☐ **All violations noted on this compliance inspection report were corrected during this inspection.**

RECEIVED SEP 22 2005

Routine Inspection & Below Grade UST Inspection conducted this date with Designated UST System Operator, John Janke, Alan Egan of Superior Ready Mix and Western Pump Tank Technician, Vern Sabin. 4 sensors were tested, passed, tagged and placed in the lowest point of the sumps and dispenser. The ATG is functioning to have audible & visible alarm at 90% capacity (10,858 gallons – 80 inches). There is working fail safe for the turbine sump sensor and the dispenser sensor. Mechanical line leak detector was tested and is in working order today. John Janke of Superior Ready mix passed the UST System Designated Operator Exam and is the D.O. for this UST System. His inspections began May 17, 2005. This DO report is on site. Spill bucket passed 1 hr test today. UST Monitoring System was Certified this date. Used oil AST has a P.E. Cert on site dated 7/14/03.

1) Observed at least 40 gallons of water that had intruded into the fill sump. The alarm was not triggered probably because the sump sensor was at the bottom of the sump, but it was on its side. Because no alarm was triggered, the D.O. did not check the sump. UST System Sumps must be kept clear of debris/liquid per CCR 2631(d)(4). This water was removed during the inspection.
CORRECTIVE ACTION: You MUST find the source for the water intrusion and work to mitigate this intrusion. Recommend resealing the sump lids and possibly diverting the water truck form this short stretch of pavement until the sumps are better sealed. Be aware that work on the UST System at any time may require UST Repair Permits. Call (619) 237-8451 if you are ever in doubt if you need a repair permit.

☐ **This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.**	**Initials of Business Representative** AE

SUPPLEMENTAL INSPECTION REPORT

PERMIT # 121310
DATE 5/28/04
PAGE 2 of 5

BUSINESS ADDRESS: 9245 Camino Santa Fe ZIP CODE: 92121

REMARKS

***Secondary Containment Testing for those components able to be tested is required 3 years after the December 31, 2002 deadline. So by January 1, 2006, you must do the secondary containment testing for this UST System. You may do the test up to 30 days in advance of the deadline.

*** Evidence of Financial Responsibility must be available during the inspection. FAX a copy to this location and to the inspector by June 30, 2005. Keep an updated valid certificate of financial responsibility on site

*** UST Operating Permit also must be kept on site. UST Operating Permit will be renewed today by this Department (as it expired 5/23/05) and the renewal expiration will be 3 years from now. Keep a copy of the permit here at this location.

Within 30 days, initiate corrective actions as required by this report, within an additional 5 days provide a written response, to the address listed on this report, providing corrective actions taken to resolve the items noted above.

Be advised, if a re-inspection is needed to determine return to compliance, a re-inspection fee may be issued.

NOTE: **Effective July 1, 1995, California Small Businesses and California Businesses with 500 employees or less must demonstrate at least $5,000, exclusive of the UST Cleanup Fund, businesses with over 500 employees must demonstrate at least $10,000. (Chap. 6.75 H&SC, Sect. 25299.32)**

The Chief Financial Officer or the owner or operator must sign, under penalty of perjury, a letter worded EXACTLY as follows or you may complete this letter by filling in the blanks with appropriate information:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the Chief Financial Officer for Superior Ready Mix Concrete L.P.
(Business name, business address, and correspondence address of owner or operator)
1508 W. Mission Road, Escondido CA 92029

This letter is in support of the use of the **Underground Storage Tank Cleanup Fund** to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by an unauthorized release of petroleum in the amount of at least $ 10,000 (Dollar Amount) per occurrence and $ 10,000 (Dollar Amount) annual aggregate coverage.

Underground storage tanks at the following facilities are assured by this letter:
9245 Camino Santa Fe, San Diego, CA 92121
(Name and address of each facility for which financial responsibility is being demonstrated.)

1.	Amount of annual aggregate coverage being assured by this letter.....	$ 10,000
2.	Total tangible assets.....	$ 54,452,992
3.	Total liabilities.....	$ 20,951,789
4.	Tangible net worth (subtract line 3 from line 2. Line 4 must be at least 10 times line 1).....	$ 33,501,203

I hereby certify that the wording of this letter is identical to the wording specified in subsection 2808.1(d)(1), Chapter 18, Division 3, Title 23 of the California Code of Regulations.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

Re: Inspection Report from today 5/31/05 for 9245 Camino Santa Fe, San Diego 92121

Comments:

Please send a written response once you have mitigated the water intrusion. This violation is repeat from last year and cannot go on. Please fix this problem by June 30, 2005. One idea is to put a rubber mat down over the sump covers for when the water trucks go over.

Of interest: TOXIC refers to an LD50 of more than 50 mg/kg and less than 500 mg/kg when administered to albino rats orally who are between 200-300 grams each. There are other definitions, but that the oral dose definition. Highly toxic is an oral LD50 of less than 50 mg/kg for the same size rats. There are definitions for dermal doses too.

Ms. Manon Mashue
County of San Diego
Department of Environmental Health
P.O. Box 129261
San Diego, CA 92112-9261

Dear Ms. Maschue,

In response to your inspection of our Carroll Canyon Facility on May 31, 2005, Superior Ready Mix Concrete, L.P. has taken appropriate action to correct the noncompliance issues observed on that date.

Water intrusion into the fill sump has been mitigated by placing silicon sealer around the edges of the sump cover. The batch manager has also been instructed not to water this area during their daily watering activities.

I have included a copy of our current Certification of Financial Responsibility.

I have also included an Underground Storage Tank Facility Information sheet for your records, also per your request.

Please do not hesitate to call with any further question or comments you may have.

Sincerely,

John Janke
Environmental Scientist
Superior Ready Mix Concrete, L.P.

Subject: RE: 121310 Superior Ready Mix...

Mike & Manon

This is probably not the correct parcel (maybe it never was). Parcel get split and change numbers over time. This may be the case here. When the parcel is split, the old parcel number becomes "historical". The Assessor no longer has owner information for historical parcel. That is why the owner is blank in Kiva. We can change to the correct parcel but need to verify. The next time Manon is downtown (say for file purging) I can bring up some aerial maps with parcel overlays so we can confirm the correct parcel. SAM is using this old parcel for past release also.

Matt,
Should we make property owner changes or is that entry controlled by another Department. See Manon's e-mail below.

Viz,

The APN for this site is listed as: 341-050-37-00 yet the Property Owner information on the UPFR is not populated. (This business is in the Carroll Canyon)

I think the site's UST may have undergone a change of owner, so I sent the Env. Contact an electronic UST Facility Information Page.

P.O. Box 129261, San Diego, CA 92112-9261

UNDERGROUND STORAGE TANK (UST) DESIGNATED OPERATORS
and
UST OWNER COMPLIANCE STATEMENT

The State Water Resources Control Board (SWRCB) has adopted changes to the Underground Storage Tank (UST) regulations that require USTs owners to submit a signed statement to the Certified Unified Program Agency (CUPA) indicating that the owner understands and is in compliance with all underground storage tank requirements, and identifying the **Designated UST Operator(s)** for each facility they own. The signed statement must be submitted to the CUPA by January 1, 2005. The Hazardous Materials Division (HMD) is the CUPA responsible for implementing the UST program in San Diego County.

The definition of a **Designated UST Operator** can be found in Title 23 of the California Code of Regulation, section 2715(b)-(f). **A Designated UST Operator** means one or more individuals designated by the UST owner to have responsibilities for training facility employees and conducting a monthly visual inspection at the UST facility. The "designated UST operator" must:

- Posses a current "California UST System Operator" certification issued by the International Code Council (ICC) by **January 1, 2005**. Certification must be renewed every 24 months.
- Provide on-the-job training for facility employee(s). Initial training is required by July 1, 2005. Facility employees hired on or after **July 1, 2005** must complete initial training within 30 days from their date of hire.
- Perform monthly visual inspections and record results on an inspection report, which must be provided to the owner/operator from their date of hire. For your convenience, a checklist for visual inspections (Form HM-9175) is available on the Hazardous Materials Division web site, **http://www.sdcounty.ca.gov/deh/hmd/index.html**. Keep this completed form with your monthly records.

The **Designated UST Operator** must be able to perform the required tasks on the timelines specified in regulations. As long as ICC certifies the individual, the **Designated UST Operator** could be the UST facility owner, operator, employee, service technician, or a third-party. Please submit the name of the **Designated UST Operator(s)** for each facility you own using the enclosed **Form HM-9174 to HMD no later than January 1, 2005.** This form also serves as the UST owner compliance statement. Also be aware that UST owners must notify the HMD within 30 days of any change of **Designated UST Operator (s)**.

For more information about the new UST regulations and to find out more about training requirements for UST Designated Operators, visit the State Regional Water Regional Control Board at http://www.swrcb.ca.gov/ust/training/new_trng_reqmts.html#operator or call the Hazardous Materials Duty Desk at 619-338-2231.

Routine Hazardous Waste/Material and UST below grade inspection conducted today. Business has changed haulers to Asbury and Safety Kleen only at this time. UST monitoring system passed mechanical line leak detector of 3 gph today. 4 sensors were tested - UDC, turbine sump both caused positive shut down of turbine, annular and piping sump sensors engaged audible alarm. Overfill was tested and caused audible/visual alarm. Fail safe shut down turbine. The Designated Operator has been conducting monthly inspections. SB 989 and Spill Buckets will be tested today. * I expect results of all testing from today to be sent to OEH by 4/24/06. * Be sure to update your "CFO" (Chief Financial Officer) Financial Responsibility for UST system letter by 6/29/06. Weekly container inspection logs and daily AST inspection logs are on site - be sure to keep these up. A P.E. Assessment is dated 7/15/03 for the Used oil AST. Monitoring alternative for the UST system is 3/A with fail safe. Written ER + Monitoring procedures for UST are on site. * Be sure D.O. forms submitted. * NO violations were observed today. Paperwork was in order and shop clean and organized. –

☒ This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited - Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. ~~If more than one monitoring system control panel is installed at the facility, a~~ A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Plan Check Number: **Permit Number:** 121310

A. General Information

Facility Name: SUPERIOR READY MIX — Bldg. No.:

Site Address: 9245 CAMINO SANTA FE — City: SAN DIEGO — Zip: 92121-

Facility Contact Person: AARON SCHOENEWEIS — Contact Phone No.: (858) 695-0666 x

Make/Model of Monitoring System: VEEDER-ROOT TLS-300C — Date of Testing/Servicing: 24-Mar-06

B. Inventory of Equipment Tested/Certified: Check the appropriate boxes to indicate specific equipment installed/ inspected serviced:

Tank ID: T 1- DIESEL ☒ In-Tank Gauging Probe Model: 847390-109 ☒ Annular Space or Vault Sensor Model: 794380-420 ☒ Piping Sump / Trench Sensor(s) Model: 794380-208 ☒ Fill Sump Sensor(s) Model: 794380-208 ☒ Mechanical Line Leak Detector Model: RED JACKET ☐ Electronic Line Leak Detector Model: ☐ Tank Overfill / High-Level Sensor Model: ☐ Other (specify equipment type and model in Section E on Page 2).	**Tank ID:** ☐ In-Tank Gauging Probe Model: ☐ Annular Space or Vault Sensor Model: ☐ Piping Sump / Trench Sensor(s) Model: ☐ Fill Sump Sensor(s) Model: ☐ Mechanical Line Leak Detector Model: ☐ Electronic Line Leak Detector Model: ☐ Tank Overfill / High-Level Sensor Model: ☐ Other (specify equipment type and model in Section E on Page 2).
Tank ID: ☐ In-Tank Gauging Probe Model: ☐ Annular Space or Vault Sensor Model: ☐ Piping Sump / Trench Sensor(s) Model ☐ Fill Sump Sensor(s) Model: ☐ Mechanical Line Leak Detector Model: ☐ Electronic Line Leak Detector Model: ☐ Tank Overfill / High-Level Sensor Model: ☐ Other (specify equipment type and model in Section E on Page 2).	**Tank ID:** ☐ In-Tank Gauging Probe Model: ☐ Annular Space or Vault Sensor Model: ☐ Piping Sump / Trench Sensor(s) Model: ☐ Fill Sump Sensor(s) Model: ☐ Mechanical Line Leak Detector Model: ☐ Electronic Line Leak Detector Model: ☐ Tank Overfill / High-Level Sensor Model: ☐ Other (specify equipment type and model in Section E on Page 2).
Dispenser ID: 1-2 ☒ Dispenser Containment Sensor(s). Model: 794380-208 ☒ Shear Valve(s). ☐ Dispenser Containment Float(s) and Chain(s).	**Dispenser ID:** ☐ Dispenser Containment Sensor(s). Model: ☐ Shear Valve(s). ☐ Dispenser Containment Float(s) and Chain(s)

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Servicing

Permit Number:

Software Version Installed: 16.05

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shutdown? *(Check all that apply)* ☒ Sump/Trench Sensors; ☐ Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☒ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90%
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments:

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment: Permit Number:

☒ Check this box if tank gauging is used only for inventory control

☐ Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☒ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☒ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☒ Yes	☐ No*	Was accuracy of system product level readings tested?
☒ Yes	☐ No*	Was accuracy of system water level readings tested?
☒ Yes	☐ No*	Were all probes reinstalled properly?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

☐ Check this box if LLDs are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h.; ☐ 0.1 g.p.h. ; ☐ 0.2 g.p.h.
☒ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

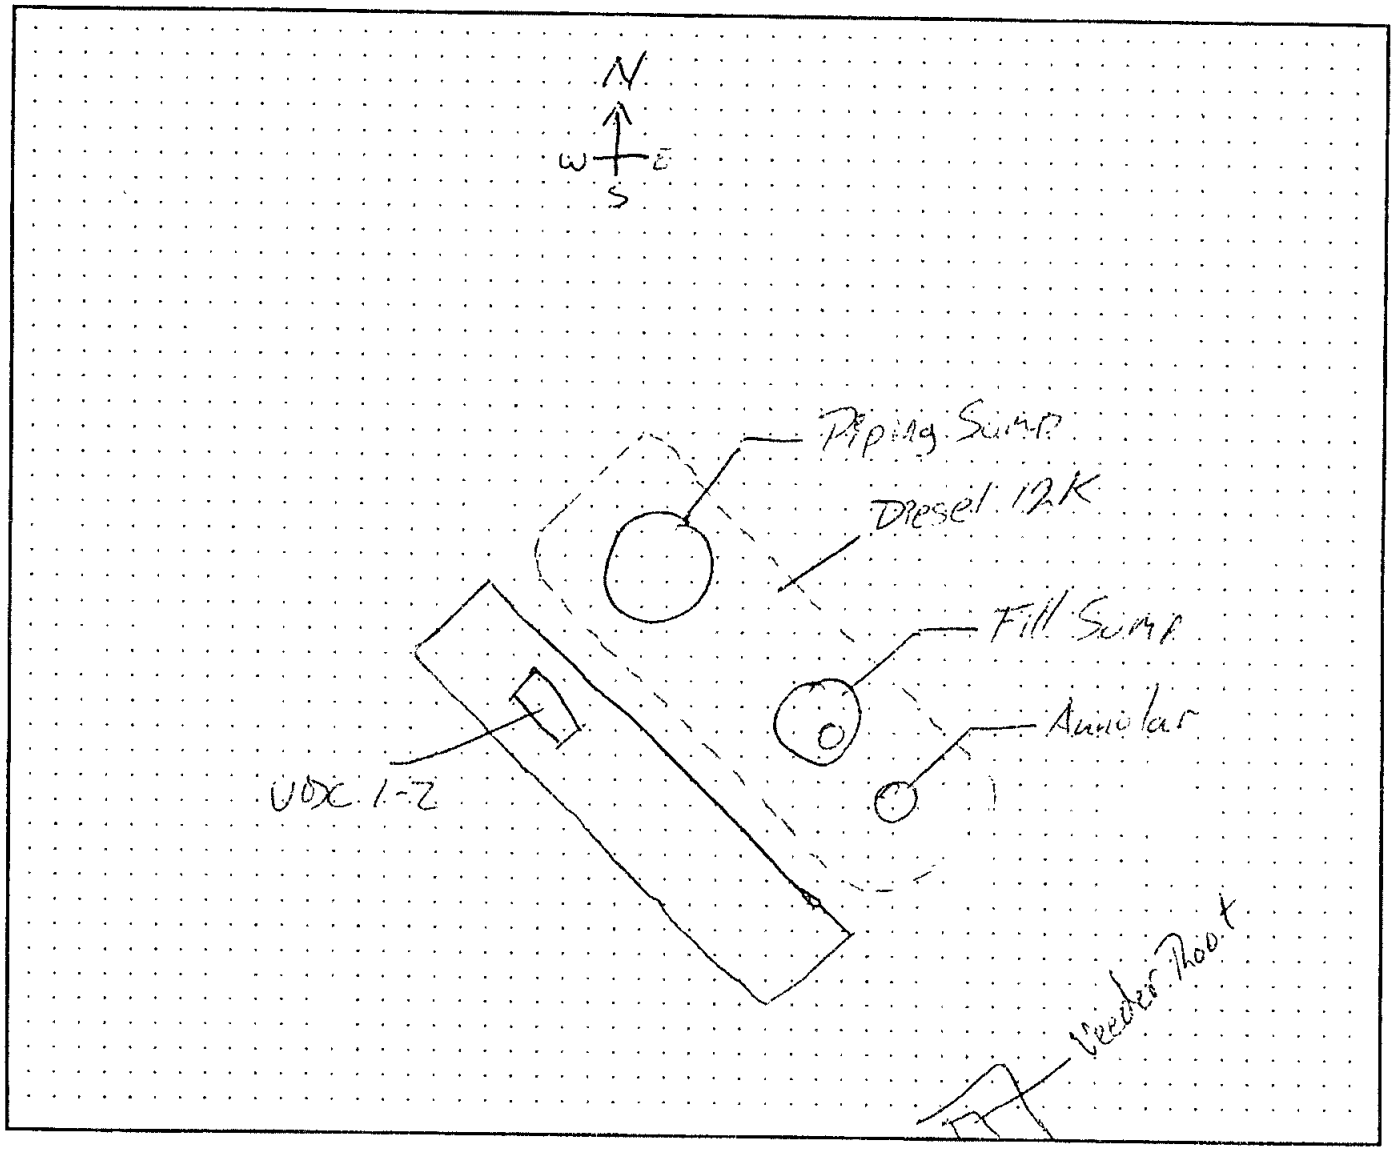
*** In Section H below, describe how and when these deficiencies were or will be corrected.**

H. Comments:

Monitoring System Certification

UST Monitoring Site Plan

Site Address: 9245 Camino Santa Fe



Date map was drawn: 03/24/06

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

UNDERGROUND STORAGE TANK SECONDARY CONTAINMENT TESTING REPORT FORM

This form is intended for use by contractors performing initial & periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), must be provided to the facility owner/operator for submittal to the County of San Diego Department of Environmental Health Hazardous Materials Division UST Group.

WRITTEN MONITORING PROCEDURES
UNDERGROUND STORAGE TANK (UST) MONITORING PROGRAM

Authority cited: Title 23 CCR, Sections 2632 (d)(1), 2634 (d)(2), and 2641 (h)

This monitoring program must be kept at the UST location at all times. The elements of this monitoring program constitute conditions of the UST operating permit. The permit holder **must** submit any changes to the San Diego County, Hazardous Materials Division, P.O. Box 129261, San Diego, CA 92112-9261 **within 30 days** of any changes to the monitoring program, unless required to obtain approval before making the change.

A. General Information

Facility Name: Superior Ready Mix Concrete, L.P.

Facility Address: 9245 Camino Santa Fe, San Diego, CA 92121

☒ Tank and piping monitoring is identical for all UST's located at this facility; *or*
☐ This plan covers only the following tank(s): _____

☐ No electronic leak detection systems are used to monitor UST systems covered by this plan; *or*
☒ The following type of electronic monitoring system performs leak detection monitoring for UST systems covered by this plan (i.e.: Veeder Root TLS 350):

Manufacturer: Veeder Root Model # TLS300C
Manufacturer: _____ Model # _____

B. Tank Monitoring (refer to annual monitor certification for help)

☒ Continuous electronic monitoring of tank interstitial space or secondary containment:
Leak Sensor Manufacturer Veeder Root Sensor Model # 794380-420
☐ Automatic Tank Gauging system used to monitor single-walled tank(s):
In-Tank Probe Manufacturer _____ Probe Model # _____
Frequency of Leak Tests: ☐ Continuous (i.e. CITLD, CSLD) ☐ Daily ☐ Weekly
☐ Monthly ☐ Other (Specify) _____
Programmed Leak Threshold: ☐ 0.1gph ☐ 0.2gph
☐ Weekly Manual Tank Gauging. Testing Period: ☐ 36 hours ☐ 60 hours
☐ Statistical Inventory Reconciliation (SIR): Note: requires biennial tank integrity test
SIR Vendor: _____
☐ Tank Tightness Testing conducted: ☐ Annually ☐ Monthly ☐ Other (specify) _____
☐ Other Monitoring (specify): _____

C. Piping Monitoring (refer to annual monitor certification for help)

Line Monitoring is performed using the following methods: (*check all that apply*)
☐ No product or remote-fill piping connected to UST
☐ Continuous electronic monitoring of piping sump and other secondary containment sumps:
Sensor Manufacturer _____ Sensor Model # _____
Will piping leak alarm trigger automatic shutdown of pump? ☐ Yes ☐ No
Will failure/disconnection of monitoring system trigger automatic shutdown of pump? ☐ Yes ☐ No
☒ Mechanical line leak detector (performs 3.0 gph leak test & restricts or shuts off flow when leak is detected):
Manufacturer Red Jacket Model # FX1
☐ Electronic line leak detector (ELLD):
Manufacturer _____ Model # _____
Programmed line tightness test: ☐ 0.1gph annually ☐ 0.2gph monthly ☐ 3.0 gph
Will ELLD detection of a piping leak trigger automatic shutdown of pump? ☐ Yes ☐ No
Will failure or disconnection of the ELLD trigger automatic shutdown of pump? ☐ Yes ☐ No
☐ Line tightness testing conducted: ☐ Annually ☐ Every 3 years ☐ Other (specify) _____
☐ Piping is suction piping meeting all requirements for exemption from monitoring (23 CCR § 2636(a)(3))
☐ Dispensers are checked daily and "Suction Piping Daily Inspection Log" is completed
☐ Above ground visual monitoring daily
☐ Other (specify): _____

D. Dispenser Leak Detection *(check all that apply)*

☐ No Under Dispenser Containment (UDC) :Dispenser housings are opened and fittings inspected daily
☐ No dispensers in system
☐ Float and chain assembly in under dispenser containment trips shear valve in case of leak
Assembly Manufacturer _____ Model # _____
☒ Continuous electronic monitoring of UDC

OFFICE USE ONLY
UPFP: 12/310

WRITTEN MONITORING PROCEDURES

Leak sensor Manufacturer: Veeder Root Model #: 794380-208
Will leak trigger audible and visual alarms? ☒ Yes ☐ No
Will leak trigger automatic shutdown of turbine pump? ☒ Yes ☐ No
Will failure/disconnection of monitoring system trigger shutdown of pump? ☒ Yes ☐ No
Other (specify): _____

E. Overfill Protection

The following method is present to prevent overfilling the UST(s): (*check all that apply*)
☒ High Level Alarm alerts transfer operator when tank is 90 % capacity
☐ Ball Float Valve that activates at _____% of tank capacity
☐ Automatic Shut-off device (flapper valve)
☐ Total secondary containment of piping including vent lines

F. Monitoring Locations

☒ Attached to this monitoring plan is a site plan which shows the general tank and piping layouts and the location where monitoring is performed (i.e. locations of sumps, sensors, line leak detectors, control panels, etc.)

G. Personnel Responsibilities

The following facility personnel are responsible for performing UST monitoring activities and/or maintaining UST leak detection equipment: (include employee job title and specific UST monitoring responsibilities: i.e., inspection of equipment, reporting of alarms, arranging equipment testing &servicing, maintaining monitoring records, etc.)

		Area of Responsibility
Name: John Janke	Title: Env. Coordinator	Designated UST Operator.
Name: Jose Torres	Title: Shop Foreman	Alarm Reporting
Name:	Title:	

H. Reporting Format

Briefly describe the reporting format for monitoring: (i.e. SIR, in tank test, annual certification.)
Annual Certification

I. Equipment Testing and Preventive Maintenance

State law requires that testing, preventive maintenance, and calibration (if applicable) of monitoring equipment (i.e. sensors, probes, line leak detectors, etc.) be performed in accordance with the equipment manufacturer's instructions or annually, whichever is more frequent. Qualified personnel must perform such work.

Monitor equipment is serviced: ☒ Annually ☐ Other (specify) _____
Describe the preventive maintenance schedule for the monitoring equipment: (List contractor performing repairs and or certifications, if known)

Western Pump, License No: 673853

J. Training

Briefly describe the employee training necessary for the operation of UST system, including piping, and the monitoring equipment:
Shop Foreman and Shop Employees receive training on Aspects such as monitoring, operation, and Leak Detection of the UST System.

Certification

I have reviewed this Underground Storage Tank Monitoring Plan and determined that it accurately describes monitoring of underground storage tank systems at this facility.

Signature of Owner/Operator _____ Date 4 / 10 / 07.

EMERGENCY RESPONSE PLAN
UNDERGROUND STORAGE TANK (UST) MONITORING PROGRAM

Authority cited: title 23 CCR, Sections2632 (d)(2), 2634 (e)(2), and 2641 (h)

California Underground Storage Tank (UST) Regulations require that facilities with USTs prepare a written response plan that describes how an unauthorized release will be handled. The plan must be approved by the County of San Diego, Hazardous Materials Division.

This monitoring program must be kept at the UST location at all times. The elements of this monitoring program constitute conditions of the UST operating permit. The permit holder **must** submit any changes to the San Diego County, Hazardous Materials Division, P.O. Box 129261, San Diego, CA 92112-9261, **within 30 days** of any changes to the monitoring program, unless required to obtain approval before making the change.

A. General Information

Facility Name: Superior Ready Mix Concrete, L.P.

Site Address: 9245 Camino Santa Fe

City: San Diego Zip Code: 92121

B. Spill Control and Clean-up Methods

Note: This plan supplements the Emergency Response/Contingency Plan module in the facility's Hazardous Materials Business Plan (Business Plan).

If safe to do so, facility personnel will take immediate measures to control or stop the release (e.g. activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.

Any release to secondary containment will be pumped or otherwise removed from the secondary containment system within a time consistent with the ability of the secondary containment system to contain the hazardous substance, but not greater than 30 calendar days or sooner if required by the local agency. Recovered hazardous materials, unless still suitable for their intended use, will be managed as hazardous waste.

Absorbents will be used to contain and clean up manageable spills of hazardous materials. Absorbents may be reused until they become too saturated to be effective. At that point, they will be managed as hazardous waste. Used absorbents, whether reusable or waste, will be stored in a properly labeled and sealed container

Facility personnel will determine whether or not any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste. In the case of petroleum, a visual check will usually suffice. If the water has a petroleum sheen (i.e. rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed of on the ground or to storm water systems.

C. Spill Control and Clean-up Equipment

Spill control and clean-up equipment kept on-site is listed in the Emergency Equipment Inventory Table in the Business Plan. This equipment is inspected at least monthly, and after each use, and supplies are replenished as needed.

OFFICE USE ONLY

UPFP #: 12130

EMERGENCY RESPONSE PLAN
UNDERGROUND STORAGE TANK (UST) MONITORING PROGRAM

The following equipment is located off-site, but is available for use if needed:

Equipment	Location	Availability
Excavator	San Diego, CA	24 hour
Wheel Loader	San Diego, CA	24 hour.

If any spill control and clean-up equipment requires periodic maintenance, identify that equipment and describe the nature of maintenance and maintenance interval(s):

N/A.

D. Responsible Persons

The following person(s) is/are responsible for authorizing any work necessary under this response plan:

Name	Title
John Janke	Environmental Coordinator

E. Reporting and Record Keeping

A written report (i.e. Underground Storage Tank Unauthorized Release (Leak)/Contamination Site Report) will be submitted to the local agency within 5 working days of a spill or release outside of secondary containment.

Any spills, leaks, or water intrusion problems will be documented in the facility's monitoring records. Those records will include the date and time of the incident; the nature and cause of the incident; a description of how the incident was resolved; and the results of any analyses performed in a laboratory or in the field.

Monitoring records and written reports of unauthorized releases will be maintained on-site for at least 3 years. Hazardous waste shipping/disposal records will be maintained for at least 3 years from the date of shipment.

Agency Use Only

This plan has been reviewed and: ☑ Approved ☐ Approved With Conditions ☐ Disapproved

Date map was drawn: 3/26/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

Mr. Michael Mann
San Diego County
Department of Environmental Health
PO Box 129261
San Diego, CA 92112-9261

Dear Mr. Mann,

In regards to your inspection of our Carroll Canyon facility on 3-26-07, Superior Ready Mix Concrete, L.P. has taken the necessary action to regain compliance at this site.

The following items have been corrected:

V0135
V0226
V3109
V3152

- Waste Disposal Manifests and receipts for the past 3 years have been sent to this site and are available for review.
- Waste Antifreeze observed in the secondary containment was removed and placed in the proper container, as noted during your inspection.
- A UST Plot Plan has been prepared for this site and is available for review. I have also included a copy for your records.
- The UST Annual Monitoring Certification documents for the past three years have been sent to the site and are available for review.
- A current copy of UST Certification of Financial Responsibility is available at the site for review.

Please note, UST Secondary Containment Testing was completed for this site on 3-24-06 and is not required for another three years.

Please do not hesitate to contact me with any further questions or comments.

Sincerely,

John R. Janke
Environmental Coordinator
Superior Ready Mix Concrete, L.P.

ROUTINE INSPECTION

NOTICE TO COMPLY:

RECEIVED APR 04 2007

1. THE WASTE DISPOSAL MANIFESTS AND RECEIPTS FOR THE USED OIL, WASTE ANTIFREEZE, AND USED SAFETY-KLEEN PARTS WASHER SOLVENT FOR THE YEAR 2006 ARE NOT ONSITE AND AVAILABLE FOR REVIEW.
   - CORRECTIVE ACTION REQUIRED: KEEP COPIES OF ALL HAZARDOUS WASTE DISPOSAL MANIFESTS OR RECEIPTS ON SITE FOR A PERIOD OF AT LEAST 3 YEARS. CONTACT ASBURY OR SAFETY-KLEEN TO OBTAIN PHOTOCOPIES OF ANY MISSING HAZARDOUS WASTE DISPOSAL DOCUMENTS.
2. WASTE ANTIFREEZE HAS SPILLED INTO THE SECONDARY CONTAINMENT UNDER THE WASTE ANTIFREEZE CONTAINER.
   - CORRECTIVE ACTION REQUIRED: REMOVE THE WASTE ANTIFREEZE FROM THE SECONDARY CONTAINMENT AND PLACE IT INSIDE THE WASTE ANTIFREEZE CONTAINER.
3. THE UST OWNER HAS NOT PREPARED A UST PLOT PLAN SHOWING THE UST AND ALL ASSOCIATED PIPING AND MONITORING EQUIPMENT.
   - CORRECTIVE ACTION REQUIRED: WITHIN 30 DAYS, PREPARE AND SUBMIT A COPY OF YOUR PLOT PLAN TO THE DEH* FOR THE ATTENTION OF MIKE MANN. KEEP A COPY OF THE PLOT PLAN ON SITE AT ALL TIMES. REFER TO THE HANDOUT FOR MORE INFORMATION.

☑ This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.

	☐	1013	HMBP is incomplete/inadequate/not amended to reflect changes. 25504, 25505(a)(2) &/or 25509(a); 25505(b); 19 CCR 2729
	☐	1014	Did not have adequate employee training program 2732 & /or 25504 (c)
	☐	1015	Failure to have an adequate emergency response plan 25504 (b); 2731
	☐	1016	Business Plan not certified annually. 25505(d) & (e)(2)
	☐	1017	Inventory not amended for 100% increase of hazardous material onsite or inventory is incomplete. 25509, 25510

HAZWASTE REQUIREMENTS FOR LQGs & SQGs

RECORDKEEPING

Viol #	V		VIOLATION DESCRIPTION
	☐	0131	Unified Program Facility (UPF) permit not obtained. SDCC 68.905
	☐	0132	Failed to obtain & maintain a valid EPA ID Number. 66262.12(a)
	☐	0133	Failed to send manifest copy to DTSC. 66262.23(a)(4)
	☐	0134	Failed to file Exception Report with DTSC. 66262.42
1	☒	0135	Failed to keep waste manifests/receipts for 3 years available for inspection. 66262.40(a) & 25160.2(b)(3)
	☐	0136	Did not have records of battery disposal. 66266.81(a)(4)(B)
	☐	0137	Failed to complete manifest properly. 66262.23(a)
	☐	0138	Failed to have TSDF copy of manifest onsite. 66262.40(a)
	☐	0140	Failed to have LDR documentation onsite. 66268.7(a)(8)
	☐	0141	Failed to obtain approval for TSDF. 25201(a)
	☐	0142	Failed to notify CUPA for eligible onsite treatment. 25201(a)
	☐	0145	ERM reporting not submitted biennially &/or available. 25143.10
	☐	0146	Failed to have adequate records demonstrating claim of exemption for Excluded Recyclable Material (ERM). 25143.2(f) & 66261.2(g)
	☐	0147	Failed to keep universal waste record for 3 years for offsite shipment. SQH:66273.19(b)&(c)(2); LQH:66273.39(b)&(c)(2)
	☐	0148	Failed to keep copies of analytical results, waste analysis records, or waste determination results. (3 years) 66262.40(c)
	☐	0149	Failed to keep disposal receipts (3 years) for drained used oil filters and/or drained fuel filters. 25250.22 and 66266.130(c)(5)

DISPOSAL AND TRANSPORTATION

Viol #	V		VIOLATION DESCRIPTION
	☐	0301	Unauthorized disposal of hazardous waste. 25189.5(a) or 25189(d)
	☐	0302	Unlawful transportation of hazardous waste (HW). 25163(a)
	☐	0303	Did not use HW manifest for disposal.66262.20(a), 25160.2(b)9
	☐	0304	Failed to make a proper waste determination. 66262.11 & 66260.200(c)
	☐	0305	Disposed of used oil illegally. 25250.5(a) and 25189.5(a)
	☐	0306	Disposed of latex paint illegally. 25217.1
	☒	0307	Disposal of universal waste to an unauthorized point. 25189.5(a); SQH:66273.11(a); LQH 66273.31(a)
	☐	0308	Impermissible dilution of hazardous waste. 66268.3(a)

HAZWASTE REQUIREMENTS FOR LQGs & SQGs

STORAGE AND HANDLING

Viol #	V		VIOLATION DESCRIPTION
	☐	0216	Failed to label hazardous materials within 10 days or less. 25124(b)(3)(A) & 66262.34(f)
	☐	0217	Failed to repackage damaged/deteriorated hazardous material container within 96 hours. 25124(b)(3)(B) & 66262.34(f)
	☐	0218	Failed to label &/or close drained ☐ used oil filters &/or ☐ used fuel filters. 25250.22 and 66266.130(c)(3)
	☐	0219	Failed to properly segregate used oil &/or fuel drained from filters. 66266.130(c)(6) or 25250.22(b)(4)
	☐	0220	Spent lead acid batteries not properly managed. 66266.81
	☐	0221	Failed to comply with satellite regulations. 66262.34(e)
	☐	0222	Failed to properly label ERM. 25143.9(a)
	☐	0223	Failed to properly manage non-empty container or inner liner removed from a container. 66261.7 (b), (d) &/or (r)
	☐	0224	Failed to mark date on empty container larger than 5 gallons and/or manage it within one year. 66261.7(e) & (f).

HAZWASTE REQUIREMENTS FOR SQGs ONLY

STORAGE AND HANDLING-Pursuant to 66262.34(d)

Viol #	V		VIOLATION DESCRIPTION
	☐	0225	Accumulated waste too long (>180 or 270 days). 66262.34(d), CFR 262.34(e) & (f), &/or 25201(a) [>90 days for an AHW waste]
2	☒	0226	Did not accumulate waste in container or tank. 66262.34 (d)(2)
	☐	0227	Failed to properly label/date hazardous waste container &/or tank. 66262.34(f)
	☐	0228	Failed to keep container closed. CFR 265.173
	☐	0229	Failed to conduct weekly inspections. CFR 265.174
	☐	0230	Failed to maintain aisle space. CFR 265.35
	☐	0231	Failed to properly separate incompatible wastes. CFR 265.177
	☐	0232	Waste accumulated in a container in poor condition. CFR 265.171
	☐	0233	Failed to use a lined/compatible container. CFR 265.172.
	☐	0234	Did not maintain &/or operate facility to prevent release or fire. CFR 265.31

TRAINING, CONTINGENCY PLAN & ER PROCEDURES Pursuant to 66262.34(d)(2)

Viol #	V		VIOLATION DESCRIPTION
	☐	0407	Employee training program not adequate. CFR 262.34(d)(5)(iii)
	☐	0408	Failed to post ER plan by phone. CFR 262.34(d)(5)(ii)
	☐	0409	Spill/fire control equip not available. CFR 265.32(c)
	☐	0410	Failed to equip facility with internal communication or alarm. CFR 265.32(a) & (b)
	☐	0411	Failed to carry out contingency plan during an emergency. CFR 262.34(d)(5)(iv)
	☐	0412	Failed to have an emergency coordinator on call or available during emergency. CFR 262.34(d)(5)(i)

HAZARDOUS WASTE TANK SYSTEMS Pursuant to 66262.34(d)(2)

Viol #	V		VIOLATION DESCRIPTION
	☐	1612	Hazardous waste improperly stored in a tank system that ☐ leaks, ☐ is corroded, or ☐ failing. CFR 265.201(b)(2)
	☐	1613	Failed to comply with tank standards which include: two feet of freeboard (where applicable), shut off for waste feed line, & daily and weekly inspections. CFR 265.201(b) & (c)
	☐	1614	Failed to properly complete &/or document closure for a hazardous waste tank. CFR 265.201(d) & 67383.3
	☐	1615	Failed to safely accumulate ignitable or reactive waste in a tank. CFR 265.201(e)
	☐	1616	Failed to safely manage incompatible waste in a tank. CFR 265.201(f)

COMPLIANCE INSPECTION REPORT

PERMIT#: 121310

DATE: 3 / 26 / 07

PAGE: 4 OF 4

BUSINESS ADDRESS: 9245 CAMINO SANTA FE, SAN DIEGO ZIP: 92121

VIOLATION REPORT: The items checked below refer to specific section numbers of Title 23 of the California Code of Regulations (CCR), Chapters 6.7, of the Health & Safety Code (HSC) & the County Code of Regulatory Ordinances (SDCC). The following code sections checked are in violation (V) with the Underground Storage Tank laws and regulations. All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form to document your return to compliance. Your Specialist can provide these forms. Please call (619) 338-2222 or your Specialist if you have any questions.

GENERAL UNDERGROUND STORAGE TANK (UST) REQUIREMENTS

VIOLATION DESCRIPTION				VIOLATION DESCRIPTION			
Viol # NOV	UST SYSTEM RECORDS	VIOL	V	Viol # NOV	FILE RECORDS	VIOL	V
	Current UPF permit not obtained/not available. 25284; 68.905, 68.1003, 68.1005	3101			Secondary containment testing not done at 6/36 months and/or not sent to CUPA within 30 days. 25284.1; 2637(a)&(e)	3114	
	Current Operating Permit not available at facility. 25284(a), 25286(a); 2712 (i); 68.1003	3102			Secondary containment testing not completed (passed) for all components &/or repairs to secondary containment components not completed. 25284.1, 25291(a)(2); 2637	3115	
	All permit operating conditions not met. 25284; 2712	3158					
	UST repair/modify/closure permit not obtained. 68.1004, 68.1005, 68.1009.5	3103			All releases not recorded and/or reported. 25294, 25295; 2650, 2651, 2652	3151	
	CUPA UST form(s) A &/or B not available/completed/ submitted to HMD. 25286(a); 2711	3104		4	All maintenance/monitoring/calibration/ repair records not available. 25293; 2712 (b)	3152	X
	Current evidence of financial responsibility not available. 25292.2(a), 25299.33; 2809	3105			Monitoring Cert. not submitted to CUPA w/i 30 days. 2638(d)	3161	
					Facility employee(s) not trained; records incomplete/not onsite. 2715(f)	3193	
	Owner/operator agreement not available/ completed/submitted to HMD. 25284(a)(3); 2620(b)	3106			Enhanced leak detection not performed as required. 25292.4; 2640(e)	3154	
	Monitoring procedures not available/completed/ submitted to HMD.2632(b)& (d), 2634(d), 2641(h), 2711(a)(9)	3107			Contractor &/or technician not trained & certified as required. 25284.1(a)(5)(D); 2715	3162	
	Emergency Response Plan is not available/complete. 25289(b); 2632(b), 2634(e), 2641(h)	3108			Contractor did not have required license, i.e., Class A, C-10, C34, C36 and/or C61. 25284.1(a)(5)(D); 2715	3163	
3	Scaled Plot plan showing tank, piping & equipment location not available/complete/submitted to HMD. 2711(a)(8), 2632(d)(1)(C)	3109	X		Monitoring system disabled or tampered with and/or monitoring records falsified. 25299(f)	3157	
	Annual certification for ATG and/or sensors not completed (existing tank systems only). 2641(j), 2638	3110			All monitoring equipment not installed, calibrated, operated, and/or maintained per manufacturer's instructions. 2638(a), 2641(j)	3164	
	Annual certification for continuous monitoring system not completed (new tanks). 25284.1(a)(4)(C); 2630(d), 2638	3116			UST system repair(s) not completed properly. 25292.1(c); 2660 (a)(k)(l)(m)	3160	
	Designated Operator (DO) Notification/Change form not submitted &/or DO not ICC certified. 2715 (a)(b)	3191			Designated Operator monthly inspection not conducted, incomplete or DO inspection reports not onsite.2715 (c)(d)(e)	3192	

UST SYSTEM INSPECTION

Requirements applicable for both, single & double walled systems

#	VIOLATION DESCRIPTION	NOV	VIOL	TANK #			
				PRODUCT			
				V	V	V	V
	Monitor in alarm at beginning of inspection. Alarm not investigated, recorded or reported. 2632 (c)(2)(B), 2650(e)(3)&(4), 2630(d)		3251				
	All audible and/or visual alarms not functioning properly. 2632(c)(2)(B), 2636(f)(1)		3252				
	Sticker/tag not affixed to monitoring equipment at certification. 2638(f)		3270				
	UST system does not have an approved overfill protection system. 2635(b)(2)		3254				
	Spill container is not in good condition and/or liquid free. 2635 (b)(1), 2636(a)(1)		3255				
	Fill box drain not functional and backup system is not available. 2635(b)(1)(C)		3256				
	Secondary containment system components not liquid free. 2631(d)(4)		3257				
	Sensors not placed adequately and/or at low point in sumps. 2641(a), 25291(a)(7)(C)		3258				
	Dispenser containment currently required and not present. 25284.1(a)(5); 2636(g)		3259				
	Dispenser containment not adequately monitored. 2636(f)(1) or (f)(5)(A)		3267				
	Dispenser containment not maintained free of liquid. 2631(d)(4)		3261				
	Secondary containment piping obstructed preventing drainage to sump. 2632		3262				
	Monitoring system components &/or devices are not all functional. 2630, 2641(j), 2632		3263				
	Spill containment not tested annually. 25284.2		3264				
	UST system not operated to prevent spills and/or overfills. 25292.1 (a)		3265				
	UST system not product tight (for tank installs on or after 7/1/03). 25290.1(c), 25290.2 (c)		3268				
	UST system not continuously monitored using Vacuum/Pressure/Hydrostatic (VPH) system (for tank installs on or after 7/1/04). 25290.1 (d)&(e)		3269				
	CATHODIC PROTECTION						
	System not checked as required by tester (at 6 months/3yrs). 2635(a)(2)(A)		3301				
	Impressed-current system not checked every 60 days. 2635(a)(2)(A)		3302				
	Corrosion protection not adequate. 25292.1(b); 2635(a)(2), 2662(c)		3303				
	CLOSURE REQUIREMENTS						
	Temporary closure requirements not completed. 25298, 2671		3322				
	Unused tank not properly closed. Permanent closure requirements not met. 25298, 2672		3324

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Plan Check Number: **Permit Number:**

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Servicing

Permit Number:

Software Version Installed: 16.05

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shutdown? *(Check all that apply)* ☒ Sump/Trench Sensors; ☒ Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☒ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90%
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments:

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment: Permit Number:

☒ Check this box if tank gauging is used only for inventory control

☐ Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☐ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☐ Yes	☐ No*	Was accuracy of system product level readings tested?
☐ Yes	☐ No*	Was accuracy of system water level readings tested?
☐ Yes	☐ No*	Were all probes reinstalled properly?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

☐ Check this box if LLDs are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h.; ☐ 0.1 g.p.h. ; ☐ 0.2 g.p.h.
☒ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

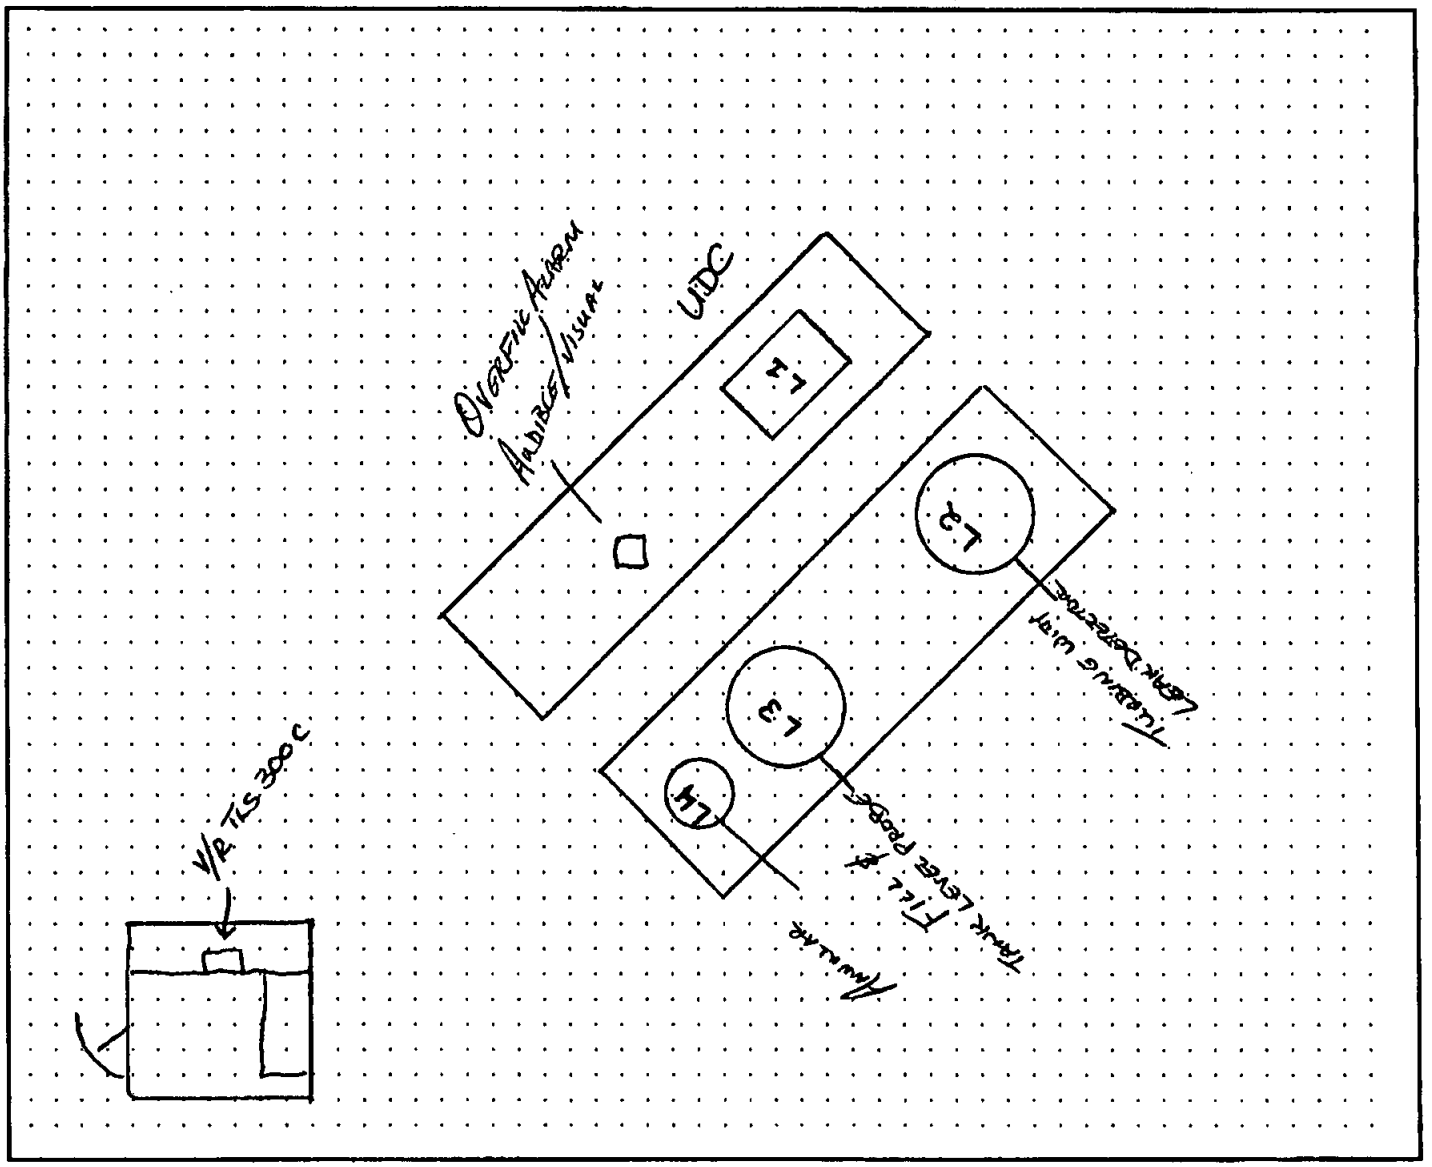
UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Permit Number:

UST Monitoring Site Plan

Site Address: 9245 Camino Santefe San Diego CA 92121

N



Date map was drawn: 3/26/07

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

SWRCB, January 2006

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name:	SUPERIOR READY MIX	Date of Testing:	03/26/2007
Facility Address:	9245 CAMINO SANTA FE, SAN DIEGO, CA 92121		
Facility Contact:	JOSE	Phone:	(858) 695-0600
Date Local Agency Was Notified of Testing :			
Name of Local Agency Inspector *(if present during testing)*:	MIKE MANN		

2. TESTING CONTRACTOR INFORMATION

Dear Mr. Mann,

Please be advised that I will no longer be performing the duties of Designated Underground Storage Tank Operator for Superior Ready Mix Concrete, Facility ID # 121310, located at 9145 Camino Santa Fe, San Diego, CA. This became effective June 13, 2008.

Please do not hesitate to contact me at 858-997-8614 with any questions.

Sincerely,

John R. Janke

Aboveground Petroleum Storage Tank Facility Statement

FACILITY/BUSINESS INFORMATION

1. FACILITY ID NUMBER – Enter your 6 character Permit # on your Unified Program Facility Permit (UPFP). If you do not have a Unified Program Facility Permit, leave this blank.
3. FACILITY NAME – Enter the full legal name of the business. This is the same as the terms "Business Name" or "DBA" - Doing Business As.
103. FACILITY ADDRESS – Enter the street address where the aboveground storage tank facility is located. No post office box numbers are allowed. This information must provide a means to locate the facility geographically.
104. CITY – Enter the city or unincorporated area in which the aboveground storage tank facility is located.
105. ZIP CODE – Enter the zip code of aboveground storage tank facility. The extra 4 digit zip may also be added.
117a. CONTACT NAME – Enter the name of the person, who receives Aboveground Storage Tank correspondence.
118a. CONTACT PHONE – Enter the phone number, area code first, and any extension.
920. DOES THE FACILITY HAVE AN SPCC PLAN – Check one box only. A Spill Prevention, Control and Countermeasure (SPCC) plan is a carefully thought-out plan, prepared in accordance with the guidelines contained in U.S. Environmental Protection Agency's Web site at http://www.epa.gov/oilspill/spcc.htm. This plan discusses procedures, methods, and equipment in place at the facility to prevent discharges of petroleum from reaching navigable waters. A complete copy of the SPCC plan must be maintained on site.

TOTAL FACILITY CAPACITY

921. TOTAL FACILITY CAPACITY – Enter the facility's total petroleum aboveground storage tank capacity (in gallons). Aboveground storage tank means a tank (or container) that has the capacity to store 55 gallons or more of petroleum and that is substantially or totally above the surface of the ground. Petroleum includes waste oil.

How to Calculate Total Petroleum Capacity for your Facility: a + b + c = Total Facility Capacity

No. of tanks and containers x size = Total Capacity *in gallons* (e.g., 2 x 550 gal. AST = 1100; 6 x 55 gal. drums = 330; 1100 + 330 = 1430 gals.)		
3 x 55 gal. = 165	x 1,000 gal. =	1 x 125 gal. = 125
x 100 gal. =	x 2,000 gal. =	2 x 250 gal. = 500
x 250 gal. =	1 x 3,000 gal. = 3,000	1 x 120 gal. = 120
x 500 gal. =	1 x 1,200 gal. = 1,200	x gal. =
Subtotal (a) = 165	Subtotal (b) = 4,200	Subtotal (c) = 745

TANK DETAILS for facilities with tanks 10,000 gallons in capacity or more (attach additional forms if needed)

922. TANK ID NUMBER – Enter a unique tank identification number for each tank. You may create your own numbering system.
923. CONTENTS – Enter the contents (i.e., DIESEL, GASOLINE, OIL, etc.) of the aboveground petroleum storage tank.
924. CAPACITY – Enter the aboveground storage tank's capacity (in gallons).
925. TANK LOCATION – Tank location is not required on this form provided an owner or operator of a tank facility has submitted a hazardous materials business plan, as defined in subdivision (e) of Section 25501, to the CUPA.
926. AGE OF TANK – Enter the age of each aboveground storage tank (in years).
927. SECONDARY CONTAINMENT – Check the appropriate box if the tank has secondary containment.

SIGNATURE

APPLICANT SIGNATURE – The application form must be signed, in the space provided
136. APPLICANT NAME – Print or type the full name of the person signing the form
134. DATE – Enter the date (MM/DD/YYYY) the form was signed.

Instructions and definitions:

A **"Tank Facility"** is defined as any one, or combination of, aboveground storage tanks, including any piping that is integral to the tank, **that contains petroleum** and that is used by a single business entity at a single location or site. A "Tank Facility" is subject to the Aboveground Petroleum Storage Act (APSA) if the "Tank Facility" is subject to the oil pollution prevention regulations specified in Part 112 (commencing with Section 112.1) of subchapter D of Chapter I of Title 40 of the Code of Federal Regulations; **or** the "Tank Facility" has a storage **capacity** of 1,320 gallons or more of petroleum.

Aboveground storage tank (AST) – A tank (or container) with a capacity to store 55 gallons or more of petroleum that is substantially or totally above the surface of the ground. (This includes drums, totes, etc.).

Petroleum – Crude oil, or any fraction thereof, which is liquid at 60 degrees Fahrenheit and 14.7 per square inch absolute pressure (also includes waste oil & waste petroleum products). If the container or tank contains a mixture of petroleum which could cause a sheen, sludge, or emulsion in or on water, it must be disclosed. There is no exemption based on the percentage of oil. Include the shell capacity of all containers and aboveground tanks (including containers) with a capacity of 55 gallons or more.

Storage – Containment, handling, or treatment of petroleum, for any period of time including on a temporary basis.

Storage capacity – The aggregate **capacity** of all aboveground storage tanks (including containers 55 gallons and greater in capacity) at a "Tank Facility". A facility with an aggregate **storage capacity** ≥1,320 gallons of **petroleum** (**a substance containing any amount of petroleum**) is subject to the SPCC rule. For example, if a facility has two 500-gallon ASTs and one 600-gallon AST, and only keeps them half full, the storage capacity for this facility is calculated by the capacity of each tank which equals 1,600 gallons and is subject to the SPCC rule.

RE: Aboveground Petroleum Storage Facility
9245 CAMINO SANTA FE, SAN DIEGO, CA 92121-2201

The Hazardous Materials Division (HMD) of the Department of Environmental Health is the Certified Unified Program Agency (CUPA) in the County of San Diego. The HMD, as the CUPA, regulates businesses storing petroleum in aboveground containers and tanks. Recent changes in state law (the Aboveground Petroleum Storage Act) define a "Tank Facility" as a facility that stores 1,320 gallons or more of petroleum in aboveground storage tanks (including drums 55-gallons in size or greater). A review of our records indicates your facility is a "Tank Facility". You are required to submit an Annual Facility Statement (enclosed). The completed statement must be submitted to the CUPA at the address above by December 31, 2008.

To assist "Tank Facilities" in achieving compliance with the new requirements, the HMD is presenting a free informational workshop. For your convenience and to facilitate your attendance, there will be four workshop sessions for you to choose from. Two sessions will be offered on November 13 and two more on December 11, 2008. Although attendance to these workshops is not required, the information presented will be very useful for you to complete your Annual Facility Statement and to review the Aboveground Petroleum Storage Act requirements of that apply to your business. We recommend at least one representative attend. An informational flyer is enclosed.

RE: Underground Tank Facility
9245 CAMINO SANTA FE, SAN DIEGO, 92121-2201

The Hazardous Materials Division (HMD) of the Department of Environmental Health is the Certified Unified Program Agency (CUPA) in the County of San Diego. The HMD, as the CUPA, regulates the construction, installation, operation, repair and removal of underground storage tank (UST) systems. Recent changes in state regulations require owners and operators of UST systems to submit the new Unified Program Consolidated Forms developed by the State Water Resources Control Board. Completed forms must be submitted to the CUPA at the address above by August 31, 2008.

The changes to the UST regulations which went into effect on January 17, 2008, require UST owners and operators to use the new standardized forms to submit all required (current and new) registration information. All UST owners and operators must provide the CUPA with tank and facility information (including Monitoring Plan, Emergency Plan and Plot Plan*) on the new forms. The forms (listed below) are available in interactive format at www.sdcounty.ca.gov/hazmat/hmd_forms.html. Failure to submit these new forms will result in non-renewal of the UST Operating Permit. To prevent any delay to the renewal of your UST Operating Permit, submit these forms immediately. Copies of the completed forms must be maintained at the UST facility. If you manage more than one facility, a complete set of forms is required for each facility.

The new standardized forms will promote consistency in record keeping which will benefit HMD and UST owners and operators. If you have recently submitted the information on the new forms, please disregard this advisory.

If you have any questions about the information contained in this bulletin, please contact the Hazardous Materials Division Duty Specialist at (619) 338-2231.

Sincerely,

J. M. VIZZIER, Chief
Hazardous Materials Division

ROUTINE INSPECTION
ON 3/28/08, AN ANNUAL UST INSPECTION (MONITORING EQUIPMENT CERTIFICATION), ~~AND~~ HAZARDOUS WASTE, AND HAZARDOUS MATERIALS INSPECTION WAS CONDUCTED WITH JOSE TORRES AND STEVE FOSTER. THE FOLLOWING VIOLATION WAS OBSERVED.

NOTICE TO COMPLY:

RECEIVED APR 28 2008

1. THE LIGHT (VISUAL ALARM) FOR THE OVERFILL ALARM SYSTEM FOR THE DIESEL UST IS NOT FUNCTIONING. THE LIGHT BULB FILAMENT IS BROKEN.
- CORRECTIVE ACTION REQUIRED: WITHIN 30 DAYS FROM TODAY, REPLACE THE BULB OR MAKE OTHER NECESSARY REPAIRS IN ORDER TO HAVE THE OVERFILL SYSTEM ALARM FUNCTION PROPERLY.

REMARK:
- PLEASE REFER TO THE HANDOUT FOR INFORMATION CONCERNING THE PROPER MANAGEMENT AND DISPOSAL OF UNIVERSAL WASTE.
- YOUR BUSINESS HAZARDOUS MATERIALS INVENTORY WILL BE UPDATED FOR SANDSTORM, RHEOMIX 235, EUCON X15, ACCELGUARD NCA, AND EUCAN AIR 40.

☑ **This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.**

UST SYSTEM INSPECTION

Requirements applicable for both, single & double walled systems

		TANK #		001			
		PRODUCT		DIESEL			
#	VIOLATION DESCRIPTION	NOV	VIOL	V	V	V	V
	Monitor in alarm at beginning of inspection. Alarm not investigated, recorded or reported. 2632 (c)(2)(B), 2650(e)(3)&(4), 2630(d)		3251				
/	All audible and/or visual alarms not functioning properly. 2632(c)(2)(B), 2636(f)(1)		3252	X			
	Sticker/tag not affixed to monitoring equipment at certification. 2638(f)		3270				
	UST system does not have an approved overfill protection system. 2635(b)(2)		3254				
	Spill container is not in good condition and/or liquid free. 2635 (b)(1), 2636(a)(1)		3255				
	Fill box drain not functional and backup system is not available. 2635(b)(1)(C)		3256				
	Secondary containment system components not liquid free. 2631(d)(4)		3257				
	Sensors not placed adequately and/or at low point in sumps. 2641(a), 25291(a)(7)(C)		3258				
	Dispenser containment currently required and not present. 25284.1(a)(5); 2636(g)		3259				
	Dispenser containment not adequately monitored. 2636(f)(1) or (f)(5)(A)		3267				
	Dispenser containment not maintained free of liquid. 2631(d)(4)		3261				
	Secondary containment piping obstructed preventing drainage to sump. 2632		3262				
	Monitoring system components &/or devices are not all functional. 2630, 2641(j), 2632		3263				
	Spill containment not tested annually. 25284.2		3264				
	UST system not operated to prevent spills and/or overfills. 25292.1 (a)		3265				
	UST system not product tight (for tank installs on or after 7/1/03). 25290.1(c), 25290.2 (c)		3268				
	UST system not continuously monitored using Vacuum/Pressure/Hydrostatic (VPH) system (for tank installs on or after 7/1/04). 25290.1 (d)&(e)		3269				
CATHODIC PROTECTION							
	System not checked as required by tester (at 6 months/3yrs). 2635(a)(2)(A)		3301				
	Impressed-current system not checked every 60 days. 2635(a)(2)(A)		3302				
	Corrosion protection not adequate. 25292.1(b); 2635(a)(2), 2662(c)		3303				
CLOSURE REQUIREMENTS							
	Temporary closure requirements not completed. 25298, 2671		3322				
	Unused tank not properly closed. Permanent closure requirements not met. 25298, 2672		3324

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Plan Check Number: **Permit Number:**

A. General Information

Facility Name: SUPERIOR READY MIX Bldg. No.:

Site Address: 9245 CAMINO SANTA FE City: SAN DIEGO Zip: 92121-

Facility Contact Person: SHAWN MENDOZA Contact Phone No.: (760) 745-0556 x

Make/Model of Monitoring System: VEEDER ROOT TLS-300C Date of Testing/Servicing: 24-Mar-09

B. Inventory of Equipment Tested/Certified: Check the appropriate boxes to indicate specific equipment installed/ inspected serviced:

Tank ID: DIESEL
- ☒ In-Tank Gauging Probe Model: 847390-109
- ☒ Annular Space or Vault Sensor Model: 794380-420
- ☒ Piping Sump / Trench Sensor(s) Model: 794380-208
- ☒ Fill Sump Sensor(s) Model: 794380-208
- ☒ Mechanical Line Leak Detector Model: RJ FX-1D
- ☐ Electronic Line Leak Detector Model:
- ☐ Tank Overfill / High-Level Sensor Model:
- ☐ Other (specify equipment type and model in Section E on Page 2).

Tank ID:
- ☐ In-Tank Gauging Probe Model:
- ☐ Annular Space or Vault Sensor Model:
- ☐ Piping Sump / Trench Sensor(s) Model:
- ☐ Fill Sump Sensor(s) Model:
- ☐ Mechanical Line Leak Detector Model:
- ☐ Electronic Line Leak Detector Model:
- ☐ Tank Overfill / High-Level Sensor Model:
- ☐ Other (specify equipment type and model in Section E on Page 2).

Tank ID:
- ☐ In-Tank Gauging Probe Model:
- ☐ Annular Space or Vault Sensor Model:
- ☐ Piping Sump / Trench Sensor(s) Model:
- ☐ Fill Sump Sensor(s) Model:
- ☐ Mechanical Line Leak Detector Model:
- ☐ Electronic Line Leak Detector Model:
- ☐ Tank Overfill / High-Level Sensor Model:
- ☐ Other (specify equipment type and model in Section E on Page 2).

Tank ID:
- ☐ In-Tank Gauging Probe Model:
- ☐ Annular Space or Vault Sensor Model:
- ☐ Piping Sump / Trench Sensor(s) Model:
- ☐ Fill Sump Sensor(s) Model:
- ☐ Mechanical Line Leak Detector Model:
- ☐ Electronic Line Leak Detector Model:
- ☐ Tank Overfill / High-Level Sensor Model:
- ☐ Other (specify equipment type and model in Section E on Page 2).

Dispenser ID: 1&2
- ☒ Dispenser Containment Sensor(s). Model: 794380-208
- ☒ Shear Valve(s).
- ☐ Dispenser Containment Float(s) and Chain(s).

Dispenser ID:
- ☐ Dispenser Containment Sensor(s). Model:
- ☐ Shear Valve(s).
- ☐ Dispenser Containment Float(s) and Chain(s).

Dispenser ID:
- ☐ Dispenser Containment Sensor(s). Model:
- ☐ Shear Valve(s).
- ☐ Dispenser Containment Float(s) and Chain(s).

Dispenser ID:
- ☐ Dispenser Containment Sensor(s). Model:
- ☐ Shear Valve(s).
- ☐ Dispenser Containment Float(s) and Chain(s).

Dispenser ID:
- ☐ Dispenser Containment Sensor(s). Model:
- ☐ Shear Valve(s).
- ☐ Dispenser Containment Float(s) and Chain(s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility

C. Certification - **I certify that the equipment identified in this document was installed/inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report** *(check all that apply)*: ☐ **Copy of the report** ☐ **System set-up** ☐ **Alarm history report**

Technician Name (print): JEFF LANE

Signature: _____

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Servicing

Permit Number:

Software Version Installed: 16.05

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shutdown? *(Check all that apply)* ☒ Sump/Trench Sensors; ☒ Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☒ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90%
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments (500 characters max. add additional sheets if needed):

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment: **Permit Number:**

☒ Check this box if tank gauging is used only for inventory control

☐ Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☐ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☐ Yes	☐ No*	Was accuracy of system product level readings tested?
☐ Yes	☐ No*	Was accuracy of system water level readings tested?
☐ Yes	☐ No*	Were all probes reinstalled properly?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

☐ Check this box if LLDs are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h.; ☐ 0.1 g.p.h. : ☐ 0.2 g.p.h.
☒ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

H. Comments (500 characters max. add additional sheets if needed):

I. Results of Vacuum/Pressure Monitoring Equipment Testing

This page should be used to document testing and servicing of vacuum and pressure interstitial sensors. A copy of this form must be included with the Monitoring System Certification Form, which must be provided to the tank system owner/operator. The owner/operator must submit a copy of the Monitoring System Certification Form to the local agency regulating UST systems within 30 days of test date.

	Model:	**System Type:** ☐ Pressure; ☐ Vacuum

	Component(s) Monitored by this Sensor:
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
How was interstitial communication verified? ☐ Leak Introduced at Far End of Interstitial Space:[1] ☐ Gauge; ☐ Visual Inspection; ☐ Other *(Describe in Sec. J. below)*	
Was vacuum/pressure restored to operating levels in all interstitial spaces? ☐ Yes ☐ No *(If no, describe in Sec. J. below)*	

J. Comments (500 characters max. add additional sheets if needed):

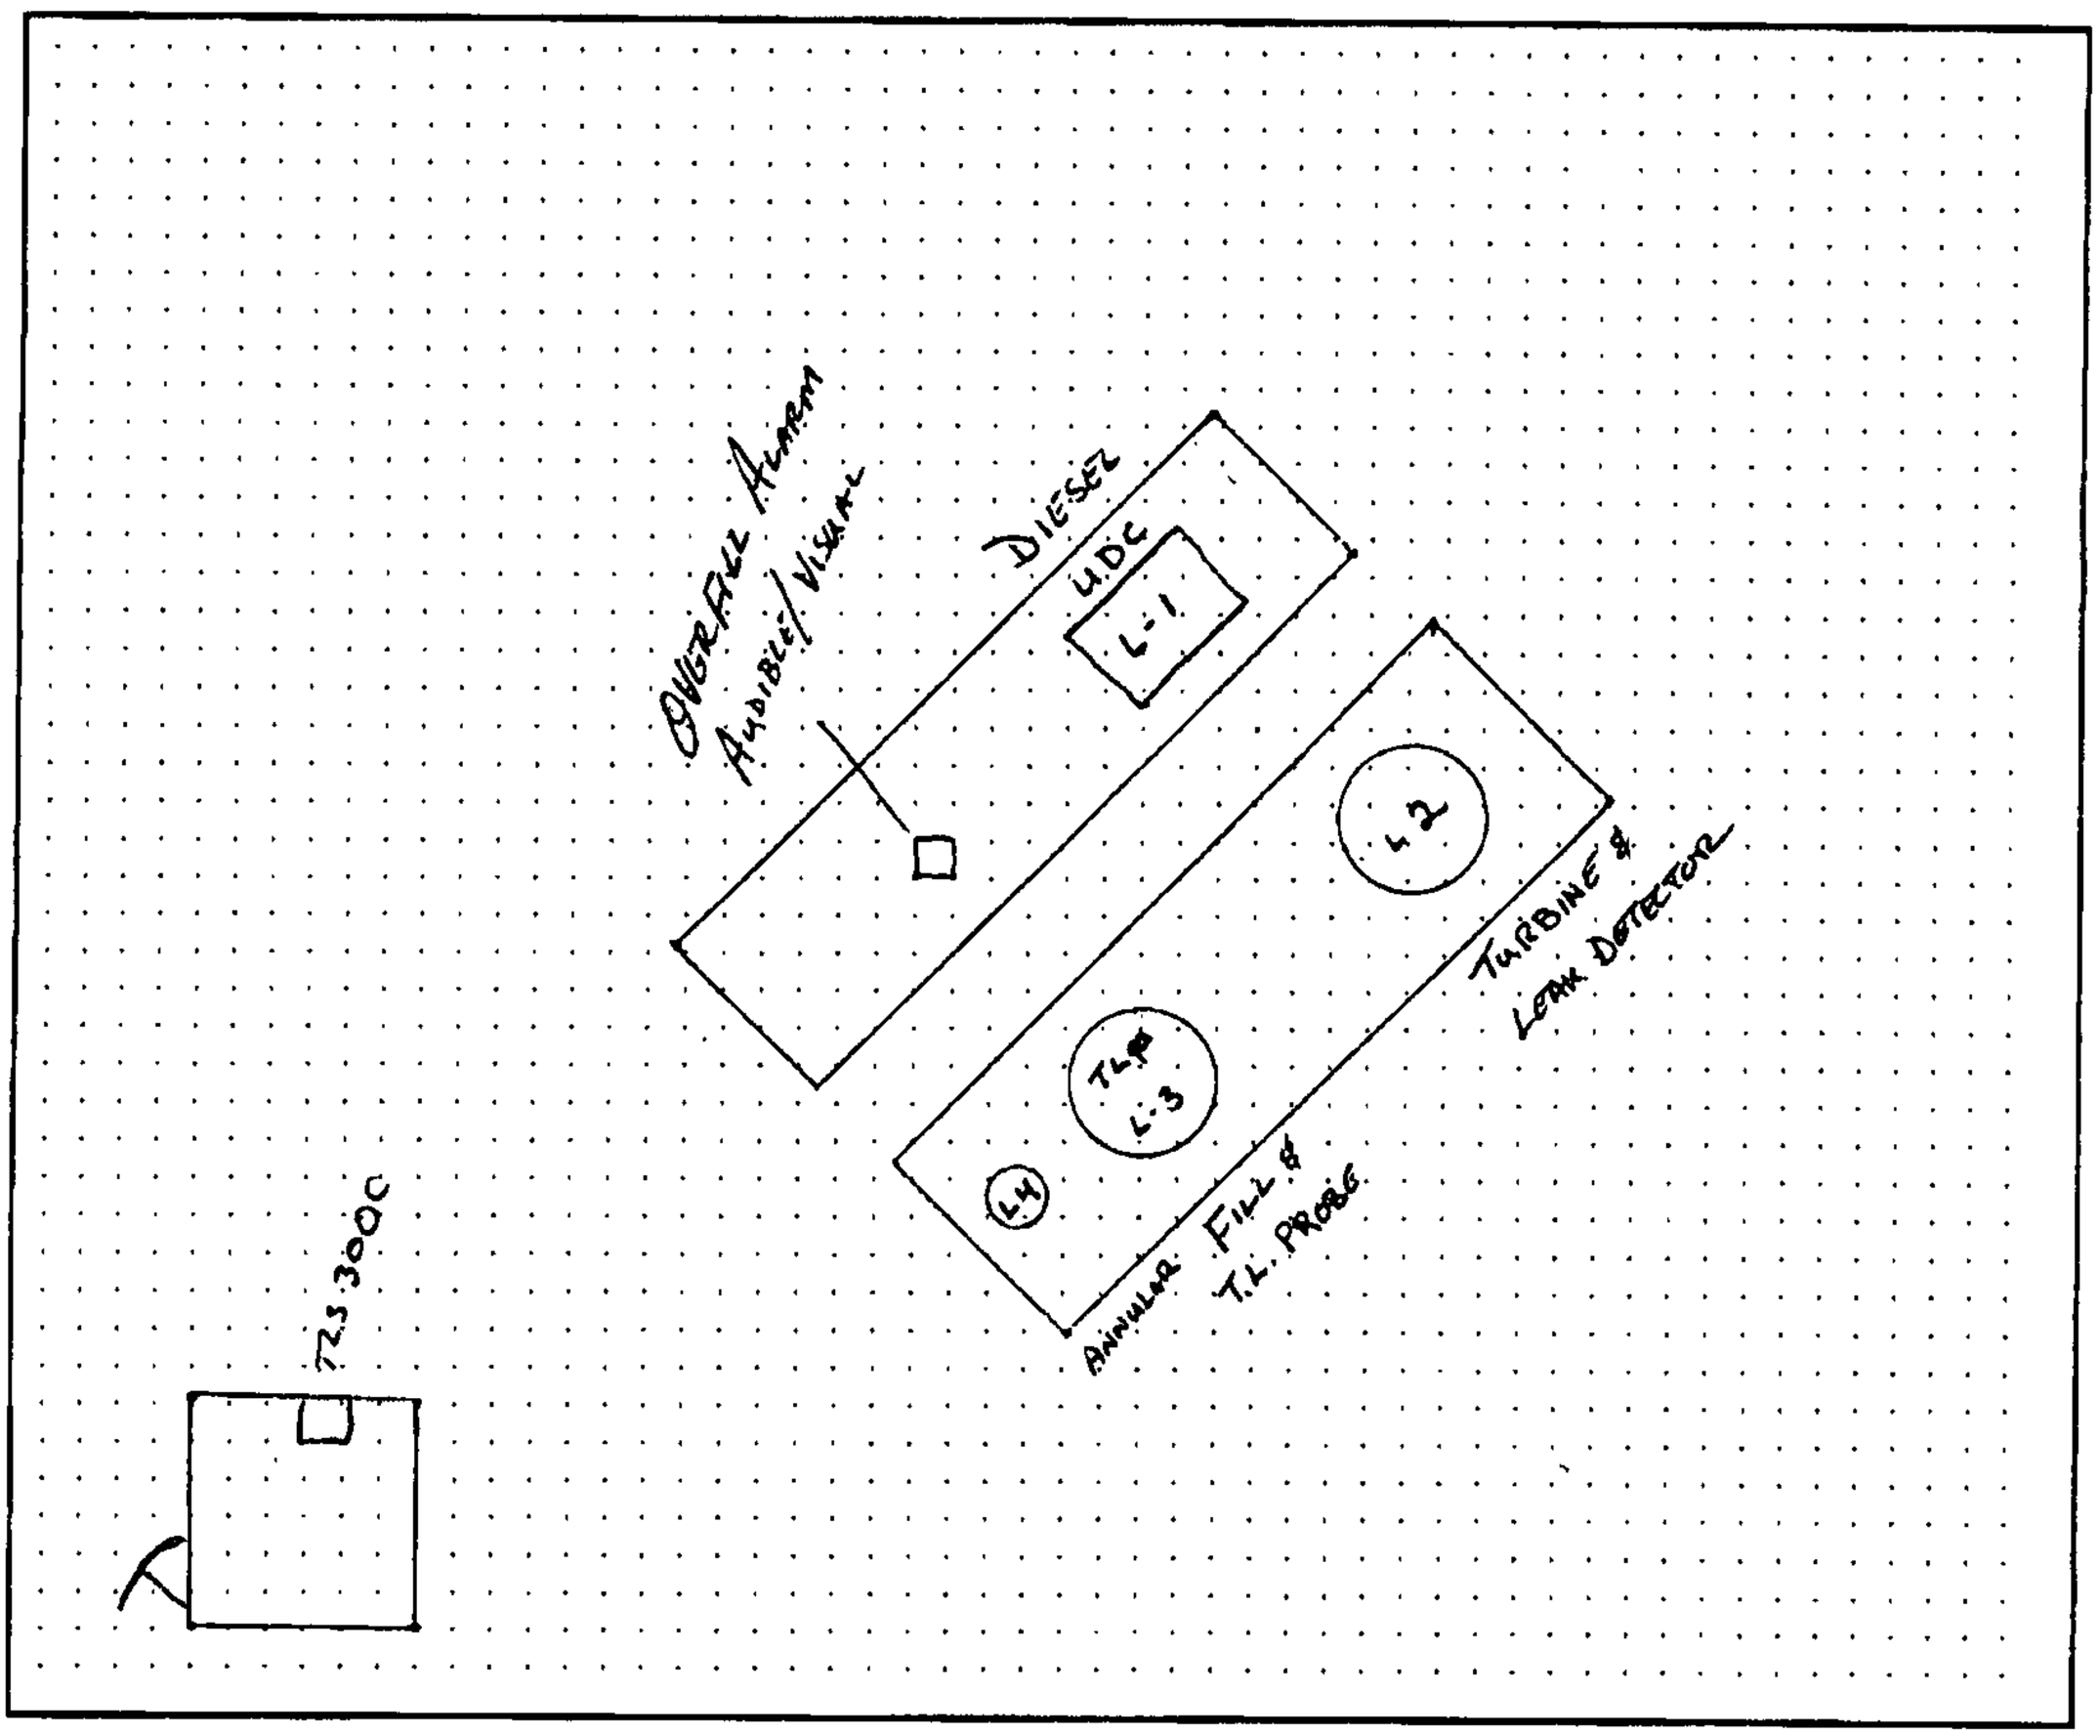
[1] If the sensor successfully detects a simulated vacuum/pressure leak introduced in the interstitial space at the furthest point from the sensor, vacuum/pressure has been demonstrated to be communicating throughout the interstice.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Permit Number: _____

Site Address: 9245 Camino Sante Fe San Diego CA

UST Monitoring Site Plan



Date map was drawn: 3 / 24 / 09

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Plan Check Number: **Permit Number:**

A. General Information

Facility Name: SUPERIOR READY MIX

Site Address: 9245 CAMINO SANTA FE Bldg. No.:

City: SAN DIEGO Zip: 92121-

Facility Contact Person: SHAWN MENDOZA Contact Phone No.: (760) 745-0556 x

Make/Model of Monitoring System: VEEDER ROOT TLS-300C Date of Testing/Servicing: 24-Mar-09

B. Inventory of Equipment Tested/Certified: Check the appropriate boxes to indicate specific equipment installed/ inspected serviced:

Tank ID: DIESEL
- ☒ In-Tank Gauging Probe Model: 847390-109
- ☒ Annular Space or Vault Sensor Model: 794380-420
- ☒ Piping Sump / Trench Sensor(s) Model: 794380-208
- ☒ Fill Sump Sensor(s) Model: 794380-208
- ☒ Mechanical Line Leak Detector Model: RJ FX-1D
- ☐ Electronic Line Leak Detector Model:
- ☐ Tank Overfill / High-Level Sensor Model:
- ☐ Other (specify equipment type and model in Section E on Page 2).

Tank ID:
- ☐ In-Tank Gauging Probe Model:
- ☐ Annular Space or Vault Sensor Model:
- ☐ Piping Sump / Trench Sensor(s) Model:
- ☐ Fill Sump Sensor(s) Model:
- ☐ Mechanical Line Leak Detector Model:
- ☐ Electronic Line Leak Detector Model:
- ☐ Tank Overfill / High-Level Sensor Model:
- ☐ Other (specify equipment type and model in Section E on Page 2).

Tank ID:
- ☐ In-Tank Gauging Probe Model:
- ☐ Annular Space or Vault Sensor Model:
- ☐ Piping Sump / Trench Sensor(s) Model:
- ☐ Fill Sump Sensor(s) Model:
- ☐ Mechanical Line Leak Detector Model:
- ☐ Electronic Line Leak Detector Model:
- ☐ Tank Overfill / High-Level Sensor Model:
- ☐ Other (specify equipment type and model in Section E on Page 2).

Tank ID:
- ☐ In-Tank Gauging Probe Model:
- ☐ Annular Space or Vault Sensor Model:
- ☐ Piping Sump / Trench Sensor(s) Model:
- ☐ Fill Sump Sensor(s) Model:
- ☐ Mechanical Line Leak Detector Model:
- ☐ Electronic Line Leak Detector Model:
- ☐ Tank Overfill / High-Level Sensor Model:
- ☐ Other (specify equipment type and model in Section E on Page 2).

Dispenser ID: 1&2
- ☒ Dispenser Containment Sensor(s). Model: 794380-208
- ☒ Shear Valve(s).
- ☐ Dispenser Containment Float(s) and Chain(s).

Dispenser ID:
- ☐ Dispenser Containment Sensor(s). Model:
- ☐ Shear Valve(s).
- ☐ Dispenser Containment Float(s) and Chain(s).

Dispenser ID:
- ☐ Dispenser Containment Sensor(s). Model:
- ☐ Shear Valve(s).
- ☐ Dispenser Containment Float(s) and Chain(s).

Dispenser ID:
- ☐ Dispenser Containment Sensor(s). Model:
- ☐ Shear Valve(s).
- ☐ Dispenser Containment Float(s) and Chain(s).

Dispenser ID:
- ☐ Dispenser Containment Sensor(s). Model:
- ☐ Shear Valve(s).
- ☐ Dispenser Containment Float(s) and Chain(s).

Dispenser ID:
- ☐ Dispenser Containment Sensor(s). Model:
- ☐ Shear Valve(s).
- ☐ Dispenser Containment Float(s) and Chain(s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification - I certify that the equipment identified in this document was installed/inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report *(check all that apply)*: ☐ Copy of the report ☐ System set-up ☐ Alarm history report

Testing Company Name: WESTERN PUMP, INC. Phone No.: (619) 239-9988 x

Testing Company Address: 3235 F STREET SAN DIEGO, CA 92102 Date of Testing/Servicing: 03/24/09

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Servicing

Permit Number:

Software Version Installed: 16.05

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shutdown? *(Check all that apply)* ☒ Sump/Trench Sensors; ☒ Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☒ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90%
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments (500 characters max. add additional sheets if needed):

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment:

Permit Number:

☒ Check this box if tank gauging is used only for inventory control

☐ Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☐ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☐ Yes	☐ No*	Was accuracy of system product level readings tested?
☐ Yes	☐ No*	Was accuracy of system water level readings tested?
☐ Yes	☐ No*	Were all probes reinstalled properly?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

☐ Check this box if LLDs are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h.; ☐ 0.1 g.p.h. ; ☐ 0.2 g.p.h.
☒ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

H. Comments (500 characters max. add additional sheets if needed):

I. Results of Vacuum/Pressure Monitoring Equipment Testing

This page should be used to document testing and servicing of vacuum and pressure interstitial sensors. A copy of this form must be included with the Monitoring System Certification Form, which must be provided to the tank system owner/operator. The owner/operator must submit a copy of the Monitoring System Certification Form to the local agency regulating UST systems within 30 days of test date.

		Model:	**System Type:** ☐ Pressure; ☐ Vacuum
	Component(s) Monitored by this Sensor:		
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor:		
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor:		
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor:		
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor:		
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor:		
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor:		
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor:		
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor:		
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor:		
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail	

How was interstitial communication verified?

