1.0 INTRODUCTION

On January 13, 2025, WRA, Inc. (WRA) conducted an arborist survey at the site of the proposed 3199 Alvarado Street Warehouse Development Project (Project), located at 3199 Alvarado Street, San Leandro, Alameda County, California (Study Area). The survey was conducted by ISA-Certified Arborist, Carla Angulo (ISA #WE-13537A) for the purpose of identifying and documenting the presence of all trees six inches and greater as required by Section Z4.16.112 "Existing Trees on Development Sites" of the City of San Leandro Municipal Code within the Study Area. This survey was conducted in direct response to the City's requirement for a qualified arborist to map, measure and quantify all trees greater than or equal to six inches diameter at breast height (DBH; as measured 4.5 feet above grade) within the Study Area.

GPS locations for all the protected trees surveyed within the Study Area and information regarding the species, size in DBH, estimated crown radius, estimated height, and health, condition, and structure ratings were collected and are included in this report. A table with all the relevant information pertaining to surveyed trees is provided in Appendix A. A tree survey location map is provided in Appendix B. Representative photographs are provided in Appendix C.

1.1 Study Area Description

The site of the proposed Project is approximately 14.69 acres and consists of a vacant parking lot and an existing building with associated parking. Ornamental trees and native trees, including street trees are present within parking medians and along the perimeter of the Study Area. The proposed Project includes the redevelopment of the existing structure and development of new parking areas.

1.2 Regulatory Background

1.2.1 City of San Leandro Tree Ordinance

The City of San Leandro recognizes the importance of landscaping and the improved quality of the environment when there is maintenance and management of the landscape within the city. Chapter Z4.16 "Landscape Requirements" enforces the landscaping codes in installation and maintenance by specifically requiring all development proposals to include all trees 6 inches or greater and their driplines within site plans and the grading limits. Section Z4.16.112 requires the development permits to include a site plan that shows all trees as described previously and a condition of approval may include an arborist report by a certified arborist. In addition, they require a plan to preserve or replace any trees which are of significance. The code defines significant as any tree which has significant size, age, prominence in the neighborhood's landscape and habitat value. Preservation and replacement of trees are to follow Section Z4.16.124.

2.0 METHODS

On January 13, 2025, the Study Area was traversed on foot to inventory all trees as defined per the City of San Leandro. WRA's ISA-Certified Arborist surveyed the area and recorded relevant tree information for each surveyed tree including species, DBH, estimated crown radius, estimated height, and health, condition and structure ratings.

2.1 Tree Inventory

Locations of trees within the Study Area were recorded using a handheld GPS unit with sub-meter accuracy. Each tree was given a unique identification number and are included in Appendix A.

DBH was calculated for surveyed trees by measuring the trunk diameter at 4.5 ft. above grade. DBH for multi-trunked trees was calculated by measuring each individual trunk and calculating the total sum of trunk diameters. In cases where multi-trunked trees had more than five main trunks, only the five largest trunks were measured. In cases where an irregular buttress or bulge occurred at two feet above ground or DBH, measurements were taken above or below the irregular feature to best represent the size of the tree. In cases where cape ivy was covering the truck of the tree, DBH was estimated.

2.2 Tree Assessment

General notes on the condition of trees were taken, including health, structure, and overall condition. Assessment of the health, structure, and overall condition of each tree was conducted according to the narratives listed in Table 1.

Table 1. Rating Narratives for Tree Assessment

	HEALTH	STRUCTURE	GENERAL CONDITION
Good	Tree is free from symptoms of disease and stress.	Tree is free from major structural defects.	Tree shows condition of foliage, bark, and overall structure characteristic of the species and lacking obvious defect, or disease.
Fair	Tree shows some symptoms of disease or stress including twig and small branch dieback, evidence of fungal / parasitic infection, thinning of crown, or poor leaf color.	Tree shows some structural defects in branches but overall structure is stable.	Tree shows condition of foliage, bark, and overall structure characteristic of the species with some evidence of stress, defect, or disease.
Poor	Tree shows symptoms of severe decline.	Tree shows structural failure of a major branch or co-dominant trunk.	Tree shows condition of foliage, bark, and overall structure uncharacteristic of the species with obvious evidence of stress, defect, or disease.

2.3 Tree Impact Assessment and Mitigation Requirements

Proposed impacts to all trees were analyzed by comparing tree survey data with the Project's Demolition Plan and Landscape Plan (Ware Malcomb 2024) which depicted all tree removals and

preserved trees outside of limits of grade and associated recommended tree protection fencing. Potential tree impacts that may require a permit from the City of San Leandro include removal or encroachment into the dripline of any tree.

In addition, to the typical comparison of demolition and overall site plans, the impacts of the construction activities were tabulated in Appendix A using the suitability for preservation rating factors and scales described in Table 2.

Table 2. Suitability for Preservation Factors and Ratings

FACTORS/RATING	DEFINITION
Tree Health	Vigorous and healthy trees are better able to tolerate construction impacts including root loss injury.
Structural Condition	Preserved trees should be structurally sound or have defects that can be effectively abated in areas near structures or high use areas.
Tree Age and Species	Older trees may have reduced ability to tolerate construction impacts and adapt to changed site conditions. Individual tree species have varying tolerances to environmental impacts and stressors.
Good	Trees in good health and structural condition with high potential for longevity.
Moderate	Trees in fair health and/or with structural defects that may be abated with management procedures. Trees in this category require more intense management and monitoring and may have shorter life spans.
Poor	Trees in poor health and/or structural condition that cannot be effectively abated with treatment. These trees have a high risk of decline or structural failure regardless of management. Included in this category are trees that are undesirable in a landscape setting or inappropriate for high use areas.

As described above, tree replacement is typically required by the City for tree removals associated with development projects. The replacement requirements for tree removals can be as described in Section Z4.16.116 (C.3) which is as follows:

a. *Minimum Number of Trees. A minimum of one tree for every six parking spaces shall be distributed throughout the parking lot.*
b. *Trees to Provide Shade at Maturity. Trees with a canopy or spreading branch structure shall be specified, and trees shall generally have consistent spacing to substantially shade the parking area at maturity.*

Protected trees are required to have best management practices outlines in the site plans and depicted in a figure. The tree protection map and tree replacement planting plan are attached in Appendix B.

3.0 RESULTS

3.1 Tree Inventory

Thirty-three (33) trees were identified within the Study Area. A complete list of all surveyed trees is presented in Appendix A. The GPS locations of surveyed trees are shown in Appendix B. Trees present within the Study Area included coast live oak (*Quercus agrifolia*), bay laurel (*Laurus nobilis*), Modesto ash (*Fraxinus velutina*), sweetgum (*Liquidambar styraciflua*), fig (*Ficus carica*), Victorian box (*Pittosporum undulatum*), mousehole tree (*Myoporum laetum*), Blackwood acacia (*Acacia melanoxylon*), *Prunus* spp, and a dead unknown tree. Eleven of the 33 are street trees and all sweetgums which are under powerlines. The remaining 21 are ornamental landscape trees planted within parking medians and parking curbs. Only one coast live oak is maintained, perhaps due to the residential house it borders.

3.2 Tree Assessment

The condition, health, and structure of trees inventoried during this assessment ranged from poor to good, with most trees ranking fair in health, structure, and general condition. The majority of trees surveyed within the Study Area ranked fair in general condition, health, and structure with most trees displaying only minimal signs of maladies or decline in vigor. Eight trees ranked poor in condition, including one heritage coast redwood tree #414, which exhibited codominant trunks with one or more leaning trunk, and a dead top on the main trunk. General maladies observed that lead to the health and condition rankings given below included leaning codominant trunks, minor to significant decay/dieback, suppressed and leaning growth forms, and twig and leaf galls. Table 2 below summarizes the assessment results for all heritage trees surveyed.

Table 3. Tree Assessment Results Summary

CRITERIA ASSESSED/RATING	CONDITION	HEALTH	STRUCTURE
Good	12 (38%)	17 (53%)	14 (44%)
Fair	16 (5%)	10 (31%)	14 (44%)
Poor	4 (13%)	5 (16%)	4 (13%)

Of the 33 trees there are 14 which have the potential to be preserved and are suitable to remain on site. They have good health and structure with conditions in either fair or good state. The work will be impacting root zones that are under existing pavement or within planters and trimming canopies that are not regularly maintained. The street trees (13-22, and 33) are under power lines and have been trimmed by utilities for avoidance of the power lines for several years. The integrity of their structure is not compromised solely by the pruning, however, the cape ivy that is beginning to climb and cover the majority of the trunks can be suffocating the trees. The visibility of the impacts are not clearly visible, however, they should be considered. The trees within the parking area (1-9) within the medians are not irrigated and have been experiencing impacts from the drought. The trees along the southwestern quadrant of the Study Area (23-31) are all within a planting median which has been allowing root structure to grow well and the coast live oaks are

in very good condition to withstand construction. The invasive acacia (32) bordering the is not doing well and is surrounded by saplings.

3.3 Tree Impact Assessment and Mitigation Summary

There are 23 trees which are to be removed by the development and 10 street trees which are to be protected in place. Trees expected to be removed are ornamental landscape trees which were planted in previous development within parking medians. The species include bay laurel, fig, coast live oak, eucalyptus, a volunteer ash tree, an overgrown Victorian box, blackwood acacia, sweetgum and *Prunus* spp. Representative photographs of trees to be removed in Appendix C.

As per the tree replacement requirements, for each six parking stalls one tree must be planted. Based on the site plans there are approximately 210 stalls, therefore 35 trees are expected to be planted within the Study Area, however, there are 143 trees proposed to be planted, including 47 native *Quercus* species. The proposed Preliminary Landscape Plans will provide 5:1 mitigation replacement for each removed tree (RW Stover & Associates, Inc. 2024). This meets standard mitigation replacements for native oaks and exceeds standard replacement tree mitigation for native trees. The replacement quantities estimated based on Section Z4.16.116 (C.3) is 35, the replacement quantities recommended per tree are listed in Appendix A. The replacement placement of the trees is outlined in the Preliminary Landscape Plans (RW Stover & Associates, Inc. 2024). All planting locations outlined in the Preliminary Landscape Plans are areas where replanting is recommended as they are located along the perimeter and within the parking medians which should be supplemented and of sufficient square footage to allow for growth of the planted trees. Removal of existing trees and replanting will need to adhere to the protections to the trees which are to remain on site. The section below explains in further detail.

4.0 TREE PROTECTION PLAN

The following relevant tree protection measures during construction may be required as a condition of approval.

1. Before the start of any clearing, excavation, construction or other work on the site, every protected tree shall be securely fenced off at the dripline. Such fences shall remain continuously in place for the duration of all construction work.

2. Tree protection fences are to be temporary chain link fence or orange construction fencing on posts that are 6 feet tall and 6 feet apart.

3. No construction work shall encroach within the dripline of a protected tree.

4. No change in existing ground level shall be made within the drip line of a protected tree. No burning or use of equipment with an open flame shall occur near or within the protected perimeter. All brush, earth and other debris shall be removed in a manner which prevents injury to the protected tree.

5. No oil, gas, chemicals or other substances that may be harmful to trees shall be stored or dumped within the dripline of any protected tree, or at any other location on the site from which such substances might enter the dripline of a protected tree. No construction materials shall be stored within the dripline of a protected tree.

6. Underground trenching for utilities shall avoid major support and absorbing tree roots of protected trees. If avoidance is impractical, tunnels shall be made below the roots. Trenches shall be consolidated to service as many units as possible. Trenching within the drip line of protected trees shall be avoided to the greatest extent possible and shall only be done under the on-site direction of a Certified Arborist.

7. No concrete or asphalt paving shall be placed over the root zones of protected trees.

8. No artificial irrigation shall occur within the root zone of oaks.

9. No compaction of the soil within the root zone of protected trees shall occur.

5.0 SUMMARY AND RECOMMENDATIONS

Thirty-three (33) trees were identified within the Study Area. A complete list of all trees surveyed is presented in Appendix A. The GPS locations of surveyed heritage trees are shown in Appendix B. Protected trees which are to be mitigated for are 23 including seven (7) coast live oaks and two street trees.

A tree removal permit will be required for any alteration, removal, or relocation of protected trees. The City of San Leandro may require replacement plantings as part of Section Z4.16.112 to mitigate for the loss of functions provided by trees that are removed. Therefore, a minimum of 35 trees are expected to be planted within the Project Site to compensate for the removal of 23 trees. Since that is the common planting ratio per 6 parking stalls. However, as described above, the Project is proposing to plant a total of 143 replacement trees of seven different ornamental species and cultivars. This amounts to a surplus of 108 trees to be planted associated with the Project. The recommended areas for replacement trees to be planted are along the perimeter of the Study Area and within the parking medians as outlined by the Project's Landscape Plans.

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Unrefrigerated Warehouse-No Rail	241.490	1000sqft	5.54385	241,490	0.00000	—	—	—

Parking Lot	97.2300	1000sqft	2.23209	0.00000	0.00000	—	—	—
Other Asphalt Surfaces	202.960	1000sqft	4.65932	0.00000	0.00000	—	—	—
Other Non-Asphalt Surfaces	107.360	1000sqft	2.46465	0.00000	107,361	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	8.85000	annual days of extreme heat
Extreme Precipitation	5.80000	annual days with precipitation above 20 mm

Sea Level Rise	—	meters of inundation depth
Wildfire	9.75000	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A

Extreme Precipitation	2	1	1	3
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	7.51711
AQ-PM	28.9857
AQ-DPM	95.0218
Drinking Water	4.20882
Lead Risk Housing	84.6881
Pesticides	0.00000
Toxic Releases	50.1750
Traffic	94.2875
Effect Indicators	—
CleanUp Sites	90.1456

Groundwater	83.3970
Haz Waste Facilities/Generators	81.0589
Impaired Water Bodies	12.4528

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	80.0000
Healthy Places Index Score for Project Location (b)	48.0000
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
Construction: Construction Phases	CalEEMod durations are based on calendar days provided by applicant for each construction activity with an assumed start date of September 2026. Assumes 7 day work week based on data from applicant. Assumes Paving and Architectural Coating will end at the same time as Building Construction
Construction: Off-Road Equipment	based on equipment provided by applicant for a 7am-7pm schedule
Construction: Trips and VMT	Added one way trips for water trucks based on equipment data provided for each construction activity. 3.6 miles/trip for demolition provided by applicant

8.4. Construction

8.4.1. Construction Phases

Phase Type	Phase Name	Model Parameter	Default Value	New Value
Demolition	Demolition	End Date	9/29/2026	11/29/2026
Demolition	Demolition	Days/Week	5.00000	7.00000
Demolition	Demolition	Work Days per Phase	20.0000	90.0000
Site Preparation	Site Preparation	Start Date	9/30/2026	12/1/2026
Site Preparation	Site Preparation	End Date	10/14/2026	12/30/2026
Site Preparation	Site Preparation	Days/Week	5.00000	7.00000
Site Preparation	Site Preparation	Work Days per Phase	10.00000	30.0000
Grading	Grading	Start Date	10/15/2026	1/1/2027
Grading	Grading	End Date	11/26/2026	1/30/2027
Grading	Grading	Days/Week	5.00000	7.00000
Building Construction	Building Construction	Start Date	11/27/2026	2/1/2027
Building Construction	Building Construction	End Date	1/21/2028	10/28/2027
Building Construction	Building Construction	Days/Week	5.00000	7.00000
Building Construction	Building Construction	Work Days per Phase	300.000	270.000
Paving	Paving	Start Date	1/22/2028	10/30/2027
Paving	Paving	End Date	2/19/2028	1/27/2028
Paving	Paving	Days/Week	5.00000	7.00000
Paving	Paving	Work Days per Phase	20.0000	90.0000
Architectural Coating	Architectural Coating	Start Date	2/20/2028	1/28/2028
Architectural Coating	Architectural Coating	End Date	3/19/2028	3/12/2028
Architectural Coating	Architectural Coating	Days/Week	5.00000	7.00000
Architectural Coating	Architectural Coating	Work Days per Phase	20.0000	45.0000

8.4.2. Off-Road Equipment

Phase Name	Equipment Type	Model Parameter	Default Value	New Value
Grading	Tractors/Loaders/Backhoes	Number per Day	2.00000	3.00000
Grading	Tractors/Loaders/Backhoes	Hours Per Day	8.00000	12.0000

8.4.6. Trips and VMT

Phase Name	Trip Type	Model Parameter	Default Value	New Value
Demolition	Hauling	Miles per Trip	20.0000	3.60000
Building Construction	Vendor	One-Way Trips per Day	39.5802	41.5802

3199 Alvarado Street Project - Tier 4 Final Mitigation Custom Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year

2.2.1. Total Construction Emissions by Year, Unmitigated

2.2.2. Onsite Construction Emissions by Year, Unmitigated

2.2.3. Offsite Construction Emissions by Year, Unmitigated

3. Construction Emissions Details

3.1. Demolition (2026)

3.1.1. Onsite - Unmitigated

3.1.2. Offsite - Unmitigated

3.2. Site Preparation (2026)

3.2.1. Onsite - Unmitigated

3.2.2. Offsite - Unmitigated

3.3. Grading (2027)

3.3.1. Onsite - Unmitigated

3.3.2. Offsite - Unmitigated

3.4. Building Construction (2027)

3.4.1. Onsite - Unmitigated

3.4.2. Offsite - Unmitigated

3.5. Paving (2027)

3.5.1. Onsite - Unmitigated

3.5.2. Offsite - Unmitigated

3.6. Paving (2028)

3.6.1. Onsite - Unmitigated

3.6.2. Offsite - Unmitigated

3.7. Architectural Coating (2028)

3.7.1. Onsite - Unmitigated

3.7.2. Offsite - Unmitigated

4. Operations Emissions Details

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

8.1. Justifications

8.4. Construction

8.4.1. Construction Phases

8.4.2. Off-Road Equipment

8.4.6. Trips and VMT

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	3199 Alvarado Street Project - Tier 4 Final Mitigation
Construction Start Date	9/1/2026
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.30000
Precipitation (days)	27.6000
Location	3199 Alvarado St, San Leandro, CA 94578, USA
County	Alameda
City	San Leandro
Air District	Bay Area AQMD
Air Basin	San Francisco Bay Area
TAZ	1424
EDFZ	1
Electric Utility	Pacific Gas & Electric Company
Gas Utility	Pacific Gas & Electric
App Version	2022.1.1.39

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Unrefrigerated Warehouse-No Rail	241.490	1000sqft	5.54385	241,490	0.00000	—	—	—
Parking Lot	97.2300	1000sqft	2.23209	0.00000	0.00000	—	—	—

Other Asphalt Surfaces	202.960	1000sqft	4.65932	0.00000	0.00000	—	—	—
Other Non-Asphalt Surfaces	107.360	1000sqft	2.46465	0.00000	107,361	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

No measures selected

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Demolition	Demolition	9/1/2026	11/29/2026	7.00000	90.0000	—
Site Preparation	Site Preparation	12/1/2026	12/30/2026	7.00000	30.0000	—
Grading	Grading	1/1/2027	1/30/2027	7.00000	30.0000	—
Building Construction	Building Construction	2/1/2027	10/28/2027	7.00000	270.000	—
Paving	Paving	10/30/2027	1/27/2028	7.00000	90.0000	—
Architectural Coating	Architectural Coating	1/28/2028	3/12/2028	7.00000	45.0000	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Aerial Lifts	Diesel	Tier 4 Final	2.00000	12.0000	46.0000	0.31000
Demolition	Tractors/Loaders/Backhoes	Diesel	Tier 4 Final	2.00000	12.0000	84.0000	0.37000
Demolition	Bore/Drill Rigs	Diesel	Tier 4 Final	1.000000	12.0000	83.0000	0.50000

Demolition	Concrete/Industrial Saws	Diesel	Tier 4 Final	4.00000	12.0000	33.0000	0.73000
Demolition	Air Compressors	Diesel	Tier 4 Final	4.00000	12.0000	37.0000	0.48000
Demolition	Cranes	Diesel	Tier 4 Final	1.000000	12.0000	367.000	0.29000
Demolition	Crawler Tractors	Diesel	Tier 4 Final	1.000000	12.0000	87.0000	0.43000
Demolition	Crushing/Proc. Equipment	Gasoline	Average	2.00000	12.0000	12.0000	0.85000
Demolition	Rubber Tired Dozers	Diesel	Tier 4 Final	2.00000	12.0000	367.000	0.40000
Demolition	Dumpers/Tenders	Diesel	Average	2.00000	12.0000	16.0000	0.38000
Demolition	Excavators	Diesel	Tier 4 Final	3.00000	12.0000	36.0000	0.38000
Demolition	Generator Sets	Diesel	Average	2.00000	12.0000	14.0000	0.74000
Demolition	Tractors/Loaders/Backhoes	Diesel	Tier 4 Final	1.000000	12.0000	84.0000	0.37000
Demolition	Rubber Tired Loaders	Diesel	Tier 4 Final	2.00000	12.0000	150.000	0.36000
Demolition	Off-Highway Tractors	Diesel	Tier 4 Final	1.000000	12.0000	38.0000	0.44000
Demolition	Off-Highway Trucks	Diesel	Tier 4 Final	1.000000	12.0000	376.000	0.38000
Demolition	Rough Terrain Forklifts	Diesel	Tier 4 Final	2.00000	12.0000	96.0000	0.40000
Demolition	Scrapers	Diesel	Tier 4 Final	2.00000	12.0000	423.000	0.48000
Demolition	Skid Steer Loaders	Diesel	Tier 4 Final	1.000000	12.0000	71.0000	0.37000
Demolition	Tractors/Loaders/Backhoes	Diesel	Tier 4 Final	2.00000	12.0000	84.0000	0.37000
Demolition	Trenchers	Diesel	Tier 4 Final	2.00000	12.0000	40.0000	0.50000
Site Preparation	Tractors/Loaders/Backhoes	Diesel	Tier 4 Final	2.00000	12.0000	84.0000	0.37000
Site Preparation	Bore/Drill Rigs	Diesel	Tier 4 Final	1.000000	12.0000	83.0000	0.50000
Site Preparation	Plate Compactors	Diesel	Average	1.000000	12.0000	8.00000	0.43000
Site Preparation	Air Compressors	Diesel	Tier 4 Final	4.00000	12.0000	37.0000	0.48000
Site Preparation	Generator Sets	Diesel	Average	2.00000	12.0000	14.0000	0.74000
Site Preparation	Tractors/Loaders/Backhoes	Diesel	Tier 4 Final	1.000000	12.0000	84.0000	0.37000
Site Preparation	Off-Highway Tractors	Diesel	Tier 4 Final	1.000000	12.0000	38.0000	0.44000

Site Preparation	Off-Highway Trucks	Diesel	Tier 4 Final	1.000000	12.0000	376.000	0.38000
Site Preparation	Skid Steer Loaders	Diesel	Tier 4 Final	1.000000	12.0000	71.0000	0.37000
Site Preparation	Tractors/Loaders/Backhoes	Diesel	Tier 4 Final	2.00000	12.0000	84.0000	0.37000
Site Preparation	Trenchers	Diesel	Tier 4 Final	2.00000	12.0000	40.0000	0.50000
Grading	Tractors/Loaders/Backhoes	Diesel	Tier 4 Final	3.00000	12.0000	84.0000	0.37000
Grading	Bore/Drill Rigs	Diesel	Tier 4 Final	1.000000	12.0000	83.0000	0.50000
Grading	Plate Compactors	Diesel	Average	2.00000	12.0000	8.00000	0.43000
Grading	Air Compressors	Diesel	Tier 4 Final	4.00000	12.0000	37.0000	0.48000

Architectural Coating	Onsite truck	—	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Control Strategies Applied	PM10 Reduction	PM2.5 Reduction
Water unpaved roads twice daily	55%	55%
Limit vehicle speeds on unpaved roads to 25 mph	44%	44%
Sweep paved roads once per month	9%	9%

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00000	0.00000	362,235	120,745	24,453.0

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Ton of Debris)	Acres Paved (acres)
Demolition	0.00000	0.00000	0.00000	17,114.0	0.00000
Site Preparation	7,750.00	—	0.00000	0.00000	0.00000
Grading	7,750.00	—	180.000	0.00000	0.00000
Paving	0.00000	0.00000	0.00000	0.00000	9.35606

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Phase Name	Land Use	Area Paved (acres)	% Asphalt
Paving	Unrefrigerated Warehouse-No Rail	0.00000	0%
Paving	Parking Lot	2.23209	100%
Paving	Other Asphalt Surfaces	4.65932	100%
Paving	Other Non-Asphalt Surfaces	2.46465	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2026	0.00000	203.983	0.03300	0.00400
2027	0.00000	203.983	0.03300	0.00400
2028	0.00000	203.983	0.03300	0.00400

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	8.85000	annual days of extreme heat
Extreme Precipitation	5.80000	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	9.75000	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	0	0	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	2	1	1	3
Sea Level Rise	1	1	1	2

Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	7.51711
AQ-PM	28.9857
AQ-DPM	95.0218
Drinking Water	4.20882
Lead Risk Housing	84.6881
Pesticides	0.00000
Toxic Releases	50.1750
Traffic	94.2875
Effect Indicators	—
CleanUp Sites	90.1456
Groundwater	83.3970
Haz Waste Facilities/Generators	81.0589

Impaired Water Bodies	12.4528
Solid Waste	86.5063
Sensitive Population	—
Asthma	89.4816
Cardio-vascular	63.0484
Low Birth Weights	54.8499
Socioeconomic Factor Indicators	—
Education	64.5153
Housing	34.2459
Linguistic	83.8408
Poverty	70.1256
Unemployment	30.8824

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	80.0000
Healthy Places Index Score for Project Location (b)	48.0000
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
Construction: Construction Phases	CalEEMod durations are based on calendar days provided by applicant for each construction activity with an assumed start date of September 2026. Assumes 7 day work week based on data from applicant. Assumes Paving and Architectural Coating will end at the same time as Building Construction
Construction: Off-Road Equipment	based on equipment provided by applicant for a 7am-7pm schedule
Construction: Trips and VMT	Added one way trips for water trucks based on equipment data provided for each construction activity. 3.6 miles/trip for demolition provided by applicant

San Leandro, California 94577
Via email: LJuarez@sanleandro.org

Subject: Cultural Resources Assessment, 3199 Alvarado Street Industrial Project, San Leandro, Alameda County, California 94578

Dear Ms. Juarez:

This letter report presents the findings of a cultural resources assessment completed in support of the 3199 Alvarado Street Industrial Project (project) in San Leandro, Alameda County, California. The City of San Leandro retained Rincon Consultants, Inc. (Rincon) to support the project's compliance with the California Environmental Quality Act (CEQA) and applicable local regulations, including the City of San Leandro Municipal Code.

Principal Planner Abe Leider, AICP CEP, conducted a pedestrian survey of the project site under direction of Senior Architectural Historian Michelle Anderson, MA. Ms. Anderson conducted archival research and was the primary author of this assessment. Architectural Historian Josh Bevan, MSHP, assisted with historic context development. Archaeologist Eleni Ziogas, BA, is also a contributing author of this study. Cultural Resources Principal Margo Nayyar, MA, provided senior oversight and quality assurance. Geographic Information Systems Analyst Kaylee Herbold prepared the figures found in this report. Ms. Anderson, Mr. Bevan, and Ms. Nayyar meet the Secretary of the Interior's Professional Qualifications Standards (PQS) for history and architectural history (36 CFR, Part 61).

Project Site and Description

The project site is approximately 14.9 acres and is comprised of Assessor Parcel Number (APN) 77B-1201-15 and is zoned as Industrial General. The site is currently developed with a 252,220 square-foot, 36-foot (one story) tall warehouse building and surface parking. Interstate (I)-880 is to the west, commercial and light industrial uses are to the north and east, and single-family residences are to the south. The project would involve demolition of the existing building and subsequent construction of a one-story, 241,488 square-foot warehouse building with two office spaces and associated site and parking improvements. The proposed warehouse structure would have a maximum height of 46 feet.

The project encompasses a portion of Township 3S, Range 3W, Sections 1 and 2 on the *San Leandro, California* United States Geological Survey (USGS) 7.5-minute topographic quadrangle.

Regulatory Setting

State

California Environmental Quality Act

California Public Resources Code (PRC) Section 21084.1 requires lead agencies to determine if a project could have a significant impact on historical or unique archaeological resources. As defined in PRC Section 21084.1, a historical resource is a resource listed in, or determined eligible for listing in,

the CRHR, a resource included in a local register of historical resources or identified in a historical resources survey pursuant to PRC Section 5024.1(g), or any object, building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant. PRC Section 21084.1 also states resources meeting the above criteria are presumed to be historically or cultural significant unless the preponderance of evidence demonstrates otherwise. Resources listed in the NRHP are automatically listed in the CRHR, as are California Historical Landmarks 770 and above; both are therefore historical resources under CEQA. Historical resources may include eligible built environment resources and archaeological resources of the precontact or historic periods.

CEQA Guidelines Section 15064.5(c) provides further guidance on the consideration of archaeological resources. If an archaeological resource does not qualify as a historical resource, it may meet the definition of a "unique archaeological resource" as identified in PRC Section 21083.2. PRC Section 21083.2(g) defines a *unique archaeological resource* as an artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria: 1) it contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information, 2) has a special and particular quality such as being the oldest of its type or the best available example of its type, or 3) is directly associated with a scientifically recognized important prehistoric or historic event or person.

If an archaeological resource does not qualify as a historical or unique archaeological resource, the impacts of a project on those resources will be less than significant and need not be considered further (*CEQA Guidelines* Section 15064.5[c][4]). *CEQA Guidelines* Section 15064.5 also provides guidance for addressing the potential presence of human remains, including those discovered during the implementation of a project.

According to CEQA, an impact that results in a substantial adverse change in the significance of a historical resource is considered a significant impact on the environment. A substantial adverse change could result from physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of the historical resource would be materially impaired (*CEQA Guidelines* Section 15064.5 [b][1]). *Material impairment* is defined as demolition or alteration in an adverse manner [of] those characteristics of a historical resource that convey its historical significance and that justify its inclusion in, or eligibility for inclusion in, the CRHR or a local register (*CEQA Guidelines* Section 15064.5[b][2][A]).

If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that resources cannot be left undisturbed, mitigation measures are required (PRC Section 21083.2[a][b]).

The requirements for mitigation measures under CEQA are outlined in *CEQA Guidelines* Section 15126.4(a)(1). In addition to being fully enforceable, mitigation measures must be completed within a defined time period and be roughly proportional to the impacts of the project. Generally, a project which is found to comply with the Secretary of the Interior's *Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings* (Standards) is considered to be mitigated below a level of significance (*CEQA Guidelines* Section 15126.4 [b][1]). For historical resources of an archaeological nature, lead agencies should also seek to avoid damaging effects where feasible. Preservation in place is the preferred manner to mitigate impacts to archaeological sites; however, data recovery through excavation may be the only option in certain instances (*CEQA Guidelines* Section 15126.4[b][3]).

As outlined in *CEQA Guidelines* Section 15164, a lead agency shall prepare an addendum to a previously certified EIR or a (mitigated) negative declaration (M)ND adopted for a proposed project, if

some changes or additions are necessary but none of the conditions described in *CEQA Guidelines* Section 15162 calling for preparation of a subsequent EIR or (M)ND have occurred. The conditions described in Section 15162 include the following:

1. Substantial changes are proposed in the project which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
2. Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR or negative declaration due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
3. New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the Negative Declaration was adopted, shows any of the following:
    a. The project will have one or more significant effects not discussed in the previous EIR or negative declaration;
    b. Significant effects previously examined will be substantially more severe than shown in the previous EIR [or negative declaration];
    c. Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
    d. Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

The *CEQA Guidelines* Section 15164 states that the lead agency or responsible agency shall prepare an addendum to an adopted EIR or negative declaration if only minor changes or additions are necessary but none of the conditions described above have occurred. The *CEQA Guidelines* further specify that a brief explanation of the decision not to prepare a subsequent EIR should be included in one of the following: the addendum itself, the lead agency's findings on the project, or elsewhere in the record. Pursuant to the *CEQA Guidelines*, an addendum does not need to be circulated for public review but can be included in or attached to the adopted EIR prior to deciding on the project.

The purpose of the EIR addendum is to analyze the environmental impacts of the proposed project in relation to the environmental impacts identified for the project site in the certified Housing Incentive Program Expansion and 788 San Antonio Road Mixed-Use Project EIR. The analysis presented herein was conducted pursuant to the requirements of *CEQA Guidelines* Section 15162 to support the discussion of cultural resources in the addendum.

