Eval Notes: APSA (Aboveground Petroleum Storage Act) requires tank facilities subject to APSA to prepare and implement an SPCC Plan in accordance with latest federal SPCC rule (40 CFR 112). 40 CFR 112.6 establishes smaller categories of SPCC plans, Tier I, Tier II and Non-qualified. Tier I qualifier requires that the facility stores less than 10,000 gallons aggregate of petroleum, have not had a release to navigable water exceeding 1,000 gallons in single discharge nor two discharges to navigable waters exceeding 42 gallons in a 12 month period and 3 years prior to implementing the SPCC Plan. Finally, no individual container greater than 5,000 gallons; then complete and self-certify the Plan template in lieu of a full P.E. certified Plan. The Plan template was e-mailed to Mike Reinking on 10-2-13

Completed Document Type:	Site Screening
Completed Date:	12/06/1991
Comments:	Completed Site Screening. Soil samples detected dichloroethylene in the soil beneath the floor. Over 8 cubic yards of soil was excavated and disposed off-site. Analyses of soil samples taken from the bottom of the excavation indicated levels less than 100 ppb. Based on this information, the SF Regional Water Quality Control Board (RWQCB), the lead agency, decided that the remaining contaminant no longer posed a threat to groundwater and no further action was required. The soil level is below residential standards.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Environmental Interest/Information System:

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require corrective actions. In 1985, Foxboro/ICT, determined that an UST had leaked. Two groundwater extraction wells were operational from 1987 to 1999. In 2000, the Regional Water Quality Control Board, San Francisco Bay Region (SFRWQCB) authorized the indefinite shutdown of the extraction wells. In 2008, soil samples were collected to address the potential historical contamination from pesticides. Two areas were identified with elevated arsenic concentrations. Five soil gas probes were also added. Laboratory analysis reported that volatile organic compounds were detected below the SFRWQCB Environmental Screening Levels in all the soil gas samples that were collected. Approximately 70 tons of arsenic-impacted affected soil was excavated. On October 10, 2013, SFRWQCB issued a letter of No Further Action and Case Closure Summary indicating that no further action related to the pollutant releases at the Site is required.

Comments:	Completed Site Screening. On December 13, 1989, the SF Regional Water Quality Control Board (RWQCB) issued Order No. 89-182 addressing site investigation cleanup of the soil and groundwater pollution. From 1993 to 1999, a combined soil vapor and groundwater extraction operated on the site. The cleanup plan did not meet expectations. Removal efficiency was low and there were a number of operational difficulties due to site soil conditions. The RWQCB issued an amended order, requiring excavation of vadose zone soil that exceeds the risk based cleanup goals; and monitored natural attenuation for impacted

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well

as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The Report recommends that if volatile organic compound (VOC) concentrations in groundwater collected from the well MW-8 exceed the state and federal maximum contaminant levels in two sequential semiannual monitoring events, follow-up actions may be necessary to maintain the future protectiveness of the MNA groundwater remedy in limiting off-site migration of VOCs.

Comments: The Annual Groundwater Monitoring Report covers the period from February 1, 2015 to January 31, 2016. Monitoring well MW-8 showed detections of trichloroethene above the California Maximum Contaminant Level of 5 micrograms per liter (ug/l). As required by the Explanation of Significant Differences, the sampling frequency will be increase from semi-annual to quarterly basis until the concentrations drop below 2 ug/l. DTSC has concurred with the recommendation to wait until the next semiannual groundwater results (due in September 2016) to evaluate if the monitoring frequency needs to be modified.

Comments: The Annual Groundwater Monitoring Report summarizes the groundwater monitoring results at the Site and the adjacent Thamien Park. The Report noted detections of volatile organic compounds, including trichloroethylene, above Maximum Contaminant Levels in the downgradient, sentinel monitoring well MW-8. The groundwater will continue to be monitored and possible contingency measures could be implemented if there is an increasing concentration trend. The groundwater concentration trend will be evaluated and the results presented in the upcoming Five-Year Review Report that is due to DTSC by June 31, 2017. The next Semi-Annual Groundwater Monitoring Report is due September 15, 2017.

Comments: The Semi-Annual 2014 Groundwater Monitoring Report presents groundwater monitoring results and elevation data for the period from February 1, 2014 through July 31, 2014. The Report is a combined report that addresses both the Mansion Grove Site and adjacent Rivermark Properties Site (currently Thamien Park) and includes a monitored natural attenuation performance review. Trichloroethene in groundwater monitoring well MW-8 increased to 6.7 micrograms per liter, above the Maximum Containment Level of 5 micrograms per liter. Per the contingency program described in the 2013 Explanation of Significant Differences, MW-8 sampling will be increased to a quarterly schedule until concentrations decrease below 2 micrograms per liter. Contaminant concentrations in other wells in the groundwater plume remains stable, and are possibly decreasing.