☐ Leak Introduced at Far End of Interstitial Space;[1] ☐ Gauge; ☐ Visual Inspection; ☐ Other *(Describe in Sec. J, below)*

Was vacuum/pressure restored to operating levels in all interstitial spaces? ☐ Yes ☐ No *(If no, describe in Sec. J, below)*

J. Comments (500 characters max. add additional sheets if needed):

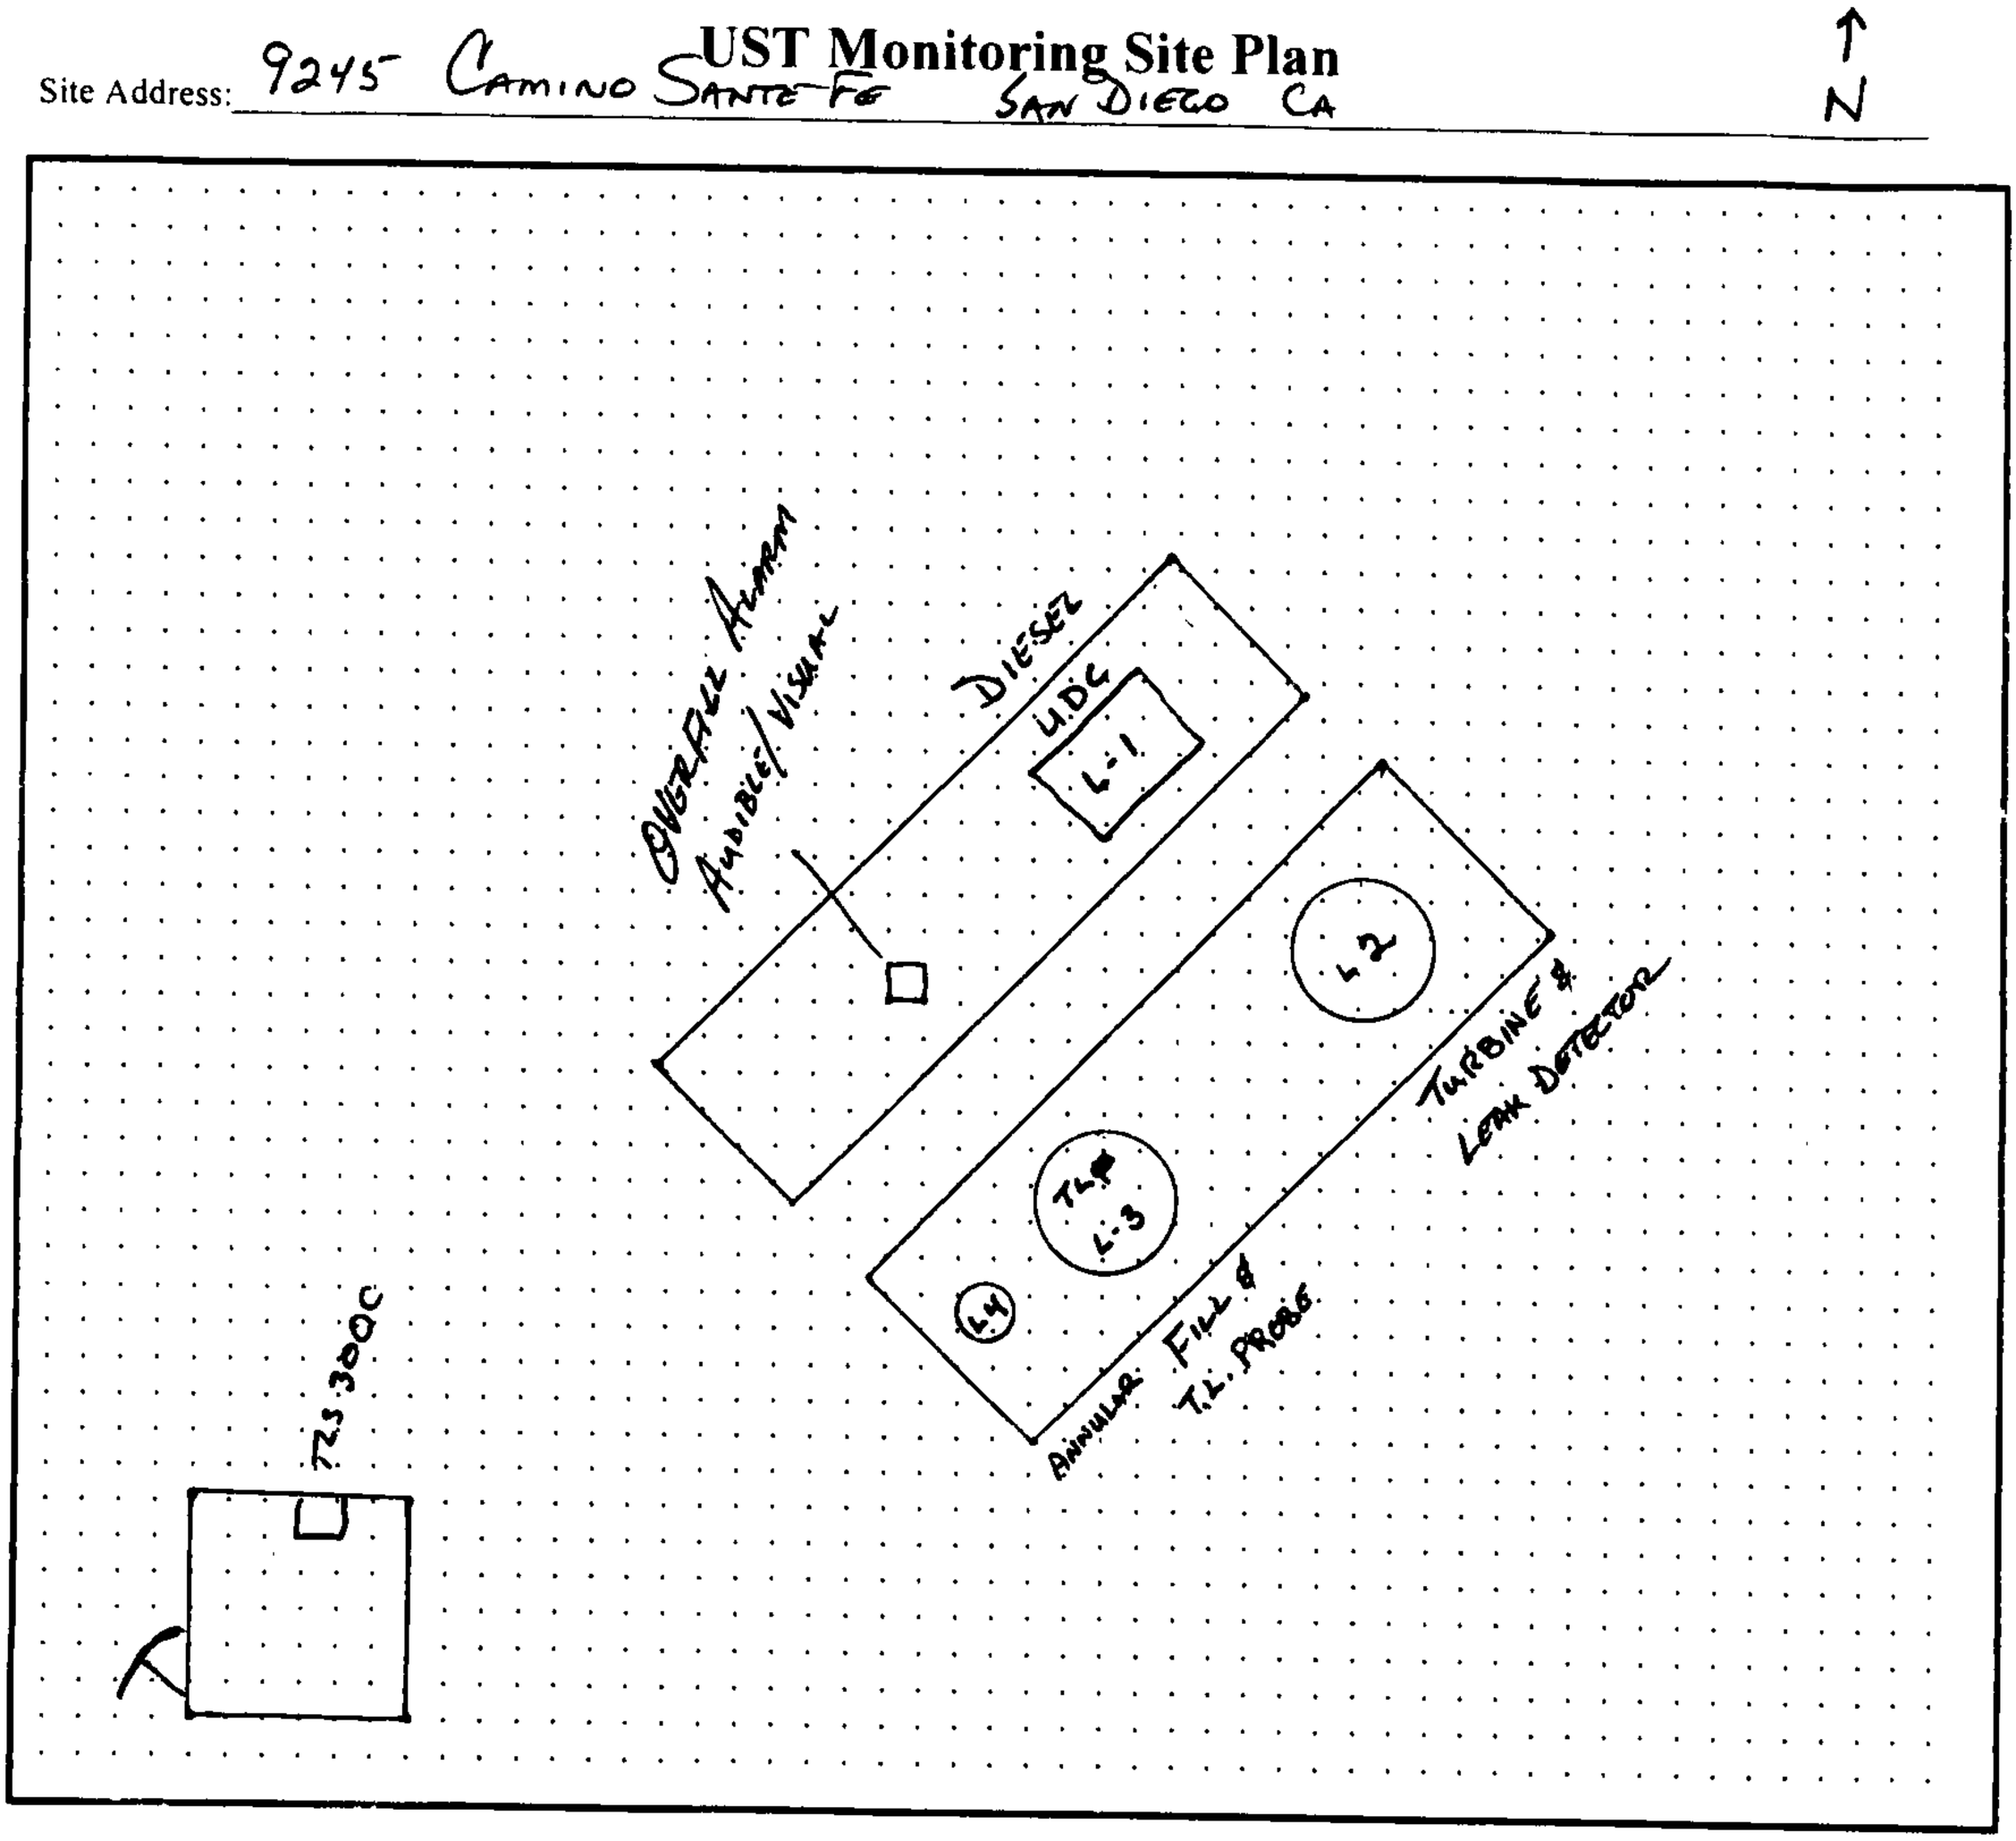
[1] If the sensor successfully detects a simulated vacuum/pressure leak introduced in the interstitial space at the furthest point from the sensor, vacuum/pressure has been demonstrated to be communicating throughout the interstice.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Permit Number: _____

Site Address: 9245 Camino Sante Fe San Diego CA

UST Monitoring Site Plan



Date map was drawn: 3 / 24 / 09

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

(Instructions on reverse side)

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY

FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in California Code of Regulations (CCR), Title 23, Division 3, Chapter 18, Section 2807,

☐ 500,000 dollars per occurrence
or
☒ 1 million dollars per occurrence

AND

☒ 1 million dollars annual aggregate
or
☐ 2 million dollars annual aggregate

B. Superior Ready Mix Concrete, L.P. *hereby certifies that it is in compliance with the requirements of Section 2807,*
(Name of Tank Owner or Operator)
California Code of Regulations, Title 23, Division 3, Chapter 18, Article 3, Section 2807.
The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp
State UST Fund	State UST Cleanup Fund P.O. Box 944212 Sacramento, CA. 94294-2120	N/A for UST Cleanup Fund	$990,000 per Occurance and Annual aggregate	Continuous	Yes	Yes
Chief Financial Officer Letter	Superior Ready Mix Concrete, L.P 1508 W. Mission Rd, Escondido, CA. 92029	N/A For this Mechanism	$10,000 per occurance and Annual aggregate	Annual	Yes	Yes

Note:

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance and shall maintain compliance with all conditions for participation in the Fund. See instructions.

D. Facility Name	Facility Address
Superior Ready Mix Concrete, L.P.	9245 Camino Santa Fe San Diego, Calif. 92121
Facility Name	Facility Address
Facility Name	Facility Address
E. Signature of Tank Owner or Operator — Date: 4-22-09	Name and Title of Tank Owner or Operator: Arnold Veldkamp, Secretary
Signture of Witness or Notary — Date: 4-22-09	Name of Witness or Notary: Richard Brouwer, CFO

#121310

The Chief Financial Officer or the owner or operator must sign, under penalty of perjury, a letter worded EXACTLY as follows or you may complete this letter by filling in the blanks with appropriate information:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the Chief Financial Officer for Superior Ready Mix Concrete, L.P.
(Business name, business address, and correspondence address of owner or operator)
1508 W. Mission Rd, Escondido, Calif. 92029

This letter is in support of the use of the **Underground Storage Tank Cleanup Fund** to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by an unauthorized release of petroleum in the amount of at least $10,000 (Dollar Amount) per occurrence and $10,000 (Dollar Amount) annual aggregate coverage.

Underground storage tanks at the following facilities are assured by this letter:
See attachment
(Name and address of each facility where tanks for which financial responsibility is being demonstrated is located.)
Superior Ready Mix Concrete, L.P., 9245 Camino Santa Fe, San Diego, CA. 92121.

1.	Amount of annual aggregate coverage being assured by this letter.....	$10,000
2.	Total tangible assets.....	$
3.	Total liabilities.....	$
4.	Tangible net worth (subtract line 3 from line 2. Line 4 must be at least 10 times line 1).....	$10,000,000

I hereby certify that the wording of this letter is identical to the wording specified in subsection 2808.1(d)(1), Chapter 18, Division 3, Title 23 of the California Code of Regulations.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

ENVIRONMENTAL HEALTH

May 1, 2009

Mr. Mike Mann
Dept of Environmental Health
Hazardous Materials Division
P.O Box 129261
San Diego, Calif. 92112-9261

Dear Mr. Mann,

Enclosed please find documentation related to your inspection of the UST at 9245 Camino Santa Fe, on 3/24/09. Thank you for the additional time to compile this.

Starting with the corrective action form listing violation 3114, attached is the updated UST secondary containment testing report performed on 4/20/09. As I mentioned in our phone conversation, there was a failure detected on the secondary piping (see included service report) I have requested Western Pump to give me a repair date for this item, and retesting when it is fixed. At this time they have not given me a firm date, but I should have this by next week.

Also included is an updated Certification of Financial Responsibility. Other included documents per your request are:

- Updated Operating Permit Application – Facility Page
- Updated Monitoring plan (2 pages)
- Updated UST Monitoring Site Plan
- Updated Response Plan (2 pages)
- Updated Tank Information page
- Annual Training record for designated Operator / facility employees.
- Most recent UST Monitoring System Certification report
- Copy of most recent monthly Dusto Inspection
- Copy of most recent monthly L.M.C and Bucket Test.
- List of Designated UST Operators

I should have a repair date next week for the secondary piping repair, and I will let you know when that that is, as well as the retesting. If you need any additional information please contact me at (760) 745-0556.

Sincerely,

Shawn Mendoza
Environmental Coordinator
Superior Ready Mix Concrete, L.P.

Hazardous Materials Division
P.O. Box 129261
San Diego, Calif. 92112-9261

Dear Mr. Mann,

The repair of the secondary piping vent that I had informed you about on my previous submittal, has been repaired, retested, and passed.

Enclosed you will find the secondary containment testing report showing repair and testing results.

Please let me know if you need any additional information.

Sincerely,

Shawn Mendoza

UST Operating Permit Application – Facility Information Page 1 Instructions

(Formerly SWRCB UST Permit Application Form A)

Complete this form for all new permits, permit changes, or facility information changes. This form must be submitted within 30 days of permit or facility information changes, unless your local agency requires approval prior to making the changes. For changes, submit only that form that contains the change.

Submit one UST Operating Permit Application – Facility Information form per facility, regardless of the number of USTs located at the facility. If not already on file with the local agency, the tank owner must submit with this form, a current UST Operating Permit Application – Tank Information form for each UST; a UST Monitoring Plan and a UST Response Plan pursuant to 23 CCR 2632, 2634 and 2641; and, for USTs containing petroleum, a certification of financial responsibility pursuant to 23 CCR 2807.

The following documents, at a minimum, are also required, if applicable (check with your local agency to see if they require submittal or if there are other forms/information needed):

- ❑ Written agreement between UST Owner and UST Operator per Health and Safety Code §25284(a)(3);
- ❑ Letter from the Chief Financial Officer (if using State Cleanup Fund, financial test of self-insurance, guarantee, local government financial test, or Local Government Fund as a financial responsibility mechanism).

Please number all pages of your submittal. (Note: Numbering of these instructions matches the data element numbers on the form.)

400. TYPE OF ACTION – Check the reason this form is being submitted. CHECK ONE ITEM ONLY.
404. TOTAL NUMBER OF USTs AT SITE – Indicate the number of tanks that will remain on the site after the requested action.
1. FACILITY ID NUMBER – This space is for agency use only.
3. BUSINESS NAME – Enter the complete Business Name. (Same as FACILITY NAME or DBA (Doing Business As)).
103. BUSINESS SITE ADDRESS – Enter the street address of the facility, including building number, if applicable. This address must be the physical location of the facility. Post office box numbers are not acceptable.
104. CITY – Enter the city or unincorporated area in which the facility is located.
105. ZIP CODE – Enter the zip code of business site. The zip + 4 may also be added.
403. FACILITY TYPE – Indicate the type of facility.
405. INDIAN RESERVATION OR TRUST LANDS – Check whether the facility is located on an Indian reservation or other trust lands.
407. PROPERTY OWNER NAME –
408. PROPERTY OWNER PHONE –
409. PROPERTY OWNER MAILING ADDRESS –
410. PROPERTY OWNER CITY –
411. PROPERTY OWNER STATE –
412. PROPERTY OWNER ZIP CODE –

} Complete items 407 - 412 for the property owner. Include the area code and any extension number.

428-1. TANK OPERATOR NAME –
428-2. TANK OPERATOR PHONE –
428-3. TANK OPERATOR MAILING ADDRESS –
428-4. TANK OPERATOR CITY –
428-5. TANK OPERATOR STATE –
428-6. TANK OPERATOR ZIP CODE –

} Complete items 428-1 to 428-6 for the UST operator. Include the area code and any extension number. Enter information regarding the Operator of the UST systems. Do not enter designated UST operator information here.

414. TANK OWNER NAME –
415. TANK OWNER PHONE –
416. TANK OWNER MAILING ADDRESS –
417. TANK OWNER CITY –
418. TANK OWNER STATE –
419. TANK OWNER ZIP CODE –

} Complete items 414 - 419 for the UST owner. Include the area code and any extension number.

420. TANK OWNER TYPE – Check the type of tank ownership.
421. BOE NUMBER – Enter your State Board of Equalization (BOE) UST storage fee account number. This fee applies to regulated USTs storing petroleum products and is required before your permit application will be processed. If you do not have an account number with the BOE, or if you have any questions regarding the fee or exemptions, contact the BOE at (916) 322-9669 or by mail at: Board of Equalization, Fuel Taxes Division, PO Box 942879, Sacramento, CA 94279-0030.
423. PERMIT HOLDER INFORMATION – Indicate the party to whom the UST operating permit is to be issued and legal notifications and mailings should be sent. Application for a permit to operate an underground storage tank with the CUPA shall be made by the owner or operator of the Unified Program facility on which the tank is located. Regardless of the box checked, all mailings will be sent to the BUSINESS MAILING ADDRESS (108a-108d) on the BUSINESS OWNER/OPERATOR IDENTIFICATION form HM-9702
406. SUPERVISOR OF DIVISION SECTION OR OFFICE SUPERVISOR – If the facility owner is a public agency, enter the name of the supervisor of the division section or office that operates the UST. This person must have access to the UST records.

APPLICANT SIGNATURE – The application form must be signed, in the space provided, by:

- The UST owner or operator, facility owner or operator, or a duly authorized representative of the owner; or
- If the UST(s) is/are owned by a corporation, partnership, or public agency:
  1.) A principal executive officer at the level of vice-president or by an authorized representative responsible for the overall operation of the facility where the UST(s) is/are located; or
  2.) A general partner or proprietor; or
  3.) A principal executive officer, ranking elected official, or authorized representative of a public agency.

424. DATE – Enter the date the form was signed.
425. PHONE – Enter the phone number of the applicant (i.e., person signing the form). Include the area code and any extension number.
426. APPLICANT NAME – Print or type the full name of the person signing the form.
427. APPLICANT TITLE – Enter the title of the person signing the form.

VI. UNDER DISPENSER CONTAINMENT (UDC) MONITORING

1. UDC MONITORING IS PERFORMED USING THE FOLLOWING METHOD: 490-54a 490-54b
☒ 1. CONTINUOUS ELECTRONIC MONITORING ☐ 2. FLOAT AND CHAIN ASSEMBLY ☐ 3. ELECTRONIC STAND-ALONE
☐ 4. NO DISPENSERS ☐ 99 OTHER (Specify):

PANEL MANUFACTURER: VEEDER ROOT	490-55	MODEL #: TCS-300C	490-56
LEAK SENSOR MANUFACTURER: VEEDER ROOT	490-57	MODEL #(S): 794380-208	490-58

DETECTION OF A LEAK INTO THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS	☒ a. YES	☐ b. NO	490-59
UDC LEAK ALARM TRIGGERS AUTOMATIC PUMP SHUTDOWN	☒ a. YES	☐ b. NO	490-60
FAILURE / DISCONNECTION OF UDC MONITORING SYSTEM TRIGGERS AUTOMATIC PUMP SHUTDOWN	☒ a. YES	☐ b. NO	490-61
UDC MONITORING STOPS THE FLOW OF PRODUCT AT THE DISPENSER	☒ a. YES	☐ b. NO	490-62

2. UDC CONSTRUCTION IS ☒ 1. SINGLE-WALLED ☐ 2. DOUBLE-WALLED 490-63

IF DOUBLE WALLED:
UDC INTERSTITIAL SPACE IS MONITORED BY: ☐ 1. LIQUID ☐ 2. PRESSURE ☐ 3. VACUUM 490-64a
A LEAK WITHIN THE SECONDARY CONTAINMENT OF THE UDC TRIGGERS AUDIBLE AND VISUAL ALARMS ☐ a. YES ☐ b. NO 490-64b

VII. PERIODIC SYSTEM TESTING

☐ 1. **ELD TESTING**: THIS FACILITY HAS BEEN NOTIFIED BY THE STATE WATER RESOURCES CONTROL BOARD THAT ENHANCED LEAK DETECTION (ELD) MUST BE PERFORMED. PERIODIC ELD IS PERFORMED EVERY 36 MONTHS AS REQUIRED. (23 CCR §2644.1) 490-65

☒ 2. **SECONDARY CONTAINMENT COMPONENTS ARE TESTED EVERY 36 MONTHS.** 490-66

☒ 3. **SPILL BUCKETS ARE TESTED ANNUALLY.** 490-67

VIII. RECORDKEEPING

The following monitoring/maintenance records are kept for this facility:

☒ Alarm logs	490-68a	☒ Visual Inspection Records	490-68b
☐ Tank integrity testing results	490-68c	☐ SIR testing results (and supporting documentation records)	490-68d
☐ Tank gauging results (and supporting documentation records)	490-68e	☐ ATG Testing results (and supporting documentation records)	490-68f
☐ Corrosion Protection 60-day logs	490-68g	☒ Equipment maintenance and calibration records	490-68h

IX. TRAINING

☒ Personnel with UST monitoring responsibilities are familiar with all of the following documents relevant to their job duties. 490-69a

REFERENCE DOCUMENTS MAINTAINED AT FACILITY (Check all that apply)

- ☒ THIS UNDERGROUND STORAGE TANK MONITORING PLAN (Required) 490-69b
- ☒ OPERATING MANUALS FOR ELECTRONIC MONITORING EQUIPMENT (Required) 490-69c
- ☐ CALIFORNIA UNDERGROUND STORAGE TANK REGULATIONS 490-69d
- ☐ CALIFORNIA UNDERGROUND STORAGE TANK LAW 490-69e
- ☐ STATE WATER RESOURCES CONTROL BOARD (SWRCB) PUBLICATION: "HANDBOOK FOR TANK OWNERS - MANUAL AND STATISTICAL INVENTORY RECONCILIATION" 490-69f
- ☐ SWRCB PUBLICATION: "UNDERSTANDING AUTOMATIC TANK GAUGING SYSTEMS" 490-69g
- ☐ OTHER (Specify): 490-69h, 490-69i

☒ This facility has a "Designated UST Operator" who has passed the California UST System Operator Exam administered by the International Code Council (ICC). The "Designated UST Operator" will train facility employees in the proper operation and maintenance of the UST systems annually, and within 30 days of hire. This training will include, but is not limited to, the following: 490-70

- Operation of the UST systems in a manner consistent with the facility's best management practices
- The facility employee's role with regard to the monitoring equipment as specified in this UST Monitoring Plan
- The facility employee's role with regard to spills and overfills as specified in the UST Response Plan
- Names of contact person(s) for emergencies and monitoring alarms

X. COMMENTS/ADDITIONAL INFORMATION

Provide additional comments here or indicate how many pages with additional information on specific monitoring procedures are attached to this plan. 490-71

XI. PERSONNEL RESPONSIBILITIES

The UST Owner/Operator is responsible for ensuring that: 1) the daily/routine UST monitoring activities and maintenance of UST leak detection equipment covered by this plan occurs, 2) all conditions that indicate a possible release are investigated, and 3) all monitoring records are maintained properly.
The following person(s) are responsible for performing the monitoring and equipment maintenance:

NAME: Brandon Musler	490-72	TITLE: Shop Manager	490-73
NAME	490-74	TITLE	490-75

The Designated Operator shall perform a monthly visual inspection of the facility, provide a report to the owner/operator, and inform the owner/operator of any conditions that need follow-up action.

XII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

APPLICANT SIGNATURE	490-76	DATE: 4 / 29 / 05	490-77

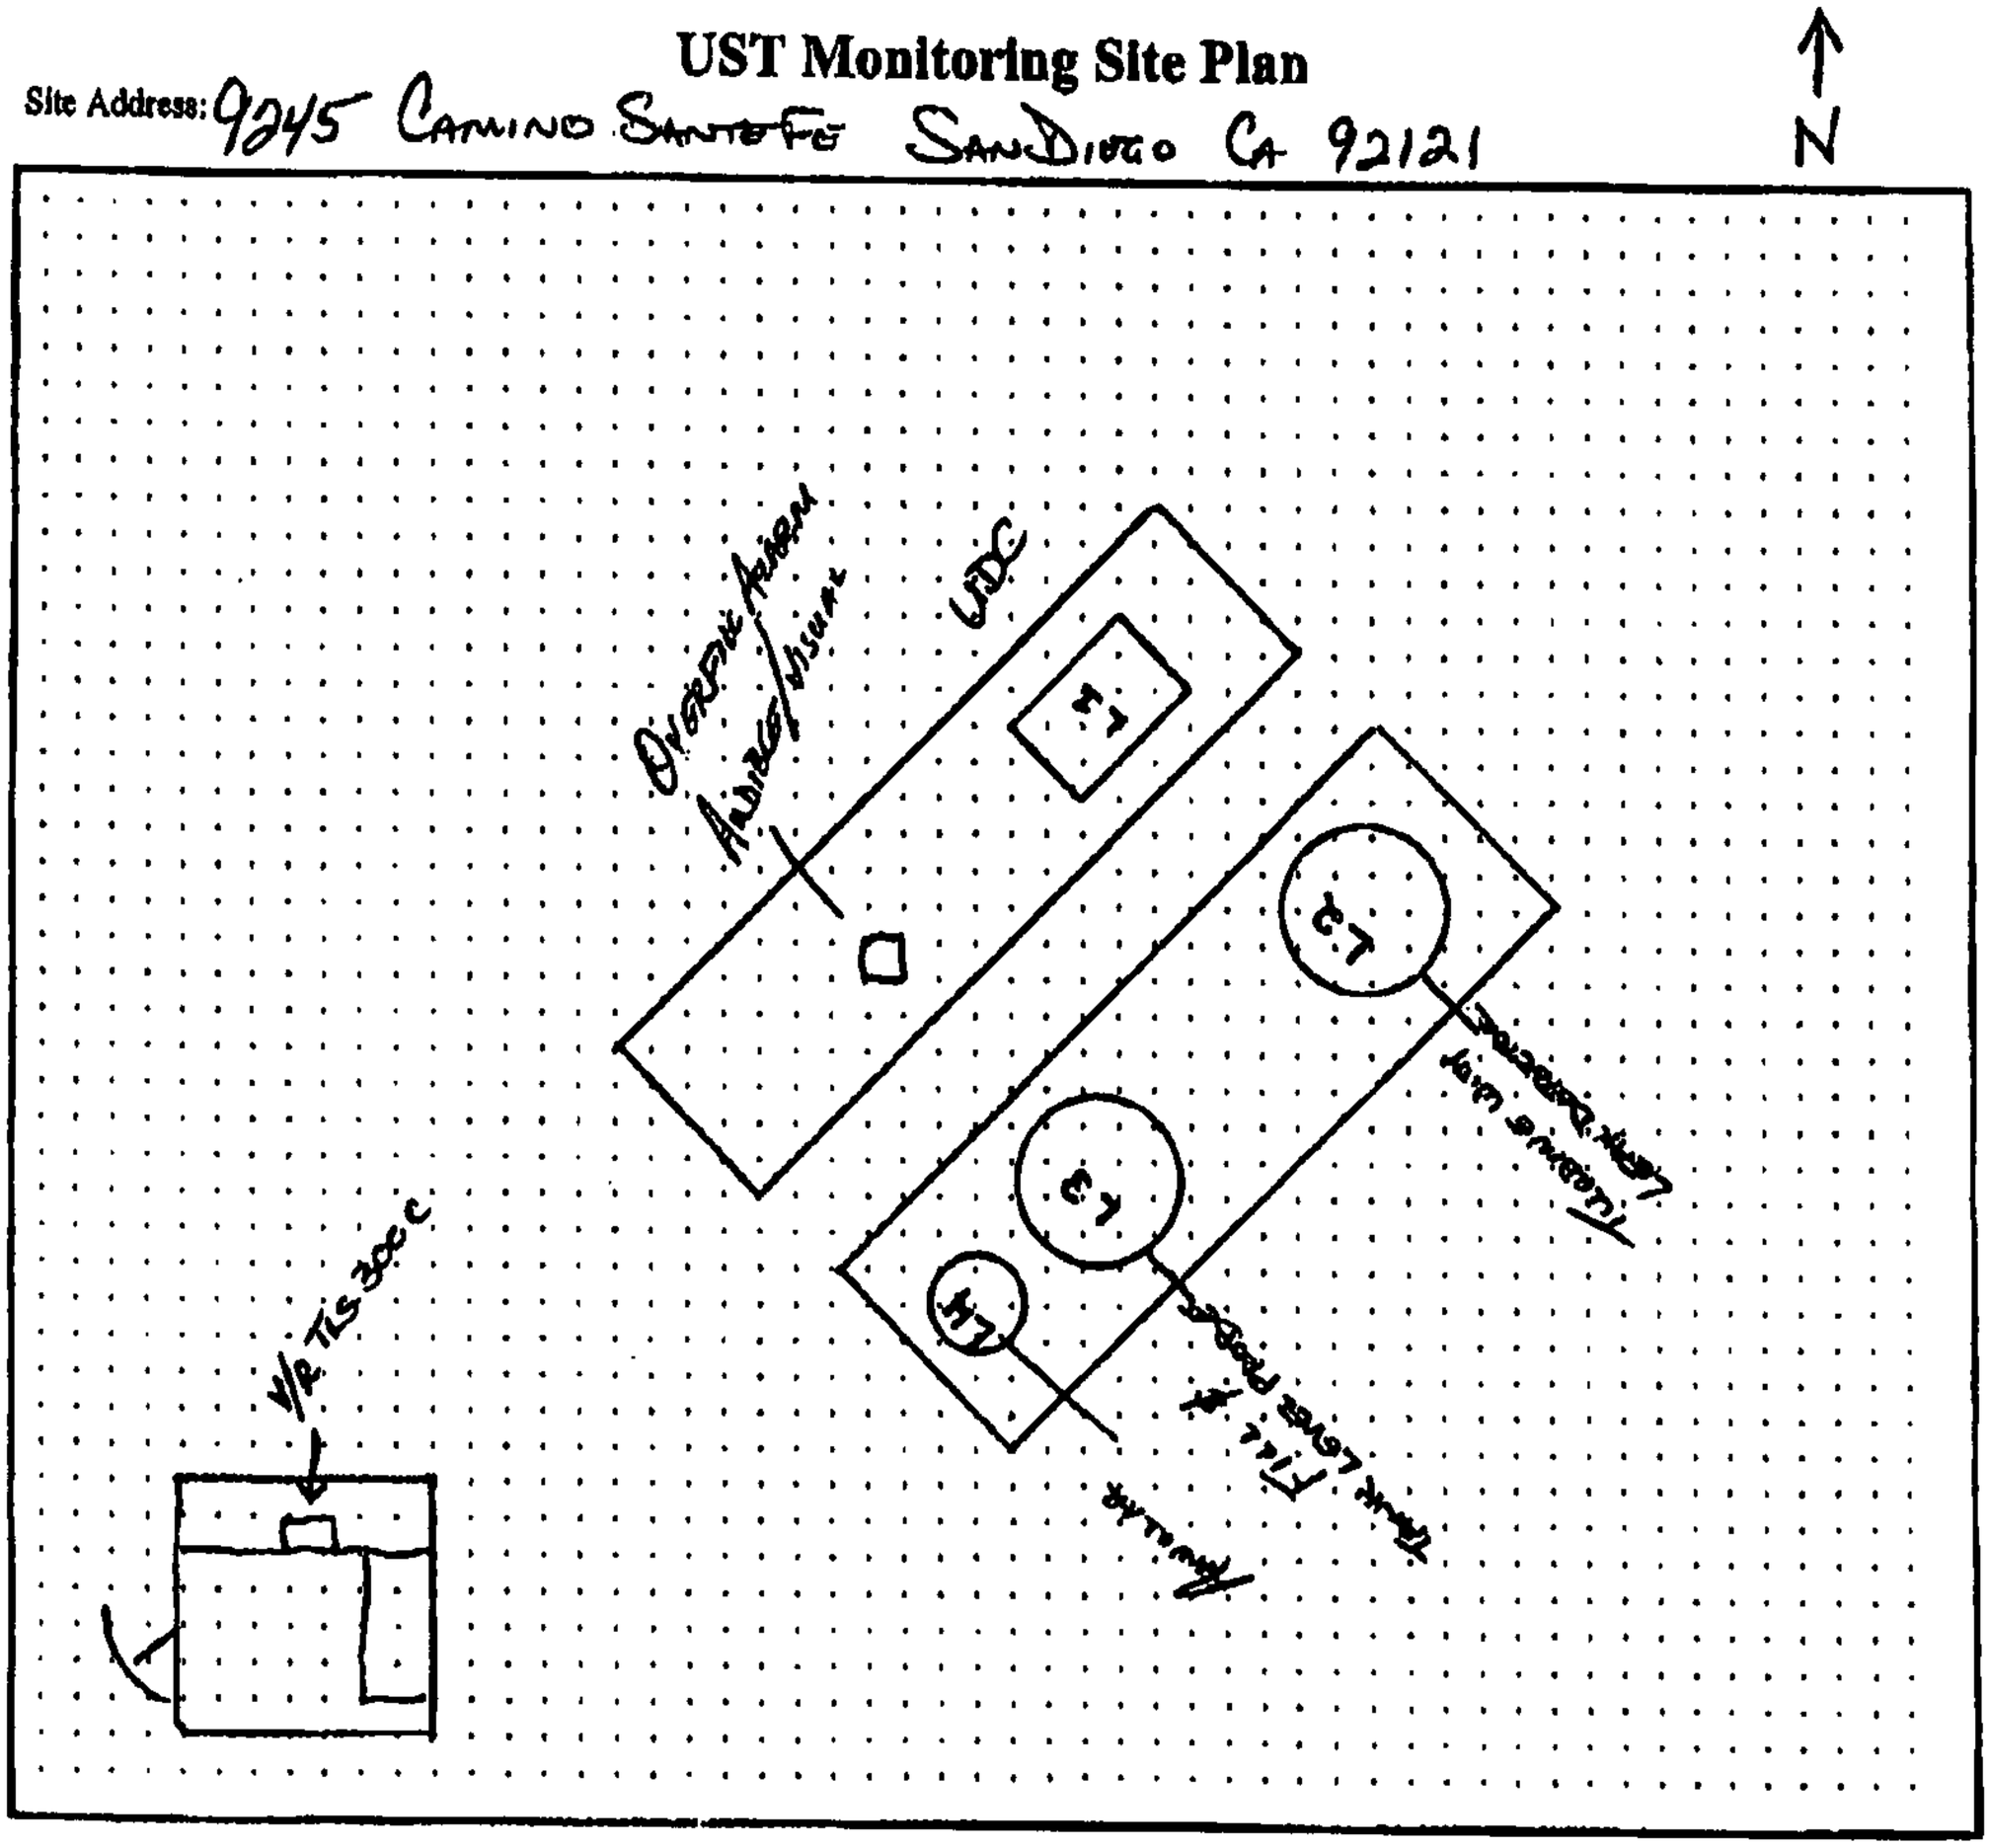
UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Permit Number:

UST Monitoring Site Plan

Site Address: 9245 Camino Santa Fe San Diego CA 92121



Date map was drawn:

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

UNDERGROUND STORAGE TANK
RESPONSE PLAN – PAGE 1

(One form per facility)

TYPE OF ACTION ☑ 1. NEW PLAN ☐ 2. CHANGE OF INFORMATION R01

I. FACILITY INFORMATION

FACILITY ID # *(Agency Use Only)* 37-000-121310 1

BUSINESS NAME (Same as FACILITY NAME or DBA – Doing Business As) R02
Superior Ready Mix Concrete, L.P.

BUSINESS SITE ADDRESS R03: 9245 Camino Santa Fe

CITY R04: San Diego

CA

ZIP CODE R05: 92121

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within 24 hours of discovery. Recovered hazardous materials, unless suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: (Complete only if applicable)

EQUIPMENT	LOCATION	AVAILABILITY
R10	R20	R30
R11	R21	R31
R12	R22	R32

UNDERGROUND STORAGE TANK

RESPONSE PLAN – PAGE 2

(One form per facility)

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released,
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released,
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions,
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred,
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site for at least 3 years Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

On the above date, the County inspected your business under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

ROUTINE INSPECTION

RECEIVED APR 0 1 2009

NOTICE TO COMPLY:

1. AN ANNUAL UST SYSTEM BELOW GRADE EQUIPMENT INSPECTION AND MONITORING SYSTEM CERTIFICATION WAS CONDUCTED ON THIS DAY. THE UST SYSTEM SECONDARY CONTAINMENT TESTING WAS LAST DONE ON 3/24/06. THE TESTING MUST BE DONE AT 36 MONTH INTERVALS AND IS NOW OVER DUE.
   - CORRECTIVE ACTION REQUIRED: WITHIN 30 DAYS FROM TODAY, SCHEDULE AND COMPLETE THE 36 MONTH REQUIRED UST SECONDARY CONTAINMENT TESTING. SUBMIT A COPY OF THE TEST RESULTS TO THE HAZARDOUS MATERIALS DIVISION (HMD)* FOR THE ATTENTION OF MIKE MANN. KEEP A COPY ONSITE.

REMARKS:

- AN ENGINEERING ASSESSMENT WAS CONDUCTED ON THE USED OIL ABOVE GROUND STORAGE TANK (AST) ON 7/15/03. IF YOU GENERATE MORE THAN 1000 KILOGRAMS (270 GALLONS OR 2200 POUNDS) OF HAZARDOUS WASTE IN ANY CALENDAR MONTH, THEN YOU WILL NEED TO UPDATE THIS AST ASSESSMENT EVERY 5 YEARS. BRANDON STATED THAT AT THIS TIME SUPERIOR READY MIX GENERATES LESS THAN 1000 Kg/mo.
- THE UST FINANCIAL RESPONSIBILITY DOCUMENT WAS LAST UPDATED 3/26/08. THIS DOCUMENT MUST BE UPDATED ANNUALLY. SEND AN UPDATED COPY TO THE HMD* IN 30 DAYS.

☑ **This is an annual certification that the Hazardous Materials Business Plan (inventory & site map, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.**

Designation of Underground Storage Tank (UST) Operator

UST Owner Statement of Understanding and Compliance with UST Requirements

Facility Name: SUPERIOR READY MIX	Facility Permit #: 1 2 1 3 1 0
Facility Address: 9245 CAMINO SANTA FE	Phone: (760) 745-0556 x
City: SAN DIEGO	Zip Code: 92121-

Reason for Submitting this Form *(Check One)* ☐ Initial Certification ☒ Change of Designated Operator ☒ Certificate Renewal

Designated UST Operator(s) for this Facility

PRIMARY DESIGNATED UST OPERATOR

Designated Operator's Name: VERN SABIN
Business Name *(If different from above)*: WESTERN PUMP INC.
Designated Operator's Phone #: (619) 239-9988 x
International Code Council Certification #: 5250326-UC

Relation to UST Facility (Check One): ☐ Owner ☐ Operator ☐ Employee ☐ Service Technician ☒ Third-Party

Expiration Date: 2011-01-14

ALTERNATE 1 *(Optional)*

Designated Operator's Name: MARK BRIDGWATER
Business Name *(If different from above)*: Western Pump Inc.
Designated Operator's Phone #: (619) 239-9988 x
International Code Council Certification #: 5246126-UC

Relation to UST Facility (Check One): ☐ Owner ☐ Operator ☐ Employee ☐ Service Technician ☒ Third-Party

Expiration Date: 2010-11-20

ALTERNATE 2 *(Optional)*

Designated Operator's Name: BOB WEIDENFELLER
Business Name *(If different from above)*: Western Pump Inc.
Designated Operator's Phone #: (619) 239-9988 x
International Code Council Certification #: 5250279-UC

Relation to UST Facility (Check One): ☐ Owner ☐ Operator ☐ Employee ☐ Service Technician ☒ Third-Party

Expiration Date: 2009-10-12

NOTIFY THE LOCAL REGULATORY AGENCY WITHIN 30 DAYS OF ANY CHANGES TO THIS INFORMATION

I certify that, for the facility indicated at the top of this page, the individual(s) listed above will serve as Designated UST Operator(s). The individual(s) will conduct and document monthly facility inspections and annual facility employee training, in accordance with California Code of Regulations, Title 23, Sections 2715(c) - (f).
Furthermore, I understand and am in compliance with the requirements (statutes, regulations, and local ordinances) applicable to underground storage tanks.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Plan Check Number: **Permit Number:**

A. General Information

Facility Name: SUPERIOR READY MIX Bldg. No.:

Site Address: 9245 CAMINO SANTA FE City: SAN DIEGO Zip: 92121-

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Servicing

Permit Number:

Software Version Installed: 16.05

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shutdown? *(Check all that apply)* ☒ Sump/Trench Sensors; ☒ Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☒ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90%
☒ Yes*	☐ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments (500 characters max. add additional sheets if needed): Red Jacket FX 1DV replaced with new and retest pass.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment:

Permit Number: 121310

☒ Check this box if tank gauging is used only for inventory control

☐ Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☒ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☒ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☒ Yes	☐ No*	Was accuracy of system product level readings tested?
☒ Yes	☐ No*	Was accuracy of system water level readings tested?
☒ Yes	☐ No*	Were all probes reinstalled properly?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

❑ Check this box if LLDs are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ❑ 3 g.p.h.; ❑ 0.1 g.p.h. ; ❑ 0.2 g.p.h.
☒ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

H. Comments (500 characters max. add additional sheets if needed): Original red jacket FX-1DV mechanical leak detector failed 3.0 GPH test. Replaced with new one and retested- New leak detector passed 3.0 GPH leak test.

I. Results of Vacuum/Pressure Monitoring Equipment Testing

This page should be used to document testing and servicing of vacuum and pressure interstitial sensors. A copy of this form must be included with the Monitoring System Certification Form, which must be provided to the tank system owner/operator. The owner/operator must submit a copy of the Monitoring System Certification Form to the local agency regulating UST systems within 30 days of test date.

	Model:	**System Type:** ☐ Pressure; ☐ Vacuum
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor:	
	Sensor Functionality Test Result: ☐ Pass; ☐ Fail	Interstitial Communication Test Result: ☐ Pass; ☐ Fail
How was interstitial communication verified? ☐ Leak Introduced at Far End of Interstitial Space;[1] ☐ Gauge; ☐ Visual Inspection; ☐ Other *(Describe in Sec. J, below)*		
Was vacuum/pressure restored to operating levels in all interstitial spaces? ☐ Yes ☐ No *(If no, describe in Sec. J, below)*		

J. Comments (500 characters max. add additional sheets if needed):

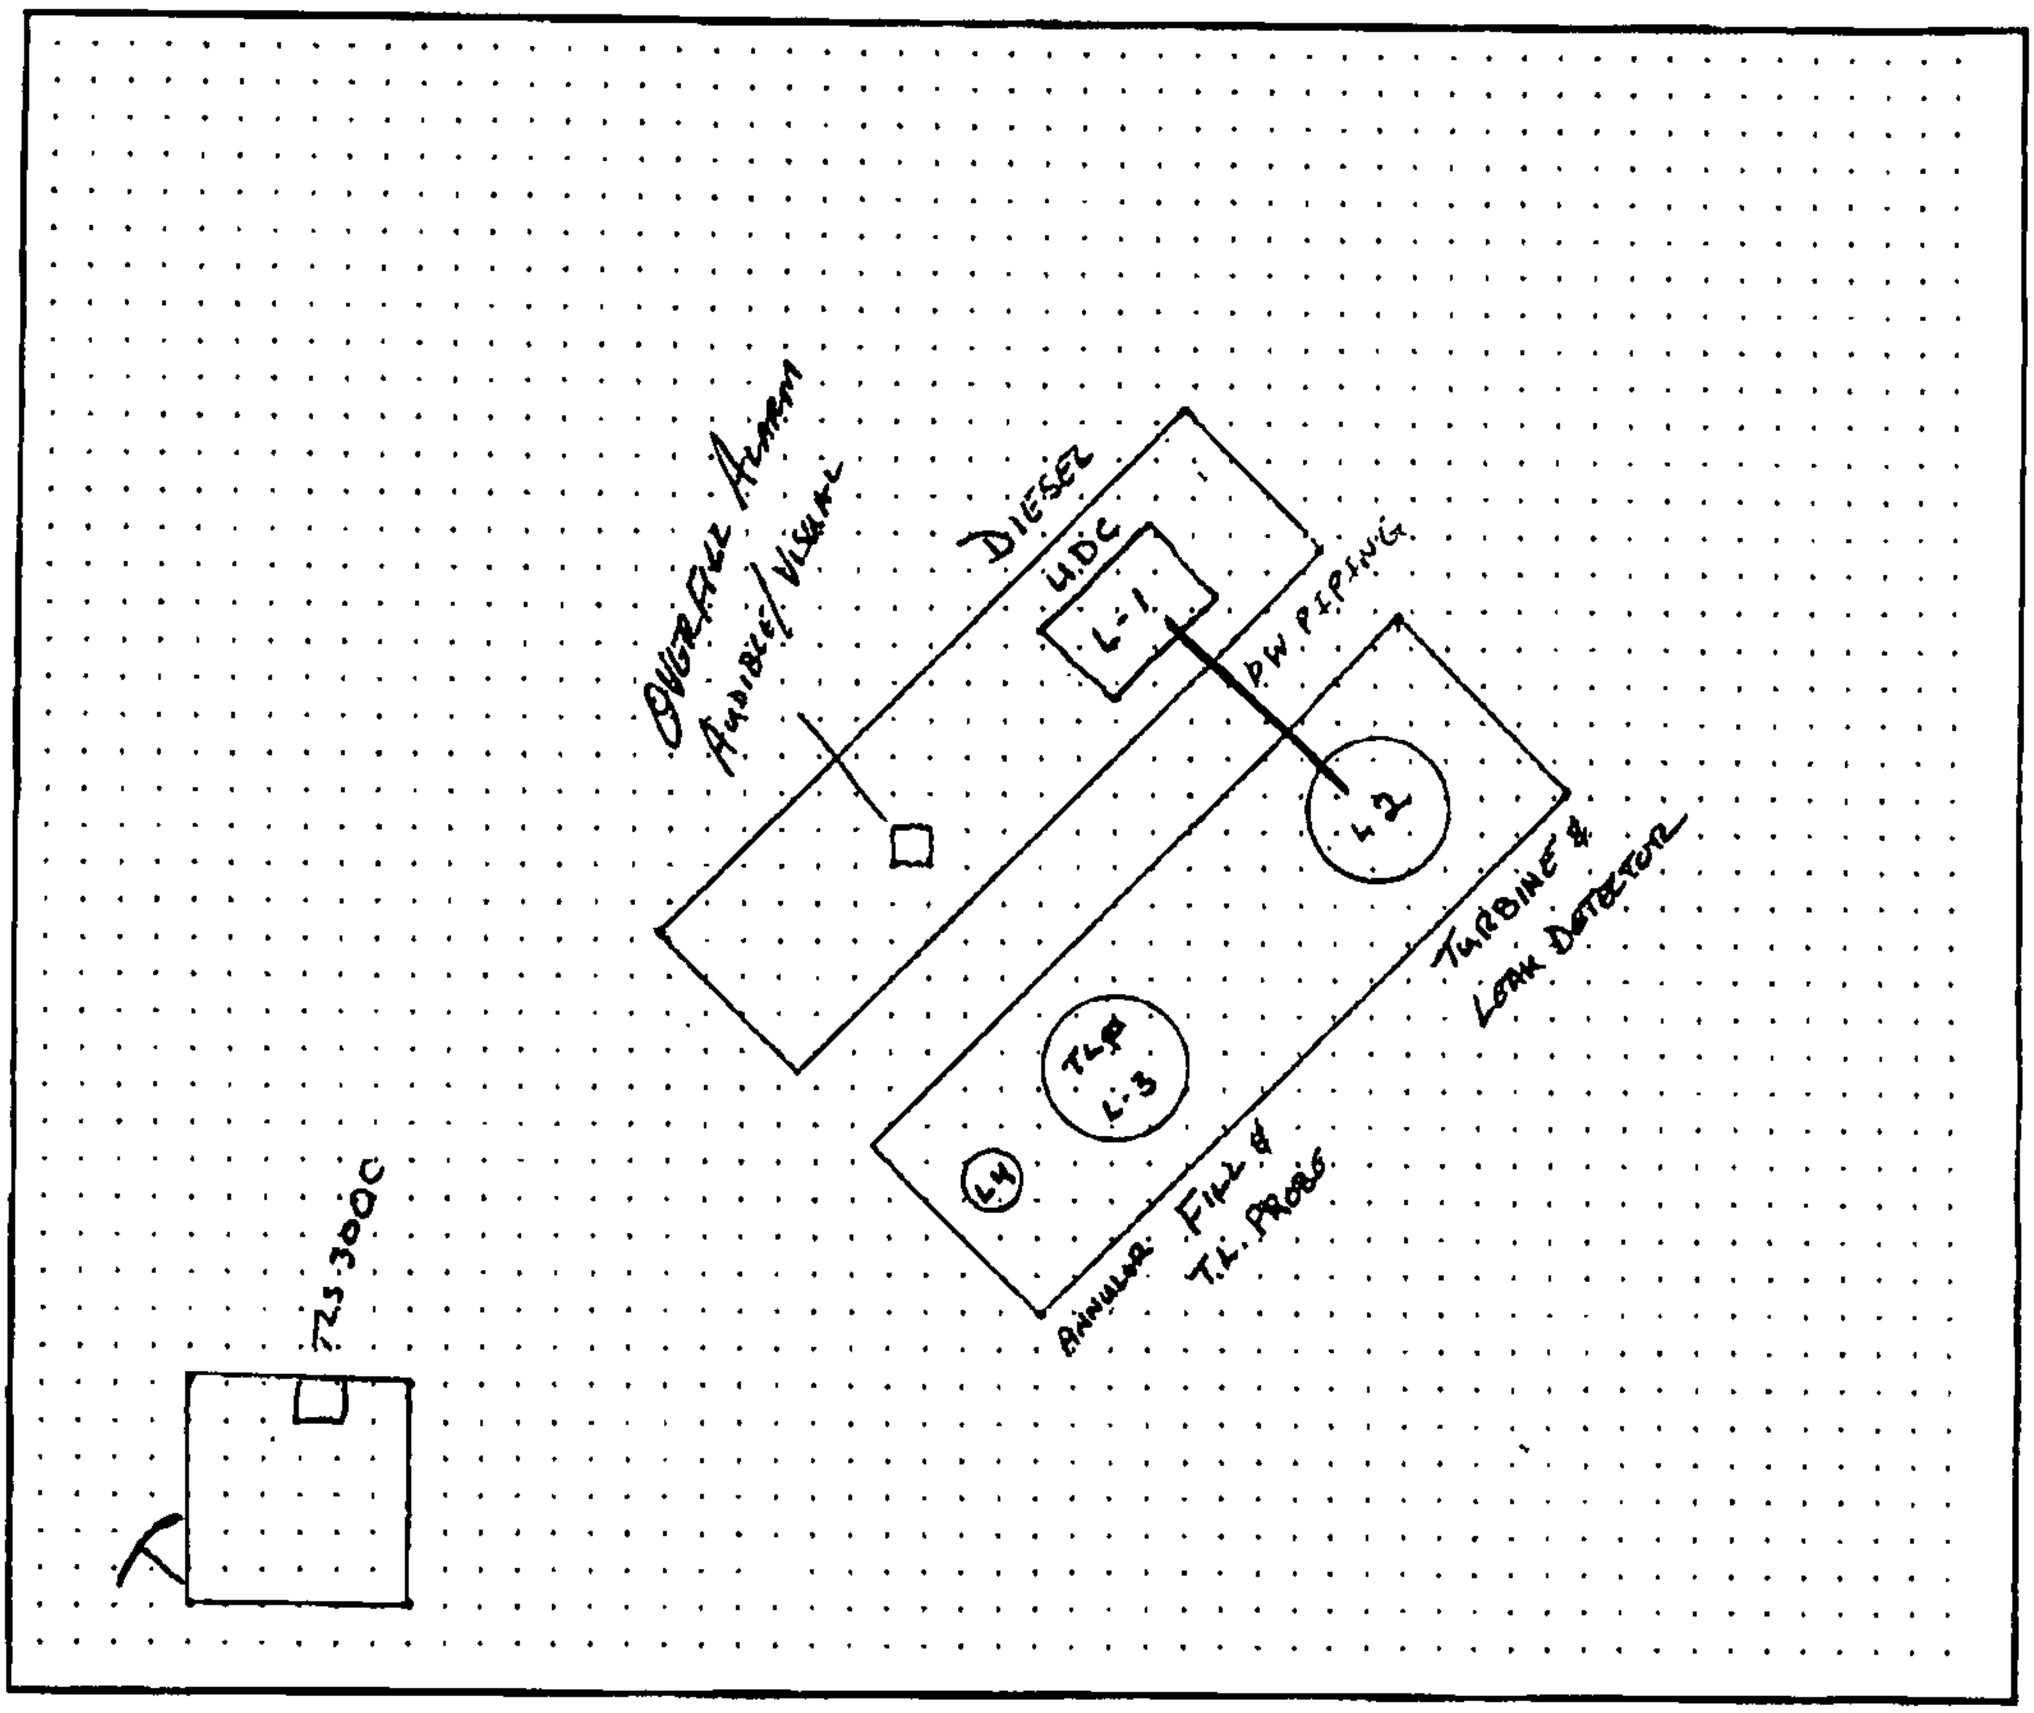
[1] If the sensor successfully detects a simulated vacuum/pressure leak introduced in the interstitial space at the furthest point from the sensor, vacuum/pressure has been demonstrated to be communicating throughout the interstice.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Permit Number: 121310

Site Address: 9245 Camino Santo Fe San Diego CA

UST Monitoring Site Plan



Date map was drawn: 3 / 23 / 10

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

SWRCB, January 2006

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name:	SUPERIOR READY MIX	Date of Testing:	3/23/10
Facility Address:	9245 CAMINO SANTA FE		
Facility Contact:	BRANDON MOUSHER	Phone:	7607450556
Date Local Agency Was Notified of Testing :			
Name of Local Agency Inspector *(If present during testing)*:	MIKE MANN		

2. TESTING CONTRACTOR INFORMATION

Company Name:	**Western Pump, Inc.**
Technician Conducting Test:	JEFF COOPER
Credentials[1]:	☒ CSLB Contractor ☒ ICC Service Tech. ☐ SWRCB Tank Tester ☐ Other *(Specify)*
License Number(s):	**673853**

3. SPILL BUCKET TESTING INFORMATION

Test Method Used:	☒ Hydrostatic	☐ Vacuum	☐ Other
Test Equipment Used:	MEASURING TAPE		Equipment Resolution:

Identify Spill Bucket *(By Tank Number, Stored Product, etc.)*	**1 DIESEL**	**2**	**3**	**4**
Bucket Installation Type:	☐ Direct Bury ☒ Contained in Sump	☐ Direct Bury ☐ Contained in Sump	☐ Direct Bury ☐ Contained in Sump	☐ Direct Bury ☐ Contained in Sump
Bucket Diameter:	12"			
Bucket Depth:	13"			
Wait time between applying vacuum/water and start of test:	10 MINUTES			
Test Start Time (T_I):	10:00 AM			
Initial Reading (R_I):	7 3/4"			
Test End Time (T_F):	11:00 AM			
Final Reading (R_F):	7 3/4"			
Test Duration ($T_F - T_I$):	1 HOUR			
Change in Reading ($R_F - R_I$):	NONE			
Pass/Fail Threshold or Criteria:	0 VARIATION			
Test Result:	☒ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail	☐ Pass ☐ Fail

Comments – *(include information on repairs made prior to testing, and recommended follow-up for failed tests)*

Performed a 1 hour visual tst on spill bucket (s)

CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING

I hereby certify that all the information contained in this report is true, accurate, and in full compliance with legal requirements.

Technician's Signature: _____ Date:3/23/10

4-23-10

[1] State laws and regulations do not currently require testing to be performed by a qualified contractor. However, local requirements may be more stringent.

CITY/ZIP SAN DIEGO 92121

On the above date, the County inspected your business under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

Y*	N/A*	NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.	Y*	N/A*

RECEIVED MAR 25 2010

AN ANNUAL UST MONITORING SYSTEM CERTIFICATION AND BELOW GRADE EQUIPMENT INSPECTION WAS CONDUCTED TODAY. THIS BUSINESS HANDLES REPORTABLE QUANTITIES OF HAZARDOUS MATERIALS AND IS TYPICALLY A SMALL QUANTITY GENERATOR OF HAZARDOUS WASTE. THE FOLLOWING VIOLATIONS WERE OBSERVED DURING THIS INSPECTION.

NOTICE TO COMPLY:

1. THE SPILL CONTAINER/BOX WAS APPROXIMATELY HALF FULL WITH WATER AND DIESEL FUEL AND HAD DEBRIS AT THE BOTTOM OF THE CONTAINER.
   - CORRECTIVE ACTION REQUIRED: MAINTAIN THE SPILL CONTAINER FREE OF ANY DEBRIS OR LIQUIDS. THE LIQUID WAS REMOVED FROM THE SPILL CONTAINER DURING THIS INSPECTION AND IT WILL BE MANAGED AS A HAZARDOUS WASTE.
2. THE MECHANICAL LINE LEAK DETECTOR DID NOT DETECT A 3 GALLON PER HOUR LEAK RATE, AND IS NOT FUNCTIONING PROPERLY.
   - CORRECTIVE ACTION REQUIRED: THE MECHANICAL LINE LEAK DETECTOR WAS REPLACED DURING THIS INSPECTION AND THE NEW DETECTOR PASSED THE 3 GALLON PER HOUR LEAK RATE TEST. ENSURE THAT ALL UST MONITORING SYSTEM COMPONENTS FUNCTION IN ACCORDANCE WITH THE MANUFACTURER'S REQUIREMENTS.

☒ **This is an annual certification that the Hazardous Materials Business Plan (inventory & site map, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.**

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

PERMIT # 12130
DATE 3/23/2010
PAGE 2 OF 3

BUSINESS ADDRESS: 9245 CAMINO SANTA FE, SAN DIEGO ZIP CODE: 92121

REMARKS:

- THE FOLLOWING UST PROGRAM DOCUMENTS WERE ONSITE AND REVIEWED DURING THIS INSPECTION: MONITORING PLAN, EMERGENCY RESPONSE PLAN, UST OPERATING PERMIT FACILITY AND TANK PAGES, FINANCIAL RESPONSIBILITY, ANNUAL MONITORING SYSTEM CERTIFICATION, SB989 SECONDARY CONTAINMENT TESTING RESULTS, AND UST OPERATING PERMIT.

- CORROSION IS EVIDENT ON THE EXTERIOR OF THE ANNULAR SENSOR RISER. KEEP MONITORING THIS SITUATION FOR FURTHER DETERIORATION. DEVISE A PLAN TO PREVENT CORROSION.

- FOR THE CONTAINERS USED IN OIL CHANGES, EMPTHY THE USED OIL FROM THE CONTAINERS AFTER EACH USE OR MANAGE THEM AS A HAZARDOUS WASTE CONTAINER.

- THE HAZARDOUS MATERIALS BUSINESS PLAN WAS REVIEWED DURING THIS INSPECTION.

- THE SPILL PREVENTION CONTROL AND COUNTERMEASURE (SPCC) PLAN WAS REVIEWED DURING THIS INSPECTION.

- REFER TO THE PRINTED DOCUMENT FOR MORE INFORMATION REGARDING THE PROPER MANAGEMENT OF UNIVERSAL WASTE.

DATE: 3 / 23 / 2010

PAGE: 3 OF 3

BUSINESS ADDRESS: 9245 CAMINO SANTA FE, SAN DIEGO ZIP: 92121

VIOLATION REPORT: The items checked below refer to specific section numbers of Title 23 of the California Code of Regulations (CCR), Chapters 6.7, of the Health & Safety Code (HSC) & the County Code of Regulatory Ordinances (SDCC). The following code sections checked are in violation (V) with the Underground Storage Tank laws and regulations. All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form to document your return to compliance. Your Specialist can provide these forms. Please call (619) 338-2222 or your Specialist if you have any questions.

GENERAL UNDERGROUND STORAGE TANK (UST) REQUIREMENTS

VIOLATION DESCRIPTION				VIOLATION DESCRIPTION			
Viol # NOV	UST SYSTEM RECORDS	VIOL	V	Viol # NOV	FILE RECORDS	VIOL	V
	Current UPF permit not obtained/not available. 25284; 68.905, 68.1003, 68.1005	3101			Secondary containment testing not done at 6/36 months and/or not sent to CUPA within 30 days. 25284.1; 2637(a)&(e)	3114	
	Current Operating Permit not available at facility. 25284(a), 25286(a); 2712 (i); 68.1003	3102			Secondary containment testing not completed (passed) for all components &/or repairs to secondary containment components not completed. 25284.1, 25291(a)(2); 2637	3115	
	All permit operating conditions not met. 25284; 2712	3158					
	UST repair/modify/closure permit not obtained. 68.1004, 68.1005, 68.1009.5	3103			All releases not recorded and/or reported. 25294, 25295; 2650, 2651, 2652	3151	
	CUPA UST form(s) A &/or B not available/completed/ submitted to HMD. 25286(a); 2711	3104			All maintenance/monitoring/calibration/ repair records not available. 25293; 2712 (b)	3152	
	Current evidence of financial responsibility not available. 25292.2(a), 25299.33; 2809	3105			Monitoring Cert. not submitted to CUPA w/l 30 days. 2638(d)	3161	
	Owner/operator agreement not available/ completed/submitted to HMD. 25284(a)(3); 2620(b)	3106			Facility employee(s) not trained; records incomplete/not onsite. 2715(f)	3193	
	Monitoring procedures not available/completed/ submitted to HMD.2632(b)& (d), 2634(d), 2641(h), 2711(a)(9)	3107			Enhanced leak detection not performed as required. 25292.4; 2640(e)	3154	
	Emergency Response Plan is not available/complete. 25289(b); 2632(b), 2634(e), 2641(h)	3108			Contractor &/or technician not trained & certified as required. 25284.1(a)(5)(D); 2715	3162	
	Scaled Plot plan showing tank, piping & equipment location not available/complete/submitted to HMD. 2711(a)(8), 2632(d)(1)(C)	3109			Contractor did not have required license, i.e., Class A, C-10, C34, C36 and/or C61. 25284.1(a)(5)(D); 2715	3163	
	Annual certification for ATG and/or sensors not completed (existing tank systems only). 2641(j), 2638	3110			Monitoring system disabled or tampered with and/or monitoring records falsified. 25299(f)	3157	
	Annual certification for continuous monitoring system not completed (new tanks). 25284.1(a)(4)(C); 2630(d), 2638	3116			All monitoring equipment not installed, calibrated, operated, and/or maintained per manufacturer's instructions. 2638(a), 2641(j)	3164	
	Designated Operator (DO) Notification/Change form not submitted &/or DO not ICC certified. 2715 (a)(b)	3191			UST system repair(s) not completed properly. 25292.1(c); 2660 (a)(k)(l)(m)	3160	
					Designated Operator monthly inspection not conducted, incomplete or DO inspection reports not onsite.2715 (c)(d)(e)	3192

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Plan Check Number: _____ **Permit Number:** 121310

A. General Information

Facility Name: SUPERIOR READY MIX Bldg. No.: _____

Site Address: 9245 CAMINO SANTA FE City: SAN DIEGO Zip: 92121

Facility Contact Person: SHAWN MENDOZA Contact Phone No.: (760) 745-0556

Make/Model of Monitoring System: VEEDER ROOT TLS-300C Date of Testing/Servicing: 3/23/10

B. Inventory of Equipment Tested/Certified: Check the appropriate boxes to indicate specific equipment installed/ inspected/serviced:

Tank ID: DIESEL
- ☒ In-Tank Gauging Probe. Model: 847390-109
- ☒ Annular Space or Vault Sensor. Model: 794380-429
- ☒ Piping Sump / Trench Sensor(s). Model: 794380-208
- ☒ Fill Sump Sensor(s). Model: RLS-FX-10
- ☐ Mechanical Line Leak Detector. Model:
- ☐ Electronic Line Leak Detector. Model:
- ☒ Tank Overfill / High-Level Sensor. Model:
- ☐ Other (specify equipment type and model in Section E on Page 2).

Dispenser ID: 1+2
- ☒ Dispenser Containment Sensor(s). Model: 794380-208
- ☒ Shear Valve(s).
- ☐ Dispenser Containment Float(s) and Chain(s).

Tank ID: _____

Testing Company Address: 3235 F ST. SAN DIEGO 92102 Date of Testing/Servicing: 3/23/10

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

.D. Results of Testing/Servicing

Permit Number: 121310

Software Version Installed: 16.05

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☒ Sump/Trench Sensors; ☒ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☒ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90 %
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments:

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment: **Permit Number:** 121310

☒ Check this box if tank gauging is used only for inventory control

☐ Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☒ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☒ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☒ Yes	☐ No*	Was accuracy of system product level readings tested?
☒ Yes	☐ No*	Was accuracy of system water level readings tested?
☒ Yes	☐ No*	Were all probes reinstalled properly?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

☐ Check this box if LLDs are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h.; ☐ 0.1 g.p.h. ; ☐ 0.2 g.p.h.
☐ Yes	☒ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

H. Comments: ORIGINAL RED JACKET FX-1DU MECHANICAL LEAK DETECTOR FAILED 3.0 GPH TEST. REPLACED WITH NEW ONE AND RE-TESTED – NEW LEAK DETECTOR PASSED 3.0 GPH LEAK TEST.

#121310

SWRCB, January 2006

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name: SUPERIOR READY MIX	Date of Testing: 3-23-10
Facility Address: 9245 CAMINO SANTA FE	
Facility Contact: BRANDON, MOUSHER	Phone: 760-745-0556
Date Local Agency Was Notified of Testing :	
Name of Local Agency Inspector *(if present during testing)*: MIKE MANN	

2. TESTING CONTRACTOR INFORMATION

Company Name:	WESTERN PUMP, INC.
Technician Conducting Test:	JEFF COOPER
Credentials[1]:	X CSLB Contractor X ICC Service Tech. ☐ SWRCB Tank Tester ☐ Other *(Specify)*

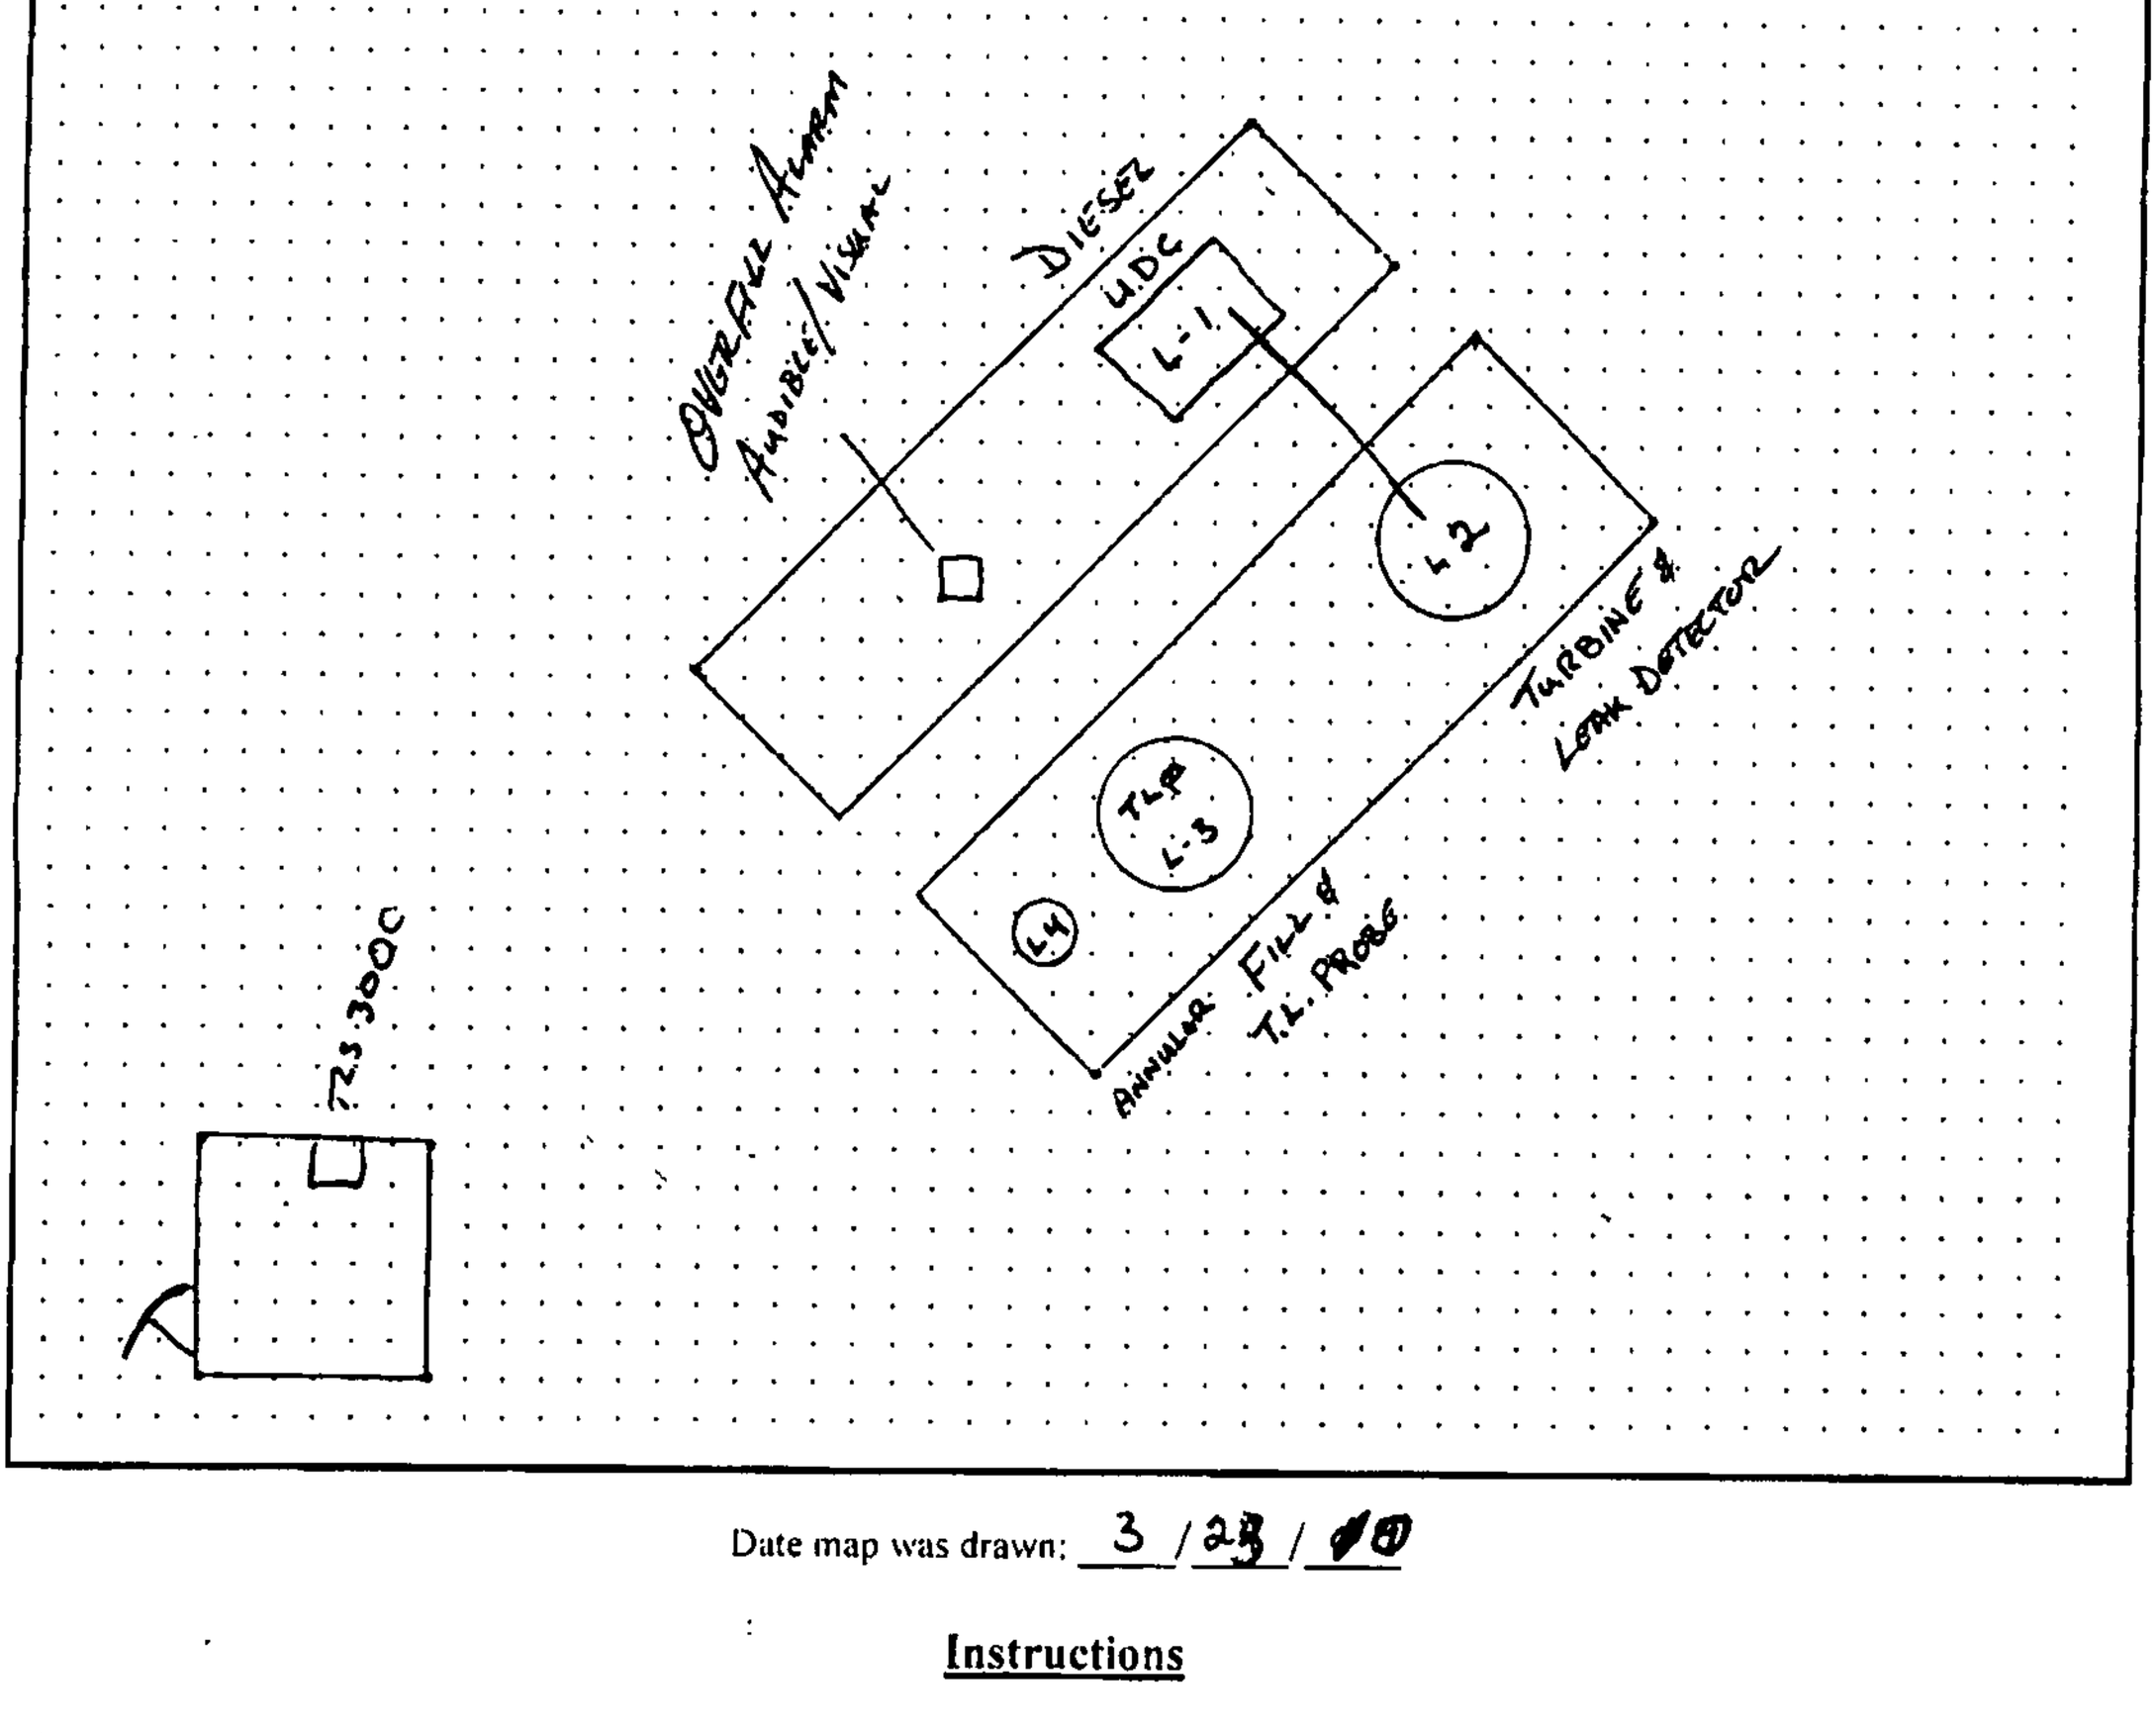
UST Monitoring Site Plan

N ↑



Date map was drawn: 3 / 23 / 10

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

FACILITY NAME SUPERIOR READY MIX CONCRETE, LP
ADDRESS 9245 CAMINO SANTA FE
CITY/ZIP SAN DIEGO 92121

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

ROUTINE INSPECTION

RECEIVED MAR 30 2011

ON 3/17/2011, AN ANNUAL UNDERGROUND STORAGE TANK (UST) MONITORING SYSTEM CERTIFICATION AND BELOW GRADE EQUIPMENT INSPECTION OF THE UST's WAS CONDUCTED WITH SHAWN MENDOZA OF SUPERIOR READY MIX. WESTERN PUMP's CALIFORNIA UST SERVICE TECHNICIAN JEFF COOPER (530014 UT) CONDUCTED THE CERTIFICATION. ADDITIONALLY, THE HAZARDOUS MATERIALS AND HAZARDOUS WASTE MANAGEMENT PROGRAMS WERE REVIEWED. THIS BUSINESS IS A SMALL QUANTITY GENERATOR (SQG) OF HAZARDOUS WASTE.

THE FOLLOWING VIOLATION WAS OBSERVED DURING THIS INSPECTION.

NOTICE TO COMPLY:

1. THE EMPTY CONTAINER INSIDE THE SECONDARY CONTAINMENT AREA WHERE THE USED OIL ABOVEGROUND STORAGE TANK (AST) IS LOCATED IS LABELED AS EMPTY, BUT THE LABEL IS MISSING THE DATE IT BECAME EMPTY. A CONTAINER HOLDING OIL CONTAMINATED ABSORBENT LOCATED INSIDE THE VEHICLE MAINTENANCE BUILDING IS MISLABELED AS EMPTY. ~~FOR~~ FOUR EMPTY 55 GALLON CONTAINERS AT THE MIXING PLANT (STEVES AREA) WERE NOT LABELED AS EMPTY AND DID NOT HAVE A DATE WHEN THEY WERE EMPTIED.

- CORRECTIVE ACTION REQUIRED: LABEL ALL EMPTY CONTAINERS AS "EMPTY" AND

☑ **This is an annual certification that the Hazardous Materials Business Plan (inventory & site map, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.**

COUNTY OF SAN DIEGO

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

PERMIT # 121310
DATE 3/17/2011
PAGE 2 OF 4

BUSINESS ADDRESS: 9245 CAMINO SANTA FE, SAN DIEGO ZIP CODE: 92121

NOTICE TO COMPLY CONTINUED:

INCLUDE THE DATE THE CONTAINER BECAME EMPTY. PROPERLY MANAGE (RECYCLE, REUSE, OR SCRAP) THE EMPTY CONTAINERS WITHIN ONE YEAR OF BECOMING EMPTY. THE OIL CONTAMINATED ABSORBENT WAS REMOVED AND PLACED INSIDE AN APPROPRIATE CONTAINER DURING THIS INSPECTION.

REMARKS:

- ALL UST MONITORING SYSTEM SENSORS AND THE ATG SUCCESSFULLY PASSED THIS INSPECTION. THE SPILL CONTAINER AND MECHANICAL LINE LEAK DETECTOR WERE TESTED AND PASSED INSPECTION.

- THE UST DESIGNATED OPERATOR MONTHLY INSPECTIONS REPORTS FOR THE PAST YEAR WERE REVIEWED. THE L2 ALARM FOR JUNE 2010 WAS NOT ADDRESSED IN THE DESIGNATED OPERATORS MONTHLY REPORT. ENSURE THAT ALL ALARMS DURING THE PREVIOUS MONTH ARE PROPERLY INVESTIGATED AND DOCUMENTED. EMPLOYEE UST TRAINING IS CONDUCTED ANNUALLY AND DOCUMENTED.

- A SMALL AMOUNT OF WATER WAS OBSERVED INSIDE THE TURBINE SUMP, BUT IT WAS NOT ENOUGH TO ACTIVATE AN ALARM. RECOMMEND PROVIDING A WATER PROOF SEALANT FOR THE MANWAY LID.

- THE ANNULAR SENSOR ELECTRICAL WIRE CORD GRIP IS DAMAGED/MISSING AND NEEDS TO BE REPLACED.

- THE CONDENSATE BLOW DOWN VENT FOR THE AIR COMPRESSOR AT THE MIXING PLANT (STEVE'S AREA) IS DISCHARGING OILY WATER TO THE CONCRETE SURFACE UNDER THE COMPRESSOR. PROVIDE A DRIP PAN FOR THE COLLECTION OF THIS OILY CONDENSATE.

- THE FOLLOWING UST SUPPORTING DOCUMENTS WERE REVIEWED TODAY: WRITTEN MONITORING PROCEDURES, EMERGENCY RESPONSE PLAN, PLOT PLAN, UST FACILITY AND TANK INFORMATION FORMS, ANNUAL UST MONITORING SYSTEM CERTIFICATIONS, SECONDARY CONTAINMENT TESTING, CERTIFICATION OF FINANCIAL RESPONSIBILITY, AND UST OPERATING PERMIT.

- THE HAZARDOUS MATERIALS BUSINESS PLAN (HMBP) WAS REVIEWED WITH SHAWN. AT LEAST ANNUALLY, SUBMIT A COMPLETED HMBP CERTIFICATION FORM TO THE COUNTY DEH - HMD*

PERMIT # 121310
DATE 3/17/2010
PAGE 3 OF 4

BUSINESS ADDRESS: 9245 CAMINO SANTA FE, SAN DIEGO ZIP CODE: 92121

REMARKS CONTINUED:

- THIS FACILITY STORES MORE THAN 1,320 GALLONS, BUT LESS THAN 10,000 GALLONS OF PETROLEUM PRODUCTS ON SITE. A REGISTERED ENGINEER HAS PREPARED A SPILL PREVENTION CONTROL AND COUNTERMEASURE (SPCC) PLAN FOR THIS FACILITY. THE ABOVEGROUND PETROLEUM STORAGE ACT (APSA) CHANGED THE WAY IN WHICH ABOVEGROUND STORAGE TANKS HOLDING ~~PETROLE~~ PETROLEUM ARE REGULATED. AMEND AND UPDATE YOUR SPCC PLAN BY 11/10/2011. PLEASE REFER TO THE TRI-FOLD HANDOUT FOR MORE INFORMATION. PIPING PENETRATES THE SECONDARY CONTAINMENT AROUND THE OIL TANKS. VERIFY THE SECONDARY CONTAINMENT IS SUFFICIENT FOR THE ABOVEGROUND OIL STORAGE TANKS.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Servicing

Permit Number: 12310

Software Version Installed: 16.05

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shutdown? *(Check all that apply)* ☒ Sump/Trench Sensors; ☒ Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☒ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90 %
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☒ Yes*	☐ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☒ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments (500 characters max. add additional sheets if needed):

FOUND APPROX. 2 GALLONS OF WATER IN DIESEL TURBINE SUMP – REMOVED WATER.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment: **Permit Number:** 121316

☒ Check this box if tank gauging is used only for inventory control

☐ Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☒ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☒ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☒ Yes	☐ No*	Was accuracy of system product level readings tested?
☒ Yes	☐ No*	Was accuracy of system water level readings tested?
☒ Yes	☐ No*	Were all probes reinstalled properly?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD): ☐ Check this box if LLDs are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h.; ☐ 0.1 g.p.h. ; ☐ 0.2 g.p.h.
☒ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

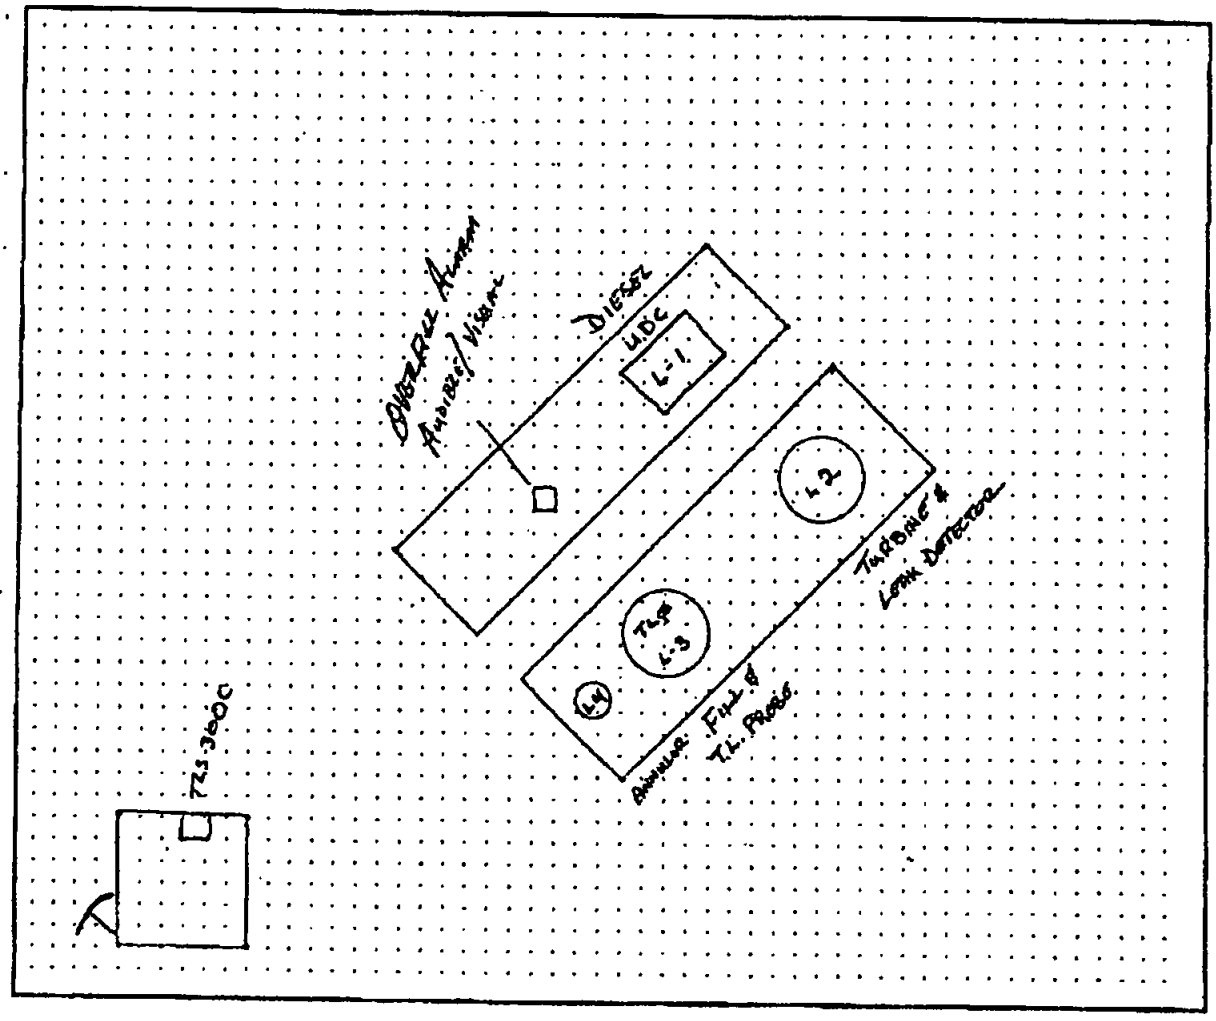
UST Monitoring Site Plan

N



Date map was drawn: 3/17/11

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

❑ Check this box if LLDs are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ❑ 3 g.p.h.; ❑ 0.1 g.p.h. ; ❑ 0.2 g.p.h.
☒ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

H. Comments (500 characters max. add additional sheets if needed):

I. Results of Vacuum/Pressure Monitoring Equipment Testing

This page should be used to document testing and servicing of vacuum and pressure interstitial sensors. A copy of this form must be included with the Monitoring System Certification Form, which must be provided to the tank system owner/operator. The owner/operator must submit a copy of the Monitoring System Certification Form to the local agency regulating UST systems within 30 days of test date.