National Register of Historic Places

Although the project does not have a federal nexus, properties which are listed in or have been formally determined eligible for listing in the NRHP are automatically listed in the CRHR. The following is therefore presented to provide applicable regulatory context. Authorized by Section 101 of the National Historic Preservation Act (NHPA), the NRHP is the nation's official list of cultural resources worthy of preservation. The NRHP recognizes the quality of significance in American, state, and local history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures,

and objects. Per 36 Code of Federal Regulations Part 60.4, a property is eligible for listing in the NRHP if it meets one or more of the following criteria:

Criterion A: Is associated with events that have made a significant contribution to the broad patterns of our history

Criterion B: Is associated with the lives of persons significant in our past

Criterion C: Embodies the distinctive characteristics of a type, period, or method of installation, or that represents the work of a master, or that possesses high artistic values, or that represents a significant and distinguishable entity whose components may lack individual distinction

Criterion D: Has yielded, or may be likely to yield, information important in prehistory or history

In addition to meeting at least one of the above designation criteria, resources must also retain integrity. The National Park Service (NPS) recognizes seven aspects or qualities that, considered together, define historic integrity. To retain integrity, a property must possess several of these seven qualities, if not all, defined in the following manner:

Location: The place where the historic property was constructed or the place where the historic event occurred

Design: The combination of elements that create the form, plan, space, structure, and style of a property

Setting: The physical environment of a historic property

Materials: The physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property

Workmanship: The physical evidence of the crafts of a particular culture or people during any given period in history or prehistory

Feeling: A property's expression of the aesthetic or historic sense of a particular period of time

Association: The direct link between an important historic event or person and a historic property

Certain properties are generally considered ineligible for listing in the NRHP, including cemeteries, birthplaces, graves of historical figures, properties owned by religious institutions, relocated structures, or commemorative properties. Additionally, a property must be at least 50 years of age to be eligible for listing in the NRHP. The NPS states that 50 years is the general estimate of the time needed to develop the necessary historical perspective to evaluate significance (NPS 1997). Properties which are less than 50 years must be determined to have "exceptional importance" to be considered eligible for NRHP listing.

California Register of Historical Resources

The CRHR was established in 1992 and codified by PRC Section 5024.1 and Title 14 Section 4852. The CRHR is an authoritative listing and guide to be used by State and local agencies, private groups, and citizens in identifying the existing historical resources of the state and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change (PRC 5024.1[a]). The criteria for eligibility for the CRHR are consistent with the NRHP criteria but have been modified for state use in order to include a range of historical resources that better reflect the history of California (PRC 5024.1[b]). Unlike the NRHP however, the CRHR does not have a defined age threshold for eligibility; rather, a resource may be eligible for the CRHR if it can be demonstrated sufficient time has passed to understand its historical or architectural significance (California Office of

Historic Preservation [OHP] 2011). Furthermore, resources may still be eligible for listing in the CRHR even if they do not retain sufficient integrity for NRHP eligibility (OHP 2011). Generally, the OHP recommends resources over 45 years of age be recorded and evaluated for historical resources eligibility (OHP 1995: 2).

A property is eligible for listing in the CRHR if it meets one of more of the following criteria:

Criterion 1: Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage

Criterion 2: Is associated with the lives of persons important to our past

Criterion 3: Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values

Criterion 4: Has yielded, or may be likely to yield, information important in prehistory or history

California Health and Safety Code

Section 7050.5 of the California Health and Safety Code states that in the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains until the Coroner of the county in which the remains are discovered has determined if the remains are subject to the Coroner's authority. If the human remains are of Native American origin, the Coroner must notify the NAHC within 24 hours of this identification.

California Public Resources Code Section 5097.98

Section 5097.98 of the PRC states that the NAHC, upon notification of the discovery of Native American human remains pursuant to Health and Safety Code Section 7050.5, shall immediately notify those persons (i.e., the Most Likely Descendant [MLD]) that it believes to be descended from the deceased. With permission of the landowner or a designated representative, the MLD may inspect the remains and any associated cultural materials and make recommendations for treatment or disposition of the remains and associated grave goods. The MLD shall provide recommendations or preferences for treatment of the remains and associated cultural materials within 48 hours of being granted access to the site.

Local

City of San Leandro Historic Resource Designation

Chapter 4-26-710 of the City of San Leandro Municipal Code outlines two categories for local historical resource designation: City Landmark and Merit Resource. A City landmark can be a building, structure, object, cultural landscape, site or archaeological site. In order to be designated as a City landmark, a resource must retain a high level of historic and architectural integrity and meet at least one of the following criteria for designation:

a. The resource exemplifies and reflects special or exemplary elements of San Leandro's cultural, social, economic, political, aesthetic, engineering, architectural or natural history, or has important archaeological or anthropological associations;

b. The resource is identified with persons or events significant in local, state, regional or national history;

c. The resource embodies distinctive or exemplary characteristics of a style, type, period or method of construction, or is a valuable example of the use of local materials or craftsmanship;

d. Represents the work of a notable builder, designer, engineer or architect recognized at the state, regional or national level; or

e. The resource may yield important archaeological, ethnographic or anthropological information about the region's past.

A merit resource can be a building, structure, object, cultural landscape, site or archaeological site. In order to be designated as a merit resource, a property must retain integrity and meet at least one of the following criteria for designation:

a. The resource reflects important elements of the City's cultural, social, economic, political, aesthetic, engineering, architectural or natural history;

b. The resource is identified with persons or events significant in local history;

c. The resource embodies important characteristics of a style, type, period or method of construction;

d. The resource represents the work of a notable local builder, designer or architect; or

e. The resource may yield important archaeological, ethnographic or anthropological information about the City's past.

Methods

This section describes the methodology of background and archival research, cultural resources records search, field survey, and National Register of Historic Places (NRHP) and California Register of Historical Resources (CRHR) evaluations conducted to identify historical resources within the project site.

Background and Archival Research

Rincon completed background and archival research in support of this assessment in February 2026. A variety of primary and secondary source materials were consulted. Sources included, but were not limited to, historical maps, aerial photographs, and written histories of the area. The following sources were utilized to develop an understanding of the project site and its context:

- California Historical Resources Information System (CHRIS) records search through the Northwest Information Center (NWIC)
- ParcelQuest property data (ParcelQuest 2026)
- Historical aerial photographs accessed via Nationwide Environmental Title Research (NETR) Online (2026)
- University of California, Santa Barabara (UCSB) Geospatial Collection (2026)
- Historical United States Geological Survey (USGS) topographic maps accessed online, via USGS topoView (2026)
- Historical newspaper clippings obtained from Newspapers.com (2026)
- Various historical records via Ancestry.com (2026)

California Historical Resources Information System Records Search

Rincon completed a CHRIS records search (File No. 25-1150) through the NWIC in February 2026. The NWIC is the official state repository for cultural resources records and reports for the county in which the project falls. The purpose of the records search was to identify previously recorded cultural resources, as well as previously conducted cultural resources studies within the project site and a 0.25-mile radius. Rincon also reviewed the NRHP, CRHR, California Historical Landmarks list, Built Environment Resources Directory for Alameda County, the Local Register, and the Archaeological Determination of Eligibility list (Attachment 2).

Field Survey

Principal Planner Abe Leider, AICP CEP, conducted a pedestrian survey of the subject property under direction of Senior Architectural Historian Michelle Anderson, MA on February 5, 2025. The built environment resource within the project site was visually inspected. Building characteristics were documented using field records and a digital camera. Copies of the digital photographs are maintained digitally by Rincon. Representative photographs of the project site are provided in Attachment 3.

Due to the paved setting and existing buildings within the project site, an archeological survey of the property was not required.

Evaluation

Pursuant to the OHP Guidelines (OHP 1995), properties over 45 years of age were evaluated for inclusion in the NRHP, CRHR, and local listing and recorded on California Department of Parks and Recreation (DPR) 523 series forms. See Attachment 3.

Findings

This section describes the findings of background and archival research, cultural resources records search, field survey, and NRHP, CRHR, and local evaluations conducted to identify cultural resources within the project site.

California Historical Resources Information System Records Search

Rincon received records search results from the NWIC on February 24, 2026. The records search included the project site and a 0.25-mile radius.

Known Cultural Resources Studies

The CHRIS records search and background research identified three studies within the 0.25-mile search radius (Attachment 2). None of the project site has been previously surveyed or studied.

Known Cultural Resources

The CHRIS records search and background research identified no cultural resources within the project area or within the 0.25-mile search radius (Attachment 2).

Aerial Imagery and Historical Topographic Maps Review

Rincon completed a review of historical topographic maps and aerial imagery to ascertain the development history of the project site. Survey plat maps dated 1870 and 1883 illustrate the project

site as entirely undeveloped, with the San Leandro Creek and burgeoning San Leandro townsite to the north (GLO 1870, 1883). By 1899, topographic maps show the Southern Pacific Railroad alignment directly east of the project site, with sparse residential development in the broader vicinity (USGS 1899).

Based on historical topographical maps and aerial photographs, the project site was under agricultural cultivation during the 1940s and 1950s, with no apparent structures on site (NETR Online 1946; USGS 1942). By 1958, dense residential construction had spread immediately south and west of the project site (NETR Online 1958). Newspaper records, Alameda County Assessor data, and aerial photographs indicate that the existing warehouse on the project site was constructed in 1963 (*Alameda Times Star* 1962a, 1962b; ParcelQuest 2026; UCSB 1965). The building was expanded with an addition at an undetermined date between 1968 and 1980. Around this time, a railroad spur was installed on the parcel to connect to a loading dock on the addition (NETR Online 1968, 1980). Current survey results suggest that the tracks are no longer in use. From the 1960s through the present day, the immediate surroundings of the project site have remained predominately industrial and residential.

Geoarchaeological Sensitivity Analysis

The project site lies in the San Francisco Bay Area Region at an approximate elevation of 9 meters (32 feet) above mean sea level. The project site and surrounding area consists of commercial and residential development and does not retain its natural setting. San Lorenzo Creek is located approximately 1.7 miles south while the San Fransico Bay is located 1.8 miles west of the project site. The project site is situated within the traditional territory of the Ohlone (or Costanoan) people. Specifically, the Chochenyo speaking Ohlones, with the nearest village being that of Tatcan and Huchuin.

According to published geologic mapping, the project area is underlain by Holocene-aged basin deposits (Graymer 2000). These deposits are the result of sediment-laden floodwater that rose above the natural banks of streams and rivers to spread across low-lying areas. They consist primarily of silts and clays and may be locally interbedded with stream channel deposits.

One dominant soil series was identified within the project site, the Clear Lake series (90%). The Clear Lake Series is formed in finely textured alluvium derived from mixed rock sources, along floodplains and basins or in drainageway swales. This series is commonly found at elevations of five to 2,000 feet above mean sea level. A typical profile of the Clear Lake Series features dark to very dark gray clay with a granular structure from 0 to 13 inches, and dark gray to grayish brown or light olive brown extremely hard clay from 19 to 60 inches (California Soil Resource Lab 2018). This series does not contain previously documented buried A horizon soils.

Subsurface explorations were conducted in the project area in January 2025 where “highly variable undocumented fills consisting of sandy lean clay and silty, clayey, and well graded sands with gravel to depths ranging from 3½ to 6½ feet” (Ohlsen 2025) were encountered. Where no fill was encountered or underneath the fill layers “medium stiff to hard lean clays with variable amounts of sand with interbedded layers of medium dense to very dense clayey and silty sands with variable amounts of gravel and very dense well-graded sand with silt to the depths explored” (Ohlsen 2025) were observed. As noted in the geotechnical investigation, “the clays were generally stiff to hard at depths shallower than 8 feet, medium stiff to stiff at depths from about 8 to about 17 to 22 feet, and then stiff to very stiff below 17 to 22 feet. The sand layers were encountered at depths of about 6¼ to 6½ feet, 7½ to 12 feet, 16 to 32 feet, and 42 to 45 feet. Beneath maximum boring depth to 100 feet interbedded stiff to hard clays and dense to very dense sands and gravels were encountered.

Although the sediments within the entire project area are of Holocene age and consist of basin deposits of alluvium derived from mixed rock sources. The Holocene epoch encompasses the entirety of documented prehistoric to modern human habitation of the area. Therefore, Holocene era alluvial formations have the potential to support and preserve buried archaeological resources and cultural materials. The soils map indicates the project site is underlain by soil series which do not contain recorded buried A-Horizon soils indicative of subsurface pre-contact archaeological sensitivity. Given this information, the project site has low sensitivity for the presence of archaeological deposits.

While archival research indicates the sediments mapped at surface within the project site are generally conducive to the natural burial and preservation of pre-contact archaeological resources given they consist of colluvial sedimentation deposited during the Holocene, recorded soils in the area do not contain any buried A-Horizon soils. Further, none of the mapped soils contain buried A-Horizon soils that indicate the presence of a paleosurface commonly identified with pre-contact archaeological deposits. Therefore, pre-contact archaeological sensitivity is considered to be low, consistent with previous studies for the area. Regarding post-contact archaeological sensitivity (i.e. historic-period), aerial and map review indicates that the project site appears first developed in 1962 and does not otherwise have longstanding historic period use. The project site has low sensitivity for post-contact subsurface archaeological deposits, which lowers the likelihood of the presence of trash pits or other deposits that may be preserved in the archaeological record. Further, the development of the project site in the early 1960s, including grading for the parking lot and excavation related to installation of building foundations, indicates significant disturbances. Coupled with the lack of historic-period use prior to the construction, the project site also has low sensitivity for the presence of subsurface historic-period archaeological deposits.

Based on the information presented above, the overall archaeological sensitivity of the project site is considered **low** for both surface and subsurface precontact and historic-period archaeological deposits.

Field Survey

The project site is located at 3199 Alvardo Street in San Leandro, Alameda County, California (Figure 3). The property is an approximately 14.9-acre industrial parcel located between Alvardo Street and I-880. It is developed with one historic-age, 252,220 square-foot, single-story warehouse building and associated hardscaping. The facility was originally constructed as a combined warehouse and department store in 1962 (*Alameda Times Star* 1962a, 1962b; ParcelQuest 2026; UCSB 1965). The property is accessed via two vehicular entrances fronting Alvarado Street. Abandoned railroad tracks are cited directly adjacent to the entry, suggesting that the warehouse loading docks were formerly accessible via rail (Figure 4). The warehouse is positioned toward the west end of the lot and is separated from Alvarado street by ample surface parking.

The warehouse exhibits a predominantly rectangular plan, composed of the original 1962 building footprint and a subsequent addition of comparable size constructed sometime between 1968 and 1980. Its exterior is characterized by tilt-up concrete panel construction. Fenestration is minimal, limited primarily to loading bays of varying sizes and flush personnel entrances with metal or glass doors (Figure 5 through Figure 9).

Review of digitally accessible building permits indicates that in 2008 the loading bays and public entrance on the building's north elevation were enlarged or otherwise modified. As part of the same renovation campaign, several openings on the east elevation facing Alvarado Street were infilled and a canopy was removed (City of San Leandro 2026).

Evaluation

Property History

The warehouse at 3199 Alvarado Street in San Leandro was opened as Consumers Mart of America's (commonly referred to as CMA) eleventh location in 1962 (*Alameda Times Star* 1962b). The San Leandro location was advertised as the largest one-floor department store in the Bay Area upon its opening and was designed to contain over 70 departments within the 152,000 square-foot building. Twelve of the site's 15 acres were reserved for surface parking (*Alameda Times Star* 1962a).

The department store brand CMA was a nationwide chain that included two Chicago area locations opened around 1959, as well as Anaheim and Torrance locations opened in Southern California in 1960 and 1961 (*Anaheim Bulletin* 1960; *San Pedro News-Pilot* 1961). The brand was led by President J.A. Keilly and gained publicity for its association with Keilly's friend and brand Vice President George Raft, a well-known motion picture actor who invested in the brand as it began to expand in the early 1960s. As of 1960, the brand had offices in Chicago, Anaheim, and San Francisco (*Anaheim Gazette* 1960). Similar to modern-day Costco or Sam's Club, CMA stores were advertised as discount shopping venues and served a membership-only customer base, which included a focus on public and government employees. Interior photographs of the subject San Leandro CMA suggest that it featured an open, warehouse-style layout comparable to that of contemporary wholesale facilities (*Alameda Times Star* 1962a).

During the same year that the San Leandro location was established, CMA was developing a second location in the Miami, Florida region with a similar 15-acre site (*Miami Herald* 1962). Each of the CMA locations typically featured a 15-acre site and a building housing approximately 70 departments within a roughly 150,000 square-foot building, with ample parking advertised as a primary amenity. Although CMA grew steadily in the early 1960s, by 1965, it was in financial difficulty and ultimately went bankrupt (Pleasant Family Shopping 2008a). Several locations across the country were acquired by other brands. The San Leandro location, in particular, was apparently short-lived as a CMA location and became part of the Bay Mart brand in 1965 (*Oakland Tribune* 1965). Several of CMA's Chicago and Florida locations were taken over by Zayre's (Pleasant Family Shopping 2008b).

The property housed Bay Mart from 1965 until approximately 1971, when it was acquired by the regional home furnishings retailer Levitz Furniture (*Oakland Tribune* 1971a, 1971b). Consistent with earlier commercial uses on the site, Levitz operated the building as a combined warehouse and showroom. Advertisements announcing the 1971 grand opening featured images of the stockroom, where forklifts transported customer-selected items "from the rack to warehouse door" (*Richmond Independent* 1971). The property continued to function as a Levitz Furniture branch until 2008 (*Oakland Tribune* 2008a, 2008b). At some point during the company's tenure, prior to 1980, the warehouse was expanded to approximately 250,000 square feet (NETR 1980).

Property Type

The industrial building at 3199 Alvarado Street is an example of a tilt-up concrete warehouse. Tilt-up construction was invented in the late nineteenth century by Colonel Robert H. Aiken, who developed the method to build United States Army barracks in the Philippines during the Spanish American War (Crosse 2014). Aiken's process involved pre-fabricating concrete wall sections while positioned horizontally and tilting them up into position to form vertical walls. He first used this system in the United States to create concrete target walls at the National Guard's Camp Logan rifle range in Illinois in 1907. He patented his method and established a concrete and steel target frame factory shortly thereafter. Aiken subsequently established the Aiken Cement Home Company and planned (but never built) an entire residential subdivision. He did succeed in constructing the Memorial United Methodist

Church in Zion, Illinois in 1910. After a period of partnership with Frederick H. Sears of Chicago, Aiken expanded his business interests to Los Angeles with the Aiken Reinforced Concrete Company in 1910. However, the West Coast branch was insolvent and closed in 1912. Aiken completed his final tilt-up project in Illinois in 1924, a subdivision of bungalows with Spanish-influenced styling (Dretske 2013). An early adopter of Aiken's system was Southern California-based architect Irving Gil, who acquired equipment and regional rights to the Aiken System from the bankrupt Aiken Reinforced Concrete Company. In 1913, Gill designed the La Jolla Woman's Club in La Jolla, which was California's first building constructed using the tilt-up method (Horak et al. 2021).

Tilt-up construction increased in popularity in California and growing Sun Belt states during the postwar period, due to its relatively economical cost, potential for minimal maintenance, and importantly, the development of mobile crane technology during World War II (Crompton 1992). Rather than transporting completed, pre-cast building materials and components, panels were cast on site and typically constructed in larger portions than allowed for transported materials (Crompton 1992). The Portland Cement Association's *Tilt-Up Construction: A Modern Method of Building with Reinforced Concrete* published in 1952 noted "Tilt-up construction is…considered as a new development because most of the buildings erected by this method have been built since about 1946," adding that many tilt-up buildings were at the time one-story structures, sometimes with a second floor that repeated the tilt-up process after the second-story floor was built (Portland Cement Association 1952). Tilt-up construction was commonly utilized for warehouses in industrial areas and also adopted for commercial building and school construction, in addition to continuance as a residential building method. Examples showcased by Portland Cement Association included a 93-acre industrial tract near Los Angeles International Airport, with buildings designed by architect S. Charles Lee. Tilt-up buildings completed around the mid-twentieth century often featured limited architectural detailing, sometimes with moderate Streamline Moderne, Art Deco, or modest International style-influenced elements. Refinements in seismic strengthening for this type of construction were developed following the 1971 San Fernando/Sylmar Earthquake and 1994 Northridge Earthquake (McCormick 2003). Tilt-up remains a popular method of construction in warehouse and commercial-office applications, particularly in suburban office and industrial parks.

Architecture

The industrial building at 3199 Alvarado Street is utilitarian in design, reflecting a functional approach to construction that does not adhere to any singular architectural style. Lacking ornamentation or embellishment, the building's appearance underscores its purpose-driven nature, prioritizing economy and efficiency over aesthetic distinction.

Architect/Builder

Research through targeted searches on the City of San Leandro building permit database, Newspapers.com, Internet Archive, Ancestry, and another online repositories did not confirm the specific architect(s) or builder(s) associated with the historic-age building present at 3199 Alvarado Street (Ancestry 2026; City of San Leandro 2026; Internet Archive 2026; Newspapers.com 2026).

NRHP/CRHP Historic Resource Evaluation

Research did not demonstrate that this property is associated with events significant to the broad patterns of our history at the local, state, or national level. The historic-period warehouse at 3199 Alvarado Street was constructed in 1962 and expanded during the 1970s, at the latter end of the postwar industrial boom in San Leandro. The property, which formerly served as a combined warehouse and store/showroom, is not directly or significantly associated with this period in history

and is not known to have made a significant contribution to other broad patterns of local, regional, state, or national culture and history. The property does not constitute one of the first or pioneering facilities in San Leandro, and its construction did not influence the course of later industrial or commercial development in the area. Therefore, the property is recommended ineligible for listing in the NRHP and CRHR under Criteria A/1.

Research did not demonstrate that the property is associated with any persons significant in national, state, or local history. While the corporate leaders of CMA, Bay Mart, and/or Levitz Furniture may have been important figures within their respective fields, research did not suggest that any of their significant contributions had any direct link to this property. Historical records reviewed revealed little specific information about individual staff who worked at this location, and there is no demonstrable evidence that any employees, singularly or collectively, made notably significant contributions within the broader context of San Leandro's history, or history at the state or national level. Therefore, the property is recommended ineligible under Criteria B/2.

3199 Alvarado Street was erected during the mid-twentieth century and is a simple iteration of the tilt-up method of concrete warehouse construction. However, the building is neither an early nor noteworthy example of the property type, which is well represented throughout the region. Further, the building was substantially altered with the construction of an addition and other modifications. The building does not adhere to an identifiable architectural style or period, and its overall simplicity lacks distinction or high artistic value. Research through targeted searches on City of San Leandro building permit database, Newspapers.com, Internet Archive, and other online repositories did not reveal the original architect or builder. Therefore, the property is recommended ineligible under Criterion C/3.

The property is not likely to yield valuable information that will contribute to our understanding of human history because the property is not and never was the principal source of important information pertaining to subjects such as twentieth century industrial properties in San Leandro. Therefore, the property is recommended ineligible for listing in the NRHP and CRHR under Criteria D/4.

City of San Leandro Historic Resource Designation

The 3199 Alvarado Street is recommended ineligible for local historical designation under all criteria. The building does not meet San Leandro Landmark or Merit Resource Criteria A or B, as it lacks association with significant event, patterns of events, or individuals, as explained under the evaluation of NRHP and CRHR Criteria A/1 and B/2 above. The building also does not meet San Leandro Landmark or Merit Resource Criteria C or D, as it lacks architectural significance, as explained under the evaluation of NRHP and CRHR Criteria C/3. Lastly, the building does not meet San Leandro Landmark or Merit Resource Criterion E, as it lacks important information potential, as explained under the evaluation of NRHP and CRHR Criteria D/4.

In conclusion, 3199 Alvarado Street is recommended ineligible for listing in the NRHP, CRHR, and applicable local register due to lack of historical and architectural significance and is not a historical resource as defined by CEQA Section 15064.5(a) or historic property as defined by 36 CFR 800.16(l)(1).

Conclusions and Recommendations

The impact analysis included here is organized based on the cultural resources thresholds included in CEQA Guidelines Appendix G: Environmental Checklist Form:

a. Would the project cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?

b. Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

c. Would the project disturb any human remains, including those interred outside of dedicated cemeteries?

Threshold A broadly refers to historical resources. To more clearly differentiate between archaeological and built environment resources, we have chosen to limit analysis under Threshold A to built environment resources. Archaeological resources, including those that may be considered historical resources pursuant to Section 15064.5 and those that may be considered unique archaeological resources pursuant to Section 21083.2, are considered under Threshold B.

Historical Built Environment Resources

One historic-age industrial property, 3199 Alvarado Street, was identified within the project site. The property is recommended ineligible for the NRHP, CRHR, and local register under all criteria. As such, the property does not qualify as a historical resource pursuant to CEQA. There are no known historical resources within the project site. Rincon recommends a finding of ***no impact to historical resources***. No mitigation measures are required.

Historical and Unique Archaeological Resources

This assessment did not identify any archaeological resources or archaeological deposits on the project site. Additionally, the project site has low archaeological sensitivity based on the extended proximity to water, lack of A soil horizon,[1] lack of archaeological remains within the vicinity of the project, and high level of disturbance. However, this does not preclude the potential for subsurface archaeological resources. Rincon presents the following recommended mitigation measure for unanticipated discoveries during construction. With adherence to this measure, Rincon recommends a finding of ***less than significant impact with mitigation incorporated*** under CEQA.

Recommended Mitigation

Unanticipated Discovery of Cultural Resources

In the event that archaeological resources are unexpectedly encountered during ground-disturbing activities, work within 50 feet of the find shall halt and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (National Park Service 1983) shall be contacted immediately to evaluate the resource. If the resource is determined by the qualified archaeologist to be prehistoric, then a Native American representative shall also be contacted to participate in the evaluation of the resource. If the qualified archaeologist and/or Native American representative determines it to be appropriate, archaeological testing for CRHR eligibility shall be completed. If the resource proves to be eligible for the CRHR and significant impacts to the resource cannot be avoided via project redesign, a qualified archaeologist shall prepare a data recovery plan tailored to the physical nature and characteristics of the resource, per the requirements of CCR Guidelines Section 15126.4(b)(3)(C). The data recovery plan shall identify data recovery excavation methods, measurable objectives, and data thresholds to reduce any significant impacts to cultural resources related to the resource. Pursuant to the data recovery plan, the qualified archaeologist and

[1] An A horizon is the uppermost soil layer, parallel to the ground surface, that represents either the current land surface or a former surface that may include archaeological deposits.

Native American representative, as appropriate, shall recover and document the scientifically consequential information that justifies the resource's significance. The City shall review and approve the treatment plan and archaeological testing as appropriate, and the resulting documentation shall be submitted to the regional repository of the California Historical Resources Information System, per CCR Guidelines Section 15126.4(b)(3)(C).

Human Remains

No human remains are known to be present within the project site. However, the discovery of human remains is always a possibility during ground disturbing activities. If human remains are found, the State of California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. In the event of an unanticipated discovery of human remains, the County Coroner must be notified immediately. If the human remains are determined to be of Native American origin, the Coroner will notify the Native American Heritage Commission, which will determine and notify a most likely descendant (MLD). The MLD has 48 hours from being granted site access to make recommendations for the disposition of the remains. If the MLD does not make recommendations within 48 hours, the landowner shall reinter the remains in an area of the property secure from subsequent disturbance. With adherence to existing regulations, Rincon recommends a finding of less than significant impact to human remains under CEQA.

City of San Leandro Standard Conditions of Approval

Additionally, the project would be required to comply with the following City Standard Condition of Approval (COA) related to the unanticipated discovery of cultural resources and human remains.

Standard COA – Discovery of Historic/Prehistoric Artifacts or Human Remains

If currently unknown historic/prehistoric artifacts or human remains are discovered during ground disturbing activities, the following measures shall be implemented:

a. *In compliance with State law (Section 7050.5 of the Health and Safety Code and Section 5097.94 of the Public Resources Code), in the event that historical artifacts are found, all work within 50 feet of the find shall stop and a qualified archaeologist shall examine the find. The archaeologist shall then submit a plan for evaluation of the resource to the City of San Leandro Planning Services Division for approval.*

b. *If the evaluation of the resource concludes that the found resource is eligible for the California Register of Historic Resources, a mitigation plan shall be submitted to the City of San Leandro Planning Services Division for approval, which shall consider reasonable efforts for the resources to be preserved in place or left in an undisturbed state.*

c. *If the artifacts and samples recovered during construction are determined to be significant and cannot be preserved in pace, the artifacts shall be cataloged and curated by a qualified archaeologist and placed in an appropriate curation facility. The mitigation plan shall be completed before earthmoving or construction activities can recommence within the designated resource area.*

d. *If the human remains are of Native American origin, the coroner must notify the Native American Heritage Commission (NAHC) within 24 hours of this identification. The NAHC will immediately identify a Native American most likely descendant (MLD) to inspect the site and provide recommendation.*

Should you have any questions concerning this study, please contact the undersigned at 916-382-2997 or mvanderson@rinconconsultants.com.

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, please reference the record search number listed above. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the California Historical Resources Information System (CHRIS).

Sincerely,

Annette Neal

Researcher

*P3a. Description:
3199 Alvardo Street in San Leandro, Alameda County, California (P5a. Photograph 1) is an approximately 14.9-acre industrial parcel located between Alvardo Street and I-880. It is developed with one historic-age, 252,220 square-foot, single-story warehouse building and associated hardscaping. The facility was originally constructed as a combined warehouse and department store in 1962 (*Alameda Times Star* 1962a, 1962b; ParcelQuest 2026; UCSB 1965). The property is accessed through two vehicular entrances fronting Alvarado Street. Abandoned railroad tracks are cited directly adjacent to the entry, suggesting that the warehouse loading docks were formerly accessible via rail (Photograph 2). The warehouse is positioned toward the west end of the lot and is separated from Alvarado street by ample surface parking.

3199 Alvarado Street has not previously been evaluated for the National Register of Historic Places (NRHP), California Register of Historical Resource (CRHR), or for local historical designation (see Continuation Sheets).

Local History
The following local historic context excerpt is derived from the *San Leandro 2035 General Plan* adopted in 2016 (City of San Leandro 2016) (see Continuation Sheets):

> Following some 3,000 years of Native American settlement, the area now known as San Leandro was divided through Spanish land grants between 1820 and 1842. Most of modern-day San Leandro was contained within the vast cattle ranches of Ignacio Peralta (north of San Leandro Creek) and Don Jose Joaquin Estudillo (south of San Leandro Creek). The ranches gave way to farms as settlers, squatters, and "49ers" arrived in the early 1850s. The town of San Leandro was laid out in 1855 and became the seat of Alameda County in 1856. The original town plan established a grid of streets, with sites set aside for prominent buildings such as the County Courthouse and City Hall.
>
> After a catastrophic earthquake destroyed the Courthouse in 1868 and the transcontinental railroad reached Oakland in 1869, the county seat was relocated from San Leandro to Oakland. However, San Leandro continued to prosper as a small agricultural town. The city incorporated in 1872 and had grown to about 2,300 residents by 1900. Farms and orchards surrounding San Leandro produced a variety of fruits and vegetables, including cherries, tomatoes, onions, potatoes, asparagus, sugar beets, rhubarb, and apricots. See Continuation Sheets.

P4. Description (Continued from Page 1):

The historic-age warehouse exhibits a predominantly rectangular plan, composed of the original 1962 building footprint and a subsequent addition of comparable size constructed sometime between 1968 and 1980. Its exterior is characterized by tilt-up concrete panel construction. Fenestration is minimal, limited primarily to loading bays of varying sizes and flush personnel entrances with metal or glass doors (Photograph 3 through Photograph 7).

Review of digitally accessible building permits indicates that in 2008 the loading bays and public entrance on the building's north elevation were enlarged or otherwise modified. As part of the same renovation campaign, several openings on the east elevation facing Alvarado Street were infilled and a canopy was removed (City of San Leandro 2026).

B10. Significance (Continued from Page 3):

Local History (Continued)

San Leandro continued to grow at a moderate pace during the first 40 years of the 20th Century. Many of the neighborhoods in the northeast part of the city, such as Broadmoor and Estudillo Estates, were developed during this time period. The railroad corridors running through the city were developed with industry, while Downtown was the center for commerce and civic life. By 1940, San Leandro had 14,000 residents. Still, the town covered just a few square miles and was surrounded by farms and orchards.

The 1940s and 50s were a time of transformation for the city. A development boom, initially created by the need for wartime housing and then sustained by returning veterans and their families, brought about a 350 percent increase in the city's population in just 20 years. Much of San Leandro's current form and character was defined during this era and nearly half of the city's current housing stock was added. Most of the neighborhood shopping centers and the commercial strips along East 14th Street and other arterials date from this period.