Comments: The Updating and Meeting the Remedial Action Objective for Paraldehyde (Technical Memorandum) assess the validity of terminating performance monitoring of paraldehyde in groundwater. Based on the information provided in the Technical Memorandum, DTSC concurs with the following: 1. Revised Remedial Action Objective (RAO) of 4 milligrams per liter for paraldehyde. The revised RAO is the upper bound limit concentration in drinking water that would not pose a human health hazard over a lifetime of exposure to paraldehyde. 2. Revised Workplan for Monitored Natural Attenuation Program s Section 3.2 recommendation to terminate a performance monitoring is applicable to paraldehyde. The paraldehyde performance monitoring termination is warranted based on results of a three-year performance monitoring period which has indicated that there is no potential future impact to receptors or beneficial uses.

The Report is a combined report that addresses both the Mansion Grove Site and adjacent Rivermark Properties Site (currently Thamien Park) and includes a monitored natural attenuation performance review. Trichloroethene in groundwater monitoring well MW-8 increased to 6.7 micrograms per liter, above the Maximum Containment Level of 5 micrograms per liter. Per the contingency program described in the 2013 Explanation of Significant Differences, MW-8 sampling will be increased to a quarterly schedule until concentrations decrease below 2 micrograms per liter. Comments: According to 2019 semiannual groundwater sampling results, chemical of concern (COC) in the plume area and average volatile organic compound concentrations across the plume are consistently decreasing over the duration of the remedial program (years 1992 to July 2019). Plume position is stable, with no off-site or deeper migration of COCs in groundwater.

Completed Date: 09/24/2009
Comments: DTSC approves the Report with the following comment: Section 3.1 describes pre-grading soil sampling that was performed within the Building G foundation area. The soil samples were collected with a hand auger and transferred into sample jars. These samples were then composited at the analytical laboratory. This method of sampling is fine for metals, pesticides, and heavy-fraction TPH, but is not typically accepted for VOCs and TPH-gasoline due to the potential for volatile losses. The soil analytical results for VOCs and TPH-gasoline should, therefore, be considered biased low.

Comments: The Updating and Meeting the Remedial Action Objective for Paraldehyde (Technical Memorandum) assess the validity of terminating performance monitoring of paraldehyde in groundwater. Based on the information provided in the Technical Memorandum, DTSC concurs with the following: 1. Revised Remedial Action Objective (RAO) of 4 milligrams per liter for paraldehyde. The revised RAO is the upper bound limit concentration in drinking water that would not pose a human health hazard over a lifetime of exposure to paraldehyde. 2. Revised Workplan for Monitored Natural Attenuation Program s Section 3.2 recommendation to terminate a performance monitoring is applicable to paraldehyde. The paraldehyde performance monitoring termination is warranted based on results of a three-year performance monitoring period which has indicated that there is no potential future impact to receptors or beneficial uses.

Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Board s NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports. On August 21, 2013, the Water Board issued a Rescission of Authorization to Discharge letter to above named facility.

California's Department of Toxic Substances Control's (DTSC's)-EnviroStor database is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Background Info:	The Mansion Grove site contains a 29-acre apartment complex with approximately 950 residential units. The site is also known as the Lick Mill Creek Apartments. Contaminated soil was discovered during excavations for several building foundations. The site was used as ranchland until about 1851; for paper milling operations from 1874-1898; and for the manufacture and storage of various chemical compounds, including alcohol and solvents, solvent recycling and metal reclamation 1902-1980. At least ten companies operated onsite until 1980, when all manufacturing and chemical storage facilities were dismantled prior to residential development of the property. Paraldehyde

and volatile organic compounds (VOCs), such as trichloroethylene (TCE), perchloroethylene (PCE), and vinyl chloride are the primary chemicals of concern. VOCs have been found in the soil in three areas, two of which require remediation. Contamination has been found in both shallow and intermediate groundwater aquifers. Currently all Mansion Grove residents drink water supplied by Hetch Hetchy. The groundwater treatment system was upgraded to improve system efficiency and to control offsite migration of contamination to adjacent properties (City park and residential homes) by the installation of three extraction wells in March 2003. Additionally, an extraction trench was installed in February 2004 at the downgradient edge of the park, as part of the Rivermark Project (See Profile 43990005).