	Model:	System Type: ☐ Pressure; ☐ Vacuum
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail	
How was interstitial communication verified? ☐ Leak Introduced at Far End of Interstitial Space;[1] ☐ Gauge; ☐ Visual Inspection; ☐ Other *(Describe in Sec. J, below)*		
Was vacuum/pressure restored to operating levels in all interstitial spaces? ☐ Yes ☐ No *(If no, describe in Sec. J, below)*		

J. Comments (500 characters max. add additional sheets if needed):

[1] If the sensor successfully detects a simulated vacuum/pressure leak introduced in the interstitial space at the furthest point from the sensor, vacuum/pressure has been demonstrated to be communicating throughout the interstice.

FACILITY NAME SUPERIOR READY MIX
ADDRESS 9245 CAMINO SANTA FE
CITY/ZIP SAN DIEGO 92121

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

Y*	N/A*	NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.	Y*	N/A*	
☑	☐	Unified Program Facility Permit current	☑	☐	Permit Expires on: 30 / JUN / 2013

ROUTINE INSPECTION

ON 3/13/2013, AN ANNUAL UNDERGROUND STORAGE TANK (UST) MONITORING SYSTEM CERTIFICATION AND BELOW GRADE INSPECTION WAS CONDUCTED WITH SHAWN MENDOZA OF SUPERIOR READY MIX AND CHRIS MIZICKO A CALIFORNIA UST SERVICE TECHNICIAN (ICC 8012378) WITH WESTERN PUMP. ADDITIONALLY, THE HAZARDOUS MATERIALS, HAZARDOUS WASTE, AND ABOVEGROUND PETROLEUM STORAGE ACT PROGRAMS WERE REVIEWED. THIS BUSINESS HAS REDUCED THE VOLUME OF VEHICLE MAINTENANCE PERFORMED AT THIS SITE AND IS CURRENTLY A SMALL QUANTITY GENERATOR OF HAZARDOUS WASTE.

THE FOLLOWING VIOLATION WAS OBSERVED DURING THIS INSPECTION.

NOTICE TO COMPLY:

1. THE CONTAINER STORING HAZARDOUS WASTE ANTIFREEZE IS MISSING THE BUNGS THAT WOULD BE USED TO PROPERLY CLOSE THE CONTAINER.
   - CORRECTIVE ACTION REQUIRED: IMMEDIATELY, OBTAIN AND INSTAL THE PROPER BUNGS IN ORDER TO KEEP THIS CONTAINER CLOSED.

REMARKS:

- FOR ALL EMPTY CONTAINERS PROVIDE A SIGN THAT HAS THE DATE THE CONTAINER WAS EMPTIED AND THEN REUSE OR RECYCLE OR PROPERLY DISPOSE WITHIN ONE YEAR.

☑ **This is an annual certification that the Hazardous Materials Business Plan (inventory & site map, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.**

TITLE OF FACILITY REPRESENTATIVE: Plant Supervisor

COUNTY OF SAN DIEGO

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

PERMIT # 121310
DATE 3/13/2013
PAGE 2 OF 3

BUSINESS ADDRESS: 9245 CAMINO SANTA FE, SAN DIEGO ZIP CODE: 92121

REMARKS CONTINUED:

- PERFORM A HAZARDOUS WASTE DETERMINATION ON THE PLANT MIXER RINSE WATER AND TRUCK RINSE TO SEE IF IT MEETS THE CRITERIA OF A HAZARDOUS WASTE EITHER CORROSIVE (pH ≥ 12.5) OR TOXIC. THE WASTE DETERMINATION CAN EITHER BE BY KNOWLEDGE OF PROCESS OR A CERTIFIED LABORATORY ANALYSIS. PROVIDE THE HAZARDOUS MATERIALS DIVISION (HMD) * WITH A COPY OF YOUR WASTE DETERMINATION REPORT. KEEP A COPY OF THE REPORT ON FILE AT YOUR BUSINESS. PLEASE REFER TO THE PRINTED HAND OUT THAT WAS PROVIDED.

- ALL UST MONITORING SYSTEM SENSORS AND THE ATG SUCCESSFULLY PASSED THIS INSPECTION. THE SPILL CONTAINER AND MECHANICAL LINE LEAK DETECTOR WERE TESTED AND PASSED INSPECTION.

- THE FOLLOWING UST SUPPORTING DOCUMENTS WERE REVIEWED: WRITTEN MONITORING PROCEDURES, EMERGENCY RESPONSE PLAN, PLOT PLAN, UST FINANCIAL RESPONSIBILITY, UST FACILITY AND TANK INFORMATION FORMS, ANNUAL UST MONITORING SYSTEM CERTIFICATIONS, SECONDARY CONTAINMENT TESTING (4/5/2012), UST OPERATING PERMIT, DESIGNATOR OPERATOR (DO) MONTHLY INSPECTIONS, AND DO EMPLOYEE TRAINING DOCUMENTATION.

- THIS FACILITY STORES MORE THAN 1320 GALLONS (CAPACITY) OF PETROLEUM PRODUCTS, BUT LESS THAN 10,000 GALLONS OF PETROLEUM PRODUCTS ON SITE. A SELF-CERTIFIED SPILL PREVENTION CONTROL AND COUNTERMEASURE (SPCC) PLAN DATED 4/6/2011 HAS BEEN PREPARED.

- KEEP DOCUMENTATION OF DAILY INSPECTIONS OF YOUR WASTE OIL TANK.

- AS OF JANUARY 1, 2013, ALL BUSINESSES ARE REQUIRED TO REPORT THEIR HAZARDOUS MATERIALS MANAGEMENT PROGRAM THROUGH THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS). REFER TO THE PRINTED LETTER FOR MORE INFORMATION. GO TO THE CERS WEBSITE TO ESTABLISH A USER ACCOUNT AND VERIFY YOUR BUSINESS INFORMATION. ALL UPDATES TO YOUR HAZARDOUS MATERIALS BUSINESS PLAN NEED TO BE MADE ~~THROUGH~~ THROUGH CERS.

PERMIT # 121310
DATE 3 / 13 / 2013
PAGE 3 OF 3

FACILITY ADDRESS: 9245 CAMINO SANTA FE, SAN DIEGO ZIP: 92121

VIOLATION REPORT: The items checked below refer to specific section numbers of Titles 19, 22 & 27 of the California Code of Regulations (CCR), Chapters 6.5, 6.67 & 6.95 of the Health and Safety Code, and/or the San Diego County Code (SDCC). Small Quantity Hazardous Waste Generator=(SQG); Large Hazardous Waste Quantity Generator=(LQG), Code 40 of Federal Regulations=(CFR). **All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form (HM-926) to document your return to compliance. Your Specialist can provide this form. Please call (858) 505-6880 or your Specialist if you have any questions.**

HAZARDOUS MATERIALS REQUIREMENTS

Viol #	V		VIOLATION DESCRIPTION
	☐	1001	UPF permit not obtained for hazardous materials. SDCC 68.905
	☐	1002	Hazardous Materials Business Plan (HMBP) not established/ implemented. 25503.5(a)
	☐	1004	HMBP not submitted to the CUPA. 25505(a)
	☐	1005	Emergency contact not provided or current. 25509(a)(7)
	☐	1007	Highly toxic gas (TLV≤10 ppm) not disclosed. 68.1113(b)
	☐	1008	Did not submit annual carcinogen/reproductive toxin list. 68.1113(c)
	☐	1009	Site map is not sufficient or complete. 25509(a)(5) & 25505(a)(2)
	☐	1010	Did not report release or threatened release. 25507(a), 19 CCR 2703
	☐	1012	SPCC Plan not prepared. 25270.3 & 25270.4.5(a)
	☐	1013	Copy of HMBP not onsite for inspector's review. 25505(e)
	☐	1014	HMBP is incomplete/inadequate/not amended to reflect changes. 25504, 25505(a)(2) &/or 25509(a); 25505(b); 19 CCR 2729
	☐	1015	Did not have adequate employee training program 2732 &/or 25504(c)
	☐	1016	Failed to have an adequate emergency response plan 25504(b); 2731
	☐	1017	Business Plan not certified annually. 25505(d) & (e)(2)
	☐	1018	Inventory not amended for 100% increase of hazardous material onsite or inventory is incomplete. 25509, 25510
	☐	1019	SPCC Plan amendment not prepared within 6 months of change. 25270.4.5(a) [ref. CFR 112.1(b) & CFR 112.5]
	☐	1020	Failed to submit Unified Program Consolidated Form(s) to the CUPA for regulated activity or change of information. 27 CCR 15400.1(b) &/or SDCC 68.906; 68.909; &/or 68.908.2

HAZWASTE REQUIREMENTS FOR LQGs & SQGs

RECORDKEEPING

	☐	0131	Unified Program Facility (UPF) permit not obtained. SDCC 68.905
	☐	0132	Failed to obtain & maintain a valid EPA ID Number. 66262.12(a)
	☐	0133	Failed to send manifest copy to DTSC. 66262.23(a)(4)
	☐	0134	Failed to file Exception Report with DTSC. 66262.42
	☐	0135	Failed to keep hazardous waste manifests/receipts for 3 years available for inspection. 66262.40(a) & 25160.2(b)(3), 25185(a)(4)
	☐	0136	Did not have records of battery disposal. 66266.81(a)(4)(B)
	☐	0137	Failed to complete manifest properly. 66262.23(a)
	☐	0138	Manifest signed by the TSDF not available for inspection. 66262.40(a)
	☐	0140	Failed to have LDR documentation onsite. 66268.7(a)(8)
	☐	0141	Failed to obtain approval for TSDF. 25201(a)
	☐	0142	Failed to notify CUPA for eligible onsite treatment. 25201(a)
	☐	0145	ERM reporting not submitted biennially &/or available. 25143.10
	☐	0146	Failed to have adequate records demonstrating claim of exemption for Excluded Recyclable Material (ERM). 25143.2(f) & 66261.2(g)
	☐	0147	Failed to keep records of offsite universal waste (UW) shipment(s) available for inspection for 3 years. 66273.39(c) & (d)(2); 25185(a)(4)
	☐	0148	Failed to keep copies of analytical results, waste analysis records, or waste determination results. (3 years) 66262.40(c)
	☐	0149	Failed to keep disposal receipts (3 years) for drained used oil filters &/or drained fuel filters. 25250.22 & 66266.130(c)(5)

DISPOSAL AND TRANSPORTATION

	☐	0301	Unauthorized disposal of hazardous waste. 25189.5(a) or 25189(c) or (d) or 25189.2(c)
	☐	0302	Unlawful transportation of hazardous waste (HW). 25163(a)
	☐	0303	Did not use HW manifest for disposal. 66262.20(a); 25160(b)(1) or (2), 25160.2(b)(9)
	☐	0304	Failed to make a proper waste determination. 66262.11 & 66260.200(c)
	☐	0305	Disposed of used oil illegally. 25250.5(a) & 25189.5(a) or 25189(c) or (d) or 25189.2(c)
	☐	0306	Disposed of latex paint illegally. 25217.1
	☐	0307	Disposed of UW to an unauthorized point. 25189.5(a) or 25189(c) or (d) or 25189.2(c); 66273.31(a)
	☐	0308	Impermissible dilution of hazardous waste. 66268.3(a)

HAZWASTE REQUIREMENTS FOR LQGs & SQGs

Viol #	V		VIOLATION DESCRIPTION

STORAGE AND HANDLING

	☐	0214	Used oil intentionally contaminated with HW. 25250.7(a)
	☐	0215	Used oil filters improperly managed. 66266.130
	☐	0216	Failed to label hazardous materials within 10 days or less. 25124(b)(3)(A) & 66262.34(f)
	☐	0217	Failed to repackage damaged/deteriorated hazardous material container within 96 hours. 25124(b)(3)(B) & 66262.34(f)
	☐	0218	Failed to label &/or close drained ☐ used oil filters &/or ☐ used fuel filters. 25250.22 & 66266.130(c)(3)
	☐	0219	Failed to properly segregate used oil &/or fuel drained from filters. 66266.130(c)(6) or 25250.22(b)(4)
	☐	0220	Spent lead acid batteries not properly managed. 66266.81
	☐	0221	Failed to comply with satellite regulations. 66262.34(e)
	☐	0222	Failed to properly label ERM. 25143.9(a)
	☐	0223	Failed to properly manage non-empty container or inner liner removed from a container. 66261.7(b), (d) &/or (r)
	☐	0224	Failed to mark date on empty container larger than 5 gallons &/or manage it within one year. 66261.7(e) & (f)
	☐	0237	Failed to properly dispose of UW within one year. 66273.35(a) &/or (b)
	☐	0238	Failed to manage UW in a manner to prevent release(s) to the environment. 66273.33 & 66273.33.5
	☐	0239	Failed to properly label or mark UW (non-CESQUWG). 66273.34

HAZWASTE REQUIREMENTS FOR SQGs ONLY

STORAGE AND HANDLING Pursuant to 66262.34(d)

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Plan Check Number: **Permit Number:**

A. General Information

Facility Name: SUPERIOR READY MIX Bldg. No.:

Site Address: 9245 CAMINO SANTA FE City: SAN DIEGO Zip: 92121-

Facility Contact Person: SHAWN MENDOZA Contact Phone No.: (760) 745-0556 x

Make/Model of Monitoring System: VEEDER ROOT TLS-300 Date of Testing/Servicing: 13-Mar-13

B. Inventory of Equipment Tested/Certified: Check the appropriate boxes to indicate specific equipment installed/ inspected serviced:

Tank ID: T:1 DIESEL ☒ In-Tank Gauging Probe Model: 847390-109 ☒ Annular Space or Vault Sensor Model: 794380-420 ☒ Piping Sump / Trench Sensor(s) Model: 794380-208 ☒ Fill Sump Sensor(s) Model: 794380-208 ☒ Mechanical Line Leak Detector Model: FX1DV ☐ Electronic Line Leak Detector Model: ☐ Tank Overfill / High-Level Sensor Model: ☐ Other (specify equipment type and model in Section E on Page 2).	**Tank ID**: ☐ In-Tank Gauging Probe Model: ☐ Annular Space or Vault Sensor Model: ☐ Piping Sump / Trench Sensor(s) Model: ☐ Fill Sump Sensor(s) Model: ☐ Mechanical Line Leak Detector Model: ☐ Electronic Line Leak Detector Model: ☐ Tank Overfill / High-Level Sensor Model: ☐ Other (specify equipment type and model in Section E on Page 2).
Tank ID: ☐ In-Tank Gauging Probe Model: ☐ Annular Space or Vault Sensor Model: ☐ Piping Sump / Trench Sensor(s) Model: ☐ Fill Sump Sensor(s) Model: ☐ Mechanical Line Leak Detector Model: ☐ Electronic Line Leak Detector Model: ☐ Tank Overfill / High-Level Sensor Model: ☐ Other (specify equipment type and model in Section E on Page 2).	**Tank ID**: ☐ In-Tank Gauging Probe Model: ☐ Annular Space or Vault Sensor Model: ☐ Piping Sump / Trench Sensor(s) Model: ☐ Fill Sump Sensor(s) Model: ☐ Mechanical Line Leak Detector Model: ☐ Electronic Line Leak Detector Model: ☐ Tank Overfill / High-Level Sensor Model: ☐ Other (specify equipment type and model in Section E on Page 2).
Dispenser ID: 1/2 DIESEL ☒ Dispenser Containment Sensor(s). Model: 794380-208 ☒ Shear Valve(s). ☐ Dispenser Containment Float(s) and Chain(s).	**Dispenser ID:** ☐ Dispenser Containment Sensor(s). Model: ☐ Shear Valve(s). ☐ Dispenser Containment Float(s) and Chain(s).
Dispenser ID: ☐ Dispenser Containment Sensor(s). Model: ☐ Shear Valve(s). ☐ Dispenser Containment Float(s) and Chain(s).	**Dispenser ID:** ☐ Dispenser Containment Sensor(s). Model: ☐ Shear Valve(s). ☐ Dispenser Containment Float(s) and Chain(s).
Dispenser ID: ☐ Dispenser Containment Sensor(s). Model: ☐ Shear Valve(s). ☐ Dispenser Containment Float(s) and Chain(s).	**Dispenser ID:** ☐ Dispenser Containment Sensor(s). Model: ☐ Shear Valve(s). ☐ Dispenser Containment Float(s) and Chain(s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification - I certify that the equipment identified in this document was installed/inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report *(check all that apply)*: ☒ Copy of the report ☒ System set-up ☒ Alarm history report

Technician Name (print): CHRIS MIZICKO

Signature: _____

Certification No.: ICC8012378 License No.: 673853

Testing Company Name: WESTERN PUMP, INC. Phone No.: (619) 239-9988 x

Testing Company Address: 3235 F STREET SAN DIEGO, CA 92102 Date of Testing/Servicing: 13-Mar-13

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Servicing

Permit Number:

Software Version Installed: 16.05

Complete the following checklist:

☒ Yes	☐ No*	Is the audible alarm operational?
☒ Yes	☐ No*	Is the visual alarm operational?
☒ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☒ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☒ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☒ Yes	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shutdown? *(Check all that apply)* ☒ Sump/Trench Sensors; ☒ Dispenser Containment Sensors. Did you confirm positive shutdown due to leaks and sensor failure/disconnection? ☒ Yes; ☐ No.
☒ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90%
☐ Yes*	☒ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☒ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☒ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☒ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments (500 characters max. add additional sheets if needed):

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment: **Permit Number:**

☐ Check this box if tank gauging is used only for inventory control

☐ Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☒ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☒ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☒ Yes	☐ No*	Was accuracy of system product level readings tested?
☒ Yes	☐ No*	Was accuracy of system water level readings tested?
☒ Yes	☐ No*	Were all probes reinstalled properly?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD): ☐ Check this box if LLDs are not installed.

Complete the following checklist:

☒ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☒ 3 g.p.h.; ☐ 0.1 g.p.h. ; ☐ 0.2 g.p.h.
☒ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☒ Yes	☐ No*	Was the testing apparatus properly calibrated?
☒ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☒ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☒ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

H. Comments (500 characters max. add additional sheets if needed):

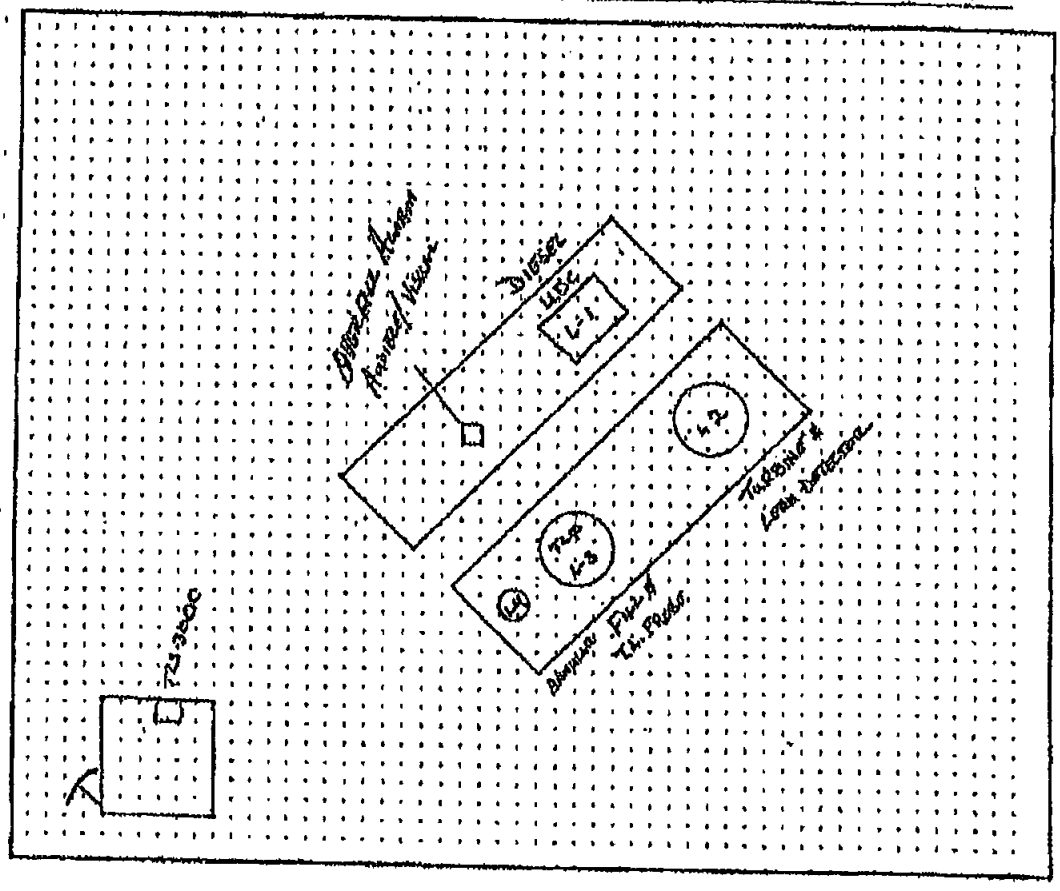
UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Permit Number: 181216

Site Address: 9275 Carmine Sante Fe San Diego CA

UST Monitoring Site Plan

N



Date map was drawn:

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

SWRCB, January 2006

Spill Bucket Testing Report Form

This form is intended for use by contractors performing annual testing of UST spill containment structures. The completed form and printouts from tests (if applicable), should be provided to the facility owner/operator for submittal to the local regulatory agency.

1. FACILITY INFORMATION

Facility Name:	SUPERIOR READY MIX	Date of Testing:	3-13-13
Facility Address:	9245 CAMINO SANTA FE		
Facility Contact:	SHAWN MENDOZA	Phone:	(760)7540556
Date Local Agency Was Notified of Testing :			
Name of Local Agency Inspector *(if present during testing)*:	MIKE MUNN		

2. TESTING CONTRACTOR INFORMATION

Company Name:	**Western Pump, Inc.**
Technician Conducting Test:	CHRIS MIZICKO
Credentials[1]:	☐ CSLB Contractor ☒ ICC Service Tech. ☐ SWRCB Tank Tester ☐ Other *(Specify)*
License Number(s):	**673853**

3. SPILL BUCKET TESTING INFORMATION

Test Method Used:	☒ Hydrostatic	☐ Vacuum	☐ Other
Test Equipment Used:	TAPE MEASURE		Equipment Resolution: 0.0

Identify Spill Bucket *(By Tank Number, Stored Product, etc.)*	1 **T:1 DIESEL**	2	3	4
Bucket Installation Type:	☐ Direct Bury ☒ Contained in Sump	☐ Direct Bury ☐ Contained in Sump	☐ Direct Bury ☐ Contained in Sump	☐ Direct Bury ☐ Contained in Sump
Bucket Diameter:	12"			
Bucket Depth:	14"			
Wait time between applying vacuum/water and start of test:	30 MIN			
Test Start Time (T_I):	10:00			
Initial Reading (R_I):	8 1/2"			
Test End Time (T_F):	11:00			
Final Reading (R_F):	8 1/2"			
Test Duration ($T_F - T_I$):	1 HOUR			
Change in Reading ($R_F - R_I$):	0.0			
Pass/Fail Threshold or Criteria:	0.0			
Test Result:	☒ **Pass** ☐ **Fail**	☐ **Pass** ☐ **Fail**	☐ **Pass** ☐ **Fail**	☐ **Pass** ☐ **Fail**

Comments – *(include information on repairs made prior to testing, and recommended follow-up for failed tests)*

TESTED BUCKET FOR 1 HOUR AND FOUND THE LEVEL DID NOT DROP AT ALL.

CERTIFICATION OF TECHNICIAN RESPONSIBLE FOR CONDUCTING THIS TESTING

I hereby certify that all the information contained in this report is true, accurate, and in full compliance with legal requirements.

Technician's Signature: _____ Date:3/13/13

[1] State laws and regulations do not currently require testing to be performed by a qualified contractor. However, local requirements may be more stringent.

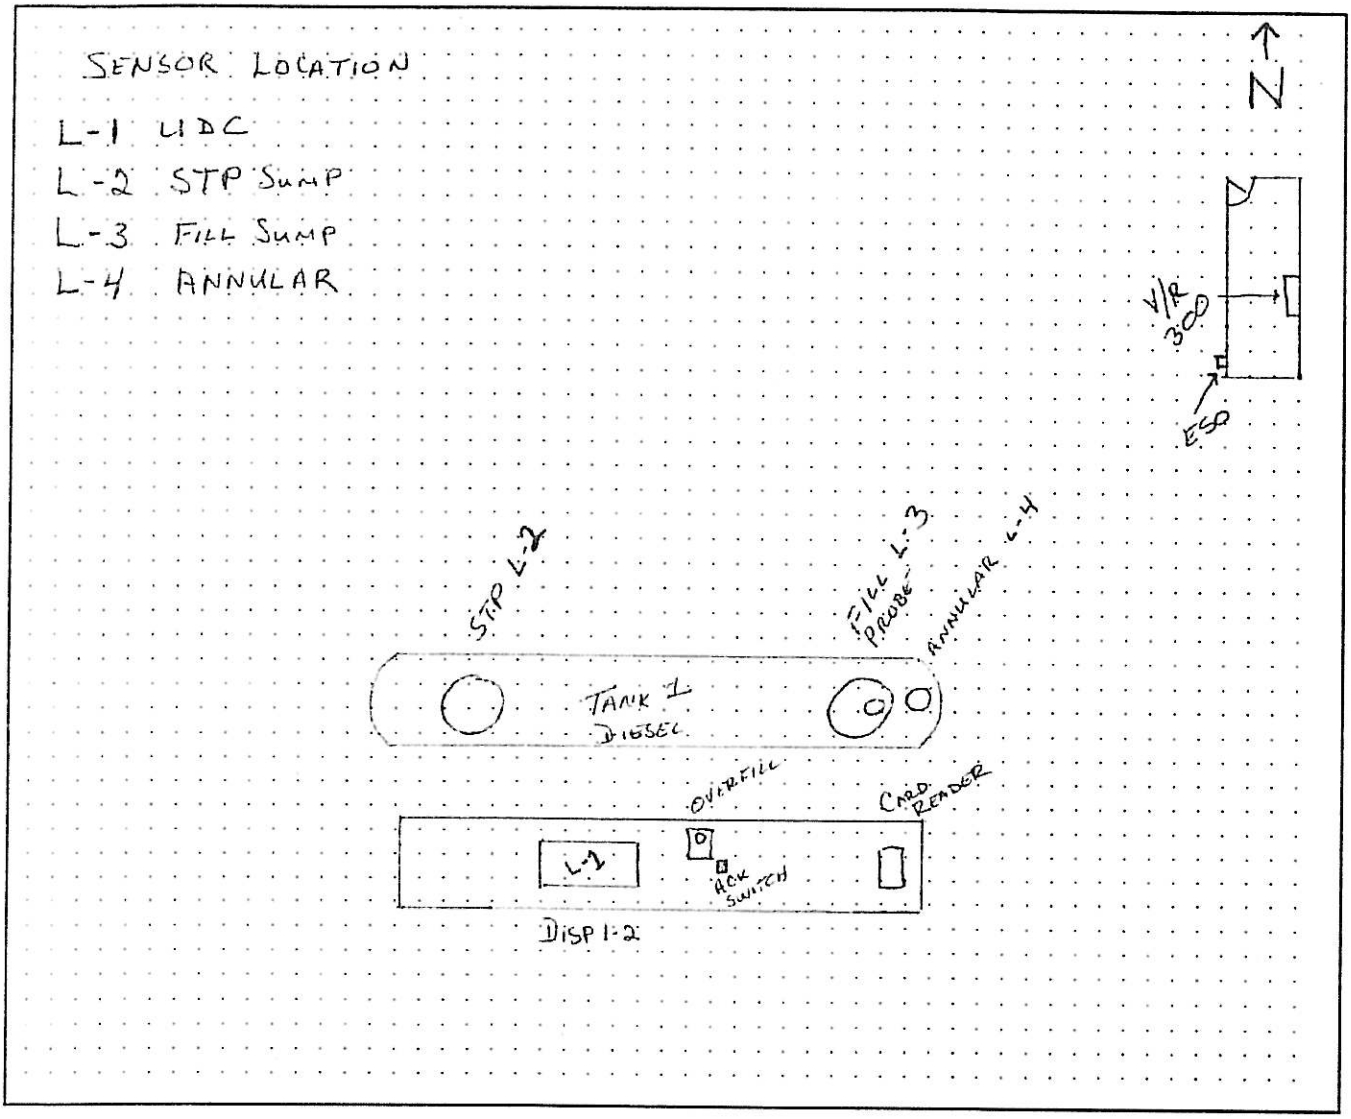
UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Permit Number:

UST Monitoring Site Plan

Site Address:



Date map was drawn: 3-13-14

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

(Instructions on reverse side)

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY

FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in California Code of Regulations (CCR), Title 23, Division 3, Chapter 18, Section 2807,

☐ 500,000 dollars per occurrence
or
☒ 1 million dollars per occurrence

AND

☒ 1 million dollars annual aggregate
or
☐ 2 million dollars annual aggregate

B. Superior Ready Mix Concrete (Name of Tank Owner or Operator) *hereby certifies that it is in compliance with the requirements of Section 2807, California Code of Regulations, Title 23, Division 3, Chapter 18, Article 3, Section 2807. The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:*

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp
State UST Fund	State UST Cleanup Fund P.O. Box 944212 Sacramento, CA 94244-2126	N/A For UST Fund	$990,000 per occurrance and annual aggregate	continuous	yes	yes
Chief Financial Officer Letter	Superior Ready Mix Concrete L.P. 1508 W Mission Rd. Escondido, CA 92029	N/A For this mechanism	$10,000 per occurrence and annual aggregate	annual	yes	yes

Note:

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance and shall maintain compliance with all conditions for participation in the Fund. See instructions.

UNDERGROUND STORAGE TANK

RESPONSE PLAN – PAGE 1

(One form per facility)

TYPE OF ACTION ☑ 1. NEW PLAN ☐ 2. CHANGE OF INFORMATION R01

I. FACILITY INFORMATION

FACILITY ID # (Agency Use Only): 3 7 – 0 0 0 – 1 2 1 3 1 0

BUSINESS NAME (Same as FACILITY NAME or DBA – Doing Business As) R02: Superior Ready Mix Concrete, L.P.

BUSINESS SITE ADDRESS R03: 9245 Camino Santa Fe | CITY R04: San Diego | CA | ZIP CODE R05: 92121

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within 24 hours of discovery. Recovered hazardous materials, unless suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: (Complete only if applicable)

EQUIPMENT	LOCATION	AVAILABILITY
R10: Absorbents, PADS	R20: Maintenance Shops	R30
R11	R21	R31
R12	R22	R32
R13	R23	R33
R14	R24	R34
R15	R25	R35

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME	TITLE
R40: Garret Brouwer	R50: Vice President
R41: Shawn Mendoza	R51: Environmental Coordinator
R42	R52
R43	R53

V. MONITORING INDICATORS

IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE, STEPS TO VERIFY THE RELEASE WILL BE MADE AS FOLLOWS: R60

☒ Additional system testing or data collection ☒ Inspection by qualified persons ☐ Recalibration of equipment ☐ Other (specify):

#121310

RESPONSE PLAN – PAGE 2

(One form per facility)

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released,
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released,
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions,
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred,
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

Designation of Underground Storage Tank (UST) Operator

UST Owner Statement of Understanding and Compliance with UST Requirements

Facility Name: SUPERIOR READY MIX	Facility Permit #: 1 2 1 3 1 0
Facility Address: 9245 CAMINO SANTA FE	Phone: (760) 497-6958 x
City: SAN DIEGO, CA	Zip Code: 92121-

Reason for Submitting this Form *(Check One)* ☒ **Initial Certification** ☐ **Change of Designated Operator** ☒ **Certificate Renewal**

Designated UST Operator(s) for this Facility

PRIMARY DESIGNATED UST OPERATOR

Designated Operator's Name: MART STEVENS
Business Name *(If different from above)*: WESTERN PUMP INC.
Designated Operator's Phone #: (619) 239-9988 x
International Code Council Certification #: 8308491-UC

Relation to UST Facility (Check One)
☐ Owner ☐ Operator ☐ Employee
☐ Service Technician ☒ Third-Party
Expiration Date: 2016-11-25

ALTERNATE 1 ***(Optional)***

Designated Operator's Name: PLEASE REFER TO ALTERNATE LIST
Business Name *(If different from above)*:
Designated Operator's Phone #:
International Code Council Certification #:

Relation to UST Facility (Check One)
☐ Owner ☐ Operator ☐ Employee
☐ Service Technician ☒ Third-Party
Expiration Date:

ALTERNATE 2 ***(Optional)***

Designated Operator's Name: PLEASE REFER TO ALTERNATE LIST
Business Name *(If different from above)*:
Designated Operator's Phone #:
International Code Council Certification #:

Relation to UST Facility (Check One)
☐ Owner ☐ Operator ☐ Employee
☐ Service Technician ☒ Third-Party
Expiration Date:

NOTIFY THE LOCAL REGULATORY AGENCY WITHIN 30 DAYS OF ANY CHANGES TO THIS INFORMATION

I certify that, for the facility indicated at the top of this page, the individual(s) listed above will serve as Designated UST Operator(s). The individual(s) will conduct and document monthly facility inspections and annual facility employee training, in accordance with California Code of Regulations, Title 23, Sections 2715(c) - (f).
Furthermore, I understand and am in compliance with the requirements (statutes, regulations, and local ordinances) applicable to underground storage tanks.

Shawn Mendoza / Superior Ready Mix — **DATE:** 3 / 13 / 13

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Plan Check Number: _____ **Permit Number:** 121310

A. General Information

Facility Name: SUPERIOR READY MIX Bldg. No.: _____

Site Address: 9245 CAMINO SANTA FE City: SAN DIEGO Zip: 92121

Facility Contact Person: SHAUN MENDOZA Contact Phone No.: (858) 695-0666

Make/Model of Monitoring System: VEEDER ROOT/ TLS 300 Date of Testing/Servicing: 2015-03-13

B. Inventory of Equipment Tested/Certified: Check the appropriate boxes to indicate specific equipment installed/ inspected/serviced:

Tank ID: T1 DIESEL	**Tank ID:**
☑ In-Tank Gauging Probe. Model: 837390-109	☐ In-Tank Gauging Probe. Model:
☑ Annular Space or Vault Sensor. Model: 794380-420	☐ Annular Space or Vault Sensor. Model:
☑ Piping Sump / Trench Sensor(s). Model: 794380-208	☐ Piping Sump / Trench Sensor(s). Model:
☑ Fill Sump Sensor(s). Model: 794380-208	☐ Fill Sump Sensor(s). Model:
☑ Mechanical Line Leak Detector. Model: R/J 116-056	☐ Mechanical Line Leak Detector. Model:
☐ Electronic Line Leak Detector. Model: N/A	☐ Electronic Line Leak Detector. Model:
☑ Tank Overfill / High-Level Sensor. Model: 837390-109	☐ Tank Overfill / High-Level Sensor. Model:

Dispenser ID:	**Dispenser ID:**
☐ Dispenser Containment Sensor(s). Model:	☐ Dispenser Containment Sensor(s). Model:
☐ Shear Valve(s).	☐ Shear Valve(s).
☐ Dispenser Containment Float(s) and Chain(s).	☐ Dispenser Containment Float(s) and Chain(s).

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification - I certify that the equipment identified in this document was installed/inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report *(check all that apply)*: ☑ System set-up ☑ Alarm history report

Technician Name (print): Gabriel Pedroza Signature: [signature]

Certification No.: 8065373 License No.: 673853

Testing Company Name: Western Pump, Inc. Phone No.: (619) 239-9988

Testing Company Address: 3235 F Street, San Diego CA 92102 Date of Testing/Servicing: 2015-03-13

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Servicing

Permit Number: _____

Software Version Installed: 16.05

Complete the following checklist:

☑ Yes	☐ No*	Is the audible alarm operational?
☑ Yes	☐ No*	Is the visual alarm operational?
☑ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☑ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☑ Yes	☐ No* ☐ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☑ Yes ☐	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☑ Sump/Trench Sensors; ☑ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☑ Yes; ☐ No.
☑ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90 %
☐ Yes*	☑ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☐ Yes*	☑ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ☐ Product; ☐ Water. If yes, describe causes in Section E, below.
☑ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☑ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments: _____

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment: **Permit Number:** _____

☑ Check this box if tank gauging is used only for inventory control

☐ Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☐ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☐ Yes	☐ No*	Was accuracy of system product level readings tested?
☐ Yes	☐ No*	Was accuracy of system water level readings tested?
☐ Yes	☐ No*	Were all probes reinstalled properly?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD): ☐ Check this box if LLDs are not installed.

Complete the following checklist:

☑ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☑ 3 g.p.h.; ☐ 0.1 g.p.h. ; ☐ 0.2 g.p.h.
☑ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☑ Yes	☐ No*	Was the testing apparatus properly calibrated?
☑ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☑ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☑ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☑ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☑ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☑ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

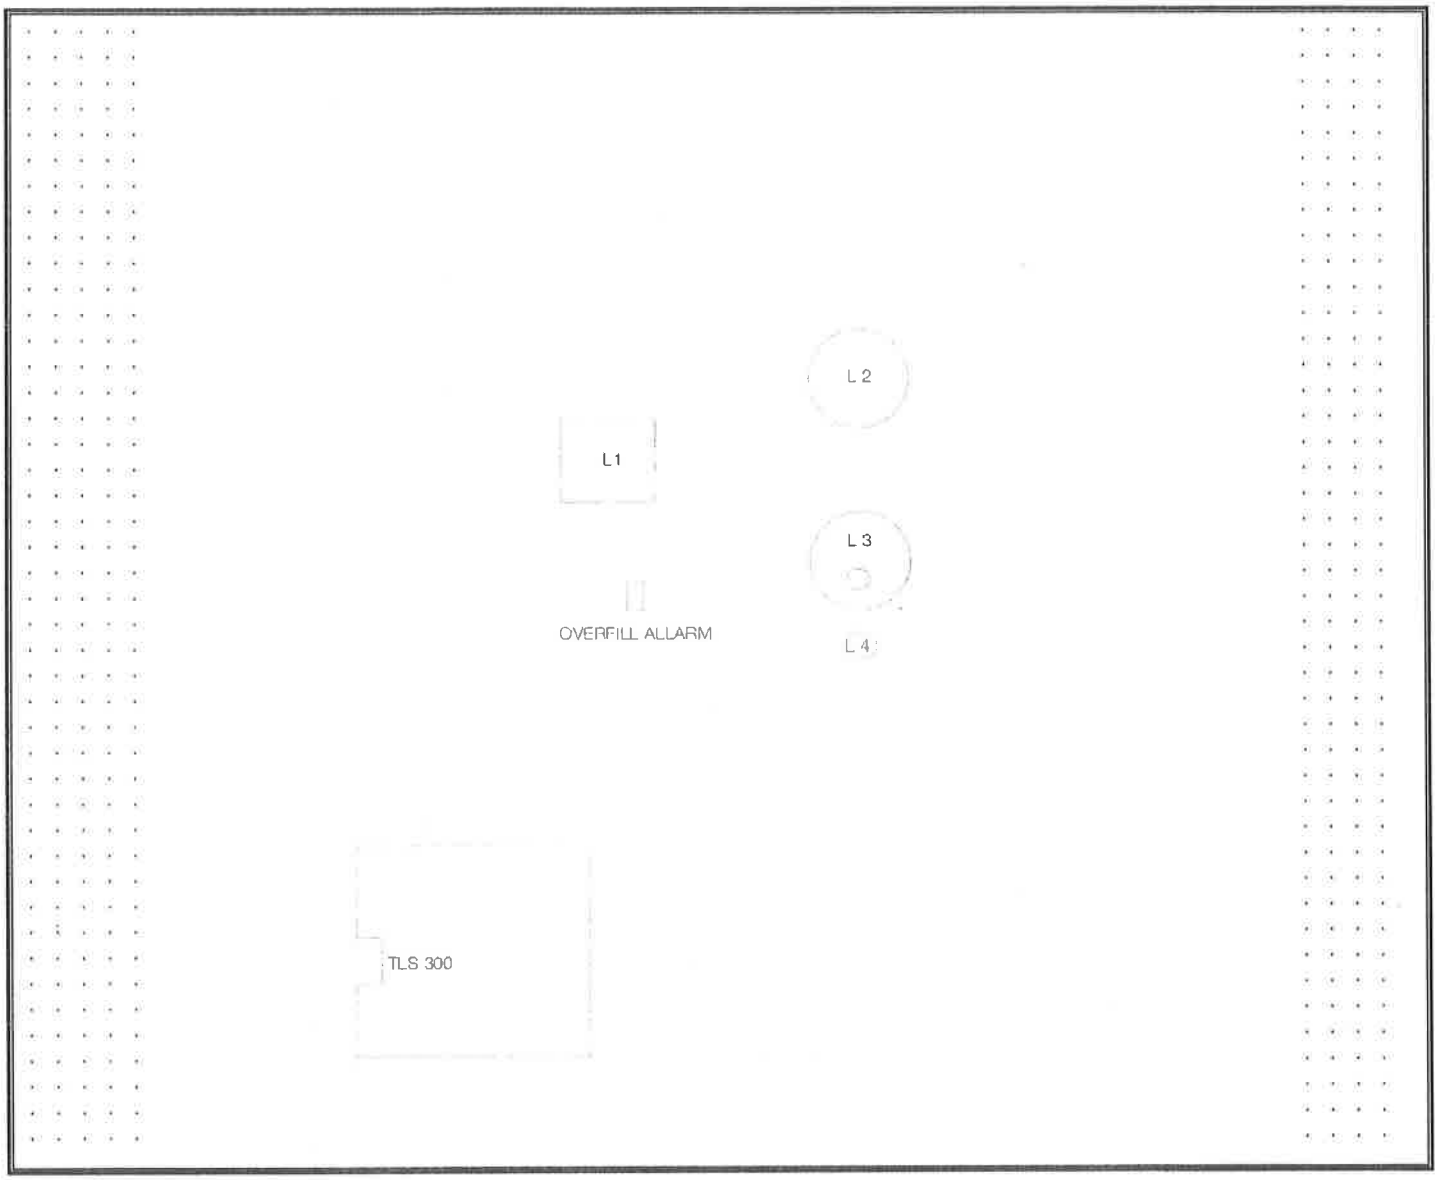
UST Monitoring Site Plan

Site Address: 9245 CAMINO SANTA FE , SAN DIEGO CA 92121



Date map was drawn: 2015-03-13

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

County of San Diego Department of Environmental Health

5500 Overland Ave #170
San Diego, CA 92123
(858) 505-6700

SUBJECT SITE: Tiennial SB989 Test Results. Superior Ready Mix, San Diego CA 92121

Dear Michael Manese,

Enclosed please find the compliance test results for the above referenced site. A summary of the results is shown below and all related test documentation is attached.

Agency Notification Date: March 23rd, 2015

Test Results Overview:

SB989 ☑ Pass ☐ Fail

Western Pump was contracted by the underground storage tank system owner to insure that this facility complies with all of the rules and regulations that govern the operation of underground storage tanks and their related components. If any of the components failed or were not tested at this facility, repairs will be made and the site understands that depending on the type of repair, permits may be required and will be obtained in accordance with your agency's guidelines.

If you have any questions please call the undersigned at: (619) 487-0671

Sincerely,

Compliance Coordinator
O (619) 487-0671 C (619) 446-9506

WESTERN PUMP, INC.
petroleum & lubrication equipment specialists

County of San Diego Department of Environmental Health

5500 Overland Ave #170
San Diego, CA 92123
(858) 505-6700

SUBJECT SITE: Tiennial SB989 Test Results. Superior Ready Mix, San Diego CA 92121

Dear Michael Manese,

Enclosed please find the compliance test results for the above referenced site. A summary of the results is shown below and all related test documentation is attached.

Agency Notification Date: March 23rd, 2015

Test Results Overview:

SB989 ☑ Pass ☐ Fail

Western Pump was contracted by the underground storage tank system owner to insure that this facility complies with all of the rules and regulations that govern the operation of underground storage tanks and their related components. If any of the components failed or were not tested at this facility, repairs will be made and the site understands that depending on the type of repair, permits may be required and will be obtained in accordance with your agency's guidelines.

If you have any questions please call the undersigned at: (619) 487-0671

Sincerely,

Compliance Coordinator
O (619) 487-0671 C (619) 446-9506

UNDERGROUND STORAGE TANK SECONDARY CONTAINMENT & SPILL CONTAINMENT TESTING REPORT FORM

This form is intended for use by contractors performing initial & periodic testing of UST secondary containment systems. Use the appropriate pages of this form to report results for all components tested. The completed form, written test procedures, and printouts from tests (if applicable), must be provided to the facility owner/operator for submittal to the County of San Diego Department of Environmental Health Hazardous Materials Division UST Group.

NOTE: **Effective July 1, 1995, California Small Businesses and California Businesses with 500 employees or less must demonstrate at least $5,000, exclusive of the UST Cleanup Fund, businesses with over 500 employees must demonstrate at least $10,000. (Chap. 6.75 H&SC, Sect. 25299.32)**

The Chief Financial Officer or the owner or operator must sign, under penalty of perjury, a letter worded EXACTLY as follows or you may complete this letter by filling in the blanks with appropriate information:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the Chief Financial Officer for Superior Ready Mix Concrete, L.P.
(Business name, business address, and correspondence address of owner or operator)
1508 W. Mission Road, Escondido, CA 92029

This letter is in support of the use of the **Underground Storage Tank Cleanup Fund** to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by an unauthorized release of petroleum in the amount of at least $10,000 (Dollar Amount) per occurrence and $10,000 (Dollar Amount) annual aggregate coverage.

Underground storage tanks at the following facilities are assured by this letter:

See Attachment
(Name and address of each facility for which financial responsibility is being demonstrated.)
Superior Ready Mix Concrete, L.P. 9245 Camino Santa Fe, San Diego, CA 92121

1.	Amount of annual aggregate coverage being assured by this letter.....	$ 10,000
2.	Total tangible assets.....	$
3.	Total liabilities.....	$
4.	Tangible net worth (subtract line 3 from line 2. Line 4 must be at least 10 times line 1).....	$ 10,000,000

I hereby certify that the wording of this letter is identical to the wording specified in subsection 2808.1(d)(1), Chapter 18, Division 3, Title 23 of the California Code of Regulations.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

SUBJECT SITE: Annual Leak Monitor Certification Results. Superior Ready Mix, San Diego, CA 92121

Anastasiya Irkhin,

Enclosed please find the compliance test results for the above referenced site. A summary of the results is shown below and all related test documentation is attached.

Agency Notification Date: February 18th, 2016

Test Results Overview:

Annual Leak Monitor Certification ☑ Pass ☐ Fail

Western Pump was contracted by the storage tank system owner to insure that this facility complies with all of the rules and regulations that govern the operation of storage tanks and their related components. If any of the components failed or were not tested at this facility, repairs will be made and the site understands that depending on the type of repair, permits may be required and will be obtained in accordance with your agency's guidelines.

If you have any questions please call the undersigned at: (619) 578-2190

Sincerely,

Sarah Pressnall - Compliance Coordinator
O (619) 578-2190 O (619) 846-7748

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Authority Cited: Chapter 6.7, Health and Safety Code; Chapter 16, Division 3, Title 23, California Code of Regulations

This form must be used to document installation, testing and servicing of monitoring equipment. A separate certification or report must be prepared for each monitoring system control panel by the technician who performs the work. A copy of this form must be provided to the tank system owner/operator. The owner/operator must submit a copy of this form to the local agency regulating UST systems within 30 days of test date.

Plan Check Number: _____ **Permit Number:** _____

*If the facility contains more tanks or dispensers, copy this form. Include information for every tank and dispenser at the facility.

C. Certification - I certify that the equipment identified in this document was installed/inspected/serviced in accordance with the manufacturers' guidelines. Attached to this Certification is information (e.g. manufacturers' checklists) necessary to verify that this information is correct and a Plot Plan showing the layout of monitoring equipment. For any equipment capable of generating such reports, I have also attached a copy of the report *(check all that apply)*: ☑ System set-up ☑ Alarm history report

Technician Name (print): Jeff Cooper Signature: Jeffrey A Cooper

Certification No.: A22278 License No.: 673853

Testing Company Name: Western Pump, Inc. Phone No.: (619) 239-9988

Testing Company Address: 3235 F Street, San Diego, CA 92102 Date of Testing/Servicing: 2016-03-08

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

D. Results of Testing/Servicing

Permit Number: _____

Software Version Installed: 16.05

Complete the following checklist:

☑ Yes	☐ No*	Is the audible alarm operational?
☑ Yes	☐ No*	Is the visual alarm operational?
☑ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☑ Yes	☐ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☑ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☑ Yes ☐	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☑ Sump/Trench Sensors; ☑ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☑ Yes; ☐ No.
☑ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90 %
☐ Yes*	☑ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☑ Yes*	☐ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ❑ Product; ☑ Water. If yes, describe causes in Section E, below.
☑ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☑ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments: _____

DIESEL STP SUMP HAD APPROX 1/2 GALLON OF WATER . REMOVED WATER AND HAD CUSTOMER DISPOSED OF PROPERLY .

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment: Permit Number: _____

☑ Check this box if tank gauging is used only for inventory control

☐ Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☐ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☐ Yes	☐ No*	Was accuracy of system product level readings tested?
☐ Yes	☐ No*	Was accuracy of system water level readings tested?
☐ Yes	☐ No*	Were all probes reinstalled properly?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD): ☐ Check this box if LLDs are not installed.

Complete the following checklist:

☑ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☑ 3 g.p.h.; ☐ 0.1 g.p.h. ; ☐ 0.2 g.p.h.
☑ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☑ Yes	☐ No*	Was the testing apparatus properly calibrated?
☑ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☑ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☑ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☑ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☑ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☑ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

H. Comments: _____

I. Results of Vacuum/Pressure Monitoring Equipment Testing

This page should be used to document testing and servicing of vacuum and pressure interstitial sensors. A copy of this form must be included with the Monitoring System Certification Form, which must be provided to the tank system owner/operator. The owner/operator must submit a copy of the Monitoring System Certification Form to the local agency regulating UST systems within 30 days of test date.

Manufacturer:	**Model:**	**System Type:** ☐ Pressure; ☐ Vacuum

Sensor ID	
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail

How was interstitial communication verified?

☐ Leak Introduced at Far End of Interstitial Space;[1] ☐ Gauge; ☐ Visual Inspection; ☐ Other *(Describe in Sec. J, below)*

Was vacuum/pressure restored to operating levels in all interstitial spaces? ☐ Yes ☐ No *(If no, describe in Sec. J, below)*

J. Comments (500 characters max. use additional sheets if needed):

N/A

[1] If the sensor successfully detects a simulated vacuum/pressure leak introduced in the interstitial space at the furthest point from the sensor, vacuum/pressure has been demonstrated to be communicating throughout the interstice.

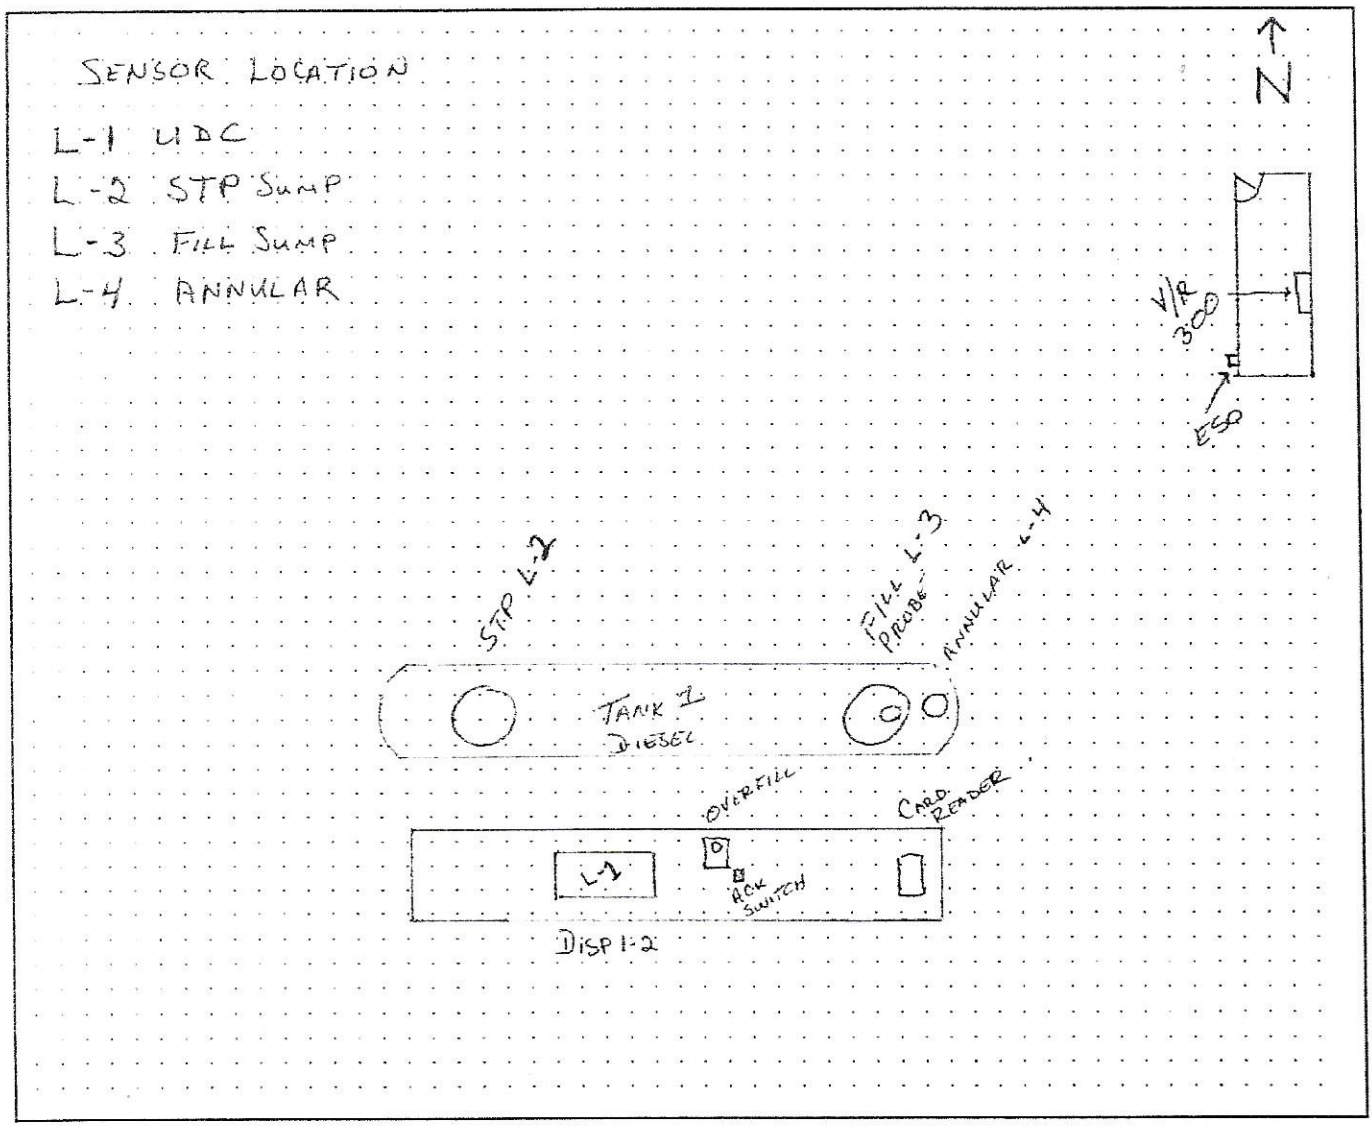
UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Permit Number:

UST Monitoring Site Plan

Site Address:



Date map was drawn: 3/8/16

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

CONSENT TO CONDUCT INSPECTION GRANTED BY: Shawn Mendoza TITLE: Environmental Coordinator

INTRODUCTION:
An annual UST monitoring certification inspection was conducted today with Shawn Mendoza, Superior Ready Mix, and Jeff Cooper, Western Pump Technician.

Verified Jeff Cooper's certifications (ICC: 813067 exp: 8/19/2016) & (Veeder Root A22278 exp: 6/16/2016)

UST training provided by Martin Stevens on 3/7/2016 per training records reviewed on-site during inspection.

Records reviewed: Alarm history, monthly designated operator inspection records, owner/operator statement, maintenance records, annual monitoring certifications on file & financial responsibility documentation.

SB989 secondary containment testing performed 4/09/2015 and passed.

Facility has one UST on this permit location for diesel fuel and one dispenser.
A) All sensors tested and passed.
B) Overfill tested and passed.
C) Spill bucket tested and passed.
D) Mechanical line leak detector tested and passed at 3gph leak test at 10psi.
E) Fail safe and sensor out tested and passed.

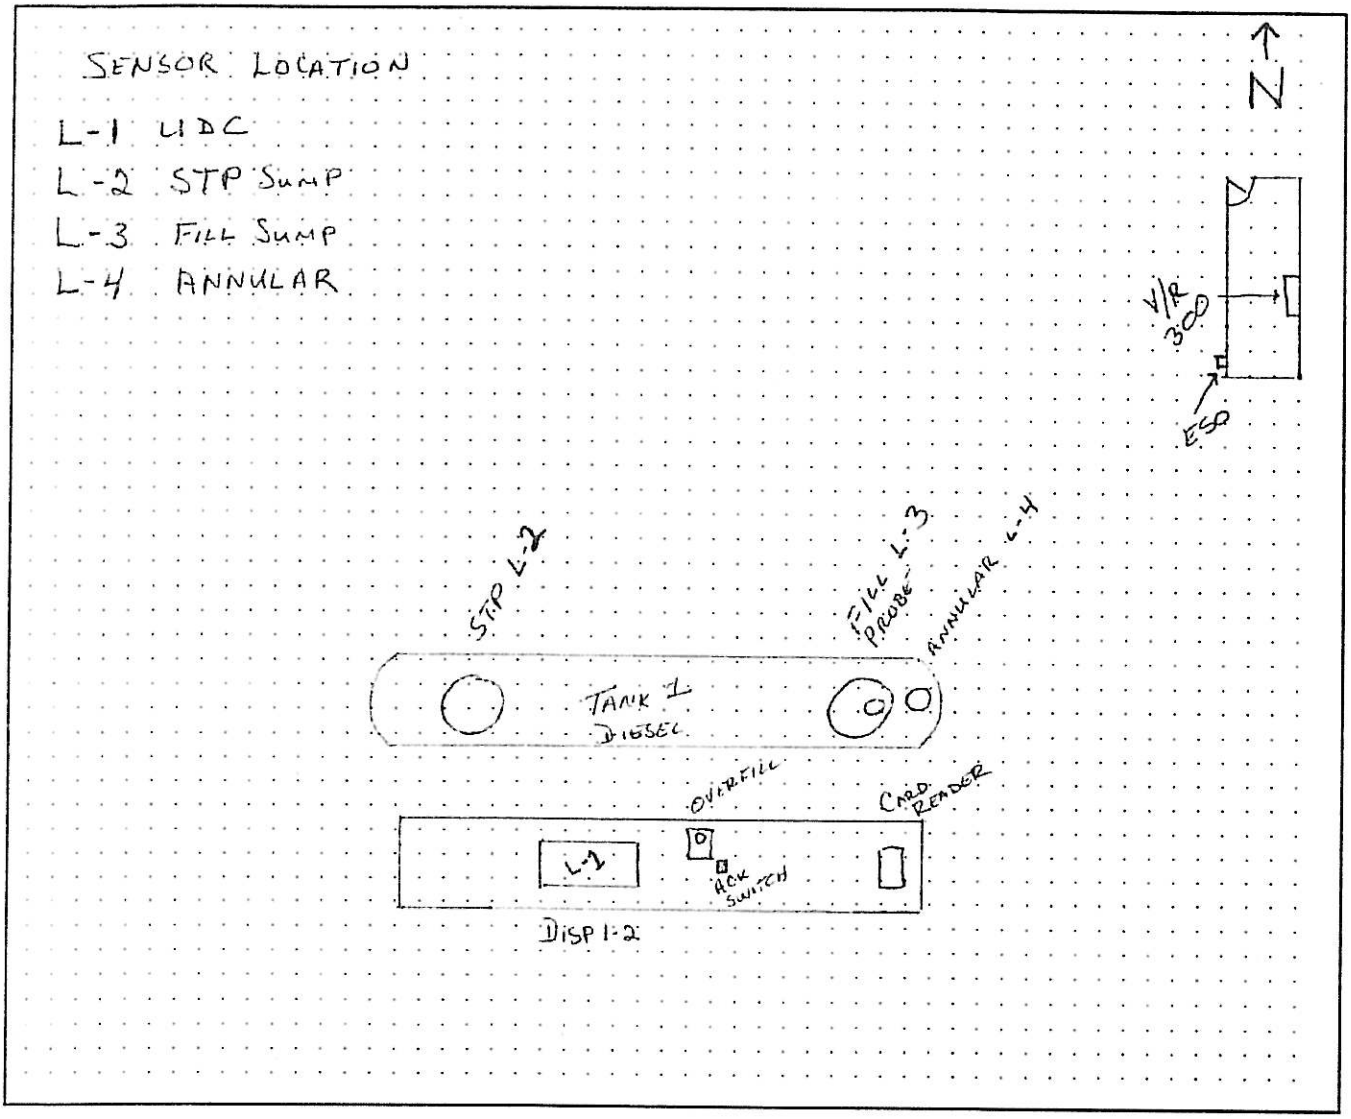
UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

Permit Number:

UST Monitoring Site Plan

Site Address:



Date map was drawn: 3-13-14

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY

FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in California Code of Regulations (CCR), Title 23, Division 3, Chapter 18, Section 2807,

☐ 500,000 dollars per occurrence
or
☒ 1 million dollars per occurrence

AND

☒ 1 million dollars annual aggregate
or
☐ 2 million dollars annual aggregate

B. Superior Ready Mix Concrete (Name of Tank Owner or Operator) *hereby certifies that it is in compliance with the requirements of Section 2807, California Code of Regulations, Title 23, Division 3, Chapter 18, Article 3, Section 2807. The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:*

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp
State UST Fund	State UST Cleanup Fund P.O. Box 944212 Sacramento, CA 94244-2126	N/A For UST Fund	$990,000 per occurrance and annual aggregate	continuous	yes	yes
Chief Financial Officer Letter	Superior Ready Mix Concrete L.P. 1508 W Mission Rd. Escondido, CA 92029	N/A For this mechanism	$10,000 per occurrence and annual aggregate	annual	yes	yes

Note:

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance and shall maintain compliance with all conditions for participation in the Fund. See instructions.

UNDERGROUND STORAGE TANK

RESPONSE PLAN – PAGE 1

(One form per facility)

TYPE OF ACTION ☑ 1. NEW PLAN ☐ 2. CHANGE OF INFORMATION R01

I. FACILITY INFORMATION

FACILITY ID # (Agency Use Only): 3 7 – 0 0 0 – 1 2 1 3 1 0

BUSINESS NAME (Same as FACILITY NAME or DBA – Doing Business As) R02: Superior Ready Mix Concrete, L.P.

BUSINESS SITE ADDRESS R03: 9245 Camino Santa Fe | CITY R04: San Diego | CA | ZIP CODE R05: 92121

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within 24 hours of discovery. Recovered hazardous materials, unless suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: (Complete only if applicable)

EQUIPMENT	LOCATION	AVAILABILITY
R10: Absorbents, PADS	R20: Maintenance Shops	R30
R11	R21	R31
R12	R22	R32
R13	R23	R33
R14	R24	R34
R15	R25	R35

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME	TITLE
R40: Garret Brouwer	R50: Vice President
R41: Shawn Mendoza	R51: Environmental Coordinator
R42	R52
R43	R53

V. MONITORING INDICATORS

IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE, STEPS TO VERIFY THE RELEASE WILL BE MADE AS FOLLOWS: R60

☒ Additional system testing or data collection ☒ Inspection by qualified persons ☐ Recalibration of equipment ☐ Other (specify):

UNDERGROUND STORAGE TANK

RESPONSE PLAN – PAGE 2

(One form per facility)

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released,
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released,
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions,
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred,
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

VII. OWNER/OPERATOR SIGNATURE

NOTE: **Effective July 1, 1995, California Small Businesses and California Businesses with 500 employees or less must demonstrate at least $5,000, exclusive of the UST Cleanup Fund, businesses with over 500 employees must demonstrate at least $10,000. (Chap. 6.75 H&SC, Sect. 25299.32)**

The Chief Financial Officer or the owner or operator must sign, under penalty of perjury, a letter worded EXACTLY as follows or you may complete this letter by filling in the blanks with appropriate information:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the Chief Financial Officer for Superior Ready Mix Concrete, L.P.
(Business name, business address, and correspondence address of owner or operator)
1508 W. Mission Road, Escondido, CA 92029

This letter is in support of the use of the **Underground Storage Tank Cleanup Fund** to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by an unauthorized release of petroleum in the amount of at least $10,000 (Dollar Amount) per occurrence and $10,000 (Dollar Amount) annual aggregate coverage.

Underground storage tanks at the following facilities are assured by this letter:

See Attachment
(Name and address of each facility for which financial responsibility is being demonstrated.)
Superior Ready Mix Concrete, L.P. 9245 Camino Santa Fe, San Diego, CA 92121

1.	Amount of annual aggregate coverage being assured by this letter.....	$ 10,000
2.	Total tangible assets.....	$
3.	Total liabilities.....	$
4.	Tangible net worth (subtract line 3 from line 2. Line 4 must be at least 10 times line 1).....	$ 10,000,000

I hereby certify that the wording of this letter is identical to the wording specified in subsection 2808.1(d)(1), Chapter 18, Division 3, Title 23 of the California Code of Regulations.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

Executed at Escondido, CA

D. Results of Testing/Servicing

Permit Number: _____

Software Version Installed: 16.05

Complete the following checklist:

☑ Yes	☐ No*	Is the audible alarm operational?
☑ Yes	☐ No*	Is the visual alarm operational?
☑ Yes	☐ No*	Were all sensors visually inspected, functionally tested, and confirmed operational?
☐ Yes	☒ No*	Were all sensors installed at lowest point of secondary containment and positioned so that other equipment will not interfere with their proper operation?
☐ Yes	☐ No* ☑ N/A	If alarms are relayed to a remote monitoring station, is all communications equipment (e.g. modem) operational?
☑ Yes ☐	☐ No* ☐ N/A	For pressurized piping systems, does the turbine automatically shut down if the piping secondary containment monitoring system detects a leak, fails to operate, or is electrically disconnected? If yes: which sensors initiate positive shut-down? *(Check all that apply)* ☑ Sump/Trench Sensors; ☑ Dispenser Containment Sensors. Did you confirm positive shut-down due to leaks and sensor failure/disconnection? ☑ Yes; ☐ No.
☑ Yes	☐ No* ☐ N/A	For tank systems that utilize the monitoring system as the primary tank overfill warning device (i.e. no mechanical overfill prevention valve is installed), is the overfill warning alarm visible and audible at the tank fill point(s) and operating properly? If so, at what percent of tank capacity does the alarm trigger? 90% ____%
☑ Yes*	☐ No	Was any monitoring equipment replaced? If yes, identify specific sensors, probes, or other equipment replaced and list the manufacturer name and model for all replacement parts in Section E, below.
☑ Yes*	☐ No	Was liquid found inside any secondary containment systems designed as dry systems? *(Check all that apply)* ❑ Product; ☑ Water. If yes, describe causes in Section E, below.
☑ Yes	☐ No*	Was monitoring system set-up reviewed to ensure proper settings? Attach set up reports, if applicable
☑ Yes	☐ No*	Is all monitoring equipment operational per manufacturer's specifications?

*** In Section E below, describe how and when these deficiencies were or will be corrected.**

E. Comments:

REPLACED MECHANICAL LEAK DETECTOR FXIDV. WITNESSED BY INSPECTOR WITH PASSING RESULTS. WATER WAS REMOVED FROM STP SUMP AND LEFT ON SITE FOR PROPER DISPOSAL BY CUSTOMER. SENSOR WAS FOUND IN CENTER OF SUMP WHEN MANWAY WAS OPENED.SENSOR WAS PLACED AT LOW POINT OF SUMP AFTER REMOVAL OF WATER.

UNDERGROUND STORAGE TANK MONITORING SYSTEM CERTIFICATION

F. In-Tank Gauging / SIR Equipment: Permit Number: _____

☑ Check this box if tank gauging is used only for inventory control

☐ Check this box if no tank gauging or SIR equipment is installed

This section must be completed if in-tank gauging equipment is used to perform leak detection monitoring.

Complete the following checklist:

☐ Yes	☐ No*	Has all input wiring been inspected for proper entry and termination, including testing for ground faults?
☐ Yes	☐ No*	Were all tank gauging probes visually inspected for damage and residue buildup?
☐ Yes	☐ No*	Was accuracy of system product level readings tested?
☐ Yes	☐ No*	Was accuracy of system water level readings tested?
☐ Yes	☐ No*	Were all probes reinstalled properly?
☐ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

G. Line Leak Detectors (LLD):

☐ Check this box if LLDs are not installed.

Complete the following checklist:

☑ Yes	☐ No* ☐ N/A	For equipment start-up or annual equipment certification, was a leak simulated to verify LLD performance? *(Check all that apply)* Simulated leak rate: ☑ 3 g.p.h.; ☐ 0.1 g.p.h. ; ☐ 0.2 g.p.h.
☑ Yes	☐ No*	Were all LLDs confirmed operational and accurate within regulatory requirements?
☑ Yes	☐ No*	Was the testing apparatus properly calibrated?
☑ Yes	☐ No* ☐ N/A	For mechanical LLDs, does the LLD restrict product flow if it detects a leak?
☐ Yes	☐ No* ☑ N/A	For electronic LLDs, does the turbine automatically shut off if the LLD detects a leak?
☐ Yes	☐ No* ☑ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system is disabled or disconnected?
☐ Yes	☐ No* ☑ N/A	For electronic LLDs, does the turbine automatically shut off if any portion of the monitoring system malfunctions or fails a test?
☐ Yes	☐ No* ☑ N/A	For electronic LLDs, have all accessible wiring connections been visually inspected?
☑ Yes	☐ No*	Were all items on the equipment manufacturer's maintenance checklist completed?

*** In Section H below, describe how and when these deficiencies were or will be corrected.**

H. Comments: _____

I. Results of Vacuum/Pressure Monitoring Equipment Testing

This page should be used to document testing and servicing of vacuum and pressure interstitial sensors. A copy of this form must be included with the Monitoring System Certification Form, which must be provided to the tank system owner/operator. The owner/operator must submit a copy of the Monitoring System Certification Form to the local agency regulating UST systems within 30 days of test date.

Manufacturer:	**Model:**	**System Type:** ☐ Pressure; ☐ Vacuum

Sensor ID	
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail
	Component(s) Monitored by this Sensor: _____ Sensor Functionality Test Result: ☐ Pass; ☐ Fail Interstitial Communication Test Result: ☐ Pass; ☐ Fail

How was interstitial communication verified?

☐ Leak Introduced at Far End of Interstitial Space;[1] ☐ Gauge; ☐ Visual Inspection; ☐ Other *(Describe in Sec. J, below)*

Was vacuum/pressure restored to operating levels in all interstitial spaces? ☐ Yes ☐ No *(If no, describe in Sec. J, below)*

J. Comments (500 characters max. use additional sheets if needed):

N/A

[1] If the sensor successfully detects a simulated vacuum/pressure leak introduced in the interstitial space at the furthest point from the sensor, vacuum/pressure has been demonstrated to be communicating throughout the interstice.

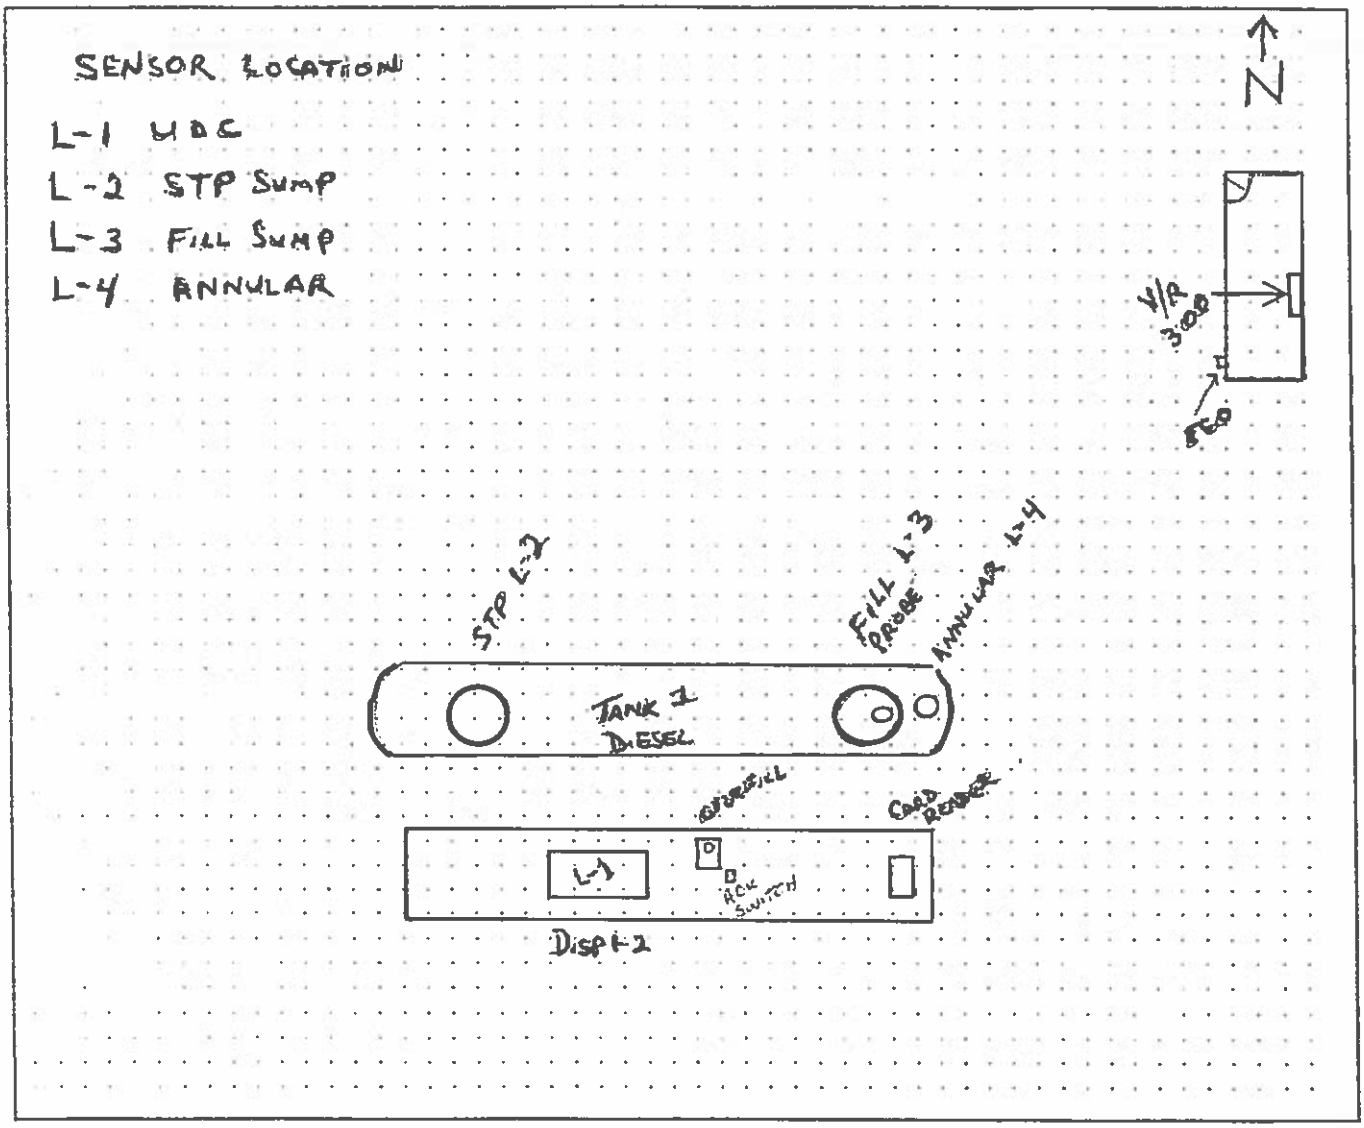
UST Monitoring Site Plan

Site Address



Date map was drawn: 03/08/2017

Instructions

If you already have a diagram that shows all required information, you may include it, rather than this page, with your Monitoring System Certification. On your site plan, show the general layout of tanks and piping. Clearly identify locations of the following equipment, if installed: monitoring system control panels; sensors monitoring tank annular spaces, sumps, dispenser pans, spill containers, or other secondary containment areas; mechanical or electronic line leak detectors; and in-tank liquid level probes (if used for leak detection). In the space provided, note the date this Site Plan was prepared.

State Water Resources Control Board
Division of Financial Assistance
P.O. Box 944212
Sacramento, CA 94244-2121
(Instructions on reverse side)

For State Use Only

CERTIFICATION OF FINANCIAL RESPONSIBILITY

FOR UNDERGROUND STORAGE TANKS CONTAINING PETROLEUM

A. I am required to demonstrate Financial Responsibility in the required amounts as specified in California Code of Regulations (CCR), Title 23, Division 3, Chapter 18, Section 2807,

☐ 500,000 dollars per occurrence
or
☒ 1 million dollars per occurrence

AND

☒ 1 million dollars annual aggregate
or
☐ 2 million dollars annual aggregate

B. Superior Ready Mix Concrete (Name of Tank Owner or Operator) *hereby certifies that it is in compliance with the requirements of Section 2807, California Code of Regulations, Title 23, Division 3, Chapter 18, Article 3, Section 2807. The mechanisms used to demonstrate financial responsibility as required by Section 2807 are as follows:*

C. Mechanism Type	Name and Address of Issuer	Mechanism Number	Coverage Amount	Coverage Period	Corrective Action	Third Party Comp
State UST Fund	State UST Cleanup Fund P.O. Box 944212 Sacramento, CA 94244-2126	N/A For UST Fund	$990,000 per occurrance and annual aggregate	continuous	yes	yes
Chief Financial Officer Letter	Superior Ready Mix Concrete L.P. 1508 W. Mission Rd. Escondido, CA 92029	N/A For this mechanism	$10,000 per occurrence and annual aggregate	annual	yes	yes

Note:

Note: If you are using the State Fund as any part of your demonstration of financial responsibility, your execution and submission of this certification also certifies that you are in compliance and shall maintain compliance with all conditions for participation in the Fund. See instructions.

D. Facility Name	Facility Address
Superior Ready Mix Concrete L.P.	9245 Camino Santa Fe San Diego, CA 92121
Facility Name	Facility Address
Facility Name	Facility Address
E. Signature of Tank Owner or Operator — Date: 3/6/17	Name and Title of Tank Owner or Operator: Arnold Veldkamp, Secretary
Signture of Witness or Notary — Date: 3/6/17	Name of Witness or Notary: Richard Brouwer, CFO

CFR (Revised 11/08) FILE: Original - Local Agency Copies - Facility/Site(s)

NOTE: **Effective July 1, 1995, California Small Businesses and California Businesses with 500 employees or less must demonstrate at least $5,000, exclusive of the UST Cleanup Fund, businesses with over 500 employees must demonstrate at least $10,000. (Chap. 6.75 H&SC, Sect. 25299.32)**

The Chief Financial Officer or the owner or operator must sign, under penalty of perjury, a letter worded EXACTLY as follows or you may complete this letter by filling in the blanks with appropriate information:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the Chief Financial Officer for Superior Ready Mix Concrete, L.P.
(Business name, business address, and correspondence address of owner or operator)
1508 W. Mission Rd., Escondido, CA 92029

This letter is in support of the use of the **Underground Storage Tank Cleanup Fund** to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by an unauthorized release of petroleum in the amount of at least $ 10,000 (Dollar Amount) per occurrence and $10,000 (Dollar Amount) annual aggregate coverage.

Underground storage tanks at the following facilities are assured by this letter:

See Attachment
(Name and address of each facility for which financial responsibility is being demonstrated.)
Superior Ready Mix Concrete, L.P. 9245 Camino Santa Fe, San Diego, CA 92121

1.	Amount of annual aggregate coverage being assured by this letter.....	$ 10,000
2.	Total tangible assets.....	$
3.	Total liabilities.....	$
4.	Tangible net worth (subtract line 3 from line 2. Line 4 must be at least 10 times line 1).....	$ 10,000,000

I hereby certify that the wording of this letter is identical to the wording specified in subsection 2808.1(d)(1), Chapter 18, Division 3, Title 23 of the California Code of Regulations.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

UNDERGROUND STORAGE TANK

RESPONSE PLAN – PAGE 1

(One form per facility)

TYPE OF ACTION ☑ 1. NEW PLAN ☐ 2. CHANGE OF INFORMATION R01

I. FACILITY INFORMATION

FACILITY ID # (Agency Use Only): 3 7 – 0 0 0 – 1 2 1 3 1 0

BUSINESS NAME (Same as FACILITY NAME or DBA – Doing Business As) R02: Superior Ready Mix Concrete, L.P.

BUSINESS SITE ADDRESS R03: 9245 Camino Santa Fe | CITY R04: San Diego | CA | ZIP CODE R05: 92121

II. SPILL CONTROL AND CLEANUP METHODS

This plan addresses unauthorized releases from UST systems and supplements the emergency response plans and procedures in the facility's Hazardous Materials Business Plan

- If safe to do so, facility personnel will take immediate measures to control or stop any release (e.g., activate pump shut-off, etc.) and, if necessary, safely remove remaining hazardous material from the UST system.
- Any release to secondary containment will be pumped or otherwise removed within 24 hours of discovery. Recovered hazardous materials, unless suitable for their intended use, will be managed as hazardous waste.
- Absorbent material will be used to contain and clean up manageable spills of hazardous materials. Absorbent material which has become too saturated to be effective or which is no longer intended for use will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. Used absorbent material, reusable or waste, will be stored in a properly labeled and sealed container. Waste material shall be disposed appropriately.
- Facility personnel will determine whether any water removed from secondary containment systems, or from clean-up activity, has been in contact with any hazardous material. If the water is contaminated, it will be managed as hazardous waste unless a waste determination in accordance with 22 CCR §66262.11 finds that it is non-hazardous. If the water has a petroleum sheen (i.e., rainbow colors), it is contaminated. A thick floating petroleum layer may not necessarily display rainbow colors. Water (hazardous or non-hazardous) from sumps, spill containers, etc. will not be disposed to storm water systems.
- We will review secondary containment systems for possible deterioration if any of the following conditions occur:
  1. Hazardous material in contact with secondary containment is not compatible with the material used for secondary containment;
  2. Secondary containment is prone to damage from any equipment used to remove or clean up hazardous material collected in secondary containment;
  3. Hazardous material, other than the product/waste stored in the primary containment system, is placed inside secondary containment to treat or neutralize released product/waste, and the added material or resulting material from such a combination is not compatible with secondary containment.

III. SPILL CONTROL AND CLEAN-UP EQUIPMENT

PERIODIC MAINTENANCE: Spill control and clean-up equipment kept permanently on-site is listed in the facility's Hazardous Materials Business Plan. This equipment is inspected at least monthly, and after each use, supplies are replenished as needed. Defective equipment is repaired or replaced as necessary.

EQUIPMENT NOT PERMANENTLY ON-SITE, BUT AVAILABLE FOR USE IF NEEDED: (Complete only if applicable)

EQUIPMENT	LOCATION	AVAILABILITY
R10: Absorbents, PADS	R20: Maintenance Shops	R30
R11	R21	R31
R12	R22	R32
R13	R23	R33
R14	R24	R34
R15	R25	R35

IV. RESPONSIBLE PERSONS

THE FOLLOWING PERSON(S) IS/ARE RESPONSIBLE FOR AUTHORIZING ANY WORK NECESSARY UNDER THIS RESPONSE PLAN:

NAME	TITLE
R40: Garret Brouwer	R50: Vice President
R41: Shawn Mendoza	R51: Environmental Coordinator
R42	R52
R43	R53

V. MONITORING INDICATORS

IF MONITORING INDICATES A POSSIBLE UNAUTHORIZED RELEASE, STEPS TO VERIFY THE RELEASE WILL BE MADE AS FOLLOWS: R60

☒ Additional system testing or data collection ☒ Inspection by qualified persons ☐ Recalibration of equipment ☐ Other (specify):

#121310

UNDERGROUND STORAGE TANK

RESPONSE PLAN – PAGE 2

(One form per facility)

VI. REPORTING AND RECORD KEEPING

We will report/record any overfill, spill, or unauthorized release from a UST system as indicated in this plan.

Recordable Releases: Any unauthorized release from primary containment which the UST operator is able to clean up within eight (8) hours after the release was detected or should reasonably have been detected, and which does not escape from secondary containment, does not increase the hazard of fire or explosion, and does not cause any deterioration of secondary containment, must be recorded in the facility's monitoring records. Monitoring records must include:

- The UST operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous substances released,
- A description of the actions taken to control and clean up the release;
- The method and location of disposal of the released hazardous substances, and whether a hazardous waste manifest was or will be used;
- A description of actions taken to repair the UST and to prevent future releases;
- A description of the method used to reactivate interstitial monitoring after replacement or repair of primary containment.

Reportable Releases: Any overfill, spill, or unauthorized release which escapes from secondary containment (or primary containment if no secondary containment exists), increases the hazard of fire or explosion, or causes any deterioration of secondary containment, is a reportable release. Reportable releases are also recordable.

Within 24 hours after a reportable release has been detected, or should have been detected, we will notify the local agency administering the UST program of the release, investigate the release, and take immediate measures to stop the release. If necessary, or if required by the local agency, remaining stored product/waste will be removed from the UST to prevent further releases or facilitate corrective action. If an emergency exists, we will notify the State Office of Emergency Services.

Within five (5) working days of a reportable release, we will submit to the local agency a full written report containing all of the following information to the extent that the information is known at the time of filing the report:

- The UST owner's or operator's name and telephone number;
- A list of the types, quantities, and concentrations of hazardous materials released,
- The approximate date of the release;
- The date on which the release was discovered;
- The date on which the release was stopped;
- A description of actions taken to control and/or stop the release;
- A description of corrective and remedial actions, including investigations which were undertaken and will be conducted to determine the nature and extent of soil, ground water or surface water contamination due to the release;
- The method(s) of cleanup implemented to date, proposed cleanup actions, and a schedule for implementing the proposed actions,
- The method(s) and location(s) of disposal of released hazardous materials and any contaminated soils, groundwater, or surface water.
- Copies of any hazardous waste manifests used for off-site transport of hazardous wastes associated with clean-up activity;
- A description of proposed methods for any repair or replacement of UST system primary/secondary containment systems;
- A description of additional actions taken to prevent future releases.

We will follow the reporting procedures described above if any of the following conditions occur:

- A recordable unauthorized release can not be cleaned up or is still under investigation within eight (8) hours of detection;
- Released hazardous substances are discovered at the UST site or in the surrounding area;
- Unusual operating conditions are observed, including erratic behavior of product dispensing equipment, sudden loss of product, or the unexplained presence of water in the tank, unless system equipment is found to be defective and is immediately repaired or replaced, and no leak has occurred,
- Monitoring results from UST system monitoring equipment/methods indicate that a release may have occurred, unless the monitoring equipment is found to be defective and is immediately repaired, recalibrated, or replaced, and additional monitoring does not confirm the initial results

Record Retention: Monitoring records and written reports of unauthorized releases must be maintained on-site for at least 3 years. Hazardous waste shipping/disposal records (e.g., manifests) must be maintained for at least 3 years from the date of shipment.

VII. OWNER/OPERATOR SIGNATURE

CERTIFICATION: I certify that the information provided herein is true and accurate to the best of my knowledge.

NOTE: **Effective July 1, 1995, California Small Businesses and California Businesses with 500 employees or less must demonstrate at least $5,000, exclusive of the UST Cleanup Fund, businesses with over 500 employees must demonstrate at least $10,000. (Chap. 6.75 H&SC, Sect. 25299.32)**

The Chief Financial Officer or the owner or operator must sign, under penalty of perjury, a letter worded EXACTLY as follows or you may complete this letter by filling in the blanks with appropriate information:

LETTER FROM CHIEF FINANCIAL OFFICER

I am the Chief Financial Officer for Superior Ready Mix Concrete, L.P.
(Business name, business address, and correspondence address of owner or operator)

1508 W. Mission Rd., Escondido, CA 92029

This letter is in support of the use of the **Underground Storage Tank Cleanup Fund** to demonstrate financial responsibility for taking corrective action and/or compensating third parties for bodily injury and property damage caused by an unauthorized release of petroleum in the amount of at least $ 10,000 (Dollar Amount) per occurrence and $10,000 (Dollar Amount) annual aggregate coverage.

Underground storage tanks at the following facilities are assured by this letter:

See Attachment
(Name and address of each facility for which financial responsibility is being demonstrated.)

