Eval Notes: On site to correct outstanding violations cited during routine inspection conducted on 5/20/21. Ataur Khan granted consent to conduct inspection. I reviewed documents in "2021 Safe Zone Binder." All employees have been trained by the designated operator (DO). Violation I651 regarding employees bering trained by the DO on annual basis has been corrected. Underground Storage Tank Statement of Understanding and Compliance Form was submitted to CERS on 6/8/21. Violation I007 regarding failure to submit form has been corrected. The following outstanding violations cannot be corrected since copies of documents submitted to CERS on 6/8/21 are not available on site: - Violation I421 regarding failure to have current UST Monitoring Plan readily accessible at the facility. - Violation I582 regarding failure to maintain updated/current monitoring plans at the facility. - Violation I673 regarding failure to maintain updated/current response plan at the [Truncated]

Eval Notes: Thank you for your revised CERS submittal.The HMBEP has been reviewed and declined. Please correct the following and resubmit: HAZARDOUS MATERIALS INVENTORY // -- Please note that if a material is listed as Pure, the Mixture Components section does not need to be filled out; only the CAS number under the Chemical Identification and Physical Properties section is required for pure materials. FACILITY MAPS // -- Please upload a higher resolution version of the facility map so that all of the words are clearly legible (the quality/clarity of the map from 5/15/2015 was acceptable). You may also use comments to note if there are no gas/water shut-offs present in the vicinity of this map. Thank you for your patience with CERS. Please feel free to contact me if you have any questions. Happy holidays! -- Allison Mok | Amok@ochca.com

eight tank sumps and six UDC sumps have 208 sensors. All sensors were located at the proper location of secondary containment. All secondary containment was free of liquid. Certification of financial responsibility valid through 12-1-15. SB 989 testing performed on 5-30-13 (passed). Designated operator (DO) inspection reports reviewed on site. All alarms documented during the past 12 months have corrective action documentation attached to the corresponding reports. DO training provided to employees and documented. Alarm log kept on site and available for review. Current CERS submittal to be reviewed.

Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit a site map with all required content.
Violation Notes:	OBSERVATION: The electronic submission of the Annotated Site Map is not accurate and complete. The following inconsistencies were observed: 1. The street Aliso Creek Road was mislabeled as Aliso Creek Parkway. Change all Aliso Creek Parkway labels to Aliso Creek Road. 2. Relabel the emergency shut-off: a. The emergency gas and electric shut-offs located outside of the facility were observed to be on the side of the building and not behind it. b. The water shut-off inside of the facility could not be located by the inspector. c. Please verify the location of the emergency water shut-off located on the outside of the facility. The shut off, as noted on the map, could not be located by inspector. Indicate the correct locations for the emergency shut-offs on the map. CORRECTIVE ACTION: The site map must be updated to correctly identify all the required elements and reflect the current layout of the hazardous materials storage on site. Business must update and [Truncated]

PRESTIGE CLEANERS DBA AL PHILLIPS THE CLEANER PRESS-TIGE ENT (Continued) **S109430431**

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: OBSERVATION: The electronic submission of the Hazardous Materials Chemical Inventory is not accurate and complete. The following inconsistencies were observed: 1. The waste siloxane-green earth Average Daily appears to be incorrect. The Average Daily is intended to be the average amount of the waste siloxane-green earth in the metal drum during the 365 days of the year. Change the Average Daily to 25 gallons. 2. The siloxane-green earth Average Daily appears to be incorrect. The Average Daily is intended to be the average amount of siloxane-green earth in the dry cleaning machines plus any back up containers. Change the Average Daily to 80 gallons. CORRECTIVE ACTION: The business must update and re-submit the HMBEP to this Agency via the California Electronic Reporting System http://cers.calepa.ca.gov/. The violation must be corrected and documents must be submitted to this Agency within 30 days. The violation will not be abated until all sections are accepted in [Truncated]

Eval Notes: According to the CERS database, your business remains out of compliance with the annual certification requirement and a violation is being cited. Businesses are required to annually review and certify that their information in the California Electronic Reporting System (CERS) is complete, accurate and in compliance by March 1st. Your business was notified via email on March 27, 2024 that your facility was out of compliance with this requirement. Please note the following important details: 1) Complete submittal includes the HazMat Inventory AND the Emergency Plan / Training sections. Both sections must be submitted. 2) If your business qualifies (see below) you may submit 2024 via the Certify option available on CERS. You must be logged in to use. HMBP Certify: A business may use the Certify option button located on their forms page if: 1) A previous, complete submittal was made the prior year, and 2) The business is not subject to the Federal EPCRA reporting requirements, and 3)

Violation Description: Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned

NEOGENOMICS LABORATORIES INC. (Continued) **S123504649**

	to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes:	Returned to compliance on 08/06/2018. OBSERVATION: NO training records for pertinent HW handlers were available. Personnel who handle hazardous waste shall be trained within six months of assignment and take part in an annual review of the initial training received. At a minimum, the training program shall be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems. The owner or operator shall maintain the following documents and records at the facility: 1) the job title for each position at the facility related to hazardous waste management, and the name of each employee filling each job; 2) written job description for each position listed above; 3) written description of the type and amount of both introductory and continuing training that will be given to each person filing positions listed above; 4) records that document that the training has been given to and completed by facility [Truncated]

Violation Notes:	22 CCR 12 66262.18(c); HSC 6.5 25189.5(a) Failure to dispose of hazardous waste at a facility which has a permit from DTSC or disposing of hazardous waste at any point which is not authorized or which does not have a valid ID number. Inspector Comments: The following hazardous wastes were observed to be disposed in an improper matter: 1) Spill absorbent mats, both pink and gray colors, were observed to be used interchangeably and placed in the regular trash throughout several areas in the lab areas and are then taken out to the municipal waste dumpster. Mats were removed by staff as they were identified and placed into the hazardous waste containers. 2) Several 1L amber glass bottles, 2L plastic bottles previously containing hazardous materials with pourable liquids were improperly deposed of in the municipal waste stream. These containers were not fully emptied or triple-rinsed.. According to Mr. Jennings, these bottles should of been triple rinsed by ACT personnel. These bottles wer

Violation Description:	Failure to maintain a complete copy of the SPCC Plan at the facility if the facility is normally attended at least four hours per day, or at the nearest field office if the facility is not so attended.
Violation Notes:	Returned to compliance on 02/06/2018. A current SPCC plan was not available for review. You must prepare a written SPCC plan and ensure that it is available for review. Your facility qualifies as a Tier 1 facility and may self-certify a SPCC Plan using the federal template. The complete SPCC must be onsite. Facilities that are a qualified Tier I facility (less than 10,000 gallons and no single container greater than 5,000 gallons) can create their own SPCC Plan using the federal template. OCHCA has a website with information regarding the APST program as well as the SPCC Plan requirements: http://occupainfo.com/programs/apst

Violation Description:	Failure to provide the following training to all oil-handling personnel: 1. Operation and maintenance of equipment to prevent discharges. 2. Discharge procedure protocols. 3. Applicable pollution control laws, rules, and regulations. 4. General facility operations. 5. Contents of the SPCC Plan.
Violation Notes:	Returned to compliance on 02/06/2018. [40 CFR Section 112.7 General Requirements for Spill Prevention, Control, and Countermeasure Plans] (f)(1) At a minimum, train your oil-handling personnel in the operation and maintenance of equipment to prevent discharges; discharge procedure protocols; applicable pollution control laws, rules, and regulations; general facility operations; and, the contents of the facility SPCC Plan. (f)(3) Schedule and conduct discharge prevention briefings for your oil-handling personnel at least once a year to assure adequate understanding of the SPCC Plan for that facility. Such briefings must highlight and describe known discharges as described in Section 112.1(b) or failures, malfunctioning components, and any recently developed precautionary measures.

NEOGENOMICS LABORATORIES INC. (Continued) **S123504649**

Violation Description: Failure to inspect weekly areas where hazardous waste containers are stored. The owner or operator must look for leaking containers and for deterioration of containers caused by corrosion or other factors.
Violation Notes: Returned to compliance on 08/13/2018. OBSERVATION: No weekly inspections for all hazardous waste container storage areas could be found during the inspection. The owner or operator shall inspect areas used for hazardous waste container storage or transfer, at least weekly, looking for leaking containers and for deterioration of containers and the containment system caused by corrosion and other factors. CORRECTIVE ACTION: Immediately begin conducting the necessary weekly inspections for all hazardous waste containers at this facility. Submit copies of the last years worth of weekly inspections, or if you are performing inspections, proof that you have started and are maintaining the documentation by July 31, 2018 to abate the violation.

Violation Date: 06-29-2018
Citation: 22 CCR 15 66262.41 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66262.41
Violation Description: Failure of a large quantity RCRA generator to prepare the Biennial report (Form 8700), and submit to DTSC by March 1st on even numbered years ; and maintain it onsite for three years.
Violation Notes: Returned to compliance on 07/11/2018. OBSERVATION: No Biennial reports were prepared and submitted to DTSC, or they could not be found during the inspection. A generator who ships any hazardous waste offsite to a TSDF within the United States shall prepare and submit a Biennial Report, U.S. EPA Form 8700, to the DTSC by March 1 of each even-numbered year, and shall cover generator activities during the previous calendar year. CORRECTIVE ACTION: Immediately ensure that biennial reports have been prepared, if not prepare the latest one and submit appropriately calendar year and submit it to the DTSC. Ensure that this report is done in a timely manner. Submit proof of submittal (certified mail return receipt) as required to DTSC to abate the violation, by July 31, 2018 to abate the violation.
Violation Division: Orange County Environmental Health

Violation Date: 06-29-2018
Citation: 22 CCR 15 66265.52 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.52
Violation Description: Failure to include all of the following in the Contingency Plan: description of actions personnel will take in response to a release or emergency, arrangements with local authorities, list of emergency coordinators including name, addresses & phone numbers, list of emergency equipment and their physical description, location and capabilities, evacuation plan, and OES phone number. (If the owner or operator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) Plan or some other emergency or contingency plan, the owner or operator need only amend that plan to incorporate

NEOGENOMICS LABORATORIES INC. (Continued) **S123504649**

hazardous waste management provisions.)
Violation Notes: Returned to compliance on 08/20/2018. OBSERVATION: The contingency plan did not include all the required information as listed in sections 66265.1, 66265.56 and 66265.55. Ensure that your contingency plan addresses all of these requirements and submit a copy to this Agency for review and approval. If you decide to use your SPCC plan, you will need to expand it to incorporate hazardous waste management provisions sufficient to comply with these requirements. CORRECTIVE ACTION: Immediately make corrections to ensure all required information is included in the contingency plan and updated as necessary. Submit a copy to the CUPA by July 31, 2018, to abate the violation.

Eval Notes: On site to conduct a routine RCRA Large Quantity Generator. Met with Matt Jennings, Associate Director EHS, and Herbert Davis, EHS Specialist who provided consent to enter, inspect and take necessary photographs. Also present representing OCHCA was Karen Blanchard. The facility is a Large Quantity Generator (LQGi) of RCRA hazardous waste and has an EPA ID# CAR000184259. A walk through of the facility was conducted. The following areas were inspected this date: Pharma, Biomed, Pathology and Pathology Support, Cytogenetics, FISH, Flow, Fresh, Accessioning, Histology, Immunochemistry,, Final Storage Area The facility has a full-time, on site hazardous waste technician from ACT Environmental who consolidates the hazardous waste and medical waste daily (from the empty dailies) and also will consolidate the waste from the satellite locations on a daily basis to the final waste storage area (behind the facility building). Satellite storage was observed in several of the laboratory areas.

Eval Notes: On site for an aboveground petroleum storage tank (APST) inspection. Met this date with Gariella Cone, EHS Specialist, who granted consent to enter and inspect. This facility is a Tier I Facility (equal to or greater than 1,320 gallons but less than 9,999 gallons of regulated petroleum products) - 1 x 3,500 gallon tank of diesel (emergency generator) The SPCC Plan was on site for review and was dated June 29, 2017. SPCC plan must be reviewed every five (5) years. Periodic inspections per SPCC are being conducted. Tank inspection logs were available and reviewed. No spill have occurred or been reported. Appropriate secondary containment are in place. Annual SPCC training records for oil handling personnel are reported to be given and training records were available for review (maintained online) Inspection report emailed to gabrielle.cone@neogenomics.com

Eval Notes: On site for an initial APST inspection. Toured facility with Marielle Bullock. Currently there are three ASTs on site [3500 gallon (empty), 400 gallon (diesel) & 940 gallon (transformer oil)]. Per Marielle Bullock, the 400 gallon tank will be removed and the 3500 gallon tank will contain the diesel for the generator by the end of January 2014. At that time the SPCC plan will be updated and PE stamped. Monthly tank inspections and annual training performed. Received CUPA forms dated 11-18-13 (business activities, owner/operator ID and APST). * Notify Health Care Agency when plan is updated. Provide copy of PE stamped page to Health Care Agency.

Eval Notes: NEOGENOMICS LABORATORIES, INC. 31 COLUMBIA ALISO VIEJO, CA 92656 On site to conduct an initial hazardous waste inspection. Consent to enter and inspect the facility was granted by Bhavika Lodhia. Facility is currently a Large Quantity Generator (LQG) of RCRA hazardous waste. Areas observed during the facility inspection include the following: - IHC (Immuno Histo Chemistry) - FISH (Fluoresence In Situ Hybridization) - Cyto 1, Cyto 2 (Satellite Accumulation Areas SAAs) - Grossing 1, Grossing 2, Grossing 3 SAAs - Central Accumulation Area Observed various hazardous waste/satellite accumulation areas. Observed weekly inspection log template for the 90-day hazardous waste storage area. This facility uses an off-site paperwork archive; requested first and last month s weekly inspection logs for review. Containers of hazardous waste were stored closed at the time of inspection. Containers appeared to be in good condition and stored with adequate aisle [Truncated]

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-27-2025
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine small quantity hazardous waste inspection. Allen Faass, Associate Director of Facilities and EH&S provided consent to inspect. Walked throughout the facility. Hazardous waste were properly labeled, stored, and dated. A perimeter walk was conducted. Municipal dumpster does not appear to contain any hazardous waste. Manifests were available and reviewed. Pick ups are conducted by Veolia Tech. Emergency response information is posted and employees are reported to be trained. No hazardous waste violations were observed on this date. Inspection report emailed to afaass.rxsight.com

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-10-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan (HMBP) . Allen Faass, Associate Director of Facilities and EH&S provided consent to inspect. Observed the following materials on site at reportable quantities: - hazardous waste flammable solvents - air compressed gas - helium compressed gas - nitrogen compressed gas - lead acid batteries - diesel fuel (generator) - liquid nitrogen Hazardous Materials disclosed in CERS 10654240 match what is reported on site. Training is reported to be conducted and records are kept online. Per California Health & Safety Code Ch. 6.95, businesses that store and handle hazardous materials at or over reportable quantities(55 gal of a liquid, 500 lbs of a solid, 200 cubic ft of a compressed gas) must prepare and implement an HMBP. The facility is responsible for identifying all hazardous materials, including hazardous wastes, which are at or above disclosure thresholds. If there isa change in the type of amount of chemicals that are ma

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D002
Waste Description:	Corrosive Waste
Waste Code:	D003
Waste Description:	Reactive Waste
Waste Code:	D022
Waste Description:	Chloroform
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene,

RXSIGHT, INC (Continued) **1024876772**

Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Violation Date: 05-02-2024
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: OBSERVATION: The Hazardous Materials Business Plan (HMBP) was not reviewed and electronically certified by the annual due date of March 1 that it is complete, accurate, and in compliance with EPCRA.
Violation Division: Orange County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-27-2025
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazard us materials and business emergency plan (HMBP) . John McGarringle, Sr EHS Manager provided consent to inspect. The following materials on site at reportable quantities: - diesel fuel - CHEM Aqua (for chiller) Hazardous Materials disclosed in CERS 10737703 match what is reported on site. Training is reported to be conducted and records are kept online. This building is used for

office/administrative purposes Inspection report emailed to john.mcgarrigle@microvention.com
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-27-2025
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: The SPCC is being prepared for the emergency fuel generator.
Eval Division: Orange County Environmental Health
Eval Program: APSA
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-12-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for an aboveground petroleum storage tank (APST) inspection. Access to this facility was provided by Todd Kulzer. Facility contains: - 2 Diesel APST (backup generators) Facility is regulated under the Aboveground Storage Tank Act (APSA). This facility has between 1,320 and 9,999 gallons of regulated petroleum products (Tier 1 facility). Facility has the following: - Periodic checklist is available for tanks (weekly) - Appropriate secondary containment or diversionary structures A copy of this report will be emailed to: TODD.KULZER@PACIFICLIFE.COM
Eval Division: Orange County Environmental Health
Eval Program: APSA
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-14-2023
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Spoke with the security guard on duty and the building is currently vacant as the tenants moved to their Newport Beach location while renovations were being completed. Spoke on the phone with Mr. Robert Coffman, facility manager, and he verified that the building is currently vacant and the company is making a decision on whether to retain or sell the property. CERS 10737703 indicates the facility has the following hazardous materials above disclosure amount: refrigerant, lead acid batteries, propane, and diesel fuel. The hazardous materials could not be verified on the day of this inspection due to it being under renovation.
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Other/Unknown
Eval Date: 05-02-2024
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: According to the CERS database, your business remains out of compliance with the annual certification requirement and a violation

MICROVENTION INC / TERUMO MEDICAL CORPORATION (Continued) **S123519337**

is being cited. Businesses are required to annually review and certify that their information in the California Electronic Reporting System (CERS) is complete, accurate and in compliance by March 1st. Your business was notified via email on March 27, 2024 that your facility was out of compliance with this requirement. Please note the following important details: 1) Complete submittal includes the HazMat Inventory AND the Emergency Plan / Training sections. Both sections must be submitted. 2) If your business qualifies (see below) you may submit 2024 via the Certify option available on CERS. You must be logged in to use. HMBP Certify: A business may use the Certify option button located on their forms page if: 1) A previous, complete submittal was made the prior year, and 2) The business is not subject to the Federal EPCRA reporting requirements, and 3)

Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-12-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: An onsite hazardous materials inspection of this facility was conducted this date. Access to the facility was provided by Todd Kulzer. This facility should be re-classified to a lower program element. The following materials were observed in amounts that meet or exceed the minimum volumes required for disclosure: - Diesel fuel - Propane - Lead acid batteries - Refrigerant A copy of this inspection report will be emailed to: TODD.KULZER@PACIFICLIFE.COM

Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Other/Unknown
Eval Date: 12-01-2020
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: A follow-up inspection was conducted this date (12/1/20). The violations noted below are in reference to a visit or review of your facility conducted on 11/12/20. OUTSTANDING VIOLATIONS - 12/1/20 NONE CORRECTED VIOLATIONS - 12/1/20 I085 - The operator has submitted a newly developed SPCC plan (review date 11/18/2020). Inspection logs viewed onsite match the frequency specified in the the plan. An inspection report is to be emailed to: TODD.KULZER@PACIFICLIFE.COM

Environmental Interest/Information System:
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.
Registry ID: 110070119302

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES,

MICROVENTION, INC. (Continued) **1023710068**

RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.

Waste Description:	Lead
Waste Code:	D009
Waste Description:	Mercury
Waste Code:	D010
Waste Description:	Selenium
Waste Code:	D022
Waste Description:	Chloroform
Waste Code:	F001
Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or

MICROVENTION INC (Continued) **1023675286**

More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F006
Waste Description: Wastewater Treatment Sludges From Electroplating Operations, Except From The Following Processes: (1) Sulfuric Acid Anodizing Of Aluminum; (2) Tin Plating On Carbon Steel; (3) Zinc Plating (Segregated Basis) On Carbon Steel; (4) Aluminum Or Zinc-Aluminum Plating On Carbon Steel; (5) Cleaning/Stripping Associated With Tin, Zinc, And Aluminum Plating On Carbon Steel; And (6) Chemical Etching And Milling Of Aluminum.

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 423157
Site Name: MicroVention Inc
Violation Date: 03-07-2018
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 06/05/2018. OBSERVATION: training documentation for all applicable employees was not available. CORRECTIVE ACTION: Submit documentation to the CUPA demonstrating that all employees have received training on safe handling of hazardous materials and the Emergency Response Plan. Submit a copy of the training documentation showing all employees were trained and what was included in the training within 30 days to abate the violation. The log should include info on the training contents of Emergency Response Training and hazardous materials training for spills, location of emergency equipment etc.

Violation Date: 03-07-2018
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description: Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes: Returned to compliance on 06/06/2018. OBSERVATION: Personnel who handle hazardous waste shall be trained within six months of

MICROVENTION INC (Continued) **S123079766**

assignment and take part in an annual review of the initial training received. At a minimum, the training program shall be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including where applicable: 1) procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment; 2) key parameters for automatic waste feed cut-off systems; 3) communications or alarm systems; 4) response to fires or explosions; 5) response to ground-water contamination incidents; and 6) shutdown of operations. The owner or operator shall maintain the following documents and records at the facility: 1) the job title for each position at the facility related to hazardous waste management, and the name of each employee filling each job; 2) written [Truncated]

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 06/06/2018. OBSERVATION: All hazardous waste except that located in the final storage area are not completely labeled. All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. The containers in the labs/clean rooms/ other generation areas as well as the transport containers must be labeled at all times and include all of the above info at all times. In addition, your use of letters to denote waste streams is fine only if the complete info is also included on the container. CORRECTIVE ACTION: Immediately label these containers and ensure that all hazardous waste containers are marked with all the required information. A follow up inspection will be done to verify that all containers are completely labeled.

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site

MICROVENTION INC (Continued) **S123079766**

at or above reportable quantities.

Violation Notes: Returned to compliance on 06/05/2018. The facility has submitted in CERS, in general as discussed during the inspection, over disclosure is discouraged. Only disclose hazardous materials that are stored in total amounts in excess of; 55 gallons liquid, 500 pounds solid and 200 cubic feet of gas (inert gas at 1000 cubic feet). On the inspection, it appears that the following chemicals need further assessment. Compressed Argon gas- check amounts throughout building and disclose if 1000 cubic feet or over (separate disclosure than liquid/cryogenic). Add oxygen gas at 2650 cubic feet (check the rest of the building for additional cylinders-we found 8 cylinders). Check the amount of methanol and ammonium hydroxide for disclosure. Also check the amount of MTBE. Waste C appears to be stored in gallons up to 110 gallons. Review the chemicals and submit all disclosable items.

Waste Description:	The Following Spent Halogenated Solvents Used In Degreasing: Tetrachloroethylene, Trichlorethylene, Methylene Chloride, 1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F002
Waste Description:	The Following Spent Halogenated Solvents: Tetrachloroethylene, Methylene Chloride, Trichloroethylene, 1,1,1-Trichloroethane, Chlorobenzene, 1,1,2-Trichloro-1,2,2-Trifluoroethane, Ortho-Dichlorobenzene, Trichlorofluoromethane, And 1,1,2, Trichloroethane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Halogenated Solvents Or Those Solvents Listed In F001, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	F005
Waste Description:	The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Description: Caller states there was a motor vehicle accident which caused a release of 20 gallons of gasoline onto asphalt. Release is stopped and contained with no waterways impacted. Contractor is performing cleanup.

FINDS:
Registry ID: 110002845556

Click Here for FRS Facility Detail Report:

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Site ID:	79269
Site Name:	UPS - Laguna
Violation Date:	10-21-2020
Citation:	HSC 6.7 25291(a)(1) - California Health and Safety Code, Chapter 6.7, Section(s) 25291(a)(1)
Violation Description:	Failure to construct, operate, and maintain primary containment as product-tight.
Violation Notes:	Returned to compliance on 11/04/2021. A test of Tank 1's (87 unleaded) annular space conducted in September 2020 indicates that the annular space is unable to hold vacuum pressure. Additionally the test report indicates the contents of the UST have been removed and water has subsequently entered the primary tank. Submit plans to this agency within 30 days (11/21/2020) detailing the repair or removal of this tank.

Violation Date:	01-07-2019
Citation:	23 CCR 16 2665(b) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665(b)
Violation Description:	"Failure to submit a copy of the overfill prevention equipment inspection results on the Overfill Prevention Equipment Inspection Report Form to the UPA within 30 days after the inspection. "
Violation Notes:	Returned to compliance on 02/05/2019. OBSERVATION: Owner/operator failed to submit a copy of the overfill prevention equipment inspection results on the Overfill Prevention Equipment Inspection Report Form to the UPA within 30 days after the inspection. CORRECTIVE ACTION: Submit a copy of the overfill prevention equipment inspection results on the Overfill Prevention Equipment Inspection Report Form to the UPA within 30 days. Allan Painter states that the overfill inspection was done in September of 2018, he does not have a copy of the results, and they have not been submitted to this Agency. Find and submit a copy of the overfill testing results within 30 days to abate this violation.

Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five

UNITED PARCEL SERVICE (Continued) **1000594559**

minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 12/13/2021. The Shut-Off Valve in New Oil tank (T4) is broken and waste oil tank's overfill prevention equipment was not tested due to broken/disconnected probe wiring. Overfill prevention equipment for both new oil and waste oil tanks must replaced/repaired and retested within 30 day of this inspection report.

Eval Notes:	On site for a routine underground tank inspection and to observe the annual monitor certification for five underground tanks. Met with Bob Toomey of Packham/Toomey Inc. Current ICC, VMI and Veeder Root certifications provided. The five tank top sumps and eight UDCs were free of liquid. Sensors were located at the low area of secondary containment. Secondary testing was performed on 7/18/12 and is current until 7/18/15. Financial certification is valid through 3-25-15.

UNITED PARCEL SERVICE (Continued) **1000594559**

Reviewed monthly designated operator (DO) reports for the past 12 months. DO reports properly completed and followed up on when needed. Corrective action documentation available for review. DO training provided on 9-14-14. Reviewed and did not accept latest UST submittal in CERS. * The sensor model number for the annular space in tanks 2 and 4 are listed as 302s. Per Bob Toomey they are 303s. Please make both changes and resubmit.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/26/2025

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 09/19/2025

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS TSCA: PFAS Manufacture and Imports Information

EPA issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. EPA publishes non-confidential business information (non-CBI) and includes descriptive information about each site, corporate parent, production volume, other manufacturing information, and processing and use information.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/02/2025
Date Data Arrived at EDR: 11/03/2025

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

ALISO VIEJO - POLARIS
5 POLARIS WAY
ALISO VIEJO, CA 92656

TARGET PROPERTY COORDINATES

Latitude (North):	33.585202 - 33° 35' 6.73''
Longitude (West):	117.725188 - 117° 43' 30.68''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	432704.5
UTM Y (Meters):	3716208.0
Elevation:	489 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	50006201 SAN JUAN CAPISTRANO, CA
Version Date:	2022

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

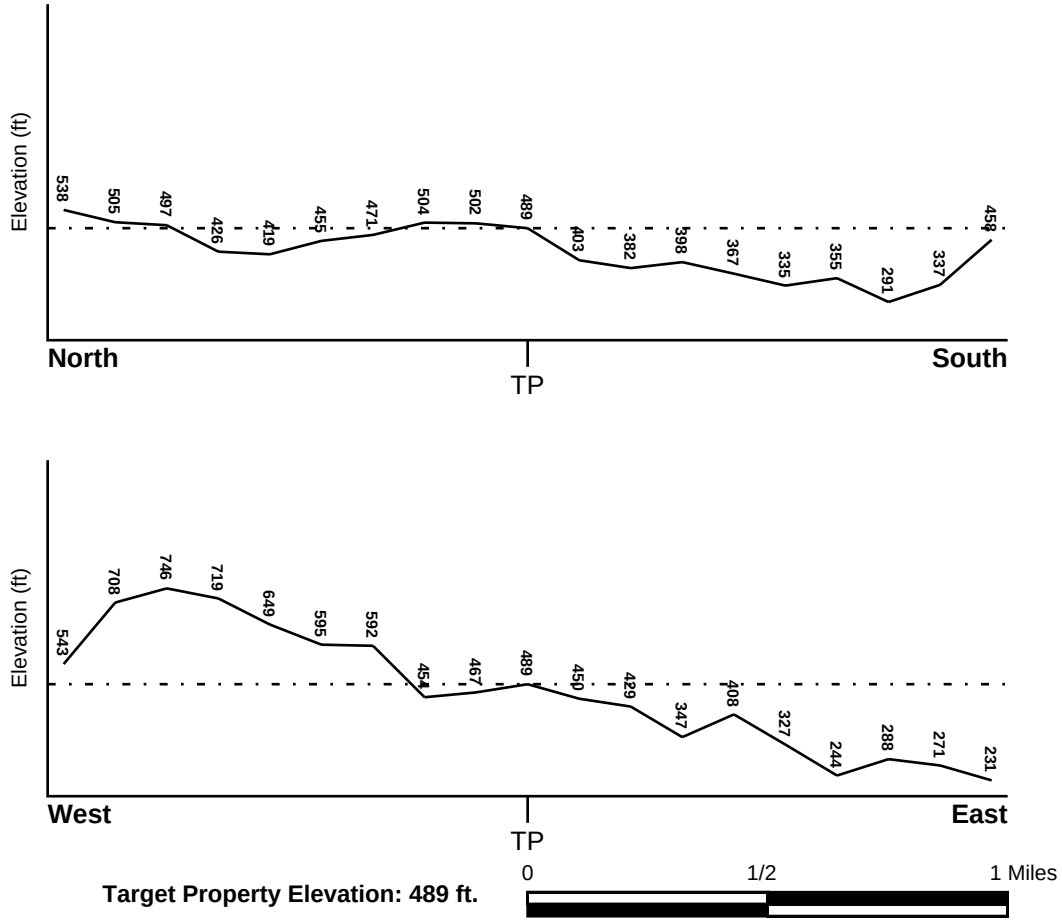
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06059C0428J	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06059C0426J	FEMA FIRM Flood data

06059C0429J	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SAN JUAN CAPISTRANO	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: BALCOM

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	29 inches	clay loam	Not reported	Not reported	Max: Min:	Max: Min:
2	29 inches	33 inches	weathered bedrock	Not reported	Not reported	Max: Min:	Max: Min:

Soil Map ID: 2

Soil Component Name: CALLEGUAS

Soil Surface Texture: clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 1.4 Min: 0	Max: Min:
2	14 inches	18 inches	weathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	Not reported	Max: 1.4 Min: 0	Max: Min:

Soil Map ID: 3

Soil Component Name: BALCOM

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

Orphan Well Prioritization Listing
California Department of Conservation
Telephone: 916-445-9686
Includes locations of wells included in the California State Well Plugging and Sealing Project, managed by CalGEM (California Geologic Energy Management Division).

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Public Records Request Number: 1-020926-16
Location(s): 1, 2, 3, 4, and 5 Polaris Way, Aliso Viejo, California 92656

Dear Requestor:

On February 9, 2026, the Department of Toxic Substances Control (DTSC) received your email of February 9, 2026 requesting records under the Public Records Act. After a thorough review of our files, no site records were found pertaining to the sites/facilities referenced above.

DTSC's E-Waste unit may have records that pertain to this request for **3 Polaris Way, Aliso Viejo, California 92656**. "E-Waste" refers to any unwanted electronic device or Cathode Ray Tube (CRT) and is classified as universal waste. E-Waste frequently contains hazardous materials, predominantly lead and mercury, and is produced by households, businesses, governments, and industries. I have forwarded your Public Records Act request to that unit for further processing. Please contact them by email at electronicwaste@dtsc.ca.gov if you are interested in this information.

A large number of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSCs data management system. It tracks our cleanup, permitting, enforcement, and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me at 916-255-3611 or via email at PubReqAct@dtsc.ca.gov.

Respectfully,

Nancy Fang

PUBLIC RECORDS REQUEST FORM

Your request will be processed in compliance with the Public Records Act California Government Code § 6253.

Please complete form in its entirety. The more specific you are with the information you are requesting, including dates, address etc. the more responsive we may be to your request. Requestor will be notified in writing if additional time will be necessary. All document duplication fees are due and payable in full prior to release and are based on the Agency's current fee resolution. We will notify you of actual amount due and payment options once record(s) is identified.

In submitting your form, if you are using Internet Explorer as your web browser, you may email completed form by clicking here.
All other web browsers, please complete form, save as a PDF file and email to address noted above.

Hello,
Haley & Aldrich is an environmental engineering company conducting a Phase I Environmental Site Assessment of the property located at the following addresses:
1 Polaris Way, Aliso Viejo, CA 92656 [APN: 623-481-49]
2 Polaris Way, Aliso Viejo, CA 92656 [APN: 623-481-50]
3 Polaris Way, Aliso Viejo, CA 92656 [APN: 623-481-51]
4 Polaris Way, Aliso Viejo, CA 92656 [APN: 623-481-53]
5 Polaris Way, Aliso Viejo, CA 92656 [APN: 623-481-52]
We are interested in any environmental files you may have for this property, such notices of violation, permits to operate, environmental site assessments, etc.
Thank you

David Rother

QUEST SOFTWARE
5 POLARIS WAY
ALISO VIEJO, CA 92656

Equipment Location: 5 POLARIS WAY, ALISO VIEJO, CA 92656

Equipment Description :

INTERNAL COMBUSTION ENGINE, CATERPILLAR, 12 CYLINDER, "TURBOCHARGED, AFTERCOOLED," MODEL 3412 DISTA (750 KW), 1114 BHP, DIESEL FUEL-FUELED, DRIVING AN EMERGENCY ELECTRICAL GENERATOR.

Conditions :

1. OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN ACCORDANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. THIS ENGINE SHALL NOT OPERATE MORE THAN 200 HOURS IN ANY ONE YEAR, WHICH INCLUDES NO MORE THAN 20 HOURS IN ANY ONE YEAR FOR MAINTENANCE AND TESTING PURPOSES.

4. AN OPERATIONAL NON-RESETTABLE TOTALIZING TIME METER SHALL BE INSTALLED AND MAINTAINED TO INDICATE THE ENGINE ELAPSED OPERATING TIME.

5. THE OPERATION OF THE ENGINE BEYOND THE 20 HOURS PER YEAR ALLOTTED FOR ENGINE MAINTENANCE AND TESTING SHALL BE ALLOWED ONLY IN THE EVENT OF A LOSS OF GRID POWER OR UP TO 30 MINUTES PRIOR TO A ROTATING OUTAGE, PROVIDED THAT THE ELECTRICAL GRID OPERATOR OR ELECTRIC UTILITY HAS ORDERED ROTATING OUTAGES IN THE CONTROL AREA WHERE THE ENGINE IS LOCATED OR HAS INDICATED THAT IT EXPECTS TO ISSUE SUCH AN ORDER AT A CERTAIN TIME, AND THE ENGINE IS LOCATED IN A UTILITY SERVICE BLOCK THAT IS SUBJECT TO THE ROTATING OUTAGE. ENGINE OPERATION SHALL BE TERMINATED IMMEDIATELY AFTER THE UTILITY DISTRIBUTION COMPANY ADVISES THAT A ROTATING OUTAGE IS NO LONGER IMMINENT OR IN EFFECT.

6. THIS ENGINE SHALL NOT BE USED AS PART OF A DEMAND RESPONSE PROGRAM USING INTERRUPTIBLE SERVICE CONTRACT IN WHICH A FACILITY RECEIVES A PAYMENT OR REDUCED RATES IN RETURN FOR REDUCING ITS ELECTRIC LOAD ON THE GRID WHEN REQUESTED TO SO BY THE UTILITY OR THE GRID OPERATOR.

FILE COPY

PERMIT TO OPERATE

7. AN ENGINE OPERATING LOG SHALL BE MAINTAINED WHICH ON A MONTHLY BASIS SHALL LIST ALL ENGINE OPERATIONS IN EACH OF THE FOLLOWING AREAS:
   A. EMERGENCY USE HOURS OF OPERATION
   B. MAINTENANCE AND TESTING HOURS
   C. OTHER OPERATING HOURS (DESCRIBE THE REASON FOR OPERATION)
   IN ADDITION, EACH TIME THE ENGINE IS STARTED MANUALLY, THE LOG SHALL INCLUDE THE DATE OF OPERATION AND THE TIMER READING IN HOURS AT THE BEGINNING AND END OF OPERATION THE LOG SHALL BE KEPT FOR A MINIMUM OF THREE CALENDAR YEARS PRIOR TO THE CURRENT YEAR AND MADE AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST. THE TOTAL HOURS OF OPERATION FOR THE PREVIOUS CALENDAR YEAR SHALL BE RECORDED SOMETIME DURING THE FIRST 15 DAYS OF JANUARY OF EACH YEAR.

8. THE OPERATOR SHALL COMPLY WITH ALL APPLICABLE REQUIREMENTS OF RULES 431.2 AND 1470.

THIS PERMIT TO OPERATE R-F75639 SUPERSEDES PERMIT TO OPERATE F75639 ISSUED 5/19/2005

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DIVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. THIS PERMIT CANNOT BE CONSIDERED AS PERMISSION TO VIOLATE EXISTING LAWS, ORDINANCES, REGULATIONS OR STATUTES OF OTHER GOVERNMENT AGENCIES.

Administration/Documentation
1010002 - Hazardous Materials Business Plan Submittal
Violation Details: HSC 6.95 25505, 25508(a)(1) Failure to complete and electronically submit initially, annually or triennially, a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Class: Class 2
Inspector Comments: According to the CERS database, your business remains out of compliance with the 2025 annual certification requirement and a violation is being cited. Businesses are required to annually review and certify that their information in the California Electronic Reporting System (CERS) is complete, accurate and in compliance by March 1st. Last submittal was on 2/22/24
Corrective Action: Log into CERS to review and re-certify the HMBEP within 30 days. If you have any questions, please contact Julie Wozencraft at jwozencraft@ochca.com or 714-614-3566.
Violation Due Date: 04/11/2025

GENERAL COMMENTS

On site for routine Hazardous Materials Business Plan (HMBP).

Observed the following materials on site at reportable quantities: diesel (emergency generator), propane (forklifts)

Hazardous Materials disclosed in CERS match what is reported on site.

Inspection report emailed to environmental contact karen.tucker@fluor.com

GENERAL COMMENTS

On site for a routine Hazardous Materials Business Plan Inspection. Met with Brad Gustavsen, building engineer. The facility has moved to a smaller location and all manufacturing has been moved out of state. The diesel emergency generator will be dismantled by April.

Removed the reporting requirement in CERS for this facility and will send a task to inactive the HMBP and APSA for this facility.

HAZARDOUS MATERIAL RELEASE RESPONSE PLAN (HMRRP) INSPECTION REPORT

FACILITY NAME: FLUOR CORP		FACILITY ADDRESS: 3 POLARIS WAY, ALISO VIEJO, CA 92656	
MAILING ADDRESS: 3 POLARIS WAY MSC0A, ALISO VIEJO CA 92656		CERS ID: 10716985 EPA ID: N/A	
C/O - OWNER: FLUOR CORP		INSPECTOR: BRIAN CARROLL	
FACILITY ID: FA0063192	RELATED ID: PR0107692	SERVICE: A01 - ROUTINE INSPECTION	INSPECTION DATE: 9/1/2020
PROGRAM DESCRIPTION: 5801 - HAZ MAT DISCLOSURE 1-4 CHEMICALS			REINSPECTION DATE: NEXT ROUTINE

Consent to enter, inspect, and take photos of the facility was given by: SONNY VU

The following items have been inspected. If there were violations, this document constitutes a Summary of Violations and Notice to Comply and the Violation Degree column is marked Minor, Class I, or Class II. A violation that is corrected at the time of inspection is marked COS. Failure to correct the listed violation(s) prior to the designated compliance date may necessitate a reinspection at an additional fee.

Overall Inspection Comments:

An onsite hazardous materials inspection of this facility was conducted this date. Access to the facility was provided by Sonny Vu.

The following materials were observed in amounts that meet or exceed the minimum volumes required for disclosure:

- Diesel fuel

NOTE: Only one LPG cylinder (for the facility's forklift) was observed. The volume of LPG is normally under the threshold by which facilities are required to report.
ALSO NOTE: There is a server room in the interior of this facility. The server room's UPS may contain battery arrays that exceed the threshold to report. Determine if this facility exceeds the following thresholds:

55 gallons liquid
500 pounds solid
200 cubic feet compressed gas

A copy of this inspection report will be emailed to: sonny.vu@fluor.com

No violations were noted. Orange County Environmental Health greatly appreciates your efforts to comply with all health, safety, and environmental laws and regulations applicable to your facility.

Consent to enter, inspect, and take photos of the facility was given by: WALLY BACKUS

The following items have been inspected. If there were violations, this document constitutes a Summary of Violations and Notice to Comply and the Violation Degree column is marked Minor, Class I, or Class II. A violation that is corrected at the time of inspection is marked COS. Failure to correct the listed violation(s) prior to the designated compliance date may necessitate a reinspection at an additional fee.

Overall Inspection Comments:

On site for an aboveground petroleum storage tank (APST) inspection. Access to this facility was provided by Wally Backus and Brad.

Facility contains:

- 1 Diesel APST (1500 gallons)

Facility is regulated under the Aboveground Storage Tank Act (APSA). This facility has between 1,320 and 9,999 gallons of regulated petroleum products (Tier 1 facility).

Facility has the following:
- On-site Spill Prevention Controls and Countermeasures (SPCC) plan prepared and implemented. SPCC must be evaluated every 5 years)
- Training (last conducted 1/1/2020)
- Periodic checklist is available for tanks (per SPCC inspections are conducted monthly)
- Appropriate secondary containment or diversionary structures

No violations were noted. Orange County Environmental Health greatly appreciates your efforts to comply with all health, safety, and environmental laws and regulations applicable to your facility.

Failure to correct the listed violation(s) prior to the designated compliance date may necessitate a reinspection at an additional fee.

Overall Inspection Comments:

An onsite hazardous materials inspection of this facility was conducted this date. Access to the facility was provided by Wally Backus and Brad. NOTE: The required electronic submittals noted below exist as part of the previous owner's CERS record and are in the midst of being transferred to the Quest CERS record.

Businesses who handle or store hazardous materials in quantities equal to or exceeding 55 gallons of liquid, 500 pounds of solid, or 200 cubic feet of a gas are required to develop the following items and submit them electronically into the state's portal CERS website (http://cers.calepa.ca.gov). Complete the electronic submittal within 30 days of receipt of this report.

HAZARDOUS MATERIALS INVENTORY
Your inventory should include the following at a minimum:
- Diesel fuel (backup generator): 1500 gallons
NOTE: Battery arrays were observed in the Emergency Power Inverter Room and the Data Center. The batteries may contain hazardous materials in excess of the thresholds noted above and may need to be included in your inventory. Assess the amount of of those items and include them in your inventory if needed.

HAZARDOUS MATERIALS BUSINESS EMERGENCY PLAN
- Complete an Emergency Response Plan and submit it electronically in CERS.

SITE MAP
In your CERS record, electronically submit a site map with the following details included:
- North orientation
- Loading areas
- Internal roads
- Adjacent streets
- Storm and sewer drains
- Access and exit points
- Emergency shutoffs
- Evacuation staging areas
- Hazardous materials handling and storage areas
- Emergency response equipment

A copy of this inspection report will be emailed to:

No violations were noted. Orange County Environmental Health greatly appreciates your efforts to comply with all health, safety, and environmental laws and regulations applicable to your facility.

On site to conduct aboveground petroleum storage tank (APST) inspection, consent to enter, inspect and take photographs was given by - Wally Backus, Facilities Sup.

Change in ownership as of 10/30/2016 from Dell Software to Quest Software Inc.

Facility is regulated under the Aboveground Storage Tank Act (APSA). Facility has between 1,320 and 9,999 gallons of regulated petroleum products .

Facility has the Following:
1) On site SPCC Prepared and implemented - update the name/owner to Quest Software
a. Facilities that are a qualified Tier 1 facility (store less than 10,000 gallons, with no single tank/container having a volume greater than 5,000 gallons) can create their own SPCC Plan using a federal template.
b. Plan is required to be reviewed every 5 years. Ensure that new corporate staff sign the SPCC plan when you update the plan
2) Periodic checklist of inspection activities is available for tanks.
3) Appropriate secondary containment or diversionary structures
4) Training on SPCC plan for appropriate staff- training was done 4/20/16

Orange County Environmental Health has created a website that contains information regarding the APST program and its requirements. The APST website is located at http://www.occupainfo.com/ast.htm. For information regarding the SPCC Plan, please visit http://www.occupainfo.com/downloads/Ttier1-Qualified-Facility-SPCC-Plan.doc .

Copy of report emailed.

I declare that I have examined and received a copy of this inspection report.

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	**Yes**

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	**No**

Hazardous Waste

Is your facility a Hazardous Waste Generator?	**No**
Does your facility treat hazardous waste on-site?	**No**
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	**No**
Does your facility consolidate hazardous waste generated at a remote site?	**No**
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	**No**
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month greater than 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	**No**
Is your facility a Household Hazardous Waste (HHW) Collection site?	**No**

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	**No**

Aboveground Petroleum Storage

Does your facility own or operate aboveground petroleum storage tanks or containers AND: * have a total aboveground petroleum storage capacity of 1,320 gallons or more, OR * have one or more petroleum tanks in an underground area?	**No**

Regulated Substances

Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	**No**

Additional Information

No additional comments provided.

Engineer	Emergency back power for buildings and server room

THIS PLAN COVERS CHEMICAL SPILLS, FIRES, AND EARTHQUAKES INVOLVING (Check all that apply): (A10.)

☐ 1. HAZARDOUS MATERIALS; ☒ 2. HAZARDOUS WASTES

INTERNAL FACILITY EMERGENCY RESPONSE WILL OCCUR BY (Check all that apply): (B1.)

☒ 1. CALLING PUBLIC EMERGENCY RESPONDERS (e.g., 9-1-1)
☒ 2. CALLING HAZARDOUS WASTE CONTRACTOR
☒ 3. ACTIVATING IN-HOUSE EMERGENCY RESPONSE TEAM

In the event of an emergency involving hazardous materials and/or hazardous waste, all facilities must IMMEDIATELY:

1. Notify facility personnel and evacuate if necessary in accordance with the Emergency Action Plan (Title 8 California Code of Regulations §3220);
2. Notify local emergency responders by calling 9-1-1;
3. Notify the local Unified Program Agency (UPA) at the phone number below; and
4. Notify the State Warning Center at (800) 852-7550.

Facilities that generate, treat, store or dispose of hazardous waste have additional responsibilities to notify and coordinate with other response agencies. Whenever there is an imminent or actual emergency situation such as an explosion, fire, or release, the Emergency Coordinator must follow the appropriate requirements for the category of facility and type of release involved:

1. Title 22 California Code of Regulations §66265.56. Emergency Procedures for generators of 1,000 kilograms or more of hazardous waste in any calendar month.
2. Title 22 California Code of Regulations §66265.196. Response to Leaks or Spills and Disposition of Leaking or Unfit-for-Use Tank Systems.
3. Title 40 Code of Federal Regulations §302.6. Notification requirements for a release of a hazardous substance equal to or greater than the reportable quantity.
4. Title 22 California Code of Regulations §66262.34(d)(2) and Title 40 Code of Federal Regulations §262.34(d)(5)(ii) for generators of less than 1000 kilograms of hazardous waste in any calendar month.

Following notification and before facility operations are resumed in areas of the facility affected by the incident, the Emergency Coordinator shall notify the local UPA and the local fire department's hazardous materials program, if necessary, that the facility is in compliance with requirements to:

1. Provide for proper storage and disposal of recovered waste, contaminated soil or surface water, or any other material that results from an explosion, fire, or release at the facility; and
2. Ensure that no material that is incompatible with the released material is transferred, stored, or disposed of in areas of the facility affected by the incident until cleanup procedures are completed.

INTERNAL FACILITY EMERGENCY COMMUNICATIONS OR ALARM NOTIFICATION WILL OCCUR BY (Check all that apply): C11.

- [x] 1. VERBAL WARNINGS;
- [x] 2. PUBLIC ADDRESS OR INTERCOM SYSTEM;
- [x] 3. TELEPHONE;
- [ ] 4. PAGERS;
- [ ] 5. ALARM SYSTEM;
- [x] 6. PORTABLE RADIO

NOTIFICATIONS TO NEIGHBORING FACILITIES THAT MAY BE AFFECTED BY AN OFF-SITE RELEASE WILL OCCUR BY (Check all that apply): C12.

- [ ] 1. VERBAL WARNINGS;
- [ ] 2. PUBLIC ADDRESS OR INTERCOM SYSTEM;
- [ ] 3. TELEPHONE;
- [ ] 4. PAGERS;
- [ ] 5. ALARM SYSTEM;
- [ ] 6. PORTABLE RADIO

EMERGENCY COORDINATOR CONTACT INFORMATION: C13.

PRIMARY EMERGENCY COORDINATOR NAME: Cliff Kingery PHONE NO.: (949) 349-2040 PHONE NO.: (949) 279-5305

ALTERNATE EMERGENCY COORDINATOR NAME: Ernesto Mendoza PHONE NO.: (949) 349-2040 PHONE NO.: (949) 279-9334

- [ ] Check if additional Emergency Coordinator contact and address information is available onsite or by calling PHONE NO.:

Note: If more than one alternate emergency coordinator is designated, attach a list in order of responsibility.

D. EMERGENCY CONTAINMENT AND CLEANUP PROCEDURES

Check the applicable boxes to indicate your facility's procedures for containing spills and preventing and mitigating releases, fires and/or explosions.

D1.

- [ ] 1. MONITOR FOR LEAKS, RUPTURES, PRESSURE BUILD-UP, ETC.;
- [x] 2. PROVIDE STRUCTURAL PHYSICAL BARRIERS (e.g., Portable spill containment walls, built-in berms);
- [ ] 3. PROVIDE ABSORBENT PHYSICAL BARRIERS (e.g., Pads, spill pigs, spill pillows);
- [x] 4. COVER OR BLOCK FLOOR AND/OR STORM DRAINS;
- [ ] 5. LINED TRENCH DRAINS AND/OR SUMPS;
- [ ] 6. AUTOMATIC FIRE SUPPRESSION SYSTEM;
- [ ] 7. ELIMINATE SOURCES OF IGNITION FOR FLAMMABLE HAZARDS;
- [x] 8. STOP PROCESSES AND/OR OPERATIONS;
- [ ] 9. AUTOMATIC / ELECTRONIC EQUIPMENT SHUT-OFF SYSTEM;
- [x] 10. SHUT OFF WATER, GAS, ELECTRICAL UTILITIES;
- [x] 11. CALL 9-1-1 FOR PUBLIC EMERGENCY RESPONDER ASSISTANCE AND/OR MEDICAL AID;
- [x] 12. NOTIFY AND EVACUATE PERSONS IN ALL THREATENED AND/OR IMPACTED AREAS;
- [x] 13. ACCOUNT FOR EVACUATED PERSONS IMMEDIATELY AFTER EVACUATION;
- [x] 14. PROVIDE PROTECTIVE EQUIPMENT FOR ON-SITE EMERGENCY RESPONSE TEAM;
- [ ] 15. REMOVE CONTAINERS AND/OR ISOLATE AREAS;
- [x] 16. HIRE LICENSED HAZARDOUS WASTE CONTRACTOR;
- [x] 17. USE ABSORBENT MATERIAL FOR SPILL CONTAINMENT;
- [ ] 18. VACUUM SUCTION USING APPROPRIATE VACUUM (e.g., Intrinsically safe) FOR SPILL CONTROL AND/OR CLEANUP;
- [ ] 19. DECONTAMINATE PERSONNEL AND EQUIPMENT WITHIN DESIGNATED AREA AND DISPOSE OF WASTEWATER AS HAZARDOUS WASTE;
- [ ] 20. PROVIDE SAFE TEMPORARY STORAGE OF HAZARDOUS WASTE GENERATED DURING EMERGENCY ACTIONS;
- [ ] 21. OTHER (Specify): D2.

E. FACILITY EVACUATION

THE FOLLOWING ALARM SIGNAL(S) WILL BE USED TO BEGIN EVACUATION OF THE FACILITY (Check all that apply): E1.

E2.

- [ ] 1. BELLS;
- [x] 2. HORNS/SIRENS;
- [x] 3. VERBAL (i.e., Shouting);
- [x] 4. OTHER (Specify): Public Address System

THE FOLLOWING LOCATION(S) WILL BE USED FOR AN EMERGENCY ASSEMBLY AREA(S) (e.g., Parking lot, street corner): E3.

Pre-designed assembly areas in the parking lot

Note: The Emergency Coordinator must account for all onsite employees and visitors after evacuation.

EVACUATION ROUTE S AND ALTERNATE EVACUATION ROUTES ARE DESCRIBED AS FOLLOWS: E4.

- [x] 1. WRITTEN PROCEDURES DESCRIBING ROUTES, EXITS, AND ASSEMBLY AREAS;
- [x] 2. EVACUATION MAP(S) DEPICTING ROUTES, EXITS, AND ASSEMBLY AREAS;
- [ ] 3. OTHER (Specify): E5.

Note: Evacuation procedures and/or maps should be posted in visible facility locations and must be included in the Contingency Plan.

F. ARRANGEMENTS FOR EMERGENCY SERVICES

ADVANCE ARRANGEMENTS FOR LOCAL EMERGENCY SERVICES (Check one of the following): F1.

- [ ] 1. HAVE BEEN DETERMINED NOT NECESSARY;
- [x] 2. THE FOLLOWING ARRANGEMENTS HAVE BEEN MADE (Specify): Contacted a hazardous waster removal company to improve the contingency plan. F2.

Note: Advance arrangements with local fire and police departments, hospitals, state and local emergency response teams, and/or emergency services contractors should be made for your facility, if necessary. Large Quantity Generators must describe arrangements in the Contingency Plan.

G. EMERGENCY EQUIPMENT

Check the applicable boxes to list emergency response equipment available at the facility, identify the location(s) where the equipment is kept, and indicate the equipment's capability, if applicable.

TYPE	EQUIPMENT AVAILABLE G1.	LOCATION G2.	CAPABILITY G3.
EXAMPLE	☒ *CHEMICAL PROTECTIVE GLOVES*	*SPILL RESPONSE KIT*	*SINGLE USE, OIL RESISTANT ONLY*
Safety and First Aid	1. ☐ CHEMICAL PROTECTIVE SUITS, APRONS, AND/OR VESTS		
	2. ■ CHEMICAL PROTECTIVE GLOVES	Basement	Single Use
	3. ☐ CHEMICAL PROTECTIVE BOOTS		
	4. ■ SAFETY GLASSES, GOGGLES, AND FACE SHIELDS	Basement	Reusable
	5. ■ HARD HATS	Basement	Reusable
	6. ☐ AIR-PURIFYING RESPIRATORS		
	7. ☐ SELF-CONTAINED BREATHING APPARATUS (SCBA)		
	8. ☐ FIRST AID KITS		
	9. ☐ PLUMBED EYEWASH FOUNTAIN AND/OR SHOWER		
	10. ■ PORTABLE EYEWASH KITS AND/OR STATION	Loading Dock and Basement	Reusable
	11. ☐ OTHER		
Fire Fighting	12. ■ PORTABLE FIRE EXTINGUISHERS	Throughout buildings	
	13. ☐ FIXED FIRE SUPPRESSION SYSTEMS AND/ OR SPRINKLERS		
	14. ☐ FIRE ALARM BOXES		
	15. ☐ OTHER		
Spill Control and Clean-Up	16. ☐ ALL-IN-ONE SPILL KIT		
	17. ■ ABSORBENT MATERIAL	Basement	Single Use
	18. ☐ CONTAINER FOR USED ABSORBENT		
	19. ☐ BERM AND/OR DIKING EQUIPMENT		
	20. ☐ BROOM		
	21. ☐ SHOVEL		
	22. ☐ VACUUM		
	23. ☐ EXHAUST HOOD		
	24. ☐ SUMP AND/OR HOLDING TANK		
	25. ☐ CHEMICAL NEUTRALIZERS		
	26. ☐ GAS CYLINDER LEAK REPAIR KIT		
	27. ☐ SPILL OVERPACK DRUMS		
	28. ☐ OTHER		
Communi-cations and Alarm Systems	29. ■ TELEPHONES (e.g., Cellular)	Landlines and cellular	
	30. ■ INTERCOM AND/OR PA SYSTEM		
	31. ■ PORTABLE RADIOS		
	32. ☐ AUTOMATIC ALARM CHEMICAL MONITORING EQUIPMENT		
Other	33. ☐ OTHER		
	34. ☐ OTHER		

H. EARTHQUAKE VULNERABILITY

Identify areas of the facility that are vulnerable to hazardous materials releases due to seismic motion. These areas require immediate isolation and inspection.

VULNERABLE AREAS (Check all that apply): H1.

- ☐ 1. HAZARDOUS MATERIALS AND/OR WASTE STORAGE AREAS
- ☐ 2. PROCESS LINES AND PIPING
- ☐ 3. LABORATORY
- ☐ 4. WASTE TREATMENT AREA

LOCATIONS (e.g., Shop, outdoor shed, lab): H2.

Identify mechanical systems vulnerable to releases / spills due to earthquake-related motion. These systems require immediate isolation and inspection.

VULNERABLE SYSTEMS AND/OR EQUIPMENT (Check all that apply): H3.

- ☐ 1. SHELVES, CABINETS AND/OR RACKS
- ☑ 2. TANKS AND SHUT-OFF VALVES
- ☐ 3. PORTABLE GAS CYLINDERS
- ☐ 4. EMERGENCY SHUT-OFF AND/OR UTILITY VALVES
- ☐ 5. SPRINKLER SYSTEMS
- ☐ 6. STATIONARY PRESSURIZED CONTAINERS (e.g., Propane tank)

LOCATIONS: H4.

Diesel fuel generator in the Loading dock area

I. EMPLOYEE TRAINING

Employee training is required for all employees and/or contractors handling hazardous materials and/or hazardous wastes during normal and/or emergency operations. Most facilities will need to submit a separate Training Plan. However, your CUPA may accept this section as the Training Plan for some small facilities.
Employee training plans may include the following content:

- Applicable laws and regulations;
- Emergency response plans and procedures;
- Safety Data Sheets;
- Hazard communication related to health and safety;
- Methods for safe handling of hazardous substances;
- Hazards of materials and processes (e.g., fire, explosion, asphyxiation);
- Hazard mitigation, prevention and abatement procedures;
- Coordination of emergency response actions;
- Notification procedures for local emergency responders, CUPA, Cal OES, and onsite personnel;
- Communication and alarm systems;
- Personal protective equipment;
- Use and maintenance of emergency response equipment and supplies (e.g. Fire extinguishers, respirators, spill control materials);
- Decontamination procedures;
- Evacuation procedures and evacuation staging locations;
- Identification of facility areas, equipment, and systems vulnerable to earthquakes and other natural disasters.
- OTHER (Specify):

Check the applicable boxes below to indicate how the employee training program is administered.

☑ 1. FORMAL CLASSROOM ☐ 2. VIDEOS ☑ 3. SAFETY MEETINGS ☐ 4. STUDY GUIDES / MANUALS I1.

☐ 5. OTHER (Specify): I2.

☐ 6. NOT APPLICABLE SINCE FACILITY HAS NO EMPLOYEES

☐ 7. CHECK IF A SEPARATE EMPLOYEE TRAINING PLAN IS USED AND UPLOADED TO CERS AS A PDF DOCUMENT I3.

☐ 8. CHECK IF EMPLOYEE TRAINING IS COVERED BY THE ABOVE REFERENCED CONTENT AND OTHER DOCUMENTS ONSITE I4.

EMPLOYEE TRAINING FREQUENCY AND RECORDKEEPING TRAINING MUST BE:

- Provided initially for new employees as soon as possible following the date of hire. New employees should not work in an unsupervised position that involves hazardous materials handling and/or hazardous waste management without proper training;
- Provided within six months from the date of hire for new employees at a large quantity generator;
- Ongoing and provided at least annually;
- Amended prior to a change in process or work assignment;
- Given upon modification to the Emergency Response/Contingency Plan.

Large Quantity Generator Training: Large quantity generators (1,000 kg or more) must retain written plan and documentation of employee training which includes:

- A written description of the type and amount of both initial and ongoing training that will be given to persons filling each job position having responsibility for hazardous waste management and/or emergency response.
- The name, job title and job description for each position at the facility related to hazardous waste management.
- Current employee training records must be retained until closure of the facility and former employee training records must be retained for at least three years after termination of employment.

Small Quantity Generator Training: Small quantity generators (less than 1,000 kg) must include basic hazardous waste management and emergency response procedures but a written employee training plan and training records are not required. In order to show that the facility has met the small quantity generator employee training requirement, an employee training plan and training records may be made available.

Hazardous Materials Business Plan Training: Businesses must provide initial and annual employee training that includes the content referenced above. The training may be based on the job position and training records must be made available for a period of at least three years.

J. LIST OF ATTACHMENTS

Check one of the following: J1.

- ☐ 1. NO ATTACHMENTS ARE REQUIRED; or
- ☑ 2. THE FOLLOWING DOCUMENTS ARE ATTACHED: J2.

Hazardous Materials

Does your facility have on site (for any purpose) at any one time, hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or is regulated under more restrictive inventory local reporting requirements (shown below if present); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	**Yes**

Underground Storage Tank(s) (UST)

Does your facility own or operate underground storage tanks?	**No**

Hazardous Waste

Is your facility a Hazardous Waste Generator?	**No**
Does your facility treat hazardous waste on-site?	**No**
Is your facility's treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	**No**
Does your facility consolidate hazardous waste generated at a remote site?	**No**
Does your facility need to report the closure/removal of a tank that was classified as hazardous waste and cleaned on-site?	**No**
Does your facility generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month greater than 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste.	**No**
Is your facility a Household Hazardous Waste (HHW) Collection site?	**No**

Excluded and/or Exempted Materials

Does your facility recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	**No**

Aboveground Petroleum Storage

Does your facility own or operate aboveground petroleum storage tanks or containers AND: * have a total aboveground petroleum storage capacity of 1,320 gallons or more, OR * have one or more petroleum tanks in an underground area?	**Yes**

Regulated Substances

Does your facility have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	**No**

Additional Information

We have a 1500 gal. above ground diesel fuel tank for our on-site 750 KW generator.

Dell Aliso Viejo Campus

EMERGENCY ACTION PLAN

- **Executive Summary**

  Dell Aliso Viejo Campus Operations and Facility Management want to communicate to everyone the importance of being prepared for an emergency. This document will cover types of emergencies, key personnel, and proper operational procedures to protect everyone, including our customers.

- **What Is an Emergency?**

  An emergency is any unplanned event that can cause deaths or significant injuries to employees, customers or the general public; or that can shut down your business, disrupt operations, cause physical or environmental damage, or threaten the facility's financial standing or public image. Obviously, numerous events can be "emergencies". This Emergency Action Plan will encompass the following potential emergencies which could be anticipated at the Aliso Viejo Campus facility.

  1. Medical
  2. Fire
  3. Hazardous materials incident
  4. Earthquake
  5. Terrorism (Bomb / Bio-chemical)
  6. Civil disturbance
  7. Severe Weather

- **Direction and Control**

  Presently, Facilities Management will be the emergency response leader if available otherwise the senior management person on site will assume these duties. If circumstances cooperate, the control center will be the guard station at the truck entrance of the Aliso Viejo Campus facility. The control center will communicate through the assigned managers who will be responsible for the following:

	Primary	Backup
Contact Fire / EMS services:	Security	Control Room
Contact Corporate Risk Management:	Security	EHS
Account for DELL / temp Employees:	Senior Shift Mgr.	Supervisors
Account for Visitors Log Book:	Adm.	Security

- **Management Staff**

  Facility Manager:

  Operations Managers:

  EHS Manager

External Use - Confidential

- **Communications**

  Drills for ALISO VIEJO CAMPUS DELL associate / Temporary should take place periodically.