Site History:	Site is under Water Board Order No. 91-138. PROJECT OVERVIEW On April 2, 2001, Van Waters & Rogers, Inc. became Vopak USA Inc. (Vopak), which eventually became Univar Solutions. The principal operations at the site, which began in 1976, include bulk chemical transfer between tank trucks, railroad tank cars, and chemical blending and packaging. In the past, 37 underground storage tanks (USTs) have been used to store chlorinated and petroleum hydrocarbons. All 37 USTs have since been removed and currently, chemicals are stored in aboveground storage tanks (ASTs). Releases were associated with underground storage tanks that were located adjacent to the covered dock and an above ground storage tank on the dock. All these tanks were removed, and above ground storage tanks were installed. The groundwater extraction treatment system (GWETS) operated from 1986 to 2020. In 2021, the Water Board concurred with curtailment of the GWETS. The effluent was discharged to a storm sewer inlet located near the northern site boundary. The treated water was eventually discharged to the Guadalupe River under an NPDES permit. In November 2007, Univar implemented an expanded soil vapor extraction system (SVE) which was shut down in 2016/2017. The SVE operated from 1993 to 2016. In 2017, the Water Board concurred with curtailment of the SVE. In 2021, Univar removed the above ground storage tanks under jurisdiction of the San Jose Fire Department, as part of the facility closure. Univar sold the property to Duke Realty in 2020. Since, the property transfer, Univar has implemented a new groundwater treatment remedy (2020), and soil remedy (2021). These are outlined in the 9/21/2021 Interim Remedial Action Plan (IRA) and 3/23/2021 Remedial Action Plan (RAP). Duke Realty will implement an active vapor intrusion mitigation system, sub-slab depressurization system (SSDS), and hot spot soil removal in the warehouse. Prior to Duke Realty's tenant occupation, monitoring of the vapor intrusion mitigation system and testing of indoor air will be conducted. Duke Realty will lease the property to a new commercial tenant and will remodel the existing warehouse and attached office. Univar will continue to monitor and sample groundwater monitoring wells and soil vapor probes to evaluate the effectiveness of the new remedies implemented in 2020

and 2021. Duke Realty will perform long-term monitoring of the SSDS. Historical Site Characterization Subsurface investigations began at the site in late 1982 at the request of the RWQCB. Site characterizations have identified two water-bearing zones, referred to as the "A-" and "B-" aquifers. The A-aquifer, which is present between depths of 10 and 45 feet below ground surface (bgs), has been further subdivided into the A-1 and A-2 zones. The A-1 zone is characterized by silty clays and clays. The underlying A-2 zone consists of sandy clays and clayey sands. The B-aquifer, which extends to about 90 feet below grade and consists of permeable sands and gravels, has been subdivided into the B-1 and B-2 zones. The B-1 and B-2 zones are similar but are separated by a thin stratum of silty clay and clayey silt. By February 2002, 43 wells and 2 deep exploratory borings have been installed at the site, 36 of which remain active. Historical ground water monitoring data have shown the past and/or continued presence of a number of dissolved organic compounds in soil and in the A- and B-aquifer wells. These compounds may be categorized as either volatile organic compounds (VOCs) or soluble oxygenated compounds, such as alcohols, glycols, and ketones. After several phases of subsurface characterization, a remedial investigation/feasibility study (RI/FS) report was submitted by Geosystem Consultants, Inc. (Geosystem, February 13, 1991) to the U.S. Environmental Protection Agency (EPA) and the RWQCB. In the RI/FS, seven compounds were selected as chemicals of concern (COCs) based on frequency of detection, maximum concentration, and health risk potential. The list of COCs included: Acetone 1,1-Dichloroethene (1,1-DCE) cis-1,2-Dichloethene (cis-1,2-DCE) Methylene chloride Tetrachloroethene (PCE) Trichloroethene (TCE) Vinyl chloride An eighth chemical, 1,1,1-trichloroethane (1,1,1-TCA), was added in the final list for target cleanup because of its designation as an indicator chemical. Other indicator chemicals were PCE and cis-1,2-DCE. These indicator chemicals have been used to simplify data evaluation and interpretation. Recent data, however, have demonstrated that 1,1,1-TCA concentrations have been reduced to levels which are no longer of concern.