Superior Ready Mix Concrete, L.P. 9245 Camino Santa Fe, San Diego, CA 92121

1.	Amount of annual aggregate coverage being assured by this letter.....	$ 10,000
2.	Total tangible assets.....	$
3.	Total liabilities.....	$
4.	Tangible net worth (subtract line 3 from line 2. Line 4 must be at least 10 times line 1).....	$ 10,000,000

I hereby certify that the wording of this letter is identical to the wording specified in subsection 2808.1(d)(1), Chapter 18, Division 3, Title 23 of the California Code of Regulations.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

CONSENT TO CONDUCT INSPECTION GRANTED BY: Shawn Mendoza TITLE: Environmental Coordinator

INTRODUCTION:
An annual monitoring certification for underground storage tank (UST) requirements and a routine inspection for hazardous materials, hazardous waste, and Aboveground Petroleum Storage Act (APSA) regulations was conducted with the consent of Shawn Mendoza, Environmental Coordinator. Mike Scheele, Plant Manager, was also present for today's inspection. This business manufactures concrete. At the time of inspection, this business is subject to hazardous materials business plan (HMBP) reporting requirements, is currently a conditionally exempt small quantity generator (CESQG) of hazardous waste, and is currently subject to APSA and UST management regulations.

The following items were observed during today's inspection:

-Mudslide/sandstorm concrete cleaner (hydroxyacetic acid)
-Lubricating oil, various grades
-Concrete additives:
- Eucon NW
- Eucon X15
- Eucon SRA Floor
- Accelguard NCA
- Plastol
- Eucon DS

-Moxie water repellent
-Diesel Exhaust Fluid (DEF)
-Ethylene glycol
-Used oil
-Waste antifreeze
-Used oily absorbent

This facility also maintains large outdoor tanks for new motor oil and waste oil. Per Shawn Mendoza and Mike Scheele, these tanks are empty and no longer in use.

COUNTY OF SAN DIEGO

SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

Annual underground storage tank monitoring certification conducted by Mark Bridgwater and John Navarro of Western Pump.

VIOLATION # 1
2060015 (RD) Failure of sensor to be located in the proper position/location. 23 CCR 2630(d), 2641(a)

Underground Storage Tanks: 26971

Classification: Class II

Observations:
Water from a recent rain event (<5 gallons) was observed in the turbine sump of the tank. Water was present on both low points of the sump. Alarms were not triggered for this water intrusion. The sump sensor was observed hanging from a pipe in the sump such that the bottom of the sensor hung above the apex of the curvature of the underground storage tank, and did not make contact with the low point of the sump. Designated Underground Storage Tank Operator (DUSTO) reports from the past year indicated that the sensor was always at the lowest point in the sump, and alarm history indicated no alarms being triggered since last year's monitoring certification.. Per Shawn Mendoza and Mike Scheele, Superior Ready Mix personnel do not ever open the tank covers.

This violation was previously cited during an inspection dated 03/13/2014.

Corrective Action Completed During Inspection:
The rainwater was removed from the sump and handled as a hazardous waste. The sump sensor was replaced at the lowest point in the sump.

VIOLATION # 2
1010004 Chemical inventory incomplete or not submitted in CERS. HSC 25505(a)(1); 25506; 25507; and 25508(a)(1)(A)

Classification: Class II

Observations:
Prior to today's inspection, none of the concrete additives detailed in the introduction nor the Moxie water repellent were reported through this facility's hazardous materials inventory through the California Environmental Reporting System. NFPA labels affixed to the concrete additive tanks indicated health hazards of 1, and fire hazards of 1 for some items. A review of the Safety Data Sheet for Moxie water repellent revealed acute health hazards and a high pH for this material.

Corrective Action Completed During Inspection:
The above items were added to this facility's reported inventory through CERS. Concrete additives are already present on this business's site map.

VIOLATION # 3
HMD1005 Emergency contact not provided or current. HSC 25508.1(f)

Classification: Class II

Observations:
Prior to today's inspection, per Shawn Mendoza and Mike Scheele, the primary emergency contact as declared through CERS no longer works at this location as of January 2017.

Corrective Action Completed During Inspection:
This business's emergency contact information was updated through CERS to include Mike Scheele, Plant Manager, as the new primary emergency contact.

VIOLATION # 4
HMD0224 Failed to mark date on empty container larger than 5 gallons and/or manage it within one year. 22 CCR 66261.7(e),(f)

Classification: Minor

Observations:
A significant number (greater than 5) of empty containers without marked dates were observed being stored throughout the facility, notably in the now-unused maintenance shop.

Corrective Action Due By:04/07/2017
Immediately label all empty containers larger than 5 gallons with the date on which that container was emptied, and manage all empty containers within 1 year of empty date. **Within 30 days**, provide certification to Hazardous Materials Division that corrective actions have been achieved by completing and submitting the Corrective Action Form to Document Return to Compliance found on the last page of this report.

VIOLATION # 5
3030010 Accumulated waste too long (>180 or 270 days) (>90 days for an acutely hazardous waste). (40 CFR 262.34(e) and (f).) HSC 25201(a); 22 CCR 66262.34(d)

Classification: Minor

Observations:
The container for waste antifreeze was labeled with an accumulation start date of 03/12/2014. The container for oily absorbent was labeled with an accumulation start date of 05/05/2015. This facility has accumulated hazardous waste beyond allowed accumulation times for this facility's generator status.

Corrective Action Due By:04/07/2017
Immediately schedule a pickup of all hazardous waste that has been accumulated beyond allowed accumulation times with your registered hazardous waste hauler. **Within 30 days**, provide certification to Hazardous Materials Division that corrective actions have been achieved by completing and submitting the Corrective Action Form to Document Return to Compliance found on the last page of this report **along with the generator's copy manifest for this hazardous waste pickup**.

INSPECTION REMARKS:
1) The mechanical line leak detector failed during today's inspection. A new line leak detector was obtained and installed at the time of inspection, which passed. Please update your CERS submittal with the model number and information of this new leak detector, along with information on the model number on your Automatic Tank Gauge (ATG).

2) There is currently a significant amount of water (no less than 3 inches in depth) in the secondary containment area designated for the now-empty motor oil and waste oil tanks. Secondary containment for petroleum-based materials must remain free of debris, per your Spill Prevention Control and Countermeasures (SPCC) Plan and APSA requirements. **Please remove all water and debris from this area immediately.**

3) Employee training documentation reviewed up to 2016. Per Shawn Mendoza, employee training covering HMBP and SPCC spill response is conducted on an annual basis every March.

4) DUSTO records reviewed. Maintain DUSTO records on site available for review dating back 3 years.

5) Hazardous waste manifests reviewed. Maintain documentation of proper hazardous waste disposal available for review dating back 3 years.

6) EPA ID number verified active: CAL000114184

7) An updated Chief Financial Officer (CFO) letter from 2016-2017 was on site available for review. **Please upload this updated document to CERS, taking care to first remove any outdated versions.**

8) Secondary containment testing last completed 04/09/2015.

COUNTY OF SAN DIEGO
SUPPLEMENTAL COMPLIANCE INSPECTION REPORT

9) Observed that the hazardous waste label for used oily absorbent was missing the generator's address, contents, and hazardous properties. This information was added to the label at the time of inspection - minor violation corrected on site.

10) One container of lubricating oil and one tote of Moxie were observed without labels clearly indicating the contents of the containers. Be advised that containers with new, usable materials must be labeled with the contents **within 10 days** of discovery. The containers were marked with the contents at the time of inspection.

5	☒	3030010 Accumulated waste too long (>180 or 270 days) (>90 days for an acutely hazardous waste). (40 CFR 262.34(e) and (f).) HSC 25201(a); 22 CCR 66262.34(d)
	☐	3030013 Failed to accumulate hazardous waste in a container that is in good condition. (40 CFR 262.34(d)(2); 265.171.) 22 CCR 66262.34(d)(2)
	☐	3030015 Failed to accumulate or store hazardous waste in a lined/compatible container. (40 CFR 262.34(d)(2); 265.172) 22 CCR 66262.34(d)(2)
	☐	3030017 Failed to properly close hazardous waste container(s). (40 CFR 262.34(d)(2); 265.173.) 22 CCR 66262.34(d)(2)
	☐	3030019 Failed to inspect hazardous waste storage area at least weekly. (40 CFR 262.34(d)(2); 265.174.) 22 CCR 66262.34(d)(2)
	☐	3030022 Failed to properly separate incompatible waste. (40 CFR 262.34(d)(2); 265.177.) 22 CCR 66262.34(d)(2)
	☐	3030030 Failed to maintain and/or operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents. (40 CFR 262.34(d)(4), 265.31.) 22 CCR 66262.34(d)(2)
	☐	3030036 Failed to maintain adequate aisle space. (40 CFR 262.34(d)(4); 265.35.) 22 CCR 66262.34(d)(2)
	☐	3010022 Failed to post, next to the telephone, emergency information containing the location of emergency equipment, contact names, and numbers. (40 CFR 262.34(d)(5)(ii).) 22 CCR 66262.34(d)(2)
	☐	3020001 Failed to ensure employees are trained for hazardous waste handling, compliance with regulations, and emergency response procedures. (40 CFR 262.34(d)(5)(iii).) 22 CCR 66262.34(d)(2)
	☐	3030032 Failed to maintain or have emergency equipment, supplies, or equivalents. 1) An internal communication or alarm system; 2) A device, such as a telephone; 3) Portable fire extinguishers, fire control equipment, spill control equipment, and decontamination equipment; and 4) Water at adequate volume and pressure (40 CFR 262.34(d)(4); 265.32) 22 CCR 66262.34(d)(2)
	☐	3030039 Failed to implement contingency plan during an emergency, spill/ release. (40 CFR 262.34(d)(5)(iv).) 22 CCR 66262.34(d)(2)

Hazardous Waste Tank Systems for SQGs ONLY

	☐	3030024 Failed to maintain sufficient freeboard of 2 ft in uncovered tanks to prevent overtopping unless the tank is equipped with a containment structure, a drainage control system or a diversion structure with a capacity that equals or exceeds the volume of the top 2 ft of the tank. (40 CFR 62.34(d)(3); 265.201(b)(c).) 22 CCR 66262.34(d)(2)
	☐	3030025 Failed to provide an overfill protection device on continuously fed hazardous waste tank. (40 CFR 262.34(d)(3); 265.201(b)(4).) 22 CCR 66262.34(d)(2)
	☐	3030027 Failed to conduct daily tank inspection of the discharge system, monitoring equipment, and tank level. (40 CFR 265.201(c)(1), 265.201(c)(2), 265.201(c)(3), 262.34(d)(3).) 22 CCR 66262.34(d)(2)
	☐	3030028 Failed to conduct weekly inspections of the construction materials, fixtures, and surrounding areas of the hazardous waste tank. (40 CFR 265.201(c)(4); 265.201(c)(5); 262.34(d)(3).) 22 CCR 66262.34(d)(2)
	☐	3050007 Failed to properly decontaminate and document closure of a hazardous waste tank system. (40 CFR 265.201(f).) 22 CCR 67383.3
	☐	HMD 1612 Hazardous waste improperly stored in a tank system causing leaks, corrosion, or failure. (40 CFR 265.201(b).) 22 CCR 66262.34(d)
	☐	HMD 1614 Failed to pre-notify the CUPA in writing prior to closing a hazardous waste tank system. 22 CCR 67383.3(a)(1)
	☐	HMD 1615 Failed to properly accumulate ignitable or reactive waste in a tank system. (40 CFR 265.201(g).) 22 CCR 66262.34(d)(2)

COUNTY OF SAN DIEGO

COMPLIANCE INSPECTION REPORT

Hazardous Materials and Hazardous Waste (continued)

Hazardous Waste Requirements for SQGs and LQGs
RECORD KEEPING/OPERATIONAL REQUIREMENTS

#		VIOLATION DESCRIPTION
	☐	3010001 Unified Program Facility (UPF) permit not obtained for the generation of hazardous waste. HSC 25404.1; SDCC 68.905
	☐	3010029 The facility has not submitted complete and accurate facility information in CERS. HSC 25404(e)(4); 27 CCR 15188(b)
	☐	3010002 Failed to obtain and/or maintain an active EPA ID. 22 CCR 66262.12
	☐	3010008 Failed to properly complete a uniform hazardous waste manifest. 22 CCR 66262.23(a)
	☐	3010009 Failed to complete the hazardous waste manifest Exception Requirement. 22 CCR 66262.42
	☐	3010010 Failed to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for 3 years. HSC 25160.2(b)(3), 25185(a)(4); 22 CCR 66262.40(a)
	☐	3010011 Failed to send hazardous waste manifest copies to the Department of Toxic Substances Control (DTSC). 22 CCR 66262.23(a)(4)
	☐	3010013 Failed to meet the consolidated manifesting requirements for waste shipment. HSC 25160.2; 22 CCR 66262.40(a)
	☐	3010014 Failed to retain disposal records of spent lead batteries for 3 years. 22 CCR 66266.81(a)(4)(B)
	☐	3030006 Failed to determine if a hazardous waste is restricted or prohibited from land disposal. 22 CCR 66268.7(a)
	☐	3010016 Failure of recycler who recycles more than 100 kilograms per month of recyclable material under a claim that the material qualifies for exclusion or exemption to provide and submit in CERS the required information. HSC 25143.10(a), (c), and/or (d)
	☐	HMD 0149 Failed to keep disposal receipts for drained used oil filters and/or drained fuel filters for 3 years. HSC 25250.22; 22 CCR 66266.130
	☐	HMD 0148 Failed to have copies of analytical records, waste analysis records, and/or waste determination results for 3 years. 22 CCR 66262.40(c)
	☐	HMD 0140 Failed to have Land Disposal Restriction documentation onsite for 3 years. 22 CCR 66268.7(a)(8)
	☐	3250005 Failed to obtain a Treatment, Storage and Disposal Facility (TSDF) permit or authorization to store/treat/dispose of hazardous waste. HSC 25201(a)
	☐	3050005 Failed to have adequate records demonstrating claim of exemption for Excluded Recyclable Materials. HSC 25143.2(f); 22 CCR 66261.2(g)
	☐	3210001 Failed to notify the CUPA in CERS for onsite hazardous waste treatment/tiered permitting. HSC 25201(a)
	☐	HMD 0138 Manifest signed by the TSDF not available for inspection. 22 CCR 66262.40(a)

Hazardous Waste Requirements for SQGs and LQGs
DISPOSAL AND TRANSPORTATION

	☐	3010007 Failed to prepare a hazardous waste manifest for the transport of a waste for off-site transfer, treatment, storage, or disposal. HSC 25160(b)(1) or (2), 25160.2(b)(9); 22 CCR 66262.20(a)
	☐	3030005 Failed to make a proper waste determination. 22 CCR 66262.11, 66262.40(c)
	☐	3050001 Failed to use a California registered hazardous waste transporter to transport hazardous waste. HSC 25163(a); 22 CCR 66263.41
	☐	3050002 Failed to properly dispose of hazardous waste at an authorized facility. HSC 25189.5(a); 25189(c),(d); 25189.2(c)
	☐	3130002 Impermissible dilution of hazardous waste. 22 CCR 66268.3(a)
	☐	HMD 0305 Disposed of used oil illegally. HSC 25250.5(a); 25189.5(a); 25189(c),(d); 25189.2(c)
	☐	HMD 0306 Disposed of hazardous waste latex paint improperly. HSC 25217.1

Hazardous Waste Requirements for SQGs and LQGs
STORAGE AND HANDLING

#		VIOLATION DESCRIPTION
	☐	3030001 Failed to meet requirements, when handling, and storing spent lead acid batteries. 22 CCR 66266.81(a)(1)
	☐	3030003 Failed to properly manage 'damaged' spent lead acid batteries. 22 CCR 66266.81(b)
	☐	3030004 Failed to properly manage, store, label, and/or recycle used oil filters and/or used fuel filters. HSC 25250.22; 22 CCR 66266.130
	☐	3050004 Failed to properly manage contaminated used oil as a hazardous waste. HSC 25250.7(a), (c)
	☐	HMD 0222 Failed to properly label Excluded Recyclable Materials (ERM). HSC 25143.9(a).
	☐	HMD 0216 Failed to label hazardous material container within 10 days after the container was discovered to be mislabeled or inadequately labeled. HSC 25124(b)(3)(A); 22 CCR 66262.34(f)
	☐	HMD 0217 Failed to repackage damaged/deteriorated hazardous material container within 96 hours. HSC 25124(b)(3)(B); 22 CCR 66262.34(f)
	☐	HMD 0219 Failed to properly segregate used oil &/or fuel drained from filters. HSC 25250.22(b)(4); 22 CCR 66266.130(c)(6)
	☐	HMD 0221 Failed to comply with hazardous waste satellite container regulation. 22 CCR 66262.34(e)
	☐	HMD 0223 Failed to properly empty container, failed to manage non-empty container, or inner liner removed from a container. 22 CCR 66261.7(b), (d) and/or (r); 66262.34(f)
4	☒	HMD 0224 Failed to mark date on empty container larger than 5 gallons and/or manage it within one year. 22 CCR 66261.7(e),(f)

Universal Waste Handler Requirements

	☐	3010004 Failed to obtain an EPA ID number from DTSC or US EPA prior to storing 5,000 kg or more of universal waste. 22 CCR 66273.32(a),(b)
	☐	3020002 Failed to maintain universal waste handler training records for 3 years. 22 CCR 66273.36(c),(d)
	☐	3020003 Failed to properly train handlers of universal waste in universal waste management and response procedures. 22 CCR 66273.36(a),(b)
	☐	3030008 Failed to properly label or mark a universal waste (non-Conditionally Exempt Small Quantity Universal Waste Generator). 22 CCR 66273.34
	☐	3030011 Failed to properly dispose of universal waste within one year. 22 CCR 66273.35(a) and/or (b)
	☐	3030046 Failed to keep records of offsite universal waste (UW) shipment(s) available for inspection for 3 years. HSC 25185(a); 22 CCR 66273.39(c), (d)(2)
	☐	3030051 Failed to meet the accumulation standards for universal waste aerosol containers and waste handling. HSC 25201.16(f)
	☐	3040004 Failed to manage universal waste in a manner to prevent release(s) to the environment. 22 CCR 66273.33; 66273.33.5
	☐	3050003 Disposal of universal waste (UW) to an unauthorized point. HSC 25189.5(a), 25189(c),(d); 25189.2(c); 22 CCR 66273.31(a)

COUNTY OF SAN DIEGO

COMPLIANCE INSPECTION REPORT

Aboveground Petroleum Storage Act (APSA) Program

INSPECTION DATE: **03/08/2017** PAGE **7** OF **11**
RECORD ID #: **DEH2002-HUPFP-121310**

Each violation checked below is for the section(s) of the California Health and Safety Code (HSC) or San Diego County Code ("SDCC") indicated in italics. Incorporated provisions of Title 40 of the Code of Federal Regulations (CFR) are noted for reference. All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use a DEH Corrective Action Form (HM-926) or other correspondence to document your return to compliance. Please call (858) 505-6880 or your Specialist if you have any questions.

GENERAL APSA FACILITY REQUIREMENT
(Chapters 6.67 and 6.11 of Division 20 of the HSC)

VIOLATION DESCRIPTION

- ☐ 4010001 Failed to prepare and implement a written spill prevention control and countermeasures (SPCC) Plan in accordance with 40 CFR Part 112 (sec. 112.3). HSC 25270.4.5(a)
- ☐ 4010013 Plan does not conform to and/or facility is not fully implementing, the latest version of the regulations in 40 CFR Part 112. HSC 25270.4.5(a) (see detail below)
- ☐ 4010032 Failed to submit a tank facility statement or update/certify business plan annually. HSC 25270.6(a)(1) or (a)(2)
- ☐ 4010033 Failed to pay the APSA program fee or obtain Unified Program Facility Permit. HSC 25270.6(b), SDCC 68.905
- ☐ 4040001 Failed to immediately, upon discovery, report a one-barrel (42 gallons) or greater release of petroleum. HSC 25270.8
- ☐ 4010038 Failed to report required program data electronically. HSC 25404(e)(4), HSC 25270.6(b), SDCC 68.905
- ☐ 4010037 Failed to meet provisions of APSA exemption for oil-filled electrical equipment including containment and visual inspection. HSC 25270.2(a)(4)

REQUIREMENTS BASED ON 40 CFR 112.1-112.6

- ☐ 4010035 Failed to meet the conditions of a Qualified Facility. (40 CFR 112.3(a)(1), 112.3(g), 112.6.) HSC 25270.4.5(a)
- ☐ 4010003 Failed to have a professional engineer certify and review the SPCC Plan. (40 CFR 112.3(d).) HSC 25270.4.5(a)
- ☐ 4010008 Failed to maintain a copy of the Plan on site (applies if facility is manned at least 4 hours/day). (40 CFR 112.3(e)(1).) HSC 25270.4.5(a)
- ☐ 4010010 Failed to make SPCC plan technical amendment(s) when the facility has had a change in: design, construction, operation, or maintenance which affects the facility's discharge potential. (40 CFR 112.5(a).) HSC 25270.4.5(a)
- ☐ 4010009 Failed to perform a 5-year review of the SPCC Plan. (40 CFR 112.5(b).) HSC 25270.4.5(a)
- ☐ 4010011 Failed to have a professional engineer certify technical amendments. (40 CFR 112.5(c). HSC 25270.4.5(a)

GENERAL SPCC REQUIREMENTS
BASED UPON 40 CFR 112.7

- ☐ 4010012 Failed to prepare a SPCC plan that follows the sequence of rule and/or to cross-reference; failed to prepare plan in writing; failed to prepare a plan that addresses additional procedures/methods/equipment not fully operational. (40 CFR 112.7 and 112.7(a)(1).) HSC 25270.4.5(a)
- ☐ 4010002 Failed to obtain facility management approval to commit resources to fully implement the SPCC Plan. (40 CFR 112.7.) HSC 25270.4.5(a)
- ☐ 4010014 Failed to discuss alternative environmental protection to SPCC requirements within SPCC Plan. (40 CFR 112.7(a)(2).) HSC 25270.4.5(a)
- ☐ 4010015 Failed to have an adequate facility diagram, including location of oil storage/transfer areas and connecting pipes, or no facility diagram included in SPCC plan. (40 CFR 112.7(a)(3).) HSC 25270.4.5(a)
- ☐ 4010016 Failed to adequately describe the physical layout of facility, including location of oil storage/transfer areas/connecting pipes or no description of physical layout included in SPCC Plan. (40 CFR 112.7(a)(3), 112.7(a)(3)(i-vi).) HSC 25270.4.5(a)

GENERAL SPCC REQUIREMENTS
BASED UPON 40 CFR 112.7 (continued)

VIOLATION DESCRIPTION

- ☐ 4010017 Plan does not contain procedures for reporting a discharge if facility has no Facility Response Plan. (40 CFR 112.7(a)(4).) HSC 25270.4.5(a)
- ☐ 4010018 Discharge procedures are not adequately addressed if facility has no Facility Response Plan. (40 CFR 112.7(a)(5).) HSC 25270.4.5(a)
- ☐ 4010019 Failed to include prediction of the direction, rate of flow, and total quantity of oil which could be discharged from facility as a result of each type of equipment failure in the SPCC Plan. (40 CFR 112.7(b).) HSC 25270.4.5(a)
- ☐ 4010020 General Containment: Failed to provide, or discuss within the plan, appropriate containment/diversionary structures/equipment designed to address the typical failure, so that any discharge will not escape containment before cleanup occurs. (40 CFR 112.7(c).) HSC 25270.4.5(a)
- ☐ 4010004 Failed to have a professional engineer clearly denote and demonstrate the impracticability of appropriate containment/diversionary structures. (40 CFR 112.7(d).) HSC 25270.4.5(a)
- ☐ 4010005 Failed to prepare an Oil Spill Contingency Plan following the provisions of 40 CFR Part 109 for impracticability claim. This is not required if facility has a Facility Response Plan. (40 CFR 112.7(d)(1).) HSC 25270.4.5(a)
- ☐ 4010006 Failed to provide a written commitment of manpower, equipment, materials for impracticability claim. (40 CFR 112.7(d)(2).) HSC 25270.4.5(a)
- ☐ 4010021 Failed to address in SPCC plan/maintain complete records of: inspections, tests/procedures for 3 years. (40 CFR 112.7(e), 112.8(c)(6).) HSC 25270.4.5(a)
- ☐ 4020001 Failed to train oil-handling personnel on operation/maintenance of equipment to prevent discharges; discharge procedure protocols; applicable laws, rules, and regulations; general facility operations; AND the contents of the SPCC Plan. (40 CFR 112.7(f)(1).) HSC 25270.4.5(a)
- ☐ 4010022 Failed to designate person accountable for discharge prevention who reports to facility management. (40 CFR 112.7(f)(2).) HSC 25270.4.5(a)
- ☐ 4010023 Failed to conduct annual discharge prevention briefings to ensure understanding of SPCC plan. (40 CFR 112.7(f)(3).) HSC 25270.4.5(a)
- ☐ 4030001 Failed to address security of oil handling areas/valves, prevent unauthorized access to starter controls, cap/blank flange connections not in service and provide appropriate lighting to prevent vandalism and assist in discovery of discharges. (40 CFR 112.7(g).) HSC 25270.4.5(a)
- ☐ 4030002 Failure of the secondary containment, and/or rack drainage to flow to a catchment basin, treatment system, or quick drainage system and hold at least the maximum capacity of the largest single compartment of any tank car or tank truck. (40 CFR 112.7(h)(1).) HSC 25270.4.5(a)
- ☐ 4030003 Failed to provide system to prevent vehicular departure before disconnect from transfer lines. (40 CFR 112.7(h)(2).) HSC 25270.4.5(a)
- ☐ 4030004 Failed to inspect lowermost drains and outlets prior to filling and departure of tank car or tank truck. (40 CFR 112.7(h)(3).) HSC 25270.4.5(a)
- ☐ 4030016 Failed to evaluate field-constructed storage tank for brittle fracture and take appropriate action. (40 CFR 112.7(i).) HSC 25270.4.5(a)
- ☐ 4010007 Failed to include discussion of conformance with requirements listed in 40 CFR Part 112. (40 CFR 112.7(j).) HSC 25270.4.5(a)

COUNTY OF SAN DIEGO

COMPLIANCE INSPECTION REPORT

APSA Program (continued)

INSPECTION DATE: **03/08/2017** PAGE **8** OF **11**
RECORD ID #: **DEH2002-HUPFP-121310**

SPCC REQUIREMENTS BASED UPON 40 CFR 112.8

Refer to APSA (HSC Chapter 6.67) for definition of "storage tank"

#	VIOLATION DESCRIPTION
☐	4010027 Failure to restrain drainage from diked storage areas by valves to prevent discharge. (40 CFR 112.8(b)(1).) HSC 25270.4.5(a)
☐	4030005 Failure to use valves of manual, open and closed design, for drainage of diked areas. (40 CFR 112.8(b)(2).) HSC 25270.4.5(a)
☐	4030008 Facility drainage system from undiked areas not designed/equipped to retain oil or return to facility and/or failed to ensure catchment basin not in an area subject to flooding. (40 CFR 112.8(b)(3), 112.8(b)(4).) HSC 25270.4.5(a)
☐	4030009 Failed to provide at least two lift pumps and permanently install one pump where drainage waters are treated in more than one treatment unit and such treatment is continuous. (40 CFR 112.8(b)(5).) HSC 25270.4.5(a)
☐	4030012 Storage tanks not compatible with materials stored or conditions such as pressure/temperature. (40 CFR 112.8(c)(1).) HSC 25270.4.5(a)
☐	4030010 (Sized Containment) Secondary containment not sized to contain the entire capacity of the largest single storage tank plus freeboard for precipitation. (40 CFR 112.8(c)(2).) HSC 25270.4.5(a)
☐	4030013 Failure to ensure diked areas are sufficiently impervious to contain discharged oil. (40 CFR 112.8(c)(2).) HSC 25270.4.5(a)
☐	4030011 Failed to keep containment bypass valves closed when not draining rainwater. (40 CFR 112.8(c)(3)(i).) HSC 25270.4.5(a)
☐	4030006 Failed to inspect retained rainwater prior to discharge. (40 CFR 112.8(c)(3)(ii).) HSC 25270.4.5(a)
☐	4030007 Failed to open and close bypass valve to drain rainwater under responsible supervision. (40 CFR 112.8(c)(3)(iii).) HSC 25270.4.5(a)
☐	4010026 Failed to maintain adequate records (or NPDES permit records) of drainage from diked areas. (40 CFR 112.8(c)(3)(iv).) HSC 25270.4.5(a)
☐	4030017 Failed to provide corrosion protection for partially buried storage tanks. (40 CFR 112.8(c)(5).) HSC 25270.4.5(a)
☐	4030015 Failed to test or inspect each storage tank for integrity, in accordance with industry standards that take into account size, configuration, and design, on a regular schedule or after material repairs. (40 CFR 112.8(c)(6).) HSC 25270.4.5(a)
☐	4030014 Failed to perform scheduled storage tank tests and inspections by appropriately qualified personnel. (40 CFR 112.8(c)(6).) HSC 25270.4.5(a)
☐	4010028 Failed to frequently inspect the outside of each storage tank for signs of deterioration, discharges, accumulation of oil in diked areas, including supports/foundations; failed to keep records of inspections, tests and comparison records. (40 CFR 112.8(c)(6).) HSC 25270.4.5(a)
☐	4030018 Failure of steam return/exhaust of internal heating coils, which discharge into an open water course, to be monitored, passed through a settling tank, skimmer, or other separation system. (40 CFR 112.8(c)(7).) HSC25270.4.5(a)
☐	4030019 Failed to provide each storage tank with a high level monitoring device, or implement procedures to prevent discharges caused by overfills, in compliance with 40 CFR Part 112. (40 CFR 112.8(c)(8)(i-iv).) HSC 25270.4.5(a)
☐	4030022 Failed to regularly test liquid level sensing devices to ensure proper operation. (40 CFR 112.8(c)(8)(v).) HSC 25270.4.5(a)
☐	4030023 Failure to frequently observe effluent treatment facilities, which discharge directly to navigable waters, to detect oil spills. (40 CFR 112.8(c)(9).) HSC 25270.4.5(a)
☐	4030021 Failed to promptly correct visible discharges and/or remove accumulations of oil in diked areas. (40 CFR 112.8(c)(10).) HSC 25270.4.5(a)
☐	4030024 (For mobile or portable storage tanks AND mobile refuelers) Failed to locate mobile or portable containers to prevent discharge. (40 CFR 112.8(c)(11).) HSC 25270.4.5(a)
☐	4030020 (For mobile or portable storage tanks EXCEPT mobile refuelers) Failed to provide secondary containment sufficient to contain the capacity of the largest single compartment or container with sufficient freeboard for precipitation. (40 CFR 112.8(c)(11).) HSC 25270.4.5(a)

SPCC REQUIREMENTS BASED UPON 40 CFR 112.8 (continued)

Refer to APSA (HSC Chapter 6.67) for definition of "storage tank"

#	VIOLATION DESCRIPTION
☐	4030025 Failed to inspect buried piping when exposed for any reason; failed to do additional examination or take corrective action if corrosion damage is identified. (40 CFR 112.8(d)(1).) HSC 25270.4.5(a)
☐	4030027 Failed to provide corrosion protection for buried piping. (40 CFR 112.8(d)(1).) HSC 25270.4.5(a)
☐	4030028 Failed to cap/blank-flange piping connection at transfer point and mark its origin if not in service. (40 CFR 112.8(d)(2).) HSC 25270.4.5(a)
☐	4030029 Failed to design pipe supports to minimize abrasion/corrosion and to allow for expansion/contraction. (40 CFR 112.8(d)(3).) HSC 25270.4.5(a)
☐	4030026 Failed to regularly inspect aboveground valves, piping, and appurtenances. (40 CFR 112.8(d)(4).) HSC 25270.4.5(a)
☐	4030030 Failed to conduct integrity and leak test on buried piping at installation, modification, construction, relocation or replacement. (40 CFR 112.8(d)(4).) HSC 25270.4.5(a)
☐	4030031 Failed to adequately warn vehicles entering facility to protect piping and other transfer operations. (40 CFR 112.8(d)(5).) HSC 25270.4.5(a)

COUNTY OF SAN DIEGO

COMPLIANCE INSPECTION REPORT

Underground Storage Tank (UST) Program

INSPECTION DATE: **03/08/2017** PAGE **9** OF **11**
RECORD ID #: **DEH2002-HUPFP-121310**

VIOLATION REPORT: Each violation checked below is for the section(s) of the California Health and Safety Code (HSC), California Code of Regulations (CCR), or the San Diego County Code (SDCC) indicated in italics. All violations must be corrected. Submit documentation of return to compliance to your Specialist. You may use the Corrective Action Form (HM-926) to document your return to compliance. Please call (858) 505-6880 or your Specialist if you have any questions.

GENERAL PROGRAM REQUIREMENTS
UST System – File Records

#	VIOLATION DESCRIPTION
☐	2030064 Failure to notify CUPA 48 hours prior to testing. 23 CCR 2637(f), 2638(e), 2643(g), 2644.1(a)(4)
☐	2030021 Failure to obtain and maintain a valid operation permit from the CUPA. HSC 25284; 23 CCR 2712(i)
☐	2030039 Failure to comply with one or more of the operating permit conditions. 23 CCR 2712; HSC 25299
☐	2060001 Failure to submit as-built plans for the location and orientation of the tanks and appurtenant piping systems for new installations and/or with the permit application. 23 CCR 2635(c)(8), 2711(a)(8)
☐	2010010 Failure to prepare, maintain, and submit accurate CUPA UST Operating Permit Application for Facility information and/or Tank information. HSC 25286(a); 23 CCR 2711
☐	2010001 Failure to obtain and maintain a valid Board of Equalization account number. HSC 25286
☐	2010007 Failure to submit and maintain complete and current Certification of Financial Responsibility or other mechanism of financial assurance. HSC 25292.2, 25299.30-25299.34; 23 CCR 2711; 2808.1, 2809-2809.2
☐	2030037 Failure to submit, maintain, or implement an owner/operator written agreement. HSC 25284(a)(3); 23 CCR 2620(b)
☐	2030033 Failure to maintain on site an approved monitoring plan. 23 CCR 2632, 2634, 2711, 2712(i)
☐	2030046 Failure to submit, obtain approval, or maintain a complete/accurate response plan. 23 CCR 2632, 2634(e), 2641(h), 2712(i)
☐	2030041 Failure to submit, obtain approval, or maintain a complete/accurate plot plan. 23 CCR 2632(d)(1)(C), 2711(a)(8)
☐	2030002 (RD) Failure to test leak detection equipment as required every 12 months (VPH, sensor, LLD, ATG, etc.) and/or submit monitoring system certification to the CUPA within 30 days of completion of the test. 23 CCR 2638
☐	2030003 (RD) Failure of the leak detection equipment to have an audible and visual alarm as required. 23 CCR 2632, 2634, 2636, 2666
☐	2060002 (RD) Failure to install an automatic tank gauging/continuous in tank leak detection monitoring system.; HSC 25292(a); 23 CCR 2643
☐	2010003 The owner/operator has failed to designate an UST operator or to inform the CUPA or any change in the designated UST operator(s) within 30 days after a change. 23 CCR 2715(a)
☐	2010009 Failure to submit a copy of the secondary containment test results to the CUPA within 30 days after the test. 23 CCR 2637(e)
☐	2030048 Failure to comply with one or more of the following: conduct secondary containment testing, within six months of installation and every 36 months thereafter, conducted in accordance with proper practices, protocols, or test methods. 23 CCR 2637
☐	2060016 Failure to conduct secondary containment testing at installation. 23 CCR 2637
☐	2030034 Failure to properly affix tag/sticker on monitoring equipment being certified, repaired, or replaced. 23 CCR 2638(f)
☐	2030044 Owner/operator deposited or allowed deposit of petroleum into a UST that has a red tag affixed to the fill pipe. 23 CCR 2717.1(f)
☐	2060011 Failure of primary or integral secondary containment to be approved for use by independent testing organization. 23 CCR 2631(b)
☐	2060013 Failure to test and pass the primary and secondary containment installation testing per manufacturers guidelines. 23 CCR 2636(e)
☐	2030047 Failure to maintain secondary containment, as evidenced by failure of secondary containment testing. HSC 25290.1(c)(2), 25290.2(c)(2), 25291(a), 25292(e); 23 CCR 2662
☐	2030061 (RD) Failure to record and/or report suspected or actual unauthorized release in appropriate time frame. HSC 29294, 29295
☐	2010005 Failure to submit enhanced leak detection testing results to the board and the CUPA within 60 days of completion of the test. 23 CCR 2644.1(a)(5)
☐	2030067 Failure to conduct the required enhanced leak detection testing for single walled UST systems located within 1,000 feet of a public drinking water well every 36 months. 23 CCR 2644.1(a)(3)

GENERAL PROGRAM REQUIREMENTS
UST System – File Records (continued)

#	VIOLATION DESCRIPTION
☐	2030068 Failure to conduct the required enhanced leak detection testing for single and double walled UST systems located within 1,000 feet of a public drinking water well. HSC 25292.4, 25292.5
☐	2060008 Failure to perform enhanced leak detection testing before the tank is placed in use. HSC 25290.1(j), 25290.2(i)
☐	2030023 Failure of service technician, designated operator, installer, and/or employee to obtain and maintain a proper and current International Code Council certification. 23 CCR 2715
☐	2030024 Failure of service technician, installer, and/or employee to obtain and maintain proper license. 23 CCR 2715
☐	2030031 Failure of service technician, installer, designated operator, and/or employee to obtain and maintain proper manufacturer certification. 23 CCR 2715
☐	2010008 (RD) Failure to maintain records of repairs, lining, and upgrades on site, or off site if approved by the CUPA, for the life of the underground storage tank and/or failure to maintain written monitoring and maintenance records on site, or off site if approved by the CUPA, for a period of 3 years, 6 ½ years for cathodic protection, and 5 years for written performance claims pertaining to release detection systems and calibration and maintenance records for such systems. 23 CCR 2712(b)
☐	2030062 (RD) Leak detection equipment disabled or tampered with in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak. HSC 25299(a)(9)
☐	2010006 Owner/operator made false statements, representation, or certification on an application, record, or other document. HSC 25299
☐	2030043 (RD) Failure of the leak detection equipment to be properly programmed or properly operated. 23 CCR 2632, 2634, 2636, 2666
☐	2010004 The owner/operator has failed to comply with one or more of the following: to maintain a copy of the designated operator monthly inspections for the last 12 months and/or maintain a list of trained employees on-site or off-site at a readily available location, if approved by the CUPA. 23 CCR 2715
☐	2030010 Failure to notify the owner or operator of any condition discovered during the monthly visual inspection that may require follow-up actions. 23 CCR 2715(d)
☐	2030011 Failure to submit statement of UST compliance and/or Designated Operator current certification. 23 CCR 2715(a), 2715(b)
☐	2030012 Failure to comply with one or more of the following: provide training to facility employee(s) responsible for proper operation and maintenance every 12 months and/or train new employee(s) who are responsible for proper operation and maintenance within 30-days of hire and/or to have at least one employee present during operating hours that has been trained in the proper operation and maintenance of the UST system. 23 CCR 16 2715(c)(6), 2715(f)
☐	2030013 Failure to comply with one or more of the designated operator monthly inspection requirements: failed to inspect the monthly alarm history report; attach a copy of the alarm history; failed to inspect for the presence of liquid or debris in the spill container/spill bucket and under dispenser containment; failed to inspect the under dispenser containment to ensure that monitoring equipment is placed in the proper position; failure to inspect for liquid or debris in the containment sump where an alarm occurred or for which there is no record of a service visit; or failure to check that all testing and maintenance has been completed and documented. 23 CCR 2715
☐	2030015 Failure to demonstrate to the CUPA that the method approved to monitor the tank meets the monitoring methods set forth in 2643(f). 23 CCR 2643
☐	2030066 Failure to take appropriate action to repair and retest any component of a single or double walled UST system that is leaking liquid or vapor which is discovered from an enhanced leak detection test for UST system located within 1,000 feet of a public drinking water well. HSC 6.7 25292.4(d), 25292.5(c)

COUNTY OF SAN DIEGO

COMPLIANCE INSPECTION REPORT

UST PROGRAM (continued)

INSPECTION DATE: **03/08/2017** PAGE **10** OF **11**
RECORD ID #: **DEH2002-HUPFP-121310**

UST Tank (DW/SW) Requirements

#	VIOLATION DESCRIPTION
☐	2030001 (RD) Failure to maintain leak detection alarm logs and/or maintain records of appropriate follow-up actions. 23 CCR 2632, 2634
☐	2030059 Failure to maintain UST system in accordance with exclusion/ exemption status. HSC 25281.6, 25283.5
☐	2060003 Failure to inspect at the installation site using an electric resistance holiday detector and repair if necessary before installation. 23 CCR 2635(a)(2)(B)
☐	2060005 Failure of the UST system to be designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance stored in the primary containment into the secondary containment. HSC 29291(b)
☐	2060006 Failure of secondary containment piping to slope back to the collection sump. 23 CCR 2636
☐	2060007 Failure of non-integral secondary containment to be designed and constructed to an engineering specification approved by a registered professional engineer or in accordance with a nationally recognized industry core or engineering standard. 23 CCR 2631(d)
☐	2060010 (RD) Failure of the UST storing a hazardous substance to have secondary containment. HSC 25291
☐	2060019 Failure of the spill bucket to have a minimum capacity of five gallons. 23 CCR 2635(b), 2665
☐	2030007 Failure to submit and maintain documentation regarding positive statement of compatibility for UST system components. 23 CCR 2631(j)
☐	2030036 (RP) Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity; and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 23 CCR 2635(b)(2), 2665
☐	2060020 (RP) Failure to comply with one or more of the following: failure to install a spill bucket, have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container, and/or be resistant to galvanic corrosion. 23 CCR 2635(b), 2665
☐	2030008 Failure to maintain under dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid. HSC 25290.1, 25290.2, 25291
1 ☒	2060015 (RD) Failure of sensor to be located in the proper position/location. 23 CCR 2630(d), 2641(a)
☐	2030016 (RD) Failure to continuously monitor the interstitial space of the tank, piping and/or sumps such that the leak detection activates an audible/ visual alarm when a leak is detected. 23 CCR 2631(g), 2632(c)(2)(A)&(B), 2633(c), 2636(f)
☐	2030017 Failure to maintain all product piping outside the dispenser to be fail-safe & shut down the pump when a leak is detected and the monitoring system shuts down the pump or flow restriction occurs when a leak is detected in the under dispenser containment. 23 CCR 2636(f)(5)
☐	2030019 Failure of the double wall pressurized piping in the under dispenser containment to be continuously monitored by a method that either shuts down the flow of product to the dispenser or activates an audible/visual alarm when a leak is detected. 23 CCR 2636(f)(1)
☐	2030022 Failure to conduct groundwater and/or vadose zone monitoring as required. 23 CCR 2647, 2648
☐	2030028 Failure to complete one or more of the requirements of tank lining, including but not limited to: submit proper written tank lining certification to the CUPA within 30 days of completion of the inspection, perform tank integrity test and/or vacuum test following lining, employ proper coatings expert and/or special inspector. 23 CCR 2663
☐	2030029 (RP) Failure to inspect a steel tank which has been lined or repaired using the interior lining method within 10 years of lining and every 5 years after. 23 CCR 2663
☐	2060024 UST system is not made of or lined with materials that are compatible with the substance stored in the underground storage tank system. 23 CCR 2631.1
☐	2030040 (RD) Failure to maintain secondarily contained piping to allow liquid in the event of a leak to drain into sump (i.e. failure to remove test boot, pipe swelling). 23 CCR 2630(d), 2641(a)

UST Tank (DW/SW) Requirements (continued)

#	VIOLATION DESCRIPTION
☐	2030060 Failure to maintain entry fitting such that it properly seals to the containment. 23 CCR 2630, 2635(d), 2636(c), 2666
☐	2030055 Failure to test the spill bucket annually. HSC 25284.2
☐	2060022 Failure of UST system installed on or after July 1, 2003 and before July 1, 2004 to comply with one or more of the following: be designed and constructed with a monitoring system capable of detecting the entry of the hazardous substance stored in the primary containment into the secondary containment and/or capable of detecting water intrusion into the secondary containment. HSC 25290.2(d)
☐	2030065 (RD) Failure to maintain the interstitial space under constant vacuum, pressure, or hydrostatic such that a breach in the primary or secondary containment is detected before the liquid or vapor phase of the hazardous substance stored in the UST tank is released into the environment. (Product Tight) HSC 25290.1(e)
☐	2060023 Failure of a UST system installed on or after July 1, 2004 to be designed and constructed so as to detect the entry of the liquid or vapor-phase of the hazardous substance stored in the primary containment into the secondary containment and capable of detecting water intrusion into the secondary containment. HSC 25290.1(d)

UST Tank (SW) Requirements

☐	2030005 (RD) Option 1: Failure to conduct the 0.2 gallon per hour continuous in tank leak detection test. 23 CCR 2643(b)(5)
☐	2030006 (RD) Option 1: Failure to conduct the monthly 0.2 gallon per hour automatic tank gauging test on a single wall tank and/or failure of the automatic tank gauge to generate and print a hard copy of the monthly 0.2 gallons per hour test. 23 CCR 2643(b)(1)
☐	2030056 Option 2: Failure to submit the annual statistical inventory reconciliation (SIR) Report to the CUPA. 23 CCR 2646.1(j)
☐	2030057 (RD) Option 2: When statistical inventory reconciliation results indicate failure or inconclusive, owner/operator failed to complete one or more of the following: notify CUPA of a possible release within 24 hours; submit copy of the report to the CUPA within 10 days; inspect records for errors and physically inspect the UST system within 24 hours; have meters recalibrated within 48 hours of receipt of report. 23 CCR 2646.1(d)
☐	2030058 (RD) Option 2: Failure to meet one or more of the requirements of SIR, including but not limited to: measurements taken daily, calculated monthly, capable of detecting a 0.2 gallon per hour release, conduct a tank integrity test every two years, conduct piping and or tank test within 15 days of receipt of two successive SIR reports which are inconclusive or which indicate a possible release and/or calibrate dispenser meters annually. CCR 2646.1
☐	2030030 (RD) Option 3: Weekly gauging not being performed in according to the required specifications. 23 CCR 2645
☐	2030004 (RD) Option 4: Failure of the automatic tank gauge to test the tank at least once per month when the product level in the tank is at least three feet and shall be capable of detecting a release of 0.1 gallons per hour. 23 CCR 2643(b)(2)

COUNTY OF SAN DIEGO

COMPLIANCE INSPECTION REPORT

UST PROGRAM (continued)

UST Pressurized Piping (DW) Requirements

#	VIOLATION DESCRIPTION
☐	2030018 (RD) Failure of the double wall pressurized piping in the turbine sump to be continuously monitored with a system that activates an audible and visual alarm or restricts or stops flow at dispenser when a leak is detected. 23 CCR 2636(f)(1)
☐	2030025 (RD) Failure of the pressurized piping to meet one or more of the following requirements: monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour, and will restrict the flow or product through the piping or trigger an alarm when a release occurs. 23 CCR 2636(f)(2)
☐	2030026 Failure of line leak detector to detect a leak and/or failure of audible and visual alarm. 23 CCR 2636(f)(2)
☐	2060014 Failure to install leak detection equipment correct for the type of system. HSC 25290.1; 23 CCR 2638
☐	2060012 (RD) Failure to install line leak detector on pressurized piping system. HSC 25290.1(h), 25290.2(g), 25291(f), 2529
☐	2030042 (RD) Option 1: Failure to perform and/or pass the annual line integrity test for pressurized piping that does not utilize fail safe or shut down. 23 CCR 2636(f)(4)
☐	2030020 (RD) Option 3: Failure to conduct daily visual inspections each time the tank is operated, but not less than monthly, and maintain a log of inspection results for review of the CUPA. HSC 25281.5(b)(3)

UST Pressurized Piping (SW) Requirements

☐	2060018 (RP) Failure to demonstrate that existing single wall pressurized pipe containing motor vehicle fuel is constructed of glass fiber reinforced plastic, cathodically protected steel, or steel clad with glass reinforced plastic. HSC 25292(e)(2); 23 CCR 2666(b)
☐	2030027 (RD) Failure of pump shut down when a leak is detected or when line leak detector is disconnected. 23 CCR 2666(c)
☐	2060017 Failure to install an automatic line leak detector capable of shutting off the pump when a release occurs, fails, or is disconnected. 23 CCR 2666(c)
☐	2030052 (RD) Option 3: Failure to monitor pressurized pipe containing motor vehicle fuel at least hourly at any pressure and either perform 0.2 gallon per hour monthly line integrity test or perform 0.1 gallon per hour annual line integrity test. 23 CCR 2641(a), 2643
☐	2030053 (RD) Option 3: Piping fails to meet one or more of the following requirements: below grade piping sloped to drain back into storage tank if the suction is released, only one check valve on the piping located directly below the suction pump, and inspection method which readily demonstrates compliance. 23 CCR 2636(a)(3) 2641(b)

UST Piping (SW) Requirements – Conventional Suction

☐	2030050 (RD) Failure to conduct 0.1 gallon per hour piping integrity test every three years. 23 CCR 2643(d)
☐	2030049 Failure to conduct daily monitoring for air in the pipe and log results. 23 CCR 2643(d)

UST Piping (SW) Requirements – Gravity

☐	2030051 Failure to conduct piping integrity test or overfill integrity test every two years. 23 CCR 2643(e)

UST System – Cathodic Protection Requirements

#	VIOLATION DESCRIPTION
☐	2030009 (RP) Failure to inspect the impressed-current system every 60 calendar days and/or failure to have corrosion protection equipment turned on and functioning properly and/or failure to inspect the impressed-current system within six months of installation and at least every three years thereafter and/or failure to test sacrificial anodes once every three years in accordance with the manufacturer's instructions. 23 CCR 2635
☐	2060004 (RP) Failure to install corrosion protection for USTs and/or failure of the field-installed cathodic protection system to meet the consensus standards. 23 CCR 2635(a)(2)(A)

UST System – Closure

☐	2030063 (RD) Failure to comply with temporary closure requirements. HSC 25298; 23 CCR 2670, 2671
☐	2030038 UST system was abandoned or not properly closed, or failure to comply with all permanent closure requirements. HSC 25298; 23 CCR 2670, 2672

E. APPLICATION SUBMITTAL, PLAN APPROVAL, PERMIT ISSUANCE, AND REQUIRED INSPECTIONS:

Submit three (3) copies of this application package, including plan drawings, with the required fee to the Department of Health Services, Hazardous Materials Management Unit, Room 311, 1700 Pacific Highway, San Diego, CA 92101. Checks should be made payable to the County of San Diego.

A permit will be issued by the Department of Health Services (DHS) upon review and approval of the application and plans. The required fees must be submitted with the application package. Information in addition to that presented in this application package may be needed in order to obtain final approval. No work is to begin on the proposed project until a permit has been issued. The required inspections cannot be scheduled until a permit has been issued.

Once the permit has been issued, it is the permittee's responsibility to notify the DHS at least two (2) working days in advance to schedule each required inspection.

Construction stages at which inspections are required are indicated in each subpart of this application form (i.e., Part II, III and IV).

UNDERGROUND HAZARDOUS MATERIALS STORAGE TANK FACILITY

PART II

APPLICATION FOR A PERMIT TO CONSTRUCT

A. Total number of tanks to be installed 1

B. Type of primary containers:

Tank #	Manufacturer	Composition	Capacity	Double or Single Wall	Material to be Stored
1	MODERN WELDING	CLASS STEEL	12000	DBL	DIESEL
2					
3					
4					

Attach additional sheets as needed for primary containers.

C. Type of secondary containment:

☒ Double Wall Tanks ☐ Flexible Liner (liner thickness) _____

☐ Vault ☐ Other _____

Manufacturer MODERN WELDING

If other than Double Wall Tanks, will all tanks be in the same secondary containment enclosure? Explain _____

Will a system be installed to de-water the containment area? Explain N/A

D. Tank leak detection/monitoring system:

☐ Continuous monitoring device within the secondary containment, connected to an audible/visual alarm system.

Manufacturer _____

☒ Daily manual monitoring of the space between the primary and secondary containers using "dip stick" readings or visual determination.

Please specify: _____

☐ Daily Inventory Control/Records reconciliation (for motor vehicle fuels only)

NOTE: If daily gauging and records reconciliation is to be used as the monitoring system, a letter from the property owner must be provided to this Department outlining the frequency and method of monitoring the space between the primary and secondary containers, as well as a statement that the tanks will be tested using an approved testing method every year.

☐ Other. Explain _____

September 15 – October 15, 2017 Pre- Diligence / LOI Period Package Addendum 2October 10, 2017

E. Piping Materials and Construction:

Primary Containment STEEL - SCHED. 40 Manufacturer/Model N/A

Secondary Containment (if applicable) N/A Manufacturer/Model _____

F. Type of product delivery system (i.e., pressurized, suction) PRESSURIZED

G. Piping leak detection/monitoring system:

☒ Leak detector on pressurized line (for motor vehicle fuels only)

Manufacturer RED JACKET

☐ Continuous monitoring device within the secondary containment, connected to an audible/visual alarm system.

Manufacturer _____

☐ Daily manual monitoring of the space between the primary and secondary containers using "dip stick" readings or visual determinations.

Please specify _____

☐ Other _____

H. Describe the tank overfill protection system you plan to use. Check all that apply.

☐ Product level sensing device equipped with high level alarm and/or automatic shut off device. Specify type: _____

☒ Ball float valve on vent and vapor lines

☐ Other. Explain _____

I. Indicate type/manufacturer of vapor recovery system to be used:

N/A

NOTE: Those systems with product flow thru the vapor lines during normal operation require secondary containment of these lines.

J. What is the approximate depth to ground water? 30'

Basis of determination KNOWN FILL AREA ON PROPERTY - (30' DEEP)

K. Attach a certification from the manufacturer, or his authorized representative, of the tank and piping materials as to the capability of the tank and piping materials to store the proposed hazardous substances.

L. Attach three copies of Plans showing:

1. Location of all existing and proposed structures
2. Location of all existing underground tanks and piping (indicate if tanks are to be removed or abandoned)
3. Location of all proposed tanks and piping and their secondary containment
4. Cross section of tank and piping system including secondary containment, overfill protection equipment, monitor ports and equipment, extension of all pipes and ports to finish grade

5. Location and detail[redacted]onitoring/leak detection syst[redacted]s
6. Location of underground utility lines and vaults
7. Site address, property lines, scale, north arrow
8. Surface elevation and location of 100 year flood plain, if applicable
9. Equipment summary

M. Required Inspections - New Tank Installations

Each new tank installation must be inspected by the DHS at each of the following stages:

1. installation of secondary containment (liner) system, where applicable
2. delivery and test of tank on site; excavation complete; placement of tank in excavation
3. product line and associated piping - pressure test on lines and tank; overfill protection devices installed
4. monitoring system installed; monitor ports brought to surface

Projects involving repiping only will normally require just one inspection (at the line pressure-test stage).

Please refer to "Underground Tank Inspection Record - New Tank Installation" (DHS:HW-914) for additional details, or call 236-2222.

N. I declare that to the best of my knowledge and belief the statements and information provided above are correct and true. I understand that information in addition to that provided above may be needed in order to obtain a permit from the Department of Health Services (DHS) and that no work is to begin on this project until the permit is issued.

I understand that any changes in design, materials or equipment will void my permit to construct if prior approval is not obtained.

I understand that a permit to operate the underground storage tank system must be obtained from the Department within 60 days of putting the system into use. This is the responsibility of the tank owner. Conditions of the permit to operate include an acceptable tank monitoring and testing schedule, submittal of an annual report form, and regular inspection by the DHS.

I will notify the Department of Health Services at least two working days (48 hours) in advance to schedule each required inspection. I understand that site and worker safety are solely the responsibility of the property owner or his agent and that this responsibility is not shared nor assumed by the County of San Diego.

IMPORTANT: CONTACT THE DEPT. OF HEALTH SERVICES AT 338-2214 AT LEAST TWO WORKING DAYS BEFORE STARTING CONSTRUCTION TO SCHEDULE THE FIRST REQUIRED FIELD INSPECTION.

E. APPLICATION SUBMITTAL, PLAN APPROVAL, PERMIT ISSUANCE, AND REQUIRED INSPECTIONS

Submit three (3) copies of this application package, including plan drawings, with the required fee to the Department of Health Services, Hazardous Materials Management Division, 1255 Imperial Ave., San Diego, CA or mail to P.O. Box 85261, San Diego, CA 92138-5261. Checks should be made payable to the County of San Diego.

A permit will be issued by the HMMD upon review and approval of the application and plans. The required fees must be submitted with the application package. Information in addition to that presented in the application package may be needed in order to obtain final approval. No work is to begin on the proposed project until a permit has been issued. The required inspections cannot be scheduled until a permit is issued.

Once the permit has been issued, it is the responsibility of the permittee to notify the HMMD at least two (2) working days in advance to schedule each required inspection.

Construction stages at which inspections are required are indicated in each subpart of this application form (i.e., Part II,III IV, and V).

F. PROJECT WORK TO BE COMPLETED: Check Applicable Box	COMPLETE APPLICATION PARTS	FEE CODE TABLE G.
☐ Installation/Construction of new tank(s) only (without closing any existing tanks)	I & II	1
☐ Closure of existing tank(s) with installation of new tanks (tank replacement)	I, II & III	1 & 2
☐ Closure of existing tank(s) with no new tank installation	I & III	2
☐ Interior coating/repair of an existing underground storage tank	I & IV	3
☑ Repipe/pipe-repair of an existing underground storage tank facility	I & V	4
☐ Installation/Construction of vaulted tanks	VI	5

G. FEES: The fees shown below cover plan review, plan re-review and approval, the required field inspections and the first year's operating permit fees. Use the appropriate Fee Code as determined in Section F above.

FEE CODE		
1	Installation fee for first tank $600.00	Fee: $
	Installation fee for each additional tank No.____ x $100.00	Fee: $
	Establishment Base Fee $160.00 (Applies to establishments not currently under permit with HMMD)	Fee: $
	Operating Permit Fee per tank No.____ x $120.00 (Does not apply to replacement tanks if the existing tank to be replaced has paid current operating permit fees)	Fee: $
	State Surcharge per tank No.____ x $56	Fee: $
	Plan Re-Review $200.00	Fee: $
2	Closure fee for first tank $375.00	Fee: $
	Closure fee for each additional tank No.____ x $50.00	Fee: $
	Plan Re-Review $200.00	Fee: $
3	Repair/Interior coating fee for first tank $600.00	Fee: $
	Repair/Interior coating fee for each additional tank No.____ x $100.00	Fee: $
	Plan Re-Review $200.00	Fee: $
4	Repipe/Pipe-repair of an existing tank facility $600.00	Fee: $ 600.00
	Plan Re-Review $200.00	Fee: $
5	Consultation fee (e.g. vaulted tank: minimum 2 hours) ____ Hours x $80.00	Fee: $
		TOTAL FEE: $ 600.00

TY (TK) HQ | 4 | 4 | — | | | | | | | |

NOTE: Application will be disapproved without this information

A. TOTAL NUMBER OF TANKS TO BE REPIPED/REPAIRED 1

B. DESCRIPTION OF TANKS TO BE REPIPED/REPAIRED:

TANK NO.	TANK CAPACITY	PRODUCT TYPE
	12,000	DIESEL

CHECK BELOW WHAT PIPING IS TO BE REPLACED OR REPAIRED

	PRODUCT	VAPOR	VENT	FILL LINES
TANK NO. 1	✓			
TANK NO. 2				
TANK NO. 3				
TANK NO. 4				
TANK NO. 5				

C. REASON FOR TANKS TO BE REPIPED/REPAIRED:

- [✓] Upgrade to meet current state/federal requirements
- [ ] Piping system failure
- [ ] Other, briefly describe _____

D. PIPING MATERIALS AND CONSTRUCTION:

Primary containment 2" Fiberglass Manufacturer/model AMERON

Secondary containment 3" Fiberglass Manufacturer/model AMERON

E. TYPE OF PRODUCT DELIVERY/FILL SYSTEM:

[✓] Pressurized [ ] Suction [ ] Gravity [ ] Direct Fill [ ] Manifolded system

F. PIPING LEAK DETECTION/MONITORING SYSTEM:

[✓] Leak detector on pressurized line

Manufacturer Red Jacket (existing)

[✓] Continuous monitoring device within the secondary containment

Manufacturer VEEDER-ROOT – MEETS REQUIREMENTS OF SEC. 2635 TITLE 23

[ ] Other, briefly describe _____

G. TANK OVERFILL PREVENTION:

☐ Product level sensing device with high level alarm and/or automatic shut off device

Manufacturer _____

☑ Ball float valve on vent or vapor lines

☑ Catchment basin surrounding fill pipe

NOTE: A MINIMUM OF BALL FLOAT VALVES AND CATCHMENT BASINS ARE REQUIRED FOR ALL TANK FACILITY REPIPES.

H. PROPOSED METHOD OF PIPE CLOSURE: ☑ REMOVAL ☐ CLOSURE IN PLACE

SAMPLING PROTOCOL Tank owner/authorized representative responsible for all sampling analyses and associated costs.

- for piping that is to be removed, the trenching shall be exposed prior to the scheduled inspection, sampling points will be identified by the HMMD inspector and samples taken every 20 feet.

-piping to be closed in place may be considered only if the removal might damage structures. Submit an alternate plan which must include soil sampling and/or hydrostatic testing.

I. ATTACH THREE COPIES OF PLANS SHOWING THE FOLLOWING (Must be drawn to scale):

1. Location of existing and proposed structures.
2. Location of all existing underground tanks and piping. (indicate what piping is to be closed in place or by removal)
3. Location of new piping, secondary containment, leak detection and overfill prevention.

J. REQUIRED INSPECTIONS-PIPING REPAIR/REPLACEMENT:

EACH PIPING REPAIR AND/OR REPLACEMENT MUST BE INSPECTED BY THE HMMD. TWO INSPECTIONS ARE REQUIRED.

1. FIRST INSPECTION:
-piping to be closed by removal. Trenching shall be exposed prior to the scheduled inspection and sampling points identified by the HMMD inspector.
-piping to be closed in place. Piping shall be capped and drained and per alternate approved plan, samples collected and/or hydrostatic testing witnessed by the HMMD inspector.

2. SECOND INSPECTION:
-pressure test of all piping repaired and/or replaced.
-verification of leak detection devices/secondary containment.
-verification of overfill prevention.

K. DECLARATION

I declare that to the best of my knowledge and belief the statements and information provided are correct and true. I understand that information in addition to that provided above may be needed in order to obtain final approval by the Hazardous Materials Management Division.

I understand that tests and procedures that may be required by other departments and agencies to demonstrate adequate site safety or suitability for further development (e.g. soil compaction testing) are in addition to the requirements of the Hazardous Materials Management Division.

I will notify the Hazardous Materials Management Division at least two working days (48 hours) before work is to begin in order to schedule the required inspections. I understand that site and worker safety are solely the responsibility of the property owner or his agent and that the responsibility is not shared or assumed by the County of San Diego.

Permit # RT2067
Establishment # H21310
Date: January 10, 2003
Expiration Date: January 10, 2004

Permit for Underground Storage Tank Construction/Closure

SITE NAME: Superior Ready Mix
SITE ADDRESS: 9245 Camino Santa Fe, San Diego, CA 92121
OWNER NAME: Superior Ready Mix
OWNER ADDRESS: 1508 Mission Road, Escondido, CA 92029

DESCRIPTION OF PROPOSED WORK: Repipe one UST system

PERMIT CONDITIONS: The following is the scope of work that will be performed at the site listed above. The DEH inspector will verify that the CCR Title 23 requirements have been met.

Tanks

A. **Existing UST Tank is double walled glassteel (DEH inspector to verify)**

1) Existing Veeder-Root Tank TLS 300 monitoring system

PLEASE NOTE : *NEW* manway lids and risers are subject to pressure testing

---

B. Existing product piping is double wall FRP piping (DEH Inspector to verify)

1) **Remove and replace all product vent piping.** **Soil sampling is required** for all product piping removed. (can be performed concurrently with the primary pressure test)
2) Install New double wall FRP product line
3) Install New single wall FRP vent line
4) Install New UDCs with continuous electronic monitoring that must be programmed for positive turbine shut down upon leak detection.
5) A **Certified Line Integrity Test** is required prior to the final inspection.

Tank Sumps

C. Tank sumps*

1) Install new water tight sumps with liquid sensors and sealed manway lids at the fill and turbine ends of tanks.

Tank sumps must be installed in accordance with the tank manufacturers recommendations. Installation must not void the Tank Manufacturers Listing. You must provide documentation from the installer that they are certified to install collars on the specific underground storage tank(s) and that it was done in accordance with the manufacturers recommendations. You must submit the documentation at the Final inspection.

*******NOTICE*******

New SB 989 regulations require that all secondary containment be tested. The secondary containment must be tested in accordance with manufacturers specification. Contractor shall certify the test. Please be advised that all secondary containment systems installed after January 1, 2001 must be tested at installation, six (6) months after installation, and every 36 months thereafter.

Inspection Requirements:

1) **Soil Sampling of product piping and Pressure Test (can be performed concurrently)**
2) **Final inspection****

****Required Documents at Final Inspection:**

1) **Certified Pipe Line Integrity Test Results**
2) **Certification of Secondary Containment Testing (SD County form DEH:HMD-9169)**
3) **New UST Written Monitoring Procedures and Emergency Response Plans (SD County form DEH:HMD-9222)**
4) **CUPA Form C**

Additional documents may be required at the discretion of the DEH Inspector

---

Please note: **Any deviation from the above scope of work may require a $200.00 plan re-review fee and $300.00 re-inspection fee**

This office must be given at least 48 hours notice for all required Underground Storage Tank Activity.

Please call at (619) 338-2214 to schedule an appointment. For cancellations, please call (619) 237-8451.

PERMIT AND STAMPED APPROVED PLANS MUST BE ON-SITE. FAILURE TO DO SO WILL RESULT IN THE INSPECTOR FAILING THE SCHEDULED INSPECTION AND ASSESSING A $300.00 REINSPECTION FEE.

Permit # RT2067
Establishment # H21310
Date: November 25, 2002

Permit for Underground Storage Tank Construction/Closure

SITE NAME: Superior Ready Mix
SITE ADDRESS: 9245 Camino Santa Fe, San Diego, CA 92121
OWNER NAME: Superior Ready Mix
OWNER ADDRESS: 1508 Mission Road, Escondido, CA 92029

DESCRIPTION OF PROPOSED WORK: Repipe one UST system

The Permit Application has been disapproved for the following reasons:

1. **No cross section of tank and piping systems. This drawing must show secondary containment of tank and piping, spill/overfill prevention devices, leak detection equipment with correct number of sensing probes and extension of all piping and ancillary equipment to finish grade. Must submit a drawing that identifies all the items listed and address the following:**

   a. **A cross section diagram for the piping into containment sump. Drawing needs to show primary and secondary piping with intrusion into the containment sump and the sensor probe to monitor the piping and/or sump.**

   b. **A drawing that show where containment sumps are to be attached to the UST. Tank sumps must be installed in accordance with the tank manufacturers recommendations. Installation must not void the Tank Manufacturers Listing. Please provide documentation from the installer that they are certified to install collars on the specific underground storage tank(s) and installation will be done in accordance with the manufacturers recommendations.**

   c. **A cross section diagram for the under dispenser containment (UDC) proposed to be installed. Drawing needs to show primary and secondary piping with intrusion into the UDC and the sensor probe to monitor the sump. Must provide manufacturer make and model of proposed UDC to be installed**

2. **Incorrect permit fee. Soil sampling is required for this proposed scope of work. The permit fee shall be $755.00. A difference of $220.00 is due.**

A $200.00 Permit re-review fee is required. Please re-submit the above information with fees.

Submit one (1) original and two (2) copies of this application package, including plan drawings with the required fee to the Department of Environmental Health (DEH), Land and Water Quality Division, 1255 Imperial Avenue, San Diego, CA 92101; or mail to P.O. Box 129261, San Diego, CA 92112-9261. Checks should be made payable to the County of San Diego.

A permit will be issued by DEH upon review and approval of the application and plans. The required fees must be submitted with the application package. Information in addition to that presented in the application package may be needed in order to obtain final approval. No work is to begin on the proposed project until a permit has been issued. The required inspections cannot be scheduled until a permit is issued.

Once the permit has been issued, it is the responsibility of the permittee to notify DEH at least two (2) working days in advance to schedule each required inspection.

Construction stages at which inspections are required are indicated in each subpart of this application form (i.e., Part II, III, IV, & V).

F. PROJECT WORK TO BE COMPLETED: Check Applicable Box	COMPLETE APPLICATION PARTS	FEE CODE TABLE G
☐ Installation/Construction of new tank(s) systems only (without closing any existing tanks)	I & II	1
☐ Closure of existing tank(s) systems with installation of new tanks (tank replacement)	I, II & III	1 & 2
☐ Closure of existing tank(s) systems with no new tank installation	I & III	2
☐ Interior coating/repair of an existing underground storage tank	I & IV	1
☒ Repipe/pipe-repair piping upgrade of an existing underground storage tank facility	I & V	3
☐ Installation/Construction of vaulted tanks	VI	4

G. FEES: The fees shown below cover plan review and the required field inspections. Use the appropriate Fee Code as determined in Section F above.

FEE CODE		
	Installation fee for first tanks $890.00 (fee will apply to all tank installations, tank repairs, interior lining and bladder installations)	Fee: $
1	Installation fee for each additional tank No. _____ X $90.00	Fee: $
	Establishment Base Fee $180.00 (Applies to establishments not currently under permit with DEH)	Fee: $
	Operating Permit Fee per tank No. _____ X $270.00 (Does not apply to replacement tanks if the existing tank to be replaced has paid current operating permit fees)	Fee: $
2	Closure fee for first tank $535.00	Fee: $
	Closure fee for each additional tank No. _____ X $90.00	Fee: $
3	NOTE: Upgrades / Repair shall include but not limited to pipe repairs, repipes, and new monitoring system installations	
	Upgrade /Repair – 2 inspections (including soil sampling) $755.00	Fee: $
	Upgrade /Repair – 1 inspection and no soil sampling $535.00	Fee: $ 535.00
4	Consultation fee (e.g. vaulted tank: minimum 2 hours) _____ Hours X $90.00	Fee: $
5	Re-inspection fee $300.00	Fee: $
	Plan Re-Review $200.00	Fee: $
		TOTAL FEE: $ 535.00

H. PERMITS REQUIRED BY OTHER AGENCIES:

FIRE DEPARTMENT Yes APCD — BUILDING DEPARTMENT — OTHER —

Provide copies of approved applications from these departments and others if needed.

September 15 - October 15, 2017 Per Difference Approval Addendum 2 October 10, 2017

PERMIT APPLICATION
PART V

APPLICATION FOR REPIPE, PIPING UPGRADE OR PIPE REPAIR OF AN EXISTING TANK FACILITY

BOARD OF EQUALIZATION UST STORAGE FEE ACCOUNT NUMBER-Call (916) 324-2300 for information

TY (TK) HQ | 4 | 4 | - | 0 | 4 | 0 | 2 | 6 | 3 |

NOTE: Application will be disapproved without this information

A. TOTAL NUMBER OF TANKS WHERE PIPING IS TO BE REPIPED, REPAIRED OR UPGRADED 1

B. DESCRIPTION OF TANKS WHERE PIPING IS TO BE REPIPED, REPAIRED OR UPGRADED

TANK NO.	TANK CAPACITY	PRODUCT TYPE	COMPOSITION
1	10,000	Diesel	unknown

CHECK BELOW WHAT PIPING IS TO BE REPLACED, REPAIRED OR UPGRADED.

	PRODUCT	VAPOR	VENT	FILL LINES
TANK NO. 1	Diesel		✓	
TANK NO. 2				
TANK NO. 3				
TANK NO. 4				

C. REASON FOR TANKS TO BE REPIPED/REPAIRED/UPGRADED:

- [X] Upgrade to meet current state/federal requirements
- [ ] Piping system failure
- [ ] Other, briefly describe _____

D. PIPING MATERIALS AND CONSTRUCTION:

Primary Containment ameron Manufacturer/model _____
Secondary Containment _____ Manufacturer/model _____
Dispenser Containment _____ Manufacturer/model _____

E. TYPE OF PRODUCT DELIVERY/FILL SYSTEM:
- [ ] Pressurized
- [ ] Suction
- [ ] Gravity
- [X] Direct Fill
- [ ] Manifolded System

F. PIPING LEAK DETECTION/MONITORING SYSTEM:
- [ ] Leak detector on pressurized line: Manufacturer _____
- [X] Continuous monitoring device within the secondary containment: Manufacturer Veeder/root
- [ ] Leak detector on pressurized line (must shut down pump and activate alarm) (pressurized lines only)
- [ ] Continuous monitoring device shuts down pump and activates alarm (pressurized lines only)

G. DISPENSER CONTAINMENT MONITORING: (at a minimum must shut down dispenser)
- [X] Mechanical monitoring
- [ ] Electronic monitoring _____ Model _____

H. TANK OVERFILL PREVENTION:

Catchment Basin surrounding the product fill pipe

Manufacturer Portco

-AND-

☐ Product Level Sensing Device with High Level Alarm and Ball Float Valves

Manufacturer Veeder Root 300C

-OR-

☐ Positive shutoff device in fill pipe at 95% full

Manufacturer

-OR-

☐ Secondary containment for vent, vapor, and tank riser piping with Ball Float Valves or Product Level Sensing Device with Hi

Level Alarm

Manufacturer Veeder Root 300C

I. PIPING UPGRADE REQUIREMENT:

☐ Cathodic protection for all product piping in direct contact with backfill material, including turbine, flex connectors and all ot appurtenances containing product

☒ Secondary containment of all product piping including turbines, dispenser piping, and all other appurtenances containing pro

J. PROPOSED METHOD OF PIPE CLOSURE: ☐ REMOVAL ☐ CLOSURE IN PLACE

SAMPLING PROTOCOL Tank owner/authorized representative responsible for all sampling analyses and associated costs.

— For piping that is to be removed, the trenching shall be exposed prior to the scheduled inspection, sampling points will be identified by the DEH inspector and samples taken every 20 feet.

— Piping to be closed in place may be considered only if the removal might damage structures. Submit an alternate plan which must include soil sampling.

K. ATTACH THREE COPIES OF PLANS SHOWING THE FOLLOWING (Must be drawn to scale):

1. Location of existing and proposed structures.
2. Location of all existing underground tanks and piping. (Indicate what piping is to be closed in place or by removal)
3. Location of new piping, secondary containment, leak detection; and overfill prevention.
4. Cross section of piping, tank sumps, dispenser containment.

L. REQUIRED INSPECTIONS-PIPING REPAIR/REPLACEMENT/PIPING UPGRADE: EACH PIPING REPAIR/REPLACEMENT AND/OR PIPING UPGRADE MUST BE INSPECTED BY DEH. THREE INSPECTIONS MAY BE REQUIRED.

1. FIRST INSPECTION:
   — Piping to be closed by removal. Trenching shall be exposed prior to the scheduled inspection and sampling points identified by the DEH inspector.
   — Piping to be closed in place. Piping shall be capped and drained and per alternate approved plan, samples collected by the DEH inspector.
2. SECOND INSPECTION:
   — Pressure test of all piping repaired, replaced, or upgraded - verification of cathodic protection.
3. THIRD INSPECTION:
   — Verification of leak detection devices/secondary containment.

M. DECLARATION

I declare that to the best of my knowledge and belief the statements and information provided are correct and true. I understand that information in addition to that provided above may be needed in order to obtain a permit from the Department of Environmental Health (DEH).

I understand that any changes in design, materials, or equipment will void my permit to construct if prior approval is not obtained.

I understand that tests and procedures that may be required by other departments and agencies to demonstrate adequate site safety suitability for further development (e.g. soil compaction testing) are in addition to the requirements of the Department Environmental Health (DEH).

I will notify the Department of Environmental Health (DEH) at least two working days (48 hours) before work is to begin in order schedule the required inspection. I understand that site and worker safety are solely the responsibility of the property owner or agent and that the responsibility is not shared or assumed by the County of San Diego.

PLAN APPROVAL

PC# RT20067 H# 21310

Approved by: [signature] Date: 1/10/03

Comments: REPIPE ONE UST SYSTEM

Any change in these plans may void this approval. This stamp does not constitute or imply approval by other agencies.

Scope of Work:

- Submit plans and fees to obtain permits from the County of San Diego Department of Environmental Health (DEH), and local Fire Department.
- Schedule appropriate inspections.
- Disconnect product piping, drain, remove, and store Turbine for re-use (electrical by others).
- Assist/direct Superior Ready Mix Personnel on the saw-cut, breakout, and removal of concrete around the turbine manhole and product piping as required.
- Assist/direct Superior Ready Mix Personnel on the removal and disposal of the existing "Bravo Turbine Sump".
- Assist/direct Superior Ready Mix Personnel to hand excavate to the existing tank top and piping system
- Provide and install one (1) new 42" Fiberglass Tank Sump onto a new 43" O.D. Sump Collar (provided by others) onto the existing UST.
- Provide and install one (1) Under Dispenser Containment (UDC) Sump complete with stabilizer bar, double-poppet shear valve, flex connector, and isolation jacket with secondary test port.
- Re-pipe product lines and electrical conduits as necessary using watertight flexible entry boots for all sump penetrations.
- Complete a Hydrostatic Sump Test and document per SB-989 requirements.
- Complete all required SB-989 Testing for the UST System.
- Test and obtain 3rd Party Certification on product piping.
- Re-install one (1) Red Jacket Submersible Turbine Pump into the existing UST.
- Provide and install one (1) new Veeder-Root single-float Sump Sensor.
- Provide one (1) new 36" diameter Turbine/Sump Manhole with rain-tight bolt-down lid for Superior Ready Mix Personnel to install prior to concrete pour.
- Re-certify the existing Veeder-Root TLS-300 and program for positive shutdown.
- Provide copies of permits to owner.

SUBJECT: DATA REPORT – REPIPE – SUPERIOR READY MIX – 9245 CAMINO SANTA FE – SAN DIEGO, CA – CET WESTERN PUMP PROJECT #21310

HP Labs Project # CET011603-12

Mr. Bodde:

Please find enclosed a data report for the above referenced location. Soil samples were analyzed in DOHS certified mobile laboratory (CERT #1839).

Project Summary

The following analyses were conducted:

- 1 soil for total petroleum hydrocarbons (TPH) by DHS LUFT/8015M Method

The samples were received chilled in appropriate containers with appropriate labels, seals, and chain-of-custody documentation.

Project Narrative

The results for all analyses and required QA/QC analyses are summarized in the enclosed tables. All calibrations, blanks, surrogates, and spike recoveries fulfill quality control criteria. No data qualifiers (flags) apply to any of the reported data.

HP Labs appreciates the opportunity to provide analytical services to CET Western Pump on this project. If you have any questions relating to this data or report, please do not hesitate to contact us.

Sincerely,

Dlayne Hoffman, for
Ms. Tamara Davis

Reason for Tank System Testing: ☐ Annual Test ☐ Retest After Repair ☐ Suspected Leak
☐ Triennial Product Suction/Remote Fill Line ☐ Annual Product Pressure Line ☒ Other UPGRADE

PRESENCE OF GROUNDWATER MUST BE DETERMINED OR TEST RESULTS WILL BE INVALID

Method for determining groundwater in tank excavation NOT INFLUENCE IN LINE TESTING

Was groundwater encountered in tank excavation? ☐ Yes ☒ No

If yes, state groundwater compensation procedure used N/A

Automatic Line Leak Detector Tested in accordance with CCR Section 2641 (i) ☒ Yes ☐ No

Type of Product Line/Fill Delivery: ☒ Pressurized ☐ Remote Fill ☐ Suction ☐ Other _____

Type of Spill/Overfill Prevention: ☒ Positive Shut Off ☒ Ball Floats ☐ High Level Alarm

Tank No.	Tank Capacity	Tank Content	Product Line		Overfilled Tank Test Including Vent, Vapor, Fill		Underfilled Tank Test (spill/overfill prevention equipment Required)		Test Date
			Gal/Hour	Pass/Fail	Gal/Hour	Pass/Fail	Gal/Hour	Pass/Fail	
1	2"LINE	DIESEL	+.0020	PASSED	N/A	N/A	N/A	N/A	4/1/03

These test results have been conducted and performed, by a tester certified according to the requirements of the tank test equipment manufacturer. The tester is licensed by the Water Resources Control Board Office of Tank Tester Licensing and meets the requirements of Subchapter 17, Title 23, of the CA Code of Regulations (effective January 1, 1990). The tank owner has been notified of these results, and has been advised of the reporting requirements for integrity testing. This UST tightness test is approved by the State Water Resources Control Board (SWRCB), has received third party verification, and meets its applicable limitations.

UNDERGROUND STORAGE TANKS – INSTALLATION CERTIFICATE OF COMPLIANCE

(one page per tank)

Page __ of __

I. FACILITY IDENTIFICATION

BUSINESS NAME (Same as FACILITY NAME or DBA – Doing Business As) 3
Superior Ready Mix

ADDRESS (For local use only) 476
9245 Camino Santa Fe, San Diego, CA 92121

FACILITY ID# 3 7 [redacted] 0 0 [redacted] H 2 1 3 1 0 1 TANK ID# 477
44-040263

II. INSTALLATION

(Check all that apply)

478 ☒ The installer has been trained and certified by the tank and piping manufacturers.

479 ☐ The installation has been inspected and certified by a registered professional engineer having education and experience with underground storage tank installations.

480 ☒ The installation has been inspected and approved by the Unified Program Agency.

481 ☒ All work listed on the manufacturer's installation checklist has been completed.

482 ☒ The installer has been certified or licensed by the Contractors' State License Board.

483 ☒ The underground storage tank, any primary piping, and secondary containment was installed according to applicable voluntary consensus standards and written manufacturer's installation procedures.

Description of work being certified:

Installation of new fill & Turbine Sumps, secondary piping, fuel dispenser & UDC.

III. TANK OWNER/AGENT SIGNATURE

I certify that the information provided herein is true and accurate to the best of my knowledge.

SIGNATURE OF TANK OWNER/AGENT	DATE 484

UST Installation - Certificate of Compliance

Formerly SWRCB Form C

Complete this certification upon installation of an UST and piping. One certification is required for each tank system. This page may be completed by either the UST owner or representative.

Refer to 23 CCR 2635 for UST installation and testing requirements.

(Note: the numbering of the instructions follows the data element numbers that are on the UPCF pages. These data element numbers are used for electronic submission and are the same as the numbering used in 27 CCR, Appendix C, the Business Section of the Unified Program Data Dictionary.)

Please number all pages of your submittal. This helps your CUPA or local agency identify whether the submittal is complete and if any pages are separated.

1. FACILITY ID NUMBER - Enter your 5 digit Establishment Number (H#) on your Health Permit. If you do not have a health permit, leave this blank.

3. BUSINESS NAME - Enter the full legal name of the business. This is the same as the terms "Facility Name" or "DBA" - Doing Business As.

476. ADDRESS - Enter the street address where the tank is located. This is to assist the tank inspector in locating the tank.

477. TANK ID NUMBER - Enter the tank ID number assigned by the owner. This is a unique number used to identify the tank. It may be assigned by the owner or by the CUPA. This is the same as item 432 as found on the UST Tank Page 1.

478. TRAINED AND CERTIFIED BY TANK AND PIPING MANUFACTURER - Check if the tank installer provided evidence of being trained and certified by the tank and piping manufacturer.

479. REGISTERED ENGINEER INSPECTION - Check if the installation has been inspected and certified by a registered professional engineer, if necessary.

480. UNIFIED PROGRAM AGENCY APPROVAL - Check if the installation has been inspected and approved by the Unified Program agency.

481. COMPLETION OF MANUFACTURER'S CHECKLIST - Check if all work listed on the manufacturer's installation checklist was completed.

482. CONTRACTORS STATE LICENSE BOARD CERTIFICATION OR LICENSE - Check if the installer has provided proof of CSLB certification or licensing.

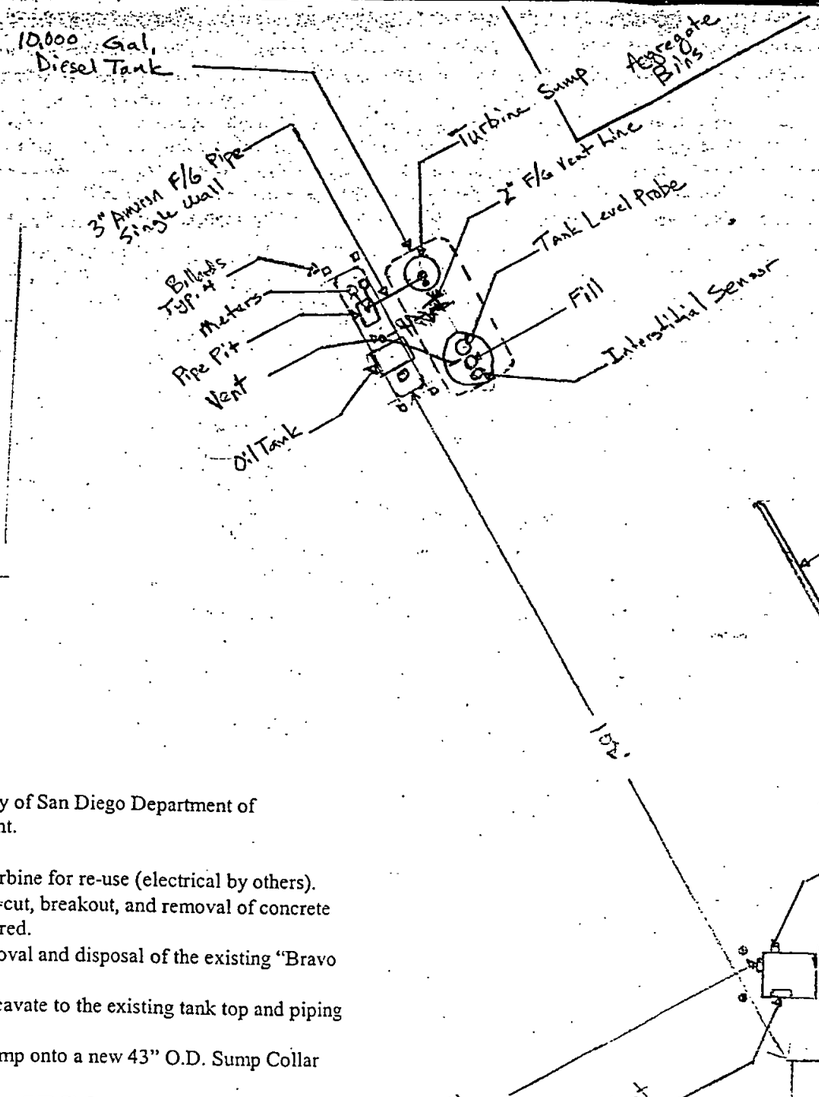
483. INSTALLATION DESCRIPTION - Check if the UST system was installed according to applicable voluntary consensus standards and any manufacturer's written installation instructions. Describe the installation in the space provided. Clarify the type and the extent of work completed at the facility, such as installation of dispenser containment, replacement of piping, or installation of turbine sumps.

SIGNATURE OF TANK OWNER/AGENT - The tank owner or agent of the owner shall sign in the space provided. This signature certifies that the signer believes that all the information submitted is true and accurate.

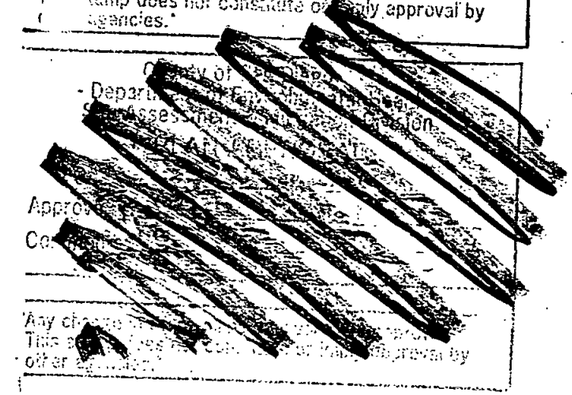
484. DATE CERTIFIED - Enter the date that the page was signed.

485. TANK OWNER/AGENT NAME - Enter the full printed name of the person signing the page.

486. TANK OWNER/AGENT TITLE - Enter the title of the person signing the page.



County of San Diego
- Department of Environmental Health -
Site Assessment & Mitigation Division
PLAN APPROVAL
PC# RT2067 HI# 21310
Approved: Date: 1/10/03
Comments: REPIPE ONE UST SYSTEM
Any change in these plans may void this approval. This stamp does not constitute or imply approval by other agencies.



