OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

DRAFT

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

UTM X (Meters):	594885.3
UTM Y (Meters):	4139482.2

USGS TOPOGRAPHIC MAP

Target Property Map:	37121-D8 MILPITAS, CA
Most Recent Revision:	1980

DRAFT

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile West
Site Name:	Lick James Mansion/Mansion Grove
Site EPA ID Number:	CAD980735971
Surficial Aquifer Flow Dir.:	NOT AVAILABLE.
Measured Depth to Water:	approximately 12 feet.
Hydraulic Connection:	A confining layer separates the surficial and lower aquifers, but an interconnection between the aquifers occurs.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

DRAFT

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

DRAFT

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

DRAFT

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

EDR City Directory Abstract

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening report designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2001. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1/8th of a mile of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.

RE: WELL DESTRUCTION DETAILS
MONTAGUE PARK SITE
SAN JOSE, CALIFORNIA

FEB 22 2000

Dear Ms. Barshay:

As requested, we have completed the destruction of four on-site ground water monitoring wells at the Montague Park site, located at the southeast corner of Zanker Road and Montague Expressway in San Jose, California. This work was performed in accordance with our agreements with you dated December 29, 1999 and January 26, 2000.

MONITORING WELL DESTRUCTION

Each of the monitoring wells was destroyed in accordance with Santa Clara Valley Water District (SCVWD) guidelines. Per the permit conditions, and under the observation of the SCVWD inspector Mr. Dave Higgins, two of the four monitoring wells (MW-2 and MW-3) were pressure grouted with cement grout to the top of the well casings. The remaining two monitoring wells (MW-1 and MW-4) were over-drilled to a total depth of 25½ feet and backfilled with cement slurry under the observation of Mr. Higgins. Work was performed by a licensed C57 driller (Exploration Geoservices, Incorporated), as required by the SCVWD. Copies of the well destruction completion notices and permits are attached to this letter.

This letter was prepared for the use of Menlo Equities Management Company. We make no warranty, expressed or implied, except that our services have been performed in accordance with environmental principles generally accepted at this time and location.

If you have any questions, please call and we will be glad to discuss them with you.

Very truly yours,

LOWNEY ASSOCIATES

James D. Dobson

APPENDIX I

RESUMES

WILLIAM E. SCHWAKE, P.G.
Director, National Programs

EDUCATION

B.A., Geology
Southern Illinois University, 1993

PROFESSIONAL REGISTRATION

Licensed Professional Geologist (IL, #196-000670)

PROFESSIONAL SUMMARY

Mr. Schwake is a Director in the National Programs group with over fourteen years experience specializing in environmental due diligence, microbial assessments and remediation, subsurface soil and groundwater characterization, underground storage tank removal and upgrade projects, soil and groundwater remediation, asbestos management, lead-based paint and indoor air quality issues.

Mr. Schwake serves as a liaison between ATC and several national clients, including several global providers of comprehensive real estate services to track the status of projects from initiation through invoice and collection. He conducts senior technical review on all project deliverables and correspondence.

Before joining ATC, Mr. Schwake served as the Environmental Health & Safety manager for a leading global provider of comprehensive real estate and investment management services. He was responsible for directing the investigation and characterization of environmental conditions in support of real estate transactions frequently exceeding $100 million in value. He also advised property managers and building engineers on various environmental issues facing individual assignments held in the company's portfolio.

DRAFT

PROFESSIONAL EXPERIENCE

Environmental

- **Environmental Site Assessments / Confidential Client / Nationwide.** Provided final technical review for all Phase I and Phase II ESAs for a national retail client. This included identifying potential environmental concerns for the client, meeting specific needs of potential lending institutions, and negotiating with regulators. Prepared work scopes for further investigation or remediation, when necessary. Approximately 1,600 ESAs were completed for this client.

- **National Programs / Major Real Estate Client / Throughout the U.S.** Mr. Schwake is responsible for providing technical oversight for all projects completed for a major truck and air cargo terminal operator in the United States and Canada. These operations typically involve on site truck and aircraft maintenance and fueling. ATC assists this client with property transactions across the country as well as other operational issues such as chemical/waste disposal, underground storage tank removal and/or upgrade projects, asbestos abatement, etc. Mr. Schwake's responsibilities include providing technical review of all report deliverables, coordinating with the performing office, preparation and implementation of work scopes, and preparation of remedial action plans, when necessary.

- **National Programs / Major Real Estate Client / Throughout the U.S.** Negotiated a Strategic Alliance Agreement between ATC and a major real estate client naming ATC as their exclusive and preferential provider of consulting services nationwide. As part of the partnership agreement, a bank of billable hours was negotiated to serve as an "out-sourced" staff member on an as-needed basis.

- **Environmental Site Assessments / Real Estate Client / Illinois, Wisconsin, and Indiana.** Provided management, including staff coordination, client interface, and technical oversight, of a sixty-five building industrial property portfolio that included various manufacturing tenants. The project was completed within a six week time period. Management responsibilities included populating a spreadsheet with significant property findings at designated points in time to assist the client in their review of the properties offered in the portfolio. Assisted in the development of Phase II ESA work-scope for the portfolio, which exceeded $400,000 in consultant fees.

- **Mold Presentation / Major Real Estate Client / Throughout the U.S.** Presented 24 separate mold identification and sampling presentations at a conference attended by over 300 chief engineers, operations managers, and the firm's senior management.

- **Subsurface Investigations / Various Clients / Throughout the U.S.** Performed comprehensive Phase II subsurface investigations of commercial and industrial properties throughout the country. Activities included logging soil borings, field screening soil samples, soil and groundwater sample collection, monitoring well installation, evaluation of groundwater-flow characteristics, pollutant plume characterization, and report preparations.

- **Groundwater Monitoring / Municipal Landfill / Chicago, Illinois.** Performed quarterly groundwater monitoring at an active permitted solid waste

DRAFT

landfill in the Chicago area. Activities include preparation of work plans that included a detailed site history, field sampling plan, and quality assurance plan. Activities also include sampling wells for permit required parameters, evaluation of groundwater flow characteristics, development of drawings and cross-sections, determining hydraulic gradient, velocity, and flow direction.

- **UST Removal Projects / Major Telecommunications Client / Illinois.** Provided oversight during UST removal projects at 18 locations for a major telecommunications client. Activities involved pre-removal subsurface investigations, on-site documentation and technical support during removal efforts, confirmatory soil sampling, and report preparation. The project activities also included entering leaking UST facilities into the Illinois LUST program.

Building Sciences

- **Mold Management / Confidential Client / PA, KY.** Conducted comprehensive mold investigations of residential properties on behalf of a major insurance company. The mold investigations were conducted to either support or discredit claims presented by the insured following a water damage episode. Sampling methodology included a combination of viable, non-viable, wall-check, and swab sampling.

- **Mold Management / Confidential Client / IL.** Conducted a comprehensive mold inspection of an assisted living facility in suburban Chicago. The project included identifying the moisture source supporting the mold growth, identifying the types of mold present, determining the quantity of airborne mold spores/colonies that were present, and providing recommendations for remedial efforts.

- **Health & Safety / Confidential Client / IL.** Revised and implemented OSHA mandated safety and training programs for a national provider of commercial real estate services. Developed and implemented a Best Practice Guidance Manual pertaining to the investigation and treatment of mold.

- **Asbestos Management / Confidential Clients / Throughout the U.S.** Conducted hundreds of asbestos investigative surveys of residential, commercial office, retail, and industrial facilities, including high-rise buildings.

- **Asbestos Management / Confidential Client / IL.** Provided construction monitoring for large-scale asbestos abatement as part of a renovation/remodeling project in Chicago. The project involved the gross removal of all asbestos-containing materials from two 8-story buildings that were staffed with 50 people per day.

- **Lead Based Paint Management / Confidential Client / IL.** Provided technical oversight and management responsibilities for a comprehensive lead based paint survey of a multi-family residential property. Survey methodology was completed in accordance with HUD protocols.

TRAINING AND CERTIFICATIONS

- NIOSH 582 Sampling and Evaluating Airborne Asbestos Dust
- EPA/AHERA Accredited Contractor Supervisor (1995)
- EPA/AHERA Accredited Asbestos Building Inspector (1994)

DRAFT

- EPA Accredited Lead Building Inspector (1997)
- Illinois Department of Public Health licensed Air Sampling Professional (1995); Project Manager (1995); Building Inspector (1995); Lead Inspector (1997)
- 40-Hour HAZWOPER Training (29 CFR 1910.120) (1995)
- 8-Hour HAZWOPER Supervisor Training (1995)
- Mold Assessment and Remediation in Buildings, Seminar, The Environmental Institute (August, 2001)

PROFESSIONAL MEMBERSHIPS

- Association of Engineering Geologists (2001)
- Geological Society of America (1994)
- American Institute of Professional Geologists – Illinois Chapter (1999)

DINO ORBISO
Project Manager

EDUCATION

B.S., Biological Sciences, California State University, Irvine, 2001

PROFESSIONAL SUMMARY

Mr. Orbiso serves as a Project Manager for ATC's office in Los Angeles, CA. Since first joining ATC in 2002, Mr. Orbiso has been involved with several of ATCs service lines, including wireless, real estate due diligence, environmental compliance and petroleum projects. Project services include environmental site assessments, NEPA compliance issues, geotechnical studies, asbestos/lead testing, source assessments, and groundwater and soil investigations.

Prior to joining ATC, Mr. Orbiso worked in the water quality industry providing stormwater, urban runoff, and industrial waste consulting services to municipalities and private industries.

SPECIFIC PROJECT EXPERIENCE

- **Environmental Management / Various Clients / Southern CA.** Served as Environmental Protection Specialist for various projects. Work included: stormwater management; industrial waste management (i.e. permitting, inspections, audits, SUSMP); NPDES compliance; performing site analysis within various municipalities and industries to determine whether Federal, State, and local environmental regulations are met (i.e. NPDES, RCRA); water sampling; and preparation of reports, procedure manuals and violation letters.

- **Environmental Site Assessments & NEPA Compliance / Various/ Southern CA.** Managed Phase I ESAs, modified Phase I ESAs, and complete NEPA reports/checklists. Services are being provided to this telecommunications client as part of a comprehensive Environmental Site Assessment program for all proposed monopole sites.

- **Environmental Site Assessments & Investigations/Due Diligence / Various Clients / Throughout CA.** Performed Phase I and Phase II Environmental Site Assessments for commercial, residential, and industrial properties.

- **Site Investigation & Remedial Studies / RELLC / Glendale, CA.** Site assessment of gasoline stations. Investigation of hydrocarbon impacted soil and groundwater. Provided oversight of field drilling and sample collection, and determined laboratory analysis.

DRAFT

- **Site Investigation & Remedial Studies / RELLC / Hawthorne, CA.** Site assessment of gasoline stations. Investigation of hydrocarbon impacted soil and groundwater. Provided oversight of field drilling and sample collection, and determined laboratory analysis.

- **Site Investigations / Various Clients / Throughout CA.** Managed and performed groundwater and soil sampling for site characterization projects.

TRAINING AND CERTIFICATIONS

- Certified Desert Tortoise Monitor, California Dept. of Fish & Game, 2002
- OSHA 40-Hour Hazardous Waste Operations & Safety

DRAFT

AUDREY E. KROMPHOLZ, CSST
Project Manager

EDUCATION

B.S., Environmental Science with a Biological Emphasis
University of California, Berkeley, California, 2004

PROFESSIONAL REGISTRATION

- Certified Site Surveillance Technicial (CSST), State of California, Division of Occupational Safety and Health, #04-3711

PROFESSIONAL SUMMARY

Ms. Krompholz has had experience as an environmental consultant since 2004. Her experience includes conducting fieldwork associated with environmental investigations throughout California, Oregon, and Nevada to include Phase I Environmental Site Assessments (ESAs) and Property Condition Assessments (PCAs) in accordance with the American Society of Testing and Materials (ASTM) standards, Transaction Screen Assessments in accordance with ASTM standards, environmental audits, National Environmental Policy Act (NEPA) evaluations, Asbestos Containing Material (ACM) surveys, preparation of Asbestos Operations and Maintenance (O&M Plans), Lead-Based Paint (LBP) surveys, indoor air quality assessments, mold assessments, groundwater sampling, and VOC testing.

Ms. Krompholz is currently responsible for coordinating and managing due diligence activities, including Phase I ESAs and NEPA surveys, for various telecommunications and other clients. She has conducted Phase I ESAs in a range of settings to include the performance of site reconnaissance, historic record/photo research, data interpretation, and report preparation.

SELECTED PROJECT EXPERIENCE

Phase I ESA

- **Modified Environmental Site Assessments and FCC-Required Environmental Compliance Studies / Various Telecommunications Clients / Northern CA.** Performed Modified Phase I ESAs and FCC-required environmental compliance studies in support of telecommunication service expansion and antenna placement. To date, have conducted services at over 35 sites.

- **Modified Environmental Site Assessments and NEPA surveys / NSA Wireless / Dayton and Silver Springs, Nevada.** Performed two (2) Modified Phase I ESAs and NEPA surveys for candidate wireless sites.

- **Modified Environmental Site Assessments / Metro PCS / Southern CA.** Performed three (3) Modified Phase I ESAs for candidate wireless sites.

DRAFT

- **Environmental Site Assessments / Colliers International / Northern CA.** Performed six (6) Phase I ESAs at commercial and light industrial properties in support of pending real estate transactions.

- **Telecommunications Site Design Walks / Bechtel / Northern CA.** Performed site design walks at five (5) prospective telecommunications sites. Provided expertise in design recommendations.

- **Environmental Site Inspections / Comerica Bank / Various Locations, CA.** Performed several site inspections and prior use reports according to Comerica Bank standards for commercial property.

PCA

- **Property Condition Assessments / Various Clients / Northern CA.** Performed property condition assessments at low-rise office buildings, retail, and apartments in Northern California. These assessments typically include investigation of pavements, site/civil, building structure, mechanical/electrical/plumbing equipment, vertical transportation, fire protection, and architectural finishes. These assessments also typically include limited building code and zoning compliance reviews as well as a cursory Americans with Disabilities Act checklist. The assessments include identification of constraints on future development, suggested repair actions, and cost estimates and capital reserves for repairs.

Phase II

- **Quarterly Groundwater Monitoring / Quik Stop / Various Locations, CA.** Performed groundwater monitoring activities using hand baling, peristaltic pumping, and Honda pumping techniques. Services were performed in accordance with scheduled quarterly monitoring events designed to evaluate groundwater contamination at the petroleum service stations.

- **Groundwater Monitoring / Schweikhardt / Santa Clara, CA.** Performed groundwater monitoring activities at the former petroleum service station using peristaltic pumps. Groundwater monitoring is designed to evaluate to extent of the groundwater contamination plume onto adjacent properties.

- **Groundwater Monitoring / Kragen / San Jose, CA.** Performed groundwater monitoring activities at the industrial facility using peristaltic and submersible pumps. Groundwater monitoring is designed to evaluate whether existing groundwater contamination originates from an offsite source.

Asbestos and Lead

- **Limited ACM (SVE) Surveys / Bank of America / Northern CA.** Performed limited ACM surveys, in over 20 Bank of America branches, based on proposed building material impaction during hardware refresh construction.

- **Comprehensive ACM and LBP Survey / Frito Lay / Frito Lay Production Facilities / Beaverton, OR.** Conducted site reconnaissance through an expansive production facility to identify, quantify and sample suspect ACMs and LBPs. Conducted ACM survey in adherence to Asbestos Hazard and Emergency Response ACT (AHERA) protocol. Collected samples for lead from predominant sources of paint. Submitted samples to an analytical laboratory following appropriate sample handling and chain-of-custody procedures. Interpreted laboratory analytical data and provided recommendations to the client in report format for ACM and lead management procedures.

DRAFT

- **Asbestos and Lead Air Monitoring / Glenborough Realty Trust / Rincon Center / San Francisco, CA.** Conducted perimeter air monitoring and oversight of ACM and LBP abatement from the exterior of the downtown, five-story, historical building. Represented the company in board meetings and responded to emergency situations following project protocol. Suggested remedial actions to project managers while expressing tenant concerns.

- **Asbestos Hazard and Emergency Response Act (AHERA) Survey / Antioch Unified School District (AUSD) / AUSD Campuses and Facilities / Antioch, CA.** Conducted site reconnaissance and historical research on fifteen site buildings to identify, quantify, and verify the condition of ACMs. Inspected campuses and facilities within the district according to AHERA protocol. Photographed areas of concern and provided recommendations to client in report format for ACM management procedures.

Mold Assessments

- **Mold and Moisture Intrusion Assessment / Modtech / Heritage High School / Brentwood, CA.** Conducted site reconnaissance and interviews with site contacts to identify immediate and long-term repair needs of modular site buildings. Documented site walks with photographs, tape lifts, and moisture measure readings. Recommended repairs and maintenance of building systems based upon observed conditions.

TRAINING AND CERTIFICATIONS

- Certified Site Surveillance Technician (CSST) #04-3711
- United States EPA AHERA Asbestos Building Inspector, Annual Refresher
- United States EPA AHERA Asbestos Contractor/Supervisor, Annual Refresher
- OSHA 40-Hour Hazardous Waste Operations Training (29 CFR 1910.120)
- Medic First Aid and CPR Certification
- Explosives Recognition and Decontamination Training
- Hazard Communication Training

DRAFT

Microscopist - Fidel Gutierrez

The analyses of the samples in this report were performed using polarized light microscopy using the EPA method 600/R-93/116. The phase abundances provided are visually estimated and expressed as percent area. Total percentage of sample constituents may total greater than 100 due to trace amounts. The limit of detection for this analytical method is less than one percent. In multilayer samples, unless otherwise specified, the asbestos concentration is reported for the layer where asbestos is found. These results lie within the statistical limits of variability calculated for standard reference samples routinely analyzed in the laboratory. On a per sample basis, the accurac and precision of the results depend on the type of sample and its asbestos content.

Hygeia recommends transmission electron microscopy (TEM) analysis on organically bound bulk materials (eg., vinyl floor tile, mastics, roofing materials, joint compounds) when PLM analysis shows undetectable quantities of asbestos. These materials often contain milled asbestos with fiber diameters and lengths too small to be resolved by the PLM and the analysis may yield a false negative result.

Hygeia Laboratories Inc. is accredited under the NIST/NVLAP program for asbestos in bulk material by polarized light microscopy and the State of California for asbestos analysis.

Bulk Sample Analysis Summary

Microscopist - Kyeong Corbin

The samples in this report were prepared and analyzed qualitatively in accordance with an in-house proprietary method developed to confirm the presence of asbestos using Transmission Electron Microscopy (TEM) with Selective Area Electron Diffraction (SAED) and Energy Dispersive X-ray Analysis (EDXA).

This report contains all TEM data sheets and representative EDXA spectra. This report relates to only those samples tested by this laboratory and must not be used to claim product endorsement by NVLAP or any agency of the U.S. Government. This report may not be reproduced except in full, without the written approval of this laboratory. Hygeia Laboratories Inc. and its personnel shall not be liable for any misinformation provided to us by the client regarding these samples or for any misuse or interpretation of information supplied by us. Liablility shall extend to providing duplicate analyses only. Hygeia will retain samples for three months, sample filters for one year and the prepared grids for three years unless otherwise specified.

DRAFT

Dear Audrey:

Enclosed are:

1). the results of **10** analyzed samples from your # **75.75061.0125; Montague Park project,**

2). a QC report for the above samples

3). a copy of the chain of custody, and

4). a bill for analytical services.

All analyses were completed satisfactorily and all QC samples were found to be within our control limits.

If you have any questions or concerns, please feel free to give me a call. Thank you for choosing McCampbell Analytical Laboratories for your analytical needs.

Best regards,

Angela Rydelius, Lab Manager

DRAFT

MS = Matrix Spike; MSD = Matrix Spike Duplicate; LCS = Laboratory Control Sample; LCSD = Laboratory Control Sample Duplicate; RPD = Relative Percent Deviation.

% Recovery = 100 * (MS-Sample) / (Amount Spiked); RPD = 100 * (MS - MSD) / ((MS + MSD) / 2).

MS / MSD spike recoveries and / or %RPD may fall outside of laboratory acceptance criteria due to one or more of the following reasons: a) the sample is inhomogenous AND contains significant concentrations of analyte relative to the amount spiked, or b) the spiked sample's matrix interferes with the spike recovery.

N/A = not applicable to this method.

NR = analyte concentration in sample exceeds spike amount for soil matrix or exceeds 2x spike amount for water matrix or sample diluted due to high matrix or analyte content.

OTHER SUPPORTING DOCUMENTATION

San José Municipal Water
2007 Water Quality Report

SIGNIFICANCE OF THIS REPORT

This report contains important information about your drinking water. We hope it will provide the facts and perspective you need to make an informed evaluation of your tap water.

Water delivered in 2006 by the San Jose Municipal Water System again met all drinking water standards set by the U.S. Environmental Protection Agency (USEPA) and California Department of Health Services (CDHS). This brochure summarizes last year's water quality. Included are details about where your water comes from, what it contains, and how it compares to USEPA and CDHS standards.

SAFEGUARDING YOUR WATER SUPPLY

Protecting our water supply is important to ensure that water is safe from contamination and aesthetically pleasing for use. Protection begins in the watersheds, where people and their activities can be a major cause of source contamination. Contamination requires additional treatment, which increases the cost to deliver water to your tap.

Conserving water, during a drought or no drought, is a cost-effective way to ensure a reliable supply of water. Muni Water provides FREE low flow showerheads and kitchen/bathroom faucet aerators that help decrease the amount of water used. Come by our office to pick one up and learn more about lowering your water bill. Conserving energy is also important in ensuring a reliable supply of water. Rolling blackouts may affect pump stations used to move water throughout the area.

Participating in public meetings and events regarding water issues gives decision makers the public's perspective and a chance for you to be directly involved in protecting your water supply.

Join us in our efforts to conserve and safeguard our natural resources. Visit the following websites for more tips, rebates, free services and products, and information on future public meetings and events:

www.sjmuniwater.com
www.sanjoseca.gov
www.valleywater.org
www.sfwater.org
www.epa.gov/safewater/
www.dhs.ca.gov/ps/ddwem/

Understanding that drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants will help you make an informed choice about your drinking water. The presence of contaminants does not necessarily indicate a health risk. Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly persons and infants can be particularly at risk from infections. These people should seek advice from their healthcare providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

THE SOURCE OF YOUR WATER

Across America, the sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or human activity. Contaminants that may be present in source water include:

- **Microbial contaminants**, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- **Inorganic contaminants**, such as salts and metals, can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production mining, or farming.
- **Pesticides and herbicides**, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

DRAFT

- **Organic chemical contaminants**, including synthetic and volatile organic chemicals that are byproducts of industrial processes and petroleum production, which can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- **Radioactive contaminants**, which can be naturally-occurring or result from oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and CDHS prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. CDHS regulations also establish limits for contaminants in bottled water that must provide the same protection for public health.

San Jose Municipal Water System Service Areas:
We serve the Evergreen, Alviso, North San Jose, Edenvale, and Coyote communities of the City of San Jose.

Evergreen Service Area
Muni Water purchases treated surface water from the Santa Clara Valley Water District (District) and delivers it to our Evergreen customers. The District's source water is mainly imported from the South Bay Aqueduct, Lake Del Valle, and San Luis Reservoir, which all draw water from Sacramento - San Joaquin Delta watershed.

The District's local water sources include Anderson and Calero Reservoirs. From these reservoirs, water is pumped to the Santa Teresa Water Treatment Plant in San Jose. The District's source waters are vulnerable to potential contamination from a variety of land use practices, such as agricultural and urban runoff, recreational activities, livestock grazing and residential and industrial development. The imported sources are also vulnerable to wastewater treatment plant discharges, seawater intrusion, and wild land fires in open space areas. In addition, local sources are also vulnerable to potential contamination from commercial stables and historic mining practices. No contaminant associated with any of these activities has been detected in the District's treated water. The water treatment plants provide multiple barriers for physical removal and disinfection of contaminants. For additional information, please visit the District website at www.valleywater.org.

Evergreen Well Fields
Ground water from local, deep-water wells is available for emergency supply. Evergreen wells were not used in 2006. A source water assessment for the Evergreen wells was conducted in January of 2003 and the report is available at our office for review.

Edenvale Service Area
Groundwater from deep-water wells provides 100% of the supply. An assessment of the drinking water sources for the Edenvale service area was conducted in January of 2003. Although the source is considered potentially vulnerable to chemical and petroleum processing activities, no contaminants have been detected associated with these activities. A copy of the assessment is available at our office. In addition, there was no detection of contaminants under the Federal Unregulated Contaminant Monitoring Rule (UCMR). The UCMR monitoring helps USEPA determine where certain contaminants occur and whether the contaminants need to be regulated. For additional information regarding the type of contaminants tested, please contact a water quality engineer at (408) 277-3671.

Coyote Valley Service Area
Groundwater from deep-water wells provides 100% of the supply. Potable use of Coyote Valley's water supply started in 2005. Previously Coyote wells were used for landscaping and industrial use only. An assessment of the drinking water sources for Coyote service area was conducted in June 2004. Although the source is considered potentially vulnerable to agricultural drainage, illegal activities/unauthorized dumping, storage tank leaks and sewer collection systems, no contaminant has been detected associated with these activities. Precautions taken during construction in combination with the local hydrology have provided protection against contamination of the local ground waters at the existing well locations.

Alviso/North San Jose Service Area
Muni Water purchases a blend of Hetch Hetchy water and treated water from San Francisco Public Utilities Commission (SFPUC) and delivers it to our Alviso and North San Jose customers.

DRAFT

The SFPUC aggressively protects the natural water resources entrusted to its care. An annual report on the Hetch Hetchy, Priest, and Moccasin watersheds is prepared to evaluate the sanitary conditions, water quality, and potential contamination sources in these watersheds. The report also presents performance results of watershed management activities implemented by the SFPUC to reduce the potential contamination sources. The 2006 sanitary survey concludes that very low levels of contaminants associated with wildlife and human activities exist in these watersheds. The SFPUC also conducts sanitary surveys of the local watersheds every five years. The potential contamination sources identified in the 2005 survey are similar to the upcountry watersheds. The reports are available through the California Department of Health Services.

In 2006, the Hetch Hetchy Watershed provided most of the total SFPUC water supply, with the rest supplemented by local watersheds in Alameda and Santa Clara Counties. The major water source originates from spring snowmelt flowing down the Tuolumne River, and is stored in the Hetch Hetchy Reservoir. Because this water source meets all federal and state criteria for watershed protection, disinfection treatment, bacteriological quality, and operational standards, CDHS has granted this water source a filtration exemption.

The Alameda Watershed spans more than 35,000 acres in Alameda and Santa Clara Counties. Surface water from rainfall and runoff is collected in the Calaveras and San Antonio Reservoirs. Prior to distribution, water from the watershed is treated at the Sunol Valley Water Treatment Plant. Fluoridation, chloramination and corrosion control treatment are provided for the combined Hetch Hetchy and SVWTP water at the Sunol Chloramination and Fluoridation Facilities.

The SFPUC's Water Quality Bureau regularly collects and tests water samples from reservoirs and designated sampling points throughout the system to ensure that the SFPUC's water meets or exceeds federal and state drinking water standards. In 2006, Water Quality staff conducted 88,096 tests of drinking water quality. Cryptosporidium and Giardia are parasitic microbes found in most surface water supplies. The SFPUC tests for them regularly both in source and treated water supplies. Both were occasionally found at very low levels in the SFPUC's water in 2006. If ingested these parasites may produce symptoms of nausea, stomach cramps, diarrhea, and associated headaches.

North San Jose Well Fields

Ground water from local, deep water wells is available for emergency supply. North San Jose wells were not used in 2006. A source water assessment was conducted in January of 2003. A copy of the assessment and the report is available at our office for review.

Distribution facilities in all service areas deliver treated surface water or groundwater through pipe mains, enclosed reservoirs, and pumping stations.

HOW WATER IS TESTED AND REPORTED

Water at various locations in the distribution system is tested weekly by a private, state-certified laboratory using the latest testing procedures and equipment. During 2006, more than 2,000 samples were collected throughout the distribution system. In addition to these tests, the District and SFPUC perform their own water quality analysis of the source and treated water. Lab analysis was performed for many constituents other than those listed in the tables. Only chemicals detected in the tap water are shown in the tables. For a complete list of all the chemicals analyzed, please contact a water quality engineer at (408) 277-3671.

Test results from our distribution analysis and those of the District are shown in Tables 1-5. Some of the data, though representative, are more than one year old. CDHS allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently.

WATER QUALITY

Drinking water, including bottled water, may reasonably be expected to contain at least minute amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (800-426-4791).

DRAFT

Disinfection of surface water is necessary to destroy disease-causing organisms for the protection of public health. In Evergreen, North San Jose and Alviso, water is disinfected using chloramine (chlorine and ammonia). Except for a slight chlorinous taste or odor, chloramine is not harmful to the general public. However, it must be removed for **kidney dialysis machines and aquariums**. If you are receiving kidney dialysis treatment, please contact your doctor or dialysis technician and for pet fish, contact your local fish store for more information about special water treatment.

Cryptosporidium and Giardia were detected at low levels in surface water sources. These are parasitic microbes found in surface water throughout the U.S. Although filtration removes them, most commonly used filtration methods cannot guarantee 100% removal. Current test methods do not allow us to determine if the organisms are dead or if they are capable of causing disease. Ingestion of cryptosporidium may cause cryptosporidiosis, an abdominal infection. Symptoms of infection include nausea, diarrhea, and abdominal cramps. Most healthy individuals can overcome the disease within a few weeks. However, immuno-compromised people are at greater risk of developing life-threatening illness. We encourage immuno-compromised individuals to consult their doctor regarding appropriate precautions. Cryptosporidium must be ingested to cause disease, and it may be spread through means other than drinking water.

Fluoride is added to the naturally occurring level in Evergreen, North San Jose and Alviso to help prevent dental cavities in consumers. The Evergreen community approved fluoridation with an advisory vote in the early 1960s. The SFPUC System-Wide Fluoridation Project (affecting North San Jose and Alviso) became operational in November 2005. The fluoride levels in the treated water are maintained within a range of 0.7 to 1.3 ppm as required by State regulations.

At present, additional fluoride is not added in Edenvale or Coyote service areas. Consult your dentist if you are considering additional fluoride supplements or treatments.

Hardness consists mainly of calcium and magnesium salts. Although it does not pose a health risk, it may be considered undesirable for other uses. Some benefits in reducing hardness or water softening are reduction in soap usage, longer life for water heaters, and a decrease in incrustation of pipes. Some disadvantages are an increase in sodium intake (depending on type of softener used), proper maintenance/servicing requirements, and potential adverse affects on plants and landscaping. To convert hardness from ppm to grains per gallon, divide by 17.1.

Radon is a radioactive gas that you can't see, taste, or smell. It is found throughout the U.S. Radon can move up through the ground and into a home through cracks and holes in the foundation. Radon can build up to high levels in all types of homes. Radon can also get into indoor air when released from tap water from showering, washing dishes, and other household activities. Compared to radon entering the home through soil, radon entering the home through tap water will in most cases be a small source of radon in indoor air. Radon is a known human carcinogen. Breathing air containing radon can lead to lung cancer. Drinking water containing radon may also cause increased risk of stomach cancer. If you are concerned about radon in your home, test the air in your home. Testing is inexpensive and easy. For additional information, call your State radon program or call USEPA's Radon Hotline (800-SOS-RADON).

Turbidity is a measure of the cloudiness of the water. It is monitored because it is a good indicator of water quality. High turbidity can hinder the effectiveness of disinfectants. The turbidity standard for unfiltered supplies (e.g., Hetch Hetchy) is 5 NTU. Filtered water turbidity must be less than 0.3 NTU 95% of the time and at no time higher than 1 NTU. All sources met the standards 100% of the time.

Lead may be present at increased levels in the tap water of some homes caused by the deterioration of household plumbing materials that contain lead. Infants and young children are typically at greatest health risk. If you are concerned about elevated lead levels in your water, have your water tested or briefly flush your tap before using the water whenever the tap has not been used for a long period of time.

DEFINITIONS:

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

DRAFT

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the USEPA.

Maximum Residual Disinfectant Level (MRDL): The level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a disinfectant added for water treatment below which there is no known or expected health risk. MRDLGs are set by the USEPA.

Notification Level (NL): Health-based advisory levels established by the California Department of Health Services for chemicals in drinking water that lack maximum contaminant levels (MCLs).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Primary Drinking Water Standard (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

San Francisco Public Utilities Commission (SFPUC): Wholesaler of treated surface water that is delivered to Alviso and North San Jose service areas by SJMWS.

Santa Clara Valley Water District (District): Wholesaler of treated surface water that is delivered to the Evergreen service area by SJMWS.

Source Water: Raw water that has not been treated to meet drinking water standards.

Treated Water: Water that has been treated to meet USEPA and CDHS drinking water standards.

WHO TO CALL FOR MORE INFORMATION

If you have any questions or concerns regarding this report or the quality of your water, please contact a **water quality engineer at (408) 277-3671.**

For more information about contaminants and potential health effects call the **USEPA's Safe Drinking Water Hotline at 1-800-426-4791.**

The Municipal Water System is a City-owned water utility retailer that has served customers since 1961, more than 45 years. We are committed to delivering a reliable water supply that meets or exceeds all drinking water health standards. Our office is open from 8 a.m. to 5 p.m., Monday through Friday, except for holidays. For more information, visit our website at www.sjmuniwater.com or call Customer Service at (408) 535-3500 (Translation services are available).

In accordance with the Americans with Disabilities Act, City of San Jose Environmental Services Department materials can be made available upon request in alternative formats, such as Braille, large print, audiotape or computer disk. Request may be made my calling (408) 277-3671 (voice) or (800) 735-2929 (California Relay Service).

EXHIBIT VI
AST/UST QUESTIONNAIRE

1. In the past five years have there been any reportable releases or spills of regulated substances, hazardous waste or any other pollutants, as defined by applicable environmental statutes or regulations at the Site? [ ] Yes [✓] No.
If Yes, were the following involved:
Corrective Action? [ ]Yes, [✓]No 3rd Party Claims? [ ]Yes, [✓]No
Remediation Complete [ ]Yes, [✓]No Claim Closed [ ]Yes, [✓]No
No Further Actions [ ]Yes, [✓]No Claim Open [ ]Yes, [✓]No
Remediation On-Going [ ]Yes, [✓]No
Provide Details:

2. Are there any facts or circumstances which may reasonably be expected to result in a claim or claims being asserted against the Site for environmental cleanup or response, or for bodily injury or property damage arising from the release of pollutants into the environment? [ ] Yes, [✓] No.
If Yes, provide explanation:

3. Have any repairs or upgrades (including relining) been performed within the past ten years for any tank at locations to be insured? [ ] Yes, [✓] No.
If Yes, please explain:

4. Were all tanks new at installation?
[✓]Yes, [ ]No, [ ] Unknown

5. Were any tanks ever removed or closed without obtaining appropriate clean closure or no further action documentation?
[ ]Yes, [✓] No, [ ]Unknown

6a. Is there a Spill Prevention and Counter Control plan with regard to aboveground storage tanks if any exist?
[ ] Yes, [ ] No, [ ] Not Applicable
Management - no
Tenants - probably

6b. If Yes, have any inspections or maintenance procedures as required by the plan **not** been performed?
[ ] Yes, [ ] No, [✓] Unknown.
If Yes, please explain:

7. Is an outside contractor or firm used for compliance management services? This includes, but is not limited to, equipment inspection and monitoring, proper state and

DRAFT

local regulatory paperwork completion and filing, pooling gauges and monthly monitoring reports for you.
[✓] Yes, [ ] No

8. Is a remote monitoring system used, with an outside vendor who receives an alarm when a release occurs and is responsible for notifying the appropriate parties?
[ ] Yes, [ ] No Unknown

9. Do any plans exist to remove or replace any tanks within the next year?
[ ] Yes, [✓] No.
If Yes, explain:

10. Do all tank systems comply, at a minimum, with the United States Environmental Protection Agency's requirements regarding construction, overfill/spill protection and leak detection for tanks, piping and dispensing systems? [✓] Yes [ ] No.
If No, please explain:

EXHIBIT VII
INDOOR AIR QUALITY QUESTIONNAIRE

1.		Have any construction defects been encountered? ○ Yes ✓ No
		If yes, what are they and how have they been rectified:
2.		Are there any moisture or wet conditions in the basement, foundation or crawl space? ○ Yes ✓ No slab-on-grade, concrete tilt up
		If yes, what is being done to control such conditions:
3.		Is the building located in a 100-year flood plain or an area subject to periodic ponding or flooding? ○ Yes ✓ No
		If yes, what precautions are in place to mitigate flood damage? No
4.		Is there a swimming pool, spa or Jacuzzi in the building? ○ Yes ✓ No
5.		Are vents in bathrooms and dryers vented to the exterior? ✓ Yes ○ No
6.		Have any of the buildings or units experienced any flooding, or water leaks? (including but not limited to leaks from the roof, windows, siding, plumbing or sewer backups) ○ Yes ○ No New HVAC units, minor roof penetrations
		If yes, describe what has done in each building or unit to correct the cause of the leak(s) and how cleanup of the resulting damage was performed.
7.		Do any of the buildings or units currently contain any visible areas of mold growth? ○ Yes ✓ No
		If yes, provide the location, the approximate size of the growth in square feet and what is being done to correct and abate the problem.
8.		Have any of the buildings or units had any previous mold or bacteria problems? ○ Yes ✓ No
		If yes, describe the findings and what was done to correct and abate the problem.
9.		Have any of the buildings or units been sampled for mold or bacteria? ○ Yes ✓ No
		If yes, please provide the results.