  Emergency Agency Phone Numbers:

  Emergency

  Emergency Phone Numbers:

  Police / Fire EMS (Ambulance) 911

  Computer communication, if applicable, will be handled through available laptops. Multiple employees will have access through remote locations or cellular technology, keeping ALISO VIEJO CAMPUS DELL up and running.

- **Life Safety**

  Evacuation plans are posted throughout the building. Employees will be familiarized with the emergency exits. Assembly areas for each work group will be communicated to the employees by their respective supervisor. Each supervisor is accountable for a headcount and insuring that everyone on their team knows where their respective assembly area is.

- **Assembly Areas**

  All personnel will assemble in the parking lot according to the posted evacuation plan map.
  We should all be prepared to expect "false" alarms in order to train and prepare ourselves for an emergency. Important items to remember:

  1. Find the nearest exit and **DO NOT PANIC**.
  2. Leave items behind. You are the most important thing!
  3. Never go back into the building.

MEDICAL EMERGENCIES

1. When a medical emergency is recognized or when you first realize something is "wrong" do a 10-second survey. In the survey, look for three (3) things:

   a) Hazards that can be dangerous to you, the injured person(s), or bystanders.
   b) Identifying and controlling (if possible) the mechanism or cause of the injury or injuries.
   c) The number of injured persons.

2. Render first aid if you are qualified.

3. If there is heavy bleeding, possible heart attack, difficulty or no breathing, choking, altered mental state, poisoning, attempted suicide, seizure, paralysis, spinal injury, imminent childbirth or any doubt concerning the possible emergency, call the emergency medical service (EMS) using Emergency Telephone Numbers posted near the office and warehouse telephones.

4. Explain the findings of the 10-second survey to the EMS operator and do not hang up until the operator instructs you to do so.

5. If you send someone else to call, tell the person to report back to you so you can be sure the call was made

6. Do not attempt to crowd or move the injured person.

7. Refer to Work-Related Injury Reporting Procedures in the Work-Related Injury section of the EHS Website.

External Use - Confidential

8. If blood or other potentially infectious material is present, refer to Bloodborne Pathogen Procedures in the Bloodborne Pathogens section of the Safety and Health Policy Manual.

FIRE EMERGENCIES

Before the Fire

1. Site Facilities will assure that fire extinguishers and automatic sprinkler systems (if any) are serviced annually.

2. Operations Managers will conduct annual fire drills.

3. Operations Managers will assure fire extinguishers are inspected monthly

4. Operations Managers will train all station employees in the proper use of fire extinguishers and fire prevention.

5. All employees should report fire hazards, such as smoking near propane storage facilities, and fires, no matter how small.

During the Fire

1. Use trained personnel with fire extinguishers to quench small fires such as a fire in a waste paper basket.

2. If the fire is too large, call 8-5555 and tell the dispatcher there is a fire emergency at the station. Do not try to flood the dispatcher with information. Briefly answer questions asked by the dispatcher.

3. Managers should use the intercom/telephone paging system, if available, to:

    i. Alert employees that there is a fire in the building.
    ii. Direct employees to two (2) or more evacuation exits away from the fire.
    iii. Order immediate evacuation.

4. Employees should stay low and evacuate the building through the nearest safe exit. A wet cloth may be used if safely available to cover the mouth and nose to prevent smoke inhalation.

5. Employees will proceed to designated evacuation staging areas.

6. Alert local management.

7. Operations Managers will perform a head count in the staging area to insure all employees and visitors are accounted for.

8. Alert the fire department if employees are missing from the head count. Do not enter a burning building! Let the firemen perform rescues.

After the Fire

1. Wait for the fire department to grant permission to enter the station.

2. Operations Managers should cautiously assess physical damage and video tape the loss as soon as possible.

3. Building repairs should be completed before employees are allowed to enter fire-damaged areas.

4. Facility Logistics Director will report the incident to Corporate Risk Management

HAZARDOUS CHEMICAL SPILLS

1. Isolate the immediate vicinity of the spill. Keep people out of the area.

External Use - Confidential

2. Identify the source of the spill and call the emergency response contractor listed on the shipping paper. Request assistance from the shipper in cleanup and disposal of the spilled material. Review the MSDS for the material.

3. If you have questions concerning hazardous material containment and removal, call the shipper's 24-hour emergency response telephone number.

4. Do not take chances. Contain and cleanup the spill based on shipper instructions if possible. **Use the authorized Emergency Response contractor designated by Corporate for cleanup, disposal and waste transportation.**

5. Report the incident to Risk Management / EHS.

If the Spill is Acutely Hazardous

1. Managers should:

    i. Alert employees that there is a hazardous spill.
    ii. Direct employees to two (2) or more evacuation exits away from the spill.
    iii. Evacuate immediately.

2. Call the local fire department (911). Tell the dispatcher "There is a hazardous chemical spill in the building and we need a hazardous response team immediately!"

3. Take head count in staging area.

4. Alert fire department if employees are missing from the head count. Only trained rescue team members from the fire department are allowed to enter an area where potentially hazardous chemicals have been released!

5. Ask Hazardous Response Team to provide documentation of the incident, including chemical disposal information. Document should be filed where it can be easily retrieved if necessary.

6. Report the incident to Corporate Risk Mgmt. as soon as possible and follow-up with an e-mail incident report.

Note: Only trained personnel, HAZMAT technicians from the fire department, or emergency responders handle hazardous material. There are no exceptions.

STEPS

1 Isolate the Area
-Announce there is a spill
-Do not touch the spilled material or handle a leaking container
-Isolate a minimum of 25 feet
-Look for injuries

2 Identify the Hazards
-Observe the labels and markings
-Secure the shipping document
-Obtain the MSDS

3 Contact

-Shipper may have input

6 Document and Report
-Keep complete details of the incident
-Send incident report to Corporate Risk Management

Note: Do not touch the spilled material. Never try to identify the material or the sources of the leak by smell.

TERRORISM

Terrorists often choose targets that offer little danger to themselves and areas with little relatively easy public access.

Foreign terrorists look for visible targets where they can avoid detection before and after an attack such as large cities, major international events, resorts, and high-profile landmarks.

Terrorist's weapons may include guns, explosives, kidnapping, hijacking, arson, and verbal threats.

ANTHRAX Threats

If you receive a suspicious parcel in the mail:

- Handle with care; don't shake or bump.
- Don't open, smell or taste.
- Do not move the package. Cover the package with plastic or other available material.
- Close doors leading to the area.
- Evacuate the immediate area.
- Treat it as suspect.
- Notify building security and tell them to shut off the air handling system.
- Call 911.
- Anyone handling the material should immediately wash their hands with soap and water. Do not use bleach or other disinfectants on your hands.
- Make a list of all persons who were present in the area. Provide this list to the authorities as soon as possible.

If an actual exposure to anthrax does occur, this is a federal crime and its location becomes a crime scene. Handling of the scene will be under the direction of the Federal Government. Clean-up should not be attempted by the affected station without consulting with federal and local authorities.
Some typical characteristics Postal Inspectors have detected over the years, which ought to trigger suspicion, include parcels that:

- Are unexpected or from someone unfamiliar to you.
- Are addressed to someone no longer with your organization or are otherwise outdated.
- Have no return address, or have one that can't be verified as legitimate.
- Are of unusual weight, given their size, or are lopsided or oddly shaped.
- Are marked with restrictive endorsements, such as "Personal" or "Confidential."
- Have protruding wires, strange odors or stains.
- Show a city or state in the postmark that doesn't match the return address.

BOMB THREATS/EXPLOSIONS

For Internal Use - Confidential

During a Bomb Threat

1. Keep the caller on the telephone, and ask an employee near by to call the police and have the call traced.
2. Get as much information from the caller as possible. Write down everything that is said.
3. Notify the Operations Manager.
4. Do not touch any suspicious packages. Clear the area around suspicious packages.
5. Operations Managers should use the intercom telephone paging system to alert employees that there has been a bomb threat to the facility and to evacuate the facility to the staging area until the threat subsides.
6. Operations Mangers take head count.
7. Guard reports incident to Local Police and Facility Logistics Director reports the incident to Corporate Risk Management.
8. Facility Logistics Director reports the incident using ALISO VIEJO CAMPUS DELLnet incident report.

Explosions

1. Evacuate the facility immediately. Use the intercom telephone paging system to alert employees of the safest exit(s) to use.
2. If debris is falling, get under a sturdy table or desk.
3. When debris stops falling, evacuate area avoiding unstable building structures. You may have to stay low and use a wet cloth to cover your mouth and nose in case of fire. See Fire Emergencies in this section.

After the Explosion

1. If you are trapped in debris, use a flashlight to signal rescuers. Cover your mouth with a handkerchief and stay in the area and try not to kick up dust.
2. Do not shout as you can inhale dangerous amounts of dust. Wait for rescue personnel.
3. Only trained responders participate in rescue. There are no exceptions!

EARTHQUAKE

During a Major Earthquake

During a major earthquake, the ground may start out gently shaking for a second or two, then grows violent and knocks you to your feet, or you may be jarred first by a violent jolt as though a truck hit the building, and a second or two later, you feel shaking, and find it difficult (if not impossible) to move from one area to another.

1. If you are indoors, stay there, as practiced in your drills. Duck, cover, and hold using sturdy furniture such as a table or desk for protection against falling objects and collapsing structures. If there is no sturdy furniture where you are working, a doorway may provide protection until the quake has stopped. Stay away from windows, shelving, or other items that could fall on you.
2. If you are outdoors, stay away from buildings, trees, walls, and power lines.
3. If you are in a motor vehicle, pull to the side of the road, stop the vehicle, and stay in the vehicle until the earthquake is over. Avoid parking under overpasses, buildings, trees, walls, and power lines. Do not attempt to drive over overpasses or bridge of any kind until it has been inspected by a structural engineer and approved for vehicular traffic.

External Use - Confidential

4. If you're in a crowded place, do not rush for the doorway, since most people are going to have the same idea. Move under a heavy piece of furniture and duck, cover, and hold.

5. Do not be surprised if the electricity goes out and the fire alarm and sprinkler systems activate.

When the Ground Shaking Stops

1. Check for injuries in the immediate area and administer first aid you are qualified to give. Do not attempt to move injured persons.

2. Do not use the telephone.

3. If possible put out small fires. The most immediate cause of fire after earthquakes is broken gas lines. If you smell gas, shut off the gas at the meter. **Note:** Never attempt to shut off a gas valve near a gas leak! Sparks or heat generated from friction can become a source of ignition and possible explosion.

4. Do not touch electrical sources or equipment.

5. Evacuate the building to designated staging areas.

6. Operations Managers perform head count.

7. Call the local fire department if employees are missing from the head count. Do not attempt rescue.

8. Secure building.

9. Call structural engineer for building and utility inspection.

Once the Building is Cleared for Re-Entry

1. After engineer inspects building structures, loose fixtures, and damaged utilities are repaired, re-enter building and resume operation.

2. Monitor seismic activity on the internet address http://quake.wr.usgs.gov/recenteqs/

3. Facility Logistics Director reports findings and incident to Regional Management.

4. Facility Logistics Director reports the incident using ALISO VIEJO CAMPUS DELLnet incident report.

CIVIL DISTURBANCES

1. Use the intercom/telephone paging system to alert employees that there is a threat outside of the facility and employees are to remain indoors until further notice.

2. Call Local Police on Emergency Numbers listed by the telephone.

3. When Police arrive, and disturbance is cleared, announce that it is been determined by local police that it is safe to go outdoors.

WEATHER EMERGENCIES - Thunderstorms, Lightning, Flooding, and Power Failure

Before the Storm

Dell Internal Use - Confidential

1. Check weather forecasts before leaving for extended periods outdoors. WATCH means conditions are favorable. A WARNING means severe weather in the area is dangerous to life and property in the path of the storm.

2. Watch and listen for signs of approaching storms, such as increasing wind, flashes of lightning, sound of thunder, static on the radio.

3. If a storm is approaching, listen to a radio or TV, and postpone activities if thunderstorms are in the areas. This is the best way to stay out of a dangerous situation.

When Storms Approach

1. REMEMBER: If you can hear thunder, you are close enough to the storm to be struck by lightning. Go to safe shelter immediately!

2. Move to a sturdy building or vehicle. Do not take shelter in small sheds, under trees, or in convertible automobiles.

3. If lighting is occurring and a sturdy shelter is not available, get inside a hard top vehicle and keep the windows up. The paging system will be used to announce a severe weather situation. When instructed move to the designated severe weather assembly area.

4. Keep away from all indoor and outdoor water sources.

5. Telephone lines and metal pipes conduct electricity. Close computer programs that you are currently working on and avoid using telephones or equipment unless it is an emergency. Unplug equipment.

6. Turn off air conditioners. Power surges from lighting can overload and damage compressors.

7. Move to higher ground immediately if flash flooding or flooding is possible. Once flooding begins, vehicles may have to be abandoned for the safety of the driver. *Most flash flooding deaths occur in automobiles.*

If Caught Outdoors and No Shelter Is Nearby

1. Find a low spot, not subject to flooding, and away from trees, fences, and poles.

2. If near trees, take shelter near shorter trees.

3. If you feel your skin tingle or hair stand on end, squat low to the ground on the balls of your feet. Place your hands on your knees with your head between them. Make sure you are the smallest target possible and minimize your contact with t he ground.

4. Stay away from water!

After the Storm

1. Stay in a protected area until it is announced on the radio or TV that dangerous weather has passed your station.

2. If your station has structural damage, do not enter damaged areas until it is checked by officials.

3. Assist injured or trapped persons and render first aid you are qualified to give. Call 911 or emergency telephone number for seriously injured persons.

The **California Public Records Act** ("PRA") is a state law found in California Government Code, Section 6250 et seq., concerning the disclosure of public records. The PRA is based upon the principle that access to information concerning the public's business is a fundamental and necessary right. Under the PRA, records maintained by the City are subject to inspection by the public upon request unless specifically exempted from disclosure under the law.

Public records are accessible during regular office hours and can be reviewed at no charge. Copies may be provided at a cost based on the City's current fee schedule. Fees for copies of records that are sent to a copying service would be the actual cost. All fees are due and payable in full before copies are made available.

Letter from Orange County Fire Authority (OCFA) I

1.0 Introduction

1.1 Purpose of Report and Study Objectives

The purpose of this Traffic and Parking Analysis is to evaluate the potential traffic impacts of the proposed 6 Polaris project. The proposed development is located within the City of Aliso Viejo. The scope of work for the study was approved by the City of Aliso Viejo.

Study objectives include: (1) documentation of Existing traffic conditions in the vicinity of the site; (2) evaluation of Existing Plus Project traffic conditions; (3) evaluation of General Plan Buildout (Year 2035) conditions with and without the project; and (4) determination of off-site improvements and system management actions needed to achieve the City of Aliso Viejo level of service requirements; and (5) analysis of construction traffic.

1.2 Site Location and Study Area

The Project site ("site") is a 4.037-acre parcel located on the south side of Aliso Viejo Parkway (Parcel I, Lot Line Adjustment 97-054), northeasterly of the SR 73 (San Joaquin Hills Transportation Corridor) on the Polaris Campus (the former Fluor Corporation Southern California headquarters), constructed by the Fluor Corporation. The Fluor Corporation in recent years sold several parcels and buildings within the Polaris Campus. The site is one of five separate parcels located on the Polaris Campus. To the north of the site, across Aliso Viejo Parkway, at a significantly higher elevation from the site, is an existing business park (zoned Business Park 2) and to the east is the existing Windward residential condominium development (zoned Residential Medium Density) at a significantly lower elevation from the subject site along with a downhill sloped area designated Open Space Preservation. To the south and west are four other buildings part of the Polaris Campus, and beyond is the SR 73 and Aliso Viejo Town Center.

The site currently contains an approximate 76,186 square foot three story office building (Building I or A) and a parking lot to the north and northwest. Parking is currently provided as a common amenity to the entire Polaris Campus under a Declaration of Reciprocal Easements and Covenants ("Covenant Document"), and was entitled as common area parking under the County of Orange prior to the City of Aliso Viejo's incorporation. The Polaris Campus development was originally approved for development through the County of Orange with entitlements granted and modified by the County in 1997 and 1998.

As amended, the Fluor development was entitled for a total of 430,268 square feet of general office space contained in five buildings, two three stories in height and three four stories in height (with an ancillary 10,860 square foot basement area in Building 3) shown as follows:

Polaris Campus Existing Building Square Footages

Existing Building	Square Footage
Building I (A)	76,186
Building 2 (B)	90,761
Building 3 (C)	96,210
Building 4 (D)	90,860
Building 5 (E)	76,251
Total General Office Space	430,268
Ancillary Basement Space – Building (C)	10,860

Under provisions of Section 6.4 of the Covenant Document, BPM was granted the right by the Fluor Corporation in their acquisition of the site to construct an additional building of no greater than 40,000 square feet of total rental square feet on the subject. BPM is also required under the Covenant Document to create, at its sole cost and expense, sufficient additional parking spaces to replace all parking displaced by the construction of the new building.

Exhibit A illustrates the site location map and traffic analysis study area. The project would have direct access to Aliso Viejo Parkway, which is classified as a Major Arterial in the City of Aliso Viejo General Plan. The study area includes the following intersections:

North-South Street	East-West Street
Pacific Park Drive	SR-73 SB Off-Ramp/ Enterprise
Aliso Viejo Parkway	Enterprise
Columbia	Aliso Creek Road
Aliso Viejo Parkway	Polaris Way/Columbia
Aliso Viejo Parkway	Polaris Way
Aliso Viejo Parkway	Aliso Creek Road

In addition to the six (6) study area intersections, RK has also analyzed the following three (3) roadway segments:

Aliso Viejo Parkway west of Polaris Way
Columbia north of Aliso Viejo Parkway
Aliso Viejo Parkway east of Polaris Way

1.3 Project Description

The proposed Project consists of an application for a Site Development Permit, Exception Permit for Parking pursuant to Section 15.38.120 of the Aliso Viejo Zoning Code and a Tentative Parcel Map for the Project. The Project includes the construction of 42,400 square feet of gross floor area of general office space with tech capability (40,000 square feet of net rental space) on the site to be contained in one, two story building with an accessory 423 space, 4 ½ level parking structure. The site is currently disturbed, having been previously master graded and developed as part of the development of the Polaris Campus. The Tentative Parcel Map proposes to parcelize the existing Parcel 1 into two parcels, to facilitate financing of the new office building and parking structure. The Site is designated on the Aliso Viejo General Plan and Zoning Map as Professional Office. The proposed project is completely consistent with the applicable General Plan land use designation and zoning regulations for the site except for the Exception Permit request.

The parking structure has been designed to be at-grade and would accommodate 423 spaces, is a concrete long-span design and is proposed to be located to the east of the office building and setback from the current landscape setback along Aliso Viejo Parkway.

Access to the Project and new parking structure will be via two driveways along Aliso Viejo Parkway. The main drive (Polaris Way) as entry to the Polaris Campus will lead directly into the larger Polaris campus, and then vehicles can turn left along a common internal driveway to access the parking structure. An additional access to the parking structure will be provided from an existing driveway at the easterly portion of the subject site where once entering the site, vehicles can turn right and then right again into the parking structure.

The Proposed Site Development Plan is provided on Exhibit B.

1.3.1 Parking Requirements

Pursuant to the County entitlements for the Polaris Campus, parking was authorized for the Polaris Campus totaling 1,747 parking spaces (1719 regular parking spaces and 28 handicapped parking spaces of which 6 were handicapped van spaces and 22 regular handicapped spaces). This was a County of Orange approved parking ratio of 4 parking spaces per 1,000 square feet of office space (430,270 square feet) and a parking ratio of 1 parking space per 1,000 square feet for the basement storage space (10,860 square feet). It has been difficult to determine the actual number of parking spaces that were provided on the Polaris Campus upon completion of the 5 campus buildings prior to incorporation, and documents have not been able to be found. Nonetheless, under the current AVMC, a total of 1,721 parking spaces would be currently required for the entire Polaris Campus and a total of 1,701 parking spaces are currently provided as shown in the table which follows, representing a 31 space deficit from AVMC parking requirements. When the proposed project (6 Polaris) is taken into consideration, the project will bring the Polaris campus into greater compliance with the AVMC since it is providing more parking than required by the AVMC, resulting in a lower deficit for the Polaris Campus than what currently exists.

Polaris Campus Existing Uses
Municipal Code Parking Requirements

Existing Buildings	Land Use	Gross Square Feet	Aliso Viejo Parking Code	Parking Stalls Required
Building I (A)	General Office	76,186	1/250 GFA	305
Building 2 (B)		90,761		363
Building 3 (C)		96,210		385
Building 4 (D)		90,860		363
Building 5 (E)		76,251		305
Total General Office		430,268		1,721
Basement Building 3(C)	Storage	10,860	1/1000 GFA	11
Total Parking Required Existing Use		441,128		1,732
Parking Stalls Provided On-Site				1,701
Parking Stalls Deficient per Code				**-31**

Polaris Campus with Proposed 6 Polaris
Municipal Code Parking Requirements

Proposed Building	Land Use	Gross Square Feet	Aliso Viejo Parking Code	Parking Stalls Required
Building 6 (New)	General Office	42,400	1/250 GFA	170
Total Parking Required for Existing Use and Proposed Use				1,902
Parking Stalls Provided On Site with Proposed Use (1701+194)				1,895
Parking Stalls Deficient per Code				**-7**

There are currently 244 parking spaces on the site, which existed when Fluor constructed improvements on 1 Polaris, with 15 spaces located directly in front of the 1 Polaris building and 229 spaces in a parking lot north and northeast of the 1 Polaris building. The 244 parking spaces are currently provided as a common amenity to the entire Polaris Campus under a Covenant Document. Pursuant to AVMC Section 15.38.170A., it could be argued that the subject site was a legal use as the effective date of the AVMC, and should be allowed to continue in operation at the parking ratio in effect at the time the use was established, since said use was properly permitted and parked in accordance with the regulations in effect at the time. In any event, pursuant to AVMC Section 15.38.170B., the addition of the new office building would require the addition of parking for said new building to comply with the AVMC.

However, total combined parking for the 1 Polaris and 6 Polaris buildings will be less than required under the AVMC, as shown in the table which follows. As a result, the applicant is requesting an Exception Permit pursuant to AVMC Section 16.38.120B. for a 7.6%, or 36 parking space reduction since the applicant can only control its own site. The number of parking spaces being displaced by the Project for the proposed office building and parking structure is 229 existing parking spaces. While the Project would only be required to replace those spaces displaced by the Project and the 170 additional parking spaces needed for the new 42,400 square foot office building (based on current AVMC parking standards), the Project will provide 423 parking spaces (replacing 229 existing spaces and adding 194 parking spaces for the new office building) and retaining the existing 15 spaces in front of 1 Polaris for a total of 438 parking spaces. This is a parking ratio of 4.57/1000 gross square footage for the new office building.

BPM 1 Polaris and Proposed 6 Polaris
AVMC Parking and Exception Permit Request

Existing Buildings	Land Use	Gross Square Feet	AVMC Parking Stds	Parking Stalls Required	Parking Stalls Provided	Stalls in Surplus per AVMC	Requested Exception per AVMC 15.38.120
Building I (A)	General Office	76,186	1/250 GFA	305	244	-61	
Building 6 (New)		42,400		170	194	24	
Total		**118,586**		**474**	**438**	**-36**	**7.6%**

1.4 Acceptable Level of Service and Significant Impact Criteria

1.4.1 Study Intersection Acceptable Level of Service and Significant Impact Criteria

There are various policies that are used to evaluate acceptable Level of Service (LOS) and significant impact criteria. The local level policy is the Aliso Viejo General Plan Circulation Element. On page C-15 of the Circulation Element, the local established acceptable LOS for intersections within the City of Aliso Viejo is LOS C or better. Therefore, any intersections operating at an LOS D, LOS E, or LOS F will be considered deficient. The City of Aliso Viejo utilizes the ICU (Intersection Capacity Utilization) methodology for signalized intersections and the HCM (Highway Capacity Manual) methodology for unsignalized intersections.

The County level of service policy is the Orange County Congestion Management Program (CMP). The CMP identifies multiple intersections that must operate at LOS E or better. If the LOS is lower than LOS E, the change in volume/capacity (V/C) ratio cannot be greater than 0.01. If the intersection does not meet the requirements, then the responsible agency must identify and complete mitigation measures to improve the intersection. There are no CMP intersections within the City of Aliso Viejo's jurisdiction, which consequently determines there are no CMP intersections in the project's study area.

The City of Aliso Viejo has resolved to use the CMP established procedures to determine significant impacts, as stated in the Aliso Viejo Circulation Element. Therefore, the project is deemed to have a significant impact to a study intersection if the project causes the study intersection's level of service to degrade from LOS C

or better to LOS D, LOS E, LOS F or if the project causes a change in volume/capacity (V/C) ratio greater than 0.01 and the study intersection is operating at LOS D, LOS E or LOS F.

1.4.2 Study Roadway Segment Acceptable Level of Service and Significant Impact Criteria

In addition to the intersection level of service, RK analyzed the roadway segment level of service as requested by City staff. The City of Aliso Viejo provides roadway segment capacities based on the roadway classification. The study area contains Major Arterials and Collector roadways with the following operational capacities per the City of Aliso Viejo General Plan:

Roadway Classification	Capacity
Major Arterial	54,000 vehicles per day
Collector	12,000 vehicles per day

The City of Aliso Viejo does not have established and adopted performance criteria and significant impact thresholds for roadway segments. Similar to intersection level of service performance criteria, this analysis assumes study roadway segments are required to perform at LOS C or better.

Section 3, Methodology, provides more detail regarding level of service and significant impact criteria.

THIS PAGE INTENTIONALLY LEFT BLANK

2.0 Area Conditions

2.1 Study Area

The study area includes the following intersections:

North-South Street	East-West Street
Pacific Park Drive	SR-73 SB Off-Ramp/ Enterprise
Aliso Viejo Parkway	Enterprise
Columbia	Aliso Creek Road
Aliso Viejo Parkway	Polaris Way/Columbia
Aliso Viejo Parkway	Polaris Way
Aliso Viejo Parkway	Aliso Creek Road

In addition to the six (6) study area intersections, RK has also analyzed the following three (3) roadway segments:

Aliso Viejo Parkway west of Polaris Way
Columbia north of Aliso Viejo Parkway
Aliso Viejo Parkway east of Polaris Way

2.2 Existing Traffic Controls and Intersection Geometrics

Exhibit C identifies the existing study intersection and roadway geometrics for the study area. The number of through traffic lanes for existing roadways and the existing intersection controls are identified.

2.3 Existing Traffic Volumes

Existing AM and PM peak hour traffic volumes for the study area intersections are shown on Exhibit D. These volumes are based upon manual AM and PM peak hour turning movement counts compiled for RK on December 10, 2014 and June 2, 2015. It should be noted that care was taken to ensure that school was in normal operation. The AM peak hour traffic volumes were determined by counting a two-hour period between 7:00 AM and 9:00 AM. Similarly, the PM peak hour traffic volumes were identified by counting the two-hour period between 4:00 PM and 6:00 PM. RK also collected three (3) 24-Hour Two-Way Average Daily Traffic (ADT) counts along the study roadway segments. The traffic count worksheets are included in Appendix A.

The remaining roadways existing average daily traffic (ADT) volumes were calculated based upon the following formula:

Peak Hour (Approach Volume + Exit Volume) * 10 = Leg Volume

It is typical for most suburban areas, with definable peak hours in traffic, to experience a peak in traffic which is approximately 1/10th of the average daily traffic. This formula for calculating average daily traffic volumes coincides with historical traffic counts in Aliso Viejo and is generally accepted engineering practice for areas in Orange County. Additionally, the formula is consistent with the measured ADT counts.

2.4 Existing Intersection Level of Service

Existing level of service calculations for intersections are shown in Table 1 and are based upon manual AM and PM peak hour turning movement counts compiled for RK on December 10, 2014 and June 2, 2015.

For existing traffic conditions, all study area intersections are currently operating at acceptable levels of service during peak hours.

The ICU (Intersection Capacity Utilization) and HCM (Highway Capacity Manual) calculation worksheets for existing conditions are provided in Appendix B.

2.5 Roadway Classifications

A hierarchical classification system is used to distinguish roadways in the City of Aliso Viejo. Roadway categories are differentiated by size, function, and capacity. Because City arterial highways were built according to County standards, the arterial classification system is derived from the County Master Plan of Arterial Highways (MPAH). Exhibit E-1 shows the roadway classifications as part of the current City of Aliso Viejo Policy Map. There are six (6) basic categories of roadways in the City of Aliso Viejo, briefly summarized below. Schematic cross-sections are included that represent desirable standards (Exhibit E-2). As stated in the City's General Plan Circulation Element, Page C-8, the roadway standards may be deviated in cases where physical constraints and/or right-of-way limitations are present, and where preservation of community character dictates special treatment. The provision of adequate bikeways and sidewalks, and the need to comply with MPAH capacity requirements may also affect the specific design of roadways. In addition, the median

width of major and secondary roadways will vary according to the area being served, right-of-way constraints, and turn lane requirements.

The following roadway classification discussion is extracted from the City of Aliso Viejo General Plan Circulation Element, pages C-11 through C-15.

2.5.1 Smart Street Arterials

Smart Street Arterials are typically six (6) to eight (8) lane roadways with enhanced capacity compared to a standard arterial street. Moulton Parkway is classified as a six-lane Smart Street as it runs through the City. Traffic carrying capacities of Smart Streets can range from 60,000 to 79,000 vehicles per day, depending on the number of lanes, degree of access control, peak period loading, and the configurations of major intersections. The Smart Street concept seeks to improve roadway capacity and smooth traffic flow through measures such as traffic signal synchronization, bus turn-outs, intersection improvements, and addition of travel lanes by removing on-street parking and consolidating driveways.

2.5.2 Major Arterial Highways

Major Arterial Highways are six-lane roadways with painted or raised landscaped medians. Unsignalized minor street and driveway access may be allowed, but signalized access is preferred, and left-turn restrictions are typically placed at unsignalized access locations. Curbside parking is prohibited. Traffic carrying capacities of 54,000 vehicles per day can be achieved depending on the degree of access control, peak period loadings, and the configurations of major intersections.

2.5.3 Primary Arterial Highways

Primary Arterial Highways are four-lane roadways with painted or raised landscaped medians. Unsignalized minor street and driveway access may be allowed, but signalized access is preferred, and left-turn restrictions are typically placed at unsignalized access locations. Curbside parking is prohibited. Traffic carrying capacities of 37,000 vehicles per day can be achieved depending on the degree of access control, peak period loadings, and the configurations of major intersections.

2.5.4 Secondary Arterial Highways

Secondary Arterial Highways are four-lane undivided roadways without medians. Direct access from private residential properties should be avoided where possible unless medians can be provided at such access points. While the Secondary Arterial Highway provides for curbside parking, such parking should be prohibited near intersections where left-turn lane striping is provided. Traffic carrying capacities of 25,000 vehicles per day can be achieved depending on the degree of access allowed and peak period traffic loadings.

2.5.5 Collectors

Collectors are two-lane roadways with no median or with painted medians for two-way left-turn movements at selected intersections. The right-of-way width for collectors varies from 40 feet to 56 feet, depending on location. The 56-foot cross-sections are typically applied to collectors located within industrial areas, whereas a smaller dimension may be appropriate for residential areas. Collectors provide for curbside parking, but parking should be restricted near intersection approaches where a separate right turn lane is provided. Traffic carrying capacities of 12,000 vehicles per day can be achieved depending on the degree of access control and peak period traffic loadings. Due to varying standards, collector roadways are not identified in the Circulation Element.

2.5.6 Local Streets

Local Streets are two-lane roadways without medians. Centerline striping is typically not provided, and curbside parking is allowed. While the traffic carrying capacity is similar to a collector roadway, the limit of acceptable traffic volumes in a residential environment is substantially lower for safety and quality of life reasons (less than 5,000 vehicles per day). Local Streets are not identified in the Circulation Element.

2.6 Existing Roadway Segment Level of Service

The roadway segment level of service calculations for Existing conditions are shown in Table 2 and are based upon measured ADT counts compiled for RK in June 2015.

For existing traffic conditions, the study area roadway segments are currently operating at acceptable level of service.

2.7 Public Transit Service

As outline in the City of Aliso Viejo's General Plan, public transit services in the study area are provided by the Orange County Transportation Authority (OCTA). The following bus routes are currently operating near the site:

- Route 490 (Enterprise and Aliso Viejo Parkway)
- Route 187 (Aliso Creek Road)

The proposed project will not conflict with the existing public transit routes, as off-site improvements will not be necessary for the development of the project and no modification will be required that would affect public transportation routes and facilities.

2.8 Recreational Trails and Bikeways

One objective and goal of the City of Aliso Viejo's General Plan is to provide for safe and convenient mobility of pedestrians and bicyclists. The City's Bike Plan is shown on Exhibit F. The following bicycle facilities are located near the project site:

- Aliso Viejo Parkway – Class II (Bike Lane)
- Aliso Creek Road – Class II (Bike Lane)
- Pacific Park Drive – Class II (Bike Lane)

THIS PAGE INTENTIONALLY LEFT BLANK

3.0 Methodology

Based on current City of Aliso Viejo standards stated in the Circulation Element, the methodology used to assess the operation of the signalized study area intersections is Intersection Capacity Utilization (ICU). To calculate the ICU, the volume of traffic using the intersection is compared with the capacity of the intersection. ICU is usually expressed as a ratio. This ratio represents that portion of the hour required to provide sufficient capacity to accommodate all intersection traffic if all approaches operate at capacity.

Based on current City of Aliso Viejo standards stated in the Circulation Element, the methodology used to assess the operation of the unsignalized study area intersections is Highway Capactiy Manual (HCM). The HCM methodology utilizes vehicular delay to assess intersection operation and LOS.

3.1 ICU Methodology (Signalized Intersections)

The ICU methodology was used to analyze signalized study area intersections with the following parameters consistent with the City of Aliso Viejo guidelines:

1. Saturation Flow Rate:

   Saturation flow value of 1,700 vehicles per lane per hour for all lanes; no adjustments are used for protected movements with dedicated lanes (including both right and left turns). A volume adjustment of 0.85 was used for right turn movements where there existed a right turn or "defacto" right turn lane adjacent to the curb lane.[1]

2. Clearance Interval and Cycle Time:

   A clearance interval factor of 5% (0.05) is applied to the ICU calculations[1]. The cycle time is 100 seconds for ICU analysis purposes only, and actual signal cycle length may vary.

[1] Source: Orange County GMP (Growth Management Program) TIM (Transportation Implementation Manual)

3. Level of Service Ranges[1]:

LOS	Critical Volume To Capacity Ratio
A	0.00 - 0.60
B	0.61 - 0.70
C	0.71 - 0.80
D	0.81 - 0.90
E	0.91 - 1.00
F	>1.00

4. Peak-Periods:

Weekday peak-hour analysis periods are defined as follows:

7:00 AM to 9:00 AM
4:00 PM to 6:00 PM

5. Peak-Hour:

The highest one-hour period in the AM and PM peak periods, as determined by four (4) consecutive 15-minute count periods are used in the ICU calculations. AM and PM peak hours are studied.

6. Peak-Hour Data Consistency:

Variations in peak-hour volumes can affect LOS calculations because they vary from day to day. To minimize these variations, as is typical engineering practice, no counts are taken on Mondays, Fridays, holidays, or weekends. Holidays and weekends typically have lower peak hour traffic volumes as less people are travelling for work. Additionally, a new trend in many work places is to have a four (4) day work week, with Friday typically becoming the day off. Finally, Monday typically has higher traffic volumes as more people may be returning from a weekend away. Therefore, many jurisdictions, including California Department of Transportation, recommend only collecting counts on Tuesday, Wednesday, or Thursday.

The traffic count worksheets for this study are included in Appendix A.

7. Right Turn Movements:

   If the distance from the edge of the outside through-lane is at least 19 feet and parking is prohibited during the peak period, right turning vehicles may be assumed to utilize this as a right turn lane[2]. Otherwise, all right turn traffic is assigned to the through lane. If a right turn lane exists, right turn activity is checked for conflicts with other critical movements. It is assumed that right turn movements are accommodated during non-conflicting left turn phases (e.g., northbound right turns during westbound left turn phase), as well as non-conflicting through flows (e.g., northbound right turn movements and north/south through flows). Right turn movements become critical when conflicting movements (e.g., northbound right turns, southbound left turns, and eastbound through flows) represent a sum of V/C ratios that are greater than the normal through/left turn critical movements.

3.2 HCM Methodology (Unsignalized Intersections)

The study area intersections that are stop-sign controlled with stop-control on the minor street only have been analyzed using the unsignalized intersection methodology of the Highway Capacity Manual. For these intersections, the calculation of level of service is dependent on the occurrence of gaps occurring in the traffic flow of the main street. Using data collected describing the intersection configuration and traffic volumes at these locations the level of service has been calculated. It is typical to determine level of service for unsignalized intersections based on the worst individual movement or movements sharing a single lane. The relationship between the level of service and delay is different than for signalized intersections.

The levels of service defined for the unsignalized intersection methodology[3] is as follows:

LOS	Average Control Delay Per Vehicle (Seconds)
	Unsignalized
A	0.00 - 10.00
B	10.01 - 15.00
C	15.01 - 25.00
D	25.01 - 35.00
E	35.01 - 50.00
F	>50.01

[2] Source: Orange County GMP (Growth Management Program) TIM (Transportation Implementation Manual)
[3] Source: HCM (Highway Capacity Manual)

3.3 Acceptable Intersection Level of Service and Significant Impact Criteria

The acceptable Level of Service (LOS) for intersections within the City of Aliso Viejo is LOS C or better. Therefore, any intersections operating at an LOS D, LOS E, or LOS F will be considered deficient. Consistent with the City of Aliso Viejo guidelines, the ICU (Intersection Capacity Utilization) methodology has been used for signalized intersections and the HCM (Highway Capacity Manual) methodology has been used for unsignalized intersections.

A project is deemed to have a significant impact to an intersection if the project causes an intersection's level of service to degrade from LOS C or better to LOS D, LOS E, LOS F or if the project causes a change in volume/capacity (V/C) ratio greater than 0.01 and the intersection is operating at LOS E or LOS F. Please refer to Section 1.4 for more information regarding the policies that determine the Level of Service and Significant Impact Criteria.

3.4 Volume to Capacity (V/C) Methodology for Roadway Segment Analysis

Study roadway segment operation is evaluated utilizing the volume to capacity (v/c) methodology. The level of service is determined by the ratio obtained by dividing the daily traffic volume of the roadway segment by its daily capacity identified by the General Plan Circulation Element for the corresponding roadway classification.

The study area contains Major Arterials and Collector roadways with the following operational capacities per the City of Aliso Viejo General Plan:

Roadway Classification	Capacity
Major Arterial	54,000 vehicles per day
Collector	12,000 vehicles per day

The following Level of Service Ranges are to be utilized:

LOS	Critical Volume To Capacity Ratio
A	0.00 - 0.60
B	0.61 - 0.70
C	0.71 - 0.80
D	0.81 - 0.90
E	0.91 - 1.00
F	>1.00

Similar to intersection level of service performance criteria, this analysis assumes study roadway segments are required to perform at LOS C or better.

4.0 Projected Traffic

4.1. Project Traffic Conditions

4.1.1 Trip Generation

Trip generation represents the amount of traffic that is attracted and produced by a development. The trip generation rates are based upon data collected and published by the Institute of Transportation Engineers (ITE) Trip Generation, 9th Edition. This publication provides a comprehensive evaluation of trip generation rates for a variety of land uses.

Both daily and peak hour trip generation rates for the proposed land uses analyzed in this study are shown in Table 3.

Both daily and peak hour trip generation for the proposed development are shown in Table 4. As shown in Table 4, the proposed development is projected to generate approximately 468 total trip-ends per day, with 66 total vehicles per hour during the AM peak hour and 63 total vehicles per hour during the PM peak hour.

4.1.2 Trip Distribution and Assignment

Trip distribution represents the directional orientation of traffic to and from the 6 Polaris Expansion Project. Trip distribution is heavily influenced by the geographical location of the sites, the location of retail, employment, recreational opportunities, and the proximity to the regional freeway system. The directional orientation of traffic was determined by evaluating existing and proposed land uses and highways within the community.

Trip distribution patterns for this study have been based upon near-term and General Plan buildout conditions, and are based upon those highway facilities that are either in place or will be contemplated over the next few years. Inbound and outbound trip distribution patterns for the proposed project are graphically depicted on Exhibits G-1 and G-2.

The assignment of traffic from the sites to the adjoining roadway system has been based upon the site's trip generation, trip distribution, and proposed arterial highway and local street systems that this traffic study assumes would be in place by the time of initial occupancy of the site.

4.1.3 Modal Split

Modal split denotes the proportion of traffic generated by a project that would use any of the transportation modes, namely buses, cars, bicycles, motorcycles, trains, carpools, etc. The traffic reducing potential of public transit and other modes is significant. However, the traffic projections in this study are conservative in that public transit and alternative transportation may be able to reduce the traffic volumes. Thus no modal split reduction is applied to the projections. With the implementation of transit service and provision of alternative transportation ideas and incentives, the automobile traffic demand can be reduced significantly.

4.1.4 Project Peak Hour Traffic Volumes

Project AM and PM peak hour intersection turning movement volumes and average daily traffic are shown on Exhibit H.

4.1.5 Existing Plus Project Peak Hour Traffic Volumes

Existing Plus Project AM and PM peak hour intersection turning movement volumes and average daily traffic includes existing traffic volumes, counted in December 2014 and June 2015, and project traffic volumes. Existing Plus Project traffic volumes are shown in Exhibit I.

4.2 Background Traffic

4.2.1 Method of Projection

To assess General Plan Buildout (Year 2035) traffic conditions, project traffic is combined with existing traffic, area-wide growth, and cumulative projects' traffic.

In order to determine an appropriate ambient growth rate for Year 2035 conditions, RK used data provided by the Orange County Transportation Analysis Model (OCTAM 3.3) and data for the City of Aliso Viejo from the 2012 Orange County Progress Report. Demographic data from the Regional Statistical Area (RSA) D-40, in which the City of Aliso Viejo is located, was also used to help establish an appropriate growth rate. This area is expected to have a growth in population, housing, and employment ranging between 4.2% and 7.3% to the Year 2035.

Based on the RSA growth data and OCTA OCTAM model predictions, a conservative 10% ambient growth rate was applied to the existing traffic counts for the study area. This conservative growth is included to account for the growth that may occur within the developed City, even though new development in the City is finite. This growth rate is considered conservative since it is applied to all movements at the study intersections, and the overall Year 2035 traffic volumes are representative of a worst case scenario in terms of the traffic analysis and should cover any other unforeseen growth in traffic in the study area. All Year 2035 forecasting data is provided in Appendix C.

4.2.2 Cumulative Projects Traffic

Table 5 lists the proposed land uses for the nearby cumulative projects for the General Plan Buildout (Year 2035) traffic conditions, known at the time this study was prepared. Cumulative projects have been obtained from the City of Aliso Viejo Staff, and consist of all developments that are either currently pending or have already been approved in the City. Cumulative impacts analyzed in this traffic impact study were conservatively assessed. Some of the cumulative projects may be downsized or may not be developed. In addition, many of the related projects have been or will be subject to a variety of mitigation measures that will reduce the potential environmental impacts associated with those projects. However, those mitigation measures have not been taken into account in projecting the environmental impact of the related projects. Therefore, the cumulative analyses set forth below are considered conservative and might result in greater impacts than would actually occur. Land use developments that are proposed in the existing General Plan include the projects illustrated on Exhibit J. The cumulative development trip distributions are shown in Appendix D.

Table 5 also shows the peak hour and daily vehicle trips generated by the Cumulative Projects being processed in the study area.

AM and PM peak hour intersection turning movement volumes and average daily traffic are shown on Exhibit K.

4.2.3 Background Traffic Growth Rate

To account for area-wide growth on the roadways, future traffic volumes have been calculated based on a total ten percent (10%) overall growth of existing traffic

volumes over a 20-year period for Year 2035 conditions. The growth is based on the method of projection described in Section 4.2.1 of this report.

4.3 General Plan Buildout (Year 2035) Without Project Traffic Volumes

General Plan Buildout (Year 2035) Without Project traffic conditions consist of existing traffic volumes, a 10% growth rate, and cumulative projects traffic volumes. General Plan Buildout (Year 2035) Without Project AM and PM peak hour intersection turning movement volumes and average daily traffic are shown on Exhibit L.

4.4 General Plan Buildout (Year 2035) With Project Traffic Volumes

General Plan Buildout (Year 2035) With Project traffic conditions consist of existing traffic volumes, a 10% growth rate, cumulative projects traffic volumes, and the proposed projects traffic volumes. General Plan Buildout (Year 2035) With Project AM and PM peak hour intersection turning movement volumes and average daily traffic are shown on Exhibit M.

5.0 Traffic Analysis

5.1. Capacity and Level of Service Improvement Analysis

5.1.1 Intersection Level of Service for Existing Plus Project Conditions

Intersection levels of service for the Existing Plus Project conditions are shown in Table 6.

As shown in Table 6, the study intersections are forecast to operate at an acceptable level of service (LOS C or better) for Existing Plus Project conditions.

ICU and HCM calculation worksheets for Existing Plus Project conditions are provided in Appendix E.

5.1.2 Roadway Segment Level of Service for Existing Plus Project Conditions

The roadway segment level of service calculations for Existing Plus Project conditions are shown in Table 7.

As shown in Table 7, for Existing Plus Project traffic conditions, the study area roadway segments are forecast to operate at acceptable level of service.

5.1.3 Intersection Level of Service for General Plan Buildout (Year 2035) Without Project Conditions

Intersection levels of service for the General Plan Buildout (Year 2035) Without Project conditions are shown in Table 8. As shown in Table 8, the following intersection is projected to operate below the acceptable levels of service for General Plan Buildout (Year 2035) Without Project Conditions:

- Pacific Park Drive (NS) at SR-73 Off Ramp (EW) – AM peak hour only (LOS E).

ICU and HCM calculation worksheets for General Plan Buildout (Year 2035) Without Project conditions are provided in Appendix F.

5.1.4 Intersection Level of Service for General Plan Buildout (Year 2035) With Project Conditions

Intersection levels of service for the General Plan Buildout (Year 2035) With Project conditions are shown in Table 9. As shown in Table 9, the following intersection is projected to continue to operate below the acceptable levels of service for General Plan Buildout (Year 2035) With Project Conditions:

- Pacific Park Drive (NS) at SR-73 Off Ramp (EW) – AM peak hour only (LOS E).

It should be noted that the project is not expected to result in a significant traffic impact at this study area intersection based on the City of Aliso Viejo established threshold of significance. Also, another City of Aliso Viejo project (Summit 7) has been conditioned to improve this intersection. That development project is currently under construction. It should be noted that the proposed improvement was not included in the calculations for this analysis, as the improvement does not have a set date of completion.

ICU and HCM calculation worksheets for General Plan Buildout (Year 2035) With Project conditions are provided in Appendix G.

5.1.5 Roadway Segment Level of Service for General Plan Buildout (Year 2035) Conditions

The roadway segment level of service calculations for General Plan Buildout (Year 2035) conditions are shown in Table 10.

As shown in Table 10, for General Plan Buidout (Year 2035) traffic conditions, the study area roadway segments are forecast to operate at acceptable level of service.

6.0 Construction Phase Traffic

This section provides an evaluation of the traffic generation and potential traffic impacts associated with the construction phase of the proposed project.

The following is an estimation of the construction-related activities based on information provided by the project applicant:

- A maximum total of approximately 50 construction staff on the site in a single day; and
- A maximum total of approximately 50 trucks during peak construction phase resulting in 50 inbound trips and 50 outbound trips.

If during the peak construction phase, each construction worker arrives in a single-occupant vehicle, which is a very conservative assumption, the project construction phase will generate approximately 50 inbound trips during the morning and 50 outbound trips during the afternoon and end of the work shift.

Furthermore, if conservatively it is assumed the truck activity overlaps with the construction staff arrival and departure, the trucks will result in an additional 50 inbound trucks in the morning and 50 outbound trucks in the afternoon. Using the typical 2.0 passenger car equivalent (PCE) factor to convert truck trips to passenger car-equivalent trips, the 50 trucks will result in approximately 100 inbound PCE trips in the morning and 100 outbound PCE trips in the afternoon.

Construction Phase Traffic Estimation

Construction Component	Forecast Trip Generation	
	PCE-Adjusted AM Peak	PCE-Adjusted PM Peak
Peak Construction Staff of 50	50	50
50 Trucks	100	100
Total	150	150

As shown in the above table, the construction phase of the proposed project is forecast to generate approximately 150 PCE-adjusted trips in the AM peak hour and 150 PCE-adjusted trips during the PM peak hour. Hence, when compared to the proposed project trip

generation (66 inbound trips in the AM and 63 outbound trips in the PM), the construction phase of the project is forecast to generate more trips. Therefore, a Level of Service analysis of Existing traffic plus construction traffic was completed to ensure there will not be construction traffic impacts.

The following assumptions were made for the construction traffic analysis:

- There are 150 PCE-adjusted inbound trips in the AM peak hour and 150 PCE-adjusted outbound trips in the PM peak hour.
- All vehicles will utilize the 73 Freeway on-ramps and off-ramps accessible on Aliso Creek Road.
- All vehicles will utilize the signalized intersection of Aliso Viejo Parkway at Polaris Way / Columbia to enter and exit the site.

The LOS analysis has been completed for the construction traffic. A summary of the LOS results are provided in Table 11. It should be noted that the construction traffic is only expected to affect three of the study area intersections due to the proposed traffic route.

As can be seen from Table 11, the study area intersections are expected to operate at acceptable LOS during construction traffic. The LOS worksheets for construction traffic scenario are provided in Appendix H.

It should be noted the construction phase trip generation forecast of 150 PCE-adjusted trips is considered very conservative for the following reasons:

- A percentage of construction staff will carpool;
- Construction staff will likely not all arrive or depart within the same hour;
- Trucks will likely not all arrive or depart within the same hour;
- Most likely, all the truck traffic will not overlap with all the construction staff traffic;
- Majority of construction staff will arrive at the site before 7:00 AM (start of construction schedule) and hence will be traveling outside the typical traffic peak period of 7:00 to 9:00 AM; and
- The 50 truck trips is only expected to occur for 8 to 10 days during the concrete pouring phase.

Hence, the construction phase of the proposed project is forecast to not result in a significant traffic impact at the study area intersections.

7.0 Findings and Improvements

The project site is located within the Polaris Campus in the City of Aliso Viejo. The proposed project will consist of the following:

- 42,400 square feet of general office; and
- 423-space parking structure.

Exhibit B illustrates the conceptual site plan.

The proposed development is projected to generate approximately 468 total trip-ends per day, with 66 total vehicles per hour during the AM peak hour and 63 total vehicles per hour during the PM peak hour.

7.1 Intersection Analysis Summary

A summary of the level of service analysis for existing and future conditions is included in Table 12. The summary table shows the change in the overall intersection volume to capacity (V/C) ratio as a result of the projects for both the Existing and General Plan Buildout (Year 2035) scenarios. As shown in Table 12, all study area intersections are projected to operate at an acceptable level of service with the exception of the following intersection for General Plan Buildout (Year 2035) Without and With Project Conditions:

- Pacific Park Drive (NS) at SR-73 Off Ramp (EW) – AM peak hour only (LOS E).

It should be noted that the project is not expected to result in a significant traffic impact at this study area intersection based on the City of Aliso Viejo established threshold of significance. Also, another City of Aliso Viejo project (Summit 7) has been conditioned to improve this intersection. That development project is currently under construction. It should be noted that the proposed improvement was not included in the calculations for this analysis, as the improvement does not have a set date of completion.

7.2 Roadway Segment Analysis Summary

All study roadway segments are expected to operate at LOS C or better for existing and future conditions.

7.3 Circulation Improvements

The following improvements are planned as part of the project design features.

7.3.1 On-Site

I. Construct the on-site circulation system per the detailed site plan.

II. Provide project access, as shown in Exhibit B.

III. Install stop signs, stop bars, and stop legends, at all unsignalized project access points.

IV. Provide adequate parking based on the City's Parking Code.

7.3.2 Area-Wide

I. Complete any driveway improvements for the project's access to Aliso Viejo Parkway adjacent to the project.

The proposed improvements are graphically summarized on Exhibits N.

7.4 Sight Distance

Sight distance standards shall conform to the standards set forth in the City of Aliso Viejo Zoning Code, Section 15.22.020. The height of fences, trees, shrubs, and other visual obstructions shall be limited to a maximum height of 12 inches within the limited use triangular area shown in Exhibit O.

A limited use area should be established and maintained to provide a clear line of sight for vehicles negotiating the project access intersections. Trees, bushes, and architectural décor should not block the line of sight requirements at these intersections. A final evaluation and review of sight distance at the project access should be conducted at the time of preparation of construction improvement plans per City of Aliso Viejo standards.

7.5 Emergency Access

Orange County Fire Authority (OCFA) has reviewed the proposed project and found the emergency access satisfactory at the time. A letter from OCFA regarding the proposed 6 Polaris Project is provided in Appendix I.

7.6 Project Fair-Share Contribution

Table 13 shows the project fair-share intersection contribution. There are no off-site improvements required as a result of the project. The project's fair-share traffic contribution represents the project's traffic contribution at each study area intersection as a percentage of overall growth in traffic for Year 2035 conditions.

The project is forecast to not result in any significant traffic impacts at the study intersections; therefore, the project is not required to make any circulation system improvements based on City of Aliso Viejo established thresholds of significance. The fair-share calculations are presented for informational purposes only.

THIS PAGE INTENTIONALLY LEFT BLANK

8.0 Conclusions

The proposed development is projected to generate approximately 468 total trip-ends per day, with 66 total vehicles per hour during the AM peak hour and 63 total vehicles per hour during the PM peak hour.

Based upon the analysis of existing and future traffic volumes, the project would have a less than significant impact at all study area intersections. Therefore, this project can be accommodated within the City of Aliso Viejo.

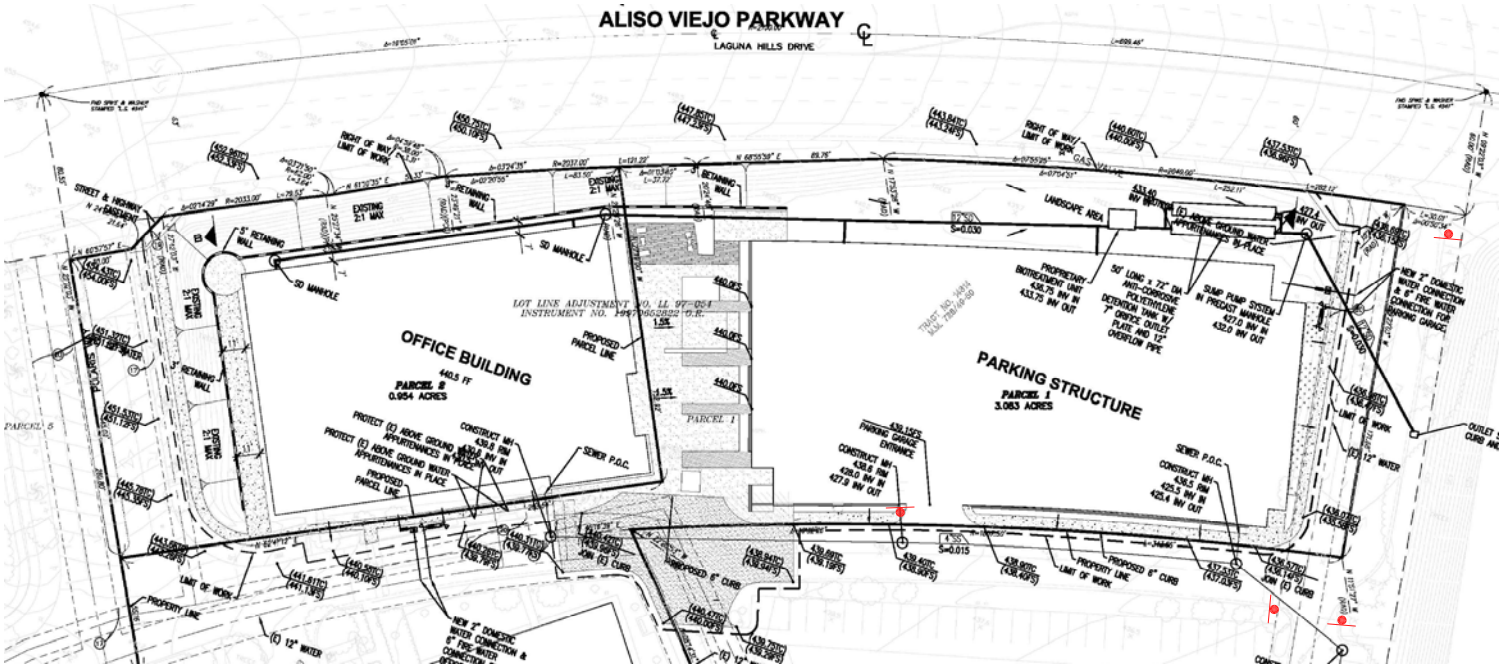
Circulation Improvements



IMPROVEMENTS

1. Construct the on-site circulation system per the detailed site plan.
2. Provide project accesses as shown.
3. Install stop signs, stop bars, and stop legends at project access points.
4. Provide adequate parking.
5. Complete any remaining half-section street improvements to Aliso Viejo Parkway adjacent to the project.
6. Sight distances at the project access points should be reviwed at the time of construction per City of Aliso Viejo standards.
7. As is the case for any roadway design, City of Aliso Viejo should periodically review traffic operations in the vicinity of the site once the project is constructed to assure that the traffic operations are satisfactory.

Notes

1. A limited use area should be established and maintained to provide a clear line of sight for vehicles negotiating the project access intersections. Trees, bushes, and architectural décor should not block the line of sight requirements at these intersections.
2. Per the Highway Design Manual, dated May 7, 2012 *Section 400-22*, where restrictive conditions exist, the minimum value for corner sight distance at private streets shall be equal to the stopping sight distance. Stopping sight distance with a speed of 50 MPH equals 430 feet along the roadway centerline.

[1] When a right turn lane is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes. Where "1!" is indicated for the through movement and "0"s are indicated for R/L movements, the R and/or L turns are shared with the through movement.

L = Left; T = Through; R = Right; > = Right Turn Overlap; >> = Free Right Turn; **Bold** = Improvement

[2] Analysis Software: Traffix, Version 8.0. Per the Intersection Capacity Utilization methodology, overall volume to capacity ratios and levels of service are shown for intersections controlled by traffic signals. Critical delay in seconds is shown per Highway Capacity Manual (HCM 2000) methodology to analyze stop controlled intersections and LOS is determined based on the worst case directional movement.

[3] TS = Traffic Signal

CSS = Cross-Street Stop

[1] When a right turn lane is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes. Where "1!" is indicated for the through movement and "0"s are indicated for R/L movements, the R and/or L turns are shared with the through movement.

L = Left; T = Through; R = Right; > = Right Turn Overlap; >> = Free Right Turn; **Bold** = Improvement

[2] Analysis Software: Traffix, Version 8.0. Per the Intersection Capacity Utilization methodology, overall volume to capacity ratios and levels of service are shown for intersections controlled by traffic signals. Critical delay in seconds is shown per Highway Capacity Manual (HCM 2000) methodology to analyze stop controlled intersections and LOS is determined based on the worst case directional movement.

[3] TS = Traffic Signal
CSS = Cross-Street Stop

TABLE 12

Summary of Intersection Level of Service Comparison

Intersection	Existing Conditions Without Project				Existing Plus Project Conditions				Change as Result of Project

[1] Analysis Software: Traffix, Version 8.0. Per the Intersection Capacity Utilization methodology, overall volume to capacity ratios and levels of service are shown for intersections controlled by traffic signals. Critical delay in seconds is shown per Highway Capacity Manual (HCM 2000) methodology to analyze stop controlled intersections and LOS is determined based on the worst case directional movement.

[2] The acceptable Level of Service (LOS) for intersections within the City of Aliso Viejo is "C" or better. Therefore, any intersections operating at a LOS "D", "E" or "F" will be considered deficient. A project's significant impact to intersections is determined if the project causes an intersection's level of service to degrade from LOS "C" or better to "D", "E" or "F" or if the project causes a change in volume/capacity ratio (V/C) greater than 0.01, if the intersection is operating at LOS "D", "E" or "F". The City does not have established criteria for determining significant impacts at unsignalized intersections.

[3] N/A = Not Applicable

N/C = No Change

TABLE 13

Project Fair-Share Intersection Contribution[1]

Intersection	Existing Traffic		Year 2035 With Project Traffic		Growth in Traffic		Project Traffic		Project % of Year 2035 With Project Growth in Traffic

OCP Update/Revision process calls for OCP modifications which are greater than +/-2.5% of the approved RSA totals to be taken through the formal OCP approval process.
Items identified by yellow highlight are those outside the +/-2.5% range.