Scope of Work:

- Submit plans and fees to obtain permits from the County of San Diego Department of Environmental Health (DEH), and local Fire Department.
- Schedule appropriate inspections.
- Disconnect product piping, drain, remove, and store Turbine for re-use (electrical by others).
- Assist/direct Superior Ready Mix Personnel on the saw-cut, breakout, and removal of concrete around the turbine manhole and product piping as required.
- Assist/direct Superior Ready Mix Personnel on the removal and disposal of the existing "Bravo Turbine Sump".
- Assist/direct Superior Ready Mix Personnel to hand excavate to the existing tank top and piping system
- Provide and install one (1) new 42" Fiberglass Tank Sump onto a new 43" O.D. Sump Collar (provided by others) onto the existing UST.
- Provide and install one (1) Under Dispenser Containment (UDC) Sump complete with stabilizer bar, double-poppet shear valve, flex connector, and isolation jacket with secondary test port.
- Re-pipe product lines and electrical conduits as necessary using watertight flexible entry boots for all sump penetrations.
- Complete a Hydrostatic Sump Test and document per SB-989 requirements.
- Complete all required SB-989 Testing for the UST System.
- Test and obtain 3rd Party Certification on product piping.
- Re-install one (1) Red Jacket Submersible Turbine Pump into the existing UST.
- Provide and install one (1) new Veeder-Root single-float Sump Sensor.
- Provide one (1) new 36" diameter Turbine/Sump Manhole with rain-tight bolt-down lid for Superior Ready Mix Personnel to install prior to concrete pour.
- Re-certify the existing Veeder-Root TLS-300 and program for positive shutdown.
- Provide copies of permits to owner.

HMD approved plans onsite? ☑ YES ☐ NO Inspection and reinspection fee required? ☑ YES ☐ NO

Inspection approved? ☑ YES ☐ NO "As Builts" required for final inspection? ☑ YES ☐ NO

REMARKS: The 12 ft primary pipe was approved this day. No vent pipe or fill sump installed per approved permit. A reinspection fee is required and due prior to pressure test inspection for vent line. In addition the secondary test was not completed in 2002 due to upgrades. Ensure annular test is submitted with as-builts if different from plan check drawings.

NOTICE: You are hereby notified that on 1/16/03, an Environmental Health Specialist conducted an inspection for the closure of ~~hazardous substance underground storage~~ Repipe tank(s). A summary of the conditions follows:

☐ An **unauthorized release** of a hazardous substance has been observed by the Environmental Health Specialist. You are hereby required to initiate **Corrective Action** measures (See Page 4 for details).

☒ A determination of this site's status is pending the Site Assessment and Mitigation (SAM) Program's receipt and review of analytical results for the samples taken from the tank and/or piping closure site. A laboratory report must be submitted to SAM within 30 days. Please request that the laboratory send a copy of the analytical report directly to Anthony Torres at the address provided below. Fax (619) 338-2335

The SAM Program has completed its review of the analytical results for samples collected at the tank closure site and has determined the following:

☐ **TANK CLOSURE COMPLETE - NO FURTHER ACTION REQUIRED**

☒ **INITIATE CORRECTIVE ACTION MEASURES (See enclosed information)**

Reviewed by: TONY TORRES **Date Reviewed:** 9/20/05 **Supervisor (initial):** MDV/SW

On the above date an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

AUG 1 0 1995

Office Use Only

Initial Inspection : processed 9/6/95 SC file

1. OBTAIN A VALID HEALTH PERMIT FROM this Dept. Post PERMIT ON SITE.
2. PROPERLY LABEL WASTE oil Drums with "HAZARDOUS WASTE" LABELS. Fill out the LABELS with the required INFORMATION FOR "storage".
3. KEEP Receipts FOR WASTE oil & oil FILTER pick ups ON SITE, EASILY AVAILABLE FOR reviews FOR a minimum OF 3 yrs.
4. KEEP WASTE oil Drums tightly CLOSED EXCEPT when ADDING OR REMOVING WASTE.
5. OBTAIN Spill CONTROL MATERIAL & STORE CLOSE to Drums to contain an accidential Spill. Clean up spills IMMEDIATELY.
6. SUBMIT A completed HAZ Mat BUSINESS PLAN to this Dept. to my attention within 30 DAYS.
7. Conduct Employee TRAINING within 30 DAYS FOR NEW Employees & annually FOR existing Employees COVERING the HANDLING, STORAGE, & DISPOSAL OF Haz waste & EMERGENCY PREPAREDNESS - FIRE & SPILLS.
8. Document All TRAINING. Dates, signatures, TOPICS.

COMPLIANCE INSPECTION REPORT

BUSINESS ADDRESS: 9255 H CAMINO Santa Fe S.D. 92121

VIOLATION REPORT: The items checked below refer to specific section numbers of Titles 19/22/23 of the California Code of Regulations (CCR), Chapters 6.5, 6.7, 6.95 of the Health and Safety Code (HSC), and/or the San Diego County Code (SDCC).

I HAZARDOUS WASTE REQUIREMENTS:

RECORD KEEPING

- [X] Health Permit not obtained SDCC 68.905 — V0108 W
- [ ] No EPA Identification Number 66262.12 — V0105 W
- [ ] Waste Manifests/Receipts not on-site for 3 years 66262.40 — V0118 W
- [ ] Manifest not properly completed 66262.23 — V0120 W
- [ ] Manifest copy not sent to CAL-EPA 66262.23 — V0115 W
- [ ] TSDF signed-manifest not on-site 66262.40 — V0121 W
- [ ] Biennial report not sent to CAL-EPA 66262.41 — V0122 W
- [ ] LDR Documentation not available 66268.7 — V0123 W
- [ ] Exception Rpt. not filed with CAL-EPA 66262.42 — V0116 W
- [ ] Operating TSDF without authorization 25201 — V0124 W

STORAGE AND HANDLING

- [ ] Waste stored longer than 90 days 66262.34 — V0221 W
- [X] Waste container missing/improperly labeled 66262.34 — V0222 W 22
- [ ] Haz Materials not properly labeled 25124 — V0223 W
- [X] Waste container not kept closed 66265.173 — V0202 W 22
- [ ] Waste container in poor condition 66265.171 — V0205 W
- [ ] Waste container(s) not properly managed 66265.173 — V0210 W
- [ ] Damaged container not repackaged 66265.171 — V0226 W
- [ ] Container incompatible with waste 66265.172 — V0207 W
- [ ] Incompatibles in the same container 66265.177 — V0224 W
- [ ] Incompatibles not stored separately 66265.177 — V0213 W
- [ ] Ignitible Wastes less than 50 feet 66265.176 — V0214 W
- [ ] Ignitible Wastes not grounded 66265.31 — V0215 W
- [ ] Storage area not inspected weekly 66265.174 — V0216 W

DISPOSAL AND TRANSPORTATION

- [ ] Unauth. disposal of waste to _____ 25189.5 — V0313 W
- [ ] Waste determination not made 66262.11 — V0319 W
- [ ] Unlawful transport of haz. waste 25163 — V0315 W
- [ ] Waste transported without manifest 66262.20 — V0316 W
- [ ] No Extremely Haz. Waste Permit 67430.1 — V0317 W

TRAINING, CONTINGENCY PLAN & EMERGENCY PROCEDURES

- [ ] Training records unavailable 66265.16 — V0405 W
- [ ] Training program not adequate 66265.16 — V0406 W
- [ ] Facility not designed to minimize release 66265.31 — V0501 W
- [ ] Spill control equip not available 66265.32 — V0508 W
- [ ] Aisle space is obstructed 66265.35 — V0509 W
- [ ] Contingency plan not prepared and/or on file 66265.51, 66265.53 — V0609 W

MISCELLANEOUS

- [ ] Waste oil contaminated 25250.7 — V0225 W
- [ ] Used oil filters improperly managed 66266.130 — V0701 W
- [ ] Damaged batteries improperly managed 66266.81 — V0702 W

II UNDERGROUND STORAGE TANK (UST) REQUIREMENTS:

GENERAL UST REQUIREMENTS

- [ ] Health Permit not obtained 68.1005, 25284 — V3002 T
- [ ] Repair/modify/close permit not obtained 68.1005 — V3007 T
- [ ] UST Permit Application not submitted 25286(a) — V3010 T
- [ ] Operating permit conditions violated 2712 — V3011 T
- [ ] Failed to notify HMMD of changes 25284 — V3012 T
- [ ] No owner/operator agreement 25293 — V3005 T
- [ ] No records of financial coverage 25292.2 — V3013 T
- [ ] No maint/monit/calib records available 2712(b), 2641i — V3001 T

MONITORING REQUIREMENTS (SINGLE WALL)

- [ ] Leak Detection Method does not meet performance standards 2643 — V3014 T
- [ ] Annual Integrity test not conducted 25292 — V3015 T
- [ ] Copy of tank test not submitted to HMMD within 30 days 2643 — V3016 T
- [ ] Manual tank gauging (<2000 gal) 2645 not done properly — V3017 T
- [ ] Reconciliation not done properly 2646 — V3018 T
- [ ] Reconciliation not approved for facility 2646 — V3019 T
- [ ] Dispenser meter(s) not calib annually 2646 — V3020 T
- [ ] Improper liquid measurements 2646 — V3021 T
- [ ] Stick in poor condition 2646 — V3022 T
- [ ] Improper monthly reconciliation 2646 — V3023 T
- [ ] Failed to report excessive variation 2646 — V3024 T

NOTICE OF VIOLATION
*****HEALTH PERMIT NOT OBTAINED*****

BUSINESS NAME Canyon Recycling Inc PHONE 550-0280
BUSINESS ADDRESS 9255 Camino Santa Fe CITY San Diego ZIP 92121
OWNERS NAME Canyon Recycling Inc. PHONE 550-0280

An inspection of this establishment/site was conducted by the County of San Diego, Hazardous Materials Management Division (HMMD) under authority of Sections 25185, 25289, and 25508 of the California Health and Safety Code. In accordance with State law and local ordinances, business establishments or property owners in San Diego County that handle; store; or dispose of hazardous substances, or own an underground storage tank(s) must obtain a COUNTY OF SAN DIEGO HEALTH PERMIT on an annual basis. You are currently in violation of the law for not obtaining a health permit and may be subject to further legal action.

Pro. 6/26/97 now

The following statements specify the violation. (Check applicable Section #'s referenced below.)

I. X *Sections 68.905-907; San Diego County Code of Regulatory Ordinances. Establishment that generates, handles, or stores a hazardous waste without a health permit.* used oil

MAY 21 1997

II. X *Sections 68.1105-1108; San Diego County Code of Regulatory Ordinances. Establishment that handles or stores a reportable hazardous material without a health permit.* Diesel Fuel

III. ___ *Sections 68.1005-1008; San Diego County Code of Regulatory Ordinances. Ownership of an underground hazardous substance storage tank without a health permit.*

INSPECTOR OBSERVATIONS: 1. This site generates hazardous waste and use hazardous material. Therefore a current Health Permit is required. Site is operating without a Health Permit at this time - obtain a current Health Permit within 10 days. Post it at the site.
2. Business Plan couldn't be located at the site and hasn't been submitted to HMMD
- fill out the plan and mail it to the address below. Keep a copy at the site.
3. Employee training on emergency procedures and managing hazardous materials & wastes is undocumented

CORRECTIVE ACTIONS: Within ten (10) calendar days from receipt of this Notice of Violation, the establishment owner must complete and sign a health permit application and pay all applicable fees and penalties to the County of San Diego, Hazardous Materials Management Division. Contact the Permit Clerk at (619) 338-2251 to confirm the amount of permit fees and penalties to be paid. A HEALTH PERMIT will only be issued to an establishment under the following conditions: 1. The establishment owner completes and signs a health permit application; and, 2. The establishment owner pays all applicable HEALTH PERMIT fees to the County of San Diego, Hazardous Materials Management Division within ten (10) calendar days.

**** *BE ADVISED THAT FAILURE TO OBTAIN A HEALTH PERMIT MAY RESULT IN FURTHER LEGAL ACTION.* Any person who violates the health permit requirement specified above is guilty of a misdemeanor. Every day this violation occurs constitutes a separate offense.

VIOLATION REPORT: The items checked below refer to specific section numbers of Titles 19/22/23 of the California Code of Regulations (CCR), Chapters 6.5, 6.7, 6.95 of the Health and Safety Code (HSC), and/or the San Diego County Code (SDCC).

I HAZARDOUS WASTE REQUIREMENTS:

RECORD KEEPING

1 [X] Health Permit not obtained SDCC 68.905 — V0108 W ✓
[ ] No EPA Identification Number 66262.12 — V0105 W
2 [X] Waste Manifests/Receipts not on-site for 3 years 66262.40 (used oil) — V0118 W ✓
[ ] Manifest not properly completed 66262.23 — V0120 W
[ ] Manifest copy not sent to CAL-EPA 66262.23 — V0115 W
[ ] TSDF signed-manifest not on-site 66262.40 — V0121 W
[ ] Biennial report not sent to CAL-EPA 66262.41 — V0122 W
[ ] LDR Documentation not available 66268.7 — V0123 W
[ ] Exception Rpt. not filed with CAL-EPA 66262.42 — V0116 W
[ ] Operating TSDF without authorization 25201 — V0124 W

STORAGE AND HANDLING

[ ] Waste stored longer than 90 days 66262.34 — V0221 W ✓
3 [X] Waste container missing/improperly labeled 66262.34 — V0222 W ✓
[ ] Haz Materials not properly labeled 25124 — V0223 W
[ ] Waste container not kept closed 66265.173 — V0202 W
[ ] Waste container in poor condition 66265.171 — V0205 W
[ ] Waste container(s) not properly managed 66265.173 — V0210 W
[ ] Damaged container not repackaged 66265.171 — V0226 W
[ ] Container incompatible with waste 66265.172 — V0207 W
[ ] Incompatibles in the same container 66265.177 — V0224 W
[ ] Incompatibles not stored separately 66265.177 — V0213 W
[ ] Ignitible Wastes less than 50 feet 66265.176 — V0214 W
[ ] Ignitible Wastes not grounded 66265.31 — V0215 W
[ ] Storage area not inspected weekly 66265.174 — V0216 W

DISPOSAL AND TRANSPORTATION

[ ] Unauth. disposal of waste to _____ 25189.5 — V0313 W
[ ] Waste determination not made 66262.11 — V0319 W
[ ] Unlawful transport of haz. waste 25163 — V0315 W
[ ] Waste transported without manifest 66262.20 — V0316 W
[ ] No Extremely Haz. Waste Permit 67430.1 — V0317 W

TRAINING, CONTINGENCY PLAN & EMERGENCY PROCEDURES

[ ] Training records unavailable 66265.16 — V0405 W
[ ] Training program not adequate 66265.16 — V0406 W
[ ] Facility not designed to minimize release 66265.31 — V0501 W
[ ] Spill control equip not available 66265.32 — V0508 W
[ ] Aisle space is obstructed 66265.35 — V0509 W
[ ] Contingency plan not prepared and/or on file 66265.51, 66265.53 — V0609 W

MISCELLANEOUS

[ ] Waste oil contaminated 25250.7 — V0225 W
[ ] Used oil filters improperly managed 66266.130 — V0701 W
[ ] Damaged batteries improperly managed 66266.81 — V0702 W

II UNDERGROUND STORAGE TANK (UST) REQUIREMENTS:

GENERAL UST REQUIREMENTS

[ ] Health Permit not obtained 68.1005, 25284 — V3002 T
[ ] Repair/modify/close permit not obtained 68.1005 — V3007 T
[ ] UST Permit Application not submitted 25286(a) — V3010 T
[ ] Operating permit conditions violated 2712 — V3011 T
[ ] Failed to notify HMMD of changes 25284 — V3012 T
[ ] No owner/operator agreement 25293 — V3005 T
[ ] No records of financial coverage 25292.2 — V3013 T
[ ] No maint/monit/calib records available 2712(b), 2641i — V3001 T

MONITORING REQUIREMENTS (SINGLE WALL)

[ ] Leak Detection Method does not meet performance standards 2643 — V3014 T
[ ] Annual Integrity test not conducted 25292 — V3015 T
[ ] Copy of tank test not submitted to HMMD within 30 days 2643 — V3016 T
[ ] Manual tank gauging (<2000 gal) 2645 not done properly — V3017 T
[ ] Reconciliation not done properly 2646 — V3018 T
[ ] Reconciliation not approved for facility 2646 — V3019 T
[ ] Dispenser meter(s) not calib annually 2646 — V3020 T
[ ] Improper liquid measurements 2646 — V3021 T
[ ] Stick in poor condition 2646 — V3022 T
[ ] Improper monthly reconciliation 2646 — V3023 T
[ ] Failed to report excessive variation 2646 — V3024 T
[ ] Pressurized Product Piping Leak Device not tested annually 25292 — V3025 T

MONITORING REQUIREMENTS (DOUBLE WALL)

[ ] Monitoring system not functional 2632 — V3026 T
[ ] No written monitoring procedure 2632 — V3027 T
[ ] Written response plan not available 2632 — V3028 T
[ ] Spill/Overfill equip. not maintained or installed 2635 — V3029 T

RELEASE REPORTING

[ ] Failure to report an unauthorized release 25295 — V3009 T

COMPLIANCE INSPECTION REPORT

BUSINESS NAME Canyon Recycling
ADDRESS 9255 Camino Santa Fe
CITY/ZIP San Diego CA 92121

On the above date an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

Office Use Only

JAN 29 1997

2/4/97

Routine Inspection

Violations and Corrective Actions:

1. There are several full unlabelled 5 gallon containers and 15 ¢ 55 gallon drums of used oil at the site, some of which are open. These have been stored in excess of allowable time.
   - have all the used oil disposed of within 30 days using a licensed hazardous waste hauler. Mail a copy of the receipt to the address below within 30 days. Keep original receipt on file at site. Locate your old receipts also.
   - put lids and bungs in or on all the used oil containers and drums. Always keep them tightly closed.
2. Business Plan isn't implemented at the site
   - fill out the plan. Mail it to the address below within 30 days. Keep a copy at the site
3. Employee training on emergency procedures and managing hazardous waste isn't adequate or documented
   - train employees on the above. Document the training

Remark:

1. There is a 500 and a 1000 gallon unleaded and diesel fuel tank, both of which are resting precariously

on pallets. This poses an immediate safety hazard.

- within 5 days, either have the tanks picked up, as I was told was going to happen, or drain your containment area of water and place the tanks in this area.
- also devise a method so that tanks won't float if containment area fills with water, ie. chain them down.

COMPLIANCE INSPECTION REPORT

BUSINESS NAME Canyon Recycling
ADDRESS 9255 Camino Santa Fe
CITY/ZIP San Diego CA 92121

On the above date an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

Office Use Only

Status Verification Inspection

Canyon Recycling has gone out of business. The aboveground gas tank and all hazardous waste has been removed from site. The aboveground 300 gallon Diesel tank is empty, and is going to be removed.

There is an independent contractor at the site cleaning up all the compost piles. He expects to be done within a month. He has a 400 gallon portable Diesel tank that he stated will be removed within a month.

De-activate this site from HE-58.

New Site Inspection

1. Site generates hazardous waste and is operating without a current Health Permit.
   - a permit application was filled out on this date. You'll receive a bill for your Health Permit in 6-8 weeks. Post the permit at the site when you receive it.
2. Business Plan, or emergency response plan, isn't at site
   - I've given you a copy of the old HG Fenton Plan, use this plan as a guideline and fill out your own B.P. Mail a copy to address below within 30 days. Keep original at site and accessible.
3. Employee training on emergency procedures and proper management of hazardous materials & wastes is inadequate and undocumented.
   - train employees on above within 30 days and document training. Mail a copy of documented training to address below. keep original on file at site.
   - update training annually.
4. Hazardous waste disposal/recycling manifests/receipts aren't on file at site,
   - mail copies of disposal receipts for used oil, solvent disposal, antifreeze recycling, used oil filters, and used absorbant for the last 12

4 (cont) Months to the address below within 10 days.
- Keep original waste disposal receipts on file at site and accessible per state law.

5. This site needs to obtain it's own EPA ID # if it hasn't already, to dispose of solvent waste. Do not use HG Fenton's I.D.#.
- obtain a new EPA ID #.

6. Used oil drain pan and used antifreeze buckets (3) are full and open.
- don't store hazardous waste in open buckets When you drain fluids, transfer them to waste drums or tanks.

Remarks

1. I observed several unrestrained cylinders, one without the safety cap.
- properly restrain cylinders using a chain or restraining strap.

2. Recommend that you keep all records in one file at site

HAZARDOUS MATERIALS SUMMARY

Complete the following information regarding the handling of hazardous materials at your business or service. Check one statement.

☒ This business or service does generate hazardous waste, handles hazardous materials subject to the inventory requirements and/or has underground storage tanks that requires a permit from the San Diego County Department of Environmental Health.

☐ I have determined that this business or service does not generate hazardous waste, handle hazardous materials subject to the inventory requirements or has underground storage tanks requiring permits from the San Diego County Department of Environmental Health.

I declare under penalty of perjury that to the best of my knowledge and belief the statements made herein are correct and true. I consent to all necessary inspections allowed by law and incidental to the issuance of required permit(s) and the operation of this business.

Signature _____ Title Service Manager

Date _____ Phone _____

Type of Business _____

Please complete the business information on the following page and return this questionnaire to the San Diego County Department of Environmental Health in the pre-addressed return envelope or mail using the following address.

SAN DIEGO COUNTY
DEPARTMENT OF ENVIRONMENTAL HEALTH
HAZARDOUS MATERIALS MANAGEMENT DIVISION
P.O. BOX 85261
SAN DIEGO CA 92186-5261

If a San Diego County Hazardous Materials Management Permit is required for your business or service a representative of this Department will complete an inspection of your business. Permit fees will be determined from the inspection and a billing statement will be mailed.

NOTE: If you do not use hazardous materials, generate hazardous waste, or have underground storage tanks you are still required to return this form.

A representative of the San Diego County Department of Environmental Health may contact you to verify the information provided on this questionnaire.

SECTION B - INVENTORY OF HAZARDOUS MATERIALS

A "hazardous substance" is a chemical compound, or product for which a manufacturer or producer is required by law to prepare a Material Safety Data Sheet (MSDS) for that substance. An MSDS is a document (usually 2 or 3 pages) which contains chemical composition information, fire and explosive data, health hazard data, reactivity data, spill or leak procedures, special protection information and special precaution information. An MSDS for a hazardous substance can be obtained from the supplier of that substance. Hazardous substances also include materials requiring placard warnings during transportation.

1. Does your establishment use or handle hazardous, substances in quantities equal to or greater than 55 gallons, 500 pounds, or 200 cubic feet of compressed gas at any one time?
   Yes ☐ No ☐

2. Review the health hazards data or health and safety section of the Material Safety Data Sheets (MSDS) to see if any chemicals or substances you use are designated as a cancer-causing substance (carcinogen) or substance which may cause birth defects, miscarriages, or damage to the human reproductive system (reproductive toxin). Does your establishment use or handle carcinogens or reproductive toxins?
   Yes ☐ No ☐

3. Does your establishment use or handle gases with Threshold Limit Values (TLV) or Time Weighted Average (TWA) of 10 parts per million or less? Yes ☐ No ☐

If you have answered "Yes" to any of the above questions (1, 2, or 3), you do use or handle hazardous materials that are subject to inventory requirements and a permit from the San Diego County Department of Environmental Health is required. Continue with Section C of the questionnaire.

SECTION C - UNDERGROUND STORAGE TANKS

An "underground storage tank" is a tank, including piping, which holds hazardous wastes (as defined in Section A) or hazardous substances (as defined in Section B, regardless of volume) and has 10% or more of the total volume located below grade.

Does your business have underground storage tanks as defined above?
Yes ☐ No ☐

If you answered "yes" a permit from the San Diego County Department of Environmental Health is required.

Underground storage tanks may not be installed, removed, destroyed, repaired or operated without permits from this Department.

Continue with the Hazardous Materials Summary on page 4.

PHONE 653-3634

On the above date an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

Office Use Only

FILE 9.21.99

Routine inspection

1. Observation: Two, 55-gallon drums storing used engine coolant missing hazardous waste labels. Next to both full drums is an unlabled, open 5-gallon bucket storing used engine coolant.
Corrective action: Affix hazardous waste labels and state the required information during storage. Keep all containers storing a hazardous waste closed unless adding or removing.

2. Observation: The Uniform Hazardous Waste Manifests for waste disposal lists "Premix" as the generator. Pressley Peterbilt has been in operation at this location for over one year.
Corrective action: Immediately discontinue listing the generator as Premix and begin using Pressley Peterbilt. Contact Cal EPA at 1-800-618-6942 for the name change and EPA identification number.

3. Observation: No employee training documentation available.
Corrective action: Conduct training as outlined in the

BUSINESS NAME Rush Truck Center of San Diego
ADDRESS 9255 Camino Santa Fe
CITY/ZIP San Diego 92121

On the above date, an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (H&S) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

Office Use Only

– Routine Inspection

OCT 24 2001

Violations and Corrective Actions:

1) Blue copies of the Uniform Hazardous Waste Manifests have not been sent to the DTSC within 30 days.

Corrective Action: Within 30 days of a waste pickup mail off the blue copy of the uniform hazardous waste manifest to the state DTSC. Ensure the blue copies onsite are mailed offsite.

2) TSDF copies of the uniform hazardous waste manifests for the following are not onsite: 20524859 9/28/00; 20570891 11/22/00; 20613033 3/12/01; 20643121 5/8/01 for the Safety Kleen parts washer. TSDF copies are missing for the following antifreeze manifests: 99899865 6/00; 99381686 3/00. TSDF copies are also missing for the following: SIC992217 8/9/00; S00211797 4/17/00; SIC9903385 12/1/99; SK990195 3/3/99.

- Corrective Action: Obtain the above listed signed TSDF manifest copies. Within 30 days of a waste pick-up, ensure you have received the signed TSDF copy of the manifest.

3) Hazardous waste containers of used oil, used antifreeze, used oily absorbent, and used oil filters are missing or improperly labeled.

- Corrective Action: Ensure all hazardous waste containers are properly labeled with the following: 'Hazardous Waste', Company

Name, address and phone number; contents of the container; physical state and hazard characteristic; and start date of accumulation. 'Drained used oil filters' and the start date of accumulation should be on the used oil filter drums.

4) A Hazardous Materials Business Plan has not been submitted for Rush Truck Center.
- Corrective Action: Within 30 days, submit a complete Hazardous Materials Business Plan for Rush Truck Center.

5) Annual employee safety training has not been conducted or documented.
- Corrective Action: Employee safety training as described in the Hazardous Materials Business Plan is an annual requirement. Conduct and document this training.

6) Hazardous waste used absorbent/used pads/oil has not been disposed of within allowable storage time limits.
- Corrective Action: Based on the amount of hazardous waste you generate (>27 gallons/mth), you have a waste storage time of 180 days from the start date of accumulation. Have this waste properly disposed of within 30 days and fax me a copy of the manifest.

Remarks:
1) Mark empty drums as 'empty'
2) Ensure all spills are cleaned up off the floor as soon as possible.
3) Ensure compressed gas cylinders are properly restrained.
4) Safety-Kleen is using the wrong EPA ID number on their manifests. Call and correct this.
5) Health permit current, expires 5/31/02.

COMPLIANCE INSPECTION REPORT

DATE 10/3/19

PAGE 3 OF 3

BUSINESS ADDRESS: 9255 Camino Santa Fe San Diego 92121

VIOLATION REPORT: The items checked below refer to specific section numbers of Titles 19/22/23 of the California Code of Regulations (CCR), Chapters 6.5, 6.7, 6.95 of the Health and Safety Code (HSC), and/or the San Diego County Code (SDCC).

I HAZARDOUS WASTE REQUIREMENTS:

RECORD KEEPING

- [ ] Health Permit not obtained SDCC 68.905 — V0108 W
- [ ] No EPA Identification Number 66262.12 — V0105 W
- [ ] Waste Manifests/Receipts not on-site for 3 years 66262.40 — V0118 W
- [ ] Manifest not properly completed 66262.23 — V0120 W
- [X] 1 Manifest copy not sent to DTSC 66262.23 — V0115 W 7
- [X] 2 TSDF signed-manifest not on-site 66262.40 — V0121 W 7
- [ ] Biennial report not sent to DTSC 66262.41 — V0122 W
- [ ] LDR Documentation not available 66268.7 — V0123 W
- [ ] Exception Rpt. not filed with DTSC 66262.42 — V0116 W
- [ ] Operating TSDF without authorization 25201 — V0124 W

STORAGE AND HANDLING

- [X] 3 Waste stored longer than 90, 180, or 270 days 66262.34 — V0221 W ✓
- [ ] Failure to clean up hazwaste off of floor surface 66262.10b — V0313 W
- [X] 4 Waste container missing/improperly labeled 66262.34 — V0222 W 7
- [ ] Haz Materials not properly labeled 25124 — V0223 W
- [ ] Waste container not kept closed 66265.173 — V0202 W
- [ ] Waste container in poor condition 66265.171 — V0205 W
- [ ] Waste container(s) not properly managed 66265.173 — V0210 W
- [ ] Damaged container not repackaged 66265.171 — V0226 W
- [ ] Container incompatible with waste 66265.172 — V0207 W
- [ ] Incompatibles in the same container 66265.177 — V0224 W
- [ ] Incompatibles not stored separately 66265.177 — V0213 W
- [ ] Ignitible Waste less than 50 feet 66265.176 — V0214 W
- [ ] Ignitible Waste not grounded 66265.31 — V0215 W
- [ ] Storage area not inspected weekly 66265.174 — V0216 W

DISPOSAL AND TRANSPORTATION

- [ ] Unauth. disposal of waste to _____ 25189.5 — V0313 W
- [ ] Waste determination not made 66262.11 — V0319 W
- [ ] Unlawful transport of haz. waste 25163 — V0315 W
- [ ] Waste transported without manifest 66262.20 — V0316 W
- [ ] Extremely Haz Waste Permit not obtained 25205.7 — V0317 W

TRAINING, CONTINGENCY PLAN & EMERGENCY PROCEDURES

- [ ] Training records unavailable 66265.16 — V0405 W
- [X] 5 Training program not adequate 66265.16 — V0406 W 7
- [ ] Facility not designed to minimize release 66265.31 — V0501 W
- [ ] Spill control equip not available 66265.32 — V0508 W
- [ ] Aisle space is obstructed 66265.35 — V0509 W
- [ ] Contingency plan not prepared and/or on file 66265.51, 66265.53 — V0609 W

MISCELLANEOUS

- [ ] Waste oil contaminated 25250.7 — V0225 W
- [X] 6 Used oil filters improperly managed 66266.130 — V0701 W 7
- [ ] Damaged batteries improperly managed 66266.81 — V0702 W
- [ ] Facility has failed to notify local CUPA and DTSC of onsite treatment of hazardous waste (tiered pemitting) — V0125 W
- [ ] Onsite treatment of waste without authorization 25201 — V0125 W

II UNDERGROUND STORAGE TANK (UST) REQUIREMENTS:

GENERAL UST REQUIREMENTS

- [ ] Health Permit not obtained 68.1005, 25284 — V3002 T
- [ ] Repair/modify/close permit not obtained 68.1005 — V3007 T
- [ ] UST Permit Application not submitted 25286(a) — V3010 T
- [ ] Operating permit conditions violated 2712 — V3011 T
- [ ] Failed to notify HMMD of changes 25284 — V3012 T
- [ ] No owner/operator agreement 25284 — V3005 T
- [ ] No records of financial coverage 25292.2 — V3013 T
- [ ] No maint/monit/calib records available 2712(b), 2641(j) — V3001 T
- [ ] Monitoring Equip. not tested annually 2630, 2641 — V3003 T

MONITORING REQUIREMENTS (SINGLE WALL)

- [ ] Leak Detection Method does not meet performance standards 2643 — V3014 T
- [ ] Integrity test not conducted 25292 — V3015 T
- [ ] Copy of tank test not submitted to HMMD within 30 days 2643 — V3016 T
- [ ] Manual tank gauging (<2000 gal) 2645 not done properly — V3017 T
- [ ] Reconciliation not done properly 2646 — V3018 T
- [ ] Reconciliation not approved for facility 2646 — V3019 T
- [ ] Dispenser meter(s) not calib annually 2646 — V3020 T
- [ ] Improper liquid measurements 2646 — V3021 T
- [ ] Stick in poor condition 2646 — V3022 T
- [ ] Improper monthly reconciliation 2646 — V3023 T
- [ ] Failed to report excessive variation 2646 — V3024 T
- [ ] Pressurized Product Piping Leak Device not tested annually 25292 — V3025 T
- [ ] No written monitoring procedure 2641 — V3027 T
- [ ] No written emergency response plan 2641 — V3027 T
- [ ] SIR reporting incorrectly done 2646.1 — V3004 T

MONITORING REQUIREMENTS (DOUBLE WALL)

- [ ] Monitoring system not functional 2632 — V3026 T
- [ ] No written monitoring procedure 2632 — V3027 T
- [ ] Written emergency response plan not available 2632 — V3028 T
- [ ] Spill/Overfill equip. not maintained or installed 2635 — V3029 T

RELEASE REPORTING

- [ ] Failure to report an unauthorized release 25295 — V3009 T
- [ ] Release record log not available 2651, 2650 — V3030 T
- [ ] No leak report/investigation/action 2652 — V3031 T

CLOSURE

- [ ] Temporary closure req. not completed 2671 — V3006 T
- [ ] Unused tank not properly closed 25298 — V3032 T
- [ ] Permanent closure req. not completed 2672 — V3033 T
- [ ] Failed to apply for temporary closure 25298 — V3008 T

III HAZARDOUS MATERIALS BUSINESS PLAN REQUIREMENTS:

RECORD KEEPING

- [ ] Health Permit not obtained SDCC 68.1105 — V2001 W
- [X] 7 Business Plan not established/implemented 25503.5 — V2002 W ✓
- [ ] Business Plan not submitted to HMMD 25505 — V2007 W
- [ ] Business Plan not amended 25505 — V2003 W
- [ ] Personnel Training Records not available 19 CCR 2732 — V2302 W

RELEASE REPORTING

- [ ] Failure to report a release/threatened release 25507 — V2008 W

BUSINESS PLAN ELEMENTS

- [ ] Emergency Response Plan inadequate 25504 — V2201 W
- [ ] Emergency Contacts not provided/current 25509 — V2203 W
- [X] 8 Personnel Training Program inadequate 25504 — V2301 W ✓
- [ ] Inventory is incomplete 25504 — V2005 W
- [ ] Site Map is not sufficient 25509 — V2202 W
- [ ] Acutely Haz. Mat. not registered 25533 — V2009 W

ALL VIOLATIONS MUST BE CORRECTED. PLEASE CALL (619) 338-2222 OR YOUR INSPECTOR IF YOU HAVE ANY QUESTIONS.

On the above date, an inspection of your business/facility was conducted in order to determine compliance with the California Health and Safety Code (HSC) Chapters 6.5, 6.7, 6.95; Titles 19, 22 and 23 of the California Code of Regulations (CCR); and the San Diego County Code (SDCC). The following remarks are intended to provide guidance to correct the violations noted on the attached violation report.

Y	N/A		Y	N/A	
☑	☐	Unified Program Facility Permit current and available			Permit Expires on: 5/31/03.
☑	☐	Hazardous Materials Business Plan available	☑	☐	Contingency Plan available
☑	☐	Employee Training is adequate	☐	☐	Employee Training records available
☑	☐	Waste disposal records available for review	☑	☐	Waste containers kept closed
☑	☐	Emergency contacts current ☐ Updated today	☑	☐	Waste containers kept labeled
☑	☐	Chemical inventory current ☐ Updated today	☑	☐	Waste containers in good condition

NOTICE TO COMPLY
Observations, Violations + Corrective Action

FEB 04 2003

(1) Employee training has not occurred this past ~~MONTH~~ (SIC) year
Employees MUST BE TRAINED 6 months within hire and annually thereafter – refer to BUISNESS Plan
Within 30 days conduct training, document + fax roster ATTN: SUSAN A. HAHN @ 858.694.3705

(2) Accumulation start date is not on USED OIL FILTER labels. The date when an oil filter is first disposed into drum (after pick-up) must be written on label.

Remarks:
Use absorbant to clean up spilled oil from area where oil is drained from trucks. There is a small amount there from recent drainage.

☒ This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.

☐ All violations noted on this compliance inspection report were corrected during this inspection.

Routine Hazardous Materials inspection conducted this date with permission from plant manager, Jeronimo Huizar. Business mixes rubber (recycled from used tires) clay and other chemicals in 6000 gallon vats to make an ad mixture for asphalt. Will add the following materials to your hazardous materials inventory. This will be done today. Carbon black 2 x 2500 #s.
Amine "Long chain alphatic amines" - Bexm - 2 14 drums x 55 gallons
Val Aro 130 A - 3 x 55 gallons.
Rhoplex P 15J - emulsion - 4 x 55 gallons.

AUG 04 2005

Observations / Violations - Notice to Comply.
① One blue 55 gallon plastic drum outside at tool shed has contents that are currently unknown. SAFELY determine the contents and label the drum. Within 10 days unknows become hazardous waste / corrective action: By ~~8/10/05~~ (JW) 7/14/05 determine the contents and label it.

☒ This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.

(con't)

There are at least 34 - 250 gallon totes and another 72 - 55 gallon drums of "petroleum soap" - part A" in the back fence area of this lot. Many of these drums are rusty - this poses a potential storm water violation and this will be referred to the City Storm water program. Also many of these containers (totes) are not properly labelled OSHA requires proper labeling with the original label. This issue will be referred to OSHA for investigation.

New Site Inspection

DEC 12 2003

Business stores waste oil on site
Stores >55 gal of EPOXY, ~165 gals Hydraulic Oil & 110 g Sealer. Has acetylene & O_2 compressed gas cyclinders – these should be secured to wall/stations
- Observed 10 gal pail full of PROMOTER – hazardous material (Health & Flammable) – the lid of pail had concaved in. Recommend disposing of properly.
- Most drums observed empty, all totes empty. – Label these MT.
- Within 7 days complete permit application fax ATTN: SUSAN A. HAHN @ 858.694.3705
- Within 30 days complete Hazardous Materials Business Plan and send to P.O. Box 129261 SD 92112 ATTN SUSAN HAHN

☐ This is an annual certification that the Hazardous Materials Business Plan (inventory, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored

On the above date, the County inspected your business under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

II. ACTIVITIES DECLARATION

NOTE: If you check YES to any part of this list, please submit the Business Owner/Operator Identification page.

Does your facility…	If Yes, please complete these pages of the UPCF….	
A. HAZARDOUS MATERIALS Have on site (for any purpose) hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	☒ YES ☐ NO 4	HAZARDOUS MATERIALS INVENTORY – CHEMICAL DESCRIPTION
B. REGULATED SUBSTANCES Have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release prevention Program (CalARP)?	☐ YES ☒ NO 4a	Coordinate with your local agency responsible for CalARP.
C. UNDERGROUND STORAGE TANKS (USTs) Own or operate underground storage tanks?	☐ YES ☒ NO 5	UST FACILITY (Formerly SWRCB Form A) HM-9715 UST TANK (one page per tank-Formerly Form B) HM-9717
D. ABOVE GROUND PETROLEUM STORAGE Store greater than 1,320 gallons of petroleum products (new or used) in above ground tanks or containers?	☐ YES ☒ NO 8	NO FORM REQUIRED TO CUPAs
E. HAZARDOUS WASTE		
▪ Generate hazardous waste?	☐ YES ☒ NO 9	EPA ID NUMBER – provide at the top of page
▪ Recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	☐ YES ☒ NO 10	RECYCLABLE MATERIALS REPORT (one per recycler)
▪ Treat hazardous waste on site?	☐ YES ☒ NO 11	ONSITE HAZARDOUS WASTE TREATMENT – FACILITY ONSITE HAZARDOUS WASTE TREATMENT – UNIT (one page per unit)
▪ Treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	☐ YES ☒ NO 12	CERTIFICATION OF FINANCIAL ASSURANCE
▪ Consolidate hazardous waste generated at a remote site?	☐ YES ☒ NO 13	REMOTE WASTE / CONSOLIDATION SITE ANNUAL NOTIFICATION
▪ Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned onsite?	☐ YES ☒ NO 14	HAZARDOUS WASTE TANK CLOSURE CERTIFICATION
▪ Generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste?	☐ YES ☒ NO 14a	Obtain federal EPA ID Number, file Biennial Report (EPA Form 8700-13A/B), and satisfy requirements for RCRA Large Quantity Generator.
▪ Household Hazardous Waste (HHW) Collection site?	☐ YES ☒ NO 14b	See CUPA for required forms.

F. LOCAL REQUIREMENTS 15

- MEDICAL WASTE
  - Generate <200 lbs/month of Medical/Biohazardous Waste? ☐ YES ☒ NO
  - Generate ≥200 lbs/month of Medical/Biohazardous Waste? ☐ YES ☒ NO
  - Generate ≥200 lbs/month of Medical/Biohazardous Waste and treat any amount of medical waste? ☐ YES ☒ NO
- Handle Toxic gases with threshold limit concentration (TLV) # 10 ppm in any quantity? ☐ YES ☒ NO

Business Activities

Submit the Business Activities page and the Business Owner/Operator Identification page for all submissions. NOTE: The numbering of the instructions follows the data element numbers that are on this form. These data element numbers are used for electronic submission and are the same as the numbering used in Division 3, Electronic Submittal of Information and the Business Section of the Unified Program Data Dictionary. Please number all pages of your submittal. This helps the San Diego County, Department of Environmental Health (DEH), Hazardous Materials Division (HMD) identify whether the submittal is complete and if any pages are separated.

1. FACILITY ID NUMBER - Enter the 6 character Permit # on your Unified Program Facility Permit (UPFP). If you do not have a Unified Program Facility Permit, leave this blank.
2. EPA ID NUMBER - Enter your facility's 12-character U.S. EPA ID #. If you do not have a number, contact the Department of Toxic Substances Control (DTSC) at (800) - 61-TOXIC or (800) 618-6942, to obtain one.
3. BUSINESS NAME - Enter the full legal name of the business. This is the same as the terms "Facility Name" or "DBA" - Doing Business As.

103. BUSINESS SITE ADDRESS - Enter the street address where the facility is located. No post office box numbers are allowed. This information must provide a means to geographically locate the facility.

104. BUSINESS SITE CITY - Enter the city or unincorporated area in which business site is located.

105. ZIP CODE - Enter the zip code of business site. Zip +4 may also be added.

4. HAZARDOUS MATERIALS ONSITE - Check the appropriate box to indicate whether you have a hazardous material onsite in the quantities listed in section A of this form. If "Yes", then you must then complete the Business Owner/Operator Identification page (DEH:HM-9702) and the Hazardous Materials Inventory - Chemical Description page (DEH:HM-9703), as well as a complete Hazardous Materials Business Plan (DEH:HM-952) and Hazardous Materials Business Plan Certification Statement (DEH:HM-953).

4a. REGULATED SUBSTANCES – Refer to www.oes.ca.gov, hazardous materials, CalARP guidance documents for regulated substances required by 19 CCR 2770.5. Check the box to indicate whether your facility has CalARP regulated substances stored onsite.

5. OWN OR OPERATE UNDERGROUND STORAGE TANK (UST) - Check the appropriate box to indicate whether you own or operate (or plan to install or upgrade) USTs containing hazardous substances as defined in Health and Safety Code (HSC) Section 25316. If "YES," then you must complete one UST Facility page and UST Tank pages for each tank. You must also submit a monitoring program plan (See HMD handout DEH:HM-9222). If you are installing USTs, then you must complete the UST Installation - Certificate of Compliance page in addition to UST Facility and Tank pages, plot plan and monitoring program plan and the DEH installation, upgrade permit applications. If you are closing an UST, complete the closure portion of the UST Tank pages for each tank. Submit a DEH closure application. Contact the HMD at (800) 253-9933.

8. OWN OR OPERATE ABOVEGROUND PETROLEUM STORAGE TANKS OR CONTAINERS- Check the appropriate box to indicate whether there is petroleum stored onsite which exceed the regulatory thresholds. Petroleum means crude oil, or any fraction thereof, which is liquid at 60 degrees Fahrenheit temperature and 14.7 pounds per square inch absolute pressure (HSC Section 25270.2 (g)).The facility must have a cumulative storage capacity greater than 1,320 gallons for all ASTs. NOT Subject to the Act (exemptions):
   An aboveground petroleum storage tank (AST) facility with one or more of the following (see HSC 25270.2 (k)) is not subject to this act and is exempt:
   - A pressure vessel or boiler which is subject to Division 5 of the Labor Code,
   - A storage tank containing hazardous waste if a hazardous waste facility permit has been issued for the storage tank by DTSC,
   - An aboveground oil production tank which is regulated by the Division of Oil and Gas,
   - Certain oil-filled electrical equipment including but not limited to transformers, circuit breakers, or capacitors.
9. HAZARDOUS WASTE GENERATOR - Check the appropriate box to indicate whether your facility generates hazardous waste. A generator is the person or business whose acts or processes produce a hazardous waste or who causes a hazardous substance or waste to become subject to State hazardous waste law. Hazardous waste means a waste that meets any of the criteria for the identification of a hazardous waste adopted by DTSC pursuant to HSC 25141. "Hazardous waste" includes, but is not limited to, federally regulated hazardous waste. Federal hazardous waste law is known as the Resource Conservation and Recovery Act (RCRA). Unless explicitly stated otherwise, the term "hazardous waste" also includes extremely hazardous waste and acutely hazardous waste.
10. RECYCLE - Check the appropriate box to indicate whether your facility recycles more than 100 kilograms per month of recyclable material under a claim that the material is excluded or exempt per HSC Section 25143.2. Check "YES" and complete the Recyclable Materials Report pages, if you either recycled onsite or recycled excluded recyclable materials which were generated offsite. Check "NO" if you only send recyclable materials to an offsite recycler. You do not need to report.
11. ONSITE HAZARDOUS WASTE TREATMENT - Check the appropriate box to indicate whether your facility engages in onsite treatment of hazardous waste. "Treatment" means any method, technique, or process which is designed to change the physical, chemical, or biological character or composition of any hazardous waste or any material contained therein, or removes or reduces its harmful properties or characteristics for any purpose. Please contact the HMD to determine if any exemptions apply to your facility. If your facility engages in onsite treatment of hazardous waste then complete the Onsite Hazardous Waste Treatment Notification - Facility page and one set of Onsite Hazardous Waste Treatment Notification - Unit pages with waste and treatment process information for each unit.
12. FINANCIAL ASSURANCE - Check the appropriate box to indicate whether your facility is subject to financial assurance requirements for closure of an onsite treatment unit. Unless they are exempt, Permit by Rule (PBR) and Conditionally Authorized (CA) operations are required to provide financial assurance for closure costs (per 22 CCR Section 67450.13 (b) and HSC Section 25245.4). If your facility is subject to financial assurance requirements or claiming an exemption, then complete the Certification of Financial Assurance page.
13. REMOTE WASTE CONSOLIDATION SITE - Check the appropriate box to indicate whether your facility consolidates hazardous waste generated at a remote site. Answer "YES" if you are a hazardous waste generator that collects hazardous waste initially at remote sites and subsequently transports the hazardous waste to a consolidation site you also operate. You must be eligible pursuant to the conditions in HSC Section 25110.10. If your facility consolidates hazardous waste generated at a remote site, then complete the Remote Waste Consolidation Site Annual Notification page.
14. HAZARDOUS WASTE TANK CLOSURE - Check the appropriate box to indicate whether the tank being closed would be classified as hazardous waste after its contents are removed. Classification could be based on:
   –Your knowledge of the tank and its contents
   –Testing of the tank
   –Inability to remove hazardous materials stored in the tank.
   –The mixture rule
   –The listed wastes in 40 CFR 261.31 or 40 CFR 261.32.

   If the tank being closed would be classified as hazardous waste after its contents are removed, then you must complete the Hazardous Waste Tank Closure Certification page.

14a. RCRA LQG - Check the appropriate box to indicate whether your facility is a Large Quantity Generator. If YES, you must have or obtain a US EPA ID Number.

14b. HOUSEHOLD HAZARDOUS WASTE COLLECTION - Check the appropriate box to indicate whether your facility is a HHW Collection site.

15. LOCAL REQUIREMENTS - If you generate Medical Waste you are required to obtain a Health Permit and submit a Biomedical Waste Management Plan. In addition to this, if you generate ≥200 lbs on medical waste per month and treat any amount of medical waste on site you may be required to apply for a medical waste treatment permit with the HMD. TOXIC GASES: If you handle toxic gases with threshold limit concentration (TLV) ≤10 ppm in any quantity, you are required to obtain a Health Permit and submit an HMD Hazardous Materials Business Plan.

UPF Permit#: 210049

DATE INSPECTED: 2 / 10 / 09

UNIFIED PROGRAM FACILITY PERMIT APPLICATION

☒ This business or service is required to obtain a Unified Program Facility Permit from the San Diego County Department of Environmental Health. I answered "yes" to one or more of the questions on the "Business Activities" form.

Date assumed business ownership at this location: _____

This permit does not excuse any owner or operator from complying with all applicable federal, state, county or local laws, ordinances or regulations. The owner or operator is required to determine if another permit or approval from any other agency or department is necessary. The County, by issuing this permit, does not relinquish its right to enforce any violation of law.

☐ I have determined that this business or service does not require a Unified Program Facility Permit from the San Diego County Department of Environmental Health.

I declare under penalty of perjury that to the best of my knowledge and belief the statements made herein are correct and true. I consent to all necessary inspections allowed by law and incidental to the issuance of required permit(s) and the operation of this business.

Signature: Kevin Dickison

Title: Environmental Specialist

Printed Name: Kevin Dickison

Date: 2-10-09

Type of Business: Public utility company

Phone #: (858) 541-5009 x

Please complete the business information on the following page and return this application to the San Diego County Department of Environmental Health at:

SAN DIEGO COUNTY
DEPARTMENT OF ENVIRONMENTAL HEALTH
HAZARDOUS MATERIALS DIVISION
P.O. BOX 129261
SAN DIEGO CA 92112-9261

If a San Diego County Unified Program Facility Permit is required for your business or service a representative of this Department will contact your business. Permit fees will be determined from the contact and a billing statement will be mailed.

NOTE: If you do not use hazardous materials, generate hazardous waste, or have underground storage tanks you are still required to return this form.

A representative of the San Diego County Department of Environmental Health may contact you to verify the information provided on this application.

Business Owner/Operator Identification

Please submit the Business Activities page, the B[redacted]ss Owner/Operator Identification page, and Hazardo[redacted]aterials - Chemical Description pages for all hazardous materials inventory submissions. For the inventory to be considered complete this page must be signed by the appropriate individual. (Note: the numbering of the instructions follows the data element numbers that are on the Unified Program Consolidated Form (UPCF) pages. These data element numbers are used for electronic submission and are the same as the numbering used in Division 3, Electronic Submittal of Information.) Please number all pages of your submittal. This helps your CUPA or AA identify whether the submittal is complete and if any pages are separated.

ALWAYS SUBMIT A COPY OF THIS COMPLETED PAGE WITH SUBMITTAL OF ANY OTHER UNIFIED PROGRAM CONSOLIDATED FORM.

1. FACILITY ID NUMBER - Enter your 6 character Permit # on your Unified Program Facility Permit (UPFP). If you do not have a Unified Program Facility Permit, leave this blank.
3. BUSINESS NAME - Enter the full legal name of the business. This is the same as the terms "Facility Name" or "DBA" - Doing Business As.
100. BEGINNING DATE - Enter the beginning year and date (YYYYMMDD) of the inventory report, recyclable materials report, or on-site tiered permitting report for PBR sites.
101. ENDING DATE - Enter the ending year and date (YYYYMMDD) of the reports identified in #100.
102. BUSINESS PHONE - Enter the phone number, area code first, and any extension.
102a. BUSINESS FAX – Enter the business fax number, area code first.
103. BUSINESS SITE ADDRESS - Enter the street address where the facility is located. No post office box numbers are allowed. This information must provide a means to geographically locate the facility. If the mailing address is different, complete #108a- #108d.
104. CITY - Enter the city or unincorporated area in which business site is located.
105. ZIP CODE - Enter the zip code of business site. The zip + 4 may also be added.
106. DUN & BRADSTREET - Enter the Dun & Bradstreet number for the facility. If you do not have one, leave this field blank.
107. PRIMARY SIC NUMBER - Enter the primary Standard Industrial Classification system number for primary business activity. Required for EPCRA. NOTE: If code is more than 4 digits, report only the first four.
107a. PRIMARY NAICS NUMBER - Enter the primary North American Industrial Classification System number.
108. COUNTY - Enter the county in which the business site is located.
108a. BUSINESS MAILING ADDRESS – Enter the mailing address to be used for all official business correspondence. This mailing address must be filled in.
108b. BUSINESS MAILING CITY - Enter the name of the city for the business mailing address.
108c. STATE - Enter the two character abbreviation of the state for the business mailing address.
108d. ZIP CODE - Enter the zip code for the business mailing address. The zip + 4 may also be added.
109. BUSINESS OPERATOR NAME - Enter the name of the business operator which is the name used for mailing correspondence.
110. BUSINESS OPERATOR PHONE - Enter business operator phone number, if different from business phone, area code first, and any extension.
111. BUSINESS OWNER NAME - Enter name of business owner, if different from business operator.
112. BUSINESS OWNER PHONE - Enter the business owner's phone number if different from business phone, area code first, and any extension.
113. BUSINESS OWNER MAILING ADDRESS - Enter the owner's mailing address where business related correspondence should be sent, if different from business site address.
114. BUSINESS OWNER CITY - Enter the name of the city for the owner's mailing address.
115. BUSINESS OWNER STATE - Enter the 2 character state abbreviation for the owner's mailing address.
116. BUSINESS OWNER ZIP CODE - Enter the zip code for the owner's address. The zip + 4 may also be added.
117. ENVIRONMENTAL CONTACT NAME - Enter the name of the person who receives all environmental correspondence.
118. CONTACT PHONE - Enter the phone number at which the environmental contact area code first, and any extension.
119. CONTACT MAILING ADDRESS - Enter the mailing address where all environmental contact correspondence should be sent.
119a. CONTACT EMAIL – Enter the email address of the environmental contact in 117, if the contact has one.
120. CONTACT MAILING CITY - Enter the name of the city for the environmental contact's mailing address.
121. STATE - Enter the 2 character state abbreviation for the environmental contact's mailing address.
122. ZIP CODE - Enter the zip code for the environmental contact's mailing address. The zip + 4 may also be added.
123. PRIMARY EMERGENCY CONTACT NAME - Enter the name of a representative that can be contacted in case of an emergency involving hazardous materials at the business site. The contact shall have FULL facility access, site familiarity, and authority to make decisions for the business regarding incident mitigation.
124. TITLE - Enter the title of the primary emergency contact.
125. BUSINESS PHONE - Enter the business number for the primary emergency contact, area code first, and any extension.
126. 24-HOUR PHONE - Enter a 24-hour phone number for the primary emergency contact. The 24-hour phone number must be one which is answered 24 hours a day. If it is not the contact's home phone number, then the service answering the phone must be able to immediately contact the individual stated above.
127. PAGER NUMBER - Enter the pager number for the primary emergency contact, if available.
128. SECONDARY EMERGENCY CONTACT NAME - Enter the name of a secondary representative that can be contacted in the event that the primary emergency contact is not available. The contact shall have FULL facility access, site familiarity, and authority to make decisions for the business regarding incident mitigation.
129. TITLE - Enter the title of the secondary emergency contact.
130. BUSINESS PHONE - Enter the business telephone number for the secondary emergency contact, area code first, and any extension.
131. 24-HOUR PHONE - Enter a 24-hour phone number for the secondary emergency contact. The 24-hour phone number must be one that is answered 24 hours a day. If it is not the contact's home phone number, then the service answering the phone must be able to immediately contact the individual stated above.
132. PAGER NUMBER - Enter the pager number for the secondary emergency contact, if available.
133. ADDITIONAL LOCALLY COLLECTED INFORMATION - This space may be used for CUPAs or AAs to collect any additional information necessary to meet the requirements of their individual programs. Contact your local agency for guidance.
134. DATE - Enter the date that the document was signed. (YYYYMMDD)
135. NAME OF DOCUMENT PREPARER - Enter the full name of the person who prepared the inventory submittal information.
136. NAME OF SIGNER - Enter the full printed name of the person signing the page. The signer certifies to a familiarity with the information submitted and that based on the signer's inquiry of those individuals responsible for obtaining the information, all the information submitted is true, accurate and complete.

SIGNATURE OF OWNER/ OPERATOR OR DESIGNATED REPRESENTATIVE - The Business Owner/Operator, or officially designated representative of the Owner/Operator, shall sign in the space provided. This signature certifies that the signer is familiar with the information submitted and that based on the signer's inquiry of those individuals responsible for obtaining the information it is the Signer's belief that the submitted information is true, accurate and complete.

137. TITLE OF SIGNER - Enter the title of the person signing the page.

CITY/ZIP SAN DIEGO 92121

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

NOTE: Reinspection fees will be charged if additional inspections are required to determine compliance.

HAZARDOUS MATERIALS BUSINESS PLAN CERTIFICATION

The California Health & Safety Code (H&SC), Division 20, Chapter 6.95, Section 25505 provides for the following:
The San Diego County, Department of Environmental Health, Hazardous Materials Division (HMD), as the administering agency, requires a business that handles hazardous materials to submit the hazardous materials inventory, a list of emergency contacts, and a site plan, **in lieu of a complete Hazardous Materials Business Plan (HMBP),** only after the initial submittal of a complete HMBP. The business must certify that a complete HMBP has been prepared and is maintained at the site where the hazardous materials are stored. A complete HMBP includes the items to be submitted to the HMD and an Emergency Response Plan and Employee Training Plan, as established in H&SC Section 25504. The business must also annually certify that the HMBP is current and maintained on site. See Back for instructions and further clarification.

II. CERTIFICATION STATEMENT

☒ **CARCINOGEN/REPRODUCTIVE TOXIN ANNUAL RENEWAL WITHOUT CHANGES: This is an annual renewal to certify that the list of carcinogens and/or reproductive toxins last provided is a current list as specified in the San Diego County Code of Regulatory Ordinances Section 68.1113.**

Check only one of the following boxes:

☐ **INITIAL CERTIFICATION: This is to certify (H&SC Section 25505(e)(1)) that a complete HMBP, which includes the hazardous materials inventory, a list of emergency contacts, a site plan, emergency response plan, and employee training plan, has been prepared and is maintained at the site where the hazardous materials are stored.**

☒ **ANNUAL CERTIFICATION WITHOUT CHANGES: This is an annual certification (H&SC Section 25505(d)&(e)(2)) that the HMBP, which includes the hazardous materials inventory, a list of emergency contacts, a site plan, emergency response plan, and employee training plan, is current and includes all the information required in H&SC Section 25504, and 25509, and is maintained at the site where the hazardous materials are stored.**

☐ **CERTIFICATION OF CHANGES/REVISIONS: This is to certify that the HMBP has been reviewed (H&SC Section 25505(c) & 25510) and all necessary changes/revisions have been made. The HMBP is current and is maintained at the site where the hazardous materials are stored. Attached are changes to the hazardous materials inventory and/or list of emergency contacts. For site map revisions, submit only the pages that have a change or revision and attach to this certification. This submittal satisfies annual certification requirements specified in H&SC Section 25505(d)&(e)(2).**

As an Authorized Representative, I certify under the penalty of law, that I have personally examined and am familiar with the information submitted and believe the information is true, accurate, and complete. By checking any of the boxes above I also certify that : a)The information contained in the hazardous materials inventory most recently submitted to the CUPA or Administrative Agency is complete, accurate, and up to date; b) There has been no change in the quantity of hazardous materials reported in the most recently submitted inventory; and c) All hazardous materials subject to inventory requirements are listed on the most recently submitted inventory.

INSTRUCTIONS TO CLERICAL STAFF FOR HMBP ACCEPTANCE

☐ **Site Map** ____/____/____
☐ ***Emergency Contacts** ____/____/____
☐ ***Chemical Inventory** ____/____/____

***Note**: Indicate the date that the inventory and/or ER contact information in the KIVA database was reviewed and changes were submitted for processing. If the inventory and ER contact information are exactly the same as it is recorded in KIVA, no changes need to be submitted.

Hazardous Materials Business Plan acceptance date will be changed to the acceptance date on new site map.
A letter will be mailed to business after processing of site map updates.

HIRT SITE ☐**

FIRE DIST._____

Specialist's Signature: (only required for new plans or for changes to site maps, chemical inventory and/or emergency contacts)

REMARKS:_____

** If HIRT box is checked, follow HIRT policy to indicate on the inventory forms which hazardous materials make this a HIRT site.

ATTENTION: HAZARDOUS MATERIALS HANDLER

Chapter 6.95 of the California Health & Safety Code (H&SC) establishes minimum standards for Hazardous Materials Business Plans (HMBP). Each business shall prepare a HMBP if that business uses, handles, or stores a hazardous material/waste in quantities greater than or equal to the following:

- 55 gallons of a liquid.
- 500 pounds of a solid substance.
- 200 cubic feet of compressed gas.
- A toxic compressed gas (TLV ≤ 10 ppm) in any amount.
- Extremely hazardous substances in quantities equal to or greater than the Threshold Planning Quantities.

A complete HMBP consists of the following elements as established in H&SC Section 25504:

- Hazardous Materials Inventory
- Site Plan
- List of Emergency Contacts
- Emergency Response Plan
- Employee Training Plan

The San Diego County, Department of Environmental Health, Hazardous Materials Division (HMD), as the administering agency and with the concurrence of all the local fire jurisdictions, requires a business that handles hazardous materials to submit the hazardous materials inventory, a list of emergency contacts, and a site plan, in lieu of a complete HMBP, only after the initial submittal of a complete HMBP.

The business must certify that a complete HMBP has been prepared and is maintained at the site where the hazardous materials are stored and must also annually certify that the HMBP is current and maintained on site.

Substantial changes as listed below must be submitted to the HMD within 30 days of the change along with a certification that the HMBP is current and maintained on site:

- **A 100% or greater increase or decrease in the quantity of any hazardous material on the inventory**
- **Addition or deletion of a hazardous material to the inventory**
- **Changes in the storage, location, or use of hazardous materials**
- **Any change in business name, ownership, or address**
- **Any change in Emergency Coordinator/Contact information**

Instructions for Completing the Hazardous Materials Business Plan Certification

Note: The numbering of the instructions follows the data element numbers that are on statewide reporting forms. These data element numbers are used for electronic submission and are the same as the numbering used in 27 CCR, Appendix C.

1. FACILITY ID NUMBER - Enter the 6 character Permit Number from your Permit. If you do not have a Permit, leave this blank.

3. BUSINESS NAME - Enter the full legal name of the business. This is the same as the terms "Facility Name" or "DBA" – Doing Business As.

103. BUSINESS SITE ADDRESS - Enter the street address where the facility is located. No post office box numbers are allowed.

104. CITY - Enter the city or unincorporated area in which business site is located.

105. ZIP CODE - Enter the zip code of business site. The extra 4-digit zip may also be added.

CARCINOGEN/REPRODUCTIVE TOXIN ANNUAL RENEWAL WITHOUT CHANGES - Any business which is required to submit a HMBP and handles a material which is a carcinogen or reproductive toxin, is required to submit a list of each such material handled during the previous year to the Director of the Department of Environmental Health. The list must include all carcinogens and reproductive toxins handled in quantities less than 55 gallons or 500 pounds. The list of such materials handled shall be renewed each year. Check this box to certify that the information previously submitted is still correct and no changes, additions or deletions are necessary. See http://www.sdcounty.ca.gov/deh/hmd/forms_hmd.html and review HM-9243 (Disclosure of Hazardous Materials Information Bulletin) to find out if you are required to submit this list.

INITIAL CERTIFICATION: Check this box if you are submitting a new HMBP.

ANNUAL CERTIFICATION WITHOUT CHANGES: Check this box if you are submitting an annual certification on an existing plan.

CERTIFICATION OF CHANGES/REVISIONS: Check this box if you are submitting changes to the hazardous materials inventory, list of emergency contacts, or the site plan. All pages should include the new submittal date. For multi-page site maps, include all pages with new submittal date.

SD-DEH-HMD Permit # 210049 Date: 3-1-11

San Diego County Department of Environmental Health
Hazardous Materials Management Division
Annual Carcinogen and Reproductive Toxin Reporting List

Business Name: San Diego Gas & Electric Fenton substation

Business Address: dirt road past end of Carroll Canyon Rd, San Diego, CA 92121 (Cross street: Camino Santa Fe)

Business Owner or Operator: San Diego Gas & Electric, 8315 Century Park Court; CP21L, San Diego, CA 92123

Please complete the following by entering the chemical name in the chemical column and then place a "√" in the quantity column that most closely estimates the amount on hand. If measured by volume, check the appropriate gallon column(s). If measured by weight, check the appropriate pound column(s). If the chemical is a trade secret, you should check the trade secret box. For example, if you have one pint of benzene you would write benzene in the chemical column and place a check in the "< 1 gallon" column. (**Please note**: the symbol < means less than.)

I. IDENTIFICATION

| | | |

Business Owner/Operator Identification

Please submit the Business Activities page, the Business Owner/Operator Identification page, and Hazardous Materials - Chemical Description pages for all hazardous materials inventory submissions. For the inventory to be considered complete this page must be signed by the appropriate individual.
(Note: the numbering of the instructions follows the data element numbers that are on the Unified Program Consolidated Form (UPCF) pages. These data element numbers are used for electronic submission and are the same as the numbering used in Division 3, Electronic Submittal of Information.) Please number all pages of your submittal. This helps your CUPA or AA identify whether the submittal is complete and if any pages are separated.
ALWAYS SUBMIT A COPY OF THIS COMPLETED PAGE WITH SUBMITTAL OF ANY OTHER UNIFIED PROGRAM CONSOLIDATED FORM.

1. FACILITY ID NUMBER - Enter your 6 character Permit # on your Unified Program Facility Permit (UPFP). If you do not have a Unified Program Facility Permit, leave this blank.
3. BUSINESS NAME - Enter the full legal name of the business. This is the same as the terms "Facility Name" or "DBA" - Doing Business As.
100. BEGINNING DATE - Enter the beginning year and date (YYYYMMDD) of the inventory report, recyclable materials report, or on-site tiered permitting report for PBR sites.
101. ENDING DATE - Enter the ending year and date (YYYYMMDD) of the reports identified in #100.
102. BUSINESS PHONE - Enter the phone number, area code first, and any extension.
102a. BUSINESS FAX – Enter the business fax number, area code first.
103. BUSINESS SITE ADDRESS - Enter the street address where the facility is located. No post office box numbers are allowed. This information must provide a means to geographically locate the facility. If the mailing address is different, complete #108a- #108d.
104. CITY - Enter the city or unincorporated area in which business site is located.
105. ZIP CODE - Enter the zip code of business site. The zip + 4 may also be added.
106. DUN & BRADSTREET - Enter the Dun & Bradstreet number for the facility. If you do not have one, leave this field blank.
107. PRIMARY SIC NUMBER - Enter the primary Standard Industrial Classification system number for primary business activity. Required for EPCRA. NOTE: If code is more than 4 digits, report only the first four.
107a. PRIMARY NAICS NUMBER - Enter the primary North American Industrial Classification System number.
108. COUNTY - Enter the county in which the business site is located.
108a. BUSINESS MAILING ADDRESS – Enter the mailing address to be used for all official business correspondence. This mailing address must be filled in.
108b. BUSINESS MAILING CITY - Enter the name of the city for the business mailing address.
108c. STATE - Enter the two character abbreviation of the state for the business mailing address.
108d. ZIP CODE - Enter the zip code for the business mailing address. The zip + 4 may also be added.
109. BUSINESS OPERATOR NAME - Enter the name of the business operator which is the name used for mailing correspondence.
110. BUSINESS OPERATOR PHONE - Enter business operator phone number, if different from business phone, area code first, and any extension.
111. BUSINESS OWNER NAME - Enter name of business owner, if different from business operator.
112. BUSINESS OWNER PHONE - Enter the business owner's phone number if different from business phone, area code first, and any extension.
113. BUSINESS OWNER MAILING ADDRESS - Enter the owner's mailing address where business related correspondence should be sent, if different from business site address.
114. BUSINESS OWNER CITY - Enter the name of the city for the owner's mailing address.
115. BUSINESS OWNER STATE - Enter the 2 character state abbreviation for the owner's mailing address.
116. BUSINESS OWNER ZIP CODE - Enter the zip code for the owner's address. The zip + 4 may also be added.
117. ENVIRONMENTAL CONTACT NAME - Enter the name of the person who receives all environmental correspondence.
118. CONTACT PHONE - Enter the phone number at which the environmental contact area code first, and any extension.
119. CONTACT MAILING ADDRESS - Enter the mailing address where all environmental contact correspondence should be sent.
119a. CONTACT EMAIL – Enter the email address of the environmental contact in 117, if the contact has one.
120. CONTACT MAILING CITY - Enter the name of the city for the environmental contact's mailing address.
121. STATE - Enter the 2 character state abbreviation for the environmental contact's mailing address.
122. ZIP CODE - Enter the zip code for the environmental contact's mailing address. The zip + 4 may also be added.
123. PRIMARY EMERGENCY CONTACT NAME - Enter the name of a representative that can be contacted in case of an emergency involving hazardous materials at the business site. The contact shall have FULL facility access, site familiarity, and authority to make decisions for the business regarding incident mitigation.
124. TITLE - Enter the title of the primary emergency contact.
125. BUSINESS PHONE - Enter the business number for the primary emergency contact, area code first, and any extension.
126. 24-HOUR PHONE - Enter a 24-hour phone number for the primary emergency contact. The 24-hour phone number must be one which is answered 24 hours a day. If it is not the contact's home phone number, then the service answering the phone must be able to immediately contact the individual stated above.
127. PAGER NUMBER - Enter the pager number for the primary emergency contact, if available.
128. SECONDARY EMERGENCY CONTACT NAME - Enter the name of a secondary representative that can be contacted in the event that the primary emergency contact is not available. The contact shall have FULL facility access, site familiarity, and authority to make decisions for the business regarding incident mitigation.
129. TITLE - Enter the title of the secondary emergency contact.
130. BUSINESS PHONE - Enter the business telephone number for the secondary emergency contact, area code first, and any extension.
131. 24-HOUR PHONE - Enter a 24-hour phone number for the secondary emergency contact. The 24-hour phone number must be one that is answered 24 hours a day. If it is not the contact's home phone number, then the service answering the phone must be able to immediately contact the individual stated above.
132. PAGER NUMBER - Enter the pager number for the secondary emergency contact, if available.
133. ADDITIONAL LOCALLY COLLECTED INFORMATION - This space may be used for CUPAs or AAs to collect any additional information necessary to meet the requirements of their individual programs. Contact your local agency for guidance.
134. DATE - Enter the date that the document was signed. (YYYYMMDD)
135. NAME OF DOCUMENT PREPARER - Enter the full name of the person who prepared the inventory submittal information.
136. NAME OF SIGNER - Enter the full printed name of the person signing the page. The signer certifies to a familiarity with the information submitted and that based on the signer's inquiry of those individuals responsible for obtaining the information, all the information submitted is true, accurate and complete.

SIGNATURE OF OWNER/ OPERATOR OR DESIGNATED REPRESENTATIVE - The Business Owner/Operator, or officially designated representative of the Owner/Operator, shall sign in the space provided. This signature certifies that the signer is familiar with the information submitted and that based on the signer's inquiry of those individuals responsible for obtaining the information it is the Signer's belief that the submitted information is true, accurate and complete.

137. TITLE OF SIGNER - Enter the title of the person signing the page.

HAZARDOUS MATERIALS BUSINESS PLAN CERTIFICATION

The California Health & Safety Code (H&SC), Division 20, Chapter 6.95, Section 25505 provides for the following:
The County of San Diego, Department of Environmental Health, Hazardous Materials Division (HMD), as the administering agency, requires a business that handles hazardous materials to submit the hazardous materials inventory, a list of emergency contacts, and a site plan, **in lieu of a complete Hazardous Materials Business Plan (HMBP),** only after the initial submittal of a complete HMBP. A complete HMBP includes the items to be submitted to the HMD and an Emergency Response Plan and Employee Training Plan, as established in H&SC Section 25504. The business must annually certify that a complete HMBP has been prepared, is current and is maintained at the site where the hazardous materials are stored. See *Back* for instructions and further clarification

II. CERTIFICATION STATEMENT

☒ **CARCINOGEN/REPRODUCTIVE TOXIN ANNUAL RENEWAL WITHOUT CHANGES: This is an annual renewal to certify that the list of carcinogens and/or reproductive toxins last provided is a current list as specified in the San Diego County Code of Regulatory Ordinances Section 68.1113.**

Check only ONE of the following boxes:

☐ **INITIAL CERTIFICATION: This is to certify (H&SC Section 25505(e)(1)) that a complete HMBP, which includes the hazardous materials inventory, a list of emergency contacts, a site plan, emergency response plan, and employee training plan, has been prepared and is maintained at the site where the hazardous materials are stored.**

☒ **ANNUAL CERTIFICATION WITHOUT CHANGES: This is an annual certification (H&SC Section 25505(d) & (e)(2)) that the HMBP, which includes the hazardous materials inventory, a list of emergency contacts, a site plan, emergency response plan, and employee training plan, is current and includes all the information required in H&SC Section 25504, and 25509, and is maintained at the site where the hazardous materials are stored.**

☐ **CERTIFICATION OF CHANGES/REVISIONS: This is to certify that the HMBP has been reviewed (H&SC Section 25505(c) & 25510) and all necessary changes/revisions have been made. The HMBP is current and is maintained at the site where the hazardous materials are stored. Attached are changes to the hazardous materials inventory and/or list of emergency contacts. For site map revisions, submit only the pages that have a change or revision and attach to this certification. This submittal satisfies annual certification requirements specified in H&SC Section 25505(d) & (e)(2).**

As an Authorized Representative, I certify, under the penalty of law, that I have personally examined and am familiar with the information submitted and believe the information is true, accurate, and complete. By checking any of the boxes above I also certify that: a) The information contained in the hazardous materials inventory most recently submitted to the CUPA or Administering Agency is complete, accurate, and up to date; b) There has been no change in the quantity of hazardous materials reported in the most recently submitted inventory; and c) All hazardous materials subject to inventory requirements are listed on the most recently submitted inventory.

☐ ***Chemical Inventory** ____/____/____

***Note:** Indicate the date that the inventory and/or ER contact information in the KIVA database was reviewed and changes were submitted for processing. If the inventory and ER contact information are exactly the same as it is recorded in KIVA, no changes need to be submitted.

Hazardous Materials Business Plan acceptance date will be changed to the acceptance date on new site map.

HIRT SITE ☐**
FIRE DIST._____

Specialist's Signature: (only required for new plans or for changes to site maps, chemical inventory and/or emergency contacts)

REMARKS:_____

** If HIRT box is checked, follow HIRT policy to indicate on the inventory forms which hazardous materials make this a HIRT site.

ATTENTION: HAZARDOUS MATERIALS HANDLER

Chapter 6.95 of the California Health & Safety Code (H&SC) establishes minimum standards for Hazardous Materials Business Plans (HMBP). Each business shall prepare a HMBP if that business uses, handles, or stores a hazardous material/waste in quantities greater than or equal to the following:

- 55 gallons of a liquid.
- 500 pounds of a solid substance.
- 200 cubic feet of compressed gas.
- A toxic compressed gas (TLV ≤10 ppm) in any amount.
- Extremely hazardous substances in quantities equal to or greater than the Threshold Planning Quantities.

A complete HMBP consists of the following elements as established in H&SC Section 25504:

- Hazardous Materials Inventory
- Site Plan (Site Map)
- List of Emergency Contacts
- Emergency Response Plan
- Employee Training Description

The County of San Diego, Department of Environmental Health, Hazardous Materials Division (HMD), as the administering agency and with the concurrence of all the local fire jurisdictions, requires a business that handles hazardous materials in reportable quantities to submit changes to the hazardous materials inventory, list of emergency contacts, and site plan, in lieu of a complete HMBP, only after the initial submittal of a complete HMBP.

The business must initially certify that a complete HMBP has been prepared and is maintained at the site where the hazardous materials are stored and must also **annually** re-certify that the HMBP is current and maintained on site. If there are no significant changes after the HMBP has been submitted and certified, then follow the instructions below for "Annual Certification without Changes".

Substantial changes as listed below must be submitted to the HMD within 30 days of the change along with a certification that the HMBP is current and maintained on site:

- **A 100% or greater increase or decrease in the quantity of any hazardous material on the inventory**
- **Addition or deletion of a hazardous material to the inventory**
- **Changes in the storage, location, or use of hazardous materials**
- **Any change in business name, ownership, or address**
- **Any change in Emergency Coordinator/Contact information**

Instructions for Completing the Hazardous Materials Business Plan Certification

Note: The numbering of the instructions follows the data element numbers that are on statewide reporting forms. These data element numbers are used for electronic submission and are the same as the numbering used in 27 CCR, Appendix C.

1. FACILITY ID NUMBER - Enter the 6 character Permit Number from your Permit. If you do not have a Permit, leave this blank.

3. BUSINESS NAME - Enter the full legal name of the business. This is the same as the terms "Facility Name" or "DBA" – Doing Business As.

103. BUSINESS SITE ADDRESS - Enter the street address where the facility is located. No post office box numbers are allowed.

104. CITY - Enter the city or unincorporated area in which business site is located.

105. ZIP CODE - Enter the zip code of business site. The extra 4-digit zip may also be added.

CARCINOGEN/REPRODUCTIVE TOXIN ANNUAL RENEWAL WITHOUT CHANGES: Any business which is required to submit a HMBP and handles a material which is a carcinogen or reproductive toxin, is required to submit a list of each such material handled during the previous year to the Director of the Department of Environmental Health. The list must include all carcinogens and reproductive toxins handled in quantities less than 55 gallons or 500 pounds. The list of such materials handled shall be renewed each year. Check this box to certify that the information previously submitted is still correct and no changes, additions or deletions are necessary. See http://www.sdcounty.ca.gov/deh/hazmat/hmd_forms.html and review HM-9243 (Disclosure of Hazardous Materials Information Bulletin) to find out if you are required to submit this list.

INITIAL CERTIFICATION: Check this box if you are submitting a new HMBP.

ANNUAL CERTIFICATION WITHOUT CHANGES: Check this box if you are submitting an annual certification on an existing plan.

CERTIFICATION OF CHANGES/REVISIONS: Check this box if you are submitting changes to the hazardous materials inventory, list of emergency contacts, or the site plan. All pages should include the new submittal date. For multi-page site maps, include all pages with new submittal date.

FACILITY NAME SDG&E FENTON SUBSTATION
ADDRESS DIRT ROAD OFF CAMINO SANTA FE BY HANSON
CITY/ZIP SAN DIEGO 92121

On the above date, the County inspected your facility under the authority of the California Health and Safety Code (H&SC), to determine compliance with applicable provisions of the H&SC, the California Code of Regulations (CCR), and the San Diego County Code of Regulatory Ordinances (SDCC). **This report serves as a Notice to Comply (H&SC 25187.8 & 25404.1.2) for any minor violations as defined in H&SC 25404 and 25117.6.** This report may contain both minor and more significant (Class II) violations. Minor violations do not include repeat violations or violations remaining uncorrected for more than 30 days (or as specified below). Minor violations do not include knowing, willful, intentional, or chronic violations; nor do they include violations showing a pattern of neglect or disregard. The remarks below are intended to provide guidance to correct any violations indicated on the attached violation report. You must submit a written response to this report within 30 days (or as specified below) demonstrating that all violations have been corrected or include a written notice of disagreement that clearly states the reason for any disputed violations. Prompt correction can protect you from penalties for a "minor violation". Penalties can be imposed for each day in violation for all other violations even if they are corrected promptly. However, correction within 30 days (or as specified below) will make a penalty less likely.

ROUTINE INSPECTION

THIS FACILITY STORES REPORTABLE AMOUNTS OF HAZARDOUS MATERIALS. THE HAZARDOUS MATERIALS BUSINESS PLAN WAS REVIEWED WITH JAYME.

AT LEAST ANNUALLY, CERTIFY YOUR HAZARDOUS MATERIALS BUSINESS PLAN USING THE CALIFORNIA ENVIRONMENTAL REPORTING SYSTEM (CERS). UPDATE CHANGES IN CERS WITHIN 30 DAYS OF THE CHANGES.

NO VIOLATIONS WERE OBSERVED DURING THIS INSPECTION.

☐ **This is an annual certification that the Hazardous Materials Business Plan (inventory & site map, emergency contacts, emergency response plan, and employee training plan) is current and includes all the information required in the H&SC and is maintained at the site where hazardous materials are stored.**

CONSENT TO CONDUCT INSPECTION GRANTED BY: Tina Carter TITLE: Sr. Environmental Specialist

INTRODUCTION:
Today we conducted a routine inspection to determine compliance in the handling, storing, and disposal of hazardous substances. Consent for today's inspection was granted by Tina Carter, Sr. Environmental Specialist.

This facility is a SDG&E substation and at the time of this inspection the facility has hazardous materials in reportable threshold quantities onsite. The facility is subject to hazardous materials business plan (HMBP) requirements.

INSPECTION REMARKS:
-The Hazardous Materials Business Plan submitted in the California Environmental Reporting System (CERS) is current and up to date.
-At least once every 12 months certify the HMBP for this facility in CERS.

Hazardous Materials Requirements

#	VIOLATION DESCRIPTION
☐	1010001 HMBP not established/ implemented. HSC 25505(a) and 25507(a)
☐	1010002 HMBP not submitted to the CUPA in CERS. HSC 25508(a)(1)(A); HSC 25404(e)(4); 27 CCR 15188(a), (d)
☐	1010003 Business Activities and/or Business Owner/Operator Identification not completed in CERS. 19 CCR 2729.2(a)(1); HSC 25404(e)(4)
☐	1010004 Chemical inventory incomplete or not submitted in CERS. HSC 25505(a)(1); 25506; 25507; and 25508(a)(1)(A)
☐	1010005 Site map not submitted in CERS or not sufficient. HSC 25505(a)(2) and 25508(a)(1)(A)
☐	1010006 HMBP not updated to reflect inventory changes or facility information. HSC 25508.1(a-e)
☐	1010007 HMBP not updated to reflect substantial change to the handler's operations. HSC 25508.1(f)
☐	1010008 HMBP not certified annually as complete and accurate in CERS. HSC 25508.2
☐	1010010 Emergency response procedures to mitigate a release or threatened release not adequate, not established or not submitted in CERS. HSC 25505(a)(3) and 25508(a)(1)(A)
☐	1010011 Failure to notify property owner in writing that the business is subject to the HMBP program. HSC 25505.1
☐	1010012 Failure to provide a copy of HMBP to the property owner within five working days upon request from property owner. HSC 25505.1
☐	1010014 Failure to submit emergency response plan in CERS, when not meeting agricultural handler exemption. HSC 25507.1(a) and 25508(a)(1)(A)
☐	1010015 Failure to submit employee training plan in CERS, when not meeting agricultural handler exemption. HSC 25507.1(a) and 25508(a)(1)(A)
☐	1010016 HMBP not established or submitted in CERS, when not meeting the remote site exemption. HSC 25507.2 and 25508(a)(1)(A)
☐	1020001 Employee training plan for hazardous materials management not adequate, not established or not submitted in CERS. HSC 25505(a)(4) and 25508(a)(1)(A)
☐	1020002 Initial and/or annual employee training not conducted for hazardous materials management and/or employee training records not available or not maintained for 3 years. HSC 25505(a)(4)
☐	1040001 Hazardous materials release or threatened release not reported to the CUPA and OES immediately upon discovery. HSC 25510(a)
☐	4010001 Failed to prepare and implement a written Spill Prevention Control and Countermeasures (SPCC) Plan in accordance with 40 CFR 112 (sec. 112.3). HSC 25270.4.5(a)
☐	HMD 1001 Unified Program Facility permit not obtained for hazardous materials. SDCC 68.905
☐	HMD 1005 Emergency contact not provided or current. HSC 25508.1(f)
☐	HMD 1007 Highly toxic gas (TLV<10 ppm) not disclosed. SDCC 68.1113(b)
☐	HMD 1008 Annual carcinogen/reproductive toxin list not submitted. SDCC 68.1113(c)
☐	HMD 1013 HMBP not readily available for review. HSC 25505(c)

Hazardous Waste Requirements for SQGs ONLY

☐	HMD 0219 Failed to properly segregate used oil &/or fuel drained from filters. HSC 25250.22(b)(4); 22 CCR 66266.130(c)(6)
☐	HMD 0226 Did not accumulate waste in a container or tank. (40 CFR 262.34(d)(2).) 22 CCR 66262.34(d)(2)
☐	HMD 0412 Failed to have an emergency coordinator on call or available during an emergency. (40 CFR 262.34(d)(5)(i).) 22 CCR 66262.34(d)(2)

Hazardous Waste Requirements for SQGs ONLY (continued)

#	VIOLATION DESCRIPTION
☐	3030007 Failed to properly label/date hazardous waste container and/or tank. 22 CCR 66262.34(f)
☐	3030010 Accumulated waste too long (>180 or 270 days) (>90 days for an acutely hazardous waste). (40 CFR 262.34(e) and (f).) HSC 25201(a); 22 CCR 66262.34(d)
☐	3030013 Failed to accumulate hazardous waste in a container that is in good condition. (40 CFR 262.34(d)(2); 265.171.) 22 CCR 66262.34(d)(2)
☐	3030015 Failed to accumulate or store hazardous waste in a lined/compatible container. (40 CFR 262.34(d)(2); 265.172) 22 CCR 66262.34(d)(2)
☐	3030017 Failed to properly close hazardous waste container(s). (40 CFR 262.34(d)(2); 265.173.) 22 CCR 66262.34(d)(2)
☐	3030019 Failed to inspect hazardous waste storage area at least weekly. (40 CFR 262.34(d)(2); 265.174.) 22 CCR 66262.34(d)(2)
☐	3030022 Failed to properly separate incompatible waste. (40 CFR 262.34(d)(2); 265.177.) 22 CCR 66262.34(d)(2)
☐	3030030 Failed to maintain and/or operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents. (40 CFR 262.34(d)(4), 265.31.) 22 CCR 66262.34(d)(2)
☐	3030036 Failed to maintain adequate aisle space. (40 CFR 262.34(d)(4); 265.35.) 22 CCR 66262.34(d)(2)
☐	3010022 Failed to post, next to the telephone, emergency information containing the location of emergency equipment, contact names, and numbers. (40 CFR 262.34(d)(5)(ii).) 22 CCR 66262.34(d)(2)
☐	3020001 Failed to ensure employees are trained for hazardous waste handling, compliance with regulations, and emergency response procedures. (40 CFR 262.34(d)(5)(iii).) 22 CCR 66262.34(d)(2)
☐	3030032 Failed to maintain or have emergency equipment, supplies, or equivalents. 1) An internal communication or alarm system; 2) A device, such as a telephone; 3) Portable fire extinguishers, fire control equipment, spill control equipment, and decontamination equipment; and 4) Water at adequate volume and pressure (40 CFR 262.34(d)(4); 265.32) 22 CCR 66262.34(d)(2)
☐	3030039 Failed to implement contingency plan during an emergency, spill/ release. (40 CFR 262.34(d)(5)(iv).) 22 CCR 66262.34(d)(2)

Hazardous Waste Tank Systems for SQGs ONLY

☐	3030024 Failed to maintain sufficient freeboard of 2 ft in uncovered tanks to prevent overtopping unless the tank is equipped with a containment structure, a drainage control system or a diversion structure with a capacity that equals or exceeds the volume of the top 2 ft of the tank. (40 CFR 62.34(d)(3); 265.201(b)(c).) 22 CCR 66262.34(d)(2)
☐	3030025 Failed to provide an overfill protection device on continuously fed hazardous waste tank. (40 CFR 262.34(d)(3); 265.201(b)(4).) 22 CCR 66262.34(d)(2)
☐	3030027 Failed to conduct daily tank inspection of the discharge system, monitoring equipment, and tank level. (40 CFR 265.201(c)(1), 265.201(c)(2), 265.201(c)(3), 262.34(d)(3).) 22 CCR 66262.34(d)(2)
☐	3030028 Failed to conduct weekly inspections of the construction materials, fixtures, and surrounding areas of the hazardous waste tank. (40 CFR 265.201(c)(4); 265.201(c)(5); 262.34(d)(3).) 22 CCR 66262.34(d)(2)
☐	3050007 Failed to properly decontaminate and document closure of a hazardous waste tank system. (40 CFR 265.201(f).) 22 CCR 67383.3
☐	HMD 1612 Hazardous waste improperly stored in a tank system causing leaks, corrosion, or failure. (40 CFR 265.201(b).) 22 CCR 66262.34(d)
☐	HMD 1614 Failed to pre-notify the CUPA in writing prior to closing a hazardous waste tank system. 22 CCR 67383.3(a)(1)

Hazardous Waste Requirements for SQGs and LQGs
RECORD KEEPING/OPERATIONAL REQUIREMENTS

#	VIOLATION DESCRIPTION
☐	3010001 Unified Program Facility (UPF) permit not obtained for the generation of hazardous waste. HSC 25404.1; SDCC 68.905
☐	3010029 The facility has not submitted complete and accurate facility information in CERS. HSC 25404(e)(4); 27 CCR 15188(b)
☐	3010002 Failed to obtain and/or maintain an active EPA ID. 22 CCR 66262.12
☐	3010008 Failed to properly complete a uniform hazardous waste manifest. 22 CCR 66262.23(a)
☐	3010009 Failed to complete the hazardous waste manifest Exception Requirement. 22 CCR 66262.42
☐	3010010 Failed to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for 3 years. HSC 25160.2(b)(3), 25185(a)(4); 22 CCR 66262.40(a)
☐	3010011 Failed to send hazardous waste manifest copies to the Department of Toxic Substances Control (DTSC). 22 CCR 66262.23(a)(4)
☐	3010013 Failed to meet the consolidated manifesting requirements for waste shipment. HSC 25160.2; 22 CCR 66262.40(a)
☐	3010014 Failed to retain disposal records of spent lead batteries for 3 years. 22 CCR 66266.81(a)(4)(B)
☐	3030006 Failed to determine if a hazardous waste is restricted or prohibited from land disposal. 22 CCR 66268.7(a)
☐	3010016 Failure of recycler who recycles more than 100 kilograms per month of recyclable material under a claim that the material qualifies for exclusion or exemption to provide and submit in CERS the required information. HSC 25143.10(a), (c), and/or (d)
☐	HMD 0149 Failed to keep disposal receipts for drained used oil filters and/or drained fuel filters for 3 years. HSC 25250.22; 22 CCR 66266.130
☐	HMD 0148 Failed to have copies of analytical records, waste analysis records, and/or waste determination results for 3 years. 22 CCR 66262.40(c)
☐	HMD 0140 Failed to have Land Disposal Restriction documentation onsite for 3 years. 22 CCR 66268.7(a)(8)
☐	3250005 Failed to obtain a Treatment, Storage and Disposal Facility (TSDF) permit or authorization to store/treat/dispose of hazardous waste. HSC 25201(a)
☐	3050005 Failed to have adequate records demonstrating claim of exemption for Excluded Recyclable Materials. HSC 25143.2(f); 22 CCR 66261.2(g)
☐	3210001 Failed to notify the CUPA in CERS for onsite hazardous waste treatment/tiered permitting. HSC 25201(a)
☐	HMD 0138 Manifest signed by the TSDF not available for inspection. 22 CCR 66262.40(a)

Hazardous Waste Requirements for SQGs and LQGs
DISPOSAL AND TRANSPORTATION

☐	3010007 Failed to prepare a hazardous waste manifest for the transport of a waste for off-site transfer, treatment, storage, or disposal. HSC 25160(b)(1) or (2), 25160.2(b)(9); 22 CCR 66262.20(a)
☐	3030005 Failed to make a proper waste determination. 22 CCR 66262.11, 66262.40(c)
☐	3050001 Failed to use a California registered hazardous waste transporter to transport hazardous waste. HSC 25163(a); 22 CCR 66263.41
☐	3050002 Failed to properly dispose of hazardous waste at an authorized facility. HSC 25189.5(a); 25189(c),(d); 25189.2(c)
☐	3130002 Impermissible dilution of hazardous waste. 22 CCR 66268.3(a)
☐	HMD 0305 Disposed of used oil illegally. HSC 25250.5(a); 25189.5(a); 25189(c),(d); 25189.2(c)
☐	HMD 0306 Disposed of hazardous waste latex paint improperly. HSC 25217.1

Hazardous Waste Requirements for SQGs and LQGs
STORAGE AND HANDLING

#	VIOLATION DESCRIPTION
☐	3030001 Failed to meet requirements, when handling, and storing spent lead acid batteries. 22 CCR 66266.81(a)(1)
☐	3030003 Failed to properly manage 'damaged' spent lead acid batteries. 22 CCR 66266.81(b)
☐	3030004 Failed to properly manage, store, label, and/or recycle used oil filters and/or used fuel filters. HSC 25250.22; 22 CCR 66266.130
☐	3050004 Failed to properly manage contaminated used oil as a hazardous waste. HSC 25250.7(a), (c)
☐	HMD 0222 Failed to properly label Excluded Recyclable Materials (ERM). HSC 25143.9(a).
☐	HMD 0216 Failed to label hazardous material container within 10 days after the container was discovered to be mislabeled or inadequately labeled. HSC 25124(b)(3)(A); 22 CCR 66262.34(f)
☐	HMD 0217 Failed to repackage damaged/deteriorated hazardous material container within 96 hours. HSC 25124(b)(3)(B); 22 CCR 66262.34(f)
☐	HMD 0221 Failed to comply with hazardous waste satellite container regulation. 22 CCR 66262.34(e)
☐	HMD 0223 Failed to properly empty container, failed to manage non-empty container, or inner liner removed from a container. 22 CCR 66261.7(b), (d) and/or (r); 66262.34(f)
☐	HMD 0224 Failed to mark date on empty container larger than 5 gallons and/or manage it within one year. 22 CCR 66261.7(e),(f)

Universal Waste Handler Requirements

☐	3010004 Failed to obtain an EPA ID number from DTSC or US EPA prior to storing 5,000 kg or more of universal waste. 22 CCR 66273.32(a),(b)
☐	3020002 Failed to maintain universal waste handler training records for 3 years. 22 CCR 66273.36(c),(d)
☐	3020003 Failed to properly train handlers of universal waste in universal waste management and response procedures. 22 CCR 66273.36(a),(b)
☐	3030008 Failed to properly label or mark a universal waste (non-Conditionally Exempt Small Quantity Universal Waste Generator). 22 CCR 66273.34
☐	3030011 Failed to properly dispose of universal waste within one year. 22 CCR 66273.35(a) and/or (b)
☐	3030046 Failed to keep records of offsite universal waste (UW) shipment(s) available for inspection for 3 years. HSC 25185(a); 22 CCR 66273.39(c), (d)(2)
☐	3030051 Failed to meet the accumulation standards for universal waste aerosol containers and waste handling. HSC 25201.16(f)
☐	3040004 Failed to manage universal waste in a manner to prevent release(s) to the environment. 22 CCR 66273.33; 66273.33.5
☐	3050003 Disposal of universal waste (UW) to an unauthorized point. HSC 25189.5(a), 25189(c),(d); 25189.2(c); 22 CCR 66273.31(a)

San Diego County Department of Environmental Health
Hazardous Materials Management Division
Annual Carcinogen and Reproductive Toxin Reporting List

Business Name: San Diego Gas & Electric substation

Business Address: _____

Business Owner or Operator: San Diego Gas & Electric, 8315 Century Park Court; CP21L, San Diego, CA 92123

Please complete the following by entering the chemical name in the chemical column and then place a "√" in the quantity column that most closely estimates the amount on hand. If measured by volume, check the appropriate gallon column(s). If measured by weight, check the appropriate pound column(s). If the chemical is a trade secret, you should check the trade secret box. For example, if you have one pint of benzene you would write benzene in the chemical column and place a check in the "< 1 gallon" column. (**Please note**: the symbol < means less than.)

