Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Location Case Number:	Not reported
File Location:	All Files are on GeoTracker or in the Local Agency Warehouse
Potential Contaminants of Concern:	Chromium, Copper, Nickel, Zinc, Per- and Polyfluoroalkyl Substances (PFAS)
Potential Media Affected:	Soil
Site History:	Explosion at site in 1987. Metals contamination in surface soil was documented in 1987. Surface soil in "explosion area" in front of southwest corner of building in parking lot was contaminated with Cr, Cu, Ni, and Zn. Surface soil in pipe discharge area behind the southeast part of the building was contaminated with cyanide, zinc, and nickel. In 1988, Alameda County Health Care Services Agency issued a September 26, 1988, letter that documented satisfactory cleanup of the building interior and exterior areas with removal of 165 drums of hazardous waste from the site. The letter states that the levels of chrome and nickel found underneath the concrete floor are not considered significant to pose a hazard to the environment as they will be sealed in place with the new concrete floor.

Background Info:	Cintas Corporation site is located at 777 139th Avenue, San Leandro, Alameda County. From February 1971 and 1983, Ross Rental Services leased the property and established a clothes-cleaning operation using tetrachloroethylene (PCE). Operation equipment included two 100-pound dry cleaning units. In 1983, Cintas Corporation acquired the business and converted all clothes cleaning operations to a water-wash laundry without the dry cleaning units. Trichloroethylene (TCE), PCE and oil grease were detected in soil during removal of gasoline and waste oil tanks in May 1986.

Comments:	DTSC approval letter for further subsurface vapor characterization.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	06/24/2015
Comments:	A total of 23 soil vapor samples were collected and analyzed for this investigation. Three compounds (primarily PCE) exceeded Tier 1 ESLs in 16 of the samples across the Site (Figure 4). At three of the 23 sample locations, PCE also exceeded Commercial ESLs; the highest concentration (28,000 8g/m3) was found outside of the building in the rear parking area, possibly indicative of a localized spill area that could be readily addressed. The other two detections were within one order of magnitude of the Commercial ESL. The widespread presence of PCE in soil vapor across the Site is likely related to known soil and groundwater contamination underlying the majority of the Site. These findings suggest soil vapor impacts are not severe. Such impacts could potentially pose a risk to indoor air quality that may require management over the long term with an appropriately-designed vapor mitigation system. DTSC agrees with these recommendtions

Completed Area Name:	PROJECT WIDE

Comments:	DTSC approval letter for further subsurface vapor characterization.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	06/24/2015
Comments:	A total of 23 soil vapor samples were collected and analyzed for this investigation. Three compounds (primarily PCE) exceeded Tier 1 ESLs in 16 of the samples across the Site (Figure 4). At three of the 23 sample locations, PCE also exceeded Commercial ESLs; the highest concentration (28,000 8g/m3) was found outside of the building in the rear parking area, possibly indicative of a localized spill area that could be readily addressed. The other two detections were within one order of magnitude of the Commercial ESL. The widespread presence of PCE in soil vapor across the Site is likely related to known soil and groundwater contamination underlying the majority of the Site. These findings suggest soil vapor impacts are not severe. Such impacts could potentially pose a risk to indoor air quality that may require management over the long term with an appropriately-designed vapor mitigation system. DTSC agrees with these recommendtions

Completed Document Type:	Site Characterization Report
Completed Date:	10/01/2021
Comments:	January 2021 Indoor Air Sampling Report approved on 10/1/2021. Report presented results of the first round of indoor air, outdoor air, sub-slab, and soil gas sampling as proposed in the Indoor Air Sampling Work Plan dated 11/12/2020. A second round of sampling was conducted in May 2021. The results of these two sampling events will be used in an upcoming Report that will propose a site-specific attenuation factor and groundwater screening criteria for vapor intrusion.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 03/04/2022
Comments: Report approved on 3/4/2022. The report presents a site-specific attenuation factor (AF), which express the reduction in vapor concentrations as volatile contaminants move from the sub-surface into indoor air. The site-specific AF is estimated at 0.00059 based on sub-slab and indoor air sampling.

Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: Currently there are no identifiable responsible parties (RPs). Therefore, Bond funds are being used to investigate and remediate the site. If during the investigation responsible parties are identified, DHS will pursue appropriate enforcement actions.
Site Description: The One Hundered Thirty-Ninth Street site is a contaminated shallow aquifer.
Hazardous Waste Desc: Chemicals found onsite include trichloroethene (TCE) and tetrachloroethene (PCE).
Threat To Public Health & Env: Ground water is the pathway for contaminant migration. Numerous private wells present possible routes of exposure. Potential receptors for exposure to ground water contaminants include residents of San Leandro who have shallow water wells on their property.
Site Activity Status: The site is currently undergoing remedial investigation. Monitoring wells and stratigraphic borings will be installed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 06/08/2023
Comments: Correspondence to the Property owner who allowed DTSC to collect groundwater samples from an irrigation well located at the Property. The groundwater sampling event was part of a large (regional) groundwater quality assessment conducted in the central portion of the City of San Leandro. Results of the groundwater sampling event are documented in the Regional Groundwater Monitoring Report, dated May 16, 2023. All confidential information (property's address and property owners' name) of residences located at the DWA Plume site, San Leandro, which consented to DTSC collecting groundwater samples are redacted.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 09/18/2023
Comments: The Contract 21-T5003 A1 (Contract) Work Order No. 1 Amendment No. 4 increases funds to perform additional services under task 7 (Temporary Nested and Single Completion Soil Gas Probes Installation). Additional technical consultative services are needed to install a soil gas probe that was tentatively installed on September 13, 2023, but a physical obstruction was observed at a depth shallower than five feet below the ground surface. Funds to support additional service requests will be transferred from Contract Work Order No.1 Task 9 to Task 7.

Completed Document Type: Site Characterization Report
Completed Date: 03/30/2018
Comments: Report presents results of indoor air sampling events in November 2017 and February 2018. Sampling events were conducted in a portion of the residential area of the DWA Plume in the Cedar Avenue vicinity (the Residential Area).

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/03/2019
Comments: Primary volatile organic compounds (VOCs) concentrations in the grab groundwater samples are generally consistent with the conceptualization of the regional DWA Plume as presented in the 2015 Groundwater Monitoring Report and historical concentrations. Groundwater concentrations do not correlate well with soil vapor concentrations in the collocated boreholes. The site-specific groundwater/soil vapor correlation for tetrachloroethene and trichloroethene concentrations varies over several order of magnitude for the different boreholes; hence, establishing a uniform site-specific attenuation factor is not recommended.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 02/20/2019
Comments: The purpose of the Soil Vapor and Groundwater Sampling Work Plan (Work Plan) is to define the lateral extent of the elevated soil vapor that was detected in 2015 in the Cedar Avenue vicinity and to investigate groundwater contamination in the same area. The Work Plan presents the site background, scope of work, data evaluation and reporting, and anticipated schedule.

Completed Date: 12/10/2020
Comments: Contract 20-T481 with RMD. Contract scope of work consists of technical consultative services to provide deliverable necessary to perform additional remedial investigations at the DWA Plume site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Litigation Support
Completed Date: 12/09/2020
Comments: DTSC proposes a settlement with Apex Companies, LLC (Apex) regarding Contract 17-T4438 Work Order 1 - Invoice 207595 Disallowance Decision. DTSC proposes to pay Apex $3,298.75, which corresponds to half of the disallowed amount if Apex and DTSC sign a Settlement Agreement and Release of Claims.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 02/01/2022
Comments: The Department of Toxic Substances Control will conduct a regional groundwater quality assessment of DWA Plume in 2022. Private well located in San Leandro, California (Property) was selected to be part of groundwater monitoring (MW) network that will be investigated during the 2022 DWA Plume regional groundwater quality assessment. The property's address and property owners' name are confidential Correspondence sent to Property owner requiring consent to access to private well. Due to confidentially, Property owner information redacted on correspondence version available to the public.

groundwater monitoring, and vapor intrusion preferential pathway evaluation in the DWA Plume Residential East Area

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/16/2023
Comments: The Regional Groundwater Monitoring Report (Report) for the DWA Plume documents pre-field activities, groundwater monitoring activities, findings, quality assurance protocols, and a discussion of investigation results. The regional groundwater sampling activities were consistent with the 2022 DWA Plume Supplemental Site Characterization Work Plan which details the investigative scope of work in the DWA Plume area, including a regional groundwater monitoring event with compound specific isotope analysis (CSIA) and microbial analysis performed at select wells.

Completed Area Name: Century Plating Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 06/22/2006
Comments: DTSC prepared HRC Injection Work Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 05/16/2023
Comments: Supplemental Site Characterization Work Plan Addendum (Addendum) describes modifications to the 2022 Supplemental Site Characterization Work Plan (Work Plan). Addendum modifications to the Work Plan are based on the October 2022 DWA Plume regional groundwater monitoring results, including compound-specific isotope analyses (CSIA) and microbial analysis performed at select wells within the DWA Plume.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 10/13/1989
Comments: The Investigations indicate the presence of volatile organic compounds in shallow groundwater beneath the vicinity of the 750 139th Avenue Site. Groundwater in the intermediate-depth zone was impacted at one location. Several metals (barium, cadmium, chromium, and lead) were also present at levels drinking water standards.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 10/01/1991
Comments: The fact sheet provides information about well water testing in San Leandro.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 07/20/2006
Comments: VOCS are still present in the San Leandro Residential area at

DWA PLUME (Continued) **S101272669**

concentrations comparable to the historical data.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 01/20/1993
Comments: Upper groundwater is contaminated with chlorinated volatile organic compounds at a number of locations throughout the study area. The data show that the contaminated groundwater has migrated and is continuing to migrate off-site areas to the west/southwest.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 10/20/1995
Comments: Seven monitoring wells were installed in the residential area. Soil volatile organic compound (VOC)concentrations were below regulatory levels. VOCs were detected in groundwater. Soil gas and ambient air sample had some detections of VOCs and these data will be used in the risk assessment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 03/29/1995
Comments: Groundwater sampling was conducted at 41 locations in the industrial area of San Leandro. Trichloroethylene, tetrachloroethylene and cis-1,2-dichloroethylene were detected.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 01/10/2007
Comments: DTSC prepared an amendment to the HRC injection Workplan for BDI bacteria injection.

Completed Area Name: San Leandro Residential Area

Completed Date: 01/19/2007
Comments: Fieldwork completed.

Completed Area Name: San Leandro Toe of the Plume
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 08/05/2004
Comments: Groundwater sampling of 4 wells indicate 3 of the wells have volatile organic compounds exceeding drinking water standards.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Risk Assessment Report
Completed Date: 04/01/1997
Comments: All estimated cancer and non-cancer risks for human receptors were within acceptable risk range. This risk estimate assumes that the shallow groundwater will not be used for domestic purposes.

DWA PLUME (Continued) **S101272669**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 09/06/2006
Comments: This site (2700 Merced Street) is located within the DWA Plume and volatile organic compounds (VOCs) above drinking water standards has been detected in groundwater.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 07/23/1993
Comments: Cone Penetrometer Testing, Hydropunch Groundwater Sampling, and Coordinated Monitoring Well Sampling results are presented in this report. Evaluation of this data is included in the Remedial investigation report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 11/17/1987
Comments: A plume of volatile organics exists in the shallow groundwater beneath 750 139th Avenue. The source of contamination is unknown and probably is not located at 750 139th Avenue.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 07/16/2007
Comments: Passive diffusion bag (PDB) sampler installed into the monitoring wells on April 27, 2007. PDBs were retrieved after equilibration on July 28, 2007 from monitoring wells within the DWA Plume Residential and Toe of the Plume areas.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 07/16/2007
Comments: Results of the post BDI injection ground water sampling event indicate that PCE concentrations in most wells are still fluctuating within the historical ranges. However, R-1 and MW-R51, showed significant decreases of PCE concentrations after the HRC/BDI injections and significant increases in cis-1,2-DCE concentrations. Increase in cis-1,2 DCE concentrations, whcih is a daughter product of dechlorination of PCE, indicates active ongoing dechlorination in wells R1 and MW-R51, which can be directly related to the injection of HRC and BDI.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/29/1993
Comments: The Investigations indicate the presence of volatile organic compounds in shallow groundwater, primarily trichloroethene (TCE) and tetrachloethene (PCE). Shallow groundwater plume was more than a mile wide and two miles long. The plume is commingled plume with multiple source areas.

Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 09/30/2013
Comments: DTSC oversight cost estimate for fiscal year 2013/2014

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: PRP Identification Memorandum
Completed Date: 01/10/2019
Comments: The memorandum documents the potentially-responsible parties (PRPs) identified for the DWA Plume. Of the 14 sites and study areas within the footprint of the regional groundwater plume, DTSC identified PRPs for four sites: Singer Friden, Century Plating, Cintas Corporation, and Hudson I.C.S. DTSC recovered $6.5 million for past and future costs related to the Singer Friden site. The data suggest that the contaminants at three sites do not impact the regional groundwater plume. If additional sources for the regional groundwater plume are identified in the future, it may be appropriate to pursue cost recovery from additional PRPs. At this time, however, there are no additional PRPs to pursue.

Completed Document Type: Fieldwork
Completed Date: 11/10/2005

DWA PLUME (Continued) **S101272669**

Comments:	Groundwater sampling completed.
Completed Area Name:	San Leandro Toe of the Plume
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	08/30/2001
Comments:	25 cone penetrometer tests were conducted in the toe of the plume. Tetrachloroethene and trichloroethene were detected.
Completed Area Name:	San Leandro Boulevard Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Workplan
Completed Date:	03/13/2002
Comments:	Approved RAW for the contamination located next to 2481 San Leandro Boulevard which requires the excavation and offsite disposal of soil contaminated with TCE and PCE.
Completed Area Name:	San Leandro Boulevard Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	11/12/2002
Comments:	Completed RA. Between August 1 and August 26, 2002, DTSC's contractor conducted a removal action using state funds at the San Leandro Source Area. Approximately 500 cubic yards of soil contaminated with volatile organic compounds (VOCs) primarily trichloroethene (TCE) and tetrachloethene (PCE) was excavated from the following locations: 1) the 1600 square foot area adjacent to San Leandro Boulevard (to a depth of 7 feet), and 2) the 100 square foot area extending into San Leandro Boulevard (to a depth of 15 feet).
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Work Notice
Completed Date:	08/07/2015
Comments:	Work notice for additional soil gas sampling in three areas of the DWA plume
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Workplan
Completed Date:	10/21/2011
Comments:	Workplan for groundwater sampling approved.
Completed Area Name:	PROJECT WIDE

Completed Document Type:	Site Characterization Workplan
Completed Date:	07/23/2015
Comments:	Workplan addresses follow up sampling of soil gas and groundwater based on previous investigation results.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	10/14/2014
Comments:	Soil Vapor Sampling Work Plan (Work Plan) for the DWA Plume located within the DWA Plume Study Area in San Leandro, California. The purpose of this Work Plan is to further characterize soil vapor

DWA PLUME (Continued) **S101272669**

conditions in the DWA Plume through sampling and laboratory analysis of select volatile organic compounds (VOCs).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 11/20/2015
Comments: Report documents supplemental soil gas sampling conducted during 2015. One new hot spot area identified and recommended for indoor air sampling.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 09/07/2022
Comments: Correspondence/Work Notice sent to private and public well owners. Confidential information (e.g., residence address, homeowner name, etc.) redacted. DTSC anticipates minimal disruption to local community during groundwater sampling of wells located at public-right-of-way areas. Groundwater sampling activities will extend to about two (2) hours or less and, at a maximum, two (2) public parking areas will be required during sampling activities.

Completed Date: 10/21/2022
Comments: Groundwater sampling completed by October 21, 2022.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 03/30/2018
Comments: Report presents results of indoor air sampling events in November 2017 and February 2018. Sampling events were conducted in a portion of the residential area of the DWA Plume in the Cedar Avenue vicinity (the Residential Area).

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/03/2019
Comments: Primary volatile organic compounds (VOCs) concentrations in the grab groundwater samples are generally consistent with the conceptualization of the regional DWA Plume as presented in the 2015 Groundwater Monitoring Report and historical concentrations. Groundwater concentrations do not correlate well with soil vapor concentrations in the collocated boreholes. The site-specific groundwater/soil vapor correlation for tetrachloroethene and trichloroethene concentrations varies over several order of magnitude for the different boreholes; hence, establishing a uniform site-specific attenuation factor is not recommended.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 02/20/2019
Comments: The purpose of the Soil Vapor and Groundwater Sampling Work Plan (Work Plan) is to define the lateral extent of the elevated soil vapor that was detected in 2015 in the Cedar Avenue vicinity and to investigate groundwater contamination in the same area. The Work Plan presents the site background, scope of work, data evaluation and reporting, and anticipated schedule.

Completed Date: 01/19/2007
Comments: Fieldwork completed.

Completed Area Name: San Leandro Toe of the Plume

DWA PLUME (Continued) **S101272669**

Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	08/05/2004
Comments:	Groundwater sampling of 4 wells indicate 3 of the wells have volatile organic compounds exceeding drinking water standards.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Risk Assessment Report
Completed Date:	04/01/1997
Comments:	All estimated cancer and non-cancer risks for human receptors were within acceptable risk range. This risk estimate assumes that the shallow groundwater will not be used for domestic purposes.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	09/06/2006
Comments:	This site (2700 Merced Street) is located within the DWA Plume and volatile organic compounds (VOCs) above drinking water standards has been detected in groundwater.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	07/23/1993
Comments:	Cone Penetrometer Testing, Hydropunch Groundwater Sampling, and Coordinated Monitoring Well Sampling results are presented in this report. Evaluation of this data is included in the Remedial investigation report.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	11/17/1987
Comments:	A plume of volatile organics exists in the shallow groundwater beneath 750 139th Avenue. The source of contamination is unknown and probably is not located at 750 139th Avenue.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	07/16/2007
Comments:	Passive diffusion bag (PDB) sampler installed into the monitoring wells on April 27, 2007. PDBs were retrieved after equilibration on July 28, 2007 from monitoring wells within the DWA Plume Residential and Toe of the Plume areas.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Technical Report
Completed Date:	07/16/2007
Comments:	Results of the post BDI injection ground water sampling event indicate that PCE concentrations in most wells are still fluctuating within the historical ranges. However, R-1 and MW-R51, showed significant decreases of PCE concentrations after the HRC/BDI injections and significant increases in cis-1,2-DCE concentrations.

DWA PLUME (Continued) **S101272669**

Increase in cis-1,2 DCE concentrations, whcih is a daughter product of dechlorination of PCE, indicates active ongoing dechlorination in wells R1 and MW-R51, which can be directly related to the injection of HRC and BDI.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/29/1993
Comments: The Investigations indicate the presence of volatile organic compounds in shallow groundwater, primarily trichloroethene (TCE) and tetrachloethene (PCE). Shallow groundwater plume was more than a mile wide and two miles long. The plume is commingled plume with multiple source areas.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 09/01/1988
Comments: The fact sheet describes activities associated with Phase II remedial investigations at 750 139th Avenue and 1465 Factor Avenue Sites.

Completed Area Name: San Leandro Toe of the Plume
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 09/19/2003
Comments: Groundwater sampling of 4 wells indicate 3 of the wells have volatile organic compounds exceeding drinking water standards.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/13/1989
Comments: The purpose of this investigation was to evaluate the regional hydrogeologic conditions in the San Leandro area so that data collected at the 1465 Factor Avenue and 750 139th Avenue Sites can be evaluated within a larger hydrogeologic context.

Completed Document Type:	Preliminary Assessment/Site Inspection Report (PA/SI)
Completed Date:	12/11/2019
Comments:	According to the information provided, the current building structure was constructed in the late 1970 s and it has been used for food processing by Saag s since that time. There were no historical records or other indications of the storage or use of significant quantities of hazardous materials at the Property. Groundwater monitoring event conducted as part of the Phase II investigation shows that volatile organic chemicals (VOCs)-impacted groundwater migrating onto the Property derive from upgradient source areas of the DWA Plume (regional VOC-impacted groundwater plume), consistent with the historical groundwater data.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	12/07/2021
Comments:	Current Conditions Report (CCR) reviews the DWA Plume site background information and current conditions to identify data gaps in anticipation of preparation of a Supplemental Investigation Work Plan and subsequent Site-Wide Remedial Action Plan.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	03/03/2022
Comments:	Supplemental Site Characterization Work Plan outlines activities within the DWA Plume site area (Site) to address data gaps identified in the December 3, 2021, Current Conditions Report in preparation for a Site-Wide Remedial Action Plan for the Site.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Work Notice
Completed Date:	08/07/2023
Comments:	Work Notice distributed to local community about a supplemental site characterization that will be conducted in the central portion of the City of San Leandro, California. Work Notice distributed to 6,549 USPS mailing addresses.
Completed Area Name:	PROJECT WIDE

Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 07/20/2018
Comments: DTSC issued Work Order No. 1 under Contract 17-T4438 to Apex Companies, Inc. The activities to be performed under the Work Order are for the purpose of better defining the lateral extent of groundwater and soil gas plumes encroaching on the DWA Plume Residential Area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 11/20/1987
Comments: Evaluation of the soil gas investigation results indicates one and possibly two areas of volatile organic compounds and total hydrocarbon soil gas contamination near 750 139th Avenue.

Completed Area Name: San Leandro Toe of the Plume
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report

DWA PLUME (Continued) **S101272669**

Completed Date:	06/11/2003
Comments:	Four Monitoring wells were installed in the toe of the DWA Plume area and 3 of the wells have volatile organic compounds exceeding drinking water standards.
Completed Area Name:	San Leandro Toe of the Plume
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	02/11/2004
Comments:	Groundwater sampling of 4 wells indicate 3 of the wells have volatile organic compounds exceeding drinking water standards.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Workplan
Completed Date:	08/04/2005
Comments:	Workplan to conduct soil gas investigation at the residential area accepted.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Technical Report
Completed Date:	03/09/2006
Comments:	Volatile organic compounds are present in the residential area and are comparable to 2003 results.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	10/22/2014
Comments:	Site visit during soil vapor probe installation and soil vapor sampling.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	05/30/2006
Comments:	Passive diffusion bag (PDB) sampler installed into the monitoring wells on May 4, 2006. PDBs were retrieved after equilibration on May 22, 2006.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Public Participation Plan / Community Relations Plan
Completed Date:	02/28/1995
Comments:	Public Participation Plan for the San Leandro Plume approved.
Completed Area Name:	San Leandro Residential Area
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	03/09/2006
Comments:	Soil gas investigation found elevated tetrachloroethene(PCE) soil gas concentrations in the vicinity of Monterey Boulevard which appear to correlate with high PCE concentrations in groundwater. The report recommends addition soil gas investigation and possible treatment of groundwater to reduce concentrations.

DWA PLUME (Continued) **S101272669**

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 02/27/2006
Comments: Groundwater Sampling completed.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 05/19/2006
Comments: DTSC prepared HRC injection workplan to inject HRC and HRC-X at 2 locations in San Leandro Residential Area.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 12/29/1995
Comments: Hydrogeology of Central San Leandro Remedial Investigation of the Regional Groundwater Contamination, San Leandro Plume.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 12/20/2004
Comments: Pilot Study was completed using HRC and DHE bacteria to treat groundwater at 2 locations in the DWA plume. One location was in the high PCE area in the residential area and the other location was near Aladdin Street near U.S. Can Site.

Completed Area Name: San Leandro Boulevard Area
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 01/31/2002
Comments: Fact Sheet for Draft RAW for soils

Completed Area Name: San Leandro Boulevard Area
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 12/20/2004
Comments: Pilot Study was completed at 2 locations in San Leandro Boulevard area using HRC and DHE bacteria. One location was in the Cherry Street and the other location was in the Hudson SIte.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 07/25/2003
Comments: Tetrachloroethene (PCE) concentrations are 1 to 2 orders of magnitude less downgradient of the high PCE concentration area.

Completed Area Name: San Leandro Residential Area
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/28/1995
Comments: Groundwater sampling was conducted at 34 locations in the residential area of San Leandro. Trichloroethylene, tetrachloroethylene and cis-1,2-dichloroethylene were detected.

DWA PLUME (Continued) **S101272669**

Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 09/30/2013
Comments: DTSC oversight cost estimate for fiscal year 2013/2014

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: PRP Identification Memorandum

DWA PLUME (Continued) **S101272669**

Completed Date:	01/10/2019
Comments:	The memorandum documents the potentially-responsible parties (PRPs) identified for the DWA Plume. Of the 14 sites and study areas within the footprint of the regional groundwater plume, DTSC identified PRPs for four sites: Singer Friden, Century Plating, Cintas Corporation, and Hudson I.C.S. DTSC recovered $6.5 million for past and future costs related to the Singer Friden site. The data suggest that the contaminants at three sites do not impact the regional groundwater plume. If additional sources for the regional groundwater plume are identified in the future, it may be appropriate to pursue cost recovery from additional PRPs. At this time, however, there are no additional PRPs to pursue.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Correspondence
Completed Date:	05/12/2013
Comments:	Phase 1 ESA, Phase One Inc., January 2013 and Phase 2, Groundwater Investigation, Phase One Inc., March 2013 review revealed no evidence of a release at this site. Groundwater contamination underneath property is related to the DWA Plume.
Completed Area Name:	PROJECT WIDE

DWA PLUME (Continued) **S101272669**

Background Info:	DTSC was conducting six site specific investigations in San Leandro. Investigations at these sites indicated that a regional shallow groundwater contamination exist. A Public Health Advisory was issued, advising residents not to use private wells for domestic purposes unless tested regularly. Contaminants of primary concern are trichloroethylene(TCE), perchloroethylene(PCE), dichloroethylene and related compounds. They as well as metals and nitrate have all been found above the state drinking water standards. Domestic water is supplied by East Bay Municipal Utility District. However, up to 2000 private wells may exist in San Leandro. In 1993 and 1995 DTSC conducted a series of investigations and determined the extent of the plume to be 1 mile wide and 2 miles long. DTSC is conducting a number of in-situ pilot studies to evaluate techniques to treat the underlying groundwater. groundwater. For site specific information see 1465 Factor Avenue, Hudson I.C.S., 750 139th Avenue Site, Singer Friden, Staefa, U.S. Can Company, Former Transcon Lines Site, Simmons Site, Dana Corporation Site, Cintas Corporation Site and Century Plating.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	07/19/1999
Comments:	Highest PCE in soil was detected at 2.2 mg/kg at 4' bgs and higest TCE also was detected at 0.41 mg/kg at 6' bgs at the same location near the San Leandro Blvd. Three moniroing wells were also sampled.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	12/19/1996
Comments:	21 parts per million of tetrachloro ethene was found 10 feet below the ground suface in the city right of way next to the property. Concentrations of PCE onsite in the top 3 feet of soil near this area are up to 1.3 ppm. Groundwater concentrations of PCE are also elevated near this sampling location. Also, in a different area of the site, a downgradient monitoring well had significantly higher concentrations than the upgradient hydropunch samples.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Other Report
Completed Date:	04/03/2000
Comments:	Based on sampling data, DTSC issued a letter requiring no further action for soils at the Site since the soil contamination appears to be not related ot the site. DTSC will conduct a soil removal under the DWA Plume project. Semiannual groundwater monitoring will continue.

Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/29/2006
Comments: Although the fire and explosion in 1962 could have released VOCs at the Site, review of limited data available does not confirm a significant release. Since down-gradient VOC concentrations appear to be decreasing according to the Hudson data, it is likely that there is no VOC source currently at the IPC Site. Therefore, no further action is recommended for this Site.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	09/30/1992
Comments:	U.S. EPA removed drums of chemicals, contaminated equipment, and debris from the building and adjoining yard. Six inches of surface soil, contaminated primarily with metals, was removed from the yard and a private well was closed.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Design
Completed Date:	06/24/1996
Comments:	Approved design for excavation, vapor venting system and paving of the yard area of the site. Additional work will include installation of three soil vapor extraction wells and a carbon system for treatment of the soil vapor prior to release to the atmosphere.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	03/14/1997
Comments:	Completed removal action. Three soil vapor extraction wells were installed, the yard has been paved, 80 cubic yards of contaminated soil were excavated and disposed, and a new floor slab was installed in the building.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Workplan
Completed Date:	02/15/1996
Comments:	Removal Action Workplan approved which requires the removal of several soil hotspots in the building by excavation, and installation of a vapor barrier floor. In the Yard area, 3-5 Soil Vapor Extraction wells was installed to lower concentrations of VOCs at depth in the soils. The yard will also be paved as part of the removal action. The extraction system is expected to operated for approximately 6 months.

