Accumulation of noise from transportation activities and stationary sources determines the overall noise environment within a community. Noise generated from automobile use, trucking, airport and rail operations is referred to as transportation related noise, while noise from stationary sources such as commercial establishments, machinery, air conditioning systems, compressors and landscape maintenance equipment is typically referred to as non-transportation noise. Noise is most problematic when it affects noise sensitive land uses that include, but are not limited to residences, schools, hospitals, religious meetings and recreational areas. These uses are considered sensitive because the presence of excessive noise may interrupt normal activities typically associated with the use. Sensitive receptor sites in Aliso Viejo are identified in the Noise Policy Map (Figure N-1). Consideration of noise sources, sensitive land uses, and information regarding the future noise environment leads to implementation of effective ways to avoid noise impacts.

Measuring Noise

Noise generally is defined as unwanted or intrusive sound. Because noise consists of pitch, loudness, and duration, describing noise with a single unit of measure presents a challenge. The A-weighted decibel scale (dB(A)) has been developed to describe the loudness of a sound or sound environment based on the sensitivity of the human ear.

The dB(A) descriptor only reports noise from a single source or combination of sources at a point in time. To allow a more comprehensive description of the noise environment, Federal and State agencies have established noise and land use compatibility guidelines that use averaging approaches to noise measurement. Two measurement scales commonly used in California are the Community Noise Equivalent Level (CNEL) and the day-night level (Ldn). To account for increased human sensitivity at night, the CNEL level includes a 5-decibel penalty on noise during the 7:00 a.m. to 10:00 p.m. time period and a 10-decibel penalty on noise during the 10:00 p.m. to 7:00 a.m. time period. The Ldn level includes only the 10 decibel weighting for late-night noise. These values are nearly identical for all but unusual noise sources.

Noise Standards and Land Use Compatibility

Table N-1 summarizes County of Orange residential noise standards adopted by the City of Aliso Viejo. The standards represent the maximum acceptable noise levels as measured from any residential property in the City. Accordingly, it is unlawful to cause the noise level on any residential property to exceed the exterior noise standards: 1) for a cumulative period of more than thirty minutes in any hour; 2) plus five dB(A) for a cumulative period of more than 15 minutes in any hour; 3) plus 10 dB(A) for a cumulative period of more than five minutes in any hour; 4) plus 15 dB(A) for a cumulative period of more than one minute in any hour; or 5) plus 20 dB(A) for any period of time. In addition, any noise that exceeds the interior noise standards established for residential uses: 1) for a cumulative period of more than five minutes in any hour; 2) plus five dB(A) for a cumulative period of more than one minute in any hour; or 3) plus 10 dB(A) for any period of time, is unlawful.

Table N-1
Orange County Residential Noise Standards

	Daytime Noise Standards (7am to 10pm)	Nighttime Noise Standards (10pm to 7am)
Interior Noise Standards	55 dB(A)	45 dB(A)
Exterior Noise Standards	55 dB(A)	50 dB(A)

Source: County of Orange Code of Ordinances, 2003.
Note: Standards are based on measurements taken from any residential property in the City.

Figure N-1
Noise Policy Map
11x17" Color

Back Side of 11x17" Page

The City's noise standards serve as the basis for the land use compatibility guidelines presented in Table N-2. A project is considered to be compatible with the noise environment if the noise level generated by the project falls within Zone A or Zone B. If the anticipated noise level of a proposed project falls into Zone A, typically no mitigation is needed and if it falls into Zone B, minor mitigation may be required to meet City and State Title 24 noise standards. All project proponents must demonstrate that noise standards have been met prior to human occupation of a building.

If the noise level of a proposed project falls within Zone C, substantial mitigation is likely needed to meet City noise standards. Mitigation may include construction of noise barriers, and/or the inclusion of substantial building sound insulation. Projects in Zone C can be successfully mitigated; however, project proponents with a project in Zone C must demonstrate that the noise standards can be met prior to issuance of a building permit. If noise levels of a proposed project fall within Zone D, the project is clearly incompatible with the noise environment and should not be approved.

The City Planning Director acts as the noise control coordinator, while Aliso Viejo Police Services is responsible for abating nuisance noises. This delegation of responsibility allows consistent and continual enforcement of the noise standards.

Noise Contours and Impacted Areas

Noise contours, based on the location of major noise sources, describe the noise environment within the community. These contours outline areas of equal noise exposure. Information about existing and projected land use development and transportation activity has been used to estimate future noise contours for Aliso Viejo.

Future noise contours for Aliso Viejo are displayed on the Noise Policy Map (Figure N-1). These contours will guide land use and development decisions to address potential noise issues. Noise impacted areas are those areas that fall within the 60 dB(A) CNEL or greater noise contours. An acoustical analysis must be prepared prior to approval of a noise sensitive project proposed within an identified noise impact area in order to assess the impact in more detail. The analysis must show that the project is designed to attenuate noise to meet the City's noise standards as set forth in Tables N-1 and N-2 in order to receive approval.

In addition, noise producing land uses will be evaluated using the standards in Tables N-1 and N-2 to ensure that proposed land uses do not adversely impact the current noise environment. If proposed project designs do not meet noise standards, mitigation will be recommended. If the analysis demonstrates that the noise standards can be met by implementing the mitigation measures, the project can be approved conditioned upon those measures. Noise attenuation measures may include soundwalls, berms, and other noise-reducing devices.

Table N-2
Noise/Land Use Compatibility Matrix

Land Use	Community Noise Exposure (Ldn or CNEL) 50	55	60	65	70	75	80	85
Residential	A	A	B	B	C	D	D	D
Transient Lodging – Motel, Hotel	A	A	B	B	B	C	D	D
Schools, Libraries, Churches, Hospitals, Nursing Homes	A	A	B	B	C	C	D	D
Auditoriums, Concert Halls, Amphitheaters	B	B	B	B	D	D	D	D
Sports Arena, Outdoor Spectator Sports	B	B	B	B	B	D	D	D
Playgrounds, Parks	A	A	A	A	C	D	D	D
Golf Course, Riding Stables, Water Recreation, Cemeteries	A	A	A	A	C	C	D	D
Office Buildings, Business Commercial, and Professional	A	A	B	B	B	C	C	C
Industrial, Manufacturing, Utilities, Agriculture	A	A	A	A	B	B	C	C

Source: Modified by CBA from 1998 State of California General Plan Guidelines.

ZONE A - Normally Acceptable: Specified land use is satisfactory, based upon the assumption that any buildings involved meet conventional Title 24 construction standards. No special noise insulation requirements.

ZONE B - Conditionally Acceptable: New construction or development shall be undertaken only after a detailed noise analysis is made and noise reduction measures are identified and included in the project design.

ZONE C- Normally Unacceptable: New construction or development is discouraged. If new construction is proposed, a detailed analysis is required, noise reduction measures must be identified, and noise insulation features included in the design.

ZONE D- Clearly Unacceptable: New construction or development clearly should not be undertaken.

Portions of the community fall within the 65 dB(A) CNEL noise contour as depicted in the Airport Environs Land Use Plan (AELUP) for the former Marine Corps Air Station El Toro. At the time this land was developed, the type and intensity of uses were restricted due to noise impacts from the former Air Station. Impacted areas include a broad spectrum of land uses such as business parks, residential areas, and open spaces. Based on provisions within the AELUP, all types of residential uses are normally unacceptable in 65 dB(A) CNEL areas.

Opportunities to intensify areas that were previously within this unacceptable noise contour have emerged in neighboring communities following closure of the Air Station, and future opportunities for such redevelopment exist within portions of Aliso Viejo. The City will continue to monitor the status of the El Toro AELUP and opportunities for appropriate redevelopment of areas within the contour at higher intensities, or with uses that would not have been permitted before closure of the Air Station.

Construction Standards

The City of Aliso Viejo will continue to enforce the provisions of the California Energy Code. Energy Code standards specify that combined indoor noise for multi-family living spaces shall not exceed 45 dB(A) CNEL and must be implemented when the outdoor noise level exceeds 60 dB(A) CNEL. The Noise Policy Map (Figure N-1) can be used to determine when and where it is appropriate to implement this standard. The standard must be applied to all new hotels, motels, and multifamily residential development.

TRANSPORTATION RELATED NOISE

Transportation activity is a significant contributor of noise to the overall noise environment within Aliso Viejo. Transportation related noise is primarily concentrated along the transportation corridors that traverse the community such as State Route 73, major arterials and collector roads.

Noise Control at Reception Sites

The City has little direct control over noise produced by transportation sources since the State is responsible for regulating motor vehicle noise. Therefore, City noise programs focus on reducing the impact of transportation noise on the community.

The most effective ways to mitigate transportation noise impacts on the community are through utilization of a design review process, and implementation of the California Environmental Quality Act (CEQA). Identification of potential impacts from transportation noise will occur during these stages of the development process and mitigation measures may be required to meet City noise standards identified in this Element. The most common ways to reduce transportation-related noise impacts are through site planning, landscaping, use of natural topography, and the design and construction of noise barriers. Small noise reductions can also be achieved by use of setbacks and landscaping.

Noise barriers should be included in roadway and freeway designs and improvements. The City supports efforts by Caltrans and the Transportation Corridor Authority (TCA) to provide acoustical protection for noise sensitive uses along transportation corridors. Additionally, the City will request that barriers be included in any future improvement projects along SR-73 to mitigate identified or potential long- and short-term noise impacts to nearby residences and businesses from roadway expansion or construction related activity. The City continues to promote the use of berms, embankments, landscaping, setbacks, and architectural design where appropriate and effective, rather than conventional wall barriers to enhance community aesthetics.

Noise Control at the Source

Reducing noise at the source is the most efficient and effective way to control noise from transportation systems. The California Vehicle Code contains noise regulations pertaining to the operation of all vehicles on public roads, which are enforced through coordination with the California Highway Patrol and the Orange County Sheriff's Department. While the City is ultimately limited in its ability to restrict noise at the source, Aliso Viejo regulates traffic flow and coordinates with the California Highway Patrol and the Orange County Sheriff's Department to enforce speed limits to reduce traffic noise.

NON-TRANSPORTATION RELATED NOISE

In addition to transportation related noise, excessive noise generated by non-transportation sources, such as commercial and industrial centers, agricultural activities, and restaurants and bars, have the potential to impact sensitive receptors. Enforcement of City noise requirements, analysis of potential noise impacts during the site design review process, and compliance with CEQA are the best means to protect sensitive receptors. Potential noise impacts can be identified during the preliminary stages of the development process and mitigation measures can be imposed.

When reviewing proposed non-residential projects, the City considers noise generation and potential impacts to surrounding development. New development can be made compatible with the noise environment by utilizing noise/land use compatibility standards and the Noise Policy Map as a guide for future planning and development decisions. An acoustical analysis is required for projects that will generate noise potentially affecting sensitive receptors. Where significant impacts are identified, mitigation measures are required. Mitigation measures that could be applied when reviewing projects include acoustically treated and/or quiet designs for furnaces, fans, motors, compressors, valves, pumps and other mechanical equipment. Noise resulting from special one-time events should be minimized as well. The City may also require limited delivery hours and/or hours of operation in order to minimize impacts to adjacent residential uses. In addition, all City departments must comply with State and federal OSHA standards. Any new equipment or vehicles purchased by the City will comply with local, State and federal noise standards, and the City will encourage landscaping contractors to utilize modern noise-reducing equipment.

Noise Control Ordinance

Upon incorporation, the City adopted the County of Orange Noise Control Ordinance. This Ordinance is designed to protect people from non-transportation related noise sources such as construction activity, machinery and pumps, and air conditioners. Enforcing the Ordinance requiring proposed development projects to demonstrate compliance ensures that adjacent properties are not exposed to excessive noise from stationary sources or nuisances. The Ordinance will be reviewed periodically for adequacy and amended as needed to address community needs and development patterns.

The City also has the opportunity to control noise and vibration transfers between adjacent land uses. Particular problems arise in cases where noise-producing uses are located immediately adjacent to sensitive uses, such as business park areas near residences or schools. Mixed use projects also present unique problems in this area, such as when restaurants with nighttime entertainment are located below residential units. The City's Zoning Ordinance or any Specific Plan developed following adoption of the General Plan will include standards regulating noise and vibration transfers within mixed use development projects.

Chapter 8.12
NOISE CONTROL[1]

Sections:

8.12.010 Purpose.
8.12.020 Declaration of policy.
8.12.030 Definitions.
8.12.040 Noise level measurement criteria.
8.12.050 Exterior noise standards.
8.12.060 Interior noise standards.
8.12.070 Exemptions.
8.12.080 Schools, hospitals and churches – Special provisions.
8.12.090 Manner of enforcement.
8.12.100 Violations.

Prior legislation: Ord. 2002-033.

8.12.010 Purpose.
The purpose of this chapter is to establish noise standards and to protect the health, safety, welfare, and living/working environments in the city. [Ord. 2010-126 § 1 (Exh. A)].

8.12.020 Declaration of policy.
A. It is hereby declared to be the policy of the city to control unnecessary, excessive, and annoying sounds from all sources as specified in this chapter.

B. It is determined that certain sound levels are detrimental to the public health, welfare, and safety, and contrary to public interest. [Ord. 2010-126 § 1 (Exh. A)].

8.12.030 Definitions.
The following definitions apply to the use of these terms for the purposes of this chapter:

“Ambient noise level” means the all-encompassing noise level associated with a given environment, being a composite of sounds from all sources, excluding the alleged offensive noise, at the location and approximate time at which a comparison with the alleged offensive noise is to be made.

“Cumulative period” means an additive period of time composed of individual time segments which may be continuous or interrupted.

“Decibel (dB)” means a unit which denotes the ratio between two quantities which are proportional to power: the number of decibels corresponding to the ratio of two amounts of power to 10 times the logarithm to the base 10 of this ratio.

“Density” means the number of dwelling units per gross acre of land as established in AVMC Title 15.

“Dwelling unit” means a single unit providing complete, independent living facilities for one or more persons including permanent provisions for living, sleeping, eating, cooking and sanitation.

“Emergency machinery, vehicle, or work” means any machinery, vehicle, or work used, employed, or performed in an effort to protect, provide, or restore safe conditions in the community or for the citizenry, or work by private or public utilities when restoring utility service.

“Fixed noise source” means a stationary device which creates sounds while fixed or motionless, including but not limited to industrial and commercial machinery and equipment, pumps, fans, compressors, generators, air conditioners, leaf blowers, public address systems and refrigeration equipment.

“Grading” means any excavating or filling of earth material, or any combination thereof, conducted at a site to prepare the site for construction or other improvements thereon.

“Impact noise source” means the noise produced by the collision of one mass in motion with a second mass which may be either in motion or at rest.

“Mobile noise source” means any noise source other than a fixed noise source.

“Noise level” means the “A” weighted sound pressure level in decibels obtained by using a sound level meter at slow response with a reference pressure of 20 micronewtons per square meter. The unit of measurement shall be designated as dB(A).

“Nonresidential property” means any parcel of real property other than residential property.

“Residential property” means a parcel of real property which is developed and used either in part or in whole for residential purposes, other than transient uses such as hotels and motels.

“Simple tone noise” means a noise characterized by a predominant frequency or frequencies so that other frequencies cannot be readily distinguished.

“Sound level meter” means an instrument meeting American National Standard Institute’s Standard S1.4-1971 for Type 1 or Type 2 sound level meters or an instrument and the associated recording and analyzing equipment which will provide equivalent data.

“Sound pressure level, in decibels” means 20 times the logarithm to the base 10 of the ratio of the pressure of the sound to a reference pressure, which reference pressure shall be explicitly stated. [Ord. 2010-126 § 1 (Exh. A)].

Cross-reference: definitions generally, AVMC 1.02.010.

8.12.040 Noise level measurement criteria.
Any noise level measurements made pursuant to the provisions of this chapter shall be performed using a sound level meter. Exterior noise levels shall be measured at any point on the affected property. Interior noise levels shall be measured within the affected dwelling unit at a point at least four feet from the wall, ceiling, or floor nearest the alleged noise source with the windows of the affected dwelling unit closed. [Ord. 2010-126 § 1 (Exh. A)].

8.12.050 Exterior noise standards.
A. The following exterior noise standards, unless otherwise specifically indicated, shall apply to all residential property within the city:

Residential Exterior Noise Standards		
	Noise Level	**Time Period**
Density of less than 10 DU/acre	50 dB(A)	7:00 a.m. – 10:00 p.m.
	45 dB(A)	10:00 p.m. – 7:00 a.m.
Density of 10 DU/acre or more	55 dB(A)	7:00 a.m. – 10:00 p.m.
	50 dB(A)	10:00 p.m. – 7:00 a.m.

In the event the noise consists entirely of impact noise, simple tone noise, speech, music, or any combination thereof, each of the above noise levels shall be reduced by five dB(A).

B. The following exterior noise standards, unless otherwise specifically indicated, shall apply to all nonresidential property within the city. If a noise affects both residential and nonresidential property, then the applicable noise standard shall be the arithmetic mean of the applicable standards that apply to residential and nonresidential property.

Nonresidential Exterior Noise Standards		
	Noise Level	**Time Period**
Commercial	65 dB(A)	7:00 a.m. – 10:00 p.m.
	60 dB(A)	10:00 p.m. – 7:00 a.m.
Manufacturing/Industrial	70 dB(A)	24 hours per day

In the event the noise consists entirely of impact noise, simple tone noise, speech, music, or any combination thereof, each of the above noise levels shall be reduced by five dB(A).

C. It shall be unlawful for any person at any location within the city to create any noise, or to allow the creation of any noise on property owned, leased, occupied, or otherwise controlled by the person, when the foregoing causes the noise level, when measured on any other parcel, to exceed:

1. The noise standard for a cumulative period of more than 30 minutes in any hour.
2. The noise standard plus five dB(A) for a cumulative period of more than 15 minutes in any hour.
3. The noise standard plus 10 dB(A) for a cumulative period of more than five minutes in any hour.
4. The noise standard plus 15 dB(A) for a cumulative period of more than one minute in any hour.

5. The noise standard plus 20 dB(A) for any period of time.

6. In the event the ambient noise level exceeds any of the applicable standards when the source of the noise is not operating, the ambient noise level shall become the standard. [Ord. 2013-151 § 3 (Exh. A); Ord. 2013-149 § 1; Ord. 2010-126 § 1 (Exh. A)].

8.12.060 Interior noise standards.

A. The following interior noise standards, unless otherwise specifically indicated, shall apply to all residential property within the city:

Residential Interior Noise Standards	
Noise Level	**Time Period**
55 dB(A)	7:00 a.m. – 10:00 p.m.
45 dB(A)	10:00 p.m. – 7:00 a.m.

In the event the noise consists entirely of impact noise, simple tone noise, speech, music, or any combination thereof, each of the above noise levels shall be reduced by five dB(A).

B. It shall be unlawful for any person at any location within the city to create any noise, or to allow the creation of any noise on property owned, leased, occupied, or otherwise controlled by the person, when the foregoing causes the noise level, when measured within the interior of any other dwelling unit on any residential parcel within the city to exceed:

1. The interior noise standard for a cumulative period of more than five minutes in any hour.

2. The interior noise standard plus five dB(A) for a cumulative period of more than one minute in any hour.

3. The interior noise standard plus 10 dB(A) for any period of time.

C. In the event the ambient noise level exceeds either of the first two noise level categories above, the cumulative period applicable to the category shall be increased to reflect the ambient noise level. In the event the ambient noise level exceeds the third noise limit category, the maximum allowable noise level under that category shall be increased to reflect the maximum ambient noise level. [Ord. 2010-126 § 1 (Exh. A)].

8.12.070 Exemptions.

The following activities shall be exempt from the provisions of this chapter:

A. Activities conducted on the grounds of any public or private nursery, elementary, intermediate or secondary school or college, or day care home.

B. “Special events” as defined in AVMC 11.05.020 provided said events are conducted pursuant to a special events permit issued pursuant to Chapter 11.05 AVMC.

C. Outdoor gatherings, public dances and shows, provided the events are conducted pursuant to a permit issued by the city.

D. Any mechanical device, apparatus, or equipment used, related to or connected with emergency machinery, vehicle or work.

E. Noise sources associated with construction, repair, remodeling, or grading of any real property, provided the activities do not take place between the hours of 8:00 p.m. and 7:00 a.m. on weekdays, 8:00 p.m. and 8:00 a.m. on Saturday, or at any time on Sunday or a federal holiday.

F. Noise sources associated with the maintenance of real property, provided the activities take place between the hours of 7:00 a.m. and 8:00 p.m. on any day except Sunday or a federal holiday, or between the hours of 9:00 a.m. and 8:00 p.m. on Sunday or a federal holiday.

G. Any activity to the extent regulation thereof has been preempted by state or federal law.

H. Noise sources associated with solid waste collection and removal, provided such activities take place between 7:00 a.m. and 6:00 p.m. Monday through Friday where audible in residential areas; or between 7:00 a.m. and 6:00 p.m. on Saturdays where audible in residential areas; or between 5:00 a.m. and 9:00 p.m. any day where such activity is not audible in residential areas; or as otherwise provided in an approved franchise agreement between a waste hauler and the city. [Ord. 2010-126 § 1 (Exh. A)].

8.12.080 Schools, hospitals and churches – Special provisions.

It shall be unlawful for any person to create any noise which causes the noise level at any school, hospital or church while the same is in use for its intended purpose to exceed the noise limits as specified in AVMC 8.12.050(A) or which causes the noise level to unreasonably interfere with the use of such institutions for their intended purpose or which unreasonably disturbs or annoys students, patients, or attendees in such institutions, provided conspicuous signs are displayed in three separate locations within one-tenth of a mile of the institution indicating the presence of a school, church or hospital. [Ord. 2010-126 § 1 (Exh. A)].

8.12.090 Manner of enforcement.

A. The chief of police services, or designee, is directed to enforce the provisions of this chapter.

B. No person shall interfere with, oppose, or resist any authorized person charged with the enforcement of this chapter while the person is engaged in the performance of his/her duty. [Ord. 2010-126 § 1 (Exh. A)].

Cross-reference: interference with public officers prohibited, AVMC 8.20.040.

8.12.100 Violations.

Any person violating any of the provisions of this chapter shall be deemed guilty of a misdemeanor and/or such violation shall constitute a public nuisance. [Ord. 2010-126 § 1 (Exh. A)].

Cross-reference: violations and penalties generally, Chapter 1.06 AVMC.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

1 POLARIS WAY
ALISO VIEJO, CA 92656

COORDINATES

Latitude (North):	33.5860000 - 33° 35' 9.60''

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MICROVENTION	75A COLUMBIA	NW 0 - 1/8 (0.087 mi.)	A1	8
CLARIENT DIAGNOSTICS	31 COLUMBIA	NW 1/8 - 1/4 (0.161 mi.)	4	12

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/10/2015 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

SEMORX INC	11 COLUMBIA	NNW 1/8 - 1/4 (0.199 mi.)	6	18

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the LUST list, as provided by EDR, and dated 06/15/2015 has revealed that there is 1 LUST site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Global Id: T0605902532
Current Status: 9
Case Number: 9UT3197

State and tribal registered storage tank lists

AST: A listing of aboveground storage tank petroleum storage tank locations.

A review of the AST list, as provided by EDR, and dated 08/01/2009 has revealed that there is 1 AST site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
Not reported	4 POLARIS WY	S 0 - 1/8 (0.115 mi.)	3	12

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there is 1 HIST CORTESE site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

CLARIENT DIAGNOSTICS SERVICES INC (Continued) **1010314275**

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 46711.6

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 2406.1

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 47185.6

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal

UNITED PARCEL SERVICE (Continued) **1000594559**

facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2015

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/25/2015
Date Data Arrived at EDR: 03/10/2015
Date Made Active in Reports: 03/25/2015
Number of Days to Update: 15

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007
Date Made Active in Reports: 04/10/2007

Data Release Frequency: Semi-Annually

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

Date of Government Version: 10/16/2014

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

POLARIS WAY
1 POLARIS WAY
ALISO VIEJO, CA 92656

TARGET PROPERTY COORDINATES

Latitude (North):	33.586 - 33° 35' 9.60''
Longitude (West):	117.7244 - 117° 43' 27.84''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	432778.2
UTM Y (Meters):	3716296.0
Elevation:	496 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5641316 SAN JUAN CAPISTRANO, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

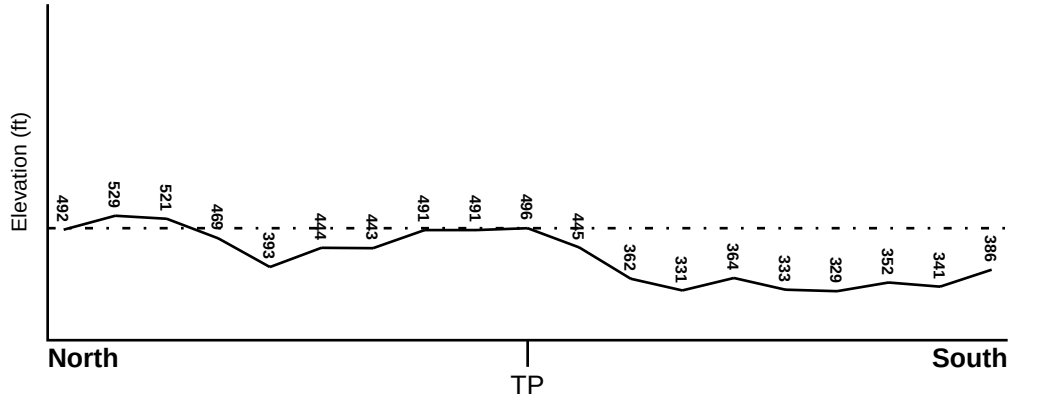
TOPOGRAPHIC INFORMATION

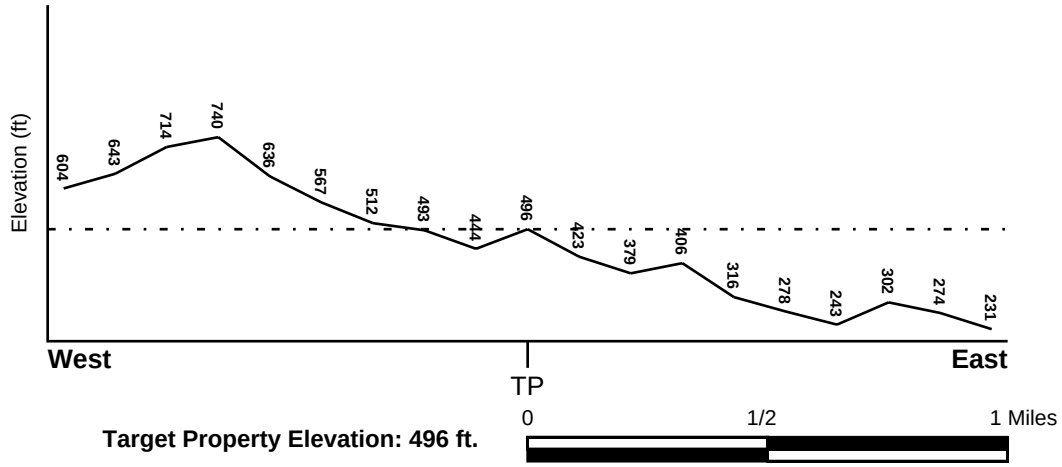
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





0 1/2 1 Miles

Target Property Elevation: 496 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
ORANGE, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06059C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN JUAN CAPISTRANO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: BALCOM

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	29 inches	clay loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
2	29 inches	33 inches	weathered bedrock	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 2

Soil Component Name: CALLEGUAS

Soil Surface Texture: clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

1 FINDINGS AND CONCLUSIONS

Professional Service Industries, Inc. (PSI) performed a Phase I Environmental Site Assessment (Phase I ESA) of a three-story office building located at 1 Polaris Way in Aliso Viejo (Orange County), California. The assessment included a Phase I ESA only. PSI performed the assessment to comply with the contract between PSI and First Republic Bank.

Currently, the subject property is developed with an approximately 35,600 foot commercial space, consisting of a three-story office building and landscaped areas. The interior of the office building consists of a main lobby area, office rooms, conference rooms, a cafeteria, and a security office. The subject property shares association amenities with the adjacent office buildings, such as a fitness center, cafeteria, maintenance services, and a backup generator located on 2 Polaris Way.

From 1938 to 1977, the property was undeveloped land. By 1990, the property was graded and left vacant. By 2005, the property was developed with the current commercial improvements. On January 2013, site reconnaissance revealed the property to be developed with Merit Companies Office Building and associated paved parking.

The subject property is located within an area primarily developed for commercial use. Uses of the adjoining properties include: Aliso Viejo Parkway, Zettler, and Smith Micro Software, Inc. to the north; single family residences to the east; Fluor Enterprises (2 & 3 Polaris Way) and Quest Software (4 Polaris Way) to the south; and Quest Software (5 Polaris Way) and San Joaquin Hills Transportation Corridor to the west.

1.1 PHASE I ESA

PSI performed the Phase I ESA in general conformance with ASTM E 1527-05. Limitations, exceptions, and deviations from this protocol are discussed in Section 3.

1.1.1 OPINIONS

Significant Data Gaps

Based on our experience, the information that we gathered and evaluated did not present significant data gaps that affected our ability to identify recognized environmental conditions (RECs) in connection with the subject property.

Recognized Environmental Conditions

This assessment revealed no evidence of recognized environmental conditions in connection with the subject property.

1.1.2 ENVIRONMENTAL PROFESSIONAL DECLARATIONS

Mr. Christian Mendoza gathered and compiled information contained in this report and performed the site and area reconnaissance.

> I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.
>
> I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

Mr. Christian Mendoza
Assessor

Reviewed By:

Mr. Lloyd Guss
Environmental Professional
Principal Consultant

1.2 RECOMMENDATIONS

Based on the findings and conclusions of this report, PSI recommends no further assessment at this time.

This summary does not contain all the information presented in the full report. The report should be read in its entirety to obtain a more complete understanding of the information provided and to aid in any decisions made or actions taken based on this information.

2 INTRODUCTION

2.1 CONTRACT

The contract between PSI and our Client is summarized below:

Summary	
Client	First Republic Bank
Authorizing Party **Title**	Mr. Robert Reza Senior Loan Specialist
Engagement ID, Date	PSI Proposal Number: 0559-85110 December 19, 2012

PSI considers the client to be the 'User' of our assessment, defined in the Practice as:

> "The party seeking to use Practice E 1527 to complete an environmental site assessment of the property. A user may include, without limitation, a potential purchaser of a property, a potential tenant of property, an owner of property, a lender or a property manager. The user has specific obligations for completing a successful application of this practice...."

2.2 PURPOSE OF SERVICES

Based on the information provided, PSI understands that your purpose for having the Phase I ESA performed is to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability (hereinafter landowner liability protections or LLPs). The scope of services presented below is intended to satisfy this purpose.

PSI performed the Phase I ESA in general conformance with ASTM E 1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (the Practice). The purpose of the Practice was to define good commercial practice for conducting an environmental site assessment and as such, the Practice is intended to permit the user to satisfy one of the requirements to qualify for the LLPs. The goal of the processes established by the Practice is to identify recognized environmental conditions (RECs) in connection with the property.

2.3 STANDARD OF CARE AND WARRANTIES

Our services were not intended to be technically exhaustive. There is a possibility that with the proper application of methodologies, conditions may exist on the property that could not be identified within the scope of the assessment(s) or that were not reasonably identifiable from the available information.

No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with the property. The ESA was intended to reduce, but not eliminate uncertainty regarding the potential for RECs in connection with a property.

Our report is based on commonly known and reasonably ascertainable information, including limited ground-level visual inspection of the property, except where otherwise explicitly indicated, in conformance with ASTM E 1527-05. Findings and conclusions derived from the methodologies described in the Practice contain all of the inherent limitations in the methodologies that are referred to in the Practice.

PSI did not perform any exploratory probing or discovery, perform tests, operate any specific equipment, or take measurements or samples to perform the ESA scope. The ESA was not a building code, safety, regulatory or environmental compliance inspection. The ESA is not intended to reduce the risk of the presence of mold and physical deficiencies conducive to mold nor the risk that mold or physical deficiencies conducive to mold may pose to the buildings and building occupants.

The methodologies include reviewing information provided by other sources. PSI treats information obtained from the record reviews and interviews concerning the property as reliable and the ASTM protocol does not require PSI to independently verify the information. Therefore, PSI cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. No other warranties are implied or expressed.

PSI warrants that the findings contained in this report have been prepared in general conformance with accepted professional practices at the time of report preparation as applied by similar professionals. Future changes in standards, practices, or regulations cannot be anticipated and have not been addressed.

The observations and recommendations presented in this report are time dependent, and conditions will change. This report speaks only as of its date.

2.4 USE BY OTHER PARTIES

This report was prepared pursuant to a contract between PSI and its client. That contractual relationship included an exchange of information about the property that was unique and serves as the basis upon which this report was prepared. Because of the importance of these understandings, our assessment may not be sufficient for the intended purposes of another party.

Reliance or any use of this report by anyone other than those parties identified above, for which it was prepared, is prohibited and therefore not foreseeable to PSI. Any unauthorized reliance on or use of this report, including any of the information or conclusions contained herein, will be at the third party's risk. No warranties or representations expressed or implied in this report are made to any such third party.

Third party reliance letters may be issued upon timely request and payment of the then-current fee for such letters. All third parties relying on our report, by such reliance, agree that such reliance is limited by our proposal and General Conditions.

3 SCOPE AND RESOURCES

3.1 PHASE I ESA

PSI performed a Phase I ESA of the subject property that generally conforms to the scope and limitations of the Practice. The assessment included four components:

- Records review;
- Reconnaissance;
- Interviews; and
- Preparation of this report, including our evaluation.

The scope of our services and the information resources accessed are detailed below.

3.1.1 STAFF

Mr. Christian Mendoza, Assessor, conducted the site reconnaissance on January 15, 2013. Mr. Christian Mendoza gathered and interpreted the information. Credentials and qualifications of persons responsible for preparation of this report are appended.

3.1.2 RECORDS REVIEW

Physical Setting Sources

PSI reviewed United States Geological Survey (USGS) Topographic (Topo) Maps and other information regarding the physical setting of the site to assist with the interpretation of subsurface water movement near the property.

Summary	
Source Name	**Year Published/Issued**
USGS 60 Minute Topo Map	Southern CA Sheet 1: 1901
USGS 30 Minute Topo Map	Corona: 1902
USGS 15 Minute Topo Map	Santiago Peak: 1942
USGS 7.5 Minute Topo Map	San Juan Capistrano: 1948, 1968, 1978, 1981
Soil Survey	EDR GeoCheck Report: 2012

Environmental Regulatory Database Information

PSI retained Environmental Data Resources, Inc. (EDR) to provide environmental database information attributed to the site and its surroundings. EDR obtains environmental databases published by local, state, tribal, and federal agencies and geocodes the information for electronic searches. EDR's service includes reporting

Standard Environmental Records Sources and, in most cases, some Additional Environmental Records Sources.

The search was performed to Approximate Minimum Search Distances (AMSD) listed in ASTM E 1527-05.

Unmappable (orphan) sites listed with insufficient address or geocoding information for EDR to map were evaluated for potential location within the AMSD. PSI used information provided about the city, county and Zip Code attributed to these sites to determine if they are located in the vicinity of the subject property.

Historical Use Information

PSI used USGS Topo maps and retained EDR to provide information about the history of the site and its surroundings. PSI also referenced other historical sources.

Recorded Land Title Records

PSI did not review land title records to obtain information about the current and past owners of the site and prior uses and tenancies.

User-Provided Information

The Practice describes information to be provided by the user, owner and key site manager. This information is detailed on appended questionnaires that PSI sent to the user.

3.1.3 RECONNAISSANCE

Mr. Ben Shaffer, of Masson Investments, granted PSI access to the site. PSI's assessor was escorted at the time of site reconnaissance.

The ground reconnaissance consisted of observing the periphery of the property and viewing the site from accessible adjacent public access areas. Visual reconnaissance of adjoining properties was limited to areas and facilities that were readily observable from the subject property or from public access areas.

PSI systematically toured interior portions of the property to provide an overlapping field of view. The periphery of structures, where present on the property, was observed along with accessible interior common areas, maintenance/repair areas and a representative number of occupant spaces.

PSI took photographs to document selected features.

3.1.4 INTERVIEWS

PSI made reasonable attempts to interview selected persons having knowledge of the uses and conditions of the site, past and present. A list of the persons that PSI interviewed and attempted to interview, along with our interpretations is presented in Section 8.

3.1.5 REFERENCES

The information sources that PSI used, including published material, material obtained from commercial sources, from other sources, or provided to us through questionnaires, is cited as that information is presented in the report. Some of this information, or excerpts thereof, are also appended.

3.2 OTHER ENVIRONMENTAL ISSUES

Our services did not include effort outside the scope of the Practice to evaluate issues related to business environmental risk associated with the property.

3.3 SIGNIFICANT ASSUMPTIONS

PSI made the following assumptions in developing our Phase I ESA findings and conclusions:

- Groundwater Flow Direction - PSI interpreted and inferred the direction of the shallow groundwater movement based on the information we obtained and our experience. Actual groundwater flow may be locally influenced by many factors beyond the scope of this study. Subsurface investigation would be necessary to determine site-specific groundwater flow direction.
- Regulatory Agency Information - PSI considers all information provided by EDR regarding regulatory status of facilities to be complete, accurate, and current.

- Other Regulatory Information - PSI considers all other information obtained from regulatory or enforcement agencies to be complete, accurate, and current.
- Title, Lien and Activity and Use Limitation (AUL) Information - PSI considers all information provided by EDR, its subcontractors, or other real estate title records review firms regarding property ownership or encumbrances to be complete, accurate and current.
- Interviews - PSI considers all information provided through interviews to be complete, unbiased and provided in good faith.

3.4 LIMITATIONS, EXCEPTIONS, DEVIATIONS AND DATA GAP

PSI considers that limitations, exceptions and deviations from the Practice manifest as a lack of or inability to obtain information required by the Practice. This represents the definition of the 'data gap' contained in the Practice.

PSI tracked the components for this assessment on the Data Gap Worksheet, which is appended. Therefore the limitations, exceptions and deviations are identified in the Worksheet.

In general, when required information was incomplete, not provided, otherwise not obtained, or indicated a need for additional information, PSI attempted to use information from other sources to meet the Practices' performance objectives. When the data gaps affected the Environmental Professional's ability to identify RECs, PSI considered the data gap(s) to be significant. Any significant data gaps PSI identified are in the Data Gap Worksheet and reported in Section 1.1.

4 USER-PROVIDED INFORMATION

PSI provided the client with a standard questionnaire. The questionnaires, if returned, are appended and selected portions are discussed in the following sections.

4.1 USER'S RESPONSIBILITIES

4.1.1 LIENS

The client indicated that they are not aware of any environmental liens recorded against the subject property.

4.1.2 ACTIVITY AND LAND USE LIMITATIONS (AULS)

The client indicated that they are not aware of any AULs recorded against the subject property.

4.2 HELPFUL DOCUMENTS

The client did not provide PSI with any previous assessment reports prepared for the subject property.

4.3 PROCEEDINGS

The client did not provide PSI with documentation about legal proceedings or litigation involving the subject property.

4.4 SUGGESTED INFORMATION

PSI requested certain information about the property to assist with our assessment. Most of this information, such as the nature of the property and its legal description, are presented in the corresponding section of this report.

4.5 FINDINGS

No evidence of recognized environmental conditions was identified during the review of the User provided information.

5 SUBJECT PROPERTY USAGE

5.1 LOCATION AND LEGAL DESCRIPTION

Summary	
Project Name	Commercial Property/Office Building
Property Address	1 Polaris Way
City, County, State, ZIP Code	Aliso Viejo, Orange County, California 92656
No. Buildings/Units/Stories	Three-story office building/associated parking lot
Area (sf)	Approximately 35,600 square feet
Occupied Subgrade Spaces?	No
Year(s), First Developed for Current Use	NA

The subject property is located on the northeast corner Aliso Viejo Parkway and Polaris Way.

5.2 PHYSICAL SETTING

Summary	
Nominal Elevations, (ft, MSL)	478 ft.
Surface Topo Characteristics	General gradient slopes towards the southeast.
General Soil Type	Soils beneath the subject property are classified as Balcom clay loam, with moderate infiltration rates.
Does EDR Map a Floodplain On-Site?	No
On-Site Water Bodies	None
Off-Site Water Bodies	None on adjoining properties
Note: MSL means Mean Sea Level	

Information regarding the groundwater table was obtained through PSI's review of a groundwater monitoring report retained on GeoTracker for a site about 2 miles north of the subject property. According to groundwater information presented in this report, the shallowest groundwater in the vicinity of the subject property:

- Occurs at a depth of approximately 6-19 feet below the ground surface, and is assumed to follow the topographic gradient towards the southeast.

5.3 CURRENT USES

Currently, the subject property is developed with an approximately 35,600 foot commercial space, consisting of a three-story office building and landscaped areas. The interior of the office building consists of a main lobby area, office rooms, conference rooms, a cafeteria, and a security office. The subject property shares association amenities with the adjacent office buildings, such as a fitness center, cafeteria, maintenance services, and a backup generator located on 2 Polaris Way.

5.3.1 INTERIOR AND EXTERIOR OBSERVATIONS

A summary of uses and conditions is tabulated below. Detailed information is discussed following the summary along with an opinion about the significance of the listing.

Summary		
Identified?		
Yes	No	
☐	☒	Hazardous Substances
☐	☒	Petroleum Products
☐	☒	Aboveground or Underground Storage Tanks (ASTs/USTs)
☐	☒	Drums
☐	☒	Suspect Containers
☒	☐	Electrical or Mechanical Equip. Suspected to Contain PCBs
☐	☒	Interior Stains or Corrosion
☐	☒	Drains or Sumps
☐	☒	Wastewater Discharges
☐	☒	Septic or Sewage Tanks
☐	☒	Pits, Ponds or Lagoons
☐	☒	Pools of Liquid or Standing Water
☐	☒	Solid Waste Dumping/Landfills/Suspect Fill Material
☐	☒	Stained Soil or Pavement
☐	☒	Stressed Vegetation
☐	☒	Drinking Water Wells
☐	☒	Irrigation Wells
☐	☒	Monitoring Wells
☐	☒	Odors
☐	☒	Other Uses or Conditions of Concern

Electrical or Mechanical Equipment Likely To Contain PCBs

To the extent observed or identified through interviews, stationary electrical or mechanical equipment identified on the subject property and known to contain PCBs, or likely to contain PCBs, are described below.

PSI observed one (1) pad-mounted backup generator on southeastern adjacent office building (2 Polaris way), but has a direct conduit to the subject property. The generator appeared to be in good condition with no evidence of leaks or damage. Based on site observations, the presence of this generator is not considered to represent a recognized environmental condition.

PSI observed one (1) pound-mounted transformer on the northwest corner of the subject building. The transformer appeared to be in good condition with no evidence of leaks or damage. Based on the site observations, the presence of this transformer is not considered to represent a recognized environmental condition.

5.3.2 UTILITIES

Utility systems identified at the property are summarized below:

- The facility heating, ventilating and air conditioning (HVAC) systems are located on the roof of the building. The systems are powered by electricity and natural gas.
- Sewage disposal at the property is provided through municipal sources.
- Potable water at the property is obtained through municipal sources.

PSI identified no evidence of RECs in the current uses of the property.

5.4 PAST USES

Our interpretation of the past uses of the property is tabulated below.

Summary	
Year(s)	**Interpreted Property Use**
1938-1977	Aerial photographs depict the property as undeveloped land.
1990-1994	Aerial photographs depict the property graded and left vacant.

Summary	
Year(s)	**Interpreted Property Use**
2005	An aerial photograph depicts the property to be developed with a commercial building. Historical city directories identified the past tenant(s) of the property as: **1 Polaris Way** • Clarus Financial Service, Community Technologies, Inc., Go Smart, Inc. (2007) • The Masson Foundation (2012) • Merit Property Management (2007-20012)
2013	Site reconnaissance revealed the property to be developed with Merit Companies Office Building, and associated paved parking.

From 1938 to 1977, the property was undeveloped land. By 1990, the property was graded and left vacant. By 2005, the property was developed with the current commercial improvements. On January 2013, site reconnaissance revealed the property to be developed with Merit Companies Office Building and associated paved parking.

6 ADJOINING AND SURROUNDING PROPERTY USAGE

A summary of our interpretation of the current and past uses and conditions of adjoining and surrounding property based on historical records and observations is provided below.

Adjoining North	
Year(s)	**Interpreted Property Use**
1938-1977	Aerial photographs depict the property as undeveloped land.
1990-2005	Aerial photographs depict the property to be developed with a road, followed by a couple of commercial buildings and landscaped areas.
2013	Site reconnaissance revealed the property to be developed with Aliso Viejo Parkway, followed by Zettler and Smith Micro Software, Inc.

Adjoining East	
Year(s)	**Interpreted Property Use**
1938-1977	Aerial photographs depict the property as undeveloped land.
1990-1994	Aerial photographs depict the property as undeveloped land, followed by a paved street and more undeveloped land.
2005	An aerial photograph depicts the property to be developed with paved parking, followed by a driveway and single-family residences.
2013	Site reconnaissance revealed the property to be developed with paved parking, followed by a driveway and single-family residences.

Adjoining South	
Year(s)	**Interpreted Property Use**
1938-1977	Aerial photographs depict the property as undeveloped land.
1990-1994	Aerial photographs depict the property to be graded and left vacant.
2005	An aerial photograph depicts the property to be developed with three (3) commercial buildings. Historical city directories identified the past tenant(s) of the property as: **3 Polaris Way** • Imagine That and Fluor Daniel Asia, Inc. (2007) • Capstone Federal Credit Union (2012) **4 Polaris Way** • Quest Software (2012)
2013	Site reconnaissance revealed the property to be developed with Fluor Enterprises (2 & 3 Polaris Way) and Quest Software (4 Polaris Way) with associated paved parking.

Adjoining West	
Year(s)	**Interpreted Property Use**
1938-1977	Aerial photographs depict the property as undeveloped land.
1990-1994	Aerial photographs depict the property as graded land, followed by a highway.
2005	An aerial photograph depicts the property to be developed with a commercial building and associated paved parking, followed by a highway. Historical city directories identified the past tenant(s) of the property as: **5 Polaris Way** • Setting Traditions, Inc. and Quest Software, Inc. (2007) • Merit Property Management (2012)
2013	Site reconnaissance revealed the property to be developed with Quest Software (5 Polaris Way) and associated paved parking, followed by San Joaquin Hills Transportation Corridor.

The subject property is located within an area primarily developed for commercial use. Uses of the adjoining properties include: Aliso Viejo Parkway, Zettler, and Smith Micro Software, Inc. to the north; single family residences to the east; Fluor Enterprises (2 & 3 Polaris Way) and Quest Software (4 Polaris Way) to the south; and Quest Software (5 Polaris Way) and San Joaquin Hills Transportation Corridor to the west.

The past and current uses of the adjoining properties are not considered to represent a recognized environmental condition.

7 ENVIRONMENTAL REGULATORY RECORDS REVIEW

7.1 DATABASE FINDINGS

The distribution of listed sites with respect to the property is tabulated and mapped in EDR's report, which is appended. PSI did not image EDR's results table into the body of this report to reduce the chance for transcription errors. The reader is referred to this table, which can be found near the front of EDR's report.

EDR reported unmappable (orphan) listed sites. PSI reviewed the information EDR provided about these sites and those that could be field-verified within the AMSD are discussed in the appropriate section below.

7.1.1 SUBJECT PROPERTY

EDR did not identify the subject property.

7.1.2 ADJOINING AND SURROUNDING PROPERTY

EDR identified properties adjoining the subject property and properties in the vicinity of the subject property. PSI considered all of the listed sites unlikely to impact the subject site, based upon factors including (but not limited to):

- The nature of the listing,
- The use of the site,
- When the site was listed and its current listed status,
- The developmental density of the setting,
- The distance between the listed and subject sites as related to the distance that releases are likely to migrate based on local surface and subsurface drainage conditions,
- The presence of intervening drainage divides, and
- The inferred groundwater movement.

7.2 OTHER REGULATORY INFORMATION

7.2.1 FREEDOM OF INFORMATION REQUESTS

PSI submitted Freedom of Information requests to the agencies tabulated below. Response status is also tabulated.

Summary		
Response?		
Yes	No	
☐	☒	Orange County Fire Authority
☐	☒	County of Orange, Health Care Agency-Environmental Health
Note: Response status based on date of report.		

At the time of this report, a response had not been received from the agencies listed above. If PSI receives further correspondence from either of the two agencies that changes the conclusions or recommendations of this report, PSI will forward on the documentation in a separate addendum.

8 INTERVIEWS

8.1 INTERVIEW PARTIES

Summary		
Name	**Affiliation**	**Role**
Mr. Robert Reza	First Republic Bank	Client/User
Mr. Ben Shaffer	Masson Investments	Site Contact

8.2 INTERVIEW FINDINGS

PSI identified no evidence of RECs in the information obtained from the interviews.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/11/2012 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MICROVENTION	***75A COLUMBIA***	***NW 1/8 - 1/4 (0.167 mi.)***	***A2***	***8***
CLARIENT, A GE HEALTHCARE COMP	***31 COLUMBIA***	***NW 1/8 - 1/4 (0.241 mi.)***	***4***	***16***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/11/2012 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
ZETTLER SYSTEMS	***75 COLUMBIA***	***NW 1/8 - 1/4 (0.167 mi.)***	***A3***	***13***

State and tribal registered storage tank lists

AST: The Aboveground Storage Tank database contains registered ASTs. The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the AST list, as provided by EDR, and dated 08/01/2009 has revealed that there is 1 AST site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Waste name: 181

Waste code: 214
Waste name: 214

Waste code: 352
Waste name: 352

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

- Waste code: F003
- Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

- Waste code: 214
- Waste name: 214

- Waste code: 343

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/01/2012
Date Data Arrived at EDR: 10/11/2012
Date Made Active in Reports: 12/20/2012
Number of Days to Update: 70

Proposed NPL: Proposed National Priority List Sites
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/01/2012

Next Scheduled EDR Contact: 01/21/2013
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/01/2012

Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/11/2012

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/11/2012
Date Data Arrived at EDR: 10/04/2012

RCRA-SQG: RCRA - Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/11/2012
Date Data Arrived at EDR: 10/04/2012
Date Made Active in Reports: 12/04/2012

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Last EDR Contact: 12/10/2012
Next Scheduled EDR Contact: 03/25/2013
Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls
A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database
The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/11/2012

DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Next Scheduled EDR Contact: 03/11/2013
Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

SSTS: Section 7 Tracking Systems
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, resin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

GEOCHECK®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

COMMERCIAL PROPERTY
1 POLARIS WAY
ALISO VIEJO, CA 92656

TARGET PROPERTY COORDINATES

Latitude (North):	33.5852 - 33° 35' 6.72"
Longitude (West):	117.7241 - 117° 43' 26.76"
Universal Transverse Mercator:	Zone 11
UTM X (Meters):	432805.5
UTM Y (Meters):	3716207.0
Elevation:	478 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	33117-E8 SAN JUAN CAPISTRANO, CA
Most Recent Revision:	1981

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

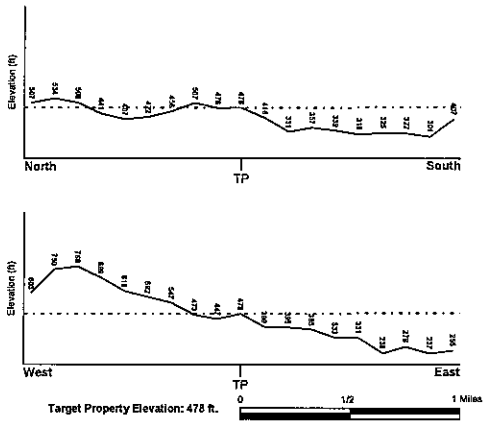
GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION
Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY
General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION
Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
ORANGE, CA	YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	06059C - FEMA DFIRM Flood data
Additional Panels in search area:	Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN JUAN CAPISTRANO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION
Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1994 Site-specific hydrogeological data gathered by CERCLIS Assist, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: BALCOM

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	29 inches	clay loam	Not reported	Not reported	Max: Min:	Max: Min:
2	29 inches	33 inches	weathered bedrock	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 2

Soil Component Name: BALCOM

Soil Surface Texture: clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2012. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

REQUEST FOR ENVIRONMENTAL HEALTH RECORDS

The undersigned hereby requests a copy of the records prepared and maintained by the Health Care Agency in the ordinary course of business, at or near the time of the act, condition, or event which they depict.

The records requested are maintained under the Public Records Act Government Code § 6250 – 6276.48. Some information held in the documents may be exempt from release pursuant to the Public Records Act.

The undersigned understands that the Health Care Agency will charge $0.15 per page copied. In the case of a request for a large number of copies, the Health Care Agency may provide the requestor an estimate of copy costs prior to making said copies. If any request is to be canceled, this office must be notified at the above number within ten (10) days of receipt of request, otherwise cost incurred will be charged to the undersigned.

In order to assist you, please describe the reason for your request:

Phase 1 ESA

Please list addresses here (no more than 10 addresses per request):

Interview Documentation

USER QUESTIONNAIRE 1 OF 2

Pursuant to ASTM E 1527-05 Appendix X.3, in order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments), the user must provide the following information (if available) to the environmental professional. Failure to provide the information could result in a determination that "all appropriate inquiry" is not complete. This form represents a type of interview and as such, the user has an obligation to answer all questions in good faith, to the extent of his or her actual knowledge.

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?
   ☒ No ☐ Yes If yes, please explain.

2. Are you aware of any activity and land use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?
   ☒ No ☐ Yes If yes, please explain.

3. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
   ☒ No ☐ Yes If yes, please explain.

4. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?
   ☒ No ☐ Yes If yes, please explain.

5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user: (a) Do you know of the past uses of the property?; (b) Do you know of specific chemicals that are present or were once present at the property?; (c) Do you know of spills or other chemical releases that have taken place at the property?; (d) Do you know of any environmental cleanups that have taken place at the property?
   ☒ No ☐ Yes If yes, please explain.

6. As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?
   ☒ No ☐ Yes If yes, please explain.

USER QUESTIONNAIRE 2 OF 2

Proceedings Involving the Property

Pursuant to ASTM E 1527-05 §10.9, as the user of this ESA do you know of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property; and (3) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?

☒ No ☐ Yes if yes, please explain.

Helpful Documents Checklist

Pursuant to ASTM E 1527-05 §10.8, do you know whether any of the following documents exist related to the subject properties, and if so, whether copies can and will be provided to PSI for review? Check all that apply.

- ☐ Environmental site assessment reports
- ☐ Environmental compliance audit reports
- ☐ Environmental permits (for example solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits, underground injection permits)
- ☐ Registrations for above or underground storage tanks
- ☐ Registration for underground injection systems
- ☐ Material safety data sheets
- ☐ Community right-to-know plan
- ☐ Risk assessments
- ☐ Safety plans; preparedness and prevention plans; spill prevention, countermeasure and control (SPCC) plans; etc.
- ☐ Reports regarding hydrogeologic conditions on the property or surrounding area
- ☐ Notices or other correspondence from any governmental agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property
- ☐ Hazardous waste generation notices or reports
- ☐ Geotechnical studies
- ☐ Recorded activity and land use limitations (AULs)

Name (Authorized User Representative)	Title
Signature	Date

Please return this form along with the signed and completed Proposal Authorization & Payment Instructions and Contact Information forms, all of which are a part of this proposal, to PSI as your authorization to begin work on this project.

Personnel Qualifications

Lloyd D. Guss, PG

Senior Geologist, Long Beach, California

Years with PSI: 5½ **Years experience with other firms:** 13½

Education

B.Sc. in Geology, California State University, Long Beach, 1992

Certifications/Registrations/Technical Training

California Registered Professional Geologist (No. 7034)
Colorado State Environmental Scientist registration (No. 5618)
Phase II Environmental Site Assessment Workshop, PSI (1999)
Professional Certificate in UST Leak Detection Standards and Systems,
University of California, Riverside (1994)
OSHA 29 CFR 1910.120 HAZWOPER, worker

Professional Experience

For about nineteen years, Mr. Guss has been involved with all aspects of quality project work for environmental and hazardous waste site investigations, risk management, and remediation activities. His responsibilities have included: project management, technical project oversight, project administration and budgeting, upholding company safety standards, regulatory agency liaison, managing and training personnel, data evaluation, and reporting.

California Department of Transportation (Caltrans) Project Experience

Mr. Guss has over eight years of experience providing services to Caltrans under various environmental related contracts. Services have included emergency response, UST removals, hazardous waste management, soil and groundwater assessments, and aerial deposited lead investigations throughout California. Projects have included property acquisition investigations, lead studies of bridge paint and right-of-way soil, and high profile drinking water assessments. Mr. Guss maintains a good working relationship with numerous contract managers at several Caltrans district offices throughout California.

Petroleum Hydrocarbon Project Experience

As Team Leader and Project Manager for environmental work at two major Los Angeles refineries, Mr. Guss was responsible for: a high profile groundwater investigation of Los Angeles aquifers (Gage, Lynwood, and Silverado), an LNAPL recovery optimization program to expand product recovery systems, oversight of air sparge and vapor extraction systems, remedial excavation of approximately 1,000 tons of California Hazardous Waste and reporting to the DTSC, and submitting routine deliverables to the CRWQCB and AQMD.

Landfill Project Experience

Mr. Guss managed a biologically sensitive military landfill remediation/restoration project, which involved the excavation of over 30,000 tons of dioxins, furans, and lead impacted soil. In addition, his team was responsible for initiating a re-profiling program so that soil could be separated and transported to the appropriate waste disposal facility, which resulted in a substantial cost saving for the client. Not only was the project completed under budget, but it was also completed on schedule.

Chlorinated Solvent Project Experience

Mr. Guss has managed a number of chlorinated solvent projects ranging from small dry cleaning facilities to a large chemical company tank farm located in the Port of Los Angeles.

Tract/Parcel Map No.	Parcel Map No. 14314	Building Permit No.	
CUP, SUP, and/or APN (Specify Lot Numbers if Portions of Tract)			

This Water Quality Management Plan (WQMP) has been prepared for BPM Investments by LPA, Inc. The WQMP is intended to comply with the requirements of the local NPDES Stormwater Program requiring the preparation of the plan.

The undersigned, while it owns the subject property, is responsible for the implementation of the provisions of this plan and will ensure that this plan is amended as appropriate to reflect up-to-date conditions on the site consistent with the current Orange County Drainage Area Management Plan (DAMP) and the intent of the non-point source NPDES Permit for Waste Discharge Requirements for the County of Orange, Orange County Flood Control District and the incorporated Cities of Orange County within the Santa Ana Region. Once the undersigned transfers its interest in the property, its successors-in-interest shall bear the aforementioned responsibility to implement and amend the WQMP. An appropriate number of approved and signed copies of this document shall be available on the subject site in perpetuity.

Section I Discretionary Permit(s) and Water Quality Conditions

Project Infomation			
Permit/Application No.		Tract/Parcel Map No.	Parel Map. No. 14314
Additional Information/ Comments:			
Water Quality Conditions			
Water Quality Conditions (list verbatim)	**Ordinance No. 2010-128** An ordinance of the city council of the city of Aliso Viejo, California, amending the Aliso Viejo Municipal Code regarding stormwater quality to ensure compliance with the city's recently re-issued Clean Water Act National Pollutant Discharge Elimination System (NPDES) permit for dischargers from the City's storm drain system ("new permit").		
Watershed-Based Plan Conditions			
Provide applicable conditions from watershed - based plans including TMDLS.	Aliso Creek is subject to the following TMDLs: Indicator Bacteria, Selenium, Total Nitrogen as N, Toxicity, Benthic Community Effects, Diazinon, Phosphorus		

Section II Project Description

II.1 Project Description

<table>
<tr><th colspan="5">Description of Proposed Project</th></tr>
<tr><td>Development Category (Verbatim from WQMP):</td><td colspan="4">6. Parking lots 5,000 square feet or more including associated drive aisle, and potentially exposed to urban stormwater runoff. A parking lot is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce.</td></tr>
<tr><td>Project Area (ft²): 99,000</td><td colspan="2">Number of Dwelling Units: N/A</td><td colspan="2">SIC Code: N/A</td></tr>
<tr><td>Narrative Project Description:</td><td colspan="4">The project site is located just east of Highway 73, southeast of Laguna Hills Drive, and northwest of an existing industrial and office building complex. The site consists of an existing parking lot and landscape features.

The proposed project involves the conversion of the existing parking lot into a parking garage and office building. The new buildings will tie into the existing curbs/roadways and include private water, sewer and storm drain upgrades to capture and treat all runoff. Waste generated at the site will include car oil, debris, suspended solids, nutrients, heavy metals, pathogens, pesticides and toxic organic compounds. The area around the buildings and the courtyard area between the buildings will consist of concrete sidewalks. The remaining areas will consist of trees and landscape.</td></tr>
<tr><td rowspan="2">Project Area</td><td colspan="2">Pervious</td><td colspan="2">Impervious</td></tr>
<tr><td>Area (sq ft)</td><td>Percentage</td><td>Area (sq ft)</td><td>Percentage</td></tr>
<tr><td>Pre-Development Conditions</td><td>99,000 sq ft</td><td>100%</td><td>0 sq ft</td><td>0%</td></tr>
<tr><td>Post-Project Conditions</td><td>23,100 sq ft</td><td>23.3%</td><td>75,900 sq ft</td><td>76.7%</td></tr>
<tr><td>Drainage Patterns/Connections</td><td colspan="4">Drain inlets will catch and convey all runoff to an underground storm drain system. Roof drains from both structures will directly connect to the underground storm drain system. All runoff will flow to a proprietary biotreatment unit that will treat the required “first flush” stormwater and bypass the remaining peak flow. Detention tanks will be located directly</td></tr>
</table>

	downstream from the proprietary biotreatment unit to ensure hydromodification criteria are met. Water will then be pumped out of an outlet structure located approximately 125 ft from the outlets of the tanks to the existing curb and gutter. Water will then flow via curb and gutter to the existing catch basin located approximately 450 ft south of the outlet structure.

II.2 Potential Stormwater Pollutants

Pollutants of Concern			
Pollutant	Circle One: E=Expected to be of concern N=Not Expected to be of concern		Additional Information and Comments
Suspended-Solid/ Sediment	(E)	N	Drains located in planter areas
Nutrients	(E)	N	Fertilizers, trash and debris are expected.
Heavy Metals	(E)	N	Presence of automobiles
Pathogens (Bacteria/Virus)	(E)	N	Bacterial indicators are routinely detected in pavement runoff.
Pesticides	(E)	N	Project includes landscaped areas
Oil and Grease	(E)	N	Project includes parking areas.
Toxic Organic Compounds	(E)	N	Landscape maintenance areas will be present.
Trash and Debris	(E)	N	Project will include foot traffic areas

II.3 Hydrologic Conditions of Concern

Determine if streams located downstream from the project area are determined to be potentially susceptible to hydromodification impacts.

☐ No – Show map and/or describe and reference supporting documentation in the space below.

☒ Yes – Describe applicable hydrologic conditions of concern in the space below.

The project site discharges water into a part of Aliso Creek that has bed and bank that are not concrete lined. Per the South Orange County Hydromodification Plan (HMP), the project is not exempt from hydromodification impacts and hydromodification must be addressed.

II.4 Post Development Drainage Characteristics

Describe post development drainage characteristics. *Refer to Section 2.2.4 in the TGD.*

All runoff will enter drain inlets and flow to a proprietary biotreatment unit where it is treated per criteria. Runoff is then discharged into detention tanks with pumps to control outflow from the site. A new underground storm drain pipe approximately 125 ft in length will convey the site discharge to an outlet structure that will route the flow to the existing curb and gutter onsite. Water will then flow to the existing catch basin located 450 ft south of the proposed outlet structure.

II.5 Property Ownership/Management

Describe property ownership/management. *Refer to Section 2.2.5 in the TGD.*

The property is owned by BPM Investments. This WQMP is their responsibility to maintain and oversee. All required inspections and maintenance will be performed and documented by the owner and/or their appointed maintenance contractor(s).

Section III Site Description

III.1 Physical Setting

Fill out table with relevant information. *Refer to Section 2.3.1 in the TGD.*

Planning Area/ Community Name	N/A
Location/Address	6 Polaris Way
	Aliso Viejo, CA
Land Use	Office
Zoning	Proposed Office
Acreage	2.27 acres
Predominant Soil Type	Soil Type D per OC TGD Appendix Fig. XVI-2a

III.2 Site Characteristics

Precipitation Zone	0.80"
Topography	Site slightly slopes towards the southeast. Surface elevations range from 440+/- and 437+/-. A landscaped slope behind the site, adjacent to the road, varies between 12 ft on the west and 0 ft on the east.
Drainage Patterns/Connections	Runoff from the existing site drains as surface flow to the surrounding street, toward v-gutters, and to existing catch basins located approximately 500 ft south of the site.
Soil Type, Geology, and Infiltration Properties	The soil type is classified as "D" per OC TGD Appendix Fig. XVI-2a. Infiltration testing has not been performed for the site.

Site Characteristics (continued)	
Hydrogeologic (Groundwater) Conditions	Groundwater data is not known at this time.
Geotechnical Conditions (relevant to infiltration)	High clay content and most likely difficult to infiltrate.
Off-Site Drainage	No offsite drainage runoff will discharge through the site.
Utility and Infrastructure Information	Approximately 125 ft of new storm drain pipe will connect the site storm drain system to the proposed outlet structure approximately 125 ft west of the site.

III.3 Watershed Description

Receiving Waters	Aliso Creek, Pacific Ocean
303(d) Listed Impairments	Indicator Bacteria, Selenium, Total Nitrogen as N, Toxicity
Applicable TMDLs	Indicator Bacteria, Selenium, Total Nitrogen as N, Toxicity, Benthic Community Effects, Diazinon, Phosphorus
Pollutants of Concern for the Project	Suspended-Soilids/Sediment, Nutrients, Heavy Metals, Pathogens (Bacteria/Virus), Pesticides, Oil and Grease, Toxic Organic Compounds, Trash and Debris.
Environmentally Sensitive and Special Biological Significant Areas	The project site is not located within 200 feet of, or adjacent to, an environmentally Sensitive Area (ESA) or an Area of Special Biological Significance (ASBS).

Section IV Best Management Practices (BMPs)

IV. 1 Project Performance Criteria

Project Performance Criteria	
If HCOC exists, list applicable hydromodification control performance criteria (MWQMP Appendix C)	The Hydromodification Plan (HMP) criteria for South Orange County are designed to manage the increase in runoff discharge rates and durations from all Priority Development Projects (PDPs) and they apply to all PDPs. The HMP criteria include the following: • All PDPs must ensure that post-project runoff flow rates and durations for the PDP shall not exceed pre-development, naturally occurring, runoff flow rates and durations by more than 10% of the time, from 10% of the 2-year runoff event up to the 10-year runoff event. Pre-Development 2 yr Peak Flow Rate = 1.50 cu-ft/s Pre-Development 110% Peak Flow Rate = 1.65 cu-ft/s Post-Development 2yr Peak Flow Rate = 2.84 cu-ft/s Pre-Development 10 yr Peak Flow Rate = 3.02 cu-ft/s Pre-Development 110% Peak Flow Rate = 3.32 cu-ft/s Post-Development 10 yr Peak Flow Rate = 5.17 cu-ft/s The watershed flowrates for the 2-year and 10-year storm events are the critical factors for Hydromodification determination. Utilizing AES software for small-area unit hydrograph, the runoff flow rates were calculated for 2 year and 10 year storm events. The post-development peak flow rate is larger than 110% of the pre development flow rate. As a result, detention tanks will be utilized to reduce the post-development peak flow rate and satisfy the criteria. The complete calculations are included in Attachment A.
List applicable LID performance criteria (Section 7.II-2.4.3 from MWQMP)	Priority projects must infiltrate, harvest and use, evapotranspire, or biotreat/biofilter, the 85th percentile, 24-hour storm event (Design Capture Volume). A properly designed biotreatment system may only be considered if infiltration, harvest and use, and evapotranspiration (ET) cannot be feasibly implemented for the full design capture volume. In this case, infiltration, harvest and use, and ET practices must be implemented to the greatest extent feasible and biotreatment may be provided for the remaining design capture volume. Based on the LID hierarchy of stormwater treatment, several treatment methods were considered for this project. Due to the location and soils of the

	site, infiltration is likely not feasible. Harvest and use is also not feasible. Refer to the worksheet in Appendix D.
List applicable treatment control BMP performance criteria (Section 7.II-3.2.2 from MWQMP)	If it is not feasible to meet LID performance criteria through retention and/or biotreatment, as described above, provided on-site or at a sub-regional/regional scale, then treatment control BMPs shall be provided on-site or offsite prior to discharge to waters of the US. Sizing of treatment control BMP(s) shall be based on one of the following criteria: • Capture and infiltrate or treat 80 percent of average annual runoff volume • Capture and infiltrate or treat the runoff from the 24-hour, 85th percentile storm event, as determined from the County of Orange's 85th percentile precipitation isopluvial map and draw down the stored volume in no more than 48 hours following the end of precipitation. • Treat the maximum flow rate of runoff produced by the 85th percentile hourly rainfall intensity, as determined from the local historical rainfall record multiplied by a factor of two • The maximum flow rate of runoff produced from a rainfall intensity of 0.2 inch of rainfall per hour, for each hour of a storm event. All runoff is routed through a proprietary biotreatment unit. This device will be sized based upon the OC TGD flow based sizing method for the maximum flow rate of runoff produced from a rainfall intensity of 0.2 inch of rainfall per hour. Full Calculations based on the OC TGD are included in Attachment A.
Calculate LID design storm capture volume for Project.	Flow-based BMP Calculation for proprietary biotreatment unit Intensity, I=0.2 in/hr Treated Impervious Area Percentage 75,900/99,000= 76.7% C=0.845x0.77+0.15=0.73 Tributary Area, A=99,000 sf = 2.27 ac Q=CxIxA = (0.73 x 0.2 x 99,000)/12/3600 = <u>0.334 cfs</u> proprietary biotreatment unit capacity: <u>0.346 cfs</u>

IV.2. SITE DESIGN AND DRAINAGE PLAN

The proposed site mimics the existing site by sloping west to east, and preserving the slope adjacent to the road. Runoff will slope towards landscape areas and drain inlets. Landscape around the site is maximized to limit impervious areas.

