## *Initial Study/NOP*

NORTH ORANGE COUNTY  
COMMUNITY COLLEGE DISTRICT

April 9, 2018

**To:** Distribution List

**From:** North Orange County Community College District  
1830A West Romneya Drive  
Anaheim, California 92801-1819

**Subject: Notice of Preparation of a Draft Environmental Impact Report for the Fullerton College Sherbeck Field Improvements Project**

The North Orange County Community College District (District) will be the lead agency and will prepare an environmental impact report (EIR) for the proposed project identified below. The District is requesting your view regarding the scope and content of the environmental information to be included in the EIR. Responsible agencies are requested to indicate their statutory responsibilities in connection with the proposed project.

The description, location, and the potential environmental effects resulting from the proposed project are contained in the initial study, which is available through the District's website (<http://www.nocccd.edu/>), Fullerton College's website ([www.fullcoll.edu/campusprojects](http://www.fullcoll.edu/campusprojects)) and at the Administrative Offices, North Orange County Community College District, Anaheim, campus located at the address above. The initial environmental review indicates that the proposed project may have potentially significant effects on the environment in the following categories: aesthetics, air quality, greenhouse gas emissions, hazards and hazardous materials, noise, public services, recreation, transportation and traffic, tribal cultural resources, and mandatory findings of significance. The EIR will include an analysis of these impact areas, as well as feasible mitigation measures and alternatives to avoid or reduce potential impacts.

Due to the time limits mandated by state law, your response must be sent at the earliest possible date but no later than 30 days after receipt of this notice. A public scoping meeting will be held on Tuesday, May 1, 2018, beginning with a Project Presentation at 6:00 p.m. in the Fullerton College Campus Theatre (Building 1300) located at 321 E. Chapman Avenue, Fullerton, CA 92832, followed by an Informational Open House in the Fullerton College Center (Building 200), Rooms 224, 226, and 228.

Please send your response to Mr. Richard Williams at the address shown above. Please provide the name of a contact person in your agency.

## **Notice of Preparation**

---

**Project Title:** Fullerton College Sherbeck Field Improvements Project

**Project Location:** Sherbeck Field (northeastern portion of the Fullerton College campus). Fullerton College is generally bounded by North Berkeley Avenue to the north and east, North Lemon Street to the west, and East Chapman Avenue to the south.

**Proposed Project:** The College plans to install permanent prefabricated aluminum bleachers, six field lighting stanchions, a new sound system, press box, and storage building at the existing Sherbeck Field. Sherbeck Field would continue to be used for academic instruction, competitive athletics, and rentals; however, Sherbeck Field is proposed to host competitive football games, which are currently held at other locations. The inclusion of field lighting as part of the project would allow Fullerton College to add more evening classes, to offer a balanced schedule, and provide more class options for students who may not be able to take physical education during the day. It is anticipated that these improvements would begin in spring 2019 and would last approximately 6 months.

A handwritten signature in black ink, appearing to read "Richard Williams", written over a horizontal line.

Richard Williams

District Director, Facilities Planning and Construction

INTENTIONALLY LEFT BLANK

# **Initial Study for the Sherbeck Field Improvements Project**

---

## **1 INTRODUCTION**

### **1.1 California Environmental Quality Act Compliance**

The California Environmental Quality Act (CEQA) serves as the main framework of environmental law and policy in California. CEQA emphasizes the need for public disclosure and identifying and preventing environmental damage associated with proposed projects. Unless the project or program is deemed categorically or statutorily exempt, CEQA is applicable to any project or program that must be approved by a public agency in order to be processed and established. The proposed project considered herein does not fall under any of the statutory or categorical exemptions listed in the 2016 CEQA Statute and Guidelines (California Public Resources Code [PRC] Section 21000 et seq.; 14 California Code of Regulations [CCR] 15000 et seq.), and, therefore, must meet CEQA requirements.

Considering the proposed project has the possibility of creating a significant impact, the preparation of an environmental impact report (EIR) is required by CEQA. Furthermore, as required by CEQA Guidelines Section 15126.6, the North Orange County Community College District (District) will include the consideration and discussion of Alternatives to the Proposed Project in the EIR.

### **1.2 Purpose of the Notice of Preparation and Initial Study**

The intent of this document is to provide an overview and analysis of the environmental impacts associated with the proposed implementation of the Sherbeck Field Improvements Project (project) for Fullerton College by the District. This document is accessible to the public, in accordance with CEQA, to receive feedback and input on topics to be discussed in the EIR.

### **1.3 Availability of the Notice of Preparation and Initial Study**

The initial study/notice of preparation (IS/NOP) for Fullerton College is being distributed directly to numerous agencies, organizations, and interested groups and persons during the scoping period (see Appendix A for the IS/NOP distribution list). The IS/NOP is also available for review at the following locations:

- North Orange County Community College District Headquarters, 1830A W. Romneya Drive, Anaheim, California 92801
- Fullerton Public Library, 353 W Commonwealth Ave, Fullerton, California 92832

In addition, the IS/NOP is available online through the North Orange County Community College District website (<http://www.nocccd.edu/>) and the Fullerton College website (<http://www.fullcoll.edu/campusprojects/>).

INTENTIONALLY LEFT BLANK

## 2 PROJECT LOCATION AND SETTING

### 2.1 Project Location

Sherbeck Field is located in the northeastern portion of the Fullerton College campus. Student Parking Lots 4 and 5 are located immediately north and west of the project site. Farther north are the Horticulture Building 1600 Complex and Child Development classrooms. North Berkeley Avenue borders the eastern side of the field, and farther east are single-family residences. Softball, baseball, and soccer fields are located south of Sherbeck Field.

Fullerton College is located at 321 East Chapman Avenue in the City of Fullerton (City) and occupies an approximately 70-acre site in northern Orange County. The City is surrounded by La Habra and Brea to the north, Placentia to the east, Anaheim to the south, and Buena Park to the west. Figure 1, Project Location, shows the campus's regional location. Specifically, Fullerton College is bounded by residential development to the north, south, and east, and Fullerton Union High School to the west.

### 2.2 Existing Site Conditions

Fullerton College is part of the North Orange County Community College District (District). Fullerton College was formed in 1913 and is the District's oldest campus. As one of the first community colleges operating in California, it afforded students the opportunity to complete the first 2 years of college within their community. Fullerton College currently houses 51 permanent and temporary buildings that occupy 549,115 assignable square feet, or 815,734 gross square feet. The campus is compact and designed with multistory buildings and few interior roadways. A portion of the Fullerton Union High School campus is on the Fullerton College campus. The project site is zoned as Public Land (P-L), and the general plan (i.e., The Fullerton Plan) land use designation for the project site is School (City of Fullerton 2012a).

Sherbeck Field is 4.36 acres and consists of a turf football field that is surrounded by a 400-meter-long track. A two-story field house is located on the western edge of the field (Fullerton College 2017). Sherbeck Field currently does not have permanent seating or lighting (see Figure 2, Existing Project Site). There is a scoreboard located at the eastern end of the field.

### 2.3 Existing Programming

Sherbeck Field is currently used for academic instruction, competitive athletics, and rentals. A description of these uses is provided below. Table 1 provides a schedule of the existing uses per semester for the 2016/2017 academic year. Scheduling and programming can vary, but the 2016/2017 academic year provides the most current representation of programming and scheduling at Sherbeck Field.

## **Initial Study for the Sherbeck Field Improvements Project**

---

### **Academic Instruction**

Fullerton College currently offers intercollegiate athletic courses for track and field, cross country, football, and soccer, as well as various fitness courses. Courses are offered on weekdays only and are offered in the mornings, afternoon, and evenings. The earliest classes begin at 6:20 a.m. and the latest classes end at 7:05 p.m. Course sizes typically range from 24 to 32 students.

### **Athletics**

#### ***Football***

Sherbeck Field is used for in-season football practice in the fall and off-season conditioning and skill development in the spring, which are typically held on weekdays in the afternoon and evening for approximately 2 hours. There are approximately 80 practice sessions in the 16-week fall semester (Saghieh 2017a).

Saturday afternoon and occasional evening games are currently held at the Yorba Linda High School field. Football games typically last for three and a half to four hours. There are approximately five regular and up to two playoff football games per year, with approximately 350 to 1,600 attendees per game (Saghieh 2017b).

#### ***Soccer***

Sherbeck Field is used for soccer practice, which is typically held on weekdays in the morning for 2 hours. There are approximately 80 practice sessions in the 16-week fall semester (Saghieh 2017a).

Friday evening games are held at Sherbeck Field. Soccer games typically last for 2 hours. There are approximately two soccer games per year with approximately 100 attendees per game (Saghieh 2017c).

#### ***Track and Field***

Sherbeck Field is used for track and field practice from Mondays through Fridays during the fall and spring semester. Team practices occur during the morning from 7:00 a.m. to 9:00 a.m. and during the afternoon from 12:00 p.m. to 2:00 p.m. There are approximately 80 practice sessions in the 16-week fall semester.

Track and field events are held at Sherbeck Field. Fullerton College track and field competition events occur on Fridays only and the frequency is only one track and field event per year during the spring semester at Fullerton College, usually from 10:00 a.m. to 4:00 p.m. There are approximately 100 attendees at competition events.

## **Initial Study for the Sherbeck Field Improvements Project**

---

Orange Lutheran High School uses the Fullerton College track in the spring and hosts up to four track meets per year, usually on a Tuesday, Wednesday or Thursday. Practice and meets are held in the afternoon from 3:00 p.m. to 6 p.m. and events include approximately 150 attendees.

### **Rentals**

Fullerton College rents out Sherbeck Field for private schools to host athletic courses and practice. Specifically, Hope International University, Rosary High School, CDA Slammers, Anaheim Soccer, Seahorse Soccer, CAL South, Troy High School, Prep Football America Camp, and Orange Lutheran rent Sherbeck Field for athletic practice sessions. Additionally, Sherbeck Field is rented out by the Buena Park Police Department three times per year for training purposes (Saghieh 2017c). Sherbeck Field is rented out at various times on weekdays, Saturdays, and Sundays, as shown in Table 1.

### **Commencement Ceremony**

The annual commencement ceremony occurs in late May or early June at Sherbeck Field. Student check-in typically occurs from 8:00 to 9:30 a.m. Commencement is held on Saturday and typically begins at 10:00 a.m. and ends in the afternoon. There are approximately 7,200 students and guests that attend the commencement ceremony (Saghieh 2017c).

### 3 PROJECT DESCRIPTION

#### 3.1 Background and Project History

Sherbeck Field was originally constructed in 1956 to 1957. The field was renamed in 1992 after Coach Hal Sherbeck (Fullerton College Centennial 2017). The field house, existing turf, and rubberized track were constructed in 2010 (California Community Colleges 2016).

Sherbeck Field improvements were initially analyzed in the Facilities Master Plan Initial Study (Dudek 2016). However, this project was removed from the Facilities Master Plan EIR because it was determined that the Sherbeck Field improvements were a separate action from the Master Plan, because the two projects have independent utility.

Funding for the Sherbeck Field improvements would come from several years of savings generated from accumulated campus fund carryover (Saghieh pers. comm. 2017d). Sherbeck Field improvements would not come from Measure J funds.

#### 3.2 Project Objectives

The proposed project's main objectives are as follows:

- Provide field lighting to allow for more evening class options for the physical education program to meet student demand.
- Provide a football field for the Fullerton College football program that meets the sizing requirements of the California Community College Athletic Association Regulations, Bylaw 4.2.6 A.
- Install permanent bleachers to reduce the costs associated with renting bleachers for the annual Fullerton College commencement ceremony.

#### 3.3 Field Improvements

Figure 3 shows the proposed site plan for Sherbeck Field. Figure 4 shows the visual simulations of the Sherbeck Field improvements.

#### Construction and Installation

##### *Bleachers*

The proposed project would involve installation of 4,417 permanent prefabricated aluminum bleachers. On the home side of the field (south), 2,861 seats would be provided, and on the

## Initial Study for the Sherbeck Field Improvements Project

---

visitor side (north), 1,556 seats would be provided. The height of the bleachers would be approximately 19 feet high on the home side<sup>1</sup> and 14 feet high on the visitor side.

### *Lighting*

There would be a total of six field lighting stanchions. Two stanchions would be located on the visitor side of the field (north). One stanchion would be located on the west side of the field (F1), while the other would be located on the east side (F2). The F1 stanchion would be located north of the western-most row of the bleachers. The F2 stanchion would be located north of the east bleacher ramp. The F1 and F2 stanchions would be approximately 100 feet tall. Football light fixtures would be located at a height of approximately 25 feet and 100 feet. Egress, or house, light fixtures would be located at a height of approximately 80 feet. F1 and F2 would individually have a power load of 16.9 kilowatts (kW).

Two stanchions would be located on the home side of the field (south). One stanchion would be located on the west side of the field (F3), while the other would be located on the east side (F4). The F3 stanchion would be located south of the west bleacher ramp and the F4 stanchion would be located south of the east bleacher ramp. The F3 and F4 stanchions would be approximately 120 feet tall. Football light fixtures would be located at a height of approximately 30 feet and 120 feet. House light fixtures would be located at a height of approximately 80 feet. F3 and F4 would individually have a power load of 19.6 kW.

One stanchion would be located on the eastern edge of the field (P1) and one on the western edge of the field (P2). The P1 stanchion would be located south of an access gate. The P2 stanchion would be located south of the scoreboard. The P1 and P2 stanchions would be approximately 60 feet tall. Track light fixtures would be located at a height of approximately 60 feet. P1 and P2 would individually have a power load of 3.45 kW.

The total power load of the field lighting would be 79.9 kW. The stanchions would be made of galvanized steel and would be grey or silver.

On Monday through Thursday evenings, field lights would operate until 9:15 p.m. to accommodate classes and rentals, and house lights would operate until 9:30 p.m. to allow students to exit the field safely. On Friday evenings, field lights would operate until 8:15 p.m. at the latest, and house lights would operate until 8:30 p.m. at the latest to allow students to exit the field safely. On Saturday evenings, field lights would operate until 10:00 p.m. at the latest, and house lights would operate

---

<sup>1</sup> The press box would be located on the home side and would be approximately 9 feet tall. Therefore, the press box would reach approximately 28 feet tall, including the height of the bleachers.

## **Initial Study for the Sherbeck Field Improvements Project**

---

until 10:30 p.m. at the latest to accommodate football games. On Sunday evenings, field lights would operate until 6:00 p.m. at the latest to accommodate soccer rentals.

### ***Sound System***

A sound system would be installed and used for athletic competition events only. The sound system would not be used for classes or rentals, although outside organizations renting the facility could bring their own sound system, if needed. There would be 12 speaker arrays in total. Seven speaker arrays, which would be 36 feet high, would be located behind the bleachers on the east side of the field. . Five speaker arrays, which would be 33 feet high, would be located behind the bleachers on the west side of the field. The speakers and speaker poles would be silver in color.

For a daytime Fullerton College football game, the sound system would be employed from 12:00 p.m. until approximately 5:00 p.m. In the event of the occasional Saturday evening football game, the sound system would operate until 10:00 p.m. If a Fullerton College soccer match was to be held in the evening, the sound system would be employed from 5:00 p.m. to approximately 8:00 p.m. For a Fullerton College track and field event, the sound system would be employed from approximately 1:00 p.m. to 5:00 p.m.

### ***Press Box***

The press box would be located on the home side of the field and would be on top of the bleachers. The press box would be divided into three portions: the home press box, coaches' box, and visitor's press box. The press box would be 9 feet tall and would reach 28 feet tall at the top of the bleachers. The home and visitor press boxes would each be approximately 15 feet long and 9 feet deep and would house the home and visitor coaches. The 24 feet long and 9 feet deep box would house the Sport Information Director, statistician, announcer, score keeper, score clock operator, radio and television broadcasters, and local media and press. A railing would be provided on top of the press box. Windows would be located across the front of the press box, and two interior doors and two exterior doors would be provided. In total, the press box would be approximately 500 square feet in area and would not have roof access or elevator access.

### ***Storage Building***

A storage building would be installed west of the visitor bleachers. The building would be 14 feet tall, 30 feet wide, and 20 feet deep, for a total area of 600 square feet. A roll up door would be provided for easy access.

# Initial Study for the Sherbeck Field Improvements Project

---

## *Scoreboard*

No new scoreboard would be provided as part of the project. The existing scoreboard, located at the eastern side of the field, would be used.

## **3.4 Proposed Programming**

Sherbeck Field would be used for academic instruction, competitive athletics, and rentals. A description of these uses is provided below. Table 2 provides a schedule of the proposed uses per semester. Because much of the proposed programming would remain the same from the existing schedule, new programming elements are provided in **bold** text.

### **Academic Instruction**

Fullerton College would continue to offer courses for track and field, cross country, football, and soccer, as well as various fitness courses. Courses would be offered on weekdays only in the mornings, afternoons, and early evenings before nightfall. The inclusion of field lighting as part of the field improvements project would allow Fullerton College to add more evening classes, to offer a balanced schedule, and provide more class options for students who may not be able to take physical education during the day. The earliest classes would begin at 6:20 a.m. and the latest classes would end at 9:15 p.m. Course sizes would range from 24 to 32 students (Saghieh 2017c).

### **Competitive Athletics**

#### *Football*

Sherbeck Field would continue to be used for football practice during weekdays in the afternoon and evening, for 2 hours. There would be approximately 80 practice sessions in the 16-week fall semester.

Saturday afternoon and occasional evening games<sup>2</sup> would be held at Sherbeck Field. Football games would last for three and a half to four hours. There would be approximately five regular and up to two playoff football games per year held at Sherbeck Field. There would be five away games held at other campuses. Football games would be scheduled from the last week of August to the last week of November. There would be a maximum of 1,600 attendees for a regular season football game and a maximum of 3,000 attendees for a playoff game (Saghieh 2017c). Parking would be provided at no charge for football game attendees.

---

<sup>2</sup> Evening games would only be held in special circumstances during hot weather events or depending on the distance the opposing college has to travel. This is based on the Southern California Football Association bylaws. Evening games would not be regularly scheduled.

## **Initial Study for the Sherbeck Field Improvements Project**

---

### ***Soccer***

Sherbeck Field would continue to be used for soccer practice, which would be held on weekdays in the morning for 2 hours. There are approximately 80 practice sessions in the 16-week fall semester.

Friday evening soccer games would be held at Sherbeck Field. Soccer games would typically last for 2 hours. There would be approximately three soccer games per year and a maximum of 200 attendees per game. Parking would be provided at no charge for soccer game attendees.

### ***Track and Field***

Sherbeck Field would continue to be used for track and field practice Mondays through Fridays during the fall and spring semester. Team practices would occur during the morning from 7:00 a.m. to 9:00 a.m. and during the afternoon from 12:00 p.m. to 2:00 p.m. There would be approximately 80 practice sessions in the 16-week fall semester.

Track and field events would continue to be held at Sherbeck Field. One Fullerton College track and field team event on a Friday would occur per year during the spring semester. This event would begin at 10 a.m. and end at 4:00 p.m. There would be approximately 100 attendees per game.

Orange Lutheran High School would continue to use the track in the spring and host up to four track meets per year, usually on a Tuesday, Wednesday or Thursday. Practice and meets would be held in the afternoon from 3:00 p.m. to 6 p.m. and would include approximately 150 attendees.

### **Rentals**

Fullerton College would continue to rent out Sherbeck Field to private schools and organizations to host athletic courses and practice. Specifically, Hope International University, Rosary High School, CDA Slammers, Anaheim Soccer, Seahorse Soccer, CAL South, Troy High School, Prep Football America Camp, and Orange Lutheran rent Sherbeck Field for athletic practice sessions. Additionally, Sherbeck Field would be rented out by the Buena Park Police Department three times per year for training purposes. Sherbeck Field would be rented out at various times on weekdays, Saturdays, and Sundays, as shown in Table 2. Rentals would be limited to the following timeframes: 6:00 a.m. to 9:00 a.m. Mondays through Fridays, 1:00 p.m. to 8:00 p.m. on Mondays through Fridays, and 8:00 a.m. to 8:00\*p.m. on Saturdays and Sundays.

### **Commencement Ceremony**

The annual commencement ceremony would continue to occur once per year in late May or early June at Sherbeck Field. Student check-in would occur from 8:00 a.m. to 9:30 a.m. Commencement would be held on Saturday, beginning at 10 a.m., and end in the afternoon. There would be a maximum of 7,500 students and guests attending the commencement ceremony.

## **Initial Study for the Sherbeck Field Improvements Project**

---

### **3.5 Construction Activities**

It is anticipated that the Sherbeck Field improvements would occur over 6 months, beginning in spring 2019 and ending in fall 2019 (Saghieh 2017e). Construction phasing is anticipated as follows:

- Demolition
- Site preparation
- Grading
- Trenching
- Construction
- Paving
- Architectural coating

Demolition would involve the removal of existing pavement. Site preparation would involve the removal of demolition materials, excavation, and rough grading. Grading would consist of over-excavation within the bleacher areas, ramp areas, storage building area, and within proposed paved areas to a depth of 3 feet. During the grading phase, soils would be removed, replaced, and compacted. The trenching phase would involve the trenching of soil for placement of underground utilities, such as stormwater, domestic water, electrical lines, and data distribution. Construction would involve the installation of the press box, storage building, bleachers, sound system, and light stanchions. The paving phase would involve the pavement of asphalt surfaces, specifically for the bleacher area, storage building area, and walkways. Architectural coating would involve the application of athletic field striping to the track and field.

INTENTIONALLY LEFT BLANK

### **4 PUBLIC REVIEW PROCESS**

#### **Required Permits and Approvals**

The lead agency, the District, is responsible for CEQA clearance and site plan review. A public agency, other than the lead agency, that has discretionary approval over the project is known as a “responsible agency,” as defined by the CEQA Guidelines (14 CCR 15000 et seq.). The responsible agencies and their corresponding approvals for this project are listed below.

#### **State of California**

- Division of the State Architect (approval of construction drawings)

#### **Regional Agencies**

- Santa Ana Regional Water Quality Control Board (National Pollutant Discharge Elimination System Permit)
- Orange County Fire Authority (emergency access)
- South Coast Air Quality Management District (Permit to Construct)

## **Initial Study for the Sherbeck Field Improvements Project**

---

INTENTIONALLY LEFT BLANK

### 5 SUMMARY OF FINDINGS

The District finds that the proposed project could have a significant adverse effect on the environment based on the results of the IS checklist, as described in Section 6. Potentially significant effects have been identified, and the District has decided to prepare an EIR to address these impacts, as described below:

1. **Aesthetics:** The proposed project could have a substantial effect by degrading the existing visual quality of a site or creating a new source of substantial light or glare. See Section 6.1, Aesthetics, for additional information.
2. **Agriculture and Forestry Resources:** The proposed project would not have an impact on agricultural resources. See Section 6.2, Agriculture and Forestry Resources, for additional information.
3. **Air Quality:** Short-term, construction-related impacts are anticipated to occur due to fugitive dust and emissions from vehicles. The operational phase of the proposed project could also result in a substantial increase in emissions. To accurately determine the proposed project's potential impacts on air quality, further analysis will be required. Impacts would be potentially significant. See Section 6.3, Air Quality, for additional information.
4. **Biological Resources:** The proposed project would not result in significant impacts to special-status wildlife or plant species or habitat on the project site, or interfere with the movement of a migratory wildlife species. Impacts would be less than significant. See Section 6.4, Biological Resources, for additional information.
5. **Cultural Resources:** The proposed project would not result in impacts to cultural, archaeological, and paleontological resources during ground-disturbing activities, or cause a substantial adverse change in the significance of a historical resource. Impacts would be less than significant. See Section 6.5, Cultural Resources, for additional information.
6. **Geology and Soils:** The proposed project would not expose people or structures to adverse risks associated with hazardous geologic or soil conditions. Impacts would be less than significant. See Section 6.6, Geology and Soils, for more information.
7. **Greenhouse Gas Emissions:** The proposed project would result in temporary construction-related emissions. During the operational phase, emissions would also increase due to higher energy usage. To accurately determine the proposed project's potential impacts on greenhouse gas emissions, further analysis will be required. Impacts would be potentially significant. See Section 6.7, Greenhouse Gas Emissions, for additional information.
8. **Hazards and Hazardous Materials:** The proposed project could introduce hazardous materials to people or the environment. See Section 6.8, Hazards and Hazardous Materials, for additional information.

## Initial Study for the Sherbeck Field Improvements Project

---

9. **Hydrology and Water Quality:** Impacts to hydrology and water quality would be less than significant. See Section 6.9, Hydrology and Water Quality, for additional information.
10. **Land Use and Planning:** Impacts to land use and planning would be less than significant. See Section 6.10, Land Use and Planning, for more information.
11. **Mineral Resources:** The proposed project would not have an impact on mineral resources. See Section 6.11, Mineral Resources, for additional information.
12. **Noise:** The proposed project could expose persons to noise levels that exceed standards or to excessive groundborne vibration or groundborne noise levels, and result in a substantial permanent, temporary, or periodic increase in ambient noise levels during construction or operation. Noise impacts will be analyzed further in the EIR. Refer to Section 6.12, Noise, for more information.
13. **Population and Housing:** The proposed project would not divide an established community or displace people or housing. The proposed project would not induce substantial population growth. Population and housing impacts would be less than significant. See Section 6.13, Population and Housing, for more information.
14. **Public Services:** The proposed project could result in impacts to fire protection and police protection due to access issues and possible disturbances from project construction and operation. See Section 6.14, Public Services, for additional information.
15. **Recreation:** The proposed project could have an impact on recreational facilities. Impacts are potentially significant and will be analyzed further in the EIR. See Section 6.15, Recreation, for additional information.
16. **Transportation and Traffic:** During construction and operation of the proposed project, increases in traffic due to construction worker commutes, equipment and materials deliveries, and campus visitors may occur. This impact will be analyzed further in the EIR. See Section 6.16, Transportation and Traffic, for additional information.
17. **Tribal Cultural Resources:** See Section 6.17, Tribal Cultural Resources, for additional information.
18. **Utilities and Service Systems:** The proposed project would not have a significant impact on utilities and service systems since it would not require construction of new stormwater drainage facilities and water and wastewater treatment facilities and could require new or expanded water entitlements or resources. This impact will not be analyzed further in the EIR. See Section 6.18, Utilities and Service Systems, for additional information.
19. **Mandatory Findings of Significance:** The proposed project could result in significant impacts. See Section 6.19, Mandatory Findings of Significance, for more information.

## Initial Study for the Sherbeck Field Improvements Project

---

### 6 INITIAL STUDY CHECKLIST

**1. Project title:**

Sherbeck Field Improvements Project

**2. Lead agency name and address:**

North Orange County Community College District  
1830A W. Romneya Drive  
Anaheim, California 92801

**3. Contact person and phone number:**

Richard Williams, District Director, Facilities Planning and Construction, 714.808.4893

**4. Project location:**

Fullerton College  
321 E. Chapman Avenue  
Fullerton, California 92832

**5. Project sponsor's name and address:**

North Orange County Community College District  
1830A W. Romneya Drive  
Anaheim, California 92801

**6. General plan designation:**

School

**7. Zoning:**

P-L Public Land

**8. Description of project. (Describe the whole action involved, including but not limited to later phases of the project, and any secondary, support, or off-site features necessary for its implementation. Attach additional sheets if necessary):**

Refer to Section 3, Project Description.

## **Initial Study for the Sherbeck Field Improvements Project**

---

**9. Surrounding land uses and setting (Briefly describe the project's surroundings):**

Fullerton College occupies an approximately 70-acre site in the City of Fullerton in northern Orange County. The City of Fullerton is surrounded by La Habra and Brea to the north, Placentia to the east, Anaheim to the south, and Buena Park to the west. Figure 1 shows the campus's regional location. Specifically, Fullerton College is bounded by residential development to the north, south, and east, and Fullerton Union High School to the west (see Figure 2).

**10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):**

- Division of the State Architect for approval of construction drawings
- Occupational Health and Safety Administration to be notified of the proposed construction, renovation, and demolition plans
- Santa Ana Regional Water Quality Control Board for the issuance of a National Pollutant Discharge Elimination System Permit
- Orange County Fire Authority for review of project design regarding emergency access

**11. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, has consultation begun?**

**Note: Conducting consultation early in the CEQA process allows tribal governments, lead agencies, and project proponents to discuss the level of environmental review, identify and address potential adverse impacts to tribal cultural resources, and reduce the potential for delay and conflict in the environmental review process. (See Public Resources Code section 21083.3.2.) Information may also be available from the California Native American Heritage Commission's Sacred Lands File per Public Resources Code section 5097.96 and the California Historical Resources Information System administered by the California Office of Historic Preservation. Please also note that Public Resources Code section 21082.3(c) contains provisions specific to confidentiality.**

Yes, one tribe requested consultation. Consultation is ongoing.

## Initial Study for the Sherbeck Field Improvements Project

---

### **DETERMINATION:** (To be completed by the Lead Agency)

On the basis of this initial evaluation:

- ☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- ☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- ☒ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- ☐ I find that the proposed project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier ENVIRONMENTAL IMPACT REPORT or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

## Initial Study for the Sherbeck Field Improvements Project

---

### EVALUATION OF ENVIRONMENTAL IMPACTS:

1. A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an Environmental Impact Report (EIR) is required.
4. “Negative Declaration: Less Than Significant With Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less Than Significant Impact.” The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from “Earlier Analyses,” as described in (5) below, may be cross-referenced).
5. Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
  - a. Earlier Analysis Used. Identify and state where they are available for review.
  - b. Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
  - c. Mitigation Measures. For effects that are “Less than Significant with Mitigation Measures Incorporated,” describe the mitigation measures which were incorporated

## Initial Study for the Sherbeck Field Improvements Project

---

or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6. Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
7. Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
8. This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
9. The explanation of each issue should identify:
  - a. The significance criteria or threshold, if any, used to evaluate each question; and
  - b. The mitigation measure identified, if any, to reduce the impact to less than significance.

## Initial Study for the Sherbeck Field Improvements Project

### 6.1 Aesthetics

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>I. AESTHETICS – Would the project:</b>				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

**a) *Would the project have a substantial adverse effect on a scenic vista?***

***Less-Than-Significant Impact.*** The proposed project would involve improvements to the existing Sherbeck Field, including installation of permanent bleachers, lighting stanchions, a sound system, and construction of a storage building and press box. Construction activities could have a temporary impact on views due to the presence and staging of equipment. The proposed bleachers could obstruct views of the surrounding area. However, the area surrounding the project site is characterized by public, residential, religious institution, and commercial uses. The City of Fullerton General Plan does not identify any scenic areas or vistas in the vicinity of the campus. There is a designated scenic corridor at the intersection of Brea Boulevard and Harbor Boulevard, approximately 0.4 miles northwest of the project site (City of Fullerton 2012a); however, Fullerton College is located in an area where the presence of existing development limits the availability of views to this scenic corridor.

No nature preserves are located within the City, but several parks are located throughout the City. The closest parks are Hillcrest Park and Byerrum Park, which are both located approximately 0.3 miles away; however, Fullerton College is located in an area where the presence of existing development limits the availability of views to nearby parks. As discussed, there are no scenic vistas visible to or from the project site. Therefore, impacts would be less than significant. This topic will not be analyzed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

---

- b) *Would the project substantially damage scenic resources including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?*

**Less-Than-Significant Impact.** The proposed project would involve installation of permanent bleachers, lighting stanchions, a sound system, a storage building, and a press box, which could obstruct views of the surrounding area. Construction activities could have a temporary impact on views due to the presence and staging of equipment. According to the California Department of Transportation (Caltrans 2017), the nearest eligible scenic roadway is the stretch of State Route (SR) 57 from SR-90 to SR-60, which is approximately 1.9 miles from the project site at its closest point. This highway is not an officially designated scenic roadway, but it is considered eligible. The nearest officially designated state scenic highway is SR-91 east of SR-55, which is approximately 5.6 miles from the project site at its closest point (Caltrans 2017). Additionally, there are no County of Orange designated scenic highways within the vicinity of the campus (County of Orange 2005). The proposed project would not damage scenic resources within a state scenic highway, and no further analysis is required. This topic will not be analyzed in the EIR.

- c) *Would the project substantially degrade the existing visual character or quality of the site and its surroundings?*

**Potentially Significant Impact.** The proposed project would involve improvements to the existing Sherbeck Field, such as permanent bleachers and lighting stanchions, which could substantially impact the visual character and quality of the site and its surroundings, particularly for residents directly adjacent to the project site across North Berkley Avenue. Impacts are potentially significant and will be examined in the EIR.

- d) *Would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?*

**Potentially Significant Impact.** The proposed project would include installation of lighting stanchions and house lighting, which would introduce a new source of nighttime light to the project site. Other project elements, including the press box and storage building, could also introduce new sources of nighttime light. The bleachers could introduce a new source of glare to the project site and the surrounding areas. Press box and storage building windows may also introduce glare. Further analysis is necessary to understand if light and glare would adversely affect day or nighttime views in the area. Impacts are potentially significant and will be analyzed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

### 6.2 Agriculture and Forestry Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>II. AGRICULTURE AND FORESTRY RESOURCES</b> – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) ***Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?***

**No Impact.** The proposed project would consist of improvements occurring entirely within the existing Sherbeck Field. The proposed project would not convert farmland to nonagricultural use. The entire project site and project vicinity are designated as urban and built-up land, pursuant to the Farmland Mapping and Monitoring Program of the California Natural Resources Agency (DOC 2017). A parcel of Prime Farmland, located in Placentia, is located approximately 4.7 miles east of the Fullerton College campus and

## Initial Study for the Sherbeck Field Improvements Project

---

appears to contain a dirt lot on the entirety of the site. Additionally, a parcel of land designated as a mixture of Prime Farmland, Farmland of Statewide Importance, and Unique Farmland is located approximately 4.8 mile northwest of the campus in Yorba Linda (DOC 2017). The site appears to contain areas of active farming. The proposed project would not occur within these isolated farmland locations, and would not result in the conversion of this land to nonagricultural use. Therefore, no impact would occur, and no further analysis is required in the EIR.

**b) *Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?***

**No Impact.** The Williamson Act, also known as the California Land Conversion Act of 1969 (California Government Code Section 51200 et seq.), preserves agricultural and open space lands from the conversion to urban land uses by establishing a contract between local governments and private landowners to voluntarily restrict their land holdings to agricultural or open space use. The project site is not located on any lands with Williamson Act contracts.

The Fullerton College campus, including Sherbeck Field, is designated as public land (P-L) in the City of Fullerton zoning map (City of Fullerton 2017). The area west of the project site consist of public land (P-L), two-family residential preservation (R-2P), limited-density multifamily residential (R-3), limited-density multiresidential preservation (R-3P), and central business district (C-3). The area to the north of the project site consists of single-family residential (R-1), single-family residential preservation (R-1P), and limited-density multifamily residential (R-3). The area east of the project site consists almost entirely of single-family residential (R-1), with some office professional land (O-P). The area south of the project site consists of office professional land (O-P), public land (P-L) and two-family residential preservation (R-2P) (City of Fullerton 2017). None of these zones allows agricultural uses. Additionally, according to the City of Fullerton General Plan EIR, less than 1% (approximately 5.3 acres) of the City is devoted to agricultural uses (City of Fullerton 2012b). Due to the developed nature of the site and surrounding land, the proposed project would not conflict with existing zoning for agricultural use. Therefore, there would be no conflict with agriculturally zoned land, and no further analysis is required in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

- c) *Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?*

**No Impact.** The project site is designated as public land. The surrounding land consists of commercial and residential uses (City of Fullerton 2017). All construction would take place within the existing Sherbeck Field on the Fullerton College campus, and the proposed project would not conflict with existing zoning or cause rezoning of any forest or timberland, since none of those land types are located within the vicinity of the project site. No impact would occur, and no further analysis is required in the EIR.

- d) *Would the project result in the loss of forest land or conversion of forest land to non-forest use?*

**No Impact.** The proposed project is located in an urban, developed area and is not located within or in the vicinity of forest land. The closest forests are located in Chino Hills State Park and Cleveland National Forest, approximately 5.5 miles northeast and 13.8 miles southeast, respectively, of the project site (USFS 2017). The proposed project would not contribute to the loss of forest land, and no impact would occur. No further analysis is required in the EIR.

- e) *Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?*

**No Impact.** No farmland or forest land exists within the vicinity of the project site, as described in Sections 6.2(a)–(d). Therefore, no farmland or forests would be converted for nonagricultural or non-forest use due to the proposed project. No impact on farmland or forest land would occur due to the proposed project; therefore, no further analysis is required in the EIR.

### 6.3 Air Quality

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
III. <b>AIR QUALITY</b> – Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Initial Study for the Sherbeck Field Improvements Project

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Expose sensitive receptors to substantial pollutant concentrations?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) Create objectionable odors affecting a substantial number of people?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- a) ***Would the project conflict with or obstruct implementation of the applicable air quality plan?***

***Potentially Significant Impact.*** The City of Fullerton is within the jurisdiction of the South Coast Air Quality Management District. The Air Quality Management Plan prepared by South Coast Air Quality Management District incorporates planning projections to devise a plan to meet federal and state air quality requirements (SCAQMD 2017). The proposed project would increase air pollutants in the short term due to construction activities, and in the long term due to an increase in visitors to the project site for Fullerton College football games, expanded classes and rentals, and expanded hours of operation. The increase in visitors would likely result in an increase in mobile criteria air pollutant emissions into the project area, and could potentially obstruct implementation of the Air Quality Management Plan. These issues are potentially significant and will be analyzed in the EIR.

- b) ***Would the project violate any air quality standard or contribute substantially to an existing or projected air quality violation?***

***Potentially Significant Impact.*** The proposed project could violate an air quality standard or contribute substantially to an air quality violation. Construction of the proposed project would result in a temporary addition of pollutants to the local airshed caused by soil disturbance, dust emissions, and combustion pollutants from on-site construction equipment, construction worker vehicles, vendor/delivery trucks, and off-site haul trucks. Oxides of nitrogen, carbon monoxide, particulate matter with an aerodynamic diameter equal to or less than 10 microns (PM<sub>10</sub>), particulate matter with an aerodynamic diameter

## Initial Study for the Sherbeck Field Improvements Project

---

equal to or less than 2.5 microns (PM<sub>2.5</sub>), and sulfur dioxide emissions would primarily result from the use of construction equipment and motor vehicles. Volatile organic compound emissions would result from architectural coating. Construction emissions can vary substantially from day to day depending on the level of activity; the specific type of operation; and, for dust, the prevailing weather conditions.

Long-term air pollution could result from vehicular emissions and proposed project operations. An increase in visitors and expanded hours of operation could contribute to additional criteria air pollutant emissions. This issue is a potentially significant impact and will be analyzed further in the EIR.

- c) ***Would the project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?***

***Potentially Significant Impact.*** The proposed project could result in a cumulatively considerable net increase of criteria pollutants under nonattainment according to a federal or state standard. Criteria pollutants under nonattainment in the South Coast Air Basin include ozone and particulate matter (PM<sub>10</sub> and PM<sub>2.5</sub>) (SCAQMD 2017). Ozone formation resulting from visitor and student vehicle emissions could contribute to long-term air quality impacts. Particulate matter emissions resulting from construction activities could contribute to temporary impacts. Further investigation is required to determine the proposed project's potential to result in a considerable net increase of these criteria pollutants. These issues are potentially significant and will be analyzed further in the EIR.

- d) ***Would the project expose sensitive receptors to substantial pollutant concentrations?***

***Potentially Significant Impact.*** Sensitive receptors include population groups that are susceptible to the effects of air pollutants. Sensitive receptors include the elderly, children, those with serious medical conditions, and any other group considered sensitive to the harmful effects of air pollutants. Sensitive receptors located within the vicinity of the campus include nearby residences, Raymond Elementary School, and Fullerton Union High School. Further analysis is required to determine the amount of criteria air pollutant emissions that would result from proposed project construction and operations, and whether this would be considered substantial. This issue is potentially significant and will be analyzed further in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

e) *Would the project create objectionable odors affecting a substantial number of people?*

**Potentially Significant Impact.** It is possible that odors could be released during construction activities and while the proposed project is in operation. Construction activities include paving and architectural coating, which could result in the temporary release of objectionable odors. While in operation, odors associated with waste and chemicals used for cleaning and facility maintenance could be released from the project site. This issue is potentially significant and will be analyzed further in the EIR.

### 6.4 Biological Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>IV. BIOLOGICAL RESOURCES – Would the project:</b>				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Initial Study for the Sherbeck Field Improvements Project

---

The following analysis is based on a general biological investigation conducted by Dudek Arborist/Biologist Ryan Gilmore performed on October 11, 2016 (Appendix B). The general survey included the Fullerton College campus plus a 200-foot buffer totaling approximately 123.67 acres (study area). The purpose of the general survey was to identify vegetation communities and land covers, and identify potential habitat for any threatened, endangered, or otherwise special-status species that may occur within the study area. No focused, protocol-level surveys for plants or wildlife were conducted.

- a) *Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?*

***Less-Than-Significant Impact.*** The presence of protected or regulated vegetation communities, plant species, and wildlife species occurring or potentially occurring within the study area was based on a literature review and evaluation of the habitat found within the study area. The review included the California Natural Diversity Database, U.S. Fish and Wildlife Service's environmental online system, and the California Native Plant Society's Inventory of Rare and Endangered Plants. During the field survey, a general inventory of plant and wildlife species were detected by sight, calls, tracks, scat, or other signs, and the potential for special-status species to occur within the study area was determined. No special-status species were observed within the study area during the site visit (Appendix B).

### **Plant Species**

The project site does not support any special-status plant species. Based on the species ranges, the types of land covers (i.e., developed, ornamental, ruderal, and transportation), and the soils present on site, there is no potential for special-status plant species to occur. A total of 39 special-status plant species were reported in the California Natural Diversity Database, U.S. Fish and Wildlife Service's environmental online system, and California Native Plant Society's inventory as occurring in the vicinity of the study area. However, no special-status plant species were observed within the study area during the site visit (Appendix B). Therefore, based on the lack of suitable habitat and the developed nature of the study area, there would be no direct or indirect impacts associated with special-status plant species.

## Initial Study for the Sherbeck Field Improvements Project

---

### Wildlife Species

The project site does not support any special-status wildlife species. Based on the species ranges, the types of land covers (i.e., developed, ornamental, ruderal, and transportation), and the soils present on site, there is no potential for special-status wildlife species to occur. A total of 50 special-status wildlife species were reported in the California Natural Diversity Database and U.S. Fish and Wildlife Service's environmental online system as occurring in the vicinity of the study area. However, no special-status wildlife species were observed within the study area during the site visit (Appendix B). Therefore, based on the lack of suitable habitat and the developed nature of the study area, there would be no direct or indirect impacts to special-status wildlife species.

### Raptor Nesting and Foraging

Because the study area is composed of ornamental landscaping that supports mature trees, there are limited nesting habitats for raptors. Foraging opportunities may occur outside the project site within the ruderal grassland areas. No raptor species were observed within the study area during the site visit (Appendix B).

Raptors that breed in wooded areas that may occur within the study area include American kestrel (*Falco sparverius*), barn owl (*Tyto alba*), Cooper's hawk (*Accipiter cooperii*), red-shouldered hawk (*Buteo lineatus*), red-tailed hawk (*Buteo jamaicensis*), and great horned owl (*Bubo virginianus*). Other species that may over-winter or visit the study area include ferruginous hawk (*Buteo regalis*), northern harrier (*Circus cyaneus*), and sharp-shinned hawk (*Accipiter striatus*) (Appendix B).

A limited number of wildlife species was observed or detected during the general field survey of the study area, including six bird species. Bird species included American crow (*Corvus brachyrhynchos*), Anna's hummingbird (*Calypte anna*), rock dove (*Columba livia*), European starling (*Sturnus vulgaris*), house finch (*Carpodacus mexicanus*), and house sparrow (*Passer domesticus*). No raptors or active nests were observed during the site visit (Appendix B).

If trees were to be removed during proposed project activities, this could have a substantial adverse effect on these special-status avian species because these trees could potentially provide nesting opportunities for bird and raptor species protected under the California Fish and Game Code and the Migratory Bird Treaty Act of 1918.

Impacts to nesting bird and raptor species would be potentially significant if implementation of the proposed project would require removal or substantial trimming of healthy mature trees during the bird nesting season. Although the proposed project would not involve the

## Initial Study for the Sherbeck Field Improvements Project

---

removal or substantial trimming of trees, the proposed project would be required to comply with the Migratory Bird Treaty Act to reduce impacts to nesting bird habitat.

Upon compliance with the Migratory Bird Treaty Act, impacts to candidate, sensitive, or special-status species would be less than significant. This topic will not be analyzed in the EIR.

- b) *Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?***

**No Impact.** According to the general reconnaissance biological survey (Appendix B), the Sherbeck Field site consists of developed land, ornamental plantings, and transportation uses. These are not natural vegetation communities considered sensitive by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service. The project site is not located in riparian habitat or a sensitive natural community, and the project would not have an adverse effect on these habitats. Therefore, no impacts would occur and no further analysis is required. This topic will not be analyzed in the EIR.

- c) *Would the project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?***

**No Impact.** The project site does not support any aquatic resources regulated by the U.S. Army Corps of Engineers or the California Department of Fish and Wildlife as jurisdictional wetlands, waters of the United States, or waters of the state. No drainages were observed within the study area. The closest aquatic resource is Brea Creek (concrete box channel or wash) located 0.12 miles to the west of Fullerton College at its closest approach (Appendix B). Therefore, the proposed project would have no adverse effect on federally protected wetlands. This topic will not be analyzed in the EIR.

- d) *Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?***

**Less-Than-Significant Impact.** Wildlife corridors are linear features that connect large patches of natural open space and provide avenues for the migration of animals. Habitat linkages are small patches that join larger blocks of habitat and help reduce the adverse effects of habitat fragmentation; they may be continuous habitat or discrete habitat islands that function as stepping stones for wildlife dispersal.

## Initial Study for the Sherbeck Field Improvements Project

---

No wildlife corridors or habitat linkages were identified near the study area (Appendix B). Given the extent of existing development north, east, south, and west of the project site and the Fullerton College campus' location between several busy vehicular thoroughfares, the study area is expected to support limited wildlife movement, and lacks intact connectivity to other major habitat reserve areas. Therefore, the proposed project would have a less-than-significant impact on the migratory movement of any wildlife species. No impacts would occur, and this issue will not be analyzed in the EIR.

- e) ***Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?***

**No Impact.** The City of Fullerton Municipal Code Chapter 9.06, Community Forestry, states that no person shall injure, prune, or remove any public tree growing within City public rights-of-way (parkways, parks, and areas around public buildings) without a permit from the Director of Maintenance Services. Furthermore, it is against the code to prune or remove a landmark tree. Landmark trees are defined as any tree found to be of high value because of its species, size, age, or historic associations, and has been designated by the City Council. Landmark trees are designated by the City and identified on maps filed in the Planning Department.

Dudek contacted the City on October 10, 2016, to determine the potential locations of landmark trees within the study area. The City stated that there are currently no official landmark trees as designated by the past or present City Council decree (Appendix B). Therefore, there are no landmark trees within the study area or project site. Therefore, the proposed project would not conflict with local policies or ordinances protecting biological resources. No impacts would occur, and this issue will not be analyzed in the EIR.

- f) ***Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?***

**No Impact.** Exhibit 25 of the City of Fullerton General Plan does not identify habitat conservation areas within the vicinity of the project site (City of Fullerton 2012c). The project site is not identified on a regional or state conservation plan. Consequently, the project would not conflict with provisions of an adopted habitat conservation plan or natural community conservation plan. There would be no impact and this issue will not be analyzed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

### 6.5 Cultural Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>V. CULTURAL RESOURCES</b> – Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Disturb any human remains, including those interred outside of dedicated cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

The following analysis is based on the Cultural Resources Report prepared by Dudek for the Fullerton College campus, dated August 2017 (Appendix C).

**a) *Would the project cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?***

**No Impact.** As part of the Cultural Resources Report (Appendix C), documents and photos available online through the Fullerton College library, available reports and historic documents on file with Fullerton College or the District, local newspapers, historic aerials, and other sources of information regarding the history and development of the campus were reviewed. In addition, a California Historical Resources Information System (CHRIS) records search of the Fullerton College campus and a 0.5-mile radius at the South Central Coastal Information Center occurred on December 14, 2016. The CHRIS search included a review of the National Register of Historic Places, the California Register of Historical Resources (CRHR), the California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list, and the California State Historic Resources Inventory list.

Dudek Architectural Historians Samantha Murray, MA, RPA; Sarah Corder, MFA; and Kara R. Dotter, MS, conducted a pedestrian survey of the Fullerton College campus on February 20, 2017. All buildings and structures that were constructed prior to 1972 were photographed, researched, and evaluated in consideration of CRHR designation criteria and integrity requirements, and in consideration of potential impacts to historical resources under CEQA. The 45-year rule was established by the Office of Historic

## Initial Study for the Sherbeck Field Improvements Project

---

Preservation in recognition of the fact that there is often a lag between the point at which resources are identified and the date that planning decisions are made on projects. The survey entailed walking all portions of the Fullerton College campus and documenting each building with notes and photographs, specifically noting their character-defining features, spatial relationships, and observed alterations (Appendix C).

As described in Section 3, Project Description, the project site was originally constructed from 1956 to 1957. The field was renamed in 1992 after Coach Hal Sherbeck (Fullerton College Centennial 2017). The field house, existing turf, and rubberized track were constructed in 2010 (California Community Colleges 2016). The project site consists of a turf football field, a rubberized track, a two-story field house, and a scoreboard. The proposed project would involve construction and installation of bleachers, lighting, a sound system, press box, and a storage building north of the field house.

Under CEQA, a project may have a significant effect on the environment if it may cause “a substantial adverse change in the significance of an historical resource” (PRC Section 21084.1; 14 CCR 15064.5[b]). If a site is either listed or eligible for listing in the CRHR, or included in a local register of historic resources, or identified as significant in a historical resources survey (meeting the requirements of PRC Section 5024.1[q]), it is a “historical resource” and is presumed to be historically or culturally significant for purposes of CEQA (PRC Section 21084.1; 14 CCR 15064.5[a]). A “substantial adverse change in the significance of an historical resource” reflecting a significant effect under CEQA means “physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired” (14 CCR 15064.5[b][1]; PRC Section 5020.1[q]).

As a result of the significance evaluations for the National Register of Historic Places, CRHR, and the City of Fullerton historical landmark eligibility criteria and integrity, the historical resources identified on the Fullerton College campus included three historic districts: the Fullerton Junior College Campus Historic District, the Mid-Century Modern Campus Expansion Historic District, and the Wilshire Junior High School Historic District. In addition, the Music Building was identified as being potentially eligible for individual listing at the local level (Appendix C).

The Cultural Resources Report did not identify Sherbeck Field or any of its components as historical resources under CEQA (Appendix C). In addition, the proposed project would not involve demolition, relocation, or alteration of any structures. Therefore, no impacts to historical resources would occur, and no analysis is required in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

---

- b) *Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?*

***Less-Than-Significant Impact.*** The CHRIS records search at the South Central Coastal Information Center indicated that 41 cultural resources were previously recorded, and 22 cultural resources studies have been conducted within a 0.5-mile search radius of the Fullerton College campus. Two of the cultural resources overlap the Fullerton College campus: Fullerton Junior College at 321 East Chapman Avenue and Wilshire Junior High School at 315 East Wilshire Avenue. There is one archaeological resource recorded within 0.5 miles of the project site: the Fullerton Transit Historical Reuse deposit (Appendix C).

No archaeological resources were identified on or adjacent to the project site as a result of the CHRIS records search or the Native American coordination efforts described in Appendix C. However, it is always possible that intact archaeological deposits are present at subsurface levels and could be uncovered during ground-disturbing activities. Therefore, in the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities for the proposed project, all construction work occurring within 100 feet of the find would be required to immediately stop until a qualified archaeologist, meeting the Secretary of the Interior's Professional Qualification Standards, can evaluate the significance of the find and determine whether additional study is warranted, as required by California Public Resources Code Section 21082. Depending on the significance of the find under CEQA, the archaeologist may simply record the find and allow work to continue. If the discovery proves significant under CEQA, additional work, such as preparation of an archaeological treatment plan, testing, or data recovery, may be warranted.

If any unanticipated archaeological resources are discovered during project construction, they would be handled in accordance with all applicable laws regulating archaeological resources; therefore, impacts would be less than significant. Therefore, no further analysis is required, and this topic will not be analyzed in the EIR.

- c) *Would the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*

***Less-Than-Significant Impact.*** According to the Los Angeles County History Museum records search results (McLeod 2016), there are no documented fossil localities within a 1-mile radius of the Fullerton College campus. Geological mapping and geotechnical investigations indicate that the site is underlain by Quaternary alluvium, including older, Pleistocene-age deposits anticipated at depth, and the Pleistocene La Habra Formation at

## Initial Study for the Sherbeck Field Improvements Project

---

the surface in the northwestern Fullerton College Campus. Older Pleistocene alluvium and the La Habra Formation have produced numerous plant and animal fossils in the region; therefore, these geological units should be considered to have a high potential to contain significant paleontological resources (McLeod 2016). However, Quaternary alluvium is too young to yield fossils. As described in Section 3.5, Construction Activities, proposed excavation would reach a depth of up to 3 feet. Because only Quaternary alluvium is present at a depth of 3 feet at the project site, project construction is not anticipated to encounter paleontological resources. Therefore, impacts associated with paleontological resources are less than significant. No further analysis is required, and this topic will not be analyzed in the EIR.

**d) *Would the project disturb any human remains, including those interred outside of dedicated cemeteries?***

***Less-Than-Significant Impact.*** There is no evidence of human remains on the project site, and the potential for the inadvertent discovery of human remains on the project site is very low because there is no evidence of any historical camps or human settlement on the site (Appendix C). Additionally, existing regulations through California Health and Safety Code Section 7050.5 et seq. state that if human remains are discovered during project construction, no further disturbance can occur until the Orange County Coroner has made the necessary findings as to its origin. Further, pursuant to PRC Section 5097.98(b), remains must be left in place and free from disturbance until a final decision as to the treatment and disposition of the remains has been made. If the County Coroner determines the remains to be Native American, the Native American Heritage Commission must be contacted within a reasonable time. Subsequently, the Native American Heritage Commission will identify the most likely descendant. The most likely descendant will then make recommendations and engage in consultations concerning the treatment of the remains, as provided in PRC Section 5097.98. Given the very low potential for human remains on the project site and required compliance with existing regulations pertaining to the discovery of human remains, the proposed project would not result in adverse impacts to human remains. The impact would be less than significant, and this topic will not be analyzed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

### 6.6 Geology and Soils

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>VI. GEOLOGY AND SOILS</b> – Would the project:				
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

a) *Would the project expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:*

i) *Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.*

**Less-Than-Significant Impact.** The proposed project site is located in the La Habra Quadrangle. No active fault lies directly underneath the project site;

## Initial Study for the Sherbeck Field Improvements Project

---

however, the Whittier Fault Zone is located 4.5 miles northeast of the proposed project site (DOC 2010). The nearest fault lines are the Norwalk Fault, located approximately 1.5 miles to the southwest; the faults in West Coyote Hills, located approximately 2.5 miles to the northwest; and the El Modeno and Peralta Hills faults, located approximately 4.0 miles southeast of the project site (DOC 2010). The Los Alamitos Fault, at its closest point, is 10.75 miles southwest of the project site in the City of Los Alamitos. Farther away are the Newport–Inglewood Fault Zone and Chino Fault (DOC 2010). Due to the proximity to fault zones, the proposed project site could be vulnerable to the effects of fault rupture, but the potential for direct surface ground rupture is considered very unlikely (Geotechnical Solutions Inc. 2018). In addition, the proposed project would occur entirely within the existing Sherbeck Field and would involve construction of only small structures and improvements, including bleachers, lighting stanchions, a press box, and a storage building. All improvements would be designed, fabricated, and constructed in accordance with applicable seismic standards and regulations, including the Division of the State Architect requirements and the California Building Standards Code. These codes impose design standards and requirements that seek to minimize the damage associated with seismic events. With adherence to applicable standards and regulations, the proposed project would not expose people or structures to substantial adverse risks associated with fault rupture. The impact would be less than significant and no further analysis is required in the EIR.

*ii) Strong seismic ground shaking?*

***Less-Than-Significant Impact.*** Given the project site’s proximity to the Norwalk Fault, the faults in West Coyote Hills, and the El Modeno and Peralta Hills faults, located 1.5 miles, 2.5 miles, and 4.0 miles from the project site, respectively (DOC 2010), the site would be vulnerable to the adverse effects of strong seismic ground shaking. However, the proposed project would involve construction of only small structures and improvements, including bleachers, lighting stanchions, a press box, and a storage building. All improvements would be designed, fabricated, and constructed in accordance with applicable seismic standards and regulations, including the Division of the State Architect requirements and the California Building Standards Code. These codes impose design standards and requirements that seek to minimize the damage associated with seismic events. With adherence to applicable standards and regulations, the proposed project would not expose people or structures to substantial adverse risks associated with

## Initial Study for the Sherbeck Field Improvements Project

---

seismic ground shaking. The impact would be less than significant and no further analysis is required in the EIR.

**iii) *Seismic-related ground failure, including liquefaction?***

***Less-Than-Significant Impact.*** Liquefaction occurs when partially saturated soil loses its effective stress and enters a liquid state, which can result in the soil's inability to support structures above. Liquefaction can be induced by ground-shaking events and is dependent on soil saturation conditions. The proposed project site is within the La Habra 7.5-minute quadrangle and is not within a liquefaction zone (CGS 1998). The project site is also not identified as susceptible to liquefaction according to Exhibit 27 of the City of Fullerton General Plan Natural Environment Element (City of Fullerton 2012c) and has been identified as outside a potential liquefaction zone (Geotechnical Solutions Inc. 2018). Additionally, project design and construction would conform to the Division of the State Architect requirements and the California Building Standards Code, which would abate any effects of unanticipated seismic-related ground failure and liquefaction. As such, the proposed project would not expose people or structures to substantial adverse risks associated with seismic-related ground failure or liquefaction. The impact would be less than significant and no further analysis is required in the EIR.

**iv) *Landslides?***

***Less-Than-Significant Impact.*** Landslides often occur during or after strong earthquakes. The proposed project site is within the La Habra 7.5-minute quadrangle and is not within an earthquake-induced landslide zone (CGS 1998; Geotechnical Solutions Inc. 2018). The project site is also not identified as susceptible to landslides according to Exhibit 27 of the City of Fullerton General Plan Natural Environment Element (City of Fullerton 2012c). Additionally, the project site is relatively flat. Due to these site conditions, the proposed project would not expose people or structures to substantial adverse risks associated with landslides. The impact would be less than significant and no further analysis is required in the EIR.

**b) *Would the project result in substantial soil erosion or the loss of topsoil?***

***Less-Than-Significant Impact.*** As described in Section 3.5, Construction Activities, grading would consist of over-excavation within the bleacher areas, ramp areas, storage building area, and within proposed paved areas to a depth of 3 feet. Therefore, the

## Initial Study for the Sherbeck Field Improvements Project

---

proposed project would involve minimal excavation and grading activities that would expose soils. Additionally, the proposed project would comply with the measures outlined in the District's Storm Water Management Plan (SWMP) (Ninyo and Moore 2015). The SWMP requires that the construction management team or contractor inspect the project site on a weekly basis to prevent erosion and stormwater runoff from occurring. Additionally, project construction would be subject to erosion best management practices (BMPs). The impact would be less than significant and no further analysis is required in the EIR.

- c) ***Would the project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?***

***Less-Than-Significant Impact.*** The proposed project site is located in Southern California, which is an area that is generally seismically active. The project site's proximity to various faults, as described in Sections 6.6 a(i and ii), means that there is an unavoidable potential for the geologic unit to become unstable. However, as described in Section 6.6 a(i), the proposed project site is not underlain by any known earthquake faults. The proposed project site is also not within an area susceptible either to liquefaction or landslides, as described in Sections 6.6 a(iii) and 6.6 a(iv). Additionally, the scope of project improvements is relatively limited and would involve construction of only small structures and improvements, including bleachers, lighting stanchions, a press box, and a storage building, which do not have the potential to cause the geologic unit to become unstable. The proposed project would be designed, fabricated, and constructed in accordance with applicable seismic standards and regulations, including the Division of the State Architect requirements and the California Building Standards Code, which would minimize damage if the geologic unit becomes unstable. Therefore, the proposed project would not result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse. The impact would be less than significant and no further analysis is required in the EIR.

- d) ***Would the project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?***

***Less-Than-Significant Impact.*** The proposed project site is located on Mocho loam, San Emigdio loam, and Xerorthents loamy cut and fill areas, which have expansive properties (USDA 2017). Tests done on site indicate that the underlying soil is classified as very low expansive soil (Geotechnical Solutions Inc. 2018). However, the scope of project improvements is relatively limited and would involve construction of only small structures and improvements, including bleachers, lighting stanchions, a press box, and a

## Initial Study for the Sherbeck Field Improvements Project

storage building within the existing Sherbeck Field. Additionally, the proposed project would comply with the Uniform Building Code of 1994 (now the International Building Code), which would minimize risks to life and property in relation to expanding soils. Therefore, the proposed project would not create a substantial risk to life or property as a result of being located on expansive soils. The impact would be less than significant and no further analysis is required in the EIR.

- e) *Would the project have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?*

**No Impact.** The proposed project would not include septic tanks or alternative wastewater disposal systems; therefore, no impact would occur. This issue will not be analyzed further in the EIR.

### 6.7 Greenhouse Gas Emissions

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>VII. GREENHOUSE GAS EMISSIONS</b> – Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- a) *Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?*

**Potentially Significant Impact.** Global climate change is a cumulative impact; a project has a potential impact through its incremental contribution combined with the cumulative increase of all other sources of greenhouse gases (GHGs). Thus, GHG impacts are recognized as exclusively cumulative impacts; there are no noncumulative GHG emissions impacts from a climate change perspective (CAPCOA 2008). This approach is consistent with that recommended by the California Natural Resources Agency, which noted in its public notice for the proposed CEQA amendments that the evidence indicates that, in most cases, the impact of GHG emissions should be considered in the context of a cumulative impact, rather than a project-level impact (CNRA 2009a). Similarly, the Final Statement of Reasons for Regulatory Action for amendments to the CEQA Guidelines

## Initial Study for the Sherbeck Field Improvements Project

confirms that an EIR or other environmental document must analyze the incremental contribution of a project to GHG levels and determine whether those emissions are cumulatively considerable (CNRA 2009b).

The proposed project would result in the emission of GHGs. Temporary GHG impacts would result from the operation of construction vehicles and equipment. Operation of the improved Sherbeck Field would increase energy demand and increase visitor and student trips, and would, therefore, result in the ongoing emission of GHGs. Further analysis is required to determine the estimated project-generated GHG emissions and their impact on global climate. Impacts are potentially significant and will be addressed in the EIR.

**b) *Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?***

**Potentially Significant Impact.** There are several federal and state regulatory measures aimed at identifying and reducing GHG emissions, most of which focus on area-source emissions (e.g., energy use) and changes to the vehicle fleet (hybrid, electric, and more fuel-efficient vehicles). The Global Warming Solutions Act (Assembly Bill [AB] 32) prepared a scoping plan and its first update, which established regulations to reduce California GHG emission levels to 431 million metric tons of carbon dioxide equivalent per year (CARB 2014). The proposed project would comply with regulations established by AB 32. However, further investigation is required to determine the estimated project-generated GHG emissions and their relationship to AB 32 and other applicable plans and policies. Impacts are potentially significant and will be addressed in the EIR.

## 6.8 Hazards and Hazardous Materials

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>VIII. HAZARDS AND HAZARDOUS MATERIALS – Would the project:</b>				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Initial Study for the Sherbeck Field Improvements Project

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
d) Be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**a) *Would the project create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?***

***Less-Than-Significant Impact.*** Hazardous substances and wastes could be transported to and stored, used, and generated on the project site during construction. These may include fuels for machinery and vehicles, motor oil, cleaning solvents, paints, and other substances and wastes typical of a construction site. However, these materials would be transported, used, and disposed of in accordance with all federal, state, and local laws regulating the management and use of hazardous materials. All waste would be removed and transported to a permitted waste facility for treatment, storage, or disposal. Use of these materials for their intended purposes during construction activities would not pose a significant risk to the public or the environment.

The proposed project would involve very little transport, storage, use, or disposal of hazardous materials, and would be associated with janitorial, maintenance, and repair activities (e.g., commercial cleaners, lubricants, or paints and household cleaning supplies). Use of these materials would be limited, and transport, storage, use, and disposal of these materials would be subject to all federal, state, and local laws regulating the management and use of hazardous materials. Because hazardous materials/chemicals

## Initial Study for the Sherbeck Field Improvements Project

---

used during operations would be transported, used, and disposed of in accordance with all federal, state, and local laws regulating the management and use of hazardous materials, impacts would be less than significant. Therefore, no further analysis is required, and this topic will not be analyzed in the EIR.

- b) *Would the project create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?*

**Less-Than-Significant Impact.** As discussed under Section 6.8(a), hazardous substances and wastes could be stored and used on the proposed project site during construction. Accidental spills, leaks, fires, explosions, or pressure releases involving hazardous materials represent a potential threat to human health and the environment if not properly treated. The most likely spills or releases of hazardous materials during construction would involve petroleum products, such as diesel fuel, oils, and lubricants. All storage, handling, and disposal of these materials are regulated by the Department of Toxic Substances Control (DTSC), the U.S. Environmental Protection Agency, the Occupational Safety and Health Administration, and the City of Fullerton and Orange County Fire Departments.

The proposed project would involve very little use of hazardous materials, which would be associated with janitorial, maintenance, and repair activities (e.g., commercial cleaners, lubricants, or paints and household cleaning supplies). Use of these materials would be subject to all federal, state, and local laws regulating the management and use of hazardous materials. Because hazardous materials/chemicals used during operations would be in accordance with all federal, state, and local laws regulating the management and use of hazardous materials, impacts would be less than significant. No further analysis is required and this topic will not be analyzed in the EIR.

- c) *Would the project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?*

**Less-Than-Significant Impact.** The proposed project site is within 0.25 miles of Fullerton Union High School and Raymond Elementary School. As discussed under Sections 6.8 (a) and (b), with adherence to applicable laws, regulations, and standards, the proposed project would not create a significant risk to the public or the environment related to the use or upset of hazardous materials. As such, it would not create a risk to nearby schools. Impacts would be less than significant and no further analysis is required. This topic will not be analyzed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

---

- d) *Would the project be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*

**Potentially Significant Impact.** CEQA requires review of Section 65962.5 of the California Government Code, also known as the “Cortese List,” to identify whether the project crosses or is in proximity to a site known to have had a hazardous materials release or to represent a threat to human health and the environment. Because this statute was enacted more than 20 years ago, some of the provisions refer to agency activities that are no longer being implemented, and, in some cases, the information to be included in the Cortese List does not exist. Government Code Section 65962.5 makes reference to the preparation of a “list,” but many changes have occurred related to Web-based information access since 1992, and this information is now largely available on the websites of the responsible organizations. The following sources, databases, and lists comprise the Cortese List:

- **Hazardous waste and substance sites from DTSC’s EnviroStor database.** The EnviroStor database is an online search and GIS tool for identifying sites that have known contamination or sites for which there may be reason to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. As discussed below, this list was reviewed for cleanup sites within 0.5 miles of the Fullerton College campus.
- **List of leaking underground storage tank (UST) sites from the State Water Resources Control Board’s (SWRCB) GeoTracker database.** GeoTracker is the SWRCB’s online search and GIS tool for sites that impact groundwater or have the potential to impact groundwater. GeoTracker contains sites that require groundwater cleanup (leaking USTs, Department of Defense sites, and Site Cleanup Program sites), as well as permitted facilities that could impact groundwater (irrigated lands, oil and gas production, operating USTs, and land disposal sites.) As discussed below, this list was reviewed for cleanup sites within 0.5 miles of the Fullerton College campus.
- **List of solid waste disposal sites identified by SWRCB with waste constituents higher than hazardous waste levels outside the waste management unit.** Review of this list revealed one site within the City. The site is the “McColl sludge disposal site,” but it is not close to Fullerton College (i.e., approximately 4 miles to the northwest) (CalEPA 2017).

## Initial Study for the Sherbeck Field Improvements Project

---

- **List of active cease-and-desist orders and cleanup and abatement orders from SWRCB.** Review of this list revealed no sites within the City (CalEPA 2017).
- **List of hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the California Health and Safety Code, as identified by DTSC.** This list only includes two sites in California, neither of which is near the proposed project site (CalEPA 2017).

The GeoTracker database and the DTSC EnviroStor database were reviewed to determine the location, type, and cleanup status of sites within 0.5 miles of the Fullerton College campus (DTSC 2017; SWRCB 2017). EnviroStor and GeoTracker are state databases that track the status and compliance activities of sites undergoing cleanup or remediation under the jurisdiction of the DTSC and SWRCB. The SWRCB generally oversees site assessment and cleanup activities for land uses and activities with potential for adverse effects on the state's water quality and drinking water supplies (including groundwater), and the DTSC oversees cleanup cases that have resulted in soil contamination that may pose a threat to human health or the environment. These databases are presented as geographic map viewers, and the location of cleanup sites are stored in a point database that can be queried using GIS.

Based on this review, 13 sites were identified in the GeoTracker database as leaking UST sites, all of which have received case closure from the SWRCB (SWRCB 2017). Case closure means that the SWRCB has determined that the site no longer poses a significant threat to the environment (i.e., through a determination that the contaminants of concern have been adequately contained and pose little risk of migration) or that the site has been adequately remediated. The closest site is a record for Fullerton College that indicates a prior release of petroleum (spillage from overfilling), discovered during UST closure in 1993 (Hydrologue Inc. 2003). A cleanup action addressed the issue, and a "no further action" letter was issued by the RWQCB in 2004 (SWRCB 2017).

In addition, Fullerton High School is listed in the EnviroStor database as a School Cleanup Program site. A proposed school expansion project prompted an environmental investigation to examine potential concerns associated with four USTs, a boiler room, numerous pad-mounted transformers, and potential lead- or asbestos-containing materials (DTSC 2017). Environmental investigation included a records search, site reconnaissance, and soil and soil gas samples for metals, PCBs, volatile organic compounds, and total petroleum hydrocarbons (Hydrologue Inc. 2003). Based on these investigations, DTSC's no further action letter indicates that "no actual or potential release of hazardous material nor the presence of naturally occurring hazardous material

## Initial Study for the Sherbeck Field Improvements Project

---

which would pose a threat to human health or the environment under any land use was indicated at the site” (DTSC 2004).

According to environmental records searches (Hydrologue Inc. 2003), Fullerton College has five USTs:

- 2,000-gallon single-walled unlined carbon steel tank (waste oil) installed in 1958
- 1,000-gallon single-walled carbon steel tank (waste oil) installed in 1961
- 8,500-gallon unlined carbon steel tank (waste oil) installed in 1964
- 10,000-gallon single-walled unlined carbon steel tank (waste oil) installed in 1975
- 10,000-gallon unlined carbon steel tank (waste oil) installed in 1975

The Fullerton Fire Department and the Orange County Department of Environmental Health were contacted to obtain records pertaining to the Fullerton College campus, including hazardous materials inventories and the Hazardous Materials Business Plan. According to the documents received, the USTs were associated with a boiler plant and have been removed or abandoned in place (Fullerton Fire Department n.d.).

In summary, there is one site within the project boundary identified in Government Code Section 65962.5 (i.e., Cortese List). The Fullerton College site references a prior release of petroleum (spillage from overfilling) discovered during UST closure in 1993 (SWRCB 1993). A cleanup action addressed the issue, and a no further action letter was issued by the RWQCB in 2004 (SWRCB 2017). However, release cases can be closed with residual contamination in place in soils, and there may be locations on campus with previously unidentified contamination. Therefore, impacts are potentially significant.

- e) ***For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?***

**No Impact.** The Airport Land Use Commission for Orange County has adopted the Airport Environs Land Use Plan. The project site is located approximately 3.4 miles east of Fullerton Municipal Airport. The project site is not located within the planning area for Fullerton Municipal Airport or any other airport land use plan (ALUC 2005). Additionally, proposed project activities would not pose a hazard for people residing or working in the project area. Although the proposed project would include construction of bleachers and lighting stanchions, the project site is not located within the height restriction zone for Fullerton Municipal Airport or any other airport. Impacts would not occur, and this topic will not be analyzed further in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

---

- f) *For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?*

**No Impact.** The proposed project is not located within the vicinity of a private airstrip. No private airstrips exist within 2 miles of the project site; therefore, there would be no impact and this issue will not be analyzed further in the EIR.

- g) *Would the project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?*

**Less-Than-Significant Impact.** Construction of the proposed project would not involve road closures and would not interfere with emergency response or evacuation plans. Operation of the proposed project may result in additional traffic on surrounding roadways and within campus parking lots, especially during football games and special events. Additional traffic would increase the difficulty of evacuating the campus population and the project site in the event of an emergency. However, the proposed project is not anticipated to significantly impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. Permitting requirements mandate that the fire department and the Division of the State Architect perform a fire and life safety review and an access compliance review, respectively, prior to approval of proposed project drawings and specification documents. Therefore, emergency response and evacuation as a result of the proposed project would be adequately evaluated to ensure the safest possible conditions for students, staff, and visitors to Sherbeck Field and the Fullerton College campus. Implementation of the proposed project would not interfere with an adopted emergency response or evacuation plan. Impacts would be less than significant and no further analysis is required. This topic will not be analyzed in the EIR.

- h) *Would the project expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?*

**No Impact.** It is unlikely that the proposed project would expose people or structures to a significant risk of loss, injury, or death involving wildland fires. The proposed project is in a completely urbanized area that contains no adjacent wildlands (City of Fullerton 2012c). Additionally, the area surrounding the project site is generally urbanized and developed. Therefore, impacts would not occur and no further analysis is required. This topic will not be analyzed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

### 6.9 Hydrology and Water Quality

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>IX. HYDROLOGY AND WATER QUALITY – Would the project:</b>				
a) Violate any water quality standards or waste discharge requirements?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Otherwise substantially degrade water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
j) Inundation by seiche, tsunami, or mudflow?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Initial Study for the Sherbeck Field Improvements Project

---

- a) *Would the project violate any water quality standards or waste discharge requirements?*

***Less-Than-Significant Impact.*** Impacts to water quality could result from short-term effects of construction activities (e.g., erosion and sedimentation due to land disturbances, uncontained material and equipment storage areas, and improper handling of hazardous materials).

As described in Section 3.5, Construction Activities, grading would consist of over-excavation within the bleacher areas, ramp areas, storage building area, and within proposed paved areas to a depth of 3 feet. Therefore, the proposed project would involve minimal excavation and grading activities that would expose soils. Additionally, the proposed project would comply with the measures outlined in the District's SWMP (Ninyo and Moore 2015). The SWMP requires that the construction management team or contractor inspect the project site on a weekly basis to prevent erosion and stormwater runoff from occurring. Additionally, project construction would be subject to stormwater BMPs. The impact would be less than significant and no further analysis is required in the EIR.

- b) *Would the project substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (i.e., the production rate of pre-existing nearby wells would drop to a level that would not support existing land uses or planned uses for which permits have been granted)?*

***Less-Than-Significant Impact.*** The City's water utility provides water services to the Fullerton College campus. The City receives its water from two main sources: (1) local well water from the Lower Santa Ana River Groundwater Basin, which is managed by the Orange County Water District (OCWD), (2) and imported water from the Metropolitan Water District of Southern California (City of Fullerton 2016a). Water supply from the City's groundwater wells accessing the Orange County Groundwater Basin is constrained by the allowable "basin production percentage,"<sup>3</sup> which is set by the OCWD on an annual basis. The OCWD has been the primary agency managing the groundwater basin since 1933. The OCWD works collaboratively with the Metropolitan Water District and other local water districts, such as the City, to implement a program to manage the groundwater basin to ensure a safe and sustainable supply.

Under the existing condition, the project site consists of a turf football field that is surrounded by a 400-meter track, a two-story field house on the western edge of the field,

---

<sup>3</sup> The basin pumping percentage is the ratio of groundwater production to total water demand, expressed as a percentage.

## Initial Study for the Sherbeck Field Improvements Project

---

a scoreboard on the eastern end of the field, and an existing sound system. The proposed project would involve installation of bleachers, lighting, a sound system, a press box, and a storage building. These project components would not result in an increase in water demand. Thus, the proposed project would not require additional water utility services from the City, and would not increase groundwater demand. Because the proposed project would not generate increased water demands that could substantially deplete groundwater supplies, and because OCWD actively manages groundwater basin supplies, the proposed project would result in less-than-significant impacts to groundwater resources. This topic will not be analyzed further in the EIR.

- c) ***Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?***

***Less-Than-Significant Impact.*** Increases in impervious areas associated with the project could alter the types and levels of pollutants that could be present in project site runoff. Under existing conditions, stormwater that is not infiltrated through landscaped areas moves as sheet flow toward street gutters, swales, and the inlets of underground storm drains. The storm drains direct runoff to the City storm drain system and the Fullerton Creek channel, and eventually into the Pacific Ocean through Coyote Creek/Lower San Gabriel River. Under proposed conditions, stormwater runoff would generally behave in the same manner, and drainage plans would ensure that hydrologic and water quality standards are met. The site would continue to direct stormwater to the City's storm drain system.

As discussed in Section 3, Project Description, the project site consists of a turf football field that is surrounded by a 400-meter track, a two-story field house, and existing scoreboard and sound system. The project site consists largely of impervious areas, such as the field house, track, and walkways. The proposed installations would include bleachers, lighting, a sound system, a press box, and a storage building. Due to the developed nature of the project site, and since the installations would occur largely on impervious areas, much of the new construction and installations that would occur would not substantially increase the amount of impervious areas at the project site.

Additionally, because the project site is largely built-out, is located on level or gently sloping topography, and is surrounded by urban land uses, the proposed project is not anticipated to substantially modify existing topography or runoff patterns. Further, the proposed project would be subject to the most current standards for drainage design and the SWMP, which requires appropriate BMPs for erosion control measures. Therefore, the proposed project would result in less-than-significant impacts associated with

## Initial Study for the Sherbeck Field Improvements Project

---

alteration of drainage patterns resulting in erosion or siltation off site. This issue will not be further analyzed in the EIR.

- d) *Would the project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?*

**Less-Than-Significant Impact.** As previously addressed in Section 6.9(c), under proposed conditions, stormwater runoff would generally behave in the same manner as it currently does, and drainage plans would ensure that hydrologic and water quality standards are met. Due to the developed nature of the project site, and since the improvements would occur largely on impervious areas, much of the new construction and installations that would occur would not substantially increase the amount of impervious areas at the project site. Additionally, because the project site is largely built-out, is located on level or gently sloping topography, and is surrounded by urban land uses, the proposed project is not anticipated to substantially modify existing topography, drainage-shed boundaries, or runoff rates/patterns. Furthermore, new project facilities would be subject to the most current standards for drainage design and the Small Phase II Municipal Separate Storm Sewer System permit, which generally requires developers to mimic pre-construction drainage patterns when designing the drainage plan for a site. Therefore, the proposed project would result in less-than-significant impacts associated with alteration of drainage patterns resulting in flooding on site or off site. This issue will not be further analyzed in the EIR.

- e) *Would the project create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?*

**Less-Than-Significant Impact.** The potential for the project to alter drainage patterns is low due to the built-out nature of the project site and because the change in impervious surfaces would be relatively minor. As previously discussed, the proposed project would not modify existing topography, drainage sheds, or runoff rates/patterns. Therefore, the project is not anticipated to exceed the capacity of the stormwater drainage systems. On-site modifications would be required to comply with the District's SWMP to include appropriate BMPs. For these reasons, impacts related to the capacity of stormwater drainage systems would be less than significant. This issue will not be analyzed further in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

---

*f) Would the project otherwise substantially degrade water quality?*

**Less-Than-Significant Impact.** As previously addressed in Section 6.9(a), impacts to water quality could result from the short-term effects of construction activities (e.g., erosion and sedimentation due to land disturbances, uncontained material and equipment storage areas, improper handling of hazardous materials). Construction activities associated with the proposed project would involve the construction and installation of bleachers, lighting, a sound system, press box, and a storage building. The SWMP would incorporate BMPs to prevent or reduce, to the greatest extent feasible, adverse impacts to water quality related to the project. Thus, required compliance with the District's SWMP would ensure that water quality impacts resulting from construction-related activities would be less than significant, and no further analysis is required in the EIR.

*g) Would the project place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?*

**No Impact.** According to the Federal Emergency Management Agency's Flood Insurance Rate Map (06059C0043J), the project site is not located within the 100-year flood hazard area, and is outside of the 0.2% annual chance floodplain (FEMA 2009). Additionally, the proposed project does not include a housing component. Therefore, the proposed project would not locate housing within a 100-year flood hazard area. Impacts would not occur, and no further analysis is required. This topic will not be analyzed in the EIR.

*h) Would the project place within a 100-year flood hazard area structures which would impede or redirect flood flows?*

**No Impact.** According to the Federal Emergency Management Agency's Flood Insurance Rate Map, the project site is not located within the 100-year flood hazard area, and is outside of the 0.2% annual chance floodplain (FEMA 2009). Therefore, the proposed project would not place structures that would impede or redirect flood flows in a 100-year flood hazard area. Impacts would not occur, and this topic will not be analyzed in the EIR.

*i) Would the project expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?*

**Less-Than-Significant Impact.** The project site is located in the vicinity of two dams: the Brea Dam (1 mile away) and the Fullerton Dam (2.5 miles away). Both dams are owned by the U.S. Army Corps of Engineers and are typically kept almost empty; the flood control storage for the Brea and Fullerton Reservoirs are 7,420 acre-feet and 1,342 acre-

## Initial Study for the Sherbeck Field Improvements Project

---

feet, respectively (County of Orange 2011). Dams are engineered and regularly monitored/ and inspected by the Department of Water Resources and/or U.S. Army Corps of Engineers to ensure that they remain stable in flooding and earthquake scenarios, and to ensure that problems or deficiencies are detected and repaired.

The failure of either of these dams would cause downstream flooding and would likely result in loss of life and property, but the potential for such a failure to occur is extremely low. This is a preexisting environmental condition and the project would have no effect on the likelihood, severity, or extent of the dam failure/inundation. The project would entail construction and installation of bleachers, lighting, a sound system, a press box, and a storage building, but would not involve construction of housing. As discussed in Section 6.13, Population and Housing, the proposed project could accommodate the projected growth of the Fullerton College campus; however, the proposed project would not directly or indirectly induce substantial population growth. Further, as described in Section 6.8, Hazards and Hazardous Materials, the permitting requirements mandate that the Fire Department and the Division of the State Architect perform a fire and life safety review and an access compliance review, respectively, prior to approval of proposed project drawings and specification documents.

Because the proposed project would have no effect on the likelihood, severity, or extent of dam failure/inundation, would not disproportionately induce growth in an area subject to dam inundation, and because emergency plans and procedures are in place, the proposed project would have a less-than-significant impact with regard to dam and levee failure hazards. This topic will not be analyzed in the EIR.

**j) *Inundation by seiche, tsunami, or mudflow?***

**No Impact.** The proposed project site is approximately 14 miles from the Pacific Ocean, and the City of Fullerton is approximately 150 feet above mean sea level; therefore, the project site would not be exposed to impacts from a tsunami (City of Fullerton 2016b). The proposed project site is not in the vicinity of any surface waters or potential mudflow sources. Additionally, according to the City of Fullerton's Local Hazard Mitigation Plan, earthquake-induced seiches are not considered a risk in the City (City of Fullerton 2010). Therefore, the proposed project would not be exposed to impacts from seiche, tsunami, or mudflow, and no further analysis is required in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

### 6.10 Land Use and Planning

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>X. LAND USE AND PLANNING</b> – Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**a) Would the project physically divide an established community?**

**Less-Than-Significant Impact.** The physical division of an established community typically refers to the construction of a linear feature (such as a major highway or railroad tracks) or removal of a means of access (such as a local road or bridge) that would impair mobility within an existing community or between a community and outlying area. Under the existing conditions, the project site is not used as a connection between established communities. The proposed project would involve construction and installation of bleachers, lighting, a sound system, a press box, and a storage building. None of the proposed elements would divide or isolate an established community. Therefore, impacts would be less than significant, and no further analysis is required in the EIR.

**b) Would the project conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?**

**Less-Than-Significant Impact.** The project site currently has a zoning designation of public land (P-L), and the community development type is school; no change in zoning is proposed. The District in general, and Fullerton College specifically, are not subject to local government planning and land use plans, policies, or regulations. Therefore, impacts would be less than significant, and this topic will not be discussed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

- c) *Would the project conflict with any applicable habitat conservation plan or natural community conservation plan?*

**No Impact.** The proposed project is not located within any adopted habitat conservation plan, natural community conservation plan, or local or regional habitat conservation plan area. The City of Fullerton General Plan does not identify any biological resource protection policies applicable to the project site (City of Fullerton 2012c). Since the proposed project is not located within any approved plan areas, it would not impact the goals or objectives of any adopted plan. Therefore, impacts would not occur, and this topic will not be discussed in the EIR.

### 6.11 Mineral Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XI. MINERAL RESOURCES – Would the project:</b>				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) *Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?*

**No Impact.** According to the State of California Department of Conservation, Division of Oil, Gas, and Geothermal Resources, there are no gas, geothermal, or other known wells located on or in the vicinity of the project site. The nearest oil wells are located approximately 0.5 miles north of the project site and are operated by Dolke-Thomas Oil Syndicate (CDC 2017). The proposed project would not result in a land use conflict with the existing oil extraction, nor would it preclude future oil extraction on underlying deposits. The project site does not contain mineral resources; therefore, the proposed project would not result in a loss of availability of a known mineral resource and no impact would occur. This topic will not be analyzed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

- b) *Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?*

**No Impact.** As discussed in Section 6.11(a), there are no mineral resources on the project site. No mineral resource recovery sites are delineated in The Fullerton Plan (City of Fullerton 2012f). The proposed project would not result in a land use conflict with existing oil extraction, nor would it preclude future oil extraction on underlying deposits. Therefore, the proposed project would not result in the loss of availability of a locally important mineral resource, and no impact would occur. This topic will not be analyzed in the EIR.

### 6.12 Noise

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XII. NOISE</b> – Would the project result in:				
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Initial Study for the Sherbeck Field Improvements Project

- a) *Would the project result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?*

**Potentially Significant Impact.** The proposed project could expose people to a noise level in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. Excessive noise could result from construction activities and the operation of construction vehicles. Additionally, the proposed project could result in the exposure of persons to noise levels in excess of established standards due to noise generated by the new sound system and associated with sporting events, classes, or other special events, as well as traffic noise. The City has established interior and exterior noise standards, which vary depending on time of day. These standards are summarized in Table 3.

**Table 3**  
**City of Fullerton Interior and Exterior Noise Standards**

Time Period	Noise Level (dBA) at Property Line	
	Exterior	Interior
7:00 a.m.–10:00 p.m.	55	55
10:00 p.m.–7:00 a.m.	50	45
<i>For residential noise zones and sensitive uses, the following allowed noise level standards shall not be exceeded:</i> For a cumulative period of more than 30 minutes in any hour; or The noise standard plus 5 dBA for a cumulative period of more than 15 minutes, but less than 30 minutes in any hour; or The noise standard plus 10 dBA for a cumulative period of more than 5 minutes, but less than 15 minutes in any hour; or The noise standard plus 15 dBA for a cumulative period of more than 1 minute, but less than 5 minutes in any hour; or The noise standard plus 20 dBA for a cumulative period of less than 1 minute in an hour.		

Source: City of Fullerton 2012e

It is possible that construction and operational activities could exceed the noise levels summarized in Table 3; therefore, impacts would be potentially significant. This issue will be analyzed in the EIR.

- b) *Would the project result in exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?*

**Potentially Significant Impact.** Construction activities could generate or expose people to excessive groundborne vibration or groundborne noise levels that exceed the groundborne vibration and noise thresholds established by the City of Fullerton.

Additionally, construction activities could expose Raymond Elementary School, Fullerton Union High School, and nearby residences to excessive groundborne vibrations and noise. Impacts are potentially significant, and this issue will be analyzed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

---

- c) *Would the project result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?*

**Potentially Significant Impact.** The proposed project site is already developed as Sherbeck Field. However, the proposed project could result in a substantial permanent increase in ambient noise levels due to operation of the new sound system, extended hours of operation, use of the field for football games, and increased traffic noise. Impacts are potentially significant, and this topic will be analyzed in the EIR.

- d) *Would the project result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?*

**Potentially Significant Impact.** The proposed project could result in a substantial temporary or periodic increase in ambient noise levels due to construction activities. Impacts are potentially significant, and this issue will be analyzed in the EIR.

- e) *Would the project be located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?*

**Less-Than-Significant Impact.** The project site is not located within the planning area for Fullerton Municipal Airport or any other airport land use plan (ALUC 2005), and Fullerton Municipal Airport is approximately 3.1 miles west of the project site. Therefore, there is little potential to expose people residing or working in the project area to excessive noise levels. Impacts would be less than significant, and this issue will not be analyzed further in the EIR.

- f) *Would the project be within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?*

**No Impact.** The proposed project is not located within the vicinity of a private airstrip. No private airstrips exist within 2 miles of the project site. People residing or working in the proposed project area would not be exposed to excessive noise levels from a private airstrip. No impacts would occur, and no further analysis is required. This topic will not be analyzed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

### 6.13 Population and Housing

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XIII. POPULATION AND HOUSING</b> – Would the project:				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) *Would the project induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?*

**Less-Than-Significant Impact.** The proposed project would involve improvements to Sherbeck Field, including the construction and installation of bleachers, lighting, a sound system, a press box, and a storage building. Although the field improvements would accommodate future growth, the proposed project would not directly or indirectly induce population growth. The field improvements would not involve habitable structures, the construction of which could generate residents. Additionally, campus programs would remain largely the same, without requiring additional campus employees. The project site is in a developed portion of the City with existing infrastructure and roads that could serve the project, and the project would not generate additional utility and service demands. Therefore, this impact would be less than significant and will not be analyzed further in the EIR.

- b) *Would the project displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?*

**No Impact.** The proposed project would not displace existing housing. The project would involve construction and installation of bleachers, lighting, a sound system, a press box, and a storage building on an existing field. No housing units currently exist on campus. No impact would occur, and no further analysis is required. The topic will not be analyzed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

- c) *Would the project displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?*

**No Impact.** The proposed project would not displace substantial numbers of people. There are no plans to move any facilities that would result in the displacement of people from the project area. No impact would occur, and no further analysis is required. This topic will not be analyzed in the EIR.

### 6.14 Public Services

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XIV. PUBLIC SERVICES</b>				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
Fire protection?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Police protection?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

- a) *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:*

#### ***Fire protection?***

**Potentially-Significant Impact.** The proposed project could increase the number of visitors to the site at specific times, such as during football games, which could impact fire protection services. Therefore, impacts are potentially significant, and this issue will be analyzed further in the EIR.

#### ***Police protection?***

**Potentially-Significant Impact.** The proposed project could increase the number of visitors to the site at specific times, such as during football games, which could impact

## Initial Study for the Sherbeck Field Improvements Project

---

police protection services. Impacts would be potentially significant, and this issue will be analyzed further in the EIR.

### *Schools?*

***Less-Than-Significant Impact.*** The proposed project would not involve the development of campus housing that would generate additional students. Although the field lighting would allow for more evening class options for the physical education program to meet student demand, the project would not directly or indirectly induce substantial population growth. Therefore, the Fullerton School District and Fullerton Joint Union High School District located in the City would not experience adverse impacts resulting from the proposed project. Impacts would be less than significant, and this issue will not be analyzed further in the EIR.

### *Parks?*

***No Impact.*** The proposed project would not result in an increase in the use of existing parks. The project would involve improvements to Sherbeck Field, the Fullerton College campus recreational facility, so athletic activities and games could remain on campus. Therefore, nearby parks would not experience an increase in visitors and acceptable service ratios would be maintained. No impacts to parks would occur, and no further analysis is required in the EIR.

### *Other public facilities?*

***No Impact.*** The proposed project would have no impact on libraries or other public facilities. The nearest library is the Fullerton Public Library, which is located approximately 1 mile southwest of the project site. The project would not generate new permanent residents in the City who would use public facilities. As such, the proposed project would not increase demand in capacity of existing libraries or other public facilities. No impacts would occur, and no further analysis is required. This issue will not be analyzed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

### 6.15 Recreation

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XV. RECREATION</b>				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- a) *Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?*

**No Impact.** The closest parks are Hillcrest Park, Byerrum Park, Amerige Park, and Ford Park, located 0.3, 0.4, 0.9, and 0.9 miles from Sherbeck Field, respectively. The proposed project would not result in an increase in the use of these existing parks or recreation areas. The project would involve improvements to Sherbeck Field, the Fullerton College campus recreational facility, so athletic activities and games could remain on campus. Therefore, off-site recreational facilities would not experience physical deterioration due to an increase of use. No impacts to recreational facilities would occur, and no further analysis is required in the EIR.

- b) *Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?*

**Potentially-Significant Impact.** As discussed in Section 6.15(a), the proposed project would not increase the use of existing parks or recreation areas outside of the campus. Therefore, the expansion or addition of off-site recreational facilities or parks would not be required. However, the proposed project would involve improvements to Sherbeck Field, which could result in an adverse physical effect to the environment. Impacts are potentially significant, and further analysis is required in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

### 6.16 Transportation and Traffic

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XVI. TRANSPORTATION/TRAFFIC</b> – Would the project:				
a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Result in inadequate emergency access?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

- a) *Would the project conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?*

**Potentially Significant Impact.** The proposed project could conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of the traffic circulation system. Applicable plans include the Built Environment Element of The Fullerton Plan. The proposed project has the potential to increase traffic on streets

## Initial Study for the Sherbeck Field Improvements Project

---

immediately surrounding the campus, including North Lemon Street, East Chapman Avenue, Nutwood Place, and North Berkeley Avenue.

If an increase in traffic would result in level of service (LOS) scores lower than “E,” or the baseline LOS if worse than LOS E, for signalized and unsignalized intersections (City of Fullerton 2012a), impacts would be potentially significant. A traffic impact analysis will be conducted and the results included in the EIR.

- b) *Would the project conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?*

**Potentially Significant Impact.** The proposed project could conflict with the Orange County Congestion Management Program (CMP) (OCTA 2015). As described in Section 6.16(a), conflicts could occur due to an increase in traffic on surrounding streets. The CMP requires that intersections do not fall below LOS E. It is unknown whether the proposed project would conflict with LOS standards or any other standards set by the CMP, and impacts would be potentially significant. A traffic impact analysis will be conducted and the results included in the EIR.

- c) *Would the project result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?*

**No Impact.** According to Exhibit 16 of The Fullerton Plan, the project site is outside of the Fullerton Municipal Airport Runway Protection Zone. Consequently, the proposed project would not change air traffic patterns or result in substantial safety risks regarding air traffic (City of Fullerton 2012a). No impact would occur and this topic will not be addressed in the EIR.

- d) *Would the project substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?*

**No Impact.** The proposed project would not involve construction of any transportation-related elements, nor would operations involve incompatible uses to the transportation system. The project site would continue to be used as an athletic field. No impacts related to hazardous design features or incompatible uses would occur, and no further analysis is required. This topic will not be analyzed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

**e) Would the project result in inadequate emergency access?**

**Potentially Significant Impact.** The proposed project could result in inadequate emergency access due to an increase in traffic, particularly during football games and special events. A traffic impact analysis is required to determine whether the project would affect emergency access. Impacts are potentially significant and will be analyzed further in the EIR.

**f) Would the project conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?**

**Potentially Significant Impact.** The proposed project could conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities in the Built Environment Element of The Fullerton Plan or the Orange County CMP (City of Fullerton 2012a; OCTA 2015). A traffic impact analysis is required to determine whether the proposed project would conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities. Impacts are potentially significant and will be analyzed further in the EIR.

### 6.17 Tribal Cultural Resources

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XVII. TRIBAL CULTURAL RESOURCES</b>				
a) Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Initial Study for the Sherbeck Field Improvements Project

---

a) *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:*

i) *Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?*

**Potentially Significant Impact.** As discussed in Section 6.5, the CHRIS records search indicated that 40 built environment resources and one archaeological resource, a historic-era refuse deposit, were previously recorded within a 0.5-mile search radius of the Fullerton College campus. No prehistoric resources have been recorded within 0.5-mile of the project site. The proposed project, however, is subject to compliance with Assembly Bill 52 (California Public Resources Code, 21074), which requires consideration of impacts to tribal cultural resources as part of the CEQA process. In compliance, the CEQA lead agency is required to notify any groups (who have requested notification) traditionally or culturally affiliated with the geographic area of the proposed project. The District received one consultation request from California Native American tribes for Assembly Bill 52 project notification. The request came from Andrew Salas, Chairman of the Gabrieleño Band of Mission Indians–Kizh Nation, who the District has been in consultation with in accordance with Assembly Bill 52 regarding the identification of Tribal Cultural Resources within or adjacent to the proposed project site. However, to date no known geographically-defined TCRs were identified within, or in the immediate vicinity of, the campus during consultation for the Fullerton College Facilities Master Plan project. Ongoing consultation will occur and will include specific discussions relating to the Sherbeck Field project area. Therefore, impacts are potentially significant.

ii) *A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?*

**Potentially Significant Impact.** As stated above, the proposed project is subject to compliance with Assembly Bill 52 (California Public Resources Code, 21074). The District received one request from California Native American tribes for

## Initial Study for the Sherbeck Field Improvements Project

Assembly Bill 52 project notification. The request came from Andrew Salas, Chairman of the Gabrieleño Band of Mission Indians–Kizh Nation, who the District has consulted with, and will continue to actively engage, in accordance with Assembly Bill 52 regarding the identification of Tribal Cultural Resources within or adjacent to the proposed project site. However, to date no known geographically-defined TCRs were identified within, or in the immediate vicinity of, the campus during consultation for the Fullerton College Facilities Master Plan project. Ongoing consultation will occur and will include specific discussions relating to the Sherbeck Field project area.

Therefore, in the event that unanticipated archaeological resources (sites, features, or artifacts) and/or potential Tribal Cultural Resources are exposed during construction activities for the proposed project, all construction work occurring within 100 feet of the find would be required to immediately halt. The Native American tribes that have informed the District they are traditionally and culturally affiliated with the geographic area of the proposed project should be notified. If the City determines that a potential resource appears to be a Tribal Cultural Resource (as defined by PRC Section 21074), the City would provide any affected tribe a reasonable period of time to conduct a site visit and make recommendations regarding the monitoring of future ground disturbance activities, as well as the treatment and disposition of any discovered Tribal Cultural Resources. Therefore, impacts are potentially significant.

### 6.18 Utilities and Service Systems

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XVIII. UTILITIES AND SERVICE SYSTEMS – Would the project:</b>				
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Initial Study for the Sherbeck Field Improvements Project

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
e) Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Comply with federal, state, and local statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**a) *Would the project exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?***

**No Impact.** Orange County Sanitation District (OCSD) is responsible for collecting, treating, and disposing of wastewater generated in the project area. OCSD maintains and operates Reclamation Plant No. 1 and Treatment Plant No. 2, located in Fountain Valley and Huntington Beach, respectively, as well as 15 pump stations located in the OCSD service area (479 square miles) (OCSD 2016). Reclamation Plant No.1 has a primary capacity of 204 million gallons per day (mgd), and treats water to be reclaimed by the Orange County Water District for landscape irrigation use and groundwater replenishment. Additional treated effluent from Reclamation Plant No. 1 is also sent to Treatment Plant No. 2, where effluents are mixed, dechlorinated with sodium bisulfite, and disposed of in the ocean (OCSD 2011). For the 2015/2016 fiscal year, average wastewater flows at Reclamation Plant No. 1 were 117 mgd, and flows at Reclamation Plant No. 2 were 67 mgd, totaling 184 mgd (OCSD 2017). Both of these reclamation plants are required to comply with the wastewater treatment requirements in the National Pollutant Discharge Elimination System permit, Order No. R8-2012-0035/CA0110604 (Santa Ana RWQCB 2012).

The City's sewer system operates entirely by gravity and discharges to several OCSD trunk sewer lines (OCSD 2017). However, the proposed project would not require additional connection to the City's sewer lines. Implementation of the proposed project would involve construction and installation of bleachers, lighting, a sound system, a press box, and a storage building. None of these project features would require wastewater utility services. Therefore, the proposed project would not generate wastewater that would exceed OCSD's ability to meet RWQCB requirements, and no impacts would occur. This topic will not be analyzed further in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

---

- b) *Would the project require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?*

### **Water Facilities**

**No Impact.** The City's water utility provides water service within its 22.3-square-mile service area, which is contiguous with the City boundary. The City receives its water from two main sources: (1) local well water from the Lower Santa Ana River Groundwater Basin, which is managed by the Orange County Water District; (2) and imported water from the Metropolitan Water District of Southern California. The City is a member agency of Metropolitan Water District of Southern California, which delivers surface water from the State Water Project and Colorado River. The City has 11 wells, located in the southern sector of the City. Water pumped from these wells is naturally filtered as it passes through underlying aquifers of sand, gravel, and soil (City of Fullerton 2016a).

The proposed project would not induce population growth such that there would be an adverse impact to the City's ability to provide water without the construction or expansion of water facilities. The proposed project would involve installation of bleachers, lighting, a sound system, a press box, and a storage building. None of these project features would necessitate new or expanded water facilities. Therefore, impacts to water facilities would not occur, and this topic will not be analyzed further in the EIR.

### **Wastewater Facilities**

**No Impact.** As addressed in Section 6.18(a), the City's sewer system operates entirely by gravity and discharges to several OCSD trunk sewer lines. OCSD maintains and operates Reclamation Plant No. 1 and Reclamation Plant No. 2, currently designed with a capacity of 144 mgd and 108 mgd, respectively. For the 2015/2016 fiscal year, average wastewater flows at Reclamation Plant No. 1 were 117 mgd, and flows at Reclamation Plant No. 2 were 67 mgd, totaling 184 mgd (OCSD 2017). Thus, under their current design capacities, Reclamation Plant Nos. 1 and 2 have a collectively surplus treatment capacity of approximately 68 mgd. However, the project would not include generation of wastewater such that wastewater treatment facilities would need to be constructed or expanded. Therefore, impacts related wastewater facilities would not occur, and this topic will not be analyzed further in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

---

- c) *Would the project require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?*

**Less-Than-Significant Impact.** Increases in impervious areas associated with the project could alter the types and levels of pollutants that could be present in project site runoff, which would require storm drainage facilities. Under existing conditions, stormwater that is not filtered through landscaped areas moves as sheet flow toward street gutters, swales, and the inlets of underground storm drains. The storm drains direct runoff to the City storm drain system and the Fullerton Creek channel, and eventually into the Pacific Ocean through Coyote Creek/Lower San Gabriel River. Under proposed conditions, stormwater runoff would generally behave in the same manner, and drainage plans would ensure that hydrologic and water quality standards are met. The site would continue to direct stormwater off site to the City's storm drain system. The municipal storm drain would then convey flows to the south for discharge into the Fullerton Creek channel, which consists of a reinforced concrete rectangular channel (28 feet wide by 15 feet high) maintained by the Orange County Flood Control District (OCFCD 2000).

As discussed in Section 3, Project Description, the project site consists of a turf football field that is surrounded by a 400-meter track, a two-story field house, and an existing scoreboard and sound system. The project site consists largely of impervious areas, such as the field house, track, and walkways. The proposed installations would include bleachers, lighting, a sound system, a press box, and a storage building. Due to the developed nature of the project site, and since the installations would occur largely on impervious areas, much of the new construction and installations that would occur would not substantially increase the amount of impervious areas at the project site, such that construction or expansion of stormwater drainage facility would be required. Therefore, impacts involving the construction or expansion of a storm drain facility would be less than significant, and this topic will not be analyzed further in the EIR.

- d) *Would the project have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?*

**No Impact.** As discussed Section 6.18(b), the proposed project would not induce population growth such that there would be an adverse impact to the City's ability to provide water from existing entitlements and resources. The proposed project would involve installation of bleachers, lighting, a sound system, a press box, and a storage building. None of these project features would require additional water supplies. Therefore, impacts related to water supplies would not occur, and this topic will not be analyzed further in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

---

- e) *Would the project result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?*

**No Impact.** As addressed in Section 6.18(a), the City's sewer system operates entirely by gravity and discharges to several OCSD trunk sewer lines. OCSD maintains and operates Reclamation Plant No. 1 and Reclamation Plant No. 2, currently designed with a capacity of 144 mgd and 108 mgd, respectively. For the 2015/2016 fiscal year, average wastewater flows at Reclamation Plant No. 1 were 117 mgd, and flows at Reclamation Plant No. 2 were 67 mgd, totaling 184 mgd (OCSD 2017). Thus, under their current design capacities, Reclamation Plant Nos. 1 and 2 have a collectively surplus treatment capacity of approximately 68 mgd. However, the project would not include generation of wastewater such that OCSD would require additional capacity to serve the project. Therefore, impacts related wastewater treatment capacity would not occur, and this topic will not be analyzed further in the EIR.

- f) *Would the project be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?*

**Less-Than-Significant Impact.** The Orange County Solid Waste Management System is composed of three landfills: Olinda Alpha Landfill, Frank R. Bowerman Landfill, and Prima Deshecha Landfill. Collected waste from the project site would be transported to Madison Resource Recovery Facility in Santa Ana, which recovers upward of 75% of materials transported to this facility (Ware Disposal Company 2017). The residual solid waste stream recovered from the Madison Resource Recovery Facility is then transported to the Frank R. Bowerman Landfill in Irvine and Olinda Alpha Landfill in Brea (Ware 2016). The Frank R. Bowerman Landfill permits a maximum of 11,500 tons of waste per day, and does not accept public dumping. Olinda Alpha accepts public dumping and permits a maximum of 8,000 tons per day (County of Orange 2017).

The proposed project would not involve demolition of any existing structures. In addition, given the maximum tons of waste accepted per day at the landfill, any waste generated by the proposed project would represent a nominal percentage of the maximum waste accepted. Therefore, the project could be served by a landfill with sufficient permitted capacity, and impacts would be less than significant. This topic will not be analyzed in the EIR.

## Initial Study for the Sherbeck Field Improvements Project

- g) *Would the project comply with federal, state, and local statutes and regulations related to solid waste?*

***Less-Than-Significant Impact.*** All collection, transportation, and disposal of solid waste generated by the proposed project would comply with all applicable federal, state, and local statutes and regulations. In particular, AB 341 requires that at least 75% of solid waste generated by a jurisdiction be diverted from landfill disposal through source reduction, recycling, or composting by 2020. Regional agencies, counties, and cities are required to develop a waste management plan that would achieve a 75% diversion from landfills (PRC Section 40000 et seq.).

Solid waste generated by Fullerton College is collected and transported by Ware Disposal Company, which is permitted and licensed to collect and transport solid waste. Once collected, solid waste is transported to sorting/disposal facilities permitted to accept commercial solid waste, with each facility's operations routinely inspected by regional and state regulatory agencies for compliance with all applicable statutes and regulations. Given these considerations, impacts associated with solid waste statutes and regulations would be less than significant. This topic will not be further analyzed in the EIR.

### 6.19 Mandatory Findings of Significance

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
<b>XIX. MANDATORY FINDINGS OF SIGNIFICANCE</b>				
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Initial Study for the Sherbeck Field Improvements Project

---

- a) *Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?*

**Less-Than-Significant Impact.** As discussed in Sections 6.4 and 6.5, the proposed project would not have the potential to cause significant impacts to biological or cultural resources. Therefore, impacts would be less than significant and no further analysis is required. This topic will not be analyzed in the EIR.

- b) *Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?*

**Potentially Significant Impact.** The proposed project could have impacts that are individually limited but cumulatively considerable, and impacts would be potentially significant. The EIR will analyze past, present, and reasonably foreseeable projects in the vicinity of the proposed project.

- c) *Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?*

**Potentially Significant Impact.** The proposed project could have environmental effects that would cause substantial adverse effects on human beings, and impacts would be potentially significant. This topic will be analyzed further in the EIR.

## *Biological Investigation*

October 17, 2016

9422

Mr. Richard Williams  
District Director, Facilities Planning and Construction  
North Orange County Community College District  
1830 W. Romneya Drive  
Anaheim, California 92801

***Subject: Biological Constraints Analysis for the Fullerton College Facilities Master Plan Project***

Dear Mr. Williams:

This letter presents the findings of a biological constraints analysis conducted by Dudek on the approximately 83-acre Fullerton College property located in the City of Fullerton, Orange County, California (project site; Figure 1). The project site is generally located south and west of North Berkeley Avenue, east of North Lemon Street, and north of East Wilshire Avenue (Figure 2).

The North Orange County Community College District (District) is updating its Facilities Master Plan for its Orange County campuses: Cypress College, Fullerton College, and its School of Continuing Education in Anaheim. The 2011 Facilities Master Plan provides an analysis of the evolving student body and makes planning recommendations based on educational needs. The District is undertaking a comprehensive improvement and building program to make the upgrades and repairs of existing buildings, to construct new facilities to improve the safety and educational experience of those attending the colleges, and to meet projected enrollment based on growth in population and jobs and the state Chancellor's Office enrollment projections in accordance with the Measure J Facilities Bond Program. Measure J was passed in November 2014 and issued \$574 million in bonds to fund upgrades to technical job training facilities, aging classrooms, and veterans' amenities.

At Fullerton College, the District plans to construct the following projects as part of the Facilities Master Plan (proposed project):

- A new Welcome Center at the corner of East Chapman Avenue and North Lemon Street
- Two new instructional buildings, one south of the 1400 building and one south of the proposed parking on lot on East Chapman Avenue

*Mr. Richard Williams*

*Subject: Biological Constraints Analysis for the Fullerton College Facilities Master Plan Project*

---

- New Horticulture and Vocational Sciences Center
- New Child Development Center
- A new 840-space parking structure located west of Sherbeck Field and a pedestrian bridge from the parking structure to the Classroom Office 1400
- New parking lots north of Berkeley Avenue adjacent to the 3100 building and south of the Lemon Street parking structure
- Realignment of the campus access to the Centennial Parking Structure
- A new Maintenance and Operations facility located north of the chiller plant, a thermal storage addition to the south of the chiller plant, and an addition on the east side of the chiller plant
- New storage, offices, and a small shower/locker room building to the north of the existing pool
- The addition of field lighting and 4,500 stadium seats to Sherbeck Field
- A new Performing Arts complex, sculpture garden, arts plaza, and campus quad, in the south campus quad at the southeast corner of East Chapman Avenue and North Lemon Street with renovation of the existing Wilshire Theater
- Renovation of Physical Education 1200 facilities to include a third sand volleyball court and renovations to Health Services, faculty offices, and the Wellness Center
- Renovation of Math 600, Business 300, Humanities 500, Campus Services 840, Administration 100, and the Fine Arts Gallery 1000
- Renovation of Academic Computing 3100
- New signage at key entry and exit points of the campus such as the intersection of North Berkeley Avenue and North Lemon Street, along Berkeley Avenue at Lot 5, along Berkeley Avenue south of Sherbeck Field, along Berkeley Avenue at Lot B-2 East, along East Chapman Avenue at North Lawrence Avenue, at the intersection of East Chapman Avenue and North Lemon Street (north and south of the intersection), and along North Lemon Street at Lot C West

It is anticipated that these improvements will be phased over a 10-year period.

This letter report is intended to: (1) describe the existing conditions of biological resources within the project site in terms of vegetation, flora, wildlife, and wildlife habitats; (2) discuss potential constraints to development of the project site; and (3) provide recommendations for

avoidance of biological resources and additional actions that may be required for environmental permitting of the project with respect to biological resources.

## PROJECT SITE DESCRIPTION

The project site is an existing college campus with paved access roads, parking lots, buildings, and landscaped areas. Fullerton College is surrounded by urban residential and commercial uses in all directions. Fullerton High School is directly adjacent northwest of the campus along North Lemon Street.

Topography of the project site is generally flat with elevations ranging from approximately 175 feet above mean sea level at the center of campus to approximately 223 feet in the northern portion of campus. The project site can be found within Section 27, T. 3 S., R. 10 W. of the U.S. Geological Survey (USGS) 7.5-minute La Habra, California quadrangle map (Figure 2).

## METHODS

The biological constraints analysis began with a review of available literature and data to evaluate the environmental setting and identify potential special-status biological resources that may be found on the project site. The review included the California Department of Fish and Wildlife's (CDFW) California Natural Diversity Data Base (CNDDB)<sup>1</sup>, U.S. Fish and Wildlife Service's (USFWS) Environmental Conservation Online System<sup>2</sup>, and California Native Plant Society's (CNPS) Inventory of Rare and Endangered Plants data (CNPS Inventory)<sup>3</sup>. A 5-mile buffer around the project site was queried in the USFWS data using geographic information systems (GIS) software, and a "nine-quad" query was conducted of the CNDDB and CNPS Inventory. The nine-quad query included the USGS 7.5-minute La Habra quadrangle and the surrounding eight USGS quadrangles (Anaheim, Baldwin Park, El Monte, Long Beach, Los Alamitos, Orange, San Dimas, Whittier, and Yorba Linda). These databases provided information regarding special-status plants, wildlife, and habitats recorded for the project site and vicinity. Dudek also reviewed soil survey maps<sup>4</sup>, USGS National Hydrography Dataset (NHD) of aquatic resources, USFWS' National

Wetlands Inventory (NWI) maps<sup>5</sup>, and other in-house documentation, GIS layers, and sources for locations of special-status species and water resources.

On October 11, 2016, Dudek Arborist/Biologist Ryan Gilmore performed a general biological investigation of the project site, plus a 200-foot buffer totaling approximately 123.67 acres (study area). The purpose of the general survey was to identify vegetation communities and land covers, and identify potential habitat for any threatened, endangered, or otherwise special-status species that may occur within the study area. No focused, protocol-level surveys for plants or wildlife were conducted.

Vegetation community and land cover mapping was conducted according to the CDFW's *Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Natural Communities*<sup>6</sup> and *List of Vegetation Alliances and Associations*<sup>7</sup>, also referred to as the Natural Communities List. Vegetation communities and land covers were mapped in the field directly onto 1:2,400-scale (1 inch = 200 feet) aerial photographic maps. Non-natural vegetation communities or land covers not listed in the Natural Communities List followed generic habitat types used in the Orange County Habitat Classification System (OCHCS)<sup>8,9</sup>, and were identified as mapping units (e.g., Ornamental Mapping Unit). Following completion of the fieldwork, all vegetation polygons were digitized using ArcGIS and a GIS coverage was created.

During the field survey, a general inventory of plant and wildlife species detected by sight, calls, tracks, scat, or other signs was compiled; and the potential for special-status species to occur within the study area was determined. Observable special-status resources including perennial plants and conspicuous wildlife (e.g., birds and some reptiles) commonly accepted as regionally sensitive by the USFWS, CDFW, and/or CNPS were recorded and later digitized into a project-specific GIS coverage.

In addition, a preliminary investigation of the extent and distribution of U.S. Army Corps of Engineers (ACOE) jurisdictional “waters of the U.S.,” Regional Water Quality Control Board (RWQCB) jurisdictional “waters of the State,” and CDFW jurisdictional streambed and associated riparian habitat was conducted.

## RESULTS

This section describes the soils, vegetation communities and floral diversity, wildlife diversity, and special-status biological resources. The study area does not occur within any established conservation plan boundaries such as a Natural Community Conservation Plan area or Habitat Conservation Plan area.

### Soil Survey Review

The *Soil Survey of Orange County and Western Part of Riverside County*<sup>10</sup> was analyzed for indicators of streams and the historic mapping of wetlands, seeps, springs, or hydric soils. Three soil series were identified as occurring within the boundaries of the study area: Mocho loam, 0 to 2% slopes (166); San Emigdio fine sandy loam, 0 to 2% slopes (194), and Xerorthents loamy, cut and fill areas, 9 to 15% slopes (219). One drainage feature was identified on the map that occurs approximately 0.12 miles west of the study area (Brea Creek).

### National Hydrography Dataset and National Wetlands Inventory Review

The study area occurs within the southeast portion of the Los Angeles-San Gabriel River Hydrologic Unit (805.00), and more specifically within the Anaheim Hydrologic Area Split (845.60) and Anaheim Hydrologic Subarea Split (845.61). The Los Angeles-San Gabriel River Hydrologic Unit includes covers most of Los Angeles County and is mostly fully developed and/or entitled. The Anaheim Hydrologic Subarea Split watershed is primarily drained by the Carbon Creek flood control channel and Moody Creek flood control channel, both of which connect with Coyote Creek and eventually merge with the San Gabriel River before eventually draining into the Pacific Ocean. No tributaries to Brea Creek channel occur within the study area. Brea Creek channel is identified as a “flowline” within the NHD and “blue-line” drainage on the USGS 7.5-minute La Habra and Anaheim quadrangle maps.

A review of the NWI dataset revealed no aquatic resources within the project site or surrounding study area.

## Vegetation Communities and Floral Diversity

Four non-natural land covers were mapped within the study area based on general physiognomy and species composition, including: developed, ornamental, ruderal, and transportation. These land cover types are described below and depicted within Figure 3. Table 1 summarizes the extent of each land cover within the study area.

**Table 1**  
**Vegetation Communities and Land Covers within the Study Area**

Vegetation Community or Land Cover	Area (acres)		
	Project Site	Off Site (200-foot Buffer)	Study Area
<i>Non-Natural Land Covers / Unvegetated Communities</i>			
Developed Mapping Unit	50.46	31.43	81.89
Ornamental Mapping Unit	18.52	5.99	24.51
Ruderal Mapping Unit	1.12	0.05	1.17
Transportation Mapping Unit	1.97	14.12	16.09
<b>Total</b>	<b>72.08</b>	<b>51.59</b>	<b>123.67</b>

### ***Non-Natural Land Covers/ Unvegetated Communities***

#### **Developed Mapping Unit**

The developed mapping unit includes areas occupied by college campus structures, residential and commercial structures, paving, and other impermeable surfaces that typically do not support vegetation or habitat for species; however, non-native ornamental landscaping may occur within the mapping unit.

#### **Ornamental Mapping Unit**

This land cover type consists of introduced plantings of exotic, and sometimes native, species as landscaping. Species associated with this mapping unit that occur within the study area include jacaranda (*Jacaranda mimosifolia*), fern pine (*Podocarpus gracilior*), camphor (*Cinnamomum camphora*), Canary Island pine (*Pinus canariensis*), sweetgum (*Liquidambar styraciflua*), Queen palm (*Syagrus romanzoffiana*), rosemary (*Rosmarinus officinalis*), Mexican fan palm (*Washingtonia robusta*), Bermuda grass (*Cynodon dactylon*), and various non-native ornamental grass species.

### **Ruderal Mapping Unit**

This land cover type consists of early successional grasslands dominated by non-native, pioneering herbaceous plants and associated with disturbed areas. The type of non-native species that dominate ruderal areas are generally forbs as opposed to grasses. Species associated with this mapping unit that occur within the study area include black mustard (*Brassica nigra*) and Russian thistle (*Salsola tragus*).

### **Transportation Mapping Unit**

This barren cover type consists of major paved vehicular access roads that lack vegetation. Roadways within the study area include East Chapman Avenue, North Lemon Street, North Berkeley Avenue, and East Wilshire Avenue.

### **Wildlife Diversity**

A limited number of wildlife species was observed or detected during the general field survey of the study area, including a total of 6 bird species. Bird species included American crow (*Corvus brachyrhynchos*), Anna's hummingbird (*Calypte anna*), rock dove (*Columba livia*), European starling (*Sturnus vulgaris*), house finch (*Carpodacus mexicanus*), and house sparrow (*Passer domesticus*). No raptors or active nests were observed during the site visit.

### **Special-Status Biological Resources**

The presence of protected or regulated vegetation communities, plant species, and wildlife species occurring or potentially occurring within the study area was based on a literature review and evaluation of the habitat found within the study area. Special-status biological resources are classified by either State or Federal resource management agencies, or both. Special-status vegetation communities include habitats considered "sensitive" by the CNDDDB that are unique, of relatively limited distribution, or of particular value to wildlife. Special-status plant and wildlife species include those listed as threatened or endangered under provisions of the State and federal Endangered Species Acts, or as California Species of Concern (SSC) by the CDFW. The species discussed below have been afforded special recognition by local, State, or federal resource conservation agencies and organizations, principally due to the species' declining or limited population sizes usually resulting from habitat loss.

### ***Sensitive Vegetation Communities***

No natural vegetation communities considered sensitive by the CNDDDB were identified within the study area.

### ***Special-Status Plants***

Special-status plants include those listed, or candidates for listing, as threatened or endangered by the USFWS and CDFW, and species identified as rare by the CNPS (particularly California Rare Plant Rank [CRPR] 1A – Presumed extinct in California; CRPR 1B – Rare, threatened, or endangered throughout its range; and CRPR 2 – Rare or Endangered in California, more common elsewhere). A total of 39 special-status plant species were reported in the CNDDDB, USFWS, and CNPS databases as occurring in the vicinity of the study area. However, no special-status plant species were observed within the study area during the site visit. Based on the species ranges, and land covers (e.g., developed, ornamental, ruderal, and transportation) and soils present on the project site, there is no potential for special-status plants to occur.

### ***Special-Status Wildlife***

Special-status wildlife include those listed, or candidates for listing, as threatened or endangered by the USFWS and CDFW, and designated as SSC by CDFW. A total of 50 special-status wildlife species were reported in the CNDDDB and USFWS databases as occurring in the vicinity of the study area. However, no special-status wildlife species were observed within the study area during the site visit. Based on the species ranges, and land covers (e.g., developed, ornamental, ruderal, and transportation) and urban pressures present on the project site, there is no potential for special-status wildlife to occur.

### ***Raptor Nesting and Foraging***

Since the study area is comprised of ornamental landscaping that support mature trees, there are limited nesting habitats for raptors. Foraging opportunities may occur outside the project site within the ruderal grassland areas. No raptor species were observed within the study area during the site visit.

Raptors that breed in wooded areas which may occur within the study area include American kestrel (*Falco sparverius*), barn owl (*Tyto alba*), Cooper's hawk (*Accipiter cooperii*), red-shouldered hawk (*Buteo lineatus*), red-tailed hawk (*Buteo jamaicensis*), and great horned owl (*Bubo virginianus*). Other species that may over-winter or visit the study area include ferruginous hawk (*Buteo regalis*), northern harrier (*Circus cyaneus*), and sharp-shinned hawk (*Accipiter striatus*).

### ***Jurisdictional Aquatic Resources***

The project site does not support any aquatic resources regulated by the ACOE, or the CDFW as jurisdictional wetlands, “waters of the U.S.,” or “waters of the State.” No drainages were observed within the study area. The closest aquatic resource is Brea Creek (concrete box channel or wash) located 0.12 miles to the west at its closest approach.

### ***Public and Landmark Trees***

The City of Fullerton Municipal Code Chapter 9.06 Community Forestry states that no person shall injure, prune, or remove any public tree growing within the city public right-of-way (parkways, parks, and areas around public buildings) without a permit from the Director of Maintenance Services. Furthermore, no person shall injure, prune, or remove a landmark tree. Landmark trees are defined as any tree found to be of high value because of its species, size, age, or historic associations and have been designated by the City Council. Landmark trees are designated by the City and identified on maps filed in the Planning Department.

Dudek contacted the City on October 10, 2016 to determine the potential locations of landmark trees within the study area. The City stated that there are currently no official landmark trees as designated by the past or present City Council decree. Therefore, there are no landmark trees within the study area or project site.

The biologist observed a number of potentially regulated public trees growing within the parkways and medians on the following streets: East Chapman Avenue, North Lemon Street, East Wilshire Avenue, North Balcom Avenue, North Newell Place, and East Brookdale Place. Regulated public trees are depicted within Figure 4.

### ***Designated Critical Habitat***

No federally designated critical habitat for any plant or wildlife species occurs within the study area.

### ***Wildlife Corridors and Habitat Linkages***

Wildlife corridors are linear features that connect large patches of natural open space and provide avenues for the migration of animals. Habitat linkages are small patches that join larger blocks of habitat and help reduce the adverse effects of habitat fragmentation; they may be continuous habitat or discrete habitat islands that function as stepping stones for wildlife dispersal.

No wildlife corridors or habitat linkages were identified near the study area. Given the extent of existing development north, east, south, and west of the project site and position between several busy vehicular thoroughfares, the study area is expected to support limited wildlife movement, and lacks intact connectivity to other major habitat reserve areas.

## **SUMMARY OF BIOLOGICAL CONSTRAINTS AND RECOMMENDATIONS**

The project site is an existing college campus characterized by non-natural land covers and unvegetated communities (e.g., developed and ornamental mapping units). Dudek understands that the proposed project involves renovation of existing structures and construction of new buildings and landscape features within the existing college campus footprint. For the purposes of this preliminary assessment, Dudek has assumed that standard best management practices during construction activities would be implemented and all future temporary and permanent impacts would occur within the existing development footprint.

Based on the results of the literature review and recent field observations conducted by Dudek, two potential biological resource constraints were identified for the proposed project:

- **Breeding and nesting bird habitat.** The project site and study area contain vegetation and trees that could potentially support breeding and nesting bird species, including raptors. Disturbing or destroying occupied nests, live young, and eggs is a violation of the Migratory Bird Treaty Act (16 U.S.C. 703) and California Fish and Game Code (Section 3503). Dudek recommends initiation of vegetation clearing outside the nesting season (February through August) in order to avoid impacting nesting birds. If construction activities must occur during the nesting season, then all suitable habitat should be thoroughly surveyed for the presence of nesting birds by a qualified biologist before commencement of any vegetation clearing. Typically, if an active nest is detected then an appropriate avoidance buffer around the nest, as determined by a qualified biologist, is flagged and avoided until the nesting cycle is complete.
- **Public Trees.** There are a large number of public trees located within the study area and regulated by the City of Fullerton. The City of Fullerton Municipal Code Chapter 9.06 Community Forestry requires a permit for activities that may alter, injure, or require the removal of a public tree.

## EXECUTIVE SUMMARY

Dudek was retained by the North Orange County Community College District (District) to conduct a cultural resources study for the Fullerton College Facilities Master Plan (proposed project) Program Environmental Impact Report (EIR).

The cultural resources study included a records search of the proposed project site plus a 0.5-mile radius; Native American coordination; a pedestrian survey of the project site for cultural resources; archival and building development research for buildings located within the project site; evaluation of buildings for the National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), and City of Fullerton historical landmark eligibility criteria and integrity requirements; and an assessment of impacts to historical resources in compliance with the California Environmental Quality Act (CEQA).

All buildings and structures on campus that were built at least 45 years ago or proposed for demolition/substantial alteration as part of the proposed project were photographed, researched, and evaluated in consideration of NRHP, CRHR, and local designation criteria and integrity requirements, and in consideration of potential impacts to historical resources under CEQA.

As a result of the significance evaluation, three historic districts and one individually eligible building were identified within the project area:

- **Fullerton Junior College Campus Historic District.** The original 1930s–1940s Fullerton Junior College Campus appears to be eligible as a historic district under NRHP/CRHR Criteria A/1 and C/3, as well as City of Fullerton historical landmark criteria 1, 5, 6, 7, and 8, for its association with WWII and the G.I. Bill and for conveying a concentration of planned buildings, structures, and associated elements united aesthetically by their embodiment of the Spanish Colonial Revival style with Churrigueresque elements. The buildings also represent the notable work of master architect Harry K. Vaughn, who created some of his most important work as an individual architect during the historic district’s period of significance (1935–1942).
- **Mid-Century Modern Campus Expansion Historic District.** The buildings designed by William Henry Taylor during the late 1950s through the 1960s appear to be eligible as a historic district under NRHP/CRHR Criterion C/3, as well as City of Fullerton historical landmark criteria 5, 6, and 8, for conveying a concentration of planned buildings, structures, and associated elements united aesthetically by their embodiment of the International and New Formalism styles. The buildings also represent the notable work of modern architect Taylor.