Alternate Address:	1124 139TH AVENUE
Alternate City,St,Zip:	SAN LEANDRO, CA 94578
Background Info:	shop at 1124 139th Avenue from about 1973 until October 1991. Prior to Century Plating, Inc., Paddy O'Chrome operated a plating shop at this location for approximately 8 years. At that time, Century was shut down by local authorities for noncompliance with fire and building codes and for unpermitted discharges to the sanitary sewer. Subsequently, U.S. EPA removed drums of chemicals, contaminated equipment, and debris from the building and adjoining yard. Six inches of surface soil, contaminated primarily with metals, was removed from the yard and a private well was closed. Soil under the building was contaminated with solvents and metals and was believed to be the source of groundwater contamination in the area. Groundwater samples had detected perchloroethene and trichlorethene above the drinking water standards. The plume migrating from this Site is part of the commingled plume which has been named DWA Plume. The groundwater investigation of this site will be carried out as part of the investigation of the San Leandro Plume. Please also review that profile report for further information. Century Plating Company, Inc. operated a plating and machine
Comments Date:	02151996
Comments:	RAW - SOIL - Removal Action Workplan approved which requires the
Comments Date:	02151996
Comments:	removal of several soil hotspots in the building by excavation,

Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 02/23/2024
Comments: The Contract 22-T5074 A-1 Work Order No.1 Amendment No.1 (WO 1 A-1) modified the funding schedule and increased the funds to perform additional services under Tasks 8 through 9.5 DTSC Contract Manager transferred $38,754.25 funds currently allocated under Contract 22-T5074 A-1 contingency fund to support additional services under WO 1 A-1.

SINGER FRIDEN (Continued) **S101272670**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Litigation Support
Completed Date: 12/22/2023
Comments: Dann Bullwinkel, a resident of Trailer Haven Park, transmitted a handwritten letter/report to Singer Fridenn++s PM, Moises Carvalho, on December 12/19/2023. The handwritten letter/report includes groundwater and potable water (East Bay Municipal Utility District [EBMUD] treated surface water) sample analytical results. The groundwater samples were collected from a production well located on the Trailer Haven Park property. The groundwater and potable water results are documented in the 2021 Consumer Confidence Report, dated June 30, 2022. A review of the summarized groundwater analytical results (Tables 1 through 6) indicates no analytes exceeded their respective Maximum Contaminant Levels (MCLs) or Maximum Contaminant Level Goals (MCLGs), if applicable. However, it is important to note that these tables represent a combined dataset from December 2013 to September 2021. The report further indicates that December 2021 samples (results not tabulated) were analyzed for perchlorate, radium 228, and 65 volatile organic compounds (VOCs), and all analytical results were below detectable levels. Similarly, no exceedances were reported for EBMUD-treated surface water samples. While the report doesnn++t specify the groundwater sampling methodology used to collect the samples, production well spigot sampling (if that is the case) can present quality concerns for VOCs due to potential degasification during collection.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 023
Completed Document Type: Site Characterization Report
Completed Date: 05/12/2023
Comments: The Technical Memorandum summarizes supplemental site characterization activities performed in March 2023 at Unit 023 and adjacent locations at the former Singer Friden Facility. Supplemental site characterization activities consisted of collection of soil gas, indoor air, sub-slab soil gas, and sewer vapor samples as multiple lines of evidence to assess whether vapor intrusion interim mitigation measures are warranted at Unit 023. Based on the results of the supplemental site characterization that indicated relatively elevated concentrations of trichloroethene (TCE) in sewer vapor (sink P-traps) and sub-slab soil gas samples, DTSC recommended the installation of a sub-slab depressurization system at Unit 023 to mitigate the indoor air quality.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 12/15/2021
Comments: Sewer Vapor Investigation Report summarizes a sewer vapor investigation conducted in August 2021 at Singer Friden site (Site). The purpose of this investigation is to verify whether the sewer system present at the Site is acting as a preferential pathway/vapor conduit to carry tetrachloroethene (PCE) and trichloroethene (TCE) present in areas around SGW-13, SGW-16, and SGW-29 where high residual PCE/TCE mass was detected in the vadose zone during the August 2019 soil gas sampling effort. Sewer vapor samples collected from sewer manholes and cleanouts for both the grab and passive samples reported concentrations of PCE, TCE and chloroform in the sewer lines around SGW-13, SGW-16, and SGW-29. Evaluation of organochlorinated compounds reported in the sewer system at the Site will be made in subsequent assessment reports. Future assessment reports will compare historical and current soil gas results, and additional sewer vapor sample results to verify the potential sources of organochlorinated compounds detected in the sewer system at the Site.

Completed Date: 07/19/2016
Comments: Follow up sampling on June 20, 2016 (after SSDs were dried out) in Unit 002 found reduced levels of tetrachloroethene.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Notice
Completed Date: 08/27/2014
Comments: Public Notice informing Sandpiper Townhome Complex community about meeting to be held on August 20, 2014, to explain the results of the indoor air sampling, proposed next steps in addressing this issue and answering questions from the public.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/18/2014
Comments: The treated groundwater discharge line s flow meter and totalizer (FI-FQI-TW) recorded that 17,900 gallons of water was processed through the remediation system during the July 2014 reporting period

SINGER FRIDEN (Continued) **S101272670**

from June 30, 2014 to July 31, 2014.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 10/26/2012
Comments: Work Notice was distributed to all homeowners in the subdivision, posted and placed on the HOA website.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 02/13/2014
Comments: The total volume of treated water for the fourth quarter 2013 and during the 2013 monitoring period was 210,400 and 838,000 gallons, respectively. The total volume treated since the remediation system began operation on May 4, 2001, was 191,435,406 gallons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/14/2014
Comments: Groundwater treatment system continues to treat low volumes of water with consistent concentrations of VOC's in the influent and non-detect results in effluent.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/18/2013
Comments: The GWTS was operated and discharge was in compliance with the NPDES permit this quarter. VOC's in the influent were around 100 ppb and non-detect in the effluent.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 12/16/2013
Comments: WTS operates in compliance with the NPDES permit. Volume treated this month was 74,900m gallons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Design - Preliminary/Intermediate
Completed Date: 09/16/2013
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 09/23/2013
Comments: Based on a comparison of VOC concentrations measured during previous sampling events with concentrations measured during the semiannual 2013 event, VOC concentrations have generally decreased over time. However, VOC concentrations in many of the Site s wells have fluctuated over time and are likely due to one or more of the following conditions: seasonal variation of groundwater elevations,

SINGER FRIDEN (Continued) **S101272670**

changing groundwater flow dynamics as extraction well pumps are turned off or on, and redistribution of dissolved contaminant mass over time. Additionally, enhanced in-situ bioremediation pilot tests in the areas of wells GW-1A, GW-3, EW-6, and EW-8 have caused VOC concentrations in these wells to vary significantly.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 02/04/2014
Comments: The report summarizes the annual 2013 groundwater monitoring data collected at the Site. The results were within historic ranges for chlorinated volatile organic compounds. Naturally-occuring parameters were also measured for use in design of future remedies such as insitu-bioremediation.

Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 12/18/2020
Comments: Fieldwork activities completed on December 18, 2020

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/06/2021
Comments: Based on the findings of the Report, groundwater elevation and potentiometric surface data indicate potential vertical gradients between the four water-bearing zones at the Site, except for wells installed in the Yerba Buena Aquitard (Shallow Regional Aquitard), which are significantly deeper than the other wells. Concentrations of primary and other volatile organic compounds (VOCs) reported during historical sampling events were compared with the concentrations reported during the December 2020 sampling event. Analytical results from the December 2020 sampling event indicate that VOC concentrations have generally stabilized or decreased over time. However, when compared to the June 2020 results, trichloroethene increased in monitoring wells EW-6 and EW-7 from 630 micrograms per liter (g/l) to 1,400 g/l and 17 g/l to 110 g/l, respectively. VOC concentrations increases and fluctuations are likely due to the following conditions: (1) seasonal variation of groundwater elevations and flow conditions and (2) redistribution of the dissolved contaminant mass in saturated porous media over time.

depressurization system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 10/17/2019
Comments: A combination of geophysical methods was used to meet the objectives of the subsurface geophysical surveys as described in the 2019 Subsurface Geophysical Survey workplan. The selected geophysical survey methods were electromagnetic line locating, metal detection, ground penetrating radar, and total field magnetic. The selected geophysical methods used in each of the five survey areas at former Singer-Friden Site depended on the nature of the suspected targets and the available site access. Subsurface geophysical surveys results identified notable evidence of subsurface features at the central portion of Cornwall Way across the Sandpiper Townhome Complex s Pool House. These subsurface features are likely a shallow backfilled catch basin and a buried metallic object. Subsurface geophysical surveys did not identify notable evidence of subsurface features at the other four survey areas.

Completed Document Type: Public Participation Plan / Community Relations Plan
Completed Date: 06/30/2022
Comments: This Public Participation Plan (PPP) was prepared by the Department of Toxic Substances Control (DTSC) for the investigation and remediation of contaminations to be conducted at the former Singer-Friden (Site) in San Leandro, California. DTSC policy requires public participation throughout the cleanup process. One aspect of DTSC's public participation process is the preparation of a Public Participation Plan. This PPP is an update to the 2013 Public Participation Plan to incorporate current information and the status of the cleanup to date.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 02/27/1996
Comments: During installation of the extraction and treatment system conveyance piping in December 1995, potentially contaminated soil was encountered adjacent to the excavation for the vault box in the intersection of Heathrow Place and Cornwall Way. Pursuant to Task Order No. 2-085-11.0-200251 issued under contract No. 91-T0085, DTSC retained URS Consultants, Inc. (URS) to perform a soil removal action at the Singer Friden site. Soil excavation extended to approximately 5 feet below grade surface. The soil quantity to be removed was estimated to be approximately 25 cubic yards. The excavation was backfilled on February 11 and 12, 1996. Class 2 gravel fill was placed in the excavation in approximately 8-inch lift and compacted with a hand-held Wacker. Final grading and asphalting was completed on February 14, 1996.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 008
Completed Document Type: Monitoring Report
Completed Date: 09/14/2018
Comments: This letter report summarizes the air sampling event performed on May 29 through June 5, 2018 at Unit 008 within the Sandpiper Townhouse Complex. The tetrachloroethene (PCE) concentration detected during the May 2018 event was similar to the concentrations detected during the May and December 2017 air sampling events. The concentrations have not changed significantly since the sub-slab depressurization system was installed in October 2017. ERRG, DTSC's contractor, recommended in the report that a variable speed fan or second fan be installed to increase suction and reduce PCE concentrations in indoor air.

Completed Sub Area Name:	Not reported
Completed Document Type:	State/Federal Funded Site Contract
Completed Date:	10/11/2021
Comments:	ERRG MSA Contract 17-T4306 A2 extended term end until October 31, 2022.
Completed Area Name:	SITES WITH NO OPERABLE UNIT

SINGER FRIDEN (Continued) **S101272670**

Completed Sub Area Name: Unit 006
Completed Document Type: Correspondence
Completed Date: 11/30/2021
Comments: Transmittal correspondence to Unit 006 resident about work summary report to abate fan system s noise emission. Confidential information redacted.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 023
Completed Document Type: Access Agreement
Completed Date: 03/17/2023
Comments: Right to Enter Agreement (Access Agreement) to install a sub-slab depressurization system at Unit 023.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 07/07/2022
Comments: Letter distributed to Sandpiper Townhome Complex community members offering a voluntary testing of indoor air quality at residences located in the Sandpiper Townhome Complex at no cost.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 001
Completed Document Type: Correspondence
Completed Date: 02/18/2021
Comments: Email sent to Unit 001 property owner informing status of sub-slab depressurization annual operation and maintenance schedule/activities. Property owner information redacted due to confidentiality.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 05/20/2022
Comments: Correspondence informs resident that 2204/2298 Heathrow Place will be partially restricted during groundwater monitoring well installation activities.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 004
Completed Document Type: Correspondence
Completed Date: 02/18/2021
Comments: Email sent to Unit 004 property owner informing status of sub-slab depressurization annual operation and maintenance schedule/activities. Property owner information redacted due to confidentiality.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 002
Completed Document Type: Correspondence
Completed Date: 02/18/2021
Comments: Email sent to Unit 002 property owner informing status of sub-slab depressurization annual operation and maintenance schedule/activities. Property owner information redacted due to confidentiality.

SINGER FRIDEN (Continued) **S101272670**

Completed Area Name:	SITES WITH NO OPERABLE UNIT
Completed Sub Area Name:	Unit 003
Completed Document Type:	Correspondence
Completed Date:	02/18/2021
Comments:	Email sent to Unit 003 property owner informing status of sub-slab depressurization annual operation and maintenance schedule/activities. Property owner information redacted due to confidentiality.

Completed Area Name:	SITES WITH NO OPERABLE UNIT
Completed Sub Area Name:	Unit 006
Completed Document Type:	Correspondence
Completed Date:	04/08/2021
Comments:	Email sent to Unit 006 property owner informing about sub-slab depressurization system (Fan System) annual inspection scheduling. Property owner information redacted due to confidentiality.

Completed Area Name:	SITES WITH NO OPERABLE UNIT
Completed Sub Area Name:	Unit 007
Completed Document Type:	Correspondence
Completed Date:	04/08/2021
Comments:	Email sent to Unit 007 property owner informing about sub-slab depressurization system (Fan System) annual inspection scheduling. Property owner information redacted due to confidentiality.

Completed Area Name:	SITES WITH NO OPERABLE UNIT
Completed Sub Area Name:	Unit 002
Completed Document Type:	Correspondence
Completed Date:	01/10/2022
Comments:	DTSC correspondence contacting Unit 002 homeowner to schedule annual inspection of fan system (sub-slab depressurization system) installed outside Unit 002 to mitigate the indoor air quality.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	State/Federal Funded Site Field Order
Completed Date:	01/11/2022
Comments:	The purpose of this field order is to provide funds to locate monitoring well P-3 and collect groundwater samples at this well according to Singer Friden s groundwater monitoring plan. P-3 was installed on Washington Boulevard across from Singer Friden s main access gate. ERRG staff was unable to visually locate P-3 during December 2021 groundwater sampling activities. It is believed that P-3 casing cover has been concealed with asphalt pavement material.

Comments: Certification letter summarizes construction of sub-slab depressurization system activities conducted on May 1 through May 9, 2017, with follow-up construction activities conducted on August 24 and 25, 2017, at Unit 007, within the Sandpiper Townhome Complex.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Five-Year Review Reports
Completed Date: 05/18/2012
Comments: According to the data reviewed, the remedy is functioning as intended by the RAP; however, VOCs in the soil gas is not addressed with the current remedy, therefore additional assessment needs to be done to address the soil gas in the central portion of the Site. The GWTS has significantly reduced the VOC concentrations in the ground water; however the leveling off of VOC concentration trends in the past several years suggests that ground water extraction with the current system alone will take many years of operation to achieve MCLs at the Site, especially in the FGU-shallow. Enhanced in-situ bioremediation pilot studies were effective in reducing VOC concentrations in groundwater, therefore, targeted in-situ methods will be effective in reducing the areas of highest VOC concentration and monitored natural attenuation (MNA) can replace active remediation for eventual MCL attainment.

Completed Document Type: Operation and Maintenance Report
Completed Date: 02/28/2014
Comments: The GWTS operated in compliance with the NPDES permit.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 04/05/2012
Comments: According to the indoor air results, the screening level cancer risks are: 2.2 x 10-6 for PCE and 4.3 x 10-6 for TCE (using the new toxicity criterion for TCE). Since vinyl chloride has been detected in soil gas, assuming vinyl chloride (VC) could be present in indoor air at its reporting limit of 0.042 ug/m3, the risk for vinyl chloride would be 1.4 x 10-6. The cumulative risk for TCE, PCE and VC is 7.9 x 10-6, still within the acceptable risk range. However, sub surface soil gas source remediation need to be conducted.

Completed Date: 06/30/2022
Comments: Groundwater sampling conducted between June 28-June 30.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 08/21/2020
Comments: Based on the findings of the Report, groundwater elevation and potentiometric surface data indicate potential vertical gradients between the four water-bearing zones at the Site. Concentrations of primary and other volatile organic compounds (VOCs) reported during historical sampling events were compared with the concentrations reported during the June 2020 sampling event. Analytical results indicate that VOC concentrations have largely stabilized or decreased over time, with occasional increases and fluctuations likely due to one or more of the following conditions: (1) seasonal variation of groundwater elevations and flow conditions and (2) redistribution of the dissolved contaminant mass in saturated porous media over time. Additionally, enhanced in-situ bioremediation pilot tests conducted in the areas near to the wells GW-1A, GW-3, EW-6, and EW-8 have caused VOC concentrations in these wells to vary significantly.

Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 10/10/2018
Comments: Contract 17-T4416 Work Order No, 1 was fully executed on October 10, 2018. The Work Order directs ERRG to perform indoor air and sub-slab depressurization system effluent sampling; install floor sealant and air sealing in a residence to determine the effectiveness in reducing volatile organic compound concentrations and prepare a work documenting the work; and conduct operation and maintenance of sub-slab depressurization systems installed at individual residences; conduct semi-annual groundwater monitoring; and prepare and implement a workplan for a soil gas survey.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 006
Completed Document Type: Correspondence
Completed Date: 05/18/2017
Comments: One indoor air sample were collected at Unit 006. Based on the indoor air sampling results, all primary VOCs (TCE, PCE and VC) were found at a concentration lower than the residential air screening level.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Project Management
Completed Date: 06/30/2021
Comments: Activity completed on 6/30/2021.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 010
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: Two indoor air samples were collected from Unit 010 bathroom. The two indoor air samples consisted of one primary and one duplicate sample. The duplicate sample was used to confirm the validity of the primary sample results. Based on the indoor air sampling results, trichloroethene was found at a concentration above the residential air screening level.

SINGER FRIDEN (Continued) **S101272670**

Completed Area Name:	SITES WITH NO OPERABLE UNIT
Completed Sub Area Name:	Unit 004
Completed Document Type:	Correspondence
Completed Date:	01/13/2020
Comments:	Three samples were collected from Unit 004. Two samples (indoor air) were collected from Unit 004 s bathroom and living room. The third sample (effluent sample) was collected outside at the sub-slab depressurization system s exhaust pipe. Based on the October 2019 indoor air sampling results, vinyl chloride was the only the chemical of concern found in the residence indoor air with concentrations above the residential air screening level.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	State/Federal Funded Site Work Order
Completed Date:	01/23/2020
Comments:	Work Order Amendment to Engineering/Remediation Resources Group to perform building foundation inspection in up to 25 townhome units at the Site.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Correspondence
Completed Date:	09/17/2018
Comments:	Informational letter indicating the new assigned project manager.
Completed Area Name:	SITES WITH NO OPERABLE UNIT
Completed Sub Area Name:	Unit 003
Completed Document Type:	Correspondence
Completed Date:	09/17/2018
Comments:	Informational letter indicating the new assigned project manager.
Completed Area Name:	SITES WITH NO OPERABLE UNIT
Completed Sub Area Name:	Unit 007
Completed Document Type:	Correspondence
Completed Date:	01/13/2020
Comments:	A total of five samples were collected at Unit 0007. Two indoor air samples were collected from Unit 007 s bathroom and kitchen. Two effluent samples were collected at Unit 007 s fan system s exhaust pipes along the rear southwestern exterior wall of your home, and the northeastern wall of your home s garage. One ambient air sample was collected at Unit 007 s back yard. Based on the October 2019 indoor air sampling results, the only chemical of concern found at Unit 007 with concentrations above the residential air screening level (0.46 micrograms per cubic meter [g/m3]) was tetrachloroethene.
Completed Area Name:	SITES WITH NO OPERABLE UNIT
Completed Sub Area Name:	Unit 013
Completed Document Type:	Correspondence
Completed Date:	01/13/2020
Comments:	One indoor air sample was collected from Unit 013 s bathroom. Based on the indoor air sampling results, none of the primary chemicals of concern (trichloroethene, tetrachloroethene and vinyl chloride) was found at your residence s indoor air above the residential air screening level.
Completed Area Name:	SITES WITH NO OPERABLE UNIT

SINGER FRIDEN (Continued) **S101272670**

Completed Sub Area Name: Unit 009
Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: Pilot Study involved collection soil vapor, sub-slab vapor and indoor air samples before and after the application of Land Science Technologies Retro-Coat on the exposed concrete slab foundation of Unit 009.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 009
Completed Document Type: Correspondence
Completed Date: 08/15/2017
Comments: Two indoor samples were collected at Unit 009. One indoor air sample was collected when the residence was unoccupied and HVAC off, and the second sample was collected under normal occupancy and HVAC on. Under normal occupancy and HVAC operation, all primary VOCs were below DTSC's health-based screening levels. The results while the house was unoccupied and HVAC off (i.e. no air exchange) do not indicate a need for an active vapor mitigation system

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 006
Completed Document Type: Correspondence
Completed Date: 09/06/2017
Comments: One indoor air sample were collected at Unit 006. Based on the indoor air sampling results, tetrachloroethene was found at a concentration above the residential air screening level.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Field Order
Completed Date: 08/27/2020
Comments: The purpose of this field order is to repair the former groundwater extraction treatment system (GWETS) well-vaults.

SINGER FRIDEN (Continued) **S101272670**

Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 05/24/2022
Comments: Work Notice informs Sandpiper Townhome Community about installation of three (3) groundwater monitoring wells and one (1) soil gas monitoring well at the Site for future sampling.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/12/2023
Comments: Concentrations of primary and other volatile organic compounds (VOCs) reported during historical sampling events were compared with the concentrations reported during the December 2022 sampling event. Analytical results from December 2022 sampling event indicate that VOC concentrations have generally stabilized or decreased over time. Review of groundwater elevation and potentiometric surface data of dual-nested groundwater monitoring wells at GW-5 and GW-6, which penetrate the two upper water-bearing zones, both show downward vertical gradients between the two upper water-bearing zones. Observed groundwater elevations and inferred potentiometric surface data of the four water-bearing zones and Shallow Regional Aquitard are included in the semiannual groundwater monitoring report.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 006
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/24/2021
Comments: 2021 Work Summary Report for Unit 006 at the Sandpiper Townhouse Complex report (Report) presents a summary of work conducted at Unit 006 during the two site visits in July and August 2021. The purpose of the work was to address the excessive noise generated by the fan system installed at Unit 006 to mitigate vapor intrusion from soil gas.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Manual
Completed Date: 08/01/2001
Comments: Operations and Maintenance Manual for groundwater extraction and treatment system completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 07/02/2008
Comments: This pilot test indicates that biostimulation through emulsified oil injections and bioaugmentation with Dehalococcoides ethenogenes culture KB-1TM can be an effective remedy for the reduction of VOCs at the Site. The pilot test results also suggest that biostimulation can be implemented at the Site without significantly increasing risks associated with VOC vapor intrusion.

SINGER FRIDEN (Continued) **S101272670**

Comments:	A total of 1,388,600 gallons of water was treated by the system during the discharge period from November 30, 2010 to January 3, 2011. Not reported
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	06/30/2011
Comments:	Injections completed.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	03/16/2012
Comments:	The total volume of treated water for the fourth quarter 2011 and during 2011 was 3,258,400 gallons and 13,379,400 gallons, respectively.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	05/24/2012
Comments:	The total volume of treated water for the first quarter 2011 was 1,947,400 gallons.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	08/16/2012
Comments:	2nd Quarter 2012 NPDES and GWM Reports
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	11/19/2012
Comments:	The Groundwater extraction system operated in compliance with the NPDES permit and treated 146,000 gallons of groundwater this quarter.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	03/11/2013
Comments:	The groundwater extraction treatment system operated in compliance with the NPDES discharge permit. The total volume treated in the fourth quarter was 290,200 gallons, removing 0.103 kilograms of VOC's. Not reported
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Pilot/Treatability Study Report
Completed Date:	03/19/2012
Comments:	The effectiveness of the 3DMe injection pilot study and the extent and concentration of the contaminant plume near extraction wells EW-6 and EW-8 were evaluated over two post-injection quarterly groundwater monitoring events. Multiple lines of evidence of improved anaerobic or reducing conditions and degradation of chlorinated VOCs were noted. Continued groundwater monitoring will be required to assess

SINGER FRIDEN (Continued) **S101272670**

ongoing performance.

Completed Document Type: Fieldwork
Completed Date: 05/06/2009
Comments: In-situ injections of emulsified oil and bacteria completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/04/2009
Comments: A total of 879,000 gallons of water was treated by the system during the discharge period from June 9, 2009 until June 22, 2009. Implementation of follow-up actions based on the recommendations of the Five-Year Review Report continued.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/04/2009
Comments: A total of 1,925,500 gallons of water was treated by the system during the discharge period from August 31, 2009 until September 29, 2009. Implementation of follow-up actions based on the recommendations of the Five-Year Review Report continued.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 04/05/2010
Comments: A total of 934,700 gallons of water was treated by the system during the discharge period from January 5, 2010 and February 2, 2010. Implementation of follow-up actions based on the recommendations of the Five-Year Review Report continued.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 05/14/2018
Comments: The 2018 groundwater monitoring event was completed. The depth to groundwater was measured in 20 monitoring wells. Groundwater samples were collected from the 20 monitoring wells and 9 former extraction wells using passive diffusion bags. Volatile organic compound (VOC)

SINGER FRIDEN (Continued) **S101272670**

concentrations reported during past groundwater sampling events were compared to those detected during the 2018 event. The comparison indicated that VOC concentrations have generally stabilized or decreased; however, VOC concentrations in may of the Site wells have fluctuated over time.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Five-Year Review Reports
Completed Date: 01/27/2020
Comments: Third Five-Year Review (FYR) Report consisted of a review of relevant documents, including operation and maintenance records, pilot study reports and monitoring data from June 2012 to July 2018. From June 2013 to June 2015, the groundwater sampling frequency changed from quarterly to a semi-annual basis. Seventeen wells were sampled in the spring of each year and 21 wells in the fall. After June 2015, groundwater monitoring did not resume until the groundwater monitoring event in May 2018. Third FYR Report recommended the following: i) Conduct an additional soil gas survey at the Site. ii) Prepare an amendment to 1996 RAP to: (a) change the selected groundwater remedy for the Site from groundwater extraction and treatment to enhanced in-situ bioremediation; and (b) add soil vapor extraction (SVE) and treatment as part of the remedy to address volatile organic compounds (VOC)-impacted soil gas. iii) Install an SVE system to extract soil gas from portions of the Site where soil gas surveys reported soil gas concentrations above federal and state screening levels. iv) Conduct groundwater sampling in the Site s monitoring well network on a semi-annual basis. v) Implement enhanced in-situ bioremediation at hot spots areas of the VOC-impacted groundwater plume and at areas downgradient of the hot spots areas. vi) Implement an expanded groundwater sampling protocol as needed to monitor enhanced in-situ bioremediation effectiveness. vii) Conduct groundwater monitoring in the intermediate (INZ-1, INZ-2 and INZ-3) and deep (DW-1, DW-2 and DW-3) zone aquifers on a semi-annual basis. viii) Conduct groundwater sampling in drinking water wells in areas immediately downgradient and adjacent to the Site.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 009
Completed Document Type: Fieldwork
Completed Date: 06/04/2018
Comments: Indoor air sampling completed in unit prior to proceeding with Retro Coat pilot study.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 09/12/2018
Comments: Groundwater monitoring had not been performed at the Site since 2015. Comparison of results from the second quarter 2018 groundwater monitoring event with historical data show that the volatile organic compounds (VOC) tetrachloroethene, trichloroethene and vinyl chloride have remained undetectable (< 0.5 micrograms per liter) in samples collected from the deep and intermediate zone aquifer, while results from the shallow aquifer show that the concentrations of these VOCs have stabilized, decreased or increased over time. The reasons for this different behavior in the shallow aquifer are likely phenomena

SINGER FRIDEN (Continued) **S101272670**

associated with historical in-situ remediation efforts implemented at the Site.

All confidential information is redacted.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Well Completion Report
Completed Date: 11/16/2022
Comments: The dual-nested groundwater monitoring wells (GW) GW-6A/ GW-6B and GW-5A/GW-5B installed on June 9th and 10th, 2022; and June 16th, 2022, respectively. The dual-nested GWs consist of 2-inch-diameter schedule 40 polyvinyl chloride (PVC) casing with 0.010 machine-slotted well screen. Each well had a 1-foot silt trap (sump) consisting of blank casing with a bottom plug installed below the screened interval. Shallow wells were noted as A, and deeper wells were noted as B for each borehole. Fifteen-foot screen intervals were set in wells GW-5A and GW-6A, and 10-foot screen intervals were set in wells GW-5B and GW-6B One triple-nested soil gas monitoring well, SGW-36, installed on June 17, 2022, as a temporary soil gas monitoring well according with three well tips located at 5, 10, and 15 feet below ground surface (bgs). The three well tips were color coded as follows: 15 blue, 10 green, and 5 red. Each soil gas monitoring well probe consists of a stainless-steel well tip attached to the end of 0.25-inch-diameter Teflon tubing placed in the center of a 2-foot-thick sand pack. Future soil gas sampling conducted at SGW-36 shall include Helium as a quantitative tracer testing and shall be performed by shrouding to confirm its functionality. If Helium is detected above the maximum allowed concentration (5 %) during a quantitative tracer testing, SGW-36 will be elected to be decommissioned.