Despite the suburban character of the development, San Leandro emerged from the boom period as much more than a "bedroom community." The city was among the fastest growing industrial centers in the Bay Area during the post-war years, adding 6,000 manufacturing jobs between 1947 and 1954 alone. Much of West San Leandro was developed with industry and numerous warehousing and distribution facilities were built south of Marina Boulevard. At the same time, early shopping centers such as Pelton Center and Bayfair Mall made the city a thriving retail destination. The favorable balance between jobs and housing enabled San Leandro to offer a competitive tax rate and a high level of City services.

The pace of growth slowed as the city reached its natural limits during the 1960s. On the east, steep hills created a barrier to large-scale development. On the west, most of the shoreline had been acquired for park uses. Established communities lay to the north and south. The focus of new development shifted to smaller infill sites, including greenhouses and nurseries, and other properties that had been bypassed during the boom years.

By the 1980s, other factors had begun to shape the form of San Leandro. The Bay Area's economic base shifted from manufacturing to services and technology, and many traditional industries left the city. As the thousands of families who moved to San Leandro during the 1940s and 50s matured, school enrollment dropped and several schools were closed and redeveloped with housing. The percentage of senior citizens in the city increased from six percent in 1960 to 20 percent by 1990, giving San Leandro the highest median age in Alameda County. Local retailers were impacted by these changes and further by competition from new suburban malls.

San Leandro's evolution continued through the 1990s and early 2000s. Significant reinvestment in the city's housing stock took place, and the city gained almost 20,000 residents in two decades. Much of the city's growth was fueled by an increase in foreign-born residents and young families, transforming many of the city's shopping areas and cultural institutions, and increasing school enrollment. The city's industrial areas also evolved. In 2011, San Leandro launched a public-private partnership to develop an 11-mile fiber optics loop (Lit San Leandro). This investment has put the city on the leading edge of the Bay Area economy and has repositioned the city's businesses to be more technology and innovation focused. At the same time, San Leandro has promoted higher density development around its two BART stations, creating a development pattern that is oriented toward walking, bicycling, and transit use rather than driving.

Property History

Survey plat maps dated 1870 and 1883 illustrate the subject property as entirely undeveloped, with the San Leandro Creek and burgeoning San Leandro townsite to the north (GLO 1870, 1883). By 1899, topographic maps show the Southern Pacific Railroad alignment directly east of the property, with sparse residential development in the broader vicinity (USGS 1899).

Based on historical topographical maps and aerial photographs, the subject property was under agricultural cultivation during the 1940s and 1950s, with no apparent structures on site (NETR Online 1946; USGS 1942). By 1958, dense residential construction had spread immediately south and west of the property (NETR Online 1958). Newspaper records, Alameda County Assessor data, and aerial photographs indicate that the warehouse on the property was constructed in 1962 (*Alameda Times Star* 1962a, 1962b; ParcelQuest 2026; UCSB 1965). The building was expanded with an addition at an undetermined date between 1968 and 1980. Around this time, a railroad spur was installed on the property to connect to a loading dock on the addition (NETR Online

1968, 1980). Current survey results suggest that the tracks are no longer in use. From the 1960s through the present day, the immediate surroundings of the subject property have remained predominately industrial and residential.

Occupancy History

The subject building in San Leandro was opened as Consumers Mart of America's (commonly referred to as CMA) eleventh location in 1962 (*Alameda Times Star* 1962b). The San Leandro location was advertised as the largest one-floor department store in the Bay Area upon its opening and was designed to contain over 70 departments within the 152,000 square-foot building. Twelve of the site's 15 acres were reserved for surface parking (Figure 1) (*Alameda Times Star* 1962a).

The department store brand CMA was a nationwide chain that included two Chicago area locations opened around 1959, as well as Anaheim and Torrance locations opened in Southern California in 1960 and 1961 (*Anaheim Bulletin* 1960; *San Pedro News-Pilot* 1961). The brand was led by President J.A. Keilly and gained publicity for its association with Keilly's friend and brand Vice President George Raft, a well-known motion picture actor who invested in the brand as it began to expand in the early 1960s. As of 1960, the brand had offices in Chicago, Anaheim, and San Francisco (*Anaheim Gazette* 1960). Similar to modern-day Costco or Sam's Club, CMA stores were advertised as discount shopping venues and served a membership-only customer base, which included a focus on public and government employees. Interior photographs of the subject San Leandro CMA suggest that it featured an open, warehouse-style layout comparable to that of contemporary wholesale facilities (Figure 2) (*Alameda Times Star* 1962a).

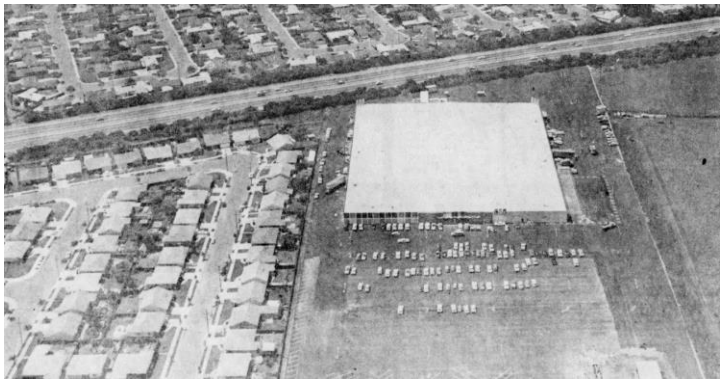

Figure 1: Newly constructed CMA warehouse/department store on the subject property photographed in 1962 (*Alameda Times Star* 1962b).

Figure 2: Interior view of the newly constructed CMA warehouse/department store in 1962 (*Alameda Times Star* 1962a).

During the same year that the San Leandro location was established, CMA was developing a second location in the Miami, Florida region with a similar 15-acre site (*Miami Herald* 1962). Each of the CMA locations typically featured a 15-acre site and a building housing approximately 70 departments within a roughly 150,000 square-foot building, with ample parking advertised as a primary amenity. Although CMA grew steadily in the early 1960s, by 1965, it was in financial difficulty and ultimately went bankrupt (Pleasant Family Shopping 2008a). Several locations across the country were acquired by other brands. The San Leandro location, in particular, was apparently short-lived as a CMA location and became part of the Bay Mart brand in 1965 (*Oakland Tribune* 1965). Several of CMA's Chicago and Florida locations were taken over by Zayre's (Pleasant Family Shopping 2008b).

The subject property housed Bay Mart from 1965 until approximately 1971, when it was acquired by the regional home furnishings retailer Levitz Furniture (*Oakland Tribune* 1971a, 1971b). Consistent with earlier commercial uses on the site, Levitz operated the building as a combined warehouse and showroom. Advertisements announcing the 1971 grand opening featured images of the stockroom, where forklifts transported customer-selected items "from the rack to warehouse door" (Figure 3) (*Richmond Independent* 1971). The property continued to function as a Levitz Furniture branch until 2008 (*Oakland Tribune* 2008a, 2008b). At some point during the company's tenure, prior to 1980, the warehouse was expanded to approximately 250,000 square feet (NETR 1980).

Figure 3: Interior of the warehouse on the subject property when it reopened as a Levitz Furniture branch in 1971 (*Richmond Independent* 1971).

Property Type

The industrial building at 3199 Alvarado Street is an example of a tilt-up concrete warehouse. Tilt-up construction was invented in the late nineteenth century by Colonel Robert H. Aiken, who developed the method to build United States Army barracks in the Philippines during the Spanish American War (Crosse 2014). Aiken's process involved pre-fabricating concrete wall sections while positioned horizontally and tilting them up into position to form vertical walls. He first used this system in the United States to create concrete target walls at the National Guard's Camp Logan rifle range in Illinois in 1907. He patented his method and established a concrete and steel target frame factory shortly thereafter. Aiken subsequently established the Aiken Cement

Home Company and planned (but never built) an entire residential subdivision. He did succeed in constructing the Memorial United Methodist Church in Zion, Illinois in 1910. After a period of partnership with Frederick H. Sears of Chicago, Aiken expanded his business interests to Los Angeles with the Aiken Reinforced Concrete Company in 1910. However, the West Coast branch was insolvent and closed in 1912. Aiken completed his final tilt-up project in Illinois in 1924, a subdivision of bungalows with Spanish-influenced styling (Dretske 2013). An early adopter of Aiken's system was Southern California-based architect Irving Gil, who acquired equipment and regional rights to the Aiken System from the bankrupt Aiken Reinforced Concrete Company. In 1913, Gill designed the La Jolla Woman's Club in La Jolla, which was California's first building constructed using the tilt-up method (Horak et. al 2021).

Tilt-up construction increased in popularity in California and growing Sun Belt states during the postwar period, due to its relatively economical cost, potential for minimal maintenance, and importantly, the development of mobile crane technology during World War II (Crompton 1992). Rather than transporting completed, pre-cast building materials and components, panels were cast on site and typically constructed in larger portions than allowed for transported materials (Crompton 1992). The Portland Cement Association's *Tilt-Up Construction: A Modern Method of Building with Reinforced Concrete* published in 1952 noted "Tilt-up construction is…considered as a new development because most of the buildings erected by this method have been built since about 1946," adding that many tilt-up buildings were at the time one-story structures, sometimes with a second floor that repeated the tilt-up process after the second-story floor was built (Portland Cement Association 1952). Tilt-up construction was commonly utilized for warehouses in industrial areas and also adopted for commercial building and school construction, in addition to continuance as a residential building method. Examples showcased by Portland Cement Association included a 93-acre industrial tract near Los Angeles International Airport, with buildings designed by architect S. Charles Lee. Tilt-up buildings completed around the mid-twentieth century often featured limited architectural detailing, sometimes with moderate Streamline Moderne, Art Deco, or modest International style-influenced elements. Refinements in seismic strengthening for this type of construction were developed following the 1971 San Fernando/Sylmar Earthquake and 1994 Northridge Earthquake (McCormick 2003). Tilt-up remains a popular method of construction in warehouse and commercial-office applications, particularly in suburban office and industrial parks.

Architecture

The industrial building at 3199 Alvarado Street is utilitarian in design, reflecting a functional approach to construction that does not adhere to any singular architectural style. Lacking ornamentation or embellishment, the building's appearance underscores its purpose-driven nature, prioritizing economy and efficiency over aesthetic distinction.

Architect/Builder

Research through targeted searches on the City of San Leandro building permit database, Newspapers.com, Internet Archive, Ancestry, and another online repositories did not confirm the specific architect(s) or builder(s) associated with the historic-age building present at 3199 Alvarado Street (Ancestry 2026; City of San Leandro 2026; Internet Archive 2026; Newspapers.com 2026).

NRHP/CRHP Historic Resource Evaluation

Research did not demonstrate that this property is associated with events significant to the broad patterns of our history at the local, state, or national level. The warehouse at 3199 Alvarado Street was constructed in 1962 and expanded during the 1970s, at the latter end of the postwar industrial boom in San Leandro. The property, which formerly served as a combined warehouse and store/showroom, is not directly or significantly associated with this period in history and is not known to have made a significant contribution to other broad patterns of local, regional, state, or national culture and history. The subject property does not constitute one of the first or pioneering facilities in San Leandro, and its construction did not influence the course of later industrial or commercial development in the area. Therefore, the property is recommended ineligible for listing in the NRHP and CRHR under Criteria A/1.

Research did not demonstrate that the property is associated with any persons significant in national, state, or local history. While the corporate leaders of CMA, Bay Mart, and/or Levitz Furniture may have been important figures within their respective fields, research did not suggest that any of their significant contributions had any direct link to this property. Historical records reviewed revealed little specific information about individual staff who worked at this location, and there is no demonstrable evidence that any employees, singularly or collectively, made notably significant contributions within the broader context of San Leandro's history, or history at the state or national level. Therefore, the property is recommended ineligible under Criteria B/2.

3199 Alvarado Street was erected during the mid-twentieth century and is a simple iteration of the tilt-up method of concrete warehouse construction. However, the building is neither an early nor noteworthy example of the property type, which is well represented throughout the region. Further, the building was substantially altered with the construction of an addition and other modifications. The building does not adhere to an identifiable architectural style or period, and its overall simplicity lacks distinction or high artistic value. Research through targeted searches on City of San Leandro building permit database, Newspapers.com, Internet Archive, and other online repositories did not reveal the original architect or builder. Therefore, the subject property is recommended ineligible under Criterion C/3.

The property is not likely to yield valuable information that will contribute to our understanding of human history because the property is not and never was the principal source of important information pertaining to subjects such as twentieth century commercial and industrial properties in San Leandro. Therefore, the property is recommended ineligible for listing in the NRHP and CRHR under Criteria D/4.

City of San Leandro Historic Resource Designation

The subject property is recommended ineligible for local historical designation under all criteria. The building does not meet San Leandro Landmark or Merit Resource Criteria A or B, as it lacks association with significant event, patterns of events, or individuals, as explained under the evaluation of NRHP and CRHR Criteria A/1 and B/2 above. The building also does not meet San Leandro Landmark or Merit Resource Criteria C or D, as it lacks architectural significance, as explained under the evaluation of NRHP and CRHR Criteria C/3. Lastly, the building does not meet San Leandro Landmark or Merit Resource Criterion E, as it lacks important information potential, as explained under the evaluation of NRHP and CRHR Criteria D/4.

In conclusion, 3199 Alvarado Street is recommended ineligible for listing in the NRHP, CRHR, and local register due to lack of historical and architectural significance and is not a historical resource as defined by CEQA Section 15064.5(a) or historic property as defined by 36 CFR 800.16(l)(1).

CORNERSTONE EARTH GROUP

Type of Services	**Geotechnical Investigation**
Project Name	**Alvarado Street Warehouse**
Location	**3199 Alvarado Street** **San Leandro, California**

SECTION 1: INTRODUCTION

This geotechnical report was prepared for the sole use of CC Industries, Inc. for the Alvarado Street Warehouse project in San Leandro, California. The location of the site is shown on the Vicinity Map, Figure 1. For our use, we were provided with the following documents:

- A plan set titled, “Alvarado Street Warehouse, 3199 Alvarado St., San Leandro, CA 94577,” prepared by Ware Walcomb, dated September 30, 2024, Planning Submittal.
- A topographic survey titled, “Topographic Survey, 3199 Alvarado Street, San Leandro, CA," prepared by Barber Surveying, Inc., dated 2021.

1.1 PROJECT DESCRIPTION

The project includes redeveloping the approximately 19-acre site for a new warehouse. The new warehouse is about 241,400 square feet. The proposed building will be single-story with column spacing ranging from 46 to 60 feet, and interior clear height of 36 feet. The building will consist of concrete tilt-up construction. Dock doors are located along the north side of the building. Office and mezzanine areas are also planned in the southeast and southwest corners. At-grade auto and trailer parking, and drive aisles will cover the remainder of the site. Appurtenant utilities, landscaping, storm water management areas, and other improvements necessary for overall site development will also be constructed. The existing building and site improvements will be demolished for new construction.

Structural loads are not available at this time. However, structural loads are expected to be typical for similar structures with interior column dead plus live loads on the order of 50 to 100 kips and perimeter wall loads on the order of 7 to 9 kips per lineal foot.

Grading plans have also not been provided. However, based on discussions with Ware Malcomb, the project Civil Engineer, we understand that a preliminary finished floor elevation of 35 feet (datum unknown) is being considered and the finished grade at the loading dock will be generally Elevation 31 feet, roughly matching existing grade. Based on the finished floor

elevation and existing site grades provided, we estimate site grades will be raised about 3½ to 6 feet to achieve finished floor elevation.

1.2 SCOPE OF SERVICES

Our scope of services was presented in our proposal dated December 18, 2024, and consisted of field and laboratory programs to evaluate physical and engineering properties of the subsurface soils, engineering analysis to prepare recommendations for site work and grading, building foundations, flatwork, retaining walls, and pavements, and preparation of this report. Brief descriptions of our exploration and laboratory programs are presented below.

1.3 EXPLORATION PROGRAM

Field exploration consisted of four borings drilled on January 21, 2025 with truck-mounted hollow-stem auger drilling equipment and five Cone Penetration Tests (CPTs) advanced on February 4, 2025. The borings were drilled to depths of 21½ to 45 feet; the CPTs were advanced to depths of about 50 to 100 feet. Seismic shear wave velocity measurements were collected from CPT-5. Borings EB-1 through EB-4 were advanced adjacent to CPT-1 through CPT-4, respectively, for direct evaluation of physical samples to correlated soil behavior.

The borings and CPTs were backfilled with cement grout in accordance with local requirements; exploration permits were obtained as required by local jurisdictions. The approximate locations of our exploratory borings and CPTs are shown on the Site Plan, Figure 2. Details regarding our field program are included in Appendix A.

1.4 LABORATORY TESTING PROGRAM

In addition to visual classification of samples, the laboratory program focused on obtaining data for foundation design and seismic ground deformation estimates. Testing included moisture contents, dry densities, washed sieve analyses, Plasticity Index tests, and a consolidation test. Details regarding our laboratory program are included in Appendix B.

1.5 ENVIRONMENTAL SERVICES

Environmental services were not requested for this project. If environmental concerns are determined to be present during future evaluations, the project environmental consultant should review our geotechnical recommendations for compatibility with the environmental concerns.

SECTION 2: REGIONAL SETTING

2.1 REGIONAL SEISMICITY

While seismologists cannot predict earthquake events, geologists from the U.S. Geological Survey have recently updated (in 2015) earlier estimates from their 2014 Uniform California Earthquake Rupture Forecast (Version 3; UCERF3) publication. The estimated probability of one or more magnitude 6.7 earthquakes (the size of the destructive 1994 Northridge

earthquake) expected to occur somewhere in the San Francisco Bay Area has been revised (increased) to 72 percent for the period 2014 to 2043 (Aagaard et al., 2016). The faults in the region with the highest estimated probability of generating damaging earthquakes between 2014 and 2043 are the Hayward (33%), Calaveras (26%), and San Andreas Faults (22%). In this 30-year period, the probability of an earthquake of magnitude 6.7 or larger occurring is 22 percent along the San Andreas Fault and 33 percent for the Hayward Fault.

The faults considered capable of generating significant earthquakes are generally associated with the well-defined areas of crustal movement, which trend northwesterly. The table below presents the State-considered active faults within 25 kilometers of the site.

Table 1: Approximate Fault Distances

Fault Name	Distance	
	(miles)	(kilometers)
Hayward (Total Length)	2.1	3.4
Calaveras	10.6	17.1
San Andreas (1906)	16.3	26.3

A regional fault map is presented as Figure 3, illustrating the relative distances of the site to significant fault zones.

SECTION 3: SITE CONDITIONS

3.1 SITE BACKGROUND

We reviewed historic aerial imagery and topographic maps provided online by Historic Aerials (historicaerials.com). A summary of pertinent surface changes at and near the site is as follows:

- 1946: The site appears to be used for agricultural purposes.
- 1958: Highway 880 and Alvarado Street appear constructed in their current configuration. The existing residential neighborhood to the south has been constructed.
- 1968: The existing building within the western third of the site has been constructed and is surrounded by at-grade asphalt parking. The eastern half of the site has been paved and is used as an at-grade parking lot.
- 1980: The eastern extension of the existing building has been constructed by this time. The remainder of the site is occupied by asphalt concrete parking lots.
- 1982-2022: No pertinent surface changes observed between this period.

3.2 SURFACE DESCRIPTION

The project site is currently occupied by a one-story industrial building appearing to be concrete tilt-up construction. Asphalt concrete pavements generally surround the building to the west, south, and east, and a concrete loading dock to the north of the structure. Landscaping areas consisting of grass, shrubs, and mature trees are present on the eastern and western edge of the site. The site is relatively level and at or near the elevation of the adjacent properties and roadways. Based on topographic data provided by Barber (2021), site grades range from approximately Elevation 29 to 32 feet (NAVD88 datum).

Surface pavements generally consisted of 2 to 4 inches of asphalt concrete over 4 to 6 inches of aggregate base. Based on visual observations, the existing pavements are in poor condition with significant alligator cracking.

3.3 SUBSURFACE CONDITIONS

Below the surface pavements, our explorations EB-1 and EB-3 encountered highly variable undocumented fills consisting of sandy lean clay and silty, clayey, and well graded sands with gravel to depths ranging from 3½ to 6½ feet. Beneath the fills or where no fills were encountered, our borings EB-1 through EB-4 generally encountered medium stiff to hard lean clays with variable amounts of sand with interbedded layers of medium dense to very dense clayey and silty sands with variable amounts of gravel and very dense well-graded sand with silt to the depths explored. The clays were generally stiff to hard at depths shallower than 8 feet, medium stiff to stiff at depths from about 8 to about 17 to 22 feet, and then stiff to very stiff below 17 to 22 feet. The sand layers were encountered at depths of about 6¼ to 6½ feet, 22 to 30 feet, and 42 to 45 feet in Boring EB-1; 7½ to 12 feet and 22 to 24½ feet in Boring EB-2; 16 to 18 feet in Boring EB-3; and 9 to 10½ feet and 19 to 32 feet in Boring EB-4.

Below the maximum boring depth, our CPTs generally encountered interbedded stiff to hard clays and dense to very dense sands and gravels to the maximum depth explored of 100 feet.

3.3.1 Plasticity/Expansion Potential

We performed two Plasticity Index (PI) tests on representative samples. Test results were used to evaluate expansion potential of surficial soils. The results indicated PIs of 16 and 27, indicating moderate to high expansion potential to wetting and drying cycles.

3.3.2 In-Situ Moisture Contents

Laboratory testing indicated that the in-situ moisture contents within the upper 10 feet range from 5 to 29 percent, indicating approximately 5 to 15 percent over the estimated laboratory optimum moisture.

3.4 GROUNDWATER

Groundwater was encountered in our exploratory borings at depths ranging from 13 to 14 feet below current grades. Groundwater was inferred in CPT-1, CPT-3, CPT-4, and CPT-5 at depths ranging from 8 to 11 feet. All measurements were taken at the time of drilling and may not represent the stabilized levels that can be higher than the initial levels encountered. Historic high groundwater levels are mapped at a depth of approximately 9 feet below existing site grades (CGS, San Leandro 7.5-Minute Quadrangle, 2003).

We also reviewed groundwater data available online from the website GeoTracker, https://geotracker.waterboards.ca.gov/. Nearby monitoring well data indicates that groundwater has been measured at depths of approximately 6½ feet at wells located at 14985 Washington Avenue approximately 1 mile to the southeast, with well measurements performed between April and October 2007. Monitoring well data at 2420 Merced Street approximately ¾ miles to the northwest indicated groundwater depths ranging from about 3½ to 12 feet between June 2006 and March 2020.

Based on the above, we anticipate that high groundwater may range up to 5 feet below the existing ground surface. While we anticipate the sustained groundwater depth may to be closer to the depths encountered in our explorations, we utilized a high groundwater depth of 5 feet for our liquefaction analysis. Fluctuations in groundwater levels occur due to many factors including seasonal fluctuation, underground drainage patterns, regional fluctuations, and other factors.

SECTION 4: GEOLOGIC HAZARDS

4.1 FAULT SURFACE RUPTURE

As discussed above several significant faults are located within 25 kilometers of the site. The site is not located within a State-designated Alquist Priolo Earthquake Fault Zone. As shown in Figure 3, no known surface expression of fault traces is thought to cross the site; therefore, fault surface rupture hazard is not a significant geologic hazard at the site.

4.2 ESTIMATED GROUND SHAKING

Moderate to severe (design-level) earthquakes can cause strong ground shaking, which is the case for most sites within the Bay Area. A peak ground acceleration (PGA_M) was estimated following the ground motion hazard analysis procedure presented in Chapter 16 and 18 and Appendix J of the 2022 California Building Code (CBC) and Chapter 21, Section 21.2 of ASCE 7-16 and Supplement No. 1. For our analysis we used a PGA_M of 0.89g, which was determined in accordance with Section 21.5 of ASCE 7-16.

4.3 LIQUEFACTION POTENTIAL

The site is within a State-designated Liquefaction Hazard Zone (CGS, San Leandro Quadrangle, 2003). Our field and laboratory programs addressed this issue by testing and

sampling potentially liquefiable layers to depths of at least 50 feet, performing visual classification on sampled materials, evaluating CPT data, and performing various tests to further classify soil properties.

4.3.1 Background

During strong seismic shaking, cyclically induced stresses can cause increased pore pressures within the soil matrix that can result in liquefaction triggering, soil softening due to shear stress loss, potentially significant ground deformation due to settlement within sandy liquefiable layers as pore pressures dissipate, and/or flow failures in sloping ground or where open faces are present (lateral spreading) (NCEER 1998). Limited field and laboratory data is available regarding ground deformation due to settlement; however, in clean sand layers settlement on the order of 2 to 4 percent of the liquefied layer thickness can occur. Soils most susceptible to liquefaction are loose, non-cohesive soils that are saturated and are bedded with poor drainage, such as sand and silt layers bedded with a cohesive cap.

4.3.2 Analysis

As discussed in the “Subsurface” section above, several sand layers were encountered below the design groundwater depth of 5 feet. Following the liquefaction analysis framework in the 2008 monograph, *Soil Liquefaction During Earthquakes* (Idriss and Boulanger, 2008), incorporating updates in *CPT and SPT Based Liquefaction Triggering Procedures* (Boulanger and Idriss, 2014), and in accordance with CDMG Special Publication 117A guidelines (CDMG, 2008) for quantitative analysis, these layers were analyzed for liquefaction triggering and potential post-liquefaction settlement. These methods compare the ratio of the estimated cyclic shaking (Cyclic Stress Ratio - CSR) to the soil’s estimated resistance to cyclic shaking (Cyclic Resistance Ratio - CRR), providing a factor of safety against liquefaction triggering. Factors of safety less than or equal to 1.3 are considered to be potentially liquefiable and capable of post-liquefaction re-consolidation (i.e. settlement).

The CSR for each layer quantifies the stresses anticipated to be generated due to a design-level seismic event, is based on the peak horizontal acceleration generated at the ground surface discussed in the “Estimated Ground Shaking” section above, and is corrected for overburden and stress reduction factors as discussed in the procedure developed by Seed and Idriss (1971) and updated in the 2008 Idriss and Boulanger monograph.

The soil’s CRR is estimated from the in-situ measurements from CPTs and laboratory testing on samples retrieved from our borings. SPT “N” values obtained from hollow-stem auger borings were not used in our analyses, as the “N” values obtained are less reliable in sands below groundwater. The tip pressures are corrected for effective overburden stresses, taking into consideration both the groundwater level at the time of exploration and the design groundwater level, and stress reduction versus depth factors. The CPT method utilizes the soil behavior type index (I_C) to estimate the plasticity of the layers.

In estimating post-liquefaction settlement at the site, we have implemented a depth weighting factor proposed by Cetin (2009). Following evaluation of 49 high-quality, cyclically induced,

ground settlement case histories from seven different earthquakes, Cetin proposed the use of a weighting factor based on the depth of layers. The weighting procedure was used to tune the surface observations at liquefaction sites to produce a better model fit with measured data. Aside from the better model fit it produced, the rationale behind the use of a depth weighting factor is based on the following: 1) upward seepage, triggering void ratio redistribution, and resulting in unfavorably higher void ratios for the shallower sublayers of soil layers; 2) reduced induced shear stresses and number of shear stress cycles transmitted to deeper soil layers due to initial liquefaction of surficial layers; and 3) possible arching effects due to nonliquefied soil layers. All these may significantly reduce the contribution of volumetric settlement of deeper soil layers to the overall ground surface settlement (Cetin, 2009).

The results of our CPT analyses (CPT-1 through CPT-5) are presented on Figures 4A through 4E of this report.

4.3.3 Summary

Our analyses indicate that several layers could potentially experience liquefaction triggering that could result in post-liquefaction total settlement at the ground surface ranging from ⅓- to 1¼-inches based on the Yoshimine (2006) method. As discussed in SP 117A, differential movement for level ground sites over deep soil sites will be up to about two-thirds of the total settlement between independent foundation elements. In our opinion, differential settlements are anticipated to range up to ¾-inch between independent foundation elements.

4.3.4 Ground Deformation and Surficial Cracking Potential

The methods used to estimate liquefaction settlements assume that there is a sufficient cap of non-liquefiable material to prevent ground deformation or sand boils. For ground deformation to occur, the pore water pressure within the liquefiable soil layer will need to be great enough to break through the overlying non-liquefiable layer, which could cause significant ground deformation and settlement. The work of Youd and Garris (1995) indicates that the non-liquefiable cap is sufficient to prevent ground deformation and significant surficial cracking; therefore, the above total settlement estimates are reasonable.

4.4 LATERAL SPREADING

Lateral spreading is horizontal/lateral ground movement of relatively flat-lying soil deposits towards a free face such as an excavation, channel, or open body of water; typically, lateral spreading is associated with liquefaction of one or more subsurface layers near the bottom of the exposed slope. As failure tends to propagate as block failures, it is difficult to analyze and estimate where the first tension crack will form.

There are no open faces within a distance considered susceptible to lateral spreading; therefore, in our opinion, the potential for lateral spreading to affect the site is low.

4.5 SEISMIC SETTLEMENT/UNSATURATED SAND SHAKING

Loose unsaturated sandy soils can settle during strong seismic shaking. We evaluated the potential for seismic compaction of the loose to medium dense sands above the design groundwater based on the work by Robertson and Shao (2010). Our analyses indicate there is a potential for less than ¼ inch of seismic settlement following a significant seismic event at CPT-3. The settlement was within the sandy undocumented fills observed within our paired Boring EB-3. Provided the undocumented fills are removed and replaced as engineered fill as discussed in the "Conclusions" and "Earthwork" sections of this report, the potential for significant differential seismic settlement affecting the proposed improvements is low.

4.6 TSUNAMI/SEICHE

The terms tsunami or seiche are described as ocean waves or similar waves usually created by undersea fault movement or by a coastal or submerged landslide. Tsunamis may be generated at great distance from shore (far field events) or nearby (near field events). Waves are formed, as the displaced water moves to regain equilibrium, and radiates across the open water, similar to ripples from a rock being thrown into a pond. When the waveform reaches the coastline, it quickly raises the water level, with water velocities as high as 15 to 20 knots. The water mass, as well as vessels, vehicles, or other objects in its path create tremendous forces as they impact coastal structures.

Tsunamis have affected the coastline along the Pacific Northwest during historic times. The Fort Point tide gauge in San Francisco recorded approximately 21 tsunamis between 1854 and 1964. The 1964 Alaska earthquake generated a recorded wave height of 7.4 feet and drowned eleven people in Crescent City, California. For the case of a far-field event, the Bay area would have hours of warning; for a near field event, there may be only a few minutes of warning, if any.

A tsunami or seiche originating in the Pacific Ocean would lose much of its energy passing through San Francisco Bay. Based on the mapping of tsunami inundation potential for the San Francisco Bay Area by CGS (conservation.ca.gov/cgs/tsunami/maps), areas most likely to be inundated are marshlands, tidal flats, and former bay margin lands that are now artificially filled, but are still at or below sea level, and are generally within 1½ miles of the shoreline. The site is approximately 1¾ miles inland from the San Francisco Bay shoreline and is at approximately Elevation 29 to 32 feet (NAVD88 datum). Therefore, the potential for inundation due to tsunami or seiche is considered low.

4.7 FLOODING

Based on our internet search of the Federal Emergency Management Agency (FEMA) flood map public database, the site is located within Zone X, areas determined to be outside the 0.2% annual chance floodplain. We recommend the project civil engineer be retained to confirm this information.

The Department of Water Resources (DWR), Division of Safety of Dams (DSOD) compiled a database of Dam Failure Inundation Hazard Maps (DSOD, 2015). The generalized hazard maps were prepared by dam owners as required by the State Office of Emergency Services; they are intended for planning purposes only. Based on our review of these maps, the site is located within a dam failure inundation area for the Chabot and New Upper San Leandro Reservoirs.

SECTION 5: CONCLUSIONS

5.1 SUMMARY

From a geotechnical viewpoint, the project is feasible provided the concerns listed below are addressed in the project design. Descriptions of each concern with brief outlines of our recommendations follow the listed concerns.

- Potential for liquefaction-induced settlements
- Shallow groundwater
- Presence of moderately to highly expansive soils
- Undocumented fill
- Redevelopment considerations

5.1.1 Potential for Liquefaction-Induced Settlements

As discussed, our liquefaction analysis indicates that there is a potential for liquefaction of localized sand layers during a significant seismic event. Although the potential for liquefied sands to vent to the ground surface through cracks in the surficial soils is low, our analysis indicates that liquefaction-induced settlement of up to about 1¼ -inch could occur, resulting in differential settlement up to about ¾-inch. Building foundations will need to be designed to tolerate total and differential settlement due to static loads and liquefaction-induced settlement. Detailed foundation recommendations are presented in the “Foundations” section.