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

- **Music Building 1100.** This building appears eligible as both a district contributor (of the Mid-Century Modern Campus Expansion Historic District) and an individual property under NRHP/CRHR Criterion C/3, as well as City of Fullerton historical landmark criteria 5, 6, 7, 8, and 9, for its high artistic value associated with the New Formalism style and for its location prominently anchoring the southwest corner of campus.
- **Wilshire Junior High School Historic District.** The original 1936 Wilshire Junior High School campus buildings appear to be eligible as a historic district under NRHP/CRHR Criteria A/1 and C/3 and City of Fullerton historical landmark criteria 3, 5, and 8 for conveying a concentration of planned buildings, structures, and associated elements united aesthetically by their embodiment of the PWA/WPA Moderne style. The buildings also represent the notable work of architect Donald Beach Kirby, whose best-known projects are the 1940 Maharajah of Indore Residence in Santa Ana and the 1950 Miss Burke's School in San Francisco.

These findings indicate that Fullerton College contains numerous buildings that are considered historical resources under CEQA. As such, the proposed project has the potential to adversely impact historical resources. Recommendations to reduce impacts to historical resources are provided.

No archaeological resources were identified within the project site as a result of the records search or Native American coordination. However, it is always possible that intact archaeological deposits are present at subsurface levels. For these reasons, the project site should be treated as potentially sensitive for archaeological resources. Management recommendations to reduce potential impacts to unanticipated archaeological resources and human remains during campus construction activities are provided.

# **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

## **1 INTRODUCTION**

Dudek was retained by the North Orange County Community College District (District) to conduct a cultural resources study for the proposed Fullerton College Facilities Master Plan (proposed project) Program Environmental Impact Report (EIR). The cultural resources study includes the following components: (1) a California Historical Resources Information System (CHRIS) records search covering the proposed project site plus a 0.5-mile radius, (2) a review of the California Native American Heritage Commission's (NAHC's) Sacred Lands File, (3) outreach with local Native American tribes/groups identified by the NAHC to collect any information they may have concerning cultural resources, (4) a pedestrian survey of the project site for cultural resources, (5) archival and building development research for buildings located within the project site, (6) the evaluation of buildings for California Register of Historical Resources (CRHR) eligibility, and (7) consideration of impacts to historical resources in compliance with the California Environmental Quality Act (CEQA).

This report was prepared by Dudek Architectural Historians Sarah Corder, MFA, Samantha Murray, MA, and Kara Dotter, MSHP, all of whom exceed the Secretary of the Interior's Professional Qualification Standards for architectural history (see resumes provided in Appendix C).

### **1.1 Project Location**

Fullerton College is located at 321 East Chapman Avenue in the City of Fullerton (City) and occupies an approximately 70-acre site in northern Orange County (Figure 1). The project site is discontiguous and includes the entire Fullerton College Campus north of Chapman Avenue between Lemon Street to the west and Berkeley Avenue to the east; the Wilshire Center School of Continuing Education to the south (located on the northeast corner of Lemon Street and Wilshire Avenue); and residential properties located south of Chapman Avenue, including 416, 418, 420, 428, 434, and 438 East Chapman Avenue, and 325–327 and 409 North Newell Place (Figure 2).

### **1.2 Project Description**

#### **1.2.1 Introduction**

The District is undertaking a comprehensive improvement and building program to make upgrades and repairs of existing buildings and to construct new facilities to improve the safety and educational experience of those attending Cypress College, Fullerton College, Anaheim Campus, and the School of Continuing Education in accordance with Measure J. In 2014, voters passed a \$574 million Measure J Facilities/Bond Program. The Measure J Bond Program will help make upgrades to lecture halls, technology, and instructional equipment to better prepare

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

students for growing fields of study and high-skill careers for all District campuses. It also allows the District to enhance classroom space and training centers. It will allow the District to expand veterans' services, as well as job placement centers to train and retrain veterans as they transition into the civilian workforce (District 2016a).

Fullerton College is proposing to implement the proposed project to more effectively meet the space needs of the projected on-campus enrollment through the next decade and beyond while constructing and renovating facilities to meet the District's instructional needs. Improved circulation in and around campus would increase accessibility to existing and new development and enhance the overall connectivity of campus uses.

### **1.2.2 Facilities Master Plan Elements**

#### **1.2.2.1 New Construction**

Based on the information in the *Proposed Facilities Master Plan Updates* (District 2016b), the projects in the following text have detailed information available and would receive project-level assessment. See Figure 3 for existing campus land uses and Figure 4 for proposed campus land uses. All construction projects would be funded by Measure J, with the exception of the Aquatics Center expansion.

#### **Welcome Center**

The proposed Welcome Center would be northeast of the East Chapman Avenue and North Lemon Street intersection to make it accessible and visible to students, visitors, and the community. The Welcome Center would be three stories tall and 29,470 assignable square feet (ASF; 44,000 gross square feet (GSF)) and would include a Veterans Resource Center and space for student services.

#### **New Instructional Building**

This building would be between the Classroom office 1400 and Physical Education 1200. The new instructional building would be three stories tall and 47,900 ASF (72,400 GSF) and would include classrooms, faculty offices, and support spaces.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **Horticulture and Vocational Services Center**

The Horticulture and Vocational Services Center would be in the northeastern portion of the campus (where the existing Horticulture buildings are currently located). New greenhouses would be constructed along with an instructional facility that will include lecture space and lab space for the Biotechnical program and kitchen facilities for the Food/Nutrition program. The new facilities would total 26,900ASF (32,300 GSF), and each facility would be one story in height.

The Lab School facility would replace the existing 1810, 1820, and 1830 buildings, located in the northeastern corner of campus, east of the Horticulture 1600 buildings. The Lab School would provide classroom and support space for the Child Development program. The building would be one story tall and 6,271 ASF (7,427 GSF).

### **Centennial Parking Structure**

The proposed project would consist of a new four-level parking structure planned west of Sherbeck Field. The parking structure would provide 840 parking spaces and would be 300 ASF (260,000 GSF). A digital display would be located at the entrance of the parking structure, which would show the number of parking spaces available or if the parking structure is full. Ingress and egress from the structure is described more fully under “Realignment of Campus Access to the Centennial Parking Structure.”

### **Pedestrian Bridge**

A new pedestrian bridge would span 60 feet across East Avenue and would connect to the second floor of the parking structure and Building 1400.

### **Realignment of Campus Access to the Centennial Parking Structure**

The proposed project would also involve the realignment of the primary one-way access from Berkeley Avenue (north) to the proposed structure and then from the structure to Berkeley Avenue (east). This would also involve the construction of a new south driveway to the new Centennial parking structure and a roundabout at the intersection of East Avenue and Centennial Way. The new realignment would limit vehicle entry from the eastern side of the parking structure and vehicle exit south of the parking structure, which would limit one-way traffic along East Avenue and Centennial Way.

### **New Parking Lots**

New parking lots are proposed throughout the campus. The Berkeley Center lot, located north of Berkeley Avenue, will be introduced upon demolition of the Berkeley 3000 building. Lot C West, located south of the Lemon Street Structure and the Safety 1500 building, will be significantly

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

expanded after the demolition of the Theatre Arts 1300 building. Lot 11 will be introduced after the removal of 428, 434, and 438 East Chapman Avenue and 400 North Newell Place.

### **New Maintenance and Operations Facility, Chiller Plant Addition, and Thermal Energy Storage**

The new Maintenance and Operations facility would be located west of the Centennial Parking Structure and north of the chiller plant. The Maintenance and Operations facility would be two stories tall and 13,200 ASF (22,300 GSF). The Maintenance and Operations facility would provide administration offices, trade work areas, and support functions.

The chiller plant addition would be one story tall and 1,600 square feet and would be required to accommodate additional facilities as part of the proposed project. The chiller plant addition would include a circulation pump, condenser water pump, and a cooling tower and would require the addition of underground piping to the thermal energy storage tank.

The thermal energy storage tank would be located south of the chiller plant. A one-story-tall, 3,900-square-foot building would encase the tank.

### **Aquatics Center**

Improvements to the Aquatics Center, located east of the Physical Education Building 1200, would include deck storage, a small shower/locker room, and two classrooms added to the north of the existing pool. These facilities would total 1,800 ASF (3,500 GSF) and would be one story tall.

### **New Performing Arts Complex**

The Performing Arts Complex is a replacement building complex that would define the south campus quad, and includes renovation of the historic Wilshire Theatre. The Performing Arts Complex auditorium would include an 80-foot-tall fly loft and total 25,658 ASF (40,300 GSF). The Performing Arts Complex would serve to replace the Theatre Arts 1300, the Music building 1100, and the TV/Radio program currently held in Building 2000. The Performing Arts Complex would host theatre and music events. The Theatre Arts 1300 and the Music Building 1100 currently offer 150 and 694 seats, respectively. Therefore, the new Performing Arts Complex would offer 844 seats. The Performing Arts Complex could also be used by other schools and entities. The Performing Arts Complex would also include support space, laboratories, and classrooms in a separate two-story building.

### **Chapman–Newell Instructional Building**

The new instructional building would be two stories tall and 35,200 ASF (54,600 GSF) and would include classrooms, faculty offices, and support spaces.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **1.2.2.2 Renovation**

Based on the information in the *Proposed Facilities Master Plan Updates* (District 2016b), the projects in the following text have detailed information available and would receive project-level assessment. See Figure 3 for existing campus land uses and Figure 4 for proposed campus land uses. All renovation projects would be funded in part or in totality by Measure J. Renovation of the Business 300 and Humanities 500 buildings will be funded in part by Measure J and also through state funding. State funding is also being considered for renovation of the Math 600 building and the Performing Arts Complex.

Due to the age and condition of the existing buildings, the Facilities Master Plan emphasizes renovation and modernization of existing facilities. The goals of the proposed renovations are to maximize educational space and improve efficiency/utilization of existing facilities. Building renovations could include new energy-efficient lighting, ceilings, flooring, casework, elevators, ADA access, ADA-compliant restrooms, stairwells, and heating, ventilation, and air conditioning systems. Figure 4 shows which facilities are planned for renovation.

#### **Math Building 600**

Math Building 600 is located in the center of the campus, south of the Technology and Engineering Building 900. Upon renovation, the building would continue to provide classrooms and the Mathematics and Computer Science Division office.

Renovations to the Math Building 600 would primarily consist of interior finishes, including installation of a new HVAC system and electrical modifications. Fenestrations would also be incorporated into the exterior walls to allow for better air intake. The bathrooms would be remodeled to meet ADA standards. Additionally, the handrails located in the exterior stairwells would need to be replaced to meet ADA standards. Other ADA renovations would be required to allow access for the visually impaired.

The Math Lab and support spaces, which have been vacated, would be converted to classrooms and offices. A new hallway would be added to provide appropriate exiting from the building. Technology upgrades would be required to meet the needs of faculty and students. Reconfiguration of the interior space would be required to create a Math Skills Center with computer stations, whiteboards, work tables, and study rooms. Renovations would also be required to grant students easier access to faculty offices and to create space for students and faculty to meet.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **Physical Education Building 1200 – Wellness Center, Faculty Offices, and Health Center**

Physical Education Building 1200 is located in the center of campus, north of the Fine Arts Gallery Building 1000. The Wellness Center, faculty offices, and Health Center are located in the eastern wing, southwestern wing, and western wing, respectively, of Physical Education Building 1200. Upon renovation of the Wellness Center and the Health Center, the buildings would continue to provide space for clinical and psychological services for Fullerton College students. The faculty offices would continue to provide office space for faculty members.

The Wellness Center and Health Center could require relocation to the new Welcome Center, and the remaining areas of the facilities would require interior renovations. Renovations would include the reconfiguration of space to support program needs; upgrade of technology infrastructure; upgrade of building systems, such as mechanical, electrical, plumbing, and structural; increase of restroom capacity to meet current codes; and upgrade of access throughout the building to meet current ADA compliance.

### **Wilshire Theatre Building 2100**

Wilshire Theatre Building 2100 is located in the southwestern corner of campus, south of East Chapman Avenue and north of Wilshire Avenue. Wilshire Theatre Building 2100 would require renovation to serve as a 400-seat concert hall. Renovations would include improved lighting, updated electrical systems, structural reinforcements to support new rigging, and improved backstage support areas. Currently, the second story is not wheelchair accessible. Upon renovation, all areas of the theater would be universally accessible. Remodeled restrooms, theater access, and stage access redesign would also be required to comply with ADA standards. The theater would also require redesign to provide a designated box office.

### **Business Building 300**

Business Building 300 is located in the southwestern portion of campus, south of the Humanities Building 500. Upon renovation, the building would continue to provide classrooms and study space to support the Business program and the Business and Computer Information Systems Division office. Renovations would include a reorganization and modernization of instructional space; remodel and reuse of vacant spaces; upgrades to provide modern instructional technology infrastructure; an increase in restroom capacity to comply with current codes; reconstruction of existing stairs and construction of new stairs and ramps to comply with current codes; replacement of mechanical, electrical, plumbing, telecommunication, and structural systems; retrofits to achieve an exceedance of Title 24 energy requirements by 15%; and hazardous materials abatement.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

Specifically, the interior and exterior of the eastern and western entrances would need to be remodeled and ramps would need to be installed to meet ADA requirements. Openings would also be incorporated into the exterior walls to allow for better air intake. New louvers would be installed throughout the exterior of the building.

### **Humanities Building 500**

Humanities Building 500 is located in the southwestern portion of campus, west of the Library/Learning Resources Center Building 800. Upon renovation, the building would provide classrooms and study space to support the Humanities program, the Humanities Division office, and could support the Veterans Resource Center. Renovations would include a reorganization and modernization of instructional space; remodel and reuse of vacant spaces; updates to provide modern instructional technology infrastructure; an increase in restroom capacity to comply with current codes; reconstruction and construction of new stairs and ramps to comply with current codes; replacement of mechanical, electrical, plumbing, telecommunication, and structural systems; retrofits to achieve an exceedance of Title 25 energy requirements by 15%; and hazardous materials abatement.

A board-formed finish would be applied to the exterior of the building, and tiles would be installed on the roof to appear consistent with the 1930s-era buildings on campus.

These renovations would provide current technology hardware and software and hybrid and flexible classroom and lab space. Additionally, the Veterans Resource Center could require renovations to accommodate the anticipated increase in veteran students. The Assessment Center requires a lab to support 50 students for testing purposes.

### **Campus Services Building 840**

Campus Services Building 840 is located in the western portion of campus, north of Library–Learning Resources Center Building 800. Upon renovation, the Campus Services Building 840 would continue to provide Disability Support Services for students, the mailroom, and a café. Renovations would include the reprogramming of vacant space and the addition of a testing space for students. Doorway modifications would be required to ensure ADA compliance.

### **Administration Building 100**

Administration Building 100 is located in the southwestern portion of campus, south of the Business Building 300. The student services functions currently located in Administration Building 100 would be relocated in the new Welcome Center. Administration Building 100 would be reprogrammed and reconfigured to support Fullerton College’s administrative functions.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

Renovation would include the demolition of the 1957 addition and restoration of the original entrance tower that was built in the 1930s. The Financial Aid Office would be reconfigured to create queuing space for students; space to accommodate staff in private work locations; a private office for the Director of Financial Aid attached or adjacent to the Financial Aid Office; space for intake, including a lowered counter space to accommodate students with mobility impairments; confidential space for intake; and a secured file room to comply with federal record-keeping requirements.

Renovations to the entrance and basement would be required to correct access issues.

### **Fine Arts Gallery Building 1000**

Fine Arts Gallery Building 1000 is located in the southern portion of campus, south of Physical Education Building 1200. The building would continue to provide gallery space and classrooms for the Fine Arts program upon renovation. Renovations would include the installation of new glass doors, illuminated signage, parking, security, and improved construction and preparation space. The existing infrastructure would require replacement. A redesign of classrooms would be required for technology upgrades and to maximize space. Redesign of the studio art labs would also be required to provide space for new art methods, materials, and technology.

A board-formed finish would be applied throughout the exterior of the building. The existing elevator does not meet current code and would require replacement. Existing handrails in the stairways would also require replacement.

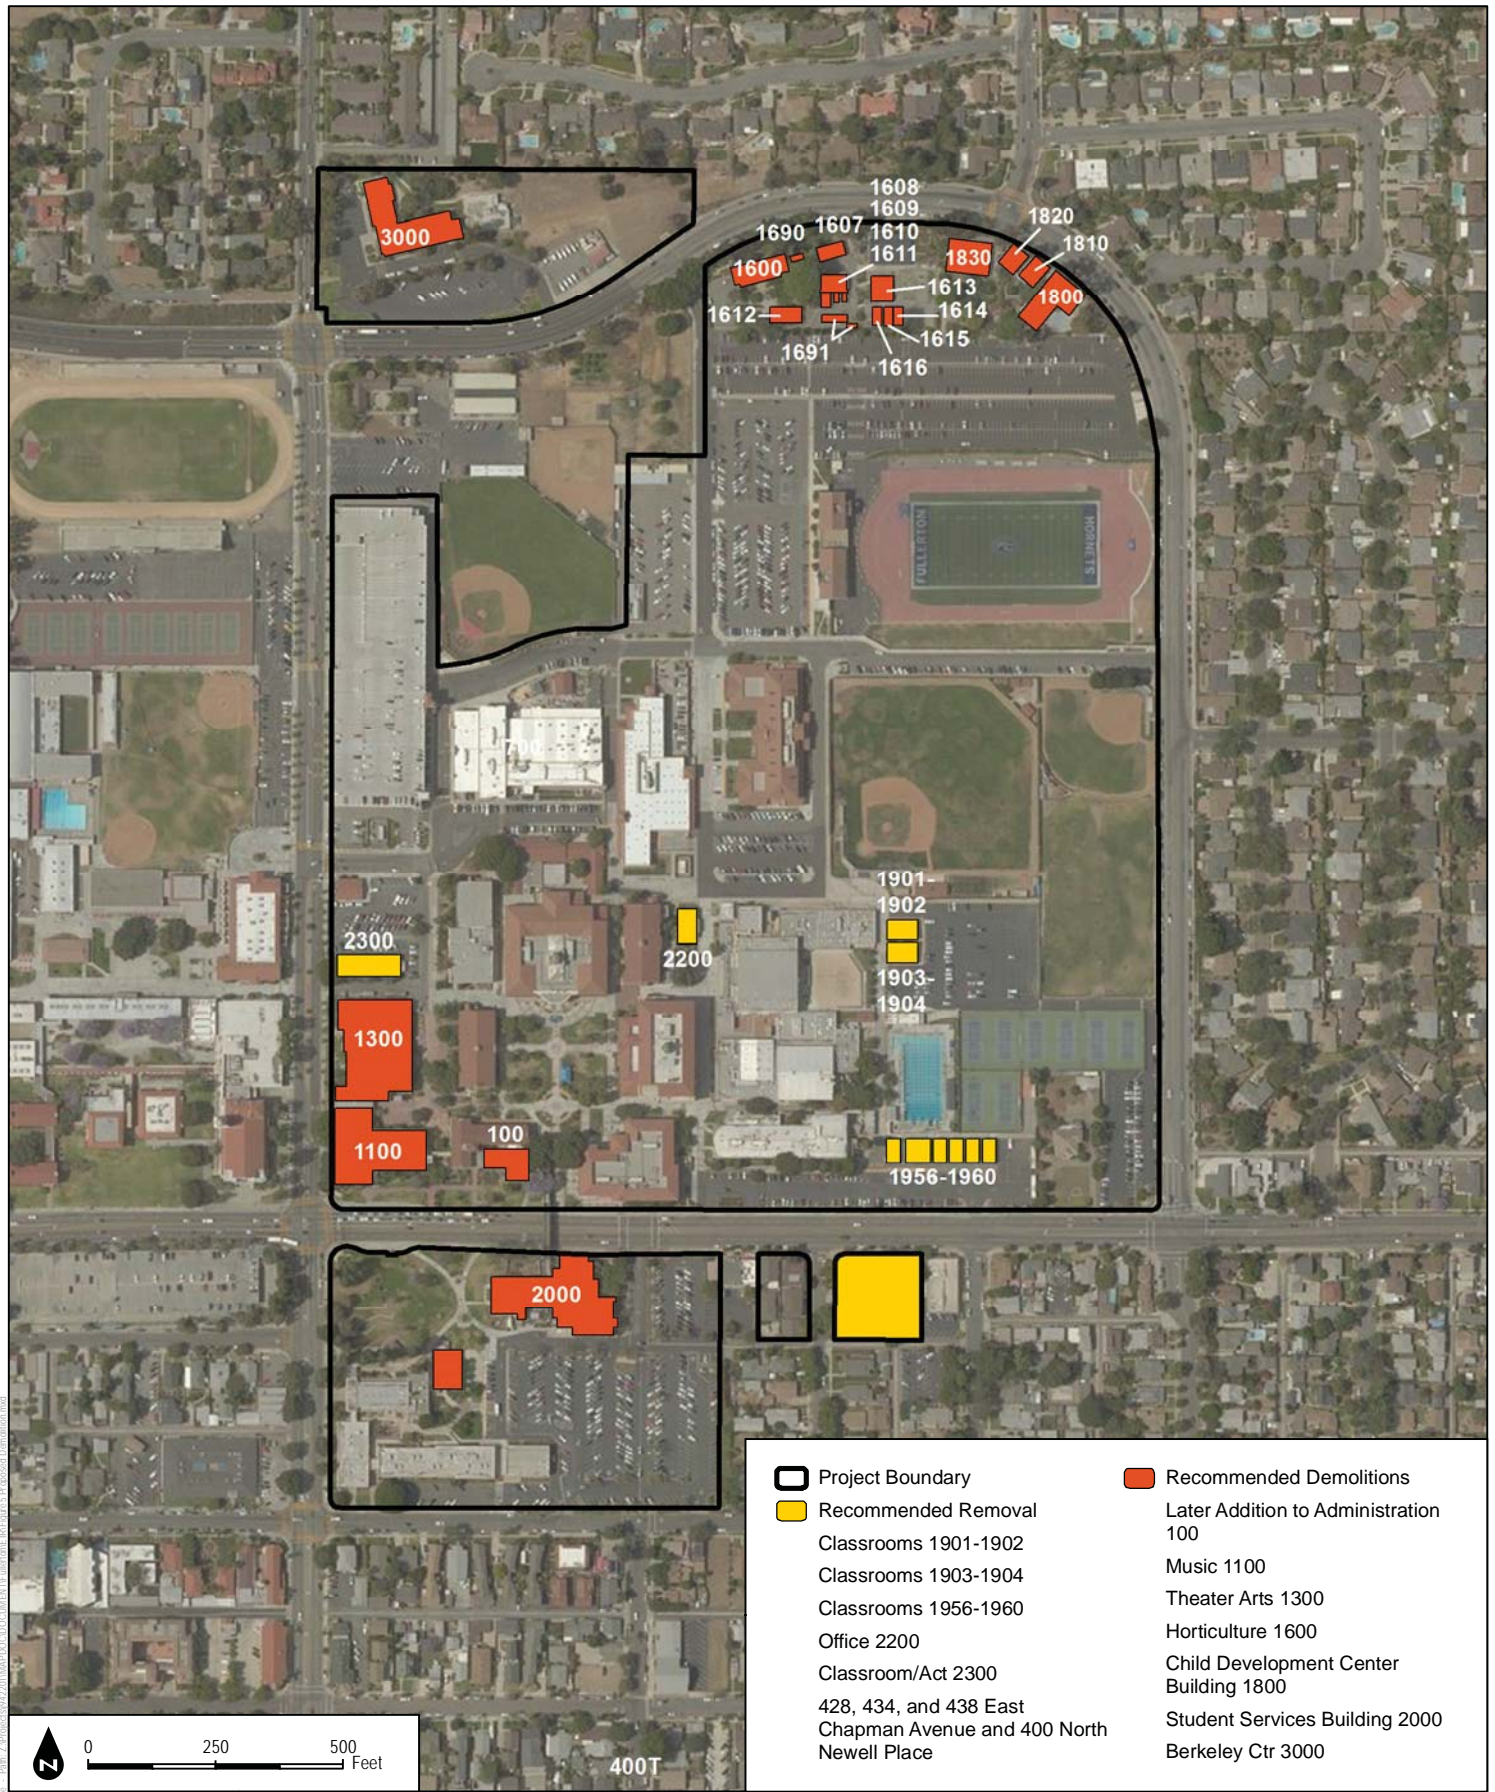

### **Academic Computing Building 3100**

Academic Computing Building 3100 is located in the northernmost portion of the campus, north of Berkeley Avenue. The building would continue to provide academic computing laboratories for students. Renovations would include upgrading technology infrastructure; upgrading building systems, such as mechanical, electrical, plumbing, and structural; increasing restroom capacity to meet current codes; and upgrading access throughout the building to meet current ADA compliance.

#### **1.2.2.3 Demolition**

The following facilities would be removed as part of implementation of the proposed project and would be assessed at the project level. Figure 5 shows which facilities are planned for demolition or removal.

SOURCE: Bing Maps, 2016; HMC Architects, 2011

**DUDEK**

Fullerton College Facilities Master Plan Program Environmental Impact Report

**FIGURE 5**  
Proposed Demolition

**Cultural Resources Study for the  
Fullerton College Facilities Master Plan Program EIR**

INTENTIONALLY LEFT BLANK

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **Berkeley Center Building 3000**

The existing Berkeley Center Building 3000, constructed in 1960, is located in the northernmost portion of campus, north of Berkeley Avenue. Berkeley Center Building 3000 currently provides space for maintenance and operations, an Assessment Center, and additional facilities space. Removal of this building would provide additional parking for students in the north campus. The services housed in the existing Berkeley Center Building 3000 would be moved to a more central location on campus.

Berkeley Center Building 3000 is a Modern-style, two-story educational building that is L-shape in plan designed by the late master architect William Henry Taylor (1912–1995). The front (northwest) elevation has an uneven roofline and extends out from the rest of the building with broad expanses of brick cladding and windows set flush into the stucco cladding between the brick. There is a separate entrance recessed into the brick wall with a metal door atop a set of concrete steps. The rest of the building is clad in stucco. The rear of the building contains a patio area with concrete walkways, ornamental lawn, and brick planters.

### **Horticulture Building 1600 Complex**

The Horticulture Building 1600 Complex is located in the northeastern corner of campus. The existing buildings range from 17 to 78 years old and currently support the Horticulture program. To accommodate growth in the Horticulture program, the existing buildings would be replaced with more state-of-the-art buildings and outdoor space. The existing buildings are at the end of their useful life.

### **Theatre Arts Building 1300**

Theatre Arts Building 1300 is located in the southwestern portion of the campus. The existing building was built in 1966. To accommodate growth in the Theatre Arts program, the existing building would be replaced with a more updated Performance Arts Complex, which would provide classroom space and accommodate multiple campus programs.

### **Music Building 1100**

Music Building 1100 is located in the southwestern corner of campus, north of East Chapman Avenue. This building was originally constructed in 1966. The intent is to replace Music Building 1100 with a more updated Performance Arts Complex, which would provide classroom space and accommodate multiple campus programs.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **Student Services Building 2000**

Student Services Building 2000 is located south of East Chapman Avenue. The original building was constructed in 1984 and would be replaced with a new Welcome Center.

### **Media Services/Academic Computing/Maintenance and Operation Shops Building 2300**

Media Services/Academic Computing/Maintenance and Operation Shops Building 2300 is located on the western edge of campus, north of Theatre Arts Building 1300. This temporary building would be replaced with a new Maintenance and Operations facility and new permanent instructional buildings.

### **Classrooms 1955–1960**

These temporary classrooms are located on the eastern portion of campus, in Lot 8. These temporary buildings would be replaced with new permanent instructional buildings.

### **Classrooms 1901–1904**

These temporary classrooms are located on the eastern portion of campus, in Lot B-2 East. These temporary buildings would be replaced with new permanent instructional buildings.

### **Office Building 2200**

This temporary office building is located in the center of campus, east of Math Building 600. This temporary office building would be replaced with a new Welcome Center, which would provide permanent office space.

### **Child Development Center Building 1800 Complex**

These temporary classrooms are located in the northeastern corner of campus, east of the Horticulture Building 1600 Complex. These temporary classrooms would be replaced with new permanent one-story instructional buildings.

### **428, 434, and 438 East Chapman Avenue and 400 North Newell Place**

These properties are located south of Chapman Avenue and east of North Newell Place and are currently developed with four single-family residences. These properties are currently vacant and would be removed and replaced with an instructional building.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **1.2.2.4 Site Improvement Elements**

Various site improvement elements include new signage at campus entryways, clear and safe vehicular drop-offs, and creation of more pedestrian pathways.

#### **Parking/Vehicular Entry Improvements**

Primary vehicular circulation is on public streets that surround the campus (Berkeley Avenue, East Chapman Avenue, and North Lemon Street). There is a need to improve circulation and connections on campus between the campus north of Berkeley Avenue and south of East Chapman Avenue, as well as within the main campus. Vehicular drop-off points need to be clearly identified. The campus is not open to bicycles or skateboards.

#### **Pedestrian Circulation**

Fullerton College is primarily a pedestrian-oriented campus, but there is a need for more pathways for pedestrians, particularly for students who park in the north and then walk across parking lots to access instructional buildings in the south of campus.

#### **Infrastructure Improvements**

New buildings would require sewer, water, storm, gas, telecom, and electrical utilities. The upgrades from the thermal energy storage tank will tie in to the existing utility infrastructure, which would accommodate and support these planned upgrades and modifications. New utility lines would connect to the existing infrastructure.

The existing ventilation and air conditioning infrastructure would be modified to connect all chilled and condensing water to the existing central plant and the thermal energy storage tank. An expansion of the existing chiller plant would also occur to serve these new facilities.

Future energy upgrades as part of the Fullerton College Energy Plan would include new lighting upgrades to interior and exterior facilities, HVAC system upgrades, installation of an automatic weather-sensing irrigation system, and installation of chiller water temperature reset controls (Fullerton College 2017). These upgrades are part of ongoing energy improvements, and are separate activities from the proposed project.

## **1.3 Regulatory Setting**

This section includes a discussion of the applicable national, state, and local laws, ordinances, regulations, and standards governing cultural resources, which must be adhered to before and during construction of the proposed project.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **1.3.1 Federal**

Although there is no federal nexus for this project, National Register of Historic Places (NRHP) criteria was addressed in consideration of previous evaluations that identified the Fullerton College Campus as potentially eligible for the NRHP (see Section 2.1.2, Previously Recorded Cultural Resources).

The NRHP is the United States' official list of districts, sites, buildings, structures, and objects worthy of preservation. Overseen by the National Park Service under the U.S. Department of the Interior, the NRHP was authorized under the National Historic Preservation Act, as amended. Its listings encompass all National Historic Landmarks and historic areas administered by the National Park Service.

NRHP guidelines for the evaluation of historic significance were developed to be flexible and to recognize the accomplishments of all who have made significant contributions to the nation's history and heritage. Its criteria are designed to guide state and local governments, federal agencies, and others in evaluating potential entries in the NRHP. For a property to be listed in or determined eligible for listing in the NRHP, the property must be demonstrated to possess integrity and to meet at least one of the following criteria:

The quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and:

- A. That are associated with events that have made a significant contribution to the broad patterns of our history; or
- B. That are associated with the lives of persons significant in our past; or
- C. That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D. That have yielded, or may be likely to yield, information important in prehistory or history (NRB 2002, p. 2).

Integrity is the ability of a property to convey its significance. To be listed in the NRHP, a property must not only be shown to be significant under the NRHP criteria, but it also must have integrity. The evaluation of integrity is sometimes a subjective judgment, but it must always be

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

grounded in an understanding of a property's physical features and how they relate to its significance. Historic properties either retain integrity (this is, convey their significance) or they do not. To retain historic integrity a property will always possess several, and usually most, of the seven aspects described above. The retention of specific aspects of integrity is paramount for a property to convey its significance (NPS 1990).

### **1.3.2 State**

#### **California Register of Historical Resources**

In California, the term “historical resource” includes, but is not limited to, “any object, building, structure, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California” (California Public Resources Code (PRC), Section 5020.1(j)). In 1992, the California legislature established the CRHR “to be used by state and local agencies, private groups, and citizens to identify the state’s historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change” (PRC Section 5024.1(a)). The criteria for listing resources on the CRHR were expressly developed to be in accordance with previously established criteria developed for listing in the NRHP, enumerated below. According to PRC Section 5024.1(c)(1–4), a resource is considered historically significant if it (i) retains “substantial integrity,” and (ii) meets at least one of the following criteria:

- (1) Is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage.
- (2) Is associated with the lives of persons important in our past.
- (3) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
- (4) Has yielded, or may be likely to yield, information important in prehistory or history (PRC Section 5024.1(c)(1–4)).

In order to understand the historic importance of a resource, sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource. A resource less than 50 years old may be considered for listing in the CRHR if it can be demonstrated that sufficient time has passed to understand its historical importance (see 14 CCR 4852(d)(2)).

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

The CRHR protects cultural resources by requiring evaluations of the significance of prehistoric and historic resources. The criteria for the CRHR are nearly identical to those for the NRHP, and properties listed or formally designated as eligible for listing in the NRHP are automatically listed in the CRHR, as are the state landmarks and points of interest. The CRHR also includes properties designated under local ordinances or identified through local historical resource surveys.

### **California Environmental Quality Act**

As described further, the following CEQA statutes (PRC Section 21000 et seq.) and CEQA Guidelines (14 CCR 15000 et seq.) are of relevance to the analysis of archaeological, historic, and tribal cultural resources:

- PRC Section 21083.2(g) defines “unique archaeological resource.”
- PRC Section 21084.1 and 14 CCR 15064.5(a) defines “historical resources.” In addition, 14 CCR 15064.5(b) defines the phrase “substantial adverse change in the significance of an historical resource”; it also defines the circumstances when a project would materially impair the significance of a historical resource.
- PRC Section 21074(a) defines “tribal cultural resources.”
- PRC Section 5097.98 and 14 CCR 15064.5(e) set forth standards and steps to be employed following the accidental discovery of human remains in any location other than a dedicated ceremony.
- PRC Sections 21083.2(b) and 21083.2(c) and 14 CCR 15126.4 provide information regarding the mitigation framework for archaeological and historic resources, including examples of preservation-in-place mitigation measures. Preservation in place is the preferred manner of mitigating impacts to significant archaeological sites because it maintains the relationship between artifacts and the archaeological context, and may also help avoid conflict with religious or cultural values of groups associated with the archaeological site(s).

More specifically, under CEQA, a project may have a significant effect on the environment if it may cause “a substantial adverse change in the significance of an historical resource” (PRC Section 21084.1; 14 CCR 15064.5(b)). If a site is either listed or eligible for listing in the CRHR, or included in a local register of historic resources, or identified as significant in a historical resources survey (meeting the requirements of PRC Section 5024.1(q)), it is a “historical resource” and is presumed to be historically or culturally significant for purposes of CEQA (PRC Section 21084.1; 14 CCR 15064.5(a)). The lead agency is not precluded from determining that a

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

resource is a historical resource even if it does not fall within this presumption (PRC Section 21084.1; 14 CCR 15064.5(a)).

A “substantial adverse change in the significance of an historical resource” reflecting a significant effect under CEQA means “physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired” (14 CCR 15064.5(b)(1); PRC Section 5020.1(q)). In turn, the significance of a historical resource is materially impaired when a project:

- (1) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or
- (2) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to Section 5020.1(k) of the PRC or its identification in an historical resources survey meeting the requirements of Section 5024.1(g) of the PRC, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or
- (3) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a lead agency for purposes of CEQA (14 CCR 15064.5(b)(2)).

Pursuant to these sections, the CEQA inquiry begins with evaluating whether a project site contains any “historical resources,” then evaluates whether that project will cause a substantial adverse change in the significance of a historical resource such that the resource’s historical significance is materially impaired.

If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (PRC Sections 21083.2(a), (b), and (c)).

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- (1) Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
- (2) Has a special and particular quality such as being the oldest of its type or the best available example of its type.
- (3) Is directly associated with a scientifically recognized important prehistoric or historic event or person (PRC Section 21083.2(g)).

Impacts to non-unique archaeological resources are generally not considered a significant environmental impact (PRC Section 21083.2(a); 14 CCR 15064.5(c)(4)). However, if a non-unique archaeological resource qualifies as a tribal cultural resource (PRC Section 21074(c), 21083.2(h)), further consideration of significant impacts is required.

Section 15064.5 of the CEQA Guidelines assigns special importance to human remains and specifies procedures to be used when Native American remains are discovered. As described below, these procedures are detailed in PRC Section 5097.98.

### **California Health and Safety Code Section 7050.5**

California law protects Native American burials, skeletal remains, and associated grave goods, regardless of their antiquity, and provides for the sensitive treatment and disposition of those remains. California Health and Safety Code Section 7050.5 requires that if human remains are discovered in any place other than a dedicated cemetery, no further disturbance or excavation of the site or nearby area reasonably suspected to contain human remains shall occur until the County coroner has examined the remains (California Health and Safety Code, Section 7050.5(b)). PRC Section 5097.98 also outlines the process to be followed in the event that remains are discovered. If the coroner determines or has reason to believe the remains are those of a Native American, the coroner must contact the NAHC within 24 hours (California Health and Safety Code, Section 7050.5(c)). The NAHC will notify the “most likely descendant.” With the permission of the landowner, the most likely descendant may inspect the site of discovery. The inspection must be completed within 48 hours of notification of the most likely descendant by the NAHC. The most likely descendant may recommend means of treating or disposing of, with appropriate dignity, the human remains and items associated with Native Americans.

### 1.3.3 Local

#### The Fullerton Plan

The Built Environment and Revitalization sections of *The Fullerton Plan*, the City's General Plan (City of Fullerton 2012a), briefly discuss goals and policies associated with preservation of the built environment. The following are excerpted portions pertinent to the Fullerton College Facilities Master Plan.

**Goal 4** Value and preserve historic resources.

#### **Policy 4.2: Awareness of Historic Resources**

Support programs and policies to raise the awareness of the value of historic resources in strengthening communities, conserving resources, fostering economic development, and enriching lives.

#### **Policy 4.3: Historic Resources Maintenance and Enhancement**

Support projects, programs, policies, and regulations to promote the maintenance, restoration, and rehabilitation of historical resources.

#### **Policy 4.4: Historic Character and Sense of Place**

Support projects, programs, policies, and regulations to reinforce the character and sense of place of established neighborhoods and districts by protecting and preserving those elements in both the private and public realms which contribute to the historic character through the use of tools including, but not limited to, preservation overlay zones and landmark districts.

#### **Policy 4.5: Historic Building Preservation**

Support projects, programs, policies, and regulations to encourage the protection and preservation of individual historic structures throughout the City, but with particular attention to the preservation of noteworthy architecture in the downtown.

#### **Policy 4.7: Responsiveness to Historic Context**

Support projects, programs, policies, and regulations to design new buildings that respect the integrity of nearby historic buildings while clearly differentiating the new from the historic.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **Policy 4.9: Historic Building Retrofits**

Support projects, programs, policies, and regulations to encourage the retrofit of historic buildings in ways that preserve their architectural design character, consistent with life safety considerations, maintaining the unique visual image of Fullerton.

**Goal 11** Revitalization activities that result in community benefits and enhance the quality of life in neighborhoods, districts, and corridors.

### **Policy 11.3: Preservation-Based Revitalization**

Support policies, projects, and programs concerning historic preservation to protect Fullerton's heritage, revitalize neighborhoods, generate design and construction jobs, and bolster the community's sense of place.

### **City of Fullerton Municipal Code**

Although the City of Fullerton has no jurisdiction over the proposed project, the college is located within the City of Fullerton. Therefore, local designation criteria are applicable to significance evaluations on campus. In the City of Fullerton Municipal Code, a "Significant Property" is defined as an individual building, structure, or feature that is considered a historical or cultural resource in the City and that is eligible for "Historical Landmark" designation. A list of Significant Properties is contained in the Resource Management Element of The Fullerton Plan.

#### ***15.48.060. Criteria for Designation***

- A. In considering a request for a "Historical Landmark" designation, the following criteria shall be used in determining eligibility:
1. Character, interest or value as part of the heritage of the city.
  2. Location as a site of a historic event.
  3. Identification with a person or persons or groups who significantly contributed to the culture and development of the city.
  4. Exemplification of a particular architectural style or way of life important to the city.
  5. Exemplification of the best remaining architectural types in an area.
  6. Identification as the work of a person or persons whose work has influenced the heritage of the city, the state of California or the United States.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

7. Embodiment of elements of outstanding attention to architectural design, detail, materials, or craftsmanship.
  8. Relationship to other landmarks, where the preservation of one has a bearing on the preservation of another.
  9. A unique location or singular physical characteristic representing an established and familiar visual feature of a neighborhood.
  10. Integrity as a natural environment that strongly contributes to the well being of the people of the city.
- B. In considering a request for a “Landmark District” designation, support of the designation should be demonstrated by a substantial majority of the property owners within the boundary of the proposed district (City of Fullerton Municipal Code, Ordinance 2982, 2001).

## 2 BACKGROUND RESEARCH

### 2.1 CHRIS Records Search

On December 14, 2016, Dudek archaeologist Adriane Dorrlor conducted a search of the California Historical Resources Information System (CHRIS) at the South Central Coastal Information Center (SCCIC), located on the campus of California State University, Fullerton. The search included any previously recorded cultural resources and investigations within a 0.5-mile radius of the project site. The CHRIS search also included a review of the NRHP, the CRHR, the California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list, and the California State Historic Resources Inventory list. The records search results maps and bibliography of previous studies are provided in Confidential Appendix A.

#### 2.1.1 Previously Conducted Cultural Resources Studies

A total of seven cultural resources studies were previously conducted within a 0.5-mile radius of the project site (Table 1). Of these, one study (OR-03509) overlaps the current project site. An additional seven studies were conducted within the La Habra and Anaheim quadrangles that may include portions of the proposed project site. However, these studies are not mapped due to insufficient locational data. Confidential Appendix A provides a complete bibliography from the SCCIC, including the unmapped studies not included in Table 1.

**Notes:**

SCCIC = South Central Coastal Information Center.

Items shown in **bold** are on the project site.

## **OR-03509**

In August 2003, Paul Secord of UltraSystems Environmental Incorporated prepared the *Cultural Resources Survey, Fullerton College, North Orange County Community College District*. The study was prepared as part of an EIR for the Fullerton College Master Development Plan. A total of seven buildings were recommended as eligible for the CRHR and NRHP: Fullerton College Student Union Building 800, Fullerton College Industrial Building , Fullerton College Commerce Building 300, Fullerton College Administration Building 100, Wilshire Theatre Building 2100 (School Auditorium), Wilshire School Building 1A (Elementary School), and Wilshire School Building 2A (Elementary School).

## **GPA 2015**

One additional study within the proposed project site that was not identified by the CHRIS records search is a 2015 study conducted by GPA Consulting (GPA) entitled *428, 434, and 438 East Chapman Avenue, Fullerton, California, Historical Resource Evaluation Report*. This report presents the results of a historical resource evaluation of three properties using NRHP, CRHR, and Fullerton Historical Landmark criteria. The study concluded that none of the properties appear eligible for listing in any of the three registration programs due to a lack of historical significance.

### **2.1.2 Previously Recorded Cultural Resources**

Forty-two cultural resources were previously recorded within 0.5 miles of the project site (Table 2). Two of these resources overlap the proposed project site: Fullerton Junior College (FJC) (30-157212) and Wilshire Junior High School (30-157290). Both of these resource evaluations were

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

updated as part of the current study. There is one archaeological resource recorded within 0.5 miles of the project site (30-001712). Of the 41 structures and buildings recorded within 0.5 miles of the project site, 13 are listed in the NRHP (30-157210, -157213, -157218, -157226, -157232, -157247, -157253, -157254, -157261, -157278, -157289, -157299, and -157300), 8 are listed as City of Fullerton Local Landmarks (30-157210, -157211, -157213, -157253, -157254, -157261, -157289 and -157290), 1 is listed as a City of Fullerton Potential Local Landmark and is recognized as a City of Fullerton Significant Property (30-157212), 1 was found to be a contributing property to a district eligible for local listing (30-156665), and 2 were determined not eligible through Section 106 consultation (30-161896 and -162503).

**Table 2**

**Notes:**

1S: Individual property listed in the NRHP by the Keeper. Listed in the CRHR.

2S: Individual property determined eligible for NRHP by the Keeper. Listed in the CRHR.

2S2: Individual property determined eligible for NRHP by a consensus through Section 106 process. Listed in the CRHR.

2S3: Individual property determined eligible for NRHP by Part 1 Tax Certification. Listed in the CRHR.

3S: Appears eligible for NRHP as an individual property through survey evaluation.

5D2: Contributor to a district that is eligible for local listing or designation.

5S2: Individual property that is eligible for local listing or designation.

6Y: Determined ineligible for the NRHP by consensus through Section 106 process. Not evaluated for CRHR or local listing.

6Z: Found ineligible for NRHP, CRHR, or local designation through survey evaluation.

7N: Needs to be reevaluated (formerly NRHP status code 4).

HL: City of Fullerton Local Landmark.

Resources shown in **bold** are on the project site.

### **30-157212**

A Historic Resources Inventory form was completed for FJC by Emily Miller in March of 1979. The form identified four of the buildings on the FJC Campus that were constructed with Works Progress Administration (WPA) funding throughout the 1930s by architect Harry Vaughn.

### **30-157290**

A Historic Resources Inventory form was completed for the Wilshire Junior High School by Lex Williman in March of 1979. The survey identified three buildings that were constructed with WPA funding in the 1930s by an unknown architect.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **428, 434, and 438 East Chapman Avenue**

As previously discussed, these previously recorded and evaluated resources were not identified by the CHRIS records search but fall within the proposed project site. In 2015, GPA evaluated all three properties using NRHP, CRHR, and Fullerton Historical Landmark criteria. The study concluded that none of the properties appear eligible for listing in any of the three registration programs due to a lack of historical significance.

## **2.2 Native American Coordination**

As part of the process of identifying cultural resources within or near the project site, Dudek contacted the NAHC to request a review of the Sacred Lands File. The NAHC emailed a response on January 19, 2017, which stated that the Sacred Lands File search was completed with negative results. Because the Sacred Lands File search does not include an exhaustive list of Native American cultural resources, the NAHC suggested contacting Native American individuals and/or tribal organizations who may have direct knowledge of cultural resources in or near the project site. The NAHC provided the contact list along with the Sacred Lands File search results. Documents related to the NAHC Sacred Lands File search are included in Appendix B.

Dudek prepared and sent letters to each of the nine persons and entities on the contact list requesting information about cultural sites and resources in or near the project site. These letters, mailed on February 16, 2017, contained a brief description of the proposed project, a summary of the Sacred Lands File and SCCIC search results and survey results, and a reference map. Recipients were asked to reply within 15 days of receipt of the letter should they have any knowledge of cultural resources in the area.

Dudek has received one response to the coordination letters to date (Appendix B). On February 24, 2017, Andrew Salas, Chairman of the Gabrieleño Band of Mission Indians – Kizh Nation responded via email. Mr. Salas stated that the proposed project site is in an area where the ancestral territories of Kizh Gabrieleño villages overlapped during the Late Prehistoric and Protohistoric periods. For this reason, Mr. Salas considers the project site to be highly sensitive for cultural resources and recommends the presence of both a Native American monitor and an archaeological monitor on site during all ground-disturbing activities.

The proposed project is subject to compliance with Assembly Bill 52 (PRC 21074), which requires consideration of impacts to “tribal cultural resources” as part of the CEQA process, and requires the CEQA lead agency to notify any groups (who have requested notification) of the proposed project who are traditionally or culturally affiliated with the geographic area of the

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

project. Because Assembly Bill 52 is a government-to-government process, all records of correspondence related to Assembly Bill 52 notification and any subsequent consultation are on file with the District. At the time this report was written, the District indicated they had not received any AB 52 consultation requests on the proposed project at Fullerton College.

### 2.3 Building Development Research

On February 24, 2017, Dudek contacted Oscar Saghie, Project Manager of Campus Capital Projects, to inquire about access to Fullerton College Campus building as-built drawings and schematics, and to obtain copies of any available reports and historic reference documents on file with Fullerton College or the District. Mr. Saghie arranged for access to the District's electronic collection of campus as-built drawings and schematics, which date from 1933 to 2013.

Dudek also reviewed a set of documents and photographs available online through the Fullerton College Library called *Fullerton College: A Pictorial History*, which includes a collection of historic photographs of the campus with content largely written by Debora Richey et al. in 2012.

Other sources of information regarding the history and development of the campus included the following:

- *Los Angeles Times* (1923–current), accessed via ProQuest Historical Newspapers

### **3 HISTORIC CONTEXT**

Post-contact history for the State of California is generally divided into three periods: the Spanish period (1769–1822), Mexican period (1822–1848), and American period (1848–present). Although Spanish, Russian, and British explorers visited the area for brief periods between 1529 and 1769, the Spanish period in California begins with the establishment in 1769 of a settlement at San Diego and the founding of Mission San Diego de Alcalá, the first of 21 missions constructed between 1769 and 1823. Independence from Spain in 1821 marks the beginning of the Mexican period, and the signing of the Treaty of Guadalupe Hidalgo in 1848, ending the Mexican–American War, signals the beginning of the American period, when California became a territory of the United States.

#### **Spanish Period (1769–1822)**

Spanish explorers made sailing expeditions along the coast of Southern California between the mid-1500s and mid-1700s. In search of the legendary Northwest Passage, Juan Rodríguez Cabrillo stopped in 1542 at present-day San Diego Bay. With his crew, Cabrillo explored the shorelines of present-day Santa Catalina Island, as well as San Pedro and Santa Monica Bays. Much of the present-day California and Oregon coastline was mapped and recorded in the next half-century by Spanish naval officer Sebastián Vizcaíno. Vizcaíno’s crew also landed on Santa Catalina Island and at San Pedro and Santa Monica Bays, giving each location its long-standing name. The Spanish crown laid claim to California based on the surveys conducted by Cabrillo and Vizcaíno (Bancroft 1885; Gumprecht 1999).

More than 200 years passed before Spain began the colonization and inland exploration of Alta California. The 1769 overland expedition by Captain Gaspar de Portolá marks the beginning of California’s Historic period, occurring just after the King of Spain installed the Franciscan Order to direct religious and colonization matters in assigned territories of the Americas. With a band of 64 soldiers, missionaries, Baja (lower) California Native Americans, and Mexican civilians, Portolá established the Presidio of San Diego, a fortified military outpost, as the first Spanish settlement in Alta California. In July of 1769, while Portolá was exploring Southern California, Franciscan Friar Junípero Serra founded Mission San Diego de Alcalá at Presidio Hill, the first of the 21 missions that would be established in Alta California by the Spanish and the Franciscan Order between 1769 and 1823.

The Portolá expedition first reached the present-day boundaries of Los Angeles in August 1769, thereby becoming the first Europeans to visit the area. Father Crespi named “the campsite by the river Nuestra Señora la Reina de los Angeles de la Porciúncula” or “Our Lady the Queen of the Angeles of the Porciúncula.” Two years later, Friar Junípero Serra returned to the valley to establish a Catholic mission, the Mission San Gabriel Arcángel, on September 8, 1771 (Kyle 2002).

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **Mexican Period (1822–1848)**

A major emphasis during the Spanish period in California was the construction of missions and associated presidios to convert the Native American population to Christianity and integrated communal enterprise. Incentives were also provided to bring settlers to pueblos or towns, but just three pueblos were established during the Spanish period, only two of which were successful and grew into California cities (San José and Los Angeles). Several factors kept growth within Alta California to a minimum, including the threat of foreign invasion, political dissatisfaction, and unrest among the indigenous population. After more than a decade of intermittent rebellion and warfare, New Spain (Mexico and the California territory) won independence from Spain in 1821. In 1822, the Mexican legislative body in California ended isolationist policies designed to protect the Spanish monopoly on trade, and decreed California ports open to foreign merchants (Dallas 1955).

Extensive land grants were established in the interior during the Mexican period, in part to increase the population inland from the more settled coastal areas where the Spanish first concentrated their colonization efforts. Nine ranchos were granted between 1837 and 1846 in the future Orange County area (Middlebrook 2005). Among the first ranchos deeded within the future Orange County were Manuel Nieto's Rancho Las Bolsas (partially in the future Los Angeles County), granted by Spanish Governor Pedro Fages in 1784, and the Rancho Santiago de Santa Ana, granted by Governor José Joaquín Arrillaga to José Antonio Yorba and Juan Pablo Peralta in 1810. The secularization of the missions following Mexico's independence from Spain resulted in the subdivision of former mission lands and establishment of many additional ranchos.

During the supremacy of the ranchos (1834–1848), landowners largely focused on the cattle industry and devoted large tracts to grazing. Cattle hides became a primary Southern California export, providing a commodity to trade for goods from the east and other areas in the United States and Mexico. The number of non-native inhabitants increased during this period because of the influx of explorers, trappers, and ranchers associated with the land grants. The rising California population contributed to the introduction and rise of diseases foreign to the Native American population, who had no associated immunities.

### **American Period (1848–Present)**

War in 1846 between Mexico and the United States precipitated the Battle of Chino, a clash between resident *Californios* and Americans in the San Bernardino area. The Mexican–American War ended with the Treaty of Guadalupe Hidalgo in 1848, ushering California into its American period.

California officially became a state with the Compromise of 1850, which also designated Utah and New Mexico (with present-day Arizona) as U.S. Territories (Waugh 2003). Horticulture and

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

livestock, based primarily on cattle as the currency and staple of the rancho system, continued to dominate the Southern California economy through 1850s. The Gold Rush began in 1848 and, with the influx of people seeking gold, cattle were no longer desired mainly for their hides but also as a source of meat and other goods. During the cattle boom of the 1850s, rancho *vaqueros* drove large herds from Southern to Northern California to feed that region's burgeoning mining and commercial boom. The cattle boom ended for Southern California as neighboring states and territories began driving herds to Northern California at reduced prices. Operation of the huge ranchos became increasingly difficult, and droughts severely reduced their productivity (Cleland 1941).

### **3.1 City of Fullerton Historical Overview**

#### **Residential Development**

The architectural development of the City of Fullerton, as for a lot of cities, was shaped by the demographics of the City. Unlike high-style architectural movements seen in other cities, Fullerton represents a middle- and working-class development pattern starting prior to the City's founding in 1887. Prior to 1887, the development within Fullerton was largely pioneer settlements without significant architectural presences. It was not until the early 1900s that residential and commercial development really took off in Fullerton. Another interesting feature of the development in Fullerton is the concept of moving buildings from their original locations. The following discussion on residential development is largely based on information from *Fullerton Through the Years: A Survey of Architectural, Cultural & Environmental Heritage*, prepared for the Development Services Department (DSD) in 2002.

The period of Fullerton's architectural history beginning in 1900 represents a departure from the early founding patterns and a move to modern city development. Fullerton was largely an agricultural community until oil was discovered in 1890. The resulting oil boom in Fullerton continued into the 1920s, making a great deal of the residential and commercial developments of the early twentieth century possible (Morris et al. 2004). Although there are a few surviving pre-1900 buildings, most of the visible architectural development in the City is post-1900. Most of the buildings built prior to the turn of the century were largely vernacular and lacked the sophistication and key elements for classification as high style. Even though recognizable architectural styles appeared in Fullerton after the turn of the century, Fullerton was primarily a working- and middle-class city. This is reflected in buildings from the period, which lack many of the high-style elements seen in the truest forms of the early twentieth century styles.

Like other cities throughout the United States, Fullerton saw a boom era in the 1920s that laid the groundwork for the City's residential architectural foundation. The boom was seen in both residential and commercial building types and can largely be attributed to the oil boom. In 1920, Fullerton established an unofficial policy stating that Spanish Colonial Revival should be the

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

style used when designing commercial and civic buildings, a policy that was largely followed by the business and civic leaders of the City until the 1950s.

One of the most prevalent architectural styles seen in Fullerton residential development of the early twentieth century is the Craftsman style, specifically the California Bungalow. Having originated in Southern California with Greene and Greene residential architecture, the movement spread throughout the United States and has an especially strong presence throughout California. In the City of Fullerton, California bungalows were popular and prevalent from 1915 to 1925 (DSD 2002; McAlester 2015).

Although the California Bungalow's popularity seemed unlikely, with its heavy use of wood in an area like Southern California where termite populations were high, it flourished. One of the key characteristics of the California Bungalow is the simplistic beauty and small footprint, which made it ideal for small families living on a middle-class budget. The key features of the style include one- to two-story designs, overhanging eaves, distinct horizontal lines, low pitched roof designs, wood shingle detailing, large front porches either centered or offset, paired windows, Craftsman style doors, interior built-in cabinets, recessed entryways, stone or brick fireplaces, and battered wooden porch supports (DSD 2002; McAlester 2015).

The California Bungalow was also taken a step further in cities like Fullerton, being used to create a Bungalow Court. A Bungalow Court is a collection of bungalows placed around a shared garden space to create a U shape. The intention of the Bungalow Court was to create a multi-family dwelling concept that provided greenspace for families or individuals who could not afford a single-family residence on their own private lot. Fullerton Bungalow Courts were placed near the downtown area within easy walking distance of urban amenities. Like standard Bungalow Courts, Fullerton Bungalow Courts typically provided six to ten units in a U shape, with a larger bungalow to the rear of the property forming the base of the U shape (DSD 2002).

In addition to California Bungalows, the Cottage/Storybook style also had some popularity in Fullerton during the 1920s. According to Fullerton Heritage, a local builder named E.S. Gregory built a tract of cottages on the north side of East Whiting Avenue and later the City built a model Cottage as a way to promote home buying in the City. The Cottage movement in Fullerton was short-lived and was not seen past 1935 in Fullerton, but there are still numerous examples remaining in the City today (DSD 2002).

The City of Fullerton experienced its last big housing boom following World War II (WWII) as veterans and young families were looking for places to call home. Throughout the 1940s and 1950s, the building permit valuations saw an incredible increase from \$2.5 million in 1948 to \$114 million by 1956 (DSD 2002; Morris et al. 2004).

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **3.2 Fullerton College Historical Overview**

The following historical context is largely drawn from the Fullerton College Library's *Fullerton College: A Pictorial History* (Richey et al. 2012).

#### **3.2.1 Fullerton College Beginnings**

Educational development in the City of Fullerton quickly followed the City's founding in 1887. Although high schools and grammar schools were the frontrunners in educational development, the City residents and leaders quickly realized that they needed an educated workforce for their growing city. In 1907 California became the first state with legislation that allowed for the establishments of junior colleges. The City of Fullerton quickly adapted the legislation and by April of 1913 established a junior college program stemming from the Fullerton Union High School. According to Fullerton College Library's *Fullerton College: A Pictorial History*, FJC first opened in September of 1913 with the following:

...enrollment of twenty-eight male and female students who registered for twelve classes, including English, Art, History, Logic, Psychology, Mathematics, Physics, Chemistry, German, Mechanical Drawing, and Manual Training (Richey et al. 2012).

On April 10, 1933, the California Field Act was passed to allow state input, inspection, and approval on school building plans. The Field Act was established as a reactionary legislative act to the Long Beach Earthquake of 1933 and the resulting damage and destruction caused to schools throughout Southern California. The 6.4 magnitude earthquake proved many schools unsafe and constructed without safeguards to protect against earthquake damage. Moving forward, all school building renovations and constructions had to be compliant with Field Act legislation to avoid a repeat of the events of the Long Beach Earthquake. In 1949, Donald Beach Kirby, president of the American Institute of Architects (AIA) in San Francisco, stated that all schools since 1933 met the requirements laid out by the Field Act of 1933 (SDU 1949; Alquist 2007).

In 1933, the Board of Trustees purchased 16 acres of land one block east of Fullerton Union High School. The acquisition of this parcel of land was the first official step taken by the board to separate the high school from the new FJC Campus. The Board of Trustees hired architect Harry K. Vaughn (1882–1962) to replace Carleton M. Winslow (Vaughn's mentor) as campus architect. Winslow was hired by the District in 1919 and designed all major buildings on the adjacent Fullerton Union High School campus. Prior to arriving in Fullerton, Vaughn had worked closely with Winslow on the extremely influential Panama-California International Exposition in San Diego (1915-1917) and followed Winslow back to Los Angeles to work on the

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

high school project. While working with Winslow on the high school campus, Vaughn oversaw the finalization of drawings as well as construction of the buildings.

For its new FJC Campus, the college put Vaughn in charge of the design, planning, and development of the FJC Campus from 1935 to 1942. Vaughn brought a great deal of experience and expertise to the FJC Campus design. Prior to becoming the FJC Campus architect, Vaughn had studied and worked under accomplished California architects Irving Gill, William Sterling Hebbard, and Octavius Morgan. However, his most relevant experience was gained during his time working on Fullerton Union High School buildings with Winslow (Richey 2010).

### **3.2.2 The Great Depression and World War II**

Although the Great Depression financially devastated most of the country, the development of the FJC Campus continued.

Vaughn operated as the FJC Campus architect with the assistance of WPA funds, designing and supervising construction of numerous buildings on the campus until 1942. The costs for building construction under Vaughn were as follows:

Commerce Building (\$148,777), the Social Science and Administration Building (\$163,633), the Technical Trades Building (\$224,321), the Locker Room and Student Center (\$60,454), and the Shop Building (\$76,605). Vaughn also designed the walls for the sunken garden and additional landscaping features (\$47,793) (Richey et al. 2012).

While architectural development continued during the Depression, enrollment also increased. With 4-year university enrollments on the decline due to financial instability, FJC provided an affordable option for the students of Fullerton and the surrounding communities, eventually reaching an enrollment of 1,500 by September 1939. However, FJC was not immune to the effects of WWII and experienced a rapid decline in enrollment after 1939, as many potential students were drafted or volunteered for the military. FJC persevered through the war, implementing new programs to support the war effort by training workers for defense industry jobs. FJC had the Adult Education Department staff working 6 days a week in multiple shifts to keep the school doors open from 7:00 a.m. to midnight, 6 days per week. Other activities on the FJC Campus further supported the war effort, such as letter writing and making clothing for the troops (LAT 1935; Richey et al. 2012).

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **3.2.3 Postwar Expansion on Campus**

As the war was ending in 1944, the Servicemen Readjustment Act, also known as the G.I. Bill of Rights, was signed into law by President Franklin D. Roosevelt. The act afforded servicemen and women the opportunity to receive an education without having to worry about the high costs of tuition, and provided a monthly stipend for living expenses. The act also covered the costs of schoolbooks and other necessary supplies. These government incentives resulted in approximately 1.7 million veterans enrolling in colleges by 1947, accounting for nearly 49% of college admissions under the G.I. Bill. Of the 16 million WWII veterans in the United States, 7.8 million participated in higher education programs because of the G.I. Bill.

Although FJC did its best to anticipate the educational needs of WWII veterans, they were ultimately unprepared for the rush of student veterans. In the school year 1944–1945, only 15 veterans were enrolled at FJC. By 1946–1947, after the G.I. Bill had officially been signed into law, that number jumped drastically to 843 students. Not only did FJC have the largest freshman class in its history, but men outnumbered women by more than two to one. FJC found itself in dire need of funding to accommodate the demands of the veteran student population. The veteran population also had a different set of needs than that of the typical college student. Many of the veterans had not yet graduated high school and had to complete special courses at Fullerton Union High School. In addition, the veterans were often older; many were already married with young children at home. Some were in need of special psychological, vocational, and other types of counseling.

Housing was ultimately the biggest problem on the FJC Campus. The City of Fullerton had already experienced a drought in the housing market during the 1920s and 1930s, and the problem only worsened after the war when veterans returned home to settle down and start families, discovering that there was no housing available. To help remedy the problem, the FJC established a Veterans Home in 1946, the only school-sponsored housing for G.I. students in Southern California. The Veterans Home served as a dormitory for up to 40 single veterans and was located at the end of Las Palmas Drive in Sunny Hills. Because many veterans were married with small children, the Board of Trustees purchased a 4.1-acre property for \$10,126 in 1946 from City librarian Carrie Sheppard and her mother Dixie Carolyn to house married veterans and their families. The property was located adjacent to the northern boundary of the FJC Campus with a 276-foot frontage along North Harvard Avenue (now Lemon Street). With the support of the Federal Public Housing Authority, FJC was able to set up 25 temporary dwellings. Eventually 51 dwelling units were constructed, providing homes for 125 married veterans and their families on the FJC Campus.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

This was a tremendous accomplishment for FJC and an example of great cooperation among agencies; FJC was the first educational institution in California to apply for and be granted veteran student housing. The federal government provided the housing, the state government paid for all associated utilities, and FJC donated the land to build the property. The G.I. housing at 1000 North Harvard Avenue would eventually name itself “College View,” and would remain in place just north of the FJC Campus until around 1956. Although originally constructed for veterans of WWII, the onset of the Korean War provided a good reason to keep the housing in place for years to follow. By 1956, 381 Korean War veterans were enrolled at FJC, many of whom lived in College View (LAT 1954a).

With a growing post-war population, residents of the City of Fullerton approved tax increases and bond measures in support of the development of new schools and the expansion of existing campuses. FJC hired Pasadena architectural firm Taylor, Warren, Nishimoto and Conner (later Taylor and Conner) to design a new master plan for the campus. This led to a number of new building projects on the FJC Campus, all under the architectural design of William H. Taylor, including a new Science building, Gymnasium, Library, Student Center, Technical Education building, Art–Home Economics building, and District Administration Center.

In 1965, FJC Superintendent Ernest G. Lake replaced architects Taylor and Conner with William E. Blurock and Associates. In addition to designing new buildings, Blurock’s firm made additions to the existing Library and Science buildings. Hoping that the addition of new buildings would finally be adequate to accommodate its student population, the District parted with the temporary classrooms it had obtained from the federal government at the end of WWII. By 1968, the District was forced to lease portable classrooms after underestimating its growing student body. By the time FJC reached its 50th anniversary in 1963, its regular daytime student enrollment had risen to 9,000; approximately 560 courses were being offered; and the FJC Campus had grown to over 57 acres, with 17 buildings valued between \$12 and \$15 million. In 1965, enrollment saw an unexpected sharp rise in the number of male students, who were hoping to avoid being drafted into the military. Other changes happening in 1965 were the split of Fullerton Union High School and FJC (LAT 1965a, 1965b, 1967a).

In 1965, FJC received the green light for expansion plans that would shape the campus’s future with the northern perimeter construction endeavor with the City of Fullerton. The plans would create a new road that would extend from Berkley Avenue, cross Lemon Street, and continue west toward Harbor Boulevard. The 1965 agreement between the City and the District laid the groundwork for FJC’s expansion in 1967 that included the purchase of lots along Chapman Avenue and Lemon Street. The parcels and buildings located at 816 North Lemon Street, 816½ North Lemon Street, 820 North Lemon Street, and 319 Chapman Avenue were successfully purchased by FJC and the buildings were demolished in preparation for the construction of the Music and Theatre buildings (LAT 1965c; Richey et al. 2012).

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **3.2.4 Politics and Social Change**

In the 1960s and into the 1970s, FJC students were growing increasingly more political against the backdrop of McCarthyism and the growing anti-communist movement. FJC experienced its own political drama with the release of an “unapproved student publication” titled *The Black Flag: A Journal of Opinions*, which was declared “subversive” (Richey et al. 2012). The District Administration Center was subsequently crammed with over 200 angry parents and local community activists, who demanded that the literary journal be banned from FJC. These types of demands continued throughout the decade, along with new demands to close certain courses, fire specific District employees or faculty members, and allow students to attend anti-communist courses off campus during regular class time. In 1961, a popular FJC welding instructor named Wendell B. Phillips Jr. was dismissed, for reasons cited as his membership in the Communist Party and refusing to discuss the political activities of his fellow faculty members (Mudrick et al. 2015).

Faculty members continued to feel shut out from all policy-making decisions on campus and found themselves with almost no opportunity to speak honestly or partake in any organization with a minority viewpoint for fear it would elicit controversy. In the 1960s, the District officially merged with other nearby college districts to form the North Orange County Junior College District, later changed to the North Orange County Community College District (District) (Richey et al. 2012).

### **3.2.5 Economic Uncertainty**

In June 1971, the District Board of Trustees approved the new Master Plan for FJC, which called for the rehabilitation of three buildings—the Business Education, North Science, and Art–Home Economics buildings—as well as construction of new facilities, including a multi-use stadium/outdoor amphitheater. Unfortunately, a lackluster economy prevented new building projects from being approved to move forward. Although existing buildings were eventually refurbished, FJC focused on smaller projects such as new lighting in the parking lots, new tennis courts, expansion of the Print Shop, new air-conditioning units for several buildings, updated athletic facilities, and the addition of a new Reading Center, Women’s Center, Veterans Affairs Office, Service for the Disabled Center, Student Affairs Office, Office of Community Services, and Artist-in-Residence Program. In August 1972, the Board of Trustees voted to officially change the name of Fullerton Junior College (FJC) to Fullerton College.

In the latter part of the 1970s, Fullerton College, along with the most of the United States, continued to experience challenging economic conditions. On the heels of the Vietnam War, the country entered a recession, causing a decline in the Fullerton College student population. The Arab oil embargo of 1973–1974 caused a sharp rise in gasoline prices, and the passage of Proposition 13 in 1978 resulted in massive cutbacks and layoffs throughout Fullerton College.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

A 19% cutback in the state budget resulted in over 200 classes being canceled, a reduction in the number of satellite campuses, and dissolution of over 100 positions. The school library was subjected to a 73% budget cut, leaving little funding for new books. In response to the economic crisis, the District implemented student fees for health services and parking. The school's agricultural program was also completely phased out in 1972, and physical education was no longer a required course (Richey et al. 2012).

### **3.2.6 Diversity and Expansion**

Against the backdrop of the budget crisis, Fullerton College students began to question the underrepresentation of minorities in the curriculum. Fullerton College responded by offering an Ethnic Studies Program that included courses such as Black History, Chicano History, and History of Native Americans. Meanwhile, women were beginning to question the offering of courses such as Personal Charm I and II, Grooming and Poise, and Figure Control, and demanded courses that reflected the reality of women entering the workforce in record numbers. In 1973, Fullerton College offered a course called College and Career Opportunities for Women, followed by additional classes in Women's Studies. Fullerton College also began offering classes for the disabled, as well as never-before-seen workshops that reflected a new reality on campus, such as rape prevention, drug and alcohol abuse control, and venereal disease education workshops.

In the 1980s, the Fullerton College Campus was once again feeling pressed for space. Although no new classrooms were added, Fullerton College did make some additions and modifications for new facilities. In 1982, the photography and journalism laboratories were added to the 500 Building, outdated exterior lighting was replaced, old payphones were replaced, and a new telecommunications system linking all 25 buildings was installed. In compliance with Section 504 of the Rehabilitation Act of 1973, Fullerton College made numerous modifications to accommodate wheelchair access. In 1980, Fullerton College purchased the Chapman–Wilshire Schools, which included unused land in the northeastern portion of the property. Fullerton College opted to construct a new Student Services Center on this portion of land. Other new construction on campus included the Child Care building and a greenhouse located at the Horticulture Complex (Richey et al. 2012).

### **3.3 Campus Development and Expansion**

#### **3.3.1 Original Campus Master Plan (1935–1942)**

Campus development at FJC was intertwined with the Fullerton Union High School buildings for many years in its early history, but in 1935 Vaughn ushered in a new era for FJC with his campus plan on the newly acquired 16 acres of land. Vaughn was assisted by landscape architect

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

Ralph D. Cornell in his plan and would receive a great deal of WPA and Public Works Administration (PWA) funding for executing the campus plan (Richey 2010):

Having already supervised the construction of all the buildings on the high school campus while working for Carleton Winslow, Vaughn was eminently qualified for his new assignment as college campus architect. Using Public Works Administration (PWA), then Work Projects Administration (WPA) funds, Vaughn designed, then supervised, the construction of all of the new campus buildings... Vaughn also designed the walls for the sunken garden and additional landscaping features (\$47,793), which the WPA funded. Forty-five percent of the building costs were paid by the federal government, with the remainder supplied by the school district.

Typical of the time, Vaughn chose Spanish Colonial Revival as the architectural style for the early campus buildings, and the layout was greatly influenced by Thomas Jefferson's plan for the University of Virginia. As shown in Figure 6, Vaughn oriented the buildings facing a large central greenspace with shared services buildings, like the library and student services, in the center. The WPA also provided Vaughn and FJC with the funding for the construction of a greenhouse and for landscaping. With this funding, the Horticulture students of FJC were able to grow plants to place throughout the campus, accenting Vaughn's plan (see Figure 7 for an aerial view of the FJC Campus in 1940). Although 12 buildings were planned and designed by Vaughn, only the Commerce building, Administration building, Technical Trades building, Student Union building, and Greenhouse building were constructed and still stand today (Richey 2010; Epting 2014; LAT 1935).

---

### **Business Building 300 (1936)**

The original Commerce building (Building 300) was the first building constructed as part of Vaughn's general plan (Figure 8). It was built in 1936 at a cost of \$148,777 with PWA funding. According to Sanborn maps from 1949, the building was constructed with fireproof materials that included a reinforced concrete foundation and interior walls covered with metal lath and plaster. The original interior of the building had a gymnasium, student bank, and multiple classrooms for 50% of the student body to attend classes. Classes taught at the original Commerce building included banking, finance, secretarial courses, English, and many more. Currently the building is used by Fullerton College for Business and Computer Information classes (Richey et al. 2012; Sanborn 1949; Morris et al. 2004; LAT 1936a, 1936b, 1990).

### Administration Building 100 (1938)

The Administration and Social Sciences building was designed and constructed in 1938 for \$163,633 with PWA funding (Figure 9). The building is the second building designed and constructed by Vaughn as part of his campus plan. According to Sanborn maps from 1949, the building was constructed with fireproof materials that included a reinforced concrete foundation and interior walls covered with metal lath and plaster. The original functions of the building included classrooms, administrative offices for FJC, and a student lounge. In the 1950s, FJC hired another architect (Taylor and Conner) to build an addition to the building's front elevation. The modern aesthetic of this new wing was completely incompatible with the Spanish Colonial Revival style of the original building. According to *Fullerton College: A Pictorial History*, Vaughn was so outraged by the modern addition to his original design that he refused to ever work for FJC again. The building is currently known as Administration Building 100 and still functions as the Administration building for Fullerton College (LAT 1937a, 1937b, 1938a, 1990; Richey et al. 2012; Sanborn 1949).

**Figure 9. Administration and Social Sciences building constructed in 1938**

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **Math Building 600 (1938)**

The Technical Trades building, now referred to as Math Building 600, was constructed in 1938 for \$224,321 from WPA funding (Figure 10). According to the 1949 Sanborn map, the building was constructed with fireproof materials that included a reinforced concrete foundation and interior walls covered with metal lath and plaster. Although design and construction of the building was done by Vaughn, he was assisted on this building by FJC's building superintendent, William (Willy) B. Potter. Because the function of the building was Technical Trades, Vaughn was required to take extra care in the design of the structural system so that the foundation and floors did not fail once the weight and vibration of heavy machinery was introduced. Once finished, the building was used for technical trade education in welding, cabinet making, and architecture. There were traditional classrooms and shop areas throughout the building for the various trades (LAT 1938b, 1939a, 1990; Richey et al. 2012; Sanborn 1949). In 1980, a bridge was added to the south elevation of the building connecting Building 400 and Building 600. This addition is no longer extant.

**Figure 10. Technical Trades building constructed in 1937**

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

### Greenhouse Building 401 (c. 1937)

Greenhouse Building 401 was constructed c. 1937 with WPA funding (Figure 11). The Greenhouse was an interesting mix of educational space and campus landscaping growth and development. The WPA funding also allowed for additional landscaping on the grounds. The students cultivated plants in the Greenhouse for use in their classes, but also helped the school by using plantings around the Commerce building. The creation of the Greenhouse and the WPA funding for additional landscaping was essential in the beautification of the FJC Campus and sparked this comment in a 1943 yearbook:

Inspirational beauty is the key note to the landscaping of the Fullerton campus. A vast expanse of lawn, lovely flowers, and many newly planted trees make a perfect background for the magnificent buildings of Spanish stucco. The brilliant sunshine brings every color vividly to life, the green of the grass, the tan of the buildings and the red of the roofs (Richey et al. 2012).

Figure 11. Interior of Greenhouse, c. 1937

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **Campus Services Building 840 (1940)**

The Student Union building (Building 840) began as a two-phased construction project in 1939 that was completed in 1940 for \$60,454 with WPA funding (Figure 12). Its original design was to house lockers and restrooms for FJC. The first section of the building was a one-story wood-and-stucco building that was rectangular in plan. The second phase of construction was for another rectangular section set perpendicular to the first section to the east, creating an L-shaped plan. In 1941 the building became U-shaped in plan with the addition of the Hornet Hive building, which was constructed as a café for the students. This is consistent with the 1949 Sanborn map, which shows the Student Union as a U-shaped building with the original section from 1939 creating the base of the U shape (Figure 13). The building was used for food services, locker rooms, publications, office space, and the campus bookstore (LAT 1939b; Richey et al. 2012).

**Figure 12. Student Union building under construction in 1939**

### T Shacks (1946)

The increased enrollment following WWII brought about space shortages on the FJC Campus. One solution to resolve space issues was the acquisition of war surplus buildings from the Santa Ana Army Air Base in 1946. Known as the “T Shacks” (Figure 14), the buildings were originally used for administrative purposes and as barracks by the military, but were no longer needed by the end of the war. The T Shacks were acquired by FJC in 1946 and according to the 1949 Sanborn map, they were located to the north of the Shops building and the Commerce building. These temporary classroom buildings allowed FJC to make it through the post-war years until government funding for new buildings was released and also allowed for the shifting of more college-level courses away from the Fullerton Union High School site. Although these buildings were meant to be a temporary fix for the classroom shortages, they remained on the FJC Campus for decades. All of the T Shacks except one were removed from the campus in May of 1961. The remaining T Shack was relocated to the north side of the campus for the agricultural program, which is the current Horticulture Complex (LAT 1955a, 1961a, 1961b; Mudrick et al. 2015; Richey et al. 2012; Sanborn 1949).

Figure 14. T Shacks used for classroom spaces starting in 1946

### 3.3.2 Taylor and Conner’s Campus Expansion Master Plan (1953–1965)

With a growing post-war population, residents of the City of Fullerton approved tax increases and bond measures in support of the development of new schools and the expansion of existing

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

campuses. FJC hired Pasadena architectural firm Taylor, Warren, Nishimoto and Conner (later Taylor and Conner) to design a new master plan for the campus in 1953. This led to a number of new building projects on the FJC Campus, all under the architectural design of William H. Taylor, including a new Science building, Gymnasium, Library, Student Center, Technical Education building, Art–Home Economics building, Applied Arts building, and District Administration Center. In 1955–1956, the firm also designed an architecturally incompatible wing to the Administration and Social Science building, which attempted to blend the new modern style with the original Spanish style.

Taylor and Conner’s original design was for a campus-wide master plan that, in addition to multiple new buildings, included drastic changes to landscape and hardscape features. Plans called for a more streamlined look, including the addition of concrete walkways throughout the campus. Although new landscaping was added during the redesign, the number of plants, trees, and shrubs was drastically cut. As stated in *Fullerton College: A Pictorial History*, this “gradually changed the look and feel of the campus” (Richey et al. 2012). Although the construction of these buildings was much needed in terms of new classroom space/educational facilities, they intruded on college’s original Spanish Colonial Revival design, and have been viewed in a negative light by many, as recounted in *Fullerton College: A Pictorial History*:

Over the decades, the campus buildings designed in the 1930s by Harry K. Vaughn and built with federal relief funds had withstood the test of time and become eligible for listing on the National Register of Historic Places. The buildings designed by Taylor and Conner following World War II, however, were in a serious state of disrepair and no longer suited the needs of the campus. The decision was made to demolish many of the post-World War II structures and replace them with Hispano Moresque-styled buildings compatible with the historic Spanish Colonial Revival buildings constructed in the 1930s and 1940s. The result was a harmonious blending of the old and new, with the diversity of architecture making the campus more enjoyable and enriching (Richey et al. 2012).

When original 1930s FJC Campus architect Harry K. Vaughn visited the campus after the remodel, it is said that he was furious about the changes to the campus and vowed to never work with FJC again. Research indicates that many of the original Taylor buildings from the late 1950s and early 1960s have since been demolished. Extant Taylor buildings seen on the Fullerton College Campus today include the Berkeley Center (1960), the Music and Theatre Arts buildings (1967), the Art–Home Economics building (1959), the Technical Education building (1960), and various modifications to the 1930s buildings (LAT 1960; Mudrick et al. 2015; Richey et al. 2012).

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **Science Building (1954) – Demolished in 2010**

The Science Building (Figure 15) was the first building constructed under Taylor and Conner's plan. The two-story building was clad in stucco and rectangular in plan, featured regular fenestration, and was oriented with its main elevation facing the campus quadrangle. The building was later connected to the Technical Trades building by a pedestrian bridge. The building was the first building on campus to be used solely for mathematics and science, which had historically been taught at the Fullerton Union High School campus and not on the FJC Campus. Plans for the Science Building signed by Blurock indicate that the building was expanded in 1966. The building was demolished in 2010 to make way for the new Science Building 400 that stands today (LAT 1954b, 1954c; Richey et al. 2012).

**Figure 15. Science building, 1955**

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **Physical Education Building 1200 (1955)**

The Gymnasium (Figure 16) was the second building constructed under Taylor and Conner's plan in 1955. The building was noted as being the first building constructed on campus that would allow all physical education classes to be taught on the FJC Campus instead of the shared high school campus. The original building contained multiple basketball courts, locker rooms, instructional areas, and spectator seating areas. In 1956, a swimming pool and student health center were added to the building. Today the original building forms the core of the section now called the North Gym (LAT 1953, 1954d, 1954e, 1955b, 1958a, 1961c, 1962a; Richey et al. 2012).

**Figure 16. Gymnasium building constructed in 1955**

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **Library (1957) – Demolished in 2003**

The two-story, reinforced-concrete library was constructed in 1957 (Figure 17). The building was irregular in plan and clad in stucco, with a complex roofline. The interior of the building included a beautiful two-story atrium and was used for a variety of functions, including studying, typing, and language listening, and also housed a faculty lounge. The building was demolished in 2003 for construction of the new library building, now referred to as the Library and Learning Resource Center Building 800 (LAT 1955c, 1957a, 1957b, 1962b, 1962c; Richey et al. 2012).

**Figure 17. Library constructed in 1957 and demolished in 2003**

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

### **Student Center (1957) – Demolished in 2007**

The two-story Student Center building was constructed in 1957 (Figure 18). The building was 11,040 square feet, irregular in plan, and clad in stucco, with a complex roof featuring a series of flat-roofed sections at varying heights. The interior was configured with a large lounge area that was 58 feet by 94 feet, with a stage at one end, so that the building not only could be used for reading and studying but could also accommodate performances and assemblies for the students. The remainder of the building was used for offices and storage. The building was demolished in 2007 and a new Student Center was constructed in approximately the same location. The current building is known as the College Center Building 200 (LAT 1955c, 1957a, 1957c; Richey et al. 2012).

**Figure 18. Student Center constructed in 1957 and demolished in 2007**

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

### Technical Education Building 700 (1959)

The fifth building constructed under Taylor and Conner's plan was the Technical Education building (Building 700) in 1959 (Figure 19). The original design of the building included classrooms and work areas for technical trades such as welding, drafting, fabrication, and cosmetology. The Technical Education building is also noted as the first building that allowed for parking in front of the building. It was remodeled heavily during the 2000s and retains very little of its original visual elements (LAT 1958b, 1958c, 1959a, 1959b; Richey et al. 2012).

**Figure 19. Technical Education building constructed in 1959**

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **Fine Arts Gallery 1000 (1959)**

The Art–Home Economics building (Building 1000) was constructed in 1959 (Figure 20). The original design of the building included classrooms and work areas for home-economics-related coursework such as table setting, home management, childhood development, cooking, and entertaining. The building was in keeping with the modern style that Taylor and Conner used for the other buildings on the FJC Campus. It was remodeled heavily during the 1970s with interior alterations (LAT 1959b; Richey et al. 2012).

**Figure 20. Art–Home Economics building view from top of Gymnasium**

### **Berkeley Center 3000 (1960)**

The District Administration building (Building 3000) was constructed in 1960 north of the main FJC Campus on Lemon Street (Figure 21). The District Administration building housed various administrative offices for the affairs of various schools, including but not limited to FJC (LAT 1959c; Richey et al. 2012).

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Figure 21. District Administration building constructed in 1960**

### **Humanities Building 500 (1962)**

The Applied Arts building (Building 500) was designed by Taylor and Conner in 1962 (Figure 22). The two-story building was designed primarily as classroom space with a few offices. Subjects taught in the building included medical assisting, dental assisting, journalism, psychology, and merchandising. German, French, Spanish, and Russian classes were also taught in the Applied Arts building. It is also important to note that the Applied Arts building was one of the first buildings at FJC to have air-conditioning units. Today the building continues to be used for Applied Arts and Humanities studies. It also serves as the Humanities Division office and the Veterans Resource Center (Richey et al. 2012).

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Figure 22. Applied Arts building constructed in 1962**

### **Music Building 1100 (1967)**

The last buildings constructed on the FJC Campus under the Taylor and Conner plan were the Music and Theatre buildings. The Music building (Building 1100; Figure 23) was designed for rehearsals as well as instrument storage and classroom space. The building included a stage, practice rooms, classrooms, storage and repair rooms, a uniform and robe room, and dressing rooms. The construction of the Music building allowed the music instruction at FJC to be shifted from the high school to the FJC Campus. Although research indicates that this building was under construction when FJC replaced Taylor and Conner in 1965, the architectural plans on file suggest that the building was completed with Taylor's designs and the Music and Theatre buildings were the last of Taylor's designs to be built on the FJC Campus. Today the building is still used as the Music building and also houses the Fine Arts Division office (LAT 1963a, 1963b, 1964a, 1964b, 1965d, 1966a; Richey et al. 2012).

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Figure 23. Music building constructed in 1967**

### **Theatre Arts Building 1300 (1967)**

The Theatre building (Building 1300; Figure 24) was constructed at the same time as the Music building by Taylor and Conner. The building included a sound/projection booth, four dressing rooms, an auditorium, and basement storage for set dressing items. Although research indicates that this building was under construction when FJC replaced Taylor and Conner in 1965, the architectural plans on file suggest that the building was completed with Taylor's designs and the Music and Theatre buildings were the last of Taylor's designs to be built on the FJC Campus. Today the building is referred to as the Theatre Arts building and houses the Campus Theatre and Box Office (LAT 1963a, 1964b, 1965d, 1966a; Richey et al. 2012).

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Figure 24. Theatre building constructed in 1967**

### **3.3.3 Blurock's Campus Expansion Projects (1965–1984)**

In 1965 FJC made the decision to terminate its agreement with Taylor and Conner and move forward with hiring William E. Blurock as the FJC Campus architect. Blurock's first contribution to the FJC Campus was the construction of an addition to the Library building. By the time Blurock began his tenure at FJC, the 1957 Library had outgrown its building and more space was required to meet the increasing enrollment numbers. Blurock completed the library addition by 1968. Blurock was also responsible for an addition to the Science building and renovations and additions to numerous other buildings on campus. During the 1960s and 1970s, FJC grew and expanded based on the needs of the students and of the industries that would be recipients of FJC graduates. Blurock completed numerous renovations to the existing buildings on the FJC Campus but was also responsible for the buildings described in this section during his time at FJC (LAT 1965e, 1966b, 1966c, 1967b, 1971a, 1971b; Richey et al. 2012).

#### **Child Development Center Buildings 1800 Complex (c. 1980)**

The Child Development Center Complex (Figure 25) was constructed c. 1980 and featured relocatable buildings combined with a section of new construction used to create an L-shaped plan for the building.

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Figure 25. Child Development Center Complex**

### **Media Services/Academic Computing/Maintenance and Operation Shops Building 2300 (c. 1970)**

According to architectural plans from the North Orange County Junior College District Division of Physical Plant and Facilities from July 1970, the Math Audio–Tutorial building (Building 2300) was a one-story relocatable building (Figure 26) that was renovated to serve as a building for the Mathematics and Engineering Division. The building was relocated to the west of the 500 Building and is currently used for the Media Services, Academic Computing, and M&O Shops.

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Figure 26. Math Audio–Tutorial building constructed c. 1970**

### **Student Services Building 2000 and Pedestrian Bridge (1984)**

The Student Center design and construction began in 1982 and was completed in 1984 by Blurock's firm. The Student Center (Building 2000) was located in the recently acquired tract of land purchased by Fullerton College in 1980. Due to the location of the Student Center, Blurock's firm also designed a connector bridge to cross Chapman Avenue (Figure 27). The building was designed to house a Bookstore, Disabled Student Services office, and Career Center, as well as the Admissions Department and the Bursar's office. Today the building houses the Admissions and Records, Bookstore, Bursar, Career and Life Planning Center, Counseling, Distance Education, and Extended Opportunity Programs and Services/Cooperative Agencies Resources for Education (EOPS/CARE) (Richey et al. 2012).

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Figure 27. Pedestrian Bridge and Student Center constructed in 1984**

### **3.3.4 Chapman and Wilshire School Acquisition (1980–1984)**

In 1980, the District acquired the Chapman School and Wilshire Junior High School (Wilshire School), located across the street on the south side of Chapman Avenue. The District renovated the buildings and turned them into the Wilshire Continuing Education Center in 1983. Once renovations were completed, the school started operations in the buildings in 1984. The purchase of the schools came with undeveloped land that Fullerton College intended to use for further expansion and development, including the construction of a new Student Center in 1984 designed by Blurock (Richey et al. 2012).

Although the Wilshire School buildings are the only buildings remaining on the plot to the south of Chapman Avenue, there was another school located beside the Wilshire School known as the Chapman School. According to a 1949 Sanborn map of the area, the Wilshire and Chapman Schools were multi-building school complexes arranged on a large parcel of land to the south of FJC. The Chapman school grounds were composed of a large one-story school building with an L-shaped plan, a roughly rectangular one-story building to the east labeled as Kindergarten, a playground to the east, and a one-story cafeteria building (Sanborn 1949).

The Wilshire School is also shown on the Sanborn map from 1949 as a three-building school complex. The Wilshire School appears to be oriented toward Wilshire Avenue, with two one-story classroom buildings that appear to be rectangular in plan and connected by an open

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

walkway between the buildings. To the north of the classrooms stands a building labeled Auditorium, which is the Wilshire Theatre (Sanborn 1949).

According to a California Department of Parks and Recreation (DPR) Historic Resources Inventory Form from 1979, the following information was recorded about the Wilshire Junior High School property:

Wilshire Junior High School bounded by Lemon, Chapman, Lawrence, and Wilshire is the latest building in an area which has been in continuous use for educational institutions since 1889. The first was a small red brick school house, constructed a year after the formation of the Fullerton Elementary School District near Lemon & Wilshire. The structure was in constant use and was modernized through the years until 1914 when it was replaced by a new, twelve-room building, the Wilshire School. By this time enrollment had increased from 333 in 1906 to 470. In 1919 the School District acquired the rest of the land around Wilshire School and in 1921, Chapman School, at the corner of Lemon and Chapman, was built. By 1924 two additional elementary schools, Ford and Maple had been constructed elsewhere in town, and average daily attendance in the District had increased to 1,336. The 1933 earthquake caused severe damage to this complex and in 1934 it was deemed necessary to make repairs and reconstruction. The Chapman School was restored and one classroom added for a total of 14 classrooms, and Wilshire School was totally demolished. The building was replaced by a new structure and an auditorium was built between it and Chapman School, joined by an archway. Wilshire School area was the location for a soup kitchen during the Depression (DPR 1979).

The current Wilshire School buildings were designed by Donald Beach Kirby in 1936 using PWA funding. The original Wilshire School was heavily damaged during the earthquake in 1933 and was unable to be saved. Kirby's new school buildings dominated the block between Chapman Avenue and Wilshire Avenue, as shown in the aerial photograph from 1938 (Figure 28). Today three buildings remain from Kirby's original designs: the Wilshire Theatre, 100 Wilshire Avenue, and 200 Wilshire Avenue. The school shut down in the early 1980s and the District purchased these buildings and renovated them for use as an Auditorium and Continuing Education Center (Epting 2014; LAT 1983).

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Figure 28. 1938 Aerial photograph looking southeast, showing the Wilshire School buildings (circled) to the south of the FJC Campus and Fullerton Union High School campus**

### **Wilshire Theatre Building 2100 (1936)**

The school purchase included the Wilshire Theatre (Figure 29), which was constructed in 1936 using PWA funding. The building was designed in the PWA Moderne style by architect Donald Beach Kirby (1905–1980). According to the 1949 Sanborn map, the Auditorium building was between the Wilshire School and the Chapman School and oriented with the entrance to Harvard Avenue. The Sanborn map shows the building as a two-story building that was constructed using fireproof reinforced concrete and a steel truss roof system. The map also notes a large stage area to the east side of the building's interior and a boiler room to the rear of the building. According to information provided in *Fullerton College: A Pictorial History*, "The auditorium was the first project approved for construction using federal Depression-era relief funds in Orange County" (Richey 2010; Richey et al. 2012; Sanborn 1949).

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Figure 29. Wilshire Theatre**

### **Wilshire School Building W100 (1936)**

The Wilshire School Building 1 was constructed in 1936, is located on the corner of Wilshire Avenue and Lemon Street, and is now known as the W1 Building or the 100 Wilshire Building (Figure 30). According to the information available from the 1949 Sanborn map, this building was a one-story building constructed in the PWA/WPA Moderne style and was originally part of the Wilshire School. The building functioned as a junior high school until it closed in the early 1980s. The District now uses the building for Continuing Education. The interior of the building has been renovated multiple times over the years, but the exterior retains much of its original PWA/WPA detailing.

**Figure 30. Wilshire School Building 1**

### **Wilshire School Building W200 (1936)**

The Wilshire School Building 2 was constructed in 1936, is oriented to face Wilshire Avenue, and is connected to Wilshire School Building 1 by a porte cochère. The building is currently

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

known as the W2 Building or the 200 Wilshire Building. According to the information available from the 1949 Sanborn map, this building was a one-story building constructed in the PWA/WPA Moderne style that was originally part of the Wilshire School. The interior of the building has been renovated multiple times over the years, but the exterior retains much of its original PWA/WPA detailing. No historic photographs of this building were located.

### **3.3.5 Chapman Avenue Residential Acquisitions (1980s, 1990s)**

During the 1980s and 1990s, Fullerton College acquired residential properties to the south of the main Fullerton College Campus on Chapman Avenue as part of their campus expansion plan. The residential properties located south of Chapman Avenue were originally multi-family or single-family residences that maintain their original uses or remain vacant. The only alterations made to the vacant properties were boarding up entry points to prevent vagrancy. Three of the residential properties were previously evaluated by GPA in 2015 and do not require additional evaluations for the purposes of this study. The previously evaluated buildings include 428 East Chapman Avenue, 434 East Chapman Avenue, and 438 East Chapman Avenue. Dudek evaluated all remaining properties on the project site, which include 325–327 North Newell Place, 409 North Newell Place, 416 East Chapman Avenue, 418 East Chapman Avenue, and 420 East Chapman Avenue. The City of Fullerton and the Orange County Assessor's office were unable to provide information on the properties in question. Visits were made in person to the Assessor's office and Permits office on March 22, 2017, and all possible building information was obtained at that time. City Directories for the City of Fullerton were accessed in person at the Fullerton Public Library Local History Room on March 22, 2017.

## **3.4 Campus Architectural Styles**

### **3.4.1 Spanish Colonial Revival (1915–1940)**

The Spanish Colonial Revival style has a rich history and popularity in California with a basis in Spanish architectural forms that were heavily influenced by the richness of the history of Spain. One huge influence on the history of Spain is the Moors. The Moors were in control of Spain for many years and made a truly significant impact on the architectural development in many Spanish cities like Seville. The Moors brought with them a rich Muslim tradition that was based on the Islamic patterns of development seen throughout the Middle East (NGS 2017). The combination of the Spanish and Moorish influence became known as the Hispano-Moorish (also referred to as Hispano-Moresque) architectural style. The height of Hispano-Moorish architecture in the Iberian Peninsula was from the 8th century to the 15th century and there was a significant revival during the 19th and early 20th centuries throughout Europe and the Americas (Curl 2006).

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

During the Spanish colonial period in the late 1400s the architectural traditions known as the Hispano Moorish style were brought to the Americas. The convergence of Christian and Islamic traditions seen in America is most often referred to as Mudèjar. The convergence of religious and architectural traditions during the Spanish Colonial period set the stage for the Spanish Colonial Revival architectural movement that gained great popularity in the 1920s and 1930s in Southern California (Khalidi, SIC 2017, SOHO 2007).

Deeply rooted in Spanish and Islamic traditions, Hispano-Moorish architecture became a uniquely Southern California tradition following the 1915 Panama-California Exposition in San Diego. Drawing not only from the rich heritage of Southern California and building on the traditions of the incredibly popular Mission Revival movement, architect Bertram G. Goodhue chose to elaborate and ornate the style to new levels with his interpretation of the Spanish Colonial principles and precedents from both Spain and Mexico. The elaborate ornament used by Goodhue and the Spanish Colonial Revival architects he influenced was specifically referred to as Churrigueresque (Bevil 1995, SIC 2017, SOHO 2017). Goodhue's use of the Spanish Colonial Revival style with Churrigueresque ornament at the 1915 Exposition was an inspiration to architects and designers throughout California. While revivalist styles were popular throughout Southern California, some cities like Fullerton embraced the Spanish Colonial Revival style above all others. The City went so far as to make Spanish Colonial Revival its preferred form of architecture for commercial and civic buildings in the 1920s (McAlester 2015; FH 2008; SDHC 2017).

The most significant character-defining features of the Spanish Colonial Revival style include the following:

- Low pitched roofs with clay tiles
- Stucco walls
- Simple rectangular or L-shaped plans
- Asymmetrical façades
- Churrigueresque detailing and features around windows and entryways
- Arched entryways
- Irregular fenestration
- Elaborately carved wood entry doors
- Wrought-iron balconies
- Interior decorative tile work

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

- Arcaded walkways
- Recessed doors and windows

Due in large part to the City's preference for the style, Fullerton's most notable commercial/civic examples of the style are the Masonic Temple built in 1920 and the California Hotel built in 1922 (DSD 2002; Foster 330-333; McAlester 2015). According to Fullerton Heritage, the City also retained many residential examples of the Spanish Colonial style, including the following:

- Muckenthaler Estate, 1923
- The Grieves Apartments, 1924
- Clinton Smith House, 1924
- William Winter House, 1926
- Gowen House, 1928
- Dewella Apartments, 1929
- Foster House, 1929
- Cleaver House, 1929

Examples of Spanish Colonial Revival style architecture on campus include the following buildings. Note that the Spanish Colonial Revival Style buildings on the Fullerton campus also exhibit architectural details that reflect the Churrigueresque style of architecture, including scalloped entrances, horseshoe arches, and tile work.

- Business Building 300
- Greenhouse Building 401
- Math Building 600
- Administration Building 100
- Student Union Building 840

### **3.4.2 Craftsman (1905–1930)**

The Craftsman architecture movement in the United States is one of the most prevalent and widespread movements, which appealed to almost all social classes. One of the most notable architectural developments arising from the Craftsman movement is the Bungalow. The Arts and Crafts movement began in the mid-late part of the nineteenth century in England as a reactionary movement against the excessiveness and ostentatious designs of the Victorian era. One of the key contributors to bringing the

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

Craftsman movement to the United States was Gustav Stickley. His work and efforts helped fuel the development of the Craftsman movement and spread it across the United States. Upon its arrival in California, the Craftsman movement produced a truly unique California architectural form: the California Bungalow. Developed by the work of Greene and Greene in Pasadena, the California Bungalow became one of the most widespread architectural movements in California.

The adaptation of the Greene and Greene Bungalow model for the masses contributed to its appeal and application to meet the needs of the housing booms happening across California following World War I. Even though Greene and Greene designed very high-style versions of the California Bungalow, builders and contractors began to mass-produce designs for the homes in pattern books and made them more available to the public.

The California Bungalow is characterized by the following features:

- Overhanging eaves
- Distinct horizontal lines
- Low pitched roof designs
- Wood shingle detailing, porches
- Maximum of two stories, mostly one story or one-and-a-half stories
- Paired windows
- Craftsman style doors
- Tapered wooden porch supports
- Extensive use of natural materials and finishes
- Brick and/or stone chimneys
- Exposed roof beams

Although the Greene and Greene bungalows represent the highest artistic and pure forms of the movement, it is in the modest application that cities like Fullerton were able to latch onto the high-style tradition and make it their own (DSD 2002; Makinson 1977; McAlester 2015; SurveyLA 2016). Buildings within the project area that exhibit characteristics of the Craftsman style include:

- 325-327 North Newall Place
- 420 East Chapman Avenue
- 428, 434, and 438 East Chapman Avenue

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **3.4.3 PWA/WPA Moderne (1933–1944)**

During the Great Depression and the years shortly thereafter a new architectural form emerged called PWA Moderne. Under New Deal initiatives from President Roosevelt, the Works Progress Administration (WPA) and the Public Works Administration (PWA) were created. Like other New Deal programs, the WPA and the PWA were focused on creating American jobs in the Depression Era. The WPA was responsible for providing government relief to cities for materials and labor, whereas the PWA was established to provide funding for private contractors for public works projects, including but not limited to bridges, civic buildings, airports, schools, hospitals, and dams. Both programs were essential in the development of the PWA/WPA Moderne style of architecture and for putting many people back to work during the economic crisis.

Given the economic state of the country, it makes sense that the PWA/WPA Moderne style would be somewhat simplistic in nature and use readily available materials to keep project costs low. In addition to simplicity and readily available materials, the PWA/WPA Moderne style has the following character-defining features:

- Use of conservative elements and materials such as concrete
- Monumental feel
- Rectangular massing
- Zigzag ornamentation
- Balanced and symmetrical forms based on Classical design principles
- Windows arranged as vertical recessed panels
- Stucco or stone walls

The Wilshire School buildings, which are now part of the Fullerton College Campus, serve as good examples of the PWA/WPA Moderne style. It is also notable that the Wilshire Theatre building was the first PWA building constructed in Orange County (DSD 2002; Epting 2014; Morris et al. 2004).

### **3.4.4 Mid-Century Modern (1933–1965)**

Following WWII, the United States had a focus on forward thinking, which sparked architectural movements like Mid-Century Modern. Practitioners of the style were focused on the most cutting-edge materials and techniques. Architects throughout Southern California implemented the design aesthetics made famous by early Modernists like Richard Neutra and Frank Lloyd Wright, who created a variety of Modern architectural forms throughout Southern California.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

The Mid-Century Modern movement in Fullerton, as in other cities in the United States, was characterized by simplistic and clear uses of materials and structural components, open interior planning, and large expanses of glass. Mid-Century Modern flourished in Fullerton housing forms and in school constructions supporting the post-war housing boom. The cost-effective nature of the style and the ability to mass-produce Mid-Century Modern building materials like concrete, wood, steel, and glass made it the perfect style for growing cities like Fullerton. Today there is a Fullerton Heritage Driving Tour that includes numerous examples of Mid-Century Modern architecture, including the following (City of San Diego 2007; DSD 2002; FPL n.d.):

- Forever Houses, 1954
- Nicolas Junior High School, 1956
- C. Hunt Foods Foundation Library, 1962
- D. Fern Drive Elementary School, 1954
- E. Golden Hills Elementary School, 1950

Characteristics of the Mid-Century Modern style include the following:

- One to two stories in height
- Post-and-beam construction using wood and/or steel
- Cantilevered canopies and overhangs
- Little to no exterior ornamentation
- Simple lines and geometric patterns
- Emphasis on function and simplicity
- Open floor plans
- Buildings sheathed in stucco, wood, brick, or steel frame with glass
- Flat roof designs
- Flush-mounted metal frame and clerestory windows
- Large expanses of windows
- Simple size and massing
- Use of simplistic geometric shapes
- Use of covered walkways with geometric canopies using such forms as butterfly or folded plate

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

- Indoor/outdoor integration
- Exterior staircases, decks, patios, and balconies

Examples of Mid-Century Modern buildings on the Fullerton College campus include:

- Physical Education Building 1200
- Fine Arts Gallery 1000
- Berkeley Center Building 3000
- Humanities Building 500
- Theatre Arts Building 1300

### 3.4.5 New Formalism (1954–1970s)

In the City of Fullerton, the New Formalism movement emerged in the 1950s and lasted until the early 1970s. The New Formalism movement emerged as a reactionary movement against the International style. Some of the most acclaimed architects of the style are Edward Durrell Stone, Philip Johnson, and Minoru Yamasaki, who all had experience working in the International style but wanted to create a more formal and ceremonial form of architecture that was strongly rooted in Classical design motifs and principles. The design of the New Delhi American Embassy in by Edward Durrell Stone is often noted as the starting point for the New Formalism movement.

Characteristics of New Formalism:

- Incorporation of formal landscapes and central plazas
- Use of classical features such as columns, arches, and colonnades
- Monumental style scale and massing, often set atop a visual podium
- Use of extravagant materials like granite, marble, and travertine
- Symmetrical façade design
- Use of arched supports
- Use of concrete screens

The New Formalism movement had its limitations, in that it was used primarily in large-scale cultural and institutional buildings with little use in other architectural sectors. Examples of New Formalism in the United States include Lincoln Center in New York City, the Los Angeles Music Center, and the Kennedy Center for the Performing Arts in Washington DC.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

Smaller cities and universities also embraced the New Formalism style, and examples of the style are seen in Fullerton with the City Hall built in 1963 and the Western University College of Law built in 1975 (City of San Diego 2007; DSD 2002; Gebhard 2003; McAlester 2015). The Fullerton College Music Building 1100 serves as an example of New Formalist style educational architecture.

### **3.4.6 International Style (c. 1925–present)**

The International style of architecture came to Los Angeles in the early 1920s and flourished under architects like Richard Neutra and R.M. Schindler. The style became very popular in almost all forms of architecture, using precise and universal materials and techniques that allowed the style to be used anywhere in the world. The strong Bauhaus roots of the movement incorporated simple and precise designs and incorporated mass-produced materials such as concrete, steel, and glass. Functionality in design was also one of the highest priorities of the style.

Characteristics of the International style:

- Flat roof structure
- Little decoration or ornamentation
- Glass curtain walls
- Open interior spaces
- Smooth wall surfaces, usually clad with stucco
- Strong linear lines
- Large concrete expanses
- Use of modern materials such as metal windows, concrete, and steel
- Flush-mounted metal windows
- Asymmetrical design

The City of Fullerton's International style buildings include the Beckman Instruments Headquarters (1953), Fullerton Community Bank Building (1960), and Hunt Administrative Building (1960) (City of San Diego 2007; DSD 2002; Gebhard 2003; McAlester 2015).

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **3.5 Campus Architects**

#### **3.5.1 Harry K. Vaughn (1882–1962)**

Harry K. Vaughn (1882–1962) was born in Wisconsin and moved to San Diego in 1906. Shortly after his arrival in San Diego, Vaughn became a draftsman for the architectural firm of Hebbard and Gill. After the dissolution of the Hebbard and Gill partnership in 1907, Vaughn made the decision to stay on with Hebbard as a draftsman. His career continued under Hebbard until 1913, when he went to work for Carleton M. Winslow. With Winslow's appointment to Architect in Residence for the Panama–California International Exposition in San Diego, Vaughn gained valuable experience working with Winslow at the exposition to design many of the temporary buildings. Following Winslow's success at the exposition, he and Vaughn relocated to Los Angeles. While living in Los Angeles, Vaughn obtained his certification in architecture after completing the required coursework at the University of California. While working with Winslow, Vaughn also worked with another noted architect, Irving Gill. Vaughn's first experiences with the FJC began when Winslow was named the Fullerton College architect in 1919. During his time under Winslow, Vaughn designed and supervised numerous construction projects. Vaughn also began to make a name for himself and was hired to design the Louis E. Plummer residence in 1927. The superintendent's fondness for Vaughn likely influenced the Board of Trustees on the decision to hire Vaughn for the new FJC Campus project in 1933.

Following in the footsteps of his previous employers, Vaughn was greatly influenced by the Spanish Colonial Revival style and incorporated it into his designs for FJC. Vaughn designed the following buildings during his time at FJC:

- Business Building 300, 1936
- Greenhouse Building 401, c. 1937
- Administration Building 100, 1938
- Math Building 600, 1938
- Campus Services Building 840, 1940

Throughout Vaughn's time at FJC, he built a following and was asked to take on other architectural projects in the City of Fullerton, including the Fullerton Public Library. A great deal of Vaughn's work was based on WPA funding; once the WPA work was completed, Vaughn returned to San Diego and continued his architectural career with the California Department of Public Works, Division of Architecture (Michelson 2015a; Richey 2010; Richey et al. 2012; Morris et al. 2004; Flanigan 1987).

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **3.5.2 Ralph D. Cornell (1890–1972)**

Ralph D. Cornell (1890–1972) was born in Nebraska and relocated to California in 1908. Following his graduation from Pomona College in 1914, he continued his studies at Harvard University and in 1917 was awarded the degree of Master Landscape Architect. Prior to his service in World War I, Cornell worked as an architect at the firm of Harries and Hall in Toronto, Canada. Upon his return from the war, Cornell settled in Los Angeles and opened one of the very first practices specializing in landscape architecture (Tyack 2011; TCLF 2014; Michelson 2015b). His principal works in California include Hillside Memorial Park Cemetery (1945); Los Angeles Civic Center Grounds (1956); Beverly Gardens Park (1931); Glen Haven Memorial Park (c. 1940); Restoration of Rancho Los Cerritos (1931); Grand Park (1956); Los Angeles Mall (1973–1975); Los Angeles Department of Water and Power Grounds (c. 1959); Pasadena’s Central Park (1927); Pasadena’s Washington Park (1922); Pomona College Grounds (beginning in 1919); Los Angeles Music Center Grounds; University of California, Los Angeles (UCLA) Grounds (beginning in 1937); and Torrey Pines (1922).

His professional architectural firms included the following:

- Cornell and Payne Landscape Architect and Wild Garden Specialist (1919–1924)
- Cook, Hall and Cornell (1924–1933)
- Cornell, Bridgers and Troller (1955–1969)
- Cornell, Bridgers, Troller and Hazlett (1969–1972)

Cornell’s work at FJC began in 1935 when he teamed with Vaughn to create the general campus plan for FJC’s new site. Heavily influenced by the University of Virginia campus, Cornell and Vaughn sought to design a series of pathways, walkways, and open spaces that worked cohesively with the surrounding buildings (Epting 2014).

Cornell’s design aesthetic was restrained and thoughtful of the natural environment. In addition to his numerous residential and public projects, Cornell also served as a landscape architect at Pomona College (1919–1959), UCLA (1937–1972), and University of Hawaii (1928–1972). Another notable point in Cornell’s career was that he was appointed as Landscape Architect Consultant for the Federal Relief Administration in 1935. Cornell’s contributions to Southern California landscape architecture were fundamental to the development of the Southern California landscape (Tyack 2011; TCLF 2014; Michelson 2015b).

### **3.5.3 Donald Beach Kirby, Architect (1905–1980)**

The principal works of Donald Beach Kirby (1905–1980), the architect for the Wilshire School buildings, include the Maharajah of Indore Residence in Santa Ana (1940), Player’s Café in

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

Hollywood (1941), Miss Burke's School in San Francisco (1950), Castle Air Force Base in Merced (1953), Post Library Presidio in San Francisco (1958), Hunter's View Public Housing in San Francisco (1955), and Upper Noe Fieldhouse in San Francisco (1955). Born in Denver and educated at the University of Pennsylvania, Kirby came to Los Angeles in 1929 and worked under two accomplished California architects for a few years. Although Kirby's training under Reginald D. Johnson and Gordon B. Kaufmann lasted a short time, Kirby decided to go out on his own in 1933. From 1934 to 1942 Kirby served as the National Housing Administration director. In 1945, Kirby relocated to San Francisco, continued a very successful architectural practice, won awards from the AIA and Association of School of Administrators for his work on the Burke School, and won the Certificate of Distinguished Service from the AIA. During his time in Southern California, Kirby designed the Wilshire Junior High School buildings using WPA funds (AIA 1970; AR 1952; AF 1956; Marsh 1994; Michelson 2015c; Lowe 1986; Priaulx 1957; SDU 1957; SFC 1980; *Who's Who* 1974–1975).

### **3.5.4 William Henry Taylor, Architect (1912–1995)**

William Henry Taylor (1912–1995), a prominent architect in the San Gabriel Valley whose principal works during the mid-century include the Public Bathhouse and Pool in Palmdale (1951); 3164 Brookdale Road in Studio City (1952); Pasadena City College buildings (1954); Whittier Intermediate School (1956); Wilson Junior High School in Glendale (1956); the first FJC Science building, Gymnasium, Library, Student Center, Technical Education building, and Art–Home Economics building (1960); the FJC Applied Arts building (1962); the FJC Administration building expansion (1964); the FJC Music and Theatre Arts building (1966); the FJC Library expansion (1969); residences in the Poppy Peak Drive district in Pasadena (1968); and the Pasadena Unified School District Services Center (1970). In 1953, FJC started its second expansion phase, which continued into the 1960s. The Pasadena architectural firm of Taylor, Warren, Nishimoto and Conner (later Taylor and Conner) was selected by the FJC trustees to develop a new master plan for the campus, with Taylor serving as the buildings' principal designer.

Taylor's work on the Poppy Peak District in Pasadena, California is perhaps one of the best examples of his Mid-Century Modern aesthetic. Taylor, who often partnered with Kenneth Nishimoto on projects, designed the 1615 Poppy Peak Drive residence. As described on the district's NRHP nomination form:

The district is characterized by a density of excellent examples of Modern 20th century residential architecture designed by a range of architects, including internationally renowned masters, nationally influential architects, and regionally and locally recognized architects, who were also responsible for a wide range of projects in Pasadena and Southern California. This diverse group, including Lyman Ennis, James Pulliam; Kenneth Nishimoto, Buff, Straub & Hensman,

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

Leland Evison, Harwell Hamilton Harris, Richard Neutra, William Henry Taylor and Robert Cox, among others, is represented by the wide range of expressions of Modern residential architecture from the mid-1930s to the late 1960s. The district is further distinguished in having atypical, early work by famous architects as well as houses that represent their classic “signatures”; the former embodied by Harris’s Laing House, rendered in an International Style not typically associated with his mature work, and the Perkins House by Richard Neutra, a quintessential example of Neutra’s 1950s work (Lamprecht and Paul 2008:5).

The NRHP district nomination form notes that all of these architects “shared the trait of interpreting Modernism individually.” Many of the architects also built houses for themselves or had family members and clients that lived in the residences, including Taylor and his brother. Many of the architects for Poppy Peak had also fought in World War II. Taylor and Nishimoto were such close friends that Taylor accompanied Nishimoto to a Japanese internment camp and attempted to secure his release by assisting as an architect for the war effort (Lamprecht and Paul 2008).

Taylor also served as a member of the Housing Research Council of Southern California with local masters like Whitney R. Smith who served as Chairman, working on a “non profit organization composed of architects, engineers and planners in private practice who are interested in research into all fields of housing, in an effort to reduce costs and raise standards (HRC 1953).”

He was also part of the Pacific Architects Collaborative at 25 S. Euclid Avenue in Pasadena. The group comprised eight principal architects and their associated firms, each with extensive experience in Southern California (Independent Star News 1962).

In the 1960s, building and expansion plans continued with the architectural and design services of Taylor and Conner. Taylor would go on to design several more buildings for the Fullerton Union High School and FJC, including an Auto Shop Facility, an Applied Arts building, a Music building, and a Theatre building (AIA 1962; Richey et al. 2012).

### **3.5.5 William E. Blurock, Architect (1922–2012)**

William E. Blurock (1922–2012) was born and raised in Los Angeles, California. He graduated from the University of Southern California School of Architecture in 1947, despite his studies being interrupted at the onset of WWII. While stationed in Foggia, Italy, Blurock flew 62 missions as a P-38 Lightning Fighter Pilot for the U.S. Army Air Corps 82nd Operations Group, flying over parts of Europe and North Africa. At the end of the war, he stayed abroad for one year to complete coursework at the University of Florence, School of Architecture, before returning to California and completing his degree in architecture (Bissell 2012; Michelson 2015d).

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

His professional architectural firms included the following:

- Blurock, Pleger, Hogan and Ellerbroek, Architects, Orange County, California (1952–1959)
- William E. Blurock and Associates, Architects; Principal, William Blurock Associates, Newport Beach, California (1960–1974)
- William Blurock & Partners, Newport Beach, California (1975–1982)
- The Blurock Partnership (TBP), Newport Beach, California (1983–1994)

Examples of his work on other educational buildings in Orange County between the 1950s and 1970s include the following:

- Orange Coast College, Costa Mesa, California: 1950s Facilities Master Plan (association with Richard Neutra/Robert Alexander) and 1970 Facilities Master Plan
- University of California, Irvine: 1965 Original Master Plan, Phases I and IA (association with William Pereira)
- Fullerton College, Fullerton, California: 1970 Facilities Master Plan
- Golden West College, Huntington Beach, California: 1972 Master Plan Update
- Saddleback College, Mission Viejo, California: 1976 Campus Master Plan
- Coastline Community College, Fountain Valley, California: 1978 Facilities Master Plan
- Irvine Valley College, Irvine, California: 1978 Original Facilities Master Plan

## 4 CULTURAL RESOURCES SURVEY

### 4.1 Methods

Dudek Architectural Historians Samantha Murray, MA, RPA; Sarah Corder, MFA; and Kara R. Dotter, MSHP, conducted a pedestrian survey of the project site on February 20, 2017. The project site includes an entirely developed active college campus and a small residential section across the street from the main Fullerton College Campus on the south side of Chapman Avenue. Although intensive-level archaeological survey methods (i.e., regularly spaced pedestrian transects) were not warranted, Ms. Murray spot-checked areas of exposed sediment throughout. All buildings and structures that were constructed prior to 1972 were photographed, researched, and evaluated in consideration of CRHR designation criteria and integrity requirements and in consideration of potential impacts to historical resources under CEQA. The 45-year rule was established by OHP in recognition of the fact that there is often a lag time between the point at which resources are identified and the date that planning decisions are made on projects. The survey entailed walking all portions of the campus and documenting each building with notes and photographs, specifically noting their character-defining features, spatial relationships, and observed alterations.

Dudek documented the fieldwork using field notes, digital photography, close-scale field maps, and aerial photographs. Photographs of the project site were taken with a Canon Power Shot SD90 digital camera with 12 megapixels and 3× optical zoom; a 20-megapixel Canon EOS Rebel T5i DSLR with an EF-S 18-55mm f/3.5-5.6 IS STM lens; and a Canon Power Shot SX160 IS digital camera with 16 megapixels and 16× optical zoom. All field notes, photographs, and records related to the current study are on file at Dudek’s Pasadena, California, office.

### 4.2 Description of Surveyed Resources

Table 3 provides an overview of all buildings and structures surveyed as part of the cultural resources study, including a photograph of each building, current building name, current building number (if applicable), historic building name (if applicable), year built (if known), a general physical description of the building, and any alterations identified either through building development research or during the cultural resources survey. Dates and details of construction and alterations were confirmed through building development research conducted on the District facilities management website, as well as archival research.

The following buildings are not listed in Table 3 because they are of recent construction and are not proposed for alteration or demolition as part of the proposed project:

- Building 200, College Center/Food Services

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

- Building 400, South Science Building
- Building 800, Library–Learning Resource Center
- Building 900, Auto/Machining/Printing
- Building 1400, Classroom Office Building
- Building 1900, Classrooms and Food Bank
- Building 2100, Sculpture/3D Arts
- Building W3, Wilshire Continuing Education
- Chiller Plant

**Table 3**  
**Fullerton College Campus Buildings and Structures Surveyed**

Current Building Number and Name	Built	Description	Identified Alterations
<i>Original Campus Master Plan Buildings (Vaughn, 1935–1942)</i>			
<b>100 Administration</b> 	1938	<p>Built as part of the original campus plan by Vaughn, the two-story Spanish Colonial Revival style building with Churrigueresque style elements is irregular in plan, with a square tower jutting upwards at the juncture between the main portion and the south-facing ell. The low-sloped side-gabled roof and hipped tower roof are covered in Mission-style half-barrel clay tiles. Each gable end sports a projection sheltering a small decorative niche with scalloped detailing along the arch intrados. The building is characterized by board-formed concrete on the exterior with Churrigueresque flourishes at the roofline, main entry doors, and second-floor-level French doors. There are multiple entry points, but the original main elevation faced south toward East Chapman Avenue. The original main elevation is obscured by a modern one-story, flat-roof addition with a variety of metal windows. The second story of the main elevation remains visible, and features a series of five large multi-lite metal-framed windows in arched openings. Windows on the original building are wood-framed and of varying shapes and styles.</p>	<p>1957 (Taylor): Addition to south elevation altered original L-shape building plan.</p> <p>1963 (Taylor): Interior reconfiguration, addition of wire glass to windows, and addition of aluminum and glass entry door to south elevation.</p> <p>1987 (tBP/Architecture Inc.): Interior reconfiguration, updates to electrical plans, and updates to interior finishes.</p> <p>2000 (Hill): Seismic upgrades</p> <p>2001 (Asuncion): HVAC system upgrades.</p> <p>2003 (Swanye): Fire Alarm System Upgrade</p>

# Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

**Table 3**  
**Fullerton College Campus Buildings and Structures Surveyed**

Current Building Number and Name	Built	Description	Identified Alterations
<b>300 Business and Computer Information</b> 	1936	<p>Built as the first building in Vaughn's campus plan, this two-story Spanish Colonial Revival building with Churrigueresque style elements is rectangular in plan and features a low-sloped side-gabled roof clad in Mission-style half-barrel clay tiles. A large octagonal cupola straddles the ridgeline near the center of the roof, with an arch sheltering a bell at the southern gable end and dentil moulding lining the cornice. The main elevation faces east toward the center of campus, with the recessed main entrance having double wooden doors topped by a lunette window. The main entry is emphasized by the use of Churrigueresque design elements, including a stilted arch with fluting above the impost line, three horseshoe-arch windows with elaborate metalwork at the second floor, and a scallop-capped niche flanked by pilasters on a decorative parapet rising from the cornice line. Secondary entry points on each remaining elevation are similarly detailed, but are less elaborate and at a reduced scale. The building was constructed of poured-in-place board-formed concrete, featuring a projecting molded string course capped by a row of stretcher bricks. Fenestration is regular, with two-by-two inoperable casement windows directly above two-by-two operable casement windows presenting as a single window unit. Near either end of the main elevation is a French door, located midway between floors, opening onto a shallow, elliptically-arched concrete bracket and protected by elliptically-arched decorative ironwork. Exterior staircases on either end of the building grant access to the second floor.</p>	<p>1962 (Taylor): Interior alterations, plumbing and mechanical system upgrades.</p> <p>1980 (Blurock): Interior plan reconfigurations; update of finishes; electrical, plumbing and mechanical system upgrades; replacement of plaster ceiling with reflective ceiling.</p> <p>2003 (Swanye): Fire Alarm System Upgrade.</p> <p>2005 (McMurray): Changes to stairs on north elevation.</p> <p>Date Unknown: Addition of a free-standing exterior elevator on the north elevation.</p>

<p><b>600 Math</b></p> 	<p>1938</p>	<p>The two-story Spanish Colonial Revival building with Churrigueresque style elements is rectangular in plan and features a low-sloped side-gabled roof clad in Mission-style half-barrel clay tiles. A large octagonal cupola straddles the ridgeline near the center of the roof, with two front vertical protrusions at each gable end and dentil moulding lining the cornice. The main elevation faces west toward the center of campus, with the recessed main entrance having a single, wide wooden door beside a hinged partial-width section, topped by a lunette window. The main entry is emphasized by the use of Churrigueresque design elements, including a stilted arch with decorative voussoirs above the impost line and flanked by quoins, three subtly-pointed equilateral-arch windows at the second floor, and a niche flanked by grooved pilasters on a decorative stepped parapet rising from the cornice line. Secondary entry points on each remaining elevation are similarly detailed, but are less elaborate and at a reduced scale. The building was constructed of poured-in-place board-formed concrete, featuring a projecting molded string course capped by a row of stretcher bricks. Fenestration is regular, with two-by-two inoperable casement windows directly above two-by-two operable casement windows presenting as a single window unit. Near either end of the main elevation is a French door, located midway between floors, opening onto a shallow, elliptically-arched concrete bracket and protected by elliptically-arched decorative ironwork. Exterior staircases on either end of the building grant access to the second floor.</p>	<p>1980 (Blurock): Addition of bridge to the south elevation, which was likely removed when the South Science building was demolished.</p> <p>1985 (Blurock): Interior changes included mechanical, plumbing, and electrical, as well as changes to interior finishes.</p> <p>2003 (Swayne): Fire alarm system upgrade.</p> <p>2008 (Asuncion): Chilled water distribution system modifications.</p> <p>Date Unknown: Addition of free-standing external elevator to the north elevation.</p>

Current Building Number and Name	Built	Description	Identified Alterations
<b>401 Biological Greenhouse</b> 	c. 1937	The one-story rectangular greenhouse building features a front-gabled glass-and-metal roof. The concrete foundation supports the exterior walls. The lower two feet of the walls are running-bond brick courses, with the upper portion of the walls framed with steel I-beams and infilled with metal-framed lites, some of which open for ventilation and sunlight. A single metal door pierces the east elevation near the northern end. A fenced-in area is located to the east of the building.	Date Unknown: Glass wall lites painted.
<b>840 Campus Services</b> 	1940	A more restrained version of the style observed elsewhere on campus, this one-story Spanish Colonial Revival style building features multiple wings clad with stucco and low-sloped side-gabled roofs covered in Mission-style half-barrel clay tiles. The rectangular west wing was the first section of the building constructed, with the second comprising the rectangular north wing, oriented perpendicular to the first section and joined onto its north elevation to form an L-shaped plan. The west wing, constructed in 1941, created the U-shaped building plan present today. Fenestration consists of single- and double doors, some wood and others metal, typically with one or two lites, and multi-lite metal-framed windows in various sizes, some of which have operable sections within fixed sections. A concrete courtyard fills the area bounded by the U-shaped building on the south side, providing seating area for the café in the west wing	<p>1941 (Vaughn): Hornet Hive building addition created U-shaped plan.</p> <p>1959 (Taylor): Hive Snack Shop added to the patio area.</p> <p>2011: Hive Snack Shop remodeled and renamed Stinger.</p> <p>Date Unknown: Handicap ramps, addition to rear of building; replacement and/or resizing of original doors; addition of security bars on some windows.</p> <p>Date Unknown: Restrooms upgraded.</p> <p>Date Unknown: HVAC units.</p>

<b>1600-1691 Horticulture Center</b> 	c. 1946; relocated to current location 1961	One of the original T-buildings moved onto campus, this one-story building has a low-sloped side-gabled roof coved in composition shingles. The walls are clad in horizontal drop-lap wood siding, and the south-facing main elevation has a central entry point accessed by a set of broad, open, wood replacement stairs. Fenestration is regular, with eight-over-eight wood-framed double-hung windows. The building is one of many in the horticulture section of campus, including various greenhouses and growing buildings, as well as a single-story brick bathroom building.	Dates Unknown: HVAC units, porch construction with railing, handicap ramp to main entry door.
<i>Taylor and Conner's Campus Master Plan (1953–1967)</i>			
<b>500 Applied Arts and Humanities</b> 	1962	The International-style building is rectangular in plan and clad in painted stucco with a flat roof covered in rolled roofing material. The main elevation faces east, and features the recessed main point of entry under a cantilevered flat roof awning. Fenestration is regular with metal-framed windows placed singly or in pairs separated by a narrow mullion. The windows are of various shapes and sizes, but the majority typically have three or four horizontal lites, with the upper lites fixed and the bottom lite being an operable hopper window. The broad expanses of stucco are generally smooth, with subtle vertical grooves accenting the spaces above and below the windows.	<p>1980 (Blurock): addition of free-standing external elevator to the north elevation, interior reconfigurations, and mechanical system upgrades.</p> <p>2000 (Hill): Seismic upgrades.</p> <p>2005 (McMurray): Changes to stairs on south elevation.</p> <p>2006 (Asuncion): Chiller plant upgrade.</p> <p>Date Unknown: Windows on the north portion of the west elevation at ground floor level were painted over.</p>

<b>3000 Berkeley Center</b> 	1960	<p>The two-story Mid-Century Modern-style educational building is L-shaped in plan. The main (southwest) elevation has an uneven roofline and two sections projecting forward from the main building. The main elevation is clad with broad expanses of alternating brick and stucco; windows are set flush with the stucco cladding between the brick portions. The rest of the building is clad in stucco. The primary front entrance is recessed beneath decorative metal grilles that extend out from the exterior wall and are supported by metal posts. Fixed, floor-to-ceiling multi-pane windows are located next to the front entrance and are partially obscured by the metal grilles. There is a second entrance recessed into the brick wall with a metal door accessed by a set of concrete steps. The southwest corner of the building contains two fixed multi-pane windows on the first story and two louvered windows on the second story set flush into vertical bands of textured stucco.</p>	<p>1982 (Blurock): Interior reconfigurations, mechanical system upgrades, elevator added.</p> <p>2000 (Hill): Seismic upgrades.</p>

<b>1000 Fine Arts/Art Gallery</b> 	1959	<p>The two-story Mid-Century Modern building is irregular in plan with a flat roof and is clad in stucco. One-story partial-length projections clad in running-bond brick occur on the main (south), east, and north elevations. Fenestration is regular on the main elevation and features paired metal-framed windows, separated by structural mullions, with four horizontal lites; the second lite operates as an awning window, and the fourth lite operates as a hopper window. Other windows on the building are metal-framed with one or two lites. A replacement window punctuates the brick projection on the main elevation. The main entry is recessed with a newer wide metal and glass entry door and a narrow sidelite to the left (west), surrounded by wider sidelites and topped by a fixed, three-lite transom window. Access is provided by a handicap ramp leading to a poured concrete stoop.</p>	<p>1976 (Blurock): Interior reconfigurations, addition of external elevator and construction of brick walls and patio area to east elevation area.</p> <p>1981: Wheelchair ramp added.</p> <p>2001 (Asuncion): HVAC system upgrades.</p> <p>2002 (McMurray): Seismic work, new interior finishes, mechanical system upgrades, new handicap ramp, interior reconfigurations, finish replacements, fireproofing.</p> <p>2009 (Runge): Reroofed.</p>

Current Building Number and Name	Built	Description	Identified Alterations
<b>1100 Music</b> 	1967	<p>This New Formalism-style building is clad in stucco and is irregular in plan with block-like massing and a flat roof. The main elevation faces south towards East Chapman Avenue, and presents as two sections: the western section with slender, attenuated columns supporting minimalist arches, four of which are infilled with smooth, monolithic stucco panels and the fifth, just west of center, is open and leads to the recessed main entrance; and the eastern section, which is recessed and contains with smooth, monolithic concrete panels sparsely punctuated by pairs of small metal-framed windows and displaying large ornamental screen grilles. The remaining elevations contain portions of running-bond brickwork at the ground floor while the rest is clad in smooth, monolithic stucco. Fenestration on the remaining elevations consists of metal-framed windows of various sizes, some fixed and others operable, as well as secondary entrances. An external staircase on the east elevation references the external staircases observed on the original campus buildings.</p>	<p>2003 (Swanye): Fire alarm system upgrade.</p> <p>2008 (Asuncion): Chilled water distribution modifications.</p> <p>Date unknown: Second-floor-level walkway from the Administration Building connecting to the east elevation, and a free-standing external elevator attached to the east elevation south of the walkway.</p>

Current Building Number and Name	Built	Description	Identified Alterations
<b>1200 Physical Education</b> 	1955	<p>The Mid-Century Modern two-story building presents with block-like massing, thanks in part to building additions during Taylor's tenure as campus architect. The main body of the building is clad in stucco, with one-story projections constructed of brick in a running bond pattern and wrapped with a flush band of stucco near or at the roofline. The building is irregular in plan and features multiple levels of flat roofs. The fenestration for the building is irregular. Metal-framed multi-lite clerestory windows adorn the main body of the building, while the one-story projections contain a variety of metal-framed windows of different styles and arrangements. Of note is the placement of multi-lite windows in the top half to one-third of exterior walls on some of the one-story projections, subtly referencing the clerestory windows of the main section.</p>	<p>1956 (Taylor): One-story brick addition for health center.</p> <p>1957 (Taylor): Additions to men's and women's locker rooms.</p> <p>1962 (Taylor): Addition to south and northwest sections of the buildings, interior reconfiguration, construction of flat-roof covered walkway and butterfly-style covered walkway.</p> <p>1979 (Blurock): Interior reconfigurations, HVAC upgrades, plumbing upgrades, updates to finishes.</p> <p>1982: Reroofed.</p> <p>1999: Interior reconfiguration, mechanical systems upgrades, site work, removal of skylights, and fixture replacement.</p> <p>2000 (Hill): Seismic upgrades.</p> <p>2001 (Smith/tBP): Women's Locker Room HVAC work, interior renovations and demolitions, new exterior doors.</p> <p>2003 (Swanye): Fire alarm system upgrade.</p>

**Fullerton College Campus Buildings and Structures Surveyed**

Current Building Number and Name	Built	Description	Identified Alterations
<b>438 East Chapman Avenue</b> 	1921	APN 033-072-03 features a one-story single-family residence that is oriented toward Chapman Avenue that was originally constructed in 1921 in the Craftsman style and was remodeled in 1949 to its present Minimal Traditional appearance. The residence is irregular in plan, set on a poured concrete foundation, with a complex roof clad in composite shingles, and is clad in horizontal wooden siding.	Remodeled to Minimal Traditional style in 1949.
<b>325–327 North Newell Place</b> 	c. 1921–1924	The one-story Bungalow style duplex is clad in horizontal wood siding, features a gabled roof, and is square in plan. The façade of the building features mirrored entry points with wooden doors and three-section, fixed Craftsman style windows, all under a gabled porch with brick-and-wood columns. The other elevations have irregular fenestration and feature a variety of sizes, but maintain a one-over-one configuration.	None identified.
<b>409 North Newell Place</b> 	c. 1958–1960	This modern two-story multi-family apartment building is rectangular in plan and clad in stucco, with a low pitched roof with exposed rafter tails. The first floor features three bays with double-wide sectional garage doors, and the second floor features a wooden balcony providing access to three living spaces. Entry to the building is provided by an exterior staircase located on the north elevation. There are a variety of windows throughout, including jalousie windows on the north and west elevations. The west elevation also features a single entry door centered on the elevation that provides access to the first story of the building.	None identified.

# Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

**Table 3**  
**Fullerton College Campus Buildings and Structures Surveyed**

Current Building Number and Name	Built	Description	Identified Alterations
<b>420 East Chapman Avenue</b> 	c. 1920	The one-story gabled Bungalow features an offset to the east front gabled porch supported by brick-and-wood columns, which features a Craftsman style fixed three-section window and an entry door. The house is clad in horizontal wood siding and sheathed in composition shingles, and the roof features exposed rafter tails. The remaining windows are single-hung, fixed wood windows in a variety of sizes.	None identified.
<b>416 East Chapman Avenue</b> 	c. 1936	The one-story gabled Minimal Traditional duplex is clad in stucco, is rectangular in plan, and is sheathed in composition shingles. The façade of the building features an offset to the east gabled entry point that provides two entry points to the duplex. There is also a bay window and a 12-paned wood window on the façade of the building.	None identified.
<b>418 East Chapman Avenue</b> 	c. 1958	The one-story tract house duplex is clad in stucco features a low pitched roof sheathed in composition shingles and is set on a poured concrete foundation. The building features irregular fenestration with a central entry point. Windows appear to be vinyl replacement windows in varying sizes and arrangements. The building is largely obscured from view by a tall wooden fence.	Date Unknown: Replacement windows, screen door, and construction of fence.

# Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

**Table 3**

Current Building Number and Name	Built	Description	Identified Alterations
<b>1800 Child Development Building</b> 	c. 1980	The one-story Modern style classroom building complex consists of three one-story buildings that were connected and arranged in an L shape around an open courtyard to the south. The two buildings, which feature low pitched roofs, were known as relocatable buildings to the campus and the clay-roof-tiled building that creates the "L" in the plan was newly constructed after the two relocatable buildings were moved to the location. The buildings are clad in stucco, with some sections of vertical wooden siding, and feature a complex roofline with clay tiles. Fenestration is irregular and includes metal-frame windows in varying sizes on all elevations. There is also a chain-link fence on the south elevation that provided security for the courtyard area, which was a play area for children.	None identified.
<b>2000 Student Services Building</b> 	1984	The two-story Modern style building is clad in stucco with a flat roof. It is irregular in plan and features irregular fenestration with fixed metal windows of varying sizes. The main point of entry for the building is located on the east elevation. The building connects to a pedestrian bridge that connects it to the rest of the campus on the north side of Chapman Avenue.	2008: Reroofed.
<b>Pedestrian Bridge</b> 	1984	The pedestrian bridge provides north-south access across Chapman Avenue. It is of Modern style construction and is supported by arched concrete supports on the north and south ends. The bridge is connected to the Student Services building to the south and the Administration building to the north.	None identified.

## 5 SIGNIFICANCE EVALUATIONS

Extensive archival research, combined with an intensive pedestrian survey of the Fullerton College grounds, indicates the campus has three potential historic districts (Figure 31): the Fullerton Junior College Campus Historic District, the Mid-Century Modern Campus Expansion Historic District, and the Wilshire Junior High School Historic District. Furthermore, the Music Building 1100 was identified as being potentially eligible for individual listing at the local level. The significance evaluations for each of the proposed historic districts and the individual property are detailed below.

### 5.1 Fullerton Junior College Campus Historic District

After purchase of the college grounds in 1934, Vaughn laid out a master plan for the new 16-acre FJC Campus. Assisted by landscape architect Ralph Cornell, Vaughn created a plan that called for 12 buildings symmetrically organized around a formal central courtyard area, similar to the arrangement of Jefferson's University of Virginia. Vaughn designed the buildings in the Spanish Colonial Revival style with Churrigueresque style influences, an architectural style synonymous with Southern California. The FJC received a great deal of WPA and PWA funding for executing the campus plan. The WPA also provided Vaughn and FJC with funding for the construction of a greenhouse and for landscaping. With this funding, the Horticulture students of FJC were able to grow plants to place throughout the campus accenting Vaughn's plan. Although the master plan originally called for 12 buildings, only 5 were constructed: the Commerce building, Administration building, Technical Trades building, Student Union building, and Greenhouse Building (FHN 2010; Epting 2014). Each of those 5 buildings still exists and continues to serve a vital role on campus. Furthermore, the City of Fullerton identifies the FJC Campus as a "Significant Property" in their publication *Fullerton Through the Years: A Survey of Architectural, Cultural, and Environmental Heritage* (DSD 2002) and in Section 5.10, Cultural Resources, of *The Fullerton Plan: Final Program EIR* (City of Fullerton 2012b).

The boundary of this potential historic district includes the historic core of the FJC Campus, and consists of the original five buildings and remnants of the formal campus plan, such as the open courtyard, linear pathways, and building locations and orientations. There are also non-contributing elements (i.e., they do not contribute to the historic district's significance) within the historic boundaries of the campus, namely more modern buildings, but they were constructed on areas of ground originally apportioned for buildings in Vaughn's master plan. Table 4 provides a complete list of all potential contributing and non-contributing components. Figure 32 shows the location of all contributing buildings. The period of significance for the district is 1935–1942, when Vaughn completed the original campus master plan.

South Science (Bldg. 400)	1969	Non-contributor
Applied Arts/Humanities (Bldg. 500)	1969	Non-contributor
Library (Bldg. 800)	1969–1976	Non-contributor

## Character Defining Features

The character-defining features of the Fullerton Junior College Campus Historic District include the following exterior features:

- Low pitched side-gabled roofs with half-barrel clay Mission tiles
- Painted, board-formed concrete walls
- Simple rectangular or L-shaped plans
- Exterior stairways on gable ends
- Symmetrical fenestration
- Prominent arches above entryways
- Heavy, multiple-panel wood doors
- Low relief oriels with typically semi-circular balconies below slightly recessed windows
- Churrigueresque flourishes at second-story doors, balconies, and gable-end apexes
- Elaborate ground-floor entrances with recessed doorways, surmounted by decorative plaques
- Extensive use of ornate, highly detailed iron work for grilles, handrails, and stair railings

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

The character-defining features of the Fullerton Junior College Campus Historic District also include the following interior features (as observed in the 100, 300, and 600 buildings):

- Recessed doorways
- Wood doors with stacked panels
- Decorative iron work (including stair railings; light fixtures in buildings 100 and 300)
- Barrel vault ceilings
- Brass door hardware

### **5.1.1 NRHP/CRHR Evaluation Criteria**

The buildings and campus components within the proposed Fullerton Junior College Campus Historic District were evaluated for listing at the local level of significance. The NRHP denotes four specific criteria for listing, of which at least one must be met for a property to be considered potentially eligible for listing on the NRHP. The CRHR criteria were expressly developed to be in accordance with previously established criteria developed for listing in the NRHP. As such, the NRHP and CRHR evaluations are presented concurrently. According to the NRHP and CRHR, a resource is considered historically significant if it (i) retains “substantial integrity,” and (ii) meets at least one of the following criteria:

***Criterion A/I: Is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage.***

FJC was established in 1913 and opened in September of that year, making it the longest continually operating junior college in California. The founding and growth of FJC occurred at the same time as the City of Fullerton and the surrounding area experienced rapid growth due to the oil boom, which peaked during the 1920s. Classes were originally held at Fullerton Union High School, until 16 acres of land were bought across the road from the high school in 1934. The Board of Trustees hired Vaughn to design and oversee planning and development of the FJC Campus from 1935 to 1942. Vaughn operated as the FJC Campus architect with the assistance of WPA funds, designing and supervising construction of numerous buildings on the campus until 1942.

With 4-year university enrollments on the decline due to financial instability, FJC provided an affordable option for the students of Fullerton and the surrounding communities, eventually reaching an enrollment of 1,500 by September 1939. A rapid decline in enrollment followed, as many potential students were drafted or volunteered for the military. FJC persevered through the war, implementing new programs to support the war effort by training workers for defense industry jobs. Other activities on campus further supported the war effort, such as letter writing

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

and making clothing for the troops. FJC continued serving the military after the war effort by adding temporary buildings and veterans' housing to accommodate the massive influx of WWII veterans using the G. I. Bill.

FJC has a rich history of assisting with the war effort by providing training and education, both during WWII and after the war, as veterans returned to civilian life. Furthermore, the original FJC Campus forms the core of California's longest continuously operating junior college. Therefore, the Fullerton Junior College Campus Historic District appears eligible for listing as a historic district under NRHP/CRHR Criterion A/1.

**Criterion B/2:**        *Is associated with the lives of persons important in our past.*

Although numerous persons are historically associated with FJC, archival and background research failed to indicate any associations with persons important in history during 1934–1942. Therefore, the Fullerton Junior College Campus Historic District does not appear eligible for listing under NRHP/CRHR Criterion B/2.

**Criterion C/3:**        *Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.*

The buildings constructed as part of the original FJC Campus design plan embody the distinctive design characteristics of Spanish Colonial Revival, a modern architectural style that dates from 1915 to 1940 and became synonymous with Southern California architecture. During this period, Spanish Colonial Revival was a popular style of architecture on college campuses in California, particularly in the south.

The campus buildings from the 1930s and 1940s are most strongly characterized by their simple rectangular and L-shaped plans; symmetrical fenestration; barrel-shaped Mission tiles cladding low-sloped, side-gabled roofs; prominent arches above entrance doors; exterior stairways on the gable ends; and use of concrete as the dominant material type. The buildings are unified aesthetically by a number of character-defining features, including painted, board-formed concrete walls; heavy, multiple-panel wood doors; oriels with typically semi-circular balconies below slightly recessed windows; modest Churrigueresque flourishes at second-story doors, balconies, and gable-end apexes; elaborate ground-floor entrances with recessed doorways surmounted by decorative plaques; and extensive use of ornate, highly detailed iron work for grilles, handrails, and stair railings.

The FJC campus was designed by an important creative individual, Harry K. Vaughn, and represents the peak of Vaughn's career (1930s–1940s) when he completed his most important—possibly his

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

only—designs as an independent architect, including the Spanish Colonial Revival style Fullerton Public Library. Prior to that time, Vaughn worked under such notable architects as Irving Gill, William Hebbard, Carleton Winslow, and Octavius Morgan, and afterward he went on to work for the California Department of Public Works, Division of Architecture. During Vaughn’s time with Hebbard, he prepared working drawings for the historic Craftsman style Marston House in San Diego. Afterwards, while working for Winslow, Vaughn prepared the working drawings for buildings associated with the 1915–1916 Panama–California International Exposition, including the Administration building. The Exposition buildings (now Balboa Park National Historic Landmark) were seminal in making the Spanish Colonial Revival style synonymous with Southern California; this was Vaughn’s first known exposure to the Spanish Colonial Revival architectural style.

Although the 1930s and 1940s buildings are unified by their Spanish Colonial Revival style and shared character-defining features, and they remain functionally related buildings, the original landscape design of the campus master plan has been altered over time (as seen in historic aerials c. 1953–1963, c. 2004, and after 2012 (NETR Online 2017)). The front of campus, facing onto East Chapman Avenue, was originally a broad expanse of flat lawn with ornamental, curvilinear plantings near the Administrative building and the anticipated footprint of another L-shaped building in the southeastern corner; a wide, north–south oriented pathway separated the two buildings and formed the grand entrance into the heart of the original campus. Between 1953 and 1963, modern additions to the two buildings infilled approximately half of the open lawn, eliminating the curvilinear planting beds, and several ancillary paved pathways further segmented the lawns. A distinctive and prominent feature of the original campus was the arrangement of the central courtyard into *parterres* (i.e., flat gardens arranged in a formal design), delineated by a grid of walkways. The grid of north–south and east–west oriented walkways served a functional use, facilitating movement within and around campus. The symmetry of the strict spatial organization created by the grid, and positioning of the library at the northern end, opposite the main entrance to campus, symbolized the power and success imparted by knowledge and learning. The expansion of the library in 2004 resulted in foreshortening the length of the original courtyard space and introduced a curved element in the shape of the hardscaping fronting the library. Additionally, at some point after 2012, the original pattern of the courtyard *parterres* was altered by removing the existing two north–south pathways and replacing them with one central north–south pathway leading directly from the main campus entrance to the library’s door, and by introducing more circular hardscaped areas at the site of formerly orthogonal intersections.

Other compromised historic materials and details include the building interiors, particularly on the second floor, with the interior of the Campus Services Building 840 being fully compromised; the expansion of two newer buildings slightly beyond the bounds of the original

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

campus footprint; and a 1957 Modern style addition to the front of the Administration Building 100. However, the essential physical features that constitute the Fullerton Junior College Campus Historic District's Spanish Colonial Revival architectural style remain largely intact. Although new buildings were added to the campus, and removal of portions of the landscape design altered the flow of the original FJC Campus design, the historic-age buildings are still united aesthetically by their Spanish Colonial Revival style and functionally by their history as the original 1930s–1940s FJC Campus buildings.

Despite alterations to the original FJC Campus design plan and the addition of new buildings in recent years, the original 1930s and 1940s Spanish Colonial Revival buildings and the master plan landscape design still convey most of the major character-defining features of their style and design, and represent the notable work of a master architect. Therefore, the buildings appear eligible for listing as contributors to a historic district under NRHP/CRHR Criterion C/3.

**Criterion D/4:**        *Has yielded, or may be likely to yield, information important in prehistory or history.*

The buildings are unlikely to yield any information important to prehistory or history, nor is it associated with any archaeological resources. Therefore, Fullerton Junior College Campus Historic District does not appear eligible for listing under Criterion D/4.

### **5.1.2        Local Evaluation Criteria**

According to the criteria for designating a local historic landmark as defined in the City of Fullerton Municipal Code, Ordinance 2982, Section 15.48.060, the Fullerton Junior College Campus Historic District appears eligible for listing under the following criteria:

1. ***Character, interest or value as part of the heritage of the city.*** The Fullerton Junior College Campus Historic District appears eligible for listing for being the original buildings and campus master plan of FJC. The original FJC Campus forms the core of California's longest continuously operating junior college.
5. ***Exemplification of the best remaining architectural types in an area.*** The historic district represents a group of exceptional examples of Spanish Colonial Revival architecture and the landscape design of the original campus master plan.
6. ***Identification as the work of a person or persons whose work has influenced the heritage of the city, the state of California or the United States.*** The buildings in the historic district are rare examples of Harry K. Vaughn's work as a solo architect, who had an esteemed career working for such esteemed California architects as Irving Gill, William Hebbard, Carleton Winslow, and Octavius Morgan. It was his time working on the

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

1915–1916 Panama–California Exposition buildings with Winslow that inspired Vaughn’s designs for the Fullerton Junior College campus.

7. ***Embodiment of elements of outstanding attention to architectural design, detail, materials, or craftsmanship.*** The historic district appears eligible for listing for the outstanding attention to detail evident in the buildings’ heavy, multiple-panel wood doors; oriels with typically semi-circular balconies below slightly recessed windows; modest Churrigueresque flourishes at second-story doors, balconies, and gable-end apexes; elaborate ground-floor entrances with recessed doorways surmounted by decorative plaques; and extensive use of ornate, highly detailed iron work for grilles, handrails, and stair railings.
8. ***Relationship to other landmarks, where the preservation of one has a bearing on the preservation of another.*** The historic district’s buildings and campus master plan present a group of buildings designed in the Spanish Colonial Revival style, of which the preservation of each of the five buildings and landscape design components are necessary to maintain their integrity and recognition as a historic district.

### 5.1.3 Integrity Considerations

Integrity is the authenticity of a historical resource’s physical identity evidenced by the survival of characteristics that existed during the resource’s period of significance. Historical resources eligible for listing in the NRHP or CRHR must meet one of the criteria of significance discussed in Section 5.1.1, NRHP/CRHR Evaluation Criteria, and retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. Furthermore, integrity must be judged with reference to the particular criteria under which a resource is proposed for eligibility (OHP 2011).

**Location:** The Fullerton Junior College Campus permanent buildings have always occupied the same location. While various functions may have changed within the buildings themselves, their location remains unchanged. Therefore, the Fullerton Junior College Campus Historic District retains integrity of location.

**Design:** For historic districts, design includes more than the integrity of the individual buildings. It also includes the way in which buildings within the district are related and connected. Overall, contributing buildings within the historic district retain a preponderance of the major design elements and character-defining features of Spanish Colonial Revival architecture that aesthetically unify them on the exterior, including their simple rectangular and L-shaped plans; symmetrical fenestration; barrel-shaped Mission tiles cladding low-

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

sloped side-gabled roofs; prominent arches above entrance doors; exterior stairways on the gable ends; and use of concrete as the dominant material type. Major exterior alterations to the buildings include an addition to the west wing of the Campus Services Building 840, and replacement of some original iron guardrails.

Additionally, the majority of the building interiors were substantially altered as part of remodeling efforts, which in many cases included removal of character-defining features on the interior. The design aesthetics of Spanish Colonial Revival architecture extended into interior spaces. The ornate iron fixtures such as handrails and lighting components, heavy wood doors, and decorative flourishes are still evident in many of the buildings. However, the reconfiguration of interior spaces on any campus is a common occurrence in response to changes in enrollment capacity, education pedagogy, and building functionality.

Integrity of the original campus plan has been somewhat compromised by foreshortening the original courtyard space; removing the existing two north–south pathways and replacing them with one central north–south pathway; and introducing several circular hardscape features among the originally orthogonal intersections and pathways. The campus does, however, still retain the essence of its original plan as a symmetrical arrangement of buildings organized around a formalized central courtyard.

In consideration of integrity of design, the Fullerton Junior College Campus buildings appear to retain the requisite integrity of the Spanish Colonial Revival stylistic elements that unify them, and Fullerton College retains the integrity of the basic layout of the original campus plan. However, aspects of design integrity related to the original campus landscape design have been partially lost.

**Setting:** The area surrounding FJC has noticeably changed since the 1930s. Originally set in an area of Fullerton bordering agricultural land, the surrounding residential and commercial development expanded along with the campus during the district’s period of significance. Later additions to campus were built around the periphery of the original FJC master plan campus. One notable change to the campus setting in recent years is alterations to pathways of the original landscape design. Additionally, trees and greenspace once located at the front (southern end) of campus were largely replaced with the College Center Building 200, the Modern extension to the main (south) elevation of the Administration Building 100, and a pedestrian bridge across East Chapman Avenue. Although most portions of the campus retain their setting, others (e.g., the area fronting onto East Chapman Avenue) have been altered. Therefore, the Fullerton Junior College Campus Historic District retains partial integrity of setting.

**Materials:** The historic district buildings retain the key exterior materials that date from their period of significance, including painted, board-formed concrete walls; heavy, multiple-panel

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

wood doors; oriels with typically semi-circular balconies below slightly recessed windows; modest Churrigueresque flourishes at second-story doors, balconies, and gable-end apexes; elaborate ground-floor entrances with recessed doorways surmounted by decorative plaques; and extensive use of ornate, highly detailed iron work for grilles, handrails, and stair railings. Although sections of the original landscape design were altered or removed, the remaining sections and repetitive nature of the materials historically used on campus still conveys the materials and intent of the original campus. Therefore, the Fullerton Junior College Campus Historic District retains the requisite integrity of materials.

**Workmanship:** The workmanship of the historic district is evident in the technology of the board-formed concrete that shapes the buildings, the purposeful use of similar yet noticeably different design flourishes, and in the striking Spanish Colonial Revival characteristics of the buildings and the sculptural qualities that they exude. Overall, the Fullerton Junior College Campus Historic District retains integrity of workmanship.

**Feeling:** The Fullerton Junior College Campus Historic District buildings and other contributing elements strongly express the Spanish Colonial Revival aesthetic. The buildings' simple rectangular and L-shaped plans and symmetrical fenestration, combined with the aesthetically unifying painted, board-formed concrete walls; heavy, multiple-panel wood doors; oriels with typically semi-circular balconies below slightly recessed windows; modest Churrigueresque flourishes at second-story doors, balconies, and gable-end apexes; elaborate ground-floor entrances with recessed doorways surmounted by decorative plaques; and extensive use of ornate, highly detailed iron work for grilles, handrails, and stair railings, immerses one in the Spanish Colonial Revival style. The Fullerton College Campus continues to evoke the spirit of Spanish Colonial Revival through its original 1930s and 1940s buildings, and therefore retains integrity of feeling.

**Association:** The Fullerton Junior College Campus Historic District is not associated with any important historic events or people.

### 5.1.4 Conclusions

The significance evaluation, including consideration of NRHP, CRHR, and local-level evaluation criteria and integrity requirements, indicates that the original 1930s–1940s FJC Campus appears to be eligible as a historic district under NRHP Criterion A/CRHR Criterion 1 and NRHP Criterion C/CRHR Criterion 3, as well as local criteria 1, 5, 6, 7, and 8, for its association with WWII and the G.I. Bill and for conveying a concentration of planned buildings, structures, and associated elements united aesthetically by their embodiment of the Spanish Colonial Revival style. The buildings also represent the notable work of master architect Harry K. Vaughn, who created some of his most important work as an individual architect during the historic district's period of significance (1935–1942).

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

As a result of these findings, the Fullerton Junior College Campus Historic District is considered a historical resource under CEQA. As such, the proposed project has the potential to adversely impact historical resources. Recommendations to reduce impacts to historical resources are provided in Chapter 6, Impacts Analysis.

### 5.2 Mid-Century Modern Campus Expansion Historic District

The buildings constructed during the late 1950s through the 1960s represent a significant community of buildings united aesthetically by their Modern architectural style. These buildings were developed as part of the mid-century expansion master plan for the campus, which was designed and executed by architect William Henry Taylor, of Taylor, Warren, Nishimoto and Conner. The Mid-Century Modern Campus Expansion Historic District period of significance is 1955–1967. This period begins with the early phases of campus expansion when FJC hired Taylor as their campus architect, and ends while the last buildings designed by Taylor were under construction and the role of campus architect transitioned to William E. Blurock.

The boundary of this potential historic district is discontinuous, forming three distinct clusters around the core of the original campus: the Music, Theatre Arts, and Applied Arts/Humanities buildings west of the core campus; the North Gym and Fine Arts/Art Gallery buildings east of the core campus; and the Berkeley Center at the northern bounds of campus. All pre-1955 and post-1967 buildings on campus are non-contributors. Table 5 provides a complete list of all potential contributing elements within the historic district. Figure 33 shows the location of all contributing buildings.

**Table 5**  
**Inventory of Buildings within the Potential**  
**Mid-Century Modern Campus Expansion Historic District**

Building Name and No.	Year Built	Historic District Status
<i>Science Building (N/A)</i>	1954	<i>Demolished in 2010</i>
Gymnasium Complex (1200)	1955–1962	Contributor
Art–Home Economics (1000)	1957	Contributor
<i>Library (N/A)</i>	1957	<i>Demolished in 2003</i>
Technical Education (700)	1959	Non-contributing; altered beyond recognition after 2007
District Administration Building (3000)	1960	Contributor
Applied Arts/Humanities (500)	1962	Contributor
Music (1100)	1967	Contributor
Theatre Arts (1300)	1967	Contributor

**Notes:** N/A = not applicable.

The Gymnasium Complex comprises three phases of construction: main building completed in 1955, followed by additions in c. 1957 and c. 1962. All phases were designed by William Henry Taylor.

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

### Character Defining Features

The character-defining features of the Mid-Century Modern Campus Expansion Historic District include the following:

- Flat roofs without copings
- Broad, typically smooth, expanses of light-colored concrete walls
- Flush-mounted metal-framed windows arranged in linear groupings
- Cantilevered canopies and overhangs
- Exterior staircases, patios, and balconies
- A marked absence of decorative detailing around windows and doors
- Asymmetrical block-like building massing
- *Brise soleils* (particularly the Music Building 1100)
- Slender, attenuated columns supporting minimalist arches (Music Building 1100)
- Covered walkways with butterfly canopies (Gymnasium Complex)
- Brick privacy screens (Gymnasium Complex)
- Repetition of butterfly form in landscape bench seating

Of the nine buildings designed by Taylor, six remain largely unaltered, one has been altered beyond recognition, and two have been demolished to make room for newer buildings.

### 5.2.1 NRHP/CRHR Evaluation Criteria

The buildings and campus components within the proposed Mid-Century Modern Campus Expansion Historic District were evaluated for listing at the local level of significance. The NRHP denotes four specific criteria for listing, of which at least one must be met to be considered potentially eligible for listing on the NRHP. The CRHR criteria were expressly developed to be in accordance with previously established criteria developed for listing in the NRHP. As such, the NRHP and CRHR evaluations are presented concurrently. According to the NRHP and CRHR, a resource is considered historically significant if it (i) retains “substantial integrity,” and (ii) meets at least one of the following criteria:

**Criterion A/I:** *Is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage.*

As FJC was already well established, it does not appear that construction of the Mid-Century Modern buildings resulted in any significant contribution to patterns of development in the

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

Fullerton area. Further, no other events were identified as a result of archival and background research that would warrant consideration under this criteria. Therefore, the Mid-Century Modern Campus Expansion Historic District does not appear eligible for listing under NRHP/CRHR Criterion A/1.

***Criterion B/2: Is associated with the lives of persons important in our past.***

Although numerous persons are historically associated with FJC during the Mid-Century Modern Campus Expansion period of significance, archival and background research failed to indicate any associations with persons important in history. Therefore, the Mid-Century Modern Campus Expansion Historic District does not appear eligible for listing under NRHP/CRHR Criterion B/2.

***Criterion C/3: Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.***

The majority of buildings constructed as part of the Mid-Century Modern Campus Expansion embody the distinctive characteristics of the International style, an architectural style popular in the United States between the 1950s and 1970s in the United States, while one was designed in the New Formalism style, which is characterized by the adaptation of classical elements into an International style expression. The buildings were designed by the late William Henry Taylor (1912–1995), an important architect in the San Gabriel Valley for his interpretation of modernism (see Section 3.5.4). In 1953, FJC started its second expansion phase, which continued into the 1960s. The Pasadena architectural firm of Taylor, Warren, Nishimoto and Conner (later Taylor and Conner) was selected by the FJC trustees to develop a new master plan for the campus, with Taylor serving as the buildings' principal designer.

The Gymnasium Complex (Building 1200), Art–Home Economics building (Building 1000), District Administration building (Building 3000), Applied Arts/Humanities building (Building 500), and Theatre Arts building (Building 1300) were designed in the International style. Somewhat modest interpretations of that style, the buildings are characterized by flat roofs without copings; broad, typically smooth, expanses of concrete walls; flush-mounted metal-framed windows arranged in linear groupings; a marked absence of decorative detailing around windows and doors; and asymmetrical block-like building massing. The shared design characteristics unify the discrete groupings of these modern buildings, making them instantly recognizable as a discontinuous but integrated whole.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

The Music Building 1100 is a significant element of Taylor's modern campus design, exhibiting New Formalist design principles and anchoring the southwest corner of the campus. The 1962 Lincoln Center for the Performing Arts (New York) is one of the best-known examples of New Formalism in the United States, which is an adaptation of International style created to evoke a more symbolic, ceremonial feeling by translating classical elements into a modern aesthetic. Taylor emulated that design ethos in his design for the Music building by intentionally incorporating the defining characteristics of New Formalism: slender, attenuated columns supporting minimalist arches; smooth, monolithic concrete panels; ornamental screen grilles; and a flat slab roof, with the overall building massing presenting as block-like forms (McAlester 2015). The Music Building also represents one of the few examples of New Formalism in Fullerton. The only other known examples of the style in the city include Fullerton City Hall (1963) and the Western State University College of Law (1975).

Although not widely known, Taylor appears to have quietly played an important role in the local interpretation of modernism in Southern California during a time when architects like Neutra and Harris were making a name for themselves as among the most important modern architects in the country. Much of Taylor's mid-century modern work occurred in Pasadena and San Gabriel Valley, from which some of the most influential modern architects emerged. Taylor's modern designs at Fullerton College embody characteristics of the International style: flat roofs without copings; broad, typically smooth, expanses of concrete walls; flush-mounted metal-framed windows arranged in linear groupings; a marked absence of decorative detailing around windows and doors; and asymmetrical block-like building massing. The buildings largely retain exterior physical integrity, with the exception of some minor alterations to the landscape and hardscape, including removal of the pool behind the gymnasium; the area now serves as a sand volleyball court. The Gymnasium Complex also had the skylights above the main and women's gymnasiums removed, with the resulting gaps roofed over and covered with rolled roofing material. The most notable exception to integrity is the Technical Education Building 700, a non-contributor to the district, which was altered beyond recognition after 2007. Regardless, the remaining Modern buildings retain their characteristics of International and New Formalist architectural styles and exemplify educational architecture during the mid-century. For these reasons, the Mid-Century Modern Campus Expansion Historic District appears eligible for listing under NRHP/CRHR Criterion C/3.

Additionally, the Music Building 1100 appears eligible for individual listing under NRHP/CRHR Criterion C/3 as an excellent local example of New Formalism, as evidenced by its slender, attenuated columns supporting minimalist arches; smooth, monolithic concrete panels; ornamental screen grilles; and a flat slab roof, with the overall building massing presenting as block-like forms.

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Criterion D/4:** *Has yielded, or may be likely to yield, information important in prehistory or history.*

The buildings are unlikely to yield any information important to prehistory or history, nor are they associated with any archaeological resources. Therefore, the Mid-Century Modern Campus Expansion Historic District does not appear eligible for listing under NRHP/CRHR Criterion D/4.

### 5.2.2 Local Evaluation Criteria

According to the criteria for designating a local historic landmark as defined in the City of Fullerton Municipal Code, Ordinance 2982, Section 15.48.060, the Mid-Century Modern Campus Expansion Historic District appears eligible for listing under the following criteria:

5. ***Exemplification of the best remaining architectural types in an area.*** The Mid-Century Modern Campus Expansion Historic District appears eligible for listing for being a rare grouping of exemplary International style educational buildings in Fullerton; and for the Music building being one of the few extant examples of New Formalism in Fullerton.
6. ***Identification as the work of a person or persons whose work has influenced the heritage of the city, the state of California or the United States.*** The historic district appears eligible for listing for being the work of William Henry Taylor, an important Southern California modern architect.
7. ***Embodiment of elements of outstanding attention to architectural design, detail, materials, or craftsmanship.*** The historic district appears eligible for listing for embodying the distinctive elements of the Mid-Century Modern style, as seen in educational architecture. In particular, the Music building incorporates outstanding attention to architectural design in the attenuated columns and geometrically patterned metal, *brise soleil* while still remaining visually connected to Taylor's other International style buildings on campus.
8. ***Relationship to other landmarks, where the preservation of one has a bearing on the preservation of another.*** The Mid-Century Modern Campus Expansion Historic District buildings represent a group of buildings ringing the original FJC Campus grounds and designed in the International or New Formalism style, of which the preservation of each of the six remaining buildings is necessary to maintain their integrity and recognition as a historic district.
9. ***A unique location or singular physical characteristic representing an established and familiar visual feature of a neighborhood.*** The historic district appears eligible for listing for the Music building, which is prominently situated on the northeast corner of

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

East Chapman Avenue and North Lemon Street and as such is strongly associated with the first view people have of the Fullerton College campus.

### 5.2.3 Integrity Considerations

Integrity is the authenticity of a historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance. Historical resources eligible for listing in the NRHP or CRHR must meet one of the criteria of significance discussed in Section 5.2.1, NRHP/CRHR Evaluation Criteria, and retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. Furthermore, integrity must be judged with reference to the particular criteria under which a resource is proposed for eligibility (OHP 2011).

**Location:** The Mid-Century Modern Campus Expansion buildings have always occupied the same location. Although various functions may have changed within the buildings themselves, their location remains unchanged. Therefore, the Mid-Century Modern Campus Expansion Historic District retains integrity of location.

**Design:** For historic districts, design concerns more than the integrity of the individual buildings. It also concerns the way in which buildings within the district are related and connected. Overall, contributing buildings within the Mid-Century Modern Campus Expansion Historic District retain a preponderance of the major design elements and character-defining features of the International and New Formalism styles that aesthetically unify them on the exterior, including their flat roofs without copings; broad, typically smooth, expanses of concrete walls; flush-mounted metal-framed windows arranged in linear groupings; a marked absence of decorative detailing around windows and doors; and asymmetrical block-like building massing. Exterior alterations to the buildings are minimal, and the addition of a free-standing elevator off the north end of the Applied Arts/Humanities building is consistent with the *Secretary of the Interior's Standards for Historic Preservation*. The one notable exception to this is the Technical Education Building 700, which was altered beyond recognition sometime after 2007.

In consideration of integrity of design, the Mid-Century Modern Campus Expansion Historic District buildings appear to retain requisite integrity of the International and New Formalist stylistic elements that unify them.

**Setting:** The area surrounding the Mid-Century Modern Campus Expansion Historic District buildings has not substantially changed since the late 1960s. Most of the residential and commercial development that surrounds the campus was already in place during the historic

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

district's period of significance. Therefore, the Mid-Century Modern Campus Expansion Historic District retains integrity of setting.

**Materials:** The historic district buildings retain the key exterior materials that date from their period of significance, including smooth concrete walls, metal-framed multi-paned windows, and light-toned painted surfaces. The repetitive nature of the materials historically used on campus ties the Mid-Century Modern buildings with the original campus buildings, while at the same time differentiating them based on finishing techniques. Therefore, the Mid-Century Modern Campus Expansion Historic District retains the requisite integrity of materials.

**Workmanship:** The workmanship of the historic district is evident in the technology of the concrete panels and columns that shape the buildings, the purposeful use of smooth and textured concrete finishes, and in the clean, linear, box-like massing of the buildings. Overall, the Mid-Century Modern Campus Expansion Historic District retains integrity of workmanship.

**Feeling:** The Mid-Century Modern Campus Expansion Historic District buildings and other contributing elements strongly express the International and New Formalism aesthetic. The graceful, elegant, unadorned forms, with the occasional artistic flourish of textured concrete or patterned metal screen grilles, evokes the zeitgeist of the modern era. The buildings form discrete pockets of modern elegance and simplicity, accentuating the more exuberant Spanish Colonial Revival buildings of the original campus; they share the feelings of excitement, innovation, and uniqueness, yet remain their own discrete parts of the campus. The Mid-Century Modern Campus Expansion Historic District exudes the spirit of modernism and therefore retains integrity of feeling.

**Association:** The Mid-Century Modern Campus Expansion Historic District is not associated with any important historic events or people.

### 5.2.4 Conclusions

The significance evaluation, including consideration of NRHP, CRHR, and local-level evaluation criteria and integrity requirements, indicate that the buildings designed by Taylor during the late 1950s through the 1960s appear to be eligible as a historic district under NRHP Criterion C/CRHR Criterion 3, as well as local criteria 5, 6, and 8, for conveying a concentration of planned buildings, structures, and associated elements united aesthetically by their embodiment of the International and New Formalism styles. The buildings also represent the notable work of modern architect William Henry Taylor.

Additionally, the Music Building 1100 appears eligible as both a district contributor and an individual property under NRHP Criterion C/CRHR Criterion 3, as well as local criteria 5, 6, 7,

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

8, and 9, for its high artistic value associated with the New Formalism style and its location prominently anchoring the southwest corner of campus.

As a result of these findings, the Mid-Century Modern Campus Expansion Historic District is considered a historical resource under CEQA. As such, the proposed project has the potential to adversely impact historical resources. Recommendations to reduce impacts to historical resources are provided in Chapter 6.

### 5.3 Wilshire Junior High School Historic District

The 1936 buildings of the Wilshire Junior High School represent a significant grouping of buildings united aesthetically by their PWA/WPA Moderne architectural style, a style prominent in PWA/WPA buildings. Designed by architect Donald Beach Kirby, the auditorium and two classroom buildings were built of reinforced concrete; the two one-story classroom buildings and the two-story auditorium had flat roofs with low parapets. These buildings were developed to replace the original Wilshire School, which was damaged in the 1933 Long Beach Earthquake. The Wilshire Junior High School Historic District period of significance is 1936, for its association with the PWA/WPA program and being a fine example of the PWA/WPA Moderne style of buildings. Furthermore, the Wilshire Junior High School Auditorium and Classroom buildings are a listed City Landmark (Landmark number HL-12), and they are already considered historical resources under CEQA.

The boundary of this potential historic district includes the three existing campus buildings constructed in 1936, which serve as contributing elements to the district, and one c.1990 building, which is a non-contributor, built adjacent to the east elevation of the Auditorium. Table 6 provides a complete list of all potential contributing and non-contributing elements. Figure 34 shows the location of all contributing buildings.

**Table 6**  
**Inventory of Buildings within the Potential Wilshire Junior High School Historic District**

Building Name and No.	Year Built	Historic District Status
Wilshire Theatre	1936	Contributor
W1, Building 100	1936	Contributor
W2, Building 200	1936	Contributor
3D Sculpture Arts (Building 2100)	c. 1990	Non-contributing

#### Character Defining Features

The character-defining features of the Wilshire Junior High School Historic District include the following:

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

- Balanced and symmetrical forms based on Classical design principles
- Feeling of monumentality and authority
- Rectangular massing
- Windows arranged as vertical recessed panels
- Smooth concrete walls
- Fluted vertical ornamentation reading as modern versions of classical columns
- Subtle, unadorned, broad belt courses
- Parapets crowned with horizontal recessed bands

### **5.3.1 NRHP/CRHR Evaluation Criteria**

The buildings and campus components within the proposed Wilshire Junior High School Historic District were evaluated for listing at the local level of significance. The NRHP denotes four specific criteria for listing, of which at least one must be met to be considered potentially eligible for listing on the NRHP. The CRHR criteria were expressly developed to be in accordance with previously established criteria developed for listing in the NRHP. As such, the NRHP and CRHR evaluations are presented concurrently. According to the NRHP and CRHR, a resource is considered historically significant if it (i) retains “substantial integrity,” and (ii) meets at least one of the following criteria:

***Criterion A/1: Is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage.***

The Wilshire Junior High School buildings were funded by monies from the PWA/WPA during the Depression. The PWA/WPA relief program had an exceptional impact on the local economy, making possible the construction of several governmental and educational buildings during the Depression years. Other PWA/WPA buildings in Fullerton include portions of the original Fullerton Community College campus, the main public library (now Fullerton Museum Center), the city hall (now the Fullerton Police Department), the main post office, and the Fullerton Union High School. The three Wilshire Junior High School Historic District buildings appear eligible for listing under NRHP/CRHR Criterion A/1 as contributors to a historic district.

**Cultural Resources Study for the  
Fullerton College Facilities Master Plan Program EIR**

---

INTENTIONALLY LEFT BLANK

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Criterion B/2:** *Is associated with the lives of persons important in our past.*

Although numerous persons are historically associated with Wilshire Junior High School, archival and background research failed to indicate any associations with persons important in history. Therefore, the Wilshire Junior High School Historic District does not appear eligible for listing under NRHP/CRHR Criterion B/2.

**Criterion C/3:** *Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.*

The buildings constructed for the Wilshire Junior High School embody the distinctive characteristics of PWA/WPA Moderne, a modern architectural style that dates between 1933 and 1944 in the United States. Associated with public buildings constructed as part of the relief projects sponsored by the PWA/WPA, this style of architecture draws inspiration from Beaux-Arts classicism and Art Deco exuberance, presenting them in more conservative, understated ways that lend a feeling of monumentality and authority to the buildings. Although not uncommon in public buildings of this period, examples of entire campuses specifically designed in the PWA/WPA Moderne style are less common. Elements of the style include classically balanced, symmetrical forms; windows arranged vertically as recessed panels; and expanses of smooth stucco or concrete surfaces. The Wilshire Junior High School buildings incorporate all of these defining characteristics, as well as vertically oriented fluting reminiscent of classically fluted columns. These fluting groupings are located on either side of the main entrances and window groupings, further evoking the sense of classical columns. Subtle, unadorned, broad belt courses run along the building walls at a height under window sills, while the parapets are crowned with two horizontal recessed bands.

Although the Wilshire Junior High School buildings are unified by their PWA/WPA Moderne style and shared character-defining features, and they remain functionally related buildings, the buildings have been altered in recent years. The windows and doors on the classroom buildings were replaced at some point. It also appears that some exterior doors were added on both classroom buildings to enhance access, and that a couple of window groupings facing onto Lemon Street were closed in. The auditorium appears largely intact, with a minor alteration being the addition of a newer building adjacent to the east elevation, enclosing a previously exterior-facing wall.

Despite alterations to the original campus design plan and the addition of new buildings in recent years, the original 1936 PWA/WPA Moderne buildings still convey most of the major character-defining features of their style and design, and represent the notable work of a local architect. Therefore, although not rising to a national level of significance, the buildings appear

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

eligible for listing as contributors to the Wilshire Junior High School Historic District under NRHP/CRHR Criterion C/3.

**Criterion D/4:**        *Has yielded, or may be likely to yield, information important in prehistory or history.*

The buildings are unlikely to yield any information important to prehistory or history, nor are they associated with any archaeological resources. Therefore, the Wilshire Junior High School Historic District does not appear eligible for listing under NRHP/CRHR Criterion D/4.

### **5.3.2        Local Evaluation Criteria**

According to the criteria for designating a local historic landmark as defined in the City of Fullerton Municipal Code, Ordinance 2982, Section 15.48.060, the Wilshire Junior High School Historic District appears eligible for listing under the following criteria:

3. *Identification with a person or persons or groups who significantly contributed to the culture and development of the city.* The Wilshire Junior High School Historic District appears eligible for listing as part of the PWA/WPA projects carried out from 1933 to 1944.
5. *Exemplification of the best remaining architectural types in an area.* The historic district's buildings exemplify the PWA/WPA Moderne style, an architectural style uncommon in Fullerton despite the many projects that relied on PWA/WPA funding.
8. *Relationship to other landmarks, where the preservation of one has a bearing on the preservation of another.* The historic district's buildings represent a group of buildings designed in the PWA/WPA Moderne style, of which the preservation of each of the three buildings is necessary to maintain their integrity and recognition as a historic district.

### **5.3.3        Integrity Considerations**

Integrity is the authenticity of a historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance. Historical resources eligible for listing in the NRHP or CRHR must meet one of the criteria of significance discussed in Section 5.3.1, NRHP/CRHR Evaluation Criteria, and retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. Furthermore, integrity must be judged with reference to the particular criteria under which a resource is proposed for eligibility (OHP 2011).

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Location:** The Wilshire Junior High School campus buildings have always occupied the same location. Although various functions may have changed within the buildings themselves, their location remains unchanged. Therefore, the historic district retains integrity of location.

**Design:** For historic districts, design concerns more than the integrity of the individual buildings. It also concerns the way in which buildings within the district are related and connected. Overall, contributing buildings within the historic district retain a preponderance of the major design elements and character-defining features of PWA/WPA Moderne that aesthetically unify them on the exterior, including their rectangular plans, board-formed concrete walls, rounded stairwells clad in glass mosaic tiles, reflected ceilings, cross-shaped smooth-formed concrete posts, recessed entrances, and minimal use of tinted glass panels. Exterior alterations to the buildings include replacement of the original windows and doors on the two classroom buildings, the addition of exterior access doors, and the removal and subsequent filling in of windows on the west elevation facing North Lemon Street.

Although there is some evidence for the removal of original interior materials and fixtures, the reconfiguration of interior spaces on any campus is a common occurrence in response to changes in enrollment capacity, education pedagogy, and building functionality. Additionally, minor changes were made to the interior of the auditorium to accommodate modern technology.

In consideration of integrity of design, the campus buildings appear to retain the requisite integrity of the PWA/WPA Moderne stylistic elements that unify them into a readily identifiable, cohesive whole.

**Setting:** The area surrounding the Wilshire Junior High School buildings has noticeably changed since the 1930s. Originally set in an area of Fullerton bordering agricultural land, the surrounding residential and commercial development expanded along with the campus during the Wilshire Junior High School Historic District's period of significance. An L-shaped building (the Chapman School) originally stood at the corner of East Chapman Avenue and North Lemon Street, blocking the view of the Wilshire Junior High School buildings from East Chapman Avenue. That building was demolished at some point after Fullerton College acquired the property in 1984. There were also grass-covered sports fields east of the Wilshire Junior High School buildings, which were paved over for parking after 1984. Therefore, the Wilshire Junior High School Historic District retains partial integrity of setting.

**Materials:** The historic district buildings retain the key exterior materials that date from their period of significance, namely wood-frame construction on 4-foot stem walls with layered plaster surfaces and minimal ornamentation in the form of elegant, classical fluting. The windows and doors on two of the three buildings were replaced at some point, with the design of

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

replacement windows being sympathetic to the original building aesthetics. The third building, the auditorium, is largely unaltered. Therefore, the Wilshire Junior High School Historic District retains the requisite integrity of materials.

**Workmanship:** The workmanship of the historic district is evident in the technology of the smooth expanses of concrete that shapes the buildings and the purposeful use of classical forms expressed in modern aesthetics. Overall, the Wilshire Junior High School Historic District retains integrity of workmanship.

**Feeling:** The Wilshire Junior High School Historic District buildings strongly express the PWA/WPA Moderne aesthetic. The combination of Beaux-Arts classicism and Art Deco exuberance, expressed in a more conservative, understated way, incorporates classically balanced, symmetrical forms; vertically arranged recessed windows; expanses of smooth stucco or concrete surfaces; and vertically oriented fluting reminiscent of classically fluted columns. Combined with subtle, unadorned, broad belt courses and parapets crowned with horizontal recessed bands, the buildings radiate a feeling of monumentality and authority. Therefore, the Wilshire Junior High School Historic District retains integrity of feeling.

**Association:** The Wilshire Junior High School Historic District is not associated with any important historic events or people.

### 5.3.4 Conclusions

The significance evaluation, including consideration of NRHP, CRHR, and local-level evaluation criteria and integrity requirements, indicate that the original 1936 campus buildings appear to be eligible as a historic district under NRHP Criterion A/CRHR Criterion 1; NRHP Criterion C/CRHR Criterion 3; and local criteria 3, 5, and 8 for conveying a concentration of planned buildings, structures, and associated elements united aesthetically by their embodiment of the PWA/WPA Moderne style. The buildings also represent the notable work of architect Donald Beach Kirby, whose most well-known projects are the 1940 Maharajah of Indore Residence in Santa Ana and the 1950 Miss Burke's School in San Francisco.

As a result of these findings, the Wilshire Junior High School Historic District is considered a historical resource under CEQA. As such, the proposed project has the potential to adversely impact historical resources. Recommendations to reduce impacts to historical resources are provided in Chapter 6.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **5.4 325–327 North Newell Place**

#### **5.4.1 NRHP/CRHR Evaluation Criteria**

**Criterion A/1:** *Is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage.*

The broad patterns of California history and cultural heritage related to the residential properties within the project area are early twentieth century residential development patterns within the City of Fullerton. Although the residential properties are now owned by Fullerton College, they were acquired many years after the property was developed.

The City experienced an outward expansion from its original town plan in the 1910s. Further population growth and development continued in the 1920s due to positive economic conditions brought on by the oil boom and the citrus farming boom in Fullerton. By the 1930s, the City’s population had more than doubled. Review of Sanborn maps from 1917 and 1927 illustrates the impact of the growing population, as growth and development of the City began to develop high-density neighborhoods. Like other cities throughout the United States, Fullerton’s population boom laid the groundwork for the City’s residential architectural foundation. During this boom period, the City of Fullerton experienced a large amount of single-family and small multi-family residential construction, with most buildings designed in the California Bungalow style. The affordability and accessibility of this architectural style facilitated residential development to support the influx of agricultural workers and oil workers (DSD 2002; McAlester 2015).

Although the property at 325–327 North Newell Place was built during this period of residential growth and development, it is not significant to the broad pattern of development. It is one of many residential buildings constructed to support the population boom. Due to a lack of significant contributions to the broad pattern of history or cultural heritage, the property located at 325–327 North Newell Place does not appear eligible under NRHP/CRHR Criterion A/1.

**Criterion B/2:** *Is associated with the lives of persons important in our past.*

The 325–327 North Newell Place duplex appears to have been a rental property, with a long list of residents throughout its history. Although the building was built by J.R. Parker, who owned and built numerous homes in the vicinity of this property, archival research did not reveal any information about Parker being a significant historical figure. Archival research also failed to provide any additional significant information for any of the renters of the property over the years. Therefore, 325–327 North Newell Place does not appear eligible for listing under NRHP/CRHR Criterion B/2.

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Criterion C/3:**      *Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.*

One of the most prevalent styles seen in Fullerton residential development of the early twentieth century is the Craftsman style, specifically the California Bungalow. Having originated in Southern California with Greene and Greene residential architecture, the movement spread throughout the United States and has an especially strong presence throughout California. During this boom period, the City of Fullerton experienced a large amount of single-family and small multi-family residential construction, with most buildings designed in the California Bungalow style, to support the influx of agricultural workers and oil workers (DSD 2002; McAlester 2015).

The property at 325–327 North Newell Place is a California Bungalow style duplex built during the 1920s residential boom in the City of Fullerton. The property appears to retain the requisite integrity and exemplifies some of the most basic character-defining features of the style: one-story height, low pitched roof design with roof overhangs, exposed rafter tails, and a large front porch with brick-and-wood supports. However, the subject property is a common and unremarkable example of the style.

Because the Craftsman style is so prevalent throughout Southern California residential neighborhoods, an individually eligible property must be able to convey the essential and unique elements of the style. The significance of California Bungalows that lack high artistic value but share a history of development with the neighborhood is best conveyed through residential historic districts. Historic districts exemplify the style through a concentration of buildings unified aesthetically by their collective character-defining features and shared history of development.

The subject property is adjacent to the northern boundary of the East Townsite Historic District, which includes a concentration of California Bungalow style residences. The entire block on which the subject property is located is intentionally excluded from the adjacent historic district due to its commercial zoning classification. Adjacent buildings within the district have been zoned as R-2P, a residential preservation zone classification. Further, the block on which the subject property is located appears to lack the unified aesthetic necessary to qualify as a historic district. Given its lack of significance with relation to the Craftsman style, the subject property appears not eligible for listing under NRHP/CRHR Criterion C/3.

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Criterion D/4:** *Has yielded, or may be likely to yield, information important in prehistory or history.*

The duplex is unlikely to yield any information important to prehistory or history, nor is it associated with any archaeological resources. Therefore, 325–327 North Newell Place does not appear eligible for listing under Criterion D/4.

### 5.4.2 Local Evaluation Criteria

According to the criteria for designating a local historic landmark as defined in the City of Fullerton Municipal Code, Ordinance 2982, Section 15.48.060, the 325–327 North Newell Place duplex does not appear eligible for listing under the following criteria:

1. ***Character, interest or value as part of the heritage of the city.*** Although the property at 325–327 North Newell Place was built during a significant period of residential growth and development in the City of Fullerton, it is not significant to the broad pattern of development. It is one of many residential buildings constructed to support the population boom. Therefore, 325–327 North Newell Place does not appear eligible for listing under Criterion 1.
2. ***Location as a site of a historic event.*** Archival research failed to indicate any significant historic events at this property. Therefore, 325–327 North Newell Place does not appear eligible for listing under Criterion 2.
3. ***Identification with a person or persons or groups who significantly contributed to the culture and development of the city.*** As discussed in Section 5.4.1 under Criterion B/2, archival research did not reveal any significant associations with a person or persons or groups who significantly contributed to the culture and development of the City. Therefore, 325–327 North Newell Place does not appear eligible for listing under Criterion 3.
4. ***Exemplification of a particular architectural style or way of life important to the city.*** As discussed in Section 5.4.1 under Criterion C/3, the property is a common example of the Craftsman style and is one of many examples throughout the City. Therefore, 325–327 North Newell Place does not appear eligible for listing under Criterion 4.
5. ***Exemplification of the best remaining architectural types in an area.*** The City of Fullerton has many excellent examples of Craftsman architecture, which retain integrity of materials and design and embody the characteristics of the style. Therefore, 325–327 North Newell Place does not appear eligible for listing under Criterion 5.
6. ***Identification as the work of a person or persons whose work has influenced the heritage of the city, the state of California or the United States.*** Building development

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

research did not indicate any identification as the work of a person or persons whose work has influenced the heritage of the City, the State of California, or the United States. Therefore, 325–327 North Newell Place does not appear eligible for listing under Criterion 6.

7. ***Embodiment of elements of outstanding attention to architectural design, detail, materials, or craftsmanship.*** The duplex does not display outstanding attention architectural design, detail, materials, or craftsmanship. It is a common example of residential construction using materials and techniques that were used throughout the 1920s throughout Southern California. Therefore, 325–327 North Newell Place does not appear eligible for listing under Criterion 7.
8. ***Relationship to other landmarks, where the preservation of one has a bearing on the preservation of another.*** The subject property is located directly north of the East Townsite Historic District, and was intentionally excluded from the boundary of this district. No further potential historic districts or landmarks were identified in the vicinity of the duplex, so there is no bearing on the preservation of other historic resources. Therefore, 325–327 North Newell Place does not appear eligible for listing under Criterion 8.
9. ***A unique location or singular physical characteristic representing an established and familiar visual feature of a neighborhood.*** Given the proximity of numerous residences to the duplex, the location of the residence is not unique. The residence is in keeping with materials, scale, and massing at adjacent properties. The property has no unique characteristics that distinguish it from adjacent residential properties. Therefore, 325–327 North Newell Place does not appear eligible for listing under Criterion 9.
10. ***Integrity as a natural environment that strongly contributes to the well-being of the people of the city.*** Given the development of the parcel with a duplex residence, the building cannot be classified as a natural environment. Therefore, 325–327 North Newell Place does not appear eligible for listing under Criterion 10.

### 5.4.3 Integrity Considerations

Integrity is the authenticity of a historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance. Historical resources eligible for listing in the NRHP or CRHR must meet one of the criteria of significance discussed in Section 5.4.1, NRHP/CRHR Evaluation Criteria, and retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. Furthermore, integrity must be judged with reference to the particular criteria under which a resource is proposed for eligibility (OHP 2011).

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

Evaluation of the building at 325–327 North Newell Place did not find it significant under NRHP/CRHR or local criteria; thus it does not have a period of significance or relevant associations to evaluate. It is notable that the building does retain integrity of location, design, materials, workmanship, and feeling. However, the building's setting is compromised by the development of the surrounding area since the date of construction. Review of Sanborn maps from 1927 and 1949 indicate that the surrounding areas to the south, east, and west of the subject property were significantly developed with single- and multi-family residences and there are few remaining empty parcels of land for development. The lack of Sanborn maps for the area to the north during this period, combined with historic aerial photographs, indicates that the land to the north was largely agricultural and not significantly developed. Post-war development at FJC led to significant campus expansion and development of large agricultural areas to the north of the subject property, which compromised the original integrity of setting for the subject property.

### **5.4.4 Conclusions**

The significance evaluation indicates that the subject property appears not eligible under all NRHP, CRHR, and local-level evaluation criteria and integrity requirements. Therefore, the subject property is not considered a historical resource under CEQA.

## **5.5 420 East Chapman Avenue**

### **5.5.1 NRHP/CRHR Evaluation Criteria**

*Criterion A/I: Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.*

The broad patterns of California history and cultural heritage related to the residential properties within the project area are early twentieth century residential development patterns within the City of Fullerton. Although the residential properties are now owned by Fullerton College, they were acquired many years after the property was developed.

The City experienced an outward expansion from its original town plan in the 1910s. Further population growth and development continued in the 1920s due to positive economic conditions brought on by the oil boom and the citrus farming boom in Fullerton. By the 1930s, the City's population had more than doubled. Review of Sanborn maps from 1917 and 1927 illustrates the impact of the growing population, as growth and development of the City began to develop high-density neighborhoods. Like other cities throughout the United States, Fullerton's population boom laid the groundwork for the City's residential architectural foundation. During this boom period, the City experienced a large amount of single-family and small multi-family residential construction, with most buildings designed in the California Bungalow style. The affordability

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

and accessibility of this architectural style facilitated residential development to support the influx of agricultural workers and oil workers (DSD 2002; McAlester 2015).

Although the property at 420 East Chapman Avenue was built during this period of residential growth and development, it is not significant to the broad pattern of development. It is one of many residential buildings constructed to support the population boom. Due to a lack of significant contributions to the broad pattern of history or cultural heritage, the property located at 420 East Chapman Avenue does not appear eligible under NRHP/CRHR Criterion A/1.

**Criterion B/2:**        *Is associated with the lives of persons important in our past.*

Archival research for the 420 East Chapman Avenue property indicated that the original owner John R. Parker, who owned the property from 1920 to 1948, was an educator at Fullerton Elementary Schools and also owned other residential properties in the general vicinity of 420 East Chapman Avenue (FNT 1951). Following Parker's ownership, another educator, J.S. Arnold, took over ownership of the property from 1955 to 1959. Arnold was an educator at FJC and served as the Social Science Chair (FNT 1959). Following Arnold's ownership of the property it appears the property was turned into residential rental property, with numerous occupants over the years. No other significant information was found on other residents and/or owners of the property. Therefore, 420 East Chapman Avenue does not appear eligible under NRHP/CRHR Criterion B/2.

**Criterion C/3:**        *Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.*

One of the most prevalent styles seen in Fullerton residential development of the early twentieth century is the Craftsman style, specifically the California Bungalow. Having originated in Southern California with Greene and Greene residential architecture, the movement spread throughout the United States and has an especially strong presence throughout California. During this boom period, the City of Fullerton experienced a large amount of single-family and small multi-family residential construction, with most buildings designed in the California Bungalow style, to support the influx of agricultural workers and oil workers (DSD 2002; McAlester 2015).

The property at 420 East Chapman Avenue is a California Bungalow style residence built during the 1920s residential boom in the City of Fullerton. The property appears to retain the requisite integrity and exemplifies some of the most basic character-defining features of the style: one-story height, low pitched roof design with roof overhangs, exposed rafter tails, and a large front

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

porch with brick-and-wood supports. However, the subject property is a common and unremarkable example of the style.

Because the Craftsman style is so prevalent throughout Southern California residential neighborhoods, an individually eligible property must be able to convey the essential and unique elements of the style. The significance of California Bungalows that lack high artistic value but share a history of development with the neighborhood is best conveyed through residential historic districts. Historic districts exemplify the style through a concentration of buildings unified aesthetically by their collective character-defining features and shared history of development.

The subject property is adjacent to the northern boundary of the East Townsite Historic District, which includes a concentration of California Bungalow style residences. The entire block on which the subject property is located is intentionally excluded from the adjacent historic district due to its commercial zoning classification. Adjacent buildings within the district have been zoned as R-2P, a residential preservation zone classification. Further, the block on which the subject property is located appears to lack the unified aesthetic necessary to qualify as a historic district. Given its lack of significance with relation to the Craftsman style, the subject property appears not eligible under NRHP/CRHR Criterion C/3.

**Criterion D/4:**        *Has yielded, or may be likely to yield, information important in prehistory or history.*

The residence is unlikely to yield any information important to prehistory or history, nor is it associated with any archaeological resources. Therefore, 420 East Chapman Avenue does not appear eligible for listing under NRHP/CRHR Criterion D/4.

### 5.5.2        Local Evaluation Criteria

According to the criteria for designating a local historic landmark as defined in the City of Fullerton Municipal Code, Ordinance 2982, Section 15.48.060, the 420 East Chapman Avenue residence does not appear eligible for listing under the following criteria:

1. ***Character, interest or value as part of the heritage of the city.*** Although the property at 420 East Chapman Avenue was built during a significant period of residential growth and development in the City of Fullerton, it is not significant to the broad pattern of development. It is one of many residential buildings constructed to support the population boom. Therefore, 420 East Chapman Avenue does not appear eligible for listing under Criterion 1.

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

2. ***Location as a site of a historic event.*** Archival research failed to indicate any significant historic events at this property. Therefore, 420 East Chapman Avenue does not appear eligible for listing under Criterion 2.
3. ***Identification with a person or persons or groups who significantly contributed to the culture and development of the city.*** As discussed in Section 5.5.1, NRHP/CRHR Evaluation Criteria, under Criterion B/2, archival research did not reveal any significant associations with person or persons or groups who significantly contributed to the culture and development of the City. Therefore, 420 East Chapman Avenue does not appear eligible for listing under Criterion 3.
4. ***Exemplification of a particular architectural style or way of life important to the city.*** As discussed in Section 5.5.1 under Criterion C/3, the property is a common example of the Craftsman style and is one of many examples throughout the City. Therefore, 420 East Chapman Avenue does not appear eligible for listing under Criterion 4.
5. ***Exemplification of the best remaining architectural types in an area.*** The City of Fullerton has many excellent examples of Craftsman architecture, which retain integrity of materials and design and embody the characteristics of the style. Therefore, 420 East Chapman Avenue does not appear eligible for listing under Criterion 5.
6. ***Identification as the work of a person or persons whose work has influenced the heritage of the city, the state of California or the United States.*** Building development research did not indicate any identification as the work of a person or persons whose work has influenced the heritage of the City, the State of California, or the United States. Therefore, 420 East Chapman Avenue does not appear eligible for listing under Criterion 6.
7. ***Embodiment of elements of outstanding attention to architectural design, detail, materials, or craftsmanship.*** The residence does not display outstanding attention to architectural design, detail, materials, or craftsmanship. It is a common example of residential construction using materials and techniques that were used throughout the 1920s in Southern California. Therefore, 420 East Chapman Avenue does not appear eligible for listing under Criterion 7.
8. ***Relationship to other landmarks, where the preservation of one has a bearing on the preservation of another.*** The subject property is located directly north of the East Townsite Historic District, and was intentionally excluded from the boundary of this district. No further potential historic districts or landmarks were identified in the vicinity of the residence, so there is no bearing on the preservation of other historic resources. Therefore, 420 East Chapman Avenue does not appear eligible for listing under Criterion 8.

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

9. *A unique location or singular physical characteristic representing an established and familiar visual feature of a neighborhood.* Given the proximity of numerous residences to the duplex, the location of the residence is not unique. The residence is in keeping with materials, scale, and massing at adjacent properties. The property has no unique characteristics that distinguish it from adjacent residential properties. Therefore, 420 East Chapman Avenue does not appear eligible for listing under Criterion 9.
10. *Integrity as a natural environment that strongly contributes to the well-being of the people of the city.* Given the development of the parcel with a residence, the building cannot be classified as a natural environment. Therefore, 420 East Chapman Avenue does not appear eligible for listing under Criterion 10.

### 5.5.3 Integrity Considerations

Integrity is the authenticity of a historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance. Historical resources eligible for listing in the NRHP or CRHR must meet one of the criteria of significance discussed in Section 5.5.1, NRHP/CRHR Evaluation Criteria, and retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. Furthermore, integrity must be judged with reference to the particular criteria under which a resource is proposed for eligibility (OHP 2011).

Evaluation of the building at 420 East Chapman Avenue did not find it significant under NRHP/CRHR or local criteria; thus, it does not have a period of significance or relevant associations to evaluate. It is notable that the building does retain integrity of location, design, materials, workmanship, and feeling. However, the building's setting is compromised by the development of the surrounding area since the date of construction. Review of Sanborn maps from 1927 and 1949 indicate that the surrounding areas to the south, east, and west of the subject property were significantly developed with single- and multi-family residences and there are few remaining empty parcels of land for development. The lack of Sanborn maps for the area to the north during this period, combined with historic aerial photographs, indicates that the land to the north was largely agricultural and not significantly developed. Post-war development at FJC led to significant campus expansion and development of large agricultural areas to the north of the subject property, which compromised the original integrity of setting for the subject property.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **5.5.4 Conclusions**

The significance evaluation indicates that the subject property appears not eligible under all NRHP, CRHR, and local-level evaluation criteria and integrity requirements. Therefore, the subject property is not considered a historical resource under CEQA.

## **5.6 416 East Chapman Avenue**

### **5.6.1 NRHP/CRHR Evaluation Criteria**

***Criterion A/1:*** *Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.*

The broad patterns of California history and cultural heritage related to the residential properties within the project area are early twentieth century residential development patterns within the City of Fullerton. Although the residential properties are now owned by Fullerton College, they were acquired many years after the property was developed.

The City experienced an outward expansion from its original town plan in the 1910s. Further population growth and development continued in the 1920s due to positive economic conditions brought on by the oil boom and the citrus farming boom in Fullerton. By the 1930s, the City's population had more than doubled. Review of Sanborn maps from 1917 and 1927 illustrates the impact of the growing population, as growth and development of the City began to develop high-density neighborhoods. Like other cities throughout the United States, Fullerton's population boom laid the groundwork for the City's residential architectural foundation. During this boom period, the City experienced a large amount of single-family and small multi-family residential construction, with most buildings designed in the California Bungalow style. The affordability and accessibility of this architectural style facilitated residential development to support the influx of agricultural workers and oil workers. Following the housing boom in the 1920s, the 1930s were marked by a period of little architectural development in the City due to the Great Depression; however, there were some examples of home building at the time in modest styles like Minimal Traditional (DSD 2002; McAlester 2015).

Although the property at 416 East Chapman Avenue was built during the Depression era, it is not significant to the broad pattern of development. It is one of many modest residential buildings constructed throughout Southern California in the Depression era. Due to a lack of significant contributions to the broad pattern of history or cultural heritage, the property located at 416 East Chapman Avenue does not appear eligible under NRHP/CRHR Criterion A/1.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

***Criterion B/2: Is associated with the lives of persons important in our past.***

Archival research for the 416 East Chapman Avenue property indicated that the original owner was John R. Parker; however, it does not appear that Parker ever resided at the property, as he was residing at 420 East Chapman Avenue during the early years of this property. There were a series of occupants for the building over the years, which further suggests its use as a rental property. No other significant information was found on other residents and/or owners of the property. Therefore, 416 East Chapman Avenue does not appear eligible under NRHP/CRHR Criterion B/2.

***Criterion C/3: Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.***

The Great Depression and the years leading up to WWII showed a rapid decline in architectural development in cities like Fullerton, until New Deal programs like the PWA/WPA and Federal Housing Administration (FHA) were established in the 1930s. The FHA allowed provided mortgage insurance and published standards for small, modest housing options to help bolster the housing market during the Depression era. With programs like the FHA, residential development in cities like Fullerton was able to continue and residents were able to make it through the Depression years.

Prior to the 1930s, housing in Fullerton was modest but stylized to popular and affordable styles like the California Bungalow. However, the Depression years brought about the rise of more modest and less stylized home styles like Minimal Traditional, which would gain increased popularity during the war and post-war years because of its affordability, accessibility, and ease of construction. The Minimal Traditional style dominated the Southern California landscape during the 1930s and 1940s and provided a cost-effective housing option for veterans and families. Although typically built in housing tracts, Minimal Traditional homes are seen in earlier residential neighborhoods intermixed with California Bungalows (NRB 2002).

The property at 416 East Chapman Avenue is a Minimal Traditional style residence built during the Depression era in the City of Fullerton. The property appears to retain the requisite integrity and exemplifies some of the most basic character-defining features of the style: one-story height, simple low pitched gabled roof with composition shingles, exterior clad in stucco, and a bay window with multi-paned windows. However, the subject property is a common and unremarkable example of the style (McAlester 2015).

Because the Minimal Traditional style is so prevalent throughout Southern California residential neighborhoods, an individually eligible property must be able to convey the essential and unique elements of the style. The significance of Minimal Traditional residences that lack high artistic value but share a history of development with the neighborhood is best conveyed through residential

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

historic districts. Historic districts exemplify the style through a concentration of buildings unified aesthetically by their collective character-defining features and shared history of development.

The subject property is adjacent to the northern boundary of the East Townsite Historic District, which includes a concentration of California Bungalows intermixed with Minimal Traditional style residences. The entire block on which the subject property is located is intentionally excluded from the adjacent historic district due to its commercial zoning classification. Adjacent buildings within the historic district have been zoned as R-2P, a residential preservation zone classification. Further, the block on which the subject property is located appears to lack the unified aesthetic necessary to qualify as a historic district. Given its lack of significance with relation to the Minimal Traditional style, the subject property appears not eligible under NRHP/CRHR Criterion C/3.

**Criterion D/4:**        *Has yielded, or may be likely to yield, information important in prehistory or history.*

The residence is unlikely to yield any information important to prehistory or history, nor is it associated with any archaeological resources. Therefore, 416 East Chapman Avenue does not appear eligible for listing under NRHP/CRHR Criterion D/4.

### 5.6.2        Local Evaluation Criteria

According to the criteria for designating a local historic landmark as defined in the City of Fullerton Municipal Code, Ordinance 2982, Section 15.48.060, the 416 East Chapman Avenue residence does not appear eligible for listing under the following criteria:

1. ***Character, interest or value as part of the heritage of the city.*** Although the property at 416 East Chapman Avenue was built during a significant period of residential growth and development in the City of Fullerton, it is not significant to the broad pattern of development. It is one of many residential buildings constructed to support the population boom. Therefore, 416 East Chapman Avenue does not appear eligible for listing under Criterion 1.
2. ***Location as a site of a historic event.*** Archival research failed to indicate any significant historic events at this property. Therefore, 416 East Chapman Avenue does not appear eligible for listing under Criterion 2.
3. ***Identification with a person or persons or groups who significantly contributed to the culture and development of the city.*** As discussed in Section 5.6.1, NRHP/CRHR Evaluation Criteria, under Criterion B/2, archival research did not reveal any significant associations with person or persons or groups who significantly contributed to the culture

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

and development of the City. Therefore, 416 East Chapman Avenue does not appear eligible for listing under Criterion 3.

4. ***Exemplification of a particular architectural style or way of life important to the city.*** As discussed in Section 5.6.1 under Criterion C/3, the property is a common example of the Minimal Traditional style and is one of many examples throughout the City. Therefore, 416 East Chapman Avenue does not appear eligible for listing under Criterion 4.
5. ***Exemplification of the best remaining architectural types in an area.*** The City of Fullerton has many excellent examples of Minimal Traditional architecture, which retain integrity of materials and design and embody the characteristics of the style. Therefore, 416 East Chapman Avenue does not appear eligible for listing under Criterion 5.
6. ***Identification as the work of a person or persons whose work has influenced the heritage of the city, the state of California or the United States.*** Building development research did not indicate any identification as the work of a person or persons whose work has influenced the heritage of the City, the State of California, or the United States. Therefore, 416 East Chapman Avenue does not appear eligible for listing under Criterion 6.
7. ***Embodiment of elements of outstanding attention to architectural design, detail, materials, or craftsmanship.*** The residence does not display outstanding attention to architectural design, detail, materials, or craftsmanship. It is a common example of residential construction using materials and techniques that were used throughout the 1930s throughout Southern California. Therefore, 416 East Chapman Avenue does not appear eligible for listing under Criterion 7.
8. ***Relationship to other landmarks, where the preservation of one has a bearing on the preservation of another.*** The subject property is located directly north of the East Townsite Historic District, and was intentionally excluded from the boundary of this district. No further potential historic districts or landmarks were identified in the vicinity of the residence, so there is no bearing on the preservation of other historic resources. Therefore, 416 East Chapman Avenue does not appear eligible for listing under Criterion 8.
9. ***A unique location or singular physical characteristic representing an established and familiar visual feature of a neighborhood.*** Given the proximity of numerous residences to the subject property, the location of the residence is not unique. The residence is in keeping with materials, scale, and massing at adjacent properties. The property has no unique characteristics that distinguish it from adjacent residential properties. Therefore, 416 East Chapman Avenue does not appear eligible for listing under Criterion 9.
10. ***Integrity as a natural environment that strongly contributes to the well-being of the people of the city.*** Given the development of the parcel with a residence, the building

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

cannot be classified as a natural environment. Therefore, 416 East Chapman Avenue does not appear eligible for listing under Criterion 10.

### **5.6.3 Integrity Considerations**

Integrity is the authenticity of a historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance. Historical resources eligible for listing in the NRHP or CRHR must meet one of the criteria of significance discussed in Section 5.6.1, NRHP/CRHR Evaluation Criteria, and retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. Furthermore, integrity must be judged with reference to the particular criteria under which a resource is proposed for eligibility (OHP 2011).

Evaluation of the building at 416 East Chapman Avenue did not find it significant under NRHP/CRHR or local criteria; thus, it does not have a period of significance or relevant associations to evaluate. It is notable that the building does retain integrity of location, design, materials, workmanship, and feeling. However, the building's setting is compromised by the development of the surrounding area since the date of construction. Review of Sanborn maps from 1927 and 1949 indicate that the surrounding areas to the south, east, and west of the subject property were significantly developed with single- and multi-family residences and there are few remaining empty parcels of land for development. The lack of Sanborn maps for the area to the north during this period, combined with historic aerial photographs, indicates that the land to the north was largely agricultural and not significantly developed. Post-war development at FJC led to significant campus expansion and development of large agricultural areas to the north of the subject property, which compromised the original integrity of setting for the subject property.

### **5.6.4 Conclusions**

The significance evaluation indicates that the subject property appears not eligible under all NRHP, CRHR, and local level evaluation criteria and integrity requirements. Therefore, the subject property is not considered a historical resource under CEQA.

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

### 5.7 418 East Chapman Avenue

#### 5.7.1 NRHP/CRHR Evaluation Criteria

**Criterion A/I:** *Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.*

The broad patterns of California history and cultural heritage related to the residential properties within the project area are early twentieth century residential development patterns within the City of Fullerton. Although the residential properties are now owned by Fullerton College, they were acquired many years after the property was developed.

The City experienced an outward expansion from its original town plan in the 1910s. Further population growth and development continued in the 1920s due to positive economic conditions brought on by the oil boom and the citrus farming boom in Fullerton. By the 1930s, the City's population had more than doubled. Review of Sanborn maps from 1917 and 1927 illustrates the impact of the growing population, as growth and development of the City began to develop high-density neighborhoods. Like other cities throughout the United States, Fullerton's population boom laid the groundwork for the City's residential architectural foundation. During this boom period, the City experienced a large amount of single-family and small multi-family residential construction, with most buildings designed in the California Bungalow style. The affordability and accessibility of this architectural style facilitated residential development to support the influx of agricultural workers and oil workers. Following the housing boom in the 1920s, the 1930s were marked by a period of little architectural development in the City of Fullerton due to the Great Depression; however, there were some examples of home building at the time in modest styles like Minimal Traditional that would flourish in the 1940s (DSD 2002; McAlester 2015).

Post WWII Fullerton experienced a housing boom that continued until the 1970s due to the influx of veterans and the availability of land due to new City annexations. The housing boom was marked by the need for rental housing options for returning soldiers, because a great number of them were single. Duplexes and small apartment buildings became much more popular during this era and provided temporary relief for housing shortages. Throughout Fullerton, the popularity of tract housing emerged as an affordable and accessible housing option that could be built very quickly (Mudrick et al. 2015).

Although the property at 418 East Chapman Avenue was built during the important boom era, it is not significant to the broad pattern of development. It is one of many modest residential buildings constructed throughout Southern California in the post-war era. Due to a lack of

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

significant contributions to the broad pattern of history or cultural heritage, the property located at 418 East Chapman Avenue does not appear eligible under NRHP/CRHR Criterion A/1.

**Criterion B/2:**            *Is associated with the lives of persons important in our past.*

Archival research revealed a series of occupants for the building over the years, which is consistent with its function as a duplex rental unit. No other significant information was found on other residents and/or owners of the property. Therefore, 418 East Chapman Avenue does not appear eligible under NRHP/CRHR Criterion B/2.

**Criterion C/3:**            *Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.*

Prior to the 1950s, housing in Fullerton was largely modest and affordable with styles like the California Bungalow and Minimal Traditional. However, the post-war era in Fullerton sparked mass produced housing options on a scale never seen before in Fullerton in the form of tract housing. Innovators of tract housing developments in Fullerton like the Jewett Brothers were able to build homes in as little as 3 days. The following quote from *Fullerton: The Boom Years* sheds light on the housing boom in Fullerton in the 1950s:

In 1955 alone, the city approved fifty-five new tracts for a total of 3,941 lots, with the tracts ranging in size from 12 to 205 lots. By August 24, 1955, city staff reported that twenty-seven homes were being added to the city's residential areas every weekday (Mudrick et al. 2015).

The property at 418 East Chapman Avenue is an example of a post-war tract house in the City of Fullerton. The property appears to retain the requisite integrity and exemplifies some of the most basic character-defining features of the style: one-story height, modesty in scale and massing, simple low pitched hipped roof with composition shingles, exterior clad in stucco, poured concrete foundation, metal windows, little to no ornamentation, rectangular plan, and a box-like aesthetic. However, the subject property is a common and unremarkable example of the style (NRB 2002; McAlester 2015).

The tract houses of Fullerton were modest in size and scale, and tended to be rectangular and boxy with little to no ornamentation.

Because the tract house style is so prevalent throughout Southern California residential neighborhoods, an individually eligible property must be able to convey the essential and unique elements of the style. The significance of tract house residences that lack high artistic value but share

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

a history of development with the neighborhood is best conveyed through residential historic districts. Historic districts exemplify the style through a concentration of buildings unified aesthetically by their collective character-defining features and shared history of development.

The subject property is adjacent to the northern boundary of the East Townsite Historic District, which includes a concentration of California Bungalows intermixed with Minimal Traditional style residences. The entire block on which the subject property is located is intentionally excluded from the adjacent historic district due to its commercial zoning classification. Adjacent buildings within the district have been zoned as R-2P, a residential preservation zone classification. Further, the block on which the subject property is located appears to lack the unified aesthetic necessary to qualify as a historic district. Given its lack of significance with relation to the tract house style, the subject property appears not eligible under NRHP/CRHR Criterion C/3.

**Criterion D/4:**        *Has yielded, or may be likely to yield, information important in prehistory or history.*

The residence is unlikely to yield any information important to prehistory or history, nor is it associated with any archaeological resources. Therefore, 418 East Chapman Avenue does not appear eligible for listing under NRHP/CRHR Criterion D/4.

### 5.7.2        Local Evaluation Criteria

According to the criteria for designating a local historic landmark as defined in the City of Fullerton Municipal Code, Ordinance 2982, Section 15.48.060, the 418 East Chapman Avenue residence does not appear eligible for listing under the following criteria:

1. ***Character, interest or value as part of the heritage of the city.*** Although the property at 418 East Chapman Avenue was built during a significant period of residential growth and development in the City of Fullerton, it is not significant to the broad pattern of development. It is one of many residential buildings constructed to support the population boom. Therefore, 418 East Chapman Avenue does not appear eligible for listing under Criterion 1.
2. ***Location as a site of a historic event.*** Archival research failed to indicate any significant historic events at this property. Therefore, 418 East Chapman Avenue does not appear eligible for listing under Criterion 2.
3. ***Identification with a person or persons or groups who significantly contributed to the culture and development of the city.*** As discussed in Section 5.7.1, NRHP/CRHR Evaluation Criteria, under Criterion B/2, archival research did not reveal any significant associations with a person or persons or groups who significantly contributed to the

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

culture and development of the City. Therefore, 418 East Chapman Avenue does not appear eligible for listing under Criterion 3.

4. ***Exemplification of a particular architectural style or way of life important to the city.*** As discussed in Section 5.7.1 under Criterion C/3, the property is a common example of the tract house style and is one of many examples throughout the City. Therefore, 418 East Chapman Avenue does not appear eligible for listing under Criterion 4.
5. ***Exemplification of the best remaining architectural types in an area.*** The City of Fullerton has many excellent examples of tract house architecture, which retain integrity of materials and design and embody the characteristics of the style. Therefore, 418 East Chapman Avenue does not appear eligible for listing under Criterion 5.
6. ***Identification as the work of a person or persons whose work has influenced the heritage of the city, the state of California or the United States.*** Building development research did not indicate any identification as the work of a person or persons whose work has influenced the heritage of the City, the State of California, or the United States. Therefore, 418 East Chapman Avenue does not appear eligible for listing under Criterion 6.
7. ***Embodiment of elements of outstanding attention to architectural design, detail, materials, or craftsmanship.*** The residence does not display outstanding attention to architectural design, detail, materials, or craftsmanship. It is a common example of residential construction using materials and techniques that were used throughout the 1950s throughout Southern California. Therefore, 418 East Chapman Avenue does not appear eligible for listing under Criterion 7.
8. ***Relationship to other landmarks, where the preservation of one has a bearing on the preservation of another.*** The subject property is located directly north of the East Townsite Historic District, and was intentionally excluded from the boundary of this district. No further potential historic districts or landmarks were identified in the vicinity of the duplex, so there is no bearing on the preservation of other historic resources. Therefore, 418 East Chapman Avenue does not appear eligible for listing under Criterion 8.
9. ***A unique location or singular physical characteristic representing an established and familiar visual feature of a neighborhood.*** Given the proximity of numerous residences to the duplex, the location of the residence is not unique. The residence is in keeping with materials, scale, and massing at adjacent properties. The property has no unique characteristics that distinguish it from adjacent residential properties. Therefore, 418 East Chapman Avenue does not appear eligible for listing under Criterion 9.
10. ***Integrity as a natural environment that strongly contributes to the well-being of the people of the city.*** Given the development of the parcel with a residence, the building

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

cannot be classified as a natural environment. Therefore, 418 East Chapman Avenue does not appear eligible for listing under Criterion 10.

### **5.7.3 Integrity Considerations**

Integrity is the authenticity of a historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance. Historical resources eligible for listing in the NRHP or CRHR must meet one of the criteria of significance discussed in Section 5.7.1, NRHP/CRHR Evaluation Criteria, and retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. Furthermore, integrity must be judged with reference to the particular criteria under which a resource is proposed for eligibility (OHP 2011).

Evaluation of the building at 418 East Chapman Avenue did not find it significant under NRHP/CRHR or local criteria; thus, it does not have a period of significance or relevant associations to evaluate. It is notable that the building does retain integrity of location, design, materials, workmanship, and feeling. However, the building's setting is compromised by the development of the surrounding area since the date of construction. Aerial photographs show how post-war development at FJC led to significant campus expansion and development of large agricultural areas to the north of the subject property, which compromised the original integrity of setting for the subject property.

### **5.7.4 Conclusions**

As a result of the significance evaluation, the subject property appears not eligible under all NRHP, CRHR, and local-level evaluation criteria and integrity requirements. Therefore, the subject property is not considered a historical resource under CEQA.

## **5.8 409 North Newell Place**

### **5.8.1 NRHP/CRHR Evaluation Criteria**

**Criterion A/1:** *Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.*

The broad patterns of California history and cultural heritage related to the residential properties on the project site are early twentieth century residential development patterns within the City of Fullerton. Although the residential properties are now owned by Fullerton College, they were acquired many years after the property was developed.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

The City experienced an outward expansion from its original town plan in the 1910s. Further population growth and development continued in the 1920s due to positive economic conditions brought on by the oil boom and the citrus farming boom in Fullerton. By the 1930s, the City's population had more than doubled. Review of Sanborn maps from 1917 and 1927 illustrates the impact of the growing population, as growth and development of the City began to develop high-density neighborhoods. Like other cities throughout the United States, Fullerton's population boom laid the groundwork for the City's residential architectural foundation. During this boom period, the City experienced a large amount of single-family and small multi-family residential construction, with most buildings designed in the California Bungalow style. The affordability and accessibility of this architectural style facilitated residential development to support the influx of agricultural workers and oil workers. Following the housing boom in the 1920s, the 1930s were marked by a period of little architectural development in the City due to the Great Depression; however, there were some examples of home building at the time in modest styles like Minimal Traditional that would flourish in the 1940s (DSD 2002; McAlester 2015).

Post WWII Fullerton experienced a housing boom that continued until the 1970s due to the influx of veterans and the availability of land due to new City annexations. The housing boom was marked by the need for rental housing options for returning soldiers, because a great number of them were single. Duplexes and small apartment buildings became much more popular during this era and provided temporary relief for housing shortages. Throughout Fullerton, the popularity of Mid-Century Modern housing styles emerged as an affordable and accessible housing options (Mudrick et al. 2015).

Although the property at 409 North Newell Place was built during the important boom era, it is not significant to the broad pattern of development. It is one of many modest residential buildings constructed throughout Southern California in the post-war era. Due to a lack of significant contributions to the broad pattern of history or cultural heritage, the property located at 409 North Newell Place does not appear eligible under NRHP/CRHR Criterion A/1.

***Criterion B/2: Is associated with the lives of persons important in our past.***

Archival research revealed a series of occupants for the building over the years, which is consistent with its function as a multi-family rental unit. No other significant information was found on other residents and/or owners of the property. Therefore, 409 North Newell Place does not appear eligible under NRHP/CRHR Criterion B/2.

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Criterion C/3:**      *Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.*

Prior to the 1950s, housing in Fullerton was largely modest and affordable with styles like the California Bungalow and Minimal Traditional. However, the post-war era in Fullerton sparked the need for efficient and higher-density housing options such as duplexes and apartment buildings. One of the popular styles for apartment buildings in the post-war era was Mid-Century Modern, as it was more stylized than the popular tract house forms but was also able to be constructed with easily accessible and cost-effective building materials.

The property at 409 North Newell Place is an example of a Mid-Century Modern apartment building in the City of Fullerton. The property appears to retain the requisite integrity and exemplifies some of the most basic character-defining features of the style: two-story height, exterior staircase, flush-mounted metal windows, low pitched roof design, exterior clad in stucco, and a second-floor balcony with modestly detailed railing. However, the subject property is a common and unremarkable example of the style (NRB 2002; McAlester 2015).

The building at 409 North Newell Place is a common and unremarkable example of a prevalent architectural style in Southern California and does not possess high artistic value. The subject property is adjacent to the northern boundary of the East Townsite Historic District, which includes a concentration of California Bungalows intermixed with Minimal Traditional style residences. The entire block on which the subject property is located is intentionally excluded from the adjacent historic district due to its commercial zoning classification. Adjacent buildings within the historic district have been zoned as R-2P, a residential preservation zone classification. Further, the block on which the subject property is located appears to lack the unified aesthetic necessary to qualify as a historic district. Given its lack of significance with relation to the Mid-Century Modern style, the subject property appears not eligible under NRHP/CRHR Criterion C/3.

**Criterion D/4:**      *Has yielded, or may be likely to yield, information important in prehistory or history.*

The residence is unlikely to yield any information important to prehistory or history, nor is it associated with any archaeological resources. Therefore, 409 North Newell Place does not appear eligible for listing under NRHP/CRHR Criterion D/4.

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

### 5.8.2 Local Evaluation Criteria

According to the criteria for designating a local historic landmark as defined in the City of Fullerton Municipal Code, Ordinance 2982, Section 15.48.060, the 409 North Newell Place residence does not appear eligible for listing under the following criteria:

1. ***Character, interest or value as part of the heritage of the city.*** Although the property at 409 North Newell Place was built during a significant period of residential growth and development in the City of Fullerton, it is not significant to the broad pattern of development. It is one of many residential buildings constructed to support the population boom. Therefore, 409 North Newell Place does not appear eligible for listing under Criterion 1.
2. ***Location as a site of a historic event.*** Archival research failed to indicate any significant historic events at this property. Therefore, 409 North Newell Place does not appear eligible for listing under Criterion 2.
3. ***Identification with a person or persons or groups who significantly contributed to the culture and development of the city.*** As discussed in Section 5.8.1, NRHP/CRHR Evaluation Criteria, under Criterion B/2, archival research did not reveal any significant associations with a person or persons or groups who significantly contributed to the culture and development of the City. Therefore, 409 North Newell Place does not appear eligible for listing under Criterion 3.
4. ***Exemplification of a particular architectural style or way of life important to the city.*** As discussed in Section 5.8.1 under Criterion C/3, the property is a common example of the Mid-Century Modern style and is one of many examples throughout the City. Therefore, 409 North Newell Place does not appear eligible for listing under Criterion 4.
5. ***Exemplification of the best remaining architectural types in an area.*** The City of Fullerton has many excellent examples of Mid-Century Modern architecture that retain integrity of materials and design and embody the characteristics of the style. Therefore, 409 North Newell Place does not appear eligible for listing under Criterion 5.
6. ***Identification as the work of a person or persons whose work has influenced the heritage of the city, the state of California or the United States.*** Building development research did not indicate any identification as the work of a person or persons whose work has influenced the heritage of the City, the State of California, or the United States. Therefore, 409 North Newell Place does not appear eligible for listing under Criterion 6.
7. ***Embodiment of elements of outstanding attention to architectural design, detail, materials, or craftsmanship.*** The residence does not display outstanding attention to architectural design, detail, materials, or craftsmanship. It is a common example of

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

residential construction using materials and techniques that were used throughout the 1950s throughout Southern California. Therefore, 409 North Newell Place does not appear eligible for listing under Criterion 7.

8. ***Relationship to other landmarks, where the preservation of one has a bearing on the preservation of another.*** The subject property is located directly north of the East Townsite Historic District, and was intentionally excluded from the boundary of this district. No further potential historic districts or landmarks were identified in the vicinity of the apartment building, so there is no bearing on the preservation of other historic resources. Therefore, 409 North Newell Place does not appear eligible for listing under Criterion 8.
9. ***A unique location or singular physical characteristic representing an established and familiar visual feature of a neighborhood.*** Given the proximity of numerous residences to the apartment building, the location of the residence is not unique. The residence is in keeping with materials, scale, and massing at adjacent properties. The property has no unique characteristics that distinguish it from adjacent residential properties. Therefore, 409 North Newell Place does not appear eligible for listing under Criterion 9.
10. ***Integrity as a natural environment that strongly contributes to the well-being of the people of the city.*** Given the development of the parcel with a residence, the building cannot be classified as a natural environment. Therefore, 409 North Newell Place does not appear eligible for listing under Criterion 10.

### 5.8.3 Integrity Considerations

Integrity is the authenticity of a historical resource's physical identity evidenced by the survival of characteristics that existed during the resource's period of significance. Historical resources eligible for listing in the NRHP or CRHR must meet one of the criteria of significance discussed in Section 5.8.1, NRHP/CRHR Evaluation Criteria, and retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance. Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. Furthermore, integrity must be judged with reference to the particular criteria under which a resource is proposed for eligibility (OHP 2011).

Evaluation of the building at 409 North Newell Place did not find it significant under NRHP/CRHR or local criteria; thus, it does not have a period of significance or relevant associations to evaluate. It is notable that the building does retain integrity of location, design, materials, workmanship, and feeling. However, the building's setting is compromised by the development of the surrounding area since the date of construction. Aerial photographs show how post-war development at FJC led to significant campus expansion and development of large agricultural areas to the north of the subject property, which compromised the original integrity of setting for the subject property.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **5.8.4 Conclusions**

The significance evaluation indicates that the subject property appears not eligible under all NRHP, CRHR, and local-level evaluation criteria and integrity requirements. Therefore, the subject property is not considered a historical resource under CEQA.

### **5.9 428, 434, and 438 East Chapman Avenue**

In 2015, GPA evaluated three properties on the project site located at 428, 434, and 438 East Chapman Avenue and reached the following conclusions from their evaluations:

None of the properties at 428, 434, or 438 East Chapman Avenue are currently designated under any national, state, or local landmark programs. They were evaluated in this report as part of the CEQA compliance process. None of the properties appear to be eligible for listing in the National Register, California Register, or for designation as a Fullerton Historical Landmark due to a lack of historical or architectural significance. In the case of the property at 438 East Chapman Avenue, its eligibility is also affected by its lack of integrity. Additionally, none of the properties appear to contribute to a potential historic district. The recommended evaluation code for all properties on the project site is 6Z, ineligible for designation at the national, state, and local levels through survey evaluation. Therefore, the properties at 428, 434, and 438 East Chapman Avenue are not historical resources subject to CEQA. As the project will have no impact on historical resources, no further study is recommended or required (GPA 2015).

Dudek reviewed the GPA report from 2015 in its entirety and concurs with the findings presented in the report by GPA. Given the extensiveness of the survey and its recent date of evaluation, Dudek does not feel that any further study is necessary on these properties.

# Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

## 6 IMPACTS ANALYSIS

Based on the information contained in the *Proposed Facilities Master Plan Updates* (District 2016b), some Master Plan elements will be assessed at the program level because specific project details are not known at this time. Other Master Plan elements have detailed information available and will receive project-level assessment. As described in the project description (Section 1.2), the District is proposing various improvements to the Fullerton College Campus that include new construction, renovation, and demolition. The following paragraphs provide an impacts analysis of all proposed activities. Table 7 provides an overview of all identified impacts to historical resources and any associated mitigation measures to reduce impacts (see Section 6.5, Recommended Mitigation, for full text of mitigation measures).

**Table 7  
Summary of Impacts and Mitigation**

Building/Structure	Level of Impact Before Mitigation	Identified Impacts	Level of Impact After Mitigation
<i>Demolition (Project Level)</i>			
Berkeley Center (3000)	<b>Significant</b>	The Berkeley Center is a contributor to the Mid-Century Modern Campus Expansion Historic District. Demolition of an historical resource is a significant unavoidable impact.	<b>Significant</b> (demolition of an historical resource cannot be mitigated below a level of significance)  See MM-CUL-1
Horticulture (1600)	Less than significant	The horticulture complex was found not eligible under all NRHP, CRHR, and City designation criteria. Therefore, it is not a historical resource.	Less than significant  No mitigation required
Theatre Arts (1300)	<b>Significant</b>	The Theatre Arts building is a contributor to the Mid-Century Modern Campus Expansion Historic District. Demolition of an historical resource is a significant unavoidable impact.	<b>Significant</b> (demolition of an historical resource cannot be mitigated below a level of significance)  See MM-CUL-1
Music (1100)	<b>Significant</b>	The Music building is a contributor to the Mid-Century Modern Campus Expansion Historic District. Demolition of an historical resource is a significant unavoidable impact.	<b>Significant</b> (demolition of an historical resource cannot be mitigated below a level of significance)  See MM-CUL-1

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

**Table 7**  
**Summary of Impacts and Mitigation**

<b>Building/Structure</b>	<b>Level of Impact Before Mitigation</b>	<b>Identified Impacts</b>	<b>Level of Impact After Mitigation</b>
Student Services (2000)	Less than significant	The Student Services building was found not eligible under all NRHP, CRHR, and City designation criteria. Therefore, it is not a historical resource.	Less than significant No mitigation required
Media Services-Academic Computing-Maintenance and Operation Shops (2300)	Less than significant	The temporary Media Services building was found not eligible under all NRHP, CRHR, and City designation criteria. Therefore, it is not a historical resource.	Less than significant No mitigation required
Classrooms (1955-1960)	Less than significant	The temporary classroom buildings were found not eligible under all NRHP, CRHR, and City designation criteria. Therefore, they are not historical resources.	Less than significant No mitigation required
Classrooms (1901-1904)	Less than significant	The temporary classroom buildings were found not eligible under all NRHP, CRHR, and City designation criteria. Therefore, they are not historical resources.	Less than significant No mitigation required
Office (2200)	Less than significant	The temporary Micro Computer Lab building was found not eligible under all NRHP, CRHR, and City designation criteria. Therefore, it is not a historical resource.	Less than significant No mitigation required
Child Development (1800, 1810, 1820, and 1830)	Less than significant	The temporary classroom buildings were found not eligible under all NRHP, CRHR, and City designation criteria. Therefore, they are not historical resources.	Less than significant No mitigation required
<b>Demolition (Program Level)</b>			
428, 434, and 438 East Chapman Avenue and 400 North Newell Place	Less than significant	These buildings were found not eligible under all NRHP, CRHR and City designation criteria. Therefore, they are not historical resources.	Less than significant No mitigation required
<b>Renovation (Project Level)</b>			
Math (600)	<b>Potentially significant</b>	<p>The Math building was found eligible as a contributor to the Fullerton Junior College Campus Historic District. Proposed renovation activities have the potential to significantly impact the building.</p> <p>Potentially significant impacts include:</p> <ul style="list-style-type: none"> <li>-alteration/removal of interior CDFs</li> <li>-new exterior fenestrations for air intakes</li> <li>-replacement of original handrails</li> <li>-ADA renovations</li> </ul>	Less than significant after implementation of MM-CUL-2 and MM-CUL-3

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

**Table 7  
Summary of Impacts and Mitigation**

<b>Building/Structure</b>	<b>Level of Impact Before Mitigation</b>	<b>Identified Impacts</b>	<b>Level of Impact After Mitigation</b>
Physical Education (1200)	<b>Potentially significant</b>	<p>The PE building was found eligible as a contributor to the Mid-Century Modern Campus Expansion Historic District. Proposed renovation activities have the potential to significantly impact the building.</p> <p>Potentially significant impacts include: -ADA renovations</p>	Less than significant after implementation of MM-CUL-2 and MM-CUL-3
Wilshire Theatre (2100)	<b>Potentially significant</b>	<p>The Wilshire Theatre was found eligible as a contributor to the Wilshire Junior High School Historic District. Proposed renovation activities have the potential to significantly impact the building.</p> <p>Potentially significant impacts include: -alteration/removal of interior CDFs -ADA renovations -addition of new box office</p>	Less than significant after implementation of MM-CUL-2 and MM-CUL-3
Business (300)	<b>Potentially significant</b>	<p>The Business building was found eligible as a contributor to the Fullerton Junior College Campus Historic District. Proposed renovation activities have the potential to significantly impact the building. However, more detail is needed to fully assess the level of impact.</p> <p>Potentially significant impacts include: -alteration/removal of interior CDFs -alteration/removal of exterior CDFs -new exterior fenestrations for air intakes -replacement of original handrails -ADA renovations</p>	Less than significant after implementation of MM-CUL-2 and MM-CUL-3
Humanities (500)	<b>Potentially significant</b>	<p>The Humanities building was found eligible as a contributor to the Mid-Century Modern Campus Expansion Historic District. Proposed renovation activities have the potential to significantly impact the building.</p> <p>Potentially significant impacts include: -reconstruction of stairs and ramps -application of board form finish on exterior -application of roof tiles</p>	Less than significant after implementation of MM-CUL-2 and MM-CUL-3

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

**Table 7  
Summary of Impacts and Mitigation**

<b>Building/Structure</b>	<b>Level of Impact Before Mitigation</b>	<b>Identified Impacts</b>	<b>Level of Impact After Mitigation</b>
Campus Services (840)	<b>Potentially significant</b>	The Campus Services building was found eligible as a contributor to the Fullerton Junior College Campus Historic District. Proposed renovation activities have the potential to significantly impact the building.  Potentially significant impacts include: -addition of testing space -doorway modifications and other ADA renovations	Less than significant after implementation of MM-CUL-2 and MM-CUL-3
Administration Building (100)	<b>Potentially significant</b>	The Administration building was found eligible as a contributor to the Fullerton Junior College Campus Historic District. Proposed renovation activities have the potential to significantly impact the building.  Potentially significant impacts include: -renovation of front upon removal of 1950s addition -renovation to entrance and basement	Less than significant after implementation of MM-CUL-2 and MM-CUL-3
Fine Arts Gallery (1000)	<b>Potentially significant</b>	The Fine Arts Gallery building was found eligible as a contributor to the Mid-Century Modern Campus Expansion Historic District. Proposed renovation activities have the potential to significantly impact the building.  Potentially significant impacts include: -installation of new glass doors -application of board form finish to exterior -replacement of elevator -replacement of handrails	Less than significant after implementation of MM-CUL-2 and MM-CUL-3
Academic Computing (3100)	Less than significant	The Academic Computing building was found not eligible under all NRHP, CRHR, and City designation criteria. Therefore, it is not a historical resource.	Less than significant  No mitigation required
<b><i>New Construction (Project Level)</i></b>			
Welcome Center	<b>Potentially significant</b>	See Demolition section above for a discussion of impacts related to demolition of the Music building (1100).  Potential significant impacts include: -incompatible massing, size, scale, and architectural features in relation to adjacent historic buildings. -damage to adjacent historic buildings.	Less than significant after implementation of MM-CUL-2 and MM-CUL-3

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

**Table 7  
Summary of Impacts and Mitigation**

<b>Building/Structure</b>	<b>Level of Impact Before Mitigation</b>	<b>Identified Impacts</b>	<b>Level of Impact After Mitigation</b>
New Instructional Building	<b>Potentially significant</b>	The proposed design/style of the new building is currently unknown.  Potential significant impacts include: -incompatible massing, size, scale, and architectural features in relation to adjacent historic buildings. -damage to adjacent historic buildings.	Less than significant after implementation of MM-CUL-2 and MM-CUL-3
Horticulture and Vocational Services Center	Less than significant	Although the proposed design/style of the new buildings is currently unknown, the proposed location of the new building is at significant distance from any historic district buildings, and is located within a portion of campus that is primarily of recent construction.	Less than significant  No mitigation required
Centennial Parking Structure	Less than significant	The proposed location of the new parking structure is at significant distance from any historic district buildings, and is located within a portion of campus that is primarily of recent construction.	Less than significant  No mitigation required
Pedestrian Bridge	Less than significant	The proposed location of the new bridge is at significant distance from any historic district buildings, and is located within a portion of campus that is primarily of recent construction. Further, the bridge will only connect with new construction.	Less than significant  No mitigation required
Realignment of Campus Access to the Centennial Parking Structure	Less than significant	The proposed location of the campus access realignment is at significant distance from any historic district buildings, and is located within a portion of campus that is primarily of recent construction.	Less than significant  No mitigation required
Parking Lots	Less than significant	See Demolition section above for a discussion of impacts related to demolition of the Berkeley Center building (3100); Theatre Arts building (1300); and 428, 434, and 438 E. Chapman Avenue and 400 N. Newell Place residential buildings.  The proposed location of the new parking lots will not impact any adjacent historical resources.	Less than significant  No mitigation required

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

**Table 7  
Summary of Impacts and Mitigation**

<b>Building/Structure</b>	<b>Level of Impact Before Mitigation</b>	<b>Identified Impacts</b>	<b>Level of Impact After Mitigation</b>
Maintenance and Operation Facility, Chiller Plant Addition, and Thermal Energy Storage	Less than significant	<p>The proposed location of the new Maintenance and Operation Facility is at significant distance from any historic district buildings, and is located within a portion of campus that is primarily of recent construction.</p> <p>The Chiller Plant was is of recent construction and is at a significant distance from any historic district buildings.</p> <p>The proposed thermal energy storage tank building addition is at significant distance from any historic district buildings, and is located within a portion of campus that is primarily of recent construction.</p>	<p>Less than significant</p> <p>No mitigation required</p>
Aquatics Center	Less than significant	The pool area is of recent construction, so construction of the new shower/locker room will not impact surrounding historical resources.	<p>Less than significant</p> <p>No mitigation required</p>
Performing Arts Complex	<b>Potentially significant</b>	<p>See Renovation section above for a discussion of impacts related to renovation of the Wilshire Theatre.</p> <p>Although the proposed Performing Arts Complex will block the view of the Wilshire Junior High School Historic District from Chapman Avenue, the district was blocked by two buildings (part of the Chapman School) during its period of significance. The existing sculpture garden was installed relatively recently (between 1980 and 1995) and does not contribute to the significance of the district or its historic setting. However, construction of the new building in close proximity to the Wilshire Junior High School Historic District has the potential for construction-related impacts.</p>	Less than significant after implementation of MM-CUL-3

# Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

**Table 7**  
**Summary of Impacts and Mitigation**

Building/Structure	Level of Impact Before Mitigation	Identified Impacts	Level of Impact After Mitigation
<i>New Construction (Program Level)</i>			
Chapman–Newell Instructional Building	<b>Potentially significant</b>	See Demolition section above for a discussion of impacts related to removal of the 428, 434, and 438 E. Chapman Avenue and 400 N. Newell Place residential buildings.  Potential significant impacts include: -incompatible massing, size, scale, and architectural features in relation to adjacent historic buildings. -damage to adjacent historic buildings.	Less than significant after implementation of MM-CUL-2 and MM-CUL-3
<i>Site Improvement Elements</i>			
Parking/Vehicular Entry Improvements	Less than significant	None of the proposed on-campus circulation improvements appear to be near historical resources, nor would they disrupt any historic patterns of circulation.	Less than significant  No mitigation required
Pedestrian Circulation	<b>Potentially significant</b>	Although no specific information is known at this time, potential significant impacts include: -disruption of existing spatial relationships. -alteration of historic district CDFs.	Less than significant after implementation of MM-CUL-2 and MM-CUL-3
Infrastructure Improvements	<b>Potentially significant</b>	Although no specific information is known at this time, potential impacts resulting from infrastructure improvements include: - exterior modifications to historic buildings to accommodate new utility connections.	Less than significant after implementation of MM-CUL-2 and MM-CUL-3

CDF = character-defining feature; ADA = Americans with Disabilities Act.

## 6.1 Proposed Demolition

The proposed project includes the demolition of multiple buildings as part of implementation of the Facilities Master Plan. These buildings include the Berkeley Center (3000), Horticulture (1600), Theatre Arts (1300), Music (1100), Student Services (2000), Media Services (2300), Classrooms 1955–1960, Classrooms 1901–1904, Office (2200), and Child Development (1800, 1810, 1820, and 1830) buildings. The project also proposes removal of the residences at 428, 434, and 438 East Chapman Avenue and 400 North Newell Place at a program level.

Three of the buildings proposed for demolition, the Berkeley Center (3000), Theatre Arts (1300), and Music (1100) buildings, are contributing elements of the Mid-Century Modern Campus Expansion Historic District on campus and are considered historical resources under CEQA.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

Demolition of an historical resource constitutes “substantial adverse change” and is considered a significant effect on the environment (14 CCR 15064.5(b)) that cannot be mitigated below a level of significance. However, CEQA requires that all feasible mitigation be undertaken even if it does not mitigate below a level of significance. Mitigation for demolition of these buildings is provided in Section 6.5 (see MM-CUL-1). It is recommended that a preservation alternative be explored as part of the EIR to avoid a significant impact.

The Horticulture (1600), Student Services (2000), Media Services (2300), Classrooms 1955–1960, Classrooms 1901–1904, Office (2200), and Child Development (1800, 1810, 1820, and 1830) buildings are not considered historical resources under CEQA. Therefore, demolition of these buildings would result in a less than significant impact. No mitigation is required.

### **6.2 Proposed Renovations**

The project proposes renovations to the following buildings as part of implementation of the Facilities Master Plan: Math (600), Physical Education (1200), Wilshire Theatre (2100), Business (300), Humanities (500), Campus Services (840), Administration (100), Fine Arts Gallery (1000), and Academic Computing (3100).

Eight of the nine buildings proposed for renovation are considered historical resources under CEQA. The Math (600), Business (300), Campus Services (840), and Administration (100) buildings are contributing elements of the Fullerton Junior College Campus Historic District; the Physical Education (1200), Humanities (500), and Fine Arts Gallery (1000) buildings are contributing elements of the Mid-Century Modern Campus Expansion Historic District; and the Wilshire Theatre (2100) is a contributing element of the Wilshire Junior High School Historic District. Therefore, it is necessary to evaluate potential impacts to these buildings resulting from the proposed renovation activities.

#### **6.2.1 Interior Renovations**

Most campus buildings have been subject to extensive interior renovations that have compromised their interior integrity. However, three buildings, Math (600), Business (300), and Administration (100), were found to retain interior character-defining features that contribute to the significance of the resources, and should be protected/preserved during campus renovation activities. All three of these buildings are contributors to the Fullerton Junior College Campus Historic District. Interior features that should be retained include the following:

- Recessed doorways
- Wood doors with stacked panels

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

- Decorative iron work (including stair railings; light fixtures in buildings 100 and 300)
- Barrel vault ceilings
- Brass door hardware

In thoughtful treatment of interior character-defining features, impacts to building interiors can be less than significant with mitigation incorporated (see MM-CUL-2 in Section 6.5).

### **6.2.2 ADA Compliance Renovations (Interior and Exterior)**

ADA compliance modifications are proposed for all buildings undergoing renovation. In order to avoid significant impacts to historical resources, the District shall complete these renovations in a manner that is sensitive to the architectural style of the buildings/historic districts. The Secretary of the Interior's Guidelines for Rehabilitation includes an "Accessibility" section which provides guidance for making modifications to historic buildings that are in compliance with current accessibility codes while still maintaining important character-defining features, spaces, and finishes. National Park Service Preservation Brief 32, *Making Historic Properties Accessible* (Jester and Park 1993), also provides specific guidance on how to make historic buildings ADA accessible while minimizing changes to historic materials and features. Impacts resulting from ADA compliance work can be less than significant with mitigation incorporated (see MM-CUL-2 in Section 6.5).

### **6.2.3 Exterior Renovations**

The following provides an overview of proposed renovation activities that will impact the exterior of historic buildings. The specific details of the proposed renovation activities for each individual building are not known. However, this list identifies proposed renovation activities with the potential to significantly impact historic buildings and structures on campus (note that this list does not constitute a complete/final list of proposed exterior renovations):

- ADA compliance modifications (all buildings)
- Incorporation of new exterior fenestrations/louvers for air intakes (Math 600 and Business 300)
- Changes to building access/entrances (Physical Education 1200, Wilshire Theatre 2100, Business 300, Administration 100, and Fine Arts Gallery 1000)
- Designated box office for the Wilshire Theatre (2100) building
- Application of board-formed finish and/or Spanish roof tiles on Humanities (500) and Fine Arts Gallery (1000) buildings to match the original campus buildings
- Demolition of 1957 addition on Administration (100) building

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

These proposed exterior renovations have the potential to adversely impact historical resources, because they are proposed for buildings that contribute to the historic district on campus. Further, the vast majority of the identified character-defining features are found on the buildings' exteriors. Most of the impacts associated with the above-described proposed exterior renovations will be less than significant with incorporation of mitigation, specifically, conformance with the Secretary of the Interior's Standards for Rehabilitation (see MM-CUL-2 in Section 6.5). However, it is strongly recommended that some of the proposed changes be reconsidered, as they are unlikely to be mitigated below a level of significance. This includes the application of a board-formed concrete finish and Spanish roof tiles to the Humanities (500) and Fine Arts Gallery (1000) buildings. Because these are Mid-Century Modern style buildings, the application of Spanish Revival style details is considered incompatible with the existing style and aesthetic of the modern buildings, and does not conform to the Standards for Rehabilitation. If these proposed modifications are carried forward, they will likely result in a significant impact to historical resources. It is recommended that a preservation alternative be explored as part of the Program EIR to avoid a significant impact.

Some of the more substantial renovation activities have the potential to adversely impact adjacent historic buildings. In consideration of indirect impacts to adjacent buildings, it is strongly recommended that a preservation plan be developed that includes protection measures for historic buildings during demolition, renovation, and new construction activities (see MM-CUL-3 in Section 6.5).

### **6.3 Proposed New Construction**

The project proposes construction of the following new facilities/elements on campus: Welcome Center, Instructional building, Horticulture and Vocational Services Center, Centennial Parking Structure, pedestrian bridge, campus realignment for access to new parking structure, parking lots, Maintenance and Operation Facility, Chiller Plant addition, Thermal Energy Storage, Aquatics Center, Performing Arts Complex, and Chapman–Newell Instructional building.

Much of the proposed new construction will occur in the recently developed northern portion of campus, at a significant distance from historic buildings. This includes the Horticulture and Vocational Services Center, Centennial Parking Structure, pedestrian bridge, campus realignment for access to new parking structure, parking lots, Maintenance and Operation Facility, Chiller Plant addition, Thermal Energy Storage, and Aquatics Center. Because there are no direct or indirect impacts identified for historical resources, no additional mitigation is required for these construction activities.

Construction of the proposed Welcome Center and Instructional buildings has the potential to adversely impact adjacent historic buildings. The new buildings' designs should take into account the massing,

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

size, scale, and architectural features in relation to adjacent historic buildings. Most of the impacts associated with new construction adjacent to historic buildings will be less than significant with incorporation of mitigation, specifically, conformance with the Secretary of the Interior's Standards for Rehabilitation (see MM-CUL-2 in Section 6.5). Further, it is strongly recommended that a preservation plan be developed that includes protection measures for adjacent historic buildings during demolition, renovation, and new construction activities (see MM-CUL-3 in Section 6.5).

Although the proposed Performing Arts Complex will block the view of the Wilshire Junior High School Historic District from Chapman Avenue, the district was blocked by two buildings (part of the Chapman School) during its period of significance. The existing sculpture garden was installed relatively recently (between 1980 and 1995) and does not contribute to the significance of the district or its historic setting. However, construction of the new building in close proximity to the Wilshire Junior High School Historic District creates a potential for construction-related impacts. In consideration of indirect impacts to adjacent buildings, it is strongly recommended that a preservation plan be developed that includes protection measures for historic buildings during demolition, renovation, and new construction activities (see MM-CUL-3 in Section 6.5).

Construction of the proposed Chapman–Newell Instructional building has the potential to adversely impact adjacent historic buildings. The new buildings' designs should take into account the massing, size, scale, and architectural features in relation to the southerly adjacent East Townsite Historic District. Most of the impacts associated with new construction adjacent to historic buildings will be less than significant with incorporation of mitigation, specifically, conformance with the Secretary of the Interior's Standards for Rehabilitation (see MM-CUL-2 in Section 6.5). Further, it is strongly recommended that a preservation plan be developed that includes protection measures for adjacent historic buildings during demolition, renovation, and new construction activities (see MM-CUL-3).

### **6.4 Site Improvement Elements**

Various site improvement elements include new signage at campus entryways, clear and safe vehicular drop-offs, and creation of more pedestrian pathways.

#### **6.4.1 Parking/Vehicular Entry Improvements**

None of the proposed on-campus vehicular circulation improvements appear to be near historical resources, nor would they disrupt any historic patterns of circulation.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

### **6.4.2 Pedestrian Circulation**

The specific details of changes to existing pedestrian pathways on campus are not fully known. Therefore, proposed modifications must be considered a potentially significant impact to adjacent historical resources, because inappropriately modified pathways would potentially disrupt important spatial relationships and character-defining features within historic districts. Most of the impacts associated with pedestrian circulation improvements would be less than significant with incorporation of mitigation, specifically, conformance with the Secretary of the Interior's Standards for Rehabilitation (see MM-CUL-2 in Section 6.5). Further, it is strongly recommended that a preservation plan be developed that includes protection measures for adjacent historic buildings during demolition, renovation, and new construction activities (see MM-CUL-3).

### **6.4.3 Infrastructure Improvements**

The connection of new utility lines to historic buildings has the potential to alter interior and exterior character-defining features. Therefore, proposed infrastructure improvements must be considered a potentially significant impact to historical resources. Most of the impacts associated with infrastructure improvements will be less than significant with incorporation of mitigation, specifically, conformance with the Secretary of the Interior's Standards for Rehabilitation (see MM-CUL-2 in Section 6.5). Further, it is strongly recommended that a preservation plan be developed that includes protection measures for adjacent historic buildings during demolition, renovation, and new construction activities (see MM-CUL-3).

## **6.5 Recommended Mitigation**

The following mitigation is recommended only after a thorough consideration of alternatives to activities that will result in substantial adverse change to historical resources on campus. Although the following mitigation measure will not reduce impacts below a level of significance, CEQA requires that all feasible mitigation be undertaken.

**MM-CUL-1** Prior to demolition of the Berkley Center (3000), Theatre Arts building (1300), and Music building (1100), the North Orange County Community College District (District) shall ensure preparation of Level II Historic American Building Survey (HABS) documentation in accordance with the Secretary of the Interior's Standards for Architectural and Engineering Documentation. Documentation shall be completed by a qualified historic preservation professional who meets the Secretary of the Interior's Professional Qualifications Standards for history or architectural history. The documentation shall capture the physical condition of the existing building with (1) existing drawings (where available), (2) photographs of the buildings with large-

## Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

format negatives using an experienced HABS photographer, and (3) a written narrative that includes a history and architectural description of the buildings and highlights their historical significance.

One original copy of the final HABS documentation packet shall be offered to the following entities:

- The Library of Congress HABS Collection (to be offered as a donation only)
- The South Central Coastal Information Center at California State University, Fullerton
- City of Fullerton Planning Department
- Fullerton College Library
- Fullerton Public Library Main Branch (Local History Room)
- Fullerton Heritage
- Orange County Public Library
- Orange County Archives
- Orange County Historical Society

The following mitigation is recommended to reduce potentially significant impacts to historical resources to a less than significant level:

**MM-CUL-2** Prior to the start of new construction, additions, renovations (including Americans with Disabilities Act (ADA) compliance work), or site improvements within or adjacent to historical resources, including buildings within the Fullerton Junior College Campus Historic District, the Fullerton College Mid-Century Modern Historic District, the Wilshire Junior High School Historic District, and the East Townsite and College Park residential historic districts, associated design schematics/project plans shall be reviewed for conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties, specifically, the Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings. Further, all proposed ADA compliance work shall reference both the "Accessibility Considerations" section of the Rehabilitation Guidelines and National Park Service Preservation Brief 32, Making Historic Properties Accessible to ensure that ADA compliance work minimizes changes to historic materials and features. The project plan/schematic design review shall be completed by a qualified architectural historian or historic preservation specialist

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

who meets the Secretary of the Interior's Professional Qualification Standards for Architectural History. Upon review, the qualified specialist may recommend changes/revisions to project plans in order to obtain conformance with the Standards for Rehabilitation. Alternatively, the District may choose to work with a preservation architect who meets the Secretary of the Interior's Professional Qualification Standards.

- MM-CUL-3** An appropriate level of protection shall be provided for adjacent district buildings during proposed new construction and renovation activities. A preservation plan shall be developed to provide these details. At a minimum, protective fencing shall be used during construction activities so district buildings are not inadvertently impacted. The preservation plan shall also examine the potential effects of vibration resulting from nearby demolition and construction activities. The final preservation plan shall be appended to the final set of construction plans.

# Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR

---

## 7 SUMMARY AND MANAGEMENT RECOMMENDATIONS

### 7.1 Summary of Findings

#### 7.1.1 Built Environment

As a result of the significance evaluations for NRHP, CRHR, and City of Fullerton historical landmark eligibility criteria and integrity, the following historical resources were identified on the Fullerton College campus:

- **Fullerton Junior College Campus Historic District.** The original 1930s–1940s FJC Campus appears to be eligible as a historic district under NRHP/CRHR Criteria A/1 and C/3, as well as City of Fullerton historical landmark criteria 1, 5, 6, 7, and 8, for its association with WWII and the G.I. Bill and for conveying a concentration of planned buildings, structures, and associated elements united aesthetically by their embodiment of the Spanish Colonial Revival style. The buildings also represent the notable work of master architect Harry K. Vaughn, who created some of his most important work as an individual architect during the historic district’s period of significance (1935–1942).
- **Mid-Century Modern Campus Expansion Historic District.** The buildings designed by William Henry Taylor during the late 1950s through the 1960s appear to be eligible as a historic district under NRHP/CRHR Criterion C/3, as well as City of Fullerton historical landmark criteria 5, 6, and 8, for conveying a concentration of planned buildings, structures, and associated elements united aesthetically by their embodiment of the International and New Formalism styles. The buildings also represent the notable work of modern architect Taylor.
- **Music Building (Building 1100).** This building appears eligible as both a district contributor (of the Mid-Century Modern Campus Expansion Historic District) and an individual property under NRHP/CRHR Criterion C/3, as well as City of Fullerton historical landmark criteria 5, 6, 7, 8, and 9, for its high artistic value associated with the New Formalism style and for its location prominently anchoring the southwest corner of campus.
- **Wilshire Junior High School Historic District.** The original 1936 Wilshire Junior High School campus buildings appear to be eligible as a historic district under NRHP/CRHR Criteria A/1 and C/3 and City of Fullerton historical landmark criteria 3, 5, and 8 for conveying a concentration of planned buildings, structures, and associated elements united aesthetically by their embodiment of the PWA/WPA Moderne style. The buildings also represent the notable work of architect Donald Beach Kirby, whose best-known projects are the 1940 Maharajah of Indore Residence in Santa Ana and the 1950 Miss Burke’s School in San Francisco.

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

As a result of these findings, the proposed project has the potential to adversely impact historical resources (see Table 7 in Section 6, Impacts Analysis). Management recommendations to reduce impacts to historical resources are provided in Section 7.2.

### **7.1.2 Archaeology**

No archaeological resources were identified within the project site as a result of the CHRIS records search or Native American coordination. However, it is always possible that intact archaeological deposits are present at subsurface levels. For these reasons, the project site should be treated as potentially sensitive for archaeological resources. Management recommendations to reduce potential impacts to unanticipated archaeological resources and human remains during campus construction activities are provided in Section 7.2.

## **7.2 Management Recommendations**

### **7.2.1 Built Environment Resources**

It is recommended that the District explore a reasonable range of preservation alternatives in the Program EIR for proposed demolition activities that would result in a significant impact to identified historical resources. This includes demolition of the Berkeley Center (3000), Theatre Arts (1300), and Music (1100) buildings. Demolition of a historical resource constitutes “substantial adverse change” and is considered a significant effect on the environment (14 CCR 15064.5(b)) that cannot be mitigated below a level of significance. However, CEQA requires that all feasible mitigation be undertaken even if it does not mitigate below a level of significance. Mitigation for demolition of these buildings is provided in Section 6.5 (see MM-CUL-1).

It is further recommended that the District make all proposed renovations and plans for new construction in conformance with the Secretary of the Interior’s Standards and Guidelines for Rehabilitation (see MM-CUL-2) in order to reduce potentially significant impacts to a less than significant level; finally, it is recommended that the District prepare a preservation plan that details how historical resources will be protected during renovations and adjacent demolition and construction activities (see MM-CUL-3).

### **7.2.3 Archaeological Resources**

#### **Unanticipated Discovery of Archaeological Resources**

In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities for the proposed project, all construction work occurring within 100 feet of the find shall immediately stop until a qualified archaeologist, meeting the Secretary of the

## **Cultural Resources Study for the Fullerton College Facilities Master Plan Program EIR**

---

Interior's Professional Qualification Standards, can evaluate the significance of the find and determine whether or not additional study is warranted. Depending upon the significance of the find under CEQA (14 CCR 15064.5(f); PRC Section 21082), the archaeologist may simply record the find and allow work to continue. If the discovery proves significant under CEQA, additional work, such as preparation of an archaeological treatment plan, testing, or data recovery, may be warranted.