SINGER FRIDEN (Continued) **S101272670**

Completed Date:	03/21/2023
Comments:	Soil Gas Monitoring Report summarizes results and findings of a soil gas monitoring event performed in October 2022. Soil gas samples were collected from triple-nested soil gas wells (SGW) at depths of 5, 10, and 15 feet below grade surface (bgs) at seven (7) SGW locations, and at 5 and 15 feet bgs at 29 SGW locations. The most prevalent detected volatile organic compounds (VOCs) were tetrachloroethene (PCE) and trichloroethene (TCE). PCE was detected in all 90 samples. PCE results for all 90 samples exceeded the screening level of 15.33 micrograms per cubic meter (μg/m3), with concentrations ranging from 43 g/m3 at well SGW-35-15 to 76,000 μg/m3 at well SGW-17-15. TCE was detected in 81 of 90 samples. TCE results for 69 samples exceeded the screening level of 16 μg/m3, with concentrations ranging from 2.7 μg/m3 at well SGW-35-5 to 14,000 μg/m3 at well SGW-22-15.

Completed Document Type: Operation and Maintenance Report
Completed Date: 03/18/2010
Comments: The treatment system removed an estimated 15.66 pounds of VOCs, and discharged 17,225,300 gallons of treated groundwater into the San Leandro storm sewer system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/04/2009
Comments: The treatment system removed an estimated 5.99 pounds of VOCs, and discharged 7,256,800 gallons of treated groundwater into the San Leandro storm sewer system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 12/31/2009
Comments: A total of 238,600 gallons of water was treated by the system during the discharge period from October 27, 2009 to December 2, 2009. Implementation of follow-up actions based on the recommendations of the Five-Year Review Report continued.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 03/18/2010
Comments: A total of 552,000 gallons of water was treated by the system during the discharge period from December 2, 2009 to January 5, 2010. Implementation of follow-up actions based on the recommendations of the Five-Year Review Report continued.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/26/2010
Comments: The treatment system removed an estimated 5.6 lbs pounds of VOCs, and discharged 7,925,700 gallons of treated groundwater into the San Leandro storm sewer system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/02/2010

SINGER FRIDEN (Continued) **S101272670**

Comments: The treatment system removed an estimated 4 pounds of VOCs, and discharged 5,388,100 gallons of treated groundwater into the San Leandro storm sewer system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 09/08/2009
Comments: A total of 2,691,500 gallons of water was treated by the system during the discharge period from June 22, 2009 until July 28, 2009. Implementation of follow-up actions based on the recommendations of the Five-Year Review Report continued.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 10/12/2009
Comments: A total of 2,609,800 gallons of water was treated by the system during the discharge period from July 28, 2009 until August 31, 2009. Implementation of follow-up actions based on the recommendations of the Five-Year Review Report continued.

Completed Area Name: PROJECT WIDE

Completed Document Type: Other Report
Completed Date: 08/25/2009
Comments: Final NPDES Permit issued by Water Board.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/30/2010
Comments: The treatment system removed an estimated 5.8 lbs pounds of VOCs, and discharged 7,607,300 gallons of treated groundwater into the San Leandro storm sewer system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 03/15/2011
Comments: The total volume of treated water for the fourth quarter 2010 and during 2010 was 6,019,400 gallons and 26,940,500 gallons, respectively.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/07/2011
Comments: The total volume of treated water for the first quarter 2011 was 3,122,200 gallons.

SINGER FRIDEN (Continued) **S101272670**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/16/2011
Comments: The total volume of treated water for the second quarter 2011 was 3,889,900 gallons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Plan Amendment
Completed Date: 07/19/2010
Comments: Addendum to O & M plan approved based on 5 year review recommendations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 02/25/2020
Comments: Soil gas analytical results for the 70 soil gas samples collected from the 35 nested soil gas monitoring wells installed for this project indicate widespread detections of trichloroethene (TCE) and tetrachloroethene (PCE) across the Site on both investigated depths, 5 and 15 feet below ground surface. The potential indoor air concentrations resulting from measured soil gas concentrations were calculated by considering a generic attenuation factor of 0.03. The results indicate that predicted indoor air concentrations of PCE and TCE may exceed the residential air screening levels in the vicinity of most of the soil gas monitoring wells. The risks of volatile organic compounds vapor intrusion (VI) into nearby buildings may also be augmented by the presence of preferential VI pathways such as subsurface utility corridors and cracks in concrete building foundations. These results indicate that further investigation of site conditions is warranted to further evaluate potential risks to human health at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 10/03/2013
Comments: Technical Memorandum summarizes the August 2013 soil vapor well sampling event at the Site. The work was conducted under Work Order No. 001 of Contract No. 09-T9128 A3. Soil vapor data continues to show trichloroethene concentrations up to 200 micrograms per liter in the investigated soil vapor monitoring wells.

Completed Area Name: PROJECT WIDE

Completed Document Type: Technical Report
Completed Date: 08/08/2022
Comments: Sub-Slab Depressurization System (SSDS) Design Review and Recommendations technical memorandum (Technical Memorandum) presents the background, SSDS design and performance evaluation, and potential improvement options to installed SSDS at seven townhome units at the Site.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 006
Completed Document Type: Operation and Maintenance Report
Completed Date: 12/20/2022
Comments: The Report summarizes the operation and maintenance (O&M) activities performed in October 2022 on the sub-slab depressurization system (SSDS) installed at Unit 006 at the Former Singer Friden Facility. The O&M activities consisted of visual inspection of the SSDS and its components, and collection of one (1) indoor air sample at Unit 006 s kitchen area. The O&M activities were performed in general accordance with the Work Plan for Diagnostic Testing and Operation and Maintenance Plan of Existing SSD Systems at the Former Singer-Friden Site . The inspection included noting any malfunctions, irregularities, leaks, or collection of moisture within the SSDS or ductwork. One (1) indoor air sample was collected on October 21, 2022, in accordance with ERRG s 2014 Indoor Air Sampling Work Plan Addendum .

Completed Date: 10/05/2020
Comments: Supplemental Groundwater Monitoring Well Location Evaluation Report (Report) provides construction design recommendations to install three dual completion groundwater monitoring wells at three distinct locations at the site. Construction design recommendations are based on August/September 2019 soil gas sampling results which indicated the presence of volatile organic compounds in areas where groundwater has not been routinely monitored.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 07/14/2022
Comments: Sampling activities completed on July 14, 2022. Nested soil gas monitoring well SGW-36 sampled on June 28, 2022. Dual-completion groundwater monitoring wells GW-5 and GW-6 sampled on July 14, 2022.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

SINGER FRIDEN (Continued) **S101272670**

Completed Document Type: Operation and Maintenance Report
Completed Date: 12/15/2021
Comments: Addendum - Operations and Maintenance Summary Report for Sub-Slab Depressurization Systems (SSDS) summarizes actions taken to address June 2021 O&M Summary Report recommendations and DTSC guidance as following: 1. Replace SSDS fans at Units 003 and 006. 2. Replace the existing SSDS fan shroud at Unit 006 with a shroud similar to the one currently in place at Unit 008 to reduce noise emission. 3. Perform annual O&M maintenance on the SSDS fan installed at Unit 007 s detached garage area. Recommendations were implemented and property documented in the Report. Additionally, Report recommends adjusting SSDS variable speed fan installed in the Unit 007 s detached garage area and replacing SSDS non-adjustable fan installed in the Unit 007 s backyard of Unit 007 If the flow rate of variable and non-adjustable fans that remain outside the specified range as determined in the 2015 Diagnostic Testing and O&M of Existing SSDS Work plan. Report s recommendation will be implemented during the next annual O&M inspection in January 2022.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 09/06/2022
Comments: The Report documents results of soil gas samples collected at the newly installed triple-nested soil gas monitoring well (SGW-36) at depths of 5, 10, and 15 feet below ground surface on June 28, 2022. Soil gas results reported presence of primary chemical of concerns (e.g., tetrachloroethene, trichloroethene, and vinyl chloride), with maximum concentrations of 660 micrograms per cubic meter (g/m3), 11 g/m3 and 0.38 g/m3, respectively. Helium was detected in all soil gas samples with concentrations ranging from 0.33 percentage (%) to 94%. Because of significant ambient air breakthrough occurred during sampling, soil gas sample results are not suitable for site characterization delineation or human health risk assessment purposes. SGW-36 should be decommissioned if reported leak cannot be corrected or monitoring well was not constructed according to July 2015 DTSC Advisory: Active Soil Gas Investigations recommendations.

Completed Date:	05/18/2021
Comments:	Work plan describes the investigation methods to assess the presence of volatile organic compounds (VOCs) in sewer vapor in sanitary lines in three investigation focus areas at the Singer Friden site
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	03/17/2022
Comments:	Review of groundwater elevation and potentiometric surface data cannot confirm potential vertical gradients between the four water-bearing zones at the Site as reported in previous semiannual groundwater monitoring reports. Nested monitoring wells that penetrate the two upper water-bearing zones are scheduled be installed at the Site in the first half of 2022. Concentrations of primary and other volatile organic compounds (VOCs) reported during historical sampling events were compared with the concentrations reported during the December 2021 and January 2022 sampling event. Analytical results from the December 2021 and January 2022 sampling event indicate that VOC concentrations have generally stabilized or

SINGER FRIDEN (Continued) **S101272670**

decreased over time. Generally, VOC concentrations have shown occasional increases and fluctuations due to one or more of the following conditions: (1) seasonal variation of groundwater elevations and flow conditions, (2) removal of the groundwater extraction treatment system, and (3) redistribution of the dissolved contaminant mass in saturated porous media over time

Comments: Soil Gas Monitoring Report to summarize the soil gas monitoring event conducted at Singer Friden site in August 2021. Tetrachloroethene (PCE) and trichloroethene (TCE) have generally decreased or remained stable in the wells monitored in the August 2021 soil gas monitoring event when compared to the results of August 2019 soil gas monitoring event. Significant increases in the concentration of PCE occurred in the sample collected from SGW-13 at 5 feet below ground surface (bgs) and from the samples collected from SGW-29 at both 5 and 15 feet bgs. TCE concentration increases occurred in the sample collected from SGW-29 at 5 feet bgs.

Completed Document Type:	Technical Report
Completed Date:	11/24/2021
Comments:	Not all utilities are shown. Water pipes were mostly non-conductive, and therefore not locatable. Many of the water valves could not be accessed; thus, depths to top of valve nuts could not be determined. Some sewer and natural gas laterals were not accessible and therefore not located. Depths shown are to center of conductive utility and are generally +/-10% of actual depth, when not distorted by adjacent conductors. Accuracy of electronic depth decreases when adjacent utilities are located within 5 ft. Critical depths require verification by potholing. Sanitary and storm depths are measured from rim to invert level. Basis of Bearings: Horizontal and Vertical Survey based on coordinates of monitoring wells provided by ERRG.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Litigation Support
Completed Date: 12/22/2023
Comments: Dann Bullwinkel, a resident of Trailer Haven Park, transmitted a handwritten letter/report to Singer Fridenn++s PM, Moises Carvalho, on December 12/19/2023. The handwritten letter/report includes groundwater and potable water (East Bay Municipal Utility District [EBMUD] treated surface water) sample analytical results. The groundwater samples were collected from a production well located on the Trailer Haven Park property. The groundwater and potable water results are documented in the 2021 Consumer Confidence Report, dated June 30, 2022. A review of the summarized groundwater analytical results (Tables 1 through 6) indicates no analytes exceeded their respective Maximum Contaminant Levels (MCLs) or Maximum Contaminant Level Goals (MCLGs), if applicable. However, it is important to note that these tables represent a combined dataset from December 2013 to September 2021. The report further indicates that December 2021 samples (results not tabulated) were analyzed for perchlorate, radium 228, and 65 volatile organic compounds (VOCs), and all analytical results were below detectable levels. Similarly, no exceedances were reported for EBMUD-treated surface water samples. While the report doesnn++t specify the groundwater sampling methodology used to collect the samples, production well spigot sampling (if that is the case) can present quality concerns for VOCs due to potential degasification during collection.

Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 06/21/2017
Comments: Contract amendment to add money and extend the contract through September 30, 2018. Work includes continued groundwater monitoring and as-needed installation of sub-slab systems.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 023
Completed Document Type: Site Characterization Report
Completed Date: 05/12/2023
Comments: The Technical Memorandum summarizes supplemental site characterization activities performed in March 2023 at Unit 023 and adjacent locations at the former Singer Friden Facility. Supplemental site characterization activities consisted of collection of soil gas, indoor air, sub-slab soil gas, and sewer vapor samples as multiple lines of evidence to assess whether vapor intrusion interim mitigation measures are warranted at Unit 023. Based on the results of the supplemental site characterization that indicated relatively elevated concentrations of trichloroethene (TCE) in sewer vapor (sink P-traps) and sub-slab soil gas samples, DTSC recommended the installation of a sub-slab depressurization system at Unit 023 to mitigate the indoor air quality.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 12/15/2021
Comments: Sewer Vapor Investigation Report summarizes a sewer vapor investigation conducted in August 2021 at Singer Friden site (Site). The purpose of this investigation is to verify whether the sewer system present at the Site is acting as a preferential pathway/vapor conduit to carry tetrachloroethene (PCE) and trichloroethene (TCE) present in areas around SGW-13, SGW-16, and SGW-29 where high residual PCE/TCE mass was detected in the vadose zone during the August 2019 soil gas sampling effort. Sewer vapor samples collected from sewer manholes and cleanouts for both the grab and passive samples reported concentrations of PCE, TCE and chloroform in the sewer lines around SGW-13, SGW-16, and SGW-29. Evaluation of organochlorinated compounds reported in the sewer system at the Site will be made in subsequent assessment reports. Future assessment reports will compare historical and current soil gas results, and additional sewer vapor sample results to verify the potential sources of organochlorinated compounds detected in the sewer system at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 12/21/2021
Comments: MW-5 and P3 wells not sampled during December 2021 Semiannual Sampling Event. MW-5 well was covered by a PODS moving container.

SINGER FRIDEN (Continued) **S101272670**

DTSC was told that PODS will be in place until February 1st. P3 was unable to be located because the apparent location was paved over.

Completed Area Name: PROJECT WIDE

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 09/23/2013
Comments: Based on a comparison of VOC concentrations measured during previous sampling events with concentrations measured during the semiannual 2013 event, VOC concentrations have generally decreased over time. However, VOC concentrations in many of the Site s wells have fluctuated over time and are likely due to one or more of the following conditions: seasonal variation of groundwater elevations,

SINGER FRIDEN (Continued) **S101272670**

changing groundwater flow dynamics as extraction well pumps are turned off or on, and redistribution of dissolved contaminant mass over time. Additionally, enhanced in-situ bioremediation pilot tests in the areas of wells GW-1A, GW-3, EW-6, and EW-8 have caused VOC concentrations in these wells to vary significantly.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 02/04/2014
Comments: The report summarizes the annual 2013 groundwater monitoring data collected at the Site. The results were within historic ranges for chlorinated volatile organic compounds. Naturally-occuring parameters were also measured for use in design of future remedies such as insitu-bioremediation.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/06/2021
Comments: Based on the findings of the Report, groundwater elevation and potentiometric surface data indicate potential vertical gradients between the four water-bearing zones at the Site, except for wells installed in the Yerba Buena Aquitard (Shallow Regional Aquitard), which are significantly deeper than the other wells. Concentrations of primary and other volatile organic compounds (VOCs) reported during historical sampling events were compared with the concentrations reported during the December 2020 sampling event. Analytical results from the December 2020 sampling event indicate that VOC concentrations have generally stabilized or decreased over time. However, when compared to the June 2020 results, trichloroethene increased in monitoring wells EW-6 and EW-7 from 630 micrograms per liter (g/l) to 1,400 g/l and 17 g/l to 110 g/l, respectively. VOC concentrations increases and fluctuations are likely due to the following conditions: (1) seasonal variation of groundwater elevations and flow conditions and (2) redistribution of the dissolved contaminant mass in saturated porous media over time.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 12/03/2021
Comments: Based on the findings of the Report, groundwater elevation and potentiometric surface data indicate potential vertical gradients between the four water-bearing zones at the Site, except for wells installed in the Yerba Buena Aquitard (Shallow Regional Aquitard), which are significantly deeper than the other wells. Concentrations of primary and other volatile organic compounds (VOCs) reported during historical sampling events were compared with the concentrations reported during the June 2021 sampling event. Analytical results from the June 2021 sampling event indicate that VOC concentrations have generally stabilized or decreased over time. However, when compared to the December 2020 results, cis-1,2-dichloroethene concentrations increased from 350 micrograms per liter (g/l) to 610 g/l and trichloroethene concentrations decreased from 1,400 g/l to 980 g/l at well EW-6. All other VOCs at the remaining wells were generally stable relative to previous results.

Completed Document Type: Technical Report
Completed Date: 10/17/2019
Comments: A combination of geophysical methods was used to meet the objectives of the subsurface geophysical surveys as described in the 2019 Subsurface Geophysical Survey workplan. The selected geophysical survey methods were electromagnetic line locating, metal detection, ground penetrating radar, and total field magnetic. The selected geophysical methods used in each of the five survey areas at former Singer-Friden Site depended on the nature of the suspected targets and the available site access. Subsurface geophysical surveys results identified notable evidence of subsurface features at the central portion of Cornwall Way across the Sandpiper Townhome Complex s Pool House. These subsurface features are likely a shallow backfilled catch basin and a buried metallic object. Subsurface geophysical surveys did not identify notable evidence of subsurface features at the other four survey areas.

Completed Document Type: Technical Report
Completed Date: 02/27/1996
Comments: During installation of the extraction and treatment system conveyance piping in December 1995, potentially contaminated soil was encountered adjacent to the excavation for the vault box in the intersection of Heathrow Place and Cornwall Way. Pursuant to Task Order No. 2-085-11.0-200251 issued under contract No. 91-T0085, DTSC retained URS Consultants, Inc. (URS) to perform a soil removal action at the Singer Friden site. Soil excavation extended to approximately 5 feet below grade surface. The soil quantity to be removed was estimated to be approximately 25 cubic yards. The excavation was backfilled on February 11 and 12, 1996. Class 2 gravel fill was placed in the excavation in approximately 8-inch lift and compacted with a hand-held Wacker. Final grading and asphalting was completed on February 14, 1996.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 008
Completed Document Type: Monitoring Report
Completed Date: 09/14/2018
Comments: This letter report summarizes the air sampling event performed on May 29 through June 5, 2018 at Unit 008 within the Sandpiper Townhouse Complex. The tetrachloroethene (PCE) concentration detected during the May 2018 event was similar to the concentrations detected during the May and December 2017 air sampling events. The concentrations have not changed significantly since the sub-slab depressurization system was installed in October 2017. ERRG, DTSC's contractor, recommended in the report that a variable speed fan or second fan be installed to increase suction and reduce PCE concentrations in indoor air.

Completed Document Type: Operation and Maintenance Report
Completed Date: 04/07/2020
Comments: 2019 Operations and Maintenance Summary Report for Sub-Slab Depressurization Systems (Report) provides a summary of operation and maintenance (O&M) inspections on sub-slab depressurization systems (SSDSs) at Units 001, 002, 002, 004, 006, 007 and 008. O&M activities were done in general accordance with the Work Plan for Diagnostic Testing and Operation and Maintenance Plan of Existing SSD Systems at the Former Singer Friden Site. Final document has information redacted due to confidentiality. A non-redacted version of the Report is available at DTSC Berkeley Office File Room.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 06/24/2021
Comments: 2020 Operations and Maintenance Summary Report for Sub-Slab Depressurization Systems (Report) provides a summary of operation and maintenance (O&M) inspections on sub-slab depressurization systems (SSDSs) at Units 001, 002, 004, 004, 006, 007 and 008. O&M activities were done in general accordance with the Work Plan for Diagnostic Testing and Operation and Maintenance Plan of Existing SSD Systems at the Former Singer Friden Site. Final document has information redacted due to confidentiality. A non-redacted version of the Report is available upon request at DTSC Berkeley Office File Room.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 02/26/2020
Comments: Fact Sheet hand delivered to Sandpiper community during the Community Update Workshop Meeting held on February 29, 2020

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 03/06/2021
Comments: Fact Sheet informs the Sandpiper community about the status of environmental investigations planned at the former Singer Friden facility (Site) The Site is currently in the operation and maintenance phase of work. Supplemental environmental investigations are planned and necessary to help the DTSC better evaluate the implementation of additional cleanup measures at the Site. When implemented, additional cleanup measures will stop or reduce vapor intrusion of chemicals coming from soil and groundwater at the Site. These measures will improve indoor air quality of residences and

SINGER FRIDEN (Continued) **S101272670**

protect human health and the environment.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 009
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 11/15/2019
Comments: Letter report describes the activities conducted to implement a membrane coating (Retro-Coat) pilot study (Pilot Study) at the Unit 009, Former Singer-Friden Facility. Letter report describes findings of the Pilot Study.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Well Installation Workplan
Completed Date: 03/18/2021
Comments: Work Plan outlines the tasks to be performed during installation of three double-nested groundwater monitoring wells and one triple-nested soil gas monitoring well at the former Singer Friden Facility (Site). The project objective is to expand the Site s monitoring well network to further evaluate the nature and extent of volatile organic compounds (VOCs) in groundwater, soil, and soil gas throughout the Site. The Work Plan only discusses groundwater monitoring well installation. Installation of soil gas monitoring wells is described in the Site s soil gas investigation work plan (Soil Gas Investigation Work Plan, Sandpiper Townhome Complex, Former Singer Friden Facility, 2350/2450 Washington Avenue, San Leandro, California. July 2019).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 06/28/2021
Comments: Work Notice distributed to the Sandpiper Townhome Complex community about Supplemental Environmental Investigations activities that will be conducted at the Singer Friden site. The Supplemental Environmental Investigations will consist of the following activities: (1) Subsurface Utility Line Geophysical Survey; (2) Soil Gas Sampling; and (3) Sewer Gas Sampling.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 011
Completed Document Type: Technical Report
Completed Date: 04/07/2020
Comments: Unit 011 Foundation Inspection Report summarizes the visual inspection of the concrete slab foundation performed on February 7, 2019, at Unit 011 within the Sandpiper Townhouse Complex at the Former Singer Friden Facility.

SINGER FRIDEN (Continued) **S101272670**

Comments: First and Second Five-Year Review Reports Revised Update Fact Sheet provides a status of environmental cleanup efforts conducted at the former Singer Friden facility (Site) from March 2001 to May 2012. The Site is currently in the operation and maintenance phase of work, which requires DTSC to review available data every five years. The purpose of a Five-Year Review is to evaluate the implementation and performance of a remedy to determine if it is or will be protective of human health and the environment.

Completed Date: 12/22/2017
Comments: Certification letter summarizes construction of sub-slab depressurization system activities conducted on May 1 through May 9, 2017, with follow-up construction activities conducted on August 24 and 25, 2017, at Unit 007, within the Sandpiper Townhome Complex.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Five-Year Review Reports
Completed Date: 05/18/2012
Comments: According to the data reviewed, the remedy is functioning as intended by the RAP; however, VOCs in the soil gas is not addressed with the current remedy, therefore additional assessment needs to be done to address the soil gas in the central portion of the Site. The GWTS has significantly reduced the VOC concentrations in the ground water; however the leveling off of VOC concentration trends in the past several years suggests that ground water extraction with the current system alone will take many years of operation to achieve MCLs at the Site, especially in the FGU-shallow. Enhanced in-situ bioremediation pilot studies were effective in reducing VOC concentrations in groundwater, therefore, targeted in-situ methods will be effective in reducing the areas of highest VOC concentration and monitored natural attenuation (MNA) can replace active remediation for eventual MCL attainment.

Comments:	The GWTS operated in compliance with the NPDES permit.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Technical Report
Completed Date:	04/05/2012
Comments:	According to the indoor air results, the screening level cancer risks are: 2.2 x 10-6 for PCE and 4.3 x 10-6 for TCE (using the new toxicity criterion for TCE). Since vinyl chloride has been detected in soil gas, assuming vinyl chloride (VC) could be present in indoor air at its reporting limit of 0.042 ug/m3, the risk for vinyl chloride would be 1.4 x 10-6. The cumulative risk for TCE, PCE and VC is 7.9 x 10-6, still within the acceptable risk range. However, sub surface soil gas source remediation need to be conducted.

Comments: Second Semiannual 2019 Groundwater Monitoring Event occurred according to sampling schedule (every December).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 06/30/2022
Comments: Groundwater sampling conducted between June 28-June 30.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 08/21/2020
Comments: Based on the findings of the Report, groundwater elevation and potentiometric surface data indicate potential vertical gradients between the four water-bearing zones at the Site. Concentrations of primary and other volatile organic compounds (VOCs) reported during historical sampling events were compared with the concentrations reported during the June 2020 sampling event. Analytical results indicate that VOC concentrations have largely stabilized or decreased over time, with occasional increases and fluctuations likely due to one or more of the following conditions: (1) seasonal variation of groundwater elevations and flow conditions and (2) redistribution of the dissolved contaminant mass in saturated porous media over time. Additionally, enhanced in-situ bioremediation pilot tests conducted in the areas near to the wells GW-1A, GW-3, EW-6, and EW-8 have caused VOC concentrations in these wells to vary significantly.

Completed Document Type:	Work Notice
Completed Date:	08/01/2019
Comments:	Work Notice informing the community about the upcoming subsurface geophysical survey (geophysical survey) and soil gas investigation that will be conducted in the Singer Friden, Sandpiper Townhome Complex. Geophysical survey and soil gas investigation activities are scheduled from August 19, 2019 to September 6, 2019 between the hours of 8:00 A.M. and 5:00 P.M., weather permitting.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	11/02/2022
Comments:	Letter report summarizes first semiannual groundwater monitoring event performed in June and July 2022 at the former Singer Friden site. Concentrations of primary and other volatile organic compounds (VOCs) reported during historical sampling events were compared with the concentrations reported during the June/July 2022 sampling event. Analytical results from the June/July 2022 sampling event indicate that VOC concentrations have generally stabilized or decreased over

SINGER FRIDEN (Continued) **S101272670**

time. When compared to the December 2021 results, trichloroethene (TCE) concentrations decreased from 820 micrograms per liter (g/L) to 200 g/L at well EW-6 and tetrachloroethene (PCE) concentrations in GW-1a are below the detection limit for the first time since June 2011. All other VOCs at the remaining wells were generally stable relative to previous results. Generally, VOC concentrations have shown occasional increases and fluctuations due to one or more of the following conditions: (1) seasonal variation of groundwater elevations and flow conditions, (2) removal of the groundwater extraction treatment system, and (3) redistribution of the dissolved contaminant mass in saturated porous media over time.

Completed Sub Area Name:	Unit 008
Completed Document Type:	Correspondence
Completed Date:	01/10/2022
Comments:	DTSC correspondence contacting Unit 008 homeowner to schedule annual inspection of fan system (sub-slab depressurization system) installed outside Unit 008 to mitigate the indoor air quality.
Completed Area Name:	SITES WITH NO OPERABLE UNIT
Completed Sub Area Name:	Unit 011

SINGER FRIDEN (Continued) **S101272670**

Completed Document Type: Correspondence
Completed Date: 01/13/2020
Comments: Two indoor air samples were collected from Unit 011 s bathroom. The two indoor air samples consisted of one primary and one duplicate sample. The duplicate sample was used to confirm the validity of the primary sample results. Based on the indoor air sampling results, trichloroethene was found at a concentration above the residential air screening level.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 006
Completed Document Type: Correspondence
Completed Date: 07/07/2021
Comments: Email sent to Unit 006 property owner informing about proposed maintenances of a sub-slab depressurization system (Fan System) installed at the property to improve indoor air quality. Property owner information redacted due to confidentiality.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 10/01/2018
Comments: Contract 14-T3902 expired on September 30, 2018. DTSC issued a stop work letter for Engineering/Remediation Resources Group, Inc. to immediately cease all work under the this contract and to submit a final invoice.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Post HARP Form
Completed Date: 08/29/2019
Comments: Not reported

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 001
Completed Document Type: Correspondence
Completed Date: 01/10/2022
Comments: DTSC correspondence contacting Unit 001 homeowner to schedule annual inspection of the fan system (sub-slab depressurization system) installed outside Unit 001 to mitigate the indoor air quality.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 003
Completed Document Type: Correspondence
Completed Date: 01/10/2022
Comments: DTSC correspondence contacting Unit 003 homeowner to schedule annual inspection of fan system (sub-slab depressurization system) installed outside Unit 003 to mitigate the indoor air quality.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Contract
Completed Date: 10/19/2022
Comments: RMD Environmental Solutions, Inc. (Contractor) agreed to enter into a Contract (Contract 22-T5074) with the Department of Toxic Substances Control (DTSC) to provide personnel, services, materials, and equipment that are needed to conduct technical consultative services

SINGER FRIDEN (Continued) **S101272670**

at the Singer Friden site. Services requested under this contract are the following: Task 1 Technical Consultative Services Task 2 Soil Vapor Extraction Pilot Study Workplan, Fieldwork and Reporting Task 3 - Soil Vapor Extraction System Environmental Noise Assessment Task 4 Human Health Risk Assessment Task 5 - Remedial Investigation/Feasibility Study Report Task 6 - Remedial Action Plan Amendment Task 7 - Public Outreach Support Service Contract 22-T5074 is effective from 10/19/2022 through 12/31/2023.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 10/20/2020
Comments: Contract 17-T4416 Work Order No. 2 with ERRG. Work Order No. 2 scope of work consists of: i) Dual-completion groundwater monitoring well and nested soil gas monitoring well installation workplan. ii) Installation of three dual-completion groundwater monitoring wells and one nested soil gas monitoring well. iii) Survey of installed dual-completion groundwater monitoring wells. iv) Post-construction reporting.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 06/06/2019
Comments: Work Order Amendment to Engineering/Remediation Resources Group for geophysical survey of four limited areas. The combined geophysical survey areas are approximately 21,600 square feet.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 007
Completed Document Type: Correspondence
Completed Date: 02/18/2021
Comments: Email sent to Unit 007 property owner informing status of sub-slab depressurization annual operation and maintenance schedule/activities. Property owner information redacted due to confidentiality.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 008
Completed Document Type: Correspondence
Completed Date: 02/18/2021
Comments: Email sent to Unit 008 property owner informing status of sub-slab depressurization annual operation and maintenance schedule/activities. Property owner information redacted due to confidentiality.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 006
Completed Document Type: Correspondence
Completed Date: 02/18/2021
Comments: Email sent to Unit 006 property owner informing status of sub-slab depressurization annual operation and maintenance schedule/activities. Property owner information redacted due to confidentiality.