Appendix D

Cumulative Projects Trip Distribution

Zone 1 Trip Distribution

Legend:

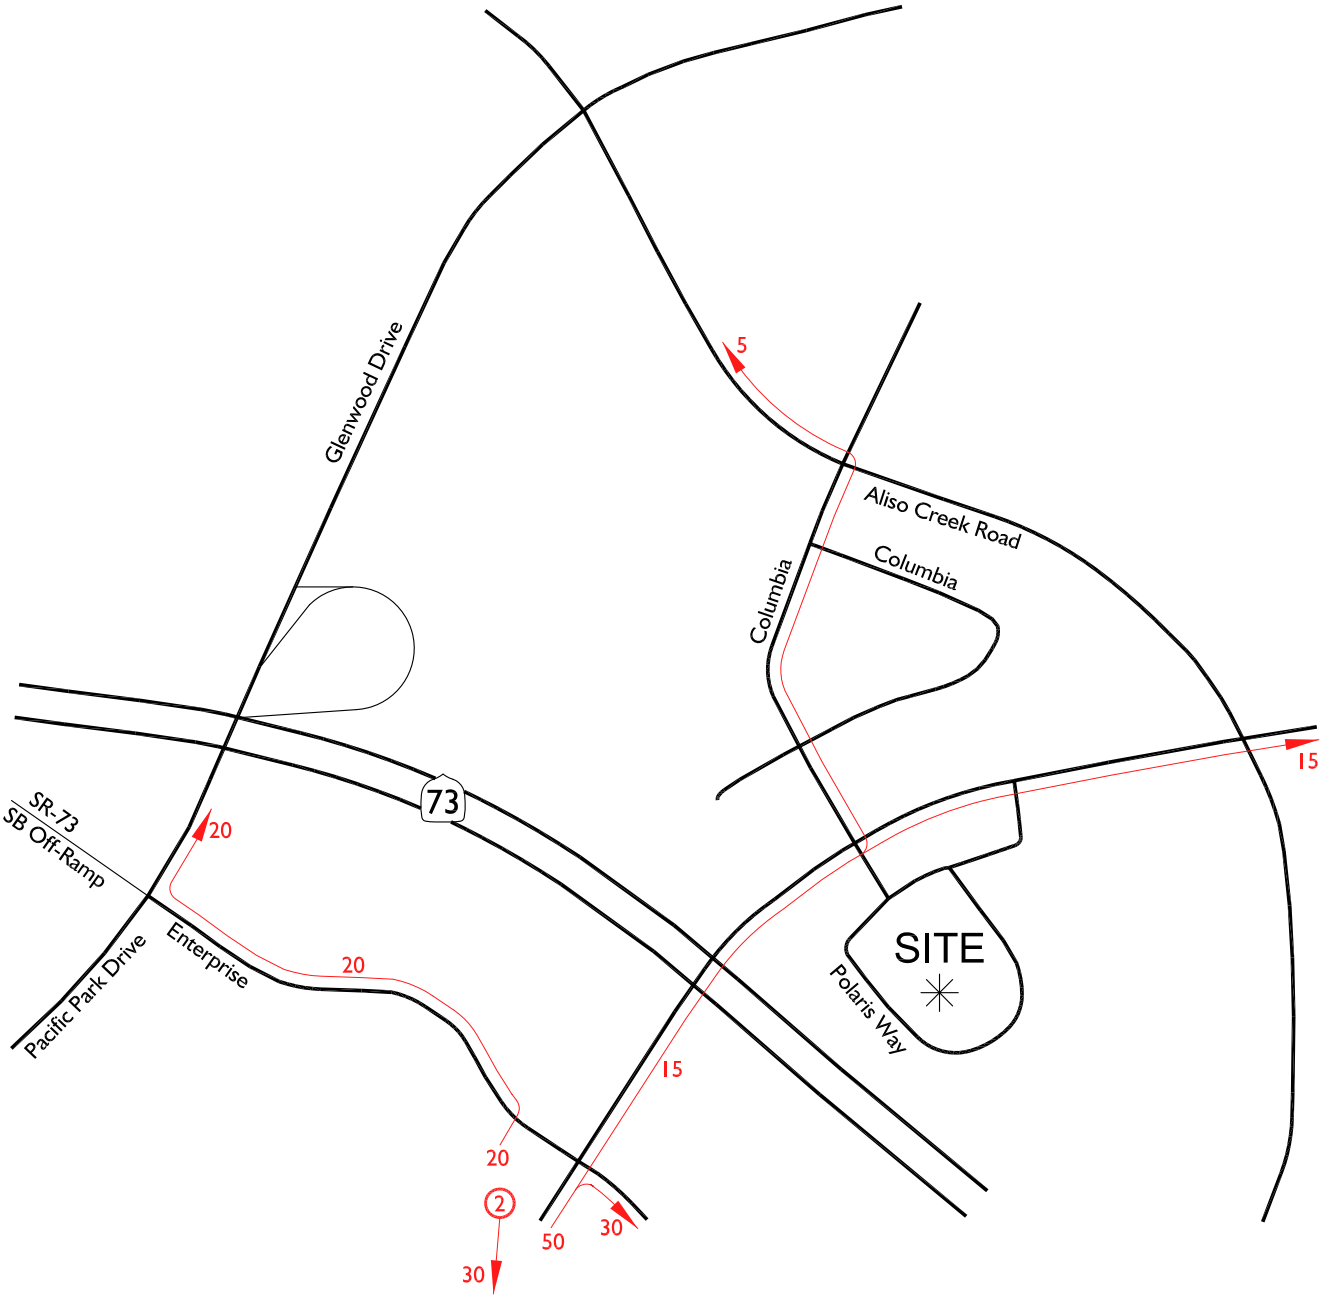
(1) = Summit 7 Corporate Office - General Office (205.46 TSF)

10 = Percent to/from Project

N

RK engineering group, inc.

Zone 2 Trip Distribution



Legend:

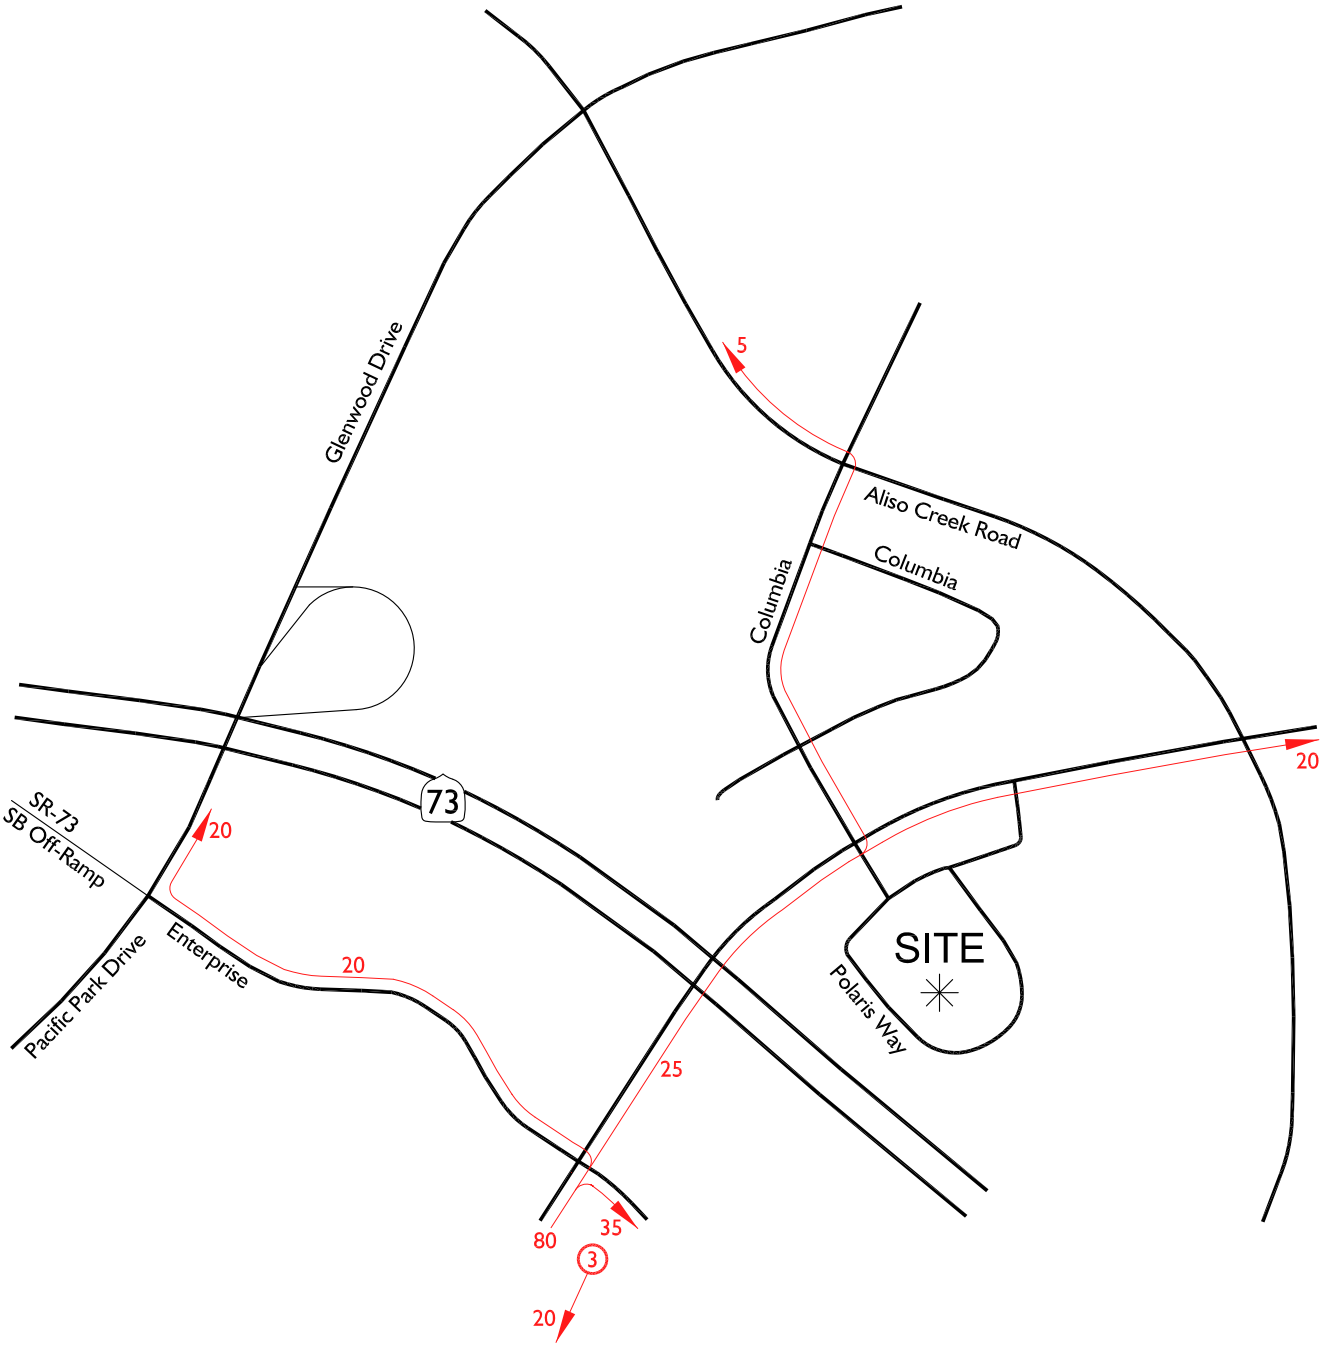
(2) = Renaissance Expansion - Hotel (100 Rooms)

10 = Percent to/from Project

N

RK engineering group, inc.

Zone 3 (Apartments) Trip Distribution



Legend:

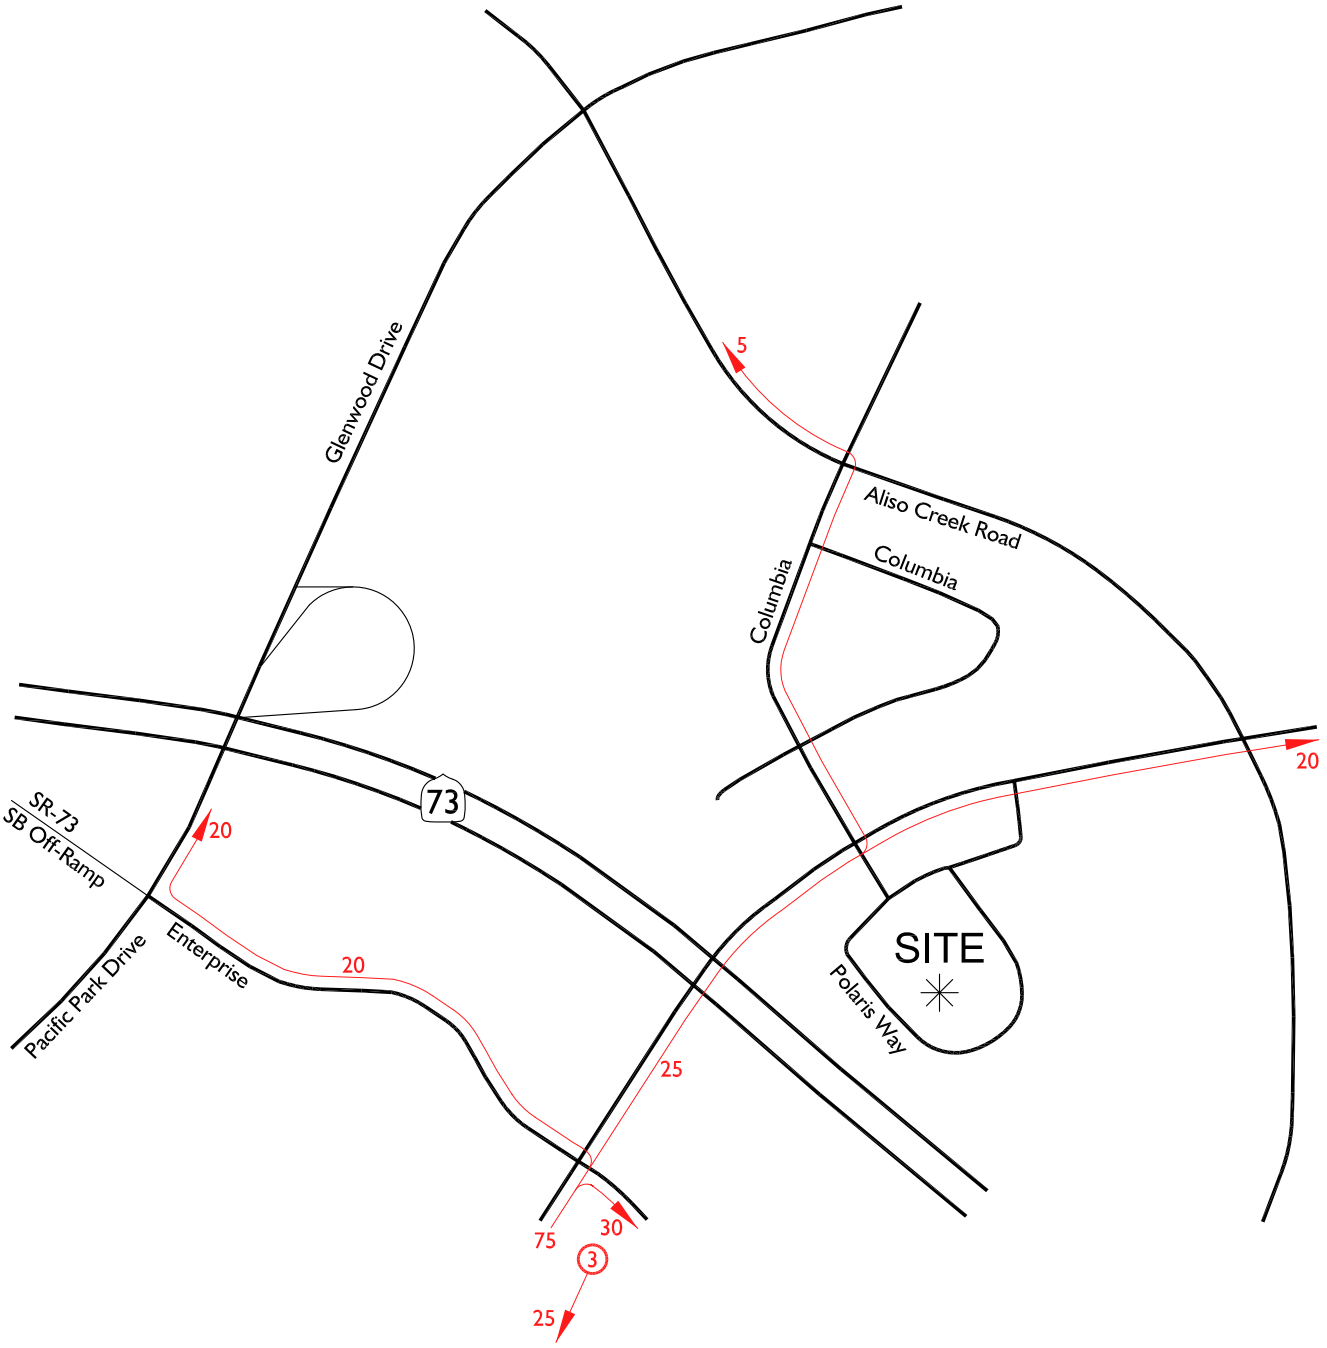
(3) = Vantis - Apartments (435 Units)

10 = Percent to/from Project

N

RK engineering group, inc.

Zone 3 (Hotel) Trip Distribution



Legend:

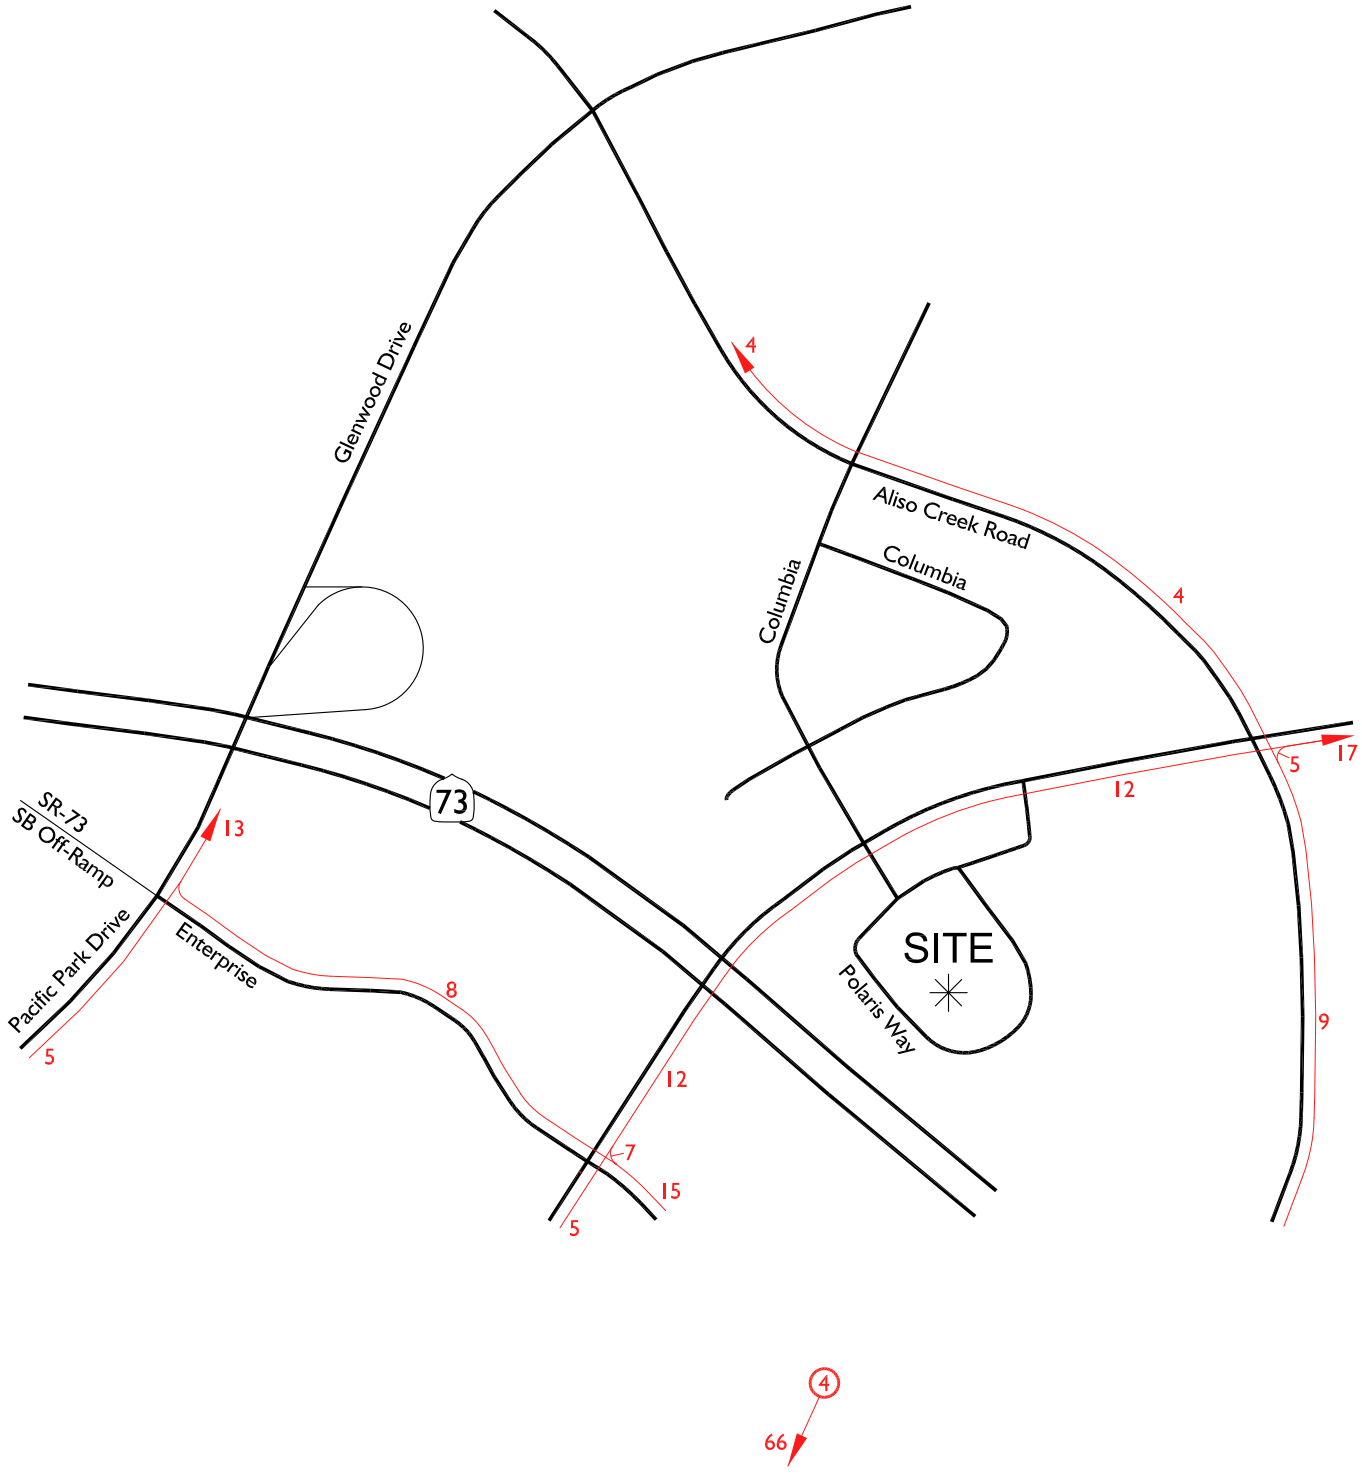
(3) = Vantis - Hotel (129 Units)

10 = Percent to/from Project

N

RK engineering group, inc.

Zone 4 Trip Distribution



Legend:

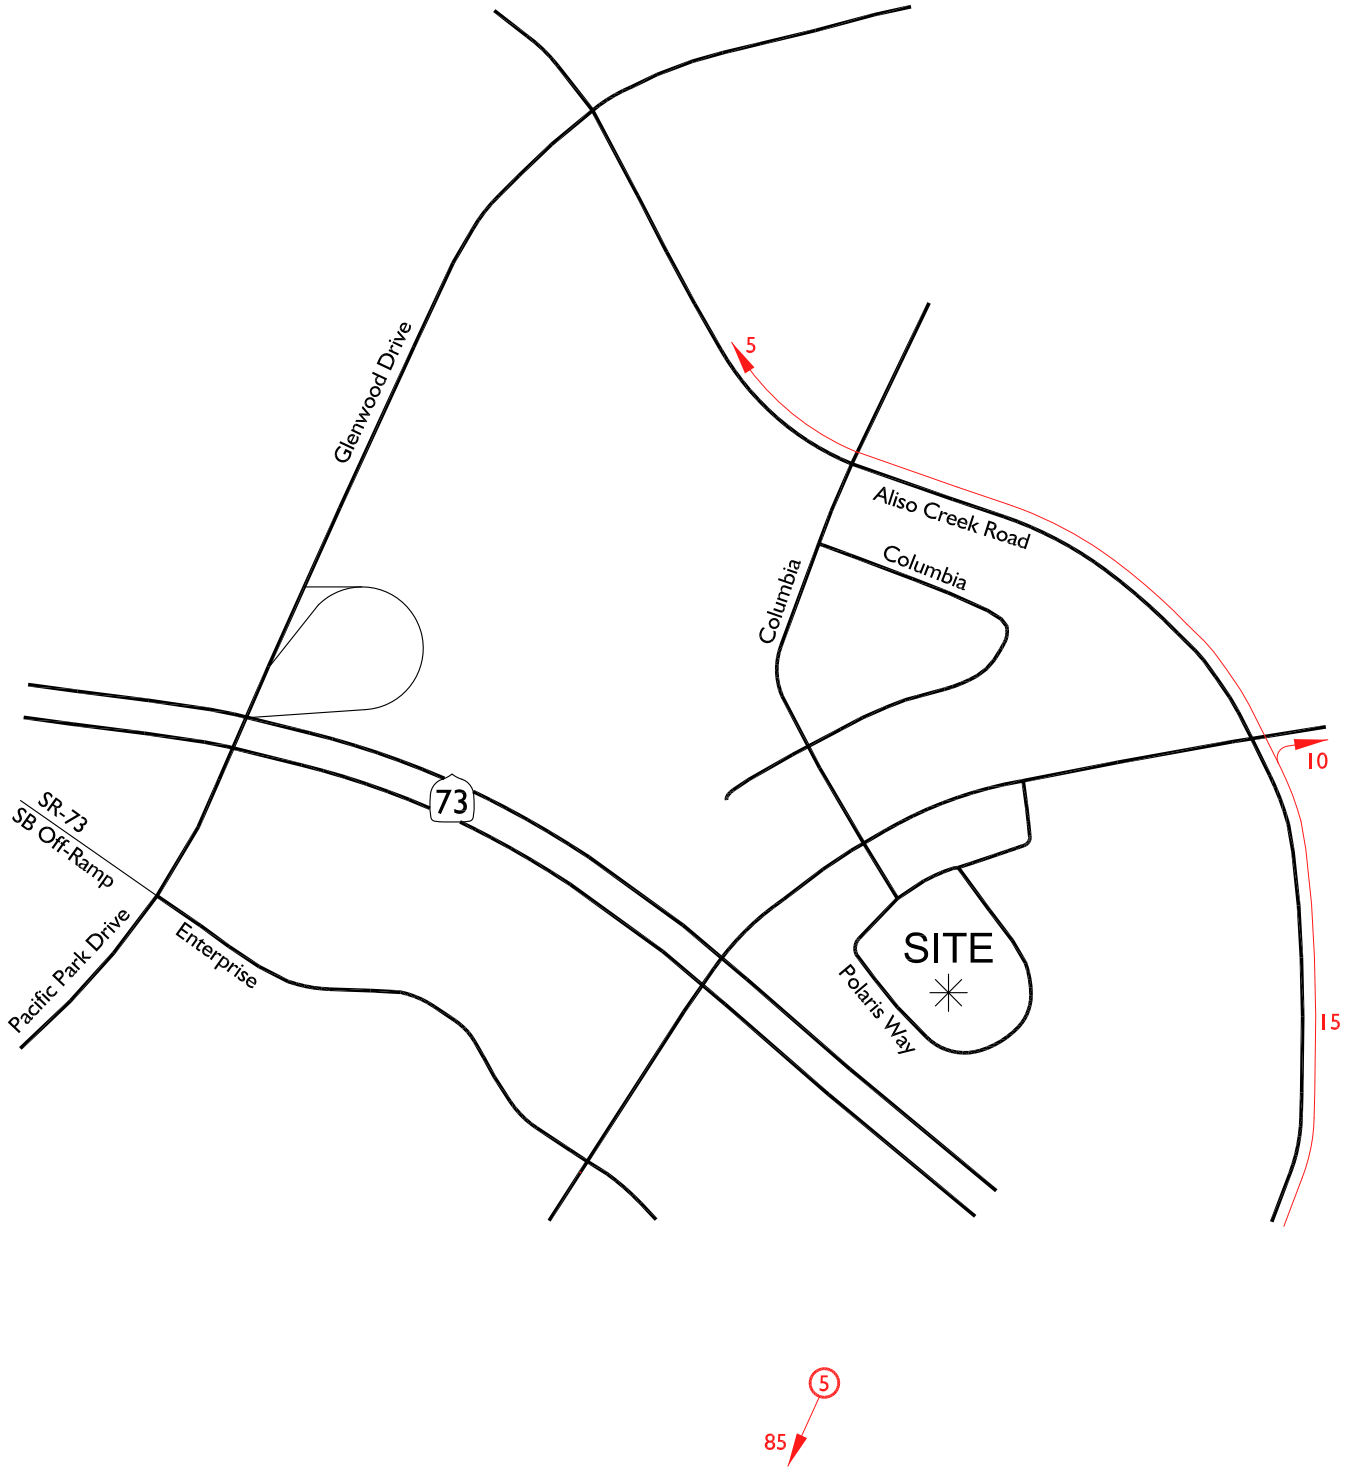
(4) = Aliso Viejo Town Center - Retail (93.3 TSF); Restaurant (93.7 TSF); General Office (64.4 TSF); Apartments (507 Units); Hotel (120 Rooms)

10 = Percent to/from Project

N

RK engineering group, inc.

Zone 5 Trip Distribution



Legend:

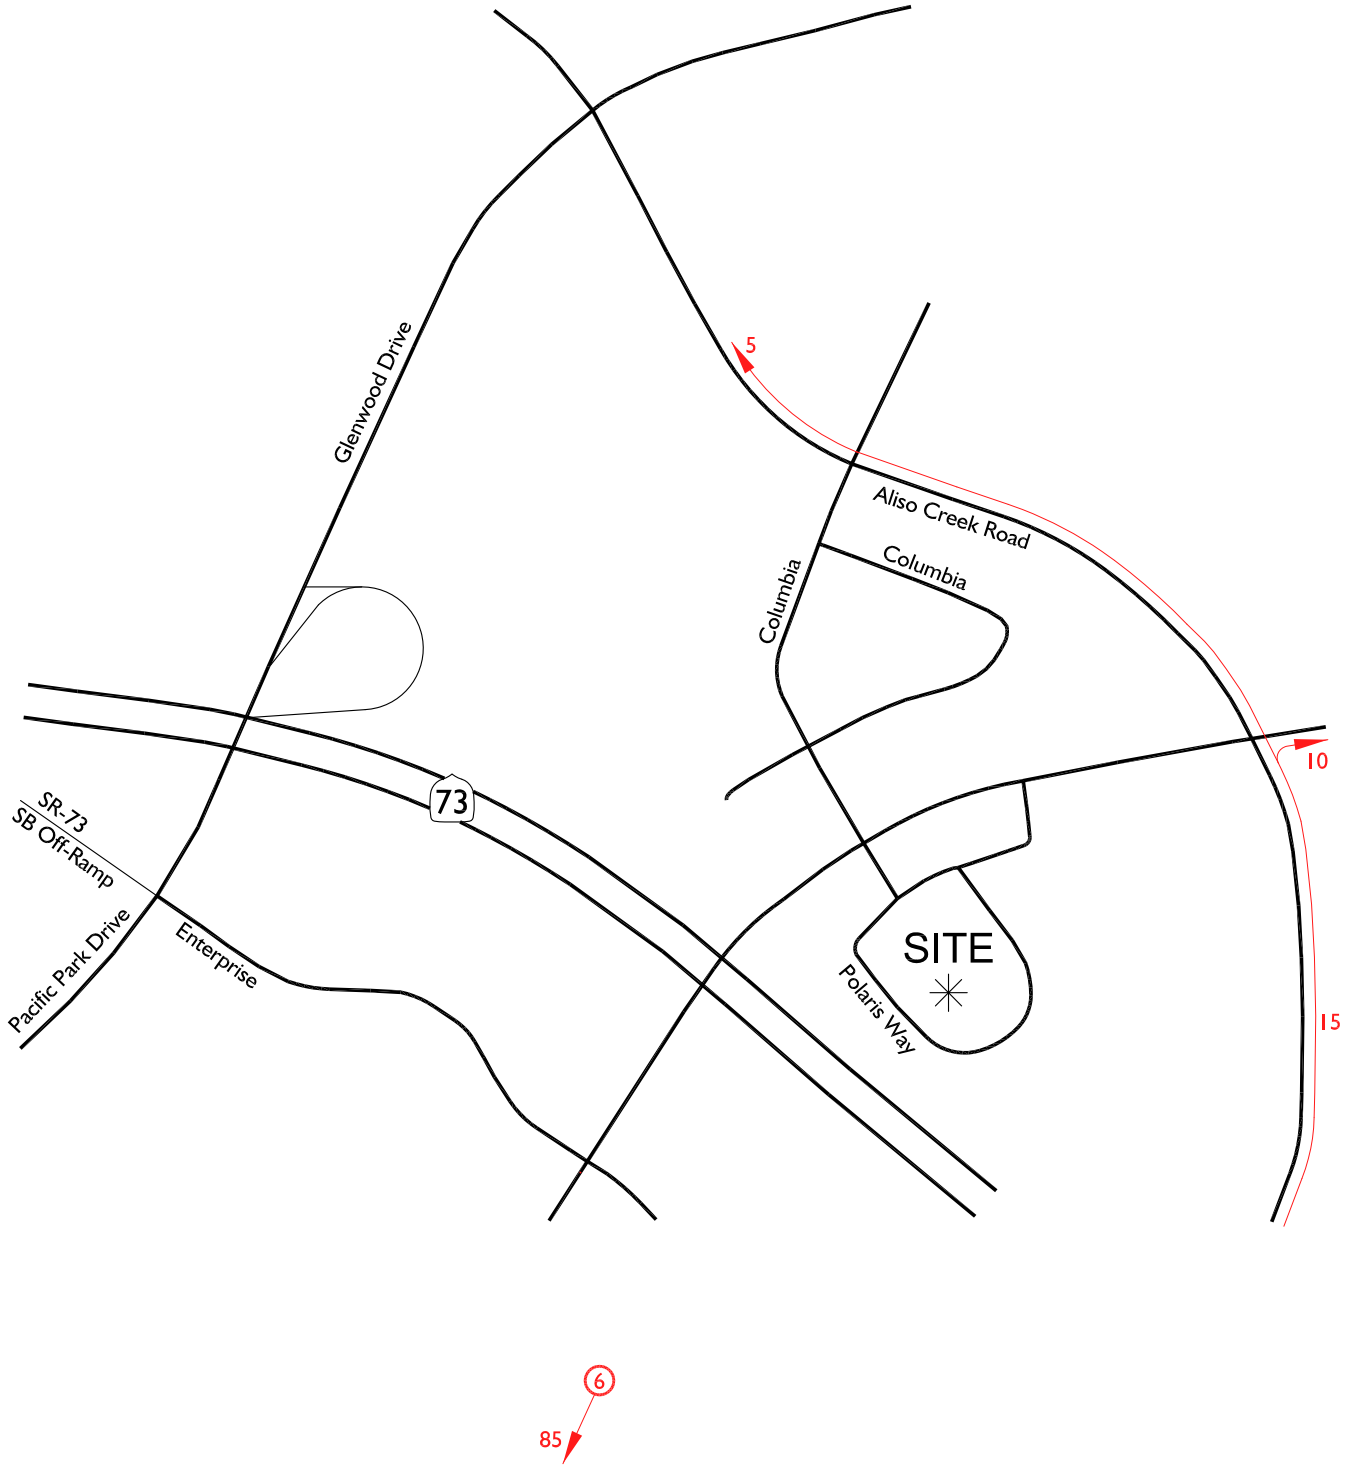
(5) = 2C Liberty - Senior Apartments (202 Units)

10 = Percent to/from Project

N

RK engineering group, inc.

Zone 6 (Residential) Trip Distribution



Legend:

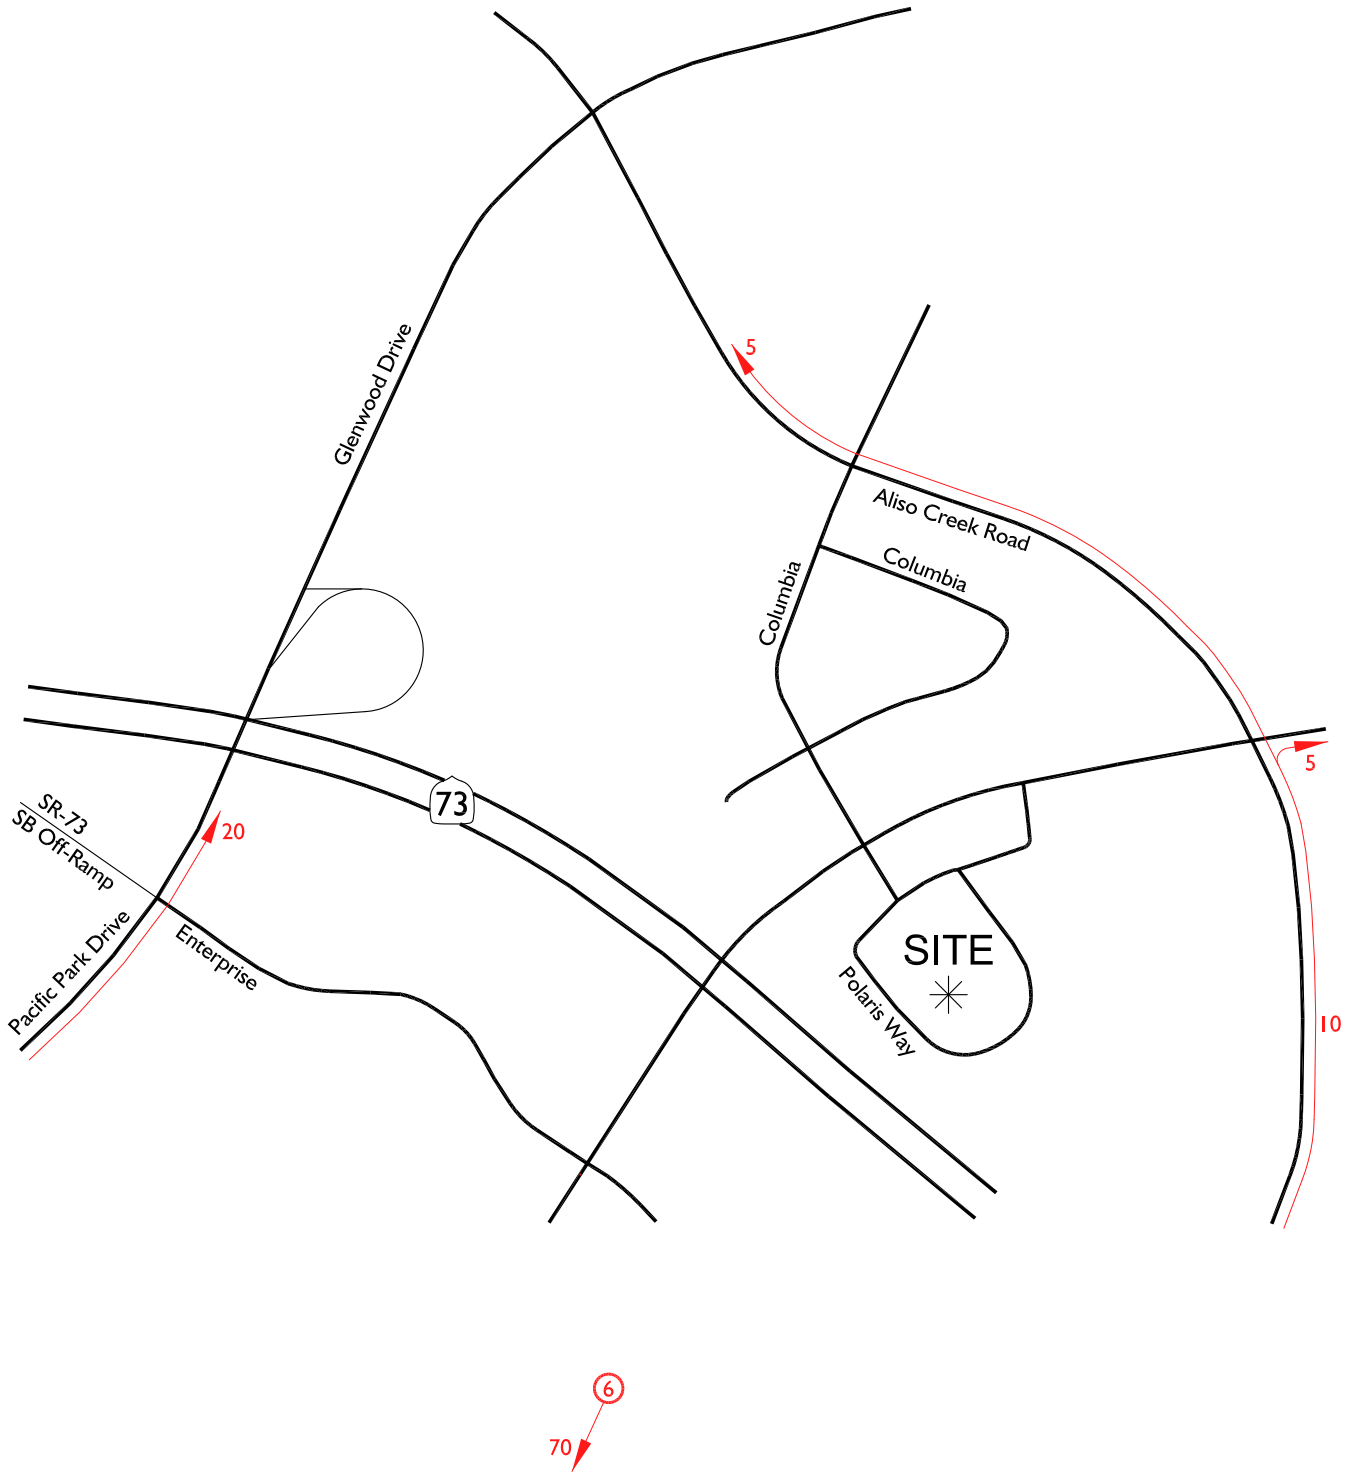
(6) = 4 Liberty - Senior Adult Housing (200 Units); Managed Care (155 Beds)

10 = Percent to/from Project

N

RK engineering group, inc.

Zone 6 (General Office) Trip Distribution



Legend:

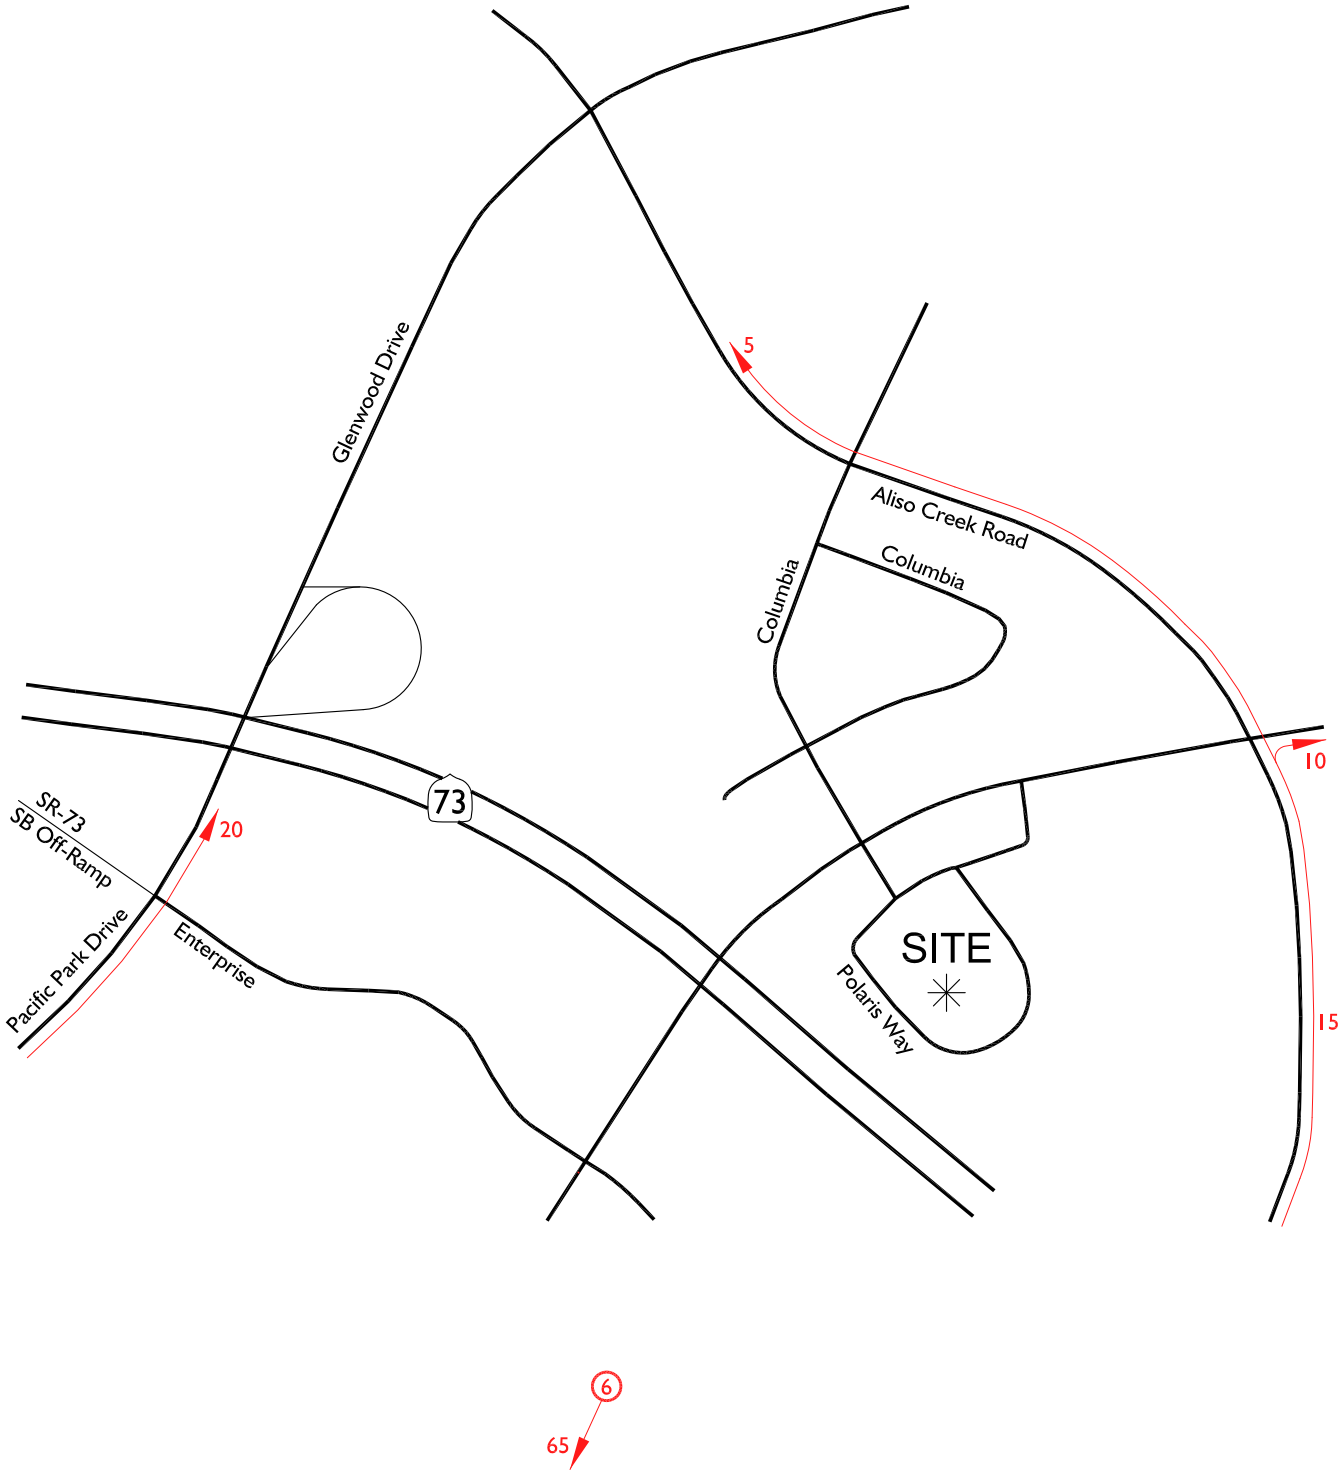
(6) = 4 Liberty - General Office (146.25 TSF)

10 = Percent to/from Project

N

RK engineering group, inc.

Zone 6 (Medical Office) Trip Distribution



Legend:

ORANGE COUNTY FIRE AUTHORITY

Fire Prevention Department

P. O. Box 57115, Irvine, CA 92619-7115 • 1 Fire Authority Road, Irvine, CA 92602

Planning and Development Services • www.ocfa.org • (714) 573-6100 / Fax (714) 368-8843

Date: October 5, 2015

To: City of Aliso Viejo Department of Planning Services
Attention: Erica Roess, Senior Planner

From: Lynne Pivaroff, Fire Prevention Analyst

Subject: **OCFA Service Request SR #187607, City Reference #PA15-030 (SDP)**
6 Polaris, Aliso Viejo
Service Code: PR105 Site Development Review/CUP

The OCFA has reviewed the proposed project, and based on this initial assessment there do not appear to be any significant issues related to fire department requirements that would prevent the project from continuing forward. The conditions listed below under "Conditions of Approval" may be applied to this project at this time. Please provide the conditions listed below on the resolution issued to the applicant. If you need additional information or clarification, please contact me by phone at (714) 573-6133, by fax at (714) 368-8843, or by email: lynnepivaroff@ocfa.org.

CONDITIONS OF APPROVAL

Plan Submittal: The applicant or responsible party shall submit the plan(s) listed below to the Orange County Fire Authority for review. Approval shall be obtained on each plan prior to the event specified.

Prior to issuance of a grading permit, or a building permit if a grading permit is not required:

- fire master plan (service code PR145)

Prior to issuance of a building permit:

- architectural (service codes PR200-PR285), when required by the OCFA "Plan Submittal Criteria Form"
- underground fire protection system (service codes PR470)
- fire sprinkler system (service codes PR400-PR465)

Prior to concealing interior construction:

- sprinkler monitoring system (service code PR500)
- fire alarm system (service code PR500-PR520)
- fire alarm system (service code PR500-PR520), if modified, provided voluntarily, or required by code.

Specific submittal requirements may vary from those listed above depending on actual project conditions identified or present during design development, review, construction, inspection, or occupancy. Standard notes, guidelines, submittal instructions, and other information related to plans reviewed by the OCFA may be found by visiting www.ocfa.org and clicking on "Fire Prevention" and then "Planning & Development Services."

1.0 INTRODUCTION

1.1 Project Information

1. Project Title: 6 Polaris Way Office and Parking Structure Project

2. Lead Agency Name and Address:

City of Aliso Viejo
12 Journey, Suite 100
Aliso Viejo, CA 92656

3. Contact Person and Phone Number:

Erica Roess, Senior Planner
Phone: (949) 425-2525

4. Project Location:

6 Polaris Way, Aliso Viejo, CA 92656

The project site is located on the south side of Aliso Viejo Parkway, northeast of State Route (SR) 73 (San Joaquin Transportation Corridor).

5. Project Sponsor's Name and Address:

BMP Investments, LLC
1200 South Coast Highway, Suite 205A
Laguna Beach, CA 92651

6. General Plan Designation:

Professional Office (PO)

7. Zoning:

Professional Office (PO)

8. Description of Project:

The project would allow for the development of an approximately 42,400-gross-square-foot (sf) (not to exceed 40,000 sf of net rental square footage), 2-story office building and a 4-½-level, 423 space parking structure on an existing surface parking lot. The existing project site includes an approximately 76,188-sf, 3-story office building and surface parking. No changes to the existing office building are a part of the project. The project is described in greater detail in Section 2.0 of this Initial Study.

9. Surrounding Land Uses and Setting:

The project site is located within an existing approximately 22.5-acre office complex (Polaris Place) which includes five office buildings ringed by surface parking. Surrounding and nearby land uses office and business uses; retail uses; SR-73; and residences.

10. Other public agencies whose approval is required: National Pollutant Discharge Elimination System (NPDES) from the Regional Water Quality Control Board, San Diego Region.

1.2 Purpose of Initial Study

In accordance with the California Environmental Quality Act (CEQA) (California Public Resources Code [PRC] Section 21000 et seq.) and the State Guidelines for Implementation of CEQA (State CEQA Guidelines) (California Code of Regulations, Title 14, Section 15000 et seq.), this Initial Study has been prepared to evaluate the potential environmental effects associated with the construction and operation of the proposed project. Pursuant to Section 15367 of the State CEQA Guidelines, the City of Aliso Viejo (City) is the lead agency for the project. The lead agency is the public agency that has the principal responsibility for carrying out or approving a project.

This Initial Study provides decision-makers and the public with information concerning the potential environmental effects associated with the implementation of the proposed project, and potential ways to reduce or avoid possible environmental impacts. It is intended to be used as a decision-making tool for the City in considering and taking action on the proposed project. Any responsible agency may elect to use this environmental analysis for discretionary actions associated with the implementation of the proposed project.

1.3 Summary of Findings

An explanation for each environmental issue is provided in this Initial Study. Based on the environmental checklist form completed for the project and supporting environmental analysis, the proposed project would have no impact or a less than significant impact in the following environmental topics: Aesthetics, Agriculture and Forestry Resources, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Mineral Resources, Population and Housing, Public Services, Recreation, Transportation and Traffic, and Utilities and Service Systems. The proposed project has the potential to have significant impacts related to Air Quality, Biological Resources, Cultural Resources, Geology and Soils, and Noise. These impacts can be mitigated to a less than significant level. The Draft Mitigation Monitoring and Reporting Program (MMRP) is provided as Appendix A to this Initial Study.

As set forth in the State CEQA Guidelines Section 15070, an Initial Study leading to a Mitigated Negative Declaration (IS/MND) can be prepared when the Initial Study has identified potentially significant environmental impacts, but revisions have been made to the project, prior to public review of the Initial Study, that would avoid or mitigate the impacts to a level considered less than significant; and there is no substantial evidence in light of the whole record before the public agency that the project, may have a significant effect on the environment.

1.4 Initial Study Public Review Process

The Notice of Intent (NOI) to Adopt a Mitigated Negative Declaration and the Initial Study have been sent to agencies with concern or with jurisdiction over resources affected by the proposed project (State CEQA Guidelines Section 15073(c)). The NOI has been provided to the California Office of Planning and Research State Clearinghouse, Clerk of the County of Orange, and interested organizations and individuals.

Reviewers of the Initial Study are given a 30-day review period to prepare written comments on the IS/MND. During the public review period, the IS/MND (including the technical appendices) can also be accessed at the City's website: http://www.cityofalisoviejo.com/and is available for review at the location

identified below during regular business hours. In reviewing the IS/MND, affected public agencies and interested members of the public should focus on the adequacy of the document in identifying and analyzing potential project impacts on the environment, and the ways in which the potential significant effects of the project are proposed to be avoided or mitigated. Responses to comments received on the IS/MND are provided in Appendix B.

City of Aliso Viejo
Planning Department
12 Journey, Suite 100
Aliso Viejo, CA 92656

1.5 Report Organization

This document has been organized into the following sections:

Section 1.0 – Introduction. This section provides an introduction and overview describing the conclusions of the Initial Study.

Section 2.0 – Project Description. This section identifies key project characteristics and includes a list of anticipated discretionary actions.

Section 3.0 – Environmental Checklist. The Environmental Checklist Form provides an overview of the potential impacts that may or may not result from project implementation.

Section 4.0 – Environmental Evaluation. This section contains an analysis of environmental impacts identified in the environmental checklist.

Section 5.0 – Report Preparers. This section identifies those individuals responsible for preparing the Initial Study.

Section 6.0 – References. The section identifies resources used to prepare this document.

This Page Intentionally Left Blank

2.0 DESCRIPTION OF PROPOSED PROJECT

2.1 Project Location and Setting

The 4.037-acre site is located at 6 Polaris Way in the City of Aliso Viejo, Orange County, California. The site is located within an existing office complex (Polaris Place) which includes five campus-style office buildings ringed by surface parking for the Polaris Place complex. The approximately 22.5-acre office complex is generally bound by Aliso Viejo Parkway to the north; State Route (SR) 73 (San Joaquin Hills Transportation Corridor) to the southwest/west; and condominium and townhome developments to the west and southwest. **Figure 1, Regional Location Map** and **Figure 2, Vicinity Map**, depict the project site in a regional and local context, respectively.

Primary access into the office complex is at Polaris Way from Aliso Viejo Parkway. There are roadways internal to the Polaris Place complex that provide access through the office development. The site currently proposed for development is a part of the existing surface parking area located within the existing office complex and on the south side of Aliso Viejo Parkway at the entrance from Polaris Way.

The 4.037-acre development parcel includes an existing approximately 76,188-sf, 3-story office building located at 1 Polaris Way and approximately 244 surface parking spaces. The existing office building would remain. The elevations of the project site range from approximately 450 feet above mean sea level (msl) at the northwest corner of the project site to approximately 435 feet above msl at the southeast corner of the project site.

Land uses in the immediate vicinity of the project site and outside of the boundaries of the Polaris Place office complex include the following:

- **North:** Aliso Viejo Parkway borders the project site to the north. Office/business park uses are located north of Aliso Viejo Parkway. A neighborhood retail center is located on the northwest corner of Aliso Viejo Parkway at Aliso Creek Road.
- **Southeast:** Townhomes are located southeast of the office development and approximately 875 feet from the project site. The townhomes are at a lower elevation (approximately 400 feet above msl) than the office complex.
- **East:** Condominium units are located adjacent and approximately 140 feet to the east of the project site. The residences are at a lower elevation (approximately 410 feet above msl) than the project site. The rooftops of the two-story condominium units are at approximately ground level of the project site.
- **Southwest/West:** SR-73

2.2 Project Characteristics

2.2.1 LAND USE DESIGNATIONS

The project site has a General Plan land use and zoning designation of Professional Office (PO). The proposed office development project is consistent with the General Plan designation. The Zoning Ordinance notes that general and professional office uses are permitted uses in the Professional Office land use district.

2.2.2 SITE DEVELOPMENT

Figure 3, Conceptual Site Plan, depicts the site plan for the project. **Figure 4, Tentative Parcel Map** depicts the tentative parcel map for the proposed project. As proposed, the Tentative Parcel map would create two parcels from the L-shaped parcel. Parcel 1 would be 0.954 acre and is the proposed location for the approximately 42,400-sf (not to exceed 40,000 sf of net rental square footage), 2-story office building. Parcel 2 would be 3.083 acres and includes the existing 76,188-sf, 3-story office building; a 15-space surface parking area located directly in front of the existing office building; and development of a 4-½-level, 423-space parking structure to replace 299 parking spaces within the existing surface parking lot portion of the parcel.

Figure 5, Site Elevations depicts the conceptual architectural design and elevations for the office building and parking structure. As proposed, a two-story office building would be located on Parcel 1 with an east-to-west orientation parallel to Aliso Viejo Parkway. The building height would be a maximum of approximately 40 feet to the top of the rooftop equipment panel screen. Guest and employee access would be from a lobby located at the southeast corner of the building.

An uncovered outdoor plaza is proposed between the office building and the parking structure. The outdoor area would provide for pedestrian access between the office building and parking structure as well as outdoor seating areas.

The parking structure would be located to the east of the office building and the outdoor plaza. Proposed as a 4-½-level at-grade parking structure, a half level of rooftop parking would be provided. Vehicular access would be provided from one location at the south side of the structure. The parking structure would range in height from approximately 35 feet (west elevation) to 45 feet (east elevation) above ground level measured from grade abutting the structure; the site and parking structure slope at different gradients adjacent to Aliso Viejo Parkway. The elevator tower would reach approximately 49 feet or approximately 17 feet above the rooftop of the parking structure at the west end.

The parking structure would provide 423 parking spaces. Parking within the existing Polaris Place five-building office complex is currently provided as a common amenity as set forth in a recorded Covenant Document of Reciprocal Easements and Covenants (Covenant Document) that affects existing parking in the entirety of the Polaris Place office development. The Covenant Document requires that sufficient additional parking spaces be provided to replace all parking displaced by the construction of the proposed office building.

There are 1,701 parking spaces provided for the existing Polaris Place office complex. Based on the City's current parking requirements, 1,732 parking spaces would be required for the existing Polaris Place five-building office complex, representing an existing 31 parking space deficit unrelated to the proposed project.

The project site includes 244 surface parking spaces, with 15 spaces located directly in front of the 1 Polaris office building and 229 spaces in the parking area north and northeast of the 1 Polaris building. These parking spaces are provided, under the Covenant Document, as a common amenity to the Polaris Place office complex. Of the 244 spaces, 229 spaces would be displaced to allow for the construction of both the office building and the 423-space parking structure, for a net increase of 194 spaces. Based on the City's parking requirement of 1 space per 250 sf of gross floor area, the proposed office building requires 170 parking spaces. The addition of the proposed office building would increase the total required parking

for the Polaris Place complex to 1,902 parking spaces. The net increase of 194 spaces would provide a total of 1,895 parking spaces for the Polaris Place complex. Implementation of the proposed project would decrease the complex-wide parking stall deficiency from 31 to 7 spaces.

Table 2-1 shows that the combined parking total for the 1 Polaris building and the 6 Polaris building would be less than required under the AVMC. Therefore, the applicant is requesting an Exception Permit pursuant to AVMC Section 15.38.120.B for a 7.6 percent, or 36 parking space reduction because it cannot be assured that the applicant would be able to provide the additional parking spaces elsewhere within the Polaris Park office complex. The number of existing parking spaces being displaced by the proposed project is 229 spaces. Replacing the 229 spaces and providing 170 parking spaces for the proposed office building would be 399 parking spaces, the project would provide 423 parking spaces (replacing 229 existing spaces, providing 194 additional parking spaces. Additionally, the 15 existing spaces in front of 1 Polaris would not be affected by the proposed project. The applicant is requesting an amendment to the Covenant Document for the assignment of 229 existing parking spaces to be replaced in the parking structure to the common area of the Polaris Place with the retention of 15 spaces immediately in front of 1 Polaris.

Table 2-1: Municipal Code Parking and Exception Permit Request

Address	Land Use	Gross SF	Parking Standards[a]	Parking Stalls Required	Parking Stalls Provided[b,c]	Net Change	Requested Exception (AVMC 15.38.120)
1 Polaris[b]	General Office	76,186	1/250 GFA	305	244	-61	
6 Polaris (proposed)		42,400		170	194	24	
Total		**118,586**		**474**	**438**	**-36**	**7.6%**

GFA = gross floor area

a. Aliso Viejo Zoning Code 15.38.040 Non-Residential Parking Requirements

b. Polaris includes 229 parking stalls to the north and north east of the building and 15 parking stalls located in front of the building

c. The parking structure will include 438 parking stalls and will displace 229 parking stalls which will be relocated in the structure. The net change is +194 spaces.

Source: BPM Investments, 2016.

2.2.3 DESIGN, LANDSCAPING, AND LIGHTING

The architecture and exterior building materials and colors would be consistent with the existing five office buildings within the Polaris Place complex. The existing structures are two- to four-story office buildings painted in a dark cream color with large expanses of windows. The proposed office building would be constructed as tilt-up structure with a smooth exterior finish and would have energy efficient, tinted low E double glazed windows. No reflective building materials, such as mirrored glass, would be used. The office building would have a maximum height of approximately 40 feet to the top of the rooftop equipment panel screen. The rooftop equipment screen would be composed of panels plastered to match the building color and would wrap around the entire mechanical system and equipment units.

The parking structure would be designed to be architecturally compatible with the existing and proposed office buildings within the complex. Exterior colors would be consistent with the proposed office building.

The office complex has landscape treatment along Aliso Viejo Parkway including pines, grass, and groundcover. A pedestrian sidewalk along Aliso Viejo Parkway extends both east and west of the development. The entrance into the office complex at Polaris Way includes rows of date palms, oak trees, as well as grass, groundcover, and shrubs. Smaller trees (African sumac) are also provided in the parking areas.