### **Unanticipated Discovery of Human Remains**

In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the County Coroner shall be immediately notified of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the County Coroner has determined, within 2 working days of notification of the discovery, the appropriate treatment and disposition of the human remains. If the County Coroner determines that the remains are, or are believed to be, Native American, the County Coroner shall notify the NAHC in Sacramento within 24 hours. In accordance with PRC Section 5097.98, the NAHC must immediately notify those persons it believes to be the most likely descendant from the deceased Native American. The most likely descendant shall complete their inspection within 48 hours of being granted access to the site. The designated Native American representative would then determine, in consultation with the property owner, the disposition of the human remains.

RE: Proposed Fullerton College Facilities Master Plan Project, City of Fullerton; La Habra and Anaheim USGS  
Quadrangles, Orange County, California

Dear Ms. Murray:

Attached is a contact list of tribes with traditional lands or cultural places located within the boundaries of the above referenced counties. A search of the SFL was completed for the USGS quadrangle information provided with negative results.

**Our records indicate that the lead agency for this project has not requested a Native American Consultation List for the purposes of formal consultation.** Lists for cultural resource assessments are different than consultation lists. Please note that the intent of the referenced codes below is to avoid or mitigate impacts to tribal cultural resources, as defined, for California Environmental Quality Act (CEQA) projects under AB-52.

As of July 1, 2015, Public Resources Code Sections 21080.3.1 and 21080.3.2 **require public agencies** to consult with California Native American tribes identified by the Native American Heritage Commission (NAHC) for the purpose mitigating impacts to tribal cultural resources:

**Within 14 days** of determining that an application for a project is complete or a decision by a public agency to undertake a project, the lead agency shall provide formal notification to the designated contact of, or a tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, which shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section. (Public Resources Code Section 21080.3.1(d))

The law does not preclude agencies from initiating consultation with the tribes that are culturally and traditionally affiliated with their jurisdictions. The NAHC believes that in fact that this is the best practice to ensure that tribes are consulted commensurate with the intent of the law.

In accordance with Public Resources Code Section 21080.3.1(d), formal notification must include a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation. The NAHC believes that agencies should also include with their notification letters information regarding any cultural resources assessment that has been completed on the APE, such as:

1. The results of any record search that may have been conducted at an Information Center of the California Historical Resources Information System (CHRIS), including, but not limited to:
  - A listing of any and all known cultural resources have already been recorded on or adjacent to the APE;
  - Copies of any and all cultural resource records and study reports that may have been provided by the Information Center as part of the records search response;
  - If the probability is low, moderate, or high that cultural resources are located in the APE.
  - Whether the records search indicates a low, moderate or high probability that unrecorded cultural resources are located in the potential APE; and

- If a survey is recommended by the Information Center to determine whether previously unrecorded cultural resources are present.
2. The results of any archaeological inventory survey that was conducted, including:
    - Any report that may contain site forms, site significance, and suggested mitigation measures.
    - All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for public disclosure in accordance with Government Code Section 6254.10.
  3. The results of any Sacred Lands File (SFL) check conducted through Native American Heritage Commission.
  4. Any ethnographic studies conducted for any area including all or part of the potential APE; and
  5. Any geotechnical reports regarding all or part of the potential APE.

Lead agencies should be aware that records maintained by the NAHC and CHRIS is not exhaustive, and a negative response to these searches does not preclude the existence of a cultural place. A tribe may be the only source of information regarding the existence of a tribal cultural resource.

This information will aid tribes in determining whether to request formal consultation. In the case that they do, having the information beforehand will help to facilitate the consultation process.

The results of these searches and surveys should be included in the "Tribal Cultural Resources" section or in a separate subsection of the Cultural Resources section of the environmental document submitted for review. Please reference California Natural Resources Agency (2016) "Final Text for tribal cultural resources update to Appendix G: Environmental Checklist Form," <http://resources.ca.gov/ceqa/docs/ab52/Clean-final-AB-52-App-G-text-Submitted.pdf>.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance we are able to assure that our consultation list contains current information.

If you have any questions, please contact me at my email address: [gayle.totton@nahc.ca.gov](mailto:gayle.totton@nahc.ca.gov).

Sincerely,

Gayle Totton, M.A., PhD.

***Subject: Fullerton College Facilities Master Plan Project, City of Fullerton, Orange County, California***

Dear Mr. Belardes:

Dudek was retained by the North Orange County Community College District (NOCCCD) to conduct a cultural resources study for the Fullerton College Facilities Master Plan Project (the proposed project). Fullerton College was formed in 1913 and is the District's oldest campus. The NOCCCD is undertaking a comprehensive improvement and building program to make upgrades and repairs of existing buildings as well as to construct new facilities to improve the safety and education experience of those attending Fullerton College in accordance with Measure J. The proposed project involves demolition of certain existing buildings; the renovation of existing buildings; and the construction and eventual operation of new buildings and campus facilities.

Fullerton College is located at 321 E. Chapman Avenue in the City of Fullerton (City) and occupies an approximately 70-acre site in northern Orange County. Specifically, Fullerton College is bounded by residential development to the north, south, and east and Fullerton Union High School to the west. The project area falls within Section 27 of Township 3 South, Range 10 West of the USGS 7.5-Minute *Anaheim* and *La Habra* Quadrangles (see attached map).

As part of the process of identifying cultural resources issues for this proposed project, Dudek contacted the California Native American Heritage Commission (NAHC) to request a Sacred Lands File (SLF) search and a list of Native American individuals and/or tribal organizations who may have knowledge of cultural resources in or near the proposed project site. The SLF search failed to indicate the presence of Native American cultural resources in the immediate project area.

A California Historical Resources Information System (CHRIS) records search was conducted for the proposed project site and a one-half-mile radius at the South Central Coastal Information Center (SCCIC). The SCCIC has no record of prehistoric or historic archaeological sites within

*Mr. Belardes:*

*Subject: Fullerton College Facilities Master Plan Project, City of Fullerton, Orange County, California*

the proposed project site. There is one previously recorded prehistoric resource approximately one-half-mile southwest of the proposed project site.

The NAHC recommended that we contact you regarding your knowledge of the presence of cultural resources that may be impacted by this project. If you have any knowledge of cultural resources that may exist within or near the proposed project site, please contact me directly at (760) 840-7556, [adorrler@dudek.com](mailto:adorrler@dudek.com), or at 3544 University Avenue, Riverside, CA 92501 within 15 days of receipt of this letter.

Please note that this letter does not constitute Assembly Bill (AB) 52 notification or initiation of consultation. AB 52 is a process between the lead agency and California Native American Tribes concerning potential impacts to tribal cultural resources. Tribes that wish to be notified of projects for the purposes of AB 52 must contact the lead agency, the NOCCCD, in writing (pursuant to Public Resources Code Section 21080.3.1 (b)).

Thank you for your assistance.

Sincerely,

---

Dudek was retained by the North Orange County Community College District (NOCCCD) to conduct a cultural resources study for the Fullerton College Facilities Master Plan Project (the proposed project). Fullerton College was formed in 1913 and is the District's oldest campus. The NOCCCD is undertaking a comprehensive improvement and building program to make upgrades and repairs of existing buildings as well as to construct new facilities to improve the safety and education experience of those attending Fullerton College in accordance with Measure J. The proposed project involves demolition of certain existing buildings; the renovation of existing buildings; and the construction and eventual operation of new buildings and campus facilities.

Fullerton College is located at 321 E. Chapman Avenue in the City of Fullerton (City) and occupies an approximately 70-acre site in northern Orange County. Specifically, Fullerton College is bounded by residential development to the north, south, and east and Fullerton Union High School to the west. The project area falls within Section 27 of Township 3 South, Range 10 West of the USGS 7.5-Minute *Anaheim* and *La Habra* Quadrangles (see attached map).

As part of the process of identifying cultural resources issues for this proposed project, Dudek contacted the California Native American Heritage Commission (NAHC) to request a Sacred Lands File (SLF) search and a list of Native American individuals and/or tribal organizations who may have knowledge of cultural resources in or near the proposed project site. The SLF search failed to indicate the presence of Native American cultural resources in the immediate project area.

A California Historical Resources Information System (CHRIS) records search was conducted for the proposed project site and a one-half-mile radius at the South Central Coastal Information Center (SCCIC). The SCCIC has no record of prehistoric or historic archaeological sites within the proposed project site. There is one previously recorded prehistoric resource approximately one-half-mile southwest of the proposed project site.

---

The NAHC recommended that we contact you regarding your knowledge of the presence of cultural resources that may be impacted by this project. If you have any knowledge of cultural resources that may exist within or near the proposed project site, please contact me directly at (760) 840-7556, [adorrler@dudek.com](mailto:adorrler@dudek.com), or at 3544 University Avenue, Riverside, CA 92501 within 15 days of receipt of this letter.

Please note that this letter does not constitute Assembly Bill (AB) 52 notification or initiation of consultation. AB 52 is a process between the lead agency and California Native American Tribes concerning potential impacts to tribal cultural resources. Tribes that wish to be notified of projects for the purposes of AB 52 must contact the lead agency, the NOCCCD, in writing (pursuant to Public Resources Code Section 21080.3.1 (b)).

Thank you for your assistance.

Sincerely,

---

Adriane Dorrlar  
Archaeologist

Mr. Andrew Salas, Chairperson  
Gabrielino Band of Mission Indians  
P.O. Box 393  
Covina, CA 91723

***Subject: Fullerton College Facilities Master Plan Project, City of Fullerton, Orange County, California***

Dear Mr. Salas:

Dudek was retained by the North Orange County Community College District (NOCCCD) to conduct a cultural resources study for the Fullerton College Facilities Master Plan Project (the proposed project). Fullerton College was formed in 1913 and is the District's oldest campus. The NOCCCD is undertaking a comprehensive improvement and building program to make upgrades and repairs of existing buildings as well as to construct new facilities to improve the safety and education experience of those attending Fullerton College in accordance with Measure J. The proposed project involves demolition of certain existing buildings; the renovation of existing buildings; and the construction and eventual operation of new buildings and campus facilities.

Fullerton College is located at 321 E. Chapman Avenue in the City of Fullerton (City) and occupies an approximately 70-acre site in northern Orange County. Specifically, Fullerton College is bounded by residential development to the north, south, and east and Fullerton Union High School to the west. The project area falls within Section 27 of Township 3 South, Range 10 West of the USGS 7.5-Minute *Anaheim* and *La Habra* Quadrangles (see attached map).

As part of the process of identifying cultural resources issues for this proposed project, Dudek contacted the California Native American Heritage Commission (NAHC) to request a Sacred Lands File (SLF) search and a list of Native American individuals and/or tribal organizations who may have knowledge of cultural resources in or near the proposed project site. The SLF search failed to indicate the presence of Native American cultural resources in the immediate project area.

A California Historical Resources Information System (CHRIS) records search was conducted for the proposed project site and a one-half-mile radius at the South Central Coastal Information Center (SCCIC). The SCCIC has no record of prehistoric or historic archaeological sites within the proposed project site. There is one previously recorded prehistoric resource approximately one-half-mile southwest of the proposed project site.

Subject: Fullerton College Facilities Master Plan Project, City of Fullerton, Orange County, California

## GABRIELEÑO BAND OF MISSION INDIANS - KIZH NATION

Historically known as The San Gabriel Band of Mission Indians  
Recognized by the State of California as the aboriginal tribe of the Los Angeles basin

Dear Adrienne Dorrlor,

**Subject: Fullerton College Facilities Master Plan Project, City of Fullerton, Orange County, California**

"The project locale lies in an area where the Ancestral & traditional territories of the Kizh(Kitc) Gabrieleño villages adjoined and overlapped with each other, at least during the Late Prehistoric and Protohistoric Periods. The homeland of the Kizh (Kitc) Gabrieleños , probably the most influential Native American group in aboriginal southern California (Bean and Smith 1978a:538), was centered in the Los Angeles Basin, and reached as far east as the San Bernardino-Riverside area. The homeland of the Serranos was primarily the San Bernardino Mountains, including the slopes and lowlands on the north and south flanks. Whatever the linguistic affiliation, Native Americans in and around the project area exhibited similar organization and resource procurement strategies. Villages were based on clan or lineage groups. Their home/ base sites are marked by midden deposits, often with bedrock mortars. During their seasonal rounds to exploit plant resources, small groups would migrate within their traditional territory in search of specific plants and animals. Their gathering strategies often left behind signs of special use sites, usually grinding slicks on bedrock boulders, at the locations of the resources. Therefore, in order to protect our resources we're requesting one of our experienced & certified Native American monitor and an Professional Archeologist- Monitor to be on site during any & all ground disturbances (this includes but is not limited to pavement removal, pot-holing, or grubbing, auguring, boring, grading, excavation and trenching).

In all cases, when the NAHC states there are "No" records of sacred sites" in the subject area; they always refer the contractors back to the Native American Tribes whose tribal territory the project area is in. This is due to the fact, that the NAHC is only aware of general information on each California NA Tribe they are "NOT" the "experts" on our Tribe. Our Elder Committee & Tribal Historians are the experts and is the reason why the NAHC will always refer contractors to the local tribes.

In addition, we are also often told that an area has been previously developed or disturbed and thus there are no concerns for cultural resources and thus minimal impacts would be expected. I have two major recent examples of how similar statements on other projects were proven very inadequate. An archaeological study claimed there would be no impacts to an area adjacent to the Plaza Church at Olvera Street, the original Spanish settlement of Los Angeles, now in downtown Los Angeles. In fact, this site was the Gabrieleno village of Yangna long before it became what it is now today. The new development wrongfully began their construction and they, in the process, dug up and desecrated 118 burials. The area that was dismissed as culturally sensitive was in fact the First Cemetery of Los Angeles where it had been well documented at the Huntington Library that 400 of our Tribe's ancestors were buried there along with the founding families of Los Angeles (Pico's, Sepulveda's, and Alvarado's to name a few). In addition, there was another inappropriate study for the development of a new sports complex at Fedde Middle School in the City of Hawaiian Gardens could commence. Again, a village and burial site were desecrated despite their mitigation measures. Thankfully, we were able to work alongside the school district to quickly and respectfully mitigate a mutually beneficial resolution.

Given all the above, the proper thing to do for your project would be for our Tribe to monitor ground disturbing construction work. Native American monitors and/or consultant can see that cultural resources are treated appropriately from the Native American point of view. Because we are the lineal descendants of the vast area of Los Angeles and Orange Counties, we hold sacred the ability to protect what little of our culture remains. We thank you for taking seriously your role and responsibility in assisting us in preserving our culture.

With respect,

Please contact our office regarding this project to coordinate a Native American Monitor to be present. Thank You

Andrew Salas, Chairman

Richard Gradias, Chairman of the council of Elders

Addendum: clarification regarding some confusions regarding consultation under AB52:

AB52 clearly states that consultation must occur with tribes that claim traditional and cultural affiliation with a project site. Unfortunately, this statement has been left open to interpretation so much that neighboring tribes are claiming affiliation with projects well outside their traditional tribal territory. The territories of our surrounding Native American tribes such as the Luiseno, Chumash, and Cahuilla tribal entities. Each of our tribal territories has been well defined by historians, ethnographers, archaeologists, and ethnographers – a list of resources we can provide upon request. Often, each Tribe as well educates the public on their very own website as to the definition of their tribal boundaries. You may have received a consultation request from another Tribe. However we are responding because your project site lies within our Ancestral tribal territory, which, again, has been well documented. What does Ancestrally or Ancestral mean? The people who were in your family in past times, Of, belonging to, inherited from, or denoting an ancestor or ancestors <http://www.thefreedictionary.com/ancestral>. . If you have questions regarding the validity of the “traditional and cultural affiliation” of another Tribe, we urge you to contact the Native American Heritage Commission directly. Section 5 section 21080.3.1 (c) states “...the Native American Heritage Commission shall assist the lead agency in identifying the California Native American tribes that are traditionally and culturally affiliated with the project area.” In addition, **please see the map below.**

# **APPENDIX C**

## *Preparers' Qualifications*

# Samantha Murray, MA

## Senior Architectural Historian and Built Environment Lead

Samantha Murray is a senior architectural historian with 12 years' professional experience in all elements of cultural resources management, including project management, intensive-level field investigations, architectural history studies, and historical significance evaluations in consideration of the California Register of Historical Resources (CRHR), the National Register of Historic Places (NRHP), and local-level evaluation criteria. Ms. Murray has conducted hundreds of historical resource evaluations and developed detailed historic context statements for a multitude of property types and architectural styles, including private residential, commercial, industrial, educational, medical, ranching, mining, airport, and cemetery properties, as well as a variety of engineering structures and objects. She has also provided expertise on numerous projects requiring conformance with the *Secretary of the Interior's Standards for the Treatment of Historic Properties*.

### EDUCATION

California State University, Los Angeles  
MA, Anthropology, 2013

California State University, Northridge  
BA, Anthropology, 2003

### PROFESSIONAL AFFILIATIONS

California Preservation Foundation

Society of Architectural Historians

National Trust for Historic Preservation

Ms. Murray meets the Secretary of the Interior's Professional Qualification Standards for both Architectural History and Archaeology. She is experienced managing multidisciplinary projects in the lines of transportation, transmission and generation, federal land management, land development, state and local government, and the private sector. She has experience preparing environmental compliance documentation in support of projects that fall under the California Environmental Quality Act (CEQA)/National Environmental Policy Act (NEPA), and Sections 106 and 110 of the National Historic Preservation Act (NHPA). She also prepared numerous Historic Resources Evaluation Reports (HRERs) and Historic Property Survey Reports (HPSRs) for the California Department of Transportation (Caltrans).

## Dudek Project Experience (2014-2017)

### Development

**Yosemite Avenue-Gardner Avenue to Hatch Road Annexation Project, City of Merced, Merced County, California.** Ms. Murray managed and reviewed the historic resource significance evaluation of a single-family residence/agricultural property within the proposed project site. The evaluation found the property not eligible under all NRHP and CRHR designation criteria. The project proposes to annex 70 acres from Merced County to the City of Merced and to construct and operate the University Village Merced Student Housing and Commercial component on an approximately 30-acre portion of the project site. No development is proposed on the remaining 40 acres.

**Schouten House Property Evaluation, California State University, Chico Research Foundation, Butte County, California.** Ms. Murray prepared a historic resource evaluation report and DPR form for a former single-family residence located at 2979 Hegan Lane in Butte County, California, in consideration of CRHR and local level eligibility criteria and integrity requirements. The University Research Foundation was proposing demolition of the property.

**Avenidas Expansion Project, City of Palo Alto, Santa Clara County, California.** Ms. Murray peer reviewed a historical resource evaluation report for the property at 450 Bryant Street. The peer review assessed the report's adequacy as an evaluation in consideration of state and local eligibility criteria and assessed the project's conformance with the Secretary of the Interior's Standards for Rehabilitation.

**Robertson Lane Hotel Commercial Redevelopment Project, City of West Hollywood, California.** Ms. Murray is currently serving as architectural historian and peer reviewer of the historical evaluation report. The project involved conducting a records search, archival research, consultation with local historical groups, preparation of a detailed historic context statement, evaluation of three buildings proposed for demolition in consideration of local, CRHR, and NRHP designation criteria, and assistance with the EIR alternatives analysis.

**Rocketship Senter Road Public Elementary School Project, City of San Jose, Santa Clara County, California.** Ms. Murray served as architectural historian and prepared a historic resource evaluation report in compliance with the City of San Jose's historic preservation ordinance. Ms. Murray evaluated a 1960s church building in consideration of NRHP, CRHR, and local designation criteria and integrity requirements.

**Jack in the Box Drive Through Restaurant Project, City of Downey, Los Angeles County, California.** Ms. Murray served as architectural historian and lead author of the cultural resources study which included evaluation of two historic resources in consideration of national, state, and local criteria and integrity requirements. The study also included a records search, survey, and Native American Coordination.

**San Carlos Library Historical Resource Technical Report, City of San Diego, California.** Ms. Murray served as architectural historian and author of the Historical Resource Technical Report for the San Carlos Library. Preparation of the report involved conducting extensive building development and archival research on the library building, development of a historic context, and a historical significance evaluation in consideration of local, state, and national designation criteria and integrity requirements. The project proposes to build a new, larger library building.

**Historical Evaluation of 3877 El Camino Real, City of Palo Alto, California.** Ms. Murray served as architectural historian, originally providing a peer review of another consultant's evaluation. The City then asked Dudek to re-do the original evaluation report. As part of this work Ms. Murray conducted additional archival research on the property and evaluated the building for historical significance in consideration of local, state, and national designation criteria and integrity requirements. The project proposes to demolish the existing building and develop new housing.

**429 University Avenue Historic Resources Evaluation Report Peer Review, City of Palo Alto, California.** Ms. Murray conducted a peer review of a study prepared by another consultant, and provided a memorandum summarizing the review, comments, and recommendations, and is currently working on additional building studies for the City of Palo Alto.

**1050 Page Mill Road Historic Resources Evaluation Report Peer Review, City of Palo Alto, Santa Clara County, California.** Ms. Murray conducted a peer review of a study prepared by another consultant, and provided a memorandum summarizing the review, comments, and recommendations.

**Big Chico Creek Ecological Reserve (BCCER) Henning Property Historical Evaluation, California State University, Chico, California.** Ms. Murray authored the historical significance evaluation report for a property located at 3521 14 Mile House Road as requested by the California State University Chico Research Foundation. The property is historically known as the Henning Property and has served as the BCCER conference center in recent years. The Foundation is considering demolition of the existing property due to numerous safety concerns and the high cost associated with bringing the building up to current code requirements.

**635 S. Citrus Avenue Proposed Car Dealership MND, City of Covina, California.** Ms. Murray served as architectural historian and archaeologist, and author of the cultural resources MND section. The project proposes to convert an existing Enterprise Rent-a-Car facility into a car dealership. As part of the MND section, Ms. Murray conducted a records search, Native American coordination, background research, building permit research, and a historical significance evaluation of the property. The study resulted in a finding of less-than-significant impacts to cultural resources.

**8228 Sunset Boulevard Tall Wall Project, City of West Hollywood, California.** Ms. Murray prepared DPR forms and conducted building development and archival research to evaluate a historic-age office building. The project proposes to install a tall wall sign on the east side of the building.

**Historic Resource Evaluation of 8572 Cherokee Drive, City of Downey, California.** Ms. Murray served as architectural historian and project manager. She prepared a historical resource evaluation report and a set of DPR forms to evaluate a partially demolished residence that was previously determined eligible for inclusion in the NRHP (known as the Al Ball House). The current owner is proposing to subdivide the lot and develop four new homes.

**Montclair Plaza Expansion Project, City of Montclair, California.** Resources MND section, which included an evaluation of several department store buildings proposed for demolition. The project proposes to expand the existing Montclair Plaza Shopping Center.

**Foothill 533 IS/MND, City Ventures, City of Glendora, California.** Ms. Murray served as architectural historian, archaeologist, and author of the cultural resources IS/MND section. As part of the cultural study, Ms. Murray recorded and evaluated five historic-age commercial/industrial properties proposed for demolition as part of the project. The project proposes to develop a series of new townhomes.

**Normal Street Project, City of San Diego, California.** Ms. Murray served as architectural historian and co-author of the Historical Resources Technical Report for properties located at 3921-3923; 3925-3927; 3935 Normal Street for the City of San Diego's Development Services Department. Ms. Murray assisted with the final round of comments from the City and wrote the historical significance evaluations for all properties included in the project.

## Education

**Kings Beach Elementary School Modernization Project, Tahoe Truckee Unified School District, Tahoe City, Placer County, California.** Ms. Murray served as architectural historian and co-author of the cultural resources study. The study involved evaluation of the existing school for NRHP, CRHR and local eligibility, conducting archival and building development research, a records search, and Native American coordination.

**Cypress College Facilities Master Plan Program EIR, City of Cypress, Orange County, California.** The North Orange County Community College District (NOCCCD) is undertaking a comprehensive improvement and building program to make upgrades and repairs to existing buildings, as well as to construct new facilities to improve the safety and education experience of those attending Cypress College. The College proposed to implement the Facilities Master Plan to more effectively meet the space needs of the projected on-campus enrollment through the next decade and beyond, while constructing and renovating facilities to meet the District's instructional needs. Ms. Murray authored the cultural resources study for the project, which included a significance evaluation of all 1960s and 1970s buildings on campus proposed for demolition or renovation. As a result of the significance evaluation, including consideration of CRHR evaluation criteria and integrity requirements, the original 1960s–1970s campus appears to be eligible as a historic district under CRHR Criterion 3 for conveying a concentration of planned buildings, structures, and associated elements united aesthetically by their embodiment of the Brutalist style. The study also entailed conducting extensive archival and building development research, a records search, Native American coordination, detailed impacts assessment, and development of mitigation measures for project conformance with the Secretary of the Interior's Standards for Rehabilitation.

**Tahoe Lake Elementary School Facilities Master Plan Project, Tahoe Truckee Unified School District, Tahoe City, Placer County, California.** Ms. Murray served as architectural historian and lead author of the cultural resources study. She recorded and evaluated the Tahoe Lake Elementary School Building for NRHP, CRHR, and local level criteria and integrity considerations. The study also entailed conducting archival and building development research, a records search, and Native American coordination.

**San Diego State University (SDSU) Open Air Theater Renovation Project, SDSU and Gatzke Dillon & Balance, LLP, San Diego, California.** Ms. Murray served as architectural historian and prepared a technical memorandum that analyzed the project's potential to impact the OAT theater (a contributing property to the San Diego State College NRHP Historic District). This included conducting a site visit, reviewing proposed site and design plans, and preparing a memorandum analyzing the project's conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties.

**Mt. San Jacinto College (MSJC) Master Plan Project, City of San Jacinto, Riverside County, California.** Ms. Murray served as architectural historian, archaeologist, and lead author of the cultural resources study. As part of the study she evaluated 11 buildings for NRHP, CRHR, and local level criteria and integrity requirements. The buildings were constructed prior to 1970 and proposed for demolition as part of the project. The study also entailed conducting extensive archival and building development research at District offices, a records search, and Native American coordination.

**San Diego State University (SDSU) Engineering and Sciences Facilities Project, SDSU and Gatzke Dillon & Balance, LLP, San Diego, California.** Ms. Murray served architectural historian, archaeologist, and lead author of the Cultural Resources Technical Report for the SDSU Engineering and Interdisciplinary Sciences Building Project. The project required evaluation of 5 historic-age buildings in consideration of NRHP, CRHR, and local designation criteria and integrity requirements, an intensive level survey, Native American coordination, and a records search. The project proposes to demolish four buildings and alter a fifth as part of the university's plan to update its engineering and science facilities.

**Fullerton College Facilities Master Plan Program EIR, North Orange County Community College District, City of Fullerton, Orange County, California. 2017.** The North Orange County Community College District (NOCCCD) is undertaking a comprehensive improvement and building program to make upgrades and repairs to existing buildings, as well as to construct new facilities to improve the safety and education experience of those attending Fullerton College. The College proposed to implement the Facilities Master Plan to more effectively meet the space needs of the projected on-campus enrollment through the next decade and beyond, while constructing and renovating facilities to meet the District's instructional needs. Ms. Murray co-authored and oversaw the cultural resources study. All buildings and structures on campus over 45 years old and/or or proposed for demolition/substantial alteration as part of the proposed project were photographed, researched, and evaluated in consideration of NRHP, CRHR, and local designation criteria and integrity requirements, and in consideration of potential impacts to historical resources under CEQA. As a result of the significance evaluation, three historic districts and one individually eligible building were identified within the project area. The study also entailed conducting extensive archival and building development research, a records search, Native American coordination, detailed impacts assessment, and development of mitigation measures for project conformance with the Secretary of the Interior's Standards for Rehabilitation.

**The Cove: 5th Avenue Chula Vista Project, E2 ManageTech Inc., San Diego, California.** Ms. Murray served as architectural historian and co-author of the CEQA report. The project involved recordation and evaluation of several properties functioning as part of the Sweetwater Union High School District administration facility, proposed for redevelopment, as well as an archaeological survey of the project area.

## Energy

**J-1351 Electrical Distribution and Substation Improvements and J-600 San Dieguito Pump Station Replacement Project, Santa Fe Irrigation, San Diego County, California.** Ms. Murray served as architectural historian and prepared the Department of Parks and Recreation (DPR) forms and associated memo concerning replacement of the original 1964 San Dieguito Pump Station. Ms. Murray recorded and evaluated the pump house for state and local significance and integrity considerations. As part of this effort she conducted background research, prepared a brief historic context, and a significance evaluation.

## Expert Witness

**Robert Salamone vs. The City of Whittier.** Ms. Murray was retained by the City of Whittier to serve as an expert witness for the defense. She peer reviewed a historic resource evaluation prepared by another consultant and provided expert testimony regarding the contents and findings of that report as well as historic resource requirements on a local and state level in

consideration of the City of Whittier's Municipal Code Section 18.84 and CEQA. Judgement was awarded in favor of the City on all counts.

## Healthcare

**Hamilton Hospital Residential Care Facility Project, City of Novato, Marin County, California.** Ms. Murray served as architectural historian, prepared a cultural resources study, and assessed the proposed project's design plans for conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties. The project proposed to construct an addition and make alterations to an NRHP-listed district contributing property. With review from Ms. Murray, the project was able to demonstrate conformance with the Standards for Rehabilitation.

**Culver Place Assisted Living Project, DJB Architects, Culver City, California.** Ms. Murray served as architectural historian, archaeologist, and author of the Letter Report for a Cultural and Paleontological Resources Study. Ms. Murray conducted the intensive-level cultural resources survey of the project area, conducted background research, and coordinated with local Native American groups. The project proposes to construct an assisted living facility on a large private property in Culver City.

## Transportation

**SR-86 and Neckel Road Intersection Improvements and New Traffic Signal Light Project, Caltrans, City of Imperial, California.** Ms. Murray served as Principal Architectural Historian, and author of the HPSR and Finding of No Adverse Effect document. The project involved an intensive field survey, Native American and historic group coordination, a records search, and recordation and NRHP and CRHR evaluation of two historic drainage canals proposed for improvement as part of Caltrans intersection improvement project. All documents were signed and approved by Caltrans District 11 and the Caltrans Cultural Studies Office.

**California Boulevard Roundabout Project, OmniMeans, City of Napa, California.** Ms. Murray served as Principal Architectural Historian and Archaeologist, preparing of the Area of Potential Effects (APE) map and subsequent preparation of Caltrans documentation, including an Archaeological Survey Report (ASR), HRER, HPSR, and a Finding of No Adverse Effect with Standard Conditions. The HRER included an evaluation of 7 previously unrecorded properties for the NRHP and CRHR. The project proposes to modify and install a roundabout at California Boulevard and First Street in the City of Napa. All documents were signed and approved by Caltrans District 4 and the Caltrans Cultural Studies Office.

## Water/Wastewater

**Morena Reservoir Outlet Tower Replacement Project, City of San Diego, California.** Ms. Murray evaluated the 1912 Morena Dam and Outlet Tower for NRHP, CRHR, and local level eligibility and integrity requirements. The project entailed conducting extensive archival research and development research at City archives, libraries, and historical societies, and preparation of a detailed historic context statement on the history of water development in San Diego County.

**69<sup>th</sup> and Mohawk Pump Station Project, City of San Diego, California.** Ms. Murray served as architectural historian and lead author of the Historical Resource Technical Report for the pump station building on 69th and Mohawk Street. Preparation of the report involves conducting extensive building development and archival research on the pump station building, development of a historic context, and a historical significance evaluation in consideration of local, state, and national designation criteria and integrity requirements.

**Pump Station No. 2 Power Reliability and Surge Protection Project, City of San Diego, California.** Ms. Murray served as architectural historian and prepared an addendum to the existing cultural resources report in order to evaluate the Pump Station No. 2 property for NRHP, CRHR, and local level eligibility and integrity requirements. This entailed conducting additional background research, building development research, a supplemental survey, and preparation of a historic context statement.

**Orange County Central Utility Facility Upgrade, County of Orange Public Works, City of Santa Ana, Orange County, California.** To further the County's long-term goals of operational safety, improved efficiency, cost effectiveness, and supporting future campus development plans, the proposed Central Utility Facility Upgrade project consisted of improvements and equipment replacements recommended by the Strategic Development Plan for the CUF's original utility systems. Ms. Murray served as architectural historian and archaeologist, and prepared the cultural resources MND section. As part of this effort Ms. Murray conducted a detailed review of historic resource issues within and around the proposed project area to assess potential impacts to historic buildings and structures. The proposed project involved improvements to 16 buildings located within the Civic Center Campus. As a result of the cultural resources analysis, it was determined that the proposed project would not result in a substantial adverse change to any of the historic-age buildings or the associated Civic Center Plaza walkways/landscaping.

**Bear River Restoration at Rollins Reservoir Project, Nevada Irrigation District, Nevada and Placer Counties, California.** Ms. Murray served as architectural historian and co-author of the Cultural Resources Inventory Report. Ms. Murray conducted background research on the 1963 Chicago Park Powerhouse Bridge and prepared a historic context for the Little York Township and Secret Town Mine.

**Otay River Estuary Restoration Project (ORERP), Poseidon Resources, South San Diego Bay, California.** Ms. Murray served as architectural historian for the documentation of Pond 15 and its associated levees. The project proposes to create new estuarine, salt marsh, and upland transition habitat from the existing salt ponds currently being used by the South Bay Salt Works salt mining facility. Because the facility was determined eligible for listing in the NRHP, the potential impacts caused by breaching the levees, a contributing feature of the property, had to be assessed.

## **Other Project Experience (2008-2014)**

**LADPW BOE Gaffey Pool and Bathhouse Project, Los Angeles County, California (2014).** Ms. Murray served as project manager, field director for the intensive-level cultural resources survey, and primary author of the cultural resources technical report. Ms. Murray reviewed proposed design plans for new construction within an NRHP-listed historic district for conformance with the Secretary of the Interior's Standards. The LADPW BOE proposed to

conduct various improvements to the Gaffey Street Pool and surrounding area, located in Upper Reservation of Fort McArthur in San Pedro, California.

**Metro Green Line to LAX Project (2013-2014).** Ms. Murray served as project manager for a multi-disciplinary project that includes cultural resources, biology, and paleontology. The Los Angeles County Metropolitan Transportation Authority (Metro), Federal Transit Administration (FTA), Federal Aviation Administration (FAA) and Los Angeles World Airports (LAWA) have initiated an Alternatives Analysis (AA)/Draft EIS/Draft EIR for the Metro Green Line to Los Angeles International Airport (LAX) project. The AA/DEIS/DEIR is being prepared to comply with NEPA and CEQA. This study will examine potential connections between the planned Metro Crenshaw / LAX Transit Corridor Project's Aviation/Century Station and the LAX Central Terminal Area (CTA) located approximately one mile to the west. Client: Terry Hayes Associates.

**LADPW BOE Downtown Cesar Chavez Median Project, Los Angeles County, California (2013).** Ms. Murray served as field director for the intensive-level cultural resources survey, and co-author of the Caltrans ASR and HRER. The City of Los Angeles Department of Public Works (LAPDW), Bureau of Engineering (BOE), proposes to provide for transportation enhancements along West Cesar Chavez Boulevard in the downtown area of Los Angeles. Client: LADPW BOE, Lead Agency: Caltrans, District 7.

**Edwards Air Force Base Historic Context and Survey, Multiple Counties, California (2013).** Ms. Murray served as lead architectural historian and project manager for survey and evaluation of 17 buildings and structures located throughout the base, and preparation of a Cold War historic context statement, an analysis of property types, and registration requirements for all built environment resources on base. Client: JT3/CH2M Hill.

**San Gabriel Trench Grade Separation Project (Phases I, II, and III); Cities of San Gabriel, Alhambra, and Rosemead, Los Angeles County, California (2008–2010, 2011–2014).** Ms. Murray served as Archaeologist, Architectural Historian, and Osteologist throughout various stages of the project. The project consisted of conducting a cultural resources assessment for a proposed grade separation located within the cities of San Gabriel, Alhambra, and Rosemead. The proposed project would lower a 2.2 mile section of Union Pacific Railroad tracks in the immediate vicinity of the historic Mission San Gabriel Arcángel. Ms. Murray was involved in both the archaeological and architectural history components of this project. This includes the archaeological and architectural history field surveys, archaeological testing of the site and completion of over 100 DPR forms for the evaluation of built environment resources. She also served as the on-site human osteologist. Client: Terry A. Hayes Associates, LLC. Agency: Caltrans.

**Azusa Intermodal Parking Facility Project, Azusa, Los Angeles County, California (2012).** Ms. Murray served as field director, assistant project manager, and primary report author for the intensive-level cultural resources survey and cultural resources technical report, which included evaluation of several built environment resources adjacent to an existing NRHP district. The City of Azusa proposed to construct an approximately 39-foot high, four-story parking structure, bus bays for passenger loading/unloading for layovers, and electric charging stations for patrons of the future Gold Line Foothill Extension Azusa Station. Client: Terry Hayes Associates.

**Terminal Island Historic Building Evaluations, Los Angeles County, California (2011).** Ms. Murray served as project manager, field director for the architectural history survey, and primary author of the technical report. She formally evaluated 16 Port of Los Angeles-owned properties on Terminal Island for NRHP and CRHR eligibility, as well as local level eligibility. Client: CDM; Port of Los Angeles.

**LOSSAN San Luis Rey River and Second Track Project, Oceanside, San Diego County, California (2011).** Ms. Murray served as primary author for the technical report and conducted the intensive-level cultural resources field survey. The project proposes to construct a new 0.6-mile section of double-track to connect two existing passing tracks, and replace the existing San Luis Rey River Bridge. She prepared the cultural resources technical report and evaluated the bridge for NRHP, CRHR, and local level criteria and integrity requirements. Client: HNTB Corporation.

**LADPW BOE San Pedro Plaza Park Project, Los Angeles County, California (2011).** Ms. Murray served as project manager, field director for the intensive-level cultural resources survey, and primary author of the cultural resources technical report. She evaluated the entire park for local, CRHR, and NRHP eligibility and integrity requirements. The LADPW BOE proposed to conduct various outdoor improvements to the San Pedro Plaza Park. Client: LADPW BOE.

**Crenshaw /LAX Transit Corridor Project, Los Angeles County, California (2011).** Ms. Murray supervised architectural history survey and participated in the evaluation of over 100 built environment resources that may be affected by the Los Angeles County Metropolitan Transportation Authority's (Metro's) proposed Crenshaw/LAX Transit Corridor Project. The project is approximately 8.5 miles in length and is located within the cities of Los Angeles and Inglewood, Los Angeles County, California. The project was subsequently approved by SHPO with no comments. Client: Terry Hayes Associates, LLC; Agency: Metro.

**LOSSAN Control Point San Onofre to Control Point Pulgas Double Track Project, San Diego County, California (2011).** Ms. Murray served as field director for the archaeological and architectural history survey and co-authored the technical report. She conducted a survey and evaluation of cultural resources in support of the Los Angeles to San Diego, California (LOSSAN) Control Point (CP) San Onofre to CP Pulgas Double Track Upgrade Project. The project is located within the boundaries of the Marine Corps Base (MCB) Camp Pendleton in Northern San Diego County, on federal land that is part of a long-term lease to the rail operator. Client: HNTB Corporation.

**Half Moon Bay Airport Taxiway and Access Road Improvement Project, San Mateo County, California (2010).** Ms. Murray served as field director for the archaeological and architectural history survey and co-authored the technical report. She conducted a cultural resources survey of 21.65 acres situated on three areas within the 313-acre airport property, and evaluated airport properties for the CRHR and NRHP. Half Moon Bay Airport is located approximately 5 miles north of the City of Half Moon Bay in unincorporated San Mateo County, California. Client: Coffman Associates.

**Sunset Avenue Grade Separation Project, Riverside County, California (2010).** Ms. Murray served as field director for the archaeological and architectural history survey and co-authored

the ASR, HRER, and HPSR reports. The project involved a proposed grade separation of Sunset Avenue, which crosses the UPRR in the City of Banning, Riverside County. She conducted a 43.6-acre survey for cultural resources, and prepared environmental compliance documentation in accordance with Caltrans. Client: Kimley-Horn and Associates, Inc.; Agency: Caltrans District 8.

**Hollister Avenue Bridge Seismic Retrofit Project, Santa Barbara County, California (2010).**

Ms. Murray supervised the architectural history survey of surrounding properties. The project proposed the seismic retrofit of Union Pacific Railroad (UPRR) Bridge 51C-0018 on Hollister Avenue in an unincorporated area of Santa Barbara County, located between UPRR mile posts 362.08 and 362.41. Client: Santa Barbara County Public Works Department; Agency: Caltrans District 5.

**Nogales Grade Separation/Gale Avenue Widening/Evaluation of 938 Nogales Street; City of Industry, Los Angeles County, California (2009).**

Ms. Murray participated in the architectural history field survey of several properties and co-authored the report. The project consisted of conducting a cultural resources assessment for a proposed grade separation project that would lower Nogales Street beneath the Union Pacific Railroad tracks and widen a 0.83 mile section of Walnut Drive/Gale Avenue located in the City of Industry. Client: Terry A. Hayes Associates, LLC. Agency: Caltrans.

**Integrated Cultural Resources Management Plan Update for MCLB Barstow, San Bernardino County, California (2011-2014).**

Served as project manager for the 2014 ICRMP update of the 2011 ICRMP that she authored. The update includes survey and evaluation of two historic road segments, recordation and preparation of a conditions assessment of the Rattlesnake Rock Art site, and revision of the NRHP nomination for the site. Client: NAVFAC Southwest.

**Integrated Cultural Resources Management Plan, Naval Air Station, Lemoore, Kings County, California (2009-2012).**

Served as project manager and primary author of the Final ICRMP document. The project consists of preparing a management plan for the protection and management of cultural resources located within Naval Air Station, Lemoore. The management plan inventories known cultural resources, summarizes relevant laws and regulations, and establishes management priorities for the installation. Client: NAVFAC SW (U.S. Navy).

**Integrated Cultural Resources Management Plan, Naval Weapons Station, Seal Beach, Detachment Corona, Riverside County, California (2009-2011).**

Served as project manager and primary author of the Advance Draft document. The project consists of preparing a management plan for the protection and management of cultural resources located within Naval Weapons Station, Seal Beach, Detachment Corona. The management plan inventories known cultural resources, summarizes relevant laws and regulations, and establishes management priorities for the installation. Client: NAVFAC SW (U.S. Navy).

**Integrated Cultural Resources Management Plan, Naval Weapons Station, Seal Beach, Orange County, California (2009-2011).**

Served as project manager and primary author of the Advance Draft document. The project consists of preparing a management plan for the protection and management of cultural resources located within Naval Weapons Station, Seal Beach. The management plan inventories known cultural resources, summarizes relevant laws

and regulations, and establishes management priorities for the installation. Client: NAVFAC SW (U.S. Navy).

**Integrated Cultural Resources Management Plan, Naval Air Weapons Station China Lake; Inyo, Kern, and San Bernardino Counties, California (2009-2011).** Served as co-author of the final document. The project consists of preparing a management plan for the protection and management of cultural resources located within Naval Air Weapons Station China Lake. The management plan inventories known cultural resources, summarizes relevant laws and regulations, and establishes management priorities for the installation. Client: NAVFAC SW (U.S. Navy).

### Select Technical Reports (as lead author)

Murray, Samantha. 2015. *Historic Report for the property located at 3167 Senter Road, San Jose, California 95111, Assessor's Parcel Number (APN) 494-01-022.* Prepared for Launchpad Development and the City of San Jose.

Murray, Samantha and Salli Hosseini. 2015. *Cultural Resources Study for Tahoe Lake Elementary School Facilities Master Plan Project, Tahoe City, Placer County, California.* Prepared for the Tahoe Truckee Unified School District.

Murray, Samantha. 2015. *SDSU Open Air Theatre Renovation Historical Resources Technical Memorandum.* Prepared for SDSU.

Murray, Samantha. 2015. *Cultural Resources Study for the Mt. San Jacinto Community College District, San Jacinto Campus Master Plan Project, City of San Jacinto, Riverside County, California.* Prepared for the Mt. San Jacinto Community College District.

Murray, Samantha and Salli Hosseini. 2015. *Cultural Resources Study for the Jack in the Box Drive-Through Restaurant Project, City of Downey, Los Angeles County, California.* Prepared for the City of Downey.

Murray, Samantha. 2015. *Cultural Resources Study for the Hamilton Hospital Residential Care Facility Project City of Novato, Marin County, California.* Prepared for the City of Novato.

Murray, Samantha. 2015. *Historic Property Survey Report for the SR-86 Neckel Road Intersection Improvements and New Traffic Signal Light Project in the City and County of Imperial, California.* Prepared for the City of Imperial and Caltrans District 11.

Murray, Samantha. 2015. *Historical Resources Evaluation Report for the California Boulevard Roundabouts Project, City and County of Napa, California.* Prepared for the City of Napa and Caltrans District 4.

Murray, Samantha. 2015. *Historic Property Survey Report for the California Boulevard Roundabouts Project, City and County of Napa, California.* Prepared for the City of Napa and Caltrans District 4.

Samantha Murray, Salli Hosseini, Angela Pham, and Adam Giacinto. 2015. *Cultural/Historical Resource Technical Report: Morena Reservoir Outlet Tower Replacement Project Lake Morena Village, San Diego County, California, Services R-308078 Task Order No. 30*. Prepared for the City of San Diego.

Samantha Murray, Salli Hosseini, Adriane Dorrlor, and Brad Comeau. 2015. *Cultural/Historical Resource Technical Report: 69<sup>th</sup> and Mohawk Pump Station 5017 69<sup>th</sup> Street / 6910 Mohawk Street, San Diego, California 92115*. Prepared for the City of San Diego.

Murray, Samantha and Adam Giacinto. 2015. *Cultural Resources Technical Report for the SDSU Engineering and Interdisciplinary Sciences Building*. Prepared for SDSU.

Murray, Samantha. 2015. *Historical Resource Technical Report: San Carlos Library 7265 Jackson Drive, San Diego, California 92119*. Prepared for the City of San Diego.

Murray, Samantha. 2015. *Cultural Resources Study for the Robertson Lane Hotel and Commercial Redevelopment Project, City of West Hollywood, Los Angeles County, California*. Prepared for the City of West Hollywood.

Murray, Samantha. 2015. *Historic Resource Evaluation Report: 3877 El Camino Real Palo Alto, California 94306*. Prepared for the City of Palo Alto.

Murray, Samantha. 2015. *Addendum to Phase I Cultural Inventory for Pump Station No. 2 Power Reliability and Surge Protection Project, San Diego County, California (WBS# S-00312.02.02)*. Prepared for the City of San Diego.

Murray, Samantha. 2015. *Significance Evaluation of the Property at 8572 Cherokee Drive, City of Downey, Los Angeles County, California*. Prepared for the City of Downey.

Murray, Samantha. 2014. *Peer Review of Historic Resource Evaluations for 429-447 University Avenue and 425 University Avenue, Palo Alto, California*. Prepared for the City of Palo Alto.

Murray, Samantha. 2014. *Peer Review of the Draft Historic Resource Evaluation for 1050 Page Mill Road, Palo Alto, California*. Prepared for the City of Palo Alto.

Murray, Samantha. 2014. *Significance Evaluation of the Property at 3521 14 Mile House Road, Forest Ranch, Butte County, California*. Prepared for California State University, Chico.

Murray, Samantha, Adam Giacinto, and Justin Castells. 2014. *Cultural and Paleontological Resources Inventory for the Cove Development project, City of Chula Vista, California*. Prepared for E2 ManageTech Inc.

Murray, Samantha, Steven Treffers, and John Dietler. 2014. *Cultural Resources Survey Report for the Gaffey Pool and Bathhouse Project in San Pedro, City of Los Angeles, Los Angeles County, California*. Prepared for the City of Los Angeles Department of Public Works Bureau of Engineering.

Murray, Samantha. 2013. *Historic Property Survey Report for the Downtown Cesar Chavez Median Project, City and County of Los Angeles, California*. Prepared for the City of Los Angeles Department of Public Works Bureau of Engineering and Caltrans District 7.

Murray, Samantha, Steven Treffers, and Shannon Carmack. 2013. *Historic Context Statement Report for Evaluation of Cold War-era Properties on Edwards Air Force Base, California*. Prepared for JT3, LLC.

Murray, Samantha, Steven Treffers, and Shannon Carmack. 2013. *Cultural Resources Survey Report for the Azusa Intermodal Parking Facility Project, City of Azusa, Los Angeles County, California*. Prepared for Terry A. Hayes Associates

Murray, Samantha, Steven Treffers, and John Dietler. 2012. *Final Cultural Resources Survey Report for the CP East Brook to CP Shell Double Track Project, San Diego County, California*. Prepared for HNTB Corporation.

Murray, Samantha and John Dietler. 2012. *Cultural Resources Survey Report for the Ford City Delivery Meter Station Project, Kern County, California*. Prepared for Mojave Pipeline Company.

Murray, Samantha, Steven Treffers, Mary Ringhoff, and Jan Ostashay. 2011. *Built Environment Evaluation Report for Properties on Terminal Island, Port of Los Angeles, City and County of Los Angeles, California*. Prepared for CDM and the Port of Los Angeles.

Murray, Samantha, Cheryle Hunt, and John Dietler. 2011. *Cultural Resources Survey Report for the South San Fernando Valley Park and Ride Project, City and County of Los Angeles, California*. Prepared for the City of Los Angeles Department of Public Works Bureau of Engineering.

Murray, Samantha, Brandi Shawn, and John Dietler. 2011. *Cultural Resources Survey Report for the San Pedro Plaza Park Project in San Pedro, City of Los Angeles, Los Angeles County, California*. Prepared for the City of Los Angeles Department of Public Works Bureau of Engineering.

Murray, Samantha and John Dietler. 2011. *Cultural Resources Survey Report for the WKN Wagner Wind Project, Palm Springs, Riverside County, California*. Prepared for the Altum Group.

Murray, Samantha, Laura Hoffman, and John Dietler. 2011. *Integrated Cultural Resources Management Plan for the Marine Corps Logistics Base, Barstow, California*. Prepared for the U.S. Department of the Navy NAVFAC SW and Marine Corps. Logistics Base Barstow.

Murray, Samantha, Robert Ramirez, and John Dietler. 2011. *Integrated Cultural Resources Management Plan for Naval Weapons Station Seal Beach, Detachment Corona, Riverside County, California*. Prepared for the U.S. Department of the Navy NAVFAC SW.

Murray, Samantha and John Dietler. 2010. *Cultural Resources Overview and Survey Report for the Poso Creek Delivery Meter Station Project, Kern County, California*. Prepared for El Paso Corporation.

## Presentations

***Historical Resources under CEQA. Prepared for the Orange County Historic Preservation Planner Working Group. Presented by Samantha Murray, Dudek. December 1, 2016.*** Ms. Murray delivered a one-hour PowerPoint presentation to the Orange County Historic Preservation Planner Working Group, which included planners from different municipalities in Orange County, regarding the treatment of historical resources under CEQA. Topics of discussion included identification of historical resources, assessing impacts, avoiding or mitigating impacts, overcoming the challenges associated with impacts to historical resources, and developing effective preservation alternatives.

***Knowing What You're Asking For: Evaluation of Historic Resources. Prepared for Lorman Education Services. Presented by Samantha Murray and Stephanie Standerfer, Dudek. September 19, 2014.*** Ms. Murray and Ms. Standerfer delivered a one-hour PowerPoint presentation to paying workshop attendees from various cities and counties in Southern California. The workshop focused on outlining the basics of historical resources under CEQA, and delved into issues/challenges frequently encountered on preservation projects.

# Kara R. Dotter, MSHP

## Senior Historic Preservation Specialist and Architectural Historian

Kara Dotter is a senior historic preservation specialist with more than 15 years experience in historic preservation and architectural conservation. Her historic preservation experience spans all elements of cultural resources management, including project management, intensive- and reconnaissance-level field investigations, architectural history studies, and historical significance evaluations in consideration of the National Register of Historic Places (NRHP), California Register of Historical Places (CRHR), and local-level designation criteria.

Ms. Dotter's background in geology informs many aspects of her architectural conservation work, including insight into the deterioration of building materials over time, which helps inform preservation strategies for various types of construction materials. She has experience with a variety of materials, in particular stone, brick, mortar, and concrete. Her materials analysis skills include petrographic analysis of stone, mortar, and concrete; paint analysis; wood species identification; and applicable American Society for Testing and Materials standards, as well as proficiency with Fourier transform infrared spectroscopy (FTIR), scanning electron microscopy with energy-dispersive X-ray spectroscopy (SEM-EDS), back-scattered electron imagery (BSE), atomic absorption spectrometry (AAS), differential thermal analysis (DTA), X-ray diffraction (XRD), and ion chromatography techniques.

Ms. Dotter exceeds the Secretary of the Interior's Professional Qualification Standards for Architectural History. She is experienced managing multidisciplinary projects in the lines of land development, state and local government, and the private sector. She has experience preparing environmental compliance documentation in support of projects that fall under the California Environmental Quality Act (CEQA)/National Environmental Policy Act (NEPA), and Sections 106 and 110 of the National Historic Preservation Act (NHPA). She also prepared numerous Historic Architectural Survey Reports (HASRs) and Findings of Effect (FOE) reports for the California High-Speed Rail Authority.

## Project Experience

### Transportation

**Environmental Preconstruction Services for Construction Package 2 and 3, California High-Speed Rail Authority, Fresno to Bakersfield Section, California.** Served as project lead for the Built Environment component of the environmental preconstruction services. The work involved conducting cultural resources assessments for a proposed 65-mile-long segment of the Fresno to Bakersfield high-speed rail alignment as directed by the California High-Speed Rail Authority and Federal Transit Administration (FTA) in order to comply with NEPA and CEQA regulations. Ms. Dotter's contributions included architectural history field surveys; documenting and updating the CRHR-designated 7,040-acre Washington Irrigated Colony Rural Historic Landscape; completion of over 150 California Department of Parks and Recreation (DPR) forms for the evaluation of built environment resources; managing structural and vibration engineering consultants; conducting research for and producing HASRs and supplemental

Findings of Effect (sFOEs); and development of Protection and Stabilization Plans and Response Plans for Unanticipated Effects and Unintended Damage.

**Environmental Compliance Services for the Caltrain Modernization (Calmod) Peninsula Corridor Electrification Project (PCEP).** Served as project lead for the Built Environment component of the environmental compliance services. The work involved cultural resources documentation in order to comply with NEPA and CEQA regulations relating to the electrification and increased capacity of the Caltrain Corridor from San Francisco's 4th and King Caltrain Station to approximately the Tamien Caltrain Station. Ms. Dotter's contributions include architectural history field surveys; managing subconsultants; conducting research for and producing documentation to HABS level III standards; and reviewing design plans and equipment placement for conformance with the Secretary of the Interior Standards for Rehabilitation.

**San Francisco International Airport (SFO) Residential Sound Insulation Program, Historic Architecture Services, As-Needed CEQA Planning Services for SFO.** Served as architectural historian and co-author of the Historical Resources Assessment Report. The work involved historical resources assessments and documentation of properties in the cities of San Bruno and Millbrae in order to comply with NEPA and CEQA regulations relating to SFO capital improvement projects. Ms. Dotter's contributions included architectural history field surveys; documenting 28 residential buildings; and completion of California Department of Parks and Recreation (DPR) forms for the evaluation of built environment resources.

## Municipal

**Santa Barbara Armory, California National Guard, Santa Barbara, Santa Barbara County, California.** Served as architectural historian and lead author of the update to state and local designations. The work involved historical resources documentation in order to comply with NEPA and CEQA regulations relating to the potential sale of the property. Ms. Dotter's contributions included updating documentation relating to the Santa Barbara Armory individual designation, as well as recording and evaluating the Santa Barbara Armory complex as a historic district for NRHP, CRHR, and local level criteria and integrity considerations; completion of DPR forms; and responding to SHPO comments.

**Normal Street DMV Facility Replacement, San Diego County, California.** Served as architectural historian and lead author of the Historical Resources Technical Report. The work involved cultural resources documentation in order to comply with NEPA and CEQA regulations relating to the proposed facilities replacement. Ms. Dotter's contributions included recording and evaluating the Normal Street DMV building for NRHP, CRHR, and local level criteria and integrity considerations, completion of DPR forms, and responding to SHPO comments.

## Development

**Village 3 HomeFed Otay Park Swap, Otay Ranch, Chula Vista, California.** Served as Cultural Resources project lead for the Constraints Analysis, as well as architectural historian and author of the Historical Resources Technical Report. The project proposed to develop approximately 100 acres of land south of the Otay River as an active recreation site. Ms. Dotter's contributions include architectural history field surveys; conducting archival research; recording and evaluating historical resources in consideration of NRHP, CRHR, and local designation criteria and integrity requirements, and in consideration of potential impacts to historical resources under CEQA.

**Santa Monica/Orange Grove Mixed-Use Development, 7811 Santa Monica Blvd., West Hollywood, California.** Served as architectural historian and co-author of the Historical Resources Technical Report, documenting existing conditions and conducting research into the history of the area and its relation to the three-parcel property in question.

**NEC Dinah Shore and Monterey Avenue Development, Palm Desert, California.** Served as architectural historian and co-author of the Cultural Resources Report, conducting research into the history of the area and its relation to the property in question.

**Montebello North and South, La Mesa, California.** Served as architectural historian and author of the Cultural Resources Technical Report, conducted research into the history of the area and its relation to the 4.16 acre subject property, documented existing conditions, and liaised with the City of La Mesa Planning Department to bring about a successful result for the client.

## Education

**Fullerton College Facilities Master Plan Program EIR, North Orange County Community College District, City of Fullerton, Orange County, California. 2017.** The North Orange County Community College District (NOCCCD) is undertaking a comprehensive improvement and building program to make upgrades and repairs to existing buildings, as well as to construct new facilities to improve the safety and education experience of those attending Fullerton College. The College proposed to implement the Facilities Master Plan to more effectively meet the space needs of the projected on-campus enrollment through the next decade and beyond, while constructing and renovating facilities to meet the District's instructional needs. Ms. Murray co-authored and oversaw the cultural resources study. All buildings and structures on campus over 45 years old and/or proposed for demolition/substantial alteration as part of the proposed project were photographed, researched, and evaluated in consideration of NRHP, CRHR, and local designation criteria and integrity requirements, and in consideration of potential impacts to historical resources under CEQA. As a result of the significance evaluation, three historic districts and one individually eligible building were identified within the project area. The study also entailed conducting extensive archival and building development research, a records search, Native American coordination, detailed impacts assessment, and development of mitigation measures for project conformance with the Secretary of the Interior's Standards for Rehabilitation.

**Kings Beach Elementary School Facilities Master Plan Project, Tahoe Truckee Unified School District (TTUSD), Kings Beach, California.** Served as architectural historian and lead author of the cultural resources study. Recorded and evaluated the Kings Beach Elementary School Building for NRHP, CRHR, and local level criteria and integrity considerations. The study also entailed conducting archival and building development research, a records search, and Native American coordination.

**Donner Trail Elementary School Modernization Project, Tahoe Truckee Unified School District (TTUSD), Kingvale, California.** Served as architectural historian and lead author of the cultural resources study. Recorded and evaluated the Kings Beach Elementary School Building for NRHP, CRHR, and local level criteria and integrity considerations. The study also entailed conducting archival and building development research, a records search, and Native American coordination.

## Water/Wastewater

**North County Pure Water Project, City of San Diego, California.** Ms. Dotter served as architectural historian and lead author of the Historical Resource Technical Report for the proposed pipeline route as

part of the EIR/EIS. Preparation of the report involved conducting extensive building development and archival research on historic-era structures along the proposed 56-mile-long route, development of related historic contexts, historical significance evaluations for each historic-era structure in consideration of local, state, and national designation criteria and integrity requirements, and determining appropriate mitigation measures.

**Historical Resource Evaluation Report for the San Dieguito Dam, Santa Fe irrigation District, Rancho Santa Fe, California.** Served as architectural historian and lead author of the Historical Resource Evaluation Report for the proposed handrail replacement project. Preparation of the report involved conducting extensive engineering development and archival research on dams, development of an historic context, and historical significance evaluation for the historic-era structure in consideration of local, state, and national designation criteria and integrity requirements.

## Relevant Previous Experience

### Development

**Historic Resource Nomination Report for 1445 Granada Avenue, San Diego, California.** Conducted archival research, interviews, extensive photo documentation, and forensic analysis of a 1912 Craftsman-style home in support of designation as an historic resource. Ms. Dotter also compiled supporting evidence for proposing a new San Diego Master Architect/Builder. The building was successfully nominated in May 2017.

**Historic Resource Technical Report for 1644 University Avenue, San Diego, California.** Served as architectural historian and author of the Historical Resource Technical Report. Preparation of the report involved conducting extensive building development and archival research on the commercial building, development of an historic context, and an historical significance evaluation in consideration of local, state, and national designation criteria and integrity requirements. The project proposed to build a new multi-use development with retail space, parking, and luxury condominiums. (2015)

### Education

**Rehabilitation of Lincoln Hall, University of Nevada, Reno.** Provided peer review of mortar repair specifications and fire code upgrades for the historic two-and-a-half story Lincoln Hall, constructed of brick in 1895 as a men's residence hall. Recommendations included changing the specified mortar mix to an historically appropriate mix design similar to that used originally and more compatible with existing materials. The suggested fire code upgrades originally called for infilling the intentionally designed wall ventilation space between interior and exterior wythes of brick with Portland cement-based grout, altering the breathability and functioning of the building envelop. Ms. Dotter instead recommended discreet insertion of fire blocks between the wythes at each floor level. (2015)

**Queen's University Belfast Main Building Materials Analysis, Belfast, Northern Ireland.** Collected mortar samples and conducted materials analysis to identify components and develop recommendations for repair mortars. The project also entailed mapping exterior walls for areas of deterioration affecting mortar and brick. (2010)

### Municipal

**Paint Analysis for Mohnike Adobe, San Diego County, California.** Analyzed selected paint chip samples to develop a stratigraphy of paint layers useful in identifying replacement materials and creating

an historically appropriate paint scheme for ongoing renovations to this San Diego County-owned property. (2016)

**Materials Conservation Assessment and Recommendations for Stone Quoins, Old Antrim Courthouse, Antrim, Northern Ireland.** Investigated the existing condition of heavily-painted stone quoins on the Grade A listed 1726 Italianate-style Old Antrim Courthouse, the oldest courthouse in Northern Ireland, during extensive rehabilitation of the structure into a cultural events center. The surface of the original sandstone ashlar blocks was friable due to impermeable paint layers retaining moisture within the stone. Recommendations included gentle removal by hand of existing paint layers, misting of more recalcitrant paint layers, and consolidation or replacement-in-kind of more damaged stone. (2011)

# Sarah Corder

## Architectural Historian

Sarah Corder is an architectural historian with more than 10 years' professional experience throughout the United States in the fields of architectural history and historic preservation. Prior to coming to Dudek, she owned and operated a historic preservation consulting business in Virginia. Throughout her career, Ms. Corder managed and worked on a variety of projects including National Register of Historic Places (NRHP) nominations, tax credit rehabilitation projects, Save America's Treasures projects, and numerous transportation projects. She served as a historic preservation project manager or architectural historian on all projects.

## Relevant Project Experience

### EDUCATION

Savannah College of Art and Design

MFA, Historic Preservation, 2004

Bridgewater College

BA, History, 2002

### CERTIFICATIONS

Certified Historic Preservation Consultant,  
Commonwealth of Virginia

Secretary of the Interior's Standards in  
Architectural History and History, exceeds  
requirements

### PROFESSIONAL AFFILIATIONS

National Trust for Historic Preservation

Los Angeles Conservancy

Society for Architectural Historians

**As-needed CEQA Planning Services, SFO, San Francisco, California.** Ms. Corder prepared a historical resources assessment report that included 28 properties in consideration of national, state and local criteria and integrity requirements. The project also included a survey, archival research, records search and preparation of DPR forms for each property.

**Castellija School Project Focused Environmental Impact Report (EIR), Palo Alto, California.** Ms. Corder prepared a cultural resource study that included 11 historic resources in consideration of national, state, and local criteria and integrity requirements. The study also included a survey, archival research, and a records search.

**CSU, Chico, Siskiyou Hall, Chico, California.** Ms. Corder prepared a historical resources technical report for Siskiyou Hall located on the CSU, Chico campus. The project also included a survey, archival research, and a records search.

**Environmental Services Retainer, Southern California.** Ms. Corder assisted with the preparation of a historical resources technical report for a DMV building in San Diego, California. Her contributions included archival research and preparation of historic context sections.

**Fullerton College Master Plan Program Environmental Impact Report (EIR), Fullerton, California.** Ms. Corder prepared a cultural resource study that included 25 historic resources in consideration of national, state, and local criteria and integrity requirements. The study also included a survey, archival research, and a records search.

**Olivewood Village Historic Resources Assessment, Pasadena, California.** Ms. Corder prepared a historical resources technical report for an institutional building in consideration of national, state, and local criteria and integrity requirements. The study also included a survey, archival research, and a records search.

**Owlwood, Los Angeles, California.** Ms. Corder prepared a cultural resources study for a residential building in consideration of national, state, and local criteria and integrity requirements. The study also included archival research, and a records search.

**Pacific Freeway Center, Fontana, California.** Ms. Corder prepared a cultural resources survey report for a large industrial complex in consideration of national, state, and local criteria and integrity requirements. The study also included preparation of DPR form, archival research, survey, and a records search.

**University Villages, Merced Student Housing Project, Merced, California.** Ms. Corder prepared a cultural resources letter report for a residential agricultural complex in consideration of national, state, and local criteria and integrity requirements. The study also included preparation of a DPR form, archival research, survey, and a records search.

#### Relevant Previous Experience

#### Development

**East Los Angeles College Environmental Impact Report (EIR), South Gate, California.** Served as architectural historian for the project. Evaluated and recorded historic period buildings, and developed mitigation measures.

**Wetlands Pocket Park, Los Angeles, California.** Served as architectural historian for the project. Evaluated and recorded historic period buildings.

#### Transportation

**Crenshaw/Los Angeles International Airport (LAX) Transit Corridor, Cities of Los Angeles and Inglewood, California.** Served as architectural historian for the project. Evaluated and recorded historic period buildings.

**Alameda Corridor–East Construction Authority (ACE) San Gabriel Trench Grade Separation, Los Angeles County, California.** Served as architectural historian for the project. Evaluated and recorded historic period buildings.

#### NRHP Evaluations and Nominations

**Old Town Historic District, Harrisonburg, Virginia.** Served as project manager and architectural historian for the project. Evaluated and recorded 450 historic buildings and structures, prepared presentations for public meetings, performed extensive primary and secondary source research, and managed survey teams.

**Whitesel Brothers, Harrisonburg, Virginia.** Served as project manager and architectural historian for the project. Evaluated and recorded historic building and prepared an NRHP nomination.

**Ramsay, Greenwood, Virginia.** Served as project manager and architectural historian for the project. Evaluated and recorded 17 historic buildings and structures and prepared an NRHP nomination.

**George Chrisman House, Linville, Virginia.** Served as project manager and architectural historian for the project. Evaluated and recorded historic buildings and structures and prepared an NRHP nomination.

**David and Catherine Driver Farm, Timberville, Virginia.** Served as project manager and architectural historian for the project. Evaluated and recorded 823 acres of farming complex including seven historic buildings and five structures and prepared an NRHP nomination.

## Professional Experience

**SWCA Environmental Consultants, Pasadena, California.** Served as an architectural historian and a project coordinator for multiple programs. Responsibilities included historic resource surveys, primary and secondary research, and quality assurance (QA)/quality control (QC) and senior level oversight for hundreds of California Department of Parks and Recreation forms. (2009–2014)

**Sabe Preservation Consulting, Harrisonburg, Virginia.** Owned a historic preservation consulting services firm. Responsibilities included NRHP nomination preparation and inventory; rehabilitation project management; Section 106 review; Main Street planning and development; building condition assessment and Historic American Buildings Survey (HABS) documentation; management of all financial documents; client interaction; leading public meetings and workshops; and management of employees, interns and subcontractors. (2004–2009)

**Owens-Thomas House Museum, Savannah, Georgia.** Served as preservation project manager for a nineteenth century plaster conservation project. Responsibilities included plaster conservation, management and training of staff and student interns, photographic documentation, presentation of project information to the public and museum staff, preparation of weekly reports, and safety compliance. (2005–2006)

## *NOP Comment Letters*

## APPENDIX B

### NOP Comment Letters

---

The following tables summarizes the comments received during the Notice of Preparation (NOP) public scoping period, from April 9, 2018 to May 8, 2018. Following this table are the copies of the comment letters received.

#### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
<i>State Agencies</i>			
Native American Heritage Commission	4/19/2018	<p>The commenter notes that CEQA was amended significantly in 2014 to include a separate category of cultural resources, "tribal cultural resources," and provides that a project that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. Assembly Bill (AB) 52 applies to any project for which a notice of preparation is filed after July 1, 2015. AB 52 has tribal consultation requirements and certain timing requirements for notification that are outlined in the letter.</p> <p>The commenter requested an appropriate records search to determine known traditional cultural resources, and preparation of an archaeological inventory survey if required. The commenter provided a list of appropriate Native American contacts for consultation concerning the project site. According to the commenter, mitigation should be included in the EIR to identify and evaluate accidentally discovered archaeological resources pursuant to California Health and Safety Code Section 7050.5 and CEQA Section 15064.5(f).</p>	Section 4.9, Tribal Cultural Resources
California Department of Transportation (Caltrans)	5/1/2018	According to the commenter, the TIA needs to be submitted to Caltrans for review and comment. If the project will impact state right-of-way, the District needs to follow Caltrans standards for preparation of traffic impact studies. Because of an existing Class II bicycle lane on Berkeley Avenue, Caltrans urges appropriate measures to ensure the safety of bicyclists and pedestrians.	Section 4.8, Traffic and Circulation
Department of Toxic Substances Control (DTSC)	5/3/2018	The commenter recommends the identification of current and historic uses at the project site that may have resulted in the release of hazardous wastes/substances. If there are any recognized environmental conditions in the project area, then proper investigation, sampling, and remedial actions overseen by the appropriate regulatory agencies should be conducted prior to the new development or any construction. If project plans include discharging wastewater to a storm drain, a National Pollutant Discharge Elimination System permit from the	Section 4.4, Hazards and Hazardous Materials

## APPENDIX B (Continued)

### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
		<p>Regional Water Quality Control Board may be required. If planned activities include building modifications/demolitions, lead-based paints or products, mercury, and asbestos containing materials should be investigated and mitigated/disposed of in accordance with all applicable and relevant laws and regulations. In addition, evaluate whether polychlorinated biphenyl (PCB) containing materials are present in on-site buildings, and address as necessary to protect human health and the environment. If the site was used for agricultural or related activities, residual pesticides may be present in on-site soil. DTSC recommends investigation and mitigation, as necessary, to address potential impact to human health and environment from residual pesticides. DTSC recommends evaluation, proper investigation and mitigation, if necessary, of on-site areas with current or historic PCB-containing transformers. Regarding underground storage tanks (USTs) associated with the boiler plant, the regulatory agencies that approved the closure of the contaminated site cleanups/UST sites should be identified. DTSC recommends soil gas sampling and vapor intrusion risk evaluation on sites with releases of volatile organic compounds (VOCs) or total petroleum hydrocarbons (TPH). DTSC is unable to evaluate whether vapor sampling and/or potential vapor intrusion risk was adequately addressed due to the lack of relevant detailed information in the Initial Study. DTSC recommends soil gas sampling after to confirm no residual VOC/TPH contamination remains on site and/or risk is acceptable based on applicable and relevant state guidelines. If soil contamination is suspected or observed on the project site, then excavated soil should be sampled prior to export/disposal. If the soil is contaminated, it should be disposed of properly in accordance with all applicable and relevant laws and regulations. In addition, if the project involves importing soil to backfill the excavated areas, proper evaluation and/or sampling should be conducted to make sure that the imported soil is free of contamination. If during construction/demolition of the project, soil and/or groundwater contamination is suspected, construction/demolition in the area should cease and appropriate health and safety procedures should be implemented. If it is determined that contaminated soil and/or groundwater exist, the EIR should identify how any required investigation and/or remediation will be conducted and the appropriate government agency to provide regulatory oversight.</p>	

## APPENDIX B (Continued)

### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
Regional Agencies			
South Coast Air Quality Management District	5/1/2018	The commenter recommends that the CEQA Air Quality Handbook (1993) be used for all air quality analysis and California Emissions Estimator Model land use emissions software be used to estimate pollutant emissions from typical land use developments. Air quality impacts from project operations and construction should be calculated. The South Coast Air Quality Management District has developed regional and localized significance thresholds for criteria pollutants that should be compared to estimated proposed project emissions. A mobile source health risk assessment should be performed in the event that the proposed project generates or attracts vehicular trips. The California Air Resources Board's Air Quality and Land Use Handbook: A Community Perspective is recommended as guidance for siting incompatible land uses. Several resources are recommended to assist in the drafting of mitigation measures in the event that the project generates significant adverse air quality impacts. The commenter states that CEQA requires that all feasible mitigation measures that go beyond what is required by the law be used during project construction and operation to minimize or eliminate these impacts. Further, the letter notes that any impacts resulting from mitigation measures must be discussed pursuant to CEQA Guidelines Section 15126.4(a)(1)(D).	Section 4.2, Air Quality Section 4.3, Greenhouse Gas Emissions
Local Agencies			
City of Fullerton	5/8/2018	<p>The City is pleased that the Initial Study acknowledges the potential for significant impacts. The City asks that the EIR include effective and enforceable mitigation measures that will protect the surrounding residential areas from light, noise, and traffic intrusion.</p> <p>The commenter requests that if there is a project objective to increase opportunities for field rentals, this should be identified.</p> <p>The City requests a discussion of any changes in programming that are anticipated with the improvements to the field.</p> <p>In terms of lighting, the City requests that the elevation of light fixtures relative to the neighborhoods north of campus be addressed, as well as the type of lighting fixtures, the effectiveness of proposed mitigation measures, and enforcement of lighting curfews.</p>	Chapter 3, Project Description Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation

## APPENDIX B (Continued)

### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
		<p>The City requests that the EIR address how the College will control noise from outside rental groups' sound systems and address the types of sound systems that might be used by these outside groups.</p> <p>According to the commenter, the traffic analysis needs to address bypass traffic through local neighborhoods, the offset condition of Parking Lot 6 driveway and Brookdale Place on Berkeley Avenue, and a worst-case situation where Fullerton Union High School and Fullerton College host games or activities simultaneously. The City also notes that any work in the public street right-of-way will require approval of the Director of Public Works, and that permits need to be obtained from the City's Public Works Department.</p> <p>The City requests that the EIR evaluate impacts to public infrastructure, using anticipated quantities of discharge into storm drains, sewers, and anticipated water usage.</p> <p>For alternatives, the commenter recommends that the EIR look at a No Project, a Reduced Project, and an Alternative Location, including building a new stadium at Cypress College.</p>	
<b>Scoping Meeting Comment Cards</b>			
Muriel Bergman	5/8/2018	Commenter is opposed, due to light and noise pollution, traffic, and parking problems.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation
Dan Chlebowski	5/1/2018	Commenter supports building the stadium; "100 years in the making."	N/A
Mike Clay	5/1/2018	Commenter fully supports the project, citing the need to upgrade the field for future generations and stating that this will improve the community college and the community.	N/A
Amy Dickinson	5/8/2018	Commenter states that the plans for this stadium do not match the perceived need, and the project will serve an insignificant population of the college campus. Commenter characterizes the proposed project as a "feel good" project to celebrate Coach Sherbeck and the victorious football team, which does not compete with the injurious nature to their home and their neighborhood in terms of light pollution, noise pollution, and traffic.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation
Yolanda Duron	5/1/2018	Commenter states that it is a great idea, and will build more community involvement and will improve the student experience. This is for all students.	N/A

## APPENDIX B (Continued)

### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
Jeff Holt	5/8/2018	Commenter states that the proposed improvements will be a visual and sonic assault on the surrounding community.	Section 4.1, Aesthetics Section 4.5, Noise
Mary Beth Holt	5/8/2018	Commenter is opposed due to parking strain, increased glare from lights, and noise from the audio system, which the commenter states will be a detriment to the community.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation
Loretta Hooghkirk	5/8/2018	Commenter's concerns include how tall the light posts will be and how they will affect her view; e.g., will there be lights shining in her yard? How loud will the PA system be? Will there be increased traffic and overspill parking on her street? How late will events be allowed and how late will the lights be on?	Chapter 3, Project Description Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation
Brice Hunt	5/1/2018	Commenter is opposed to stadium because of speakers and lighting.	Section 4.1, Aesthetics Section 4.5, Noise
Sandee Hunt	5/1/2018	Commenter is opposed to stadium because of traffic, noise, and outside rentals.	Section 4.8, Traffic and Circulation Section 4.5, Noise
Ellen Lentz	5/8/2018	Commenter stresses the need to consider the community. According to the commenter, they already suffer, and this stadium would further magnify noise, traffic and unsafe drivers, trash, and light pollution.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation
Bill Miller	5/1/2018	Commenter states that they are already dealing with loud noise at early hours, trash, drug deals, and lewd behavior in cars, and says the project will bring more of the same.	Section 4.5, Noise <b>Note:</b> Lewd behavior is not a topic assessed under CEQA.
Ursula Oleksyn	5/1/2018	Commenter cites negative impact on quality of life with parking, noise, air quality. Commenter notes that there is already a stadium in the area.	Section 4.8, Traffic and Circulation Section 4.5, Noise Section 4.2, Air Quality
Marlon Rizo	5/1/2018	Commenter states that Fullerton College should lower tuition costs before building a stadium.	N/A
Chris Ryan	5/1/2018	Commenter is opposed to stadium because of noise pollution, light pollution, traffic congestion, and loss in property value.	Section 4.5, Noise Section 4.1, Aesthetics Section 4.8, Traffic and Circulation
Susan Ryan	5/1/2018	Commenter is opposed to spending the money on the Sherbeck Field improvements because of noise, trash, and traffic congestion. States that the project will also decrease property values. Suggests the use of funds to increase academic opportunities.	Section 4.5, Noise Section 4.8, Traffic and Circulation

## APPENDIX B (Continued)

### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
			<b>Note:</b> Littering and property values are not topics assessed under CEQA.
Jo Sand	5/8/2018	Commenter is opposed due to traffic, noise, lower property values. Suggests the use of the other stadiums within a mile or less (Fullerton Union High School or California State University, Fullerton (CSUF)) for Fullerton College football.	Section 4.5, Noise Section 4.8, Traffic and Circulation <b>Note:</b> Property values are not assessed under CEQA.
Laurice Singer	5/1/2018	Commenter is opposed to project. Suggests use of high school stadium. States that project would be a waste of taxpayer money, and cites noise, traffic, lighting, and trash issues.	Section 4.5, Noise Section 4.8, Traffic and Circulation Section 4.1, Aesthetics <b>Note:</b> Littering is not a topic assessed under CEQA.
Robert Singer	5/8/2018	Commenter states that the following significant negative impacts to the surrounding neighborhoods are likely: increases in noise and night lighting; drugs, alcohol, undesirable behavior; loss of privacy; and parking and street congestion. Suggests sharing the artificial turf stadium at Fullerton Union High School or other venues.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation Chapter 6, Alternatives <b>Note:</b> Undesirable behavior and privacy are not topics assessed under CEQA.
Jon St. Amant	5/8/2018	Commenter states that noise is a big concern and suggests sound-absorbing walls, suggesting that this could be constructed as a buffer between the stadium and surrounding community.	Section 4.5, Noise
Desi St. Amant	5/8/2018	Commenter is concerned about increased traffic. States that the sound study was conducted on a day when few students were in school with no traffic, skewing the study results. Notes increased trash and light pollution as an issue. States that the site was rejected in 1973 because it was primarily residential and asks what has changed about the location.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation.
Tenney	5/7/18	Commenter is okay with the plans.	N/A
Shirley Wooldridge	5/8/2018	Commenter is opposed due to traffic congestion, lights, noise, and litter.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation
Jan Youngman	5/8/2018	Commenter states that there is no need for a stadium at Fullerton College because there is one at the high school. States intention to work to vote all Trustees out of office regarding this issue.	Chapter 6, Alternatives

## APPENDIX B (Continued)

### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
Individuals			
Amy Alspaugh	5/4/2018	Commenter's concerns and objections include increased traffic, noise pollution, parking problems, traffic congestion, vendors, trash, strain on Fullerton Police, and violations of local residents' and homeowners' property rights with loitering, vandalism, loss of privacy, noise and lighting, and unwelcome visitors to the neighborhood.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.6, Public Services Section 4.8, Traffic and Circulation <b>Note:</b> Littering, loss of privacy, and unwelcome visitors are not topics assessed under CEQA.
Robert L. Ashlock	4/18/2018	Commenter is opposed due to traffic and parking issues caused by the College. States that the use of the field at night will further extend the traffic, parking, and noise into the neighborhood.	Section 4.5, Noise Section 4.8, Traffic and Circulation
Ken Bane	5/8/2018	Commenter does not agree with Land Use and Planning conclusions in the Initial Study. Thinks mitigation such as an alternative location, reduced project, putting a dome over the project, lowering the project below grade, and establishing a formal communication channel to issue complaints should be considered. Commenter recommends that noise mitigation measures include innovative streaming to individual smart devices, having all bleachers face away from homes.	Section 4.5, Noise Section 4.8, Traffic and Circulation Chapter 6, Alternatives
Richard Bartulski	4/16/2018	Commenter is opposed.	N/A
Randolph Baxter	4/20/2018	Commenter states that the project would increase traffic, air quality, greenhouse gas emissions, and noise in the area.	Section 4.2, Air Quality Section 4.3, Greenhouse Gas Emissions Section 4.8, Traffic and Circulation
Cyndi Bemis	5/1/2018	Commenter raises concerns about noise; parking in neighborhoods, which causes safety concerns; sleep disruption; trash on streets; vandalism; decrease in home values; and cost of project when other stadiums are available for use.	Section 4.5, Noise Section 4.8, Traffic and Circulation Section 4.6, Public Services Chapter 6, Alternatives <b>Note:</b> Littering and home values are not topics assessed under CEQA.
William H. Chambers	5/3/2018	Commenter is 100% in support, stating that it is long overdue. Commenter was head Fullerton College Athletic Trainer for 38 years, and states that taking athletes off campus for games is difficult. It is expensive for transportation and rent. Notes that their teams were always third in line at the Fullerton Union	Chapter 6, Alternatives

## APPENDIX B (Continued)

### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
		High School stadium, and at CSUF, they were treated as outsiders. States that now the students are bused to Yorba Linda High School. States that Sherbeck Field is a classroom for football and track athletes as well as for physical activities.	
Martin and Maria Chavez	5/8/2018	Commenters are opposed due to noise, light pollution, generation of trash and vandalism, traffic, and crowd control. Suggest use of alternatives already in place, such as CSUF and Fullerton Union High School stadium.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation Section 4.6, Public Services Chapter 6, Alternatives
Terrence and Mary Collier	5/2/2018	Commenters are opposed to the project due to noise, excess traffic, light pollution, generation of trash and vandalism, and crowd control. Suggest that the District use the stadium at Fullerton Union High School or Titan Stadium at CSUF.	Section 4.5, Noise Section 4.8, Traffic and Circulation Section 4.1, Aesthetics Section 4.6, Public Services
John E. Collins	4/23/2018	Commenter asks whether another stadium is necessary when the high school has one that can be used. States that neighbors are opposed due to traffic, parking, light, and noise.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation
Wayne and Alice Collins	4/16/2018	Commenters are opposed. They have a view lot and there would be an impact on them.	N/A
Fred Crissinger III	5/4/2018	Commenter recommends building the stadium, then working out issues and compromises. Thinks the major issue has already been worked out: lights out by 10:00 p.m. States that Fullerton College would benefit, City of Fullerton would benefit, and neighboring businesses would benefit. Wonders why so few can raise a voice, all in protest over a few Saturdays, because they might be inconvenienced. Restates that it should be built.	N/A
Anna Dalin	5/8/2018	Commenter is opposed due to lights, noise, decline in home values, trash, parking, and traffic safety. Suggests use of the stadium at Fullerton Union High School.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation Chapter 6, Alternatives <b>Note:</b> Property values are not assessed under CEQA.
Wayne Dalin	5/8/2018	Commenter raises need to address parking overflow into neighborhoods. Asks if there is a mechanism to monitor parking in neighborhoods after the stadium is built. States that trash is a problem and that light pollution will be a problem. Commenter states that he	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation

## APPENDIX B (Continued)

### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
		contacted Musco and they said the stadium at Chapman College was representative of the technology. Commenter found there was still a lot of glare there, and states that a monitoring body needs to be put in place to evaluate any light pollution once the lights are up. States that noise pollution is probably the biggest factor. Also very concerned about rentals to outside organizations where there is no control over noise. Concerned about ground vibration. Recommends a contractual agreement with residents limiting rental use. States that a shared use agreement with Fullerton Joint Union High School District (FJUHS) is the best way to mitigate noise at games. Recommends use of adjustable goal posts and repainting hash lines. States the need for a body that will receive noise complaints and do something about them.	Chapter 6, Alternatives
Ruth Davies	4/21/2018	Commenter is opposed because of increased traffic, greenhouse gas emissions, noise, light pollution, foot traffic, littering, and loss of valuable parking spaces.	Section 4.8, Traffic and Circulation  Section 4.3. Greenhouse Gas Emissions  Section 4.5, Noise  Section 4.1, Aesthetics
Ronald Dymek	5/3/2018	Commenter is opposed due to the increased noise, lighting, traffic congestion, pollution, and trash the project would create. Notes that events at the stadium will last past the 7 p.m. parking permit restriction for the neighborhood, and that noise pollution from the softball field is unbearable.	Section 4.5, Noise  Section 4.1, Aesthetics  Section 4.8, Traffic and Circulation  <b>Note:</b> Trash left behind by students on site and in the neighborhoods, while undesirable, is not an environmental impact assessed under CEQA. The CEQA questions regarding solid waste have to do with whether there is a landfill with sufficient capacity to serve the project and whether the proposed project would comply with federal, state, and local statutes and regulations related to solid waste. The project would comply with these regulations, which do not pertain to the issue of littering.

## APPENDIX B (Continued)

### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
Shaun Dymek	5/3/2018	Commenter is opposed due to safety, noise, property value decline, and future impacts. Expresses doubt that future administrations and chancellors will keep promises.	Section 4.5, Noise
Todd and Petra Farquhar	5/8/2018	Commenters state that they already have two large stadiums within 5 minutes of their house and can't imagine why there is a need for another. They understood the costs for the improvements at the high school stadium were justified in part by the benefit it would provide to sharing it with Fullerton College. State that the project would bring more noise, traffic congestion, trash, vandalism, and bright lights, and would increase the need for police patrols as well. Suggest the use of the Fullerton Union High School stadium and saving the money for something that truly benefits the community.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation Chapter 6, Alternatives
Mary Francis Gable	5/8/2018	<p>Commenter expresses concerns about the Sherbeck Field improvements project. States that the project should be rejected because in 1973, Fullerton Mayor Robert Root requested a study to be done by the Chamber of Commerce to find a location for a city stadium and this exact location was rejected because the location is primarily residential; traffic and parking is historically a problem there and access is poor.</p> <p>Lists a number of items that need to be considered: the project is not a classroom and would be subject to approval by the City of Fullerton. Suggests use of the Fullerton Union High School Stadium for graduation because it has 6,500 seats, and states that the seating capacity of this project is not enough.</p> <p>Concerned about lighting, suggesting an alternative that looks at replacing 60-foot lighting previously on the field. Suggests limiting the size of the project. States that lights will negatively impact birds. Cites noise as a significant concern to the neighborhood. Requests a new traffic study. States that a stadium is a public nuisance that will affect home property values. Wants the following alternatives considered: alternative location, shared use agreement with FJUHS, and reduced project.</p>	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation Chapter 6, Alternatives
Gary	5/2/2018	Commenter states that before stadium is complete, these things should be done: (1) parking structure; (2) no street parking on Berkeley during any event; (3) safety first (too many students cross Berkeley to park their cars and someone is going to get hit by a car); (4) have enough parking on campus and don't sell parking pass unless there is	N/A

### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
		room or spaces available; (5) school should pick up all trash on a daily basis, don't leave it to the City; and (6) no neighborhood parking at any time.	
Kathleen Goodno	5/4/2018	Commenter objects to the project and demands it be denied. States that better scheduling should be considered and that the college has more than adequate sports facilities. States that the project would overburden the surrounding community. Cites sound pollution, light pollution, traffic congestion, and trash concerns. States that parking will encroach on city streets and cause safety hazards. States that there are numerous sports facilities nearby that can be used.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation Chapter 6, Alternatives
Jonathan Gottlieb	4/30/2018	Commenter is opposed. Has concerns about trash; noise—car noise, car alarms, street racing, and from fans at games; vandalism; drunkenness; illegal parking; lighting at night; traffic congestion; lewd conduct; illegal or unlicensed street vendors; increased overtime for Fullerton Police; and outside rentals 7 days/nights per week from 6 a.m. to 10 p.m. Suggests use of Fullerton Union High School's stadium or Titan Stadium at CSUF.	Section 4.5, Noise Section 4.1, Aesthetics Section 4.8, Traffic and Circulation Section 4.6, Public Services Chapter 6, Alternatives <b>Note:</b> Littering and lewd conduct are not topics addressed under CEQA.
Rob Grantham	5/1/2018	Commenter cites light and sound pollution concerns. Suggests use of the high school stadium. States that parking is a great concern to the neighborhood. Recommends considering a joint use agreement with Fullerton Union High School.	Section 4.1, Aesthetics Section 4.5, Noise Chapter 6, Alternatives
Robert and Susan Harmston	4/28/2018	Commenters state that there is no need for another stadium in the neighborhood, and it would bring more traffic, congestion, loitering, and trash. Suggest using the one next door or the one at CSUF, stating that this would save Fullerton College and the City having to hire more police officers. Also raise concerns about noise and lighting.	Section 4.8, Traffic and Circulation Chapter 6, Alternatives Section 4.6, Public Services Section 4.5, Noise Section 4.1, Aesthetics
Jonathan Heffernan	5/4/2018	Commenter is opposed; cites trash and traffic impacts.	Section 4.8, Traffic and Circulation <b>Note:</b> Trash left behind by students on site and in the neighborhoods, while undesirable, is not an environmental impact assessed under CEQA. The CEQA questions regarding solid waste have to do with whether there is a landfill with sufficient capacity

## APPENDIX B (Continued)

### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
			to serve the project and whether the proposed project would comply with federal, state, and local statutes and regulations related to solid waste. The project would comply with these regulations, which does not pertain to the issue of littering or how trash gets to the city streets.
Judith Hirou	4/16/2018	Commenter is opposed; cites noise, lighting. Suggests use of two other stadiums nearby.	Section 4.5, Noise Section 4.1, Aesthetics Chapter 6, Alternatives
E. Kinny	4/13/2018	Commenter is opposed to the project.	N/A
Ellen Lentz	5/4/2018	Commenter is opposed to the project. Issues: noise would be intolerable, lights are already bright, traffic is already unbearable, and home values would plunge.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation
Fred Lentz	5/2/2018	Commenter is opposed to the project. Issues cited: noise; traffic; trash; and careless, dangerous driving. Commenter notes that the home side of the field is facing the neighborhood, and claims that renting out the field is the main reason for building it.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation
David and Reba Lewis	4/9/2018 and 4/30/2018	Commenters are concerned about traffic, noise, and unsavory individuals. Commenters moved here in 1971 and believe the proposed project threatens their peace and safety. Commenters are concerned about trash, car noise, car alarms, noise from stadium, vandalism, drunkenness, lighting, traffic congestion, lewd conduct, illegal or unlicensed street vendors, increased overtime for Fullerton Police, and outside rentals 7 days/nights per week from 6 a.m. to 10 p.m.	Section 4.8, Traffic and Circulation Section 4.5, Noise Section 4.6, Public Services Section 4.1, Aesthetics <b>Note:</b> Littering, lewd conduct, and illegal and unlicensed street vendors are not topics assessed under CEQA.
Robbe Lindsay	5/4/2018	Commenter calls Sherbeck Field "hallowed ground" and urges "Build it now."	N/A
Laura Gallagher Lopez	4/30/2018	Commenter is opposed. Feels the field is redundant. Thinks renting out the field for profit is asking too much of the neighborhood. Notes that morning weekday traffic is already so bad from Fullerton College students/staff that on many weekday mornings, it is backed up on Lemon, north of Berkeley, toward the crest of the hill at Hillcrest Park, which makes it very difficult to get out of the commenter's neighborhood at Hillcrest Drive. Commenter requested a "do not block" sign on Lemon at Hillcrest Drive from the City of Fullerton,	Chapter 6, Alternatives Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation

## APPENDIX B (Continued)

### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
		and it still gets blocked. States that when making a left turn onto Lemon from Hillcrest Drive, there is zero visibility in either direction and it is very dangerous, as drivers have to inch out until they're in the lane before they can see the traffic. States that this situation needs to be remedied and anything that adds to the already bad traffic situation (be it construction related or additional traffic from attendees) is of major concern from a safety and quality of life standpoint. Also concerned about light pollution and additional noise.	
Steven and Patricia Lowry	4/25/2018	Commenters are opposed. Note that Fullerton Union High School's stadium was just upgraded. Note noise as a big concern, along with light intensity.	Section 4.5, Noise Section 4.1, Aesthetics Chapter 6, Alternatives
Tanya McCrory	5/8/2018	Commenter is opposed to the current project with 4,417 seats, which exceeds the number of spectators and still falls short of what is needed for graduation. States that only 1,600 seats are needed for most events. Suggests renting the PA system for football games and commencement only. Wants a binding contract that the field won't be rented out. Would support alternate venues like Fullerton Union High School and CSUF. Would also support reduced project of 1,600 seats with no PA system and no new renters.	Chapter 6, Alternatives
William and Elaine Miller	5/6/2018	Commenters are opposed, citing parking, trash, noise, and pedestrian problems with current use of athletic facilities by school and outside entities. Further, the commenters present the following objections: the reasons for needing the project are invalid, because Fullerton College athletic programs have been successful with current facilities; viable alternatives exist nearby; physical education classes have been on the schedule for decades making use of existing facilities; property values will decline; stadium rental to outside entities and construction of the stadium using money from taxpayers who oppose the project.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation Chapter 6, Alternatives
Kelsey Mori	5/2/2018	Commenter is opposed. Suggests use of Fullerton Union High School's stadium. Issues: lights, loudspeakers, noise and trash, vandalism, security, and more traffic. Recommends using Fullerton Union High School or CSUF's stadium instead of building a third, unnecessary, stadium.	Chapter 6, Alternatives Section 4.1, Aesthetics Section 4.5, Noise Section 4.6, Public Services Section 4.8, Traffic and Circulation
Sherrie Mori	5/2/2018	Same comment as Kelsey Mori.	Same as above.

## APPENDIX B (Continued)

### Summary of Comments Received in Response to the NOP

Commenting Agency or Property Owner	Date	Summary of Comments	Chapter/Section Where Comment Is Addressed
Suzanne Muhaidly	5/6/2018	Commenter is opposed due to noise, light pollution, traffic congestion, trash, and proximity of the project to a residential area.	Section 4.1, Aesthetics Section 4.5, Noise Section 4.6, Public Services Section 4.8, Traffic and Circulation
Anne S. Murphy	4/11/2018	Commenter opposes the Sherbeck Field improvements. Concerns include trash generation, noise, vandalism, drunkenness, illegal parking, parking for profit, lighting, traffic, lewd conduct, illegal or unlicensed street vendors, animal defecation, and increased overtime for Fullerton Police Department. Believes that the consequences of a stadium as proposed would reduce the values of properties within 1 mile. Urges use of newly renovated Fullerton Union High School stadium.	Section 4.5, Noise Section 4.8, Traffic and Circulation Section 4.1, Aesthetics Section 4.6, Public Services Chapter 6, Alternatives <b>Note:</b> Parking for profit, littering, lewd conduct, illegal or unlicensed street vendors, animal defecation, and impacts to property values are not topics assessed under CEQA.
Thomas Nelson	4/23/2018	Commenter is concerned about noise levels, lighting, bleacher size, and press box. Thinks various elements of the project need to be scaled down.	Section 4.5, Noise Section 4.1, Aesthetics Chapter 6, Alternatives
Damion Planchon (a.k.a. Damion Lloyd)	5/8/2018	Commenter is opposed. Notes that there is another viable stadium alternative 1,000 feet away. Has comments about seating, light pollution, safety, noise, press box, lewd conduct and trash, student demand, and funding. States that building a smaller project with 1,600 to 2,000 seats with a strict field use policy could help alleviate most of the neighbor concerns.	Chapter 6, Alternatives Chapter 3, Project Description Section 4.1, Aesthetics Section 4.5, Noise Section 4.8, Traffic and Circulation
Laura Richard-Barasch	5/6/2018	Commenter is concerned about the impact to the surrounding neighborhood of increased traffic, light pollution, sound pollution, and safety (impacts).	Section 4.8, Traffic and Circulation Section 4.1, Aesthetics Section 4.5, Noise Section 4.6, Public Services

RE: Fullerton College Sherbeck Improvement Project

Dear Mr. Williams:

I am writing in response to your letter of April 9<sup>th</sup> concerning the Fullerton College Sherbeck Improvement Project. I did in fact attend the scope meeting last Tuesday evening, but unfortunately could not stay for the duration. I did however watch the initial presentation, and it reaffirmed the concerns I already had.

As a long time Fullerton resident, homeowner, and alumni of Fullerton College, my concerns are primarily concerning the proximity of the enhancements that are being planned and the negative impact on the general area, particularly residents and homeowners who live right next to it and those that drive through that area on a regular basis. I do not believe it is possible to add the bleachers, stadium lighting and other elements without negatively impacting the entire area. Additionally, as the parent of a former student and graduate of Fullerton High School, I am finding it difficult to justify this project as that stadium has fulfilled the needs of this community for some time.

To summarize, I am listing the following concerns and objections to the College Sherbeck Improvement Project:

- Increased traffic in an already fully built up area
- Noise pollution
- Parking problems
- Traffic congestion
- Vendors, trash and other issues with events
- Additional strain on the Fullerton Police who are already burdened with Downtown nightlife issues
- Violation of local residents and homeowner's property rights
  - Loitering
  - Potential for increased vandalism
  - Loss of privacy
  - Noise/lighting
  - Unwelcome visitors to their neighborhood

In closing, while I have the deepest respect for Hal Sherbeck, fondness for my alma mater and would welcome improvements of another kind that also benefitted the adjacent community and Fullerton generally, I do not feel that this project in any way fulfills this. I am opposed to the Fullerton College Sherbeck Improvement Project

Thank you for your time and interest.

Re: Fullerton College Sherbeck Field Improvements Project

Dear Mr. Williams,

This letter is in response to your advisement/inquiry for comments regarding the draft EIR.

I live in the neighboring community adjacent Fullerton College. I am opposed to any further improvements or expansion of facilities at the College. Over the last 20 years of my residence here, the traffic and parking issues caused by the College have continually increased. Adding the capability for the use of the field at night for additional activities and events will further extend the periods of traffic, student/attendee parking, and noise throughout our neighborhood into the evening hours.

Thank You,

Robert L. Ashlock

**Subject:** Comments on Stadium NOP

Below are comments on the FC Stadium NOP. Please confirm receipt, thanks.

Ken Bane  
1211 Luanne Ave  
Fullerton, CA 92831

### **4 PUBLIC REVIEW PROCESS**

*The City of Fullerton approves water access and grading/drainage*

### **6 INITIAL STUDY CHECKLIST**

*Need to add city of fullerton for water and grading/drainage*

### **ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:**

#### **6.10.b Land Use and Planning**

*This analysis and finding of less-than-significant impact is flawed. The site's present P-L zoning and independence from local land use control DOES NOT eliminate the possibility of potential impacts on surrounding land use plans of an agency with jurisdiction over the project. In fact, the City of Fullerton has jurisdiction for water, grading, and draining for this project. In addition, the project could have impacts that would interfere with the City's land use plans, specifically residential zoning to the north and east. THEREFORE LAND USE IMPACTS WILL BE POTENTIALLY SIGNIFICANT AND MUST BE ANALYZED*

#### **mitigations to be considered:**

- alternative location (no project i.e Fullerton HS or Yorba Linda HS)
- reduction in project size and/or use restriction agreement
- putting a dome over the project
- lowering the project below grade
- establishing a formal communication channel to resolve time/date specific complaints

#### **6.12 Noise**

#### **mitigation measures to consider should include**

- removing speakers and using innovative streaming to individual smart devices
- reduction in project size and/or use restriction agreement
- putting a dome over the project
- having all bleachers face AWAY from the homes
- lowering the project below grade

-establishing a formal communication channel to resolve time/date specific complaints including dB ongoing sound level monitoring technology possibly with the ability to volume up and down

#### **6.14 Public Services**

*Impacts will include noise complaint calls to the Fullerton Police Department and the FC Stadium Security Department.*

#### **6.16 Traffic**

*post-completion impacts will be potentially significant and must be analyzed including impacts on surrounding circulation systems and adjacent residential areas*

4/16/18

Dear Mr Williams,

I've read the letter concerning  
"Sherlock Field Improvements  
Project." I don't know what the  
projects are but if they are  
minimal in money costs - I  
approve it.

But if it has anything  
to do with building a "New  
STADIUM" on the college campus,  
I am very much NOT IN FAVOR  
of this project.

Sincerely,

Richard Bartulski

re: opposition to Fullerton College field project

Dear Mr. Williams,

I am writing to express my opposition to the proposed Fullerton College Sherbeck Field Improvements Project, as outlined in the NOCCCD's letter to me dated April 9<sup>th</sup>. Though I have read the on-line descriptions of the project, I will be unable to attend the May 1<sup>st</sup> public-scoping meeting and open house.

I am a 19-year Fullerton resident who lives a few blocks from, and regularly drives the streets adjacent to Sherbeck Field. Given the concessions/warnings reported in the recent Draft EIR, I am very concerned that the Project would increase traffic, air quality, greenhouse gas emissions, and noise in the area. Rentals of the field to outside teams for competitive events, in particular, would dramatically increase traffic and noise well into evenings that do not currently suffer such intrusions.

I feel the current stadium situation is perfectly adequate for the needs of Fullerton College and area schools, so the proposed improvements to Sherbeck Field are unnecessary.

Thank you for receiving this reply, and for your efforts in responding to resident feedback on this issue. Please do not hesitate to contact me, should you have any further questions in this matter.

Sincerely,

A handwritten signature in black ink, appearing to read "Randolph Baxter", with a horizontal line extending to the right.

April 28, 2018

Dear Mr. Williams:

I'm writing as a neighbor to Fullerton College and I wanted to express my concerns about expanding the Fullerton College stadium project.

I have lived in my home for 18 years next to Fullerton College. I also attended Fullerton College as a youth. I value the college and the education and programs that it provides. However, I have some significant concerns about the potential project.

**Concerns:** A major issue that has come up over the years has been the way that **sound travels**. Whenever there is a construction project at FC, or a sporting event where music is played, the sound carries right into my home. It's amazing how it has actually seemed as though there is a boom box in my house when the sports teams are playing their music. When construction was taking place a few years back, it was waking me up in the morning. I walked over to the site to talk directly to the foreman and he was surprised that I could hear it so loudly at my home. It actually appeared to be louder in my neighborhood than it was at the actual site. I don't have an understanding of how sound carries, but I do know from experience that it does carry and that the sounds from the college are very loud in our neighborhood. I personally have sleep issues, and value quietness in the morning and evenings. I am concerned/and know that the sounds of the stadium events would be a huge intrusion on privacy and quiet. Actually it **WILL** be if the stadium is built.

Another concern is parking. With large events, **our street will be filled with parked cars**. With parked cars on each side, there is not enough room for two way traffic on my street (Princeton Circle W). This is a fact that I have experienced. In addition, there would be no room for **emergency vehicles** to pass through. **This is a huge safety concern.**

Also, again with cars parked on my street for events lasting until 10pm, I am concerned once again about **noise, lack of my sleep**, trash on the streets (we have already seen this with college students parking previously on our streets) and an increase in vandalism. Currently we have a quiet neighborhood and value this greatly. The stadium will change that forever. We have already in the past year had a higher incident of burglaries in our neighborhoods. (There are times when I go to bed early, but people on my street and next door at the stadium will forever prevent that....this is simply not right.)

**Safety** in pulling out of my driveway is a huge concern. With cars parked on the street, it **impacts visibility** when all of us are backing out of our driveways. As we have experienced in the past, college students and others speed up and down our streets.

In addition, the value of our homes will decrease. People will definitely reconsider purchasing a home in this neighborhood!

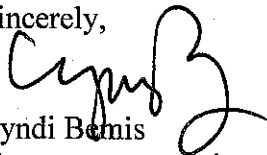

**Solution:**

It hurts my heart to know that there is a suitable space next door at Fullerton High to host events and that college has plowed forward despite residents' legitimate concerns. **I would ask the board and those in support of the project that if they were in our shoes, what would they want?** Would they still be supporting this even though they know it will impact their sleep, health and safety and that of their kids? That bright lights would be shining into their kids' bedrooms at 10pm and lots of noise outside? I only ask that you put yourself in our shoes. There are so many other things that the money could go towards: more education, other sports, etc. I imagine that the college has a long list of things they would love to spend money on.

I will admit, it's also very hard for me to see the college spend my and other's tax dollars on something that I don't support and also building or improvement projects that I could never afford for myself. I struggle to make ends meet personally and have to at times wait years to afford a single repair on my own home (My rain gutters are 68 years old and leak water, for example!). Yet, my tax dollars support FC building projects and they are state of the art. In this case, it really appears wasteful as there are other options such as Titan Stadium and FC stadium. It really strikes me as a **moral decision** when it comes to the decision of how to spend money that comes from others.

Thank you for your consideration.

Sincerely,

Cyndi Bemis

Dear Mr . Williams

I am writing to cast my 100% support to build a stadium on Sherbeck Field . This project is long over-due facility for the Fullerton College student athletes .

I was the F C Head Athletic Trainer for 38 years . I went through the trials and tribulations of having to take out student athletes off campus for football games . It was expensive for transportation and for rent, and our teams still managed to have success thanks to a great coaching staff and a desire to compete by these students .

We were always third in line at FUHS Stadium behind two high schools .

When we went to Cal State Fullerton we were always treated as outsiders and we had to go fully contained because their facility offered us very little . Now these student athletes are being bused to Yorba Linda High School for games which is not an ideal situation .

Sherbeck Field is a classroom for the football and track student athletes as well as for physical activities and a stadium on campus would be a wonderful addition to the Fullerton College Campus . A sound decision to take care of a long overdue project and provide a stadium should be made.

Sincerely

William H Chambers

RE: OPPOSITION TO SHERBECK FIELD IMPROVEMENT  
Comments for Inclusion in draft EIR

Dear Mr. Williams

My name is Martin Chavez and my wife Maria Chavez, both OPPOSE the Sherbeck Field Improvement Project for the following reasons.

**-Noise** [large crowds, cheering fans, PA announcements, horns and stomping on bleachers, extra traffic and parked vehicles behind residential homes.]

**-Light Pollution** and Negative effects of LED [the lights will reflect into the neighboring homes.]

**Generation of Trash and some Vandalism** within the surrounding community.

**Traffic and Crowd Control** from events would burden Fullerton police and the community.

To best understand how I have come to this decision, is to list some examples of each of my experiences. They would need to be mitigated and not just stated that nothing can be done to the current project as planned.

The proposed project is to install 4417 capacity permanent bleacher seats and 6 light towers with 12 loudspeaker PA. All this under the umbrella that the college can host football games, academic instruction, host competitive athletics and rental of the stadium.

First let me address the NOISE that would be generated from such proposal project. Currently we live near a stadium located on Lemon St and Berkley Ave; Fullerton High School Stadium. The crowd noise from football games during the season can be heard from Princeton Circle West and the neighboring community. And this is located about ¼ mile away from my house. I have walked my dog during the evening and can still hear the roar of the crowd up to Raymond Ave. Just recently, 30<sup>th</sup> of April 2018, there was a PA system check from FUHS Stadium which I noticed when I got home from work around 5pm. I could hear an individual just speaking, but it was not overly loud. But as the evening dragged on and when I took my dog for her walk around 7:30pm the individuals

voice was more noticeable. I figure since there was less noise pollution from vehicles and people that other noise was more profound. Currently the noise that is most produced is from the football practice that are held on the field. It is loud, but it is only the football team and coaches, practices are usually over by 6/6:30pm. Which is greatly appreciated by our family. But now the

FC campus wants to extend the hours of operation of the field use till 10pm and seven days a week, is not acceptable. So now the noise will be ongoing with no relief and knowing what to expect each day.

Just recently on the 18th of April at around 7:30pm I had some students that were parked on Berkley Ave, right behind my backyard. These two students sitting in their vehicle had the music loud. They were there for a while even after I photo flashed them, hoping to get their attention, but it seemed they were not discouraged. I decided to call FC Campus Security, so they could just bring some order to this situation. I was told they could not do anything, since it was off campus and to call the Fullerton Police Department. I did not want to do this, since this was a Fullerton College issue. I did call FPD, but was not happy in doing this, due to the fact manpower and resources were used to deal with this situation.

Secondly the TRASH left, that is the consequence of vehicles parked on Berkley Ave, right behind our homes. Currently cars parked along Berkley Ave are from those attending classes and/or events being held on Fullerton College Campus. It is well known that the trash left on Berkley is most likely from FC attendees. I myself have had to clean up some of this trash, which includes broken beer bottles.

As neighbors we had to petition the city to have parking permits. This was done after repeated complaints to FC; regarding trash, drinking alcohol, loitering and blocking driveways on neighboring streets close to FC campus.

Another issue would be the lighting considered to be installed and the hours of operation. As in any lighting there is spillage outside the controlled area. Using Fullerton High School Stadium as an example the new lighting has spillage on the outside perimeter. Due to light intensity to light the field, you have deflection of light, due to the hours of operation the FC proposed project wants to implement. Since the field is so close to homes, about 15 yards from the closest homes along Berkley Ave. it will affect many families; reflective light into homes, disrupting sleep for those that need to go to work early or school. I myself need to go to sleep by no later than 9pm and usually up by 3am to get ready for work. My daughters also get up early to go to school.

Traffic and Crowd Control needs to be addressed. Currently FC is not capable in dealing with the traffic and crowds that would be generated from such an upgrade of Sherbeck Field. The campus is not able to accommodate the vehicle parking needed on its campus and most would want to park along Berkley Ave near homes. Plus, Berkley Ave is only a two lane road and is usually busy, speeding, and dangerous road to be on.

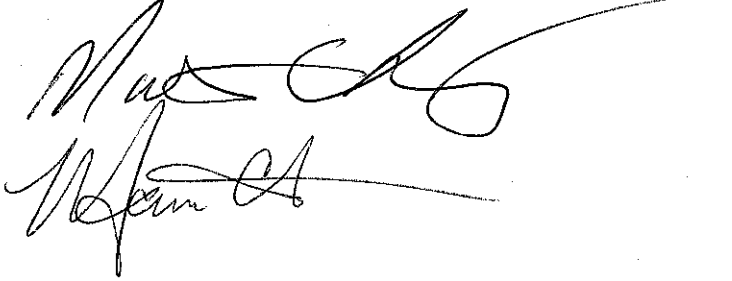

The best way to mitigate this "Stadium Proposal Upgrade" is to use alternatives that are already in place. Such as using Cal State Fullerton Stadium with a 10,000-seat capacity or Fullerton High School Stadium just renovated stadium.

If all those alternatives are exhausted than the Field Proposed Upgrade for FC should be downsized from the 4417 to maybe 1500 seat capacity. This would mitigate the noise, traffic and crowd control and the impact on the surrounding community. The initial argument for why a stadium was needed was for FC football home games. So I looked at what kind of attendance

of home games at their current Yorba Linda Stadium; it was 1200 spectators on Sept 2, 2017[[hornet.fullcoll.edu/hornets-football-kicks-off-the-season-with-ninety-fifth-key-to-the-](http://hornet.fullcoll.edu/hornets-football-kicks-off-the-season-with-ninety-fifth-key-to-the-)]. The hours of operation and rentals should also be limited to how late in the evening the field can be in operation and the times it is available on the weekends, especially on Sunday. I know firsthand that in the City of Fullerton, the Ranger Soccer Club do not start Sunday games till 12 noon and they must end by 4pm. These games are embedded into the community school fields and parks. So, it is a way for everyone to co-exist and be good neighbors.

Sincerely,

Martin and Maria Chavez

RE: OPPOSITION TO SHERBECK FIELD

Dear Mr. Williams:

My name is Mr. and Mrs. Terrence Collier and we oppose the Sherbeck Field Improvements project due to:

Noise

Excess Traffic

Light Pollution and negative effects of LEDS

Generation of trash and vandalism

Crowd control

Our solution: use District Stadium at FUHS or Titan Stadium at CSUF.

Terrence and Mary Collier

Anaheim, California 92801-1819

**Subject: Notice of Preparation of a Draft Environmental Impact Report for the Fullerton College Sherbeck Field Improvements Project**

The North Orange County Community College District (District) will be the lead agency and will prepare an environmental impact report (EIR) for the proposed project identified below. The District is requesting your view regarding the scope and content of the environmental information to be included in the EIR. Responsible agencies are requested to indicate their statutory responsibilities in connection with the proposed project.

*neighbors' complaint*

The description, location, and the potential environmental effects resulting from the proposed project are contained in the initial study, which is available through the District's website (<http://www.nocccd.edu/>), Fullerton College's website ([www.fullcoll.edu/campusprojects](http://www.fullcoll.edu/campusprojects)) and at the Administrative Offices, North Orange County Community College District, Anaheim, campus located at the address above. The initial environmental review indicates that the proposed project may have potentially significant effects on the environment in the following categories: aesthetics, air quality, greenhouse gas emissions, hazards and hazardous materials, noise, public services, recreation, transportation and traffic, tribal cultural resources, and mandatory findings of significance. The EIR will include an analysis of these impact areas, as well as feasible mitigation measures and alternatives to avoid or reduce potential impacts.

Due to the time limits mandated by state law, your response must be sent at the earliest possible date but no later than 30 days after receipt of this notice. A public scoping meeting will be held on Tuesday, May 1, 2018, beginning with a Project Presentation at 6:00 p.m. in the Fullerton College Campus Theatre (Building 1300) located at 321 E. Chapman Avenue, Fullerton, CA 92832, followed by an Informational Open House in the Fullerton College Center (Building 200), Rooms 224, 226, and 228.

Please send your response to Mr. Richard Williams at the address shown above. Please provide the name of a contact person in your agency.

## Notice of Preparation

**Project Title:** Fullerton College Sherbeck Field Improvements Project

**Project Location:** Sherbeck Field (northeastern portion of the Fullerton College campus). Fullerton College is generally bounded by North Berkeley Avenue to the north and east, North Lemon Street to the west, and East Chapman Avenue to the south.

**Proposed Project:** The College plans to install permanent prefabricated aluminum bleachers, six field lighting stanchions, a new sound system, press box, and storage building at the existing Sherbeck Field. Sherbeck Field would continue to be used for academic instruction, competitive athletics, and rentals; however, Sherbeck Field is proposed to host competitive football games, which are currently held at other locations. The inclusion of field lighting as part of the project would allow Fullerton College to add more evening classes, to offer a balanced schedule, and provide more class options for students who may not be able to take physical education during the day. It is anticipated that these improvements would begin in spring 2019 and would last approximately 6 months.

Richard Williams

District Director, Facilities Planning and Construction

- ✓ Fullerton Union High School has served FC for years. Do we NEED our own?
- ✓ neighbors will oppose traffic, parking, light, noise, etc.
- ✓ How do they meet P.E. classes now - and for years?
- ✓ I vote "No."

John E. Collins, Ed. D.

PS, my wife Eileen died in 2014. Please remove her name from your list. Thanks - John

Dear Mr. Williams,

I would ask to have my voice heard regarding the proposed "Hal Sherbeck Stadium" project.

This is an unfortunate and frivolous disagreement, which could be quickly remedied. It seems to be brought on by a handful of residential neighbors in the proximity of the proposed site. Well, build the stadium, then if adjustments or concessions need to be worked-out, let everybody involved bend a little. Compromise. It looks like to me, the major compromise has already been reached -- lights out by 10:00 p.m. Problem solved. If that doesn't suffice, work it out.

It seems a shame that if Fullerton College would benefit and the city of Fullerton would benefit, and certainly neighboring businesses in the area would benefit... build it. The infrastructure alone makes this a more than worthwhile venture. An awful lot of food would be put on the table's of those who work on the construction of this stadium.

As an aside, I played at the Fullerton Stadium across the street, many years ago -- four years worth. Three years while I was at Troy High School and a season while attending Fullerton College. This was in the late seventies and early eighties. There were no problems to speak of. Game was over, people left. They went home. Sadly, a sour few in the neighborhood have created quite a sour situation. Much tah-doo about nothing. Build It.

When I played at Fullerton Community College, it was a true "community" gathering. North Orange County folks, pulling for a community team, while watching great football at the same time. That should never change. That community should be watching the games in a well-deserved stadium.

Coach Hal Sherbeck changed many a young man's life on the proposed site of this stadium. Men that would go on to coach, and relay his strong beliefs. Men that would go on to be successful in the world of life. Stand-up, meaningful, contributing men.

My Pop Warner coach, Pete Laborde, was a major influence in my youth. He played for Coach Sherbeck. In high school, I had countless coaches who played for Coach Sherbeck. Dennis Dixon, who taught me how to be a man, on and off the field. Craig Feola, who opened the weight room every day at 6:00 a.m., and worked-out with me, so I could attain a greater success on the field and in life. They played for Coach Sherbeck.

It seems ludicrous to me, that so few can raise a voice, all in protest over a few Saturday nights, or a few Friday nights here and there, because they (might) be slightly inconvenienced.

In the name of a legendary coach and man... let the legacy of Coach Hal Sherbeck live on. Build it!

Thank you for taking the time to consider my thoughts on this matter.

Sincerely,

Fred Crissinger III

Dear Mr. Williams:

I am writing to express my opposition to the Sherbeck Field Improvements Project. I oppose it for several reasons:

- The light of the proposed improvements will disrupt the sleep of our neighborhood's children, older residents and that of adults like my husband who must get up at 5:00am every day to teach an early period as a teacher. For these three populations, sleep research has shown that it is not enough for the tall field lights to be turned off at 9:00pm. They must be turned off at least one half hour earlier to allow human eyes to start preparing for sleep in a dim environment.
- The sound of the events and speakers will also disrupt the sleep of our neighborhood's children, older residents and that of adults who must rise early. Per the Environmental Protection Agency (EPA), some of the results of noise pollution are: increased aggression, lack of sleep, decreased motivation, hypertension, fatigue and anxiety, increase in heart rate. **Especially in children, noise such as from large outside events causes many detrimental effects** including negatively affecting a child's acquisition of speech, language, and language-related skills, such as reading and listening; causing Noise Induced Hearing Loss (NIHL), which is especially caused by prolonged exposure to high levels of noise or by the sudden high level (impulse) noise which will often occur at college events; causing tinnitus, causing elevated blood pressure and other cardiovascular ailments
- I am saddened that the College is not considering the fact that while this stadium will bring in revenues to the College, it will decrease the value of all neighborhood homes significantly. This is insult upon injury, and not very "community"-minded for a community college. Why should we be financially affected by the College's plans?
- I am not looking forward to the trash, parking and traffic safety issues that will be caused by increased use of the field.

- Architecturally and from an urban planning perspective, it is silly and also unattractive for two stadiums to be located so close together. You already have a beautiful stadium that you can use at Fullerton High School.
- The big stadium of a four-year college should be a goal for athletes to look forward to, and is unnecessary for a junior college. Community college funds should be reserved for programs which help all students prepare to successfully transfer to four-year colleges and/or prepare for fulfilling career futures.

Thank you for your time.

Sincerely,

Anna Dalin

Mr. Richard Williams, District Director, Facilities Planning & Construction  
North Orange County Community College District  
1830A West Romneya Drive  
Anaheim, CA 92801-1819

Dear Mr. Williams:

I'm writing regarding the Pre-EIR and the college's proposed expansion. Some of the issue I would like to see addressed are as follows:

- There is a potential for parking problems. If the stadium is used in its full capacity there is a potential for overflow in the neighborhood. Even if parking is free, some people prefer to park far away and walk to not have to deal with the hassle of getting out of a sporting event. Some questions:
  - Will there be any mechanism in place to monitor parking after the stadium is built? Could a citizen's group be created to monitor parking in the stadium's infancy? This body could count cars to notify the school if there is a problem with people parking in neighborhoods so the college could take some action. Could the college hire an agency to do this in the first year of the stadium?
- Living by the college, trash is regular problem on Berkeley. After sporting events, attendees often litter in the area close to their car.
  - Will the college identify what trash looks like at other similar sized stadiums? Can they put in place a system to ensure that detritus from a sporting event doesn't spill over to the neighborhoods close by?
- Light pollution will be an inevitable consequence of the stadium. Musco, the company currently bidding for the lighting contract, argues that there will be no light pollution. They have shown mock-ups that present a stadium with no light pollution. However, I believe these mock ups are nothing more than photoshopped pictures, and that the low-level lighting they promise is not possible. When I spoke with a Musco representative I was instructed to visit the stadium at Chapman College during a football game. I was told that the lights at this stadium were representative of the technology that would be utilized at Sherbeck Field. However, I was disappointed when I walked further than 100 feet (the closest home are only 80 feet from the proposed lights) from the stadium and was able to read a book in the glare.
  - Will the college go to Chapman stadium and evaluate the real-world lighting conditions created by the lighting stanchions? If the college only takes the data provided from Musco, then they are not actively engaged in discovering the real

world effects of Musco's lights. The college's "research" must go beyond using the data provided by Musco. Looking at similar sized stanchions of the same make and size seems essential to identify the light pollution generated by the stanchions.

- Will the college put into place an oversight committee, either community controlled, or one run by the Facilities department of the college to evaluate the light pollution once the lights are actually up? It is possible the lighting projections provided by Musco, or even predicted by the college, might not match the real effects of the lighting. A monitoring body needs to be in place to evaluate and possibly make changes if the glare is far beyond that predicted by Musco or Fullerton College. If the EIR calculates a certain amount of light pollution, and the trustees vote on those effects, but the effects turn out to be great than supposed, than this process is not fair, but rather disingenuous.
- Noise pollution will probably be the biggest factor ruining the lives of the neighbors. Some homes are 80 feet away. The college should take into consideration the following:
  - Ground vibration caused by students pounding on the bleachers. The college should take several measurements:
    - Stadium with average capacity at football games
    - Stadium with projected playoff capacity at football games
    - Stadium with all seats filled, for a possible concert or sporting event
  - An acceptable answer is NOT:
    - The college will forbid this behavior, because this answer does not take into account the possible usage scenarios. The college has the potential for rentals throughout the entire year. Board members have written to me (emails can be provided) indicating that at some time they suspect the stadium will be rented out by outside groups. When the stadium is currently being used by outside groups there are NO NOISE CONTROLS. NO ONE FROM THE COLLEGE IS PRESENT DURING RENTALS TO MONITOR NOISE. Hence, if this policy is continued, there will be no one present to stop a game facilitator from encouraging the people in the stadium to pound on the bleachers. Therefore
      - The college could consider having a specialist dedicated to monitoring noise at all events hosted by outside groups to ensure that these groups fall into the noise compliance goals set in place by the EIR
    - Ground vibrations are worse than noise. Unlike noise, where doors and windows can be shut, there is no way to stop the effects of ground vibration. There are long lasting effects of ground vibration. There have been several studies linking increased heart rate and adverse affects on sleep due to ground vibrations caused by railroad cars. Some homes with young children are 80 feet away from the stadium and have bed times between 7-8 pm. The college must find a way to stop the bleachers from being stomped on lest the sleep of young children be interrupted. I suspect

aluminum bleachers might be even worse because of the loud noise generated by aluminum.

- A recent study published in the Noise & Health Journal indicated that there is a link between night time noise exposure and cardiovascular disease. This study also concluded that low-level noises can impact health due to sleep disturbances. The college might argue that the noise generated by sports events is sporadic, and not continuous, therefore no noise mitigation needs to occur. However, the study in the Noise and Health Journal and other studies have concluded that these sporadic noises can interrupt regular sleep rhythms. In particular, children exposed to loud, episodic sounds, especially those above 80 decibels will most likely experience disturbances in their sleep cycles. To me, this behavior seems criminal. To mitigate these loud sounds, the following options exist:
  - Enter into a contractual agreement with the residents limiting rental use. Every instance of field use with sizable crowds will most likely result in the loss of sleep for the young children that live close to the stadium. Limiting the use of the field is one key way of mitigating this problem.
  - Build a sound wall. While a sound wall will most likely limit some of the aesthetic features of the stadium that the College would like to have, the benefits to nearby residents are sizable. A sound wall, if well-designed, might lessen the noise (in terms of decibels) of large crowds. Landscaping could be utilized to enhance the aesthetics of such a wall.
- A shared use agreement with the Fullerton Joint Union High School District (FJUHSD) to use the stadium at Fullerton High School is the best way to mitigate the noise generated by games. The college makes some claims which need to be addressed:
  - The college claims that a shared use agreement is impossible based on California Community College Athletic Association Regulations. The two issues of concern are goal post sizes and hash marks.
    - Aaesports.com, sportsfieldspecialties.com, and wizardsports.com, are three of many possible companies that sell goal posts which are adjustable and can be utilized by both the high school and college. The adjustability allows them to be compliant for both high school and college level football rules. FJUHSD has shown themselves to be very open to this possibility.
    - Because the field is astroturf as opposed to natural grass, it can be repainted as needed, thus allowing the wider hash marks to be painted for college level games.
- The college claims that lighting and bleachers are needed at Sherbeck field for their athletic programs and fitness classes that they hope to offer. The community is not against lighting for the field so it can be used for fitness classes and a reasonable amount of bleachers. However, stadium lighting, and the addition of 4,417 seats will change the fundamental nature of the community that the college resides in. Minor modifications should be made to Sherbeck Field to allow for greater evening use for fitness classes and track and field. However, the disruptive, loud nature of college football games (in

addition to whatever rentals the college deems fit in which the citizens have no say), with noise spikes that will interfere with the sleep of residents and small children, should be prohibited. A shared use agreement for college football games with FJUHSD, who are extremely supportive of such an agreement, seems like the best use of resources for Fullerton College.

- Finally, if the college does wish to be a “good neighbor,” they need to create a body with which residents can make noise complaints if the stadium is built. Several times during the year the current field is used by groups who often bring their own sound system. These groups are either unaware of the nearby residents, or simply don’t care, but they blare their music and make announcements, and because the school is public grounds that are not under regular noise restrictions, the only recourse of citizens is to approach the event organizers. Sometimes, the organizers are accommodating, and sometimes they simply shrug their shoulders and say they have rented the facility and to go away. If the college desires to act like a “good neighbor” then they need a representative on site at all times, especially when the facilities are used by outside groups, to ensure they stay within the noise parameters set by the college. If the college refuses to do this then the EIR is disingenuous because every group that rents out the stadium has the ability to create noise that is a nuisance to the neighborhood. If the college chooses to let other groups utilize their facilities then they need to be accountable to the citizens as “hosts” of these events. To simply let an outside group use Fullerton’s facilities and not give the citizens a way to stop noise nuisance as it occurs, is not being responsible, nor is it being a good neighbor.
- If the college plans on continuing with this inane idea, the cost of maintenance of the stadium needs to be identified and where the ongoing funds for this must be identified since bond construction fund can’t be used for regular maintenance.

I am 100% opposed to the stadium and believe the college does NOT NEED it to fulfill it’s educational mission. Its educational mission has been fulfilled for decades without a stadium. To argue that this stadium is a need is ridiculous.