Completed Area Name: PROJECT WIDE

SINGER FRIDEN (Continued) **S101272670**

Completed Sub Area Name: Not reported
Completed Document Type: Work Notice
Completed Date: 05/24/2022
Comments: Work Notice informs Sandpiper Townhome Community about installation of three (3) groundwater monitoring wells and one (1) soil gas monitoring well at the Site for future sampling.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/12/2023
Comments: Concentrations of primary and other volatile organic compounds (VOCs) reported during historical sampling events were compared with the concentrations reported during the December 2022 sampling event. Analytical results from December 2022 sampling event indicate that VOC concentrations have generally stabilized or decreased over time. Review of groundwater elevation and potentiometric surface data of dual-nested groundwater monitoring wells at GW-5 and GW-6, which penetrate the two upper water-bearing zones, both show downward vertical gradients between the two upper water-bearing zones. Observed groundwater elevations and inferred potentiometric surface data of the four water-bearing zones and Shallow Regional Aquitard are included in the semiannual groundwater monitoring report.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 006
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/24/2021
Comments: 2021 Work Summary Report for Unit 006 at the Sandpiper Townhouse Complex report (Report) presents a summary of work conducted at Unit 006 during the two site visits in July and August 2021. The purpose of the work was to address the excessive noise generated by the fan system installed at Unit 006 to mitigate vapor intrusion from soil gas.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Manual
Completed Date: 08/01/2001
Comments: Operations and Maintenance Manual for groundwater extraction and treatment system completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Pilot/Treatability Study Report
Completed Date: 07/02/2008
Comments: This pilot test indicates that biostimulation through emulsified oil injections and bioaugmentation with Dehalococcoides ethenogenes culture KB-1TM can be an effective remedy for the reduction of VOCs at the Site. The pilot test results also suggest that biostimulation can be implemented at the Site without significantly increasing risks associated with VOC vapor intrusion.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 02/02/2006

SINGER FRIDEN (Continued) **S101272670**

Comments:	109,800 gallons of water was treated from November 31, 2005 to January 4, 2006
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	02/27/1996
Comments:	During installation of the extraction and treatment system conveyance piping in December 1995, potentially contaminated soil was encountered adjacent to the excavation for the vault box in the intersection of Heathrow Place and Cornwall Way. During this removal action, 25 cubic yards of soil was removed.
Completed Area Name:	PROJECT WIDE

Completed Document Type: Operation and Maintenance Report
Completed Date: 12/15/2011
Comments: The total volume of treated water for the third quarter 2011 was 3,108,900 gallons.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Work Notice

SINGER FRIDEN (Continued) **S101272670**

Completed Date: 06/13/2011
Comments: Work Notice for In-situ injections at two locations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 09/07/2011
Comments: A total of 1,300,200 gallons of water was treated by the system during the discharge period from June 30, 2011 to August 2, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 10/31/2011
Comments: A total of 1,032,000 gallons of water was treated by the system during the discharge period from August 2, 2011 to August 31, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/09/2011
Comments: A total of 776,700 gallons of water was treated by the system during the discharge period from August 31, 2011 to October 3, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/18/2011
Comments: A total of 1,082,100 gallons of water was treated by the groundwater treatment system during the discharge period from October 3, 2011 to October 31, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 01/27/2012
Comments: A total of 1,125,700 gallons of water was treated by the groundwater treatment system during the discharge period from October 31, 2011 to November 29, 2011.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 04/05/2012
Comments: A total of 597,400 gallons of water was treated by the groundwater treatment system during the discharge period from January 3, 2012 to January 31, 2012.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 07/19/2012
Comments: A total of 197,500 gallons of water was treated by the groundwater treatment system during the discharge period from May 1, 2012, to June 1, 2012.

Completed Area Name: PROJECT WIDE

SINGER FRIDEN (Continued) **S101272670**

Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/06/2009
Comments: The treatment system removed an estimated 3.57 pounds of VOCs, and discharged 5,373,100 gallons of treated groundwater into the San Leandro storm sewer system.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 07/06/2010
Comments: A total of 1,828,900 gallons of water was treated by the system during the discharge period from May 4, 2010 to May 25,2010. Implementation of follow-up actions based on the recommendations of the Five-Year Review Report continued.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 05/06/2009
Comments: In-situ injections of emulsified oil and bacteria completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 08/04/2009
Comments: A total of 879,000 gallons of water was treated by the system during the discharge period from June 9, 2009 until June 22, 2009. Implementation of follow-up actions based on the recommendations of the Five-Year Review Report continued.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 11/04/2009
Comments: A total of 1,925,500 gallons of water was treated by the system during the discharge period from August 31, 2009 until September 29, 2009. Implementation of follow-up actions based on the recommendations of the Five-Year Review Report continued.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operation and Maintenance Report
Completed Date: 04/05/2010
Comments: A total of 934,700 gallons of water was treated by the system during the discharge period from January 5, 2010 and February 2, 2010. Implementation of follow-up actions based on the recommendations of the Five-Year Review Report continued.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 05/14/2018
Comments: The 2018 groundwater monitoring event was completed. The depth to groundwater was measured in 20 monitoring wells. Groundwater samples were collected from the 20 monitoring wells and 9 former extraction wells using passive diffusion bags. Volatile organic compound (VOC)

SINGER FRIDEN (Continued) **S101272670**

concentrations reported during past groundwater sampling events were compared to those detected during the 2018 event. The comparison indicated that VOC concentrations have generally stabilized or decreased; however, VOC concentrations in may of the Site wells have fluctuated over time.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Five-Year Review Reports
Completed Date: 01/27/2020
Comments: Third Five-Year Review (FYR) Report consisted of a review of relevant documents, including operation and maintenance records, pilot study reports and monitoring data from June 2012 to July 2018. From June 2013 to June 2015, the groundwater sampling frequency changed from quarterly to a semi-annual basis. Seventeen wells were sampled in the spring of each year and 21 wells in the fall. After June 2015, groundwater monitoring did not resume until the groundwater monitoring event in May 2018. Third FYR Report recommended the following: i) Conduct an additional soil gas survey at the Site. ii) Prepare an amendment to 1996 RAP to: (a) change the selected groundwater remedy for the Site from groundwater extraction and treatment to enhanced in-situ bioremediation; and (b) add soil vapor extraction (SVE) and treatment as part of the remedy to address volatile organic compounds (VOC)-impacted soil gas. iii) Install an SVE system to extract soil gas from portions of the Site where soil gas surveys reported soil gas concentrations above federal and state screening levels. iv) Conduct groundwater sampling in the Site s monitoring well network on a semi-annual basis. v) Implement enhanced in-situ bioremediation at hot spots areas of the VOC-impacted groundwater plume and at areas downgradient of the hot spots areas. vi) Implement an expanded groundwater sampling protocol as needed to monitor enhanced in-situ bioremediation effectiveness. vii) Conduct groundwater monitoring in the intermediate (INZ-1, INZ-2 and INZ-3) and deep (DW-1, DW-2 and DW-3) zone aquifers on a semi-annual basis. viii) Conduct groundwater sampling in drinking water wells in areas immediately downgradient and adjacent to the Site.

Completed Area Name: SITES WITH NO OPERABLE UNIT
Completed Sub Area Name: Unit 009
Completed Document Type: Fieldwork
Completed Date: 06/04/2018
Comments: Indoor air sampling completed in unit prior to proceeding with Retro Coat pilot study.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 09/12/2018
Comments: Groundwater monitoring had not been performed at the Site since 2015. Comparison of results from the second quarter 2018 groundwater monitoring event with historical data show that the volatile organic compounds (VOC) tetrachloroethene, trichloroethene and vinyl chloride have remained undetectable (< 0.5 micrograms per liter) in samples collected from the deep and intermediate zone aquifer, while results from the shallow aquifer show that the concentrations of these VOCs have stabilized, decreased or increased over time. The reasons for this different behavior in the shallow aquifer are likely phenomena

SINGER FRIDEN (Continued) **S101272670**

associated with historical in-situ remediation efforts implemented at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Well Completion Report
Completed Date: 11/16/2022
Comments: The dual-nested groundwater monitoring wells (GW) GW-6A/ GW-6B and GW-5A/GW-5B installed on June 9th and 10th, 2022; and June 16th, 2022, respectively. The dual-nested GWs consist of 2-inch-diameter schedule 40 polyvinyl chloride (PVC) casing with 0.010 machine-slotted well screen. Each well had a 1-foot silt trap (sump) consisting of blank casing with a bottom plug installed below the screened interval. Shallow wells were noted as A, and deeper wells were noted as B for each borehole. Fifteen-foot screen intervals were set in wells GW-5A and GW-6A, and 10-foot screen intervals were set in wells GW-5B and GW-6B One triple-nested soil gas monitoring well, SGW-36, installed on June 17, 2022, as a temporary soil gas monitoring well according with three well tips located at 5, 10, and 15 feet below ground surface (bgs). The three well tips were color coded as follows: 15 blue, 10 green, and 5 red. Each soil gas monitoring well probe consists of a stainless-steel well tip attached to the end of 0.25-inch-diameter Teflon tubing placed in the center of a 2-foot-thick sand pack. Future soil gas sampling conducted at SGW-36 shall include Helium as a quantitative tracer testing and shall be performed by shrouding to confirm its functionality. If Helium is detected above the maximum allowed concentration (5 %) during a quantitative tracer testing, SGW-36 will be elected to be decommissioned.

SINGER FRIDEN (Continued) **S101272670**

Completed Date:	03/21/2023
Comments:	Soil Gas Monitoring Report summarizes results and findings of a soil gas monitoring event performed in October 2022. Soil gas samples were collected from triple-nested soil gas wells (SGW) at depths of 5, 10, and 15 feet below grade surface (bgs) at seven (7) SGW locations, and at 5 and 15 feet bgs at 29 SGW locations. The most prevalent detected volatile organic compounds (VOCs) were tetrachloroethene (PCE) and trichloroethene (TCE). PCE was detected in all 90 samples. PCE results for all 90 samples exceeded the screening level of 15.33 micrograms per cubic meter (μg/m3), with concentrations ranging from 43 g/m3 at well SGW-35-15 to 76,000 μg/m3 at well SGW-17-15. TCE was detected in 81 of 90 samples. TCE results for 69 samples exceeded the screening level of 16 μg/m3, with concentrations ranging from 2.7 μg/m3 at well SGW-35-5 to 14,000 μg/m3 at well SGW-22-15.

Comments:	Addendum to O & M plan approved based on 5 year review recommendations.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Report
Completed Date:	02/25/2020
Comments:	Soil gas analytical results for the 70 soil gas samples collected from the 35 nested soil gas monitoring wells installed for this project indicate widespread detections of trichloroethene (TCE) and tetrachloroethene (PCE) across the Site on both investigated depths, 5 and 15 feet below ground surface. The potential indoor air concentrations resulting from measured soil gas concentrations were calculated by considering a generic attenuation factor of 0.03. The results indicate that predicted indoor air concentrations of PCE and TCE may exceed the residential air screening levels in the vicinity of most of the soil gas monitoring wells. The risks of volatile organic compounds vapor intrusion (VI) into nearby buildings may also be augmented by the presence of preferential VI pathways such as subsurface utility corridors and cracks in concrete building foundations. These results indicate that further investigation of site conditions is warranted to further evaluate potential risks to human health at the Site.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Technical Report
Completed Date:	10/03/2013
Comments:	Technical Memorandum summarizes the August 2013 soil vapor well sampling event at the Site. The work was conducted under Work Order No. 001 of Contract No. 09-T9128 A3. Soil vapor data continues to show trichloroethene concentrations up to 200 micrograms per liter in the investigated soil vapor monitoring wells.

Completed Date: 03/17/2015
Comments: The treated groundwater discharge line s flow meter and totalizer (FI-FQI-TW) recorded that 3,300 gallons of water was processed through the remediation system during the January 2015 reporting period from January 1, 2015, to January 31, 2015 and 3,100 gallons during the February reporting period from February 1, 2015 through February 28, 2015. The low flow totals for January and February were a result of system down time due to the malfunctioning uninterruptable power supply, which was replaced on February 19, 2015.

Completed Date: 12/15/2021
Comments: Addendum - Operations and Maintenance Summary Report for Sub-Slab Depressurization Systems (SSDS) summarizes actions taken to address June 2021 O&M Summary Report recommendations and DTSC guidance as following: 1. Replace SSDS fans at Units 003 and 006. 2. Replace the existing SSDS fan shroud at Unit 006 with a shroud similar to the one currently in place at Unit 008 to reduce noise emission. 3. Perform annual O&M maintenance on the SSDS fan installed at Unit 007 s detached garage area. Recommendations were implemented and property documented in the Report. Additionally, Report recommends adjusting SSDS variable speed fan installed in the Unit 007 s detached garage area and replacing SSDS non-adjustable fan installed in the Unit 007 s backyard of Unit 007 If the flow rate of variable and non-adjustable fans that remain outside the specified range as determined in the 2015 Diagnostic Testing and O&M of Existing SSDS Work plan. Report s recommendation will be implemented during the next annual O&M inspection in January 2022.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 09/06/2022
Comments: The Report documents results of soil gas samples collected at the newly installed triple-nested soil gas monitoring well (SGW-36) at depths of 5, 10, and 15 feet below ground surface on June 28, 2022. Soil gas results reported presence of primary chemical of concerns (e.g., tetrachloroethene, trichloroethene, and vinyl chloride), with maximum concentrations of 660 micrograms per cubic meter (g/m3), 11 g/m3 and 0.38 g/m3, respectively. Helium was detected in all soil gas samples with concentrations ranging from 0.33 percentage (%) to 94%. Because of significant ambient air breakthrough occurred during sampling, soil gas sample results are not suitable for site characterization delineation or human health risk assessment purposes. SGW-36 should be decommissioned if reported leak cannot be corrected or monitoring well was not constructed according to July 2015 DTSC Advisory: Active Soil Gas Investigations recommendations.

Comments:	Five (5) junction box vaults welded on September 2020 Two (2) within the Sandpiper Townhome Complex s streets, one (1) just outside the Washington Avenue access gate to the complex, and two (2) along Washington Avenue.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operation and Maintenance Report
Completed Date:	04/27/2022
Comments:	2021 Operations and Maintenance Summary Report for Sub-Slab Depressurization Systems (Report) provides a summary of operation and maintenance (O&M) inspections on sub-slab depressurization systems (SSDSs) at Units 001, 002, 004, 006, 007 and 008. With exceptions noted and documented in the Report as deviations from the Work Plan for Diagnostic Testing and O&M Plan of Existing SSDS (Work Plan), the O&M activities were done in general accordance with the Work Plan. The final document has information redacted due to confidentiality. A non-redacted version of the Report is available upon request at DTSC Berkeley Office File Room.

Comments:	Air sampling report letter summarizes indoor air samples results collect at Unit 013 in September 2019.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	05/18/2021
Comments:	Work plan describes the investigation methods to assess the presence of volatile organic compounds (VOCs) in sewer vapor in sanitary lines in three investigation focus areas at the Singer Friden site
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Monitoring Report
Completed Date:	03/17/2022
Comments:	Review of groundwater elevation and potentiometric surface data cannot confirm potential vertical gradients between the four water-bearing zones at the Site as reported in previous semiannual groundwater monitoring reports. Nested monitoring wells that penetrate the two upper water-bearing zones are scheduled be installed at the Site in the first half of 2022. Concentrations of primary and other volatile organic compounds (VOCs) reported during historical sampling events were compared with the concentrations reported during the December 2021 and January 2022 sampling event. Analytical results from the December 2021 and January 2022 sampling event indicate that VOC concentrations have generally stabilized or

SINGER FRIDEN (Continued) **S101272670**

decreased over time. Generally, VOC concentrations have shown occasional increases and fluctuations due to one or more of the following conditions: (1) seasonal variation of groundwater elevations and flow conditions, (2) removal of the groundwater extraction treatment system, and (3) redistribution of the dissolved contaminant mass in saturated porous media over time

Completed Document Type: Monitoring Report
Completed Date: 12/15/2021
Comments: Soil Gas Monitoring Report to summarize the soil gas monitoring event conducted at Singer Friden site in August 2021. Tetrachloroethene (PCE) and trichloroethene (TCE) have generally decreased or remained stable in the wells monitored in the August 2021 soil gas monitoring event when compared to the results of August 2019 soil gas monitoring event. Significant increases in the concentration of PCE occurred in the sample collected from SGW-13 at 5 feet below ground surface (bgs) and from the samples collected from SGW-29 at both 5 and 15 feet bgs. TCE concentration increases occurred in the sample collected from SGW-29 at 5 feet bgs.

Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 06/10/2020
Comments: Third Five-Year Review Report Fact Sheet provides a status update of environmental cleanup efforts conducted at the former Singer Friden facility (Site) from June 2012 to July 2018. The Site is currently in the operation and maintenance phase of work, which requires DTSC to review available data every five years. The purpose of a Five-Year Review is to evaluate the implementation and performance of a remedy to determine if it is or will be protective of human health and the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Health & Safety Plan
Completed Date: 07/09/2021
Comments: The Hazard Appraisal and Recognition Plan provides essential information about hazards associated the Site, defines protocols necessary for protecting on-site personnel from the hazards associated with supplemental investigations to be conducted at the Singer Friden Site, and establishes site safety and health policies and procedures.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	07/28/2021
Comments:	Sewer Vapor Implementation Work Plan Addendum (Work Plan Addendum) provides an update of site conditions and includes results of a utility survey conducted at the Site during the week of July 12th, 2021. Additionally, the Work Plan Addendum describes additional details of the methods that will be implemented at the Site according to the Sewer Vapor Implementation Work Plan (approved on May 18, 2021) and Addendum. Fieldwork activities will be performed by Engineering/Remediation Resources Group, Inc. (ERRG).
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Technical Report
Completed Date:	11/24/2021
Comments:	Not all utilities are shown. Water pipes were mostly non-conductive, and therefore not locatable. Many of the water valves could not be accessed; thus, depths to top of valve nuts could not be determined. Some sewer and natural gas laterals were not accessible and therefore not located. Depths shown are to center of conductive utility and are generally +/-10% of actual depth, when not distorted by adjacent conductors. Accuracy of electronic depth decreases when adjacent utilities are located within 5 ft. Critical depths require verification by potholing. Sanitary and storm depths are measured from rim to invert level. Basis of Bearings: Horizontal and Vertical Survey based on coordinates of monitoring wells provided by ERRG.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	06/21/2022
Comments:	Fieldwork activities completed on June 21, 2022. Dual-Completion monitoring wells GW-5 and GW-6, and nested soil gas monitoring well SGW-36 installed according to respective work plans. Dual-Completion monitoring wells GW-4 installation postponed to a later date due to logistic restrictions.

Completed Document Type:	Standard Voluntary Agreement
Completed Date:	02/04/2002
Comments:	Voluntary Cleanup Agreements signed with Lavery California Dealership (Property Owner) to review data and reports for the Site to determine if remediation conducted without DTSC oversight is protective of human health and the environment.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	08/29/2002
Comments:	The property intends to be developed into an auto dealer. The San Francisco Bay Regional Water Quality Control Board has approved a soil management plan for the site and is requiring a deed restriction and asphalt cap to prevent exposure to the contaminants. In August 2002, DTSC confirmed that a deed restriction has been recorded on the properties by RWQCB and that no further action is needed for the site provided that the properties continue to comply with the RWQCB requirements.

Quarterly Update:	US Printing Ink is located in an industrial area approximately 2.5 miles southeast from the Oakland International Airport. The facility has manufactured printing inks for the magazine and news industry since 1968. Raw materials and finished products are stored among 28 aboveground steel tanks with capacities between 2,500 and 10,000 gallons. Ink product is shipped to customers via tanker trucks, 55-gallon drums, or smaller containers. The manufacturing process includes mixing pigments with varnishes and oils, milling the mixtures to reduce particle sizes, and filtering the product. Waste ink is a by-product of the manufacturing process. Waste inks from the facility have historically included hazardous wastes containing barium, chromium, and lead. Cleaning operations at the facility have also produced solvent waste. The facility installed a hazardous waste storage area in 1983 to comply with Resource Conservation and

US INK CORPORATION (Continued) **S103630823**

Recovery Act regulations. The Department of Health Services issued a Hazardous Waste Facility Permit in July 1984 allowing the facility to store waste for longer than 90 days. The storage area consisted of approximately 180 square feet of a bermed, concrete pad. The facility stored as much as 5,500 gallons of hazardous waste in the storage area at one time. US Printing Ink closed the storage area in 1988 to return to a generator status, and the Department of Health Services acknowledged closure in December 1989. There has been no documented releases from this area. The facility is currently a non-permitted facility that stores hazardous wastes for no longer than 90 days. The active waste storage area contains only waste inks, and no solvents. There has been no documented releases from this area.

Environmental Interest/Information System:
The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically

US INK A DIVISION OF SUN CHEMI (Continued) **1000399394**

collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

US INK A DIVISION OF SUN CHEMI (Continued) **1000399394**

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/25/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 06/07/2024

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

INDIAN ODI: Report on the Status of Open Dumps on Indian Lands

Location of open dumps on Indian land.

Date of Government Version: 12/31/1998
Date Data Arrived at EDR: 12/03/2007
Date Made Active in Reports: 01/24/2008
Number of Days to Update: 52

Source: Environmental Protection Agency
Telephone: 703-308-8245
Last EDR Contact: 10/17/2024
Next Scheduled EDR Contact: 02/03/2025
Data Release Frequency: Varies

ODI: Open Dump Inventory

An open dump is defined as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D Criteria.

Date of Government Version: 06/30/1985
Date Data Arrived at EDR: 08/09/2004
Date Made Active in Reports: 09/17/2004
Number of Days to Update: 39

Source: Environmental Protection Agency
Telephone: 800-424-9346
Last EDR Contact: 06/09/2004
Next Scheduled EDR Contact: N/A
Data Release Frequency: No Update Planned

DEBRIS REGION 9: Torres Martinez Reservation Illegal Dump Site Locations

A listing of illegal dump sites location on the Torres Martinez Indian Reservation located in eastern Riverside County and northern Imperial County, California.

Date of Government Version: 01/12/2009
Date Data Arrived at EDR: 05/07/2009
Date Made Active in Reports: 09/21/2009
Number of Days to Update: 137

Source: EPA, Region 9
Telephone: 415-947-4219
Last EDR Contact: 11/19/2024
Next Scheduled EDR Contact: 01/27/2025
Data Release Frequency: No Update Planned

IHS OPEN DUMPS: Open Dumps on Indian Land

A listing of all open dumps located on Indian Land in the United States.

Date of Government Version: 02/07/2024
Date Data Arrived at EDR: 11/13/2024
Date Made Active in Reports: 11/19/2024
Number of Days to Update: 6

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations that have been removed from the DEAs National Clandestine Laboratory Register.

Date of Government Version: 05/20/2024
Date Data Arrived at EDR: 08/19/2024
Date Made Active in Reports: 10/09/2024
Number of Days to Update: 51

Source: Drug Enforcement Administration
Telephone: 202-307-1000
Last EDR Contact: 11/22/2024
Next Scheduled EDR Contact: 03/03/2025
Data Release Frequency: No Update Planned

HIST CAL-SITES: Calsites Database

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

Date of Government Version: 08/08/2005
Date Data Arrived at EDR: 08/03/2006
Date Made Active in Reports: 08/24/2006
Number of Days to Update: 21

Source: Department of Toxic Substance Control

Last EDR Contact: 02/23/2009
Next Scheduled EDR Contact: 05/25/2009
Data Release Frequency: No Update Planned

SCH: School Property Evaluation Program

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 07/22/2024
Date Data Arrived at EDR: 07/22/2024
Date Made Active in Reports: 10/09/2024
Number of Days to Update: 79

Source: Department of Toxic Substances Control
Telephone: 916-323-3400
Last EDR Contact: 10/22/2024
Next Scheduled EDR Contact: 02/03/2025
Data Release Frequency: Quarterly

CDL: Clandestine Drug Labs

A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

Date of Government Version: 12/31/2022
Date Data Arrived at EDR: 03/21/2024
Date Made Active in Reports: 06/12/2024
Number of Days to Update: 83

Source: Department of Toxic Substances Control
Telephone: 916-255-6504
Last EDR Contact: 11/19/2024
Next Scheduled EDR Contact: 02/10/2025

Next Scheduled EDR Contact: 01/27/2025
Data Release Frequency: Quarterly

TOXIC PITS: Toxic Pits Cleanup Act Sites

Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/1995
Date Data Arrived at EDR: 08/30/1995
Date Made Active in Reports: 09/26/1995
Number of Days to Update: 27

Source: State Water Resources Control Board
Telephone: 916-227-4364
Last EDR Contact: 01/26/2009
Next Scheduled EDR Contact: 04/27/2009
Data Release Frequency: No Update Planned

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/20/2024
Date Data Arrived at EDR: 08/19/2024
Date Made Active in Reports: 10/09/2024

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services

Longitude (West):	122.153393 - 122° 9' 12.21''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	574630.4
UTM Y (Meters):	4173070.5
Elevation:	31 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50005406 SAN LEANDRO, CA
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

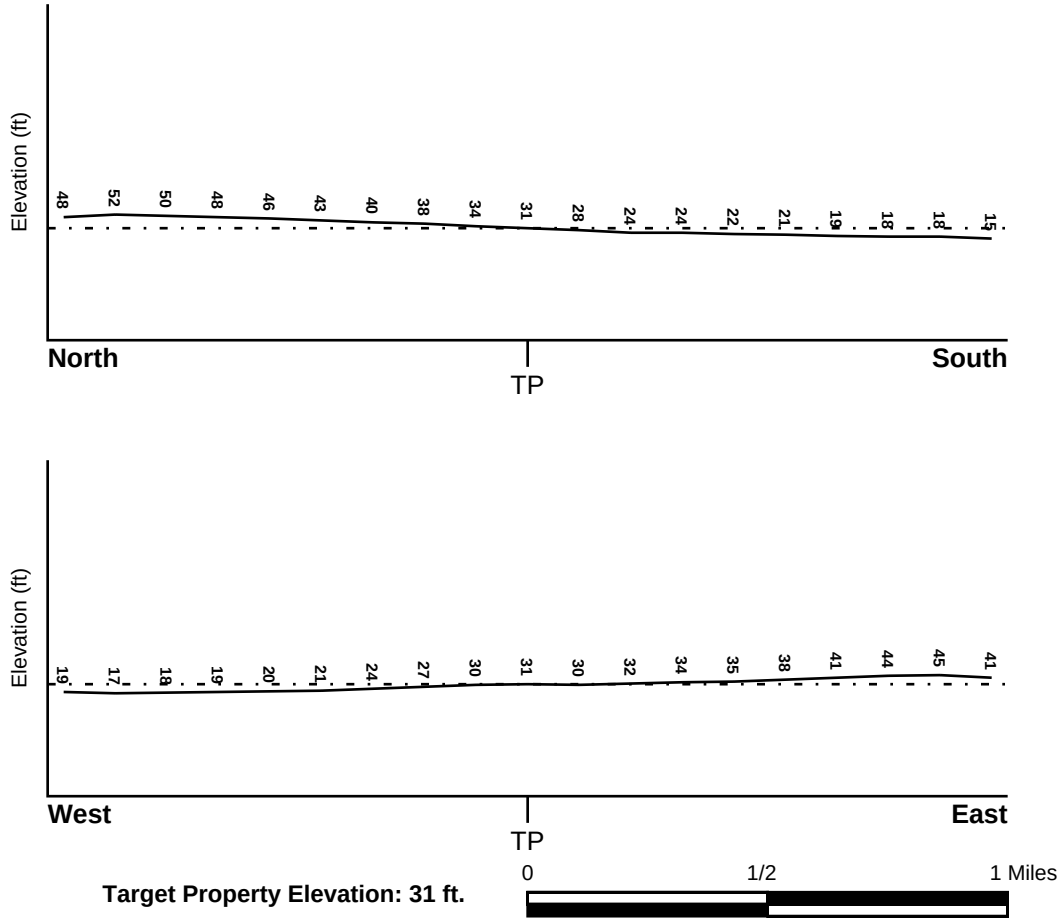
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 31 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06001C0259G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06001C0258G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN LEANDRO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
A11	1/2 - 1 Mile NNW	W
F27	1/2 - 1 Mile NNW	SSE
1G	1/2 - 1 Mile NNW	SSE
2G	1/2 - 1 Mile NNW	W

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Clear Lake

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 137 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	25 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9
2	25 inches	59 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.9

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Ramboll Americas Engineering Solutions, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ramboll Americas Engineering Solutions, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

ENVIRONMENTAL SITE ASSESSMENT
LEVITZ FURNITURE
LOCATED AT
3199 ALVARADO STREET
IN SAN LEANDRO, CALIFORNIA

1.0 INTRODUCTION

This report summarizes the results of an environmental site assessment (ESA) conducted for the Levitz Furniture facility located at 3199 Alvarado Street (site) in San Leandro, Alameda County, California (Figure 1). The assessment was conducted by ATC Associates Inc. (ATC) in response to the request and authorization of Mr. Chris Bartzokis with the Levitz Furniture Corporation and in general accordance with the contract dated February 11, 1999, between the Levitz Furniture Corporation and ATC.