Geotechnical Engineering Investigation
Proposed Mechanical Yard
3050 Zanker Road
San Jose, California

DRAFT

Dear Mr. Cuzner:

Transmitted herewith is our geotechnical investigation report for the proposed mechanical yard on the western edge of the existing Ultratech building at 3050 Zanker Road, San Jose, California. This report includes the results of our subsurface exploration program, laboratory testing, conclusions of the study, and presents recommendations for the foundation of various equipment and 18-foot high perimeter walls.

We thank you for the opportunity to perform these services. Should you have any questions or comments please contact our office.

Very truly yours,

REPORT

GEOTECHNICAL ENGINEERING INVESTIGATION
PROPOSED MECHANICAL YARD
ULTRATECH
3050 ZANKER ROAD
SAN JOSE, CALIFORNIA
For AlfaTech

DRAFT

1.0 INTRODUCTION

This report presents the results of our geotechnical investigation performed for the proposed mechanical yard at the western corner of the existing Ultratech building located at 3050 Zanker Road, San Jose, California. The attached Plate 1, Vicinity Map, shows the general location of the site. Plate 2, Site Plan, shows the outline of the proposed mechanical yard and the approximate locations of our exploratory boring drilled for this investigation. These services were performed in accordance with the scope of services outlined in our Proposal No. 04-194, dated July 15, 2004.

2.0 PROJECT DESCRIPTION

It is our understanding that the subject project will consist of construction of a new mechanical yard at the western corner of the existing Ultratech building in San Jose. The mechanical pad will be approximately 40 x 60 in plan dimensions and will support new chillers, cooling tower(s), etc. The equipment yard will be surrounded with 18-foot-high perimeter screen walls which may be supported drilled piers with a maximum depth of 25-feet. The perimeter wall will weight less than 200 pounds per lineal foot. The average load from the weight of the mechanical equipment to be supported on the concrete pad is not expected to exceed 750 psf.

3.0 PURPOSE AND SCOPE OF SERVICES

The purpose of our investigation was to obtain information regarding the subsurface and foundation conditions at the location of the proposed mechanical yard. Based on our understanding of the project, this report presents conclusions, opinions, and recommendations regarding:

- the overall feasibility of the proposed project from a geotechnical point of view,
- vicinity geologic conditions and seismicity of the project site, including the seismic parameters per the 1997 Edition of the UBC, and the 2001 Edition of the CBC,
- specific subsurface conditions discovered by our borings, such as loose, expansive, or collapsible soils, that may require special mitigation or impose restrictions on the project, including the thickness, and consistency of on-site fill soils, if encountered within the depths explored, and the need for any special mitigation of the soft soils within the footings (the thickness of each pavement component will also be measured and reported),
- evaluation of the potential of the site materials for liquefaction or compaction during seismic conditions,
- estimates of the allowable bearing capacity and the lateral capacity (passive resistance) of the foundation soils for the spread footings, and the allowable capacity of the drilled piers for gravity, uplift, and lateral loads,
- estimates of the total post-construction settlements for the new foundations, and differential settlement between the new features and the existing structure,
- need for dewatering of shallow foundation excavations or pits,
- criteria for site grading and preparation of the slab subgrade, including compaction requirements for utility trench backfill and placement of fills or backfills,
- development of support of slab-on-grade concrete pads,
- estimate of modulus of subgrade reaction, and
- provisions for drainage.

DRAFT

The scope of our services consisted of completing the tasks described below:

- Visited the site and marked the boring locations at least 72 hours in advance of the planned explorations and notified Underground Service Alert (USA) to mark the known utilities entering to the building and/or within the site.

- Reviewed published geologic maps and reports pertinent to the site area regarding the seismic and geologic history of the site.

- Drilled, logged, and collected samples from two borings. Boring B-1 was drilled to 25 feet, whereas Boring B-2 was drilled to 40½ feet below the existing ground surface. The borings were drilled with a truck-mounted drilling rig using hollow-stem augers. The borings were drilled under the supervision of our geologist who directed the exploration and collected disturbed bulk, Standard Penetration Test, and relatively undisturbed ring samples of the subsurface soils for visual classification and laboratory testing. He also measured the depth to groundwater in the borings. The borings were backfilled with cement grout, as per standard protocol. The drilled cuttings were placed within the planter areas near the borings as directed by the client.

- Performed a laboratory testing program on the collected soil samples to evaluate some of the index properties and engineering characteristics of the subsurface soils. Tests included direct shear strength, grain size distribution, and moisture-density determination.

- Performed engineering analyses based on the results obtained from the above tasks and oriented towards the above-described purpose of the investigation.

- Prepared six copies of a letter report summarizing our findings including a site plan showing the boring locations, the logs of borings, the results of the laboratory tests, and our conclusions, opinions, and recommendations.

4.0 SITE DESCRIPTION

The area proposed for the construction of the mechanical yard is located near the western corner of the existing Ultratech building at 3050 Zanker Road, San Jose, California. The subject area is relatively flat, is covered with an asphalt pavement, and is currently used for parking. The project area is located adjacent to an existing equipment yard.

DRAFT

5.0 FIELD EXPLORATION AND LABORATORY TESTING

To address the geotechnical aspects of the project, we conducted a subsurface exploration program at the site consisting of drilling two soil borings. Borings B-1 was drilled to 25 feet below the existing ground surface (BGS) whereas boring B-2 was drilled to 40½ feet BGS. Bulk, Standard Penetration Test, and undisturbed ring samples of the subsurface materials were obtained at 3- to 5-foot intervals, as necessary for visual classification and laboratory testing. A laboratory testing program was then designed and conducted on the samples collected from the borings to evaluate some of the index and strength properties of the subsurface materials encountered in the borings.

The materials encountered in the borings, and the results of laboratory tests are shown the on the Boring Logs included in this report as Plates 10 and 11. The legends for the symbols used on the boring logs and other soil/rock terminology on the boring logs are shown on Plates 5 through 9.

Selected samples were tested in direct shear to evaluate the strength characteristics of the foundation soils. Tests were performed at natural moisture contents and under various surcharge pressures. The moisture content and dry density of undisturbed samples were determined to aid in correlating their engineering properties. The results of our laboratory strength tests and moisture-density data are shown on the Boring Logs.

6.0 GEOLOGY AND SEISMICITY

The site area is located less than one mile away from Guadalupe river to the west and Coyote Creek to the east. The geologic map tilted "Quaternary Geology of Santa Clara Valley, by E.J. Helley, R.W. Graymer, G.A. Phelps, P.K. Showalter, and C.M. Wentworth, May 1994 indicates that the subject site is located in the flood-plain deposits (Qhb). The State of California, Seismic Hazard Zones, Milpitas Quadrangle, released April 19, 2004 indicates that the subject site is located within a liquefaction zone.

DRAFT

The Regional Geology Map, Plate 3, shows the geology of the general site area. The soil conditions encountered in the borings drilled at the site generally corroborate the geologic map.

The project site is located within the seismically-active San Francisco Bay region. The nearest major active fault is the southest extension of the Hayward Fault (a Type B fault), located approximately 7.1 kilometers from the project site. The main Hayward Fault (Type A fault), is located approximately 11.3 kilometers from the project site. The Calaveras Fault (north of Calaveras Reservoir) is located approximately 12 kilometers from the subject site. The San Andreas fault is located approximately 21.4 kilometers from the subject site.

DRAFT

7.0 SITE CONDITIONS

7.1 Subsurface Conditions

The borings were drilled at the approximate locations shown on Plate 2, Site Plan. The materials encountered during our subsurface exploration were generally consistent with the materials mapped on the referenced Geology Map. The subsurface soil conditions encountered at the boring locations are typical of alluvium, i.e., interlayered and interfingured deposits of gravels, sands, silts, clays and mixtures thereof. The near surface soils up to the depth of 19 feet below the ground surface (bgs) consist of stiff to very stiff lean clay. Increasing proportions of sands and silts were encountered at about 19 feet BGS. At about 21 feet, the soils encountered in the boreholes transitioned to medium dense silty sand. The silt content in the subsurface soils continued to decrease with depth and as a result the soil layer starting at 29 feet was logged as loose fine to medium sand with a trace of silt. The thickness of this layer was estimated to be about 6 feet. Medium stiff lean clay was encountered below the sand layer, to the maximum depth of drilling - 40.5 feet.

The details of the subsurface materials encountered at the site are shown on the boring logs included in this report as Plates 10 and 11.

7.2 Groundwater

Free groundwater was encountered at 15 feet in Boring B-1 and 18.5 feet in Boring B-2. The groundwater levels in the borings rose as the boreholes were kept open. About one hour after drilling to the final depth, the groundwater level in boring B-1 was measured to be 12.5 feet and about 2 hours after boring B-2 was drilled to the maximum depth the groundwater level was measured to be 14 feet below the ground surface. It should be noted that groundwater levels may fluctuate with time as a result of seasonal changes, and other activities such as irrigation, regional groundwater injection, or nearby pumping activities.

7.3 Liquefaction

Soil Liquefaction is a condition where saturated loose granular soils near the ground surface undergo a substantial loss of strength due to increased pore water pressure resulting from reversing cyclic stress associated with vibrations introduced by earthquakes. In this process, the soil acquires a mobility sufficient to permit both vertical and horizontal movements, which, if not confined, could result in significant deformations. Soils most susceptible to liquefaction are loose, uniformly-graded, fine grained sands and loose silts with very little cohesion. It is generally acknowledged that liquefaction does not occur if the deposits described above are located at depths greater than 40-50 feet below the ground surface because of the greater overburden pressure.

We performed an analysis to evaluate the liquefaction potential at the subject site and to estimate liquefaction related settlement. The liquefaction potential evaluation was performed using the subsurface soil conditions encountered in the deeper borehole (B2). Laboratory test results were used to aid in the liquefaction potential evaluation analysis. The analysis was performed using Recommended Procedures for Implementing of DMG Special Publication 117, Guidelines for Analyzing and Mitigating Liquefaction in California, March 1999 (Special Publication 117) and 1996 NCEER workshop method. The liquefaction related settlement was estimated using the methodology suggested by Tokimatsu and Seed (1987). The analysis was performed using a peak ground acceleration value of 0.32g. This value was derived using the attenuation relationship suggested by Cambell and Bezorgia, 2003 for a magnitude 7.3 earthquake on Hayward Fault located 11.3 kilometers from the site and deep alluvial soil profile. The groundwater table was assumed to be 14 feet below the ground surface.

DRAFT

The results of the analysis indicate that the loose to medium dense layers of saturated silty sand to clean sand are likely to undergo liquefaction during a seismic event. The liquefaction related settlement was estimated to be in the range of 3 to 5 inches. Using Figure 7.14 (Typical Chart for Evaluation of Surface Manifestation of Liquefaction, After Ishihara, 1985) in Special Publication 117 we judge that there will be no surface manifestation of the liquefaction related settlement since the liquefiable sand layer is overlain by 19 feet of clayey soil.

8.0 DISCUSSION AND RECOMMENDATIONS

8.1 General

Based on the subsurface exploration conducted at the subject site and the results obtained from our laboratory testing program, it is our opinion that the proposed project is feasible from a geotechnical engineering standpoint, provided the recommendations presented in this report are incorporated into the project design and construction. When the final development plans become available, they should be submitted to BAGG for review prior to construction. The purpose of the plan review is to evaluate whether the project foundation and grading plans meet the intent of our recommendations and verify that our recommendations properly address the project in its final form.

Based on the results of our subsurface exploration and laboratory testing, it is our opinion that the 18-foot high perimeter walls may be supported on cast-in-place, drilled, reinforced, concrete piers or conventional continuous strip footings. The piers will derive their load supporting capacity through adhesion between concrete and the surrounding soil. The gravity loads from the other miscellaneous equipment within the mechanical yard may be supported on conventional spread footings. The design criteria for the foundation piers and the conventional footings are provided in the following sections of this report.

One of the major concerns at the site is the presence of saturated loose to medium dense fine to medium sands with a trace of silt. The silty sand to sand materials were encountered as shallow as 19 feet below the ground surface. These types of soils tend to cave if they are not confined;

DRAFT

therefore, if the piers are drilled below the depth of 19 feet they will most likely need to be cased.

Groundwater was encountered as high as 12.5 feet below the ground surface. The presence of groundwater at relatively shallow depths indicates that foundation piers drilled below the depth of 12.5 feet may have to be dewatered prior to the placement of concrete, or concrete may be placed through the tremie pipe.

The site could experience very strong ground shaking from future earthquakes during the anticipated lifetime of the project. The intensity of the ground shaking will depend on the magnitude of the earthquake, distance to the epicenter, and the response characteristics of the native soils and bedrock materials. Therefore, as a minimum the structures should be designed to meet the requirements of the latest Uniform Building Code (1997).

DRAFT

8.2 Site Grading

Site grading will most likely consist of minor (less than 2 feet) cuts and fills. Existing utilities where known should be located on the grading plans to assist the Contractor and the Geotechnical Engineer during the grading operations. The necessity of removing abandoned, underground utility lines will be determined by the Geotechnical Engineer. Ruts and depressions resulting from the removal of utilities should be cleaned out down to firm soil. The bottom of the resulting depressions should be scarified to a depth of 8 inches and compacted to 90 percent relative compaction and sufficiently wet of optimum. The depression should be backfilled with approved, compacted structural fill as recommended in the other sections of this report.

Prior to grading operations, the existing asphalt pavement should be removed from the areas that are to receive fill or concrete slabs on grade. The underlying baserock could be left in place. Prior to placing fill over the baserock, it may be necessary to moisture condition and compact the baserock layer if it is observed to be excessively dry and/or loose.

Acceptable import fill should have plasticity and strength characteristics equal to or better than the native soil. It should be free of debris, organics, and deleterious materials and should have a maximum particle size of 3-inches. A sample of each material proposed for import fill should be

delivered to the Geotechnical Engineer or his representative for testing and approval at least three working days prior to being transported to the site.

As used in this report, the term "compact" and its derivatives mean that all on-site soils and bedrock materials should be compacted to at least 90 percent of maximum dry density, as determined by ASTM Test Method D1557-01, while at a moisture content that is slightly over optimum. In the slab and pavement subgrades, the upper 6-inches of the subgrade, in addition to the aggregate base, should be compacted to at least 95 percent of the maximum dry density.

The fill material should be uniformly moisture conditioned and compacted in lifts not exceeding 8 inches in loose thickness.

The Geotechnical Engineer should be notified at least 48 hours prior to commencement of any grading operation so he may coordinate the work in the field with contractors. The site grading operation should be conducted under the observations of BAGG.

8.3 1997 Uniform Building Code Site Characterization

The Structural Engineering Design Provisions in Chapter 16 of the 1997 Uniform Building Code (UBC) introduced substantial changes to earthquake design for new buildings (International Conference of Building Officials, 1997). The new code considers local (near source) seismic affects. It uses "near-source factors" to account for the fact that recorded near-fault ground motions have frequently exceeded those specified in earlier editions of the UBC. This implies that buildings may be subject to higher lateral load requirements than previously dictated by the UBC. Based on our geologic research, including published maps of known active fault zones prepared for the 1997 UBC and the distance to the seismic sources, the seismic design parameters per Chapter 16 of the 1997 UBC are listed below. The seismic design parameters per 2001 California Building Code are identical to those listed below.

UBC 1997 defines Type A faults as Faults which are capable of producing large magnitude (greater than 7.0) events and that have a high rate of seismic activity (slip rate greater than 5 mm/year) (Table 16-U - Seismic Source Type). Type C faults are defined as faults that are not capable of producing large magnitude earthquakes (less than 6.5) and that have a relatively low rate of seismic activity (less

DRAFT

than 2 mm/year). Type B faults are defined vaguely as all faults other than Type A and Type C faults. Based on the results of subsurface exploration, the soil profile at the site was classified as S_D as per UBC 1997. Soil Profile S_D is defined as "stiff soil profile" with an average shear wave velocity of 600 to 1200 feet per second, average Standard Penetration Test (N) values in the range of 15 to 50, and average undrained shear strength in the range of 1000 to 2000 psf for the top 100 feet of soil profile (UBC 1997 - Table 16-J).

The seismic design parameters per UBC 1997 are listed below. Please note, that these values represent the minimum design standards.

SEISMIC DESIGN PARAMETERS PER UBC 1997

UBC, 1997	Site Parameter

Table 16-T, Near-Source Factor, N_v	1.1
Seismic Coefficient Ca	0.44
Seismic Coefficient Cv	0.70

8.4 Foundations

8.4.1 Drilled Piers

The gravity, and lateral loads of the perimeter wall may be supported on drilled, cast-in-place, reinforced concrete piers. The foundation piers may be designed using the criteria provided below:

- Minimum pier diameter = 18 inches.
- Minimum pier depth = 10 feet.
- Minimum center to center spacing - 3 times the pier diameter.

DRAFT

- Allowable adhesion between the pier and the surrounding soil (for gravity loads) = 500 psf (ignore end bearing capacity). The allowable value may be increased by one-third for short term seismic or other type of transient loads.
- Allowable adhesion values between the pier and the surrounding soil for uplift loads = 350 psf. The allowable value may be increased by one-third for short-term seismic or other type of transient loads.
- Allowable passive pressure = 300 pcf equivalent fluid weight over 1½ times the pier diameter.

Each pier should be reinforced for the entire depth. To minimize potential caving, drilled piers should be filled with concrete as soon as reasonably possible. Drilled piers should not be left open overnight, unless approved by the Geotechnical Engineer. If the piers are drilled below 18 feet below the ground surface some caving should be anticipated. Therefore the portion of the piers below 18 feet will have to be cased. The inside diameter of the casing should be no smaller than the design diameter of the pier.

It is anticipated that the pier will be excavated with helical auger above the groundwater table and a bucket auger below the groundwater table. To reduce the amount of sloughage in the bottom of the hole, the hole should be cleaned out with a bucket auger prior to placement of reinforcing steel and concrete. The total length of the drilled pier should be confirmed prior to placement of concrete in the pier hole.

If water is encountered within the pier holes, the concrete should be placed using a rigid tremie pipe. BAGG recommends against dewatering the pier holes because the dewatering activities may induce instability in the sidewalls of the pier hole. The use of the tremie pipe should be continued until the concrete is brought to the surface to promote displacement of water and laitance (undesirable cement-mud-water mixture). The tremie pipe should initially be kept near the bottom of the hole, and subsequently kept approximately 2 feet below the top of concrete during concrete placement. For holes that are partially cased, efforts should be made to fill the cavities that may form on the sidewalls of the holes during drilling.

A representative from this office should be present during drilling and subsequent filling of the pier holes with concrete to monitor compliance with the recommendations included in this report.

DRAFT

We have estimated that the total post construction, static settlements of the proposed perimeter wall supported on properly constructed pier foundations will be negligible. If the perimeter wall is supported on drilled piers, it should be structurally separated from the conventional foundations or other concrete floor slabs-on-grade because they will have differing settlement characteristics.

8.4.2 Conventional Shallow Footings

The perimeter wall and the miscellaneous loads within the mechanical yard may also be supported on conventional shallow continuous footings. The shallow footings with minimum trenching depth of 18 inches below the lowest adjacent final grade may be designed using an allowable bearing pressure of 2,000 psf for dead plus live load. This value may be increased by one-third for short term loads such as wind and seismic loads. The bottom of the foundation trenches should be firm, clean and free of any loose or yielding soils. BAGG should be contacted to inspect the footings prior to placement of structural steel and concrete. The soil exposed along the foundation trenches should be kept moist by frequent misting or spraying.

The lateral loads acting on the spread footings may be resisted by a combination of passive soil resistance and friction between the bottom of the footings and soil. Passive resistance may be calculated by using an equivalent fluid pressure of 300 pcf. The friction coefficient between the concrete and native soil is estimated to be 0.35.

We have estimated that the total post construction, static settlements of the proposed perimeter wall supported on properly constructed conventional shallow foundations will be less than one-inch.

8.4.3 Concrete Mat Foundation

The miscellaneous foundation loads within the mechanical yard may also be supported on a concrete mat slab. The concrete mat slab should be designed for an allowable bearing pressure value of 1,000 psf. This allowable bearing pressure value may be increased by one-third for short term loads such as wind and seismic loads. The mat foundation should be sufficiently thick to spread the concentrated loads, and can be designed with a modulus of subgrade reaction of 100 psi/inch.

DRAFT

8.5 Slabs-on-Grade and Exterior Flatwork

Concrete slabs should be placed on 4 inches of approved, clean, free draining, angular gravel placed on a compacted soil subgrade. The subgrade soils should be maintained at a moisture content of at least 2 percent over optimum, and should be approved by the Geotechnical Engineer immediately before the slab is poured. In the areas where fork lift traffic is anticipated, the concrete slab should be underlain by 6 inches of Caltrans Class 2 aggregate baserock compacted to 95 percent relative compaction. In the areas of moisture sensitive floors, the concrete floor slab should be underlain by 2 inches of clean sand, over a minimum of 10-mil thick vapor membrane (Stegowrap) over 4 inches of clean, free draining, angular gravel.

The concrete floor slabs-on-grade should be reinforced. The size, spacing, and configurations of the reinforcement should be determined by the Project Structural Engineer.

8.6 Utility Trench Backfilling

Vertical trenches deeper than 5 feet will require temporary shoring. Where shoring is not used, the sides should be sloped or benched, with a maximum slope of 1:1 (horizontal : vertical). The trench spoils should not be placed closer than 3 feet (or one-half of the trench depth) from the trench sidewalls. All work associated with trenching must conform to the State of California, Division of Industrial Safety requirements. In our opinion, the soils at the upper 10 to 15 feet of the site should be classified as "Type B Soil."

Trench backfill materials and compaction should conform to the following:

- In general, soils used for trench backfill shall be free of debris, roots and other organic matter, debris, and rocks or lumps exceeding 3 inches in greatest dimension.
- Compaction shall be performed to a minimum of 90% relative compaction in accordance with ASTM D1557, at a moisture content recommended previously. In pavement areas, the upper 24 inches of the backfill (below the pavement subgrade) shall be compacted to 95% of the maximum dry density.
- Jetting shall not be allowed.

DRAFT

8.7 Drainage

Although the project site is generally flat, drainage measures to control and collect surface run-off should be considered an integral part of the proposed development. The ground surface of new pavements and graded areas should be sloped to drain away from the foundations of existing structures.

8.8 Plan Review

It is recommended that the Geotechnical Engineer (Bay Area Geotechnical Group) be retained to review the final grading and foundation plans. This review is to assess general suitability of the earthwork and foundation recommendations contained in this report and to verify the appropriate implementation of our recommendations into the project plans and specifications.

8.9 Observation and Testing

It is recommended that the Geotechnical Engineer (BAGG) be retained to provide observation and testing services during the grading, excavation, backfilling, and foundation construction phases of work. This is to verify that the work in the field is performed as recommended and in accordance with the approved plans and specifications, and more importantly, to verify that subsurface conditions encountered during construction are similar to those anticipated during the design phase.

DRAFT

9.0 CLOSURE

This report has been prepared in accordance with generally-accepted engineering practices for the strict use of Alfatech and other professionals associated with the specific project described in this report. The conclusions and recommendations contained in this report are based on subsurface conditions revealed by two exploratory borings. It is not uncommon for unanticipated conditions to be encountered during site grading and/or foundation installation, and it is not possible for all such variations to be found by a field exploration program appropriate for this type of project. The recommendations contained in this report are therefore contingent upon the review of the final grading, drainage, and foundation plans by this office, and upon geotechnical observation and testing

by BAGG of all pertinent aspects of construction, including clearing, site grading, foundation excavations, placement of fills or backfills, and preparation of subgrades.

Surface conditions and standards of practice change with time. Therefore, we should be consulted to update this report, if the construction does not commence within 18 months from the date this report is submitted. Additionally, the recommendations of this report are only valid for the proposed development as described herein. If the proposed project is modified, our recommendations should be reviewed and approved or modified by this office in writing.

BAGG

COARSE-GRAINED SOILS
LESS THAN 50% FINES*

GROUP SYMBOLS	ILLUSTRATIVE GROUP NAMES	MAJOR DIVISIONS
GW	Well graded gravel Well graded gravel with sand	GRAVELS More than half of coarse fraction is larger than No. 4 sieve size
GP	Poorly graded gravel Poorly graded gravel with sand	
GM	Silty gravel Silty gravel with sand	
GC	Clayey gravel Clayey gravel with sand	
SW	Well graded sand Well graded sand with gravel	SANDS More than half of coarse fraction is smaller than No. 4 sieve size
SP	Poorly graded sand Poorly graded sand with gravel	
SM	Silty sand Silty sand with gravel	
SC	Clayey sand Clayey sand with gravel	

NOTE: Coarse-grained soils receive dual symbols if:
(1) their fines are CL-ML (e.g. SC-SM or GC-GM) or
(2) they contain 5-12% fines (e.g. SW-SM, GP-GC, etc.)

FINE-GRAINED SOILS
MORE THAN 50% FINES*

GROUP SYMBOLS	ILLUSTRATIVE GROUP NAMES	MAJOR DIVISIONS
CL	Lean clay Sandy lean clay with gravel	SILTS AND CLAYS liquid limit less than 50
ML	Silt Sandy silt with gravel	
OL	Organic clay Sandy organic clay with gravel	
CH	Fat clay Sandy fat clay with gravel	SILTS AND CLAYS liquid limit more than 50
MH	Elastic silt Sandy elastic silt with gravel	
OH	Organic clay Sandy organic clay with gravel	
PT	Peat Highly organic silt	HIGHLY ORGANIC SOIL

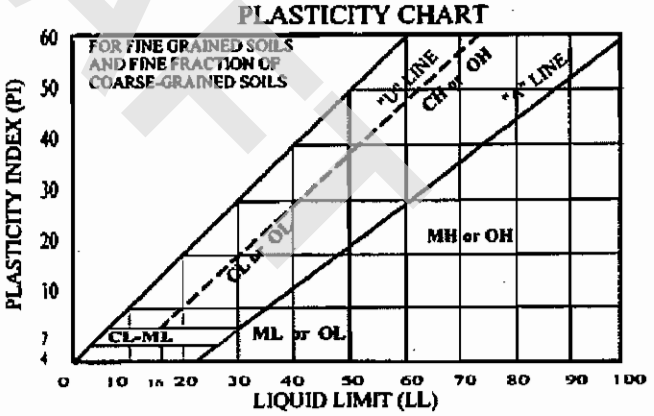
NOTE: Fine-grained soils receive dual symbols if their limits plot in the hatched zone on the Plasticity Chart (CL-ML).

SOIL SIZES

COMPONENT	SIZE RANGE
BOULDERS	ABOVE 12 in.
COBBLES	3 in. to 12 in.
GRAVEL	No. 4 to 3 in.
Coarse	¾ in to 3 in.
Fine	No. 4 to ¾ in.
SAND	No. 200 to No.4
Coarse	No. 10 to No. 4
Medium	No. 40 to No. 10
Fine	No. 200 to No. 40
*FINES:	BELOW No. 200

NOTE: Classification is based on the portion of a sample that passes the 3-inch sieve.

PLASTICITY CHART



Reference: ASTM D 2487-98, Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System).

GENERAL NOTES: The tables list 30 out of a possible 110 Group Names, all of which are assigned to unique proportions of constituent soils. Flow charts in ASTM D 2487 aid assignment of the Group Names. Some general rules for fine grained soils are: less than 15% sand or gravel is not mentioned; 15% to 25% sand or gravel is termed "with sand" or "with gravel;" and 30% to 49% sand or gravel is termed "sandy" or "gravelly." Some general rules for coarse-grained soils are: uniformly-graded or gap-graded soils are "Poorly" graded (SP or GP); 15% or more sand or gravel is termed "with sand" or "with gravel;" 15% to 25% clay and silt is termed clayey and silty and any cobbles or boulders are termed "with cobbles" or "with boulders."

UNIFIED SOIL CLASSIFICATION SYSTEM

(1/00)

DRAFT

SOIL TYPES (Ref 1)

Boulders: particles of rock that will not pass a 12-inch screen.
Cobbles: particles of rock that will pass a 12-inch screen, but not a 3-inch sieve.
Gravel: particles of rock that will pass a 3-inch sieve, but not a #4 sieve.
Sand: particles of rock that will pass a #4 sieve, but not a #200 sieve.
Silt: soil that will pass a #200 sieve, that is non-plastic or very slightly plastic, and that exhibits little or no strength when dry.
Clay: soil that will pass a #200 sieve, that can be made to exhibit plasticity (putty-like properties) within a range of water contents, and that exhibits considerable strength when dry.

MOISTURE AND DENSITY

Moisture Condition: an observational term; dry, moist, wet, or saturated.
Moisture Content: the weight of water in a sample divided by the weight of dry soil in the soil sample, expressed as a percentage.
Dry Density: the pounds of dry soil in a cubic foot of soil.

DESCRIPTORS OF CONSISTENCY (Ref 3)

Liquid Limit: the water content at which a - soil that will pass a #40 sieve is on the boundary between exhibiting liquid and plastic characteristics. The consistency feels like soft butter.
Plastic Limit: the water content at which a - soil that will pass a #40 sieve is on the boundary between exhibiting plastic and semi-solid characteristics. The consistency feels like stiff putty.
Plasticity Index: the difference between the liquid limit and the plastic limit, i.e. the range in water contents over which the soil is in a plastic state.

MEASURES OF CONSISTENCY OF COHESIVE SOILS (CLAYS) (Ref's 2 & 3)

Very Soft	N=0-1*	C=0-250 psf	Squeezes between fingers
Soft	N=2-4	C=250-500 psf	Easily molded by finger pressure
Medium Stiff	N=5-8	C=500-1000 psf	Molded by strong finger pressure
Stiff	N=9-15	C=1000-2000 psf	Dented by strong finger pressure
Very stiff	N=16-30	C=2000-4000 psf	Dented slightly by finger pressure
Hard	N>30	C>4000 psf	Dented slightly by a pencil point

*N=blows per foot in the Standard Penetration Test. In cohesive soils, with the 3-inch-diameter ring sampler, 140-pound weight, divide the blow count by 1.2 to get N (Ref 4).

MEASURES OF RELATIVE DENSITY OF GRANULAR SOILS (GRAVELS, SANDS, AND SILTS) (Ref's 2 & 3)

Very Loose	N=0-4**	RD=0-30	Easily push a ½-inch reinforcing rod by hand
Loose	N=5-10	RD=30-50	Push a ½-inch reinforcing rod by hand
Medium Dense	N=11-30	RD=50-70	Easily drive a ½-inch reinforcing rod
Dense	N=31-50	RD=70-90	Drive a ½-inch reinforcing rod 1 foot
Very Dense	N>50	RD=90-100	Drive a ½-inch reinforcing rod a few inches

**N=Blows per foot in the Standard Penetration Test. In granular soils, with the 3-inch-diameter ring sampler, 140-pound weight, divide the blow count by 2 to get N (Ref 4).

xxxx

WEATHERING DESCRIPTORS

Fresh	No discoloration, not oxidized, no separation, hammer rings when crystalline rocks are struck.
Slight	Discoloration or oxidation is limited to surface of, or short distance from, fractures; some feldspar crystals are dull, no visible separation, hammer rings when crystalline rocks are struck, body of rock not weakened.
Moderate	Discoloration extends from fractures, usually throughout ;Fe-Mg materials are "rusty", feldspar crystals are "cloudy", all fractures are discolored or oxidized, partial separation of boundaries visible, texture generally preserved, hammer dose not ring when rock is struck, body of rock is slightly weakened.
Intense	Discoloration or oxidation throughout; all feldspars and Fe-Mg minerals are altered to clay to some extent; or chemical alteration produces in situ disaggregation, all fracture surfaces are discolored or oxidized, surfaces friable, partial separation, texture altered by chemical disintegration, dull sound when struck with hammer, rock is significantly weakened.
Decomposed	Discolored or oxidized throughout, but resistant mineral such as quartz may be unaltered, all feldspars and Fe-Mg minerals are completely altered to clay, complete separation of grain boundaries, resembles a soil, partial or complete remnant of rock structure may be preserved, can be granulated by hand, resistant minerals such as quartz may be present as "stringers" or "dykes".

BEDDING FOLIATION AND FRACTURE SPACING DESCRIPTORS

Millimeters	Feet	Bedding	Fracture Spacing
>10	<0.03	Laminated	Very Close
10-30	0.03-0.1	Very Thin	Very Close
30-100	0.1-0.3	Thin	Close
100-300	0.3-1	Moderate	Moderate
300-1000	1-3	Thick	Wide
1000-3000	3-10	Very Thick	Very Wide
>3000	>10	Massive	Extremely Wide

ROCK HARDNESS/STRENGTH DESCRIPTORS*

Extremely Hard	Core, fragment, or exposure cannot be scratched with knife or sharp pick; can only be chipped with repeated heavy hammer blows.
Very Hard	Cannot be scratched with knife or sharp pick. Core or fragment breaks with repeated heavy hammer blows.
Hard	Can be scratched with knife or sharp pick with difficulty (heavy pressure). Heavy hammer blow required to break specimen.
Moderately Hard	Can be scratched with knife or sharp pick with light or moderate pressure. Core or fragment breaks with moderate hammer blow.
Moderately Soft	Can be grooved $^1/_{16}$ inch (2mm) deep by knife or sharp pick with moderate or heavy pressure. Core fragment breaks with light hammer blow or heavy manual pressure.
Soft	Can be grooved or gouged easily by knife or sharp pick with light pressure, can be scratched with fingernail. Breaks wit light to moderate manual pressure.
Very Soft	Can be readily indented, grooved, or gouged with fingernail, or carved with a knife. Breaks with light manual pressure.
*Note:	Although "sharp pick" is included in those definitions, descriptions of ability to be scratched, grooved, or gouged by a knife is the preferred criteria.

xxxx

GENERAL NOTES FOR BORING LOGS:

The boring logs are intended for use only in conjunction with the text, and for only the purposes the text outlines for our services. The Plate "Soil Terminology" defines common terms used on the boring logs.

The plate "Unified Soil Classification System," illustrates the method used to classify the soils. The soils were visually classified in the field; the classifications were modified by visual examination of samples in the laboratory, supported, where indicated on the logs, by tests of liquid limit, plasticity index, and/or gradation. In addition to the interpretations for sample classification, there are interpretations of where stratum changes occur between samples, where gradational changes substantively occur, and where minor changes within a stratum are significant enough to log.

There may be variations in subsurface conditions between borings. Soil characteristics change with variations in moisture content, with exchange of ions, with loosening and densifying, and for other reasons. Groundwater levels change with seasons, with pumping, from leaks, and for other reasons. Thus boring logs depict interpretations of subsurface conditions only at the locations indicated, and only on the date(s) noted.

SPECIAL FIELD NOTES FOR THIS REPORT:

1. The two borings were drilled on July 26, 2004, with a truck-mounted drilling rig utilizing 5-inch-diameter (outside) hollow stem flight augers. The borings were sealed with cement grout and capped with asphalt immediately after the last soil sample was collected.

2. The boring locations were approximately located by pacing from known points on the site.

3. The soils' Group Names [e.g. SANDY LEAN CLAY] and Group Symbols [e.g. (CL)] were determined or estimated per ASTM D 2487-00, Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System, see Plate 5). Other soil engineering and rock terms used on the boring logs are defined on Plate 6, Soil Terminology, and on Plate 7, Rock Terminology.

4. The "Blow Count" Column on the boring logs indicates the number of blows required to drive the sampler below the bottom of the boring, and the blow counts given are for each 6 inches of sampler penetration.

5. Groundwater was not encountered during drilling.

6. The symbol "LL" and "PI" denotes Liquid Limit and Plasticity Index (ASTM D 4318-00).

DRAFT

BORING LOG NOTES

KEY TO SYMBOLS

Symbol	Description
Strata symbols	
	Paving
	Silty, lean clay
	Clayey sand
	Silty sand
	Poorly graded sand
Misc. Symbols	
	Water first encountered during drilling
	Water level at completion of boring
Soil Samplers	
	Modified California Sampler: 2.375" ID by 3" OD, split-barrel sampler driven w/ 140-pound hammer falling 30" (ASTM D 3550-01)
	Standard Penetration Test: 1 3/8" ID by 2" OD, split-spoon sampler driven with 140-pound hammer falling 30" (ASTM D 1586-99)
Line Types	
	Denotes a sudden, or well identified strata change
	Denotes a gradual, or poorly identified strata change

Symbol	Description
Laboratory Tests	
DS	Denotes direct shear test performed at field moisture content (ASTM D2166-00).

Important Information About Your

Geotechnical Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

The following information is provided to help you manage your risks.

DRAFT

Geotechnical Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical engineering study conducted for a civil engineer may not fulfill the needs of a construction contractor or even another civil engineer. Because each geotechnical engineering study is unique, each geotechnical engineering report is unique, prepared *solely* for the client. *No one except you* should rely on your geotechnical engineering report without first conferring with the geotechnical engineer who prepared it. *And no one—not even you*—should apply the report for any purpose or project except the one originally contemplated.

Read the Full Report

Serious problems have occurred because those relying on a geotechnical engineering report did not read it all. Do not rely on an executive summary. Do not read selected elements only.

A Geotechnical Engineering Report Is Based on A Unique Set of Project-Specific Factors

Geotechnical engineers consider a number of unique, project-specific factors when establishing the scope of a study. Typical factors include: the client's goals, objectives, and risk management preferences; the general nature of the structure involved, its size, and configuration; the location of the structure on the site; and other planned or existing site improvements, such as access roads, parking lots, and underground utilities. Unless the geotechnical engineer who conducted the study specifically indicates otherwise, *do not rely on a geotechnical engineering report* that was:

- o not prepared for you,
- o not prepared for your project,
- o not prepared for the specific site explored, or
- o completed before important project changes were made.