Infiltration and harvest and use are likely not feasible. Therefore, biotreatment will be incorporated to satisfy criteria. The project site consists of one Drainage Management Area (DMA)). The discharge from the proprietary biotreatment unit will then be detained in a series of underground tanks before it is discharged at a controlled rate, using a pump, into a proposed outlet structure located 125 ft east of the outlet of the tanks. Runoff will then be routed to the existing curb and gutter and flow to the existing catch basin located 450 ft south of the proposed outlet structure. (See WQMP Site Plan in Section VI).

IV.3 LID BMP SELECTION AND PROJECT CONFORMANCE ANALYSIS

IV.3.1 Hydrologic Source Controls

The configuration of the site and constraints based upon the existing buildings do not allow for HSC options.

Name	Included?
Localized on-lot infiltration	☐
Impervious area dispersion (e.g. roof top disconnection)	☐
Street trees (canopy interception)	☐
Residential rain barrels (not actively managed)	☐
Green roofs/Brown roofs	☐
Blue roofs	☐
Impervious area reduction (e.g. permeable pavers, site design)	☐
Other:	☐
Other:	☐
Other:	☐
Other:	☐
Other:	☐
Other:	☐
Other:	☐
Other:	☐

IV.3.2 Infiltration BMPs

Identify infiltration BMPs to be used in project. If design volume cannot be met state why BMPs cannot be met

Name	Included?
Bioretention without underdrains	☐
Rain gardens	☐
Porous landscaping	☐
Infiltration planters	☐
Retention swales	☐
Infiltration trenches	☐
Infiltration basins	☐
Drywells	☐
Subsurface infiltration galleries	☐
French drains	☐
Permeable asphalt	☐
Permeable concrete	☐
Permeable concrete pavers	☐
Other:	☐
Other:	☐

Show calculations below to demonstrate if the LID Design Storm Capture Volume can be met with infiltration BMPs. If not document how much can be met with infiltration and document why it is not feasible to meet the full volume with infiltration BMPs.

Infiltration is not feasible due to the existing soil type based on OC TGD Appendix Fig. XVI-2a. Refer to infiltration BMP feasibility worksheet in Attachment D.

IV.3.3 Evapotranspiration, Rainwater Harvesting BMPs

Name	Included?
All HSCs; *See Section IV.3.1*	☐
Surface-based infiltration BMPs	☐
Biotreatment BMPs	☐
Above-ground cisterns and basins	☐
Underground detention	☐
Other:	☐
Other:	☐
Other:	☐

Show calculations below to demonstrate if the LID Design Storm Capture Volume can be met with evapotranspiration, rainwater harvesting BMPs in combination with infiltration BMPs. If not document how much can be met with either infiltration BMPs, evapotranspiration, rainwater harvesting BMPs, or a combination, and document why it is not feasible to meet the full volume with either of these BMPs categories.

Rainwater harvesting is not feasible due to minimum irrigation area required based on conservation landscape design being larger than proposed irrigated area. Refer to Worksheet J in Attachment D for calculations.

IV.3.4 Biotreatment BMPs

Name	Included?
Bioretention with underdrains	☐
Stormwater planter boxes with underdrains	☐
Proprietary vegetated biotreatment systems	☒
Other:	☐
Other:	☐

Show calculations below to demonstrate if the LID Design Storm Capture Volume can be met with a combination of infiltration, evapotranspiration, rainwater harvesting and/or biotreatment BMPs. Show calulations to demonstrate the "pre-filter detention volume plus pre volume" in biofiltration BMPs is at least 0.75 of the reaming DCV (after accouting for retention achieved before using biofiltration BMPs). If it is not feasible to meet the DCV with a combination of either infiltration BMPs, evapotranspiration, rainwater harvesting BMPs, document why it is not feasible to meet the full volume with either of these BMPs categories and document how much can be feasibly retain, plus biofiltered.

Proprietary biotreatment unit will be located at 33°35'11"N & 117°43'24"W.

The bio treatment sizing calculations are included as Attachment C.

IV.3.5 Hydromodification Control BMPs

Describe hydromodification control BMPs. See Section 5 TGD. Include sections for selection, suitability, sizing, and infeasibility, as applicable. Detail compliance with Prior Conditions of Approval.

Hydromodification Control BMPs

BMP Name	BMP Description
Underground detention	Two x 50′ long x 72″ diameter underground cisterns with internal pump. 7″ orifice plate on outlet pipe and 12″ overflow pipe.*

* Modeled using AES flow-through detention basin routing. Internal pump ensures continuous pump discharge rate of 3.09 cfs (<3.32 cfs set forth in TGD criteria).

Sizing: Volume: 2,500 cubic feet
Peak Q inflow: 5.17 cfs
Peak Q outflow: 3.09 cfs
Peak deph of water: 4.56 ft

IV.3.6 Non-Structural Source Control BMPs

Fill out non-structural source control check box forms or provide a brief narrative explaining if non-structural source controls were not used.

Non-Structural Source Control BMPs				
Identifier	**Name**	**Check One**		**If not applicable, state brief reason**
		Included	**Not Applicable**	
N1	Education for Property Owners, Tenants and Occupants	☒	☐	
N2	Activity Restrictions	☒	☐	
N3	Common Area Landscape Management	☒	☐	
N4	BMP Maintenance	☒	☐	
N5	Title 22 CCR Compliance (How development will comply)	☐	☒	No hazardous waste associated with the proposed project
N6	Local Industrial Permit Compliance	☐	☒	No industrial related or fueling stations
N7	Spill Contingency Plan	☐	☒	No hazardous waste associated with the proposed project
N8	Underground Storage Tank Compliance	☐	☒	No underground storage tank proposed
N9	Hazardous Materials Disclosure Compliance	☐	☒	No hazardous materials associated with the proposed project
N10	Uniform Fire Code Implementation	☐	☒	No hazardous materials associated with the proposed project
N11	Common Area Litter Control	☒	☐	
N12	Employee Training	☒	☐	
N13	Housekeeping of Loading Docks	☐	☒	No loading docks proposed

N15	Street Sweeping Private Streets and Parking Lots	☒	☐	
N16	Retail Gasoline Outlets	☐	☒	No gasoline outlet proposed

N1 – Education for Property Owners, Tenants and Occupants: Materials related to good housekeeping practices for the protection of stormwater will be provided to the employees and tenants. The educational program and materials will be prepared by Irvine Company Office Properties and provided to the employees and tenants. The educational materials for the Property Owners, Tenants, and Occupants in included as Attachment A.

N2 – Activity Restrictions: For stormwater protection car washing is not allowed at this facility.

N3 – Common Area Landscape Management: Maintenance of the landscape areas is to be performed consistent with the Orange County Water Conservation Resolution. Fertilizer and/or Pesticide use shall be limited and consistent with City and County guidelines. Incorporate fertilizer directly into soil around the plant, where possible, to minimize potential surface runoff.

N4 – BMP Maintenance: Operation and Maintenance of all BMPs is included in Attachment C.

N11 – Common Area Liter Control: Property owner shall implement a trash management and litter control procedure, aimed at reducing pollution of stormwater. They may contract with their landscape maintenance firm to provide this service during regularly scheduled maintenance, which should consist of litter patrol, emptying of trash receptacles, and noting trash disposal violations by tenants.

N12 - Employee Training: The property owner shall develop an education program to train future employees in good housekeeping practices for the protection of stormwater. Recommended educational materials are included in Attachment A.

N14 - Common Area Catch Basin Inspection: The owner is required to have all drainage facilities inspected, cleaned, and maintained on an annual basis. Cleaning should take place in the late summer/early fall prior to October 1st. Drainage facilities include catch basins (inlets) and the Filterra units.

N15 - Street Sweeping Private Streets and Parking Lots: Streets and parking lots are required to be swept monthly.

IV.3.7 Structural Source Control BMPs

Fill out structural source control check box forms or provide a brief narrative explaining if Structural source controls were not used.

Structural Source Control BMPs

Identifier	Name	Check One		If not applicable, state brief reason
		Included	Not Applicable	
S1	Provide storm drain system stenciling and signage	☒	☐	
S2	Design and construct outdoor material storage areas to reduce pollution introduction	☐	☒	No outdoor storage areas proposed
S3	Design and construct trash and waste storage areas to reduce pollution introduction	☐	☒	No trash enclosures located in project area.
S4	Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control	☒	☐	
S5	Protect slopes and channels and provide energy dissipation	☐	☒	No channels proposed
	Incorporate requirements applicable to individual priority project categories (from SDRWQCB NPDES Permit)	☐	☒	Site is less than one acre
S6	Dock areas	☐	☒	No dock areas proposed
S7	Maintenance bays	☐	☒	No maintenance bays proposed
S8	Vehicle wash areas	☐	☒	No vehicle washing areas proposed
S9	Outdoor processing areas	☐	☒	No outdoor processing areas proposed
S10	Equipment wash areas	☐	☒	No equipment washing areas proposed.
S11	Fueling areas	☐	☒	No fueling areas proposed.
S12	Hillside landscaping	☐	☒	No hillside landscaping.
S13	Wash water control for food preparation areas	☐	☒	No food preparation areas proposed.
S14	Community car wash racks	☐	☒	No car washing proposed.

S1 – Storm Drain Signage: Owner shall provide stenciling or labeling of all storm drain inlets and catch basins, constructed or modified, within the project area with prohibitive language.

S4 - Use efficient irrigation systems & landscape design, water conservation, smart controllers, and source control: Owner shall utilize rain shutoff valves to prevent irrigation after precipitation. As the landscape area around the front entry is minimal the owner shall monitor and adjust the irrigation devices to avoid overspray and fix broken sprinkler heads or lines as soon as practical.

IV.4 ALTERNATIVE COMPLIANCE PLAN (IF APPLICABLE)

IV.4.1 Request of Waiver of LID BMPs

Not applicable.

IV.4.2 Water Quality Credits

Not applicable.

Description of Proposed Project				
Project Types that Qualify for Water Quality Credits (Select all that apply):				
☐Redevelopment projects that reduce the overall impervious footprint of the project site.	☐Brownfield redevelopment, meaning redevelopment, expansion, or reuse of real property which may be complicated by the presence or potential presence of hazardous substances, pollutants or contaminants, and which have the potential to contribute to adverse ground or surface WQ if not redeveloped.		☐ Higher density development projects which include two distinct categories (credits can only be taken for one category): those with more than seven units per acre of development (lower credit allowance); vertical density developments, for example, those with a Floor to Area Ratio (FAR) of 2 or those having more than 18 units per acre (greater credit allowance).	
☐ Mixed use development, such as a combination of residential, commercial, industrial, office, institutional, or other land uses which incorporate design principles that can demonstrate environmental benefits that would not be realized through single use projects (e.g. reduced vehicle trip traffic with the potential to reduce sources of water or air pollution).		☐ Transit-oriented developments, such as a mixed use residential or commercial area designed to maximize access to public transportation; similar to above criterion, but where the development center is within one half mile of a mass transit center (e.g. bus, rail, light rail or commuter train station). Such projects would not be able to take credit for both categories, but may have greater credit assigned		☐ Redevelopment projects in an established historic district, historic preservation area, or similar significant city area including core City Center areas (to be defined through mapping).
☐Developments with dedication of undeveloped portions to parks, preservation areas and other pervious uses.	☐ Developments in a city center area.	☐ Developments in historic districts or historic preservation areas.	☐ Live-work developments, a variety of developments designed to support residential and vocational needs together – similar to criteria to mixed use development; would not be able to take credit for both categories.	☐In-fill projects, the conversion of empty lots and other underused spaces into more beneficially used spaces, such as residential or commercial areas.
Calculation of Water Quality Credits (if applicable)

AUTOMOBILE PARKING

R-3

Parked automobiles may contribute pollutants to the storm drain because poorly maintained vehicles may leak fluids containing hydrocarbons, metals, and other constituents. In addition, heavily soiled automobiles may drop clods of dirt onto the parking surface, contributing to the sediment load when runoff is present. During rain events, or wash-down activities, the pollutants may be carried into the storm drain system.

Think before leaving anything in the storm drain. The ocean starts at your front door.

Designated BMPs

- Residents will be required to remove vehicles from the street during designated street sweeping/cleaning times.
- Residents are encouraged to place a pan or similar collection device under their automobile if it is leaking fluids, until such time as the leak may be repaired.
- Use dry cleaning methods to remove any materials deposited by vehicles (e.g. adsorbents for fluid leaks, sweeping for soil clod deposits).
- Residents are encouraged to perform routine maintenance on their automobiles to minimize fluid leaks, and maximize efficiency.

Optional BMPs

- Residents are encouraged/required to park automobiles over permeable surfaces (e.g. gravel, or porous cement).
- Limit vehicle parking to covered areas.

IC2. BUILDING MAINTENANCE

1. Properly collect and dispose of water when pressure washing buildings, rooftops, and other large objects.
2. Properly prepare work area before conducting building maintenance.
3. Properly clean and dispose of equipment and wastes used and generated during building maintenance.
4. Employ soil erosion and stabilization techniques when exposing large areas of soil.
5. Store toxic material under cover when not in use and during precipitation events.
6. Properly dispose of fluids from air conditioning, cooling tower, and condensate drains.
7. Regularly inspect air emission control equipment under AQMD permit.
8. Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.

OPTIONAL:

9. Switch to non-toxic chemicals for maintenance when possible.
10. Use chemicals that can be recycled.

Pollution Prevention

Consider pollution prevention measures at all times for improving pollution control. Implementation of pollution prevention measures may reduce or eliminate the need to implement other more costly or complicated procedures.

The following pollution prevention principles apply to most industries:

- Affirmative Procurement - Use alternative, safer, or recycled products.
- Redirect storm water flows away from areas of concern.
- Reduce use of water or use dry methods.
- Reduce storm water flow across facility site.
- Recycle and reuse waste products and waste flows.
- Move or cover potential pollution from storm water contact.
- Provide on-going employee training in pollution prevention.

Best Management Practices

1. **Properly collect and dispose of water when pressure washing buildings, rooftops, and other large objects.**
    - If pressure washing where the surrounding area is paved, use a water collection device that enables collection of wash water and associated solids. Use a sump pump, wet vacuum or similarly effective device to collect the runoff and loose materials. Dispose of the collected runoff and solids properly.
    - If pressure washing on a grassed area (with or without soap), runoff must be dispersed as sheet flow as much as possible, rather than as a concentrated stream. The wash runoff must remain on the grass and not drain to pavement.
2. **Properly prepare work area before conducting building maintenance.**
    - Use ground or drop cloths underneath outdoor painting, scraping, and sandblasting work, and properly dispose of collected material daily.
    - Use a ground cloth or oversized tub for activities such as paint mixing and tool cleaning.
    - Use a storm drain cover, filter fabric, or similarly effective runoff control mechanism if dust, grit, wash water, or other pollutants may escape the work area and enter a storm drain.
3. **Properly clean and dispose of equipment and wastes used and generated during building maintenance.**
    - Clean paint brushes and tools covered with water-based paints in sinks connected to sanitary sewers or in portable containers that can be dumped into a sanitary sewer

drain. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents (e.g., paint thinner, turpentine, etc.) for recycling or proper disposal.
- Properly dispose of wash water, sweepings, and sediments.
- Properly store equipment, chemicals, and wastes.
- Do not dump any toxic substance or liquid waste on the pavement, the ground, or toward a storm drain.

OPTIONAL:
- Recycle residual paints, solvents, lumber, and other materials to the maximum extent practicable

4. **Employ soil erosion and stabilization techniques when exposing large areas of soil.**
    - Confine excavated materials to pervious surfaces away from storm drain inlets, sidewalks, pavement, and ditches. Material must be covered if rain is expected.
    - Use chemical stabilization or geosynthetics to stabilize bare ground surfaces.
5. **Store toxic material under cover when not in use and during precipitation events.**
6. **Properly dispose of fluids from air conditioning, cooling tower, and condensate drains.**
7. **Regularly inspect air emission control equipment under AQMD permit.**

8. **Training**

    1. **Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.**
    2. **Train employees on proper spill containment and cleanup.**
        - Establish training that provides employees with the proper tools and knowledge to immediately begin cleaning up a spill.
        - Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.
        - BMP IC17 discusses Spill Prevention and Control in detail.
    3. **Establish a regular training schedule, train all new employees, and conduct annual refresher training.**
    4. **Use a training log or similar method to document training.**

OPTIONAL:

9. **Switch to non-toxic chemicals for maintenance when possible.**
    - If cleaning agents are used, select biodegradable products whenever feasible
    - Consider using a waterless and non-toxic chemical cleaning method for graffiti removal (e.g. gels or spray compounds).
10. **Use chemicals that can be recycled.**
    - Buy recycled products to the maximum extent practicable

R-6 DISPOSAL OF GREEN WASTES

Green wastes entering the storm drain may clog the system creating flooding problems. Green wastes washed into receiving waters create an oxygen demand as they are decomposed, reducing the available oxygen for aquatic life. Pesticide and nutrient residues may be carried to the receiving water with the green wastes.

Think before leaving anything in the storm drain. The ocean starts at your front door.

Designated BMPs

- Prohibit the disposal of green wastes to the street, gutter, public right-of-way, storm drain, or receiving water.

Optional BMPs

- Implement a city wide green waste collection service as a department of the regular waste removal operations.

DF-1

DRAINAGE FACILITY OPERATION AND MAINTENANCE

As a consequence of its function, the stormwater conveyance system collects and transports urban runoff and storm water that may contain certain pollutants. Consequently these pollutants may accumulate in the system and must be removed periodically. In addition, the systems must also be maintained to function properly hydraulically to avoid flooding. Maintaining the system may involve the following activities:

Inspection and Cleaning of Stormwater Conveyance Structures

Controlling Illicit Connections and Discharges

Controlling Illegal Dumping

MODEL PROCEDURES:

1. Inspection and Cleaning of Drainage Facilities

General Guidelines

- ✓ Annually inspect and clean drainage facilities as needed. Maintain appropriate records. This information should be used to determine problem areas that may need to be checked more often.
- ✓ Remove trash and debris as needed from open channels and properly dispose of these materials (at an approved landfill or recycling facility). It should be noted that major debris removal may require other regulatory permits prior to completing the work.
- ✓ Conduct annual visual inspections during the dry season to determine if there are problem inlets where sediment/trash or other pollutants accumulate.
- ✓ Eliminate any discharges that may occur while maintaining and cleaning any municipal drainage facilities.
- ✓ Train crews in proper maintenance activities, including record keeping and disposal.
- ✓ Provide energy dissipaters (e.g. riprap) below culvert outfalls to minimize potential for erosion.

Storm Drain Flushing

- ✓ Flushing of storm drains or storm drain inlets should only be done in emergencies.
- ✓ If flushed, the material should be collected (vacuumed), treated with an appropriate filtering device to remove sand and debris and disposed of properly.

Waste Management

- ✓ Store wastes collected from cleaning activities of the drainage facilities in appropriate containers or temporary storage sites in a manner that prevents discharge to the storm drain.
- ✓ Dewater the wastes if necessary with outflow into the sanitary sewer if permitted. Water should be treated with an appropriate filtering device to remove the sand and debris prior to discharge to the sanitary sewer. If discharge to the sanitary sewer is not permitted, water should be pumped or vacuumed to a tank and properly disposed of. Do not dewater near a storm drain or stream.

➔ *Note: Permission must be obtained for any discharge of wash water to the sanitary sewer from the local sewering agency.*

OPTIONAL:

- Provide for laboratory analysis of at least one randomly collected sediment (less the debris) sample per year from the storm drain inlet cleaning program to ensure that it does not meet the EPA criteria for hazardous waste. If the sample is determined to be hazardous, the sediment must be disposed of as hazardous waste.

2. Controlling Illicit Connections and Discharges

Improper physical connections to the storm drain system can occur in a number of ways, such as overflow cross-connects from sanitary sewers and floor drains from businesses like auto shops and restaurants. Illicit discharges and illegal connections can generally be detected and investigated through a combination of programs and approaches that target a variety of pollutants and sources.

- ✓ Report prohibited discharges such as dumping, paint spills, abandoned oil containers, etc. observed during the course of normal daily activities so they can be investigated, contained, and cleaned up.
- ✓ Conduct field investigations to detect and eliminate existing illicit connections and improper disposal of pollutants into the storm drain (i.e. identify problem areas where discharges or illegal connections may occur and follow up stream to determine the source(s)).
- ✓ Report all observed illicit connections and discharges to the 24-hour water pollution problem reporting hotline (714) 567-6363.
- ✓ Encourage public reporting of improper waste disposal by distributing public education materials and advertising the 24-hour water pollution problem reporting hotline.

Storm Drain Stenciling

Storm drain system signs act as highly visible source controls that are typically stenciled directly adjacent to storm drain inlets.

✓ Implement a storm drain stenciling program.

OPTIONAL:

- Create a volunteer work force to stencil storm drain inlets; municipal staff must organize, market, and provide training to initiate the volunteer program:
  - Promote volunteer services through radio/television and mail-out campaigns.
  - Educate businesses and residents about storm water pollution, the storm drain system, and the watershed and provide information on alternatives such as recycling, household hazardous waste disposal, and safer products.

3. Controlling Illegal Dumping

Illegally dumped wastes can cause storm water and receiving water quality problems as well as clog the storm drain system itself. Non-hazardous solid wastes may include garbage, trash, refuse, paper, rubbish, ashes, industrial wastes, demolition and construction wastes, abandoned vehicles and parts thereof, discarded home and industrial appliances, manure, vegetable or animal solid and semi-solid wastes and other discarded solid or semi-solid waste provided that such wastes do not contain wastes which must be managed as hazardous wastes, or wastes which contain soluble pollutants in concentration which exceed applicable water quality objectives or could cause degradation of waters of the state.

Field Investigation

✓ Report prohibited discharges such as dumpings observed during the course of normal daily activities so they can be investigated, contained and cleaned up.

✓ Conduct field investigations to detect and eliminate improper disposal of pollutants into the storm drain (i.e. identify problem areas where discharges or illegal connections may occur and follow up stream to determine the source(s)).

✓ Report all observed illicit connections and discharges to the 24-hour water pollution problem reporting hotline (714) 567-6363.

✓ Encourage public reporting of improper waste disposal by distributing public education materials and advertising the 24-hour water pollution problem reporting hotline.

OPTIONAL:

- Post “No Dumping” signs in problem areas with a phone number for reporting dumping and disposal. Signs should also indicate fines and penalties for illegal dumping.

Training/Education/ Outreach

- ✓ Annually train municipal employees to recognize and report illegal dumping.
- ✓ Encourage public reporting of illegal dumping by advertising the 24-hour water pollution problem reporting hotline (714) 567-6363.

OPTIONAL:

- Educate the public with public education materials such as a hotline and/or door hanger (door hangers are placed on the front doors in neighborhoods where illegal dumping has occurred to inform the reader why illegal dumping is a problem, and that illegal dumping carries a significant financial penalty).
- Educate the public through volunteer water quality monitoring programs. Volunteers can be trained to notice and report the presence and suspected source of an observed pollutant to the appropriate public agency.

LIMITATIONS:

Clean-up activities may create a slight disturbance for local aquatic species. Access to items and material on private property may be limited. Trade-offs may exist between channel hydraulics and water quality/riparian habitat. If storm channels or basins are recognized as wetlands, many activities, including maintenance, may be subject to regulation and permitting.

Santa Clara Valley Urban Runoff Pollution Prevention Program. 1997 Urban Runoff Management Plan. September 1997, updated October 2000.

IC6. LANDSCAPE MAINTENANCE

1. Take steps to reduce landscape maintenance requirements.
2. Properly store and dispose of gardening wastes.
3. Use mulch or other erosion control measures on exposed soils.
4. Properly manage irrigation and runoff.
5. Properly store and dispose of chemicals.
6. Properly manage pesticide and herbicide use.
7. Properly manage fertilizer use.
8. Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.

OPTIONAL:

9. Incorporate integrated pest management techniques where appropriate.

Pollution Prevention

Consider pollution prevention measures at all times for improving pollution control. Implementation of pollution prevention measures may reduce or eliminate the need to implement other more costly or complicated procedures.

The following pollution prevention principles apply to most industries:

- Affirmative Procurement - Use alternative, safer, or recycled products.
- Redirect storm water flows away from areas of concern.
- Reduce use of water or use dry methods.
- Reduce storm water flow across facility site.
- Recycle and reuse waste products and waste flows.
- Move or cover potential pollution from storm water contact.
- Provide on-going employee training in pollution prevention.

Best Management Practices

1. **Take steps to reduce landscape maintenance requirements.**
    - Where feasible, retain and/or plant native vegetation with features that are determined to be beneficial. Native vegetation usually requires less maintenance than planting new vegetation.
    - When planting or replanting consider using low water use flowers, trees, shrubs, and groundcovers.

    OPTIONAL:
    - Consider alternative landscaping techniques such as naturescaping and xeriscaping.
2. **Properly store and dispose of gardening wastes.**
    - Dispose of grass clippings, leaves, sticks, or other collected vegetation as garbage at a permitted landfill or by composting.
    - Do not dispose of gardening wastes in streets, waterways, or storm drainage systems.
    - Place temporarily stockpiled material away from watercourses and storm drain inlets, and berm and/or cover.
3. **Use mulch or other erosion control measures on exposed soils.**
4. **Properly manage irrigation and runoff.**
    - Irrigate slowly or pulse irrigate so the infiltration rate of the soil is not exceeded.
    - Inspect irrigation system regularly for leaks and to ensure that excessive runoff is not occurring.
    - If re-claimed water is used for irrigation, ensure that there is no runoff from the landscaped area(s).
    - If bailing of muddy water is required (e.g. when repairing a water line leak), do not put it in the storm drain; pour over landscaped areas.

OPTIONAL:

- Use automatic timers to minimize runoff.
- Use popup sprinkler heads in areas with a lot of activity or where pipes may be broken. Consider the use of mechanisms that reduce water flow to broken sprinkler heads.

5. Properly store and dispose of chemicals.

- Implement storage requirements for pesticide products with guidance from the local fire department and/or County Agricultural Commissioner.
- Provide secondary containment for chemical storage.
- Dispose of empty containers according to the instructions on the container label.

OPTIONAL:

- Triple rinse containers and use rinse water as product.

6. Properly manage pesticide and herbicide use.

- Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of pesticides and herbicides and training of applicators and pest control advisors.
- Follow manufacturers' recommendations and label directions.
- Use pesticides only if there is an actual pest problem (not on a regular preventative schedule). When applicable use less toxic pesticides that will do the job. Avoid use of copper-based pesticides if possible. Use the minimum amount of chemicals needed for the job.
- Do not apply pesticides if rain is expected or if wind speeds are above 5 mph.
- Do not mix or prepare pesticides for application near storm drains. Prepare the minimum amount of pesticide needed for the job and use the lowest rate that will effectively control the targeted pest.
- Whenever possible, use mechanical methods of vegetation removal rather than applying herbicides. Use hand weeding where practical.
- Do not apply any chemicals directly to surface waters, unless the application is approved and permitted by the state. Do not spray pesticides within 100 feet of open waters.
- Employ techniques to minimize off-target application (e.g. spray drift) of pesticides, including consideration of alternative application techniques.
- Clean pavement and sidewalk if chemicals are spilled on these surfaces before applying irrigation water.
- When conducting mechanical or manual weed control, avoid loosening the soil, which could lead to erosion.

OPTIONAL:

- Purchase only the amount of pesticide that you can reasonably use in a given time period.
- Careful soil mixing and layering techniques using a topsoil mix or composted organic material can be used as an effective measure to reduce herbicide use and watering.

7. Properly manage fertilizer use.

- Follow all federal, state, and local laws and regulations governing the use, storage, and disposal of fertilizers.
- Follow manufacturers' recommendations and label directions.
- Employ techniques to minimize off-target application (e.g. spray drift) of fertilizer, including consideration of alternative application techniques. Calibrate fertilizer distributors to avoid excessive application.
- Periodically test soils for determining proper fertilizer use.

- Fertilizers should be worked into the soil rather than dumped or broadcast onto the surface.
- Clean pavement and sidewalk if chemicals are spilled on these surfaces before applying irrigation water.
- Sweep pavement and sidewalk if fertilizer is spilled on these surfaces before applying irrigation water.

OPTIONAL:

- Use slow release fertilizers whenever possible to minimize leaching

8. Training

1. **Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.**
2. **Educate and train employees on the use of pesticides and pesticide application techniques. Only employees properly trained to use pesticides can apply them.**
3. **Train and encourage employees to use integrated pest management techniques.**
4. **Train employees on proper spill containment and cleanup.**
   - Establish training that provides employees with the proper tools and knowledge to immediately begin cleaning up a spill.
   - Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.
   - BMP IC17 discusses Spill Prevention and Control in detail.
5. **Establish a regular training schedule, train all new employees, and conduct annual refresher training.**
6. **Use a training log or similar method to document training.**

OPTIONAL:

9. Incorporate the following integrated pest management techniques where appropriate:

- Mulching can be used to prevent weeds where turf is absent.
- Remove insects by hand and place in soapy water or vegetable oil. Alternatively, remove insects with water or vacuum them off the plants.
- Use species-specific traps (e.g. pheromone-based traps or colored sticky cards).
- Sprinkle the ground surface with abrasive diatomaceous earth to prevent infestations by soft-bodied insects and slugs. Slugs also can be trapped in small cups filled with beer that are set in the ground so the slugs can get in easily.
- In cases where microscopic parasites, such as bacteria and fungi, are causing damage to plants, the affected plant material can be removed and disposed of (pruning equipment should be disinfected with bleach to prevent spreading the disease organism).
- Small mammals and birds can be excluded using fences, netting, and tree trunk guards.
- Promote beneficial organisms, such as bats, birds, green lacewings, ladybugs, praying mantis, ground beetles, parasitic nematodes, trichogramma wasps, seedhead weevils, and spiders that prey on detrimental pest species.

FP-3

ROADS, STREETS, AND HIGHWAYS OPERATION AND MAINTENANCE

Streets, roads, and highways are significant sources of pollutants in storm water discharges, and operation and maintenance (O&M) practices, if not conducted properly, can contribute to the problem. O&M practices may involve one or more of the following activities:

1. **Sweeping & Cleaning**
2. **Street Repair & Maintenance**
3. **Bridge and Structure Maintenance**

Streets, roads, and highways are significant sources of pollutants in storm water discharges, and operation and maintenance (O&M) practices, if not conducted properly, can contribute to the problem. O&M practices may involve one or more of the following activities:

Pollution prevention measures that should be consider and the minimum required and optional model procedures for each performance standard are provided below.

POLLUTION PREVENTION:

Pollution prevention measures have been considered and incorporated in the model procedures. Implementation of these measures may be more effective and reduce or eliminate the need to implement other more complicated or costly procedures. Possible pollution prevention measure for roads, streets, and highways operation and maintenance include:

- Use the least toxic materials available (e.g. water based paints, gels or sprays for graffiti removal)
- Recycle paint and other materials whenever possible.
- Once per year, educate municipal staff on pollution prevention measures.

MODEL PROCEDURES:

1. Sweeping & Cleaning

Sweeping Frequency and Timing

- ✓ Maintain a consistent sweeping schedule. Provide minimum monthly sweeping of streets.
- ✓ Perform street cleaning during dry weather if possible.
- ✓ Avoid wet cleaning or flushing of streets, and utilize dry methods where possible.
- ✓ If flushing of a street is absolutely necessary, sweep and remove debris before flushing. Do not let wash water enter storm drain inlets. Collect wash water and direct to a dirt or vegetated area, pump into a vacuum truck and dispose of properly.

OPTIONAL:

- Consider increasing sweeping frequency based on factors such as traffic volume, land use, field observations of sediment and trash accumulation, proximity to water courses, etc.

Equipment Operation and Selection

- ✓ Maintain cleaning equipment in good working condition and purchase replacement equipment as needed. Old sweepers should be replaced as needed with new technologically advanced sweepers (preferably regenerative air sweepers) that maximize pollutant removal.
- ✓ Operate sweepers at manufacturer requested optimal speed levels to increase effectiveness.
- ✓ Clean sweepers at a wash rack that drains to the sanitary sewer. The wash rack area should be covered and bermed and wash water should drain to a clarifier prior to entering the sanitary sewer.
- ✓ Regularly inspect vehicles and equipment for leaks, and repair immediately.

> ➔ *Note: Permission must be obtained for any discharge of wash water to the sanitary sewer from the local sewering agency.*

OPTIONAL:

- If available use vacuum or regenerative air sweepers in the high sediment and trash areas (typically industrial/commercial).

Management of Material Removed by Sweeping

- ✓ Dispose of street sweeping debris and dirt at a landfill.
- ✓ Do not store swept material along the side of the street or near a storm drain inlet.
- ✓ If dewatering of saturated materials is necessary it should be conducted in a designated area away from storm drain inlets and the water contained for proper disposal.

✓ If authorized by the local sanitation agency, water may be discharged to the sanitary sewer only after passing through a clarifier. As an alternative, dewatering can be conducted in a containment area in which saturated materials are placed on a tarp and allowed to dry. Dry debris is then disposed of properly.

✓ Keep debris storage to a minimum during the wet season or make sure debris piles are contained (e.g. by berming the area) or covered (e.g. with tarps or permanent covers).

➔ *Note: Permission must be obtained for any discharge of wash water to the sanitary sewer from the local sewering agency.*

Maximize Access for Sweepers

✓ Keep accurate operation logs to track program.

✓ Properly maintain and operate equipment; which will increase efficiency.

✓ Sweeping should be conducted as close to the curb line as possible.

OPTIONAL:

- Institute a parking policy to restrict parking in problematic areas during periods of street sweeping.
- Post permanent street sweeping signs in problematic areas; use temporary signs if installation of permanent signs is not possible.
- Develop and distribute flyers notifying residents of street sweeping schedules.

2. Repair and Maintenance

Pavement Marking

✓ Develop paint handling procedures for proper use, storage, and disposal of paints.

✓ Transfer and load paint and hot thermoplastic away from storm drain inlets.

✓ Street or hand sweep thermoplastic grindings. Yellow thermoplastic grindings may require special handling as they may contain lead.

✓ Replace paints containing lead and tributyltin with less toxic alternatives.

✓ Use water based paints. Clean application equipment in a sink that is connected to the sanitary sewer.

✓ Properly store leftover paints if they are to be kept for the next job, or dispose of properly.

✓ See *Spill Control procedure sheet* for guidance on the proper cleanup of paint spills.

Concrete Installation and Repair

✓ Avoid mixing excess amounts of fresh concrete or cement mortar on-site. Only mix what is needed for the job.

✓ Wash concrete trucks off site or in designated areas on site, such that there is no discharge of concrete wash water into storm drain inlets, open ditches, streets, or other stormwater conveyance structures.

- ✓ Store concrete materials under cover, away from drainage areas.
- ✓ Return leftover materials to the transit mixer. Dispose of small amounts of hardened excess concrete, grout, and mortar in the trash.
- ✓ Do not wash sweepings from exposed aggregate concrete into the street or storm drain. Collect and return sweepings to aggregate base stockpile, or dispose in the trash.
- ✓ When washing poured concrete areas to remove fine particles and expose the aggregate, contain the wash water for proper disposal; do not discharge water to the storm drain system.
- ✓ Do not allow excess concrete to be dumped on-site, except in designated areas.
- ✓ Apply concrete, asphalt, and seal coat during dry weather to allow the material to adequately dry prior to a rain event.
- ✓ When making saw cuts in pavement, use as little water as possible and perform during dry weather. Cover each nearby or appropriate storm drain inlet completely with filter fabric or plastic during the sawing operation and contain the slurry by placing straw bales, sandbags, or gravel dams around the inlets. After the liquid drains or evaporates, shovel or vacuum the slurry residue from the pavement or gutter and remove from site. Alternatively, a small on-site vacuum may be used to pick up the slurry as this will prohibit slurry from reaching storm drain inlets.

Patching, Resurfacing, and Surface Sealing

- ✓ Pre-heat, transfer or load hot bituminous material away from storm drain inlets.
- ✓ Apply concrete, asphalt, and seal coat during dry weather to allow the material to adequately dry prior to a rain event.
- ✓ Where applicable, cover and seal each nearby or appropriate storm drain inlet (with waterproof material, plastic or mesh) and maintenance holes before applying seal coat, slurry seal, etc. Leave covers in place until job is complete and until all water from emulsified oil sealants has drained or evaporated. Clean any debris from covered man holes and storm drain inlets when the job is complete.
- ✓ Use only as much water as necessary for dust control, to avoid runoff.
- ✓ Catch drips from paving equipment that is not in use with pans or absorbent material placed under the machines. Dispose of collected material and absorbents properly.
- ✓ Prior to a rain event or at the completion of a project, sweep the project area by hand or with a street sweeper.

Equipment Cleaning, Maintenance, and Storage

Also see Equipment Repair & Maintenance procedure sheet.

- ✓ Clean equipment including sprayers, sprayer paint supply lines, patch and paving equipment, and mudjacking equipment at the end of each day. If equipment can be cleaned and materials reapplied at the job site, do so in compliance with the laws and regulations. Clean in a sink or other area (e.g. vehicle wash area) that is connected to the sanitary sewer.

- ✓ If refueling or repairing vehicles and equipment must be done on-site, conduct the activity away from storm drain inlets and watercourses.
- ✓ Place drip pans or absorbent materials under heavy equipment when not in use.
- ✓ Clean paint brushes and tools covered with water-based paints in sinks connected to sanitary sewers. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents (e.g., paint thinner, turpentine, etc.) for recycling or proper disposal.

➔ *Note: Permission must be obtained for any discharge of wash water to the sanitary sewer from the local sewering agency.*

OPTIONAL:

- Conduct cleaning at a corporation or maintenance yard if possible.
- When practical, perform major equipment repairs at the corporation yard.

➔ *In addition to the procedures above, review and apply general procedures outlined for Minor Construction activities when conducting street, road, and highway repair and maintenance activities.*

3. Bridge and Structure Maintenance

Painting and Paint Removal

- ✓ Transport paint and materials to and from job sites in containers with secure lids and tied down to the transport vehicle.
- ✓ Do not transfer or load paint near storm drain inlets or watercourses.
- ✓ Test and inspect spray equipment prior to starting to paint. Tighten all hoses and connections and do not overfill paint container.
- ✓ If sand blasting is used to remove paint, cover nearby storm drain inlets prior to starting work.
- ✓ If the bridge crosses a watercourse, perform work on a maintenance traveler or platform, or use suspended netting or tarps to capture paint, rust, paint removing agents, or other materials, to prevent discharge of materials to surface waters. If sanding, use a sander with a vacuum filter bag.
- ✓ Recycle paint when possible (e.g. paint may be used for graffiti removal activities). Dispose of paint at an appropriate household hazardous waste facility.
- ✓ See Spill Control procedure sheet for guidance on the proper cleanup of paint spills.

Graffiti Removal

- ✓ Avoid graffiti abatement activities during rain events.
- ✓ Protect nearby storm drain inlets prior to removing graffiti from walls, signs, sidewalks, or other structures needing graffiti abatement. Clean up

afterwards by sweeping or vacuuming thoroughly, and/or by using absorbent and properly disposing of the absorbent.

- ✓ Note that care should be taken when disposing of waste since it may need to be disposed of as hazardous waste.
- ✓ When graffiti is removed by painting over, implement the procedures under Painting and Paint Removal above.
- ✓ Direct runoff from sand blasting and high pressure washing (with no cleaning agents) into a landscaped or dirt area.
- ✓ If a graffiti abatement method generates wash water containing a cleaning compound (such as high pressure washing with a cleaning compound), plug nearby storm drains and collect wash water and dispose of properly.

OPTIONAL:

- Consider using a waterless and non-toxic chemical cleaning method for graffiti removal (e.g. gels or spray compounds).

Guardrail and Fence Repair

- ✓ When cleaning guardrails or fences follow the appropriate surface cleaning methods (depending on the type of surface) outlined in the *Sidewalk, Plaza, and Fountain Maintenance and Cleaning* procedure sheet.
- ✓ If painting is conducted, follow the *Painting and Paint Removal* procedures above.
- ✓ If graffiti removal is conducted, follow the *Graffiti Removal* procedures above.
- ✓ If construction takes place, see the procedure sheet for *Minor Construction*.
- ✓ Recycle materials whenever possible.

LIMITATIONS:

Limitations related to street sweeping may include high equipment costs, the potential inability to restrict parking in urban areas, the need for sweeper operator training, the inability of current sweeper technology to remove oil and grease, and the lack of scientific evidence regarding the expected levels of pollutant removal.

Santa Clara Valley Urban Runoff Pollution Prevention Program. 1997 Urban Runoff Management Plan. September 1997, updated October 2000.

WALKWAYS AND DRIVEWAYS

R-9

The cleaning of walkways and driveways have the potential to contribute directly to storm drain systems primarily through the removal of spilled fluids such as oils, greases, and solvents along with dirt and other sediments which increases the sediment load on the storm drain system.

Think before letting anything but rainwater into the storm drains.

Designated BMPs

A. Do not discharge wash water from cleaning or hosing of impervious surfaces to the storm water drainage system.

B. Use dry methods (e.g. sweeping, backpack blowers, vacuuming) whenever practical to clean sidewalks and driveways rather than hosing, pressure washing, or steam cleaning. DO NOT sweep or blow material into curb gutters or street. Pick up and dispose into trash.

C. To remove pet or wildlife feces, scoop, sweep or wipe it up and dispose in trash, sanitary sewer or compost pile. If still needed, direct any hose down water to landscaped areas, (BACT)

D. Parking facilities should be swept/vacuumed on a regular basis.

E. Use absorbents to pick up oil; then dry sweep.

IC19. WASTE HANDLING AND DISPOSAL

1. Prevent waste materials from coming in direct contact with wind or rain.
2. Design waste handling and disposal area to prevent stormwater runon.
3. Design waste handling and disposal area to contain spills.
4. Keep waste collection areas clean.
5. Secure solid waste containers when not in use.
6. Regularly inspect, repair, and/or replace waste containers.
7. Do not fill waste containers with washout water or any other liquid.
8. Use all of a product before disposing of the container.
9. Segregated wastes by type and label and date wastes.
10. Label and store hazardous wastes according to hazardous waste regulations.
11. Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.

OPTIONAL:

12. Minimize waste.

Pollution Prevention

Consider pollution prevention measures at all times for improving pollution control. Implementation of pollution prevention measures may reduce or eliminate the need to implement other more costly or complicated procedures.

The following pollution prevention principles apply to most industries:

- Affirmative Procurement - Use alternative, safer, or recycled products.
- Redirect storm water flows away from areas of concern.
- Reduce use of water or use dry methods.
- Reduce storm water flow across facility site.
- Recycle and reuse waste products and waste flows.
- Move or cover potential pollution from storm water contact.
- Provide on-going employee training in pollution prevention.

Best Management Practices

1. **Prevent waste materials from coming in direct contact with wind or rain.**
    - Cover the waste management area with a permanent roof.
    - If this is not feasible, cover waste piles with temporary covering material such as reinforced tarpaulin, polyethylene, polyurethane, polypropylene, or hypalon.
    - Cover dumpsters to prevent rain from washing out waste materials.
2. **Design waste handling and disposal area to prevent stormwater runon.**
    - Enclose the waste handling and disposal area or build a berm around it.
    - Position roof downspouts to direct stormwater away from waste handling and disposal area.
3. **Design waste handling and disposal area to contain spills.**
    - Place dumpsters or other waste receptacles on an impervious surface.
    - Construct a berm around the area to contain spills.
    - Install drains connected to the public sewer or the facility's process wastewater system within these contained areas. **DO NOT** discharge to a public sewer until contacting the local sewer authority to find out if pretreatment is required.
4. **Keep waste collection areas clean.**
    - When cleaning around waste handling and disposal areas use dry methods when possible (e.g. sweeping, use of absorbents).
    - If water must be used, collect water and discharge to the sewer if permitted to do so. **DO NOT** discharge to a public sewer until contacting the local sewer authority to find out if pretreatment is required. If discharge to the sanitary sewer is not allowed, pump water to a tank and dispose of properly.

OPTIONAL:

- Post "No Littering" signs.

5. **Secure solid waste containers when not in use.**
6. **Regularly inspect, repair, and/or replace waste containers.**
7. **Do not fill waste containers with washout water or any other liquid.**
8. **Use all of a product before disposing of the container.**
9. **Segregate wastes by type and label and date wastes.**
    - Do not mix wastes; this can cause chemical reactions, make recycling impossible, and complicate disposal.
    - Ensure that only appropriate solid wastes are added to solid waste containers.
    - Certain wastes such as hazardous wastes, appliances, fluorescent lamps, pesticides, etc. may not be disposed of in solid waste containers.
10. **Label and store hazardous wastes according to hazardous waste regulations.**
    - Consult your local hazardous waste agency or Fire Department for details.
    - Obtain a hazardous waste generator license or permit.

11. **Training**

    1. **Train employees on these BMPs, storm water discharge prohibitions, and wastewater discharge requirements.**
    2. **Train employees in proper waste handling and disposal.**
    3. **Train employees on proper spill containment and cleanup.**
        - Establish training that provides employees with the proper tools and knowledge to immediately begin cleaning up a spill.
        - Ensure that employees are familiar with the site's spill control plan and/or proper spill cleanup procedures.
        - BMP IC17 discusses Spill Prevention and Control in detail.
    4. **Establish a regular training schedule, train all new employees, and conduct annual refresher training.**
    5. **Use a training log or similar method to document training.**

OPTIONAL:

12. **Minimize waste.**
    - Recycle materials whenever possible.
    - Modify processes or equipment to increase efficiency.
    - Identify and promote use of non-hazardous alternatives.
    - Reduction in the amount of waste generated can be accomplished using many different types of source controls such as:
        - Production planning and sequencing
        - Process or equipment modification
        - Raw material substitution or elimination
        - Loss prevention and housekeeping
        - Waste segregation and separation

        - Close loop recycling
    - Establish a material tracking system to increase awareness about material usage. This may reduce spills and minimize contamination, thus reducing the amount of waste produced.

    - Process or equipment modification
    - Raw material substitution or elimination
    - Loss prevention and housekeeping
    - Waste segregation and separation
    - Close loop recycling

Establish a material tracking system to increase awareness about material usage. This may reduce spills and minimize contamination, thus reducing the amount of waste produced.

FP-6

WATER AND SEWER UTILITY OPERATION AND MAINTENANCE

Although sewage systems the operation and maintenance of public utilities are not considered themselves are not a chronic sources of stormwater pollution, some activities and accidents can result in the discharge of raw sewage contains pollutants that can pose a threat to both human health and the quality of receiving waters if they enter the storm drain system through incidents such as spills, leaks or overflows. Activities associated with the operation and maintenance of water and sewer utilities to prevent and handle such incidents include the following:

1. **Water Line Maintenance**
2. **Sanitary Sewer Maintenance**
3. **Spill/Leak/Overflow Control, Response, and Containment**

Cities that do not provide maintenance of water and sewer utilities should coordinate with the contracting agency responsible for these activities and ensure that these model procedures are followed.

POLLUTION PREVENTION:

Pollution prevention measures have been considered and incorporated in the model procedures. Implementation of these measures may be more effective and reduce or eliminate the need to implement other more complicated or costly procedures. Possible pollution prevention measures for water and sewer utility operation and maintenance include:

- Inspect potential non-storm water discharge flow paths and clear/cleanup any debris or pollutants found (i.e. remove trash, leaves, sediment, and wipe up liquids, including oil spills).
- Once per year, educate municipal staff on pollution prevention measures.

MODEL PROCEDURES:

1. Water Line Maintenance

Procedures can be employed to reduce pollutants from discharges associated with water utility operation and maintenance activities. Planned discharges may include fire hydrant testing, flushing water supply mains after new construction, flushing lines due to complaints of taste and odor, dewatering mains for maintenance work. Unplanned discharges from treated, recycled water, raw water, and groundwater systems operation and maintenance activities can occur from water main breaks, sheared fire hydrants, equipment malfunction, and operator error.

Planned Discharges

✓ For planned discharges use one of the following options:

- Reuse water for dust suppression, irrigation, or construction compaction
- Discharge to the sanitary sewer system with approval
- Discharge to the storm drain system or to a creek using applicable pollution control measures listed below (this option is ONLY applicable to uncontaminated pumped ground water, water line flushing, discharges from potable water sources other than water main breaks) and may require a permit from the Regional Water Quality Control Board.

✓ If water is discharged to a storm drain inlet (catch basin), control measures must be put in place to control potential pollutants (i.e. sediment, chlorine, etc.). Examples of some storm drain inlet protection options include:

- Silt fence – appropriate where the inlet drains a relatively flat area.
- Gravel and wire mesh sediment filter – Appropriate where concentrated flows are expected.
- Wooden weir and fabric – use at curb inlets where a compact installation is desired.

✓ Prior to discharge, inspect discharge flow path and clear/cleanup any debris or pollutants found (i.e. remove trash, leaves, sediment, and wipe up liquids, including oil spills).

✓ Select appropriate pollution control measure(s) considering the receiving system (i.e. curb inlet, drop inlet, culvert, creek, etc.) and ensure that the control device(s) fit properly.

✓ General design considerations for inlet protection devices include the following:

- The device should be constructed such that cleaning and disposal

of trapped sediment is made easy, while minimizing interference with discharge activities.

- Devices should be constructed so that any standing water resulting from the discharge will not cause excessive inconvenience or flooding/damage to adjacent land or structures.

✓ The effectiveness of control devices must be monitored during the discharge period and any necessary repairs or modifications made as needed.

OPTIONAL:

- Sediment removal may be enhanced by placing filter fabric, gravel bags, etc. at storm drain inlets.

Unplanned Discharges

✓ Stop the discharge as quickly as possible by turning off water source.

✓ Inspect flow path of the discharged water:

- Control erosion along the flow path.
- Identify areas that may produce significant sediment or gullies, use sandbags to redirect the flow.
- Identify erodible areas which may need to be repaired or protected during subsequent repairs or corrective actions

✓ If repairs or corrective action will cause additional discharges of water, select the appropriate procedures for erosion control, chlorine residual, turbidity, and chemical additives. Prevent potential pollutants from entering the flow path and ensure that no additional discharged water enters storm drain inlets.

2. Sanitary Sewer Maintenance

Applicable to municipalities who own and operated a sewage collection system. Facilities that are covered under this program include sanitary sewer pipes and pump stations owned and operated by the Permittee. The owner of the sanitary sewer facilities is the entity responsible for carrying out this prevention and response program.

Sewer System Cleaning

✓ Sewer lines should be cleaned on a regular basis to remove grease, grit, and other debris that may lead to sewer backups.

✓ Establish routine maintenance program. Cleaning should be conducted at an established minimum frequency and more frequently for problem areas such as restaurants that are identified

✓ Cleaning activities may require removal of tree roots and other identified obstructions.

Preventative and Corrective Maintenance

✓ During routine maintenance and inspection note the condition of sanitary sewer structures and identify areas that need repair or maintenance. Items to note may include the following:

- cracked/deteriorating pipes
- leaking joints/seals at manhole
- frequent line plugs
- line generally flows at or near capacity
- suspected infiltration or exfiltration

✓ Document suggestions and requests for repair and report the information to the appropriate manager or supervisor.

✓ Prioritize repairs based on the nature and severity of the problem. Immediate clearing of blockage or repair is required where an overflow is currently occurring or for urgent problems that may cause an imminent overflow (e.g. pump station failures, sewer line ruptures, sewer line blockages). These repairs may be temporary until scheduled or capital improvements can be completed.

✓ Review previous sewer maintenance records to help identify "hot spots" or areas with frequent maintenance problems and locations of potential system failure.

3. Spill/Leak/Overflow Control, Response, and Containment

Control

Also see Drainage System procedures sheet

✓ Refer to countywide *Illicit Discharge Detection and Elimination Program*. Components of this program include:

- Investigation/inspection and follow-up
- Elimination of illicit discharges and connections
- Enforcement of ordinances
- Respond to sewage spills
- Facilitate public reporting of illicit discharges and connections. A citizen's hotline for reporting observed overflow conditions should be established to supplement the field screening efforts being conducted by the Principal Permittee.

Response and Containment

✓ Establish lead department/agency responsible for spill response and containment. Provide coordination within departments.

- ✓ When a spill, leak, and/or overflow occurs, keep sewage from entering the storm drain system to the maximum extent practicable by covering or blocking storm drain inlets or by containing and diverting the sewage away from open channels and other storm drain facilities (using sandbags, inflatable dams, etc.).
- ✓ If a spill reaches the storm drain notify County of Orange Health Care Agency through Control One at (714) 628-7208.
- ✓ Remove the sewage using vacuum equipment or use other measures to divert it back to the sanitary sewer system.
- ✓ Record required information at the spill site.
- ✓ Perform field tests as necessary to determine the source of the spill.
- ✓ Develop additional notification procedures regarding spill reporting as needed.

LIMITATIONS:

Private property access rights needed to perform testing along storm drain right-of-ways. Requirements of municipal ordinance authority for suspected source verification testing necessary for guaranteed rights of entry.

Operation & Maintenance Plan

Operations and Maintenance (O&M) Log

Water Quality Management Plan

for

Proposed Office Building and Parking Garage

6 Polaris Way

Aliso Viejo, CA 92656

Parcel 1, Parcel Map No. 14314

Operations and Maintenance Plan

Inspection and maintenance records shall be kept for a minimum of five years and be made available for inspection by the City staff.

BMP Name and BMP Implementation, Maintenance, and Inspection Procedures	Implementation, Maintenance, and Inspection Frequency and Schedule	Inspection / Maintenance Activities Required	Person or Entity with Operation & Maintenance Responsibility
Non-Structural Source Control BMPs			
N1. Education for Property Owners, Tenants and Occupants	Shall be provided upon tenant occupancy.	Educational materials shall be provided to all employees and tenants.	BPM Investments
N2. Activity Restriction	Monthly	Review on-site activities on a monthly basis and verify that restricted activities as outlined in this WQMP or per local standards are not occurring.	
N3. Common Area Landscape Management	Upon hiring of new field landscape maintenance personnel.	Training on landscape management consistent with County Water Conservation Resolution or City equivalent, plus Management Guidelines for Fertilizers (DAMP Section 5.5) shall be conducted for all new field landscape maintenance personnel.	
N4. BMP Maintenance	Weekly	Maintenance of BMPs implemented at the project site shall be performed at the frequency prescribed in this WQMP.	
N11. Common Area Litter Control	Daily	Litter patrol, violations investigation, reporting and other litter control activities shall be performed in conjunction with maintenance activities.	
N12. Employee Training	Yearly for all employees and within 6 months of hire date for new employees.	Education programs shall be implemented as they apply to future employees of individual businesses.	
N14. Common Area Catch Basin Inspection	Monthly	Catch basin inlets and media filters shall be inspected and cleaned with increased frequency during the storm season (October 1st through April 30th). The catch basin inlets shall be cleaned at a minimum once a year prior to the storm season, no later than October 1st each year.	

BMP Name and BMP Implementation, Maintenance, and Inspection Procedures	Implementation, Maintenance, and Inspection Frequency and Schedule	Inspection / Maintenance Activities Required	Person or Entity with Operation & Maintenance Responsibility
N15. Street Sweeping Private Streets and Parking Lots	Monthly	Private streets and parking areas within the project shall be swept at a minimum frequency of once a month.	BPM Investments
Structural Source Control BMPs			
S4. Use Efficient Irrigation Systems & Landscape Design	Weekly	Once a week in conjunction with maintenance activities, verify that landscape design continues to function properly by adjusting propyl to eliminate overspray to hardscape areas, and to verify that irrigation timing and cycle lengths area adjust in accordance with water demands, given time of year, and day or night time temperatures.	BPM Investments

Low Impact Development (LID) and Treatment Control BMPs			
Proprietary Biotreatment Unit	Bi-annual	Remove trash from screening device, trim vegetation.	BPM Investments
	Annual	Remove sediment from separation chamber, replace cartridge filter media, replace drain down filter media.

Feasibility Analysis

Table 2.7: Infiltration BMP Feasibility Worksheet

	Infeasibility Criteria	*Yes*	*No*
1	**Would Infiltration BMPs pose significant risk for groundwater related concerns?** Refer to Appendix VII (Worksheet I) for guidance on groundwater-related infiltration feasibility criteria.		
Provide basis: Summarize findings of studies provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
2	Would Infiltration BMPs **pose significant risk of increasing risk of geotechnical hazards that cannot be mitigated to an acceptable level**? (Yes if the answer to any of the following questions is yes, as established by a geotechnical expert): • The BMP can only be located less than 50 feet away from slopes steeper than 15 percent • The BMP can only be located less than eight feet from building foundations or an alternative setback. • A study prepared by a geotechnical professional or an available watershed study substantiates that stormwater infiltration would potentially result in significantly increased risks of geotechnical hazards that cannot be mitigated to an acceptable level.		
Provide basis: Summarize findings of studies provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
3	Would infiltration of the DCV from drainage area **violate downstream water rights**?		
Provide basis: Summarize findings of studies provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			

Table 2.7: Infiltration BMP Feasibility Worksheet (continued)

	Partial Infeasibility Criteria	***Yes***	***No***
4	Is proposed infiltration facility **located on HSG D soils** or the site geotechnical investigation identifies presence of soil characteristics which support categorization as D soils?		
Provide basis: Summarize findings of studies provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
5	Is **measured infiltration rate below proposed facility less than 0.3 inches per hour**? This calculation shall be based on the methods described in Appendix VII.		
Provide basis: Summarize findings of studies provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
6	Would **reduction of over predeveloped conditions cause impairments to downstream beneficial uses, such as change of seasonality of ephemeral washes or increased discharge of contaminated groundwater to surface waters?**		
Provide citation to applicable study and summarize findings relative to the amount of infiltration that is permissible: Summarize findings of studies provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
7	Would **an increase in infiltration over predeveloped conditions cause impairments to downstream beneficial uses, such as change of seasonality of ephemeral washes or increased discharge of contaminated groundwater to surface waters?**		
Provide citation to applicable study and summarize findings relative to the amount of infiltration that is permissible: Summarize findings of studies provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			

Table 2.7: Infiltration BMP Feasibility Worksheet (continued)

Infiltration Screening Results (check box corresponding to result):		
8	Is there substantial evidence that infiltration from the project would result in a significant increase in I&I to the sanitary sewer that cannot be sufficiently mitigated? (See Appendix XVII) Provide narrative discussion and supporting evidence: Summarize findings of studies provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.	
9	If any answer from row 1-3 is yes: infiltration of any volume is **not feasible** within the DMA or equivalent. Provide basis: Summarize findings of infeasibility screening	
10	If any answer from row 4-8 is yes, infiltration is **permissible but is not presumed to be feasible for the entire DCV.** Criteria for designing biotreatment BMPs to achieve the maximum feasible infiltration and ET shall apply. Provide basis: Summarize findings of infeasibility screening	
11	If all answers to rows 1 through 10 are no, infiltration of the full DCV is potentially feasible, BMPs must be designed to infiltrate the full DCV to the maximum extent practicable.

Subject: **Addendum No. 3 to Report for Geotechnical Investigation**
Design Recommendations for 1st Floor Slabs
Fluor Corporate Headquarters
Engineering and Construction Offices, Site "D"
(Report dated December 16, 1997)

Dear Mr. Hillgren:

This addendum modifies and supersedes the recommendations related to foundation slabs-on-grade presented in Section 3.6 and those related to overexcavation of existing fill and placement with select fill presented in Sections 3.8.2.2 and 3.8.2.3 of the above referenced report. This addendum also modifies and supersedes the recommendations provided in Addendum No. 2 to the above referenced report. The modified recommendations have been developed based on the discussions held during our January 16 meeting with Fluor Daniel, Inc. (Fluor) and Fluor's Interoffice Correspondence memo of January 19.

BYA recommends that the 1st floor slab be constructed with reinforced concrete grade beams and voids beneath the slab sections between grade beams. Using this approach, the grade beams may be founded on existing fill and bedrock materials. The slab sections between grade beams should be formed on compressible material such as cardboard to create a void between the slab section and the subgrade materials. The purpose of including the void beneath the slab sections is to reduce the potential uplift force on the slab due to expansive soil.

If additional fill is required to bring building pads to final grade, approved on-site non-select fill may be used. The earthwork recommendations in Sections 3.8.2.1 and 3.8.2.2 related to site clearing and removal of loose, dry or otherwise unsuitable fill will still apply. The subgrade below the buildings should be scarified to a depth of at least six inches, moisture conditioned to 2 to 3 percent above optimum moisture content and compacted to 90 percent of the maximum density (as determined by ASTM D 1557). Any additional approved non-select fill required to bring the pads to final grade should also be compacted to 90 percent relative compaction at 2 to 3 percent above optimum moisture content. If these recommendations are followed, the requirements related to overexcavation, presoaking of the subgrade and placement of select fill beneath the buildings as described in Sections 3.8.2.2 and 3.8.2.3 of the report will not be necessary.

RECEIVED TIME JAN 21 10:48AM PRINT TIME JAN 21 10:49AM

The 1st floor slabs should be designed in general accordance with the specifications outlined in Fluor's Interoffice Correspondence memo dated January 19. The following design parameters will be used:

1. The 1st floor slab will not be designed per the 1997 Section 1815 of the Uniform Building Code.

2. The design of the perimeter grade beams will remain the same.

3. The 1st floor slab will be stiffened with 12 inch x 24 inch (total slab plus grade beam depth) interior grade beams, on typical 15 foot centers in each direction. The grade beams will be reinforced with 2 - #9 longitudinal bars top and bottom and #4 ties at 10 inch spacing. The longitudinal reinforcing will be tied into perimeter grade beams and footings. The grade beams will bear on compacted fill or bedrock subgrade material.

4. The 1st floor slab will be designed to span between the grade beams without support from the soil. 3 to 6 inch high cardboard "void box" forms will be placed over the subgrade beneath the 1st floor slab only, not below the grade beams.

5. No "visqueen" moisture barrier or sand will be required beneath the 1st floor slab.

6. Construction of the 1st floor slab will be delayed until the structural steel has been erected and the above grade slab concrete has been placed.

It was agreed by Fluor, Culp & Tanner and BYA at the January 16 meeting that the above recommendations would provide an acceptable level of performance for the 1st floor slab while utilizing a shallow foundation system. We hope this letter provides you with the information you need at this time. Should you need additional information, please call.

Subject: **Addendum No. 2 to Report for Geotechnical Investigation**
Design Recommendations for Slabs on Grade
Fluor Corporate Headquarters
Engineering and Construction Offices, Site "D"
(Report dated December 16, 1997)

Dear Mr. Hillgren:

This addendum modifies and supercedes the recommendations related to foundation slabs-on-grade presented in Section 3.6 and those related to overexcavation of existing fill and placement with select fill presented in Sections 3.8.2.2 and 3.8.2.3 of the above referenced report. The modified recommendations have been developed based on the discussions held during our January 7 meeting with Lowe and Fluor.

Instead of constructing conventional foundation slabs-on-grade over 18 inches of select fill, BYA recommends that slabs-on-grade with reinforced concrete grade beams should be constructed. Using this approach, slabs may be founded on existing fill and native bedrock materials. If additional fill is required to bring building pads to final grade, either select or approved non-select fill may be used. The earthwork recommendations in Sections 3.8.2.1 and 3.8.2.2 related to site clearing and removal of loose, dry or otherwise unsuitable fill will still apply. The subgrade below the buildings should be scarified to a depth of at least six inches, moisture conditioned to 2 to 3 percent above optimum moisture content and compacted to 90 percent of the maximum density (as determined by ASTM D 1557). Any additional non-select fill required to bring the pads to final grade should also be compacted to 90 percent relative compaction at 2 to 3 percent above optimum moisture content. If these recommendations are followed, the requirements related to overexcavation, presoaking of the subgrade and placement of select fill beneath the buildings as described in Sections 3.8.2.2 and 3.8.2.3 of the report will not be necessary.

The slabs should be designed in general accordance with the procedures outlined in Division III, Section 1815 of the 1997 edition of the Uniform Building Code (UBC). This procedure is based primarily on the selection of effective plasticity index and climatic rating values. The following design parameters are recommended:

Effective plasticity index (PI)	= 50
Climatic rating (C_w)	= 15
Soil/Climate Rating Factor (1-C)	= 0.4

17701 Mitchell North, Irvine, California 92614-6029 Phone (714) 757-1941 Fax (714) 757-1943 e-mail: bya@earthlink.net
A subsidiary of ATC Group Services, Inc.

Using these design parameters, the maximum grade beam spacing per Figure 18-III-7 of the UBC is approximately 13.5 feet. Because the column spacing for all of the structures is 30 feet, a nominal grade beam spacing of 15 feet is desired. If the 15 foot spacing is used, the section modulus of the reinforced concrete slab should be increased to greater than the minimum required by the UBC procedure (e.g., by decreasing the bar spacing and/or increasing the bar size). The slab should be tied into the planned 4-foot deep perimeter grade beam and the interior footings. It should be recognized that the UBC procedure applies to buildings in which loads are transmitted to the slab foundation primarily by means of bearing walls rather than columns. The structural design requirements for the grade beams and slab should be evaluated by the project structural engineer.

The requirements in Section 3.6 of the report for placement of a Visqueen vapor barrier (minimum 10 mil thickness), clean sand base (4 inches thick below the vapor barrier and 2 inches thick above the vapor barrier), and water sealant apply to the revised slab. The vapor barrier should be continuous below the slabs and associated grade beams. This will require special attention at locations where grade beams cross to ensure that the vapor barrier is overlapped and taped at any cuts and/or seams.

In addition, the recommendation contained in Section 3.3 of the report related to the sequence and time frame for construction of settlement-sensitive components, including slabs-on-grade, should still be followed, i.e., construction of the slabs should be delayed until at least 3 months following the application of dead loads to the spread footings. The moinsture content of the slab subgrade areas should be maintained at or above optimum moisture contant during this period. If the slabs are to be structurally tied to the footings and perimeter grade beams, reinforcing steel required for these connections should be placed at the time the footings and perimeter grade beam are constructed.

We hope this letter provides you with the information you need at this time. Should you need additional information, please call.

Subject: **Addendum No. 1 to Report for Geotechnical Investigation**
Pre-soaking Period, Pressure Relief Valves
Fluor Corporate Headquarters
Engineering and Construction Offices, Site "D"
December 16, 1997

Dear Mr. Hillgren:

In Section 3.6 of the above referenced report, BYA recommended that the sub-slab excavation should be pre-soaked for at least 45 days. BYA has been informed that because of construction schedule constraints, 45 days is not available for pre-saturation. The recommended minimum period for pre-soaking is now 14 days, with a maximum period of 28 days. It is recommended that the project geotechnical engineer monitor the progress of pre-saturation using field instruments and sample testing.

In Section 3.8.2.3 of the above referenced report, pressure relief valves in the basement floor slab were recommended as an additional and relatively inexpensive safeguard in case water levels ever rise above the basement floor elevation. While it is unlikely that water would rise this high, it is possible. The relief valves may be omitted if desired. Care should be taken however to ensure that the drain around the bottom of the basement walls is located at the bottom of the wall and below the bottom of the basement floor slab.

Report of Geotechnical Investigation, Site "D"

Dear Mr. Hillgren:

Please find enclosed four bound and one un-bound copies of the above referenced report by Bing Yen & Associates Inc.. Two additional copies have been sent directly to Mike Banhagel of McLaren Vasquez Partners. Based on our observations and evaluations presented herein, and in accordance with the Developer-Consultant Agreement and Attached Exhibits, effective July 1, 1997, it is BYA's conclusions that the site is suitable for the proposed project from a geotechnical perspective.

Please contact us if you have any questions regarding the attached. We have enjoyed working with Lowe Enterprises and Fluor Daniel Corporation on this project and look forward to providing continued services to Lowe and Fluor Daniel in the future.

Sincerely,

1.1 OBJECTIVES OF INVESTIGATION

This report presents the results of a geotechnical investigation for the proposed Fluor Corporate Headquarters, Engineering and Construction facility in Aliso Viejo, California. The geotechnical investigation has been completed in general accordance with the Developer-Consultant Agreement and Attached Exhibits, effective July 1, 1997. The objectives of the investigation were to evaluate the geologic, seismic, and geotechnical conditions at the locations of the proposed construction and to provide geotechnical recommendations for the proposed facilities.