DHS:HM-916 (10/89)

Type(s) of hazardous substance(s) released: Possibly Diesel

Is hazardous material ponded? Water was ponded What is estimated amount? _____

Is amount of hazardous substance release known? No Estimated amount? N/A

What is estimated depth to ground water below the site? Ponded water was observed at 14-15' BG feet

Is site located in a beneficial use area? Yes

SOIL CONDITIONS:

Is backfill discolored? Yes Estimated amount highly

Is backfill saturated? Not observed Estimated amount _____

Is native soil stained? yes Estimated amount highly

Is native soil saturated? Not observed Estimated amount _____

Describe native soil type(s) Conglomerate / Sandy clayey w/ cobbles

Condition of tank(s) (holes, corrosion, wrapping, seams) No holes were observed wrapping around the tanks were eroded

Piping leak location Pumps were located directly above the tanks

Nearby water wells or surface waters? Not observed

Any known underground vaults, utilities or basements nearby? Not observed

FURTHER COMMENTS: Water was ponded at the bottom of tank Excavation. A hard pan layer was felt w/ backhoe bucket at between 14-15 BG. It was not known whether the ponded water was perched G. H2O or simply water from nearby water line → Ponding on top of hard pan?

See attached sheet for more detail.

IMPORTANT: CONTACT THE DEPT. OF HEALTH SERVICES AT 338-2214 AT LEAST TWO WORKING DAYS BEFORE STARTING CONSTRUCTION TO SCHEDULE THE FIRST REQUIRED FIELD INSPECTION.

E. APPLICATION SUBMITTAL, PLAN APPROVAL, PERMIT ISSUANCE, AND REQUIRED INSPECTIONS

Submit three (3) copies of this application package, including plan drawings, with the required fee to the Department of Health Services, Hazardous Materials Management Division, 1255 Imperial Ave., San Diego, CA or mail to P.O. Box 85261, San Diego, CA 92138-5261. Checks should be made payable to the County of San Diego.

A permit will be issued by the HMMD upon review and approval of the application and plans. The required fees must be submitted with the application package. Information in addition to that presented in the application package may be needed in order to obtain final approval. No work is to begin on the proposed project until a permit has been issued. The required inspections cannot be scheduled until a permit is issued.

Once the permit has been issued, it is the responsibility of the permittee to notify the HMMD at least two (2) working days in advance to schedule each required inspection.

Construction stages at which inspections are required are indicated in each subpart of this application form (i.e., Part II,III IV, and V).

San Diego, CA 92112

Dear Mr. Smith:

RE: UNAUTHORIZED RELEASE OF PETROLEUM PRODUCT FROM UNDERGROUND STORAGE TANKS AT H.G. FENTON MATERIALS, 9255 CAMINO SANTA FE, SAN DIEGO, CA 92121 H17076-001

This letter confirms the completion of site investigation and remedial action for the underground storage tank(s) at the above site. Thank you for your cooperation throughout this investigation. With the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the underground tank release is required based on the available information as set forth in California Code of Regulations, Title 23, Division 3, Chapter 16, Article 11, Section 2721(e) (Underground Storage Tank Corrective Action Regulations).

If the present or proposed use of the site changes, it is the property owner's responsibility to promptly notify this agency.

Please contact this office if you have any questions in this matter.

Sincerely,

CHUCK PRYATEL, Division Manager
Site Assessment and Mitigation Division

III. RELEASE AND SITE CHARACTERIZATION INFORMATION (Continued)

MAXIMUM DOCUMENTED CONTAMINANT CONCENTRATIONS -- BEFORE AND AFTER CLEANUP

Contaminant	Soil(ppm)		Water (ppm)		Contaminant	Soil (ppm)		Water (ppm)	
	Before	After	Before	After		Before	After	Before	After
TPH (Gas)					Xylene	101 µg/kg	<15 µg/kg		
TPH (Diesel)	5570	<10			Ethylbenzene	<0.5	<0.5		
Benzene	<0.5	<0.5			Oil & Grease				
Toluene	<0.5	<0.5			Heavy Metals				
Other: Organic Lead	<0.5	<0.5			Other				

Comments (Depth of Remediation, etc.):

Two 10,000 gallon diesel UST were removed on 12/27/91. Contaminated soils were excavated and confirmatory soil samples were collected at the bottom and the side walls of the former tank excavation area. TPH concentrations of all confirmatory soil samples were below laboratory detection limits (<10 mg/kg). Maximum depth of the excavation was 21.5 feet below grade and approximately 400 cubic yards of stockpile soil was generated from the former tank excavation. Stockpile soil was characterized and TPH concentrations were below laboratory detection limits. The stockpile soil was used as a road base material at this site. The depth of ground water was reported at approximately 50 feet below ground. Based on the reported information there is no apparent threat to public and environmental health at this site.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes

Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes

Does corrective action protect public health for current land use? Yes

Site Management Requirements: N/A

Should corrective action be reviewed if land use changes? Yes

NOTICE OF REIMBURSEMENT AND REPORTING REQUIREMENTS

December 31, 1991

Paul Smith
Fenton Western Properties
7220 Trade Street
P.O. Box 64
San Diego, CA 92112

Dear Mr. Smith:

RE: UNAUTHORIZED RELEASE #T2182/H17076-001
H.G. FENTON MATERIALS, 9255 CAMINO SANTA FE, SAN DIEGO, CA 92121

Information provided to this Department indicates that the underground hazardous substance storage facility at the location referenced above has had an Unauthorized Release (leak), and identifies you as the party, or one of the parties, responsible for investigation and cleanup of the Unauthorized Release.

As described in the paragraph below, federal and state law require the responsible party(ies) to reimburse the State Water Resources Control Board for local and state agency costs associated with oversight of the investigation and cleanup of the Unauthorized Release. Please take note of the following:

> Whereas the Federal Petroleum Leaking Underground Storage Tank Trust Fund provides funding to pay the local and state agency administrative and oversight costs associated with the cleanup of releases from underground storage tanks; and Whereas the Legislature has authorized funds to pay the local and state agency administrative and oversight costs associated with the cleanup of releases from underground storage tanks; and Whereas the direct and indirect costs of overseeing removal or remedial action at the above site are funded, in whole or in part, from the Federal Trust Fund; and Whereas the above individual(s) or entity(ies) have been identified as the party or parties responsible for investigation and cleanup of the above site; YOU ARE HEREBY NOTIFIED that pursuant to Title 42 of the United States Code, Section 6991b(h)(6) and Sections 25297.1 and 25360 of the Health and Safety Code the above Responsible Party or Parties shall reimburse the State Water Resources Control Board not more than 150 percent of the total amount of site specific oversight costs actually incurred while overseeing the cleanup of the above underground storage tank site, and the above Responsible Party or Parties shall make full payment of such costs within 30 days of receipt of a detailed invoice from the State Water Resources Control Board.

Mr. Paul Smith December 31, 1991

The following individual(s) and/or entity(ies) are being notified as responsible parties for the Unauthorized Release at the above referenced site:

Paul Smith
Fenton Western Properties
7220 Trade Street
P.O. Box 64
San Diego, CA 92112

In accordance with the California Health and Safety Code, Chapter 6.5 and 6.7, and the California Code of Regulations, Title 22 and 23, the tank owner/operator must report and correct the conditions created by the Unauthorized Release. It is the tank owner's/operator's responsibility to:

1. Take immediate action to prevent further unauthorized release.
2. Determine the extent and impact of the unauthorized release.
3. Submit a written Unauthorized Release Report within five workdays of receiving this Official Notice. This requirement is satisfied by submitting the enclosed State Water Resources Control Board form entitled "UNDERGROUND STORAGE TANK UNAUTHORIZED RELEASE (LEAK)/CONTAMINATION SITE REPORT". The completed form, with attached comments if necessary, must address the Unauthorized Release Report items described on the final page of this Notice. Submit the completed form to this office for distribution.
4. Submit supplemental reports as required to update the initial report.
5. Complete any site mitigation (cleanup) required.
6. Reimburse the State Water Resources Control Board for local and state agency costs associated with oversight of the investigation and cleanup.

The Unauthorized Release Report must address all six items listed on the final page of this Notice, to the extent of the best information known at this time. Additional information and responsibilities are also listed. Subsequent site characterization and mitigation actions will be determined upon evaluation of the written report and consultation with the Regional Water Quality Control Board and other appropriate regulatory agencies.

If you have any questions concerning this Notice, please contact the undersigned at (619) 338-2256, or the Division of Clean Water Programs, State Water Resources Control Board, P.O. Box 944212, Sacramento, CA 94224-2120.

Sincerely,

M.A. Lahsaizadeh

MEMORANDUM FOR: California Regional Water Quality Control Board, San Diego Region

FROM: Hazardous Materials Management Division (HMMD)

SUBJECT: **UNAUTHORIZED RELEASE OF HAZARDOUS MATERIAL FROM AN UNDERGROUND STORAGE TANK T# 2182/H#7076-001**

Evidence of an unauthorized release of a hazardous material has been noted by HMMD staff at the site described below:

Site Address: 9255 Camino Santa Fe (Street) | San Diego (City) | 92121 (Zip Code)

Property Owner: H.G. Fenton Western Properties (Name)
7220 Trade St. P.O.Box 64 (Street) | San Diego (City) | 92112 (Zip Code)
Telephone (619) 566-2000

Tank Operator: H.G. Fenton Western Properties (Name) | 566-2000 (Telephone)
Mr. Paul Smith

The following information is provided for your consideration and action in accordance with the authority and responsibilities of the Regional Board.

Suspected Source(s): Diesel

Amount Released: unknown (Gallons) Not known (Time Period)

Release Detected By:

- ____ Routine Tank Testing
- ____ Test of Piping
- ____ Inventory Audit
- ____ Monitoring Device/Well
- ✓ Evidence of Soil Contamination Detected During Tank Removal
- ✓ Evidence of Leaky Tank Detected During Tank Removal
- ____ Other

Description of underground tank systems on property (number, type, age, capacity, material stored, evidence of leakage). 2 UST 10000 GALLON steel Diesel tank; Tanks were apparently installed sometime in 61-62, No holes were observed on any of the tanks.

Date Release Reported to or Detected by HMMD 12-27-91

Contact With Other Agencies No

Additional Comments: Ponded water was observed at the bottom of Excavation and a hard Pan layer was encountered at about 14-15' BG.

Please call the HMMD at 338-2222 if you have questions or comments regarding the above.

Dear Mr. Smith:

RE: UNAUTHORIZED RELEASE #T2182/H17076-001
H.G. FENTON MATERIALS, 9255 CAMINO SANTA FE, SAN DIEGO, CA 92121

A review of the Hazardous Materials Management Division's (HMMD) files indicates that the unauthorized release issue associated with an underground storage tank at this site has not been resolved. The last activity on this site appears to be greater than three (3) months ago.

The California Code of Regulations, Title 23, Chapter 3, Subchapter 16, Section 2652 (d) states that until cleanup is complete, reports shall be submitted to the local agency and the Regional Water Quality Control Board (RWQCB) every three months or at a more frequent interval if specified.

Within thirty (30) days of receipt of this letter, submit a written update report to the HMMD and the RWQCB summarizing the site activities and the proposal for any further work. Submit the updates at the frequency previously specified by the HMMD, not to exceed the minimum of every three months (October 15th, January 15th, April 15th, July 15th). Updates must be submitted until which time the unauthorized release is resolved.

Please be reminded that the State Water Resources Control Board (SWRCB) will bill the responsible party for all local agency time expended on the unauthorized release investigation. Site assessments and remediation activities completed in a comprehensive and timely manner may minimize the amounts billed by the SWRCB.

Please contact me at (619) 338-2256, if you have questions regarding this matter.

Sincerely,

M. A. Lahsaizadeh

[x] Telephone Conversation — Phone: (___) 299-0033 — Name: Carl Bonura

[ ] Peer Review — Name: Enecotech

TOPIC: SA/M report dated 2-24-92

SUMMARY: Carl said that the Role was backfilled w/ clean soil & 900 y³ soil is stockpiled at this site. They took 2 soil samples and ran the highest for Fish Bioassay (160 RPM) and would like to declare it as Non hazardous for the purposes of asphalt mixture usage! I told him that I need to contact RWQCB to see if 2 soil sample is enough for Non hazardous characterization. I mentioned that I believe He need to do full analysis for St. Pile characterization to have better understanding of contamination distribution in the Pile.

I called RWQCB at 9:AM, Jim said that Fenton must have permit from SDHS for asphalt mixing of cont. Diesel soil and even if He can use it as mix He still need to characterize the Pile for contamination Distribution

AT 2PM I discussed this issue w/ D. Fowler. He said that they must Follow SW846 sampling protocol & take the highest sample for Fish toxicity. If is classified as non hazardous material then they can incorporate it into Asphalt Mix However For HMMD Tracking Purposes since this is going to be considered as a treatment option They need to send work plan describing How is going to be mixed & where & how is going to be used

At 2:30 PM I called Eric Hong From SDHS permitting office Region I and He concurred w/ D. Fowler & Myself.

** Schedule of Events must be Submitted.

3-12-92 Carl called & I explained the above infos to him.

3-16-92 Carl called & we Dis remediation options and St Pile Soil characterization

[] Peer Review — Name: Enecotech

TOPIC: stockpile usage in Asphalt Mix

SUMMARY: Carl called to discuss about the possibility of Mixing contaminated soil in Asphalt Mix. I told him that 1st they need to do self certification of stockpile soil & follow Article 11 requirement (including Fish Toxicity Test) If comes out Non-hazardous then they need to provide HMMD with the following info.

1) Their mixing Process.
2) How is it going to be stored
3) How is it going to be used & where is it going to end up.
4) Full status report must be submitted to HMMD & RWQCB until it is all being used.

I also told him to call Cal EPA permitting Division & find out what is required to get Permit for this kind of recycling. I gave him ph # For Eric Hong (916) 855-7726

P.O. Box 64
San Diego, CA 92112

Dear Mr. Smith:

RE: UNAUTHORIZED RELEASE OF PETROLEUM PRODUCT FROM UNDERGROUND STORAGE TANKS AT H.G. FENTON MATERIALS, 9255 CAMINO SANTA FE SAN DIEGO, CA 92121 - CASE #T02182/H17076-001

The Site Assessment and Mitigation Division (SAM) of San Diego County Environmental Health Services (EHS) and the San Diego Regional Water Quality Control Board (RWQCB) have reviewed the Unauthorized Release Report (Form No. HSC-05) submitted by Mr. Arturo Hoyos of EnecoTech and dated August 17, 1993. This report conforms to the initial reporting requirements outlined in Chapter 6.7 of the California Health and Safety Code and Title 23, Division 3, Chapter 16 of the California Code of Regulations (CCR).

California law states that contamination resulting from an unauthorized release (leak) of a petroleum product may pose a threat to public health and the environment. The law requires responsible parties (persons responsible) to take corrective actions, including investigation and remediation (cleanup) of soil and groundwater contamination caused by an unauthorized release. California regulations require that workplans for any site investigation or remediation activities be submitted to and approved by EHS prior to implementation. All work should be performed in accordance with the guidelines presented in the most recent copy of EHS's Site Assessment and Mitigation Manual. **Please submit a workplan, describing your proposed activities to investigate the above-referenced unauthorized release, by September 30, 1993.**

The investigation and the remediation of an unauthorized release are usually performed in separate phases. Much of the work must be performed under the direction of a registered professional civil engineer or geologist and, therefore, responsible parties generally obtain the services of a qualified environmental consultant. Ultimately, you are required to submit a written report, signed by a registered professional, which addresses all the items on the enclosed "Site Assessment Report Checklist."

We remind you that if you intend to seek reimbursement for your investigation and remediation costs from the State Water Resources Control Board's (SWRCB) Underground Storage Tank Cleanup Fund, you must obtain a minimum of three bids for the proposed work. Additionally, failure to comply with EHS or RWQCB directives may jeopardize your eligibility for the reimbursement from the Underground Storage Tank Cleanup Fund.

Please be advised that the California Health and Safety Code authorizes EHS to issue notices to ensure the timely investigation and remediation of unauthorized release sites. These notices are called corrective action orders, and put responsible parties at risk of further legal action and monetary fines.

Copies of the workplan requested above, and all future submittals, should be sent to both EHS and to the RWQCB. Send correspondence to my attention at the address appearing on the letterhead above and to Ms. Rosalind Dimenstein at the RWQCB, 9771 Clairemont Mesa Blvd., Suite B, San Diego, CA 92124.

EHS and RWQCB staff are available to meet with you and/or your environmental consultant to discuss agency guidelines and requirements. Please call me at (619) 338-2256 if you have any questions.

Sincerely,

M. A. Lahsaizadeh

UNDERGROUND STORAGE TANK CLEANUP FUND CLAIM NUMBER 003401 FOR SITE ADDRESS: 9255 CAMINO SANTA FE, SAN DIEGO

The State Water Resources Control Board (SWRCB) takes pleasure in issuing the attached Letter of Commitment in an amount not to exceed **$20,000**. This Letter of Commitment is based upon our review of the corrective action costs incurred to date and your application received on January 17, 1992 and may be modified by the SWRCB in writing by an amended Letter of Commitment.

The SWRCB will take steps to withdraw this Letter of Commitment after 90 calendar days from the date of this transmittal letter unless you proceed with due diligence with your cleanup effort. This means that you must take positive, concrete steps to ensure that corrective action is proceeding with all due speed. For example, if you have not started your cleanup effort, you must obtain three bids and sign a contract with one of these bidders within 90 calendar days. If your cleanup effort has already started and was delayed, you must resume the expenditure of funds to ensure that your cleanup is proceeding in an expeditious manner. You are reminded that you must comply with all regulatory agency time schedules and requirements. We constantly review the status of all active claims, and failure to proceed with due diligence will be grounds for withdrawal of this Letter of Commitment.

You should read the terms and conditions listed in the Letter of Commitment. Also attached you will find:

- A "Reimbursement Request Instructions" package. **You should retain this package for future reimbursement requests.** Among other information, the package includes instructions for completion of the "Reimbursement Request" form and the "Spreadsheet". These instructions must be followed when seeking reimbursement for corrective action costs incurred after January 1, 1988. Included in these instructions are samples of Reimbursement Request forms and completed Spreadsheets. Within the package also included are:
  - A "Bid Summary Sheet" to document data on bids received.
  - Recommended Minimum Invoice Cost Breakdown.
  - A "Certification of Non-Recovery From Other Sources" which must be returned before any reimbursements can be made.
- "Reimbursement Request" forms which you must use to request reimbursement of costs incurred.
- "Spreadsheet" forms which you must use in conjunction with your Reimbursement Request.
- "Vendor Data Record" (Std. Form 204) which must be completed and returned with your first Reimbursement Request.

If you have any questions regarding the Letter of Commitment or the Reimbursement Request package, please contact Nancy Camacho at (916) 227-4387.

Sincerely,

Dave Deaner, Manager

Subject: **Update - Stockpile Sampling/Soil Treatment Plan**
Fenton Carroll Canyon Site
9255 Camino Santa Fe, San Diego, California 92121
T2182/H17076-001

Mr. Lahsaie:

EnecoTech Southwest, Inc. (EnecoTech) directed the remedial excavation of diesel impacted soil at the subject site (Figure 1) in January 1992. During remedial excavation activities, approximately 900 cubic yards of soil was stockpiled on site. Approval for separation of the high amount of coarse fragments from the diesel impacted soil was obtained from the Air Pollution Control District (APCD) San Diego Region (Appendix A). Once the coarse fragments were separated, three stockpiles comprising approximately 650 cubic yards of soil remained. The remaining 650 cubic yards of stockpiled soils were sampled as one stockpile unit according to the procedures outlined in Appendix B.

Upon separation, the coarse fragments were stockpiled adjacent to the soil stockpiles (Figure 2). Because the rock fragments would not have readily absorbed released petroleum hydrocarbons, samples of the stockpiled coarse rock fragments were not collected or analyzed for impact from petroleum hydrocarbons.

On December 4, 1992, based upon the volume of stockpiled soil remaining on site, twenty-six soil samples were collected utilizing a hand auger with extensions. The derivation of random soil sample locations and the soil sampling procedures are outlined in Appendix B. All twenty-six soil samples were analyzed for total petroleum hydrocarbons (TPH) by the DHS LUFT method. Since no detectable levels of TPH were indicated in any soil samples, analyses of benzene, toluene, ethylbenzene, xylenes (BTEX), and organic lead were not conducted. The laboratory results are summarized in Table 1 and the laboratory report is included as Appendix C. A *Stockpile Statistics Worksheet* was not completed for the characterization as all samples indicated no detectable levels of TPH.

The Responsible Party, Fenton Materials, plans on using the stockpiled soil as road base material. The County of San Diego Hazardous Materials Management Division (HMMD) was contacted by telephone on March 16, 1992 to propose recycling of the stockpiled soil as road base. To allow the recycling of the diesel impacted soil as road base, the HMMD would require full characterization of the stockpile, permission from the APCD to separate coarse fragments from the stockpiled soils, and submission of a plan for tracking the movement and use of the stockpiled soil. During the aforementioned March 16, 1992 phone conversation, the HMMD mentioned that the use of the stockpiled soil as road base material would be less restricted with the verification of reduced levels of diesel impact.

ND denotes Not Detected at laboratory detection limit of 10 mg/kg TPH in soil.

The plan for tracking the use of the stockpiled soil would involve the pre-approval of the HMMD and the San Diego Regional Water Quality Control Board (RWQCB). For example, when the Responsible Party identifies a site where the use of the stockpiled soil may be appropriate, they would notify EnecoTech. EnecoTech would then notify the HMMD and the RWQCB of the desired location to use the soil as road base. The HMMD indicated during the aforementioned March 16, 1992 phone conversation that only a two day processing period would be required for them to determine if the soil could be used as requested. Upon approval of the HMMD and the RWQCB, the soil could be used for road base at the desired site. Copies of transportation and loading receipts would be collected by EnecoTech and would be submitted to the HMMD and the RWQCB with a cover letter stating how much soil was removed and utilized as road base at each specified site.

Based on the analytical TPH results for the twenty-six soil samples collected from the stockpiled soils, EnecoTech requests that a less stringent tracking plan be utilized. EnecoTech suggests that, upon complete removal and usage of the stockpiled soils as road base, a letter stating where and when the soil was used, accompanying site plans and weight tickets, be submitted to the HMMD and the RWQCB. If removal takes longer than a three month period, update reports accounting for the removal and use of the stockpiled soils as road base, together with all appropriate figures and receipts, will be submitted every three month period until all soil is accounted for.

The coarse rock fragments that were separated from the stockpiled soils remain stockpiled on site. EnecoTech suggests that the Responsible Party be given permission to use the stockpiled coarse rock fragments as seen fit. If required, the Responsible Party can account for the destination of the crushed rock in a manner similar to that suggested for the stockpiled soil, by supplying the HMMD and the RWQCB with appropriate site plans and weight tickets.

submit a Work Plan before transporting the Pile

Please indicate by written response the procedure for tracking the stockpiled soil as road base that will be required of the responsible party. If you have any questions, do not hesitate to call the undersigned at (619) 299-0033.

indicate Where & How it will be used in the Process?

Sincerely,
ENECOTECH SOUTHWEST, INC.

PERMIT FOR SEPARATION OF DIESEL CONTAMINATED SOIL

The San Diego Air Pollution Control District (APCD) has reviewed the enclosed letter from EnecoTech, dated September 2, 1992, Messier/Bonura to Yager requesting the screening of 900 tons of diesel fuel impacted soil with an APCD permitted screening equipment (Kolman Model 101 Conveyor-Screen Plant). Based on additional data submitted by EnecoTech and the APCD evaluation of the process, it was determined that the emissions associated with this screening operation are not expected to produce significant hydrocarbons or particulate dust emissions.

The H.G. Fenton Rock Plant is a major source of particulate emissions, however, in the last five (5) years there has been no increase in particulate emissions at this site. Therefore, the small increase in particulate emissions from the proposed screening operation will not exceed any of the New Source Review threshold limits for Air Quality Analysis and Major Source requirements.

The APCD, hereby, approves the use of portable equipment, APCD Permit to Operate No. 923, for this screening operation to be done at the H.G. Fenton Rock Plant Facility located in Carroll Canyon, San Diego, CA. All the conditions of the APCD Permit to Operate No. 923 shall be met. In addition, please inform the APCD when the portable equipment is going to be moved on and off the Carroll Canyon site for this screening operation.

It should be noted that the above letter from EnecoTech referenced the APCD Permit to Operate for your rock plant in Carroll Canyon, which equipment will

not be used in this operation as indicated in our telephone conversation on October 13, 1992.

If there are any questions, please call me at (619) 694-3315.

Sincerely

ANDREW SEGAL
Associate Air Pollution Control Engineer

APPENDIX B

Procedures for the Derivation of Random Soil Sample Locations and Stockpile Soil Sampling Procedures

PROCEDURES FOR GENERATING RANDOM LOCATIONS FOR STOCKPILE SAMPLING

The soil stockpiled at the subject site has been sampled in accordance with the County of San Diego, Hazardous Materials Management Division (HMMD) Site Assessment and Mitigation Manual (SA/M Manual). The SA/M manual specifies the number of samples to be collected from a stockpile according to its volume, and that the sample locations must be selected from a three dimensional grid.

Initially, the volume of a stockpile is estimated, and the number of samples to be analyzed is calculated. The stockpiled soils are then divided into equal subunits, one subunit for each soil sample to be collected. One sample is collected from each half of stockpiles less than 10 cubic yards, each third of stockpiles between 10 and 20 cubic yards, and each quarter of stockpiles between 20 and 100 cubic yards. For stockpiles greater than 100 cubic yards, one sample is collected from each 25 cubic yard subunit. After the stockpiled soils are divided into subunits, a 10 X 10 X 10 three dimensional grid is developed for each subunit.

The three dimensional grid is developed in two steps. Both the X-axis (length) and the Y-axis (width) of each stockpile subunit are divided into 10 increments. The height of the Z-axis is equal to the height of the stockpile at the point designated by the soil sampling location in the X-Y plane. The Z-axis is then also divided into 10 increments. All axes are divided into 10 increments because only single random digits (0-9) are used.

The Random Digit Table (Table B1) is used to select random digits. Starting with the digit in the first row and the first column, and moving from left to right, digits are collected in sets of three. Each set of three digits is applied to the coordinate grid to determine the soil sample location for each subunit of stockpiled soil. For each set of three random digits, the first digit corresponds to the number of increments along the X-axis, the second digit corresponds to the number of increments along the Y-axis, and the third digit corresponds to the number of increments along the Z-axis.

For example, a stockpile subunit has an X-axis 15 feet long, a Y-axis 10 feet wide, and a Z-axis between 0 and 6 feet high. Therefore, each increment of the X-axis is 1.5 feet and each increment of the Y-axis is 1.0 feet. Before the height of the Z-axis can be finalized, the soil sample location within the X-Y plane must be determined. Once the soil sample location within the X-Y plane is determined, the height of the Z-axis at that point can be measured. In the example, the height of the stockpile at the sampling location is 5 feet, so, each increment of the Z-axis will be 0.5 feet. To determine the soil sample location, the increment length of each axis is multiplied by the random digit for the corresponding axis. If the random digit set for the stockpile subunit is (7,6,3), the soil sample location is to be collected at a point 10.5 feet (7x1.5') along the X-axis, 6 feet (6x1') along the Y-axis, and 1.5 feet (3x0.5') along the Z-axis.

For simplifying the measurement of soil sampling locations in the field, coordinates are rounded-up to the whole number. After rounding, the sample coordinates for the example stockpile would shift from (10.5', 6.0', 1.5') to (11', 6',2'). Transformation of random digit sets into coordinate locations for soil sample collection is indicated in Table B2.

Soil samples are collected utilizing a hand auger. Regardless of sample coordinates, soil samples are always collected at least one foot below the stockpile surface. The auger is washed in an Alkanox solution and rinsed in tap water between the collection of samples. The soil samples are placed into laboratory-provided, 250 ml capacity, glass jars and are sealed with teflon-lined, screw-on caps. The samples are then immediately placed in an ice chest, and delivered to a state-certified laboratory for analyses. Standard chain of custody procedures are followed.

SUBJECT: DATA REPORT - PROJECT: FENTON - ENECOTECH PROJECT #540-001-02

TEG JOB #921204-2

Mr. Bonura:

Please find enclosed the data report for soil samples from the Fenton site for EnecoTech. All samples were analyzed in TEG's California DOHS certified mobile laboratory (CERT #1746). TEG conducted the following analyses:

- 26 soils for total petroleum hydrocarbons (TPH) by DOHS Modified EPA Method 8015 for gasoline and diesel.

The results of the analyses are summarized in the attached tables. Applicable detection limits and QA/QC data are included on the tables.

TEG appreciates the opportunity to provide analytical services to EnecoTech for this project. If you have any questions relating to this data or report, please do not hesitate to contact us.

Sincerely,

Sheri W Hartman

ANALYTICAL PROCEDURES

SAMPLE PREPARATION

Waters

Separate water aliquots are extracted for TPH analysis (gasoline and diesel) by liquid-liquid extraction with freon 113 using a modified EPA Method 3510. For volatile aromatics and chlorinated hydrocarbons (EPA 601 & 602), water samples are purged of volatiles in a Tekmar LSC-2000 purge & trap following EPA Method 5030.

Soils

Soil samples are extracted with methanol for volatile chlorinated hydrocarbon compounds (EPA 8010) and with freon 113 for volatile aromatic hydrocarbon compounds (EPA 8020) and fuel compounds (DOHS approved EPA 8015m) by hand-shaking for 2 minutes and sonification for 10 minutes.

GAS CHROMATOGRAPHY

Volatile Chlorinated Hydrocarbons

Water samples and soil extracts are purged in a Tekmar LSC-2000 purge & trap, and backflushed into a Shimadzu 14A gas chromatograph equipped with megabore capillary columns and photoionization detector (PID) and Hall electrolytic detectors following EPA Methods 601/8010 and 602/8020.

Volatile Aromatic Hydrocarbons (BTEX) & Total Fuel Hydrocarbons (TPH)

An aliquot of the soil extract is injected on-column into a Shimadzu gas chromatograph equipped with megabore capillary columns, photoionization (PID) and flame ionization detectors (FID).

TOTAL RECOVERABLE HYDROCARBONS

Extracts are scrubbed with silica gel and measured on a BUCK 404 Infrared Analyzer following EPA 418.1 protocols.

DATA ACQUISITION & PROCESSING

Data from the gas chromatographs are integrated and plotted by Hewlett-Packard 3393A computing integrators. Separate chromatograms are printed for each detector. The resulting chromatograms are inspected at the end of each run and the data entered into an IBM-compatible computer for on-site processing and evaluation.

Mr. Joe Jaeger
San Diego Air Pollution Control District
9150 Chesapeake Drive
San Diego, California 92123-1095

Subject: **Authorization for Separation of Diesel Contaminated Soil**
Fenton Carroll Canyon Site
9255 Camino Santa Fe, San Diego, California 92121

Mr. Jaeger:

Approximately 900 tons of soil was stockpiled at the subject site during the remedial excavation of diesel impacted soil. Conducted under the supervision of EnecoTech Southwest, Inc. (EnecoTech), soil samples collected during the remedial excavation contained concentrations of total petroleum hydrocarbons (TPH) that ranged from < 10 mg/kg to 5,570 mg/kg (Appendix A). Approval is currently being sought from the County of San Diego Hazardous Materials Management Division (HMMD) to dispose of the stockpiled soil by recycling as road base material. The HMMD has indicated that the stockpiled soil will be suitable as road base material providing that 1) upon complete characterization, the petroleum hydrocarbon average concentration in the soil is found to be less than 1,000 mg/kg TPH, and that 2) the process used to separate the coarse stone fragments from the finer material is acceptable to the San Diego Air Pollution Control District (APCD).

It is because of the second requirement above that we originally contacted Mr. Andy Segal, the original permit evaluator. Because he is presently on vacation, we appealed to Mr. Don Speer, his supervisor, who referred the request to you. In a telephone conversation on August 27, 1992, you asked for an outline of exactly what process is proposed. The client, Fenton Western Properties, is proposing to separate coarse fragments from the 900 tons of stockpiled soil using a Kolman Model 101 separator already permitted with the APCD (permit #013510, Exp 8/18/93). The separation of the coarse fragments from the soil is expected to continue for a 1-2 day period.

The laboratory results and field observations made by EnecoTech personnel indicate that only a small portion of the stockpiled soil contains significant levels of TPH. Two of the twenty two soil samples collected during the excavation contained detectable levels of petroleum hydrocarbons. The carbon range of detected TPH is from C10 to C23, which indicates that a significant amount of benzene, toluene, ethylbenzene, and xylene (BTEX) constituents are not present. Therefore, EnecoTech does not consider that agitation of the diesel impacted soil, as would occur with the use of the Kolman Model 101 separator, would volatilize significant levels of BTEX constituents. EnecoTech requests that the APCD waive a requirement for a special permit for the one-time separation of coarse fragments from the stockpiled soils.

If your conclusion is that a formal permit process is necessary, EnecoTech would appreciate an explanation of the possible requirement for a permit to separate coarse fragments from diesel contaminated soils when it appears that there is no apparent APCD regulation of vapor return lines on diesel fuel dispensers. An explanation of the above would help EnecoTech in future work to be regulated by the APCD.

Please call the undersigned at (619) 299-0033 if you have any questions.

Sincerely,
ENECOTECH SOUTHWEST, INC.

Subject: **Permit for Separation of Diesel Contaminated Soil**
9255 Camino Santa Fe, San Diego, California 92121

Mr. Segal:

Approximately 900 cubic yards of soil was stockpiled at the subject site during the remedial excavation of diesel impacted soil. Conducted under the supervision of EnecoTech Southwest, Inc. (EnecoTech), soil samples collected during the remedial excavation contained concentrations of total petroleum hydrocarbons (TPH) that ranged from < 10 mg/kg to 5,570 mg/kg. Approval is currently being sought from the County of San Diego Hazardous Materials Management Division (HMMD) to dispose of the stockpiled soil by recycling as road base material. The HMMD has indicated that the stockpiled soil will be suitable as road base material providing that (1) upon complete characterization, the petroleum hydrocarbon average concentration in the soil is found to be less than 1,000 mg/kg TPH, and that (2) the process used to separate the coarse stone fragments from the finer material is acceptable to the San Diego Air Pollution Control District (APCD).

Correspondence with the APCD regarding the separation procedure was initiated in April 1992. In a telephone conversation on April 21, 1992, you agreed to informally review the acceptability of the Kolman Model 101 for separation of coarse fragments from the stockpiled soils once provided with an equipment diagram and an APCD permit number. Enclosed is a diagram of a Kolman Model 101 that is registered with the APCD under permit number 013510 (Exp.9/1/92). EnecoTech asks that you consider the request for a one time use of the Kolman Model 101 for the separation of coarse fragments from an estimated 900 cubic yards of stockpiled soils at the subject site.

Please call the undersigned at (619) 299-0033 if you have any questions.

Sincerely,
ENECOTECH SOUTHWEST, INC.

P.O. Box 64
San Diego, California 92112

Subject: **Update Letter**
9255 Camino Santa Fe
San Diego, California 92121
H17076-001

Mr. Smith:

EnecoTech Southwest, Inc. (EnecoTech) prepared a Limited Site Assessment and Remedial Excavation report dated February 24, 1992 that was submitted to the County of San Diego Hazardous Materials Management Division (HMMD). The HMMD subject site specialist responded by telephone on March 11, 1992 indicating that the remedial excavation had completely delineated the pit area with respect to petroleum hydrocarbon impact to soil. Shortly after Fenton was informed that the HMMD had given pit closure by telephone, the pit was filled with clean imported soil. According to the HMMD, the disposition of the stockpile is the only remaining issue for the site.

Planning for the disposal of the stockpiled soils as road base is currently underway. As directed by the HMMD on March 11, 1992, 30 soil samples should be collected from the stockpile. According to the HMMD SA/M manual, 36 soil samples would be required to characterize the stockpile which is approximately 900 cubic yards in volume. However, the HMMD indicated that 30 soil samples would be an adequate number to characterize the stockpile. The stockpile is scheduled to be sampled within the month of August 1992.

To dispose of the stockpiled soil by recycling it as road base material, a large proportion of cobbles and gravel have to be removed. The HMMD has asked that the Air Pollution Control District (APCD) be consulted for the operation of a Kolman separator to remove the coarse fragments from the stockpile. The petroleum hydrocarbon impact to the soil is of diesel origin, therefore, significant volatilization of petroleum hydrocarbons during separation is not expected to occur. If the APCD agrees that the proposed separation process produces no risk of significant emissions, the separation will be permitted under existing permits. Otherwise, a new permit will be sought. EnecoTech is currently working with the APCD to determine if the Kolman separator is acceptable.

1.0 INTRODUCTION

1.1 Scope

Subsequent to removal of two underground fuel tanks, it was requested by the San Diego County Department of Health, Hazardous Materials Management Division (HMMD) that a site assessment be performed on the subject site. Jenal Engineering Contractor (Jenal), the firm that removed the tanks, contacted EnecoTech Southwest, Inc. (EnecoTech) to subcontract its site assessment services. Jenal requested EnecoTech to supervise the site assessment/remedial excavation activities by retrieving appropriate samples and evaluating mobile laboratory analytical results from these samples. Jenal performed the excavation services during those activities. Site assessment/remedial excavation activities were performed on January 6, 1992.

1.2 Site Description

The following information applies to the subject site:

HMMD Numbers:	AT2490/H17076
APN:	341-015-011
Property Owner:	Fenton Western Properties
Contact:	Paul Smith
Mailing Address:	7220 Trade Street
	San Diego, California 92121
Telephone Number:	(619) 566-2000

The site is located within Carroll Canyon at the north end of Camino Santa Fe, west of the community of Mira Mesa in the city of San Diego, California (Figure 1). The area of the tank removal is part of a large sand and gravel mining operation which also includes concrete and asphalt production plants. Future use of the area will continue to be sand and gravel mining operations.

Topographically, the property lies on a generally flat river bed area at an elevation of approximately 215 feet above mean sea level (msl). An intermittent westerly trending creek is located approximately 300 feet south of the tank removal pit, at the south edge of the canyon. Three large separation ponds lie approximately 200 feet north of the tank excavation, at the north edge of the canyon. Additional structures, the location of the former underground storage tanks and the approximate limits of the remedial excavation, are depicted on the site plan (Figure 2).

SITE PLAN

2.0 BACKGROUND

2.1 Site History

Prior to the tank removal, the facility was used for diesel fuel dispensing operations for internal company consumption. No previous site assessment activities are known to date and no action levels have been set for the site.

2.2 Tank Removal

On December 27, 1991, two underground diesel storage tanks and associated fuel lines were excavated and removed from the subject property. Tank removal activities were conducted by Jenal. On site was Mr. Mo Lahsaie, Hazardous Materials Specialist with the HMMD. EnecoTech personnel were not present during the removal operations. Field notes made by Mr. Lahsaie described highly stained soils with strong petroleum hydrocarbon odor. Following these preliminary results, the HMMD recommended that a site assessment be performed to determine the extent of soil contamination.

3.0 REMEDIAL EXCAVATION

3.1 Site Safety

Level D safety procedures for hazardous waste sites were followed throughout the operation. A photoionization detector (PID), equipped with a 10.6 electron volt lamp, was utilized to monitor exposure to hydrocarbon vapors and to screen soil samples.

3.2 Excavation Procedures

On January 6, 1992 EnecoTech performed confirmatory sampling and supervised additional remedial excavation. Initial overexcavation had been performed on January 3 & 4, 1992 by Jenal to clean out slough and remove visually apparent contaminated soil. This lowered the pit bottom to 16-16.5 feet, greater than 4 feet below the bottom of the tanks (approximately 12 feet deep). Approximately 550 cubic yards of soil were removed from the pit sidewalls and bottom, according to Jenal volume estimates. The excavation was performed by means of a Caterpillar EL200 trackhoe excavator equipped with a 36 inch wide bucket.

When the EnecoTech representative arrived on January 6, 1992, Jenal began pumping water from the bottom of the pit, discharging it to the surface. Approximately 400 gallons (based on average thickness and area covered) of water had accumulated in the southern quarter of the pit bottom since January 4, 1992, apparently due to intermittent rain and resultant runoff into the pit the day after. Slight seepage was observed at various locations on the side walls of the excavation, probably due to local pit sidewall surface wetting by rain water. Once the accumulated rain water was removed from the pit, no more water accumulated. Throughout the site assessment/remedial excavation procedure, the pit floor remained dry, regardless of the depth reached due to excavation.

After pumping was completed, fourteen initial soil samples were secured at different locations from the bottom of the excavation (E1-E14). At this time, the pit was already 16 to 16.5 feet deep and approximately 56 feet long and 42 feet wide (Figure 2). Generally, soil was retrieved from the pit bottom using the excavator bucket and samples were collected from the retrieved soil. Double initial samples were taken from the pit floor below the former locations of the ends of the tanks (Figure 2). The double samples were taken 2 feet below the initial 16.5 feet depth.

Quality Assurance Laboratory (QAL) provided a mobile laboratory for soil sample analyses on site. The laboratory results from the initial sampling detected soil contamination in samples E7-16.5 and E8-18.5 at depths of 16.5 and 18.5 feet, respectively. Further excavation was performed to remove the detected contamination.

Excavation continued in the contaminated area (north end of pit) until non-detectable levels were confirmed. All other initial results were below detection limits. In general, the impacted area was further excavated until two vertically consecutive samples indicated non-detectable levels of Total Petroleum Hydrocarbons (<10 ppm TPH). This conservative approach was utilized to insure that all material with detectable TPH values was excavated from the pit, a necessity because a site action level was not available.

The excavation activities resulted in the deepening of the pit area to 18.5 to 21.5 feet at the north portion. The area indicating contamination at the time of initial sampling, E7-16.5 and E8-18.5, was excavated to a total depth of 21.5 feet. Confirmatory samples E21-20 and E22-21.5 indicated that all contamination had been removed (Figure 3). Excavation was discontinued when the confirmatory results were known.

A total of twenty two soil samples were collected during the remedial excavation. All samples were placed in clean, 250 ml capacity glass jars with plastic screw-on lids containing teflon seals and given to a representative of QAL following standard chain of custody procedures. All twenty two soil samples were analyzed for TPH in accordance with the Department of Health Services (DHS) method. Two samples were further analyzed for benzene, toluene, ethylbenzene, and xylene (BTEX) and total organic lead. The laboratory results are summarized in Table 1. The laboratory report and chain of custody forms are included in Appendix A.

Following the completion of excavation, the excavated area was backfilled with clean fill taken from elsewhere on the property. Approximately 900 cubic yards of excavated material was stockpiled on site. The excavated material was stockpiled west of the former tank location and was covered with visqueen.

4.0 SUMMARY OF FINDINGS

4.1 Site Geology

Undocumented fill (Quf) material consisting of loose, dry to damp, brown, silty fine to medium sands with alternating layers of gravelly clayey fine sands, was encountered to a depth of approximately 9 to 10 feet. Underlying the fill material are the formational soils of Stadium Conglomerate (Tst). This unit typically consists of dense, moist, dark yellow orange, silty fine to coarse sandy conglomerate with cobbles to 12 inches long. Some areas within this formation were observed to be well cemented.

4.2 Hydrogeology

Research regarding the depth to groundwater in the area revealed that its depth at the pit site is probably at least 50 feet below ground surface (bgs). Water wells in the canyon bottom approximately 1 mile down and up stream, had recorded depths of 25 feet and greater than 100 feet, respectively, bgs to groundwater in 1962 (DWR groundwater data Appendix B). The 50 foot depth is a result of conservatively projecting between the two wells and accounting for elevation differences between them and the pit site. Recent observations of apparent groundwater standing at 80 feet bgs in an open sand and gravel pit 1,000 feet up stream confirm the minimal value of 50 feet and are suggestive of an even greater depth to groundwater at the pit site.

The observed seepage from the pit sidewalls during the excavation process is probably attributable to the recent rains. Furthermore, the samples taken at the maximum depth excavated, specifically samples E12-18.5, E14-19, E20-19 and E22-21.5, showed no evidence of ground water in the pit. No water from any source accumulated in the pit during the excavation.

Based on the San Diego Hydrologic Basin Plan (RWQCB, 1986), the subject site is within the Miramar Reservoir Hydrographic Area, 6.10. According to the Updated Staff Report (RWQCB, 1991), the subject site has no designated beneficial water uses because its location corresponds to the description in footnote "e" (page 2).

4.3 Soil Contamination

Only two of a total of twenty two samples retrieved during excavation activities contained detectable levels of TPH. Soil samples E7-16.5 and E8-18.5 contained 5,570 and 101 mg/kg, respectively. Due to the carbon range detected in the analyses, the contamination is characterized as diesel fuel.

As a result of soil contamination evident in the two samples, further material was excavated in the vicinity and two confirmatory soil samples were collected at depths of 20 and 21.5 feet below the contaminated samples (samples E21-20 and E22-21.5). In general, excavation was conducted until double confirmation samples retrieved indicated non-detectable TPH values (<10 ppm).

5.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of the work performed to date, EnecoTech concludes the following:

1. The horizontal and vertical extent of impacted soil has been delineated (Figures 2 and 3). Soil contamination was found to be of limited extent both vertically and horizontally. Based on the continual monitoring of excavated soil with a PID, visual inspection, laboratory analysis, and the methodology employed, all soil contamination with detectable TPH values was removed and stockpiled.

2. There is direct evidence that no groundwater exists at the pit to the maximum excavated depth of 21.5 feet. Extrapolated data suggests a minimum depth to ground water on the order of 50 feet, based on the reported ground water depth for this area and historical data from nearby wells. The deepest extent of soil contamination on site existed at a depth of 18.5 feet (Sample E8-18.5). The existence of double confirmed, non-contaminated soil below this depth supports the conclusion that no connection occurred between groundwater and soil contamination.

3. Based on the above information, it is EnecoTech's opinion that the probability of impact to the groundwater below the site is low. No future potential for groundwater impact exists because soil contamination has been completely removed to non-detectable levels rather than a probable action level of 1,000 ppm.

Based on the above conclusions, EnecoTech recommends the following:

1. Regulatory closure of the site with regard to subsurface soil contamination and groundwater.

2. Treatment and/or disposal of the contaminated soil stockpile. EnecoTech is currently preparing a plan of action for the stockpiled soil.

6.0 QUALIFICATIONS AND LIMITATIONS

EnecoTech is pleased to have performed environmental assessment services for Jenal Engineering Company in connection with the property located at 9255 Camino Santa Fe, San Diego, California. These services have been performed in accordance with and are limited by the scope of work of our cost estimate for limited site assessment. EnecoTech assumes no responsibility for detection or assessment of any conditions affecting the property which were outside the scope of work requested.

EnecoTech has conducted the tasks outlined in the proposal consistent with that level of care ordinarily exercised by members of the profession currently practicing under similar conditions. In performing these tasks, EnecoTech has relied on documents, oral statements, and other information from public officials and third parties outside of EnecoTech's control. EnecoTech cannot and does not warrant the accuracy of this information.

No environmental assessment is infallible. Some uncertainty will always exist concerning the presence or absence of potentially adverse conditions at any particular property, irrespective of the rigor of the investigation. Accordingly, EnecoTech offers no warranty that adverse environmental conditions, other than those identified in this report, do not exist at 9255 Camino Santa Fe, San Diego, California, or may not exist there in the future.

INSTRUCTIONS

EMERGENCY
Indicate whether emergency response personnel and equipment were involved at any time. If so, a Hazardous Material Incident Report should be filed with the State Office of Emergency Services (OES) at 2800 Meadowview Road, Sacramento, CA 95832. Copies of the OES report form may be obtained at your local underground storage tank permitting agency. Indicate whether the OES report has been filed as of the date of this report.

LOCAL AGENCY ONLY
To avoid duplicate notification pursuant to Health and Safety code Section 25180.7, a designated government employee should sign and date the form in this block. A signature here does not mean that the leak has been determined to pose a significant threat to human health or safety, only that notification procedures have been followed if required.

REPORTED BY
Enter your name, telephone number, and address. Indicate which party you represent and provide company or agency name.

RESPONSIBLE PARTY
Enter name, telephone number, contact person, and address of the party responsible for the leak. The responsible party would normally be the tank owner.

SITE LOCATION
Enter information regarding the tank facility. At a minimum, you must provide the facility name and full address.

IMPLEMENTING AGENCIES
Enter names of the local agency and Regional Water Quality Control Board involved.

SUBSTANCES INVOLVED
Enter the name and quantity lost of the hazardous substance involved. Room is provided for information on two substances if appropriate. If more than two substances leaked, list the two of most concern for cleanup.

DISCOVERY/ABATEMENT
Provide information regarding the discovery and abatement of the leak.

SOURCE/CAUSE
Indicate source(s) of leak. Check box(es) indicating cause of leak.

CASE TYPE
Indicate the case type category for this leak. Check one box only. Case type is based on the most sensitive resource affected. For example, if both soil and ground water have been affected, case type will be "Ground Water". Indicate "Drinking Water" only if one or more municipal or domestic water wells have actually been affected. A "Ground Water" designation does not imply that the affected water cannot be, or is not, used for drinking water, but only that water wells have not yet been affected. It is understood that case type may change upon further investigation.

CURRENT STATUS
Indicate the category which best describes the current status of the case. Check one box only. The response should be relative to the case type. For example, if case type is "Ground Water", then "Current Status" should refer to the status of the ground water investigation or cleanup, as opposed to that of soil. Descriptions of options follow:

- No Action Taken - No action has been taken by responsible party beyond initial report of leak.
- Leak Being Confirmed - Leak suspected at site, but has not been confirmed.
- Preliminary Site Assessment Workplan Submitted - workplan/proposal requested of/submitted by responsible party to determine whether ground water has been, or will be, impacted as a result of the release.
- Preliminary Site Assessment Underway - implementation of workplan.
- Pollution Characterization - responsible party is in the process of fully defining the extent of contamination in soil and ground water and assessing impacts on surface and/or ground water.
- Remediation Plan - remediation plan submitted evaluating long term remediation options. Proposal and implementation schedule for appropriate remediation options also submitted.
- Cleanup Underway - implementation of remediation plan.
- Post Cleanup Monitoring in Progress - periodic ground water or other monitoring at site, as necessary, to verify and/or evaluate effectiveness of remedial activities.
- Case Closed - regional board and local agency in concurrence that no further work is necessary at the site.

IMPORTANT: THE INFORMATION PROVIDED ON THIS FORM IS INTENDED FOR GENERAL STATISTICAL PURPOSES ONLY AND IS NOT TO BE CONSTRUED AS REPRESENTING THE OFFICIAL POSITION OF ANY GOVERNMENTAL AGENCY

REMEDIAL ACTION
Indicate which action have been used to cleanup or remediate the leak. Descriptions of options follow:

- Cap Site - install horizontal impermeable layer to reduce rainfall infiltration.
- Containment Barrier - install vertical dike to block horizontal movement of contaminant.
- Excavate and Dispose - remove contaminated soil and dispose in approved site.
- Excavate and Treat - remove contaminated soil and treat (includes spreading or land farming).
- Remove Free Product - remove floating product from water table.
- Pump and Treat Groundwater - generally employed to remove dissolved contaminants.
- Enhanced Biodegradation - use of any available technology to promote bacterial decomposition of contaminants.
- Replace Supply - provide alternative water supply to affected parties.
- Treatment at Hookup - install water treatment devices at each dwelling or other place of use.
- Vacuum Extract - use pumps or blowers to draw air through soil.
- Vent Soil - bore holes in soil to allow volatilization of contaminants.
- No Action Required - incident is minor, requiring no remedial action.

COMMENTS - Use this space to elaborate on any aspects of the incident.

SIGNATURE - Sign the form in the space provided.

DISTRIBUTION
If the form is completed by the tank owner or his agent, retain the last copy and forward the remaining copies intact to your local tank permitting agency for distribution.

1. Original - Local Tank Permitting Agency
2. State Water Resources Control Board, Division of Loans and Grants, Underground Storage Tank Program, P.O. Box 944212, Sacramento, CA 94244-2120
3. Regional Water Quality Control Board
4. County Board of Supervisors or designee to receive Proposition 65 notifications.
5. Owner/responsible party.

Re. Unauthorized Release #T02182/H17076-001
H. G. Fenton Materials
9255 Camino Santa Fe, San Diego, CA 92121

Dear Mr. Lahsaie,

In accordance with CCR Title 23, Chapter 3, Subchapter 16, Section 2652 (d), Shewey Environmental Management Co., Inc. (Shewey) has prepared the following progress submittal with respect to the subject unauthorized release.

Subject site development activities previously conducted by EnecoTech in 1992 are summarized as follows:

- EnecoTech Southwest, Inc. completed a Limited Site Assessment (LSA) and Remedial Excavation report dated February 24, 1992 which was submitted to the County of San Diego Hazardous Materials Management Division (HMMD).

  According to records maintained by H. G. Fenton, HMMD authorized the closure of the former underground storage tank pit based upon the content of the LSA and was shortly thereafter restored to surface grade with clean, imported soil.

  According to HMMD, the disposition of the stockpiled soil is the only remaining issue for the site.

Shewey performed the characterization of approximately 400 cubic yards of stockpiled soil April 6, 1994. As previously reported, the petroleum hydrocarbon impact to the soil was of diesel fuel origin.

In following the guidelines established in the County of San Diego, EHS, HMMD, Site Assessment & Mitigation Manual, Section 4, Page 4, Soil Sampling, Shewey personnel collected a total of 16 samples from the stockpiled soil. Sample locations are illustrated in Figure 1 in the attachments.

These 16 samples represent one, random, unbiased sample for each 25 cubic yards of soil currently located at the subject site. Further, all samples were evaluated for the presence of total petroleum hydrocarbons via California DOHS LUFT method.

The samples were analyzed by Mobile One Laboratories in accordance with the California DHS procedure for Total Petroleum Hydrocarbons (TPH). The results are summarized in the following table:

Sample I. D.	Analyses Method	Amount Found	Detection Limit
SP-1 #1	8015 Mod. Diesel	nd	10 mg/kg
SP-2 #1	8015 Mod. Diesel	nd	10 mg/kg
SP-3 #1	8015 Mod. Diesel	nd	10 mg/kg
SP-4 #1	8015 Mod. Diesel	nd	10 mg/kg
SP-5 #1	8015 Mod. Diesel	nd	10 mg/kg
SP-6 #1	8015 Mod. Diesel	nd	10 mg/kg
SP-7 #1	8015 Mod. Diesel	nd	10 mg/kg
SP-8 #1	8015 Mod. Diesel	nd	10 mg/kg
SP-1 #2	8015 Mod. Diesel	nd	10 mg/kg
SP-2 #2	8015 Mod. Diesel	nd	10 mg/kg
SP-3 #2	8015 Mod. Diesel	nd	10 mg/kg
SP-4 #2	8015 Mod. Diesel	nd	10 mg/kg
SP-5 #2	8015 Mod. Diesel	nd	10 mg/kg
SP-6 #2	8015 Mod. Diesel	nd	10 mg/kg
SP-7 #2	8015 Mod. Diesel	nd	10 mg/kg
SP-8 #2	8015 Mod. Diesel	nd	10 mg/kg

nd = not found above the detection limit

Neither gasoline nor diesel was identified in the samples. No other fuel hydrocarbons were indicated. All quality control results were within acceptable limits.

All analytical data can be viewed in Appendix A in the attachments.

Discussions with H. G. Fenton Material indicate that the entire volume of soil stockpiled during site delineation activities (approximately 900 cubic yards) was screened to remove rock and cobbles. This material was then crushed and integrated with ongoing base manufacturing operations.

The balance of soil remaining at the subject site (approximately 400 cubic yards) is requested to be reclassified for no further action based upon the results of the characterization.

Should you have any questions or require additional information regarding the characterization of soil or the request for reclassification, please contact me at your convenience.

Respectfully,

REGISTERED ENVIRONMENTAL ASSESSOR

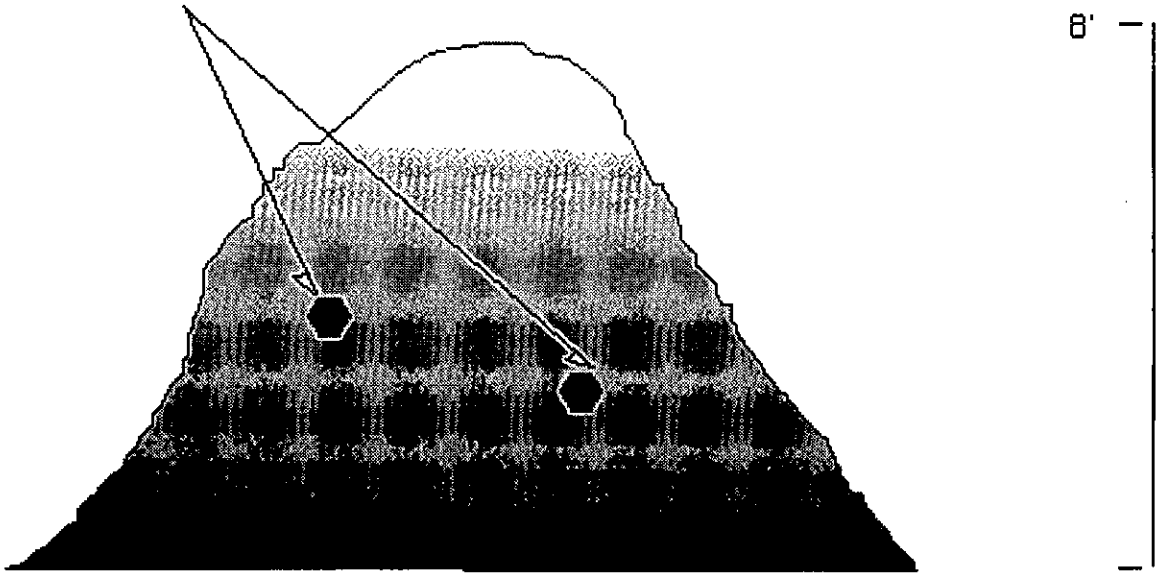
Figure 1

Soil Sample Locations

Scale: 1" = 10'

Soil was sampled between 4 and 6 vertical feet below the top of the stockpile. The samples were collected utilizing EPA SW 846 protocol and handled to insure test data integrity.



End view of typical stockpile. Soil samples obtained within the grid as indicated in Figure 1, attempting to gather soil representative of pile interior although not random and unbiased per SAM guidelines. Soil VOC diffusion characteristics recently evaluated cooperatively with the San Diego APCD were utilized to effectively sample in areas less likely to have been influenced by surficial temperature variation and naturally occuring volitilization.

Invoices will be sent to the applicant at this address unless other arrangements are made.

D. Brief Project Description An area of diesel-impacted soil was discovered during quarrying operations. The source of the diesel may be from an historical AST. Test trenches were excavated and soil samples were analyzed for TPH and BTEX. TPH at 5,540 ppm and xylenes at 0.256 ppm were detected. The extent of the TPH-impacted soils appears limited, both horizontally and vetically.

Type of Assistance Requested Provide oversight and regulatory concurrence for in-place closure.

I accept the application requirements and project review conditions listed on Page 2 of 2 and I agree to pay all costs associated with DEH staff time and services within 30 days of receiving an invoice.

COUNTY OF SAN DIEGO
DEPARTMENT OF ENVIRONMENTAL HEALTH

VOLUNTARY ASSISTANCE PROGRAM

The Voluntary Assistance Program is designed to provide the applicant with staff consultation, project review, and public health assessment pertaining to properties suspected or known to be contaminated with hazardous substances. California Health and Safety Code Sections 101480-101490 authorize the County Department of Environmental Health (DEH) to enter into voluntary agreements for the oversight of remedial action at sites contaminated by wastes.

The DEH staff will review and manage all projects in accordance with applicable regulatory requirements, industry practices, and the current version of the DEH Site Assessment and Mitigation Manual. Our goal throughout project review is the protection of human health, water resources and the environment. Upon completion of a project, DEH will issue a letter addressing the applicant's specific project goals. Open lines of communication between DEH and the applicant provide the best opportunities for expedient review and successful project resolution.

Application Requirements

- Sections A, B, C, and D must be completed on the "Application for Assistance" form (Page 1 of 2), along with the applicant's original signature.
- Fully describe your project and your specific request(s) for DEH review and written response (Section D). As necessary, include a cover letter to clarify your project needs.
- Submit all relevant documentation/reports with the application. All documents containing geologic and/or contaminant migration interpretations must be signed by an experienced professional with the appropriate California registration or certification.
- An **initial fee of $160, payable to the County of San Diego,** is required at the time of application submittal. This fee covers two (2) hours of staff review time. Staff time in excess of two hours will be invoiced to applicant and must be paid within 30 days of receipt of the invoice. The staff billing rate is currently $80/hour. **Staff assistance will not be provided on delinquent accounts.**

Project Review Conditions

- Within five (5) workdays of DEH receipt of your complete application, the project is identified by a DEH Case No. and assigned to a DEH project manager.
- The DEH will notify the Department of Toxic Substances Control (DTSC) and the Regional Water Quality Control Board (RWQCB) that the project has been submitted for DEH review.
- A copy of all written DEH correspondence will be sent to the applicant and forwarded to the legal property owner. Project files will be available for public review.
- DEH has the option of referring the project to the DTSC or RWQCB at any time during the project review process. If the applicant ceases work, or requests DEH to cease work, on a project prior to resolving site contamination issues, then DEH would refer the project to the appropriate agency and/or identify the project as unresolved in the DEH database.

Dear Messrs. Howell and Jones:

VOLUNTARY ASSISTANCE PROGRAM CASE H17076-002
HANSON AGGREGATES-CARROLL CANYON FACILITY
9255 CAMINO SANTA FE, SAN DIEGO, CA 92121

The site remediation information submitted to this agency by URS Corporation consultants, summarizing the site characterization and mitigation activities at the above-referenced location, has been reviewed following guidance from the Regional Water Quality Control Board. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is the position of this office that **no further action is required at this time**.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or the Porter Cologne Water Quality Control Act. If previously unidentified contamination is discovered which may affect public health, safety and/or water quality, additional site assessment and cleanup may be necessary.

Changes in the proposed use of the above site may require reevaluation to determine if the change will pose a risk to public health.

Thank you for your efforts in resolving this matter. Please contact Joy R. Newman of the Site Assessment and Mitigation Program (SAM), at (619) 338-2243, if you require additional assistance.

Sincerely,

GEORGE McCANDLESS, Program Manager
Supervising Environmental Health Specialist
Site Assessment and Mitigation Program

MAXIMUM DOCUMENTED CONTAMINANT CONCENTRATIONS - - BEFORE AND AFTER CLEANUP

Contaminant	Soil (ppm)		Water (ppm)		Contaminant	Soil (ppm)		Water (ppm)	
	Before	After	Before	After		Before	After	Before	After
TPH (Diesel)	5540	5540	NA	NA					
Benzene	<.001	<.001	NA	NA					
Toluene	<.001	<.001	NA	NA					
Ethylbenzene	<.001	<001	NA	NA					
Xylene	.256	.256	NA	NA					

Comments: An area of diesel impacted soil was found during quarrying opertions. The diesel release is believed from an old AST. Trenches were dug to determine the extent of impacted soil. The trenches were dug in three areas and extended from four feet to thirteen feet below grade based on visual and odors. The samples at the bottom of the trenches were below detection limits. The excavated soils were put back in the trenches. The consultant estimates the impacted soil of >100 mg/kg to be less than 20 cubic yards.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes

Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes

Does corrective action protect public health for current land use? Yes

Case review based on current/proposed use as an sand/gravel quarrying facility.

Are there other issues DEH needs to follow up on: NA

Site Management Requirements: NA

Should corrective action be reviewed if land use changes? Yes

List Enforcement Actions Taken: NA

Attention: Mr. Allen Jones, Vice President

Re: Assessment of Diesel Fuels in Soil
Hanson Aggregates Facility, Carroll Canyon, San Diego, California
For H. G. Fenton Company
URS Project No. 40092-008-035

Dear Mr. Jones:

URS Corporation (URS) is pleased to provide this letter report to H. G. Fenton Company (Fenton) describing our assessment of diesel-impacted soil that occurred at the above-referenced site. This assessment was performed at the request of Fenton, who previously conducted sand and gravel quarrying operations at the property. Hanson Aggregates (Hanson) now owns the property and conducts quarrying operations at the site. The diesel-impacted soil was discovered in June 2000 during other earthmoving activities. The source of the diesel is not known, but is presumed to be from an aboveground diesel tank that could have previously been used in the area.

SCOPE OF WORK

URS's scope of work for this project was conducted in general accordance with the scope of services and terms and conditions described in our September 5, 2000 proposal to Fenton and consisted of the following tasks:

- Excavating three test trenches using a backhoe to assess the lateral and vertical limits of the diesel-impacted soil;
- Collecting and analyzing 13 soil samples from the test trenches for total petroleum hydrocarbons (TPH) diesel-range by EPA Method 8015B and five samples for benzene, toluene, ethylbenzene, and total xylenes (BTEX) by EPA Method 8021B; and
- Preparing this letter report summarizing the work performed, analytical test results, and our conclusions.

The work was performed in general accordance with applicable procedures outlined in the County of San Diego, Site Assessment and Mitigation Manual. Additionally, the field operations were conducted by an

experienced URS field geologist under URS's site-specific Health and Safety Plan that provided health and safety procedures for our field personnel.

SITE LOCATION AND ENVIRONMENTAL SETTING

The site is located within Carroll Canyon about 6,000 feet east of the main entrance gate of the Hanson Facility in the northeast ¼ of the southeast ¼ of Section 2, Township 15 South, Range 3 West, San Bernardino Base and Meridian in the County of San Diego (Figure 1). The site is situated in the southern portion of the canyon near the toe of a north-facing slope. A dirt haul road is located directly to the west and north, and piles of soil are positioned to the east (Figure 2). The site elevation is about 280 feet above mean sea level and the topographic gradient in the area is toward the west-southwest (USGS, 1975). An intermittent, west-flowing creek within Carroll Canyon is located about two to three hundred feet to the north.

The site has been mapped as being underlain by Quaternary-age undifferentiated alluvial and slopewash deposits within Carroll Canyon (CDMG, 1975). The adjacent canyon walls are composed of Eocene-age Scripps Formation and Stadium Conglomerate, that consist of yellowish-brown, sandstone and massive conglomerate (CDMG, 1975).

The site is located within the Miramar Reservoir Hydrologic Area of the Penasquitos Hydrologic Unit and has been designated as having municipal, agricultural, and industrial beneficial uses (CRWQCB, 1994). Specific information regarding the depth to groundwater at the site was not available. However, the depth to groundwater in the hydrologic area is reported to range from approximately 25 to 50 feet below ground surface (bgs) within the drainage areas (CDWR, 1967). Additionally, within the drainages of Carroll and Rattlesnake Canyons, groundwater is anticipated to be about 20 to 30 feet bgs. Based on the topography of the overlying ground surface, local groundwater gradient within the site vicinity is inferred to generally flow to the west.

EXCAVATION AND SOIL SAMPLING ACTIVITIES

Three test trenches (Trench 1 through 3) were excavated on September 12, 2000 in the area of impacted soil (Figure 2) using a backhoe operated by Ace Excavating (a URS subcontractor). Each trench was excavated in a general north-south orientation within accessible areas. The location of the trenches was somewhat restricted due to stockpiled soils and the dirt road located directly north and west of the

September 15 – October 15, 2017 Pre- Diligence / LOI Period Package Addendum 2 October 10, 2017

impacted area, respectively. The trench depths ranged from about 4½ to 13 feet bgs. The trenches were excavated in the area of the suspected source, based on information provided by Mr. Tom Ferrell, Hanson Regulatory Affairs and observations of slightly discolored (darkish) soil on the surface.

During the excavation activities, the soils were geologically logged. Visual and olfactory observations were also made to screen for possible contamination. Thirteen selected soil samples from among the three test trenches were collected for laboratory analysis of diesel-range TPH by EPA Method 8015B. Most sample locations were generally biased toward soils that exhibited possible signs of contamination such as odors or staining. Samples were also collected at the bottom of each trench in apparently uncontaminated soils to evaluate the depth of contamination, if present. Each sample was retained in a two-inch-diameter, stainless steel sleeve capped with Teflon liners and plastic-end caps. Samples were stored in an ice chest with ice until delivery to the laboratory. Upon completion of the excavation and sampling activities, the test pits were immediately backfilled with the excavated soil due to safety concerns relating to truck traffic on the adjacent road.

The excavated soils generally consisted of reddish- and yellowish-brown sandy clay and clayey sand that contained numerous well-rounded cobbles. The soils were concluded to be fill dirt based on wood debris observed in one of the trenches and the current topographic expression of the terrain. Additionally, Mr. Ferrell later indicated that the soils were probably fill dirt based on his knowledge of previous operations in the area. Indications of contamination consisted of moderate diesel-like odors and a dark discoloration that was easily distinguished from native soils. Trenches 1 and 3 were extended down to the base of the visually discolored soil. Groundwater was not encountered in any of the test trenches.

LABORATORY TEST RESULTS

The 18 soil samples collected were submitted to Pacific Treatment Analytical Services, Inc. in San Diego, California under strict chain-of-custody procedures. Ten samples were initially analyzed for TPH diesel-range (C10 through C30) by EPA Method 8015B. The remaining samples were archived with the laboratory, pending results of the shallow samples. After receiving the TPH results, three additional samples were analyzed for TPH and five for BTEX by EPA Method 8021B. The sample results are summarized in Table 1. Sample locations and TPH and BTEX detections are shown in Figure 2. The laboratory reports and chain of custody forms are attached.

September 15 – October 15, 2017 Pre- Diligence / LOI Period Package Addendum 2 October 10, 2017

URS

TPH was detected in three of the thirteen samples at concentrations of 22, 435, and 5,540 mg/kg. The 5,540 and 435 mg/kg TPH concentrations were both found in Trench 1 at 2 feet bgs. The 5,540 mg/kg detection was collected near the reported source area. The 22 mg/kg of TPH was found at the bottom of Trench 3 at 11 feet bgs. The other samples analyzed for TPH, including those collected at the bottom of the trenches (Figure 2), did not contain TPH above the reporting limit of 10 mg/kg.

Of the five samples analyzed for BTEX compounds, only xylene was detected in the highest TPH sample at 0.256 mg/kg. No other BTEX compounds were detected in the other soil samples analyzed.

No significant quality control problems were indicated by the corresponding laboratory method blanks or other quality control tests, although the BTEX sample analyses exceeded their 14-day holding time until extraction by two days. This is not expected to significantly affect the sample results or the reliability of the data.

CONCLUSIONS AND RECOMMENDATIONS

Based on our field observations and soil sample results, it appears that the extent of the TPH-impacted soils has largely been delineated to the south and east. The exact northern and western limits of the impacted soil were not clearly delineated, but based on decreasing TPH concentrations with distance from the source, it appears likely that the impacted area does not extend to an appreciable distance. A possible depiction of the limits of impacted soil is presented in Figure 2. The depth of the impacted soil appears to have also been delineated. This is supported by decreasing TPH concentrations with depth in the presumed source area, the lack of product-saturated soil, the absence of discolored soil at lower depths, and the absence or very low concentrations of TPH in the lowermost samples.

TPH in soil has no specific regulatory action level. However, preliminary remediation goal values, or PRGs, are commonly used to evaluate if further investigation is warranted based on the potential risks that may be posed by individual site compounds. The PRGs for *m*-xylene (the most precautionary of the three separate xylene compounds) is 210 mg/kg for both industrial and residential scenarios. Additionally, the soil screening level (SSL) for *m*-xylene is 10 mg/kg. This particular SSL assumes that no dilution or attenuation between the source and a hypothesized receptor well will occur, and is therefore, quite protective of groundwater. Even at twice it's reported concentration (to account for possibly low data caused by exceeding the recommended laboratory holding time), *m*-xylene is still about two orders of magnitude below it's PRG.

September 15 – October 15, 2017 Pre- Diligence / LOI Period Package Addendum 2 October 10, 2017

URS

Based on our field assessment activities that indicate the impacted area has been sufficiently delineated and that no unacceptable risks were identified, it is URS's opinion that the diesel-impacted soil does not present a threat or potential threat to human health or groundwater in its current condition and may be left in place without the need for further assessment or corrective action.

LIMITATIONS AND CLOSING

URS has performed this assessment within the limits prescribed by our proposal using the usual degree of care and thoroughness normally employed by the environmental consulting profession at the time and locality in which the study was completed. The conclusions presented in this report are professional opinions based solely upon the visual observations of the site and soil sample results. They are intended exclusively for the purpose outlined herein and the site location and project indicated. This report is intended for the use of H. G. Fenton Company and its designated agents.

It should be recognized that this study was not intended to be a definitive investigation of all potential problems, defects, or contamination at the site, and the results obtained are not necessarily inclusive of all possible conditions. Given that the scope of services for this evaluation was limited, it is possible that currently unidentified subsurface contamination may exist at the site.

Opinions and recommendations presented herein apply to the conditions that existed at the time of our assessment and cannot necessarily apply to site changes of which URS is unaware and has not had the

September 15 – October 15, 2017 Pre- Diligence / LOI Period Package Addendum 2 October 10, 2017

URS

opportunity to evaluate. Site conditions may be affected by natural processes or by the works of man. Changes in applicable standards and regulation may also occur as a result of legislation or the broadening of knowledge. Consequently, the findings of this report may be invalidated, wholly, or in part, by changes that are unforeseen and beyond our control.

9665 Chesapeake Drive, Suite 201
San Diego, California 92123

Project Name/No.: None
Laboratory Log No.: 2037-00
Date Received: 09/12/00
Sample Matrix: Eighteen soil samples
PO No.: SDO-R-0900-0256

Please find the following enclosures for the above referenced project identified:

1) Analytical Report
2) QA/QC Report
3) Chain of Custody Form

.....*Certificate of Analysis*.....

Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. Date of extraction, date of analysis, detection limits and dilution factor are reported for each compound analyzed. All samples were analyzed within the method required holding time from sample collection.

Data for each analytical method was evaluated by assessing the following QA/QC functions, as applicable to the methodology:

- Quality Control Standard
- Surrogate Percent Recovery
- Laboratory Control Sample (LCS) percent recoveries for all analyses
- Matrix Spike Recovery/Matrix Spike Duplicate Recovery (MSR & MSDR) and/or
- Relative Percent Difference (RPD from MSR & MSDR)

I certify that this data report is in compliance both technically and for completeness. Release of the data contained in this hardcopy data report has been authorized by the following signature.

Janis Columbo
Vice President/Laboratory Director

Re: Estimate of Diesel-impacted Soil
Hanson Aggregates Facility, Carroll Canyon, San Diego, California
DEH File Number H17076-002
For H. G. Fenton Company, URS Project No. 40092-008-035

Dear Ms. Newman:

At your request, URS Corporation (URS) is pleased to provide the enclosed information regarding our estimated volume of diesel-impacted soil at the above-referenced site. Upon receipt of this information, we understand you are likely to recommend in-place closure of the impacted soils and not require further action in this matter.

Based on our field observations and soil sample results as documented in our November 9, 2000 letter report, it appears that the extent of the TPH-impacted soils extends about 5 feet to the south and east from the reported point source. The exact northern and western limits of the impacted soil were not clearly delineated, but based on decreasing TPH concentrations with distance from the source, probably do not extend beyond about 10 feet. Soil sampling indicates the depth of the impacted soil does not extend below 5 feet at the reported source area. Based on these observations, sample results, and assumptions, the total amount of TPH-impacted soil over 100 mg/kg is estimated to be less than 20 cubic yards.

If you have any questions or require additional assistance, do not hesitate to call.

Respectfully submitted,
URS CORPORATION

Re: Freedom of Information Act Request EPA-R9-2017-008754

Dear Ms. Castagno:

This is in response to your Freedom of Information Act request regarding:

9255 Camino Santa Fe, San Diego, CA

I wish to advise you that Region 9 has no records responsive to your request.

All FOIA related documents, including this letter (invoice if applicable), have been uploaded to EPA's FOIAOnline system found at https://foiaonline.regulations.gov/foia/action/public/home. Please be sure to reference your FOIA request as EPA-R9-2017-008754 to access this record.

This letter concludes our response to your request. You may appeal this response by email at hq.foia@epa.gov, or by mail to the National Freedom of Information Office, U.S. EPA, 1200 Pennsylvania Avenue, N.W. (2822T), Washington, DC 20460 (U.S. Postal Service Only). Only items mailed through the United States Postal Service may be delivered to 1200 Pennsylvania Avenue, N.W. If you are submitting your appeal via hand delivery, courier service, or overnight delivery, you must address your correspondence to 1301 Constitution Avenue, N.W., Room 6416J, Washington, DC 20001. Your appeal must be made in writing, and it must be received no later than 90 calendar days from the date of this letter. The Agency will not consider appeals received after the 90 calendar day limit. Appeals received after 5:00 pm EST will be considered received the next business day. The appeal letter should include the FOIA tracking number listed above. For quickest possible handling, the subject line of your email, the appeal letter, and its envelope, if applicable, should be marked "Freedom of Information Act Appeal." Additionally, you may seek assistance from EPA's FOIA Public Liaison at hq.foia@epa.gov or (202)566-1667, or from the Office of Government Information Services (OGIS).

You may contact OGIS in any of the following ways: by mail, Office of Government Information Services, National Archives and Records Administration, Room 2510, 8610 Adelphi Road, College Park, MD 20740-6001; e-mail, ogis@nara.gov; telephone, (301) 837-1996 or (877) 684-6448 or fax, (301) 837-0348.

If you have any questions, please contact Stephen Southern of this office at 415-972-3215.

Sincerely,

Enrique Manzanilla
Division Director

Dear Ms. Castagno:

The Department of Toxic Substances Control has received your letter to review records under the Public Records Act.

After a thorough review of our files we have found that no such records exist at this office pertaining to the site/facility referenced above.

We would like to inform you about EnviroStor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accesses at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available at each DTSC Regional File Room Office for use by community members to view EnviroStor.

If you have any questions or would like further information regarding your request, please contact me at (714) 484-5337.

Sincerely,

Julie Johnson

VARIOUS SITES
PR3-062217-09

Dear Ms. Castagno:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control.

After a thorough review of our files we have found that no such records exist at this office pertaining to the sites/facilities referenced below.

- 9255 Camino Santa Fe, San Diego, CA 92121
- APNs: 341-050-38-00 through 341-050-42-00
- APNs: 341-051-17-00 through 341-051-19-00
- APNs: 341-060-82-00

However, your request has been forwarded to our Cypress office as they may have records for the San Diego facility. We would also like to inform you about EnviroStor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor. If you have any questions or would like further information regarding your request, please contact me at (818) 717-6521.

Sincerely,

Robert Hardison

Re: 9255 Camino Sante Fe, San Diego, California 92121

Dear Ms. Shannon Castagno:

We have received your Public Records Act Request for records from Department of Toxic Substances Control.

After a thorough review of our files we have found that, **no such records** exist at this office pertaining to the site/facility referenced above.

We would like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. Envirostor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view Envirostor.

If you have any questions, or would like further information regarding your request, please contact our Regional Records Coordinator at (619) 516-1982.

Sincerely,

Beatriz Davila
Office Technician

Finish Date: 6/9/2015 1:00:52PM

Notice

Notice of Fire and Safety Hazards You are hereby notified that an inspection of your premises has disclosed the following fire safety hazards and/or violations of the provisions of appropriate local or state codes.

Order to Comply As such conditions are contrary to law you are hereby required to correct these conditions immediately upon receipt of this notice. An inspection to determine whether you have complied will be conducted on or before the next inspection date. Failure to comply with the foregoing order before the date of the next inspection may subject you to further enforcement action and penalties as provided by law.

Potential Enforcement Consequences for Failure to Timely Comply with this Notice Misdemeanor criminal prosecution (maximum fine of $1,000 per day for each violation plus six months in jail), civil injunction, administrative abatement, revocation of permits, recordation of Notice of Violation, civil penalties (maximum of $2,500 per day for each violation).

Notice

Notice of Fire and Safety Hazards You are hereby notified that an inspection of your premises has disclosed the following fire safety hazards and/or violations of the provisions of appropriate local or state codes.

Order to Comply As such conditions are contrary to law you are hereby required to correct these conditions immediately upon receipt of this notice. An inspection to determine whether you have complied will be conducted on or before the next inspection date. Failure to comply with the foregoing order before the date of the next inspection may subject you to further enforcement action and penalties as provided by law.

Potential Enforcement Consequences for Failure to Timely Comply with this Notice Misdemeanor criminal prosecution (maximum fine of $1,000 per day for each violation plus six months in jail), civil injunction, administrative abatement, revocation of permits, recordation of Notice of Violation, civil penalties (maximum of $2,500 per day for each violation).

Attention: Public Records Request

Subject: Records Search – Hazardous Materials/Waste/Underground Tanks/Pipelines

Site 9255 Camino Santa Fe
San Diego, CA 92121
APN's 341-050-38-00 through 341-050-42-00, 341-051-17-00 through 341-051-19-00, and 341-060-82-00
(see attached map)

Dear Public Records Request,

Environmental Support Services (ESS) is in the process of conducting a records search for an environmental audit at a site in San Diego, CA. This search includes researching the history of the site, especially as it pertains to hazardous materials/waste. With this in mind, **ESS** requests the following information concerning the subject address which your agency may have on file:

1. utilization, manufacture, storage, or discharge of hazardous materials/waste.
2. previous or on-going site investigations/remediations pertaining to hazardous materials/waste.
3. hazardous materials disclosures concerning the site.
4. pipelines.
5. information regarding underground storage tank present or previously found at the site.

Should you have any questions concerning this request for information, please call. Your expedient processing of this request is appreciated.

Sincerely,
Environmental Support Services

Shannon Castagno
Project Manager

LICENSED CONTRACTOR'S DECLARATION: I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. DATE 1-14-88 9-1-87

SIGNATURE TITLE AGENT SEC. VICE PRES.

5. WORKER'S COMPENSATION

☐ WORKER'S COMPENSATION DECLARATION: I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Worker's Compensation Insurance, or a certified copy thereof filed with the Building Inspection Department (Sec. 3800, Lab. C)

INSURANCE COMPANY PRINCIPAL CONTINENTAL POLICY NO WP87-25376?-4 EXPIRATION DATE 12/1/88

☐ CERTIFICATE OF EXEMPTION: I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Worker's Compensation Laws of California.