Landscaping associated with the proposed project would be consistent and compatible with the existing landscape treatment within the office development. Landscaping would be provided around both the office building and the parking structure and would include a mix of trees, shrubs, groundcover, and vines. Pedestrian areas, including an outdoor plaza between the proposed office building and the parking structure, would be enhanced with landscape materials including oak trees and hardscape treatments. Landscaping would be consistent with the City's drought tolerant plant materials list, and as required by the Aliso Viejo Municipal Code (AVMC), at least 50 percent of the landscaping would use drought resistant plant materials.

Site lighting would be used to provide adequate lighting for circulation, safety, and security. The project site lighting would use building mounted or free standing light poles with cut off style high efficiency lighting to prevent off-site waste light. Building mounted and light standards for the parking structure would be provided consistent with the City's requirements to shield and direct lighting such that it is confined within the boundaries of the project site including that associated with rooftop parking structure lighting.

2.2.4 GRADING AND CONSTRUCTION

For purposes of the CEQA analysis, this Initial Study assumes that construction of the project commences in 2016 and would be completed in 2017. Project construction is expected to be completed over a 12- to 18-month time period.

Construction activities for the project would include demolition of the surface parking lot, site preparation, grading, building and parking structure construction, paving, and coating. The site proposed for development was previously graded and paved as a part of the Polaris Place office complex including the surface parking areas. Preliminary grading estimates are 991 cubic yards of cut and 506 cubic yards of fill. Site grading is expected to result in the export of approximately 484 cubic yards of earth material. There are multiple options for a receiving site of the exported earth material; all of the optional sites are located less than 35 miles from the project site.

2.3 Project Approvals

The City of Aliso Viejo is the Lead Agency under CEQA and is responsible for reviewing and approving the CEQA document. The Applicant has requested the following permits and approvals from the City:

- Site Development Permit: Required by Aliso Viejo Municipal Code (AVMC), Section 15.74.020;
- Exception Permit for Parking: Required by AVMC, Section 15.38.120; and
- Tentative Parcel Map: Required by AVMC, Title 14.

As part of the review of the project, the following projects, as of August 2015, are either currently pending, have already been approved, or are under construction in the City of Aliso Viejo. Most specifically, these

projects are included in the cumulative traffic, air quality, greenhouse gas, and noise analyses. In situations where the Initial Study asks whether the proposed project would have a cumulative impact, the list of projects was used to conduct that analysis. Please refer to Section 3.0 for an analysis of the project's impacts.

- Vantis Project (435 apartments and a 129 room hotel) (under construction);
- Vintage Aliso, 2C Liberty (202 senior apartments) (under construction);
- Summit 7 Corporate Office (205,460 sf office) (approved);
- Aliso Viejo Dog Park (0.88 acre) (City approved; pending before Coastal Commission);
- 4 Liberty (200 unit senior housing, 155 unit of managed care, 146,250 sf of general office, and 36,960 sf of medical/dental office) (approved);
- Aliso Viejo Town Center (93,300 sf of retail, 93,700 sf of restaurants, 64,400 sf of general office, 507 apartments, and 120 room hotel) (in process).

ZONING AND BUILDING SETBACK REQUIREMENTS:

CURRENT ZONING: (PO) PROFESSIONAL OFFICE

SET BACKS:

HEIGHT AND FLOOR AREA RATIO:	
MINIMUM LOT SIZE:	NO MINIMUM
MAXIMUM STRUCTURE HEIGHT:	65 FEET
MAXIMUM FLOOR AREA RATIO (FAR):	1.5
MINIMUM PERIMETER SETBACK IN FEET:	
FROM ARTERIAL HIGHWAY	20 FEET
FROM LOCAL NONRESIDENTIAL STREETS	20 FEET
FROM RESIDENTIAL STREETS	20 FEET
FROM ABUTTING PARCELS IN RESIDENTIAL, OS AND OR DISTRICTS	20 FEET
FROM ABUTTING COMMERCIAL, OFFICE AND OTHER NONRESIDENTIAL DEVELOPMENTS	10 FEET
FROM INTERIOR PROPERTY LINES WITHIN THE SAME PROJECT	0 FEET

1 ALL MINIMUM PERIMETER SETBACKS SHALL BE INCREASED 1 FOOT FOR EVERY FOOT IN HEIGHT ABOVE 35 FEET (EXCEPT FOR SETBACKS FROM INTERIOR PROPERTY LINES) UP TO A REQUIRED MINIMUM SETBACK OF 50 FEET. HOWEVER, SUCH INCREASED SETBACKS MAY BE REDUCED TO 30 FEET IF A CONDITIONAL USE PERMIT (CUP) IS APPROVED FOR AN INDIVIDUAL PROJECT, SUBJECT TO THE CUP FINDINGS OF AVMC 15.74.040.

2 SETBACKS ARE MEASURED FROM ULTIMATE STREET RIGHT-OF-WAY LINE.

3 OR A DISTANCE EQUAL TO THE HEIGHT OF THE BUILDING, WHICHEVER IS GREATER.

3.0 INITIAL STUDY CHECKLIST

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agricultural and Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Geology/Soils
☐ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials	☐ Hydrology/Water Quality
☐ Land Use/Planning	☐ Mineral Resources	☐ Noise
☐ Population/Housing	☐ Public Services	☐ Recreation
☐ Transportation/Traffic	☐ Utilities/Service Systems	☐ Mandatory Findings of Significance

DETERMINATION:

On the basis of this initial evaluation (check one):

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

ENVIRONMENTAL CHECKLIST

	Potentially Significant Impact	Less Than Significant Impact W/ Mitigation	Less Than Significant Impact	No Impact
I. AESTHETICS. Would the project:				
a) Have a substantial adverse effect on a publicly available scenic vista?	☐	☐	☐	☒
b) Substantially damage scenic resources, including but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	☐	☐	☒	☐
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐
II. AGRICULTURE AND FORESTRY RESOURCES. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 1222(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104 (g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒
III. AIR QUALITY. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact W/ Mitigation	Less Than Significant Impact	No Impact
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	☐	☐	☒	☐
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	☐	☐	☒	☐
d) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
e) Create objectionable odors affecting a substantial number of people?	☐	☐	☒	☐
IV. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?	☐	☐	☐	☒
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☒	☐	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact W/ Mitigation	Less Than Significant Impact	No Impact
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒
V. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☒	☐	☐
c) Directly or indirectly destroy a unique paleontological resource or site; archaeological or historical site, structure, or object; or unique geological feature?	☐	☒	☐	☐
d) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐
e) Cause a substantial adverse change in the significant of a tribal cultural resources as defined in Public Resources Code Section 21074?	☐	☒	☐	☐
VI. GEOLOGY AND SOILS. Would the project:				
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii) Strong seismic ground shaking?	☐	☒	☐	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☐	☒
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact W/ Mitigation	Less Than Significant Impact	No Impact
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☒	☐	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	☐	☒	☐	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒
VII. GREENHOUSE EMISSIONS. Would the project:				
a) Generate greenhouse gas (GHG) emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	☒	☐
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐
VIII. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	☒
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact W/ Mitigation	Less Than Significant Impact	No Impact
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	☐	☐	☐	☒
IX. HYDROLOGY AND WATER QUALITY. Would the project: **a) Violate any water quality standards or waste discharge requirements?**	☐	☐	☐	☒
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	☐	☐	☐	☒
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on-or off-site?	☐	☐	☒	☐
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact W/ Mitigation	Less Than Significant Impact	No Impact
e) Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff?	☐	☐	☐	☒
f) Otherwise substantially degrade water quality?	☐	☐	☐	☒
g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	☐	☐	☐	☒
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	☐	☐	☐	☒
i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	☐	☐	☐	☒
j) Inundation by seiche, tsunami, or mudflow?	☐	☐	☐	☒
X. LAND USE AND PLANNING. Would the project: **a) Physically divide an established community?**	☐	☐	☐	☒
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☐	☒
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	☐	☐	☐	☒
XI. MINERAL RESOURCES. Would the project: **a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?**	☐	☐	☐	☒
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact W/ Mitigation	Less Than Significant Impact	No Impact
XII. NOISE. Would the project result in:				
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	☒	☐
b) Exposure of persons to or generation of excessive ground-borne vibration or ground-borne noise levels?	☐	☐	☒	☐
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☐	☒	☐
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☐	☒	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
XIII. POPULATION AND HOUSING. Would the project:				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact W/ Mitigation	Less Than Significant Impact	No Impact
XIV. PUBLIC SERVICES.				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire Protection?	☐	☐	☒	☐
ii) Police Protection?	☐	☐	☒	☐
iii) Schools?	☐	☐	☒	☐
iv) Parks?	☐	☐	☒	☐
v) Other Public Facilities?	☐	☐	☒	☐
XV. RECREATION.				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☒	☐
XVI. TRANSPORTATION/ TRAFFIC.				
a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	☐	☐	☒	☐
b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant Impact W/ Mitigation	Less Than Significant Impact	No Impact
measures, or other standards established by the county congestion management agency for designated roads or highways?				
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	☐	☐	☐	☒
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g. farm equipment)?	☐	☐	☐	☒
e) Result in inadequate emergency access?	☐	☐	☐	☒
f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance of safety of such facilities?	☐	☐	☐	☒
g) Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?	☐	☐	☐	☒
XVII. UTILITIES AND SERVICE SYSTEMS.				
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	☐	☐	☒	☐
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☒	☐
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☒	☐
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	☐	☐	☒	☐
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant Impact W/ Mitigation	Less Than Significant Impact	No Impact
project's projected demand in addition to the provider's existing commitments?				
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	☐	☐	☒	☐
g) Comply with federal, state, and local statutes and regulations related to solid waste?	☐	☐	☐	☒
XIX. MANDATORY FINDINGS OF SIGNIFICANCE.				
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☐	☒	☐
b) Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?	☐	☐	☒	☐
c) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☐	☒	☐
d) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

4.0 ENVIRONMENTAL ANALYSIS

4.1 Aesthetics

The visual impacts of a project include both the objective visual resource change created by the project and the subjective viewer response to that change. Distance from the project, frequency of view, length of view, viewer activity, viewer perception, and viewing conditions contribute to the assessment of a visual impact. The physical limits and changes of the views and the quantity of the viewers are objective. Viewer perception is subjective.

The perception that different viewer groups have of the visual environment and its elements varies based on viewer activity and awareness. Activities such as commuting in traffic can distract an observer from many aspects of the visual environment. Conversely, pleasure driving or relaxing in a scenic environment can encourage an observer to look at the view more closely and at greater length, thereby increasing the observer's attention to detail. Sensitivity is also determined by how much the viewer has at stake in the viewshed. Typically, persons who own property or reside or work in an area are more sensitive to change than those just passing through.

The Aliso Viejo General Plan Final Environmental Impact Report (Final EIR) focused out all aesthetic-related issues with the exception of light and glare. With respect the issues of (a) substantial adverse effects on scenic vistas; (b) substantial damage to scenic resources, and (c) substantial degradation of the existing visual character or quality of a site and its surroundings, the Notice of Preparation (NOP) for the Final EIR found these issues to be less than significant. The Final EIR NOP states:

> Aliso Viejo has scenic resources including "landscape and view corridors along major roadways and views of the Aliso and Woods Wilderness Park. Key objectives within the General Plan Land Use and Conservation/Open Space Elements include conservation of scenic vistas, scenic resources, and the visual character and quality of the City. The following General Plan goals and policies support these objectives:
>
> Goal LU-2: Promote a visually-cohesive urban form and establish connections between the urban core and outlying portions of the community.
>
> Policy LU-2.3: Identify ways to visually identify and connect all portions of the community focusing on enhanced City gateways and unifying isolated and/or outlying areas with the rest of the City.
>
> Policy LU-2.4: Encourage land uses that complement (in type. size. scale and design) the community's topography, scenic vistas, and natural resources.
>
> Goal COS-4: Identify and preserve unique landform features and scenic resources within and surrounding Aliso Viejo.
>
> Policy COS-4.1 Protect scenic landform features such as hillsides, ridgelines, canyons and view corridors through designation of key areas as open space and use of other land planning tools.
>
> Policy COS-4.2 Encourage and maintain high-quality architectural and landscaping designs that enhance or compliment the community's visual character.

> To preserve views of significant natural resources, all new public and private development projects will be reviewed to ensure that they do not obstruct public views of scenic resources. Implementation of the identified policies will ensure that impact will be less than significant on a project-by-project basis.

With respect to light and glare, the Final EIR states that "Depending upon the location and scope of individual development projects, potential light and glare impacts to surrounding uses could be significant. Requiring new development projects to conform to the Zoning Ordinance to be developed by the City following adoption of the proposed General Plan and evaluating individual projects according to CEQA will reduce these potential impacts to a less than significant level on a project-by-project basis."

The *Photometric Analysis* was prepared by LPA (January 2016) as a part of this CEQA analysis. The photometric analysis is summarized below and is included as Appendix C to this Initial Study. Photometric calculations were performed using a 3D sketch-up model of the project site and was modeled with McGraw-Edison Gleon 15-foot poles with a single head and landscape design for a more accurate representation. The analysis is based on a single horizontal plane which provides a point-by-point photometric calculation of light levels throughout the project site and above the top level of the parking structure.

Existing Setting

The project area is fully developed with business uses, retail uses, SR-73, and residences. The project site is located within the developed Polaris Place office complex. The approximately 22.5-acre office complex includes five, two- to four-story office buildings located in the central portion of the complex with surface parking surrounding the office uses. The perimeter of the office complex is landscaped with mature trees and shrubs. Additional landscaping is provided adjacent to the buildings; the surface parking areas include smaller trees in the parking rows. Along the western and southwestern boundaries of the complex, densely planted landscaping including mature trees and shrubs provide a visual buffer between the office complex and off-site residential uses.

The 4.037-acre project site is currently developed with an existing 76,188-sf, 3-story office building located at 1 Polaris Way and with 244 surface parking spaces. The elevations of the project site ranges from approximately 450 feet above mean sea level (msl) at the northwest corner of the project site to approximately 435 feet above msl at the southeast corner of the project site.

Would the project:

a) Have a substantial adverse effect on a scenic vista?

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. There are no official-designated or eligible for designation State scenic highways proximate to the project site.[1] The project site fronts onto Aliso Viejo Parkway. The City of Aliso Viejo General Plan Conservation/Open Space Element does not identify Aliso Viejo Parkway as either a Viewscape Corridor or a Landscape Corridor. The project site is not designated as a scenic vista in the City of Aliso Viejo General

[1] California Scenic Highway Mapping System, www.dot.ca.gov/hq/LandArch/16_livability/scenic_highways/index.htm, accessed August 18, 2015.

Plan.[2] The Conservation/Open Space Element identifies SR-73 as a Landscape Corridor. The General Plan defines a Landscape Corridor as a corridor that traverses developed or developing areas and has been designated for special treatment to provide a pleasant driving environment as well as community enhancement.

The project site is approximately 675 feet east of SR-73. There is a difference in elevation between the transportation corridor and the project site. Motorists traveling northbound on SR-73 would be at approximately 465 feet above msl when passing the project site. The project site has a mid-point elevation of approximately 440 feet above msl. The project site would not be visible to motorists traveling northbound because the existing office buildings in the complex are located between the corridor and the project site and would therefore block views of the site.

Motorists traveling southbound on SR-73 would be at an elevation of approximately 550 above msl north of the site and descending to approximately 465 feet above msl when crossing Aliso Viejo Parkway. There are existing office buildings located north of Aliso Viejo Parkway near SR-73 ranging from approximately 475 to 500 feet above msl; these buildings are in the foreground with the project site in the background at approximately 440 feet above msl. The duration of motorists' exposure to a viewshed or scenic vista is of a very short duration. Any potential views of the project site to southbound motorists on SR-73 would be limited in visibility and time. The proposed project would be of similar massing, height, architectural design, and exterior colors as the other office buildings in the Polaris Place complex. The project would not adversely impact SR-73. No impacts would occur and no mitigation is required.

Because there are no State scenic highways within Aliso Viejo, the proposed project would not substantially damage scenic resources, including but not limited to, trees, rock outcroppings or historic buildings within a scenic highway. No impacts would occur and no mitigation is required.

c) Substantially degrade the existing visual character or quality of the site and its surroundings?

Less Than Significant Impact. The project site has been previously graded and developed into relatively flat pads. The perimeter of the project site adjacent to Aliso Viejo Parkway and residential uses is landscaped with shrubs and mature trees as part of the development of the Polaris Place complex. Additional mature trees are located off the site within the residential development to the east. Construction of the proposed project may create temporary aesthetic nuisances associated with construction activities including grading and construction and the presence of construction debris, equipment, and truck traffic. This visual impact associated with the construction of the project would be characteristic of a typical small construction site and would largely be screened by the perimeter landscaping around the Polaris Place complex. Construction at the project site would not be visible to residential uses located to the east of Polaris Way because these residences are located below the site lines of the project site. Because of the limited visibility of the construction site and because the typical construction activities required for the project, these activities would not result in a substantial degradation to the site or surrounding area. Therefore, construction activities are considered less than significant.

The proposed project would change the site from a surface parking lot associated with the existing office complex to an office building and parking structure associated with the existing office complex. The maximum structure height in the Professional Office zone is 65 feet. The proposed office building inclusive

[2] City of Aliso Viejo General Plan, Conservation/Open Space Element, page COS-17.

of rooftop mechanical screening (8 feet above the roof parapet) would be approximately 40 feet and the proposed parking structure inclusive of an elevator tower would be approximately 49 feet, both of which are lower than the permitted building height set forth in the Professional Office zoning standards. The elevator tower would be located on the southwest corner of the parking structure.

The project would allow for an office building and parking structure using the same architectural elements and materials as the other buildings located within the office complex. As previously identified in this section of the Initial Study, the NOP for the General Plan Final EIR stated that the "Implementation of the identified policies will ensure that impact will be less than significant on a project-by-project basis." As noted above, the project site is not adjacent to a landscape or view corridor nor are there views of or from the site of the Aliso and Woods Wilderness Park.

- "Goal LU-2: Promote a visually-cohesive urban form and establish connections between the urban core and outlying portions of the community." The project site is located within an existing office complex adjacent to existing development. The proposed project is consistent with the General Plan and zoning designations for the property and would range in height from approximately 40 to 49 feet in a zoning designation which permits development up to 65 feet. There are existing office buildings north of Aliso Viejo Parkway, and existing office buildings and parking structures abutting Aliso Viejo Parkway immediately west of SR-73.

- "Policy LU-2.3: Identify ways to visually identify and connect all portions of the community focusing on enhanced City gateways and unifying isolated and/or outlying areas with the rest of the City." As noted, the project site is located within an existing office complex bound by existing development and Aliso Viejo Parkway. Neither the General Plan nor the AVMC defines or has designated gateways in the City.

- "Policy LU-2.4: Encourage land uses that complement (in type, size, scale and design) the community's topography, scenic vistas, and natural resources." The proposed project would allow for an office building and a parking structure within an existing office complex. The project site is generally flat and does not contain or is near a scenic visa or natural resources. There are no existing parking structures within the office complex. However, the height of both the proposed office building and parking structure are less than permitted in the Professional Office zone. The color palette and building materials would be consistent with the existing uses within the office complex, and setbacks from Aliso Viejo Parkway would exceed AVMC requirements.

- "Goal COS-4: Identify and preserve unique landform features and scenic resources within and surrounding Aliso Viejo." The project site does not contain nor is it adjacent to unique landforms or scenic resources.

- "Policy COS-4.1: Protect scenic landform features such as hillsides, ridgelines, canyons and view corridors through designation of key areas as open space and use of other land planning tools." The project site does not contain nor is it adjacent to scenic landform features or view corridors.

- "Policy COS-4.2: Encourage and maintain high-quality architectural and landscaping designs that enhance or compliment the community's visual character." AVMC Section 15.38.080.F states that "Special care shall be taken to mitigate the visual impacts of the mass and height of parking structures. Among other design features, the decision-making authority may require that upper levels be set back from the level immediately below in order to minimize the apparent mass of the structure from the street." AVMC Section 15.38.080.G states that "Landscaping shall be

incorporated into aboveground parking structures to soften their building mass. This shall include perimeter planting, side wall planting and rooftop landscaping as deemed appropriate by the decision-making authority." Based on the height of the proposed office building and parking structure, the AVMC requires that the building and structure be set back 25 feet and 33 feet from the right-of-way, respectively, from Aliso Viejo Parkway. The office building and the parking structure are proposed to be set back 31 feet and 39 feet, respectively from Aliso Viejo Parkway.

With respect to landscaping, perimeter landscaping would be provided on the north, east, and west sides of the parking structure. A green wall would be provided on the ground level of the parking structure on the south, east, and west sides of the parking structure. Additionally, the south wall of the parking structure would have fixed blade louvers at parking levels one through four.

The proposed project would implement and/or be consistent with the goals and policies of the General Plan. The NOP for the General Plan Final EIR stated that the "Implementation of the identified policies will ensure that impact will be less than significant on a project-by-project basis." Therefore, the change associated with project implementation is considered less than significant.

d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less Than Significant Impact. The project would introduce additional light sources into an existing urban area. Existing on-site light sources include light standards located throughout the parking lot and accent lighting around the existing office buildings. Off-site light sources include roadway lighting, illuminated signage, and lighting associated with residential, office, and retail uses.

The proposed project would eliminate the existing surface parking lot light standards and replace them with new light sources, including outdoor accent lighting for the office building and lighting of the exterior, parking levels. Light for the rooftop parking would be provided. Although there are existing light standards in the complex's surface parking lots, there are no existing parking structures.

Although night lighting of the building and parking structure would be visible, the project site is located within the existing Polaris Place complex which itself is in a developed urban environment. The Polaris Place complex and project site are screened by landscaping including mature trees and shrubs along Aliso Viejo Parkway to the north and along the eastern boundary of the Polaris Place complex. Because the project site is located in an existing developed area with existing nighttime light sources and is set back from Aliso Viejo Parkway, interior lighting from the office building and perimeter lighting associated with both the office building and the parking structure, consistent with the existing lighting within the complex, would not be considered a significant impact.

The AVMC Section 15.62.070 states that "The intensity of outdoor lighting shall conform to the provisions of Appendix A of this code. Lighting shall be designed and shielded to minimize spillover onto neighboring properties. In order to assess compliance of proposed projects with lighting intensity and spillover limitations, the city may require a photometric site plan analysis to show lighting intensities within the site and light spillover beyond the site boundaries." Light "spills" when it shines beyond the identified location and illuminates an unintended area. The amount of light spill, measured in foot candles, is a function of distance and intensity of the light source.

A Parking Structure *Photometric Analysis* was prepared as a part of the Initial Study in conformance with the City's requirements to evaluate whether the lighting for the structure would adversely impact sensitive receptors proximate to the development parcel. There are existing sensitive receptors located east of the site proposed for the 4-½ level parking structure. The existing condominiums are, at the nearest point, approximately 140 feet to the east and approximately 30 feet lower in elevation from the parking structure site; only the rooftops of the units are visible (behind the landscaped tree buffer) from the office complex.

The *Photometric Analysis* included the entire exposed top level of the 4 ½ level parking structure. Lighting of each level of the structure including the rooftop parking level would be required for both security and vehicular visibility throughout the structure. Within the parking structure as well as the office building, energy efficient LED fixtures would be placed in concrete cavities formed by each floor's ceiling, horizontal concrete beams and the exterior walls of the parking structure. The placement of the lights within these cavities and directed internal to the garage level would reduce light spillage and glare outside the structure. Lighting on the rooftop would include a minimum of four light standards at approximately 20 feet above the perimeter of the parapet of the parking structure. Light standards would be located a minimum of 45 feet from the perimeter of the structure at the east side of the parking structure. Free standing light poles would use full cut-off technology to direct lighting downwards and to reduce glare. All of the parking structure openings facing the residential properties to the east would include fixed blade sound louvers. These louvers would be provided because they have an acoustical benefit; however, they also function to retain light spillage from the northeast end of the parking structure. The topography and mature landscaping would further shield the residents from the development site.

All lighting would be designed in accordance with the AVMC which requires that lighting is shielded and direct rays confined within property lines. According to the *Photometric Analysis*, there would be no spillover light onto the residential neighborhood east of the project site. The project would result in a minor change in nighttime lighting intensity and pursuant to the significance criteria set forth in this Initial Study, no significant impacts would occur.

Reflected light (glare) can be caused by sunlight or artificial light reflecting from finished surfaces such as window glass or other reflective materials. Buildings constructed of highly reflective materials from which the sun reflects at a low angle commonly cause adverse glare. The proposed office building is a low profile building, sited parallel to and with a minimum setback of 31 feet from Aliso Viejo Parkway. The office building would be approximately 10 feet below the Aliso Viejo Parkway roadway elevation and would be partially screened by existing mature trees along Aliso Viejo Parkway. Further, materials known to cause glare, such as mirrored/reflective glass would not be used. Given that the building is not located directly to the roadway and that non-reflective materials would be used, no significant glare-induced impacts would occur.

Cumulative Impacts

When evaluating cumulative aesthetic impacts, a number of factors must be considered. The cumulative study area for aesthetic impacts is the viewshed that includes the project site and surrounding areas. The context in which a project is being viewed will also influence the significance of the aesthetic impact. The contrast a project has with its surrounding environment may actually be reduced by the presence of other cumulative projects. For example, if most of an area becomes urbanized, the contrast of a project with the natural surrounding may be less since it would not stand out in contrast as much. In order for a cumulative aesthetic impact to occur, the proposed elements of the cumulative projects would need to

be seen together or in proximity to each other. If the projects were not near each other, the viewer would not perceive them in the same scene.

The project site located adjacent to Aliso Viejo Parkway within an existing office complex. There is existing adjacent development to the north, south, east, and west. There is no undeveloped property adjacent to or in the immediate vicinity or viewshed of the project site. Other potential future projects in the viewshed are anticipated to be primarily renovations or rehabilitations because the project site is bound on by existing development. Although the proposed project—combined with past, present and reasonably foreseeable future projects—has changed the visual character of the area, the proposed project is consistent with the General Plan and zoning designations for the site and no significant cumulative visual impacts are anticipated.

Mitigation Program

Standard Conditions and Requirements

AES-SC1 The lighting for the project shall be designed in accordance with the City of Aliso Viejo Municipal Code Section 15.62.070 and Title 15 Zoning Code, Appendix A.

Mitigation Measures

No mitigation is required.

4.2 Agriculture and Forestry Resources

Existing Setting

The project site is located within the developed Polaris Place office complex, and is currently developed with an office building and surface parking. The project area can be characterized as a development urban environment. There are no agricultural and forestry resources located on or proximate to the project site.

Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps pursuant to the Farmland Mapping and Monitoring Program of the California Resource Agency, to non-agricultural use?

No Impact. The State of California, Department of Conservation, Farmland Mapping and Monitoring Program, has designated the project site as Urban and Built-Up Land. This farmland category defines Urban and Built-Up Land as land developed at a density of at least 1 dwelling unit (du) per 1.5 acres, or approximately 6 structures to a 10-acre parcel. Land uses include but are not limited to residential, industrial, office/commercial, institutional, and public administration. There is no Prime Farmland, Unique Farmland, Farmland of Statewide Importance, or Farmland of Local Importance on the project site or in the project vicinity.[3] No farmland would be converted. Therefore, no impacts would occur.

b) Conflict with existing zoning for agricultural use, or a Williamson Act Contract?

No Impact. A Williamson Act contract between local governments and private land owners restricts specified parcels of land to agricultural or related open space use in return for a lower property tax assessment. The project site is not zoned for agricultural uses or is it under a Williamson Act contract. The project site is zoned Professional Office; agriculture is not a permitted use in this zone. Development of the proposed project would not conflict with either existing zoning for agricultural uses or with lands under a Williamson Act Contract. Therefore, no impacts would occur.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104 (g))?

d) Result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. The proposed project would not conflict with existing zoning for forest land, timberland, or timberland production. There is no forest or timberland on the project site, and it is not zoned for such uses. Therefore, no impact would occur.

e) Involve other changes in the existing environment which, due to their location or nature could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest land?

[3] California Important Farmland Finder, State of California Department of Conservation, http://maps.conservation.ca.gov/ciff/ciff.html, accessed August 19, 2015.

No Impact. The project site does not include or is it proximate to agricultural uses or forest land. Therefore, the project would not directly or indirectly result in the conversion of property from agricultural or timberland uses. Therefore, no impact would occur.

Cumulative Impacts

The proposed project would have no impact on agricultural and forestry resources. The General Plan does not identify any agricultural or forestry resources in the City. Therefore, no cumulative impacts would occur.

Mitigation Program

Standard Conditions and Requirements

No standard conditions or requirements are applicable to the project.

Mitigation Measures

No mitigation is required.

4.3 Air Quality

The *6 Polaris Air Quality and GHG Impact Study* was prepared by RK Engineering Group, Inc. (January 2016) as a part of this CEQA analysis. The air quality and greenhouse gas (GHG) assessment is summarized below and is included as Appendix D to this Initial Study. Emissions were estimated for the project using the California Emissions Estimator Model Version 2013.2.2 (CalEEMod).

Existing Setting

The project site is located in the South Coast Air Basin (Basin) which includes all of Orange County and parts of Los Angeles, Riverside, and San Bernardino counties. The Basin is bound on the west by the Pacific Ocean and on the east, north, and south by mountains. To the north lie the San Gabriel Mountains; to the north and east are the San Bernardino Mountains; to the southeast are the San Jacinto Mountains; and to the south are the Santa Ana Mountains. The Basin forms a low plain and the mountains channel and confines airflow that traps air pollutants. The South Coast Air Quality Management District (SCAQMD) is the air pollution control agency for the Basin. The South Coast Air Quality Management District (SCAQMD) and the California Air Resources Board (CARB) monitor air quality within the Basin.

The climatological station closest to the project site is a National Weather Service Cooperative weather station located in the City of Laguna Beach. Climatological data from the National Weather Service at this station spanning the period 1928-2013 indicates an annual average temperature of 61.1 Fahrenheit. January is the coldest month (mean minimum daily temperatures of 43.0° Fahrenheit) and August is the warmest month of the year (mean daily maximum temperatures of 78.1° Fahrenheit).

Would the project:

a) Conflict with or obstruct implementation of applicable air quality plan?

Less Than Significant Impact. SCAQMD, in coordination with the Southern California Association of Governments (SCAG), is responsible for developing, updating, and implementing the Air Quality Management Plan (AQMP) for the Basin. Air quality plans describe air pollution control strategies and measures to be implemented by a city, county, region, and/or air district. The primary purpose of an air quality plan is to bring an area that is in non-attainment with federal and State air quality standards into compliance with the requirements of the federal Clean Air Act and California Clean Air Act. Non-attainment is used to refer to an air basin where one or more ambient air quality standards are exceeded. In addition, air quality plans are developed to ensure that an area maintains a healthful level of air quality based on the National Ambient Air Quality Standards (NAASQS) and the California Ambient Air Quality Standards (CAAQS).

In 2012, the SCAQMD's governing board adopted the 2012 AQMP. The 2012 AQMP incorporates scientific and technological information and planning assumptions, including the 2012 Regional Transportation Plan/Sustainable Communities Strategies (RTP/SCS) and updated emission inventory methodologies for various source categories. In addition, the 2012 AQMP includes new and changing federal requirements, the implementation of new technology measures, and the continued development of economically sound, flexible compliance approaches. The SCAQMD is currently preparing a 2016 AQMP to demonstrate

attainment of the 2008 8-hour ozone NAAQS (75 pounds per day [lbs/day])[4] and the 2012 annual particulate matter less than 2.5 microns in diameter ($PM_{2.5}$) NAAQS (12 µg/m3[5]), as well as updates to the 80 lbs/day 8-hour ozone NAAQS, 1-hour ozone (120 lbs/day) and 24-hour $PM_{2.5}$ (35 µg/m3).

For a project to be consistent with the AQMP adopted by the SCAQMD, the pollutants emitted from the project should not exceed the SCAQMD daily threshold or cause a significant impact on air quality, or the project must already have been included in the AQMP projections. Additionally, since the AQMP is based on the local General Plan, projects that are deemed consistent with the General Plan are found to be consistent with the AQMP. Therefore, even though the project would increase the square footage of general office uses and develop a parking structure, the emissions are below the SCAQMD thresholds and would not causes a significant impact, and therefore are accounted for by the AQMP. Therefore, impacts would be less than significant.

b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?

Less Than Significant Impact.

Appendix G of the State CEQA Guidelines states that the significance criteria established by the applicable air quality management plan or air pollution control district may be relied upon to make significance determinations. The SCAQMD has established significance thresholds to assess the regional and localized impacts of project related air pollutant emissions. Table 4.3.1 and Table 4.3.3 identify the significance thresholds for construction and operations, respectively. A project with daily emission rates, risk values, or concentrations below these thresholds is generally considered to have a less than significant effect on air quality.

Short-Term Air Quality Impacts. Project construction is expected to take 12 to 18 months with the construction anticipated to begin in 2016 and be completed and operational in 2017. The CalEEMod construction timeline default was used in the analysis. Construction activities for the project would include demolition of the surface parking lot, site preparation, grading, building and parking structure construction, paving, and coating.

Project construction was analyzed as one phase. This is the conservative approach because it assumes that all construction phase activities are occurring at once. For example, during the building construction phase, the building of the parking structure and the office building would be occurring at the same time. The paving and architectural coating phases are assumed to occur concurrently.

Fugitive dust quantities were estimated by CalEEMod based on the number of pieces of equipment used during grading. As a worst-case scenario, tractors, graders, and dozers were estimated to impact three acres per eight-hour work day, and all equipment was assumed to be operating simultaneously. As identified in Mitigation Measure (MM) AQ-MM1, the maximum disturbance area for grading would be limited two acres. The proposed project assumes the export of approximately 484 cubic yards of soil.

[4] On October 1, 2015, the Environmental Protection Agency (EPA) lowered the ozone NAAQS to 70 parts per billion (ppb). However, the standard has not been adopted by CARB or air quality districts. Until CARB and air quality districts update their regulatory plans, the analysis will be conducted based on the existing 75 ppb standard.

[5] µg/m3 = micrograms per cubic meter

Consistent with the air quality modeling assumptions, AQ-MM2 requires that all export must be deposited within a 35-mile radius of the project site.

Table 4.3-1 identifies the construction emissions associated with the proposed project assuming compliance with SCAQMD standard requirements. Fugitive dust emissions would be controlled by regular watering or other dust prevention measures, as specified in the SCAQMD's Rules and Regulations. SCAQMD Rule 402 requires implementation of dust suppression techniques to prevent fugitive dust from causing a nuisance off site. Rule 403 addresses fugitive dust emissions during construction activities. VOC emissions would be greatest during architectural coating. As identified in Mitigation Measure AQ-MM3, to the extent possible, the proposed project would use paints with a volatile organic compound (VOC) content lower than SCAQMD Rule 1113 requirements in order to further lower VOC emissions. The largest amounts of carbon monoxide (CO) and oxides of nitrogen (NO_x) emissions would occur during demolition, site preparation, and grading. PM_{10} and $PM_{2.5}$ emissions would also be generated by fugitive dust from demolition, site preparation, and grading activities. As identified in Table 4.3-1, construction-related emissions would not exceed SCAQMD thresholds with compliance with SCAQMD Rules and Regulations. Therefore, construction air quality impacts would be less than significant.

Table 4.3-1: Construction Emissions (lbs/day)[a]

Activity	VOC	NO_x	CO	SO_2	PM_{10}	$PM_{2.5}$
Demolition	4.34	45.72	35.85	0.04	2.44	2.18
Site Preparation	5.14	54.71	42.09	0.04	4.24	3.37
Grading	3.92	42.07	28.87	0.04	3.02	2.38
Building Activity	4.01	31.91	26.75	0.05	3.04	2.18
Paving	1.72	16.88	13.49	0.02	1.20	0.98
Architectural Coating	54.87	2.25	2.72	0.01	0.34	0.22
Maximum[b]	56.59	54.71	42.09	0.05	4.24	3.37
SCAQMD Threshold	*75.0*	*100.0*	*550.0*	*150.0*	*150.0*	*55.0*
Exceeds Threshold	**No**	**No**	**No**	**No**	**No**	**No**

VOC: volatile organic compounds; NOx: nitrogen oxides; CO: carbon monoxide; SOx: sulfur oxides; PM10: particulate matter 10 microns or less in diameter; PM2.5: particulate matter 2.5 microns or less in diameter

a. Assumes compliance with SCAQMD Rule 402 and Rule 403.
b. Construction activities are not expected to overlap except during paving and painting, therefore, the maximum emissions represent the largest of each activity alone except for painting and paving which are combined.

Source: RK Engineering Group, Inc., January 2016.

Local Significant Thresholds (LSTs). As part of the SCAQMD's environmental justice program, attention was focused on localized effects of air quality. The LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or State ambient air quality standard, and were developed based on the ambient concentrations of that pollutant for each source receptor area (SRA). The project site is located in the Central Orange County Coastal SRA 20.

The local air quality emissions from construction were analyzed using the SCAQMD's Mass Rate Localized Significant Threshold Look-Up Tables and the methodology described in *Localized Significance Threshold Methodology* (SCAQMD, revised July 2008) to determine if the daily emissions of CO, NO_x, PM_{10}, and $PM_{2.5}$, from the project would result in a significant impact to local air quality. Residents in condominiums are

located approximately 140 feet to the east of the project site. Construction and operational emissions were compared to the SCAQMD's threshold tables; construction and operational LSTs were compared to the SCAQMD screening thresholds. **Table 4.3-2** shows that construction and operational emissions would not exceed SCAQMD LSTs. Therefore, the project would not result in significant localized construction or operational emissions.

Table 4.3-2: Localized Significance Emissions (lbs/day)

LST Pollutants[a]	CO	NO_x	PM_{10}	$PM_{2.5}$
Construction Emissions				
On-Site Emissions	42.09	54.71	4.24	3.37
SCAQMD Construction Threshold[b]	962	131	7	5
Exceeds Threshold	**No**	**No**	**No**	**No**

On-Site Emissions[c]	0.95	0.28	0.17	0.05
SCAQMD Operation Threshold[b]	962	131	2	2
Exceeds Threshold	**No**	**No**	**No**	**No**

VOC: volatile organic compounds; NOx: nitrogen oxides; CO: carbon monoxide; SOx: sulfur oxides; PM10: particulate matter 10 microns or less in diameter; PM2.5: particulate matter 2.5 microns or less in diameter

a. Reference LST Thresholds are from 2006-2008 SCAQMD Mass rate Localized Significance Thresholds for construction and operation Table C-1 for a disturbance area of 2 acres and at a receptor distance of 25 meters.
b. Source Receptor Area 20 Threshold.
c. Per LST methodology, mobile source emissions do not need to be included except for land use emissions and on-site vehicle emissions. It is estimated that approximately 5% of mobile emissions would occur on the project site.

Source: RK Engineering Group, Inc., January 2016.

Long-Term/Operational Air Quality Impacts. Long-term emissions occur over the life of a project. Operational emissions are generated by mobile and area sources. The primary source of long-term operational air pollutant emissions associated with the proposed project would be emissions from motor vehicles. Long-term operational emissions from the project also include combustion of natural gas for water and space heating, landscape maintenance equipment, and maintenance painting. Estimates of motor vehicle emissions were calculated based on trip generation, mix of vehicles, length of each trip by each type of vehicle, and emission factor (quantity of emission for each mile traveled or time spent idling). **Table 4.3-3** identifies the operational emissions associated with the proposed project. As identified in the table, operational-related emissions would not exceed SCAQMD thresholds. Therefore, long-term/operational air quality impacts would be less than significant.

Table 4.3-3: Operational Emissions (lbs/day)

Activity	VOC	NO_x	CO	SO_2	PM_{10}	$PM_{2.5}$
Area Sources	4.46	0.00	0.05	0.00	0.00	0.00
Energy Sources	0.01	0.11	0.09	0.00	0.01	0.01
Mobile Sources	1.42	3.38	16.25	0.04	3.23	0.89

c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?

Less Than Significant Impact. A significant impact air quality would occur if the project would result in a cumulative considerable net increase of any criteria pollutant for which the region is non-attainment under an applicable National or State AAQS (including releasing emissions which exceed quantitative thresholds for ozone precursors). The ozone precursors are VOC and NO_x. The Basin is in non-attainment for ozone (State and federal), PM_{10} (State), $PM_{2.5}$ (State and federal), and lead (federal, partial non-attainment in a portion of Los Angeles County). To determine whether the project would result in a cumulatively considerable increase in non-attainment criteria pollutants or exceed the quantitative thresholds for ozone precursors, project emissions may be evaluated based on the quantitative emission thresholds established by the SCAQMD in its CEQA Air Quality Handbook (SCAQMD 1993, as amended). The SCAQMD has established quantitative thresholds against which a project's emissions could be evaluated to determine if there is a potential for a significant impact (see Tables 4.3-1 and 4.3-3). In the event direct impacts from a project are less than significant, a project may still have a cumulatively considerable impact on air quality if the emissions from the project, in combination with the emissions from other proposed, or reasonably foreseeable future projects are in excess of screening levels identified above, and the project's contribution accounts for more than an insignificant proportion of the cumulative total emissions. As previously addressed, the proposed project would not result in significant construction or operational air quality impacts including non-attainment criteria pollutants. The project's contribution to regional pollutant concentrations would not be cumulatively considerable. The impact would be less than significant.

d) Expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact. Sensitive receptors are considered land uses or other types of population groups that are more sensitive to air pollution than others due to their exposure. Sensitive population groups include children, the elderly, the acutely and chronically ill, and those with cardio-respiratory diseases. According to the SCAQMD LST Methodology, a sensitive receptor is defined as a location where a sensitive individual could remain for 24 hours or longer, such as residences, hospitals, and schools. As previously noted, the closest existing sensitive receptors are the condominiums located approximately 140 feet or more to the east of the project site. The project would result in an incremental increase in pollutants when compared to current site conditions as a result of construction and operational activities.

However, all potential pollutant concentrations are below the significant thresholds established by SCAQMD. Therefore, the proposed project would have a less than significant impact.

e) Create objectionable odors affecting a substantial number of people?

Less Than Significant Impact. The SCAQMD CEQA Air Quality Handbook (SCAQMD 1993) identifies certain land uses as sources of odors. These land uses include but are not limited to agriculture, wastewater treatment plants, food processing plants, composting, landfills, and fiberglass molding. The proposed project would be an office building and parking structure and does not propose to include any odor-inducing uses on the site.

During construction-related activities, some odors (not substantial pollutant concentrations) that may be detected are those typical of construction vehicles (e.g., diesel exhaust from grading and construction equipment). These odors are a temporary short-term impact that is typical of construction projects. No other sources of objectionable odors have been identified for the proposed project. Therefore, the project would not result in significant objectionable odors.

Cumulative Impacts

A project that has a significant impact on air quality with regard to emissions of PM_{10}, $PM_{2.5}$, NO_x and/or ROGs as determined above would have a significant cumulative effect. In the event direct impacts from a project are less than significant, a project may still have a cumulatively considerable impact on air quality if the emissions from the project, in combination with the emissions from other proposed, or reasonably foreseeable future projects are in excess of thresholds, and the project's contribution accounts for more than an insignificant proportion of the cumulative total emissions. The project's potential project-specific and contributions to cumulative air quality emissions are evaluated in the Initial Study analysis provided above. The cumulative air quality impacts study area is the South Coast Air Basin. The project would not result in a cumulatively considerable net increase of any criteria pollutant. The proposed project, when combined with development in the region, would have a less than significant cumulative air quality impact because the contribution to regional pollutant concentrations would be not be cumulatively considerable.

Mitigation Program

Standard Conditions and Requirements

AQ-SC1 The Applicant shall prepare a Fugitive Dust Emissions Plan to demonstrate compliance with South Coast Air Quality Management District's (SCAQMD's) Rules 402 and 403 in order to minimize short-term emissions of dust and particulates. SCAQMD Rule 402 requires that air pollutant emissions not be a nuisance off site. SCAQMD Rule 403 requires that fugitive dust be controlled with Best Available Control Measures so that the presence of such dust does not remain visible in the atmosphere beyond the property line of the emission source. This requirement shall be included as notes on the contractor specifications. Table 1 of Rule 403 lists the Best Available Control Measures that are applicable to all construction projects.

The Fugitive Dust Emissions Plan shall identify methods to control fugitive dust through implementation of reasonable available control measures in sufficient frequencies and quantities to prevent visible emissions from crossing the property line of the proposed facility. Provisions of the plan shall include the stipulation that all areas of active grading shall be watered at least twice daily and no more than 20 acres will undergo active grading

at any one time. The plan shall also stipulate that disturbed areas at the construction site shall be treated with dust suppressants when activities have ceased for 30 days as well as two or more of the control techniques identified below:

a. Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas in active for ten days or more);

b. Water active sites at least three times daily, as necessary;

c. Cover all trucks hauling dirt, sand, soil, or other loose materials, or maintain at least two feet of freeboard in accordance with the requirements of California Vehicle Code Section 23114;

d. Sweeping and/or cleaning streets where vehicles exit construction sites;

e. Installation of wheel washers where vehicles exit disturbed surface areas onto paved roads;

f. Pave construction access roads at least 100 feet onto the site from the main road, as necessary;

g. Reduce traffic speeds on all unpaved roads to 15 miles per hour or less;

h. Pave all roads on a construction site once final elevations have been reached or at the earliest feasible time, as necessary; and

i. All stockpiles for material export shall be watered twice daily. Stockpiles that may be used for long-term on-site soil storage shall be planted and water twice daily until such plants take root, as necessary.

Mitigation Measures

The following measures are not required to mitigate significant air quality impacts. However, they are recommended in order to further reduce air quality emissions.

AQ-MM1 The Applicant shall limit ground disturbance to a maximum of 2 acres in any 8-hour day.

AQ-MM2 The Applicant shall export all cut soil to a receiving site within a 35-mile radius of the project site.

AQ-MM3 Prior to the issuance of a building permit, the Building Official shall confirm that the Building Plan and specifications stipulate that, to the degree possible, the volatile organic compound (VOC) content of architectural coatings shall be lower than required by South Coast Air Quality Management District Rule 1113.

4.4 Biological Resources

Existing Setting

The project site is located within the developed Polaris Place office complex, and is currently developed with an existing approximately 76,188-sf, 3-story office building and approximately 244 surface parking spaces. There are no native habitat areas on the site. The existing office buildings are located in the central portion of the complex with surface parking surrounding the office uses. The perimeter of the office complex is landscaped with mature trees and shrubs. Along the Aliso Viejo Parkway frontage, landscaping includes Afghan pine (*Pinus brutia 'Eldarica'*) and ornamental shrubs. Polaris Way is lined with pine trees, date palms (*Phoenix dactylifera*), and groundcover. Camphor trees (*Cinnamomum camphora*) are within the surface parking lots (east and west) of and adjacent to Polaris Way. African Sumac (*Rhus lancea*) are located throughout the office complex in the parking lot islands. Along the western boundary of the office complex, the area is densely planted pine. Eucalyptus appear to be located within the boundaries of the off-site residential development. The pine and eucalyptus trees provide a visual buffer between the office complex and off-site residential uses. Within the area proposed for development as a part of this project, there are approximately 30 African sumac in the parking lot islands.

Would the project:

a) Have a substantial effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game of U.S. Fish and Wildlife Service?

Less Than Significant. The site has been previously developed and contains an existing office building, surface parking lot, and ornamental landscaping; there are no native habitat areas on the site nor is the site adjacent to native habitat area. The site is surrounded on all sides by developed parcels. Project implementation would require the demolition of the surface parking area including the existing ornamental landscaping in the parking area, which would include approximately 30 ornamental trees. Existing trees along Aliso Creek Parkway would be protected in place where feasible. Trees along the eastern border of the office complex would not be disturbed. The proposed project includes site landscaping including groundcover, shrubs, and approximately 20 trees. The existing office building and parking area do not provide habitat for any known special status species or listed plants. Therefore, the proposed project would have no impacts in this regard.

As with all development, avian injury and mortality resulting from collisions with the proposed office building as well as the existing office buildings in the office complex could occur. Some birds are unable to detect and avoid glass and have difficulty distinguishing between actual objects and their reflected images. In addition, internal building lighting can interfere with some night-migrating birds. The frequency of bird collisions in any particular area depends on many factors, including local and migratory avian populations; densities and species composition; migration characteristics; resting and feeding patterns; habitat preferences; time of year; prevailing winds; and weather conditions.

Where existing and proposed buildings in the office complex include wide expanses of glass, there is the potential for bird collisions and mortalities. It should be noted that the site of the proposed office building and parking structure is within an existing office complex. There are no known reports of avian injury or mortality associated with the existing 2-, 3-, and 4-story office buildings within the campus. It is not expected that there will be any substantial adverse effect on sensitive species because of the lack of

suitable foraging habitat to attract such species to the area in the first place. Further, the proposed office building would use low-reflective glass on building facades. Therefore, the proposed project is not expected to have a substantial effect on avian populations. Impacts would be less than significant.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact. There is no riparian habitat or federally protected wetlands or resources on the project site.[6] The project site does not contain any water resources (e.g., streams, creeks, channels, vernal pools) nor would any of the proposed land uses potentially impact wetlands. Therefore, no impacts to riparian habitat or wetlands would result from the proposed project.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less Than Significant Impact With Mitigation. As noted in the response to 4.4(a) above, the project site is developed and located within an urban environment. The project site is not located within a known movement or travel corridor for native resident species. Project implementation would require the demolition of the surface parking area including the existing ornamental landscaping in the parking area. Larger trees along the periphery of the project site and office complex would not be removed as a part of the project. Trees within the parking area are small ornamental trees. Because of the presence of large stands of mature trees in the immediate vicinity of the site, it is expected that there would be more limited use of the small trees within the parking lot by nesting and migratory birds. Native migratory birds and their nests are protected under the provisions of the Migratory Bird Treaty Act (16 USC § 703 et seq.) and California Department of Fish and Game Code (§ 3503 et seq.). The loss of any active nests of a native bird during project construction would be considered a significant impact. BIO-MM1 requires a preconstruction survey for nesting birds with procedures should nesting birds be discovered. Implementation of Bio-MM1 would reduce potential impacts to nesting birds to a less than significant level.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

No Impact. The City does not have any policies or ordinances related to biological resources that would be applicable to the proposed project. Therefore, no impacts would occur.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

[6] U.S. Fish and Wildlife Service, *National Wetlands Inventory.* http://www.fws.gov/wetlands/Data/Mapper.html, accessed August 19, 2015.

No Impact. Please refer to the response to question 4.4(a) above. The project site is within the Central Coastal Orange County Natural Communities Conservation Plan/Habitat Conservation Plan (NCCP/HCP) area. However, the project site is not within the NCCP Reserve system. Because of the lack of habitat resources on the project site, no impacts would occur.

Cumulative Impacts

Past, present and reasonably foreseeable future projects are required to implement measures, as set forth in their respective CEQA documents, consistent with federal, State, and local regulations to avoid adverse effects to existing biological resources or to mitigate for significant impacts to these resources. The types of measures required for projects impacting protected habitat, species, and regulated resources can include avoidance, project design features, regulatory approvals, best management practices, and mitigation measures. With mitigation, the proposed Project would not cause a significant impact to biological resources. The project would be contribute a cumulative effect on biological resources including sensitive species, protected habitat, or wetland resources. Therefore, the proposed Project would not contribute to a cumulatively considerable impact.

Mitigation Program

Standard Conditions and Requirements

No standard conditions or requirements are applicable to the project.

Mitigation Measures

Compliance with BIO-MM1 would mitigate potential impacts to nesting and migratory birds to a less than significant level.

BIO-MM1 A preconstruction survey for nesting birds shall be conducted by a qualified biologist if clearing and grubbing work is conducted within the bird nesting season (typically February 15 to September 15). If an active nest is discovered, disturbance within an established buffer shall be prohibited until nesting is complete; the buffer distance shall be determined by the biologist in consultation with applicable resource agencies and in consideration of species sensitivity and existing nest site conditions. Limits of avoidance shall be demarcated with flagging or fencing. The biologist shall record the results of the recommended protective measures described above and shall submit a memo summarizing any nest avoidance measures to the City to document compliance with applicable State and federal laws pertaining to the protection of native birds.

4.5 Cultural Resources

Existing Setting

The Aliso Viejo General Plan Conservation/Open Space Element notes that the City contains cultural and historic resources within its boundaries. Prior to development of the Aliso Viejo Planned Community, which includes most of the current City, the area was extensively surveyed for significant archaeological resources. Among the sites identified, 33 are in areas currently designated as open space. The Aliso Creek and Aliso Woods areas and other portions of the City contain fossils.

The project site is located within the Polaris Place office complex, and is currently developed with an existing approximately 76,188-sf, 4-story office building, and approximately 244 surface parking spaces. The existing office building, completed in 2004, is less than 45 years of age and would not be removed as a part of the project. The area surrounding the office complex is developed.

Would the project:

a) Cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines §15064.5?

No Impact. The project site is currently developed with an office building and a surface parking lot. As previously noted, the existing office building is less than 45 years of age and would not be removed as a part of the project. According to the National Register of Historic Places and the State of California Office of Historic Preservation, there are no identified historic resources identified on or in the vicinity of the project site. Therefore, the proposed project would not impact any known historical structures.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines §15064.5?

Less Than Significant Impact with Mitigation. The likelihood of encountering archaeological resources in the project site is considered low because the project site has been extensively altered by prior ground disturbance and development. Construction activities for the project would include excavation and grading. Therefore, while low there is the potential for the project to affect a previously unidentified archaeological resource. Standard practice of the City is that if previously undocumented cultural resources are identified during earthmoving activities, the City would require that a qualified archaeologist be contacted to assess the nature and significance of the find. Therefore, to mitigate this potential impact to archaeological resources, CUL-MM1 would require that an archaeological monitor be retained should resources be identified during ground disturbing activities. Compliance with this mitigation measure would mitigate potential impacts to archaeological resources to a less than significant level.

c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less Than Significant Impact with Mitigation. As discussed above (see responses to 4.5(a) and 4.5(b)), the project site has been subject to extensive disruption. Given the disturbed condition of the site, and previous grading of the site, there are no known paleontological resources on the project site. Therefore, the project would not directly or indirectly destroy known unique paleontological resources or site or unique geologic features. However, because there is some potential for the project to affect a previously unidentified paleontological resource, implementation of Mitigation Measure CUL-MM2, which addresses

the actions to be taken should paleontological resources to be found, is required to reduce potential impacts to paleontological resources to a less than significant level.

d) Disturb any human remains, including those interred outside of formal cemeteries?

Less Than Significant Impact. No known human remains occur on site, and due to the level of past disturbance, it is not anticipated that human remains exist within the property. In the event human remains are encountered during earth removal or disturbance activities compliance with the California Health and Safety Code Section 7050.57.98 would reduce any impact associated with human remains to less than significant levels.

e) Cause a substantial adverse change in the significance of a tribal cultural resource as defined in Public Resources Code Section 21074?

Less Than Significant Impact With Mitigation. Chapter 532 Statutes of 2014 (i.e., Assembly Bill [AB] 52) requires that lead agencies evaluate a project's potential impact on "tribal cultural resources". Such resources include "[s]ites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are eligible for inclusion in the California Register of Historical Resources or included in a local register of historical resources." AB 52 also gives lead agencies the discretion to determine, based on substantial evidence, whether a resource qualifies as a "tribal cultural resource". As explained above in section (b), there are no known Native American cultural resources on or within the immediate project area.

Public Resources Code Section 21080.3.1 indicates that Native American consultation is required upon request by a California Native American Tribe who has previously requested that the lead agency provide it with notice of such projects. Native American tribes may have knowledge about cultural resources in the area and may have concerns about adverse effects from development on tribal cultural resources as defined in Public Resources Code Section 21074. Native American Tribes may have knowledge about tribal cultural resources in the area and may have concerns about adverse effects from development on tribal cultural resources. These resources may be sacred lands, traditional cultural places and resources, and archaeological sites.

In compliance with AB 52, the City has provided formal notification to California Native American tribal representatives identified by the State of California Native American Heritage Commission (NAHC) and those tribes that requested to receive notice to offer consultation with interested tribes regarding the proposed project. The following tribal representatives were contacted. Copies of these informational letters are included in Appendix E.

- Gabrieleño-Tongva Tribe, Linda Candelaria
- Gabrieleño-Tongva Nation, Sam Dunlap
- Gabrieleño-Tongva San Gabriel Band of Mission Indians, Anthony Morales
- Gabrieleño Band of Mission Indians – Kizh Nation, Andrew Salas
- Juaneño Band of Mission Indians, Sonia Johnston
- Juaneño Band of Mission Indians – Acjachemen Nation, Joyce Stanfield Perry
- Juaneño Band of Mission Indians – Acjachemen Nation, Teresa Romero
- Juaneño Band of Mission Indians – Acjachemen Nation, Chairperson

The City received correspondence from Joyce Stanfield Perry noting that they have no concerns regarding the proposed project, and from Andrew Salas requesting that the City contact the Juaneño Band of Mission Indians. The City has not received any requests for consultation.

While the likelihood of discovering tribal cultural resources is low, implementation of CUL-MM1 would reduce any potential impacts to previously undiscovered tribal cultural resources to a less than significant level.

Cumulative Impacts

Potential cumulative impacts could occur if the project—when combined with other past, present, and reasonably foreseeable future projects—would causes significant impacts based on the thresholds of significance set forth in this Initial Study. The project site does not contain any historic resources and is not expected to impact any potential archaeological or paleontological resources and measures have been identified to mitigate potential impacts to a less than significant level. As with the proposed project, other past projects, other current projects, and probable future projects would be required to comply with standard conditions of approval and mitigation measures. Despite the site-specific nature of the resources, mitigation required for the identification and protection of unknown or undocumented resources would reduce the potential for cumulative impacts. On a cumulative level, data recovered from sites in the region allow for the examination and evaluation of the diversity of human activities in the region. The proposed project would not contribute to a cumulatively considerable impact on cultural resources.

Mitigation Program

Standard Conditions and Requirements

CUL-SC1 If previous human remains are uncovered during site preparing, grading, or excavation, the archaeological monitor shall have the authority to immediately halt or divert grading in the immediate area of the discovery, and shall notify the County Coroner within 24 hours of the discovery. If the Coroner determines that the remains are not recent, the Coroner shall notify the Native American Heritage Commission. The project applicant shall comply with the procedures set forth in Section 5097.98 of the California Public Resources Code and shall consult with the most likely descendant designated by the Native American Heritage Commission to obtain recommendations on the treatment and disposition with appropriate dignity of the human remains and associated grave goods.

Mitigation Measures

CUL-MM1 would reduce potentially significant impacts to previously unknown archaeological resources to a less than significant level. CUL-MM2 would reduce potentially significant impacts to paleontological resources to a less than significant level.

CUL-MM1 Prior to the issuance of a grading permit and/or action that would permit project site disturbance (whichever occurs first), the Applicant shall provide written evidence to the City of Aliso Viejo Planning Department that the Applicant has retained a qualified archaeologist to respond on an as-needed basis to address unanticipated archaeological discoveries. The archaeologist shall attend pre-grade meetings.

In the event that archaeological materials are encountered during ground-disturbing activities including site preparation, grading, or excavation, the archaeological monitor shall have the authority to temporary halt or divert grading in the immediate area of the discovery and to evaluate the resources. If the archaeologist determines that they are unique archaeological resources as defined by Public Resources Code Section 21083.2 or a tribal cultural resource as defined by Public Resources Code Section 21074, then the archaeologist shall conduct additional excavations to avoid impacts to these resources by the development. If they are not "unique" or "tribal cultural resources" then no further mitigation would be required. Unique cultural resources shall be determined based on the criteria set forth in Public Resources Code Section 21083.2. Tribal cultural resources shall be determined based on the criteria set forth in Public Resources Code section 21074. Nothing in this mitigation measure precludes the retention of a single cross-trained observer who is qualified to monitor for both archaeological, paleontological, and tribal cultural resources.

CUL-MM2 Prior to the issuance of a grading permit and/or action that would permit project site disturbance (whichever occurs first), the Applicant shall provide written evidence to the City of Aliso Viejo Planning Department that the Applicant has retained a qualified paleontologist to respond on an as-needed basis to address unanticipated discoveries. The paleontologist shall attend pre-grade meetings.

If previously unidentified paleontological resources are uncovered during site preparation, grading, or excavation, the paleontological monitor shall have the authority to temporary halt or divert grading in the immediate area of the discovery and to evaluate the resources. If the paleontologist determines that they are unique paleontological resources as defined by Section 21083.2 of CEQA, then the paleontologist shall conduct additional excavations to avoid impacts to these resources by the development. If they are not "unique" then no further mitigation would be required. Unique cultural resources shall be determined based on the criteria set forth in Section 21083.2 of CEQA. Nothing in this mitigation measure precludes the retention of a single cross-trained observer who is qualified to monitor for both archaeological and paleontological resources.

4.6 Geology and Soils

A geotechnical investigation, *Report for Geotechnical Investigation Fluor Daniel Corporate Headquarters Engineering and Construction Offices Site "D" Aliso Viejo, California* (*Geotechnical Investigation*), was prepared by Bing Yen & Associates, Inc. (December 1997). The intent of the *Geotechnical Investigation* was to evaluate the geologic, seismic, and geotechnical conditions at the locations of the proposed construction and to provide geotechnical recommendations for the overall Polaris Place office complex. The *Geotechnical Investigation* report is provided in Appendix F.

Existing Setting

The project site is located within the developed Polaris Place office complex; the project area is also developed. Subsurface earth materials within the office complex consist of compacted fill and bedrock. The Safety Element of the City's General Plan includes an evaluation of public safety that addresses geology and soils of the City. The Aliso Viejo General Plan notes that the City, as well as all of Southern California, is located in a seismically active area that can subject City residents to earthquake and seismic-related hazards. Potential seismic hazards affecting the City include ground shaking, ground failure and liquefaction. The City would be subject to moderate to high ground shaking from a seismic event occurring on regional faults. There are no known active or potentially active faults that cross the project site.

Would the project:

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Less Than Significant Impact. The City, as well as most of Southern California, is located in a region of historic seismic activity. There are no known active fault systems located within the limits of the City including the project site.[7] According to the Alquist-Priolo Fault Zone and Seismic Hazard Zone Map, the project site is not located in a Fault Zone.[8] Therefore, no part of the City has been delineated on the Alquist-Priolo Earthquake Fault Zone. However, Aliso Viejo is located in a region that contains several significant active faults. The Newport-Inglewood fault runs north-south approximately seven miles northwest and offshore of the City. The *Geotechnical Investigation* confirms that the potential for fault ground rupture affecting the project site is considered low (page 6). Therefore, the proposed project would not result in any significant impacts in relation to a rupture of a known earthquake fault as delineated on the most recent Alquist-Priolo Earthquake Fault Map.

7 Aliso Viejo General Plan Final EIR, Section 5-5, pages 5.5-1 through 5.5-6.

8 California Department of Conservation, Alquist-Priolo Fault Zone and Seismic Hazard Map, www.conservation.ca.gov/cgs/rghm/ap, accessed January 19, 2016.

ii) Strong seismic ground shaking?

Less Than Significant Impact with Mitigation. There are active or potentially active fault systems that can affect the project area. The most significant known active faults include the Newport-Inglewood and Whittier-Elsinore fault. The Newport-Inglewood Fault Zone and the Whittier-Elsinore Fault Zone have the greatest potential for causing earthquake damage related to ground shaking at the project site. Several moderate earthquakes and numerous smaller shocks have been recorded in proximity to the Newport-Inglewood zone and have originated on the deeper faults within the zone. The potential for damage results from seismic-related events include ground shaking, ground failure, and ground displacement. The site is expected to be subject to moderate to severe ground shaking from a regional seismic event within the project life of the proposed office building and parking structure.