1.2 PROJECT DESCRIPTION

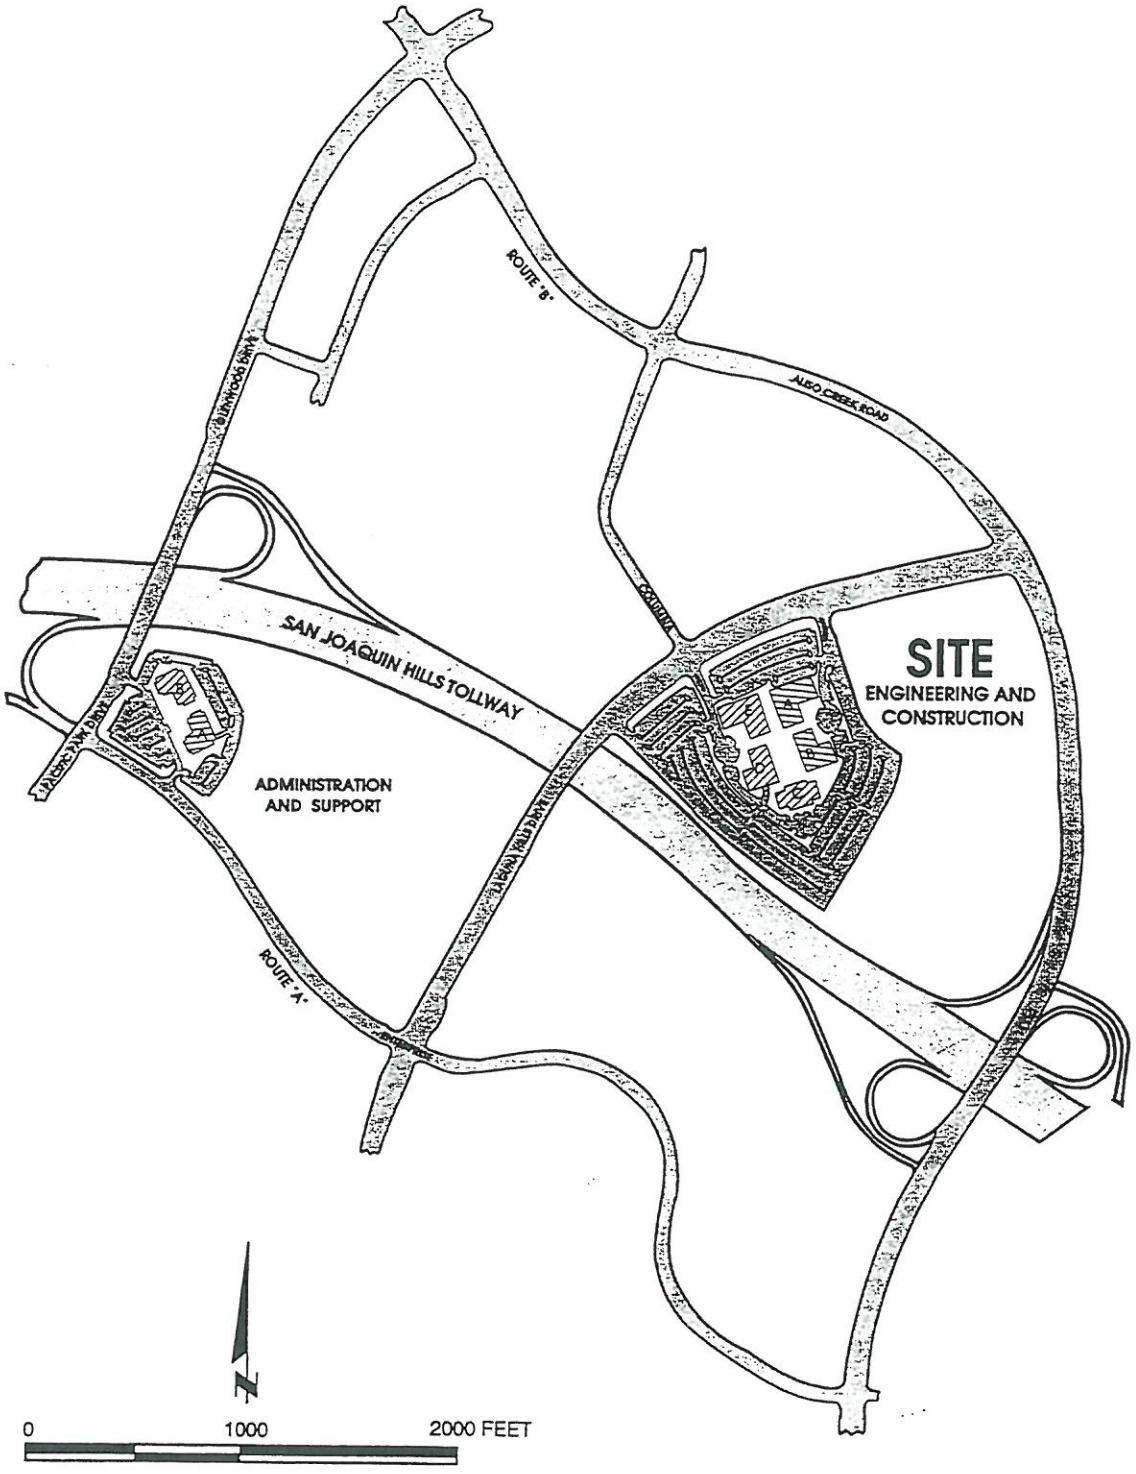
The proposed project consists of developing two vacant sites in Aliso Viejo with low rise (three and four story) buildings. The proposed development will include extensive landscaping and water features in a campus setting. The larger site, referred to as the "Engineering and Construction Site" (or Site "D"), is located on Laguna Hills Drive and is the subject of this report. The smaller site, referred to as the "Administration and Support Site" (or Site "T"), is located on Pacific Park Drive and will be addressed in a separate report. The location of the Engineering and Construction Site is shown on Figure 1.

Site D is approximately 22.5 acres in size. Development of the site will include construction of five buildings with a total of approximately 425,000 square feet of office space. The current design finish pad elevations are anticipated to be within two feet of the current grade. Building construction is anticipated to be steel frame and/or concrete tilt up. Structural loads are anticipated to range from lightly loaded interior columns and slabs to heavily loaded columns (up to 400 kips).

Four of the five proposed buildings will be constructed at finish grade with three to four levels. The fifth building may be constructed with one below-grade level and two or more above-grade levels. The finished floor elevation of the below-grade level is not known at this time; however it is anticipated that it would be less than 15 feet below finish grade. A plan showing the proposed locations of the five buildings is shown on Plate 1 (in pocket at back of the report). Current plans show that proposed building C will include the below grade level.

1.3 SCOPE OF WORK

The scope of BYA's investigation included conducting field explorations and laboratory testing to characterize the subsurface conditions at the locations of the proposed buildings, developing geotechnical parameters for use in design of the project, and preparing this report to summarize the geotechnical data acquired during our investigation and to present our conclusions, recommendations, and professional opinions related to the project.



BING YEN & ASSOCIATES, INC.

Geotechnical & Environmental Consultants, Established 1979

PROJECT NAME: FLUOR HEADQUARTERES

PROJECT NO: G971482 | DATE: OCTOBER 1997

SITE LOCATION MAP

FIGURE 1

2.1 FIELD EXPLORATION AND LABORATORY TESTING

Field explorations for the project were conducted in May and June, 1997 and consisted of the following:

- Excavating two test trenches (T-1 and T-2) to a depth of approximately 5 feet,
- Drilling 11 hollow stem auger borings (B-1 through B-11) to depths ranging from 3 to 40 feet, and
- Conducting 21 Cone Penetrometer Test (CPT) soundings (C-1 through C-21) including one sounding with shear wave velocity measurements.

The locations of the trenches, borings and CPT soundings are shown on Plate 1 (in pocket at back of the report). The purpose of the trenches, borings and CPT soundings was to gather information on and samples of subsurface materials. The relatively long trenches were excavated at the site to allow observation of the extent of potentially weaker layers of bedrock near the surface in order to evaluate their effects on the proposed shallow foundations. Additional details of the field exploration, including boring logs, CPT logs, and trench logs are included in Appendices A, B and C respectively.

Soil samples were obtained at selected intervals in the borings. Selected samples were tested in the laboratory to measure index properties and physical parameters. A summary of selected geotechnical material parameters is included in Section 3.2. A description of the testing and the test results are presented in Appendix D.

2.2 SURFACE CONDITIONS

The five proposed buildings at Site D will be constructed in a cluster in the central portion of the approximately 22.5 acre, roughly rectangular-shaped site. The site is bounded on the southwest by the San Joaquin Hills Transportation Corridor (SJHTC), on the northwest by Laguna Hills Drive, and on the northeast and southeast by adjacent residential developments. The site has been previously graded into several separate pads, with a "U" shaped paved access road and sidewalk extending southeast from Laguna Hills Drive into the center of the site. Based on our field observations, existing improvements at the site include street lighting, underground utilities and provisions for subsurface drainage. Canyon subdrains installed during previous grading episodes exist under the southern portion of the Site (Nolte, 1988). Exclusive of the paved areas, the site was covered with mowed dry grass, and with shrubs and ground cover on the boundary slopes. No buildings or foundations (other than those for roads and utilities) were observed at the time of our investigation.

The ground surface at the site generally slopes gently to the east, with the exception of several 2 to 4 foot high slopes separating pads on the northeast section of the site. Several earth berms approximately 2 to 3 feet high and 5 feet wide at the base radiate outward from the central access road, apparently to control surface water runoff. Ground surface elevations at the pad level of the

site range from approximately 438 to 421 feet above sea level. A fill ramp rises approximately 12 feet from the site grade to Laguna Hills Road and supports the northwest leg of the existing access road. Slopes bound the site on all sides. To the northwest, a slope extends upward from the site approximately 2 to 12 feet at an approximate gradient of 2:1 to the level of Laguna Hills Drive. Along the southeast boundary of the site, a slope extends down approximately 5 to 30 feet at an approximate gradient of 2:1 to the SJHTC . Along the northeast and southeast boundaries of the site, slopes extend downward approximately 25 feet at an approximate gradient of 2:1 to the level of the adjacent residential developments. Locally deep rilling occurs at several locations along the southeast slope, apparently due to leaks from the irrigation system.

2.2.1 Previous Grading

Our review of the available documents indicates that previous site development consisted of two separate phases of earthwork operations. The first phase of grading at the site was conducted between January 14, 1987 and September 15, 1988 by C.W. Poss, Inc. During this phase of grading, six large pads and associated infrastructure were constructed within Aliso Viejo Planning Areas 50.2, 50.3, 51.1, and 24.1. Fill materials placed during this period of grading reportedly compacted to 90 percent of the maximum dry density as determined by ASTM D1557 or 95 percent of the Achievable Density Criteria (ADC) (Nolte and Associates, 1988). The second phase of grading was performed by Reed Thomas, Inc. in September and October of 1990 and consisted of construction of nine level pads and associated improvements within Aliso Viejo Planning Area 51.1. Fill materials placed during this period of grading were reportedly compacted to 90 percent of the maximum dry density as determined by ASTM D1557 (Nolte and Associates, 1990). Geotechnical design, observation and testing services during both phases of grading were provided by Nolte and Associates.

2.3 GEOLOGIC CONDITIONS

2.3.1 Geologic Setting

The site is located in the southeastern portion of the Central Block of the Los Angeles Basin near the boundary with the Southwestern Block (Yerkes et al., 1965). The site lies within a series of low-lying hills known as the San Joaquin Hills. The San Joaquin Hills are an antiform that lies in the hanging wall of a low-angle, regional detachment fault system. This low-angle fault system formed as result of extension within southern California during Oligocene to Miocene time (Fattahipour and Frost, 1996). Geomorphic and structural geologic investigations of the northern portion of the San Joaquin Hills and the Newport Back Bay (north of the site) suggest this area may be actively deforming above a low-angle fault system (Grant et al., 1997).

The most recent published regional maps indicate that the site is underlain by bedrock of the Miocene Monterey Formation (Morton and Miller, 1981; Greenwood and Morton, 1991). The bedrock at site is overlain by engineered fill of varying thickness placed during two episodes of mass grading between 1988 and 1990 (Nolte and Associates, 1988, 1990).

2.3.2 Faulting and Seismicity

Review of current available maps indicate no known active or potentially active faults cross the site. The site is not within a designated Alquist-Priolo Earthquake Fault Zone (Hart, 1994). However, the site is located in close proximity to several surface faults that are presently zoned as active or potentially active pursuant to the guidelines of the Alquist-Priolo Earthquake Fault Zoning Act (Jennings, 1992; Hart, 1994). The nearest of these faults, the strike-slip Newport-Inglewood fault zone, trends northwest-southeast and is located approximately 11 kilometers southwest of the site. The site may also be underlain by segments of a low-angle fault system named the San Joaquin Hills fault, the surfaces of which do not necessarily break the ground surface during sizeable earthquakes (Grant et al., 1997). These sub-horizontal faults or blind thrusts have not yet been studied with enough detail to render them classified as "Active" pursuant to the guidelines of the Alquist-Priolo Earthquake Fault Zoning Act (Hart, 1994). However, similar low-angle fault systems (e.g., blind thrusts) in the northern portion of the Los Angeles Basin are currently believed capable of generating earthquakes of M_w 6.5 to 7.5 (WGCEP, 1995).

2.4 SUBSURFACE MATERIALS

On-site earth materials encountered in the test excavations consisted of fill and bedrock. Bedrock cuts or thin layers of fill (0.5 to 2 feet) over bedrock are generally exposed on the north to northwest portion of the site. Fill thicknesses increases across the site to the east and south. Up to 30 feet of fill was placed over descending slopes and canyons on the eastern and southern areas of the site (See cross-section in Figure 2). A fill ramp rises approximately 12 feet from the site grade to Laguna Hills Road and supports the northwest leg of the existing access road. A zone of relatively loose fill exists at the base of this ramp. Deeper fills may exist in an area of excess removals for a keyway along the San Joaquin Hills Toll Road alignment. Documentation of this fill could not be obtained in time for this report; however it is not anticipated that this fill will significantly impact the currently proposed project.

2.4.1 Fill Materials

Fill materials encountered in the excavations consisted of white to light gray and greenish gray diatomaceous clayey silt (ML) to silty clay (CL). The fill materials were mottled, moist, stiff, and had a moderate to high estimated plasticity. Samples of fill material tested had an average dry density of 62 pcf and a water content of 47 percent with standard deviations of 9 pcf and 13 percent, respectively. Percent of fines (smaller than the #200 sieve) for the fill varied from 74.5 to 90 percent with an average of 83 percent for samples tested. Results of CPT soundings in the fill indicate relatively uniform conditions, with tip resistance of approximately 50 tsf and friction ratios of approximately 3 to 4 percent.

SECTION THREE Discussions, Conclusions and Recommendations

3.1 POTENTIAL GEOLOGIC AND SEISMIC HAZARDS

3.1.1 Fault Ground Rupture

For facility planning and siting purposes, the potential for fault ground rupture is generally considered to be significant along "active" faults and to a lesser degree along "potentially active" faults. A review of currently available geologic maps and the results of the field exploration for the project did not indicate the presence of any "active" or "potentially active" faults at the site. The potential for fault ground rupture affecting the currently planned facilities is considered low.

3.1.2 Seismic Ground Response

Ground response at the sites was determined from a review of the statewide probabilistic seismic hazard assessment (Petersen et al., 1996). This report estimates peak horizontal ground accelerations (PHGA) between 0.3g to 0.4g for firm-rock site conditions within this area of southern Orange County. The statewide probabilistic seismic hazard assessment was published prior to a report by Grant et al. (1997) that evaluates the San Joaquin Hills low angle fault system and therefore does not include seismic hazards associated with that system. At the time of this writing, the subsurface extent, activity, maximum credible earthquake and potential ground response associated with the San Joaquin Hills low-angle fault system is not thoroughly known (Roquemore, personal communication, 1997). A more thorough understanding of on-site ground response utilizing a combined site-specific, deterministic and probabilistic approach could be undertaken but is beyond the scope of this study.

3.1.3 UBC Seismic Response Spectra

The site is within Zone 4 as per the 1994 Uniform Building Code (UBC) seismic zonation map (Section 1629). Based on the subsurface conditions at the site, we have categorized the site as S_2 based on the UBC. The more recent version of the UBC (1997) includes substantial changes to the design response spectrum, particularly if the predominant fault contributing to the seismic hazard is less than 10 km from the site. The 1997 procedure for evaluating a design response spectrum includes consideration of the seismic source type, the maximum earthquake magnitude, and the soil profile type. The soil profile types have also been modified from the 1994 soil profile codes. Based on measured shear wave velocities, SPT N-values, and undrained strength, the site is classified as S_c according to the 1997 UBC criteria. The Newport-Inglewood fault, a Type B fault at a distance of 11 km, is the most critical seismic hazard. If the postulated San Joaquin Hills fault exists below the project site (distance of 0 km using UBC guidelines) it would be categorized as a Type B fault.

3.1.4 Liquefaction

Compacted fill at the site is not considered to be susceptible to liquefaction because of the lack of groundwater and the relatively fine grained nature and particle density of the fill soil. Bedrock is generally considered to have a very low susceptibility to liquefaction. Bedrock at this site, if considered to be soil for conservative purposes, would have a very low susceptibility to liquefaction based on criteria for clayey soils reported by Seed et al. (1983). These criteria, based on the performance of clayey soils in China (Wang 1979), involve the percentage of fines, the liquid limit, and the moisture content relative to the liquid limit.

3.1.5 Landslides and Stability of Existing Slopes

The site is not situated on any known (mapped) ancient landslides and no indications of active landslides were observed during BYA's field explorations. No indications of active landslides were represented in the previous investigations of the site by others.

Constructed slopes bound the site on all sides. To the northwest, a slope extends upward from the site approximately 10 to 12 feet at an approximate gradient of 2:1 to the level of Laguna Hills Drive. Along the southeast boundary of the site, a slope extends down approximately 5 to 30 feet at an approximate gradient of 2:1 to the SJHTC . Along the northeast and southeast boundaries of the site, slopes extend downward approximately 25 feet at an approximate gradient of 2:1 to the level of the adjacent residential developments. These slopes were designed and constructed during previous episodes of grading at the site (see Section 2.2.1). With the exception of the slopes along Laguna Hills Drive, BYA understands that the slopes themselves are owned by the adjacent property owners.

The following information regarding the existing site slopes is included in the Geotechnical Report of Rough Grading for the Site by the previous geotechnical engineer of record (Nolte, 1988):

- Rough grading of the site and adjacent slopes was conducted in general accordance with the Orange County Grading Code and design geotechnical recommendations,
- All designed cut slopes were buttressed or stabilized, since locally complex geologic conditions could have resulted in local popouts of daylighted bedding planes, and
- The constructed slopes should possess an adequate factor of safety with respect to deep-seated and surficial movement.

BYA has performed no independent analysis of these slopes, however, based on our review of the rough grading reports, our observations at the site, and our experience, the slopes are expected to be grossly stable. However, it is also our opinion that there will be a tendency for the outer 20 feet of slope (measured perpendicular to the slope face) to creep downward in response to anticipated wetting and drying cycles of the fill materials. We understand that no buildings are currently planned near the slope faces, however distress should be expected for any structures founded within

20 feet of the slope face. This distress would include cracking in block walls and concrete curbs, as well as cracking and warping of flexible pavements. The slopes currently show indications of minor erosion, probably due to leaking irrigation lines, which should be repaired (hand labor only required).

3.1.6 Settlement

Settlement of existing diatomaceous fills and bedrock underlying fill at the Site can be expected to continue during the lifetime of the project. The geotechnical engineer of record for the design and construction of the existing fills at the site has stated that secondary differential settlement of the on-site materials under their own weight can be expected to vary from zero to a maximum of about one and one-half inches over any horizontal distance of 100 feet during the next 50 years (Nolte and Associates, 1988). BYA has estimated that in areas of diatomaceous fill with a thickness of between 20 and 30 feet, that the remaining differential settlement of the fill and bedrock will be between 1/2 and 1 inch over a horizontal distance of 30 feet (assuming the age of the fill is approximately 8 to 10 years). The estimates are averages based on the results of laboratory one-dimensional consolidation tests as discussed in Section 3.2.

Most of the building and landscape features are situated over bedrock or fill of less than two feet in depth and will therefore not be impacted by settlement of the existing fill and bedrock due to the weight of the fill. Settlement due to the fill is expected to impact primarily the proposed parking areas shown on Plate 1 where fill thickness exceeds 20 feet.

3.1.7 Groundwater

Based on conditions observed to date, extensive groundwater is not proposed within 30 feet of the ground surface at the site. Extensive irrigation alongside structures is planned, however, and provisions for drainage of substructures should be included as described in Section 3.8.2.3.

3.2 GEOTECHNICAL DESIGN PARAMETERS

The engineering characteristics of the site soil and bedrock material for the proposed project were evaluated based on the results of our site specific field exploration and laboratory testing. Boring, CPT and trench logs and laboratory test reports are presented in Appendices A through D respectively. The following paragraphs summarize our findings and selected geotechnical design parameters.

3.2.1 Fill

The sixteen samples of fill material that were tested by BYA had an average dry density of 62 pcf and a water content of 47 percent with standard deviations of 9 pcf and 13 percent, respectively. Percent of fines (material smaller than the #200 sieve) of the fill varied from 74.5 to 90 percent with an average of 83 percent for samples tested. The material is classified as a low plasticity

diatomaceous silt with a plasticity index (PI) ranging from 34 to 58, and an average PI of 45. The soluble soil sulfate content of a selected sample was 0.0075 percent, which places the soil sulfate exposure in the "negligible" range (Table 19-A-4, UBC 1997). One compaction test was performed on the fill material and indicated a maximum dry density of 87 pcf and optimum moisture content of 27.5 percent. The fill material has high expansion potential with an expansion index (EI) of 100 (Table 18-I-B, UBC 1997).

Evaluation of the shear strength of the fill material was based on the results of direct shear and triaxial shear tests. The effective friction angle and cohesion selected for the fill based on the test data are 24 degrees and 1.3 ksf at failure, respectively. The ultimate effective friction angle and cohesion are 22 degrees and 0.9 ksf, respectively. The unconsolidated undrained strength of fill samples tested ranged from 2.5 to 3.5 ksf. The results of tests on fill material are summarized in Table 1.

Settlement characteristics of the fill material were evaluated based on the average values of one-dimensional consolidation tests performed on samples from both the Engineering and Administrative Sites. The average values of strain-based compression index ($C_{\epsilon c}$), swell index ($C_{\epsilon s}$), and pre-consolidation pressure (σ_p) were 9.2 percent, 2.4 percent, and 4.4 ksf, respectively. The corresponding standard deviations for $C_{\epsilon c}$, $C_{\epsilon s}$, and pre-consolidation pressure were 1.6 percent, 0.3 percent, and 1.30 ksf. The average coefficient at consolidation C_v, is 0.036 in^2/min with a standard deviation of 0.011 in^2/min. Permeability of the soil was calculated to be 0.22 in/yr based on the consolidation tests. The results of consolidation tests on samples of fill material are summarized in Table 3.

3.2.2 Bedrock

The eleven samples of the bedrock material tested had an average dry density of 54 pcf and a water content of 49 percent with standard deviations of 8 pcf and 11 percent, respectively. The percentage of fine-grained particles (smaller than the #200 sieve) for this material varied from 88 to 97 percent with an average of 92 percent for samples tested. The bedrock is classified as a diatomaceous siltstone with a plasticity index (PI) ranging form 56 to 62 and an average PI of 59. The soluble soil sulfate content of a single sample tested was 0.0114 percent which places the sulfate exposure in the "moderate" range (Table 19-A-4, UBC 1997). One compaction test performed on the bedrock material indicated a maximum dry density of 66 pcf and optimum moisture content of 48 percent. The bedrock material tested had a high expansion potential with an expansion index (EI) of 125 (Table 18-I-B, UBC 1997).

Evaluation of the shear strength of the bedrock material was based on the results of direct and triaxial shear tests. The effective friction angle and cohesion selected for the bedrock based on the test data are 37 degrees and 0.7 ksf at failure, respectively. The ultimate effective friction angle and cohesion are 28 degrees and 0.4 ksf, respectively. The unconsolidated undrained (UU) strength of bedrock materials tested ranged from 0.95 to 7.7 ksf. The lower range of UU strength could be due to the

NOTES ON TESTING PROGRAM

1) Shear strength (Txuu and DS) and consol tests have been concentrated in borings for which a companion CPT was performed.
2) TXUU test confining pressures are set at over burden, with two samples each for fill and bedrock, one shallow, one deep.
3) DS tests, one on bedrock and one on fill with normal stress set for range of anticipated project overburdens.
4) DS time to failure will equal 50 X (time to 50% consolidation under the applied normal load).
5) PI/-200 test concentrated on sample for which strength tests are being run, for correleation with CPT data.
6) Consol: load to overburden dry (w/ time rate) then rebound. Swell under 1 psi load, then load 0.5, 1, 2, 4, 8, 16 (time rate), 32 ksf
7) TI's for R-value = 4, 5, 6, 7 & 8

possible existence of pre-sheared failure planes. The results of tests on bedrock material are summarized in Table 2.

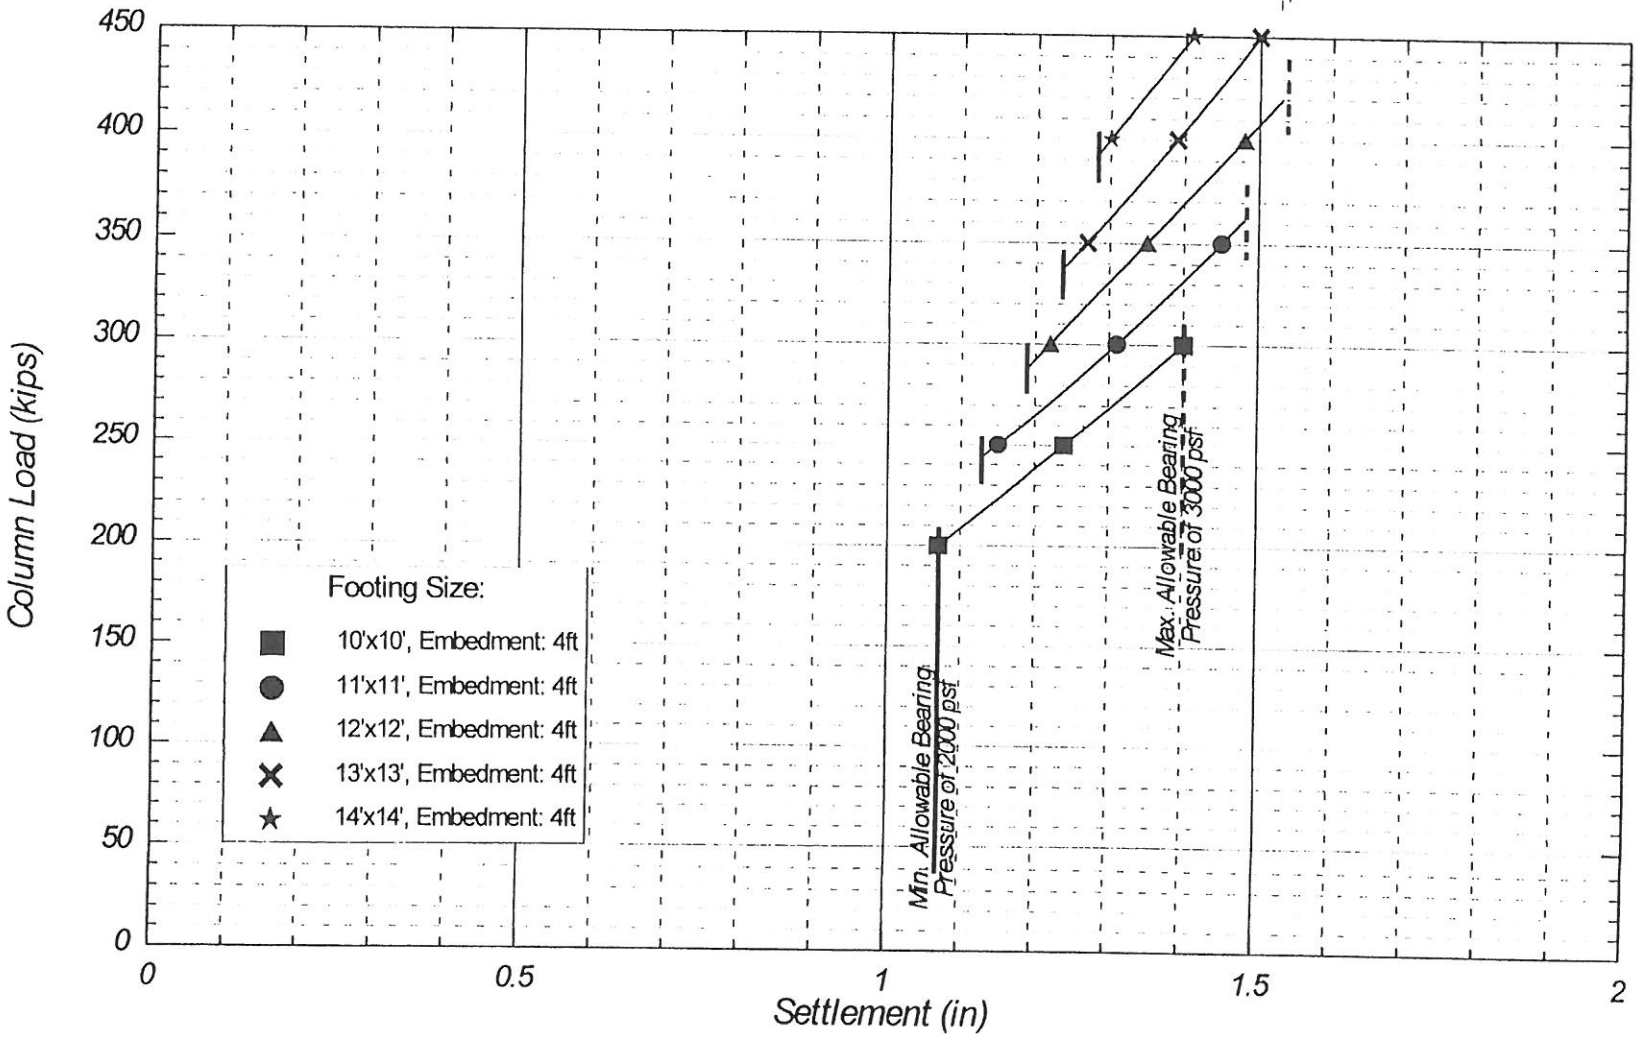
Settlement characteristics of the bedrock material were evaluated based on the average of one-dimensional consolidometer tests on samples from both the Engineering and Administrative Sites. The average values of $C_{\epsilon c}$, $C_{\epsilon s}$, and pre-consolidation pressure (σ_p) are 9.8 percent, 1.7 percent, and 8.0 ksf, respectively. The corresponding standard deviations for $C_{\epsilon c}$, $C_{\epsilon s}$, and pre-consolidation pressure are 2.0 percent, 0.09 percent, and 3.2 ksf. The average consolidation factor, C_v, is 0.027 in^2/min with a standard deviation of 0.011 in^2/min. The results of consolidation tests on samples of bedrock are summarized in Table 3.

3.3 SHALLOW FOUNDATIONS

Because the bedrock is present at shallow depths (0 to 8 feet) beneath fill, most of the buildings at this site may be supported on shallow spread footings founded in competent Monterey Formation bedrock. Deeper fill (up to 17 feet thick) lies beneath a portion of Buildings B and C as shown on Plate 1. The presence of the deeper fill will require the use of "deepened spread footings" or piles extending to bedrock beneath portions of these buildings. Alternatively, basement or sub-levels may be planned for these structures, effectively deepening the structures and allowing the use of shallow footings. The base of the footings should be a minimum of 4 feet below final grade. Due to the relatively compressible and expansive nature of the bedrock, settlement and expansion have both been considered as controlling variables in footing design.

As shown on Figure 3, total estimated settlement for 10 foot square footings under column loads of 300 to 400 kips are relatively high (greater than 1.4 inches). This is due primarily to the relatively compressible nature of the bedrock. In order to minimize differential settlement, all footings for the structures should be sized to achieve uniform estimated settlement. Estimates of time rate of footing settlement are illustrated on Figure 4. Approximately 60% of the total settlement of shallow footings founded on bedrock will occur within one month following application of the full dead load, and approximately 90% of the settlement will be completed within 10 months of foundation loading. The estimates of settlement and rate of settlement were developed using consolidation theory based on parameters developed from the results of laboratory one-dimensional consolidation tests (See section 3.2) and on BYA's experience with diatomaceous soils and bedrock from the Aliso Viejo area.

Because the subsurface materials are not only compressible, but also highly expansive, higher bearing pressures are desirable to counteract expansion pressure. The anticipated typical column loads (300 kips) will result in bearing pressures on the order of 3000 psf on 10 foot square footings. The need to balance settlement requirements with expansion pressure factors may be accommodated by construction sequencing. If construction of settlement sensitive elements such as the slab on grade and interior dry wall can be postponed until some time after the frame and exterior cladding have been erected, these "sensitive" elements will be subjected to much smaller remaining settlements.



Note: To obtain the pressure distribution under the footing, soil was assumed as a simi infinite elastic media with Poissons ratio of 0.3.

Based on consideration of both the settlement and expansion-related issues, our recommendations for shallow spread footings are summarized as follows:

- Footings should be sized in accordance with Figure 3 to achieve relatively uniform total settlement;
- All footings should be designed using a minimum allowable bearing pressure of 2,000 psf (to minimize expansion) and a maximum allowable bearing pressure of 3,000 psf (to minimize total and differential settlements);
- We recommend that elements including slabs-on-grade, interior drywall or other settlement-sensitive components should not be constructed or installed until at least 3 months following the application of the structural loads to the footings.
- Total settlements associated with this range of bearing pressures will be on the order of 1 to 1½ inches, with maximum long-term differential settlements for upper stories on the order of ½ inch between adjacent columns. Maximum total and differential settlement for the slabs-on-grade should be less than ½ inch and ¼ inch, respectively.

The following additional design values for shallow footings are recommended:

Minimum footing depth (inches)	48
Passive pressure equivalent fluid weight (pcf)	250
Friction coefficient (without passive)	0.3
Friction coefficient (with passive)	0.25

The estimated footing settlements are for the total of dead and frequently applied live loads (or real long term loads). These loads may be increased by one-third for transient loading conditions, including wind or seismic forces without affecting the long term settlement performance of the footing.

The passive resistance values assume that foundation concrete is placed neat against the excavated foundation soils. The upper 12 inches of material in areas not protected by floor slabs or pavement should not be included in design for passive resistance. Spread footings should be set back from face of adjacent slopes a distance of at least 20 feet measured horizontally from the lower outside footing edge.

3.4 PILE FOUNDATIONS

The southeast portions of buildings B and C are located over areas with fill thickness up to 10 to 20 feet. Depending on the depth of the fill, the incorporation of basement levels, and other project considerations, it may be desirable to use cast in drilled hole piles (CIDH piles) founded in bedrock (as opposed to deepened spread footings) to support the structure loads.

3.4.1 Vertical Pile Capacity

Piles that penetrate competent Monterey Formation bedrock will gain support primarily from skin friction within the bedrock. Long term consolidation of the fill materials overlying the bedrock may result in downdrag forces on CIDH piles. End bearing support will be substantially less than the skin friction and has been disregarded. The depth of embedment is controlled by the depth of fill and the desired load capacity of the CIDH pile. Estimated pile capacities are presented in Figure 5, and incorporate a assumed down drag load. The downdrag load was estimated as a negative skin friction value induced by the fill layer at the pile location (-50 kips and -100 kips for piles in areas of 10 and 20 foot fill thicknesses, respectively). The vertical capacities incorporate a factor of safety of 2, and should be checked against the structural capacities of the piles themselves. The allowable compression capacities can be increased by 33 percent for transient loads. No reduction for group action is required for a center-to-center spacing of at least three pile diameters. Settlements of properly installed CIDH piles are expected to be approximately ½ inch, with maximum differential settlements between adjacent pile foundations of ¼ to ½ inch.

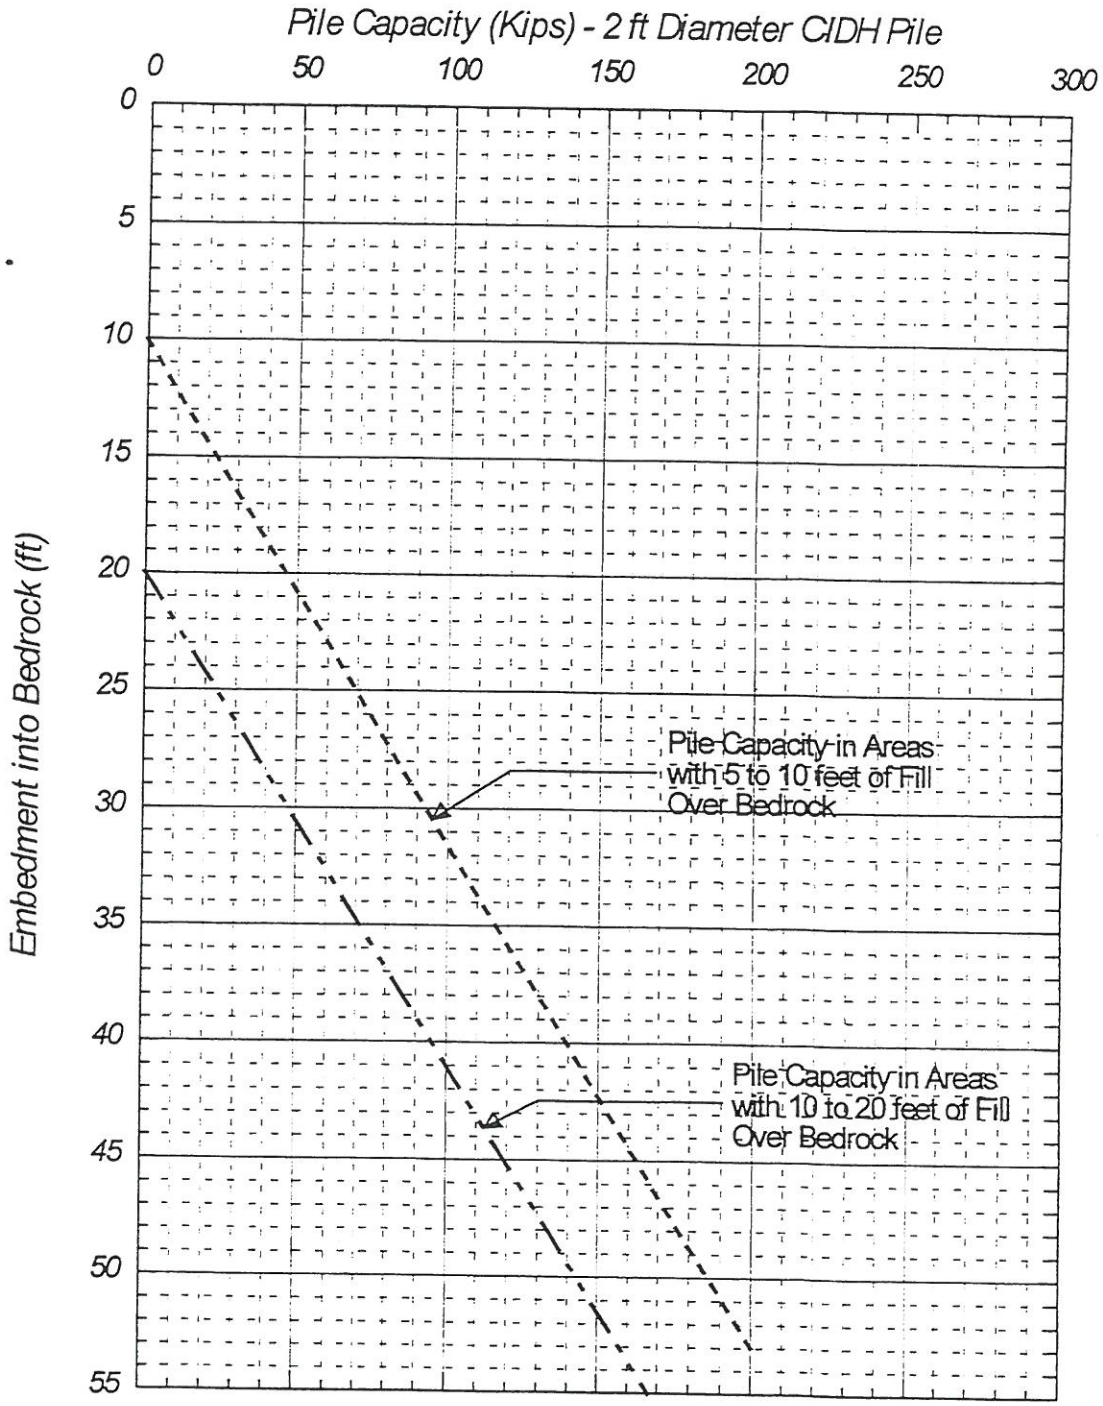
3.4.2 Lateral Pile Capacity

Resistance to lateral loads may include an allowable passive soil pressure of 250 psf for compacted fill applied against the pile caps. The upper 1 foot of passive resistance should be neglected unless the soil is confined by a pavement or slab. Lateral loads can also be resisted by piles in bending. Lateral behavior of the piles was analyzed using the computer program Group (Ensoft, 1996) which uses non-linear soil/pile responses to model pile deflections. Based on a maximum ground line deflections of ½ inch, the maximum lateral loads for a 24-inch diameter CIDH pile are 20 and 40 kips for the free head and fixed head conditions respectively. For piles spaced 8 diameters or more apart, no reduction for group interaction is required. For piles spaced 3 diameters apart, lateral resistance of individual piles should be reduced by 75%, to 5 and 10 kips for the free head and fixed head conditions, respectively. Reductions for 4 and 6 diameter spacings are 60% and 30%, respectively. Lateral load capacities do not included any factor of safety.

3.4.3 Pile Installation

Based on our observations during the field investigation, drilling holes at the Site for 24-inch diameter piles is expected to be feasible. It should be noted that very hard, cemented layers were observed in the bedrock, and some rock coring should be anticipated during installation of the piles. Zones of loose fill and bedrock may require the use of casing during drilling. The depth of fill beneath the proposed locations of buildings B and C has been estimated based on the results of a few borings and CPT soundings. The actually depths encountered during pile installation may vary significantly. Preliminary pile design capacity estimates should incorporate this uncertainty and allow for modifications during construction.

Pile installation should be performed under continuous inspection of the project geotechnical engineer to confirm that the piles have been installed according to the recommendations of this



G97-1434	Fluor Corp.	Pile Capacity	Figure 5
BING YEN & ASSOCIATES, Inc. Geotechnical & Environmental Consultants. Established 1979.			

design.grf

Date: 9/25/97

report. The project geotechnical engineer should provide detailed specifications for the installation of the CIDH piles if these piles are used in the design of the project.

3.5 LATERAL EARTH PRESSURES AND EARTH RETAINING STRUCTURES

Walls capable of horizontal movements of at least 0.005H at the top of the wall (where H is the height of the wall) should be designed as cantilever walls. Walls that can not deflect at their top and rotate about their base for at least 0.5 percent of the wall height should be designed as restrained walls. Lateral pressures induced by backfill, water, earthquake, surcharge, and traffic conditions for design of cantilever and restrained walls are presented on Figure 6 for both "select" and "non-select" backfill conditions. In general, "non-select" backfill will have higher pressures than "select" backfill for various loading conditions. Lateral earth pressures were estimated based on procedures summarized in NAVFAC DM 7.1, 1982. The lateral earth pressures recommended in this report are based upon the assumption that the ground surface behind the wall is level. If the design conditions differ from this assumption or if other special loading conditions are present, revisions to the recommended geotechnical parameters will be required.

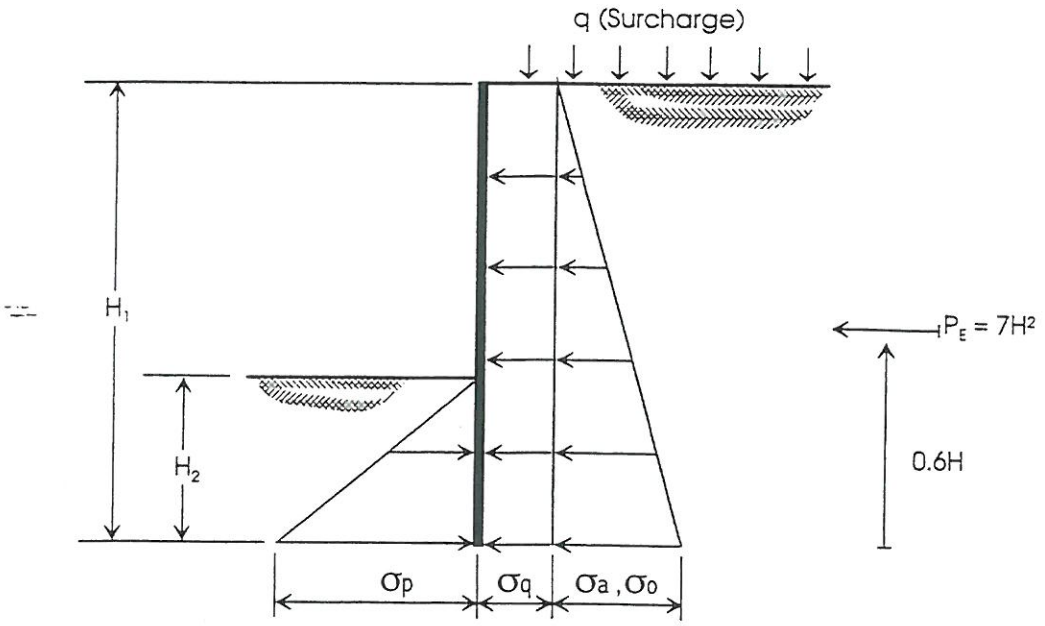
3.6 FOUNDATION SLABS ON GRADE

Slabs-on-grade should be placed directly on a prepared subgrade and should be underlain by a minimum of 18 inches of select fill material as recommended in Section 3.8 of this report. At the time of covering, the slab subgrade should be firm, relatively unyielding, and at optimum moisture content. Any soils disturbed during excavation should be removed to expose competent soils and should be replaced with properly compacted select fill. Based on our recent discussions with the project structural engineer, Culp & Tanner, we understand that the current foundation system includes the following elements:

- A perimeter grade beam, 4' deep and up to 4' wide, covering approximately 80% of the building perimeter,
- A slab on grade with thickened edge, and
- The slab will be tied to the perimeter grade beam.

From a geotechnical perspective, we recommend the following concepts be incorporated into the foundation design to help mitigate the effects of the expansive soil on the slab:

- The 4' deep grade beam should be extended to cover 100% of the building perimeter. In the extension area, the width of the grade beam need be no greater than 1 foot if structural considerations do not require a wider grade beam.



Cantilever Walls

$\sigma p = 250H \leq$ or 3,000 $\quad \sigma = \sigma a + \sigma q = 35H_1 + 0.4q$ (Un-Select Fill)
$= 30H + 0.3q$ (Select Fill)

Restrained Walls

$\sigma = \sigma o + \sigma q = 75H + q$ (Un-Select Fill with 12" Drainage Rock)
$= 50H + 0.5q$ (Select Fill)

Notes:

1. All values of height (H) in feet, pressure (σ) and surcharge (q) in pounds per square foot (psf), and P in pounds.
2. σp, σa and σo are the passive, active and at rest earth pressures, repectively; Pe is the seismic earth force; σq is the incremental surcharge earth pressure
3. σp includes a safety factor of 1.5.
4. Neglect upper 1 foot for passive pressure unless surface is confined by a pavement slab.
5. Earth pressures assume no hydrostatic pressures. If hydrostatic pressures are allowed to build up the incremental earth pressures below the ground-water level should be reduced by 50% and added to hydrostatic pressure for total lateral pressure.

Not to Scale

BING YEN & ASSOCIATES, INC.
Geotechnical & Environmental Consultants, Established 1979

PROJECT NAME: FLUOR HEADQUARTERS

PROJECT NO.: G971482 | DATE: OCTOBER 1997

LATERAL EARTH PRESSURES

FIGURE 6

- The connection area between the slab and the grade beam may be subject to concentrated bending moments and shear due to differential movement, and a thickened transition slab should be included at the connection area,

- The sub-slab excavation should be pre-soaked prior to pouring concrete for foundations and placement of the select fill. Pre-soaking should be conducted for at least 45 days, and progress should be monitored by the project geotechnical engineer to confirm the depth of saturation.

The slab-on-grade should be underlain by a layer (4 inches thick minimum) of moistened (not saturated) clean coarse (washed concrete) sand. Expansion joints and crack control sawcuts should be included at regular intervals. Where moisture-sensitive floor coverings (such as carpets or tile) are used, the floor slab should be waterproofed (e.g., using Xypex or equal), and underlain by an impermeable vapor barrier (e.g., 10 mil Visqueen or equal) over the 4-inch sand layer. The vapor barrier should be covered by a 2-inch layer of moistened (not saturated) sand.

Based on the results of R-value tests, an equivalent modulus of subgrade reaction of 150 pci may be used in design of reinforced concrete slabs.

3.7 PAVEMENTS

3.7.1 Structural Sections

Extensive parking lots are planned for the proposed project. Because of the highly expansive nature of the fill and bedrock materials, the proposed subgrade materials will have very low R-value designations, and significant differential shrink and/or swell may be expected (up to 4 inches) in paved areas where subgrade moisture content changes occur during the project lifetime. Asphalt concrete pavement (ACP) consisting of asphalt concrete (AC) over aggregate base (AB) may be used for the project. Following the procedures of the State Highway Design Manual, ACP structural sections were calculated for a pavement subgrade having an R-value of 6 to 17. The calculated structural sections also assume a minimum R-value of 78 for the aggregate base and a 20-year design life with normal maintenance. For various service conditions expressed in terms of Traffic Indices, the calculated ACP sections are summarized in Table 4.

The structural sections listed in Table 4 should be considered as preliminary in nature. Final sections should be based upon the results of R-value testing on the subgrade exposed at the conclusion of grading. AC should conform to Section 39-2.01 of the latest edition of the State of California Standard Specifications.

Table 4. Asphalt Concrete Pavement Structural Sections

Traffic Index	Structural Section (Inches)	
	Asphalt Concrete	Aggregate Base
4.0	2	8
5.0	3	8
6.0	3	12
7.0	3	16
8.0	4	16

3.7.2 Base Materials

Base course should be Class 2 aggregate base conforming to the requirements of the Section 26-1.02B of the latest edition of State of California Standard Specifications. Base course should be compacted to at least 95 percent of the maximum dry density as determined by the ASTM D1557-78 (Method D) procedures.

3.7.3 Pavement Subgrade

ACP sections should be placed on a prepared subgrade at least 12 inches thick. The pavement subgrade should have an R-value of at least 17, and should be compacted to a minimum relative compaction of 95 percent as determined in accordance with ASTM D1557 procedures. At the time of covering with base or pavement, the subgrade should be firm, and moisture conditioned to within zero and two percent above the optimum moisture content.

3.8 SITE PREPARATION AND EARTHWORK

3.8.1 General Requirements

The proposed grading should be performed in accordance with the Section 300 of the latest editions of Standard Specifications for Public Works Construction (SSPWC, known as the Green Book) and the County of Orange Grading and Excavation Code. Earthwork should be performed in conformance of the recommendations of this report under the observation and testing of the project geotechnical engineer and engineering geologist.

3.8.2 Removals and Excavations

Removals of materials will be required to clear existing improvements from the Site, to replace potentially expansive near surface fill and bedrock materials with select fill having low expansion

potential, and for the excavation of basement level structures. It is expected that excavation for the proposed construction can generally be accomplished using conventional earthmoving equipment, however very hard cemented siltstone layers are present in the bedrock at the site.

3.8.2.1 Site Clearing

Demolition of existing structures and site improvements will be required. It is also recommended that the existing access ramp be removed and rebuilt because of the presence of loose fill material. It is essential that the demolition operations be observed by qualified personnel and that the limits of demolition and the cavities created by such operations be documented. Debris, deleterious matters, rubbles, and remnants resulting from site demolition should be completely removed and disposed of offsite. Clearing and grubbing shall be in accordance with Section 300-1 of the latest edition Standard Specifications for Public Works Construction.

3.8.2.2 Overexcavation Below At-Grade Structures

The shallow bedrock and fill materials at the Engineering Site are moderately to highly expansive, and left untreated will contribute to poor performance of slabs on grade and exterior hard-scape structures. It is recommended that diatomaceous fill and bedrock be removed to a depth of 18 inches below pad level and replaced with "select fill" material beneath buildings and hardscape areas. In exterior paved areas with aggressive drainage, replacement of existing sub-grade materials is probably not justified, although some distress to pavement due to expansive soils should be anticipated.

Prior to placement of select fill, removals of near-surface, potentially expansive soils at the site will be required. Such removals will include excavation of existing fills, bedrock, loose or soft surficial materials, and porous or disturbed soils resulting from site clearing. On the basis of the field exploration, the minimum depth of such removals should be 18 inches below finish grade.

The limits of overexcavation should extend to the edge (but not beyond) of the footprints of the proposed buildings and exterior hardscape, including all at-grade structures and components. The exposed surface of the excavation should be observed by the project geotechnical engineer, and should be proof-rolled by excavation equipment to check for the potential presence of loose or soft or soft materials. If localized loose or soft conditions are indicated during earthwork, additional removals of the unsuitable materials will be required. Following the overexcavation, as described above, sub-slab excavations should be pre-soaked as described in Section 3.6 of this report. The overexcavated portion should be replaced with properly conditioned and compacted select fill in accordance with the recommendations of this report.

3.8.2.3 Excavation and Overexcavation for Basement Levels

Excavations of soils below the existing grade may be required if basement levels are planned. The depths of these structures is not known at this time, however is assumed that excavations of up to 15 feet may be required for a single level basement. Depending on the location of the building, this

excavation is expected to encounter existing fill and bedrock materials. The below grade portion behind walls should be replaced with properly conditioned and compacted non-select fill or select fill (depending on the design lateral pressures described in Section 3.5) in accordance with the recommendations of this report.

Basement walls should be waterproofed, and drainage adjacent to the walls should be provided by 12 inches of drainage gravel (or a equivalent drainage geotextile) connected to a 4 inch diameter gravity drained perforated pipe at the base of the basement wall. Basement floor slabs should be underlain by 12 inches of 3/4 inch rock and should include water pressure relief valves. A geotextile "filter fabric" such as Mirafi 600x should be place between the drain and floor slab rock and the excavation wall and floor. A minimum of two feet of impervious soil should be placed over the drainage rock along the building perimeter adjacent to the basement wall.

3.8.3 Fill Materials

3.8.3.1 General Fill

Compacted fill shall be free of vegetation, organics, or other deleterious matter. Fill material shall not contain rocks or hard lumps greater than 3 inches in maximum dimension, and at least 80 percent (by weight) of its particles shall pass a US Standard 3/8-inch sieve. Materials greater than the 3/8-inch sieve shall be placed so that they are completely surrounded by compacted finer soils.

No nesting of rocks shall be permitted. No perishable, spongy, hazardous, or other improper materials shall be used in filling.

3.8.3.2 Select Fill and Non-Select Fill

"Select" fill shall have an Expansion Index of 30 or less when tested in accordance with ASTM D4829. The results of BYA's investigation indicate that the majority of the subsurface materials at the Site consist of diatomaceous silt and clay, none of which are considered as "select" fill. For the purpose of this report, materials that meet the requirements of general fill (Section 3.8.3.1) but do not meet the requirement of"select" fill are described as "non-select" fill.

"Non-select" fill may be assumed to be moderately to highly expansive, have lower compacted strength, induce higher lateral earth pressures on walls below grade, have poor drainage characteristics, require more handling and conditioning during compaction, and may require stockpiling of wet materials during construction. Conversely, "select" fill will generally have opposite characteristics. Unless desired by for economic considerations, "non-select" fill is not recommended for use as backfill for walls below grade. It should be noted that lateral earth pressures induced on walls below grade by "non-select" backfill are significantly higher than those by "select" backfill (refer to Section 5.5 of this report). It should be emphasized that "non-select" backfill shall not be used unless the walls below grade are designed for appropriate lateral earth pressures.

3.8.4 New Permanent Cut and Fill Slopes

All fill slopes should be graded at an inclination no steeper than 2:1 (horizontal to vertical). Properly compacted fill slopes founded on competent ground, less than 10 feet in height, should have a factor of safety against deep-seated failure in excess of 1.5 under static conditions.

Fill slopes are particularly susceptible to shallow slope sloughing in periods of flooding, rainfall, heavy irrigation, and surface water runoff. Periodic maintenance of fill slopes will be required. Fill slopes should be overbuilt, cut back to the compacted core, and trackwalked by heavy compaction equipment (such as a dozer) in order to reach the specified degree of compaction. The fill slopes should be planted, drained, and maintained with an appropriate amount of surface irrigation.

No new permanent cut slopes are anticipated for the proposed development at this time. If the design conditions differ from this assumption or if existing slopes are changed, evaluations of specific cuts will be required due to the potential for adverse geologic conditions in some cut orientations.

3.8.5 Fill Placement, Compaction and Bulking/Shrinkage

In the areas where fill is to be placed, the bottom of excavation should be scarified to a depth of at least six inches. The scarified surface should be moisture conditioned to within zero to three percent above the optimum moisture content, and compacted in place by heavy construction equipment.

Fill should be placed in lifts not exceeding 6 inches in thickness prior to compaction. Fill placed on a plane inclined at a slope in excess of 5:1 (horizontal to vertical) should be keyed and benched into competent soils during placement. Unless otherwise recommended, all fill soils placed below foundations and concrete slabs should be select fill, mechanically compacted to at least 90 percent of the maximum dry density as determined in accordance with ASTM D1557. For the foundation, pavement and slab subgrades, the uppermost 12 inches should be compacted to at least 95 percent relative compaction using appropriate vibrating equipment. During placement, the moisture content of the fill should be within zero and three percent above the optimum moisture content. Field density of fill should be determined by the geotechnical engineer in accordance with the Sand Cone Method (ASTM D1556) or the Nuclear Method (ASTM D2922 and D3017). If select material is used for backfill, it should not be jetted.

Non-select fill may be derived from cuts of existing fill and bedrock at the site, provided it meets the requirements for general fill described in Section 3.8.3.1. No shrinkage or bulking is expected to occur from cutting of existing fill. Bedrock cut material will on the average shrink approximately 15% when placed as compacted fill.

3.8.5.1 Settlement of Fill

Compacted fill soils typically increase in moisture and compress due to their own weight sometime during the project lifetime. Bedrock materials underlying fills will also compress due to the weight of the fill. Significant changes in fill depths are not anticipated for the proposed project, and most

settlement of select fill materials recommended in this report should be completed during construction. See Section 3.1.6 for a discussion of settlement of existing fill and bedrock.

3.8.6 Temporary Excavation

Excavation and safety during construction is the sole responsibility of the Contractor who shall perform an independent assessment of the proposed excavation. Excavations should be performed in accordance with applicable local, state, and federal regulations and safety ordinances such that excessive ground movement and failure will not occur.

Where spacing permits and providing that adjacent structures, utility lines, etc. are adequately supported and the site is properly dewatered (if necessary), open excavations above water levels may be considered for the project. Unsupported temporary slopes in fill material sufficiently above the water level with conditions similar to those encountered during the exploration should be made at an inclination no steeper than 1:1 (horizontal to vertical), or flatter, as field conditions dictate. Flatter inclinations of up to 3:1 may be necessary for bedrock cuts, particularly those with unfavorable discontinuity orientation (for example, bedding dipping out of slope). The contractor must be able to demonstrate that temporary construction slopes are considered to have a factor of safety against deep-seated failure in excess of 1.2 under static conditions.

It is expected that excavation for the proposed construction can generally be accomplished using conventional earthmoving equipment. The top of excavations shall be graded to prevent runoff from entering the excavation, wetting the soils, and eroding the excavated faces. Surcharge loads from vehicle parking and traffic or stockpile materials should be set back from the top of temporary excavation a horizontal distance equal to at least the depth of excavation. Even with the implementation of these recommendations, sloughing of the surface of temporary excavations may still occur, and workers should be adequately protected.

3.9 SOIL CORROSIVITY

The results of pH, resistivity, soluble sulphates, and chloride content tests are presented in Appendix B. are The soluble soil sulfate content of the bedrock and diatomaceous non-select fill materials tested in the moderate range (Table 19-A-4, UBC 1997)

3.10 EXPANSIVE SOILS, SITE DRAINAGE, IRRIGATION AND GEOTECHNICAL MAINTENANCE

BYA understands that extensive landscaping and irrigation is planned adjacent to the perimeters of the proposed building and other structures. Due to the highly expansive nature of the site soils, significant distress to structures founded directly on the non-select fill and bedrock materials may result from changes in moisture content of the expansive materials beneath such structures.

The building footprints are underlain by approximately 2 feet of gravel and select fill material over presaturated bedrock materials. In addition, the four-foot-deep grade beams that will be present

around the perimeters of the buildings will provide a barrier limiting lateral migration of moisture beneath the slabs. Consequently, significant distress to the building related to expansive soil conditions is not expected.

For other structures where pressure and/or movement caused by expansive soils is undesirable, the structure should be designed to accommodate the expansive soil characteristics. Alternatively, expansive materials may be remediated by removal and replacement with select fill, or with soil improvement techniques such as treatment with hydrated lime. The project geotechnical engineer should be consulted regarding recommendations for specific structures.

It will be difficult to prevent changes in moisture content of the expansive soils. However, the following steps should be taken to minimize potential damage to structures due to expansive soils.

- Landscaping and irrigation should be kept as far away from the structural perimeters as possible, and should be kept to the minimum level required.

- Finished grades within project area should be sloped down and away from structures to facilitate positive surface drainage. A minimum ground slope of 1 and 2 percent is suggested for paved and unpaved areas, respectively.

- A layer of non-select, low permeability fill should be placed adjacent to finished structures to a depth of at least 24 inches.

- All drainage should be directed away from structures and into appropriate, water-tight discharge areas via non-erosive devices. A regular maintenance program should be implemented to keep the drainage in a good working condition.

Slopes should be maintained to promote deep-rooting, low irrigation vegetation. Burrowing rodents should be prevented from establishing developments in the slope areas.

The project geotechnical engineer should review all irrigation, drainage, and sub drain designs for conformance with these recommendations.

APPENDIX A - Soil Borings

Six soil borings (through) were completed at the site between May 22 and May 23, 1997. Borings locations are shown on Plate 1. A summary of the borings is presented in Table A-1.

Borings were drilled by H-F Drilling of Brea, California, using a Failing F-10 truck-mounted drilling rig equipped with 8-inch diameter hollow-stem augers.

Soil samples were obtained at select depth intervals by driving Standard Penetration Test 1.5 inch I.D. split spoon samplers, 2.5-inch diameter ring-lined split spoon samplers, and 3.0 inch diameter thin walled steel tube samples into the soil at the bottom of the borehole, using either a 140-pound hammer falling about 30 inches or a direct hydraulic push. Plastic end caps were used to seal the samples to help preserve the natural water content. In addition, bulk samples were obtained from the borings. All samples were labeled, packaged and transported to the BYA laboratory for classification and testing.

The number of blows required to drive the sampler was recorded at six inch intervals for a total of 18 to 24 inches of penetration. The first 6-inch increment of penetration is considered to be a "seating interval" in highly disturbed soils at the base of the borehole. The total number of blows for the last 12-inch penetration is typically used to describe the relative density and consistency of the soil samples with a correction factor typically applied to different sampler types in order to estimate their equivalent SPT blow counts. Because of the unusual nature of the diatomaceous soil and bedrock materials at the site, the variety of different sampler types used, the use of both a hammer and pushing to drive the samplers and because it is widely accepted that the above blow count correlation is overly simplistic, the relative density and consistency correlations were omitted from the material classifications in the boring logs on this project. Detailed information on the variability and consistency of the subsurface materials may be obtained directly from the CPT logs presented in Appendix B.

The boring logs were initiated in the field by a technician or staff professional who recorded soil characteristics, observations, sample locations, and other drilling information. The earth materials encountered were visually classified in general accordance with the Unified Soil Classification System as described in ASTM Method D2488. The final boring logs were prepared on the basis of visual observation of the samples and the results of laboratory testing.

TO: File/Record/Applicant

FROM: Thomas B. Mathews, Director, Planning and Development Services Dept.

SUBJECT: Planning Application PA 97-0113 for Site Development Permit

APPLICANT: Fluor Corporation, property developer
Mission Viejo Co., property owner
Wayne Peterson and Associates, agent

I. NATURE OF PROJECT:

Site Development Permit for the construction of the Fluor Corporation Global Administration Facility in Aliso Viejo. The project consists of one office building totaling 118,875 square feet gross (114,000 square feet rentable) on a 7.27 acre site in Planning Area 40 of the Aliso Viejo Planned Community. The project site is located and adjacent to the east side Pacific Park Drive, the north side Enterprise and the south side of the San Joaquin Hills Transportation Corridor.

The office structure has four floors, not including a basement storage area, and is a total of 70 feet in height above finished grade (55 feet to the roof, an additional six feet to the top of the parapet wall and then an addition 8 1/2 feet to the top of the mechanical screen wall). The building exterior is designed to reflect the Town Center theme through the use of EIFS walls and glass panels. The building is located at the southwest corner of the site with setbacks of approximately 34 feet from Pacific Park Drive and 37 feet from Enterprise.

A total of 476 parking spaces are provided based on a gross rentable building area of 114,000 square feet. The parking area, with 24 feet wide drive aisles, is accessed by a 30 feet wide driveway from Pacific Park Drive and a 50 feet wide driveway on Enterprise. Driveway throat lengths in excess of 160 feet are provided. Landscaping is designed to conform with the Town Center theme and requirements, and is provided throughout the parking area with perimeter landscaping 20 to 35 feet in width adjacent to the streets.

Planning Area 40 of the Aliso Viejo Planned Community has a land use designated of "Town Center". The objective of the Town Center designation is intended to provide for a mixed-use center to function as the community's urban core, central business district and community shopping area. The proposed office complex is consistent with the Town Center

objectives. The proposal also conforms to all the site development standards including: building site area (no minimum required); building height (building height based on setbacks); and, building setbacks (based on adjacent land use). All wall and monument signage will be in accordance with the Town Center sign regulations. The proposal and site plan were reviewed by the Aliso Viejo Advisory Planning Committee and approved at their July 23, 1997 meeting. A revised site plan, the current proposal, was approved by the Aliso Viejo Advisory Planning Committee at their October 22, 1997 meeting.

II. **REFERENCE:** (Authority for Administrative action is given by what ordinance, regulation, etc.)

Orange County Zoning Code sections 7-9-150 "Discretionary Permits and Procedures" and the Aliso Viejo Planned Community site development regulations.

III. **ENVIRONMENTAL DOCUMENTATION:**

The proposed project is covered by Final EIR 088 previously certified on 9-24-82. Prior to project approval, this EIR must be found adequate to satisfy the requirements of CEQA the Director. Section V of this report contains the required CEQA Finding.

IV. **CERTIFICATION:**

I hereby certify that the subject proposal has been Conditionally Approved as noted below.

Thomas B. Mathews, Director
Planning and Development Services Department

Date: 12/11/97 By: C. M. Shoemaker

C. M. Shoemaker, Chief
CPSD/Site Planning Section

WVM FOLDER: AV

V. FINDINGS:

I. The project is consistent with the objectives, policies, general land uses and programs specified by the General Plan adopted pursuant to the State Planning and Zoning Laws.

II. The project, subject to the specified conditions, is consistent with the provisions of the Zoning Code and Aliso Viejo Planned Community.

III. The decision-maker has considered Final EIR 088 , previously certified on 9-24-82, and Addendum No. PA970113 prior to project approval. Together they are approved for the proposed project based upon the following findings:

a. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

b. The additions, clarifications and/or changes to the original document caused by the Addendum, do not raise new significant issues which were not addressed by the EIR; and

c. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Lead Agency.

IV. The location, size, design and operating characteristics of the project will not create unusual noise, traffic or other conditions or situations that may be objectionable, detrimental or incompatible with other permitted uses in the vicinity.

V. The project will not result in conditions or circumstances contrary to the public health and safety and the general welfare.

VI. The project is located within a fee area as that term is defined in Section 7-9-702 and will contribute to the need for a fire station and/or library facility for which a fee is required.

VII. The subject project lies within the area of benefit of the San Joaquin Hills Transportation Corridor. In order to find this project consistent with the General Plan and to ensure that the traffic impacts have been adequately mitigated, it is necessary to adopt a condition requiring the developer to participate in the fee program adopted by the Board of Supervisors.

VI. CONDITIONS OF APPROVAL

1. CP NA NA BASIC/ZONING REGULATIONS
This approval constitutes approval of the proposed project only to the extent that the project complies with the Orange County Zoning Code and any

other applicable zoning regulations. Approval does not include any action or finding as to compliance of approval of the project regarding any other applicable ordinance, regulation or requirement.

2. CP NA NA BASIC/TIME LIMIT
This approval is valid for a period of 36 months from the date of final determination. If the use approved by this action is not established within such period of time, this approval shall be terminated and shall thereafter be null and void.

3. CP NA NA BASIC/PRECISE PLAN
Except as otherwise provided herein, this permit is approved as a precise plan. After any application has been approved, if changes are proposed regarding the location or alteration of any use or structure, a changed plan may be submitted to the Director-Planning and Development Services Department for approval. If the Director determines that the proposed change complies with the provisions and the spirit and intent of the approval action, and that the action would have been the same for the changed plan as for the approved plot plan, he may approve the changed plan without requiring a new public hearing.

4. CP NA NA BASIC/COMPLIANCE
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

5. CP NA NA BASIC/OBLIGATIONS
Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

6. CP CP B SPECIAL - REVISED PLANS
Prior to the issuance of building permits, the applicant shall submit a Changed Plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the regulations contained in Zoning Code Section 7-9-143 "Facility Design Regulations".