Typical changes that can erode the reliability of an existing geotechnical engineering report include those that affect:

- o the function of the proposed structure, as when it's changed from a parking garage to an office building, or from a light industrial plant to a refrigerated warehouse,
- o elevation, configuration, location, orientation, or weight of the proposed structure,
- o composition of the design team, or
- o project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes—even minor ones—and request an assessment of their impact. *Geotechnical engineers cannot accept responsibility or liability for problems that occur because their reports do not consider developments of which they were not informed.*

Subsurface Conditions Can Change

A geotechnical engineering report is based on conditions that existed at the time the study was performed. *Do not rely on a geotechnical engineering report* whose adequacy may have been affected by: the passage of time; by man-made events, such as construction on or adjacent to the site; or by natural events, such as floods, earthquakes, or groundwater fluctuations. *Always* contact the geotechnical engineer before applying the report to determine if it is still reliable. A minor amount of additional testing or analysis could prevent major problems.

Most Geotechnical Findings Are Professional Opinions

Site exploration identifies subsurface conditions *only* at those points where subsurface tests are conducted or samples are taken. Geotechnical engineers review field and laboratory data and then apply their professional judgment to render an *opinion* about subsurface conditions throughout the site. Actual subsurface conditions may differ—sometimes significantly—from those indicated in your report. Retaining the geotechnical engineer who developed your report to provide construction observation is the most effective method of managing the risks associated with unanticipated conditions.

Subject: Ultratech Stepper, Inc. Name Change

Mr. Randolph,

This letter is to inform you that Ultratech Stepper, Inc. has officially changed the company name to Ultratech, Inc. There is no change of ownership. Please re-issue our current operating permits to reflect our name change. The permits affected are:

3050 Zanker Road, San Jose, CA 95134
Permit #: H405736 Hazardous Materials Storage Permit
F405736 Occupancy Permit

2880 Junction Ave., San Jose, CA 95134
Permit #: H406689 Hazardous Materials Storage Permit
F406689 Occupancy Permit

If you have any questions regarding this matter please call Rich Morales at 408-577-3101 or 408-314-9377. Thank you for your assistance in this matter.

Sincerely,

Bruce R. Wright

Bruce Wright

SECTION III - Hazardous Materials Inventory Statement (HMIS)

Although the HMIS is a part of your Hazardous Materials Management Plan, it must be a separate document. This Section (Inventory Statement), when completed, will satisfy the HMIS requirement.

Part A - Declaration

1. Business Name: ULTRATECH STEPPER, INC.
2. Facility Address: 3050 Zanker Road, San Jose, CA 95134
3. Date: 11-5-93
4. Do you have underground tanks, sumps, vaults, below grade treatment systems, etc ☐ Yes ☒ No
5. Do you store any Carcinogens listed under Title 8, California Administrative Code? (If yes, attach a list of all carcinogens, the quantity range and a copy of the Carcinogen registration form for each). ☐ Yes ☒ No
6. Do you claim any hazardous materials to be trade secrets? (If yes, you must submit a declaration under penalty of perjury. You must also provide on this form the number of materials claimed to be trade secrets, their hazard class, and quantity range for each hazard class). Trade secret information must be submitted on a separate inventory form. ☐ Yes ☒ No

7. You must complete a separate inventory sheet for non-waste and waste hazardous materials that you handle at your facility in amounts equal to or greater than 500 pounds, 55 gallons, or 200 cubic feet of gas (calculated at standard temperature and pressure). You must also list each extremely hazardous substance handled in amounts greater than the federal threshold planning quantity (TPG) listed in the Code of Federal Regulations, or in amounts equal to or greater than 500 pounds, whichever is less. List all chemicals in alphabetical order by hazard class.

8. Declaration (must be signed by executive officer or his authorized representative):

Under penalty of perjury, I declare that the information provided as part of this hazardous materials inventory statement is true and correct.

Print Name: DAVE GHOSH Signature: [signature]

Regarding: Repipe of Two (2) Existing Solvent Pumping Systems

Scope of Work

1. The work can generally be described as removing the existing piping of two solvent piping systems: one at 3050 Zanker Road and the other at 2880 Junction Avenue, then repiping them with double-contained SS and test for City of San Jose.
2. The pumping systems are existing and in service. Therefore, the repiping, testing and inspection shall be strategically scheduled.

Re: City of San Jose Comments, 4/10/00

Jay,

We spoke to our contact at the San Jose Fire Department, Hazardous Materials Unit today. She has not yet seen the HMMP for 2880 Junction, and believes that these questions should have come to her from within the planning department.

She is familiar with Ultratech Stepper, and based on this knowledge and that 2880 will mirror this facility agrees that scrubbers are probably not necessary. However she needs to see the HMMP to finalize that statement.

We explained that we had a thruput analysis done on 3050 Zanker Road, the results are attached via a matrix. We are way below the requirements for scrubbers. She believes that this information should be submitted as part of their internal evaluation.

Summary: Please submit this additional information to Mr. David Altstadt. This should satisfy his questions regarding the need for scrubbers. He should also submit this to the Hazardous Materials division within the City of San Jose, during the sign off process of the HMMP.

Please let me know if you have any other questions.

Best Regards,

Cathi L. Marx

						Total (tons):	0.42	0.35	0.0017	0.0014	

Notes:

The wafer disks used to test the steppers are not manufactured at the facility. They are purchased as blanks from vendors or are brought to the facility by customers to conduct QC/QA on the steppers.

The ST-20 Photresist stripper and acetone are used to prepare previously used wafers for reuse. Use of these chemicals are done in closed loop systems. Waste is collected in sealed drums and sent off-site for disposal.

It is assumed that based on engineering estimates, the net usage/emissions are 10% of the total chemical use/throughput.

Positive developers primarily contain water and inorganic ingredients and do not contain POC or NPOCs.

BAAQMD Regulation 2-1-103 allows sources to be exempt from permitting if total emissions of POC or NPOC are below 10 pounds per day.

Daily emissions are based on 8 hours per day, 5 days per week, 50 weeks per year.

CHEMICAL USAGE FORECAST FOR NEW B-2:

Chemicals are purchased in 1 gallon size containers or smaller.

HAZARDOUS MATERIALS BUSINESS PLAN

Section A - General Information

For Use by All Jurisdictions Within the County of Santa Clara

1. Facility Information: *(Note: Print or type all information. Instructions are located on the other side of this page.)*

Business Name: **ULTRATECH STEPPER, INC. (B-2)** Business Phone: **(408) 321-8835**

Site Address: **2880 JUNCTION AVE.**

City: **SAN JOSE** State: **CA** Zip: **95134**

Dunn & Bradstreet No.: **10-211-0616** Primary SIC Code *(4 digit)*: **3559**

Operator Name: **ULTRATECH STEPPER** Operator Phone: **(408) 321-8835**

2. Business Owner Information:

Owner Name: **ULTRATECH STEPPER** Owner Phone: **(408) 321-8835**

Owner Mailing Address: **3050 ZANKER ROAD** If different from site address

City: **SAN JOSE** State: **CA** Zip: **95134**

3. Environmental Contact:

Contact Name: **CHERI ABLE** Contact Phone: **(408) 577-3101** ext. **or 321-8835**

Contact Mailing Address: **3050 ZANKER ROAD** If different from site address

City: **SAN JOSE** State: **CA** Zip: **95134**

4. Emergency Contacts:

Primary Emergency Coordinator	Secondary Emergency Coordinator
Name: **CATHI MARX**	Name: **CHERI ABLE**
Title: **COMPLIANCE MANAGER**	Title: **SR. HAZ. MAT./SAFETY COORDINATOR**
Business Phone: **(408) 325-6049** ext.	Business Phone: **(408) 577-3101** ext.
24 Hour Phone: **(408) 210-9338**	24 Hour Phone: **(408) 210-9937**
Pager No.: **(415) 201-7811**	Pager No.: **(408) 233-3017**

☐ *(Check box only if applicable)* Additional Emergency Coordinators are listed on page of this HMBP.

5. Acutely Hazardous Materials (AHMs):

Are AHMs Present On-Site? ☐ Yes; ☒ No *(Note: If yes, contact your local agency regarding an AHM Registration appendix to the HMBP.)*

6. Additional Required Information:

EPA ID No.: CAD000067991 Principal Type of Business: **R&D and OFFICE**

Billing Address: **SAME AS MAILING ADDRESS** If different from owner mailing address City: State: Zip:

Industrial Waste Discharge Contact: **CHERI ABLE** Phone No.: **(408) 577-3101** ext:

Property Owner: **MENLO EQUITIES** Phone No.: **(650) 326-9300**

Facility Hours of Operation: **12 HOURS 5 DAYS** No. of Employees Per Shift: Day: **150**; Swing **0** ; Grave **0**

7. OWNER/OPERATOR CERTIFICATION: I am an officer at the level of Vice-President, General Partner, Sole Proprietor, or higher. I hereby certify under penalty of law that this information was obtained in accordance with applicable requirements. Based upon my inquiry of those individuals responsible for obtaining the information reported herein, I believe that the submitted information is true, accurate, and complete.

Name of HMBP Document Preparer *(Print)*: **CHERI ABLE** Title: **HAZARDOUS MATERIALS COORDINATOR**

Signature of Owner/Operator: Bruce R. Wright Date: 3/14/00 Page 1 of

Message: Mike,

The only change since the 10/99 update is the general layout sheet which I faxed in January '00. I am faxing the general layout sheet now also. There will be several changes to the inventory in the next 2 months & I will update the HMMP in it's entirety & resend it at that time. Thanks for all your help. Cheri Able

Number of pages including cover sheet: 3

FACILITY INFORMATION
BUSINESS ACTIVITIES

I. FACILITY IDENTIFICATION

FACILITY ID #	1.	EPA ID # (Hazardous Waste Only)	2.
		CAR000067991	

BUSINESS NAME (Same as Facility Name or DBA - Doing Business As) 3.

Ultratech Stepper, Inc. 2880 Junction Ave., San Jose, CA 95134

II. ACTIVITIES DECLARATION

NOTE: If you check YES to any part of this list, please submit the Business Owner/Operator Identification page (OES Form 2730).

Does your facility...	If Yes, please complete these pages of the UPCF...	
A. HAZARDOUS MATERIALS		
Have on site (for any purpose) hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	☒ YES ☐ NO 4.	HAZARDOUS MATERIALS INVENTORY - CHEMICAL DESCRIPTION (OES 2731)
B. UNDERGROUND STORAGE TANKS (USTs)		
1. Own or operate underground storage tanks?	☐ YES ☒ NO 5.	UST FACILITY (Formerly SWRCB Form A) UST TANK (one page per tank) (Formerly Form B)
2. Intend to upgrade existing or install new USTs?	☐ YES ☒ NO 6.	UST FACILITY UST TANK (one per tank) UST INSTALLATION - CERTIFICATE OF COMPLIANCE (one page per tank) (Formerly Form C)
3. Need to report closing a UST?	☐ YES ☒ NO 7.	UST TANK (closure portion - one page per tank)
C. ABOVE GROUND PETROLEUM STORAGE TANKS (ASTs) Own or operate ASTs above these thresholds: ---any tank capacity is greater than 660 gallons, or ---the total capacity for the facility is greater than 1,320 gallons?	☐ YES ☒ NO 8.	NO FORM REQUIRED TO CUPAs
D. HAZARDOUS WASTE		
1. Generate hazardous waste?	☒ YES ☐ NO 9.	EPA ID NUMBER – provide at the top of this page
2. Recycle more than 100 kg/month of excluded or exempted recyclable materials (per H&SC §25143.2)?	☐ YES ☒ NO 10.	RECYCLABLE MATERIALS REPORT (one per recycler)
3. Treat hazardous waste on site?	☒ YES ☐ NO 11.	ONSITE HAZARDOUS WASTE TREATMENT - FACILITY (Formerly DTSC Forms 1772) ONSITE HAZARDOUS WASTE TREATMENT - UNIT (one page per unit) (Formerly DTSC Forms 1772 A,B,C,D and L)
4. Treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	☒ YES ☐ NO 12.	CERTIFICATION OF FINANCIAL ASSURANCE (Formerly DTSC Form 1232)
5. Consolidate hazardous waste generated at a remote site?	☐ YES ☒ NO 13.	REMOTE WASTE / CONSOLIDATION SITE ANNUAL NOTIFICATION (Formerly DTSC Form 1196)
6. Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned onsite?	☐ YES ☒ NO 14.	HAZARDOUS WASTE TANK CLOSURE CERTIFICATION (Formerly DTSC Form 1249)

E. LOCAL REQUIREMENTS (You may also be required to provide additional information by your CUPA or local agency.) 15.

NOTE:

- Prior to the commencement of work on any hazardous materials storage system in the City of San Jose, plans must be approved by the Fire Marshal.
- A final inspection approving the project must be conducted before the system may be placed into service, or considered closed.
- Call the Hazardous Materials Division at least 48 hours in advance to schedule an inspection.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct and that, to the best of my knowledge, the license(s) listed above are those required for the work to be performed and are in full force and effect, or if exempt, that the exemptions meets the requirements of the Contractor's State License Law as contained in the Business and Professions Code, Division 3, Chapter 9. If there is any change which would materially affect the above information or plans submitted, I will notify the Bureau of Fire Prevention.

HAZARDOUS MATERIAL PLAN CHECK (Page 1)

Date: Sept 29, 1999

Installation/Removal Location:	2840 Junction Ave.
Facility Name:	Lifeguard Healthcare
Plan Date:	9/15/99
Installation/Removal Contractor:	Wittmers Electric Inc.
Type of Work/Construction:	Aboveground Tank Installation (1)

The aboveground storage/dispensing tank installation plans have been reviewed, and the following conditions apply to this project:

TANK CONSTRUCTION STANDARDS:

- Piping, valves, fittings and related components intended for use with flammable and combustible liquids shall be designed and fabricated from suitable materials having adequate strength and durability to withstand the pressures, structural stresses and exposures to which they can be subjected. Such equipment shall be in accordance with nationally recognized engineering standards, be listed for the application or approved by the Chief. (1999 SJFC 7901.11.1.1) 12/16/99

- The aboveground tank shall be seismically braced in accordance with the San Jose Building Code, Chapter 17.04. A copy of the Building Department's approval shall be provided to the inspector during the installation inspection. (1999 SJFC Sections 7902.1.10, 7902.1.14.5) 12/16/99

- The design, fabrication and construction of tanks shall be in accordance with recognized good engineering practice and nationally recognized standards. Each tank shall bear a permanent nameplate or marking indicating the standard used as the basis of design, fabrication and construction. (1999 SJFC Section 7902.1.8.2.1) 12/16/99

TANK/PIPING TESTING:

- Primary and secondary tanks shall pass either a pressure leak test or a hydrostatic test. The tank shall be pneumatically tested to 110 percent of the maximum anticipated pressure of the system or hydrostatically tested to 150 percent of the maximum anticipated pressure, but not less than 3 psig or the maximum rated pressure of the tank. Secondary tanks shall be pneumatically tested to 110 percent of maximum anticipated pressure of the system, but not less than 5 psig or the maximum rated pressure of the tank. The secondary tank may be tested hydrostatically by conducting a 24-hour standing water test. This testing shall be witnessed by the San Jose Fire Department prior to being placed into service. (SJFD Policy, 1999 SJFC Section 7902.1.8.2.5) 12/16/99

San Jose, CA 95113-1305

HAZARDOUS MATERIAL PLAN CHECK (page 2)

- Piping, before being placed in use, shall be hydrostatically tested to 150 percent of the maximum anticipated pressure of the system, or pneumatically tested to 110 percent of the maximum anticipated pressure of the system, but not less than 5 psig. The test shall be maintained for a sufficient time period to complete visual inspection of all joints and connections. For a minimum of 30 minutes, there shall not be leakage or permanent distortion. (1999 SJFC 7901.11.10)

12/16/99

LOCATION OF TANK:

12/16/99

- The area surrounding an outdoor storage area or tank shall be kept clear of combustible materials and vegetation for a minimum distance of 30 feet. (1999 SJFC Section 8003.1.12)

- Aboveground tanks operating at pressures not exceeding 2.5 psig for storage of Class I, II, or III-A liquids, equipped with emergency venting devices limiting pressures to 2.5 psig, shall be located in accordance with Table 7902.2-F. (Attached) (1999 SJFC Section 7902.2.2.2)

12/16/99

- Guard post must be installed in accordance with 1999 SJFC Section 8001.11.3 to provide for vehicle protection. (1999 SJFC Section 7901.11.2)

MONITORING:

12/16/99

- The secondary containment shall be continuously monitored or shall be visually inspected not less than monthly. When monitoring devices are provided, they shall be directed to distinct visual and audible alarms. (1999 SJFC Section 7901.13, UN-018)

12/16/99

- If a continuous leak detection device is used, the device shall be tested annually. The test results shall be readily available upon request. (SJFD Policy)

TANK VENTING

12/16/99

- Atmospheric tanks shall not exceed operating pressures of 1 psig and shall not exceed 2.5 psig under emergency venting conditions. (1999 SJFC Section 7902.1.8.2.3)

12/16/99

- Vent pipe outlets for tanks storing Class I, II, or III-A liquids shall be located such that the vapors are released at a safe point outside of buildings and not less than 12 feet above the adjacent ground level. Vapors shall be discharged upward or horizontally away from closely adjacent walls to assist in vapor dispersion. Vent outlets shall be located such that flammable vapors will not be trapped by eaves or other obstructions and shall be at least 5 feet from building openings or property lines of properties that can be built on. (1999 SJFC Section 7902.1.11.4)

DRAFT

HazMat Log No.: P-4023 File No.: New 432640 Permit No.:09-16-99

San Jose Hazardous Materials Program

San Jose, CA 95113-1305

HAZARDOUS MATERIAL PLAN CHECK (page 3)

- Aboveground tanks shall be equipped with adequate additional venting that will relieve excessive internal pressure caused by exposure to fire. (1999 SJFC Sections 7902.2.6.1, 7902.2.6.2)

12/16/99 ✓

- The total venting capacity of both normal and emergency vents shall be enough to prevent rupture of the shell or bottom of tank. The total capacity of both normal and emergency venting devices shall be less than derived from Table 7902.2-H (Attached) (1999 SJFC Section 7902.2.6.3.1)

12/16/99 ✓

- The tank's emergency vent shall be labeled to indicate its maximum flow capacity. (1999 SJFC Section 7902.2.6.4.1)

12/16/99 ✓

TANK OPENINGS AND PIPING CONNECTIONS:

- Connections to an aboveground tank located below the normal liquid level shall be provided with internal control valves located as close as practical to the shell of the tank. Except for liquid whose chemical characteristics are incompatible with steel, such valves, when external, and their connects to the tank shall be of steel. (1999 SJFC Section 7901.11.5)

N/A

- Top loaded tanks with metallic fill pipes shall be designed and installed to minimize the generation of static electricity by terminating the pipe within 6 inches of the bottom of the tank and shall be installed to avoid excessive vibration. Filling and withdrawal connections which are made and broken shall be located outside of buildings away from sources of ignition and not less than 5 feet away from building openings. Such connections for any liquid shall be closed, liquid tight when not in use and identified. (1999 SJFC Section 7902.2.7.2)

EMERGENCY/SAFETY DEVICES

- Portable fire extinguishers shall be provided in accordance with UFC Standard 10-1 and as otherwise required in Article 79. (1999 SJFC Section 7901.5.3)

12/16/99 ✓

MARKINGS/LABELING:

- The tank must be labeled in accordance with the Uniform Marking Guidelines (UN-016) identifying the material therein and providing vital information for safety and emergency situations (Section 7). (1999 SJFC Section 7901.9.1)

HAZARDOUS MATERIAL PLAN CHECK (page 4)

C - Signs shall be posted in storage areas prohibiting open flames, no dispensing into unapproved containers, stop motor and no smoking. (1999 SJFC Section 7902.1.3.1, 5201.8)

C - Tanks over 100 gallons capacity shall bear a label in accordance with the NFPA 704 Placarding system. (1999 SJFC Section 7902.1.3.2)

GENERAL REQUIREMENTS:

C - Persons responsible for the operation of areas where hazardous materials are stored or dispensed shall be familiar with the chemical nature of the materials and the appropriate mitigating actions necessary in the event of fire, leak or spill. (1999 SJFC Section 8001.11.1.1)

C - The storage and dispensing area shall be secured against unauthorized entry and safeguarded with such protective facilities as public safety requires. (1999 SJFC Section 8001.11.2)

12/16/99 - Upon completion of the installation and prior to placing any hazardous materials into the tank, a completed Hazardous Materials Management Plan and Hazardous Materials Inventory Statement must be submitted to the Fire Department. (1999 SJFC Sections 8001.3.2, 8001.3.3)

- This permit and a copy of this plan check shall be kept on the premises and shall be posted in a conspicuous location or in a location approved by the chief. (1999 SJFC Section
- 105.5)

- Contact the Inspector identified below at least 48 hours in advance to schedule an installation/ pressure test inspection.

- A final inspection and sign-off must be obtained prior to placing hazardous materials into the storage system.

If you have any questions regarding this project, please contact Inspector Richard Bryson at (408) 277-8746.

HAZARDOUS MATERIAL PLAN CHECK

Date: October 13. 1999

Installation Location:	2840 Junction Ave.
Facility Name:	Lifeguard
Plan Date:	September 20, 1999
Architect:	APH Design
Type of Project:	New Construction

Based upon the information provided this is an outdoor installation and would have no effect on the building classification.
The plans submitted have been reviewed and approved.

- A Hazardous Materials Installation Permit for the aboveground storage system has been obtained.
- Provide a Hazardous Materials Business Plan prior to introduction of fuel into tanks.

Note: These comments are for the Hazardous Material Division of the San Jose Fire Department. There may be additional requirements from other Fire and Building Departments regarding this project.

If you have any questions regarding this project, please contact Inspector Richard A Bryson at (408) 277-8746. (Richard Bryson)

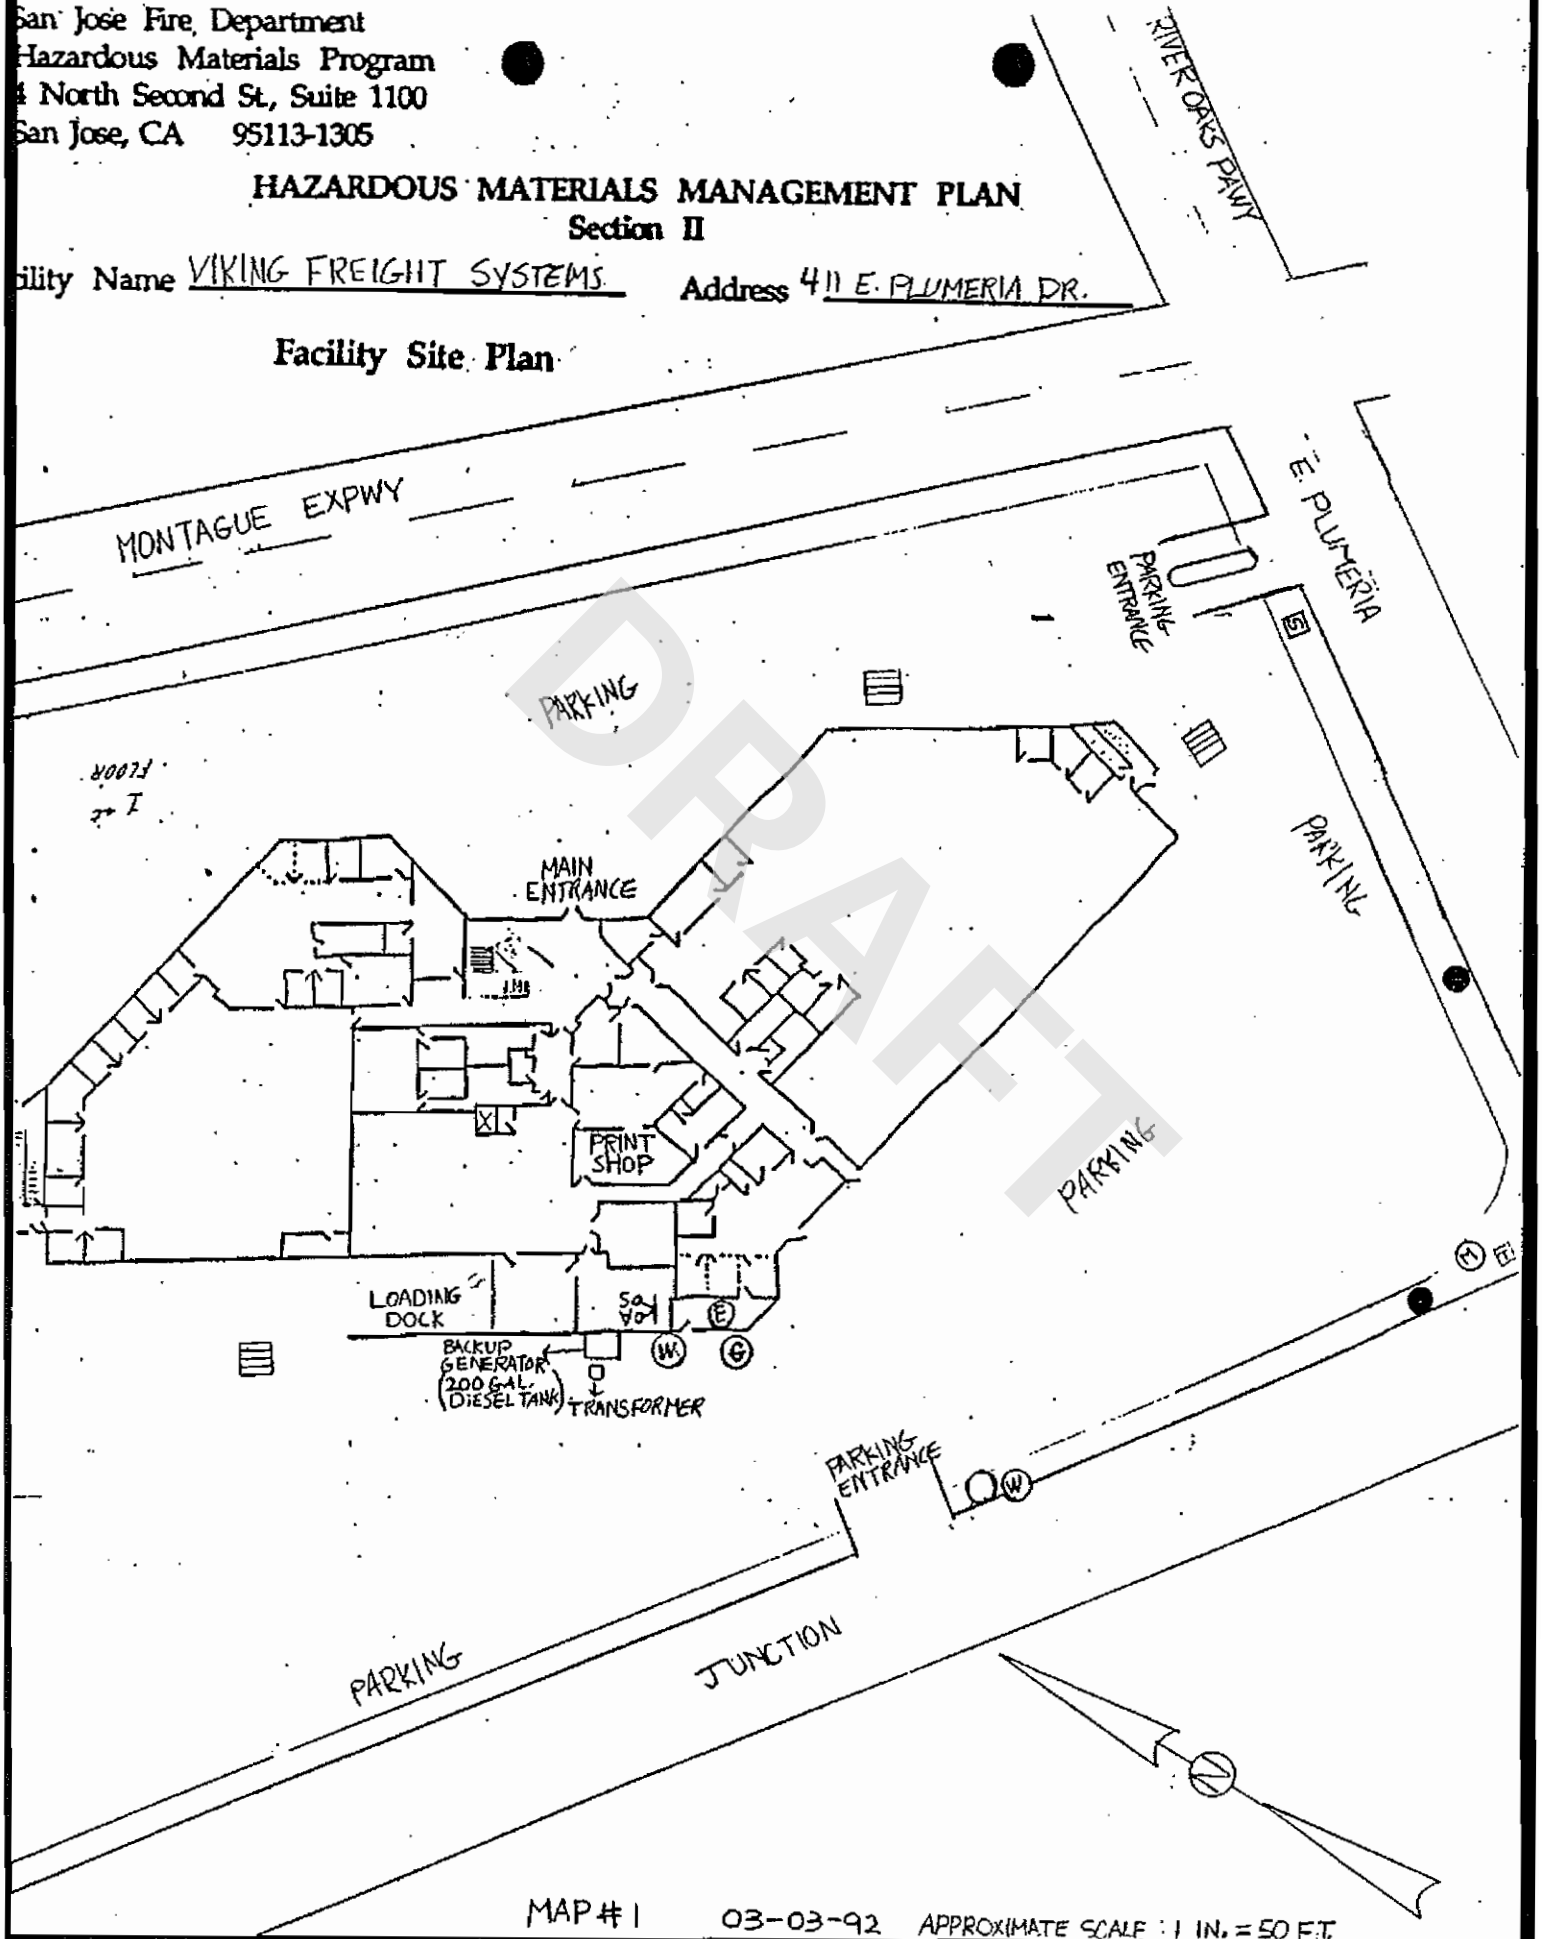
Facility Site Plan



DRAFT

MAP #1 03-03-92 APPROXIMATE SCALE : 1 IN. = 50 F.T.

SECTION III - Hazardous Materials Inventory Statement (HMIS)

Although the HMIS is a part of your Hazardous Materials Management Plan, it must be a separate document. This Section (Inventory Statement), when completed, will satisfy the HMIS requirement.

Part A - Declaration

1. Business Name: Vikins Freight System
2. Facility Address: 411 East Plumeria Dr. S.J. 95134
3. Date: 03-03-92
4. Do you have underground tanks, sumps, vaults, below grade treatment systems, etc ☐ Yes ☒ No
5. Do you store any Carcinogens listed under Title 8, California Administrative Code? (If yes, attach a list of all carcinogens, the quantity range and a copy of the Carcinogen registration form for each). ☐ Yes ☒ No
6. Do you claim any hazardous materials to be trade secrets? (If yes, you must submit a declaration under penalty of perjury. You must also provide on this form the number of materials claimed to be trade secrets, their hazard class, and quantity range for each hazard class). Trade secret information must be submitted on a separate inventory form. ☐ Yes ☒ No

7. You must complete a separate inventory sheet for non-waste and waste hazardous materials that you handle at your facility in amounts equal to or greater than 500 pounds, 55 gallons, or 200 cubic feet of gas (calculated at standard temperature and pressure). You must also list each extremely hazardous substance handled in amounts greater than the federal threshold planning quantity (TPG) listed in the Code of Federal Regulations, or in amounts equal to or greater than 500 pounds, whichever is less. List all chemicals in alphabetical order by hazard class.

8. Declaration (must be signed by executive officer or his authorized representative):

Under penalty of perjury, I declare that the information provided as part of this hazardous materials inventory statement is true and correct.

Emergency Response Training

All Personnel
All employees are trained in the following procedures:
__X__ Internal/alarm notification.
____ External emergency response organization notification.
____ Locations and content of emergency response plan.
____ Evacuation procedures.
____ Spill procedures.

Chemical Handlers none
Chemical handlers are additionally trained in the following:
____ Safe method for handling and storage of hazardous materials.
____ Proper use of personal protection equipment.
____ Locations and proper use of fire and spill control equipment.
____ Specific hazards of each chemical to which they may be exposed, including the pathways of exposure (i.e. skin absorption, inhalation, ingestion).

Emergency Response Team none
Emergency response team members are additionally trained in the following procedures and will act as liaison to the Fire Department:
____ Personnel rescue procedures.
____ Shutdown of operations.
____ Use, maintenance, and replacement of emergency response equipment.
____ Emergency response drills, which are held _____ (frequency).
____ Refresher training is provided at least annually.

Emergency Response Documents none
The following training records are maintained for each employee:
____ Verification of date that training was completed.
____ Description of introductory and continuing training.
____ Employee's training records are retained at least three years.
____ Description and documentation of facility emergency response drills.

Your Emergency Response Training Plan and training records must be on site and available for review by the Fire Department.

HAZARDOUS MATERIALS MANAGEMENT P[illegible]
SHORT FORM

INSTRUCTIONS: WHO SHOULD USE THE SHORT FORM?

You may use the Short Form HMMP if you store total amounts of hazardous materials that do not exceed any of the following: 500 pounds of solids; 55 gallons of liquids; 200 cubic feet of compressed gases at standard temperature and pressure. After review, the City may require a Long Form HMMP due to complex circumstances.

1. Address 411 E. Plumeria Dr. #185 Phone 9222183
2. Name of Business Viking Freight, Inc.
3. Owner, Responsible Employee " Viking Freight "
4. Type of Business Corporate offices

5. Two people that could respond in an emergency when the facility is closed (weekends, holidays, etc.) Business open 24 hours/day 7 days per week

	NAME	ADDRESS	PHONE NUMBER
A.	Scot Bishop	411 E. Plumeria Dr. #185	1-800-Vikings
B.	Bruce Campisi	" " " " "	1-800-Vikings

6. Describe how the hazardous material will be:
   A. Stored (such as factory container, 55-gallon drum, underground tank)
   (1) 300 gal. above ground diesel fuel Tank for emergency power generator.
   B. Secondarily Contained (such as concrete pad, metal cabinet, soil)
   Tank is a double walled, skid mounted, closed top, self Contained Tank: 100% Vol. Containment in secondary shell.
   C. Monitored (how you are able to detect a leak)
   System, both Tank and piping will be checked weekly by Visual inspection

7. After the hazardous materials have been used, how is the spent material or waste handled and disposed of? No disposal. Diesel is burned as emergency fuel only.

8. Write below or attach a list of the names, hazard classes, and quantities of each chemical.

Examples of Chemical and Hazard Classes include:

- o Flammable/Combustible Liquids (FL/CL): Gasoline, Diesel, Cleaning Solvents, Paint, Thinner, Waste Oil
- o Corrosives: Hydrochloric Acid, Sodium Hydroxide Hot Tank
- o Gases: Acetylene, Hydrogen
- o Oxidizers: Hydrogen Peroxide, Ammonium Nitrate
- o Other Regulated Materials: Anti-Freeze

RE: FINANCIAL ASSURANCE ANNUAL CERTIFICATION

Dear Sir or Madam:

This information package is provided by your Certified Unified Program Agency (CUPA), the County of Santa Clara, Department of Environmental Health. The intent is to help facilitate your Annual Certification for Financial Assurance which is required for the operation of an onsite fixed treatment unit under Conditional Authorization (CA).

The required Unified Program Consolidated Forms (UPCF) pertaining to your onsite treatment unit(s) have been submitted by your facility. **You are requested to submit the (UPCF) form "Certificate of Financial Assurance" with signature to our office by May 15, 2005:**

The requested UPCF form is enclosed in this package. If changes related to your onsite treatment unit(s) occurred last year, in addition to the above noted form, please submit the UPCF forms to reflect those changes. Templates for all UPCF forms are available on the following website: www.unidocs.org.

As a reminder, facilities are required to adjust their closure cost estimates for inflation by March 1st of each year. It is advisable that you use last year's inflation factor of 1.016 per cent since the Bureau of Economic Affairs doesn't publish the Implicit Price Deflator for the last quarter of year 2004 until April of 2005.

You are requested to submit a copy of your updated closure cost estimate to this office only if you previously self certified that the closure cost was less than $10,000.00 and now, due to updating, it exceeds that amount. In addition, all facilities that claim salvage value for resale of equipment under the closure cost estimate, please send documentation supporting the true market value of the salvage/reclaimed equipment.

DRAFT

Board of Supervisors: Donald F. Gage, Blanca Alvarado, Pete McHugh, James T. Beall, Jr., Liz Kniss
County Executive: Peter Kutras, Jr.