Sincerely,

## RE: Sherbeck Field Improvements Project

---

4/21/18

447, E. Amerige Ave  
Fullerton, CA 92832

Dear Mr. Williams:

I have resided in Fullerton since 1986 and have owned the property listed above for 20 years.

I have witnessed an increased amount of development in this city, especially in the last five years...most of which has been negative.

This correspondence is to notify you of my strong dis-approval of the Sherbeck Field Improvements Project.

This project will have many negative impacts to my neighborhood including increased traffic & greenhouse gas emissions, increased noise, increased light pollution, increased foot traffic, increased littering and loss of valuable parking spaces.

I am not able to attend the public scoping meeting scheduled for 5/1/18.

This correspondence will serve as my formal disapproval and condemnation of this proposed project.

Sincerely,

Ruth Davies

Attn: Mr. Richard Williams

Dear Mr. Williams,

My wife and I are long time Fullerton residents. Our home is one block east of Berkeley and just south of Brookdale Avenue. We are a few hundred yards from the Sherbeck Field and the proposed project.

We strongly object to the proposed improvements, especially the 4500 seat bleachers, the six field lighting stanchions, a new (and very loud) sound system and all the additional noise, traffic congestion, pollution and trash it will create. The EIR initial review mentioned in your letter date April 9, 2018 brings up very good points as it states "The initial environmental review INDICATES that the proposed project may have **potentially significant** effects on the environment in the following categories: aesthetics (causing decreased property values) air quality (health issues) green house gas emissions (more health issues) hazard and hazardous materials, noise (decreased property values and quality of life) public services, recreation, transportation and traffic, tribal cultural resources.....

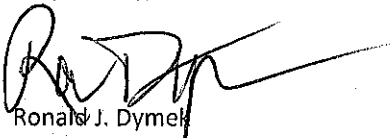

Berkeley Avenue is riddled with trash daily from the students parking who will not pay for on site parking. Does anyone really think that allowing a stadium that can seat up to 4500 people will not impact our lifestyle, our quality of life and our quiet neighborhood? We have a significant number of senior citizens (including me) who have worked hard to enjoy a quality of life that includes peace and quiet.

We petitioned the City of Fullerton for permit parking due to the traffic congestion on our streets resulting from the trash, drug paraphernalia, condoms and the safety issue parking in our neighborhood created. Most of the events you are suggesting will last long past the 7 PM restriction our permits have now. There is no parking restriction on weekends or when school is not in session, meaning our neighborhood will become the parking for these events.

We currently have noise pollution from the softball field that is just adjacent to Sherbeck Field during games. Apparently loud, amplified music has become a normal part and apparently necessary addition to playing or practicing for soft ball games. While some of us work from home, others study and have young children trying to nap during the days. The sound has become unbearable and has caused some neighbors to confront the team manager and athletic director. We can only imagine the sound and light pollution from the new proposed stadium. We feel this proposed stadium is an unnecessary waste of financial resources and other options and locations are available for you proposed activities.

Our quality of life and property values will be significantly and permanently changed in a very negative way and we adamantly object to this proposed stadium improvements.

Respectfully,

Ronald J. Dymek

FACILITIES  
2018 MAY -3 AM 8:54

Dear Mr. Williams,

I respectfully request that you consider my thoughts on the proposed Fullerton College stadium.

We bought our house in 1983 because we love this college town and wanted our children to grow up in this small town. We love this area so much that in 2006, we decided that instead of moving, we would tear down our house and rebuild it! We consider ourselves good neighbors and we have a "tight" neighborhood. We have July 4th block parties and we are the neighborhood that hangs the lighted Christmas balls each year. We have organized block events too!

The top four reasons I oppose the building of this stadium are as follows:

1. Safety.
2. Noise.
3. Property value.
4. Future impact.

1. Our former Fullerton Police Chief and Councilman Mr. Pat McKinley recognized our neighborhood in 2010, as lacking wide enough streets to be able to accommodate parked vehicles on both sides of our streets. Emergency vehicles need to be able to drive down our streets. Students parking in our neighborhood were creating a variety of problems, but safety was the most significant impact on us at the time. We were successful in getting resident parking only permits by petitioning the city council to allow the tax-paying homeowners to be able to live in a safe and quiet neighborhood and to be able to park in front of our own homes.

The possibility of up to 4500 sports fans in approximately 2000 cars arriving in our neighborhood at one time for an event, knowing they will park on our public streets rather than pay for college campus parking, will not allow ADEQUATE EMERGENCY ACCESS to the neighborhood!

Drive down Berkeley Avenue during a normal school day, when classes are in session, and you will see that the parking situation continues and will continue to get worse as time has proven. I believe that this problem could be rectified by simply offering your students free parking in your structure(s).

2. My noise concern really is not a small one. My husband has a 24-hour emergency service business and has trouble hearing his business calls when the music is amplified. We have an adult child who became disabled while he was a FC student. He has sleeping problems, so he sleeps during the day at times which can be difficult on FC softball days. Even when he was a student at FC, he complained about the noise from the fields as he attempted to study.

For some reason, the noise resonates in my house, although we have double-pane windows and close all of them and our doors.

I can only imagine how loud the stadium noise will be. With the hours of operation being from 6 am to 10 pm and the coming and goings before and afterwards, you leave your neighbors sleeping hours of 11 pm to 6 am. This is not being a good neighbor.

3. Each homeowner losing upwards of \$100,000 in property value. This figure is based on what happened to the property values in Point Loma neighborhood when the stadium was built. I'm wondering if the neighbors who own nearby properties here realize the financial detriment the stadium would put us in. 500 neighbors signed our petition and at \$100K each, we stand to lose \$50M collectively!

4. I lack confidence that what you put in writing or promise us verbally will actually be carried through new administration and/or different chancellors. More specifically, if you promise us that you won't rent it out to anyone else than you currently do, that it most likely will not be true later on. I doubt that "It is being completed for student use," means that it will be used only for 7 FC football home games.

The Master Plan Program EIRs concluded that FC should avoid impacts on its neighbors. I feel that the building and use of this stadium will significantly impact my quality of lifestyle and also my neighbors'.

On your Fullerton College website, one of your many Core Values states: Community - We promote a sense of community that enhances the well-being of our campus and surrounding areas.

We are your surrounding area.

Please love thy neighbor.

Please do not do this to your neighbors.

Again, I respectfully submit my request,

A handwritten signature in black ink, appearing to read "Shaun Dymek", with a long, sweeping horizontal line extending to the right.

Re: Fullerton Junior College Stadium

Director, Facilities Planning & Construction

Dear Mr. Williams,

We write to express our opposition to the building of a stadium for Fullerton Junior College. We have two large stadiums within 5 minutes of our house and can't imagine why there is a need for another. Our understanding was the costs for the Fullerton High School stadium improvements were justified in part by the benefit it would provide in sharing it with the J.C.

The J.C. already creates a large increase of traffic and safety issues in our neighborhoods. We have students parking in front of our houses, "jay-walking" to get to/from their classes; imagine the increase in all these areas another stadium will bring. We can't safely ride our bikes with our kids in our neighborhood due to the traffic and lack of visibility caused by streets lined with cars. There will be more noise, traffic congestion, trash, vandalism, bright lights etc. It would increase the need for police patrols as well.

Our solution is for the J.C. to use the Fullerton High School Stadium and save the money for something that truly benefits the entire community.

Thank you for your consideration,

Todd & Petra Farquhar

Anaheim, CA 92801-1819  
[RWilliams@nocccd.edu](mailto:RWilliams@nocccd.edu)

Dear Mr. Williams,

I am writing to address impacts from the proposed project located at Sherbeck Field. I offer the following comments and suggested mitigations in response to the Initial Study for Sherbeck Field Improvements dated April 2018.

### 3.1 Background and Project History

According to the IS, the field was originally constructed in 1956. The homes east of the field predate the construction of a field by a few years. Our home on Princeton Circle West was built in 1954. Previous attempts to build a stadium like the proposed project were rejected. ***The project should be rejected outright because of historical precedent of rejecting a stadium at the exact proposed location.*** It was removed from the Projects in 2016. It was cancelled in 2007 and in 1973, the location was judged to be altogether unacceptable for a stadium. In 1973, Fullerton Mayor Robert Root requested a study to be done by the chamber of commerce to find a location for a city stadium as reported on 11/27/1973 in the Fullerton News Tribune. This exact location was rejected because, *"the location is primarily residential; traffic and parking is historically a problem there; access is poor."*

Within this sentence is found the primary problems of this project. **The area is landlocked by residential houses.** The location is on **Berkeley Avenue**, a street that **was intended by Fullerton's Master Plan to 1) provide significant relief to downtown Fullerton's traffic congestion problems and 2) significantly speed up traffic flow from North to East Fullerton and vice versa**, doing so by providing a convenient route circumventing the downtown (Harbor Blvd.) area. **Access** to said stadium is indeed poor. Berkeley is a heavily travelled 90 foot wide street. **Parking** will also continue to present problems as people prefer street parking to structure parking, primarily because of access. Construction on the Centennial Parking Structure is not scheduled to begin until 2020.

### 3.2 Project Objectives

*My Comments: The Project Objectives are easily achieved without much of what has been proposed in the Initial Study.*

Under Section 3.2 Project Objectives the IS says,

The proposed project's main objectives are as follows:

Project Objective 1. Provide field lighting to allow for more evening class options for the physical education program to meet student demand.

*My comments: It may be fairly argued that the Project outlined in the IS is not a classroom and therefore must be subject to approval by the City of Fullerton. Calling this project a classroom does not make it so. It is unreasonable and disingenuous to call a facility with 4417 seats, 6 stadium field lighting stanchions, 2@60 feet, 2@ 100 feet and 2@ 125 feet, 12 arrays of speakers, a field house with locker rooms for home and visiting teams, a ticket booth, a press box that, "would house the Sport Information Director, statistician, announcer, score keeper, score clock operator, radio and television broadcasters, and local media and press." and a*

planned parking structure for 840 vehicles, a classroom. Stadiums are not considered classrooms under the legislative history of California Statutory Law and Cal. Gov. Code sec 53097 (b) gives cities jurisdiction over facilities for non-classroom use. If it is indeed a classroom, then low level replacement lighting should suffice as stadium lighting is unnecessary. Students i.e. football players, paying for the "class" held in this classroom are granted at most 2 hours of credit for practice which has in the past and can continue to take place during the day or under 60 foot replacement lights. This project is indeed a stadium and must comply with the city's General Plan and Zoning Regulations and be approved by the Fullerton City Council.

**Suggested Mitigation:** This could be accomplished by replacement of original 60 foot light standards that were previously on the field.

Project Objective 2. Provide a football field for the Fullerton College football program that meets the sizing requirements of the California Community College Athletic Association Regulations, Bylaw 4.2.6 A.

**My comments:** *Proposed action on project is unnecessary as the existing field is already compliant with CCCAA regulations. If this study is referring to a replacement of current playing field at YLHS, then this objective is only necessary for playoffs, two games at maximum. A suitable alternative for these games is already available.*

**Suggested Mitigation:** None.

Project Objective 3. Install permanent bleachers to reduce the costs associated with renting bleachers for the annual Fullerton College commencement ceremony.

**My comments:** *There is a suitable alternative next door at Fullerton High School.*

**Suitable alternative:** *Use FJUHS stadium. According to section 2.3 the college, Commencement Ceremony requires seating for approximately 7,200. Seating capacity of 4,417 is therefore not enough. FJUHS stadium has 6500 seats and therefore is a suitable alternative if students are seated on the field. In fact, it accommodated FC graduation until 2015.*

**Project Objectives Do Not Include Rentals:** Project Objectives listed in the IS are inconsistent with stated tables of availability of use for rental. No mention of rental is included in the Project Objectives.

**Suggested Mitigation:** No rentals of Sherbeck Field. Or a limited use agreement in perpetuity negotiated with neighbors and representatives of the Fullerton College Neighborhood Action Council.

### Initial Study Checklist

**My comments:** *Adding the stadium Project to previously approved projects in the prior EIR imposes **Cumulatively Considerable Negative Impacts on the neighborhood.***

Sherbeck Stadium has been incrementally planned and built over the course of 12 years. Paid for by Measure X in 2010, FC built a field house and box office at a cost of ~ \$4.3M, and installed artificial turf and a track, at a cost of ~ \$1M. The college also installed underground electric cables planning to later install stadium lighting which was not included in the EIR. Paid for by Measure J and approved 12/2017, FC plans to build an 840 space parking structure behind the field house, at a cost of ~ \$29M. In the current project, FC is planning bleachers to seat 4417, a sound system, lights and possibly a press box. This will cost ~ \$4M. The term field is disingenuous. Please analyze the cumulatively considerable negative impacts of all pieces of this stadium noted above in addition to projects funded with Measure X and Measure J.

### 6.1 Aesthetic Significance of Projects's Lighting

The IS incorrectly states that there would be a less than significant impact on a scenic vista. There are several neighboring homes located on Dorothy Drive, Sheppard Dr. and Cannon whose homes and yards have a scenic vista. Many have a view of Catalina Island. If the stadium were built, it would have a potentially significant impact on the views of these homes.

The IS is correct in saying, "The proposed project could have a substantial effect by degrading the existing visual quality of a site or creating a new source of substantial light or glare." Drawings of the project in the college's IS are disingenuous showing lighting only on Sherbeck Field, when in fact, the entire campus between Lemon and Berkeley, encompassing numerous athletic facilities and parking facilities and structure is lit until late at night. Social and economic changes may result from both the proposed lighting from the 6 stadium field lighting stanchions, 2@60 feet, 2@100 feet and 2@125 feet, and the proposed noise from the 12 arrays of speakers. The addition of these impacts to the surrounding environment constitutes a significant physical change to the surrounding area and should be mitigated.

**My comments:** *Neighborhood homes to the East are within 100 feet of the proposed playing field, while neighbors to the North are located on a hill, directly facing into the light. The project's proposed lights will create glow, spill and ambient light for several blocks as well as visual pollution in a city with building height restricted to 9 stories. Also the cumulative impact of the project's proposed 79.9kW total power load of the field lighting added to existing lighting on campus and lighting from the approved Centennial Parking Structure will impose considerable cumulative impact on neighboring houses. Neighbors are already subject to lights, including blue lights all night long at the Lemon parking structure. Substantial impacts that should be considered are listed below:*

**Please revise the IS to include analysis of the scientifically proven Negative Effects of Bright Light which include but are not limited to:**

**Nighttime light suppresses melatonin secretion in humans.** ("In 1980, researchers at the National Institute of Mental Health (NIMH) demonstrated that exposure to 2500 lux of bright white light at night strongly suppressed production of melatonin." from: Lewy AJ, Wehr TA, Goodwin FK, Newsome DA, Markey SP. Light suppresses melatonin secretion in humans. Science. 1980 Dec 12;210(4475):1267-9.)

**Negatively affects neighbor's normal daily pattern of life.** (Several teachers and others who go to sleep early expressed concern of how the lights would affect their sleeping patterns.)

**Damage to retinas, both human and animal.** (<http://www.brightfocus.org/macular/article/are-bright-lights-damaging-eye>) Bright Focus Foundation

**Lights with significant blue light have been proven to cause eye damage.** (T-24) (Gunnar Optics <http://www.gunnars.com/artificial-lighting-and-the-blue-light-hazard/>)

**Disruption of Circadian Rhythm.** ([DarkSky.org](http://darksky.org), issue #80, 2010 Find at: <http://darksky.org/wp-content/uploads/2015/06/NS80.pdf>)

**Numerous scholarly articles have concluded that human exposure to artificial lighting** such as lights used at CSUF's Intermural Field (Musco #228 LED at 5700 Kelvin with 65 cri) **is detrimental to human health in numerous ways especially causing retinal degeneration:**

"The photoreceptors in the retina . . . are susceptible to damage by light, particularly blue light. The damage can lead to cell death and diseases." Shaban H, Richter C. A2E and blue light in the retina: the paradigm of age-related macular degeneration. Biol Chem 2002 Mar-Apr;383(3-4):537-45.

"It is not too harsh to state that virtually all persons with vision problems should be removed from a light environment where the predominant light waves are a temperature above 3500K or a wavelength less than approximately 500 nm." Elaine Kitchel, [M.ED.VI](#). The effects of fluorescent light on the ocular health of persons with pre-existing eye pathologies. American Printing House for the Blind, 2000.

"Exposure to the eye to intense light, particularly blue light, can cause irreversible, oxygen-dependent damage to the retina. We have found that illumination of human retinal pigment epithelium cells induces significant uptake of oxygen that is both wavelength and age dependent...and contribute to the development of age-related maculopathy." Rozanowska M, et al. Blue light induced reactivity of retinal age pigment. Journal of Biological Chemistry 1995; 270(32):18825-18830.

" . . . high levels of exposure to blue or visible light may cause ocular damage, especially later in life, and may be related to the development of age-related macular degeneration." Taylor HR, West S, Munoz B, Rosenthal FS, Bressler SB, and Bressler NM. The Long Term Effects of Visible Light on the Eye. Archives of Ophthalmology 1992; 110:99-104.

"The effectiveness of light in inducing photodamage to the retina increases with decreasing wavelength from 500 to 400 nm." Andley UP, L.T. Chylack Jr LT. Recent Studies on Photodamage to the Eye with Special Reference to Clinical and Therapeutic Procedures. Photodermatology Photoimmunology and Photomedicine 1990; 7:98-105.

" . . . continuous exposure to blue light is potentially dangerous to vision." Koide R, Ueda TN, Dawson WW, Hope GM, Ellis A, Somuelsen D, Ueda T, Iwabuchi S, Fukuda S, Matsuishi M, Yasuhara H, Ozawa T, Armstrong D. Nippon. Retinal hazard from blue light emitting diode. Ganka Gakkai Zasshi. 2001 Oct;105(10):687-95.

"I think chronic blue light is probably damaging." Joshua Dunaief, MD, in Bethke W. Should We Block The Blue. Review of Ophthalmology Oct 15 2003; 10(10).

"Because sunlight and many high-intensity artificial light sources contain relatively high proportions of blue, and the retina as well as pigment epithelium contain several types of blue-absorbing molecules, the short-wavelength band of the visible spectrum may contribute to the pathogenesis of age-related macular degeneration and amplify some forms of inherited retinal degeneration." Remé CE, Wenzel A, Grimm G, Iseli HP. Mechanisms of Blue Light-Induced Retinal Degeneration and the Potential Relevance for Age-Related Macular Degeneration and Inherited Retinal Diseases SLTBR Annual Meetings Abstracts 2003.

" . . . the photon catch capacity of the retina is significantly augmented during blue-light illumination, which may explain the greater susceptibility of the retina to blue light than to green light. However, blue light can also affect function of several blue-light-absorbing enzymes that may lead to the induction of retinal damage." Grimm C, et al. Rhodopsin-Mediated Blue-Light Damage to the rat Retina: Effect of Photoreversal of Bleaching. Invest Ophthalmol Vis Sci 2001 Feb;42(2):497-505.

All quotes above are referenced in the following article are from: **Living Well With Low Vision, entitled, "Artificial Lighting and the Blue Light Hazard."** <http://lowvision.preventblindness.org/daily-living-2/artificial-lighting-and-the-blue-light-hazard/#blue>

**Suggested Mitigation:** Replace only the 60 foot tall practice lights used for classes after dark and hold football games and/or other events only during the day.

**Suggested Mitigation:** If Project is built as described, Fullerton College should pay for light blocking shutters for affected neighboring homes.

**Suggested Mitigation:** Limit size and use of Project so that it achieves only project objectives for evening classes, a football field for the Fullerton College football program, and annual commencement ceremony.

**Please conduct a study that would show the comparative impacts of Project lighting vs. replacing only the 60' lighting that was previously in place on Sherbeck Field.**

### **6.3 Air Quality**

*My comments: I agree with the IS's assessment that the both the short term and long term impacts would be potentially significant. As busses bring in athletes for competitions and rental events, air quality will suffer greater than significant and even negative impact.*

**Suggested Mitigation:** Limit size and use of Project so that it achieves only project objectives for evening classes, a football field for the Fullerton College football program, and annual commencement ceremony.

### **6.4 Biological Resources**

*My comments: I have observed all birds mentioned in the report in my backyard. The addition of the Project's proposed 6 stadium field lighting stanchions, 2@60 feet, 2@100 feet and 2@125 feet with 79.9kW total power load of the field lighting added to existing lighting on campus and lighting from the approved Centennial Parking Structure will impose considerable cumulative impact on the birds and wildlife in the area. Most wildlife depends upon circadian rhythm for sleep cycles and the Project's proposed use hours from 6am until*

10 pm Mondays throughout Saturdays and from 6am until 8pm on Sundays will negatively impact wildlife as well as animals living at FHS farm. I contest your findings from October of 2016 that there are no raptors within 200 yards of the project. On 5/6/2018 - 5/8/2018 as I have been writing this, I have had a red tailed hawk flying around my backyard. I have pictures and videos as proof.

**Suggested Mitigation:** Replace only the 60 foot tall practice lights used for classes after dark and play football games and/or other events only during the day.

**Suggested Mitigation:** Reduce seating capacity.

**Suggested Mitigation:** Limit size and use of Project so that it achieves only project objectives for evening classes, a football field for the Fullerton College football program, and annual commencement ceremony.

**Please conduct a new study that considers the raptors which frequent my yard. Please include expert bird-watchers who live in the area including Bob Singer.**

## **6.7 Greenhouse Gas Emissions**

*My comments: Greenhouse gasses are increased by added exhaust from increased vehicular traffic and sports lighting.*

**Please consider the following article and revise the IS to include analysis of increase in greenhouse gasses caused specifically from sports lighting.**

*The sports lighting would add to ozone levels in Fullerton.* An article from the American Chemical Society reports that, a brightly lit sports stadium provides, "enough light to drive certain chemical reactions in the atmosphere that would boost daytime levels of ozone, one of the most prevalent and difficult-to-control air pollutants in urban areas." (From: "Monitoring the Skies" Chemical and Engineering News, **American Chemical Society Magazine**, Feb. 11, 2009 Press Pac)

**Suggested Mitigation:** Replace only the 60 foot tall practice lights used for classes after dark and play football games and/or other events only during the day.

**Suggested Mitigation:** Limit size and use of Project so that it achieves only project objectives for evening classes, a football field for the Fullerton College football program, and annual commencement ceremony.

**Please conduct a study that includes the cumulative impact of greenhouse gas emissions from additional vehicular traffic to area for sporting events in addition to the lights at proposed Project in addition to the lights at FJUHS stadium.**

## **6.12 Noise**

*My Comments: This is an area of significant concern to the neighborhood. The lay of the land is unique to our neighborhood as homes to the East are within 100 feet of the proposed playing field, while homes to the North are located on a hill, creating a natural amphitheater. Noise from Fullerton High School already carries east to Raymond Avenue. Noise from sports fields are already heard as far north as the peak of Luanne Ave and Skyline. The proposed project could have a substantial negative impact on residents by degrading the existing quality of life through a new source of noise pollution resulting from the array of 12 speakers. Social and economic changes may result from the proposed noise pollution from the 12 arrays of speakers. Many residents work from home, some have hearing sensitivity, one homeowner has a sound studio in his home. Neighbor's sleep schedules would be disrupted by speaker and crowd noise before dawn and after dark. The addition of these impacts to the surrounding environment constitutes a significant physical change to the surrounding area.*

**Please revise the Initial Study to Analyze the following Negative Effects of Noise from proposed project rental (available from 6 am until 10 pm, Mondays through Saturdays and 6 am until 8 pm on Sundays) and use of proposed array of 12 speakers which include but are not limited to:**

Prolonged exposure to moderate levels of noise involving irrelevant speech can effect performance, unlike the moderate intensity white noise of 55dBA noted as Fullerton's limit.

[A 2003 study reported in Noise and Health Journal entitled, "The effects of background noise on cognitive performance during a 70 hour simulation of conditions aboard the International Space Station."

There are three major factors that determine the effect of noise on cognitive performance: Intensity (loudness), type of noise, and duration. **Moderate levels of noise can affect performance**, depending on it's type and duration. For example, moderate intensity white noise (55 dB), has little or no effect on performance while **moderate intensity irrelevant speech can seriously disrupt performance** (LeCompte, 1994; Smith, 1999). The effect of duration has received little attention to date, however, Smith and Miles (1985) have demonstrated that **the longer the exposure the greater the decrement in performance.**

**Significant background noise may negatively affect performance in a number of ways** (see e.g. Smith, 1989. A review of the effects on noise on human performance. Scand. J. Psychol., 30: 185-206.). In some cases the **noise may directly affect one's ability to perform a task** but there are also many ways in which noise can disturb task performance indirectly. For instance **noise may disrupt sleep patterns, disturb normal social behavior or increase subjective feelings of stress all of which could ultimately lead to poor performance in cognitive tasks.**

**Loud background noise (above 90 dBA) typically reduces the quality of performance. A number of studies have demonstrated that noise hinders performance on cognitive tasks involving vigilance, decision-making, and memory** (see Broadbent, D. E. (1971). Decision and stress. New York: Academic Press.; Smith, A.P. (1989). A review of the effects on noise on human performance. Scand. J. Psychol., 30: 185-206; Salas, E., Driskell, and Hughes, S. (1996). Introduction: The study of stress and human performance. In Stress and Human Performance. Driskell, J. E. and Salas, E. eds. Lawrence Erlbaum, New Jersey, pp 1-45; Banbury, S. P., Macken, W. J., Tremblay, S., Jones, D. M. (2001) Auditory distraction and short-term memory: Phenomena and practical implications. Hum. Factors, 43: 12-29). According to Broadbent's, now classic, theoretical treatment of the effects of noise on performance, loud noise leads to over-arousal, which narrows attention, restricting ones focus to a limited range of cues. This inability to attend to less salient cues ultimately **leads to deterioration of performance.**

The negative effects of noise are not limited to cognitive performance. **Recent work has demonstrated that noise disrupts both social behavior and indices of subjective stress** (Salas, E., Driskell, and Hughes, S. (1996). Introduction: The study of stress and human performance. In Stress and Human Performance. Driskell, J. E. and Salas, E. eds. Lawrence Erlbaum, New Jersey, pp 1-45. ). From: Noise and Health, A Bi-Monthly Interdisciplinary Journal. <http://www.noiseandhealth.org/article.asp?issn=1463-1741;year=2003;volume=6;issue=21;page=3;epage=16;aualast=Smith>

**Suggested Mitigation:** If Project is completed as described, college should pay for triple paned windows and light blocking shutters for affected neighboring homes.

**Suggested Mitigation:** Limit size and use of Project so that it achieves only project objectives for evening classes, a football field for the Fullerton College football program, and annual commencement ceremony.

**Suggested Mitigation:** Use streaming media instead of speakers.

**Suggested Mitigation:** Direct all sound towards the south, as neighboring homes are much further away towards the south.

**Please conduct a new noise study as prior study, if used as a baseline, was misleading.** (Noise data for the IS was gathered on 12/15/2017 when college classes had virtually ended for the break, no activity was occurring on Sherbeck Field and sound was only gathered across the street to the east of Sherbeck Field, not up the hill which forms a natural amphitheater. Gathering data on a Friday, the 2nd to the last day of classes is totally disingenuous.) **Collection of Misleading Noise Data MUST BE REMEDIED during collection of data for EIR.** A fair assessment of noise must be taken and should be gathered on days when the college is in session and field use is heaviest. This would more accurately reflect the impact of greater amount of noise brought on by the Project.

#### **6.15 Recreation**

*My comments: The Initial Study adequately describes areas to be analyzed. The Project Objectives as stated in 3.2 should constitute the only use of the Project because the negative impacts on the neighborhood outweigh any positive benefits of future community use.*

**Suggested Mitigation:** Limit size and use of Project so that it achieves only project objectives for evening classes, a football field for the Fullerton College football program, and annual commencement ceremony.

**Please conduct a new study of alternative venues that meet the needs of Project Objectives. See requests under Alternatives Analysis\* on page 11.**

#### **6.16 Transportation and Traffic**

*My comments: Regarding traffic impacts and safety hazards:*

*Purpose of Berkeley was to be an alternate route for Fullerton residents going up Harbor to avoid traffic. Project size and stadium use will bring in hundreds or thousands of vehicles causing traffic difficulty for residents and may eventually necessitate the installation of 2 new traffic signals making a total of 4 traffic signals over 0.9 miles of Berkeley between Chapman and Lemon and 5 between Chapman and Harbor. This is too much traffic for a two lane avenue.*

*This will also negatively impact Wilshire and overburden the corner of Chapman and Berkeley.*

*Crossing Berkeley is already dangerous for pedestrians, extra traffic from a new parking structure will exacerbate this problem.*

**Suggested Mitigation:** Limit size and use of Project so that it achieves only project objectives for evening classes, a football field for the Fullerton College football program, and annual commencement ceremony.

**Please conduct a new traffic study as prior study, if used as a baseline, was misleading. Collection of Misleading Traffic Data MUST BE REMEDIED during collection of data for EIR** A fair assessment of traffic must be taken and should be gathered on days when the college is in session and field use is heaviest. This would more accurately reflect the impact of greater amount of traffic brought on by the Project.

*Last time the college studied the traffic on Berkeley, they did so on days when traffic is lightest. The first day data was collected was on Friday, 11/03/2017. I believe the data collection stayed up for five days which included Saturday, Sunday, Monday and Tuesday. Two of those days were weekends and hardly any classes meet on Fridays. The Monday and Tuesday were during the week that ended on November 10th, Veteran's Day. Often during weeks that end on holidays, classes are cancelled or attendance is just lighter.*

*Additional comment: As I was completing this letter, at approximately 3:08 pm, there was an accident on Berkeley right behind my house. (I took a picture in case you don't believe me.) Thankfully, the persons involved do not seem to be injured, and are currently exchanging information. But in times past, I have had to call the police when severe injuries were involved. I can not imagine how much worse this would be if more sports events, many involving children, took place at Sherbeck Field.*

#### **6.19 Mandatory Findings of Significance (b)**

*My comments: The neighborhood homes east of the college were built in 1954 and predate the existence of a practice field on Sherbeck. If I were to put my home on the market right now, I would be required by law to disclose to any potential buyer that there may be a stadium built behind my property. It is clear from this fact that a stadium located next door to a home is considered by law to result in negative social and economic circumstances.*

**Please revise the Initial Study to Analyze the Negative Social and Economic Effects suffered by homeowners living next to the Project, including, but not limited to the following:**

**Stadium Creates a Public Nuisance and Safety Hazard on numerous levels:**

*No limit on use creates 7 days/week traffic, light & noise problems.*

*Impact would be unlike anywhere else in the area. Area is right next to an often heavily populated downtown and an established, historic residential neighborhood.*

*Numerous similar situations across the US testify to the negative impacts on neighbors.*

*Decrease in property value and increase in neighboring houses being turned into rentals.*

**Suggested Mitigation: Fullerton College makes payments to homeowners who are adversely affected in lieu of devaluation of housing values and disruption of quality of life.**

#### **6.19 Mandatory Findings of Significance (c)**

*My comments: The proposed Project will have environmental effects which will cause substantial adverse effects on human beings, directly and indirectly. The Project added to prior projects since 2009 will indeed have impacts that are cumulatively considerable.*

*When completed, the Project will consist of a venue with 4417 seats, 6 stadium field lighting stanchions, 2@60 feet, 2@ 100 feet and 2@ 125 feet, 12 arrays of speakers, a field house with locker rooms for home and visiting teams, a ticket booth, a press box that according to the IS, "would house the Sport Information Director, statistician, announcer, score keeper, score clock operator, radio and television broadcasters, and local media and press." and a planned parking structure for 840 vehicles. The cumulative effects of*

allowed use as noted in the IS from 6am until 10 pm Mondays through Saturdays and from 6am until 8pm on Sundays will present an extremely negatively impact on neighboring homes.

**Proposed Stadium Is Unnecessary:**

Proposed stadium is located right next to a renovated stadium FC has used for years.

Participation in intercollegiate football does not require a stadium, merely a field.

Only 1 PE credit is necessary for an AA degree.

Only 1 PR credit is accepted in transfer to a CSU and no PE credits are accepted to a UC school.

As it exists, Sherbeck Field is acceptable for intercollegiate play.

**Suggested Mitigation:** Limit size and use of Project so that it achieves only project objectives for evening classes, a football field for the Fullerton College football program, and annual commencement ceremony.

**Suggested Mitigation:** Compensatory remuneration to owners of neighboring homes affected by the Project.

**\*Alternatives Analysis**

For some reason, your Initial Study has not included any alternative options to the Project. I encourage a robust analysis of project alternatives in order to mitigate, or eliminate, impacts of the proposed Sherbeck Field Improvements Project. In the EIR, ***please include a side-by-side cost analysis that includes all costs associated with use and maintenance and compares cost of Project with cost of options. At a minimum, please include the following alternatives:***

**Alternative Location of Stadium:** The IS has not included any analysis of opportunities for joint use of comparable stadium facilities within the area. ***Please include an analysis of opportunities for joint use of comparable stadium facilities within the area, such as those found at California State University Fullerton and, with adjustments, FJUHS stadium, as well as identifying all other potential existing locations and analyzing the feasibility and costs associated with such use. In addition, include an analysis of the ability to construct a new stadium at the Cypress College campus. Please also include a comparative analysis of environmental impacts between proposed Project and use of other alternatives.***

**Suggested alternative of a shared use agreement with FJUHS Stadium:** A suitable alternative, located a few hundred yards away, shared use of the publicly funded Fullerton Joint Union High School Stadium is an obvious and viable option. With few easily accommodated changes, modifications could be made to field markings and goal posts to make the venue acceptable for regulation play for FC playoff games. Adjustable goal posts are available. Turf markings can be swapped out. A joint use agreement would be a **better use of public funds**. Cooperation between these two public entities could enhance one stadium that **would eliminate numerous negative impacts noted in the IS, provide a more environmentally friendly, better and safer option.** ***Please include analysis of costs of a joint use agreement between the FJUHS and the college that defines upgrades and accommodations the college deems necessary for football play at the high school and costs of commencement ceremonies.***

**Reduction of Improvements to Sherbeck Field:** ***Please include an analysis of a reduced-scope stadium improvements.***

I have many concerns about the college's plans to finish its stadium Project on Sherbeck Field at Fullerton College. It is my conclusion that after taking into consideration the above significant impacts on the neighbors, Fullerton College should abide by the precedent under which it has operated for 95 years and use other facilities for its football games, and not install a stadium on Sherbeck Field. The IS notes that on many counts there will be potentially significant impact on the neighborhood. For many neighbors, negative social and economic changes will result from the Project. Compensatory remuneration to owners of neighboring homes must be awarded to neighbors who are affected by the Project. Project Objectives can be simply met without numerous proposals in the Initial Study. As a neighbor and representative of the 500+ signatories of the petition against the construction of a stadium on Sherbeck Field, I propose that the EIR incorporate the specific mitigation measures provided above into the design and operation of the project. As representative of the Fullerton College Neighborhood Action Council, I expect to be notified of any and all newly mitigated revisions.

Thank you for receiving my concerns.

Sincerely,

Mary Frances Gable

Subject: Fullerton College Sherbeck Field Project

I object to the project and demand that it be denied.

The college has more than adequate sports facilities; better scheduling will accommodate additional needs.

This project will over burden the surrounding community. It will create pollution of all kinds, including sound, light, congestion, and trash. The demand for more parking will further encroach on city streets and create safety hazards.

There are numerous sports facilities nearby that can be scheduled and used. The college and the city does not need this vanity project; one that has not proven to be financially viable.

Fullerton, CA 92831

Dear Mr. Williams,

Please take the time to reconsider and oppose the construction of a new stadium at Fullerton College. I have lived across the street from the college for almost 20 years. During this time, a new stadium has been proposed and rejected. If a new stadium is needed, please consider using the Fullerton High School's newly refurbished stadium. It will cost less and also have access to closer parking without overflowing into the accompanying neighborhoods with visitors as the proposed stadium off of Berkeley.

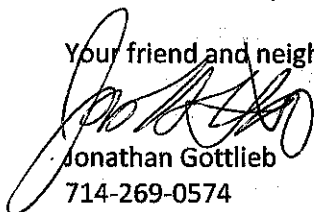

Here are the main reasons for my opposition:

1. Generation of trash of all kinds and types.
2. Noise-of additional cars, trucks, street racing, car security alarms and people/fans.
3. Vandalism of private and commercial property including graffiti, theft and general mischief.
4. Drunkenness-this includes liquor, trash, vomit and other human waste.
5. Illegal parking plus parking for profit.
6. Lighting on from 6 pm to 10 pm. (80,000 watts of sleep disturbing LED Light)
7. Traffic congestion before and after events
8. Lewd conduct
9. Illegal and unlicensed street vendors, whether they are selling food or paraphernalia
10. Increased overtime for Fullerton Police Department
11. Outside rental 7-days/nights per week from 6am to 10pm

I offer solutions: as I mention Fullerton High School is the perfect solution or the use of Titan Stadium at CSUJ Fullerton. Remember, UCLA and USC do not use on campus stadiums and they are major football colleges. I deem using one of our local schools as an answer to an amicable and quick solution to your stadium needs. Please be a good neighbor and consider this solution.

I look forward to participating in this process.

**From:** Rob Grantham <robgrantham@aol.com>  
**Sent:** Tuesday, May 1, 2018 3:02 PM  
**To:** Richard Williams  
**Subject:** FC Sherbeck Field Improvements Project

As a longtime homeowner in the lower Raymond Hills area, I am, of course, concerned about the affect the proposed project will have on the local neighborhood. The houses to the north and east of the field would be the most directly affected, and these are homes that are part of the originally tracts in the area, built in the 1950's and earlier, with many families being long-term neighbors of the college.

While many in the neighborhood are strong supporters of the college, and understand the need to improve the college facilities in order to continue to provide a quality education to our local students, no one project will have such a far-reaching affect on the entire neighborhood, in terms of light and sound pollution. If a stadium did not already exist, located right next door to the college, no less, then the need for the college to construct one of their own would hold more validity. However, when Fullerton High School has just spent millions of dollars to renovate the stadium directly across the street from the college, with new lighting and sound systems, the need for the college to, effectively, build their own right next door, seems unwarranted.

Those who live to the north of the FUHS stadium already have to deal with increased light and sound pollution from this renovated stadium, so for them to then have to also deal with the same from a second stadium directly next door does not seem either fair or justified. Parking is also of great concern to the neighborhood, as, although there is a parking structure on Lemon which serves the college, the location of the proposed stadium is not close enough to the structure for the game attendees to realistically utilize. This will, of course, mean that they will be parking along Berkeley and further into the neighborhood, as evening events will be outside of regular college hours, for the most part.

I urge the college to reach an agreement with the high school for renewed joint usage of the newly-renovated stadium, and if the college feels that additional improvements need to be made, then perhaps some of the Sherbeck Field Improvement Project funds could be redirected there instead.

The city of Fullerton has always been a "college town," and is somewhat unique in the way in which its downtown includes a mix of businesses, homes, schools, college -- living together in a rather unique symbiosis. It is my hope that this project does not tip the balance so far in one direction that this will be forever irreparably damaged.

Thank you for taking the time to read my thoughts and concerns regarding this project.

Fullerton, CA 92831  
714-879-4716

Mr. Richard Williams,

We are writing in regards to the proposed stadium at Fullerton College. We see no need for such a stadium in our neighborhood. We have lived in our home near the college for 42 years now and we fear for our peace and quiet along with the noise and light pollution. Along with this stadium would come more traffic in our neighborhood, congestion, loitering, and trash that we already deal with from student parkers on our streets!

There is a suitable field right next door as well as one at CSUF that can be rented by the college. That would save the college and city from having to hire more police officers to have increased overtime policing these events. And we all know well that it wont be just used for a few football games. We've researched other cities that have faced this same dilemma and they have horror stories to tell about the fields being rented out 6-7 days a week and the vandalism, graffiti, thefts, etc. that come with it! We already get the noise in the distance from the games at FUHS and that is tolerable, but if you let them build close to our homes, well then, we will have lighting on all hours of the day and night that will disturb sleep and noise levels that would prevent any neighbors from having any family events! We already get enough traffic in the daytime when school is in session! Please don't add to our headaches!

We are totally opposed to this project moving forward for the above reasons. We look forward to participating in this process.

Thank you,  
Bob & Sue Harmston

Dear Mr. Williams,

I writing to voice my opposition to the proposed improvements to Sherbeck Field. My primary concerns are stated below:

### **Trash Impacts**

The current use conditions of both the college and the existing athletic fields generates a large volume of trash along Berkeley Avenue and in the surrounding neighborhood due to overflow / on-street parking. Currently Fullerton is doing nothing to mitigate these impacts, instead relying on City services (routine street sweeping) and residents (such as myself) to remove the trash left by campus users. I personally remove trash from the front of my home on a daily basis while school is in session, and trash along Berkeley Avenue sits in the curb and gutter for days until street sweeping by the City removes it.

Fullerton College currently has no best management practices to mitigate its trash impact to the surrounding community. How does Fullerton College intend to mitigate the increased trash generated by the users of the proposed improved Sherbeck Field? Are these impacts identified in the EIR and how will they mitigated? Will Fullerton College provide additional funding to the City so that street sweeping can be performed multiple times during the week? Will Fullerton College have its maintenance staff perform daily manual litter removal on along both sides of Berkeley and the surrounding neighborhoods?

### **Traffic Impacts**

Fullerton College currently generates an increased traffic volume in the area while school is in session. Additionally, overflow parking from the campus entering the neighborhoods contributes to not only increased traffic on residential streets, but also the trash impacts discussed above. Often the evenings and weekends are the only reprieve residents have from these existing traffic impacts.

With the proposed improvement of Sherbeck Field, residents can expect the traffic impacts remain high into the evenings and weekends. How does Fullerton College intend to mitigate these impacts? Are these impacts identified and mitigated in the EIR? Will Fullerton College provide funding to the City for a traffic study and the costs associated with adjusting traffic signal timing in the area to account for increased traffic flows in the evening and on weekends?

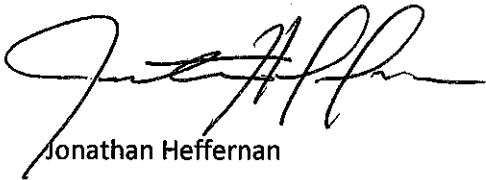

The only solution I can offer to the parking situation is that Fullerton College waive its parking permit requirement during the evenings, weekends, and during special events at Sherbeck Field. This would

encourage Sherbeck Field users to park their vehicles on campus, and keep them out of the neighborhoods.

When I moved into my home in 2010, I understood there would be some negative impacts from living so close to a community college and, although I do not like the current levels trash and traffic, I have (begrudgingly) come to accept them. However, an increase in these negative impacts is unacceptable, especially when the proposed use of Sherbeck Field includes renting it out to third parties. The neighborhood will have to live with the negative impacts while Fullerton College will reap the reward.

I appreciate you considering my concerns, and look forward to participating in the process.

Sincerely,

RE: OPPOSITION TO SHERBECK FIELD IMPROVEMENTS: Comments for  
inclusion to draft EIR

Dear Mr. Williams,

As you can see from my address, I live right by Fullerton College on Dorothy Drive directly up from the college (not Dorothy Lane). I absolutely and vehemently OPPOSE this plan. We must already tolerate much from FC students and the school and this plan would magnify the effect of your college on our neighborhood. Our house is directly uphill from the proposed stadium.

1. The noise from games would be intolerable (we know this because we are affected by the speaker system and crowd noise from Fullerton High School which is not nearly as close). We were told that the "home" section would directly face our house. Would you like to live here? (We can hear every word spoken over the PA at the FUHS stadium.)

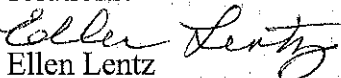

2. The lights from FC campus are already bright with the parking garage lights on all night. Add stadium lights five + nights a week and it would be as if we have lost part of the night, every night. **Light pollution is a very real and negative condition.** One I prefer not to experience.

3. The traffic is already unbearable during the school day. The college students seem to follow their own set of traffic laws and FREQUENTLY jeopardize other drivers' lives. Berkeley and Lemon have become almost impassable during the day and we find we must avoid it, which is very hard from our house. **If you add events in the evenings and on weekends you are impacting our quality of life to an even greater extent.** At the beginning of every semester our street is flooded with parked cars.

4. Home values will plunge. No one is eager to live next to not one but two stadiums. And that is most unsettling for people in retirement who are counting on the equity in their house for their later years.

We already have to deal with the noise from Fullerton High School; trash and unsafe drivers from the college; our street hijacked with sloppily parked cars, heavy traffic, and now you want to further destroy our neighborhood.

Would you want to live here? There are other, better, more neighborhood friendly solutions.

RE; OPPOSITION TO SHERBECK FIELD IMPROVEMENTS: Comments for  
Inclusion in draft EIR

Dear Mr. Williams:

Before attending last night's "scoping" meeting I was apprehensive about the proposed new stadium, euphemistically being called by NOCCCD a "field". After last night I came away completely opposed to it. I will give you some of my reasons:

1. The disruption to the neighborhood and beyond: The noise, traffic, trash, and careless, dangerous driving.
2. Home side: we are appalled that the home side of the "field" will be facing the neighborhood. The resultant enhanced crowd noise will be intolerable.
3. FC football draws only a few hundred people while you are proposing seating for almost 5,000. Do NOT call it a football field.
4. "Evening Classes": Are you kidding? There are plenty of facilities/areas on campus now for that. Calling them "classes" is a ruse. And having them end at 9:15 simply means more noise, squealing tires. The 1-unit PE requirement does not justify what you're calling evening "classes".
5. Renting out the field is, in my opinion, your main reason for building it. For what? Concerts? (Here comes the alcohol!) So, you using our tax money as a way for FC to make money. That is unethical and thoughtless.

You will be hearing, I'm certain, from many people who live in this area. We've lived here since 1972 (46 years), raised our children here and enjoyed the ambiance around us. Now with this proposed "field", that is all going to change. With two other stadiums in Fullerton this project is completely uncalled for. Shame on you for even proposing it.

Mr. Richard Williams

We are responding to your letter dated April 9, 2018, we have been residents here on Nutwood since 1971, we are not an agency, just hard working Americans who pay our taxes take care of our families, serve our country and hope to live in a peaceful and safe neighborhood. Peaceful and safe was the reason we chose this neighborhood in 1971. Now you and your colleagues are bound and determined to insure that we have NO PEACE OR SAFETY IN OUR NEIGHBORHOOD. We are retired and believe we are entitled to a peaceful neighborhood. We worked and paid taxes MANY years, my wife, Reba was an accountant for Beckman Coulter and I was a tooling engineer at Rockwell (now Boeing).

We submitted a letter on January 24 that was taken with others to the State Chancellor office regarding this new stadium. Funny you do not refer to it as a stadium in your communication. Got news for you, WE ARE NOT STUPID!!

Do you and your colleagues pushing this project live in this neighborhood? Of course you DO NOT. What do you care? NOT AT ALL. You won't have to put up with more traffic, noise and whatever kinds of unsavory people that may come here as a result. SHAME ON YOU. HOW DARE YOU.

Please feel free to contact us, we may not be an agency, but we are American citizens who VOTE.

David and Reba Lewis

JANUARY 24, 2018

NOCCC BOARD

TO WHOM IT MAY CONCERN:

We live on Nutwood just off of Raymond. We have been here since June of 1971. We bought here because the neighborhood is safe and tranquil. We are very upset and concerned about the possibility of another stadium at the Junior College. The noise generated from that stadium would be unbearable for the people living on Princeton Circle West and also unbearable for the rest of us living in the vicinity. People pushing for this stadium, of course do NOT live in the area. How dare they be so cruel and mean. They obviously do not care about us fellow human beings. We challenge them to live in our neighborhood and then push for this stadium. **OF COURSE THEY WILL NOT. MEAN MEAN MEAN**

REALLY, the high school stadium has been recently renovated, why do we need to waste more of our tax dollars on another stadium????????? Enough of our tax dollars was spent on that grand renovation. The junior college can use that one and the one at CSUF. You people do not have a right to use our tax dollars in a wasteful manner as this most certainly would be. How dare you to even propose another stadium so close to the one available. More waste of our tax dollars. Do you not know that most of us have to work for the money that you so flagrantly take for granted and want to use so wastefully. Well, do know that money does NOT fall from the trees. We work for it, pay our taxes and expect our elected officials to spend it wisely. **THIS CERTAINLY IS NOT A WISE EXPENDITURE.**

Mr. Richard Williams

We have been residents here on Nutwood since 1971, we are not an agency, just hard working Americans who pay our taxes take care of our families, serve our country and hope to live in a peaceful and safe neighborhood. Peaceful and safe was the reason we chose this neighborhood in 1971. Now you and your colleagues are bound and determined to insure that we have NO PEACE OR SAFETY IN OUR NEIGHBORHOOD. We are retired and believe we are entitled to a peaceful neighborhood. We worked and paid taxes MANY years, my wife, Reba was an accountant for Beckman Coulter and I was a tooling engineer at Rockwell (now Boeing).

The following are all valid reasons why this Fullerton College Stadium project should never be completed.

- a. All kinds of trash would be left in our yards and street
- b. Noise of cars and trucks racing up and down our streets, alarms and people at the **STADIUM**
- c. Vandalism, unsavory people in area creating an unsafe area in our neighborhood.
- d. Drunkenness and the fifth resulting from the drunkenness.
- e. Lighting from the stadium, yes the STADIUM would be very intrusive to our peace in our home.
- f. Traffic congestion on our local streets would be horrible and NOT ACCEPTABLE.
- g. Lewd conduct would not be acceptable; we have a nice neighborhood and would like to keep it.
- h. Illegal or unlicensed street vendors no matter what they may be selling. NOT ACCEPTABLE
- i. Increased overtime for Fullerton Police
- j. Outside rentals 7 days/nights per week from 6 a.m. to 10 p.m.

Our tax dollars were used to renovate the High School stadium. It's a block away for God's sake they can use it or Cal State Fullerton. You people have no right to use our tax dollars so wastefully. We worked and paid taxes all these years and every right to reject such a wasteful use of our tax dollars.

**Do you and your colleagues pushing this project live in this neighborhood? Of course you DO NOT. What do you care? NOT AT ALL. You won't have to put up with more traffic, noise and whatever kinds of unsavory people that may come here as a result. SHAME ON YOU. HOW DARE YOU.**

Re: Sherbeck Field

Dear Mr. Williams:

I am writing in response to your letter dated April 9, 2018, requesting my view of the scope of the Sherbeck Field Improvements as a resident living in the surrounding neighborhood. I truly hope you take my opinion, as well as those of my neighbors, into serious consideration. First and foremost, I am not in support of the expansion of Sherbeck Field for competitive use and feel it is not necessary for the student population at Fullerton College. I believe the effort that would be made in the proposed expansion and improvements would result in an unnecessary and redundant sports field when the existing facility already supports the school population. It would seem to be wasted money that could be better spent elsewhere, especially in light of the fact that there are two other existing sports facility alternatives: Fullerton High School Stadium on Berkeley and Lemon, and CSUF Titan Stadium, nearby.

The proposed expansion for renting out the stadium for competitive use (for profit?) is asking too much of the surrounding neighborhood. I am concerned about the additional traffic and parking into the surrounding area. Morning weekday traffic is already so bad from Fullerton College students/staff that on many weekday mornings, it is backed up on Lemon, north of Berkeley, toward the crest of the hill at Hillcrest Park. It makes it very difficult to get out of my neighborhood at Hillcrest Drive. We requested a "do not block" on Lemon at Hillcrest Drive from the City of Fullerton and it still gets blocked. In addition, when making a left hand turn onto Lemon from Hillcrest Drive, there is zero visibility in either direction and it is very dangerous as you have to inch out until you're in the lane until you can see the traffic. This situation needs to be remedied and anything that adds to the already bad traffic situation (be it construction related or additional traffic from attendees) is of major concern from a safety and quality of life standpoint.

I am also concerned about the light pollution from the lighting proposed at Sherbeck field, and I am concerned about additional noise from the new sound system. I am concerned about the additional parking that will flood our neighborhoods and the trash that will be left behind. From a realistic standpoint, I don't think you will be able to mitigate those concerns as nothing seems to be done about them from other large events such as graduations. And I am concerned about all of the other disturbances that come with a large construction project such as this including additional congestion in an already congested area, pollution, dirt, noise, aesthetics, etc. It was not that long ago that you finished the improvements at the stadium on Lemon and Berkeley. All of these things affect the quality of life living in this area. Our neighborhoods need a break.

Sincerely,

A handwritten signature in black ink that reads "Laura Gallagher Lopez". The signature is fluid and cursive, with the first name "Laura" being the most prominent.

Subject: Proposed New Stadium Development, Fullerton Community College

Dear Mr. Williams:

We are residents at 508 Princeton Circle West in Fullerton, living one street east of Berkeley Ave. across from the Fullerton Community College and the current athletic tract and physical education facilities along Berkeley Ave. We are opposed to the further development of this stadium complex for the following reasons.

The Fullerton High School Stadium was recently upgraded to near professional caliber facilities, if not at that level. Our tax dollars are at stake here and many hundreds of thousands, if not millions, of dollars were spent to create this quality stadium directly across the street from the college. I happen to know that the college can share this stadium during the regular season, with minor adjustments or improvements for post-season play if necessary. There is no reason to justify another similar upgraded stadium facility within such close proximity in our community.

Noise levels would rise to offensive levels to adjacent and other local residents across Berkeley Ave. and in the general neighborhood. Speaker systems project voice to a level that cannot be contained from the neighborhood. There are other sounds projected, from bands and other music, to say nothing of an excited stadium crowd.

Excessive light intensity also will pervade the adjacent neighborhood for extended periods of time. It is our understanding that environmental impact assessments are being conducted, with results being withheld from the general public and residents. Those impact assessments should be revealed to Fullerton residents in full. You should conduct an open and honest environmental assessment, with results published for the community to see and evaluate.

Finally, traffic congestion will increase significantly with the construction of a duplicate stadium. Current parking facilities are surely inadequate as they stand, with our anticipation of the college building more multi-level parking with its impact on Berkeley Ave. and the neighborhood.

Fullerton High School Stadium is satisfactorily isolated from the surrounding community by distance and elevation as well to the local residential areas in the elevated hillside. The stadium at Fullerton College is not, being isolated from residential areas by Berkeley Ave. alone.

Our concerns are justified and should be taken seriously by the North Orange County Community College District. We, not the district board members, are the ones who must live near this facility and deal with the complex issues that face nearby property owners, if this plan should proceed.

Please listen to your community and their concerns and make the right decision to save wasted taxpayer funds, prevent many issues that are sure to disrupt and agitate adjacent property owners, and to blatantly build a duplicate stadium facility in such close proximity to an existing one. It is not reasonable or prudent to proceed to build this facility in our neighborhood.

RE: Response to NOP of Draft EIR for Fullerton College Sherbeck Field Improvements.

Dear Mr. Williams:

As neighbors at Fullerton College, we have lived in harmony with the school and are willing to support the growth of Fullerton College's athletic department. We are in support of the Fullerton College National Championship football team playing all of their home games on an improved field, which could accommodate all of their 1,600 fans. We are in support of more P.E. classes, so that additional Fullerton College students can receive the education they need in a timely manner.

We have no problem supporting the football team and the physical education department, and we understand that this will require growth.

We are **opposed** to building a venue/stadium with 4,417 seats, which far exceeds the spectator needs of either Fullerton College's athletic department or the school's championship football team. Even with 4,400+ seats, the venue falls approximately 3,000 seats short of 7,200-- the number of seats needed for graduates, family and friends expected once a year at Commencement Ceremonies. The number of proposed seats argument does not stand up to any scrutiny and in fact, no one at the 'information stations' I spoke with at the scoping meeting could answer the 4,400+ seat question satisfactorily.

From the scoping presentation in the campus theatre on May 1st, and all the information gathered over the past years, the community has concluded that there is absolutely no need for more than 1,600 permanent seats. Nor is there a need for a permanent public address system that we have absolutely no way of controlling once it gets installed. P.A. systems should be *rented* for football games and commencement ceremony only. This will help alleviate many neighborhood concerns over stadium noise and sounds, which is our greatest concern and it has not been adequately addressed. How will you mitigate the noise from approximately 4,500 screaming fans?

We have been assured repeatedly that this new stadium will not be for more outside rentals other than who currently rents the field. If that is the case, what is the need for 4,400+ seats? The college has said that the increased number of seats is needed for annual commencement ceremonies, but that argument makes no sense. Graduation is only one day out of the year and requires 7,000+ seats and a P.A. system. Bleacher rentals will still be required regardless, so why not simply rent a suitable venue with the appropriate amount of seats? FUHS for example. I urge you strongly to consider using Fullerton District Stadium at FUHS one block away from Fullerton College, which the school had done until 2016 with no issues. What changed? Why did the college stop using the district stadium? Why has Fullerton College chosen to spend \$67,000 per year (for 3 years straight) on bleacher rentals when they can rent the District Stadium at FUHS one block away for approximately \$5,000-\$7,000? (figures are educated guesses) Cost savings is a primary reason for the Sherbeck Field Improvements project, so please explain the economics behind such decisions.

Permanent seating- We would welcome 1,600 permanent bleacher seats which more than covers any known record of spectator fans ever to attend a game at Fullerton College. Having a limited number of seats that is appropriate for the number of fans would profoundly decrease the negative impacts to the neighborhood and the city in EVERY WAY... That said, 1,600 people descending into a residential neighborhood will still require a sophisticated insulating sound absorbing wall which will buffer the loud noises the venue will still create. We ask that sound insulating walls be priced out, investigated and included as part of the mitigation measures.

If the college truly wants to improve their athletic department, and provide a nice place for their home teams to play home games- we would happily support those efforts, so long as it is put in a permanent and binding contract, that this field will never be used as a profit-making rental facility.

We have heard that multiple high schools are already interested in renting the facility and we can only imagine what other outside groups such as concerts, musicians, festivals, and sporting clubs will also certainly be interested. There is nothing wrong with such events, but they should take place in an open area downtown, or a district that is suitable for such events and is not located in the heart of a residential neighborhood. Sound from the project is the greatest concern for residents followed by excess traffic, light pollution and safety (crime, drunkenness, and proper street access for emergency vehicles)

We understand that certain community groups currently rent the stadium and we are willing to see a limited number of community groups continue renting the facility, but all of that would need to be in writing and all without the use of a permanent public address system. How many days per year will the stadium be

in use by the college? How many days by outside renters and until what time? How many of both the college and outside renters will require a PA sound system or lights? We need these questions answered in detail please.

We would be fine with 12-15 days per year with use of P.A., and absolutely no more. This amount of use is very reasonable. There is absolutely no need for a permanent sound system blasting music and a game announcer for 400-500 fans of a Fullerton College football game. And for goodness sakes- a Press Box? If the only use is in fact for the home team to play home games for the PE Department to have PE classes how is a Press Box needed for any of this?

We feel that the college is being disingenuous by continuing to say that this is only for the use of the school's athletic programs and a few current renters. Anyone with half a brain can see that the college is hoping to make this a steady income stream via rentals and that is not appropriate, nor is it sustainable for a residential community and it is not something that the community or the city itself will support.

**We Will Support:**

**\*Alternate Venues** (FUHS, CSUF) being thoroughly discussed and looked at in detail before any building commences at Sherbeck Field. We feel that there are viable NO BUILD alternatives to a stadium that are both fiscally and environmentally more responsible and should be considered first for the needs of the college.

**\*Smaller Project:** Seating for no more than 1600 spectators with no permanent public address system and fewer lights with a very limited and strict field use policy. Grandfather in who rents the stadium now. No new renters.

I look forward to reading the Draft EIR and participating more in this process.

Sincerely,

A handwritten signature in black ink that reads "Tanya McCrory". The signature is fluid and cursive, with the first name "Tanya" written in a larger, more prominent script than the last name "McCrory".

Dear Sir,

As long time residents of Fullerton we have seen first hand how the recent expansions at Fullerton College have negatively impacted surrounding neighborhoods. We oppose the construction of the proposed stadium at Sherbeck Field for the following reasons.

1. Current use of athletic facilities by school and outside entities cause parking, trash, noise and pedestrian problems. These problems extend several blocks into residential streets. The proposed stadium will worsen these problems and extend the hours of the intrusion.
2. Fullerton College's stated reasons for needing the stadium are invalid. FC athletic programs have been successful with current facilities. They have not developed a fan base to warrant a 5,000 seat stadium for any athletic event. Viable alternative sites exist nearby, (one is ¼ mile away and newly renovated).
3. Physical Education classes have been on the schedule for decades, making use of the 2 gyms, dance studios, pool and tennis courts. A stadium would simply not provide students with any essential opportunities.
4. Property values in surrounding neighborhoods are predicted to decrease by ten to fifteen percent due to the negative impact of the stadium. This is a minimum loss of \$65,000 on the resale value of our home. This impact comes in the form of noise pollution, the eyesore and light pollution from light towers, as well as increased traffic and trash.
5. This stadium will by Fullerton College's own admission be rented to outside entities. In addition to the above stated environmental impact, this stadium will be constructed using bond money not intended for this purpose, granted by residents that oppose the project.

For these reasons and several others we oppose the construction of the proposed stadium at Sherbeck Field. It is not necessary, will have a negative environmental impact, and is an undue burden on the surrounding residents.

Sincerely,

William and Elaine Miller

Mr. Williams,

We are opposed to the building of the Fullerton College Stadium. There are already two stadiums in Fullerton and the one being considered for building is just around the corner from the Fullerton High School's stadium. Why can't the college use FHS stadium? It was just renovated.

Our home is approximately a half mile from the Fullerton College track and field and if that is to be made into a stadium we feel that would put undue strain on this neighborhood. Lights, loudspeakers, noise and trash, vandalism, security and more traffic. Raymond Elementary is in this community so there are a lot of children in this track of homes next to your planned stadium. The extra traffic in this area could put them at risk.

We urge you to use the Fullerton High School or The CSU Fullerton College Stadiums and not build a third unnecessary stadium.

Our home is approximately a half mile from the Fullerton College track and field and if that is to be made into a stadium we feel that would put undue strain on this neighborhood. Lights, loudspeakers, noise and trash, vandalism, security and more traffic. Raymond Elementary is in this community so there are a lot of children in this track of homes next to your planned stadium. The extra traffic in this area could put them at risk.

We urge you to use the Fullerton High School or The CSU Fullerton College Stadiums and not build a third unnecessary stadium.

Dear Mr. Williams,

I am writing to you in order to voice my opposition to the proposed developments at Sherbeck field. I am opposed to the project for many reasons; including noise and light pollution, traffic congestion, trash and the proximity to a residential area.

Of great concern to me is the inclusion of a sound system and press box. From my residence at 601 North Yale Avenue, I am able to hear noise from the farmers market in downtown Fullerton. Also, the new sound system at the high school disturbs me while I am in my yard. Because of this, I am well aware that a sound system so much closer to my house will be nothing short of loud. I would like to know:

1. How are you going to measure the sound's impact on the residence? (are you measuring the sound at different times during the year/day to account for busier times of year/day)?
2. How do you propose to include the sound of bands, cars and the loud speaker cumulatively?
3. How are you going to account for sound coming from both the college and the high school at the same time ( they will undoubtedly have games that overlap)?
4. Are you taking into account that the homes close to the stadium are older homes that do not have insulation, double pane windows or air conditioners. ( I do not have an air conditioner and open my windows)?
5. Are you considering the affect of sound on people when they are outside in their yards?

Increased traffic will also create a negative impact on the surrounding areas. Berkeley Avenue is a cut through from Harbor to Chapman and is already highly used. Also, Dorothy is a cut through from St. College to Berkeley. During school, these streets get a lot of use. I would like to know:

1. How are you going to measure the proposed increase in traffic ?( I was told that Yorba Linda High School is being used as a data collection site. I do not agree that this is a fair comparison as Y.L. high school does not sit on a cut through street like Berkeley and is not in close proximity to other schools that also impact traffic such as Troy, St. Julianas, Fullerton high school )
2. How are you going to address the issue of traffic flow. Turning left onto Brookdale going south on Berkeley, drivers already compete for the center lane with drivers turning into the school going north on Berkeley?
3. How will multiple new lights on Lemon NOT create gridlock? Everyday I drive to the La Puente are on Fullerton Road where there is heavy traffic and multiple lights? Traffic doesn't move smoothly! There are too many cars and nowhere to go.
4. How are going to keep more cars out of our neighborhoods where children play?
5. How are you going to keep increased car pollution from affecting me? I don't want to live with a constant stream of cars passing my house on the way to a game?
6. Pollution experts state that you should live a certain distance from a freeway in order not to be adversely affected by pollution. Are you measuring the increase in pollution? And how?

The light used to illuminate the field shouldn't be near a residential area. I feel strongly that bright lights have a negative human health impact. There are studies coming out about the increased risk of diabetes, impact on melatonin...

\*Are these lights going to be LED lights?

\* If so, how are you going to address the health issues coming to light about this type of lighting

*A study from Harvard found a greater risk of breast cancer in women who live in neighborhoods that have higher levels of outdoor light during the night. The higher the light level, the higher the risk.*

*"There's a lot of potential breast cancer," Benal said.*

Trash is an ever- increasing problem in our cities. Currently, the trash left behind by students that park along Berkeley is disturbing. The trash left behind in the stadium by athletes is disturbing. The fact that the school does not have a recycling system in 2018 is appalling. I know because I pick up trash when I walk there. There aren't any dedicated areas for recyclables or any kind of a system that I can see. The school should be a leader and innovator in this area. In my opinion, recycling is a moral obligation to our planet (and ourselves) and not a revenue generator so my conclusion is that it is not important to the school. Therefore, I can only conclude that the school will not take the trash issue seriously. I would like to know however

\*How will the increase in trash be addressed?

\*How will it be different from what is currently being done?

\*Will you have a recycling system?

\*Who is going to take responsibility for the trash left in my yard, on my fence and even thrown into my backyard?

I am opposed to the development for the reasons stated and feel strongly that the 2 years that an athlete is at the college does not compare to the lifetime that residents are in their homes. There are options for the games ( using the new field at the high school ). The athletes have shown that not having a stadium does not impact their ability to win games. **However this stadium will decrease my home's value and my quality of life.** I am in opposition to the stadium at Sherbeck Field.

Regards,

Suzanne Muhaidly

Anaheim, CA 92801-1819

Mr. Williams,

This letter is in response to your 'Notice of Preparation of a Draft of Environmental Impact Report for the Fullerton College Sherbeck Field Improvements Project'.

**I am OPPOSED to this project moving forward.**

How are you going to mitigate the following issues?

1. Generation of trash of all kinds and types
2. Noise abatement – cars, trucks, street racing, car security alarms, and people
3. Vandalism of private (and commercial) property including graffiti, theft and general mischief
4. Drunkenness – this includes liquor trash and vomit
5. Illegal Parking
6. Parking for Profit
7. Lighting
8. Traffic congestion before and after the events
9. Lewd conduct
10. Illegal or unlicensed street vendors, whether they are selling food or paraphernalia
11. Animal defecation
12. Increased overtime for Fullerton Police Department

The effect and consequences are well documented of a stadium as proposed would reduce the values of properties within a one mile radius of a stadium. I refer you to the following articles:

<https://news.stanford.edu/2015/07/30/stadium-economics-noll-073015/>

<https://research.stlouisfed.org/publications/page1-econ/2017-05-01/the-economics-of-subsidizing-sports-stadiums/>

I offer a solution: the newly renovated Fullerton High School stadium, located adjacent to the Fullerton College campus.

I look forward to participating in this process.

Sincerely,  
Anne S. Murphy  
(Property Owner)

Mr. Williams,

My views regarding the scope and content of the environmental information to be included in the EIR for the proposed Fullerton College Sherbeck Field Improvement project are as follows:

**A) Noise levels (Pages, 17 & 78)** - A proposed sound system includes 12 speaker arrays, 5 (36-foot high) on the north/visitors side and 7 (33-foot high) on the south/home side. The speakers are to be used for athletic events only (campus sponsored and rental) which are scheduled to occur at various lengths and times during the days and nights 7-days a week.

The EIR infers that the only standard that will be used to measure "excess" noise levels by the new sound system will be Interior and Exterior Noise Standards established by the City of Fullerton. If said standards were used for the new sound system in the Joint City Stadium at Fullerton High School approximately one-quarter of the a mile to west, then I say the proposed standards to be used at Sherbeck Field are not restrictive enough. This is said because the broadcasts from said stadium are loud enough to hear clearly approximately 0.25 to 0.5 miles away in predominately single family residential developments to the northeast/north/northwest. This is likely due in part to the upsloping hillside topography of the properties to the north across Berkeley. , i.e., sound travels up!

Given that this element applies to Sherbeck Field with additional single family residential tracks lying roughly 100-feet to the east a more than restrictive and/or excess noise standard measurement should be applied to Sherbeck Field's sound system when also coupled with the following attendee information. Soccer and track/field events are attracting and/or projected to have only a small number of attendees per competitive event (approximately 100 attracted/100 to 200 projected) with the Commencement Ceremony (1 time event each year - 7,200 attracted/7,200 projected) and college football games (7 possible games - 350 to 1,600 attracted/1,600 to 2,000 projected) having higher attendee numbers.

Therefore, after considering these two elements alone it would strongly appear as if the sound system as described in the initial study is excessive (over serving the number of attendees) and will easily bleed well into the neighboring single residential developments to the north and east.

As such, and noting some of the proposed competitive events could extend into the late afternoon/evening hours (Pages 17 and 18), **I propose that only the speaker standards on the north/visitor side of the field be built and that their sound arrays be specifically directed ground ward and face to the southwest. Given the highlighted elements said proposal would strongly appear to be more than sufficient to serve the attendees at each of each of the competitive events (Pages 18 and 19) while at the same time maximally retaining the stadium's internal noise to the campus where it belongs thereby limiting the detrimental impact to the appeal and values to the campuses adjacent properties. Addresses issues on Pages 78 and 79).**

B) **Lighting (Pages 16 and 17)** - other than possible use for the campuses football team lighting does not appear to be required. Hours of operation can be scaled back/limited to 5 PM for those scheduled beyond this time (as late as 8:00 P.M (7) days a week essentially to rental tenants [Page 19] as well as proposed Academic instruction (week days), appear are by their nature optional and can be easily eliminated, i.e., on a campus that is over used (high density use compared to other campuses in the district) more use even in the evenings and close other proximity of alternative negate the need to offer Academic beyond that already offered at the campus. **As such, by limiting the hours and stadium use to essentially day light hours appears reasonable and would greatly limit the negative affects to a significantly lesser number of days/nights.** Thereby, greatly diminishing the potential light pollution that would result from the proposed lighting plan in conjunction with the proposed Sherbeck Field schedule and programming. Given that the immediate area, particularly on the north side of Berkeley Avenue also contends with the light pollution resulting from the use of the Fullerton All city Stadium (another element to consider in the lighting use at the Sherbeck Field), would limit the potential significant negative affects to the appeal and values of the surrounding residential properties to the campus. **Addresses on Pages 41 and 42.**

C) **Bleacher size and Press Box (Pages 15 and 17)** - Proposed bleacher size and press box appears to be excessive and not repectively for the various competitive non-rental and rental events after considering the following. The College Football team which is only projected to have a maximum of 3,000 attendees viewing 2 possible playoff games and only a maximum of 1,000 attendees viewing 5 (five) regular season games. All others are projected to have only a maximum of 200 or less attendees for each of their individual events. Representing at best a projected occupancy rate of 68% to 23% for the College Football games (playoff and regular season, respectively) and at best 5% for all other events at the proposed permanent seating capacity. Given this information it would seem as if the proposed project's 4,417 permanent seating capacity could be easily scaled back to roughly 3,200 (70%) or 2,200 (50%) given that projected numbers are typically optimistic and rarely ever achieved and that the proposed press box facility is not cost effective at all (needed at best 7 times out of 365 days).

We recognize the College is proposing to continue to use the facility for Commencement Ceremonies which garnered 7,200 attendees in the most recent year with projections at 7,500 attendees in future years. However, the ceremonies occur only once a year for a little more than half a day in late May or early June on a Saturday. Because the preceding suggests sufficient flexibility in scheduling where an alternative site could be found, likely rented at a significantly lesser amount than the cost of installation of temporary seating, and Sherbeck Field is not "holy ground" where the ceremony has to take place at said facility. It is therefore suggested the college strongly pursue a one day rental of the Fullerton High School stadium facility. It is close by, has sufficient seating to accommodate the requirements of the College, and they would likely have one day available during the noted extended late May/early June time frame (Page 5). Information is not available to say that the commencement date has to be on a Saturday. Therefore, absent a concrete reason why, the college should show flexibility and think outside the box on this issue in-order to avoid the cost of installing temporary seating at Sherbeck Field.

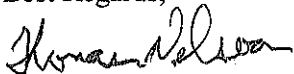

The preceding **addresses issues on Page 42** of the Initial Study for the Sherbeck Field Improvement project. Suggestions/solutions have been provided to support downsizing the scope/number of permanent seating at the proposed Sherbeck Field project which seem reasonable, more financially practical, and also result in less negative visual appeal/value to the adjacent residential properties to the east and north

across Berkeley Avenue. I hope the preceding will be reviewed and considered by the appropriate parties within the EIR.

The preceding are my primary concerns with my proposed solutions pertaining to the Proposed Fullerton College Sherbeck Field Improvement Project delineated within the initial EIR study, dated April 2018, and completed by Dudek. I hope the preceding will be reviewed and strongly considered for adoption by the appropriate agencies. The proposals I feel are not ideal solutions but recognize that some give and take must be part of the process from all parties including the College. Especially if the College want to be good neighbors and further noting that it is apparent that the EIR process is being completed because the neighboring property owners best solution is to use the recently renovated All City Stadium essentially across the street on the Fullerton High School Campus. As such, and because the adjacent property owners to the east and north are already dealing with noise, lighting, and traffic issues from other sporting events on the adjacent College and High School campus (girls soft ball field, boys high school baseball field, and the All City Stadium) through-out the extended daylight and some evening hours during each week, it is only right that the College accept a project of lesser scope than that represented by the present planned renovation improvement plan.

Due to the proposed development scope the neighboring residents have a great deal at stake given that the potential negative effects of the project would viewed as a compounding or a "piling-it-on" of all the less than desirable issues associated with the varied sport fields/activities in the immediate area. A such, and because property values of residences are generally found to be the owner's greatest investment/since of security **I ask that the EIR study not consider the various elements associated with the Sherbeck Field renovation in isolation but in total with the elements associated with the other aforementioned sporting activities at the College and adjacent high school.** Since said elements are common to each, a tempering of the conclusions relating to the proposed Sherbeck field's improvements should be considered, noted, and made within the EIR report. When taken as a whole it is our opinion that it becomes more evident that the proposed Sherbeck's Field improvements are aggressive and not appropriate nor are they physically or economically beneficial to the surrounding property uses. Therefore, they must be modified/down scaled.

Best Regards,

### **RE: Response to NOP and OPPOSITON TO SHERBECK FIELD IMPROVEMENTS; Comments for Inclusion in Draft EIR**

Dear Mr. Williams:

My name is Damion Planchon, and I am OPPOSED to the Sherbeck Field Improvements project (current design) for numerous reasons. For these reasons, I feel very strongly that NO BUILD is the best option and will give the college the least amount of objection. It makes the most sense. If there wasn't another very viable stadium alternative 1,000' away from the college campus, we could better understand the need for the project.

As a neighbor of Fullerton College and homeowner of more than 12 years, I have always supported the school and have even had 3 interns from your photography program intern for my studio. Two of those interns became semi-permanent members of my studio and work with me to this very day. Additionally, it's my pleasure to serve on Fullerton College's Photography Department Advisory Committee, headed by Melody LaMontia. I care about the school and its students. I also care very much about my cherished and quiet neighborhood and would appreciate if you could thoroughly address the following concerns:

**Seating:** Please explain how 4,417 permanent bleacher seats will save the college money. Renting FUHS stadium (as the college had done until 2016) is *a fraction* of the cost of building a stadium at Sherbeck Field. Even if the college installs 4,400 seats, an additional 3,000 bleacher seats will still need to be rented for Commencement ceremonies every single year. Fullerton College football games draw anywhere from 350-1600 fans according to the IS. The number of bleacher seats proposed simply does not make sense for the college's use unless it is planning on renting to outside teams and entities which will draw a high number of spectators regularly. This is our main objection to the project- noise. How will you mitigate the noise from 4,500 screaming and cheering fans at an exciting sporting contest with a 12 loudspeaker Public Address system blaring at game volume? If the college is being truthful about their desires for a nice field just to play their home football games, we neighbors would support this project wholeheartedly. The problems begin when you look at the proposed rental schedule and see that the field is available for rent from 6 a.m. to 8 p.m. M-F and 8 a.m. to 8 p.m. Sat-Sun. Football season sees the field rented/used until 10 p.m. This is hardly a project only for the college. The high number of seats points toward maximizing attendance and renting the facility out as much as possible. This is clearly going to be a profit making endeavor for the college, and we have genuine concerns with the college's disregard for the neighbors legitimate worries over the problems a stadium will cause.

**Light Pollution:** How do you propose to mitigate the new source of substantial light and glare, which could adversely affect nighttime views in the area? I'm fully aware of the new focused and shielded LED technology used to minimize direct glare, but how will you mitigate the 80,000 watts of light (skyglow) that the lighted field itself will produce?

**Safety:** The streets are narrow in the neighborhood directly across Berkeley from the proposed stadium project. Due to long exit times leaving a parking structure after an event (even if allowed to park for free during games), students and fans will choose to instead park in the adjacent neighborhoods and walk to the field, as it is simply more convenient for egress after events. Our concern for safety cannot be ignored. If a full event is happening at Sherbeck Stadium (and God forbid simultaneous events at FUHS and FC) and fans' cars are parked on both sides of Princeton Circle, the street is even more narrow and becomes one-way only. Emergency vehicles (such as fire trucks and ambulances) would find it difficult, if not impossible to navigate the neighborhood this way and thus increase emergency response times unnecessarily. This issue *must* be adequately addressed in the Draft EIR.

**Noise:** Public Address System (permanent and outside rentals). The project proposes to install 12 loudspeaker arrays between 33'-36' in height. The college claims that the P.A. will only be used for home football games- approximately 5-7 times/year (we could handle this easily) and for athletic competition events only. This is grey area, and completely unknown. How much excessive noise will the neighbors and adjacent neighborhood be subjected to, and for how many hours per day? How many athletic competitions is the college planning on hosting? How many days per year will the sound system be employed? 20 events? 50 events? 100 events? Also, how will you mitigate the noise generated from 4,500 excited sports fans at a full event? How will the school monitor and control the volume from outside rental P.A. systems? Will the Draft EIR analyze the decibel level of the proposed permanent P.A. system and all proposed outside (rental) P.A. systems? Please be specific, as excessive and uncontrollable noise from the project is one of the primary objections we have. To date, we have not seen a single sound study performed for the lead agency NOCCCD. We have witnessed a sound engineer recording sound on Berkeley Ave on the last day of classes Friday, December 15, 2017 at approximately 11:15

a.m on a virtually empty street (we have photos with timestamps to prove this). Is this an appropriate time to be recording sound for such a project?

**Press Box:** The addition of a press box indicates that the field is geared toward outside rentals to large sporting contests drawing thousands of fans. Why would a community college football team with an average regular season attendance of approximately 400-500 spectators need a press box unless the college had big plans for outside rental? This field would indeed be very appealing for private high schools to rent out to play their football games. Please provide evidence on why a community college football team needs a press box.

**Lewd Conduct, Trash:** As much as the college wants to believe fans coming to events at Sherbeck Stadium obey the rules and are good citizens, we who live across the street from the school know how flawed that thinking is. Fullerton College students smoke marijuana and do other drugs, have sexual intercourse, leave fast food wrappers and other refuse on the street, and many just sit in their cars on their phones for long periods of time parked with their cars idling. Imagine 2,000 extra cars (bringing sports fans from all over the Orange County area and beyond) doing this every weekend in your neighborhood in front of your house. How will you mitigate this additional traffic and careless behavior? Please adequately address this in the Draft EIR.

**Student Demand:** Fullerton College currently offers over 100 P.E. courses between the hours of 6:15 a.m. to 7:15 p.m. For the majority of Fullerton College students, only one unit of P.E. is required to graduate with an AA degree or transfer to the CSU system. How does the current schedule of classes not meet this demand? Where is the student demand for more course offerings? Please provide proof of this student demand in the Draft EIR.

**Funding:** The funding for this project has never been clear. Even as early as 18 months ago, Measure J monies were earmarked for this project. Since the field was initially built with taxpayer bond money, please provide the history and timeline of funding and costs associated with what is currently Sherbeck Field (Field House, 400M track, and artificial turf field, professional fees) and the precise source of funding for the proposed improvements, and the project's exact cost.

**A smaller project:** (1,600-2,000 seats maximum) with a very limited (25+ year legally binding) and strict field use policy could help alleviate most of the neighbor concerns, and we'd welcome the opportunity to discuss such matters with a representative from the School District at any time.

Thank you for the opportunity to participate in this process. If you wish to discuss an appropriately sized smaller project, we would welcome those talks at any time.

Sincerely,

Damion Planchon

May 6, 2018

Dear Mr. Williams

I am writing regarding my concerns about the renovation of Sherbeck Field. I am concerned about the impact of the changes to the field and the impact on the surrounding neighborhoods. The major impact will be a result of increased traffic, light pollution, sound pollution, and safety.

By increasing the capacity and type of uses that the field will have, there will be an increase of traffic. These are my concerns about increased traffic:

- Increased pollution in the area negatively impact the health of residents
- Increased noise due to traffic
- Parking problems. Students already park in the neighborhoods surrounding Fullerton College. This already has increased traffic into residential areas, especially Monday through Thursday. An increase of events/games/use of the stadium across all days of the week will lead to increased traffic and parking in these neighborhoods across all days of the week.
- There is already a problem with litter in the areas that the students park on campus, on Berkley and in the surrounding neighborhoods. More people using the field will lead to more litter.
- The likelihood that the traffic study may not be representative of what traffic would really be like when the field was in full use for the college and for rentals.
- One of the entrances/exits from the field is offset from the intersection of Brookdale and Berkley. Accidents already occur there. Increased traffic to and from the field will increase accidents.
- Using the number of people who attended games at Yorba Linda High School may not be representative of how many people would attend games if there was a stadium at Sherbeck Field. Because the stadium would be on campus, attendance would likely be increased.
- Students frequently jaywalk on Berkley between Hornet and Chapman. Increased traffic will increase the likelihood of accidents between cars and pedestrians.

Questions/considerations for traffic:

- If traffic is studied during the summer session, it will not be representative of what traffic is truly like during fall and spring semesters because of lower summer enrollment.
- If traffic is studied while Fullerton High school is out of session, it will not be representative of what traffic is like during the school year.
- How will they estimate traffic for when the stadium is being rented?

- How are they factoring in the traffic which will occur if FUHS stadium and Sherbeck Field were being used for concurrent events/games?
- What will be done to increase traffic safety along Berkley with increased coming and going from the field area?
- If estimated traffic to games is based on games held 30 minutes away from campus, this may be an underestimate. How is the likelihood of increased numbers of football game attendees because the stadium would be on campus making games easier to attend be factored into the traffic projections?
- How will overflow parking be kept out of the neighborhoods surrounding the college?
- How will pedestrians crossing Berkley between Hornet and Chapman be protected from increased traffic?
- What will be done about the litter left behind on the streets and in the surrounding neighborhoods?

I am concerned about the light pollution that will be caused by lighting on the field for the following reasons:

- Light can disrupt circadian rhythms. Having light at night that leaks into the surrounding neighborhoods would likely disrupt the circadian rhythms of the residents which in turn would lead to health problems and poor sleep. Poor sleep in turn increases the likelihood of traffic accidents and poor work performance.
- Aesthetically, the lights will be seen from residential neighborhoods and be unattractive.

Questions/considerations about lights:

- Will the lights be similar to the ones installed at the stadium at FUHS?
- What would be the combined impact on the surrounding neighborhoods when lights are on at FUHS and Sherbeck Field at the same time?
- How can lights that are as high as proposed not "leak" light into surrounding neighborhoods?
- How will the college keep the light from leaking into the surrounding neighborhoods?

I am concerned about the noise pollution caused by increased use of the field for the following reasons:

- Disruption to sleep caused by noise because of the extended hours of the field's use.
- Noise can already be heard in the surrounding neighborhoods from football games and events at FUHS, games on the baseball field at the college and events downtown, like music at market night. Adding more noise from more games and events at the field will compound the existing noise.
- Disruption to the peace and quiet currently experienced in the surrounding neighborhoods caused by increased noise from the field.
- The negative health impacts of experiencing constant/frequent noise.

Here are my questions/concerns regarding noise:

- How will the noise caused by increased usage of the field with games and rentals of the field that would be experienced by residents in the surrounding neighborhoods be measured inside and outside of their homes?
- What will the college do to dampen the noise?

- How will they measure noise from possible events through stadium rentals?
- Will noise be measured in the neighborhoods to determine the noise levels that would happen when events/games were happening at the same time at FUHS and on Sherbeck Field?

I am concerned about the safety in the the surrounding neighborhoods for the following reasons:

- Increased traffic will lead to the likelihood of more car accidents.
- Increased number of people using the stadium brings more people into the neighborhoods which in turn would increase the likelihood of crime.
- With more strangers in the neighborhood, it will be hard for residents to tell who is a potential threat to their property versus who is just parking to go the game.

Questions/Considerations regarding safety:

- How will the college and the city work together to decrease the likelihood of accidents caused by increased traffic?
- Would the college pay the city for increased police patrolling in the neighborhoods around the field to insure the safety of residents during events?

It is my sincerest hope that this stadium will not be built because of it's potential negative impact on the surrounding neighborhoods and residents. Please don't build it.

Sincerely,

Laura E. Richard-Barasch

May 6, 2018

Dear Mr. Williams :

This letter is regarding my objections to current plans for the renovation of Sherbeck Field, particularly the building of the stadium, the addition of the lights, and the loud speaker system. My family has owned our home on north Yale since it was built in 1951. The college and the surrounding neighborhoods have always coexisted as good neighbors. With these changes, the college is going to significantly negatively impact the quality of life for the residents who live around the school. I am deeply concerned about the impact of the changes to the field and the impact on the surrounding neighborhoods. The major impact will be a result of increased traffic, light pollution, sound pollution, and safety.

There will be increased traffic to and from the field due to its expanded use for the college and as a rental stadium. My concerns about increased traffic are as follows:

- Increased pollution in the area negatively impact the health of residents
- Increased noise due to traffic, which is also not good for the health of residents
- Parking problems. Students already park in the neighborhoods surrounding Fullerton College. Monday through Friday, my family and guests can not find parking in front of my home because students are parking there. When an emergency vehicle is needed in the neighborhood, they essentially have to double park to get to a residence. Greater use of the stadium will lead to greater parking problems in the neighborhood.
- There is already has increased traffic into residential areas, especially Monday through Thursday. An increase of events/games/use of the stadium across all days of the week will lead to increased traffic in these neighborhoods across all days of the week.
- People constantly use our neighborhood as a cut through from Berkley (Berkley to Brookdale to Yale to Nutwood to Raymond). This will only increase with increased use of Sherbeck Field.
- Litter is already a problem in the areas that the students park on campus, on Berkley and in the surrounding neighborhoods. More people using the field will lead to more litter.
- The traffic study may not be representative of what traffic would really be like when the field was in full use for the college and for rentals if traffic is studied during the summer when enrollment is low. During summer there will also be less traffic due to FUHS being out.
- One of the entrances/exits from the field is offset from the intersection of Brookdale and Berkley. Accidents happen there regularly. Increased traffic to and from the field

will increase the likelihood of accidents in this area. I can think of at least 2 or 3 fatal accidents in the stretch between Brookdale and Horner Way over the years.

- If projections of game attendees are based on the number of people who attended games at Yorba Linda High School, the projections may not be correct if there was a stadium at Sherbeck Field. Because the stadium would be on campus, attendance would likely be higher.
- Students frequently jaywalk on Berkley between Horner and Chapman. Increased traffic will increase the likelihood of accidents between cars and pedestrians.

I am concerned about the light pollution that will be caused by lighting on the field for the following reasons:

- Light will leak into the surrounding neighborhoods from the stadium lights
- Disruption to circadian rhythms due to exposure to the field lights at night. Having light at night that leaks into the surrounding neighborhoods would likely disrupt the circadian rhythms of the residents which in turn would lead to health problems and poor sleep.
- Aesthetically, the lights will be seen from residential neighborhoods and be unattractive.

I am concerned about the noise pollution caused by increased use of the field for the following reasons:

- Disruption to sleep caused by noise because of the extended hours of the field's use.
- From our neighborhood, I can already hear football games and events at FUHS, games on the baseball field at the college and events downtown, like music at market night. The addition of noise from events and games at Sherbeck would be too much.
- Noise from the increased use of the field will disrupt the peace and quiet currently experienced in the surrounding neighborhoods.
- There are negative health impacts from experiencing constant/frequent noise.

I am concerned about the safety in the the surrounding neighborhoods for the following reasons:

- Increased traffic will lead to the likelihood of more car accidents.
- More people using the stadium will bring more people into the neighborhoods which in turn would increase the likelihood of crime.
- Neighborhood Watch can no longer work because of the high number people of going and coming from the neighborhoods to reach the stadium. With more strangers in the neighborhood, it will be hard for residents to tell who belongs there and who does not belong there.

Please don't build the stadium on Sherbeck Field.

Sincerely,

*Anne E. Richard*

Anaheim, CA 92801-1819

Dear Mr. Williams:

A lot has been written about the pros and cons of the proposed Fullerton College Stadium. As a nearby resident, my main concern is the impact that this stadium will have on the quality of life in our community. We will be impacted by noise and light pollution, increased traffic congestion and a reduction in property values that this stadium will have on our neighborhood.

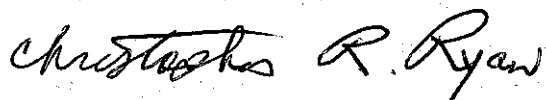

In addition to home football games in the fall, you state in your NOP that the field can be rented to outside parties Monday through Saturday from 6 am to 10 pm and on Sundays from 6 am to 8:30 pm. These hours of operation are unacceptable! As a resident, the quality of life for my family will be negatively impacted by this stadium. I welcome you to come to my house, stand in my front yard and explain to me (in full view of the proposed stadium) how this will improve my life. I am entitled to enjoy peace and quiet when I come home from work. If I want to hear the play by play I will go to the game. I don't want it broadcast through the walls of my house. When there are events at the high school stadium I can hear the public address announcements and it is approximately .25 miles away. Imagine how loud the public announcements will be now when it is across the street from our house.

Nowhere in the Environment Impact Report is there any discussion of the impact this stadium will have on area property values. This is a real life issue. Who wants their home value depreciated because of traffic congestion, noise and light pollution? What a parting gift as I approach retirement.

You have many other options at your disposal that won't impact the nearby residents such as the stadium at Cal State Fullerton. Also, I do not believe that this is the best way to spend \$4M for .005% of the student population. Stop by for a visit and put a name and face to your decision making process.

Thank you for your time and consideration.

Sincerely,

Christopher R. Ryan

**RE: OPPOSITION TO SHERBECK FIELD IMPROVEMENTS:** Comments for  
Inclusion in draft EIR

Dear Mr. Williams:

My name is Frankie Smith and I **OPPOSE** the improvement construction and planned use of Sherbeck Field. **Traffic** is already a major problem on the Lemon/Marion cross street on Brea Blvd. Southbound drivers even whip onto Marion and u-turn to the crosslight rather than wait in the gathering lineup to turn left to go up Lemon hill (another dangerous pathway). Residents on the Marion side "tremble" to enter that chaos! ANY new building project in this area is ridiculous! Renting the proposed stadium to music venues would be inviting disaster.

The creation of such a huge negative impact on the surrounding area when there are two other stadiums nearby brings one to question, "Who benefits?" In order to make money for the college at the **cost of \$5 million, reduced property values** for so many affected taxpayers, increased **crime control**, more **traffic accidents**, and general "**bad will**" from long time supportive Fullertonians just doesn't make sense to me.

Why not use that funding to alleviate the "wait list" for required courses and keep the "good will" of impacted property owners? When construction causes so much destruction of community well being where is the balance? Thank you for your consideration to change this proposed project.

In pursuit of happiness,

Frankie Smith

**To:** Richard Williams  
**Subject:** Comments on the Proposed Sherbeck Stadium

Dear Mr. Williams,

I am writing to you to express my concern for the idea of a stadium at Sherbeck Field. I think it would be an irresponsible and very inconsiderate addition to the quiet community that so many families love. In addition to the significant negative impacts the stadium would have on nighttime lighting, traffic and parking, littering, and reduction of home value, I would have to say my biggest concerns are the noise potential, number of seats, and proposed schedule of use.

I live with my wife and two kids at the house our neighborhood calls, "Ground Zero," which is directly across Berkeley at the eastern Sherbeck field goal post. We have had footballs bounce into our backyard from football practices. On some Fridays when Fullerton Union High School is hosting a game or event, we can easily hear the booming voices on the P.A. and the cheers of the crowd even with our windows closed. The idea of dealing with the noise of thousands of bleacher-stomping and screaming fans ninety feet from our backyard keeps us pretty stressed out. We put our boys (ages 5 and 8) to bed by 7:30pm each night (slightly later on weekends). We get to bed around 9pm and wake up at 4am each morning to chip away at our passion projects- writing and illustrating children's books- before heading to school (we are both teachers). I can't imagine enjoying the occasional movie or even getting a decent night's rest while an announcer's voice blasts a play-by-play, or people in the crowd stomp to the beat of a rally song. I understand that most of the time, the field will be used for practices and sports classes, which wouldn't be too noisy unless a whistle-happy coach were present. My concern comes from the potential of outside rentals. These outside organizations and schools could host playoff games, social events, concerts, etc. whose attendees would have little to no respect and/or understanding of the need for peace and quiet in the surrounding neighborhood. I read in the EIR that outside groups would need to provide their own sound equipment, but I have personally witnessed an outside football league bring massive subwoofers to Sherbeck Field to blast loud music in between a host's announcements. What can be done to reduce or eliminate the loud sounds?

I want to raise another point about the use of the stadium. Why are 4500 seats needed when no proposed event (including the college football playoffs) is expected to get audience numbers close to that level of attendance? I know that the college wants to host its own graduations, but can't extra seating be arranged and temporarily installed the one day per year it's needed? The overabundance of seating tells me the college is looking to rent that future stadium to much bigger events. If this is the case, the proposed use schedule is very misleading. Also, the proposed use schedule is only valid until the next president takes his/her seat. What's stopping a future college president from allowing programming to go right up until 10pm every night?

Lastly, I want to point out that about 500 households in the surrounding neighborhoods have signed a petition taking a stand against Sherbeck Field becoming a stadium. Does the college really want to draw the ire of that many people? Does the college even care about its community?

Richard,

**Re: Sherbeck Field Project**

5-4-18

I hope this correspondence finds you doing well.

There is concern on my part regarding the purposed Sherbeck Field project. While keeping an open mind, I have attended several meetings regarding the above mentioned project. Having been in Real Estate Lending for over 30 plus years, I have real world experience as to the adverse effect a well-lit stadium/field would bring to a community. As a corporate officer of one of the largest Savings Banks in the nation, the adverse effect caused by *traffic, noise, unwanted lighting* was always a concern to us. These adverse influences cause documented depreciation in property values.

Drawing from my years of experience in the lending industry, I would never choose to live in a home with *traffic, noise, unwanted lighting as adverse conditions*. Hence the reason my family choose not to live by Cal-State Fullerton, or in the hills by the Fullerton High School Stadium. However, now I'm being asked to accept these very adverse conditions that the renovated Sherbeck Field will bring.

Earlier I wrote of my real world experience. A few years back, El Dorado High School, in nearby Placentia, decided to bring in portable lighting to enable the football team to practice during the evening. Even though my rental property did not backed to the school, my tenant, as well as others, were upset with the infringement the lighting caused to their family's quality of life. This adverse condition must now must disclosed and effects the value and rents of the property. This has become a liability to the owners of such properties.

Before the renovation of Fullerton High Schools Stadium, my family rarely heard the noise of the P.A. system or had any issues with the lighting. After the renovation of Fullerton High School Stadium, my family can clearly hear the P.A. system and we receive some ambient light intrusion. Common sense tells us that the renovation of Sherbeck Filed will only exacerbate the lighting and noise issues. Again, a real world experience.

Your letter dated April 9, 2018 states that the above mentioned project "may have potentially significant effects" on our neighborhood environment. I submit to you that the areas touched upon by your letter "noise, aesthetics, transportation and traffic" **will** have a significant effects on the surrounding neighborhoods.

On the evening of May 1<sup>st</sup>, I had a nice exchange of ideas with a number of members of the Community College staff. I listened to their reasoning as to why the renovations to Sherbeck Field were needed.

I for one agreed with them, and do not believe there will be drunks roaming the neighborhood after games.

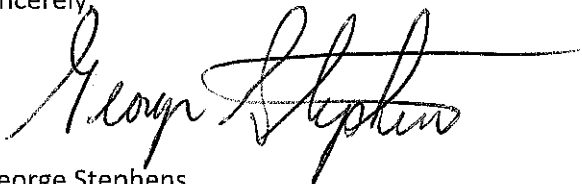

For financial reasons, it also seems like a good idea to have the football games and the commencement ceremonies at Sherbeck Field. However if the games will be played during the day and the commencement ceremonies are during the day, then there are no need for lights? Adding lights to the field to have a couple more athletic classes does not make sense to me. Also I'm confused as to why one would build a 4,000 seat stadium for commencement ceremonies when from what I was told approximately 7,000 attend these commencement ceremonies.

However, during our discussion a point came up that I had not thought of. That point was the renting of the field to non-Fullerton College groups. After doing some research, I discovered the incredibly high demand for a lighted practice field for youth sports. These fields are used throughout the week up until 10 pm. This would mean that Sherbeck Field could be used many nights of the week to fill this demand. There is an excellent likelihood of this happening. The Placentia District office informed me that use agreements can change, and that's why there are now practice lights at El Dorado. I would not want the same thing to happen at Sherbeck field.

There is obviously some give and take when living in the vicinity of a College. I understood that when choosing to move into the area. I know that during certain hours of the week day, there will be increased traffic and noise. I can accept that. However, during the evenings and weekends, when I wish to enjoy my neighborhood and home, having these and other addressed adverse issues is not acceptable to me.

Please keep this simple thought in mind when making your decision regarding Shebeck Field. Would you choose to live in an area with increased noise, aesthetics degradation, and traffic? My family and would not welcome those changes to our neighborhood.

Sincerely,

A handwritten signature in black ink, appearing to read "George Stephens". The signature is fluid and cursive, with a long horizontal line extending from the end of the name.

Fullerton, CA 92831

**RE: OPPOSITION TO SHERBECK FIELD IMPROVEMENTS: Comments for Inclusion in draft EIR**

Dear Mr. Williams:

My name is Christina Tsai, and I OPPOSE the Sherbeck field Improvements Project for the following reasons.

How will the following issues be brought on by a stadium's construction and daily operation be mitigated?

- Noise:** large crowds, cheering from fans, noisemakers, horns and stomping on bleachers)
- Excess Traffic:** on a 2 lane street and loitering before and after events
- Light Pollution & Negative effects of LEDs :**even with advanced light shields, 80,000 watts produces intense skyglow
- Generation of Trash, Vandalism, and Crime:** of private and commercial properties
- Lewd Conduct and Crowd Control** would burden Fullerton police and neighbors
- Illegal and unlicensed street vendors** selling food or paraphernalia (this happened at graduation)

I offer a solution to building a 3<sup>rd</sup> stadium in Fullerton: use the newly renovated District Stadium at FUHS or Titan Stadium at CSUF

I look forward to participating in this process.

  
Christina Tsai

628 E Fern Dr  
Fullerton, CA 92831  
(714)686-3940

My statement,

I am a proud student Alumni of Fullerton College and a proud former Football team member that played for Coach Sherbeck, Obviously I am a supporter for the Field. I am not speaking for everyone that is FOR or AGAINST the Hal Sherbeck Field. I just want a solution found that is satisfactory for everyone and the community.

I do understand and recognize both sides FOR and AGAINST the Field being built.

When I was going to school and playing Football at Fullerton college I paid for all my school tuition, books, food and even paid for my own apartment. I worked 35 to 60 hours a week, Managed the most popular bar and night club in orange county and worked at a night club and 5 graveyard shifts at a gas station when I transferred to Sonoma State. I didn't receive any help from the state or any other source. I was not an elite athlete just a regular student like everyone else that wanted to get an education and fulfill a childhood dream of playing college football. So many women and men share the same dreams of getting an education participating in sports and are not elite athletes just living out a childhood dream.

I understand sacrifice, dedication, hard work and solutions.

I am unique because I lived in Fullerton at The Hill Crest apartments when I was going to Fullerton college, Berkeley was right outside my window. I heard the sounds from the stadium, I heard the traffic and the cars when there were no games and I didn't feel any inconvenience. Fullerton High School had the same issues with neighbors. I recall people watching games from the hills overlooking the stadium. I remember walking over to Fullerton High School for all our home game and guys spraining

their ankles on the way over from there cleats, so Fullerton High School didn't serve us all that well at least not like walking out of your own locker room.

Football is not the only sport that would benefit, women sports too.

What I learned from my Fullerton College Athletic experience was solutions and overcoming your short comings and keep your eye on what other due to succeed.

Change is always inevitable in our society. Fullerton College and the City of Fullerton will follow the trends of other High Schools, Colleges and communities as resources become limited or the schools might not be able to serve the students or the community of which it has vowed to do. Home owners, renters that move into a school zone know what they are moving into and it seems naive that change couldn't and wouldn't happen.

Fullerton College has had improvement in every decade as it will in years to come.

**Take a look at solutions through the eye of technology. When LAX was faced with a noise pollution problem, they found a solution, triple pain windows.**

**Triple pain and tinted windows would be a viable solution for local residents. If this was offered to the residents would this be a satisfactory.**

I know that Coach Sherbeck former players, Coaches and admirers would help in this cause.

What we need here is the next great community organizer that can find the solution for everyone. Ben Vega 83 84 85

Subject: Sherbeck Field Improvements

Dear Mr. Williams:

We are totally against wasting tax payer money on this project when the little used beautiful high school stadium could be used.

We have lived just north of the college for 51 years and owned rentals south of the college for 42 years. Every year the congestion and parking become worse. Several times a week I drive on North Berkeley seeing little used athletic fields being watered and mowed while hoping I can find a parking space at my rentals. The athletic fields must be turned into parking lots.

Sincerely,

  
Larry and Judy Walker

APRIL 9, 2018

Dear Richard Williams,

I am writing regarding;

Fullerton College Sherbeck Field Improvements Project

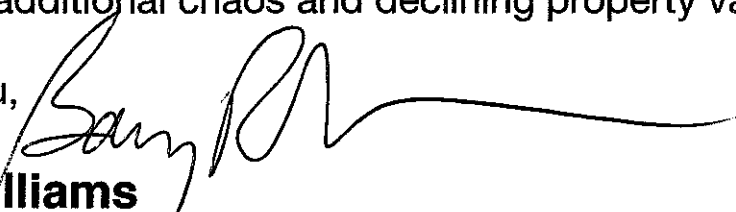

As a home owner in the neighborhood just west of Fullerton College, my family has seen increasing spillover effect of Fullerton College's inability to serve it's own student population and sporting event needs.

Parking continues to rudely infiltrate once peaceful neighborhoods  
Traffic has become dangerously dense and aggressive  
Irresponsible street crossing by scurrying students  
Trash  
Bright unnatural lights into the evening hours  
Noise levels

All of these should be contained and absorbed within Fullerton College itself, *not* the surrounding community.

Please use existing stadiums at Fullerton High School and Cal State Fullerton. A new stadium is an unnecessary waste of tax dollars and will bring additional chaos and declining property values.

Thank you,

**Resident Comment:**

Russell Williams  
609 N. Lincoln Ave.  
Fullerton, CA 92831

**RE: OPPOSITION TO SHERBECK FIELD IMPROVEMENTS: Comments For Inclusion in draft EIR**

Dear Mr. Williams,

I write to express my opposition to the proposed **Sherbeck Field Improvements**. The following are issues and related comments reflecting my opposition to the proposed project.

- a. Excess traffic in the surrounding areas due to FCU use and continuous rental use of the proposed facilities
- b. Transient unlicensed vendors for the continuous rental use of the proposed facilities.
- c. Crowd control, loitering, drunkenness, vandalism in residential areas including illegal parking in residential areas
- d. Anticipated yearly, taxation consequences to Fullerton resident requiring tax underwriting for increasing costs to the City of Fullerton to provide needed yearly city services due to the ongoing (likely ever-increasing private Paid Rental/Special Event Use) use of Fullerton College's Sherbeck Field.

**Commentary:** As residents, my wife and I moved to this particular area to experience the community experience that Fullerton offers. We think the impact of this proposal will unfavorably altar the dynamic of contiguous residential areas surrounding the college. Ongoing, ever-increasing demands on the City of Fullerton requiring resources to address anticipated, ever-changing agreements between the city and the College regarding uses of a new facility for private, commercial events and the \$ impact to the city will, with time, become costs passed on to Fullerton taxpayers. That is the way government manages its costs. The tax payer pays the bill.

Clearly, there are community alternatives to this proposed project. Namely Fullerton College should focus on its primary need... long-term use agreements with **Fullerton Union HS or Titan Stadium at Cal State Fullerton** for specific, limited, *large event* programming needs (excluding PE) requiring **large seating capacity**.

The *multi focus mission* of the existing **Sherbeck Field Improvement Project** Proposal underscores the college's primary goal: **\$ financial revenue generating for Fullerton College**. The NOCCD project proposal will impact the surrounding community requiring additional taxpayer underwriting to mitigate city costs for multi-private events throughout the year. *Ultimately, the tax payer will pay annually into the future for this project while the college becomes the financial beneficiary annually into the future.*

Sincerely,

  
Russell Williams

Anaheim, California 92801-1819

Dear Sir,

I have been a resident of Fullerton since the fifties, attended Fullerton Junior College '50 to '52. Our kids are all grads of FJC. I know the College and the City well and the College is such an asset to our community. One Stadium has always been adequate all of these years, sure the enrollment has increased exponentially however there are still eleven players on a team. As you I'm sure, already know both schools were one district for many years so the policy of one stadium for FUHS and FJC is not new and has worked pretty well for many, many years.

My concern is not environmental but fiscal, Fullerton High just put a ton of dollars into a completely remodeled stadium with artificial turf to alleviate the wear and tare which is always present with natural grass.

I'm sure the scheduling can be worked out for those using the field. Other district are able to solve this problem without simply building a redundant stadium.

If there are funds for one more stadium why not put those dollars into a parking structure that could be used every day of the week for many events as well as student parking. A structure would give FJC's neighbors some relief from all of the street parking.

Regards

John Wolfe

SR 91; PM 21.933  
SR 57; PM 17.42

Dear Mr. Williams,

Thank you for including the California Department of Transportation (Caltrans) in the review of the Draft Initial Study (IS) for the proposed Fullerton College Sherbeck Field Improvements Project which is within 2 miles of both State Route 57 (SR 57) and State Route 91 (SR 91). The mission of Caltrans is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability.

The proposed project's main objectives are to:

- Provide field lighting to allow for more evening class options for the physical education program to meet student demand.
- Provide a football field for the Fullerton College football program that meets the sizing requirements of the California Community College Athletic Association Regulations, Bylaw 4.2.6 A.
- Install permanent bleachers to reduce the costs associated with renting bleachers for the annual Fullerton College commencement ceremony.

Sherbeck Field is located in the northeastern portion of the Fullerton College campus. Fullerton College is located at 321 East Chapman Avenue in the City of Fullerton and occupies an approximately 70-acre site in northern Orange County. The project site is located 2.1 miles west of SR 57, and is 1.6 miles north of SR 91. Both SR 57 and SR 91 are overseen by Caltrans. Caltrans is the responsible agency and has the following comments:

**Traffic Operations Comments:**

1. The Traffic Impact Analysis will need to be submitted to Caltrans for review and comment.

2. In Section 6.16 (b), "Transportation and Traffic", the Draft Initial Study report states "A Traffic Impact Analysis will be conducted and the results will be included in the EIR". In regards to the preparation of the EIR, if the project will impact State right-of-way, the North Orange County Community College District will need to follow the "Guide for the Preparation of Traffic Impact Studies" in order to meet Caltrans standards. Guidance can be found at: [http://www.dot.ca.gov/hq/tpp/offices/ocp/igr\\_ceqa\\_files/tisguide.pdf](http://www.dot.ca.gov/hq/tpp/offices/ocp/igr_ceqa_files/tisguide.pdf). Current concerns that will also need to be addressed in the EIR include: added traffic generation, distribution and assignment to the State facilities both during and after construction, and the addition of construction trucks on freeway facilities during peak traffic periods.
3. The North Orange County Community College District will need to use the latest version of the Highway Capacity Manual (HCM) methodologies when analyzing traffic impacts on State Transportation Facilities. The following topics will need to be addressed in the traffic impact analysis as well as in the EIR:
  - a. Merge/Diverge at On/Off Ramps if applicable.
  - b. Queuing and its effects at Off Ramps if applicable.

System Planning Comments

4. According to the City of Fullerton Bicycle Master Plan (2012), there is currently an existing Class II bicycle lane located on Berkeley Avenue. Because traffic volumes may increase, appropriate measures need to be implemented to ensure the safety of bicyclists and pedestrians.

Please continue to coordinate with Caltrans for any future developments that could potentially impact State transportation facilities. If you have any questions, please do not hesitate to contact Julie Lugaro at 657-328-6368 or [Julie.lugaro@dot.ca.gov](mailto:Julie.lugaro@dot.ca.gov).

Sincerely,

MARLON REGISFORD  
Branch Chief, Regional-IGR-Transit Planning  
District 12

## CITY OF FULLERTON

Community Development Department

May 8, 2018

Mr. Richard Williams, District Director, Facilities Planning and Construction  
North Orange County Community College District  
1830A West Romney Drive  
Anaheim, CA 92801-1819

Subject: Response to Notice of Preparation of a Draft Environmental Impact Report for the  
Fullerton College Sherbeck Field Improvements Project

Dear Mr. Williams,

Thank you for the opportunity to review the Fullerton College Sherbeck Field Initial Study (IS). The City's main concerns with the project are with potential impacts on the surrounding neighborhoods due to noise, lighting and increased traffic. We are pleased that the IS acknowledges the potential for significant impacts and will analyze these topics in the EIR. The City requests that the analyses address the associated issues described below, and that the EIR include effective and enforceable mitigation measures that will protect the surrounding residential areas from light, noise and traffic intrusion.

Project Objectives:

There are various references in Chapters 2 and 3 of the IS regarding rental of Sherbeck Field to other schools and organizations. If one of the project objectives is to increase the opportunities for field rentals, this should be identified in Section 3.2.

Project Description:

Sherbeck field activities for 2016-2017 school year are included in the project description. Please discuss any changes in programming that are anticipated with the improvements to the field.

Aesthetics:

The City has concerns that project lighting may adversely affect the surrounding residential neighborhood, particularly residents to the east and north. The IS indicates that lighting impacts will be analyzed, and the City requests that the following are addressed in the analysis:

- Relative elevation of light fixtures to neighborhoods north of campus, where homes are on higher ground than Sherbeck Field
- Type of lighting fixtures to be used
- Effectiveness of proposed mitigation measures
- Enforcement of lighting curfews

Noise:

Noise is also an area of significant concern to the City, and the Initial Study describes areas to be analyzed. On page 17 of the IS, it is noted that the sound system would not be used for rentals, but also states that outside organizations could bring their own sound system. Please

**THE EDUCATION COMMUNITY**

303 West Commonwealth Avenue, Fullerton, California 92832-1775  
(714) 738-6547 • Fax (714) 738-3110 • Web Site: [www.ci.fullerton.ca.us](http://www.ci.fullerton.ca.us)

address the impacts and mitigation related to use of the proposed sound system, and also for different types of sound systems that are expected to be used by other entities who rent the field.

Traffic:

As noted in the IS, the project may increase traffic on streets in the vicinity of the proposed project. With increased traffic for sporting events, traffic peaks can be expected during the periods before and after events. We request that the traffic analysis address impacts to street infrastructure and to the following traffic conditions:

- Bypass traffic through local neighborhoods
- Offset condition of the Parking Lot 6 driveway and Brookdale Place, on Berkeley Avenue.
- "Worst case" situation where Fullerton High School and Fullerton College host games or activities simultaneously.

Please note also that any traffic control measures or construction that will affect public right of way must be coordinated with and approved by the City Traffic Engineer. Any work in public street right of way will require approval of the Director of Public Works, and that permits will need to be obtained from the City's Public Works Department.

Tribal Cultural Resources

On page 88 of the IS there are references to City responsibility for Tribal Cultural Resources. Please modify to identify that the District, as lead agency, would be responsible for those actions.

Utilities and Service Systems:

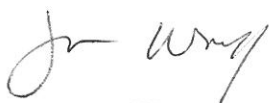

Please evaluate the impact to public infrastructure, utilizing anticipated quantities of discharge into storm drains and sewers and anticipated water use.

Alternatives Analysis:

- No project alternative
- Reduction in Size of Improvements to Sherbeck Field – Please include an analysis of a reduced-scope of stadium improvements.
- Alternative Location of Stadium – Please include an analysis of opportunities for joint use of comparable stadium facilities within the area, such as those found at Fullerton High School or California State University, Fullerton, and identify all other potential existing locations and analyzing the feasibility of such use. In addition, we ask that you include an analysis of the ability to construct a new stadium at the Cypress College campus.

The City of Fullerton appreciates the opportunity to review and comment on the Initial Study. If you have any questions on any of our comments, please feel free to contact me at (714) 738-6837 or [joanw@ci.fullerton.ca.us](mailto:joanw@ci.fullerton.ca.us), and I will put you in touch with the appropriate department.

Sincerely,

Joan Wolff, AICP  
Senior Planner

[Rwilliams@noccdd.edu](mailto:Rwilliams@noccdd.edu)

NOTICE OF PREPARATION (NOP) OF AN ENVIRONMENTAL IMPACT REPORT (EIR) FOR THE FULLERTON COLLEGE SHERBECK FIELD IMPROVEMENTS PROJECT, 321 EAST CHAPMAN AVENUE, FULLERTON, ORANGE COUNTY (LOCATED IN THE NORTHEASTERN PORTION OF THE FULLERTON COLLEGE CAMPUS (SCH# 2018041025))

Dear Mr. Williams:

The Department of Toxic Substances Control (DTSC) has reviewed the subject NOP. The following project description is stated in the NOP: "The College plans to install permanent prefabricated aluminum bleachers, six field lighting stanchions, a new sound system, press box, and storage building at the existing Sherbeck Field. Sherbeck Field would continue to be used for academic instruction, competitive athletics, and rentals; however, Sherbeck Field is proposed to host competitive football games, which are currently held at other locations. The inclusion of field lighting as part of the project would allow Fullerton College to add more evening classes, to offer a balanced schedule, and provide more class options for students who may not be able to take physical education during the day. It is anticipated that these improvements would begin in spring 2019 and would last approximately 6 months."

Based on the review of the submitted document, DTSC has the following comments:

1. The EIR should identify and determine whether current or historic uses at the project site may have resulted in any release of hazardous wastes/substances. A Phase I Environmental Site Assessment may be appropriate to identify any recognized environmental conditions.

2. If there are any recognized environmental conditions in the project area, then proper investigation, sampling and remedial actions overseen by the appropriate regulatory agencies should be conducted prior to the new development or any construction.
3. If the project plans include discharging wastewater to a storm drain, you may be required to obtain an NPDES permit from the overseeing Regional Water Quality Control Board (RWQCB).
4. If planned activities include building modifications/demolitions, lead-based paints or products, mercury, and asbestos containing materials (ACMs) should be investigated and mitigated/disposed of in accordance with all applicable and relevant laws and regulations. In addition, evaluate whether polychlorinated biphenyls (PCBs) containing materials is present in onsite buildings and address as necessary to protect human health and the environment.
5. If the site was used for agricultural or related activities, residual pesticides may be present in onsite soil. DTSC recommends investigation and mitigation, as necessary, to address potential impact to human health and environment from residual pesticides.
6. DTSC recommends evaluation, proper investigation and mitigation, if necessary, of onsite areas with current or historic PCB-containing transformers.
7. The Initial Study states, "According to the documents received, the USTs were associated with a boiler plant and have been removed or abandoned in place (Fullerton Fire Department n.d.)." It further states, "However, release cases can be closed with residual contamination in place in soils, and there may be locations on campus with previously unidentified contamination. Therefore, impacts are potentially significant."
  - a. Identify the name(s) of the regulatory agency(ies) approved the closure of the contaminated site cleanups/underground storage tank (UST) sites.
  - b. DTSC is unable to evaluate whether vapor sampling and/or potential vapor intrusion risk was adequately addressed due to lack of relevant detailed information in the Initial Study.
  - c. DTSC recommends soil gas sampling and vapor intrusion risk evaluation on sites with releases of volatile organic compounds (VOCs) or total petroleum hydrocarbons (TPH). DTSC recommends soil gas sampling after to confirm no residual VOC/TPH contamination remain onsite and/or risk is acceptable based on applicable and relevant state guidelines.

Mr. Richard Williams  
May 3, 2018  
Page 3

8. If soil contamination is suspected or observed in the project area, then excavated soil should be sampled prior to export/disposal. If the soil is contaminated, it should be disposed of properly in accordance with all applicable and relevant laws and regulations. In addition, if the project proposes to import soil to backfill the excavated areas, proper evaluation and/or sampling should be conducted to make sure that the imported soil is free of contamination.
9. If during construction/demolition of the project, soil and/or groundwater contamination is suspected, construction/demolition in the area should cease and appropriate health and safety procedures should be implemented. If it is determined that contaminated soil and/or groundwater exist, the EIR should identify how any required investigation and/or remediation will be conducted and the appropriate government agency to provide regulatory oversight.

If you have any questions regarding this letter, please contact me at (714) 484-5380 or by email at [Johnson.Abraham@dtsc.ca.gov](mailto:Johnson.Abraham@dtsc.ca.gov).

Sincerely,

Johnson P. Abraham

RE: SCH# 2018041025; Fullerton College Sherbeck Field Improvements Project, City of Fullerton; Orange County, California

Dear Mr. Williams:

The Native American Heritage Commission has received the Notice of Preparation (NOP) for Draft Environmental Impact Report for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code § 21000 et seq.), specifically Public Resources Code section 21084.1, states that a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit. 14, § 15064.5 (b) (CEQA Guidelines Section 15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an environmental impact report (EIR) shall be prepared. (Pub. Resources Code § 21080 (d); Cal. Code Regs., tit. 14, § 15064 subd. (a)(1) (CEQA Guidelines § 15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources with the area of project effect (APE).

**CEQA was amended significantly in 2014.** Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a **separate category of cultural resources**, "tribal cultural resources" (Pub. Resources Code § 21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment (Pub. Resources Code § 21084.2). Please reference California Natural Resources Agency (2016) "Final Text for tribal cultural resources update to Appendix G: Environmental Checklist Form," <http://resources.ca.gov/ceqa/docs/ab52/Clean-final-AB-52-App-G-text-Submitted.pdf>. Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code § 21084.3 (a)). **AB 52 applies to any project for which a notice of preparation or a notice of negative declaration or mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. § 800 et seq.) may also apply.

The NAHC recommends **lead agencies consult with all California Native American tribes** that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments. **Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.**

## AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a **lead agency** shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
  - a. A brief description of the project.
  - b. The lead agency contact information.
  - c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code § 21080.3.1 (d)).
  - d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code § 21073).
2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A **lead agency** shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code § 21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or environmental impact report. (Pub. Resources Code § 21080.3.1(b)).
  - a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code § 65352.4 (SB 18). (Pub. Resources Code § 21080.3.1 (b)).
3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
  - a. Alternatives to the project.
  - b. Recommended mitigation measures.
  - c. Significant effects. (Pub. Resources Code § 21080.3.2 (a)).
4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
  - a. Type of environmental review necessary.
  - b. Significance of the tribal cultural resources.
  - c. Significance of the project's impacts on tribal cultural resources.
  - d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code § 21080.3.2 (a)).
5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code sections 6254 (r) and 6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code § 21082.3 (c)(1)).
6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
  - a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
  - b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code section 21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code § 21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:
- The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
  - A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code § 21080.3.2 (b)).
8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code section 21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code section 21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code § 21082.3 (a)).
9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code section 21084.3 (b). (Pub. Resources Code § 21082.3 (e)).
10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:
- Avoidance and preservation of the resources in place, including, but not limited to:
    - Planning and construction to avoid the resources and protect the cultural and natural context.
    - Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
  - Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
    - Protecting the cultural character and integrity of the resource.
    - Protecting the traditional use of the resource.
    - Protecting the confidentiality of the resource.
  - Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
  - Protecting the resource. (Pub. Resource Code § 21084.3 (b)).
  - Please note that a federally recognized California Native American tribe or a nonfederally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code § 815.3 (c)).
  - Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code § 5097.991).
11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An environmental impact report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
- The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code sections 21080.3.1 and 21080.3.2 and concluded pursuant to Public Resources Code section 21080.3.2.
  - The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
  - The lead agency provided notice of the project to the tribe in compliance with Public Resources Code section 21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code § 21082.3 (d)).
- This process should be documented in the Cultural Resources section of your environmental document.*

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: [http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation\\_CalEPAPDF.pdf](http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf)

- b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.
- 3. Contact the NAHC for:
  - a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
  - b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.
- 4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
  - a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, section 15064.5(f) (CEQA Guidelines section 15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
  - b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
  - c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code section 7050.5, Public Resources Code section 5097.98, and Cal. Code Regs., tit. 14, section 15064.5, subdivisions (d) and (e) (CEQA Guidelines section 15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

To: Reviewing Agencies  
Re: Fullerton College Sherbeck Field Improvements Project  
SCH# 2018041025

Attached for your review and comment is the Notice of Preparation (NOP) for the Fullerton College Sherbeck Field Improvements Project draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

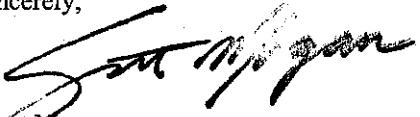

Please direct your comments to:

**Richard Williams**  
North Orange County Community College District  
1830A West Romneya Drive  
Anaheim, CA 92801

with a copy to the State Clearinghouse in the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

  
Scott Morgan  
Director, State Clearinghouse

**SCH#** 2018041025  
**Project Title** Fullerton College Sherbeck Field Improvements Project  
**Lead Agency** North Orange County Community College District

---

**Type** NOP Notice of Preparation  
**Description** Fullerton College plans to install permanent prefabricated aluminum bleachers, six field lighting stanchions, a new sound system, press box, and storage building at the existing Sherbeck Field. Sherbeck Field would continue to be used for academic instruction, competitive athletics, and rentals; however, Sherbeck Field is proposed to host competitive football games, which are currently held at other locations. The inclusion of field lighting as part of the project would allow Fullerton College to add more evening classes, to offer a balanced schedule, and provide more options for students who may not be able to take physical education during the day. It is anticipated that these improvements would begin in Spring 2019 and would last approx. 6 months.

## **Notice of Preparation of a Draft Environmental Impact Report for the Fullerton College Sherbeck Field Improvements Project**

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. SCAQMD staff's comments are recommendations regarding the analysis of potential air quality impacts from the Proposed Project that should be included in the Draft Environmental Impact Report (EIR). Please send SCAQMD a copy of the Draft EIR upon its completion. Note that copies of the Draft EIR that are submitted to the State Clearinghouse are not forwarded to SCAQMD. Please forward a copy of the Draft EIR directly to SCAQMD at the address shown in the letterhead. **In addition, please send with the Draft EIR all appendices or technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all air quality modeling and health risk assessment files<sup>1</sup>. These include emission calculation spreadsheets and modeling input and output files (not PDF files). Without all files and supporting documentation, SCAQMD staff will be unable to complete our review of the air quality analyses in a timely manner. Any delays in providing all supporting documentation will require additional time for review beyond the end of the comment period.**

### **Air Quality Analysis**

SCAQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. SCAQMD recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analysis. Copies of the Handbook are available from SCAQMD's Subscription Services Department by calling (909) 396-3720. More guidance developed since this Handbook is also available on SCAQMD's website at: [http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-\(1993\)](http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993)). SCAQMD staff also recommends that the Lead Agency use the CalEEMod land use emissions software. This software has recently been updated to incorporate up-to-date state and locally approved emission factors and methodologies for estimating pollutant emissions from typical land use development. CalEEMod is the only software model maintained by the California Air Pollution Control Officers Association (CAPCOA) and replaces the now outdated URBEMIS. This model is available free of charge at: [www.caleemod.com](http://www.caleemod.com).

SCAQMD has also developed both regional and localized significance thresholds. SCAQMD staff requests that the Lead Agency quantify criteria pollutant emissions and compare the results to SCAQMD's CEQA regional pollutant emissions significance thresholds to determine air quality impacts.

---

<sup>1</sup> Pursuant to the CEQA Guidelines Section 15174, the information contained in an EIR shall include summarized technical data, maps, plot plans, diagrams, and similar relevant information sufficient to permit full assessment of significant environmental impacts by reviewing agencies and members of the public. Placement of highly technical and specialized analysis and data in the body of an EIR should be avoided through inclusion of supporting information and analyses as appendices to the main body of the EIR. Appendices to the EIR may be prepared in volumes separate from the basic EIR document, but shall be readily available for public examination and shall be submitted to all clearinghouses which assist in public review.

SCAQMD's CEQA regional pollutant emissions significance thresholds can be found here: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf>. In addition to analyzing regional air quality impacts, SCAQMD staff recommends calculating localized air quality impacts and comparing the results to localized significance thresholds (LSTs). LSTs can be used in addition to the recommended regional significance thresholds as a second indication of air quality impacts when preparing a CEQA document. Therefore, when preparing the air quality analysis for the Proposed Project, it is recommended that the Lead Agency perform a localized analysis by either using the LSTs developed by SCAQMD staff or performing dispersion modeling as necessary. Guidance for performing a localized air quality analysis can be found at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds>.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis.

In the event that the Proposed Project generates or attracts vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment. Guidance for performing a mobile source health risk assessment ("*Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*") can be found at: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis>. An analysis of all toxic air contaminant impacts due to the use of equipment potentially generating such air pollutants should also be included.

In addition, guidance on siting incompatible land uses (such as placing homes near freeways) can be found in the California Air Resources Board's *Air Quality and Land Use Handbook: A Community Health Perspective*, which can be found at: <http://www.arb.ca.gov/ch/handbook.pdf>. CARB's Land Use Handbook is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process. Guidance<sup>2</sup> on strategies to reduce air pollution exposure near high-volume roadways can be found at: [https://www.arb.ca.gov/ch/rd\\_technical\\_advisory\\_final.PDF](https://www.arb.ca.gov/ch/rd_technical_advisory_final.PDF).

### **Mitigation Measures**

In the event that the Proposed Project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize these impacts. Pursuant to CEQA Guidelines Section 15126.4 (a)(1)(D), any impacts resulting from mitigation measures must also be discussed. Several resources are available to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project, including:

---

<sup>2</sup> In April 2017, CARB published a technical advisory, *Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways: Technical Advisory*, to supplement CARB's *Air Quality and Land Use Handbook: A Community Health Perspective*. This technical advisory is intended to provide information on strategies to reduce exposures to traffic emissions near high-volume roadways to assist land use planning and decision-making in order to protect public health and promote equity and environmental justice. The technical advisory is available at: <https://www.arb.ca.gov/ch/landuse.htm>.