5.1.2 Shallow Groundwater

Shallow groundwater was measured at depths ranging from approximately 8 to 14 feet below the existing ground surface in our explorations. We anticipate that high groundwater may fluctuate up to 5 feet below the existing ground surface, but is not anticipated over a sustained time period. Our experience with similar sites in the vicinity indicates that shallow groundwater could significantly impact grading and underground construction. These impacts typically consist of potentially wet and unstable pavement subgrade, difficulty achieving compaction, and difficult underground utility installation. Dewatering and shoring of utility trenches may be required in some isolated areas of the site. Detailed recommendations addressing this concern are presented in the “Earthwork” section of this report.

5.1.3 Presence of Moderately to Highly Expansive Soils

Moderately to highly expansive surficial soils generally blanket the site. Expansive soils can undergo significant volume change with changes in moisture content. They shrink and harden when dried and expand and soften when wetted. To reduce the potential for damage to the planned structure, slabs-on-grade should have sufficient reinforcement and be supported on a layer of non-expansive fill; footings should extend below the zone of seasonal moisture fluctuation. In addition, it is important to limit moisture changes in the surficial soils by using positive drainage away from buildings as well as limiting landscaping watering. We recommend that a plug of low-permeability clay soil, sand-cement slurry, or lean concrete be placed within trenches just outside where the trenches pass into building and pavement areas. Detailed grading and foundation recommendations addressing this concern are presented in the following sections.

5.1.4 Undocumented Fill

As discussed, our exploratory Borings EB-1 and EB-3 encountered 3½ and 6½ feet of undocumented fill, respectively. Undocumented fills are expected to vary in thickness, density, and consistency across the site. We recommend all undocumented fill be removed from within building areas. Additional recommendations are provided in the "Earthwork" sections of this report.

5.1.5 Redevelopment Considerations

As discussed, the site is currently occupied by an existing building and appurtenant pavements, site fixtures, and landscaping. We understand that all of the existing improvements will be demolished for the construction of the new warehouse building. Potential issues that are often associated with redeveloping sites include demolition of existing improvements, abandonment of existing utilities, and undocumented fills. Please refer to the "Earthwork" section below for further recommendations.

5.2 PLANS AND SPECIFICATIONS REVIEW

We recommend that we be retained to review the geotechnical aspects of the project structural, civil, and landscape plans and specifications, allowing sufficient time to provide the design team with any comments prior to issuing the plans for construction.

5.3 CONSTRUCTION OBSERVATION AND TESTING

As site conditions may vary significantly between the small-diameter borings performed during this investigation, we also recommend that a Cornerstone representative be present to provide geotechnical observation and testing during earthwork and foundation construction. This will allow us to form an opinion and prepare a letter at the end of construction regarding contractor compliance with project plans and specifications, and with the recommendations in our report. We will also be allowed to evaluate any conditions differing from those encountered during our investigation and provide supplemental recommendations as necessary. For these reasons, the

recommendations in this report are contingent of Cornerstone providing observation and testing during construction. Contractors should provide at least a 48-hour notice when scheduling our field personnel.

SECTION 6: EARTHWORK

6.1 SITE DEMOLITION

All existing improvements not to be reused for the current development, including all foundations, flatwork, pavements, utilities, and other improvements should be demolished and removed from the site. Recommendations in this section apply to the removal of these improvements, which are and may currently be present on the site, prior to the start of mass grading or the construction of new improvements for the project.

Cornerstone should be notified prior to the start of demolition and should be present on at least a part-time basis during all backfill and mass grading as a result of demolition. Occasionally, other types of buried structures (wells, cisterns, debris pits, etc.) can be found on sites with prior development. If encountered, Cornerstone should be contacted to address these types of structures on a case-by-case basis.

6.1.1 Demolition of Existing Slabs, Foundations and Pavements

All slabs, foundations, and pavements should be completely removed from within planned building areas.

Special care should be taken during the demolition and removal of existing floor slabs, foundations, utilities and pavements to minimize disturbance of the subgrade. Excessive disturbance of the subgrade, which includes either native or previously placed engineered fill, resulting from demolition activities can have serious detrimental effects on planned foundation and paving elements.

Existing foundations are typically mat-slabs, shallow footings, or piers/piles. If slab or shallow footings are encountered, they should be completely removed. If drilled piers are encountered, they should be cut off at an elevation at least 60-inches below proposed footings or the final subgrade elevation, whichever is deeper. The remainder of the drilled pier could remain in place. Foundation elements to remain in place should be surveyed and superimposed on the proposed development plans to determine the potential for conflicts or detrimental impacts to the planned construction. Following review, additional mitigation or planned foundation elements may need to be modified.

6.1.2 Abandonment of Existing Utilities

All utilities should be completely removed from within planned building areas. For any utility line to be considered acceptable to remain within building areas, the utility line must be completely backfilled with grout or sand-cement slurry (sand slurry is not acceptable), the ends outside the building area capped with concrete, and the trench fills either removed and replaced as

engineered fill with the trench side slopes flattened to at least 1:1, or the trench fills are determined not to be a risk to the structure. The assessment of the level of risk posed by the particular utility line will determine whether the utility may be abandoned in place or needs to be completely removed. The contractor should assume that all utilities will be removed from within building areas unless provided written confirmation from both the owner and the geotechnical engineer.

Utilities extending beyond the building area may be abandoned in place provided the ends are plugged with concrete, they do not conflict with planned improvements, and that the trench fills do not pose significant risk to the planned surface improvements.

The risk for owners associated with abandoning utilities in place include the potential for future differential settlement of existing trench fills, and/or partial collapse and potential ground loss into utility lines that are not completely filled with grout.

6.2 SITE CLEARING AND PREPARATION

6.2.1 Site Stripping

The site should be stripped of all surface vegetation, and surface and subsurface improvements to be removed within the proposed development area. Demolition of existing improvements is discussed in the prior paragraphs. A detailed discussion of existing fills is provided later in this report. Surface vegetation and topsoil should be stripped to a sufficient depth to remove all material greater than 3 percent organic content by weight.

6.2.2 Tree and Shrub Removal

Trees and shrubs designated for removal should have the root balls and any roots greater than ½-inch diameter removed completely. Mature trees are estimated to have root balls extending to depths of 2 to 4 feet, depending on the tree size. Significant root zones are anticipated to extend to the diameter of the tree canopy. Grade depressions resulting from root ball removal should be cleaned of loose material and backfilled in accordance with the recommendations in the “Compaction” section of this report.

6.3 MITIGATION OF UNDOCUMENTED FILLS

As discussed in the “Conclusions” section, Borings EB-1 and EB-3 encountered 3½ and 6½ feet of undocumented fills and additional undocumented fills are anticipated to be encountered as part of the prior development grading and improvements. Undocumented fills are expected to vary across the site. All undocumented fills should be completely removed from within building areas and to a lateral distance of at least 5 feet beyond the building footprint or to a lateral distance equal to fill depth below the perimeter footing, whichever is greater. Side slopes of the demolition and/or fill removal excavations should be over-excavated or benched to inclinations no steeper than 3:1 (horizontal:vertical) until the footings are supported entirely on native material or engineered fill to reduce abrupt fill thickness transitions.

Provided the fills meet the “Material for Fill” requirements below, the fills may be reused when backfilling the excavations. Based on review of the samples collected from our borings, it appears that the fill may be reused. If materials are encountered that do not meet the requirements, such as debris, wood, trash, those materials should be screened out of the remaining material and be removed from the site. Backfill of excavations should be placed in lifts and compacted in accordance with the “Compaction” section below.

Fill extending into planned pavement and flatwork areas may be left in place provided they are determined to be a low risk for future settlement and that the upper 12 inches of fill below pavement subgrade is re-worked and compacted as discussed in the “Compaction” section below.

6.3.1 Supplemental Exploratory Test Pits

At your option, a supplemental field exploration program including test pits can be performed once site demolition has been completed to better evaluate the competency and quality of the existing undocumented fill and further define its limits and depths. We recommend this supplemental program be performed after the existing buildings are demolished and prior to site mass grading, if appropriate.

6.4 TEMPORARY CUT AND FILL SLOPES

The contractor is responsible for maintaining all temporary slopes and providing temporary shoring where required. Temporary shoring, bracing, and cuts/fills should be performed in accordance with the strictest government safety standards. On a preliminary basis, the upper 5 feet at the site may be classified as OSHA Soil Type C materials.

Excavations performed during site demolition and fill removal should be sloped at 3:1 (horizontal:vertical) within the upper 5 feet below building subgrade. Actual excavation inclinations should be reviewed in the field during construction, as needed. Excavations below building subgrade and excavations in pavement and flatwork areas should be sloped in accordance with OSHA soil classification requirements.

In general, the contractor should be responsible for all temporary trenches and excavations at the site and design of any required temporary shoring. Support of adjacent existing improvements without distress should also be the contractor’s responsibility.

6.5 SHALLOW GROUNDWATER

As previously stated, high groundwater levels are anticipated to be on the order of 5 feet at the site. We recommend that contractors anticipate dewatering to control water seeping into deeper excavations close to or below the groundwater. Groundwater conditions can be difficult to handle, and if the groundwater is in a relatively widespread, continuous layer, it may be hard to dewater, requiring continuous dewatering during excavations. Contractors should also anticipate wet and unstable subgrade conditions and difficulty achieving compaction within wetter soils.

6.6 SUBGRADE PREPARATION

After site clearing and demolition is complete, and prior to backfilling any excavations resulting from fill removal or demolition, the excavation subgrade and subgrade within areas to receive additional site fills, slabs-on-grade and/or pavements should be scarified to a depth of 6 inches, moisture conditioned, and compacted in accordance with the "Compaction" section below.

Some near surface sandy soils were encountered in our borings. If sandy soils are present at subgrade elevation, we recommend that subgrade compaction and proof rolling be performed within 24 hours of capillary break layer or slab-on-grade construction.

6.7 WET SOIL STABILIZATION GUIDELINES

Native soil and fill materials, especially soils with high fines contents such as clays and silty soils, can become unstable due to high moisture content, whether from high in-situ moisture contents or from winter rains. As the moisture content increases over the laboratory optimum, it becomes more likely the materials will be subject to softening and yielding (pumping) from construction loading or become unworkable during placement and compaction.

As discussed in the "Subsurface" section in this report, the in-situ moisture contents range up to about 15 percent over the estimated laboratory optimum in the upper 10 feet of the soil profile. The contractor should anticipate needing to dry some soils prior to reusing them as fill. In addition, repetitive rubber-tire loading may de-stabilize the soils.

There are several methods to address potential unstable soil conditions and facilitate fill placement and trench backfill. Some of the methods are briefly discussed below. Implementation of the appropriate stabilization measures should be evaluated on a case-by-case basis according to the project construction goals and the site conditions.

6.7.1 Scarification and Drying

The soils may be scarified to a depth of 6 to 12 inches and allowed to dry to near optimum conditions, if sufficient dry weather is anticipated to allow sufficient drying. More than one round of scarification may be needed to break up the soil clods.

6.7.2 Removal and Replacement

As an alternative to scarification, the contractor may choose to over-excavate the unstable soils and replace them with dry on-site or import materials. A Cornerstone representative should be present to provide recommendations regarding the appropriate depth of over-excavation, whether a geosynthetic (stabilization fabric or geogrid) is recommended, and what materials are recommended for backfill.

6.7.3 Chemical Treatment

Where the unstable area exceeds about 5,000 to 10,000 square feet and/or site winterization is desired, chemical treatment with quicklime (CaO), kiln-dust, or cement may be more cost-effective than removal and replacement. Recommended chemical treatment depths will typically range from 12 to 18 inches depending on the magnitude of the instability. The feasibility and chemical treatment method should be further evaluated by the specialty contractor. Additional laboratory testing should be performed, as required.

6.8 MATERIAL FOR FILL

6.8.1 Re-Use of On-site Soils

On-site soils with an organic content less than 3 percent by weight may be reused as general fill. General fill should not have lumps, clods or cobble pieces larger than 6 inches in diameter; 85 percent of the fill should be smaller than 2½ inches in diameter. Minor amounts of oversized material (smaller than 12 inches in diameter) may be allowed provided the oversized pieces are not allowed to nest together and the compaction method will allow for loosely placed lifts not exceeding 12 inches.

As discussed, the in-situ moisture contents range up to about 15 percent over the estimated laboratory optimum in the upper 10 feet of the soil profile. Additionally, the soils may become significantly wetter during wet winter weather and where excavations extend near groundwater. The contractor should anticipate drying and processing wetter soils prior to reusing them as fill. The contractors should anticipate working with and mitigating unstable soil conditions.

6.8.2 Re-Use of On-Site Site Improvements

Asphalt concrete (AC) grindings and aggregate base (AB) and Portland Cement Concrete (PCC) may be generated during site demolition. If the AC grindings are mixed with the underlying AB to meet Class 2 AB specifications, they may be reused within the new pavement and flatwork structural sections. AC grindings may not be reused within the building areas unless otherwise approved by ownership. Laboratory testing will be required to confirm the grindings meet project specifications.

If the site area allows for on-site pulverization of PCC and provided the PCC is pulverized to meet the “Material for Fill” requirements of this report, it may be used as select fill within the building areas, excluding the capillary break layer; as typically pulverized PCC comes close to or meets Class 2 AB specifications, the recycled PCC may likely be used within the pavement structural sections. Laboratory testing will be required to confirm the pulverized PCC meets project specifications. PCC grindings also make good winter construction access roads, similar to a cement-treated base (CTB) section.

6.8.3 Potential Import Sources

Non-expansive material should be inorganic with a Plasticity Index (PI) of 15 or less, and not contain recycled asphalt concrete where it will be used within the building areas unless otherwise approved by ownership. Imported soil for use as general fill material should be inorganic with a Plasticity Index (PI) of 25 or less, and not contain recycled asphalt concrete where it will be used within the building areas unless otherwise approved by ownership. To prevent significant caving during trenching or foundation construction, imported material should have sufficient fines. Samples of potential import sources should be delivered to our office at least 10 days prior to the desired import start date. Information regarding the import source should be provided, such as any site geotechnical reports. If the material will be derived from an excavation rather than a stockpile, potholes will likely be required to collect samples from throughout the depth of the planned cut that will be imported. At a minimum, laboratory testing will include PI tests. Material data sheets for select fill materials (Class 2 aggregate base, ¾-inch crushed rock, quarry fines, etc.) listing current laboratory testing data (not older than 6 months from the import date) may be provided for our review without providing a sample. If current data is not available, specification testing will need to be completed prior to approval.

Environmental and soil corrosion characterization should also be considered by the project team prior to acceptance. Suitable environmental laboratory data to the planned import quantity should be provided to the project environmental consultant; additional laboratory testing may be required based on the project environmental consultant's review. The potential import source should also not be more corrosive than the on-site soils, based on pH, saturated resistivity, and soluble sulfate and chloride testing.

6.8.4 Non-Expansive Fill Using Lime Treatment

As discussed above, non-expansive fill should have a Plasticity Index (PI) of 15 or less. As an alternative to importing non-expansive fill, chemical treatment can be considered to create non-expansive fill. It has been our experience that for high PI clayey soil materials will likely need to be mixed with at least 3 to 4 percent quicklime (CaO) or approved equivalent to adequately reduce the PI of the on-site soils to 15 or less. If this option is considered, additional laboratory tests should be performed during initial site grading to further evaluate the optimum percentage of quicklime required.

6.9 COMPACTION REQUIREMENTS

All fills, and subgrade areas where fill, slabs-on-grade, and pavements are planned, should be placed in loose lifts 8 inches thick or less and compacted in accordance with ASTM D1557 (latest version) requirements as shown in the table below. In general, clayey soils should be compacted with sheepsfoot equipment and sandy/gravelly soils with vibratory equipment; open-graded materials such as crushed rock should be placed in lifts no thicker than 18 inches and consolidated in place with vibratory equipment. Each lift of fill and all subgrade should be firm and unyielding under construction equipment loading in addition to meeting the compaction requirements to be approved. The contractor (with input from a Cornerstone representative) should evaluate the in-situ moisture conditions, as the use of vibratory equipment on soils with

high moistures can cause unstable conditions. General recommendations for soil stabilization are provided in the "Wet Soil Stabilization Guidelines" section of this report. Where the soil's PI is 20 or greater, the expansive soil criteria should be used.

Table 2: Compaction Requirements

Description	Material Description	Minimum Relative[1] Compaction (percent)	Moisture[2] Content (percent)
General Fill (within upper 5 feet)	On-Site Expansive Soils	87 – 92	>3
	Low Expansion Soils	90	>1
General Fill (below a depth of 5 feet)	On-Site Expansive Soils	92	>3
	Low Expansion Soils	95	>1
Retaining Wall Backfill	Without Surface Improvements	90[5]	>1
	With Surface Improvements	95[4,5]	>1
Trench Backfill	On-Site Expansive Soils	87 – 92	>3
	Low Expansion Soils	90	>1
Trench Backfill (upper 6 inches of subgrade)	On-Site Low Expansion Soils	95	>1
Crushed Rock Fill	¾-inch Clean Crushed Rock	Consolidate In-Place	NA
Non-Expansive Fill	Imported Non-Expansive Fill	90	Optimum
Warehouse Slab-On-Grade (upper 12 inches beneath slab)	Aggregate Base/Non-Expansive Fill	95[6]	Optimum
Flatwork Subgrade	On-Site Expansive Soils	87 - 92	>3
	Low Expansion Soils	90	>1
Flatwork Aggregate Base	Class 2 Aggregate Base[3]	90	Optimum
Pavement Subgrade	On-Site Expansive Soils	87 - 92	>3
	Low Expansion Soils	95	>1
Pavement Aggregate Base	Class 2 Aggregate Base[3]	95	Optimum
Asphalt Concrete	Asphalt Concrete	95 (Marshall)	NA

1 – Relative compaction based on maximum density determined by ASTM D1557 (latest version)
2 – Moisture content based on optimum moisture content determined by ASTM D1557 (latest version)
3 – Class 2 aggregate base shall conform to Caltrans Standard Specifications, latest edition, except that the relative compaction should be determined by ASTM D1557 (latest version)
4 – Using light-weight compaction or walls should be braced
5 – Refer to the retaining wall section of this report for additional recommendations for expansive soil compaction
6 – If the non-expansive fill (NEF) directly beneath the aggregate section consists of undisturbed lime-treated material, the lime-treated material only needs to be compacted to 90 percent relative compaction.

6.9.1 Construction Moisture Conditioning

Expansive soils can undergo significant volume change when dried then wetted. The contractor should keep all exposed expansive soil subgrade (and also trench excavation side walls) moist

until protected by overlying improvements (or trenches are backfilled). If expansive soils are allowed to dry out significantly, re-moisture conditioning may require several days of re-wetting (flooding is not recommended), or deep scarification, moisture conditioning, and re-compaction.

6.10 TRENCH BACKFILL

Utility lines constructed within public right-of-way should be trenched, bedded and shaded, and backfilled in accordance with the local or governing jurisdictional requirements. Utility lines in private improvement areas should be constructed in accordance with the following requirements unless superseded by other governing requirements.

All utility lines should be bedded and shaded to at least 6 inches over the top of the lines with crushed rock (⅜-inch-diameter or greater) or well-graded sand and gravel materials conforming to the pipe manufacturer's requirements. Open-graded shading materials should be consolidated in place with vibratory equipment and well-graded materials should be compacted to at least 90 percent relative compaction with vibratory equipment prior to placing subsequent backfill materials. Open-graded materials (i.e. crushed rock, pea gravel, etc.) should also be completely enclosed within filter fabric, Mirafi 140N, or approved equivalent when extending near and below the design groundwater.

General backfill over shading materials may consist of on-site native materials provided they meet the requirements in the "Material for Fill" section, and are moisture conditioned and compacted in accordance with the requirements in the "Compaction" section.

Where utility lines will cross perpendicular to strip footings, the footing should be deepened to encase the utility line, providing sleeves or flexible cushions to protect the pipes from anticipated foundation settlement, or the utility lines should be backfilled to the bottom of footing with sand-cement slurry or lean concrete. Where utility lines will parallel footings and will extend below the "foundation plane of influence," an imaginary 1:1 plane projected down from the bottom edge of the footing, either the footing will need to be deepened so that the pipe is above the foundation plane of influence or the utility trench will need to be backfilled with sand-cement slurry or lean concrete within the influence zone. Sand-cement slurry used within foundation influence zones should have a minimum compressive strength of 75 psi.

On expansive soils sites it is desirable to reduce the potential for water migration into building and pavement areas through the granular shading materials. We recommend that a plug of low-permeability clay soil, sand-cement slurry, or lean concrete be placed within trenches just outside where the trenches pass into building and pavement areas.

6.11 SITE DRAINAGE

Ponding should not be allowed adjacent to building foundations, slabs-on-grade, or pavements. Hardscape surfaces should slope at least 2 percent towards suitable discharge facilities; landscape areas should slope at least 3 percent towards suitable discharge facilities. Roof runoff should be directed away from building areas in closed conduits, to approved infiltration facilities, or on to hardscaped surfaces that drain to suitable facilities. Retention, detention or

infiltration facilities should be spaced at least 10 feet from buildings, and preferably at least 5 feet from slabs-on-grade or pavements. However, if retention, detention or infiltration facilities are located within these zones, we recommend that these treatment facilities meet the requirements in the Storm Water Treatment Design Considerations section of this report.

6.12 LOW-IMPACT DEVELOPMENT (LID) IMPROVEMENTS

The Municipal Regional Permit (MRP) requires regulated projects to treat 100 percent of the amount of runoff identified in Provision C.3.d from a regulated project's drainage area with low impact development (LID) treatment measures onsite or at a joint stormwater treatment facility. LID treatment measures are defined as rainwater harvesting and use, infiltration, evapotranspiration, or biotreatment. A biotreatment system may only be used if it is infeasible to implement harvesting and use, infiltration, or evapotranspiration at a project site.

Technical infeasibility of infiltration may result from site conditions that restrict the operability of infiltration measures and devices. Various factors affecting the feasibility of infiltration treatment may create an environmental risk, structural stability risk, or physically restrict infiltration. The presence of any of these limiting factors may render infiltration technically infeasible for a proposed project. To aid in determining if infiltration may be feasible at the site, we provide the following site information regarding factors that may aid in determining the feasibility of infiltration facilities at the site.

- The near-surface soils at the site are generally clayey and categorized as Hydrologic Soil Group D, and is expected to have infiltration rates of less than 0.2 inches per hour. In our opinion, these clayey soils will significantly limit the infiltration of stormwater.

- Locally, seasonal high groundwater is anticipated at a depth of 5 feet, and therefore is expected to be within 10 feet below the base of the infiltration measure.

- In our opinion, infiltration locations within 10 feet of the buildings would create a geotechnical hazard.

6.12.1 Storm Water Treatment Design Considerations

If storm water treatment improvements, such as shallow bio-retention swales, basins or pervious pavements, are required as part of the site improvements to satisfy Storm Water Quality (C.3) requirements, we recommend the following items be considered for design and construction.

6.12.1.1 General Bioswale Design Guidelines

- If possible, avoid placing bioswales or basins within 10 feet of the building perimeter or within 5 feet of exterior flatwork or pavements. If bioswales must be constructed within these setbacks, the side(s) and bottom of the trench excavation should be lined with 10-mil visqueen to reduce water infiltration into the surrounding expansive clay.

- Bioswales constructed within 3 feet of proposed buildings may be within the foundation zone of influence for perimeter wall loads. Therefore, where bioswales will parallel foundations and will extend below the "foundation plane of influence," an imaginary 1:1 plane projected down from the bottom edge of the foundation, the foundation will need to be deepened so that the bottom edge of the bioswale filter material is above the foundation plane of influence.

- The bottom of bioswale or detention areas should include a perforated drain placed at a low point, such as a shallow trench or sloped bottom, to reduce water infiltration into the surrounding soils near structural improvements, and to address the low infiltration capacity of the on-site clay soils.

6.12.1.2 Bioswale Infiltration Material

- Gradation specifications for bioswale filter material, if required, should be specified on the grading and improvement plans.

- Compaction requirements for bioswale filter material in non-landscaped areas or in pervious pavement areas, if any, should be indicated on the plans and specifications to satisfy the anticipated use of the infiltration area.

- If bioswales are to be vegetated, the landscape architect should select planting materials that do not reduce or inhibit the water infiltration rate, such as covering the bioswale with grass sod containing a clayey soil base.

- Due to the relatively loose consistency and/or high organic content of many bioswale filter materials, long-term settlement of the bioswale medium should be anticipated. To reduce initial volume loss, bioswale filter material should be wetted in 12-inch lifts during placement to pre-consolidate the material. Mechanical compaction should not be allowed, unless specified on the grading and improvement plans, since this could significantly decrease the infiltration rate of the bioswale materials.

- It should be noted that the volume of bioswale filter material may decrease over time depending on the organic content of the material. Additional filter material may need to be added to bioswales after the initial exposure to winter rains and periodically over the life of the bioswale areas, as needed.

6.12.1.3 Bioswale Construction Adjacent to Pavements

If bio-infiltration swales or basins are considered adjacent to proposed parking lots or exterior flatwork, we recommend that mitigative measures be considered in the design and construction of these facilities to reduce potential impacts to flatwork or pavements. Exterior flatwork, concrete curbs, and pavements located directly adjacent to bio-swales may be susceptible to settlement or lateral movement, depending on the configuration of the bioswale and the setback between the improvements and edge of the swale. To reduce the potential for distress to these

improvements due to vertical or lateral movement, the following options should be considered by the project civil engineer:

- Improvements should be setback from the edge of a bioswale (assuming a sloping bioswale) such that there is at least 1 foot of horizontal distance between the edge of improvements and the top edge of the bioswale excavation for every 1 foot of vertical bioswale depth, or

- Concrete curbs for pavements, or lateral restraint for exterior flatwork, located directly adjacent to a bioswale, or not meeting the above setback, should be designed to resist lateral earth pressures in accordance with the recommendations in the "Retaining Walls" section of this report, or concrete curbs or edge restraint should be adequately keyed into the native soil or engineered to reduce the potential for rotation or lateral movement of the curbs.

6.13 LANDSCAPE CONSIDERATIONS

Since the near-surface soils are moderately to highly expansive, we recommend greatly reducing the amount of surface water infiltrating these soils near foundations and exterior slabs-on-grade. This can typically be achieved by:

- Using drip irrigation

- Avoiding open planting within 3 feet of the building perimeter or near the top of slopes

- Regulating the amount of water distributed to lawns or planter areas by using irrigation timers

- Selecting landscaping that requires little or no watering, especially near foundations.

We recommend that the landscape architect consider these items when developing landscaping plans.

SECTION 7: 2022 CBC SEISMIC DESIGN CRITERIA

7.1 SEISMIC DESIGN CRITERIA

We developed site-specific seismic design parameters in accordance with Chapter 16, Chapter 18 and Appendix J of the 2022 California Building Code (CBC) and Chapters 11, 12, 20, and 21 and Supplement No. 1 of ASCE 7-16.

7.1.1 Site Location and Provided Data For 2022 CBC Seismic Design

The project is located at latitude 37.703569° and longitude -122.153242°, which is based on Google Earth (WGS84) coordinates at the approximate center of 3199 Alvarado Street in San Leandro, California. We have assumed that a Seismic Importance Factor (I_e) of 1.00 has been

assigned to the structure in accordance with Table 1.5-2 of ASCE 7-16 for structures classified as Risk Category II. The building period has not been provided by the project structural engineer.

7.2 2022 CBC SEISMIC DESIGN CRITERIA

As discussed in the "Subsurface" of our report, our CPT and exploratory borings encountered medium dense to very dense sands and medium stiff to hard clay deposits to a depth of 100 feet, the maximum depth explored. Shear wave velocity (V_S) measurements were performed while advancing CPT-5, resulting in a time-averaged shear wave velocity for the top 30 meters (V_{S30}) of 234 meters per second (767 feet per second), for the upper 100 feet. As our borings encountered deep alluvial soils with shear wave velocity for the upper 30 meters between 600 and 1200 feet per second, per section 20.3.2 of ASCE 7-16, we have classified the site as Soil Classification D, which is described as a "stiff soil" profile. Because we used site specific data from our explorations and laboratory testing, the site class should be considered as "determined" for the purposes of estimating the seismic design parameters from the code.

In accordance with Section 11.4.8 of ASCE 7-16, we performed a ground motion hazard analysis following Chapter 21, Section 21.2 of ASCE 7-16. We evaluated both Probabilistic MCE_R Ground Motions in accordance with Method 1 and Deterministic MCE_R Ground Motions to generate our recommended design response spectrum for the project. The recommended design spectral accelerations and associated periods are provided graphically on Figure 5.

SECTION 8: FOUNDATIONS

8.1 SUMMARY OF RECOMMENDATIONS

In our opinion, provided estimated settlements are structurally tolerable, the proposed structure may be supported on shallow foundations provided the recommendations in the "Earthwork" section and the sections below are followed.

8.2 SHALLOW FOUNDATIONS

Provided the structure can tolerate the estimated static and seismic total and differential settlements, conventional shallow footings can be considered for building support.

8.2.1 Conventional Shallow Footings

Conventional shallow footings should bear on natural, undisturbed soil or engineered fill, be at least 15 inches wide, and extend at least 18 inches below the lowest adjacent grade. Lowest adjacent grade is defined as the deeper of the following: 1) bottom of the adjacent interior slab-on-grade, or 2) finished exterior grade, excluding landscaping topsoil.

Based on the preliminary finished floor provided and estimated depth of footings, we anticipate bottom of footings will range from about 3 feet above existing grades down to about 4 feet below existing grades. Based on these depths, footings constructed to the above dimensions and in

accordance with the “Earthwork” recommendations of this report are capable of supporting maximum allowable bearing pressures of 2,000 psf for dead loads, 3,000 psf for combined dead plus live loads, and 4,000 psf for all loads including wind and seismic. These pressures are based on factors of safety of 3.0, 2.0, and 1.5 applied to the ultimate bearing pressure for dead, dead plus live, and all loads, respectively. These pressures are net values; the weight of the footing may be neglected for the portion of the footing extending below grade (typically, the full footing depth). Top and bottom mats of reinforcing steel should be included in continuous footings to help span irregularities and differential settlement. Once additional grading and foundation loading and dimensions are available, we recommend we be retained to review and provide additional bearing capacity recommendations.

8.2.2 Footing Settlement

Structural loads were not provided to us at the time this report was prepared; therefore, we assumed the typical loading in the following table.

Table 3: Anticipated Structural Loading

Foundation Area	Range of Assumed Loads
Interior Isolated Column Footing	75 to 100 kips
Perimeter Strip Footing	7 to 9 kips per lineal foot

Based on the preliminary finished floor Elevation 35 feet, site grades will be generally raised about 3½ to 6 feet to establish finished floor. Settlement within slab areas due to fill placement is estimated to be on the order of less than ½- to ⅔-inch. Based on the estimated foundation loading above, allowable bearing pressures presented above, and assumed bottom of footings (interior column footings at about 3 feet below finished floor and perimeter wall footings at loading docks at about 6 to 7 feet below finished floor), we estimate that the total static footing settlement will be on the order of ½- to ¾-inch, with less than ½-inch of post-construction differential settlement between adjacent foundation elements, or over an estimated horizontal distance of 50 to 60 feet. In addition, we estimate that differential seismic movement between independent foundation elements will be on the order of ¾-inch, resulting in a total estimated combined static and seismic differential footing movement of about 1- to 1¼-inch between independent foundation elements, or over a horizontal distance of about 50 to 60 feet. As our footing loads were assumed and grading information is preliminary, we recommend we be retained to review the final footing layout and loading and verify the above settlement estimates.

8.2.3 Lateral Loading

Lateral loads may be resisted by friction between the bottom of footing and the supporting subgrade, and also by passive pressures generated against footing sidewalls. An ultimate frictional resistance of 0.40 applied to the footing dead load, and an ultimate passive pressure based on an equivalent fluid pressure of 400 pcf may be used in design. The structural engineer should apply an appropriate factor of safety (such as 1.5) to the ultimate values above.

Where footings are adjacent to landscape areas without hardscape, the upper 18 inches of soil should be neglected when determining passive pressure capacity.