Strong levels of seismic ground shaking can cause damage, particularly to older and poorly constructed buildings. Construction of the office building and parking structure would be required to conform to the seismic design parameters of the 2013 California Building Code, 2013 California Electrical Code, 2013 California Mechanical Code, 2013 California Plumbing Code, 2013 California Green Building Standards Code, and the 2013 California Energy Code (or applicable adopted code at the time of plan submittal or permit issuance). Additionally, the proposed project would need to comply with the AMVC, Chapter 13.08, Grading and Excavation Code which requires a soil engineering and engineering geology report. The Grading and Excavation Code also requires that recommendations included in the reports and approved by the building official be incorporated in grading plans or specifications. GEO-MM1 requires the City to review all project plans for grading, foundation, structural, infrastructure, and all other relevant construction permits relative to the Geotechnical Investigation and Code requirements. Compliance with GEO-MM1 and applicable regulations would reduce potential impacts related to strong seismic ground shaking to a less than significant level.

iii) Seismic-related ground failure, including liquefaction?

Less Than Significant Impact. According to the Safety Policy Map in the Aliso Viejo General Plan (Figure S-1), the project site is not located within a potential liquefaction zone. Additionally, the *Geotechnical Investigation* determined that the site is not considered susceptible to liquefaction because of the lack of groundwater and the relatively fine grained nature and particle density of the fill soil (Appendix F, page 7). Therefore, any potential impacts relative to liquefaction are considered less than significant.

iv) Landslides?

No Impact. Landslides can occur if areas of steep slopes consisting of unstable soils are disturbed by ground shaking and/or heavy rainfall. According to the Safety Policy Map in the Aliso Viejo General Plan (Figure S-1), the project site is not located within a potential landslide zone. The project site is relatively flat and is not located on any mapped ancient landslides. There are no visual indications of active landslides. Therefore, no impacts related to landslides would occur.

b) Result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. The project site is currently developed with an office building and surface parking lot and consists entirely impervious surfaces with the exception of limited landscaped area. The proposed project would construct a 42,400-sf office building and multi-level parking space structure. The proposed project would include 75,900 sf of impervious surfaces and 23,100 sf of pervious surfaces (trees and landscaping). Pervious areas would be landscaped to prevent soil erosion; the remainder of the

project site would be impervious and therefore not subject to soil erosion. Therefore, the project would not result in substantial soil erosion or loss of topsoil.

Grading and earthwork activities during construction would expose soils to potential short-term erosion by wind and water. During construction the proposed project would be required to comply with the erosion and siltation control measures of the City's Grading Manual. This includes measures such as sand-bagging to reduce site runoff or hold topsoil in place prior to final grading and construction. Compliance with the City's Grading Manual would ensure that there is no increase in soil erosion or less of top soil during construction activities. Additionally, the proposed project is required to comply with the National Pollutant Discharge Elimination System (NPDES) permitting process. Construction impacts would be minimized through compliance with the Construction General Permit. The permit requires development and implementation of a Stormwater Pollution Prevention Plan (SWPPP) and monitoring plan, which must include erosion-control and sediment-control Best Management Practices (BMPs) that would meet or exceed measures required by the Construction General Permit to control potential construction-related pollutants. Erosion-control BMPs are designed to prevent erosion, whereas sediment controls are designed to trap sediment once it has been mobilized. These requirements would ensure that potential project impacts to topsoil and/or soil erosion are less than significant.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in an on-site or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Less Than Significant Impact With Mitigation. According to the *Geotechnical Investigation*, the project site contains highly expansive soils (Appendix F, page 19). Compliance with the AVMC, Chapter 13.08, Grading and Excavation Code requires that recommendations included in the soil engineering and engineering geology reports and approved by the building official be incorporated in grading plans or specifications. Compliance with GEO-MM1 and applicable regulations would reduce potential impacts related to instability including expansive soils to a less than significant level.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact. The project does not propose the use of septic tanks. The proposed project would connect to the existing sanitary sewer system for wastewater disposal. Therefore, no impacts would occur.

Cumulative Impacts

The proposed project would be constructed in compliance with all applicable codes and in accordance with the Mitigation Program set forth in this Initial Study, which are designed to reduce the exposure of people or structures to substantial risk of loss, injury, or death related to geological conditions or seismic events. Therefore, project impacts would be mitigated to a less than significant level. Current building codes and regulations would apply to all present and reasonably foreseeable future projects, which could also be subject to even more rigorous requirements. Therefore, the project—in combination with past, present, and reasonably foreseeable future projects—would not result in a cumulatively significant impact by exposing people or structures to risks related to geologic hazards, soils, or seismic conditions.

Mitigation Program

Standard Conditions and Requirements

GEO-SC1 The project is required to conform to the seismic design parameters of the 2013 California Building Code, 2013 California Electrical Code, 2013 California Mechanical Code, 2013 California Plumbing Code, 2013 California Green Building Standards Code, and the 2013 California Energy Code (or applicable adopted code at the time of plan submittal or permit issuance).

GEO-SC2 During construction activities, the project is required to comply with the City's Grading Manual, which includes erosion and siltation control measures.

GEO-SC3 The project is required to comply with the Aliso Viejo Municipal Code, Chapter 13.08, Grading and Excavation Code, which requires that recommendations included in the soil engineering and engineering geology reports and approved by the building official be incorporated in grading plans or specifications.

Mitigation Measures

Mitigation Measure GEO-MM1 would reduce potential impacts of strong seismic ground shaking as well potential impacts due to expansive soils to a less than significant impact.

GEO-MM1 Prior to the issuance of grading permits, the City shall review all project plans for grading, foundation, structural, infrastructure, and all other relevant construction permits to ensure compliance with the applicable recommendations from the *Geotechnical Investigation* and other applicable Code requirements.

4.7 Greenhouse Gas Emissions

A greenhouse gas (GHG) assessment, *6 Polaris Air Quality and GHG Impact Study*, was prepared by RK Engineering Group, Inc. (January 2016). The technical report is summarized below and provided in Appendix D.

Existing Setting and Background

The 4.037-acre project site is located within the existing Polaris Place office complex which includes five office buildings ringed by surface parking. Surrounding and nearby land uses office and business uses; retail uses; SR-73; and residences. The existing project site includes an approximately 76,188-sf, 3-story office building and surface parking.

The "greenhouse effect" is the natural process that retains heat in the troposphere, the bottom layer of the atmosphere. Greenhouse gases (GHGs) are the components of the atmosphere responsible for the greenhouse effect. The amount of heat that is retained is proportional to the concentration of GHGs in the atmosphere. As more GHGs are released into the atmosphere, GHG concentrations increase and the atmosphere retains more heat increasing the effects of climate change. The principal GHGs are carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), ozone, and water vapor. Fossil fuel consumption in the transportation sector (on-road motor vehicles, off-highway mobile sources, and aircraft) is the single largest source of GHG emissions, accounting for approximately one-half of GHG emissions globally. Industrial and commercial sources are the second largest contributors of GHG emissions with about one-fourth of total emissions.

California has passed several bills and California Governors have signed Executive Orders (EO) regarding GHGs. GHG statutes and Executive Orders include Assembly Bill (AB) 32, Senate Bill (SB) 97, SB 1368, EO S-03-05, EO S-20-06, and EO S-01-07. In 2006, the State adopted the landmark California Global Warming Solutions Act of 2006 (AB 32). Major components of AB 32 include:

- Require the monitoring and reporting of GHG emissions beginning with sources or categories of sources that contribute the most to statewide emissions.
- Requires immediate "early action" control programs on the most readily controlled GHG sources.
- Mandates that by 2020, California's GHG emissions be reduced to 1990 levels.
- Forces an overall reduction of GHG gases in California by 25 percent to 40 percent, from business as usual by 2020.
- Must complement efforts to achieve and maintain federal and State ambient air quality standards and to reduce toxic air contaminants.

Senate Bill (SB) 97, a companion bill to AB 32, directed the California Natural Resources Agency (Resources Agency) to certify and adopt guidelines for the mitigation of GHG or the effects of GHG emissions. SB 97 was the State Legislature's directive to the Resources Agency to specifically establish that GHG emissions and their impacts are appropriate subjects for CEQA analysis. In June 2008, the State of California Office of Planning and Research (OPR) issued a Technical Advisory on CEQA and Climate Change that provided an outline of the elements needed for a CEQA GHG analysis. The amendments to the CEQA Guidelines implementing SB 97 became effective on March 18, 2010.

Greenhouse Gas Emissions Significance Thresholds

Pursuant to Appendix G of the CEQA Guidelines, a project would have a potentially significant impact if it:

- Generates GHG emissions, directly or indirectly, that may have a significant impact on the environment, or
- Conflicts with an applicable plan, policy, or regulation adopted to reduce GHG emissions.

Section 15064.4 of the CEQA Guidelines specifies how significance of GHG emissions is to be evaluated. The process is broken down into quantification of project-related GHG emissions, making a determination of significance, and specification of any appropriate mitigation if impacts are found to be potentially significant. The City of Aliso Viejo currently does not have thresholds of significance for GHG emissions. However, the SCAQMD is working to establish recommended significance thresholds for GHGs for local lead agency consideration ("SCAQMD draft local agency threshold"). SCAQMD staff has recommended to the SCAQMD Board a five-tiered draft GHG threshold which includes a 3,000 metric ton of CO_2e[9] per year significance threshold for residential and commercial projects (South Coast Air Quality Management District 2010c).

Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less Than Significant Impact.

Construction Greenhouse Gas Emissions. For the purpose of this environmental analysis, project construction is expected to take 12 to 18 months with the construction beginning in 2016 and completed in 2017. Project construction was analyzed in one phase. This is the conservative approach because it assumes that each phase of construction activities for the entirety of the site is occurring at once. For example, during the building construction phase, the building of the parking structure and the office building would occur at the same time. The paving and the architectural coating phases are assumed to occur concurrently. The CalEEMod construction timeline default is used in the analysis. Construction activities for the project would consist of demolition, site preparation, on-site grading, building, paving, and architectural coating. Other parameters which are used to estimate construction emissions such as the worker and vendor trips and trip lengths utilize the CalEEMod defaults.

GHG emissions from project construction equipment and worker vehicles are shown in **Table 4.7-1**. The impacts of the construction components are identified. The total construction emissions amortized over a period of 30 years are estimated at 17.96 $MTCO_2e$ ($MTCO_2e$ refers to metric tons of CO_2 equivalent emissions) per year.

[9] CO_2e = Carbon dioxide equivalent

Table 4.7-1: Construction Greenhouse Gas Emissions

Activity	Emissions ($MTCO_2e$)[a]		
	On-site	Off-site	Total
Demolition	37.31	1.49	38.80
Site Preparation	9.28	0.45	9.73
Grading	11.30	4.14	15.44
Building Construction	279.90	175.70	455.60
Paving	15.40	1.71	17.11
Coating	2.30	1.46	3.76
Total	**355.49**	**184.95**	**540.44**
Averaged over 30 years[b]	**11.85**	**6.16**	**18.01**

a. $MTCO_2e$ = metric tons of carbon dioxide equivalents (includes carbon dioxide, methane, nitrous oxide, and/or hydroflurocarbons)
b. The construction emissions are averaged over 30 years because the average is added to the operational emissions, pursuant to SCAQMD recommendations.
Source: RK Engineering Group, Inc., January 2016.

Operational Greenhouse Gas Emissions. Operational or long-term emissions occur over the life of the project. Both mobile and area sources generate operational emissions. Area source emissions arise from consumer product usage, heaters that consume natural gas, gasoline-powered landscape equipment, gasoline service station, and architectural coatings (painting). Mobile source emissions from motor vehicles are the single largest long-term source of air pollutants from the operation of the project. Small amounts of emissions would also occur from area sources such as the consumption of natural gas for heating, hearths, from landscaping emissions, and consumer product usage. The operational emissions were estimated using CalEEMod. The project includes a requirement to use paints, to the degree feasible, with a VOC content lower than the SCAQMD Rule 1113 requirements in order to further lower VOC emissions.

Table 4.7-2 identifies the GHG emissions from operation of the project. The operational emissions for the project are 1,072.26 $MTCO_2e$ per year. The emissions do not exceed the SCAQMD's 3,000 threshold. Therefore, the project would not result in significant GHG emissions.

Table 4.7-2: Operational Greenhouse Gas Emissions

Emission Source	Emissions ($MTCO_2e$)[a]
Area Source	0.01
Energy Source	530.49
Mobile Source	453.59
Waste	17.94
Water	52.27
Construction (averaged over 30 years)[b]	18.01
Total Emissions	**1,072.31**
SCAQMD Threshold	*3,000*
Exceeds Threshold	**No**

a. $MTCO_2e$ = metric tons of carbon dioxide equivalents (includes carbon dioxide, methane, nitrous oxide, and/or hydroflurocarbons)
b. The construction emissions are averaged over 30 years because the average is added to the operational emissions, pursuant to SCAQMD recommendations.
Source: RK Engineering Group, Inc., January 2016.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less Than Significant Impact. The project incorporates features that would minimize GHG emissions. Although the project would generate GHG emissions, these emissions would be less than cumulatively considerable. With the implementation of energy efficient programs, as well as State and federal vehicle emissions reduction programs, the proposed project would be consistent with the goals of AB 32 and the City of Aliso Viejo. The core mandate of AB 32 is that Statewide GHG emissions in 2020 be equal to 1990 levels. AB 32 is anticipated to secure emission reductions through a variety of mechanisms, such as increasing energy efficiency and introducing more renewable energy sources. CARB has already begun to adopt strategies to reduce GHG emissions under AB 32. Strategies included in the Climate Change Scoping Plan, such as SPM-2 (California Light-Duty Vehicle GHG Standards), SPM-3 (Energy Efficiency), SPM-4 (renewables Portfolio Standard), SPM-5 (Low Carbon Fuel Standard), SPM-7 (Vehicle Efficiency Measures), and SPM-10 (heavy/Medium-Duty Vehicles), while applicable to land use projects, are generally not under the control of local agencies. Nonetheless, emission reductions from these strategies are anticipated to occur as CARB adopts and implements regulations under AB 32. Therefore, the project is consistent with AB 32. Therefore, the project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing emissions of greenhouse gases and the project would have a less than significant impact.

Cumulative Impacts

As addressed in this Initial Study, because of the global nature of the climate change problem, most projects will not generate GHG emissions that individually will cause a significant impact on global climate change. Therefore, the analysis of a project's GHG impacts is typically not considered individually, but is analyzed against the GHG emissions of existing and proposed projects within the region, State, and ultimately against global emissions and how the emissions can cumulatively affect global climate change. This concept is supported in the various Attorney General, State of California Office of Planning and Research, and SCAQMD publications. The project would have a less than significant cumulative GHG impact because the contribution to emissions would be not be cumulatively considerable.

Mitigation Program

Standard Conditions and Requirements

No standard conditions or requirements are applicable to the project.

Mitigation Measures

No mitigation is required.

4.8 Hazards and Hazardous Materials

PSI prepared a *Phase I Environmental Site Assessment, Merit Companies Office Building 6 Polaris Way Aliso Viejo, California 92656* (*Phase I ESA*) (January 2013). The purpose of the *Phase I ESA* was to review existing environmental conditions and to evaluate potential environmental hazards that may exist at the project site as a result of present and historical on-site and adjacent land uses. An EDR Radius Map Report was prepared in August 2015. The purpose of the 2015 report was to search available environmental records associated with the project site. Both reports are summarized below and provided in Appendix G.

Existing Setting

The project site is located within the developed Polaris Place office complex, and is currently developed with an existing approximately 76,188-sf, 3-story office building and approximately 244 surface parking spaces. The office complex property has been developed as an office complex since the late 1990s.

Would the project:

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less Than Significant Impact. Exposure of the public or the environment to hazardous materials can occur through transportation accidents; environmentally unsound disposal methods; improper handling of hazardous materials or hazardous wastes (particularly by untrained personnel); and/or emergencies, such as explosions or fires. The severity of these potential effects varies by type of activity, concentration and/or type of hazardous materials or wastes, and proximity to sensitive receptors.

Construction of the proposed project is not anticipated to involve transport, use, creation or disposal of hazardous materials. Should any contaminated soils or other hazardous materials be discovered and be removed from the project site, the soils/material can be transported only by a licensed hazardous waste hauler in covered containment devices in compliance with all applicable State and federal requirements.

The project is an office building and parking structure. It would not emit hazardous emissions or involve hazardous or acutely hazardous materials, substances, or waste. However, the proposed project could involve the use of materials associated with routine maintenance of the property, such as janitorial supplies for cleaning purposes and/or herbicides and pesticides for landscaping such as that currently used within the office complex. On the local level, the Fire Department routinely provides inspections to ensure the safe storage, management, and disposal of any hazardous materials in accordance with the federal, State, and local regulations. Impacts associated with the transport, use, or disposal of hazardous materials would be less than significant.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less Than Significant Impact. The proposed project would not be a generator of or facilitate the generation of hazardous materials. No anticipated significant hazardous materials would be stored or handled on-site associated with the operation of the project. If there are future users that require the handling of hazardous materials, an administrative use permit may be appropriate, and subsequent environmental review would be applicable to those users. The storage, use, handling, and disposal of any hazardous materials (such as paints and solvents) that might be stored on the site during construction are

addressed by federal, State, and local laws, regulations and programs that govern the use, transport and/or disposal of hazardous materials. According to the EDR, the project site is not listed on any databases and there is no known history that would cause environmental hazards on the project site. Therefore, it is unlikely that demolition and grading activities would involve the release of hazardous materials into the environment. Compliance with local, State and federal laws and regulations, including, but not limited to, the Resources Conservation and Recovery Act, Toxic Substances Control Act, Comprehensive Environmental Response, Compensation and Liability Act, and Hazardous Materials Transportation Act would reduce the risk of hazardous material incidents to a less than significant impact. Therefore, the project would not create a significant hazard to the public or to the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.

c) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment?

No Impact. According to the EDR, the project site is not listed in any of the databases searched by EDR. The location of the project site is not included on a list of hazardous materials sites compiled pursuant to *California Government Code* Section 65962.5. Therefore, the project would not result in any impacts relative to hazardous material sites.

d) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

No Impact. The project site is not located within one-quarter mile of an existing school. Therefore, the project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. Therefore, no impacts would occur.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

No Impact. The proposed project is not located within two miles of a public airport or within an adopted airport land use plan. Therefore, the project would not result in a safety hazard for people residing or working in the project area and no impacts would occur.

f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

No Impact. The proposed project is not located within the vicinity of a private airstrip. Therefore, the project would not result in any safety hazards for people residing or working in the project area and no impacts would occur.

g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

No Impact. The City of Aliso Viejo as an Emergency Operations Plan, outlining the City's response to extraordinary emergency situations associated with natural disasters, technological incidents, and national security emergencies. The General Plan identifies evacuation routes within the City to be used in

the event of a major emergency that requires evacuation of all or part of Aliso Viejo. The project site is not located along one of the City's designated evacuation routes. Therefore, the project would not result in any impacts to an adopted emergency response plan or emergency evacuation plan.

h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed into wildlands?

No Impact. The project site is located within a developed area of the City of Aliso Viejo. According to the Safety Policy Map in the Aliso Viejo General Plan (Figure S-1), the project site is not located within a Special Fire Protection Area or a Very High Fire Hazard Severity Zone. The project site is not located within, adjacent, or in close proximity to wildlands. Therefore, no impacts would occur.

Cumulative Impacts

Impacts associated with hazardous materials are often site-specific and localized. No impacts are expected associated with the proposed project. Therefore, the proposed project would not result in incremental effects to hazards or hazardous materials that could be compounded or increased when considered together with similar effects from other past, present, and reasonably foreseeable probable future projects. The proposed project would not result in cumulatively considerable impacts to or from hazards or hazardous materials.

Mitigation Program

Standard Conditions and Requirements

No standard conditions are applicable to the project.

Mitigation Measures

No mitigation is required.

4.9 Hydrology and Water Quality

LPA, Inc. prepared a *Water Quality Management Plan (WQMP)* (August 2015). The *WQMP* is summarized below and can be found in Appendix H.

Existing Setting

The project site is currently developed with an approximately 76,188-sf, 3-story office building and approximately 244 surface parking spaces within an existing office complex. The area in the vicinity of the project site is developed. The site slightly slopes towards the southeast. Runoff currently drains as surface flow to surrounding streets, toward valley gutters, and to existing catch basins located approximately 500 feet south of the site.

Would the project:

a) Violate any water quality standards or waste discharge requirements?

f) Otherwise substantially degrade water quality?

No Impact. Due to soil disturbance associated with construction, there is a potential for sediment to be transported from the construction site into receiving waters such as rivers and streams. Other potential pollutants include metals (vehicles and heavy equipment). In compliance with the National Pollutant Discharge Elimination System (NPDES) regulations, the State of California requires that any construction activity disturbing one acre or more of soil comply with the General Construction Activity Storm Water Permit (Water Quality Order 99-08-DWQ). To obtain authorization for proposed storm water discharges pursuant to this permit, the landowner (discharger) is required to submit a Notice of Intent to the State Water Resources Control Board and implement Best Management Practices (BMPs) during construction activities. Dischargers are required to implement Best Available Technology Economically Achievable and Best Conventional Pollutant Control Technology to reduce or eliminate storm water pollution. The purpose of implementing BMPs is to prevent all construction pollutants from contacting storm water and to keep all erosion projects from moving off-site into receiving waters. The proposed project is required to obtain a General Construction Permit because it would disturb one acre or more of soil during the construction phase. In addition, the Applicant would be required to submit and obtain approval of a WQMP as required by the City of Aliso Viejo. BMPs to be included in the proposed project are listed below.

Non-Structural Source Control BMPs

- Education for Property Owners, Tenants and Occupants
- Activity Restrictions
- Common Area Landscape Management
- SMP Maintenance
- Common Area Litter Control
- Employee Training
- Common Area Catch Basin Inspection
- Street Sweeping Private Streets and Parking Lots

Structural Source Control BMPs

- Provide storm drain system stenciling and signage

- Use efficient irrigation systems and landscape design, water conservation, smart controllers and source control

The southern portion of Orange County which includes the City of Aliso Viejo is under the jurisdiction of the San Diego Regional Water Quality Control Board (SDRWQCB). As noted above, runoff currently drains as surface flow to surrounding streets, toward valley gutters, and to existing catch basins located approximately 500 feet south of the site.

As with existing uses within the office complex, with development of the project, waste generated at the site can include car oil, debris, suspended solids, nutrients, heavy metals, pathogens, pesticides and toxic organic compounds. The area around the buildings and the courtyard area between the office building and the parking structure would include concrete sidewalks. The remaining areas would be landscaped.

The post-developed conditions of the project site would be over 76 percent impervious surfaces, with the remaining 23.3 percent consisting of pervious landscaping. The new buildings are proposed to tie into the existing curbs/roadways and include private water, sewer and storm drain upgrades to capture and treat all runoff. Drain inlets would catch and convey all runoff to an underground storm drain system. Roof drains from the office building and parking structure would also directly connect to the underground storm drain system. All runoff would flow to a proprietary biotreatment unit that would treat the required "first flush" storm water and bypass the remaining peak flow. The runoff would then be discharged into detention takes with pumps to control outflow from the site. The detention tanks would be located directly downstream from the proprietary biotreatment unit to ensure that the South Orange County hydromodification criteria are met. A new underground storm drain would convey the water to an outlet structure which would then be pumped out the outlet structure and routed to the existing on-site curb and gutter. Water would then flow via curb and gutter to the existing catch basin located approximately 450 feet south of the proposed outlet structure.

Hydromodification refers to changes in the magnitude and frequency of stream flows and its associated sediment load due to urbanization or other changes in the watershed land use and hydrology and the resulting impacts on receiving channels, such as erosion, sedimentation, and potentially degradation of in-stream habitat. The HMP criteria for South Orange County are designed to manage the increase in runoff discharge rates and durations from all Priority Development Projects (PDPs) and they apply to all PDPs. The HMP criteria states that all PDPs must ensure that post-project runoff flow rates and durations for the PDP would not exceed pre-development, naturally occurring, runoff flow rates and durations by more than ten percent of the time, from ten percent of the two-year runoff event up to the ten-year runoff event.

All new development is required to comply with existing water quality standards and waste discharge regulations set forth by the SDWQCB. The proposed project would comply with these regulations. Waste discharges are to be connected to the public wastewater system and conveyed to the Regional Treatment Plant for treatment. Therefore, the project would not violate any water quality standards or waste discharge requirements.

b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?

No Impact. The project site is a developed property with an office building and surface parking. Because the site is impervious it does not contribute to groundwater recharge. Additionally, the soils at the site have high clay content and are most likely difficult to infiltrate. The project site does not support surface recharge of groundwater and would have no effect on existing groundwater supplies. Therefore, the proposed project would not deplete groundwater supplies or interfere substantially with groundwater recharge. Therefore, no impact would occur.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?

Less Than Significant Impact. The proposed project would not result in a significant change to the drainage pattern of the site. The project would not involve the alteration of the course of a stream or river. As previously noted, runoff from the site drains as surface flow to the surrounding street, toward valley-gutters, and to existing catch basins located south of the site.

After development, all runoff would enter drain inlets and conveyed to an underground storm drain system. Underground detention in detention tanks would have pumps to control outflow from the site. A new underground storm drain pipe would convey the site discharge to an outlet structure that would route the flow to the existing curb and gutter on site. Water would then flow to the existing catch basin south of the site. The post-developed conditions of the project site would be over 76 percent impervious surfaces, with the remaining 23.3 percent consisting of pervious landscaping. There would be no substantial changes in the drainage patterns, and during both construction and operation, the project would include both structural and non-structural BMPs to prevent substantial erosion and water quality impacts. Therefore, no significant impacts would occur.

d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

No Impact. As discussed in the response to checklist question 4.9(c), the proposed project would not substantially alter the existing drainage pattern of the site or area, or alter the course of a stream or a river. The project does not proposed any alterations to the existing or planned drainage pattern of the site or area in Aliso Viejo, including through the alteration of the course of an stream, or river, or substantially increase the rate or amount of surface runoff In a manner which would result in flooding on or off-site site . Therefore, no impacts would occur.

e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

No Impact. The City is primarily built out and contains an existing storm water drainage system. The project is consistent with the capacity of the existing storm drain system in the City. The drainage plan includes detention basins with pumps in order to control outflow from the site, to ensure that runoff water would not exceed the capacity of the storm drain system. During construction, the construction plans would be reviewed along with supporting hydrology reports and calculations and the project would be required to comply with NPDES requirements to ensure that any potential impacts associated with runoff and water quality during grading and construction of the project would be reduced to a level of less than significant. Therefore, no impacts associated with runoff are anticipated to occur as a result of the proposed project.

g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?

No Impact. No housing is proposed as a part of the project. According to the Safety Policy Map in the Aliso Viejo General Plan (Figure S-1), the project site is not located within the 100-year hazard flood zone area. The Flood Insurance Rate Map (FIRM) for the project site shows that it is located in Zone X. Zone X refers to areas determined to be outside the 0.2 percent annual change floodplain.[10] Therefore, no impacts would occur.

i) Expose people to structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

No Impact. According to the Safety Policy Map in the Aliso Viejo General Plan (Figure S-1), the project is not located in an area that would expose people or structures to flooding, including flooding as a result of a levee or dam, since there are no levees or dams in close enough vicinity to impact the project site. Additionally, the City has emergency procedures, including established evacuation routes, identified emergency shelter facilities, and water supplies, in the event of a major event (e.g., flooding, earthquake, evacuation plans) that would further reduce the potential for the project to experience a significant impact related to flooding. Therefore, no impacts relative to flooding would occur as a result of the proposed project.

j) Inundation by seiche, tsunami, or mudflow?

No Impact. Because the project site is located approximately 4.5 miles from the Pacific Ocean, is on the inland side of the San Joaquin Hills, and is approximately 440 feet higher than sea level, the project site would not experience impacts associated with inundation by tsunami. According to the California Geological Survey, the project site is not located within an area at risk of tsunami inundation.[11] It is also unlikely that the site could be affected by a seiche, which occur in large bodies of water such as a lake, because there are no larger water bodies proximate to the site. Aliso Creek is west and southwest of the project site and is at a lower elevation by approximately 200 feet. Lastly, the project site is flat and in a developed area; no inundation by mudflow would be expected. Therefore, no impacts would occur.

Cumulative Impacts

With implementation of the Mitigation Program identified below, project-specific impacts would be reduced to a less than significant level. Buildout of the proposed project, in combination with present and reasonably foreseeable future development that would occur within the watershed, would involve construction activities, new development from which runoff would discharge into waterways, potential increases in storm water runoff from new imperious surfaces, and a potential reduction in groundwater recharge areas. Construction of new development within the watershed could result in the erosion of soil,

[10] FEMA. Flood Insurance Rate Map, Orange County, California and Incorporated Areas, 2009. https://msc.fema.gov/portal, accessed on January 20, 2016.

[11] California Geologic Survey. Tsunami Inundation Maps, Orange. www.conservation.ca.gov/cgs/geologic_hazards/Tsunami/Inundation_Maps/Orange, accessed January 21, 2016.

thereby cumulatively impacting water quality within the watershed. In addition, the increase in impermeable surfaces and more intensive land uses within the watershed resulting from future development may also adversely affect water quality by increasing the amount of storm water runoff and common urban contaminants entering the storm drain system. However, new development would be required to comply with existing regulations regarding construction and operational practices that minimize risks of erosion and runoff. Compliance with requirements would minimize degradation of water quality at individual project construction sites. As such, no significant cumulative impacts are anticipated.

Mitigation Program

Standard Conditions and Requirements

HYDRO-SC1 The project must comply with the National Pollutant Discharge Elimination System (NPDES) permitting process. A Stormwater Pollution Prevention Plan (SWPPP) and Notice of Intent (NOI) to comply with the General Permit for Construction Activities shall be prepared to comply with the NPDES requirements. The SWPPP shall be reviewed by the Public Works Department prior to being submitted to the State Water Resources Control Board (SWRCB) for approval and shall be made a part of the construction program. The City of Aliso Viejo shall maintain a copy of the NOI and application check as proof of filing with the SWRCB. The SWPPP shall detail measures and practices that shall be in effect during construction to preclude the project's impact on water quality.

HYDRO-SC2 Prior to issuance of a Grading Permit, the Owner/Developer shall submit to the Director of Public Works for review and approval a final Water Quality Management Plan (WQMP) consistent with the preliminary WQMP submitted to the City of Aliso Viejo in September 2015 to address water quality impacts of the project which is consistent with NPDES Permit (R9-2013-0001 as amended by R9-2015-001) and the current Orange County Model WQMP at the time of plan submittal. The final WQMP shall address low impact development (LID) and hydromodification requirements. The management regime recommended in this WQMP shall be the governing document for long-term maintenance of water quality features included in the project. The City shall periodically monitor adherence to plans and management guidelines contained in the WQMP, and may initiate action as necessary to ensure compliance by the Owner/Developer with all conditions established by the final WQMP.

Mitigation Measures

No mitigation is required.

4.10 Land Use and Planning

Existing Setting

The 4.037-acre site is located at 6 Polaris Way in the City of Aliso Viejo. The site is located within the Polaris Place office complex which includes five campus-style office buildings ringed by surface parking for the Polaris Place complex. The approximately 22.5-acre office complex is generally bound by Aliso Viejo Parkway to the north; SR-73 (San Joaquin Hills Transportation Corridor) to the southwest/west; and condominium and townhome developments to the west and southwest. The 4.037-acre development parcel includes an existing approximately 76,188-sf, 3-story office building located at 1 Polaris Way and approximately 244 surface parking spaces. The existing office building would remain.

Would the project:

a) Physically divide an established community?

No Impact. The project site is currently developed with an office building and a surface parking lot. The project would allow for the development of a 42,400-sf office building and a 423 space parking structure. The existing office building would not be affected by the project. The project would allow for additional office development within an existing office campus and would not physically divide an established community. Therefore, no impacts would occur.

b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but no limited to, the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

No Impact. This Initial Study evaluates the potential impacts associated with the proposed project. All impacts can be mitigated to a less than significant level.

The General Plan land use designation and zoning designation for the site is Professional Office. The Professional Office land use designation permits general and professional office buildings such as that proposed by the project and that currently exists within the office complex. This land use designation has a maximum Floor Area Ratio (FAR) of 1.5. The project would have a FAR of 1.02. The project would comply with the development standards for the Professional Office District. The proposed project is consistent with the General Plan and zoning designations for the property.

As previously addressed in the Project Description, the applicant is requesting an Exception Permit pursuant to AVMC Section 15.38.120B for a 7.6 percent, or 36 parking space reduction. The proposed parking structure would provide 423 parking spaces. Parking within the existing Polaris Place five-building office complex is currently provided as a common amenity as set forth in a recorded Covenant Document that affects existing parking in the entirety of the Polaris Place office development. The Covenant Document requires that sufficient additional parking spaces be provided to replace all parking displaced by the construction of the proposed office building.

There are 1,701 parking spaces provided for the existing Polaris Place office complex. Based on the City's current parking requirements, 1,732 parking spaces would be required for the existing Polaris Place five-building office complex, representing an existing 31 parking space deficit unrelated to the proposed project. The project site includes 244 surface parking spaces. These parking spaces are provided, under the Covenant Document, as a common amenity to the Polaris Place office complex. Of the 244 spaces, 229 spaces would be displaced to allow for the construction of the office building and the parking

structure, for a net increase of 194 spaces. Based on the City's parking requirement of 1 space per 250 sf of gross floor area, the proposed office building requires 170 parking spaces. The addition of the proposed office building would increase the total required parking for the Polaris Place complex to 1,902 parking spaces. The net increase of 194 spaces would provide a total of 1,895 parking spaces for the Polaris Place complex. Implementation of the proposed project would decrease the complex-wide parking stall deficiency from 31 to 7 spaces.

c) Conflict with any applicable habitat conservation plan or natural community conservation plan?

No Impact. The project site is within the Central Coastal Orange County Natural Communities Conservation Plan/Habitat Conservation Plan (NCCP/HCP) area. However, the project site is not within the NCCP Reserve system nor does the site contain any habitat resources. The project site is currently developed and is bordered by existing urban development. Therefore, no impacts would occur.

Cumulative Impacts

The proposed project is consistent with the General Plan and zoning designations and the Initial Study finds that all potential environmental impacts of the project would either be less than significant or can be mitigated to a level that is considered less than significant. City growth would be subject to review for consistency with adopted land use plans and policies by the City, in accordance with the requirements of CEQA, the State Zoning and Planning Law, and the State Subdivision Map Act, all of which require findings of plan and policy consistency prior to approval of entitlements for development. Therefore, no significant cumulative impacts associated plans and policies would occur.

Mitigation Program

Standard Conditions and Requirements

No standard conditions are applicable to the project.

Mitigation Measures

No mitigation is required.

4.11 Mineral Resources

Existing Setting

The 4.037-acre site is located at 6 Polaris Way in the City of Aliso Viejo. The site is located within the Polaris Place office complex which includes five campus-style office buildings ringed by surface parking for the Polaris Place complex. The site is not used for the extraction of mineral resources.

Would the project:

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No Impact. The proposed project does not involve any use that would result in any impacts to mineral resources. The project site is currently developed and the General Plan notes that the site is not located within a known and/or State-designated Mineral Resource Zone. Therefore, there would be no loss of a known mineral resource, and no impact would occur.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. The City's General Plan does not delineate any locally important mineral resource in the project area. Therefore, no impact would occur.

Cumulative Impacts

The analysis of potential impacts indicated that no significant impacts would result from the proposed project. The General Plan Final EIR's NOP notes that the majority of area that contains classified mineral resources is in areas of the City where the General Plan does not permit future development. The NOP identifies that the other areas are unlikely to have mineral resources or there is insufficient information to identify their potential presence. The Final EIR NOP concluded that impacts were less than significant. As a result, no cumulative impacts related to mineral resources would occur.

Mitigation Program

Standard Conditions and Requirements

No standard conditions are applicable to the project.

Mitigation Measures

No mitigation is required.

4.12 Noise

A *Noise Impact Study, 6 Polaris, City of Aliso Viejo, California* was prepared by RK Engineering Group, Inc. (February 2016). The *Noise Impact Study* is summarized below and provided in Appendix I.

Existing Setting

The project site is located within the developed Polaris Place office complex; the site includes an existing 3-story office building and approximately 244 surface parking spaces. The area surrounding the project site is fully developed. Noise measurements taken along the eastern boundary of the property adjacent to the off-site condominiums indicate that noise levels range from 59.3 to 62.6 dBA[12] Leq[13] during daytime hours. The site is exposed to typical traffic noise from the local roadway network. Noise levels vary depending on distance from centerline of roadway, time of day, and traffic speeds and activities.

Would the project:

a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinances, or applicable standards of other agencies?

c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

d) A substantial temporary or periodic increase in ambient noise level in the project vicinity about levels existing without the project?

Less Than Significant Impact. The City of Aliso Viejo's noise regulations and standards are included in the Noise Element of the City's General Plan and the AVMC. The Noise Element was used to evaluate the roadway noise impacts to and from the project site. The Noise Element outlines Noise Zones and a Land Use Compatibility Matrix based on land use. Zone A refers to a normally acceptable condition, Zone B refers to a conditionally acceptable condition, Zone C refers to a normally unacceptable condition, and Zone D refers to a clearly unacceptable condition. The site is located in Zone B. Development in Zone B must meet City and State Title 24 noise standards. All project proponents must demonstrate that noise standards have been met prior to human occupation of a building. The City's stationary noise limits are in Section 8.12.050A of the AVMC. The City's allowable hours of construction are in Section 8.12.070E of the AVMC.

The City of Aliso Viejo General Plan Noise Element defines the Community Noise Exposure Levels (CNEL) for land uses within the City. The Noise/Land Use Compatibility Matrix specifies that normally acceptable noise levels for residential development be below 60 dBA CNEL. Normally acceptable noise levels are based on the assumption that any building involved meet conventional Title 24 construction standards.

[12] dBA – A-weighted decibels

[13] Several rating scales (or noise "metrics") exist to analyze effects of noise on a community. These scales include the equivalent noise level (L_{eq}), the community noise equivalent level (CNEL), and the day-night average sound level (L_{dn}). Average noise levels over a period of minutes or hours are usually expressed as dBA L_{eq}, which is the equivalent noise level for that period of time.

New residential construction may be conditionally acceptable in Zone B if noise levels are below 70 dBA CNEL, provided that noise reduction measures are identified and included in the project design.

The City has implemented a stationary noise limit for offending stationary noise sources (e.g., loading/unloading, condenser units, compressors, blowers, etc.), in Section 8.12.050A of the AVMC. The exterior residential noise standards for the City require the noise level be below 55 dBA from 7:00 AM to 10:00 PM and below 50 dBA from 10:00 PM to 7:00 AM. The interior residential noise standards for the City (Section 8.12.060A of the AVMC) require that noise level be below 55 dBA from 7:00 AM to 10:00 PM and below 45 dBA from 10:00 PM to 7:00 AM.

Section 8.12.070 of the AVMC has an exemption for noise created during construction during permissible hours of operation. The AVMC defines exempt construction noise as follows: "Noise sources associated with construction, repair, remodeling, or grading of any real property, provided the activities do not take place between the hours of 8:00 pm and 7:00 am on weekdays, and 8:00 pm and 8:00 am on Saturday, or at any time on Sunday or a federal holiday."

Construction Noise

While the AVMC limits noise-generating construction activities to daytime weekdays and Saturdays, construction noise can result in a substantial temporary increase in ambient noise levels to noise sensitive receptors. However, neither the City of Aliso Viejo nor Orange County has quantitative threshold standards for evaluation of construction noise levels under CEQA given that construction activities during certain times of the day are exempt under the AVMC. Therefore, until such time as the City specifically establishes thresholds for evaluation of construction noise levels under CEQA, as shown in Table 4.1.2-1 construction noise threshold standards used by the Federal Transit Administration, Los Angeles County, and the City of San Diego were used to measure the threshold of significance for construction noise impacts. The City's residential stationary noise standard is also shown as reference only. The closest off-site receptors to the office complex include a business park to the north of Aliso Viejo Parkway and residences (sensitive receptor) to the east and south. It is estimated that, on average, construction activity would take place approximately 50 feet from the nearest property line of the Polaris Park office complex. An averaged distance within the residential development is approximately 300 feet.

Construction noise levels would vary depending the type of construction activity, the size and topographical features of the active construction zone, the duration of the work day, and the types of equipment employed. Different construction activities have their own noise characteristics; some would have higher continuous noise levels than others, and some have high intensity-short duration noise events but lower average levels.

The construction noise analysis uses the Federal Highway Administration (FHWA) Roadway Construction Noise Model, together with several key construction parameters, including distance to the sensitive receiver, topography, equipment usage, and percentage of usage. Construction noise is typically loudest during the grading, concrete, and building phases of construction. The project's noise impacts were analyzed based on two heavy pieces of equipment (one excavator and one grader) operating simultaneously during the grading phase, which is expected to generate the highest noise levels and represent the worst case. It is estimated that, on average, construction activity would take place approximately 300 feet from the nearest residential uses. The estimated off-site exterior noise levels during construction at the nearest residential uses are shown in **Table 4.12-1**.

Although the single event exposure may result in higher intermittent annoyance noise levels, the effect of the long-term ambient noise levels would be small when averaged over an extended time period. The estimated noise level during construction would be 51.4 dBA L_{eq} at 300 feet from the noise source to the nearest residential use. Noise levels are not expected to exceed the City's residential noise standard of 55 dBA at the nearest sensitive off-site receivers during typical daytime construction activity. The increase in ambient noise levels due to construction is expected to be less than significant to the nearest off-site sensitive receptors. Based on the noise impact analysis and with compliance with established guidelines for construction noise, the proposed project would not result in a significant noise impact.

Table 4.12-1: Projected Exterior Noise Levels at Residences East of the Project Site (dBA)

Source	Distance from Reference Source to Sensitive Receiver (feet)[d]	L_{eq} or (8-hour L_{eq})	L_{max} or (1-hour L_{eq})
Construction Activity[a]	300	62.9	66.9
Shielding Value[b]	300	-11.5	-11.5
Adjusted Noise Level[c]	300	51.4	55.4
Federal Transit Administration Construction Noise Criteria[e]	-	80	90
County of Los Angeles Construction Noise Criteria[f]	-	-	80
City of San Diego Construction Noise Criteria[g]	-	75	-
City of Aliso Viejo Stationary Noise Criteria[h]	-	55	75
Construction Activity Exceeds Established Thresholds?	-	No	No

Notes:

a. Nose levels are expected to be the loudest during the grading phase of construction. Construction activity includes the noise impacts from the following pieces of heavy equipment operating simultaneously: (1) Excavator and (1) Grader. Noise levels are references from the FHWA Construction Noise Model.
b. Shielding includes the attenuation effects from the vertical change in elevation between the construction site and the residential homes and the effects of existing vegetation which is represented using soft-site conditions.
c. The adjusted noise level results from the difference in the projected construction noise level at 300 feet and the shielding effects from topography and vegetation.
d. Construction activity is expected to take place at different locations on-site throughout the construction process. To estimate approximately distance of a noise source to the nearest sensitive receptor, the average distance to the nearest property line is used. For impacts to the residential property, the noise source is shown to be closer to the residential uses, near the center of the parking structure, to provide a more conservative analysis.
e. The FTA provides general assessment criteria for evaluating noise impacts during construction activities at residential land uses. For purposes of this analysis, the 1-hour L_{eq} is used in reference to the maximum noise levels expected during operation and the 8-hour L_{eq} is used for average noise levels.
f. Section 12.08.440 of the County of Los Angeles Municipal Code limits the maximum noise level caused by construction activity (mobile equipment) to 80 dBA at multi-family structures during daytime hours.
g. Section 59.5.0404 of the City of San Diego Municipal Code. Except for emergency work, it is unlawful to conduct any construction activity so as to cause, at or beyond the property lines of any property zoned residential, an average sound level greater than 75 decibels during the 12–hour period from 7:00 AM to 7:00 PM. With respect to construction activities, the City's Municipal Code only applies to potential effects to property zoned residential.
h. The City of Aliso Viejo does not have established construction noise thresholds. The residential exterior stationary noise standards are shown herein for reference purposes. Based on the estimated construction noise levels at 300 feet from the nearest residential uses, the City's residential noise standard of 55 dBA would not be exceeded.

Source: RK Engineering Group, Inc., February 2016.

Operational Noise

The *Noise Impact Analysis* conducted ambient noise measurements proximate to the project site near roadways. Noise measurement data indicates that the site experiences noise ranging from 59.3 to 62.6 dBA Leq during daytime hours. The site is exposed to typical traffic noise from the local roadway network. Noise levels vary depending on the distance from the centerline of the roadway, time of day, and traffic speeds and activities. Noise impacts from operation of the project would result from increased traffic.

The noise contours of the nearby roadways were calculated using the FHWA Traffic Noise Prediction Model (FHWA-RD-77-108) to provide a baseline of the existing traffic noise levels. The distances to the 55, 60, 65, 70 dBA CNEL noise contours were calculated. In addition, the noise level at 100 feet from the centerline was calculated and representative of the nearest residences along the study area roadways.

The existing traffic noise levels at 100 feet from the centerline of Aliso Viejo Parkway (the roadway closest to the project site) range from 65.5 to 67.5 dBA CNEL. The existing traffic noise conditions fall within the City of Aliso Viejo's Conditionally Acceptable Zone B thresholds for residential and commercial use.

Potential off-site noise impacts caused by the increase in vehicular traffic from the operation of the proposed project on the nearby roadways were calculated for the following conditions:

- Existing with Project Condition
- Year 2035 without Project Condition
- Year 2035 with Project Condition

Table 4.12-2 compares the Existing without Project Condition to the Existing with Project Condition. Noise levels are expected to increase by a maximum on 0.1 dBA CNEL along Aliso Viejo Parkway as a result of the project. The projected noise levels at 100 feet represent general flat conditions along a roadway and do not take into consideration the effect of topography, noise barriers, structures, or other factors which would impact the actual noise levels in the outdoor living areas.

Table 4.12-2: Existing Exterior Noise Levels Along Roadways (dBA CNEL)

Roadway	Segment	CNEL at 100 feet dBA				
		Existing Without Project	Existing With Project	Change in Noise Level	Significance Threshold[a]	Significant Impact[b]
Aliso Viejo Pkwy	SR-73 to Polaris Way	65.6	65.6	0.0	75.0	No
	Polaris Way to Aliso Creek Rd	65.5	65.6	0.1	70.0	No
	Aliso Creek Rd to Cedarbrook	67.5	67.5	0.0	70.0	No
Aliso Creek Rd	Aliso Viejo Parkway to Windsong	67.3	67.3	0.0	70.0	No

Notes:
a. The City of Aliso Viejo's Residential and Office/Commercial (Zone B) have conditionally acceptable noise levels of 70 and 75 dBA SNEL, respectively.
b. It takes a change of 3 dBA or more to hear a noticeable change in noise level. Therefore, a significant impact occurs when a project causes a 3 dBA or more increase in noise level exceeds the allowable limits of the adjacent use.

Source: RK Engineering Group, Inc., February 2016.

According to the significance threshold, an impact is considered significant if there is a substantial increase above the ambient condition. The human ear can detect changes of 3 dBA and changes of less than 3 dBA, while audible under controlled circumstances, are not readily discernable in an outdoor environment. Therefore, a change of 0.1 dBA is considered as a barely audible change.

As shown in Table 4.12-2, the Existing with Project condition would increase the noise level by 0.1 dBA CNEL. The projected noise level along Aliso Viejo Parkway at 100 feet from the centerline is 65.6 dBA CNEL. The increase in noise level is within the City's Zone B conditionally acceptable category. Even though there is a potential increase in 0.1 dBA, the change in noise level would be considered imperceptible and the final noise level would be within the City's Residential and Office/Commercial Zone B conditionally acceptable category of 70 and 75 dBA, respectively. Therefore, the impact is considered less than significant.

The project would include design features which incorporate the requirements from the California Building Code Title 24 regarding building insulation and design. The project design features would satisfy the requirements for Zone B development and no mitigation would be required.

Table 4.12-3 compares the 2035 without Project Condition to the 2035 with Project Condition. Noise levels are not expected to increase along Aliso Viejo Parkway and Aliso Creek Road as a result of the project. Therefore, the project would not cause significant noise impacts.

Table 4.12-3: Future Year 2035 Exterior Noise Levels Along Roadways (dBA CNEL)

Roadway	Segment	CNEL at 100 feet dBA			
		Future Year 2035 Without Project	Future Year 2035 With Project	Significance Threshold[a]	Significant Impact[b]
Aliso Viejo Pkwy	SR-73 to Polaris Way	66.8	66.8	75	No
	Polaris Way to Aliso Creek Rd	66.8	66.8	70	No
	Aliso Creek Rd to Cedarbrook	68.6	68.6	70	No
Aliso Creek Rd	Aliso Viejo Parkway to Windsong	68.1	68.1	70	No

Notes:
a. The City of Aliso Viejo's Residential and Office/Commercial (Zone B) have conditionally acceptable noise levels of 70 and 75 dBA SNEL, respectively.
b. Is takes a change of 3 dBA or more to hear a noticeable change in noise level. Therefore, a significant impact occurs when a project causes a 3 dBA or more increase in noise level exceeds the allowable limits of the adjacent use.

Source: RK Engineering Group, Inc., February 2016.

The City has implemented a stationary noise limit for offending stationary noise sources (e.g., loading/unloading, condenser units, compressors, blowers, etc.), Section 8.12.050A of the AVMC. The exterior residential standards noise level for 7:00 AM to 10:00 PM is 55 dBA and is 50 dBA between 10:00 PM and 7:00 AM. It is unlawful for any person at any location within the City to create any noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, which causes the noise level when measured on any other residential property to exceed:

1. The noise standard for a cumulative period of more than 30 minutes in any hour; or
2. The noise standard plus 5 dBA for a cumulative period of more than 15 minutes in any hour; or
3. The noise standard plus 10 dBA for a cumulative period of more than 5 minutes in any hour; or

4. The noise standard plus 15 dBA for a cumulative period of more than one minute in any hour; or
5. The noise standard plus 20 dBA for any period of time.

The main source of stationary noise at the project site would be noise from the proposed parking structure. This would typically include the opening and closing of doors, screeching tires, exhaust noise, and occasionally from horns and alarms. The parking structure would be located approximately 150 feet from the nearest residences. With the effects of distance divergence, noise generated by the parking structure would be reduced to 44 dBA L_{eq} at the closest residences. The noise levels generated by the parking structure would be below the City's daytime/nighttime exterior standard for the residential land uses. The parking structure would not cause a significant increase in noise when combined with the ambient noise level. Therefore, no significant noise impacts would occur to off-site noise sensitive land uses from the parking structure. The project would provide fixed blade acoustical louvers along the east side of the parking structure. The acoustical louvers would further reduce parking structure noise from the site to the residential uses.

The combined noise level calculation includes the existing ambient noise level plus all stationary noise sources associated with the project. When combining the existing ambient noise level to the stationary noise levels, the project would result in a 62.7 dBA L_{eq} level during the daytime, which is approximately a 0.1 dBA L_{eq} increase.

Existing ambient noise levels exceed the City's noise threshold for several noise threshold categories. However, the project does not increase noise levels by more than 3 dBA for any category in which noise levels exceed the City standard. 3 dBA is generally considered the threshold for human perception of change of noise levels, and therefore the project impact is considered less than significant.

The interior noise standards, according to the AVMC Section 8.12.050B, apply to all residential property within the City. The interior residential standards noise level for 7:00 AM to 10:00 PM is 55 dBA and is 45 dBA from 10:00 PM to 7:00 AM. In the event the noise consists of impact noise, simple tone noise, speech, music, or any combination thereof, each of the above noise levels shall be reduced by 5 dBA. It is unlawful for any person at any location within the City to create any noise, or to allow the creation of any noise on property owned, leased, occupied, or otherwise controlled by the person, when the foregoing causes of noise level when measured within the interior of any residential parcel within the City to exceed:

1. The interior noise standard for a cumulative period of more than 5 minutes in any hour.
2. The noise standard plus 5 dBA for a cumulative period of more than one minute in any hour.
3. The noise standard plus 10 dBA for any period of time.

In the event the ambient noise level exceeds either of the first two noise level categories above, the cumulative period applicable to the category will be increased to reflect the ambient noise level. In the event the ambient noise level exceeds the third noise limit category, the maximum allowable noise level under that category will be increased to reflect the maximum ambient noise level.

The interior noise level is the difference between the projected exterior noise level at the parking structure's façade and the noise reductions provided by the structure itself. Final building plans would be needed to determine the projected interior noise level of the project. Based on the general data provided in the Environmental Protection Agency's (EPA) Protective Noise Levels (EPA 550/9-79-100, Nov 1979), building design may provide at least 12 dBA of noise exterior to interior noise attenuation with windows open and 20 dBA with windows closed. It is expected the project would provide an adequate interior noise

environment with the design features required by the California Building Code Title 24 regarding building insulation and design. Operational windows are not included as part of the building design. Prior to building occupancy permit, a final noise study would be prepared which shall demonstrate the interior noise levels meet the City's 45 dBA CNEL limit. Upgraded windows are part of the project's design features. Therefore, impacts would be less than significant.

b) Exposure of persons to or generation of excessive groundborne vibrations or groundborne noise levels?

Less Than Significant Impact. The City of Aliso Viejo does not have regulatory standards for construction or operational vibration sources. There are no Federal Highway Administration (FHWA), Federal Transit Administration (FTA), or State standards for construction-related vibration impacts. According to the FHWA, construction vibrations very rarely reach the levels that can damage structures. However, the California Department of Transportation (Caltrans) has guideline thresholds for potential structural damage and human annoyance associated with vibration from construction activities. These thresholds are, identified in Tables 4.12-4 and 4.12-5, respectively. For comparative purposes, according to the Konan Vibration Criteria for Historic and Sensitive Buildings the criteria for transient vibration sources should not exceed 0.3 peak particle velocity (PPV). 0.035 inches per second is barely perceptive.

Table 4.12-4: Vibration Thresholds for Structural Damage

Structure and Condition	Maximum ppv (in/sec)	
	Transient Sources	Continuous/Frequent Intermittent Sources
Extremely fragile historic buildings, ruins, ancient monuments	0.12	0.08
Fragile buildings	0.20	0.10
Historic and some old buildings	0.50	0.25
Older residential structures	0.50	0.30
New residential structures	1.00	0.50
Modern industrial/commercial buildings	2.00	0.50
Note: Transient sources create a single isolated vibration event, such as blasting or drop balls. Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment. ppv: peak particle velocity Source: Caltrans 2004.		

Table 4.12-5: Human Response to Transient Vibration

Average Human Response	ppv (in/sec)
Severe	2.00
Strongly perceptible	0.90
Distinctly perceptible	0.25
Barely perceptible	0.04
ppv: peak particle velocity Source: Caltrans 2004.	

Construction activities can produce vibration that may be felt by adjacent land uses. The construction of the proposed project would not require the use of equipment such as pile drivers, which are known to generate substantial construction vibration levels. The primary source of vibration during construction may be from a bulldozer. A small bulldozer has a vibration impact of 0.003 inches per second PPV at 25 feet. The distance of the construction equipment would be further than 25 feet from any existing building. It is anticipated that no significant vibration impact would occur due to the distance of construction equipment from existing buildings Therefore, impacts would be less than significant.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The project does not propose development located within an airport land use plan or near a public airport. Therefore, no impacts would occur in this regard.

f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The project is not located within the vicinity of a private airstrip nor would the project expose people to excessive noise levels. Therefore, there are no project impacts associated with a private airstrip. Therefore, no impacts would occur.

Cumulative Impacts

Cumulative noise impacts describe how much noise levels are forecasted to increase over existing conditions with the development of the proposed project and all other foreseeable projects. The traffic analysis considers cumulative traffic from future growth. As discussed above, all construction and operational noise impacts can be mitigated to a less than significant level. Construction noise impacts are by nature localized. There are no known planned projects proximate to the project site that would be constructed during the anticipated timeframe for the proposed project. Therefore, the distance of separation among the proposed project and other potential cumulative projects would be such that the temporary noise and vibration effects of the proposed project would not be compounded or increased by similar noise or vibration effects from other cumulative projects. As discussed, operational noise caused by the proposed project can be mitigated. The noise analysis performed for project operations incorporated cumulative noise levels from forecasted traffic volumes in the study area. Therefore, cumulative impacts relative to temporary and permanent noise generation associated with the proposed Project would be less than significant.

Mitigation Program

Standard Conditions and Requirements

NOI-SC1 The project would comply with Section 8.12.070 of the City of Aliso Viejo Municipal Code, which prohibits noise sources associated with construction, repair, remodeling, or grading of any real property between the hours of 8:00 PM and 7:00 AM on weekdays, and 8:00 PM and 8:00 AM on Saturday, or at any time on Sunday or a federal holiday.

All construction activities shall be regulated in accordance with adopted City noise standards and all construction equipment shall be properly maintained and tuned. In

addition, the City shall require proposed development projects to provide a construction plan that identifies equipment staging areas and construction haul routes.

NOI-SC2 Stationary construction noise sources such as generators or pumps will be located at least 300 feet from sensitive land uses, as feasible.

NOI-SC3 Construction staging areas will be located as far from noise sensitive land uses, as feasible.

NOI-SC4 During construction, the contractor will ensure all construction equipment is equipped with appropriate noise attenuating devices.

NOI-SC5 Idling equipment will be turned off when not in use.

NOI-SC6 Equipment will be maintained so that vehicles and their loads are secured from rattling and banging.

NOI-SC7 The construction contractor shall designate a noise disturbance coordinator who would be responsible for responding to any local complaints about construction noise. The disturbance coordinator would determine the cause of the noise complaints (e.g., starting too early, bad muffler, etc.) and institute reasonable measures warranted to correct the problem. The construction contractor shall conspicuously post a telephone number for the disturbance coordinator at all entrances to the construction site. The construction contractor shall also notify the Windward Homeowners Association of the anticipated dates and hours of the demolition and site preparation phases of construction.

Mitigation Measures

No mitigation is required.

4.13 Population and Housing

Existing Setting

The California State Department of Finance identifies that City of Aliso Viejo has an existing population of 50,204 persons[14] and 19,342 dwelling units[15]. Between 2000 and 2015, the City's population increased by 10,166 persons. Between 2015 and 2035 (General Plan buildout), the population is expected to increase to 51,049 or an increase of 845 persons. The population of the County of Orange is 3,147,655 and is expected to increase to 3,434,443 by 2035. The project site is located in the Polaris Park office complex.

Would the project:

a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less Than Significant Impact. The proposed project would allow for the development of an office building and parking structure adjacent to existing roads in a developed area of the City. The proposed project does not have a residential component. The number of employees that would use the office building is speculative because a tenant(s) has not been identified. Square footage per employee varies by tenant needs, office space configuration, etc. and can range from around 150 square feet per employee to over 350 square feet per employees. The proposed office building would have a maximum of 40,000 net sf and the number of employees in the building could range from around 114 to 267 employees. It is also unknown whether employment positions would be filled by existing residents in the region or represents job creation. Given the mobility of workers, it is also not possible to accurately estimate the housing demand these jobs would generate in other parts of the region. However, the number of potential new employees does not represent a substantial growth in population. The project site is located within an existing office complex currently served by roads and infrastructure. No significant impacts would occur.

b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?

c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?

No Impact. The project site does not include any existing housing and no housing would be demolished to make way for the proposed project. Therefore, no impacts would occur.

Cumulative Impacts

The proposed project would not result in direct or indirect permanent or temporary impacts related to population or housing. Therefore, the project would not result in incremental effects to population and housing that could be compounded or increased when considered together with similar effects from other past, present, and reasonably foreseeable probable future projects. As a result, no cumulative impacts related to population and housing would occur.

[14] Released May 2015, State Dept. of Finance
[15] As of January 1, 2014, State Dept. of Finance

Mitigation Program

Standard Conditions and Requirements

No standard conditions or requirements are applicable to the project.

Mitigation Measures

No mitigation is required.

4.14 Public Services

Existing Setting

The project site is located within the Polaris Place office complex, and is developed with a 3-story office and approximately 244 surface parking spaces. The area in the vicinity of the project site is developed. The Orange County Fire Authority provides fire protection and emergency services to the project site. The Orange County Sheriff's Department provides law enforcement services to the site. The project site is located within the Capistrano Unified School District.

Would the project:

a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

i) Fire Protection?

Less Than Significant Impact. The Orange County Fire Authority (OCFA) provides fire protection and emergency services to Aliso Viejo on a contract basis. One fire station is located within the City at 57 Journey which less than two miles from the project site (as the crow flies). Two other stations (Laguna Niguel and Laguna Woods) located near the City's boundaries also provide service to Aliso Viejo residents and businesses. Emergency medical transportation is provided through City contracts with private sector providers. Implementation of the proposed project would intensify development within the existing office complex and the number of persons accessing the site would increase. However, the incremental increase in office employees associated with approximately 42,000 sf of development would not result in the need for new fire facilities in the City. Further, the OCFA will review construction plans for the project and appropriate requirements for fire hydrants, water availability, fire sprinklers, fire access roads, fire lane markings, hazardous materials and fire alarm systems would be required as condition of permit consistent with the City's adopted Fire Code. Therefore, the proposed project would have no impact on fire protection services.

ii) Police Protection?

Less Than Significant Impact. The City of Aliso Viejo contracts with the Orange County Sheriff's Department to provide law enforcement services within the City. Sheriff facilities are at the Aliso Viejo sub-station located at 11 Journey, less than two miles (as the crow files) from the project site. Aliso Viejo and the Sheriff's Department have implemented a Crime Prevention through Environmental Design Program based on the premise that proper design and effective use of the physical environment reduce the incidence and fear of crime and thereby improve quality of life. Aliso Viejo also has active Neighborhood Watch and Community Oriented Policing programs organized by Police Services.

Although a new office building would be constructed and operated on the project site, the proposed project would be located in an urbanized area and would not result in a substantial increase in demand on police services. It is not anticipated to increase response times to the project site or vicinity. The project would not result in the need for new or physically altered police protection facilities in the City.

As part of the project review process, the City would review all plans for the purpose of ensuring that design requirements are incorporated into the building design to promote and ensure public safety and avoid unsafe conditions.

iii) Schools?

Less Than Significant Impact. The project site is located in the Capistrano Unified School District. The project does not propose construction of residential dwellings. The development of the project could result in an indirect increase in students of employees working at the project site and residing within the School District. Because there is an existing Mello Roos tax for Aliso Viejo, the School District does not collect any fees for building projects in the City. Developers and homeowners are directly taxed by the City for any improvements and construction. Therefore, impacts would be less than significant.

iv) Parks?

Less Than Significant Impact. The Aliso Viejo Community Association (AVCA) is a master association that owns and maintains 21 parks within the community (257.5± acres) and maintains most of the slopes adjacent to the major thoroughfares within Aliso Viejo. The City owns and maintains Iglesia Park and View Park, and operates the Family Resource Center in Iglesia Park.

Within one-half mile of the project site is Brookline Park, Pinewood Park, and Creekside Park. The proposed project is an office development in an existing office complex and does not include a residential component. The property owner is subject to the payment of fees to the AVCA. The proposed project would not create a significant increase demand or need for the construction of park facilities. Further, the Polaris Place complex provides a fitness center and a variety of outdoor areas for relaxation and for the benefits of tenants in the complex. The project would also provide additional outdoor meeting areas. The impacts to existing parks or other recreational facilities generated by employees of the project would be minimal. Therefore, impacts would be less than significant.

v) Other public facilities?