Comments: PCE and gasoline spills in June '84 and December '85 recently triggered countyt involvement. Preliminary assessment of 1987 recommended DTSC (then DHS) and city of San Jose review permit to upgrade spill containment. But also says No Further Action (NFA). No further action per EPA preliminary assessment for the site only determined that the hazard ranking score (HRS) would not admit it into National Priority List (NPL). DTSC's recommendation on re-evaluation of the site reflects the departments own criteria. Recommendation is County Lead. Limited DTSC involvement anticipated.

Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require DTSC to pursue corrective actions. Schlage Lock Company - ADF was a tenant and operated a light manufacturing facility at the site from 1983 to 2001. Schlage Lock operated three hazardous waste treatment units under the Conditionally Authorized permitting tier, a primary treatment unit, filter press, and evaporator. Schlage Lock ceased operation and closed the facility in 2001. The company submitted a Post Closure Report to the Santa Clara County Department of Environmental Health, Hazardous Materials Division, who acknowledged closure of the treatment operation in a July 2, 2001 letter. A Facility Closure Report - Request for No Further Action Determination, dated July 6, 2001, was submitted to the Regional Water Quality Control Board (RWQCB) that summarized sampling and removal of petroleum hydrocarbon-impacted soil as part of the closure. RWQCB issued a no further action letter on February 8, 2002. DTSC concluded in the site screening that based on RWQCB's issuance of the no further action letter the site status in Envirostor should be "Refer: RWQCB".

Environmental Interest/Information System:
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

DRAFT

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

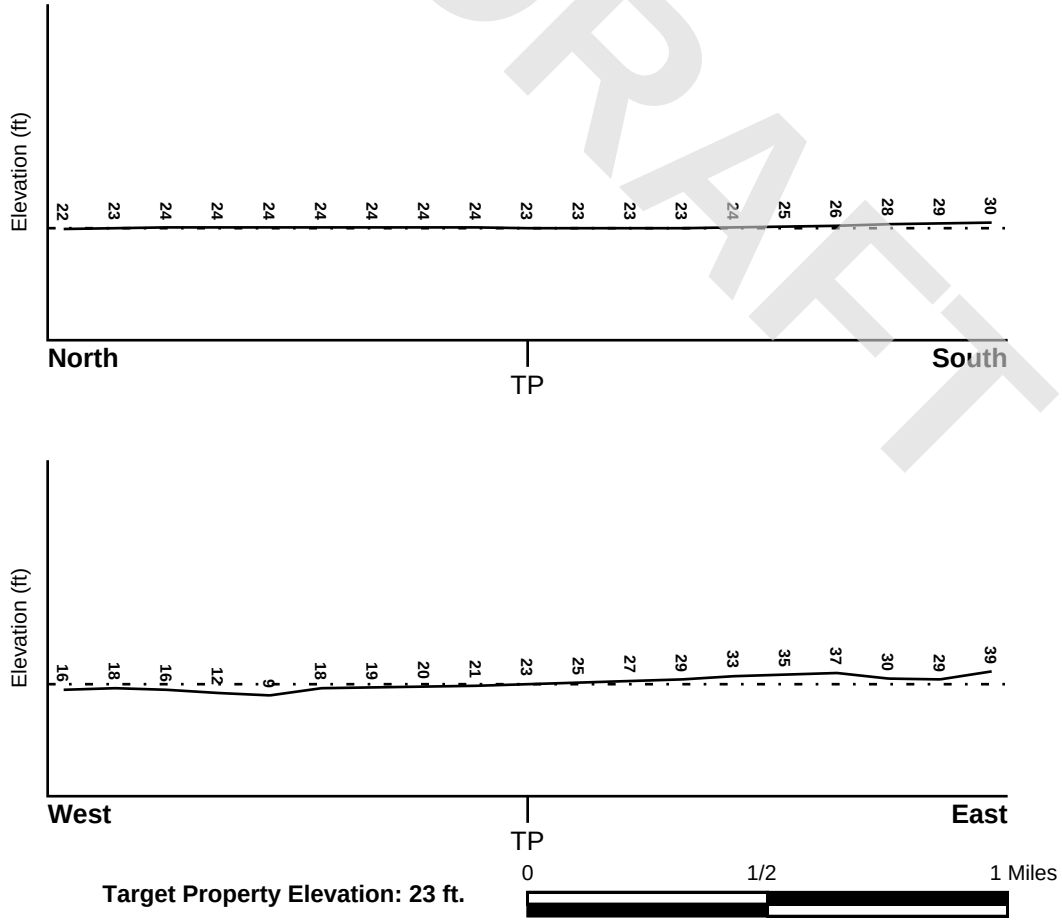
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

DRAFT

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 23 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.