After updating your closure cost estimate, we recommend that you evaluate the financial mechanism and verify that it is adequate to cover the current closure cost estimate. For facilities that have filed under the mechanism of Financial Test and Corporate Guarantee, in order to maintain eligibility for this closure assurance mechanism, annual updated information must be submitted to this department within ninety days of the close of the firm's fiscal year.

Do not send an annual notification fee with this renewal form. You will be receiving an invoice either from our Department or from your local fire department for the annual permit to operate your treatment unit(s).

Once you have completed and submitted the Certificate of Financial Assurance Form, you will have complied with the 2005 annual certification requirements as noted in the California Code of Regulations, Title 22, Section 67450.13.

If you have any questions regarding this letter, please contact Ruben Williams at (408) (408) 918-1985.

Sincerely,

Nicole Pullman

DRAFT

Dear Ms. Pullman,

Early this year a similar request was made by the Santa Clara County, Environmental Resources Agency, Department of Environmental Health, Hazardous Materials Compliance Division.

1) Enclosed is a copy of a current closure cost estimate made by Romic Environmental and the Certification of Financial Assurance form you requested. I hope you will find these meet your requirements.

2) Please update you information for the name of our company, Ultratech Stepper no longer exists, and the contact person, Cheri Able no longer works at Ultratech, Inc.

   A copy of your letter with these changes is also attached.

If you have any questions or comments please contact me.

Sincerely,

Charles Wurm, MS, CHMM, REA

Attn: Charles Wurm

Dear Mr. Wurm,

DRAFT

Thank you for the time you gave ROMIC Environmental Technologies and I during our meeting. We know that you will be extremely satisfied with the quality service that we have been providing to our customers for over 39 years. We have various processes for recycling/disposal which include LABPACKING & FIELD SERVICES, RECYCLING & WATER TREATMENT, NEUTRALIZATION, ALTERNATIVE FUELS & LIQUEFACTION RECYCLING and THERMAL TREATMENT by incineration. This letter will confirm the various capabilities of ROMIC Environmental.

During our meeting we discussed the closure of your Wastewater treatment system located at two of your San Jose, CA. facilities. Please review the brief scope of work and pricing:

SCOPE OF WORK

Romic will mobilize personnel to decommission the wastewater treatment system(s) located at the two adjacent facilities in the San Jose, CA. A tailgate safety meeting will take place to review the potential hazards. The unit(s) will be "isolated" from any electrical source prior to arrival, this is be performed by Ultra Tech. The associated piping will be flushed, cut and capped to the tanks. All appropriate field pH testing will be conducted during these activities. The tanks will be decontaminated and cut in place with the debris disposed of as Hazardous waste. The secondary containment will be decontaminated with field pH tested conducted. The waste generated (spent PPE, rags, etc.) from cleaning activities will be labeled, contained and manifested to Romic.

Estimate for Decontamination
Labor, Equipment and Materials
(Includes Disposal)

$18,200.00 / $9100.00 EA
FOR 2 SYSTEMS
1 EA B1 & B2

IN THE EVENT ANY BALANCE IS NOT PAID NET 30 DAYS FROM INVOICE DATE, A 1½% FINANCE CHARGE WILL BE ASSESSED.

Contingencies:

- Others will disconnect electrical source. The unistrut/supports will be left in place.
- The secondary containment will be left in place after pH Testing is verified.
- Water source will be made available on site.
- The transportation and disposal of waste is included.
- Based on weekday work, straight time.

The above pricing outlines the transportation, documentation and disposal/recycling. We look forward to the opportunity to establishing a long-term relationship with Ultra Tech and we hope this information will facilitate us getting started. If you have any questions please contact me at **800-335-1638 (Ext. #2422)**.

Best Regards,

Kurt Soto-Gambini
Industrial Services Manager

Project estimate accepted by:

Bruce R. Wright
Charles Wurm or Authorized Agent

PO#_____ DATE: March 7, 2005

Terms: Net ~~30~~ 60 BRCW days UAC
Prices are firm for 30 days and may be subject to change with a 30 day notice.
Any incoming waste stream which is different than the profile analytical may be subject to the associated charges. Pricing will be based on the status of the waste received.

RE: FINANCIAL ASSURANCE ANNUAL CERTIFICATION

Dear Sir or Madam:

This letter is provided by your Certified Unified Program Agency (CUPA), the County of Santa Clara, Department of Environmental Health. The intent is to help facilitate your Annual Certification for Financial Assurance which is required for the operation of an onsite fixed treatment unit under Conditional Authorization (CA).

The required Unified Program Consolidated Forms (UPCF) pertaining to your onsite treatment unit(s) have been submitted by your facility. **You are requested to submit the (UPCF) form "Certificate of Financial Assurance" with signature to our office by May 31, 2007.**

If changes related to your onsite treatment unit(s) occurred last year, in addition to the above noted form, please submit the UPCF forms to reflect those changes. Templates for all UPCF forms are available on the following website: www.EHinfo.org.

As a reminder, facilities are required to adjust their closure cost estimates for inflation by March 1st of each year. It is advisable that you use last year's inflation factor of 1.029 per cent since the Bureau of Economic Affairs doesn't publish the Implicit Price Deflator for the last quarter of year 2006 until April of 2007.

You are requested to submit a copy of your updated closure cost estimate to this office only if you previously self certified that the closure cost was less than $10,000.00 and now, due to updating, it exceeds that amount. In addition, all facilities that claim salvage value for resale of equipment under the closure cost estimate, please send documentation supporting the true market value of the salvage/reclaimed equipment.

I.T. CORPORATION SAN JOSE TRANSFER FACILITY
3010 Zanker Road
San Jose, California

EPA ID No. CAD 000 633 115

DRAFT

Inspected by: Luz T. Castillo
Date of Inspection: November 15, 1988
Date of Report: January 13, 1989

I. PURPOSE:

RCRA Non- Major Interim Status TSD Facility and Land Ban Generator Inspection.

II. REPRESENTATIVES PRESENT:

I.T. Corporation, 1680 Rogers Ave., San Jose:

Bill Smyser, Facility Manager
Joe Sparrow, Shopkeeper

DHS/TSCD/ Region 2:

Luz T. Castillo, Waste Management Engineer

III. OWNER/OPERATOR:

I.T. Corporation San Jose Transfer Facility (I.T. San Jose) is owned and was operated by I.T. Corporation. The property is owned by the City of San Jose. A revised closure plan has been submitted to the Department's Permitting Unit for review. The Department's contact person regarding the closure process is Chari Madabushi and for the facility is Kate Jackson, Environmental Affairs Special Projects Manager, I.T. Corporation.

IV. BACKGROUND:

I.T. San Jose was issued an Interim Status Document (ISD) on March 30, 1981. According to the files at the Toxic Substances Control Division, Region 2, the first ISD inspection was on October 22, 1981 and thirteen ISD violations were found. Since 1981, ISD inspections have been conducted yearly until November 21, 1986.

During an inspection on March 1, 1983 the facility was found to be completely flooded due to levee failures on the Coyote Creek and large releases from the controlling reservoir due to the excessive rainfall. Another inspection on March 4, 1983 noted seventy-eight 55-gallon drums containing acids, caustics, flammables and oxidizers that were all stored in a trailer.

During the November 21, 1986 inspection it was noted that the eight hazardous waste tanks used for storage of bulk wastes had been removed from the facility. The eight storage tanks were removed in early 1986. This removal was approved by the Permitting Unit utilizing the April 29, 1983 closure plan. As a result of the November 1986 inspection, a Report of Violation (ROV) dated January 6, 1988 was sent to the facility which indicated their failure to keep a copy of the training plan for employees who handle hazardous wastes. The ROV also included a Schedule of Correction for the violation noted. A letter on March 16, 1988 stated that I.T. Corporation had completed the required correction noted in the ROV and that all records at the inactive facility at 3010 Zanker Road would be kept at 1680 Rogers Ave., San Jose until the facility is certified closed by the Department. I.T. Corporation also agreed to inspect the inactive facility perimeter fence, hazardous waste warning signs and the security locks once a week.

V. GENERAL DESCRIPTION OF FACILITY:

The I.T. San Jose Transfer facility consists of approximately 1.8 acres of land. The property on which the facility is located is owned by the City of San Jose. The business started in 1974 as a joint operation by Industrial Tank, Inc. and Oscar Erickson, Inc. for an industrial waste transfer facility. In 1978, the rights and interest in the transfer facility operation were transferred to Industrial Environmental Services, Inc., which is I.T. Corporation San Jose Transfer facility. The operation was a transportation yard with a collection and transfer area for containerized and bulk hazardous waste. At the time of this inspection all the hazardous waste drums and tanks had been removed from the area. The only tank remaining on-site was the 6,000-gallon water tank (not a hazardous waste tank).

VI. HAZARDOUS WASTE ACTIVITY DESCRIPTION:

(See Attachment D, for reference)

DRAFT

Bulk Hazardous Waste Storage (Inactive)

Bulk hazardous wastes from tank trucks were stored in the facility's eight aboveground tanks. Tanks 1 through 6 were horizontal tanks with a design capacity of 6,500 gallons each, while tanks 7 and 8 were vertical tanks designed to hold 7,000-gallons each. Tanks 1 through 4 were used for storing chlorinated and non-chlorinated solvents, and tanks 7 & 8 for reclaimed oil and acid respectively. All of the eight tanks were decontaminated and removed in 1986.

Containerized Hazardous Waste Storage (Inactive)

Containerized wastes received were identified, stored in drums and separated by waste type such as flammables, caustics, oxidizers, poisons and acids.

When sufficient quantities were accumulated, the hazardous wastes were transported to a final treatment or disposal facility.

VI. VIOLATIONS:

1.a. Title 22, California Code of Regulations (Cal. Code Regs.), Section 66492(a):

I.T. San Jose violated Title 22, Cal. Code Regs. Section 66492(a), in that on or about November 15,1988, a copy of manifest #87075226 for waste shipped off-site in December 1987 was not available for review.

b. Title 22, Cal. Code Regs. Section 66492(b):

I.T.San Jose violated Title 22, Cal. Code Regs. Section 66492(b), in that on or about November 15, 1988 I.T. San Jose did not retain a copy of the 1987 Biennial Report. I.T. Corporation agreed to keep facility records of the I.T. San Jose facility at 1680 Rogers Ave. as per March 16, 1988 letter (Attachment H).

2. Title 22, Cal. Code Regs. Section 66484(g):

I.T. San Jose violated Title 22, Cal. Code Regs. Section 66484(g), in that on or about November 15, 1988, the facility did not submit an Exception Report when the TSD copy of manifest #87088099 was not received. A copy of manifest #87088099 is on Attachment F. A print-out from the Hazardous Waste Information System (HWIS) as shown on Attachment G, also indicates that a copy of manifest #87088099 has not been submitted to the Department by the receiving TSD.

DRAFT

3. Title 22, Cal. Code Regs. Section 67105(e); Health and Safety Code (H&SC) Section 25202; ISD Part III.6(e):

I.T. San Jose violated Title 22, Cal. Code Regs. Section 67105(e); H&SC Section 25202 and ISD Part III.6(e), in that on or about November 15, 1988, the facility did not keep copies of training records of former employees. I.T. San Jose agreed to keep the inactive facility's records at 1680 Rogers Ave. per March 16, 1988 letter (Attachment H). Bill Smyser had record of employees from the inactive facility that transferred to the 1680 Rogers Ave. office but not other former employees. Mr. Smyser stated that all of the employees records are kept at the Wilmington office.

4. Title 22, Cal. Code Regs. Section 67164:

I.T. San Jose violated Title 22, Cal. Code Regs. Section 67164, in that on or about November 15, 1988, the facility did not have copies of the 1986 and 1987 Facility Annual Reports. I.T. Corporation agreed to keep all records of the inactive facility (I.T. San Jose) at 1680 Rogers Ave. per March 16, 1988 letter (Attachment H).

5. Title 22, Cal. Code Regs. Section 67104(d); H&SC Section 25202; ISD Part III.5.d:

I.T. San Jose violated Title 22, Cal. Code Regs. Section 67104(d); H&SC Section 25202; ISD Part III.5.d., in that on or about November 15, 1988, the facility did not have inspection records for January and February 1988 available for review.

<u>LAND BAN VIOLATION</u>:

1. Health and Safety Code (H&SC) Section 25159.5(a), Title 40, Code of Federal Regulations (CFR), 268.7(a)(1):

I.T. San Jose violated Title 40, CFR 268.7(a)(1), in that on or about July 10, 1987, the facility shipped off-site 2,100 gallons of restricted wastes (manifest #87088099, Attachment F) without notifying the treatment facility in writing of the appropriate treatment standards as specified on Part 268, Subpart D.

DRAFT

VIII. OBSERVATIONS:

(For reference, the photographs are on Attachment E)

I met with Joe Sparrow upon arrival at 1680 Rogers Ave., San Jose. The records of the inactive facility are kept at this location according to an agreement by the Department and I.T. Corporation per March 16, 1988 letter (Attachment H). The following documents were reviewed: hazardous waste manifests from January 1987 to July 1987; daily inspection logs until December 1987; weekly inspection logs for the perimeter fence, hazardous warning signs and security locks from March 1988 to November 9, 1988. The following records were not reviewed: 1986 and 1987 Facility Annual Reports, Annual Reports to the Board of Equalization, inspection logs for January and February 1988 and a manifest for the shipment of waste in December 1987. Joe Sparrow stated that all logs and manifests are kept on the shelf but was not sure where the missing documents were. Regarding the other documents, he said that Bill Smyser should be the person to ask.

After reviewing the documents, I went to the inactive facility located at 3010 Zanker Road. Joe Sparrow and I stopped by the Water Pollution Control Plant and he asked somebody to unlock the gate in order for us to have access to the inactive facility gate. The area surrounding the inactive facility has been fenced by the City of San Jose. Upon entering the facility, I inspected the tank and container areas, took photos and the following were observed: all the tanks and containers have been removed except the 6,000-gallon water tank (Photo. No. 12); the soil underneath the diesel tank had a dark brown color and a noticeable hydrocarbon odor (Photo. No. 1); there were cracks on the flammable pad and the caustic oxidizer and poison pad (Photo. Nos. 2 & 3); there were large cracks and brown discolorations on the acid pad (Photo. No. 4); the fume scrubber pad had blue green discolorations (Photo. No. 5); the pad for the vertical tanks had bluegreen and brown stains (Photo. No. 6); the drum storage pads had brown stains and large cracks (Photo. No. 7 & 8); a pool of water had a yellowish brown discoloration at the bottom (Photo. No. 9); there were dark gray discolorations on the soil near the northwest corner of the facility (Photo. No. 10). I also observed that three fire extinguishers and three eyewashes/ showers are in the facility. The facility perimeter fence had hazardous warning signs posted and the gates had security locks (Photo. Nos. 11 & 12).

IX. SAMPLING SUMMARY:

No samples were taken.

X. DISCUSSION WITH MANAGEMENT:

I met with Bill Smyser in the afternoon and discussed the inspection and document review conducted in the morning. I informed him that copies of the 1986 and 1987 Facility Annual Reports, Annual report to the Board of Equalization and training records of former employees at the 3010 Zanker Road facility were not available for review. He showed me the training records of employees from the inactive facility that are currently working at the 1680 Rogers Ave. office. He said that the training records of other employees are kept at the Wilmington office and he gave me the contact person's name regarding training records. Regarding the 1986 and 1987 Facility Annual Reports and the Board of Equalization Annual Report, he said that the person that was previously in charge left the company and that he would look for these documents in a room where all the files of the inactive facility are kept. I also told B. Smyser about a December 1987 manifest that was not in their manifest file and failure of I.T. San Jose to submit a notification to the treatment facility during shipment of land restricted waste. He said that their new facility is different now because all they do is perform environmental services wherein they go to facilities that need to have their tanks cleaned.

I informed B. Smyser that I would be sending him a Report of Violation regarding the results of the inspection conducted at the inactive facility.

XI. ATTACHMENTS:

1. Attachment A - Hazardous Waste Generator Checklist (14 pgs.)

7. Attachment I - FRU Evaluation

SITE SCREENING FORM

Site Name: IT-San Jose Transfer Facility
Site Location: 3010 Zanker Road, San Jose, Santa Clara County
Calsite Identification 43360127 (if applicable)

Site Summary:

The former San Jose Transfer facility was set up to consolidate hazardous wastes for shipment to regulated disposal sites. Since the early 1970s the City of San Jose has owned the site. In January 1974 the City of San Jose entered into an agreement with Industrial Tank, Inc. and Oscar E. Erickson Inc. for the construction and operation of an industrial waste transfer facility. In April 1978 the transfer facility operation was assigned to Industrial Tank Environmental Services, the predecessor of IT. The transfer facility was on approximately 1.8 acre of land and consisted of 14 concrete storage areas for storing drums and above-ground tanks. The types of wastes that were received at the site were flammable liquids and solids, caustic compounds, oxidizing chemicals, acids, poisons and other regulated materials.

In 1986 the tanks and containers were cleaned and removed. In 1987 IT ceased its operations. The Department of Health Services (DHS), predecessor to Department of Toxic Substances Control (DTSC), was the lead agency that oversaw all closure activities at the site. In September 1990 soil and groundwater samples were taken and analyzed according to an approved Closure Plan. Soil sample results indicated heavy metals and chlorinated hydrocarbons. Groundwater results indicated heavy metals and total xylenes. Chemicals of concern in groundwater were nickel (0.14 ppm) and total xylenes (7.0 ppm). Heavy metals of concern in soil were cadmium (65 ppm), chromium (960 ppm), lead (930 ppm) and mercury (9.9 ppm). Chlorinated hydrocarbons of concern in soil were 1,1,1-trichloroethane (0.008 ppm), trichloroethene (0.200 ppm), and tetrachloroethene (0.75 ppm). The November 1989 closure plan indicated that the site would be considered clean if the confirmation samples were less than background plus two standard deviations. The site was cleaned closed by excavating, removing, and disposing off-site 54 cubic yard of hazardous soil and 1,830 cubic yard of non-hazardous soil. DTSC acknowledged that the hazardous waste storage facility was closed and approved the certifications of closure on December 10, 1991 (No closure report is available in the file). The site is now a commercial area occupied by office buildings.

Mr. Chari Madabhushi
California Environmental Protection Agency
Department of Toxic Substances Control
700 Heinz Avenue, Bldg. F, Suite 200
Berkeley, CA 94710

Dear Mr. Madabhushi:

Subject: Closure Certification Report, IT San Jose Transfer Facility (CAD000633115)

District staff have reviewed the IT Transfer Facility Closure Report. Based on the information presented it appears that any significantly contaminated soil has been excavated and removed from the site. In two areas (11 and 14) soil was excavated beneath the groundwater depth of 10.0 feet Groundwater samples from Location 11 indicate no significant levels of organic solvents. The soil at Location 14 contains so much clay that no groundwater sample could be collected using a hydropunch.

At this time, and on the basis of the information presented, the District has no further concern that this site presents a threat to groundwater.

We appreciate the opportunity to be informed regarding this closure and the consideration which you have given to our concerns in the past. If you have any questions regarding this letter please contact Seena Hoose at (408) 927-0710, extension 633.

Sincerely,

David J. Chesterman

INTERNATIONAL TECHNOLOGY CORPORATION

September 23, 1991

Mr. Gary Lynch
City of San Jose
Office of Environmental Management
777 North First Street, Suite 450
San Jose, CA 95112

IT Corporation - San Jose Transfer Facility
3010 Zanker Road

Dear Mr. Lynch:

From the mid-1970's to July 1987, IT Corporation (IT) or its predecessors operated a hazardous waste storage facility at 3010 Zanker Road, San Jose, California. With input from California Environmental Protection Agency, Department of Toxic Substances Control (DTSC, formerly the Department of Health Services); United States Environmental Protection Agency (U.S. EPA); the City of San Jose and the Santa Clara Valley Water District, a Closure Plan was approved for the subject facility. During 1990/1991, IT implemented the Closure Plan.

Implementation required iterative soil sampling, analysis, and excavation events resulting in clean closure of the subject facility. On August 20, 1991, IT submitted a Closure Certification Report for the subject facility. The report provides information regarding implementation of the approved Closure Plan, results of soil and groundwater analysis, establishment of the critical values based on background, required soil excavation, and certification statements by IT and an independent engineer.

Your review of the Closure Certification Report prompted a request for a statement from IT identifying the generator of the soil removed during closure. IT, as the operator of the subject facility, was the generator of the soil removed from the facility as part of closure. As you are aware, soil removal was based upon site specific background concentrations. None of the analytical results exceeded criteria established to identify a hazardous waste. Disposal facilities were selected by IT based on analytical data and facility specific acceptance criteria.

If you should have any further questions, please do not hesitate to call me at (510) 372-9100.

Sincerely,

Jane A. Zevely

TERMINOLOGY

TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E 1527-05. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of terms.

recognized environmental condition(s) (REC) - the presence or likely presence of any *hazardous substances* or *petroleum products* on a *property* under conditions that indicate an existing release, a past release, or a *material threat* of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, ground water, or surface water of the *property*. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions.

.

de minimis conditions – are conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not *recognized environmental conditions*.

historical recognized environmental condition(s) (HREC) - environmental condition which in the past would have been considered a *recognized environmental condition*, but which may or may not be considered a *recognized environmental condition* currently. The final decision rests with the *environmental professional* and will be influenced by the current impact of the *historical recognized environmental condition* on the *property*. If a past release of any *hazardous substances* or *petroleum products* has occurred in connection with the property and has been remediated, with such remediation accepted by the responsible regulatory agency (for example, as evidenced by the issuance of a no further action letter or equivalent), this condition shall be considered a *historical recognized environmental condition*.

material threat – a physically observable or *obvious* threat which is reasonably likely to lead to a release that, in the opinion of the *environmental professional*, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a *hazardous substance* and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

threat to human health or the environment – a substantial risk of harm to public health or the environment resulting from the presence or likely presence of an existing release, a past release, or a *material threat* of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, ground water, or surface water of the *property*. An example might include a release of a *hazardous substance* in concentrations exceeding applicable governmental agency standards under conditions that could reasonably and foreseeably result in substantial exposure to humans or substantial damage to natural resources. The risk of that exposure or damage would represent a threat to human health or the environment.

generally would not be the subject of an enforcement action – the likelihood that an environmental condition would not be subject to enforcement action if brought to the attention of appropriate governmental agencies. If the circumstances suggest an enforcement action would be less likely than not, then the condition is considered to be generally not the likely the subject of an enforcement action.

APPENDIX I

RESUMES

Gabe Stivala, PG

Senior Project Manager/Senior Geologist

Highlights

- *Mr. Stivala is a service-oriented senior manager with over 20 years of environmental management experience in the private and public sectors.*
- *Mr. Stivala has extensive experience in subsurface assessment & remediation of major oil company and airport facilities.*
- *Mr. Stivala is dedicated to protecting worker's well-being by fostering a strong culture of health and safety in the workplace.*

Professional Summary

Mr. Stivala has 20 years of environmental management. He coordinates and implements environmental site assessments, remedial alternative testing, and environmental support for construction and demolition projects. Mr. Stivala is adept at negotiating environmental solutions with regulators, attorneys and clients. In his capacity as a senior environmental professional, he has managed environmental programs in the oil & gas and aviation industries. Mr. Stivala's regional experience has spans California, Oregon, Washington, Florida, and Georgia.

Mr. Stivala is well-versed in the management and preparation of a range of technical reports including site investigation work plans, corrective action plans, remedial action plans, feasibility studies, site conceptual models, groundwater monitoring reports, and Phase I & II ESAs. Mr. Stivala's environmental field techniques includes drilling via hollow-stem auger, direct-push, mud rotary, air rotary, and cone penetraometer testing. He is skilled in aquifer testing media sampling. Mr. Stivala has implemented several remedial alternatives including multi-phase extraction, airsparging, bioventing, pump & treat, in situ chemical oxidation, surfactant application, and excavation.

Mr. Stivala is dedicated to protecting worker's well-being by fostering a strong culture of health and safety in the workplace. Mr. Stivala has extensive experience with behavior-based health & safety philosophies such as the Loss Prevention System. He has led near loss investigations, performed field safety observation and feedback sessions as well as tracked company's regional use of health & safety documentation tools.

Relevant Experience

Environmental

Retail Petroleum Portfolio Management/ Western U.S. Between 2005 and 2009, managed large portfolios of Chevron Environmental Company – Marketing Business Unit sites. Responsible for stewarding a team of project managers and scientists in the assessment and remediation of petroleum-impacted sites of varying sizes. Personally managed portfolio of over 20 projects at a time while at Conestoga-Rovers & Associates. Chevron EMC–MBU sites consist of bulk fuel terminals and service stations. Implemented assessment technologies, such as Membrane Interface Probe, Rapid Optical Screening Tool, and Ultraviolet Induced Fluorescence. Managed implementation of remedial alternatives including multi-phase extraction, airsparging, biosparging in situ chemical oxidation, and surfactant application. Presented remedial action plans to Chevron's in-house remediation review team. Versed in Chevron's Incident Reporting Protocol and have led Loss Prevention System (LPS) Near Loss Investigations, prepared Loss Prevention Observations, and led feedback sessions. Tracked company's regional use of LPS tools.

Airport Facility Site Assessment & Remediation. Managed large-scale contamination assessment and remediation projects at San Francisco, Oakland, Sacramento and Miami Airports from1991 to 2008. Contaminants included petroleum, chlorinated solvents, and metals.

DRAFT

Performed jet fuel bulk storage facilities assessments at San Francisco and Oakland International Airports. Major clients include United Airlines, SFO Fuel, PS Trading, and Dade County Aviation Department. Interfaced with airport and regulatory agency officials. Coordinated "air-side" activities under expedited schedules. Performed fuel-hydrant line closures and provided environmental support for airport facilities modification projects.

Fractured Bedrock Investigation/ San Francisco Airport. Field manager for bedrock drilling project. Supervised drilling of multilevel monitoring wells up to 500 feet deep into fractured bedrock as part of a chlorinated solvent assessment. Down-hole geophysical logging was performed to identify fracture zones. Logging included caliper, resistivity, gamma, and video logging. Wells were drilled using a mud and air rotary rig.

Aviation Fuel Storage Facilities Demolitions/San Francisco, Oakland Airports and Sacramento. Program manager for the decommissioning of aviation fuel distribution facilities. Orchestrated demolition of bulk jet fuel storage tank facilities and subsequent assessment and remediation. Negotiated with regulatory authorities and outside consultants. Remediation at San Francisco International Airport included excavation and in situ chemical oxidation One project included a large excavation of soil impacted with jet fuel and PCBs.

Former Solvent Packaging Facility Remediation, Union City, CA. Maintained a large groundwater/soil remediation system located at a former solvent packaging facility. Chlorinated solvent contamination from the facility extended a quarter mile offsite and was captured using 22 groundwater extraction wells pumping from two separate aquifers. Air treatment was performed using a resin absorption unit.

Railroad Facilities Assessment and remediation/ Western United States. Managed environmental site assessment projects at Union Pacific Railroad sites in California and Oregon. Projects consisted of assessments of petroleum, solvents, metals, and pesticides contamination.

Professional Qualifications

- Registered Professional Geologist (CA #7748)
- OSHA 40-Hour Hazardous Waste Operations Training
- OSHA 8-Hour Hazardous Waste Operations Supervisor Training\
- Loss Prevention System (LPS) Training
- BATC Refinery Safety Training

Education

University of Miami, Coral Gables, FL
B.S., Geological Sciences

DRAFT

Highlights

- *More than seven years of consulting experience in the private sector*
- *Quickly promoted to Project Manager based on a reputation of excellent written abilities and client rapport*

"Thank you for providing the Collocation Exemption Letters requested, we were pleased that ATC was able to provide these within the time quoted and faster than the maximum represented under our agreement."

– Public Wireless, Inc.

Audrey Krompholz, REA, CAC

Due Diligence Services Manager

Professional Summary

Ms. Krompholz has experience performing and managing Phase I Environmental Site Assessments (ESAs), Transaction Screen Assessments (TSAs), Property Condition Assessments (PCAs), and industrial hygiene investigations. She develops report templates in support of due diligence and industrial hygiene service lines. Ms. Krompholz is responsible for leading staff scientists, industrial hygienists, project managers, field technicians, and subcontractors, as well as coordinating large-scale microbial remediation oversight contracts.

Relevant Experience

Modified Environmental Site Assessments and FCC-Required Environmental Compliance Studies / Telecommunications Sector / California and Nevada. Performed and/or managed over 200 Modified Phase I ESAs or FCC-required environmental compliance studies in support of telecommunication service expansion and antenna placement.

Environmental Site Assessments / Agricultural, Residential, Commercial, Industrial, and Government Sectors / Northern CA. Performed and managed ASTM-compliant ESAs in support of pending real estate transactions. Completed a Phase I ESA for a 12.9-acre site in San Rafael that was previously utilized as a manufactured gas plant, corporation yard, and gasoline service station; each of the prior uses had contributed to onsite contamination which required further action. Performed a Phase I ESA of a 123-acre site in Salinas which was previously utilized as a tire-manufacturing plant and was delisted from the National Priority List.

Transaction Screen Assessments / Education, Residential, Commercial, and Industrial Sectors / Northern CA. Performed and/or managed ASTM-compliant TSAs and developed a report template that complies with the revised ASTM standard and current SBA guidelines.

Property Condition Assessments / Residential, Commercial, and Industrial Sectors / Northern CA. Performed PCAs to include observation and report of the physical condition and maintenance of a property and its improvements. PCA reports addressed items significant for the continued operation of a facility in its current usage and occupancy, consistent with comparable properties of similar age. One PCA included an assessment of a 44-acre marina in Alameda which contained 10 piers, 530 berths, and approximately 37 buildings constructed between the early 1900's and 1984.

Draft

Combustible Materials Assessment / Data Center / San Jose, CA. Developed a scope of work/report template and completed the combustible materials assessment. The report was well-received by City of San Jose Fire Department staff who commented on its thoroughness and accuracy.

Indoor Air Quality, Odor, and Microbial Investigations / Education, Residential, Commercial Industrial, and Government Sectors / Northern CA. Performed indoor air quality, odor, and microbial investigations at numerous site buildings and campuses throughout the San Francisco Bay Area. Investigations included visual inspections, HVAC inspections, collection of indoor air quality measurements, bulk and/or air sample collection, interpretation of findings and analytical results, report preparation, and site-specific remediation strategies.

Asbestos, Lead, and Dust Air Monitoring / Construction, Education, Residential, Commercial, and Industrial Sectors / Northern CA. Conducted air monitoring and/or oversight of construction, emergency spill/release cleanup, or abatement activities. Directed subcontractors and responded to emergency situations in adherence with the established scope of work. Recommended scope modifications in response to tenant concerns. Represented the environmental consulting company at regularly scheduled board meetings regarding abatement status.

Limited, Comprehensive, and Demolition ACM Surveys / Education, Residential, Commercial, and Industrial Sectors / Northern CA and Oregon. Identified, quantified and sampled suspect asbestos-containing materials (ACMs). Interpreted laboratory analytical data and provided recommendations to the client, in report format, for ACM management procedures.

AHERA Surveys / Education Sector / Northern CA. Re-inspected asbestos-containing building materials within multiple district campuses according to AHERA protocol. Photographed areas of concern and provided recommendations to clients, in report format, for ACM management procedures.

Spill Prevention, Control, and Countermeasure (SPCC) Plan / Data Center / San Francisco, CA. Completed an SPCC plan for a light industrial data center with several backup generators and aboveground storage tanks.

Groundwater Monitoring / Commercial and Industrial Sectors / Northern CA. Performed groundwater monitoring activities in accordance with scheduled monitoring events designed to evaluate groundwater contamination at petroleum service stations and industrial facilities.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

DRAFT

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

MAP INFORMATION

Map Scale: 1:3,470 if printed on A size (8.5" × 11") sheet.

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for accurate map measurements.

A Message from the U.S. Environmental Protection Agency

Across America, the sources of both tap and bottled drinking water include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or human activity. Contaminants that may be present in source water include:

- ***Microbial contaminants***, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- ***Inorganic contaminants***, such as salts and metals, can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production mining, or farming.
- ***Pesticides and herbicides***, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- ***Organic chemical contaminants***, including synthetic and volatile organic chemicals that are byproducts of industrial processes and petroleum production, which can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- ***Radioactive contaminants***, which can be naturally-occurring or result from oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and CDPH prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. CDPH regulations also establish limits for contaminants in bottled water that must provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly persons and infants can be particularly at risk from infections. These people should seek advice about drinking water from their healthcare providers. USEPA/ Centers for Disease Control guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline at 1-800-426-4791.

Safeguarding Your Water Supply

Protecting our water supply is important to ensure that water is safe from contamination and aesthetically pleasing for use. Protection begins in the watersheds, where people and their activities can be a major cause of source contamination. Contamination requires additional treatment, which increases the cost to deliver water to your tap.

Participating in public meetings and forums regarding water issues enables decision-makers to hear your perspective and allows you to be directly involved in protecting your water supply.

Understanding that drinking water — including bottled water — may reasonably be expected to contain at least minute amounts of contaminants will help you make an informed choice about your drinking water. The presence of contaminants does not necessarily indicate a health risk.

The Source of Your Water

The San Jose Municipal Water System (Muni Water) serves the North San José, Alviso, Evergreen, Edenvale, and Coyote Valley communities of the City of San José. The source of your water depends on the service area in which you are located.

North San José/Alviso Service Area

Muni Water purchases a blend of Hetch Hetchy water and treated water from the San Francisco Public Utilities Commission (SFPUC) and delivers it to our Alviso and North San José customers. In 2011, the Hetch Hetchy Watershed provided most of the total SFPUC water supply, with supplementation by local watersheds in Alameda and Santa Clara counties. The major water source originates from spring snowmelt flowing down the Tuolumne River to the Hetch Hetchy Reservoir where it is stored. Since this water source meets all federal and state criteria for watershed protection, disinfection treatment practices, bacteriological quality monitoring, and high operational standards, the State and USEPA have granted this water source a filtration exemption.

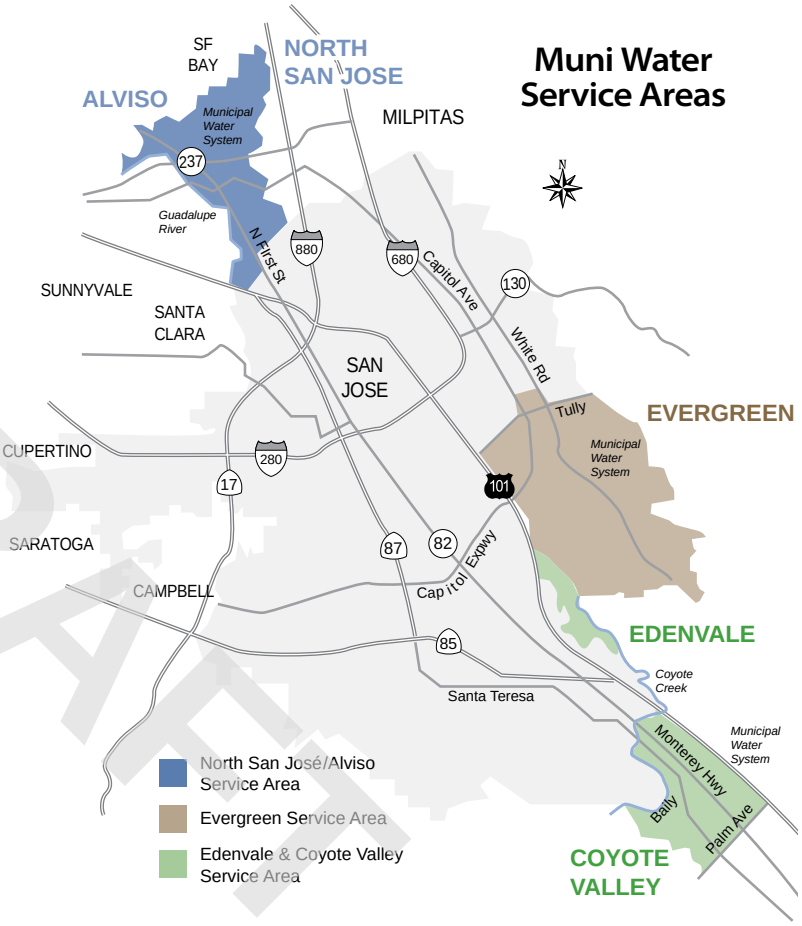
The Alameda Watershed spans more than 35,000 acres in Alameda and Santa Clara counties. Surface water from rainfall and runoff is collected in the Calaveras and San Antonio reservoirs. Prior to distribution, the water from these reservoirs is treated at the Sunol Valley Water Treatment Plant (SVWTP). Fluoridation, chloramination, and corrosion control treatment are provided for the combined Hetch Hetchy and SVWTP water at the Sunol Chloramination and Fluoridation facilities.

The SFPUC actively and aggressively protects the natural water resources entrusted to its care. An annual report on the Hetch Hetchy Watershed reflects the evaluation of its sanitary conditions, water quality, and potential contamination sources. The report also presents performance results of watershed management activities implemented by the SFPUC and partner agencies to reduce or eliminate potential contamination sources. The SFPUC also conducts sanitary surveys of the local watersheds every five years. These surveys identified wildlife and human activity as potential contamination sources. The reports are available for review through the CDPH San Francisco District office.

In the summer of 2011, the SFPUC began using ultraviolet (UV) light as an additional disinfection step for the Hetch Hetchy water supply. The new Tesla Treatment Facility uses state-of-the-art UV treatment equipment to provide advanced disinfection for the Hetch Hetchy supply in the Regional Water System which serves 2.5 million customers. The facility was built to comply with the USEPA regulation that requires an additional disinfectant by April 2012 to protect the water supply from the Cryptosporidium parasite. The facility can treat up to 315 million gallons of water per day – making it the largest UV drinking water treatment plant in California and the third largest in the U.S.