Less Than Significant Impact. Due to the size and the scope of the proposed project, implementation of the project would not significantly affect other governmental agencies or facilities. The project would not substantially increase the demand for public services, including health services and library services because it is a general office use. Therefore, impacts would be less than significant.

Cumulative Impacts

The provision of public services and facilities takes into consideration a larger service area than just project boundaries. Therefore, the study area is the service area for the respective agencies and districts. Through coordination with the public services and facilities providers, the cumulative needs of the area are considered. The proposed project does not cause the need to construct any new or expand any existing facilities. Therefore, the Project would not result in incremental effects to public services or facilities that could be compounded or increased when considered together with similar effects from other past, present, and reasonably foreseeable probable future projects. The project would not result in cumulatively considerable impacts to public services or facilities.

Mitigation Program

Standard Conditions and Requirements

PS-SC1 The City shall review all new development proposals for sensitivity to Crime Prevention through Environmental Design (CPTED) principles. The City shall encourage incorporation of design features that employ adequate lighting and place increased emphasis on public areas.

Mitigation Measures

No mitigation is required.

4.15 Recreation

Existing Setting

The Aliso Viejo Community Association (AVCA) is a master association that owns and maintains 21 parks within the community (257.5± acres) and maintains most of the slopes adjacent to the major thoroughfares within Aliso Viejo. The City owns and maintains Iglesia Park and View Park, and operates the Family Resource Center in Iglesia Park. The City also owns the approximately seven-acre Acre Aliso Viejo Ranch property which is used for community events. The project site is located within the boundaries of an existing office complex that includes five office buildings. Proposed development would occur on a portion of the existing surface parking area of the office complex.

Would the project:

a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Less Than Significant Impact. The proposed project is an office building and parking structure and does not include a residential component. As discussed in Response 4.14(a-iv), the proposed project would not create a significant increased use of existing parks or other recreational facilities; it is not anticipated that implementation of the project would induce a substantial population increase. Further, the project is consistent with the City General Plan and is subject to the payment of fees to the AVCA. The impacts to existing parks or other recreational facilities generated by employees of the project would be minimal. Therefore, impacts would be less than significant.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Less Than Significant Impact. As discussed in Response 4.14(a-iv) and 4.14(a), the proposed project does not include or require the construction or expansion of recreational facilities because the development of an office building and parking structure would not result in a significant increased demand for recreational facilities. However, the Polaris Place complex includes a fitness center for exclusive use of tenants in the complex. Therefore, impact would be less than significant.

Cumulative Impacts

The proposed project would not result in an increased use of recreational facilities or require construction or expansion of existing recreational facilities. Therefore, no cumulative impacts on recreational facilities would result from project implementation.

Mitigation Program

Standard Conditions and Requirements

No standard conditions or requirements are applicable to the project.

Mitigation Measures

No mitigation is required.

4.16 Transportation/Traffic

RK Engineering Group, Inc. prepared a Traffic and Parking Study (February 2016) to evaluate potential parking and traffic-related impacts associated with the proposed project. The traffic and parking study is included as Appendix J and the results are summarized herein.

Existing Setting

Vehicular roadways are the primary existing transportation facilities in the City. The existing roadway network consists of primary arterial roads, secondary arterial roads and collector streets. Intersection level of service (LOS) C is acceptable and is met throughout Aliso Viejo. No airports are located in or within ten miles of Aliso Viejo. The project site is located within the developed Polaris Place office complex. Access to the office complex is provided from Aliso Viejo Parkway. SR-73 is located southwest of the project site.

Would the project:

a) Conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?

Less Than Significant Impact. The project would have direct access to/from Aliso Viejo Parkway, which is classified as a Major Arterial in the City of Aliso Viejo General Plan. **Table 4.16-1** identifies the intersections located within the traffic study area.

Table 4.16-1: Study Intersections

North-South Street	East-West Street
Pacific Park Drive	SR-73 SB Off-Ramp/Enterprise
Aliso Viejo Parkway	Enterprise
Columbia	Aliso Creek Road
Aliso Viejo Parkway	Polaris Way/Columbia
Aliso Viejo Parkway	Polaris Way
Aliso Viejo Parkway	Aliso Creek Road
Source: RK Engineering Group, Inc., February 2016.	

The Aliso Viejo General Plan Circulation Element identifies levels of service for the City. The acceptable level of service (LOS) for intersections within the City of Aliso Viejo is LOS C or better. Therefore, any intersections operating at LOS D, LOS E, or LOS F are considered deficient. The City uses the ICU (Intersection Capacity Utilization) methodology for signalized intersections and the HCM (Highway Capacity Manual) methodology for unsignalized intersections.

The Congestion Management Program (CMP) is the program by which State agencies monitor and report on the status of regional roadways. The CMP requires that a Traffic Impact Assessment (TIA) be conducted for any project generating 2,400 or more daily trips or, for projects that have direct access to the CMP Highway System, 1,600 or more daily trips. The CMP Highway System includes specific roadways, including

State Highways, smart streets, and CMP arterial monitoring locations/intersections. The CMP identifies specific intersections that must operate at LOS E or better. If the LOS is lower than LOS E, the change in volume/capacity (V/C) ratio cannot be greater than 0.01. If the intersection does not meet the requirements, then the responsible agency must identify and complete mitigation to improve the intersection. There are no CMP intersections within the City.

However, the City of Aliso Viejo used the CMP established procedures when developing the City's significance thresholds, which are identified in the City's General Plan Circulation Element. Therefore, a project would have a significant impact to a study intersection if the project causes the traffic study area intersections' level of service to degrade from LOS C or better to LOS D, LOS E, LOS F; or if a project causes a change in volume/capacity (V/C) ratio greater than 0.01 and the study intersection is operating at LOS D, LOS E, or LOS F.

In addition to the six study area intersections, three roadway segments were also analyzed. **Table 4.16-2** identifies the roadway segments located within the traffic study area.

Table 4.16-2: Study Roadway Segments

Roadway Segments
Aliso Viejo Parkway west of Polaris Way
Columbia north of Aliso Viejo Parkway
Aliso Viejo Parkway east of Polaris Way
Source: RK Engineering Group, Inc., February 2016.

The City of Aliso Viejo provides roadway segment capacities based on roadway classification. The traffic study area contains Major Arterials and Collector roadways with the following operational capacities per the City of Aliso Viejo General Plan:

- Major Arterial: 54,000 vehicles per day
- Collector: 12,000 vehicles per day

Similar to intersection level of service performance criteria, this analysis assumes study roadway segments are required to perform at LOS C or better.

Existing Conditions

Table 4.16-3 identifies the existing intersection levels of service for the study area intersections. All traffic study area intersections are currently operating at acceptable levels of service.

Table 4.16-3: Existing Conditions Intersections

Intersection	ICU Critical V/C Ratio or Delay (sec.)[a]		Level of Service	
	AM	PM	AM	PM
Pacific Park Drive (NS)/Enterprise/SR-73 Off-Ramp (EW)	0.754	0.443	C	A
Aliso Viejo Parkway (SN)/Enterprise (EW)	0.357	0.360	A	A
Polaris Way/ Columbia (EW)	0.422	0.357	A	A
Project Access (EW)	9.5	13.3	A	B
Aliso Creek Road (EW)	0.529	0.636	A	B
Columbia (NS)/Aliso Creek Road (EW)	0.328	0.489	A	A

a. Per the Intersection Capacity Utilization methodology, overall volume to capacity ratios and levels of service are shown for intersections controlled by traffic signals. Critical delay in seconds is shown per Highway Capacity Manual methodology to analyze stop controlled intersections and LOS is determined on the worst-case directional movement.

Project Trip Generation

Trip generation rates are based the Institute of Transportation Engineers (ITE) Trip Generation, 9th Edition. Both daily and peak hour trip generation for the proposed project are identified in **Table 4.16-5**. As shown in the table, the proposed project would generate 468 trip-ends per day, with 66 trips during the AM peak hour and 53 trips during the PM peak hour.

Table 4.16-5: Project Trip Generation

Land Use	Quantity	Units	Peak Hour						Daily
			AM			PM			
			In	Out	Total	In	Out	Total	
General Office	42.40	Thousand sf	58	8	66	11	52	53	468

Source: RK Engineering Group, Inc., February 2016.

Existing Plus Construction Traffic Conditions

Construction of the proposed project is estimated to have a maximum of approximately 50 construction staff on the site in a single day and a maximum of approximately 50 trucks during peak construction phase resulting in 50 inbound trips and 50 outbound trips. If during the peak construction phase, each construction worker arrives in a single-occupant vehicle, which is a very conservative assumption, the project construction phase would generate approximately 50 inbound trips during the morning and 50 outbound trips during the afternoon and end of the work shift.

Furthermore, if conservatively it is assumed the truck activity overlaps with the construction staff arrival and departure, the trucks would result in an additional 50 inbound trucks in the morning and 50 outbound trucks in the afternoon. Using the typical 2.0 passenger car equivalent (PCE) factor to convert truck trips to passenger car-equivalent trips, the 50 trucks would result in approximately 100 inbound PCE trips in the morning and 100 outbound PCE trips in the afternoon.

The construction phase of the proposed project is forecast to generate approximately 150 PCE-adjusted trips in the AM peak hour and 150 PCE-adjusted trips during the PM peak hour. As shown in **Table 4.16-6**, the study area intersections are expected to operate at acceptable LOS during construction traffic. Therefore, the proposed project would not result in a significant traffic impact at the study area intersections.

Table 4.16-6: Existing Conditions Plus Construction Traffic

	Intersection Approach Lane(s)[a]												ICU Critical V/C Ratio or Delay (Sec)[b]		Level of Service	
	Northbound			Southbound			Eastbound			Westbound						
Intersection	L	T	R	L	T	R	L	T	R	L	T	R	AM	PM	AM	PM
Aliso Viejo Parkway (NS)																
Polaris Way/ Columbia (EW), TS	1.0	3.0	1.0	2.0	3.0	1.0	1.0	0.5	0.5	0.5	0.5	1.0	0.422	0.376	A	A
Project Access (EW), CSS	0.0	3.0	1.0	1.0	3.0	0.0	0.0	0.0	0.0	0.0	0.0	1.0	9.5	14.5	A	B
Aliso Creek Road (EW), TS	1.0	3.0	1>	1.5	2.5	1.0	1.0	2.0	1>	1.0	2.0	1>	0.577	0.636	A	B

L = Left; T = Through; R = Right; > = Right Turn Overlap; >> = Free Right Turn; TS = Traffic Signal; CSS = Cross-Street Stop
Bold = Improvement.

a. When a right turn lane is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes. Where"1!" is indicated for the through movement and "0's" are indicated for R/L movements, the R and/or L turns are shared with the through movement.

b. Analysis Software: Traffic, Version 8.0. Per the Intersection Capacity Utilization methodology, overall volume to capacity ratios and levels of service are shown for intersections controlled by traffic signals. Critical delay in seconds is shown per Highway Capacity Manual (HCM 2000) methodology to analyze stop controlled intersections and LOS is determined based on the worst case directional movement

Source: RK Engineering Group, Inc., February 2016.

Existing Plus Project

Intersection levels of services for the Existing Plus Project traffic scenario are shown in **Table 4.16-7**. As shown in the table, the traffic study area intersections are forecast to operate at acceptable levels of service (LOS C or better) and impacts would be less than significant.

Table 4.16-7: Existing Conditions Plus Project Conditions Intersections

Intersection	ICU Critical V/C Ratio or Delay (sec.)[a]		Level of Service		Significant Impact	
	AM	PM	AM	PM	AM	PM
Pacific Park Drive (NS)/ Enterprise/SR-73 Off-Ramp (EW)	0.756	0.443	C	A	No	No

General Plan Buildout (2035) without Project Conditions

To assess General Plan Buildout (Year 2035) traffic conditions, project traffic is combined with existing traffic, area-wide growth, and cumulative project traffic. Intersection levels of service for this traffic without the proposed project are shown in **Table 4.16-9**. The Pacific Park Drive at the SR-73 off-ramp is forecasted to operate at a deficient level of service (LOS E) during AM peak hour.

Table 4.16-9: General Plan Buildout (Year 2035) Without Project

Intersection	ICU Critical V/C Ratio or Delay (sec.)[a]		Level of Service	
	AM	PM	AM	PM
Pacific Park Drive (NS)/Enterprise/SR-73 Off-Ramp (EW)	0.952	0.592	E	A
Aliso Viejo Parkway (SN)/Enterprise (EW)	0.505	0.459	A	A

Columbia (NS)/Aliso Creek Road (EW)	0.368	0.547	A	A

a. Per the Intersection Capacity Utilization methodology, overall volume to capacity ratios and levels of service are shown for intersections controlled by traffic signals. Critical delay in seconds is shown per Highway Capacity Manual methodology to analyze stop controlled intersections and LOS is determined on the worst case directional movement.

Source: RK Engineering Group, Inc., February 2016.

Intersection levels of service for the General Plan Buildout (Year 2035) With Project traffic scenario are shown in **Table 4.16-10**. The Pacific Park Drive at the SR-73 off-ramp would also operate at LOS E with the proposed project. Based on the City's significance criteria, the project's contribution to the deficiency of this intersection would be less than significant.

Table 4.16-10: General Plan Buildout (Year 2035) With Project Conditions Intersections

Intersection	ICU Critical V/C Ratio or Delay (sec.)[a]		Level of Service		Significant Impact	
	AM	PM	AM	PM	AM	PM

Columbia north of Aliso Viejo Parkway	Collector	12,000	5,511	0.459	A
Aliso Viejo Parkway east of Polaris Way	Major Arterial	54,000	18,441	0.342	A

Notes:
a. Classifications are based on the City of Aliso Viejo General Plan Circulation map.
b. Per City of Aliso Viejo's General Plan Circulation Element, roadway segment descriptions.
c. As measured during counts conducted June 2015.

Source: RK Engineering Group, Inc., February 2016.

b) Conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

No Impact. Based on trip generation estimates (see Table 4.16-5), the project is expected to generate 468 average daily trips. The project is exempt from the Orange County Congestion Management Plan (CMP) traffic impact analysis threshold of 2,400 average daily trips or less than 1,600 average daily trips directly onto the CMP Highway System. The project would not exceed, either individually or cumulatively, a level of service standard. Therefore, no impacts would occur.

c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?

No Impact. The closest operating airport to the project site is the John Wayne Airport, which is approximately 10 miles north of the site. The project is consistent with the City's General Plan and would have no impact relative to air traffic patterns or cause aircraft-related safety risks. Therefore, the proposed project would not result in any significant impacts relative to air traffic patterns or levels.

d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

No Impact. The proposed project would be designed in compliance with all applicable State, County and City building codes and would meet City of Aliso Viejo and County of Orange standards for design. The proposed project would comply with the sight distance standards set forth in AVMC Section 15.22.020. Future detailed construction level plans would ensure proper striping and signage are incorporated into the project design. Access to the office building and parking structure would occur internal to the existing office development. Ingress/egress to the parking structure would be provided from the south side of the structure. The proposed project does not involve any changes that would create new potentially hazardous conditions or incompatible uses in the project vicinity. Therefore, compliance with existing regulations would preclude significant impacts.

e) Result in inadequate emergency access?

No Impact. The project would not result in significant impacts to study area intersections and would not affect existing roadway design. The General Plan and AVMC have been developed in conformance with applicable circulation system plans and policies. Aliso Viejo Planning Department and Public Works staff

and the Orange County Fire and Sherriff's Department are responsible for the review of site development plans as a part of the Site Development Permit process to ensure that the project provides for adequate emergency access (see the AVMC, in particular Section 15.62 Design Standards with respect to the provision of adequate emergency access). The Orange County Fire Authority has approved emergency access of the project. Therefore, no significant impacts would occur.

f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance of safety of such facilities?

No Impact. The proposed project would be developed within the existing office complex and would be accessible from Aliso Viejo Parkway. One objective and goal of the City of Aliso Viejo's General Plan is to provide a system of complete streets that accommodates safe and convenient access and travel for all users and to promote a healthy and sustainable transportation throughout the community. The following bicycle facilities are located near the project site:

- Aliso Viejo Parkway – Class II Bike Lanes
- Aliso Creek Road – Class II Bike Lanes
- Pacific Park Drive – Class II Bike Lanes

Public transit services in the project vicinity are provided by the Orange County Transportation Authority (OCTA). The following bus routes currently operate near the project site:

- Route 490 (Enterprise and Aliso Viejo Parkway)
- Route 187 (Aliso Creek Road)

The project would not conflict with the adopted policies and would be proximate to alternatives to vehicular or any of the facilities listed. Therefore, no impacts would occur.

g) Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?

No Impact. There are no conflicts with adopted policies, plans or programs supporting alternative transportation. As outlined in the City of Aliso Viejo's General Plan, public transit services in the project vicinity are provided by the Orange County Transportation Authority (OCTA). The following bus routes currently operate near the project site:

- Route 490 (Enterprise and Aliso Viejo Parkway)
- Route 187 (Aliso Creek Road)

The project would not impact existing bus routes or bus stops in the project vicinity as off-site improvements would not be necessary. Therefore, no impacts would occur.

Cumulative Impacts

The traffic study addresses both the project-specific and the project's contribution to cumulative impacts. No significant impacts have been identified.

Mitigation Program

Standard Conditions and Requirements

No standard conditions or requirements are applicable to the project.

Mitigation Measures

No mitigation is required.

4.17 Utilities And Service Systems

Existing Setting

The project site is located within the developed Polaris Place office complex, and is currently developed with an existing approximately 76,188-sf, three-story office building located at 1 Polaris Way and approximately 244 surface parking spaces. The area in the vicinity of the project site is developed. The project site is served by the Moulton Niguel Water District (MNWD), which provides water and wastewater service. MNWD has potable water emergency inter-district connections with neighboring water districts to ensure water delivery continuity to Aliso Viejo in case of service failure in any district. The MNWD 2010 Urban Water Management Plan (UWMP) states that the NMWD is capable of meeting the water demands of its customers in normal, single dry and multiple dry years between 2015 and 2035.

Would the project:

a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less Than Significant Impact. The project site is located in an area of Aliso Viejo that is served by the Moulton Niguel Water District (MNWD). The MNWD currently provides water and wastewater service to the project area including the existing office complex. MNWD collects wastewater via a network of gravity lines, lift stations, and force mains throughout the service area. Wastewater collected by the MNWD is sent to one of three of the South Orange County Wastewater Authority (SOCWA) plants for treatment and disposal. The current total average daily flow tributary to the SOCWA J.B. Latham Treatment Plant is 8.5 million gallons per day (MGD). The plant has a design capacity of 13 MGD. The SOCWA Joint Regional Treatment Plant has a capacity of 12 MGD and is currently processing slightly over 10 MGD. Plant 3A has a secondary treatment capacity of 8 MGD and is currently processing 4 MGD. MNWD owns 22.7 MGD of secondary treatment capacity in the SOCWA treatment plants.[16]

The existing MNWD public water and sewer system in the Polaris Place complex anticipated future development of an additional office building on the proposed site. Utility infrastructure was installed with the construction of the original Polaris Place complex. The MNWD previously issued will-serve letters for the Polaris Place complex and a new will-serve letter has been requested for the project. Additional on-site connection facilities would be required as part of the proposed project as shown on the preliminary wet utilities plan and would be reviewed with the City and MNWD as part of the plan check process.

The increase in wastewater flow from the proposed site would not significantly impact the SOCWA's plants for treatment and disposal as it represents a minimal percent of the flow directed to the treatment

[16] Malcolm Pirnie, Inc. *Moulton Niguel Water District 2010 Urban Water Management Plan*. June 2011, pg. 6-1.

facilities that are operating well below capacity. The proposed project would not exceed wastewater treatment requirements of the Regional Water Quality Control Board. Further, the proposed project would be subject to the requirements of the NPDES stormwater program. Compliance with the requirements of the Regional Water Quality Control Board, NPDES program, and all other applicable federal, State, and local regulations prior to project approval would result in a less than significant impact.

c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Less Than Significant Impact. The project does not require and would not result in the construction of new storm drainage facilities or expansion of existing facilities. While modifications to the existing on-site storm drain system may be required to implement the project, existing facilities are adequate to accommodate the development. As detailed in Response 4.9(c), currently, runoff from the existing site drains as surface flow to the surrounding street toward valley gutters and to existing catch basins located approximately 500 feet south of the site. After development, all runoff would enter drain inlets and flow to a proprietary biotreatment unit where it would be treated. Runoff would then discharge into detention tanks with pumps to control outflow from the site. A new underground storm drain pipe would convey the site discharge to an outlet structure that would route the flow to the existing curb and gutter onsite. Water would then flow to the existing catch basin south of the site. Therefore, it is not anticipated that the project would result in any significant impacts to the storm water drainage facilities.

d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?

Less Than Significant Impact. The *2010 Moulton Niguel Water District Urban Water Management Plan* was prepared in compliance with the requirements of Water Code Sections 10610 through 10656 of the Urban Water Management Planning Act. The Urban Water Management Planning Act requires urban water suppliers that either provide over 3,000 acre-feet of water annually or serve more than 3,000 or more connections to assess the reliability of its water sources over a 20-year planning horizon and to update the data in the urban water plans every 5 years. In preparing their 20-year management plans, water suppliers must directly address the subject of future population growth. The suppliers must also identify sources of supply to meet demand during normal, dry, and multiple dry years.

All of MNWD's potable water supply is imported water from Metropolitan through the Municipal Water District of Orange County (MWDOC). Currently, the total water demand for retail customers served by MNWD is approximately 33,846 acre-feet annually consisting of 26,726 acre-feet (79%) of potable water and 7,120 acre-feet (21%) of recycled water. It is projected that recycled water would increase to 23 percent by 2035. The sources of imported water supplies include the Colorado River and the State Water Project (SWP).

Based on an interior water use for office uses of 60 gallons per day (gpd) per thousand square feet (ksf), the office building would require approximately 2,544 gpd. The existing water system in the Polaris Place complex anticipated future development of an additional office building on the proposed site. Water main infrastructure was installed with the construction of the original Polaris Place complex. MNWD previously issued will-serve letters for the Polaris Place complex and a new will-serve letter has been requested for the project. Additional on-site water connection facilities would be required as part of the proposed project as shown on the preliminary wet utilities plan and would be reviewed with the City and MNWD as part of the plan check process. Because of the limited water demand associated with the proposed project, no significant impacts are anticipated.

f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?

Less Than Significant Impact. There are approximately 14 recycling, construction, and demolition debris and green waste processing locations located throughout Orange County. The closest processing location to the project site is Ewles Materials located in San Juan Capistrano. The Orange County Integrated Waste Management Department (IWMD) owns and operates three landfills. The project site would be served by a solid waste collection service that is contracted for by the City. Solid waste is transmitted by that collection service to various Class III landfills operated by the IWMD. Class III landfills accept non-hazardous municipal waste. The Prima Deshecha Landfill, located in San Juan Capistrano, is permitted to accept 4,000 tons of solid waste per day and is located on 1,530 acres, 1,000 of which is permitted for refuse disposal. Opened in 1976, the landfill is scheduled to close around 2040. The other landfills that receive solid waste are the Frank R. Bowerman Landfill in Irvine and the Olinda Alpha Landfill in Brea.

The development level proposed by the project is consistent with the growth projections in the Orange County Projections, which are used by the County of Orange in their long-term planning for landfill capacity. The County's landfill system has capacity in excess of the required 15-year threshold established by the California Integrated Waste Management Board (CIWMB). Based on the remaining capacity of the noted landfills and the County's long-term planning programs required to meet CIWMB's requirements, there would be adequate waste disposal capacity within the permitted County's landfill system to meet the needs of the proposed project.

The General Plan identifies that the City would continue to implement waste diversion programs as well as public education programs to reduce the amount of solid waste by 50 percent as stated in AB 939. The project would comply with the requirements established in the City's Source Reduction and Recycling Element (SRRE) as well as applicable federal, State and local statutes on solid waste disposal. No significant impacts to this topical area are anticipated.

g) Comply with federal, state, and local statutes and regulations related to solid waste?

No Impact. See Response 4.17 above. The project would comply with applicable City requirements, such as the SRRE, as well as federal, State, and local statutes on solid waste disposal. Therefore, no impacts would occur.

Cumulative Impacts

The proposed project would have a less than significant impact with respect to utilities/service systems. The Project would require water and wastewater infrastructure, as well as solid waste disposal for building facility operation. Development of public utility infrastructure is part of an extensive planning process involving utility providers and jurisdictions with discretionary review authority. The coordination process associated with the preparation of development and infrastructure plans is intended to ensure that adequate resources are available to serve both individual projects and cumulative demand for resources and infrastructure as a result of cumulative growth and development in the area. Each individual project is subject to review for utility capacity to avoid unanticipated interruptions in service or inadequate supplies. Coordination with the utility companies would allow for the provision of utility service to the proposed project and other developments. The project and other planned projects are subject to connection and service fees to assist in facility expansion and service improvements triggered by an increase in demand. Because of the utility planning and coordination activities described above, no significant cumulative utility impacts are anticipated.

Mitigation Program

Standard Conditions and Requirements

No standard conditions or requirements are applicable to the project.

Mitigation Measures

No mitigation is required.

4.18 Mandatory Findings of Significance

Would the project:

a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Less Than Significant Impact. On the basis of the foregoing analysis, the proposed project does not have the potential to significantly degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten or eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory. The project site is located in a developed area, is currently developed with an office building and a surface parking lot that serves all office uses within the Polaris Place complex, and is surrounded by urban development. Further, the development of an additional office building on the proposed site was previously anticipated. The proposed project is consistent with the General Plan and the AVMC subject to approval of a Site Development Permit and Parcel Map. Therefore, the project would not have a significant impact on any sensitive, rare, or endangered plant/wildlife community.

b) Does the project have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals?

Less Than Significant Impact. The proposed project does not have the potential to achieve short-term environmental goals to the disadvantage of long-term environmental goals. The project implements the City General Plan development goals and policies for the project site and is consistent with the Professional Office land use designation. The site is located in an area that is used for general office purposes. There are no long-term environmental goals that would be compromised by the project.

c) Does the project have possible environmental effects which are individually limited, but cumulatively considerable?

Less Than Significant Impact. The proposed project does not have impacts that are individually limited, but cumulatively considerable. Incremental impacts resulting from development and operation of the proposed project and other cumulative projects that would be under construction include increased traffic, generation of greenhouse gas, increased short and long-term air quality emissions, increased use of domestic water, generation of wastewater and solid waste, and short term construction noise and long term operational noise impacts. The analysis concluded that these incremental impacts are each less than significant. When viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects, these impacts are not cumulatively considerable. No cumulative impacts are anticipated in connection with this or other projects. The proposed project is consistent with the development goals and policies of the City's General Plan for the project site. The proposed project complies with long-term regional air quality plans, regional population forecasts, and is within the service capabilities of utility purveyors. No significant adverse environmental impacts have been identified. The analysis contained in this Initial Study evaluated existing conditions, potential impacts associated with the development of the project, and possible environmental cumulative impacts. The

project does not have any impact on projected growth or planned projects for the City of Aliso Viejo or neighboring jurisdictions known as of the date of this analysis.

d) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less Than Significant Impact. There are no known substantial adverse effects on human beings that would be caused by the proposed project. The project is consistent with the General Plan and the AVMC, and land uses in the project area and the environmental evaluation has concluded that no adverse significant environmental impacts will result from the project.

APPENDIX A

MITIGATION MONITORING AND REPORTING PROGRAM

MITIGATION, MONITORING, AND REPORTING PROGRAM

Impact Category	Mitigation Program	Timeframe for Implementation	Responsible Monitoring Party	Monitoring/Reporting Method	Compliance Status
Air Quality	**AQ-MM1:** The Applicant shall limit ground disturbance to a maximum of 2 acres in any 8-hour day.	Monitor during grading and construction	Public Works Department	Compliance with project conditions of approval.	
	AQ-MM2: The Applicant shall export all cut soil to a receiving site within a 35-mile radius of the project site.	Monitor during grading and construction	Public Works Department	Compliance with project conditions of approval.	
	AQ-MM3: Prior to the issuance of a building permit, the Building Official shall confirm that the Building Plan and specifications stipulate that, to the degree possible, the volatile organic compound (VOC) content of architectural coatings shall be lower than required by South Coast Air Quality Management District Rule 1113.	Prior to issuance of a building permit, and confirmation during construction	Building and Safety Department	Compliance with project conditions of approval.	
Biological Resources	**BIO-MM1:** A preconstruction survey for nesting birds shall be conducted by a qualified biologist if clearing and grubbing work is conducted within the bird nesting season (typically February 15 to September 15). If an active nest is discovered, disturbance within an established buffer shall be prohibited until nesting is complete; the buffer distance shall be determined by the biologist in consultation with applicable resource agencies and in consideration of species sensitivity and existing nest site conditions. Limits of avoidance shall be demarcated with flagging or fencing. The biologist shall record the results of the recommended protective measures described above and shall submit a memo summarizing any nest avoidance measures to the City to document compliance with applicable State and federal laws pertaining to the protection of native birds.	Prior to site disturbance if during nesting season.	Planning Department	Compliance with determination of qualified biologist and California Department of Fish and Wildlife, as needed.	
Cultural Resources	**CUL-MM1:** Prior to the issuance of a grading permit and/or action that would permit project site disturbance (whichever occurs first), the Applicant shall provide written evidence to the City of Aliso Viejo Planning Department that the Applicant has retained a qualified archaeologist to respond on an as-needed basis to address unanticipated archaeological discoveries. The archaeologist shall attend pre-grade meetings. In the event that archaeological materials are encountered during ground-disturbing activities including site preparation, grading, or excavation, the archaeological monitor shall have the authority to temporary halt or divert grading in the immediate area of the discovery and to evaluate the resources. If the archaeologist determines that they are unique archaeological resources as defined by Public Resources Code Section 21083.2 or a tribal cultural resource as defined by Public Resources Code Section 21074, then the archaeologist shall conduct additional excavations to avoid impacts to these resources by the development. If they are not "unique" or "tribal cultural resources" then no further mitigation would be required. Unique cultural resources shall be determined based on the criteria set forth in Public Resources Code Section 21083.2. Tribal cultural resources shall be determined based on the criteria set forth in Public Resources Code section 21074. Nothing in this mitigation measure precludes the retention of a single cross-trained observer who is qualified to monitor for both archaeological, paleontological, and tribal cultural resources.	Prior to issuance of grading permit and/or action that would permit project site disturbance (whichever occurs first)	Planning Department	Compliance with project conditions of approval.	
	CUL-MM2: Prior to the issuance of a grading permit and/or action that would permit project site disturbance (whichever occurs first), the Applicant shall provide written evidence to the City of Aliso Viejo Planning Department that the Applicant has retained a qualified paleontologist to respond on an as-needed basis to address unanticipated discoveries. The paleontologist shall attend pre-grade meetings. If previously unidentified paleontological resources are uncovered during site preparation, grading, or excavation, the paleontological monitor shall have the authority to temporary halt or divert grading in the immediate area of the discovery and to evaluate the resources. If the paleontologist determines that they are unique paleontological resources as defined by Section 21083.2 of CEQA, then the paleontologist shall conduct additional excavations to avoid impacts to these resources by the development. If they are not "unique" then no further mitigation would be required. Unique cultural resources shall be determined based on the criteria set forth in Section 21083.2 of CEQA. Nothing in this mitigation measure precludes the retention of a single cross-trained observer who is qualified to monitor for both archaeological and paleontological resources.	Prior to issuance of grading permit and/or action that would permit project site disturbance (whichever occurs first)	Planning Department	Compliance with project conditions of approval.	
Geology and Soils	**GEO-MM1:** Prior to the issuance of grading permits, the City shall review all project plans for grading, foundation, structural, infrastructure, and all other relevant construction permits to ensure compliance with the applicable recommendations from the *Geotechnical Investigation* and other applicable Code requirements.	Condition of issuance of grading permits	Public Works Department	Compliance with project conditions of approval.

INITIAL STUDY AND MITIGATED NEGATIVE DECLARATION FOR 6 POLARIS WAY OFFICE AND PARKING STRUCTURE PROJECT, ALISO VIEJO, CALIFORNIA (SCH# 2016041066)

Dear Ms. Roess:

The Department of Toxic Substances Control (DTSC) has reviewed the Initial Study and Mitigated Negative Declaration for 6 Polaris Way Office and Parking Structure Project, located in the City of Aliso Viejo, San Diego.

The proposed project is located within an existing office complex and would allow for the development of an approximately 42,400-gross-square-foot, two-story office building and a 4-1/2 level, 423-space parking structure on an existing surface parking lot.

DTSC's comments are as follows:

Comment 1

Section 4.8 (a) requires that any contaminated soils, hazardous materials or hazardous waste removed from the site be transported only by licensed hazardous waste haulers in accordance with applicable State and federal requirements.

Please note that if any soil contamination is identified or observed during the soil excavation, the project work plan should include the following response actions:

1. Further investigate the contaminated soil to delineate the nature and extent of the contamination. The potential threat to public health and/or the environment should also be evaluated. All environmental investigations, sampling and/or remediation for the site should be conducted under a work plan approved and overseen by a regulatory agency that has jurisdiction to oversee hazardous substance cleanup.

2. Characterize and manage contaminated soil in accordance with California Code of Regulations, division 4.5, chapters 11 and 12 prior to its disposal. Land Disposal Restrictions (LDRs) may be applicable to this soil.

3. If the project would import soil to backfill the excavated areas, sample properly the imported soil to ensure that the imported soil is free of contamination as recommended by DTSC's information Advisory for Clean Imported Fill Materials (http://www.dtsc.ca.gov/PublicationsForms/pubs_index.cfm.

If you would like to discuss this matter further, please contact Ms. Chia Rin Yen at 714-484-5417 or ChiaRin.Yen@dtsc.ca.gov.

Sincerely,

Yolanda Garza

Yolanda Garza, Unit Chief

Response to Comment 1

The Department of Toxic Substances Control's identification of the requirements for the removal of contaminated soil, should it be found, is noted. As a part of the Initial Study, a Phase I Environmental Site Assessment and an EDR Radius Map Report were prepared to identify existing environmental conditions and to evaluate potential environmental hazards that may exist at the project site as a result of present and historical on site and adjacent land uses. There is no evidence of the presence of contaminated soil on the project site. As addressed in Section 4.8 of the Initial Study, "Construction of the proposed project is not anticipated to involve transport, use, creation or disposal of hazardous materials. Should any contaminated soils or other hazardous materials be discovered and be removed from the project site, the soils/material can be transported only by a licensed hazardous waste hauler in covered containment devices in compliance with all applicable State and federal requirements ….According to the EDR, the project site is not listed on any databases and there is no known history that would cause environmental hazards on the project site. Therefore, it is unlikely that demolition and grading activities would involve the release of hazardous materials into the environment." Should, however, any contaminated soils or hazardous materials be discovered during project construction, the discussion provided in the Initial Study identifies the procedures that would be taken, consistent with the Resource Conservation and Recovery Act (RCRA) established by the U.S. Environmental Protection Agency which regulates generation, transportation, treatment, storage, and disposal of hazardous waste. No changes to the Initial Study are required.

Project GHG Emission Calculations Output (CalEEMod) ..... A

1.0 Executive Summary

1.1 Purpose and Methods of Analysis

This air quality and greenhouse gas (GHG) analysis was prepared to evaluate whether the estimated criteria pollutants and GHG emissions generated from the Project would cause a significant impact to air resources in the project area. This assessment was conducted within the context of the California Environmental Quality Act (CEQA, California Public Resources Code Sections 21000, et seq.). The assessment is consistent with the methodology and emission factors endorsed by South Coast Air Quality Management District (SCAQMD), California Air Resource Board (CARB), and the United States Environmental Protection Agency (US EPA).

1.2 Project Summary

1.2.1 Site Location

The Project site ("site") is a 4.037-acre parcel located on the south side of Aliso Viejo Parkway (Parcel I, Lot Line Adjustment 97-054), northeasterly of the SR 73 (San Joaquin Hills Transportation Corridor) on the Polaris Campus (the former Fluor Corporation Southern California headquarters), constructed by the Fluor Corporation. The Fluor Corporation in recent years sold several parcels and buildings within the Polaris Campus. The site is one of five separate parcels located on the Polaris Campus. To the north of the site, across Aliso Viejo Parkway, at a significantly higher elevation from the site, is an existing business park (zoned Business Park 2) and to the east is the existing Windward residential condominium development (zoned Residential Medium Density) at a significantly lower elevation from the subject site along with a downhill sloped area designated Open Space Preservation. To the south and west are four other buildings part of the Polaris Campus, and beyond is the SR 73 and Aliso Viejo Town Center.

The site currently contains an approximate 76,186 square foot three story office building (Building I or A) and a parking lot to the north and northwest. Parking is currently provided as a common amenity to the entire Polaris Campus under a Declaration of Reciprocal Easements and Covenants ("Covenant Document"), and was entitled as common area parking under the County of Orange prior to the City of Aliso Viejo's incorporation. The Polaris Campus development was originally approved for development through the County of Orange with entitlements granted and modified by the County in 1997 and 1998.

As amended, the Fluor development was entitled for a total of 430,268 square feet of general office space contained in five buildings, two three stories in height and three four stories in height (with an ancillary 10,860 square foot basement area in Building 3) shown as follows:

Polaris Campus Existing Building Square Footages

Existing Building	Square Footage
Building I (A)	76,186
Building 2 (B)	90,761
Building 3 (C)	96,210
Building 4 (D)	90,860
Building 5 (E)	76,251
Total General Office Space	430,268
Ancillary Basement Space – Building (C)	10,860

Under provisions of Section 6.4 of the Covenant Document, BPM was granted the right by the Fluor Corporation in their acquisition of the site to construct an additional building of no greater than 40,000 square feet of total rental square feet on the subject. BPM is also be required under the Covenant Document to create, at is sole cost and expense, sufficient additional parking spaces to replace all parking displaced by the construction of the new building.

1.2.2 Project Description

The proposed Project consists of an application for a Site Development Permit, Exception Permit for Parking pursuant to Section 15.38.120 of the Aliso Viejo Zoning Code and a Tentative Parcel Map for the Project. The Project includes the construction of 42,400 square feet of gross floor area of general office space with tech capability (40,000 square feet of net rental space) on the site to be contained in one, two story building with an accessory 423 space, 4 ½ level parking structure. The site is currently disturbed, having been previously master graded and developed as part of the development of the Polaris Campus. The Tentative Parcel Map proposes to parcelize the existing Parcel 1 into two parcels, to facilitate financing of the new office building and parking structure. The Site is designated on the Aliso Viejo General Plan and Zoning Map as Professional Office. The proposed project is completely consistent with the applicable General Plan land use designation and zoning regulations for the site except for the Exception Permit request.

The parking structure has been designed to be at-grade and would accommodate 423 spaces, is a concrete long-span design and is proposed to be located to the east of the office building and setback from the current landscape setback along Aliso Viejo Parkway.

Access to the Project and new parking structure will be via two driveways along Aliso Viejo Parkway. The main drive (Polaris Way) as entry to the Polaris Campus will lead directly into the larger Polaris campus, and then vehicles can turn left along a common internal driveway to access the parking structure. An additional access to the parking structure will be provided from an existing driveway at the easterly portion of the subject site where once entering the site, vehicles can turn right and then right again into the parking structure.

1.2.3 Sensitive Receptors

Sensitive receptors are considered land uses or other types of population groups that are more sensitive to air pollution than others due to their exposure. Sensitive population groups include children, the elderly, the acutely and chronically ill, and those with cardio-respiratory diseases. For CEQA purposes, the SCAQMD, in its Localized Significance Threshold Methodology (SCAQMD 2008a, page 3-2), considers a sensitive receptor to be a location where a sensitive individual could remain for 24-hours or longer, such as residencies, hospitals, and schools (etc).

The closest existing sensitive receptors are proposed residential units located approximately 25 meters (residential development) to the east of the Project.

1.3 Summary of Analysis Results

The following is a summary of the analysis results, according to impact.

Impact AIR-1: The Project would not conflict with or obstruct implementation of the applicable air quality plan. **Less than significant.**

Impact AIR-2: The Project would not violate an air quality standard or contribute substantially to an existing or projected air quality violation. **Less than significant.**

Impact AIR-3: The Project will not result in a cumulatively considerable net increase of a criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard

(including releasing emissions, which exceed quantitative thresholds for ozone precursors). **Less than significant.**

Impact AIR-4: The Project would not expose sensitive receptors to substantial pollutant concentrations. **Less than significant.**

Impact AIR-5: The Project would not create objectionable odors affecting a substantial number of people. **Less than significant.**

The following is a summary of the analysis results, according to impact:

Impact GHG-1: The Project would generate direct and indirect greenhouse gas emissions; however, these emissions would not result in a significant impact on the environment. **Less than significant.**

Impact GHG-2: The Project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases. **Less than significant.**

1.4 Project Design Features

Air Quality Impact Construction Measures

1. The project shall ensure that during site preparation and grading operations, all contractors shall comply with all applicable measures listed in SCAQMD Rule 403 to control fugitive dust including the application of water to all exposed surfaces a minimum of three times per day.

2. The proposed project and its contractors shall ensure that either water based or low-VOC coating with a VOC coating of 50 grams per liter be utilized to apply the architectural coatings (lower than SCAQMD Rule 1113).

Air Quality/Greenhouse Gas Impact Operation Measures

1. Project shall require to the extent feasible, use paints with VOC content lower than SCAQMD Rule 1113 requires for application to surfaces of spaces within the project site.

2.0 Regulatory Framework and Background

2.1 Air Quality Regulatory Setting

Air pollutants are regulated at the national, state, and air basin level; each agency has a different level of regulatory responsibility. The United States Environmental Protection Agency (EPA) regulates federal sources such as aircraft, trains and ships at the national level. The California Air Resources Board (ARB) regulates mobile sources and area sources (e.g. consumer products) at the state level. The South Coast Air Quality Management District (SCAQMD) regulates stationary sources, some area sources (e.g. architectural coatings) and some mobile sources (e.g. local fleets) at the air basin level.

2.1.1 National and State

Both the federal government and the State of California have established health-based ambient air quality standards (AAQS) for seven air pollutants. As shown in Table 2, these pollutants include ozone (O_3), carbon monoxide (CO), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), coarse particulate matter with a diameter of 10 microns or less (PM_{10}), fine particulate matter with a diameter of 2.5 microns in diameter ($PM_{2.5}$), and lead. In addition the State has set standards for sulfates, hydrogen sulfides, vinyl chloride, and visibility-reducing particles. These standards are designed to protect the health and welfare of the populace with a reasonable margin of safety.

In addition to setting out primary and secondary AAQS, the State has established a set of episode criteria for O_3, CO, NO_2, SO_2, and PM_{10}. These criteria refer to episode levels representing periods of short-term exposure to air pollutants that actually threaten public health. Health effects are progressively more severe as pollutant levels increases from Stage One to Stage Three. An alert level is that concentration of pollutants at which initial stage control actions are to begin. An alert will be declared when any one of the pollutant concentrations can be expected to remain at these levels for 12 or more hours or to increase or, in the case of oxidants, the situation is likely to recur within the next 24 hours, unless control actions are taken.

Pollutant alert levels:

- O_3: 392 micrograms per cubic meter (μg/m3) (0.20 parts per million [ppm]), 1-hour average
- CO: 17 milligrams per cubic meter (mg/m3) (15 ppm), 8-hour average
- NO_2: 1,130 μg/m3 (0.6 ppm) 1-hour average; 282 μg/m3 (0.15 ppm) 24-hour average
- S02: 1,130 μg/m3 (0.2 ppm) 24-hour average
- Particulates, measured as PM10: 350 μg/m3, 24-hour average

According to the AQMD pollutant alert levels are summarized below:

Air Quality Index
Pollutant Specific Cautionary Statements

Health Categories	Ozone	Very Small Particles PM2.5	Small Particles PM10	Carbon Monoxide (C0)
Very Unhealthy (201 to 300)	Active children and adults, and people with respiratory disease, such as asthma, should avoid all outdoor exertion (participation in strenuous sports activities or exercise); everyone else, especially children, should limit outdoor exertion.	People with respiratory or heart disease, the elderly and children should avoid any outdoor activity; everyone else should avoid prolonged exertion.	People with respiratory disease, such as asthma, should avoid any outdoor activity; everyone else, especially the elderly and children, should limit outdoor exertion.	People with cardiovascular disease, such as angina, should avoid exertion and sources of CO, such as heavy traffic.
Unhealthy (151 to 200)	Active children and adults, and people with respiratory disease, such as asthma, should avoid prolonged outdoor exertion; everyone else, especially children, should limit prolonged outdoor exertion.	People with respiratory or heart disease, the elderly and children should avoid prolonged exertions; everyone else should limit prolonged exertion.	People with respiratory disease, such as asthma, should avoid outdoor exertion; everyone else, especially the elderly and children, should limit prolonged outdoor exertion.	People with cardiovascular disease, such as angina, should limit moderate exertion and avoid sources of CO, such as heavy traffic.
Unhealthy For Sensitive Groups (101 to 150)	Active children and adults, and people with respiratory disease, such as asthma, should limit prolonged outdoor exertion.	People with respiratory or heart disease, the elderly and children should limit prolonged exertion.	People with respiratory disease, such as asthma, should limit outdoor exertion.	People with cardiovascular disease, such as angina, should limit heavy exertion and avoid sources of CO, such as heavy traffic.
Moderate (51 to 100)	Unusually sensitive people should consider limiting prolonged outdoor exertion.	None	None	None
Good (0 to 50)	None	None	None	None

Source: South Coast Air Quality Management District

A State Implementation Plan is a document prepared by each state describing existing air quality conditions and measures that will be followed to attain and maintain federal standards. The State Implementation Plan for the State of California is administered by the ARB, which has overall responsibility for statewide air quality maintenance and air pollution prevention. California's State Implementation Plan incorporates individual federal attainment plans for regional air districts—air district prepares their federal attainment plan, which sent to ARB to be approved and incorporated into the California State

Implementation Plan. Federal attainment plans include the technical foundation for understanding air quality (e.g., emission inventories and air quality monitoring), control measures and strategies, and enforcement mechanisms.

Several pollutants listed in Table 2 are not addressed in this analysis. Analysis of lead is not included in this report because the Project is not anticipated to emit lead. Visibility-reducing particles are not explicitly addressed in this analysis because particulate matter is addressed. The Project is not expected to generate or be exposed to vinyl chloride because proposed Project uses do not utilize the chemical processes that create this pollutant and there are no such uses in the Project vicinity. The proposed Project is not expected to cause exposure to hydrogen sulfide because it would not generate hydrogen sulfide in any substantial quantity.

2.1.2 South Coast Air Quality Management District

The agency for air pollution control for the South Coast Air Basin (basin) is the South Coast Air Quality Management District (SCAQMD). SCAQMD is responsible for controlling emissions primarily from stationary sources. SCAQMD maintains air quality monitoring stations throughout the basin. SCAQMD, in coordination with the Southern California Association of Governments, is also responsible for developing, updating, and implementing the Air Quality Management Plan (AQMP) for the basin. An AQMP is a plan prepared and implemented by an air pollution district for a county or region designated as nonattainment of the federal and/or California ambient air quality standards. The term nonattainment area is used to refer to an air basin where one or more ambient air quality standards are exceeded.

Every three (3) years the SCAQMD prepares a new AQMP, updating the previous plan and having a 20-year horizon. AQMPs are prepared based on the effective date of designation for new national ambient air quality standards (NAAQS) and the required attainment of the NAAQS is based on the classification of the non-attainment (or degree upon which an area is not in attainment such as moderate, serious, severe, extreme). For example, EPA designated non-attainment areas on July 20, 2012 for the latest 8-hour ozone NAAQS (75 ppb). The Clean Air Act gives 4 years to submit the ozone SIP (our AQMP is the SIP for South Coast) and 20 years to attain if in an "extreme" non-attainment of the NAAQS, so July 20, 2032.

On December 7, 2012, SCAQMD adopted the 2012 AQMP. The 2012 AQMP incorporates the latest scientific and technological information and planning assumptions, including the 2012 Regional Transportation Plan/Sustainable Communities Strategy and updated emission inventory methodologies for various source categories. In addition, the 2012 AQMP includes the new and changing federal requirements, the implementation of new technology measures, and the continued development of economically sound, flexible compliance approaches. The SCAQMD is currently preparing a 2016 AQMP to demonstrate attainment of the 2008 8-hour ozone NAAQS (75 ppb) and the 2012 annual

PM2.5 NAAQS (12 ug/m3), as well as updates to the 80 ppb 8-hour ozone NAAQS, 1-hour ozone (120 ppb) and 24-hour PM2.5 (35 ug/m3).

It should be noted that on October 1, 2015, the Environmental Protection Agency (EPA) lowered the ozone National Ambient Air Quality Standard (NAAQS) to 70 ppb. However, the standard has not been adopted by California Air Resource Board (CARB) or air quality districts. Until CARB and the air quality districts update their regulatory plans, the analysis will be conducted based on the existing 75 ppb standard.

South Coast Air Quality Management District Rules

The AQMP for the basin establishes a program of rules and regulations administered by SCAQMD to obtain attainment of the state and federal standards. The rules and regulations that apply to this Project include, but are not limited to, the following:

SCAQMD Rule 402 prohibits a person from discharging from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

SCAQMD Rule 403 governs emissions of fugitive dust during construction and operation activities. Compliance with this rule is achieved through application of standard Best Management Practices, such as application of water or chemical stabilizers to disturbed soils, covering haul vehicles, restricting vehicle speeds on unpaved roads to 15 miles per hour, sweeping loose dirt from paved site access roadways, cessation of construction activity when winds exceed 25 mph, and establishing a permanent ground cover on finished sites.

SCAQMD Rule 1113 governs the sale, use, and manufacturing of architectural coating and limits the VOC content in paints and paint solvents. This rule regulates the VOC content of paints available during construction. Therefore, all paints and solvents used during construction and operation of project must comply with Rule 1113.

SCAQMD Rule 1143 governs the manufacture, sale, and use of paint thinners and solvents used in thinning of coating materials, cleaning of coating application equipment, and other solvent cleaning operations by limiting their VOC content. This rule regulates the VOC content of solvents used during construction. Solvents used during the construction phase must comply with this rule.

SCAQMD Rule 1186 limits the presence of fugitive dust on paved and unpaved roads and sets certification protocols and requirements for street sweepers that are under contract to provide sweeping services to any federal, state, county, agency or special district such as water, air, sanitation, transit, or school district.

SCAQMD Rule 1303 governs the permitting of re-located or new major emission sources, requiring Best Available Control Measures and setting significance limits for PM10 among other pollutants.

SCAQMD Rule 2202 On-Road Motor Vehicle Mitigation Options, is to provide employers with a menu of options to reduce mobile source emissions generated from employee commutes, to comply with federal and state Clean Air Act requirements, Health & Safety Code Section 40458, and Section 182(d)(1)(B) of the federal Clean Air Act. It applies to any employer who employs 250 or more employees on a full or part-time basis at a worksite for a consecutive six-month period calculated as a monthly average.

2.2 Greenhouse Gas Regulatory Setting

2.2.1 International

Many countries around the globe have made an effort to reduce GHGs since climate change is a global issue.

Intergovernmental Panel on Climate Change. In 1988, the United Nations and the World Meteorological Organization established the Intergovernmental Panel on Climate Change to assess the scientific, technical and socio-economic information relevant to understanding the scientific basis of risk of human-induced climate change, its potential impacts, and options for adaptation and mitigation.

United Nations. The United States participates in the United Nations Framework Convention on Climate Change (UNFCCC) (signed on March 21, 1994). Under the Convention, governments gather and share information on greenhouse gas emissions, national policies, and best practices; launch national strategies for addressing greenhouse gas emissions and adapting to expected impacts, including the provision of financial and technological support to developing countries; and cooperate in preparing for adaptation to the impacts of climate change. The 2014 UN Climate Change Conference in Lima Peru provided a unique opportunity to engage all countries to assess how developed countries are implementing actions to reduce emissions.

Kyoto Protocol. The Kyoto Protocol is a treaty made under the UNFCCC and was the first international agreement to regulate GHG emissions. It has been estimated that if the commitments outlined in the Kyoto Protocol are met, global GHG emissions could be reduced by an estimated 5 percent from 1990 levels during the first commitment period of 2008 – 2012 (UNFCCC 1997). On December 8, 2012, the Doha Amendment to the Kyoto Protocol was adopted. The amendment includes: New commitments for Annex I Parties to the Kyoto Protocol who agreed to take on commitments in a second commitment period from 2013 – 2020, a revised list of greenhouse gases (GHG) to be reported on by Parties in the second commitment period, and Amendments to several articles of the Kyoto Protocol,

which specifically referenced issues pertaining to the first commitment period and which needed to be updated for the second commitment period.

2.2.2 National

Greenhouse Gas Endangerment. On December 2, 2009, the EPA announced that GHGs threaten the public health and welfare of the American people. The EPA also states that GHG emissions from on-road vehicles contribute to that threat. The decision was based on *Massachusetts v. EPA* (Supreme Court Case 05-1120) which argued that GHGs are air pollutants covered by the Clean Air Act and that the EPA has authority to regulate those emissions.

Clean Vehicles. Congress first passed the Corporate Average Fuel Economy law in 1975 to increase the fuel economy of cars and light duty trucks. The law has become more stringent over time. On May 19, 2009, President Obama put in motion a new national policy to increase fuel economy for all new cars and trucks sold in the United States. On April 1, 2010, the EPA and the Department of Transportation's National Highway Safety Administration announced a joint final rule establishing a national program that would reduce greenhouse gas emissions and improve fuel economy for new cars and trucks sold in the United States.

The first phase of the national program would apply to passenger cars, light-duty trucks, and medium-duty passenger vehicles, covering model years 2012 through 2016. They require these vehicles to meet an estimated combined average emissions level of 250 grams of carbon dioxide per mile, equivalent to 35.5 miles per gallon if the automobile industry were to meet this carbon dioxide level solely through fuel economy improvements. Together, these standards would cut carbon dioxide emissions by an estimated 960 million metric tons and 1.8 billion barrels of oil over the lifetime of the vehicles sold under the program (model years 2012-2016). The second phase of the national program would involve proposing new fuel economy and greenhouse gas standards for model years 2017 – 2025 by September 1, 2011.

On October 25, 2010, the EPA and the U.S. Department of Transportation proposed the first national standards to reduce greenhouse gas emissions and improve fuel efficiency of heavy-duty trucks and buses. For combination tractors, the agencies are proposing engine and vehicle standards that begin in the 2014 model year and achieve up to a 20 percent reduction in carbon dioxide emissions and fuel consumption by the 2018 model year. For heavy-duty pickup trucks and vans, the agencies are proposing separate gasoline and diesel truck standards, which phase in starting in the 2014 model year and achieve up to a 10 percent reduction for gasoline vehicles and 15 percent reduction for diesel vehicles by 2018 model year (12 and 17 percent respectively, if accounting for air conditioning leakage). Lastly, for vocational vehicles, the agencies are proposing engine and vehicle standards starting in the 2014 model year which would achieve up to a 10 percent reduction in fuel consumption and carbon dioxide emissions by 2018 model year.

Mandatory Reporting of Greenhouse Gases. On January 1, 2010, the EPA started requiring large emitters of heat-trapping emissions to begin collecting GHG data under a new reporting system. Under the rule, suppliers of fossil fuels or industrial greenhouse gases, manufacturers of vehicles and engines, and facilities that emit 25,000 metric tons or more per year of greenhouse gas emissions are required to submit annual reports to the EPA.

Climate Adaption Plan. The EPA Plan identifies priority actions the Agency will take to incorporate considerations of climate change into its programs, policies, rules and operations to ensure they are effective under future climatic conditions. The Plan reflects input received from States, Tribes and municipal and county officials during development, as well as comments received during a formal Tribal consultation process and a 60 day public comment period during the Winter of 2013.

EPA is also releasing final Climate Change Adaptation Implementation Plans from its National Environmental Program Offices and all 10 Regional Offices. The Implementation Plans, which also reflect responses to public comment, provide more detail on how EPA Programs and Regions will carry out the work called for in the agency wide Plan in partnership with states, tribes, and local governments.

2.2.3 California

Title 24. California Code of Regulations Title 24 Part 6: California's Energy Efficiency Standards for Residential and Nonresidential Buildings, was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. All buildings for which an application for a building permit is submitted on or after July 1, 2014 must follow the 2013 standards. The 2013 commercial standards are estimated to be 30% more efficient than the 2008 standards; 2013 residential standards are at least 25% more efficient.

California Green Building Standards. On January 12, 2010, the State Building Standards Commission unanimously adopted updates to the California Green Building Standards Code, which went into effect on January 1, 2011. The Code is a comprehensive and uniform regulatory code for all residential, commercial and school buildings.

The California Green Building Standards Code does not prevent a local jurisdiction from adopting a more stringent code as state law provides methods for local enhancements. The Code recognizes that many jurisdictions have developed existing construction and demolition ordinances, and defers to them as the ruling guidance provided they provide a minimum 50-percent diversion requirement. The code also provides exemptions for areas not served by construction and demolition recycling infrastructure. State building code provides the minimum standard which buildings need to meet in order to be certified for occupancy. Enforcement is generally through the local building official.

The California Green Building Standards Code (code section in parentheses) requires:

- **Short-term bicycle parking.** If a commercial project is anticipated to generate visitor traffic, provide permanently anchored bicycle racks within 200 feet of the visitors' entrance, readily visible to passers-by, for 5 percent of visitor motorized vehicle parking capacity, with a minimum of one two-bike capacity rack (5.106.4.1).

- **Long-term bicycle parking.** For buildings with over 10 tenant-occupants, provide secure bicycle parking for 5 percent of tenant-occupied motorized vehicle parking capacity, with a minimum of one space (5.106.4.2).

- **Designated parking.** Provide designated parking in commercial projects for any combination of low-emitting, fuel-efficient and carpool/van pool vehicles (5.106.5.2).

- **Recycling by Occupants.** Provide readily accessible areas that serve the entire building and are identified for the depositing, storage and collection of nonhazardous materials for recycling.

- **Construction waste.** A minimum 50-percent diversion of construction and demolition waste from landfills, increasing voluntarily to 65 and-75 percent for new homes and 80-percent for commercial projects. All (100 percent) of trees, stumps, rocks and associated vegetation and soils resulting from land clearing shall be reused or recycled.

- **Wastewater reduction.** Each building shall reduce the generation of wastewater by one of the following methods:

    - The installation of water-conserving fixtures or
    - Utilizing nonpotable water systems (5.303.4).
    - Water use savings. 20-percent mandatory reduction in indoor water use with voluntary goal standards for 30, 35 and 40-percent reductions.
    - Water meters. Separate water meters for buildings in excess of 50,000 square feet or buildings projected to consume more than 1,000 gallons per day.
    - Irrigation efficiency. Moisture-sensing irrigation systems for larger landscaped areas.
    - Materials pollution control. Low-pollutant emitting interior finish materials such as paints, carpet, vinyl flooring, and particle board.
    - Building commissioning. Mandatory inspections of energy systems (i.e. heat furnace, air conditioner, mechanical equipment) for nonresidential buildings over 10,000 square feet to ensure that all are working at their maximum capacity according to their design efficiencies.

Pavley Regulations. California AB 1493, enacted on July 22, 2002, required the ARB to develop and adopt regulations that reduce greenhouse gases emitted by passenger vehicles

and light duty trucks. The regulation was stalled by automaker lawsuits and by the EPA's denial of an implementation waiver. On January 21, 2009, the ARB requested that the EPA reconsider its previous waiver denial. On January 26, 2009, President Obama directed that the EPA assess whether the denial of the waiver was appropriate. On June 30, 2009, the EPA granted the waiver request.

The standards phase in during the 2009 through 2016 model years. When fully phased in, the near term (2009-2012) standards will result in about a 22-percent reduction compared with the 2002 fleet, and the mid-term (2013-2016) standards will result in about a 30-percent reduction. Several technologies stand out as providing significant reductions in emissions at favorable costs. These include discrete variable valve lift or camless valve actuation to optimize valve operation rather than relying on fixed valve timing and lift as has historically been done; turbocharging to boost power and allow for engine downsizing; improved multi-speed transmissions; and improved air conditioning systems that operate optimally, leak less, and/or use an alternative refrigerant.

Executive Order S-3-05. California Governor Arnold Schwarzenegger announced on June 1, 2005, through Executive Order S-3-05, the following reduction targets for greenhouse gas emissions:

- By 2010, California shall reduce greenhouse gas emissions to 2000 levels;
- By 2020, California shall reduce greenhouse gas emissions to 1990 levels.
- By 2050, California shall reduce greenhouse gas emissions to 80% below 1990 levels.

The 2050 reduction goal represents what scientists believe is necessary to reach levels that will stabilize the climate. The 2020 goal was established to be an aggressive, but achievable, mid-term target. The Climate Action Team's Report to the Governor in 2006 contains recommendations and strategies to help ensure the 2020 targets in Executive Order S-3-05 are met.

Low Carbon Fuel Standard - Executive Order S-01-07. The Governor signed Executive Order S-01-07 on January 18, 2007. The order mandates that a statewide goal shall be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020. In particular, the executive order established a Low Carbon Fuel Standard and directed the Secretary for Environmental Protection to coordinate the actions of the California Energy Commission, the ARB, the University of California, and other agencies to develop and propose protocols for measuring the "life-cycle carbon intensity" of transportation fuels. This analysis supporting development of the protocols was included in the State Implementation Plan for alternative fuels (State Alternative Fuels Plan adopted by California Energy Commission on December 24, 2007) and was submitted to ARB for consideration as an "early action" item under AB 32. The ARB adopted the Low Carbon Fuel Standard on April 23, 2009.

SB 1368. In 2006, the State Legislature adopted Senate Bill (SB) 1368, which was subsequently signed into law by the Governor. SB 1368 directs the California Public Utilities Commission to adopt a performance standard for greenhouse gas emissions for the future power purchases of California utilities. SB 1368 seeks to limit carbon emissions associated with electrical energy consumed in California by forbidding procurement arrangements for energy longer than 5 years from resources that exceed the emissions of a relatively clean, combined cycle natural gas power plant. Because of the carbon content of its fuel source, a coal-fired plant cannot meet this standard because such plants emit roughly twice as much carbon as natural gas, combined cycle plants. Accordingly, the new law will effectively prevent California's utilities from investing in, otherwise financially supporting, or purchasing power from new coal plants located in or out of the State. Thus, SB 1368 will lead to dramatically lower greenhouse gas emissions associated with California's energy demand, as SB 1368 will effectively prohibit California utilities from purchasing power from out-of-state producers that cannot satisfy the performance standard for greenhouse gas emissions required by SB 1368. The California Public Utilities Commission adopted the regulations required by SB 1368 on August 29, 2007.