2.0 OBJECTIVE

The objective of the assessment described in this report was to identify to the extent feasible pursuant to the processes prescribed herein, the presence of Recognized Environmental Conditions (RECs) as defined in the American Society of Testing and Materials (ASTM) Standard E 1527-97.

3.0 SCOPE

The scope of services used to meet the objective was in general accordance with ASTM Standard E 1527-97 and included review of the following readily available information sources:

- Task 1: Site and Site Vicinity
  - Discussions with personnel familiar with the site facility and review of site facility drawings;
  - A site reconnaissance to look for evidence of present and/or past operations that use or may have used potentially hazardous materials; and
  - A site vicinity reconnaissance to compile a list of companies/businesses in the immediate site vicinity that are reported to use, or appear to use or produce, hazardous substances that in our judgment may impact the site.

Confidential

used here to mean the effect or result of a release of a hazardous substance that could be judged an REC.

5.0 SITE REVIEW

The following terms are used in this report:

- "Site" refers to the property within the approximate boundaries shown in Figures 1 and 2 and described in Subsection 5.1;
- "Immediate site vicinity" refers to properties immediately adjacent to the site that share a common boundary with the site; and
- "Site vicinity" refers to the area within approximately a 1-mile radius of the site.

5.1 Site Setting

The site comprises approximately 14.9 acres of land developed with a 250,520 square foot building currently occupied by a furniture sales showroom and warehouse and paved parking areas (Figure 2). The site is located south of the intersection of Teagarden Street and Alvarado Street in San Leandro, California. Several multi-tenant commercial buildings are located north of the site, Alvarado Street with commercial buildings beyond is located immediately east of the site, single-family residences are located south of the site, and the Nimitz Freeway (Highway 880) is located west of the site. The site is located at an elevation between approximately 25 and 30 feet above mean sea level. Site boundary information was obtained from Mr. Ron Hill of the Levitz Furniture Corporation and during the site reconnaissance conducted by ATC. Mr. Hill was not certain when the building was constructed, but indicated that he believed the building was originally utilized by a supermarket.

5.2 Site and Site Vicinity Reconnaissance

5.2.1 Site Reconnaissance - A site reconnaissance was conducted on February 23, 1999, by personnel from ATC Associates Inc. Color photographs of the site are presented in Figure 3. At the time of the site reconnaissance, the site was developed with a furniture showroom/warehouse building and paved parking areas.

Potentially hazardous materials observed on-site appeared to be limited to small quantities (5-gallon or smaller containers) of cleaning supplies and general maintenance products such as paints and varnishes. These materials were observed in a small janitorial closet in the showroom area and in flammable materials cabinets in the warehouse area. All potentially hazardous materials observed on site appeared to be stored in a neat and orderly manner in flammable materials cabinets. In addition, one air compressor was observed in the shop area of the warehouse and two 1-gallon containers of refrigeration oil were observed near a heating, ventilating and air conditioning unit (HVAC) unit on the south side of the warehouse. No

Confidential

evidence of spills or releases or significant staining was observed on the concrete floor in these areas.

No evidence of stressed vegetation was observed at the site. During a review of building plans for the site provided to ATC by Levitz (Werner S. Stroch & Associates, 1971), placement of a gasoline UST adjacent to the northeast corner of the site building was identified, as well as the proposed abandonment of a water well on the western portion of the site. During the site reconnaissance, the area where the proposed UST was depicted was observed to be paved with asphalt. No evidence of underground storage tanks (i.e. fill ports or vent risers) or groundwater monitoring wells were observed on-site. Mr. Hill did not have any further knowledge of the UST on the plans and the site was not listed in any regulatory databases or at any regulatory agencies. The former water well was observed adjacent to a fire hydrant in the parking area on the west side of the site. The water well appeared to have been plugged, however, the well had not been abandoned flush with the ground surface. The top of the well was identified by a circular steel casing.

Numerous municipal debris were observed on the western portion of the site parking lot near a covered loading dock area. Debris included sinks, toilets, metal shelving, wood scraps, several containers labeled to contain paint ranging in size from 1-pint to 5-gallons, and one 55-gallon drum labeled to contain Spray Kote stored on a wood pallet.

A railroad spur is located on the southeast corner of the site and extends into the southeast corner of the warehouse. This area is currently utilized as storage space.

Potable water is provided to the site by the East Bay Municipal Utilities District (East Bay MUD) and sewer and storm drains are maintained by the City of San Leandro.

One pad-mounted electrical transformer was observed at the site. The transformer was not labeled with regard to PCB content. The transformer is owned and operated by Pacific Gas & Electric (PG&E). PG&E has maintained in the past that none of their system equipment contains PCBs. The transformer appeared to be in good condition with no evidence of spills and/or releases of fluid.

A visual asbestos survey of readily accessible building finish materials, not including the collection of samples for analysis, was conducted by ATC as part of our site visit. Suspected asbestos containing materials (ACMs) were evaluated for the presence of damage.

An asbestos survey typically includes a review of building plans and specifications to evaluate the type of construction used and the materials specified. However, detailed building plans and drawings were not readily available for review at the time of the survey. Therefore, ATC relied on visual observations, past experiences and professional judgment in the selection of materials judged to potentially contain asbestos. In general accordance with the aforementioned scope of work, material which could potentially contain asbestos was surveyed. The materials observed at the site included; wallboard, joint tape and taping

Confidential

compound, acoustical drop ceiling panels, flooring materials and their associated mastics, and covebase and its associated mastic. No structural fire proofing or insulated piping was observed during the survey. The above-mentioned materials were observed to be in a generally undamaged condition in the showroom at the time of this survey. However, evidence of localized damage to wallboard was observed in the warehouse areas of the building.

5.2.2 Site Vicinity Reconnaissance - A site vicinity reconnaissance was conducted by personnel from ATC Associates Inc. on February 23, 1999. Properties surrounding the site were observed to be developed for commercial and residential purposes. Several multi-tenant commercial buildings are located north of the site, Alvarado Street with commercial buildings beyond is located immediately east of the site, single-family residences are located south of the site, and the Nimitz Freeway (Highway 880) is located west of the site.

5.3 Hydrogeologic Setting

The subject site is located in the central coastal area of California, on the eastern side of San Francisco Bay. The lithology beneath the site is described as Recent Alluvium, which includes artificial fill, bay mud and salt marsh deposits (Department of Natural Resources, 1961).

The City of San Leandro Engineering Department was not able to provide depth to groundwater nor groundwater gradient information. However, based on the surface topography, the anticipated direction of groundwater flow is to the west, towards San Francisco Bay. Based on the elevation of the site (approximately 25-30 feet above sea level), the estimated depth to groundwater in the site vicinity is approximately 25-30 feet below ground surface (BGS). However, actual local groundwater depth and flow direction can vary greatly over short distances and can be influenced by additional factors such as underground structures, seasonal fluctuations, and soil and bedrock geology.

6.0 HISTORICAL REVIEW

6.1 Permits

Building permits for the site were reviewed at the City of San Leandro Community Development Department. The earliest permit for the site was an electrical permit for Baymart dated August 5, 1965. Various tenant improvements, including a proposed building expansion (to 150,000 square feet) were identified covering the years 1965-1993. Based on a review of building documents, it appears that the western portion of the site was constructed in the late 1950's or early 1960's. In approximately 1971, it appears that the eastern portion of the building was constructed to form the current site configuration.

The site is located in Zone C, an area of minimal flooding, according to the Federal Emergency Management Agency (FEMA) map for the City of San Leandro dated March 18, 1980 (Community Panel Number 060013 003B). The zoning designation for the site is IG - Industrial General.

Confidential

6.2 Sanborn Fire Insurance Maps

A search for Sanborn Fire Insurance Maps for the site and immediate site vicinity was conducted through Environmental Date Resources, Inc. (EDR). No Sanborn Maps were identified. Search documentation is included in Appendix B.

6.3 Aerial Photographs

Aerial photographs of the site and vicinity were obtained from EDR covering the years 1939, 1946, 1968, 1977, and 1989.

Obvious indicators of potential sources of hazardous waste from land use, such as apparent aboveground tank areas, ponds, pits, sumps, landfills, and heavy-industry or oil-field-related developments, were not observed at the site.

The 1939 and 1946 aerial photographs depicted the site and surrounding area as agricultural land. The Nimitz Freeway was not depicted on either of the photographs.

In the photograph dated 1968, a large warehouse was interpreted on the western portion of the site and a smaller rectangular-shaped structure was interpreted on the northeast corner of the site. Driveways/parking areas were interpreted on the north, east, south, and west sides of the site. Agricultural land was depicted north of the site, Alvarado Street with a large parking lot beyond was depicted east of the site, single-family residences were depicted south of the site, and the Nimitz Freeway (Highway 880) with single-family residences beyond was depicted west of the site.

The 1977 and 1989 photographs depicted a building on the western portion of the site. The building depicted on the 1968 aerial photograph had been expanded on the east side of the building. The structure on the northeast corner of the site was no longer present. Driveways/parking areas were interpreted on the north, east, south, and west sides of the site. Four buildings interpreted as warehouse/multi-tenant spaces were interpreted north of the site, Alvarado Street with a large parking lot beyond was depicted to the east (a building had been constructed in the parking lot on the 1989 photograph), single-family residences were depicted south of the site, and the Nimitz Freeway (Highway 880) was depicted west of the site.

6.4 City Directories

ATC received historical city directories from EDR. Sources utilized included Polk City Directory (1951 and 1959), and Haines City Directory (1977, 1983, 1988, 1993, and 1998). Appendix A presents the city directory abstract that was provided by EDR and is the basis for the following information.

Confidential

7.9.1 Permitted USTs: Distance Searched - Site and Immediate Site Vicinity - Information from SWRCB regarding registered USTs indicated that no UST-listed facilities are located in the immediate site vicinity.

7.9.2 UST Releases (LUST): Distance Searched - 0.5 mile - The RWQCB, SWRCB and the Alameda County Department of Environmental Health Services (DEH) maintain records of facilities currently involved in site assessment/mitigation resulting from reported spills or releases from USTs. According to the EDR report, 21 LUST-listed facilities are located within the search area; none of which is located in the immediate site vicinity.

Five LUST facilities are located potentially upgradient from the site. The nearest potentially upgradient facility is Amaral Sausage (735 Fremont Ave.), located approximately 0.23 mile east of, and potentially upgradient from the site. The EDR report lists a case type of soil only.

7.10 Oil and Gas

Distance Searched - 0.5 mile - A review of Publication No. TR01, Oil & Gas Prospect Wells Drilled in California (CADOG) indicated that the site is not located in an oil field and that there are no oil or gas wells located within one mile of the site (CADOG, 1982).

7.11 Local Regulatory Agency Files

Alameda County Environmental Health Services Division (EHS)

ATC requested available file information regarding the site from the EHS. According to Ms. Erlene Coleman-Ali, no files for the site address were identified. Ms. Coleman-Ali recommended contacting the East Bay MUD and the Alameda County Fire Department.

East Bay Municipal Utilities District (East Bay MUD)

ATC requested available file information regarding the site from the East Bay MUD. According to Ms. Cynthia Adrisson, Environmental Compliance Officer, the East Bay MUD does not maintain LUST or environmental investigation files.

Alameda County Fire Department (FD)

ATC requested available file information regarding hazardous materials, USTs and related issues from the FD. According to FD file information, no current UST files were identified. However, a permit for the installation of three 9,980-gallon gasoline USTs and one 550-gallon waste oil UST by Consumers Mart Co., dated July 18, 1962 was identified. A hand-drawn sketch on a permit dated April 22, 1963, indicated that the USTs belonged to a service station on the northeast corner of the site maintained by Consumers Mart Co. A permit dated April 12, 1971, indicated that All Bay Cities was scheduled to remove the four USTs from the site.

Confidential

- We have performed a Phase I Environmental Site Assessment in conformance with the scope of work and limitations of ASTM Standard E 1527-97 for the Levitz Furniture facility located at 3199 Alvarado Street in San Leandro, California. Any exceptions to or deletions from this practice are described in Section 4.0 of this report. This assessment has revealed no evidence of Recognized Environmental Conditions in connection with the site, with the exception of the following:

  - A service station was formerly located on the northeast corner of the site from approximately 1962 until 1971. Records reviewed at local regulatory agencies could not verify the removal of the USTs, however, the site was not listed as a LUST facility;

  - A review of building plans for the site building identified plans for the installation of a gasoline UST adjacent to the northeast corner of the site building. Records reviewed at local regulatory agencies could not verify if the UST was installed; and

  - Localized damage to wallboard was observed in the warehouse area.

10.0 RECOMMENDATIONS

Based on the information obtained during this assessment, current regulatory guidelines, and the judgment of ATC, the following recommendations have been made:

- If a higher level of confidence is required regarding the removal of the four USTs associated with the former service station located on the northeast corner of the site, and the proposed gasoline UST located adjacent to the northeast corner of the site building reviewed on building plans, ATC recommends a geophysical survey be conducted at the site to assess whether historical subsurface features (i.e. former USTs, dispenser lines, etc.) are present at the site. Based on the results of this investigation, a subsurface soil sampling investigation may be warranted; and

- Based on the date of building construction (late 1950s and 1971), if building renovations or demolition activities are to occur, an asbestos survey should be performed.

This assessment was performed on behalf of and solely for the Client. No other company, entity, or person shall have any rights with regard to ATC's contract with the above client, including but not limited to indemnification by ATC, or any rights of reliance on the findings, conclusions and recommendations of this pr any subsequent reports regarding the referred site.

Dear Mr. Bartzokis:

Notice of No Further Action Required – Levitz Furniture Site
3199 Alvarado Street, San Leandro CA

This letter confirms the completion of subsurface investigation and characterization for the underground storage tank operation formerly located at the above-mentioned site. Thank you for your cooperation and promptness throughout this investigation.

Based on the subsurface investigation data and information in the site file, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action is required related to the former underground storage tanks.

If you have any questions, please call Tiffany Treece, Environmental Protection Specialist at (510) 577-6031.

Sincerely,

Michael Bakaldin
Environmental Services Manager

ADDITIONAL SUBSURFACE INVESTIGATION FOR THE LEVITZ FURNITURE LOCATED IN SAN LEANDRO, CALIFORNIA

1.0 INTRODUCTION

This report presents the results of an additional subsurface soil investigation conducted by ATC Associates Inc. (ATC) at the Levitz Furniture facility located at 3199 Alvarado Street (site) in San Leandro, California (Figure 1). The work was conducted in general accordance with the scope of work as it was outlined in ATC's *Workplan for Additional Subsurface Investigation*, dated 15 October 1999 and ATC's *Addendum to Workplan for Additional Subsurface Investigation*, dated 20 October 1999.

ATC completed a Phase I environmental site assessment (ESA) investigation of the site in March 1999 (ATC, 1999). The ESA identified several potential environmental concerns at the property. Subsequent to the findings and the recommendations of the ESA, a limited subsurface investigation was conducted at the site by ATC on 27 April 1999. The limited subsurface investigation discovered an unknown volume of petroleum hydrocarbon impacted soil and groundwater present at the site. The results were summarized in ATC's *Subsurface Investigation Report for Levitz Furniture Located in San Leandro*, dated 6 May 1999 and contained recommendations for additional subsurface investigation activities.

ATC performed a second limited subsurface investigation on 11 May 1999. The subsurface investigation defined the lateral extent of petroleum impacted soil and groundwater at the site. The results were summarized in ATC's *Additional Subsurface Investigation Report for Levitz Furniture Located in San Leandro*, dated 25 May 1999 and contained recommendations for no additional site activities. ATC requested no further action status for the site in a letter to the City of San Leandro dated 2 September 1999. This request was denied pending further evaluation of diesel impacted soil discovered beneath Alvarado Street. The following report summarizes the findings of that additional investigation.

2.0 OBJECTIVE

The objective of the work presented in this report was to evaluate the presence of diesel impacted soil and groundwater, if any, in the vicinity of the former service station at the site and along the eastern property line.

3.0 SCOPE

The scope of services developed to meet the objective included the following tasks:

Confidential

ATC ASSOCIATES INC.

8015. In addition, the groundwater sample collected from boring SB13 was analyzed for TPHg, BTEX, and MTBE by EPA Method 8015 modified and 8020.

No concentrations of TPHd were detected in any of the analyzed soil samples collected from borings SB9, SB10, SB11, SB12, SB13, and SB14.

The following Table 2 summarizes the laboratory analytical results for soil samples. Copies of the laboratory reports for analyzed soil samples and the chain-of-custody forms are presented in Appendix B.

8.0 DISCUSSION

Field observations and the results of the laboratory analyses showed no indication of the presence of TPHd in the soil samples to be above laboratory detection limits. The groundwater samples

Confidential

collected from borings SB9, SB10, SB12, SB13, and SB14 contained no detectable concentrations of TPHd. The groundwater sample from boring SB11 contained TPHd at 1,100 ug/l. The groundwater sample collected from boring SB13 contained no detectable concentrations of TPHg, BTEX, or MTBE. Analytical results from past and current subsurface investigations indicate that the TPHd impacted groundwater collected from boring SB11 did not originate from the location of the former service station located at the site, but from a location east of the site. Samples from boring SB12, located in the immediate vicinity of the former service station, and boring SB13, located in the estimated downgradient direction, did not contain detectable concentrations of TPHd. In addition, samples from boring SB14, located between SB11 and the former service station, also did not contain detectable concentrations of TPHd.

9.0 CONCLUSION

Based on the information obtained during this subsurface investigation, the previous limited subsurface investigation, laboratory analytical results, current regulatory guidelines and the professional judgement of ATC, the following conclusion is drawn:

- There are moderate concentrations of TPHd present in the groundwater in the immediate vicinity of boring SB11. There is a very low likelihood that the source of the residually impacted groundwater is the former gasoline service station.

10.0 RECOMMENDATION

Based on the information obtained during this subsurface investigation, laboratory analytical results, current regulatory guidelines and the professional judgement of ATC, additional investigation activities are not required.

The judgments and conclusions described in this report pertain to the conditions judged to be present or applicable at the time the work was performed. Future conditions may differ from those described herein, and this report is not intended for use in future evaluations of the site unless an update is conducted by consultant familiar with site soil characterization.

Use of this report is provided to Levitz Furniture, for its exclusive use and shall be subject to the terms and conditions in the applicable contract between Levitz Furniture and ATC. No other third party use of or reliance on this report is permitted by ATC without ATC's advance written authorization. Any authorized third party use of this report shall be subject to the terms and conditions governing the work in the contract between Levitz Furniture and ATC. Any unauthorized release or misuse of the report shall be without risk or liability to ATC.

Certain information contained in this report may have been rightfully provided to ATC by third parties or other outside sources. ATC has made reasonable inquiry to ascertain the veracity of the information. However, ATC does not make any warranties or representation, whether

ENVIRONMENTAL SITE ASSESSMENT
LEVITZ FURNITURE
LOCATED AT
3199 ALVARADO STREET
IN SAN LEANDRO, CALIFORNIA

1.0 INTRODUCTION

This report summarizes the results of an environmental site assessment (ESA) conducted for the Levitz Furniture facility located at 3199 Alvarado Street (site) in San Leandro, Alameda County, California (Figure 1). The assessment was conducted by ATC Associates Inc. (ATC) in response to the request and authorization of Mr. Chris Bartzokis with the Levitz Furniture Corporation and in general accordance with the contract dated February 11, 1999, between the Levitz Furniture Corporation and ATC.

2.0 OBJECTIVE

The objective of the assessment described in this report was to identify to the extent feasible pursuant to the processes prescribed herein, the presence of Recognized Environmental Conditions (RECs) as defined in the American Society of Testing and Materials (ASTM) Standard E 1527-97.

3.0 SCOPE

The scope of services used to meet the objective was in general accordance with ASTM Standard E 1527-97 and included review of the following readily available information sources:

- Task 1: Site and Site Vicinity
  - Discussions with personnel familiar with the site facility and review of site facility drawings;
  - A site reconnaissance to look for evidence of present and/or past operations that use or may have used potentially hazardous materials; and
  - A site vicinity reconnaissance to compile a list of companies/businesses in the immediate site vicinity that are reported to use, or appear to use or produce, hazardous substances that in our judgment may impact the site.

Confidential

used here to mean the effect or result of a release of a hazardous substance that could be judged an REC.

5.0 SITE REVIEW

The following terms are used in this report:

- "Site" refers to the property within the approximate boundaries shown in Figures 1 and 2 and described in Subsection 5.1;
- "Immediate site vicinity" refers to properties immediately adjacent to the site that share a common boundary with the site; and
- "Site vicinity" refers to the area within approximately a 1-mile radius of the site.

5.1 Site Setting

The site comprises approximately 14.9 acres of land developed with a 250,520 square foot building currently occupied by a furniture sales showroom and warehouse and paved parking areas (Figure 2). The site is located south of the intersection of Teagarden Street and Alvarado Street in San Leandro, California. Several multi-tenant commercial buildings are located north of the site, Alvarado Street with commercial buildings beyond is located immediately east of the site, single-family residences are located south of the site, and the Nimitz Freeway (Highway 880) is located west of the site. The site is located at an elevation between approximately 25 and 30 feet above mean sea level. Site boundary information was obtained from Mr. Ron Hill of the Levitz Furniture Corporation and during the site reconnaissance conducted by ATC. Mr. Hill was not certain when the building was constructed, but indicated that he believed the building was originally utilized by a supermarket.

5.2 Site and Site Vicinity Reconnaissance

5.2.1 Site Reconnaissance - A site reconnaissance was conducted on February 23, 1999, by personnel from ATC Associates Inc. Color photographs of the site are presented in Figure 3. At the time of the site reconnaissance, the site was developed with a furniture showroom/warehouse building and paved parking areas.

Potentially hazardous materials observed on-site appeared to be limited to small quantities (5-gallon or smaller containers) of cleaning supplies and general maintenance products such as paints and varnishes. These materials were observed in a small janitorial closet in the showroom area and in flammable materials cabinets in the warehouse area. All potentially hazardous materials observed on site appeared to be stored in a neat and orderly manner in flammable materials cabinets. In addition, one air compressor was observed in the shop area of the warehouse and two 1-gallon containers of refrigeration oil were observed near a heating, ventilating and air conditioning unit (HVAC) unit on the south side of the warehouse. No

Confidential

evidence of spills or releases or significant staining was observed on the concrete floor in these areas.

No evidence of stressed vegetation was observed at the site. During a review of building plans for the site provided to ATC by Levitz (Werner S. Stroch & Associates, 1971), placement of a gasoline UST adjacent to the northeast corner of the site building was identified, as well as the proposed abandonment of a water well on the western portion of the site. During the site reconnaissance, the area where the proposed UST was depicted was observed to be paved with asphalt. No evidence of underground storage tanks (i.e. fill ports or vent risers) or groundwater monitoring wells were observed on-site. Mr. Hill did not have any further knowledge of the UST on the plans and the site was not listed in any regulatory databases or at any regulatory agencies. The former water well was observed adjacent to a fire hydrant in the parking area on the west side of the site. The water well appeared to have been plugged, however, the well had not been abandoned flush with the ground surface. The top of the well was identified by a circular steel casing.

Numerous municipal debris were observed on the western portion of the site parking lot near a covered loading dock area. Debris included sinks, toilets, metal shelving, wood scraps, several containers labeled to contain paint ranging in size from 1-pint to 5-gallons, and one 55-gallon drum labeled to contain Spray Kote stored on a wood pallet.

A railroad spur is located on the southeast corner of the site and extends into the southeast corner of the warehouse. This area is currently utilized as storage space.

Potable water is provided to the site by the East Bay Municipal Utilities District (East Bay MUD) and sewer and storm drains are maintained by the City of San Leandro.

One pad-mounted electrical transformer was observed at the site. The transformer was not labeled with regard to PCB content. The transformer is owned and operated by Pacific Gas & Electric (PG&E). PG&E has maintained in the past that none of their system equipment contains PCBs. The transformer appeared to be in good condition with no evidence of spills and/or releases of fluid.

A visual asbestos survey of readily accessible building finish materials, not including the collection of samples for analysis, was conducted by ATC as part of our site visit. Suspected asbestos containing materials (ACMs) were evaluated for the presence of damage.

An asbestos survey typically includes a review of building plans and specifications to evaluate the type of construction used and the materials specified. However, detailed building plans and drawings were not readily available for review at the time of the survey. Therefore, ATC relied on visual observations, past experiences and professional judgment in the selection of materials judged to potentially contain asbestos. In general accordance with the aforementioned scope of work, material which could potentially contain asbestos was surveyed. The materials observed at the site included; wallboard, joint tape and taping

Confidential

compound, acoustical drop ceiling panels, flooring materials and their associated mastics, and covebase and its associated mastic. No structural fire proofing or insulated piping was observed during the survey. The above-mentioned materials were observed to be in a generally undamaged condition in the showroom at the time of this survey. However, evidence of localized damage to wallboard was observed in the warehouse areas of the building.

5.2.2 Site Vicinity Reconnaissance - A site vicinity reconnaissance was conducted by personnel from ATC Associates Inc. on February 23, 1999. Properties surrounding the site were observed to be developed for commercial and residential purposes. Several multi-tenant commercial buildings are located north of the site, Alvarado Street with commercial buildings beyond is located immediately east of the site, single-family residences are located south of the site, and the Nimitz Freeway (Highway 880) is located west of the site.

5.3 Hydrogeologic Setting

The subject site is located in the central coastal area of California, on the eastern side of San Francisco Bay. The lithology beneath the site is described as Recent Alluvium, which includes artificial fill, bay mud and salt marsh deposits (Department of Natural Resources, 1961).

The City of San Leandro Engineering Department was not able to provide depth to groundwater nor groundwater gradient information. However, based on the surface topography, the anticipated direction of groundwater flow is to the west, towards San Francisco Bay. Based on the elevation of the site (approximately 25-30 feet above sea level), the estimated depth to groundwater in the site vicinity is approximately 25-30 feet below ground surface (BGS). However, actual local groundwater depth and flow direction can vary greatly over short distances and can be influenced by additional factors such as underground structures, seasonal fluctuations, and soil and bedrock geology.

6.0 HISTORICAL REVIEW

6.1 Permits

Building permits for the site were reviewed at the City of San Leandro Community Development Department. The earliest permit for the site was an electrical permit for Baymart dated August 5, 1965. Various tenant improvements, including a proposed building expansion (to 150,000 square feet) were identified covering the years 1965-1993. Based on a review of building documents, it appears that the western portion of the site was constructed in the late 1950's or early 1960's. In approximately 1971, it appears that the eastern portion of the building was constructed to form the current site configuration.

The site is located in Zone C, an area of minimal flooding, according to the Federal Emergency Management Agency (FEMA) map for the City of San Leandro dated March 18, 1980 (Community Panel Number 060013 003B). The zoning designation for the site is IG - Industrial General.

Confidential

6.2 Sanborn Fire Insurance Maps

A search for Sanborn Fire Insurance Maps for the site and immediate site vicinity was conducted through Environmental Date Resources, Inc. (EDR). No Sanborn Maps were identified. Search documentation is included in Appendix B.