- Chapter 11 of SCAQMD's CEQA Air Quality Handbook
- SCAQMD's CEQA web pages available here: <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies>
- SCAQMD's Rule 403 – Fugitive Dust, and the Implementation Handbook for controlling construction-related emissions and Rule 1403 – Asbestos Emissions from Demolition/Renovation Activities
- SCAQMD's Mitigation Monitoring and Reporting Plan (MMRP) for the 2016 Air Quality Management Plan (2016 AQMP) available here (starting on page 86): <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2017/2017-mar3-035.pdf>
- CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures* available here: <http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf>

### **Alternatives**

In the event that the Proposed Project generates significant adverse air quality impacts, CEQA requires the consideration and discussion of alternatives to the project or its location which are capable of avoiding or substantially lessening any of the significant effects of the project. The discussion of a reasonable range of potentially feasible alternatives, including a “no project” alternative, is intended to foster informed decision-making and public participation. Pursuant to CEQA Guidelines Section 15126.6(d), the Draft EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the Proposed Project.

### **Permits**

In the event that the Proposed Project requires a permit from SCAQMD, SCAQMD should be identified as Responsible Agency for the Proposed Project. For more information on permits, please visit SCAQMD webpage at: <http://www.aqmd.gov/home/permits>. Questions on permits can be directed to SCAQMD's Engineering and Permitting staff at (909) 396-3385.

### **Data Sources**

SCAQMD rules and relevant air quality reports and data are available by calling SCAQMD's Public Information Center at (909) 396-2039. Much of the information available through the Public Information Center is also available at SCAQMD's webpage at: <http://www.aqmd.gov>.

SCAQMD staff is available to work with the Lead Agency to ensure that project air quality impacts are accurately evaluated and any significant impacts are mitigated where feasible. If you have any questions regarding this letter, please contact me at [lsun@aqmd.gov](mailto:lsun@aqmd.gov) or call me at (909) 396-3308.

Sincerely,

*Lijin Sun*

Richard Williams,  
District Director, Facilities Planning and Construction  
North Orange County Community College District  
1830A West Romney Drive  
Anaheim, California 92801-1819

Re: *Comments on Notice of Preparation of a Draft Environmental  
Impact Report for the Fullerton College Sherbeck Field  
Improvements Project*

Dear Mr. Williams:

This office represents the nonprofit public interest group, Fullerton College Neighborhood Action Council ("Neighborhood Council"), a grassroots project and coalition of residents of the North Orange County Community College District ("District") dedicated to the protection of the neighborhoods, communities, and environmental resources within the District.

I note that the Notice of Preparation ("NOP") describes only *categories* of projects:

The initial environmental review indicates that the proposed project may have potentially significant effects on the environment in the following categories: aesthetics, air quality, greenhouse gas emissions, hazards and hazardous materials, noise, public services, recreation, transportation and traffic, tribal cultural resources, and mandatory findings of significance. The EIR will include an analysis of these impact areas, as well as feasible mitigation measures and alternatives to avoid or reduce potential impacts.

(NOP at p. 1.)

My office requests that District supplement its NOP to identify "with sufficient information describing the project and the potential environmental effects to enable the responsible agencies to make a meaningful response." (*See* CEQA Guidelines § 15082, subd. (a)(1) & subd. (a)(1)(C) [minimum requirements for NOP].) The above list of categories is not sufficient for meaningful responses and comments. Please supplement accordingly.

Additionally, the NOP fails to meet other basic requirements pursuant to CEQA Guidelines § 15082, subd. (a)(1)(B) – namely: "Location of the project (either by street address and cross street, for a project in an urbanized area, or by attaching a specific map, preferably a copy of a U.S.G.S. 15' or 7-1/2' topographical map identified by quadrangle name). . ." (*Id.*) Please further supplement accordingly.

Page Two  
May 8, 2018  
North Orange County Community College District  
NOP Comments – Stadium Project

I do note that the NOP states such information is available elsewhere through certain websites and at District's office. (NOP at p. 1.) However, that is not compliance with CEQA Guidelines, section 15082 and there is no go gather the information "elsewhere" or "go see our website" exception.

In response to the April 9, 2018 NOP for the Fullerton College Sherbeck Field Improvements Project ("Stadium Project"), my client requests, in addition to all legally required EIR issues and topics, and those matters raised by other persons and responsible agencies, that the following issues and matters be addressed in one or more appropriate sections in the proposed EIR, including but not limited to:

1. Evaluate and address projected sports programming of Fullerton College should the Stadium Project be approved and built.
2. Evaluate and address projected rentals, during weekdays and each weekend day, of the Stadium Project, should it be approved and built.
3. Evaluate and address all actually anticipated and potential cumulative impacts arising from the instant development Stadium Project, and its use and implementation.
4. Evaluate and address all vegetation and environmental resource losses arising from not only the planned development of structures and hardscape, but also fire management zones, and other use areas and edge effects that may potentially arise from development and use of the Stadium Project.
5. Evaluate and address all field use and rental agreement proposals and policies that will be put in place for the Stadium Project as controls, mitigation measures, or otherwise.
6. Evaluate and address how mitigation measures will be implemented and enforced for all third-party rentals.
7. Evaluate and address the locations and distances that the proposed Stadium Project's field lights, and PA loudspeaker system will have on the neighboring community.
8. Evaluate and address the locations and distances that the proposed Stadium Project's building and structures may be seen and have adverse impacts on scenic and other visual resources.
9. Evaluate, identify and address how the Stadium Project, including road/s, would affect the current natural wildlife movement corridors – north to south and east to west.

Page Three  
May 8, 2018  
North Orange County Community College District  
NOP Comments – Stadium Project

10. Evaluate and address the Stadium Project's increase in impermeable surface areas and materials constituting artificial fields for runoff and water pollution impacts (including storm-water analyses).

11. Evaluate and address the consistency and compliance with the city of Fullerton's ordinances and programs controlling grading and drainage.

12. Evaluate and address all issues regarding the Stadium Project's effect on traffic circulation, parking, and impacts to morning and evening commutes (and all cumulative effects thereof).

13. Evaluate and address all issues regarding the Stadium Project's direct, indirect, and cumulative effect of added greenhouse gases.

14. Evaluate and address whether a plan for the reduction of greenhouse gas emissions been adopted in the area covered by Stadium Project, and whether the Stadium Project is consistent.

15. Evaluate and address the baselines of all impacts currently found likely to be significant in the Initial Study, and evaluate whether the Stadium Project causes a cumulative impact for each.

#### Project Alternatives Analysis

Review and consider the following impact-reducing project alternatives that will fulfill one or more important goals and purposes of the project.

1. Alternative location at Fullerton High School or Yorba Linda High School
2. A reduction in Stadium Project size
3. A field policy for the number of events, and hours of events, along with a field use policy or use agreement for rentals or other third party use.
4. A reduction in planned rental use and rental caps.

Pursuant to CEQA and Public Resources Code § 21092.2, please provide my office (at the above address) written notice of any available documents, and any informational or decision-making meetings for, or relating to, the herein subject Stadium Project (whether preliminary or final)

Re: Fullerton College Sherbeck Field Improvements Project

Dear Mr. Williams,

My wife and I do not support the "improvements" that Fullerton College proposes to make to Sherbeck Field.

In our opinion, they are excessive, unnecessary, a misuse of taxpayer monies, and most importantly will cause a significant detrimental effect on Fullerton College's neighboring community.

As a matter of fact, we are at a loss to understand exactly what Fullerton College is trying to accomplish with it's proposed slate of "improvements". Will the College become the premiere College of "Parking Lot Construction Practice" or something? Near as we can tell, by the time you are done covering every square foot of available space with massive monolithic parking structures, probably 25% of the campus footprint if not more will be dedicated solely to parking. This for a mostly part-time population of students who dwindle within a matter of weeks after the start of any semester if our observations of the pattern of student parking in our neighborhood mean anything.

How about if the College focus on it's core mission - education?

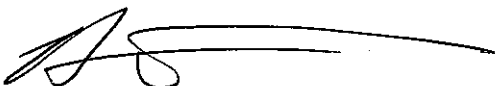

As far as the Sherbeck field goes it is ludicrous to waste taxpayer monies and inflict significant negative impacts - excessive noise both from stadium speakers and attendees, light, trash, traffic, etc., etc. - on the surrounding community when there is a beautiful, newly refurbished stadium just 100 yards from Sherbeck field. There is absolutely NO reason whatsoever why the gorgeous Fullerton High School stadium on which significant taxpayer dollars were spent cannot be used for any and all Fullerton College football games and other events as necessary.

We reject and do not support your proposed improvements to Sherbeck Field and indeed, many of the other proposed "improvements" (such as building yet another parking structure on NE corner of Lemon/Berkley).

Fullerton "Community" College needs to remember that it is a community college, not a Cal-State or University of California institution. You exist in a local community that has supported you for decades. Stop the dreams of grandiosity and focus on your core mission - education.

Sincerely,

Kevin and Karen Arthur

RE: Opposition to Sherbeck Field Improvements: Comments For Inclusion in  
Draft EIR

Dear Mr. Williams,

My name is Sam Castellano and I STRONGLY OPPOSE the Sherbeck Field Improvements Project because of the following reasons listed below. I am deeply concerned at the intentions of Fullerton College and how they are going to guarantee minimal impact to my family (we have a toddler and a baby on the way) and the residents of the local neighborhood.

- **Noise** - There is a tremendous amount of noise pollution from athletic stadiums (air horns, screaming, traffic/horns, metal bleacher stomping), especially since it seems likely that you will be renting the facility for many purposes.
- **Traffic** - Let alone the tremendous amount of traffic that Berkeley will see, I am gravely concerned about the increase on Brookdale, as it already is being used as a shortcut for the students of Fullerton College. I just witnessed an accident less than a month ago, and I am regularly grabbing my toddler tightly as we watch students speed through Brookdale to get to class on our nightly walks.
- **Light** - Your 3-D renderings at the Open House were embarrassing. It actually showed the light from the stadium directly lighting up the backyards of the residents on Princeton Cir. West. This would be inexcusable to affect residents with this much blatant disregard.
- **Lewd Conduct and Crowd Control** - Before we passed our neighborhood parking permit ordinance, we endured unbelievably disgusting behavior from the athletes and students of Fullerton College. Changing (including shorts/pants) in front of our houses,

obscenely profane/racial language, and inordinate amounts of trash was commonplace. Our parking permits that we have are only required from 7 am - 7 pm Monday - Friday. So when Fullerton College plays their games on Saturday, this means all ordinances are off at Saturday games/events, as are any sort of behavior regulations. For far too long, I have observed the behavior of many disrespectful young adults. I fear this will only worsen on weekends and at sporting events, no less.

For several years my family and I have endured a heightened sense of awareness due to the rising student population at Fullerton College. Even if only for a couple hours at a time, this would likely continue with a 5,000-seat stadium at Sherbeck Field. Moreover, many of us are genuinely concerned that your proposal would certain inflict damage upon the property values of our homes since your project does nothing to improve/appreciate the area. We do not want this opposition to come to any sort of civil disagreement, so we sincerely hope that this project does not cause any sort of direct depreciation to the value of our homes. I would like to see in your proposals, projected effects of your project on property values.

So as not to think I am only offering reasons for my opposition with no solutions whatsoever, I believe the solution to be an easy one. Instead of building another stadium within the same block, use the newly renovated District Stadium at FUHS or even Titan Stadium at CSUF.

I truly look forward to participating in this process and hearing your response to my input.

Sincerely,

A handwritten signature in black ink, appearing to read "Samuel J. Castellano", with a long horizontal flourish extending to the right.

the plans of  
Comment continued: stadium. The degree of this proposed stadium does  
not match the perceived need. Our football team and the potential for  
evening <sup>physical</sup> ~~classes~~ <sup>are</sup> ~~are~~ insignificant in contrast to the injury this project  
will affect the surrounding neighborhoods, specifically my home.  
FC should not be using resources for an insignificant population  
on our college campus. I have taught at FC for 11 years, so I  
understand that <sup>this</sup> is not a <sup>consequential</sup> perceived need for our campus.

This project is a "feel good" project. It is based on a need to  
honor a man, Coach Sherbeck, and our victorious football team.  
Yet these are anecdotal at best, and they cannot compete with  
the injurious nature to my home and neighborhood in terms of  
light pollution, noise pollution, and traffic. "Feelings" should not play  
a part in making this decision.

Comment continued: Prior to our street enacting permit only parking  
we were subjected to daily disturbances from Fullerton College Students.  
loud noise at early hours from car radios and conversations.  
Trash left on our lawn, drug deals taking place openly on  
the street and lewd behavior in cars was a constant  
occurrence. We do not speculate that a stadium  
would have an impact on the quality of life for  
neighborhood residents, this history confirms it for  
us.

Good neighbors do not impose their will and annoyances,  
we demand that Fullerton College that exists in a neighborhood  
conform to behavior of a good neighbor.

Comment: "improvement" for whom?

It's a change, growth, not improvement.

How about the negative impact on the quality  
of life of the neighboring house owners, environment,  
parking, noise, air quality? Why is "more"

"bigger" necessary? Is it always better? We already have a stadium  
big, modern that fits into our nice, attractive college campus. It's even too bi  
already". It must be a profit generator for the school!!! That's all!!

Comment continued: proposed stadium. We support  
sports and Fullerton College but the proposed stadium  
will impact our environment Living just above the college  
with a view of the existing field:

- Lighting poles will pollute the night sky and shine  
directly into our backyard and house.
- Sound/PA system will effect our quiet enjoyment,  
again sound waves will be in direct line with our home.
- Parking and traffic will be heavy during events in an  
already over-used area. Fullerton College doesn't have  
adequate parking as it is. Why not use public funds for  
a new parking structure or facilities to allow more classrooms
- Fullerton College should use existing fields at Fullerton HS or CSUF.  
Thank you, Luke Lidvoff

Comment: Dear Mr. Williams

Our neighborhood is  
incredibly concerned about  
the proposed Stadium. We  
fully support Fullerton  
college sports, however the

Comment continued: new proposed stadium will definitely  
impact our environment living right above the  
college. From our home we see -

1. Lights from current field that alter the night  
sky and shine into our backyard + other homes  
around us.
2. Parking & traffic will increase during these  
events. we should use public funds to have  
another parking structure. Our streets currently  
get used by college students.
3. The PA / Sound System will effect our  
quiet environment. It's already loud enough  
with current stadium.
4. Please use existing Fullerton HS or CSUP fields.

Thank You — Laretha Liddell

Comment continued: the college. My understanding is the current average football attendance is under 1,000 people. I don't understand why the need for a 4,400 seat stadium in this necessary. I appreciate the need to control the home team scheduling, and for the ONCE-A-YEAR commencement (for which additional bleachers can be shipped in). The concern in this light is that a larger stadium is more attractive to other schools (for football and commencement) and other third-parties (for concerts and shows). While I support the school in its athletics needs, I wholly oppose the use for anything else. The negative side effects

cont...

• cont.

are many:

Noise From an overly large public address system, crowds, arriving and departing traffic.

Traffic From greater out of town visitors than would be generated by a home-team athletics event, exacerbated by people looking for free parking on residential streets

Light Pollution From a massive 80,000 watt LED system towering over residents houses

Other negative side effects, like an increase in trash and vandalism in the neighborhood; lewd and rowdy crowd problems; street vendors and scalpers selling merch and tickets.

There are several compromised solutions that can be made, and of which are preferable to the current plan:

- Share the stadium for big events with Fullerton H.S.
- Restrict the scope of the project to 2,200 to make it less attractive to bigger events.
- Keep events daytime only by removing lighting from the current plan.

Comment continued: I can imagine the aluminum bleachers  
being put to good use as drums with thousands of  
feet stomping in unison. There is a company  
that makes sound-absorbing walls (soundwalls.com) which  
could provide an important buffer between the stadium  
and surrounding community. The walls are designed  
to absorb and dampen sound, similar to how the  
foam in a sound-recording booth works. If a  
wall could be built high enough to cover the  
highest P.A. speaker, it could greatly reduce the  
noise impact.

Reported per TM-21-11. See luminaire datasheet for details.			

**Guaranteed Performance:** The ILLUMINATION described above is guaranteed per your Musco Warranty document and includes a 0.95 dirt depreciation factor.

**Field Measurements:** Individual field measurements may vary from computer-calculated predictions and should be taken in accordance with IESNA RP-6-15.

**Electrical System Requirements:** Refer to Amperage Draw Chart and/or the "Musco Control System Summary" for electrical sizing.

**Installation Requirements:** Results assume ± 3% nominal voltage at line side of the driver and structures located within 3 feet (1m) of design locations.

## Fullerton, CA

## Summary

A well-designed lighting system controls light to provide maximum useful on-field illumination with minimal destructive off-site glare.

## Candela Levels

Should only occur on or very near the lit area where the light source is in direct view. Care must be taken to minimize high glare zones.

Equivalent to high beam headlights of a car.

Equivalent to 100W incandescent light bulb.

**1.3 User Entered Comments & Non-Default Data**

Project Characteristics - Operational Year 2020. CO2 intensity factor was adjusted to account for SCE's compliance with the RPS.

Land Use - Project acreage: 4.36. The project would include development of a press box and storage building, totaling 1,100 square feet. No other buildings are proposed.

Construction Phase - Construction Phasing was based on information provided by the project applicant.

Off-road Equipment - Construction equipment data was based on information provided by the project applicant.

Off-road Equipment - Construction equipment data was based on information provided by the project applicant.

Off-road Equipment - Construction equipment data was based on information provided by the project applicant.

Off-road Equipment - Construction equipment data was based on information provided by the project applicant.

Off-road Equipment - Construction equipment data was based on information provided by the project applicant.

Off-road Equipment - Construction equipment data was based on information provided by the project applicant.

Trips and VMT - Number of trips for worker and vendor trucks was based on information provided by the project applicant.

Demolition - None required.

Architectural Coating - Default values.

Vehicle Trips - Trip generation rates from the project's traffic impact study were used in place of CalEEMod defaults.

Vehicle Emission Factors - CalEEMod defaults.

Vehicle Emission Factors - CalEEMod defaults.

Vehicle Emission Factors - CalEEMod defaults.

**1.3 User Entered Comments & Non-Default Data**

Project Characteristics - Operational Year 2020. CO2 intensity factor was adjusted to account for SCE's compliance with the RPS.

Land Use - Project acreage: 4.36. The project would include development of a press box and storage building, totaling 1,100 square feet. No other buildings are proposed.

Construction Phase - Construction Phasing was based on information provided by the project applicant.

Off-road Equipment - Construction equipment data was based on information provided by the project applicant.

Off-road Equipment - Construction equipment data was based on information provided by the project applicant.

Off-road Equipment - Construction equipment data was based on information provided by the project applicant.

Off-road Equipment - Construction equipment data was based on information provided by the project applicant.

Off-road Equipment - Construction equipment data was based on information provided by the project applicant.

Off-road Equipment - Construction equipment data was based on information provided by the project applicant.

Trips and VMT - Number of trips for worker and vendor trucks was based on information provided by the project applicant.

Demolition - None required.

Architectural Coating - Default values.

Vehicle Trips - Trip generation rates from the project's traffic impact study were used in place of CalEEMod defaults.

Vehicle Emission Factors - CalEEMod defaults.

Vehicle Emission Factors - CalEEMod defaults.

Vehicle Emission Factors - CalEEMod defaults.

Attention: Leigh Anne Jones | Senior Architect

Subject: **Fullerton College Sherbeck Field; Fullerton, California**  
**Exterior Acoustical Study Report**  
**VA Project No. 2663-071**

Dear Ms. Jones,

Veneklasen Associates (VA) was contracted to conduct an acoustical study for proposed changes to the Sherbeck Field athletic facility at Fullerton College in Fullerton, California. Fullerton College is located at 321 E Chapman Avenue, Fullerton, CA 92832. The location of the project site is shown in Figure 1.

A list of acoustical terms and their definitions is presented in *Appendix A*.

**Figure 1. Project Site Location**

## PROJECT DESCRIPTION

Sherbeck Field at Fullerton College is an existing athletic facility including a turf field and surrounding track for various athletic activities at the college. The purpose of this project is for the addition of additional bleacher sitting on the south (home) and north (visitor) sidelines, the installation of a press box, and the design and installation of a public address (PA) system for the facility.

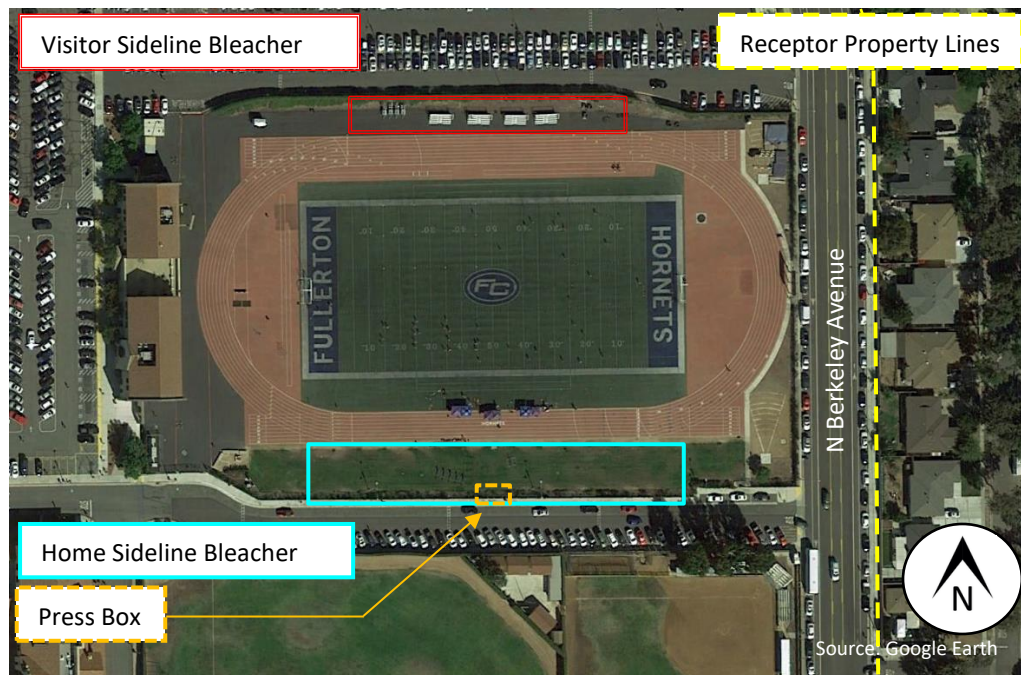

The proposed home sideline bleacher is proposed on the existing grass area to the south of the existing field and track. The proposed bleacher is approximately 43'2" in the north-south direction, and the top row of seats is approximately 19'6" above grade elevation. The press box is located at the center of the bleacher with a base elevation at 19'6" above grade, and a top height of approximately 8'9" above the highest row of seats at the front of the press box. The press box is approximately 9'0" in the north-south direction. The home sideline bleacher is designed for a maximum capacity of 2861 people.

The proposed visitor sideline bleacher is proposed on the existing paved area to the north of the existing field and track. The proposed bleacher is approximately 34'0" in the north-south direction, and the top row of seats is approximately 15'8" above grade elevation. The visitor sideline bleacher is designed for a maximum capacity of 1556 people.

The proposed public address (PA) speaker system was designed by PlanNet, and utilizes speaker arrays designed by L-Acoustics. There are seven speaker arrays (including the press box) specified for the home sideline, and five speaker arrays specified for the visitor sideline. Speakers are proposed at approximately 36 feet above grade elevation on the home sideline (33 feet above grade for the press box speaker array) and 33 feet above grade elevation on the visitor sideline.

Several single-family residences are located along N Berkeley Avenue to the east and north of the project area. These residences have been considered receptors for the purposes of this acoustical study.

The total capacity of the proposed project is 4417 people on both sidelines, in addition to personnel on the field. The locations of various project elements and receptor locations are shown in Figure 2.

**Figure 2. Project Elements and Receptor Locations**

## CRITERIA

The City of Fullerton Municipal Code (FMC) specifies sound level limits in Title 15, *Zoning*. In Chapter 15.90, *Noise Standards and Regulations*, various acoustical terms and specific sound level limits for various zones are defined.

In Section 15.90.030.A, *Noise Standards*, the FMC defines sound level limits for residential noise zones. Sound level limits specified in the FMC are shown in Table 1.

**Table 1. Sound Level Limits for Residential Noise Zones**

Receptor Location	Time Period	Allowable Noise Level (dB(A))
Interior	Day (07:00 – 22:00)	55
	Night (22:00 – 07:00)	45
Exterior	Day (07:00 – 22:00)	55
	Night (22:00 – 07:00)	50

As interior sound levels are variable based on the design of the exterior façade of the residence, glazing assemblies, etc., prediction is not possible without significant additional measurements. Therefore, only exterior sound levels are considered in this acoustical study.

Section 15.90.030.B defines additional sound level standards for sensitive land uses. This section defines “sensitive uses” as “any private or public school, hospital, residential care facility for the elderly, and religious institution”. Although Fullerton College is an educational facility, each of the receptors surrounding this project are single-family residential properties, and therefore are not considered “sensitive uses” according to this chapter of the FMC.

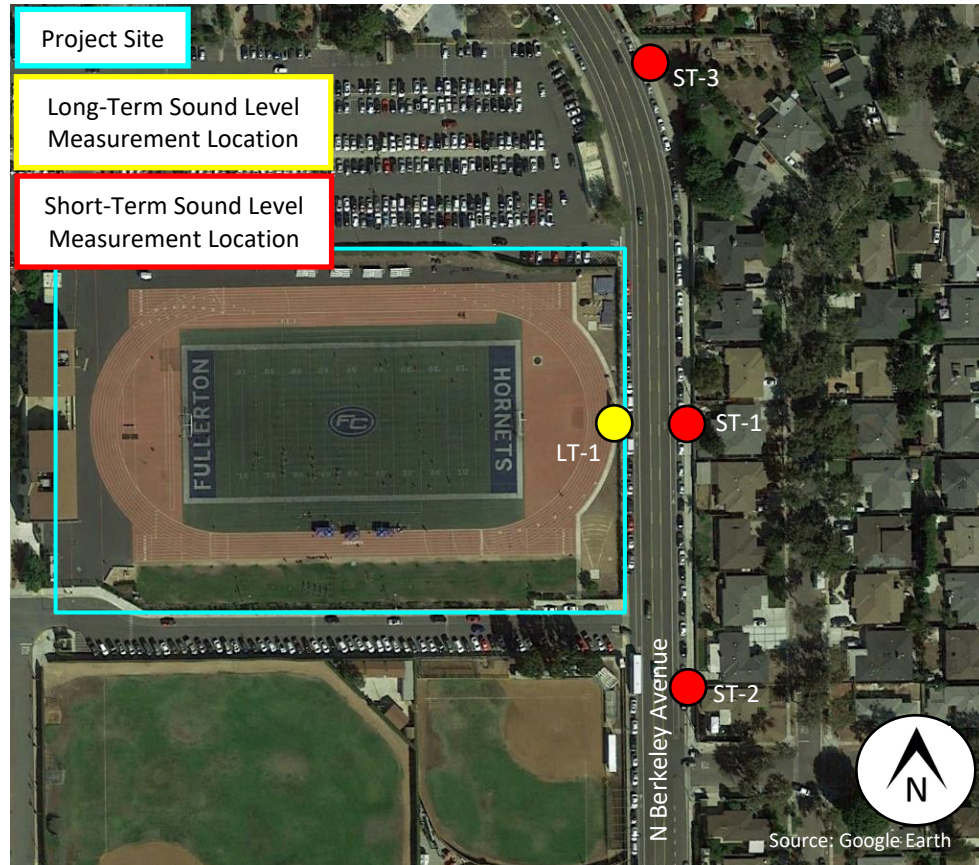

Section 15.90.040, *Activities exempt from standards*, specifies activities that are exempt from sound level standards discussed in this chapter of the FMC. Item A-1 in this section specifies “[s]chool bands, school athletic and school entertainment events” as exempt activities. Item A-2 in this section specifies “[o]utdoor gatherings, public dances, shows and sporting and entertainment events provided the events are conducted pursuant to a permit and/or license issued by the city” as exempt activities. Item A-3 in this section specifies “[a]ctivities conducted on public parks, public playgrounds and public or private school grounds” as exempt activities.

VA interprets the above sections of the FMC such that the proposed Sherbeck Field project shall be exempt from strict interpretation of FMC sound level limits due to the exemption in Section 15.90.040.A.1. However, sound levels from the proposed project have been analyzed to quantify the predicted sound levels at residential receptor locations near the project with respect to the existing “ambient” sound levels at these receptors.

### ACOUSTICAL MEASUREMENTS

Measurements were conducted by VA in and around the project site to quantify existing sound levels at nearby residential receptor property lines. Measurements were conducted on 12/15/2017 through 12/18/2017 at four discrete measurement sites for various durations. Measurement locations are shown in Figure 3 and described in Table 2 below. The primary sound source in the project area is automobile traffic on N Berkeley Avenue.

**Figure 3. Acoustical Measurement Locations**

**Table 2. Acoustical Measurement Locations**

Measurement Site	Approximate Duration	Description
LT-1	3 Days	East property line of existing Sherbeck Field on Fullerton College property on west side of N Berkeley Avenue.
ST-1	1 Hour	Public R.O.W. on east of N Berkeley Avenue west of single-family residential property at 621 Princeton Circle W, Fullerton, CA 92831
ST-2	20 Minutes	Public R.O.W. east of N Berkeley Avenue west of single-family residential property at 601 Princeton Circle W, Fullerton, CA 92831
ST-2	20 Minutes	Public R.O.W. east of N Berkeley Avenue west of empty lot to the south of 600 E Glenwood Avenue, Fullerton, CA 92831

One long-term acoustical measurement (denoted Site LT-1) was conducted on the east side of the existing Sherbeck Field property to quantify long-term sound levels generated by automobile traffic on N Berkeley Avenue. This sound level meter was installed on 12/15/2017 at approximately 10:00 a.m. and measured continuously until 12/18/2017 at approximately 08:00 a.m.

Three additional short-term acoustical measurements (denoted Sites ST-1, ST-2, and ST-3) were conducted while the long-term measurement was simultaneously measuring at public right-of-way (R.O.W.) adjacent to nearby residential receptors. By comparing measured short-term sound levels at these locations to the simultaneously measured sound levels at location LT-1, sound levels could be correlated by calculating an “offset” difference in sound levels. Utilizing that offset and the hourly measured sound levels at Site LT-1 (averaged across the three-day measurement period), sound levels at any period of the day at each of the ST sites can be accurately calculated.

Simultaneously measured sound levels at each of the measurement sites, as well as calculated sound level offset values, are shown in Table 3. Calculated hourly sound levels at each of the measurement locations using this offset are shown in Table 4 on the following page. The complete set of measured sound levels at Site LT-1 are shown in *Appendix B. Site LT-1 Measured Sound Levels*.

**Table 3. Simultaneously Measured Existing Sound Levels and Offset Values**

Measurement Site	Measured Sound Level, $L_{eq}$ (dB(A) re: 20 $\mu$ Pa)		Offset (dB)
	Site LT-1	ST Sites	
ST-1	68	70	2
ST-2	65	67	2
ST-3	65	69	4

Acoustical measurements for this project were conducted with Brüel & Kjær Type 2270 sound level meters which conform to ANSI S.14-1961 for Type 1 precision sound level meters. Measurements were conducted utilizing Brüel and Kjær Type 4189 microphones. All equipment was field-calibrated before use utilizing a Larson Davis CAL200 acoustical calibrator.

## ACOUSTICAL MODELING PROCEDURES AND RESULTS

An acoustical model of the project area has been generated to evaluate and quantify sound levels generated by the proposed project and their impact on nearby residential receptors. Sound exposure was modeled using the Brüel & Kjær Predictor acoustical modeling software, Version 12.00. The selected calculation method for this project was LimA – International Organization for Standardization (ISO) 9613.1/2.

Acoustical models were generated for projected crowd noise, projected noise levels from the proposed speaker system, and for existing traffic noise in the project area. Acoustical modeling procedures for all scenarios are discussed in this section of the report.

The acoustical model includes shielding and reflections generated by buildings, walls and other structures in the area with elevations obtained utilizing Google Earth. The noise model also includes terrain elevation data from the United States Geological Survey (USGS) NAD83 data set.

This section is continued on page 7 of this report.

23:00	60	60	62

<sup>a</sup> Denotes minimum existing sound level between 07:00 a.m. and 22:00 (10:00 p.m.), which are the expected potential operating hours of the proposed project.

## ACOUSTICAL MODELING PROCEDURES AND RESULTS (CONTINUED)

Utilizing the Brüel & Kjær Predictor acoustical modeling software, VA utilized the following data sets and assumptions to model sound levels due to the proposed project.

### Crowd and On-Field Source Modeling:

VA utilized various data sources to determine the average sound levels generated by crowds at sporting events. VA utilized data measured for previous projects for both softball and soccer activities, and normalized all data for both measured distance and crowd size.

VA also utilized measurement data presented in the Harvard-Westlake Middle School (located in Los Angeles, California) Campus Modernization Project Draft Noise Assessment Technical Report, prepared by PCR Services Corporation in January 2004. This report presents data measured both near the source at nearby residential receptors during a football games. This data was used to corroborate previously measured data by VA.

The above data sets were normalized to obtain the sound power (source sound level) characteristics of a crowd of a given size. The reference sound pressure level spectrum per person utilized for this report, normalized to a 50-foot setback distance, is shown in Figure 4.

**Figure 4. Crowd Reference Sound Pressure Level per Person, Normalized to 50 feet Setback Distance**

The noise model was generated using a crowd of 2725 people on the home sideline bleacher and 1475 people on the visitor sideline bleacher (95% maximum capacity on both sidelines). The crowd was assumed to be dispersed evenly about both bleachers. Crowd sources were modeled as omnidirectional point sources.

The acoustical model additionally includes 300 total people (150 home and 150 visitor) at grade elevation on the field sidelines, to evaluate noise exposure from players, coaches, and referees. These results are included in the acoustical crowd noise model.

A sound level contour map for crowd and on-field sources is shown in Figure 8 on page 11.

### Speaker System Source Modeling:

The speaker / public address (PA) system for the Sherbeck Field project was designed by PlanNet, and utilized speaker arrays designed by L-Acoustics, Inc. Speaker design models and other associated information were provided to VA in a Soundvision audio/visual model. VA incorporated speaker locations and orientations into the Predictor acoustical model for evaluation of sound level exposure.

Two types of L-Acoustics speaker arrays were specified for this project. Seven speaker arrays were specified on the home sideline to the south (including the press box), at a height of approximately 36 feet above grade elevation (33 feet above grade for the press box speaker array). The speaker array specified is a combination of the Arcs Focus speaker on top, with the Arcs Wide speaker on the bottom.

Five speaker arrays were specified on the visitor sideline to the north, at a height of approximately 33 feet above grade elevation. The speaker array specified is a dual configuration of Arcs Focus speakers.

The directivities of both speaker arrays were determined using the EASE audio/visual model, utilizing inputs on each speaker type provided by L-Acoustics. The directivities of each associated speaker array utilized in VA's acoustical model is shown as *Appendix C. L-Acoustics, Inc. Speaker Array Directivity Diagrams*. The directivities shown are conservatively utilized for both the horizontal and vertical directions, utilizing the speaker orientations specified in the Soundvision audio/visual model.

VA utilized reference sound levels from various sources to evaluate sound level exposure. A sound level spectrum for rock music was utilized from *Architectural Acoustics* by M. David Egan. A sound level spectrum for human speech through the PA system was utilized from the textbook *Acoustics* by Leo L. Beranek. Both spectra were normalized to a sound level ( $L_p$ ) of 91 dB(A) in the bleacher, which is 10 dB above the level generated by the crowd at an identical location. The reference sound power levels of each source spectrum for each speaker are shown in Figure 5.

**Figure 5. Speaker System Reference Sound Power Levels; Each Array**

Utilizing the reference sound levels for both music and speech over the PA system, a composite time-weighted sound power level for the PA system was determined.

It was assumed for this assessment that rock music was utilized at the reference sound power level shown in Figure 5 for 15 minutes out of every hour (25% utilization). This assumption was based on VA's qualitative observations of sporting events.

It was assumed for this assessment that PA speech was utilized at the reference sound power level shown in Figure 5 for 20 minutes out of every hour (33% utilization). This assumption was based on VA's qualitative observations of sporting events.

Utilizing the above assumptions, the reference sound power level spectra for both PA music and speech were weighted with respect to time, to determine the maximum average hourly contribution of each noise source. The two time-weighted spectra were combined to determine the composite time-weighted maximum average hourly noise level contribution of each array of the PA system.

The time-weighted spectrum for PA music and speech, as well as the total composite time-weighted average sound power level of each speaker array, are shown in Figure 6.

**Figure 6. Speaker System Time-Weighted Sound Power Levels, Each Array**

Spectral sound level contour maps for the proposed PA speaker system utilizing the above assumptions are shown in *Appendix D. I-acoustics, inc. Speaker (PA) System Sound Level Contour Figures*. The Predictor acoustical model is limited in that it cannot incorporate spectral directivities for a source, therefore each octave band was modeled separately. Note that all spectral sound levels are modeled as A-weighted sound levels, for visual comparison to overall A-weighted sound levels presented quantitatively.

### **Existing Sound Level Traffic Modeling:**

Utilizing the measured sound levels described in the *Acoustical Measurements* section of this report, an acoustical model was generated to evaluate the existing sound level at each residential receptor in the project area.

To evaluate existing traffic noise at each receptor, the measured sound level spectrum measured at Site ST-1 (nearest to N Berkeley Avenue, along the residential property line) was normalized to the quietest measured hour at site LT-1. Utilizing this procedure, the existing quietest hour due to traffic noise can be evaluated.

The modeled sound pressure level of N Berkeley Avenue, normalized to a 50-foot setback distance, is shown in Figure 7.

**Figure 7. Modeled Existing Traffic Sound Levels**

### **Cumulative Sound Levels:**

Each of these acoustical models was combined to generate the cumulative predicted maximum hourly sound levels generated by the proposed project. Existing quietest hourly sound levels, predicted sound levels due to the crowd, predicted sound levels due to the proposed speaker system, cumulative sound levels, and maximum future sound level increase are shown in Table 5 on page 12.

Quantitative sound level results are at the property line location closest to the project site at a height of five feet above grade elevation. For the majority of residential receptors in the study area, there is a four-foot high property line wall between the residential property and the public right-of-way. Each receptor location is therefore approximately one-foot above the top of this property line wall.

545 Princeton Circle W	63	64	67	69	70	7

<sup>a</sup> Existing sound level on receptor property was calculated using an acoustical model for N Berkeley Avenue, calibrated to minimum hourly sound level, as measured on-site.

Note – Sound levels are rounded to the nearest whole decibel.

## **MITIGATION RECOMMENDATIONS**

Due to the height of speakers and grandstands proposed for this project, traditional sound level mitigation measures are predicted to be ineffective or infeasible for the reduction of sound levels due to the proposed project. Property line noise barrier walls would need to be constructed to a very high elevation to provide acoustic shielding to residential receptors, as speaker arrays and the top row of the crowd are located at elevations of 30 feet above grade. Noise barrier walls on the bleachers would likely add significant structural weight for little acoustic benefit, and are therefore also not considered feasible.

Two initial public-address system strategies were considered, the design analyzed above was the most optimum design to reduce impact to areas outside of Sherbeck Field. Other, more traditional approaches, resulted in unacceptable levels of sound transmission to Fullerton College neighbors.

VA investigated the design of a focused public-address system to minimize system levels reaching the neighbors while analyzing various grandstand seating capacities for determining possible benefits. This focused public-address system incorporated up to eight JBL AW266-LS loudspeakers per grandstand and the total stadium seating capacity ranging from 2,000 to 3,500. Eight different grandstand seating combinations were analyzed in acoustical models to generate the cumulative predicted maximum hourly sound levels generated. Existing quietest hourly sound levels, predicted sound levels due to the crowd, predicted sound levels due to the proposed speaker system, cumulative sound levels, and maximum future sound level increase are shown in Tables 6 through 13 below.

A review of the tables indicates an average reduction in noise level impact from the initial proposed project ranging from 2 to 4 decibels. A reduction in the crowd size decreases the noise generated by the crowd, which in turn decreases the required sound level of the public-address system. This analysis assumes a public-address system sound level of 10 decibels above the crowd noise level. Further reductions in the overall sound level increase can be achieved by reducing the sound level of the public-address system. A reduction in the public-address system of 2 or 4 decibels will further reduce the overall sound level increase by 1 or 2 decibels, respectively, yielding an overall reduction between 3 and 6 decibels.

VA also reviewed the option of placing speakers in front of the grandstands. This option was infeasible as proper placement of these loudspeakers would require installation in the center of the proposed track. The analysis also indicated there were no significant sound level reductions afforded by this option.

## CONCLUSIONS AND DISCUSSION

VA has been contracted to conduct an acoustical study of the proposed Sherbeck Field renovation at Fullerton College in Fullerton, California and to evaluate the potential for sound exposure from the proposed project. VA has utilized a variety of modeling techniques as well as on-site acoustical measurements to determine the predicted sound exposure with respect to existing sound levels.

The Fullerton Municipal Code (FMC) specifies sound level limits from various sources at noise-sensitive receptor locations. However, the FMC exempts educational facilities, including athletic activities, from these sound level limits.

For receptors close to the project site, there is predicted to be an increase in overall sound level during athletic activities on Sherbeck Field. The increase of sound level is primarily due to the conservatively predicted sound levels generated by the speaker / PA system proposed for the project.

Regardless of reduction of sound level from the speaker system or crowd, it is very unlikely that athletic events could be held at close proximity to the nearby residential receptors without events being audible or measurable above existing sound levels. However, this study represents periods of maximum hourly sound level exposure (i.e. high crowd capacity, relatively loud speaker sound levels). Therefore, sound exposure at these nearby residences would likely be limited to high capacity athletic events such as evening games.

Given the infeasibility of traditional sound level mitigation measures and the exemption of educational facility projects in the FMC, VA recommends utilizing the directional loudspeakers, similar to the JBL AW266-LS loudspeakers, for a focused public-address system. VA recommends that sound levels from both speech and music be continuously normalized while in use to ensure that they are not excessively loud, and the PA system is utilized at the lowest possible sound level while preserving the intended use of the facility.

Please do not hesitate to contact us if you have any questions regarding the materials presented in this report.

Sincerely,

## APPENDIX A. DEFINITIONS OF ACOUSTICAL TERMS

Term	Definition
<b>Decibel (dB)</b>	A unit describing the amplitude of sound in a logarithmic ratio to a reference value.
<b>A-weighted Decibels (dBA)</b>	A filter applied to sound pressure levels in decibel to simulate the response of the human ear at the threshold of hearing. A-weighting de-emphasizes the low frequency components of a sound similar to the human ear at these levels. This metric has been closely tied to subjective reactions of annoyance to noise, and is used as a noise metric in this and in many other environmental acoustics reports. In this report, all dBA levels reported refer to the sound pressure level, referenced to 20 $\mu$ Pa
<b>Sound Pressure Level (<math>L_p</math>)</b>	The amplitude of sound compared to the reference value of 20 $\mu$ Pa. Sound Pressure Level is what we perceive as audible sound. Sound Pressure Level decreases as distance from the source to the receiver increases. All sound values discussed in this report refer to Sound Pressure Levels.
<b>Equivalent Sound Level (<math>L_{eq}</math>)</b>	The time-weighted average sound level for a given period of time. Use of this metric allows the observation of the overall sound level for the measurement period.
<b>Sound Power Level (<math>L_w</math>)</b>	The amplitude of sound compared to the reference value of 1pW. Sound Power Level does not vary with distance, and represents the level of sound emitted by a given source. The sound power level is generally used to model the sound pressure level of a source at a given distance or location.
<b>Ambient Noise Level</b>	As defined in the Fullerton Municipal Code, the ambient noise level is “the all-encompassing noise level associated with a given environment... at the location and approximate time at which a comparison with the alleged offensive noise is to be made”. This report defines the “ambient” noise level as the existing noise level at a residential receptor location prior to the proposed project installation.
<b>Sound Level Percentile (<math>L_n</math>)</b>	Also referred to as a “statistical sound level”, $L_n$ refers to the noise level that is exceeded for nth percent of a given measurement period. For example, $L_{50}$ refers to the noise level that is exceeded for 50% of a measurement period, i.e. 30 minutes out of an hour. These metrics can be used to evaluate noise levels that are apparent for a given period of time at a measurement location.

# TABLE OF CONTENTS

SECTION	PAGE
<b>1.0 Introduction.....</b>	<b>1</b>
1.1 Scope of Work .....	1
1.2 Study Area .....	2
<b>2.0 Project Description .....</b>	<b>4</b>
2.1 Site Access .....	5
2.2 Pedestrian Circulation .....	5
<b>3.0 Existing Conditions.....</b>	<b>6</b>
3.1 Existing Street System .....	6
3.2 Existing Bicycle Network .....	6
3.3 Existing Public Transit.....	7
3.4 Existing Traffic Volumes.....	7
3.5 Existing Daily Roadway Segment Volume Comparisons .....	8
3.6 Existing Intersection Conditions.....	8
3.6.1 Highway Capacity Manual 6 (HCM 6) Method of Analysis (Signalized Intersections).....	8
3.6.2 Highway Capacity Manual 6 (HCM 6) Method of Analysis (Unsignalized Intersections).....	9
3.6.2.1 Two-Way Stop-Controlled Intersections .....	9
3.6.2.2 All-Way Stop-Controlled Intersections .....	9
3.7 Level of Service Criteria .....	9
3.8 Level of Service Input Parameters .....	10
3.9 Existing Level of Service Results .....	10
<b>4.0 Traffic Forecasting Methodology .....</b>	<b>17</b>
<b>5.0 Project Traffic Characteristics .....</b>	<b>18</b>
5.1 Project Traffic Generation – Academic Instruction.....	18
5.2 Project Traffic Generation – Field Event.....	18
5.3 Project Traffic Distribution and Assignment.....	19
5.4 Existing Plus Project Traffic Conditions .....	20
<b>6.0 Future Traffic Conditions .....</b>	<b>23</b>
6.1 Year 2020 Traffic Volumes .....	23
6.2 Year 2030 Buildout Traffic Volumes .....	24
<b>7.0 Traffic Impact Analysis Methodology .....</b>	<b>25</b>
7.1 Significant Impact Criteria.....	25
7.2 Traffic Impact Analysis Scenarios.....	26

# TRAFFIC IMPACT ANALYSIS REPORT

## FULLERTON COLLEGE SHERBECK FIELD IMPROVEMENTS PROJECT

Fullerton, California  
April 17, 2019

### 1.0 INTRODUCTION

This Traffic Impact Analysis report addresses the potential traffic impacts associated with the proposed Fullerton College Sherbeck Field Improvements Project (hereinafter referred to as Project). The Fullerton College Campus is an approximately 70-acre site that is generally bounded by residential uses along Berkeley Avenue to the north and east, Chapman Avenue to the south, Lemon Street to the west, and has an address of 321 E. Chapman Avenue, in the City of Fullerton, California. Specifically, Sherbeck Field (i.e. the proposed Project site) is located in the northeastern portion of the Fullerton College Campus. The proposed Project will consist of the installation of permanent prefabricated aluminum bleachers with 4,417 seats (i.e. 2,861 seats on the home side of the field and 1,556 seats on the visitor side of the field), six field lighting stanchions to allow for more evening class options for the physical education program, a sound system, a press box and a storage building. The proposed field improvements will also enable Fullerton College home football games to occur on campus between 1:00 PM and 4:00 PM on Saturdays.

### 1.1 Scope of Work

This traffic report documents the findings and recommendations of a traffic impact analysis conducted by Linscott, Law & Greenspan, Engineers (LLG) to determine the potential impacts associated with the proposed Project. The traffic analysis evaluates the operating conditions at thirty-one (31) key study locations within the project vicinity, estimates the trip generation potential of the proposed Project, superimposes the project-related traffic volumes on the circulation system as it currently exists, and forecasts future operating conditions without and with the proposed Project. Where necessary, intersection improvements/mitigation measures are identified.

The project site has been visited and an inventory of adjacent area roadways and intersections was performed. Existing weekday PM peak hour traffic information has been collected at thirty-one (31) key study locations on a “typical” weekday for use in the preparation of intersection level of service calculations. A “typical” weekday constitutes a Tuesday, Wednesday or Thursday and refers to a non-holiday condition when the college and other local schools are in session. Existing Saturday peak hour traffic information has also been collected at the thirty-one (31) key study intersections for use in the preparation of Saturday intersection level of service calculations.

This traffic report satisfies the traffic impact requirements of the City of Fullerton and is consistent with the most current *Congestion Management Program (CMP) for Orange County*. This traffic report analyzes existing and future weekday PM peak hour and Saturday peak hour traffic conditions for the Year 2020 traffic setting (i.e. project completion year) and for the Year 2030 Buildout traffic setting. Year 2020 weekday PM peak hour and Saturday peak hour background traffic volumes were forecast based on application of growth rates provided by the City of Fullerton to existing

traffic volumes, and further adding traffic volumes from identified cumulative projects. Year 2030 weekday PM peak hour and Saturday peak hour background traffic volumes were also forecast based on application of growth rates provided by the City of Fullerton to existing traffic volumes, and further adding traffic volumes from all future cumulative projects (i.e. buildout of the City).

## 1.2 Study Area

The traffic analysis study area is generally comprised of those locations which have the greatest potential to experience significant traffic impacts due to the proposed project as defined by the Lead Agency. Consistent with standard traffic engineering practices, the study area typically includes those intersections that are:

- arterial to arterial intersections adjacent or in close proximity to the project site;
- arterial to arterial intersections in the vicinity of the project site that are documented to have current or projected future adverse operational issues; and
- arterial to arterial intersections in the vicinity of the project site that are forecast to experience a relatively greater percentage of project-related vehicular turning movements.

Based on the above criteria and direction from City of Fullerton Traffic Engineering staff, a total of thirty-one (31) locations have been selected for evaluation. The thirty-one (31) locations listed below provide regional and local access to the study area and define the extent of the boundaries for this traffic impact investigation.

### Key Study Intersections

| 15. Lemon Street at Wilshire Avenue             | 31. Lemon Street at Parking Structure                    |
| 16. Harbor Boulevard at Commonwealth Avenue     |  |

**Figure 1-1** presents a Vicinity Map, which illustrates the general location of the Project and depicts the study locations and surrounding street system. The Level of Service (LOS) investigations at these key locations were used to evaluate the potential traffic-related impacts associated with area

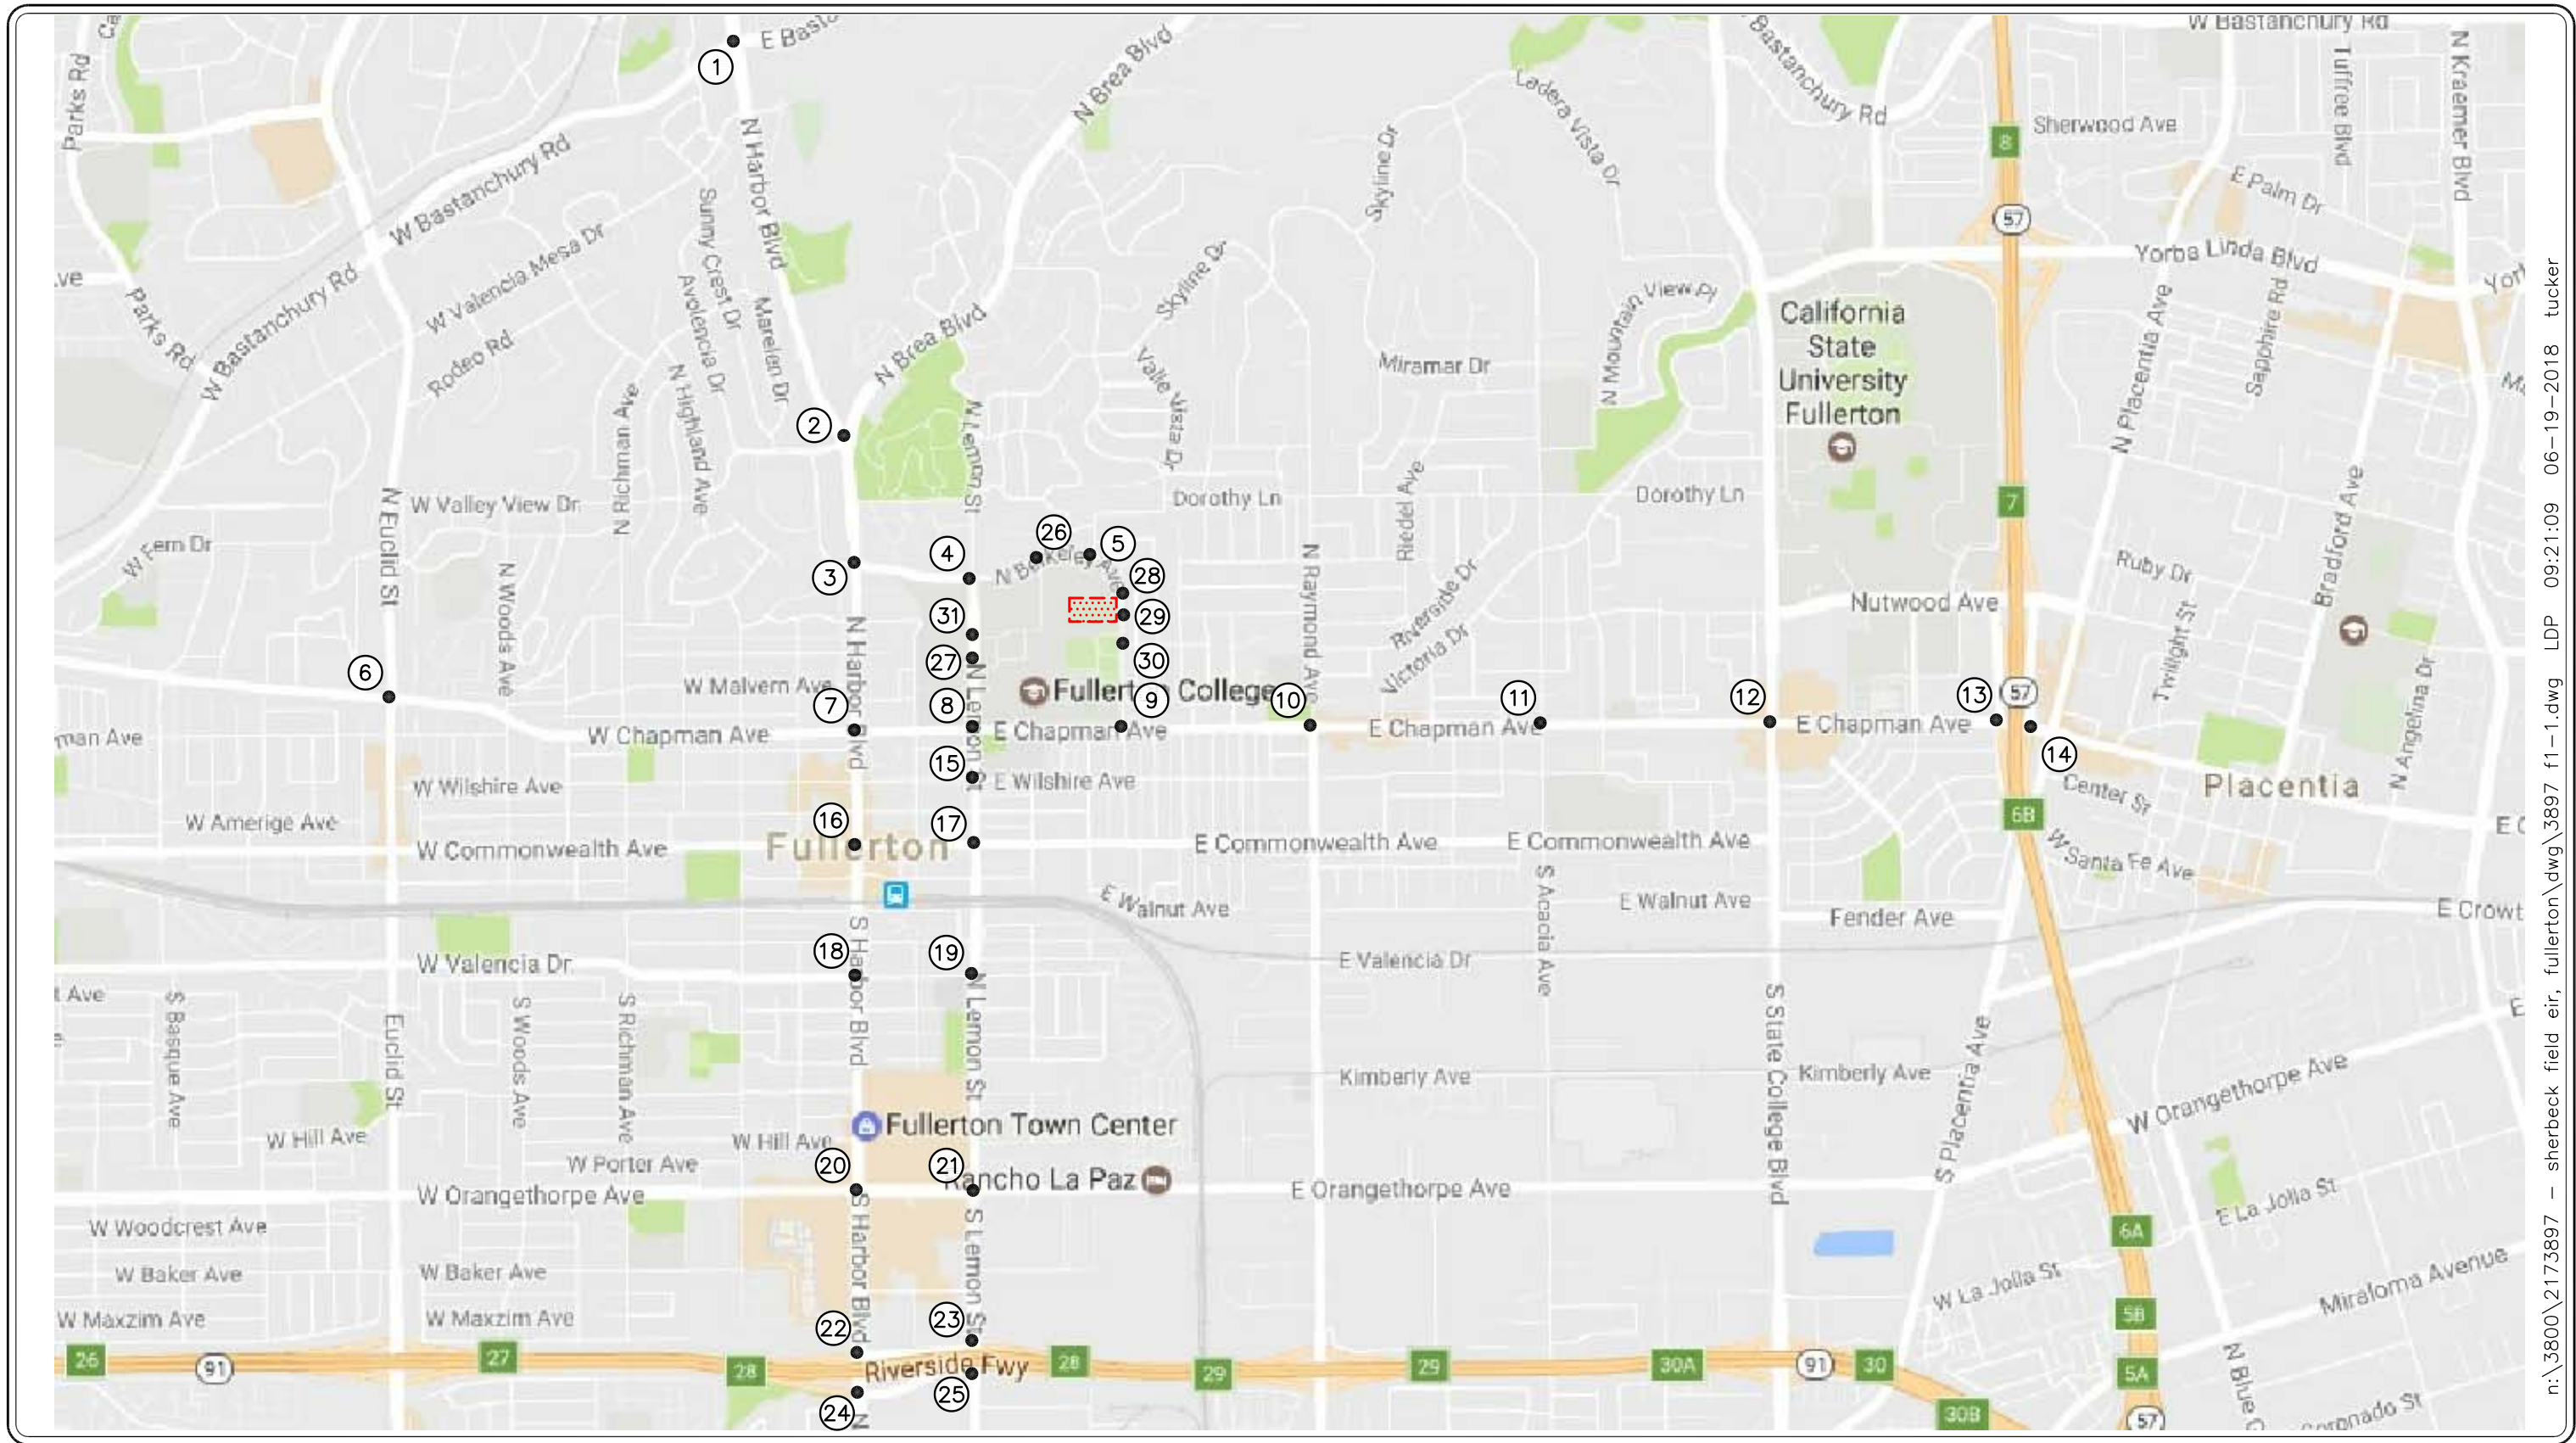

<sup>1</sup> Orange County Congestion Management Program (CMP) intersection.

growth, cumulative projects, and the proposed Project. When necessary, this report recommends intersection improvements that may be required to accommodate future traffic volumes and restore/maintain an acceptable Level of Service, and/or mitigate the impact of the project.

Included in this Traffic Impact Analysis are:

- Existing traffic counts,
- Estimated Project traffic generation/distribution/assignment,
- Estimated cumulative project traffic generation/distribution/assignment,
- Weekday PM peak hour, Saturday Event Arrival peak hour and Saturday Event Departure peak hour capacity analyses for Existing conditions,
- Weekday PM peak hour, Saturday Event Arrival peak hour and Saturday Event Departure peak hour capacity analyses for Existing plus Project conditions,
- Weekday PM peak hour, Saturday Event Arrival peak hour and Saturday Event Departure peak hour capacity analyses for Year 2020 traffic conditions without and with the proposed Project,
- Weekday PM peak hour, Saturday Event Arrival peak hour and Saturday Event Departure peak hour capacity analyses for Year 2030 Buildout traffic conditions without and with the proposed Project,
- Caltrans Facilities Analysis at applicable locations,
- Recommended Improvements, and
- Friday Field Event analysis.

It should be noted that since the proposed Project consists of field lighting to allow for more weekday evening class options for the physical education program (i.e. beginning at 6:00 PM) and is not changing the field's current operations that occur during the morning hours, this traffic study does not include the evaluation of the weekday AM peak hour.

FIGURE 1-1

VICINITY MAP

FULLERTON COLLEGE SHERBECK FIELD IMPROVEMENTS PROJECT, FULLERTON

## 2.0 PROJECT DESCRIPTION

The Fullerton College Campus is an approximately 70-acre site that is generally bounded by residential uses along Berkeley Avenue to the north and east, Chapman Avenue to the south, Lemon Street to the west, and has an address of 321 E. Chapman Avenue, in the City of Fullerton, California. Specifically, Sherbeck Field (i.e. the proposed Project site) is located in the northeastern portion of the Fullerton College Campus. Sherbeck Field is 4.36 acres and consists of a turf football field that is surrounded by a 400-meter-long track. A two-story field house is located on the western edge of the field and there is a scoreboard located at the eastern end of the field. Sherbeck Field currently does not have permanent seating or lighting. Sherbeck Field is currently used for academic instruction, competitive athletics, and rentals. **Figure 2-1** presents an aerial depiction of the existing site.

**Figure 2-2** presents the proposed site plan for the proposed Project. As shown, the proposed Project will consist of the installation of permanent prefabricated aluminum bleachers with 4,417 seats (i.e. 2,861 seats on the home side of the field and 1,556 seats on the visitor side of the field), six field lighting stanchions to allow for more evening class options for the physical education program, a sound system, a press box and a storage building. The proposed field improvements will also allow Fullerton College home football games to occur on campus between 1:00 PM and 4:00 PM on Saturdays. The proposed Project is expected to be completed by the Year 2020.

In order to facilitate the development of trip generation forecasts for the proposed Project, the aforementioned project description has been divided amongst two categories. These two categories consist of 1) academic instruction and 2) field event. The following describes the aforementioned two categories in detail.

### **Academic Instruction**

As stated above, the addition of lighting stanchions to Sherbeck Field will allow the college to offer more evening class options for the physical education program. Based on the Proposed Sherbeck Field Schedule and Programming table provided by Fullerton College Staff, new evening classes would begin at 6:00 PM. A maximum of two classes would occur on the field with class sizes ranging from 24 students to 32 students. To provide a conservative analysis, the traffic study assumes that each class will have the maximum number of students (i.e. 32 students) and all of the students would arrive during the PM peak hour.

### **Field Event**

As stated above, the proposed Project will consist of the installation of permanent prefabricated aluminum bleachers with 4,417 seats. The proposed field improvements will also allow Fullerton College home football games to occur on campus between 1:00 PM and 4:00 PM on Saturdays. To provide a conservative analysis, the traffic study assumes a Saturday field event with a maximum seating attendance of 4,417 seats. It should be noted that there would be approximately five regular season football games and up to two playoff football games per year at the field.

## **2.1 Site Access**

Vehicular access to the parking lots adjacent to Sherbeck Field (i.e. student parking lots 4, 5 and 6) would continue to be provided from the existing unsignalized driveways located along Berkeley Avenue [i.e. Centennial Way/Berkeley Avenue (key study intersection #26), Berkeley Avenue/College Driveway No. 1 (key study intersection #28) and Berkeley Avenue/College Driveway No. 2 (key study intersection #29)].

It should be noted that key study intersection #29 (i.e. Berkeley Avenue/College Driveway No. 2) was assumed to only provide egress movements from the campus in the Year 2030, consistent with the Fullerton College Master Plan Traffic Study.

## **2.2 Pedestrian Circulation**

Pedestrian circulation would continue to be provided via the existing public sidewalks located along Berkeley Avenue within the vicinity of Sherbeck Field, which connect to the existing driveways along Berkeley Avenue and to the campus internal walkways.

## 3.0 EXISTING CONDITIONS

### 3.1 Existing Street System

The principal local network of streets serving the project site are Berkeley Avenue, Lemon Street and Chapman Avenue. The following discussion provides a brief synopsis of these key area streets. The descriptions are based on an inventory of existing roadway conditions.

**Berkeley Avenue** is generally a two-lane, divided roadway, oriented in both the east-west and north-south directions. The posted speed limit on Berkeley Avenue is 35 miles per hour (mph). On-street parking is generally permitted along this roadway in the vicinity of Fullerton College. Traffic signals control the study intersections of Berkeley Avenue at Harbor Boulevard, Lemon Street, Horner Way and Chapman Avenue. The study intersections of Berkeley Avenue at Centennial Way, College Driveway No. 1, College Driveway No. 2 and Brookdale Place are stop controlled.

**Lemon Street** is a two-lane, undivided roadway north of Berkeley Avenue and a four-lane, divided roadway south of Berkeley Avenue, oriented in the north-south direction. The posted speed limit on Lemon Street is 25 mph north of Berkeley Avenue, 30 mph between Berkeley Avenue and Chapman Avenue, and 40 mph south of Chapman Avenue. On-street parking is generally not permitted along this roadway in the vicinity of Fullerton College. Traffic signals control the study intersections of Lemon Street at Berkeley Avenue, Fullerton College Drive, Chapman Avenue, Wilshire Avenue, Commonwealth Avenue, Valencia Drive, Orangethorpe Avenue, SR-91 Westbound Ramps, and SR-91 Eastbound Ramps.

**Chapman Avenue** is generally a four-lane, divided roadway oriented in the east-west direction. The posted speed limit on Chapman Avenue is 40 mph between Euclid Street and Harbor Boulevard, 30 mph between Harbor Boulevard and Raymond Avenue, and 40 mph east of Raymond Avenue. On-street parking is generally not permitted along this roadway in the vicinity of Fullerton College, except on the south side of the street between Lawrence Avenue and Balcom Avenue. Traffic signals control the study intersections of Chapman Avenue at Euclid Street, Harbor Boulevard, Lemon Street, Berkeley Avenue, Raymond Avenue, Acacia Avenue, State College Boulevard, SR-57 Southbound Ramps, and SR-57 Northbound Ramps.

**Figure 3-1** presents an inventory of the existing roadway conditions for the arterials and intersections evaluated in this report. This figure identifies the number of travel lanes for key arterials, as well as intersection configurations and controls for the key area study intersections. **Figure 3-2** shows roadway classifications within the City of Fullerton as shown on the City's General Plan Circulation Element.

### 3.2 Existing Bicycle Network

The City of Fullerton promotes bicycling as a means of mobility and a way in which to improve the quality of life within its community. The Bicycle Master Plan recognizes the needs of bicycle users and aims to create a complete and safe bicycle network throughout the City. The Existing Bikeways

Network is shown on **Figure 3-3**. As shown in *Figure 3-3*, a Class II bike lane is currently provided along Berkeley Avenue in both directions between Chapman Avenue and Lemon Street.

### 3.3 Existing Public Transit

Public transit bus service is provided in the Project area by the Orange County Transportation Authority (OCTA). The OCTA Bus System Map is shown in **Figure 3-4**. Four (4) OCTA Bus Routes operate within the vicinity of the Project site either along Chapman Avenue or Lemon Street and consist of the following:

- OCTA Bus Route 24
- OCTA Express Bus Route 103B
- OCTA Bus Route 143
- OCTA Bus Route 213/A

Five (5) bus stops are located along Lemon Street between Berkeley Avenue and Wilshire Avenue, west of the college campus. Four (4) bus stops are located along Chapman Avenue between Lemon Street and Berkeley Avenue, south of the college campus.

### 3.4 Existing Traffic Volumes

Thirty-one (31) key study intersections have been identified as the locations at which to evaluate existing and future traffic operating conditions. Some portion of potential project-related traffic will pass through each of these intersections and their analysis will reveal the expected relative impacts of the project. Existing weekday PM peak hour traffic volumes for the locations evaluated in this report were obtained from the *Fullerton College Master Plan Traffic Impact Analysis Report*, prepared by LLG Engineers, dated May 24, 2017. It should be noted that all weekday PM peak hour traffic counts taken from the *Fullerton College Master Plan Traffic Impact Analysis Report* were factored up by the City-approved growth factor of 0.5% to bring them up to current Year 2017 existing baseline traffic conditions. The only exception was key study intersection #1, as the traffic count for this location was conducted in March 2017.

Existing Saturday Event Arrival Period and Saturday Event Departure Period peak hour traffic volumes for the locations evaluated in this report were obtained from manual peak hour turning movement counts conducted by Transportation Studies Inc. in November 2017. It should be noted that the Saturday traffic counts were conducted between 12:00 PM and 2:00 PM and between 3:30 PM and 5:30 PM.

**Figure 3-5** illustrates the existing weekday PM peak hour traffic volumes at the key study intersections evaluated in this report. **Figures 3-6** and **3-7** illustrate the existing Saturday Event Arrival Period and existing Saturday Event Departure Period peak hour traffic volumes at the key study intersections evaluated in this report, respectively. **Appendix A** contains the detailed peak hour count sheets for the key intersections evaluated in this report.

### 3.5 Existing Daily Roadway Segment Volume Comparisons

Five days of daily (24-hour) traffic counts were collected from Friday October 6, 2017 through Tuesday October 10, 2017 at six (6) locations either bordering or near the Fullerton College campus. The six (6) locations consisted of the following:

- Berkeley Avenue, east of Lemon Street
- Hornet Way, north of Berkeley Avenue
- Brookdale Place, east of Berkeley Avenue
- Lemon Street, north of Chapman Avenue
- Chapman Avenue, between Lemon Street and Berkeley Avenue
- Berkeley Avenue, north of Chapman Avenue

The traffic counts were conducted to gain insight as to the existing variation in daily weekday versus daily weekend traffic around the Fullerton College campus. **Figures 3-8, 3-9, 3-10, 3-11, 3-12 and 3-13** present the existing daily profile for the six (6) locations listed above, respectively. Review of the aforementioned figures indicates that traffic around the Fullerton College campus is significantly lower on a typical Saturday when compared to a typical weekday (Tuesday had the greatest daily volume). The Saturday traffic volumes are approximately fifty percent (50%) lower at all the locations, except for the segment on Brookdale Place (approximately 35% lower) and Chapman Avenue (approximately 25% lower).

**Figures 3-14, 3-15, 3-16, 3-17, 3-18 and 3-19** present the Saturday versus Tuesday existing hourly volume profiles for the six (6) locations listed above, respectively. Review of the aforementioned figures indicates again that traffic around the Fullerton College campus is significantly lower on a Saturday when compared to a Tuesday on an hourly basis. These results would imply that there is significant roadway capacity in the area to add special event traffic on Saturdays.

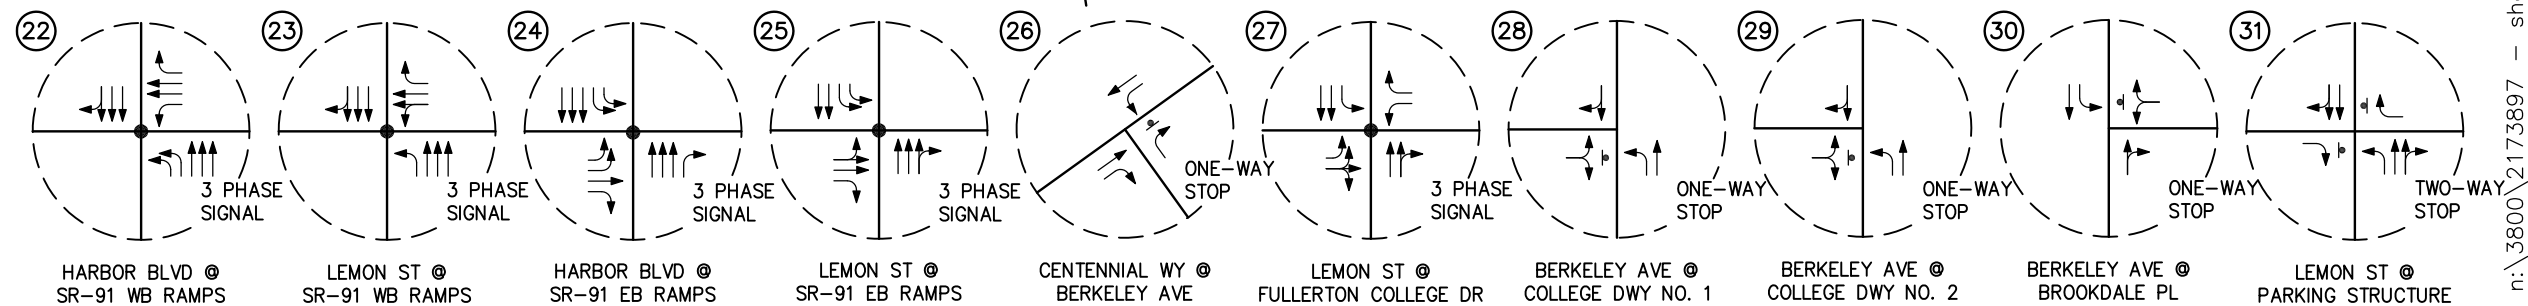

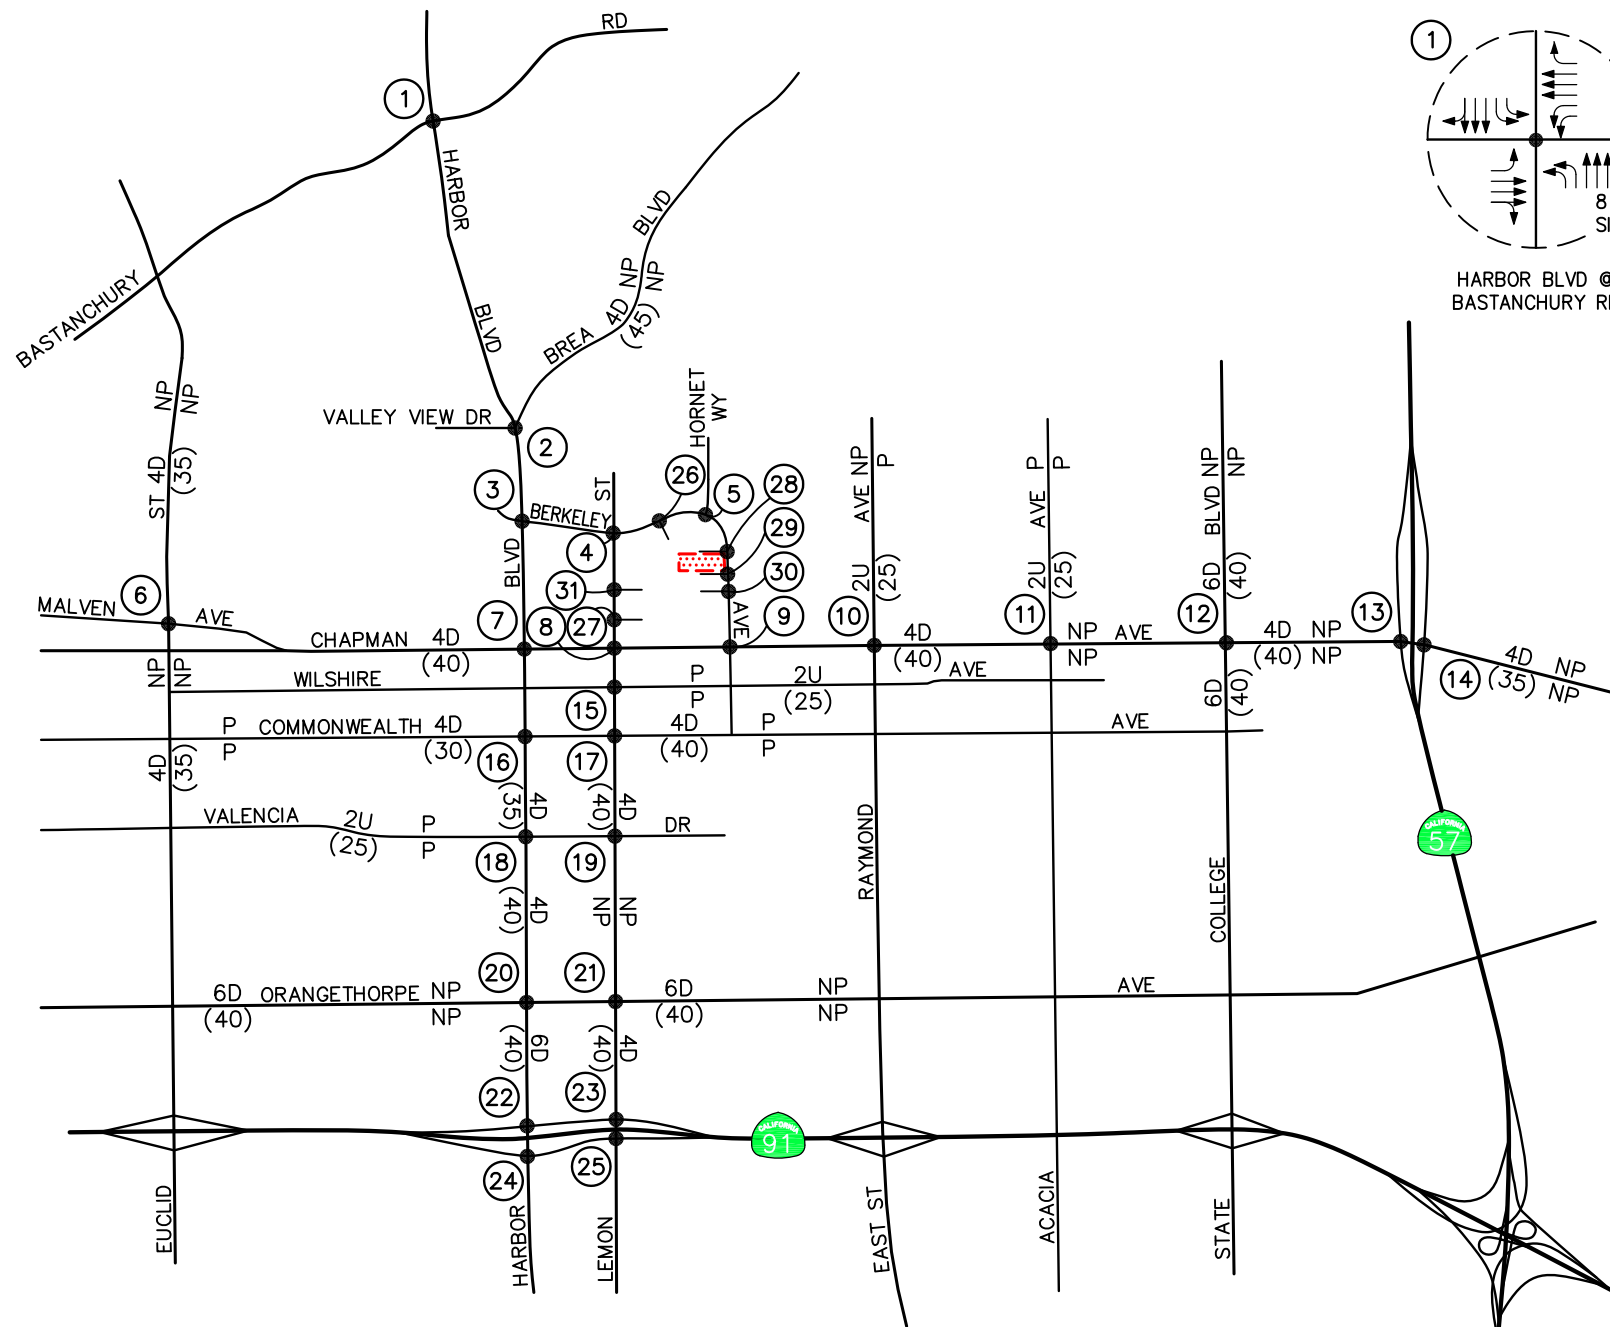

*Appendix A* also contains the daily traffic volumes for the aforementioned six (6) roadway segments.

### 3.6 Existing Intersection Conditions

In conformance with City of Fullerton requirements, existing peak hour operating conditions for the key study intersections were evaluated using the methodology outlined in *Chapter 19 of the Highway Capacity Manual 6 (HCM 6)* for signalized intersections, the methodology outlined in *Chapter 20 of the HCM 6* for two-way stop-controlled intersections and the methodology outlined in *Chapter 21 of the HCM 6* for all-way stop-controlled intersections.

#### 3.6.1 Highway Capacity Manual 6 (HCM 6) Method of Analysis (Signalized Intersections)

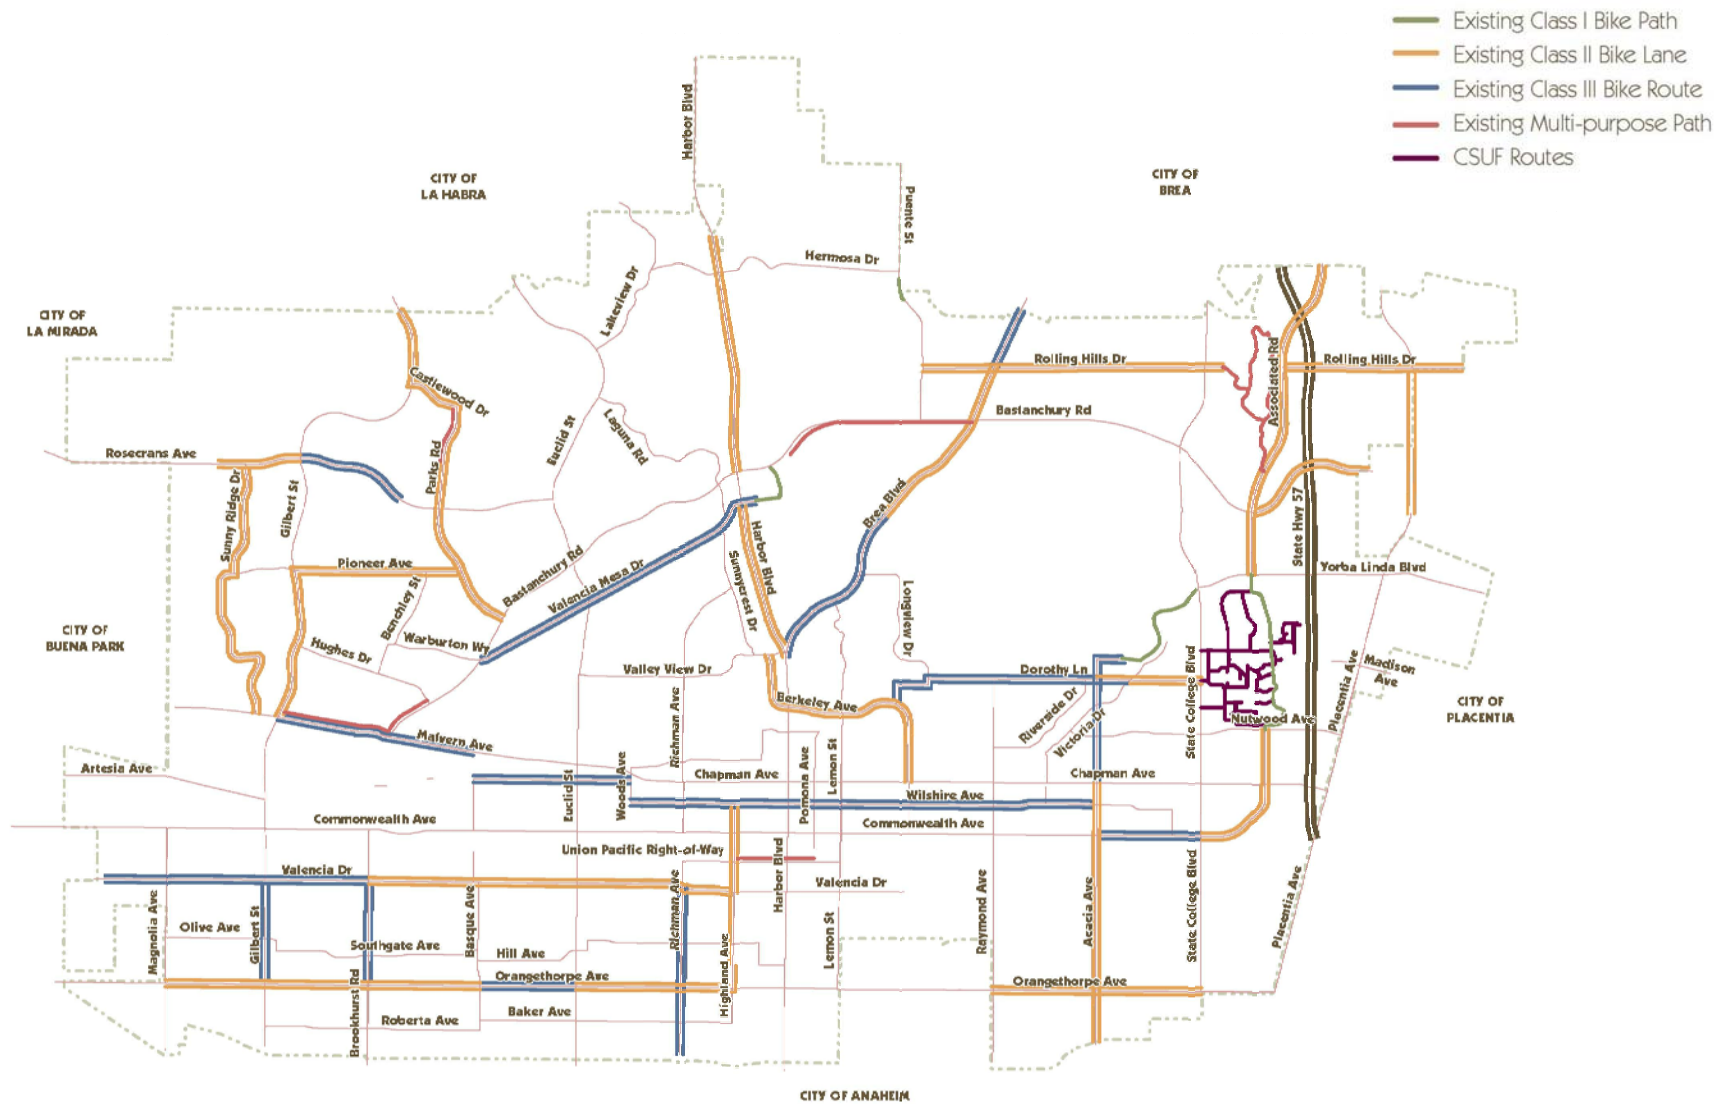

Based on the HCM operations method of analysis, level of service for signalized intersections and approaches is defined in terms of control delay, which is a measure of the increase in travel time due to traffic signal control, driver discomfort, and fuel consumption. Control delay includes the delay associated with vehicles slowing in advance of an intersection, the time spent stopped on an intersection approach, the time spent as vehicles move up in the queue, and the time needed for vehicles to accelerate to their desired speed. LOS criteria for traffic signals are stated in terms of the

control delay in seconds per vehicle. The LOS thresholds established for the automobile mode at a signalized intersection are shown in *Table 3-1*.

### **3.6.2 Highway Capacity Manual 6 (HCM 6) Method of Analysis (Unsignalized Intersections)**

The HCM unsignalized methodology for stop-controlled intersections was utilized for the analysis of the unsignalized intersections. LOS criteria for unsignalized intersections differ from LOS criteria for signalized intersections as signalized intersections are designed for heavier traffic and therefore a greater delay. Unsignalized intersections are also associated with more uncertainty for users, as delays are less predictable, which can reduce users' delay tolerance.

#### **3.6.2.1 Two-Way Stop-Controlled Intersections**

Two-way stop-controlled intersections are comprised of a major street, which is uncontrolled, and a minor street, which is controlled by stop signs. Level of service for a two-way stop-controlled intersection is determined by the computed or measured control delay. The control delay by movement, by approach, and for the intersection as a whole is estimated by the computed capacity for each movement. LOS is determined for each minor-street movement (or shared movement) as well as major-street left turns. The worst side street approach delay is reported. LOS is not defined for the intersection as a whole or for major-street approaches, as it is assumed that major-street through vehicles experience zero delay. The HCM control delay value range for two-way stop-controlled intersections are shown in *Table 3-2*.

#### **3.6.2.2 All-Way Stop-Controlled Intersections**

All-way stop-controlled intersections require every vehicle to stop at the intersection before proceeding. Because each driver must stop, the decision to proceed into the intersection is a function of traffic conditions on the other approaches. The time between subsequent vehicle departures depends on the degree of conflict that results between the vehicles and vehicles on the other approaches. This methodology determines the control delay for each lane on the approach, computes a weighted average for the whole approach, and computes a weighted average for the intersection as a whole. Level of service (LOS) at the approach and intersection levels is based solely on control delay. The HCM control delay value range for all-way stop-controlled intersections are shown in *Table 3-2*.

### **3.7 Level of Service Criteria**

According to the City of Fullerton, LOS D is the minimum acceptable condition that should be maintained during the peak commute hours. It should be noted that although the City standard is LOS D, there are two intersections located in the Historic Downtown area where LOS E is deemed acceptable to the City because of the fully developed character of the downtown area, the presence of historic properties and the great expense and hardship that would be caused by attempting to secure right-of-way required to improve LOS. The two intersections where LOS E is considered acceptable are: Harbor Boulevard/Chapman Avenue (i.e. key study intersection #6) and Harbor Boulevard/Commonwealth Avenue (i.e. key study intersection #16). LOS E is also considered acceptable at the CMP intersection of Harbor Boulevard/Orangethorpe Avenue (i.e. key study intersection #20).

### 3.8 Level of Service Input Parameters

Per City staff, the following values were applied in the level of service analyses, which have been conducted using the Vistro software (HCM 6 Methodology):

- **Base Saturation Flow Rate:** 1800 passenger cars per hour per lane (pc/hr/ln) [left and right turn movement], 3500 pc/hr/ln (dual left turn movement) and 1900 pc/hr/ln (through movement)
- **Cycle Length:** based on existing timings as provided by City staff
- **Loss Time:** 2 seconds per critical phase
- **Minimum Pedestrian Crossing Time:** calculated by using the minimum pedestrian crossing time equation
- **Analysis Time Period:** 0.25 hour
- **Peak Hour Factor:** based on existing counts

### 3.9 Existing Level of Service Results

*Table 3-3* summarizes the existing weekday PM peak hour service level calculations for the key study intersections based on existing traffic volumes and current street geometrics. Review of *Table 3-3* indicates that thirty (30) of the thirty-one (31) key study intersections currently operate at an acceptable service level during the PM peak hour. The intersection of Harbor Boulevard at Bastanchury Road (i.e. key study intersection #1) currently operates at LOS during the PM peak hour.

*Table 3-4* summarizes the existing Saturday Event Arrival and Event Departure peak hour service level calculations for the key study intersections based on existing traffic volumes and current street geometrics. Review of *Table 3-3* indicates that all thirty-one (31) key study intersections currently operate at an acceptable service level during the Saturday Event Arrival and Event Departure peak hours.

*Appendix B* presents the HCM/LOS calculation worksheets for the key study intersections for the weekday PM peak hour, Saturday Event Arrival peak hour and Saturday Event Departure peak hour.

**TABLE 3-1**  
**LEVEL OF SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS (HCM 6 METHODOLOGY)<sup>2</sup>**

Level of Service (LOS)	Control Delay Per Vehicle (seconds/vehicle)	Level of Service Description
A	$\leq 10.0$	This level of service occurs when progression is extremely favorable and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.
B	$> 10.0$ and $\leq 20.0$	This level generally occurs with good progression, short cycle lengths, or both. More vehicles stop than with LOS A, causing higher levels of average delay.
C	$> 20.0$ and $\leq 35.0$	Average traffic delays. These higher delays may result from fair progression, longer cycle lengths, or both. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, though many still pass through the intersection without stopping.
D	$> 35.0$ and $\leq 55.0$	Long traffic delays At level D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high $v/c$ ratios. Many vehicles stop and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.
E	$> 55.0$ and $\leq 80.0$	Very long traffic delays This level is considered by many agencies to be the limit of acceptable delay. These high delay values generally indicate poor progression, long cycle lengths and high $v/c$ ratios. Individual cycle failures are frequent occurrences.
F	$\geq 80.0$	Severe congestion This level, considered to be unacceptable to most drivers, often occurs with over saturation, that is, when arrival flow rates exceed the capacity of the intersection. It may also occur at high $v/c$ ratios below 1.0 with many individual cycle failures. Poor progression and long cycle lengths may also be major contributing factors to such delay levels.

## 4.0 TRAFFIC FORECASTING METHODOLOGY

In order to estimate the traffic impact characteristics of the proposed Project, a multi-step process has been utilized. The first step is traffic generation, which estimates the total arriving and departing traffic on a peak hour and daily basis. The traffic generation potential is forecast by applying the appropriate vehicle trip generation equations or rates to the project development tabulation.

The second step of the forecasting process is traffic distribution, which identifies the origins and destinations of inbound and outbound project traffic. These origins and destinations are typically based on demographics and existing/expected future travel patterns in the study area.

The third step is traffic assignment, which involves the allocation of project traffic to study area streets and intersections. Traffic assignment is typically based on minimization of travel time, which may or may not involve the shortest route, depending on prevailing operating conditions and travel speeds. Traffic distribution patterns are indicated by general percentage orientation, while traffic assignment allocates specific volume forecasts to individual roadway links and intersection turning movements throughout the study area.

With the forecasting process complete and project traffic assignments developed, the impact of the proposed project is isolated by comparing operational (LOS) conditions at selected key intersections using expected future traffic volumes with and without forecast project traffic. The need for site-specific and/or cumulative local area traffic improvements can then be evaluated and the significance of the project's impacts identified.

## 5.0 PROJECT TRAFFIC CHARACTERISTICS

Traffic generation is expressed in vehicle trip ends, defined as one-way vehicular movements, either entering or exiting the generating land use. Generation equations and/or rates used in the traffic forecasting procedure are typically found in the 10<sup>th</sup> Edition of *Trip Generation*, published by the Institute of Transportation Engineers (ITE) [Washington D.C., 2017]. Since trip generation rates for the proposed Project categories are not specifically contained within the ITE *Trip Generation* manual, the trip generation potential was estimated based on the following:

- Academic instruction = based on the proposed evening class schedule and size.
- Field event = based on empirical rates developed from counts/observations conducted at Yorba Linda High School during a Fullerton College football game.

The following describes the project trip generation details for the academic instruction project component and the field event project component.

### 5.1 Project Traffic Generation – Academic Instruction

As stated above, the trip generation potential for the weekday evening classes (i.e. academic instruction) is based on the Proposed Sherbeck Field Schedule and Programming table provided by Fullerton College Staff and the maximum student size of the classes. The following assumptions were utilized to develop the trip generation for academic instruction.

- Evening classes would begin at 6:00 PM with a maximum of two classes utilizing the field at the same time.
- The class size would range from 24 students to 32 students with 1 teacher. The traffic study assumes 32 students and 1 teacher to provide a conservative forecast.
- Based on information provided by Fullerton College Staff, the majority of students enrolling in these evening classes will already be on campus for other classes. However, in order to provide a conservative forecast, the traffic study assumes that all students and teachers would be new trips and that they would arrive prior to 6:00 PM during the weekday PM peak hour.

Based on the aforementioned assumptions, **Table 5-1** presents the Project's (i.e. academic instruction) forecast daily and PM peak hour traffic volumes. Review of **Table 5-1** shows that the proposed Project (i.e. academic instruction) is forecast to generate 528 weekday daily trips and 66 weekday PM peak hour trips (66 inbound and 0 outbound).

### 5.2 Project Traffic Generation – Field Event

As stated above, the trip generation potential for the field event is based on empirical trip rates developed from counts/observations conducted at Yorba Linda High School during a Fullerton College football game and applied to the proposed Project's maximum seating attendance of 4,417 seats. The following describes the details of the counts/observations conducted at Yorba Linda High School during a Fullerton College football game.

- Saturday traffic counts/observations were conducted at Yorba Linda High School on October 21, 2017 during the Fullerton College football game against Saddleback College, which had an attendance of 1,100 people and a start time of 1:00 PM.
- Traffic counts/observations were conducted at the three driveways along Bastanchury Road between 11:30 AM and 1:30 PM during the football game's arrival period and between 3:30 PM and 5:30 PM during the football game's departure period in order to determine the trip generation for the field event, which included an adjustment to the traffic counts to eliminate any non-football game related traffic at the high school during the arrival and departure periods.
- The Saturday traffic counts indicated that the Fullerton College football game generated 1,072 daily trips, 388 trips during the arrival peak hour (306 inbound and 82 outbound) and 416 trips during the departure peak hour (35 inbound and 381 outbound).
- The aforementioned trips were then divided by the game attendance (i.e. 1,100 people) to determine the Saturday daily, Saturday Arrival peak hour and Saturday Departure peak hour trip rates per seat specific to a Fullerton College football game.

It should be noted that the procedures described above that were utilized to develop the empirical rates for a Fullerton College football game are generally consistent with the trip generation study procedures contained within the *ITE Trip Generation Handbook*. It should be further noted, that even though only one football game was studied, the use of empirical rates developed specifically for the proposed project land use is typically the most accurate form for establishing the proposed Project's trip generation potential. Furthermore, the trip generation rates are based on trips per spectator, which would not vary significantly per game, given that the average vehicle occupancy (AVO) would not vary significantly either.

**Table 5-2** summarizes the Saturday trip generation rates and presents the Project's (i.e. field event) forecast Saturday daily, Saturday Event Arrival peak hour and Saturday Event Departure peak hour traffic volumes. Review of **Table 5-2** shows that the proposed Project (i.e. field event with 4,417 occupied seats) is forecast to generate 4,307 Saturday daily trips, 1,559 Saturday Event Arrival peak hour trips (1,228 inbound and 331 outbound) and 1,669 Saturday Event Departure peak hour trips (141 inbound and 1,528 outbound).

**Appendix C** contains the traffic counts/observations conducted at Yorba Linda High School on October 21, 2017 during the Fullerton College football game against Saddleback College.

### 5.3 Project Traffic Distribution and Assignment

**Figures 5-1** and **5-2** present the Year 2020 and Year 2030 general traffic distribution patterns for the proposed Project (i.e. academic instruction), respectively. **Figures 5-3** and **5-4** present the Year 2020 and Year 2030 general traffic distribution patterns for the proposed Project (i.e. field event), respectively. Project traffic volumes both entering and exiting the project site have been distributed and assigned to the adjacent street system based on the following considerations:

- the site's proximity to major traffic carriers (i.e. Lemon Street, Chapman Avenue, Harbor Boulevard, SR-57 Freeway, SR-91 Freeway, etc.),

- expected localized traffic flow patterns based on adjacent street channelization and presence of traffic signals,
- review of existing peak hour traffic volumes and the location of parking lots, and
- ingress/egress availability at the project site.

It should be noted that key study intersection #29 (i.e. Berkeley Avenue/College Driveway No. 2) was assumed to only provide egress movements from the campus in the Year 2030, consistent with the Fullerton College Master Plan Traffic Study.

The anticipated Year 2020 and Year 2030 weekday PM peak hour project traffic volumes associated with the Project (i.e. academic instruction) are presented in **Figures 5-5** and **5-6**, respectively. The traffic volume assignments presented in **Figures 5-5** and **5-6** reflect the traffic distribution characteristics shown in **Figures 5-1/5-2** and the traffic generation forecast presented in **Table 5-1**.

The anticipated Year 2020 Saturday Event Arrival peak hour and Saturday Event Departure peak hour project traffic volumes associated with the Project (i.e. field event) are presented in **Figures 5-7** and **5-8**, respectively. The traffic volume assignments presented in **Figures 5-7** and **5-8** reflect the traffic distribution characteristics shown in **Figure 5-3** and the traffic generation forecast presented in **Table 5-2**.

The anticipated Year 2030 Saturday Event Arrival peak hour and Saturday Event Departure peak hour project traffic volumes associated with the Project (i.e. field event) are presented in **Figures 5-9** and **5-10**, respectively. The traffic volume assignments presented in **Figures 5-9** and **5-10** reflect the traffic distribution characteristics shown in **Figure 5-4** and the traffic generation forecast presented in **Table 5-2**.

#### **5.4 Existing Plus Project Traffic Conditions**

The Existing plus Project traffic conditions have been developed based upon existing conditions and the estimated Project traffic. These forecast traffic conditions have been prepared pursuant to the California Environmental Quality Act (CEQA) guidelines, which require that the potential impacts of a Project be evaluated upon the circulation system as it currently exists. This traffic volume scenario and the related intersection capacity analyses will identify the roadway improvements necessary to mitigate the direct traffic impacts of the Project, if any.

**Figure 5-11** presents projected weekday PM peak hour traffic volumes at the thirty-one (31) key study locations with the addition of the trips generated by the proposed Project (i.e. academic instruction) to existing traffic volumes. **Figures 5-12** and **5-13** present projected Saturday Event Arrival Period and Saturday Event Departure Period peak hour traffic volumes at the thirty-one (31) key study locations with the addition of the trips generated by the proposed Project (i.e. field event) to existing traffic volumes, respectively.

**TABLE 5-1**  
**WEEKDAY ACADEMIC INSTRUCTION PROJECT TRAFFIC GENERATION FORECAST**

Project Description	Daily 2-Way	Weekday Academic Instruction PM Peak Hour		
		Enter	Exit	Total
<b><u>Generation Forecasts:</u></b>				
▪ Sherbeck Field – Academic Instruction <sup>5</sup>				
➤ Students (64 students)	512	64	0	64
➤ Teachers (2 teachers)	16	2	0	2
<b>Total Trip Generation Potential – Academic Instruction</b>	<b>528</b>	<b>66</b>	<b>0</b>	<b>66</b>

<sup>5</sup> The following assumptions were utilized to develop the trip generation for academic instruction.

- Evening classes would begin at 6:00 PM with a maximum of two classes utilizing the field at the same time.
- The class size would range from 24 students to 32 students with 1 teacher. The traffic study assumes 32 students and 1 teacher to provide a conservative forecast.
- The traffic study assumes that all students and the teacher would arrive prior to 6:00 PM during the weekday PM peak hour to provide a conservative forecast.

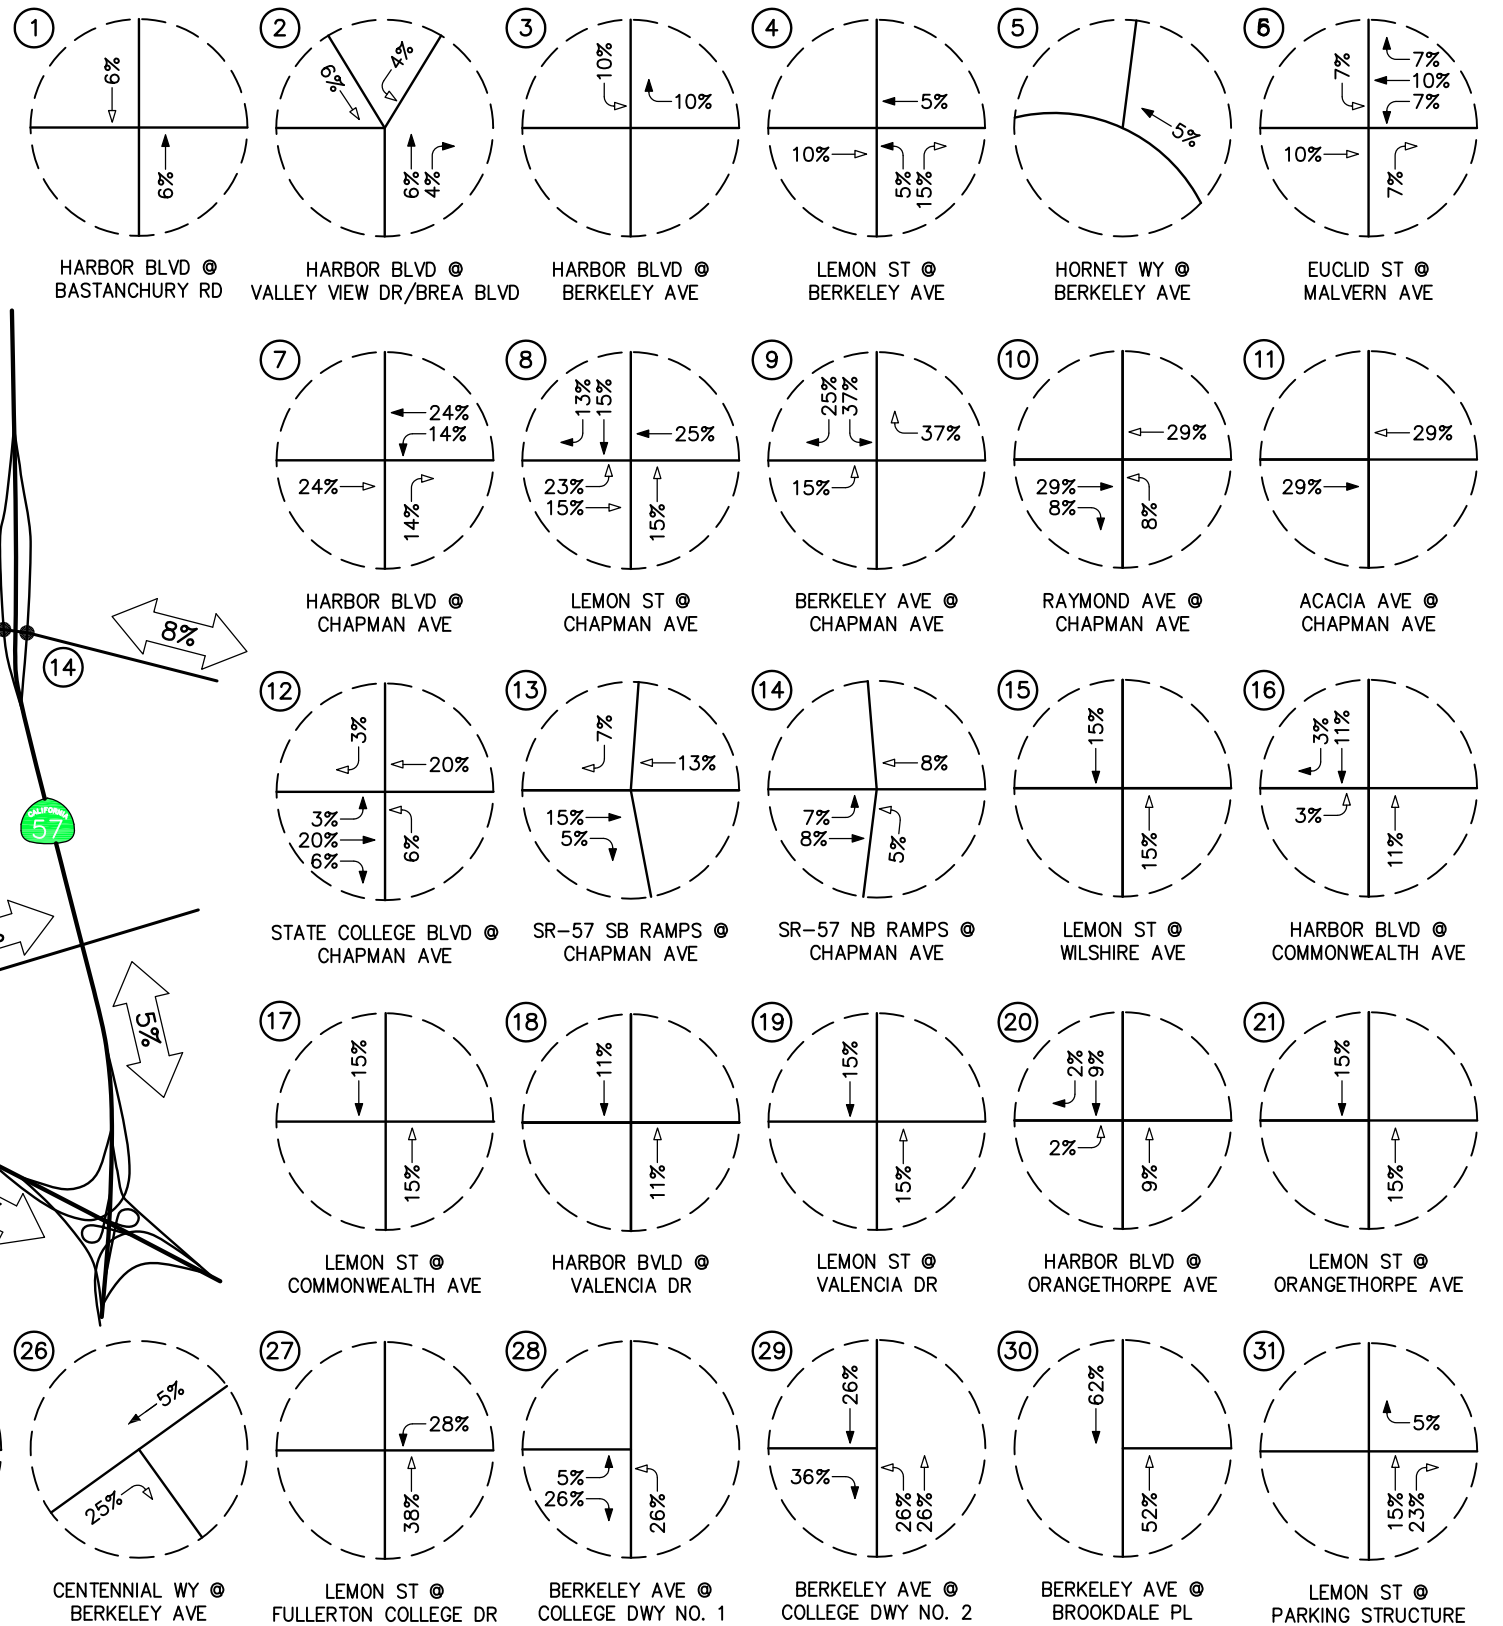

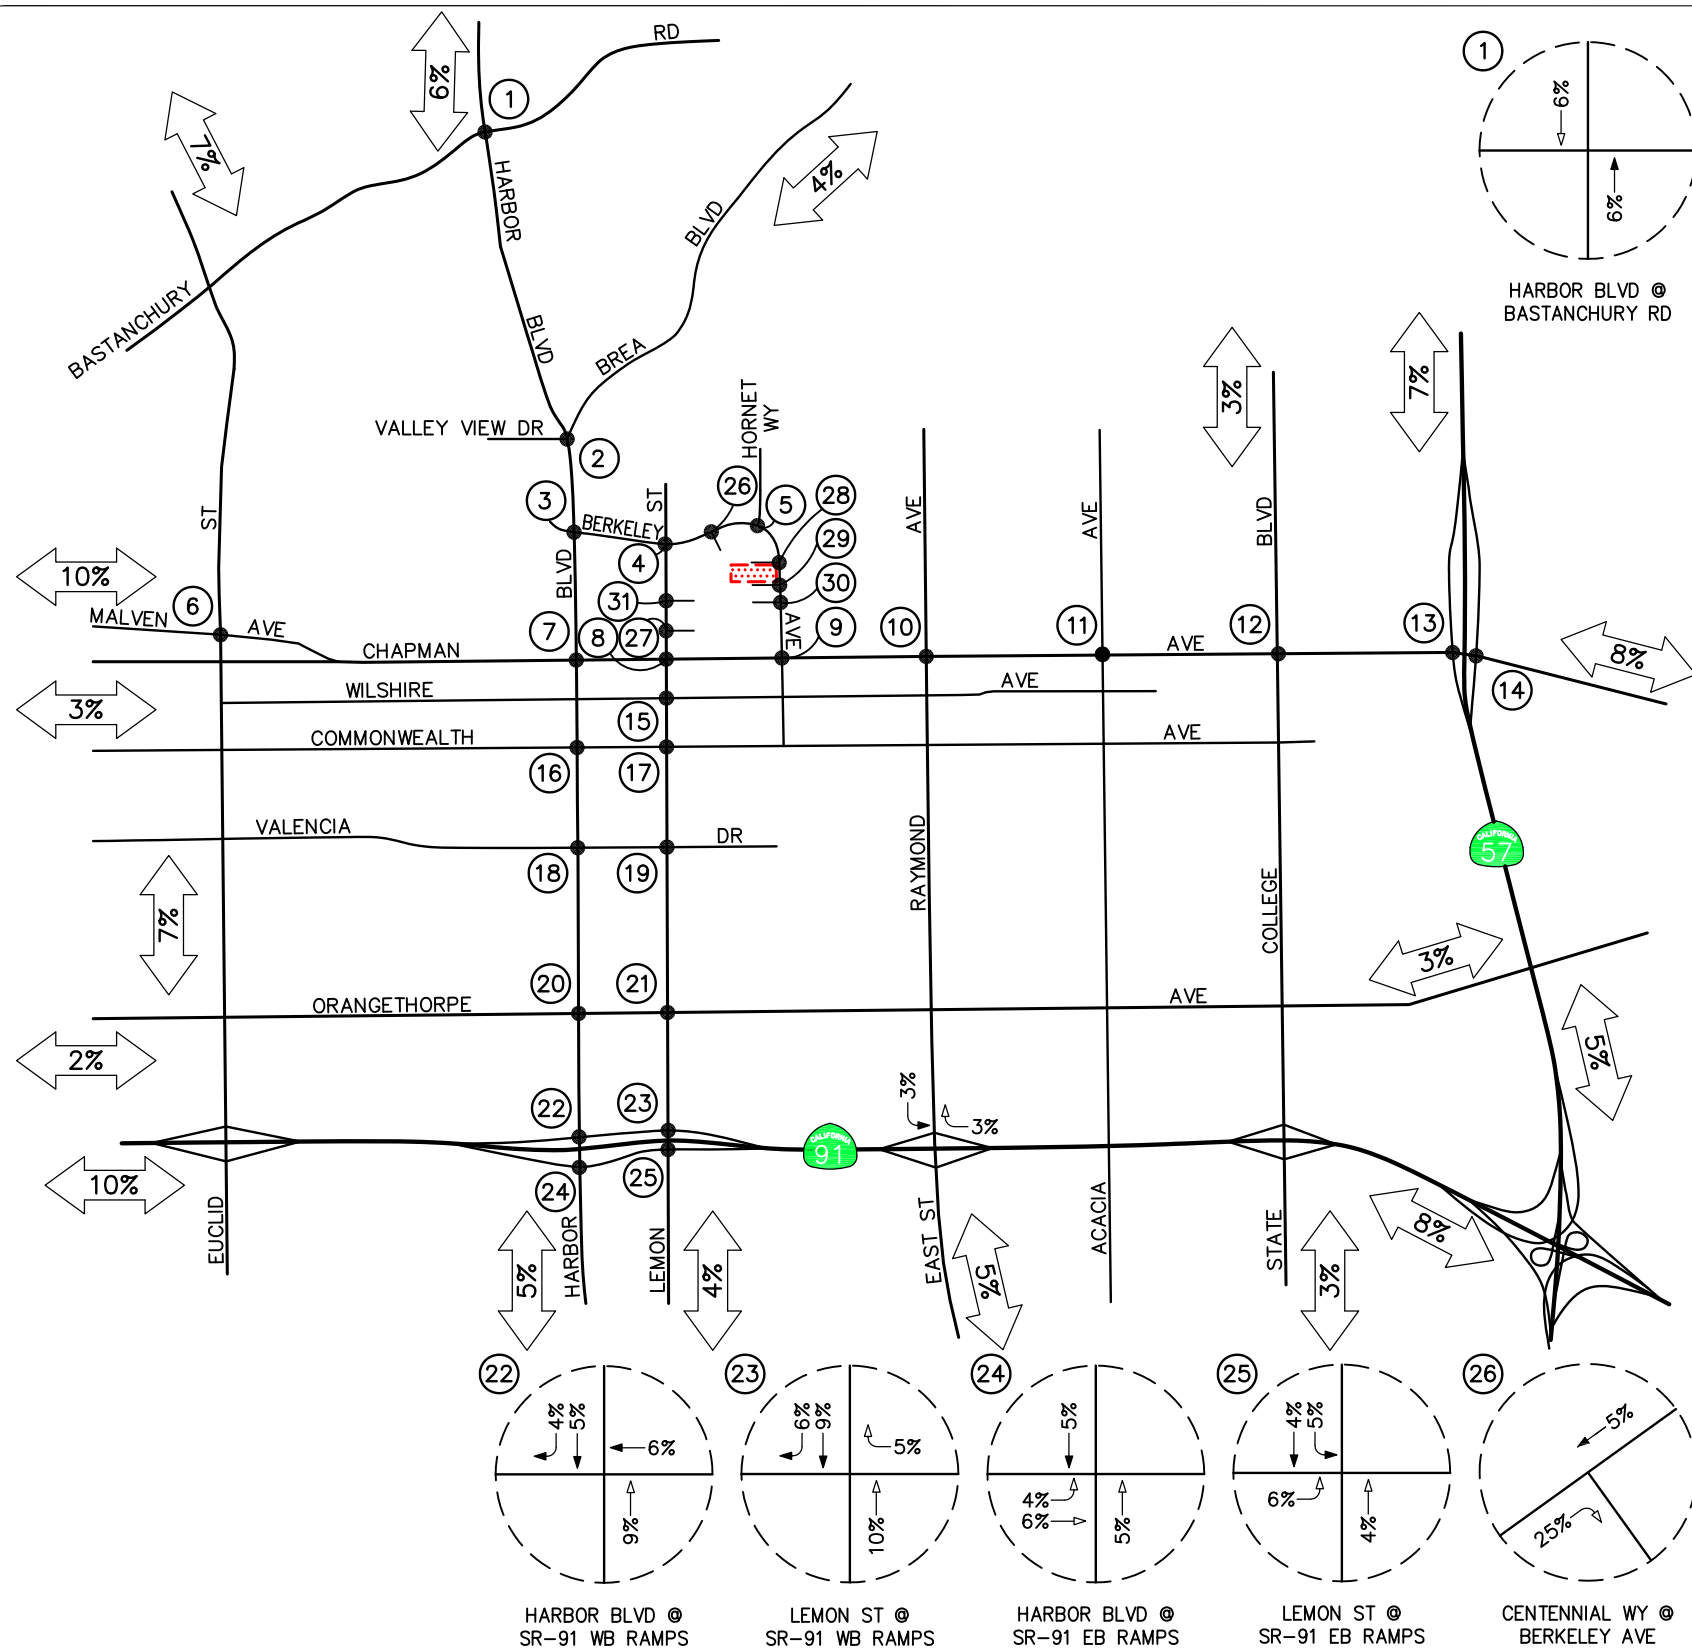

**TABLE 5-2**  
**SATURDAY FIELD EVENT PROJECT TRAFFIC GENERATION FORECAST**

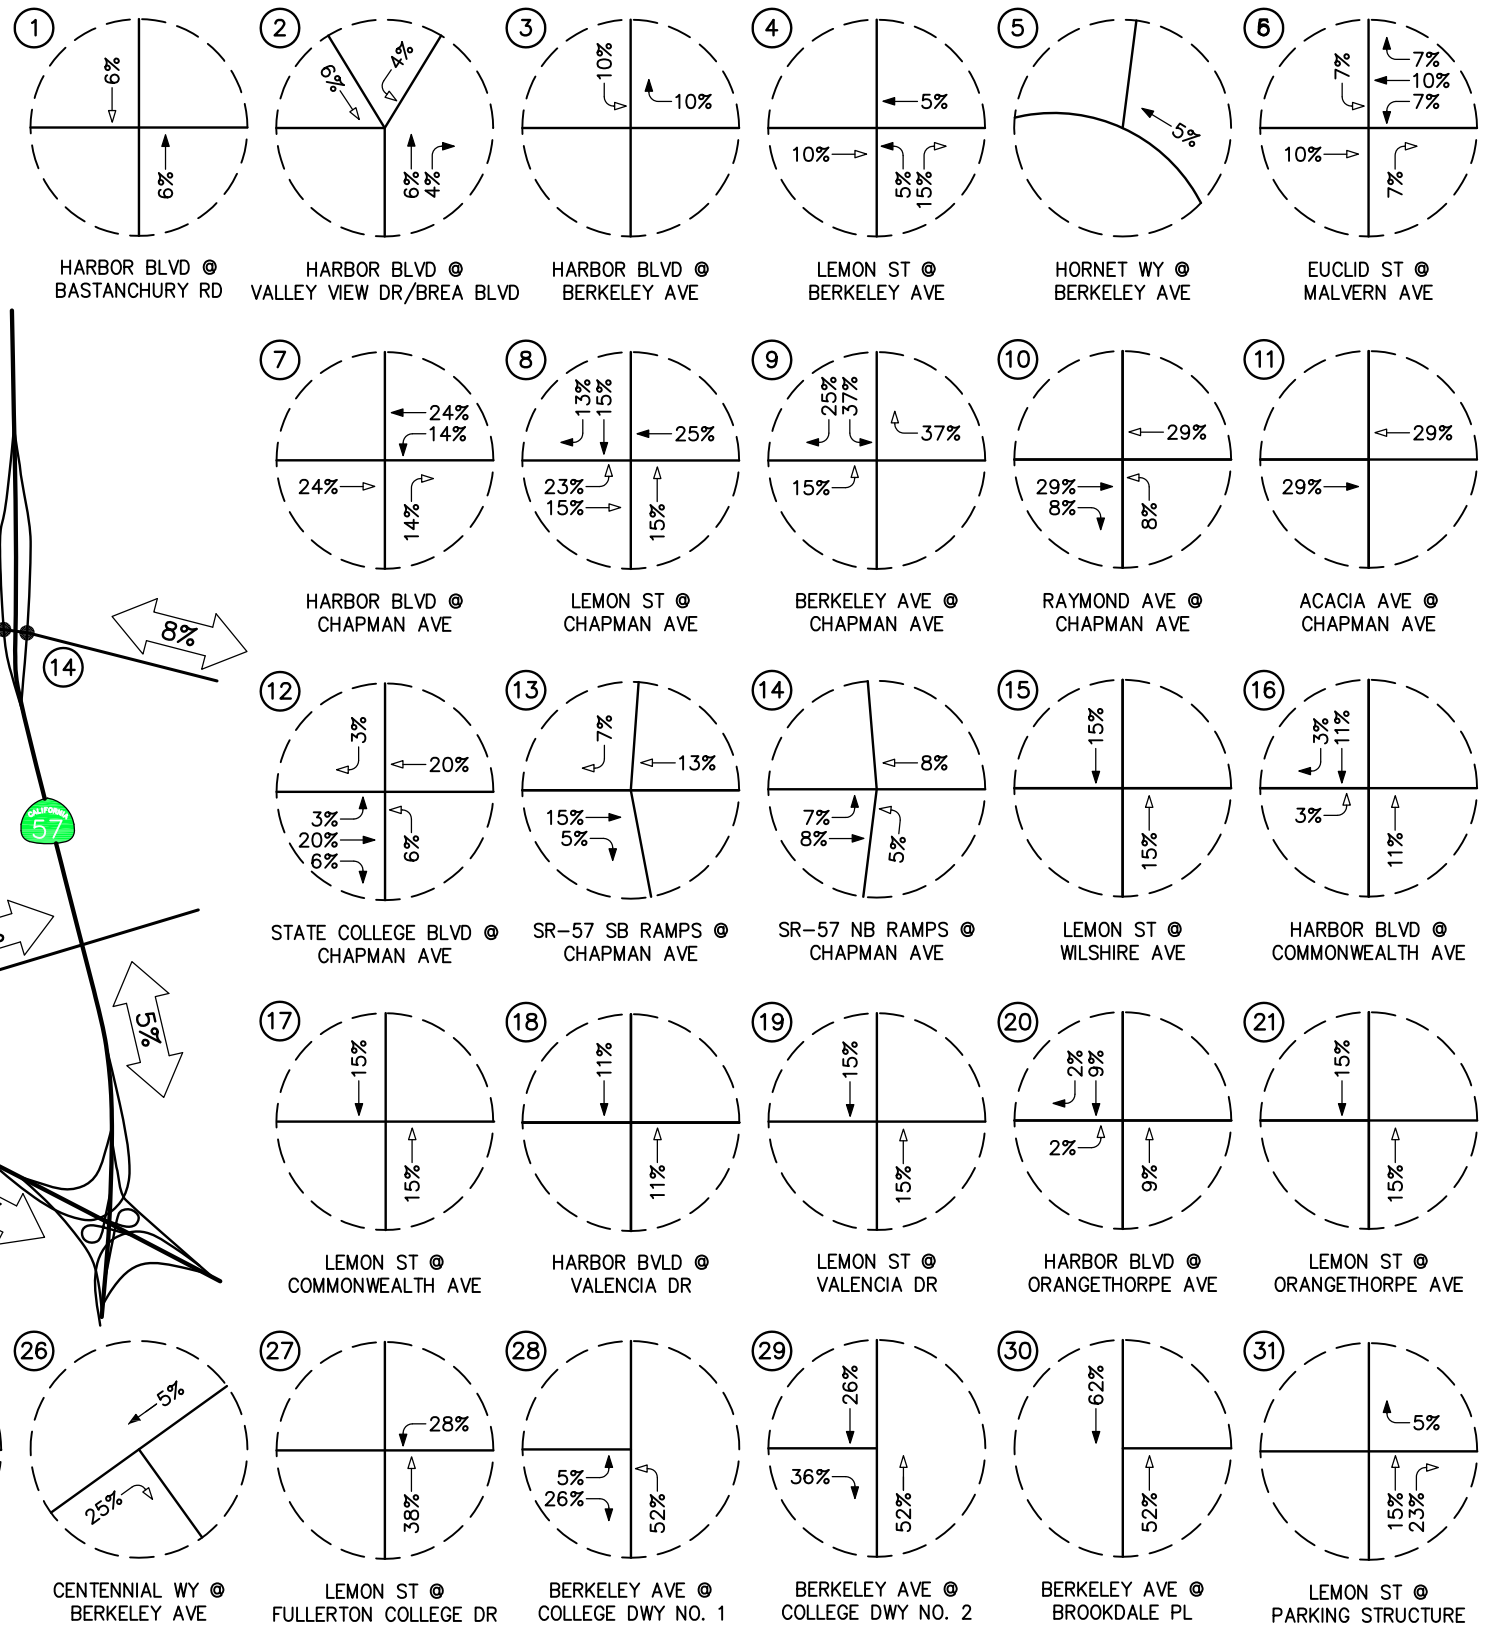

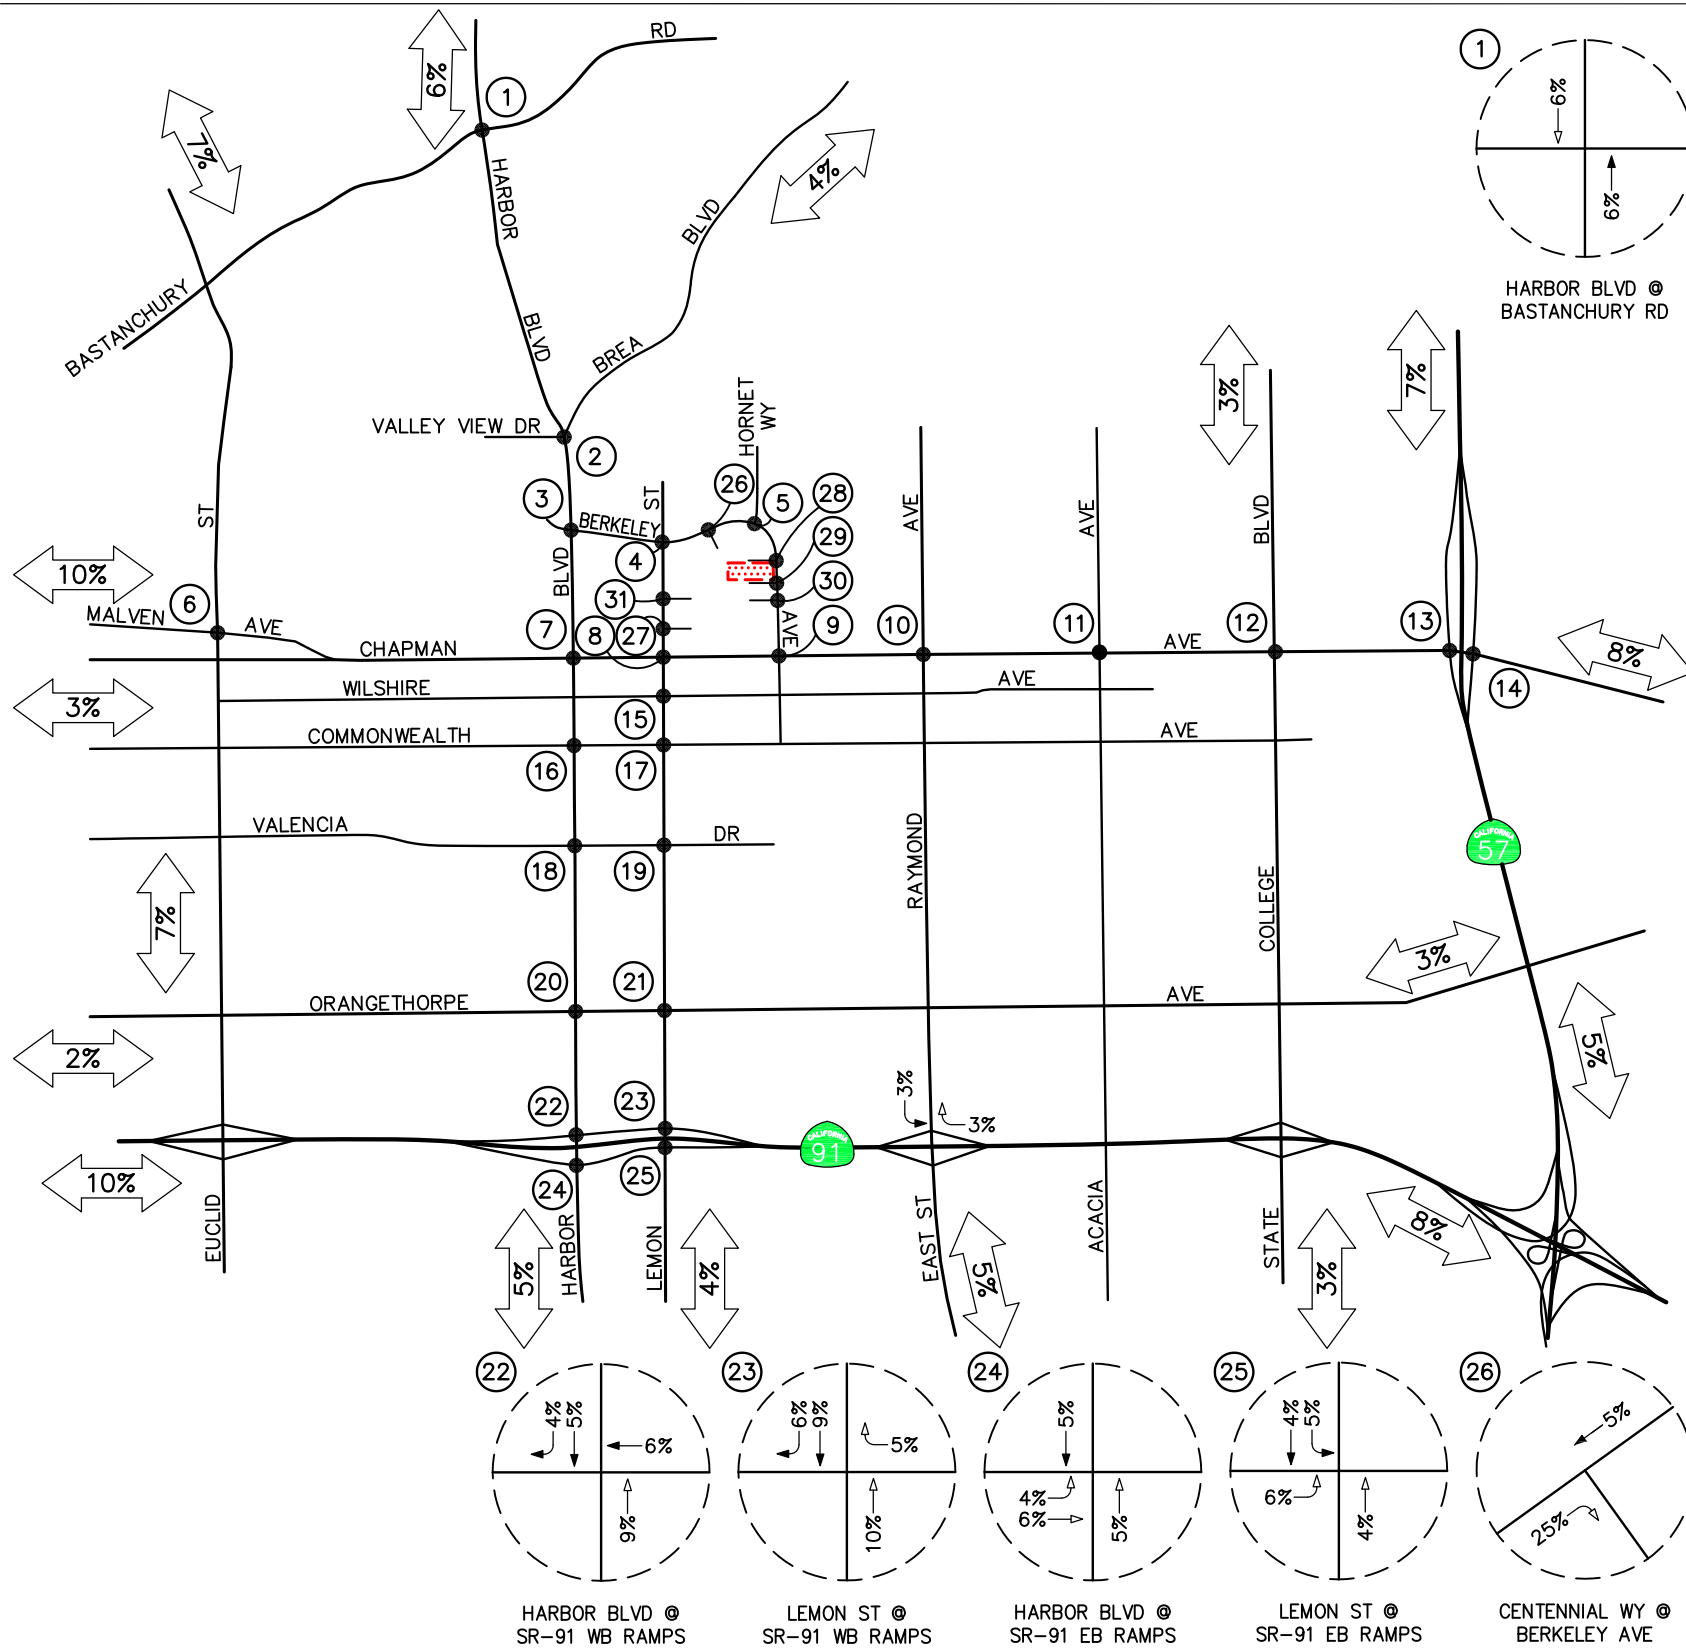

Project Description	Daily 2-Way	Saturday Field Event Arrival Peak Hour			Saturday Field Event Departure Peak Hour		
		Enter	Exit	Total	Enter	Exit	Total
<b><u>Generation Factors:</u></b>							
▪ Sherbeck Field – Field Event (TE/Occupied Seat) <sup>6</sup>	0.975	0.278	0.075	0.353	0.032	0.346	0.378
<b><u>Generation Forecasts:</u></b>							
▪ Sherbeck Field – Field Event (4,417 Seats)	4,307	1,228	331	1,559	141	1,528	1,669

Notes:

- TE/Seat = Trip ends per seat

<sup>6</sup> The trip generation rates for the field event were developed based on existing Saturday traffic counts/observations conducted at Yorba Linda High School on October 21, 2017 during the Fullerton College football game against Saddleback College, which had an attendance of 1,100 people and a start time of 1:00 PM. Traffic counts/observations were conducted at the three driveways along Bastanchury Road between 11:30 AM and 1:30 PM during the football game's arrival period and between 3:30 PM and 5:30 PM during the football game's departure period in order to determine the trip generation for the field event, which included an adjustment to the traffic counts to eliminate any non-football game related traffic at the high school during the arrival and departure periods. The Saturday traffic counts indicated that the Fullerton College football game generated 1,072 daily trips, 388 trips during the arrival peak hour (306 inbound and 82 outbound) and 416 trips during the departure peak hour (35 inbound and 381 outbound). The aforementioned trips were then divided by the game attendance (i.e. 1,100 people) to determine the Saturday daily, Saturday Arrival peak hour and Saturday Departure peak hour trip rates per seat specific to a Fullerton College football game.