SB 97 and the CEQA Guidelines Update. Passed in August 2007, SB 97 added Section 21083.05 to the Public Resources Code. The code states "(a) On or before July 1, 2009, the Office of Planning and Research shall prepare, develop, and transmit to the Resources Agency guidelines for the mitigation of greenhouse gas emissions or the effects of greenhouse gas emissions as required by this division, including, but not limited to, effects associated with transportation or energy consumption. (b) On or before January 1, 2010, the Resources Agency shall certify and adopt guidelines prepared and developed by the Office of Planning and Research pursuant to subdivision (a)." Section 21097 was also added to the Public Resources Code. It provided CEQA protection until January 1, 2010 for transportation projects funded by the Highway Safety, Traffic Reduction, Air Quality, and Port Security Bond Act of 2006 or projects funded by the Disaster Preparedness and Flood Prevention Bond Act of 2006, in stating that the failure to adequately analyze the effects of greenhouse gases would not violate CEQA.

On April 13, 2009, the Office of Planning and Research submitted to the Secretary for Natural Resources its recommended amendments to the CEQA Guidelines for addressing greenhouse gas emissions. On July 3, 2009, the Natural Resources Agency commenced the Administrative Procedure Act rulemaking process for certifying and adopting these amendments pursuant to Public Resources Code section 21083.05. Following a 55-day public comment period and two public hearings, the Natural Resources Agency proposed revisions to the text of the proposed Guidelines amendments. The Natural Resources Agency transmitted the adopted amendments and the entire rulemaking file to the Office of Administrative Law on December 31, 2009. On February 16, 2010, the Office of Administrative Law approved the Amendments, and filed them with the Secretary of State for inclusion in the California Code of Regulations. The Amendments became effective on March 18, 2010.

The CEQA Amendments provide guidance to public agencies regarding the analysis and mitigation of the effects of greenhouse gas emissions in CEQA documents. The CEQA Amendments fit within the existing CEQA framework by amending existing CEQA Guidelines to reference climate change.

A new section, CEQA Guidelines Section 15064.4, was added to assist agencies in determining the significance of greenhouse gas emissions. The new section allows agencies the discretion to determine whether a quantitative or qualitative analysis is best for a particular project. However, little guidance is offered on the crucial next step in this assessment process—how to determine whether the project's estimated greenhouse gas emissions are significant or cumulatively considerable.

Also amended were CEQA Guidelines Sections 15126.4 and 15130, which address mitigation measures and cumulative impacts respectively. Greenhouse gas mitigation measures are referenced in general terms, but no specific measures are championed. The revision to the cumulative impact discussion requirement (Section 15130) simply directs agencies to analyze greenhouse gas emissions in an EIR when a project's incremental contribution of emissions may be cumulatively considerable, however it does not answer the question of when emissions are cumulatively considerable.

Section 15183.5 permits programmatic greenhouse gas analysis and later project-specific tiering, as well as the preparation of Greenhouse Gas Reduction Plans. Compliance with such plans can support a determination that a project's cumulative effect is not cumulatively considerable, according to proposed Section 15183.5(b). In addition, the amendments revised Appendix F of the CEQA Guidelines, which focuses on Energy Conservation. The sample environmental checklist in Appendix G was amended to include greenhouse gas questions.

AB 32. The California State Legislature enacted AB 32, the California Global Warming Solutions Act of 2006. AB 32 requires that greenhouse gases emitted in California be reduced to 1990 levels by the year 2020. "Greenhouse gases" as defined under AB 32 include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. ARB is the state agency charged with monitoring and regulating sources of greenhouse gases. AB 32 states the following:

Global warming poses a serious threat to the economic well-being, public health, natural resources, and the environment of California. The potential adverse impacts of global warming include the exacerbation of air quality problems, a reduction in the quality and supply of water to the state from the Sierra snowpack, a rise in sea levels resulting in the displacement of thousands of coastal businesses and residences, damage to marine ecosystems and the natural environment, and an increase in the incidences of infectious diseases, asthma, and other human health-related problems.
The ARB Board approved the 1990 greenhouse gas emissions level of 427 million metric tons of carbon dioxide equivalent (MMTCO2e) on December 6, 2007 (California Air Resources Board 2007). Therefore, emissions generated in California in 2020 are required

to be equal to or less than 427 MMTCO2e. Emissions in 2020 in a "business as usual" scenario are estimated to be 596 MMTCO2e.

Under AB 32, the ARB published its Final Expanded List of Early Action Measures to Reduce Greenhouse Gas Emissions in California. Discrete early action measures are currently underway or are enforceable by January 1, 2010. The ARB has 44 early action measures that apply to the transportation, commercial, forestry, agriculture, cement, oil and gas, fire suppression, fuels, education, energy efficiency, electricity, and waste sectors. Of these early action measures, nine are considered discrete early action measures, as they are regulatory and enforceable by January 1, 2010. The ARB estimates that the 44 recommendations are expected to result in reductions of at least 42 MMTCO2e by 2020, representing approximately 25 percent of the 2020 target.

The ARB's Climate Change Scoping Plan (Scoping Plan) contains measures designed to reduce the State's emissions to 1990 levels by the Year 2020 (California Air Resources Board 2008). The Scoping Plan identifies recommended measures for multiple greenhouse gas emission sectors and the associated emission reductions needed to achieve the year 2020 emissions target—each sector has a different emission reduction target. Most of the measures target the transportation and electricity sectors. As stated in the Scoping Plan, the key elements of the strategy for achieving the 2020 greenhouse gas target include:

- Expanding and strengthening existing energy efficiency programs as well as building and appliance standards;
- Achieving a statewide renewables energy mix of 33 percent;
- Developing a California cap-and-trade program that links with other Western Climate Initiative partner programs to create a regional market system;
- Establishing targets for transportation-related greenhouse gas emissions for regions throughout California and pursuing policies and incentives to achieve those targets;
- Adopting and implementing measures pursuant to existing State laws and policies, Including California's clean car standards, goods movement measures, and the Low Carbon Fuel Standard; and
- Creating targeted fees, including a public goods charge on water use, fees on high global warming potential gases, and a fee to fund the administrative costs of the State's long-term commitment to AB 32 implementation.

In addition, the Scoping Plan differentiates between "capped" and "uncapped" strategies. "Capped" strategies are subject to the proposed cap-and-trade program. The Scoping Plan states that the inclusion of these emissions within the cap-and trade program will help ensure that the year 2020 emission targets are met despite some degree of uncertainty in the emission reduction estimates for any individual measure. Implementation of the capped strategies is calculated to achieve a sufficient amount of reductions by 2020 to achieve the emission target contained in AB 32. "Uncapped" strategies that will not be subject to the cap-and-trade emissions caps and requirements are provided as a margin of safety by accounting for additional greenhouse gas emission reductions.

SB 375. Passing the Senate on August 30, 2008, SB 375 was signed by the Governor on September 30, 2008. According to SB 375, the transportation sector is the largest contributor of greenhouse gas emissions, which emits over 40 percent of the total greenhouse gas emissions in California. SB 375 states, "Without improved land use and transportation policy, California will not be able to achieve the goals of AB 32." SB 375 does the following: (1) requires metropolitan planning organizations to include sustainable community strategies in their regional transportation plans for reducing greenhouse gas emissions, (2) aligns planning for transportation and housing, and (3) creates specified incentives for the implementation of the strategies. Concerning CEQA, SB 375, section 21159.28 states that CEQA findings determinations for certain projects are not required to reference, describe, or discuss (1) growth inducing impacts or (2) any project-specific or cumulative impacts from cars and light-duty truck trips generated by the project on global warming or the regional transportation network if the project:

1. Is in an area with an approved sustainable communities strategy or an alternative planning strategy that the ARB accepts as achieving the greenhouse gas emission reduction targets.
2. Is consistent with that strategy (in designation, density, building intensity, and applicable policies).
3. Incorporates the mitigation measures required by an applicable prior environmental document.

Executive Order S-13-08. Executive Order S-13-08 indicates that "climate change in California during the next century is expected to shift precipitation patterns, accelerate sea level rise and increase temperatures, thereby posing a serious threat to California's economy, to the health and welfare of its population and to its natural resources." Pursuant to the requirements in the order, the 2009 California Climate Adaptation Strategy (California Natural Resources Agency 2009) was adopted, which is the " . . . first statewide, multi-sector, region-specific, and information-based climate change adaptation strategy in the United States." Objectives include analyzing risks of climate change in California, identifying and exploring strategies to adapt to climate change, and specifying a direction for future research.

Renewable Electricity Standards. On September 12, 2002, Governor Gray Davis signed SB 1078 requiring California to generate 20 percent of its electricity from renewable energy by 2017. SB 107 changed the due date to 2010 instead of 2017. On November 17, 2008, Governor Arnold Schwarzenegger signed Executive Order S-14-08, which established a Renewable Portfolio Standard target for California requiring that all retail sellers of electricity serve 33 percent of their load with renewable energy by 2020. Governor Schwarzenegger also directed the ARB (Executive Order S-21¬09) to adopt a regulation by July 31, 2010, requiring the state's load serving entities to meet a 33 percent renewable energy target by 2020. The ARB Board approved the Renewable Electricity Standard on September 23, 2010 by Resolution 10-23.

2.2.4 South Coast Air Quality Management District

The Project is within the South Coast Air Basin, which is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). SCAQMD Regulation XXVII currently includes three rules:

- The purpose of Rule 2700 is to define terms and post global warming potentials.
- The purpose of Rule 2701, SoCal Climate Solutions Exchange, is to establish a voluntary program to encourage, quantify, and certify voluntary, high quality certified greenhouse gas emission reductions in the SCAQMD.
- Rule 2702, Greenhouse Gas Reduction Program, was adopted on February 6, 2009. The purpose of this rule is to create a Greenhouse Gas Reduction Program for greenhouse gas emission reductions in the SCAQMD. The SCAQMD will fund projects through contracts in response to requests for proposals or purchase reductions from other parties.

SCAQMD Threshold Development

The SCAQMD has established recommended significance thresholds for greenhouse gases for local lead agency consideration ("SCAQMD draft local agency threshold"). SCAQMD has published a five-tiered draft GHG threshold which includes a 10,000 metric ton of CO_2e per year for stationary/industrial sources and 3,000 metric tons of CO_2e per year significance threshold for residential/commercial projects (South Coast Air Quality Management District 2010c). Tier 3 is anticipated to be the primary tier by which the SCAQMD will determine significance for projects. The Tier 3 screening level for stationary sources is based on an emission capture rate of 90 percent for all new or modified projects. A 90-precent emission capture rate means that 90 percent of total emissions from all new or modified stationary source projects would be subject to CEQA analysis. The 90-percent capture rate GHG significance screening level in Tier 3 for stationary sources was derived using the SCAQMD's annual Emissions Reporting Program.

The current draft thresholds consist of the following tiered approach:

- Tier 1 consists of evaluating whether or not the project qualifies for any applicable exemption under CEQA.

- Tier 2 consists of determining whether or not the project is consistent with a greenhouse gas reduction plan. If a project is consistent with a qualifying local greenhouse gas reduction plan, it does not have significant greenhouse gas emissions.

- Tier 3 consists of screening values, which the lead agency can choose but must be consistent. A project's construction emissions are averaged over 30 years and are added to a project's operational emissions. If a project's emissions are under one of the following screening thresholds, then the project is less than significant:

- All land use types: 3,000 MTCO2e per year

- Tier 4 has the following options:
  - Option 1: Reduce emissions from business as usual by a certain percentage; this percentage is currently undefined
  - Option 2: Early implementation of applicable AB 32 Scoping Plan measures
  - Option 3: Year 2020 target for service populations (SP), which includes residents and employees: 4.8 MTCO2e/SP/year for projects and 6.6 MTCO2e/SP/year for plans;
  - Option 3, 2035 target: 3.0 MTCO2e/SP/year for projects and 4.1 MTCO2e/SP/year for plans

- Tier 5 involves mitigation offsets to achieve target significance threshold.

2.2.5 City of Aliso Viejo

The City of Aliso Viejo currently does not have any thresholds of significance for GHG emissions therefore the project will follow the SCAQMD's recommended Tiered 3 and 4 (option 1):

- Tier 3: project greenhouse gas emissions compared with the threshold: 3,000 MTCO2e per year (see analysis in Section VII below), if the project exceeds this threshold; go to Tier 4.

- Tier 4, option 1: Reduce greenhouse gas emissions from business as usual by 15 percent (see analysis in Section 7 below).

Section 15064.4(b) of the CEQA Guideline amendments for greenhouse gas emissions states that a lead agency may take into account the following three considerations in assessing the significance of impacts from greenhouse gas emissions:

> Consideration #1: The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting.
>
> Consideration #2: Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project.
>
> Consideration #3: The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions.

Such regulations or requirements must be adopted by the relevant public agency through a public review process and must include specific requirements that reduce or mitigate the project's incremental contribution of greenhouse gas emissions. If there is substantial evidence notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the project.

3.0 Setting

3.1 Existing Physical Setting

The Project is located in the City of Aliso Viejo in Orange County and is within the South Coast Air Basin (basin). To the west of the basin is the Pacific Ocean. To the north and east of the basin are the San Gabriel, San Bernardino, and San Jacinto mountains, while the southern limit of the basin is the San Diego County line. The basin consists of Orange County, all of Los Angeles County except for the Antelope Valley, the non-desert portion of western San Bernardino County, and the western and Coachella Valley portions of Riverside County. The air quality in the basin is impacted by dominant airflows, topography, atmospheric inversions, location, season, and time of day.

3.1.1 Local Climate and Meteorology

Dominant airflows provide the driving mechanism for transport and dispersion of air pollution. The mountains surrounding the region form natural horizontal barriers to the dispersion of air contaminants. Air pollution created in the coastal areas and around the Los Angeles area is transported inland until it reaches the mountains where the combination of mountains and inversion layers generally prevent further dispersion. This poor ventilation results in a gradual degradation of air quality from the coastal areas to inland areas. Air stagnation may occur during the early evening and early morning periods of transition between day and nighttime flows. The region also experiences periods of hot, dry winds from the desert, known as Santa Ana winds. If the Santa Ana winds are strong, they can surpass the sea breeze, which blows from the ocean to the land, and carry the suspended dust and pollutants out to the ocean. If the winds are weak, they are opposed by the sea breeze and cause stagnation, resulting in high pollution events.

The local dominant wind blows predominantly from the south-southwest with relatively low velocities. The annual average annual wind speed is about 10 mph. Summer wind speeds average slightly higher than winter wind speeds. Low average wind speeds, together with a persistent temperature inversion limit the vertical dispersion of air pollutants throughout the Basin.

The annual average temperature varies little throughout much of the basin, ranging from the low to middle 60s, measured in degrees Fahrenheit (°F). With more pronounced oceanic influence, coastal areas show less variability in annual minimum and maximum temperatures than inland areas.

The climatological station closest to the project site is a National Weather Service Cooperative weather station located in City of Laguna Beach. Climatological data from the National Weather Service at this station spanning the period 1928-2013 indicate an annual average temperature of 61.1 Fahrenheit, with January the coldest month (mean minimum

daily temperatures of 43.0° Fahrenheit) and August, the warmest month of the year (mean daily maximum temperatures of 78.1° Fahrenheit).

The majority of the annual rainfall in the basin occurs between November and March. Summer rainfall is minimal and is generally limited to scattered thunderstorms in the coastal regions and slightly heavier showers in the eastern portion of the basin along the coastal side of the mountains. The climatological data from the Laguna Beach National Weather Service Coop station spanning the period 1928-2013 indicate an annual average precipitation of 12.52 inches. Eighty-three (83) percent of the annual rainfall occurs during the November to March rain season. The highest monthly average rainfall occurs during February. Year to year patterns in rainfall are unpredictable due to fluctuations in the weather. General meteorological data for the Aliso Viejo area, as measured at the Laguna Beach weather station, are presented in Table 3.

Temperature inversions are another important feature that limits the vertical depth through which pollution can be mixed. During the summer, coastal areas are characterized by a sharp discontinuity between the cool marine air at the surface and the warm, sinking air aloft within the high-pressure cell over the ocean to the west. This marine/subsidence inversion allows for good local mixing, but acts like a giant lid over the Basin. The air remains stagnant, as the average wind speed in downtown Los Angeles becomes less than five mph. A second type of inversion forms on clear winter nights when cold air off the mountains to the south sinks to the valley floor while the air aloft over the valley remains warm. This forms radiation inversions. These inversions, in conjunction with calm winds, trap pollutants such as those from automobile exhaust near their source. They lead to air pollution "hotspots" in heavily developed coastal areas of the Basin, but onshore breezes often push the pollutants along canyons into the inland valleys. Summers are often periods of hazy visibility and occasionally unhealthful air, while winter air quality impacts tend to be highly localized and can consist of elevated levels of nitrogen dioxide and fine particulate matter.

3.1.2 Local Air Quality

The local air quality can be evaluated by reviewing relevant air pollution concentrations near the project area. For evaluation purposes, the South Coast Air Quality Management District (SCAQMD) has divided the basin into 36 Source Receptor Areas (SRA) within the Basin operating monitoring stations in most of the areas. These SRAs are designated to provide a general representation of the local meteorological, terrain, and air quality conditions within the particular geographical area. The Project is within SRA 20, Central Orange County Coastal. This station does not monitor pollutant levels. . The next closest monitoring station is the Saddleback Valley, Station 19 which monitors ozone, CO, PM_{10} and $PM_{2.5}$. The North Coastal Orange County Station, Station 18, monitors NO_2 and SO_2. The pollutant levels from SRA 18 and 19 were used to comprise a "background" for the Project location.

Table 4 summarizes 2011 through 2013 published monitoring data, which is the most recent 3-year period available. The data shows that during the past few years, the Project area has exceeded the ozone, PM_{10}, and $PM_{2.5}$ standards.

3.1.3 Attainment Status

The EPA and the ARB designate air basins where ambient air quality standards are exceeded as "nonattainment" areas. If standards are met, the area is designated as an "attainment" area. If there is inadequate or inconclusive data to make a definitive attainment designation, they are considered "unclassified." National nonattainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from standards. Each standard has a different definition, or 'form' of what constitutes attainment, based on specific air quality statistics. For example, the Federal 8-hour CO standard is not to be exceeded more than once per year; therefore, an area is in attainment of the CO standard if no more than one 8-hour ambient air monitoring values exceeds the threshold per year. In contrast, the federal annual $PM_{2.5}$ standard is met if the three-year average of the annual average $PM_{2.5}$ concentration is less than or equal to the standard. Table 5 lists the attainment status for the criteria pollutants in the Basin.

3.2 Climate Change Setting

Climate change is a change in the average weather of the earth that is measured by alterations in temperature, wind patterns, storms, and precipitation. These changes are assessed using historical records of temperature changes occurring in the past, such as during previous ice ages. The historical data is utilized to extrapolate a level of statistical significance specifically focusing on temperature records from the last 150 years.

The United Nations Intergovernmental Panel on Climate Change (IPCC) constructed several emission trajectories of GHGs needed to stabilize global temperatures and climate change impacts. The IPPC concluded that global average temperatures and sea levels are expected to rise under all analytical scenarios (Intergovernmental Panel on Climate Change 2007a). The report also concluded that"[w]arming of the climate system is unequivocal," and that "[m]ost of the observed increase in global average temperatures since the mid-20th century is very likely due to the observed increase in anthropogenic greenhouse gas concentrations."

Many question the validity of the IPCC's report by claiming the inadequacy of the peer review process. Audits have concluded that 48 percent of the chapters in the Fourth Assessment Report received a grade of "F" meaning that 59 percent or fewer of the sources were peer reviewed (NoConsensus.org 2010).

Consequences of Climate Change in California

In California, climate change may result in consequences such as the following (from California Climate Change Center 2006 and Moser et al. 2010).

- A rise in sea levels resulting in displacement of costal businesses and residencies. During the past century, sea levels along California's coast have risen about seven inches. If emissions continue unabated and temperatures rise into the higher anticipated warming range, sea level is expected to rise an additional 22 to 55 inches by the end of the century.

- A reduction in the quality and supply of water from the Sierra snowpack. If heat-trapping emissions continue unabated, more precipitation will fall as rain instead of snow, and the snow that does fall will melt earlier, reducing the Sierra Nevada spring snowpack by as much as 70 to 90 percent. This can lead to challenges in securing adequate water supplies. It can also lead to a potential reduction in hydropower.

- Increased risk of large wildfires. If rain increases as temperatures rise, wildfires in the grasslands and chaparral ecosystems of southern California are estimated to increase by approximately 30 percent toward the end of the 21st century because more winter rain will stimulate the growth of more plant "fuel" available to burn in the fall. In contrast, a hotter, drier climate could promote up to 90 percent more northern California fires by the end of the century by drying out and increasing the flammability of forest vegetation.

- Reductions in the quality and quantity of certain agricultural products. The crops and products likely to be adversely affected include wine grapes, fruit, nuts, and milk.

- Exacerbation of air quality problems. If temperatures rise to the medium warming range, there could be 75 to 85 percent more days with weather conducive to ozone formation in Los Angeles and the San Joaquin Valley, relative to today's conditions. This is more than twice the increase expected if rising temperatures remain in the lower warming range. This increase in air quality problems could result in an increase in asthma and other health-related problems.

- An increase temperature and extreme weather events. Climate change is expected to lead to increases in the frequency, intensity, and duration of extreme heat events and heat waves in California. More heat waves can exacerbate chronic disease or heat-related illness.

- A decrease in the health and productivity of California's forests. Climate change can cause an increase in wildfires, an enhanced insect population, and establishment of non-native species.

3.3 Greenhouse Gases

Gases that trap heat in the atmosphere are commonly referred to as "greenhouse gases" because they function like a greenhouse by letting light in while preventing heat from escaping. Naturally occurring GHGs include water vapor, carbon dioxide (CO_2) methane (CH_4) and nitrogen dioxide/oxides (N_2O and NO_x). The natural accumulation of GHGs in the atmosphere has a warming effect on the Earth's temperature. Without these natural GHGs, the Earth's temperature would be cooler.

In addition to the naturally occurring gases, man-made chemicals also act as GHGs and include the following common compounds: chlorofluorocarbons (CFCs), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulfur hexafluoride (SF_6), ozone (O_3), and aerosols. It is believed that emissions from human activities, such as electricity production and vehicle use, have elevated the concentration of these gases in the atmosphere beyond the level of naturally occurring concentrations.

Climate change is driven by forcings and feedbacks. Radiative forcing is the difference between the incoming energy and outgoing energy in the climate system. Positive forcing tends to warm the surface while negative forcing tends to cool it. Radiative forcing values are typically expressed in watts per square meter. A feedback is a climate process that can strengthen or weaken a forcing. For example, when ice or snow melts, it reveals darker land underneath which absorbs more radiation and causes more warming. The global warming potential is the potential of a gas or aerosol to trap heat in the atmosphere. The global warming potential of a gas is essentially a measurement of the radiative forcing of a greenhouse gas compared with the reference gas, carbon dioxide.

Individual greenhouse gas compounds have varying global warming potential and atmospheric lifetimes. Carbon dioxide (CO_2), the reference gas for global warming potential, has a global warming potential of one. The global warming potential of a greenhouse gas is a measure of how much a given mass of a greenhouse gas is estimated to contribute to global warming. To describe how much global warming a given type and amount of greenhouse gas may cause, the carbon dioxide equivalent (CO_2 e) is used. The calculation of the carbon dioxide equivalent is a consistent methodology for comparing greenhouse gas emissions since it normalizes various greenhouse gas emissions to a consistent reference gas, carbon dioxide. For example, methane's warming potential of 21 indicates that methane has 21 times greater warming affect than carbon dioxide on a molecule per molecule basis. A carbon dioxide equivalent is the mass emissions of an individual greenhouse gas multiplied by its global warming potential. Greenhouse gases defined by AB 32 include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. They are described in Table 6.

Emissions Inventories

Emissions in California were approximately 450 million tons of carbon dioxide equivalents (MMTCO2e) in 2009 (California Air Resources Board).

3.4 Greenhouse Gas Inventory

This analysis is restricted to greenhouse gases identified by AB 32 and the CEQA Guidelines (section 15364.5), which include carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. The Project would generate a variety of greenhouse gases during construction and operation, including several defined by AB 32 and the CEQA Guidelines such as carbon dioxide, methane, and nitrous oxide.

The Project may also emit greenhouse gases that are not defined by AB 32 and the CEQA Guidelines. For example, the project may generate aerosols. During construction, the diesel fueled vehicles and equipment emit diesel particulate matter, which has black carbon, which is a component of aerosol. During operation, any diesel fueled trucks or vehicles could emit aerosols. Aerosols are short-lived particles, as they remain in the atmosphere for about one week. Studies have indicated that black carbon has a high global warming potential; however, the Intergovernmental Panel on Climate Change states that it has a low level of scientific certainty (Intergovernmental Panel on Climate Change 2007a).

Water vapor could be emitted from evaporated water used for landscaping, but this is not a significant impact, because water vapor concentrations in the upper atmosphere are primarily due to climate feedbacks rather than emissions from project-related activities. The project would emit nitrogen oxides and volatile organic compounds, which are ozone precursors. Ozone is a greenhouse gas; however, unlike the other greenhouse gases, ozone in the troposphere is relatively short-lived and can be reduced in the troposphere on a daily basis. Stratospheric ozone can be reduced through reactions with other pollutants.

Certain greenhouse gases defined by AB 32 would not be emitted by the project. Perfluorocarbons and sulfur hexafluoride are typically used in industrial applications, none of which would be used by the project. Therefore, it is not anticipated that the project would emit perfluorocarbons or sulfur hexafluoride.

An upstream emission source (also known as life cycle emissions) refers to emissions that were generated during the manufacture of products to be used for construction of the project. Upstream emission sources for the project include but are not limited emissions from the manufacture of cement, emissions from the manufacture of steel, and/or emissions from the transportation of building materials to the seller. The upstream emissions were not estimated because they are not within the control of the project and to do so would be speculative at this time. Additionally, the California Air Pollution Control Officers Association White Paper on CEQA and Climate Change supports this conclusion by stating, "The full life-cycle of GHG [greenhouse gas] emissions from construction activities is not accounted for . . . and the information needed to characterize [life-cycle emissions] would be speculative at the CEQA analysis level" (California Air Pollution Control Officers Association 2008). Therefore, pursuant to CEQA Guidelines Sections 15144 and 15145, upstream / life cycle emissions are speculative and no further discussion is necessary.

4.0 Modeling Parameters and Assumptions

4.1 Construction

Emissions were estimated using the California Emissions Estimator Model Version 2013.2.2 (CalEEMod), which was released October 2, 2013. The analysis reflects the construction of a 42,400 square feet of general office building, and a parking structure with 423 parking spaces. Construction is anticipated to begin no sooner than 2016 and will be completed in 2017. The project is anticipated to be operational in 2017. The CalEEMod construction timeline default for all phases is used in the analysis. Construction activities within the Project area will consist of demolition, site preparation, on-site grading, building, paving, and coating.

To be conservative, the project was analyzed in one phase. This is the conservative approach because it assumes the all construction phase activity for the entirety of the site is occurring at once. For example, during the building construction phase, the building of the parking structure and the office building is occurring at once. It should be noted that the paving and architectural coating phase is assumed to occur at once.

Please see the CalEEMod output in Appendix A for details.

The construction equipment list is shown in Table 7.

Other parameters which are used to estimate construction emissions such as the worker and vendor trips and trip lengths utilize the CalEEMod defaults. The trips assumptions are also available in Appendix A

Grading The quantity of fugitive dust estimated by CalEEMod is based on the number of equipment used during grading. Tractors, graders, and dozers would impact 3 acres per 8-hour day if all were used simultaneously. To avoid a significant impact during construction, the project is confined to a maximum disturbance area of 2 acres. It is assumed for purposes of this analysis that there would be 484.46 cubic yards of exported soil, which will be hauled a maximum 35 miles. At this time, there are multiple options for a receiving site, with the furthest located approximately 35 miles from the project site. Therefore, to be conservative, 35 miles was used in the CalEEMod calculations.

SCAQMD Rule 403 requires fugitive dust generating activities follow best available control measures to reduce emissions of fugitive dust. These measures are accounted for in CalEEMod as "mitigation" because the model categorizes the measures as "mitigation," even though they are technically not mitigation, since it is required by SCAQMD.

4.2 Operations

Operational or long-term emissions occur over the life of the Project. Both mobile and area sources generate operational emissions. Area source emissions arise from consumer product usage, heaters that consume natural gas, gasoline-powered landscape equipment, gasoline service station, and architectural coatings (painting). Mobile source emissions from motor vehicles are the largest single long-term source of air pollutants from the operation of the Project and consist of emissions from residential vehicles. Small amounts of emissions would also occur from area sources such as the consumption of natural gas for heating, hearths, from landscaping emissions, and consumer product usage.

The operational emissions were estimated using the California Emissions Estimator Model Version 2013.2.2 (CalEEMod).

4.2.1 Motor Vehicle Emissions

Estimates of motor vehicle emissions require information on four parameters: trip generation, mix of vehicles accessing the Project (i.e., car versus type of truck), length of each trip made by each type of vehicle, and emission factor (quantity of emission for each mile traveled or time spent idling by each vehicle). Each of these parameters is discussed below.

Commercial, Commercial – Work, Commercial - Nonwork

The percentages of C-C, C-W, C-NW are from CalEEMod defaults. The trip generation rates are from the CalEEMod's default and are shown in Table 8. The trip generation rates are from the traffic study (prepared by RK, 2015) and the Institute of Transportation Engineers (ITE) Trip Generation Manual 9th Edition are shown in Table 8.

The percentages for C-C, C-W, C-NW are from the CalEEMod defaults. A summary of the operational vehicle trip assumptions from CalEEMod are demonstrated in Table 9, and the vehicle mix is shown in Table 10.

Emission Factors

The emission factors (from EMFAC2011) required to estimate the mobile source emissions are embedded in the CalEEMod emissions model.

4.2.2 Other Emissions

Natural Gas. Natural gas emissions refer to the emissions that occur when natural gas is combusted on the project site for heating water, space heating, stoves, or other uses. Criteria air pollutant and greenhouse gas emissions were estimated using CalEEMod defaults.

Indirect Electricity. Indirect electricity refers to the greenhouse gas emissions generated by offsite power plants to supply the electricity required for the project. The CalEEMod defaults for energy intensity were used.

Water Transport. There would be greenhouse gas emissions generated from the electricity required to supply and treat the water to be used on the project site. See Appendix A for estimated water usage.

Waste. There would be greenhouse gas emissions from the decomposing waste generated by the project. See Appendix A for estimated waste.

4.3 Localized Construction Analysis Modeling Parameters

The SCAQMD has published a "Fact Sheet for Applying CalEEMod to Localized Significance Thresholds" (South Coast Air Quality Management District 2011b). CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily disturbance activity possible for each piece of equipment. In order to compare CalEEMod reported emissions against the localized significance threshold lookup tables, the CEQA document should contain in its project design features or its mitigation measures the following parameters:

1) The off-road equipment list (including type of equipment, horsepower, and hours of operation) assumed for the day of construction activity with maximum emissions.
2) The maximum number of acres disturbed on the peak day.
3) Any emission control devices added onto off-road equipment.
4) Specific dust suppression techniques used on the day of construction activity with maximum emissions.

The local air quality emissions from construction were analyzed using the SCAQMD's Mass Rate Localized Significant Threshold Look-up Tables and the methodology described in Localized Significance Threshold Methodology, prepared by SCAQMD, revised July 2008. The Look-up Tables were developed by the SCAQMD in order to readily determine if the daily emissions of CO, NOx, PM10, and PM2.5 from the proposed project could result in a significant impact to the local air quality. Sensitive receptors include residences, schools, hospitals, and similar uses that are sensitive to adverse air quality. Nearby existing sensitive receptors in the project vicinity include proposed residential units approximately 25 meters to the east. These look-up tables were utilized to determine localized significance. The construction emissions were compared to the SCAQMD's threshold tables with a disturbance area of 2 acres.

4.4 Localized Operational Analysis Modeling Parameters

For operational emissions, the screening tables for a disturbance area of 2 acres were utilized to determine significance. The tables were compared to the project's operational emissions.

5.0 Thresholds of Significance

5.1 Air Quality Thresholds of Significance

5.1.1 CEQA Guidelines for Air Quality

The CEQA Guidelines define a significant effect on the environment as "a substantial, or potentially substantial, adverse change in the environment." To determine if a project would have a significant impact on air quality, the type, level, and impact of emissions generated by the Project must be evaluated.

The following air quality significance thresholds are contained in Appendix G of the CEQA Guidelines. A significant impact would occur if the Project would:

a) Conflict with or obstruct implementation of the applicable air quality plan;

b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation;

c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable national or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors);

d) Expose sensitive receptors to substantial pollutant concentrations; or

e) Create objectionable odors affecting a substantial number of people.

While the final determination of whether a project is significant is within the purview of the Lead Agency pursuant to Section 15064(b) of the CEQA Guidelines, SCAQMD recommends that its quantitative air pollution thresholds be used to determine the significance of project emissions. If the Lead Agency finds that the project has the potential to exceed these air pollution thresholds, the project should be considered to have significant air quality impacts. There are daily emission thresholds for construction and operation of a proposed project in the Basin.

5.1.2 Regional Significance Thresholds for Construction Emissions

The following CEQA significance thresholds for construction emissions are established for the Basin:

- 75 pounds per day (lbs/day) of ROC
- 100 lbs/day of NO_x
- 550 lbs/day of CO
- 150 lbs/day of PM_{10}

- 55 lbs/day of $PM_{2.5}$
- 150 lbs/day of SO_2

Projects in the Basin with construction-related emissions that exceed any of the emission thresholds are considered to be significant under SCAQMD guidelines.

5.1.3 Regional Significance Thresholds for Operational Emissions

The daily operational emissions significance thresholds for the Basin are as follows:

- 75 pounds per day (lbs/day) of ROC
- 100 lbs/day of NO_x
- 550 lbs/day of CO
- 150 lbs/day of PM_{10}
- 55 lbs/day of $PM_{2.5}$
- 150 lbs/day of SO_2

Local Microscale Concentration Standards The significance of localized project impacts under CEQA depends on whether ambient CO levels in the vicinity of the project are above or below State and federal CO standards. If ambient levels are below the standards, a project is considered to have a significant impact if project emissions result in an exceedance of one or more of these standards. If ambient levels already exceed a State or federal standard, project emissions are considered significant if they increase 1-hour CO concentrations by 1.0 ppm or more or 8-hour CO concentrations by 0.45 ppm or more. The following are applicable local emission concentration standards for CO:

- California State 1-hour CO standard of 20.0 ppm
- California State 8-hour CO standard of 9.0 ppm

5.1.4 Thresholds for Localized Significance

LSTs represent the maximum emissions from a project site that is not expected to result in an exceedance of the national or state AAQS shown in Table 4. LSTs are based on the ambient concentrations of that pollutant within the project source receptor area (SRA) and the distance to the nearest sensitive receptor. For this project, the appropriate SRA for the LST is the Central Orange County Coastal area.

In the case of CO and NO_2, if ambient levels are below the standards, a project is considered to have a significant impact if project emissions result in an exceedance of one or more of these standards. If ambient levels already exceed a State or federal standard, then project emissions are considered significant if they increase ambient concentrations by a measurable amount. This would apply to PM_{10} and $PM_{2.5}$, both of which are non-attainment pollutants. For these two, the significance criteria are the pollutant concentration thresholds presented in SCAQMD Rules 403. The Rule 403 threshold of 10.4

micrograms per cubic meter applies to construction emissions (and may apply to operational emissions at aggregate handling facilities).

Construction LSTs are assessed with the SCAQMD screening thresholds. Construction thresholds for a 2-acre site in the Central Orange County Coastal SRA (SRA-20) at 25 meters were utilized:

- 131 lbs/day of NO_X
- 962 lbs/day of CO
- 7 lbs/day of PM_{10}
- 5 lbs/day of $PM_{2.5}$

Operational LSTs are assessed with the SCAQMD screening thresholds. Operational thresholds for a 2-acre site in the Central Orange County Coastal SRA (SRA-20) at 25 meters were utilized:

- 131 lbs/day of NO_X
- 962 lbs/day of CO
- 2 lbs/day of PM_{10}
- 2 lbs/day of $PM_{2.5}$

5.1.5 Thresholds for Toxic Air Contaminants

According to the SCAQMD CEQA Handbook, any project that has the potential to expose the public to toxic air containments in excess of the following thresholds would be considered to have a significant impact:

- If the Maximum Incremental Cancer Risk is 10 in one million or greater; or

- Toxic air containments from the proposed project would result in a Hazard Index Increase of 1 or greater.

In order to determine if the proposed project may have a significant impact related to hazardous air pollutants (HAP), the Health Risk Assessment Guidance for analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis, (Diesel Analysis), prepared by SCAQMD, August 2003, recommends that if the proposed project is anticipated to create hazardous air pollutants through stationary sources or regular operations of diesel trucks on the project site, then the proximity of the nearest receptors to the source of the hazardous air pollutants and the toxicity of the hazardous air pollutants should be analyzed through a comprehensive facility-wide health risk assessment (HRA).

5.2 Greenhouse Gas Thresholds of Significance

5.2.1 CEQA Guidelines for Greenhouse Gas

CEQA Guidelines define a significant effect on the environment as "a substantial, or potentially substantial, adverse change in the environment." To determine if a project would have a significant impact on greenhouse gases, the type, level, and impact of emissions generated by the project must be evaluated.

The following greenhouse gas significance thresholds are contained in Appendix G of the CEQA Guidelines, which were amendments adopted into the Guidelines on March 18, 2010, pursuant to SB 97. A significant impact would occur if the project would:

(a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment; or
(b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

5.2.2 SCAQMD Interim Significance Thresholds

In addition to CEQA guidelines, the SCAQMD established working group to develop an interim significance threshold for GHG emissions under CEQA as discussed in Section 3.4.1. This analysis compares the Project's GHG emissions to the SCAQMD's Tier 3 approach. It is appropriate to use the Tier 3 approach for this project due to the size and type of project (See SCAQMD's Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold, Chapter 3, page 3-11).

6.0 Air Quality Impact Analysis

6.1 Construction Air Quality Emissions Impact

6.1.1 Regional Construction Emissions

CalEEMod was used to estimate onsite and offsite unmitigated and mitigated construction emissions and the results are shown in Table 11. The construction emissions incorporate Rule 403. Daily emissions CalEEMod outputs are located in Appendix A. The emissions will be below the SCAQMD thresholds of significance for regional construction emissions. **Therefore, the project will have a less than significant impact.**

6.1.2 Localized Construction Emissions

Table 12 illustrates the construction related LSTs for the project area. **The emissions will be below the SCAQMD thresholds of significance for localized construction emissions.** Therefore, the Project will not result in significant localized construction emissions.

6.1.3 Fugitive Dust

Fugitive dust emissions are generally associated with land clearing and exposure of soils to the air and wind. Dust generated during construction varies substantially on a project-by-project basis, depending on the level of activity, the specific operations, the equipment being operated, local soils, and weather conditions at the time of construction.

The proposed project will be required to comply with SCAQMD Rules 402 and 403 to control fugitive dust. Table 11 illustrates total construction emissions, i.e., fugitive-dust emissions and construction equipment exhausts that have incorporated control measures implemented to comply with Rule 403. Section 6.4 discusses the applicable measures utilized. Table 11 illustrates that for all construction phases, the daily total construction emissions with standard control measures would be below the daily thresholds established by the SCAQMD. **Therefore, the project would cause less than significant Fugitive Dust emissions.**

6.1.4 Odors

Heavy-duty equipment in the Project area during construction will emit odors; however, the construction activity would cease to occur after individual construction is completed. The project is required to comply with Rule 402 during construction. No other sources of objectionable odors have been identified for the proposed Project. **Therefore, the Project will not result in significant Odors.**

6.1.5 Naturally Occurring Asbestos

The proposed Project is located in Orange County which is not among the counties that are found to have serpentine and ultramafic rock in their soils. **Therefore, the potential risk for naturally occurring asbestos (NOA) during project construction is small and less than significant.**

6.1.6 Construction-Related Toxic Air Contaminant Impact

The greatest potential for toxic air contaminant emissions would be related to diesel particulate emissions associated with heavy equipment operations during construction of the proposed project. According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of "individual cancer risk". "Individual Cancer Risk" is the likelihood that a person exposed to concentrations of toxic air contaminants over a 70-year lifetime will contract cancer, based on the use of standard risk-assessment methodology. Given the relatively limited number of heavy- duty construction equipment and the short-term construction schedule, the proposed project would not result in a long-term (i.e., 70 years) substantial source of toxic air contaminant emissions and corresponding individual cancer risk. **Therefore, no significant short-term toxic air contaminant impacts would occur during construction of the proposed project.**

6.2 Operational Air Quality Emissions Impact

6.2.1 Regional Operational Emissions

Long-term air pollutant emission impacts are those associated with stationary sources and mobile sources involving any project-related changes. The stationary source emissions would come from additional natural gas consumption for on-site buildings and electricity for the lighting in the buildings and streets. Based on trip generation factors included in the traffic study and in the Institute of Transportation Engineers' (ITE) Trip Generation Manual, Ninth Edition, which is the most recent edition and was manually adjusted in the model, long-term operational emissions associated with the proposed project, calculated with the CalEEMod model, are shown in Table 13. Area sources include architectural coatings, consumer products, and landscaping. Energy sources include natural gas consumption for heating.

Table 13 shows that the increase of all criteria pollutants as a result of the proposed Project is below the SCAQMD daily emission thresholds. Therefore, the Project will not result in significant Regional Operational emissions.

6.2.2 Localized Operational Emissions

Table 14 shows the calculated emissions for the proposed operational activities compared with appropriate LSTs. The LST analysis only includes on-site sources; however, the CalEEMod software outputs do not separate on-site and off-site emissions for mobile sources. For a worst-case scenario assessment, the emissions shown in Table 14 include all on-site project-related stationary sources and 5% of the project-related new mobile sources. This percentage is an estimate of the amount of project-related new vehicle traffic that will occur on-site.

Table 14 indicates that the operational emission rates would not exceed the LST thresholds for the nearest sensitive receptors at 25 meters. **Therefore the project will not result in significant Localized Operational emissions.**

6.3 CO Hot Spot Emissions

The SCAQMD recommends that a local CO hot spot analysis be conducted if the intersection meets one of the following criteria: 1) the intersection is at level of service (LOS) D or worse and where the project increases the volume to capacity ratio by 2 percent, or 2) the project causes an intersection to decrease from LOS C to D.

Micro-scale air quality emissions have traditionally been analyzed in environmental documents where the air basin was a non-attainment area for CO. However, the SCAQMD has demonstrated in the CO attainment redesignation request to EPA that there are no "hot spots" anywhere in the air basin, even at intersections with much higher volumes, much worse congestion, and much higher background CO levels than anywhere in Orange County. If the worst-case intersections in the air basin have no "hot spot" potential, any local impacts will be below thresholds

6.4 Air Quality Impact Measures

It should be noted that CEQA states that an air quality significant impact would occur if the Project would result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable national or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors). The ozone precursors (VOC and NOx) do not exceed the SCAQMD regional or localized thresholds. **Therefore, there is no significant impact.**

Air Quality Reduction Measures

The Project is required to comply with regional rules that assist in reducing short-term air pollutant emissions. SCAQMD Rule 403 requires that fugitive dust be controlled with best-available control measures so that the presence of such dust does not remain visible in the atmosphere beyond the property line of the emission source. In addition, SCAQMD Rule

403 requires implementation of dust suppression techniques to prevent fugitive dust from creating a nuisance off site. Applicable suppression techniques are as follows:

- Apply nontoxic chemical soil stabilizers according to manufacturers' specifications to all inactive construction areas (previously graded areas in active for 10 days or more).
- Water active sites at least three times daily.
- Cover all trucks hauling dirt, san, soil, or other loose materials, or maintain at least 2 feet of freeboard in accordance with the requirements of California Vehicle Code (CVC) section 23114.
- Pave construction access roads at least 100 feet onto the site from the main road.
- Reduce traffic speeds on all unpaved roads to 15 mph or less.

Air Quality Impact Construction Measures

The project will comply with the following measures as required to maintain the construction emissions below the SCAQMD daily emissions thresholds:

1. The project shall ensure that during site preparation and grading operations, all contractors shall comply with all applicable measures listed in SCAQMD Rule 403 to control fugitive dust including the application of water to all exposed surfaces a minimum of three times per day.

2. The proposed project and its contractors shall ensure that either water based or low-VOC coating with a VOC coating of 50 grams per liter be utilized to apply the architectural coatings (lower than SCAQMD Rule 1113).

It should be noted that the above construction measures are not mitigation, but instead requirements per SCAQMD. To be in conformance with SCAQMD, every project must follow the above measures.

Air Quality Impact Operational Measures

The project will comply with SCAQMD requirements through Operational Measure Reductions listed in Section 7.2.1

6.5 Air Quality Management Plan Consistency

An AQMP describes air pollution control strategies to be taken by a City, County, or Region classified as a nonattainment area. The main purpose of an AQMP is to bring the area into compliance with Federal and State air quality standards. CEQA requires that certain proposed projects be analyzed for consistency with the AQMP. For a project to be consistent with the AQMP adopted by the SCAQMD, the pollutants emitted from the project should not exceed the SCAQMD daily threshold or cause a significant impact on air

quality, or the project must already have been included in the AQMP projection. However, if project design features or feasible mitigation measures are implemented and shown to reduce the impact level from significant to less than significant, a project may be deemed consistent with the AQMP. The AQMP uses the assumptions and projections of local planning agencies to determine control strategies for regional compliance status. Since the AQMP is based on the local General Plan, projects that are deemed consistent with the General Plan are found to be consistent with the AQMP.

The proposed Project would accommodate the growth that has been projected for the project vicinity and sub-region through the construction of needed infrastructure, thus removing an impediment to growth within the project area. Emissions projections used to establish SCAQMD attainment objectives reflect adopted regional and local land use plans. Therefore, the emissions associated with the proposed Project are within the amounts already accounted for in the AQMP, and no significant inconsistency with the AQMP would occur.

To summarize, even though the project is increasing the square footage of the general office building and adding a parking structure, the emissions are below the SCAQMD thresholds and will not cause a significant impact, and therefore is accounted for by the AQMP.

THIS PAGE INTENTIONALLY LEFT BLANK

7.0 Greenhouse Gas Impact Analysis

7.1 Construction Greenhouse Gas Emissions Impact

CalEEMod was used to estimate onsite and offsite emissions. For assumptions used in estimating these emissions, please refer to Section 4.1. Greenhouse gas emissions from project construction equipment and worker vehicles are shown in Table 15. The impacts of each expected phase of construction are shown. The total construction emissions amortized over a period of 30 years are estimated at 17.96 metric tons of CO_2e per year. CalEEMod output calculations are provided in Appendix A.

7.2 Operational Greenhouse Gas Emissions Impact

Operational or long-term emissions occur over the life of the project. For assumptions used in estimating the emissions and details regarding the emissions, please refer to Section 4.2. The operational emissions for the Project are 1,072.26 metric tons of CO_2e per year as shown in Table 16. The emissions do not exceed the SCAQMD's 3,000 threshold, therefore operational emissions for the Project are 1,927.74 metric tons below the threshold.

It should be noted that AQMD suggests this methodology to determine the greenhouse gas emissions, as determined from the following:

> "For the purposes of determining whether or not GHG emissions from affected projects are significant, project emissions will include direct, indirect, and, to the extent information is available, life cycle emissions during construction and operation. Construction emissions will be amortized over the life of the project, defined as 30 years, added to the operational emissions, and compared to the applicable interim GHG significance threshold tier."

With project design features shown below, operational GHG emissions are below the SCAQMD's significance threshold. Therefore, the Project will not result in significant construction emissions.

7.2.1 Operational Project Design Features

1. Project shall require to the extent feasible, use paints with VOC content lower than SCAQMD Rule 1113 requires for application to surfaces of spaces within the project site.

It should be noted that the above operational measures are not mitigation, but instead requirements per SCAQMD. To be in conformance with SCAQMD, every project must follow the above measures.

7.3 Conflict with an Applicable Plan, Policy or Regulation for the Purpose of Reducing the Emissions of Greenhouse Gases

The Project will promote the goals of AB 32. The Project site location is positioned within the City's planned growth urban footprint. The Project incorporates a number of features that would minimize greenhouse gas emissions. Although the Project would generate greenhouse gas emissions, these emissions would not have a significant impact on the environment.

The core mandate of AB 32 is that statewide GHG emissions in Year 2020 be equal to Year 1990 levels. AB 32 is anticipated to secure emission reductions through a variety of mechanisms, such as increasing energy efficiency and introducing more renewable energy sources. As noted earlier, CARB has already begun to adopt strategies to reduce GHG emissions under AB 32. Strategies included in the Climate Change Scoping Plan (CARB 2008b), such as SPM-2 (California Light-Duty Vehicle GHG Standards), SPM-3 (Energy Efficiency), SPM-4 (Renewables Portfolio Standard), SPM-5 (Low Carbon Fuel Standard), SPM-7 (Vehicle Efficiency Measures), and SPM-10 (Heavy/Medium-Duty Vehicles), while applicable to land use projects, are generally not under the control of local agencies. Nonetheless, emission reductions from these strategies are anticipated to occur as CARB adopts and implements regulations under AB 32. Reductions are already expected to take place in 2012, if not earlier, due to the newly adopted vehicle emission standards and the Low Carbon Fuel Standard.

Other measures contained in the Climate Change Scoping Plan are under development and regulations have not yet been adopted at this time. Therefore, it is difficult to explicitly compare the proposed Project's consistency with the implementing programs and regulations to achieve the statewide GHG emission reduction goals established under AB 32 because many are still under development.

With the implementation of energy efficient programs and state and federal vehicle emission reduction programs, the proposed Project would be consistent with the goals of AB 32 and the City of Aliso Viejo.

Therefore, the Project would not conflict with any applicable plan, policy, or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases.

TABLE 2
Description of Air Pollutants

Air Pollutant	Averaging Time	California Standard	Federal Standard[1]	Most Relevant Effects from Pollutant Exposure	Properties	Sources
Ozone	1 Hour	0.09 ppm	--	(a) Decrease of pulmonary function and localized lung edema in humans and animals; (b) risk to public health implied by alterations in pulmonary morphology and host defense in animals; (c) increased mortality risk; (d) altered connective tissue metabolism and altered pulmonary morphology in animals after long-term exposures and pulmonary function decrements in chronically exposed humans; (e) vegetation damage; (f) property damage.	Ozone is a photochemical pollutant as it is not emitted directly into the atmosphere, but is formed by a complex series of chemical reactions between volatile organic compounds (VOC), NOX, and sunlight. Ozone is a regional pollutant that is generated over a large area and is transported and spread by the wind..	Ozone is a secondary pollutant; thus, it is not emitted directly into the lower level of the atmosphere. The primary sources of ozone precursors (VOC and NOX) are mobile sources (on-road and off-road vehicle exhaust).
	8 Hour	0.070 ppm	0.075 ppm[5]			
Carbon Monoxide (CO)	1 Hour	20 ppm	35 ppm	(a) Aggravation of angina pectoris (chest pain) and there aspects of coronary heart disease; (b) decreased exercise tolerance in persons with peripheral vascular disease and lung disease; (c) impairment of central nervous system functions; (d) possible increased risk to fetuses.	CO is a colorless, odorless, toxic gas. CO is somewhat soluble in water; therefore, rainfall and fog can suppress CO conditions. CO enters the body through the lungs, dissolves in the blood, replaces oxygen as an attachment to hemoglobin, and reduces available oxygen in the blood.	CO is produced by incomplete combustion of carbon-containing fuels (e.g., gasoline, diesel fuel, and biomass). Sources include motor vehicle exhaust, industrial processes (metals processing and chemical manufacturing), residential wood burning, and natural sources.
	8 Hour	9 ppm	9 ppm			
Nitrogen Dioxide (NO_2)[2]	1 Hour	0.18 ppm	0.100 ppm	(a) Potential to aggravate chronic respiratory disease and respiratory symptoms in sensitive groups; (b) risk to public health implied by pulmonary and extra-pulmonary biochemical and cellular changes and pulmonary structural changes; (c) contribution to atmospheric discoloration.	During combustion of fossil fuels, oxygen reacts with nitrogen to produce nitrogen oxides - NOX (NO, NO_2, NO_3, N_2O, N_2O_3, N_2O_4,and N_2O_5). NOX is a precursor to ozone, PM_{10}, and $PM_{2.5}$ formation. NOX can react with compounds to form nitric acid and related particles.	NOX is produced in motor vehicle internal combustion engines and fossil fuel-fired electric utility and industrial boilers. NO_2 concentrations near major roads can be 30 to 100 percent higher than those at monitoring stations.
	Annual	0.030 ppm	0.053 ppm			
Sulfur Dioxide (SO_2)[3]	1 Hour	0.25 ppm	0.075 ppm	Bronchoconstriction accompanied by symptoms which may include wheezing, shortness of breath and chest tightness, during exercise or physical activity in persons with asthma. Some population-based studies indicate that the mortality and morbidity effects associated with fine particles show a similar association with ambient sulfur dioxide levels. It is not clear whether the two pollutant alone is the predominant factor.	Sulfur dioxide is a colorless, pungent gas. At levels greater than 0.5 ppm, the gas has a strong odor, similar to rotten eggs. Sulfur oxides (SOX) include sulfur dioxide and sulfur trioxide. Sulfuric acid is formed from sulfur dioxide, which can lead to acid deposition and can harm natural resources and materials. Although sulfur dioxide concentrations have been reduced to levels well below state and federal standards, further reductions are desirable because sulfur dioxide is a precursor to sulfate and PM_{10}.	Human caused sources include fossil-fuel combustion, mineral ore processing, and chemical manufacturing. Volcanic emissions are a natural source of sulfur dioxide. The gas can also be produced in the air by dimethylsulfide and hydrogen sulfide. Sulfur dioxide is removed from the air by dissolution in water, chemical reactions, and transfer to soils and ice caps. The sulfur dioxide levels in the State are well below the maximum standards.
	3 Hour	--	0.5 ppm			
	24 Hour	0.04 ppm	--			
Particulate Matter (PM_{10})	24 Hour	50 $\mu g/m^3$	150 $\mu g/m^3$	(a) Exacerbation of symptoms in sensitive patients with respiratory or cardiovascular disease; (b) declines in pulmonary function growth in children; (c) increased risk of premature death from heart or lung diseases in the elderly. Daily fluctuations in PM2.5 levels have been related to hospital admissions for acute respiratory conditions, school absences, and increased medication use in children and adults with asthma.	Suspended particulate matter is a mixture of small particles that consist of dry solid fragments, droplets of water, or solid cores with liquid coatings. The particles vary in shape, size, and composition. PM_{10} refers to particulate matter that is between 2.5 and 10 microns in diameter, (1 micron is one-millionth of a meter). $PM_{2.5}$ refers to particulate matter that is 2.5 microns or less in diameter.	Stationary sources include fuel combustion for electrical utilities, residential space heating, and industrial processes; construction and demolition; metals, minerals, and petrochemicals; wood products processing; mills and elevators used in agriculture; erosion from tilled lands; waste disposal, and recycling. Mobile or transportation-related sources are from vehicle exhaust and road dust.
	Mean	20 $\mu g/m^3$	--			
Particulate Matter (PM2.5)	24 Hour	--	35 $\mu g/m^3$			
	Annual	12 $\mu g/m^3$	12 $\mu g/m^3$			
Visibility reducing particles	8 Hour	Extinction coefficient of 0.23 per kilometer; visibility of ten miles or more (0.07 - 30 miles or more for Lake Tahoe) due to particles when relative humidity is less than 70 percent.				
Sulfates	24 Hour	25 $\mu g/m^3$	--	(a) Decrease in ventilatory function; (b) aggravation of asthmatic symptoms; (c) aggravation of cardiopulmonary disease; (d) vegetation damage; (e) degradation of visibility; (f) property damage.	The sulfate ion is a polyatomic anion with the empirical formula SO4 2−. Sulfates occur in combination with metal and/or hydrogen ions. Many sulfates are soluble in water.	Sulfates are particulates formed through the photochemical oxidation of sulfur dioxide. In California, the main source of sulfur compounds is combustion of gasoline and diesel fuel.
Lead[4]	30-day	1.5 $\mu g/m^3$	--	Lead accumulates in bones, soft tissue, and blood and can affect the kidneys, liver, and nervous system. It can cause impairment of blood formation and nerve conduction, behavior disorders, mental retardation, neurological impairment, learning deficiencies, and low IQs.	Lead is a solid heavy metal that can exist in air pollution as an aerosol particle component. Leaded gasoline was used in motor vehicles until around 1970. Lead concentrations have not exceeded state or federal standards at any monitoring station since 1982.	Lead ore crushing, lead-ore smelting, and battery manufacturing are currently the largest sources of lead in the atmosphere in the United States. Other sources include dust from soils contaminated with lead-based paint, solid waste disposal, and crustal physical weathering.
	Quarter	--	1.5 $\mu g/m^3$			
	Rolling 3-month average	--	0.15 $\mu g/m^3$			
Vinyl chloride[4]	24 Hour	0.01 ppm	--	Short-term exposure to high levels of vinyl chloride in the air causes central nervous system effects, such as dizziness, drowsiness, and headaches. pidemiological studies of occupationally exposed workers have linked vinyl chloride exposure to development of a rare cancer, liver angiosarcoma, and have suggested a relationship between exposure and lung and brain cancers.	Vinyl chloride, or chloroethene, is a chlorinated hydrocarbon and a colorless gas with a mild, sweet odor. In 1990, ARB identified vinyl chloride as a toxic air contaminant and estimated a cancer unit risk factor.	Most vinyl chloride is used to make polyvinyl chloride plastic and vinyl products, including pipes, wire and cable coatings, and packaging materials. It can be formed when plastics containing these substances are left to decompose in solid waste landfills, sewage plants, and hazardous waste sites.
Hydrogen sulfide	24 Hour	0.03 ppm	--	High levels of hydrogen sullide can cause immediate respiratory arrest. It can irritate the eyes and respiratory tract and cause headache, nausea, vomiting, and cough. Long exposure can cause pulmonary edema.	Hydrogen sulfide (H2S) is a flammable, colorless, poisonous gas that smells like rotten eggs.	Manure, storage tanks, ponds, anaerobic lagoons, and land application sites are the primary sources of hydrogen sulfide. Anthropogenic sources include the combustion of sulfur containing fuels (oil and coal).
Volatile organic compounds (VOC)		There are no State or federal standards for VOCs because they are not classified as criteria pollutants.		Although health-based standards have not been established for VOCs, health effects can occur from exposures to high concentrations because of interference with oxygen uptake. In general, concentrations of VOCs are suspected to cause eye, nose, and throat irritation; headaches; loss of coordination; nausea; and damage to the liver, the kidneys, and the central nervous system. Many VOCs have been classified as toxic air contaminants.	Reactive organic gases (ROGs), or VOCs, are defined as any compound of carbon—excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate—that participates in atmospheric photochemical reactions. Although there are slight differences in the definition of ROGs and VOCs, the two terms are often used interchangeably.	Indoor sources of VOCs include paints, solvents, aerosol sprays, cleansers, tobacco smoke, etc. Outdoor sources of VOCs are from combustion and fuel evaporation. A reduction in VOC emissions reduces certain chemical reactions that contribute to the formulation of ozone. VOCs are transformed into organic aerosols in the atmosphere, which contribute to higher PM10 and lower visibility.
Benzene		There are no ambient air quality standards for benzene.		Short-term (acute) exposure of high doses from inhalation of benzene may cause dizziness, drowsiness, headaches, eye irritation, skin irritation, and respiratory tract irritation, and at higher levels, loss of consciousness can occur. Long-term (chronic) occupational exposure of high doses has caused blood disorders, leukemia, and lymphatic cancer.	Benzene is a VOC. It is a clear or colorless light-yellow, volatile, highly flammable liquid with a gasoline-like odor. The EPA has classified benzene as a "Group A" carcinogen.	Benzene is emitted into the air from fuel evaporation, motor vehicle exhaust, tobacco smoke, and from burning oil and coal. Benzene is used as a solvent for paints, inks, oils, waxes, plastic, and rubber. It is used in the extraction of oils from seeds and nuts and in the manufacture of detergents, explosives, and pharmaceuticals.
Diesel particulate matter (DPM)		There are no ambient air quality standards for DPM.		Some short-term (acute) effects of DPM exposure include eye, nose, throat, and lung irritation, coughs, headaches, light-headedness, and nausea. Studies have linked elevated particle levels in the air to increased hospital admissions, emergency room visits, asthma attacks, and premature deaths among those suffering from respiratory problems. Human studies on the carcinogenicity of DPM demonstrate an increased risk of lung cancer, although the increased risk cannot be clearly attributed to diesel exhaust exposure.	DPM is a source of PM2.5—diesel particles are typically 2.5 microns and smaller. Diesel exhaust is a complex mixture of thousands of particles and gases that is produced when an engine burns diesel fuel. Organic compounds account for 80 percent of the total particulate matter mass, which consists of compounds such as hydrocarbons and their derivatives, and polycyclic aromatic hydrocarbons and their derivatives. Fifteen polycyclic aromatic hydrocarbons are confirmed carcinogens, a number of which are found in diesel exhaust.	Diesel exhaust is a major source of ambient particulate matter pollution in urban environments. Typically, the main source of DPM is from combustion of diesel fuel in diesel-powered engines. Such engines are in on-road vehicles such as diesel trucks, off-road construction vehicles, diesel electrical generators, and various pieces of stationary construction equipment.

Notes:

ppm = parts per million (concentration) µg/m3 = micrograms per cubic meter Annual = Annual Arithmetic Mean 30-day = 30-day average Quarter = Calendar quarter

[1] Federal standard refers to the primary national ambient air quality standard, or the levels of air quality necessary, with an adequate margin of safety to protect the public health. All standards listed are primary standards except for 3 Hour SO2, which is a secondary standard. A secondary standard is the level of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

[2] Effective April 12, 2010; the 3-year average of the 98th percentile of the daily maximum 1-hour average at each monitor within an area must not exceed 100 ppb, or 188 µg/m3

[3] On 6/2/2010, a new 1-hr SO_2 standard was established and the existing 24-hr and annual primary standards were revoked. To attain the 1-hr national standard, the 3-yr average of the annual 99th percentile of the 1-hr daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hr and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

[4] The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

[5] To attain this standard, the 3-year average of the 99th percentile of the daily maximum 1-hour average at each monitor within an area must not exceed 75 ppb.

$\mu g/m^3$ = micrograms per cubic meter
CARB = California Air Resource Board
EPA= Environmental Protection Agency
ppm = part per million
ppb = part per billion

[1] On October 1, 2015, the Environmental Protection Agency (EPA) lowered the ozone National Ambient Air Quality Standard (NAAQS) to 70 ppb. However, the standard has not been adopted by California Air Resource Board (CARB) or air quality districts. Until CARB and the air quality districts update their regulatory plans, the analysis will be conducted based on the existing 75 ppb standard.