6.3 Aerial Photographs

Aerial photographs of the site and vicinity were obtained from EDR covering the years 1939, 1946, 1968, 1977, and 1989.

Obvious indicators of potential sources of hazardous waste from land use, such as apparent aboveground tank areas, ponds, pits, sumps, landfills, and heavy-industry or oil-field-related developments, were not observed at the site.

The 1939 and 1946 aerial photographs depicted the site and surrounding area as agricultural land. The Nimitz Freeway was not depicted on either of the photographs.

In the photograph dated 1968, a large warehouse was interpreted on the western portion of the site and a smaller rectangular-shaped structure was interpreted on the northeast corner of the site. Driveways/parking areas were interpreted on the north, east, south, and west sides of the site. Agricultural land was depicted north of the site, Alvarado Street with a large parking lot beyond was depicted east of the site, single-family residences were depicted south of the site, and the Nimitz Freeway (Highway 880) with single-family residences beyond was depicted west of the site.

The 1977 and 1989 photographs depicted a building on the western portion of the site. The building depicted on the 1968 aerial photograph had been expanded on the east side of the building. The structure on the northeast corner of the site was no longer present. Driveways/parking areas were interpreted on the north, east, south, and west sides of the site. Four buildings interpreted as warehouse/multi-tenant spaces were interpreted north of the site, Alvarado Street with a large parking lot beyond was depicted to the east (a building had been constructed in the parking lot on the 1989 photograph), single-family residences were depicted south of the site, and the Nimitz Freeway (Highway 880) was depicted west of the site.

6.4 City Directories

ATC received historical city directories from EDR. Sources utilized included Polk City Directory (1951 and 1959), and Haines City Directory (1977, 1983, 1988, 1993, and 1998). Appendix A presents the city directory abstract that was provided by EDR and is the basis for the following information.

Confidential

7.9.1 Permitted USTs: Distance Searched - Site and Immediate Site Vicinity - Information from SWRCB regarding registered USTs indicated that no UST-listed facilities are located in the immediate site vicinity.

7.9.2 UST Releases (LUST): Distance Searched - 0.5 mile - The RWQCB, SWRCB and the Alameda County Department of Environmental Health Services (DEH) maintain records of facilities currently involved in site assessment/mitigation resulting from reported spills or releases from USTs. According to the EDR report, 21 LUST-listed facilities are located within the search area; none of which is located in the immediate site vicinity.

Five LUST facilities are located potentially upgradient from the site. The nearest potentially upgradient facility is Amaral Sausage (735 Fremont Ave.), located approximately 0.23 mile east of, and potentially upgradient from the site. The EDR report lists a case type of soil only.

7.10 Oil and Gas

Distance Searched - 0.5 mile - A review of Publication No. TR01, Oil & Gas Prospect Wells Drilled in California (CADOG) indicated that the site is not located in an oil field and that there are no oil or gas wells located within one mile of the site (CADOG, 1982).

7.11 Local Regulatory Agency Files

Alameda County Environmental Health Services Division (EHS)

ATC requested available file information regarding the site from the EHS. According to Ms. Erlene Coleman-Ali, no files for the site address were identified. Ms. Coleman-Ali recommended contacting the East Bay MUD and the Alameda County Fire Department.

East Bay Municipal Utilities District (East Bay MUD)

ATC requested available file information regarding the site from the East Bay MUD. According to Ms. Cynthia Adrisson, Environmental Compliance Officer, the East Bay MUD does not maintain LUST or environmental investigation files.

Alameda County Fire Department (FD)

ATC requested available file information regarding hazardous materials, USTs and related issues from the FD. According to FD file information, no current UST files were identified. However, a permit for the installation of three 9,980-gallon gasoline USTs and one 550-gallon waste oil UST by Consumers Mart Co., dated July 18, 1962 was identified. A hand-drawn sketch on a permit dated April 22, 1963, indicated that the USTs belonged to a service station on the northeast corner of the site maintained by Consumers Mart Co. A permit dated April 12, 1971, indicated that All Bay Cities was scheduled to remove the four USTs from the site.

Confidential

- We have performed a Phase I Environmental Site Assessment in conformance with the scope of work and limitations of ASTM Standard E 1527-97 for the Levitz Furniture facility located at 3199 Alvarado Street in San Leandro, California. Any exceptions to or deletions from this practice are described in Section 4.0 of this report. This assessment has revealed no evidence of Recognized Environmental Conditions in connection with the site, with the exception of the following:

  - A service station was formerly located on the northeast corner of the site from approximately 1962 until 1971. Records reviewed at local regulatory agencies could not verify the removal of the USTs, however, the site was not listed as a LUST facility;

  - A review of building plans for the site building identified plans for the installation of a gasoline UST adjacent to the northeast corner of the site building. Records reviewed at local regulatory agencies could not verify if the UST was installed; and

  - Localized damage to wallboard was observed in the warehouse area.

10.0 RECOMMENDATIONS

Based on the information obtained during this assessment, current regulatory guidelines, and the judgment of ATC, the following recommendations have been made:

- If a higher level of confidence is required regarding the removal of the four USTs associated with the former service station located on the northeast corner of the site, and the proposed gasoline UST located adjacent to the northeast corner of the site building reviewed on building plans, ATC recommends a geophysical survey be conducted at the site to assess whether historical subsurface features (i.e. former USTs, dispenser lines, etc.) are present at the site. Based on the results of this investigation, a subsurface soil sampling investigation may be warranted; and

- Based on the date of building construction (late 1950s and 1971), if building renovations or demolition activities are to occur, an asbestos survey should be performed.

This assessment was performed on behalf of and solely for the Client. No other company, entity, or person shall have any rights with regard to ATC's contract with the above client, including but not limited to indemnification by ATC, or any rights of reliance on the findings, conclusions and recommendations of this pr any subsequent reports regarding the referred site.

Boca Raton FL 33487-1613

Dear Mr. Bartzokis:

Notice of No Further Action Required – Levitz Furniture Site
3199 Alvarado Street, San Leandro CA

This letter confirms the completion of subsurface investigation and characterization for the underground storage tank operation formerly located at the above-mentioned site. Thank you for your cooperation and promptness throughout this investigation.

Based on the subsurface investigation data and information in the site file, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action is required related to the former underground storage tanks.

If you have any questions, please call Tiffany Treece, Environmental Protection Specialist at (510) 577-6031.

Sincerely,

Michael Bakaldin
Environmental Services Manager

1.0 EXECUTIVE SUMMARY

Pioneer Engineering & Environmental Services, Inc. (Pioneer) was engaged by CC Industries, Inc. (Client) to complete a Phase I Environmental Site Assessment (ESA) of the property located at 3199 Alvarado Street in San Leandro, California (subject property). The subject property consists of an approximate 14.9-acre, irregular-shaped parcel that is improved by a one-story commercial structure (subject building) occupied by Levitz Furniture. The subject building encompasses approximately 240,000 square feet, and is currently utilized as a furniture showroom and warehouse. See Figure 1 for a Site Diagram and Appendix A for an Area Map.

Historical investigation indicates that the subject property was undeveloped, vacant land until the development of the western portion of the subject building in the early 1960s. At that time, a service station was also developed on the northeast portion of the subject property. In approximately 1971, the service station was demolished, and the eastern portion of the current subject building was developed. Levitz Furniture has occupied the subject building since the late 1960s.

The visual inspection of the subject property was conducted on December 9, 2002. Operations on site include furniture sales and warehousing. Wastes generated at the subject property consist exclusively of general refuse, consisting of packaging materials and office refuse. General refuse is placed in two dumpsters, one located adjacent to the northeast corner of the subject building and one located adjacent to the western portion of the subject building. The dumpsters are serviced three times a week, or as needed, by the City of San Leandro. Pioneer observed a limited amount of petroleum/hazardous substances on site, including furniture stainer, fabric treatment, paints, and cleaning supplies; however, there was no hazardous waste reportedly generated on site. Pioneer did not observe areas of staining in the areas of chemical storage, and the concrete floors were in good condition during the site inspection, with limited cracking to serve as a potential migratory pathway.

The following environmental reports were previously prepared for the subject property by ATC Associates, Inc. (ATC): *Environmental Site Assessment*, dated March 16, 1999; *Workplan for Subsurface Investigation*, dated April 23, 1999; *Subsurface Investigation*, dated May 6, 1999; *Additional Subsurface Investigation*, dated May 25, 1999; *Request for No Further Action Status*, dated September 2, 1999; *Workplan for Subsurface Investigation*, dated October 15, 1999; *Addendum to Workplan for Subsurface Investigation*, dated October 20, 1999; and *Additional*

Subsurface Investigation, dated November 16, 1999. The investigations indicated that a service station was historically located on the northeast portion of the subject property from the early 1960s until approximately 1971. ATC's *Environmental Site Assessment* indicated that a permit, dated July 18, 1962, was on file with the Alameda County Fire Department for the installation of three 9,980-gallon gasoline underground storage tanks (USTs) and one 550-gallon waste oil UST at the service station (known as "Consumers Mart Co."). An additional permit, dated April 12, 1971, was also on file with the Alameda County Fire Department that gave permission to "All Bay Cities" to remove the three 9,980-gallon gasoline tanks and one 550-gallon waste oil tank; however, there was no documentation that indicated if/when the USTs were removed from the subject property. ATC was also provided with building plans of the subject property, dated 1971, that indicated a gasoline UST associated with the service station was located adjacent to the northeast corner of the subject building.

Based on the available information, ATC performed subsurface investigations at the subject property during 1999. Results indicated that low-level xylenes were present in a soil sample and that ethylbenzene, toluene, and xylenes were present in a grab groundwater sample at one of eight soil borings. A City of San Leandro utility trench excavation was performed in October 1999 along the eastern border of the subject property and identified petroleum contamination in groundwater. Therefore, at the request of the City, additional soil and grab groundwater sampling was performed at six locations. The results indicated that only one grab groundwater sample along the eastern property border contained total petroleum hydrocarbons. Following the subsurface investigations, the City of San Leandro issued a *No Further Action Required* letter for the subject property on November 22, 1999. Therefore, Pioneer believes the former on-site service station represents a historical recognized environmental condition.

A review of the appropriate federal and state environmental databases revealed that one RCRA CORRACTS site, 20 leaking underground storage tank (LUST) incidents, 12 Calsites listings, and one Solid Waste Facility (SWF) site are located at or within the ASTM minimum search distances from the subject property. However, based on the available information and/or distances, Pioneer does not believe that these listings represent recognized environmental conditions to the subject property at this time.

Upon completion of this report, no recognized environmental conditions (RECs) were identified in connection with the subject property.

The Executive Summary is intended to provide a brief overview of the findings of this investigation. It should be noted that although the Executive Summary is an integral part of a report, it should not be substituted in lieu of reading the entire report. The entire report must be read in order to fully understand the findings and potential environmental concerns associated with the subject property.

2.0 STATEMENT OF WORK

Pioneer Engineering & Environmental Services, Inc. (Pioneer) was engaged by CC Industries, Inc. (Client) to complete a Phase I Environmental Site Assessment (ESA) of the property located at 3199 Alvarado Street in San Leandro, California (subject property). The subject property consists of an approximate 14.9-acre, irregular-shaped parcel that is improved by a one-story commercial structure (subject building) occupied by Levitz Furniture. The subject building encompasses approximately 240,000 square feet, and is currently utilized as a furniture showroom and warehouse. See Figure 1 for a Site Diagram and Appendix A for an Area Map.

A Phase I ESA is designed to identify, to the extent feasible pursuant to the processes described by ASTM Standard Practice E 1527-00, "recognized environmental conditions" (see definition, following page) in connection with the subject property. The ASTM standard was developed to provide current owners, prospective buyers, lending institutions or other interested parties with qualified professional judgments concerning the presence or likely presence of a petroleum/hazardous substance release or substantial threat of a release of a petroleum/hazardous substance. The scope of this Phase I ESA includes a historical review of the site's development and prior use, visual inspection of the site and any associated structures and other improvements, and a review of state and federal environmental/regulatory databases for the subject site and surrounding properties in accordance with the requirements of the ASTM standard. Pioneer's Phase I ESAs are generally expanded to identify several potential "business environmental risk(s)," including a search for suspect asbestos-containing materials (ACMs), lead-based paint (LBP), and potential PCB-containing light ballasts. Thus, the information contained within this Phase I ESA has been compiled in such a manner that meets or exceeds the recommended practices established by ASTM Standard Practice E 1527-00, except whereas specified within this report.

The scope of the Phase I ESA can be further expanded from outlined above as specified by the Client, or "User." Unless specifically instructed by the User as to the purpose of the Phase I ESA, Pioneer is required to assume that it is being prepared for the purpose of qualifying for the innocent landowner defense to CERCLA liability. The following specific additions or instructions were made by the User with regard to the purpose and practice of this Phase I ESA: none.

The following terminology and definitions are specific to the ASTM standard:

Recognized Environmental Conditions: "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include 'de minimis' conditions (see following definition)."

De Minimis Conditions: "(environmental) conditions that do not generally present a material risk of harm to health or the environment and that generally would not be subject to enforcement action if brought to the attention of appropriate governmental agencies."

Historical Recognized Environmental Conditions: "(an) environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently."

Business Environmental Risk: "a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate (such as asbestos, regulatory compliance, lead-based paint issues, etc.), not necessarily limited to those environmental issues required to be investigated in this (ASTM) practice."

Findings: "known or suspect environmental conditions associated with the property, and which may include recognized environmental conditions, historical recognized environmental conditions and de minimis conditions, among other environmental conditions."

3.0 HISTORICAL REVIEW

3.1 Introduction

The historical review process is intended to provide a chronological outline of the prior uses and development of the subject property in accordance with Section 7.3 of the ASTM standard. The investigative research attempts to identify potential environmental hazards and their associations with structures or operations of the past and present. Particular attention was focused on past owners or operations that may have been involved with the generation, treatment, handling, storage, or disposal of petroleum/hazardous materials and other practices that may have led to recognized environmental conditions in connection with the subject property.

Pertinent information was collected from standard historical sources that were reasonably ascertainable, such as Sanborn Fire Insurance Maps, USGS Topographic Maps, aerial photographs, local building and fire department records, tax assessor records, zoning/land use records and interviews with persons knowledgeable of the historical use of the site. Primary sources utilized during this investigation are documented in Section 9.0 of this report. A detailed account of the sources contacted during this investigation, including the dates that information was requested and last updated, is maintained on file at Pioneer and is available upon request.

It should be noted that Pioneer was unable to obtain site-specific documentation dating back to 1940, in accordance with ASTM Standard Practice E 1527-00. However, the documentation available strongly suggests that the subject property was vacant, unimproved land prior to the development of the western portion of the subject building in the early 1960s.

3.2 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps (Sanborn maps) provide detailed drawings of the location and use of buildings in a given time period as early as the late 1800s. Pioneer reviewed the Sanborn map collection on file at the City of San Leandro Building Department; however, no coverage was available for the subject property and surrounding properties.

3.3 USGS Topographic Maps

Pioneer reviewed USGS 7.5 Minute Topographic Maps (USGS maps) of the area, dated 1948, 1959, 1968, 1973, 1980, and 1993 (see Appendix B for copies of the USGS maps).

1948: The 1948 USGS map showed the subject and adjacent properties as vacant, unimproved land. Alvarado Street was not present east of the subject property, and Highway 880 (Nimitz Freeway) was not present west of the subject property.

1959: The 1959 USGS map showed the subject property and north and east adjacent properties as vacant, unimproved land. Alvarado Street was present east of the subject property, and the Nimitz Freeway was denoted west of the subject property. The south adjacent properties and west adjacent properties, across the Nimitz Freeway, were included in an area in which individual buildings are not denoted due to the high structure density of the area. However, the map testified to the general development of the vicinity during that period.

1968: The 1968 USGS map showed a rectangular-shaped structure in the size of the western portion of the subject building on the western portion of the subject property. In addition, a thin, rectangular structure was denoted on the northeast portion of the site. The east adjacent properties, across Alvarado Street, were denoted with structures similar in shape to the current commercial buildings. The north, south, and west adjacent properties were shown as on the 1959 map.

1973 and 1980: The 1973 and 1980 USGS maps showed the subject property as developed with the current subject building and the thin, northerly-located, rectangular structure. The 1980 map revealed railroad tracks entering the subject building from the east. As a note, the structure on the northeastern portion of the subject property was reportedly demolished by this time (see Sections 3.5 and 3.7), and aerial photographs confirm that this structure was demolished by 1975 (see Section 3.4). Pioneer believes it is likely that this discrepancy is due to an error in updating the USGS maps. The north adjacent properties were revealed with structures similar in configuration to the current commercial buildings. The east, south, and west adjacent properties were shown as on the 1968 map.

1993: The 1993 USGS map did not specifically identify individual buildings located at the subject property or surrounding areas due to the high structure density in the region. However, the map testified to the general development of the vicinity at this time.

3.4 Aerial Photographs

Pioneer reviewed aerial photographs, dated 1947, 1959, 1969, 1975, and 2002, for the area incorporating the subject property (see Appendix C):

1947: The 1947 aerial photograph revealed the subject and adjacent properties as vacant, undeveloped land. Alvarado Street was not present east of the site, and the Nimitz Freeway was not present west of the site.

1959: The 1959 aerial photograph revealed the subject property and north adjacent properties as vacant, undeveloped land. Alvarado Street was shown east of the subject property and the Nimitz Freeway was present west of the site. The east adjacent properties, beyond Alvarado Street, were revealed with rectangular structures that appeared commercial in nature. The south adjacent properties and west adjacent properties, beyond the Nimitz Freeway, were shown with structures in the shape of the current residential structures.

1969: The 1969 aerial photograph revealed the subject property as developed with the western portion of the current subject building, and a thin, rectangular structure on the northeast portion of the property. Small rectangular objects that appeared similar to vehicles were revealed throughout the eastern portion of the subject property. The adjacent properties were shown as on the 1959 aerial photograph.

1975: The 1975 aerial photograph revealed the subject property as developed with the current subject building. The thin, rectangular structure on the northeast portion of the property was no longer present. The north adjacent properties were revealed as developed with structures in the shape of the current commercial structures. The east, south, and west adjacent properties were shown as on the 1969 aerial photograph.

2002: The 2002 aerial photograph revealed the subject property and north, south, and west adjacent properties as shown on the 1975 aerial photograph. The east adjacent properties, across Alvarado Street, were revealed with structures in the shape of the current commercial structures.

3.5 Local Historical Sources

Pioneer visited the Alameda County Fire Department and the City of San Leandro Building Department and Department of Environmental Services in an effort to obtain additional information regarding the subject property, including building permits, records of underground storage tanks (USTs), aboveground storage tanks (ASTs), hazardous chemical releases, and environmentally significant incidents in connection with the subject property. The following provides a summary of the pertinent information gathered from the permits available for review and lists the source.

3.5.1 Alameda County Fire Department

Records reviewed at the Alameda County Fire Department included fire inspection reports from 1963 to the present day. Records also included a copy of a hand-drawn map of the subject property, dated April 22, 1963, that showed the western portion of the current subject building and a service station (labeled as "Consumers Mart of America") located in the northeast portion of the site. A phone conversation log, dated September 4, 1970, from the fire department indicated that Mr. Frank Wright of "Station @ Bay Mart Properties, 3199 Alvarado Street" was informed that the three 9,980-gallon gasoline tanks on site should be filled with water and sealed unless the tanks were to be removed. The log also stated that the service station was to be demolished. An additional letter from the fire department, dated April 12, 1971, gave permission to "All Bay Cities" to remove three 9,980-gallon gasoline tanks and one 550-gallon waste oil tank from the subject property. No further records were on file regarding the installation and/or removal of USTs on the subject property.

3.5.2 San Leandro Building Department

Records received from the San Leandro Building Department included landscaping, irrigation, and foundation plans, dated 1971, that showed the current subject building. The Building Department also had records of the on-site sprinkler system plans and the installation of storage racks located in the warehouse. No additional records were on file regarding the former service station and/or USTs on the subject property.

3.5.3 San Leandro Department of Environmental Services

Records on file with the City of San Leandro Department of Environmental Services included several environmental reports prepared by ATC Associates, Inc., dated 1999. The reports included an environmental site assessment that identified a former service station with four USTs located on the northeast portion of the site from the early 1960s until approximately 1971, and subsequent subsurface investigations to address this concern to the subject property (see Section 3.7). Records were also on file regarding a City of San Leandro utility trench excavation that was performed in October 1999 along the eastern border of the subject property and identified "diesel" contamination in groundwater. As a note, although the city identified that the contamination was associated with diesel fuel, no diesel fuel tanks appear to have been located on the subject property. Following the subsurface investigations to address these concerns, the City of San Leandro issued a *No Further Action Required* letter for the subject property on November 22, 1999 (see Appendix D for a copy of the letter).

3.6 Property Owner and/or Key Site Manager Interview & Questionnaire

Pioneer interviewed Mr. Wayne Gulledge, warehouse supervisor at the subject property, regarding the history and use of the site. Mr. Gulledge stated that the subject property has been utilized as a furniture showroom and warehouse since development. Mr. Gulledge was not aware of the presence of the former service station and USTs located on the northeast portion of the subject property.

Pioneer also submitted a Property Owner/Key Site Manager Questionnaire to Mr. Gulledge. The purpose of this questionnaire is to create a foundation and preliminary history of the subject property and obtain information regarding potential recognized environmental conditions. A review of the property owner questionnaire, as completed by Mr. Gulledge, identified no obvious environmental concerns associated with the subject property. See Appendix E for a copy of the completed Property Owner/Key Site Manager Questionnaire.

3.7 Previous Environmental Assessments

The following environmental reports were previously prepared for the subject property by ATC Associates, Inc. (ATC): *Environmental Site Assessment*, dated March 16, 1999; *Workplan for Subsurface Investigation*, dated April 23, 1999; *Subsurface Investigation*, dated May 6, 1999; *Additional Subsurface Investigation*, dated May 25, 1999; *Request for No Further Action Status*, dated September 2, 1999; *Workplan for Subsurface Investigation*, dated October 15, 1999; *Addendum to Workplan for Subsurface Investigation*, dated October 20, 1999; and *Additional Subsurface Investigation*, dated November 16, 1999. The investigations indicated that a service station was historically located on the northeast portion of the subject property from the early 1960s until approximately 1971. ATC's *Environmental Site Assessment* indicated that a permit, dated July 18, 1962, was on file with the Alameda County Fire Department for the installation of three 9,980-gallon gasoline USTs and one 550-gallon waste oil UST at the service station (known as "Consumers Mart Co."). An additional permit, dated April 12, 1971, was also on file with the Alameda County Fire Department that gave permission to "All Bay Cities" to remove the three 9,980-gallon gasoline tanks and one 550-gallon waste oil tank; however, there was no documentation that indicated if/when the USTs were removed from the subject property. ATC was also provided with building plans of the subject property, dated 1971, that indicated a gasoline UST associated with the service station was located adjacent to the northeast corner of the current subject building.

Based on the available information, ATC performed subsurface investigations at the subject property during 1999. Results indicated that low-level xylenes were present in a soil sample and that ethylbenzene, toluene, and xylenes were present in a grab groundwater sample at one of eight soil borings. A City of San Leandro utility trench excavation was performed in October 1999 along the eastern border of the subject property and identified petroleum contamination in groundwater.

Therefore, at the request of the City, additional soil and grab groundwater sampling was performed at six locations. The results indicated that only one grab groundwater sample along the eastern property border contained total petroleum hydrocarbons. Following the subsurface investigations, the City of San Leandro issued a *No Further Action Required* letter for the subject property on November 22, 1999. Therefore, Pioneer believes the former on-site service station represents a historical recognized environmental condition.

4.0 SITE INSPECTION

4.1 Introduction

A visual inspection of the subject property consisted of a physical walk-through of the grounds and building to obtain information regarding recognized environmental conditions in connection with the subject site in accordance with Section 8.0 of the ASTM standard. Particular attention was focused on, but not limited to, the nature of apparent past and present operations at and adjacent to the subject site and a specific search for certain petroleum/hazardous substances. The purpose of the inspection is to assess the potential of a release or imminent threat of a release of a petroleum/hazardous substance and/or waste based on the activities performed and observations noted.

The following sections address the observations noted during the visual inspection conducted on December 9, 2002. Pioneer personnel was unaccompanied during the recent site inspection. A photographic log for the subject property is included in Appendix F of this report.

4.2 Site Location & General Description

The subject property is located at 3199 Alvarado Street in San Leandro, California, and consists of an approximate 14.9-acre, irregular-shaped parcel that is improved by a one-story commercial structure (subject building) occupied by Levitz Furniture. The subject building encompasses approximately 240,000 square feet and is currently utilized as a furniture showroom and warehouse. The remainder of the property consists of an asphalt-paved parking lot and landscaping. Railroad tracks, no longer in use, are located on the eastern portion of the subject property and enter the southeast corner of the subject building. See Figure 1 for a Site Diagram.

4.3 Surrounding Properties

The subject property is located in a mixed-use area of San Leandro. The following provides a summary of the adjacent properties noted during the recent site inspection.

North: The subject property is bordered to the north by several multi-tenant commercial facilities, beyond which is Teagarden Street.

East: The subject property is bordered to the east by Alvarado Street, beyond which are multi-tenant commercial facilities.

South: The subject property is bordered to the south by several residential structures.

West: The subject property is bordered to the west by Highway 880 (Nimitz Freeway), beyond which are residential dwellings.

4.4 Physical Setting

The topography of the subject property and adjacent sites is relatively level, with no significant natural relief features. According to the most recent USGS map available, the elevation of the subject property is approximately 20-30 feet above mean sea level. Based on further interpretation of this source, localized groundwater is expected to flow in a westerly direction, towards San Francisco Bay, which is located approximately 1.5-2 miles west of the subject property (note: site-specific conditions may vary due to a variety of factors, including geologic anomalies, utilities, nearby pumping wells [if present] and subsurface structures and/or developments).

Pioneer also reviewed a General Soil Map, dated 1977 and contained in the *Soil Survey of Alameda County West, California* published by the United States Department of Agriculture Natural Resources Conservation Service, that indicated that the subject site is located in an area with nearly level to moderately steep, moderately well-drained loams and Urban land.

4.5 Site Improvements

The subject building is constructed primarily of concrete/cement blocks atop a concrete slab foundation. The floors throughout the structure consist mainly of concrete, which has been partially covered with carpeting and/or 12" x 12" floor tiles in the furniture showroom, offices, and hallways. Pioneer did not observe any areas of staining in the subject building, and the concrete floor was in good condition during the site inspection, with little to no cracking observed to serve as potential migratory pathways. Walls consist of concrete, wood, and drywall, and ceilings consist of wood, steel beams, and 2' x 4' acoustical ceiling tiles.

4.6 Site Utilities

The subject building is connected to the San Leandro municipal drinking water and sanitary sewer systems, and potable water is supplied by East Bay Municipal Utilities District (East Bay MUD). The subject building is heated by rooftop-mounted combination heating and cooling units powered by natural gas. Natural gas and electricity are supplied to the subject property by Pacific Gas & Electric (PG&E).

4.7 Facility Operations & Wastes

Operations conducted on site include furniture sales and warehousing. Wastes generated at the subject property consist exclusively of general refuse, consisting of packaging materials and office refuse. General refuse is placed in two dumpsters, one located adjacent to the northeast corner of the subject building and one located adjacent to the western portion of the subject building. The dumpsters are serviced three times a week, or as needed, by the City of San Leandro.

4.8 Underground Storage Tanks

Underground storage tanks (USTs) that exist or previously existed at sites may represent a potential environmental risk due to the possibility of tank system failures and/or spills and overfills. An inspection was conducted at the subject property in order to identify the location of any USTs that exist or may have existed. Specific attention was focused on visual indications of equipment associated with USTs, such as fill or vent piping, dispensers, dispenser islands, or evidence of excavations. Information for the UST investigation was gathered from the visual inspection, personal interviews, the local municipal agencies, and the California Register of USTs.

4.8.1 Subject Property Underground Storage Tanks

Historical research and previous investigations indicated that a service station was historically located on the northeast portion of the subject property from the early 1960s until approximately 1971. As mentioned in Section 3.7, ATC's *Environmental Site Assessment* indicated that a permit, dated July 18, 1962, was on file with the Alameda County Fire Department for the installation of three 9,980-gallon gasoline USTs and one 550-gallon waste oil UST at the former on-site service station (known as "Consumers Mart Co."). An additional permit, dated April 12, 1971, was also on file with the Alameda County Fire Department that gave permission to "All Bay Cities" to remove the three 9,980-gallon gasoline tanks and one 550-gallon waste oil tank; however, there was no documentation that indicated if/when the USTs were removed from the subject property. ATC was also provided with building plans of the subject property, dated 1971, that indicated a gasoline UST associated with the service station was located adjacent to the northeast corner of the current subject building. ATC subsequently performed several subsurface investigations at the subject property in 1999, and there was no evidence of USTs remaining on site. Additionally, Pioneer did not observe obvious evidence of UST placement during the recent site inspection. As a note, the subject property was not identified on the California Register of USTs, and no further information was available regarding the former on-site UST systems.