7. CP CP U SPECIAL - REVISED SCREENING
Prior to the issuance of certificates of use and occupancy, the applicant shall submit a revised preliminary landscaping plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the screening and landscaping regulations contained Sections XI.B.10 and 11 of the Aliso Viejo Planned Community development regulations.

8. CP CP B SPECIAL - LIGHTING
Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.

9. CP CP B SPECIAL - SIGNS
Prior to the installation of any signs, the applicant shall submit a "Sign Program". The Sign Program shall be approved through a Changed Plan as required by Zoning Code Section 7-9-150. The Sign Program shall be in substantial conformance with Section XXI of the Aliso Viejo Planned Community development regulations. The Sign Program shall be reviewed by the Aliso Viejo Advisory Planning Committee prior to approval of the Changed Plan.

10. SG SG G GEOLOGY RPT
Prior to the issuance of a grading permit, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

11. BP BP G CONST NOISE
A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

(1) All construction vehicles or equipment, fixed or mobile, operated within 1,000' of a dwelling shall be equipped with properly operating and maintained mufflers.

(2) All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

(3) Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.

12. ER SG G POLLUTANT RUNOFF
Prior to issuance of precise grading or building permits, as determined by the Manager, Subdivision and Grading Services, the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs

whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

13. ER DS G NPDES PERMIT

Prior to issuance of any grading permits, the applicant shall submit evidence to the Manager, Subdivision and Grading, that the applicant has obtained coverage under the NPDES statewide General Stormwater Permit from the State Water Resources Control Board.

14. SG SG GB DRAINAGE STUDY

Prior to the issuance of any grading permits, or prior to the issuance of building permits, whichever comes first, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels, street flows, catch basins, storm drains, and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

15. SG SG GB DRAINAGE IMPRO

A. Prior to the issuance of any grading permits or prior to the issuance of building permits, whichever comes first, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

SG C U DRAINAGE IMPROV

B. Prior to the issuance of any certificates of use and occupancy, said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

16. F F R FIRE ACCESS
Prior to the issuance of grading permits, the applicant shall obtain approval of the Fire Chief of all fire protection access easements and shall dedicate them to the County in a manner meeting the approval of the Fire Chief. The approval of the Fire Chief is required for any modifications such as speed bumps, control gates or other changes within said easement.

17. F F G STREET PLANS
Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of preliminary plans for all street and courts, public or private, from the Fire Chief in consultation with the Manager, Traffic Engineering. The plans shall include the plan view, sectional view, and indicate the width of the street or court, measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked when a dead-end street exceeds 150 feet or when other conditions require it.

18. F F GU STREET MARKINGS
A. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval from the Fire Chief for street improvement plans with fire lanes shown. The plans shall indicate the locations of red curbing and signage, and provide a drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color.

B. Prior to the issuance of the certificate of use and occupancy, the approved fire lane marking plan shall be installed. The CC&Rs shall contain a fire lane map and provisions which prohibit parking in the fire lanes. A method of enforcement shall be included.

19. F F B SITE PLANNING
Prior to the issuance of building permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class. All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

20. TE TE G SIGHT DISTANCE
Prior to the issuance of any grading permits, the applicant shall provide adequate sight distance at all street intersections per Standard Plan 1117, in a manner meeting the approval of the Manager, Subdivision and Grading Services. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.

21. TE TE GU ACCESS
Prior to the issuance of grading permits, the applicant shall design and dedicate to the County of Orange any necessary right of way required for an additional twelve (12) feet wide lane on northbound Pacific Park Drive across the property frontage, all in a manner meeting the approval of the

Manager, Subdivision and Grading Services. Said improvement shall be constructed prior to the issuance of certificates of use and occupancy, in a manner meeting the approval of the Manager, Subdivision and Grading Services.

22. SG SG/BI GU PVT LANDSCP

A. Prior to the issuance of building permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

23. BP BP B ACOUST NON-RES

Except when the interior noise level exceeds the exterior noise level, all non-residential structures shall be sound attenuated against the combined impact of all present and projected noise from exterior noise sources to meet the interior noise criteria as specified in the Noise Element and Land Use/Noise Compatibility Manual.

Prior to the issuance of any building permits, the applicant shall submit to the Manager, Building Permits, evidence prepared under the supervision of a County-certified acoustical consultant that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5. The evidence shall be in the form of an acoustical analysis report describing in detail the exterior noise environment and the acoustical design features required to achieve the interior noise standard and which indicate that the sound attenuation measures specified have been incorporated into the design of the project.

24. F F B WATER

Prior to the issuance of the first building permit, the applicant shall submit water improvement plans to the Fire Chief for review and approval to ensure adequate fire protection and financial security is posted for the

installation. The water system design, location of valves, and the distribution of fire hydrants will be evaluated and approved by the Fire Chief.

25. F F RB FIRE HYDRANTS
Prior to the issuance of first building permit, the applicant shall submit to the Fire Chief evidence of the on-site fire hydrant system. The system shall be reviewed and approved by the Fire Chief prior to issuance of building permits. Provisions shall be made by the applicant for the repair and maintenance of the system, in a manner meeting the approval of the Fire Chief.

26. F F B AUTO FIRE EXT
Prior to the issuance of building permits, the applicant shall place a note on the construction plans stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

27. F F B COMBSTBLE CONST
Prior to the issuance of any building permits for combustible construction, the developer shall submit and obtain the Fire Chief's approval of a letter and plan stating that water for fire fighting purposes and an all weather fire access road shall be in place and operational as required by the Uniform Fire Code before any combustible materials are placed on the site.

28. F F B WATER AVAILABILITY
Prior to the issuance of any building permits, an Orange County Fire Authority Water Availability Form shall be submitted to and approved by the Plan Review Section of the Orange County Fire Authority. If sufficient water to meet fire flow requirements is not available, an automatic fire extinguishing system shall be installed in each structure, in a manner meeting the approval of the Fire Chief.

29. F F BU FIRE SPRINKLERS
Prior to the issuance of any building permits, plans for an automatic fire sprinkler system shall be submitted to and approved by the Fire Chief prior to installation. This system shall be operational prior to the issuance of a certificate of use and occupancy.

30. F F B BUILDING USE
Prior to the issuance of any building permits, the applicant shall submit a detailed letter of intended use for each building to the Fire Chief for review and approval.

31. F F B HAZARDOUS MATERIALS DISCLOSURE
Prior to the issuance of any building permits, the applicant shall contact the Orange County Fire Authority Hazardous Materials Disclosure Office at (714) 744-0463 to obtain a "Hazardous Materials Business Information and Chemical Inventory Packet". This shall be completed and submitted to the Fire Chief before the issuance of any building permits.

32. F F B FIRE SAFETY SITE PLAN
Prior to the issuance of a building permit, the applicant shall submit plans for the review and approval of the Fire Chief. The applicant shall include information on the plans required by the Fire Chief. Contact the Orange County Fire Authority Plans Review Section at (714) 744-0403 for the Fire Safety Architectural Notes to be placed on the plans.

33. TE TE B ROAD FEE PROG
Prior to the issuance of building permits, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading Division.

a. San Joaquin Hills Transportation Corridor
b. Moulton Parkway/Laguna Niguel Area
c. Coastal Area Road Improvements and Traffic Signals

34. TE TE BU ACCESS
Prior to the issuance of building permits or prior to the issuance of certificates of use and occupancy, as determined by the Manager, Subdivision and Grading Services, the applicant shall provide for a 200 feet left turn pocket on eastbound Enterprise at the access driveway to the site in a manner meeting the approval of the Manager, Subdivision and Grading Services.

35. TE TE BU SIGNAL
Prior to the issuance of building permits or prior to the issuance of certificates of use and occupancy, the applicant shall design and install a traffic signal at the site access/Enterprise intersection in a manner meeting the approval of the Manager, Subdivision and Grading Services in consultation with the Manager, Program Development Services.

36. TE TE B RECORDATION
Prior to the issuance of building permits, the applicable portion of TT13435 shall be recorded.

37. F F U FIRE HYDRANT MARKER
Prior to the issuance of any certificates of use and occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard and approved by the Fire Chief. On private property these markers are to be maintained in good condition by the property owner.

38. F F NA FIRE ALARM
Prior to installation, plans for the fire alarm system shall be submitted to and approved by the Fire Chief. This system shall be operational prior to the issuance of a certificate of use and occupancy.

TO: File/Record/Applicant

FROM: Thomas B. Mathews, Director, Planning and Development Services Dept.

SUBJECT: Planning Application PA 97-0113 for Site Development Permit

APPLICANT: Fluor Corporation, property developer
Mission Viejo Co., property owner
Wayne Peterson and Associates, agent

I. NATURE OF PROJECT:

Site Development Permit for the construction of the Fluor Corporation Global Administration Facility in Aliso Viejo. The project consists of one office building totaling 118,875 square feet gross (114,000 square feet rentable) on a 7.27 acre site in Planning Area 40 of the Aliso Viejo Planned Community. The project site is located and adjacent to the east side Pacific Park Drive, the north side Enterprise and the south side of the San Joaquin Hills Transportation Corridor.

The office structure has four floors, not including a basement storage area, and is a total of 70 feet in height above finished grade (55 feet to the roof, an additional six feet to the top of the parapet wall and then an addition 8 1/2 feet to the top of the mechanical screen wall). The building exterior is designed to reflect the Town Center theme through the use of EIFS walls and glass panels. The building is located at the southwest corner of the site with setbacks of approximately 34 feet from Pacific Park Drive and 37 feet from Enterprise.

A total of 476 parking spaces are provided based on a gross rentable building area of 114,000 square feet. The parking area, with 24 feet wide drive aisles, is accessed by a 30 feet wide driveway from Pacific Park Drive and a 50 feet wide driveway on Enterprise. Driveway throat lengths in excess of 160 feet are provided. Landscaping is designed to conform with the Town Center theme and requirements, and is provided throughout the parking area with perimeter landscaping 20 to 35 feet in width adjacent to the streets.

Planning Area 40 of the Aliso Viejo Planned Community has a land use designated of "Town Center". The objective of the Town Center designation is intended to provide for a mixed-use center to function as the community's urban core, central business district and community shopping area. The proposed office complex is consistent with the Town Center

objectives. The proposal also conforms to all the site development standards including: building site area (no minimum required); building height (building height based on setbacks); and, building setbacks (based on adjacent land use). All wall and monument signage will be in accordance with the Town Center sign regulations. The proposal and site plan were reviewed by the Aliso Viejo Advisory Planning Committee and approved at their July 23, 1997 meeting. A revised site plan, the current proposal, was approved by the Aliso Viejo Advisory Planning Committee at their October 22, 1997 meeting.

II. **REFERENCE:** (Authority for Administrative action is given by what ordinance, regulation, etc.)

Orange County Zoning Code sections 7-9-150 "Discretionary Permits and Procedures" and the Aliso Viejo Planned Community site development regulations.

III. **ENVIRONMENTAL DOCUMENTATION:**

The proposed project is covered by Final EIR 088 previously certified on 9-24-82. Prior to project approval, this EIR must be found adequate to satisfy the requirements of CEQA the Director. Section V of this report contains the required CEQA Finding.

IV. **CERTIFICATION:**

I hereby certify that the subject proposal has been Conditionally Approved as noted below.

Thomas B. Mathews, Director
Planning and Development Services Department

Date: 12/11/97 By: C. M. Shoemaker

C. M. Shoemaker, Chief
CPSD/Site Planning Section

WVM FOLDER: AV

V. FINDINGS:

I. The project is consistent with the objectives, policies, general land uses and programs specified by the General Plan adopted pursuant to the State Planning and Zoning Laws.

II. The project, subject to the specified conditions, is consistent with the provisions of the Zoning Code and Aliso Viejo Planned Community.

III. The decision-maker has considered Final EIR 088 , previously certified on 9-24-82, and Addendum No. PA970113 prior to project approval. Together they are approved for the proposed project based upon the following findings:

a. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

b. The additions, clarifications and/or changes to the original document caused by the Addendum, do not raise new significant issues which were not addressed by the EIR; and

c. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Lead Agency.

IV. The location, size, design and operating characteristics of the project will not create unusual noise, traffic or other conditions or situations that may be objectionable, detrimental or incompatible with other permitted uses in the vicinity.

V. The project will not result in conditions or circumstances contrary to the public health and safety and the general welfare.

VI. The project is located within a fee area as that term is defined in Section 7-9-702 and will contribute to the need for a fire station and/or library facility for which a fee is required.

VII. The subject project lies within the area of benefit of the San Joaquin Hills Transportation Corridor. In order to find this project consistent with the General Plan and to ensure that the traffic impacts have been adequately mitigated, it is necessary to adopt a condition requiring the developer to participate in the fee program adopted by the Board of Supervisors.

VI. CONDITIONS OF APPROVAL

1. CP NA NA BASIC/ZONING REGULATIONS
This approval constitutes approval of the proposed project only to the extent that the project complies with the Orange County Zoning Code and any

other applicable zoning regulations. Approval does not include any action or finding as to compliance of approval of the project regarding any other applicable ordinance, regulation or requirement.

2. CP NA NA BASIC/TIME LIMIT
This approval is valid for a period of 36 months from the date of final determination. If the use approved by this action is not established within such period of time, this approval shall be terminated and shall thereafter be null and void.

3. CP NA NA BASIC/PRECISE PLAN
Except as otherwise provided herein, this permit is approved as a precise plan. After any application has been approved, if changes are proposed regarding the location or alteration of any use or structure, a changed plan may be submitted to the Director-Planning and Development Services Department for approval. If the Director determines that the proposed change complies with the provisions and the spirit and intent of the approval action, and that the action would have been the same for the changed plan as for the approved plot plan, he may approve the changed plan without requiring a new public hearing.

4. CP NA NA BASIC/COMPLIANCE
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

5. CP NA NA BASIC/OBLIGATIONS
Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

6. CP CP B SPECIAL - REVISED PLANS
Prior to the issuance of building permits, the applicant shall submit a Changed Plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the regulations contained in Zoning Code Section 7-9-143 "Facility Design Regulations".

7. CP CP U SPECIAL - REVISED SCREENING
Prior to the issuance of certificates of use and occupancy, the applicant shall submit a revised preliminary landscaping plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the screening and landscaping regulations contained Sections XI.B.10 and 11 of the Aliso Viejo Planned Community development regulations.

8. CP CP B SPECIAL - LIGHTING
Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.

9. CP CP B SPECIAL - SIGNS
Prior to the installation of any signs, the applicant shall submit a "Sign Program". The Sign Program shall be approved through a Changed Plan as required by Zoning Code Section 7-9-150. The Sign Program shall be in substantial conformance with Section XXI of the Aliso Viejo Planned Community development regulations. The Sign Program shall be reviewed by the Aliso Viejo Advisory Planning Committee prior to approval of the Changed Plan.

10. SG SG G GEOLOGY RPT
Prior to the issuance of a grading permit, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

11. BP BP G CONST NOISE
A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

(1) All construction vehicles or equipment, fixed or mobile, operated within 1,000' of a dwelling shall be equipped with properly operating and maintained mufflers.

(2) All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

(3) Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.

12. ER SG G POLLUTANT RUNOFF
Prior to issuance of precise grading or building permits, as determined by the Manager, Subdivision and Grading Services, the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs

whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

13. ER DS G NPDES PERMIT

Prior to issuance of any grading permits, the applicant shall submit evidence to the Manager, Subdivision and Grading, that the applicant has obtained coverage under the NPDES statewide General Stormwater Permit from the State Water Resources Control Board.

14. SG SG GB DRAINAGE STUDY

Prior to the issuance of any grading permits, or prior to the issuance of building permits, whichever comes first, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels, street flows, catch basins, storm drains, and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

15. SG SG GB DRAINAGE IMPRO

A. Prior to the issuance of any grading permits or prior to the issuance of building permits, whichever comes first, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

SG C U DRAINAGE IMPROV

B. Prior to the issuance of any certificates of use and occupancy, said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

16. F F R

FIRE ACCESS

Prior to the issuance of grading permits, the applicant shall obtain approval of the Fire Chief of all fire protection access easements and shall dedicate them to the County in a manner meeting the approval of the Fire Chief. The approval of the Fire Chief is required for any modifications such as speed bumps, control gates or other changes within said easement.

17. F F G

STREET PLANS

Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of preliminary plans for all street and courts, public or private, from the Fire Chief in consultation with the Manager, Traffic Engineering. The plans shall include the plan view, sectional view, and indicate the width of the street or court, measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked when a dead-end street exceeds 150 feet or when other conditions require it.

18. F F GU

STREET MARKINGS

A. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval from the Fire Chief for street improvement plans with fire lanes shown. The plans shall indicate the locations of red curbing and signage, and provide a drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color.

B. Prior to the issuance of the certificate of use and occupancy, the approved fire lane marking plan shall be installed. The CC&Rs shall contain a fire lane map and provisions which prohibit parking in the fire lanes. A method of enforcement shall be included.

19. F F B

SITE PLANNING

Prior to the issuance of building permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class. All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

20. TE TE G

SIGHT DISTANCE

Prior to the issuance of any grading permits, the applicant shall provide adequate sight distance at all street intersections per Standard Plan 1117, in a manner meeting the approval of the Manager, Subdivision and Grading Services. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.

21. TE TE GU

ACCESS

Prior to the issuance of grading permits, the applicant shall design and dedicate to the County of Orange any necessary right of way required for an additional twelve (12) feet wide lane on northbound Pacific Park Drive across the property frontage, all in a manner meeting the approval of the

Manager, Subdivision and Grading Services. Said improvement shall be constructed prior to the issuance of certificates of use and occupancy, in a manner meeting the approval of the Manager, Subdivision and Grading Services.

22. SG SG/BI GU PVT LANDSCP

A. Prior to the issuance of building permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

23. BP BP B ACOUST NON-RES

Except when the interior noise level exceeds the exterior noise level, all non-residential structures shall be sound attenuated against the combined impact of all present and projected noise from exterior noise sources to meet the interior noise criteria as specified in the Noise Element and Land Use/Noise Compatibility Manual.

Prior to the issuance of any building permits, the applicant shall submit to the Manager, Building Permits, evidence prepared under the supervision of a County-certified acoustical consultant that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5. The evidence shall be in the form of an acoustical analysis report describing in detail the exterior noise environment and the acoustical design features required to achieve the interior noise standard and which indicate that the sound attenuation measures specified have been incorporated into the design of the project.

24. F F B WATER

Prior to the issuance of the first building permit, the applicant shall submit water improvement plans to the Fire Chief for review and approval to ensure adequate fire protection and financial security is posted for the

installation. The water system design, location of valves, and the distribution of fire hydrants will be evaluated and approved by the Fire Chief.

25. F F RB FIRE HYDRANTS
Prior to the issuance of first building permit, the applicant shall submit to the Fire Chief evidence of the on-site fire hydrant system. The system shall be reviewed and approved by the Fire Chief prior to issuance of building permits. Provisions shall be made by the applicant for the repair and maintenance of the system, in a manner meeting the approval of the Fire Chief.

26. F F B AUTO FIRE EXT
Prior to the issuance of building permits, the applicant shall place a note on the construction plans stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

27. F F B COMBSTBLE CONST
Prior to the issuance of any building permits for combustible construction, the developer shall submit and obtain the Fire Chief's approval of a letter and plan stating that water for fire fighting purposes and an all weather fire access road shall be in place and operational as required by the Uniform Fire Code before any combustible materials are placed on the site.

28. F F B WATER AVAILABILITY
Prior to the issuance of any building permits, an Orange County Fire Authority Water Availability Form shall be submitted to and approved by the Plan Review Section of the Orange County Fire Authority. If sufficient water to meet fire flow requirements is not available, an automatic fire extinguishing system shall be installed in each structure, in a manner meeting the approval of the Fire Chief.

29. F F BU FIRE SPRINKLERS
Prior to the issuance of any building permits, plans for an automatic fire sprinkler system shall be submitted to and approved by the Fire Chief prior to installation. This system shall be operational prior to the issuance of a certificate of use and occupancy.

30. F F B BUILDING USE
Prior to the issuance of any building permits, the applicant shall submit a detailed letter of intended use for each building to the Fire Chief for review and approval.

31. F F B HAZARDOUS MATERIALS DISCLOSURE
Prior to the issuance of any building permits, the applicant shall contact the Orange County Fire Authority Hazardous Materials Disclosure Office at (714) 744-0463 to obtain a "Hazardous Materials Business Information and Chemical Inventory Packet". This shall be completed and submitted to the Fire Chief before the issuance of any building permits.

32. F F B FIRE SAFETY SITE PLAN
Prior to the issuance of a building permit, the applicant shall submit plans for the review and approval of the Fire Chief. The applicant shall include information on the plans required by the Fire Chief. Contact the Orange County Fire Authority Plans Review Section at (714) 744-0403 for the Fire Safety Architectural Notes to be placed on the plans.

33. TE TE B ROAD FEE PROG
Prior to the issuance of building permits, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading Division.

a. San Joaquin Hills Transportation Corridor
b. Moulton Parkway/Laguna Niguel Area
c. Coastal Area Road Improvements and Traffic Signals

34. TE TE BU ACCESS
Prior to the issuance of building permits or prior to the issuance of certificates of use and occupancy, as determined by the Manager, Subdivision and Grading Services, the applicant shall provide for a 200 feet left turn pocket on eastbound Enterprise at the access driveway to the site in a manner meeting the approval of the Manager, Subdivision and Grading Services.

35. TE TE BU SIGNAL
Prior to the issuance of building permits or prior to the issuance of certificates of use and occupancy, the applicant shall design and install a traffic signal at the site access/Enterprise intersection in a manner meeting the approval of the Manager, Subdivision and Grading Services in consultation with the Manager, Program Development Services.

36. TE TE B RECORDATION
Prior to the issuance of building permits, the applicable portion of TT13435 shall be recorded. T.r. 15521 recorded 12-15-97

37. F F U FIRE HYDRANT MARKER
Prior to the issuance of any certificates of use and occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard and approved by the Fire Chief. On private property these markers are to be maintained in good condition by the property owner.

38. F F NA FIRE ALARM
Prior to installation, plans for the fire alarm system shall be submitted to and approved by the Fire Chief. This system shall be operational prior to the issuance of a certificate of use and occupancy.

SUBJECT: Planning Application PA 97-0113 for Site Development Permit

APPLICANT: Fluor Corporation, property developer
Mission Viejo Co., property owner
Wayne Peterson and Associates, agent

I. NATURE OF PROJECT:

Site Development Permit for the construction of the Fluor Corporation Global Administration Facility in Aliso Viejo. The project consists of one office building totaling 118,875 square feet gross (114,000 square feet rentable) on a 7.27 acre site in Planning Area 40 of the Aliso Viejo Planned Community. The project site is located and adjacent to the east side Pacific Park Drive, the north side Enterprise and the south side of the San Joaquin Hills Transportation Corridor.

The office structure has four floors, not including a basement storage area, and is a total of 70 feet in height above finished grade (55 feet to the roof, an additional six feet to the top of the parapet wall and then an addition 8 1/2 feet to the top of the mechanical screen wall). The building exterior is designed to reflect the Town Center theme through the use of EIFS walls and glass panels. The building is located at the southwest corner of the site with setbacks of approximately 34 feet from Pacific Park Drive and 37 feet from Enterprise.

A total of 476 parking spaces are provided based on a gross rentable building area of 114,000 square feet. The parking area, with 24 feet wide drive aisles, is accessed by a 30 feet wide driveway from Pacific Park Drive and a 50 feet wide driveway on Enterprise. Driveway throat lengths in excess of 160 feet are provided. Landscaping is designed to conform with the Town Center theme and requirements, and is provided throughout the parking area with perimeter landscaping 20 to 35 feet in width adjacent to the streets.

Planning Area 40 of the Aliso Viejo Planned Community has a land use designated of "Town Center". The objective of the Town Center designation is intended to provide for a mixed-use center to function as the community's urban core, central business district and community shopping area. The proposed office complex is consistent with the Town Center

objectives. The proposal also conforms to all the site development standards including: building site area (no minimum required); building height (building height based on setbacks); and, building setbacks (based on adjacent land use). All wall and monument signage will be in accordance with the Town Center sign regulations. The proposal and site plan were reviewed by the Aliso Viejo Advisory Planning Committee and approved at their July 23, 1997 meeting. A revised site plan, the current proposal, was approved by the Aliso Viejo Advisory Planning Committee at their October 22, 1997 meeting.

II. REFERENCE: (Authority for Administrative action is given by what ordinance, regulation, etc.)

Orange County Zoning Code sections 7-9-150 "Discretionary Permits and Procedures" and the Aliso Viejo Planned Community site development regulations.

III. ENVIRONMENTAL DOCUMENTATION:

The proposed project is covered by Final EIR 088 previously certified on 9-24-82. Prior to project approval, this EIR must be found adequate to satisfy the requirements of CEQA the Director. Section V of this report contains the required CEQA Finding.

IV. CERTIFICATION:

I hereby certify that the subject proposal has been Conditionally Approved as noted below.

Thomas B. Mathews, Director
Planning and Development Services Department

Date: 12/11/97 By: _____
C. M. Shoemaker, Chief
CPSD/Site Planning Section

WVM FOLDER: AV

V. FINDINGS:

I. The project is consistent with the objectives, policies, general land uses and programs specified by the General Plan adopted pursuant to the State Planning and Zoning Laws.

II. The project, subject to the specified conditions, is consistent with the provisions of the Zoning Code and Aliso Viejo Planned Community.

III. The decision-maker has considered Final EIR 088 , previously certified on 9-24-82, and Addendum No. PA970113 prior to project approval. Together they are approved for the proposed project based upon the following findings:

a. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

b. The additions, clarifications and/or changes to the original document caused by the Addendum, do not raise new significant issues which were not addressed by the EIR; and

c. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Lead Agency.

IV. The location, size, design and operating characteristics of the project will not create unusual noise, traffic or other conditions or situations that may be objectionable, detrimental or incompatible with other permitted uses in the vicinity.

V. The project will not result in conditions or circumstances contrary to the public health and safety and the general welfare.

VI. The project is located within a fee area as that term is defined in Section 7-9-702 and will contribute to the need for a fire station and/or library facility for which a fee is required.

VII. The subject project lies within the area of benefit of the San Joaquin Hills Transportation Corridor. In order to find this project consistent with the General Plan and to ensure that the traffic impacts have been adequately mitigated, it is necessary to adopt a condition requiring the developer to participate in the fee program adopted by the Board of Supervisors.

VI. CONDITIONS OF APPROVAL

1. CP NA NA BASIC/ZONING REGULATIONS
This approval constitutes approval of the proposed project only to the extent that the project complies with the Orange County Zoning Code and any

other applicable zoning regulations. Approval does not include any action or finding as to compliance of approval of the project regarding any other applicable ordinance, regulation or requirement.

2. CP NA NA BASIC/TIME LIMIT
This approval is valid for a period of 36 months from the date of final determination. If the use approved by this action is not established within such period of time, this approval shall be terminated and shall thereafter be null and void.

3. CP NA NA BASIC/PRECISE PLAN
Except as otherwise provided herein, this permit is approved as a precise plan. After any application has been approved, if changes are proposed regarding the location or alteration of any use or structure, a changed plan may be submitted to the Director-Planning and Development Services Department for approval. If the Director determines that the proposed change complies with the provisions and the spirit and intent of the approval action, and that the action would have been the same for the changed plan as for the approved plot plan, he may approve the changed plan without requiring a new public hearing.

4. CP NA NA BASIC/COMPLIANCE
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

5. CP NA NA BASIC/OBLIGATIONS
Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

6. CP CP B SPECIAL - REVISED PLANS
Prior to the issuance of building permits, the applicant shall submit a Changed Plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the regulations contained in Zoning Code Section 7-9-143 "Facility Design Regulations".

7. CP CP U SPECIAL - REVISED SCREENING
Prior to the issuance of certificates of use and occupancy, the applicant shall submit a revised preliminary landscaping plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the screening and landscaping regulations contained Sections XI.B.10 and 11 of the Aliso Viejo Planned Community development regulations.

see memo 7-28-98 AVPAC APPR. LIGHTING PLAN

8. CP CP B SPECIAL - LIGHTING

Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.

Staple to Plans

9. CP CP B SPECIAL - SIGNS

Prior to the installation of any signs, the applicant shall submit a "Sign Program". The Sign Program shall be approved through a Changed Plan as required by Zoning Code Section 7-9-150. The Sign Program shall be in substantial conformance with Section XXI of the Aliso Viejo Planned Community development regulations. The Sign Program shall be reviewed by the Aliso Viejo Advisory Planning Committee prior to approval of the Changed Plan.

10. SG SG G GEOLOGY RPT

Prior to the issuance of a grading permit, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

11. BP BP G CONST NOISE

A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

(1) All construction vehicles or equipment, fixed or mobile, operated within 1,000' of a dwelling shall be equipped with properly operating and maintained mufflers.

(2) All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

(3) Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.

12. ER SG G POLLUTANT RUNOFF

Prior to issuance of precise grading or building permits, as determined by the Manager, Subdivision and Grading Services, the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs

whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

13. ER DS G NPDES PERMIT

Prior to issuance of any grading permits, the applicant shall submit evidence to the Manager, Subdivision and Grading, that the applicant has obtained coverage under the NPDES statewide General Stormwater Permit from the State Water Resources Control Board.

14. SG SG GB DRAINAGE STUDY

Prior to the issuance of any grading permits, or prior to the issuance of building permits, whichever comes first, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels, street flows, catch basins, storm drains, and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

15. SG SG GB *DRAINAGE IMPRO*

A. Prior to the issuance of any grading permits or prior to the issuance of building permits, whichever comes first, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

SG C U DRAINAGE IMPROV

B. Prior to the issuance of any certificates of use and occupancy, said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

16. F F R — FIRE ACCESS
Prior to the issuance of grading permits, the applicant shall obtain approval of the Fire Chief of all fire protection access easements and shall dedicate them to the County in a manner meeting the approval of the Fire Chief. The approval of the Fire Chief is required for any modifications such as speed bumps, control gates or other changes within said easement.

17. F F G — STREET PLANS
Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of preliminary plans for all street and courts, public or private, from the Fire Chief in consultation with the Manager, Traffic Engineering. The plans shall include the plan view, sectional view, and indicate the width of the street or court, measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked when a dead-end street exceeds 150 feet or when other conditions require it.

18. F F GU — STREET MARKINGS

A. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval from the Fire Chief for street improvement plans with fire lanes shown. The plans shall indicate the locations of red curbing and signage, and provide a drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color.

B. Prior to the issuance of the certificate of use and occupancy, the approved fire lane marking plan shall be installed. The CC&Rs shall contain a fire lane map and provisions which prohibit parking in the fire lanes. A method of enforcement shall be included.

19. F F B — SITE PLANNING
Prior to the issuance of building permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class. All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

20. TE TE G — SIGHT DISTANCE
Prior to the issuance of any grading permits, the applicant shall provide adequate sight distance at all street intersections per Standard Plan 1117, in a manner meeting the approval of the Manager, Subdivision and Grading Services. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.

21. TE TE GU — ACCESS
Prior to the issuance of grading permits, the applicant shall design and dedicate to the County of Orange any necessary right of way required for an additional twelve (12) feet wide lane on northbound Pacific Park Drive across the property frontage, all in a manner meeting the approval of the

Manager, Subdivision and Grading Services. Said improvement shall be constructed prior to the issuance of certificates of use and occupancy, in a manner meeting the approval of the Manager, Subdivision and Grading Services.

22. SG SG/BI GU PVT LANDSCP

A. Prior to the issuance of building permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

23. BP BP B ACOUST NON-RES

Except when the interior noise level exceeds the exterior noise level, all non-residential structures shall be sound attenuated against the combined impact of all present and projected noise from exterior noise sources to meet the interior noise criteria as specified in the Noise Element and Land Use/Noise Compatibility Manual.

Prior to the issuance of any building permits, the applicant shall submit to the Manager, Building Permits, evidence prepared under the supervision of a County-certified acoustical consultant that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5. The evidence shall be in the form of an acoustical analysis report describing in detail the exterior noise environment and the acoustical design features required to achieve the interior noise standard and which indicate that the sound attenuation measures specified have been incorporated into the design of the project.

24. F F B WATER

Prior to the issuance of the first building permit, the applicant shall submit water improvement plans to the Fire Chief for review and approval to ensure adequate fire protection and financial security is posted for the

installation. The water system design, location of valves, and the distribution of fire hydrants will be evaluated and approved by the Fire Chief.

25. F F RB FIRE HYDRANTS
Prior to the issuance of first building permit, the applicant shall submit to the Fire Chief evidence of the on-site fire hydrant system. The system shall be reviewed and approved by the Fire Chief prior to issuance of building permits. Provisions shall be made by the applicant for the repair and maintenance of the system, in a manner meeting the approval of the Fire Chief.

26. F F B AUTO FIRE EXT
Prior to the issuance of building permits, the applicant shall place a note on the construction plans stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

27. F F B COMBSTBLE CONST
Prior to the issuance of any building permits for combustible construction, the developer shall submit and obtain the Fire Chief's approval of a letter and plan stating that water for fire fighting purposes and an all weather fire access road shall be in place and operational as required by the Uniform Fire Code before any combustible materials are placed on the site.

28. F F B WATER AVAILABILITY
Prior to the issuance of any building permits, an Orange County Fire Authority Water Availability Form shall be submitted to and approved by the Plan Review Section of the Orange County Fire Authority. If sufficient water to meet fire flow requirements is not available, an automatic fire extinguishing system shall be installed in each structure, in a manner meeting the approval of the Fire Chief.

29. F F BU FIRE SPRINKLERS
Prior to the issuance of any building permits, plans for an automatic fire sprinkler system shall be submitted to and approved by the Fire Chief prior to installation. This system shall be operational prior to the issuance of a certificate of use and occupancy.

30. F F B BUILDING USE
Prior to the issuance of any building permits, the applicant shall submit a detailed letter of intended use for each building to the Fire Chief for review and approval.

31. F F B HAZARDOUS MATERIALS DISCLOSURE
Prior to the issuance of any building permits, the applicant shall contact the Orange County Fire Authority Hazardous Materials Disclosure Office at (714) 744-0463 to obtain a "Hazardous Materials Business Information and Chemical Inventory Packet". This shall be completed and submitted to the Fire Chief before the issuance of any building permits.

32. F F B — FIRE SAFETY SITE PLAN
Prior to the issuance of a building permit, the applicant shall submit plans for the review and approval of the Fire Chief. The applicant shall include information on the plans required by the Fire Chief. Contact the Orange County Fire Authority Plans Review Section at (714) 744-0403 for the Fire Safety Architectural Notes to be placed on the plans.

RD 4/8/20 NA 4/10/98

33. TE TE B — ROAD FEE PROG
Prior to the issuance of building permits, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading Division.

a. San Joaquin Hills Transportation Corridor
b. Moulton Parkway/Laguna Niguel Area
c. Coastal Area Road Improvements and Traffic Signals

34. TE TE BU — ACCESS
Prior to the issuance of building permits or prior to the issuance of certificates of use and occupancy, as determined by the Manager, Subdivision and Grading Services, the applicant shall provide for a 200 feet left turn pocket on eastbound Enterprise at the access driveway to the site in a manner meeting the approval of the Manager, Subdivision and Grading Services.

? (BAB Will Hacke inspector?)

35. TE TE BU — SIGNAL
Prior to the issuance of building permits or prior to the issuance of certificates of use and occupancy, the applicant shall design and install a traffic signal at the site access/Enterprise intersection in a manner meeting the approval of the Manager, Subdivision and Grading Services in consultation with the Manager, Program Development Services.

?

36. TE TE B — RECORDATION
Prior to the issuance of building permits, the applicable portion of TT13435 shall be recorded. Tr. 15521 recorded 12-15-97

37. F F U — FIRE HYDRANT MARKER
Prior to the issuance of any certificates of use and occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard and approved by the Fire Chief. On private property these markers are to be maintained in good condition by the property owner.

38. F F NA — FIRE ALARM
Prior to installation, plans for the fire alarm system shall be submitted to and approved by the Fire Chief. This system shall be operational prior to the issuance of a certificate of use and occupancy.

SUBJECT: OWNER: Fluor Corporation
APPLICANT: Wayne Peterson & Associates

APPLICATION #: PA 97-0113/PA 97-0114
CHANGED PLAN: CP98-0098
ADDRESS: 1 ENTERPRISE
AREA: ALISO VIEJO

The subject Changed Plan has been reviewed by Bill Grant of the Current Planning Services Division and the determination has been made, as authorized by Section 7-9-150.3(h) of the Orange County Zoning Code, that the proposed changes are in substantial compliance with the original approval action .

APPROVED CHANGES ARE AS FOLLOWS:

Fluor Corporation has submitted a sign program in accordance with conditions of previously approved Planning Application PA97-0113 and PA 97-0114. The sign program shall include ground monument signs, wall signs with logo, address, and directory signs. Other signs are shown to include handicap sign, stop sign and parking signs.

APPROVAL APPLIES TO DISCRETIONARY ACTIONS RELATED TO THE ORANGE COUNTY ZONING CODE.

APPROVAL OF THIS CHANGED PLAN DOES NOT INCLUDE OTHER APPROVALS REQUIRED TO COMPLY WITH COUNTY PROCEDURE.

SUBJECT: Sign Program for Fluor Corporation Buildings (PA 97-0113 & 97-0114)

Dear Bill:

Enclosed for your review and approval is the Sign Program for the two Fluor Corporation buildings which are under construction in Aliso Viejo. They were approved under two separate Planning Applications, PA 97-0113 for the Global Administration Facility and PA97-0114 for the Fluor Daniel Southern California Facility. Conditions of approval were added to each project requiring that the Sign Program be reviewed through the "Changed Plan" process.

As we discussed in our meeting, both sites will utilize minimal signage and all signs are in compliance with the regulations of Aliso Viejo. In addition, the sign program was reviewed and approved by the Aliso Viejo Advisory Planning Committee.

Please call if you have any questions.

Sincerely,

WAYNE PETERSON AND ASSOCIATES

July 18, 1997

Mr. John Buzas, Division Manager
County of Orange - Current Planning Services
300 North Flower Street, Third Floor
Santa Ana, California 92702

SUBJECT: Site Plan for Fluor Global Administration Facility

Dear Mr. Buzas:

On behalf of Lowe Enterprises Commercial Group and the Fluor Corporation, the enclosed site plan application package for the Fluor Global Administration Facility is being submitted for your review and processing for an administrative approval. This application is being processed concurrently with a site plan for Fluor Daniel's Southern California Facility which is located on a site approximately one-half mile to the east of this site.

The 7.18-acre project site is located within the Town Center portion of the Aliso Viejo Planned Community, at the westerly corner of Enterprise and Pacific Park Drive. The site is within the Town Center area (Planning Area 40) of Aliso Viejo and is also part of the Aliso Viejo Urban Activity Center. The proposed office use is completely consistent with the applicable land use regulations for the site.

The project site will serve as Fluor Corporation's international headquarters. A total of approximately 114,400 square feet of gross floor area will be contained in two buildings, one two-stories in height (40' 6" max.) and one three-stories (54' max.). The site enjoys a prominent location adjacent to the San Joaquin Hills Tollway and will have commanding views of the Saddleback Valley. To the east of the site is the Summit office project. To the south, across Enterprise, is an apartment community currently under construction, and to the west is a future Tollway interchange and a 150-foot high landscaped slope atop which are new residential development areas.

Access to the site will be from both Enterprise and Pacific Park Drive. The two drives will lead to the grand garden court area and the two building entrances. Landscaped off-street parking areas are provided surrounding the building. Parking for 447 vehicles is provided, 10 spaces less than the 457 spaces required by the PC Text. A parking modification to permit the 2% reduction is incorporated in the site plan application. As a single-user campus, Flour is able to strictly control the use of the buildings and the need for the on-site parking facilities. Further,

Fluor Corporation is one of the corporate leaders in the area of car pooling, ride-sharing, van pooling and other innovative techniques to reduce the number of cars driven to their facilities each day. Fluor is confident that the parking will be more than adequate to meet their needs.

The proposed buildings have been designed by McLarand, Vasquez and Partners utilizing concrete and glass to reflect a strong corporate image. The buildings are in conformance with the applicable design guidelines for the area. Sign details will be consistent with Area Plan guidelines and will be incorporated in a Sign Program which will be submitted at a later date. A materials board and colored elevations are available if staff would like to review them.

A site-specific traffic and parking study for the project site has been prepared by RKJK and has been submitted as a part of this application package. That study concludes that the existing and future arterial highway system is adequate to accommodate the proposed project subject to the incorporation of certain design-level improvements to facilitate traffic flow into and out of the site. As a part of the Aliso Viejo Town Center, additional traffic analyses are underway relative to the impacts of the overall Town Center area. Pursuant to the Area Plan for PA 40 (Town Center) these additional analyses are required when proposed development exceeds a total of 69,374 trip-ends generated. This project does not cause that threshold to be exceeded and therefore those analyses are not required prior to the approval of this project.

Pursuant to the requirements of the PC Text, this project has been submitted to the Aliso Viejo Advisory Planning Committee (AVAPC) for comment. The project is on the AVAPC's agenda for their July 23rd meeting. Representatives from the project team will be making a presentation on the project to the AVAPC and the results of their review will be forwarded to you for your files.

On behalf of the entire project team, please accept our invitation for a site tour or a follow-up briefing if you feel it would be helpful. Please do not hesitate to contact me during the processing of this project if there is any additional information needed or if clarification is needed on any aspect of this project. Please call me if you have any questions.

Sincerely,

WAYNE PETERSON AND ASSOCIATES

P.C./S.P.:	Aliso Viejo - PA 40 (Town Center)
Supv. Dist.:	5
Project Proposal:	Project proposes the development of an office campus of two buildings totalling approximately 14,400 square feet of gross floor area. The two buildings will house Fluor Corporation's international headquarters. The buildings are 2 and 3 stories (max. height 54') per Town Center and Urban Activity Center standards. This application includes a parking modification request to allow 447 parking spaces instead of 457 required (2% reduction).

Existing Site Conditions:

Mass grading of the site is in progress per previous Area Plan and Vesting Tentative Map approvals.

Previous Governmental Approvals:

FEIR 088, VTT 13435, Area Plan PA 970044

MEMO

DATE: AUG 2 8 1997

TO: John Buzas, Manager, Land Use Planning

FROM: Manager, Subdivision and Grading Services

SUBJECT: **PA 970113 - ADMINISTRATIVE SITE PLAN**
FLUOR CORPORATION - ALISO VIEJO P.C.

Attention: Bill Melton

This is an administrative site plan to construct two office buildings totaling 114,400 square feet to serve as headquarters for the Fluor Corporation. The project is to include an off street parking modification for a reduction from the required 457 parking spaces to 447 spaces. The site (Lots 1 & 2, TT13435) is located at the northeast corner of Pacific Park Drive/Enterprise, bounded on the north by the SJHTC. A 3rd Revised TT13435 is being reviewed concurrently. Improvements to the surrounding street will also be addressed on the Tentative Tract.

CIRCULATION:

There are two accesses proposed to the site. One a full access signalized driveway off Enterprise, the other a right turn in/right turn out only driveway off Pacific Park Drive. Enterprise is an unimproved industrial collector street and Pacific Park Drive is a primary arterial highway.

DISCUSSION:

The applicant is required to revise the site plan to reflect the following changes:

1. Relocate the access on Enterprise to be aligned with the access to the apartment complex on the southerly side of Enterprise.

2. Provide four lanes, two inbound, two outbound at the Enterprise access.

3. Revise the site plan to provide a free right turn on westbound Enterprise at Pacific Park Drive, in addition, provide additional right of way on Pacific Park Drive across the property frontage for a right turn lane for SJHTC on ramp. Relocate the bus turnout from the far side of Enterprise.

4. Design the access driveway to Pacific Park Drive for right turn in/right turn out only movements by use of a physical barrier.

5. Provide a 200' left turn pocket on eastbound Enterprise at the access driveway to the site.

MAJOR THOROUGHFARE AND BRIDGE FEE PROGRAM:

This project lies within the area of benefit of the Foothill Circulation Phasing Program. The applicant is required to pay fees in accordance with the adopted program.

This project lies within the Moulton Parkway zone of the area of benefit of the Moulton Parkway/Laguna Niguel Fee Program. The applicant is required to pay Major Thoroughfare and Bridge fees in accordance with the adopted program.

This project lies within the area of benefit of the Coastal Roadway Improvement and Traffic Signals Fee Program. The applicant is required to pay fees in accordance with the adopted program.

CONDITIONS:

1. Prior to issuance of each Building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the San Joaquin Hills Transportation Corridor.

2. Prior to issuance of each Building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the Moulton Parkway/Laguna Niguel area.

3. Prior to issuance of a Building permit, payment of fees will be required as prescribed in the Coastal Area Roadway Improvement and Traffic Signal Fee Program.

4. Prior to issuance of a Grading permit, adequate sight distance shall be provided at all intersections per Standard Plan 1117 in a manner meeting the approval of the Manager, Subdivision and Grading Services. This includes any necessary revisions to the pan to remove slopes or other encroachments from the Limited Use Area.

5. Notwithstanding the site plan, prior to the issuance of a grading permit, the access driveway to Enterprise shall be relocated easterly to be aligned with the access driveway to the apartment complex on the southerly side of Enterprise. In addition, the applicant is required to design the access driveway with two inbound and two outbound lanes in a manner meeting the approval of the Manager, Subdivision and Grading Services.

6. Prior to the issuance of a Building permit, applicant shall provide a 200' left turn pocket on eastbound Enterprise at the access driveway to the site in a manner meeting the approval of the Manager, Subdivision and Grading Services.

7. Prior to the issuance of a Grading permit, the applicant shall design the access driveway on Pacific Park Drive for right turn in/right turn out only movements by use of a physical barrier in a manner meeting the approval of the Manager, Subdivision and Grading Services.

8. Prior to the issuance of a Grading permit, applicant shall relocate bus turnout on Pacific Park Drive, to not interfere with the travel lanes of free right turn lanes on Pacific Park,, and dedicate to the County of Orange any right of way necessary to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

9. Prior to the issuance of a Grading permit, applicant shall design and construct an additional 12' wide lane on northbound Pacific Park Drive across the property frontage and dedicate to the County of Orange any necessary right of way required to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

10. Prior to the issuance of a Building permit, applicant shall design and construct a traffic signal at Enterprise/access driveway to he site in a manner meeting the approval of the Manager, Subdivision and Grading Services in consultation with the Manager, Program Development Services.

11. Prior to the issuance of a Building permit, the applicable portion of TT13435 shall be recorded.

Mr. John Buzas
Zoning Administrator
County of Orange
300 North Flower Street
Santa Ana, California 92702

SUBJECT: Site Plan for Fluor Daniel Southern California Facility (PA 97-0114)

Dear Mr. Buzas:

On behalf of the Fluor Corporation and Lowe Enterprises, I would like to request your consideration of minor modifications to the conditions of approval proposed to be applied to the approval of the site plan for the Fluor Daniel Southern California facility. Please understand that we are not requesting any change to the substance of the conditions, only changes to the method or timing of compliance.

Condition 8
Compliance with this condition should not require the submittal of a revised plan. We would request that the condition be modified to read, "The project's exterior lighting shall be designed in conformance with Section XI. B. 7 of the Aliso Viejo Planned Community development regulations. Lighting plans shall be reviewed by the Aliso Viejo Advisory Planning Committee."

Condition 12
We would like to add some flexibility to this condition by replacing the phrase "whichever comes first" with "as determined by the Manager of Subdivision and Grading Services." This revised wording was acceptable to Pat Stanton, Manager of Subdivision and Grading Services.

Condition 19
Compliance with this condition should occur prior to the issuance of building permits. This condition deals with the disclosure of the nature, quantity and storage of designated hazardous materials once the project is occupied and operational. From a practical standpoint, until working drawings for the buildings are completed, it is speculative to state where and how any such materials will be stored. We would request that compliance with this condition be tied to the issuance of building permits.

Condition 22
This condition should be modified to require compliance prior to building permits, not grading permits. This condition deals with the submittal of a precise landscape plan and is unrelated to precise grading. This revision was acceptable to Pat Stanton, Manager of Subdivision and Grading Services.

Condition 34
This condition should be modified to insert "shall initiate the process to" before the word "dedicate" in the third line. This revision was acceptable to Pat Stanton, Manager of Subdivision and Grading Services.

Thank you for your consideration of this request. Members of the project team will attend your hearing to discuss these requests and any other aspect of the project.

Sincerely,

WAYNE PETERSON AND ASSOCIATES

Wayne Peterson, Principal

7. CP CP U SPECIAL - REVISED SCREENING
Prior to the issuance of certificates of use and occupancy, the applicant shall submit a revised preliminary landscaping plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the screening and landscaping regulations contained Sections XI.B.10 and 11 of the Aliso Viejo Planned Community development regulations.

8. CP CP B The project's exterior lighting shall be designed in LIGHTING SPECIAL - ~~Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in~~ conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. ~~Said revised~~ plan shall be reviewed by the Aliso Viejo Advisory Planning Committee. Lighting

9. CP CP B SPECIAL - SIGNS
Prior to the installation of any signs, the applicant shall submit a "Sign Program". The Sign Program shall be approved through a Changed Plan as required by Zoning Code Section 7-9-150. The Sign Program shall be in substantial conformance with Section XXI of the Aliso Viejo Planned Community development regulations. The Sign Program shall be reviewed by the Aliso Viejo Advisory Planning Committee prior to approval of the Changed Plan.

10. SG SG G GEOLOGY RPT
Prior to the issuance of a grading permit, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

11. BP BP G CONST NOISE
A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

(1) All construction vehicles or equipment, fixed or mobile, operated within 1,000' of a dwelling shall be equipped with properly operating and maintained mufflers.

(2) All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

(3) Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.

12. ER SG G POLLUTANT RUNOFF

OK as determined by the Manager Subdivision and Grading Services

Prior to issuance of precise grading or building permits, ~~whichever comes first~~, the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

13. ER DS G NPDES PERMIT

Prior to issuance of any grading permits, the applicant shall submit evidence to the Manager, Subdivision and Grading, that the applicant has obtained coverage under the NPDES statewide General Stormwater Permit from the State Water Resources Control Board.

14. SG SG GB DRAINAGE STUDY

Prior to the issuance of any grading permits, or prior to the issuance of building permits, whichever comes first, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels, street flows, catch basins, storm drains, and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

15. SG SG GB DRAINAGE IMPRO

A. Prior to the issuance of any grading permits or prior to the issuance of building permits, whichever comes first, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

DRAINAGE IMPROV

SG C U

B. Prior to the issuance of any certificates of use and occupancy, said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

16. F F R — FIRE ACCESS

Prior to the issuance of grading permits, the applicant shall obtain approval of the Fire Chief of all fire protection access easements and shall dedicate them to the County. The CC&Rs shall contain provisions which prohibit obstructions within the fire protection access easement. The approval of the Fire Chief is required for any modifications such as speed bumps, control gates or other changes within said easement.

17. F F G — STREET PLANS

Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of preliminary plans for all street and courts, public or private, from the Fire Chief in consultation with the Manager, Traffic Engineering. The plans shall include the plan view, sectional view, and indicate the width of the street or court, measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked when a dead-end street exceeds 150 feet or when other conditions require it.

18. F F GU — STREET MARKINGS

A. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval from the Fire Chief for street improvement plans with fire lanes shown. The plans shall indicate the locations of red curbing and signage, and provide a drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color.

B. Prior to the issuance of the certificate of use and occupancy, the approved fire lane marking plan shall be installed. The CC&Rs shall contain a fire lane map and provisions which prohibit parking in the fire lanes. A method of enforcement shall be included.

19. F F G — SITE PLANNING

ok building

Prior to the issuance of grading permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class. All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

20. TE TE G — SIGHT DISTANCE

Prior to the issuance of any grading permits, the applicant shall provide adequate sight distance at all street intersections per Standard Plan 1117, in a manner meeting the approval of the Manager, Traffic Engineering. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.

21. TR TR G STORM DRAIN
Prior to the issuance of grading permits, the applicant shall relocate the existing storm drain in a manner meeting the approval of the Manager, Subdivision and Grading Services.

22. SG SG/NI GU PVT LANDSCP
A. Prior to the issuance of ~~precise grading~~ permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

23. BP BP B ACOUST NON-RES
Except when the interior noise level exceeds the exterior noise level, all non-residential structures shall be sound attenuated against the combined impact of all present and projected noise from exterior noise sources to meet the interior noise criteria as specified in the Noise Element and Land Use/Noise Compatibility Manual.

Prior to the issuance of any building permits, the applicant shall submit to the Manager, Building Permits, evidence prepared under the supervision of a County-certified acoustical consultant that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5. The evidence shall be in the form of an acoustical analysis report describing in detail the exterior noise environment and the acoustical design features required to achieve the interior noise standard and which indicate that the sound attenuation measures specified have been incorporated into the design of the project.

24. F F B WATER
Prior to the issuance of the first building permit, the subdivider shall submit water improvement plans to the Fire Chief for review and approval to ensure adequate fire protection and financial security is posted for the

32. F F B — FIRE SAFETY SITE PLAN
Prior to the issuance of a building permit, the applicant shall submit plans for the review and approval of the Fire Chief. The applicant shall include information on the plans required by the Fire Chief. Contact the Orange County Fire Authority Plans Review Section at (714) 744-0403 for the Fire Safety Architectural Notes to be placed on the plans.

33. TE TE B — ROAD FEE PROG
Prior to the issuance of each building permit, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Traffic Engineering.

a. San Joaquin Hills Transportation Corridor
b. Moulton Parkway/Laguna Niguel Area
c. Coastal Area Road Improvements and Traffic Signals

shall initiate the process to

34. TE TE B — ACCESS
O.K.
Prior to the issuance of the first building permit, the applicant shall design a right turn lane on the northeast bound Laguna Hills Drive, at the most southwesterly driveway access to the site, and dedicate to the County of Orange the necessary right of way to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

35. TE TE B — ABANDONMENT
Prior to the issuance of the first building permit, the applicant shall obtain from the County of Orange the abandonment of the street Discovery in a manner meeting the approval of the Manager, Subdivision and Grading Services.

36. F F U — FIRE HYDRANT MARKER
Prior to the issuance of any certificates of use and occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard and approved by the Fire Chief. On private property these markers are to be maintained in good condition by the property owner.

37. F F MA — FIRE ALARM
Prior to installation, plans for the fire alarm system shall be submitted to and approved by the Fire Chief. This system shall be operational prior to the issuance of a certificate of use and occupancy.

County of Orange

MEMO

DATE: September 15, 1997

TO: Chuck Shoemaker, Chief, Site Planning & Consistency

FROM: Harry Persaud, Chief, Transportation Planning

SUBJECT: Site Plan for Fluor Global Administration Facility (PA 970113)

The 7.18-acre project site is located within the Town Center portion (Planning Area 40) of the Aliso Viejo Planned Community at the northeasterly corner of Enterprise and Pacific Park Drive. The project proposes the development of an office campus of two buildings totaling approximately 114,400 square feet of gross floor area. The two buildings will serve as the Fluor Corporation's international headquarters.

The cumulative impacts of this proposed project upon the local and regional circulation system were addressed in the Aliso Viejo Planning Area 40 (PA 40) Traffic Analysis prepared by RKJK. In addition, a Site Specific Traffic and Parking Study has been prepared by RKJK for this proposed project in conjunction with the site plan for the Fluor Southern California Facility (PA 970114).

The Transportation Planning Section has reviewed the subject proposal and offers the following comments:

1) The Aliso Viejo PA 40 Traffic Analysis identified traffic impacts associated with both the 1989 Approved Area Plan (with a daily trip generation ceiling of 69,378 daily trips) and the 1996 Approved Area Plan (with a daily trip cap of 125,000 daily trips). This proposed site plan falls within the future levels of development anticipated under the 1989 Approved Area Plan. According to the Aliso Viejo PA 40 Traffic Analysis, the following two intersections are anticipated to operate at an unacceptable level of service (LOS) under <u>both</u> Year 2020 With 1989 Approved Area Plan conditions <u>and</u> Year 2020 With 1996 Approved Area Plan conditions: Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW). Therefore, the following condition/mitigation measure is recommended:

   "Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the unfunded improvements needed at the intersections of Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), as identified in the Aliso Viejo Planning Area 40 Traffic Analysis. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

2) The proposed project is located adjacent to the intersection of Pacific Park Drive (NS) and Enterprise (EW). According to the Aliso Viejo PA 40 Traffic Analysis, this intersection is anticipated to operate at LOS "C" under Year 2020 With 1989 Approved Area Plan conditions and at LOS "D" under Year 2020 With 1996 Approved Area Plan conditions. However, it should be noted that it is the practice of the County to use a more conservative approach regarding the trip generation rate for office land uses and the internal trip "capture" assumption for mixed land uses than what was used

in the traffic studies for this proposed project. In order to ensure that this intersection operates at an acceptable level of service, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the following improvements at the intersection of Pacific Park Drive (NB) and Enterprise (EW): 1) construct dual right turn lanes westbound on Enterprise; 2) convert the southerly right turn lane to a combined right turn and through lane and modify the signalization to accommodate the combined movement when the southbound SR-73 ramp is opened; and 3) provide for westbound right turn overlap for this intersection. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

3) As indicated in the Aliso Viejo PA 40 Traffic Analysis, the project site lies within the areas of benefit of three existing road fee programs. Therefore, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall pay fees as prescribed in the Major Thoroughfare and Bridge Fee Programs for the San Joaquin Hills Transportation Corridor, the Moulton Parkway/Laguna Niguel Area, and the Coastal Area Road Improvements and Traffic Signals in a manner meeting the approval of the Manager, Subdivision and Grading Services."

ADVISORY PLANNING COMMITTEE

July 29, 1997

Mr. Charles M. Shoemaker, Section Chief, Site Planning & Consistency Section
County of Orange
Planning & Development Services Department
P.O. Box 4048
Santa Ana, California 92702-4048

SUBJECT: Fluor Corporation - Global Administration Facility (Site Plan, PA 970113) and Fluor Daniel Southern California Facility (Site Plan, PA970114).

Dear Mr. Shoemaker:

At the July 23, 1997, Aliso Viejo Advisory Planning Committee (AVAPC) meeting, the Committee reviewed the above mentioned project. The Committee took the following action on the proposal:

- **Recommend that the County approve the proposed Fluor Corporation projects as presented to the AVAPC on July 23, 1997 with the following project condition of approval:**

  1. The applicant shall submit a lighting plan/study and a sign program to the AVAPC for review upon completion of said studies and prior to County approval of studies.

The applicant was agreeable to the above recommended conditional approval. Please provide AVAPC a copy of the County Staff Report for the project when it becomes available. If you should have any questions regarding this letter, please contact Larry Lawrence at (714) 661-8175.

Sincerely,

SUBJECT: Site Plan for Fluor Global Administration Facility (PA 970113)

The 7.18-acre project site is located within the Town Center portion (Planning Area 40) of the Aliso Viejo Planned Community at the northeasterly corner of Enterprise and Pacific Park Drive. The project proposes the development of an office campus of two buildings totaling approximately 114,400 square feet of gross floor area. The two buildings will serve as the Fluor Corporation's international headquarters.

The cumulative impacts of this proposed project upon the local and regional circulation system were addressed in the Aliso Viejo Planning Area 40 (PA 40) Traffic Analysis prepared by RKJK. In addition, a Site Specific Traffic and Parking Study has been prepared by RKJK for this proposed project in conjunction with the site plan for the Fluor Southern California Facility (PA 970114).

The Transportation Planning Section has reviewed the subject proposal and offers the following comments:

1) The Aliso Viejo PA 40 Traffic Analysis identified traffic impacts associated with both the 1989 Approved Area Plan (with a daily trip generation ceiling of 69,378 daily trips) and the 1996 Approved Area Plan (with a daily trip cap of 125,000 daily trips). This proposed site plan falls within the future levels of development anticipated under the 1989 Approved Area Plan. According to the Aliso Viejo PA 40 Traffic Analysis, the following two intersections are anticipated to operate at an unacceptable level of service (LOS) under both Year 2020 With 1989 Approved Area Plan conditions and Year 2020 With 1996 Approved Area Plan conditions: Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW). Therefore, the following condition/mitigation measure is recommended:

   "Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the unfunded improvements needed at the intersections of Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), as identified in the Aliso Viejo Planning Area 40 Traffic Analysis. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

2) The proposed project is located adjacent to the intersection of Pacific Park Drive (NS) and Enterprise (EW). According to the Aliso Viejo PA 40 Traffic Analysis, this intersection is anticipated to operate at LOS "C" under Year 2020 With 1989 Approved Area Plan conditions and at LOS "D" under Year 2020 With 1996 Approved Area Plan conditions. However, it should be noted that it is the practice of the County to use a more conservative approach regarding the trip generation rate for office land uses and the internal trip "capture" assumption for mixed land uses than what was used

in the traffic studies for this proposed project. In order to ensure that this intersection operates at an acceptable level of service, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the following improvements at the intersection of Pacific Park Drive (NB) and Enterprise (EW): 1) construct dual right turn lanes westbound on Enterprise; 2) convert the southerly right turn lane to a combined right turn and through lane and modify the signalization to accommodate the combined movement when the southbound SR-73 ramp is opened; and 3) provide for westbound right turn overlap for this intersection. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

3) As indicated in the Aliso Viejo PA 40 Traffic Analysis, the project site lies within the areas of benefit of three existing road fee programs. Therefore, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall pay fees as prescribed in the Major Thoroughfare and Bridge Fee Programs for the San Joaquin Hills Transportation Corridor, the Moulton Parkway/Laguna Niguel Area, and the Coastal Area Road Improvements and Traffic Signals in a manner meeting the approval of the Manager, Subdivision and Grading Services."

If you have any questions, please contact either Mike Galizio of my staff at 834-2501 or myself at 834-3669.

COMMENTS

1. ___ The height, area and configuration of man-made slopes shall be clearly shown. All slope areas shall be shown by type.

2. ___ Typical building pads proposed for the location of structures shall be graphically indicated with approximate dimensions and setbacks.

3. ___ Proposed finished grade elevations shall be shown:
   - ___ A. Along proposed streets and drives at one hundred (100) foot intervals or opposite lot corners; and
   - ___ B. On each proposed building pad.

4. ___ A statement of the estimated volume of export or borrow earth material required and the location of the disposal or borrow sites shall accompany the tentative map.

5. ___ A statement of the maintenance responsibility for each slope area shall be made.

6. ___ Soils and Geology Report
   A preliminary report, or reports, describing the soils and geologic conditions on the site and their effect on the feasibility of the plan of development, including the grading concept, shall be submitted with the tentative tract map. This report, or reports, shall be prepared under the supervision of a soils engineer and an engineering geologist.

7. ___ Height and inclination of man-made slopes exceed requirements.
   - ___ A. Vertical height maximums for slopes in excess of (steeper than) five (5) feet horizontal to one (1) foot vertical.
     - (1.) Type A slope - none.
     - (2.) Type B slope - thirty-five (35) feet.
     - (3.) Type C slope - twenty (20) feet.
   - ___ B. Man-made slopes shall not be constructed one on top of another or combined in such a manner so that they exceed the maximum heights specified.
   - ___ C. Man-made slopes shall be no steeper than two (2) feet horizontal to (1) foot vertical.

8. ___ Hillside Lot Design Criteria
   - ___ A. Length and contour of man-made slopes.
     Man-made slopes shall be designed to resemble natural terrain where feasible, with a minimum of long, flat, inclined plane surfaces and acute angles.
   - ___ B. Lots shall be designed so that where Type C slopes are proposed between abutting lots, the common property line shall be at the top of the slope.

9. ___ Drainage and Erosion Control Standards
   Where any lot is designed in such a manner that it will not drain directly to a street or common drainage facility with a minimum one percent (1%) grade, it shall be designed in a manner that will conform to the following criteria.
   - ___ A. Lots shall be designed in such a manner that man-made slopes are not subject to sheet flow or concentrated drainage runoff from either the same or an adjacent lot.
   - ___ B. All drainage flowing down man-made slopes except that drainage from water falling on each slope shall be contained within an appropriate drainage device.
   - ___ C. All drainage flowing from one lot to or across another lot shall be within an approved drainage device located within a properly executed easement, where appropriate.

10. ___ Recreation Trails
    - ___ A. A note shall be placed on the tentative map which reads "Grading of recreation trails shall conform to the requirements of the Orange County Grading and Excavation Code."
    - ___ B. Major Cut/fill slopes and drainage devices related to recreation trails shall be shown.

ADVISORY PLANNING COMMITTEE

October 31, 1997

Mr. Charles M. Shoemaker, Section Chief, Site Planning & Consistency Section
County of Orange
Planning & Development Services Department
P.O. Box 4048
Santa Ana, California 92702-4048

SUBJECT: Global Administration Facility (Fluor Corporation) - Revised Site Plan, Landscape Plan, Floor Plans, and Elevations - Located in AVPC PA 40, Tract 13435, near Pacific Park Drive and Enterprise.

Dear Mr. Shoemaker:

At the October 22, 1997, Aliso Viejo Advisory Planning Committee (AVAPC) meeting, the Committee reviewed the above mentioned. The Committee took the following action on the proposal:

- **Recommend that the County approve the project as presented to the AVAPC on October 22, 1997 with the following project condition of approval:**

  1. The applicant shall evaluate the parking area to include features that will further eliminate the appearance of mass.

Please provide AVAPC a copy of the County's conditions of approval for the project when it becomes available. If you should have any questions regarding this letter, please contact Larry Lawrence at (714) 661-8175.

Sincerely,

ALISO VIEJO ADVISORY PLANNING COMMITTEE

Santa Ana, California 92702

SUBJECT: Submittal of Revised Plans for Fluor Global Administration Facility (PA 970113)

Dear Bill:

Enclosed for your review and approval are 10 sets of the revised site plan package for the Fluor Global Administration Facility to be located at the corner of Enterprise and Pacific Park Drive in the Aliso Viejo Town Center. The revised plan reflects the information you requested relative to gross building square footage (including basement area), off-street parking totals, landscape maintenance, and site cross-sections.

The plan reflects Fluor Corporation's decision to utilize a single building to house their international operations function, replacing the two building illustrated in the previous submittal. The single building plan offers a more efficient use of the available land area allowing Fluor to maintain the high-image building, a dramatic entry statement and lush site landscaping. The building contains 118,875 gross square feet of building area in four stories plus a basement area. The overall building height is 70 feet, including the mechanical equipment screen. The exterior colors and materials are the same as presented in the earlier submittal package.

The project complies with all of the applicable development standards for the site and has been recommended for approval by the Aliso Viejo Advisory Planning Committee. Off-street parking has been provided for 476 cars which meets the County's parking code requirement of 4 spaces per 1000 feet of gross area. Site access is via multi-lane driveways on the Enterprise and Pacific Park Drive frontages.

To facilitate your review, I have enclosed a copy of the draft staff report that was prepared for the prior submittal. The draft has been edited to reflect the changes made to the project. In addition, we have enclosed a copy of the previous draft conditions, also edited to accommodate the new proposal. We hope these are helpful to you.

We appreciate staff's patience while we have been completing the fine-tuning of the plans for the project. We are confident that the changes made during this time will result in a substantially improved project and one that will be a significant economic and aesthetic benefit for the community of Aliso Viejo and the entire south County region.

Please review these plans at your earliest opportunity and contact me immediately if there are any questions. If I can be of any assistance during your review, please do not hesitate to call.

Sincerely,

WAYNE PETERSON & ASSOCIATES

Wayne Peterson, Principal

SITE 'T'

other applicable zoning regulations. Approval does not include any action or finding as to compliance of approval of the project regarding any other applicable ordinance, regulation or requirement.

2. CP NA NA BASIC/TIME LIMIT
This approval is valid for a period of 36 months from the date of final determination. If the use approved by this action is not established within such period of time, this approval shall be terminated and shall thereafter be null and void.

3. CP NA NA BASIC/PRECISE PLAN
Except as otherwise provided herein, this permit is approved as a precise plan. After any application has been approved, if changes are proposed regarding the location or alteration of any use or structure, a changed plan may be submitted to the Director-Planning and Development Services Department for approval. If the Director determines that the proposed change complies with the provisions and the spirit and intent of the approval action, and that the action would have been the same for the changed plan as for the approved plot plan, he may approve the changed plan without requiring a new public hearing.

4. CP NA NA BASIC/COMPLIANCE
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

5. CP NA NA BASIC/OBLIGATIONS
Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

6. CP CP B SPECIAL - REVISED PLANS
Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the regulations contained in Zoning Code Section 7-9-143 "Facility Design Regulations".

7. CP CP U SPECIAL - REVISED SCREENING
Prior to the issuance of certificates of use and occupancy, the applicant shall submit a revised preliminary landscaping plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the screening and landscaping regulations contained Sections XI.B.10 and 11 of the Aliso Viejo Planned Community development regulations.

8. CP CP B SPECIAL - LIGHTING
Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.

9. CP CP B SPECIAL - SIGNS
Prior to the installation of any signs, the applicant shall submit a "Sign Program". The Sign Program shall be approved through a Changed Plan as required by Zoning Code Section 7-9-150. The Sign Program shall be in substantial conformance with Section XXI of the Aliso Viejo Planned Community development regulations. The Sign Program shall be reviewed by the Aliso Viejo Advisory Planning Committee prior to approval of the Changed Plan.

10. SG SG G GEOLOGY RPT
Prior to the issuance of a grading permit, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

BP BP G CONST NOISE

A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

(1) All construction vehicles or equipment, fixed or mobile, operated within 1,000' of a dwelling shall be equipped with properly operating and maintained mufflers.

(2) All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

(3) Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.