Local groundwater from deep water wells is available for supplemental or emergency supply. However, the North San José wells were not used in 2011.

Muni conducted a one-time source water assessment of the wells in January of 2003.*



Evergreen Service Area

Muni Water purchases treated surface water from the Santa Clara Valley Water District (SCVWD) and delivers it to our Evergreen customers. SCVWD surface water is mainly imported from the South Bay Aqueduct, Lake Del Valle, and San Luis Reservoir, which all draw water from the Sacramento-San Joaquin Delta watershed. SCVWD local surface water sources include Anderson and Calero reservoirs. Water from imported and local sources is pumped to and treated at the Santa Teresa Water Treatment Plant in San José.

Since 2006, the SCVWD has used ozone as the primary disinfectant. Ozone disinfection is highly effective at inactivating microbial contaminants and creates fewer disinfection by-products than chlorine. Ozone also effectively removes negative tastes and odors often caused by seasonal algal blooms in the Delta source waters.

SCVWD source waters are vulnerable to potential contamination from a variety of land use practices, such as agricultural and urban runoff, recreational activities, livestock grazing, and residential and industrial development. Imported sources are additionally vulnerable to wastewater treatment plant discharges, seawater intrusion, and wildfires in watershed areas. Local sources are additionally vulnerable

DRAFT

to contamination from commercial stables and historic mining practices. No contaminant associated with any of these activities has been detected in SCVWD treated water. The water treatment plants provide multiple barriers for physical removal and disinfection of contaminants. Additional information on water treatment can be found at **www.valleywater.org**.

Local groundwater from deep water wells is available for emergency supply. The Evergreen wells were not used in 2011. Muni Water conducted a one-time source water assessment for the Evergreen wells in January 2003.*

Edenvale Service Area

Groundwater from deep water wells provides 100 percent of the supply for this service area. Muni Water conducted a one-time source water assessment for the Edenvale wells in January 2003.* Although the source is considered potentially vulnerable to chemical and petroleum processing activities, no contaminants associated with these activities have been detected.

Coyote Valley Service Area

Groundwater from deep water wells provides 100 percent of the supply for this service area. An assessment of these wells was conducted in June 2004,* and potable use of the groundwater began in 2005. Although the source is considered potentially vulnerable to agricultural drainage, unauthorized dumping, storage tank leaks, and sewer collection systems, no contaminants associated with these activities have been detected. Precautions taken during construction, in combination with the local hydrology, have protected the existing well locations from contamination.

**For information about the type of contaminants tested or to get a copy of the groundwater well assessment reports for your service area, please contact a Water Quality Engineer at 408-277-3671.*

Water Quality

Coliforms, reported as "Total Coliform," are bacteria that are naturally present in the environment and are used as an indicator that other potentially harmful bacteria may be present. Standards for compliance vary depending on the size of the distribution system. In larger systems (including Evergreen, Edenvale, and Coyote Valley), 95 percent of all samples taken each month must be free of coliforms. In smaller systems (including North San José and Alviso), no more than one sample per month may test positive for the presence of coliforms.

Disinfection of surface water is necessary to destroy disease-causing organisms for the protection of public health. In Evergreen, North San José, and Alviso, water is disinfected using chloramine. Except for a slight chlorinous taste or odor, chloramine is not harmful to the general public. However, it must be removed for kidney dialysis machines and aquariums. If you are receiving kidney dialysis treatment, please contact your doctor or dialysis technician. For pet fish, contact your local fish store for more information about special water treatment.

Fluoride is added to the naturally occurring level in Evergreen, North San José, and Alviso to help prevent dental cavities in consumers. The Evergreen community approved fluoridation with an advisory vote in the early 1960s. The SFPUC System-Wide Fluoridation Project (affecting North San José and Alviso) became operational in November 2005. The fluoride levels in the treated water are maintained within the range required by state regulations. At present, additional fluoride is not added in Edenvale or Coyote Valley service areas. Consult your doctor or dentist if you are considering additional fluoride supplements or treatments.

Hardness consists mainly of calcium and magnesium salts. Although it does not pose a health risk, it may be considered undesirable for other reasons. Some benefits to reducing hardness by using water softeners are reductions in soap usage, longer life for water heaters, and less incrustation of pipes. Some disadvantages are an increase in sodium intake (depending on type of softener used), proper maintenance/servicing requirements, and potential adverse affects on plants and landscaping.

Turbidity is a measure of the cloudiness of the water. It is monitored because it is a good indicator of the effectiveness of the water treatment process. The turbidity standard for unfiltered supplies (e.g., Hetch Hetchy) is 5 NTU. The turbidity for filtered water supplies (e.g., SCVWD treated water) must be less than 0.3 NTU 95 percent of the time, and at no time higher than 1 NTU.

Cryptosporidium is a parasitic microbe found in most surface water. The SFPUC regularly tests for this water-borne pathogen, and found it at very low levels in source water and treated water in 2011. However, current test methods approved by the USEPA do not distinguish between dead organisms and those capable of causing disease. Ingestion of *Cryptosporidium* may produce symptoms of nausea, abdominal cramps, diarrhea, and associated headaches. *Cryptosporidium* must be ingested to cause disease, and it may be spread through means other than drinking water.

Lead, if present at elevated levels, can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Muni Water is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 1-800-426-4791 or at **www.epa.gov/safewater/lead**.

2011 Water Quality Data

Water at various locations in the distribution system is tested by certified City staff and a private, state-certified laboratory using the latest testing procedures and equipment. During 2011, numerous tests were conducted on samples taken from the distribution system. In addition to these tests, the SCVWD and SFPUC perform their own water quality analyses of the source and treated water.

Test results from the distribution system and source water analyses are shown in the table at right. Some of the data, though representative, are more than one year old. CDPH allows us to monitor for some contaminants less than once per year since the concentrations of these contaminants do not change frequently.

Lab analysis was also performed for many constituents other than those listed in the tables; only those chemicals detected in the tap water are shown. For a complete list of all the chemicals analyzed or any questions about this report, please contact a Water Quality Engineer at 408-277-3671.

* Some SFPUC water was delivered to the SCVWD's distribution system from 1/1/11 - 1/4/11 and 3/8/11 - 5/1/11, and may have been part of the supply received by Evergreen customers during that time. Refer to the North San Jose/Alviso (SFPUC) data column in this table for details on the quality of that water supply.

** Temporary chlorination was performed during April 2011 and October 2011 for maintenance purposes. No chlorine was present in the service area during the remainder of the year.

NOTES:

a Distribution system data in 2011
b Well data in 2010
c Distribution system data in 2009
d Filtered water turbidity required to be < 0.3 NTU in 95% of samples. All filtered water sources met this standard.
e To convert hardness from ppm to grains per gallon, divide by 17.1.

TYPICAL SOURCES IN DRINKING WATER:

1 Erosion of natural deposits
2 Water additive that promotes strong teeth
3 Runoff/leaching from fertilizers
4 By-product of drinking water disinfection
5 Added for disinfection
6 Naturally present in the environment
7 Soil runoff
8 Internal corrosion of household plumbing systems
9 Runoff/leaching of natural deposits
10 Seawater influence
11 Naturally-occurring organic material
12 Industrial waste
13 Industrial discharges
14 Substances forming ions in water
15 Various natural and manmade sources
16 Naturally occurring
17 Human/animal fecal waste

See back panel for definitions and abbreviations used in this table.

It's Easy to Save Water

Tips for residents and businesses

- **Fix leaks promptly.** Some faucet and toilet leaks are simple enough to fix yourself. A free guide for fixing simple leaks is available at the Muni Water office or by calling **(408) 363-4708.**
- **Sign up for a Free Water-Wise House Call.** A trained technician will help you find leaks, install free water-saving devices, and provide advice on ways to save water in your home and garden. Call 1-800-548-1882.
- **You may qualify for a rebate if you upgrade to more water-efficient fixtures or if you replace your lawn.** For more information about the following programs, call the Santa Clara Valley Water District at (408) 265-2607, ext. 2554.

For Homes:
High Efficiency Toilet Rebate
High Efficiency Clothes Washer Rebate
Landscape Rebates

For Businesses, Condominiums, and Apartment Complexes:
High Efficiency Toilet or Urinal Installation Program
Commercial Clothes Washer Rebate
Landscape Rebates

For more water conservation tips, visit www.sanjoseca.gov/esd/water-conservation

In the event of an earthquake, will you have enough?

Keep a 3-day water supply just in case

- Each family member (including pets!) needs 1 gallon per day
- Store **tap water** in food-grade plastic containers; replace every 6 months
- Store **bottled water** in the original sealed containers; replace every 6 months

If your supply runs out, you can treat your tap water

- **Boil it** for 3 minutes, *or* **disinfect** it by adding regular household bleach
- To disinfect: Add 8 drops of bleach per gallon of water. Shake or stir, then let it stand for 30 minutes

About Us

The San Jose Municipal Water System is a City-owned water utility that has served customers since 1961. We are committed to delivering a reliable water supply that meets or exceeds all drinking water health standards.

Our office is open from 8:00 a.m. to 5:00 p.m., Monday through Friday (closed holidays). For more information, visit our website at **www.sjmuniwater.com** or call 408-535-3500 (translation services are available).

In accordance with the Americans with Disabilities Act, City of San José Environmental Services Department materials can be made available upon request in alternative formats, such as Braille, large print, audiotape or computer disk. Requests may be made by calling 408-277-3671 (voice), 1-800-735-2929 (California Relay Service), or 408-294-9337 (TTY).

The City of San José is committed to open and honest government and strives to consistently meet the community's expectations by providing excellent service, in a positive and timely manner, and in the full view of the public.

Printed on recycled paper using soy-based inks. 0512/25,100/ImageX

Definitions

AL (Regulatory Action Level)
The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

MCL (Maximum Contaminant Level)
The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technically feasible.

Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

MCLG (Maximum Contaminant Level Goal)
The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the USEPA.

MRDL (Maximum Residual Disinfectant Level)
The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

MRDLG (Maximum Residual Disinfectant Level Goal)
The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

NL (Notification Level)
Health-based advisory levels established by the CDPH for chemicals in drinking water that lack maximum contaminant levels.

PDWS (Primary Drinking Water Standard)
MCLs and MRDLs for contaminants that affect health along with their monitoring, reporting, and water treatment requirements.

PHG (Public Health Goal)
The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Source Water
Raw water that has not been treated to meet drinking water standards.

Treated Water
Water that has been treated to meet USEPA and CDPH drinking water standards.

Treatment Technique
A required process intended to reduce the level of a contaminant in drinking water.

Abbreviations:

CALIFORNIA GEOLOGICAL SURVEY

GENERALIZED GEOLOGIC MAP OF CALIFORNIA

NOTE 17

Geologic maps show the distribution of rocks exposed at the surface of the earth as well as other geologic information. Rocks are grouped according to age and origin on the map. Age of the rocks is considered to be the geologic time at which the rock formed (see Geologic Time Scale on back page). Rocks are classified according to their origin:

1) sedimentary rocks form as accumulations of mineral material in oceans (marine) or on continents (continental); 2) igneous rocks form by crystallization of minerals from molten rock. Molten rock beneath the earth's surface is called magma. Magma cools slowly to form coarse-grained igneous rocks such as granite. Molten rock erupted on the earth's surface from volcanoes is called lava and forms volcanic rocks; 3) metamorphic rocks form from preexisting rocks by mineralogical, chemical, and/or structural changes. Other geologic information shown on geologic maps includes structural features such as faults. Faults are fractures in the earth's crust where rocks have moved relative to each other.

The map shown here is generalized from more detailed, larger scale maps. On this map, rocks exposed in California are placed in one of seven units:

Quaternary sedimentary rocks. Gravel, sand, silt, and clay deposited mostly in valleys and lowlands onshore. There are some marine sedimentary rocks of this age in California.

Tertiary sedimentary rocks. Sandstone, shale, and conglomerate usually deposited in relatively shallow marine water near the continental margin. These rocks are exposed mostly in the coastal regions of California.

Tertiary and Quaternary volcanic rocks. Lava flows erupted from volcanoes. These rocks make up much of the Cascade Range and the Modoc Plateau, and are widespread in eastern California. They also occur in coastal regions.

Mesozoic sedimentary rocks. Sandstone and shale that were deposited mostly in the ocean. The rocks make up the bulk of the Coast Ranges. They also occur in coastal southern California.

Mesozoic granitic rocks. A wide variety of coarse-grained igneous rocks formed when magma that intruded the earth's crust cooled and was later exposed by erosion. Granitic rocks occur throughout the state, but are most common in the mountainous areas such as the Klamath Mountains, the Sierra Nevada, and the Peninsular Ranges. Some granitic rocks are Cenozoic, Paleozoic, and Precambrian.

Mesozoic and Paleozoic metamorphic rocks. Metasedimentary and metavolcanic rocks that make up much of the Klamath Mountains and the Sierran foothills. They are also common in the Basin and Range, the Mojave Desert, the Transverse Ranges, and the Peninsular Ranges.

Serpentinized ultramafic rocks. A special type of rock that does not fit into the three common categories of rocks. The most common rock is serpentine, the California state rock (see CGS Note 14).

APPENDIX M

TERMINOLOGY

TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E 1527-05. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of terms.

recognized environmental condition(s) (REC) - the presence or likely presence of any *hazardous substances* or *petroleum products* on a *property* under conditions that indicate an existing release, a past release, or a *material threat* of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, ground water, or surface water of the *property*. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions.

de minimis conditions – are conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not *recognized environmental conditions*.

historical recognized environmental condition(s) (HREC) - environmental condition which in the past would have been considered a *recognized environmental condition*, but which may or may not be considered a *recognized environmental condition* currently. The final decision rests with the *environmental professional* and will be influenced by the current impact of the *historical recognized environmental condition* on the *property*. If a past release of any *hazardous substances* or *petroleum products* has occurred in connection with the property and has been remediated, with such remediation accepted by the responsible regulatory agency (for example, as evidenced by the issuance of a no further action letter or equivalent), this condition shall be considered a *historical recognized environmental condition*.

material threat – a physically observable or *obvious* threat which is reasonably likely to lead to a release that, in the opinion of the *environmental professional*, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a *hazardous substance* and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

threat to human health or the environment – a substantial risk of harm to public health or the environment resulting from the presence or likely presence of an existing release, a past release, or a *material threat* of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, ground water, or surface water of the *property*. An example might include a release of a *hazardous substance* in concentrations exceeding applicable governmental agency standards under conditions that could reasonably and foreseeably result in substantial exposure to humans or substantial damage to natural resources. The risk of that exposure or damage would represent a threat to human health or the environment.

generally would not be the subject of an enforcement action – the likelihood that an environmental condition would not be subject to enforcement action if brought to the attention of appropriate governmental agencies. If the circumstances suggest an enforcement action would be less likely than not, then the condition is considered to be generally not the likely the subject of an enforcement action.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

DRAFT

EXECUTIVE SUMMARY

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/10/2014 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/10/2014 has revealed that there are 2 RCRA-TSDF sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/10/2014 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/10/2014 has revealed that there are 14 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent NPL

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, and dated 08/05/2014 has revealed that there is 1 CA RESPONSE site within approximately 1 mile of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 08/05/2014 has revealed that there are 42 CA ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/10/2014 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 2 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: D009
Waste name: MERCURY

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED

DRAFT

ULTRATECH STEPPER INC (Continued) **1001967352**

SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Classification:	Small Quantity Generator

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Waste code:	D008
Waste name:	LEAD
Waste code:	F003
Waste name:	THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Waste code:	F020

ULTRATECH (Continued) **1000349751**

Waste name: WASTES (EXCEPT WASTEWATER AND SPENT CARBON FROM HYDROGEN CHLORIDE PURIFICATION) FROM THE PRODUCTION OR MANUFACTURING USE (AS A REACTANT, CHEMICAL INTERMEDIATE, OR COMPONENT IN A FORMULATING PROCESS) OF TRI- OR TETRACHLOROPHENOL, OR OF INTERMEDIATES USED TO PRODUCE THEIR PESTICIDE DERIVATIVES. (THIS LISTING DOES NOT INCLUDE WASTES FROM THE PRODUCTION OF HEXACHLOROPHENE FROM HIGHLY PURIFIED 2,4,5-TRICHLOROPHENOL).

Violation Status: No violations found

FINDS:

Registry ID: 110002839304

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DRAFT

LOCKHEED MARTIN INFO SYSTEMS & (Continued) **S109281935**

Hydraulic fluid was released from the ram casing for an elevator at the site. 6,500 gallons of hydraulic fluid and groundwater have been pumped out to date. Had proposed to install a recovery well with a passive skimmer as their interim cleanup, but encountered footings while drilling inside the building. Many site limitations due to location of release within the building. Wells installed outside of the building.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

- Violation Status: No violations found

Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D005

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ORCHARD PROPERTIES/DAGGETT (Continued) **S101482368**

Comments: Completed Site Screening. Soil samples detected dichloroethylene in the soil beneath the floor. Over 8 cubic yards of soil was excavated and disposed off-site. Analyses of soil samples taken from the bottom of the excavation indicated levels less than 100 ppb. Based on this information, the SF Regional Water Quality Control Board (RWQCB), the lead agency, decided that the remaining contaminant no longer posed a threat to groundwater and no further action was required. The soil level is below residential standards.

File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	* Insecticides/Fumigants, * Metals/Heavy Metals, * Metals/Heavy Metals - Arsenic
Site History:	This site would like to be considered for redevelopment of dense residential use. Prior uses of this abandoned land was an orchard from pre-1940s to mid-1970s. It was vacant since the early 1980s and purchased by Hyundai Merchant Marine (America), Inc. in 1999. DDT, dieldrin, lead, arsenic and mercury were found in the shallow groundwater aquifer.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require corrective actions. In 1985, Foxboro/ICT, determined that an UST had leaked. Two groundwater extraction wells were operational from 1987 to 1999. In 2000, the Regional Water Quality Control Board, San Francisco Bay Region (SFRWQCB) authorized the indefinite shutdown of the extraction wells. In 2008, soil samples were collected to address the potential historical contamination from pesticides. Two areas were identified with elevated arsenic concentrations. Five soil gas probes were also added. Laboratory analysis reported that volatile organic compounds were detected below the SFRWQCB Environmental Screening Levels in all the soil gas samples that were collected. Approximately 70 tons of arsenic-impacted affected soil was excavated. On October 10, 2013, SFRWQCB issued a letter of No Further Action and Case Closure Summary indicating that no further action related to the pollutant releases at the Site is required.

FOXBORO/ICT SITE - FORMER (Continued) **S106235137**

File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: The Site had a release of solvents (PCE, TCE) from a waste solvent tank. The tank was removed along with contaminated soil. A groundwater extraction and treatment system was operated until groundwater pollutant concentrations reached asymptotic levels. The site then went to monitored natural attenuation. Solvent concentrations in groundwater are now at low levels.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 10/10/1991
Comments: Completed PEA. Sampling and analysis determined that the concrete pad area contained the highest concentration of pesticides and petroleum hydrocarbons. The following contaminants were found in the soil near the concrete pad: lead (2.5 to 1900 ppm), total petroleum hydrocarbons (29 to 280,000 ppm), DDT (0.016 to 3.34 ppm), diquat (0.044 ppm), paraquat (0.015 ppm), and toxaphene (0.2 to 0.063 ppm). No pesticides or petroleum hydrocarbons were found in the groundwater. Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 10/23/2001
Comments: Confirmation samples detected low level contamination that pose no threat to public health. No further action is required.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	11/02/1994
Comments:	Completed Site Screening. On December 13, 1989, the SF Regional Water Quality Control Board (RWQCB) issued Order No. 89-182 addressing site investigation cleanup of the soil and groundwater pollution. From 1993 to 1999, a combined soil vapor and groundwater extraction operated on the site. The cleanup plan did not meet expectations. Removal efficiency was low and there were a number of operational difficulties due to site soil conditions. The RWQCB issued an amended order, requiring excavation of vadose zone soil that exceeds the risk based cleanup goals; and monitored natural attenuation for impacted groundwater.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	01/29/1990
Comments:	Completed Site Screening. During the investigation of groundwater, free product containing toluene and hexane was discovered in one monitoring well. The free product is believed to be the result of an overflow from an underground sump connected to the solvent recovery system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: School Cleanup Agreement
Completed Date: 03/28/2012
Comments: DTSC signed the SCA on March 27, 2012 and sent one fully executed original to RP. The other original is maintained in the Project File. DTSC also signed the SFPD 4.15 Form on March 27, 2012 and sent the wet copy to CDE. Also note, the District changed the name of the District?s Agreement Manager from Mr. Roger Barnes to Mr. Jim Luayu within the District's signed Agreement. After a telephone discussion with Mr. Roger Barnes on March 27, 2012, Sections 3.3 on page 4, 3.4 on page 5, and 3.8.3 on page 8 were changed to reflect the Agreement Manager change

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 11/23/2011
Comments: Send e-mail to Mr. Barnes summarizing our conversation on Nov. 18, 2011 about the EOA cost estimate. The EOA budget up to Nov. 18, 2011 was over by approximately $20,500.00. And as requested by Mr. Barnes an estimated additional $21,000.00 is needed for completing the Community Profile, reviewing the EIR and other unanticipated tasks until a further action agreement is executed. Revised estimated EOA cost is $109,700.00.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

Reponsible Party:	RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	DHS will be issuing remedial action order or entering into an enforceable agreement with the responsible parties. DHS has budgeted $100,000 for oversight/monitoring of cleanup efforts. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with remedial investigations and cleanup activities.
Site Description:	Mansion Grove is a 29 acre residential apartment complex currently under construction. The site was occupied by facilities involved in metals reclamation and the manufacture and recycling of solvents and other chemicals for over 70 years. During excavations for several building foundations, contaminated soil was discovered.
Hazardous Waste Desc:	Soil testing has detected the presence of volatile organic compounds including halogenated solvents, naphthalene compounds, polynuclear aromatic compounds and petroleum hydrocarbons. There is potential for ground water contamination.
Threat To Public Health & Env:	Residential apartments are located adjacent to areas of contaminated soil. The site is fenced and posted to prevent public contact with contaminated soil.
Site Activity Status:	A removal of 6000 cubic yards of contaminated soil adjacent to occupied buildings was completed by the RP under DHS oversight in 1988. Preliminary ground water investigations have been initiated.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

RB Case Number:	43s0678
File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	* Solvents
Site History:	No Water Board oversight of cleanup at this site. This case is included in Geotracker because the site is covered by the Water Boards NPDES general permits for discharges from pump and treat systems to surface waters (one each for fuels- and VOC-impacted sites). This can happen for two reasons: (i) the site is overseen by another agency (e.g., USEPA or DTSC) and needs coverage under one of the NPDES general permits or (ii) construction dewatering in an area of groundwater contamination necessitates NPDES general permit coverage. Including this case in Geotracker helps staff to receive and review required NPDES reports.

Completed Document Type: Amendment - Order/Agreement

DRAFT

MANSION GROVE (Continued) **1000593227**

Completed Date: 11/07/1996
Comments: An amendment to Order HAS 88-89-019 (November 7, 1996) was also issued to ensure the operation and maintenance of both systems until such time that cleanup objectives are met.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 11/15/1996
Comments: Certification - Ongoing operation and maintenance consists of the continued extraction and treatment of the groundwater and soil vapor.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Initial Study/ Neg. Declaration
Completed Date: 11/30/1994
Comments: A Negative Declaration was adopted for the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Initial Study/ Neg. Declaration
Completed Date: 12/10/1991
Comments: DTSC adopted a Negative Declaration for the proposed RAW.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date: 03/01/1989
Comments: An Order was issued to require Mansion Grove to conduct groundwater monitoring and among other things to , submit a Remedial Investigation/Feasibility Study and a Remedial Aciton Workplans.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 09/11/1981

Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 12/14/2011
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Notice of Exemption
Completed Date: 07/26/2013
Comments: CEQA Notice of Exemption has been approved and filed. Transition of project to monitored natural attenuation will have no impact to the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 10/18/2013
Comments: DTSC letter with oversight cost estimate for fiscal year 2013/2014..

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 02/07/2008
Comments: The 5 Year Report indicates the existing system at the site is effective in controlling offsite migration of groundwater contaminants.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 06/20/2002
Comments: The 5 Year Review Report indicates that the groundwater and the soil vapor remediation systems are containing the offsite migration of contaminants.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Plan
Completed Date: 10/23/1996
Comments: The approval of the Operation and Maintenance Plan which lays out plan how to operate and maintain both the soil vapor and the groundwater monitorng and extraction treatment systems.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 05/14/1996
Comments: Completed the start-up of the groundwater and the soil vapor extraction and treatment systems.

DRAFT

MANSION GROVE (Continued) **1000593227**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 05/30/1995
Comments: DTSC approved a detailed design for the installation of the soil vapor (expanded) and groundwater monitoring extraction system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 11/30/1994
Comments: A Remedial Action Plan was approved on November 30, 1994 which required the installation of groundwater and the expansion of the soil vapor extraction and treatment systems.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 03/31/1994
Comments: The Remedial Investigation and Feasibility Study Report confirms the presence of volatile organic compounds in soil and groundwater.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 09/30/1992
Comments: The installation of a soil vapor extraction system, including its wells and associated piping and a carbon adsorption unit, were completed to remediate soils contaminated with volatile organic compounds.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 03/31/1991
Comments: A Removal Action Workplan was approved for the installation of a soil vapor extraction system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Participation Plan / Community Relations Plan
Completed Date: 08/30/1989
Comments: The Public Participation plan for the site was approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: *Site Inspection (SI) Report
Completed Date: 05/09/1989
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 12/31/1988
Comments: Removal action completed which consisted of excavation of contaminated soil with volatile organic compounds and disposed to an offsite facility.

DRAFT

MANSION GROVE (Continued) **1000593227**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 06/16/1988
Comments: A Preliminary Assessment Report was completed and made a recommendation for the inclusion of the site into the State Superfund but will continue to work with Prometheus Development Company to develop a plan for a Remedial Investigation/Feasibility Study.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Manual
Completed Date: 09/21/2007
Comments: The approved manual describes procedures how to properly and effectively operate and maintain the Rivermark extraction trench system and other accessories/equipment that supports it.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 08/23/2006
Comments: Report approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 10/11/2006
Comments: DTSC approved revisions to the Annual Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 09/15/2006
Comments: DTSC has no technical comments.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

Completed Date: 09/21/2007
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 09/14/2007
Comments: VOC concentrations within historical trend.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 10/25/2007
Comments: Report indicates data within historical VOC concentration trend.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 12/26/2006

DRAFT

MANSION GROVE (Continued) **1000593227**

Comments: DTSC has no comments.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 02/01/1990
Comments: Fact Sheet provides project updates.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Risk Assessment Report
Completed Date: 06/20/1994
Comments: The focused HRA concluded that there is no significant adverse chronic health hazards related to exposure to residual VOCs levels detected in Area 1.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Risk Assessment Report
Completed Date: 08/09/1991
Comments: The HRA concluded that there are no significant health effects associated with the contaminants detected at the site. The groundwater at the site is not the source for drinking water.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 02/01/2007
Comments: DTSC review indicates there was no historical chemical usage at the proposed locations of the Oak Grove Court and Riverside Court; and no contamination above the cleanup/screening level has been detected at the Mansion Court.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 03/14/2008
Comments: Report indicates data within historical VOC concentration trend.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 05/02/2008
Comments: The Report indicates VOC concentrations within historical trend.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 10/16/2008
Comments: Report indicates data is consistent with historical trend.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 11/13/2008
Comments: Contaminant concentrations are within historic ranges. DTSC requested that 1,4 -Dioxane be analyzed for in the January sampling

DRAFT

MANSION GROVE (Continued) **1000593227**

event and that low flow sampling techniques be evaluated and the O&M Plan modified for future events.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 04/28/2009
Comments: Groundwater results within historical ranges.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 08/17/2009
Comments: Report approved as revised buy August 6, 2009 submissions. Contaminats in groundwater remain within historical ranges. SVETs system is no longer in operation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Design
Completed Date: 09/15/2008
Comments: The Soil Management Plan and the Health and Safety Plan will ensure that soil will be managed properly during and after excavation and will also ensure that the workers and the public will be protected from exposure to VOC contaminants.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 11/14/2008
Comments: This workplan describes the procedures for decommisioning of the Soil Vapor Extraction Treatment System, associated piping and 10 soil vapor extraction wells. It also includes closure procedures for two groundwater wells (MW-4 and LF-2) which are no longer used.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 02/28/2013
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 05/05/1998
Comments: Review of the report indicates the SVE system to be effectively reducing the VOC vapor in soil. The report also proposes to turn off the following SVE wells: LFVES-6, LFVES-7, LFVES-8, LFVES-4, LFVES-9, LFVES-10, LVES-11, and LFVES-12.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/05/2009
Comments: The soil vapor extraction and treatment system and monitoring wells MW-4 and LF-2 have been properly shut down and decommissioned.

DRAFT

MANSION GROVE (Continued) **1000593227**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 09/24/2009
Comments: DTSC approves the Report with the following comment: Section 3.1 describes pre-grading soil sampling that was performed within the Building G foundation area. The soil samples were collected with a hand auger and transferred into sample jars. These samples were then composited at the analytical laboratory. This method of sampling is fine for metals, pesticides, and heavy-fraction TPH, but is not typically accepted for VOCs and TPH-gasoline due to the potential for volatile losses. The soil analytical results for VOCs and TPH-gasoline should, therefore, be considered biased low.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 09/17/2009
Comments: All changes DTSC requested will be made in future reports.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 11/09/2009
Comments: Report approved, but comments issued on the information needed in the future if a monitored natural attenuation remedy is to be considered.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 05/28/2010
Comments: GSU memo and cover letter sent

Completed Area Name: PROJECT WIDE

Completed Document Type: Operations and Maintenance Report
Completed Date: 12/26/2006
Comments: DTSC has no comments.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 02/01/1990
Comments: Fact Sheet provides project updates.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Risk Assessment Report
Completed Date: 06/20/1994
Comments: The focused HRA concluded that there is no significant adverse chronic health hazards related to exposure to residual VOCs levels detected in Area 1.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Risk Assessment Report
Completed Date: 08/09/1991
Comments: The HRA concluded that there are no significant health effects associated with the contaminants detected at the site. The groundwater at the site is not the source for drinking water.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 02/01/2007
Comments: DTSC review indicates there was no historical chemical usage at the proposed locations of the Oak Grove Court and Riverside Court; and no contamination above the cleanup/screening level has been detected at

DRAFT

MANSION GROVE (Continued) **1000593227**

the Mansion Court.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 03/14/2008
Comments: Report indicates data within historical VOC concentration trend.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 05/02/2008
Comments: The Report indicates VOC concentrations within historical trend.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 10/16/2008
Comments: Report indicates data is consistent with historical trend.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 11/13/2008
Comments: Contaminant concentrations are within historic ranges. DTSC requested that 1,4 -Dioxane be analyzed for in the January sampling event and that low flow sampling techniques be evaluated and the O&M Plan modified for future events.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 04/28/2009
Comments: Groundwater results within historical ranges.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Long Term Monitoring Report
Completed Date: 08/17/2009
Comments: Report approved as revised buy August 6, 2009 submissions. Contaminats in groundwater remain within historical ranges. SVETs system is no longer in operation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Design
Completed Date: 09/15/2008
Comments: The Soil Management Plan and the Health and Safety Plan will ensure that soil will be managed properly during and after excavation and will also ensure that the workers and the public will be protected from exposure to VOC contaminants.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 11/14/2008
Comments: This workplan describes the procedures for decommisioning of the Soil

DRAFT

MANSION GROVE (Continued) **1000593227**

Vapor Extraction Treatment System, associated piping and 10 soil vapor extraction wells. It also includes closure procedures for two groundwater wells (MW-4 and LF-2) which are no longer used.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 02/28/2013
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 05/05/1998
Comments: Review of the report indicates the SVE system to be effectively reducing the VOC vapor in soil. The report also proposes to turn off the following SVE wells: LFVES-6, LFVES-7, LFVES-8, LFVES-4, LFVES-9, LFVES-10, LVES-11, and LFVES-12.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/05/2009
Comments: The soil vapor extraction and treatment system and monitoring wells MW-4 and LF-2 have been properly shut down and decommissioned.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 09/24/2009
Comments: DTSC approves the Report with the following comment: Section 3.1 describes pre-grading soil sampling that was performed within the Building G foundation area. The soil samples were collected with a hand auger and transferred into sample jars. These samples were then composited at the analytical laboratory. This method of sampling is fine for metals, pesticides, and heavy-fraction TPH, but is not typically accepted for VOCs and TPH-gasoline due to the potential for volatile losses. The soil analytical results for VOCs and TPH-gasoline should, therefore, be considered biased low.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 09/17/2009
Comments: All changes DTSC requested will be made in future reports.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 11/09/2009
Comments: Report approved, but comments issued on the information needed in the future if a monitored natural attenuation remedy is to be considered.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 05/28/2010

DRAFT

MANSION GROVE (Continued) **1000593227**

Comments: GSU memo and cover letter sent

Completed Area Name: PROJECT WIDE

Background Info:	The Mansion Grove site contains a 29-acre apartment complex with approximately 950 residential units. The site is also known as the Lick Mill Creek Apartments. Contaminated soil was discovered during excavations for several building foundations. The site was used as ranchland until about 1851; for paper milling operations from 1874-1898; and for the manufacture and storage of various chemical compounds, including alcohol and solvents, solvent recycling and metal reclamation 1902-1980. At least ten companies operated onsite until 1980, when all manufacturing and chemical storage facilities were dismantled prior to residential development of the property. Paraldehyde and volatile organic compounds (VOCs), such as trichloroethylene (TCE), perchloroethylene (PCE), and vinyl chloride are the primary chemicals of concern. VOCs have been found in the soil in three areas, two of which require remediation. Contamination has been found in both shallow and intermediate groundwater aquifers. Currently all Mansion Grove residents drink water supplied by Hetch Hetchy. The groundwater treatment system was upgraded to improve system efficiency and to control offsite migration of contamination to adjacent properties (City park and residential homes) by the installation of three extraction wells in March 2003. Additionally, an extraction trench was installed in February 2004 at the downgradient edge of the park, as part of the Rivermark Project (See Profile 43990005).