4.8.2 Adjacent Property Underground Storage Tanks

Pioneer performed a limited inspection of the surrounding properties from the subject property's borders and public thoroughfares, and no obvious evidence of USTs was observed

on the adjacent sites. Additionally, there was no information on file with the California Register of USTs or the Alameda County Fire Department concerning the registration or knowledge of USTs located at the immediate adjacent properties.

4.9 Other Petroleum/Hazardous Substance Storage

Petroleum/Hazardous Substances Summary

(Number) Size / Type of Container(s)	*Contents*	*Location*	*Secondary Containment*	*Visual Observations*
(3) 30-gallon containers	Stainsafe furniture guard	Northeast corner of east warehouse	None	No staining
(10-15) 5-gallon containers	Stainsafe furniture guard	Northeast corner of east warehouse	None	No staining
(20) 5-gallon containers	Latex paint	Receiving hallway	None	No staining
(20) 1-gallon containers	Latex paint	Receiving hallway	None	No staining
(~100) 12-16 oz. bottles	Stainer/finish	Southwest corner of west warehouse	None	No staining
(~100) <1-gallon containers	Touch-up paint	Southwest corner of west warehouse	None	No staining
(~10) <1-gallon containers	Cleaners	Southwest corner of west warehouse	None	No staining

Pioneer observed a limited amount of petroleum/hazardous substances on site, including furniture stainer, fabric treatment, paints, and cleaning supplies. These materials are utilized for repairing minor damage to furniture, stain-proofing fabric portions of furniture, and general building maintenance activities. Reportedly, no special/hazardous wastes are generated from the use of these materials. Pioneer did not observe areas of staining in the areas of chemical storage, and the concrete floors were in good condition during the site inspection.

4.10 Asbestos-Containing Materials

This section addresses a potential environmental concern beyond the scope of ASTM Standard Practice E 1527-00. Restrictions for asbestos use in building materials became more stringent in the 1970s, and the use of friable and sprayed-on asbestos was prohibited in 1978 by the Environmental Protection Agency with the passage of the National Emission Standards for

Hazardous Air Pollutants (NESHAP). Friable and sprayed-on asbestos-containing materials (ACMs) are easily crumbled or pulverized and therefore easily made airborne. Friable ACMs are a potential health hazard. Non-friable ACMs are not a major concern unless they become airborne by such processes as sanding, drilling, milling, cutting, etc. during renovation or demolition. As a note, the 1990 ban on non-friable ACMs was revised in 1993. The revised ban applies only to (1) any new releases of asbestos and (2) materials for which manufacturing, importing or processing was discontinued prior to July 12, 1989. Products that are no longer subject to the ban include, but are not limited to, vinyl asbestos-containing floor tile, asbestos cement shingles and roofing felt.

A comprehensive asbestos survey is beyond the scope of this Phase I ESA. The asbestos survey conducted at the subject property was limited to an inspection of readily-accessible areas. Particular attention was focused on identifying asbestos-containing insulation, plaster materials, floor tiles, and sprayed or troweled-on structural coverings. Sampling and analysis were not included as part of this investigation. The suspect ACMs identified include the following:

Table of Suspect ACMs

Suspect ACM	*Location*	*Condition*	*Friability*
2' x 4' ceiling tile	Offices and showroom	Good	Friable
12'' x 12'' floor tile	Offices and showroom	Good	Non-friable
Drywall/associated joint compound & tape	Throughout	Good	Non-friable

4.11 Lead-Based Paint

The use of lead-based paint (LBP) was widespread in the construction industry prior to 1973 due to its durability. At that time, amendments to the Lead Based Paint Poisoning Prevention Act established the allowable level of lead in paint to 0.5 percent by weight of dry sample. This limit was implemented to eliminate the hazard of LBP in housing. LBPs can exist on any painted surface. Such paint, if properly maintained and in good condition, poses little risk. However, damaged or deteriorated surfaces can present a health threat, especially to children under six years of age. Chipping or peeling paint poses a threat if ingested, however, the greatest danger lies in the inhalation of dust particles.

A comprehensive survey is beyond the scope of this Phase I ESA. The LBP survey conducted at the subject property was necessarily limited to a visual inspection of readily accessible areas. Particular attention was focused on identifying deteriorated areas of painted surfaces and frequent impact surfaces such as window and door frames. Bulk sampling and analysis of suspect LBPs were not included within the scope of this survey.

Painted surfaces were observed throughout the subject building. The original painted surfaces are considered to contain LBP based on the subject building's date of construction. The painted surfaces observed were in sound condition at the time of the property inspection, with no visible areas of chipping or peeling.

4.12 Polychlorinated Biphenylic Compounds

The use of Polychlorinated Biphenylic (PCB) compounds was widespread in various manufacturing and industrial applications due to their superior dielectric, lubricating and fire-retardant properties prior to their federal ban in 1979. Pioneer's focus has been limited to the more common potential PCB sources, which include dielectric fluids used in electrical equipment, such as transformers and capacitors, unless otherwise stated.

Pioneer observed a pad-mounted transformer located south of the subject building and two floor-mounted transformers located in the eastern warehouse area of the subject building. Visual inspection of these transformers noted that they appeared to be in sound condition, with no staining or other evidence of leakage observed. The pad-mounted transformer located south of the subject building is owned and maintained by Pacific Gas & Electric (PG&E). According to information received from PG&E, all PG&E transformers in California are considered non-PCB containing. The transformers located in the subject building were labeled as being manufactured by Jeffries Transformer. Pioneer contacted Romac Electrical Equipment (Romac), a distributor of Jeffries transformers, regarding the transformers on site. A representative from Romac indicated that the Jeffries transformers on site are "dry," indicating that they are non-PCB containing. Therefore, the transformers are not expected to represent an environmental concern to the subject property.

The ballasts associated with fluorescent light fixtures are also possible sources of PCBs depending on their specific manufacturer and the date of manufacture. Equipment containing PCBs that is old, neglected, or damaged may leak and is therefore potentially hazardous depending on the actual PCB content and the specific PCB isomer involved. As a result, Pioneer includes a discussion of this equipment although this specific potential source of PCBs is beyond the scope of the ASTM standard.

Fluorescent light ballasts were observed throughout the subject building. The ballasts are considered potential sources of PCBs, based upon their potential age. In general, these light fixtures appeared to be in sound condition, and no signs of fluid leakage were noted from their ballasts at the time of the recent site inspection.

5.0 ENVIRONMENTAL DATABASE REVIEW

5.1 Introduction

The purpose of this section is to identify sites within a prescribed distance from the subject property that are listed on standard environmental databases that may have a potential impact on the subject property in accordance with Section 7.2 of the ASTM Standard. The following is a list of federal and state databases searched for the area surrounding the subject property; the search distances are noted in parenthesis.

- NPL: The National Priorities List is a federal list of abandoned or uncontrolled hazardous waste sites identified for priority remedial action under the Superfund program (1.0 mile).
- CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System is a compilation of the sites that the EPA has investigated or is currently investigating, pursuant to the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) for a release or threatened release of a hazardous substance. It also includes abandoned or uncontrolled waste sites identified under the federal Superfund program (0.5 mile). Sites that have been investigated and subsequently de-listed from CERCLIS are designated as No Further Remedial Action Planned (NFRAP) sites (subject and adjacent properties.
- RCRIS: The Resource Conservation and Recovery Information System is a listing of facilities that are regulated by the Resource Conservation and Recovery Act (RCRA). RCRIS lists facilities that treat, store or dispose (TSD) of hazardous waste (1.0 mile) and identifies hazardous waste handlers with corrective action (CORRACTS) activity (1.0 mile). RCRIS also lists small-quantity generators (SQGs) and large-quantity generators (LQGs) of hazardous waste (subject and adjacent properties).
- ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances (subject property only).
- UST: The Underground Storage Tank database lists USTs registered with local government agencies and is maintained by the State Water Resources Control Board (subject property and adjacent properties).
- LUST: The Leaking Underground Storage Tank records contain an inventory of LUST incidents reported to the state (0.5 mile).
- VCP: The California Voluntary Cleanup Program (VCP) database includes properties that are enrolled in the state s voluntary clean-up program (0.5 mile).
- CALSITES: The Calsites database contains potential or confirmed hazardous substance release properties maintained by the California EPA. The Calsites database is the state equivalent to the NPL or CERCLIS (1.0 mile).
- SWF/LF: The Solid Waste Facilities/Landfills records typically contain an inventory of solid waste disposal facilities or landfills, active or inactive, in a particular state (0.5 mile).

It should be noted that a Public Records Act request would be required to obtain more information concerning the compliance status of any of the sites identified during the environmental database review. This request may take approximately four weeks to obtain. As a matter of standard practice, Pioneer would require client authorization prior to initiation of the process. Any pertinent information subsequently received would then be forwarded to the client and amendments, if warranted, to any recommendations made in this report would be evaluated at that time.

5.2 Federal & State Notifiers/Listings

Environmental Data Resources, Inc. (EDR) provided regulatory information for the site and surrounding properties using a database search. Properties/listings identified in *The EDR Radius Map™ Report* within the ASTM minimum search distances from the subject property include the following: one RCRA CORRACTS site, 20 LUST incidents, 12 Calsites listings, and one SWF site. Specific information regarding all of these listings can be found in the complete EDR report, which is included as Appendix G to this report. As a note, distances of some of the listed sites have been adjusted based upon field observations and the actual borders of the subject property.

The subject property, listed as "Levitz" and "Levitz Furniture," was identified as on the HAZNET database, which identifies sites that have utilized hazardous waste manifests as reported to the state of California. The subject property was reported to dispose of 0.5 tons of an "unspecified organic liquid mixture," 0.25 tons of "contaminated soil from site clean-ups," and 0.25 tons of "other organic solids." No violations have been reported for the subject property.

All of the sites/listings identified on the federal and state environmental databases, within the ASTM minimum search distances, are located approximately one-eighth of a mile or greater from the subject property. Therefore, based on the available information and/or their distances, Pioneer does not believe that these sites represent recognized environmental conditions to the subject property at this time.

6.0 FINDINGS & OPINIONS

Based on the information gathered during this Phase I Environmental Site Assessment, within the scope of this investigation and pursuant to the requirements of ASTM Standard Practice E 1527-00, the following findings and opinions are presented below:

1. *Recognized Environmental Conditions*:

   - None

2. *Historical Recognized Environmental Conditions*:

   - Available information indicated that a service station was historically located on the northeast portion of the subject property from the early 1960s until approximately 1971. ATC performed subsurface investigations at the subject property during 1999. Results indicated that low-level xylenes were present in one soil sample, and that ethylbenzene, toluene, xylenes, and total petroleum hydrocarbons as diesel (TPHd) were present in various combinations at two grab groundwater sample locations. Following the subsurface investigations, the City of San Leandro issued a *No Further Action Required* letter for the subject property on November 22, 1999. Therefore, the subject property has been adequately characterized and the former service station does not represent a recognized environmental condition.

3. *De Minimis Conditions*:

   - None

4. *Business Environmental Risks*:

   - Limited areas of soil contamination associated with the historical on-site service station have been identified on the subject property. If future redevelopment activities will

require the excavation of soil from known impacted areas, the material will require handling in accordance with applicable solid waste regulations.

- As outlined in Section 4.10, suspect asbestos-containing materials, in the form of 2' x 4' ceiling tiles, 12" x 12" floor tiles, and drywall and associated tape/joint compound, were observed throughout the subject building. These materials were generally in good condition at the time of the recent site inspection and, thus, do not represent an immediate environmental concern. A review of original building supply lists, manufacturer's documentation, and/or analytical testing would be necessary to provide a definitive determination of the asbestos content of these suspect materials. It is important to note that, prior to renovation or demolition activities, when ACMs could be disturbed, the suspect materials should be analyzed and, if necessary, handled according to federal, state and local regulations.

- Painted surfaces observed throughout the interior and exterior of the subject building are considered to contain lead-based paint (LBP) based on the date of construction. Currently, there are no federal environmental regulations that require the testing, abatement or notification of LBP in non-residential structures. However, it should be noted that the Occupational Safety & Health Administration (OSHA) regulates construction work (such as demolition or renovation activities) where an employee may be occupationally exposed to lead.

- Fluorescent light ballasts observed in the subject building are considered potential sources of PCBs, based on their suspected age. In general, these light fixtures appeared to be in sound condition, and no signs of fluid leakage were noted from their ballasts. Therefore, Pioneer believes these fluorescent light fixtures do not represent an immediate environmental concern to the subject property. However, if the ballasts are to be removed or subsequently determined to be leaking, Pioneer recommends that the PCB content be determined for proper disposal and/or handling procedures.

5. *Off-site Environmental Issues*:

- None

7.0 CONCLUSIONS

Pioneer Engineering & Environmental Services, Inc. has performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-00 of the subject property located at 3199 Alvarado Street in San Leandro, California. Any exceptions to, or deletions from, this practice are expressed herein. Upon completion of this report, no recognized environmental conditions (RECs) were identified in connection with the subject property.

8.0 CLOSING REMARKS

Pioneer warrants that the findings and conclusions contained herein have been promulgated in accordance with ASTM Standard Practice E 1527-00, *Phase I Environmental Site Assessment Process*, only for the site described in this report. No environmental assessment can eliminate the uncertainty regarding the potential for recognized environmental conditions in connection with a property. The Phase I ESA is designed to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property.

Due to the limited nature of the work, there is a possibility that conditions may exist which could not be identified within the scope of the assessment, or which were not apparent at the time of the report preparation. The scope of the Phase I ESA does not include the sampling or analytical testing of substances encountered at the subject site. Consequently, a subsurface investigation would be necessary in order to analytically determine the environmental condition of the subject site.

Pioneer is not responsible for independently verifying the information provided. Further, Pioneer cannot be held responsible if the user, current owner or key site manager does not communicate to Pioneer any specialized knowledge or experience that is material to recognized environmental conditions in connection directly or indirectly with the subject property.

This report has been prepared for the sole use of the Client identified in the report and can not be relied upon by other persons or entities without the joint permission of the Client and Pioneer. The observations and conclusions contained herein are limited by the scope and intent of the work mutually agreed upon by the Client and Pioneer and the work actually performed. Pioneer believes the findings and conclusions provided in this report are reasonable. However, no warranties are implied or expressed.

Pioneer appreciates the opportunity to be of service to you on this project. We hope this information meets your needs at this time. If you have any questions regarding this initial assessment, please contact us at (312) 587-1021.

CITY OF SAN LEANDRO
NO FURTHER ACTION REQUIRED LETTER

City of San Leandro
Civic Center, 835 E. 14th Street
San Leandro, California 94577

November 22, 1999

Chris Bartzokis
Levitz Furniture Corporation
7887 North Federal Highway
Boca Raton FL 33487-1613

Dear Mr. Bartzokis:

Notice of No Further Action Required – Levitz Furniture Site
3199 Alvarado Street, San Leandro CA

This letter confirms the completion of subsurface investigation and characterization for the underground storage tank operation formerly located at the above-mentioned site. Thank you for your cooperation and promptness throughout this investigation.

Based on the subsurface investigation data and information in the site file, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action is required related to the former underground storage tanks.

If you have any questions, please call Tiffany Treece, Environmental Protection Specialist at (510) 577-6031.

Sincerely,

Michael Bakaldin
Environmental Services Manager

Property Owner and/or Key Site Manager Questionnaire:

This questionnaire has been developed in accordance with the American Society for Testing and Materials (ASTM) standard E 1527 - 00. The purpose of this questionnaire is to create a foundation and preliminary history of the subject property and to obtain information regarding recognized environmental conditions in connection with the subject property.

Please answer the following questions to the best of your knowledge with a yes, no, or unknown response and elaborate, wherever possible, in the space provided below. A copy of the completed questionnaire will be included as an appendix to the Phase I Environmental site Assessment performed for the subject site

1. Has the property or adjoining properties been used for industrial purposes in the past or present?

Yes ✓ No_____ Unknown_____

2. To the best of your knowledge has the property or any adjoining properties been used as a gasoline service station, commercial printing facility, dry cleaners, photo developing lab, junkyard or landfill, or as a waste treatment, storage, disposal, processing or recycling facility in the past or present?

Yes_____ No_____ Unknown ✓

3. Are there currently, or to the best of your knowledge have there been previously, facility operations involving the treatment, storage, disposal generation or handling of petroleum/hazardous substances at the site or adjoining properties?

Yes_____ No ✓ Unknown_____

4. Are there or has there ever been any underground storage tanks located on the property or at the facility?

Yes_____ No_____ Unknown ✓

5. Are there or has there ever been any above ground storage tanks located on the property or at the facility?

Yes_____ No_____ Unknown ✓

6. Are there or has there ever been any underground storage containers associated with hydraulic equipment located on the property or at the facility?

Yes_____ No_____ Unknown__✓__

7. Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCB's, and if so where are they located?

Yes_____ No_____ Unknown__✓__

8. Have there ever been any asbestos-containing building materials present in the subject building?

Yes_____ No_____ Unknown__✓__

9. Are there, or to the best of your knowledge has there been, any facility operations which require monitoring by a state or federal environmentally-related agency or program?

Yes_____ No__✓__ Unknown_____

10. Are there, or to the best of your knowledge has there been, any substances used on site for which Material Safety Data Sheets (MSDS) are required to be maintained?

Yes__✓__ No_____ Unknown_____

11. Are there currently, or to the best of your knowledge have there ever been any wastes generated on site that require disposal as special waste or hazardous waste?

Yes_____ No__✓__ Unknown_____

12. Is the property served by a private on-site well?

Yes_____ No__✓__ Unknown_____

13. Are there currently or have there been any pits, ponds, or lagoons whether natural, septic, or industrial related located on the property or at the facility?

Yes_____ No_✓_ Unknown_____

14. Does the property discharge waste water on or adjacent to the property other than storm water into a sanitary sewer system?

Yes_✓_ No_____ Unknown_____

15. If the facility is discharging into the municipal sewer system has contact been made with the pre-treatment coordinator regarding the effluent?

Yes_____ No_____ Unknown_✓_

16. Has fill dirt been brought onto the property?

Yes_____ No_✓_ Unknown_____

17. Have there ever been any materials identified or unidentified disposed of , burned, or buried on the property?

Yes_____ No_____ Unknown_✓_

18. Has there ever been any environmental assessments, feasibility studies or any other environmentally-related activities performed on the property?

Yes_____ No_____ Unknown_✓_

19. Has there ever been any pending, threatened or past lawsuits, administrative proceedings, and/or government notices regarding a release or threatened release; improper storage or handling practices on the subject property?

Yes_____ No_____ Unknown_✓_

20. Has there ever been any environmental liens assessed against the subject property?

Yes_____ No_____ Unknown__✓__

21. Has there ever been any petroleum or hazardous substance spills or releases, known, suspected, or reported to have occurred at the subject property?

Yes_____ No_____ Unknown__✓__

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc. (EDR). The report meets the government records search requirements of ASTM Standard Practice for Environmental Site Assessments, E 1527-00. Search distances are per ASTM standard or custom distances requested by the user.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS 1 degree Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. EDR's definition of a site with an elevation equal to the target property includes a tolerance of +/- 10 feet. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property (by more than 10 feet). Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL ASTM STANDARD

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 05/02/2002 has revealed that there is 1

CORRACTS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, has revealed that there are 12 HAZNET sites within approximately 0.25 miles of the target property.

Corrective Action: CA075LO - CA Prioritization, Facility or area was assigned a low corrective action priority

GENERAL ELECTRIC CO (Continued) **1000214031**

RCRIS Corrective Action Summary:
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.
Event Date: 03/31/1992

Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1) it appears to be technically infeasible or inappropriate (NF) or 2) there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.
Event Date: 03/31/1992

Event: CA Prioritization, Facility or area was assigned a low corrective action priority.
Event Date: 11/21/1991

EPA Waste Codes Addendum

Code	Description
D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
D002	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
D006	CADMIUM
D007	CHROMIUM
D008	LEAD
D011	SILVER

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Elapsed ASTM days: Provides confirmation that this EDR report meets or exceeds the 90-day updating requirement of the ASTM standard.

FEDERAL ASTM STANDARD RECORDS

NPL: National Priority List
Source: EPA
Telephone: N/A
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/18/02
Date Made Active at EDR: 09/20/02
Database Release Frequency: Semi-Annually

Date of Data Arrival at EDR: 08/01/02
Elapsed ASTM days: 50
Date of Last EDR Contact: 11/04/02

Elapsed ASTM days: 50
Date of Last EDR Contact: 11/04/02

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
Source: EPA
Telephone: 703-413-0223
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 08/15/02
Date Made Active at EDR: 10/28/02
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 09/23/02
Elapsed ASTM days: 35
Date of Last EDR Contact: 09/23/02

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Source: EPA
Telephone: 703-413-0223
As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Data Arrival at EDR: 09/24/02
Elapsed ASTM days: 34
Date of Last EDR Contact: 09/24/02

ERNS: Emergency Response Notification System
Source: EPA/NTIS
Telephone: 202-260-2342
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/01
Date Made Active at EDR: 07/15/02
Database Release Frequency: Varies

Date of Data Arrival at EDR: 07/02/02
Elapsed ASTM days: 13
Date of Last EDR Contact: 10/28/02

FEDERAL ASTM SUPPLEMENTAL RECORDS

BRS: Biennial Reporting System
Source: EPA/NTIS
Telephone: 800-424-9346
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/99
Database Release Frequency: Biennially

Date of Last EDR Contact: 09/16/02
Date of Next Scheduled EDR Contact: 12/16/02

CONSENT: Superfund (CERCLA) Consent Decrees
Source: EPA Regional Offices
Telephone: Varies
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: N/A
Database Release Frequency: Varies

Date of Last EDR Contact: N/A
Date of Next Scheduled EDR Contact: N/A

ROD: Records Of Decision
Source: EPA
Telephone: 703-416-0223
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 12/21/01
Database Release Frequency: Annually

Date of Last EDR Contact: 10/07/02
Date of Next Scheduled EDR Contact: 01/06/03

DELISTED NPL: National Priority List Deletions
Source: EPA
Telephone: N/A
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/18/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 11/04/02
Date of Next Scheduled EDR Contact: 02/03/03

FINDS: Facility Index System/Facility Identification Initiative Program Summary Report
Source: EPA
Telephone: N/A
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 06/13/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 10/07/02
Date of Next Scheduled EDR Contact: 01/06/03

HMIRS: Hazardous Materials Information Reporting System
Source: U.S. Department of Transportation
Telephone: 202-366-4555
Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 05/31/02
Database Release Frequency: Annually

Date of Last EDR Contact: 10/21/02
Date of Next Scheduled EDR Contact: 01/20/03

MLTS: Material Licensing Tracking System
Source: Nuclear Regulatory Commission
Telephone: 301-415-7169
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 07/12/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 10/08/02
Date of Next Scheduled EDR Contact: 01/06/03

MINES: Mines Master Index File
Source: Department of Labor, Mine Safety and Health Administration
Telephone: 303-231-5959

Date of Government Version: 09/10/02
Database Release Frequency: Semi-Annually

Date of Last EDR Contact: 09/30/02
Date of Next Scheduled EDR Contact: 12/30/02

NPL LIENS: Federal Superfund Liens
Source: EPA
Telephone: 205-564-4267
Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 10/15/91
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 08/26/02
Date of Next Scheduled EDR Contact: 11/25/02

PADS: PCB Activity Database System
Source: EPA
Telephone: 202-564-3887
PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 06/28/02
Database Release Frequency: Annually

Date of Last EDR Contact: 11/13/02
Date of Next Scheduled EDR Contact: 02/10/03

RAATS: RCRA Administrative Action Tracking System
Source: EPA
Telephone: 202-564-4104
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/95
Database Release Frequency: No Update Planned

Date of Last EDR Contact: 09/10/02
Date of Next Scheduled EDR Contact: 12/09/02

TRIS: Toxic Chemical Release Inventory System
Source: EPA
Telephone: 202-260-1531
Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/00
Database Release Frequency: Annually

Date of Last EDR Contact: 09/24/02
Date of Next Scheduled EDR Contact: 12/23/02

TSCA: Toxic Substances Control Act
Source: EPA
Telephone: 202-260-5521
Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/98
Database Release Frequency: Every 4 Years

Date of Last EDR Contact: 09/09/02
Date of Next Scheduled EDR Contact: 12/09/02

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
Source: EPA
Telephone: 202-564-2501

Date of Government Version: 04/25/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 09/24/02
Date of Next Scheduled EDR Contact: 12/23/02

SSTS: Section 7 Tracking Systems
Source: EPA
Telephone: 202-564-5008
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/00
Database Release Frequency: Annually

Date of Last EDR Contact: 10/22/02
Date of Next Scheduled EDR Contact: 01/20/03

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Telephone: 202-564-2501
FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 04/25/02
Database Release Frequency: Quarterly

Date of Last EDR Contact: 09/24/02
Date of Next Scheduled EDR Contact: 12/23/02

STATE OF CALIFORNIA ASTM STANDARD RECORDS

AWP: Annual Workplan Sites
Source: California Environmental Protection Agency
Telephone: 916-323-3400
Known Hazardous Waste Sites. California DTSC's Annual Workplan (AWP), formerly BEP, identifies known hazardous substance sites targeted for cleanup.

Date of Government Version: 10/04/02
Date Made Active at EDR: 10/23/02
Database Release Frequency: Annually

Date of Data Arrival at EDR: 10/07/02
Elapsed ASTM days: 16
Date of Last EDR Contact: 10/07/02

CAL-SITES: Calsites Database
Source: Department of Toxic Substance Control
Telephone: 916-323-3400
The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database.

Date of Government Version: 10/01/00
Date Made Active at EDR: 11/22/00
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 10/30/00
Elapsed ASTM days: 23
Date of Last EDR Contact: 10/08/02

CHMIRS: California Hazardous Material Incident Report System
Source: Office of Emergency Services
Telephone: 916-845-8400
California Hazardous Material Incident Reporting System. CHMIRS contains information on reported hazardous material incidents (accidental releases or spills).

Date of Government Version: 12/31/94
Date Made Active at EDR: 04/24/95
Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 03/13/95
Elapsed ASTM days: 42
Date of Last EDR Contact: 11/25/02

CORTESE: "Cortese" Hazardous Waste & Substances Sites List
Source: CAL EPA/Office of Emergency Information
Telephone: 916-323-9100
The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

Date of Government Version: 04/01/01
Date Made Active at EDR: 07/26/01
Database Release Frequency: Varies

Date of Data Arrival at EDR: 05/29/01
Elapsed ASTM days: 58

NOTIFY 65: Proposition 65 Records
Source: State Water Resources Control Board
Telephone: 916-445-3846
Proposition 65 Notification Records. NOTIFY 65 contains facility notifications about any release which could impact drinking water and thereby expose the public to a potential health risk.

Date of Government Version: 10/21/93
Date Made Active at EDR: 11/19/93
Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 11/01/93
Elapsed ASTM days: 18
Date of Last EDR Contact: 10/21/02

TOXIC PITS: Toxic Pits Cleanup Act Sites
Source: State Water Resources Control Board
Telephone: 916-227-4364
Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/95
Date Made Active at EDR: 09/26/95
Database Release Frequency: No Update Planned

Date of Data Arrival at EDR: 08/30/95
Elapsed ASTM days: 27
Date of Last EDR Contact: 11/04/02

SWF/LF (SWIS): Solid Waste Information System
Source: Integrated Waste Management Board
Telephone: 916-341-6320
Active, Closed and Inactive Landfills. SWF/LF records typically contain an inve ntory of solid waste disposal facilities or landfills. These may be active or i nactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 09/13/02
Date Made Active at EDR: 10/08/02
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 09/16/02
Elapsed ASTM days: 22
Date of Last EDR Contact: 09/16/02

WMUDS/SWAT: Waste Management Unit Database
Source: State Water Resources Control Board
Telephone: 916-227-4448
Waste Management Unit Database System. WMUDS is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information.

Date of Government Version: 04/01/00
Date Made Active at EDR: 05/10/00
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 04/10/00
Elapsed ASTM days: 30
Date of Last EDR Contact: 09/11/02

LUST: Leaking Underground Storage Tank Information System
Source: State Water Resources Control Board
Telephone: 916-341-5740
Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 07/11/02
Date Made Active at EDR: 09/03/02
Database Release Frequency: Quarterly

Date of Data Arrival at EDR: 07/18/02
Elapsed ASTM days: 47
Date of Last EDR Contact: 10/11/02

CA BOND EXP. PLAN: Bond Expenditure Plan
Source: Department of Health Services
Telephone: 916-255-2118
Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

Date of Government Version: 01/01/89
Date Made Active at EDR: 08/02/94
Database Release Frequency: No Update Planned

HAZNET: Hazardous Waste Information System
Source: California Environmental Protection Agency
Telephone: 916-255-1136
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY HISTORICAL DATABASES

Former Manufactured Gas (Coal Gas) Sites: The existence and location of Coal Gas sites is provided exclusively to EDR by Real Property Scan, Inc. ©Copyright 1993 Real Property Scan, Inc. For a technical description of the types of hazards which may be found at such sites, contact your EDR customer service representative.