11. ER SG G POLLUTANT RUNOFF
Prior to issuance of precise grading or building permits, ~~whichever comes first~~) the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which

as determined by the Manager, Subdivision and Grading Division

details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

12. ER DS G NPDES PERMIT
Prior to issuance of any grading permits, the applicant shall submit evidence to the Manager, Subdivision and Grading, that the applicant has obtained coverage under the NPDES statewide General Stormwater Permit from the State Water Resources Control Board.

13. SG SG GB DRAINAGE STUDY
Prior to the issuance of any grading permits, or prior to the issuance of building permits, whichever comes first, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels, street flows, catch basins, storm drains, and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

14. SG SG GB DRAINAGE IMPRO
A. Prior to the issuance of any grading permits or prior to the issuance of building permits, whichever comes first, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

SG C U DRAINAGE IMPROV
B. Prior to the issuance of any certificates of use and occupancy, said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

15. F F R — FIRE ACCESS

Prior to the issuance of grading permits, the applicant shall obtain approval of the Fire Chief of all fire protection access easements and shall dedicate them to the County. The CC&Rs shall contain provisions which prohibit obstructions within the fire protection access easement. The approval of the Fire Chief is required for any modifications such as speed bumps, control gates or other changes within said easement.

16. F F G — STREET PLANS

Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of preliminary plans for all street and courts, public or private, from the Fire Chief in consultation with the Manager, Traffic Engineering. The plans shall include the plan view, sectional view, and indicate the width of the street or court, measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked when a dead-end street exceeds 150 feet or when other conditions require it.

17. F F GU — STREET MARKINGS

A. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval from the Fire Chief for street improvement plans with fire lanes shown. The plans shall indicate the locations of red curbing and signage, and provide a drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color.

B. Prior to the issuance of the certificate of use and occupancy, the approved fire lane marking plan shall be installed. The CC&Rs shall contain a fire lane map and provisions which prohibit parking in the fire lanes. A method of enforcement shall be included.

18. F F G — SITE PLANNING

Prior to the issuance of ~~grading~~ building permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class. All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

19. TE TE G — SIGHT DISTANCE

Prior to the issuance of any grading permits, the applicant shall provide adequate sight distance at all street intersections per Standard Plan 1117, in a manner meeting the approval of the Manager, Subdivision and Grading Services. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.

20. TE TE G — ACCESS

Notwithstanding the the plan, prior to the issuance of grading permits, the access driveway to Enterprise shall be relocated easterly to be aligned with

CONDITIONS 20 - 23 ARE NOT NEEDED. THE REVISED PLAN HAS INCORPORATED THESE DESIGN CHANGES.

the access driveway to the apartment complex on the southerly side of Enterprise. In addition, the applicant is required to design the access driveway with two inbound and two outbound lanes in a manner meeting the approval of the Manager, Subdivision and Grading Services.

21. TE TE G ACCESS
Prior to the issuance of building permits, the applicant shall design and construct the access driveway on Pacific Park Drive for right turn in/right turn out only movements by the use of a physical barrier in a manner meeting the approval of the Manager, Subdivision and Grading Services.

22. TE TE G ACCESS
Prior to the issuance of grading permits, the applicant shall relocate the bus turnout on Pacific Park Drive so as not to interfere with the travel lanes of free right turns on Pacific Park Drive. The applicant shall dedicate to the County of Orange any additional right of way necessary to accomplish the bus turnout relocation in a manner meeting the approval of the Manager, Subdivision and Grading Services.

23. TE TE G ACCESS
Prior to the issuance of grading permits, the applicant shall design, construct, and dedicate to the County of Orange any necessary right of way required for an additional twelve (12) feet wide lane on northbound Pacific Park Drive across the property frontage, all in a manner meeting the approval of the Manager, Subdivision and Grading Services.

24. SG SG/BI GU PVT LANDSCP

A. Prior to the issuance of ~~precise grading~~ building permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

25. BP BP B ACOUST NON-RES

Except when the interior noise level exceeds the exterior noise level, all non-residential structures shall be sound attenuated against the combined impact of all present and projected noise from exterior noise sources to meet the interior noise criteria as specified in the Noise Element and Land Use/Noise Compatibility Manual.

Prior to the issuance of any building permits, the applicant shall submit to the Manager, Building Permits, evidence prepared under the supervision of a County-certified acoustical consultant that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5. The evidence shall be in the form of an acoustical analysis report describing in detail the exterior noise environment and the acoustical design features required to achieve the interior noise standard and which indicate that the sound attenuation measures specified have been incorporated into the design of the project.

26. F F B WATER

Prior to the issuance of the first building permit, the applicant shall submit water improvement plans to the Fire Chief for review and approval to ensure adequate fire protection and financial security is posted for the installation. The water system design, location of valves, and the distribution of fire hydrants will be evaluated and approved by the Fire Chief.

27. F F RB FIRE HYDRANTS

Prior to the issuance of first building permit, the applicant shall submit to the Fire Chief evidence of the on-site fire hydrant system. The system shall be reviewed and approved by the Fire Chief prior to issuance of building permits. Provisions shall be made by the applicant for the repair and maintenance of the system, in a manner meeting the approval of the Fire Chief.

28. F F B AUTO FIRE EXT

Prior to the issuance of building permits, the applicant shall place a note on the construction plans stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

29. F F B COMBSTBLE CONST

Prior to the issuance of any building permits for combustible construction, the developer shall submit and obtain the Fire Chief's approval of a letter and plan stating that water for fire fighting purposes and an all weather fire access road shall be in place and operational as required by the Uniform Fire Code before any combustible materials are placed on the site.

30. F F B WATER AVAILABILITY

Prior to the issuance of any building permits, an Orange County Fire Authority Water Availability Form shall be submitted to and approved by the Plan Review Section of the Orange County Fire Authority. If sufficient

water to meet fire flow requirements is not available, an automatic fire extinguishing system shall be installed in each structure, in a manner meeting the approval of the Fire Chief.

31. F F BU — FIRE SPRINKLERS
Prior to the issuance of any building permits, plans for an automatic fire sprinkler system shall be submitted to and approved by the Fire Chief prior to installation. This system shall be operational prior to the issuance of a certificate of use and occupancy.

32. F F B — BUILDING USE
Prior to the issuance of any building permits, the applicant shall submit a detailed letter of intended use for each building to the Fire Chief for review and approval.

33. F F B — HAZARDOUS MATERIALS DISCLOSURE
Prior to the issuance of any building permits, the applicant shall contact the Orange County Fire Authority Hazardous Materials Disclosure Office at (714) 744-0463 to obtain a "Hazardous Materials Business Information and Chemical Inventory Packet". This shall be completed and submitted to the Fire Chief before the issuance of any building permits.

34. F F B — FIRE SAFETY SITE PLAN
Prior to the issuance of a building permit, the applicant shall submit plans for the review and approval of the Fire Chief. The applicant shall include information on the plans required by the Fire Chief. Contact the Orange County Fire Authority Plans Review Section at (714) 744-0403 for the Fire Safety Architectural Notes to be placed on the plans.

35. TE TE B — ROAD FEE PROG
Prior to the issuance of each building permit, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading Division.

a. San Joaquin Hills Transportation Corridor
b. Moulton Parkway/Laguna Niguel Area
c. Coastal Area Road Improvements and Traffic Signals

36. TE TE B — ACCESS
Prior to the issuance of building permits, the applicant shall provide for a 200 feet left turn pocket on eastbound Enterprise at the access driveway to the site in a manner meeting the approval of the Manager, Subdivision and Grading Services.

37. TE TE B — SIGNAL
Prior to the issuance of ~~building~~ occupancy permits, the applicant shall design and install a traffic signal at the site access/Enterprise intersection in a manner meeting the approval of the Manager, Subdivision and Grading Services in consultation with the Manager, Program Development Services.

38. **F F U** **FIRE HYDRANT MARKER**
Prior to the issuance of any certificates of use and occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard and approved by the Fire Chief. On private property these markers are to be maintained in good condition by the property owner.

39. **F F NA** **FIRE ALARM**
Prior to installation, plans for the fire alarm system shall be submitted to and approved by the Fire Chief. This system shall be operational prior to the issuance of a certificate of use and occupancy.

SUBJECT: Comments on Draft Conditions - Site Plan for Fluor Corporation (PA970113)

Dear Bill:

Thank you for the opportunity to review the draft of the staff report and condition of approval for the Site Plan for the Fluor Global Administration Facility in Aliso Viejo. We appreciate staff's support for this project and welcome your assistance as we move into and through the construction process.

We have reviewed the proposed conditions and have the following comments. Please note that we have no concern with the substance of the conditions, our only concerns deal with the timing of compliance. As you can imagine, the coordination of the construction of this facility (and the Fluor Daniel Southern California Facility) is a major undertaking and our condition revisions are proposed solely to facilitate the plan approval and construction processes.

Report Text, Paragraph 3:

Third sentence should read, "Driveway throat lengths in excess of 160 feet are provided."

Condition 11:

Phrase, "whichever comes first" should be replaced with "as determined by the Manager, Subdivision and Grading Division" to be consistent with the condition imposed on the other Fluor project (PA970114).

Condition 15:

This site will be under a single ownership and therefore there will be no C,C&R's prepared. The second sentence should delete "The C,C&R's" and insert, "Applicant will record an easement which..."

Condition 18:

Compliance with this condition should be required at building permits, not with grading permits. Please revise the first sentence accordingly.

Condition 20:

The additional right-of-way dedication on Pacific Park Drive required by this condition will be accomplished with the recordation of the final map for the property (scheduled for mid-December). We would request the first sentence be revised to read, "Concurrent with the recordation of a final map for the property, or prior to the issuance of certificates of use and occupancy..."

Condition 21:

Please adjust the first sentence to read, "Prior to the issuance of building permits...."

Condition 33:

Please adjust the first sentence to read, "Prior to the issuance of certificates of use and occupancy..." These street improvements are not needed until the building is actually occupied and traffic is accessing the site.

Condition 34:

Please adjust the first sentence to read, "Prior to the issuance of certificates of use and occupancy...." The traffic signal is not needed until the building is occupied and traffic is accessing the site.

Thank you for your consideration of our requests. Fluor Corporation is fully prepared to comply with all of the County's requirements as expressed in the proposed conditions of approval. We are requesting only that the timing of compliance be adjusted in some cases to facilitate the permitting and construction processes.

Please call me if you have any questions. Thank you again for your continued assistance with the Fluor Corporation projects.

DRAFT

FILE: PA 97-0113

DATE: >

TO: File/Record/Applicant

FROM: Thomas B. Mathews, Director, Planning and Development Services Dept.

SUBJECT: Planning Application PA 97-0113 for Site Development Permit

APPLICANT: Fluor Corporation, property developer
Mission Viejo Co., property owner
Wayne Peterson and Associates, agent

I. NATURE OF PROJECT:

Site Development Permit for the construction of the Fluor Corporation Global Administration Facility in Aliso Viejo. The project consists of one office building totaling 118,875 square feet gross (114,000 square feet rentable) on a 7.27 acre site in Planning Area 40 of the Aliso Viejo Planned Community. The project site is located and adjacent to the east side Pacific Park Drive, the north side Enterprise and the south side of the San Joaquin Hills Transportation Corridor.

The office structure has four floors, not including a basement storage area, and is a total of 70 feet in height above finished grade (55 feet to the roof, an additional six feet to the top of the parapet wall and then an addition 8 1/2 feet to the top of the mechanical screen wall). The building exterior is designed to reflect the Town Center theme through the use of EIFS walls and glass panels. The building is located at the southwest corner of the site with setbacks of approximately 34 feet from Pacific Park Drive and 37 feet from Enterprise.

A total of 476 parking spaces are provided based on a gross rentable building area of 114,000 square feet. The parking area, with 24 feet wide drive aisles, is accessed by a 30 feet wide driveway from Pacific Park Drive and a 50 feet wide driveway on Enterprise. Driveway throat lengths in excess of 160 feet are provided. Landscaping is designed to conform with the Town Center theme and requirements and is provided throughout the parking area. Perimeter landscaping is proposed with landscaping adjacent to the streets 20 to 35 feet in width.

Planning Area 40 of the Aliso Viejo Planned Community has a land use designated of "Town Center". The objective of the Town Center designation is intended to provide for a mixed-use center to function as the community's urban core, central business district and community shopping area. The proposed office complex is consistent with the Town Center

12/2/97
DRAFT

8. CP CP B SPECIAL - LIGHTING
Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.

9. CP CP B SPECIAL - SIGNS
Prior to the installation of any signs, the applicant shall submit a "Sign Program". The Sign Program shall be approved through a Changed Plan as required by Zoning Code Section 7-9-150. The Sign Program shall be in substantial conformance with Section XXI of the Aliso Viejo Planned Community development regulations. The Sign Program shall be reviewed by the Aliso Viejo Advisory Planning Committee prior to approval of the Changed Plan.

10. SG SG G GEOLOGY RPT
Prior to the issuance of a grading permit, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

BP BP G CONST NOISE
A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

(1) All construction vehicles or equipment, fixed or mobile, operated within 1,000' of a dwelling shall be equipped with properly operating and maintained mufflers.

(2) All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

(3) Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.

11. ER SG G POLLUTANT RUNOFF
Prior to issuance of precise grading or building permits, ~~whichever comes first,~~ the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which

as determined by the Manager, Subdivision and Grading Division.

12/2/97
DRAFT

Applicant will record an easement which

15. F F R — FIRE ACCESS

Prior to the issuance of grading permits, the applicant shall obtain approval of the Fire Chief of all fire protection access easements and shall dedicate them to the County. ~~The CC&Rs~~ shall contain provisions which prohibit obstructions within the fire protection access easement. The approval of the Fire Chief is required for any modifications such as speed bumps, control gates or other changes within said easement.

16. F F G — STREET PLANS

Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of preliminary plans for all street and courts, public or private, from the Fire Chief in consultation with the Manager, Traffic Engineering. The plans shall include the plan view, sectional view, and indicate the width of the street or court, measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked when a dead-end street exceeds 150 feet or when other conditions require it.

17. F F GU — STREET MARKINGS

A. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval from the Fire Chief for street improvement plans with fire lanes shown. The plans shall indicate the locations of red curbing and signage, and provide a drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color.

B. Prior to the issuance of the certificate of use and occupancy, the approved fire lane marking plan shall be installed. The CC&Rs shall contain a fire lane map and provisions which prohibit parking in the fire lanes. A method of enforcement shall be included.

18. F F G — SITE PLANNING

Prior to the issuance of ~~grading~~ building permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class. All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

19. TE TE G — SIGHT DISTANCE

Prior to the issuance of any grading permits, the applicant shall provide adequate sight distance at all street intersections per Standard Plan 1117, in a manner meeting the approval of the Manager, Subdivision and Grading Services. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.

12/2/97

DRAFT

20. TE TE ~~Prior to the issuance of grading permits,~~ Concurrent with the recordation of a final map for the property, or certificates of use and occupancy ACCESS
the applicant shall design, construct, and dedicate to the County of Orange any necessary right of way ~~required~~ for an additional twelve (12) feet wide lane on northbound Pacific Park Drive across the property frontage, all in a manner meeting the approval of the Manager, Subdivision and Grading Services.

21. SG SG/BI GU PVT LANDSCP
A. Prior to the issuance of ~~precise grading~~ building permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

22. BP BP B ACOUST NON-RES
Except when the interior noise level exceeds the exterior noise level, all non-residential structures shall be sound attenuated against the combined impact of all present and projected noise from exterior noise sources to meet the interior noise criteria as specified in the Noise Element and Land Use/Noise Compatibility Manual.

Prior to the issuance of any building permits, the applicant shall submit to the Manager, Building Permits, evidence prepared under the supervision of a County-certified acoustical consultant that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5. The evidence shall be in the form of an acoustical analysis report describing in detail the exterior noise environment and the acoustical design features required to achieve the interior noise standard and which indicate that the sound attenuation measures specified have been incorporated into the design of the project.

23. F F B WATER
Prior to the issuance of the first building permit, the applicant shall submit water improvement plans to the Fire Chief for review and approval to ensure adequate fire protection and financial security is posted for the

12/2/97
DRAFT

31. F F B **FIRE SAFETY SITE PLAN**
Prior to the issuance of a building permit, the applicant shall submit plans for the review and approval of the Fire Chief. The applicant shall include information on the plans required by the Fire Chief. Contact the Orange County Fire Authority Plans Review Section at (714) 744-0403 for the Fire Safety Architectural Notes to be placed on the plans.

32. TE TE B **ROAD FEE PROG**
Prior to the issuance of building permits, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading Division.

a. San Joaquin Hills Transportation Corridor
b. Moulton Parkway/Laguna Niguel Area
c. Coastal Area Road Improvements and Traffic Signals

33. TE TE B certificates of use and occupancy **ACCESS**
Prior to the issuance of ~~building permits~~, the applicant shall provide for a 200 feet left turn pocket on eastbound Enterprise at the access driveway to the site in a manner meeting the approval of the Manager, Subdivision and Grading Services.

34. TE TE B certificates of use and occupancy **SIGNAL**
Prior to the issuance of ~~building permits~~, the applicant shall design and install a traffic signal at the site access/Enterprise intersection in a manner meeting the approval of the Manager, Subdivision and Grading Services in consultation with the Manager, Program Development Services.

35. TE TE B **RECORDATION**
Prior to the issuance of building permits, the applicable portion of TT13435 shall be recorded.

36. F F U **FIRE HYDRANT MARKER**
Prior to the issuance of any certificates of use and occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard and approved by the Fire Chief. On private property these markers are to be maintained in good condition by the property owner.

37. F F NA **FIRE ALARM**
Prior to installation, plans for the fire alarm system shall be submitted to and approved by the Fire Chief. This system shall be operational prior to the issuance of a certificate of use and occupancy.

ALISO VIEJO

ADVISORY PLANNING COMMITTEE

October 31, 1997

Mr. Charles M. Shoemaker, Section Chief, Site Planning & Consistency Section
County of Orange
Planning & Development Services Department
P.O. Box 4048
Santa Ana, California 92702-4048

SUBJECT: Global Administration Facility (Fluor Corporation) - Revised Site Plan, Landscape Plan, Floor Plans, and Elevations - Located in AVPC PA 40, Tract 13435, near Pacific Park Drive and Enterprise.

Dear Mr. Shoemaker:

At the October 22, 1997, Aliso Viejo Advisory Planning Committee (AVAPC) meeting, the Committee reviewed the above mentioned. The Committee took the following action on the proposal:

- **Recommend that the County approve the project as presented to the AVAPC on October 22, 1997 with the following project condition of approval:**

  1. The applicant shall evaluate the parking area to include features that will further eliminate the appearance of mass.

Please provide AVAPC a copy of the County's conditions of approval for the project when it becomes available. If you should have any questions regarding this letter, please contact Larry Lawrence at (714) 661-8175.

Sincerely,

ALISO VIEJO ADVISORY PLANNING COMMITTEE

SUBJECT: Traffic Conditions for Fluor Site Plans (PA 970113 and PA 970114)

Dear Mr. Peterson:

The Environmental & Project Planning Services (E&PPS) Division has reviewed your letter dated September 19, 1997 (attached) regarding the appropriateness of the traffic conditions included in the Transportation Planning Section's memos dated September 15, 1997 (attached) on the subject site plans and has prepared the following responses:

PA 970113 - Fluor Global Administration Facility

In response to your comment on item #1 regarding the condition requiring a fair share contribution towards the unfunded intersection improvements needed at Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), E&PPS staff has discussed this issue with Current Planning Services (CPS) and Subdivision & Grading Services (S&GS), and it was agreed that only those site plans in Aliso Viejo Planning Area 40 which cause the 69,378 ADT cap to be exceeded will be required to pay a fair share contribution towards the unfunded regional improvements identified in the Aliso Viejo Planning Area 40 Traffic Analysis. Therefore, this condition is not applicable to this project.

In response to your comment on item #2 regarding the intersection improvements needed at Pacific Park Drive (NS) @ Enterprise (EW), E&PPS staff concurs with the improvements (e.g. westbound free right turn lane) proposed by S&GS staff for inclusion in the project plans for this intersection. Therefore, this condition is no longer applicable to this project.

PA 970114 - Fluor Southern California Facility

In response to your comment on item #1 regarding the condition requiring a fair share contribution towards the unfunded intersection improvements needed at Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), it will be the obligation of the development in Aliso Viejo Planning Area 40 to fund the improvements at these intersections. Since this project is not located in Planning Area 40, this condition is not applicable to this project.

In response to your comment on item #2 regarding the need for intersection improvements at Aliso Creek Road (NS) @ Laguna Hills Drive North (EW), it should be noted that this development is subject to the County's Growth Management Program (GMP) in accordance with the Aliso Viejo Development Agreement. The County's GMP provides that LOS "D" (i.e. ICU value not to exceed .90) is to be maintained at intersections within the County's jurisdiction. While the traffic analysis prepared for this project indicates that this intersection is expected to operate at LOS "D" (ICU of .88) in Year 2020 conditions, there may be a future need for improvements (e.g. additional left turn or through lanes on the westbound approach) at this intersection. After re-evaluating the geometrics for this intersection, staff has determined that such improvements can likely be implemented through restriping. The County can continue to monitor the traffic levels at this intersection and then implement these improvements when warranted. Therefore, this condition is no longer applicable to this project.

We hope that this letter satisfactorily addresses your concerns. If you have any questions, please contact me at 834-3669.

Very truly yours,

Harry Persaud

County of Orange
300 North Flower Street
Santa Ana, California 92702

SUBJECT: Fluor Site Plans (PA 970113, PA 970114)

Dear Mr. Persaud:

I have reviewed your September 15, 1997 memos regarding the two Fluor Corporation site plans in Aliso Viejo and have the following concerns:

PA 970113 - Fluor Global Administration Facility

Your memo recommends a condition of approval (your item #1) requiring this project to contribute a pro-rata share of improvements to the Alicia/Aliso Creek and Glenwood/Aliso Creek intersections. As your memo correctly points out, the development of this project fits under the 69,378 ADT cap established with the 1989 Area Plan and is therefore protected by the Aliso Viejo Development Agreement. No additional exactions are permitted under that Agreement. It is therefore inappropriate to apply this condition to this project.

Regarding your item #2, please be advised that a detailed design for the Pacific Park/Enterprise intersection has been worked out by the County Traffic staff (Grant Anderson, Tony Small), Robert Kahn, John Kain & Associates (RKJK) and Robert Bein, William Frost & Associates (RBF). This plan reflects lane configurations, turn pockets, traffic signal locations, channelization controls, etc. These improvements will be installed prior to or concurrent with the development of the Fluor project. Therefore, this proposed condition is unnecessary.

Regarding your item #3, we concur that the project is subject to the existing road fee programs as they have been applied to other projects in Aliso Viejo.

PA 970114 - Fluor Daniel Southern California Facility

Regarding your item #1, since this project is not located in Planning Area 40, it is not subject to any of the additional roadway improvement conditions imposed on the PA 40 ADT trip augmentation Area Plan. The development of this site is protected by the Aliso Viejo Development Agreement and additional exactions are prohibited.

Regarding your item #2, again, this site is not in PA 40 and therefore its development is protected by the Development Agreement. This proposed condition is inappropriate for this site.

Regarding your item #3, we concur that the project is subject to the existing road fee programs as they have been applied to other projects in Aliso Viejo.

If you have any disagreement with any of my comments above, please call Bob Kahn or me as soon as possible. We are moving toward administrative actions on these projects early next week and we would like to have these items resolved.

Thank you for your attention to this matter.

Sincerely,

WAYNE PETERSON AND ASSOCIATES

County of Orange

MEMO

DATE: September 15, 1997

TO: Chuck Shoemaker, Chief, Site Planning & Consistency

FROM: Harry Persaud, Chief, Transportation Planning

SUBJECT: Site Plan for Fluor Global Administration Facility (PA 970113)

The 7.18-acre project site is located within the Town Center portion (Planning Area 40) of the Aliso Viejo Planned Community at the northeasterly corner of Enterprise and Pacific Park Drive. The project proposes the development of an office campus of two buildings totaling approximately 114,400 square feet of gross floor area. The two buildings will serve as the Fluor Corporation's international headquarters.

The cumulative impacts of this proposed project upon the local and regional circulation system were addressed in the Aliso Viejo Planning Area 40 (PA 40) Traffic Analysis prepared by RKJK. In addition, a Site Specific Traffic and Parking Study has been prepared by RKJK for this proposed project in conjunction with the site plan for the Fluor Southern California Facility (PA 970114).

The Transportation Planning Section has reviewed the subject proposal and offers the following comments:

1) The Aliso Viejo PA 40 Traffic Analysis identified traffic impacts associated with both the 1989 Approved Area Plan (with a daily trip generation ceiling of 69,378 daily trips) and the 1996 Approved Area Plan (with a daily trip cap of 125,000 daily trips). This proposed site plan falls within the future levels of development anticipated under the 1989 Approved Area Plan. According to the Aliso Viejo PA 40 Traffic Analysis, the following two intersections are anticipated to operate at an unacceptable level of service (LOS) under <u>both</u> Year 2020 With 1989 Approved Area Plan conditions <u>and</u> Year 2020 With 1996 Approved Area Plan conditions: Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW). Therefore, the following condition/mitigation measure is recommended:

   "Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the unfunded improvements needed at the intersections of Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), as identified in the Aliso Viejo Planning Area 40 Traffic Analysis. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

2) The proposed project is located adjacent to the intersection of Pacific Park Drive (NS) and Enterprise (EW). According to the Aliso Viejo PA 40 Traffic Analysis, this intersection is anticipated to operate at LOS "C" under Year 2020 With 1989 Approved Area Plan conditions and at LOS "D" under Year 2020 With 1996 Approved Area Plan conditions. However, it should be noted that it is the practice of the County to use a more conservative approach regarding the trip generation rate for office land uses and the internal trip "capture" assumption for mixed land uses than what was used

in the traffic studies for this proposed project. In order to ensure that this intersection operates at an acceptable level of service, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the following improvements at the intersection of Pacific Park Drive (NB) and Enterprise (EW): 1) construct dual right turn lanes westbound on Enterprise; 2) convert the southerly right turn lane to a combined right turn and through lane and modify the signalization to accommodate the combined movement when the southbound SR-73 ramp is opened; and 3) provide for westbound right turn overlap for this intersection. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

3) As indicated in the Aliso Viejo PA 40 Traffic Analysis, the project site lies within the areas of benefit of three existing road fee programs. Therefore, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall pay fees as prescribed in the Major Thoroughfare and Bridge Fee Programs for the San Joaquin Hills Transportation Corridor, the Moulton Parkway/Laguna Niguel Area, and the Coastal Area Road Improvements and Traffic Signals in a manner meeting the approval of the Manager, Subdivision and Grading Services."

If you have any questions, please contact either Mike Galizio of my staff at 834-2501 or myself at 834-3669.

County of Orange

MEMO

DATE: September 15, 1997

TO: Chuck Shoemaker, Chief, Site Planning & Consistency

FROM: Harry Persaud, Chief, Transportation Planning

SUBJECT: Site Plan for Fluor Southern California Facility (PA 970114)

The 22.6-acre project site is located in Planning Area 51 of the Aliso Viejo Planned Community at the southeasterly side of Laguna Hills Drive, immediately northerly of the San Joaquin Hills Transportation Corridor (SJHTC). The project proposes the development of an office campus of five buildings totalling approximately 454,000 square feet of gross floor area. The five buildings will serve as the Fluor Corporation's Southern California headquarters.

The cumulative impacts of this proposed project upon the local and regional circulation system were addressed in the Aliso Viejo Planning Area 40 (PA 40) Traffic Analysis prepared by RKJK. In addition, a Site Specific Traffic and Parking Study has been prepared by RKJK for this proposed project in conjunction with the site plan for the Fluor Global Administration Facility (PA 970113).

The Transportation Planning Section has reviewed the subject proposals and offers the following comments:

1) The Aliso Viejo PA 40 Traffic Analysis identified traffic impacts associated with both the 1989 Approved Area Plan (with a daily trip generation ceiling of 69,378 daily trips for PA 40) and the 1996 Approved Area Plan (with a daily trip cap of 125,000 daily trips for PA 40). According to the Aliso Viejo PA 40 Traffic Analysis, the following two intersections are anticipated to operate at an unacceptable level of service (LOS) under <u>both</u> Year 2020 With 1989 Approved Area Plan conditions <u>and</u> Year 2020 With 1996 Approved Area Plan conditions: Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW). Therefore, the following condition/mitigation measure is recommended:

   "Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the unfunded improvements needed at the intersections of Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), as identified in the Aliso Viejo Planning Area 40 Traffic Analysis. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

2) The proposed project is located adjacent to the intersection of Aliso Creek Road (NS) and Laguna Hills Drive North (EW). According to the Aliso Viejo PA 40 Traffic Analysis, this intersection is anticipated to operate at LOS "E" under Year 2020 With 1989 Approved Area Plan conditions and at LOS "D" under Year 2020 With 1996 Approved Area Plan conditions. However, it should be noted that it is the practice of the County to use a more conservative approach regarding the trip generation rate for office land uses and the internal trip "capture" assumption for mixed land uses than what was used

in the traffic studies for the proposed project. In order to ensure that this intersection operates at an acceptable level of service, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the upgrade the westbound approach of the intersection of Aliso Creek Road (NB) and Laguna Hills Drive North (EW) to provide dual left turn lanes and three through lanes. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

3) The project site lies within the areas of benefit of three existing road fee programs. Therefore, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall pay fees as prescribed in the Major Thoroughfare and Bridge Fee Programs for the San Joaquin Hills Transportation Corridor, the Moulton Parkway/Laguna Niguel Area, and the Coastal Area Road Improvements and Traffic Signals in a manner meeting the approval of the Manager, Subdivision and Grading Services."

If you have any questions, please contact either Mike Galizio of my staff at 834-2501 or myself at 834-3669.

ORANGE COUNTY FIRE AUTHORITY

PO Box 86, Orange, CA 92856-0086 • 180 South Water St., Orange, CA 92866-2175

Larry J. Holmes, Director of Fire Services *(714) 744-0400*

August 6, 1997

PA97-0113

To: Bill Melton, Planner
County of Orange, Subdivision and Grading

From: Cari Purkey, Senior Fire Safety Specialist
Orange County Fire Authority

Subject: **SR21414 AV FLUOR**

The following conditions shall apply to the above referenced project:

FP1 Water Improvement Plans
Prior to the recordation of a subdivision map, the subdivider shall submit water improvement plans to Fire Chief for review and approval to ensure adequate fire protection and financial security is posted for the installation. The water system design, location of valves, and the distribution of the fire hydrants will be evaluated and approved by the Fire Chief.

FP2 Fire Hydrants
Prior to the recordation of any subdivision map or the issuance of any building permits, whichever occurs first, the applicant shall submit to the Fire Chief evidence of the on-site fire hydrant system and indicate whether it is public or private. If the system is private, the system shall be reviewed and approved by the Fire Chief prior to issuance of building permits. Provisions shall be made by the applicant for the repair and maintenance of the system, in a manner meeting the approval of the Fire chief.

FP3 Automatic Fire Extinguishing Systems
Prior to the recordation of a subdivision map, a note shall be placed on the map stating that all structures greater than 6,000 square feet or structures identified by the Fire Chief shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

FP4 Fire Access
Prior to the recordation of a subdivision map, the applicant shall obtain approval of the Fire Chief of all fire protection access easements and shall dedicate them to the County/City. The CC&R's shall contain provisions which prohibit obstructions within the fire protection access easement. The approval of the Fire Chief is required for any modifications such as speed bumps, control gates or other changes in within said easement.

FP7 Fuel Modification

A. Prior to the recordation of any subdivision map, the applicant shall obtain the Fire Chief's approval, in consultation with the Manager, Environmental and Project Planning of a conceptual fuel modification plan and program. Contact the Orange County Fire Authority Development Review Section at (714) 744-0477 for requirements and clearance of this condition.

B. Prior to the issuance of any grading permits, the applicant shall obtain the Fire Chief's approval, in consultation with the Manager Environmental Project Planning, of a precise fuel modification plan and program. The plan shall indicate the proposed means of achieving an acceptable level of risk to structures by vegetation. Include the method (mechanical or hand labor) for removal of combustible vegetation and the planting of drought tolerant fire resistant plants.

C. Prior to the issuance of building permits, the developer shall have completed, under the supervision of the Fire Chief, that portion of the approved fuel modification plan determined to be necessary by the Fire Chief before the introduction of any combustible materials into the project area.

D. Prior to the issuance of any certificate of use and occupancy, the remainder of the fuel modification shall be installed and completed under the supervision of the Fire Chief. Further, the installed fuel modification shall be established to a degree meeting the approval of the Fire Chief. The CC&R's shall contain provision for maintaining the fuel modification zones including the removal of all dead and dying vegetation and the inspection and correction of any deficiencies in the irrigation system three times a year.

FP8 Street Plans

Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of preliminary plans for all streets and courts, public or private, from the Fire Chief in consultation with the Manager, Traffic Engineering. The plans shall include the plan view, sectional view, and indicate the width of the street or court measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked when a dead-end street exceeds 150 feet or when other conditions require it.

FP9 Street Markings

A. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval from the Fire Chief for street improvement plans with fire lanes shown. The plans shall indicate the locations of red curbing and signage. A drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color shall be submitted to and approved by the Fire Chief.

B. Prior to the issuance of the certificate of use and occupancy the approved fire lane marking plan shall be installed. The CC&R's shall contain a fire lane map and provisions which prohibit parking in the fire lanes. A method of enforcement shall be included.

FP15 Fire Sprinkler System
Prior to the issuance of any building permits on those lot(s)/parcel(s) determined applicable by the Fire Chief, plans for the automatic fire sprinkler system shall be submitted to and approved by the Fire Chief prior to installation. This system shall be operational prior to the issuance of a certificate of use and occupancy.

FP18 Architectural Plan
Prior to approval of a site development/use permit, or the issuance of a building permit, whichever occurs first, the applicant shall submit plans for the review and approval of the Fire Chief. The applicant shall include information on the plans required by the Fire Chief. Contact the Orange County Fire Authority Plans Review Section at (714) 744-0403 for the Fire Safety Site/Architectural Notes to be placed on the plans.

FP19 Fire Hydrant Markers
Prior to the issuance of any certificates of use and occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard and approved by the Fire Chief. On private property these markers are to be maintained in good condition by the property owner.

Should you have any questions or need my help, please feel free to contact me at my office (714) 289-7870, or fax me (714) 289-7811.

July 18, 1997

Mr. John Buzas, Division Manager
County of Orange - Current Planning Services
300 North Flower Street, Third Floor
Santa Ana, California 92702

SUBJECT: Site Plan for Fluor Global Administration Facility

Dear Mr. Buzas:

On behalf of Lowe Enterprises Commercial Group and the Fluor Corporation, the enclosed site plan application package for the Fluor Global Administration Facility is being submitted for your review and processing for an administrative approval. This application is being processed concurrently with a site plan for Fluor Daniel's Southern California Facility which is located on a site approximately one-half mile to the east of this site.

The 7.18-acre project site is located within the Town Center portion of the Aliso Viejo Planned Community, at the westerly corner of Enterprise and Pacific Park Drive. The site is within the Town Center area (Planning Area 40) of Aliso Viejo and is also part of the Aliso Viejo Urban Activity Center. The proposed office use is completely consistent with the applicable land use regulations for the site.

The project site will serve as Fluor Corporation's international headquarters. A total of approximately 114,400 square feet of gross floor area will be contained in two buildings, one two-stories in height (40' 6" max.) and one three-stories (54' max.). The site enjoys a prominent location adjacent to the San Joaquin Hills Tollway and will have commanding views of the Saddleback Valley. To the east of the site is the Summit office project. To the south, across Enterprise, is an apartment community currently under construction, and to the west is a future Tollway interchange and a 150-foot high landscaped slope atop which are new residential development areas.

Access to the site will be from both Enterprise and Pacific Park Drive. The two drives will lead to the grand garden court area and the two building entrances. Landscaped off-street parking areas are provided surrounding the building. Parking for 447 vehicles is provided, 10 spaces less than the 457 spaces required by the PC Text. A parking modification to permit the 2% reduction is incorporated in the site plan application. As a single-user campus, Flour is able to strictly control the use of the buildings and the need for the on-site parking facilities. Further,

Fluor Corporation is one of the corporate leaders in the area of car pooling, ride-sharing, van pooling and other innovative techniques to reduce the number of cars driven to their facilities each day. Fluor is confident that the parking will be more than adequate to meet their needs.

The proposed buildings have been designed by McLarand, Vasquez and Partners utilizing concrete and glass to reflect a strong corporate image. The buildings are in conformance with the applicable design guidelines for the area. Sign details will be consistent with Area Plan guidelines and will be incorporated in a Sign Program which will be submitted at a later date. A materials board and colored elevations are available if staff would like to review them.

A site-specific traffic and parking study for the project site has been prepared by RKJK and has been submitted as a part of this application package. That study concludes that the existing and future arterial highway system is adequate to accommodate the proposed project subject to the incorporation of certain design-level improvements to facilitate traffic flow into and out of the site. As a part of the Aliso Viejo Town Center, additional traffic analyses are underway relative to the impacts of the overall Town Center area. Pursuant to the Area Plan for PA 40 (Town Center) these additional analyses are required when proposed development exceeds a total of 69,374 trip-ends generated. This project does not cause that threshold to be exceeded and therefore those analyses are not required prior to the approval of this project.

Pursuant to the requirements of the PC Text, this project has been submitted to the Aliso Viejo Advisory Planning Committee (AVAPC) for comment. The project is on the AVAPC's agenda for their July 23rd meeting. Representatives from the project team will be making a presentation on the project to the AVAPC and the results of their review will be forwarded to you for your files.

On behalf of the entire project team, please accept our invitation for a site tour or a follow-up briefing if you feel it would be helpful. Please do not hesitate to contact me during the processing of this project if there is any additional information needed or if clarification is needed on any aspect of this project. Please call me if you have any questions.

Sincerely,

WAYNE PETERSON AND ASSOCIATES

ADVISORY PLANNING COMMITTEE

July 28, 1998

Mr. Charles M. Shoemaker, Section Chief, Site Planning & Consistency Section
County of Orange, Planning & Development Services Department
P.O. Box 4048
Santa Ana, California 92702-4048

SUBJECT: Fluor Corporation (Site Plan PA970113 & Site Plan PA 970114) - Lighting Plan and Sign Program. Located in AVPC PA 40 (Tract 13435, Lots 5 & 6) & PA 51, near the San Joaquin Hills Transportation Corridor.

Dear Mr. Shoemaker:

At the July 22, 1998, Aliso Viejo Advisory Planning Committee (AVAPC) meeting, the Committee reviewed the above mentioned project. The Committee took the following action on the proposal:

- **Recommend that the County approve the lighting plan and sign program as presented to the AVAPC on July 22, 1998 with the following project conditions of approval:**

  1. The monument signage (identified as sign A2 per sign program) at Pacific Park Drive and Enterprise shall be an entry monument sign for the Aliso Viejo Town Center.
  2. Single entry monument signage shall be allowed at each site entry.
  3. Any modifications of the reviewed sign program shall be submitted to the AVAPC for review.

Please provide AVAPC a copy of the County's conditions of approval for the project when it becomes available. If you should have any questions regarding this letter, please contact Larry Lawrence at (714) 661-8175.

Sincerely,

AGENDA ITEM #2: FLUOR SIGN PROGRAM AND LIGHTING PLAN

Date: July 22, 1998
To: Aliso Viejo Advisory Planning Committee
From: Bob Goldin and Larry Lawrence, Lawrence Associates

PROJECT

Fluor Corporation: Review of the Sign Program and Lighting Plan for the Fluor Corporation complex located near the San Joaquin Hills Corridor in PA 40 (Tract 13435, Lots 5&6).

ANALYSIS

Project Description:

The project consists of the proposed Sign Program and Lighting Plan for the Fluor Corporation that was required to be reviewed by AVAPC as a condition of approval of the site plan approved on July 23, 1997. A letter, Sign Program and Lighting Plan from the applicant is included that details the wall signs, directional signs and freestanding signs proposed. A photometric study is also provided.

Sign Program:

The table below compares development standards shown on the submitted plans with those in the Planned Community Ordinance and as indicated in the Planned Sign Program for the project:

SIGN STANDARDS ANALYSIS		
SIGN TYPE	**PC ORDINANCE REQUIREMENT**	**SHOWN ON PLAN**
Monument Signs	As shown in the sign program, per Sec. XXI-87, p.84.. (If no sign program, one sign per main use is allowed for uses with street frontages in excess of 99'. No max. height or size specified in PC regulations.)	One sign for each of the two sites:: Laguna Hills Dr. sign (A1): • 4'-1" high • 9'-4" wide • Approx. 38 sq.ft. sign area Pacific Park Dr. sign (A2): • 4'-1" high • 11-6½" wide • Approx. 47 sq.ft. sign area
Wall Signs	As shown in the sign program. (If no sign program, 1 sq.ft. of sign area per 1 foot of building frontage is allowed, up to a maximum aggregate of 100 sq.ft. per use.)	Two wall signs for each of the two sites: • H1/H2: 2 @ 38'-9" x 2'-2" = 85 sq.ft. x 2 = 170 sq.ft. aggregate • H3/H4: 2 @ 27' x 2'-2" = 57 sq.ft. x 2 = 114 sq.ft. aggregate
Internal Directional Signs	As shown in the sign program	Various incidental signs, 5'-6" max. height

AGENDA ITEM #2: FLUOR SIGN PROGRAM AND LIGHTING PLAN

The overall sign program is comprehensive, well-designed, and will result in attractive understated signage for the two sites. The free-standing signs ("Fluor Daniel" for the Laguna Hills Drive site and "Fluor Corporation" for the Pacific Park site) use internally-illuminated "push-through" lettering and logo with an opaque background. The signs will be mounted on a natural-color concrete base, which will also include the "Aliso Viejo" community logo.

The wall signs use halo-lit reverse channel letters. These signs are larger in aggregate area than those normally allowed without a sign program. However, larger signs can be permitted if the overall program is deemed acceptable. In the present case, we believe that the wall signs are relatively small in relation to the building elevations where mounted. We therefore recommend approval of these signs and the overall program.

Lighting Plan:

The two light standards to be installed throughout the complex are 27 feet and 12 feet in height. The larger light fixture, used in the parking areas, is the "shoe box" style of cutoff fixture with the light focused downward. The smaller fixture is used primarily closer to the building and for accent lighting. The photometric study provided shows that the majority of the light is confined to the site and the light spillage should be minimal. However, the adjacent properties will be able to see the glow created from the complex because of the large parking area being lighted.

Wall sconces are proposed for the buildings, with light directed both up and down to graze the wall surfaces.

The applicant is requesting to modify the approved color of the fixtures from white to black. The change in color should not have any adverse impacts.

RECOMMENDATION:

Approve the sign program, lighting plan and color change as submitted.

Subject: Traffic and Parking Study for Fluor Corporation Facilities - Aliso Viejo

Dear Mr. Hillgren:

Attached for your use is our Site Specific Traffic and Parking Study for the proposed Fluor Corporation facilities in Aliso Viejo. The report summarizes existing conditions in the project area, evaluates the traffic impacts of the proposed projects, and makes several recommendations relative to project design details. The report concludes that the proposed projects function adequately from a traffic and parking standpoint with the implementation of the recommended traffic improvements.

Our report shows that the two Fluor projects in total will generate approximately 6,650 trip-ends per day, with the Fluor Global Administration Facility generating approximately 1,910 trips, and the Fluor Daniel Southern California Facility generating approximately 4,740 trips. This traffic generation has been accommodated in all of the previous traffic analyses prepared for the project sites and for the Aliso Viejo project as a whole.

Further, the traffic volumes generated by the Fluor Global Administration Facility in Planning Area 40 (Town Center) do not cause the Town Center area to go beyond the trip-end threshold of 69,378 that triggers additional traffic analysis. A chart is attached (Table 1) illustrating the cumulative daily trip totals as they relate to this trip-end threshold.

Please review the report and let me know if you have any questions.

Sincerely,

ROBERT KAHN, JOHN KAIN & ASSOCIATES, INC.

Brea, CA 92621

Subject: Aliso Viejo Fluor Daniel Development Site Specific Traffic and Parking Study

Dear Mr. Hillgren:

INTRODUCTION

ROBERT KAHN, JOHN KAIN & ASSOCIATES, INC. (RKJK) is pleased to provide this Site Specific Traffic Study for the proposed Aliso Viejo Fluor Daniel Development project located in Aliso Viejo (Planning Areas 40.1 and 51.1). The proposed project consists of two sites. The Fluor Daniel Global Administration Offices is to be located at the intersection of Pacific Park Drive and Enterprise, and the Southern California Operation will be located north of the San Joaquin Hills Toll Road and east of Laguna Hills Drive. At the request of LOWE ENTERPRISES COMMERCIAL GROUP, a site specific traffic evaluation has been prepared to address the local traffic circulation impacts with respect to the proposed project.

FINDINGS

1. The two sites are currently undeveloped and not generating any traffic.

2. The arterial highway adjacent the project has been completed or is in the process of being completed in conjunction with other projects in this area. The local street system planned for this portion of Planning Areas 40.1 and 51.1 will be constructed in conjunction with the project.

3. The proposed project consists of 150,000 square feet of Global Administration offices and 500,000 square feet of general office space (Southern California Operation). The Global Administration Offices will be located east of Pacific Park Drive and north of Enterprise in Planning Area 40.1. The Southern California Operation will be located north of the San Joaquin Hills Toll Road and east of Laguna Hills Drive in Planning Area 51.1.

4. The proposed Global Administration Offices are anticipated to generate approximately 1,910 trip-ends per day with 265 trips occurring during the AM peak hour and 255 trips occurring during the PM peak hour. The proposed Southern California Operation is anticipated to generate approximately 4,740 trip-ends per day with 670 trips occurring during the AM peak hour and 610 trips occurring during the PM peak hour. Both projects combined would generate 6,650 trip-ends per day with 935 trips occurring during the AM peak hour and 865 trips occurring during the PM peak hour.

5. The proposed project in conjunction with other approved/vested projects within Aliso Viejo Planning Area 40 will generate 57,960 daily trip ends per day (see Table 1 for a summary of Planning Area 40 cumulative daily trips). This is less than the 69,378 daily trips which would required more extensive traffic modeling and off-site traffic analysis for Planning Area 40. Therefore, this study is limited to site specific traffic items, such as access, driveway widths and turn lane requirements.

6. Based upon this review, the proposed project is consistent with previous transportation planning in the area and can be accommodated within the planned arterial highway and local street system within Aliso Viejo. This study includes a number of traffic recommendations to be incorporated into the final site plan.

7. This project, along with the rest of Aliso Viejo, is covered by a Development Agreement (DA 87-9), which identifies a number of public benefits that will be provided in conjunction with the build out of the Aliso Viejo Planned Community. As a result of the significant public benefits package provided in the Development Agreement, the development regulations in effect at the time of the development agreement are to be carried through with the project.

8. Access to the Fluor Daniel Global Administration Offices is provided from Enterprise at a full access driveway adjacent to the southerly portion of the site. Access is also provided on Pacific Park Drive at a restricted access (right in/out and left in) driveway along the westerly portion of the site. Access to the Fluor Daniel Southern California Operation is provided from Laguna Hills Drive at two full access driveways adjacent to the westerly portion of the site.

9. The project is part of the Aliso Viejo Master Plan office/commercial development located along Enterprise between Pacific Park Drive and the existing Park Plaza site.

[1] Administrative and Professional Business Office includes Community Facilities.

[2] Not vested under 69,378 daily trip limitation for AV PA 40.

[3] NTE = Not to Exceed.

10. The planned land uses within this project are consistent with the business/professional land use designation included in the approved Planned Community Zoning for Aliso Viejo. The project will have regional traffic benefits by providing employment opportunities within South County.

11. A multi-modal circulation plan has been previously approved for the entire Aliso Viejo Planning Area 40 and will be accommodated in a future phase of the Summit Master Plan.

12. During the planning process, Enterprise has been realigned slightly to the north in comparison to previously approved VTTM 1343. The proposed alignment will better relate to the office/commercial uses that it will serve within the Master Plan area. The terminus of Enterprise at Pacific Park Drive and at Park Plaza at Aliso Viejo Town Center are identical to the current plans for this roadway.

TRAFFIC RECOMMENDATIONS

Based upon our review of the circulation needs of the project, the following recommendations (also summarized on Exhibits A and B), for both the Global Administration Offices and the Southern California Operation, should be incorporated into the final project design:

Global Administration Offices

1. Full access should be provided for the southerly access driveway to the Fluor Daniel Global Administration Offices. The westerly access driveway on Pacific Park Drive should provide right turns in/out and left turns in.

2. The westerly driveway should be designed to a minimum width of 40 feet with two inbound and one outbound lane. The southerly access driveway should be designed to a minimum width of 50 feet with two inbound and two outbound lanes.

3. A stop sign and stop legend/bar should be provided at the southerly and westerly access driveway.

4. The project driveways should be designed as "curb-return" type driveways pursuant to Environmental Management Agency Standard Plan 1111.

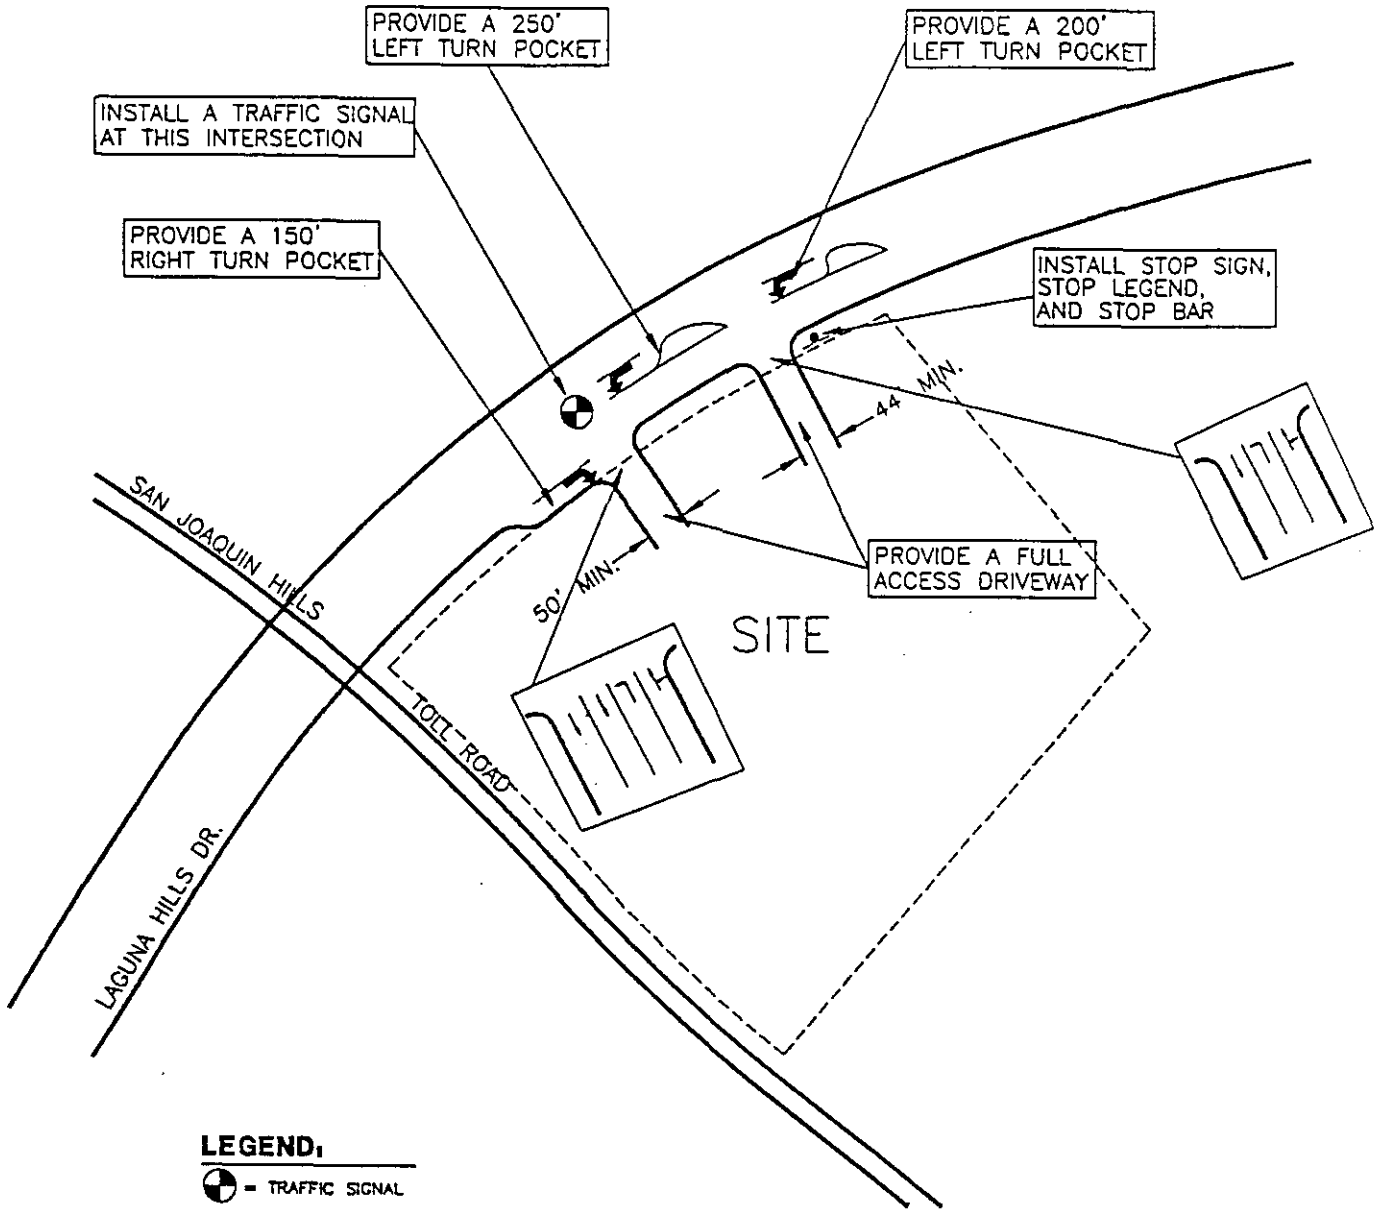
SOUTHERN CALIFORNIA OPERATIONS CIRCULATION RECOMMENDATIONS



938-97-001:06A

ALISO VIEJO FLUOR DANIEL CORPORATE HEADQUARTERS, Aliso Viejo, California

RKJK
ROBERT KAHN • JOHN KAIN & ASSOCIATES INC.

5. Sight distance at the driveway intersections should be reviewed with respect to Standard Plan Number 1117 (Appendix "A"), when landscape and improvement plans are prepared.

6. An eastbound left turn pocket on Enterprise should be provided with a *minimum* length of 100 feet to accommodate the left-in access for the southerly access driveway. A westbound right turn pocket should be provided at the same intersection with a length of 150 feet to accommodate right-in access. At the westerly access driveway, a southbound left turn lane with a length of 150 feet is required to accommodate left-in access.

Southern California Operation

1. Full access should be provided for both access driveways to the Fluor Daniel Southern California Operation.

2. The westerly access driveway should be designed to a minimum width of 50 feet with two inbound and two outbound lanes. Similarly, the easterly access driveway *should be designed* to a minimum width of 44 feet with one inbound and two outbound lanes.

3. A traffic signal should be installed at the intersection of the westerly access driveway with Laguna Hills Dr. A stop sign and stop legend/bar should be provided at the easterly access driveway.

4. The project driveways should be designed as "curb-return" type driveways pursuant to Environmental Management Agency Standard Plan 1111.

5. Sight distance at the driveway intersections should be reviewed with respect to Standard Plan Number 1117 (Appendix "A"), when landscape and improvement plans are prepared.

6. A westbound left turn pocket on Laguna Hills Dr. should be provided with a length of 250 feet to *accommodate left-in* access for the westerly access driveway. Another westbound left turn pocket should be provided at the easterly access driveway. This pocket requires a length of 200 feet. An eastbound right turn pocket should be provided with a length of 150 feet to accommodate right-in access to the westerly driveway.

PROJECT DESCRIPTION

The Aliso Viejo Fluor Daniel development will be located in both Planning Areas 40.1 and 51.1. Exhibit C illustrates the locations of both sites. The site at Planning Area 40.1 will consist of approximately 150,000 square feet of general office space. Similarly, the site at Planning Area 51.1 will consist of the Southern California Operation that will accommodate approximately 500,000 square feet of general office space.

Exhibits D and E illustrate the site plan for the Global Adminstration Offices and the Southern California Operation buildings, respectively. The Global Adminstration Offices will have access to Pacific Park Drive and Enterprise. The Southern California Operation buildings will have two access driveways to Laguna Hills Drive.

EXISTING CONDITIONS

The arterial highway system adjacent to the project is either completed or in the process of being completed in conjunction with other projects. Enterprise is a commercial collector which will be constructed in conjunction with the project. Exhibit F summarizes existing roadway conditions for study area roadways. The number of through traffic lanes for existing roadways and the existing intersection traffic control devices are presented on this exhibit.

Enterprise adjacent to the site is planned to be a four-lane commercial collector street which can include a raised landscaped median. Left-turn pockets have been planned within the median of Enterprise.

Glenwood Drive is classified on the Orange County MPAH as a Primary arterial highway and has been fully constructed to its MPAH classification cross-section between Moulton Parkway and Aliso Creek Road. Glenwood Drive currently carries approximately 10,000 ADT in the study area.

Pacific Park Drive is classified on the Orange County MPAH as a Major arterial highway east of Wood Canyon Drive and as a Primary arterial highway between Wood Canyon Drive and SR-73. It is currently fully constructed to its MPAH classifications. Pacific Park Drive in the study area carries approximately 8,000 to 24,000 ADT.

Laguna Hills Drive is a planned six-lane divided arterial highway. Laguna Hills Drive will have a median with left turn pockets serving the areas of Aliso Viejo Fluor Daniel Southern California Operation.

ROBERT KAHN · JOHN KAIN & ASSOCIATES INC.

San Joaquin Hills Toll Road (SJHTR) is classified as a Transportation Corridor on the Orange County MPAH. Currently, SJHTR has three lanes in each direction with plans for high occupancy vehicle lanes in the future. This toll road provides regional access between Aliso Viejo and communities to the south and north.

Aliso Creek Road is classified on the Orange County Master Plan of Arterial Highways (MPAH) as a Primary arterial highway between Laguna Canyon Road and El Toro Road, as a Secondary arterial highway between El Toro Road and Glenwood Drive, as a Primary arterial highway between Glenwood Drive and the San Joaquin Hills Transportation Corridor (SR-73), and as a Major arterial highway south of the SR-73. In the study area, Aliso Creek Road is currently built to its full Orange County MPAH classification cross-section. Current traffic volumes on Aliso Creek Road range from approximately 9,000 ADT to 26,000 ADT.

PARKING REQUIREMENTS

The parking accommodations required by Orange County is 1 space per 250 square feet of office space, therefore, the site plan for the Global Administration Offices is required to provide 600 parking spaces for 150,000 square feet. Similarly, the Southern California Operation is required to provide 2,000 parking spaces for 500,000 square feet. The final site plans may have a lower square footage, therefore, parking could be reduced accordingly and provide a rate of 1 space per 250 square feet.

TRIP GENERATION

Trip generation represents the amount of traffic which is produced or attracted to a development. Traffic generation for this project has been based upon the specific land use planned within the development. Trip generation rate has been developed from data collected by ITE (Institute of Transportation Engineers).

The trip generation rates utilized in this study are shown in Table 2. Based upon the planned use and the trip generation rates, the proposed project's trip generation has been determined and is presented in Table 3. The proposed Global Administration Offices is anticipated to generate approximately 1,910 trip-ends per day with 265 trips occurring during the AM peak hour and 255 trips occurring during the PM peak hour. The proposed Southern California Operation is anticipated to generate approximately 4,740 trip-ends per day with 670 trips occurring during the AM peak hour and 610 trips occurring during the PM peak hour. Both projects combined would generate 6,650 trip-ends per day with 935 trips occurring during the AM peak hour and 865 trips occurring during the PM peak hour.

TABLE 2

TRIP GENERATION RATES

LAND USE	UNITS[1]	PEAK-HOUR RATES				DAILY
		AM		PM		
		IN	OUT	IN	OUT	
Southern California Operation (Office)[2] (500 TSF)	TSF	1.19	0.15	0.21	1.01	9.47
Global Administration Offices (Office)[2] (150 TSF)	TSF	1.55	0.19	0.28	1.39	12.71

[1] TSF = thousand square feet

[2] Office trip generation rates are based upon the following Institute of Transportation Engineers (ITE) equations for Land Use Code 710:

Office Rates			% In	% Out
LN(T)	=	0.756 Ln(X) + 3.765	50	50
LN(AMT)	=	0.777 Ln(X) + 1.674	89	11
LN(PMT)	=	0.737 Ln(X) + 1.831	17	83
X	=	building gross leasable area in TSF		
T	=	daily trips		
AMT	=	AM peak hour trips		
PMT	=	PM peak hour trips		

TABLE 3

PROJECT TRIP GENERATION

LAND USE	QUANTITY[2]	PEAK-HOUR TRIPS[1]				DAILY[3] TRIPS
		AM		PM		
		IN	OUT	IN	OUT	
Southern California Operation (Office)	500 TSF	595	75	105	505	4,740
Global Administration Offices (Office)	150 TSF	235	30	45	210	1,910
TOTAL		830	105	150	715	6,650

1 All peak hour trips rounded to the nearest 5.

2 TSF = thousand square feet

3 All daily trips rounded to the nearest 10.

TRIP DISTRIBUTION

Trip distribution represents the directional orientation of traffic to and from the site. Trip distribution is influenced by a number of factors, including the geographical location of the site, the type of land use, access to the regional freeway and transportation system, and other planned uses in the area. The trip distribution estimates for this project are based upon buildout conditions which includes the San Joaquin Hills Toll Road (SR-73). These trip distributions have been developed based upon a review of the Aliso Viejo Traffic Model (AVTM 2.0) which was previously prepared for the entire Aliso Viejo Planned Community.

The trip distribution patterns for both site locations are graphically depicted on Exhibits G, H and I.

TRAFFIC ASSIGNMENT

Based upon the trip generation, trip distributions and planned access to the project, traffic assignment has been determined. Exhibits J and K illustrate the daily trips associated with the Global Administration Offices and the Southern California Operation, respectively. Similarly, Exhibits L and M illustrate the AM and PM peak hour volumes at the respective project driveways.

The Year 2020 traffic volumes which can be expected in the vicinity of the project for daily, AM and PM peak hour are shown on Exhibits N through P, respectively. These buildout volumes are from a previous traffic study prepared by RKJK on April 15, 1997 for Aliso Viejo Planning Area 40. These Year 2020 traffic forecasts were based upon the 1996 Approved Area Plan summary and assume a total of up to 125,000 daily trip-ends per day in Planning Area 40. The traffic volumes shown on Exhibits N through P include traffic from the project site and the future adjacent project site at the Orange County standard rates for general office land use.

The Year 2020 intersection analysis is included in Appendix "B". The required improvements to the lane configurations at the study intersections are also shown in Appendix "B".

TRAFFIC ASSESSMENT

Traffic impacts from the proposed project are consistent with the planned uses previously considered within the business park development of Aliso Viejo. Access to the Fluor Daniel Global Administration Offices is provided from Enterprise at the full access driveway adjacent to the southerly portion of the site. Access is also provided on Pacific Park Drive at a restricted access driveway along the westerly portion of the site. Access to the Fluor Daniel Southern California Operation is provided from

Laguna Hills Drive at two full access driveways adjacent to the westerly portion of the site.

Traffic signal warrants have been conducted at the following intersections for Year 2020 with Project conditions:

- Enterprise at the Global Administration Offices southerly project driveway
- Laguna Hills Drive at the Southern California Operation's westerly project driveway
- Laguna Hills Drive at the Southern California Operation's easterly project driveway

The intersection of Laguna Hills Drive at the Southern California Operation's westerly project driveway is the only intersection that met the planning level signal warrants. Appendix "C" contains the traffic signal warrant worksheets.

Additionally, peak hour traffic signal warrants have been conducted for the intersection of Enterprise and the Global Administration Offices southerly driveway. Based upon these traffic signal warrants, a traffic signal is anticipated to be warranted for Year 2020 with the project conditions. Therefore, it is recommended that a monitoring process be implemented to determine when a traffic signal should be constructed based upon on-going traffic demands. The peak hour traffic signal warrants are also included in Appendix "C".

The access driveways should be designed as a "curb-return" type driveway, pursuant to Environmental Management Agency Standard Plan 1111. Refer to the TRAFFIC RECOMMENDATIONS which begin on page 2 of this report for a detailed discussion of the various improvements.

CONCLUSIONS

The proposed site plan for Aliso Viejo Fluor Daniel Development project is adequate from a traffic circulation and parking standpoint, if the recommended traffic improvements are implemented as noted in this report. Driveway width and traffic control as recommended in this report should be implemented in conjunction with final design of the project. With these recommendations the site plan will function adequately from a traffic circulation and parking standpoint.

RKJK is pleased to provide LOWE ENTERPRISES COMMERCIAL GROUP this Site Specific Traffic Review for Aliso Viejo Fluor Daniel Development in Aliso Viejo Planning Areas 40.1 and 51.1. The proposed Aliso Viejo Fluor Daniel Development Project does not exceed the 69,378 daily trip-end cap for Planning Area 40 which would require additional traffic modeling and traffic analysis. Therefore, this site specific traffic study is adequate for Aliso Viejo Fluor Daniel Development.

If you have any questions regarding this review or need any further information, please do not hesitate to give us a call at (714) 474-0809.

Sincerely,

ROBERT KAHN, JOHN KAIN & ASSOCIATES, INC.

ORANGE COUNTY ENVIRONMENTAL MANAGEMENT AGENCY

Approved W.L. Zaun 11-15-91
W.L. Zaun, Director of Public Works

Adopted: Res. 77-92 Revised: Res. 82-718; 86-1141; 88-1341; 91-1481

STD. PLAN 1117

INTERSECTION SIGHT DISTANCE

SHT. 1 OF 3

NOTES:

1. The distance S represents the corner sight distance measured along the centerline of the road. The corner sight distance is the distance required to allow 7 1/2 seconds for the driver on the cross road (or left turn pocket) to safely cross the main roadway or turn left while the approach vehicle travels at the assumed design speed of the main roadway.

2. The distance S should be increased by 20% from the amount shown on the table on sustained downgrades steeper than 3% and longer than one mile.

3. Points A and A' are the locations of a driver's line of sight (3.5 foot eye height) to oncoming vehicles (4.25 foot object height) located at Points C and C' while in a vehicle at an intersection 10 feet back from the projection of the curb line. In no case shall Points A or A' be less than fifteen feet from the edge of the traveled way.

4. The distance Y' is the distance measured from the centerline of the main road to the far right through travel lane. The distance Y' is equal to zero for T-intersections. The distance X is the distance measured from the centerline of the main road to the center of the far right through travel lane. The distance X' is the distance measured from the centerline of the main road to the center of the travel lane nearest the centerline of the road.

5. The Limited Use Area is determined by the graphical method using the appropriate distances given in the above table. It shall be used for the purpose of prohibiting or clearing obstructions in order to maintain adequate sight distance at intersections.

6. The Line of Sight line shall be shown at intersections on all landscaping plans, grading plans and tentative tract plans where safe sight distance is questionable. In cases where an intersection is located on a vertical curve, a profile of the line of sight may be required.

7. Obstructions such as bus shelters, walls or landscaping within the Limited Use Area which could restrict the line of sight shall not be permitted.
   a. Plants and shrubs within the Limited Use Area shall be of the type that will grow no higher than 12 inches above the ground and shall be maintained at a maximum height of 12 inches above the ground. Maintenance at a lower height may be required on crest vertical curves per Note 6 above.
   b. A profile of the line of sight may be required to verify 12" minimum vertical clearance above variable height obstructions such as slope landscaping, plants and shrubs.
   c. The toe of slope may encroach into the Limited Use Area provided that the requirements of (b) above are satisfied.
   d. In lieu of providing a profile of the line of sight, the toe of slope shall not encroach into the Limited Use Area, and the Limited Use Area shall slope at 2% maximum to the roadway.

APPENDIX C

TRAFFIC SIGNAL WARRANT WORKSHEETS

TRAFFIC SIGNAL WARRANTS

(Based on Estimated Average Daily Traffic-See Note 2)

Major St: Enterprise Minor St: S. Proj. Driveway Year = 2020wp

Volume = 21,600 Lanes= 2 Volume = 785 Lanes= 1 (one-way)

URBAN XX RURAL	Minimum Requirements EADT	
1. Minimum Vehicular Satisfied Not Satisfied XX	Vehicles per day on major street (both approaches)	Vehicles per day on higher volume minor-street approach (one direction only)
Number of lanes for moving traffic on each approach. Major Street 21,600 Minor Street 785 1 1 2 + 1 2 + 2 + 1 2 +	Urban Rural 8,000 5,600 9,600 * 6,720 9,600 6,720 8,000 5,600	Urban Rural 2,400 1,680 2,400 1,680 3,200 2,240 3,200 2,240
2. Interruption of Continuous traffic Satisfied Not Satisfied XX	Vehicles per day on major street (both approaches)	Vehicles per day on higher volume minor-street approach (one direction only)
Number of lanes for moving traffic on each approach. Major Street 21,600 Minor Street 785 1 1 2 + 1 2 + 2 + 1 2 +	Urban Rural 12,000 8,400 14,400 * 10,080 14,000 10,080 12,000 8,400	Urban Rural 1,200 850 1,200 850 1,600 1,120 1,600 1,120
3. Combination Satisfied Not Satisfied XX No one warrant satisfied but following warrants fulfilled 80% or more.. 33% 65% 1 2	2 Warrants	2 Warrants

NOTES: 1. Heavier left turn movement from the major street may be included with minor street volume if a separate signal phase is to be provided for the left-turn movement.