## 6.0 FUTURE TRAFFIC CONDITIONS

### 6.1 Year 2020 Traffic Volumes

The Cumulative Base or “background” traffic projections account for existing traffic volumes, and include two growth elements over existing traffic volumes: (1) increase in the existing traffic volumes due to overall regional growth, inclusive of the development of projects outside the study area; and (2) traffic generated by specific developments expected to be constructed by the Year 2020 in the vicinity of the project study area. In order to develop forecasts for the Year 2020, existing (Year 2017) traffic volumes were increased by a total ambient growth factor of 1.5% (0.5% per year). The ambient growth factors were provided by City of Fullerton staff and are based on the City’s review of local/regional growth projections in the area of the proposed Project. The City of Fullerton provided volumes from their in-house traffic model for all cumulative projects related to Year 2020 traffic conditions. It should be noted that a portion of the Fullerton College Master Plan student growth (i.e. 638 students out of 3,189 students) was also included as a cumulative project in the Year 2020.

The weekday PM peak hour traffic volumes associated with the cumulative projects in the Year 2020 are presented in **Figure 6-1**. The Saturday Event Arrival and Saturday Event Departure peak hour traffic volumes associated with the cumulative projects in the Year 2020 are presented in **Figure 6-2**. It should be noted that the Saturday cumulative project traffic volumes were adjusted to be 75% of the weekday PM peak hour cumulative project traffic volumes. The 25% reduction was based on a comparison between existing PM peak hour traffic volumes and existing Saturday Midday and Afternoon peak hour traffic volumes at key study intersections around the campus (i.e. key study intersections #4, #7, #8 and #9). The comparisons revealed a volume reduction between approximately 25% and 50%. Based on discussions with City of Fullerton staff, it was determined that a 25% reduction should be utilized to provide a conservative forecast for the Saturday cumulative project traffic volumes.

**Figure 6-3** presents the weekday PM peak hour cumulative traffic volumes (existing traffic + ambient growth + cumulative projects) at the key study intersections for the Year 2020. **Figures 6-4** and **6-5** present the Saturday Event Arrival and Saturday Event Departure peak hour cumulative traffic volumes (existing traffic + ambient growth + cumulative projects) at the key study intersections for the Year 2020, respectively.

**Figure 6-6** illustrates the Year 2020 forecast weekday PM peak hour traffic volumes, with the inclusion of the trips generated by the proposed Project (i.e. academic instruction), respectively. **Figures 6-7** and **6-8** illustrate the Year 2020 forecast Saturday Event Arrival and Saturday Event Departure peak hour traffic volumes, with the inclusion of the trips generated by the proposed Project (i.e. field event), respectively.

**Appendix D** contains the Year 2020 weekday PM peak hour cumulative project traffic volumes for the thirty-one (31) key study intersections as provided by the City of Fullerton.

## 6.2 Year 2030 Buildout Traffic Volumes

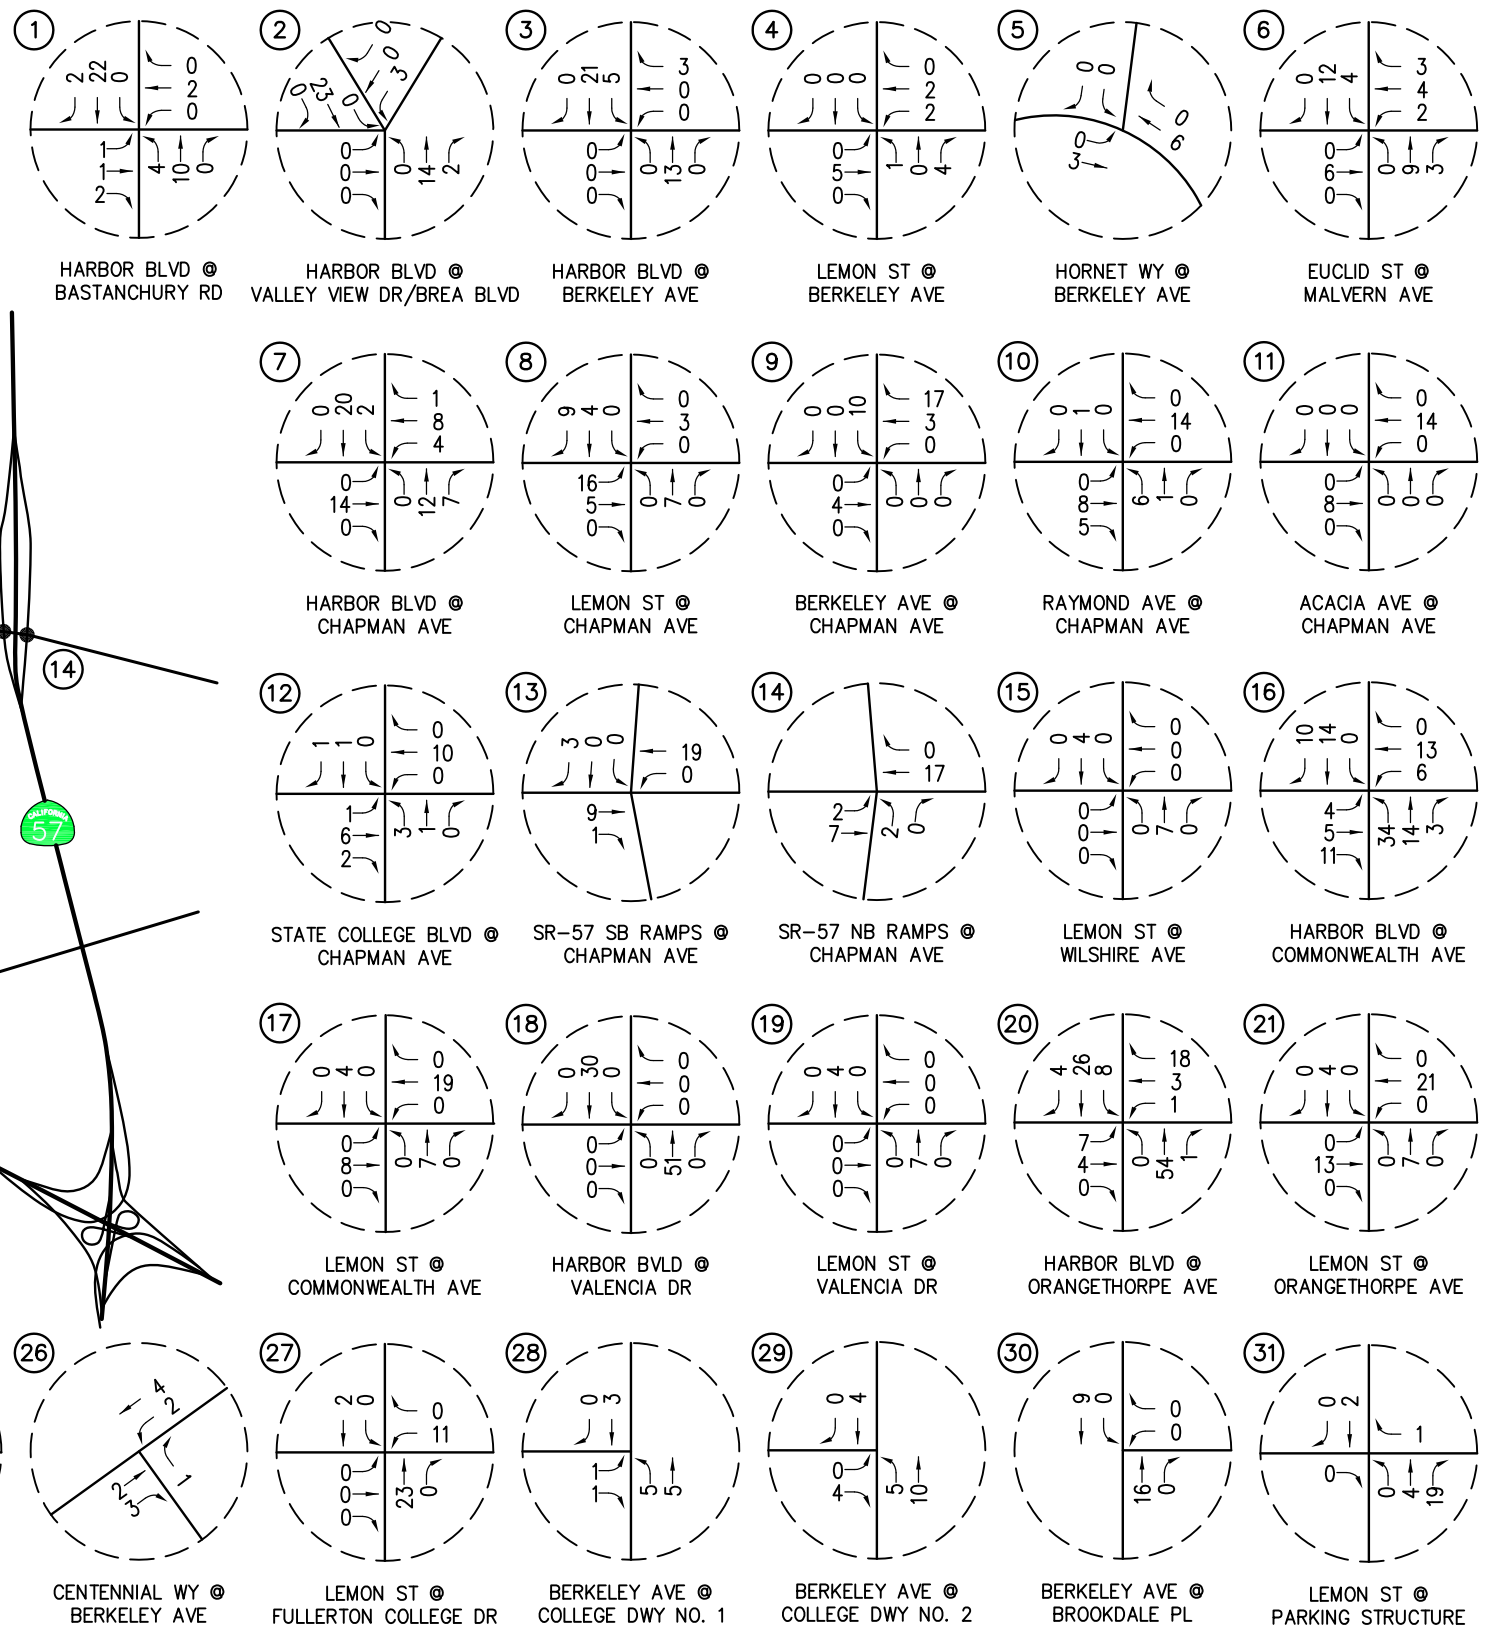

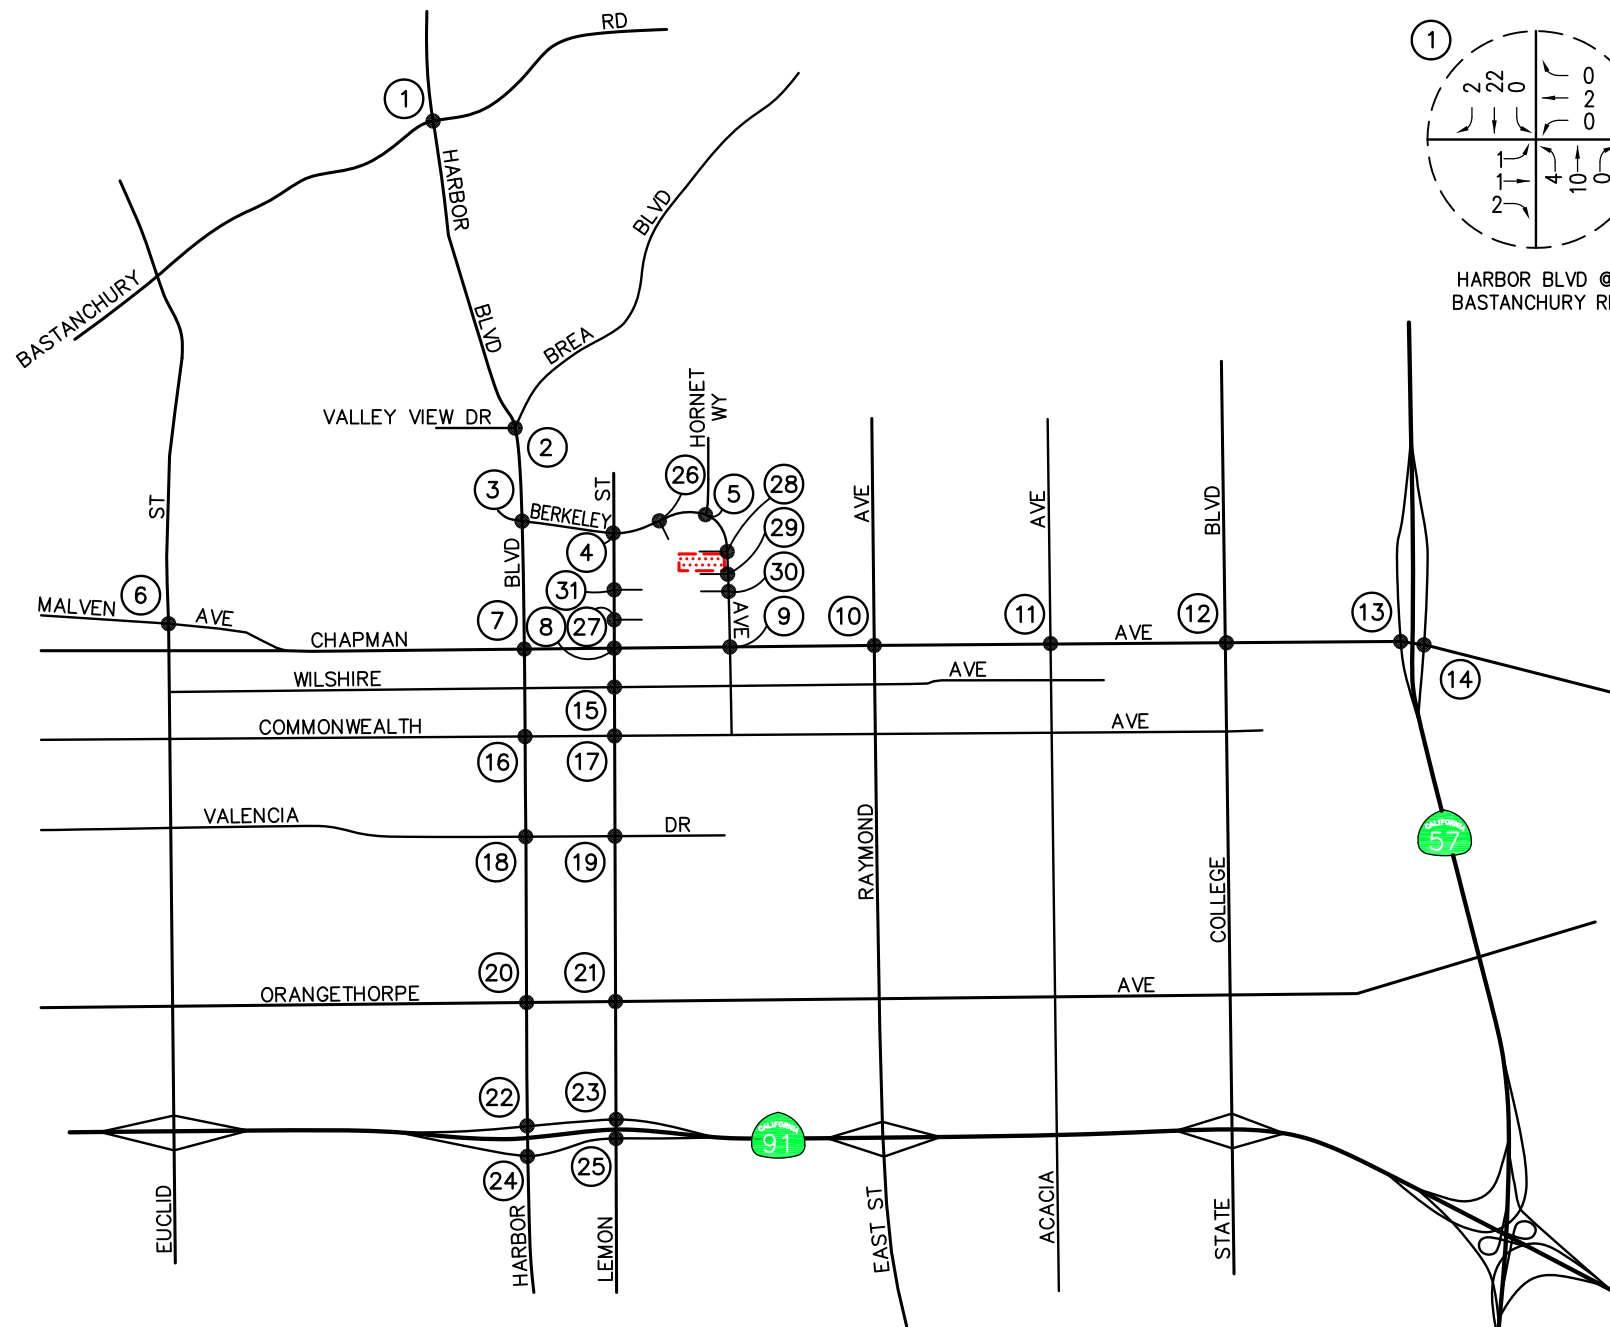

Similar to the approach in forecasting Year 2020 traffic volumes, Year 2030 peak hour background traffic volumes were forecast based on application of growth rates provided by the City of Fullerton to existing traffic volumes, and by further adding traffic volumes from all future cumulative projects (i.e. buildout of the City). A 10% total growth was applied to existing traffic volumes at key study intersections for all major through movements, and for any major turn movements, as identified by City of Fullerton staff. A 5% total growth was applied to existing traffic volumes for all of the remaining key intersection movements, which are considered to be minor movements. The ambient growth factors were provided by City of Fullerton staff and are based on the City's review of local/regional growth projections in the area of the proposed Project. The City of Fullerton provided volumes from their in-house traffic model for all cumulative projects related to Year 2030 traffic conditions. It should be noted that the Fullerton College Master Plan student growth (i.e. 3,189 students) was also included as a cumulative project in the Year 2030.

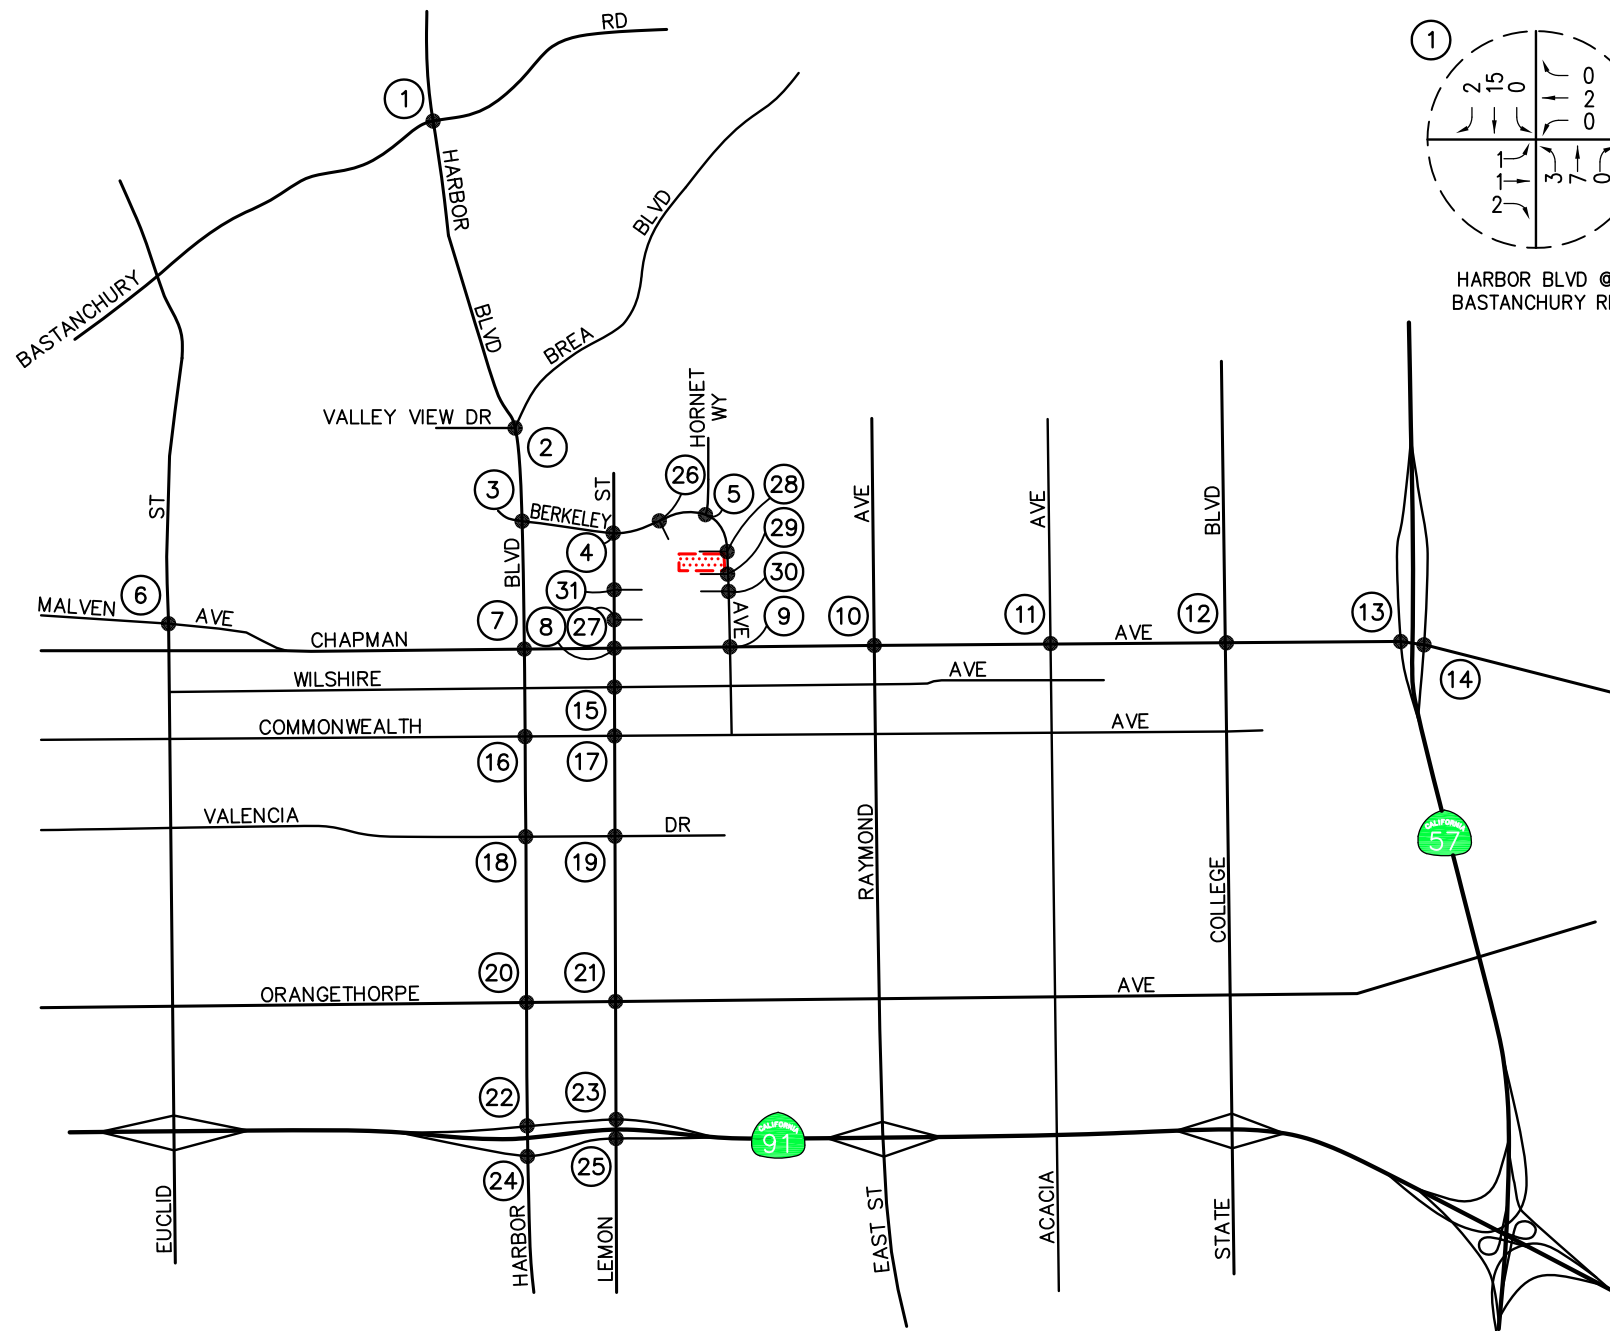

The weekday PM peak hour traffic volumes associated with the cumulative projects in the Year 2030 are presented in **Figure 6-9**. The Saturday Event Arrival and Saturday Event Departure peak hour traffic volumes associated with the cumulative projects in the Year 2030 are presented in **Figure 6-10**. It should be noted that the Saturday cumulative project traffic volumes were adjusted to be 75% of the weekday PM peak hour cumulative project traffic volumes. The 25% reduction was based on a comparison between existing PM peak hour traffic volumes and existing Saturday Midday and Afternoon peak hour traffic volumes at key study intersections around the campus (i.e. key study intersections #4, #7, #8 and #9). The comparisons revealed a volume reduction between approximately 25% and 50%. Based on discussions with City of Fullerton staff, it was determined that a 25% reduction should be utilized to provide a conservative forecast for the Saturday cumulative project traffic volumes.

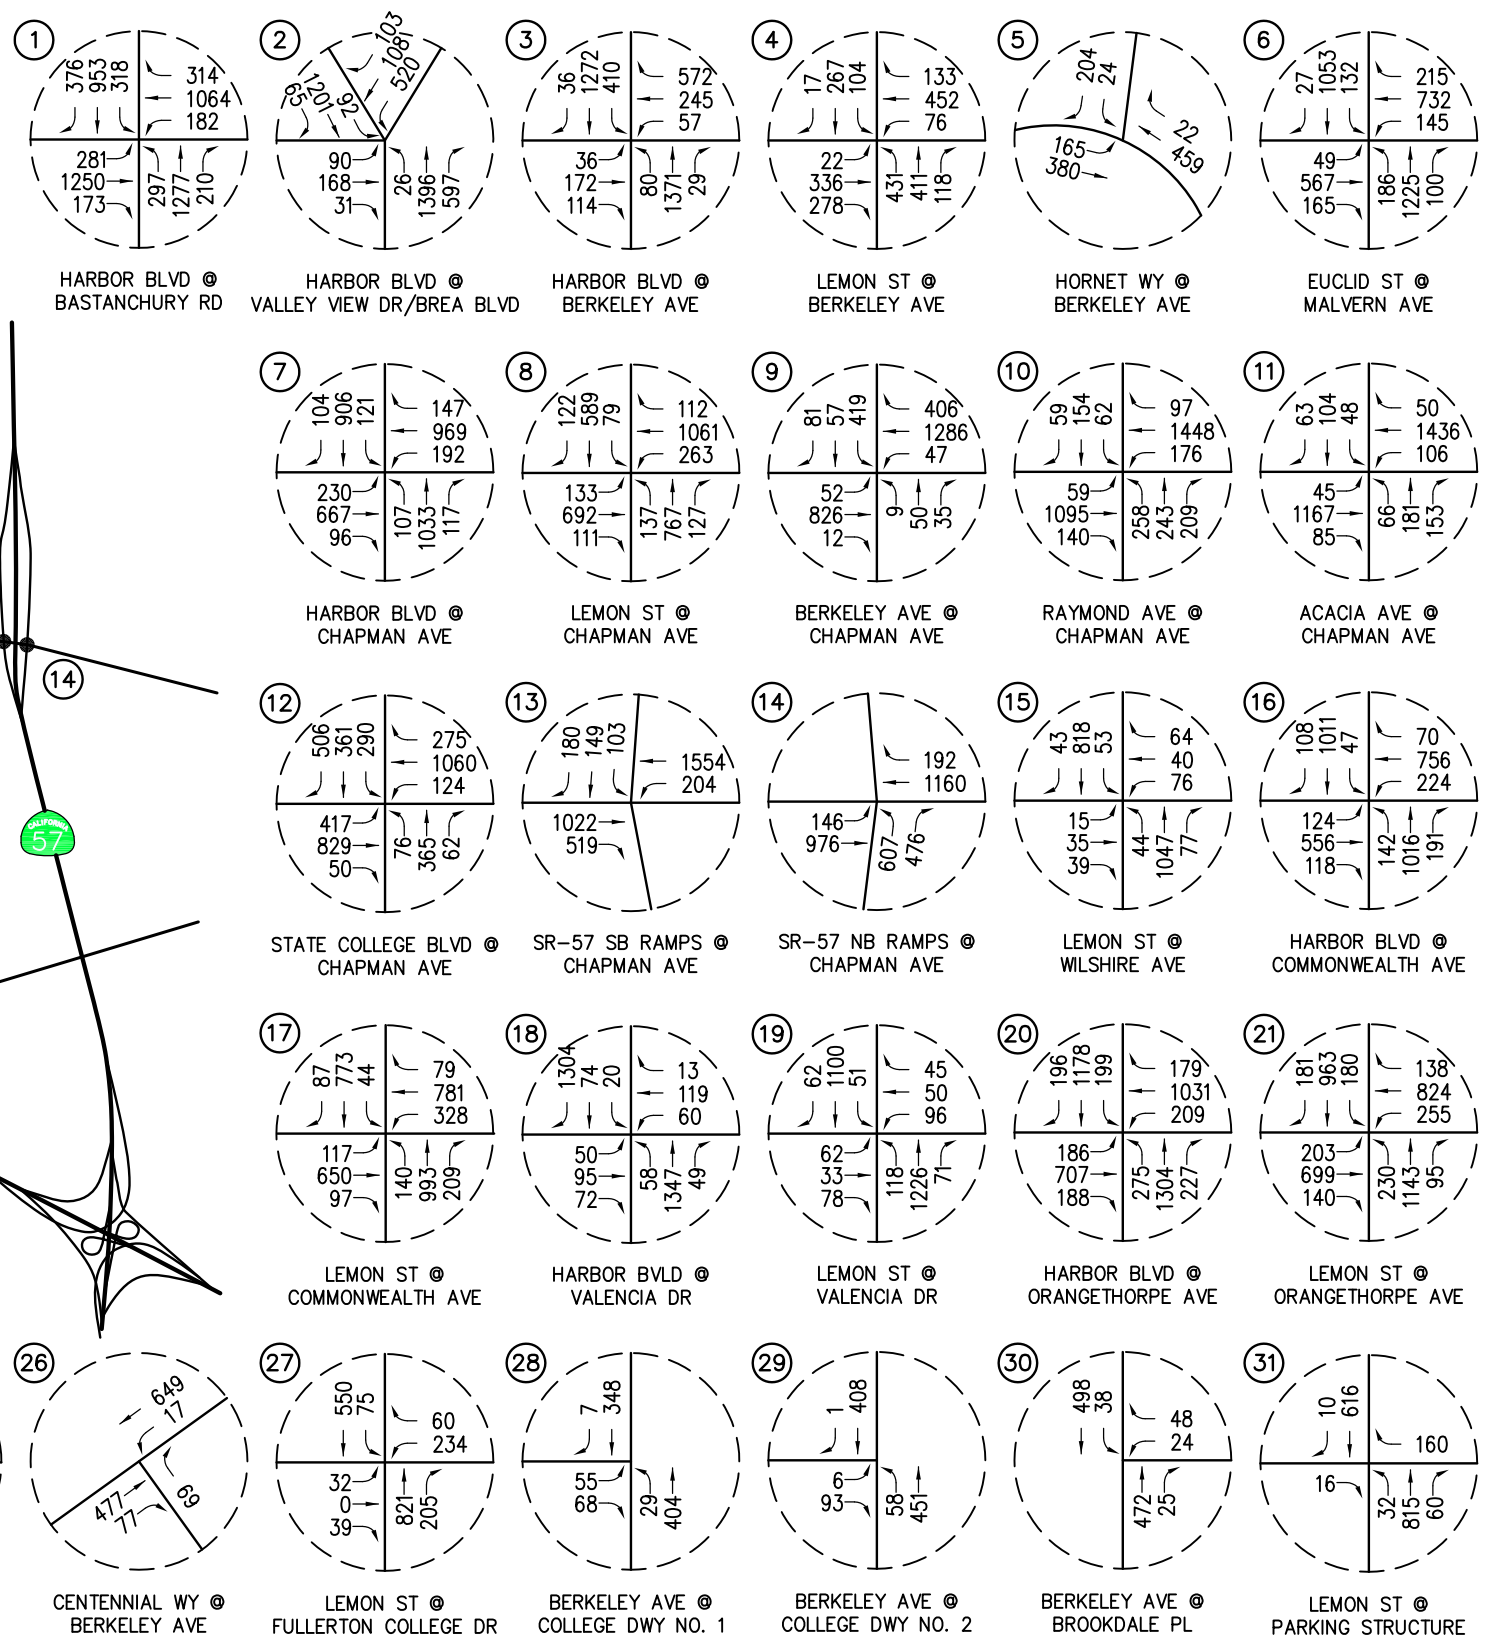

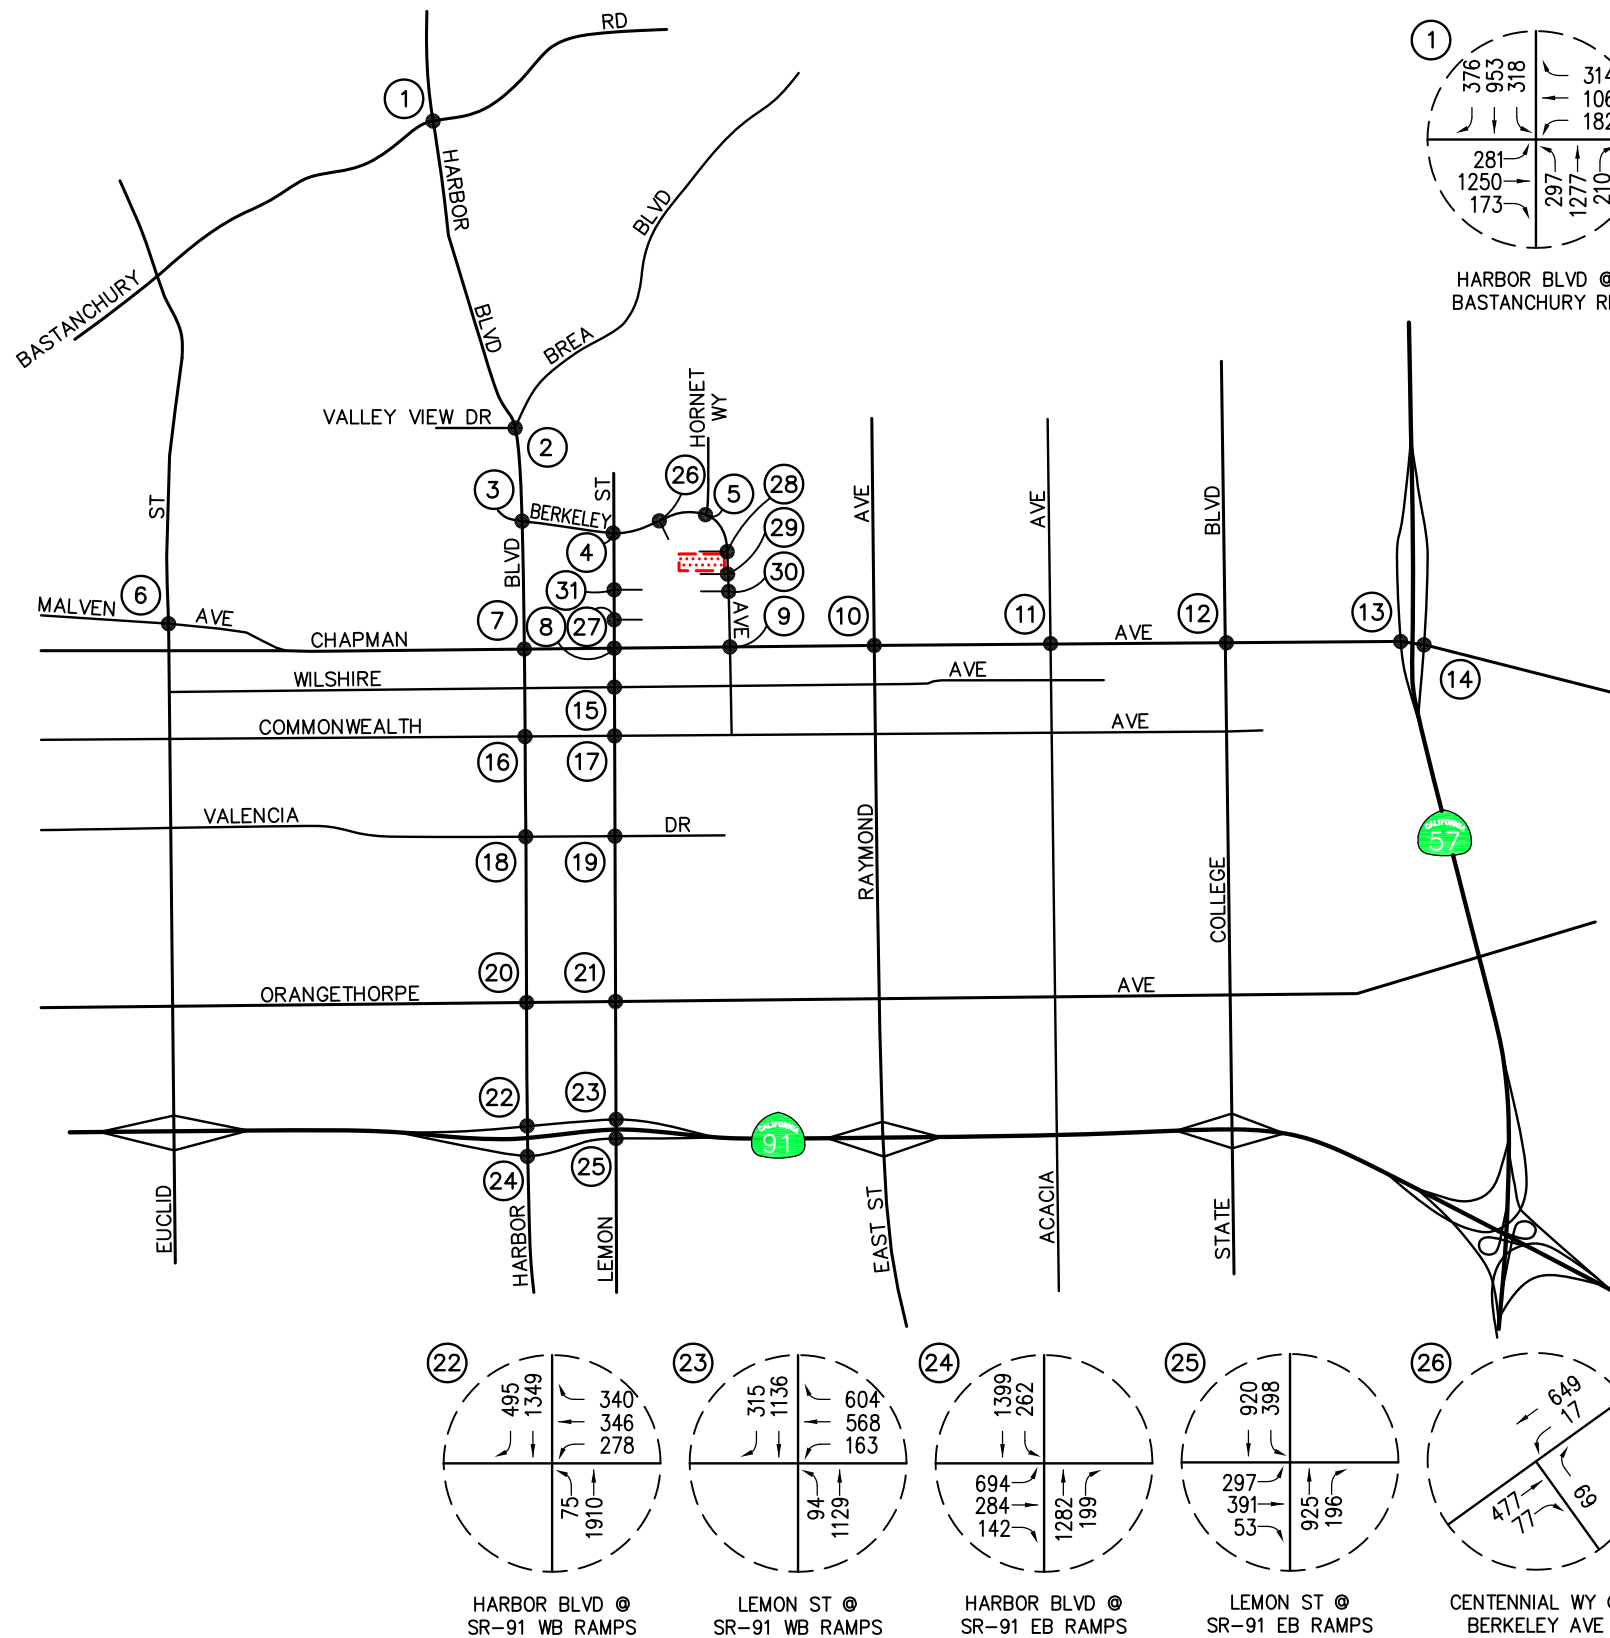

**Figure 6-11** presents the Year 2030 weekday PM peak hour buildout traffic volumes at the key study intersections. **Figures 6-12** and **6-13** present the Year 2030 Saturday Event Arrival and Saturday Event Departure peak hour buildout traffic volumes at the key study intersections, respectively. It should be noted that the buildout traffic volumes represent the accumulation of existing traffic, ambient growth traffic, and cumulative projects traffic.

**Figure 6-14** illustrates the Year 2030 forecast weekday PM peak hour traffic volumes, with the inclusion of the trips generated by the proposed Project (i.e. academic instruction), respectively. **Figures 6-15** and **6-16** illustrate the Year 2030 forecast Saturday Event Arrival and Saturday Event Departure peak hour traffic volumes, with the inclusion of the trips generated by the proposed Project (i.e. field event), respectively.

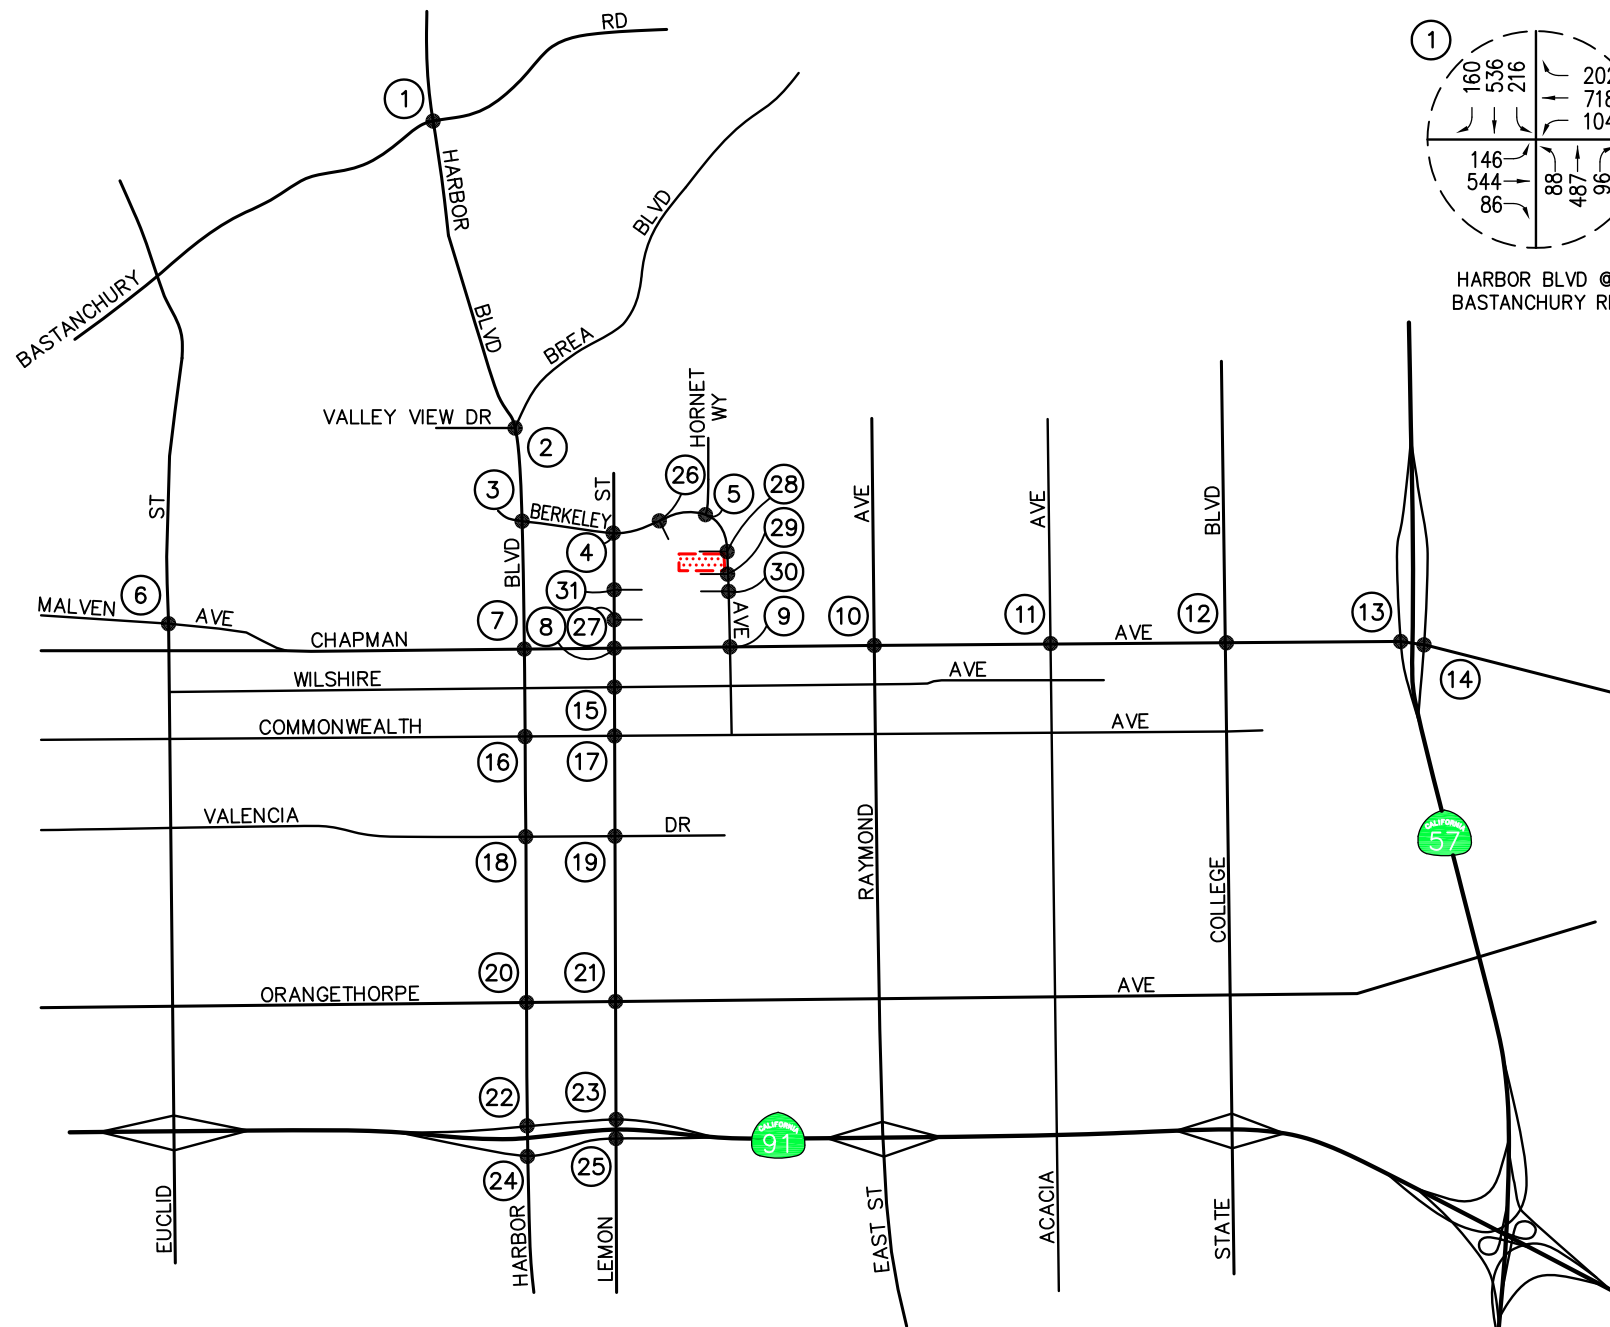

*Appendix D* also contains the Year 2030 weekday PM peak hour cumulative project traffic volumes for the thirty-one (31) key study intersections as provided by the City of Fullerton.

## 7.0 TRAFFIC IMPACT ANALYSIS METHODOLOGY

The relative impact of the proposed Project during the weekday PM peak hour, Saturday Event Arrival Period peak hour and Saturday Event Departure Period peak hour was evaluated based on analysis of future operating conditions at the thirty-one (31) key study intersections, without, then with, the proposed Project. The previously discussed capacity analysis procedures were utilized to investigate the future delay/volume-to-capacity relationships and service level characteristics at each study intersection utilizing the Vistro software and HCM 6 Methodology. The significance of the potential impacts of the Project (i.e. direct or cumulative) at each key intersection was then evaluated using the following traffic impact criteria.

### 7.1 Significant Impact Criteria

In order to provide a quantitative basis for determining the significant traffic impact at a specific location, it was necessary to establish the criteria to be used in the analysis of intersections for this study. Based on the City of Fullerton traffic study guidelines, a project is considered to have a significant impact at an intersection if the following criteria are met:

- *For signalized intersections, an impact is considered to be significant if the project causes an intersection at LOS D or better to degrade to LOS E or F.*
- *For unsignalized intersections, an impact is considered to be significant if the project causes an intersection at LOS D or better to degrade to LOS E or F. However, unsignalized intersection LOS is based on the control delay, but that delay is only assessed for those traffic movements that are stopped or must yield to through traffic. Some movements, including cross traffic on the minor street or left turns onto the major street may be acceptable with relatively long delays, when through traffic and right turns from a major street do not experience any delays at stopped intersections. When delay for cross traffic is severe (LOS F), the intersection should be further evaluated for possible improvement with traffic signals. In some cases, this analysis determines that the delay is being experienced by a very low number of vehicles and traffic signals are not warranted. For this condition, the intersection does not need to be considered impacted, but measures to reduce delay may be considered, if appropriate. In other cases, the number of stopped vehicles is substantial and traffic signals may be justified as a mitigation measure. Therefore, the following significance criteria for unsignalized intersections are used:*
  - *An unsignalized intersection impact is considered to be significant if the project causes an intersection at LOS D or better to degrade to LOS E or F, and the traffic signal warrant analysis determines that a signal is justified.*

It should be noted that although the City standard is LOS D, there are two intersections located in the Historic Downtown area where LOS E is deemed acceptable to the City because of the fully developed character of the downtown area, the presence of historic properties, and the great expense and hardship that would be caused by attempting to secure right-of-way required to improve LOS. The two intersections where LOS E is considered acceptable are: Harbor Boulevard/Chapman Avenue (i.e. key study intersection #6) and Harbor Boulevard/Commonwealth Avenue (i.e. key

study intersection #16). It should be further noted that LOS E is also considered acceptable at the CMP intersection of Harbor Boulevard/Orangethorpe Avenue (i.e. key study intersection #20).

## **7.2 Traffic Impact Analysis Scenarios**

The following scenarios are those for which LOS calculations have been performed at the thirty-one (31) key study intersections for Existing plus Project traffic conditions, Year 2020 plus Project traffic conditions and Year 2030 Buildout plus Project traffic conditions:

- A. Existing Traffic Conditions;
- B. Existing Plus Project Traffic Conditions;
- C. Scenario (B) with Improvements, if necessary;
- D. Year 2020 Cumulative Traffic Conditions;
- E. Year 2020 Cumulative Plus Project Traffic Conditions;
- F. Scenario (E) with Improvements, if necessary;
- G. Year 2030 Buildout Traffic Conditions,
- H. Year 2030 Buildout Plus Project Traffic Conditions; and
- I. Scenario (H) with Improvements, if necessary.

## 8.0 PEAK HOUR INTERSECTION CAPACITY ANALYSIS

### 8.1 Existing Plus Project Analysis – Weekday Academic Instruction

*Table 8-1* summarizes the weekday PM peak hour Level of Service results at the thirty-one (31) key study intersections for Existing plus Project (i.e. academic instruction) traffic conditions. The first column (1) of HCM/LOS values in *Table 8-1* presents a summary of existing weekday PM peak hour traffic conditions (which were also presented in *Table 3-3*). The second column (2) lists Existing plus Project (i.e. academic instruction) traffic conditions. The third column (3) shows the increase in the HCM value due to the added peak hour Project trips and indicates whether the traffic associated with the Project will have a significant impact based on the LOS standards and significant impact criteria defined in this report. The fourth column (4) of *Table 8-1* indicates the anticipated operating conditions with implementation of improvements planned and/or recommended to mitigate Project traffic and/or achieve an acceptable Level of Service.

Review of Columns 2 and 3 of *Table 8-1* indicates that traffic associated with the proposed Project (i.e. academic instruction) ***will not*** significantly impact any of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. Although the intersection of Harbor Boulevard/Bastanchury Road is forecast to operate at unacceptable LOS E during the PM peak hour without and with the addition of project traffic, the addition of Project trips is not anticipated to worsen or further degrade the service level and therefore is considered less than significant based on the LOS standards and impact criteria detailed in **Section 7.1**. The remaining thirty (30) key study intersections currently operate and are forecast to continue to operate at an acceptable service level during the weekday PM peak hour with the addition of Project generated traffic to existing traffic.

*Appendix E* presents the Existing plus Project HCM/LOS weekday PM peak hour calculations for the thirty-one (31) key study intersections.

### 8.2 Existing Plus Project Analysis – Field Event

*Table 8-2* summarizes the Saturday Event Arrival peak hour and Saturday Event Departure peak hour Level of Service results at the thirty-one (31) key study intersections for Existing plus Project (i.e. field event) traffic conditions. The first column (1) of HCM/LOS values in *Table 8-2* presents a summary of existing Saturday Event Arrival peak hour and Saturday Event Departure peak hour traffic conditions (which were also presented in *Table 3-4*). The second column (2) lists Existing plus Project (i.e. field event) traffic conditions. The third column (3) shows the increase in the HCM value due to the added peak hour Project trips and indicates whether the traffic associated with the Project will have a significant impact based on the LOS standards and significant impact criteria defined in this report. The fourth column (4) of *Table 8-2* indicates the anticipated operating conditions with implementation of improvements planned and/or recommended to mitigate Project traffic and/or achieve an acceptable Level of Service.

Review of Columns 2 and 3 of *Table 8-2* indicates that traffic associated with the proposed Project (i.e. field event) will significantly impact three (3) of the thirty-one (31) key study intersections,

when compared to the LOS standards and significant impact criteria specified in this report. The remaining twenty-eight (28) key study intersections currently operate and are forecast to continue to operate at an acceptable service level during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour with the addition of Project generated traffic to existing traffic. The intersections operating at an adverse level of service under existing plus project Saturday traffic conditions are as follows:

<u>Key Intersection</u>	<u>Saturday Arrival</u>		<u>Saturday Departure</u>	
	<u>ICU/HCM</u>	<u>LOS</u>	<u>ICU/HCM</u>	<u>LOS</u>
4. Lemon Street at Berkeley Avenue	---	---	72.4 s/v	E
28. Berkeley Avenue at College Driveway No. 1	---	---	72.2 s/v	F
29. Berkeley Avenue at College Driveway No. 2	---	---	85.4 s/v	F

As shown in column 4, the implementation of improvements (i.e. Traffic Management Plan) at the impacted key study intersections of Lemon Street/Berkeley Avenue, Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 will improve the intersections level of service operation to an acceptable level.

*Appendix E* also presents the Existing plus Project HCM/LOS Saturday Event Arrival peak hour and Saturday Event Departure peak hour calculations for the thirty-one (31) key study intersections.

### **8.3 Year 2020 Traffic Conditions – Weekday Academic Instruction**

**Table 8-3** summarizes the weekday PM peak hour Level of Service results at the thirty-one (31) key study intersections for Year 2020 traffic conditions. The first column (1) of HCM/LOS values in **Table 8-3** presents a summary of existing weekday PM peak hour traffic conditions (which were also presented in **Table 3-3** and **8-1**). The second column (2) lists projected Year 2020 traffic conditions (existing plus ambient growth plus cumulative projects traffic) based on existing intersection geometry, but without any traffic generated from the proposed Project. The third column (3) presents forecast Year 2020 traffic conditions with the addition of Project traffic. The fourth column (4) shows the increase in the HCM value due to the added peak hour Project trips and indicates whether the traffic associated with the Project will have a significant impact based on the LOS standards and significant impact criteria defined in this report. The fifth column (5) of **Table 8-3** indicates the anticipated operating conditions with implementation of improvements planned and/or recommended to mitigate Project traffic and/or achieve an acceptable Level of Service.

#### **8.3.1 Year 2020 Traffic Conditions (Without Project) – Weekday Academic Instruction**

An analysis of future (Year 2020) traffic conditions indicates that the addition of ambient growth and cumulative projects traffic will cumulatively impact one (1) of the thirty-one (31) key study intersections. The remaining thirty (30) key study intersections are forecast to operate at an acceptable service level during the weekday PM peak hour with the addition of ambient traffic growth and cumulative projects traffic. The intersections forecast to operate adversely in the Year 2020 consists of the following:

<u>Key Intersection</u>	<u>PM Peak Hour</u>	
	<u>HCM</u>	<u>LOS</u>
1. Harbor Boulevard at Bastanchury Road	58.1 s/v	E

### 8.3.2 Year 2020 Plus Project Traffic Conditions – Weekday Academic Instruction

Review of Columns 3 and 4 of *Table 8-3* indicates that traffic associated with the proposed Project (i.e. academic instruction) ***will not*** significantly impact any of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. Although the intersection of Harbor Boulevard/Bastanchury Road is forecast to operate at unacceptable LOS E during the PM peak hour without and with the addition of project traffic, the addition of Project trips is not anticipated to worsen or further degrade the service level and therefore is considered less than significant based on the LOS standards and impact criteria detailed in **Section 7.1**. The remaining thirty (30) key study intersections are forecast to continue to operate at an acceptable LOS with the addition of Project generated traffic under Year 2020 traffic conditions.

**Appendix F** presents the Year 2020 plus Project HCM/LOS weekday PM peak hour calculations for the thirty-one (31) key study intersections.

## 8.4 Year 2020 Traffic Conditions – Saturday Field Event

**Table 8-4** summarizes the Saturday Event Arrival peak hour and Saturday Event Departure peak hour Level of Service results at the thirty-one (31) key study intersections for Year 2020 traffic conditions. The first column (1) of HCM/LOS values in *Table 8-4* presents a summary of existing Saturday Event Arrival peak hour and Saturday Event Departure peak hour traffic conditions (which were also presented in *Table 3-4* and *8-2*). The second column (2) lists projected Year 2020 traffic conditions (existing plus ambient growth plus cumulative projects traffic) based on existing intersection geometry, but without any traffic generated from the proposed Project. The third column (3) presents forecast Year 2020 traffic conditions with the addition of Project traffic. The fourth column (4) shows the increase in the HCM value due to the added peak hour Project trips and indicates whether the traffic associated with the Project will have a significant impact based on the LOS standards and significant impact criteria defined in this report. The fifth column (5) of *Table 8-4* indicates the anticipated operating conditions with implementation of improvements planned and/or recommended to mitigate Project traffic and/or achieve an acceptable Level of Service.

### 8.4.1 Year 2020 Traffic Conditions (Without Project) – Saturday Field Event

An analysis of future (Year 2020) Saturday cumulative traffic conditions indicates that the addition of ambient traffic growth and cumulative projects traffic will not adversely impact the thirty-one (31) key study intersections. The thirty-one (31) key study intersections are forecast to continue to operate at acceptable levels of service during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour with the addition of ambient traffic growth and cumulative projects traffic.

#### 8.4.2 Year 2020 Plus Project Traffic Conditions – Saturday Field Event

Review of Columns 3 and 4 of *Table 8-3* indicates that traffic associated with the proposed Project (i.e. field event) will significantly impact three (3) of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. The remaining twenty-eight (28) key study intersections are forecast to continue to operate at an acceptable LOS with the addition of Project generated traffic under Year 2020 traffic conditions. The intersections operating at an adverse level of service under Year 2020 plus project Saturday traffic conditions are as follows:

<u>Key Intersection</u>	<u>Saturday Arrival</u>		<u>Saturday Departure</u>	
	<u>ICU/HCM</u>	<u>LOS</u>	<u>ICU/HCM</u>	<u>LOS</u>
4. Lemon Street at Berkeley Avenue	---	---	73.6 s/v	E
28. Berkeley Avenue at College Driveway No. 1	---	---	76.1 s/v	F
29. Berkeley Avenue at College Driveway No. 2	---	---	89.8 s/v	F

As shown in column 5, the implementation of improvements (i.e. Traffic Management Plan) at the impacted key study intersections of Lemon Street/Berkeley Avenue, Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 will improve the intersections level of service operation to an acceptable level.

*Appendix F* also presents the Year 2020 plus Project HCM/LOS Saturday Event Arrival peak hour and Saturday Event Departure peak hour calculations for the thirty-one (31) key study intersections.

#### 8.5 Year 2030 Traffic Conditions – Weekday Academic Instruction

*Table 8-5* summarizes the weekday PM peak hour Level of Service results at the thirty-one (31) key study intersections for the Year 2030 buildout year and is similar in setup to *Table 8-3*.

##### 8.5.1 Year 2030 Buildout Traffic Conditions (Without Project) – Weekday Academic Instruction

An analysis of future (Year 2030) buildout traffic conditions indicates that the addition of ambient growth and cumulative projects traffic will cumulatively impact eleven (11) of the thirty-one (31) key study intersections. The remaining twenty (20) key study intersections are forecast to operate at an acceptable service level during the weekday PM peak hour with the addition of ambient traffic growth and cumulative projects traffic. The intersections forecast to operate adversely in the Year 2030 consist of the following:

<u>Key Intersection</u>	<u>PM Peak Hour</u>	
	<u>HCM</u>	<u>LOS</u>
1. Harbor Boulevard at Bastanchury Road	89.2 s/v	F
3. Harbor Boulevard at Berkeley Avenue	67.2 s/v	E
6. Euclid Street at Malvern Avenue	74.0 s/v	E
7. Harbor Boulevard at Chapman Avenue	85.0 s/v	F
8. Lemon Street at Chapman Avenue	55.6 s/v	E

10. Raymond Avenue at Chapman Avenue	81.2 s/v	F
12. State College Boulevard at Chapman Avenue	128.0 s/v	F
14. SR-57 NB Ramps at Chapman Avenue	86.2 s/v	F
18. Harbor Boulevard at Valencia Drive	78.5 s/v	E
20. Harbor Boulevard at Orangethorpe Avenue	116.6 s/v	F
21. Lemon Street at Orangethorpe Avenue	91.1 s/v	F

### 8.5.2 Year 2030 Buildout Plus Project Traffic Conditions – Weekday Academic Instruction

Review of Columns 3 and 4 of *Table 8-5* indicates that traffic associated with the proposed Project (i.e. academic instruction) ***will not*** significantly impact any of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. Although the intersections of Harbor Boulevard/Bastanchury Road, Harbor Boulevard/Berkeley Avenue, Euclid Street/Malvern Avenue, Harbor Boulevard/Chapman Avenue, Lemon Street/Chapman Avenue, Raymond Avenue/Chapman Avenue, State College Boulevard/Chapman Avenue, SR-57 NB Ramps/Chapman Avenue, Harbor Boulevard/Valencia Drive, Harbor Boulevard/Orangethorpe Avenue and Lemon Street/Orangethorpe are forecast to operate at unacceptable LOS E or LOS F during the PM peak hour without and with the addition of project traffic, the addition of Project trips is not anticipated to worsen or further degrade the service level and therefore is considered less than significant based on the LOS standards and impact criteria detailed in **Section 7.1**. The remaining twenty (20) key study intersections are forecast to continue to operate at an acceptable LOS with the addition of Project generated traffic under Year 2030 Buildout traffic conditions.

**Appendix G** presents the Year 2030 Buildout plus Project HCM/LOS weekday PM peak hour calculations for the thirty-one (31) key study intersections.

## 8.6 Year 2030 Traffic Conditions – Saturday Field Event

**Table 8-6** summarizes the Saturday Event Arrival peak hour and Saturday Event Departure peak hour Level of Service results at the thirty-one (31) key study intersections for the Year 2030 buildout year and is similar in setup to *Table 8-4*.

### 8.6.1 Year 2030 Buildout Traffic Conditions (Without Project) – Saturday Field Event

An analysis of future (Year 2030) Saturday buildout traffic conditions indicates that the addition of ambient growth and cumulative projects traffic will cumulatively impact one (1) of the thirty-one (31) key study intersections. The remaining thirty (30) key study intersections are forecast to operate at an acceptable service level during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour with the addition of ambient traffic growth and cumulative projects traffic. The intersection forecast to operate adversely in the Year 2030 consists of the following:

<u>Key Intersection</u>	<u>Saturday Arrival</u>		<u>Saturday Departure</u>	
	<u>ICU/HCM</u>	<u>LOS</u>	<u>ICU/HCM</u>	<u>LOS</u>
20. Harbor Boulevard at Orangethorpe Avenue	92.1 s/v	F	81.7 s/v	F

### 8.6.2 Year 2030 Buildout Plus Project Traffic Conditions – Saturday Field Event

Review of Columns 3 and 4 of *Table 8-6* indicates that traffic associated with the proposed Project (i.e. field event) will significantly impact four (4) of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. Although the intersection of Harbor Boulevard/Orangethorpe Avenue is forecast to operate at unacceptable LOS F during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour without and with the addition of project traffic, the addition of Project trips is not anticipated to worsen or further degrade the service level and therefore is considered less than significant based on the LOS standards and impact criteria detailed in **Section 7.1**. The remaining twenty-six (26) key study intersections are forecast to continue to operate at an acceptable LOS with the addition of Project generated traffic under Year 2030 Buildout traffic conditions. The intersections operating at an adverse level of service under Year 2030 Buildout plus project Saturday traffic conditions are as follows:

<u>Key Intersection</u>	<u>Saturday Arrival</u>		<u>Saturday Departure</u>	
	<u>ICU/HCM</u>	<u>LOS</u>	<u>ICU/HCM</u>	<u>LOS</u>
4. Lemon Street at Berkeley Avenue	---	---	72.9 s/v	E
12. State College Boulevard at Chapman Avenue	66.4 s/v	E	89.4 s/v	F
28. Berkeley Avenue at College Driveway No. 1	124.2 s/v	F	114.1 s/v	F
29. Berkeley Avenue at College Driveway No. 2	---	---	113.6 s/v	F

As shown in column 5, the implementation of improvements at the impacted key study intersection of State College Boulevard/Chapman Avenue completely offsets the impact of project traffic. The implementation of improvements (i.e. Traffic Management Plan) at the impacted key study intersections of Lemon Street/Berkeley Avenue, Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 will improve the intersections level of service operation to an acceptable level.

*Appendix G* also presents the Year 2030 Buildout plus Project HCM/LOS Saturday Event Arrival peak hour and Saturday Event Departure peak hour calculations for the thirty-one (31) key study intersections.

**TABLE 8-1**  
**EXISTING PLUS PROJECT WEEKDAY PEAK HOUR INTERSECTION CAPACITY ANALYSIS – ACADEMIC INSTRUCTION**

Key Intersection	Min. Acc. LOS	Time Period	(1)  Existing Traffic Conditions		(2)  Existing Plus Project Traffic Conditions		(3)  Significant Impact		(4)  Existing Plus Project With Improvements	
			HCM	LOS	HCM	LOS	Increase	Yes/No	HCM	LOS
1. Harbor Boulevard at Bastanchury Road	D	Weekday PM	<b>57.0 s/v</b>	<b>E</b>	<b>57.0 s/v</b>	<b>E</b>	0.0 s/v	No	--	--
2. Harbor Boulevard at Valley View Drive/ Brea Boulevard	D	Weekday PM	30.0 s/v	C	30.1 s/v	C	0.1 s/v	No	--	--

## 9.0 STATE OF CALIFORNIA (CALTRANS) METHODOLOGY

In conformance with the current Caltrans *Guide for the Preparation of Traffic Impact Studies*, existing and projected weekday PM peak hour, Saturday Event Arrival peak hour and Saturday Event Departure peak hour operating conditions at the six (6) state-controlled study intersections within the study area have been evaluated using the *Highway Capacity Manual* operations method of analysis. These state-controlled locations include the following six of thirty-one key study intersections:

- |  |  |
|--|--|
| 13. SR-57 SB Ramps at Chapman Avenue   | 23. Lemon Street at SR-91 WB Ramps     |
| 14. SR-57 NB Ramps at Chapman Avenue   | 24. Harbor Boulevard at SR-91 EB Ramps |
| 22. Harbor Boulevard at SR-91 WB Ramps | 25. Lemon Street at SR-91 EB Ramps     |

Caltrans “endeavors to maintain a target LOS at the transition between LOS “C” and LOS “D” on State highway facilities”; it does not require that LOS “D” (shall) be maintained. However, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. Based on historic coordination with Caltrans, for this analysis, LOS D is the target level of service standard and will be utilized to assess the project impacts at the state-controlled study intersections.

### 9.1 Existing Plus Project Traffic Conditions – Weekday Academic Instruction

*Table 9-1* summarizes the weekday PM peak hour HCM level of service results at the six (6) state-controlled study intersections within the study area for Existing plus Project (i.e. academic instruction) traffic conditions. The first column (1) of HCM/LOS values in *Table 9-1* presents a summary of existing traffic conditions. The second column (2) presents Existing plus Project (i.e. academic instruction) traffic conditions based on existing intersection geometry. The third column (3) indicates whether added peak hour Project trips will have a significant impact based on the significant impact criteria defined in this report. The fourth column (4) indicates the anticipated level of service with planned and/or recommended improvements.

#### 9.1.1 Existing Traffic Conditions – Weekday Academic Instruction

Review of Column 1 of *Table 9-1* indicates that all six (6) state-controlled study intersections currently operate at an acceptable LOS during the weekday PM peak hour.

#### 9.1.2 Existing Plus Project Traffic Conditions – Weekday Academic Instruction

Review of Columns 2 and 3 of *Table 9-1* indicates that traffic associated with the proposed Project (i.e. academic instruction) **will not** significantly impact any of the six (6) state-controlled study intersections, when compared to the LOS standards and significant impact criteria specified in this report. The six (6) state-controlled study intersections are forecast to operate at acceptable service levels during the weekday PM peak hour with the addition of project traffic to existing traffic.

*Appendix H* presents the Existing plus Project HCM/LOS weekday PM peak hour calculations for the six (6) state-controlled study intersections.

## 9.2 Existing Plus Project Traffic Conditions – Saturday Field Event

*Table 9-2* summarizes the Saturday Event Arrival peak hour and Saturday Event Departure peak hour Level of Service results at the six (6) state-controlled study intersections within the study area for Existing plus Project (i.e. field event) traffic conditions. The first column (1) of HCM/LOS values in *Table 9-2* presents a summary of existing traffic conditions. The second column (2) presents Existing plus Project (i.e. field event) traffic conditions based on existing intersection geometry. The third column (3) indicates whether added peak hour Project trips will have a significant impact based on the significant impact criteria defined in this report. The fourth column (4) indicates the anticipated level of service with planned and/or recommended improvements.

### 9.2.1 Existing Traffic Conditions – Saturday Field Event

Review of Column 1 of *Table 9-2* indicates that all six (6) state-controlled study intersections currently operate at an acceptable LOS during the Saturday Event Arrival and Event Departure peak hours.

### 9.2.2 Existing Plus Project Traffic Conditions – Saturday Field Event

Review of Columns 2 and 3 of *Table 9-2* indicates that traffic associated with the proposed Project (i.e. field event) ***will not*** significantly impact any of the six (6) state-controlled study intersections, when compared to the LOS standards and significant impact criteria specified in this report. The six (6) state-controlled study intersections are forecast to operate at acceptable service levels during the Saturday Event Arrival and Event Departure peak hours with the addition of project traffic to existing traffic.

*Appendix H* also presents the Existing plus Project HCM/LOS Saturday Event Arrival peak hour and Saturday Event Departure peak hour calculations for the six (6) state-controlled intersections.

## 9.3 Year 2020 Traffic Conditions – Weekday Academic Instruction

*Table 9-3* summarizes the weekday PM peak hour HCM level of service results at the six (6) state-controlled study intersections within the study area for Year 2020 traffic conditions. The first column (1) of HCM/LOS values in *Table 9-3* presents Year 2020 traffic conditions (existing plus ambient growth plus cumulative projects traffic) based on existing intersection geometry, but without any traffic generated from the proposed Project. The second column (2) presents forecast Year 2020 traffic conditions with the addition of Project traffic. The third column (3) indicates whether added peak hour Project trips will have a significant impact based on the significant impact criteria defined in this report. The fourth column (4) indicates the anticipated level of service with planned and/or recommended improvements.

### 9.3.1 Year 2020 Traffic Conditions (Without Project) – Weekday Academic Instruction

An analysis of future (Year 2020) traffic conditions indicates that the addition of ambient growth and cumulative projects traffic will not adversely impact the six (6) state-controlled study intersections. The six (6) state-controlled study intersections are forecast to operate at acceptable

LOS C or better during the weekday PM peak hour with the addition of ambient traffic growth and cumulative projects traffic in the Year 2020.

### **9.3.2 Year 2020 Plus Project Traffic Conditions – Weekday Academic Instruction**

Review of Columns 2 and 3 of *Table 9-3* indicates that traffic associated with the proposed Project (i.e. academic instruction) ***will not*** significantly impact any of the six (6) state-controlled study intersections, when compared to the LOS standards and significant impact criteria specified in this report. The six (6) state-controlled study intersections are forecast to operate at acceptable service levels during the weekday PM peak hour with the addition of Project generated traffic under Year 2020 traffic conditions.

*Appendix I* presents the Year 2020 plus Project HCM/LOS weekday PM peak hour calculations for the six (6) state-controlled study intersections.

### **9.4 Year 2020 Traffic Conditions – Saturday Field Event**

*Table 9-4* summarizes the Saturday Event Arrival peak hour and Saturday Event Departure peak hour HCM level of service results at the six (6) state-controlled study intersections within the study area for Year 2020 traffic conditions. The first column (1) of HCM/LOS values in *Table 9-4* presents Year 2020 traffic conditions (existing plus ambient growth plus cumulative projects traffic) based on existing intersection geometry, but without any traffic generated from the proposed Project. The second column (2) presents forecast Year 2020 traffic conditions with the addition of Project traffic. The third column (3) indicates whether added peak hour Project trips will have a significant impact based on the significant impact criteria defined in this report. The fourth column (4) indicates the anticipated level of service with planned and/or recommended improvements.

#### **9.4.1 Year 2020 Traffic Conditions (Without Project) – Saturday Field Event**

An analysis of future (Year 2020) traffic conditions indicates that the addition of ambient growth and cumulative projects traffic will not adversely impact the six (6) state-controlled study intersections. The six (6) state-controlled study intersections are forecast to operate at acceptable LOS C or better during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour with the addition of ambient traffic growth and cumulative projects traffic in the Year 2020.

#### **9.4.2 Year 2020 Plus Project Traffic Conditions – Saturday Field Event**

Review of Columns 2 and 3 of *Table 9-4* indicates that traffic associated with the proposed Project (i.e. field event) ***will not*** significantly impact any of the six (6) state-controlled study intersections, when compared to the LOS standards and significant impact criteria specified in this report. The six (6) state-controlled study intersections are forecast to operate at acceptable service levels during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour with the addition of Project generated traffic under Year 2020 traffic conditions.

*Appendix I* also presents the Year 2020 plus Project HCM/LOS Saturday Event Arrival peak hour and Saturday Event Departure peak hour calculations for the six (6) state-controlled study intersections.

## **9.5 Year 2030 Traffic Conditions – Weekday Academic Instruction**

*Table 9-5* summarizes the weekday PM peak hour HCM level of service results at the six (6) state-controlled study intersections within the study area for the Year 2030 buildout year and is similar in setup to *Table 9-3*.

### **9.5.1 Year 2030 Buildout Traffic Conditions (Without Project) – Weekday Academic Instruction**

An analysis of future (Year 2030) buildout traffic conditions indicates that the addition of ambient traffic growth and cumulative projects traffic will adversely impact one (1) of the six (6) state-controlled study intersections. The state-controlled study intersection of the SR-57 NB Ramps/Chapman Avenue is forecast to operate at unacceptable LOS F during the weekday PM peak hour. The remaining five state-controlled study intersections are forecast to operate at acceptable LOS D or better during the weekday PM peak hour with the addition of ambient traffic growth and cumulative projects traffic in the Year 2030.

### **9.5.2 Year 2030 Buildout Plus Project Traffic Conditions – Weekday Academic Instruction**

Review of Columns 2 and 3 of *Table 9-5* indicates that traffic associated with the proposed Project (i.e. academic instruction) will cumulatively impact one of the six (6) state-controlled study intersections, when compared to the LOS standards specified in this report. The remaining five state-controlled study intersections are forecast to continue to operate at acceptable LOS D or better with the addition of project generated traffic in the Year 2030.

As shown in Column 4 of *Table 9-5*, the implementation of improvements at the impacted state-controlled intersection of the SR-57 NB Ramps/Chapman Avenue completely offsets the impact of the proposed project. The impacted state-controlled key study intersection of the SR-57 NB Ramps/Chapman Avenue is forecast to operate at an acceptable LOS during the weekday PM peak hour with implementation of improvements.

*Appendix J* presents the Year 2030 Buildout plus Project HCM/LOS weekday PM peak hour calculations for the six (6) state-controlled study intersections.

## **9.6 Year 2030 Traffic Conditions – Saturday Field Event**

*Table 9-6* summarizes the Saturday Event Arrival peak hour and Saturday Event Departure peak hour HCM level of service results at the six (6) state-controlled study intersections within the study area for the Year 2030 buildout year and is similar in setup to *Table 9-4*.

### **9.6.1 Year 2030 Buildout Traffic Conditions (Without Project) – Saturday Field Event**

An analysis of future (Year 2030) buildout traffic conditions indicates that the addition of ambient growth and cumulative projects traffic will not adversely impact the six (6) state-controlled study intersections. The six (6) state-controlled study intersections are forecast to operate at acceptable LOS D or better during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour with the addition of ambient traffic growth and cumulative projects traffic in the Year 2030.

### **9.6.2 Year 2030 Buildout Plus Project Traffic Conditions – Saturday Field Event**

Review of Columns 2 and 3 of *Table 9-6* indicates that traffic associated with the proposed Project (i.e. field event) **will not** significantly impact any of the six (6) state-controlled study intersections, when compared to the LOS standards and significant impact criteria specified in this report. The six (6) state-controlled study intersections are forecast to operate at acceptable service levels during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour with the addition of Project generated traffic under Year 2030 traffic conditions.

*Appendix J* also presents the Year 2030 Buildout plus Project HCM/LOS Saturday Event Arrival peak hour and Saturday Event Departure peak hour calculations for the six (6) state-controlled study intersections.

## 9.7 Off-Ramp Queuing Analysis

A queuing evaluation has been conducted for the aforementioned six (6) state-controlled study intersections (i.e. SR-57 Freeway Off-Ramps at Chapman Avenue and the SR-91 Freeway Off-Ramps at Harbor Boulevard and Lemon Street) to determine the minimum required stacking/storage lengths for all off-ramp lanes. The queuing evaluation was conducted based on projected Existing plus Project, Year 2020 Cumulative plus Project, and Year 2030 Buildout plus Project peak hour traffic volumes and was prepared for the weekday PM peak hour and Saturday Event Arrival and Event Departure peak hours.

Given that Caltrans does not have significant impact criteria for off-ramp queuing, based on historic coordination with Caltrans, the queue with the proposed Project should not impede the freeway mainline.

### 9.7.1 Existing Plus Project Traffic Conditions

**Table 9-7** presents the weekday PM peak hour 95<sup>th</sup> percentile queuing analysis results for the aforementioned six (6) state-controlled study intersections under Existing plus Project traffic conditions. **Table 9-8** presents the Saturday Event Arrival peak hour and Saturday Event Departure peak hour 95<sup>th</sup> percentile queuing analysis results for the aforementioned six (6) state-controlled study intersections under Existing plus Project traffic conditions.

Review of *Tables 9-7* and *9-8* indicates that adequate storage is provided at the off-ramps for all six (6) state-controlled study intersections under Existing plus Project traffic conditions during the weekday PM peak hour, Saturday Event Arrival peak hour, and Saturday Event Departure peak hour.

*Appendix H* presents the weekday and Saturday LOS/queuing calculations for Existing plus Project traffic conditions.

### 9.7.2 Year 2020 Cumulative Plus Project Traffic Conditions

**Table 9-9** presents the weekday PM peak hour 95<sup>th</sup> percentile queuing analysis results for the aforementioned six (6) state-controlled study intersections under Year 2020 Cumulative plus Project traffic conditions. **Table 9-10** presents the Saturday Event Arrival peak hour and Saturday Event Departure peak hour 95<sup>th</sup> percentile queuing analysis results for the aforementioned six (6) state-controlled study intersections under Year 2020 Cumulative plus Project traffic conditions.

Review of *Tables 9-9* and *9-10* indicates that adequate storage is provided at the off-ramps for all six (6) state-controlled study intersections under Year 2020 Cumulative plus Project traffic conditions during the weekday PM peak hour, Saturday Event Arrival peak hour, and Saturday Event Departure peak hour.

*Appendix I* presents the weekday and Saturday LOS/queuing calculations for Year 2020 Cumulative plus Project traffic conditions.

### 9.7.3 Year 2030 Buildout Plus Project Traffic Conditions

**Table 9-11** presents the weekday PM peak hour 95<sup>th</sup> percentile queuing analysis results for the aforementioned six (6) state-controlled study intersections under Year 2030 Buildout plus Project traffic conditions. **Table 9-12** presents the Saturday Event Arrival peak hour and Saturday Event Departure peak hour 95<sup>th</sup> percentile queuing analysis results for the aforementioned six (6) state-controlled study intersections under Year 2030 Buildout plus Project traffic conditions.

Review of *Tables 9-11* and *9-12* indicates that adequate storage is provided at the off-ramps for all six (6) state-controlled study intersections under Year 2030 Buildout plus Project traffic conditions during the weekday PM peak hour, Saturday Event Arrival peak hour, and Saturday Event Departure peak hour.

*Appendix J* presents the weekday and Saturday LOS/queuing calculations for Year 2030 Buildout plus Project traffic conditions.

TABLE 9-7

EXISTING PLUS PROJECT WEEKDAY PEAK HOUR FREEWAY OFF-RAMP QUEUING ANALYSIS – ACADEMIC INSTRUCTION<sup>7</sup>

Key Ramp Intersection	(1) Existing Plus Project Traffic Conditions		
	Estimated Storage Provided (feet)	Weekday PM Peak Hour	
		Max. Queue/ Min. Storage Required	Adequate Storage (Yes / No)
13. SR-57 SB Ramps at Chapman Avenue <i>Southbound Shared Through/Left-Turn</i> <i>Southbound Right-Turn</i>	1,050' 1,295'	327' 226'	Yes Yes
14. SR-57 NB Ramps at Chapman Avenue <i>Northbound Left-Turn</i> <i>Northbound Shared Left/Right-Turn</i> <i>Northbound Right-Turn</i>	915' 915' 500'	380' 380' 380'	Yes Yes Yes
22. Harbor Boulevard at SR-91 WB Ramps <i>Westbound Left-Turn</i> <i>Westbound Through</i> <i>Westbound Right-Turn</i>	360' 1,210' 265'	285' 176' 342'	Yes Yes Yes <sup>8</sup>
23. Lemon Street at SR-91 WB Ramps <i>Westbound Shared Through/Left-Turn</i> <i>Westbound Through</i> <i>Westbound Right-Turn</i>	890' 890' 320'	279' 270' 539'	Yes Yes Yes <sup>9</sup>
24. Harbor Boulevard at SR-91 EB Ramps <i>Eastbound Left-Turn</i> <i>Eastbound Through</i> <i>Eastbound Right-Turn</i>	245' 1,175' 245'	322' 262' 133'	Yes <sup>10</sup> Yes Yes

<sup>7</sup> Queue is based on the 95<sup>th</sup> Percentile Queue and is reported in total queue length (feet) per lane for signalized intersections.

<sup>8</sup> Although the queue exceeds the specific lane movement storage, the excess queue can be accommodated within the No. 2 WB through lane since the combined storage between the WB right-turn lane and WB through lane of 1,475' is greater than those combined queues.

<sup>9</sup> Although the queue exceeds the specific lane movement storage, the excess queue can be accommodated within the WB through lane since the combined storage between the WB right-turn lane and WB through lane of 1,210' is greater than those combined queues.

<sup>10</sup> Although the queue exceeds the specific lane movement storage, the excess queue can be accommodated within the EB through lane since the combined storage between the EB left-turn lane and EB through lane of 1,420' is greater than those combined queues.

<sup>32</sup> Although the queue exceeds the specific lane movement storage, the excess queue can be accommodated within the EB through lane since the combined storage between the EB left-turn lane and EB through lane of 1,420' is greater than those combined queues.

## 10.0 CALTRANS FACILITIES ANALYSIS

Caltrans requires the use of analysis methods provided in the Highway Capacity Manual 6 (*HCM 6*) for the analysis of ramp intersections. As discussed previously in Section 9.0, Caltrans “endeavors to maintain a target LOS at the transition between LOS “C” and LOS “D” on State highway facilities”; it does not require that LOS “D” (shall) be maintained. However, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. Based on historic coordination with Caltrans, for this analysis, LOS D is the target level of service standard and will be utilized to assess the project impacts at the state-controlled study locations.

A Basic Freeway Segment Analysis for freeway mainlines was conducted for the following eight (8) Caltrans freeway segments. The eight (8) freeway segments were selected for evaluation based on application of Caltrans criteria and the resultant peak hour level of service results for existing conditions.

1. SR-57 Northbound *south of* Chapman Avenue
2. SR-57 Northbound *north of* Nutwood Avenue
3. SR-57 Southbound *north of* Nutwood Avenue
4. SR-57 Southbound *south of* Chapman Avenue
5. SR-91 Westbound *east of* Lemon Street
6. SR-91 Westbound *west of* Harbor Boulevard
7. SR-91 Eastbound *west of* Harbor Boulevard
8. SR-91 Eastbound *east of* Lemon Street

Additionally, a Freeway Merge and Diverge Segment Analysis for ramp junctions was conducted for the following eight (8) Caltrans freeway merge and diverge segments. The eight (8) freeway merge and diverge segments were selected for evaluation based on application of Caltrans criteria and the resultant peak hour level of service results for existing conditions.

1. SR-57 Northbound Off-Ramp *to* Chapman Avenue
2. SR-57 Northbound On-Ramp *from* Nutwood Avenue
3. SR-57 Southbound Off-Ramp *to* Nutwood Avenue
4. SR-57 Southbound On-Ramp *from* Chapman Avenue
5. SR-91 Westbound Off-Ramp *to* Lemon Street
6. SR-91 Westbound On-Ramp *from* Harbor Boulevard
7. SR-91 Eastbound Off-Ramp *to* Harbor Boulevard
8. SR-91 Eastbound On-Ramp *from* Lemon Street

## 10.1 Basic Freeway Segment Capacity Analysis

### 10.1.1 Existing Traffic Conditions

**Table 10-1** summarizes the peak hour Level of Service results at the eight (8) basic freeway segments located along the SR-57 and SR-91 Freeways for Existing traffic conditions under Weekday PM peak hour traffic conditions. **Table 10-2** summarizes the peak hour Level of Service results at the eight (8) basic freeway segments located along the SR-57 and SR-91 Freeways for the Existing traffic conditions under Saturday Event Arrival peak hour and Saturday Event Departure peak hour traffic conditions. Review of *Tables 10-1* and *10-2* indicates that the eight key freeway segments currently operate at LOS D or better during the Weekday PM peak hour and during the Saturday Arrival and Departure peak hours.

Per Caltrans guidelines, the following is stated in the *Caltrans Guide for the Preparation of Traffic Impact Studies, December 2002*:

*“The following criterion is a starting point in determining when a TIS is needed. When a project:*

- 1. Generates over 100 peak hour trips assigned to a State highway facility.....*
- 2. Generates 50 to 100 peak hour trips assigned to a State highway facility and noticeable delay approaching LOS C or D.....*
- 3. Generates 1 to 49 peak hour trips assigned to a State highway facility and noticeable delay approaching LOS E or F.....”*

Based on the Caltrans criteria above and the results of the basic freeway segment analysis for Existing Weekday PM peak hour traffic conditions as presented in *Table 10-1*, it is determined that no additional analysis is needed for the eight (8) key freeway segments located along the SR-57 and SR-91 Freeways since the proposed Project (academic instruction) does not generate 50 to 100 peak hour trips assigned to a state highway facility and the eight (8) freeway segments are forecast to operate at an acceptable LOS D or better during the Weekday PM peak hour under Existing traffic conditions. It should be noted that a merge/diverge analysis is also not required for the Weekday PM peak hour (academic instruction) since the Caltrans criteria required for further analysis is not satisfied.

Based on the Caltrans criteria above and the results of the basic freeway segment analysis for Existing Saturday Event Arrival peak hour and Saturday Event Departure peak hour traffic conditions as presented in *Table 10-2*, it is determined that no additional analysis is needed for key freeway segment #5 located along the SR-91 Freeway since the proposed Project (field event) does not generate 50 to 100 peak hour trips assigned to the state highway facility and the freeway segment is forecast to operate at an acceptable LOS C during the Saturday Event Arrival peak hour and during the Saturday Event Departure peak hour under Existing traffic conditions. Further review of *Table 10-2* indicates that additional traffic analysis will be required for the remaining seven (7) key freeway segments located along the SR-57 and SR-91 Freeways since the Project generates more

than 50 peak hour trips assigned to a state highway facility during the Saturday Event Arrival peak hour or during the Saturday Event Departure peak hour.

*Appendix K* contains the Basic Freeway Segment Analysis calculation worksheets for the eight (8) freeway segments for Existing weekday and Saturday traffic conditions.

## **10.2 Existing Plus Project Traffic Conditions – Saturday Field Event**

*Table 10-3* summarizes the peak hour level of service results at the seven (7) key freeway segments located along the SR-57 and SR-91 Freeways for Existing plus Project traffic conditions during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour. The first column (1) presents a summary of existing Saturday Event Arrival peak hour and Saturday Event Departure peak hour traffic conditions. The second column (2) presents Existing plus Project Saturday traffic conditions and the third column (3) indicates whether the traffic associated with the proposed project will have an impact based on the LOS standards defined in this report.

Review of *Table 10-3* indicates that with the addition of Project traffic, one (1) of the seven (7) evaluated freeway segments is forecast to operate at an unacceptable level of service during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour when compared to the LOS standards defined in this report (i.e. key freeway segment #4; SR-57 Freeway). The Project's contribution to the freeway system can be considered significantly impacted at this one (1) freeway mainline location under this traffic scenario. The remaining six (6) freeway segments located along the SR-57 and SR-91 Freeways are forecast to continue to operate at an acceptable level of service during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour under existing plus project traffic conditions.

*Appendix K* contains the Basic Freeway Segment Analysis calculation worksheets for the seven (7) freeway segments for Existing Plus Project Saturday traffic conditions.

**TABLE 10-1**

Key Basic Freeway Segment	Time Period	(1) Existing Traffic Conditions			(2) Existing Plus Project Traffic Conditions			(3) Significant Impact
		Peak Hour Volume (pc/h/ln)	Density (pc/mi/ln)	LOS	Peak Hour Volume (pc/h/ln)	Density (pc/mi/ln)	LOS	Yes/No
1. SR-57 Northbound <i>south of</i> Chapman Avenue	Sat. Arrival	1,408	21.7	C	1,441	22.2	C	No
	Sat. Departure	1,448	22.3	C	1,451	22.3	C	No
2. SR-57 Northbound <i>north of</i> Nutwood Avenue	Sat. Arrival	1,312	20.2	C	1,318	20.3	C	No
	Sat. Departure	1,352	20.8	C	1,380	21.2	C	No
3. SR-57 Southbound <i>north of</i> Nutwood Avenue	Sat. Arrival	1,489	22.9	C	1,515	23.4	C	No
	Sat. Departure	1,474	22.7	C	1,477	22.8	C	No
4. SR-57 Southbound <i>south of</i> Chapman Avenue	Sat. Arrival	2,048	34.7	D	<b>2,061</b>	<b>35.1</b>	<b>E</b>	<b>Yes</b>
	Sat. Departure	2,019	33.9	D	<b>2,080</b>	<b>35.6</b>	<b>E</b>	<b>Yes</b>
6. SR-91 Westbound <i>west of</i> Harbor Boulevard	Sat. Arrival	2,008	33.6	D	2,022	34.0	D	No
	Sat. Departure	1,950	32.1	D	2,012	33.7	D	No
7. SR-91 Eastbound <i>west of</i> Harbor Boulevard	Sat. Arrival	1,878	30.4	D	1,928	31.6	D	No
	Sat. Departure	1,850	29.8	D	1,856	29.9	D	No
8. SR-91 Eastbound <i>east of</i> Lemon Street	Sat. Arrival	1,566	24.2	C	1,569	24.3	C	No
	Sat. Departure	1,560	24.1	C	1,573	24.3	C	No

**Notes:**

- pc/mi/ln = Passenger cars per mile per lane (density)
- LOS = Level of Service, please refer to *Table 3-4* for the LOS definitions
- **Bold Volume/Density/LOS values** indicate adverse service levels based on the Caltrans LOS Criteria

### **10.3 Year 2020 Cumulative Plus Project Basic Freeway Segment Capacity Analysis – Saturday Field Event**

*Table 10-4* summarizes the peak hour level of service results at the seven (7) key freeway segments located along the SR-57 and SR-91 Freeways for Year 2020 Cumulative traffic conditions during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour. The first column (1) presents a summary of existing Saturday Event Arrival peak hour and Saturday Event Departure peak hour traffic conditions. The second column (2) presents Year 2020 Cumulative Saturday traffic conditions and the third column (3) presents Year 2020 Cumulative plus Project Saturday traffic conditions. The fourth (4) column indicates whether the traffic associated with the proposed project will have an impact based on the LOS standards defined in this report.

#### **10.3.1 Year 2020 Cumulative Traffic Conditions – Saturday Field Event**

Review of column (2) of *Table 10-4* indicates that one (1) of the seven (7) evaluated freeway segments is forecast to operate at an unacceptable level of service during the Saturday Event Arrival peak hour under Year 2020 Cumulative traffic conditions when compared to the LOS standards defined in this report (i.e. key freeway segment #4; SR-57 Freeway). The remaining six (6) freeway segments located along the SR-57 and SR-91 Freeways are forecast to continue to operate at an acceptable level of service during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour under Year 2020 Cumulative traffic conditions.

#### **10.3.2 Year 2020 Cumulative Plus Project Traffic Conditions – Saturday Field Event**

Review of columns (3) and (4) of *Table 10-4* indicates that with the addition of Project traffic, two (2) of the seven (7) evaluated freeway segments are forecast to operate at an unacceptable level of service during the Saturday Event Arrival peak hour and/or Saturday Event Departure peak hour under Year 2020 Cumulative plus Project traffic conditions when compared to the LOS standards defined in this report (i.e. key freeway segment #4; SR-57 Freeway and key freeway segment #6; SR-91 Freeway). The Project's contribution to the freeway system can be considered significantly impacted at these two (2) freeway mainline locations under this traffic scenario. The remaining five (5) freeway segments located along the SR-57 and SR-91 Freeways are forecast to continue to operate at an acceptable level of service during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour under Year 2020 Cumulative plus Project traffic conditions.

*Appendix K* contains the Basic Freeway Segment Analysis calculation worksheets for the seven (7) freeway segments for Year 2020 Cumulative Saturday traffic conditions.

TABLE 10-4

## YEAR 2020 CUMULATIVE SATURDAY PEAK HOUR FREEWAY MAINLINE CAPACITY ANALYSIS SUMMARY – FIELD EVENT

Key Basic Freeway Segment	Time Period	(1) Existing Traffic Conditions			(2) Year 2020 Cumulative Traffic Conditions			(3) Year 2020 Cumulative Plus Project Traffic Conditions			(4) Significant Impact
		Peak Hour Volume (pc/h/ln)	Density (pc/mi/ln)	LOS	Peak Hour Volume (pc/h/ln)	Density (pc/mi/ln)	LOS	Peak Hour Volume (pc/h/ln)	Density (pc/mi/ln)	LOS	Yes/No
1. SR-57 Northbound <i>south of</i> Chapman Avenue	Sat. Arrival	1,408	21.7	C	1,436	22.1	C	1,469	22.6	C	No
	Sat. Departure	1,448	22.3	C	1,476	22.7	C	1,480	22.8	C	No
2. SR-57 Northbound <i>north of</i> Nutwood Avenue	Sat. Arrival	1,312	20.2	C	1,339	20.6	C	1,345	20.7	C	No
	Sat. Departure	1,352	20.8	C	1,381	21.2	C	1,408	21.7	C	No
3. SR-57 Southbound <i>north of</i> Nutwood Avenue	Sat. Arrival	1,489	22.9	C	1,521	23.5	C	1,547	23.9	C	No
	Sat. Departure	1,474	22.7	C	1,506	23.2	C	1,509	23.3	C	No
4. SR-57 Southbound <i>south of</i> Chapman Avenue	Sat. Arrival	2,048	34.7	D	<b>2,088</b>	<b>35.8</b>	<b>E</b>	<b>2,102</b>	<b>36.2</b>	<b>E</b>	<b>Yes</b>
	Sat. Departure	2,019	33.9	D	2,059	35.0	D	<b>2,120</b>	<b>36.7</b>	<b>E</b>	<b>Yes</b>
6. SR-91 Westbound <i>west of</i> Harbor Boulevard	Sat. Arrival	2,008	33.6	D	2,048	34.7	D	<b>2,061</b>	<b>35.1</b>	<b>E</b>	<b>Yes</b>
	Sat. Departure	1,950	32.1	D	1,988	33.1	D	2,050	34.7	D	No
7. SR-91 Eastbound <i>west of</i> Harbor Boulevard	Sat. Arrival	1,878	30.4	D	1,918	31.3	D	1,967	32.6	D	No
	Sat. Departure	1,850	29.8	D	1,889	30.7	D	1,895	30.8	D	No
8. SR-91 Eastbound <i>east of</i> Lemon Street	Sat. Arrival	1,566	24.2	C	1,598	24.8	C	1,601	24.9	C	No
	Sat. Departure	1,560	24.1	C	1,592	24.7	C	1,605	24.9	C	No

**Notes:**

- pc/mi/ln = Passenger cars per mile per lane (density)
- LOS = Level of Service, please refer to *Table 3-4* for the LOS definitions
- **Bold Volume/Density/LOS values** indicate adverse service levels based on the Caltrans LOS Criteria

## **10.4 Year 2030 Buildout Plus Project Basic Freeway Segment Capacity Analysis – Saturday Field Event**

*Table 10-5* summarizes the peak hour level of service results at the seven (7) key freeway segments located along the SR-57 and SR-91 Freeways for Year 2030 Buildout traffic conditions during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour. The first column (1) presents a summary of existing Saturday Event Arrival peak hour and Saturday Event Departure peak hour traffic conditions. The second column (2) presents Year 2030 Buildout Saturday traffic conditions and the third column (3) presents Year 2030 Buildout plus Project Saturday traffic conditions. The fourth (4) column indicates whether the traffic associated with the proposed project will have an impact based on the LOS standards defined in this report.

### **10.4.1 Year 2030 Buildout Traffic Conditions – Saturday Field Event**

Review of column (2) of *Table 10-5* indicates that three (3) of the seven (7) evaluated freeway segments are forecast to operate at unacceptable levels of service during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour under Year 2030 Buildout traffic conditions when compared to the LOS standards defined in this report (i.e. key freeway segment #4; SR-57 Freeway, key freeway segment #6; SR-91 Freeway and key freeway segment #7; SR-91 Freeway). The remaining four (4) freeway segments located along the SR-57 and SR-91 Freeways are forecast to continue to operate at an acceptable level of service during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour under Year 2030 Buildout traffic conditions.

### **10.4.2 Year 2030 Buildout Plus Project Traffic Conditions – Saturday Field Event**

Review of columns (3) and (4) of *Table 10-5* indicates that with the addition of Project traffic, three (3) of the seven (7) evaluated freeway segments are forecast to operate at an unacceptable level of service during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour under Year 2030 Buildout plus Project traffic conditions when compared to the LOS standards defined in this report (i.e. key freeway segment #4; SR-57 Freeway, key freeway segment #6; SR-91 Freeway and key freeway segment #7; SR-91 Freeway). The Project's contribution to the freeway system can be considered significantly impacted at these three (3) freeway mainline locations under this traffic scenario. The remaining four (4) freeway segments located along the SR-57 and SR-91 Freeways are forecast to continue to operate at an acceptable level of service during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour under Year 2030 Buildout plus Project traffic conditions.

*Appendix K* contains the Basic Freeway Segment Analysis calculation worksheets for the seven (7) freeway segments for Year 2030 Buildout Saturday traffic conditions.

## 10.5 Freeway Segment Traffic Improvements

A review of the level of service calculations summarized in *Tables 10-3 through 10-5* indicates that the development of the Project in combination with cumulative development and ambient traffic growth is anticipated to significantly impact one (1) of the seven (7) freeway segments under Existing plus Project Saturday traffic conditions, two (2) of the seven (7) freeway segments under Year 2020 Cumulative plus Project Saturday traffic conditions and three (3) of the seven (7) freeway segments under Year 2030 Buildout plus Project Saturday traffic conditions. However, the SR-57 and SR-91 Freeways are controlled exclusively by the State of California and there is no mechanism by which the lead agency can construct or guarantee the construction of any improvements to these freeway segments. Therefore, the proposed Project's incremental impacts on key freeway study segments assessed in the report are considered unmitigatable as there are no feasible mitigation measures that will reduce cumulative mainline impacts to below significance thresholds or achieve acceptable service level goals.

TABLE 10-5

## YEAR 2030 BUILDOUT SATURDAY PEAK HOUR FREEWAY MAINLINE CAPACITY ANALYSIS SUMMARY – FIELD EVENT

Key Basic Freeway Segment	Time Period	(1) Existing Traffic Conditions			(2) Year 2030 Buildout Traffic Conditions			(3) Year 2030 Buildout Plus Project Traffic Conditions			(4) Significant Impact
		Peak Hour Volume (pc/h/ln)	Density (pc/mi/ln)	LOS	Peak Hour Volume (pc/h/ln)	Density (pc/mi/ln)	LOS	Peak Hour Volume (pc/h/ln)	Density (pc/mi/ln)	LOS	Yes/No
1. SR-57 Northbound <i>south of</i> Chapman Avenue	Sat. Arrival	1,408	21.7	C	1,672	26.1	D	1,703	26.7	D	No
	Sat. Departure	1,448	22.3	C	1,719	27.0	D	1,723	27.1	D	No
2. SR-57 Northbound <i>north of</i> Nutwood Avenue	Sat. Arrival	1,312	20.2	C	1,586	24.6	C	1,591	24.7	C	No
	Sat. Departure	1,352	20.8	C	1,634	25.5	C	1,660	25.9	C	No
3. SR-57 Southbound <i>north of</i> Nutwood Avenue	Sat. Arrival	1,489	22.9	C	1,764	28.0	D	1,789	28.4	D	No
	Sat. Departure	1,474	22.7	C	1,746	27.6	D	1,748	27.6	D	No
4. SR-57 Southbound <i>south of</i> Chapman Avenue	Sat. Arrival	2,048	34.7	D	<b>2,432</b>	[a]	F	<b>2,445</b>	[a]	F	Yes
	Sat. Departure	2,019	33.9	D	<b>2,398</b>	[a]	F	<b>2,456</b>	[a]	F	Yes
6. SR-91 Westbound <i>west of</i> Harbor Boulevard	Sat. Arrival	2,008	33.6	D	<b>2,394</b>	[a]	F	<b>2,407</b>	[a]	F	Yes
	Sat. Departure	1,950	32.1	D	<b>2,325</b>	<b>44.0</b>	E	<b>2,384</b>	[a]	F	Yes
7. SR-91 Eastbound <i>west of</i> Harbor Boulevard	Sat. Arrival	1,878	30.4	D	<b>2,239</b>	<b>40.7</b>	E	<b>2,286</b>	<b>42.4</b>	E	Yes
	Sat. Departure	1,850	29.8	D	<b>2,209</b>	<b>39.7</b>	E	<b>2,214</b>	<b>39.8</b>	E	Yes
8. SR-91 Eastbound <i>east of</i> Lemon Street	Sat. Arrival	1,566	24.2	C	1,860	30.0	D	1,863	30.0	D	No
	Sat. Departure	1,560	24.1	C	1,853	29.8	D	1,865	30.1	D	No

Notes:

- pc/mi/ln = Passenger cars per mile per lane (density)
- LOS = Level of Service, please refer to *Table 3-4* for the LOS definitions
- **Bold Volume/Density/LOS values** indicate adverse service levels based on the Caltrans LOS Criteria
- [a] = *HCS 7* software does not report a density value for mainline segments operating at LOS F.

## 10.6 Freeway Merge/Diverge Ramp Junction Analysis – Saturday Field Event

This section of the report presents a Saturday Freeway Ramp (Merge/Diverge) Analysis for the SR-57 Interchanges at Chapman Avenue and Nutwood Avenue and the SR-91 Interchanges at Harbor Boulevard and Lemon Street. The analysis is consistent with Caltrans requirements and has been prepared using the methods provided in the *Highway Capacity Manual 6 (HCM 6)*.

As stated previously in Section 10.1, a merge/diverge analysis is not required for the Weekday PM peak hour (academic instruction) since the Caltrans criteria required for further analysis is not satisfied.

### 10.6.1 Existing Plus Project Ramp Junction Analysis – Saturday Field Event

**Table 10-6** summarizes the peak hour Level of Service results at the seven (7) freeway ramp junctions for Existing plus Project Saturday traffic conditions. The first column (1) presents a summary of existing Saturday Event Arrival peak hour and Saturday Event Departure peak hour traffic conditions. The second column (2) presents Existing Plus Project traffic conditions and the third column (3) indicates whether the traffic associated with the Project will have an impact based on the LOS standards defined in this report.

#### 10.6.1.1 Existing Traffic Conditions – Saturday Field Event

Review of column (1) of *Table 10-6* indicates that one (1) of the seven (7) freeway ramps currently operates at an unacceptable level of service during the Saturday Event Arrival peak hour when compared to the LOS standards defined in this report (i.e. #7 – diverge segment). The remaining six (6) freeway ramps currently operate at an acceptable level of service during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour.

#### 10.6.1.2 Existing Plus Project Traffic Conditions – Saturday Field Event

Review of columns (2) and (3) of *Table 10-6* indicates that traffic associated with the proposed Project **will not** significantly impact any of the seven (7) freeway ramps when compared to the LOS standards and significant impact criteria specified in this report. Although location #7 is forecast to operate at an unacceptable LOS during the Saturday Event Arrival peak hour, this location is not impacted per the significant impact criteria specified in this report, as the existing level of service is maintained. The remaining six (6) freeway ramps are forecast to continue to operate at an acceptable level of service during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour under existing plus project traffic conditions.

**Appendix L** contains the Freeway Merge/Diverge Ramp Junction Analysis calculation worksheets for the seven (7) freeway segments for Existing Plus Project Saturday traffic conditions.

**TABLE 10-6**  
**EXISTING PLUS PROJECT SATURDAY PEAK HOUR MERGE AND DIVERGE CAPACITY ANALYSIS SUMMARY – FIELD EVENT**

Key Freeway Merge or Diverge Segment	Analysis Type	Time Period	(1) Existing Traffic Conditions				(2) Existing Plus Project Traffic Conditions				(3) Significant Impact
			Freeway Pk Hr Volume	Ramp Pk Hr Volume	Density (pc/mi/lane)	LOS	Freeway Pk Hr Volume	Ramp Pk Hr Volume	Density (pc/mi/lane)	LOS	Yes/No
1. SR-57 Northbound Off-Ramp <i>to</i> Chapman Avenue	Diverge Analysis	Sat. Arrival	7,865	789	18.6	B	8,049	973	20.1	C	No
		Sat. Departure	8,086	811	19.4	B	8,107	832	19.6	B	No
2. SR-57 Northbound On-Ramp <i>from</i> Nutwood Avenue	Merge Analysis	Sat. Arrival	6,629	698	20.5	C	6,629	731	20.7	C	No
		Sat. Departure	6,866	689	21.0	C	6,866	842	22.2	C	No
3. SR-57 Southbound Off-Ramp <i>to</i> Nutwood Avenue	Diverge Analysis	Sat. Arrival	6,931	626	16.3	B	7,054	749	17.4	B	No
		Sat. Departure	6,862	609	16.0	B	6,876	623	16.2	B	No
4. SR-57 Southbound On-Ramp <i>from</i> Chapman Avenue	Merge Analysis	Sat. Arrival	6,859	767	30.7	D	6,859	817	31.1	D	No
		Sat. Departure	6,734	784	30.4	D	6,734	1,013	32.2	D	No
6. SR-91 Westbound On-Ramp <i>from</i> Harbor Boulevard	Merge Analysis	Sat. Arrival	6,385	1,093	31.0	D	6,385	1,143	31.4	D	No
		Sat. Departure	6,226	1,035	30.0	D	6,226	1,265	31.8	D	No
7. SR-91 Eastbound Off-Ramp <i>to</i> Harbor Boulevard	Diverge Analysis	Sat. Arrival	<b>6,994</b>	<b>1,082</b>	<b>35.4</b>	<b>E</b>	<b>7,179</b>	<b>1,267</b>	<b>37.2</b>	<b>E</b>	No
		Sat. Departure	6,891	970	34.5	D	6,912	991	34.6	D	No
8. SR-91 Eastbound On-Ramp <i>from</i> Lemon Street	Merge Analysis	Sat. Arrival	5,912	1,380	22.1	C	5,912	1,393	22.2	C	No
		Sat. Departure	5,921	1,342	21.8	C	5,921	1,403	22.3	C	No

**Notes:**

- pc/mi/lane = Passenger cars per mile per lane (density)
- LOS = Level of Service, please refer to *Table 3-4* for the LOS definitions
- **Bold Volume/Density/LOS values** indicate adverse service levels based on the Caltrans LOS Criteria

### **10.6.2 Year 2020 Cumulative Ramp Junction Analysis – Saturday Field Event**

*Table 10-7* summarizes the peak hour Level of Service results at the seven (7) freeway ramp junctions for Year 2020 Cumulative Saturday traffic conditions. The first column (1) presents forecast Year 2020 Cumulative traffic conditions and the second column (2) presents forecast Year 2020 Cumulative Plus Project traffic conditions. The third column (3) indicates whether the traffic associated with the Project will have an impact based on the LOS standards defined in this report.

#### **10.6.2.1 Year 2020 Cumulative Traffic Conditions – Saturday Field Event**

Review of column (1) of *Table 10-7* indicates that one (1) of the seven (7) freeway ramps is forecast to operate at an unacceptable level of service in the Year 2020 during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour (i.e. #7 – diverge segment). The remaining six (6) freeway ramps are forecast to operate at an acceptable level of service under Year 2020 Cumulative traffic conditions during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour.

#### **10.6.2.2 Year 2020 Cumulative Plus Project Traffic Conditions – Saturday Field Event**

Review of columns (2) and (3) of *Table 10-7* indicates that one (1) of the seven (7) freeway ramps is forecast to continue to operate at an unacceptable level of service under Year 2020 Cumulative plus Project traffic conditions during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour, when compared to the LOS standards defined in this report (i.e. #7 – diverge segment). The Project's contribution to the freeway system can be considered significantly impacted at this one (1) freeway ramp under this traffic scenario. The remaining six (6) freeway ramps are forecast to operate at an acceptable level of service during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour under Year 2020 Cumulative plus Project traffic conditions.

*Appendix L* contains the Freeway Merge/Diverge Ramp Junction Analysis calculation worksheets for the seven (7) freeway segments for Year 2020 Cumulative Plus Project Saturday traffic conditions.

**TABLE 10-7**  
**YEAR 2020 CUMULATIVE SATURDAY PEAK HOUR MERGE AND DIVERGE CAPACITY ANALYSIS SUMMARY– FIELD EVENT**

Key Freeway Merge or Diverge Segment	Analysis Type	Time Period	(1) Year 2020 Cumulative Traffic Conditions				(2) Year 2020 Cumulative Plus Project Traffic Conditions				(3) Significant Impact
			Freeway Pk Hr Volume	Ramp Pk Hr Volume	Density (pc/mi/ln)	LOS	Freeway Pk Hr Volume	Ramp Pk Hr Volume	Density (pc/mi/ln)	LOS	Yes/No
1. SR-57 Northbound Off-Ramp <i>to</i> Chapman Avenue	Diverge Analysis	Sat. Arrival	8,023	798	19.1	B	8,207	982	20.7	C	No
		Sat. Departure	8,248	820	19.9	B	8,269	841	20.1	C	No
2. SR-57 Northbound On-Ramp <i>from</i> Nutwood Avenue	Merge Analysis	Sat. Arrival	6,774	707	20.9	C	6,774	740	21.2	C	No
		Sat. Departure	7,015	698	21.4	C	7,015	851	22.6	C	No
3. SR-57 Southbound Off-Ramp <i>to</i> Nutwood Avenue	Diverge Analysis	Sat. Arrival	7,079	637	16.9	B	7,202	760	17.9	B	No
		Sat. Departure	7,010	620	16.6	B	7,024	634	16.7	B	No
4. SR-57 Southbound On-Ramp <i>from</i> Chapman Avenue	Merge Analysis	Sat. Arrival	7,002	776	31.3	D	7,002	826	31.7	D	No
		Sat. Departure	6,876	792	31.0	D	6,876	1,021	32.8	D	No
6. SR-91 Westbound On-Ramp <i>from</i> Harbor Boulevard	Merge Analysis	Sat. Arrival	6,515	1,111	31.6	D	6,515	1,161	32.0	D	No
		Sat. Departure	6,353	1,052	30.6	D	6,353	1,282	32.4	D	No
7. SR-91 Eastbound Off-Ramp <i>to</i> Harbor Boulevard	Diverge Analysis	Sat. Arrival	<b>7,141</b>	<b>1,102</b>	<b>36.1</b>	E	<b>7,326</b>	<b>1,287</b>	<b>37.8</b>	E	No
		Sat. Departure	<b>7,036</b>	<b>988</b>	<b>35.1</b>	E	<b>7,057</b>	<b>1,009</b>	<b>35.3</b>	E	Yes
8. SR-91 Eastbound On-Ramp <i>from</i> Lemon Street	Merge Analysis	Sat. Arrival	6,039	1,399	22.6	C	6,039	1,412	22.7	C	No
		Sat. Departure	6,048	1,361	22.3	C	6,048	1,422	22.8	C	No

**Notes:**

- pc/mi/ln = Passenger cars per mile per lane (density)
- LOS = Level of Service, please refer to *Table 3-4* for the LOS definitions
- **Bold Volume/Density/LOS values** indicate adverse service levels based on the Caltrans LOS Criteria

### **10.6.3 Year 2030 Buildout Ramp Junction Analysis – Saturday Field Event**

*Table 10-8* summarizes the peak hour Level of Service results at the seven (7) freeway ramp junctions for Year 2030 Buildout Saturday traffic conditions. The first column (1) presents forecast Year 2030 Buildout traffic conditions and the second column (2) presents forecast Year 2030 Buildout Plus Project traffic conditions. The third column (3) indicates whether the traffic associated with the Project will have an impact based on the LOS standards defined in this report.

#### **10.6.3.1 Year 2030 Buildout Traffic Conditions – Saturday Field Event**

Review of column (1) of *Table 10-8* indicates that three (3) of the seven (7) freeway ramps are forecast to operate at an unacceptable level of service in the Year 2030 during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour (i.e. #4 – merge segment, #6 – merge segment and #7 – diverge segment). The remaining four (4) freeway ramps are forecast to operate at an acceptable level of service under Year 2030 Buildout traffic conditions during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour.