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D004
Waste name: ARSENIC

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D007
Waste name: CHROMIUM

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR

DRAFT

X LAM TECHNOLOGIES (Continued) **1000417383**

MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste code: F007
Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS

Waste code: F009
Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

CA BOND EXP. PLAN:

Reponsible Party:	RWQCB REFERRAL SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Van Waters and Rogers, Inc., the responsible party is conducting cleanup activities under the direction of the RWQCB. The RWQCB will continue to have lead responsibility for monitoring Van Waters and Roger's progress under an existing cooperative agreement between the RWQCB, EPA and DHS. The RWQCB is conducting the work with support from the EPA through a cooperative agreement. Until such time as the RWQCB refers the site to DHS for follow-up using Bond funds, no money will be budgeted from this fund for this site.
Site Description:	Van Waters and Rogers is a division of Univar which operates a chemical blending, storage and distribution facility. The site encompasses about 12 acres in the City of San Jose. The facility contains about 36 underground tanks which store a variety of organic compounds.
Hazardous Waste Desc:	In 1982, soil and ground water contamination was discovered at the site. This contamination was caused by spillage, inadequate handling practices and/or leakage from tanks and piping. The following contaminants have been detected: trichloroethane (TCA), perchloroethylene (PCE), dichloroethane (DCA), dichloroethylene (DCE), methylene chloride, vinyl chloride, toluene, ketones, xylene and alcohols.
Threat To Public Health & Env:	Ground water contamination at the site represents a potential threat to public health and the environment. Domestic wells are located one-half mile downgradient of the site.
Site Activity Status:	Van Waters and Rogers, Inc, has installed and is operating a ground water extraction system. The lead responsibility within DHS for oversight of remedial activities at this site has been transferred to the regional facilities permitting unit.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D029
Waste name: 1,1-DICHLOROETHYLENE

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: D040

DRAFT

VAN WATERS & ROGERS, INC. (Continued) **1000136188**

Waste name: TRICHLOROETHYLENE

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Alias Name: VAN WATERS & ROGERS, INC.
Alias Address: 2256 JUNCTION AVE
SAN JOSE, CA 95131
Alias ID: 101
Alias Comments: PREVIOUS EPA ID# AZD 981 416 977
Site Description: VAN WATERS & ROGERS DSTRB SOLVENTS AT A PLT IN SAN JOSE,CA. FACIL OCCUPIES 13 ACRES SURROUNDED BY RESID/INDUS/BUSINESS AREAS.MONITORING WELLS ON-SITE CONTAM WITH SOLVENTS BELIEVEDTO RESULTED FR LOCALIZED SPILLS.220,000 DEPEND ON GRD WTR. Van Waters & Rogers site ("VW&R" or "the site") is located in the Santa Clara Valley, a gently-sloping alluvial plain. Major topographic relief features include the Diablo Range to the northeast and the Santa Cruz and Gavilan Ranges to the southwest. Nearby surface drainage features include Coyote Creek, approximately 1200 feet to the east of the site, and the Guadalupe River, approximately 6000 feet to the west. Both of these drainage features discharge into San Francisco Bay nine miles to the north. The 13.7 acre VW&R facility is located in a zoned commercial/industrial area, about three miles north of downtown San Jose. Land use in the vicinity of the site includes road and rail transportation corridors, light to heavy manufacturing facilities, warehouse and distribution facilities, oil storage facilities, riparian habitats, and agricultural plots. Land use immediately adjacent to the site includes road and rail transportation facilities; food products packaging and distribution facilities; a consumer electronics warehouse/distribution facility; a public utility yard, several small retail outlets; and vacant lots. The nearest municipal water supply wells are in the Breeding Avenue Well Field operated by the City of San Jose, about 2000 feet east-southeast and hydraulically upgradient of the site. Other wells are located to the north of Trimble Road, about 2500 feet to the north of the site. The majority of the active water-producing wells in the vicinity extract water from aquifers well beneath the A- and B- aquifers. Although the Santa Clara Valley was historically a predominantly agricultural area, no active or inactive agricultural wells have been identified in the area immediately downgradient from the site. The mobile home park located 1.5 miles to the northeast of the VW&R site is served by a municipal water supply system. The farm residence and other agricultural holdings north of the site are serviced by individual domestic water supply wells. The site is located within a triangle bounded by the Bayshore Freeway (U.S. Highway 101) to the west, the Nimitz Freeway (Interstate Highway 880) to the east, and Trimble Road/Montague Expressway to the north. The Santa Clara County light rail transportation corridor is located approximately 3000 feet to the west of the site. San Jose International Airport is located approximately two miles southwest of the site. The nearest residential areas are a mobile home park about 1.5 miles to the northeast (on the east side of the Nimitz Freeway) and an active farm approximately 2500 feet north of Trimble Road. A vacant lot that was formerly an agricultural plot is located immediately southeast of the site. The riparian habitats are those associated with the Guadalupe River and Coyote Creek. To the east of the site, on the west bank of Coyote Creek is a large oil and petroleum products storage facility. Northern San Jose was once a predominantly agricultural area, but has been intensively developed over the last 10 to 15 years. The land on which the Van Waters & Rogers site is located was used for agricultural purposes until 1975, when the site was purchased and developed by VW&R. Van Waters & Rogers, Inc., a wholly owned subsidiary of Univar, has operated a facility at the site since 1976. VW&R is a commercial chemical storage, handling and distribution facility that has been in operation since 1976. Principal operations and activities at the site include bulk chemical transfers between tank trucks, railroad tank cars, and underground storage tanks; chemical

VAN WATERS & ROGERS, INC. (Continued) **1000136188**

storage in drums and underground tanks; chemical blending, packaging, and distribution; and rinsing of containers. Fourteen of the underground storage tanks have been taken out of service and are currently empty. With the exception of one tank used for diesel fuel storage, VW&R presently uses, or has used in the past the tanks to store the following industrial chemicals: 1,1,1-trichloroethane (TCA), methylene chloride, tetrachloroethylene (PCE), selected aliphatic hydrocarbons, aromatic hydrocarbons (including xylene and toluene), ketones, glycols, and alcohols. Subsurface investigations at the VW&R site began in December 1982, following the California Regional Water Quality Control Board (RWQCB) survey of facilities in the San Francisco Bay Region known to handle hazardous materials and waste. Site investigations have been performed in phases by several consultants for VW&R since then under orders from the RWQCB. Subsurface investigations initiated at the site in December 1982 revealed the presence of various industrial chemicals in the soil and groundwater at the facility. These chemicals included TCA, trichloroethylene (TCE), PCE, 1,1-dichloroethane (DCA), 1,1- and 1,2-dichloroethylene (DCE), methylene chloride, vinyl chloride, toluene, xylene, ketones, and alcohol. The highest concentrations are located north of the open dock, the area where most chemical handling has occurred. On October 2, 1984, the Environmental Protection Agency (EPA) proposed adding the VW&R site to the National Priorities List (NPL), subject to regulation under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). Amendments to the Resource Conservation and Recovery Act (RCRA) by the Hazardous and Solid Waste Amendments (HSWA) of 1984 greatly expanded RCRA corrective action authorities. Pursuant to HSWA, EPA dropped the VW&R site from the list of proposed NPL sites in October 1989. As a RCRA Storage Facility, VW&R is subject to the corrective action authorities of Subtitle C of RCRA. Under the South Bay Multi-Site Cooperative Agreement between EPA and the RWQCB, the RWQCB has been acting as the lead regulatory agency for this site. A Record of Decision (ROD) for soil and groundwater (Operable Unit 1) at the Van Waters & Rogers Site was signed in September 1991.

Five-Year Status Review Vopak USA Inc. Page 2 San Jose, California February 27, 2002 1.1 PROJECT OVERVIEW(On April 2, 2001, Van Waters & Rogers, Inc. became Vopak USA Inc. (Vopak). Vopak operates a warehouse and distribution facility (the site) at 2256 Junction Avenue in San Jose, California. The principal operations at the site, which began in 1976, include bulk chemical transfer between tank trucks, railroad tank cars, and chemical blending and packaging. In the past, 37 underground storage tanks (USTs) have been used to store chlorinated and petroleum hydrocarbons. All 37 USTs have since been removed and currently, chemicals are stored in aboveground storage tanks (ASTs). Site Characterization Subsurface investigations began at the site in late 1982 at the request of the RWQCB. Site characterizations have identified two water-bearing zones, referred to as the "A-" and "B-" aquifers. The A-aquifer, which is present between depths of 10 and 45 feet below ground surface (bgs), has been further subdivided into the A-1 and A-2 zones. The A-1 zone is characterized by silty clays and clays. The underlying A-2 zone consists of sandy clays and clayey sands. The B-aquifer, which extends to about 90 feet below grade and consists of permeable sands and gravels, has been subdivided into the B-1 and B-2 zones. The B-1 and B-2 zones are similar but are separated by a thin stratum of silty clay and clayey silt. By February 2002, 43 wells and 2 deep exploratory borings have been installed at the site, 36 of which remain active. Historical ground water monitoring data have shown the past and/or continued presence of a number of dissolved organic compounds in soil and in the A- and B-aquifer wells. These compounds may be categorized as either volatile organic compounds (VOCs) or soluble oxygenated compounds, such as alcohols, glycols, and ketones. After several phases of subsurface characterization, a remedial investigation/feasibility study (RI/FS) report was submitted by Geosystem Consultants, Inc. (Geosystem, February 13, 1991) to the U.S. Environmental Protection Agency (EPA) and the RWQCB. In the RI/FS, seven compounds were selected as chemicals of concern (COCs) based on frequency of detection, maximum concentration, and health risk potential. The list of COCs included: Acetone 1,1-Dichloroethene (1,1-DCE) cis-1,2-Dichloethene (cis-1,2-DCE) Methylene chloride Tetrachloroethene (PCE) Trichloroethene (TCE) Vinyl chloride An eighth chemical, 1,1,1-trichloroethane (1,1,1-TCA), was added in the final list for target cleanup because of its designation as an indicator chemical. Other indicator chemicals were PCE and cis-1,2-DCE. These indicator chemicals have been used to simplify data evaluation and interpretation. Recent data, however, have demonstrated that 1,1,1-TCA concentrations have been reduced to levels which are no longer of concern.

Completed Date:	03/04/1993
Comments:	PCE and gasoline spills in June '84 and December '85 recently triggered countyt involvement. Preliminary assessment of 1987 recommended DTSC (then DHS) and city of San Jose review permit to upgrade spill containment. But also says No Further Action (NFA). No further action per EPA preliminary assessment for the site only determined that the hazard ranking score (HRS) would not admit it into National Priority List (NPL). DTSC's recommendation on re-evaluation of the site reflects the departments own criteria. Recommendation is County Lead. Limited DTSC involvement anticipated.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

File Location:	Not reported
Potential Media Affected:	Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Benzene, Other Chlorinated Hydrocarbons, Toluene, Xylene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	The Equilon site (formerly Shell Oil) is an operating petroleum product distribution terminal, which is used to store gasoline, diesel fuel, and fuel additives. The 9.6-acre site is located on the northeast side of Coyote Creek in a commercial area of San Jose. The site began operation in the mid 1960s, as it was constructed from 1964 to 1965. The site includes four (4) aboveground fuel tanks, three (3) aboveground fuel additive tanks, a (1) below-grade 4,000-gallon transmix tank, a four-lane fuel loading rack, three (3) aboveground wastewater tanks, and several buildings. The plant stores and distributes three (3) grades of gasoline from the truck loading rack.

Title:	13267 Requirement for Technical Reports/Information for Shell San Jose Terminal
Description:	13267 letter requires 5 report submittals aimed at achieving and demonstrating full delineation of TPH, BTEX, and MTBE impacts to groundwater, source identification and evaluation, and a comprehensive remedial action plan for all impacts. The letter also requires a report documenting storm water sampling to better evaluate storm water discharge threats and BMP appropriateness. Submittal due dates range from January 15, 2007 through August 15, 2007.

Environmental Interest/Information System

DRAFT

INTERNATIONAL LEADFRAME CORP (Continued) **1000217023**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 10/26/2004
Comments: RMDL - GW - DTSC approved the completion report for the installation and start up of the groundwater extraction trench. A Deed restriction was recorded on the portion of the site where the groundwater contamination exist which prevents use of the property for residential and other purposes. Alll allowed uses and developments of the property shall preserve the intergrity of the extraction trench, extraction wells, and groundwater treatment system and monitoring wells at the site.

Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 08/05/2011
Comments: During the inspection it was observed that the bolts were missing from the monitoring wells. Otherwise,the restricted portion of the Site complied with the conditions of the Deed Restriction.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 02/17/2002
Comments: RMDL - PH 3 - DTSC approved the implementation report for the Phase 3 area. Phase 3 consists of soil in the remaining 16 acres of the site, which is bounded on the north by Hope Drive, Lick Mill Boulevard on the west, Guadaluoe River on the east, and the Mansion Grove Apartments on the south. Between January 2001 and December 2001, approximately 55,000 cubic yards of contaminated soils were excavated from the Phase 3 area of the site and either disposed offsite or reused in the nearby CalTrans Highway 87 construction project.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 11/07/2001
Comments: Remedial action completed which consisted of excavation of contaminated soil containing metals and polynuclear aromomatic hydrocarbons (PAH) and disposed to an offsite facility.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 06/09/2003
Comments: DES - GW - DTSC approved the Remedial Design and Implementation Plan for ground water. Phase 4 consists of implementation of the groundwater remedy in the 2.2 acre area north of Mansion Grove apartments where groundwater contaminated with volatile organic constituents will be extracted and treated. The remedy consists of the installation of three extraction wells at the property boundary of Mansion Grove in March 2003 and the extraction trench at the leading edge of the contaminated groundwater in February 2004.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 07/12/2002
Comments: RMDL - PH 1 - DTSC approved the Remedial Action Implementation Report for Phase 1 area. Phase 1 consists of soils on approximately 130 acres generally bounded by Hope Drive on the north, Agnew Road on the

DRAFT

RIVERMARK PROPERTIES (Continued) **S105557606**

west, Lick Mill Boulevard on the east, and Montague Expressway on the south. Between December 20, 2000 and June 15, 2001, approximately 182,600 tons of soils contaminated with hazardous levels of arsenic, lead, mercury and DDT were excavated from Phase 1 and disposed at permitted landfill. Approximately 269,400 tons of soil contaminated with non-hazardous levels of arsenic, lead or PAHs were either transported to the CalTrans Highway 87 construction project for reuse, or to permitted landfill for disposal.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 12/19/2000
Comments: DTSC approved a remedial design for the soil removal activities.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 10/26/2004
Comments: DTSC approved the implementation of the remedial action which consisted of the installation of the exraction trench and the its treatment system, including the groundwater monitoring system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Plan
Completed Date: 11/20/2000
Comments: RAP - DTSC approved the RAP which required that any soil above the remedial goals be excavated and properly managed off-site. The groundwater beneath the site will be remediated by the construction of an extraction trench at the property boundary of Mansion Grove, and an additional extraction trench at the leading edge of the contaminated groundwater. The site cleanup was broken up into four phases to support development schedules for the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 08/16/2000
Comments: Approved the Remedial Investigation Report for the site which delineated the extent of soil and groundwater contamination. Soil was contaminated with the following: arsenic, lead, mercury, DDT, chlordane, polycyclic aromatic hydrocarbons (PAHs), perchloroethylene (PCE) and trichloroethylene (TCE). Groundwater investigation showed PCE, TCE, 1,1-dichloroethylene (DCE), cis-1,2-DCE, 1,2-dichloroethane (DCA) and vinyl chloride (VC) to be above the drinking water standards in the area north of the Mansion Grove Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 02/07/2008
Comments: The 5 Year Report indicates the existing system at the site is effective in controlling offsite migration of groundwater contaminants.

Comments: Approved the Remedial Investigation Report for the site which delineated the extent of soil and groundwater contamination. Soil was contaminated with the following: arsenic, lead, mercury, DDT, chlordane, polycyclic aromatic hydrocarbons (PAHs), perchloroethylene (PCE) and trichloroethylene (TCE). Groundwater investigation showed PCE, TCE, 1,1-dichloroethylene (DCE), cis-1,2-DCE, 1,2-dichloroethane (DCA) and vinyl chloride (VC) to be above the drinking water standards in the area north of the Mansion Grove Site.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

DRAFT

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/25/2014

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

DRAFT

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Latitude (North):	37.3989 - 37° 23' 56.04''
Longitude (West):	121.9275 - 121° 55' 39.00''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	594929.8
UTM Y (Meters):	4139460.5
Elevation:	26 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	37121-D8 MILPITAS, CA
Most Recent Revision:	1980

DRAFT

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

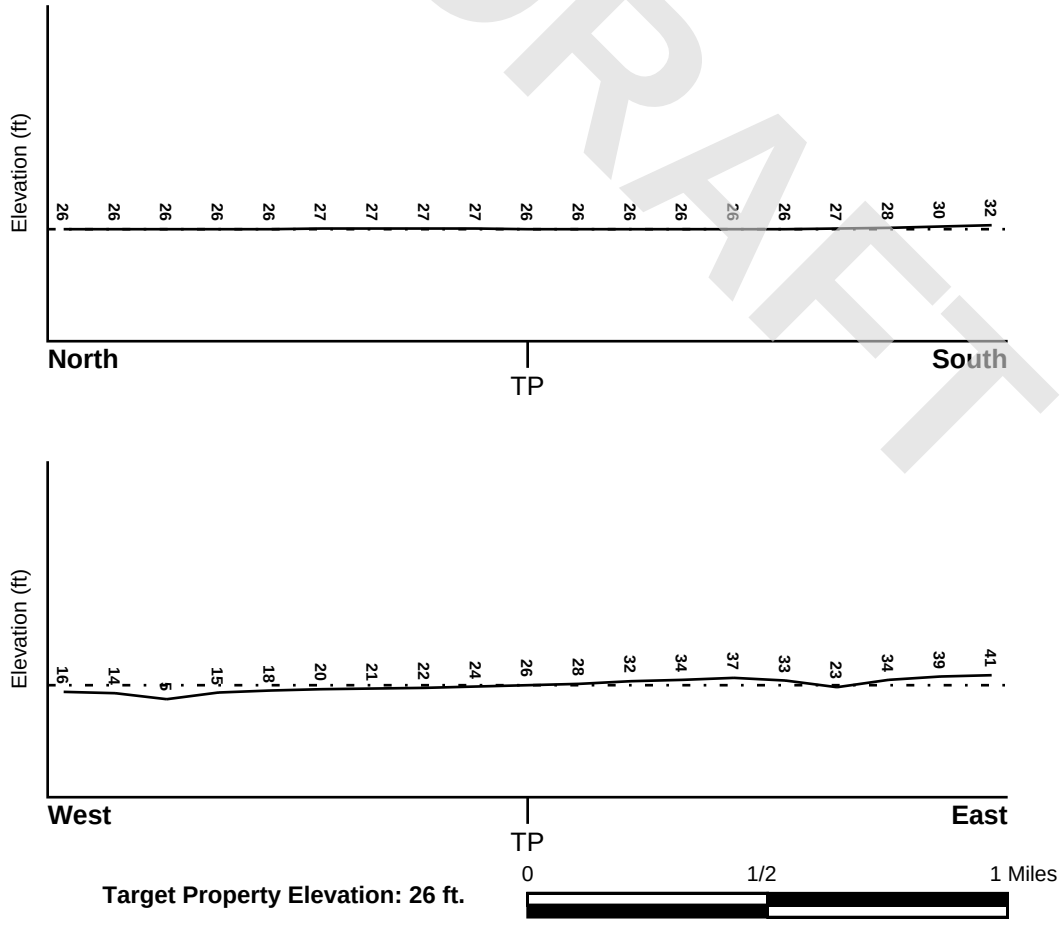
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

DRAFT

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 26 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SANTA CLARA, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06085C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MILPITAS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile West
Site Name:	Lick James Mansion/Mansion Grove
Site EPA ID Number:	CAD980735971
Surficial Aquifer Flow Dir.:	NOT AVAILABLE.
Measured Depth to Water:	approximately 12 feet.
Hydraulic Connection:	A confining layer separates the surficial and lower aquifers, but an interconnection between the aquifers occurs.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

DRAFT

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	BOTELLA
Soil Surface Texture:	clay loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

DRAFT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

DRAFT

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

DRAFT

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

HAZARDOUS MATERIALS BUSINESS PLAN CERTIFICATION FORM

For Use by Unidocs Member Agencies or where approved by your Local Jurisdiction
Authority Cited: Health and Safety Code §25503.3(c); 19 CCR §2729.5(c)

SANTA CLARA COUNTY
DEPT. OF ENV. HEALTH
2012 FEB -8 PM 12: 28

To: Agency Name: **County of Santa Clara Department of Environmental Health**
Agency Mailing Address: **1555 Berger Drive, Suite 300**
San Jose, CA 95112-2716

Pursuant to Section 25503.3(c) of California Health and Safety Code (HSC), the Hazardous Materials Business Plan (HMBP) certification described below is hereby submitted for the following facility:

Facility Name: **Ultratech, Inc.**

Facility Street Address: **3050 Zanker Road** City: **San Jose**

Date of Current HMBP: **8/28/2009**

I certify that: *(Check the appropriate box.)*

☒ I have personally reviewed the Hazardous Materials Business Plan currently on file with your agency and certify that the HMBP is complete and accurate. *(See bottom of page for details.)* If this facility is subject to Federal Emergency Planning and Community Right to Know Act (EPCRA) reporting requirements, I have submitted the following documents with this Certification Form: Unified Program Consolidated Form (UPCF) Business Activities page; UPCF Business Owner/Operator Identification page with current signature and date; Hazardous Materials Inventory Statement page(s) with an original signature, photocopy of an original signature, or signature stamp on each page for all Extremely Hazardous Substances (EHS) handled at or above their Federal Threshold Planning Quantity (TPQ) or 500 pounds, whichever is less.

or

☐ Revisions to the Hazardous Materials Business Plan are necessary. The HMBP as revised is complete and accurate and is being implemented. A copy of the revisions has been electronically submitted or is enclosed with this Certification along with a signed UPCF Business Owner/Operator Identification page and UPCF Business Activities page if the HMBP revision include changes to the Hazardous Materials Inventory Statement.

OWNER/OPERATOR CERTIFICATION: I hereby certify under penalty of law that, based upon my inquiry of those individuals responsible for obtaining the information reported above, I believe that the submitted information is true, accurate, and complete. I understand that a revised HMBP must be submitted within 30 days of any change in this facility's storage or handling of hazardous materials that would require updating of the HMBP.

Name of Owner/Operator *(Print)*: **Bruce R. Wright** Title: **Chief Financial Officer**

Phone: **None** Signature: Bruce R. Wright Date: 2/6/12

By checking the upper box on this form, you are certifying that:

- The information contained in the HMBP most recently submitted is complete, accurate, and up-to-date; **and**
- There has been no change in the quantity of any hazardous material as reported in the most recently submitted Hazardous Materials Inventory forms; **and**
- The facility has not begun handling any hazardous material in a HMBP reportable quantity that is not currently listed in the Hazardous Materials Inventory; **and**
- The most recently submitted HMBP contains the information required by Section 11022 of Title 42 of the United States Code; **and**
- There have been no substantial changes in the facility's operations that would require revision of the current HMBP.

VIOLATIONS: Codes noted below in the "Violation Codes" column represent specific violations of State law and/or local Ordinance. These codes are defined in the attached Violation Codes document(s). Time granted for correction of violations does not preclude any enforcement action by this Department or other agencies. This facility may be subject to reinspection at any time. Consent to Inspect Given By: TOM TRAN

Violation Codes	Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions	Corrective Actions Taken
G020	Observed several containers used for satellite accumulation of Hazardous waste improperly labeled. Hazardous waste labels were missing the generators name, address, physical state and Hazardous properties of the waste.	New satellite accumulation labels will include generator information such as name, address, physical state and haz property of the waste.
G111	Observed Eyewash and safety shower station in the metrology lab not being inspected monthly. Last inspection was recorded as 7/3/08. Implement a monthly inspection for all eyewash and safety shower stations as required in CAL OSHA.	Please see comments from Bldg 1 inspection form.

All violations must be corrected within 30 days of the inspection date unless noted otherwise, above. Section 25404.1.2(c)(1) of California Health and Safety Code (HSC) requires that you write a brief description of the corrective actions you have taken to bring this facility into compliance and submit it to HMCD within 5 days of achieving compliance, or within 35 days of the inspection date, whichever comes first. ***(Note: Detailed instructions on actions you must take are printed on the reverse side of this page.)***

Received by: Tom Tran Inspected by: Jose BUSTAMANTE Entered by: 1/9/09

Certification: I certify under penalty of perjury that this facility has complied with directives specified in this Notice to Comply.

2044 REV 8/06

THE OFFICIAL NOTICE OF INSPECTION EXPLAINED

This Official Notice of Inspection (NOI) describes the findings made during the inspection, including all violations and any actions that must be taken by the facility to correct the violations. All violations must be corrected within 30 days of the inspection date unless noted otherwise by the inspector.

Within five working days of achieving compliance, or within 35 days of the inspection, whichever comes first, you must submit a written response which describes the corrective actions you have taken or — for those violations which are impossible to correct within 30 days — propose to take in order to bring your facility into compliance. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. After you have addressed each violation, complete the certification box located at the bottom of page 1 of the NOI. **Your description of corrective actions taken, along with your signed certification of the NOI and any required supporting documents, will serve as your written response to this Notice to Comply.** Your response must be mailed to Santa Clara County Hazardous Materials Compliance Division (HMCD) at 1555 Berger Drive, Suite 300, San Jose, CA 95112-2716. The effective date of the certification that any violation has been corrected is the date that it is postmarked.

What Does the Information in Each Column Mean?

Violation Code: Codes listed in this column identify specific violations of laws, regulations, or codes which were observed during this inspection. Definitions of Violation Codes are listed on the attached Violation Codes document(s).

Summary of Violations, Notice to Comply, Observations, and Required Corrective Actions: Information noted in this column describes the circumstances of any violations noted in the first column and describes how the violations may be corrected. Additionally, the inspector may use this space to note any additional observations resulting from the inspection.

Corrective Actions Taken: This column on the NOI has been provided so that you can note how you have corrected or propose to correct each violation. Where proposed corrective actions are described, you must specify a date by which you expect each violation to be corrected. If more space is needed, attach additional pages.

Why Were Two Copies of the Notice of Inspection Given to Me?

You have been given two copies so you will have a copy for your own records after you submit your written response to HMCD. **Do not separate the copies until you have described all of your corrective actions and signed the certification box on page 1. The yellow copy of each page must be returned to HMCD. The pink copy is for your records.**

What if I Disagree With a Violation Noted on the Notice of Inspection?

If you disagree with any violation listed in this NOI, you must submit a written Notice of Disagreement to HMCD within 30 days of the inspection date. Address such notices to the attention of the inspector who cited the violation. In your Notice of Disagreement, you must explain in detail why you believe the violation does not exist. If there is sufficient space, you may use the "Corrective Actions Taken" column of this NOI to dispute violations.

What About Photographs or Samples Taken During the Inspection?

If samples were taken, split samples will be given to you upon request. Since this NOI was prepared and given to you at the end of the inspection, any photographs and sampling or laboratory results associated with the inspection were not yet available. A copy of any photographs and/or analytical results from sampling taken during this inspection will be provided to you upon written request. Other pertinent information derived from the inspection is attached to this NOI. Photographs and sample results may be withheld in the event of a criminal investigation or other ongoing investigation.

****

- **Per HSC §§25187.8(b) and 25404.1.2(c), failure to sign the certification on this Notice to Comply and return it to HMCD is a violation of State law.**
- **Per HSC §25404.1.2(c)(2), a false statement that compliance has been achieved is a misdemeanor.**
- **Per HSC §25191(b), a false statement that hazardous waste compliance has been achieved is a violation of State law punishable by a fine of not less than $2,000 or more than $25,000 and/or imprisonment in the county jail for up to one year.**
- **Per HSC §§25299(a)(8) and (b)(7), a false statement that underground storage tank compliance has been achieved is a violation of State law punishable by a fine of not less than $500 or more than $5,000.**
- **Per HSC §§25187.8(i), HMCD has the right to require the submittal of reasonable and necessary documentation in support of any claim of compliance made by your facility.**

Mr. Richard Bryson / Inspector
San Jose Fire Department / Haz-Mat
200 E. Santa Clara St., 2nd Floor Tower
San Jose, CA 95113-1905

RE: NXP Semiconductors USA Inc. - HMBP – 411 E. Plumeria, San Jose:

Dear Mr. Bryson:

Please consider the attached document as NXP Semiconductors USA, Inc.'s Tier 2 filing of their Updated 2012 Hazardous Materials Business Plan for their new facility now located at 411 E. Plumeria Drive, San Jose, CA 95114. I am not certain what might have happened to their earlier filing in September of 2011 when they first occupied the site, as they had not heard anything from either your agency or the Santa Clara County Environmental Health Department in this matter for their new facility. However, they are filing this documentation with you and with Mr. Ruben Williams of the County agency for good measure at this time to be certain that they are entered into the permitting system.

Please let me know if you will need anything else to complete this filing of NXP Semiconductors USA, Inc.s' Hazardous Materials Business Plan permit application for their facility at 411 E. Plumeria Drive, SJ. You may call me on my cell phone at 408-568-9400 if you should have any questions in this matter.

C.H.A.S.E. and NXP's management appreciate your assistance in this matter.

Sincerely,

William L. Sanborn, R.E.A. # 02690
C.H.A.S.E. President

FACILITY INFORMATION

BUSINESS ACTIVITIES

I. FACILITY IDENTIFICATION

FACILITY ID # *(Agency Use Only)*	1.	EPA ID # (Hazardous Waste Only) **CAR - (Permit Applied for)**	2.

BUSINESS NAME (Same as Facility Name or DBA - Doing Business As) 3.

NXP SEMICONDUCTORS USA, INC. - 411 EAST PLUMERIA DRIVE – SAN JOSE CA 95134

II. ACTIVITIES DECLARATION

NOTE: If you check YES to any part of this list, please submit the Business Owner/Operator Identification page (OES Form 2730).

Does your facility…		If Yes, please complete these pages of the UPCF…
A. HAZARDOUS MATERIALS Have on site (for any purpose) hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	☐ YES ☒ NO 4.	HAZARDOUS MATERIALS INVENTORY – CHEMICAL DESCRIPTION (OES 2731)
B. UNDERGROUND STORAGE TANKS (USTs) 1. Own or operate underground storage tanks?	☐ YES ☒ NO 5.	UST FACILITY (Formerly SWRCB Form A) UST TANK (one page per tank) (Formerly Form B)
2. Intend to upgrade existing or install new USTs?	☐ YES ☒ NO 6.	UST FACILITY UST TANK (one per tank) UST INSTALLATION - CERTIFICATE OF COMPLIANCE (one page per tank) (Formerly Form C)
3. Need to report closing a UST?	☐ YES ☒ NO 7.	UST TANK (closure portion – one page per tank)
C. ABOVE GROUND PETROLEUM STORAGE TANKS (ASTs) Own or operate ASTs above these thresholds: ---any tank capacity is greater than 1,320 gallons, or ---the total capacity for the facility is greater than 1,320 gallons?	☐ YES ☒ NO 8.	NO FORM REQUIRED TO CUPAs
D. HAZARDOUS WASTE 1. Generate hazardous waste?	☒ YES ☐ NO 9.	EPA ID NUMBER – provide at the top of this page
2. Recycle more than 100 kg/month of excluded or exempted recyclable materials (per H&SC §25143.2)?	☐ YES ☒ NO 10.	RECYCLABLE MATERIALS REPORT (one per recycler)
3. Treat hazardous waste on site?	☐ YES ☒ NO 11.	ONSITE HAZARDOUS WASTE TREATMENT – FACILITY (Formerly DTSC Forms 1772) ONSITE HAZARDOUS WASTE TREATMENT – UNIT (one page per unit) (Formerly DTSC Forms 1772 A,B,C,D and L)
4. Treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	☐ YES ☒ NO 12.	CERTIFICATION OF FINANCIAL ASSURANCE (Formerly DTSC Form 1232)
5. Consolidate hazardous waste generated at a remote site?	☐ YES ☒ NO 13.	REMOTE WASTE / CONSOLIDATION SITE ANNUAL NOTIFICATION (Formerly DTSC Form 1196)
6. Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned onsite?	☐ YES ☒ NO 14.	HAZARDOUS WASTE TANK CLOSURE CERTIFICATION (Formerly DTSC Form 1249)

E. LOCAL REQUIREMENTS 15.

(You may also be required to provide additional information by your CUPA or local agency.)

DRAFT

Emergency Response/Contingency Plan

(Hazardous Materials Business Plan Module)

Authority Cited: H&SC, Section 25504(b); Title 22, Div. 4.5, Ch. 12, Art. 3 CCR

All facilities that handle hazardous materials in specified quantities must have a written emergency response plan. In addition, facilities that generate 1,000 kilograms or more of hazardous waste per month, or accumulate more than 6,000 kilograms of hazardous waste on-site at any one time, must prepare a contingency plan. Because the requirements are similar, they have been combined in a single document, provided below, for your convenience. This plan is a required module of the Hazardous Materials Business Plan (HMBP). If you already have a plan that meets these requirements, you should not complete the blank plan, below, but you must include a copy of your existing plan as part of your HMBP.

This site-specific Emergency Response/Contingency Plan is the facility's plan for dealing with emergencies and shall be implemented immediately whenever there is a fire, explosion, or release of hazardous materials that could threaten human health and/or the environment. **At least one copy of the plan shall be maintained at the facility for use in the event of an emergency and for inspection by the local agency.** Within Santa Clara County, hospitals and police agencies have delegated receipt of these plans to the local agencies administering Hazardous Materials Business Plans, so additional copies need not be submitted. However, a copy of the plan and any revisions must be provided to any contractor, hospital, or agency with whom special (i.e. contractual) emergency services arrangements have been made *(see section 3, below)*.

1. Evacuation Plan:

a. The following alarm signal(s) will be used to begin evacuation of the facility *(check all that apply)*:

☐ Bells; ☒ Horns/Sirens; ☒ Verbal *(i.e. shouting)*; ☒ Other *(specify)* _____

b. ☒ Evacuation map is prominently displayed throughout the facility.

Note: A properly completed HMBP Site Plan satisfies contingency plan map requirements. This drawing (or any other drawing that shows primary and alternate evacuation routes, emergency exits, and primary and alternate staging areas) must be prominently posted throughout the facility in locations where it will be visible to employees and visitors.

2. a. Emergency Contacts*:

Fire/Police/Ambulance	Phone No. **911**
State Office of Emergency Services	Phone No. **(800) 852-7550**

b. Post-Incident Contacts*:

San Jose Fire Department Hazardous Materials Program	Phone No.: **(408) 277-8747**
Santa Clara County Hazardous Materials Compliance Division	Phone No.: **(408) 918-1900**
California EPA Department of Toxic Substances Control	Phone No. **(510) 540-3739**
Cal-OSHA Division of Occupational Safety and Health	Phone No.: **(408) 452-7288**
Bay Area Air Quality Management District	Phone No.: **(415) 771-6000**
Regional Water Quality Control Board	Phone No.: **(510) 622-2300**

** These telephone numbers are provided as a general aid to emergency notification. Be advised that additional agencies may be required to be notified.*

c. Emergency Resources:

Poison Control Center		Phone No. **(800) 876-4766**
Nearest Hospital:	Name: **REGIONAL MEDICAL CENTER of SAN JOSE**	Phone No.: **(408) 259-5000**
	Address: **225 N. Jackson Avenue**	City: **San Jose**

3. Arrangements With Emergency Responders:

If you have made special (i.e. contractual) arrangements with any police department, fire department, hospital, contractor, or State or local emergency response team to coordinate emergency services, describe those arrangements below:

_____

_____

DRAFT

4. Emergency Procedures:

Emergency Coordinator Responsibilities:

a. Whenever there is an imminent or actual emergency situation such as a explosion, fire, or release, the emergency coordinator *(or his/her designee when the emergency coordinator is on call)* shall:

   i. Identify the character, exact source, amount, and areal extent of any released hazardous materials.

   ii. Assess possible hazards to human health or the environment that may result from the explosion, fire, or release. This assessment must consider both direct and indirect effects *(e.g. the effects of any toxic, irritating, or asphyxiating gases that are generated, the effects of any hazardous surface water run-off from water or chemical agents used to control fire, etc.)*.

   iii. Activate internal facility alarms or communications systems, where applicable, to notify all facility personnel.

   iv. Notify appropriate local authorities *(i.e. call 911)*.

   v. Notify the State Office of Emergency Services at 1-800-852-7550.

   vi. Monitor for leaks, pressure build-up, gas generation, or ruptures in valves, pipes, or other equipment shut down in response to the incident.

   vii. Take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous materials at the facility.

b. Before facility operations are resumed in areas of the facility affected by the incident, the emergency coordinator shall:

   i. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from a explosion, fire, or release at the facility.

   ii. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.

   iii. Ensure that all emergency equipment is cleaned, fit for its intended use, and available for use.

   iv. Notify the California Environmental Protection Agency's Department of Toxic Substances Control, the County of Santa Clara's Hazardous Materials Compliance Division, and the local fire department's hazardous materials program that the facility is in compliance with requirements b-i and b-ii, above.

Responsibilities of Other Personnel:
On a separate page, list any emergency response functions not covered in the "Emergency Coordinator Responsibilities" section, above. Next to each function, list the job title or name of each person responsible for performing the function. Number the page(s) appropriately.

5. Post-Incident Reporting/Recording:

The time, date, and details of any hazardous materials incident that requires implementation of this plan shall be noted in the facility's operating record.

Within 15 days of any hazardous materials emergency incident or threatened hazardous materials emergency incident that triggers implementation of this plan, a written Emergency Incident Report, including, but not limited to a description of the incident and the facility's response to the incident, must be submitted to the California Environmental Protection Agency's Department of Toxic Substances Control, the County of Santa Clara's Hazardous Materials Compliance Division, and the local fire department's hazardous materials program. The report shall include:

a. Name, address, and telephone number of the facility's owner/operator;
b. Name, address, and telephone number of the facility;
c. Date, time, and type of incident *(e.g. fire, explosion, etc.)*;
d. Name and quantity of material(s) involved;
e. The extent of injuries, if any;
f. An assessment of actual or potential hazards to human health or the environment, where this is applicable;
g. Estimated quantity and disposition of recovered material that resulted from the incident;
h. Cause(es) of the incident;
i. Actions taken in response to the incident;
j. Administrative or engineering controls designed to prevent such incidents in the future.

DRAFT

6. Emergency Equipment:

22 CCR §66265.52(e) [as referenced by 22 CCR §66262.34(a)(4)] and the Hazardous Materials Storage Ordinance require that emergency equipment at the facility be listed. Completion of the following Emergency Equipment Inventory Table meets this requirement.

EMERGENCY EQUIPMENT INVENTORY TABLE

1. Equipment Category	2. Equipment Type	3. Locations *	4. Description**

Employee Training Plan

(Hazardous Materials Business Plan Module)

Authority Cited: H&SC, Section 25504(c); Title 22, Div. 4.5, Ch. 12, Art. 3 CCR

All facilities that handle hazardous materials must have a written plan for employee training. This plan is a required module of the Hazardous Materials Business Plan (HMBP). A blank plan has been provided below for you to complete and submit if you do not already have such a plan. If you already have a training plan, then you are not required to complete the blank plan below, but you must include a copy of your existing plan as part of your HMBP.

Check all boxes that apply. *[Note: Items marked with an asterisk (*) are required.]*:

1. **Personnel** are trained in the following procedures:

☒	Internal alarm/notification *
☒	Evacuation/re-entry procedures & assembly point locations*
☐	Emergency incident reporting
☐	External emergency response organization notification
☐	Location(s) and contents of Emergency Response/Contingency Plan
☒	Facility evacuation drills, that are conducted at least *(specify)* _ANNUALLY_ *(e.g. "Quarterly", etc.)*

2. **Chemical Handlers** are additionally trained in the following:

☒	Safe methods for handling and storage of hazardous materials *
☐	Location(s) and proper use of fire and spill control equipment
☐	Spill procedures/emergency procedures
☒	Proper use of personal protective equipment *
☒	Specific hazard(s) of each chemical to which they may be exposed, including routes of exposure *(i.e. inhalation, ingestion, absorption)* *
☒	**Hazardous Waste Handlers/Managers** are trained in all aspects of hazardous waste management specific to their job duties *(e.g. container accumulation time requirements, labeling requirements, storage area inspection requirements, manifesting requirements, etc.)* *

3. **Emergency Response Team Members** are capable of and engaged in the following:

☐	Personnel rescue procedures
☐	Shutdown of operations
☐	Liaison with responding agencies
☒	Use, maintenance, and replacement of emergency response equipment
☒	Refresher training, which is provided at least annually *
☒	Emergency response drills, which are conducted at least *(specify)* _ANNUALLY_ *(e.g. "Quarterly", etc.)*

DRAFT

Recordkeeping

(Hazardous Materials Business Plan Module)

All facilities that handle hazardous materials must maintain records associated with their management. A summary of your recordkeeping procedures is a required module of the Hazardous Materials Business Plan (HMBP). A blank summary has been provided below for you to complete and submit if you do not already have such a document. If you already have a brief written description of your hazardous materials recordkeeping systems that addresses all subjects covered below, you are not required to complete this page, but you must include a copy of your existing document as part of your HMBP.