2. To be used only for NEW INTERSECTIONS or other locations where actual traffic volumes cannot be counted.

PEAK HOUR VOLUME WARRANT
(Urban Area)

Year 2020 With Project

Major Street Name = **Enterprise**

Total of Both Approaches (VPH) = **1748**

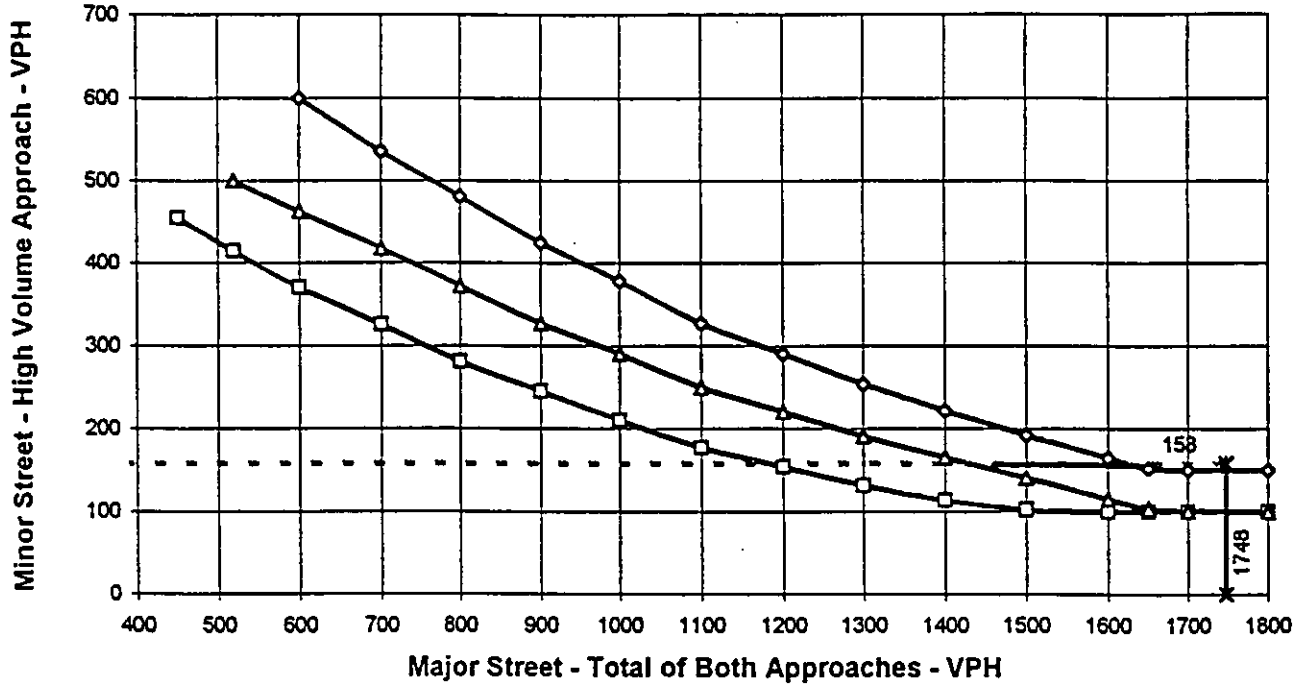
Number of Approach Lanes on Major Street = **2**

Minor Street Name = **Southerly Project Driveway**

High Volume Approach (VPH) = **158**

Number of Approach Lanes On Minor Street = **1**

WARRANTED FOR A SIGNAL



* NOTE:
150 VPH APPLIES AS THE LOWER THRESHOLD VOLUME FOR A MINOR STREET APPROACH WITH TWO OR MORE LANES AND 100 VPH APPLIES AS THE LOWER THRESHOLD VOLUME FOR A MINOR STREET APPROACHING WITH ONE LANE.

TRAFFIC SIGNAL WARRANTS

(Based on Estimated Average Daily Traffic-See Note 2)

Major St: Laguna Hills Dr. Minor St: E. Driveway Year = 2020wp

Volume = 20,800 Lanes= 2 Volume = 948 Lanes= 1 (one-way)

URBAN XX RURAL	Minimum Requirements EADT	
1. Minimum Vehicular Satisfied Not Satisfied XX	Vehicles per day on major street (both approaches)	Vehicles per day on higher volume minor-street approach (one direction only)
Number of lanes for moving traffic on each approach. Major Street 20,800 Minor Street 948 1 1 2 + 1 2 + 2 + 1 2 +	Urban Rural 8,000 5,600 9,600 * 6,720 9,600 6,720 8,000 5,600	Urban Rural 2,400 1,680 2,400 1,680 3,200 2,240 3,200 2,240
2. Interruption of Continuous traffic Satisfied Not Satisfied XX	Vehicles per day on major street (both approaches)	Vehicles per day on higher volume minor-street approach (one direction only)
Number of lanes for moving traffic on each approach. Major Street 20,800 Minor Street 948 1 1 2 + 1 2 + 2 + 1 2 +	Urban Rural 12,000 8,400 14,400 * 10,080 14,000 10,080 12,000 8,400	Urban Rural 1,200 850 1,200 850 1,600 1,120 1,600 1,120
3. *Combination* Satisfied Not Satisfied XX No one warrant satisfied but following warrants fulfilled 80% or more.. 40% 79% 1 2	2 Warrants	2 Warrants

NOTES: 1. Heavier left turn movement from the major street may be included with minor street volume if a separate signal phase is to be provided for the left-turn movement.

2. To be used only for NEW INTERSECTIONS or other locations where actual traffic volumes cannot be counted.

TRAFFIC SIGNAL WARRANTS

(Based on Estimated Average Daily Traffic-See Note 2)

Major St: Laguna Hills Dr. Minor St: Central Driveway Year = 2020wp

Volume = 20,800 Lanes= 2 Volume = 1,422 Lanes= 1 (one-way)

URBAN XX RURAL	Minimum Requirements EADT	
1. Minimum Vehicular Satisfied / Not Satisfied XX	Vehicles per day on major street (both approaches)	Vehicles per day on higher volume minor-street approach (one direction only)
Number of lanes for moving traffic on each approach. Major Street / Minor Street 1 / 1 2 + 20,800 / 1 1,422 2 + / 2 + 1 / 2 +	Urban / Rural 8,000 / 5,600 9,600 * / 6,720 9,600 / 6,720 8,000 / 5,600	Urban / Rural 2,400 / 1,680 2,400 / 1,680 3,200 / 2,240 3,200 / 2,240
2. Interruption of Continuous traffic Satisfied / Not Satisfied XX	Vehicles per day on major street (both approaches)	Vehicles per day on higher volume minor-street approach (one direction only)
Number of lanes for moving traffic on each approach. Major Street / Minor Street 1 / 1 2 + 20,800 / 1 1,422 2 + / 2 + 1 / 2 +	Urban / Rural 12,000 / 8,400 14,400 * / 10,080 14,000 / 10,080 12,000 / 8,400	Urban / Rural 1,200 / 850 1,200 * / 850 1,600 / 1,120 1,600 / 1,120
3. Combination Satisfied / Not Satisfied XX No one warrant satisfied but following warrants fulfilled 80% or more.. 59% / 100% 1 / 2	2 Warrants	2 Warrants

NOTES: 1. Heavier left turn movement from the major street may be included with minor street volume if a separate signal phase is to be provided for the left-turn movement.

2. To be used only for NEW INTERSECTIONS or other locations where actual traffic volumes cannot be counted.

Santa Ana, California 92702

SUBJECT: Site Plan for Fluor Global Administration Facility

Dear Mr. Buzas:

On behalf of Lowe Enterprises Commercial Group and the Fluor Corporation, the enclosed site plan application package for the Fluor Global Administration Facility is being submitted for your review and processing for an administrative approval. This application is being processed concurrently with a site plan for Fluor Daniel's Southern California Facility which is located on a site approximately one-half mile to the east of this site.

The 7.18-acre project site is located within the Town Center portion of the Aliso Viejo Planned Community, at the westerly corner of Enterprise and Pacific Park Drive. The site is within the Town Center area (Planning Area 40) of Aliso Viejo and is also part of the Aliso Viejo Urban Activity Center. The proposed office use is completely consistent with the applicable land use regulations for the site.

The project site will serve as Fluor Corporation's international headquarters. A total of approximately 114,400 square feet of gross floor area will be contained in two buildings, one two-stories in height (40' 6" max.) and one three-stories (54' max.). The site enjoys a prominent location adjacent to the San Joaquin Hills Tollway and will have commanding views of the Saddleback Valley. To the east of the site is the Summit office project. To the south, across Enterprise, is an apartment community currently under construction, and to the west is a future Tollway interchange and a 150-foot high landscaped slope atop which are new residential development areas.

Access to the site will be from both Enterprise and Pacific Park Drive. The two drives will lead to the grand garden court area and the two building entrances. Landscaped off-street parking areas are provided surrounding the building. Parking for 447 vehicles is provided, 10 spaces less than the 457 spaces required by the PC Text. A parking modification to permit the 2% reduction is incorporated in the site plan application. As a single-user campus, Flour is able to strictly control the use of the buildings and the need for the on-site parking facilities. Further,

Fluor Corporation is one of the corporate leaders in the area of car pooling, ride-sharing, van pooling and other innovative techniques to reduce the number of cars driven to their facilities each day. Fluor is confident that the parking will be more than adequate to meet their needs.

The proposed buildings have been designed by McLarand, Vasquez and Partners utilizing concrete and glass to reflect a strong corporate image. The buildings are in conformance with the applicable design guidelines for the area. Sign details will be consistent with Area Plan guidelines and will be incorporated in a Sign Program which will be submitted at a later date. A materials board and colored elevations are available if staff would like to review them.

A site-specific traffic and parking study for the project site has been prepared by RKJK and has been submitted as a part of this application package. That study concludes that the existing and future arterial highway system is adequate to accommodate the proposed project subject to the incorporation of certain design-level improvements to facilitate traffic flow into and out of the site. As a part of the Aliso Viejo Town Center, additional traffic analyses are underway relative to the impacts of the overall Town Center area. Pursuant to the Area Plan for PA 40 (Town Center) these additional analyses are required when proposed development exceeds a total of 69,374 trip-ends generated. This project does not cause that threshold to be exceeded and therefore those analyses are not required prior to the approval of this project.

Pursuant to the requirements of the PC Text, this project has been submitted to the Aliso Viejo Advisory Planning Committee (AVAPC) for comment. The project is on the AVAPC's agenda for their July 23rd meeting. Representatives from the project team will be making a presentation on the project to the AVAPC and the results of their review will be forwarded to you for your files.

On behalf of the entire project team, please accept our invitation for a site tour or a follow-up briefing if you feel it would be helpful. Please do not hesitate to contact me during the processing of this project if there is any additional information needed or if clarification is needed on any aspect of this project. Please call me if you have any questions.

Sincerely,

WAYNE PETERSON AND ASSOCIATES

MEMO

DATE: September 15, 1997

TO: Chuck Shoemaker, Chief, Site Planning & Consistency

FROM: Harry Persaud, Chief, Transportation Planning

SUBJECT: Site Plan for Fluor Global Administration Facility (PA 970113)

The 7.18-acre project site is located within the Town Center portion (Planning Area 40) of the Aliso Viejo Planned Community at the northeasterly corner of Enterprise and Pacific Park Drive. The project proposes the development of an office campus of two buildings totaling approximately 114,400 square feet of gross floor area. The two buildings will serve as the Fluor Corporation's international headquarters.

The cumulative impacts of this proposed project upon the local and regional circulation system were addressed in the Aliso Viejo Planning Area 40 (PA 40) Traffic Analysis prepared by RKJK. In addition, a Site Specific Traffic and Parking Study has been prepared by RKJK for this proposed project in conjunction with the site plan for the Fluor Southern California Facility (PA 970114).

The Transportation Planning Section has reviewed the subject proposal and offers the following comments:

1) The Aliso Viejo PA 40 Traffic Analysis identified traffic impacts associated with both the 1989 Approved Area Plan (with a daily trip generation ceiling of 69,378 daily trips) and the 1996 Approved Area Plan (with a daily trip cap of 125,000 daily trips). This proposed site plan falls within the future levels of development anticipated under the 1989 Approved Area Plan. According to the Aliso Viejo PA 40 Traffic Analysis, the following two intersections are anticipated to operate at an unacceptable level of service (LOS) under both Year 2020 With 1989 Approved Area Plan conditions and Year 2020 With 1996 Approved Area Plan conditions: Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW). Therefore, the following condition/mitigation measure is recommended:

   "Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the unfunded improvements needed at the intersections of Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), as identified in the Aliso Viejo Planning Area 40 Traffic Analysis. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

2) The proposed project is located adjacent to the intersection of Pacific Park Drive (NS) and Enterprise (EW). According to the Aliso Viejo PA 40 Traffic Analysis, this intersection is anticipated to operate at LOS "C" under Year 2020 With 1989 Approved Area Plan conditions and at LOS "D" under Year 2020 With 1996 Approved Area Plan conditions. However, it should be noted that it is the practice of the County to use a more conservative approach regarding the trip generation rate for office land uses and the internal trip "capture" assumption for mixed land uses than what was used

in the traffic studies for this proposed project. In order to ensure that this intersection operates at an acceptable level of service, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the following improvements at the intersection of Pacific Park Drive (NB) and Enterprise (EW): 1) construct dual right turn lanes westbound on Enterprise; 2) convert the southerly right turn lane to a combined right turn and through lane and modify the signalization to accommodate the combined movement when the southbound SR-73 ramp is opened; and 3) provide for westbound right turn overlap for this intersection. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

3) As indicated in the Aliso Viejo PA 40 Traffic Analysis, the project site lies within the areas of benefit of three existing road fee programs. Therefore, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall pay fees as prescribed in the Major Thoroughfare and Bridge Fee Programs for the San Joaquin Hills Transportation Corridor, the Moulton Parkway/Laguna Niguel Area, and the Coastal Area Road Improvements and Traffic Signals in a manner meeting the approval of the Manager, Subdivision and Grading Services."

SUBJECT: Planning Application PA 97-0113 for Site Development Permit

APPLICANT: Fluor Corporation, property developer
Mission Viejo Co., property owner
Wayne Peterson and Associates, agent

I. NATURE OF PROJECT:

Site Development Permit for the construction of the Fluor Corporation Global Administration Facility in Aliso Viejo. The project consists of one office building totaling 118,875 square feet gross (114,000 square feet rentable) on a 7.27 acre site in Planning Area 40 of the Aliso Viejo Planned Community. The project site is located and adjacent to the east side Pacific Park Drive, the north side Enterprise and the south side of the San Joaquin Hills Transportation Corridor.

The office structure has four floors, not including a basement storage area, and is a total of 70 feet in height above finished grade (55 feet to the roof, an additional six feet to the top of the parapet wall and then an addition 8 1/2 feet to the top of the mechanical screen wall). The building exterior is designed to reflect the Town Center theme through the use of EIFS walls and glass panels. The building is located at the southwest corner of the site with setbacks of approximately 34 feet from Pacific Park Drive and 37 feet from Enterprise.

A total of 476 parking spaces are provided based on a gross rentable building area of 114,000 square feet. The parking area, with 24 feet wide drive aisles, is accessed by a 30 feet wide driveway from Pacific Park Drive and a 50 feet wide driveway on Enterprise. Driveway throat lengths in excess of 160 feet are provided. Landscaping is designed to conform with the Town Center theme and requirements, and is provided throughout the parking area with perimeter landscaping 20 to 35 feet in width adjacent to the streets.

Planning Area 40 of the Aliso Viejo Planned Community has a land use designated of "Town Center". The objective of the Town Center designation is intended to provide for a mixed-use center to function as the community's urban core, central business district and community shopping area. The proposed office complex is consistent with the Town Center

objectives. The proposal also conforms to all the site development standards including: building site area (no minimum required); building height (building height based on setbacks); and, building setbacks (based on adjacent land use). All wall and monument signage will be in accordance with the Town Center sign regulations. The proposal and site plan were reviewed by the Aliso Viejo Advisory Planning Committee and approved at their July 23, 1997 meeting. A revised site plan, the current proposal, was approved by the Aliso Viejo Advisory Planning Committee at their October 22, 1997 meeting.

II. REFERENCE: (Authority for Administrative action is given by what ordinance, regulation, etc.)

Orange County Zoning Code sections 7-9-150 "Discretionary Permits and Procedures" and the Aliso Viejo Planned Community site development regulations.

III. ENVIRONMENTAL DOCUMENTATION:

The proposed project is covered by Final EIR 088 previously certified on 9-24-82. Prior to project approval, this EIR must be found adequate to satisfy the requirements of CEQA the Director. Section V of this report contains the required CEQA Finding.

IV. CERTIFICATION:

I hereby certify that the subject proposal has been Conditionally Approved as noted below.

Thomas B. Mathews, Director
Planning and Development Services Department

Date: 12/11/97 By: C. M. Shoemaker

C. M. Shoemaker, Chief
CPSD/Site Planning Section

WVM FOLDER: AV

V. FINDINGS:

I. The project is consistent with the objectives, policies, general land uses and programs specified by the General Plan adopted pursuant to the State Planning and Zoning Laws.

II. The project, subject to the specified conditions, is consistent with the provisions of the Zoning Code and Aliso Viejo Planned Community.

III. The decision-maker has considered Final EIR 088 , previously certified on 9-24-82, and Addendum No. PA970113 prior to project approval. Together they are approved for the proposed project based upon the following findings:

a. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

b. The additions, clarifications and/or changes to the original document caused by the Addendum, do not raise new significant issues which were not addressed by the EIR; and

c. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Lead Agency.

IV. The location, size, design and operating characteristics of the project will not create unusual noise, traffic or other conditions or situations that may be objectionable, detrimental or incompatible with other permitted uses in the vicinity.

V. The project will not result in conditions or circumstances contrary to the public health and safety and the general welfare.

VI. The project is located within a fee area as that term is defined in Section 7-9-702 and will contribute to the need for a fire station and/or library facility for which a fee is required.

VII. The subject project lies within the area of benefit of the San Joaquin Hills Transportation Corridor. In order to find this project consistent with the General Plan and to ensure that the traffic impacts have been adequately mitigated, it is necessary to adopt a condition requiring the developer to participate in the fee program adopted by the Board of Supervisors.

VI. CONDITIONS OF APPROVAL

1. CP NA NA BASIC/ZONING REGULATIONS
This approval constitutes approval of the proposed project only to the extent that the project complies with the Orange County Zoning Code and any

other applicable zoning regulations. Approval does not include any action or finding as to compliance of approval of the project regarding any other applicable ordinance, regulation or requirement.

2. CP NA NA BASIC/TIME LIMIT
This approval is valid for a period of 36 months from the date of final determination. If the use approved by this action is not established within such period of time, this approval shall be terminated and shall thereafter be null and void.

3. CP NA NA BASIC/PRECISE PLAN
Except as otherwise provided herein, this permit is approved as a precise plan. After any application has been approved, if changes are proposed regarding the location or alteration of any use or structure, a changed plan may be submitted to the Director-Planning and Development Services Department for approval. If the Director determines that the proposed change complies with the provisions and the spirit and intent of the approval action, and that the action would have been the same for the changed plan as for the approved plot plan, he may approve the changed plan without requiring a new public hearing.

4. CP NA NA BASIC/COMPLIANCE
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

5. CP NA NA BASIC/OBLIGATIONS
Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

6. CP CP B SPECIAL - REVISED PLANS
Prior to the issuance of building permits, the applicant shall submit a Changed Plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the regulations contained in Zoning Code Section 7-9-143 "Facility Design Regulations".

7. CP CP U SPECIAL - REVISED SCREENING
Prior to the issuance of certificates of use and occupancy, the applicant shall submit a revised preliminary landscaping plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the screening and landscaping regulations contained Sections XI.B.10 and 11 of the Aliso Viejo Planned Community development regulations.

8. CP CP B SPECIAL - LIGHTING
Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.

9. CP CP B SPECIAL - SIGNS
Prior to the installation of any signs, the applicant shall submit a "Sign Program". The Sign Program shall be approved through a Changed Plan as required by Zoning Code Section 7-9-150. The Sign Program shall be in substantial conformance with Section XXI of the Aliso Viejo Planned Community development regulations. The Sign Program shall be reviewed by the Aliso Viejo Advisory Planning Committee prior to approval of the Changed Plan.

10. SG SG G GEOLOGY RPT
Prior to the issuance of a grading permit, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

11. BP BP G CONST NOISE
A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

(1) All construction vehicles or equipment, fixed or mobile, operated within 1,000' of a dwelling shall be equipped with properly operating and maintained mufflers.

(2) All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

(3) Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.

12. ER SG G POLLUTANT RUNOFF
Prior to issuance of precise grading or building permits, as determined by the Manager, Subdivision and Grading Services, the applicant shall submit and obtain approval *from* Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs

whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

13. ER DS G NPDES PERMIT
Prior to issuance of any grading permits, the applicant shall submit evidence to the Manager, Subdivision and Grading, that the applicant has obtained coverage under the NPDES statewide General Stormwater Permit from the State Water Resources Control Board.

14. SG SG GB DRAINAGE STUDY
Prior to the issuance of any grading permits, or prior to the issuance of building permits, whichever comes first, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels, street flows, catch basins, storm drains, and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

15. SG SG GB DRAINAGE IMPRO
A. Prior to the issuance of any grading permits or prior to the issuance of building permits, whichever comes first, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

SG C U DRAINAGE IMPROV
B. Prior to the issuance of any certificates of use and occupancy, said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

16. F F R — FIRE ACCESS

Prior to the issuance of grading permits, the applicant shall obtain approval of the Fire Chief of all fire protection access easements and shall dedicate them to the County in a manner meeting the approval of the Fire Chief. The approval of the Fire Chief is required for any modifications such as speed bumps, control gates or other changes within said easement.

17. F F G — STREET PLANS

Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of preliminary plans for all street and courts, public or private, from the Fire Chief in consultation with the Manager, Traffic Engineering. The plans shall include the plan view, sectional view, and indicate the width of the street or court, measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked when a dead-end street exceeds 150 feet or when other conditions require it.

18. F F GU — STREET MARKINGS

A. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval from the Fire Chief for street improvement plans with fire lanes shown. The plans shall indicate the locations of red curbing and signage, and provide a drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color.

B. Prior to the issuance of the certificate of use and occupancy, the approved fire lane marking plan shall be installed. The CC&Rs shall contain a fire lane map and provisions which prohibit parking in the fire lanes. A method of enforcement shall be included.

19. F F B — SITE PLANNING

Prior to the issuance of building permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class. All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

20. TE TE G — SIGHT DISTANCE

Prior to the issuance of any grading permits, the applicant shall provide adequate sight distance at all street intersections per Standard Plan 1117, in a manner meeting the approval of the Manager, Subdivision and Grading Services. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.

21. TE TE GU — ACCESS

Prior to the issuance of grading permits, the applicant shall design and dedicate to the County of Orange any necessary right of way required for an additional twelve (12) feet wide lane on northbound Pacific Park Drive across the property frontage, all in a manner meeting the approval of the

Manager, Subdivision and Grading Services. Said improvement shall be constructed prior to the issuance of certificates of use and occupancy, in a manner meeting the approval of the Manager, Subdivision and Grading Services.

22. SG SG/BI GU PVT LANDSCP

A. Prior to the issuance of building permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

23. BP BP B ACOUST NON-RES

Except when the interior noise level exceeds the exterior noise level, all non-residential structures shall be sound attenuated against the combined impact of all present and projected noise from exterior noise sources to meet the interior noise criteria as specified in the Noise Element and Land Use/Noise Compatibility Manual.

Prior to the issuance of any building permits, the applicant shall submit to the Manager, Building Permits, evidence prepared under the supervision of a County-certified acoustical consultant that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5. The evidence shall be in the form of an acoustical analysis report describing in detail the exterior noise environment and the acoustical design features required to achieve the interior noise standard and which indicate that the sound attenuation measures specified have been incorporated into the design of the project.

24. F F B WATER

Prior to the issuance of the first building permit, the applicant shall submit water improvement plans to the Fire Chief for review and approval to ensure adequate fire protection and financial security is posted for the

installation. The water system design, location of valves, and the distribution of fire hydrants will be evaluated and approved by the Fire Chief.

25. F F RB FIRE HYDRANTS
Prior to the issuance of first building permit, the applicant shall submit to the Fire Chief evidence of the on-site fire hydrant system. The system shall be reviewed and approved by the Fire Chief prior to issuance of building permits. Provisions shall be made by the applicant for the repair and maintenance of the system, in a manner meeting the approval of the Fire Chief.

26. F F B AUTO FIRE EXT
Prior to the issuance of building permits, the applicant shall place a note on the construction plans stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

27. F F B COMBSTBLE CONST
Prior to the issuance of any building permits for combustible construction, the developer shall submit and obtain the Fire Chief's approval of a letter and plan stating that water for fire fighting purposes and an all weather fire access road shall be in place and operational as required by the Uniform Fire Code before any combustible materials are placed on the site.

28. F F B WATER AVAILABILITY
Prior to the issuance of any building permits, an Orange County Fire Authority Water Availability Form shall be submitted to and approved by the Plan Review Section of the Orange County Fire Authority. If sufficient water to meet fire flow requirements is not available, an automatic fire extinguishing system shall be installed in each structure, in a manner meeting the approval of the Fire Chief.

29. F F BU FIRE SPRINKLERS
Prior to the issuance of any building permits, plans for an automatic fire sprinkler system shall be submitted to and approved by the Fire Chief prior to installation. This system shall be operational prior to the issuance of a certificate of use and occupancy.

30. F F B BUILDING USE
Prior to the issuance of any building permits, the applicant shall submit a detailed letter of intended use for each building to the Fire Chief for review and approval.

31. F F B HAZARDOUS MATERIALS DISCLOSURE
Prior to the issuance of any building permits, the applicant shall contact the Orange County Fire Authority Hazardous Materials Disclosure Office at (714) 744-0463 to obtain a "Hazardous Materials Business Information and Chemical Inventory Packet". This shall be completed and submitted to the Fire Chief before the issuance of any building permits.

32. F F B FIRE SAFETY SITE PLAN
Prior to the issuance of a building permit, the applicant shall submit plans for the review and approval of the Fire Chief. The applicant shall include information on the plans required by the Fire Chief. Contact the Orange County Fire Authority Plans Review Section at (714) 744-0403 for the Fire Safety Architectural Notes to be placed on the plans.

33. TE TE B ROAD FEE PROG
Prior to the issuance of building permits, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading Division.

a. San Joaquin Hills Transportation Corridor
b. Moulton Parkway/Laguna Niguel Area
c. Coastal Area Road Improvements and Traffic Signals

34. TE TE BU ACCESS
Prior to the issuance of building permits or prior to the issuance of certificates of use and occupancy, as determined by the Manager, Subdivision and Grading Services, the applicant shall provide for a 200 feet left turn pocket on eastbound Enterprise at the access driveway to the site in a manner meeting the approval of the Manager, Subdivision and Grading Services.

35. TE TE BU SIGNAL
Prior to the issuance of building permits or prior to the issuance of certificates of use and occupancy, the applicant shall design and install a traffic signal at the site access/Enterprise intersection in a manner meeting the approval of the Manager, Subdivision and Grading Services in consultation with the Manager, Program Development Services.

36. TE TE B RECORDATION
Prior to the issuance of building permits, the applicable portion of TT13435 shall be recorded.

37. F F U FIRE HYDRANT MARKER
Prior to the issuance of any certificates of use and occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard and approved by the Fire Chief. On private property these markers are to be maintained in good condition by the property owner.

38. F F NA FIRE ALARM
Prior to installation, plans for the fire alarm system shall be submitted to and approved by the Fire Chief. This system shall be operational prior to the issuance of a certificate of use and occupancy.

SUBJECT: Traffic Conditions for Fluor Site Plans (PA 970113 and PA 970114)

Dear Mr. Peterson:

The Environmental & Project Planning Services (E&PPS) Division has reviewed your letter dated September 19, 1997 (attached) regarding the appropriateness of the traffic conditions included in the Transportation Planning Section's memos dated September 15, 1997 (attached) on the subject site plans and has prepared the following responses:

PA 970113 - Fluor Global Administration Facility

In response to your comment on item #1 regarding the condition requiring a fair share contribution towards the unfunded intersection improvements needed at Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), E&PPS staff has discussed this issue with Current Planning Services (CPS) and Subdivision & Grading Services (S&GS), and it was agreed that only those site plans in Aliso Viejo Planning Area 40 which cause the 69,378 ADT cap to be exceeded will be required to pay a fair share contribution towards the unfunded regional improvements identified in the Aliso Viejo Planning Area 40 Traffic Analysis. Therefore, this condition is not applicable to this project.

In response to your comment on item #2 regarding the intersection improvements needed at Pacific Park Drive (NS) @ Enterprise (EW), E&PPS staff concurs with the improvements (e.g. westbound free right turn lane) proposed by S&GS staff for inclusion in the project plans for this intersection. Therefore, this condition is no longer applicable to this project.

PA 970114 - Fluor Southern California Facility

In response to your comment on item #1 regarding the condition requiring a fair share contribution towards the unfunded intersection improvements needed at Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), it will be the obligation of the development in Aliso Viejo Planning Area 40 to fund the improvements at these intersections. Since this project is not located in Planning Area 40, this condition is not applicable to this project.

In response to your comment on item #2 regarding the need for intersection improvements at Aliso Creek Road (NS) @ Laguna Hills Drive North (EW), it should be noted that this development is subject to the County's Growth Management Program (GMP) in accordance with the Aliso Viejo Development Agreement. The County's GMP provides that LOS "D" (i.e. ICU value not to exceed .90) is to be maintained at intersections within the County's jurisdiction. While the traffic analysis prepared for this project indicates that this intersection is expected to operate at LOS "D" (ICU of .88) in Year 2020 conditions, there may be a future need for improvements (e.g. additional left turn or through lanes on the westbound approach) at this intersection. After re-evaluating the geometrics for this intersection, staff has determined that such improvements can likely be implemented through restriping. The County can continue to monitor the traffic levels at this intersection and then implement these improvements when warranted. Therefore, this condition is no longer applicable to this project.

We hope that this letter satisfactorily addresses your concerns. If you have any questions, please contact me at 834-3669.

Very truly yours,

Harry Persaud

Santa Ana, California 92702

SUBJECT: Fluor Site Plans (PA 970113, PA 970114)

Dear Mr. Persaud:

I have reviewed your September 15, 1997 memos regarding the two Fluor Corporation site plans in Aliso Viejo and have the following concerns:

PA 970113 - Fluor Global Administration Facility

Your memo recommends a condition of approval (your item #1) requiring this project to contribute a pro-rata share of improvements to the Alicia/Aliso Creek and Glenwood/Aliso Creek intersections. As your memo correctly points out, the development of this project fits under the 69,378 ADT cap established with the 1989 Area Plan and is therefore protected by the Aliso Viejo Development Agreement. No additional exactions are permitted under that Agreement. It is therefore inappropriate to apply this condition to this project.

Regarding your item #2, please be advised that a detailed design for the Pacific Park/Enterprise intersection has been worked out by the County Traffic staff (Grant Anderson, Tony Small), Robert Kahn, John Kain & Associates (RKJK) and Robert Bein, William Frost & Associates (RBF). This plan reflects lane configurations, turn pockets, traffic signal locations, channelization controls, etc. These improvements will be installed prior to or concurrent with the development of the Fluor project. Therefore, this proposed condition is unnecessary.

Regarding your item #3, we concur that the project is subject to the existing road fee programs as they have been applied to other projects in Aliso Viejo.

PA 970114 - Fluor Daniel Southern California Facility

Regarding your item #1, since this project is not located in Planning Area 40, it is not subject to any of the additional roadway improvement conditions imposed on the PA 40 ADT trip augmentation Area Plan. The development of this site is protected by the Aliso Viejo Development Agreement and additional exactions are prohibited.

Regarding your item #2, again, this site is not in PA 40 and therefore its development is protected by the Development Agreement. This proposed condition is inappropriate for this site.

Regarding your item #3, we concur that the project is subject to the existing road fee programs as they have been applied to other projects in Aliso Viejo.

If you have any disagreement with any of my comments above, please call Bob Kahn or me as soon as possible. We are moving toward administrative actions on these projects early next week and we would like to have these items resolved.

Thank you for your attention to this matter.

Sincerely,

WAYNE PETERSON AND ASSOCIATES

Wayne Peterson

County of Orange

MEMO

DATE: September 15, 1997

TO: Chuck Shoemaker, Chief, Site Planning & Consistency

FROM: Harry Persaud, Chief, Transportation Planning

SUBJECT: Site Plan for Fluor Global Administration Facility (PA 970113)

The 7.18-acre project site is located within the Town Center portion (Planning Area 40) of the Aliso Viejo Planned Community at the northeasterly corner of Enterprise and Pacific Park Drive. The project proposes the development of an office campus of two buildings totaling approximately 114,400 square feet of gross floor area. The two buildings will serve as the Fluor Corporation's international headquarters.

The cumulative impacts of this proposed project upon the local and regional circulation system were addressed in the Aliso Viejo Planning Area 40 (PA 40) Traffic Analysis prepared by RKJK. In addition, a Site Specific Traffic and Parking Study has been prepared by RKJK for this proposed project in conjunction with the site plan for the Fluor Southern California Facility (PA 970114).

The Transportation Planning Section has reviewed the subject proposal and offers the following comments:

1) The Aliso Viejo PA 40 Traffic Analysis identified traffic impacts associated with both the 1989 Approved Area Plan (with a daily trip generation ceiling of 69,378 daily trips) and the 1996 Approved Area Plan (with a daily trip cap of 125,000 daily trips). This proposed site plan falls within the future levels of development anticipated under the 1989 Approved Area Plan. According to the Aliso Viejo PA 40 Traffic Analysis, the following two intersections are anticipated to operate at an unacceptable level of service (LOS) under both Year 2020 With 1989 Approved Area Plan conditions and Year 2020 With 1996 Approved Area Plan conditions: Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW). Therefore, the following condition/mitigation measure is recommended:

   "Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the unfunded improvements needed at the intersections of Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), as identified in the Aliso Viejo Planning Area 40 Traffic Analysis. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

2) The proposed project is located adjacent to the intersection of Pacific Park Drive (NS) and Enterprise (EW). According to the Aliso Viejo PA 40 Traffic Analysis, this intersection is anticipated to operate at LOS "C" under Year 2020 With 1989 Approved Area Plan conditions and at LOS "D" under Year 2020 With 1996 Approved Area Plan conditions. However, it should be noted that it is the practice of the County to use a more conservative approach regarding the trip generation rate for office land uses and the internal trip "capture" assumption for mixed land uses than what was used

in the traffic studies for this proposed project. In order to ensure that this intersection operates at an acceptable level of service, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the following improvements at the intersection of Pacific Park Drive (NB) and Enterprise (EW): 1) construct dual right turn lanes westbound on Enterprise; 2) convert the southerly right turn lane to a combined right turn and through lane and modify the signalization to accommodate the combined movement when the southbound SR-73 ramp is opened; and 3) provide for westbound right turn overlap for this intersection. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

3) As indicated in the Aliso Viejo PA 40 Traffic Analysis, the project site lies within the areas of benefit of three existing road fee programs. Therefore, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall pay fees as prescribed in the Major Thoroughfare and Bridge Fee Programs for the San Joaquin Hills Transportation Corridor, the Moulton Parkway/Laguna Niguel Area, and the Coastal Area Road Improvements and Traffic Signals in a manner meeting the approval of the Manager, Subdivision and Grading Services."

If you have any questions, please contact either Mike Galizio of my staff at 834-2501 or myself at 834-3669.

MEMO

DATE: September 15, 1997

TO: Chuck Shoemaker, Chief, Site Planning & Consistency

FROM: Harry Persaud, Chief, Transportation Planning

SUBJECT: Site Plan for Fluor Southern California Facility (PA 970114)

The 22.6-acre project site is located in Planning Area 51 of the Aliso Viejo Planned Community at the southeasterly side of Laguna Hills Drive, immediately northerly of the San Joaquin Hills Transportation Corridor (SJHTC). The project proposes the development of an office campus of five buildings totalling approximately 454,000 square feet of gross floor area. The five buildings will serve as the Fluor Corporation's Southern California headquarters.

The cumulative impacts of this proposed project upon the local and regional circulation system were addressed in the Aliso Viejo Planning Area 40 (PA 40) Traffic Analysis prepared by RKJK. In addition, a Site Specific Traffic and Parking Study has been prepared by RKJK for this proposed project in conjunction with the site plan for the Fluor Global Administration Facility (PA 970113).

The Transportation Planning Section has reviewed the subject proposals and offers the following comments:

1) The Aliso Viejo PA 40 Traffic Analysis identified traffic impacts associated with both the 1989 Approved Area Plan (with a daily trip generation ceiling of 69,378 daily trips for PA 40) and the 1996 Approved Area Plan (with a daily trip cap of 125,000 daily trips for PA 40). According to the Aliso Viejo PA 40 Traffic Analysis, the following two intersections are anticipated to operate at an unacceptable level of service (LOS) under <u>both</u> Year 2020 With 1989 Approved Area Plan conditions <u>and</u> Year 2020 With 1996 Approved Area Plan conditions: Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW). Therefore, the following condition/mitigation measure is recommended:

   "Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the unfunded improvements needed at the intersections of Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), as identified in the Aliso Viejo Planning Area 40 Traffic Analysis. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

2) The proposed project is located adjacent to the intersection of Aliso Creek Road (NS) and Laguna Hills Drive North (EW). According to the Aliso Viejo PA 40 Traffic Analysis, this intersection is anticipated to operate at LOS "E" under Year 2020 With 1989 Approved Area Plan conditions and at LOS "D" under Year 2020 With 1996 Approved Area Plan conditions. However, it should be noted that it is the practice of the County to use a more conservative approach regarding the trip generation rate for office land uses and the internal trip "capture" assumption for mixed land uses than what was used

in the traffic studies for the proposed project. In order to ensure that this intersection operates at an acceptable level of service, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the upgrade the westbound approach of the intersection of Aliso Creek Road (NB) and Laguna Hills Drive North (EW) to provide dual left turn lanes and three through lanes. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

3) The project site lies within the areas of benefit of three existing road fee programs. Therefore, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall pay fees as prescribed in the Major Thoroughfare and Bridge Fee Programs for the San Joaquin Hills Transportation Corridor, the Moulton Parkway/Laguna Niguel Area, and the Coastal Area Road Improvements and Traffic Signals in a manner meeting the approval of the Manager, Subdivision and Grading Services."

If you have any questions, please contact either Mike Galizio of my staff at 834-2501 or myself at 834-3669.

MEMO

DATE: AUG 2 8 1997

TO: John Buzas, Manager, Land Use Planning

FROM: Manager, Subdivision and Grading Services

SUBJECT: **PA 970113 - ADMINISTRATIVE SITE PLAN**
FLUOR CORPORATION - ALISO VIEJO P.C.

Attention: Bill Melton

This is an administrative site plan to construct two office buildings totaling 114,400 square feet to serve as headquarters for the Fluor Corporation. The project is to include an off street parking modification for a reduction from the required 457 parking spaces to 447 spaces. The site (Lots 1 & 2, TT13435) is located at the northeast corner of Pacific Park Drive/Enterprise, bounded on the north by the SJHTC. A 3rd Revised TT13435 is being reviewed concurrently. Improvements to the surrounding street will also be addressed on the Tentative Tract.

CIRCULATION:

There are two accesses proposed to the site. One a full access signalized driveway off Enterprise, the other a right turn in/right turn out only driveway off Pacific Park Drive. Enterprise is an unimproved industrial collector street and Pacific Park Drive is a primary arterial highway.

DISCUSSION:

The applicant is required to revise the site plan to reflect the following changes:

1. Relocate the access on Enterprise to be aligned with the access to the apartment complex on the southerly side of Enterprise.

2. Provide four lanes, two inbound, two outbound at the Enterprise access.

3. Revise the site plan to provide a free right turn on westbound Enterprise at Pacific Park Drive, in addition, provide additional right of way on Pacific Park Drive across the property frontage for a right turn lane for SJHTC on ramp. Relocate the bus turnout from the far side of Enterprise.

4. Design the access driveway to Pacific Park Drive for right turn in/right turn out only movements by use of a physical barrier.

5. Provide a 200' left turn pocket on eastbound Enterprise at the access driveway to the site.

MAJOR THOROUGHFARE AND BRIDGE FEE PROGRAM:

This project lies within the area of benefit of the Foothill Circulation Phasing Program. The applicant is required to pay fees in accordance with the adopted program.

This project lies within the Moulton Parkway zone of the area of benefit of the Moulton Parkway/Laguna Niguel Fee Program. The applicant is required to pay Major Thoroughfare and Bridge fees in accordance with the adopted program.

This project lies within the area of benefit of the Coastal Roadway Improvement and Traffic Signals Fee Program. The applicant is required to pay fees in accordance with the adopted program.

CONDITIONS:

1. Prior to issuance of each Building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the San Joaquin Hills Transportation Corridor.

2. Prior to issuance of each Building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the Moulton Parkway/Laguna Niguel area.

3. Prior to issuance of a Building permit, payment of fees will be required as prescribed in the Coastal Area Roadway Improvement and Traffic Signal Fee Program.

4. Prior to issuance of a Grading permit, adequate sight distance shall be provided at all intersections per Standard Plan 1117 in a manner meeting the approval of the Manager, Subdivision and Grading Services. This includes any necessary revisions to the pan to remove slopes or other encroachments from the Limited Use Area.

5. Notwithstanding the site plan, prior to the issuance of a grading permit, the access driveway to Enterprise shall be relocated easterly to be aligned with the access driveway to the apartment complex on the southerly side of Enterprise. In addition, the applicant is required to design the access driveway with two inbound and two outbound lanes in a manner meeting the approval of the Manager, Subdivision and Grading Services.

6. Prior to the issuance of a Building permit, applicant shall provide a 200' left turn pocket on eastbound Enterprise at the access driveway to the site in a manner meeting the approval of the Manager, Subdivision and Grading Services.

7. Prior to the issuance of a Grading permit, the applicant shall design the access driveway on Pacific Park Drive for right turn in/right turn out only movements by use of a physical barrier in a manner meeting the approval of the Manager, Subdivision and Grading Services.

8. Prior to the issuance of a Grading permit, applicant shall relocate bus turnout on Pacific Park Drive, to not interfere with the travel lanes of free right turn lanes on Pacific Park,, and dedicate to the County of Orange any right of way necessary to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

9. Prior to the issuance of a Grading permit, applicant shall design and construct an additional 12' wide lane on northbound Pacific Park Drive across the property frontage and dedicate to the County of Orange any necessary right of way required to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

10. Prior to the issuance of a Building permit, applicant shall design and construct a traffic signal at Enterprise/access driveway to he site in a manner meeting the approval of the Manager, Subdivision and Grading Services in consultation with the Manager, Program Development Services.

11. Prior to the issuance of a Building permit, the applicable portion of TT13435 shall be recorded.

CURRENT PLANNING SERVICES

County of Orange **MEMO** File: CP98-0059

DATE: July 1, 1998

TO: RECORD/FILE/APPLICANT

FROM: Bill M. Grant, Chief, LUP/Current Planning Section

SUBJECT: Changed Plan CP98-0059 For Project No. PA97-0114

The subject *Changed Plan* has been reviewed by Trudy Teshima of the Land Use Planning Division and the determination has been made, as authorized by the Conditions of Approval, that the proposed changes are in substantial compliance with the original approval action by the Orange County Zoning Administrator.

The proposed changes are as follows: Fluor Daniel, Aliso Viejo Facility located at 23216 Laguna Hills Drive.

1. The applicant requests a change plan to Buildings A, B, C, D and E to provide a screen to the mechanical equipment on the roof of each building for *aesthetic purposes*.
2. The change plan also includes a reduction to the off-stree parking from 1,759 parking spaces to 1,747 spaces. The proposed size of the buildings are reduced and parking modifications are as follows:

PREV. APPR. EXISTING BUILDING		PROPOSED BUILDING REDUCTION	
BUILDING A	78,250 S.F. 3-STORY	"A"	76,186 S.F. 3-STORY
BUILDING B	93,350 S.F. 4-STORY	"B"	90,761 S.F. 4-STORY
BUILDING C	98,350 S.F. 4-STORY	"C"	96,210 S.F. 4-STORY
BUILDING D	93,350 S.F. 4-STORY	"D"	90,860 S.F. 4-STORY
BUILDING E	78,250 S.F. 3-STORY	"E"	76,251 S.F. 3-STORY
	12,500 S.F. BASEMENT		10,860 BLDG."C" BASEMENT
TOTAL:	454,000 S.F.		441,128 S.F.

PREV. APPR. EXISTING PARKING		PROPOSED PARKING PER REDUCTION	
441,500 OFFICE @ 4/1000	1,766	430,270 OFFICE @ 4/1,000	1,721
12,500 BASEMENT @ 1/100	13	10,860 BASEMENT @/1,000	11

RE: Requesting a Changed Plan
Fluor Daniel Aliso Viejo Facility
Engineering Site (Site D)
23216 Laguna Hills Drive
Aliso Viejo, CA 92656
Planning Application No. PA 970114

Attention: Mr. Robert Gill

We are submitting a Changed Plan for the Fluor Daniel Aliso Viejo Facility located at 23216 Laguna Hills Drive. The request is for the following two items:

1. **Change in Building Height from 67 ½ feet to 70 feet.**

   Attached are plans and exterior elevations of the five (5) buildings located on this site. Buildings A & E are 3-story buildings and Buildings B, C,and D are 4-story buildings which are affected by the Change from 67 ½ feet to 70 feet. The 4-story buildings have a mechanical equipment screen which requires the top of the screen to be at the 70 foot above the first floor. This will then screen the mechanical equipment located behind the screen.

   Our other Corporate Site (Site T), Planning Application No. PA 970113 approval includes a 70 foot building height for the 4-story Building F on that site. The 4-story buildings at both of these sites are very similar in height and mechanical screen provisions. This request is within the same general good planning that the Corporate Site had received approval on December 11, 1997 by Planning and Development Services.

2. **Change in Parking Count for the Engineering Site (Site D):**

   Original Parking Per Approved Plan:

Total Required Parking:	1,779 Stalls
Total Provided Parking:	1,759 Stalls

   This was based on the following total building area:

Gross Building Area:	454,000 SF
Gross Rentable Area:	436,000 SF

Fluor Daniel Worldwide Headquarters Project

Changed Parking Plan

The following Project Summary provides the breakdown for justification of the change in parking count:

Project Summary

Building A	76,186 SF	3 Story
Building B	90,761 SF	4 Story
Building C	96,210 SF	4 Story
Building D	90,860 SF	4 Story
Building E	76,251 SF	3 Story
Total Gross Rentable Area	430,270 SF	
Building C	10,860 SF	Basement (Storage)
Total Building Area	**441,128 SF**	

Proposed Use: General Office

Parking:

Office Space - 430,270 SF @ 4/1,000	=	1,721 Stalls
Storage Space – 10,860 SF @ 1/1,000	=	11 Stalls
Total Parking Required		**1,732 Stalls**
Total Handicapped parking Required		**28 Stalls (4 Van, 24 Standard)**

Parking Provided:

Total Van Accessible Parking Provided	6 Stalls
Total Standard Handicapped Parking Provided	22 Stalls
Total Handicapped Provided	**28 Stalls**
Total Standard Parking Provided	1,719 Stalls
Total Handicapped Parking Provided	28 Stalls
Total Parking Provided	**1,747 Stalls**

The building design has progressed to a more final stage and the project is under construction with Shell and Core plans now permitted. The changed plan for the parking requirements as indicated above meets the County provisions. The attached Site Plan reflects this changed parking provisions.

~~8. CP CP B SPECIAL - LIGHTI~~

~~Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.~~

8. CP CP U SPECIAL - LIGHTI

Prior to the issuance of certificates of use and occupancy, the applicant shall submit evidence to the Manager, Current Planning Services Division showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations and has been reviewed by the Aliso Viejo Advisory Planning Committee.

12. ER SG G POLLUTANT RUNO

Prior to issuance of precise grading or building permits, ~~whichever comes first~~ as determined by the Manager Subdivision and Grading Division, the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

19. F F ~~G~~ B SITE PLANNI

Prior to the issuance of ~~grading~~ building permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class. All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

22. SG SG/BI ~~G~~BU PVT LANDS

A. Prior to the issuance of ~~precise grading~~ building permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted

planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

34. TE TE B ACCE

Prior to the issuance of the first building permit, the applicant shall design a right turn lane on the northeast bound Laguna Hills Drive, at the most southwesterly driveway access to the site, and shall initiate the process to dedicate to the County of Orange the necessary right of way to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

FILE: PA 97-0113

DATE: December 11, 1997

TO: File/Record/Applicant

FROM: Thomas B. Mathews, Director, Planning and Development Services Dept.

SUBJECT: Planning Application PA 97-0113 for Site Development Permit

APPLICANT: Fluor Corporation, property developer
Mission Viejo Co., property owner
Wayne Peterson and Associates, agent

I. NATURE OF PROJECT:

Site Development Permit for the construction of the Fluor Corporation Global Administration Facility in Aliso Viejo. The project consists of one office building totaling 118,875 square feet gross (114,000 square feet rentable) on a 7.27 acre site in Planning Area 40 of the Aliso Viejo Planned Community. The project site is located and adjacent to the east side Pacific Park Drive, the north side Enterprise and the south side of the San Joaquin Hills Transportation Corridor.

The office structure has four floors, not including a basement storage area, and is a total of 70 feet in height above finished grade (55 feet to the roof, an additional six feet to the top of the parapet wall and then an addition 8 1/2 feet to the top of the mechanical screen wall). The building exterior is designed to reflect the Town Center theme through the use of EIFS walls and glass panels. The building is located at the southwest corner of the site with setbacks of approximately 34 feet from Pacific Park Drive and 37 feet from Enterprise.

A total of 476 parking spaces are provided based on a gross rentable building area of 114,000 square feet. The parking area, with 24 feet wide drive aisles, is accessed by a 30 feet wide driveway from Pacific Park Drive and a 50 feet wide driveway on Enterprise. Driveway throat lengths in excess of 160 feet are provided. Landscaping is designed to conform with the Town Center theme and requirements, and is provided throughout the parking area with perimeter landscaping 20 to 35 feet in width adjacent to the streets.

Planning Area 40 of the Aliso Viejo Planned Community has a land use designated of "Town Center". The objective of the Town Center designation is intended to provide for a mixed-use center to function as the community's urban core, central business district and community shopping area. The proposed office complex is consistent with the Town Center

objectives. The proposal also conforms to all the site development standards including: building site area (no minimum required); building height (building height based on setbacks); and, building setbacks (based on adjacent land use). All wall and monument signage will be in accordance with the Town Center sign regulations. The proposal and site plan were reviewed by the Aliso Viejo Advisory Planning Committee and approved at their July 23, 1997 meeting. A revised site plan, the current proposal, was approved by the Aliso Viejo Advisory Planning Committee at their October 22, 1997 meeting.

II. REFERENCE: (Authority for Administrative action is given by what ordinance, regulation, etc.)

Orange County Zoning Code sections 7-9-150 "Discretionary Permits and Procedures" and the Aliso Viejo Planned Community site development regulations.

III. ENVIRONMENTAL DOCUMENTATION:

The proposed project is covered by Final EIR 088 previously certified on 9-24-82. Prior to project approval, this EIR must be found adequate to satisfy the requirements of CEQA the Director. Section V of this report contains the required CEQA Finding.

IV. CERTIFICATION:

I hereby certify that the subject proposal has been Conditionally Approved as noted below.

Thomas B. Mathews, Director
Planning and Development Services Department

Date: _____ By: _____
C. M. Shoemaker, Chief
CPSD/Site Planning Section

WVM FOLDER: AV

V. FINDINGS:

I. The project is consistent with the objectives, policies, general land uses and programs specified by the General Plan adopted pursuant to the State Planning and Zoning Laws.

II. The project, subject to the specified conditions, is consistent with the provisions of the Zoning Code and Aliso Viejo Planned Community.

III. The decision-maker has considered Final EIR 088 , previously certified on 9-24-82, and Addendum No. PA970113 prior to project approval. Together they are approved for the proposed project based upon the following findings:

a. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

b. The additions, clarifications and/or changes to the original document caused by the Addendum, do not raise new significant issues which were not addressed by the EIR; and

c. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Lead Agency.

IV. The location, size, design and operating characteristics of the project will not create unusual noise, traffic or other conditions or situations that may be objectionable, detrimental or incompatible with other permitted uses in the vicinity.

V. The project will not result in conditions or circumstances contrary to the public health and safety and the general welfare.

VI. The project is located within a fee area as that term is defined in Section 7-9-702 and will contribute to the need for a fire station and/or library facility for which a fee is required.

VII. The subject project lies within the area of benefit of the San Joaquin Hills Transportation Corridor. In order to find this project consistent with the General Plan and to ensure that the traffic impacts have been adequately mitigated, it is necessary to adopt a condition requiring the developer to participate in the fee program adopted by the Board of

Supervisors.

VI. CONDITIONS OF APPROVAL

1. CP NA NA BASIC/ZONING REGULA
   This approval constitutes approval of the proposed project only to the extent that the project complies with the Orange County Zoning Code and any

   other applicable zoning regulations. Approval does not include any action or finding as to compliance of approval of the project regarding any other applicable ordinance, regulation or requirement.

2. CP NA NA BASIC/TIME
   This approval is valid for a period of 36 months from the date of final determination. If the use approved by this action is not established within such period of time, this approval shall be terminated and shall thereafter be null and void.

3. CP NA NA BASIC/PRECISE
   Except as otherwise provided herein, this permit is approved as a precise plan. After any application has been approved, if changes are proposed regarding the location or alteration of any use or structure, a changed plan may be submitted to the Director-Planning and Development Services Department for approval. If the Director determines that the proposed change complies with the provisions and the spirit and intent of the approval action, and that the action would have been the same for the changed plan as for the approved plot plan, he may approve the changed plan without requiring a new public hearing.

4. CP NA NA BASIC/COMPLI
   Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

5. CP NA NA BASIC/OBLIGA
   Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

6. CP CP B SPECIAL - REVISED P

Prior to the issuance of building permits, the applicant shall submit a Changed Plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the regulations contained in Zoning Code Section 7-9-143 "Facility Design Regulations".

7. CP CP U SPECIAL - REVISED SCREE
Prior to the issuance of certificates of use and occupancy, the applicant shall submit a revised preliminary landscaping plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the screening and landscaping regulations contained Sections XI.B.10 and 11 of the Aliso Viejo Planned Community development regulations.

8. CP CP B SPECIAL - LIGH
Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.

9. CP CP B SPECIAL -
Prior to the installation of any signs, the applicant shall submit a "Sign Program". The Sign Program shall be approved through a Changed Plan as required by Zoning Code Section 7-9-150. The Sign Program shall be in substantial conformance with Section XXI of the Aliso Viejo Planned Community development regulations. The Sign Program shall be reviewed by the Aliso Viejo Advisory Planning Committee prior to approval of the Changed Plan.

10. SG SG G GEOLOG
Prior to the issuance of a grading permit, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

11. BP BP G CONST
A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

(1) All construction vehicles or equipment, fixed or mobile, operated within 1,000' of a dwelling shall be equipped with properly operating and maintained mufflers.

(2) All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

(3) Stockpiling and/or vehicle staging areas shall be located as far as practicable

from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.

12. ER SG G POLLUTANT RU

Prior to issuance of precise grading or building permits, as determined by the Manager, Subdivision and Grading Services, the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs

whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

13. ER DS G NPDES PE

Prior to issuance of any grading permits, the applicant shall submit evidence to the Manager, Subdivision and Grading, that the applicant has obtained coverage under the NPDES statewide General Stormwater Permit from the State Water Resources Control Board.

14. SG SG GB DRAINAGE S

Prior to the issuance of any grading permits, or prior to the issuance of building permits, whichever comes first, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels, street flows, catch basins, storm drains, and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

15. SG SG GB DRAINAGE I

A. Prior to the issuance of any grading permits or prior to the issuance of building permits,

whichever comes first, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

SG C U DRAINAGE IM

B. Prior to the issuance of any certificates of use and occupancy, said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

16. F F R FIRE AC

Prior to the issuance of grading permits, the applicant shall obtain approval of the Fire Chief of all fire protection access easements and shall dedicate them to the County in a manner meeting the approval of the Fire Chief. The approval of the Fire Chief is required for any modifications such as speed bumps, control gates or other changes within said easement.

17. F F G STREET P

Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of preliminary plans for all street and courts, public or private, from the Fire Chief in consultation with the Manager, Traffic Engineering. The plans shall include the plan view, sectional view, and indicate the width of the street or court, measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked when a dead-end street exceeds 150 feet or when other conditions require it.

18. F F GU STREET MARK

A. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval from the Fire Chief for street improvement plans with fire lanes shown. The plans shall indicate the locations of red curbing and signage, and provide a drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color.

B. Prior to the issuance of the certificate of use and occupancy, the approved fire lane marking plan shall be installed. The CC&Rs shall contain a fire lane map and provisions which prohibit parking in the fire lanes. A method of enforcement shall be included.

19. F F B SITE PLAN

Prior to the issuance of building permits, the applicant shall submit to the Fire Chief a list of the

quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class. All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

20. TE TE G SIGHT DIST

Prior to the issuance of any grading permits, the applicant shall provide adequate sight distance at all street intersections per Standard Plan 1117, in a manner meeting the approval of the Manager, Subdivision and Grading Services. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.

21. TE TE GU AC

Prior to the issuance of grading permits, the applicant shall design and dedicate to the County of Orange any necessary right of way required for an additional twelve (12) feet wide lane on northbound Pacific Park Drive across the property frontage, all in a manner meeting the approval of the

Manager, Subdivision and Grading Services. Said improvement shall be constructed prior to the issuance of certificates of use and occupancy, in a manner meeting the approval of the Manager, Subdivision and Grading Services.

22. SG SG/BI GU PVT LAN

A. Prior to the issuance of building permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

23. BP BP B ACOUST NO
Except when the interior noise level exceeds the exterior noise level, all non-residential structures shall be sound attenuated against the combined impact of all present and projected noise from exterior noise sources to meet the interior noise criteria as specified in the Noise Element and Land Use/Noise Compatibility Manual.

Prior to the issuance of any building permits, the applicant shall submit to the Manager, Building Permits, evidence prepared under the supervision of a County-certified acoustical consultant that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5. The evidence shall be in the form of an acoustical analysis report describing in detail the exterior noise environment and the acoustical design features required to achieve the interior noise standard and which indicate that the sound attenuation measures specified have been incorporated into the design of the project.

24. F F B W
Prior to the issuance of the first building permit, the applicant shall submit water improvement plans to the Fire Chief for review and approval to ensure adequate fire protection and financial security is posted for the

installation. The water system design, location of valves, and the distribution of fire hydrants will be evaluated and approved by the Fire Chief.

25. F F RB FIRE HYDR
Prior to the issuance of first building permit, the applicant shall submit to the Fire Chief evidence of the on-site fire hydrant system. The system shall be reviewed and approved by the Fire Chief prior to issuance of building permits. Provisions shall be made by the applicant for the repair and maintenance of the system, in a manner meeting the approval of the Fire Chief.

26. F F B AUTO FIR
Prior to the issuance of building permits, the applicant shall place a note on the construction plans stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

27. F F B COMBSTBLE C
Prior to the issuance of any building permits for combustible construction, the developer shall submit and obtain the Fire Chief's approval of a letter and plan stating that water for fire fighting purposes and an all weather fire access road shall be in place and operational as required by the Uniform Fire Code before any combustible materials are placed on the site.

28. F F B WATER AVAILAB
Prior to the issuance of any building permits, an Orange County Fire Authority Water Availability Form shall be submitted to and approved by the Plan Review Section of the Orange County Fire Authority. If sufficient water to meet fire flow requirements is not available, an

automatic fire extinguishing system shall be installed in each structure, in a manner meeting the approval of the Fire Chief.

29. F F BU FIRE SPRINK
Prior to the issuance of any building permits, plans for an automatic fire sprinkler system shall be submitted to and approved by the Fire Chief prior to installation. This system shall be operational prior to the issuance of a certificate of use and occupancy.

30. F F B BUILDIN
Prior to the issuance of any building permits, the applicant shall submit a detailed letter of intended use for each building to the Fire Chief for review and approval.

31. F F B HAZARDOUS MATERIALS DISCLO
Prior to the issuance of any building permits, the applicant shall contact the Orange County Fire Authority Hazardous Materials Disclosure Office at (714) 744-0463 to obtain a "Hazardous Materials Business Information and Chemical Inventory Packet". This shall be completed and submitted to the Fire Chief before the issuance of any building permits.

32. F F B FIRE SAFETY SITE
Prior to the issuance of a building permit, the applicant shall submit plans for the review and approval of the Fire Chief. The applicant shall include information on the plans required by the Fire Chief. Contact the Orange County Fire Authority Plans Review Section at (714) 744-0403 for the Fire Safety Architectural Notes to be placed on the plans.

33. TE TE B ROAD FEE
Prior to the issuance of building permits, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading Division.

a. San Joaquin Hills Transportation Corridor
b. Moulton Parkway/Laguna Niguel Area
c. Coastal Area Road Improvements and Traffic Signals

34. TE TE BU AC
Prior to the issuance of building permits or prior to the issuance of certificates of use and occupancy, as determined by the Manager, Subdivision and Grading Services, the applicant shall provide for a 200 feet left turn pocket on eastbound Enterprise at the access driveway to the site in a manner meeting the approval of the Manager, Subdivision and Grading Services.

35. TE TE BU SI
Prior to the issuance of building permits or prior to the issuance of certificates of use and occupancy, the applicant shall design and install a traffic signal at the site access/Enterprise

intersection in a manner meeting the approval of the Manager, Subdivision and Grading Services in consultation with the Manager, Program Development Services.

36. TE TE B RECORDA
Prior to the issuance of building permits, the applicable portion of TT13435 shall be recorded.

37. F F U FIRE HYDRANT MA
Prior to the issuance of any certificates of use and occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard and approved by the Fire Chief. On private property these markers are to be maintained in good condition by the property owner.

38. F F NA FIRE A
Prior to installation, plans for the fire alarm system shall be submitted to and approved by the Fire Chief. This system shall be operational prior to the issuance of a certificate of use and occupancy.

County of Orange

ORANGE COUNTY ZONING ADMINISTRATOR HEARING - October 23, 1997

ZONE TAPE NO.: ZA0B16 RECORDING INDEX: 0:16:19-E.O.T. TIME: 2:03

ITEM 1.: PUBLIC HEARING: - Planning Application No. PA 97-0114, EIR 88, of Fluor Corporation.

The Zoning Administrator introduced the project.

Planner IV Melton gave the staff presentation. He stated that the proposed project is a request for the construction of a 454,000 square feet, five building office complex located in Aliso Viejo. Mr. Melton stated that the applicant is requesting a height modification to allow building height of 67 feet when the standard is 50 feet. He stated that the project is a five office building complex composed of 2 three-story buildings and 4 four-story buildings. He noted that the buildings are clustered around a landscaped courtyard. Mr. Melton stated that the three-story buildings are 54 feet in height from finished grade to the top of the roof mounted mechanical screening, and the four-story buildings are 67 1/2 feet from the finished grade to the top of the roof mounted mechanical screening. He stated that this project would normally have been handled administratively but the applicant is requesting a modification to the development standards.

Mr. Melton stated that the exteriors of the buildings are designed to reflect the Business Park theme. He noted that the office complex is generally located at the center of the site with setbacks of approximately 220 feet from Laguna Hills Drive, 190 feet from the San Joaquin Hills Transportation Corridor, 240 feet from the property line to the north, and 260 feet from the property line to the east.

Mr. Melton stated that 1,744 parking spaces are provided based on the gross leasable space. He explained how the parking requirement was determined. Mr. Melton pointed out the ingress and egress for the project. Mr. Melton stated that staff was recommending approval of the proposed project.

Mr. Melton stated that staff did receive one letter of concern from Louis Boish raising an objection to the height increase. Mr. Boish didn't know how the increased height negatively effect the view he has from his home; will it effect the value of his property; will this effect the noise he hears from the toll road or the already noisy military aircraft; increase traffic.

2:10 P.M.: The Zoning Administrator opened the public hearing.

Wayne Peterson, representing Fluor Corporation, stated that the reason a height modification was requested was to allow the clustering of the office buildings. He presented photos of the project design. Mr. Peterson stated that there are 9 existing recorded lots on the property which could have been built on individually. He stated that he has read the staff report and supports it. He

stated that he was requesting modifications to conditions 8, 12, 19, 22, and 34.

Mr. Buzas discussed the modifications requested to conditions 8, 12, 19, 22, and 34. He agreed to the requested modifications.

Mr. Peterson address the concerns raised in Mr. Boish's letter.

2:23 P.M.: No one else wishing to be heard, the Zoning Administrator closed the public hearing.

ACTION: 2:23 P.M.: The Zoning Administrator approved Planning Application No. PA 97-0114 for Site Development Permit with 8 Findings and 37 Conditions; with modification to condition numbers 8, 19, 22, and 34 (as shown below), as recommended in the Current Planning Division report, dated October 23, 1997.

~~8. CP CP B SPECIAL - LIGHTING~~
~~Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.~~

8. CP CP U SPECIAL - LIGHTING
Prior to the issuance of certificates of use and occupancy, the applicant shall submit evidence to the Manager, Current Planning Services Division showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations and has been reviewed by the Aliso Viejo Advisory Planning Committee.

12. ER SG G POLLUTANT RUNOFF
Prior to issuance of precise grading or building permits, ~~whichever comes first~~ as determined by the Manager Subdivision and Grading Division, the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

19. F F ~~G~~ B SITE PLANNING
Prior to the issuance of ~~grading~~ building permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class.

All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

22. SG SG/BI ~~G~~BU PVT LANDSCP

A. Prior to the issuance of ~~precise grading~~ building permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

34. TE TE B ACCESS

Prior to the issuance of the first building permit, the applicant shall design a right turn lane on the northeast bound Laguna Hills Drive, at the most southwesterly driveway access to the site, and shall initiate the process to dedicate to the County of Orange the necessary right of way to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

ITEM # 1

PLANNING AND DEVELOPMENT SERVICES REPORT

DATE: October 23, 1997

TO: Orange County Zoning Administrator

FROM: P&DSD/Current Planning Services Division

SUBJECT: Public Hearing on Planning Application PA 97-0114

PROPOSAL: Site Development Permit for a modification of an Aliso Viejo Planned Community "Business Park" site development standard to allow a building height of 67 feet when the standard is 50 feet in association with the construction of a 454,000 square feet, five building office complex.

LOCATION: In the Community of Aliso Viejo at the northeast quadrant of the intersection of Laguna Hills Drive and the San Joaquin Hills Transportation Corridor. Fifth Supervisorial District.

APPLICANT: Fluor Corporation, property developer
Mission Viejo Co., property owner
Wayne Peterson and Associates, agent

SYNOPSIS: Current Planning Services Division recommends Zoning Administrator approval subject to findings and conditions.

STAFF PLANNER/CONTACT: William V. Melton, Project Manager
Phone: (714) 834-2541, FAX: 834-4652 or 6132

BACKGROUND:

The Fluor Corporation requests a Site Development Permit to modify the site development standard for height to permit the construction of the Fluor Corporation Global Administration Facility/Southern California Facility in Aliso Viejo. The project is a five building complex totaling 454,000 square feet of office space with 1,759 parking spaces on a 22.3 acre site in Planning Area 51 "Business Park" of the Aliso Viejo Planned Community.

The five office building complex is composed of 2 three-story buildings and 3 four-story buildings. The buildings are clustered around a landscaped courtyard with the 2 three-story buildings located closest to Laguna Hills Drive. As proposed, the three-story buildings are 54 feet in height from finished grade to the top of the roof mounted mechanical screening, and the four-story buildings are 67 1/2 feet from the finished grade to the top of the roof mounted mechanical screening. The site development standards for the Business Park permits a maximum height of 50 feet, unless modified by a Site Development Permit as permitted by Section XXIV of the Aliso Viejo Planned Community development regulations and Section 7-9-150.1(d) of the Orange County Zoning Code.

The exteriors of the buildings are designed to reflect the Business Park theme through the use of masonry walls and glass panels. The office complex is generally located at the center of the site with setbacks of approximately 220 feet from Laguna Hills Drive, 190 feet from the San Joaquin Hills Transportation Corridor, 240 feet from the property line to the north, and 260 feet from the property line to the east.

A total of 1,759 parking spaces are provided. The total number of parking spaces required is 1,744, which was determined by using the gross rentable building area for the five buildings of 436,000 square feet plus the basement storage areas of 12,500 square feet The parking area, which is accessed from a signalized intersection at Laguna Hills Drive surrounds the buildings, has standard 9' x 18' parking stalls and 24 feet wide aisle ways. The main entrance has two drive lanes in and two drive lanes out. This entrance then branches into the 28 feet wide primary circulation drive. The secondary entrance, on the northern property line is 48 feet wide. All landscaping is designed to conform with the Business Park theme and requirements. The landscaping is 35 feet in depth along Laguna Hills Drive; and is provided around the perimeter of the site and throughout the parking area. Screening of the parking area will be installed adjacent to Laguna Hills Drive and the abutting residential areas as required.