8.2.4 Conventional Shallow Footing Construction Considerations

Where utility lines will cross perpendicular to strip footings, the footing should be deepened to encase the utility line, providing sleeves or flexible cushions to protect the pipes from anticipated foundation settlement, or the utility lines should be backfilled to the bottom of footing with sand-cement slurry or lean concrete. Where utility lines will parallel footings and will extend below the "foundation plane of influence," an imaginary 1:1 plane projected down from the bottom edge of the footing, either the footing will need to be deepened so that the pipe is above the foundation plane of influence or the utility trench will need to be backfilled with sand-cement slurry or lean concrete within the influence zone. Sand-cement slurry used within foundation influence zones should have a minimum compressive strength of 75 psi.

Footing excavations should be filled as soon as possible or be kept moist until concrete placement by regular sprinkling to prevent desiccation. A Cornerstone representative should observe all footing excavations prior to placing reinforcing steel and concrete. If there is a significant schedule delay between our initial observation and concrete placement, we may need to re-observe the excavations.

Some near surface sandy soils were encountered at the site. Where encountered, footing excavation walls may not stand vertical and may need to be sloped to a minimum 1:1 inclination or Stay-Form or similar may need to be placed within the footing excavations as they are excavated during construction of the foundation elements. If granular material is encountered in footing bottoms they will likely be disturbed to a depth of 6 to 8 inches following excavation and will need to be compacted to 90 percent relative compaction prior to steel placement. Care should be taken to not disturb the compacted granular material during steel placement. We should re-observe the footing excavations in granular materials after reinforcing steel has been placed and just prior to concrete placement. Footing excavations should also be kept moist by regular sprinkling with water to prevent desiccation and potential raveling of the granular materials. As an alternative, a rat slab can be placed over the granular material after we have observed the footing excavation to protect the granular material prior to steel placement.

SECTION 9: CONCRETE SLABS AND PEDESTRIAN PAVEMENTS

9.1 OFFICE SLABS-ON-GRADE

Due to the moderate to high expansion potential of the surficial soils, the proposed office slabs-on-grade should be at least 6 inches thick and be supported on at least 12 inches of non-expansive fill (NEF) to reduce the potential for slab damage due to soil heave. The NEF layer should be constructed over subgrade prepared in accordance with the recommendations in the "Earthwork" section of this report. If moisture-sensitive floor coverings are planned, the recommendations in the "Interior Slabs Moisture Protection Considerations" section below may be incorporated in the project design if desired. If significant time elapses between initial subgrade preparation and slab-on-grade NEF construction, the subgrade should be proof-rolled

to confirm subgrade stability, and if the soil has been allowed to dry out, the subgrade should be re-moisture conditioned in accordance with the “Compaction” section of this report.

The structural engineer should determine the appropriate slab reinforcement for the loading requirements and considering the expansion potential of the underlying soils. For unreinforced concrete slabs, ACI 302.1R recommends limiting control joint spacing to 24 to 36 times the slab thickness in each direction, or a maximum of 18 feet.

9.2 WAREHOUSE SLABS-ON-GRADE

Warehouse slabs-on-grade should be at least 6 inches thick, should have a minimum compressive strength of 3,500 psi, and should be designed for the specific warehouse loading (i.e. forklifts, rack loads, etc.). At this time, rack loading information, etc. was not available. The slab should also be designed to accommodate potential slab settlement beneath heavily loaded slab areas.

Warehouse slabs-on-grade should also be supported on at least 6 inches of non-expansive fill (NEF) consisting of crushed granular base having an R-value of at least 50 and no more than 10 percent passing the No. 200 sieve, such as Class 2 aggregate base. Due to the moderate to high plasticity of the existing soils, an additional 6 inches of non-expansive fill (NEF) should underlie the upper granular base NEF, for a total slab NEF section thickness of 12 inches.

To summarize, the warehouse slab-on-grade should be underlain by the materials and alternatives outlined below. Figure 6 outlines the recommended NEF section beneath warehouse slabs-on-grade. Additional details follow these points.

- Zone A Fill Material – Upper 6 inches of pad subgrade should consist of crushed granular base having an R-value of at least 50 and no more than 10 percent passing the No. 200 sieve, such as Class 2 aggregate base

- Zone B Fill Material – from 6 to 12 inches below pad subgrade (or below the Zone A noted above), the soil/material should also consist of a non-expansive fill (NEF) with a Plasticity Index (PI) of 15, or less

- Zone B Fill Material Alternative 1 – from 6 to 12 inches below pad subgrade (or below the Zone A noted above), the non-expansive fill material also can consist of the same material used for Zone A

- Zone B Fill Material Alternative 2 – from 6 to 12 inches below pad subgrade (or below the Zone A noted above), the onsite material also can be chemical-treated to meet non-expansive requirement with a PI of 15, or less

All base and subbase materials should be placed and compacted in accordance with the “Compaction” section of this report. If there will be areas within the warehouse that are moisture sensitive, such as equipment and elevator rooms, a vapor barrier may be placed over the upper granular base prior to slab construction. Please refer to the recommendations in the “Interior

Slabs Moisture Protection Considerations" section for vapor barrier construction. Consideration should be given to limiting the control joint spacing to a maximum of about 2 feet in each direction for each inch of concrete thickness.

9.3 INTERIOR SLABS MOISTURE PROTECTION CONSIDERATIONS

The following general guidelines for concrete slab-on-grade construction where floor coverings are planned are presented for the consideration by the developer, design team, and contractor. These guidelines are based on information obtained from a variety of sources, including the American Concrete Institute (ACI) and are intended to reduce the potential for moisture-related problems causing floor covering failures, and may be supplemented as necessary based on project-specific requirements. The application of these guidelines or not will not affect the geotechnical aspects of the slab-on-grade performance.

- Place a minimum 15-mil vapor retarder conforming to ASTM E 1745, Class C requirements or better directly below the concrete slab; the vapor retarder should extend to the slab edges and be sealed at all seams and penetrations in accordance with manufacturer's recommendations and ASTM E 1643 requirements. A 4-inch-thick capillary break, consisting of crushed rock should be placed below the vapor retarder and consolidated in place with vibratory equipment. The capillary break rock may be considered as the upper 4 inches of the non-expansive fill previously recommended. The mineral aggregate shall be of such size that the percentage composition by dry weight as determined by laboratory sieves will conform to the following gradation:

Sieve Size	Percentage Passing Sieve
1"	100
¾"	90 – 100
No. 4	0 – 10
No. 200	0 – 5

- The concrete water:cement ratio should be 0.45 or less. Mid-range plasticizers may be used to increase concrete workability and facilitate pumping and placement.

- Water should not be added after initial batching unless the slump is less than specified and/or the resulting water:cement ratio will not exceed 0.45.

- Polishing the concrete surface with metal trowels is not recommended.

- Where floor coverings are planned, all concrete surfaces should be properly cured.

- Water vapor emission levels and concrete pH should be determined in accordance with ASTM F1869-98 and F710-98 requirements and evaluated against the floor covering manufacturer's requirements prior to installation.

9.4 EXTERIOR FLATWORK

Exterior concrete flatwork subject to pedestrian and/or occasional light pick up loading should be at least 4 inches thick and supported on at least 6 inches of Class 2 aggregate base overlying subgrade prepared in accordance with the "Earthwork" recommendations of this report. Flatwork that will be subject to heavier or frequent vehicular loading should be designed in accordance with the recommendations in the "Vehicular Pavements" section below. To help reduce the potential for uncontrolled shrinkage cracking, adequate expansion and control joints should be included. Consideration should be given to limiting the control joint spacing to a maximum of about 2 feet in each direction for each inch of concrete thickness. Flatwork should be isolated from adjacent foundations or retaining walls.

SECTION 10: VEHICULAR PAVEMENTS

10.1 ASPHALT CONCRETE

The following asphalt concrete pavement recommendations tabulated below are based on the Procedure 608 of the Caltrans Highway Design Manual, estimated traffic indices for various pavement-loading conditions, and on a design R-value of 5. The design R-value was chosen based on engineering judgement considering the variable and expansive soil conditions. Additionally, due to the presence of moderate to highly expansive soils, we have also included an option for chemical-treated (lime/cement) subgrade soils using an estimated design R-value of 50. If it is desired to chemical-treat, we recommend the upper 12 inches of subgrade soil be treated. Additional testing will need to be performed to determine the appropriate lime/cement percentage to be mixed with the subgrade soil.

Table 4: Asphalt Concrete Pavement Recommendations, Untreated Subgrade

Design Traffic Index (TI)	Asphalt Concrete (inches)	Class 2 Aggregate Base[1] (inches)	Total Pavement Section Thickness (inches)
4.5	2.5	9.5	12.0
5.0	3.0	10.0	13.0
5.5	3.0	12.0	15.0
6.0	3.5	13.0	16.5
6.5	4.0	13.5	17.5
7.0	4.0	15.5	19.5
7.5	4.5	16.5	21.0
8.0	5.0	17.5	22.5
8.5	5.0	19.5	24.5
9.0	5.5	20.5	26.0
9.5	6.0	21.5	27.5
10.0	6.5	23.0	29.5

1 – Caltrans Class 2 aggregate base; minimum R-value of 78; subgrade R-value of 5

Table 5: Asphalt Concrete Pavement Recommendations, Chemical-Treated Subgrade

Design Traffic Index (TI)	Asphalt Concrete (inches)	Class 2 Aggregate Base[1] (inches)	Total Pavement Section Thickness (inches)
4.0 / 4.5	2.5	4.0	6.5
5.0 / 5.5	3.0	4.0	7.0
6.0	3.5	4.0	7.5
6.5	4.0	4.0	8.0
7.0	4.0	4.5	8.5
7.5	4.5	5.0	9.5
8.0	5.0	5.0	10.0
8.5	5.0	6.0	11.0
9.0	5.5	6.5	12.0
9.5	6.0	7.0	13.0
10.0	6.5	7.0	13.5

1 – Caltrans Class 2 aggregate base; minimum R-value = 78; design subgrade R-value = 50, assuming 12-inch-thick subgrade chemical treatment

Frequently, the full asphalt concrete section is not constructed prior to construction traffic loading. This can result in significant loss of asphalt concrete layer life, rutting, or other pavement failures. To improve the pavement life and reduce the potential for pavement distress through construction, we recommend the full design asphalt concrete section be constructed prior to construction traffic loading. Alternatively, a higher traffic index may be chosen for the areas where construction traffic will use the pavements.

Asphalt concrete pavements constructed on expansive subgrade where the adjacent areas will not be irrigated for several months after the pavements are constructed may experience longitudinal cracking parallel to the pavement edge. These cracks typically form within a few feet of the pavement edge and are due to seasonal wetting and drying of the adjacent soil. The cracking may also occur during construction where the adjacent grade is allowed to significantly dry during the summer, pulling moisture out of the pavement subgrade. Any cracks that form should be sealed with bituminous sealant prior to the start of winter rains. One alternative to reduce the potential for this type of cracking is to install a moisture barrier at least 24 inches deep behind the pavement curb.

10.2 PORTLAND CEMENT CONCRETE

The exterior Portland Cement Concrete (PCC) pavement recommendations tabulated below are based on methods presented in “Concrete Pavement for Trucking Facilities” by the American Concrete Pavement Association (ACPA, 1995), and the Portland Cement Association (PCA) design manual (PCA, 1984). In our opinion, the truck loading areas where trucks turn, brake, or stop should be constructed of reinforced Portland Cement Concrete (PCC) pavement. We have provided a few pavement alternatives below as the anticipated number of trucks and number of load repetitions per day on a given location of the pavement has not been provided at this time.

An alternative should be chosen that is greater than what is expected for the development. At this time, we have assumed trucks will consist of tractor trailers. When more specific truck loading information is available, additional information can be provided.

Table 6: PCC Pavement Recommendations, Untreated Subgrade

Traffic Category	Minimum PCC Thickness[1] (inches)
Trucks per day per lane = 20	7.0
Trucks per day per lane = 80	7.5
Trucks per day per lane = 400	8.0

1 – Subgrade design R-Value = 5

The PCC thicknesses recommended above are based on a concrete flexural strength of at least 550 psi, minimum 28-day compressive strength of 4,000 psi, and supporting the PCC on at least 6 inches of Class 2 aggregate base compacted to a minimum relative compaction of 95 percent (ASTM D1557) as recommended in the "Earthwork" section of our report. The aggregate base should be constructed over compacted subgrade prepared in accordance with "Compaction" section of this report. The PCC should have a low water-cement ratio (industry standards), and in no case exceed a water-cement plus pozzolan ratio of 0.53.

Adequate expansion and control joints should be included. Joint spacing should not exceed about 24 times the pavement thickness, in approximately square panels for unreinforced concrete. Joint spacing can be increased somewhat for reinforced concrete where light reinforcing steel is provided to help hold together intermediate cracks that may form in panels. Construction and expansion joints, and dowels, should be designed in accordance with industry standards; joint sealing should be included due to the expansive soils at the site.

If the subgrade soils are to be chemically treated (lime/cement), we have provided some pavement alternatives below. For chemically treated subgrade, we recommend the upper 12 inches of subgrade soil be treated and the treated subgrade should obtain a minimum R-value of 50. Additional testing will need to be performed to determine the appropriate lime/cement percentage to be mixed with the subgrade soil to achieve an estimated R-value of 50. The remaining design and construction details should be consistent with the above recommendations for PCC pavements over untreated subgrade.

Table 7: PCC Pavement Recommendations, Chemical-Treated Subgrade

Traffic Category	Minimum PCC Thickness[1] (inches)
Trucks per day per lane = 20	6.5
Trucks per day per lane = 80	7.0
Trucks per day per lane = 400	7.5

1 – Subgrade design R-Value = 50, assuming 12-inch-thick subgrade chemical treatment

If chemical treatment of the subgrade is performed, the underlying Class 2 aggregate base section may be reduced from 6 inches to 4 inches, provided it is compacted to a minimum relative compaction of 95 percent (ASTM D1557) as recommended in the "Earthwork" section of our report.

10.3 STRESS PADS FOR TRASH ENCLOSURES

Pads where trash containers will be stored, and where garbage trucks will park while emptying trash containers, should be constructed on Portland Cement Concrete. We recommend that the trash enclosure pads and stress (landing) pads where garbage trucks will store, pick up, and empty trash be increased to a minimum PCC thickness of 8 inches for untreated subgrade and 7.5 inches for chemically treated subgrade. The compressive strength, underlayment, and construction details should be consistent with the above recommendations for PCC pavements.

10.4 PAVEMENT CUTOFF

Surface water penetration into the pavement section can significantly reduce the pavement life, due to the native expansive clays. While quantifying the life reduction is difficult, a normal 20-year pavement design could be reduced to less than 10 years; therefore, increased long-term maintenance may be required.

It would be beneficial to include a pavement cut-off, such as deepened curbs, redwood-headers, or "Deep-Root Moisture Barriers" that are keyed at least 4 inches into the pavement subgrade. This will help limit the additional long-term maintenance.

SECTION 11: RETAINING WALLS

11.1 STATIC LATERAL EARTH PRESSURES

The structural design of any site retaining wall should include resistance to lateral earth pressures that develop from the soil behind the wall, any undrained water pressure, and surcharge loads acting behind the wall. Provided a drainage system is constructed behind the wall to prevent the build-up of hydrostatic pressures as discussed in the section below, we recommend that the walls with level backfill be designed for the pressures in the table below. As mentioned, moderately to highly expansive soils are present at the site. Backfill within 3 feet

of the back side of retaining walls should consist of onsite or imported soils with a PI of 25 or less. Onsite soils with a PI greater than 25 should not be used as backfill within 3 feet of the back side of the wall.

Table 8: Recommended Lateral Earth Pressures

Wall Condition	Lateral Earth Pressure[1]	Additional Surcharge Loads
Unrestrained – Cantilever Wall	45 pcf	⅓ of vertical loads at top of wall
Restrained – Braced Wall	45 pcf + 8H psf [2]	½ of vertical loads at top of wall

1 – Lateral earth pressures are based on an equivalent fluid pressure for level backfill conditions
2 – H is the distance in feet between the bottom of footing and top of retained soil

If adequate drainage cannot be provided behind the wall, an additional equivalent fluid pressure of 40 pcf should be added to the values above for both restrained and unrestrained walls for the portion of the wall that will not have drainage. Damp proofing or waterproofing of the walls may be considered where moisture penetration and/or efflorescence are not desired.

11.2 SEISMIC LATERAL EARTH PRESSURES

The 2022 CBC states that lateral pressures from earthquakes should be considered in the design of basements and retaining walls. At this time, we are not aware of any retaining walls 6 feet or greater in height and have not provided seismic earth pressures for the project. If retaining walls greater than 6 feet in height are proposed, we should be retained to provide seismic earth pressures, if warranted. In our opinion, seismic earth pressures are not warranted for design of minor retaining walls (i.e. walls 6 feet or less in height).

11.3 WALL DRAINAGE

Adequate drainage should be provided by a subdrain system behind all walls. This system should consist of a 4-inch minimum diameter perforated pipe placed near the base of the wall (perforations placed downward). The pipe should be bedded and backfilled with Class 2 Permeable Material per Caltrans Standard Specifications, latest edition. The permeable backfill should extend at least 12 inches out from the wall and to within 2 feet of outside finished grade. Alternatively, ½-inch to ¾-inch crushed rock may be used in place of the Class 2 Permeable Material provided the crushed rock and pipe are enclosed in filter fabric, such as Mirafi 140N or approved equivalent. The upper 2 feet of wall backfill should consist of compacted on-site soil. The subdrain outlet should be connected to a free-draining outlet or sump.

Miradrain, Geotech Drainage Panels, or equivalent drainage matting can be used for wall drainage as an alternative to the Class 2 Permeable Material or drain rock backfill. Horizontal strip drains connecting to the vertical drainage matting may be used in lieu of the perforated pipe and crushed rock section. The vertical drainage panel should be connected to the perforated pipe or horizontal drainage strip at the base of the wall, or to some other closed or through-wall system such as the TotalDrain system from AmerDrain. Sections of horizontal drainage strips should be connected with either the manufacturer's connector pieces or by pulling back the filter fabric, overlapping the panel dimples, and replacing the filter fabric over

the connection. At corners, a corner guard, corner connection insert, or a section of crushed rock covered with filter fabric must be used to maintain the drainage path.

Drainage panels should terminate 18 to 24 inches from final exterior grade. The Miradrain panel filter fabric should be extended over the top of and behind the panel to protect it from intrusion of the adjacent soil.

11.4 BACKFILL

Where surface improvements will be located over the retaining wall backfill, backfill placed behind the walls with a PI less than 20 should be compacted to at least 95 percent relative compaction using light compaction equipment. If the soil's PI is 20 or greater, expansive soil criteria should be used as discussed in the "Compaction" section of this report. Where no surface improvements are planned, backfill should be compacted to at least 90 percent for soils with a PI less than 20. Expansive soil criteria should be followed for soils with a PI of 20 or greater. If heavy compaction equipment is used, the walls should be temporarily braced.

11.5 FOUNDATIONS

Retaining walls may be supported on a continuous and or spread footing designed in accordance with the recommendations presented in the "Foundations" section of this report.

SECTION 12: LIMITATIONS

This report, an instrument of professional service, has been prepared for the sole use of CC Industries, Inc. specifically to support the design of the Alvarado Street Warehouse project in San Leandro, California. The opinions, conclusions, and recommendations presented in this report have been formulated in accordance with accepted geotechnical engineering practices that exist in Northern California at the time this report was prepared. No warranty, expressed or implied, is made or should be inferred.

Recommendations in this report are based upon the soil and groundwater conditions encountered during our subsurface exploration. If variations or unsuitable conditions are encountered during construction, Cornerstone must be contacted to provide supplemental recommendations, as needed.

CC Industries, Inc. may have provided Cornerstone with plans, reports and other documents prepared by others. CC Industries, Inc. understands that Cornerstone reviewed and relied on the information presented in these documents and cannot be responsible for their accuracy.

Cornerstone prepared this report with the understanding that it is the responsibility of the owner or their representatives to see that the recommendations contained in this report are presented to other members of the design team and incorporated into the project plans and specifications, and that appropriate actions are taken to implement the geotechnical recommendations during construction.

Conclusions and recommendations presented in this report are valid as of the present time for the development as currently planned. Changes in the condition of the property or adjacent properties may occur with the passage of time, whether by natural processes or the acts of other persons. In addition, changes in applicable or appropriate standards may occur through legislation or the broadening of knowledge. Therefore, the conclusions and recommendations presented in this report may be invalidated, wholly or in part, by changes beyond Cornerstone's control. This report should be reviewed by Cornerstone after a period of three (3) years has elapsed from the date of this report. In addition, if the current project design is changed, then Cornerstone must review the proposed changes and provide supplemental recommendations, as needed.

An electronic transmission of this report may also have been issued. While Cornerstone has taken precautions to produce a complete and secure electronic transmission, please check the electronic transmission against the hard copy version for conformity.

Recommendations provided in this report are based on the assumption that Cornerstone will be retained to provide observation and testing services during construction to confirm that conditions are similar to that assumed for design, and to form an opinion as to whether the work has been performed in accordance with the project plans and specifications. If we are not retained for these services, Cornerstone cannot assume any responsibility for any potential claims that may arise during or after construction as a result of misuse or misinterpretation of Cornerstone's report by others. Furthermore, Cornerstone will cease to be the Geotechnical-Engineer-of-Record if we are not retained for these services.

Warehouse Slab-On-Grade NEF Detail

Legend

Zone A - 6 inches of NEF consisting of crushed granular base having an R-value of at least 50 and no more than 10 percent passing the No. 200 sieve, such as Class 2 aggregate base compacted to a minimum 95 percent relative compaction or open-graded 3/4-inch crushed rock consolidated in-place.

Zone B - 6 inches of non-expansive fill (NEF) with a Plasticity Index (PI) of 15, or less. Examples include Class 2 aggregate base, lime-treated onsite soils, or other imported soils with a PI of 15, or less. Compacted to minimum 95 percent unless material is undisturbed lime-treated soil then minimum 90 percent compaction.

CORNERSTONE EARTH GROUP	Warehouse Slab-On-Grade NEF Detail Alvarado Street Warehouse San Leandro, CA	Project Number: 1561-1-1 Figure Number: Figure 6 Date: March 2025 Drawn By: RRN

APPENDIX A: FIELD INVESTIGATION

The field investigation consisted of a surface reconnaissance and a subsurface exploration program using truck-mounted hollow-stem auger drilling equipment and 25-ton truck-mounted Cone Penetration Test equipment. Four 8-inch-diameter exploratory borings were drilled on January 21, 2025 to depths of 21½ to 45 feet. Five CPT soundings were also performed in accordance with ASTM D 5778-95 (revised, 2002) on February 4, 2025, to depths ranging from about 50 to 100 feet. The approximate locations of exploratory borings and CPTs are shown on the Site Plan, Figure 2. The soils encountered were continuously logged in the field by our representative and described in accordance with the Unified Soil Classification System (ASTM D2488). Boring logs, as well as a key to the classification of the soil, are included as part of this appendix.

Boring and CPT locations were approximated using existing site boundaries, a hand-held GPS unit, and other site features as references. Boring elevations were approximated based on the topographic plan provided. The locations and elevations of the borings and CPTs should be considered accurate only to the degree implied by the method used.

Representative soil samples were obtained from the borings at selected depths. All samples were returned to our laboratory for evaluation and appropriate testing. The standard penetration resistance blow counts were obtained by dropping a 140-pound hammer through a 30-inch free fall. The 2-inch O.D. split-spoon sampler was driven 18 inches and the number of blows was recorded for each 6 inches of penetration (ASTM D1586). 2.5-inch I.D. samples were obtained using a Modified California Sampler driven into the soil with the 140-pound hammer previously described. Relatively undisturbed samples were also obtained with 2.875-inch I.D. Shelby Tube sampler which were hydraulically pushed. Unless otherwise indicated, the blows per foot recorded on the boring log represent the accumulated number of blows required to drive the last 12 inches. The various samplers are denoted at the appropriate depth on the boring logs.

The CPT involved advancing an instrumented cone-tipped probe into the ground while simultaneously recording the resistance at the cone tip (q_c) and along the friction sleeve (f_s) at approximately 5-centimeter intervals. Based on the tip resistance and tip to sleeve ratio (R_f), the CPT classified the soil behavior type and estimated engineering properties of the soil, such as equivalent Standard Penetration Test (SPT) blow count, internal friction angle within sand layers, and undrained shear strength in silts and clays. A pressure transducer behind the tip of the CPT cone measured pore water pressure (u_2). Graphical logs of the CPT data is included as part of this appendix.

Field tests included an evaluation of the unconfined compressive strength of the soil samples using a pocket penetrometer device. The results of these tests are presented on the individual boring logs at the appropriate sample depths.

Attached boring and CPT logs and related information depict subsurface conditions at the locations indicated and on the date designated on the logs. Subsurface conditions at other locations may differ from conditions occurring at these boring and CPT locations. The passage of time may result in altered subsurface conditions due to environmental changes. In addition,

any stratification lines on the logs represent the approximate boundary between soil types and the transition may be gradual.

COMMENT:

APPENDIX B: LABORATORY TEST PROGRAM

The laboratory testing program was performed to evaluate the physical and mechanical properties of the soils retrieved from the site to aid in verifying soil classification.

Moisture Content: The natural water content was determined (ASTM D2216) on 30 samples of the materials recovered from the borings. These water contents are recorded on the boring logs at the appropriate sample depths.

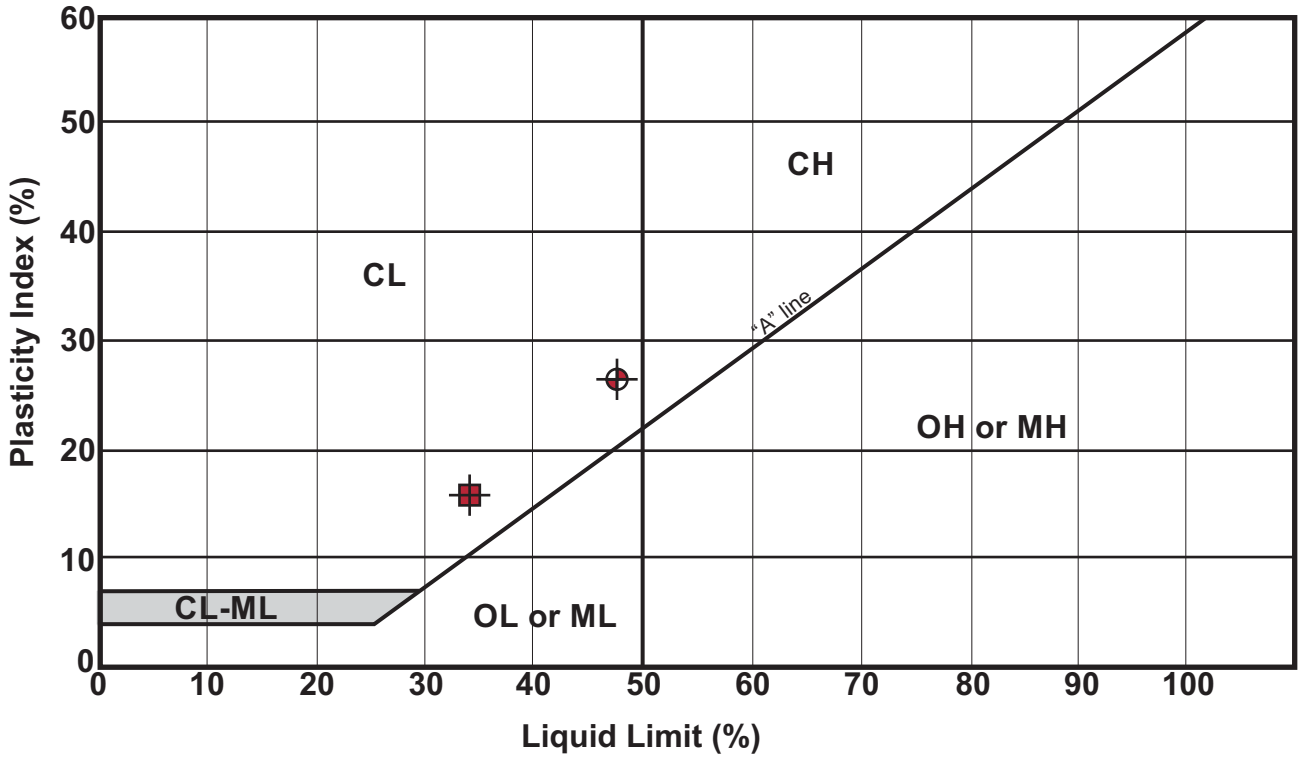
Dry Densities: In place dry density determinations (ASTM D2937) were performed on 30 samples to measure the unit weight of the subsurface soils. Results of these tests are shown on the boring logs at the appropriate sample depths.

Washed Sieve Analyses: The percent soil fraction passing the No. 200 sieve (ASTM D1140) was determined on two samples of the subsurface soils to aid in the classification of these soils. Results of these tests are shown on the boring logs at the appropriate sample depths.

Plasticity Index: Two Plasticity Index determinations (ASTM D4318) were performed on samples of the subsurface soils to measure the range of water contents over which this material exhibits plasticity. The Plasticity Index was used to classify the soil in accordance with the Unified Soil Classification System and to evaluate the soil expansion potential. Results of these tests are shown on the boring logs at the appropriate sample depths.

Consolidation: One consolidation test (ASTM D2435) was performed on a relatively undisturbed sample of the subsurface clayey soils to assist in evaluating the compressibility property of this soil. Results of the consolidation test are presented graphically in this appendix.

Plasticity Index (ASTM D4318) Testing Summary



Symbol	Boring No.	Depth (ft)	Natural Water Content (%)	Liquid Limit (%)	Plastic Limit (%)	Plasticity Index	Passing No. 200 (%)	Group Name (USCS - ASTM D2487)

1. EXECUTIVE SUMMARY

Ramboll Americas Engineering Solutions, Inc. (Ramboll) was retained by CC Industries, Inc. – A Henry Crown Company (CCI or the "Client") to perform a Phase I Environmental Site Assessment (ESA) of the site located at 3199 Alvarado Street in San Leandro, California (herein referred to as the "site") (Figures 1 and 2). Ramboll's assessment was conducted in connection with the potential redevelopment or sale of the site.

The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-21 (the "ASTM Standard"), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard (see Section 8).

1.1 Site Summary

The site is developed with an approximately 252,000-square-foot building located on the western portion of the approximately 14.9-acre site. The building is primarily open warehouse space with a centrally located office cluster. An out-of-use railroad spur is located within the southeastern portion of the building. Other features include a covered loading dock, an attached storage room, and a mobile office trailer situated along the south-southwest portion of the site. The remainder of the site is paved with limited landscaping. While the majority of the building is vacant, a portion of the western half of the building is leased by The Ford Store for vehicle storage and K&C Environmental uses the storage room, office trailer, loading dock, and paved areas on the west-southwestern portion of the site for the storage and minimal maintenance of heavy equipment, dumpsters, and vehicles.

The site was farmland (row crops) by 1939 and was developed with a portion of the existing building for use as a store on the western portion of the site, along with a service station on the north-northeast portion of the site in 1962–1963. The store and service station were both operated by Consumers Mart of America (CMA) and then shortly thereafter the Bay Mart Department Store. In the late 1960s to early 1970s, the service station was demolished, the store building was expanded to its current footprint, and a rail spur was added. Levitz Furniture operated a furniture showroom and warehouse at the site from the late 1960s to 2005. A building renovation was conducted in 2008 and the site was occupied by warehousing and distribution companies from at least 2008 to 2022, including Dependable Highway Express (DHE) who formerly conducted on-site truck maintenance activities. The site has been owned by Crown H Grandchildrens Trust II since 2016.

1.2 Phase I ESA Conclusions

Ramboll performed a Phase I ESA of the site in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 7.2 of this report. The assessment has revealed no RECs, controlled RECs (CRECs), or significant data gaps (SDGs) in connection with the subject property, except as identified below.

- **Groundwater Contamination Related to Off-Site Sources.** The Davis-Washington-Alvarado (DWA) Plume is a regional groundwater contamination plume that is identified on the Response, Envirostor, Cortese, and Historical Cal-Site databases. The commingled plume is impacted by volatile organic compounds (VOCs), including tetrachloroethene (PCE), trichloroethene (TCE), vinyl chloride (VC), 1,1-dichloroethene (1,1-DCE), 1,1,1- trichloroethane (TCA), 1,1-dichloroethane (DCA), chloroform, petroleum-related compounds, and metals from multiple sites that is approximately 1 mile wide and 2 miles long. The plume was historically mapped to include the

subject site although there is no data available to indicate that the plume actually extends beneath the site. The California Department of Toxic Substances Control (DTSC) reviewed over 170 potential contributors to the DWA Plume and has overseen investigation and remediation activities at Potentially Responsible Parties (PRPs) in the area, including the Singer Friden Site, Cintas/DeDomenico Site, and Hudson ICS Site located at least 0.2 mile north-northeast of the site. Two sub-areas of the DWA Plume adjoin the subject site, the Industrial Data Gap Area to the northeast, and the Residential East and West Areas (adjoining residential areas directly southeast and to the southwest beyond Interstate 880). Grab groundwater sampling conducted within the Industrial Gap area in 1994–1995 identified TCE at a concentration of up to 1,000 µg/L at or near the US Can facility. Due to the unidentified source(s) and VOC contamination within the DWA Plume, this matter represents a REC to the site.