Disclaimer Provided by Real Property Scan, Inc.

The information contained in this report has predominantly been obtained from publicly available sources produced by entities other than Real Property Scan. While reasonable steps have been taken to insure the accuracy of this report, Real Property Scan does not guarantee the accuracy of this report. Any liability on the part of Real Property Scan is strictly limited to a refund of the amount paid. No claim is made for the actual existence of toxins at any site. This report does not constitute a legal opinion.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

LEGAL DESCRIPTION

ALL THAT REAL PROPERTY IN THE CITY OF SAN LEANDRO, COUNTY OF ALAMEDA, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

PARCEL ONE:

PORTION OF THE 113.56 ACRE TRACT OF LAND DESCRIBED A PARCEL FIVE IN THE DEED BY MARY STENZEL, ET AL., TO F. STENZEL FARMS, INC., DATED APRIL 22, 1926, RECORDED MAY 13, 1926 IN BOOK 1250 OF OFFICIAL RECORDS OF ALAMEDA COUNTY, PAGE 461, W/42107, DESCRIBED AS FOLLOWS:

BEGINNING AT THE INTERSECTION OF THE NORTHEASTERN LINE OF THE NIMITZ FORMERLY EASTSHORE, FREEWAY, WITH THE NORTHWESTERN LINE OF THE 1.196 ACRE STRIP OF LAND CONVEYED IN THE DEED FROM VALBROOK, INC., A CORPORATION, TO ALAMEDA COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT, DATED DECEMBER 31, 1959, RECORDED MARCH 7, 1960, ON REEL 40, IMAGE 480, AR/26201, ALAMEDA COUNTY RECORDS; RUNNING THENCE ALONG SAID LINE OF THE NIMITZ FREEWAY, NORTH 48°58'28" WEST 534.38 FEET (RECORD NORTH 49°00'25" WEST 533.94 FEET) ; , THENCE NORTH 62°14'17" EAST 1288.20 FEET (RECORD NORTH 62°13'30" EAST 1289.81 FEET) TO THE NORTHEASTERN LINE OF SAID 113.56 ACRE TRACT; THENCE ALONG THE LAST NAMED LINE SOUTH 27°46'30" EAST 497.93 FEET (RECORD 501.50 FEET) TO SAID NORTHWESTERN LINE OF THE 1.196 ACRE STRIP OF LAND; THENCE ALONG THE LAST NAMED LINE SOUTH 62°13'30" WEST 1094.96 FEET (RECORD 1094.98 FEET) TO THE POINT OF BEGINNING.

PARCEL TWO:

ALL THAT CERTAIN PARCEL OF LAND CONVEYED IN THE DEED FROM VALBROOK, INC. A CORPORATION, TO ALAMEDA COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT, DATED DECEMBER 31, 1959, RECORDED MARCH 7, 1960, ON REEL 40, IMAGE 480, AR/26201, ALAMEDA COUNTY RECORDS, DESCRIBED AS FOLLOWS:

BEGINNING AT THE INTERSECTION OF THE NORTHEASTERN LINE OF THE NIMITZ, FORMERLY EASTSHORE, FREEWAY, WITH THE DIRECT EXTENSION SOUTHWESTERLY OF THE NORTHWESTERN BOUNDARY LINE OF THE TRACT OF LAND SHOWN ON THE MAP OF "TRACT 1507, CITY OF SAN LEANDRO, ALAMEDA COUNTY, CALIFORNIA, FILED MARCH 16, 1955, IN BOOK 35 OF MAPS, PAGES 68 AND 69, IN THE OFFICE OF THE COUNTY RECORDER OF ALAMEDA COUNTY; RUNNING THENCE ALONG SAID EXTENDED LINE AND ALONG THE NORTHWESTERN BOUNDARY LINE OF SAID TRACT 1507, NORTH 62°13'30" EAST 1076.34 FEET (RECORD 1076.33 FEET) TO THE SOUTHWESTERN LINE OF ALVARADO STREET, AS SAID STREET NOW EXISTS; THENCE ALONG THE LAST NAMED LINE, NORTH 27°46'30" WEST 48 FEET; THENCE PARALLEL WITH THE NORTHWESTERN BOUNDARY LINE OF SAID TRACT 1507 AND THE DIRECT EXTENSION THEREOF, SOUTH 62°13'30" WEST 1094.96 FEET (RECORD 1094.98 FEET)TO SAID LINE OF NIMITZ FREEWAY ; AND THENCE ALONG THE LAST NAMED LINE , SOUTH 48°58'28" EAST 51.48 FEET (RECORD SOUTH 49°00'25" EAST 51.50 FEET) TO THE POINT OF BEGINNING.

PARCEL THREE:

PORTION OF THE PARCEL OF LAND DESCRIBED AS PARCEL 2 IN DEED DATED NOVEMBER 15, 1951, FROM ALAMEDA COUNTY-EASTBAY TITLE INSURANCE COMPANY TO SOUTHERN PACIFIC COMPANY RECORDED NOVEMBER 20, 1951, IN BOOK 6592, PAGE 3, OFFICIAL RECORDS OF ALAMEDA COUNTY, AND MORE PARTICULARLY DESCRIBED AS FOLLOWS:

BEGINNING AT THE POINT OF INTERSECTION OF THE SOUTHEASTERLY LINE OF SAID PARCEL OF LAND DESCRIBED AS PARCEL 2 IN SAID DEED WITH THE NORTHEASTERLY LINE OF ALVARADO STREET, 76 FEET WIDE(LAST SAID LINE BEING ALSO THE NORTHWESTERLY LINE OF THE 3.479 ACRE PARCEL OF LAND DESCRIBED IN DEED DATED APRIL 22, 1955 FROM SOUTHERN PACIFIC COMPANY TO CITY OF SAN LEANDRO RECORDED JUNE 6, 1955, IN BOOK 7680, PAGE 573, OFFICIAL RECORDS OF SAID COUNTY); THENCE NORTH 27°46'30" WEST (RECORD NORTH 28°44'23" WEST) ALONG SAID NORTHEASTERLY LINE OF ALVARADO STREET, A DISTANCE OF 50 FEET TO A LINE PARALLEL WITH AND DISTANT 50.00 FEET NORTHWESTERLY, MEASURED AT RIGHT ANGLES, FROM SAID SOUTHEASTERLY LINE OF SAID PARCEL 2; THENCE NORTH 62°13'30" EAST (RECORD NORTH 61°51'25" EAST) ALONG SAID PARALLEL LINE 1718.27 FEET TO A LINE PARALLEL WITH AND DISTANT 60.00 FEET SOUTHWESTERLY, MEASURED AT RIGHT ANGLES, FROM THE ORIGINAL LOCATED CENTER LINE OF MAIN TRACT OF THE SOUTHERN PACIFIC TRANSPORTATION COMPANY, THENCE SOUTH 42°15'55"EAST (RECORD SOUTH 42°39' EAST) ALONG LAST SAID PARALLEL LINE, 3.21 FEET; THENCE SOUTHEASTERLY, FROM A TANGENT WHICH BEARS SOUTH 25°08'22" EAST (RECORD SOUTH 25°29'27" EAST) , ON A CURVE TO THE LEFT WITH A RADIUS OF 392.24 FEET THROUGH A CENTRAL ANGLE OF 6°51'18", AN ARC DISTANCE OF 46.92' FEET LONG CHORD OF SAID CURVE BEARS SOUTH 28°32'00" EAST (RECORD SOUTH 28°55'06" EAST) , 46.90 FEET TO A POINT IN SAID SOUTHEASTERLY LINE OF SAID PARCEL 2; THENCESOUTH 62°13'30" WEST (RECORD SOUTH 61°51'25" WEST) ALONG LAST SAID LINE 1719.69 FEET (RECORD 1,719.19 FEET) TO THE POINT OF BEGINNING.

EXCEPTING THEREFROM THAT PORTION OF SAID PROPERTY LYING BELOW A DEPTH OF FIVE HUNDRED(500) FEET MEASURED VERTICALLY FROM THE CONTOUR OF THE SURFACE THEREOF; PROVIDED, HOWEVER, THAT SAID GRANTOR, ITS SUCCESSORS AND ASSIGNS, SHALL NOT HAVE THE RIGHT FOR ANY AND ALL PURPOSES TO ENTER UPON, INTO OR THROUGH THE SURFACE OF THE PORTION OF SAID PROPERTY LYING ABOVE 500 FEET , MEASURED VERTICALLY FROM THE CONTOUR OF THE SURFACE OF SAID PROPERTY, AS RESERVED IN THE DEED FROM SOUTHERN PACIFIC TRANSPORTATION COMPANY, IN THE DEED RECORDED JULY 19, 1971, AS INSTRUMENT NO. 90227.

METES AND BOUNDS DESCRIPTION OF PARCEL ONE AND TWO COMBINED

PORTION OF THE 113.56 ACRE TRACT OF LAND DESCRIBED A PARCEL FIVE IN THE DEED BY MARY STENZEL, ET AL., TO F. STENZEL FARMS, INC., DATED APRIL 22, 1926, RECORDED MAY 13, 1926 IN BOOK 1250 OF OFFICIAL RECORDS OF ALAMEDA COUNTY, PAGE 461, W/42107, DESCRIBED AS FOLLOWS:

BEGINNING AT THE INTERSECTION OF THE NORTHEASTERN LINE OF THE NIMITZ, FORMERLY EASTSHORE, FREEWAY, WITH THE DIRECT EXTENSION SOUTHWESTERLY OF THE NORTHWESTERN BOUNDARY LINE OF THE TRACT OF LAND SHOWN ON THE MAP OF "TRACT 1507, CITY OF SAN LEANDRO, ALAMEDA COUNTY, CALIFORNIA, FILED MARCH 16, 1955, IN BOOK 35 OF MAPS, PAGES 68 AND 69, IN THE OFFICE OF THE COUNTY RECORDER OF ALAMEDA COUNTY; RUNNING THENCE ALONG SAID LINE OF THE NIMITZ FREEWAY, NORTH 48°58'28" WEST 585.86 FEET ; THENCE NORTH 62°14'17" EAST 1288.20 FEET TO THE NORTHEASTERN LINE OF SAID 113.56 ACRE TRACT; THENCE ALONG THE LAST NAMED LINE SOUTH 27°46'30" EAST 545.93 FEET TO SAID NORTHWESTERN LINE OF TRACT; THENCE ALONG THE LAST NAMED LINE SOUTH 62°13'30" WEST 1076.34 FEET TO THE POINT OF BEGINNING.

THIS LEGAL DESCRIPTION DESCRIBES THE SAME PROPERTY AS DESCRIBED IN THE TITLE COMMITMENT BY FIRST AMERICAN TITLE INSURANCE COMPANY ORDER NO. SP 851637 , DATED SEPTEMBER 29, 1999

NOTE: ALL FIELD MEASUREMENTS ARE WITHIN THE PRECISION REQUIREMENTS OF ALTA/ACSM LAND TITLE SURVEY SPECIFICATIONS

TITLE ITEMS PER THE TITLE COMMITMENT BY FIRST AMERICAN TITLE INSURANCE COMPANY ORDER NO SP 851637 , DATED SEPTEMBER 29, 1999

3) LACK OF ABUTTERS RIGHTS PER 6190 OR 345 (PLOTTED)
5) STORM SEWER EASEMENT PER 6486 OR 598 (PLOTTED)
6) FLOOD CONTROL EASEMENT PER 9097 OR 357 (PLOTTED)
7) SEWER EASEMENT PER REEL 538 IM 756 (PLOTTED)
8) STORM DRAIN EASEMENT PER REEL 571 IM 93 (PLOTTED)
9) PUBLIC UTILITY EASEMENT PER REEL 3078 IM 141 AND 3078 IM 143 (PLOTTED)

BASIS OF BEARING
THE MONUMENTED CENTER LINE OF ALVARADO STREET AS SHOWN ON THE MAP OF TRACT 1507 FILED IN BOOK 35 AT PAGE 68 TAKEN AS NORTH 27°46'30" WEST

DIRK C. SLOOTEN, A REGISTERED LAND SURVEYOR, LICENSE NO. 5342, IN AND FOR THE STATE OF CALIFORNIA AND LEGALLY DOING BUSINESS IN SACRAMENTO, DOES HEREBY CERTIFY TO:
HENRY CROWN AND COMPANY , A DELAWARE CORPORATION , SIMON PROPERTY GROUP , L.P. A DELAWARE LIMITED PARTNERSHIP AND INTERSTATE TITLE SERVICES, AND THE SUCCESSORS AND ASSIGNS OF THE FOREGOING ENTITIES

(1) THE ACCOMPANYING SURVEY ("SURVEY") REPRESENTS A TRUE AND CORRECT SURVEY MADE BY ME ON 3-11 ,1999 OF THE LAND THEREIN PARTICULARLY DESCRIBED;
(2) THE SURVEY AND THE INFORMATION, COURSES AND DISTANCES SHOWN THEREON ARE CORRECT;
(3) THE TITLE LINES AND LINES OF ACTUAL POSSESION ARE THE SAME;
(4) THE LAND DESCRIBED IN THE SURVEY IS THE SAME AND AS DESCRIBED IN THE TITLE INSURANCE COMMITMENT DESCRIBED BELOW;
(5) THE AREA OF THE SUBJECT PROPERTY AND THE SIZE, LOCATION AND TYPE OF BUILDINGS AND IMPROVEMENTS AND ANY OTHER MATTERS SITUATED ON THE SUBJECT PROPERTY ARE AS SHOWN AND ALL BUILDINGS AND IMPROVEMENTS ARE WITHIN THE BOUNDARY LINES AND APPLICABLE SET-BACK LINES OF THE PROPERTY;
(6) THERE ARE NO EASEMENTS OR USES AFFECTING THIS PROPERTY APPEARING FROM A CAREFUL PHYSICAL INSPECTION OF THE SAME, OTHER THAN THOSE SHOWN AND DEPICTED ON THE SURVEY;
(7) THERE ARE NO ENCROACHMENTS ON THE ADJOINING PROPERTIES, STREETS, OR ALLEYS BY ANY OF SAID BUILDINGS, STRUCTURES AND IMPROVEMENTS, OTHER THAT AS SHOWN ON THE SURVEY;
(8) THERE ARE NO PARTY WALLS OR VISIBLE ENCROACHMENTS ON SAID DESCRIBED PROPERTY BY STREETS, ALLEYS OR BUILDINGS, STRUCTURES OR OTHER IMPROVEMENTS SITUATED ON ADJOINING PROPERTY, EXCEPT AS SHOWN ON THE SURVEY;
(9) ALL UTILITY SERVICES REQUIRED FOR THE OPERATION OF THE PREMISES EITHER ENTER THE PREMISES THROUGH ADJOINING PUBLIC STREETS, OR THE SURVEY SHOWS THE POINT OF ENTRY AND LOCATION OF ANY UTILITIES THAT PASS THROUGH OR ARE LOCATED ON ADJOINING LAND;
(10) THE SURVEY SHOWS THE LOCATION AND DIRECTION OF ALL STORM DRAINAGE SYSTEMS FOR THE COLLECTION AND DISPOSAL OF ALL ROOF AND SURFACE DRAINAGE;
(11) ANY DISCHARGE INTO STREAMS, RIVERS OR OTHER CONVEYANCE SYSTEM IS SHOWN ON THE SURVEY;
(12) THE PARCELS DESCRIBED IN THIS SURVEY DOES NOT LIE WITHIN FLOOD HAZARD AREAS IN ACCORDANCE WITH ANY MAPS ENTITLED: "FLOOD INSURANCE RATE MAP", "FLOOD HAZARD FLOODWAY BOUNDARY MAP", "FLOOD HAZARD BOUNDARY MAP" OR "FLOOD BOUNDARY AND FLOODWAY MAP" PUBLISHED BY THE FEDERAL EMERGENCY MANAGEMENT AGENCY OR A FLOOD HAZARD BOUNDARY MAP PUBLISHED BY THE U.S. DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT. THE SURVEY CORRECTLY INDICATES THE ZONE DESIGNATION OF ANY AREA SHOWN AS BEING WITHIN A FLOOD HAZARD AREA;
(13) THE SUBJECT PROPERTY HAS ACCESS TO AND FROM ALVARADO STREET A DULY DEDICATED AND ACCEPTED PUBLIC STREET OR HIGHWAY.
(14) [EXCEPT AS SHOWN ON THE SURVEY,] THE SUBJECT PROPERTY DOES NOT SERVE ANY ADJOINING PROPERTY FOR DRAINAGE, UTILITIES, OR INGRESS OR EGRESS; AND
(15)THE RECORD DESCRIPTION OF THE SUBJECT PROPERTY FORMS A MATHEMATICALLY CLOSED FIGURE.

THE UNDERSIGNED HAS RECEIVED AND EXAMINED A COPY OF FIRST AMERICAN TITLE INSURANCE COMPANY'S COMMITMENT NO. SP 851637 ,DATED 9-29-1999; AND THE LOCATION OF ANY MATTER SHOWN THEREON, TO THE EXTENT IT CAN BE LOCATED, HAS BEEN SHOWN ON THIS SURVEY WITH THE APPROPRIATE RECORDING REFERENCE.

THE PARTIES LISTED ABOVE ARE ENTITLED TO RELY IN THE SURVEY AND THIS CERTIFICATE AS BEING TRUE AND ACCURATE.

THIS SURVEY IN MADE IN ACCORDANCE WITH THE 1992 "MINIMUM STANDARD DETAIL REQUIREMENTS FOR LAND TITLE SURVEYS" JOINTLY ESTABLISHED AND ADOPTED BY AMERICAN LAND TITLE ASSOCIATION ("ALTA") AND AMERICAN CONGRESS ON SURVEYING AND MAPPING (ASCM") AND MEETS THE REQUIREMENTS OF AN URBAN SURVEY, AS DEFINED IN THE CURRENT ACCURACY STANDARDS JOINTLY ADOPTED BY ALTA AND ACSM AND INCLUDES ITEMS 2, 3, 4, 6, 7(A), 7(B)(1), 8, 9, 10, 11 AND 13 OF TABLE A THEREOF.

QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

JODI VANNEMAN

Managing Consultant

Jodi Vanneman has over 30 years of environmental consulting experience, primarily in the due diligence and environmental compliance arena. With thousands of due diligence and third-party desktop reviews completed, Jodi has worked on both single and large-portfolio projects throughout the United States. Familiar with agency funding and regulatory framework, Jodi has assisted industrial clients achieve their compliance objectives and investors make informed acquisition decisions.

EDUCATION

1985-1988
BA, Biology
Hastings College, Hastings, NE, United States

EXPERIENCE HIGHLIGHTS

Completed assessment of properties with existing contamination subject to regulatory Cleanup Orders. Prevented prospective buyers from acquiring contaminated property due to exposure of deficient and grossly misleading prior reports and/or findings assisted with property value negotiations.

Managed the assessment and completion of Preliminary Endangerment Assessment (PEA) and remedial action at a former plating facility transferred through inheritance. Completed a risk assessment/PEA for the DTSC to achieve case closure.

Conducted environmental assessment of 1000s of residential and commercial structures to assist military privatization objectives defined for the Housing Requirements and Marketing Analyses of military installations.

Provided desktop review and recommendations for a 100+ year old lumbermill and pulp plant with history of tanks, treatment ponds, and open water discharges subject to lawsuits and public exposure.

Conducted assessment and compliance audits of vineyards and wineries addressing agriculturally-related maintenance, water management, natural resource management, pesticide applications, and wastewater treatment.

Conducted environmental, health & safety compliance audits that included employee interviews, record audits and agency interviews to identify deficiencies. Selected management tools to improve compliance.

Completed various Phase I and II site assessments to document environmental disposition of regional malls commonly addressing dry-cleaning, gas stations and automotive repair activities. Developed and prioritized remedial action.

Lead environmental auditor on EH&S compliance audits interviewing employees, auditing records and inspecting facilities to identify deficiencies and prioritize negative findings. Recommended corrective actions and best management practices.

Conducted third-party/desktop reviews and conducted site assessments for large, multi-site portfolios providing environmental and business risk summaries to develop strategies for managing properties with environmental concerns.

STACY A. STONEQUIST

Principal

Stacy Stonequist has 20 years of experience in the environmental field with an additional two years of experience working in the manufacturing industry following a graduate assistantship. She has particular expertise in Phase I environmental site assessments (ESAs), due diligence evaluations and regulatory compliance reviews. Stacy has completed and/or managed environmental assessments and due diligence reviews for hundreds of industrial, commercial and residential facilities in North America, South America, Europe and Asia on behalf of buyers, sellers and lenders, to evaluate known and potential environmental liabilities. She also manages transactional subsurface investigations and hazardous materials surveys. Stacy is a certified professional environmental auditor and a licensed asbestos building inspector in Illinois and Indiana.

EDUCATION

1995 MS, Environmental Studies/Science
Southern Illinois University at Edwardsville

1994 BA, Biological Sciences
Southern Illinois University at Carbondale

COURSES/CERTIFICATIONS

Certified Professional Environmental Auditor (CPEA) – Environmental Compliance (#668), Board of Environmental, Health and Safety Auditor Certifications (BEAC)
Accredited Asbestos Hazard Emergency Response Act (AHERA) Asbestos Building Inspector, USEPA, 1997–present
Licensed Asbestos Building Inspector (IL 100-8400), Illinois Department of Public Health (IDPH), 1997–present
Licensed Asbestos Building Inspector (IN 191312094), Indiana Department of Environmental Management (IDEM), 2004–present
Licensed Lead Inspector (IL L-5713), IDPH, 1997–2013
40-Hour Health and Safety Training with annual refreshers, 1997–present

PROJECTS

Due Diligence

- Portfolio Phase I ESAs for Gas Station/Truck Stop Owner's Legal Counsel - Managed Phase I ESAs to assess environmental liabilities at over 50 gas station/truck stop properties prior to the company's post-bankruptcy auction. The Phase I ESAs were

United States of America

completed in a six-week period. Project management included assisting the owner and their legal counsel in the development of cost estimates to address environmental liabilities.

- Transactional Environmental Services for National Office Building Owner and Manager and Real Estate Investment Trust - Managed environmental services for the company's transactions prior to their acquisition. Services provided included Phase I ESAs and Phase II investigations, Property Condition Assessments, additional structural assessments, indoor air quality assessments, sampling for mold, asbestos, etc.
- Evaluation of Environmental Information of Multiple Sites in the US and Mexico - Assessed and organized remedial and compliance issues identified in previous environmental documents and environmental database reports of 26 manufacturing and distribution facilities and resulted in the preparation of cost estimates of environmental liability.
- Phase I ESAs with Sampling in Various Locations throughout the US - Performed numerous Phase I ESAs with limited asbestos, lead paint, lead-in-drinking water and radon sampling on multi-family residential complexes, office buildings and hotels for transactions. The sampling activities were utilized to assess environmental business risk at these facilities. Sites range from areas in Indiana, Kentucky and Wisconsin to be developed with future electric generation facilities and involved the assessment of wetland areas and surface soil characteristics via sampling and analysis to a 750,000-square foot former printing, lithography and publishing company in Racine, Wisconsin, which resulted in the identification of several "unknown" underground storage tanks (USTs) and subsurface arsenic contamination.

Compliance Auditing

- Environmental Management Systems (EMS) and Compliance Auditing - Performed over a dozen on-site EMS and compliance audits for an agricultural products manufacturer and distributer with facilities in North America (US and Canada). Facility types assessed included nitrogen, phosphate and potash production facilities, mines, distribution terminals, fertilizer processing (granulation) facilities and retail sites.
- Multi-media Compliance Auditing - Managed and audited multi-media topics, including solid and hazardous waste management, air emissions/permitting, wastewater and storm water discharges, spill prevention and control, emergency planning and community right-to-know reporting, water supplies, toxic substances control, aboveground storage tank (AST) and UST management and miscellaneous areas for numerous projects. Facilities audited include manufacturers of soaps and detergents, paint and plastics (injection molding), tools/parts, packaging, etc. located in Illinois, Indiana, Iowa, Missouri and Wisconsin, as well as a wind farm in Iowa and a national park in California.
- Pipeline Safety Compliance Assessments - Assisted the US Production Organization (USPO) of Marathon Oil in attaining compliance with federal pipeline safety regulation that refined the definitions of natural gas production, gathering and transmission lines. The project entailed working with USPO in interpreting the regulation, developing criteria for assessing current and future lines in view of the regulatory interpretation, developing the overall process for field evaluation of current lines and leading field teams in the evaluation.
- Program and Compliance Audits of Multiple Sites in the US - Audited multi-media topics at food product manufacturing facilities against corporate environmental program and regulatory compliance protocols. Participated in this project for three years. Included sites in Arizona, Arkansas, Colorado, Connecticut, Hawaii, Illinois, Missouri, Oregon, Tennessee, Utah and Wisconsin.

Compliance

- Water Quality Monitoring Program of Multiple Sites in the US, Canada and Mexico - Managed water quality monitoring at food product manufacturing facilities with water wells in the US and facilities on municipal water supplies in Canada and Mexico, with quarterly sampling and analysis, data validation and preparing technical reports. Managed this project for 12 years.

Hazardous Materials Surveys

- Pre-Demolition/Renovation Hazardous Materials Surveys - Managed hundreds of pre-demolition/renovation hazardous materials surveys for various types of properties/clients, including industrial buildings, a commercial tower being converted to residential units and other commercial properties, including strip malls, stand-alone businesses and multi-family residential buildings. The surveys included the collection and analysis of samples of suspect asbestos-containing material (ACM) and lead-containing paint, as well as cataloguing other hazardous materials, including polychlorinated biphenyl-containing equipment, mercury-containing items, refrigerant-containing mechanical equipment and other chemicals/oils/etc. Follow-on activities included coordination and oversight of abatement activities and completion of operations and maintenance program plans.

Ref. P3861C-24265b / 194011690

Ramboll Americas Engineering Solutions, Inc. (Ramboll) is pleased to present results of a soil vapor sampling investigation performed at the warehouse property located at 3199 Alvarado Street in San Leandro, California (the "site"). The site includes a 14.8-acre portion (two parcels) improved with an approximately 240,000-square-foot warehouse building most recently used as a distribution warehouse and historically used as a furniture showroom/warehouse and a 1.97-acre easement.

This letter presents the results of the soil vapor sampling investigation that was conducted on April 3, 2025.

It is Ramboll's understanding that CCI is contemplating the redevelopment of the site with a new warehouse building of approximately the same size, but slightly different footprint of the existing structure. Ramboll prepared a Phase I ESA for the site in January 2025. To address potential vapor intrusion and determine whether there are on-/off-site sources of volatile organic compounds (VOCs) that could potentially affect future building occupants, Ramboll conducted a soil vapor sampling investigation that included the following:

- Collection and analysis of sub-slab soil vapor samples from 12 locations within the current building's interior perimeter at the approximate locations shown in Figure 1; and
- Because the future warehouse building has a slightly different footprint than the existing warehouse, Ramboll installed and collected samples from three soil vapor probes in the parking area, east of the current warehouse, within the footprint of the future new warehouse. The locations are shown on Figure 1.

Sub-Slab Soil Vapor Probe Installation

Sub-slab soil vapor samples were collected from 12 locations which were selected based on current and historical chemical use, prior sampling data, and accessibility. Prior to vapor pin installation, the building slab was scanned to clear each location of buried utilities and to mark the location of rebar. On March 28, 2025, at each location, a stainless-steel vapor pin was installed through the slab using a roto-hammer and hand tools. The vapor pin consisted of a barbed stainless-steel probe

with silicone sleeves that form an air-tight seal between the vapor pin and the edge of the concrete slab borehole. A 5/8-inch diameter hole was drilled through the slab, the vapor pin was installed in the hole, and a protective stainless-steel cover was installed flush with the surrounding floor surface.

Soil Vapor Monitoring Probe Installation

On March 28, 2025, Ramboll installed three soil vapor probes in the parking area (Figure 1). At each soil vapor probe location, a boring was advanced to a depth of approximately 4.25 feet below ground surface (bgs) to install a soil vapor probe at 4.75 feet bgs. The soil borings were advanced using a hand auger.

The soil vapor monitoring probes were constructed by backfilling the borehole with approximately 6 inches of sand, placing a stainless-steel soil vapor sampling probe connected to Teflon tubing on top of the sand layer at a depth of approximately 4.75 feet bgs and an additional 6 inches of sand was placed on top of the sand layer followed by one foot of dry bentonite. The remaining borehole annulus was backfilled with neat cement grout. An airtight valve was placed on the end of each length of Teflon tubing for sample collection. Each soil vapor monitoring probe was completed with a traffic-rated well box.

Soil Vapor Sample Collection and Analysis