SIGNATURE DATE 1-14-88

6. OWNER-BUILDER DECLARATION

OWNER-BUILDER DECLARATION: I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9, commencing with Section 7000, of Division 3 of the Business and Professions Code) or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500):

☐ As owner of the property, or my employees with wages as their sole compensation, will do the work and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale).

☐ As owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law).

☐ I am exempt under Section N/A B.&P.C. for this reason

SIGNATURE DATE

7. CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C)

LENDER'S NAME N/A LENDER'S ADDRESS

8. APPLICANT'S SIGNATURE

I certify that I have read this application and state that the above information is correct and that I am the owner or the duly authorized agent of the owner. I agree to comply with all city and state laws relating to building construction. I hereby authorize representatives of the City of San Diego to enter upon the above-mentioned property for inspection purposes. I also making the Certificate of Exemption from the Worker's Compensation provisions of the Labor Code, I shall become subject to such provisions. I will forthwith comply. In the event I do not comply with the Worker's Compensation law, this permit shall be deemed revoked.

State License No 515883 | License Class B/C-8/C51 | City Business Tax No

Licensed Contractor's Declaration I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code and my license is in full force and effect.
Signature Barbara Harris | Title AGENT for | Date 1/25/02

Part II

7. **Workers' Compensation Declaration** I hereby affirm under penalty of perjury one of the following declarations:
☐ a. I have and will maintain a certificate of consent to self-insure for workers' compensation as provided by Section 3700 of the Labor Code for the performance of the work for which this permit is issued.
☒ b. I have and will maintain workers' compensation as required by Section 3700 of the Labor Code for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:
Insurance Company STATE FUND INSURANCE | Policy No 6007446 UT 202246 | Expiration Date 12-1-02
(This section need not be completed if the permit is for one hundred dollars ($100) or less)
☐ c. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California, and agree that, if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.
Signature Barbara Harris | Date 1-24-01
Warning: Failure to secure workers' compensation coverage is unlawful, and shall subject an employer to criminal penalties and civil fines up to one hundred thousand dollars ($100,000), in addition to the cost of compensation, damages as provided for in Section 3706 of the Labor Code, interest, and attorney's fees.

8. **Owner-Builder Declaration** I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9, commencing with Section 7000, of Division 3 of the Business and Professions Code) or that he is exempt therefrom, and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500):)
☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.)
☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with contractor(s) licensed pursuant to the Contractor's License Law.)
☐ I am exempt under Section _____, B&P C. for this reason
Signature _____ Date _____

9. **Construction Lending Agency** I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.)

PUBLIC RECORDS REQUEST FORM

ATTENTION REQUESTOR: To expedite your request for District records, please fill out this form completely, and identify specifically the type of records you are requesting. Please limit your request to one facility or one site address for each request form filed. Additional forms or pages can be used if requesting information for more than one facility or for records not identified on this form. Requests should reasonably describe identifiable records prepared, owned, used, or retained by the District. District Public Records staff is available to assist you in identifying those records in the District's possession. The District is not required by law to create a new record.

Conditions

#	Name	Description
1	C4	Air pollution control equipment shall be maintained in good operating condition and shall be in full operation in accordance with manufacturer's instructions at all times when the process equipment is in operation.
2	C1349	The fabric filter dust collection systems shall be maintained so that there is no leakage of air contaminants to the atmosphere prior to their treatment. Baghouse emissions shall not exceed 0.01 grains per dry standard cubic foot, as determined using the District particulate emission test procedures. Baghouse emissions shall not exceed ten (10) percent opacity at any time.
3	C26747	Collected fines transferred from Baghouse Hoppers to the Conveying System shall contain sufficient added moisture to prevent any visible emissions. Differential pressures across the Baghouse filters shall be 6.0" +/- 4.0" H2O.
4	C1351	Visible emissions from transfer points shall not exceed 20% opacity at any time. Applicant shall not cause or allow the emission of fugitive dust from any transport, handling or storage activity for which such dust remains visible in the atmosphere beyond the property line of the emission source. This condition shall not apply when the wind speed instantaneously exceeds25 mph, or when the wind speed averages or 15 minutes is greater than 15mph.
5	C1352	The minimum moisture contents by weight of the following rock products shall be: (a) Fines 3.0% (b) -3/8"+1/4" 1.0% (c) -1/2"+3/8" .75% (d) -3/4"+1/2" .5% (e) -1"+3/4" .5% (f) -1 1/2"+1" .5% (g) Base 8.0%
6	C1353	Vehicles at the site and on the haul roads shall not exceed speeds of 25 miles per hour. All unpaved haul roads and areas at the site subject to vehicle traffic, excluding areas inaccessible to treatment by water trucks, shall be kept visibly moist or treated with a chemical binder to minimize dust emissions. Paved haul roads shall be wet swept a minimum of once every week in order to minimize dust emissions from vehicle traffic.

7	C1354	Visible dust emissions from all vehicles traveling on paved or unpaved haul roads shall not exceed 20% opacity at any time at a distance of 8 feet or more above the ground or road surface.
8	C1355	The maximum hourly output of the plant is limited to 1,650 tons. The maximum daily output of the plant is limited to 15,000 tons. The maximum yearly output of the plant is limited to 3,000,000 tons.
9	C1356	Records shall be maintained of the materials removed from each product stockpile, and these records shall be made available to the District upon request.
10	C1357	Applicant shall not cause or allow the emission of fugitive dust from any transport, handling or storage activity for which such dust remains visible in the atmosphere beyond the property line of the emission source. This Condition shall not apply when the wind speed instantaneously exceeds 25 mph or when the wind speed averages or 15 minutes is greater than 15 mph.
11	C2465	The rock product trucked out of the Plant shall not exceed 1100 tons/hr or 10,000 tons/day or 2,000,000 tons/year. (This Condition is placed on the Permit to satisfy banking credit calculations.)
12	C3771	Visible dust emissions to the atmosphere shall not exceed 7% opacity at the Lime Silo/Transfer System. (Ref NSPS Subpart OOO, Method 9)
13	C7182	Any increases in the particulate matter (PM10) emissions from this equipment due to any modifications may result in changes in the emission reduction credit transfer for this application, including the ERC certificates No.41106-01 and issuing new certificate.
14	C26746	Each Baghouse shall have a properly operating differential pressure gauge.

Conditions

#	Name	Description
1	C23518	Permittee shall give the District written notice within 24 hours of re-locating equipment. Notification via facsimile is acceptable.
2	C22311	Except for emergency operations, an emission unit shall not be operated within 1,000 feet of any K-12 school unless California Health and Safety Code section 42301.6 is met.
3	C23519	Fuel use for this engine shall be limited to 7,752 gallons per year. Potential NOx emissions are 2.342 tons per year. This condition limits engine fuel use to no more than fifteen percent of its potential to emit.
4	C25695	This Engine shall use only California Diesel Fuel. Records of California Diesel Fuel Certification shall be maintained on-site and made available to District personnel upon request.
5	C23520	A log showing the daily hours of engine operation, and gallons of fuel used per month shall be kept.
6	C23516	Emission unit can be operated only at stationary sources which have an aggregate potential to emit of less than 50 tons per year of Oxides of Nitrogen (NOx) and 50 tons per year of Volatile Organic Compounds (VOC). Emission units may also operate at stationary sources which have an aggregate potential to emit greater than these levels if emission offsets at the ratios of 1.2:1 are provided for the period of time the emission unit is located at such a stationary source. The potential to emit shall be calculated at the new site each time the unit is re-located.
7	C23517	In lieu of calculating the potential to emit of NOx and VOCs each time the unit is re-located; the Permittee may consider the site to which the engine has been re-located non-major for NOx and VOCs if the most recent District emissions inventory indicates the actual emissions for NOx and VOCs are each less than 25 tons per year.
8	C26591	Non-resettable fuel meters shall be maintained in good working order and used for recording total fuel usage of this Engine. The District's Compliance Division shall be notified prior to replacement of the fuel meters.
9	C25281	The Owner or Operator of the Engine shall conduct periodic maintenance of this Engine as recommended by the Engine manufacturer as specified by any other maintenance procedure as approved in writing in advance by the District. The periodic maintenance shall be conducted at least once each calendar year.

10	C25282	The Owner or Operator of this Engine shall keep the following records: -applicable fuel certification -manual of recommended maintenance provided by the manufacturer -other maintenance procedure as approved in writing, in advance, by the District These records shall be kept on-site for at least the same period of time as the Engine to which the records apply is located at the site. These records shall be made available to the District upon request. (Rule 69.4.1)
11	C26669	The Owner and Operator of this Engine shall maintain an Operating Log containing, at a minimum, the following: -dates and times of Engine operation -total cumulative hours of operation per calendar month -total cumulative hours of operation per calendar year
12	C20712	All the required records shall be maintained for a minimum of three calendar years. These records shall be maintained and made available to the District upon request.
13	C28436	This engine is one of four or more engines owned by an owner or operator and prior to January 1, 2008, can only be relocated to an off-site location that is owned by the same owner or operator.

Conditions

#	Name	Description
1	C41657	This permit authorizes operation only at the stationary source(s) listed on this permit to operate. This engine shall be operated as a portable unit as defined by the Airborne Toxic Control Measure for Diesel Particulate Matter from Portable Engines Rated at 50 Horsepower and Greater. This permit does not preclude off-site operations under a valid registration issued by the California Air Resources Board (CARB) under the Portable Equipment Registration Program (PERP). (17CCR93116).
2	C42290	This engine shall not be operated more than 384 hours per calendar year.
3	C42024	For the purposes of conditions referring to 17 CCR 93116, location shall be defined as any single site at a building, structure, facility, or installation. [17 CCR 93116]
4	C42225	An emission unit is not portable if any of the following apply : The unit, or its replacement, is attached to a foundation or, if not so attached, will reside at the same location for more than 12 consecutive months; or The emission unit remains or will reside at a location for less than 12 consecutive months if the unit is located at a seasonal source and operates during the full annual operating period of the seasonal source; or The emission unit is moved from one location to another in an attempt to circumvent the portable emission unit residence time requirements. [17 CCR 93116]
5	C26204	Days when a portable emission unit is stored in a designated holding or storage area shall not be counted towards the above time limits, provided the emission unit was not operated on that calendar day except for maintenance and was in the designated holding or storage area the entire calendar day.
6	C28413	Visible emissions including crank case smoke shall comply with Air Pollution Control District Rule 50. (Rule 50)
7	C28414	The equipment described above shall not cause or contribute to a public nuisance. (Rule 51)
8	C29964	This engine shall use only carb diesel fuel. (Rule 69.4.1, 17 CCR 93116)

September 15 - October 15, 2017 Pre-Diligence / LOI Period Package Addendum 2 October 10, 2017

9	C28736	A non-resettable engine hour meter and/or non-resettable totalizing fuel meter shall be installed on this engine, maintained in good working order and used for recording engine operation hours. If a meter is replaced, the Air Pollution Control District's compliance division shall be notified in writing within in 10 calendar days. The written notifications shall include the following information: a. old meter's reading. b. replacement meter's manufacturer name, model and serial number if available and current reading on replacement meter; and c. copy of receipt of new meter or of installation work order. A copy of the meter replacement notification shall be maintained on site and made available to the Air Pollution Control District upon request. (Rule 69.4.1)
10	C40724	The owner or operator of this engine shall conduct periodic maintenance of the engine and add-on control equipment, if any, as recommended by the engine and control equipment manufacturers or as specified by the engine servicing company's maintenance procedures. The periodic maintenance shall be conducted at least once every 4000 hours of operation, or every six months, whichever occurs first. (Rule 69.4.1)
11	C29966	The owner or operator of the engine shall maintain the following records on site for at least the same period of time as the engine to which the records apply is located at the site: a. documentation shall be maintained identifying the fuel as carb diesel. b. manual of recommended maintenance provided by the manufacturer, or maintenance procedures specified by the engine servicing company; and c. records of annual engine maintenance including date the maintenance was performed. These records shall be made available to the Air Pollution Control District upon request. (Rule 69.4.1)(17 CCR 93116)
12	C30080	All operational and maintenance logs and fuel use and type and purchase records required by this permit shall be kept for a minimum of 36 months from their date of creation unless otherwise indicated by the conditions of this permit. The records shall be maintained onsite for a minimum of 24 months from their date of creation. Records for the last 24 months of operations shall be made available to the Air Pollution Control District upon request. Records for operation for the last 25 to 36 months shall be made available to the Air Pollution Control District within 5 working days of request.
13	C40397	Effective January 1, 2012, the Responsible Official of a fleet shall maintain on a calendar year basis a record of the total hours of operation for each portable engine. These records shall be maintained at a central place of business for five years from their date of creation. The records shall clearly identify each portable engine subject to the recordkeeping requirement as well as the annual hours of operation. These records shall be made available, upon request, to the District or CARB personnel and provided within ten business days of the request.
14	C41422	This engine, as part of the fleet that it is included in, shall comply with the fleet averaging standards of 17CCR 93116. A copy of the most recent compliance statement submitted to the California Air Resources Board under 17CCR 93116 shall be provided to District personnel upon request. (17CCR 93116)
15	C40398	The responsible official shall submit compliance statements as required by 17CCR 93116. These compliance statements are due to the California Air Resources Board by March 1, 2013, March 1, 2017 and March 1, 2020.
	C42289	This permit authorizes operation only at the location described above.

#	Name	Description
1	C3236	All process materials shall contain sufficient naturally occurring or added moisture to maintain visibly wet material and to minimize dust emissions at all times.
2	C21765	Daily records of the screening plant production shall be maintained on site and made readily available for inspection by the district upon request.
3	C21766	The maximum production rate of the screening plant shall not exceed 200 tons/hr, 1000 tons/day and 250,000 tons/year.
4	C21767	Daily production summary records shall be maintained and kept on site at least 36 months and be made readily available upon request.
5	C21768	The total length of all unpaved haul roads shall not exceed 0.3 miles. Maximum speed of all trucks on these roads is limited to 15 miles per hour.
6	C3942	All unpaved areas at the site and haul roads shall contain sufficient naturally occurring or added moisture to maintain visible emissions due to vehicular traffic to less than 20 percent opacity as measured eight feet above ground.
7	C21769	Before moving the screening plant to a new stationary source, the permittee shall submit to the district an application for a change of location.

Carroll Canyon Turbidity Log
10/1/2010- 5/30/2011

Instructions

1. If a rain event is 0.5 inches or more based on the nearest available rain gauge and a discharge is produced, then fill in the below table.
2. If a rain event is 0.5 inches or more based on the nearest available rain gauge and a discharge is not produced, then take photos at the discharge point to document there is no discharge.
3. Submit this Turbidity Log to the Regional Board within 7 days of the date of testing. Each submittal shall show the earlier test results.
4. If a rain event that is 0.5 inches or more does not result in a discharge at a discharge point, then submit photos in lieu of turbidity test results.
5. In the event that the turbidity of a sample exceeds 20 NTU, additional actions must be taken immediately to control the discharge.

Turbidity of Discharge Table

Date of Storm Event (1)	Turbidity in NTU at Camino Santa Fe Discharge Point (2)	Turbidity in NTU at Access Road #1 Discharge Point (low point in road) (2)	Turbidity in NTU at Access Road #2 Discharge Point (near office trailer) (2)	Initials of Person Filling Out Log
10/19/10-10/20/10			58.6	

Notes

(1) Show date of storm event that is 0.5 inches or more based on the nearest available rain gauge.

(2) Record turbidity when storm event exceeds 0.5 inches and stormwater discharge is produced at discharge point.

Carroll Canyon Turbidity Report

According to the MCASM weather station, there were 0.95 inches of rainfall within a 24-hour period beginning at approximately 12:00 pm on 10/19/2010. The three Carroll Canyon desilting basins were inspected for storm water discharges at approximately 10:30 AM on 10/20/2010. There was a discharge from the Access Road #2 Discharge Point (located near the office trailer), which had a turbidity level of 58.6 NTU. This was a limited discharge that ceased by the end of the working day on 10/20/2010. Immediate action taken on 10/20/2010 to mitigate the turbidity level included installation of additional chevrons upgradient of this Discharge Point. Additional BMP's are being evaluated that could be implemented when there are discharges from future rain events.

There was not a discharge from the Camino Santa Fe Basin Discharge Point or the Access Road #1 Discharge Point (see attached photos). Also attached are the turbidity test results for the storm event of 10/20/2010. Since a sediment discharge at the Camino Santa Fe Desilting Basin did not exceed Basin Plan Standards for turbidity, a baker tank or equivalent was not installed for this event.

CALIFORNIA
Water Boards

EDMUND G. BROWN JR.
GOVERNOR

MATTHEW RODRIQUEZ
SECRETARY FOR
ENVIRONMENTAL PROTECTION

California Regional Water Quality Control Board, San Diego Region

January 10, 2014

Mr. Marvin Howell
Hansons Aggregate
9229 Harris Plant Road
San Diego CA 92163

In reply refer to / attn:
213364:jodermatt

Subject: ENROLLMENT UNDER CONDITIONAL WAIVER NO. 9 – DISCHARGES OF SLURRIES TO LAND, HANSONS AGGREGATE CARROLL CANYON PLANT, SAN DIEGO.

Mr. Howell:

The California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) received your application, dated December 2, 2013. Based on information provided in the signed and completed Notice of Intent (NOI), the proposed discharge of Slurries to Land is hereby enrolled under the conditional waiver.

The heading portion of this letter includes the reference number 213364:jodermatt. In order to assist us in the processing of your correspondence please include this code in the heading or subject line portion of all correspondence and reports to the San Diego Water Board pertaining to this matter. If you have any questions, please contact Mr. John Odermatt at (619)521-5906 or jodermatt@waterboards.ca.gov.

Respectfully,

Enclosure: Conditional Waiver No. 9 Discharges of Slurry to Land

Tech Staff Info & Use	
Order No.	R9-2007-0104
Party (CIWQS) ID	19795
Reg. Measure ID	394473
Place ID	213364

Conditional Waiver No. 9 – Discharges of Slurries to Land

Conditional Waiver No. 9 is for discharges of slurries to land, which may be a source of pollutants that can adversely affect the quality of waters of the state. A slurry typically consists of water and some material to form a liquid mixture.

The following types of discharge not regulated or authorized under WDRs may be eligible for Conditional Waiver No. 9:

- Discharges of drilling muds to land
- Discharges of concrete grinding residues to land

These types of discharge have similar properties, potential threat to water quality, and waiver conditions. Therefore, these types of slurry discharges to land were grouped together into one discharge classification. Discharges of slurries to land that comply with the waiver conditions are not expected to pose a threat to the quality of waters of the state.

Slurries typically consist of water mixed with very fine-grained solids. If these slurries are discharged to land in a sump or containment area for storage, proper management measures must be taken to prevent the degradation of surface water or groundwater quality. Slurries must be properly contained to prevent them from running off to surface waters. Slurries consist of high liquid content, which can potentially infiltrate to groundwater. However, the very fine-grained materials in these types of slurries would likely seal the sump or containment area surface, which will severely reduce or eliminate any leaching potential as the water content evaporates. Slurries discharged to land, with proper management and containment, are not expected to pose a threat to the quality of waters of the state and may be eligible for a conditional waiver. Therefore, waiver conditions must require proper management and containment of slurries discharged to land to minimize or eliminate the discharge of pollutants to waters of the state.

Waiver conditions should be developed in order for members of the public, cities, counties, local agencies and organizations, and/or the San Diego Water Board to determine if any discharges of slurries to land pose a threat to the quality of the waters of the state. If dischargers of slurries are not in compliance with waiver conditions, they can be issued a Notice of Violation and required to correct deficiencies in order to be eligible for Conditional Waiver No. 9. If dischargers of slurries violate any waiver conditions, the San Diego Water Board has the option to terminate the conditional waiver for the discharge and begin regulating the discharge with individual WDRs and/or take other enforcement actions.

In order to be eligible for Conditional Waiver No. 9, discharges must comply with certain conditions to be protective of water quality. The waiver conditions applicable to discharges of slurries to land include the following:

9.I.A. General Waiver Conditions for Slurries Discharged to Land

9.II.A. Specific Waiver Conditions for Discharges of Drilling Mud to Land

Discharges of slurries to land that comply with the general and specific waiver conditions in Conditional Waiver No. 9 are not expected to pose a threat to the quality of waters of the state.

9.I.A General Waiver Conditions for Slurries Discharged to Land

1. Prevent the direct or indirect discharge of slurries to any surface waters of the state (including ephemeral streams and vernal pools).
2. Slurries must be contained to eliminate the potential for runoff from the site.
3. If slurries are discharged to land for storage, the storage area or sump must be designed to be fully contained and ensure no overflow during discharge with at least 2 feet of freeboard.
4. The floor of the storage area or sump must be at least 5 feet above the highest known historical or anticipated groundwater level.
5. The walls of the storage area or sump must be at least 100 feet away from any surface water body or municipal water well.
6. Slurries cannot contain any toxic or hazardous constituents.
7. Slurries discharged to land must not adversely affect the quality or beneficial uses of underlying groundwater.
8. Slurries must be removed and disposed of at an appropriate disposal facility prior to restoring the storage area or sump to pre-discharge conditions.
9. The storage area or sump must be filled in and restored to pre-discharge conditions.
10. Discharger must submit a Notice of Intent or technical and/or monitoring program reports when directed by the San Diego Water Board.

9.II.A. Specific Waiver Conditions for Discharge of Drilling Muds

1. Drilling mud cannot be from borings advanced for a soil or groundwater contamination investigation.

Subject: ENROLLMENT UNDER CONDITIONAL WAIVER NO. 9 – DISCHARGES OF SLURRIES TO LAND, HANSONS AGGREGATE CARROLL CANYON PLANT, SAN DIEGO.

Mr. Howell:

The California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) received your application, dated December 2, 2013. Based on information provided in the signed and completed Notice of Intent (NOI), the proposed discharge of Slurries to Land is hereby enrolled under the conditional waiver.

The heading portion of this letter includes the reference number 213364:jodermatt. In order to assist us in the processing of your correspondence please include this code in the heading or subject line portion of all correspondence and reports to the San Diego Water Board pertaining to this matter. If you have any questions, please contact Mr. John Odermatt at (619)521-5906 or jodermatt@waterboards.ca.gov.

Respectfully,

DAVID W. GIBSON.

Conditional Waiver No. 9 – Discharges of Slurries to Land

Conditional Waiver No. 9 is for discharges of slurries to land, which may be a source of pollutants that can adversely affect the quality of waters of the state. A slurry typically consists of water and some material to form a liquid mixture.

The following types of discharge not regulated or authorized under WDRs may be eligible for Conditional Waiver No. 9:

- Discharges of drilling muds to land
- Discharges of concrete grinding residues to land

These types of discharge have similar properties, potential threat to water quality, and waiver conditions. Therefore, these types of slurry discharges to land were grouped together into one discharge classification. Discharges of slurries to land that comply with the waiver conditions are not expected to pose a threat to the quality of waters of the state.

Slurries typically consist of water mixed with very fine-grained solids. If these slurries are discharged to land in a sump or containment area for storage, proper management measures must be taken to prevent the degradation of surface water or groundwater quality. Slurries must be properly contained to prevent them from running off to surface waters. Slurries consist of high liquid content, which can potentially infiltrate to groundwater. However, the very fine-grained materials in these types of slurries would likely seal the sump or containment area surface, which will severely reduce or eliminate any leaching potential as the water content evaporates. Slurries discharged to land, with proper management and containment, are not expected to pose a threat to the quality of waters of the state and may be eligible for a conditional waiver. Therefore, waiver conditions must require proper management and containment of slurries discharged to land to minimize or eliminate the discharge of pollutants to waters of the state.

Waiver conditions should be developed in order for members of the public, cities, counties, local agencies and organizations, and/or the San Diego Water Board to determine if any discharges of slurries to land pose a threat to the quality of the waters of the state. If dischargers of slurries are not in compliance with waiver conditions, they can be issued a Notice of Violation and required to correct deficiencies in order to be eligible for Conditional Waiver No. 9. If dischargers of slurries violate any waiver conditions, the San Diego Water Board has the option to terminate the conditional waiver for the discharge and begin regulating the discharge with individual WDRs and/or take other enforcement actions.

In order to be eligible for Conditional Waiver No. 9, discharges must comply with certain conditions to be protective of water quality. The waiver conditions applicable to discharges of slurries to land include the following:

9.I.A. General Waiver Conditions for Slurries Discharged to Land

9.II.A. Specific Waiver Conditions for Discharges of Drilling Mud to Land

Discharges of slurries to land that comply with the general and specific waiver conditions in Conditional Waiver No. 9 are not expected to pose a threat to the quality of waters of the state.

9.I.A General Waiver Conditions for Slurries Discharged to Land

1. Prevent the direct or indirect discharge of slurries to any surface waters of the state (including ephemeral streams and vernal pools).
2. Slurries must be contained to eliminate the potential for runoff from the site.
3. If slurries are discharged to land for storage, the storage area or sump must be designed to be fully contained and ensure no overflow during discharge with at least 2 feet of freeboard.
4. The floor of the storage area or sump must be at least 5 feet above the highest known historical or anticipated groundwater level.
5. The walls of the storage area or sump must be at least 100 feet away from any surface water body or municipal water well.
6. Slurries cannot contain any toxic or hazardous constituents.
7. Slurries discharged to land must not adversely affect the quality or beneficial uses of underlying groundwater.
8. Slurries must be removed and disposed of at an appropriate disposal facility prior to restoring the storage area or sump to pre-discharge conditions.
9. The storage area or sump must be filled in and restored to pre-discharge conditions.
10. Discharger must submit a Notice of Intent or technical and/or monitoring program reports when directed by the San Diego Water Board.

9.II.A. Specific Waiver Conditions for Discharge of Drilling Muds

1. Drilling mud cannot be from borings advanced for a soil or groundwater contamination investigation.

INTRODUCTION

This application package constitutes a Report of Waste Discharge (ROWD) pursuant to California Water Code Section 13260. Section 13260 states that persons discharging or proposing to discharge waste that could affect the quality of the waters of the State, other than into a community sewer system, shall file a ROWD containing information which may be required by the appropriate Regional Water Quality Control Board (RWQCB).

This package is to be used to start the application process for all waste discharge requirements (WDRs) and National Pollutant Discharge Elimination System (NPDES) permits* issued by a RWQCB except:

a) Those landfill facilities that must use a joint Solid Waste Facility Permit Application Form, California Integrated Waste Management Board Form E-1-77; and
b) General WDRs or general NPDES permits that use a Notice of Intent to comply or specify the use of an alternative application form designed for that permit.

This application package contains:

1. Application/General Information Form for WDRs and NPDES Permits [Form 200 (10/97)].
2. Application/General Information Instructions.

Instructions

Instructions are provided to assist you with completion of the application. If you are unable to find the answers to your questions or need assistance with the completion of the application package, please contact your RWQCB representative. *The RWQCBs strongly recommend that you make initial telephone or personal contact with RWQCB regulatory staff to discuss a proposed new discharge before submitting your application.* The RWQCB representative will be able to answer procedural and annual fee related questions that you may have. (See map and telephone numbers inside of application cover.)

All dischargers regulated under WDRs and NPDES permits must pay an annual fee, except dairies, which pay a filing fee only. The RWQCB will notify you of your annual fee based on an evaluation of your proposed discharge. Please do NOT submit a check for your first annual fee or filing fee until requested to do so by a RWQCB representative. Dischargers applying for reissuance (renewal) of an existing NPDES permit or update of an existing WDR will be billed through the annual fee billing system and are therefore requested NOT to submit a check with their application. Checks should be made payable to the State Water Resources Control Board.

Additional Information Requirements

A RWQCB representative will notify you within 30 days of receipt of the application form and any supplemental documents whether your application is complete. If your application is incomplete, the RWQCB representative will send you a detailed list of discharge specific information necessary to complete the application process. The completion date of your application is normally the date when all required information, including the correct fee, is received by the RWQCB.

*** NPDES PERMITS:** If you are applying for a permit to discharge to surface water, you will need an NPDES permit which is issued under both State and Federal law and may be required to complete one or more of the following Federal NPDES permit application forms: Short Form A, Standard Form A, Forms 1, 2B, 2C, 2D, 2E, and 2F. These forms may be obtained at a RWQCB office or can be ordered from the National Center for Environmental Publications and Information at (513) 891-6561.

APPLICATION/REPORT OF WASTE DISCHARGE
GENERAL INFORMATION FORM FOR
WASTE DISCHARGE REQUIREMENTS OR NPDES PERMIT

INSTRUCTIONS

FOR COMPLETING THE APPLICATION/REPORT OF WASTE DISCHARGE GENERAL INFORMATION FORM FOR: WASTE DISCHARGE REQUIREMENTS/NPDES PERMIT

If you have any questions on the completion of any part of the application, please contact your RWQCB representative. A map of RWQCB locations, addresses, and telephone numbers is located on the reverse side of the application cover.

I. FACILITY INFORMATION

You must provide the factual information listed below for ALL owners, operators, and locations and, where appropriate, for ALL general partners and lease holders.

A. FACILITY:
Legal name, physical address including the county, person to contact, and phone number at the facility. (**NO P.O. Box numbers!** If no address exists, use street and nearest cross street.)

B. FACILITY OWNER:
Legal owner, address, person to contact, and phone number. Also include the owner's Federal Tax Identification Number.

OWNER TYPE:
Check the appropriate Owner Type. The legal owner will be named in the WDRs/NPDES permit.

C. FACILITY OPERATOR (The agency or business, not the person):
If applicable, the name, address, person to contact, and telephone number for the facility operator. Check the appropriate Operator Type. If identical to B. above, enter "same as owner".

D. OWNER OF THE LAND:
Legal owner of the land(s) where the facility is located, address, person to contact, and phone number. Check the appropriate Owner Type. If identical to B. above, enter "same as owner".

E. ADDRESS WHERE LEGAL NOTICE MAY BE SERVED:
Address where legal notice may be served, person to contact, and phone number. If identical to B. above, enter "same as owner".

F. BILLING ADDRESS
Address where annual fee invoices should be sent, person to contact, and phone number. If identical to B. above, enter "same as owner".

CALIFORNIA ENVIRONMENTAL PROTECTION AGENCY

State of California
Regional Water Quality Control Board

APPLICATION/REPORT OF WASTE DISCHARGE GENERAL INFORMATION FORM FOR WASTE DISCHARGE REQUIREMENTS OR NPDES PERMIT

II. TYPE OF DISCHARGE

Check the appropriate box to describe whether the waste will be discharged to: A. Land, or B. Surface Water.

Check the appropriate box(es) which best describe the activities at your facility.

Hazardous Waste - **If you check the Hazardous Waste box,** STOP **and contact a representative of the RWQCB for further instructions.**

Landfills - **A separate form, APPLICATION FOR SOLID WASTE FACILITY PERMIT/WASTE DISCHARGE REQUIREMENTS, California Integrated Waste Management Board Form E-1-77, may be required. Contact a RWQCB representative to help determine the appropriate form for your discharge.**

III. LOCATION OF THE FACILITY

1. Enter the Assessor's Parcel Number(s) (APN), which is located on the property tax bill. The number can also be obtained from the County Assessor's Office. Indicate the APN for both the facility and the discharge point.

2. Enter the Latitude of the entrance to the proposed/existing facility and of the discharge point. Latitude and longitude information can be obtained from a U.S. Geological Survey quadrangle topographic map. Other maps may also contain this information.

3. Enter the Longitude of the entrance to the proposed/existing facility and of the discharge point.

IV. REASON FOR FILING

NEW DISCHARGE OR FACILITY:
A discharge or facility that is proposed but does not now exist, or that does not yet have WDRs or an NPDES permit.

CHANGE IN DESIGN OR OPERATION:
A material change in design or operation from existing discharge requirements. Final determination of whether the reported change is material will be made by the RWQCB.

CHANGE IN QUANTITY/TYPE OF DISCHARGE:
A material change in characteristics of the waste from existing discharge requirements. Final determination of whether the reported change would have a significant effect will be made by the RWQCB.

CHANGE IN OWNERSHIP/OPERATOR:
Change of legal owner of the facility. Complete Parts I, III, and IV only and contact the RWQCB to determine if additional information is required.

WASTE DISCHARGE REQUIREMENTS UPDATE OR NPDES PERMIT REISSUANCE:
WDRs must be updated periodically to reflect changing technology standards and conditions. A new application is required to reissue an NPDES permit which has expired.

OTHER:
If there is a reason other than the ones listed, please describe the reason on the space provided. (If more space is needed, attach a separate sheet.)

CALIFORNIA ENVIRONMENTAL PROTECTION AGENCY

State of California
Regional Water Quality Control Board

APPLICATION/REPORT OF WASTE DISCHARGE GENERAL INFORMATION FORM FOR WASTE DISCHARGE REQUIREMENTS OR NPDES PERMIT

V. CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA)

It should be emphasized that communication with the appropriate RWQCB staff is vital before starting the CEQA documentation, and is recommended before completing this application. There are Basin Plan issues which may complicate the CEQA effort, and RWQCB staff may be able to help in providing the needed information to complete the CEQA documentation.

Name the Lead Agency responsible for completion of CEQA requirements for the project, i.e., completion and certification of CEQA documentation.

Check YES or NO. Has a public agency determined that the proposed project is exempt from CEQA?
If the answer is YES, state the basis for the exemption and the name of the agency supplying the exemption on the space provided. (Remember that, if extra space is needed, use an extra sheet of paper, but be sure to indicate the attached sheet under Section VII. Other.)

Check YES or NO. Has the "Notice of Determination" been filed under CEQA? If YES, give the date the notice was filed and enclose a copy of the Notice of Determination and the Initial Study, Environmental Impact Report, or Negative Declaration. If NO, check the box of the expected type of CEQA document for this project, and include the expected date of completion using the timelines given under CEQA. The date of completion should be taken as the date that the Notice of Determination will be submitted. (If not known, write "Unknown")

VI. OTHER REQUIRED INFORMATION

To be approved, your application MUST include a COMPLETE characterization of the discharge. If the characterization is found to be incomplete, RWQCB staff will contact you and request that additional specific information be submitted.

This application MUST be accompanied by a site map. A USGS 7.5' Quadrangle map or a street map, if more appropriate, is sufficient for most applications.

VII. OTHER

If any of the answers on your application form need further explanation, attach a separate sheet. Please list any attachments with the titles and dates on the space provided.

VIII. CERTIFICATION

Certification by the owner of the facility or the operator of the facility, if the operator is different from the owner, is required. The appropriate person must sign the application form.
Acceptable signatures are:

1. **for a corporation,** a principal executive officer of at least the level of senior vice-president;
2. **for a partnership or individual (sole proprietorship),** a general partner or the proprietor;
3. **for a governmental or public agency,** either a principal executive officer or ranking elected/appointed official.

DISCHARGE SPECIFIC INFORMATION

In most cases, a request to supply additional discharge specific information will be sent to you by a representative of the RWQCB. If the RWQCB determines that additional discharge specific information is not needed to process your application, you will be so notified.

APPLICATION/REPORT OF WASTE DISCHARGE GENERAL INFORMATION FORM FOR WASTE DISCHARGE REQUIREMENTS OR NPDES PERMIT

VI. OTHER REQUIRED INFORMATION

Please provide a COMPLETE characterization of your discharge. A complete characterization includes, but is not limited to, design and actual flows, a list of constituents and the discharge concentration of each constituent, a list of other appropriate waste discharge characteristics, a description and schematic drawing of all treatment processes, a description of any Best Management Practices (BMPs) used, and a description of disposal methods.

Also include a site map showing the location of the facility and, if you are submitting this application for an NPDES permit, identify the surface water to which you propose to discharge. Please try to limit your maps to a scale of 1:24,000 (7.5' USGS Quadrangle) or a street map, if more appropriate.

VII. OTHER

Attach additional sheets to explain any responses which need clarification. List attachments with titles and dates below:

See attached memorandum.

You will be notified by a representative of the RWQCB within 30 days of receipt of your application. The notice will state if your application is complete or if there is additional information you must submit to complete your Application/Report of Waste Discharge, pursuant to Division 7, Section 13260 of the California Water Code.

VIII. CERTIFICATION

"I certify under penalty of law that this document, including all attachments and supplemental information, were prepared under my direction and supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment."

California Environmental Protection Agency
Bill of Rights for Environmental
Permit Applicants

California Environmental Protection Agency (Cal/EPA) recognizes that many complex issues must be addressed when pursuing reforms of environmental permits and that significant challenges remain. We have initiated reforms and intend to continue the effort to make environmental permitting more efficient, less costly, and to ensure that those seeking permits receive timely responses from the boards and departments of the Cal/EPA. To further this goal, Cal/EPA endorses the following precepts that form the basis of a permit applicant's "Bill of Rights."

1. Permit applicants have the right to assistance in understanding regulatory and permit requirements. All Cal/EPA programs maintain an Ombudsman to work directly with applicants. Permit Assistance Centers located throughout California have permit specialists from all the State, regional, and local agencies to identify permit requirements and assist in permit processing.

2. Permit applicants have the right to know the projected fees for review of applications, how any costs will be determined and billed, and procedures for resolving any disputes over fee billings.

3. Permit applicants have the right of access to complete and clearly written guidance documents that explain the regulatory requirements. Agencies must publish a list of all information required in a permit application and of criteria used to determine whether the submitted information is adequate.

4. Permit applicants have the right of timely completeness determinations for their applications. In general, agencies notify the applicant within 30 days of any deficiencies or determine that the application is complete. California Environmental Quality Act (CEQA) and public hearing requests may require additional information.

5. Permit applicants have the right to know exactly how their applications are deficient and what further information is needed to make their applications complete. Pursuant to California Government code Section 65944, after an application is accepted as complete, an agency may not request any new or additional information that was not specified in the original application.

6. Permit applicants have the right of a timely decision on their permit application. The agencies are required to establish time limits for permit reviews.

7. Permit applicants have the right to appeal permit review time limits by statute or administratively that have been violated without good cause. For state environmental agencies, appeals are made directly to the Cal/EPA Secretary or to a specific board. For local environmental agencies, appeals are generally made to the local governing board or, under certain circumstances, to Cal/EPA. Through this appeal, applicants may obtain a set date for a decision on their permit and, in some cases, a refund of all application fees (ask boards and departments for details).

8. Permit applicants have the right to work with a single lead agency where multiple environmental approvals are needed. For multiple permits, all agency actions can be consolidated under a lead agency. For site remediation, all applicable laws can be administered through a single agency.

9. Permit applicants have the right to know who will be reviewing their application and the time required to complete the full review process.

Memorandum

Date:	2 December 2013
To:	Roger Mitchell, Regional Water Quality Control Board
From:	Chris Lieder, Geosyntec
Subject:	Additional Information for Notice of Intent (NOI) Resolution No. R9-2007-104 (Conditional Waiver No. 9) Hanson Aggregates - Carroll Canyon Plant

---

This memorandum was prepared to provide additional information in regards to the Notice of Intent by Hanson Aggregate (Hanson) to enroll in Resolution R9-2007-104 (Conditional Waiver No.9) for Discharges of Slurries to Land. During washout of residual concrete and cement left in trucks, the partially cured remaining material is processed to remove the sand and gravel for re-use and the leftover cement residue is what is being requested to be discharged during reclamation of former mining areas at the site. This product has similar pH levels to concrete and cement and would be applicable for discharge to land under this waiver. The following responses to the general waiver conditions are provided below to assist the Regional Water Quality Control Board in their approval process:

1. Prevent the direct or indirect discharge of slurries to any surface waters of the state (including ephemeral streams and vernal pools).

The residual cement material produced through the washout activities will be dewatered and the inert dry material will be spread as a thin layer (2" thick) during backfill operation of the Carroll Canyon Facility as part of their reclamation procedures. The material will then be bladed in with clean backfill from the site. These procedures will thoroughly mix the cement material in the soil, and will be performed in a manner which prevents the discharge to surface water.

2. Slurries must be contained to eliminate the potential for runoff from the site.

Following processing to remove sand and gravel, the resulting cement residue is described as a dried light colored granular material.

3. If slurries are discharged to land for storage, the storage area or sump must be designed to be fully contained and ensure no overflow during discharge with at least 2 feet of freeboard.

The dry cementitiuos material is a solid and not a slurry, will temporarily stockpiled prior to discharge to land.

4. The floor of the storage area or sump must be at least 5 feet above the highest known historical or anticipated groundwater level.

The solid material is planned to be added to backfilled lifts that are currently at least 40 feet above the highest historical groundwater level.

5. The walls of the storage area or sump must be at least 100 feet away from any surface water body or municipal water well.

The dried cementitious material to be used for onsite backfill during mine reclamation activities will not be stored in a sump and will be stockpiled more than 100 feet away from any surface water body.

6. Slurries cannot contain any toxic or hazardous constituents.

The material is residual leftover cement that cannot be re-used. It does not contain any toxic or hazardous constituents.

7. Slurries discharged to land must not adversely affect the quality or beneficial uses of underlying groundwater.

The dried material is planned to be placed more than 40 feet above the highest groundwater level. It will also be thoroughly mixed in with clean fill material. In addition, Hanson plans to then add over 20 feet of clean fill above the lifts that contain the mixed concrete residue and clean fill.

8. Slurries must be removed and disposed of at an appropriate disposal facility prior to restoring the storage area or sump to pre-discharge conditions.

Not applicable.

9. The storage area or sump must be filled in and restored to pre-discharge conditions.

In reply refer to:
213364:RMitchell

Subject: January-December 2011 Annual Monitoring Report, for Hanson Aggregates Carroll Canyon Plant, San Diego, San Diego County

Mr. Tieck:

The above referenced document (2011 Annual Monitoring Report), was received by the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) on January 27, 2012. The 2011 Annual Monitoring Report is an annual assessment of the Hanson Aggregates Carroll Canyon Plant to evaluate groundwater and other on-site conditions to determine potential environmental impacts associated with the discharge of wastes to land.

The San Diego Water Board has reviewed the 2011 Annual Monitoring Report submitted in accordance with Order No. 95-104 (the Order),[1] and have no comments.

The San Diego Water Board is implementing a Paperless Office system to reduce our paper use, increase efficiency, and provide a more effective way for our staff, the public and interested parties to view water quality documents in electronic form.

Please convert all regulatory documents, submissions, materials, and correspondence that you would normally submit to us as hard copies to a searchable Portable Document Format (PDF). Data may be submitted in Excel spreadsheets. Documents that are less than 50 MB should be emailed to SanDiego@waterboads.ca.gov. Documents that are 50 MB or larger should be transferred to a disk and mailed to the address listed below.

California Regional Water Quality Control Board

Subject: January – December 2011 Annual Monitoring Report for Hanson Aggregates Carroll Canyon Facility, Waste Discharge Report No. 95-104.

Dear Industrial Compliance Unit:

The January – December 2011 Annual Monitoring Report for Waste Discharge Report No. 95-104 is attached to this letter.

"I certify under penalty of law that I personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including possibility of fine and imprisonment."

If you have any questions please call me at (858) 577-2711.

Sincerely,

Craig Tieck
RMC Production Manager

January 20, 2010

Subject: January – December 2009 Annual Monitoring Report for Hanson Aggregates Channel Road Facility, Waste Discharge Report No. 88-65.

Dear Industrial Compliance Unit:

The January – December 2009 Annual Monitoring Report for Waste Discharge Report No. 88-65 is attached to this letter.

"I certify under penalty of law that I personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including possibility of fine and imprisonment."

If you have any questions please call me at (805) 985-2191.

Sincerely,

Steve Zacks
Environmental Manager
Environmental, Safety, and Health Department

WDR NO. 9 000000171 ORDER NO.: 88-65
REPORT PERIOD: January – December, 2009 REPORT DUE: January 30, 2010

C. PLANT FACILITIES

___ There was no change of the facility during this monitoring period.

X There have been some changes to the facility.
Installation of an upgraded washout system, which will be a closed loop facility, was in progress during 2009. A tank will hold slurry water from the existing mixer washout pit. A water filtering plant will clean and send the water to 2 10,000-gallon tanks for reuse. Cement paste that has been dried will be trucked to a recycle base plant for reuse in Class II base materials.

D. OPERATION AND MAINTENANCE PROCEDURES IMPLEMENTATION

I certify that the operation and maintenance procedures developed pursuant to Provision C-5 of Order No. 88-65 was implemented by operating personnel throughout the previous year. There were no ready pond overflows in 2009 and the pond system is in sound condition.

SIGNED UNDER PENALTY OF PERJURY

E. FACILITY MAPS AND DIAGRAMS ARE FOUND IN APPENDIX C TO SHOW THE FOLLOWING:

1. Buildings, stationary equipment, plants and machinery.
2. Stock piles of materials and stockpiles of sediments removed from settling ponds.
3. Present location of settling ponds.
4. Present locations and description of facilities that provide flood and storm protection as specified in discharge specifications B.1 and B.2.
5. A topographic map showing the drainage pattern for all land regulated by this Order.

See previous reports and attached Alar Processing plot plan showing upgraded washout system.

Steve Zacks
West Region
681 Aspen Circle
Oxnard, CA 93030

Subject: Channel Road Plant, Lakeside, California

Dear Steve:

I performed a site visit today and certify that flood and storm protection for the plant (see attached exhibit for plant facilities) is adequate. Furthermore, wastewater discharge requirements pursuant to Order No. 88-65, B1 and B2, are in similar compliance to previous years.

The on-site activities since last year primarily include material excavation west of the site entrance. This excavation is being performed in accordance with a Major Use Permit issued by the County of San Diego. The excavation provides greater storm protection for the plant because it acts as a large retention basin.

Sincerely,

Wayne W. Chang, M.S., R.C.E. #46548

Subject: January – December 2009 Annual Monitoring Report for Hanson Aggregates Chula Vista Facility, Waste Discharge Report No. 94-07.

Dear Industrial Compliance Unit:

The Chula Vista concrete and aggregate processing plants did not operate during 2009. Since there was no aggregate washing or concrete production, a sample was not taken and concrete washwater was not recycled. Therefore, an Annual Monitoring Report for Waste Discharge is not attached to this letter.

DECEMBER	129,700	303,000

D. PLANT FACILITIES

X There was no change of the facility during this monitoring period.

___ There were some changes to the facility during the monitoring period. See Appendix B for further details.

E. OPERATION AND MAINTENANCE PROCEDURES IMPLEMENTATION

I certify that the operation and maintenance procedures developed pursuant to Provisions of Order No. 94-63 was implemented by operating personnel throughout the previous year. There were no ready mix pond overflows in 2009 (except when debris and water from an offsite canyon filled a pond) and the pond system is in sound condition. The pond that filled was cleaned out prior to the storm that caused the filling.

SIGNED UNDER PENALTY OF PERJURY

California Regional Water Quality Control Board
San Diego Region

DISCHARGER: Miramar Facility
WDR NO. 9 000000081 ORDER NO.: 94-63
REPORT PERIOD: January – December, 2009 REPORT DUE: January 30, 2010

F. LAND RECLAMATION/RESTORATION AND REPORTING

A draft copy of the Sample and Fill Load Checking Program submitted to the Marine Corps for comment has been submitted with a previous annual report. Total loads received are shown in Appendix C. Approximately 15,000 tons of inert fill (soil) was received from miscellaneous private and agency haulers during 2009 from various private and public excavations. The estimated remaining capacity in the western fill area remains in excess of 200,000 cubic yards. Routine daily visual inspections of the clean fill area continue to be conducted to ensure that all of the placed material falls within the required guidelines.

January 18, 2010

Subject: January – December 2009 Annual Monitoring Report for Hanson Aggregates Slaughterhouse Canyon Facility, Waste Discharge Report No. 94-06.

Dear Industrial Compliance Unit:

The asphalt and rock & sand plants did not operate at Slaughterhouse during 2009, and so there was no aggregate or asphalt plant truck washing. Since there was no washing, lab sampling and washwater recycling could not occur during 2009. Therefore, an Annual Monitoring Report for Waste Discharge Report No. 94-06 is not attached to this letter.

"I certify under penalty of law that I personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including possibility of fine and imprisonment."

If you have any questions please call me at (805) 985-2191.

Sincerely,

Steve Zacks
Environmental Manager
Environmental, Safety, and Health Department

NOVEMBER	255,750	255,750
DECEMBER	240.400	240.400

Note: Production uses approximately 50% recycle water and 50% makeup water.

D. PLANT FACILITIES

___ There was no change of the facility during this monitoring period.

_X_ There have been some changes to the facility. The old reclaimer was used through January 2010 and the new reclaimer from February- December 2010. This is a closed loop except for cement paste, and includes an Alar system to remove water from the paste. The Alar system began operation in mid-February 2010.

E. OPERATION AND MAINTENANCE PROCEDURES IMPLEMENTATION

I certify that the operation and maintenance procedures developed pursuant to Provision C-5 and 16 of Order No. 95-104 was implemented by operating personnel throughout the previous year. There were no ready pond overflows in 2010 and the pond system is in sound condition.

I. COMPLIANCE HISTORY/BACKGROUND

This site has been enrolled in the Industrial Stormwater Permit since October of 1998. In 1999, the site received a Notice of Violation for failure to submit an annual report. The facility is located in a sensitive environment. Carroll Canyon Creek flows through the site from east to west. Also, the Los Penasquitos Lagoon is located downstream of this site and it is impaired for sedimentation and siltation (i.e., on the 303(d) list for impaired water bodies). In addition, recent investigations indicate that Carroll Canyon Creek is the primary source of sediment that is impacting the lagoon.

II. FINDINGS

Along with Wayne Chiu (Regional Board staff member) I arrived at the site on the morning after a very intense rainfall event. The Miramar weather station (which is the station closest to this site) measured a total of 2.19 inches of rainfall from the storm. Photo 1 shows the facility and Carroll Canyon which surrounds it. We met with Jud Harvey, the Plant Manager and Henry Pimentel, also of Hanson Aggregates. We reviewed the SWPPP. No problems were noted. However, the location and extent of Carroll Canyon Creek could be more clearly indicated on at least one of the maps. After the SWPPP review, we performed the site inspection. From the main office which is located on the east side of the site, we drove to the west.

FACILITY: Hanson Carroll Canyon (WDID) 9 37I014663 INSPECTION DATE 12/8/09

Sediment Discharge Area No.1: Dirt road running along the north side of Carroll Canyon Creek. A few hundred yards west of the office, we observed a location along the road with a significant accumulation of sediment and standing water (Photo 2). The road actually runs parallel and adjacent to Carroll Canyon Creek at this point. Photos 3 and 4 show the south side of the road where it appears that flowing water has dislodged fiber rolls. Standing water located east of the fiber rolls appears to have been retained by a rock berm. Therefore, while the rock berm (which extends all the way back to the office area) appears to have prevented sediment-laden water from reaching the creek, the failed fiber rolls may have allowed turbid water to reach the creek. Photo 5 shows the north bank of Carroll Canyon Creek just beyond the area of the fiber roll breach. There did not appear to be any significant sediment accumulation in this area however.

Sediment Discharge Area No. 2: Sediment detention basin located south of the quarry. We proceeded to the west end of the site and parked at the intersection of Camino Santa Fe and the driveway of the facility. Photo 6 shows the detention basin which is used to collect runoff from the quarry. Jud explained that there is a riser in the basin which conducts water directly to Carroll Canyon Creek which is located on the other side of the facility driveway. Rock material packed around the riser is used to filter and slow down the discharge. Photo 6 also shows a brow ditch which conveys water from off-site to the creek using the same outfall as the detention basin. We walked across the driveway to observe Carroll canyon Creek where it leaves the facility (Photo 7). I walked down the bank of the creek and photographed the discharge from the outfall (Photos 8 and 9). The discharge was turbid. Photo 10 shows the Carroll Canyon Creek upstream of the outfall area. Water in this area appeared to be clear and unaffected by sediment. We drove up a dirt road north of the creek and viewed the quarry. There was not a great deal of activity in this area because of the recent rainfall. On the north side of the quarry area, we observed a stream of turbid water which was flowing to the detention basin (Photos 12 and 13). After inspecting the detention basin and quarry area, we slowly drove east along the north bank of Carroll Canyon Creek and did not observe any issues. The creek is undergrounded (apparently in a culvert) for a distance below an area where various aggregate processing activities take place. Photo 11 shows a rock berm above the location where the creek undergrounds. Once again, this type of berm appears to be effective at keeping surface flows from entering the creek.

III. CONCLUSIONS, RECOMMENDATIONS AND ADDITIONAL ITEMS FOR FOLLOWUP

As noted earlier, the impairment of the Los Penaquitos Lagoon by sediment is a major concern. It is also important to note that Carroll Canyon Creek has been identified as the primary source of this impairment. Therefore, any identified sediment discharges in this area require corrective action. Pursuant to the requirements of the Industrial Stormwater Permit, any identified source of sediment discharge must be mitigated to the BAT/BCT standard (Best Available Technology or Best Conventional Technology, as appropriate). The two primary concerns at this facility are 1) The potential for direct discharges into the creek in the area where fiber rolls had been dislodged (along the dirt road that connects the quarry to the processing area) and 2) Turbid discharges from the detention basin. In both of these areas, it is necessary to upgrade Best Management Practices (BMPs) to (at a minimum) prevent visibly turbid discharges from occurring. In Sediment Discharge Area No. 1, all necessary erosion controls and sediment controls must be implemented to prevent sediment discharges from the dirt road to Carroll Canyon Creek from occurring. There is also a need to remove sediment that has encroached on the bank area of the creek (in the area between the dislodged fiber rolls shown in Photo 4). This sediment may enter the creek during a future rain event. In Sediment Discharge Area No. 2, it is necessary to upgrade the detention basin or the manner in which the detention basin is used to achieve a significantly greater reduction in sediment concentration. It is important to note that the Basin Plan standard for turbidity for discharges into surface waters of the Los Penaquitos Watershed is 20 Nephelometric Turbidity Units (NTUs). This standard corresponds to a transparency of one foot, meaning that visible light can penetrate water with a turbidity of 20 NTUs to a depth of one foot. In order to achieve an acceptable level of turbidity, either a major redesign of the detention basin will be needed (possibly including using alternate storage such as a Baker tank) or it may be necessary to augment the system with chemical flocculants. The SWPPP should be revised to include a discussion of all BMP upgrades.

II. FINDINGS

Along with Wayne Chiu (Regional Board staff member) I arrived at the site on the morning after a very intense rainfall event. The Miramar weather station (which is the station closest to this site) measured a total of 2.19 inches of rainfall from the storm. Photo 1 shows the facility and Carroll Canyon which surrounds it. We met with Jud Harvey, the Plant Manager and Henry Pimentel, also of Hanson Aggregates. We reviewed the SWPPP. No problems were noted. However, the location and extent of Carroll Canyon Creek could be more clearly indicated on at least one of the maps. After the SWPPP review, we performed the site inspection. From the main office which is located on the east side of the site, we drove to the west.

FACILITY: Hanson Carroll Canyon (WDID) 9 37I014663 INSPECTION DATE 12/8/09

Sediment Discharge Area No.1: Dirt road running along the north side of Carroll Canyon Creek. A few hundred yards west of the office, we observed a location along the road with a significant accumulation of sediment and standing water (Photo 2). The road actually runs parallel and adjacent to Carroll Canyon Creek at this point. Photos 3 and 4 show the south side of the road where it appears that flowing water has dislodged fiber rolls. Standing water located east of the fiber rolls appears to have been retained by a rock berm. Therefore, while the rock berm (which extends all the way back to the office area) appears to have prevented sediment-laden water from reaching the creek, the failed fiber rolls may have allowed turbid water to reach the creek. Photo 5 shows the north bank of Carroll Canyon Creek just beyond the area of the fiber roll breach. There did not appear to be any significant sediment accumulation in this area however.

Sediment Discharge Area No. 2: Sediment detention basin located south of the quarry. We proceeded to the west end of the site and parked at the intersection of Camino Santa Fe and the driveway of the facility. Photo 6 shows the detention basin which is used to collect runoff from the quarry. Jud explained that there is a riser in the basin which conducts water directly to Carroll Canyon Creek which is located on the other side of the facility driveway. Rock material packed around the riser is used to filter and slow down the discharge. Photo 6 also shows a brow ditch which conveys water from off-site to the creek using the same outfall as the detention basin. We walked across the driveway to observe Carroll canyon Creek where it leaves the facility (Photo 7). I walked down the bank of the creek and photographed the discharge from the outfall (Photos 8 and 9). The discharge was turbid. Photo 10 shows the Carroll Canyon Creek upstream of the outfall area. Water in this area appeared to be clear and unaffected by sediment. We drove up a dirt road north of the creek and viewed the quarry. There was not a great deal of activity in this area because of the recent rainfall. On the north side of the quarry area, we observed a stream of turbid water which was flowing to the detention basin (Photos 12 and 13). After inspecting the detention basin and quarry area, we slowly drove east along the north bank of Carroll Canyon Creek and did not observe any issues. The creek is undergrounded (apparently in a culvert) for a distance below an area where various aggregate processing activities take place. Photo 11 shows a rock berm above the location where the creek undergrounds. Once again, this type of berm appears to be effective at keeping surface flows from entering the creek.

III. CONCLUSIONS, RECOMMENDATIONS AND ADDITIONAL ITEMS FOR FOLLOWUP

As noted earlier, the impairment of the Los Penaquitos Lagoon by sediment is a major concern. It is also important to note that Carroll Canyon Creek has been identified as the primary source of this impairment. Therefore, any identified sediment discharges in this area require corrective action. Pursuant to the requirements of the Industrial Stormwater Permit, any identified source of sediment discharge must be mitigated to the BAT/BCT standard (Best Available Technology or Best Conventional Technology, as appropriate). The two primary concerns at this facility are 1) The potential for direct discharges into the creek in the area where fiber rolls had been dislodged (along the dirt road that connects the quarry to the processing area) and 2) Turbid discharges from the detention basin. In both of these areas, it is necessary to upgrade Best Management Practices (BMPs) to (at a minimum) prevent visibly turbid discharges from occurring. In Sediment Discharge Area No. 1, all necessary erosion controls and sediment controls must be implemented to prevent sediment discharges from the dirt road to Carroll Canyon Creek from occurring. There is also a need to remove sediment that has encroached on the bank area of the creek (in the area between the dislodged fiber rolls shown in Photo 4). This sediment may enter the creek during a future rain event. In Sediment Discharge Area No. 2, it is necessary to upgrade the detention basin or the manner in which the detention basin is used to achieve a significantly greater reduction in sediment concentration. It is important to note that the Basin Plan standard for turbidity for discharges into surface waters of the Los Penaquitos Watershed is 20 Nephelometric Turbidity Units (NTUs). This standard corresponds to a transparency of one foot, meaning that visible light can penetrate water with a turbidity of 20 NTUs to a depth of one foot. In order to achieve an acceptable level of turbidity, either a major redesign of the detention basin will be needed (possibly including using alternate storage such as a Baker tank) or it may be necessary to augment the system with chemical flocculants. The SWPPP should be revised to include a discussion of all BMP upgrades.

Re: Hanson Aggregates Pacific Southwest, Inc. Waste Discharge Facility ID: 9 000000687 Carroll Canyon

Dear Mr. Osibodu:

Hanson Aggregates Pacific Southwest, Inc. (Hanson) has ceased all Mining, Sand and Gravel Processing, and Ready Mix Concrete Production at the Carroll Canyon facility located at 9255 Camino Santa Fe in San Diego. The property discontinued mining activities in October 2016 and processed the remaining stockpiles before the end of 2016. Due to the cost involved to transport material to the property to produce ready mix concrete that operation was also terminated at the end of 2016. On January 3, 2017 Hanson surrendered all air Permits to Operate associated with the Sand and Gravel Processing and the Ready Mix Concrete Production with the Air Pollution Control District San Diego County. Concrete barriers have been placed at the entrance of the Mining and Sand and Gravel plant and the chain link fence is lock to the entrance and exit of the Ready Mix Concrete plant. Please see the photos included.

Should you have any questions or require additional information, please contact me at (858) 715-5667.

RE: NOTICE OF VIOLATION NO. R9-2010-0060 & REQUIRED TECHNICAL REPORT

Dear Mr. Harvey,

Enclosed is **Notice of Violation (NOV) No. R9-2010-0060** for the subject site. The violations specified were identified during site inspections on December 8, 2009 and March 1, 2010. Corrective measures and Best Management Practices (BMPs) should be implemented immediately to address these violations.

Pursuant to California Water Code (CWC) section 13267 and 13383, the California Regional Water Quality Control Board (San Diego Water Board) directs you to submit a **Required Technical Report (RTR)** to be received at the San Diego Water Board no later than **5:00 PM, April 12, 2010**. The RTR is required due to the violations noted in the enclosed NOV. The RTR will be reviewed to assess the need for further enforcement actions. The RTR shall include the following Sections:

1. A Site Status Report section including photo-documentation of proper implementation of BMPs addressing, but not necessarily limited to, those specific violations indicated in the attached NOV. The report should include a listing of violations noted in the NOV along with the BMP or BMPs implemented to correct the violation. Any interim corrective action

September 15 – October 15, 2017 Pre- Diligence / LOI Period Package Addendum 2October 10, 2017

measures that have been taken to address the occurrence of discharges should be documented in the Site Status Report Section.

2. A Storm Water Pollution Prevention Plan (SWPPP) Status Report section including:

   a. An 8.5" x 11" Site Map boldly indicating all flow lines, storm water inlets and outfalls (designate active or inactive), and direct discharges (if applicable) to waters of the state.

   b. SWPPP revisions including:
      1) Any necessary updates to the description of potential pollution sources (Section A.6.).

      2) Any necessary updates to the assessment of potential pollutant sources (Section A.7.).

      3) Any necessary updates to the storm water best management practices section (A.8.).

      4) Any necessary updates to the description of sediment control BMPs including, but not limited to sediment detention basins and linear controls.

      5) A description of any interim contingency measures that will be taken in the event that sediment discharges in violation of Basin Plan Standards occur. Contingency measures should be included that address both discharges from sediment basins and discharges that occur along the banks of Carroll Canyon Creek (e.g., from the haul road that runs along the creek).

3. A Long-Term Corrective Action Plan that addresses the need to:

   a. Prevent future discharges of turbid water to Carroll Canyon Creek from the sediment detention basin. It is expected that this plan will address the need to significantly reconfigure or augment the existing sediment detention basin.

   b. Prevent discharges of sediment to Carroll Canyon Creek along the facility's haul road.

   The plan should describe permanent BMPs that will be sufficient to prevent future discharges that exceed Basin Plan Standards. Once the plan is implemented, the SWPPP should be modified to incorporate the new BMPs. The SWPPP should, however, continue to include protocols for contingency measures to be undertaken in the event of the occurrence of unexpected events that result in turbid discharges.

The submitted Required Technical Report shall include the following signed certification:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those

September 15 – October 15, 2017 Pre- Diligence / LOI Period Package Addendum 2October 10, 2017

persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Failure to submit the above information by the date requested may result in the imposition of administrative civil liability pursuant to CWC sections 13268 and 13385.

Questions pertaining to this Required Technical Report and the enclosed Notice of Violation should be directed to Peter Peuron at (858) 637-7137. Written correspondence should be directed to the following address:

IN THE MATTER OF:	NOTICE OF VIOLATION NO. R9-2010-0060
Mr. Jud Harvey Hanson Aggregates P.O. Box 639069 San Diego, CA 92163-9069	WDID NO. *9 37I014663*

YOU ARE HEREBY NOTIFIED OF THE FOLLOWING VIOLATIONS:

Best Management Practices associated with the operation of a sediment detention basin were ineffective at preventing discharges from exceeding Water Quality Objectives for turbidity established in the San Diego Region's Water Quality Control Plan (Basin Plan).

BASIS FOR ALLEGED VIOLATIONS:

On December 8, 2009, a facility inspection was performed by Peter Peuron, Environmental Scientist and Wayne Chiu, Water Resource Control Engineer, both of the San Diego Regional Water Quality Control Board (San Diego Water Board). The inspection was conducted after a relatively heavy rainfall event (2.09 inches of rain during a two-day period). During this inspection, it was determined that a sediment detention basin that was being used to capture runoff from a quarry was discharging highly turbid water directly into Carroll Canyon Creek. Best Management Practices (BMPs) that were being employed to control the discharges were therefore, inadequate. A Facility Inspection Report (Attachment 1) documenting the violations was provided to representatives of Hanson Aggregates on December 24, 2009 via mail and e-mail (one copy mailed to Jud Harvey, Plant Manager and one copy e-mailed to Steve Zachs, a Hanson environmental affairs representative). The report indicates that the turbidity exceeds the Basin Plan standard of 20 Nephelometric Turbidity Units (NTUs). The report directs Hanson Aggregates to upgrade BMPs to achieve Basin Plan Standards. The report also notes that Carroll Canyon Creek (one of three creeks that flow into the Los Penasquitos Lagoon) has been found to be the primary contributor of sediment loads to Los Penasquitos Lagoon, a lagoon that is 303(d)-listed for sediment/siltation.

On March 1, 2010, a second inspection was conducted by Peter Peuron. Attachment 2 documents the findings of this inspection. Once again, highly turbid water was discharging into Carroll Canyon Creek from the outfall that leads to the sediment basin. The Facility Inspection Report also documents a turbidity plume in Los Penasquitos Creek. Since the depth of the creek was less than 12 inches and the turbidity plume was opaque enough to obscure the bottom of the creek, it can be inferred that both the

discharge from the outfall and the receiving water immediately outside the outfall were at turbidity levels that exceed the Basin Plan Water Quality Objective of 20 NTUs. Therefore, the discharge is in violation of the Basin Plan. In addition, BMP implementation fails to meet the standard for Best Conventional Technology specified in the Statewide General Industrial Stormwater Permit (Water Quality Order No. 97-03-DWQ). Another sediment discharge of turbid water into Carroll Canyon Creek was observed in front of the facility's administrative office. Again, BMPs were inadequate.

Summary of Violations:

I. FAILURE TO PREVENT PROHIBITED DISCHARGES

- ***Pursuant to Water Quality Order No. 97-03-DWQ Order No. C.2:***
  Storm water discharges and authorized non-storm water discharges shall not cause or contribute to an exceedance of any applicable water quality standards contained in a Statewide Water Quality Control Plan or the applicable Regional Water Board's Basin Plan.

  Observations: On December 8, 2009 and March 1, 2010, turbid water that exceeded the Basin Plan Water Quality Objective of 20 Nephelometric Turbidity Units (NTUs) was observed to be discharging from an outfall leading to a sediment detention basin that receives runoff from the Hanson Aggregates quarry in Carroll Canyon. The turbidity of the water (in both cases) significantly attenuated light and did not allow a transparency of 1 foot which corresponds to a turbidity of 20 NTUs[1]. These visual observations which are documented in two inspection reports (Attachments 1 and 2) demonstrate that both discharges are in violation of the Basin Plan Standard.

  On March 1, 2010, turbid water that exceeded the Basin Plan Water Quality Objective of 20 Nephelometric Turbidity Units (NTUs) was observed to be discharging from a road adjacent to the facility's administrative office directly into Carroll Canyon Creek. Visual observations which are documented in an inspection report (Attachment 2) demonstrate that this discharge is in violation of the Basin Plan Standard.

II. FAILURE TO IMPLEMENT / MAINTAIN BEST MANAGEMENT PRACTICES

- **Pursuant to Water Quality Order NO. 97-03-DWQ, Order No. B.3.:**
  At a minimum, the discharger/operator must reduce or prevent storm water pollution associated with industrial activity by implementing Best Management Practices (BMPs) that achieve the standard of Best Available Technology (BAT)

[1] 1 "A Protocol to Estimate the Response of Aquatic Systems to Changes in Phosphorus and Nitrogen Inputs", USDA, October, 1999.

for toxic and non-conventional pollutants and Best Conventional Technology (BCT) for conventional pollutants.

Observation: As discussed earlier, on December 8, 2009 and March 1, 2010, the sediment detention basin at the Hanson Aggregates quarry was observed to be discharging sediment in violation of the Basin Plan Water Quality Objective of 20 NTUs. In 2005 and 2006, a panel of storm water experts (known as the "Blue Ribbon Panel") determined that it was feasible to achieve turbidity levels below 10 NTUs on average using Active Treatment Systems (i.e., applying chemical flocculant to turbid water to remove suspended sediment). Therefore, at least one technology exists (i.e, a Best Conventional Technology or BCT which is appropriate for suspended sediment) that is technologically and economically feasible for attaining Water Quality Objectives, yet Water Quality Objectives were not achieved even after a period of 83 days (from Decembr 8, 2009 to March 1, 2010) passed. The failure to implement BCT in violation of the Industrial Stormwater Permit occurred for a period of at least 83 days.

The above-referenced discharge of sediment from a road to Carroll Canyon Creek resulted from inadequate BMP implementation. It is technologically and economically feasible to implement Active Treatment to attain turbidity levels that comply with Basin Plan standards. Therefore, BMP implementation did not meet the Best Conventional Technology standard.

If you have any questions, please telephone Pete Peuron at (858) 637-7137, or email at Ppeuron@waterboards.ca.gov

Respectfully,

for David Barker

I. COMPLIANCE HISTORY/BACKGROUND

This site has been enrolled in the Industrial Stormwater Permit since October of 1998. In 1999, the site received a Notice of Violation for failure to submit an annual report. The facility is located in a sensitive environment. Carroll Canyon Creek flows through the site from east to west. Also, the Los Penasquitos Lagoon is located downstream of this site and it is impaired for sedimentation and siltation (i.e., on the 303(d) list for impaired water bodies). In addition, recent investigations indicate that Carroll Canyon Creek is the primary source of sediment that is impacting the lagoon. On December 8, 2009 I inspected this site and noted that the sediment basin was discharging turbid water to Carroll Canyon Creek. There was also a potential for discharge along the main road at the facility where it runs alongside the creek. Muddy water had encroached into a grassy area next to the creek. The facility was required to upgrade BMPs in both areas to prevent any future exceedances of discharge standards. The report notes that the standard for Carroll Canyon Creek is 20 Nephelometric Turbidity Units (NTUs). On February 25th, I called Jud Harvey, the Plant Manager, and asked what progress had been made in upgrading the sediment basin. Jud told me that Hanson still had Wayne Chang, an engineer, working on the design of a new basin but that they hadn't actually done anything to upgrade it. He stated that they could not do work on the basin because they would be in trouble if a storm event occurred while the basin was still under construction. I told Jud that in any case they must prevent sediment discharges from occurring. So if they don't upgrade the basin immediately, they must have other contingencies in place to prevent turbid discharges. It was apparent from this discussion that they had not

FACILITY: Hanson Carroll Canyon (WDID) 9 37I014663 INSPECTION DATE 3/2/10

taken such steps. Today's inspection followed a weekend during which about 1.32 inches of rain fell (according to the nearest weather station per NOAA's database).

II. FINDINGS

I arrived at the site and observed the sediment detention basin which is located near the front gate of the facility adjacent to Camino Santa Fe. As shown in Photo 1, there was a significant amount of turbid water in the basin. I proceeded to the outfall where water from the basin is discharged to Carroll Canyon Creek. Turbid water was flowing out of the outfall as shown in Photo 2. This outfall is located at the bottom of the north bank of Carroll Canyon Creek and it discharges directly into the creek. Photo 3 shows turbid water that had ponded just outside the outfall. Photo 4 and 5 show a turbidity plume that formed at the point where the turbid water being discharged from the outfall mixes with water in the creek. I proceeded back to the front gate where I had parked and encountered Henry Pimentel, Production Supervisor for Hanson who asked me what I was doing. I explained that I was there to see if they were continuing to discharge sediment-laden water from their sediment basin and since I had confirmed that a discharge was occurring, I would need to meet with Jud Harvey, the plant manager, and complete my inspection. I also explained the problem with the sediment basin to Henry and made the point that the facility is required to prevent these discharges from occurring. I then drove to the facility's administrative offices and met with Jud Harvey and David Chong, the Environmental Health and Safety manager for the facility. I told Jud that they should be preventing any turbid discharges from occurring and Jud repeated the point he had made last week to the effect that attempting to reconfigure the basin during the rainy season would be a problem. Over the course of the inspection, we discussed what options were available for terminating the sediment discharge. Jud said they planned to enlarge the basin, but needed to wait until there was no threat of rain. I explained to Jud that it was technologically feasible to prevent the discharge from occurring because they can either use active treatment (flocculant) or store the water in a Baker tank (or tanks). Therefore, there is no reason for the facility to be discharging sediment. Even if they implement a long-term fix, such as an upgraded basin, they must implement interim measures to prevent discharges in violation of the Basin Plan. Jud, and David and I went to the sediment basin and the outfall and I showed them the same conditions shown in Photos 2 through 4. On the way back to the administrative office, we stopped at a location where, during the inspection in December, sediment had been observed to be encroaching into the creek area. Turbid water was again ponding in a depression in the road and seeping into the the area of the north bank of Carroll Canyon Creek. Photo 6 shows the ponded water and Photo 7 shows sediment that has accumulated on the other side of a rock berm (a berm that is intended to trap sediment). It did not appear that the sediment had reached the creek at this location, but it is necessary to remove sediment in this area to prevent it from reaching the creek in the future. Further up the road (This is the main road at the facility which runs from the front gate to the main office.) there was another flow of turbid water occurring (Photos 9 and 10). Piles of rock material have been placed along the road to trap sediment, but the turbid water was reaching the creek at the location shown in Photo 11.

III. CONCLUSIONS, RECOMMENDATIONS AND ADDITIONAL ITEMS FOR FOLLOWUP

On the morning of March 2, 2009 (the day after the inspection) I telephoned both Jud and David and told them that they should do whatever is necessary to terminate the discharge from the sediment basin as soon as possible. I referred to the possibility of monetary penalties since there is no question that discharge violations have occurred and that they could have been avoided. I again pointed out that it is technologically possible because either active treatment or using mobile storage tanks would be effective. David said that they will do there best to get something in place within 24 hours. I spoke with Jud after speaking with David and we agreed to again discuss the situation on March 3rd. On March 3rd I spoke with David Chong. He said that they pumped out much of the basin water and sent it back to the quarry. They then partitioned the basin by building two rock dams (using 3/4" rock) thereby creating three compartments. David said these measures resulted in a clear discharge at the outfall. He indicated that the intake of the riser in the basin is near the top of the basin and that water in this zone was now clear. They ordered a 21,000 gallon Baker tank which they will use in conjunction with the detention basin. The tank will be available for use on March 4th. David said that they are still working on a long-term plan and that plan will include building an additional sediment basin as well as incorporating contingency measures into their SWPPP so that future discharges are prevented. I told David that we will be sending an NOV along with a directive to implement both interim and permanent sediment basin upgrades and a requirement for a report that documents the upgrades.

I. COMPLIANCE HISTORY/BACKGROUND

This site has been enrolled in the Industrial Stormwater Permit since October of 1998. In 1999, the site received a Notice of Violation for failure to submit an annual report. The facility is located in a sensitive environment. Carroll Canyon Creek flows through the site from east to west. Also, the Los Penasquitos Lagoon is located downstream of this site and it is impaired for sedimentation and siltation (i.e., on the 303(d) list for impaired water bodies). In addition, recent investigations indicate that Carroll Canyon Creek is the primary source of sediment that is impacting the lagoon.

II. FINDINGS

Along with Wayne Chiu (Regional Board staff member) I arrived at the site on the morning after a very intense rainfall event. The Miramar weather station (which is the station closest to this site) measured a total of 2.19 inches of rainfall from the storm. Photo 1 shows the facility and Carroll Canyon which surrounds it. We met with Jud Harvey, the Plant Manager and Henry Pimentel, also of Hanson Aggregates. We reviewed the SWPPP. No problems were noted. However, the location and extent of Carroll Canyon Creek could be more clearly indicated on at least one of the maps. After the SWPPP review, we performed the site inspection. From the main office which is located on the east side of the site, we drove to the west.

FACILITY: Hanson Carroll Canyon (WDID) 9 37I014663 INSPECTION DATE 12/8/09

Sediment Discharge Area No.1: Dirt road running along the north side of Carroll Canyon Creek. A few hundred yards west of the office, we observed a location along the road with a significant accumulation of sediment and standing water (Photo 2). The road actually runs parallel and adjacent to Carroll Canyon Creek at this point. Photos 3 and 4 show the south side of the road where it appears that flowing water has dislodged fiber rolls. Standing water located east of the fiber rolls appears to have been retained by a rock berm. Therefore, while the rock berm (which extends all the way back to the office area) appears to have prevented sediment-laden water from reaching the creek, the failed fiber rolls may have allowed turbid water to reach the creek. Photo 5 shows the north bank of Carroll Canyon Creek just beyond the area of the fiber roll breach. There did not appear to be any significant sediment accumulation in this area however.

Sediment Discharge Area No. 2: Sediment detention basin located south of the quarry. We proceeded to the west end of the site and parked at the intersection of Camino Santa Fe and the driveway of the facility. Photo 6 shows the detention basin which is used to collect runoff from the quarry. Jud explained that there is a riser in the basin which conducts water directly to Carroll Canyon Creek which is located on the other side of the facility driveway. Rock material packed around the riser is used to filter and slow down the discharge. Photo 6 also shows a brow ditch which conveys water from off-site to the creek using the same outfall as the detention basin. We walked across the driveway to observe Carroll canyon Creek where it leaves the facility (Photo 7). I walked down the bank of the creek and photographed the discharge from the outfall (Photos 8 and 9). The discharge was turbid. Photo 10 shows the Carroll Canyon Creek upstream of the outfall area. Water in this area appeared to be clear and unaffected by sediment. We drove up a dirt road north of the creek and viewed the quarry. There was not a great deal of activity in this area because of the recent rainfall. On the north side of the quarry area, we observed a stream of turbid water which was flowing to the detention basin (Photos 12 and 13). After inspecting the detention basin and quarry area, we slowly drove east along the north bank of Carroll Canyon Creek and did not observe any issues. The creek is undergrounded (apparently in a culvert) for a distance below an area where various aggregate processing activities take place. Photo 11 shows a rock berm above the location where the creek undergrounds. Once again, this type of berm appears to be effective at keeping surface flows from entering the creek.

III. CONCLUSIONS, RECOMMENDATIONS AND ADDITIONAL ITEMS FOR FOLLOWUP

As noted earlier, the impairment of the Los Penaquitos Lagoon by sediment is a major concern. It is also important to note that Carroll Canyon Creek has been identified as the primary source of this impairment. Therefore, any identified sediment discharges in this area require corrective action. Pursuant to the requirements of the Industrial Stormwater Permit, any identified source of sediment discharge must be mitigated to the BAT/BCT standard (Best Available Technology or Best Conventional Technology, as appropriate). The two primary concerns at this facility are 1) The potential for direct discharges into the creek in the area where fiber rolls had been dislodged (along the dirt road that connects the quarry to the processing area) and 2) Turbid discharges from the detention basin. In both of these areas, it is necessary to upgrade Best Management Practices (BMPs) to (at a minimum) prevent visibly turbid discharges from occurring. In Sediment Discharge Area No. 1, all necessary erosion controls and sediment controls must be implemented to prevent sediment discharges from the dirt road to Carroll Canyon Creek from occurring. There is also a need to remove sediment that has encroached on the bank area of the creek (in the area between the dislodged fiber rolls shown in Photo 4). This sediment may enter the creek during a future rain event. In Sediment Discharge Area No. 2, it is necessary to upgrade the detention basin or the manner in which the detention basin is used to achieve a significantly greater reduction in sediment concentration. It is important to note that the Basin Plan standard for turbidity for discharges into surface waters of the Los Penaquitos Watershed is 20 Nephelometric Turbidity Units (NTUs). This standard corresponds to a transparency of one foot, meaning that visible light can penetrate water with a turbidity of 20 NTUs to a depth of one foot. In order to achieve an acceptable level of turbidity, either a major redesign of the detention basin will be needed (possibly including using alternate storage such as a Baker tank) or it may be necessary to augment the system with chemical flocculants. The SWPPP should be revised to include a discussion of all BMP upgrades.

Subject: January – December 2007 Annual Monitoring Report for Hanson Aggregates Carroll Canyon Facility, Waste Discharge Report No. 95-104.

Dear Industrial Compliance Unit:

The January – December 2007 Annual Monitoring Report for Waste Discharge Report No. 95-104 is attached to this letter.

"I certify under penalty of law that I personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including possibility of fine and imprisonment."

If you have any questions please call me at (805) 985-2191.

Sincerely,

Steve Zacks
Environmental Manager
Environmental, Safety, and Health Department

Project Name: WDR 94-104	

Notes and Definitions

QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.
HT-15	This sample was received outside of the EPA's recommended 15 minute holding time for this analysis. However, the sample was analyzed immediately upon receipt.
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Memo

To: **File**

From: **Jud Harvey**

Copy: Steve Zacks

Date: **3/29/2011**

Pages: **1**

This turbidity report is sent in response to NOV No. R9-2010-0060 (Carroll Canyon- WDID # 9 37I014663)

Carroll Canyon Turbidity Report- 3/21/2011 Event

There was rain during the prior weekend. By the time turbidity was measured on Monday 3/21/2011, the discharge was a low flow at the Access Road #1 Discharge Point, and there was no discharge at the Camino Santa Fe or Access Road #2 Discharge Points.

An asphalt berm was installed in response to the December 2010 storms at the Access Road #2 Discharge Point to divert water around the damaged sedimentation basin. We are still in the process of obtaining a permit to rebuild this basin and associated culverts.

Additional gravel bags were installed at the Access Road #1 Discharge Point on 3/21/2011 to further filter the discharge. The discharge at this location was rapidly decreasing at the time the bags were installed..

Carroll Canyon Turbidity Log
10/1/2010- 5/30/2011

Instructions

1. If a rain event is 0.5 inches or more based on the nearest available rain gauge and a discharge is produced, then fill in the below table.
2. If a rain event is 0.5 inches or more based on the nearest available rain gauge and a discharge is not produced, then take photos at the discharge point to document there is no discharge.
3. Submit this Turbidity Log to the Regional Board within 7 days of the date of testing. Each submittal shall show the earlier test results.
4. If a rain event that is 0.5 inches or more does not result in a discharge at a discharge point, then submit photos in lieu of turbidity test results.
5. In the event that the turbidity of a sample exceeds 20 NTU, additional actions must be taken immediately to control the discharge.

Turbidity of Discharge Table

Date of Storm Event (1)	Turbidity in NTU at Camino Santa Fe Discharge Point (2)	Turbidity in NTU at Access Road #1 Discharge Point (low point in road) (2)	Turbidity in NTU at Access Road #2 Discharge Point (near office trailer) (2)	Initials of Person Filling Out Log
10/19-10/20/2010	No Discharge	No Discharge	58.6	
12/21/2010	62	No Discharge	66	
03/21/2011	No Discharge	72	No Discharge	

Notes

(1) Show date of storm event that is 0.5 inches or more based on the nearest available rain gauge.

(2) *Record turbidity when storm event exceeds 0.5 inches and stormwater discharge* is produced at discharge point.

Mr. Peter G. Zagar
Hanson Aggregates-West Region
PO Box 639069
San Diego, CA 92163-9069

Dear Mr. Zagar:

SUBJECT: MIRAMAR PLANT, CARROLL CANYON PLANT, CONCRETE BATCHING PLANT, CHANNEL ROAD SAND PLANT, OTAY PLANT, SLAUGHTERHOUSE CANYON PLANT

The California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) has reviewed the January – December 2009 annual monitoring reports submitted by Hanson Aggregates in accordance with Monitoring and Reporting Program No. 94-63, No. 95-104, No. 94-34, No. 88-65, No. 94-07, No. 94-06 for the subject facilities.

The San Diego Water Board has the following comments regarding the referenced above:

1. No violations of Order No. 94-63, No. 95-104, No. 94-34, No. 88-65, No. 94-07, and No. 94-06 were identified in the submitted reports.

2. The next monitoring reports are the January - December 2010 annual monitoring report, which are due by January 30, 2011.

In the subject line of any response, please include the requested "in reply refer to" information located in the heading of this letter. Please contact Amanda Dai at 858-627-3977 or at adai@waterboards.ca.gov if you have any questions on this matter.

Sincerely,

Robert Morris

Robert W. Morris, P.E.
Senior Water Resource Control Engineer
Ground Water Branch

CALIFORNIA

Mr. Aaron Lund
Lehigh Hanson, West Region
P.O. Box 639069
San Diego, CA 92163-9069

Subject: Carroll Canyon Sand and Gravel Plant Inspection Summary and Site Evaluation for Enrollment in Conditional Waiver of Waste Discharge Requirements for Discharges of Slurries to Land, San Diego, San Diego County

Mr. Lund:

This letter provides you with a summary of inspection observations and an evaluation for potential enrollment in Waiver No. 9 – *Discharges of Slurries to Land* (Slurry Waiver). The Slurry Waiver is one of the conditional waivers adopted by the San Diego Water Board, as part of Order No. R9-2014-0041 – *Conditional Waiver of Waste Discharge Requirements for Low Threat Discharges in the San Diego Region* (Order No. R9-2014-0041) on June 26, 2014.[1] San Diego Water Board staff conducted an inspection of the Carroll Canyon Sand and Gravel Plant (Facility), operated by Lehigh Hanson, West Region (Hanson), on April 3, 2015. This letter only addresses observations made by San Diego Water Board staff, regarding compliance with Order No. 95-104 – *Waste Discharge Requirements for H.G. Fenton Material Company, Carroll Canyon Plant, San Diego County* (Order No. 95-104),[2] and the potential to enroll the Facility in the Slurry Waiver.

Inspection Findings

1. Observed Violations. During the inspection of the Facility, San Diego Water Board did not observe any violations against the requirements specified in Order No. 95-104.

2. Enrollment Potential. During the inspection, San Diego Water Board staff conferred with Hanson's Environmental Manager and concurred the Facility may satisfy all of the conditions for enrollment in the Slurry Waiver.

[1] Order No. R9-2014-0041 is available on-line at:
http://www.waterboards.ca.gov/sandiego/board_decisions/adopted_orders/2014/R9-2014-0041.pdf

[2] Order No. 95-104 is available on line at:
http://www.waterboards.ca.gov/sandiego/board_decisions/adopted_orders/1990/95-104.pdf

Determination and Next Steps

Based on the inspection findings, the San Diego Water Board considers that Facility to be in good standing, and remains a candidate for enrollment in the Slurry Waiver. As such Hanson must:

1. provide the San Diego Water Board with documentation demonstrating that the discharge of waste at the Facility is at least 100 feet from any surface water body or municipal water well; and

2. maintain compliance with the requirements specified in Order No. 95-104, and the associated monitoring and reporting program, until otherwise directed in writing, by the San Diego Water Board.

The next monitoring report required to be submitted is the January-December 2015 annual monitoring report, which is due by January 30, 2016. Please submit all future responses to the San Diego Water Board by email.[3] Email submittals must include a signed cover/transmittal letter (with the facility name, facility contact information, and reference code: 213364:RMitchell, and be sent via email to sandiego@waterboards.ca.gov. This request does not replace routine email correspondence that may be sent to individual San Diego Water Board staff members. Please contact Mr. Roger Mitchell at 619-521-5898, or at Roger.Mitchell@waterboards.ca.gov if you have any questions.

Respectfully,

Roger N. Mitchell, P.G.
Engineering Geologist
Cleanup and Land Discharge Branch

INSPECTION TYPE (Check One)

- ☐ "A" type compliance - Comprehensive inspection in which samples are usually taken (EPA Type S)
- ☐ AGT SPCC - An inspection of an above ground tank site and review of the site's spill prevention control and counter measure plant.
- ■ "B" type compliance - A routine inspection (EPA Type C) that typically does not include collecting samples
- ☐ Complaint - Inspection made in response to a complaint
- ☐ Field Oversight - Inspection or site visit to confirm clean-up work is being performed
- ☐ Follow-up (enforcement) - Included inspections specifically made to verify compliance with enforcement mandates
- ☐ Follow-up (non-compliance) - Includes inspections specifically made to verify corrections of non-compliance where no enforcement has been initiated
- ☐ Pre-requirement - Inspection made to gather information relative to preparing, modifying, or rescinding requirements
- ☐ Pretreatment Compliance Audit - An audit that includes review of that program authority, records, and industrial facility field inspections
- ☐ Pretreatment Compliance Inspection - An inspection of a pretreatment program that includes records review and industrial facility field inspections
- ☐ MS4 Audit - An evaluation of an MS4 program or program component that could possibly lead to enforcement. It must include a site visit.
- ☐ NOT - Inspection performed in response to the submittal of a Notice of Termination coverage under a general order
- ☐ Miscellaneous - Any inspection type not mentioned above

Section 1
Introduction

General Permit No. CAS000001 authorizes the discharge of storm water from industrial facilities into surface waters. The General Permit requires that a Storm Water Pollution Prevention Plan (SWPPP) be developed and implemented to identify potential pollutants in the storm water and Best Management Practices to reduce or eliminate these pollutants. This document is the Storm Water Pollution Prevention Plan (SWPPP) for the Carroll Canyon facility.

The Hanson Carroll Canyon facility includes rock and sand mining, rock and sand (Primary, Secondary, and Tertiary) plants, concrete plant, sand plant, shops (Truck and Heavy Equipment), and a soil screening/ amended soil sales operation (A-1 Soils).