To address this REC and assess potential vapor intrusion risks to building occupants from the potential presence of VOCs in groundwater from the DWA plume, a soil vapor sampling investigation is planned for implementation at the site in April 2025. Soil vapor samples will be collected in accordance with DTSC guidance[1] from up to twelve (12) sub-slab vapor pin locations inside the existing warehouse and up to three (3) soil vapor probes in the parking area, east of the current warehouse and within the footprint of the future new warehouse. Soil vapor samples will be analyzed for VOCs using a mobile lab (by EPA Method 8260B) and/or fixed based laboratory using EPA Method TO-14.

Ramboll identified additional findings that are not considered RECs are discussed in Section 7.1.

[1] DTSC 2015. Advisory for Active Soil Gas Investigations. July.

2. INTRODUCTION

2.1 Scope of Work

Ramboll conducted a Phase I ESA of the site, relying on the sources of information noted below. The date on which the information was obtained/reviewed is also indicated in Table 2.1.

Table 2.1 Sources of Information Relied on for the Phase I ESA

Resource	Description	Date
Site Reconnaissance		
Site visit	Ramboll representative: Jodi Vanneman (photographs from the site visit are provided in Appendix A)	December 5, 2024
Interviews		
Site Representatives (year first associated with the site)	Troy DeHerrera, KC Environmental (2014)	December 5, 2024
Site Owner Representative	Tom Gretz, Henry Crown & Company, Manager of Corporate Real Estate Services (2024)	December 5–10, 2024
Governmental Agencies	In lieu of interviewing regulatory authorities, Ramboll submitted written information requests and reviewed responsive information (if provided) in accordance with procedures established by the regulatory authorities (see below).	See below
Records Review		
Environmental Database Search	Environmental Data Resources Inc (EDR) database report (Appendix B)	November 25, 2024
Governmental and Other Online Resources	USEPA Envirofacts and Enforcement and Compliance History Online (ECHO) databases California DTSC EnviroStor and Hazardous Waste Tracking System (HWTS) databases California Water Resources Control Board (WRCB) GeoTracker website WRCB Storm Water Multiple Applications and Report Tracking System (SMARTS) California Environmental Protection Agency (CalEPA) Regulated Site Portal United States Department of Transportation, National Pipeline Mapping System (NPMS) online	December 2, 2024

Table 2.1 Sources of Information Relied on for the Phase I ESA

Regulatory Agency Records	Ramboll reviewed site-related information available from the following agencies: • San Leandro City Environmental Services • Bay Area Air Quality Management District (BAAQMD) Ramboll also requested information from the Alameda County Fire Department regarding fire incidents, site usage, and spill responses on file for the site; however, because a response was not received within 20 calendar days of the information request, this source is not considered by the ASTM standard to be "reasonably ascertainable". Additionally, building records for the site were viewed via EDR Lightbox.	December 2–5, 2024
Historical Sources	Aerial photographs, topographic maps, city directory listings, Sanborn maps (as available), obtained from EDR (Appendix C).	November 25–26, 2024
Physical Setting Sources	Current United States Geological Survey (USGS) 7.5-minute topographic map for the site and surrounding area. Geologic, hydrogeologic, and hydrologic information provided in the EDR report and prior site assessment reports noted below.	December 2–5, 2024
Prior Environmental Reports and Site-Related Information	Prior environmental reports and documents reviewed by Ramboll (Appendix D) include: • *Environmental Site Assessment, Levitz Furniture located in San Leandro, California, by ATC Associates, Inc* (ATC), dated March 16, 1999 (the "1999 ESA report"); • *Additional Subsurface Investigation for the Levitz Furniture located in San Leandro, California, by ATC*, dated November 16, 1999 (the "November 1999 Additional Subsurface Investigation report"); • *Phase I Environmental Site Assessment, 3199 Alvarado Street, San Leandro, California*, prepared by Pioneer Engineering & Environmental Services, Inc. (Pioneer),	December 2, 2024

Table 2.1 Sources of Information Relied on for the Phase I ESA

Resource	Description	Date
	dated December 18, 2022 (the "2002 Phase I ESA report"); and • *ALTA Land Title Survey, prepared by Slooten Consulting, Inc.*, dated November 2002 (the "2002 ALTA Survey"). In addition, Ramboll requested from site representatives the environmental documents identified in Section 10.8 of the ASTM Standard. No other such documents were provided or are available.	

Notes:

Ramboll interviewed representatives of the site (i.e., "facility personnel") identified by the Client as having good knowledge of the uses, physical characteristics, and operations of the site (i.e., "key site manager" as defined by the ASTM Standard), including information identified in Section 10.8 and Section 10.9 of the ASTM Standard. Certain follow-up discussions and communication may have been completed following the date of the initial interview.

Database searches were completed for those databases required by the ASTM Standard, as well as other readily available sources. Where specified, the radius searched for each database was selected in accordance with the ASTM Standard.

This Phase I ESA was conducted in accordance with the methodology specified in the ASTM Standard, as agreed upon by Ramboll and its Client in the proposal for this assignment.

The scope of work for this assignment was expanded to include an evaluation of certain additional considerations that are not included in the ASTM Standard, including a screening-level review of ACM[2] in the site building. The review of additional considerations was conducted based on available information and documentation; no samples of any media were collected as part of this assignment unless explicitly stated otherwise. Any other areas referred to as non-scope considerations by the ASTM Standard not listed above were outside the scope of this assessment.

2.2 Significant Assumptions

In conducting this review, Ramboll made no significant assumptions.

[2] Ramboll's review of ACM in building materials did not include a formal asbestos survey in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, and any comments in this report regarding the condition of building materials represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

2.3 Reliance and General Limitations

This report has been prepared for the exclusive use of CCI (the "Client") and may not be relied upon by any other person or entity without Ramboll's prior express written permission.

This report is considered current if the site visit, interviews, and regulatory database search were all performed within 180 days prior to the anticipated transaction. The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll must rely upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, the conclusions in this report are valid only to the extent that the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions. Ramboll makes no representations or warranties, express or implied, about the conditions of the site.

Ramboll's scope of work for this assignment did not include collecting samples of any environmental media. As such, this review cannot rule out the existence of latent conditions, including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions.

On May 8, 2024, the United States Environmental Protection Agency (USEPA) formally published in the Federal Register (89 Fed. Reg. 39124) its final rule designating perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), together with their salts and structural isomers, as Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) hazardous substances. The rule was effective July 8, 2024. Therefore, Ramboll's assessment included consideration that PFOA, PFOS, and their salts and structural isomers are CERCLA hazardous substances. Ramboll's assessment also included review of other per- and polyfluoroalkyl substances (PFAS), to the extent identified, even if not a CERCLA hazardous substance (and thus outside the scope of the ASTM Standard). Ramboll's review is intended to provide guidance about possible current and/or historical uses of PFAS at the site based on the information available at the time of our assessment, recognizing that knowledge regarding the current and historical uses of these substances continues to evolve.[3]

[3] Ramboll's review of PFAS risks excludes certain PFAS-containing refrigerants that may be contained in on-site equipment and are gases at standard temperature and pressure (e.g., R-410A, R-134a), on the assumption that they are not expected to pose a significant site contamination risk.

3. SITE DESCRIPTION

3.1 Site Setting

The site is located northwest of the intersection of Alvarado Street and Fremont Avenue, and approximately 15 miles east-southeast of San Francisco, California (Figure 1).

The site is developed with an approximately 252,000-square-foot building located on the western portion of the approximately 14.9-acre site. The building is primarily open warehouse space with a centrally located office cluster. An out-of-use railroad spur is located within the southeastern portion of the building. Other features include a covered loading dock, an attached storage room and a mobile office trailer situated along the south-southwest portion of the site. The remainder of the site is paved for parking and access with landscaping within a few curbed islands in the eastern parking lot and along portions of the site perimeter (Figure 2).

The building is configured for warehousing and distribution with several loading docks and minimal interior improvements. While the majority of the building is vacant, a portion of the western half of the building is leased by The Ford Store for vehicle storage and K&C Environmental uses the storage room, office trailer, loading dock, and paved areas on the west-southwestern portion of the site for the storage and minimal maintenance of heavy equipment, dumpsters, and vehicles.

The primary site access is from driveways off Alvarado Street along the northeastern site boundary. Table 3.1 provides an overview of physical setting information for the site.

Table 3.1 Physical Setting Information

Conditions	Description
Site Information	
Property Owner	Craig C Martin and H D Levin/Crown H Grandchildrens Trust II
Size	14.9 acres
Assessor Parcel Number (APN)	077B-1201-015
Topography, Geology, and Hydrology	
Topography	Site: The site is nearly flat with an average elevation of approximately 31 feet above mean sea level (amsl). Region: Regionally, the ground slopes downward to the southwest.
Nearest Surface Water Body to the Site	On-Site: There are no on-site surface water bodies. Off-Site: The nearest water body is the Estudillo Canal, located approximately 1 mile southwest of the site, that discharges into the San Francisco Bay, located approximately 2 miles west of the site.

Table 3.1 Physical Setting Information

Conditions	Description
Presumed Direction of Shallow Groundwater Flow	South-southwest (based on surface topography sloping downward toward the San Francisco Bay and DWA Plume reports [see Section 6.2])
Depth to Groundwater	During 1999 subsurface investigations completed at the site (see Section 4.4), groundwater was encountered at depths of 10 to 12 feet below ground surface (bgs) in borings placed on the north-northeast portion of the site.
Geologic Conditions	According to the database search report, site soils are characterized as Clear Lake clay. This poorly-drained soil exhibits very flow infiltration rates and is described as clay to a depth of 59 inches bgs.
Flood Plain	Facility personnel reported no known occurrences of flooding at the site. The site is located in an area of minimal flood hazard, which are the areas outside the 500-year flood zone.
Wetlands	According to the wetlands information provided by the National Wetland Inventory (NWI) (as obtained from the EDR database report), there are no on-site federally designated wetlands.
Nearby Groundwater Supply Wells	According to well database information provided in the database search report, there are no public water supply wells present within a 1-mile radius of the site. A total of 37 state-registered wells are reported within a 1-mile radius of the site, all of which are located 0.5 mile or more away from the site. Six of these wells are reported as former or current water supply wells and are all located crossgradient or upgradient of the site. The remaining wells are reported as monitoring, irrigation, industrial-use wells or wells of unknown use and are not expected to be used for potable purposes.

Notes:

Information in this table was obtained through visual observations during the site visit; a review of USGS topographic maps, Google Earth imagery, information contained in the database search report, and local agency sources (noted in Section 2), and information provided by site representatives.

In the absence of on-site measurements of groundwater flow direction, presumed direction of groundwater flow is based on local/regional topography, the location of nearby surface water bodies, and data for nearby property.

3.2 Current Use of the Site

The site is currently used by The Ford Store, a nearby automotive dealership, for the interior storage of vehicles within the western portion of the building. Their activities do not include the storage or use of chemicals.

The west-southwestern exterior portion of the site along with a small, attached storage structure and a mobile office trailer are used by K&C Environmental for the storage and minimal maintenance of heavy equipment, dumpsters, and vehicles. Operations are limited primarily to storage with minimal maintenance activities involving the use of compressed gas and automotive fluids (i.e., oils, lubricants, antifreeze, windshield fluid, etc.) stored in containers up to 5 gallons in size and portable compressed gas cylinders.

Site representatives knew of no use of chlorinated solvents or PFAS at the site, and the current use of such chemicals is considered unlikely based on the nature of site uses. Foam-based fire suppression systems were not observed (or reported) at the site.

4. RECORDS REVIEW

4.1 Historical Site Use and Local Agency Information

The site was farmland (row crops) by 1939 and was developed with a portion of the existing building for use as a store on the western portion of the site, along with a service station on the north-northeast portion of the site in 1962–1963. The store and service station were both operated by CMA and then shortly thereafter the Bay Mart Department Store. In the late 1960s to early 1970s, the service station was demolished, the store building was expanded to its current footprint, and a rail spur was added. Levitz Furniture operated a furniture showroom and warehouse at the site from the late 1960s to 2005. A building renovation was conducted in 2008 and the site was occupied by warehousing and distribution companies from at least 2008 to 2022 including DHE (formerly conducted truck maintenance activities), Dependable Hawaiian Express (DHX), and Dependable Distribution Center (DDC). Other prior occupants identified include Tremco (2009–2013), Pioneer Sawdust (2010), and Canon Solutions America (2017) that indicate the site operated as a multi-tenant facility for some period of time. The site has been owned by Crown H Grandchildrens Trust II since 2016.

Table 4.1 provides a summary of key information obtained by Ramboll from a review of available historical resources and information obtained from local governmental agencies and regulatory bodies.

Table 4.1 Summary of Historical Resources and Local Agency Information for the Site

Historical Resource	Key Observations Regarding Site History
Historical Resources	
Aerial Photographs (1939, 1946, 1958, 1963, 1968, 1974, 1982, 1993, 1998, 2005, 2009, 2012, 2016 and 2020) Satellite Imagery (1993–2024)	1939–1958: The site is farmland with unpaved roads and two small structures, possibly sheds, on the western portion. 1963 and 1968: The western approximate half of the current building is present with paved parking and accessways surrounding the building. In addition, there is a small rectangular-shaped building present on the north-northeast portion of the site. 1974–2024: The eastern approximate half of the building has been added and is served by a rail spur at the southeast corner. The small rectangular-shaped building previously depicted on the north-northeast corner is no longer present.
Topographic Maps (1899–2021)	≤1959: No development or land use on the site is depicted. 1968: The western portion of the existing building is present along with a small rectangular-shaped structure on the north-northeast portion of the site. 1973: The eastern portion of the building has been added. 1980: A rail spur is present along the southeastern portion of the site. 1996: The site is shaded to indicate inclusion in a densely-developed area without showing specific structure(s); the rail spur is depicted. 2012–2021: No development (or rail spur) is shown on the site. It is noted more recent maps typically depict only topographic features and roads.

Table 4.1 Summary of Historical Resources and Local Agency Information for the Site

Historical Resource	Key Observations Regarding Site History
City Directory Abstracts (1920–2020 at approximate 5-year intervals)	Prior occupants of the site are listed as: Eay [Bay] Mart Dept Store (1965), Levitz Furniture (1975–2005), General Electric Credit Corporation Appliance & Furniture Financing (1976–1982), DHE (2010–2017), DHX Dependable Hawaiian Express/DHX Inc. (2010–2020), Pioneer Sawdust (2010), Canon Solutions America (2017), and DDC-Dependable Distribution Center (2020).
1999 and 2002 Phase I Reports	The site was initially developed with a portion of the current building and a service station in the early 1960s (permit to install three gasoline USTs and one waste oil UST issued in 1962). A permit was issued in 1971 for All Bay Cities to remove all four USTs; no confirmatory documentation of their removal was found. Levitz Furniture occupied the site from the late 1960s into 2002.
2002 ALTA Survey	The ALTA Survey prepared for Henry Crown and Company and Simon Property Group shows the southern approximate 1.2 acres of the site as Parcel 2, and the remaining approximately 13.6 acres as Parcel 1. The current building was depicted as a one-story concrete building of 252,269 square feet. The original 113.56-acre land tract that included the site was deeded by Mary Stenzel of Stenzel Farms Inc. in 1926. Other land conveyances and associated years include Southern Pacific Company (1951 and 1955), Alameda County Flood Control and Water Conservation District (1959), Valbrook Inc. (1960), and excepting property lying below a depth of 500 feet reserved to Southern Pacific Transportation Company (1971).
Site Owner Representative	Ramboll observed areas marked by spray paint in the building. The site owner representative reported no knowledge regarding interior markings and were not aware of prior borings or past/present water wells on the site.
ParcelQuest Lite	The site is identified as APN 77B-1201-15-00, a 14.9-acre parcel improved with a 241,370-square-foot building constructed in 1963. The use type is industrial.
NETR Datastore Online	A transfer detail report was compiled by NETR indicates the site is owned by Craig C Martin and H D Levin with the associated 2016 recording document listing the buyer as Crown H Grandchildrens Trust II. Other ownership/interests and associated recording dates include Crown H Grandchildrens Trust (2016), John A Washburn/Henry Crown Trust (2003), Simon Property Group (2003), and Corporate Property Investors (1972).
Database Search Report	The EDR database report indicates that the following prior occupants have operated at the site address: Levitz Furniture (1986–2000), DHE (2008–2021), DHX-Dependable Hawaiian Express (2014), and Tremco/Dependable Distribution Center (2009–2013)
Google Search: Flickr.com	A Google search completed for the Bay Mart Department Store in San Leandro included an undated newspaper advertisement for the opening of “Bay Mart…the finest name in discounting now open in San Leandro…3199 Alvarado St”. The advertisement stated Bay Mart was “more than a department store” and included a service station. The website stated the store was built as a CMA and became a Bay Mart shortly after opening.

Table 4.1 Summary of Historical Resources and Local Agency Information for the Site

Historical Resource	Key Observations Regarding Site History
Local Agency Information	
Alameda County Clerk-Recorder Web Access	Ramboll researched the recording documents provided in the NETR transfer detail report referenced above and the recorder's website and the findings are as follows: • 2016 recording document #2016217537 listed both the grantors and grantees as Debra Levin Trust and Henry Crown Trust. • 2003 recording document #2003172275 listed the grantor as John A Washburn and the grantees as Geoffrey F Grossman rust and Henry Crown Trust. • 2003 recording document #2003011696 listed the grantor as Simon Property Group and the grantees as Geoffrey F Grossman Trust and Henry Crown Trust. • 1972 recording document #72054865 listed the grantor as Peerage Equities Group and the grantee as Corporate Property Investor with a lease recorded with Levitz Furniture on the same day.
Alameda County Assessor Geographic Information System (GIS) Website	The site is identified as a single parcel, APN 77B-1201-15, with Use Code 4100-Warehouse. The recorded parcel map provides an area of 14.9 acres. No other readily available information is provided.
San Leandro City Building Department Accela website	The City maintains access to the building permit record through the Accela website. The Accela permit history for the site dates back to 1993 and is summarized below: • 1993–2000: Improvements for Levitz Furniture, including adding a "repair area" in 1995 • 2005: Tent in parking lot for Levitz furniture sales • 2008: 1.2-million-dollar improvement project, including enlarging 11 dock doors, creating a storefront entry, demolishing an existing canopy, installing restrooms, a breakroom, and 27 skylights • 2009: DLS sign and DHS electrical work • 2009: Code enforcement matter stating a trucking company was parking trucks out front at the old Levitz site • 2006–2010: Code enforcement matters referring to parking and landscaping at "the old Levitz" property • 2010 and 2015: Cablecom and fiber cable permits • 2019: Install wireless communicator • 2024: Planning application PLN24-0030 by Ware Malcomb for a 252,000-square foot industrial development
Building Permits via EDR Lightbox	The permit history provided by EDR is the same as the permit history provided on the Accela website as referenced above.

Table 4.1 Summary of Historical Resources and Local Agency Information for the Site

Historical Resource	Key Observations Regarding Site History
San Leandro City Environmental Services	Records were reviewed at the San Leandro City Environmental Services, the Certified Unified Program Agency (CUPA) providing hazardous materials and storage tank oversight. The records are summarized as follows: • DHE: Identified as a prior site occupant from 2009–2022 that conducted vehicle maintenance activities. An inventory reported the following storage: used oil, used oil filters, used tires, propane, waste lead batteries, antifreeze (55-gallon drums), motor oil (240-gallon and 480-gallon aboveground storage tanks [ASTs]), and compressed gases. • Consumers Mart of America: A 1962 site plan depicted a "new retail and market building" on the original portion of the current building, and a "service station" rectangle on the northern corner of the site. A 1962 permit was issued to install three 9,980-gallon gasoline tanks and one 550-gallon waste oil tank. • Baymart Shoe Department: This former occupant was listed on a 1967 emergency card. • Levitz Furniture: Identified as a prior site occupant on records dated back to 1971. A 1971 letter stated Levitz was in the process of obtaining bids for complete removal of the service station and 9,000-gallon gasoline USTs "in front of the" station that still contained some fuel. A 1972 inspection listed "paints, thinners & glue in the furniture finishing room" plus solvents in a metal cabinet of the furniture store. A Notice of NFAR letter was issued to Levitz from the city of San Leandro dated November 22, 1999, confirming the "completion of subsurface investigation and characterization for the UST operation formerly located" at the site. In addition, environmental reports issued in 1999 were found on file and are further discussed in Section 4.4.
San Leandro City Self-Serve Zoning Map website	According to the San Leandro City Self-Serve Zoning Map website, the site is zoned IG – Industrial General for light-industrial land uses.
Alameda County EHD LOP Document Search website	No records for the site address were identified on the Alameda County EHD LOP Document Search website.
BAAQMD	Ramboll submitted a written request to the BAAQMD for records regarding operating permits, permit applications and violations on file for the site. In response, the BAAQMD provided record of one permit issued to Levitz Furniture Corporation in 1991 for the operation of a "Spraycator 3M Model," presumably a spray coating applicator that was shut down in 1992.
WRCB SMARTS website	The SMARTS website listed DHE with an industrial stormwater permit that was terminated in 2018. DHE's 2015 Stormwater Pollution and Prevention Plan (SWPPP) is posted to SMARTS and shows DHE occupied the entire building with a maintenance area within the northwest corner of the building for the maintenance and repair of trucks. Products/wastes stored inside the building included the following: interior 2,000-gallon new motor oil "tank", 1,000-gallon used motor oil "tank", two 275-gallon totes of diesel exhaust fluid (DEF), new and used antifreeze in 55-gallon drums, and used batteries stored on a rack. No stormwater violations were reported on SMARTS. Although the two storage tanks were not indicated to be ASTs, their interior location and map depiction suggest they were ASTs.

Table 4.1 Summary of Historical Resources and Local Agency Information for the Site	
Historical Resource	**Key Observations Regarding Site History**
Notes: In addition to aerial photographs provided by the third-party provider, Ramboll viewed historical satellite imagery available on Google Earth. Printed copies were not obtained, and imagery dates were not independently verified. The third-party provider reported that Sanborn fire insurance map coverage is not available for the site.	

4.2 Environmental Regulatory Database Review for the Site

Ramboll reviewed the results of the state and federal environmental database searches performed by the third-party database search provider (Appendix B) and reviewed information available on the EnviroStor, HWTS, GeoTracker, CalEPA Regulated Site Portal, NPMS, Alameda County EHD LOP Document Search, NPMS, and CalGEM websites. The site is listed on several environmental databases related to site conditions, as discussed in Table 4.2.

Table 4.2 Summary of Environmental Database Listings for the Site	
Summary of Information Contained in Database	**Ramboll's Comments**
3199 Alvarado St is listed on the California Hazardous Materials Incident Response System (CHMIRS) and Hazardous Materials Information Reporting System (HMIRS) databases. The CHMIRS listing is for a release of 20 gallons or hydraulic fluid from a broken truck line that occurred in 2001. The fire department responded, and the release was reportedly contained. The HMIRS listing is for a release of 0.125 gallons of printing ink to a trailer bed from a damaged drum in 2014. The drum was placed into an overpack drum and the trailer floor cleaned up.	Site representatives had no information on this matter. The minor release of printing ink within a trailer and inhouse cleanup indicate the 2014 incident does not present a concern. In addition, because the 2001 hydraulic oil release was reportedly contained and received regulatory response, Ramboll does not consider this matter to represent a contamination concern to the site.
Levitz/Levitz Furniture is listed on the Facility and Manifest Data (Haznet) and HWTS databases. Levitz is reported active on Haznet from 1986 to 2000 and removed the following waste types as reported on manifests: unspecified organic liquid mixture, other organic solids, unspecified oil-containing waste, paint sludge, empty containers of 30 gallons or more, unspecified waste and contaminated soil from "site cleanup" (500 pounds removed in 1996).	The generation and removal of wastes under manifest procedures, by itself, does not suggest a contamination concern to the site. However, the reason for the removal of soil generated from site cleanup is not known; the USTs were removed in 1999. This matter is further discussed in Section 7 of this report.
DHE is listed on the Haznet and HWTS, databases as active on Haznet with a start date of 2009. The following waste types were removed (per manifests): unspecified oil-containing waste, other organic solids, hydrocarbon solvents, waste oil/mixed oil, off-spec/aged/surplus organics, aqueous solution, and latex waste/paint.	The generation and removal of wastes under manifest procedures, by itself, does not suggest a contamination concern to the site.

Table 4.2 Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
DHX-Dependable Hawaiian Express is listed on the Haznet and HWTS databases in 2014 and removed unspecified aqueous solution and off-spec/aged/surplus organics as reported on manifests.	The generation and removal of wastes under manifest procedures, by itself, does not suggest a contamination concern to the site.
Tremco, Inc. is listed on the Resource Conservation and Recovery Act Small Quantity Generator (RCRA-SQG), Haznet, and HWTS databases. Tremco, Inc. is reported active on HWTS from 2009 to 2013. The following waste types were removed as reported on manifests: ignitable wastes, off-spec/aged/surplus organics, other organic solids, unspecified organic liquid mixture, and other inorganic solid wastes.	The generation and removal of wastes under manifest procedures, by itself, does not suggest a contamination concern to the site.

Notes:

The site is also listed on the following databases related to regulatory compliance: California Integrated Water Quality System Project (CIWQS), ECHO, Facility Index System/Facility Registration System (FINDS), Hazardous Waste Electronic Manifest System (E-Manifest), National Pollutant Discharge Elimination System (NPDES), and Resource Conservation and Recovery Act Non Generator/No Longer Regulated (RCRA NonGen/NLR). Listings on these databases, by themselves, are not necessarily indicative of contamination.

4.3 Prior Operations and Chemical Use

According to facility personnel, K&C Environmental's operations have remained generally consistent during its period of occupancy at the facility and include minimal maintenance activities involving the use of compressed gas and automotive fluids stored in containers up to five-gallons in size and portable compressed gas cylinders. Site representatives knew of no use of chlorinated solvents or PFAS at the site, and the current use of such chemicals is considered unlikely based on the nature of site uses.

According to Fire Department and SMARTS records (see Section 4.1), during DHE's former occupancy, truck maintenance activities were conducted at the site that included the use of compressed gas and automotive fluids stored in containers up to 55 gallons in size and four ASTs up to 2,000 gallons in size. The ASTs were stored within the northwest portion of the building. DHE and other trucking companies were identified as generators of regulated waste that appear to be related to automotive services and building maintenance activities (see Section 4.2).

During Levitz's furniture's operations, a 1972 Fire Department inspection listed "paints, thinners & glue in the furniture finishing room" plus solvents in a metal cabinet of the furniture store (see Section 4.1). An air permit was issued to Levitz Furniture Corporation in 1991 for the operation of a "Spraycator 3M Model," presumably a spray coating applicator that was shut down in 1992 (see Section 4.1). Levitz was also identified to store 30-gallon containers of "Stainsafe Furniture Guard" in the northeast corner of the warehouse (see Section 4.4). In addition, Levitz Furniture was identified to generate regulated wastes from 1986 to 2000 that included unspecified organic liquid mixture, other organic solids, unspecified oil-containing waste, paint sludge, empty containers of 30 gallons or more, unspecified waste and contaminated soil from "site cleanup" (500 pounds removed in 1996). The reason for this soil cleanup was not identified and this matter is further discussed in Section 7.

Facility personnel knew of no past use of chlorinated solvents or PFAS at the site, nor did Ramboll's review of database listings and site documents identify the past use of chlorinated solvents or PFAS at the site. The site is not listed on any PFAS-related databases searched by EDR (or other provider). Site personnel were not aware of any past fires at the site, or use of firefighting foams for fire training drills. However, the chemical composition of the Stainsafe Furniture Guard is unknown and it is noted that fabric stain retardants commonly contained PFAS.

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with site representatives, prior environmental assessment, and sampling activities have been conducted at the site, as summarized below. Pertinent historical and site-related information contained in the prior reports has been incorporated into other sections of this report.

- **1999 ESA Report.** This report was conducted by ATC on behalf of Levitz Furniture. ATC stated their review of building plans dated 1971 identified "placement of a gasoline UST adjacent to the northeast corner of the site building, as well as the proposed abandonment of a water well on the western portion of the site." No evidence of this proposed UST was identified during ATC's site visit. The water well was observed adjacent to a fire hydrant in the parking area on the west side of the site and appeared to have been plugged. In addition, ATC identified a 1962 Fire Department permit to install three 9,960-gallon USTs and one 550-gallon waste oil UST by Consumers Mart Co. and a 1971 permit that indicated All Bay Cities was scheduled to remove the four USTs from the site. ATC stated no documentation was identified to confirm that the USTs were removed. ATC concluded that the former service station, the UST proposed for installation in 1971, and localized damage to wallboard observed in the warehouse area were RECs. The Report recommended that if a higher level of confidence regarding the presence of USTs was required, a geophysical survey could be performed and pending results of survey, a soil sampling investigation may be warranted. The former service station is discussed in Section 7.
- **November 1999 Additional Subsurface Investigation Report.** This investigation was conducted by ATC on behalf of Levitz Furniture. ATC had previously completed subsurface assessments in April and May 1999 that included eight borings installed to a maximum depth of 15 feet bgs to assess the presence of fuel constituents including the collection of eight soil samples and six grab groundwater samples that were analyzed for TPHg, BTEX; and MTBE. No analyzed constituents were detected in soil except for except for xylenes in one sample at 0.019 ppm. TPHg, benzene, and MTBE were not detected in the groundwater samples above laboratory detection levels and toluene, ethylbenzene and xylenes were identified in one sample at 0.6 µg/L, 0.9 µg/L and 3.6 µg/L, respectively. Therefore, a NFAR status was requested from the city of San Leandro who denied the request due to the presence of recently discovered diesel-impacted soil during a utility excavation in the adjoining Alvarado Street. In order to be considered for a NFAR determination, the City required additional assessment to be completed. In response, ATC conducted additional investigation, the results of which were summarized in the November 1999 Additional Subsurface Investigation Report.[5] Six additional soil and grab groundwater samples were collected and analyzed for TPHd. One groundwater sample (SB13) was also analyzed for TPHg. The results were reported as non-detect in soil and in five of the groundwater samples with TPHd identified at 1,100 µg/L (in SB11 installed the furthest away from the former service building along Alvarado Street). The one detection of TPHd in groundwater was believed to be associated with an off-site source to the east with this finding supported by surrounding sampling points. ATC concluded there was a low likelihood that the source of the residually impacted groundwater is from the former on-site service station and that no additional investigation activities were

required. Based on the results of the 1999 Subsurface Investigation report, the city of San Leandro issued a NFAR status in 1999.

This matter is further discussed in Section 7.

- **2002 Phase I ESA Report.** The report was conducted by Pioneer on behalf of CCI. The findings of the 2002 Phase I ESA report were similar to those in the 1999 ESA report referenced above, including identification of the 1962 permit to install four USTs at the site, and the 1971 permit to remove the USTs; however, no documentation to evidence the removal of USTs was found. Pioneer concluded no RECs were identified; however, the following additional findings were presented: (1) the historical service station and residual subsurface contamination were concluded to represent a historical REC (HREC); (2) limited areas of soil contamination associated with the historical service station were identified and represent a business environmental risk that may require excavation of soil from impacted areas and handling of the soil in accordance with applicable regulations if redeveloped; (3) suspect ACM, including ceiling tile, floor tile and drywall (and associated joint compound and tape) were identified to be present in good condition; (4) the subject building was suspect to contain lead-based paint (LBP) based on its date of construction; and (5) fluorescent light ballasts were suspect to contain PCBs based on the potential date of installation.

  Ramboll notes the “limited areas of soil contamination” referenced above by Pioneer as an additional finding is based on the identification of 0.019 ppm xylene in soil. This level does not exceed the 2019 RWQCB Tier 1 ESL for unrestricted land use for xylene of 20 ppm.