SITE ZONING AND SURROUNDING LAND USE:

Direction	PC Planning Area	Designation	Existing Land Use
Project Site	51.1	Business Park	Vacant
North	50.3	Business Park	Business/Industrial
South	40.2 *	Town Center	Vacant **
East	24.1	High Den. Residential	Residential
West	50.3	Business Park	Business/Industrial

* The San Joaquin Hills Transportation Corridor separates Planning Area 50.3 and 40.2

** Planning Application PA 97-0113 is pending approval or has been approved for a Site Development Permit for the construction of the Fluor Corporation Global Administration Facility in Aliso Viejo. The project consists of two office buildings totaling 114,400 square feet on a 7.18 acre site.

CEQA COMPLIANCE:

The proposed project is covered by Final EIR 088 previously certified on 9/24/82. Prior to project approval, this EIR must be found adequate to satisfy the requirements of CEQA the Zoning Administrator. Attachment A of this report contains the required CEQA Finding.

PUBLIC NOTICES AND COMMENTS RECEIVED:

A Notice of Hearing was mailed to all owners of record within 300 feet of the subject site. Additionally, a notice was posted at the site, at the 300 N. Flower Building and as required by established public hearing posting procedures. A copy of the planning application and a copy of the proposed site plan were distributed for review and comment to eight County Divisions, the Aliso Viejo Advisory Planning Committee, the State Permit Assistance Center, the Orange County Fire Authority and the Capistrano Unified School District.

As of the writing of this staff report, comments received have been regulatory in nature and have been incorporated into the project conditions of approval where appropriate. The proposal and site plan were reviewed by the Aliso Viejo Advisory Planning Committee and approved at their July 23, 1997 meeting. The Committee did not raise a concern with regards to the modification requested for increased building height.

Staff received several letters and telephone calls after the mailing of the Public Hearing Notice. The callers and writers were concerned as to the location of the office buildings relative to the residential area because of the modification to the height standard proposed. Two callers were concerned that people in the office building would be looking into their back yards. The buildings will be between 240 and 260 feet from the property lines abutting the residential areas.

REVIEW AND ANALYSIS:

Planning Area 51 of the Aliso Viejo Planned Community has a land use designation of "Business Park". The Fluor proposal is a principal permitted use in the Business Park. The objective of the Business Park designation is to provide a balanced economic and employment base for the community of Aliso Viejo. The Business Park is located in proximity to residential areas to minimize commuter work trips and vehicle miles traveled. High density multi-family residential land uses are located to the north and east of the site.

Staff identified no planning issues associated with the request for the increased building height. The project site is on an elevated graded pad with a ground elevation of between 20 to 30 feet above the ground elevation of the adjacent residential projects. With a building setback of 240 and 260 feet from the nearest residential structure, the requested increase in building height will not restrict the distant views from the nearby residential area. People in the office building will not be looking into the adjacent residents back yards. The setbacks required by this project are the height of the buildings. Therefore, the setbacks proposed for this project are up to four times greater than is permitted by the site development regulations. Staff is of the opinion that this is a better project with the site development modification than could be built with the standard height and setback requirements. By allowing the buildings to exceed the standard building height, the office complex can be concentrated at the center of the site and therefore provide for increased setbacks from the residential areas and Laguna Hills Drive.

The proposed Fluor Corporation Global Administration Facility/Southern California Facility office complex is consistent with the Business Park objectives and conforms to all the site development standards, except for building height. The office park will be an asset to the community. It will help achieve the Business Park objective of providing a balanced residential/employment community. Staff supports the Fluor Corporation proposal and also supports the request for a site development modification of the building height.

RECOMMENDATION

Current Planning Services Division recommends the Zoning Administrator:

a. Receive staff presentation and public testimony as appropriate; and,

b. Approve Planning Application PA 97-0114 subject to the attached Findings and Conditions of Approval.

Respectfully submitted,

C. M. Shoemaker, Chief
CPSD/Site Planning Section

WVM FOLDER: AVPC

Attachments: A. Recommended Findings

B. Recommended Conditions of Approval

Exhibits: 1. Applicant's Letter of Explanation

2. Site Plans and Site Photos

ATTACHMENT A

FINDINGS

The Orange County Zoning Administrator hereby finds:

I. The project is consistent with the objectives, policies, general land uses and programs specified by the General Plan adopted pursuant to the State Planning and Zoning Laws.

II. The project, subject to the specified conditions, is consistent with the provisions of the Zoning Code and Aliso Viejo Planned Community.

III. The decision-maker has considered Final EIR 088, previously certified on 9/24/82, and Addendum No. PA970113 prior to project approval. Together they are approved for the proposed project based upon the following findings:

a. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

b. The additions, clarifications and/or changes to the original document caused by the Addendum, do not raise new significant issues which were not addressed by the EIR; and

c. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Lead Agency.

IV. The location, size, design and operating characteristics of the project will not create unusual noise, traffic or other conditions or situations that may be objectionable, detrimental or incompatible with other permitted uses in the vicinity.

V. The project will not result in conditions or circumstances contrary to the public health and safety and the general welfare.

VI. The project is located within a fee area as that term is defined in Section 7-9-702 and will contribute to the need for a fire station and/or library facility for which a fee is required.

VII. The subject project lies within the area of benefit of the San Joaquin Hills Transportation Corridor. In order to find this project consistent with the General Plan and to ensure that the traffic impacts have been adequately mitigated, it is necessary to adopt a condition requiring the developer to participate in the fee program adopted by the Board of Supervisors.

VIII. The alternate development standard(s) will result in an equivalent or better project in terms of adverse impacts and public benefits to the immediate and surrounding community.

ATTACHMENT B

CONDITIONS OF APPROVAL

1. CP NA NA BASIC/ZONING REGULATIONS
This approval constitutes approval of the proposed project only to the extent that the project complies with the Orange County Zoning Code and any other applicable zoning regulations. Approval does not include any action or finding as to compliance of approval of the project regarding any other applicable ordinance, regulation or requirement.

2. CP NA NA BASIC/TIME LIMIT
This approval is valid for a period of 36 months from the date of final determination. If the use approved by this action is not established within such period of time, this approval shall be terminated and shall thereafter be null and void.

3. CP NA NA BASIC/PRECISE PLAN
Except as otherwise provided herein, this permit is approved as a precise plan. After any application has been approved, if changes are proposed regarding the location or alteration of any use or structure, a changed plan may be submitted to the Director-Planning and Development Services Department for approval. If the Director determines that the proposed change complies with the provisions and the spirit and intent of the approval action, and that the action would have been the same for the changed plan as for the approved plot plan, he may approve the changed plan without requiring a new public hearing.

4. CP NA NA BASIC/COMPLIANCE
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

5. CP NA NA BASIC/OBLIGATIONS
Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

6. CP CP B SPECIAL - REVISED PLANS
Prior to the issuance of building permits, the applicant shall submit a Changed Plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the regulations contained in Zoning Code Section 7-9-143 "Facility Design Regulations".

7. CP CP U SPECIAL - REVISED SCREENING
Prior to the issuance of certificates of use and occupancy, the applicant shall submit a revised preliminary landscaping plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the screening and landscaping regulations contained Sections XI.B.10 and 11 of the Aliso Viejo Planned Community development regulations.

8. CP CP B SPECIAL - LIGHTING
Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.

9. CP CP B SPECIAL - SIGNS
Prior to the installation of any signs, the applicant shall submit a "Sign Program". The Sign Program shall be approved through a Changed Plan as required by Zoning Code Section 7-9-150. The Sign Program shall be in substantial conformance with Section XXI of the Aliso Viejo Planned Community development regulations. The Sign Program shall be reviewed by the Aliso Viejo Advisory Planning Committee prior to approval of the Changed Plan.

10. SG SG G GEOLOGY RPT
Prior to the issuance of a grading permit, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

11. BP BP G CONST NOISE
A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

(1) All construction vehicles or equipment, fixed or mobile, operated within 1,000' of a dwelling shall be equipped with properly operating and maintained mufflers.

(2) All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

(3) Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.

12. ER SG G POLLUTANT RUNOFF

Prior to issuance of precise grading or building permits, whichever comes first, the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

OK per Mark 1-21-98

13. ER DS G NPDES PERMIT

Prior to issuance of any grading permits, the applicant shall submit evidence to the Manager, Subdivision and Grading, that the applicant has obtained coverage under the NPDES statewide General Stormwater Permit from the State Water Resources Control Board.

Memo 1-21-98

14. SG SG GB DRAINAGE STUDY

Prior to the issuance of any grading permits, or prior to the issuance of building permits, whichever comes first, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels, street flows, catch basins, storm drains, and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

15. SG SG GB DRAINAGE IMPRO

A. Prior to the issuance of any grading permits or prior to the issuance of building permits, whichever comes first, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

SG C U DRAINAGE IMPROV

B. Prior to the issuance of any certificates of use and occupancy, said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

16. F F R FIRE ACCESS

Prior to the issuance of grading permits, the applicant shall obtain approval of the Fire Chief of all fire protection access easements and shall dedicate them to the County. The CC&Rs shall contain provisions which prohibit obstructions within the fire protection access easement. The approval of the Fire Chief is required for any modifications such as speed bumps, control gates or other changes within said easement.

17. F F G STREET PLANS

Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of preliminary plans for all street and courts, public or private, from the Fire Chief in consultation with the Manager, Traffic Engineering. The plans shall include the plan view, sectional view, and indicate the width of the street or court, measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked when a dead-end street exceeds 150 feet or when other conditions require it.

18. F F GU STREET MARKINGS

A. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval from the Fire Chief for street improvement plans with fire lanes shown. The plans shall indicate the locations of red curbing and signage, and provide a drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color.

B. Prior to the issuance of the certificate of use and occupancy, the approved fire lane marking plan shall be installed. The CC&Rs shall contain a fire lane map and provisions which prohibit parking in the fire lanes. A method of enforcement shall be included.

19. F F G SITE PLANNING

Prior to the issuance of grading permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class. All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

20. TE TE G SIGHT DISTANCE

Prior to the issuance of any grading permits, the applicant shall provide adequate sight distance at all street intersections per Standard Plan 1117, in a manner meeting the approval of the Manager, Traffic Engineering. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.

21. TE TE G STORM DRAIN
Prior to the issuance of grading permits, the applicant shall relocate the existing storm drain in a manner meeting the approval of the Manager, Subdivision and Grading Services.

22. SG SG/BI GU PVT LANDSCP

A. Prior to the issuance of precise grading permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

23. BP BP B ACOUST NON-RES
Except when the interior noise level exceeds the exterior noise level, all non-residential structures shall be sound attenuated against the combined impact of all present and projected noise from exterior noise sources to meet the interior noise criteria as specified in the Noise Element and Land Use/Noise Compatibility Manual.

Prior to the issuance of any building permits, the applicant shall submit to the Manager, Building Permits, evidence prepared under the supervision of a County-certified acoustical consultant that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5. The evidence shall be in the form of an acoustical analysis report describing in detail the exterior noise environment and the acoustical design features required to achieve the interior noise standard and which indicate that the sound attenuation measures specified have been incorporated into the design of the project.

24. F F B WATER
Prior to the issuance of the first building permit, the subdivider shall submit water improvement plans to the Fire Chief for review and approval to ensure adequate fire protection and financial security is posted for the

installation. The water system design, location of valves, and the distribution of fire hydrants will be evaluated and approved by the Fire Chief.

25. F F RB FIRE HYDRANTS
Prior to the issuance of first building permit, the applicant shall submit to the Fire Chief evidence of the on-site fire hydrant system. The system shall be reviewed and approved by the Fire Chief prior to issuance of building permits. Provisions shall be made by the applicant for the repair and maintenance of the system, in a manner meeting the approval of the Fire Chief.

26. F F B AUTO FIRE EXT
Prior to the issuance of building permits, the applicant shall place a note on the construction plans stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

27. F F B COMBSTBLE CONST
Prior to the issuance of any building permits for combustible construction, the developer shall submit and obtain the Fire Chief's approval of a letter and plan stating that water for fire fighting purposes and an all weather fire access road shall be in place and operational as required by the Uniform Fire Code before any combustible materials are placed on the site.

28. F F B WATER AVAILABILITY
Prior to the issuance of any building permits, an Orange County Fire Authority Water Availability Form shall be submitted to and approved by the Plan Review Section of the Orange County Fire Authority. If sufficient water to meet fire flow requirements is not available, an automatic fire extinguishing system shall be installed in each structure, in a manner meeting the approval of the Fire Chief.

29. F F BU FIRE SPRINKLERS
Prior to the issuance of any building permits, plans for an automatic fire sprinkler system shall be submitted to and approved by the Fire Chief prior to installation. This system shall be operational prior to the issuance of a certificate of use and occupancy.

30. F F B BUILDING USE
Prior to the issuance of any building permits, the applicant shall submit a detailed letter of intended use for each building to the Fire Chief for review and approval.

31. F F B HAZARDOUS MATERIALS DISCLOSURE
Prior to the issuance of any building permits, the applicant shall contact the Orange County Fire Authority Hazardous Materials Disclosure Office at (714) 744-0463 to obtain a "Hazardous Materials Business Information and Chemical Inventory Packet". This shall be completed and submitted to the Fire Chief before the issuance of any building permits.

32. F F B FIRE SAFETY SITE PLAN
Prior to the issuance of a building permit, the applicant shall submit plans for the review and approval of the Fire Chief. The applicant shall include information on the plans required by the Fire Chief. Contact the Orange County Fire Authority Plans Review Section at (714) 744-0403 for the Fire Safety Architectural Notes to be placed on the plans.

BLD A-E RD980119

33. TE TE B ROAD FEE PROG
Prior to the issuance of each building permit, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Traffic Engineering.

a. San Joaquin Hills Transportation Corridor
b. Moulton Parkway/Laguna Niguel Area
c. Coastal Area Road Improvements and Traffic Signals

BLD B&D RD980158

34. TE TE B ACCESS
Prior to the issuance of the first building permit, the applicant shall design a right turn lane on the northeast bound Laguna Hills Drive, at the most southwesterly driveway access to the site, and dedicate to the County of Orange the necessary right of way to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

35. TE TE B ABANDONMENT
Prior to the issuance of the first building permit, the applicant shall obtain from the County of Orange the abandonment of the street Discovery in a manner meeting the approval of the Manager, Subdivision and Grading Services.

36. F F U FIRE HYDRANT MARKER
Prior to the issuance of any certificates of use and occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard and approved by the Fire Chief. On private property these markers are to be maintained in good condition by the property owner.

37. F F NA FIRE ALARM
Prior to installation, plans for the fire alarm system shall be submitted to and approved by the Fire Chief. This system shall be operational prior to the issuance of a certificate of use and occupancy.

County of Orange

MEMO

DATE: October 3, 1997

TO: Chuck Shoemaker, Chief, Site Planning Services

FROM: PDS/Environmental & Project Planning Services Division

SUBJECT: Project Title: PA 970114 Aliso Viejo - PA 51 Site Development Permit PA 970114 for the Fluor Daniel Southern California Facility. Initial Study No. PA 970114 (PP53558)

PROJECT DESCRIPTION: Site Development Permit for construction of a 454,000 square feet, five building office complex with a requested modification to a site development standard of the Aliso Viejo Planned Community "Business Park" to allow a building height of 67 feet instead of the permitted 50 feet.

PROJECT LOCATION: Aliso Viejo Planned Community, Planning Area 51, Business Park. The Planning Area is located at the northeast corner of the intersection of Laguna Hill Drive and the San Joaquin Hills Transportation Corridor.

CEQA DETERMINATION: The CEQA documentation for your proposed project has been completed by the Environmental Planning Division. Based upon its review, E&PPSD has determined that the proper CEQA documentation for the Project is previously certified FEIR Final EIR No. 088, as Addendumed, which serves as a Program EIR for the proposed project. The following information is attached to this memo for your consideration:

I. Instructions for Filing CEQA Documents with the County Clerk; and

II. CEQA Statement, Action and Findings which should be used for Staff Reports and AITs for the Project, including:

- A. CEQA Compliance Statement for AIT and Staff Report; and
- B. Recommended Action for Decision-maker(s) to Re-Certify EIR; and
- C. Fish and Game Code Finding for Approval of Project; and
- D. NCCP Findings for Approval of Projects.

III. Initial Study Analysis PA 970114

If clarification is needed regarding this Memo or if there are questions, please contact the following staff person from PDS/Environmental & Project Planning Services Division:

E&PPSD Staff Contact: Richard Bailey
Telephone Number: 834-2439

George Britton, Manager
PDS/Environmental & Project Planning Services Division

By: Richard Bailey Date: 10/6/97
Title: Chief, >

Attachments: Attachment A: Filing Instructions for County Clerk
Attachment 1: Recommended CEQA Statements, Actions, Findings
Attachment 2: Initial Study Analysis

ATTACHMENT A

FILING CEQA DOCUMENTS WITH THE COUNTY CLERK

Your division will be responsible for filing the CEQA documentation and paying its related $38.00 filing fee with the County Clerk for your project. The County Clerk now only needs your CEQA document(s) with your project charge number in the upper right corner in order to post the document and recover this fee. You must, however, obtain a fee receipt from the County Clerk which must then be turned in immediately to Management Services/Accounting Services. The County Clerk requires the $38.00 documentary handling fee for the following items:

* Negative Declarations (ND);
* Notices of Determinations (NOD); and
* Notices of Exemption (NOE)

Please note the following:

1. Within 5 days of approval action by the decision-making authority (e.g. Board, Planning Commission, Zoning Administrator) on a project, a Notice of Determination (NOD) must be filed with the County Clerk.

2. If E&PPSD has determined that your project is exempt from the Department of Fish and Game (DFG) fees, a De Minimis Finding (Certificate of Fee Exemption) will be provided by E&PPSD and must accompany your project's NOD.

3. If E&PPSD has determined that your project is exempt from the Department of Fish and Game (DFG) fees because the required fees were previously paid, a memo will be provided by E&PPSD and must accompany your project's NOD.

4. If E&PPSD cannot find your project exempt from the DFG fees and the will be required to pay $1288.00, or $888.00, respectively, for NDs and EIRs, including the $38.00 handling fee.

You will need to fill in the information on the NOD or NOE form and get an original authorizing signature from your division after the approval action on your project. You will need to take the original set, and at least one set of copies to the EIR Clerk located in the Recorders/Clerks Office, Building 12, Civic Center Plaza. The Clerk will stamp the ND, NOD or NOE, and keep the original set. The Clerk will issue a receipt for the Environmental document which must be returned to Management Services/Accounting Services by the end of the day. A copy of a stamped NOD/NOE must be sent to E&PPSD for the file.

ATTACHMENT 1

RECOMMENDED CEQA STATEMENTS AND FINDINGS FOR STAFF REPORTS/AITs

A. CEQA COMPLIANCE STATEMENT (FOR TEXT OF STAFF REPORT/AIT):

The CEQA compliance statement, located in the text of the staff report or body of the AIT under "Additional Data", shall include the following statement unless advised otherwise by County Counsel or the Manager, Environmental & Project Planning Services Division.

> The proposed project is covered by Final EIR No. 088 which was originally certified on 4/11/79 and certified as a program on 9/24/82, and subsequent Addendum, satisfies the requirements of CEQA for this project. Prior to project approval, the decision-maker must assert that this EIR is adequate to satisfy the requirements of CEQA for the proposed project.

B. RECOMMENDED ACTION STATEMENT FOR APPROVING PROJECT:

State law requires that action on a CEQA document be taken by the decision-maker prior to approval of the project for which it has been prepared. The following action must be taken before action on the project, unless directed otherwise by County Counsel or the Manager, Environmental & Project Planning Services Division.

> The decision-maker has determined that Final Final EIR No. 088 which was originally certified on 4/11/79 and certified as a program on 9/24/82, and subsequent Addendum, satisfies the requirements of CEQA for this project and was approved as a Program EIR for the proposed project based upon the following findings:
>
> a. Based on the Initial Study, it is found that the EIR serves as a Program EIR for the proposed project; and
>
> b. The approval of the previously certified Final EIR for the project reflects the independent judgment of the Lead Agency.

C. FISH AND GAME CODE FINDING FOR APPROVAL OF PROJECT

> Find that pursuant to Section 711.4 of the California Fish and Game Code, this project is exempt from payment of required fees as it has been determined that the required fees have been paid, EIR 088, Receipt Document Number 88995, 3/22/95.

D. NCCP FINDINGS FOR APPROVAL OF PROJECTS

> Find that the proposed project will not have a significant unmitigated impact upon Coastal Sage Scrub habitat and, therefore, will not preclude the ability to prepare an effective subregional Natural Communities Conservation Planning (NCCP) Program.

PROJECT DESCRIPTION & BACKGROUND:

PA 970114 Aliso Viejo - PA 51 Site Development Permit PA 970114 for Fluor Daniel. The project proposes the construction of a 454,000 square feet, five building office complex with a requested modification to a site development standard of the Aliso Viejo Planned Community "Business Park" to allow a building height of 67 feet instead of the permitted 50 feet, with parking for 1,759 cars to be provided with an at-grade facilities.

The Site Plan proposes an alternative development standard for building height 67 feet instead of the permitted 50 feet. Project proposes four (4) parking spaces per 1,000 square feet of rentable floor area instead of the standard four (4) spaces per 1,000 square feet of gross floor area as required by the Parking Regulations of the Orange County Zoning Code.

The proposal includes five office building structures composed of three-story (2 buildings) and four-story (3 buildings) stories in height. The buildings are clustered around a landscaped courtyard with the two three-story buildings located closest to Laguna Hills Drive. The five building office complex is located at the center of the site. Screening of the parking area will be installed adjacent to Laguna Hills Drive and the abutting residential areas

PROJECT LOCATION: Aliso Viejo Planned Community, Planning Area 51, Business Park. The Planning Area is located at the northeast corner of the intersection of Laguna Hill Drive and the San Joaquin Hills Transportation Corridor.

The project site is in the Fifth Supervisorial District.

EXISTING SITE CONDITION:

The majority of the site is presently vacant and rough graded.

PROGRAM EIR:
The California Environmental Quality Act states that a Program EIR is prepared for a series of actions that can be characterized as one large project, the actions are related geographically and as logical parts in the chain of contemplated actions.

The CEQA Guidelines provide guidance for the use of a previously certified EIR with a subsequent activity. Specifically, where a previous EIR has been certified for a larger project, the later activity or project is examined in light of the program EIR. The Guidelines also provide that a Program EIR may be incorporated into an (EIR) Addendum to address significant and cumulative program impacts analyzed and considered with the Program EIR.

CONSIDERATIONS IN INITIAL STUDY:
In order to determine the potential impacts of the proposed project, the County of Orange, as the Lead Agency for the subject project, is required to solicit expert opinions. It must also establish early contacts with responsible agencies and interested parties. The project Lead Division and the Environmental & Project Planning Division, consulted the technical divisions of the County, as well as, parties interested in reviewing the proposed project. Environmental & Project Planning Division considered the following in completing its Initial Study:

- Final Environmental Impact Report EIR 088, the Program EIR for Aliso Viejo and subsequent addendum.
- Aliso Viejo Land Use Regulations;
- Site and Plot Plans for the proposed project.
- Comments received include: Transportation Planning, Fire Authority, Streets Acoustics, Subdivision-Drainage & Grading Sections & NPDES.
- A detailed analysis of the CEQA Environmental Checklist.

CEQA BASIS FOR A PREVIOUS DOCUMENTATION:

EIR 088 was which was originally certified on 4/11/79 and certified as a program on 9/24/82, for the Aliso Viejo PC. In accordance with the Guidelines, Initial Study (PA 970114) was completed on the subject project by the Environmental & Project Planning Division (EPPSD&PD).

Based upon the foregoing information, it was determined that EIR 088 adequately analyzed all of the major impacts of the proposed project. That no subsequent changes are proposed with respect to the circumstances surrounding this project, and no new information that would substantially affect the validity of the EIR has become available.

ANALYSIS OF IMPACTS/MITIGATION:

The proposed project, (PA 970114), is regarded as a private project. The following is the analysis of the subject proposal and compilation of pertinent mitigation measures/conditions from previously certified EIR 088. These mitigation measures/conditions reflect the very latest requirements of CEQA (Mitigation Monitoring) in addition to County ordinances, policies and guidelines.

Attached are the salient mitigation measures from the EIR 088

CHECKLIST OF IMPACTS/MITIGATIONS

The following is the analysis of the subject proposal and compilation of pertinent measures contained in the Mitigation Monitoring And Reporting Plan (MMRP) prepared for EIR 088 for Aliso Viejo Planned Community as approved by the Board Of Supervisors on April 20, 1988. Minor modifications have been made to some of the mitigation measures to achieve consistency with the county's standard conditions of approval, where more specificity is warranted to clarify how the measures apply to this project. Additionally, these mitigation measures/conditions have been updated to reflect the latest requirements of CEQA in addition to County ordinances, policies and guidelines.

1. LAND USE **ANALYSIS**

The proposed project is consistent with and in conformance with General Plan and its implementing documents. Under the Land Use element: (6) Urban Activity Center; Community Profile (6.1): Urban Activity Center. The project is consistent with the applicable planned community, the Aliso Viejo Planned Community, the applicable Feature Plan, and Area Plan. These is no conflict with zoning or general plan designation nor conflict with existing, or planned land uses which would result from implementation of the project. The project area proposed to be developed with Fluor Daniel, a office complex. Prior to the issuance of a building permit for any structure, compliance with the Site Development Permit PA 970114 is required to assure consistency and conformance with the site development standards stated in the Aliso Viejo Planned Community, Business Park District. No mitigation measures are warranted.

2. POPULATION AND HOUSING **ANALYSIS**

The proposed project, the establishment of Fluor Daniel, a office complex will not affect adopted regional or local population projection. Neither will it induce substantial growth in an undeveloped area or extension of major infrastructure or displace existing housing. No mitigation measures are warranted.

3. GEOPHYSICAL **ANALYSIS**

The project will not result in changes to geologic substructures nor will it expose people to geologic hazards. There will not be a significant change in topography or ground surface relief features, the project area has been rough graded in preparation for future development. The Impact section of Landform and Topography of EIR 088 impacts have been identified regarding unstable earth conditions, an inactive earthquake fault, and change in topography. However, compliance with the County of Orange, Grading and Excavation Code will ensure that possible impacts will be mitigated to a level of insignificance.

Mitigation #1
Prior to the issuance of the building permit, detailed grading plans, further defining the extent of earthwork requirements for the project must be developed as required by EIR 088, incorporating the previously developed stability analysis prepared for the numerous mapped landslides. These plans will be in accordance with stated grading concepts and meeting the approval of the Manager, Development Services.

4. WATER **ANALYSIS**

Under the Hydrology section of EIR 088 impacts were identified regarding changes in absorptions rates, potential increase in peak run-off resulting in increased erosion potential, increased pollution and increase in downstream peak flows.

The site lies within the Central Aliso Viejo Area Master Plan of Drainage. Master Plan of Drainage fees are required for this project per Agreement No. D82-026.

During the construction phase of the project and during the operation of the proposed project the applicant shall comply with Best Management Practices outlined in the National Pollution Discharge Elimination System (NPDES) Stormwater Regulation. The following mitigation measures will ensure that the possible impacts will be mitigated to a level of insignificance.

Mitigation #2

Prior to issuance of building permits, permit applicant shall submit for approval of the Manager, Development Services, in consultation with the Manager, Environmental Resources, a proposal specifically identifying Best Management Practices (BMPs) that will be used on site to control predictable pollutant run-off.

This proposal shall identify the types of structural and non-structural measures to be used, the location(s) of structures, and assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.). Regrading and/or construction of special features to adequately control pollutant run-off may be required.

5. TRANSPORTATION **ANALYSIS**

Within the Impact Section of Transportation/Circulation of EIR 088 impacts were identified. The proposed project would generate additional vehicular movement since the project site is currently undeveloped, however, not beyond that already addressed in EIR 088. The Traffic Engineer for the County of Orange has completed a review of the proposed site plan. Bases upon the Traffic Engineering's analysis which addressed accesses, parking and conflicts with adopted policies the following mitigation measure would ensure that potential impacts will be mitigated to a level of insignificance.

The project lies within the area of benefit of the San Joaquin Hills Transportation Corridor, the Moulton Parkway/Laguna Niguel Fee Program and the Coastal Area Roadway Improvement and Traffic Signals Fee Program. The collection of county established fees/assessment programs are required prior to issuance of building permits. The following mitigation measures will ensure that the fees will be collected in the appropriate timing.

Mitigation #3

Prior to the issuance of any grading permits, adequate sight distance shall be provided at all driveway intersections per Standard Plan 1117, in a manner meeting the approval of the Manager, Transportation Program Division. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.

5. **TRANSPORTATION** (continued)

Mitigation #4

Prior to the issuance of a building permit, the applicant shall pay fees as prescribed in the Major Thoroughfare and Bridge Fee Program for the San Joaquin Hills Transportation Corridor, Major Thoroughfare and Bridge Fee Program for the Moulton Parkway/Laguna Niguel area and Coastal Area Road Improvements and Traffic Signals Fee Program.

Mitigation #5

Prior to the approval of the grading permit, the applicant shall provide revise plans (if deemed necessary by the Traffic Engineering Division) incorporating the changes prescribed by the Traffic Engineering Division of EMA/Transportation, meeting the approval of Manager, EMA/Transportation, Traffic Engineering Division.

6. **AIR** **ANALYSIS**

Within the Impacts section of Air Quality of EIR 088 impacts were identified regarding the pollutants emitted by construction activities, the incremental increase in emission and the exceeding of the 8-hour carbon monoxide standard when project is implemented.

long-term impacts which may occur are the generation of additional traffic, since the site is not developed, which could result in higher concentrations of carbon monoxide and nitrogen oxides, however, not beyond those already addressed in EIR 088.

short-term impacts identified were the local elevation of dust during grading and construction activities. A dust abatement program required by the County Grading and Excavation Code and South Coast Air Quality Management District (SCAQMD) will reduce the impacts below the level of significance.

The proposed project is not expected to result in a significant increase in air emissions or deterioration of ambient air quality beyond previously adopted projections contained in the SCAQMP.

Mitigation #6

Grading and excavation shall be halted during periods of high winds meeting the approval of the Manager, EMA, Subdivision Division, Grading Inspection Section. According to AQMP Measure F-4, high winds are defined as 30 m.p.h. or greater. This level occurs only under unusually extreme conditions, such as Santa Ana wind conditions.

Notations in the above format, included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.

Mitigation #7

Prior to issuance of grading permits, the project applicant shall demonstrate measures to ensure compliance with SCAQMD Rule 403, and shall identify the dust suppression measures, such as regular watering, which shall be implemented to reduce emissions during construction and grading in

6. **AIR** (continued)

Mitigation #7 (continued)

a manner meeting the approval of the Manager, Development Services. This shall assist in reducing short-term impacts from particles which could result in nuisances that are prohibited by Rule 403.

Notations, included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.

7. **NOISE** **ANALYSIS**

Within the Impact Section of Noise of EIR 088 acoustical impacts were identified regarding construction and aircraft noise. Since the site is undeveloped, the project would result in an increase in existing noise levels. Short-term increases would result during construction activities, and long-tern increases may result from vehicular and aircraft noise, however not beyond those addressed in the EIR 088 or in excess of County Standards. The following mitigation measures would ensure that people would not be exposed to noise levels in excess of County Standards.

Mitigation #8

Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Development Services, that:

(1) All construction vehicles or equipment, fixed or mobile, operated within 1,000' of a dwelling shall be equipped with properly operating and maintained mufflers.
(2) All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).
(3) Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

Notations in the above format, appropriately numbered and included with other notations on the front sheet of grading plans. will be considered as adequate evidence of compliance with this condition.

Mitigation #9

All non-residential structures shall be sound attenuated against the combined impact of all present and projected noise from exterior noise sources to meet the interior noise criteria as specified in the Noise Element and Land Use/Noise Compatibility Manual.

Prior to the issuance of any building permits, evidence prepared under the supervision of a County-certified acoustical consultant that these standards will be satisfied in a manner consistent with applicable zoning regulations shall be submitted to the Manager, Building Permits, in the form of an acoustical analysis report describing in detail the exterior noise environment and the acoustical design features required to achieve the interior noise standard and which indicate that the sound attenuation measures specified have been incorporated into the design of the project.

7. **NOISE** (continued)

Mitigation #10

An avigation easement has been applied to this property. Prior to issuance of a building permit, the applicant/owner shall provide to each prospective purchaser, lessee, or tenant a notice and statement of acknowledgment that the property is subject to overflight, sight, and sound of aircraft operating from El Toro Marine Corps Air Station. The form and method of distribution of said notice and statement of acknowledgment shall be as approved by the Manager, Building Permits.

8. **BIOLOGICAL RESOURCES** **ANALYSIS**

The project would not bring about any change in the diversity of species, change or deterioration of flora and fauna habitat, change in the number of any species of plants or animals, reduction of the numbers of any unique, aesthetically significant, rare or endangered species of plants or animals beyond those addressed in EIR 088.

A number of potential biological impacts were associated with the development of Aliso Viejo. These impacts were identified under Impacts/Biological Resources Section in FEIR 088. The loss of native or natural vegetation/wildlife through project development is an unavoidable impact of urbanization. However, the benefits of the development of the Aliso Viejo Planned Community plan which guarantees management of the open space and remaining natural habitats outweigh the over-all reduction of these resources.

No potential impacts on biological resources is anticipated. The subject area has been graded (Grading Permit #87-162870 issued 2/20/87) and no significant species of plants or animals are in existence. No mitigation measures are warranted.

9. **AESTHETICS** **ANALYSIS**

EIR 088 identified impacts to aesthetic resources to be primarily the transformation of the rural canyon environment to one that is predominantly urban, business park and recreational in character. The proposed project would not result in the obstruction of any scenic vista or view open to the public. Compliance with the following mitigation measure will ensure that any impacts will be mitigated to a level of insignificance:

Mitigation #11

Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, as applicable, certify that it was installed in accordance with the certified plan. Said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, shall be furnished in writing to the Manager, Building Inspection Division, and the Manager, Construction Division, prior to the issuance of any certificates of use and occupancy.

10. CULTURAL/SCIENTIFIC RESOURCES **ANALYSIS**

No potential impacts on cultural and scientific resources related to this proposed project are anticipated. The site area has been graded (Preliminary Grading Permit No. #87-162870). Record searches and field surveys of previously located archaeological and paleontological sites were completed prior to the issuance of the preliminary grading permit. Archaeological and paleontological observation took place at the time the site was rough graded. No mitigation measures are warranted.

11. RECREATION **ANALYSIS**

Within the Impact Section of the Recreation impacts were not identified for this project area. No existing or proposed recreational uses are located on or adjacent to the project site. The project will not impact the quality or quantity of recreational opportunities. No mitigation measures are warranted.

12. ENERGY & MINERAL RESOURCES **ANALYSIS**

The proposed project would not result in abnormally high consumption of fuel or energy or increase demand on existing sources of energy or require the development of new sources of energy. The consumption rate associated with the project falls within energy projection/use incorporated during the planning process. No mitigation measures are warranted.

13. PUBLIC HEALTH AND SAFETY **ANALYSIS**

The site is located in an area designated to be developed the Business Park District of the Aliso Viejo Planned Community. Approval of required Site Development Permit will establish this use and regulate the impacts of the use which will ensure compliance with codes relevant to public health and fire hazards, Best Management Practices outlined in the National Pollution Discharge Elimination System (NPDES) Stormwater Regulation, and the State of California "Regulations for the Accommodation of the Disabled". Compliance will ensure that potential impacts will be mitigated to a level of insignificance. No additional mitigation measures are warranted.

14. PUBLIC SERVICES AND UTILITIES **ANALYSIS**

The proposed project will not result in the need for new or altered governmental services, i.e. Fire and Police protection, schools, maintenance of public facilities such as roads or other governmental services beyond those services addressed in EIR 088 certified for the Aliso Viejo Planned Community. No mitigation measures are warranted.

Within the Impacts Section of the Public Services and Utilities of EIR 088 impacts were identified regarding police, fire, health care, school, water,waste water, energy, telephone, and cable vision services.

The collection of the State mandated facility fees as well as the County established fees/assessment programs will assure the timely development of the project.

FINDINGS

1. **AB 3158 FEE EXEMPTION**: Find that pursuant to Section 711.4 of the California Fish and Game Code, this project is required to provide payment of required fees as it has been determined that the required fees have been previously paid.

2. The proposed project will be beneficial in achieving both long-term and short-term goals; it will provide both employment opportunities as well as additional housing opportunities for the future.

3. There are no cumulative impacts. The proposed project will generate additional vehicular movement since the project site is currently undeveloped, however, not beyond that already addressed in Final EIR 088.

4. The project as proposed will not have any adverse affects or impacts on humans or otherwise.

5. Final EIR 088 which was originally certified on 4/11/79 and certified as a program on 9/24/82, and subsequent Addendum, satisfy the requirements of CEQA for this project.

DETERMINATION:

I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because Final EIR 088, which was originally certified on 4/11/79 and certified as a program on 9/24/82, and subsequent Addendum, satisfies the requirements of CEQA for this project.

ALISO VIEJO

ADVISORY PLANNING COMMITTEE

July 29, 1997

Mr. Charles M. Shoemaker, Section Chief, Site Planning & Consistency Section
County of Orange
Planning & Development Services Department
P.O. Box 4048
Santa Ana, California 92702-4048

SUBJECT: Fluor Corporation - Global Administration Facility (Site Plan, PA 970113) and Fluor Daniel Southern California Facility (Site Plan, PA970114).

Dear Mr. Shoemaker:

At the July 23, 1997, Aliso Viejo Advisory Planning Committee (AVAPC) meeting, the Committee reviewed the above mentioned project. The Committee took the following action on the proposal:

- **Recommend that the County approve the proposed Fluor Corporation projects as presented to the AVAPC on July 23, 1997 with the following project condition of approval:**

  1. The applicant shall submit a lighting plan/study and a sign program to the AVAPC for review upon completion of said studies and prior to County approval of studies.

The applicant was agreeable to the above recommended conditional approval. Please provide AVAPC a copy of the County Staff Report for the project when it becomes available. If you should have any questions regarding this letter, please contact Larry Lawrence at (714) 661-8175.

Sincerely,

ALISO VIEJO ADVISORY PLANNING COMMITTEE

INFORMATION TO ACCOMPANY
PLANNING APPLICATION FOR
FLUOR DANIEL SOUTHERN CALIFORNIA FACILITY

==========

Application for: Initial Study and Site Plan

Project Name: Fluor Daniel Southern California Facility

Location: NE corner of Enterprise and Pacific Park Drive, Aliso Viejo

Acreage: 22.6 acres

Owner: Mission Viejo Company
26137 La Paz Road
Mission Viejo, CA 92691
(714) 837-6050

Applicant/Agent: Wayne Peterson
Wayne Peterson and Associates
27001 La Paz Road, Suite 400-18
Mission Viejo, California 92691
(714) 768-8815 FAX (714) 768-8816

LUE: 6 Urban Activity Center

Zone: PC (Planned Community)

P.C./S.P.: Aliso Viejo - PA 51 (Business Park/Urban Activity Center)

Supv. Dist.: 5

Project Proposal: Project proposes the development of an office campus of five buildings totalling approximately 454,000 square feet of gross floor area. The buildings will house Fluor Daniel's Southern California headquarters. The buildings are 3 and 4 stories (max. height 67'6") permitted under Urban Activity Center standards. This application includes a parking modification request to allow 1759 parking spaces instead of 1779 required (1% reduction).

Existing Site Conditions:
Mass grading of the site is in progress per previous Area Plan and Vesting Tentative Map approvals.

Previous Governmental Approvals:
FEIR 088, VTT 12810, Area Plan 86-05P

FROM: Manager, Subdivision and Grading Services

SUBJECT: PA 970114 - SITE PLAN TO PLANNING COMMISSION - FLUOR DANIEL'S SOUTHERN CALIFORNIA FACILITY - ALISO VIEJO P.C.

Attention: Bill Melton

This is a site plan to construct a five building, 454,000 square feet facility to serve as Fluor Daniel's Southern California headquarters. The site is located at the northeast corner of Laguna Hills Drive and San Joaquin Hills Transportation Corridor on tracts 14323, 14324, previously lots 1-9, TT 12810.

The two accesses proposed to the site off Laguna Hills Drive are at the existing loop street Discovery, the most southwesterly access will be full access and signalized, the other a non-signalized full access driveway. The existing Discovery is a public street, the applicant therefore, has to request and obtain the abandonment of this street by the County of Orange.

In addition the applicant is required to relocate the existing storm drain within the site.

A right turn deceleration lane is proposed on northeast bound Laguna Hills Drive, at the most southerly driveway access to the site.

The applicant is requesting an off street parking modification for a reduction from the required 1779 parking spaces to 1759 spaces.

MAJOR THOROUGHFARE AND BRIDGE FEE PROGRAM:

This project lies within the area of benefit of the San Joaquin Hills Transportation Corridor. The applicant is required to pay SJHTC Major Thoroughfare and Bridge fees in accordance with the adopted program.

This project lies within the Moulton Parkway zone of the area of benefit of the Moulton Parkway/Laguna Niguel Fee Program. The applicant is required to pay Major Thoroughfare and Bridge fees in accordance with the adopted program.

This project lies within the area of benefit of the Coastal Area Roadway Improvement and Traffic Signals Fee Program. The applicant is required to pay fees in accordance with the adopted program.

CONDITIONS:

1. Prior to issuance of each Building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the San Joaquin Hills Transportation Corridor.

2. Prior to issuance of each Building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the Moulton Parkway/Laguna Niguel area.

3. Prior to issuance of a Building permit, payment of fees will be required as prescribed in the Coastal Area Roadway Improvement and Traffic Signal Fee Program.

4. Prior to issuance of a Grading permit, adequate sight distance shall be provided at all intersections per Standard Plan 1117 in a manner meeting the approval of the Manager, Subdivision and Grading Services. This includes any necessary revisions to the pan to remove slopes or other encroachments from the Limited Use Area.

5. Prior to the issuance of a building permit applicant shall design a right turn lane on northeast bound Laguna Hills Drive, at the most southwesterly driveway access to the site, and dedicate to the County of Orange the necessary right of way to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

6. Prior to the issuance of a building permit the applicant shall obtain from the County of Orange the abandonment of the street Discovery in a manner meeting the approval of the Manager, Subdivision and Grading Services.

7. Prior to the issuance of a grading permit applicant shall relocate the existing storm drain in a manner meeting the approval of the Manager, Subdivision and Grading Services.

ORANGE COUNTY FIRE AUTHORITY

PO Box 86, Orange, CA 92856-0086 • 180 South Water St., Orange, CA 92866-2175

Larry J. Holms, Director of Fire Services *(714) 744-0400*

August 11, 1997

RECEIVED

AUG 13 1997

OF FIRE DEPT
BUREAU

To: Bill Melton, EMA

From: Cari Purkey, Senior Fire Safety Specialist
Orange County Fire Authority

Subject: **SR21413**

The following conditions shall apply to the above referenced project:

FP1 Water Improvement Plans
Prior to the recordation of a subdivision map, the subdivider shall submit water improvement plans to Fire Chief for review and approval to ensure adequate fire protection and financial security is posted for the installation. The water system design, location of valves, and the distribution of the fire hydrants will be evaluated and approved by the Fire Chief.

FP2 Fire Hydrants
Prior to the recordation of any subdivision map or the issuance of any building permits, whichever occurs first, the applicant shall submit to the Fire Chief evidence of the on-site fire hydrant system and indicate whether it is public or private. If the system is private, the system shall be reviewed and approved by the Fire Chief prior to issuance of building permits. Provisions shall be made by the applicant for the repair and maintenance of the system, in a manner meeting the approval of the Fire chief.

FP3 Automatic Fire Extinguishing Systems
Prior to the recordation of a subdivision map, a note shall be placed on the map stating that all structures greater than 6,000 square feet or structures identified by the Fire Chief shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

FP4 Fire Access
Prior to the recordation of a subdivision map, the applicant shall obtain approval of the Fire Chief of all fire protection access easements and shall dedicate them to the County/City. The CC&R's shall contain provisions which prohibit obstructions within the fire protection access easement. The approval of the Fire Chief is required for any modifications such as speed bumps, control gates or other changes in within said easement. Buildings appear to be out of the required access which states that all portions of the building shall be within 150 feet of fire department access.

FP7 Fuel Modification
A. Prior to the recordation of any subdivision map, the applicant shall obtain the Fire Chief's approval, in consultation with the Manager, Environmental and Project Planning of a conceptual fuel modification plan and program. Contact the Orange County Fire Authority Development Review Section at (714) 744-0477 for

requirements and clearance of this condition.

B. Prior to the issuance of any grading permits, the applicant shall obtain the Fire Chief's approval, in consultation with the Manager Environmental Project Planning, of a precise fuel modification plan and program. The plan shall indicate the proposed means of achieving an acceptable level of risk to structures by vegetation. Include the method (mechanical or hand labor) for removal of combustible vegetation and the planting of drought tolerant fire resistant plants.

C. Prior to the issuance of building permits, the developer shall have completed, under the supervision of the Fire Chief, that portion of the approved fuel modification plan determined to be necessary by the Fire Chief before the introduction of any combustible materials into the project area.

D. Prior to the issuance of any certificate of use and occupancy, the remainder of the fuel modification shall be installed and completed under the supervision of the Fire Chief. Further, the installed fuel modification shall be established to a degree meeting the approval of the Fire Chief. The CC&R's shall contain provision for maintaining the fuel modification zones including the removal of all dead and dying vegetation and the inspection and correction of any deficiencies in the irrigation system three times a year.

FP8 Street Plans

Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of preliminary plans for all streets and courts, public or private, from the Fire Chief in consultation with the Manager, Traffic Engineering. The plans shall include the plan view, sectional view, and indicate the width of the street or court measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked when a dead-end street exceeds 150 feet or when other conditions require it.

FP9 Street Markings

A. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval from the Fire Chief for street improvement plans with fire lanes shown. The plans shall indicate the locations of red curbing and signage. A drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color shall be submitted to and approved by the Fire Chief.

B. Prior to the issuance of the certificate of use and occupancy the approved fire lane marking plan shall be installed. The CC&R's shall contain a fire lane map and provisions which prohibit parking in the fire lanes. A method of enforcement shall be included.

FP11 Hazardous Materials Classification for Site Planning

Prior to the approval of any use/site permits for site planning, issuance of any grading permits, or building permits, whichever occurs first, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class. All forms of materials are to be converted to units

of measure in pounds, gallons and cubic feet.

FP13 Combustible Construction Letter
Prior to the issuance of any building permits for combustible construction, the developer shall submit and obtain the Fire Chief's approval of a letter and plan stating that water for fire fighting purposes and an all weather fire access road shall be in place and operational as required by the Uniform Fire Code before any combustible materials are placed on the site.

FP14 Water Availability
Prior to the issuance of any building permits, an Orange County Fire Authority Water Availability Form shall be submitted to and approved by the Plan Review Section of the Orange County Fire Authority. If sufficient water to meet fire flow requirements is not available, an automatic fire extinguishing system shall be installed in each structure, in a manner meeting the approval of the Fire Chief.

FP15 Fire Sprinkler System
Prior to the issuance of any building permits on those lot(s)/parcel(s) determined applicable by the Fire Chief, plans for the automatic fire sprinkler system shall be submitted to and approved by the Fire Chief prior to installation. This system shall be operational prior to the issuance of a certificate of use and occupancy.

FP16 Building Use Letter
Prior to the issuance of any building permits, the applicant shall submit a detailed letter of intended use for each building to the Fire Chief for review and approval.

FP17 Hazardous Materials Disclosure
Prior to the issuance of any building permits, the applicant shall contact the Orange County Fire Authority Hazardous Materials Disclosure Office at (714) 744-0463 to obtain a "Hazardous Materials Business Information and Chemical Inventory Packet". This shall be completed and submitted to the Fire Chief before the issuance of any building permits.

FP18 Architectural Plan
Prior to approval of a site development/use permit, or the issuance of a building permit, whichever occurs first, the applicant shall submit plans for the review and approval of the Fire Chief. The applicant shall include information on the plans required by the Fire Chief. Contact the Orange County Fire Authority Plans Review Section at (714) 744-0403 for the Fire Safety Site/Architectural Notes to be placed on the plans.

FP19 Fire Hydrant Markers
Prior to the issuance of any certificates of use and occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard and approved by the Fire Chief. On private property these markers are to be maintained in good condition by the property owner.

FP21 Fire Alarm System
Prior to installation, plans for the fire alarm system shall be submitted to and approved by the Fire Chief. This system shall be operational prior to the issuance of a Certificate of Use and Occupancy.

Should you have any questions or need my help, please feel free to contact me at my office (714) 289-7870, or fax me (714) 289-7811.

STANDARD DRAINAGE CONDITIONS

(For Site Plans/Use Permits, etc. - Rev. 1)

Subject: PA 97-0114 By: Robert Rhyne

Reviewed By: R. Young 8/19/97

Subject site is located within the Central Aliso Viejo Master Plan of Drainage (MPD). No MPD facilities are involved and no MPD fees are required, pursuant to Agreements D82-026 and D82-026-1.

Portions of subject project lie within FIRM Zone A and therefore subject to FP-2 zoning conditions. A Site Development Permit will be required prior to any proposed grading or improvement.

Approval is recommended subject to the following conditions:

1. Prior to issuance of any building permit or prior to the issuance of any grading permits, whichever comes first, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

   A. A drainage study of the site including diversions, off-site areas that drain onto and/or through the site, and justification of any diversions; and

   B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

   C. Detailed drainage studies indicating how the site grading, in conjunction with the drainage conveyance systems including applicable swales, channels, street flows, catch basins, storm drains, and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

2. A. Prior to issuance of any building permit or prior to the issuance of any grading permits, whichever comes first, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

      1. Design provisions for surface drainage; and

      2. Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

      3. Dedicate the associated easements to the County of Orange, if determined necessary.

   B. Prior to the issuance of any building permit, or prior to the issuance of any certificates of use and occupancy, whichever occurs first, said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

END

~~3. Prior to the issuance of any grading permit, and if determined necessary by the Manager, Subdivision and Grading, a letter of consent, in a form approved by the Manager, Subdivision and Grading, as suitable for recording, shall be obtained from the upstream and/or downstream property owners permitting drainage diversions and/or unnatural concentrations.~~

~~4. Prior to the issuance of any building permits, the applicant shall participate in the applicable Master Plan of Drainage in a manner meeting the approval of the Manager, Subdivision and Grading, including payment of fees and the construction of the necessary facilities.~~

1. ___ The height, area and configuration of man-made slopes shall be clearly shown. All slope areas shall be shown by type.

2. ___ Typical building pads proposed for the location of structures shall be graphically indicated with approximate dimensions and setbacks.

3. ___ Proposed finished grade elevations shall be shown:
   ___ A. Along proposed streets and drives at one hundred (100) foot intervals or opposite lot corners; and
   ___ B. On each proposed building pad.

4. ___ A statement of the estimated volume of export or borrow earth material required and the location of the disposal or borrow sites shall accompany the tentative map.

5. ___ A statement of the maintenance responsibility for each slope area shall be made.

6. ___ Soils and Geology Report
   A preliminary report, or reports, describing the soils and geologic conditions on the site and their effect on the feasibility of the plan of development, including the grading concept, shall be submitted with the tentative tract map. This report, or reports, shall be prepared under the supervision of a soils engineer and an engineering geologist.

7. ___ Height and inclination of man-made slopes exceed requirements.
   ___ A. Vertical height maximums for slopes in excess of (steeper than) five (5) feet horizontal to one (1) foot vertical.
      (1.) Type A slope - none.
      (2.) Type B slope - thirty-five (35) feet.
      (3.) Type C slope - twenty (20) feet.
   ___ B. Man-made slopes shall not be constructed one on top of another or combined in such a manner so that they exceed the maximum heights specified.
   ___ C. Man-made slopes shall be no steeper than two (2) feet horizontal to (1) foot vertical.

8. ___ Hillside Lot Design Criteria
   ___ A. Length and contour of man-made slopes.
   Man-made slopes shall be designed to resemble natural terrain where feasible, with a minimum of long, flat, inclined plane surfaces and acute angles.
   ___ B. Lots shall be designed so that where Type C slopes are proposed between abutting lots, the common property line shall be at the top of the slope.

9. ___ Drainage and Erosion Control Standards
   Where any lot is designed in such a manner that it will not drain directly to a street or common drainage facility with a minimum one percent (1%) grade, it shall be designed in a manner that will conform to the following criteria.
   ___ A. Lots shall be designed in such a manner that man-made slopes are not subject to sheet flow or concentrated drainage runoff from either the same or an adjacent lot.
   ___ B. All drainage flowing down man-made slopes except that drainage from water falling on each slope shall be contained within an appropriate drainage device.
   ___ C. All drainage flowing from one lot to or across another lot shall be within an approved drainage device located within a properly executed easement, where appropriate.

10. ___ Recreation Trails
   ___ A. A note shall be placed on the tentative map which reads "Grading of recreation trails shall conform to the requirements of the Orange County Grading and Excavation Code."
   ___ B. Major Cut/fill slopes and drainage devices related to recreation trails shall be shown.

SUBJECT: Aliso Viejo Planning Area 40 Fair Share Calculation for Intersections

Dear Bryan:

I have reviewed your letter of September 23, 1997, regarding the above subject and cannot support your recommended approach to address the fair share regional traffic obligations of the Aliso Viejo Planning Area 40. I believe that the approach recommended by staff in the Environmental & Project Planning Services Division (E&PPSD) is more in line with the guidelines of the County's Growth Management Program (GMP) and our practice in dealing with similar situations on other south county projects as discussed below:

1) The County's GMP guidelines recommend the use of the Intersection Capacity Utilization (ICU) methodology to assess traffic conditions at intersections. The staff's ICU-based formula recommended for your use is consistent with our GMP guidelines and the County's practice in assessing the fair share traffic impacts of a proposed project.

2) As indicated in your letter, the County has applied this ICU-based formula to other large scale projects such as Lower Peters Canyon Specific Plan and Northwood Point developments. It is important to note that this formula was supported by the cities adjacent to those developments as the most equitable method of calculating fair share contributions for regional intersection improvements. Similar methodology has been utilized on other south county projects. As we continue to work on the standardization of a methodology for Board approval, we hope to minimize some of the deficiencies that you highlighted in your letter.

3) It should also be noted that the fair share formula included in the County's GMP guidelines and used as the basis for your recommended formula applies only to "deficient intersections." As defined in the GMP guidelines, a "deficient intersection" is "one that is under the sole control of the County which is currently operating at worse than LOS 'D' as a result of factors outside the control of the County and where there are seemingly no opportunities for making any conventional geometric improvements..." Since there no designated "deficient intersections" in Aliso Viejo, this formula is not applicable to this project.

Lastly, it should be emphasized that it is the County's policy to require any project which causes an intersection to operate at an unacceptable level of service (e.g. worsens the LOS from "D" to "E" or "F") to be fully responsible for any needed improvements to mitigate the impacts to that intersection.

I look forward to resolving this issue in an expeditious manner to facilitate continued processing of discretionary approvals in the Aliso Viejo Planned Community. The E&PPSD will not support approval of any site plans in Planning Area 40 which increases the total trips beyond the previous trip cap of 69,378 ADT until this issue is resolved.

I look forward to your response and am willing to consider any other alternatives you may offer to achieve agreement. The meeting scheduled for Wednesday, October 1, 1997 can move us in this direction. If you have any questions, please contact me at 834-5312.

Very truly yours,

George Britton, Manager
Environmental & Project Planning
Services Division

DATE: September 23, 1997

SUBJECT: Aliso Viejo Planning Area 40: Fair Share Cost Calculation for Intersections

Thank you for the opportunity to meet on September 2 in response to your August 14 memorandum on this subject. On behalf of our client, Mission Viejo Company, we have reviewed your alternative approach to fair share calculation, and we conclude that the Northwood/Lower Peters Canyon methodology is not acceptable because it does not produce a fair share distribution of costs among developers. Per my August 22 memorandum, the following formula should be the basis of determining project fair share costs:

$$\text{Aliso Viejo Planning Area 40 Fair Share Cost Methodology} = \frac{\text{Project Trip Contribution to an Intersection}}{\text{Total Future Increase in Trips at the Intersection}}$$

The Aliso Viejo Planning Area 40 Traffic Analysis (April 15, 1997) included the total number of project trips and the total growth in trips at each intersection to compute the Planning Area 40 fair share costs. However, we recognize that the Bolsa Chica, Ladera and other projects use the change in Intersection Capacity Utilization (ICU) to compute fair share costs as follows:

$$\text{Bolsa Chica/Ladera ICU Methodology to Fair Share Costs} = \frac{\text{Project Contribution to an Intersection ICU}}{\text{Total Future Increase in the Intersection ICU}}$$

This methodology is equitable and has been applied by the County to the projects comparable to the Aliso Viejo Planning Area 40 Town Center. While this ICU calculation approach would result in higher fair shares for Planning Area 40, the methodology is justifiable. If the County remains concerned about the ICU impact of Planning Area 40 development, this methodology would address this concern acceptably.

We understand that the County recommends the following fair share formula which was used for the Lower Peters Canyon Specific Plan and Northwood Point traffic studies:

$$\text{Fair Share Cost} = \frac{\text{Future "With Project" ICU}}{\text{Future "With Project" ICU}} : \frac{\text{Future "No Project" ICU}}{\text{Future "With Mitigation" ICU}}$$

Per my August 21 memorandum, we have the following concerns regarding this approach:

1. The methodology does not appear to be as compatible with the O.C. Congestion Management Program (CMP) impact cost calculation methodology (Appendix, Pg. 11). The CMP and AV 40 Analysis methodology are as follows:

   $$\text{Impact Cost} = \frac{\text{development traffic}}{\text{capacity of improvement}} \times \text{improvement costs}$$

2. The methodology does not appear as consistent with the O.C. Growth Management Program (GMP) Traffic Guidelines (e.g., pg. A-3-14 Intersection Analysis). The GMP Traffic Guidelines require analysis of the project's total daily traffic contribution to the intersection compared to the total traffic entering the intersection, which is the AV 40 Analysis approach.

3. The Northwood Point and Lower Peters Canyon projects are undeveloped, previously unplanned areas with little or no infrastructure or existing highway fee and construction programs. The PA 40 project is the opposite situation; that is, the PA 40 project is an intensification of attractions within a largely completed highway system with several overlapping highway fee and development agreement programs.

4. The methodology could result in double-counting of shares - the total will always add-up to more than 100%.

5. The methodology could result in shares exceeding 100% (e.g., Alicia/Moulton = 137.5%) and shares less than zero percent (e.g., Alicia/Aliso Creek = minus 17%).

6. The methodology could introduce anomalies when the critical moves change between the "No Project" and "With Project Mitigation" cases (e.g., Glenwood Dr./Moulton Pkwy. and the Laguna Hills Dr./Moulton Pkwy. intersections where the "With Project Mitigation" and the "No Project" critical moves are different).

7. The methodology subtracts and divides the sums of percentages (i.e., ICU's are volumes as percentages of capacities) which have different volumes and capacities. Since the volumes and the critical moves at each intersection are different for the "future with project", "future without project", and "future with project mitigation"; the resulting ICU's should not be subtracted or divided (i.e., unless they were equalized for the differences in volumes/capacities).

In conclusion, the Northwood Point/Lower Peters Canyon fair share methodology is not consistent with CMP/GMP approach and is not equitable. The Aliso Viejo Planning Area 40 methodology is consistent with applicable County programs, guidelines and methodologies, and should therefore be the basis of determining the project fair share costs for regional intersection improvements. If the County remains concerned about the change in ICU's, then the Bolsa Chica methodology noted above represents an equitable ICU approach to calculating fair share.

Santa Ana, California 92702

SUBJECT: Fluor Site Plans (PA 970113, PA 970114)

Dear Mr. Persaud:

I have reviewed your September 15, 1997 memos regarding the two Fluor Corporation site plans in Aliso Viejo and have the following concerns:

PA 970113 - Fluor Global Administration Facility

Your memo recommends a condition of approval (your item #1) requiring this project to contribute a pro-rata share of improvements to the Alicia/Aliso Creek and Glenwood/Aliso Creek intersections. As your memo correctly points out, the development of this project fits under the 69,378 ADT cap established with the 1989 Area Plan and is therefore protected by the Aliso Viejo Development Agreement. No additional exactions are permitted under that Agreement. It is therefore inappropriate to apply this condition to this project.

Regarding your item #2, please be advised that a detailed design for the Pacific Park/Enterprise intersection has been worked out by the County Traffic staff (Grant Anderson, Tony Small), Robert Kahn, John Kain & Associates (RKJK) and Robert Bein, William Frost & Associates (RBF). This plan reflects lane configurations, turn pockets, traffic signal locations, channelization controls, etc. These improvements will be installed prior to or concurrent with the development of the Fluor project. Therefore, this proposed condition is unnecessary.

Regarding your item #3, we concur that the project is subject to the existing road fee programs as they have been applied to other projects in Aliso Viejo.

PA 970114 - Fluor Daniel Southern California Facility

Regarding your item #1, since this project is not located in Planning Area 40, it is not subject to any of the additional roadway improvement conditions imposed on the PA 40 ADT trip augmentation Area Plan. The development of this site is protected by the Aliso Viejo Development Agreement and additional exactions are prohibited.

Regarding your item #2, again, this site is not in PA 40 and therefore its development is protected by the Development Agreement. This proposed condition is inappropriate for this site.

Regarding your item #3, we concur that the project is subject to the existing road fee programs as they have been applied to other projects in Aliso Viejo.

If you have any disagreement with any of my comments above, please call Bob Kahn or me as soon as possible. We are moving toward administrative actions on these projects early next week and we would like to have these items resolved.

Thank you for your attention to this matter.

Sincerely,

WAYNE PETERSON AND ASSOCIATES

Wayne Peterson

County of Orange

MEMO

DATE: September 15, 1997

TO: Chuck Shoemaker, Chief, Site Planning & Consistency

FROM: Harry Persaud, Chief, Transportation Planning

SUBJECT: Site Plan for Fluor Global Administration Facility (PA 970113)

The 7.18-acre project site is located within the Town Center portion (Planning Area 40) of the Aliso Viejo Planned Community at the northeasterly corner of Enterprise and Pacific Park Drive. The project proposes the development of an office campus of two buildings totaling approximately 114,400 square feet of gross floor area. The two buildings will serve as the Fluor Corporation's international headquarters.

The cumulative impacts of this proposed project upon the local and regional circulation system were addressed in the Aliso Viejo Planning Area 40 (PA 40) Traffic Analysis prepared by RKJK. In addition, a Site Specific Traffic and Parking Study has been prepared by RKJK for this proposed project in conjunction with the site plan for the Fluor Southern California Facility (PA 970114).

The Transportation Planning Section has reviewed the subject proposal and offers the following comments:

1) The Aliso Viejo PA 40 Traffic Analysis identified traffic impacts associated with both the 1989 Approved Area Plan (with a daily trip generation ceiling of 69,378 daily trips) and the 1996 Approved Area Plan (with a daily trip cap of 125,000 daily trips). This proposed site plan falls within the future levels of development anticipated under the 1989 Approved Area Plan. According to the Aliso Viejo PA 40 Traffic Analysis, the following two intersections are anticipated to operate at an unacceptable level of service (LOS) under both Year 2020 With 1989 Approved Area Plan conditions and Year 2020 With 1996 Approved Area Plan conditions: Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW). Therefore, the following condition/mitigation measure is recommended:

   "Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the unfunded improvements needed at the intersections of Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), as identified in the Aliso Viejo Planning Area 40 Traffic Analysis. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

2) The proposed project is located adjacent to the intersection of Pacific Park Drive (NS) and Enterprise (EW). According to the Aliso Viejo PA 40 Traffic Analysis, this intersection is anticipated to operate at LOS "C" under Year 2020 With 1989 Approved Area Plan conditions and at LOS "D" under Year 2020 With 1996 Approved Area Plan conditions. However, it should be noted that it is the practice of the County to use a more conservative approach regarding the trip generation rate for office land uses and the internal trip "capture" assumption for mixed land uses than what was used

in the traffic studies for this proposed project. In order to ensure that this intersection operates at an acceptable level of service, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the following improvements at the intersection of Pacific Park Drive (NB) and Enterprise (EW): 1) construct dual right turn lanes westbound on Enterprise; 2) convert the southerly right turn lane to a combined right turn and through lane and modify the signalization to accommodate the combined movement when the southbound SR-73 ramp is opened; and 3) provide for westbound right turn overlap for this intersection. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

3) As indicated in the Aliso Viejo PA 40 Traffic Analysis, the project site lies within the areas of benefit of three existing road fee programs. Therefore, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall pay fees as prescribed in the Major Thoroughfare and Bridge Fee Programs for the San Joaquin Hills Transportation Corridor, the Moulton Parkway/Laguna Niguel Area, and the Coastal Area Road Improvements and Traffic Signals in a manner meeting the approval of the Manager, Subdivision and Grading Services."

If you have any questions, please contact either Mike Galizio of my staff at 834-2501 or myself at 834-3669.

MEMO

DATE: September 15, 1997

TO: Chuck Shoemaker, Chief, Site Planning & Consistency

FROM: Harry Persaud, Chief, Transportation Planning

SUBJECT: Site Plan for Fluor Southern California Facility (PA 970114)

The 22.6-acre project site is located in Planning Area 51 of the Aliso Viejo Planned Community at the southeasterly side of Laguna Hills Drive, immediately northerly of the San Joaquin Hills Transportation Corridor (SJHTC). The project proposes the development of an office campus of five buildings totalling approximately 454,000 square feet of gross floor area. The five buildings will serve as the Fluor Corporation's Southern California headquarters.

The cumulative impacts of this proposed project upon the local and regional circulation system were addressed in the Aliso Viejo Planning Area 40 (PA 40) Traffic Analysis prepared by RKJK. In addition, a Site Specific Traffic and Parking Study has been prepared by RKJK for this proposed project in conjunction with the site plan for the Fluor Global Administration Facility (PA 970113).

The Transportation Planning Section has reviewed the subject proposals and offers the following comments:

1) The Aliso Viejo PA 40 Traffic Analysis identified traffic impacts associated with both the 1989 Approved Area Plan (with a daily trip generation ceiling of 69,378 daily trips for PA 40) and the 1996 Approved Area Plan (with a daily trip cap of 125,000 daily trips for PA 40). According to the Aliso Viejo PA 40 Traffic Analysis, the following two intersections are anticipated to operate at an unacceptable level of service (LOS) under both Year 2020 With 1989 Approved Area Plan conditions and Year 2020 With 1996 Approved Area Plan conditions: Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW). Therefore, the following condition/mitigation measure is recommended:

   "Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the unfunded improvements needed at the intersections of Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), as identified in the Aliso Viejo Planning Area 40 Traffic Analysis. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

2) The proposed project is located adjacent to the intersection of Aliso Creek Road (NS) and Laguna Hills Drive North (EW). According to the Aliso Viejo PA 40 Traffic Analysis, this intersection is anticipated to operate at LOS "E" under Year 2020 With 1989 Approved Area Plan conditions and at LOS "D" under Year 2020 With 1996 Approved Area Plan conditions. However, it should be noted that it is the practice of the County to use a more conservative approach regarding the trip generation rate for office land uses and the internal trip "capture" assumption for mixed land uses than what was used

in the traffic studies for the proposed project. In order to ensure that this intersection operates at an acceptable level of service, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the upgrade the westbound approach of the intersection of Aliso Creek Road (NB) and Laguna Hills Drive North (EW) to provide dual left turn lanes and three through lanes. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

3) The project site lies within the areas of benefit of three existing road fee programs. Therefore, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall pay fees as prescribed in the Major Thoroughfare and Bridge Fee Programs for the San Joaquin Hills Transportation Corridor, the Moulton Parkway/Laguna Niguel Area, and the Coastal Area Road Improvements and Traffic Signals in a manner meeting the approval of the Manager, Subdivision and Grading Services."

If you have any questions, please contact either Mike Galizio of my staff at 834-2501 or myself at 834-3669.

According to the Aliso Viejo PA 40 Traffic Analysis, this intersection is anticipated to operate at LOS "E" under Year 2020 With 1989 Approved Area Plan conditions and at LOS "D" under Year 2020 With 1996 Approved Area Plan conditions. However, it should be noted that it is the practice of the County to use a more conservative approach regarding the trip generation rate for office land uses and the internal trip "capture" assumption for mixed land uses than what was used

in the traffic studies for the proposed project. In order to ensure that this intersection operates at an acceptable level of service, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the upgrade the westbound approach of the intersection of Aliso Creek Road (NB) and Laguna Hills Drive North (EW) to provide dual left turn lanes and three through lanes. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

3) The project site lies within the areas of benefit of three existing road fee programs. Therefore, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall pay fees as prescribed in the Major Thoroughfare and Bridge Fee Programs for the San Joaquin Hills Transportation Corridor, the Moulton Parkway/Laguna Niguel Area, and the Coastal Area Road Improvements and Traffic Signals in a manner meeting the approval of the Manager, Subdivision and Grading Services."

If you have any questions, please contact either Mike Galizio of my staff at 834-2501 or myself at 834-3669.

Subject: Planning Application PA 97-0114

Dear Planning Department:

I just received notice of the hearing on the above application and would like to state my current objection to the change in the maximum building height. I have never seen any drawings of this proposed project and am concerned with how this height change will effect my current quality of life.