Check all boxes that apply. The following records are maintained at the facility. *[Note: Items marked with an asterisk (*) are required.]*:

☒	Current employees' training records *(to be retained until closure of the facility)* *
☒	Former employees' training records *(to be retained at least three years after termination of employment)* *
☒	Training Program(s) *(i.e. written description of introductory and continuing training)* *
☒	Current copy of this Emergency Response/Contingency Plan *
☒	Record of recordable/reportable hazardous material/waste releases *
☒	Record of hazardous material/waste storage area inspections *
☐	Record of hazardous waste tank daily inspections * N/A
☐	Description and documentation of facility emergency response drills

Note: The above list of records does not necessarily identify every type of record required to be maintained by the facility.

A copy of the Inspection Check Sheet(s) or Log(s) used in conjunction with required routine self-inspections of your facility must be submitted with your HMBP. *(Exception: Available from your local agency is a Hazardous Materials/Waste Storage Area Inspection Form that you may use if you do not already have your own form. If you use the example provided, you do not need to attach a copy.)*

Check the appropriate box:

☒	We will use the "Hazardous Materials/Waste Storage Area Inspection Form" (Document No. UN-023) to document inspections.
☐	We will use our own documents to record inspections. *(A blank copy of each document used must be attached to this HMBP.)*

DRAFT

SECTION VII. - RECORDKEEPING **SEPT. 2011 / REV. 0**

411 EAST PLUMERIA DRIVE : ALL DEPARTMENTS & CHEMICAL LOCATIONS:

MAILING ADRESS:
NXP SEMICONDUCTORS USA, INC.;
411 EAST PLUMERIA DRIVE
SAN JOSE, CA 95134

Inspection Program Description: Inspections of storage areas at NXP Semiconductors are conducted weekly by the supervisors (or their designees) responsible for each storage facility. The weekly inspection checklists are maintained by the supervisors. Checklist files are maintained for a minimum of three years in or near the storage facilities. These files are subject to periodic unannounced audits by NXPs' Environmental/Safety representatives.

You are required to keep inspection logs or check-sheets designed to be used in conjunction with routine inspections for all storage facilities or areas as well as for continuous monitoring systems for underground tanks. Sample forms are attached for your use. Check the appropriate box below.

[XXX] We will use the sample forms (UN-023) in our routine inspection program.

[ ] We will not use the sample forms. (If you choose not to use the sample forms, provide for review and approval copies of the forms you will be using.) See attached forms for review and approval.

The following personnel will be responsible for monitoring and/or maintaining equipment.

SEPT. 2011 / REV. 0

Name FRANK MARTINS Title FACILITIES OPNS & PLANNING MGR.

Name TIM REDDING Title SECURITY SUPERVISOR

Note: If you have continuous monitoring-equipment, you must maintain copies of results for all service and maintenance work. Such reports shall be available for review at the site and shall be submitted to the San Jose Fire Department upon request.

DRAFT

Hazardous Material/Waste Aboveground Storage Area Inspection Form

Area Inspected: _____

Date	Inspector's Initials	Storage area free of spills and leaks	Containers and storage area properly labeled	Containers within secondary containment	Fire extinguishers serviced and tagged	Hazardous waste labels complete and visible	Eye wash, safety shower, ER equipment functional	Containers sealed with tight-fitting lids/bungs	Incompatibles properly segregated	Waste not stored over allowable time	Comments

Explain any problems found and corrective actions taken in the "Comments" section.
THIS FORM DOES NOT APPLY TO UNDERGROUND TANKS - Maintain completed forms at Safety Station

ZONING INFORMATION

THE ZONING INFORMATION WAS PROVIDED BY
PZR, THE PLANNING & ZONING RESOURCE CORPORATION
100 NORTH EAST 5TH ST.
OKLAHOMA CITY, OK 73104
405-840-4344

PZR SITE NO. 79882-1
DATED 11/18/2014

CURRENT ZONING – IP, INDUSTRIAL PARK DISTRICT
SETBACKS

FRONT	15 FEET
SIDE	0 FEET
REAR	0 FEET
HEIGHT	50 FEET
PARKING	25 Feet From Street Rights-of-Way; 0 Feet From Interior Lot Lines; 25 Feet From Interior Lots Lines Abutting a Residential District
PARKING SPACE REQUIREMENT	1 SPACE PER 350 SQ.FT. GROSS FLOOR AREA. 1,014 REQUIRED
DENSITY	NONE

*ZONING AND RESTRICTIONS SHOWN HEREON WERE OBTAINED BY A GENERAL REQUEST AT THE PUBLIC COUNTER OF THE ABOVE NAMED DEPARTMENT. NO REPRESENTATION IS MADE FOR THE ACCURACY OR COMPLETENESS OF SAID THIRD PARTY INFORMATION. THIS FIRM IS NOT AN EXPERT IN THE INTERPRETATION OF COMPLEX ZONING ORDINANCES, COMPLIANCE IS BEYOND THE SCOPE OF THIS SURVEY. ANY USER OF SAID INFORMATION IS URGED TO CONTACT THE LOCAL AGENCY DIRECTLY.

GENERAL NOTES

OBSERVED NO DISCERNIBLE EVIDENCE OF EARTH MOVING WORK, BUILDING CONSTRUCTION OR BUILDING ADDITIONS WITHIN RECENT MONTHS

OBSERVED NO DISCERNIBLE EVIDENCE OF RECENT STREET OR SIDEWALK CONSTRUCTION OR REPAIR.

THERE IS NO KNOWN CHANGES TO THE STREET RIGHT OF WAY LINES.

OBSERVED NO DISCERNIBLE EVIDENCE OF SITE BEING USED AS A SOLID WASTE DUMP, SUMP OR SANITARY LANDFILL.

OBSERVED NO DISCERNIBLE EVIDENCE OF SITE BEING USED AS A CEMETERY OR BURIAL GROUNDS.

THE EXISTENCE AND LOCATION OF ALL UTILITIES, PIPES, POLES, AND/OR STRUCTURES SHOWN ON THIS SURVEY WERE OBTAINED BY OBSERVED EVIDENCE ONLY. THE POINT OF ENTRY ON SAID UTILITIES CANNOT BE DETERMINED

ALL FIELD MEASUREMENTS MATCHED RECORD DIMENSIONS WITHIN THE PRECISION REQUIREMENTS OF ALTA/ACSM SPECIFICATIONS UNLESS OTHERWISE SHOWN.

SURVEY IS CERTIFIED FOR THIS REAL ESTATE TRANSACTION ONLY AND NOT FOR FUTURE PURCHASES (OTHER THAN TO ASSIGNEES OR TRANSFEREES WITH RESPECT TO ANY TRANSFER OF THE RELATED NOTE AS TO SUCCESSORS OR ASSIGNS THEREOF WHETHER BY PURCHASE OR OPERATION OF LAW) OR REAL ESTATE TRANSACTIONS.

THIS SURVEY IS BEING PROVIDED SOLELY FOR THE USE OF THE CURRENT PARTIES AND THEIR SUCCESSORS AND/OR ASSIGNS; NO LICENSE HAS BEEN CREATED, EXPRESS OR IMPLIED, TO COPY THE SURVEY EXCEPT AS IS NECESSARY IN CONJUNCTION WITH (I) THE ORIGINAL TRANSACTION, (II) DISCLOSURES REQUIRED TO SECURITIZE ANY RELATED LOAN, (III) WITH RESPECT TO ANY SUBSEQUENT SALE OR TRANSFER OF THE LOAN, OR (IV) IN CONJUNCTION WITH ANY FUTURE EXERCISE OF REMEDIES BY OR ON BEHALF OF THE THEN OWNER OF THE NOTE INCLUDING ANY NOTE SALE OR REO SALE DUE DILIGENCE PACKAGE.

THIS SURVEY MAY NOT CONTAIN SUFFICIENT DETAIL FOR DESIGN PURPOSES. THE BOUNDARY DATA AND TITLE MATTERS AS SHOWN HEREON HAVE BEEN DEVELOPED FROM THE REFERENCED TITLE REPORT.

UNLESS THIS PLAN HAS THE SEAL AND SIGNATURE OF THE SURVEYOR AND/OR ENGINEER RESPONSIBLE FOR ITS PREPARATION, THIS IS NOT AN AUTHENTIC COPY OF THE ORIGINAL SURVEY AND SHALL NOT BE DEEMED RELIABLE.

THIS PROPERTY IS NOT LOCATED IN A WETLANDS AREA ACCORDING TO THE NATIONAL WETLANDS INVENTORY WEBSITE, WWW.FWS.GOV/WETLANDS

THE PROPERTY DEPICTED HEREON ABUTS, WITH NO GAPS OR GORES, AND HAS PEDESTRIAN AND VEHICULAR ACCESS TO ZANKER ROAD, JUNCTION AVENUE, AND PLUMERIA DRIVE, ALL PUBLIC RIGHTS OF WAY.

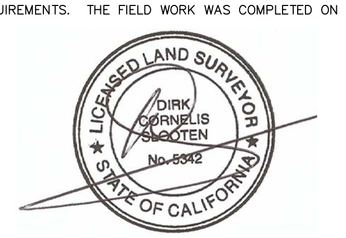
SURVEYOR'S CERTIFICATION

TO:
METROPOLITAN LIFE INSURANCE COMPANY, METLIFE INSURANCE COMPANY USA, AND GENERAL AMERICAN LIFE INSURANCE COMPANY, AND THEIR AFFILIATES AND THEIR RESPECTIVE SUCCESSORS AND/OR ASSIGNS;
CHICAGO TITLE COMPANY;
MONTAGUE PARK JUNCTION , LLC;
FIRST AMERICAN TITLE INSURANCE COMPANY;

THIS IS TO CERTIFY THAT THIS MAP OR PLAT AND THE SURVEY ON WHICH IT IS BASED WAS MADE IN ACCORDANCE WITH THE 2011 MINIMUM STANDARD DETAIL REQUIREMENTS FOR ALTA/ACSM LAND TITLE SURVEYS, JOINTLY ESTABLISHED AND ADOPTED BY ALTA AND NSPS AND INCLUDES ITEMS 2 THROUGH 4, 6(A)-(B), 7(A),7(B1), 7(C), 8, 9, 10(A), 10(B), 11(A), 11(B), 13, 14, 16-19, AND 21 OF TABLE A THEREOF, AND THE UNDERSIGNED HAS PROVIDED TO THE ABOVE-NAMED PARTIES A CERTIFICATE OF INSURANCE EVIDENCING PROFESSIONAL LIABILITY INSURANCE MAINTAINED IN ACCORDANCE WITH ITEM 21 OF SAID TABLE A. THIS SURVEY INCLUDES THE METROPOLITAN REQUIREMENTS. THE FIELD WORK WAS COMPLETED ON NOVEMBER 7, 2014.

DIRK C SLOOTEN
REGISTERED LAND SURVEYOR LS 5342
IN THE STATE OF CALIFORNIA
DATE OF PLAT OR MAP 12/3/2014



FLOOD NOTE: By graphic plotting only, this property is in Zone(s) SHADED X AND AO of the Flood Insurance Rate Map, Community Panel No. 06085C0068H which bears an effective date of 05/18/2009 and is not in a Special Flood Hazard Area. By telephone call dated 11-11-2014 to the National Flood Insurance Program (800-638-6620) we have learned this community does currently participate in the program. No field surveying was performed to determine this zone and an elevation certificate may be needed to verify this determination or apply for a variance from the Federal Emergency Management Agency.

*A PORTION OF THE PROPERTY ALONG ZANKER ROAD IS AFFECTED BY ZONE AO. THE REST OF THE SITE INCLUDING THE BUILDINGS IS IN ZONE SHADED X.

Subject: Voluntary Cleanup Program Case Closure: Lockheed Martin, 3100 Zanker Road, San Jose, California

Ladies and Gentlemen:

This letter confirms the completion of site investigation and remedial action activities for the release of waste formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the release of waste are greatly appreciated.

Based on information in the above-referenced file, and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and remedial action carried out at the above-referenced site satisfies the cleanup goal requirements of the remedial action agreement between the responsible party and the Department of Environmental Health as outlined in Section 101480 of the Health and Safety Code, and that no further action related to the release of waste at the site is required. It should be noted that any additional or previously unidentified contamination at this site might require further investigation or cleanup.

Board of Supervisors: Mike Wasserman, Cindy Chavez, Dave Cortese, Ken Yeager, S. Joseph Simitian
County Executive: Jeffrey V. Smith

The data collected at the site and presented in the case closure summary, Section 3, indicates the following conditions were reported at the site at the time of closure:

- Soil - Soil samples were not collected during the investigations at this site. Soil in the elevator pit was noted to be stained and saturated with product. Soil in this area is impacted similarly to the groundwater as listed below.
- Groundwater – 1,150,000 parts per billion (ppb) Total Petroleum Hydrocarbons as Hydraulic Oil (TPHho)

Residual contamination in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. The County and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement.

A Site Management Plan has been prepared and should be followed to prevent unnecessary exposure to the residual contamination located under the site building. The Site Management Plan requires that notification be made to the Department of Environmental Health (DEH) should there be elevator maintenance in this area that would require removal of soil and/or groundwater. Additionally, notification needs to be made to DEH if additional releases occur in this elevator.

This notice is issued pursuant to subdivision (e) of Section 101480 of the Health and Safety Code. Please contact our office if you have any questions regarding this matter.

Sincerely,

Jim Blamey

Jim Blamey
Director

Hazardous Materials Compliance Division

CASE CLOSURE SUMMARY[1]
Voluntary Cleanup Program

Date: December 10, 2013

I. AGENCY INFORMATION

Agency Name: County of Santa Clara, Department of Environmental Health	Address: 1555 Berger Drive, #300
City/State/Zip: San Jose, CA 95112	Phone: (408) 918-3400
Responsible Staff Person: Lani Lee	Title: Senior Hazardous Materials Specialist

II. CASE INFORMATION

Site Facility Name: Lockheed Martin			
Site Facility Address: 3100 Zanker Road, San Jose 95134			
VCP Case No.: 06S1W24D01s	URF Filing Date: --	APN: 097-33-105	
Responsible Parties	Address	Phone Number	
Lockheed Martin Space Systems Company c/o Allen Lund	1111 Lockheed Martin Way, Orgn 9K2S, Bldg. 157 Sunnyvale, CA 94089	(408) 756-0538	
Lockheed Martin IS&GS c/o Cynthia Rittenhouse	3130 Zanker Rd. P.O. Box 49041 San Jose, CA 95161	(408) 473-4311	
Boston Properties c/o Kelley Hattley	303 Almaden Blvd., Suite 120 San Jose, CA 95110	(408) 885-9110	
System/Source of Contamination	Contents	Closed In Place/Removed?	Date
Elevator Shaft	Hydraulic Oil	Existing	8/09

III. RELEASE AND SITE CHARACTERIZATION INFORMATION

Cause and Type of Release: Release from Elevator		
Site characterization complete? Yes		
Monitoring wells installed? Yes	Number: 3	Proper screened interval? Yes
Highest GW Depth Below Ground Surface: 8.42'	Lowest Depth: 12.99'	Flow Direction: Westerly
Most Sensitive Current Use: Potential Drinking Water		
Summary of Production Wells in Vicinity: There are numerous environmental monitoring wells within a ¼-mile radius of the site. There are 2 inactive water supply wells in the upgradient to cross-gradient groundwater flow direction. Both wells are reported to have seals of greater than 150 feet. The closest well is approximately 330 feet to the south of the elevator location.		

[1] This case closure summary report is a summary of site conditions based on data collected at the site and included in the case file. It should be used in conjunction with the complete case file which can be reviewed online at http://geotracker.waterboards.ca.gov/

DRAFT

Lockheed Martin
3100 Zanker Road, San Jose
06S1W24D01s

Are drinking water wells affected? No	Aquifer Name: Santa Clara Valley Basin
Is surface water affected? No	Nearest SW Name: None within a ¼-mile radius of the site
Off-site Beneficial Use Impacts (Addresses/Locations): None.	
Reports on file? Yes	Where are reports filed? SWRCB Geotracker Database

TREATMENT AND DISPOSAL OF AFFECTED MATERIAL

Material	Amount (Include Units)	Action (Treatment or Disposal w/Destination)	Date
Free Product	6,500 gals. of FP and groundwater 12 drums	Disposed; Clean Harbors, Aragonite, UT and Kimball, NE Disposed; Clean Harbors, Buttonwillow, CA	10/09
Soil	--	--	--

Description of Interim Remediation Activities: free product and groundwater removal

CONTAMINANT CONCENTRATIONS IN SOIL[1]

	Soil (ppm)			Soil (ppm)	
Contaminant	Max		Contaminant	Max	
TPH (Hydraulic Oil)	Note[1]				

Notes:

1. Soil samples were not collected during the investigations at this site. Soil in the elevator pit was noted to be stained and saturated with product. Soil in this area is impacted similarly to the groundwater as listed below.

CONTAMINANT CONCENTRATIONS IN GROUNDWATER[1]
Please see Attachment 3 for additional information on contaminant locations and concentrations

	Water (ppm*)	
Contaminant	Maximum[2]	Monitoring Wells (most recent)
TPH (Hydraulic Oil)	1,150,000[3]	Not Detected[5]
TPH (Diesel)	ND[3]	
Benzene	ND[3]	
Toluene	ND[3]	
Ethylbenzene	ND[3]	
Xylenes	ND[3]	
PAHs[4]	ND[3]	

Notes:

1. This table presents maximum historical contaminant concentrations and most recent contaminant concentrations in groundwater. Only TPH(ho) was detected above the laboratory reporting limit and was due to the presence of free product. These concentrations are reported in parts per million (ppm).
2. The maximum concentration listed is the highest concentration reported for a specific constituent in groundwater samples collected at the site.
3. Grab groundwater and product samples (Top and Bottom) collected from the elevator shaft on 8/14/09. Due to the presence of building structural footings, a recovery well could not be installed within the elevator pit nor in the vicinity.
4. PAHs – Polynuclear Aromatic Hydrocarbons
5. 3 groundwater monitoring wells were installed onsite and sampled semi-annually for 2.5 years. All samples collected from these monitoring wells were not reported to have concentrations present above the laboratory reporting limits for TPH(ho). Note it is likely that Free Product is still present in the area of the elevator pit.

DRAFT

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes
Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes
Does corrective action protect public health for current land use? Environmental Health Department staff does not make specific determinations concerning public health risk. However, it does not appear that the release would present a significant risk to human health.
Site Management Requirements: The site is currently occupied by office buildings with associated parking areas and landscaping. Residual contamination both in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. Therefore, the impact of the disturbance of any residual contamination or the installation of water well(s) in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time. A Site Management Plan (Attachment 4) has been prepared and should be followed to prevent unnecessary exposure to the residual contamination located under the site building. The Site Management Plan requires that notification be made to the DEH should there be elevator maintenance in this area that would require removal of soil and/or groundwater. Additionally, notification needs to be made to DEH if additional releases occur in this elevator.
Should corrective action be reviewed if land use changes? Yes; See Site Management Requirements

Number of Wells Commissioned: 3	Number of Wells Decommissioned: 0	Number of Wells Retained: 3*
List Enforcement Actions Taken: None.		
List Enforcement Actions Rescinded: None.		

* All monitoring wells will be properly destroyed prior to issuance of the closure letter and associated documents.

V. ADDITIONAL COMMENTS, DATA, ETC.

Site History:
2009 – In August, during routine elevator servicing, it was noted that hydraulic fluid had been released into the ram casing and surrounding soil within elevator shaft number one. The cause and duration of the release is unknown. Approximately 6,500 gallons of fluid (FP) with groundwater was removed from the ram casing. Approximately ½-inch of hydraulic oil was measured in the ram casing following the pump out. It was estimated that the maximum volume lost was 150 gallons.

The extracted liquid was profiled for disposal (samples Top and Bottom). The profile analysis included testing for Polynuclear Aromatic Hydrocarbons (PAHs), Benzene, Toluene, Ethylbenzene and Xylenes (BTEX); of which none were reported to be present above the laboratory reporting limits. The sample was reported to contain 1,150,000,000 parts per billion (ppb) Total Petroleum Hydrocarbons (TPH) as Hydraulic Oil (TPHho). The profile states that Polychlorinated Biphenyls (PCBs) were not present in the waste stream.

In October, 2 soil borings were advanced immediately adjacent to the ram casing to approximately 18 feet below the ground surface (ft bgs). The opening in the floor for the elevator shaft is wider than the shaft casing and is not covered with concrete. Approximately 45 minutes following completion of the boring,

DRAFT

FP was measured to be present at a thickness of approximately 2.7 feet. The boring was backfilled with soil cuttings. The second boring collapsed following completion. Strong hydrocarbon odors were noted in the boring log from 3.5-18 ft bgs. Soil was noted to be saturated with product from 12-18 ft bgs. Soil samples were not reported to have been collected for chemical analysis due to the clear presence of product.

A new secondary containment and hydraulic jack assembly were installed in the elevator pit and the elevator brought back online.

2010 – In October, 3 monitoring wells (MW1 through MW3) were installed onsite outside of the building to depths of 18-21 ft bgs. Groundwater was encountered between 13-17 ft bgs. Due to the distance of the wells from the release site, soil samples were not collected for laboratory analysis.

In December, they attempted to install a recovery well within elevator shaft number one. A concrete slab, believed to be a structural footing for the building was encountered at 2 locations within the elevator shaft preventing the installation of the well. Due to the central location of the elevator within an office building and presence of these structural footings, borings and or wells could not be advanced within the building.

The new wells were sampled semi-annually for a period of two years.

2012 – In June, the final groundwater monitoring event was conducted. The groundwater at the site was analyzed for TPHho and it was never reported to be present in the wells.

2013 – In November, a Site Management Plan was submitted that was agreed to by both Lockheed Martin and the property owner, Boston Properties.

Considerations and/or Variances:
The release of hydraulic fluid was from an elevator shaft located centrally within an office building. Due to the location and limited access within the elevator room, it was not possible to remove impacted soil in this area. This also prevented the installation of a recovery well, as proposed, to remove the product released. Product remains in this area that is impacting both soil and groundwater. It is estimated that 150 gallons of product was lost and approximately 6,500 gallons of groundwater and product were removed from the ram casing.

A Site Management Plan is in place that includes the need for notification of DEH if work is done in the area of the elevator that may encounter the contamination. At that time, soil and/or groundwater removal may be required. If additional releases occur from the elevator they are to be reported to the DEH. Should the building be demolished, additional investigation in this area will be conducted to determine the site conditions at that time. Remediation could also be required to be done at that time.

VI. CLOSURE CRITERIA

Pollutant Sources are Identified and Evaluated and the Site is Adequately Characterized:
The site is currently occupied by office buildings with associated parking and landscaped areas. The site is adequately characterized through soil and groundwater investigations. Groundwater monitoring was conducted semi-annually for two years. Contamination was not detected in the groundwater monitoring wells.

Exposure Pathways, Receptors, and Potential Risks, Threats, and Other Environmental Concerns are Identified and Assessed:
Nearby receptors were identified, and exposure pathways such as direct contact, inhalation and ingestion of contaminants in soil and groundwater were investigated and assessed through soil and groundwater sampling and testing.

A Site Management Plan is in place that includes the need for notification of DEH if work is done in the

DRAFT

area of the elevator that may encounter the contamination. At that time, soil and/or groundwater removal may be required. If additional releases occur from the elevator they are to be reported to the DEH. Should the building be demolished, additional investigation in this area will be conducted to determine the site conditions at that time. Remediation could also be required to be done at that time.

Pollutant Sources are Remediated to the Extent Feasible:
Approximately 6,500 gallons of free product and groundwater were pumped out of the elevator pit. Due to the location of the elevator shaft within an office building and the presence of footings for the building, additional remediation could not be completed. A new secondary containment and jack assembly were installed within the ram casing.

A Site Management Plan is in place that includes the need for notification of DEH if work is done in the area of the elevator that may encounter the contamination. At that time, soil and/or groundwater removal may be required. If additional releases occur from the elevator they are to be reported to the DEH. Should the building be demolished, additional investigation in this area will be conducted to determine the site conditions at that time. Remediation could also be required to be done at that time.

Unacceptable Risks to Human Health, Ecological Health, and Sensitive Receptors, Considering Current and Future Land and Water Uses, are Mitigated:
The residual contamination in soil and groundwater at the site do not pose unacceptable risks to human health. TPH(ho) in groundwater is above the Regional Water Quality Control Board's groundwater screening levels for drinking water. Based on the results of the groundwater sampling, the presence of hydraulic oil in soil and groundwater at the site are not a risk to indoor air.

The TPHho in soil is confined to depths of 3.5 ft bgs and is located under the building; therefore it does not pose a direct contact, inhalation and ingestion risk to human receptors.

A Site Management Plan is in place that includes the need for notification of DEH if work is done in the area of the elevator that may encounter the contamination. At that time, soil and/or groundwater removal may be required. If additional releases occur from the elevator they are to be reported to the DEH. Should the building be demolished, additional investigation in this area will be conducted to determine the site conditions at that time. Remediation could also be required to be done at that time.

Unacceptable Threats to Groundwater and Surface Water Resources, Considering Existing and Potential Beneficial Uses, are Mitigated:
The residual contamination in soil and groundwater at the site does not pose an unacceptable risk to groundwater and surface water resources. It is likely that the concentration of contaminants will decrease by natural processes over time.

A Site Management Plan is in place that includes the need for notification of DEH if work is done in the area of the elevator that may encounter the contamination. At that time, soil and/or groundwater removal may be required. If additional releases occur from the elevator they are to be reported to the DEH. Should the building be demolished, additional investigation in this area will be conducted to determine the site conditions at that time. Remediation could also be required to be done at that time.

Conclusion:
The Department of Environmental Health believes that the residual soil and groundwater contamination at the site does not pose a continuing, significant threat to groundwater resources, human health, or the environment. Regional Water Quality Control Board objectives have not been compromised. The investigation was performed in accordance with state and local guidelines. The Department of Environmental Health recommends that this site be closed.

SUBJECT: SITE MANAGEMENT PLAN . SCCO CASE NO. 6S1W24D01S – LOCKHEED MARTIN IS & GS. 3100 ZANKER ROAD, SAN JOSE, CA.

Dear Ms. Lee:

In response to your letter request dated March 28, 2013, Lockheed Martin Information Systems and Global Services (Lockheed Martin IS & GS) is submitting this Site Management Plan (SMP) for the property located at 3100 Zanker Road in San Jose, CA (the Site, Figure1). The SMP addresses actions that will be taken if any work conducted at the Site encounters the residual contamination under the building and what steps will need to be taken should the building be demolished and the impacted soils be encountered.

Background

During routine elevator service operations conducted in August 2009, it was noted that hydraulic fluid had been released into the ram casing and surrounding soil within elevator shaft number 1 at the Site (Figure 2). The San Jose Fire Department and Santa Clara County were verbally notified of the release on August 12, 2009. Following the release, Lockheed Martin removed approximately 6,500 gallons of fluids, comprised of a mixture of hydraulic fluid and groundwater from the ram casing. Extracted fluids were transported off-site to a licensed transport and disposal facility for disposal. Approximately 0.5 inches of hydraulic oil were measured within the ram casing following the fluid removal.

To assess whether hydraulic fluids had migrated beyond the ram casing, two soil borings were installed immediately adjacent to the ram casing on October 6, 2009. The borings were installed using a hand auger and were advanced to 18 feet bgs.

Attachment # 4
Site Management Plan

Product thickness was measured in one soil boring (the second boring collapsed following installation) at 2.70 feet 45 minutes following completion of the boring. The hand auger boring was backfilled with soil cuttings following measurement of product thickness. No soil samples were submitted for analysis due to the presence of free product and strong hydrocarbon odors emanating from the soil.

Lockheed Martin IS & GS attempted to install a product recovery well within the floor of the elevator shaft to remove residual floating product from the release area. Numerous attempts to install the product recovery well were made, however structural building footings were encountered immediately beneath the floor of the elevator shaft which prevented installation of the well. Following this discovery, Lockheed Martin IS & GS contacted the county and it was agreed that installation of three monitoring wells and semi-annual groundwater monitoring to evaluate the distribution and transport of hydraulic oil within the subsurface was appropriate. Lockheed Martin then proceeded to install three monitoring wells (MW-1, MW-2 and MW-3) in October 2010 and initiated a semi-annual groundwater monitoring program in June 2011. A total of five semi-annual groundwater monitoring events have been conducted at the Site since that time. No hydrocarbons have been detected in any of the wells since the monitoring program was initiated.

Site Management Plan

As a condition of obtaining Site closure from the county, Lockheed Martin IS & GS has negotiated an agreement with Boston Properties, the Site owner, to address any potential future Site activities that could result in contact with soils impacted by the hydraulic oil release. The agreement reached with Boston Properties is as follows:

Residual contamination in soil and groundwater remains at the site that could pose an unacceptable risk under certain site development activities such as site grading, excavation, or the installation of water wells. Under current site use, the only potential exposures to residual contamination would be to elevator service personnel performing routine elevator maintenance under license from the State of California. Therefore, the impact of the disturbance of any residual contamination or the installation of a water well in the vicinity of the residual contamination shall be assessed and appropriate action taken so that there is no significant impact to human health, safety, or the environment. This could necessitate additional sampling, health risk assessment, and mitigation measures. The Santa Clara Valley Water District, County of Santa Clara Environmental Health and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, excavation, elevator maintenance activities that result in removal of impacted media and installation of water wells. This notification shall include a statement that residual contamination exists on the property and list all mitigation actions, if any, necessary to ensure compliance with this site management requirement. The levels of residual contamination and any associated site risk are expected to reduce with time. Lockheed Martin, Information Systems & Global Services shall work with Boston Properties to develop a Site Management Plan to address residual hydrocarbons if development plans are provided in the future. Lockheed Martin, Information Systems and Global Services, further agrees that in the event of redevelopment of the property or maintenance of the property oil is encountered, Lockheed Martin, Information Systems and Global Services shall be responsible for all costs incurred with either (i) the

DRAFT

clean-up associated with the oil or (ii) for restoring or repairing any damage caused by the oil. However, in the event of a redevelopment and no oil is encountered; Lockheed Martin, Information Systems and Global Services would not be responsible for any costs incurred with said redevelopment.

Closing

Lockheed Martin IS & GS plans to abandon the three monitoring wells installed in October 2010 and cease all groundwater monitoring and reporting activities upon approval of this SMP. Should you have any questions or concerns regarding this plan, please contact Ms. Cynthia Rittenhouse at (408) 473-4311.

Sincerely,

Mary Patricia Barr

SITE SCREENING

Site Name: IT Corporation - San Jose Transfer Facility

Site Location: 3010 Zanker Road, San Jose, CA 95134

EnviroStor Identification No.: 80001333

EPA Identification No.: CAD000633115

Site Description:

The IT Corporation San Jose Transfer Facility site (site) consists of approximately 1.8 acres of land and is listed with an address of 3010 Zanker Road, San Jose, 95134 in Santa Clara County, California. The site location map (Figure 1) in the Closure Certification Report for the facility (discussed below) that operated on the site shows the site at a location near the north end of Zanker Road. Google Maps shows 3010 Zanker Road (Figure 2) is approximately two and a half miles to the south on Zanker Road from the location shown on site location map from the Closure Certification Report. The reason for this discrepancy could not be determined. The transfer facility no longer occupies the site. The property at 3010 Zanker Road is currently a commercial office setting and the surrounding area is mostly commercial with some residential.

Site History:

The site was owned by the City of San Jose in the early 1970s. The previous owner of the site is unknown and it may have been used for agricultural purposes. In 1974, the City of San Jose entered into an agreement with Industrial Tank, Inc. and Oscar E. Erickson for the design, construction, and operation of an industrial waste transfer facility. In April 1978, a reorganization caused all rights and interests to be transferred to Industrial Tank Environmental Services, the predecessor of International Technology Corporation (IT). The transfer facility combined a transportation operation with a collection and transfer facility where various wastes, including Resource Conservation and Recovery Act (RCRA) hazardous wastes, were stored until a sufficient quantity of similar wastes had been collected for transfer to the final disposal site. Only 1.5 of the 1.8 acres were used for the operations.

In November 1980, IT filed a RCRA Hazardous Waste Part A Permit Application for the facility with the United States Environmental Protection Agency (EPA), and was granted an Interim Status Document from the California Department of Health Services (DHS), predecessor to the Department of Toxic Substances Control (DTSC), on March 30, 1981. IT later submitted a RCRA Hazardous Waste Part B Permit Application at an unknown date. The facility had several concrete drum storage pads separated by waste type, eight above-ground storage tanks, an above-ground water tank, and an above-ground diesel storage tank. The maximum number of drums at the facility at any one time was approximately 400. The wastes received at the facility for temporary storage included flammable liquids and solids, caustic compounds, acids, oxidizing chemicals, poisons, and other regulated materials. The site also received polychlorinated biphenyl (PCB) solids and liquids for transfer from one truck to another.

The facility had no history of releases from any of the above-ground storage tanks. During inspections of the facility conducted by DHS there were indications of leaks on the site at some of the concrete drum storage pads. It had been observed that the concrete drum storage pads were overfilled with 55-gallon drums and some of the drums were stored on the ground surface, with fluid from some of the drums leaking onto the ground surface. The types of fluids leaking from the drums and exact locations of where fluids leaked onto the ground surface were not noted in the inspection reports. The concrete drum storage pads were observed as having numerous cracks and stains on them. In 1983, a flood occurred at the site which rendered the facility inoperable for approximately two months. According to IT, all containerized waste had been removed prior to the flooding of the facility.

The facility was given permission to close in 1985. In 1986, the eight above-ground storage tanks were cleaned and removed from the facility, with the diesel storage tank removed in 1987. The final shipment of containerized waste was received July 25, 1987 and shipped out on July 31, 1987. Empty, unused drums remained at the facility after operations ceased with the intention to remove them prior to facility closure. The water storage tank remained on site at the time of closure. In July 1987, IT ceased operations at the site and moved towards certifying closure of the facility. The site was given an Interim Status of Inactive/Closing beginning in September, 1987, but was not yet RCRA closed.

DHS oversaw facility closure at the site as outlined in the Closure Plan, Revision 2.1, dated September 6, 1990, which was approved by DHS. The Closure Plan indicated that the facility was to be closed in a manner that did not require post-closure care. A sampling and analysis plan included as part of the Closure Plan was designed to show whether any significant contamination was present at the site. Closure activities concluded in June 1991, and IT presented their Closure Certification Report to DHS in August 1991. A correspondence from the Santa Clara Valley Water District, dated November 4, 1991, indicates that the District had no further concerns about the site presenting a threat to the groundwater based on the information presented in the Closure Certification Report. The site was certified as closed by DTSC on December 10, 1991 after review by DTSC, the Santa Clara Valley Water District, and the City of San Jose. DTSC's Hazardous Waste Tracking System (HWTS) database shows that the facility has been inactive since May 12, 1994.

Sampling was performed as outlined in the sampling and analysis plan included as part of the Closure Plan and consisted of two components: 1) collection of discrete soil samples at locations underneath the concrete drum storage pads and in the area of waste loading/unloading for the bulk storage tanks; and 2) soil sampling using a grid system over the area that was not used for waste storage. Groundwater sampling was also performed at the same discrete locations as used for the soil sampling. Seventeen sample points were used for the discrete soil and groundwater sampling. Soil sampling of all of the area that was not used for waste storage was performed using a 25 foot by 25 foot grid system with composite sampling. The soil and groundwater sample analytes included

metals, PCBs, volatile organic compounds (VOCs), semi-VOCs, and total petroleum hydrocarbons. A combination of fixed-base lab and mobile lab sampling data was used to determine the depths at which the concentration of contaminants fell below critical values identified in the Closure Plan. The critical values were based on the mean constituent concentrations of background soil and groundwater samples plus two standards deviations. Where the analytical results were reported as non-detected, the critical values were twice the detection limits. The critical values provided the clean closure target levels used in the soil excavation done at the site as part of the closure.

Initial closure soil sampling showed exceedances of the critical values for metals, diesel, oil, trichloroethylene, or tetrachloroethylene at almost all areas of the site (Table 1). Soil excavation was performed based on the soil sampling results and resampling where the critical values were exceeded. Excavation proceeded until the critical values (clean closure target levels) were met in every location. Approximately 232 cubic yards of soil were excavated at depths of up to 14 feet at discrete locations, and approximately 1,204 cubic yards of soil were excavated at depths of up to 3 feet at composite grid locations. The approximately 1,436 total cubic yards of excavated soil was removed to permitted, off-site disposal facilities.

The groundwater sampling results (Table 2) indicated that the concentrations of contaminants found did not exceed state or federal Maximum Contaminant Levels. On-site maximum concentrations for aluminum, nickel, total xylenes, and zinc exceeded background concentrations at separate sampling locations, where only one of the COCs was detected above background concentrations at each of the sampling locations. Concentrations of these COCs were below background levels or not detected in all other sampling locations. IT concluded that elevated levels of COCs in these locations were not caused by operations at the facility. No groundwater remediation occurred at the site.

Ecology and Environment, Inc. prepared a Preliminary Assessment (PA) for EPA in 1991 to determine the site's eligibility for the National Priorities List (NPL). The PA provided recommendations to the EPA for the site. EPA did not put the site on the NPL. The site was granted the status of clean closed in December 1991.

There is no listing for the site in the GeoTracker database. The Santa Clara County Department of Environmental Health did not have any records associated with the site when this site screening was prepared.

Conclusion:

The facility on the site was closed and post-closure monitoring was not required by DHS. Closure sampling adequately characterized the site, including areas outside of the storage and primary operational areas of the facility. Excavation that was done during closure removed soil with contaminants above the established critical values. The critical values are below current human health risk screening levels for unrestricted land use. The involved agencies did not raise any concerns regarding the site or possible residual contamination at the time of closure.