4.5 User-Provided Information

Because this assessment is being prepared on behalf of the associated owner of this site, user-provided information (e.g., relating to environmental liens, activity and use limitations [AULs], specialized knowledge of the site, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination) was obtained through the site reconnaissance and interviews and is referenced in the applicable sections of this report.

5. SITE OBSERVATIONS

5.1 Chemical and Petroleum Storage

5.1.1 Underground Storage Tanks

According to site representatives, there are no current USTs at the site, and Ramboll identified no visual evidence of such (e.g., vent pipes, fill ports, or dispensing equipment) during the site visit or in the review of records pertaining to the site. According to the environmental database report, the site is not listed on the UST database.

Based on information reviewed by Ramboll, a permit to install four USTs in association with a former gas station was issued in 1962, as listed in Table 5.1. A permit to remove the USTs was issued in 1971; however, no documentation was identified evidencing removal of the USTs. A discussion of investigation activities associated with the USTs is presented in Section 4.4.

The site is not listed on the Leaking UST (LUST) database. The 1999 ESA Report stated their review of building plans dated 1971 identified "placement of a gasoline UST adjacent to the northeast corner of the site building, as well as the proposed abandonment of a water well on the western portion of the site."

Table 5.1 Underground Storage Tanks

Number and Size (gal.)	Location	Contents	Key Dates	Regulatory Closure Granted	Notes
USTs (Disposition Unknown)					
1 x Unknown	Adjacent to the northeast corner of the building	Gasoline	Identified in 1971 building plans, per the 1999 ESA report (see Section 4.4)	None	No other documentation was identified to confirm this UST was installed and Ramboll observed no visual evidence of this UST. This matter is further discussed in Section 7.
3 x 9,980	North-Northeast portion of site associated with former service station	Gasoline	1962 permit to install; 1971 permit to remove	1999 NFAR	Subsurface investigation of the former USTs area was conducted and NFAR was granted in 1999. This matter is further discussed in Section 7.
1 x 550		Waste Oil			

5.1.2 Aboveground Storage Tanks

Site representatives reported that there are currently no ASTs at the site, and Ramboll did not observe any during the site visit. However, a few empty trailer-mounted, portable ASTs up to approximately 300 gallons each used at off-site locations by K&C Environmental are stored on the site. These portable ASTs appeared to be in good condition.

According to Fire Department and SMARTS records (see Section 4.1), during DHE's former occupancy, truck maintenance activities were conducted at the site that included the storage of product oil and

used oil in four ASTs up to 2,000 gallons in size. The ASTs were stored within the northwest portion of the building.

5.1.3 Other Chemical and Petroleum Containers

Chemical storage at the site is limited to compressed gas and automotive fluids (i.e., oils, lubricants, antifreeze, windshield fluid, etc.) stored in a few dozen containers up to five-gallons in size and portable compressed gas cylinders inside the storage room attached to the southwest side of the building that are used by K&C Environmental. A few surface stains were observed on the concrete floor in the storage room that appeared to be less than two square feet in size each. In addition, there is a floor drain in the corner of this room that was stained with an oil funnel stored on top with several small containers of product oil on and near the drain. According to site personnel, used oil is placed in five-gallon containers and transported for off-site processing and no used oil or product oil is reportedly discharged to the floor drain. Ramboll also observed several stained areas on the exterior concrete and asphalt paved areas, as further discussed in Section 5.2.

5.2 Other Site Reconnaissance Observations

During the site visit, Ramboll made observations of interior and exterior portions of the site to look for and identify the features, activities, uses, and conditions specified in Section 9.4 of the ASTM Standard, as discussed in Table 5.2.

Table 5.2 Site Reconnaissance Observations

Conditions	Description
Site Utilities and Equipment	
Heating and Cooling Equipment	Ramboll presumes the office area is supplied conditioned air/heat; air ducts are present in the mezzanine space above the limited central office area. The warehouse space is not heated or cooled.
Natural Gas Service	The site is provided with natural gas service.
Use of Fuel Oil for Building Heat	No current or former use of fuel oil for building heat.
Foam-based Fire Suppression System	According to facility personnel, the site is not equipped with a built-in foam-based fire suppression system, and there is no indication of a former use of a foam-based fire-fighting system at the site.
Water Supply and On-site Water Wells	The site receives drinking water from the East Bay Municipal Utility District (EBMUD) water system. Ramboll did not observe evidence of groundwater wells on the site. According to the 1999 ESA report, building plans dated 1971 identified the proposed abandonment of a water well on the western portion of the site. The 1999 ESA report stated a water well was observed adjacent to a fire hydrant in the parking area on the west side of the site that appeared to have been plugged. In addition, a 1995 map that was appended to the 2006 San Leandro Residential Ground Water Technical Memorandum (see Section 6.2.1) showed a private well was located on the northeast corner of the site.

Table 5.2 Site Reconnaissance Observations

Conditions	Description	
	The site owner representative reported no knowledge regarding past/present water wells on the site.	
Polychlorinated Biphenyl (PCB)-containing Equipment	Site representatives were not aware of any on-site equipment that is known to contain PCBs. There is exterior one pad-mounted transformer on the site that is located on the southern portion of the site. The unit is owned by Pacific Gas & Electric Company (PG&E). The unit was not labeled as to the PCB content. Because the unit was installed before the 1979 federal ban on the manufacture of PCBs, it is possible that transformer oils contain PCBs. Because the building was constructed prior to the 1979 federal ban on the manufacture of PCBs, it is possible that other types of electrical equipment, such as capacitors, and light ballasts, contain PCBs. Ramboll observed no evidence of leaks or releases from transformers or other electrical equipment during the site visit.	
Waste, Wastewater and Stormwater		
Waste	Hazardous and Universal	Hazardous wastes generated at the site appear to be limited to used oil stored in 5-gallon buckets. According to site representatives, minimal used oil is generated and upon generation, it is transported in an employee truck within the 5-gallon bucket to an off-site location for processing.
	Nonhazardous	Nonhazardous waste generated at the site includes limited construction, paper, empty nonhazardous containers and employee food debris stored in one roll-off dumpster. The dumpster is transported by K&C Environmental for off-site disposal of (the dumpster) contents on an as-needed basis.
	Observations	Ramboll observed no evidence of a contamination concern associated with waste storage and management at the site.
Wastewater	Sanitary	Sanitary wastewater from the site is discharged to the municipal sanitary sewer system. K&C Environmental employees use an exterior portable toilet that is serviced by an off-site contractor.
	Process	Operations at the site do not generate process wastewater.
	Septic Systems	No identified current or former septic systems.
	Observations	Ramboll observed no evidence of a contamination concern associated with wastewater management at the site.
Stormwater	Management	Percolates into the ground surface at unpaved areas and enters catch basins that discharge to the municipal stormwater sewer system.
	Observations	Ramboll observed no evidence of a contamination concern associated with stormwater management at the site.

Table 5.2 Site Reconnaissance Observations

Conditions	Description
Other Interior and Exterior Observations	
Exterior Ponds, Pits, Lagoons, and Standing Surface Water	Ramboll observed no exterior ponds, pits, or lagoons.
On-site Disposal or Fill Material	Ramboll did not observe any areas of the site indicative of on-site waste disposal or placement of fill material.
Staining and Stressed Vegetation	Several oil-stained areas were observed on the southwest portion of the site in the areas used by K&C Environmental. In addition, one front loader was stored on oil-soaked plywood. The majority of the stains were less than 2 square feet in size and did not appear to extend to stormwater drains.
Interior Drains, Sumps, Pits, and Trenches	Ramboll observed several floor drains in the southwestern portion of the building along with several concrete patches that were likely associated with the former operation of the building as a supermarket by Consumer Mart. Several small containers of motor oil were stored adjacent to an interior floor drain in the maintenance storage room on the southwest portion of the site, as previously discussed in Section 5.1. According to Ramboll's observations, there are no other sub-grade structures at the site (e.g., below-grade pits, below-grade oil/water separators, or trenches).
Odors	At the time of the site visit, Ramboll did not note strong odors in interior or exterior areas at the site.
Other	Three locations were marked with spray paint on the southwest interior portion of the building. The marking is similar to proposed boring locations. Ramboll inquired about boring locations marked by spray paint in the building. In response, the site owner representative stated ownership had no knowledge regarding interior marked borings on the site.

6. SURROUNDING PROPERTIES

The ASTM Phase I Standard requires an evaluation of the potential for migration of contamination onto the site from adjoining and other off-site properties. Ramboll's review of potential contamination risks posed by properties surrounding the site is presented below.

6.1 Current and Past Uses of Adjoining Properties and Surrounding Area

The site is located in a light-industrial, commercial, and residential mixed-used land area, as summarized in Table 6.1. The nearest residences adjoin the southeast side of the site.

The surrounding properties were used as farmland by at least 1939 up to their current development beginning in the 1950s. Ramboll did not observe obvious indications of environmental concern on the historical sources reviewed.

Table 6.1 Current and Past Uses of Adjoining Properties

Uses of Adjoining Properties	Notable Past Uses and Approximate Time Period	Observations Relating to Potential Conditions
Northeast		
Alvarado Road, beyond which is a Prologis multi-tenant, multi-building warehouse and commercial complex with the two nearest buildings occupied by stores, distributors, and an electrical design company (2950–2054 and 3018 Alvarado Street).	Agricultural (<1939–1960) Montgomery Ward store, distribution center and auto services (1960s–1980s) Current multi-building warehouse and commercial complex (1990s–present)	Ramboll did not observe conditions on adjacent properties that represent a potential contamination concern to the site. Montgomery Ward (former occupant of Prologis complex) was identified on contamination-related databases and this land is part of the DWA Industrial Data Gap area; these matters are further discussed in Section 6.2.1.
Southeast		
Residential area	Agricultural (<1939–1940s) Current residential tract (1950s–present)	Ramboll did not observe conditions on, or identify past uses of, adjacent properties that represent a potential contamination concern to the site. This area is part of the DWA Residential East Area, as further discussed in Section 6.2.1.
Southwest		
Multi-laned 580 Freeway followed by residential area	Agricultural (<1939–1940s) Current freeway followed by a residential area (1950s–present)	Ramboll did not observe conditions on, or identify past uses of, adjacent properties that represent a potential contamination concern to the site. This area is part of the DWA Residential West Area, as further discussed in Section 6.2.1.

Table 6.1 Current and Past Uses of Adjoining Properties

Uses of Adjoining Properties	Notable Past Uses and Approximate Time Period	Observations Relating to Potential Conditions
Northwest		
Several multi-tenant warehouse and commercial buildings (3063 Alvarado Street and 3007–3081 Teagarden Street)	Agricultural (<1939–1960s) Current warehouse and commercial buildings (1970s–present)	Ramboll did not observe conditions on, or identify past uses of, adjacent properties that represent a potential contamination concern to the site.

Notes:

During the site visit, Ramboll walked or drove by the borders of the properties that are adjacent to the site. Ramboll did not enter the neighboring properties.

6.2 Database Review for Off-Site Properties

6.2.1 Adjoining Properties

Based on a review of the environmental database search report, Ramboll identified the adjoining property listed in Table 6.2 on databases relating to known or potential past releases.

Table 6.2 Database Listings Relating to Known / Potential Releases at Adjoining Properties[1]

Listing Name and Relative Location	Summary of Information Contained in Database	Ramboll's Comments
Montgomery Ward 3000 Alvarado Street (adjoining to the northeast beyond street)	This property is listed on the UST Finder, LUST, and Cortese/Historical Cortese databases related to a release of diesel reported to groundwater in 1986 and case closure granted by the RWQCB in 1995. The facility is also listed on the Historical UST (Hist UST) database for nine diesel, gasoline, and waste oil USTs installed 1965 to 1974.	Records for this property, reviewed at the San Leandro City Fire Department, included a 1995 Site Closure Summary for the Montgomery Ward site, and a 1995 Oversight of the Ground Water Assessment Program Report conducted at 2950-3018 Alvarado Street (current Prologis complex that replaced Montgomery Ward). According to the Closure Summary, eight gasoline and diesel USTs, three waste oil USTs and four motor oil USTs were removed from 1980 to 1986. Groundwater monitoring wells were installed and grab groundwater samples were collected with first depth to groundwater reported at 14.4 to 17.5 feet bgs flowing to the southwest. The comments section of the summary stated the following: No soil or groundwater remediation has occurred at the site. The "before" groundwater concentrations (notably TPHg up to 3,600 µg/L, and BTEX up to 2.1 µg/L) represent the highest readings from two monitoring wells, sampled six times 1987–1988. The "after" concentrations (notably TPHg up to 320 µg/L, BTEX up to 3.9 µg/L, PCE up to 8.9 µg/L, and TCE up to 9.1 µug/L) represent the highest readings from six grab groundwater samples collected in April 1994. Two hydropunch samples were collected downgradient from each of the three former tank

Table 6.2 Database Listings Relating to Known / Potential Releases at Adjoining Properties[1]

Listing Name and Relative Location	Summary of Information Contained in Database	Ramboll's Comments
		clusters." Only results for "before" soil samples were provided with TPHg at 200 ppm, TPHd at 970 ppm, and xylene at 2.1 ppm. The 1995 Oversight of the Ground Water Assessment Program Report stated 30 groundwater samples were collected throughout the property and analyzed for halogenated VOCs from 1994 to 1995. Review of the tabulated data show chloroform up to 3.8 µg/L, PCE up to 94 µg/L, and TCE up to 64 µg/L were identified in several groundwater samples with the most elevated results identified on the northern portion of the property. The presence of VOCs in regional groundwater is further discussed in Section 7.
DWA Plume San Leandro Groundwater Contamination San Leandro	The DWA Plume is identified on the Response, Envirostor, Cortese and Historical Cal-Site databases. According to the Site History provided by Envirostor updated September 2022, the DWA Plume is a commingled, regional groundwater plume impacted by VOCs including PCE, TCE, VC, 1,1-DCE, TCA, DCA, chloroform, petroleum-related compounds, and metals from multiple sites that is approximately one mile wide and two miles long. The DWA Plume consists of individual sites: Singer Friden, Intercoastal Paint Company, Staefa Control System Inc. , Century Plating Company Inc., Cintas/DeDomenico, Hudson ICS, U.S. Can Company, Former Transcon Lines, Simmons Company, and Dana Corporation and four specific study areas: San Leandro Boulevard Area, Toe of the Plume Area, Industrial Data Gap Area, and the Residential Area. DTSC reviewed potential contributors to the DWA Plume and coordinated a domestic well sampling	Five documents on the Envirostor website were reviewed, including: 2006 San Leandro Residential Ground Water Technical Memorandum (the "2006 Memorandum"), 2019 Orphan Site Designation Memorandum, 2021 Current Conditions report, 2022 Supplemental Site Characterization Workplan (the "2022 Work Plan"), and 2023 Regional Groundwater Monitoring Report (the "2023 Report," based on October 2022 groundwater sampling results). The DWA Plume was initially detected in the late 1980s and in 1992, an Imminent and Substantial Endangerment Determination was issued for the plume area that included the subject site. Over 170 facilities were investigated as potential contributors with the primary PRPs identified to include Singer Friden, Century Plating, Cintas/DeDomenico, and Hudson ICS that are all located approximately 0.25 to 0.65 miles northeast of the site. Regional groundwater monitoring shows an overall flow to the west and localized to the south-southwest near the site. Two sub-areas of the DWA Plume adjoin the subject site, the Industrial Data Gap Area (to the northeast including the adjoining Prologis complex [former Montgomery Ward, Tap Plastics, and Standard T Chemicals facilities]) and the Residential East and West Areas (adjoining residential areas directly southeast and to the southwest beyond Interstate 880). Groundwater sampling conducted within the Industrial Gap area in 1994-1995 included groundwater monitoring wells on the US Can facility and 19 other grab groundwater locations with TCE identified up to 1,000 µg/L at or near the US Can facility (north of the Prologis complex). Although the site was historically included within the plume area, the 2022 plume distribution maps do not show the more recent TCE or PCE plumes (defined as contamination levels over 5

Table 6.2 Database Listings Relating to Known / Potential Releases at Adjoining Properties[1]

Listing Name and Relative Location	Summary of Information Contained in Database	Ramboll's Comments
	program and conducted multiple phases of investigation with hundreds of soil and groundwater sampling locations. Subsequent characterization activities have included regional groundwater monitoring, enhanced in situ bioremediation pilot testing, soil gas sampling and evaluation of associated potential vapor intrusion risks, and residential indoor air sampling. In addition, DTSC has overseen investigation and remediation activities at multiple sites in the area, including the Singer Friden Site, Cintas/DeDomenico Site, and Hudson ICS Site. DTSC is currently implementing a supplemental site characterization of the DWA Plume consisting of regional groundwater monitoring, commingled plume assessment and soil gas site characterization. The purpose of the supplemental site characterization is to verify historic trends and provide an updated dataset to develop a remedial action plan.	µg/L) underlying the subject site, the Industrial Data Gap Area or adjoining properties to the northwest. TCE and PCE plumes are mapped approximately 1,200 to 1,500 feet northwest and north of the subject site (see below for the Residential Areas located southeast and southwest of the subject site). Within the Residential Areas, a 1995 map depicted a sample point in Alvarado Street (R9) adjoining the northeast subject site boundary, and two sample points (R13 and R50) along Figueroa Drive (approximately 120 feet southeast of the subject site) with PCE groundwater concentrations at non-detect and <1 µg/L. The 1995 map showed PCE was identified in groundwater samples up to 2,500 µg/L located 300 to 800 feet south, southeast and southwest of the subject site. In 2005, PCE was identified in groundwater in the same Residential East Area up to 9,800 µg/L. The 2006 Memorandum concluded the source was likely located to the northeast (not northwest in the direction of the subject site). It is noted the 1995 map also showed a private well located on the northeast corner of the subject site that was not observed during Ramboll's site visit or found in other reviewed documents. The 2021 Current Conditions Report (based on groundwater samples collected in 2014) stated PCE and TCE plumes with concentrations up to 3,200 µg/L and 710 µg/L, respectively, were identified in the Residential East Area with no sources yet identified; and PCE and TCE plumes with concentrations up to 20 µg/L and 230 µg/L, respectively, were identified in the Residential West Area. There are numerous monitoring wells in the Residential Areas and the 2023 Report shows the PCE plume boundary is mapped nearly adjacent to the subject property's southeastern boundary with the center of the plume (with PCE up to 4,400 µg/L in 2022) located approximately 600–700 feet southeast of the subject site. Two TCE plume boundaries are approximately 300 to 700 feet southeast and south, respectively, from the subject site. The 2023 report stated PCE concentrations relative to upgradient sources have persisted through multiple rounds of in situ bioremediation injections, suggesting a more local, non-transient source. The 2023 report also stated there may be a preferential pathway between the Singer Friden site (located approximately 0.6 miles northeast of the subject site) via underground utilities and referenced a stormwater drain system on/adjacent to the southeastern subject site boundary. The 2023 Report and 2022 Work Plan recommended additional investigation activities with the nearest proposed

Table 6.2 Database Listings Relating to Known / Potential Releases at Adjoining Properties[1]

Listing Name and Relative Location	Summary of Information Contained in Database	Ramboll's Comments
		Hydropunch (grab groundwater) and/or soil vapor sample locations situated approximately 170 to 250 feet north and south of the subject site to further delineate the extent of the plume and assess potential sources of contamination in the Residential Areas. This matter represents an environmental concern to the site and is discussed in Section 7. Ramboll notes that the Singer Friden, Staefa Control System Inc., Century Plating Company, Cintas Corporation, U.S. Can Company, Transcon Lines, Simmons Company, and Dana Corporation properties are located at least 0.25 mile away from the subject site, are listed on the Response and/or Envirostor databases with No Further Action (NFA) or Certified statuses, and are therefore not further reviewed herein. A copy of plume maps is included in Appendix D.

Notes:

Ramboll's analysis of adjoining properties was based on observations made during the site reconnaissance and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers "adjoining" properties to be properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table (e.g., RCRA Generator, UST, AST), as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the site.

6.2.2 Other Surrounding Properties

Ramboll has identified a non-adjoining property with an open status on a contamination-related database that warranted review, as detailed in Table 6.3.

Table 6.3 Database Listings for Surrounding Properties Indicative of Potential Contamination[1]

Listing Name and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
295 139th Avenue (0.4 miles northeast)	This site is identified on the Cleanup Program Sites-Spills, Leaks, Investigations and Cleanups (CPS-SLIC) database with an Open-Site Assessment status as of December 15, 2016.	According to a 2018 Indoor Air and Soil Gas Sampling Workplan obtained from the Geotracker website, VOCs were identified in groundwater samples in 2015 include PCE up to 41 µg/L, TCE up to 2.2 µg/L, and total TPHd up to 720 µg/L. PCE was detected in soil gas samples up to 4,700 micrograms per cubic meter (µg/m^3), and these analytes were not identified in soil samples above applicable screening levels. The Alameda County EHD has requested additional assessment to be conducted. Based on the relatively distant location of this facility and

Table 6.3 Database Listings for Surrounding Properties Indicative of Potential Contamination[1]

Listing Name and Location Relative to the Site	Summary of Information Contained in Database	Ramboll's Comments
		reported groundwater contamination levels, this facility is unlikely to represent a significant environmental concern to the site.

Note:

[1] Ramboll considered non-adjoining properties to represent a potential risk of contamination to the site only if they are listed on databases indicative of contamination, with open status, and located potentially upgradient of the site (as the issuance of regulatory closure suggests that impacts to the subject site from the noted off-site property are unlikely).

It is noted the San Francisco Nike 31 facility, listed on the Envirostor and Response databases, was erroneously plotted in the database report approximately 1,000 feet northeast and potentially upgradient of the site. However, the San Francisco Nike 31 facility is located several miles away from the site and, therefore, does not present a concern to the site.

7. FINDINGS, OPINION, AND CONCLUSIONS

7.1 Discussion of Findings

Ramboll's findings, opinions, and conclusions regarding conditions at the site are presented below. The findings of this assessment are classified based on the definitions in the ASTM Standard provided in Section 8 of this report.

According to the database report and as detailed in Section 4.2, the site is not listed with active status on environmental databases that are indicative of a contamination concern. The site is currently not the subject of regulatory scrutiny or enforcement actions related to soil or groundwater conditions, and the current facility operations are not chemically intensive.

Ramboll identified the following findings relating to known and potential site conditions:

- **UST Closure with Known Groundwater Contamination.** According to regulatory records reviewed and prior reports, three gasoline USTs and one waste oil UST were permitted for installation at a former service station on the north-northeast portion of the site in 1962, and a permit was issued for their removal in 1971. Documentation evidencing the USTs removal was not identified nor was a geophysical survey reportedly conducted to indicate their removal. In April and May of 1999, subsurface investigations were completed and eight soil samples and six grab groundwater samples were analyzed for TPHg; BTEX; and MTBE.[4] No analyzed constituents were detected in soil except for xylenes in one sample at 0.019 ppm. TPHg, benzene, and MTBE were not detected in the groundwater samples above laboratory detection levels and toluene, ethylbenzene, and xylenes were identified in one groundwater sample at 0.6 µg/L, 0.9 µg/L, and 3.6 µg/L, respectively. Therefore, a status of NFAR was requested from the city of San Leandro who denied the request due to the presence of recently discovered diesel-impacted soil during a utility excavation in the adjoining Alvarado Street. To be considered for a NFAR determination, additional soil and grab groundwater samples were collected and analyzed in October 1999. The analytical results were reported as non-detect in soil and in five of six groundwater samples with TPHd identified at 1,100 µg/L in one sample (in SB11 installed the farthest from the former service building along Alvarado Street). The one detection of TPHd in groundwater is unlikely to be attributable to the site USTs since diesel fuel was not known to have been stored onsite, and the surrounding groundwater sample locations were non-detect for TPHd. Based on these results, the source of the TPHd appears to be from an off-site property. The site was issued a NFAR status by the city of San Leandro in 1999. Since the location of the former service station is outside the limits of the current and proposed new warehouse, Ramboll characterizes this finding as a *de minimis* condition, provided this area of the site is not redeveloped.
- **Groundwater Contamination Related to Off-Site Sources.** The DWA Plume is a regional groundwater contamination plume that is identified on the Response, Envirostor, Cortese, and Historical Cal-Site databases. The commingled plume is impacted by VOCs, including PCE, TCE, VC, 1,1-DCE, 1,1,1-TCA, 1,1-DCA, chloroform, petroleum-related compounds, and metals from multiple sites that is approximately 1 mile wide and 2 miles long. The plume was historically mapped to include the subject site. The California DTSC reviewed over 170 potential contributors to the DWA Plume and has overseen investigation and remediation activities at PRPs in the area, including the Singer Friden Site, Cintas/DeDomenico Site, and Hudson ICS Site located at least 0.2 mile north-northeast of the site. Two sub-areas of the DWA Plume adjoin the subject site, the

[4] The 1999 investigation did not include soil or groundwater analysis for VOCs other than BTEX and MTBE.

Industrial Data Gap Area to the northeast, and the Residential East and West Areas (adjoining residential areas directly southeast and to the southwest beyond Interstate 880). Grab groundwater sampling conducted within the Industrial Gap area in 1994-1995 included groundwater monitoring wells on the US Can facility and 19 other grab groundwater locations with TCE identified at a concentration of up to 1,000 µg/L at or near the US Can facility (north of the adjoining Prologis complex). Although the historical TCE and PCE distribution maps include the subject site and Industrial Data Gap Area within the DWA Plume extent, the 2022 plume distribution maps do not show the more recent TCE or PCE plumes (defined as contamination levels over 5 µg/L) underlying the subject site, with the TCE and PCE plumes located approximately 1,200 to 1,500 feet to the north-northeast. Within the Residential Areas, data from 1995 to 2022 identified PCE and TCE in groundwater up to 9,800 µg/L and 3,200 µg/L, respectively, approximately 300 to 800 feet south, southeast and southwest of the subject site with no sources identified; and PCE and TCE plumes with concentrations up to 20 µg/L and 230 µg/L, respectively, in the Residential West Area. There are numerous monitoring wells in the Residential Areas and a 2023 Report shows the PCE plume boundary is mapped nearly adjacent to the subject site's southeastern boundary. As discussed above in Section 1, due to the potential migration of VOC contamination within the DWA Plume, this matter represents a REC to the site.

To address this REC and assess potential vapor intrusion risks to building occupants from the potential presence of VOCs in groundwater from the DWA plume, a soil vapor sampling investigation is planned for implementation at the site in April 2025. Soil vapor samples will be collected in accordance with DTSC guidance[5] from up to twelve (12) sub-slab vapor pin locations inside the existing warehouse and up to three (3) soil vapor probes in the parking area, east of the current warehouse and within the footprint of the future new warehouse. Soil vapor samples will be analyzed for VOCs using a mobile lab (by EPA Method 8260B) and/or fixed based laboratory using EPA Method TO-14.

- **Long-Term Commercial and Light-Industrial Use of the Site.** Levitz Furniture occupied the site from the late 1960s to 2005 during which time a rail spur was installed along the southeast portion of the site entering the building. Creosote and other wood preservatives and potential weed control chemicals are commonly associated with railroad tracks. Levitz operated a furniture store with a warehouse and "furniture finishing room" that included the use of relatively small quantities of paints, thinners, glue, and fabric stain repellent, specifically Stainsafe Furniture Guard. Although the chemical composition of the Stainsafe Furniture Guard is unknown, fabric stain retardants may contain PFAS. In addition, Levitz Furniture is listed on regulatory databases for the removal of regulated wastes that included 500 pounds of contaminated soil generated from site cleanups in 1996; no additional detail was identified. Since the existing (and former Levitz Furniture warehouse) is to be demolished and replaced by a new warehouse, it is recommended that a Soil Management Plan be implemented during earth disturbing activities related to construction of the new warehouse.

  DHE conducted on-site truck maintenance activities from 2008 to 2022. Products/wastes stored inside the building included the following: 2,000-gallon new motor oil tank, 1,000-gallon used motor oil tank, two 275-gallon totes of DEF, new and used antifreeze in 55-gallon drums and used batteries stored on a rack. DHE's operations were conducted during a time period when robust environmental regulations were in place regarding chemical handling and waste management. As such, Ramboll characterizes this finding as a *de minimis* condition, provided the site use remains

[5] DTSC 2015. Advisory for Active Soil Gas Investigations. July.

industrial and a Soil Management Plan is implemented during earth disturbing activities related to construction of the new warehouse.

- **Past Use of Site for Agricultural Purposes.** The property was historically used for agricultural purposes from at least 1939 up to the early 1960s. While it is possible that small amounts of agricultural chemicals or petroleum products may have been used or stored at the site in the past, Ramboll has not identified any evidence of known or suspected past releases. If residual concentrations of agricultural chemicals are present, it is unlikely that they would be the subject of regulatory scrutiny in the context of a non-residential land-use scenario, particularly given that the site has already been redeveloped for its current non-residential use. As such, Ramboll characterizes this finding as a *de minimis* condition, provided the site use remains industrial.
- **Limited Pavement and Floor Staining.** Ramboll observed areas of exterior pavement and interior flooring where oil stains were apparent. A few surface stains were observed on the concrete floor in the storage room used by K&C Environmental that appeared to be less than 2 square feet in size each. In addition, there is a floor drain in the corner of this room that was stained with an oil funnel stored on top with several small containers of product oil on and near the drain. According to site personnel, used oil is placed in five-gallon containers and transported for off-site processing and no used oil or product oil is reportedly discharged down this drain. Several oil-stained areas were also observed on the southwest portion of the site in the areas used by K&C Environmental, including one front loader parked on oil-soaked plywood. The majority of these stains are less than 2 square feet in size and do not appear to extend to stormwater drains or unpaved surfaces. As such, Ramboll considers this matter to represent a *de minimis* condition.

7.2 Analysis of Data Gaps

The ASTM Standard defines a data gap as “a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information.” A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on SDGs.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Site representatives did not have current contact information for representatives of former site owners/occupants. As such, Ramboll was unable to interview former owners/occupants about historical operations and site conditions. However, Ramboll conducted an interview with an owner representative and reviewed other historical sources regarding former uses of the site.
- Historical information, such as aerial photographs, was not readily available to characterize the site from the present back to the site’s obvious first developed use or 1940, whichever is earlier. The earliest readily available historical source that would indicate specific site uses is a 1939 aerial photograph which shows that at least a portion of the site was already developed for agricultural uses. ASTM defines agricultural site use as a “developed” site use.
- Ramboll did not observe the roof of the building due to access and safety constraints.
- Ramboll was not able to observe portions of the site along the northern and northeastern portions of the site due to dense vegetation (including fallen leaves).
- Ramboll requested from the User a search for environmental liens or AULs associated with the site, dating back to 1980. A lien/AUL search report has not been provided.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above is considered to represent SDGs.

8. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

(1) The presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; (2) the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or (3) the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations).

HREC - Historical Recognized Environmental Condition:

A previous release of hazardous substances or petroleum products affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations).

***De Minimis* Condition:**

A condition related to a release that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap / Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap that affects the ability of the environmental professional to identify a REC is considered a significant data gap.

APPENDIX B

ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

The third-party provider conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology “approximate minimum search distance” to refer to the radii searched in the environmental database report.

Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/25/2024 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
LINCOLN PROPERTIES Site ID: 0902255 EPA Id: CAD981159064	1465 FACTOR ST	W 1/4 - 1/2 (0.279 mi.)	L92	611

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/03/2024 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/03/2024 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/22/2024 has revealed that there are 20 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 3 SWF/LF sites within approximately 0.5 miles of the target property.

Lists of state and tribal leaking storage tanks

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 32 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 3 CPS-SLIC sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within

approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 2 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/03/2024 has revealed that

there are 25 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 07/01/2024 has revealed that there are 5 PFAS ECHO sites within approximately 0.25 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 07/24/2023 has revealed that there are 21 E MANIFEST sites within approximately 0.25 miles of the target property.