#### **10.6.3.2 Year 2030 Buildout Plus Project Traffic Conditions – Saturday Field Event**

Review of columns (2) and (3) of *Table 10-8* indicates that three (3) of the seven (7) freeway ramps are forecast to continue to operate at an unacceptable level of service under Year 2030 Buildout plus Project traffic conditions during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour, when compared to the LOS standards defined in this report (i.e. #4 – merge segment, #6 – merge segment and #7 – diverge segment). The Project's contribution to the freeway system can be considered significantly impacted at these three (3) freeway ramps under this traffic scenario. The remaining four (4) freeway ramps are forecast to operate at an acceptable level of service during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour under Year 2030 Buildout plus Project traffic conditions.

*Appendix L* contains the Freeway Merge/Diverge Ramp Junction Analysis calculation worksheets for the seven (7) freeway segments for Year 2030 Buildout Plus Project Saturday traffic conditions.

### **10.6.4 Freeway Ramp Junction Traffic Improvements**

A review of the level of service calculations summarized in *Tables 10-6* through *10-8* indicates that the development of the Project in combination with cumulative development and ambient traffic growth is anticipated to significantly impact none of the seven (7) freeway ramp junctions under Existing plus Project Saturday traffic conditions, one (1) of the seven (7) freeway ramp junctions under Year 2020 Cumulative plus Project Saturday traffic conditions, and three (3) of the seven (7) freeway ramp junctions under Year 2030 Buildout plus Project Saturday traffic conditions. However, the SR-57 and SR-91 Freeways are controlled exclusively by the State and there is no mechanism by which the lead agency can construct or guarantee the construction of any improvements to these ramp junctions. Therefore, the proposed Project's incremental impacts on the freeway ramp junctions assessed in the report are considered unmitigatable as there are no feasible mitigation measures that will reduce cumulative impacts to below significance thresholds or achieve acceptable service level goals.

**TABLE 10-8**  
**YEAR 2030 BUILDOUT SATURDAY PEAK HOUR MERGE AND DIVERGE CAPACITY ANALYSIS SUMMARY– FIELD EVENT**

Key Freeway Merge or Diverge Segment	Analysis Type	Time Period	(1) Year 2030 Buildout Traffic Conditions				(2) Year 2030 Buildout Plus Project Traffic Conditions				(3) Significant Impact
			Freeway Pk Hr Volume	Ramp Pk Hr Volume	Density (pc/mi/ln)	LOS	Freeway Pk Hr Volume	Ramp Pk Hr Volume	Density (pc/mi/ln)	LOS	Yes/No
1. SR-57 Northbound Off-Ramp <i>to</i> Chapman Avenue	Diverge Analysis	Sat. Arrival	9,832	984	23.8	C	10,016	1,168	25.3	C	No
		Sat. Departure	10,108	1,008	24.7	C	10,129	1,029	24.9	C	No
2. SR-57 Northbound On-Ramp <i>from</i> Nutwood Avenue	Merge Analysis	Sat. Arrival	8,289	1,035	25.8	C	8,289	1,068	26.1	C	No
		Sat. Departure	8,583	1,025	26.5	C	8,583	1,178	27.6	C	No
3. SR-57 Southbound Off-Ramp <i>to</i> Nutwood Avenue	Diverge Analysis	Sat. Arrival	8,645	849	21.4	C	8,768	972	22.4	C	No
		Sat. Departure	8,553	830	21.0	C	8,567	844	21.2	C	No
4. SR-57 Southbound On-Ramp <i>from</i> Chapman Avenue	Merge Analysis	Sat. Arrival	<b>8,460</b>	<b>1,073</b>	<b>36.7</b>	<b>F</b>	<b>8,460</b>	<b>1,123</b>	<b>37.0</b>	<b>F</b>	<b>Yes</b>
		Sat. Departure	<b>8,307</b>	<b>1,091</b>	<b>36.3</b>	<b>F</b>	<b>8,307</b>	<b>1,320</b>	<b>38.0</b>	<b>F</b>	<b>Yes</b>
6. SR-91 Westbound On-Ramp <i>from</i> Harbor Boulevard	Merge Analysis	Sat. Arrival	<b>7,948</b>	<b>1,437</b>	<b>37.1</b>	<b>F</b>	<b>7,948</b>	<b>1,487</b>	<b>37.4</b>	<b>F</b>	<b>Yes</b>

7. SR-91 Eastbound Off-Ramp <i>to</i> Harbor Boulevard	Diverge Analysis	Sat. Arrival	<b>8,778</b>	<b>1,393</b>	<b>42.1</b>	<b>E</b>	<b>8,963</b>	<b>1,578</b>	<b>43.7</b>	<b>E</b>	No
		Sat. Departure	<b>8,659</b>	<b>1,270</b>	<b>41.1</b>	<b>E</b>	<b>8,680</b>	<b>1,291</b>	<b>41.2</b>	<b>E</b>	<b>Yes</b>
8. SR-91 Eastbound On-Ramp <i>from</i> Lemon Street	Merge Analysis	Sat. Arrival	7,385	1,730	25.9	C	7,385	1,743	26.0	C	No
		Sat. Departure	7,389	1,689	25.6	C	7,389	1,750	26.1	C	No

**Notes:**

- pc/mi/ln = Passenger cars per mile per lane (density)
- LOS = Level of Service, please refer to *Table 3-4* for the LOS definitions
- **Bold Volume/Density/LOS values** indicate adverse service levels based on the Caltrans LOS Criteria

## 11.0 AREA-WIDE TRAFFIC IMPROVEMENTS

For those intersections where, based on City criteria, projected traffic volumes are expected to result in significant impacts, this report identifies roadway improvements that change the intersection geometry to increase capacity. These capacity improvements involve roadway widening and/or restriping to reconfigure (add lanes) to specific approaches of an intersection. The identified improvements are expected to:

- mitigate the impact of existing traffic, Project traffic and future non-project (ambient traffic growth and cumulative project) traffic and
- improve Levels of Service to an acceptable range and/or to pre-project conditions.

### 11.1 Existing Plus Project Recommended Improvements

#### 11.1.1 Weekday Academic Instruction

The results of the intersection capacity analysis presented previously in *Table 8-1* shows that the proposed Project (i.e. academic instruction) will not significantly impact any of the thirty-one (31) key study intersections under the “Existing Plus Project Weekday” traffic scenario. Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

#### 11.1.2 Saturday Field Event

The results of the intersection capacity analysis presented previously in *Table 8-2* shows that the proposed Project (i.e. field event) will significantly impact three (3) of the thirty-one (31) key study intersections under the “Existing Plus Project Saturday” traffic scenario. The following are improvements recommended to mitigate the existing plus project Saturday traffic impacts:

- **No. 4 – Lemon Street at Berkeley Avenue:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **No. 28 – Berkeley Avenue at College Driveway No. 1:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **No. 29 – Berkeley Avenue at College Driveway No. 2:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).

**Figure 11-1** graphically illustrates the Existing plus Project Saturday recommended improvements.

## 11.2 Year 2020 Plus Project Recommended Improvements

### 11.2.1 Weekday Academic Instruction

The results of the intersection capacity analysis presented previously in *Table 8-3* shows that the proposed Project (i.e. academic instruction) will not significantly impact any of the thirty-one (31) key study intersections under the “Year 2020 Plus Project Weekday” traffic scenario. Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

### 11.2.2 Saturday Field Event

The results of the intersection capacity analysis presented previously in *Table 8-4* shows that the proposed Project (i.e. field event) will significantly impact three (3) of the thirty-one (31) key study intersections under the “Year 2020 Plus Project Saturday” traffic scenario. The following are improvements recommended to mitigate the Year 2020 plus project Saturday traffic impacts:

- **No. 4 – Lemon Street at Berkeley Avenue:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **No. 28 – Berkeley Avenue at College Driveway No. 1:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **No. 29 – Berkeley Avenue at College Driveway No. 2:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).

**Figure 11-2** graphically illustrates the Year 2020 plus Project Saturday recommended improvements.

## 11.3 Year 2030 Buildout Plus Project Recommended Improvements

### 11.3.1 Weekday Academic Instruction

The results of the intersection capacity analysis presented previously in *Table 8-5* shows that the proposed Project (i.e. academic instruction) will not significantly impact any of the thirty-one (31) key study intersections under the “Year 2030 Buildout Plus Project Weekday” traffic scenario. Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

### 11.3.2 Saturday Field Event

The results of the intersection capacity analysis presented previously in *Table 8-6* shows that the proposed Project (i.e. field event) will significantly impact four (4) of the thirty-one (31) key study intersections under the “Year 2030 Buildout Plus Project Saturday” traffic scenario. The following are improvements recommended to mitigate the Year 2030 buildout plus project Saturday traffic impacts:

- **No. 4 – Lemon Street at Berkeley Avenue:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **No. 12 – State College Boulevard at Chapman Avenue:** Widen and restripe the westbound approach of Chapman Avenue to provide a 2<sup>nd</sup> westbound left-turn lane. Modify the existing traffic signal as necessary. Right-of-way acquisition will be required. Source: *CollegeTown Draft Environmental Impact Report (DEIR)*. The installation of these improvements is subject to the approval of the City of Fullerton. Since the proposed Project cannot guarantee that these improvements that are located in the City of Fullerton will be implemented, the impact is significant and unavoidable.
- **No. 28 – Berkeley Avenue at College Driveway No. 1:** Implement a Traffic Management Plan (TMP) during the event arrival period and event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **No. 29 – Berkeley Avenue at College Driveway No. 2:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).

**Figure 11-3** graphically illustrates the Year 2030 Buildout plus Project Saturday recommended improvements.

## 11.4 Existing Plus Project Recommended Improvements – Caltrans Methodology

### 11.4.1 Weekday Academic Instruction

The results of the intersection capacity analysis presented previously in *Table 9-1* shows that the proposed Project (i.e. academic instruction) will not significantly impact any of the six (6) state-controlled study intersections under the “Existing Plus Project Weekday” traffic scenario (Caltrans Methodology). Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

#### **11.4.2 Saturday Field Event**

The results of the intersection capacity analysis presented previously in *Table 9-2* shows that the proposed Project (i.e. field event) will not significantly impact any of the six (6) state-controlled study intersections under the “Existing Plus Project Saturday” traffic scenario (Caltrans Methodology). Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

### **11.5 Year 2020 Plus Project Recommended Improvements – Caltrans Methodology**

#### **11.5.1 Weekday Academic Instruction**

The results of the intersection capacity analysis presented previously in *Table 9-3* shows that the proposed Project (i.e. academic instruction) will not significantly impact any of the six (6) state-controlled study intersections under the “Year 2020 Plus Project Weekday” traffic scenario (Caltrans Methodology). Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

#### **11.5.2 Saturday Field Event**

The results of the intersection capacity analysis presented previously in *Table 9-4* shows that the proposed Project (i.e. field event) will not significantly impact any of the six (6) state-controlled study intersections under the “Year 2020 Plus Project Saturday” traffic scenario (Caltrans Methodology). Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

### **11.6 Year 2030 Buildout Plus Project Recommended Improvements – Caltrans Methodology**

#### **11.6.1 Weekday Academic Instruction**

The results of the intersection capacity analysis presented previously in *Table 9-5* shows that the proposed Project (i.e. academic instruction) will significantly impact one (1) of the six (6) state-controlled study intersections under the “Year 2030 Buildout Plus Project Weekday” traffic scenario. The following are improvements recommended to mitigate the Year 2030 Buildout plus Project Weekday traffic impacts:

- **No. 14 – SR-57 NB Ramps at Chapman Avenue:** Widen and restripe the westbound approach of Chapman Avenue to provide a 3<sup>rd</sup> westbound through lane. Modify the existing traffic signal as necessary. Right-of-way acquisition will be required. Source: *CollegeTown Draft Environmental Impact Report (DEIR)*. The installation of these improvements is subject to the approval of Caltrans and the City of Fullerton. Since the proposed Project cannot guarantee that these improvements that are located in the City of Fullerton and/or also under the jurisdiction of Caltrans will be implemented, the impact is significant and unavoidable.

#### **11.6.2 Saturday Field Event**

The results of the intersection capacity analysis presented previously in *Table 9-6* shows that the proposed Project (i.e. field event) will not significantly impact any of the six (6) state-controlled study intersections under the “Year 2030 Buildout Plus Project Saturday” traffic scenario (Caltrans

Methodology). Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

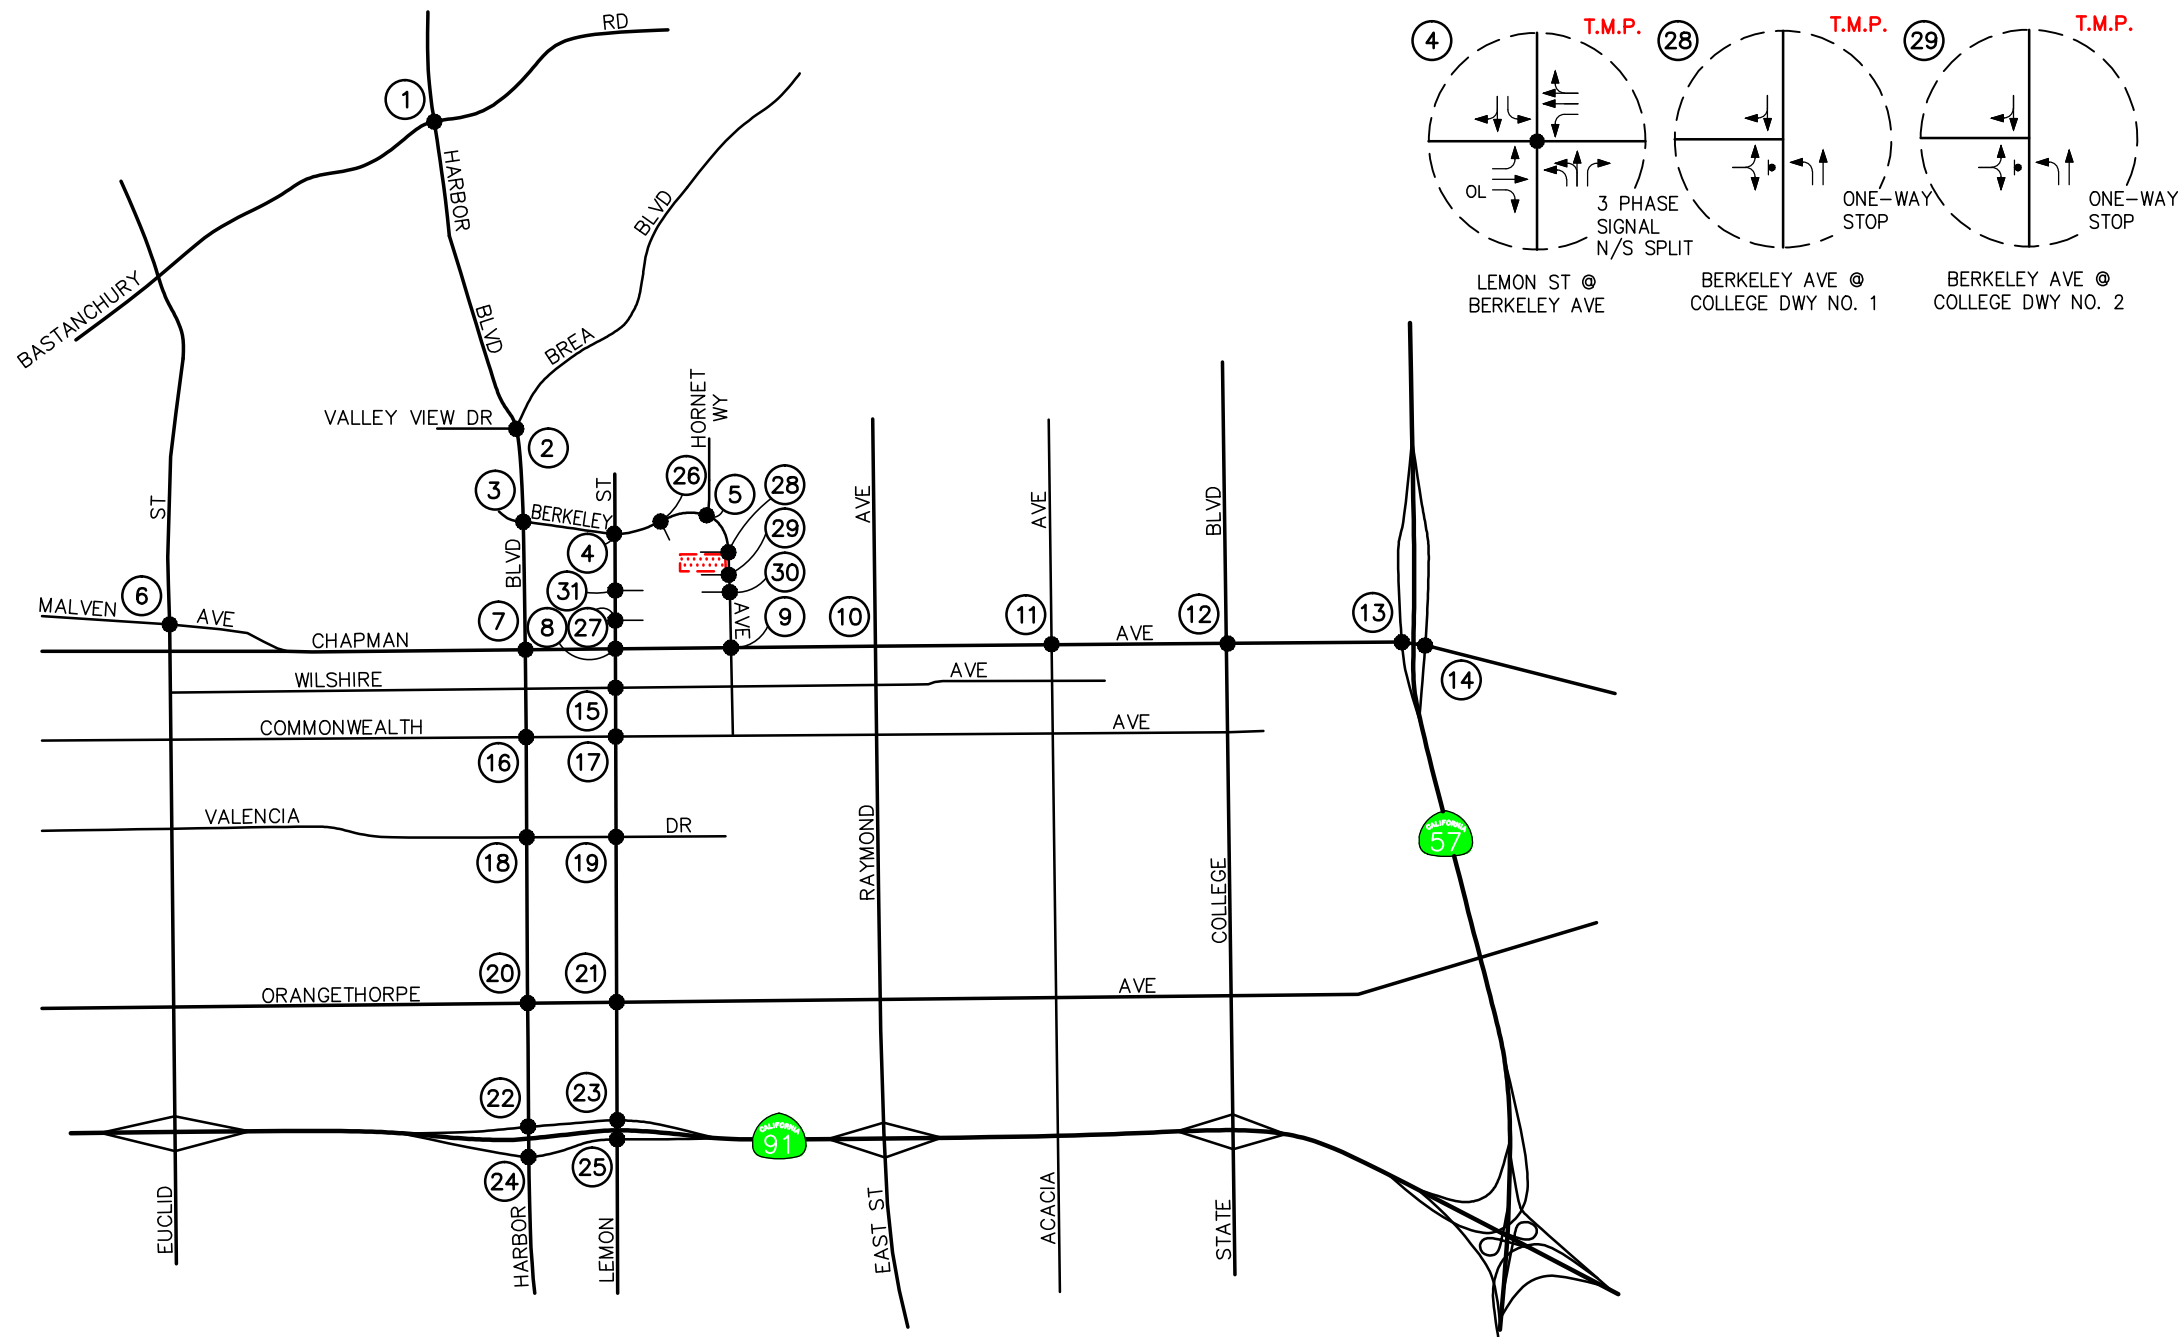

**Figure 11-4** graphically illustrates the Year 2030 Buildout plus Project Weekday (Caltrans methodology) recommended improvements.

## 11.7 Traffic Management Plan

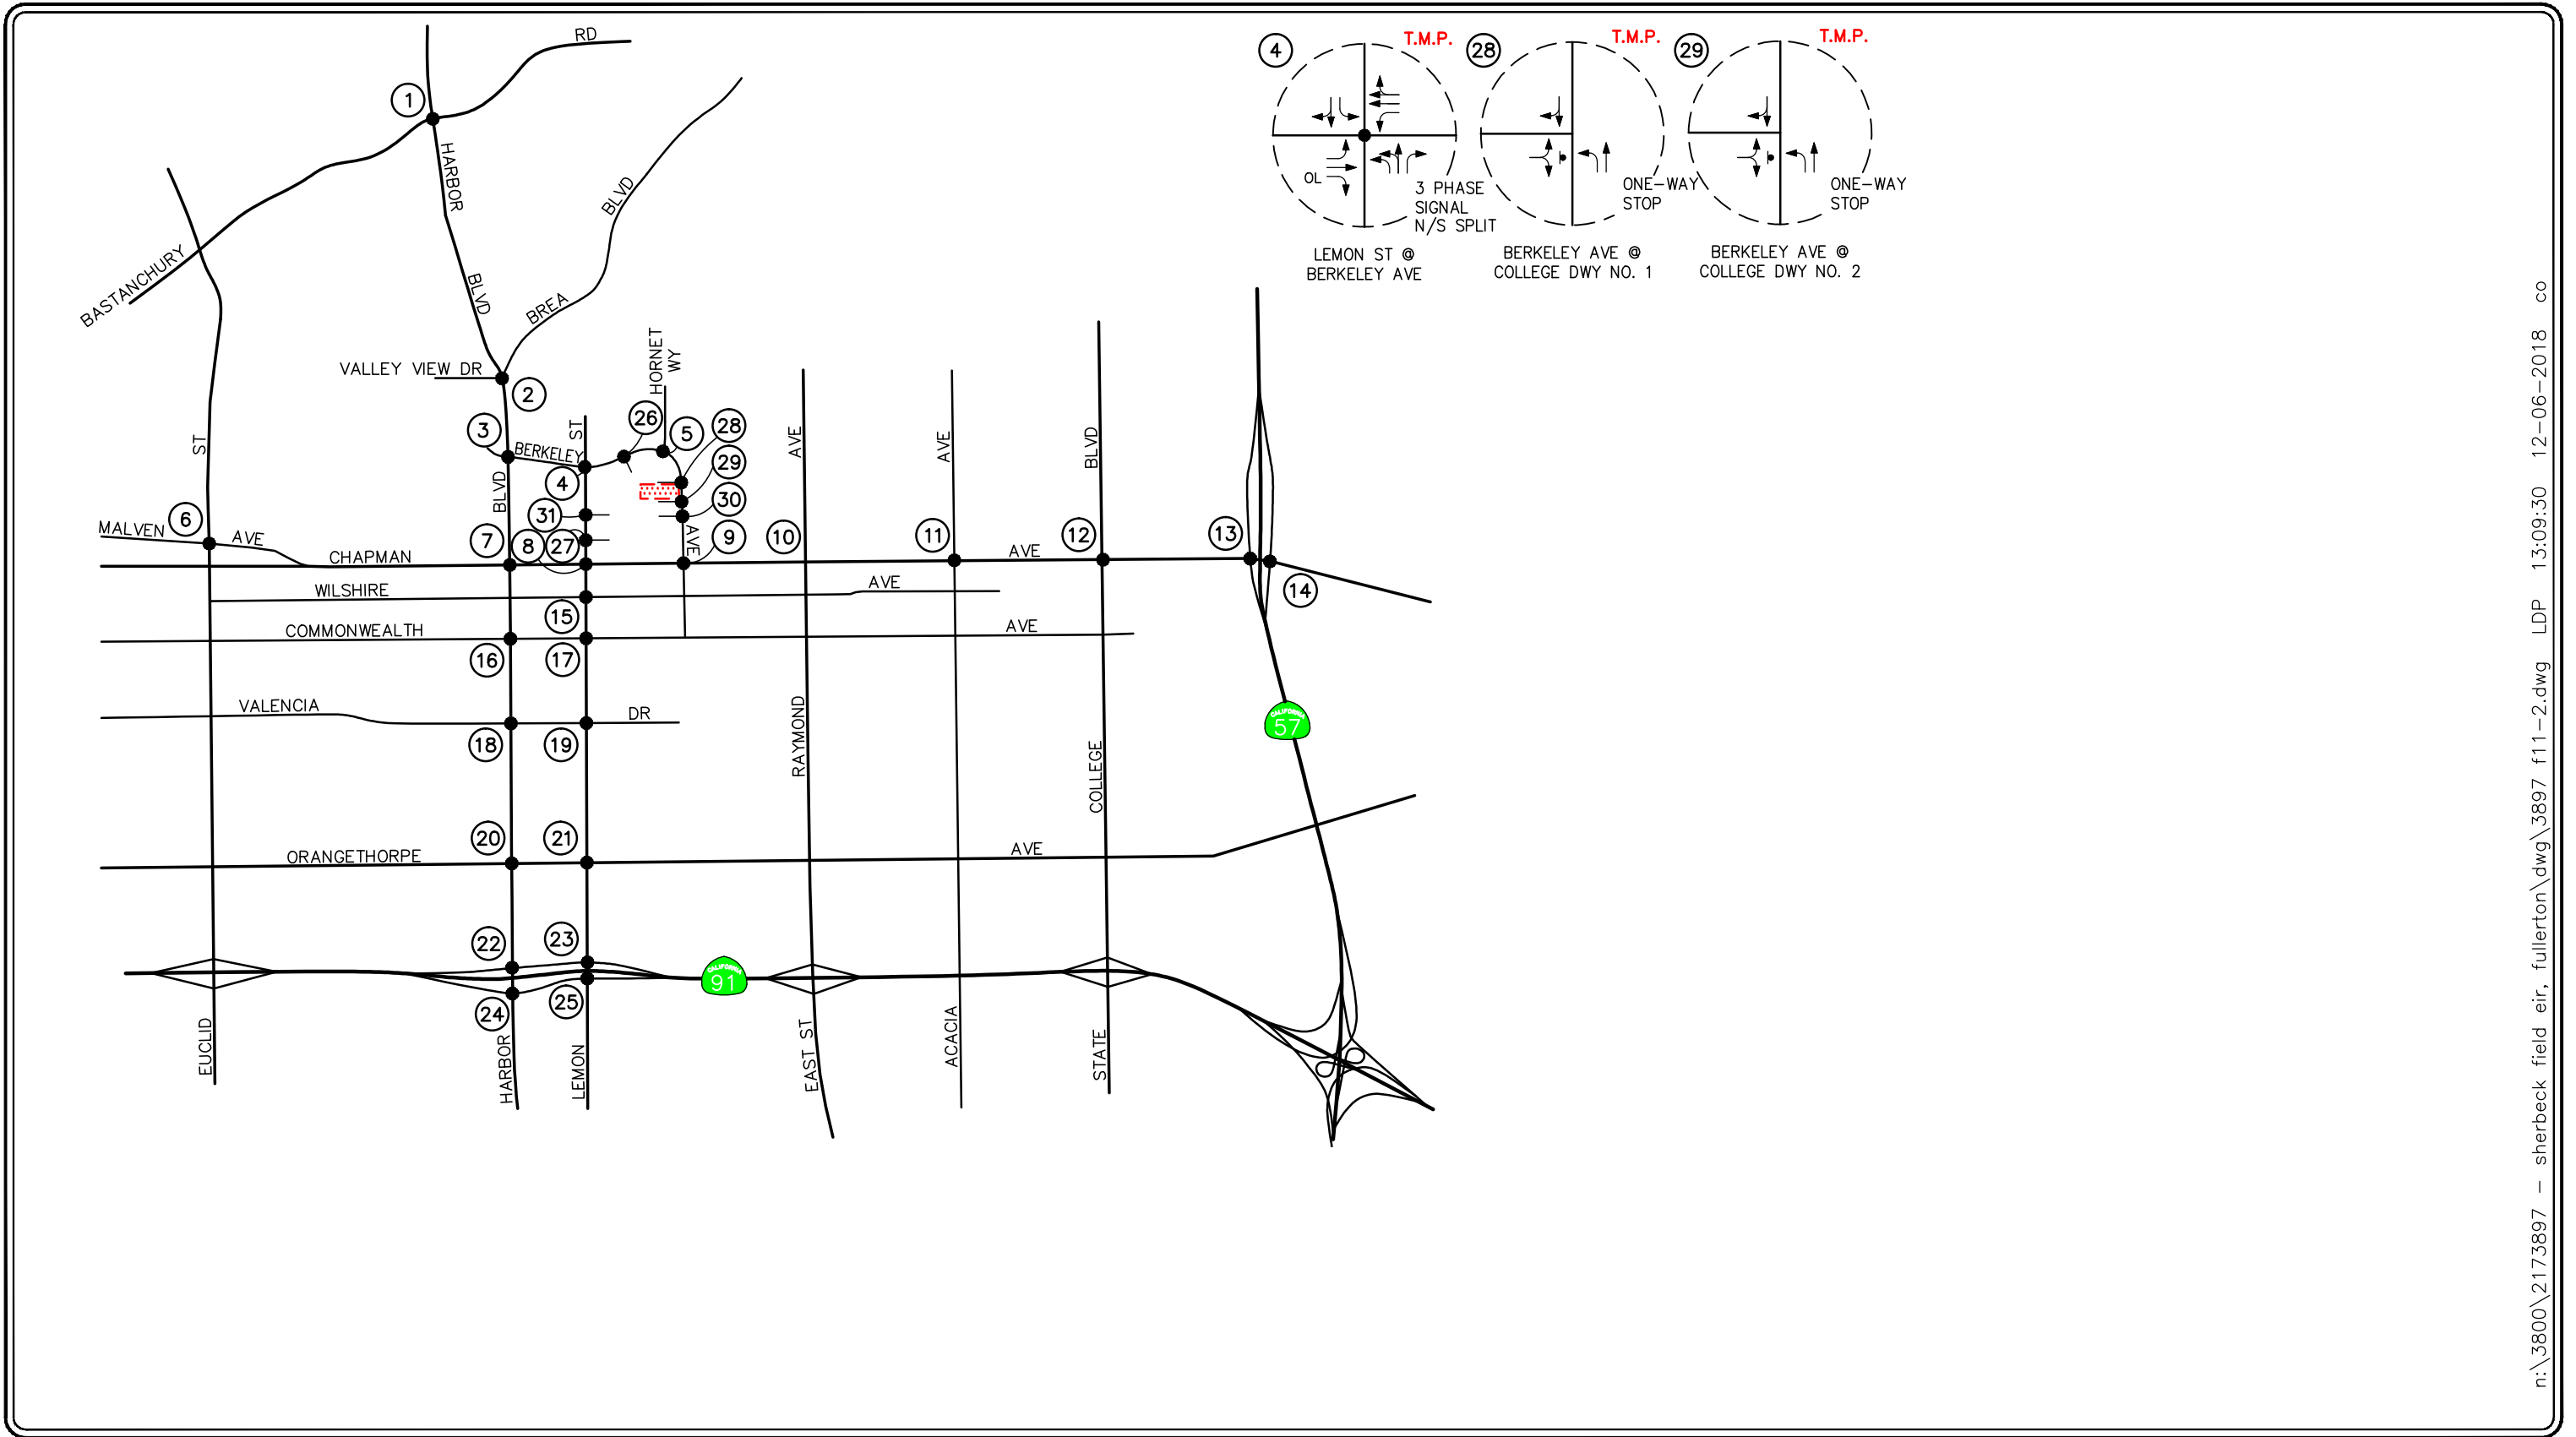

**Figure 11-5** presents the staffing component of the Traffic Management Plan (TMP) recommended during the Saturday field event arrival period for key study intersection #28. The figure identifies the potential location of police department staff that will be stationed at this location to direct traffic flows. The project traffic movements are also shown for reference. As part of the TMP, police department staff will monitor traffic congestion at this location to help minimize any traffic queues along Berkeley Avenue. Should any traffic congestion or queues occur on Berkeley Avenue during the event arrival period, police department staff controlling the intersection will direct traffic flows in a manner to reduce or minimize the traffic congestion and queues. Depending on traffic conditions on any given day, other components of the event TMP available to assist police department staff that could be deployed include routing of traffic via traffic cones/delineators as necessary and/or placement of programmable changeable message signs (PCMS).

**Figure 11-6** presents the Traffic Management Plan (TMP) staffing component recommended during the Saturday field event departure period for key study intersections #4, #28 and #29. The figure identifies the potential location of police department staff that will be stationed at these locations to direct traffic flows. The project traffic movements are also shown for reference. As part of the TMP, police department staff will monitor traffic congestion at these three locations to minimize any traffic queues along Berkeley Avenue and Lemon Street. Should any traffic congestion or queues occur on Berkeley Avenue and Lemon Street during the event departure period, police department staff controlling the intersections will direct traffic flows in a manner to reduce or minimize the traffic congestion and queues. For the intersection of Lemon Street/Berkeley Avenue (i.e. key study intersection #4), other components of the event TMP available to assist police department staff that could be deployed dependent upon traffic conditions on a specific day include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators, and/or programmable changeable message signs (PCMS). For the intersections of Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 (i.e. key study intersections #28 and #29, respectively), other components of the event TMP available to assist police department staff dependent upon traffic conditions on a specific day include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).

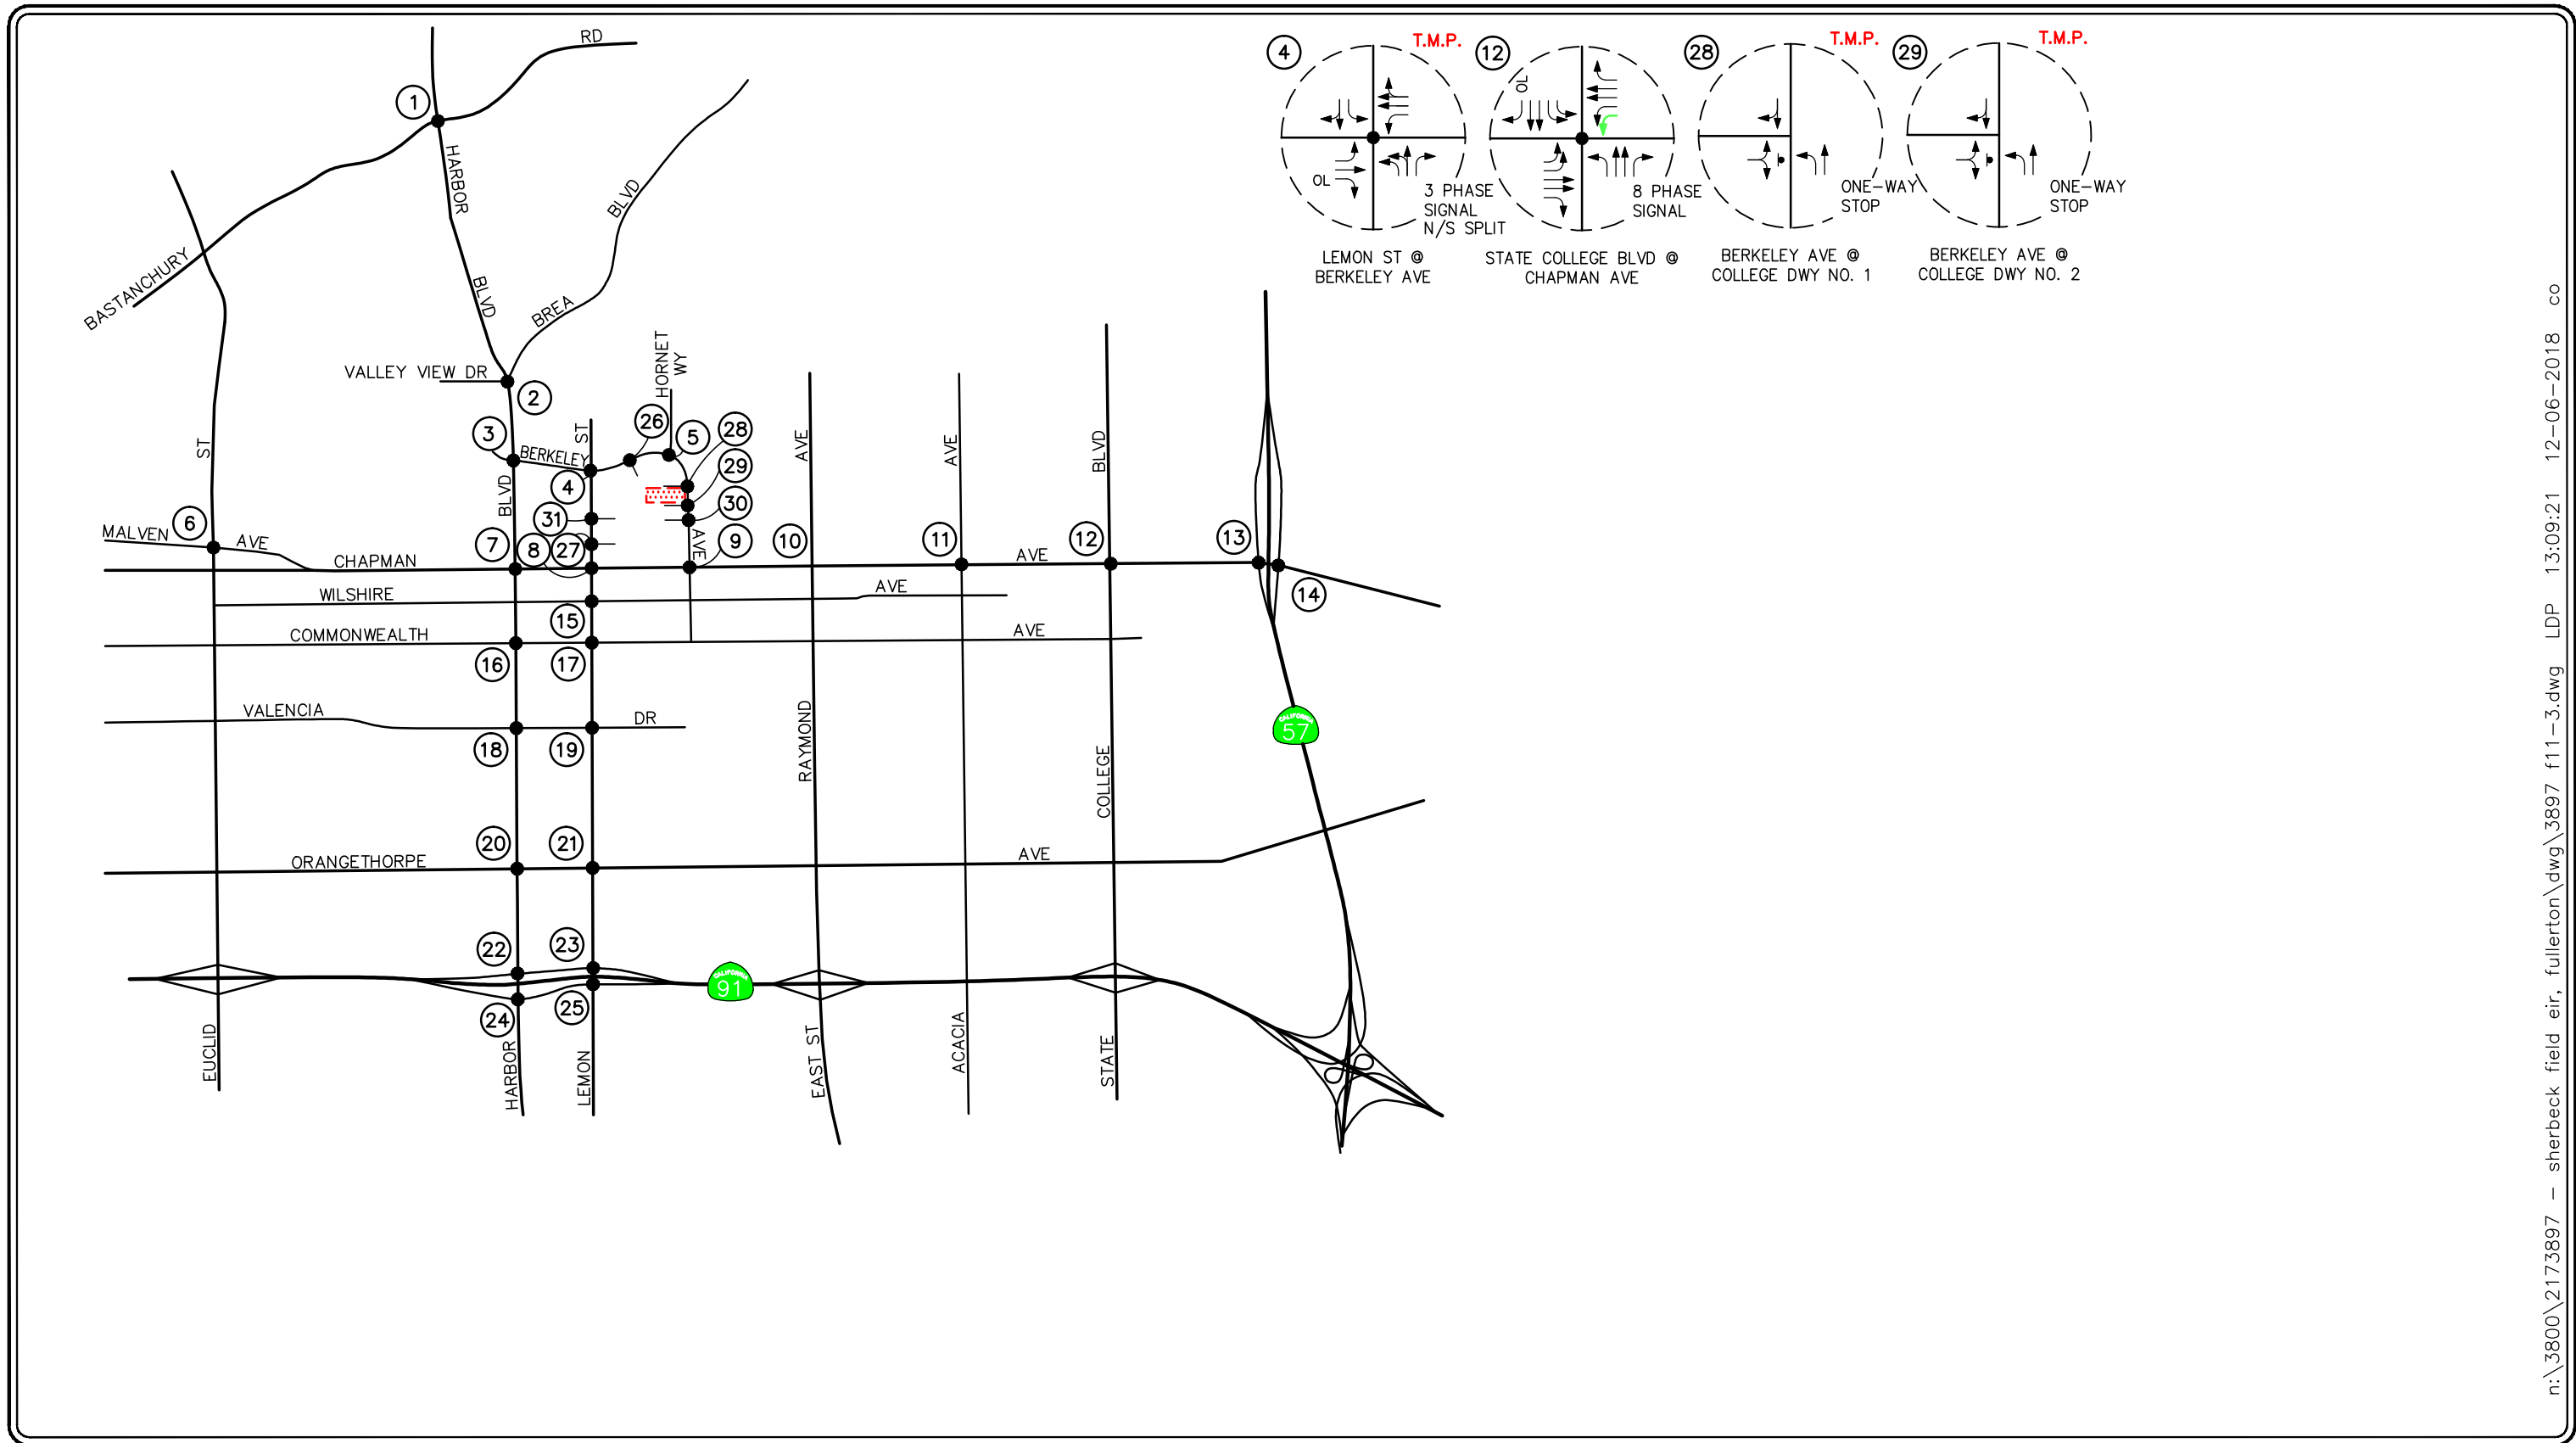

As shown on *Tables 8-2, 8-4 and 8-6*, with implementation of the TMP, which includes those strategies available to traffic control personnel as described above, the impacts at the key study intersections of Lemon Street/Berkeley Avenue, Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 (i.e. key study intersections #4, #28 and #29, respectively) will be reduced to less than significant and these three (3) intersections will operate at an acceptable level of service under existing plus project, Year 2020 plus project and Year 2030

buildout plus project traffic conditions. Refer to the “with improvements” columns of *Tables 8-2, 8-4 and 8-6* presented previously in Section 8.0, which illustrates the resulting levels of service with implementation of the TMP.

## **11.8 Project-Related Fair Share Percentage Contribution**

The transportation impacts associated with the development of the proposed Project were determined based on the existing plus project, Year 2020 and Year 2030 analyses. As summarized above, the development of the proposed Project is anticipated to create significant impacts at three (3) key study intersections under existing plus project traffic conditions, at three (3) key study intersections in the Year 2020 and at five (5) key study intersections in the Year 2030. It should be noted that the intersection of SR-57 NB Ramps/Chapman Avenue (i.e. key study intersection #14) is only impacted under the Caltrans methodology. The Project is fully responsible for the existing plus project impacts and can be expected to pay a proportional “fair-share” of the improvement costs of the impacted intersections in the Year 2020 and the Year 2030 to mitigate the project’s traffic impacts.

### **11.8.1 Year 2020 Project-Related Fair Share Contribution**

Given that the Year 2020 Saturday recommended mitigation measures for the three (3) impacted key study intersections consist of the implementation of a Traffic Management Plan, the Project’s contribution will be 100.0% for all three (3) locations to offset the Year 2020 Saturday project impacts.

### **11.8.2 Year 2030 Buildout Project-Related Fair Share Contribution**

*Table 11-1* presents the percentage of net traffic impact at the study intersections impacted by the proposed Project for Year 2030 buildout traffic conditions (weekday and Saturday). As presented in this table, the first column (1) presents a total of all movements for existing conditions. The second column (2) presents future Year 2030 buildout traffic conditions. The third column (3) presents future Year 2030 buildout traffic conditions with project traffic. The fourth column (4) represents what percentage of total intersection traffic is project-related traffic.

Review of *Table 11-1* shows that the Project’s fair share contribution to offset the Year 2030 weekday and Saturday project impacts ranges between 0.6% and 100.0%.

**TABLE 11-1**  
**YEAR 2030 BUILDOUT PROJECT FAIR SHARE CONTRIBUTION**

Key Intersection		Impacted Time Period	(1) Existing Traffic	(2) Year 2030 Buildout Traffic	(3) Year 2030 Buildout Plus Project Traffic	(4) Project Percentage Share
4.	Lemon Street at Berkeley Avenue	Sat. Departure	Traffic Management Plan			100.0%
12.	State College Boulevard at Chapman Avenue	Sat. Arrival Sat. Departure	2,665 2,768	4,470 4,583	5,033 5,185	23.8% 24.9%
14.	SR-57 NB Ramps at Chapman Avenue	Weekday PM	3,477	4,708	4,716	0.6%
28.	Berkeley Avenue at College Driveway No. 1	Sat. Arrival Sat. Departure	Traffic Management Plan			100.0%
29.	Berkeley Avenue at College Driveway No. 2	Sat. Departure	Traffic Management Plan			100.0%

Notes:

Project Percentage Share (4) = [Column (3) – Column (2)] / [Column (3) – Column (1)]

## 12.0 FRIDAY FIELD EVENT ANALYSIS

This section of the report presents the findings of an Existing plus Project and Year 2020 Cumulative plus Project Friday evening traffic evaluation. The purpose of the Friday evaluation is to address City of Fullerton Staff concerns regarding a “worst case” traffic scenario if Fullerton College hosts an event at Sherbeck Field on Friday evening while Fullerton Union High School hosts a simultaneous event at their field. The following section summarizes the results of the Friday evaluation.

### 12.1 Existing Friday Traffic Volumes

In order to model the “worst case” traffic condition, existing Friday evening traffic counts were conducted at the thirty-one (31) key study intersections on Friday October 26, 2018 during the Fullerton Union High School football game with Troy High School. The football game had a start time of 7:00 PM and finished at approximately 9:45 PM with an attendance of 1,485 people.<sup>33</sup> Specifically, manual peak hour turning movement counts were conducted by Transportation Studies Inc. (TSI) between 6:00 PM and 8:00 PM (event arrival period) and between 9:00 PM and 11:00 PM (event departure period) to establish a Friday baseline traffic condition for the Event Arrival Period peak hour and the Event Departure Period peak hour.

**Figures 12-1** and **12-2** illustrate the existing Friday Event Arrival Period peak hour and existing Friday Event Departure Period peak hour traffic volumes at the key study intersections evaluated in this report, respectively.

**Appendix M** contains the detailed Friday peak hour count sheets for the key intersections evaluated in this report.

### 12.2 Project Traffic Generation and Assignment – Friday Field Event

The project trip generation for the field event presented previously in *Table 5-2* was utilized for the Friday analysis [i.e. 4,307 daily trips, 1,559 Event Arrival peak hour trips (1,228 inbound and 331 outbound) and 1,669 Event Departure peak hour trips (141 inbound and 1,528 outbound)].

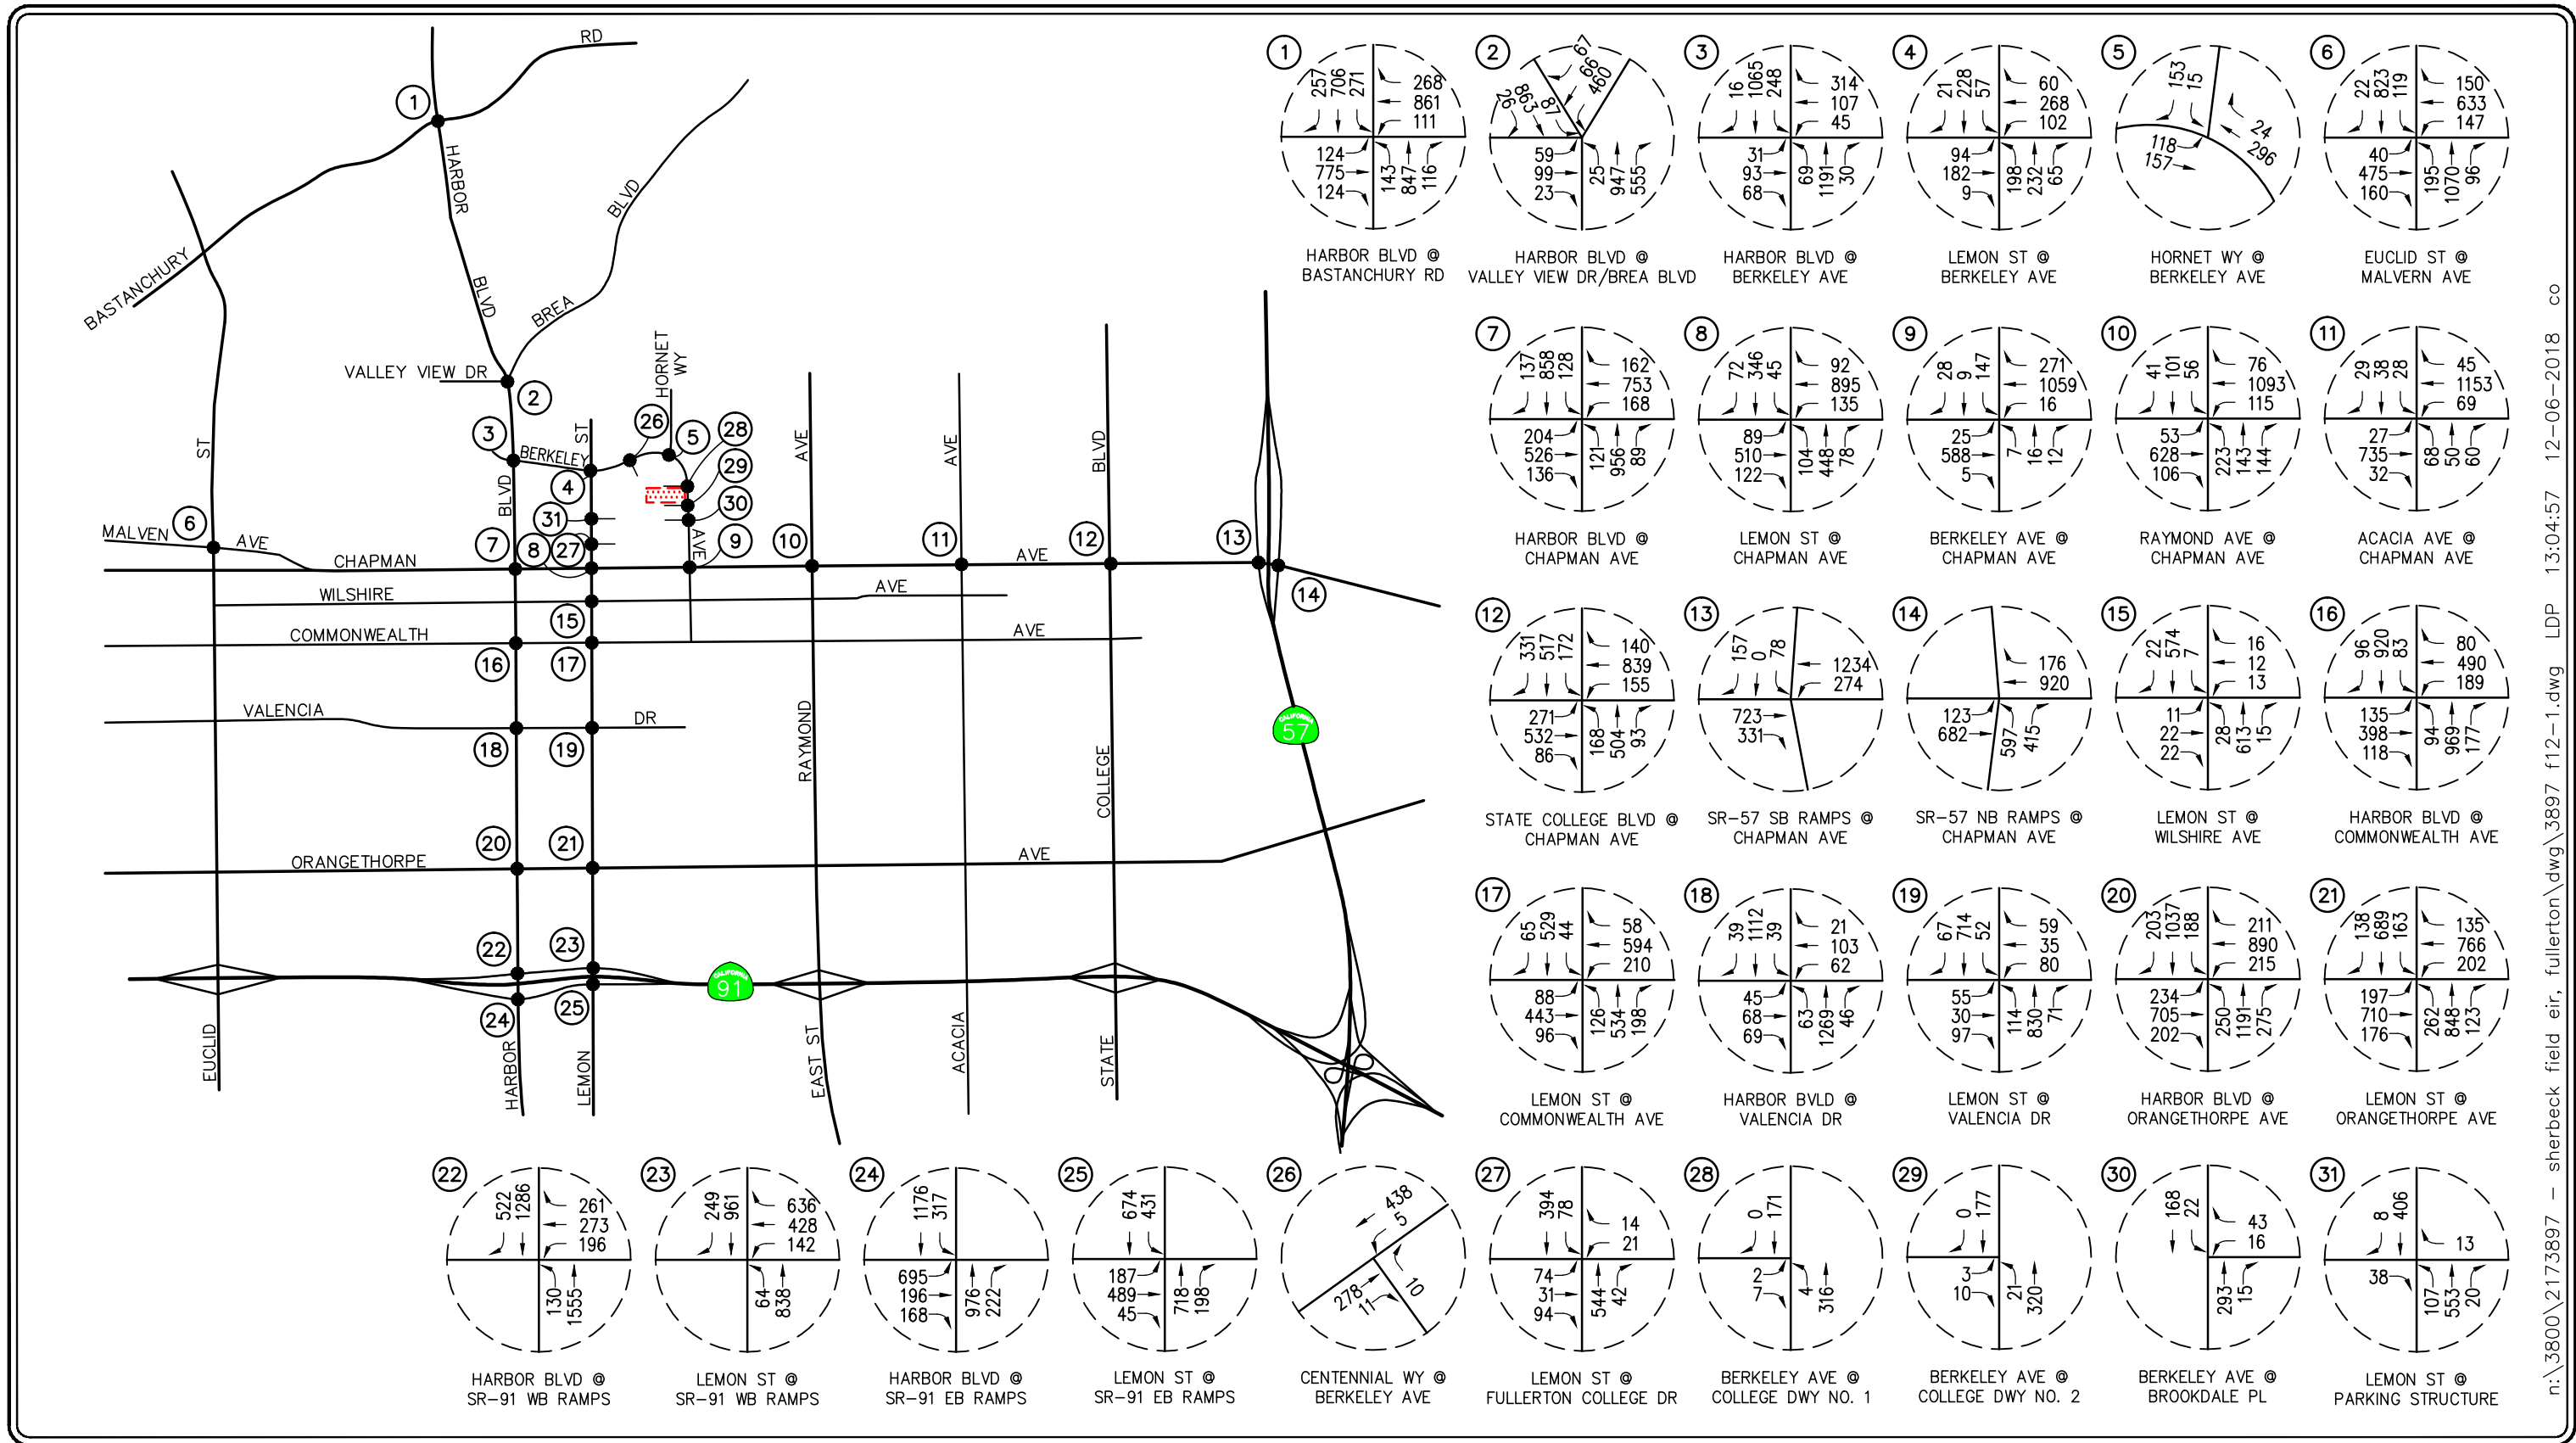

The project traffic distribution pattern presented previously in *Figure 5-3* was utilized to assign the Friday field event project trips to the key study intersections for the event arrival period and event departure period.

### 12.3 Existing Plus Project Friday Traffic Volumes

**Figures 12-3** and **12-4** present projected Friday Event Arrival Period peak hour traffic volumes and Friday Event Departure Period peak hour traffic volumes at the thirty-one (31) key study locations with the addition of the trips generated by the proposed Project (i.e. field event) to existing traffic volumes, respectively.

## 12.4 Year 2020 Friday Traffic Volumes

The Year 2020 Friday cumulative traffic volumes were forecasted consistent with the forecasting methodology presented previously in Section 6.1. It should be noted that the weekday PM peak hour cumulative project traffic volumes were utilized for the Friday Event Arrival Period peak hour and Friday Event Departure Period peak hour to provide a conservative forecast.

**Figures 12-5 and 12-6** present the Friday Event Arrival and Friday Event Departure peak hour cumulative traffic volumes (existing traffic + ambient growth + cumulative projects) at the key study intersections for the Year 2020, respectively.

**Figures 12-7 and 12-8** illustrate the Year 2020 forecast Friday Event Arrival peak hour and Friday Event Departure peak hour traffic volumes, with the inclusion of the trips generated by the proposed Project (i.e. field event), respectively.

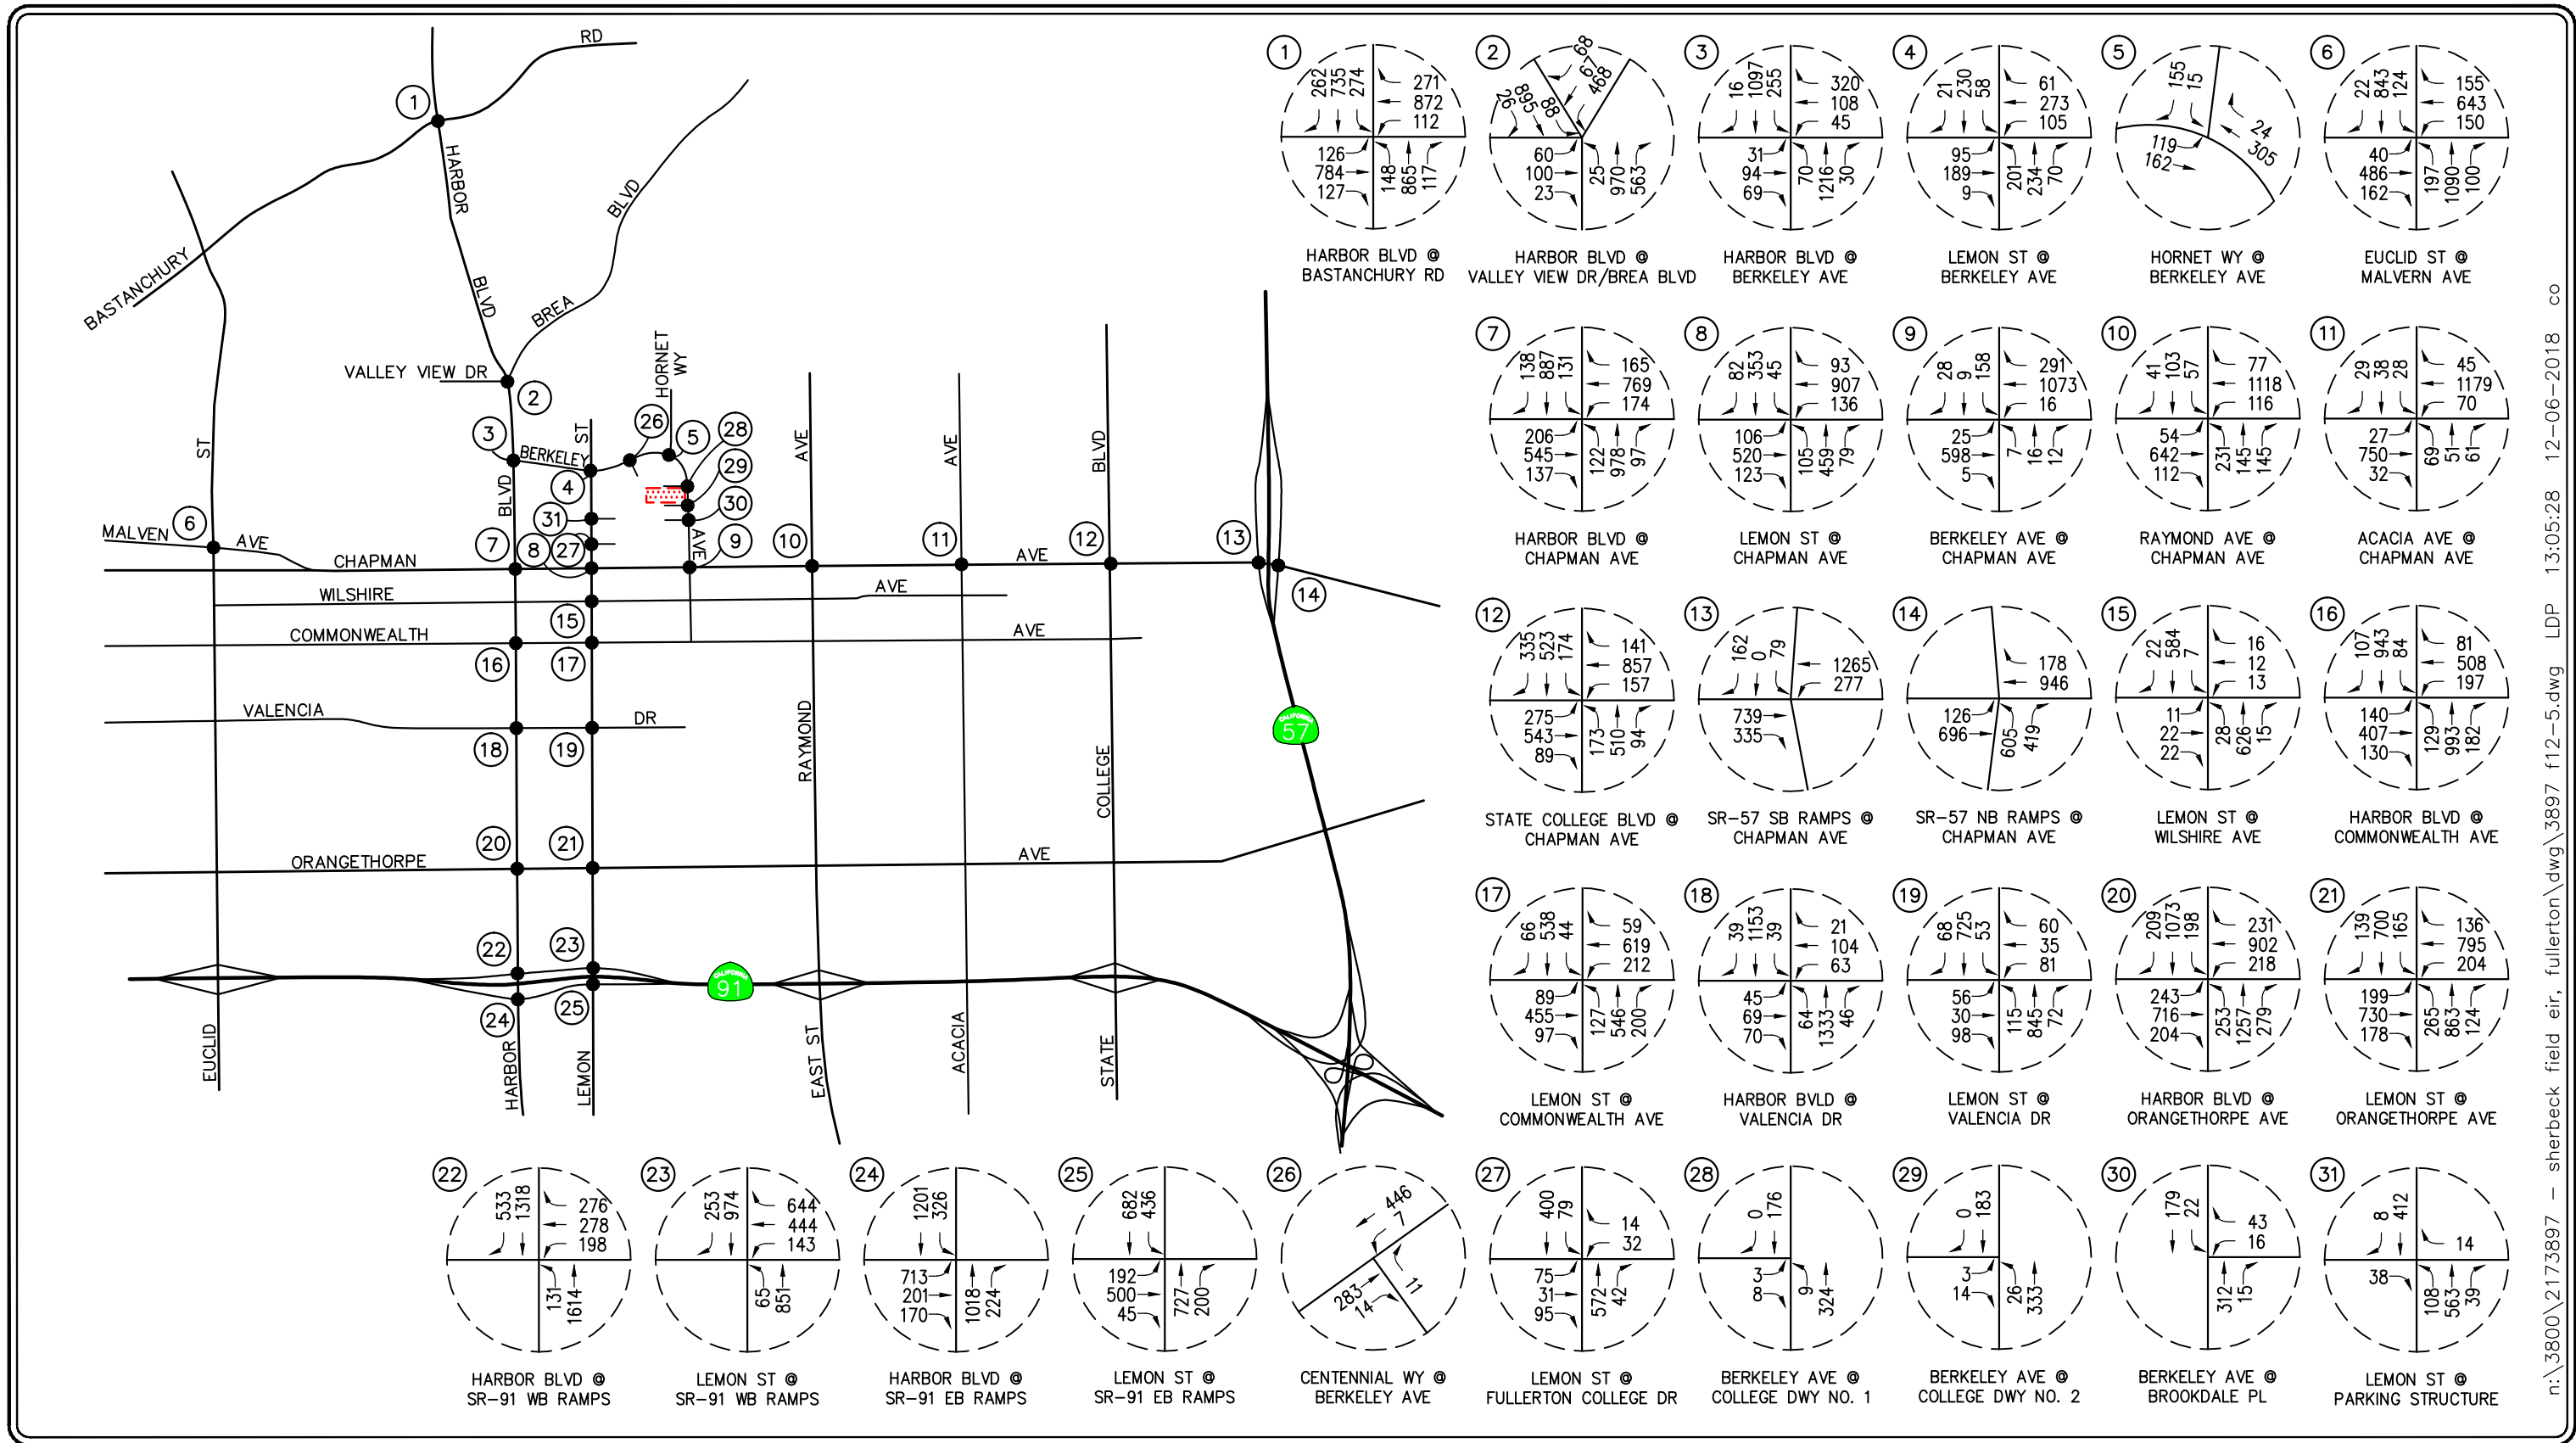

## 12.5 Peak Hour Intersection Capacity Analysis

### 12.5.1 Existing Plus Project Analysis – Friday Field Event

**Table 12-1** summarizes the Friday Event Arrival peak hour and Friday Event Departure peak hour Level of Service results at the thirty-one (31) key study intersections for Existing plus Project (i.e. field event) traffic conditions. The first column (1) of HCM/LOS values in **Table 12-1** presents a summary of existing Friday Event Arrival peak hour and Friday Event Departure peak hour traffic conditions. The second column (2) lists Existing plus Project (i.e. field event) traffic conditions. The third column (3) shows the increase in the HCM value due to the added peak hour Project trips and indicates whether the traffic associated with the Project will have a significant impact based on the LOS standards and significant impact criteria defined in this report. The fourth column (4) of **Table 12-1** indicates the anticipated operating conditions with implementation of improvements planned and/or recommended to mitigate Project traffic and/or achieve an acceptable Level of Service.

Review of Columns 2 and 3 of **Table 12-1** indicates that traffic associated with the proposed Project (i.e. field event) will significantly impact four (4) of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. The remaining twenty-seven (27) key study intersections currently operate and are forecast to continue to operate at an acceptable service level during the Friday Event Arrival peak hour and Friday Event Departure peak hour with the addition of Project generated traffic to existing traffic. The intersections operating at an adverse level of service under Existing plus Project Friday traffic conditions are as follows:

<u>Key Intersection</u>	<u>Friday Arrival</u>		<u>Friday Departure</u>	
	<u>ICU/HCM</u>	<u>LOS</u>	<u>ICU/HCM</u>	<u>LOS</u>
4. Lemon Street at Berkeley Avenue	---	---	93.5 s/v	F
27. Lemon Street at Fullerton College Drive	---	---	541.9 s/v	F

**YEAR 2020 FRIDAY EVENT ARRIVAL PERIOD  
CUMULATIVE PLUS PROJECT PEAK HOUR TRAFFIC VOLUMES  
FULLERTON COLLEGE SHERBECK FIELD IMPROVEMENTS PROJECT, FULLERTON**

As shown in column 4, the implementation of improvements (i.e. Traffic Management Plan) at the impacted key study intersections of Lemon Street/Berkeley Avenue, Lemon Street/Fullerton College Drive, Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 will improve the intersections level of service operation to an acceptable level.

*Appendix N* presents the Existing plus Project HCM/LOS Friday Event Arrival peak hour and Friday Event Departure peak hour calculations for the thirty-one (31) key study intersections.

### **12.5.2 Year 2020 Traffic Conditions – Friday Field Event**

*Table 12-2* summarizes the Friday Event Arrival peak hour and Friday Event Departure peak hour Level of Service results at the thirty-one (31) key study intersections for Year 2020 traffic conditions. The first column (1) of HCM/LOS values in *Table 12-2* presents a summary of existing Friday Event Arrival peak hour and Friday Event Departure peak hour traffic conditions. The second column (2) lists projected Year 2020 traffic conditions (existing plus ambient growth plus cumulative projects traffic) based on existing intersection geometry, but without any traffic generated from the proposed Project. The third column (3) presents forecast Year 2020 traffic conditions with the addition of Project traffic. The fourth column (4) shows the increase in the HCM value due to the added peak hour Project trips and indicates whether the traffic associated with the Project will have a significant impact based on the LOS standards and significant impact criteria defined in this report. The fifth column (5) of *Table 12-2* indicates the anticipated operating conditions with implementation of improvements planned and/or recommended to mitigate Project traffic and/or achieve an acceptable Level of Service.

#### **12.5.2.1 Year 2020 Traffic Conditions (Without Project) – Friday Field Event**

An analysis of future (Year 2020) Friday cumulative traffic conditions indicates that the addition of ambient traffic growth and cumulative projects traffic will not adversely impact the thirty-one (31) key study intersections. The thirty-one (31) key study intersections are forecast to continue to operate at acceptable levels of service during the Friday Event Arrival peak hour and Friday Event Departure peak hour with the addition of ambient traffic growth and cumulative projects traffic.

#### **12.5.2.2 Year 2020 Plus Project Traffic Conditions – Friday Field Event**

Review of Columns 3 and 4 of *Table 12-2* indicates that traffic associated with the proposed Project (i.e. field event) will significantly impact four (4) of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. The remaining twenty-seven (27) key study intersections are forecast to continue to operate at an acceptable service level during the Friday Event Arrival peak hour and Friday Event Departure peak hour with the addition of Project generated traffic to Year 2020 cumulative traffic. The intersections operating at an adverse level of service under Year 2020 plus project Friday traffic conditions are as follows:

<u>Key Intersection</u>	<u>Friday Arrival</u>		<u>Friday Departure</u>	
	<u>ICU/HCM</u>	<u>LOS</u>	<u>ICU/HCM</u>	<u>LOS</u>
4. Lemon Street at Berkeley Avenue	---	---	98.1 s/v	F
27. Lemon Street at Fullerton College Drive	---	---	554.2 s/v	F
28. Berkeley Avenue at College Driveway No. 1	---	---	46.8 s/v	E
29. Berkeley Avenue at College Driveway No. 2	---	---	60.2 s/v	F

As shown in column 5, the implementation of improvements (i.e. Traffic Management Plan) at the impacted key study intersections of Lemon Street/Berkeley Avenue, Lemon Street/Fullerton College Drive, Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 will improve the intersections level of service operation to an acceptable level.

**Appendix O** presents the Year 2020 plus Project HCM/LOS Friday Event Arrival peak hour and Friday Event Departure peak hour calculations for the thirty-one (31) key study intersections.

## 12.6 Existing Plus Project Friday Recommended Improvements

The results of the intersection capacity analysis presented previously in *Table 12-1* shows that the proposed Project (i.e. field event) will significantly impact four (4) of the thirty-one (31) key study intersections under the “Existing Plus Project Friday” traffic scenario. The following are improvements recommended to mitigate the Existing plus Project Friday traffic impacts:

- **No. 4 – Lemon Street at Berkeley Avenue:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **No. 27 – Lemon Street at Fullerton College Drive:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **No. 28 – Berkeley Avenue at College Driveway No. 1:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **No. 29 – Berkeley Avenue at College Driveway No. 2:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).

**Figure 12-9** graphically illustrates the Existing plus Project Friday recommended improvements.

## 12.7 Year 2020 Plus Project Friday Recommended Improvements

The results of the intersection capacity analysis presented previously in *Table 12-2* shows that the proposed Project (i.e. field event) will significantly impact four (4) of the thirty-one (31) key study intersections under the “Year 2020 Plus Project Friday” traffic scenario. The following are improvements recommended to mitigate the Year 2020 plus Project Friday traffic impacts:

- **No. 4 – Lemon Street at Berkeley Avenue:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may

include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).

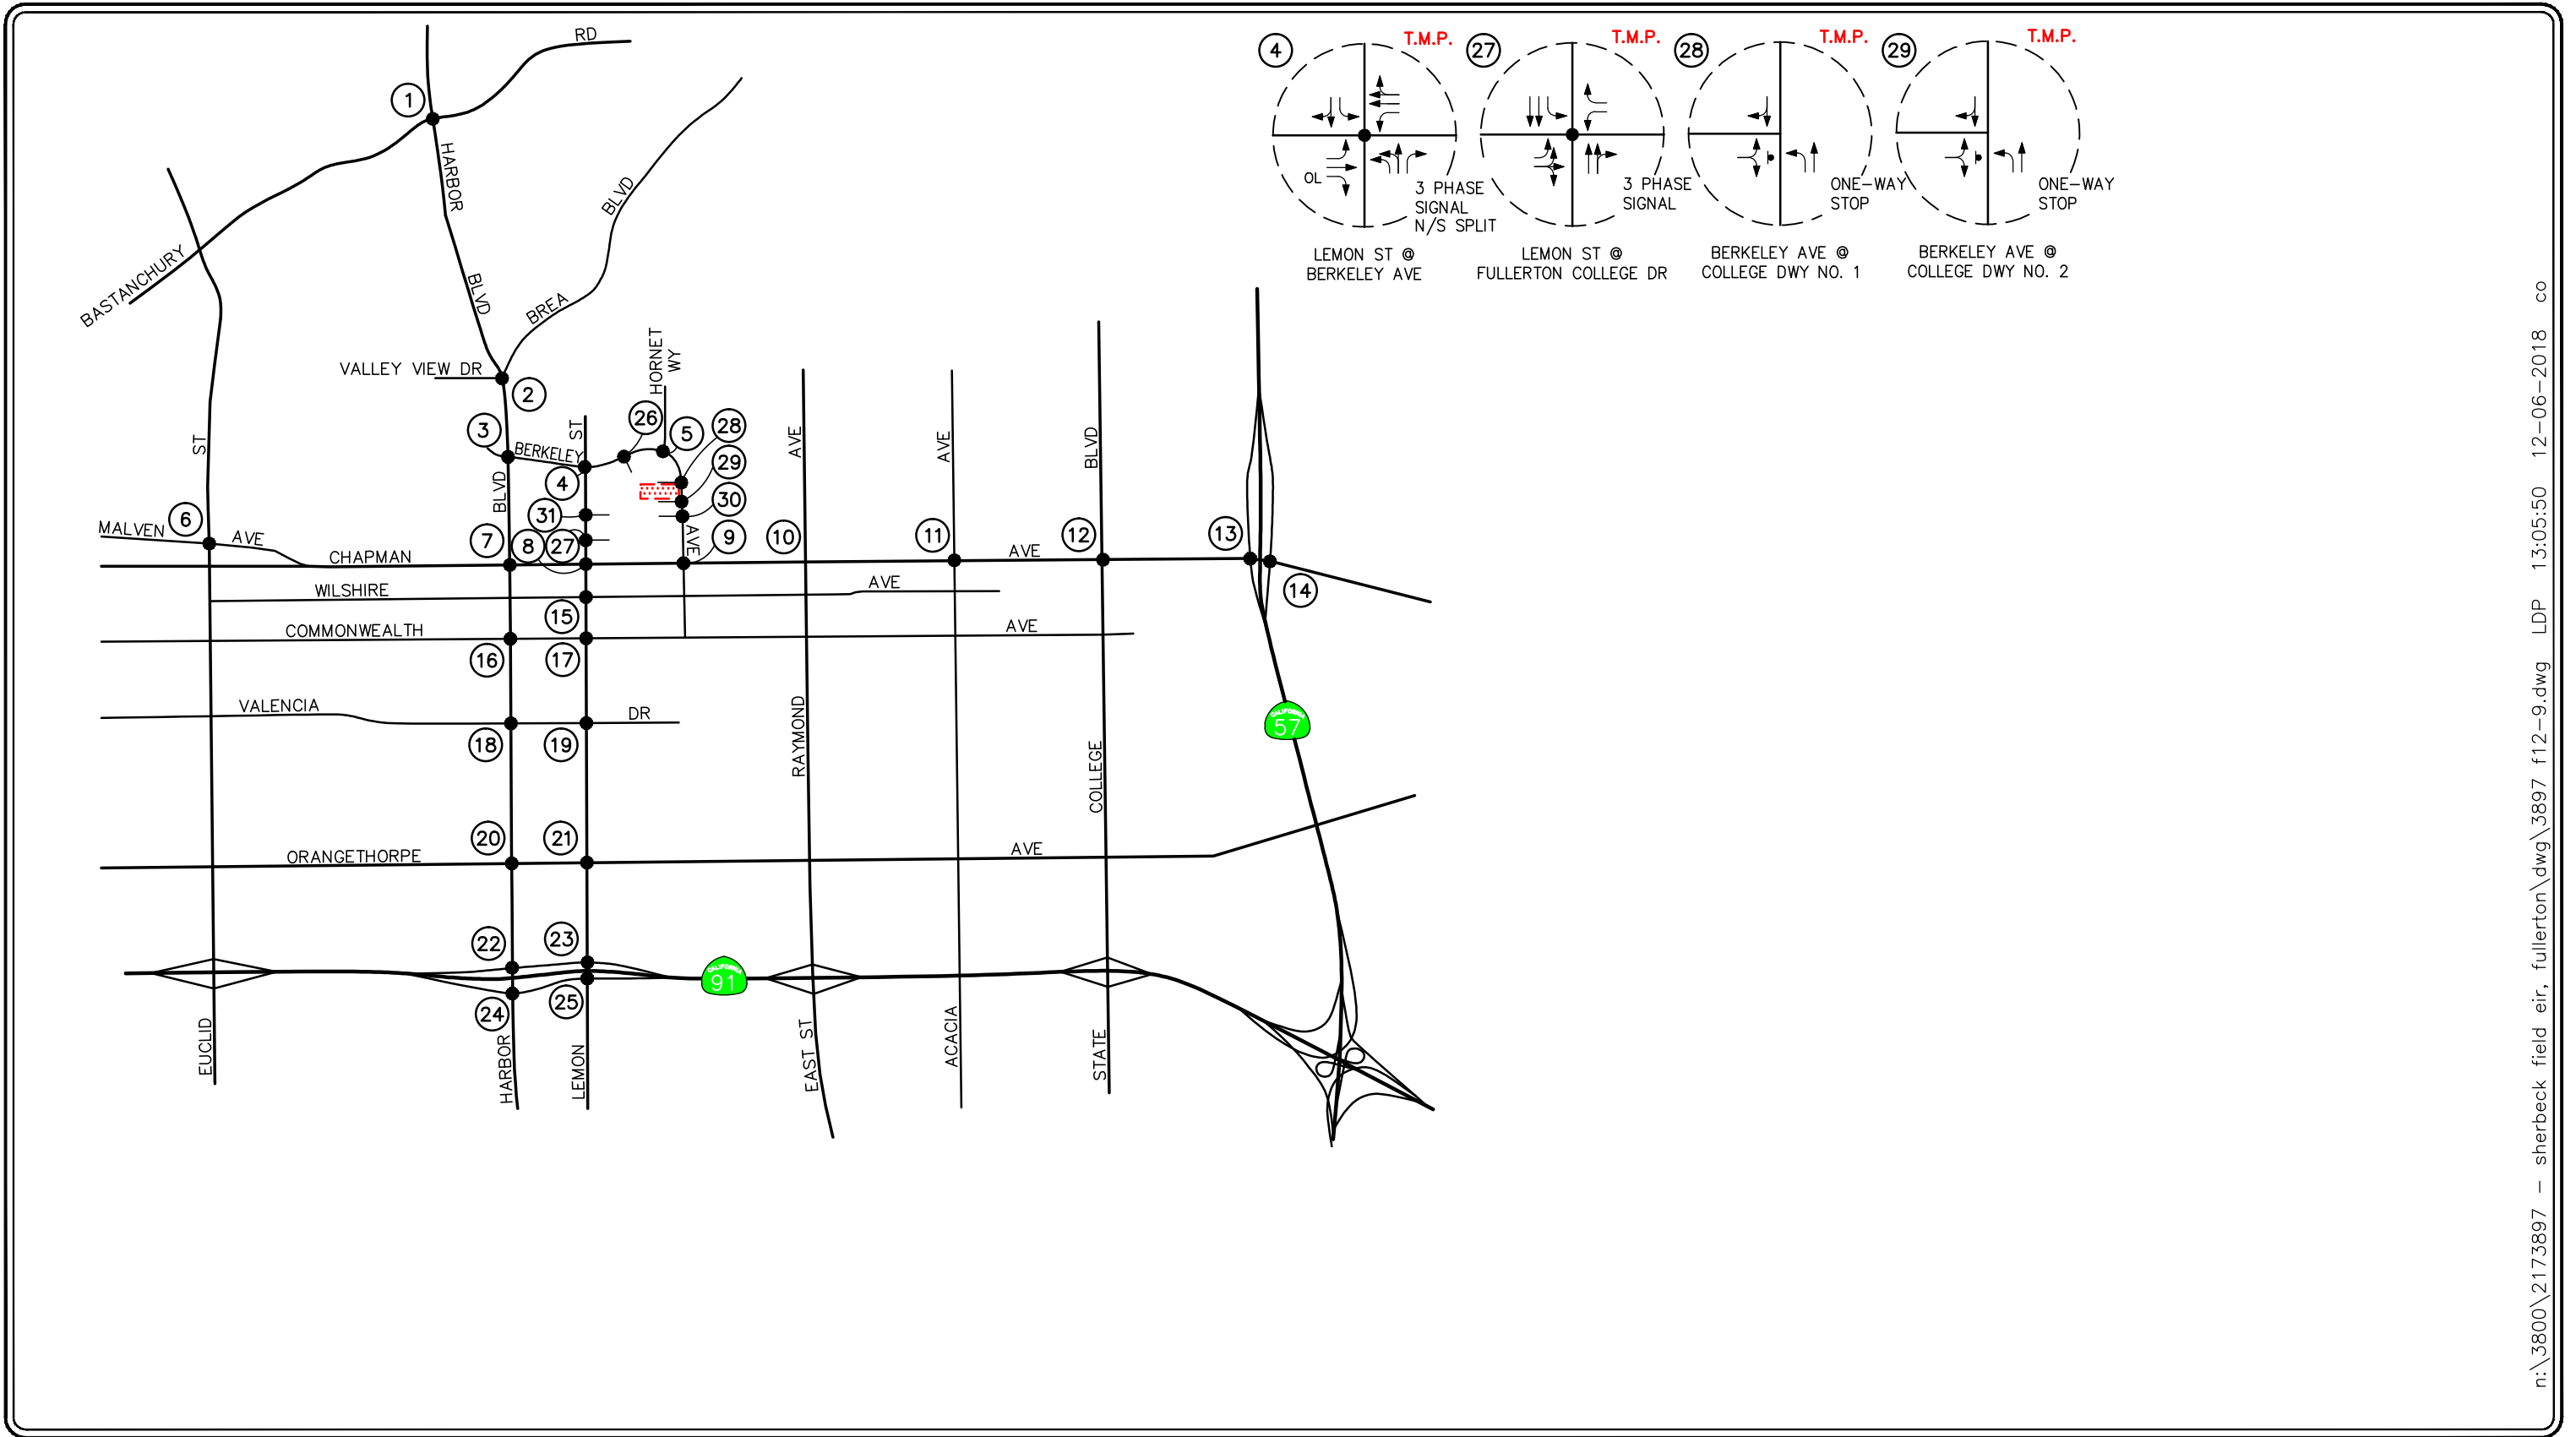

- **No. 27 – Lemon Street at Fullerton College Drive:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **No. 28 – Berkeley Avenue at College Driveway No. 1:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **No. 29 – Berkeley Avenue at College Driveway No. 2:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).

*Figure 12-10* graphically illustrates the Year 2020 plus Project Friday recommended improvements.

## 12.8 Traffic Management Plan

*Figure 12-11* presents the staffing component of the Traffic Management Plan (TMP) recommended during the Friday field event departure period for key study intersections #4, #27, #28 and #29. The figure identifies the potential location of police department staff that will be stationed at these locations to direct traffic flows. The project traffic movements are also shown for reference. As part of the TMP, police department staff will monitor traffic congestion at these four locations to help minimize any traffic queues along Berkeley Avenue and Lemon Street. Should any traffic congestion or queues occur on Berkeley Avenue and Lemon Street during the event departure period, police department staff controlling the intersections will direct traffic flows in a manner to reduce or minimize the traffic congestion and queues. For the intersections of Lemon Street/Berkeley Avenue and Lemon Street/Fullerton College Drive (i.e. key study intersections #4 and #27, respectively), and depending upon traffic conditions on a given day, other components of the event TMP available to assist police department staff that could be deployed include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators, and/or placement of programmable changeable message signs (PCMS). For the intersections of Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 (i.e. key study intersections #28 and #29, respectively), other TMP components to assist police department staff include routing of traffic via traffic cones/delineators and/or placement of PCMS.

As shown in *Tables 12-1* and *12-2*, with implementation of the TMP, the impacts at the key study intersections of Lemon Street/Berkeley Avenue, Lemon Street/Fullerton College Drive, Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 (i.e. key study intersections #4, #27, #28 and #29, respectively) will be reduced to less than significant and these four (4) intersections will operate at an acceptable level of service under existing plus project and Year 2020 plus project traffic conditions. Refer to the “with improvements” columns of *Tables 12-1* and *12-2*, which illustrates the resulting levels of service with implementation of the TMP.

## 13.0 CONSTRUCTION TRAFFIC IMPACT ASSESSMENT

This section of the report qualitatively evaluates the potential traffic impacts associated with the construction activities at the project site. The construction activities include 1) Site Preparation, 2) Trenching, 3) Building Construction, 4) Paving and 5) Architectural Coating. The following section describes the potential construction related trips associated with each construction activity and provides a qualitative assessment as to whether or not the forecast construction trips will have an impact on the existing street system.

### 13.1 Construction Traffic Trip Generation

In order to forecast the potential construction related trips associated with the construction activities at the project site, the following assumptions, as provided by the environmental consultant, have been utilized for the five aforementioned construction components.

#### **Site Preparation**

- A five-day work week (Monday through Friday from 7:00 AM to 5:00 PM) was assumed.
- The site preparation construction component is anticipated to last approximately one week.
- A total of nine (9) workers will be on site Monday through Friday from 7:00 AM to 5:00 PM.

#### **Trenching**

- A five-day work week (Monday through Friday from 7:00 AM to 5:00 PM) was assumed.
- The trenching construction component is anticipated to last approximately one month.
- A total of four (4) workers will be on site Monday through Friday from 7:00 AM to 5:00 PM.

#### **Building Construction**

- A five-day work week (Monday through Friday from 7:00 AM to 5:00 PM) was assumed.
- The building construction component is anticipated to last approximately 3.5 months.
- Sixteen (16) vendor trucks will visit the site per day as part of this construction component.
- A total of forty (40) workers will be on site Monday through Friday from 7:00 AM to 5:00 PM.

#### **Paving**

- A five-day work week (Monday through Friday from 7:00 AM to 5:00 PM) was assumed.
- The paving construction component is anticipated to last approximately two weeks.
- A total of eight (8) workers will be on site Monday through Friday from 7:00 AM to 5:00 PM.

#### **Architectural Coating**

- A five-day work week (Monday through Friday from 7:00 AM to 5:00 PM) was assumed.
- The architectural coating construction component is anticipated to last approximately one week.
- A total of ten (10) workers will be on site Monday through Friday from 7:00 AM to 5:00 PM.

In addition to the aforementioned assumptions for each construction component, the following assumptions were utilized for vendor truck trips and worker trips.

- Each vendor truck requires an inbound trip and an outbound trip.

- The daily number of vendor truck trips was averaged over the ten-hour workday to obtain the number of peak hour vendor truck trips (50% entering and 50% exiting).
- All vendor truck trips were converted to passenger car equivalents (P.C.E.'s) using a P.C.E. factor of 2.5.
- Each worker would make two (2) trips per day (one arrival before the AM peak hour and one departure during the PM peak hour).

Using the aforementioned assumptions, *Table 13-1* provides a summary of the forecast construction peak hour and daily traffic volumes for each of the five construction components. Review of the first row of *Table 13-1* shows that the site preparation construction component is expected to generate 18 daily trips, with 0 trips produced during the AM peak hour and 9 trips produced during the PM peak hour. Review of the second row of *Table 13-1* shows that the trenching construction component is expected to generate 8 daily trips, with 0 trips produced during the AM peak hour and 4 trips produced during the PM peak hour. Review of the third row of *Table 13-1* shows that the building construction component is expected to generate 160 daily trips, with 10 trips produced during the AM peak hour and 50 trips produced during the PM peak hour. Review of the fourth row of *Table 13-1* shows that the paving construction component is expected to generate 16 daily trips, with 0 trips produced during the AM peak hour and 8 trips produced during the PM peak hour. Review of the last row of *Table 13-1* shows that the architectural coating construction component is expected to generate 20 daily trips, with 0 trips produced during the AM peak hour and 10 trips produced during the PM peak hour.

### 13.2 Construction Traffic Assessment

Construction-related trips associated with trucks and workers traveling to and from the site in the morning and afternoon may result in some minor traffic delays; however, potential traffic interference caused by construction vehicles would create a temporary/short-term impact to vehicles using Berkeley Avenue and Chapman Avenue in the morning and afternoon hours and the number of construction workers will vary depending on the specific construction activities over time.

Traffic impacts to the adjacent roadway network will be minimal and **not** long-term. Further, since the construction-related trip generation potential of the proposed Project (i.e. all five construction components) is less than that of the proposed Project (i.e. weekday academic instruction) and the proposed Project (i.e. weekday academic instruction) is not expected to significantly impact any of the key study intersections, no significant impacts resulting from construction traffic are anticipated aside from the nuisance traffic that will occur as a result of construction-related traffic (e.g., construction materials, construction workers, etc.).

Nevertheless, to reduce the impact of construction-related traffic, the implementation of a Construction Management Plan is recommended to minimize traffic impacts upon the local circulation system in the area.

### 13.3 Construction Management Plan Criteria

To ensure impacts to the surrounding street system are kept a minimum, it is recommended that a Construction Management Plan for the proposed Project be developed. The Construction Management Plan should be developed in coordination with the City of Fullerton and at a minimum, address the following:

- Traffic control for any street closure, detour, or other disruption to traffic circulation.
- Identify the routes that construction vehicles will utilize for the delivery of construction materials to access the site, traffic controls and detours, and proposed construction phasing plan for the project.
- Specify the hours during which transport activities can occur and methods to mitigate construction-related impacts to adjacent streets.
- Require the Applicant to keep all haul routes clean and free of debris including but not limited to gravel and dirt as a result of its operations. The Applicant shall clean adjacent streets, as directed by the City Engineer (or representative of the City Engineer), of any material which may have been spilled, tracked, or blown onto adjacent streets or areas.
- Hauling or transport of oversize loads will be allowed between the hours of 7:00 AM and 5:00 PM only, Monday through Friday, unless approved otherwise by the City Engineer. No hauling or transport will be allowed during nighttime hours, weekends, or federal holidays.
- Use of local streets shall be prohibited.
- Haul trucks entering or exiting public streets shall at all times yield to public traffic.
- All construction-related parking and staging of vehicles will be kept out of the adjacent public roadways and will occur on-site.
- This Construction Management Plan shall meet standards established in the current *California Manual on Uniform Traffic Control Device (MUTCD)* as well as City of Fullerton requirements.

**TABLE 13-1**

<sup>34</sup> A passenger car equivalent factor of 2.5 was applied to the truck trips to convert them into passenger car trips.

## 14.0 SUMMARY OF FINDINGS AND CONCLUSIONS

- **Project Description** – The Fullerton College Campus is an approximately 70-acre site that is generally bounded by residential uses along Berkeley Avenue to the north and east, Chapman Avenue to the south, Lemon Street to the west, and has an address of 321 E. Chapman Avenue, in the City of Fullerton, California. Specifically, Sherbeck Field (i.e. the proposed Project site) is located in the northeastern portion of the Fullerton College Campus. Sherbeck Field is 4.36 acres and consists of a turf football field that is surrounded by a 400-meter-long track. A two-story field house is located on the western edge of the field and there is a scoreboard located at the eastern end of the field. Sherbeck Field currently does not have permanent seating or lighting. Sherbeck Field is currently used for academic instruction, competitive athletics, and rentals.

The proposed Project will consist of the installation of permanent prefabricated aluminum bleachers with 4,417 seats (i.e. 2,861 seats on the home side of the field and 1,556 seats on the visitor side of the field), six field lighting stanchions to allow for more evening class options for the physical education program, a sound system, a press box and a storage building. The proposed field improvements will also allow Fullerton College home football games to occur on campus between 1:00 PM and 4:00 PM on Saturdays. The proposed Project is expected to be completed by the Year 2020.

Vehicular access to the parking lots adjacent to Sherbeck Field (i.e. student parking lots 4, 5 and 6) would continue to be provided from the existing unsignalized driveways located along Berkeley Avenue [i.e. Centennial Way/Berkeley Avenue (key study intersection #26), Berkeley Avenue/College Driveway No. 1 (key study intersection #28) and Berkeley Avenue/College Driveway No. 2 (key study intersection #29)]. It should be noted that key study intersection #29 (i.e. Berkeley Avenue/College Driveway No. 2) was assumed to only provide egress movements from the campus in the Year 2030, consistent with the Fullerton College Master Plan Traffic Study.

- **Study Scope** – The following thirty-one (31) key study locations were selected for detailed peak hour level of service analyses (i.e. Weekday PM peak hour, Saturday Event Arrival peak hour and Saturday Event Departure peak hour) under Existing Traffic Conditions, Existing Plus Project Traffic Conditions, Year 2020 Cumulative Traffic Conditions, Year 2020 Cumulative Plus Project Traffic Conditions, Year 2030 Buildout Traffic Conditions and Year 2030 Buildout Plus Project Traffic Conditions.

### Key Study Intersections

| 15. Lemon Street at Wilshire Avenue           | 31. Lemon Street at Parking Structure                |
| 16. Harbor Boulevard at Commonwealth Avenue   |  |

- **Existing Traffic Conditions** – Thirty (30) of the thirty-one (31) key study intersections currently operate at an acceptable service level during the PM peak hour. The intersection of Harbor Boulevard at Bastanchury Road (i.e. key study intersection #1) currently operates at LOS during the PM peak hour. All thirty-one (31) key study intersections currently operate at an acceptable service level during the Saturday Event Arrival and Event Departure peak hours.
- **Project Trip Generation** – The proposed Project (i.e. academic instruction) is forecast to generate 528 weekday daily trips and 66 weekday PM peak hour trips (66 inbound and 0 outbound). The proposed Project (i.e. field event with 4,417 occupied seats) is forecast to generate 4,307 Saturday daily trips, 1,559 Saturday Event Arrival peak hour trips (1,228 inbound and 331 outbound) and 1,669 Saturday Event Departure peak hour trips (141 inbound and 1,528 outbound).
- **Year 2020 Traffic Characteristics** – In order to develop forecasts for the Year 2020, existing (Year 2017) traffic volumes were increased by a total ambient growth factor of 1.5% (0.5% per year). The City of Fullerton provided volumes for all cumulative projects related to Year 2020 traffic conditions. It should be noted that a portion of the Fullerton College Master Plan student growth (i.e. 638 students out of 3,189 students) was also included as a cumulative project in the Year 2020.
- **Year 2030 Buildout Traffic Characteristics** – Year 2030 peak hour background traffic volumes were forecast based on application of growth rates provided by the City of Fullerton to existing traffic volumes, and by further adding traffic volumes from all future cumulative projects (i.e. buildout of the City). A 10% total growth was applied to existing traffic volumes at key study intersections for all major through movements, and for any major turn movements, as identified by City of Fullerton staff. A 5% total growth was applied to existing traffic volumes for all of the remaining key intersection movements, which are considered to be minor movements. The City of Fullerton provided volumes for all cumulative projects related to Year 2030 traffic conditions. It should be noted that the Fullerton College Master Plan student growth (i.e. 3,189 students) was also included as a cumulative project in the Year 2030.

<sup>36</sup> Orange County Congestion Management Program (CMP) intersection.

- **Existing Plus Project Traffic Conditions (Weekday Academic Instruction)** – The proposed Project (i.e. academic instruction) will not significantly impact any of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. Although the intersection of Harbor Boulevard/Bastanchury Road is forecast to operate at unacceptable LOS E during the PM peak hour without and with the addition of project traffic, the addition of Project trips is not anticipated to worsen or further degrade the service level and therefore is considered less than significant based on the LOS standards and impact criteria detailed in **Section 7.1**. The remaining thirty (30) key study intersections currently operate and are forecast to continue to operate at an acceptable service level during the weekday PM peak hour with the addition of Project generated traffic to existing traffic.
- **Existing Plus Project Traffic Conditions (Saturday Field Event)** – The proposed Project (i.e. field event) will significantly impact three (3) of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. The remaining twenty-eight (28) key study intersections currently operate and are forecast to continue to operate at an acceptable service level during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour with the addition of Project generated traffic to existing traffic. The intersections operating at an adverse level of service under existing plus project Saturday traffic conditions are as follows:

<u>Key Intersection</u>	<u>Saturday Arrival</u>		<u>Saturday Departure</u>	
	<u>ICU/HCM</u>	<u>LOS</u>	<u>ICU/HCM</u>	<u>LOS</u>
4. Lemon Street at Berkeley Avenue	---	---	72.4 s/v	E
28. Berkeley Avenue at College Driveway No. 1	---	---	72.2 s/v	F
29. Berkeley Avenue at College Driveway No. 2	---	---	85.4 s/v	F

The implementation of improvements (i.e. Traffic Management Plan) at the impacted key study intersections of Lemon Street/Berkeley Avenue, Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 will improve the intersections level of service operation to an acceptable level.

- **Year 2020 Plus Project Traffic Conditions (Weekday Academic Instruction)** – The proposed Project (i.e. academic instruction) will not significantly impact any of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. Although the intersection of Harbor Boulevard/Bastanchury Road is forecast to operate at unacceptable LOS E during the PM peak hour without and with the addition of project traffic, the addition of Project trips is not anticipated to worsen or further degrade the service level and therefore is considered less than significant based on the LOS standards and impact criteria detailed in **Section 7.1**. The remaining thirty (30) key study intersections are forecast to continue to operate at an acceptable LOS with the addition of Project generated traffic under Year 2020 traffic conditions.
- **Year 2020 Plus Project Traffic Conditions (Saturday Field Event)** – The proposed Project (i.e. field event) will significantly impact three (3) of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. The

remaining twenty-eight (28) key study intersections are forecast to continue to operate at an acceptable LOS with the addition of Project generated traffic under Year 2020 traffic conditions. The intersections operating at an adverse level of service under Year 2020 plus project Saturday traffic conditions are as follows:

<u>Key Intersection</u>	<u>Saturday Arrival</u>		<u>Saturday Departure</u>	
	<u>ICU/HCM</u>	<u>LOS</u>	<u>ICU/HCM</u>	<u>LOS</u>
4. Lemon Street at Berkeley Avenue	---	---	73.6 s/v	E
28. Berkeley Avenue at College Driveway No. 1	---	---	76.1 s/v	F
29. Berkeley Avenue at College Driveway No. 2	---	---	89.8 s/v	F

The implementation of improvements (i.e. Traffic Management Plan) at the impacted key study intersections of Lemon Street/Berkeley Avenue, Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 will improve the intersections level of service operation to an acceptable level.

- Year 2030 Buildout Plus Project Traffic Conditions (Weekday Academic Instruction)** – The proposed Project (i.e. academic instruction) ***will not*** significantly impact any of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. Although the intersections of Harbor Boulevard/Bastanchury Road, Harbor Boulevard/Berkeley Avenue, Euclid Street/Malvern Avenue, Harbor Boulevard/Chapman Avenue, Lemon Street/Chapman Avenue, Raymond Avenue/Chapman Avenue, State College Boulevard/Chapman Avenue, SR-57 NB Ramps/Chapman Avenue, Harbor Boulevard/Valencia Drive, Harbor Boulevard/Orangethorpe Avenue and Lemon Street/Orangethorpe are forecast to operate at unacceptable LOS E or LOS F during the PM peak hour without and with the addition of project traffic, the addition of Project trips is not anticipated to worsen or further degrade the service level and therefore is considered less than significant based on the LOS standards and impact criteria detailed in **Section 7.1**. The remaining twenty (20) key study intersections are forecast to continue to operate at an acceptable LOS with the addition of Project generated traffic under Year 2030 Buildout traffic conditions.
- Year 2030 Buildout Plus Project Traffic Conditions (Saturday Field Event)** – The proposed Project (i.e. field event) will significantly impact four (4) of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. Although the intersection of Harbor Boulevard/Orangethorpe Avenue is forecast to operate at unacceptable LOS F during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour with the addition of project traffic, the addition of Project trips is not anticipated to worsen or further degrade the service level and therefore is considered less than significant based on the LOS standards and impact criteria detailed in **Section 7.1**. The remaining twenty-six (26) key study intersections are forecast to continue to operate at an acceptable LOS with the addition of Project generated traffic under Year 2030 Buildout traffic conditions. The intersections operating at an adverse level of service under Year 2030 Buildout plus project Saturday traffic conditions are as follows:

<u>Key Intersection</u>	<u>Saturday Arrival</u>		<u>Saturday Departure</u>	
	<u>ICU/HCM</u>	<u>LOS</u>	<u>ICU/HCM</u>	<u>LOS</u>
4. Lemon Street at Berkeley Avenue	---	---	72.9 s/v	E
12. State College Boulevard at Chapman Avenue	66.4 s/v	E	89.4 s/v	F
28. Berkeley Avenue at College Driveway No. 1	124.2 s/v	F	114.1 s/v	F
29. Berkeley Avenue at College Driveway No. 2	---	---	113.6 s/v	F

The implementation of improvements at the impacted key study intersection of State College Boulevard/Chapman Avenue completely offsets the impact of project traffic. The implementation of improvements (i.e. Traffic Management Plan) at the impacted key study intersections of Lemon Street/Berkeley Avenue, Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 will improve the intersections level of service operation to an acceptable level.

- ***State of California (Caltrans) Methodology (Weekday Academic Instruction)*** – The results of the Existing Plus Project Weekday and Year 2020 Plus Project Weekday traffic analyses using the State of California (Caltrans) Methodology indicates that the proposed Project ***will not*** significantly impact the six (6) state-controlled study intersections. The six (6) state-controlled study intersections are forecast to operate at acceptable service levels during the weekday PM peak hour with the addition of Project generated traffic to existing traffic and Year 2020 traffic.

The results of the Year 2030 Plus Project Weekday traffic analysis using the State of California (Caltrans) Methodology indicates that the proposed Project (i.e. academic instruction) will cumulatively impact one of the six (6) state-controlled study intersections, when compared to the LOS standards specified in this report. The remaining five state-controlled study intersections are forecast to continue to operate at acceptable LOS D or better with the addition of project generated traffic in the Year 2030. The implementation of improvements at the impacted state-controlled intersection of the SR-57 NB Ramps/Chapman Avenue completely offsets the impact of the proposed project. The impacted state-controlled key study intersection of the SR-57 NB Ramps/Chapman Avenue is forecast to operate at an acceptable LOS during the weekday PM peak hour with implementation of improvements.

- ***State of California (Caltrans) Methodology (Saturday Field Event)*** – The results of the Existing Plus Project Saturday, Year 2020 Plus Project Saturday and Year 2030 Buildout Plus Project Saturday traffic analyses using the State of California (Caltrans) Methodology indicates that the proposed Project ***will not*** significantly impact the six (6) state-controlled study intersections. The six (6) state-controlled study intersections are forecast to operate at acceptable service levels during the Saturday Event Arrival peak hour and Saturday Event Departure peak hour with the addition of Project generated traffic to existing traffic, Year 2020 traffic and Year 2030 traffic.

- ***Off-Ramp Queuing Analysis*** – Adequate storage is provided at the off-ramps for all six (6) state-controlled study intersections under Existing plus Project, Year 2020 plus Project and Year 2030 Buildout plus Project traffic conditions during the weekday PM peak hour, Saturday Event Arrival peak hour, and Saturday Event Departure peak hour.
  
- ***Caltrans Basic Freeway Analysis*** – The development of the Project in combination with cumulative development and ambient traffic growth is anticipated to significantly impact one (1) of the seven (7) freeway segments under Existing plus Project Saturday traffic conditions, two (2) of the seven (7) freeway segments under Year 2020 Cumulative plus Project Saturday traffic conditions and three (3) of the seven (7) freeway segments under Year 2030 Buildout plus Project Saturday traffic conditions. However, the SR-57 and SR-91 Freeways are controlled exclusively by the State of California and there is no mechanism by which the lead agency can construct or guarantee the construction of any improvements to these freeway segments. Therefore, the proposed Project’s incremental impacts on key freeway study segments assessed in the report are considered unmitigatable as there are no feasible mitigation measures that will reduce cumulative mainline impacts to below significance thresholds or achieve acceptable service level goals.
  
- ***Caltrans Ramp Junction Merge and Diverge Analysis*** – The development of the Project in combination with cumulative development and ambient traffic growth is anticipated to significantly impact none of the seven (7) freeway ramp junctions under Existing plus Project Saturday traffic conditions, one (1) of the seven (7) freeway ramp junctions under Year 2020 Cumulative plus Project Saturday traffic conditions, and three (3) of the seven (7) freeway ramp junctions under Year 2030 Buildout plus Project Saturday traffic conditions. However, the SR-57 and SR-91 Freeways are controlled exclusively by the State and there is no mechanism by which the lead agency can construct or guarantee the construction of any improvements to these ramp junctions. Therefore, the proposed Project’s incremental impacts on the freeway ramp junctions assessed in the report are considered unmitigatable as there are no feasible mitigation measures that will reduce cumulative impacts to below significance thresholds or achieve acceptable service level goals.
  
- ***Recommended Existing Plus Project Improvements*** – The results of the intersection capacity analysis presented previously in *Table 8-1* shows that the proposed Project (i.e. academic instruction) will not significantly impact any of the thirty-one (31) key study intersections under the “Existing Plus Project Weekday” traffic scenario. Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

The results of the intersection capacity analysis presented previously in *Table 8-2* shows that the proposed Project (i.e. field event) will significantly impact three (3) of the thirty-one (31) key study intersections under the “Existing Plus Project Saturday” traffic scenario. The following are improvements recommended to mitigate the existing plus project Saturday traffic impacts:

- **No. 4 – Lemon Street at Berkeley Avenue:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **No. 28 – Berkeley Avenue at College Driveway No. 1:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **No. 29 – Berkeley Avenue at College Driveway No. 2:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- ***Recommended Year 2020 Plus Project Improvements*** – The results of the intersection capacity analysis presented previously in *Table 8-3* shows that the proposed Project (i.e. academic instruction) will not significantly impact any of the thirty-one (31) key study intersections under the “Year 2020 Plus Project Weekday” traffic scenario. Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

The results of the intersection capacity analysis presented previously in *Table 8-4* shows that the proposed Project (i.e. field event) will significantly impact three (3) of the thirty-one (31) key study intersections under the “Year 2020 Plus Project Saturday” traffic scenario. The following are improvements recommended to mitigate the Year 2020 plus project Saturday traffic impacts:

- **No. 4 – Lemon Street at Berkeley Avenue:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS). The Project’s fair share contribution totals 100.0%.
- **No. 28 – Berkeley Avenue at College Driveway No. 1:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic

cones/delineators and/or programmable changeable message signs (PCMS). The Project's fair share contribution totals 100.0%.

- **No. 29 – Berkeley Avenue at College Driveway No. 2:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS). The Project's fair share contribution totals 100.0%.
- **Recommended Year 2030 Buildout Plus Project Improvements** – The results of the intersection capacity analysis presented previously in *Table 8-5* shows that the proposed Project (i.e. academic instruction) will not significantly impact any of the thirty-one (31) key study intersections under the “Year 2030 Buildout Plus Project Weekday” traffic scenario. Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

The results of the intersection capacity analysis presented previously in *Table 8-6* shows that the proposed Project (i.e. field event) will significantly impact four (4) of the thirty-one (31) key study intersections under the “Year 2030 Buildout Plus Project Saturday” traffic scenario. The following are improvements recommended to mitigate the Year 2030 buildout plus project Saturday traffic impacts:

- **No. 4 – Lemon Street at Berkeley Avenue:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS). The Project's fair share contribution totals 100.0%.
- **No. 12 – State College Boulevard at Chapman Avenue:** Widen and restripe the westbound approach of Chapman Avenue to provide a 2<sup>nd</sup> westbound left-turn lane. Modify the existing traffic signal as necessary. Right-of-way acquisition will be required. Source: *CollegeTown Draft Environmental Impact Report (DEIR)*. The installation of these improvements is subject to the approval of the City of Fullerton. Since the proposed Project cannot guarantee that these improvements that are located in the City of Fullerton will be implemented, the impact is significant and unavoidable. The Project's fair share contribution totals 24.9%.
- **No. 28 – Berkeley Avenue at College Driveway No. 1:** Implement a Traffic Management Plan (TMP) during the event arrival period and event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include

routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS). The Project's fair share contribution totals 100.0%.

- **No. 29 – Berkeley Avenue at College Driveway No. 2:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS). The Project's fair share contribution totals 100.0%.

- ***Recommended Existing Plus Project Improvements (Caltrans)*** – The results of the intersection capacity analysis presented previously in *Table 9-1* shows that the proposed Project (i.e. academic instruction) will not significantly impact any of the six (6) state-controlled study intersections under the “Existing Plus Project Weekday” traffic scenario (Caltrans Methodology). Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

The results of the intersection capacity analysis presented previously in *Table 9-2* shows that the proposed Project (i.e. field event) will not significantly impact any of the six (6) state-controlled study intersections under the “Existing Plus Project Saturday” traffic scenario (Caltrans Methodology). Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

- ***Recommended Year 2020 Plus Project Improvements (Caltrans)*** – The results of the intersection capacity analysis presented previously in *Table 9-3* shows that the proposed Project (i.e. academic instruction) will not significantly impact any of the six (6) state-controlled study intersections under the “Year 2020 Plus Project Weekday” traffic scenario (Caltrans Methodology). Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

The results of the intersection capacity analysis presented previously in *Table 9-4* shows that the proposed Project (i.e. field event) will not significantly impact any of the six (6) state-controlled study intersections under the “Year 2020 Plus Project Saturday” traffic scenario (Caltrans Methodology). Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

- ***Recommended Year 2030 Buildout Plus Project Improvements (Caltrans)*** – The results of the intersection capacity analysis presented previously in *Table 9-5* shows that the proposed Project (i.e. academic instruction) will significantly impact one (1) of the six (6) state-controlled study intersections under the “Year 2030 Buildout Plus Project Weekday” traffic scenario. The following are improvements recommended to mitigate the Year 2030 Buildout plus Project Weekday traffic impacts:

- **No. 14 – SR-57 NB Ramps at Chapman Avenue:** Widen and restripe the westbound approach of Chapman Avenue to provide a 3<sup>rd</sup> westbound through lane. Modify the

existing traffic signal as necessary. Right-of-way acquisition will be required. Source: *CollegeTown Draft Environmental Impact Report (DEIR)*. The installation of these improvements is subject to the approval of Caltrans and the City of Fullerton. Since the proposed Project cannot guarantee that these improvements that are located in the City of Fullerton and/or also under the jurisdiction of Caltrans will be implemented, the impact is significant and unavoidable. The Project's fair share contribution totals 0.6%.

The results of the intersection capacity analysis presented previously in *Table 9-6* shows that the proposed Project (i.e. field event) will not significantly impact any of the six (6) state-controlled study intersections under the "Year 2030 Buildout Plus Project Saturday" traffic scenario (Caltrans Methodology). Given that there are no significant project impacts, no improvements are required to address this traffic scenario.

- ***Friday Field Event Analysis (Existing Plus Project)*** – The proposed Project (i.e. field event) will significantly impact four (4) of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. The remaining twenty-seven (27) key study intersections currently operate and are forecast to continue to operate at an acceptable service level during the Friday Event Arrival peak hour and Friday Event Departure peak hour with the addition of Project generated traffic to existing traffic. The intersections operating at an adverse level of service under Existing plus Project Friday traffic conditions are as follows:

<u>Key Intersection</u>	<u>Friday Arrival</u>		<u>Friday Departure</u>	
	<u>ICU/HCM</u>	<u>LOS</u>	<u>ICU/HCM</u>	<u>LOS</u>
4. Lemon Street at Berkeley Avenue	---	---	93.5 s/v	F
27. Lemon Street at Fullerton College Drive	---	---	541.9 s/v	F
28. Berkeley Avenue at College Driveway No. 1	---	---	44.5 s/v	E
29. Berkeley Avenue at College Driveway No. 2	---	---	56.7 s/v	F

The implementation of improvements (i.e. Traffic Management Plan) at the impacted key study intersections of Lemon Street/Berkeley Avenue, Lemon Street/Fullerton College Drive, Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 will improve the intersections level of service operation to an acceptable level.

- ***Friday Field Event Analysis (Year 2020 Plus Project)*** – The proposed Project (i.e. field event) will significantly impact four (4) of the thirty-one (31) key study intersections, when compared to the LOS standards and significant impact criteria specified in this report. The remaining twenty-seven (27) key study intersections are forecast to continue to operate at an acceptable service level during the Friday Event Arrival peak hour and Friday Event Departure peak hour with the addition of Project generated traffic to Year 2020 cumulative traffic. The intersections operating at an adverse level of service under Year 2020 plus project Friday traffic conditions are as follows:

<u>Key Intersection</u>	<u>Friday Arrival</u>		<u>Friday Departure</u>	
	<u>ICU/HCM</u>	<u>LOS</u>	<u>ICU/HCM</u>	<u>LOS</u>
4. Lemon Street at Berkeley Avenue	---	---	98.1 s/v	F
27. Lemon Street at Fullerton College Drive	---	---	554.2 s/v	F
28. Berkeley Avenue at College Driveway No. 1	---	---	46.8 s/v	E
29. Berkeley Avenue at College Driveway No. 2	---	---	60.2 s/v	F

The implementation of improvements (i.e. Traffic Management Plan) at the impacted key study intersections of Lemon Street/Berkeley Avenue, Lemon Street/Fullerton College Drive, Berkeley Avenue/College Driveway No. 1 and Berkeley Avenue/College Driveway No. 2 will improve the intersections level of service operation to an acceptable level.

- ***Friday Field Event – Recommended Existing Plus Project Improvements*** – The results of the intersection capacity analysis presented previously in *Table 12-1* shows that the proposed Project (i.e. field event) will significantly impact four (4) of the thirty-one (31) key study intersections under the “Existing Plus Project Friday” traffic scenario. The following are improvements recommended to mitigate the Existing plus Project Friday traffic impacts:
  - **No. 4 – Lemon Street at Berkeley Avenue:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
  - **No. 27 – Lemon Street at Fullerton College Drive:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
  - **No. 28 – Berkeley Avenue at College Driveway No. 1:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
  - **No. 29 – Berkeley Avenue at College Driveway No. 2:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the

location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).

- **Friday Field Event – Recommended Year 2020 Plus Project Improvements** – The results of the intersection capacity analysis presented previously in *Table 12-2* shows that the proposed Project (i.e. field event) will significantly impact four (4) of the thirty-one (31) key study intersections under the “Year 2020 Plus Project Friday” traffic scenario. The following are improvements recommended to mitigate the Year 2020 plus Project Friday traffic impacts:
  - **No. 4 – Lemon Street at Berkeley Avenue:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
  - **No. 27 – Lemon Street at Fullerton College Drive:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts at the intersection. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include intersection signal timing adjustments to improve traffic flow, routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
  - **No. 28 – Berkeley Avenue at College Driveway No. 1:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
  - **No. 29 – Berkeley Avenue at College Driveway No. 2:** Implement a Traffic Management Plan (TMP) during the event departure period to minimize traffic impacts on Berkeley Avenue. The TMP will consist of providing police department staff at the location to manage traffic flow. The TMP is subject to the approval of the City of Fullerton. Other components of the event TMP may include routing of traffic via traffic cones/delineators and/or programmable changeable message signs (PCMS).
- **Construction Traffic Impact Assessment** – Traffic impacts to the adjacent roadway network will be minimal and **not** long-term. Further, since the construction-related trip generation potential of the proposed Project (i.e. all five construction components) is less than that of the proposed Project (i.e. weekday academic instruction) and the proposed Project (i.e. weekday academic instruction) is not expected to significantly impact any of the key study intersections, no significant impacts resulting from construction traffic are anticipated aside from the nuisance traffic that will occur

as a result of construction-related traffic (e.g., construction materials, construction workers, etc.). Nevertheless, to reduce the impact of construction-related traffic, the implementation of a Construction Management Plan is recommended to minimize traffic impacts upon the local circulation system in the area. The Construction Management Plan should be developed in coordination with the City of Fullerton and at a minimum, address the following:

- Traffic control for any street closure, detour, or other disruption to traffic circulation.
- Identify the routes that construction vehicles will utilize for the delivery of construction materials to access the site, traffic controls and detours, and proposed construction phasing plan for the project.
- Specify the hours during which transport activities can occur and methods to mitigate construction-related impacts to adjacent streets.
- Require the Applicant to keep all haul routes clean and free of debris including but not limited to gravel and dirt as a result of its operations. The Applicant shall clean adjacent streets, as directed by the City Engineer (or representative of the City Engineer), of any material which may have been spilled, tracked, or blown onto adjacent streets or areas.
- Hauling or transport of oversize loads will be allowed between the hours of 7:00 AM and 5:00 PM only, Monday through Friday, unless approved otherwise by the City Engineer. No hauling or transport will be allowed during nighttime hours, weekends, or federal holidays.
- Use of local streets shall be prohibited.
- Haul trucks entering or exiting public streets shall at all times yield to public traffic.
- All construction-related parking and staging of vehicles will be kept out of the adjacent public roadways and will occur on-site.
- This Construction Management Plan shall meet standards established in the current *California Manual on Uniform Traffic Control Device (MUTCD)* as well as City of Fullerton requirements