My main concerns are:

Will this increase height negatively effect the view I have from my home?

Will this effect the value of my property?

Will this effect the noise I hear from the toll road or the already noisy military aircraft?

Will this increase in height, increase the number of people in these buildings, and therefore increase the traffic over what I was expecting based on the original height limits for my community?

I would like the above questions answered so I may make an informed decision on this project. Until that time I remain firmly against a 34% increase in the height limit for this project.

Sincerely,

Louis Boish

SUBJECT: Site Plan for Fluor Daniel Southern California Facility

Dear Mr. Buzas:

On behalf of Lowe Enterprises Commercial Group and the Fluor Corporation, the enclosed site plan application package for the Fluor Daniel Southern California Facility is being submitted for your review and processing for an administrative approval. This application is being processed concurrently with a site plan for the Fluor Global Adminstration Facility which is located on a site approximately one-half mile to the west of this site.

The 22.6-acre project site is located in Planning Area 51 of the Aliso Viejo Planned Community, on the southeastely side of Laguna Hills Drive, immediately northerly of the San Joaquin Hills Tollway. Ths site is designated for Business Park uses by the Planned Community Text and is also part of the Aliso Viejo Urban Activity Center. The proposed office use is completely consistent with the applicable land use regulations for the site.

The project site will serve as Fluor Daniel's Southern California headquarters. A total of 454,000 square feet of gross floor area will be contained in five buildings, two three-stories in height (54' max.) and three four-stories (67'6" max.). To the north of the project site, across Laguna Hills Drive, is an existing business park and to the east are two existing residential neighborhoods at a considerably lower elevation. To the south and west is the San Joaquin Hills Tollway and the Aliso Viejo Town Center beyond.

The layout of the site has been developed with a high degree of sensitivity to adjacent residential neighborhoods. The buildings have been clustered in the center of the site, with the closest buildings situated approximately 250 feet away from the edges of the site. In addition to the existing landscaped slopes which separate the residential areas from the project site, additional landscape area is proposed to provide additional screening. Parking lot lighting has been designed to minimize impact on adjacent homes by locating the light standards such that no direct light rays will be directed toward the residences. Site sections are provided which illustrate the relationship between the proposed buildings and the existing residences.

Access to the site will be via two or three driveways along Laguna Hills Drive. The main drive (across from Columbia) leads directly to a large entry court which opens to a large "gathering commons" located in the middle of the five-building campus. Landscaped off-street parking areas surround the building area. Parking for 1,759 vehicles is provided, 20 spaces less than the 1779 spaces required by the PC Text. A parking modification to permit the 1% reduction is incorporated in the site plan application. As a single-user campus, Fluor is able to strictly control the use of the buildings and the need for the on-site parking facilities. Further, Fluor Corporation is one of the corporate leaders in the area of car pooling, ride-sharing, van pooling and other innovative techniques to reduce the number of cars driven to their facilities each day. Fluor is confident that the parking will be more than adequate to meet their needs.

The proposed buildings have been designed by McLarand, Vasquez and Partners utilizing concrete and glass to reflect a strong corporate image. The buildings are in conformance with the applicable design guidelines for the area. Sign details will be incorporated in a Sign Program which will be submitted at a later date. A materials board and colored elevations are available if staff would like to review them.

A site-specific traffic and parking study for the project site has been prepared by RKJK and has been submitted as a part of this application package. That study concludes that the existing and future arterial highway system is adequate to accommodate the proposed project subject to the incorporation of certain design-level improvements to facilitate traffic flow into and out of the site.

Pursuant to the requirements of the PC Text, this project has been submitted to the Aliso Viejo Advisory Planning Committee (AVAPC) for comment. The project is on the AVAPC's agenda for their July 23rd meeting. Representatives from the project team will be making a presentation on the project to the AVAPC and the results of their review will be forwarded to you for your files.

On behalf of the entire project team, please accept our invitation for a site tour or a follow-up briefing if you feel it would be helpful. Please do not hesitate to contact me during the processing of this project if there is any additional information needed or if clarification is needed on any aspect of this project. Please call me if you have any questions.

Sincerely,

WAYNE PETERSON AND ASSOCIATES

NOTICE OF PUBLIC HEARING
BY THE ORANGE COUNTY ZONING ADMINISTRATOR

SUBJECT: PUBLIC HEARING ON PLANNING APPLICATION PA 97-0114
FOR SITE DEVELOPMENT PERMIT

PROPOSAL: Modification of the site development standard for building height. The applicant is requesting a maximum building height of 67 feet (to the top of the roof mounted equipment screen) when the standard for building height is 50 feet. The height modification request is in association with the construction of a three and four-story, 454,000 square feet, five building office complex on a 22 acre site in the Aliso Viejo Planned Community Business Park.

LOCATION: At the northeast quadrant of the intersection of Laguna Hills Drive and the San Joaquin Hills Transportation Corridor. See other side for project location map.

APPLICANT: Fluor Corporation

ENVIRONMENTAL DOCUMENTATION: The proposed project is covered by previously certified Final EIR 088

HEARING DATE: Thursday, October 23, 1997

HEARING TIME: 2:00 P. M. **(Or as soon as possible thereafter)**

HEARING LOCATION: 300 N. Flower Street (southwest corner of N. Flower Street and W. Santa Ana Blvd.), 5th Floor, Room 503, Santa Ana, CA. See other side for Hearing Location Map.

INVITATION TO BE HEARD:

The applicant and all persons either favoring or opposing this proposal and all supporting documents are invited to present their views at this hearing. It is requested that any written response be submitted to the Planning and Development Services Dept. prior to the hearing date. If you challenge the action taken on this proposal in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the Planning and Development Services Dept.

For further information, call Bill Melton at (714) 834-2541 (FAX 834-4652) or come to the Development Processing Center at the address indicated below.

SUBJECT: **PA 970114 - SITE PLAN TO PLANNING COMMISSION - FLUOR DANIEL'S SOUTHERN CALIFORNIA FACILITY - ALISO VIEJO P.C.**

Attention: Bill Melton

This is a site plan to construct a five building, 454,000 square feet facility to serve as Fluor Daniel's Southern California headquarters. The site is located at the northeast corner of Laguna Hills Drive and San Joaquin Hills Transportation Corridor on tracts 14323, 14324, previously lots 1-9, TT 12810.

The two accesses proposed to the site off Laguna Hills Drive are at the existing loop street Discovery, the most southwesterly access will be full access and signalized, the other a non-signalized full access driveway. The existing Discovery is a public street, the applicant therefore, has to request and obtain the abandonment of this street by the County of Orange.

In addition the applicant is required to relocate the existing storm drain within the site.

A right turn deceleration lane is proposed on northeast bound Laguna Hills Drive, at the most southerly driveway access to the site.

The applicant is requesting an off street parking modification for a reduction from the required 1779 parking spaces to 1759 spaces.

MAJOR THOROUGHFARE AND BRIDGE FEE PROGRAM:

This project lies within the area of benefit of the San Joaquin Hills Transportation Corridor. The applicant is required to pay SJHTC Major Thoroughfare and Bridge fees in accordance with the adopted program.

This project lies within the Moulton Parkway zone of the area of benefit of the Moulton Parkway/Laguna Niguel Fee Program. The applicant is required to pay Major Thoroughfare and Bridge fees in accordance with the adopted program.

This project lies within the area of benefit of the Coastal Area Roadway Improvement and Traffic Signals Fee Program. The applicant is required to pay fees in accordance with the adopted program.

CONDITIONS:

1. Prior to issuance of each Building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the San Joaquin Hills Transportation Corridor.

2. Prior to issuance of each Building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the Moulton Parkway/Laguna Niguel area.

3. Prior to issuance of a Building permit, payment of fees will be required as prescribed in the Coastal Area Roadway Improvement and Traffic Signal Fee Program.

4. Prior to issuance of a Grading permit, adequate sight distance shall be provided at all intersections per Standard Plan 1117 in a manner meeting the approval of the Manager, Subdivision and Grading Services. This includes any necessary revisions to the pan to remove slopes or other encroachments from the Limited Use Area.

5. Prior to the issuance of a building permit applicant shall design a right turn lane on northeast bound Laguna Hills Drive, at the most southwesterly driveway access to the site, and dedicate to the County of Orange the necessary right of way to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

6. Prior to the issuance of a building permit the applicant shall obtain from the County of Orange the abandonment of the street Discovery in a manner meeting the approval of the Manager, Subdivision and Grading Services.

7. Prior to the issuance of a grading permit applicant shall relocate the existing storm drain in a manner meeting the approval of the Manager, Subdivision and Grading Services.

MEMO

DATE: January 21, 1998

TO: Charles Shoemaker, Site Planning

FROM: Water Quality Management Coordinator, NPDES Section, Subdivision/Grading Division

SUBJECT: Site Development Permit: SP PA 97-0114, Fluor Facility, Aliso Viejo, Urban Runoff Condition

Water Quality Management Plans (WQMP) were submitted for subject condition on January 14, 1998. Revisions were discussed on the same day. On January 20, 1998, applicant faxed a memo agreeing to make necessary changes tp the WQMPs.

This memo serves as preliminary clearance to allow applicant to get grading permits or building permits.

NOTICE OF PUBLIC HEARING
BY THE ORANGE COUNTY ZONING ADMINISTRATOR

SUBJECT: PUBLIC HEARING ON PLANNING APPLICATION PA 97-0114
FOR SITE DEVELOPMENT PERMIT

PROPOSAL: Modification of the site development standard for building height. The applicant is requesting a maximum building height of 67 feet (to the top of the roof mounted equipment screen) when the standard for building height is 50 feet. The height modification request is in association with the construction of a three and four-story, 454,000 square feet, five building office complex on a 22 acre site in the Aliso Viejo Planned Community Business Park.

LOCATION: At the northeast quadrant of the intersection of Laguna Hills Drive and the San Joaquin Hills Transportation Corridor. See other side for project location map.

APPLICANT: Fluor Corporation

ENVIRONMENTAL DOCUMENTATION: The proposed project is covered by previously certified Final EIR 088

HEARING DATE: Thursday, October 23, 1997

HEARING TIME: 2:00 P. M. **(Or as soon as possible thereafter)**

HEARING LOCATION: 300 N. Flower Street (southwest corner of N. Flower Street and W. Santa Ana Blvd.), 5th Floor, Room 503, Santa Ana, CA. See other side for Hearing Location Map.

INVITATION TO BE HEARD:

The applicant and all persons either favoring or opposing this proposal and all supporting documents are invited to present their views at this hearing. It is requested that any written response be submitted to the Planning and Development Services Dept. prior to the hearing date. If you challenge the action taken on this proposal in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the Planning and Development Services Dept.

For further information, call Bill Melton at (714) 834-2541 (FAX 834-4652) or come to the Development Processing Center at the address indicated below.

The height modification request is in association with the construction of a three and four-story, 454,000 square feet, five building office complex on a 22 acre site in the Aliso Viejo Planned Community Business Park.

LOCATION: At the northeast quadrant of the intersection of Laguna Hills Drive and the San Joaquin Hills Transportation Corridor. See other side for project location map.

APPLICANT: Fluor Corporation

ENVIRONMENTAL DOCUMENTATION: The proposed project is covered by previously certified Final EIR 088

HEARING DATE: Thursday, October 23, 1997

HEARING TIME: 2:00 P. M. **(Or as *soon* as possible thereafter)**

HEARING LOCATION: 300 N. Flower Street (southwest corner of N. Flower Street and W. Santa Ana Blvd.), 5th Floor, Room 503, Santa Ana, CA. See other side for Hearing Location Map.

INVITATION TO BE HEARD:

The applicant and all persons either favoring or opposing this proposal and all supporting documents are invited to present their views at this hearing. It is requested that any written response be submitted to the Planning and Development Services Dept. prior to the hearing date. If you challenge the action taken on this proposal in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the Planning and Development Services Dept.

For further information, call Bill Melton at (714) 834-2541 (FAX 834-4652) or come to the Development Processing Center at the address indicated below.

ORANGE COUNTY ZONING ADMINISTRATOR HEARING - October 23, 1997

ZONE TAPE NO.: ZA0B16 RECORDING INDEX: 0:16:19-E.O.T. TIME: 2:03

ITEM 1.: PUBLIC HEARING: - Planning Application No. PA 97-0114, EIR 88, of Fluor Corporation.

The Zoning Administrator introduced the project.

Planner IV Melton gave the staff presentation. He stated that the proposed project is a request for the construction of a 454,000 square feet, five building office complex located in Aliso Viejo. Mr. Melton stated that the applicant is requesting a height modification to allow building height of 67 feet when the standard is 50 feet. He stated that the project is a five office building complex composed of 2 three-story buildings and 4 four-story buildings. He noted that the buildings are clustered around a landscaped courtyard. Mr. Melton stated that the three-story buildings are 54 feet in height from finished grade to the top of the roof mounted mechanical screening, and the four-story buildings are 67 1/2 feet from the finished grade to the top of the roof mounted mechanical screening. He stated that this project would normally have been handled administratively but the applicant is requesting a modification to the development standards.

Mr. Melton stated that the exteriors of the buildings are designed to reflect the Business Park theme. He noted that the office complex is generally located at the center of the site with setbacks of approximately 220 feet from Laguna Hills Drive, 190 feet from the San Joaquin Hills Transportation Corridor, 240 feet from the property line to the north, and 260 feet from the property line to the east.

Mr. Melton stated that 1,744 parking spaces are provided based on the gross leasable space. He explained how the parking requirement was determined. Mr. Melton pointed out the ingress and egress for the project. Mr. Melton stated that staff was recommending approval of the proposed project.

Mr. Melton stated that staff did receive one letter of concern from Louis Boish raising an objection to the height increase. Mr. Boish didn't know how the increased height negatively effect the view he has from his home; will it effect the value of his property; will this effect the noise he hears from the toll road or the already noisy military aircraft; increase traffic.

2:10 P.M.: The Zoning Administrator opened the public hearing.

Wayne Peterson, representing Fluor Corporation, stated that the reason a height modification was requested was to allow the clustering of the office buildings. He presented photos of the project design. Mr. Peterson stated that there are 9 existing recorded lots on the property which could have been built on individually. He stated that he has read the staff report and supports it. He

stated that he was requesting modifications to conditions 8, 12, 19, 22, and 34.

Mr. Buzas discussed the modifications requested to conditions 8, 12, 19, 22, and 34. He agreed to the requested modifications.

Mr. Peterson address the concerns raised in Mr. Boish's letter.

2:23 P.M.: No one else wishing to be heard, the Zoning Administrator closed the public hearing.

ACTION: 2:23 P.M.: The Zoning Administrator approved Planning Application No. PA 97-0114 for Site Development Permit with 8 Findings and 37 Conditions; with modification to condition numbers 8, 19, 22, and 34 (as shown below), as recommended in the Current Planning Division report, dated October 23, 1997.

~~8. CP CP B SPECIAL - LIGHTING~~
~~Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.~~

8. CP CP U SPECIAL - LIGHTING
Prior to the issuance of certificates of use and occupancy, the applicant shall submit evidence to the Manager, Current Planning Services Division showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations and has been reviewed by the Aliso Viejo Advisory Planning Committee.

12. ER SG G POLLUTANT RUNOFF
Prior to issuance of precise grading or building permits, ~~whichever comes first~~ as determined by the Manager Subdivision and Grading Division, the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

19. F F ~~G~~ B SITE PLANNING
Prior to the issuance of ~~grading~~ building permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class.

All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

22. SG SG/BI ~~G~~BU PVT LANDSCP

A. Prior to the issuance of ~~precise grading~~ building permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

34. TE TE B ACCESS

Prior to the issuance of the first building permit, the applicant shall design a right turn lane on the northeast bound Laguna Hills Drive, at the most southwesterly driveway access to the site, and shall initiate the process to dedicate to the County of Orange the necessary right of way to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

ITEM # 1

PLANNING AND DEVELOPMENT SERVICES REPORT

DATE: October 23, 1997

TO: Orange County Zoning Administrator

FROM: P&DSD/Current Planning Services Division

SUBJECT: Public Hearing on Planning Application PA 97-0114

PROPOSAL: Site Development Permit for a modification of an Aliso Viejo Planned Community "Business Park" site development standard to allow a building height of 67 feet when the standard is 50 feet in association with the construction of a 454,000 square feet, five building office complex.

LOCATION: In the Community of Aliso Viejo at the northeast quadrant of the intersection of Laguna Hills Drive and the San Joaquin Hills Transportation Corridor. Fifth Supervisorial District.

APPLICANT: Fluor Corporation, property developer
Mission Viejo Co., property owner
Wayne Peterson and Associates, agent

SYNOPSIS: Current Planning Services Division recommends Zoning Administrator approval subject to findings and conditions.

STAFF PLANNER/CONTACT: William V. Melton, Project Manager
Phone: (714) 834-2541, FAX: 834-4652 or 6132

BACKGROUND:

The Fluor Corporation requests a Site Development Permit to modify the site development standard for height to permit the construction of the Fluor Corporation Global Administration Facility/Southern California Facility in Aliso Viejo. The project is a five building complex totaling 454,000 square feet of office space with 1,759 parking spaces on a 22.3 acre site in Planning Area 51 "Business Park" of the Aliso Viejo Planned Community.

The five office building complex is composed of 2 three-story buildings and 3 four-story buildings. The buildings are clustered around a landscaped courtyard with the 2 three-story buildings located closest to Laguna Hills Drive. As proposed, the three-story buildings are 54 feet in height from finished grade to the top of the roof mounted mechanical screening, and the four-story buildings are 67 1/2 feet from the finished grade to the top of the roof mounted mechanical screening. The site development standards for the Business Park permits a maximum height of 50 feet, unless modified by a Site Development Permit as permitted by Section XXIV of the Aliso Viejo Planned Community development regulations and Section 7-9-150.1(d) of the Orange County Zoning Code.

The exteriors of the buildings are designed to reflect the Business Park theme through the use of masonry walls and glass panels. The office complex is generally located at the center of the site with setbacks of approximately 220 feet from Laguna Hills Drive, 190 feet from the San Joaquin Hills Transportation Corridor, 240 feet from the property line to the north, and 260 feet from the property line to the east.

A total of 1,759 parking spaces are provided. The total number of parking spaces required is 1,744, which was determined by using the gross rentable building area for the five buildings of 436,000 square feet plus the basement storage areas of 12,500 square feet The parking area, which is accessed from a signalized intersection at Laguna Hills Drive surrounds the buildings, has standard 9' x 18' parking stalls and 24 feet wide aisle ways. The main entrance has two drive lanes in and two drive lanes out. This entrance then branches into the 28 feet wide primary circulation drive. The secondary entrance, on the northern property line is 48 feet wide. All landscaping is designed to conform with the Business Park theme and requirements. The landscaping is 35 feet in depth along Laguna Hills Drive; and is provided around the perimeter of the site and throughout the parking area. Screening of the parking area will be installed adjacent to Laguna Hills Drive and the abutting residential areas as required.

SITE ZONING AND SURROUNDING LAND USE:

Direction	PC Planning Area	Designation	Existing Land Use
Project Site	51.1	Business Park	Vacant
North	50.3	Business Park	Business/Industrial
South	40.2 *	Town Center	Vacant **
East	24.1	High Den. Residential	Residential
West	50.3	Business Park	Business/Industrial

* The San Joaquin Hills Transportation Corridor separates Planning Area 50.3 and 40.2

** Planning Application PA 97-0113 is pending approval or has been approved for a Site Development Permit for the construction of the Fluor Corporation Global Administration Facility in Aliso Viejo. The project consists of two office buildings totaling 114,400 square feet on a 7.18 acre site.

CEQA COMPLIANCE:

The proposed project is covered by Final EIR 088 previously certified on 9/24/82. Prior to project approval, this EIR must be found adequate to satisfy the requirements of CEQA the Zoning Administrator. Attachment A of this report contains the required CEQA Finding.

PUBLIC NOTICES AND COMMENTS RECEIVED:

A Notice of Hearing was mailed to all owners of record within 300 feet of the subject site. Additionally, a notice was posted at the site, at the 300 N. Flower Building and as required by established public hearing posting procedures. A copy of the planning application and a copy of the proposed site plan were distributed for review and comment to eight County Divisions, the Aliso Viejo Advisory Planning Committee, the State Permit Assistance Center, the Orange County Fire Authority and the Capistrano Unified School District.

As of the writing of this staff report, comments received have been regulatory in nature and have been incorporated into the project conditions of approval where appropriate. The proposal and site plan were reviewed by the Aliso Viejo Advisory Planning Committee and approved at their July 23, 1997 meeting. The Committee did not raise a concern with regards to the modification requested for increased building height.

Staff received several letters and telephone calls after the mailing of the Public Hearing Notice. The callers and writers were concerned as to the location of the office buildings relative to the residential area because of the modification to the height standard proposed. Two callers were concerned that people in the office building would be looking into their back yards. The buildings will be between 240 and 260 feet from the property lines abutting the residential areas.

REVIEW AND ANALYSIS:

Planning Area 51 of the Aliso Viejo Planned Community has a land use designation of "Business Park". The Fluor proposal is a principal permitted use in the Business Park. The objective of the Business Park designation is to provide a balanced economic and employment base for the community of Aliso Viejo. The Business Park is located in proximity to residential areas to minimize commuter work trips and vehicle miles traveled. High density multi-family residential land uses are located to the north and east of the site.

Staff identified no planning issues associated with the request for the increased building height. The project site is on an elevated graded pad with a ground elevation of between 20 to 30 feet above the ground elevation of the adjacent residential projects. With a building setback of 240 and 260 feet from the nearest residential structure, the requested increase in building height will not restrict the distant views from the nearby residential area. People in the office building will not be looking into the adjacent residents back yards. The setbacks required by this project are the height of the buildings. Therefore, the setbacks proposed for this project are up to four times greater than is permitted by the site development regulations. Staff is of the opinion that this is a better project with the site development modification than could be built with the standard height and setback requirements. By allowing the buildings to exceed the standard building height, the office complex can be concentrated at the center of the site and therefore provide for increased setbacks from the residential areas and Laguna Hills Drive.

The proposed Fluor Corporation Global Administration Facility/Southern California Facility office complex is consistent with the Business Park objectives and conforms to all the site development standards, except for building height. The office park will be an asset to the community. It will help achieve the Business Park objective of providing a balanced residential/employment community. Staff supports the Fluor Corporation proposal and also supports the request for a site development modification of the building height.

RECOMMENDATION

Current Planning Services Division recommends the Zoning Administrator:

a. Receive staff presentation and public testimony as appropriate; and,

b. Approve Planning Application PA 97-0114 subject to the attached Findings and Conditions of Approval.

Respectfully submitted,

C. M. Shoemaker, Chief
CPSD/Site Planning Section

WVM FOLDER: AVPC

Attachments: A. Recommended Findings

B. Recommended Conditions of Approval

Exhibits: 1. Applicant's Letter of Explanation

2. Site Plans and Site Photos

ATTACHMENT A

FINDINGS

The Orange County Zoning Administrator hereby finds:

I. The project is consistent with the objectives, policies, general land uses and programs specified by the General Plan adopted pursuant to the State Planning and Zoning Laws.

II. The project, subject to the specified conditions, is consistent with the provisions of the Zoning Code and Aliso Viejo Planned Community.

III. The decision-maker has considered Final EIR 088, previously certified on 9/24/82, and Addendum No. PA970113 prior to project approval. Together they are approved for the proposed project based upon the following findings:

a. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

b. The additions, clarifications and/or changes to the original document caused by the Addendum, do not raise new significant issues which were not addressed by the EIR; and

c. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Lead Agency.

IV. The location, size, design and operating characteristics of the project will not create unusual noise, traffic or other conditions or situations that may be objectionable, detrimental or incompatible with other permitted uses in the vicinity.

V. The project will not result in conditions or circumstances contrary to the public health and safety and the general welfare.

VI. The project is located within a fee area as that term is defined in Section 7-9-702 and will contribute to the need for a fire station and/or library facility for which a fee is required.

VII. The subject project lies within the area of benefit of the San Joaquin Hills Transportation Corridor. In order to find this project consistent with the General Plan and to ensure that the traffic impacts have been adequately mitigated, it is necessary to adopt a condition requiring the developer to participate in the fee program adopted by the Board of Supervisors.

VIII. The alternate development standard(s) will result in an equivalent or better project in terms of adverse impacts and public benefits to the immediate and surrounding community.

ATTACHMENT B

CONDITIONS OF APPROVAL

1. CP NA NA BASIC/ZONING REGULATIONS
This approval constitutes approval of the proposed project only to the extent that the project complies with the Orange County Zoning Code and any other applicable zoning regulations. Approval does not include any action or finding as to compliance of approval of the project regarding any other applicable ordinance, regulation or requirement.

2. CP NA NA BASIC/TIME LIMIT
This approval is valid for a period of 36 months from the date of final determination. If the use approved by this action is not established within such period of time, this approval shall be terminated and shall thereafter be null and void.

3. CP NA NA BASIC/PRECISE PLAN
Except as otherwise provided herein, this permit is approved as a precise plan. After any application has been approved, if changes are proposed regarding the location or alteration of any use or structure, a changed plan may be submitted to the Director-Planning and Development Services Department for approval. If the Director determines that the proposed change complies with the provisions and the spirit and intent of the approval action, and that the action would have been the same for the changed plan as for the approved plot plan, he may approve the changed plan without requiring a new public hearing.

4. CP NA NA BASIC/COMPLIANCE
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

5. CP NA NA BASIC/OBLIGATIONS
Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

6. CP CP B SPECIAL - REVISED PLANS
Prior to the issuance of building permits, the applicant shall submit a Changed Plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the regulations contained in Zoning Code Section 7-9-143 "Facility Design Regulations".

7. CP CP U SPECIAL - REVISED SCREENING
Prior to the issuance of certificates of use and occupancy, the applicant shall submit a revised preliminary landscaping plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the screening and landscaping regulations contained Sections XI.B.10 and 11 of the Aliso Viejo Planned Community development regulations.

8. CP CP B SPECIAL - LIGHTING
Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.

9. CP CP B SPECIAL - SIGNS
Prior to the installation of any signs, the applicant shall submit a "Sign Program". The Sign Program shall be approved through a Changed Plan as required by Zoning Code Section 7-9-150. The Sign Program shall be in substantial conformance with Section XXI of the Aliso Viejo Planned Community development regulations. The Sign Program shall be reviewed by the Aliso Viejo Advisory Planning Committee prior to approval of the Changed Plan.

10. SG SG G GEOLOGY RPT
Prior to the issuance of a grading permit, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

11. BP BP G CONST NOISE
A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

(1) All construction vehicles or equipment, fixed or mobile, operated within 1,000' of a dwelling shall be equipped with properly operating and maintained mufflers.

(2) All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

(3) Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.

12. ER SG G POLLUTANT RUNOFF

Prior to issuance of precise grading or building permits, whichever comes first, the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

13. ER DS G NPDES PERMIT

Prior to issuance of any grading permits, the applicant shall submit evidence to the Manager, Subdivision and Grading, that the applicant has obtained coverage under the NPDES statewide General Stormwater Permit from the State Water Resources Control Board.

14. SG SG GB DRAINAGE STUDY

Prior to the issuance of any grading permits, or prior to the issuance of building permits, whichever comes first, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels, street flows, catch basins, storm drains, and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

15. SG SG GB DRAINAGE IMPRO

A. Prior to the issuance of any grading permits or prior to the issuance of building permits, whichever comes first, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

SG C U DRAINAGE IMPROV

B. Prior to the issuance of any certificates of use and occupancy, said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

16. F F R FIRE ACCESS

Prior to the issuance of grading permits, the applicant shall obtain approval of the Fire Chief of all fire protection access easements and shall dedicate them to the County. The CC&Rs shall contain provisions which prohibit obstructions within the fire protection access easement. The approval of the Fire Chief is required for any modifications such as speed bumps, control gates or other changes within said easement.

17. F F G STREET PLANS

Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of preliminary plans for all street and courts, public or private, from the Fire Chief in consultation with the Manager, Traffic Engineering. The plans shall include the plan view, sectional view, and indicate the width of the street or court, measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked when a dead-end street exceeds 150 feet or when other conditions require it.

18. F F GU STREET MARKINGS

A. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval from the Fire Chief for street improvement plans with fire lanes shown. The plans shall indicate the locations of red curbing and signage, and provide a drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color.

B. Prior to the issuance of the certificate of use and occupancy, the approved fire lane marking plan shall be installed. The CC&Rs shall contain a fire lane map and provisions which prohibit parking in the fire lanes. A method of enforcement shall be included.

19. F F G SITE PLANNING

Prior to the issuance of grading permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class. All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

20. TE TE G SIGHT DISTANCE

Prior to the issuance of any grading permits, the applicant shall provide adequate sight distance at all street intersections per Standard Plan 1117, in a manner meeting the approval of the Manager, Traffic Engineering. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.

21. TE TE G STORM DRAIN
Prior to the issuance of grading permits, the applicant shall relocate the existing storm drain in a manner meeting the approval of the Manager, Subdivision and Grading Services.

22. SG SG/BI GU PVT LANDSCP

A. Prior to the issuance of precise grading permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

23. BP BP B ACOUST NON-RES
Except when the interior noise level exceeds the exterior noise level, all non-residential structures shall be sound attenuated against the combined impact of all present and projected noise from exterior noise sources to meet the interior noise criteria as specified in the Noise Element and Land Use/Noise Compatibility Manual.

Prior to the issuance of any building permits, the applicant shall submit to the Manager, Building Permits, evidence prepared under the supervision of a County-certified acoustical consultant that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5. The evidence shall be in the form of an acoustical analysis report describing in detail the exterior noise environment and the acoustical design features required to achieve the interior noise standard and which indicate that the sound attenuation measures specified have been incorporated into the design of the project.

24. F F B WATER
Prior to the issuance of the first building permit, the subdivider shall submit water improvement plans to the Fire Chief for review and approval to ensure adequate fire protection and financial security is posted for the

installation. The water system design, location of valves, and the distribution of fire hydrants will be evaluated and approved by the Fire Chief..

25. F F RB FIRE HYDRANTS
Prior to the issuance of first building permit, the applicant shall submit to the Fire Chief evidence of the on-site fire hydrant system. The system shall be reviewed and approved by the Fire Chief prior to issuance of building permits. Provisions shall be made by the applicant for the repair and maintenance of the system, in a manner meeting the approval of the Fire Chief.

26. F F B AUTO FIRE EXT
Prior to the issuance of building permits, the applicant shall place a note on the construction plans stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

27. F F B COMBSTBLE CONST
Prior to the issuance of any building permits for combustible construction, the developer shall submit and obtain the Fire Chief's approval of a letter and plan stating that water for fire fighting purposes and an all weather fire access road shall be in place and operational as required by the Uniform Fire Code before any combustible materials are placed on the site.

28. F F B WATER AVAILABILITY
Prior to the issuance of any building permits, an Orange County Fire Authority Water Availability Form shall be submitted to and approved by the Plan Review Section of the Orange County Fire Authority. If sufficient water to meet fire flow requirements is not available, an automatic fire extinguishing system shall be installed in each structure, in a manner meeting the approval of the Fire Chief.

29. F F BU FIRE SPRINKLERS
Prior to the issuance of any building permits, plans for an automatic fire sprinkler system shall be submitted to and approved by the Fire Chief prior to installation. This system shall be operational prior to the issuance of a certificate of use and occupancy.

30. F F B BUILDING USE
Prior to the issuance of any building permits, the applicant shall submit a detailed letter of intended use for each building to the Fire Chief for review and approval.

31. F F B HAZARDOUS MATERIALS DISCLOSURE
Prior to the issuance of any building permits, the applicant shall contact the Orange County Fire Authority Hazardous Materials Disclosure Office at (714) 744-0463 to obtain a "Hazardous Materials Business Information and Chemical Inventory Packet". This shall be completed and submitted to the Fire Chief before the issuance of any building permits.

32. F F B FIRE SAFETY SITE PLAN

Prior to the issuance of a building permit, the applicant shall submit plans for the review and approval of the Fire Chief. The applicant shall include information on the plans required by the Fire Chief. Contact the Orange County Fire Authority Plans Review Section at (714) 744-0403 for the Fire Safety Architectural Notes to be placed on the plans.

33. TE TE B ROAD FEE PROG

Prior to the issuance of each building permit, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Traffic Engineering.

a. San Joaquin Hills Transportation Corridor
b. Moulton Parkway/Laguna Niguel Area
c. Coastal Area Road Improvements and Traffic Signals

34. TE TE B ACCESS

Prior to the issuance of the first building permit, the applicant shall design a right turn lane on the northeast bound Laguna Hills Drive, at the most southwesterly driveway access to the site, and dedicate to the County of Orange the necessary right of way to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

35. TE TE B ABANDONMENT

Prior to the issuance of the first building permit, the applicant shall obtain from the County of Orange the abandonment of the street Discovery in a manner meeting the approval of the Manager, Subdivision and Grading Services.

36. F F U FIRE HYDRANT MARKER

Prior to the issuance of any certificates of use and occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard and approved by the Fire Chief. On private property these markers are to be maintained in good condition by the property owner.

37. F F NA FIRE ALARM

Prior to installation, plans for the fire alarm system shall be submitted to and approved by the Fire Chief. This system shall be operational prior to the issuance of a certificate of use and occupancy.

County of Orange

ORANGE COUNTY ZONING ADMINISTRATOR HEARING - October 23, 1997

ZONE TAPE NO.: ZA0B16 RECORDING INDEX: 0:16:19-E.O.T. TIME: 2:03

ITEM 1.: PUBLIC HEARING: - Planning Application No. PA 97-0114, EIR 88, of Fluor Corporation.

The Zoning Administrator introduced the project.

Planner IV Melton gave the staff presentation. He stated that the proposed project is a request for the construction of a 454,000 square feet, five building office complex located in Aliso Viejo. Mr. Melton stated that the applicant is requesting a height modification to allow building height of 67 feet when the standard is 50 feet. He stated that the project is a five office building complex composed of 2 three-story buildings and 4 four-story buildings. He noted that the buildings are clustered around a landscaped courtyard. Mr. Melton stated that the three-story buildings are 54 feet in height from finished grade to the top of the roof mounted mechanical screening, and the four-story buildings are 67 1/2 feet from the finished grade to the top of the roof mounted mechanical screening. He stated that this project would normally have been handled administratively but the applicant is requesting a modification to the development standards.

Mr. Melton stated that the exteriors of the buildings are designed to reflect the Business Park theme. He noted that the office complex is generally located at the center of the site with setbacks of approximately 220 feet from Laguna Hills Drive, 190 feet from the San Joaquin Hills Transportation Corridor, 240 feet from the property line to the north, and 260 feet from the property line to the east.

Mr. Melton stated that 1,744 parking spaces are provided based on the gross leasable space. He explained how the parking requirement was determined. Mr. Melton pointed out the ingress and egress for the project. Mr. Melton stated that staff was recommending approval of the proposed project.

Mr. Melton stated that staff did receive one letter of concern from Louis Boish raising an objection to the height increase. Mr. Boish didn't know how the increased height negatively effect the view he has from his home; will it effect the value of his property; will this effect the noise he hears from the toll road or the already noisy military aircraft; increase traffic.

2:10 P.M.: The Zoning Administrator opened the public hearing.

Wayne Peterson, representing Fluor Corporation, stated that the reason a height modification was requested was to allow the clustering of the office buildings. He presented photos of the project design. Mr. Peterson stated that there are 9 existing recorded lots on the property which could have been built on individually. He stated that he has read the staff report and supports it. He

stated that he was requesting modifications to conditions 8, 12, 19, 22, and 34.

Mr. Buzas discussed the modifications requested to conditions 8, 12, 19, 22, and 34. He agreed to the requested modifications.

Mr. Peterson address the concerns raised in Mr. Boish's letter.

2:23 P.M.: No one else wishing to be heard, the Zoning Administrator closed the public hearing.

ACTION: 2:23 P.M.: The Zoning Administrator approved Planning Application No. PA 97-0114 for Site Development Permit with 8 Findings and 37 Conditions; with modification to condition numbers 8, 19, 22, and 34 (as shown below), as recommended in the Current Planning Division report, dated October 23, 1997.

~~8. CP CP B SPECIAL - LIGHTING~~
~~Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.~~

8. CP CP U SPECIAL - LIGHTING
Prior to the issuance of certificates of use and occupancy, the applicant shall submit evidence to the Manager, Current Planning Services Division showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations and has been reviewed by the Aliso Viejo Advisory Planning Committee.

12. ER SG G POLLUTANT RUNOFF
Prior to issuance of precise grading or building permits, ~~whichever comes first~~ as determined by the Manager Subdivision and Grading Division, the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

19. F F ~~G~~ B SITE PLANNING
Prior to the issuance of ~~grading~~ building permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class.

All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

22. SG SG/BI ~~C~~BU PVT LANDSCP

A. Prior to the issuance of ~~precise grading~~ building permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

34. TE TE B ACCESS

Prior to the issuance of the first building permit, the applicant shall design a right turn lane on the northeast bound Laguna Hills Drive, at the most southwesterly driveway access to the site, and shall initiate the process to dedicate to the County of Orange the necessary right of way to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

ITEM # 1

PLANNING AND DEVELOPMENT SERVICES REPORT

DATE: October 23, 1997

TO: Orange County Zoning Administrator

FROM: P&DSD/Current Planning Services Division

SUBJECT: Public Hearing on Planning Application PA 97-0114

PROPOSAL: Site Development Permit for a modification of an Aliso Viejo Planned Community "Business Park" site development standard to allow a building height of 67 feet when the standard is 50 feet in association with the construction of a 454,000 square feet, five building office complex.

LOCATION: In the Community of Aliso Viejo at the northeast quadrant of the intersection of Laguna Hills Drive and the San Joaquin Hills Transportation Corridor. Fifth Supervisorial District.

APPLICANT: Fluor Corporation, property developer
Mission Viejo Co., property owner
Wayne Peterson and Associates, agent

SYNOPSIS: Current Planning Services Division recommends Zoning Administrator approval subject to findings and conditions.

STAFF PLANNER/CONTACT: William V. Melton, Project Manager
Phone: (714) 834-2541, FAX: 834-4652 or 6132

BACKGROUND:

The Fluor Corporation requests a Site Development Permit to modify the site development standard for height to permit the construction of the Fluor Corporation Global Administration Facility/Southern California Facility in Aliso Viejo. The project is a five building complex totaling 454,000 square feet of office space with 1,759 parking spaces on a 22.3 acre site in Planning Area 51 "Business Park" of the Aliso Viejo Planned Community.

The five office building complex is composed of 2 three-story buildings and 3 four-story buildings. The buildings are clustered around a landscaped courtyard with the 2 three-story buildings located closest to Laguna Hills Drive. As proposed, the three-story buildings are 54 feet in height from finished grade to the top of the roof mounted mechanical screening, and the four-story buildings are 67 1/2 feet from the finished grade to the top of the roof mounted mechanical screening. The site development standards for the Business Park permits a maximum height of 50 feet, unless modified by a Site Development Permit as permitted by Section XXIV of the Aliso Viejo Planned Community development regulations and Section 7-9-150.1(d) of the Orange County Zoning Code.

The exteriors of the buildings are designed to reflect the Business Park theme through the use of masonry walls and glass panels. The office complex is generally located at the center of the site with setbacks of approximately 220 feet from Laguna Hills Drive, 190 feet from the San Joaquin Hills Transportation Corridor, 240 feet from the property line to the north, and 260 feet from the property line to the east.

A total of 1,759 parking spaces are provided. The total number of parking spaces required is 1,744, which was determined by using the gross rentable building area for the five buildings of 436,000 square feet plus the basement storage areas of 12,500 square feet The parking area, which is accessed from a signalized intersection at Laguna Hills Drive surrounds the buildings, has standard 9' x 18' parking stalls and 24 feet wide aisle ways. The main entrance has two drive lanes in and two drive lanes out. This entrance then branches into the 28 feet wide primary circulation drive. The secondary entrance, on the northern property line is 48 feet wide. All landscaping is designed to conform with the Business Park theme and requirements. The landscaping is 35 feet in depth along Laguna Hills Drive; and is provided around the perimeter of the site and throughout the parking area. Screening of the parking area will be installed adjacent to Laguna Hills Drive and the abutting residential areas as required.

SITE ZONING AND SURROUNDING LAND USE:

Direction	PC Planning Area	Designation	Existing Land Use
Project Site	51.1	Business Park	Vacant
North	50.3	Business Park	Business/Industrial
South	40.2 *	Town Center	Vacant **
East	24.1	High Den. Residential	Residential
West	50.3	Business Park	Business/Industrial

* The San Joaquin Hills Transportation Corridor separates Planning Area 50.3 and 40.2

** Planning Application PA 97-0113 is pending approval or has been approved for a Site Development Permit for the construction of the Fluor Corporation Global Administration Facility in Aliso Viejo. The project consists of two office buildings totaling 114,400 square feet on a 7.18 acre site.

CEQA COMPLIANCE:

The proposed project is covered by Final EIR 088 previously certified on 9/24/82. Prior to project approval, this EIR must be found adequate to satisfy the requirements of CEQA the Zoning Administrator. Attachment A of this report contains the required CEQA Finding.

PUBLIC NOTICES AND COMMENTS RECEIVED:

A Notice of Hearing was mailed to all owners of record within 300 feet of the subject site. Additionally, a notice was posted at the site, at the 300 N. Flower Building and as required by established public hearing posting procedures. A copy of the planning application and a copy of the proposed site plan were distributed for review and comment to eight County Divisions, the Aliso Viejo Advisory Planning Committee, the State Permit Assistance Center, the Orange County Fire Authority and the Capistrano Unified School District.

As of the writing of this staff report, comments received have been regulatory in nature and have been incorporated into the project conditions of approval where appropriate. The proposal and site plan were reviewed by the Aliso Viejo Advisory Planning Committee and approved at their July 23, 1997 meeting. The Committee did not raise a concern with regards to the modification requested for increased building height.

Staff received several letters and telephone calls after the mailing of the Public Hearing Notice. The callers and writers were concerned as to the location of the office buildings relative to the residential area because of the modification to the height standard proposed. Two callers were concerned that people in the office building would be looking into their back yards. The buildings will be between 240 and 260 feet from the property lines abutting the residential areas.

REVIEW AND ANALYSIS:

Planning Area 51 of the Aliso Viejo Planned Community has a land use designation of "Business Park". The Fluor proposal is a principal permitted use in the Business Park. The objective of the Business Park designation is to provide a balanced economic and employment base for the community of Aliso Viejo. The Business Park is located in proximity to residential areas to minimize commuter work trips and vehicle miles traveled. High density multi-family residential land uses are located to the north and east of the site.

Staff identified no planning issues associated with the request for the increased building height. The project site is on an elevated graded pad with a ground elevation of between 20 to 30 feet above the ground elevation of the adjacent residential projects. With a building setback of 240 and 260 feet from the nearest residential structure, the requested increase in building height will not restrict the distant views from the nearby residential area. People in the office building will not be looking into the adjacent residents back yards. The setbacks required by this project are the height of the buildings. Therefore, the setbacks proposed for this project are up to four times greater than is permitted by the site development regulations. Staff is of the opinion that this is a better project with the site development modification than could be built with the standard height and setback requirements. By allowing the buildings to exceed the standard building height, the office complex can be concentrated at the center of the site and therefore provide for increased setbacks from the residential areas and Laguna Hills Drive.

The proposed Fluor Corporation Global Administration Facility/Southern California Facility office complex is consistent with the Business Park objectives and conforms to all the site development standards, except for building height. The office park will be an asset to the community. It will help achieve the Business Park objective of providing a balanced residential/employment community. Staff supports the Fluor Corporation proposal and also supports the request for a site development modification of the building height.

RECOMMENDATION

Current Planning Services Division recommends the Zoning Administrator:

a. Receive staff presentation and public testimony as appropriate; and,

b. Approve Planning Application PA 97-0114 subject to the attached Findings and Conditions of Approval.

Respectfully submitted,

C. M. Shoemaker, Chief
CPSD/Site Planning Section

WVM FOLDER: AVPC

Attachments: A. Recommended Findings

B. Recommended Conditions of Approval

Exhibits: 1. Applicant's Letter of Explanation

2. Site Plans and Site Photos

ATTACHMENT A

FINDINGS

The Orange County Zoning Administrator hereby finds:

I. The project is consistent with the objectives, policies, general land uses and programs specified by the General Plan adopted pursuant to the State Planning and Zoning Laws.

II. The project, subject to the specified conditions, is consistent with the provisions of the Zoning Code and Aliso Viejo Planned Community.

III. The decision-maker has considered Final EIR 088, previously certified on 9/24/82, and Addendum No. PA970113 prior to project approval. Together they are approved for the proposed project based upon the following findings:

a. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

b. The additions, clarifications and/or changes to the original document caused by the Addendum, do not raise new significant issues which were not addressed by the EIR; and

c. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Lead Agency.

IV. The location, size, design and operating characteristics of the project will not create unusual noise, traffic or other conditions or situations that may be objectionable, detrimental or incompatible with other permitted uses in the vicinity.

V. The project will not result in conditions or circumstances contrary to the public health and safety and the general welfare.

VI. The project is located within a fee area as that term is defined in Section 7-9-702 and will contribute to the need for a fire station and/or library facility for which a fee is required.

VII. The subject project lies within the area of benefit of the San Joaquin Hills Transportation Corridor. In order to find this project consistent with the General Plan and to ensure that the traffic impacts have been adequately mitigated, it is necessary to adopt a condition requiring the developer to participate in the fee program adopted by the Board of Supervisors.

VIII. The alternate development standard(s) will result in an equivalent or better project in terms of adverse impacts and public benefits to the immediate and surrounding community.

ATTACHMENT B

CONDITIONS OF APPROVAL

1. CP NA NA BASIC/ZONING REGULATIONS
This approval constitutes approval of the proposed project only to the extent that the project complies with the Orange County Zoning Code and any other applicable zoning regulations. Approval does not include any action or finding as to compliance of approval of the project regarding any other applicable ordinance, regulation or requirement.

2. CP NA NA BASIC/TIME LIMIT
This approval is valid for a period of 36 months from the date of final determination. If the use approved by this action is not established within such period of time, this approval shall be terminated and shall thereafter be null and void.

3. CP NA NA BASIC/PRECISE PLAN
Except as otherwise provided herein, this permit is approved as a precise plan. After any application has been approved, if changes are proposed regarding the location or alteration of any use or structure, a changed plan may be submitted to the Director-Planning and Development Services Department for approval. If the Director determines that the proposed change complies with the provisions and the spirit and intent of the approval action, and that the action would have been the same for the changed plan as for the approved plot plan, he may approve the changed plan without requiring a new public hearing.

4. CP NA NA BASIC/COMPLIANCE
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

5. CP NA NA BASIC/OBLIGATIONS
Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

6. CP CP B SPECIAL - REVISED PLANS
Prior to the issuance of building permits, the applicant shall submit a Changed Plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the regulations contained in Zoning Code Section 7-9-143 "Facility Design Regulations".

7. CP CP U SPECIAL - REVISED SCREENING
Prior to the issuance of certificates of use and occupancy, the applicant shall submit a revised preliminary landscaping plan to the Manager, Current Planning Services Division for review and approval showing that the project is in conformance with the screening and landscaping regulations contained Sections XI.B.10 and 11 of the Aliso Viejo Planned Community development regulations.

8. CP CP B SPECIAL - LIGHTING
Prior to the issuance of building permits, the applicant shall submit a revised site plan to the Manager, Current Planning Services Division for review and approval showing that the project's exterior lighting is in conformance with the regulation of Section XI.B.7 of the Aliso Viejo Planned Community development regulations. Said revised plan shall be reviewed by the Aliso Viejo Advisory Planning Committee.

9. CP CP B SPECIAL - SIGNS
Prior to the installation of any signs, the applicant shall submit a "Sign Program". The Sign Program shall be approved through a Changed Plan as required by Zoning Code Section 7-9-150. The Sign Program shall be in substantial conformance with Section XXI of the Aliso Viejo Planned Community development regulations. The Sign Program shall be reviewed by the Aliso Viejo Advisory Planning Committee prior to approval of the Changed Plan.

10. SG SG G GEOLOGY RPT
Prior to the issuance of a grading permit, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

11. BP BP G CONST NOISE
A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

(1) All construction vehicles or equipment, fixed or mobile, operated within 1,000' of a dwelling shall be equipped with properly operating and maintained mufflers.

(2) All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

(3) Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.

12. ER SG G POLLUTANT RUNOFF

Prior to issuance of precise grading or building permits, whichever comes first, the applicant shall submit and obtain approval from Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.); and, shall reference the location(s) of structural BMPs.

OK per Mark 1-21-98

13. ER DS G NPDES PERMIT

Prior to issuance of any grading permits, the applicant shall submit evidence to the Manager, Subdivision and Grading, that the applicant has obtained coverage under the NPDES statewide General Stormwater Permit from the State Water Resources Control Board.

Memo 1-21-98

14. SG SG GB DRAINAGE STUDY

Prior to the issuance of any grading permits, or prior to the issuance of building permits, whichever comes first, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels, street flows, catch basins, storm drains, and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

15. SG SG GB DRAINAGE IMPRO

A. Prior to the issuance of any grading permits or prior to the issuance of building permits, whichever comes first, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

SG C U DRAINAGE IMPROV

B. Prior to the issuance of any certificates of use and occupancy, said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

16. F F R FIRE ACCESS

Prior to the issuance of grading permits, the applicant shall obtain approval of the Fire Chief of all fire protection access easements and shall dedicate them to the County. The CC&Rs shall contain provisions which prohibit obstructions within the fire protection access easement. The approval of the Fire Chief is required for any modifications such as speed bumps, control gates or other changes within said easement.

17. F F G STREET PLANS

Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of preliminary plans for all street and courts, public or private, from the Fire Chief in consultation with the Manager, Traffic Engineering. The plans shall include the plan view, sectional view, and indicate the width of the street or court, measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked when a dead-end street exceeds 150 feet or when other conditions require it.

18. F F GU STREET MARKINGS

A. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval from the Fire Chief for street improvement plans with fire lanes shown. The plans shall indicate the locations of red curbing and signage, and provide a drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color.

B. Prior to the issuance of the certificate of use and occupancy, the approved fire lane marking plan shall be installed. The CC&Rs shall contain a fire lane map and provisions which prohibit parking in the fire lanes. A method of enforcement shall be included.

19. F F G SITE PLANNING

Prior to the issuance of grading permits, the applicant shall submit to the Fire Chief a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These liquids and materials are to be classified according to the "Orange County Fire Authority Chemical Classification Handout". The submittal shall provide a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class. All forms of materials are to be converted to units of measure in pounds, gallons and cubic feet.

20. TE TE G SIGHT DISTANCE

Prior to the issuance of any grading permits, the applicant shall provide adequate sight distance at all street intersections per Standard Plan 1117, in a manner meeting the approval of the Manager, Traffic Engineering. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.

21. TE TE G STORM DRAIN
Prior to the issuance of grading permits, the applicant shall relocate the existing storm drain in a manner meeting the approval of the Manager, Subdivision and Grading Services.

22. SG SG/BI GU PVT LANDSCP

A. Prior to the issuance of precise grading permits, the applicant shall prepare a detailed landscape plan for privately maintained areas. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, adopted planned community regulations, scenic corridor and specific plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed and approved by the Manager, Subdivision and Grading.

B. Prior to the issuance of certificates of use and occupancy, applicant shall install said landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, certify that it was installed in accordance with the approved plan. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other implementation report determined applicable, to the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

23. BP BP B ACOUST NON-RES
Except when the interior noise level exceeds the exterior noise level, all non-residential structures shall be sound attenuated against the combined impact of all present and projected noise from exterior noise sources to meet the interior noise criteria as specified in the Noise Element and Land Use/Noise Compatibility Manual.

Prior to the issuance of any building permits, the applicant shall submit to the Manager, Building Permits, evidence prepared under the supervision of a County-certified acoustical consultant that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5. The evidence shall be in the form of an acoustical analysis report describing in detail the exterior noise environment and the acoustical design features required to achieve the interior noise standard and which indicate that the sound attenuation measures specified have been incorporated into the design of the project.

24. F F B WATER
Prior to the issuance of the first building permit, the subdivider shall submit water improvement plans to the Fire Chief for review and approval to ensure adequate fire protection and financial security is posted for the

installation. The water system design, location of valves, and the distribution of fire hydrants will be evaluated and approved by the Fire Chief.

25. F F RB FIRE HYDRANTS
Prior to the issuance of first building permit, the applicant shall submit to the Fire Chief evidence of the on-site fire hydrant system. The system shall be reviewed and approved by the Fire Chief prior to issuance of building permits. Provisions shall be made by the applicant for the repair and maintenance of the system, in a manner meeting the approval of the Fire Chief.

26. F F B AUTO FIRE EXT
Prior to the issuance of building permits, the applicant shall place a note on the construction plans stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

27. F F B COMBSTBLE CONST
Prior to the issuance of any building permits for combustible construction, the developer shall submit and obtain the Fire Chief's approval of a letter and plan stating that water for fire fighting purposes and an all weather fire access road shall be in place and operational as required by the Uniform Fire Code before any combustible materials are placed on the site.

28. F F B WATER AVAILABILITY
Prior to the issuance of any building permits, an Orange County Fire Authority Water Availability Form shall be submitted to and approved by the Plan Review Section of the Orange County Fire Authority. If sufficient water to meet fire flow requirements is not available, an automatic fire extinguishing system shall be installed in each structure, in a manner meeting the approval of the Fire Chief.

29. F F BU FIRE SPRINKLERS
Prior to the issuance of any building permits, plans for an automatic fire sprinkler system shall be submitted to and approved by the Fire Chief prior to installation. This system shall be operational prior to the issuance of a certificate of use and occupancy.

30. F F B BUILDING USE
Prior to the issuance of any building permits, the applicant shall submit a detailed letter of intended use for each building to the Fire Chief for review and approval.

31. F F B HAZARDOUS MATERIALS DISCLOSURE
Prior to the issuance of any building permits, the applicant shall contact the Orange County Fire Authority Hazardous Materials Disclosure Office at (714) 744-0463 to obtain a "Hazardous Materials Business Information and Chemical Inventory Packet". This shall be completed and submitted to the Fire Chief before the issuance of any building permits.

32. F F B FIRE SAFETY SITE PLAN
Prior to the issuance of a building permit, the applicant shall submit plans for the review and approval of the Fire Chief. The applicant shall include information on the plans required by the Fire Chief. Contact the Orange County Fire Authority Plans Review Section at (714) 744-0403 for the Fire Safety Architectural Notes to be placed on the plans.

33. TE TE B ROAD FEE PROG
Prior to the issuance of each building permit, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Traffic Engineering.

a. San Joaquin Hills Transportation Corridor
b. Moulton Parkway/Laguna Niguel Area
c. Coastal Area Road Improvements and Traffic Signals

34. TE TE B ACCESS
Prior to the issuance of the first building permit, the applicant shall design a right turn lane on the northeast bound Laguna Hills Drive, at the most southwesterly driveway access to the site, and dedicate to the County of Orange the necessary right of way to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

35. TE TE B ABANDONMENT
Prior to the issuance of the first building permit, the applicant shall obtain from the County of Orange the abandonment of the street Discovery in a manner meeting the approval of the Manager, Subdivision and Grading Services.

36. F F U FIRE HYDRANT MARKER
Prior to the issuance of any certificates of use and occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard and approved by the Fire Chief. On private property these markers are to be maintained in good condition by the property owner.

37. F F NA FIRE ALARM
Prior to installation, plans for the fire alarm system shall be submitted to and approved by the Fire Chief. This system shall be operational prior to the issuance of a certificate of use and occupancy.

MEMO

File: CP98-0059

DATE: July 1, 1998

TO: RECORD/FILE/APPLICANT

FROM: Bill M. Grant, Chief, LUP/Current Planning Section

SUBJECT: Changed Plan CP98-0059 For Project No. PA97-0114

The subject Changed Plan has been reviewed by Trudy Teshima of the Land Use Planning Division and the determination has been made, as authorized by the Conditions of Approval, that the proposed changes are in substantial compliance with the original approval action by the Orange County Zoning Administrator.

The proposed changes are as follows: Fluor Daniel, Aliso Viejo Facility located at 23216 Laguna Hills Drive.

1. The applicant requests a change plan to Buildings A, B, C, D and E to provide a screen to the mechanical equipment on the roof of each building for aesthetic purposes.
2. The change plan also includes a reduction to the off-stree parking from 1,759 parking spaces to 1,747 spaces. The proposed size of the buildings are reduced and parking modifications are as follows:

PREV. APPR. EXISTING BUILDING		PROPOSED BUILDING REDUCTION	
BUILDING A	78,250 S.F. 3-STORY	"A"	76,186 S.F. 3-STORY
BUILDING B	93,350 S.F. 4-STORY	"B"	90,761 S.F. 4-STORY

RE: Requesting a Changed Plan
Fluor Daniel Aliso Viejo Facility
Engineering Site (Site D)
23216 Laguna Hills Drive
Aliso Viejo, CA 92656
Planning Application No. PA 970114

Attention: Mr. Robert Gill

We are submitting a Changed Plan for the Fluor Daniel Aliso Viejo Facility located at 23216 Laguna Hills Drive. The request is for the following two items:

1. **Change in Building Height from 67 ½ feet to 70 feet.**

   Attached are plans and exterior elevations of the five (5) buildings located on this site. Buildings A & E are 3-story buildings and Buildings B, C,and D are 4-story buildings which are affected by the Change from 67 ½ feet to 70 feet. The 4-story buildings have a mechanical equipment screen which requires the top of the screen to be at the 70 foot above the first floor. This will then screen the mechanical equipment located behind the screen.

   Our other Corporate Site (Site T), Planning Application No. PA 970113 approval includes a 70 foot building height for the 4-story Building F on that site. The 4-story buildings at both of these sites are very similar in height and mechanical screen provisions. This request is within the same general good planning that the Corporate Site had received approval on December 11, 1997 by Planning and Development Services.

2. **Change in Parking Count for the Engineering Site (Site D):**

   Original Parking Per Approved Plan:

Total Required Parking:	1,779 Stalls
Total Provided Parking:	1,759 Stalls

   This was based on the following total building area:

Gross Building Area:	454,000 SF
Gross Rentable Area:	436,000 SF

Fluor Daniel Worldwide Headquarters Project
23216 Laguna Hills Drive
Aliso Viejo, California 92656 USA
office: 949.425.5401 fax: 949.425.5420

ADP MARSHALL
A FLUOR DANIEL COMPANY

Changed Parking Plan

The following Project Summary provides the breakdown for justification of the change in parking count:

Project Summary

Building A	76,186 SF	3 Story
Building B	90,761 SF	4 Story
Building C	96,210 SF	4 Story
Building D	90,860 SF	4 Story
Building E	76,251 SF	3 Story
Total Gross Rentable Area	430,270 SF	
Building C	10,860 SF	Basement (Storage)
Total Building Area	**441,128 SF**	

Proposed Use: General Office

Parking:

Office Space - 430,270 SF @ 4/1,000	=	1,721 Stalls
Storage Space – 10,860 SF @ 1/1,000	=	11 Stalls
Total Parking Required		**1,732 Stalls**
Total Handicapped parking Required		**28 Stalls (4 Van, 24 Standard)**

Parking Provided:

Total Van Accessible Parking Provided	6 Stalls
Total Standard Handicapped Parking Provided	22 Stalls
Total Handicapped Provided	**28 Stalls**
Total Standard Parking Provided	1,719 Stalls
Total Handicapped Parking Provided	28 Stalls
Total Parking Provided	**1,747 Stalls**

The building design has progressed to a more final stage and the project is under construction with Shell and Core plans now permitted. The changed plan for the parking requirements as indicated above meets the County provisions. The attached Site Plan reflects this changed parking provisions.

SUBJECT: **PA 970114 - SITE PLAN TO PLANNING COMMISSION - FLUOR DANIEL'S SOUTHERN CALIFORNIA FACILITY - ALISO VIEJO P.C.**

Attention: Bill Melton

This is a site plan to construct a five building, 454,000 square feet facility to serve as Fluor Daniel's Southern California headquarters. The site is located at the northeast corner of Laguna Hills Drive and San Joaquin Hills Transportation Corridor on tracts 14323, 14324, previously lots 1-9, TT 12810.

The two accesses proposed to the site off Laguna Hills Drive are at the existing loop street Discovery, the most southwesterly access will be full access and signalized, the other a non-signalized full access driveway. The existing Discovery is a public street, the applicant therefore, has to request and obtain the abandonment of this street by the County of Orange.

In addition the applicant is required to relocate the existing storm drain within the site.

A right turn deceleration lane is proposed on northeast bound Laguna Hills Drive, at the most southerly driveway access to the site.

The applicant is requesting an off street parking modification for a reduction from the required 1779 parking spaces to 1759 spaces.

MAJOR THOROUGHFARE AND BRIDGE FEE PROGRAM:

This project lies within the area of benefit of the San Joaquin Hills Transportation Corridor. The applicant is required to pay SJHTC Major Thoroughfare and Bridge fees in accordance with the adopted program.

This project lies within the Moulton Parkway zone of the area of benefit of the Moulton Parkway/Laguna Niguel Fee Program. The applicant is required to pay Major Thoroughfare and Bridge fees in accordance with the adopted program.

This project lies within the area of benefit of the Coastal Area Roadway Improvement and Traffic Signals Fee Program. The applicant is required to pay fees in accordance with the adopted program.

CONDITIONS:

1. Prior to issuance of each Building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the San Joaquin Hills Transportation Corridor.

2. Prior to issuance of each Building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the Moulton Parkway/Laguna Niguel area.

3. Prior to issuance of a Building permit, payment of fees will be required as prescribed in the Coastal Area Roadway Improvement and Traffic Signal Fee Program.

4. Prior to issuance of a Grading permit, adequate sight distance shall be provided at all intersections per Standard Plan 1117 in a manner meeting the approval of the Manager, Subdivision and Grading Services. This includes any necessary revisions to the pan to remove slopes or other encroachments from the Limited Use Area.

5. Prior to the issuance of a building permit applicant shall design a right turn lane on northeast bound Laguna Hills Drive, at the most southwesterly driveway access to the site, and dedicate to the County of Orange the necessary right of way to accomplish this in a manner meeting the approval of the Manager, Subdivision and Grading Services.

6. Prior to the issuance of a building permit the applicant shall obtain from the County of Orange the abandonment of the street Discovery in a manner meeting the approval of the Manager, Subdivision and Grading Services.

7. Prior to the issuance of a grading permit applicant shall relocate the existing storm drain in a manner meeting the approval of the Manager, Subdivision and Grading Services.

Mr. John Buzas, Division Manager
County of Orange - Current Planning Services
300 North Flower Street, Third Floor
Santa Ana, California 92702

SUBJECT: Site Plan for Fluor Daniel Southern California Facility

Dear Mr. Buzas:

On behalf of Lowe Enterprises Commercial Group and the Fluor Corporation, the enclosed site plan application package for the Fluor Daniel Southern California Facility is being submitted for your review and processing for an administrative approval. This application is being processed concurrently with a site plan for the Fluor Global Adminstration Facility which is located on a site approximately one-half mile to the west of this site.

The 22.6-acre project site is located in Planning Area 51 of the Aliso Viejo Planned Community, on the southeastely side of Laguna Hills Drive, immediately northerly of the San Joaquin Hills Tollway. Ths site is designated for Business Park uses by the Planned Community Text and is also part of the Aliso Viejo Urban Activity Center. The proposed office use is completely consistent with the applicable land use regulations for the site.

The project site will serve as Fluor Daniel's Southern California headquarters. A total of 454,000 square feet of gross floor area will be contained in five buildings, two three-stories in height (54' max.) and three four-stories (67'6" max.). To the north of the project site, across Laguna Hills Drive, is an existing business park and to the east are two existing residential neighborhoods at a considerably lower elevation. To the south and west is the San Joaquin Hills Tollway and the Aliso Viejo Town Center beyond.

The layout of the site has been developed with a high degree of sensitivity to adjacent residential neighborhoods. The buildings have been clustered in the center of the site, with the closest buildings situated approximately 250 feet away from the edges of the site. In addition to the existing landscaped slopes which separate the residential areas from the project site, additional landscape area is proposed to provide additional screening. Parking lot lighting has been designed to minimize impact on adjacent homes by locating the light standards such that no direct light rays will be directed toward the residences. Site sections are provided which illustrate the relationship between the proposed buildings and the existing residences.

Access to the site will be via two or three driveways along Laguna Hills Drive. The main drive (across from Columbia) leads directly to a large entry court which opens to a large "gathering commons" located in the middle of the five-building campus. Landscaped off-street parking areas surround the building area. Parking for 1,759 vehicles is provided, 20 spaces less than the 1779 spaces required by the PC Text. A parking modification to permit the 1% reduction is incorporated in the site plan application. As a single-user campus, Fluor is able to strictly control the use of the buildings and the need for the on-site parking facilities. Further, Fluor Corporation is one of the corporate leaders in the area of car pooling, ride-sharing, van pooling and other innovative techniques to reduce the number of cars driven to their facilities each day. Fluor is confident that the parking will be more than adequate to meet their needs.

The proposed buildings have been designed by McLarand, Vasquez and Partners utilizing concrete and glass to reflect a strong corporate image. The buildings are in conformance with the applicable design guidelines for the area. Sign details will be incorporated in a Sign Program which will be submitted at a later date. A materials board and colored elevations are available if staff would like to review them.

A site-specific traffic and parking study for the project site has been prepared by RKJK and has been submitted as a part of this application package. That study concludes that the existing and future arterial highway system is adequate to accommodate the proposed project subject to the incorporation of certain design-level improvements to facilitate traffic flow into and out of the site.

Pursuant to the requirements of the PC Text, this project has been submitted to the Aliso Viejo Advisory Planning Committee (AVAPC) for comment. The project is on the AVAPC's agenda for their July 23rd meeting. Representatives from the project team will be making a presentation on the project to the AVAPC and the results of their review will be forwarded to you for your files.

On behalf of the entire project team, please accept our invitation for a site tour or a follow-up briefing if you feel it would be helpful. Please do not hesitate to contact me during the processing of this project if there is any additional information needed or if clarification is needed on any aspect of this project. Please call me if you have any questions.

Sincerely,

WAYNE PETERSON AND ASSOCIATES

Wayne Peterson

MEMO

DATE: September 15, 1997

TO: Chuck Shoemaker, Chief, Site Planning & Consistency

FROM: Harry Persaud, Chief, Transportation Planning

SUBJECT: Site Plan for Fluor Southern California Facility (PA 970114)

The 22.6-acre project site is located in Planning Area 51 of the Aliso Viejo Planned Community at the southeasterly side of Laguna Hills Drive, immediately northerly of the San Joaquin Hills Transportation Corridor (SJHTC). The project proposes the development of an office campus of five buildings totalling approximately 454,000 square feet of gross floor area. The five buildings will serve as the Fluor Corporation's Southern California headquarters.

The cumulative impacts of this proposed project upon the local and regional circulation system were addressed in the Aliso Viejo Planning Area 40 (PA 40) Traffic Analysis prepared by RKJK. In addition, a Site Specific Traffic and Parking Study has been prepared by RKJK for this proposed project in conjunction with the site plan for the Fluor Global Administration Facility (PA 970113).

The Transportation Planning Section has reviewed the subject proposals and offers the following comments:

1) The Aliso Viejo PA 40 Traffic Analysis identified traffic impacts associated with both the 1989 Approved Area Plan (with a daily trip generation ceiling of 69,378 daily trips for PA 40) and the 1996 Approved Area Plan (with a daily trip cap of 125,000 daily trips for PA 40). According to the Aliso Viejo PA 40 Traffic Analysis, the following two intersections are anticipated to operate at an unacceptable level of service (LOS) under both Year 2020 With 1989 Approved Area Plan conditions and Year 2020 With 1996 Approved Area Plan conditions: Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW). Therefore, the following condition/mitigation measure is recommended:

   "Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the unfunded improvements needed at the intersections of Alicia Parkway (NS) @ Aliso Creek Road (EW) and Glenwood Drive (NS) @ Aliso Creek Road (EW), as identified in the Aliso Viejo Planning Area 40 Traffic Analysis. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

2) The proposed project is located adjacent to the intersection of Aliso Creek Road (NS) and Laguna Hills Drive North (EW). According to the Aliso Viejo PA 40 Traffic Analysis, this intersection is anticipated to operate at LOS "E" under Year 2020 With 1989 Approved Area Plan conditions and at LOS "D" under Year 2020 With 1996 Approved Area Plan conditions. However, it should be noted that it is the practice of the County to use a more conservative approach regarding the trip generation rate for office land uses and the internal trip "capture" assumption for mixed land uses than what was used

in the traffic studies for the proposed project. In order to ensure that this intersection operates at an acceptable level of service, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall enter into an agreement with the County of Orange to pay a pro-rata share of the costs towards the upgrade the westbound approach of the intersection of Aliso Creek Road (NB) and Laguna Hills Drive North (EW) to provide dual left turn lanes and three through lanes. Said agreement shall be approved by the Manager, Subdivision and Grading Services."

3) The project site lies within the areas of benefit of three existing road fee programs. Therefore, the following condition is recommended:

"Prior to the issuance of building permits, the applicant shall pay fees as prescribed in the Major Thoroughfare and Bridge Fee Programs for the San Joaquin Hills Transportation Corridor, the Moulton Parkway/Laguna Niguel Area, and the Coastal Area Road Improvements and Traffic Signals in a manner meeting the approval of the Manager, Subdivision and Grading Services."