CHROME PLATING: This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

A review of the CHROME PLATING list, as provided by EDR, and dated 08/28/2024 has revealed that there is 1 CHROME PLATING site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 28 HIST CORTESE sites within approximately 0.5 miles of the target property.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
Registry ID: 110057097467

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Preparer of Incident Report:	Carrier
Description of Events:	EMI JOB #35267/CON-WAY TRUCKLOAD INC.- INCIDENT #2014-061354; ON 06-09-14 A CON-WAY TRUCKLOD INC. (CTI) TRACTOR-TRAILER UNIT (TRAILER #44387) ARRIVED AT THE CONSIGNEE'S FACILITY TO DELIVER A LOAD OF PRODUCTS. THE PRODUCTS WERE CLASS 3 HAZARDOUS MATERIALS AND NON-REGULATED MATERIALS. THE MATERIALS WERE PACKAGED IN 55-GALLON DRUMS 5-GALLON PAILS AND CARTONS. WHILE UNLOADING THE ITEMS IT WAS DISCOVERED THAT A 55-GALLON DRUM (UN1210 PRINTING INK 3 PG II) WAS LEAKING IN THE CTI TRAILER. UPON INSPECTION OF THE DRUM IT WAS OBSERVED THAT THE PRODUCT WAS WEEPING FROM THE SEAM ON THE BOTTOM OF THE DRUM (PACKAGING FAILURE). LESS THAN ONE PINT OF THE PRODUCT HAD BEEN RELEASED AND IMPACTED A SMALL AREA OF THE TRAILER FLOOR. CONSIGNEE PERSONNEL PLACED THE LEAKING DRUM INTO AN OVERPACK DRUM AND CLEANED THE TRAILER FLOOR. THE CONSIGNEE ACCEPTED THE DAMAGED DRUM. NO FURTHER ACTION WAS REQUIRED
Recommendations/Actions Taken:	Continue our on going efforts in driver safety/spill prevention training in efforts in preventing incidents as these from happening.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Year: 1995
Gepaid: CAD981633878
TSD EPA ID: CAT000613950
CA Waste Code: 212 - Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)
Disposal Method: H01 - Transfer Station
Tons: 0.09

Year: 1994
Gepaid: CAD981633878
TSD EPA ID: CAT000613950
CA Waste Code: 212 - Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)
Disposal Method: H01 - Transfer Station
Tons: 0.036

Year: 1994
Gepaid: CAD981633878
TSD EPA ID: CAT000613893
CA Waste Code: 212 - Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)
Disposal Method: H01 - Transfer Station
Tons: 0.0315

Year: 1994
Gepaid: CAD981633878
TSD EPA ID: CAT000613893
CA Waste Code: 212 - Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)
Disposal Method: -
Tons: 0.027

Year: 1992
Gepaid: CAD981633878
TSD EPA ID: CAD009452657
CA Waste Code: 214 - Unspecified solvent mixture
Disposal Method: R01 - Recycler
Tons: 0.2168

Year: 1991
Gepaid: CAD981633878
TSD EPA ID: CAD009452657
CA Waste Code: 212 - Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)
Disposal Method: -
Tons: 0

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Eval Notes: EPA ID # was active. Hazardous waste manifests were available for review. All hazardous waste containers were properly labeled including accumulation start dates. All hazardous waste containers were kept closed. The SPCC was available on site for review. Routine tank/container inspection forms were present and completed. All flammable cabinets were kept clean/dry/well organized. The Most recent full CERS submittal was completed on 01/12/2023 and will be due again on or before 01/12/2024. A few items were identified during the inspection that could use attention. Better training record tracking. Empty rain water from secondary containment pallets. Additional detail is necessary for the tank/container inspection forms. Check AST emergency vents to make sure they are operating properly. Ensure the AST secondary is kept clean and dry. Make sure the AST level gauges are maintained.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-21-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: This is not an APSA facility, but they continue to make an APSA submittal along with their CERS HMBP submittal. Their Federal SPCC is for wax, but it also includes other oils on site (all much below 1,320 gallons). Their current SPCC was last certified on 11/12/20. It is fully developed and they are doing all requirements list in it. Their PE certified that the active wax tank has a functional life greater than thirty years. The other AST (the eastern tank) is empty and labeled OUT OF SERVICE. Both ASTs are within a bermed enclosure with wall about forty inches high. The are inside the berm is completely dry and has little dirt and a small amount of loose trash (mostly paper). There is no material escaping it and there was no outside staining. No violations were observed.
Eval Division: San Leandro City
Eval Program: APSA
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-16-2014
Violations Found: No

GEORGIA-PACIFIC CORRUGATED, LLC (Continued) **S121773263**

Eval Type: Routine done by local agency
Eval Notes: Hazardous wastes are all kept in an enclosed area. All drums were in excellent condition. They were all stored properly; sealed; labeled properly; and properly segregated. An excellent hazardous waste area. No violations were observed.
Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-16-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Last CERS 4/14/15; annual submittal requirement gone over with facility representatives. No violations were observed.
Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-09-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last CERS submittal was on 2/27/15. They have made eight CERS submittal so far. The facility contact is aware of the requirements. The inventory was accurate. No violations were observed.
Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-12-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Hazardous waste storage is excellent. They have most of their hazardous wastes in a small chain link enclosure inside. All wastes are stored in proper containers that are in pristine condition, all properly labeled, tacked, and sealed. They keep their records on site for three years. The parent company maintains all hazardous waste records for an additional two years for a total of five years. That being said, they maintain many of their hazardous waste records indefinitely. Universal wastes are also kept in the same hazardous waste area, and they all looked good. Housekeeping in this area is excellent. No violations were observed.
Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-30-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their hazardous waste area is very clean and orderly. All containers are properly segregated, sealed, labeled, and tracked. Most containers are within secondary containment. There are a few other hazardous waste containers throughout the facility and they are equally well maintained. They continue to keep all hazardous waste paperwork on

GEORGIA-PACIFIC CORRUGATED, LLC (Continued) **S121773263**

site for three years and they keep them indefinitely at their corporate level. No hazardous waste violations were observed during this inspection.

Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-21-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The hazardous waste area had less material in it this year than in the past. They apparently just had a large pickup. All containers were in excellent condition, sealed, properly labeled, tracked, and some were on top of spill containment pallets (liquid wastes). They are keeping records for three plus years. They had all recent hazardous waste manifests for easy review. No hazardous waste violations were observed.

Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-07-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The hazardous waste area looked very good. All containers were in excellent condition. All hazardous waste drums were on top of secondary containment. All drums were in excellent condition, properly labeled, tracked, and sealed. They do an inspection every day. They are retaining records on site for five years. They have a tracking system to manage every drum from start to TSDF signed off manifest copy received. Housekeeping in this area is excellent. It is indoors and behind a locked gated enclosure. No violations were observed.

Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-07-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last full CERS submittal was on 2/26/16. They also made a facility information and a hazardous materials inventories submittal on 11/14/16. They understand that they must make an emergency response/contingency plan submittal by 2/26/17. The hazardous materials inventories are accurate. No violations were observed.

Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-17-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: This is a Federal SPCC facility (wax). They also have some mixed oil storage on site that is covered by their SPCC. They continue to have

GEORGIA-PACIFIC CORRUGATED, LLC (Continued) **S121773263**

two large ASTs for wax storage, but only one tank is in operation. Their current SPCC was PE certified on 6/9/16. The PE certification of their tanks determined that the operational tank has greater than 30 years of usefull life. Their SPCC is fully developed and implemented. They are doing all requirements of it. No violations were observed.

Eval Division: San Leandro City
Eval Program: APSA
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-30-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last full CERS HMBP submittal was done on 2/4/19. They also had a facility and hazardous material inventory submittal on 6/27/19. Their HMBP is fully developed, complete, and is accurate. The next annual submittal is due by 2/4/20. No violations were observed.

Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-21-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: (1) Their last CERS submittal was on 2/23/21. Their next submittal is due by 2/23/22. (2) The propane tank and adjoining propane rack looked good. (3) All oil storage looked good. They have changed out their old gravity fed oil container tanks with new color-coded pressure feed tanks. All clean with no spillage. (4) All other hazardous material storage in proper containers, sealed, and labeled. No HMBP violations were observed.

Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-21-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last CERS HMBP submittal was on 3/1/22. It is accurate and complete. No business plan violations were observed.

Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-09-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: This is a Federal SPCC facility. They have about 50,000 gallons of wax. This material does not fall under APSA as it is not a liquid at 60 F. They also have roughly 5,000 gallons of mixed oils on site. These oils are mostly stored in 55-gallon metal drums, but they also have some small lube cube type ASTs. All petroleum storage is exclusively inside. Their current SPCC was PE certified on 6/9/16. They have a PE on staff for this. Their last tank certifications were

GEORGIA-PACIFIC CORRUGATED, LLC (Continued) **S121773263**

on 2/14/12. The PE determined that both wax tanks had greater than 30 years of useful life remaining. They are in the process of scheduling a retest. I will check the retest during this years annual routine inspection scheduled for September. Their SPCC is fully developed and implemented. They are doing all requirements of it. No violations were observed.

Eval Division: San Leandro City
Eval Program: APSA
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-09-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The hazardous waste area remains the same. It is in a locked chain link enclosure. The housekeeping in this facility is spotless. They have all containers labeled properly and sealed. No violations were observed.

Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-12-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last full CERS submittal was on 3/1/17. It is fully developed, complete, and accurate. The long time facility contact is going to leave before the end of the year (12/31/17). His replacement has not yet been named, but he is going to set that person up in CERS prior to him leaving. No violations were observed.

Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-17-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The hazardous waste area continues to have outstanding housekeeping. All containers are in excellent condition, sealed, properly labeled, and most containers are within secondary containment. Other hazardous waste containers throughout the facility are similarly well maintained. They continue to keep local hazardous waste records on site for at least three years and they keep them at the corporate level indefinitely. No hazardous waste violations were observed during this inspection.

Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-30-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: This is not an APSA facility. They are a federal SPCC for wax only. The quantity of other oils on site are below the SPCC threshold. They

GEORGIA-PACIFIC CORRUGATED, LLC (Continued) **S121773263**

made an CERS APSA submittal during their last complete CERS HMBP submittal. Their current SPCC was PE certified on 6/9/16. The PE certification of their tanks determined that the operational tank has greater than 30 years of useful life. The other large AST next to it and within the same secondary containment are is empty and is labeled as permanently closed. Their SPCC is fully developed and implemented. They are doing all requirements of it. No violations were observed.

Eval Division: San Leandro City
Eval Program: APSA
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-21-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: There were less hazardous wastes in the hazardous waste storage area than in the past. All containers were properly labeled, sealed, clean, and in excellent condition. There was no spillage. Universal waste bin looked good. All secondary containment was clean and dry. They continue to keep hazardous waste records for at least three years and indefinitely at the corporate level. The pretreatment filter is analyzed yearly and continues to be non-hazardous. This is disposed at Altamont land fill. No hazardous waste violations were observed during this inspection.

Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-21-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: This is a federal SPCC facility for wax. They are not an APSA facility. All oil storage is well below 1320 gallons. Their current SPCC was last certified on 11/12/20. It meets all apparent federal requirements. Their second was AST is still marked as out of service. They have no intention of putting it back into service and they still plan to remove it one day. The active wax AST PE's certification has stated that its life expectancy is greater than thirty years. Both of these ASTs are within a bermed secondary containment structure that is in excellent condition and shows no sign of leakage. No violations were observed.

Eval Division: San Leandro City
Eval Program: APSA
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-17-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last full HMBP CERS submittal was done on 2/26/18. It was complete and accurate. There was an additional facility and inventory submittal done on 8/9/18. They are aware of all annual CERS submittal requirements. No violations were observed

GEORGIA-PACIFIC CORRUGATED, LLC (Continued) **S121773263**

Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-12-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Hazardous waste storage is excellent. They have most of their hazardous wastes in a small chain link enclosure inside. All wastes are stored in proper containers that are in pristine condition, all properly labeled, tacked, and sealed. They keep their records on site for three years. The parent company maintains all hazardous waste records for an additional two years for a total of five years. That being said, they maintain many of their hazardous waste records indefinitely. Universal wastes are also kept in the same hazardous waste area, and they all looked good. Housekeeping in this area is excellent. No violations were observed.
Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-30-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their hazardous waste area is very clean and orderly. All containers are properly segregated, sealed, labeled, and tracked. Most containers are within secondary containment. There are a few other hazardous waste containers throughout the facility and they are equally well maintained. They continue to keep all hazardous waste paperwork on site for three years and they keep them indefinitely at their corporate level. No hazardous waste violations were observed during this inspection.
Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-21-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The hazardous waste area had less material in it this year than in the past. They apparently just had a large pickup. All containers were in excellent condition, sealed, properly labeled, tracked, and some were on top of spill containment pallets (liquid wastes). They are keeping records for three plus years. They had all recent hazardous waste manifests for easy review. No hazardous waste violations were observed.
Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-07-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The hazardous waste area looked very good. All containers were in excellent condition. All hazardous waste drums were on top of

GEORGIA-PACIFIC CORRUGATED, LLC (Continued) **S121773263**

secondary containment. All drums were in excellent condition, properly labeled, tracked, and sealed. They do an inspection every day. They are retaining records on site for five years. They have a tracking system to manage every drum from start to TSDF signed off manifest copy received. Housekeeping in this area is excellent. It is indoors and behind a locked gated enclosure. No violations were observed.

Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-07-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last full CERS submittal was on 2/26/16. They also made a facility information and a hazardous materials inventories submittal on 11/14/16. They understand that they must make an emergency response/contingency plan submittal by 2/26/17. The hazardous materials inventories are accurate. No violations were observed.

Eval Date: 04-21-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last CERS HMBP submittal was on 3/1/22. It is accurate and complete. No business plan violations were observed.

Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-09-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: This is a Federal SPCC facility. They have about 50,000 gallons of wax. This material does not fall under APSA as it is not a liquid at 60 F. They also have roughly 5,000 gallons of mixed oils on site. These oils are mostly stored in 55-gallon metal drums, but they also have some small lube cube type ASTs. All petroleum storage is exclusively inside. Their current SPCC was PE certified on 6/9/16. They have a PE on staff for this. Their last tank certifications were on 2/14/12. The PE determined that both wax tanks had greater than 30 years of useful life remaining. They are in the process of scheduling a retest. I will check the retest during this years annual routine inspection scheduled for September. Their SPCC is fully developed and implemented. They are doing all requirements of it. No violations were observed.

Eval Division: San Leandro City
Eval Program: APSA
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-09-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The hazardous waste area remains the same. It is in a locked chain link enclosure. The housekeeping in this facility is spotless. They have all containers labeled properly and sealed. No violations were observed.

Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-12-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last full CERS submittal was on 3/1/17. It is fully developed, complete, and accurate. The long time facility contact is going to

GEORGIA-PACIFIC CORRUGATED, LLC (Continued) **S121773263**

leave before the end of the year (12/31/17). His replacement has not yet been named, but he is going to set that person up in CERS prior to him leaving. No violations were observed.

Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-17-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The hazardous waste area continues to have outstanding housekeeping. All containers are in excellent condition, sealed, properly labeled, and most containers are within secondary containment. Other hazardous waste containers throughout the facility are similarly well maintained. They continue to keep local hazardous waste records on site for at least three years and they keep them at the corporate level indefinitely. No hazardous waste violations were observed during this inspection.

Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-30-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: This is not an APSA facility. They are a federal SPCC for wax only. The quantity of other oils on site are below the SPCC threshold. They made an CERS APSA submittal during their last complete CERS HMBP submittal. Their current SPCC was PE certified on 6/9/16. The PE certification of their tanks determined that the operational tank has greater than 30 years of useful life. The other large AST next to it and within the same secondary containment are is empty and is labeled as permanently closed. Their SPCC is fully developed and implemented. They are doing all requirements of it. No violations were observed.

Eval Division: San Leandro City
Eval Program: APSA
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-21-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: There were less hazardous wastes in the hazardous waste storage area than in the past. All containers were properly labeled, sealed, clean, and in excellent condition. There was no spillage. Universal waste bin looked good. All secondary containment was clean and dry. They continue to keep hazardous waste records for at least three years and indefinitely at the corporate level. The pretreatment filter is analyzed yearly and continues to be non-hazardous. This is disposed at Altamont land fill. No hazardous waste violations were observed during this inspection.

Eval Division: San Leandro City

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-21-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: This is a federal SPCC facility for wax. They are not an APSA facility. All oil storage is well below 1320 gallons. Their current SPCC was last certified on 11/12/20. It meets all apparent federal requirements. Their second was AST is still marked as out of service. They have no intention of putting it back into service and they still plan to remove it one day. The active wax AST PE's certification has stated that its life expectancy is greater than thirty years. Both of these ASTs are within a bermed secondary containment structure that is in excellent condition and shows no sign of leakage. No violations were observed.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Not reported
Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-09-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: CERS is up to date and kept current. All hazardous materials were properly stored. All compressed cylinders were chained and capped. All hazardous waste labeling was completed. All hazardous waste containers were kept closed. All waste manifests were available for review. All hazardous waste was properly stored. The operation was clean and well kept. The parking area was fairly clean and well kept. The dumpster lids were kept closed when waste was not being placed in them. No violations were observed at the time of the site inspection.
Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Well Decommissioning Report
Completed Date:	08/20/2018
Comments:	This letter documents the destruction of five monitoring wells (MW-1, MW-5, MW-6, MW-7, and MW-8) and the protection of one well (MW-2) at the Site. Monitoring well MW-6 was to be protected, however, well functionally was compromised. Monitoring well MW-6 was abandoned following the same procedures as to other wells. Following the completion of the redevelopment activities, the Site owner will consult with the DTSC regarding the replacement of well MW-6 and the rehabilitation of well MW-2.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date:	04/19/1996
Comments:	Issued I&SE Order to three Responsible Parties. The current owners

U. S. CAN COMPANY SITE (Continued) **S102002464**

and past owner/operators, US Can Company and the Sherwin Williams Company. The order requires investigation of the site which is within the San Leandro Plume.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/31/2006
Comments: Based on the review of current and historical data, the site does not appear to currently have a source of hazardous substances which is contributing to groundwater contamination and does not appear to pose a current threat to human health or the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 05/16/2017
Comments: Response to request to close unused wells at the US CAN Site. DTSC agrees to the proper closure of any well located on the Site with the exception of MW-2 and MW-6 which were sampled in 2014, and which DTSC needs to continue to use to monitor the regional groundwater plume known as the DWA Plume. DTSC will continue to periodically need access to these wells to collect groundwater elevation and samples for analysis.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 10/28/1997
Comments: The highest upper zone TCE concentration was 440 ug/l. The highest lower zone TCE concentration was 630 ug/l, significantly lower than the 1989 concentrations.

Background Info:	The site consists of a 130,000 square foot building on 7 acres of land. In 1957, Sherwin-Williams manufactured metal cans and containers. Solvents were used as part of that process. In 1983, the facility was sold to U. S. Can Company, who continued to use the same processes to manufacture metal cans and containers. U.S. Can Company added an aerosol can manufacturing operation. The manufacturing facility closed in 1989. The building is used for warehousing. Investigations found that both the soil and groundwater at the Site were contaminated with dichloroethane, dichloroethylene, and tetrachloroethylene. A limited soil hot spot was removed and a sump was closed in place. The site is located within a regional groundwater plume located in Central San Leandro. Groundwater contamination will be addressed as part of the regional plume (see site ID 01990002).

CA BOND EXP. PLAN:

Reponsible Party:	DETAILED SITE EXPENDITURE PLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Bond funds will be used to investigate and possibly remediate the site. DHS has elected to continue the hazardous waste investigation, in the vicinity of 1465 Factor Avenue, San Leandro, even though multiple PRPs may be present. Following the collection of definitive information concerning responsibility, DHS will pursue enforcement actions, recover its costs, and require the responsible parties to implement the RAP. This site has not been identified as an NPL site, nor does it appear to be a likely NPL candidate in the future. Therefore, it appears unlikely that federal funds are a viable source of revenue for this site.
Site Description:	The Factor Avenue site is a contaminated shallow aquifer.
Hazardous Waste Desc:	Chemicals found on the site include: cyanide at 120 parts per billion (ppb); 1-1-Dichloroethylene (DCE) at 524 ppb; and 1,1-and 1,2-Dichloroethane (DCA) at 7.4 and 4.8 ppb, respectively; trans 1-2-dichloroethylene at 2110 ppb; 1,1-trichloroethane at321 ppb; trichloroethylene (TCE) at 2215 ppb; tetrachloroethylene (PCE) at 263 ppb; benzene at 7.19 pp); and toluene at 2.0 ppb.
Threat To Public Health & Env:	Ground water is a pathway for contaminant migration. Numerous private wells present possible route of exposure to humans. Residents of San Leandro who have shallow wells on their property are potential receptors for exposure to contaminants in ground water. The residents of record owning wells have been advised of possible exposures, in the event affected wells are used for drinking water.
Site Activity Status:	The site is currently undergoing Phase II remedial investigation. Monitoring wells and stratigraphic borings will be installed. Following the Phase II work, DHS will prepare an intial endangerment assessment. East Bay MUD (EBMUD) has required the installation of back flow devices on all residences situated on parcels with water wells, whether or not the water is used for drinking.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	05/29/2003
Comments:	Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	* Discovery
Completed Date:	11/01/1985
Comments:	The site was discovered in 1985 by Lincon Properties during a property transfer evaluation at 1465 Factor Avenue.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date:	03/11/1997
Comments:	ORDER - An Imminent and Substantial Endangement and Remedial Action Order was issued to Simmons Company and Orton Development.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	08/03/1989
Comments:	The presence of volatile organic compounds, particularly 1,l-dichloroethene (DCE), l,l,l-trichloroethane (TCA), TCE, and tetrachloroethene (PCE), in shallow groundwater was confirmed.

SIMMONS - SOILS (Continued) **S102008255**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 10/23/1987
Comments: The shallow groundwater is contaminated with volatile organic compounds.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 06/15/1987
Comments: 6 soil samples and 3 groundwater samples were analyzed for volatile organic compounds VOCs). VOCs detected in soil were below regulatory levels. The VOCs in groundwater which were above drinking water standards appear to coming from upgraident offsite source.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 01/01/1987
Comments: Investigations identified volatile organic compunds exceeding the California drinking water standards in the shallow groundwater. A review of the neighboring industries has revealed that chlorinated solvents have been used by adjacent businesses for many years.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 11/01/1987
Comments: This soil gas investigation indicated that shallow groundwater contamination is widespread through the study area, but was inconclusive concerning the boundaries of the contamination.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/06/2003
Comments: DTSC determined that no further action was needed at the site due to the declining concentrations of contaminants in groundwater. In April 2004, seventeen wells (on-site and off-site) were closed. The Site is located within a regional groundwater contamination problem located in the central area of the City of San Leandro.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 03/03/1998
Comments: Investigation report completed. Low concentrations of dichloroethylene, trichloroethylene, and tetrachloroethylene were detected in soil. Groundwater contamination above the drinking water standards for dichloroethylene, trichloroethylene, and tetrachloroethylene was also detected in the onsite wells, both shallow and deeper, and the nearby wells south of the site.

Site History:	Nelson Stud Welding leased the facility in 1965 to manufacture and distribute welding studs. In 1969, Nelson Stud Welding became a division of TRW. The welding studs were manufactured from low carbon steel and involved a lathing operation that generated waste products such as cutting oils and metal shavings which were stored in drums. Small quantities of solvents used to clean tools were stored in containers inside)the building. The former storage pen was used to

TRW (Continued) **S106717780**

store and maintain diesel generators as well as to store the drums containing cutting oils and metal shavings (Appendix A; Photograph 1). The storage pen was unpaved until 1988 when it was covered with asphalt. The drums were typically stored for several weeks before being transported off site by a recycler. During storage, cutting oil leaked from some of the drums onto the unpaved ground. In addition, diesel fuel was spilled during maintenance of the diesel generators. Drums were also stored along the eastern and southern fence lines. Minor spills may have occurred at these locations. The rear service yard may also have been used occasionally for storage of diesel generators and drums containing metal shavings. TRW ceased manufacturing operations in 1985 but continued using the site as a sales and distribution facility. In 1988, several inches of surface soil from the storage pen were excavated and transported off site and the pen was paved with asphalt. TRW vacated the facility in December 1993. The facility has been occupied by Bay Cryogenics, Inc. and L&L Lift, Inc. since May 1994. In August 1994, 478 tons of soil impacted with heavy range petroleum hydrocarbons was excavated and disposed offsite. Groundwater monitoring for four quarters provided confirmation that groundwater was not impacted with heavy range petroleum hydrocarbons. A Request for Case Closure for filed in 1995. Case closure letter was issued in 12/2/1996.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-07-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: (1) All hazardous wastes in the vehicle shop looked good. All containers were in excellent condition, closed, within secondary containment, and properly labeled. (2) The used oil and the used antifreeze ASTs are within secondary containment metal troths. All other containers are in secondary containment or are on spill pallets. (3) All shop hazardous wastes are indoors. (4) The indoor household hazard waste area looked good. It is in the middle of the main building and covered. All containers were closed, in good condition, and properly labeled. (5) The outdoor household hazardous wastes are kept in three separate storage containers. All containers looked good, were closed, and properly labeled. (6) Maintenance shop and household hazardous wastes are shipped and tracked separately. (7) All hazardous waste receipts and shipping documents are retained locally for three

ALAMEDA COUNTY INDUSTRIES (Continued) **S108197038**

years. No hazardous waste violations were observed.

Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-07-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The last CERS submission was on 2/25/14. The facility contact was made aware of the annual submission being due on 2/25/15. No violations were observed.

Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-16-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The hazardous waste areas were neat and wastes were properly segregated. All hazardous waste containers were properly marked, secure, and in good condition. They are keeping manifests indefinitely. The area was cleaned and they are looking at the areas more than weekly. No violations were observed.

Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-07-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: (1) Their last CERS HMBP certification was on 4/30/21. They are eligible to recertify again next year if there are not any HMBP changes. However, they must make a full CERS HMBP submission in 2023. (2) There HMBP is fully developed, complete, and accurate. (3) All hazardous material storage was in good containers, closed, indoors, and properly labeled. No HMBP violations were observed.

Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-19-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: No changes. Their household collected hazardous waste is mostly in the center of the main processing building. Their site generated hazardous waste are mostly kept in the hazardous waste near the southeastern corner of their facility. The shop/maintenance area has the remaining site generated hazardous wastes. Most haz wastes are kept in ASTs, but there is also drained used oil drums. The containers were free of loose hazardous wastes. All containers were labeled and all generation start dates were filled out. They are maintaining hazardous waste area logs. They are keeping hazardous waste related records indefinitely. The facility contact has a spread she that she uses to tract all

hazardous waste shipments, TSDF arrivals, and receipt of of paperwork (TSDF signed manifest copies). No violations were observed.

Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-16-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last CERS submittal was on 3/20/15; their next annual submittal is due by 3/20/16. The facility contact is fully aware of CERS and submittal requirements. No violations were observed.

Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-19-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last CERS submittal was on 8/18/16. It did not include an emergency response/contingency plan. The last plan submitted was on 2/23/16. The approved submissions had next reporting due dates of 2/23/17 to remind the business that a full CERS submission including the emergency response/contingency plan will be due by that date. This was also discussed with the facility contact and she acknowledge the requirement for future submissions. Note: her other facility located at 577 Aladdin Ave. San Leandro had an overdue emergency response contingency plan that was noted as a violation. The rest of the plan looked good and the emergency response/contingency plan also looked good. No violations were observed.

Eval Division: San Leandro City
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-07-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Hazardous waste tanks are inspected daily and hazardous waste areas are inspected at least weekly. All hazardous waste labels were OK. No violations were observed.

Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-06-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Household hazardous wastes are now kept outdoors in a separate hazardous material containment shed. There is another shed next to it that the site's hazardous wastes are kept in. Same storage practices in the two sheds. Wastes were all properly labeled and contained. They are keeping hazardous waste records indefinitely. They are still tracking all hazardous waste shipments to ensure they get all their

ALAMEDA COUNTY INDUSTRIES (Continued) **S108197038**

copies and that disposal is complete. They now about the reporting requirements if a manifest copy is late. No violations were observed.
Eval Division: San Leandro City
Eval Program: HW
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-06-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Their last full HMBP CERS submittal was on 6/29/17. It is fully developed, complete, and accurate. The facility contact understands that they must make an annual submittal including all major elements. No violations were observed.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date:	11/07/1997
Comments:	Order issued to the current owners/operators.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	05/28/1992
Comments:	Phase I investigation identified the possible presence of hazardous materials at site and additional work was recommended.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	06/13/1995
Comments:	Five underground tanks were removed.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	03/13/2002
Comments:	DTSC determined that no further action is needed at the site due to the declining concentrations in groundwater and because all potential

TRANSCON LINES (Continued) **S101630334**

sources have been removed from the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 10/28/1996
Comments: Underground tanks were removed, soil excavated and stockpiled on site, soil samples collected and analyzed for hydrocarbons and VOCs. The soil pile was areated and used as backfill. Groundwater sampling conducted in 4 wells. TCE and PCE were detected in groundwater up to 92 ug/l and 2200 ug/l respectively.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/21/1999
Comments: VOCs were sampled in 4 on site wells and TCE was detected from 396 ug/l to 548 ug/l in the wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 06/01/1989
Comments: Soil and groundwater investigation conducted which found subsurface diesel and waste oil contamination at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 06/25/1993
Comments: The existing diesel underground storage tanks may have leaked. Approximately 3,000 cubic yards of diesel affected soil are present at the site. Groundwater at the site is contaminated with trichloroethylene which may be migrating from upgradient sites.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

DANA CORPORATION (Continued) **S101641808**

Completed Document Type:	Remedial Investigation Report
Completed Date:	09/01/1998
Comments:	Soil samples analyzed in potential source areas did not detect any volatile organic compounds (VOCs). The highest 1,1-dichloroethene (DCE), trichloroethene (TCE), tetrachloroethene (PCE) and 1,1,1 trichloroethane (TCA) detected in groundwater at the site were 204 ppb, 67 ppb, 17 ppb and 19 ppb respectively. These concentration were slightly above the upgradient boundary concentrations.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	06/16/2006
Comments:	Based on the review of current and historical data, the site does not appear to currently have a source of hazardous substances which is contributing to groundwater contamination and does not appear to pose a current threat to human health or the environment.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	07/26/1993
Comments:	4 soil samples and 2 grab groundwater samples were analyzed for volatile organic compounds (VOCs), oil and grease (O & G), and total extractable hydrocarbons (TEH) at 2 locations. All soil sample results were below regulatory levels. DCE, TCE and PCE concentrations detected in the shallow groundwater were above the maximum contaminant levels (MCLs)

Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	06/16/2006
Comments:	Based on the review of current and historical data, the site does not appear to currently have a source of hazardous substances which is contributing to groundwater contamination and does not appear to pose

DANA CORPORATION (Continued) **S101641808**

a current threat to human health or the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 07/26/1993
Comments: 4 soil samples and 2 grab groundwater samples were analyzed for volatile organic compounds (VOCs), oil and grease (O & G), and total extractable hydrocarbons (TEH) at 2 locations. All soil sample results were below regulatory levels. DCE, TCE and PCE concentrations detected in the shallow groundwater were above the maximum contaminant levels (MCLs)

Background Info:	The Site is located on approximately 0.7-acre parcel of land and consists of a one-story building. In or about 1963, the Site was developed for Dana Corporation to assemble and repair heavy-duty truck transmissions. Degreasing agents such as carbon tetrachloride, trichloroethene and 1, 1, 1-trichloroethane were used. From 1987 to 1994, Westates Mechanical Contractors, Inc. (Westates) occupied the Site. Westates used trichloroethane. A 1998 site investigation found low concentrations of tetrachloroethylene, toluene and xylene were detected in the site soil. Dichloroethane, dichloroethylene, trichloroethylene, and tetrachloroethylene were found above the drinking water standard. The Site is located within a regional groundwater contamination problem located in the central area of the City of San Leandro.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-16-2010
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: No major permit violations observed during site inspection. Recommend denial of No Exposure Certification based on observations of outdoor product storage and handling, evidence of routine out door spillage (relatively minor), and historic record of a major product spill outdoors, exemption from sampling and analyses requirement is not approved. Recommend pursuing submittal of 2009/10 Annual Report but not enforcement due to Water Board staff not being able to inspect/determine need for permit, as requested by facility, until after Annual Report due date

Facility Project Subtype:	Not reported
RWQCB Region:	SAN FRANCISCO BAY RWQCB (REGION 2)
Site History:	Not all historic documents for the fuel leak case may be available on GeoTracker. Additional documents can be viewed over the Internet on the Alameda County Department of Environmental Health website (http://www.acgov.org/aceh/lop/ust.htm). Both databases should be reviewed to obtain a complete history. In February 1991 a UST, a dispenser, and associated piping was removed from the subject site. Overexcavation (4 5 cubic yards) is documented to have occurred thereafter. Four soil bores were installed in February 1999, three additional soil bores in March 1999, and an additional eight in July 1999. Soil and grab groundwater samples were collected to help characterize the site. Three wells were installed in May 2000, and a

PALACE GARAGE (Continued) **S102434931**

fourth well was installed in December 2002, along with another soil bore. Groundwater monitoring has occurred intermittently since December 2002. Not all historic documents for the fuel leak case may be available on GeoTracker. A more complete historic case file for this site is located on the Alameda County Environmental Health website at: http://ehgis.acgov.org/dehpublic/dehpublic.jsp.