TABLE 6
Description of Greenhouse Gases

Greenhouse Gas	Description and Physical Properties	Sources
Nitrous oxide	Nitrous oxide (N_20),also known as laughing gas is a colorless gas. It has a lifetime of 114 years. Its global warming potential is 310.	Microbial processes in soil and water, fuel combustion, and industrial processes. In addition to agricultural sources, some industrial processes (nylon production, nitric acid production) also emit N_20.
Methane	Methane (CH_4) is a flammable gas and is the main component of natural gas. It has a lifetime of 12 years. Its global warming potential is 21.	A natural source of CH_4 is from the decay of organic matter. Methane is extracted from geological deposits (natural gas fields). Other sources are from the decay of organic material in landfills, fermentation of manure, and cattle farming.
Carbon dioxide	Carbon dioxide (CO_2) is an odorless, colorless, natural greenhouse gas. Carbon dioxide's global warming potential is 1. The concentration in 2005 was 379 parts per million (ppm), which is an increase of about 1.4 ppm per year since 1960.	Natural sources include decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic sources are from burning coal, oil, natural gas, and wood.
Chlorofluorocarbons	CFCs are nontoxic, nonflammable, insoluble, and chemically unreactive in the troposphere (the level of air at the earth's surface). They are gases formed synthetically by replacing all hydrogen atoms in methane or methane with chlorine and/or fluorine atoms. Global warming potentials range from 3,800 to 8,100.	Chlorofluorocarbons were synthesized in 1928 for use as refrigerants, aerosol propellants, and cleaning solvents. They destroy stratospheric ozone, therefore their production was stopped as required by the Montreal Protocol.
Hydrofluorocarbons	Hydrofluorocarbons (HFCs) are a group of greenhouse gases containing carbon, chlorine, and at least one hydrogen atom. Global warming potentials range from 140 to 11,700.	Hydrofluorocarbons are synthetic manmade chemicals used as a substitute for chlorofluorocarbons in applications such as automobile air conditioners and refrigerants.
Perfluorocarbons	Perfluorocarbons (PFCs) have stable molecular structures and only break down by ultraviolet rays about 60 kilometers above the Earth's surface. They have a lifetime 10,000 to 50,000 years. They have a global warming potential range of 6,200 to 9,500.	Two main sources of perfluorocarbons are primary aluminum production and semiconductor manufacturing.
Sulfur hexafluoride	Sulfur hexafluoride (SF_6) is an inorganic, odorless, colorless, and nontoxic, nonflammable gas. It has a lifetime of 3,200 years. It has a high global warming potential, 23,900.	This gas is manmade and used for insulation in electric power transmission equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.

3.1 Mitigation Measures Construction

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Water Unpaved Roads

Reduce Vehicle Speed on Unpaved Roads

Clean Paved Roads

3.2 Demolition - 2016

Unmitigated Construction On-Site

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use -

Grading - Export 484.46 cubic yards of soil

Trips and VMT - Haul route for grading phase extended to 35 miles per haul route plans

Architectural Coating - Per SCAQMD Rule 1113 limits paint to 50 g/L

Vehicle Trips - Per ITE Trip Generation Manual, 9th Edition, 2012
General Office ITE Code 710: 11.03 weekday, 2.46 Saturday, 1.05 Sunday.

Area Coating - Per SCAQMD Rule 1113 limits paint to 50 g/L

Construction Off-road Equipment Mitigation - Per SCAQMD Rule 403 Fugitive Dust

Area Mitigation - Per SCAQMD Rule 1113 limits paint to 50 g/L

3.1 Mitigation Measures Construction

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Water Unpaved Roads

Reduce Vehicle Speed on Unpaved Roads

Clean Paved Roads

3.2 Demolition - 2016

Unmitigated Construction On-Site

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use -

Grading - Export 484.46 cubic yards of soil

Trips and VMT - Haul route for grading phase extended to 35 miles per haul route plans

Architectural Coating - Per SCAQMD Rule 1113 limits paint to 50 g/L

Vehicle Trips - Per ITE Trip Generation Manual, 9th Edition, 2012
General Office ITE Code 710: 11.03 weekday, 2.46 Saturday, 1.05 Sunday.

Area Coating - Per SCAQMD Rule 1113 limits paint to 50 g/L

Construction Off-road Equipment Mitigation - Per SCAQMD Rule 403 Fugitive Dust

Area Mitigation - Per SCAQMD Rule 1113 limits paint to 50 g/L

3.1 Mitigation Measures Construction

Use Soil Stabilizer

Replace Ground Cover

Water Exposed Area

Water Unpaved Roads

Reduce Vehicle Speed on Unpaved Roads

Clean Paved Roads

3.2 Demolition - 2016

Unmitigated Construction On-Site

Re: AB52 Native American Consultation and Project Notification, proposed Planning Application PA15-030 (SDP/EP) – 6 Polaris Way in the City of Aliso Viejo in Orange County, California.

Dear Co-Chairperson Candelaria:

In accordance with Public Resources Code, section 21080.3.1(d), the City of Aliso Viejo (the "City") hereby notifies you of the proposed Planning Application PA15-030 (SDP/EP) – 6 Polaris Way in the City of Aliso Viejo in Orange County, California. The proposed project would allow for the construction and operation of a 42,400 square foot office building and a 423 space parking structure on property currently utilized as surface parking for existing office buildings. Please note, Kimley-Horn and Associates, on behalf of the City, requested a Sacred Lands File from the Native American Commission for this project. The results of the Sacred Lands File did not indicate the presence of Native American cultural resources within the project Area of Potential Effects.

The City is the lead agency for the proposed project. I am the lead agency contact person, and my contact information is as follows:

Erica Roess, Senior Planner, City of Aliso Viejo
12 Journey, Suite 100, Aliso Viejo, CA 92656, (949) 425-2528, eroess@cityofalisoviejo.com

You and/or your tribe have previously requested to receive notice of qualifying projects under Public Resources Code, section 21080.3.1. You were identified by the Gabriellino-Tongva Tribe as the Tribe's designated lead contact, or tribal representative.

To that end, please take notice that you and your tribe have thirty (30) days from the date of this letter to request consultation on the proposed project pursuant to Public Resources Code, section 21080.3.1. Please let me know if you have any questions or concerns.

Sincerely,

Erica Roess

Juaneno Band of Mission Indians
P.O. Box 25628
Santa Ana, CA 92799

Re: AB52 Native American Consultation and Project Notification, proposed Planning Application PA15-030 (SDP/EP) – 6 Polaris Way in the City of Aliso Viejo in Orange County, California.

Dear Chairperson Johnston:

In accordance with Public Resources Code, section 21080.3.1(d), the City of Aliso Viejo (the "City") hereby notifies you of the proposed Planning Application PA15-030 (SDP/EP) – 6 Polaris Way in the City of Aliso Viejo in Orange County, California. The proposed project would allow for the construction and operation of a 42,400 square foot office building and a 423 space parking structure on property currently utilized as surface parking for existing office buildings. Please note, Kimley-Horn and Associates, on behalf of the City, requested a Sacred Lands File from the Native American Commission for this project. The results of the Sacred Lands File did not indicate the presence of Native American cultural resources within the project Area of Potential Effects.

The City is the lead agency for the proposed project. I am the lead agency contact person, and my contact information is as follows:

Erica Roess, Senior Planner, City of Aliso Viejo
12 Journey, Suite 100, Aliso Viejo, CA 92656, (949) 425-2528, eroess@cityofalisoviejo.com

You and/or your tribe have previously requested to receive notice of qualifying projects under Public Resources Code, section 21080.3.1. You were identified by the Juaneno Band of Mission Indians as the Tribe's designated lead contact, or tribal representative.

To that end, please take notice that you and your tribe have thirty (30) days from the date of this letter to request consultation on the proposed project pursuant to Public Resources Code, section 21080.3.1. Please let me know if you have any questions or concerns.

Sincerely,

Erica Roess

1.0 Introduction

1.1 Purpose of Analysis and Study Objectives

The purpose of this acoustical assessment is to evaluate the potential noise impacts for the project study area and to recommend noise mitigation measures, if necessary, to minimize the potential noise impacts. The assessment was conducted and compared to the noise standards set forth by the Federal, State, and Local agencies. Consistent with the City's Noise Guidelines and CEQA thresholds of significance, a significant impact related to noise would occur if a proposed project is determined to result in:

- Exposure of persons to or generation of noise levels in excess of standards established in the local General Plan or noise ordinance, or applicable agencies.
- Exposure of persons to or generation of excessive ground-borne vibration or ground-borne noise levels.
- A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project.
- Exposure of persons residing or working in the project area to excessive noise levels, for a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport.
- Exposure of persons residing or working in the project area to excessive noise levels, for a project within the vicinity of a private airstrip.

The following is provided in this report:

- A description of the study area and the proposed project.
- Information regarding the fundamentals of noise.
- A description of the local noise guidelines and standards.
- An exterior/interior analysis for buildout traffic noise impacts to the project study area.
- Construction noise analysis.

1.2 Site Location and Study Area

The Project site ("site") is a 4.037-acre parcel located on the south side of Aliso Viejo Parkway (Parcel I, Lot Line Adjustment 97-054), northeasterly of the SR 73 (San Joaquin Hills Transportation Corridor) on the Polaris Campus (the former Fluor Corporation Southern California headquarters), constructed by the Fluor Corporation. The Fluor Corporation in recent years sold several parcels and buildings within the Polaris Campus. The site is one five separate parcels located on the Polaris Campus. To the north of the site, across Aliso Viejo Parkway, at a significantly higher elevation from the site, is an existing business park (zoned Business Park 2) and to the east is the existing Windward residential condominium development (zoned Residential Medium Density) at a significantly lower elevation from the subject site along with a downhill sloped area designated Open Space

Preservation. To the south and west are four other buildings part of the Polaris Campus, and beyond is the SR 73 and Aliso Viejo Town Center.

The site currently contains an approximate 76,186 square foot three story office building (Building I or A) and a parking lot to the north and northwest. Parking is currently provided as a co=on amenity to the entire Polaris Campus under a Declaration of Reciprocal Easements and Covenants ("Covenant Document"), and was entitled as common area parking under the County of Orange prior to the City of Aliso Viejo's incorporation. The Polaris Campus development was originally approved for development through the County of Orange with entitlements granted and modified by the County in 1997 and 1998.

As amended, the Fluor development was entitled for a total of 430,268 square feet of general office space contained in five buildings, two three stories in height and three four stories in height (with an ancillary 10,860 square foot basement area in Building 3) shown as follows:

Polaris Campus Existing Building Square Footages

Existing Building	Square Footage
Building I (A)	76,186
Building 2 (B)	90,761
Building 3 (C)	96,210
Building 4 (D)	90,860
Building 5 (E)	76,251
Total General Office Space	430,268
Ancillary Basement Space – Building (C)	10,860

Under provisions of Section 6.4 of the Covenant Document, BPM was granted the right by the Fluor Corporation in their acquisition of the site to construct an additional building of no greater than 40,000 square feet of total rental square feet on the subject. BPM is also be required under the Covenant Document to create, at is sole cost and expense, sufficient additional parking spaces to replace all parking displaced by the construction of the new building.

1.3 Proposed Project Description

The proposed Project consists of an application for a Site Development Permit, Exception Permit for Parking pursuant to Section 15.38.120 of the Aliso Viejo Zoning Code and a Tentative Parcel Map for the Project. The Project includes the construction of 42,400 square feet of gross floor area of general office space with tech capability (40,000 square feet of net rental space) on the site to be contained in one, two story building with an accessory 423 space, 4 Y2 level parking structure. The site is currently disturbed, having been

previously master graded and developed as part of the development of the Polaris Campus. The Tentative Parcel Map proposes to parcelize the existing Parcel 1 into two parcels, to facilitate financing of the new office building and parking structure. The Site is designated on the Aliso Viejo General Plan and Zoning Map as Professional Office. The proposed project is completely consistent with the applicable General Plan land use designation and zoning regulations for the site except for the Exception Permit request.

The office structure will be tilt-up with a smooth exterior finish and with energy efficient, tinted low E double glazed windows compliant with the California Green Code. While AVMC Section 15.762.030 identifies that concrete tilt-up construction should not be used for office projects, pursuant to Section 15.62.030 B.2., there are compelling considerations which make such building treatment acceptable in the case of the subject project. Concrete tilt up was selected for the 6 Polaris Project by the design team for a number of reasons:

- *Surrounding Campus context: The use of site cast concrete will allow the building to match the existing EIFS building in both color and texture, but at the same time will provide the owner the long term durability of concrete. The site cast concrete panels will also be designed in a way that will give the building facades the opportunity to incorporate a number of different sized window openings allowing 6 Polaris to seamlessly blend into the existing campus which also uses varied openings throughout the development. The panel design has maximized the use of glass to not only provide naturally day lit interior office environments, but to also provide an elegant and timeless exterior building design that will hold its aesthetic quality for generations to come.*
- *Sustainability: The selection of site cast concrete also contributes to the sustainable story of the 6 Polaris project. The project team will locally source the concrete from a nearby batch plant reducing the energy needed to transport building materials from long distances. The mix design will also include a percentage of fly ash which will increase the recycled quotient of the concrete and will reduce the need for virgin building materials.*

The office building is proposed with a maximum height of approximately 40 ft. to top of the mechanical screen on the office building (11 ft. from roof top). Setbacks from Aliso Viejo Parkway for the new office building will be approximately 31 ft. The mechanical equipment screen will be composed of panels plastered to match the building and wrapping around the entire mechanical system and equipment and energy-efficient roofing material will be colored to match the building. The building will incorporate various levels of environmental sensitivity. The exterior architecture and materials conform to the Polaris Campus, as well as to city design guidelines and are consistent with other buildings on the larger Polaris Campus.

The parking structure has been designed to be at-grade and would accommodate 423 spaces, is a concrete long-span design and is proposed to be located to the east of the office building and setback from the current landscape setback along Aliso Viejo Parkway. The parking structure is proposed at a maximum height of approximately 35 ft. 8 inches at its west elevation to 45 ft. three inches on its east elevation as measured from grade abutting the structure as the site and parking structure slope at different gradients adjacent to the Aliso Viejo Parkway and has an approximate 37-39 foot setback from Aliso Viejo Parkway, a large setback of 109 ft. 10 inches from the residential property line further to the east and a minimum setback of approximately 5 ft. from interior parcel lines abutting adjacent parcels in the Polaris Campus. There would be a minimum of four light standards at the highest portion of the parking structure, approximately 20 ft. above the roof top level perimeter parapet of the parking structure and is considered an architectural projection. The elevator tower would reach 48 ft. eight inches, or 16 ft. ten inches above the roof top of the parking structure lowest height on its westerly elevation. The parking structure roof top light standards would be located on the interior column grid of the structure a minimum of 45 ft. from the structure's perimeter on its easterly elevation.

Access to the Project and new parking structure will be via two driveways along Aliso Viejo Parkway. The main drive (Polaris Way) as entry to the Polaris Campus will lead directly into the larger Polaris campus, and then vehicles can turn left along a common internal driveway to access the parking structure. An additional access to the parking structure will be provided from an existing driveway at the easterly portion of the subject site where once entering the site, vehicles can turn right and then right again into the parking structure. Trash areas for the project are located near the vehicular entry of the parking structure. Enclosures will conform to the design standards of the responsible disposal company. It should also be noted that in common areas within the Polaris Campus, there are additional trash facilities and trash compactors that are available for use of all tenants.

The layout of the proposed project has been developed with a high degree of sensitivity to the adjacent residential development and other ownerships within the Polaris Campus. The new office building has been sited adjacent to Polaris Way to ensure that any after dark activities would be screened from the edge of the site with the Parking Structure sited on the northeast portion of the site. Siting of the future office building closer to the main Polaris campus entry, will reinforce the identity, high visibility and quality of the entry to the Polaris campus. The office building location also allows grade variations along Aliso Viejo Parkway, which slope from Polaris Way to the south to be taken advantage of the grade variations and in order to lower the profile and scale of the proposed office building. The parking structure location will also result in its greater use, in a location that will also be less obtrusive to the rest of the Polaris Campus. While there is existing landscape slopes with full grown landscaping which separate the residential area to the east from the project site and proposed parking structure, additional landscape screening will be provided adjacent to the parking structure. Building and parking structure Lighting will also be designed to minimize impacts on the residential neighborhood so that direct light rays

are not directed toward residences. Pursuant to discussions the applicant has had with the Aliso Viejo Community Association, an additional architectural feature has been added to the east end of the parking structure to mitigate noise and provide additional privacy to residents to the east in the Windward condominium project. In addition to the landscaping hedge that wraps around the west and south elevation of the parking structure, the hedge will be extended to the half level of the east facade. A fixed blade acoustical louvers will be added to the parking levels above on this east elevation (SheetsA4.03 and A4.4-Parking Structure Elevations). Site sections have been provided with the application site plan submittal to illustrate the relationship of the proposed buildings and existing residences.

The proposed buildings have been designed by LPA utilizing a compatible design to the main Polaris Campus and improvements are designed to reflect a strong corporate image. With the exception of a parking exception which is described later in this summary, the proposed project meets all zoning code development standards Colored elevations are included in the application package.

2.0 Fundamentals of Noise

This section of the report provides basic information about noise and presents some of the terms used within the report.

2.1 Sound, Noise and Acoustics

Sound is a disturbance created by a moving or vibrating source and is capable of being detected by the hearing organs. Sound may be thought of as mechanical energy of a moving object transmitted by pressure waves through a medium to a human ear. For traffic, or stationary noise, the medium of concern is air. *Noise* is defined as sound that is loud, unpleasant, unexpected, or unwanted.

2.2 Frequency and Hertz

A continuous sound is described by its *frequency* (pitch) and its *amplitude* (loudness). Frequency relates to the number of pressure oscillations per second. Low-frequency sounds are low in pitch (bass sounding) and high-frequency sounds are high in pitch (squeak). These oscillations per second (cycles) are commonly referred to as Hertz (Hz). The human ear can hear from the bass pitch starting out at 20 Hz all the way to the high pitch of 20,000 Hz.

2.3 Sound Pressure Levels and Decibels

The *amplitude* of a sound determines it loudness. The loudness of sound increases or decreases, as the amplitude increases or decreases. Sound pressure amplitude is measured in units of micro-Newton per square inch meter (N/m2), also called micro-Pascal (μPa). One μPa is approximately one hundred billionths (0.00000000001) of normal atmospheric pressure. Sound pressure level (SPL or L_p) is used to describe in logarithmic units the ratio of actual sound pressures to a reference pressure squared. These units are called decibels and abbreviated dB.

2.4 Addition of Decibels

Because decibels are on a logarithmic scale, sound pressure levels cannot be added or subtracted by simple plus or minus addition. When two (2) sounds or equal SPL are combined, they will produce an SPL 3 dB greater than the original single SPL. In other words, sound energy must be doubled to produce a 3 dB increase. If two (2) sounds differ by approximately 10 dB the higher sound level is the predominant sound.

2.5 Human Response to Changes in Noise Levels

In general, the healthy human ear is most sensitive to sounds between 1,000 Hz and 5,000 Hz, (A-weighted scale) and it perceives a sound within that range as being more intense than a sound with a higher or lower frequency with the same magnitude. For purposes of this report as well as with most environmental documents, the A-scale weighting is typically reported in terms of A-weighted decibel (dBA). Typically, the human ear can barely perceive the change in noise level of 3 dB. A change in 5 dB is readily perceptible, and a change in 10 dB is perceived as being twice or half as loud. As previously discussed, a doubling of sound energy results in a 3 dB increase in sound, which means that a doubling of sound energy (e.g. doubling the volume of traffic on a highway), would result in a barely perceptible change in sound level.

2.6 Noise Descriptors

Noise in our daily environment fluctuates over time. Some noise levels occur in regular patterns, others are random. Some noise levels are constant, while others are sporadic. Noise descriptors were created to describe the different time-varying noise levels. Following are the most commonly used noise descriptors along with brief definitions.

A-Weighted Sound Level

The sound pressure level in decibels as measured on a sound level meter using the A-weighted filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the response of the human ear. A numerical method of rating human judgment of loudness.

Ambient Noise Level

The composite of noise from all sources, near and far. In this context, the ambient noise level constitutes the normal or existing level of environmental noise at a given location.

Community Noise Equivalent Level (CNEL)

The average equivalent A-weighted sound level during a 24-hour day, obtained after addition of five (5) decibels to sound levels in the evening from 7:00 to 10:00 PM and after addition of ten (10) decibels to sound levels in the night before 7:00 AM and after 10:00 PM.

Decibel (dB)

A unit for measuring the amplitude of a sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure, which is 20 micro-pascals.

dB(A)

A-weighted sound level (see definition above).

Equivalent Sound Level (LEQ)

The sound level corresponding to a steady noise level over a given sample period with the same amount of acoustic energy as the actual time varying noise level. The energy average noise level during the sample period.

Habitable Room

Any room meeting the requirements of the Uniform Building Code or other applicable regulations which is intended to be used for sleeping, living, cooking or dining purposes, excluding such enclosed spaces as closets, pantries, bath or toilet rooms, service rooms, connecting corridors, laundries, unfinished attics, foyers, storage spaces, cellars, utility rooms, and similar spaces.

L(n)

The A-weighted sound level exceeded during a certain percentage of the sample time. For example, L10 in the sound level exceeded 10 percent of the sample time. Similarly L50, L90 and L99, etc.

Noise

Any unwanted sound or sound which is undesirable because it interferes with speech and hearing, or is intense enough to damage hearing, or is otherwise annoying. The State Noise Control Act defines noise as "...excessive undesirable sound...".

Outdoor Living Area

Outdoor spaces that are associated with residential land uses typically used for passive recreational activities or other noise-sensitive uses. Such spaces include patio areas, barbecue areas, jacuzzi areas, etc. associated with residential uses; outdoor patient recovery or resting areas associated with hospitals, convalescent hospitals, or rest homes; outdoor areas associated with places of worship which have a significant role in services or other noise-sensitive activities; and outdoor school facilities routinely used for educational purposes which may be adversely impacted by noise. Outdoor areas usually not included in this definition are: front yard areas, driveways, greenbelts, maintenance areas and storage areas associated with residential land uses; exterior areas at hospitals that are not used for patient activities; outdoor areas associated with places of worship and principally used for short-term social gatherings; and, outdoor areas associated with school facilities

that are not typically associated with educational uses prone to adverse noise impacts (for example, school play yard areas).

Percent Noise Levels

See L(n).

Sound Level (Noise Level)

The weighted sound pressure level obtained by use of a sound level meter having a standard frequency-filter for attenuating part of the sound spectrum.

Sound Level Meter

An instrument, including a microphone, an amplifier, an output meter, and frequency weighting networks for the measurement and determination of noise and sound levels.

Single Event Noise Exposure Level (SENEL)

The dBA level which, if it lasted for one (1) second, would produce the same A-weighted sound energy as the actual event.

2.7 Traffic Noise Prediction

Noise levels associated with traffic depends on a variety of factors: (1) volume of traffic, (2) speed of traffic, (3) auto, medium truck (2 – 6 wheels) and heavy truck percentage (3 axle and greater), and sound propagation. The greater the volume of traffic, higher speeds and truck percentages equate to a louder volume in noise. A doubling of the Average Daily Traffic (ADT) along a roadway will increase noise levels by approximately 3 dB; reasons for this are discussed in the sections above.

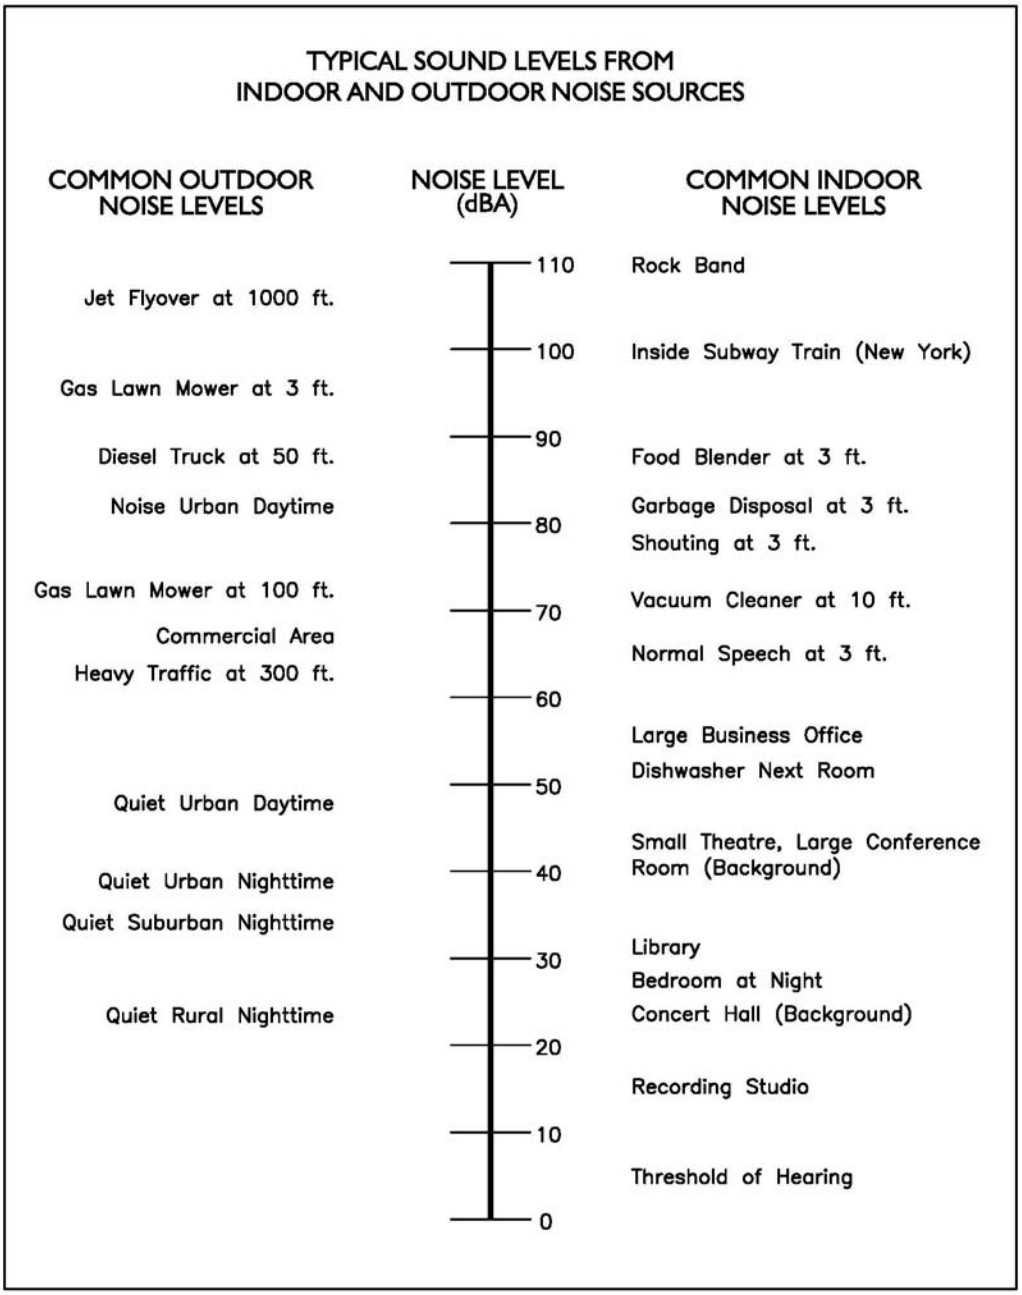
2.8 Sound Propagation

As sound propagates from a source it spreads geometrically. Sound from a small, localized source (i.e., a point source) radiates uniformly outward as it travels away from the source in a spherical pattern. The sound level attenuates at a rate of 6 dB per doubling of distance. The movement of vehicles down a roadway makes the source of the sound appear to propagate from a line (i.e., line source) rather than a point source. This line source results in the noise propagating from a roadway in a cylindrical spreading versus a spherical spreading that results from a point source. The sound level attenuates for a line source at a rate of 3 dB per doubling of distance.

As noise propagates from the source, it is affected by the ground and atmosphere. Noise models use hard site (reflective surfaces) and soft site (absorptive surfaces) to help calculate

predicted noise levels. Hard site conditions assume no excessive ground absorption between the noise source and the receiver. Soft site conditions such as grass, soft dirt or landscaping attenuate noise at an additional rate of 1.5 dB per doubling of distance. When added to the geometric spreading, the excess ground attenuation results in an overall noise attenuation of 4.5 dB per doubling of distance for a line source and 6.0 dB per doubling of distance for a point source.

Research has demonstrated that atmospheric conditions can have a significant effect on noise levels when noise receivers are located 200 feet from a noise source. Wind, temperature, air humidity and turbulence can further impact how far sound can travel.



THIS PAGE INTENTIONALLY LEFT BLANK

3.0 Regulatory Setting

The proposed project is located in the City of Aliso Viejo and noise regulations are addressed through the various federal, state, and local government agencies. The agencies responsible for regulating noise are discussed below.

3.1 Federal Regulations

The adverse impact of noise was officially recognized by the federal government in the Noise Control Act of 1972, which serves three (3) purposes:

- Publicize noise emission standards for interstate commerce
- Assist state and local abatement efforts
- Promote noise education and research

The Federal Office of Noise Abatement and Control (ONAC) was originally tasked with implementing the Noise Control Act. However, it was eventually eliminated leaving other federal agencies and committees to develop noise policies and programs. Some examples of these agencies are as follows: The Department of Transportation (DOT) assumed a significant role in noise control through its various agencies. The Federal Aviation Agency (FAA) is responsible to regulate noise from aircraft and airports. The Federal Highway Administration (FHWA) is responsible to regulate noise from the interstate highway system. The Occupational Safety and Health Administration (OSHA) is responsible for the prohibition of excessive noise exposure to workers.

The Federal government and the State advocate that local jurisdiction use their land use regulatory authority to arrange new development in such a way that "noise sensitive" uses are either prohibited from being constructed adjacent to a highway or, or alternatively that the developments are planned and constructed in such a manner that potential noise impacts are minimized.

Since the Federal government and the State have preempted the setting of standards for noise levels that can be emitted by the transportation source, the County is restricted to regulating the noise generated by the transportation system through nuisance abatement ordinances and land use planning.

3.2 State Regulations

Established in 1973, the California Department of Health Services Office of Noise Control (ONC) was instrumental in developing regularity tools to control and abate noise for use by local agencies. One significant model is the "Land Use Compatibility for Community Noise Environments Matrix." The matrix allows the local jurisdiction to clearly delineate compatibility of sensitive uses with various incremental levels of noise.

The State of California has established noise insulation standards as outlined in Title 24 and the Uniform Building Code (UBC) which in some cases requires acoustical analyses to outline exterior noise levels and to ensure interior noise levels do not exceed the interior threshold. The State mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines published by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of normally acceptable, conditionally acceptable, normally unacceptable, and clearly unacceptable.

3.3 City of Aliso Viejo Noise Regulations

The City of Aliso Viejo outlines their noise regulations and standards within the Noise Element from the General Plan and Municipal Code (Appendix A). For purposes of this analysis, the City of Aliso Viejo's Noise Element is used to evaluate the roadway noise impacts to and from the proposed project. The Noise Element outlines Noise Zones and a Land Use Compatibility Matrix based on land use. Zone A refers to a normally acceptable condition, Zone B refers to a conditionally acceptable condition, Zone C refers to a normally unacceptable condition and Zone D refers to a clearly unacceptable condition.

The site is located in a Zone B, normally acceptable location. Development in Zone B must meet City and State Title 24 noise standards. All project proponents must demonstrate that noise standards have been met prior to human occupation of a building.

The City outlines stationary noise limits in the Municipal Code (Section 8.12.050A). In addition, the City's Municipal Code outlines the noise standards (Section 8.12.070E).

Traffic Noise Regulation

The City of Aliso Viejo General Plan Noise Element defines the Community Noise Exposure Levels (CNEL) for land uses within the City. Table N-2, Noise/Land Use Compatibility Matrix, specifies that normally acceptable noise levels for residential developments be below 60 dBA CNEL. Normally acceptable noise levels are based on the assumption that any building involved meet conventional Title 24 construction standards. New residential construction may be conditionally acceptable in Zone B if noise levels are below 70 dBA CNEL, provided that noise reduction measures are identified and included in the project design.

For purposes of this analysis, residential and commercial noise standards are applicable, as they represent the worst case noise requirements for the site.

Stationary Noise Regulation

Exterior

The City has implemented a stationary noise limit for offending stationary noise sources (e.g., loading/unloading, condenser units, compressors, blowers, etc), Section 8.12.050A of the Municipal Code. The following outlines the City's residential limits.

City of Aliso Viejo Noise Ordinance Exterior Noise Standards	
Exterior Residential Standards Noise Level	**Time Period**
55 dB (A)	7:00 AM – 10:00 PM
50 dB (A)	10:00 PM – 7:00 AM

It is unlawful for any person at any location within the City to create any noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person, which causes the noise level when measured on any other residential property to exceed:

1. The noise standard for a cumulative period of more than 30 minutes in any hour; or
2. The noise standard plus 5 dB(A) for a cumulative period of more than 15 minutes in any hour; or
3. The noise standard plus 10 dB(A) for a cumulative period of more than 5 minutes in any hour; or
4. The noise standard plus 15 dB(A) for a cumulative period of more than one minute in any hour; or
5. The noise standard plus 20 dB(A) for any period of time.

Interior

The following interior noise standards, unless otherwise specifically indicated, shall apply to all residential property within the city (Section 8.12.050B of the Municipal Code).

City of Aliso Viejo Noise Ordinance Interior Noise Standards	
Interior Residential Standards Noise Level	**Time Period**
55 dB (A)	7:00 AM – 10:00 PM
45 dB (A)	10:00 PM – 7:00 AM

In the event the noise consists of impact noise, simple tone noise, speech, music, or any combination thereof, each of the above noise levels shall be reduced by five (5) dBA.

It shall be unlawful for any person at any location within the city to create any noise, or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by the person, when the foregoing causes the noise level when measured within the interior of any residential parcel within the city to exceed.

1. The interior noise standard for a cumulative period of more than five minutes in any hour.
2. The noise standard plus 5 dB(A) for a cumulative period of more than 1 minute in any hour.
3. The noise standard plus 10 dB(A) for any period of time.

In the event the ambient noise level exceeds either of the first two noise level categories above, the cumulative period applicable to the category shall be increased to reflect the ambient noise level. In the event the ambient noise level exceeds the third noise limit category, the maximum allowable noise level under that category shall be increased to reflect the maximum ambient noise level.

Construction Noise Regulation

Section 8.12.070 of the municipal code indicates construction noise is exempt from the noise ordinance. The municipal code defines exempt construction noise as follows: "Noise sources associated with construction, repair, remodeling, or grading of any real property, provided the activities do not take place between the hours of 8:00 PM and 7:00 AM on weekdays, and 8:00 PM and 8:00 AM on Saturday, or at any time on Sunday or a federal holiday." Although the City of Aliso Viejo exempts construction noise from the noise ordinance, the construction noise impact was analyzed for this project to comply with all CEQA requirements. (See Section 7.0)

4.0 Study Method and Procedures

To determine the existing and future noise level environment at and adjacent to the project site, field noise monitoring was conducted on Thursday, August 6, 2015 during typical daytime (7:00 AM-10:00 PM) operating hours. The following describes the measurement procedures, measurement locations, results, noise modeling methods and assumptions to determine the existing and future noise level impact.

4.1 Measurement Procedures and Criteria

Noise measurements are taken to determine the existing noise levels. A noise receiver or receptor is any location in the noise analysis in which noise might produce an impact. The following criteria are used to select measurement locations and receptors:

- Locations expected to receive the highest noise impacts, such as first row of houses
- Locations that are acoustically representative and equivalent of the area of concern
- Human land usage
- Sites clear of major obstruction and contamination

RK conducted the sound level measurements in accordance to Caltrans technical noise specifications. All measurement equipment meets American National Standards Institute (ANSI) specifications for sound level meters (S1.4-1983 identified in Chapter 19.68.020.AA). The following gives a brief description of the Caltrans Technical Noise Supplement procedures for sound level measurements:

- Microphones for sound level meters were placed five (5) feet above the ground for all measurements
- Sound level meters were calibrated (Larson Davis CAL 200) before and after each measurement
- Following the calibration of equipment, a wind screen was placed over the microphone
- Frequency weighting was set on "A" and slow response
- Results of the long-term noise measurements were recorded on field data sheets
- During any short-term noise measurements any noise contaminations such as barking dogs, local traffic, lawn mowers, or aircraft fly-overs were noted
- Temperature and sky conditions were observed and documented

4.1.1 Noise Measurements

Using a Larson Davis 712 Type 2 sound level meter, several short-term (10-minute) noise measurements were recorded at various locations at the site. The Leq, Lmin, Lmax, L2, L8, L25, and L50 statistical data was recorded over 10-minute periods. The information was utilized to define the noise characteristics for the project.

4.1.2 Noise Measurement Locations

The noise monitoring locations for the 6 Polaris site were selected based on the proximity to the location to adjacent noise sources. Short-term noise monitoring location 1 (S1) is located approximately 165 feet south of Aliso Viejo Parkway centerline along the eastern property line. Ambient noise was captured from local traffic. Short-term noise monitoring location 2 (S2) is located approximately 360 feet south of Aliso Viejo Parkway centerline, along the eastern property line. Ambient noise was captured from local traffic.

Table 1 shows the results of the noise measurement results at the existing site, Exhibit C illustrates the proximity of the noise monitoring locations, and Appendix B includes photos, field sheets, and measured noise data.

4.1.3 Noise Measurement Timing and Climate

Short-term noise measurements were recorded during daytime hours and were recorded at various hours and dates as specified in Table 1. Noise measurements were conducted in 10-minute intervals during the indicated time schedule.

The climate data was noted during the measurements and is indicated on the field sheets within Appendix B.

4.2 Traffic Noise Modeling

Traffic noise from vehicular traffic was projected using a version of the FHWA Traffic Noise Prediction Model (FHWA-RD-77-108). The FHWA model arrives at the predicted noise level through a series of adjustments to the key input parameters. Traffic data, traffic volumes, and percentages were obtained using the Traffic Impact Study prepared by RK and typical OC vehicle mix data.

The following outlines the key adjustments made to the computer model for the roadway inputs:

- Roadway classification – (e.g. freeway, major arterial, arterial, secondary, collector, etc),
- Roadway Active Width – (distance between the center of the outer most travel lanes on each side of the roadway)
- Average Daily Traffic (ADT) Volumes, Travel Speeds, Percentages of automobiles, medium trucks, and heavy trucks
- Roadway grade and angle of view
- Site Conditions (e.g. soft vs. hard)
- Percentage of total ADT which flows each hour throughout a 24-hour period

Tables 2 and 3 show the roadway parameters, vehicle distribution, and scenarios utilized for this study.

The following outlines key adjustments to the computer model for the project site parameter inputs:

- Vertical and horizontal distances (Sensitive receptor distance from noise source)
- Noise barrier vertical and horizontal distances (Noise barrier distance from sound source and receptor).
- Traffic noise source spectra
- Topography

RK estimated the traffic noise levels at 100 feet from the centerline of the analyzed roadway and the roadway noise contours. The noise model assumes a flat topography condition (which is a worst-case scenario). In many cases, there are up slopes, down slopes, and walls, which will further reduce noise levels. The project noise calculation worksheet outputs are provided in Appendix C.

4.3 Stationary Noise Modeling

The stationary noise was projected using a computer program that replicates the FHWA Noise Prediction Model (FHWA-RD-77-108). The FHWA model arrives at the predicted noise level through a series of adjustments to the reference energy noise level. For each stationary source, the referenced noise level was applied to the model. The model outputs the projected noise level based on the following key parameters:

- Measured referenced noise level – (e.g. how loud a source is at a specific distance)
- Vertical and horizontal distances (sensitive receptor distance from noise source)
- Noise barrier vertical and horizontal distances (noise barrier distance from sound source and receptor).
- Typical noise source spectra
- Topography

The main source of stationary noise at the project site would be noise from the parking structure. This would typically include screeching tires, horns and exhaust noise. Table 4 indicates the measured referenced and adjusted noise level measurements conducted by RK. The noise measurement data indicates the distance the microphone was placed from the noise source and the statistical data. Measurements were taken over a 10-minute interval.

To estimate the future noise levels during typical conditions, RK adjusted the reference noise levels. Reference noise levels were projected to the nearest property lines where sensitive receptors exist. Table 4 indicates the adjusted noise level measurements.

The adjusted noise levels are based on the distance of the receptor location relative to the noise source, local topography and the project design features, including parapet shielding walls for the equipment. Noise calculation worksheets are located in Appendix D.

4.4 Construction Noise Modeling

The construction noise analysis utilizes the Federal Highway Administration (FHWA) Roadway Construction Noise Model, together with several key construction parameters. Key inputs include distance to the sensitive receiver, equipment usage, % usage factor (= % full throttle) and baseline parameters for the project site. This study evaluates the potential exterior noise impacts. For purposes of the project, the project was analyzed based on the different construction phases. Construction noise will be loudest during the grading, concrete, and building phases of construction. The construction noise calculation output worksheet is located in Appendix D. The following assumptions relevant to short-term construction noise impacts were used:

- It is anticipated that the project will be completed in 2017 with construction lasting approximately 1 to 1.5 years. Construction noise is expected to be the loudest during the grading, concrete, and building phases.

- Vibration impact is not anticipated because the project does not call for pile driving equipment or other vibration impacting equipment.

5.0 Existing Noise Environment

Ambient noise measurements were conducted at various locations at the project site. Two (2) short-term ambient noise measurements were conducted at or near the site to evaluate the existing noise conditions. Exhibit C shows the measurement locations. Noise measurement data indicates that traffic noise propagating from the nearby roadways are the main sources of noise at the project site and surrounding area.

5.1 Short-Term Noise Measurement Results

The results of the short-term measurements are presented in Table 1. The noise measurements recorded the sound pressure levels in dBA in 3-second intervals, which have been used to calculate the minimum, maximum, L2, L8, L25, L50, and Leq averaged over 10-minute intervals for each noise measurement. Noise monitoring was conducted at two (2) different locations to document existing ambient noise levels. During the monitoring phase weather conditions were documented. Noise monitoring data printouts are included in Appendix B.

Noise measurement data indicates that the existing sites experience noise ranging from 59.3 to 62.6 dBA Leq during daytime hours. The sites are exposed to typical traffic noise from the local roadway network. Noise levels vary depending on distance from centerline of roadway, time of day, and traffic speeds and activities. Table 1 summarizes the noise measurements.

5.2 Modeled Existing Traffic Noise Levels

The noise contours of the nearby existing roadways were calculated using the FHWA Traffic Noise Prediction Model (FHWA-RD-77-108) in order to provide a baseline of the existing traffic noise levels. The distances to the 55, 60, 65, 70 dBA CNEL noise contours were calculated. In addition, the noise level at 100 feet from the centerline was calculated and representative of the nearest homes along the study area roadways. The existing traffic (without project) noise levels along the roadways are presented in Table 5.

The calculated existing noise contours in Table 5 demonstrate that the noise level at 100 feet from the centerline for the analyzed roadways, range from 65.5 to 67.5 dBA CNEL. The existing traffic noise level conditions at 100 feet from the centerline of Aliso Viejo Parkway, the roadway closest to the proposed project, ranges from 65.5 to 67.5 dBA CNEL.

The existing traffic noise conditions fall within the City of Aliso Viejo Conditionally Acceptable Zone B thresholds for residential and commercial use.

THIS PAGE INTENTIONALLY LEFT BLANK

6.0 Future Noise Environment Impacts and Mitigation

6.1 Future Exterior Noise

Each future noise source related to the project was analyzed and compared to the CEQA guidelines. The sections below analyze the exterior noise levels and provide mitigation measures that would reduce noise levels. This assessment evaluates the potential noise impacts from the proposed 6 Polaris to the surrounding land uses and compares the results to the City's Noise Standards.

6.1.1 Traffic Source Noise

The potential off-site noise impacts caused by the increase in vehicular traffic from the operation of the proposed project on the nearby roadways were calculated for the following conditions:

- Existing with Project Condition: This scenario refers to existing traffic noise conditions with (plus) project generated traffic noise. This scenario compares the existing without project to the existing with project condition.

- Year 2035 without Project Condition: This scenario refers to the 2035 traffic noise conditions consisting of future traffic generated by ambient growth and known development projects in the project study areas, without the proposed project generated traffic noise.

- Year 2035 with Project Condition: This scenario refers to the 2035 traffic noise conditions consisting of future traffic generated by ambient growth and known development projects in the project study areas, with (plus) the proposed project generated traffic noise. This scenario compares the noise level contours for the without and with project 2035 project condition.

Existing with Project Traffic Condition

The Existing with Project Condition noise contours were calculated for the nearby roadways and are shown in Table 6. Table 6 shows that the noise level from the centerline of the analyzed roadway ranges from 65.6 to 67.5 dBA CNEL.

Table 7 compares the Existing without Project Condition to the Existing with Project Condition. Noise levels are expected to increase by a maximum of 0.1 dBA CNEL, along Aliso Viejo Parkway, as a result of the project, as indicated in Table 7. The projected noise levels at 100' represent general flat conditions along a roadway and do not take into consideration the effect of topography, noise barriers, structures or other factors which will impact the actual noise level in the outdoor living areas.

According to CEQA, an impact is considered significant if there is a substantial increase above the ambient condition. The human ear can detect changes of 3 dBA and changes of less than 3 dBA, while audible under controlled circumstances, are not readily discernable in an outdoor environment. Thus, a change of 0.1 dBA is considered as a barely audible change.

As shown in Table 7, the Existing with Project condition will increase the noise level by 0.1 dBA CNEL. The projected noise level along Aliso Viejo Parkway at 100 feet from the centerline is 65.6 dBA CNEL. The increase in noise level is within the City's Zone B conditionally acceptable category. Even though there is a potential increase in 0.1 dBA, the change in noise level would be considered imperceptible and the final noise level would still be within the City's Residential and Office/Commercial Zone B conditionally acceptable category of 70 and 75 dBA CNEL, respectively. Therefore the project impact is considered less than significant.

The project will include design features which incorporate the requirements from the California Building Code Title 24 regarding building insulation and design. The project design features will satisfy the requirements for Zone B development and no additional mitigation would be required.

Year 2035 without Project Traffic Condition

The 2035 without Project Condition noise contours were calculated for the nearby roadways and are shown in Table 8. Table 8 shows that the noise level from the centerline of the analyzed roadway ranges from 66.8 to 68.6 dBA CNEL.

Year 2035 with Project Traffic Condition

The 2035 with Project Condition noise contours were calculated for the nearby roadways and are shown in Table 9. Table 9 shows that the noise level from the centerline of the analyzed roadway ranges from 66.8 to 68.6 dBA CNEL.

Table 10 compares the 2035 without Project Condition to the 2035 with Project Condition. Noise levels are not expected to increase along Aliso Viejo Parkway and Aliso Creek Road, and are expected to remain below the Zone B noise level threshold with the addition of project traffic, as indicated in Table 10. Therefore the project does not have a significant impact.

The project will include design features which incorporate the requirements from the California Building Code Title 24 regarding building insulation and design. The project design features will satisfy the requirements for Zone B development and no additional mitigation would be required.

6.1.2 Stationary Source Noise

The main source of stationary noise at the project site would be noise from the parking structure. This would typically include opening and closing of doors, screeching tires, exhaust noise, and occasionally noise from horns and alarms. The parking structure would be located approximately 150 feet from the nearest residencies. With the effects of distance divergence, noise generated by the parking structure would be reduced to 44.0 dBA Leq at the closest residences.

The noise levels generated by parking structure would be below the City's daytime/nighttime exterior standard for the residential land uses. The parking structure would not cause a significant increase in noise when combined with the ambient noise level. Therefore, no significant noise impacts would occur to off-site noise sensitive land uses from the parking structure. The project will provide fixed blade acoustical louvers along the east side of the parking structure. The acoustical louvers will help further reduce parking structure noise from the site to the residential units. The acoustical louvers are not required from a noise mitigation standpoint.

Combined Noise Levels

The combined noise level calculation includes the existing ambient noise level plus all stationary noise sources associated with the project. When combining the existing ambient noise level to the stationary noise levels, the project would result in a 62.7 dBA Leq level during daytime, which is approximately a 0.1 dBA Leq increase.

Existing ambient noise levels exceed the City's noise threshold for several noise threshold categories. However, the project does not increase noise levels by more than 3 dBA for any category in which noise levels exceed the City standard. 3 dBA is generally considered the threshold for human perception of change of noise levels, and therefore the project impact is considered less than significant.

6.2 Future Interior Noise

The interior noise level is the difference between the projected exterior noise level at the structure's façade and the noise reduction provided by the structure itself. Final building plans will need to be provided to determine the projected interior noise level of the proposed office building. Based on the general data provided in the Environmental Protection Agency's (EPA) Protective Noise Levels (EPA 550/9-79-100, Nov 1979), building design may provide at least 12 dBA of noise exterior to interior noise attenuation with windows open and 20 dBA with windows closed. The project will include design features which incorporate the requirements from the California Building Code Title 24 regarding building insulation and design. Prior to building occupancy permit, a final noise study will be prepared which indicates the specific STC rating for windows that will be needed to meet the City's 45 dBA CNEL limit. Upgraded windows are a part of the project's design features.

7.0 Construction Noise Impact

The degree of construction noise will vary depending on the phase of construction, the type of construction activity, the size and topographical features of the active construction zone, the duration of the workday, and the types of equipment employed. The closest receptors to the project site include; Business Park located approximately 350 feet to the north, and residential located approximately 300 feet to the east and south.

Construction noise is considered a short-term impact and is exempt from noise standards specified in the City of Aliso Viejo Municipal Code (Section 8.12.070). Although the municipal code exempts construction noise from regulation in the City, there may still be environmental impacts. Thus, construction noise impacts are evaluated for CEQA purposes at the nearest off-site sensitive receivers.

For purposes of this study, the City's residential noise standard is used to measure the threshold of significance for construction noise impacts. This measure of significance is considered conservative, since construction noise is a short-term impact and is exempt from the noise standards in the municipal code.

7.1 Construction Noise Analysis

The construction noise analysis utilizes the Federal Highway Administration (FHWA) Roadway Construction Noise Model, together with several key construction parameters. Key inputs include distance to the sensitive receiver, topography, equipment usage, % usage factor (= % full throttle) and baseline parameters for the project site.

Table 12 shows the typical construction noise levels for various pieces of equipment. Table 13 has the typical construction vibration levels for various pieces of construction equipment.

This study evaluates the potential noise impacts of construction activity. Construction noise is typically loudest during the grading, concrete and building phases of construction. For purposes of this project, construction noise was analyzed based on two heavy pieces of equipment operating simultaneously during the grading phase, which is expected to generate the highest noise levels and represent the worst case scenario. The construction noise analysis assumes one (1) excavator and one (1) grader would be in operation at the same time. It is estimated that, on average, construction activity will take place approximately 300 feet from the nearest residential dwelling units.

Table 14 outlines the estimated off-site exterior noise levels during construction at the nearest residential dwelling units. The construction noise calculation worksheet outputs are located in Appendix D.

Typical operating cycles for these types of construction equipment may involve one or two minutes of full power operation followed by a few minutes at lower idling speeds. Although the single event exposure may result in higher intermittent annoyance noise levels, the effect of the long-term ambient noise levels would be small when averaged over an extended time period.

- Construction noise is expected to be the loudest during the grading phase.

- The estimated noise level during construction would be 51.4 dBA LEQ at 300 feet from the noise source to the nearest residential dwelling unit.

- Noise levels are not expected to exceed the City's residential noise standard of 55 dBA at the nearest sensitive off-site receivers during typical daytime construction activity.

- The increase in ambient noise levels is expected to be less than significant to the nearest off-site sensitive receptors

7.2 Construction Vibration

The effects of vibration on structures have been the subject of extensive research. Much of the work orientated in the mining industry, where vibration from blasting is critical. The Transportation and Construction Induced Vibration Guidance Manuel for the California Department of Transportation has various recommended vibration thresholds for various types of projects and land uses. For example, according to the Konan Vibration Criteria for Historic and Sensitive Buildings the criteria for transient vibration sources should not exceed 0.3 peak particle velocity (PPV) *(Section 6 – Structures, Table 11)*. 0.035 inches per second is barely perceptive.

Construction activities can produce vibration that may be felt by adjacent land uses. The construction of the proposed project would not require the use of equipment such as pile drivers, which are known to generate substantial construction vibration levels. The primary source vibration during construction may be from a bull dozer. A small dozer has a vibration impact of 0.003 inches per second PPV at 25 feet. The distance of the construction equipment will be further than 25 feet from any existing building. It is anticipated that no significant vibration impact will occur to any adjacent buildings due to the distance of construction equipment from buildings.

The project is not anticipated to have a vibration impact and is considered not significant.

7.3 Construction Recommendations

Based on the noise impact analysis contained in this report, the proposed project would not result in a significant off-site noise impact during construction. The following measures are recommended as general best practice methods which will be included as design features and are not required for mitigation to comply with established guidelines:

1. Construction shall not take place between the hours of 8:00 PM and 7:00 AM on weekdays, and between 8:00 PM and 8:00 AM on Saturday or at any time on Sunday or a federal holiday.

2. Stationary construction noise sources such as generators or pumps should be located at least 300 feet from sensitive land uses, as feasible.

3. Construction staging areas should be located as far from noise sensitive land uses as feasible.

4. During construction, the contractor shall ensure all construction equipment is equipped with appropriate noise attenuating devices.

5. Idling equipment shall be turned off when not in use.

6. Equipment shall be maintained so that vehicles and their loads are secured from rattling and banging.

TABLE 14

Projected Exterior Construction Noise Levels at Residential Units to the East of Project Site (dBA)

	Source	Distance from Reference Source to Sensiteve Receiver (feet)[4]	Adjusted Noise Levels (dBA)	
			L_{eq} or (8-hour L_{eq})	L_{max} or (1-hour L_{eq})
Daytime (7:00 AM - 10:00 PM)	Construction Activity[1]	300	62.9	66.9
	Shielding Value[2]	300	-11.5	-11.5
	Adjusted Noise Level[3]	300	51.4	55.4
	Federal Transit Admistration Construction Noise Criteria[5]	- -	80	90
	County of Los Angeles Construction Noise Criteria[6]	- -	- -	80
	City of San Diego Construction Noise Criteria[7]	- -	75	- -
	City of Aliso Viejo Stationary Noise Criteria[8]	- -	55	75
	Construction Activity Exceeds Established Thresholds?	- -	No	No

[1] Noise levels are expected to be the loudest during the grading phase of construction. Construction activity includes the noise impacts from the following pieces of heavy equipment operating simultaneously: (1) Excavator and (1) Grader. Noise levels are referenced from the FHWA Construction Noise model.

[2] Shielding includes the attenuation effects from the vertical change in elevation between the construction site and the residential homes ands the effects of existing vegitation which is represented using soft-site conditions.

[3] The adjusted noise level results from the difference in the projected construction noise level at 300 feet and the shielding effects from topography and vegitation.

[4] Construction activity is expected to take place at different locations on-site throughout the construction process. To estimate the approximate distance of a noise source to the nearest sensitve receptor, the average distance to the nearest property line is used. For impacts to the residential property, the noise source is shown to be closer to the residential units, near the center of the parking structre, to provide a more conservative analysis.

[5] The FTA provides general assessment criteria for evaluating noise impacts during construction activities at residnetial land uses . For purposes of this analysis, the 1-hour Leq is used in reference to the maximum noise levels expected during operation and the 8-hour Leq is used for average noise levels.

[6] Section 12.08.440 of The County of Los Angeles Municipal Code limits the maximum noise level caused by construction activity (mobile equipment) to 80dBA at Multi-family residential structures during daytime hours.

[7] Section 12.08.440 of The County of Los Angeles Municipal Code limits the maximum noise level caused by construction activity (mobile equipment) to 80dBA at Multi-family residential structures during daytime hours.

[8] The City of Aliso Viejo does not have established construction nose thresholds. The residential exterior stationary noise standards are shown herein for reference purposes. Based on the estimated construction noise levels at 300 feet from the nearest residential units, the City's residential noise standard of 55 dBA would not be exceeded.

Appendices

Appendix A

City of Aliso Viejo
Noise Element and Noise Ordinance

NOISE ELEMENT

INTRODUCTION

The City of Aliso Viejo desires to achieve and maintain an environment free from objectionable, excessive, or harmful noise to protect and enhance quality of life for residents. In addition to causing irritation, high noise levels can be a source of stress for those working and residing nearby. Creating effective strategies that reduce excessive noise and limit the community's exposure to loud noise sources is the central objective of the General Plan Noise Element.

PURPOSE OF THE NOISE ELEMENT

The purpose of the Noise Element is to identify current and potential future sources of noise so that future land uses can be organized and new development adequately designed in a manner that minimizes noise impacts to community residents and businesses. This Element contains policies and programs to achieve and maintain a safe noise environment within Aliso Viejo.

SCOPE AND CONTENT OF THE NOISE ELEMENT

The Noise Element is a mandatory component of the General Plan as outlined in the State Government Code. Noise exposure contours in the Element present quantified projections of future noise conditions associated with both short- and long-term growth. This noise information serves as the basis for guidelines describing compatible land uses.

The Noise Element has three sections: 1) this Introduction; 2) Issues, Goals and Policies; and 3) the Noise Plan. In the second section (Issues, Goals and Policies), goals and policies are established which address identified noise issues. The goals identify overall City desires and consist of broad statements of purpose and direction. The policies are guidelines aimed to reduce or avoid adverse noise effects on residents and businesses. The Noise Plan describes how goals and policies will be achieved, or implemented. Specific implementation for the Noise Element is provided in the General Plan Implementation Program, located in Appendix A.

RELATED PLANS AND PROGRAMS

Many plans and programs enacted through State and local legislation directly relate to the Noise Element. These plans and programs are administered by agencies with powers to enforce State and local laws.

California Environmental Quality Act (CEQA) and Guidelines

The California Environmental Quality Act (CEQA) was adopted by the State legislature in response to a public mandate for thorough environmental analysis of projects that might affect the environment. The provisions of the law and environmental review procedure are described in the CEQA Statutes and the CEQA Guidelines. Excessive noise is considered an environmental impact under CEQA. Implementation of

CEQA ensures that during the decision making stage of development, City officials and the general public will be able to assess the potential noise impacts associated with private and public development projects.

California Noise Insulation Standards (Title 24)

The California Commission of Housing and Community Development officially adopted noise insulation standards in 1974. In 1988, the Building Standards Commission approved revisions to the standards (Title 24, Part 2, California Code of Regulations). As revised, Title 24 establishes an interior noise standard of 45 dB(A) for residential space (CNEL or Ldn). Acoustical studies must be prepared for residential structures to be located within noise contours of 60 dB(A) or greater (CNEL or Ldn) from freeways, major streets, thoroughfares, rail lines, rapid transit lines, or industrial noise sources. The studies must demonstrate that the building is designed to reduce interior noise to 45 dB(A) or lower (CNEL or Ldn).

City of Aliso Viejo Noise Control Ordinance

Upon incorporation, Aliso Viejo adopted the Orange County Noise Control Ordinance. The Ordinance establishes interior and exterior noise standards, controls for nuisance and business-related noise, and specific standards for acceptable daytime and nighttime noise levels. Requirements of the Noise Control Ordinance are identified in this Element.

RELATIONSHIP TO OTHER GENERAL PLAN ELEMENTS

State planning law requires the Noise Element to be consistent with other General Plan elements. The Land Use, Circulation and Conservation/Open Space Elements are most closely related to the Noise Element.

Policies and plans developed in the Noise Element are intended to protect current and planned land uses identified in the Land Use Element from excessive noise. Potential noise sources are identified in the Noise Element and programs are established to avoid or mitigate noise impacts from planned development. At the same time, policies contained in the Land Use Element ensure that environmental conditions, including noise, are considered in all land use decisions. Preventing the intrusion of negative environmental conditions, such as excessive noise, in order to create a healthy environment is a central objective of the Land Use Element.

The transportation issues discussed in the Circulation Element are also directly related to the Noise Element. Noise from transportation is largely responsible for excessive noise levels in certain locations in urban environments. Projected noise distribution, depicted as noise contours, is corollary to the Circulation Plan. Noise policies and implementation are largely based on the Circulation Element and are aimed to minimize the effects of transportation noise on current and planned land uses.

The Conservation/Open Space Element is also related to the Noise Element. Enjoyment of parks and open spaces can be diminished by excessive noise, and noise information provided in the Noise Element should be considered in planning new recreational areas. At the same time, where appropriate, open space areas can serve as effective buffers between sensitive land uses and noise producers.

ISSUES, GOALS, AND POLICIES

Some parts of Aliso Viejo are subject to high noise levels, which can reduce quality of life in residential neighborhoods and for certain other sensitive uses, like churches and schools. Consideration of noise sources in the planning process, combined with identification of affected areas can minimize the impacts of noise on the community.

Noise Element goals, policies and implementation address three issues: (1) avoiding the negative impacts of noise through land use planning and noise reduction measures; (2) minimizing the impact of transportation related noise; and (3) minimizing the impact of non-transportation related noise.

NOISE AND LAND USE PLANNING

Consideration of the sources and recipients of noise early in the land use planning and development process can be an effective way to reduce the impact of noise on the community. Consideration should be given to both reducing noise in severely impacted areas through rehabilitative improvements and avoiding potential noise impacts through effective land use planning.

Goal N-1 **Minimize the impact of point source noise and ambient noise levels throughout the community.**

Policy N-1.1 Ensure that construction and occupancy of new development are compatible with, and do not exceed thresholds defining the acceptable noise environment in surrounding areas.

Policy N-1.2 Require inclusion of noise-reducing design features in development projects to address the impact of noise on residential development.

TRANSPORTATION RELATED NOISE

Excessive noise levels in Aliso Viejo are caused primarily by traffic on the San Joaquin Hills Transportation Corridor (SR-73) and major thoroughfares. Reduction of transportation-related noise levels is desired to improve quality of life in all neighborhoods and for other noise-sensitive land uses.

Goal N-2 **Minimize transportation-related noise impacts.**

Policy N-2.1 Ensure noise impacts generated by motorized vehicles are minimized through the use of noise attenuation measures on City streets.

Policy N-2.2 Control truck traffic routing within the City.

Policy N-2.3 Require inclusion of sound-reducing design measures in development projects impacted by transportation-related noise.

Policy N-2.4 Encourage use of alternative transportation technologies that minimize noise impacts.

NON-TRANSPORTATION RELATED NOISE

Noise is also associated with construction activity, manufacturing or business operations, and everyday activities in Aliso Viejo neighborhoods, such as leafblowing and lawnmowing.

Goal N-3	Minimize noise impacts from sources other than transportation.

Policy N-3.1 Ensure stationary noise impacts on sensitive receptors and noise emanating from construction activities, private developments/residences, landscaping activities and special events are minimized.

Policy N-3.2 Require that mixed-use structures and areas be designed to prevent transfer of noise and vibration from commercial uses to residential uses.

NOISE PLAN

As the population of Aliso Viejo and the surrounding region increases, noise levels associated with transportation and non-transportation related sources will also increase. The City has established goals and policies (listed in the previous section) to safeguard the community from excessive noise levels as the ambient noise level in the community rises. The Noise Plan describes the approach for achieving this aim and provides a general outline of action programs. As an extension of the Noise Plan, noise implementation contained in Appendix A of the General Plan describes specific actions that the City will take to protect the overall quality of life in the community.

NOISE POLICY MAP

Figure N-1 presents graphically the City's noise policies and plan. The Noise Policy Map presents the locations of future noise contours surrounding City roadways, within which land use compatibility and noise mitigation requirements outlined in the Noise Plan will be evaluated and required as needed as a part of development review. In addition, the map identifies the location of several "sensitive receptors". These schools, child care facilities, senior housing complexes, churches, and other similar facilities should be protected from additional noise intrusions associated with new development or roadway improvements, to the extent feasible. As applicable, the Noise Plan refers to the Policy Map for identification of significant locations, conditions, or development requirements.

NOISE AND LAND USE PLANNING