DRAFT

Status Recommendation:

No further action.

Rationale/Supporting Documentation:

SAN JOSE WATER

Annual Water Quality Report 2023

Clean Water for Our Customers

This brochure provides a snapshot of last year's water quality data for San Jose Water (SJW). Included are details about where your water comes from and how your water quality compares to State standards. As a member of the Partnership for Safe Water, SJW remains focused on water quality and environmental stewardship to ensure continued delivery of safe and high quality water to our customers.

Since joining the Partnership for Safe Water, SJW has increased distribution system residual disinfectant levels and outperformed industry benchmarks in early detection of leaks and reducing main breaks. These Partnership-related improvements have contributed to increased water service reliability and enhanced public health protection.

Williams Station PFAS Treatment Rendering

A Commitment to Water Quality

At San Jose Water (SJW), our top priority is to consistently provide high-quality drinking water that meets or exceeds state and federal standards. We are committed to maintaining the highest quality of water for our customers and conduct thorough testing to ensure compliance with all drinking water regulations.

DRAFT

EPA Finalizes Nationwide PFAS Regulations

PFAS are manmade chemicals that have been widely used in industry and consumer products ranging from water-repellent clothing to firefighting foam. These chemicals, often referred to as "forever chemicals," accumulate in both the environment and the human body due to their resistance to degradation.

On April 10, 2024, EPA announced and established the first-ever nationwide, legally enforceable drinking water standards to protect communities from PFAS in their drinking water.

EPA finalized a National Primary Drinking Water Regulation (NPDWR) establishing legally enforceable levels, called Maximum Contaminant Levels (MCLs), for six PFAS in drinking water. PFOA, PFOS, PFHxS, PFNA, and HFPO-DA as contaminants with individual MCLs, and PFAS mixtures containing at least two or more of PFHxS, PFNA, HFPO-DA, and PFBS using a Hazard Index MCL to account for the combined and co-occurring levels of these PFAS in drinking water. EPA also finalized health-based, non-enforceable Maximum Contaminant Level Goals (MCLGs) for these PFAS.

PFAS Monitoring and UCMR5 Testing

SJW has been proactively monitoring PFAS compounds in all wells since 2019. Due to this proactive monitoring, ten wells were placed on standby for exceeding the notification level of 6.5 ppt between 2019 and 2020. Although these are on operational standby and do not run to the distribution system, the data from these wells is included in this report. Our monitoring has detected levels of PFHxS, a type of PFAS, above the notification levels set by the California State Water Resources Control Board Division of Drinking Water (DDW). The notification level is an advisory level based on health considerations, not a regulatory standard. The levels of PFHxS detected in some of our wells are between 3 parts per trillion (ppt) and 6 ppt, well below the DDW's response level of 20 ppt, and below the EPA's MCL for PFHxS of 10 ppt.

In 2023 SJW also completed testing under the U.S. Environmental Protection Agency's Fifth Unregulated Contaminant Monitoring Rule (UCMR5) program in addition to our routine monitoring. This program aims to monitor unregulated contaminants, including various PFAS compounds, in drinking water systems, and further advance laboratory analytical techniques. Many of the PFAS sampled for under the UCMR5 program are the same that SJW has been proactively monitoring since 2019. The results of this monitoring are presented in this report.

Proactive Measures for PFAS Removal

In response to the detection of PFAS at some groundwater wells, SJW is actively working on the design of our first ion exchange PFAS treatment facility. With a capacity of 20,000 gallons per minute, this facility will be a significant step in our efforts to remove PFAS compounds, including PFHxS, from our water supply. Ion exchange technology is an effective method for trapping and removing PFAS molecules from the water.

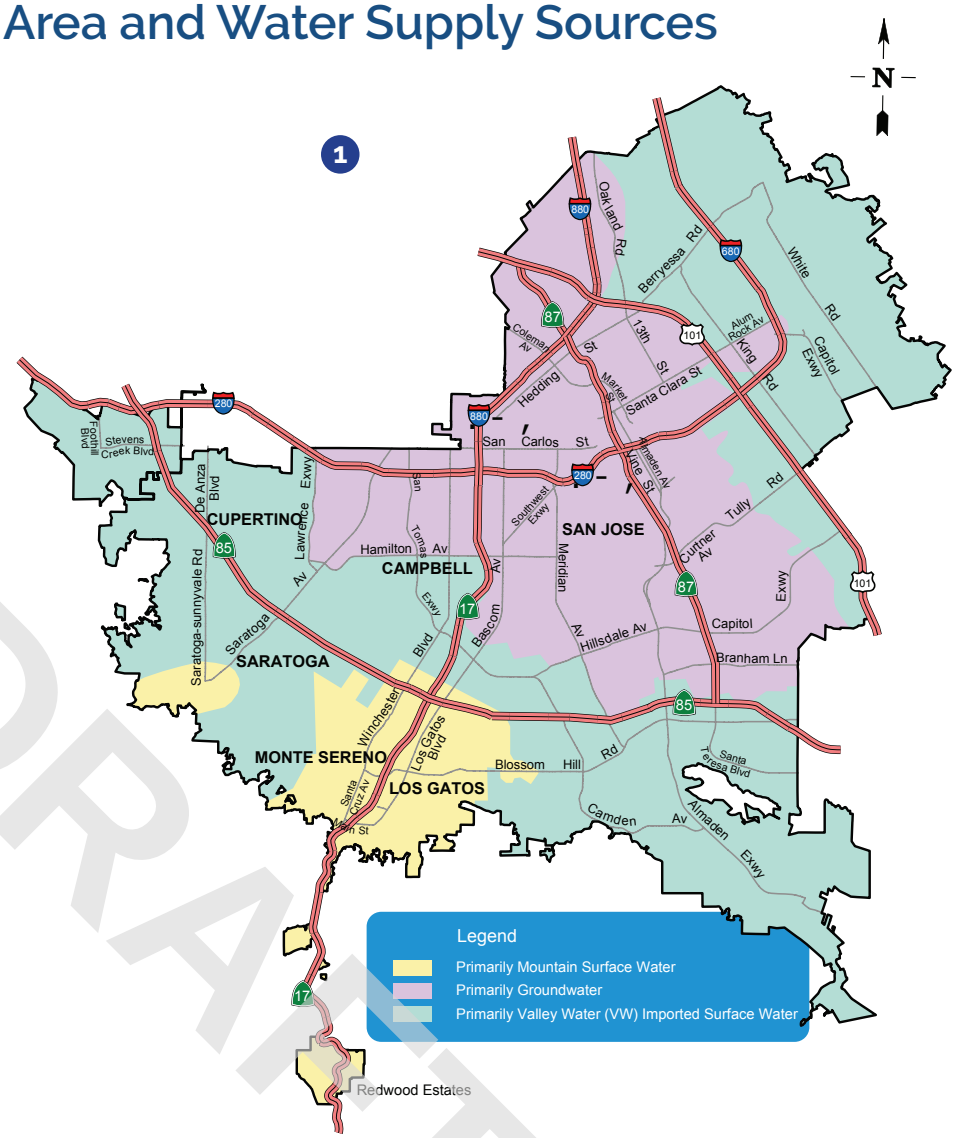
A Commitment to Water Quality

SJW is dedicated to ensuring the quality and purity of our water supply. Our efforts to address PFAS levels in our groundwater, along with our participation in the UCMR5 testing program, demonstrate our commitment to public health and the environment. We are focused on providing clean water to our customers and are continually working to enhance our water quality and treatment processes.

San Jose Water Service Area and Water Supply Sources

How to Read the Water Quality Table

1. Find your location on the map on this page. Note which is your source water area.
2. Go to this column in the tables on the following pages to find the parameter you are interested in. Remember – no news is good news!
3. This column notes the unit of measurement for the contaminant. For more information about these units see the Definitions section below.
4. This column lists the maximum contaminant level (MCL). The MCL is the highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.
5. This column lists the public health goal (PHG). At that amount or lower, there is no known or expected risk to health from the parameters' presence in drinking water. Not all listed parameters have state or federal goals.
6. Find the column that corresponds to the source water that primarily serves you. This is the amount of the parameter detected in your area's water.
7. The last column lists how the parameter typically gets into your drinking water.



DRAFT

IMPORTANT DEFINITIONS

Detection Limit for Purposes of Reporting (DLR): The lowest level of a constituent that the Department of Public Health requires to be reported.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water, below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency.

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Residual Disinfectant Level (MRDL): The level of a disinfectant added for water treatment that may not be exceeded at consumer's tap.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Not Applicable (N/A): Not applicable.

Not Detected (ND): If a constituent is not measured at or above a DLR, it is reported as ND.

Not Sampled (NS): Source designated non-vulnerable or testing not required.

Notification Level (NL): A non-regulatory, health-based advisory level for contaminants in drinking water that do not have established Maximum Contaminant Levels. Systems are required to report exceedances to their governing boards and Public Authorities.

Primary Drinking Water Standard (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Response Level (RL): A non-regulatory, precautionary health-based level. Water systems are required to remove from service, provide treatment, or notify all impacted customers directly for any water source exceeding this level.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

UNITS

Nephelometric Turbidity Units (NTU): A measure of the cloudiness of the water.

One part per million (ppm): One milligram per liter (mg/L). One ppm corresponds to a single penny in $10,000 or one minute in two years.

One part per billion (ppb): One microgram per liter (µg/L). One ppb corresponds to a single penny in $10,000,000 or one minute in 1,900 years.

One part per trillion (ppt): One nanogram per liter (ng/L). One ppt corresponds to a single penny in $10,000,000,000 or one minute in 19 million years.

pCi/L: Picocuries per liter, a measure of radioactivity.

TON: Threshold Odor Number, a measure of odor.

umho/cm: Micromho per centimeter, a measure of electrical conductivity.

2023 SJW Annual Water Quality Report

The State Division of Drinking Water specifies monitoring frequencies for some parameters less often than annually because the concentrations do not change frequently. Some of our data, though representative, are more than a year old.

DRAFT

* This Consumer Confidence Report (CCR) reflects changes in drinking water regulatory requirement that add the requirements of the federal Revised Total Coliform Rule, effective since April 1, 2016, to the existing state Total Coliform Rule. The revised rule maintains the purpose to protect public health by ensuring the integrity of the drinking water distribution system and monitoring for the presence of microbials (i.e., total coliform and *E. coli* bacteria). The U.S. EPA anticipates greater public health protection as the rule requires water systems that are vulnerable to microbial contamination to identify and fix problems. Water systems that exceed a specified frequency of total coliform occurrences are required to conduct an assessment to determine if any sanitary defects exist. If found, these must be corrected by the water system. The state Revised Total Coliform Rule became effective July 1, 2021.

SECONDARY

Secondary standards relate to aesthetic qualities such as taste, odor, and color but do not pose any health risk.

14 PRESENT **4 TESTED BUT NOT PRESENT**

UCMR 5 RESULTS

The Environmental Protection Agency (EPA) gathers data for various unregulated contaminants through the Unregulated Contaminant Monitoring Rule (UCMR). During the fifth installment, (UCMR 5), certain public water systems were required to monitor for 29 per- and polyfluoroalkyl substances (PFAS) and lithium in drinking water. Below is the data detected from our participation in UCMR 5. To see all data from the UCMR 5 program, please visit: https://www.epa.gov/dwucmr/fifth-unregulated-contaminant-monitoring-rule-data-finder#data-finder

PARAMETER	Range of Results
Lithium (µg/L)	ND-10
Perfluorohexanesulfonic Acid [PFHxS] (ppt)	ND-5.5
Perfluorooctyl Sulfonate [PFOS] (ppt)	ND-6.2

7 Typical Sources of Chemical Constituents

1. Erosion or leaching of natural deposits
2. Runoff and leaching from agriculture
3. Residue from some surface water treatment processes
4. Industrial waste
5. Seawater influence
6. Discharge from factories and metal degreasing sites
7. By-product of drinking water disinfection
8. Naturally present in the environment
9. Soil erosion and stream sediments
10. Internal corrosion of plumbing systems
11. Water additive for promotion of public health
12. Water additive used to control microbes

Footnotes

1 This parameter is only applicable to surface water treatment techniques

2 At the time this data was collected, there was no MCL for chromium-6. The previous MCL of 10 ppb was withdrawn on September 11, 2017. There is also currently no detection limit for reporting. All results less than 1 ppb are considered ND. SJW is continuing to report the sample results for informational purposes.

3 Fluoride was not added to these sources.

4 State regulations recommend an optimal fluoride level of 0.7 ppm be maintained in fluoridated treated water. Concentrations listed here are provided by San Jose Water's wholesalers.

Violation Notices: These incidents were not emergencies, but, as our customers, you have a right to know what happened. All customers directly impacted by these events were notified directly via mail.

Williams Well #10- May 5, 2023

A routine sample of the untreated groundwater collected at one of our wells on May 5, 2023, had a positive *E. coli* result. The well was immediately removed from service.

Drinking water regulations require that we report any *E. coli* positive to the Division of Drinking Water (DDW) within 24 hours. Additionally, since the detection of an *E. coli* positive sample qualifies as a potential significant rise in bacterial count, we were required to perform investigations and submit reports to DDW within 24-hours and 30 days of the positive sample. While we conducted an internal investigation which included additional sampling along with the analysis of routine samples and site inspections, we failed to notify DDW within 24-hours of the positive sample and failed to perform a formal investigation and submit reports regarding a potential significant rise in bacterial count.

The untreated groundwater was not delivered to our customers' homes. The water delivered during this incident was treated with chlorine for disinfection and continued to comply with drinking water quality requirements.

Corrective Actions: We have fortified our communications protocols regarding positive total coliform and *E. coli* sample reporting to include multiple checks and balances and have retrained all staff on the new Standard Operating Procedures.

Saratoga Filter Plant - June 1, 2023

Drinking water standards require drinking water suppliers to use multibarrier treatment and continuous disinfection to meet specific removal requirements for regulated microbial constituents. After filtration, the drinking water must sit in contact with enough chlorine (disinfectant) over a period of time before entering the distribution system to achieve "log performance removal" which amounts to the reduction of 99.99% of microorganisms. On June 1, 2023, a failure of the chlorination system at San Jose Water's Saratoga Filter Plant resulted in a failure to maintain continuous disinfection. Approximately 50,000 gallons of filtered water entered the distribution system for 21 minutes between 4:32 PM and 4:53 PM that did not meet standards.

Corrective Actions: The Saratoga Filter Plant was shut down at 4:53 pm on June 1, 2023, and remained offline while we completed repairs and implemented additional control measures throughout the treatment process.

DRAFT

Sludge holding tank at Montevina Treatment Plant

Water Quality Guidance

Source Water Assessment

An original assessment of the drinking water sources for SJW's water system was completed in December 2002 and is updated as new wells are brought online. SJW's wells are considered most vulnerable to one or more of the following activities, which have not been associated with any contaminants detected in the water supply: dry cleaners, automobile gas stations and repair shops, and underground storage tanks. Some of SJW's wells are also considered vulnerable to metal plating and finishing, photo processing/printing, electrical/electronics manufacturing, chemical/petroleum processing/storage, known contaminant plumes, and plastics/synthetics producers. SJW's surface supplies are considered most vulnerable to low density septic systems. Imported surface water purchased from Valley Water is considered most vulnerable to a variety of land use practices, such as agricultural and urban runoff, recreational activities, livestock grazing, as well as residential and industrial development. In addition, local sources are vulnerable to potential contamination from commercial stables and historic mining practices. Although these activities exist in areas near one or more of SJW's or Valley Water sources, physical barriers, treatment systems, and monitoring programs are in place to ensure that water supplied to our customers is not adversely affected. Customers seeking additional information are encouraged to contact SJW Customer Service at 408.279.7900.

Special Populations

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Drinking Water Regulation

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, that are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- Radioactive contaminants, that can be naturally-occurring or be the result of oil and gas production and mining activities.

DRAFT

Lead

In order to ensure that tap water is safe to drink, the U.S. Environmental Protection Agency (USEPA) and the State Water Resources Control Board (State Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. San Jose Water is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you do so, you may wish to collect the flushed water and reuse it for another beneficial purpose, such as watering plants. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/lead.

Lead sampling in the system

Data from the 2022 round of Lead and Copper Rule (LCR) sampling can be found in the Primary Standards table under Lead and Copper. To make LCR sampling as meaningful as possible, SJW worked with the state Division of Drinking Water and an outside consultant to identify the areas of highest risk for lead exposure from drinking water in our system. Compliance is determined by the 90th percentile of sample results. The 90th percentile for SJW's 2022 lead results was below the lead detection limit, and both lead and copper results met regulatory standards. SJW's next round of LCR sampling will occur in 2025. If you have reason for concern about lead containing fixtures in your home, please feel free to contact us at (408) 279–7900 to request sampling.

Lead Sampling in Schools

In January 2018, Assembly Bill 746 went into effect requiring water utilities to collect lead samples in all daycare, preschool and kindergarten through 12th grade schools on public property to ensure students have access to safe drinking water. If a private school wished to have their water sampled, the head of the school could request lead testing from their water provider. The timeframe for sample collection ended in July of 2019. Over the span of the program, San Jose Water sampled 330 schools in our area, including all schools that requested sampling. Of the schools assessed, four initially had a result above the action level, but each was promptly resolved through corrective actions of replacing internal fixtures. For more information about sampling in your child's school, contact your school officials or check out the website at: https://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/leadsamplinginschools.html.

Fluoride

For information on fluoride in your water, please refer to our website at https://www.sjwater.com/customer-care/help-information/fluoride, or to see up-to-date concentrations local to your neighborhood.

Nitrate

Nitrate as Nitrogen (Nitrate-N) in drinking water at levels above 10 mg/L is a health risk for infants of less than six months of age. Such Nitrate-N levels in drinking water can interfere with the capacity of the infant's blood to carry oxygen, resulting in a serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate-N levels above 10 mg/L may also affect the ability of the blood to carry oxygen in other individuals, such as pregnant women and those with certain specific enzyme deficiencies. If you are caring for an infant, or you are pregnant, you should ask advice from your health care provider.

Turbidity

Turbidity is a measure of the cloudiness of the water. We monitor it because it is a good indicator of the effectiveness of our filtration systems.

Reminder for Dialysis Patients and Aquarium Owners

Chloramine and chlorine may be present in the water provided by SJW. These chemicals are used to protect public health by destroying disease-causing organisms. Except for a slight chlorinous taste or odor, these disinfectants will not cause any problems for the general public. However, home dialysis patients and aquarium owners must take special precautions before the water can be used in kidney dialysis machines or aquariums. Please consult your doctor or dialysis technician to be sure your home equipment is adequate and proper tests are being performed every time it is used. Before filling an aquarium or fish pond, the disinfectant must be removed. Your local tropical fish store can help determine the best water treatment for your fish.

To Learn More about the Quality of Your Water

Your drinking water is continually tested to ensure compliance with state and federal standards for quality and safety. This annual report summarizes the results of more than 18,000 water quality tests conducted throughout the year. If you have any questions about your water quality, service, or the information contained in this report, please call us at 408.279.7900, Monday to Friday between 8:30AM and 5:30PM. You may also contact the US EPA Safe Drinking Water Hotline at 800.426.4791 for additional public information about the Safe Drinking Water Act or US EPA's drinking water regulatory programs.

APPENDIX I

QUALIFICATIONS

DRAFT

CHRISTOPHER OLSEN

ASSOCIATE CONSULTANT

EDUCATION

- BA Environmental Studies, UC Santa Barbara
- MBA Santa Clara University, Leavey School of Business

CERTIFICATIONS

- AHERA, Asbestos Building Inspector

SUMMARY OF PROFESSIONAL EXPERIENCE

Mr. Olsen has had experience in the environmental consulting, property disclosure, and real estate due diligence industry since 1994. Mr. Olsen has performed several thousand Phase I Environmental Site Assessments (ESAs) including Fannie Mae, Freddie Mac, HUD and FDIC scopes of work. Mr. Olsen has performed asbestos, lead-based paint, radon, and mold sampling on hundreds of Phase I ESA projects. He has completed Phase I ESA projects on all property types, including heavy and light industrial, commercial office and retail, hospitality, multifamily, mobile home parks, hospital and skilled nursing facilities, resort properties, automotive service facilities, and waste processing facilities. Mr. Olsen has several years' experience reviewing Phase I ESA reports, and conducing "desk reviews" of Phase I ESAs as a third-party reviewer. Mr. Olsen has completed approximately 50 Property Condition Assessments.

PROJECT EXPERIENCE

Project experience for Mr. Olsen includes:

- **Oakridge Shopping Center, San Jose, CA -** This 1.14M SF shopping center was constructed in 1971. HRECs were identified in connection with a former auto service facility which was on site. Mr. Olsen recommended an ACM O&M plan.
- **Garaventa Transfer Station, Pittsburg, CA** - This 11.05-acre site is a recycling and solid waste transfer station. RECs were identified, and an ACM O&M plan was recommended as well as continued groundwater monitoring and remediation per RWQCB requirements.
- **Embassy Suites, South Lake Tahoe, CA** - Embassy Suites is a resort hotel. No RECs were identified; however, Mr. Olsen recommended an ACM O&M plan.
- **Durkee Industrial Facility, Richmond, CA** - This 6.32-acre commercial/industrial property was found to have multiple RECs due to historic industrial uses. Groundwater contamination was reported. Mr. Olsen recommended continued groundwater monitoring and remediation per RWQCB requirements.
- **Office Tower, 100 Van Ness Ave, San Francisco, CA** - This 29-story office tower constructed in 1973 was undergoing a complete interior renovation for conversion to residential use. Several RECs were identified due to the operation of vaulted tanks without permits or tank testing documentation.
- **Mixed-use Property, Oakland, CA** - This 2.45-acre site consisted of ten office and retail buildings constructed between 1868 and 1881. RECs were identified in connection with undocumented former onsite contaminated soil removal. Additionally, an adjacent open SLIC case (groundwater contamination) was reported.
- **Portfolio of five multifamily residential facilities, San Francisco, CA** - No RECs were found while reviewing this portfolio of multifamily residential properties in San Francisco. Mr. Olsen recommended both ACM and LBP O&M plans for these properties.

DRAFT

Phillip A. Hoeksema

National Client Manager, Due Diligence

EDUCATION

- B.S. - Geology, Illinois State University, 1995

CERTIFICATIONS

- ASTM Personal Certificate for Vapor Encroachment Condition Screening (VECs)

SUMMARY OF PROFESSIONAL EXPERIENCE

Mr. Hoeksema has over 25 years of experience in the due diligence industry. He has performed and managed thousands of environmental site assessments for multifamily residential, commercial, and industrial properties throughout the continental United States and Caribbean. In addition to due diligence assessments, Mr. Hoeksema has managed and performed RCRA Facility Investigations, closure of LUSTs, LUST reimbursements, and negotiated closure of environmentally impacted sites under the Illinois Environmental Protection Agency (IEPA) Site Remediation Program and Indiana Department of Environmental (IDEM) Voluntary Remediation Program.

PROJECT EXPERIENCE

Project experience for Mr. Hoeksema includes:

- **CenterPoint Properties, Indianapolis, IN** - Environmental Site Assessments and follow-on subsurface investigations of an industrial real estate portfolio.

- **State Superfund Site, Addison, IL** - Assisted in finding a cost-effective cleanup technology as an alternative to off-site soil disposal for an investment casting facility. The site history included degreasing solvents that were discharged to a surface impoundment over several years and subsequently resulted in the contamination of soil and groundwater. Low Temperature Thermal Desorption technology was used to remediate over 6,000 tons of soil contaminated with chlorinated solvents and a pump and treat system was utilized to remediate the contaminated groundwater and obtain closure through the IEPA.

- **Industrial Waste Cleanup Facility, Lake Calumet, IL** – Team member conducting on-site activities to determine if historical operations had resulted in releases to soil and/or groundwater and assessing the need for remediation. Consisted of the installation of approximately 170 soil borings and groundwater sampling in Level C protective equipment.

- **Chemical Manufacturing Facility, Hammond, IN** – This property was vacant and distressed after historically being used as a chemical manufacturing facility by an international chemical company. Managed the project from conducting the Phase I ESA and Phase II investigations through to entering the site into the voluntary cleanup program and obtaining the no further remediation letter. This site was subsequently developed into a retail shopping center.

DRAFT

- **Multifamily Apartment Complex, Colorado Springs, CO** – Managed the Phase I ESA which identified a former methamphetamine lab in one residential unit within the complex. Developed the sampling plan which identified methamphetamine chemicals of concern above the mandated limit on the floors, walls, ceilings and countertops within the unit, and subsequently the remediation and restoration of the unit.

- **Richards Gebaur Air Force Base, Kansas City, MO** - Conducted the Phase I ESA and monitoring of cleanup of several areas of concern across the base as part of the redevelopment.

- **Senior Living Facilities, multiple locations across the US** – Provided due diligence project management of a portfolio of senior living facilities.

- **Port of Will County, Joliet, IL** – Performed Phase I ESA of an industrial facility with multiple areas of concern, including mine operations, former USTs and LUSTs, radiation issues due to disturbance of rocks with high levels naturally occurring radium, and existing groundwater contamination. The property was purchased, no further remediation letters were obtained, and the property was repurposed for additional industrial use.

- **Multifamily Apartment Complex, Birmingham, AL** – Provided project management and review for a Phase I ESA which was identified with a chlorinated solvent plume from an off-site dry cleaner which extended over 1,000 feet and onto the subject property. Several vapor encroachment and vapor intrusion studies were undertaken with funding approved by the Alabama Dry Cleaner Fund.

Eugene A. Belli, REPA, CHMM

Executive Vice President

EDUCATION

- MS - Environmental Science, New Jersey Institute of Technology, 1996
- B.A. - Geography, Rutgers University, 1986

CERTIFICATIONS

- Certified Hazardous Material Manager, Institute of Hazardous Material Managers
- Registered Environmental Property Assessor, National Registry of Environmental Professionals
- New York State Asbestos Inspector/Management Planner, New York State Dept of Labor, Certification # 01-22084
- USEPA Asbestos Building Inspector, Certification #62360
- USEPA Asbestos Management Planner, Certification #62363

SUMMARY OF PROFESSIONAL EXPERIENCE

Mr. Belli has over 39 years of experience in the due diligence industry, including serving as an environmental manager of a regional and international bank. He has managed over 10,000 environmental site assessments for residential, commercial, and industrial properties throughout the continental United States. Many of the assessments completed on industrial sites were performed in accordance with New Jersey's Industrial Site Recovery Act (formerly known as the Environmental Cleanup Responsibility Act [ECRA]). In addition to due diligence assessments, Mr. Belli has managed and performed compliance audits, Underground storage tank management and closure activities, remedial investigations, and cleanups.

During Mr. Belli's banking and consulting career, he has been intimately involved with bulk and portfolio sales as well as conduit lending. Mr. Belli is a registered Environmental Property Assessor, a certified Hazardous Materials Manager, An AHERA Building Inspector/Management Planner and previously serviced as a licensed New Jersey Underground Storage Tank Subsurface Evaluator.

PROJECT EXPERIENCE

Project experience for Mr. Belli includes:

- Fleet Bank: Summit Bank Portfolio - Environmental Site Assessments and desktop reviews of 375 bank branches located in NJ, NY and CT.
- JPMorgan Chase: Centro Watt Portfolio - Environmental and property condition assessments of 292 retail shopping centers nationwide, conducted in four weeks.
- Merrill Lynch: LaQuinta Hotel Portfolio - Conducted 475 environmental and property condition assessments within 25 days. Properties were located throughout the United States.
- Wells Fargo Foothill: Uhaul Portfolio - Completed desktop reviews of prior environmental reports, historical record reviews and database reports for 950 properties. Risk analysis of each property was performed with information summarized in an access database. Calculated worst case environmental liability loss.

DRAFT

- GHM Military Housing- Navy Northeast Housing Project: Northeast Region of United States - Conducted Phase I Environmental Site Assessments and subsurface investigations at 10 US Navy installations in the northeast to support the privatization of base housing.
- GHM Military Housing- Navy Southeast Housing Project: Southeast Region of United States - Conducted Phase I Environmental Site Assessments and subsurface investigations at multiple US Navy installations in the southeast to support the privatization of base housing.
- Andrews Air Force Base – Underground Storage Tank Audit and Upgrade Program - Performed compliance audits on the underground storage tank systems at Andrews Air Force Based and recommend and oversaw system upgrades. The evaluation included the tanks at the Air Force One Presidential Complex.
- Federal Express – Underground Storage Tank Compliance and Upgrade Program - Developed and managed a national underground storage tank compliance program consisting of 235 facilities throughout the country. Program consisted of testing, installation of corrosion protection, leak detection, spill/overfill devices and permitting.
- US Navy – Lead Risk Assessment Survey - Managed and directed a lead based paint survey of three T-AKE Class ships for the US Navy. Ships were in port in Guam, San Francisco, and Washington State. The ships consisted of the USNS Wally Shira, USNS Amelia Earhart and USNS Carl Brashear.
- Alpert and Alpert – Brownfield Redevelopment Project under New Jersey's Industrial Site Recovery Act - Performed soil, groundwater and indoor building material testing under New Jersey's ISRA Program. Conducted remedial action and designed building interior decontamination to allow the property to be converted to residential use.

COURT QUALIFICATIONS

Expert Witness: Environmental Consulting and Finance, New York

SPECIALIZED EDUCATION

Asbestos Abatement Procedures and Safety, Alternative Ways, Cherry Hill, New Jersey 1986
Site Remediation 40 Hour HAZWOPER Training, IT Corporation, 1986.

COMMONLY USED ACRONYMS & ABBREVIATIONS

DRAFT

Units	
µg/L	Micrograms per Liter
mg/kg	Milligrams per Kilogram
mg/L	Milligrams per Liter

Acronyms & Abbreviations	
AACEI	Association for the Advancement of Cost Engineering International
AC	Air Conditioner, or Acre
ACM	Asbestos-Containing Material
ADA	The Americans with Disabilities Act
ADAAG	ADA Accessibility Guidelines
ADJ	Adjoining Site
ADU	Accessory Dwelling Unit
AEI	AEI Consultants
AFUE	Annual Fuel Utilization Efficiency
AHERA	Asbestos Hazard Emergency Response Act
AHU	Air Handling Unit
AIA	American Institute of Architects
Allow	Allowance
ALTA	American Land Title Association
Amp	Amperage, or Ampere
APN	Assessor Parcel Number
ASCE	American Society of Civil Engineers
ASHRAE	American Society of Heating, Refrigerating and Air-Conditioning Engineers
AST	Aboveground Storage Tank
ASTM	ASTM International
AUL	Activity and Use Limitation
bgs	Below Ground Surface
BOMA	Building Owners & Managers Association
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes
BTU	British Thermal Unit (measurement of heat)
BTUH	British Thermal Units per Hour
BUR	Built-up Roof System
CERCLA	Comprehensive Environmental Response Compensation and Liability Act
CERCLIS	Comprehensive Environmental Response Compensation and Liability Information System
CESQG	Conditionally Exempt Small Quantity Generator
CH	Clubhouse
CO	Certificate of Occupancy
COC	Contaminant of Concern, or Chemical of Concern
COP	Coefficient of Performance
CRA	Construction Risk Assessment
CREC	Controlled Recognized Environmental Condition
CUP	Conditional Use Permit
CWH	Compact Water Heater, or Cold Water Heater
DHW	Domestic Hot Water
DWV	Drainage, Waste, Ventilation
EA	Each
EC	Engineering Controls
ECM	Energy Conservation Measure
EDR	Environmental Data Resources, Inc.
EEM	Energy Efficiency Measures
EER	Energy Efficiency Ratio

Units	
pCi/L	PicoCuries per Liter
ppb	Parts per Billion
ppm	Parts per Million

Acronyms & Abbreviations	
LBP	Lead-Based Paint
LCP	Lead-Containing Paint
LED	Light Emitting Diode
LEED	Leadership in Energy and Environmental Design
LFCA	Limited Facility Condition Assessment
LLP	Landowner Liability Protection
LQG	Large Quantity Generator
LS	Lump Sum
LUST	Leaking Underground Storage Tank
M	Model
MAP	Multifamily Accelerated Processing
MBH	1,000 BTUs per Hour
MCL	Maximum Contaminant Level
MDP	Main Distribution Panel
MEP	Mechanical, Electrical and Plumbing
MHP	Mobile Home Park
MMI	Modified Mercalli Intensity
MPH	Miles per Hour
MRL	Machine Room-Less
MTBE	Methyl Tertiary Butyl Ether
MTCO2e	Metric Tons of Carbon Dioxide Equivalent
NA or N/A	Not Applicable
ND	None Detected
NESHAP	National Emission Standards for Hazardous Air Pollutants
NFA	No Further Action
NFPA	National Fire Protection Association
NFRAP	No Further Remedial Action Planned
NLR	No Longer Regulated
NOV	Notice of Violation
NPL	National Priorities List
NPV	Net Present Value
NRA	Net Rentable Area
NRI	National Risk Index
O	Occupied
O&M	Operations and Maintenance
OEC	Other Environmental Consideration
OFC	Office
OH&PR / OH&P	Overhead and Profit
OPC	Opinion of Probable Cost
OSHA	Occupational Safety and Health Administration
PCA	Property Condition Assessment
PCB	Polychlorinated Biphenyl
PCE / PERC	Perchloroethylene, or Tetrachloroethylene, or Tetrachloroethene
PCR	Property Condition Report
PE	Professional Engineer
PFAS	Per- and Polyfluoroalkyl Substances

DRAFT

Acronyms & Abbreviations	
EFF AGE	Effective Age
EIFS	Exterior Insulation Finishing Systems
EMF	Electro Magnetic Fields
EMS	Energy Management System
EPA	Environmental Protection Agency
EPDM	Ethylene Propylene Diene Monomer (rubber membrane roof)
ERNS	Emergency Response Notification System
ESA	Environmental Site Assessment
ESG	Environmental, Social and Governance
EUI	Energy Use Intensity
EUL	Estimated Useful Life
EWEM	Energy and Water Efficiency Measure
F	Fahrenheit
FAR	Floor Area Ratio
FCA	Facility Condition Assessment
FCU	Fan Coil Unit
FEMA	Federal Emergency Management Agency
FF&E	Furniture, Fixtures and Equipment
FFHA	Federal Fair Housing Act
FHA	Forced Hot Air, or Fair Housing Act, or Fair Housing Adminitration
FHW	Forced Hot Water
FIRM	Flood Insurance Rate Map
FLS	Fire and Life Safety
FM	Factory Mutual
FOIA	US Freedom of Information Act
FOIL	Freedom of Information Law
FRP	Fiber Reinforced Plastic
FRT	Fire Retardant Treated
FTRP	Fire Retardant Treated Plywood
Gal	Gallon
GFA	Gross Floor Area
GFCI	Ground Fault Circuit Interrupter
GFI	Ground Fault Interrupt (circuit)
GHG	Greenhouse Gas
GIS	Geographic Information System
GPF	Gallons per Flush
GPM	Gallons per Minute
GPNA	Green Physical Needs Assessment
GPR	Ground-Penetrating Radar
GSF	Gross Square Footage
GWB	Gypsum Wall Board
HID	High Intensity Discharge
HREC	Historical Recognized Environmental Condition
HSPF	Heating Seasonal Performance Factor
HUD	Department of Housing and Urban Development
HVAC	Heating, Ventilation and Air Conditioning
IAQ	Indoor Air Quality
IBC	International Building Code
IC	Institutional Control
IM / IR	Immediate Repair
IRR	Internal Rate of Return
ISR	Impervious Surface Ratio
kBTU	Kilo-British Thermal Unit
kGal	Kilogallon
kW	Kilowatt
kWh	Kilowatt Hour

Acronyms & Abbreviations	
PGA	Peak Ground Acceleration
PML	Probable Maximum Loss
POC	Point of Contact
PSF	Pounds per Square Foot
PSQ	Pre-Survey Questionnaire
PTAC	Packaged Through-Wall Air Conditioning (Unit)
PVC	Polyvinyl Chloride
R&M	Repair and Maintain - Routine Maintenance
RCRA	Resource Conservation and Recovery Act
REC	Recognized Environmental Condition
RM	Room
ROI	Return On Investment
ROW	Right-of-Way
RP	Responsible Party
RR	Replacement Reserve
RTU	Rooftop Unit
RUL	Remaining Useful Life
SDS	Safety Data Sheet
SEDI	Statement of Energy Design Intent
SEER	Seasonal Energy Efficiency Ratio
SEL	Scenario Estimated Loss
SEMS	Superfund Enterprise Management System
SEP	Statement of Energy Performance
SF	Square Footage, or Square Feet
SIR	Savings to Investment Ratio
SL	Scenario Loss
SP	Subject Property
SQG	Small Quantity Generator
SRA	Seismic Risk Assessment
ST	Short Term
SUL	Scenario Upper Loss
SUP	Special Use Permit
SVOC	Semi-Volatile Organic Compound
SY	Square Yard
TCE	Trichloroethylene, or Trichloroethene
TE	Thermal Efficiency
TPH	Total Petroleum Hydrocarbons
TPHd / TPH-d	Total Petroleum Hydrocarbons (diesel range)
TPHg / TPH-g	Total Petroleum Hydrocarbons (gasoline range)
TPHo / TPH-o	Total Petroleum Hydrocarbons (oil range)
TPO	Thermoplastic Polyolefin Roof Membrane
TRPH	Total Recoverable Petroleum Hydrocarbons
TSD	Treatment, Storage, and Disposal
UBC	Uniform Building Code
USDA	United States Department of Agriculture
USGS	United States Geological Survey
UST	Underground Storage Tank
V	Vacant
VAV	Variable Air Volume Box
VCP	Voluntary Cleanup Program
VOC	Volatile Organic Compound
VSQG	Very Small Quantity Generator
WDO	Wood Destroying Organism
ZAR	Zoning Analysis Report