Section 2
Facility Information and Certification

1. Facility WDID No: 9 37I014663
   SIC Code: 1442 (Construction Sand and Gravel); 3273 (Ready Mix Concrete); 7699 (Vehicle Maintenance)

2. Facility Location and Operator
   Name: Hanson Aggregates Pacific Southwest Region
   Address: 9225 Camino Santa Fe, San Diego
   Phone Number: (858) 577-2722
   Site Contact Person: Jud Harvey, Plant Manager

3. SWPPP Team
   SWPPP Development: David Chong- ESH Manager; Steve Zacks- Environmental Manager
   Onsite Implementation: Jud Harvey- Rock and Sand Plant Manager; Craig Tieck- Concrete Area Manager; Randy Burns- San Diego Operations Manager Recycled Materials/A-1 Soils; David Chong- ESH Manager

4. Certification
   I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

   Signature: *Steve Zacks* Date: 4/9/2010
   Title: Environmental Manager

Section 3
Storm Water Collection and Site Map

1. Storm Water Flow

Most storm water contacting the various operations would ultimately flow to Carroll Canyon Creek or onsite ponds. Storm water flow at the different plant areas is described in Table 1 and shown on the Site Map (Attachment 1).

Table 1: Storm Water Flow

Operation	Description of Storm Water Flow
Mining, Primary Plant, A-1 Soils-Screen & Stockpile Area	Most storm water flows to the Camino Santa Fe Desilting Basin or the mining pit. Storm water in the mining pit is sometimes pumped to the Camino Santa Fe Desilting Basin. Water that enters the Basin riser discharges to Carroll Canyon Creek.
Rock and Sand Plant- Secondary & Tertiary Plants	Storm water ultimately flows to Carroll Canyon Creek with sufficient rain.
Sand Wash Plant	Storm water ultimately flows to Carroll Canyon Creek with sufficient rain.
Concrete Plant	Storm water contacting the plant area drains to a sump (Concrete Plant Sump) and then is pumped to an Alar system to remove solids. Treated water can be pumped to 2 water tanks. If there is sufficient rain, storm water may reach an unlined pond.
Shops	Storm water ultimately flows to Carroll Canyon Creek with sufficient rain.
A-1 Soils- Office & Amended Soils Area	Storm water ultimately flows via an unnamed tributary to Carroll Canyon Creek with sufficient rain.

2. Storm Water Discharge Points

Storm water discharge points that will be inspected and sampled include:

- Camino Santa Fe Desilting Basin Discharge Point. The Camino Santa Fe Desilting Basin riser discharges to a lined swale, which then flows to a pipe that discharges to Carroll Canyon Creek. The sampling location will be where the riser discharges to the lined swale.
- Access Road #1 Discharge Point (low point in road)
- Access Road #2 Discharge Point (to be installed- near office trailer)

The location of these discharge points are shown on the Site Map.

There is a discharge from the A-1 Amended Soils Area to a tributary to Carroll Canyon Creek. This discharge co-mingles with runoff from bluffs located south of the A-1 Amended Soils area. Sampling and inspections will not be conducted at this location due to this co-mingling.

Section 4
List of Significant Materials and Potential Pollutant Sources

1. List of Significant Materials

Materials present at the facility that may contribute pollutants to storm water run-off are listed in Table 2 below. The primary pollutants that can be generated at the site are sediment and elevated pH.

Table 2: Significant Materials and Potential Pollutants

Materials	Location	Quantity (Approximate)	Pollutant
Rock and Sand Plants			
Sand and Gravel	Stockpiles- Unprocessed (surge pile)	Aggregate- 15,000 tons	Sediment
Sand and Gravel	Stockpiles- Processed	Gravel- 40,000 tons Sand- 8,000 tons	Sediment
Mining Area			
Sand and Gravel	Pit	Aggregate- variable amount exposed by grading	Sediment
Sand Plant			
Sand	Stockpiles (processed and unprocessed)	8,000 tons	Sediment
Concrete Plant			
Sand and Gravel	Stockpiles, Aggregate silos and overhead bins at concrete plant.	Sand- 10,000 tons Rock- 700 tons	Sediment
Cement, Fly Ash	Silos at concrete plant	Cement-200 tons Fly Ash-50 tons	Elevated pH materials
Admixtures and colors	Tanks at concrete plant	Admixtures- 10,000 gal Colors- 2,500 gal	Misc.
Acid	Tank at concrete plant	250 gal	Reduced pH
Shops and Fuel Areas			
Diesel	Underground Tanks	50,000 gallons	TPH

Oil and Grease	Shop Buildings	Oil- 1400 gal Grease- 110 gal Used Oil- 500 gal Antifreeze- 55 gal Used Antifreeze- 55gal Kerosene- 70 gal	TPH, Metals, Ethylene Glycol
A-1 Soils			
Imported Amended Soils	Amended Soils Area	3,500 cy	Sediment, fertilizers, organic material
Screened Topsoil	Amended Soils Area	1,500 cy	Sediment
Screened Topsoil	Screen and Stockpile Area	8,000 cy	Sediment

2. Industrial Processes

The Industrial processes and associated significant materials for the site are listed in Table 3 below:

Table 3: Industrial Processes

Industrial Process	Description of Process	Associated Significant Materials
Mining Area and Primary Plant		
Excavation of aggregate	A dozer in the mining pit pushes aggregate into a feed hopper that leads to a conveyor system.	Sediment
Transport of aggregate to primary rock and sand plant	The conveyor system transports the aggregate to the primary rock and sand plant.	Sediment
Rock and Sand Plant- Secondary and Tertiary Plants		
Crushing and screening	Aggregate processed by the primary plant is transported to the Secondary and then Tertiary plants via conveyors. These plants screen and crush aggregate to produce rock products of different sizes and manufactured sand.	Sediment
Washing of rock	Rock products are washed	Sediment

products	with water to remove fines. The washwater is discharged to an onsite settling pond.	
Storage of processed sand and gravel in stockpiles	Finished rock and sand products are stored in stockpiles until transported offsite.	Sediment
Concrete Plant		
Aggregate delivery and storage	Sand and gravel is delivered from stockpiles to the plant via conveyors, and then moved into silos or overhead bins.	Sand and Gravel
Silo loading and storage	Cement and fly ash are pneumatically loaded into silos.	Cement, Fly Ash
Concrete production	Concrete is produced by dropping sand, gravel, cement and/or fly ash, water, and admixtures into a mixer truck. Colors are sometimes added to the mix. Admixture and color tanks are stored in a concrete containment.	Sand and Gravel, Cement, Fly Ash, Admixtures, Colors
Interior truck washing; Handling of return concrete	Return concrete and interior truck washwater are discharged to reclaimer/ Alar system.	Sand and Gravel, Cement, Fly Ash, Admixtures
Exterior truck washing	Truck exteriors are typically rinsed with an acid-water mixture at the end of each working day. Rinse water flows to either the Concrete Plant Sump or towards a lined storm water pond.	Acid
Sand Plant		
Sand washing	Material is imported from offsite locations, blended with onsite materials, and washed to remove fines. The washwater is discharged to an onsite settling pond.	Sediment
Shops (Heavy Equipment, Truck) and Fueling Area		
Fueling	Equipment is fueled from underground tanks.	Diesel
Vehicle/ Equipment	Vehicle and equipment	Oil and grease,

Maintenance	maintenance and repair.	waste oil and anti-freeze.
Hazardous Materials and Waste Storage Area(s)	Materials and waste are stored indoors or under a rain shelter.	Oil and grease, waste oil and anti-freeze, battery acid
A-1 Soils		
Topsoil Screening	Topsoil is screened at the Screen and Stockpile Area to remove oversized materials. Processed topsoil is stockpiled in this area and at the Amended Soils Area.	Sediment
Import of Amended Soil	Minerals such sand and soil are blended with compost and other organics, and/or fertilizers at an offsite location and hauled to Carroll Canyon for storage and sale at the Amended Soils Area.	Minerals such as sand and soil, compost and other organics, fertilizers

3. Material Handling: See Table 3 above.

4. Dust and Particulate Generating Activities

Minor amounts of dust could be generated at the different operations from moving equipment or vehicles, and as follows:

- Mining Area- From excavation and conveying of aggregate.
- Primary, Secondary, and Tertiary Aggregate Plants: From conveying, crushing, screening, and storage of aggregate.
- Concrete plant- When the cement or fly ash is dropped into a mixer truck, when silos are being filled with cement or fly ash, and from the sand and gravel transfer.
- A-1 Soils- From screening of materials and from stockpiles during periods of heavy wind.

5. Significant Spills and Leaks

Based on interviews with plant staff and review of previous SWPPP's, it appears that significant quantities of materials have not spilled or leaked in storm water or non-storm water discharges since April 17, 1994.

6. Non-Storm Water Discharges

An audit was conducted on 4/8/2010 to determine whether there are any unauthorized storm water discharges. The audit was based on observations during dry weather and did not identify any non-storm water discharges.

7. Soil Erosion

There is the potential for soil erosion at unlined portions of the site at the mining and plant areas.

8. Assessment of Potential Pollutant Sources

The primary pollutants that could be generated include:

- Mining Area and Plants- Sediment
- Concrete Plant- Elevated pH from the cement or fly ash. Cement could be released to the ground and exposed to rain water by the following processes:
    1. When cement or fly ash is dropped into a mixer truck.
    2. When a cement or fly ash silo is being filled.
    3. Rinsing the exterior of a batch truck.
    4. Rinsing the interior of a batch truck.
    5. Where washout material is stored.

  A baghouse significantly limit the amount of dust generated by silo loading and cement (or fly ash) being dropped into a mixer truck, in accordance with an APCD permit.
- Sand Plant- Sediment
- Shops and Fueling Area- Spills of oil, waste oil, and antifreeze during maintenance activities. Diesel spillage could occur during fueling of equipment and filling of the diesel tank. Oils and antifreeze can leak from mobile equipment.
- A-1 Soils- Sediment, fertilizers

Section 5

Best Management Practices (BMP's)

An overview of onsite BMP's is as follows.

A. Structural BMP's

- Overhead Coverage:
  a. Hazardous materials and wastes are stored on lined areas in buildings or under roofed areas, unless their use requires the material or waste to be temporarily stored outside.
  b. The diesel tanks are underground and therefore not directly exposed to rainwater.
  c. Vehicle/equipment maintenance in the Truck Shop occurs in lined areas under a rain shelter

- Retention Ponds:
  a. Most runoff will enter a desilting basin before discharging to Carroll Canyon Creek. Runoff from the primary plant and A-1 Soils stockpile areas, and pumped water from the mining pit will discharge to the Camino Santa Fe Desilting Basin. Runoff from the Secondary and Tertiary aggregate plant areas would flow to the planned Office Desilting Basin.
  b. The existing Camino Santa Fe Desilting Basin will be expanded and deepened, assuming there are no obstacles such as buried utilities. The riser height will also be increased to increase basin capacity. The capacity of the Camino Santa Fe Desilting Basin when expanded, will exceed the capacity requirements defined in the City of San Diego Stormwater Manual. The estimated completion date for the expansion and riser modification is 7/31/2010.
  c. The estimated completion date for the installation of the planned Office Desilting Basin is 6/30/2010.
  d. A new desilting basin (Primary Plant Upper Desilting Basin) will be installed in the primary plant area and an existing desilting basin (Primary Plant Lower Desilting Basin) located down gradient of the primary plant will be upgraded. The estimated completion date is 6/30/2010.These basins will then discharge to the Camino Santa Fe Desilting Basin for further treatment (i.e. sediment settling).
  e. Most storm water in the mining and adjacent areas flows to the mining pit and will be stored in this pit for at least 24 hours. The 24-hour delay will allow sediment to settle out in the pit before being pumped to the Camino Santa Fe desilting basin. The delay will also allow runoff already in the Camino Santa Fe basin to be treated (i.e. sediment settling) and discharged prior to co-mingling with the pumped pit water.

f. Washwater generated by washing of sediment is discharged to a desilting pond.
g. The truck rinse off station is graded so that runoff drains into a desilting pond.
h. If heavy rain overcomes the capacity of the Concrete Plant Sump, then it will flow to an unlined pond.

- Control Devices:
  a. Two rock filters approximately 8' wide X 25' long have been installed in the Camino Santa Fe Desilting Basin.
  b. A rock "blanket" has been installed to filter storm water that flow from the main access road to the Camino Santa Fe Desilting Basin.
  c. A 22,000 gallon Baker tank was installed in early March 2010. Water is pumped from the Camino Santa Fe Desilting Basin to the Baker tank, and then discharged to the creek. The Baker tank will be removed after the 2009-2010 rainy season or when the new desiltation basin system is fully completed.
  d. In the event that sediment discharges from the Camino Santa Fe Desilting Basin exceed Basin Plan Standards for turbidity, then a Baker tank or an equivalent will be brought to the site.
  e. Gravel berms and fiber rolls are placed along the south side of the main access road, to filter storm water that could flow to Carroll Canyon Creek. Fiber rolls are replaced as needed.
  f. An unlined swale has been installed at the north side of the main access road, near the low point. Rock berms will be installed on both ends of the swale. The swale acts as desilting basin. Overflow water would drain towards the pit area or paved road.
  g. Gravel filter basins have been installed along the unpaved access road in the primary plant area, which will retain and filter some runoff that ultimately reaches the Camino Santa Fe desilting basin.
  h. Storm water is directed away from the secondary and tertiary plants by grading and seasonal berms. The berms also filter rainwater that would ultimately flow to Carroll Canyon Creek. This is a seasonal BMP that is maintained during the wet season.
  i. Fiber rolls and a rock berm will be installed to filter runoff at the A-1 Soils Amended Soils Area.
  j. Baghouses at the secondary and territory plants control dust generation at the crushers.
  k. The baghouse at the concrete plant controls the amount of cement and fly ash dust generated during loading of a mixer truck.
  l. The concrete plant silos are vented to the baghouse, which controls the amount of cement and fly ash dust generated during silo loading. Silo filling is monitored by strict inventory control.

m. Rumble grates are located near the exit to control trackout.
n. 1,500 filter bags filled with gravel are at the site and can be used as an emergency BMP.

- Secondary Containment:
  a. Admixture and color tanks at the concrete plant are stored on a concrete pad within a concrete containment area.
  b. Admixture totes at the concrete plant are stored on a concrete pad within a concrete containment area.
  c. Hazardous materials and wastes are stored in secondary containment.

- Material Storage:
  a. All rock and some sand at the concrete plant is stored in silos

B. Non-Structural BMP's
  1. Good Housekeeping:
     a. The main access road is paved to the aggregate plant office. The road is regularly swept.
     b. Spillage on the main access road is promptly cleaned up.
     c. Stockpiles are set back from Carroll Canyon Creek.
     d. Maintenance in the Truck and Heavy Equipment Shops occurs on lined areas.
     e. Outdoor maintenance areas are graded to prevent storm water run-on.
     f. The hazardous materials and wastes storage areas at the Truck and Heavy Equipment shops are elevated to prevent run-on.
     g. Drip pans are placed under vehicles/equipment when draining fluids or for leaks.
     h. The fueling pad is lined with concrete or asphalt and is .elevated to prevent run-on.
     i. The fueling area is located away from storm drain inlets and drainages.
     j. Fuel transfer procedures have been developed for the facility, and are followed during the transfer of fuel from tanker trucks to the diesel tank, and during the filling up of facility vehicles and equipment.
     k. Visual inspections of oil storage containers for signs of leaks are conducted on a regular basis. Daily inspections are conducted at the Truck Shop.
     l. All exposed areas of the site are maintained in a clean, orderly manner, especially around trash containers and material storage areas. Trash is removed from the site on a regular basis.

  2. Preventive Maintenance

a. Berms are inspected on a regular basis for signs of deterioration, and maintenance is conducted as needed. Additionally, native vegetation is allowed to grow on the berms, to help minimize erosion of the berms.
b. Preventive maintenance is performed on vehicles and equipment that are utilized in the plant areas.

3. Spill Response:
    a. If there is a spill of a hazardous material, then emergency response procedures described in the Business Plan will be implemented. Employees are trained in spill response.
    b. Absorbent materials will be available to clean up fuel, oil, and other spills.
    c. If admixture were to spill outside the containment at the concrete plant, it would flow to the Concrete Plant Sump.
    d. Spilled cement or fly ash is promptly cleaned up.
    e. Sediment spillage on the main access road is promptly removed.

4. Material Handling and Storage:
    a. See Material Storage above.

5. Employee Training: See Section 8, Training.

6. Waste Handling/Recycling:
    a. Storm water contacting the concrete plant area including the load-out area drains to a sump (Concrete Plant Sump) and then is pumped to an Alar system to remove solids. The capacity of the Sump system is increased by pumping treated water to 2 water tanks. The water is then recycled into the mix or used at the reclaimer.
    b. Storm water that contact sand stockpiles at the concrete plant drains to the Concrete Plant Sump.
    c. The reclaimer and Alar system processes return concrete
    d. Wash water from rinsing truck interiors is collected in the reclaimer and treated by the Alar system.
    e. Wash water from exterior truck rinsing drains to the Concrete Plant Sump or a lined pond. The Sump water is being recycled and there are plans to recycle the water in the lined pond.
    f. A recycler picks up fluid wastes generated at the shops such as solvent, waste oil, and anti-freeze. Discharged batteries are recycled. A recycler also picks up used absorbent.
    g. The shop trash bin is located away from storm drain inlets and drainages. The lid is kept shut to keep out rainwater

7. Erosion Control and Site Stabilization:

a. As mining progresses, site grading will be constructed to direct runoff towards the pit, where feasible.
b. Slopes are benched to reduce runoff velocity and associated erosion.
c. Berms prevent run-on of storm water to active cuts in the mine area
d. Existing vegetation beyond the limits of mining operations will be preserved to protect soil from erosion.
e. Haul roads are covered with gravel to minimize erosion

8. Inspections, Recordkeeping and Quality Assurance: See Section 6, Inspections.

Potential pollutants and associated structural and non-structural BMP's are summarized in the Table 4 below:

Table 4: Potential Pollutants and BMP's

Source/ Activity	Material / Potential Pollutant	BMP
Site Wide BMP's		
Site Wide Operations	Sediment	1. Most runoff will enter a desilting basin before discharging to Carroll Canyon Creek. Runoff from the primary plant and A-1 Soils stockpile areas, and pumped water from the mining pit will discharge to the Camino Santa Fe Desilting Basin. Runoff from the Secondary and Tertiary aggregate plant areas would flow to the planned Office Desilting Basin. 2. The existing Camino Santa Fe Desilting Basin will be expanded and deepened, assuming there are no obstacles such as buried utilities. The riser height will also be increased to increase basin capacity. The capacity of the Camino Santa Fe Desilting Basin when expanded, will exceed the capacity requirements defined in the City of San Diego Stormwater Manual. The estimated completion date for the expansion and riser modification is 7/31/2010.

		3. Two rock filters approximately 8' wide X 25' long have been installed in the Camino Santa Fe Desilting Basin. 4. A rock "blanket" has been installed to filter storm water that flow from the main access road to the Camino Santa Fe Desilting Basin. 5. In the event that sediment discharges from the Camino Santa Fe Desilting Basin exceed Basin Plan Standards for turbidity, then a Baker tank or an equivalent will be brought to the site. 6. The estimated completion date for the installation of the planned Office Desilting Basin is 6/30/2010. 7. A new desilting basin (Primary Plant Upper Desilting Basin) will be installed in the primary plant area and an existing desilting basin (Primary Plant Lower Desilting Basin) located down gradient of the primary plant will be upgraded. The estimated completed date is 6/30/2010. These basins will then discharge to the Camino Santa Fe Desilting Basin for further treatment (i.e. sediment settling). 8. A 22,000 gallon Baker tank was installed in early March 2010. Water is pumped from the Camino Santa Fe Desilting Basin to the Baker tank, and then discharged to the creek. The Baker tank will be removed after the 2009-2010 rainy season or when the new desiltation basin system is fully completed.
Main Access Road	Sediment	1. The main access road is paved to the aggregate plant office. The road is regularly swept. 2. Gravel berms and fiber rolls are placed along the south side of the road, to filter storm water that could flow to Carroll Canyon Creek. Fiber rolls are replaced as needed.

		3. An unlined swale has been installed at the north side of the road, near the low point. Rock berms will be installed on both ends of the swale. The swale acts as desilting basin. Overflow water would drain towards the pit area or paved road. 4. Rumble grates are located near the exit to control trackout. 5. Spillage on the road is promptly cleaned up.
Site Wide Operations	Sediment	1. 1,500 filter bags filled with gravel are at the site and can be used as an emergency BMP.
Mining Area		
Excavation and conveying of aggregate.	Sediment	1. Most storm water in the mining and adjacent areas flows to the mining pit and will be stored in this pit for at least 24 hours. The 24-hour delay will allow sediment to settle out in the pit before being pumped to the Camino Santa Fe desilting basin. The delay will also allow runoff already in the Camino Santa Fe basin to be treated (i.e. sediment settling) and discharged prior to co-mingling with the pumped pit water. 2. As mining progresses, site grading will be constructed to direct runoff towards the pit, where feasible. 3. Slopes are benched to reduce runoff velocity and associated erosion. 4. Berms prevent run-on of storm water to active cuts in the mine area. 5. Berms are inspected on a regular basis for signs of deterioration, and maintenance is conducted as needed. Additionally, native vegetation is allowed to grow on the berms, to help minimize erosion of the berms. 6. Existing vegetation beyond the limits of mining operations will be preserved to protect soil from erosion.
Excavation, loading, and	Oil and grease (from leaking	1. Preventive maintenance is performed on vehicles and

conveying of sand and gravel	equipment)	equipment that are utilized in this area.
Rock and Sand Plants		
Crushing and screening-Aggregate	Sediment	1. Storm water is directed away from the secondary and tertiary plants by grading and seasonal berms. The berms are maintained during the rainy season 2. Baghouses at the secondary and territory plants control dust generation at the crushers.
Crushing and screening-Equipment	Oil and grease	1. Preventive maintenance is performed on equipment to prevent breakdowns and equipment failures
Washing of Processed Material	Sediment	1. Sediment washwater is discharged to a desilting pond.
Storage of Sand and Gravel in Stockpiles	Sediment	1. Stockpiles are set back from Carroll Canyon Creek. 2. Approximately one dozen rock berms are installed in the secondary and tertiary plant areas to filter rainwater that would ultimately flow to Carroll Canyon Creek. This is a seasonal BMP that is maintained during the wet season.
Access Road	Sediment	1. Gravel filter basins have been installed along the unpaved access road in the primary plant area, which will retain and filter some runoff that ultimately reaches the Camino Santa Fe desilting basin. 2. Haul roads are covered with gravel to minimize erosion 3. Sediment spillage is promptly removed.
Rock and Sand Truck Rinse-Off	Sediment	1. The truck rinse off station is graded so that runoff drains into a retention pond.
Concrete Plant		
Site Wide (within concrete plant operation)	Sediment, Elevated pH materials	1. Storm water contacting the plant area drains to a sump (Concrete Plant Sump) and then is pumped to an Alar system to remove solids. 2. The capacity of the sump system is

		increased by pumping treated water to 2 water tanks. The water is then recycled into the mix or used at the reclaimer. 3. If heavy rain overcomes the capacity of the sump, then it will flow to an unlined pond.
Storage of sand and gravel in stockpiles	Sediment	1. All rock and some sand is stored in silos. 2. Storm water that contact sand stockpiles drains to the Concrete Plant Sump.
Loading and storage of cement and fly ash in silos.	Elevated pH materials	1. The silos are vented to the baghouse, which controls the amount of cement and fly ash dust generated during silo loading. 2. Silo filling is monitored by strict inventory control. 3. Spilled cement or fly ash is promptly cleaned up.
Storage of admixtures and colors	Misc.	1. Admixture and color tanks are stored on a concrete pad within a concrete containment area. 2. Admixture totes are stored on a concrete pad within a concrete containment area. 3. If admixture were to spill outside the containment, it would flow to the Concrete Plant Sump.
Concrete batching	Elevated pH materials	1. The baghouse controls the amount of cement and fly ash dust generated during loading of a mixer truck. 2. Water contacting the load-out area flows to the Concrete Plant Sump
Interior truck washing; Handling of return concrete	Elevated pH materials	1. The reclaimer and Alar system processes return concrete 2. Wash water from rinsing truck interiors is collected in the reclaimer and treated by the Alar system.
Exterior truck washing	Reduced pH	1. Wash water drains to the Concrete Plant Sump or a lined pond. 2. The Sump water is being recycled and there are plans to recycle the water in the lined pond. This recycling will increase the capacity of the pond system.

Sand Plant		
Sand washing	Sediment	1. Sediment washwater is discharged to a desilting pond.
Shops (Truck and Heavy Equipment) and Fueling		
Fueling	Diesel	1. The diesel tanks are underground and therefore not directly exposed to rainwater. 2. The fueling pad is lined with concrete or asphalt. 3. The fueling area is elevated to prevent run-on. 4. The fueling area is located away from storm drain inlets and drainages. 5. Fuel transfer procedures have been developed for the facility, and are followed during the transfer of fuel from tanker trucks to the diesel tank, and during the filling up of facility vehicles and equipment. 6. If there is a spill of a hazardous material, then emergency response procedures described in the Business Plan will be implemented. Employees are trained in spill response.
Vehicle maintenance	Oil and grease, batteries, waste oil and anti-freeze.	1. Vehicle/equipment maintenance in the Truck Shop occurs in lined areas under a rain shelter Maintenance in the Heavy Equipment Shop occurs on lined areas. 2. Outdoor maintenance areas are graded to prevent storm water run-on. 3. Drip pans placed under vehicles/equipment when draining fluids or for leaks. 4. Absorbent materials will be available to clean up fuel, oil, and other spills. 5. Preventive maintenance is conducted for facility equipment to prevent breakdowns and equipment failures 6. If there is a spill of a hazardous material, then emergency response

		procedures described in the Business Plan will be implemented. Employees are trained in spill response.
Hazardous Materials and Waste Storage Area(s)	Oil and grease, solvents, batteries, waste oil and anti-freeze.	1. Hazardous materials and wastes are stored on lined areas in buildings or under roofed areas, unless their use requires the material or waste to be temporarily stored outside. 2. Storage area is elevated to prevent run-on. 3. Hazardous materials and wastes are stored in secondary containment. 4. Hazardous material and waste areas are graded to prevent storm water run-on. 5. A recycler picks up fluid wastes such as solvent, waste oil, and anti-freeze. Discharged batteries are recycled.. 6. Visual inspections of oil storage containers for signs of leaks are conducted on a regular basis. Daily inspections are conducted at the Truck Shop. 7. Absorbent materials will be available to clean up fuel, oil, and other spills. 8. If there is a spill of a hazardous material, then emergency response procedures described in the Business Plan will be implemented. Employees are trained in spill response.
Disposal of trash	Misc. debris	1. Lid kept shut to keep out rainwater. 2. All exposed areas of the site are maintained in a clean, orderly manner, especially around trash containers and material storage areas. Trash is removed from the site on a regular basis. 3. The trash bin is located away from storm drain inlets and drainages.
A-1 Soils		
Topsoil Screening	Sediment	1. Runoff from the Screen and Stockpile Area will discharge to the

and Stockpiling at the Screen and Stockpile Area		Camino Santa Fe Desilting Basin.
Storage of Topsoil and Amended Soils in stockpiles at the Amended Soils Area	Sediment	1. Fiber rolls and a rock berm will be installed to filter runoff.

Section 6
Inspections

Inspections are conducted to identify conditions that may allow pollutants to be discharged with storm water and to ensure BMP's are being implemented. The inspections that will be conducted are listed in Table 5 below. All inspections will be documented (see Inspection Forms, Attachment 2).

Table 5: Inspections

Type of Inspection	Frequency	Description	Responsible Party
Non- Storm Water Discharge	Quarterly	Review Camino Santa Fe Desilting Basin, Access Road #1, and Access Road #2 discharge points to determine whether any authorized or unauthorized non-storm water discharges are occurring.	Plant
Storm Water Inspection	1 Storm Event / Month Between Oct 1 and May 30.	Review whether there is discharge at the Camino Santa Fe Desilting Basin, Access Road #1, and Access Road #2 discharge points. If there is a discharge, then document discharge characteristics.	Plant
SWPPP Review	Annually	Evaluate whether all aspects of the SWPPP are being implemented and the need to revise any portion of the program. Inspect all potential pollutant sources, evaluate the effectiveness and need for additional BMP's, verify the site map is up-to-date, and review inspection records.	ESH

The Plant Manager or an employee designated by the Plant Manager will conduct monthly inspections between October and May. Inspections and other Storm Water Pollution Prevention Plan documents such as monitoring information will be retained onsite for 5 years.

Section 7
Monitoring

The Carroll Canyon site is part of the BMI Storm Water Group monitoring program, and does not need to sample storm water every year. When sampling is required, plant staff should collect storm water samples from discharge generated by the first storm that occurs between October 1 and May 30. Sampling should occur during scheduled facility operating hours, during the first hour of discharge, and be preceded by 3 working days without a storm water discharge. Samples need to be collected, even if all the sampling requirements are not met.

All samples are to be analyzed for TSS, pH, Specific Conductance, oil and grease, and Nitrate+Nitrite. In addition, samples at the Concrete Plant inlet should be analyzed for Iron. The procedure for collecting a sample is described in Attachment 3.

The Plant Manager will designate an employee who will take samples between October and May. Sampling will only occur when it is safe to be near the discharge point.

Section 8
Training

Training shall occur at least once per year, preferable around April. A sample training presentation and training log are included in Attachment 4. Personnel to be trained include those responsible for:

- Implementing BMP's
- Conducting Inspections
- Managing Storm Water

FORM 3-QUARTERLY VISUAL OBSERVATIONS OF UNAUTHORIZED NON-STORM WATER DISCHARGES (NSWDs)

- Unauthorized NSWDs are discharges (such as wash or rinse waters) that do not meet the conditions provided in Section D (pages 5-6) of the General Permit.
- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordance with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

QUARTER: **JULY-SEPT.** **DATE/TIME OF OBSERVATIONS** __/__/__ __:__ ☐ AM ☐ PM	**Observers Name:** _____ **Title:** _____ **Signature:** _____	**WERE UNAUTHORIZED NSWDs OBSERVED?** ☐ **YES** ☐ **NO** **WERE THERE INDICATIONS OF PRIOR UNAUTHORIZED NSWDs?** ☐ **YES** ☐ **NO**	If **YES** to either question, complete reverse side.

Wet Weather Season Monthly Stormwater Visual Observation Form 4

Instructions: Complete this form for each month during the Stormwater Wet Weather Season months of October through May. This form is used to document no discharge during the month or any discharge that occurs during the first hour of the first stormwater discharge of that month. This form is also used to record any rain events throughout the month. Keep all completed forms in your plant files.

Plant: _____

Plant Discharge Location: _____

Month and Year: _____

Inspector(s): _____

Inspector(s) Job Title: _____

Fill out this section during the month:

DATE	AMOUNT OF RAIN	DISCHARGE? Yes or No	COMMENTS

Was there any discharge of stormwater to a storm drain, creek or other drainage during the month, during operating hours?

☐ **No** ☐ **Yes**

- If you answered *"No,"* sign and date the bottom of the form. This form is now completed.
- If you answered *"Yes,"* fill out the below data before signing and dating the form.

Observation Summary of ***First*** Discharge of Month, During Operating Hours:

Date of Discharge Observation	Time of Discharge Observation	Time Discharge Began (est)

Characteristics of Discharge:

Discharge turbid or colored?	☐ No	☐ Yes
Discharge have sheen?	☐ No	☐ Yes
Discharge leave staining?	☐ No	☐ Yes
Discharge have odor?	☐ No	☐ Yes
Discharge have debris?	☐ No	☐ Yes

Source of any pollutants in discharge: _____

BMP's in place?	☐ No	☐ Yes
New BMP's needed to reduce pollutants in discharge?	☐ No	☐ Yes

If "Yes," describe new BMP's: _____

Inspector's Signature **Date**

Date should reflect the last operating day of the month or the first operating day of the following month.

5 Attachment 3- Procedure For Collecting A Sample

STEP 4: TAKING THE SAMPLE

This section will explain how to collect storm water samples.

TASKS:

1. Put on clean latex gloves and open a sample bottle from the box.

Note: Sample bottles may contain a small amount of acid (see page 7). Fill the bottle only once, and be careful not to overfill, or spill the acid. ***DO NOT RINSE OR POUR OUT THE CONTENTS OF A BOTTLE.***

2. Dip the clean sample collection container in the center of flow if possible to grab a sample. If you are sampling on a flat surface, lay a scoop down flat so that water will run into it. For unusual collection areas a customized scoop or vessel may have to be fashioned from a clean plastic bottle other utensil. Be mindful not to contaminate sample stirring up materials during the placement of the sample collection container. Keep sample free from uncharacteristic floating debris.

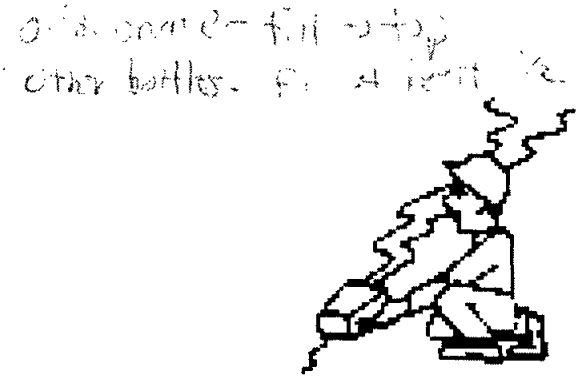
3. Carefully pour the storm water from the collection container into the sample bottle. For the sample bottles, fill as completely as possible without spilling.

4. Cap sample bottle tightly.

5. Repeat steps 2, 3, and 4 for the remaining four sample bottles.

6. Move indoors.

7. Fill out the sample bottle labels if necessary some bottles may be bar coded, older kits may need labels filed out by hand.



Attachment 4- Training Log and Sample Training Presentation

Sample Training Presentation shall include site flow overview, significant materials, inspection and sampling procedures, significant materials and BMPs.

Slide 1

2008-2009 STORM WATER PERMIT TRAINING

Slide 2

REQUIREMENTS OF THE GENERAL STORM WATER PERMIT

1. Develop and implement a storm water pollution prevention plan (SWPPP).
2. Eliminate unauthorized non-storm water discharges;
3. Perform inspections of storm water discharges
4. Perform sampling of storm water discharges

Slide 3

STORM WATER POLLUTION PREVENTION PLAN (SWPPP)

The SWPPP has two major objectives:

1. Identify the sources of pollution that affect the quality of industrial storm water discharges.
2. Identify and implement site- specific Best Management Practices (BMPs) to reduce or prevent pollutants in industrial storm water discharges.

Slide 4

SOURCES OF POLLUTION

- Typical sources of pollutants at concrete plants include cement, fly ash, admixtures, colors, and acid.
- Typical sources of pollutants at an aggregate plant include sediment from stockpiles, mining areas, and slope erosion.
- Shop areas can also be a source of pollutants from fuel tanks, oil tanks and drums, etc.

Slide 5

BEST MANAGEMENT PRACTICES

Typical BMP's at a ready mix plant include:

- Install berms and swales to separate storm water and process water. Process water can be water that contacts cement or fly ash, or water in washout ponds
- Retain storm water that has mixed with process water in a retention basin. Use this water for washing or in the concrete mix.

Typical BMP's at a rock and sand plant include:

- Retention basins to allow solids to settle out.
- Rock berms, waddles, and/ or silt fencing to filter sediment out of runoff.

Slide 6

NON-STORM WATER DISCHARGES

1. Unauthorized non-storm water discharges are discharges from our plant activities instead of rain. They include discharges from plant process water, truck wash water, and dust abatement water.
2. Non-Storm Water discharges generally are illegal, except for a few types such as landscape water runoff.

Slide 7

INSPECTIONS OF STORM WATER DISCHARGES

1. Two types of inspections will be conducted by plant staff at each storm water discharge point:
    - Quarterly Visual Observation of Non-Storm Water Discharges
    - Monthly Visual Observation of Storm Water Discharges
2. A facility operator is not required to conduct an inspection due to dangerous weather conditions, such as flooding, electrical storm, etc.
3. Authorized non-storm water discharges, if present, should also be monitored. There have been no authorized non-storm water discharges reported at our sites during 2007-2008.

Slide 8

This slide will be both sides of Form 3 (attached)

Slide 9

QUARTERLY VISUAL OBSERVATION OF NON-STORM WATER DISCHARGE

The visual observations shall occur:

- Quarterly: January-March, April-June, July-September, and October-December. Quarterly visual observations shall be conducted within 6-18 weeks of each other.
- During daylight hours
- On days with no storm water discharges.
- During scheduled facility operating hours.

Slide 10

If an unauthorized non-storm water discharge is identified, then:

- Document on Form 3 the presence of any discolorations, stains, odors, floating materials, etc., as well as the source of any discharge.
- Take steps to eliminate this discharge.

Slide 11

This slide will be both sides of Form 4 (attached)

Slide 12

MONTHLY VISUAL OBSERVATION OF STORM WATER DISCHARGES

The visual observations shall occur:

- Monthly: One storm event per month during the wet season (October 1-May 30).
- During the first hour of discharge at all discharge locations. (Visual observations of stored or contained storm water shall occur at the time of release.)
- During daylight hours
- When preceded by at least three (3) working days without storm water discharges
- During scheduled facility operating hours.

Slide 13

Visual observations of any dischage shall document on Form 4 the presence of any:

- Floating and suspended material.
- Oil and grease, discolorations
- Turbidity
- Odor
- Source of any pollutants

Slide 14

SAMPLING OF STORM WATER DISCHARGES

1. No Hanson sites will need to be sampled during 2008-09 for the BMI monitoring program.
2. However, a few sites will be sampled to determine if runoff from an offsite location is a source of contamination. These sites include Oceanside and El Cajon.

Slide 15

INACTIVE MINING SITES

1. If a site does not have scheduled working hours, then there is no need to inspect or sample at that site. Inactive sites include San Marcos.
2. However, the Regional Water Quality Control Board would still like Hanson to inspect inactive sites to verify they are not a source of sediment runoff or other storm water pollutants.
3. Inactive sites should be inspected during a rain to verify they are not source of pollutants. These inspections should be documented.
4. Where storm water inspections and sampling are impracticable, facility operators of inactive mining operations may instead obtain certification once every three years by a Registered Professional Engineer that an SWPPP has been prepared for the facility and is being implemented in accordance with the requirements of this General Permit.

HELIX Environmental Planning

April 25, 2011 HAW-20

Mr. David Gibson
California Regional Water Quality Control Board
San Diego Region
9174 Sky Park Court, Suite 100
San Diego, California 92123

Subject: 401 Water Quality Certification for the Hanson Aggregates Pacific Southwest, Inc's Carroll Canyon Facility

Dear Mr. Gibson:

On behalf of Hanson Aggregates Pacific Southwest, Inc. (Applicant), HELIX Environmental Planning, Inc. (HELIX) is transmitting the enclosed updated 401 Water Quality Certification application for bank stabilization at their Carroll Canyon facility. Recent heavy rains have eroded a portion of the Carroll Creek channel adjacent to an existing building to the point where a portion of the slab supporting the building is completely unsupported (Attachment 1: Photo Page).

The existing stream flows at the eastern erosion area are conveyed through a single corrugated culvert pipe. The high flows exiting the pipe, as well as flows coming off of the dirt road adjacent to the channel, eroded the slope and soil supporting the existing concrete slab. The proposed action is to replace the slope area with soil and riprap to stabilize the area under the concrete slab and building.

404 NON-NOTIFYING NATIONWIDE PERMIT

The project has met requirements of a non-notifying Nationwide Permit under Section 404 of the Clean Water Act.

CALIFORNIA DEPARTMENT OF FISH AND GAME EMERGENCY REQUEST

The applicant has requested authorization of emergency repairs to public service facilities from the California Department of Fish and Game pursuant to Section 1610 of the California Fish and Game Code.

If you have any questions, please contact me at (619) 462-1515.

Sincerely,

Barry L. Jones
Senior Consulting Biologist

OWNERSHIP

Does the applicant own the project site? Yes ☒ No ☐

If the project site is not owned by the applicant, provide the name(s), address(es), and phone number(s) for the property owner(s) as well as evidence that the applicant has the necessary approvals to construct the project at this location.

Does the applicant plan on selling all or a portion of the site after receiving the necessary approvals?

Yes ☐ No ☒

Does the applicant plan on selling all or a portion of the site prior to starting construction?

Yes ☐ No ☒

If yes, provide the name(s), address(es), and phone number(s) of the future land owner(s).

Does the applicant plan on transferring the certification after receiving the necessary approvals and/or prior to starting construction?

Yes ☐ No ☒

If yes, provide the name(s), address(es), and phone number(s) of the future transferee(s).

AFFECTED WATER BODY(IES) (See instructions.)

List all affected water body(ies).

Carroll Creek

List water velocities and shear for the 2, 5, 10, 50, and 100 storm water elevations for each water body.

Frequency/Year	FEMA Flow Rate, CFS	Velocity/FPS	Shear/PSF
2	145	17.3	0.6
5	440	21.2	1.1
10	800	23.4	1.5
50	2000	28.6	2.7
100	3500	30.0	3.1

Are any of the water body(ies) considered isolated per SWANCC or Rapanos? Yes ☐ No ☒

NEED FOR PROJECT (See instructions.)

Recent heavy rains have damaged a portion of drainage pipe and eroded a portion of the slope bank resulting in undercutting of an existing concrete pad. Placement of rip rap will prevent future erosion.

DESCRIPTION OF ACTIVITY (See instructions.)

Rip rap will be placed on the eroded slope to prevent future erosion.

Has any portion of the work been initiated? Yes ☐ No ☒

If yes, describe the initiated work and explain why it was initiated prior to obtaining a permit; indicate whether any enforcement action has been taken against the project.

AVOIDANCE OF IMPACTS (See instructions.)

No avoidance is possible. The placement of the rip rap will occur in areas that were previously upland.

MINIMIZATION OF IMPACTS (See instructions.)

Impacts are limited to areas that were previously upland.

PROTECTION OF WATER QUALITY – CONSTRUCTION (See instructions.)

Work will occur outside of the rainy season. A silt fence and/or straw wattles will be placed at the toe of slope to prevent soil from washing into the streambed during placement of the rip rap.

PROTECTION OF WATER QUALITY – POST-CONSTRUCTION (See instructions.)

No post-construction measures are required.

PROTECTION OF WATER QUALITY – IMPAIRED WATER BODY(IES). (See instructions.)

Are any of the water body(ies) within the project area, including impacted and preserved water body(ies), list as impaired on the Clean Water Act Section 303(d) list?

Yes ☐ No ☒

Are any of the water body(ies) within the project area a tributary to a Clean Water Act Section 303(d) water body(ies)?

Yes ☐ No ☒

Are any of the water body(ies) within the project area the subject of an adopted Total Maximum Daily Load (TMDL)?

Yes ☐ No ☒

If yes, provide a detailed description of the actions that will be taken to ensure that the project does not contribute additional pollutants to the water body(ies). Include a discussion of the pollutants causing the impairment, potential sources of pollutants, and construction and post-construction BMPs.

STATE OR FEDERALLY THREATENED OR ENDANGERED SPECIES IMPACTED BY THIS PROJECT (See instructions.)

Are any state or federally threatened or endangered species potentially impacted by this project?

Yes ☐ No ☒

If yes, provide a list of the potentially impacted species (with common name).

FILL AND DREDGE INFORMATION (See instructions.)

Water Body Type	Permanent Impact		Temporary Impact

Subject: Inspection of the Hanson Carroll Canyon Plant, San Diego County

Mr. Lund:

On March 28, 2017, Mr. Fisayo Osibodu of the California Regional Water Quality Control Board, San Diego Region (San Diego Water Board) conducted an inspection of the Lehigh Hanson Carroll Canyon Plant (plant). The plant is currently regulated under Order No. *95-104, Waste Discharge Requirements for H.G Fenton Material, Carroll Canyon Plant, San Diego County*. Lehigh Hanson West Region (Hanson) submitted a letter, dated January 6, 2017, notifying the San Diego Water Board that it had terminated mining, sand and gravel processing, and ready mix concrete production at the Carroll Canyon Plant. The purpose of the inspection was to verify that these activities had been terminated.

Enclosed is a copy of the subject inspection report. Hanson has terminated mining, sand and gravel processing, and ready mix concrete production at the plant as described in the January 6, 2017 letter. As a result, the San Diego Water Board will rescind Order No. 95-104 in the near future. The San Diego Water Board appreciates your co-operation during the inspection.

In the subject line of any response, please include reference code **213364: oosibodu.** Please contact Mr. Fisayo Osibodu at 619-521-8036, or at Olufisayo.Osibodu@waterboards.ca.gov if you have any questions or comments.

Sincerely,

Fisayo Osibodu
WRC Engineer
Land Discharge Unit

- ☐ CWC SECTION 13264

PURPOSE OF INSPECTION: Lehigh Hanson, West Region (Hanson) submitted a letter notifying the San Diego Water Board that it had terminated mining, sand, gravel processing, and ready mix concrete production at the Carroll Canyon Plant. The purpose of the inspection was to verify that these activities had been terminated and to determine if the waste discharge requirements for the facility, Order No. 95-104 can be rescinded.

FINDING OF VIOLATION(s): (if any) No violations of Order No. 95-104 were noted during the inspection.

Please take appropriate measures to correct the above violation(s). If you disagree with any of violations identified, you must submit a written appeal to the Regional Board within 30 days of the date you receive this notice. Your written appeal must fully explain your reasons.

Violation No. _____ is (are) considered minor and should be corrected by: _____. Within five working days of achieving compliance, you must sign the certification statement, and return the certified inspection report form to the Regional Board. If any violations have not been corrected, clearly describe the uncorrected violation(s) on a separate sheet and enclose it with your signed certification statement. Failure to correct the violations identified may result in an enforcement action leading to Administrative Civil Penalties.

CERTIFICATION STATEMENT: Under penalty of perjury, I hereby certify that the violations cited above have been corrected and the facility is now in compliance.

RECIPIENT NAME (print) _____ **TITLE** _____

SIGNATURE _____ **DATE** _____

FACILITY: Carroll Canyon Plant **INSPECTION DATE:** March 28, 2017

OTHER KEY FINDINGS:

1. Hanson submitted a letter, dated January 6, 2017, notifying the San Diego Water Board that it had terminated mining, sand and gravel processing, and ready mix concrete production at the Carroll Canyon Plant.

2. Mr. Aaron Lund, Environmental Manager for Hanson was the facility representative present during the inspection.

3. Mining, sand and gravel, and concrete batching operations have been shut down as described in the January 6, 2017, letter.

4. No wash water is being generated and discharged to onsite settling ponds since sand and gravel and concrete batching operations have been terminated.

5. The San Diego Water Board will rescind Order No. 95-104 at a future date.

FACILITY: Carroll Canyon Plant **INSPECTION DATE:** March 28, 2017

OTHER DISCHARGER FOLLOWUP ACTION(s):

No items for follow up. Hanson has terminated mining, sand and gravel processing, and ready mix concrete production at the plant as described in the January 6, 2017 letter. As a result, the San Diego Water Board plans to rescind Order No. 95-104 in the near future.

Carroll Canyon- NOV R9-2010-0060 & Required Technical Report

Dear Mr. Peuron,

This is a response to your March 11, 2010 NOV that requests submittal of a Required Technical Report.

Hanson Aggregates agrees that the turbid discharge described in the inspection reports indicates the need for increased BMP's. Some BMP's have already been installed and additional BMP's are planned. We also have comments on the following statements in the NOV:

- NOV: Best Management Practices (BMPs) that were being employed to control the discharges were therefore, inadequate.
  Comment: The settling capacity of the existing Camino Santa Fe sediment detention basin exceeds the capacity required by the City of San Diego Storm Water Manual, for areas directly draining to this basin.

- NOV: Water Quality Objectives were not achieved even after a period of 83 days (from December 8, 2009 to March 1, 2010) passed. The failure to implement BCT in violation of the Industrial Stormwater Permit occurred for a period of at least 83 days.
  Comment: While an active treatment system (chemical flocculent) was not installed during the 83 day period, other additional BMP's were installed as described in the BMP sections below. The primary planned additional BMP's for the turbid discharge, installation of additional sediment detention basins, could not be installed during this period due to the constant threat of rain. If construction of these projects had been underway but incomplete when heavy rain occurred, then there could have been far greater sedimentation impacts to Carroll Canyon Creek than exists in the current condition. For reasons discussed above, it was not reasonable or feasible to install these additional BMPs until the weather pattern of heavy storms cleared. Undertaking

such measures during this period would have posed greater risk of sediment discharges than what occurred under the circumstances. Further, it should be noted that there was not continuous discharge from the sedimentation basin to the Creek during the 83 day period. Finally, the Basin Plan water quality objectives for turbidity call for the 20 NTU concentrations not to be exceeded more than 10 percent of the time in any one year, apparently in recognition of the fact that major storms such as those that occurred during this period may prevent that limit from being met for the time period during the storm.

A. Site Status Report

Violations noted in the NOV and BMP's that address these NOV's are listed below.

1. Violation- Failure to prevent prohibited discharges.
Visual observations indicate the 20 NTU turbidity limit in Basin Plan was exceeded

BMP's

Existing BMP's at the site are described in a June 5, 2009 SWPPP addendum. BMP's for excavation, loading, and hauling of sand and gravel included this addendum are below:

Source	Material / Potential Pollutant	BMP
Excavation, loading, and hauling of sand and gravel	Sediment	1. As mining progresses, site grading is constructed to direct runoff towards the pits. 2. Slopes are benched to reduce runoff velocity and associated erosion. 3. Site grading directed away from creek. 4. Site grading directs runoff to on-site collection areas such as a pit or pond, to store and allow storm water to evaporate and/or infiltrate. 5. Haul roads in quarry area graded so that runoff flows into pit. 6. Existing vegetation beyond the limits of mining operations will be preserved to protect soil from erosion. 7. Retention basin, screens, and/or risers are installed at inlets. 8. Hay bales, rock berms, or fiber rolls installed around inlets and along unpaved haul road. 9. Sediment and debris will be removed from around inlets and fiber rolls cleaned. 10. Berms at certain locations, to retain storm water runoff on-site, and to prevent run-on of storm water to the mine area. 11. Berms or swales direct runoff to settling

		areas. 12. Berms are inspected on a regular basis for signs of deterioration, and maintenance is conducted as needed. Additionally, native vegetation is allowed to grow on the berms, to help minimize erosion of the berms. 13. Flow controls such as rock berms have been installed on quarry roads. 14. Haul roads are covered with gravel to minimize erosion.

There have been ongoing inspections of the existing BMP's, which are repaired as needed.

A status report regarding the status of BMP's at our Carroll Canyon site was emailed to you on 1/27/2010. The 1/27/2010 report provides an evaluation conducted by our engineer to address the concerns raised during the December 2009 inspection and describes additional BMP's that will be implemented.

A subsequent SWPPP addendum was prepared on February 25, 2010 to incorporate planned BMP's listed in the 1/27/2010 report. These BMP's are as follows:

Source	Material / Potential Pollutant	BMP
Excavation, loading, and hauling of sand and gravel	Sediment	15. The existing desiltation basin (located near Camino Santa Fe) will be expanded, assuming there are no obstacles such as buried utilities. The basin would be installed after the site dries out.
Access Roads	Sediment	5. A desiltation basin will be installed upgradient of the low point in the road. An unlined swale will also be installed on the north side of the road near the low point to convey runoff to an existing retention basin. The basin and swale would be installed after the site dries out.

BMP's that have been implemented since the 12/8/2009 inspection are listed below and shown in the attached photos:

Interim BMP's	
BMP	Date of Installation
1. Gravel berm extended at low point in road, on the south side. Berm filtered runoff and also caused water to backup into access road, which acted as a desilting basin.	12/08/2009
2. Swale installed on low point of road, on the north side. Rock berm installed on lower end of swale. Swale acted as desilting basin. Overflow water drained towards the pit area	02/12/2010

or paved road.	
3. Two rock filters approximately 8' wide X 25' long have been installed in the desiltation basin located near Camino Santa Fe.	03/02/2010
4. 1500 Gravel filled filter bags delivered for emergency BMP's	03/15/2010
5. Gravel filter basins installed in primary plant area, which will retain and filter some runoff that ultimately reaches the existing desiltation basin located near Camino Santa Fe.	03/10/2010
6. 22,000 gallon Baker tank installed. Water will be pumped from the existing desiltation basin located near Camino Santa Fe to the Baker tank, and then discharged to the creek.	03/05/2010

Additional BMP's are planned, which have been delayed due to concern about rain during BMP construction. If rain did occur while one of these BMP's is under construction, then there would be a potential for excessive sedimentation in Carroll Canyon Creek.

Future BMP's	
BMP	Planned Date of Installation (estimate)
1. A desiltation basin will be installed upgradient of the low point in the road. This planned BMP is discussed in the 1/27/2010 report.	By 6/30/2010
2. A new desiltation basin will be installed in the primary plant area, which is upgradient of the existing desiltation basin located near Camino Santa Fe. An existing desiltation basin located down gradient of the primary plant will also be upgraded.	By 6/30/2010
3. The existing desiltation basin located near Camino Santa Fe will be expanded and deepened, assuming there are no obstacles such as buried utilities. The height of the riser will also be increased. This planned BMP is discussed in the 1/27/2010 report.	By 7/31/2010

There are three drainage areas that ultimately drain to the existing Camino Santa Fe basin (see Basin Exhibit). These areas and the flows that would be generated from each area during the design storm are as follows:

Drainage Area	Flow from Drainage Area (flow based on City of San Diego Storm Water Manual)	Drains To:
28.85 ac	0.67 Ac-Ft	Camino Santa Fe Basin
6.3 ac	0.15 Ac-Ft	Camino Santa Fe Basin
74.9 ac	1.74 Ac-Ft	Mining Pit and then pumped to Camino Santa Fe Basin
Total- 110.05 ac	2.56 Ac-FT	

Runoff from these three drainage areas ultimately flows to the expanded Camino Santa Fe basin. Runoff from the 28.85 acre drainage area will first be treated by the new desiltation basin that will be installed at the primary plant. This new basin will have a storage capacity of approximately 0.15 acre-feet, and so will be a pre-treatment basin only. Water from this new basin will be then conveyed via pipe and ditch to the expanded Camino Santa Fe basin.

The 74.90 acre drainage area is tributary to the pit. Water generated by the design storm that is pumped from the mining pit to the Camino Santa Fe basin would exceed the capacity of the existing basin. Past practice has been to wait 24 hours before commencing the pumping to allow sediment to settle out in the mining pit before being pumped to the Camino Santa Fe basin for final treatment. The 24-hour delay before pumping will continue. This delay will also allow runoff from the 28.85 and 6.30 acre areas to be treated and discharged from the desilting basins prior to commingling with the pit water. The settling capacity of Camino Santa Fe basin will be increased to better treat water pumped from the pit.

Based on a conceptual grading plan, the expanded Camino Santa Fe basin will have a storage volume of approximately 5.38 acre-feet. This capacity exceeds the 2.56 ac-feet of runoff that would be generated from the three drainage areas during the City of San Diego Storm Water Manual design storm.

2. Violation- Failure to Implement/ Maintain BMP's:
The NOV states BMP's must be implemented that achieve the standard of Best Available Technology (BAT). Active Treatment System (i.e. applying chemical flocculent) is a Best Conventional Technology which is appropriate for suspended sediment.

Additional BMP's
Hanson is evaluating the feasibility of adding chemical flocculent at this site as requested by Regional Board staff. As you know, a number of factors much be taken into account to conclude such an evaluation and we would like to work with you to

complete this evaluation, which should take account of the available information and any unique factors relating to the sources and this site. We understand that other relevant factors may include the cost of achieving potential reductions in concentrations in relation to the benefits, the age of the equipment and facilities at this site, the processes employed at the site and any required process changes, engineering aspects of the control technologies, non-water quality environmental impacts (including energy requirements), and other such other appropriate factors.

Accordingly, as part of this evaluation, State Fish and Game has been contacted to verify whether discharge of stormwater treated with chemical flocculent to Carroll Canyon Creek would be acceptable. Fish and Game is still conducting their evaluation, but has stated Fish and Game elsewhere in the State is having an issue with flocculent.

We would appreciate if you could provide contact information for a party that is using flocculent as a Best Conventional Technology at a quarry in the San Diego area under similar stormwater and operating conditions to those we experience at Carroll Canyon. We would then contact this party to determine whether their flocculent treatment system would be feasible for our Carroll Canyon operation and we would, of course, share that evaluation with you.

In the meantime, Hanson believes it has taken all reasonable and feasible measures and implemented all BMPs that were available under the circumstances.

B. Storm Water Pollution Prevention Plan (SWPPP) Status
A SWPPP with map is attached that includes updates of the potential pollutant sources and BMP's.

C. Long Term Corrective Action Plan
The revised and expanded sediment basin system is described in the above BMP discussion. This system includes a new basin to treat discharges on the haul road.

An unlined swale will also be installed on the north side of the road near the low point to convey runoff to an existing retention basin. The basin and swale would be installed after the site dries out.

BMP's that have been implemented since the 12/8/2009 inspection are listed below and shown in the attached photos:

Interim BMP's	
BMP	Date of Installation
1. Gravel berm extended at low point in road, on the south side. Berm filtered runoff and also caused water to backup into access road, which acted as a desilting basin.	12/08/2009
2. Swale installed on low point of road, on the north side. Rock berm installed on lower end of swale. Swale acted as desilting basin. Overflow water drained towards the pit area	02/12/2010

or paved road.	
3. Two rock filters approximately 8' wide X 25' long have been installed in the desiltation basin located near Camino Santa Fe.	03/02/2010
4. 1500 Gravel filled filter bags delivered for emergency BMP's	03/15/2010
5. Gravel filter basins installed in primary plant area, which will retain and filter some runoff that ultimately reaches the existing desiltation basin located near Camino Santa Fe.	03/10/2010
6. 22,000 gallon Baker tank installed. Water will be pumped from the existing desiltation basin located near Camino Santa Fe to the Baker tank, and then discharged to the creek.	03/05/2010

Additional BMP's are planned, which have been delayed due to concern about rain during BMP construction. If rain did occur while one of these BMP's is under construction, then there would be a potential for excessive sedimentation in Carroll Canyon Creek.

Future BMP's	
BMP	Planned Date of Installation (estimate)
1. A desiltation basin will be installed upgradient of the low point in the road. This planned BMP is discussed in the 1/27/2010 report.	By 6/30/2010
2. A new desiltation basin will be installed in the primary plant area, which is upgradient of the existing desiltation basin located near Camino Santa Fe. An existing desiltation basin located down gradient of the primary plant will also be upgraded.	By 6/30/2010
3. The existing desiltation basin located near Camino Santa Fe will be expanded and deepened, assuming there are no obstacles such as buried utilities. The height of the riser will also be increased. This planned BMP is discussed in the 1/27/2010 report.	By 7/31/2010

There are three drainage areas that ultimately drain to the existing Camino Santa Fe basin (see Basin Exhibit). These areas and the flows that would be generated from each area during the design storm are as follows:

Drainage Area	Flow from Drainage Area (flow based on City of San Diego Storm Water Manual)	Drains To:
28.85 ac	0.67 Ac-Ft	Camino Santa Fe Basin
6.3 ac	0.15 Ac-Ft	Camino Santa Fe Basin
74.9 ac	1.74 Ac-Ft	Mining Pit and then pumped to Camino Santa Fe Basin
Total- 110.05 ac	2.56 Ac-FT	

Runoff from these three drainage areas ultimately flows to the expanded Camino Santa Fe basin. Runoff from the 28.85 acre drainage area will first be treated by the new desiltation basin that will be installed at the primary plant. This new basin will have a storage capacity of approximately 0.15 acre-feet, and so will be a pre-treatment basin only. Water from this new basin will be then conveyed via pipe and ditch to the expanded Camino Santa Fe basin.

The 74.90 acre drainage area is tributary to the pit. Water generated by the design storm that is pumped from the mining pit to the Camino Santa Fe basin would exceed the capacity of the existing basin. Past practice has been to wait 24 hours before commencing the pumping to allow sediment to settle out in the mining pit before being pumped to the Camino Santa Fe basin for final treatment. The 24-hour delay before pumping will continue. This delay will also allow runoff from the 28.85 and 6.30 acre areas to be treated and discharged from the desilting basins prior to commingling with the pit water. The settling capacity of Camino Santa Fe basin will be increased to better treat water pumped from the pit.

Based on a conceptual grading plan, the expanded Camino Santa Fe basin will have a storage volume of approximately 5.38 acre-feet. This capacity exceeds the 2.56 ac-feet of runoff that would be generated from the three drainage areas during the City of San Diego Storm Water Manual design storm.

2. Violation- Failure to Implement/ Maintain BMP's:
The NOV states BMP's must be implemented that achieve the standard of Best Available Technology (BAT). Active Treatment System (i.e. applying chemical flocculent) is a Best Conventional Technology which is appropriate for suspended sediment.

Additional BMP's
Hanson is evaluating the feasibility of adding chemical flocculent at this site as requested by Regional Board staff. As you know, a number of factors much be taken into account to conclude such an evaluation and we would like to work with you to

complete this evaluation, which should take account of the available information and any unique factors relating to the sources and this site. We understand that other relevant factors may include the cost of achieving potential reductions in concentrations in relation to the benefits, the age of the equipment and facilities at this site, the processes employed at the site and any required process changes, engineering aspects of the control technologies, non-water quality environmental impacts (including energy requirements), and other such other appropriate factors.

Accordingly, as part of this evaluation, State Fish and Game has been contacted to verify whether discharge of stormwater treated with chemical flocculent to Carroll Canyon Creek would be acceptable. Fish and Game is still conducting their evaluation, but has stated Fish and Game elsewhere in the State is having an issue with flocculent.

We would appreciate if you could provide contact information for a party that is using flocculent as a Best Conventional Technology at a quarry in the San Diego area under similar stormwater and operating conditions to those we experience at Carroll Canyon. We would then contact this party to determine whether their flocculent treatment system would be feasible for our Carroll Canyon operation and we would, of course, share that evaluation with you.

In the meantime, Hanson believes it has taken all reasonable and feasible measures and implemented all BMPs that were available under the circumstances.

B. Storm Water Pollution Prevention Plan (SWPPP) Status
A SWPPP with map is attached that includes updates of the potential pollutant sources and BMP's.

C. Long Term Corrective Action Plan
The revised and expanded sediment basin system is described in the above BMP discussion. This system includes a new basin to treat discharges on the haul road.

2007-2008

ANNUAL REPORT

FOR

STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2007 through June 30, 2008

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at http://www.waterboards.ca.gov/stormwtr/contact.html. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information:

Facility WDID No: **9371014663**

Facility Business Name: Hanson Aggregates (Carroll Canyon Facility) Contact Person: Jud Harvey

Physical Address: 9255 Camino Santa Fe e-mail: Jud.Harvey@hanson.biz

City: San Diego **CA** Zip 92121 Phone: (760) 591-0952

Standard Industrial Classification (SIC) Code(s): 1423 Quarry Rock; 3723 Construction Material;2951 Asphalt Concrete

B. Facility Operator Information:

2007-2008
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

   ☒ **YES** Go to Item D.2 ☐ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

   i. ☒ Participating in an Approved Group Monitoring Plan **Group Name:** Building Materials Industry (BMI)

   ii. ☐ Submitted ***No Exposure Certification* (NEC)** Date Submitted: ___/___/___

   Re-evaluation Date: ___/___/___

   Does facility continue to satisfy NEC conditions? ☐ YES ☐ NO

   iii. ☐ Submitted **Sampling Reduction Certification (SRC)** Date Submitted: ___/___/___

   Re-evaluation Date: ___/___/___

   Does facility continue to satisfy SRC conditions? ☐ YES ☐ NO

   iv. ☐ Received Regional Board Certification Certification Date: ___/___/___

   v. ☐ Received Local Agency Certification Certification Date: ___/___/___

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

   ☒ **YES** Go to Section E ☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 0 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0"). (BMI)

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

   YES ☐ **NO** **attach explanation** **(Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)**

3. How many storm water discharge locations are at your facility? 1

2007-2008

ANNUAL REPORT

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's' storm water discharge locations? ☒ YES, go to Item E.6 ☐ NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ YES ☐ NO, **attach explanation**

   If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.

   Date facility's drainage areas were last evaluated __/__/____

6. Were all samples collected during the first hour of discharge? ☒ YES ☐ NO, **attach explanation**

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☒ YES ☐ NO, **attach explanation**

8. Were there any discharges of storm water that had been temporarily stored or contained? (such as from a pond) ☐ YES ☒ NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☐ NO, **attach explanation**

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

    a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☒ YES ☐ NO, Go to Item E.11

    b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☒ YES ☐ NO

    c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

    _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

    _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

    _____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler
- Parameters tested
- Name of analytical testing laboratory
- Discharge location identification
- Testing results
- Test methods used
- Test detection limits
- Date of testing
- Copies of the laboratory analytical results

2007-2008

ANNUAL REPORT

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. *Do authorized non-storm water discharges occur at your facility?*

☐ **YES** ☒ **NO** Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** *Indicate "N/A" for quarters without any authorized non-storm water discharges.*

July-September	☐ YES	☐ NO	☐ N/A	October-December	☐ YES	☐ NO	☐ N/A
January-March	☐ YES	☐ NO	☐ N/A	April-June	☐ YES	☐ NO	☐ N/A

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information:

i. name of each authorized non-storm water discharge
ii. date and time of observation
iii. source and location of each authorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. *name, title, and signature of observer*
vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non- storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July-September	☒ YES	☐ NO	October-December	☒ YES	☐ NO
January-March	☒ YES	☐ NO	April-June	☒ YES	☐ NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

☐ **YES** ☒ **NO** Go to Item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

☐ **YES** ☐ **NO** **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information:

i. name of each unauthorized non-storm water discharge
ii. date and time of observation
iii. source and location of each unauthorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. *name, title, and signature of observer*
vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

2007-2008

ANNUAL REPORT

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers**. Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the *date, time, name and title of the person who observed that there was no storm water discharge.*

	YES	NO		YES	NO
October	☐	☒	February	☐	☒
November	☒	☐	March	☐	☒
December	☐	☒	April	☐	☒
January	☐	☒	May	☐	☒

2. Report monthly wet season visual observations using **Form 4** or provide the following information:

   a. date, time, and location of observation
   b. name and title of observer
   c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed
   d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
   The following areas should be inspected:

   - areas where spills and leaks have occurred during the last year
   - outdoor wash and rinse areas
   - process/manufacturing areas
   - loading, unloading, and transfer areas
   - waste storage/disposal areas
   - dust/particulate generating areas
   - erosion areas
   - building repair, remodeling, and construction
   - material storage areas
   - vehicle/equipment storage areas
   - truck parking and access areas
   - rooftop equipment areas
   - vehicle fueling/maintenance areas
   - non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

   - facility boundaries
   - outline of all storm water drainage areas
   - areas impacted by run-on
   - storm water discharges locations
   - storm water collection and conveyance system
   - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

2007-2008

ANNUAL REPORT

4. Have you *reviewed all General Permit compliance records generated* since the last annual evaluation? ☒ YES ☐ NO

   The following records should be reviewed:

   - quarterly authorized non-storm water discharge visual observations
   - monthly storm water discharge visual observation
   - records of spills/leaks and associated clean-up/response activities
   - *quarterly unauthorized non-storm water discharge* visual observations
   - Sampling and Analysis records
   - preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

   The following SWPPP items should be reviewed:

   - pollution prevention team
   - list of significant materials
   - description of potential pollutant sources
   - assessment of potential pollutant sources
   - identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

   The following BMP categories should be reviewed:

   - good housekeeping practices
   - spill response
   - employee training
   - erosion control
   - quality assurance
   - preventative maintenance
   - material handling and storage practices
   - waste handling/storage
   - structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- *schedule for implementing SWPPP revisions*
- any incidents of non-compliance and the corrective actions taken

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? ☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

2007-2008
ANNUAL REPORT

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

1.	Have you attached Forms 1,2,3,4, and 5 or their equivalent?	☒ YES (Mandatory)		
2.	If you conducted sampling and analysis, have you attached the laboratory analytical reports?	☒ YES	☐ NO	☐ NA
3.	If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications?	☐ YES	☐ NO	☒ NA
4.	Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J?	☒ YES	☐ NO	☐ NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Printed Name: Steve Fackt

Title: Environmental Manager

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC),and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. *Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for* drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at http://www.waterboards.ca.gov. It is contained in the Sampling and Analysis Reduction Certification.

ANNUAL REPORT

FORM 4-MONTHLY VISUAL OBSERVATIONS OF STORM WATER DISCHARGES

SIDE A

- Storm water discharge visual observations are required for at least one storm event per month between October 1 and May 31.
- Visual observations must be conducted during the first hour of discharge at all discharge locations.
- Discharges of temporarily stored or contained storm water must be observed at the time of discharge.
- Indicate "None" in the first column of this form if you did not conduct a monthly visual observation.
- Make additional copies of this form as necessary.
- *Until a monthly visual observation is made*, record any eligible storm events that do not result in a storm water discharge and note the date, time, name, and title of who observed there was no storm water discharge.

SAN DIEGO REGIONAL
WATER QUALITY
CONTROL BOARD

Arnold Schwarzenegger
Governor

2010 JUN 25 P 3:08

State of California
STATE WATER RESOURCES CONTROL BOARD

2009-2010
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2009 through June 30, 2010

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at http://www.waterboards.ca.gov/stormwtr/contact.html. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information:

Facility WDID No: 937I014663

Facility Business Name: Hanson Aggregates (Carroll Canyon) Contact Person: Jud Harvey
Physical Address 9255 Camino Santa Fe e-mail: Jud.Harvey@hanson.com
City: San Diego **CA** Zip: 92121 Phone: (760) 591-0952
Standard Industrial Classification (SIC) Code(s): 1442, 3273, 5032, 2875, 2951

B. Facility Operator Information:

Operator Name: Hanson Aggregates (Pacific Southwest Region) Contact Person: David Chong
Mailing Address: P.O. Box 639069 e-mail: David.Chong@hanson.com
City: San Diego State: CA Zip: 92163 Phone: (858) 715-5684

C. Facility Billing Information:

Operator Name: Hanson Aggregates (Pacific Southwest Region) Contact Person: David Chong
Mailing Address: P.O. Box 639069 e-mail: David.Chong@hanson.com
City: San Diego State: CA Zip: 92163 Phone: (858) 715-5684

2009-2010

ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

   ☐ **YES** Go to Item D.2 ☒ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

   i. ☐ Participating in an Approved Group Monitoring Plan **Group Name:** Building Materials Industry

   ii. ☐ Submitted **No Exposure Certification (NEC)** Date Submitted: ___/___/___

   Re-evaluation Date: ___/___/___

   Does facility continue to satisfy NEC conditions? ☐ YES ☐ NO

   iii. ☐ Submitted **Sampling Reduction Certification (SRC)** Date Submitted: ___/___/___

   Re-evaluation Date: ___/___/___

   Does facility continue to satisfy SRC conditions? ☐ YES ☐ NO

   iv. ☐ Received Regional Board Certification Certification Date: ___/___/___

   v. ☐ Received Local Agency Certification Certification Date: ___/___/___

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

   ☐ **YES** Go to Section E ☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 1 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

   ☒ **YES** ☐ **NO** **attach explanation** **(Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)**

3. How many storm water discharge locations are at your facility? 2

2009-2010
ANNUAL REPORT

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's' storm water discharge locations? ☒ YES, go to Item E.6 ☐ NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☒ YES ☐ NO, **attach explanation**

   If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.

   Date facility's drainage areas were last evaluated 6/1/10

6. Were all samples collected during the first hour of discharge? ☒ YES ☐ NO, **attach explanation**

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☒ YES ☐ NO, **attach explanation**

8. Were there any discharges of storm water that had been temporarily stored or contained? (such as from a pond) ☐ YES ☒ NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☐ NO, **attach explanation**

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

    a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☐ YES ☒ NO, Go to Item E.11

    b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☐ YES ☐ NO

    c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

    _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

    _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

    _____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler
- Parameters tested
- Name of analytical testing laboratory
- Discharge location identification
- Testing results
- Test methods used
- Test detection limits
- Date of testing
- Copies of the laboratory analytical results

OHIO

2009-2010
ANNUAL REPORT

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

☐ **YES** ☒ **NO** Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers**. Indicate "N/A" for quarters without any authorized non-storm water discharges.

July-September	☐ YES	☐ NO	☐ N/A	October-December	☐ YES	☐ NO	☐ N/A
January-March	☐ YES	☐ NO	☐ N/A	April-June	☐ YES	☐ NO	☐ N/A

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information:

i. name of each authorized non-storm water discharge
ii. date and time of observation
iii. source and location of each authorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non- storm water discharges and their sources. **Attach an explanation for any "NO" answers**.

July-September	☒ YES	☐ NO	October-December	☒ YES	☐ NO
January-March	☒ YES	☐ NO	April-June	☒ YES	☐ NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

☐ **YES** ☒ **NO** Go to Item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

☐ **YES** ☐ **NO** **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information: None observed

i. name of each unauthorized non-storm water discharge
ii. date and time of observation
iii. source and location of each unauthorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

CLEANED

2009-2010
ANNUAL REPORT

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	☒	☐	February	☒	☐
November	☒	☐	March	☒	☐
December	☒	☐	April	☒	☐
January	☒	☐	May	☒	☐

2. Report monthly wet season visual observations using **Form 4** or provide the following information:

   a. date, time, and location of observation
   b. name and title of observer
   c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed
   d. any new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
   The following areas should be inspected:

   - areas where spills and leaks have occurred during the last year
   - outdoor wash and rinse areas
   - process/manufacturing areas
   - loading, unloading, and transfer areas
   - waste storage/disposal areas
   - dust/particulate generating areas
   - erosion areas
   - building repair, remodeling, and construction
   - material storage areas
   - vehicle/equipment storage areas
   - truck parking and access areas
   - rooftop equipment areas
   - vehicle fueling/maintenance areas
   - non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

   - facility boundaries
   - outline of all storm water drainage areas
   - areas impacted by run-on
   - storm water discharges locations
   - storm water collection and conveyance system
   - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

   The following records should be reviewed:

   - quarterly authorized non-storm water discharge visual observations
   - monthly storm water discharge visual observation
   - records of spills/leaks and associated clean-up/response activities
   - quarterly unauthorized non-storm water discharge visual observations
   - Sampling and Analysis records
   - preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

   The following SWPPP items should be reviewed:

   - pollution prevention team
   - list of significant materials
   - description of potential pollutant sources
   - assessment of potential pollutant sources
   - identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

   The following BMP categories should be reviewed:

   - good housekeeping practices
   - spill response
   - employee training
   - erosion control
   - quality assurance
   - preventative maintenance
   - material handling and storage practices
   - waste handling/storage
   - structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? ☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

2009-2010

ANNUAL REPORT

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

1.	Have you attached Forms 1,2,3,4, and 5 or their equivalent?	☒ YES (Mandatory)		
2.	If you conducted sampling and analysis, have you attached the laboratory analytical reports?	☒ YES	☐ NO	☐ NA
3.	If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications?	☐ YES	☐ NO	☒ NA
4.	Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J?	☒ YES	☐ NO	☐ NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Printed Name: David Chong

Signature: _____ Date: 6/11/10

Title: ESH Manager

E-1,2: There was only one qualifying discharge during the reporting season. Other observed discharges began flowing outside of the reporting window and were not valid for sampling.

2009-2010
ANNUAL REPORT

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC),and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at http://www.waterboards.ca.gov. It is contained in the Sampling and Analysis Reduction Certification.

FORM 1-SAMPLING & ANALYSIS RESULTS

See BMI Sample Result Summary

FIRST STORM EVENT

- If analytical results are less than the detection limit (or non detectable), show the value as less than the numerical value of the detection limit (example: <.05)
- If you did not analyze for a required parameter, do not report "0". Instead, leave the appropriate box blank
- When analysis is done using portable analysis (such as portable pH meters, SC meters, etc.), indicate "PA" in the appropriate test method used box.
- Make additional copies of this form as necessary.

NAME OF PERSON COLLECTING SAMPLE(S):_____ **TITLE:** _____ **SIGNATURE:** _____

FORM 2-QUARTERLY VISUAL OBSERVATIONS OF AUTHORIZED NON-STORM WATER DISCHARGES (NSWDs)

Not Applicable

* Quarterly dry weather visual observations are required of each authorized NSWD.

- Observe each authorized NSWD source, impacted drainage area, and discharge location.
- Authorized NSWDs must meet the conditions provided in Section D (pages 5-6), of the General Permit.
- Make additional copies of this form as necessary.

QUARTER: **JULY-SEPT.** DATE: __/__/__	**Observers Name:** _____ **Title:** _____ **Signature:** _____	**WERE ANY AUTHORIZED NSWDs DISCHARGED DURING THIS QUARTER?** ☐ **YES** ☐ **NO** If **YES**, complete reverse side of this form.

FORM 3-QUARTERLY VISUAL OBSERVATIONS OF UNAUTHORIZED NON-STORM WATER DISCHARGES (NSWDs)

- Unauthorized NSWDs are discharges (such as wash or rinse waters) that do not meet the conditions provided in Section D (pages 5-6) of the General Permit.
- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordance with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

Wet Weather Season Monthly Stormwater Visual Observation Form 4

Instructions: Complete this form for each month during the Stormwater Wet Weather Season months of October through May. This form is used to document no discharge during the month or any discharge that occurs during the first hour of the first stormwater discharge of that month. This form is also used to record any rain events throughout the month. Keep all completed forms in your plant files.

Plant: CARROLL CANYON

Plant Discharge Location: #1 CAMINO SANTA FE & SITE ENTRANCE
#2 DRAINAGE ON S. SIDE OF DRIVEWAY

Month and Year: OCT 2009

Inspector(s): JUD HARVEY

Inspector(s) Job Title: SITE MANAGER

Fill out this section during the month:

DATE	AMOUNT OF RAIN	DISCHARGE? Yes or No	COMMENTS
10/30/09	TRACE	NO	

Was there any discharge of stormwater to a storm drain, creek or other drainage during the month, during operating hours?

☒ No ☐ Yes

- If you answered *"No,"* sign and date the bottom of the form. This form is now completed.
- If you answered *"Yes,"* fill out the below data before signing and dating the form.

Observation Summary of ***First*** Discharge of Month, During Operating Hours:

Date of Discharge Observation	Time of Discharge Observation	Time Discharge Began (est)

Characteristics of Discharge:

Discharge turbid or colored?	☐ No	☐ Yes
Discharge have sheen?	☐ No	☐ Yes
Discharge leave staining?	☐ No	☐ Yes
Discharge have odor?	☐ No	☐ Yes
Discharge have debris?	☐ No	☐ Yes

Source of any pollutants in discharge: _____

BMP's in place?	☐ No	☐ Yes
New BMP's needed to reduce pollutants in discharge?	☐ No	☐ Yes

If "Yes," describe new BMP's: _____

Instructions: Complete this form for each month during the Stormwater Wet Weather Season months of October through May. This form is used to document no discharge during the month or any discharge that occurs during the first hour of the first stormwater discharge of that month. This form is also used to record any rain events throughout the month. Keep all completed forms in your plant files.

Plant: Carroll Canyon

Plant Discharge Location: #1 Camino Santa Fe @ Entrance
#2 Drainage on S Side of Driveway

Month and Year: May 2010

Inspector(s): Jud Harvey

Inspector(s) Job Title: Site Manager

Fill out this section during the month:

DATE	AMOUNT OF RAIN	DISCHARGE? Yes or No	COMMENTS
5-31-2010	**None observed**	**No**	

Was there any discharge of stormwater to a storm drain, creek or other drainage during the month, during operating hours?

[X] **No** [ ] **Yes**

- If you answered *"No,"* sign and date the bottom of the form. This form is now completed.
- If you answered *"Yes,"* fill out the below data before signing and dating the form.

Observation Summary of ***First*** Discharge of Month, During Operating Hours:

Date of Discharge Observation	Time of Discharge Observation	Time Discharge Began (est)

Characteristics of Discharge:

Discharge turbid or colored?	[ ] No	[ ] Yes
Discharge have sheen?	[ ] No	[ ] Yes
Discharge leave staining?	[ ] No	[ ] Yes
Discharge have odor?	[ ] No	[ ] Yes
Discharge have debris?	[ ] No	[ ] Yes

Source of any pollutants in discharge: _____

BMP's in place?	[ ] No	[ ] Yes
New BMP's needed to reduce pollutants in discharge?	[ ] No	[ ] Yes

If "Yes," describe new BMP's: _____

Jud Harvey **5/31/2010**

Inspector's Signature **Date**

Date should reflect the last operating day of the month or the first operating day of the following month.

2008- 2009

ANNUAL REPORT

Annual Comprehensive Site Compliance Evaluation Addendum

The Evaluation Date shown on Form 5 is date of site visit and BMP evaluation. Annual Report certification date is the date Annual Report was filled out (including Form 5 itself).

The lab samples show elevated TSS (and SC) levels, even after the installation of additional BMP's during the 2008-09 season. The following BMP's have been implemented, which could reduce these levels:

Implemented BMP's	
BMP	Date of Installation
1. Gravel berm extended at low point in road, on the south side. Berm filtered runoff and also caused water to backup into access road, which acted as a desilting basin.	12/08/2009
2. Swale installed on low point of road, on the north side. Rock berm installed on lower end of swale. Swale acted as desilting basin. Overflow water drained towards the pit area or paved road.	02/12/2010
3. Two rock filters approximately 8' wide X 25' long have been installed in the desiltation basin located near Camino Santa Fe.	03/02/2010
4. 1500 Gravel filled filter bags delivered for emergency BMP's	03/15/2010
5. Gravel filter basins installed in primary plant area, which will retain and filter some runoff that ultimately reaches the existing desiltation basin located near Camino Santa Fe.	03/10/2010
6. 22,000 gallon Baker tank installed. Water will be pumped from the existing desiltation basin located near Camino Santa Fe to the Baker tank, and then discharged to the creek.	03/05/2010

Additional BMP's are planned, which have been delayed due to concern about rain during BMP construction. If rain did occur while one of these BMP's was under construction, then there would be a potential for discharge of excessive sedimentation into Carroll Canyon Creek.

Future BMP's	
BMP	Planned Date of Installation (estimate)
1. A desiltation basin will be installed upgradient of the low point in the road. This planned BMP is discussed in the 1/27/2010 report.	By 6/30/2010
2. A new desiltation basin will be installed in the primary plant area, which is upgradient of the existing desiltation basin located near Camino Santa Fe. An existing desiltation basin located down gradient of the primary plant will also be upgraded.	By 6/30/2010
3. The existing desiltation basin located near Camino Santa Fe will be expanded and deepened, assuming there are no obstacles such as buried utilities. The height of the riser will also be increased. This planned BMP is discussed in the 1/27/2010 report.	By 7/31/2010

The 6/5/2009 SWPPP was updated on 2/25/2010 to incorporate planned BMP's and subsequently updated on 4/9/2010 to incorporate both recently installed and planned BMP's.

Re: Building Materials Industry (BMI) Storm Water Monitoring Group
2014/2015 Annual Group Evaluation Report
Storm Water Annual Reports

Dear Ms. Morey:

Enclosed please find the 2014/2015 Annual Group Evaluation Report (AGER) for the Building Materials Industry (BMI) Storm Water Monitoring Group for your approval. The AGER was prepared based on the guidelines found on the State Water Board's website and the 2014/2015 Group Monitoring Plan ("GMP," dated July 25, 2014) for the Group.

Also attached are the Storm Water Annual Reports for the participants. These reports are also being submitted to Regional Boards where the facilities are located.

If you have any questions regarding the AGER or the Annual Reports, please do not hesitate to contact me at (805) 275-1515.

Best regards,

Joseph L. King, P.E., C.P.E.S.C.
Vice President
Sespe Consulting, Inc.
BMI Storm Water Monitoring Group Leader

STATE WATER RESOURCES CONTROL BOARD

2014-2015
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2014 through June 30, 2015

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at http://www.swrcb.ca.gov/stormwtr/contact.html. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information:

Facility WDID No: 937I014663

Facility Business Name: Hanson Aggregates Pacific Southwest Ir

2014-2015
ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

   ☒ **YES** Go to Item D.2 ☐ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

   i. ☒ Participating in an Approved Group Monitoring Plan **Group Name:** Building Materials

   ii. ☐ Submitted **No Exposure Certification (NEC)** Date Submitted: _____

   Re-evaluation Date: _____

   Does facility continue to satisfy NEC conditions? ☐ YES ☐ NO

   iii. ☐ Submitted **Sampling Reduction Certification (SRC)** Date Submitted: _____

   Re-evaluation Date: _____

   Does facility continue to satisfy SRC conditions? ☐ YES ☐ NO

   iv. ☐ Received Regional Board Certification Certification Date: _____

   v. ☐ Received Local Agency Certification Cetification Date: _____

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

   ☒ **YES** Go to Section E ☐ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 4 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

   ☒ **YES** ☐ **NO, attach explanation** **(Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)**

3. How many storm water discharge locations are at your facility? 4

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's storm water discharge locations? ☒ YES, go to Item E.6 ☐ NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ YES ☐ NO, **attach explanation**

   If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.

   Date facility's drainage areas were last evaluated _____

6. Were all samples collected during the first hour of discharge? ☒ YES ☐ NO, **attach explanation**

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☒ YES ☐ NO, **attach explanation**

8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond) ☐ YES ☒ NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☐ NO, **attach explanation**

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

    a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☒ YES ☐ NO, Go to Item E.11

    b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☒ YES ☐ NO

    c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

    _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

    _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

    _____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler.
- Parameters tested.
- Name of analytical testing laboratory.
- Discharge location identification.
- Testing results.
- Test methods used.
- Test detection limits.
- Date of testing.
- Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**
Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

☐ **YES** ☒ **NO** Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers**. Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September	☐ **YES**	☐ **NO**	☒ **N/A**	October-December	☐ **YES**	☐ **NO**	☒ **N/A**
January-March	☐ **YES**	☐ **NO**	☒ **N/A**	April-June	☐ **YES**	☐ **NO**	☒ **N/A**

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

i. name of each authorized non-storm water discharge
ii. date and time of observation
iii. source and location of each authorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**
Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers**.

July -September	☒ **YES**	☐ **NO**	October-December	☒ **YES**	☐ **NO**
January-March	☒ **YES**	☐ **NO**	April-June	☒ **YES**	☐ **NO**

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

☐ **YES** ☒ **NO** Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

☐ **YES** ☐ **NO** **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

i. name of each unauthorized non-storm water discharge.
ii. date and time of observation.
iii. source and location of each unauthorized non-storm water discharge.
iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
v. name, title, and signature of observer.
vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers**. Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	☐	☒	February	☒	☐
November	☒	☐	March	☒	☒
December	☒	☐	April	☐	☒
January	☐	☒	May	☒	☐

2. Report monthly wet season visual observations using **Form 4** or provide the following information.

   a. date, time, and location of observation
   b. name and title of observer
   c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
   d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
   The following areas should be inspected:

   - areas where spills and leaks have occured during the last year.
   - outdoor wash and rinse areas.
   - process/manufacturing areas.
   - loading, unloading, and transfer areas.
   - waste storage/disposal areas.
   - dust/particulate generating areas.
   - erosion areas.
   - building repair, remodeling, and construction
   - material storage areas
   - vehicle/equipment storage areas
   - truck parking and access areas
   - rooftop equipment areas
   - vehicle fueling/maintenance areas
   - non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

   - facility boundaries
   - outline of all storm water drainage areas
   - areas impacted by run-on
   - storm water discharges locations
   - storm water collection and conveyance system
   - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? ☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

1. Have you attached Forms 1,2,3,4, and 5 or their equivalent?	☒ YES (Mandatory)		
2. If you conducted sampling and analysis, have you attached the laboratory analytical reports?	☒ YES	☐ NO	☐ NA
3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications?	☐ YES	☐ NO	☒ NA
4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J?	☒ YES	☐ NO	☐ NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

FORM 3-QUARTERLY VISUAL OBSERVATIONS OF UNAUTHORIZED NON-STORM WATER DISCHARGES (NSWDs)

- Unauthorized NSWDs are discharges (such as wash or rinse waters) that do not meet the conditions provided in Section D (pages 5-6) of the General Permit.
- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordance with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

QUARTER: **JULY-SEPT.** **DATE/TIME OF OBSERVATIONS** ☒ AM ☐ PM 9/12/14 10:30	Observers Name: Ron Thompson Title: Manager Signature:	**WERE UNAUTHORIZED NSWDs OBSERVED?** ☐ YES ☒ NO **WERE THERE INDICATIONS OF PRIOR UNAUTHORIZED NSWDs?** ☐ YES ☒ NO	If **YES** to either question, complete reverse side.

Wet Weather Season Monthly Stormwater Visual Observation Form 4

Instructions: Complete this form for each month during the Stormwater Wet Weather Season months of October through May. This form is used to document rain events, discharges that occur during the month, or that there was no discharge during the entire month. Keep all completed forms in your plant files.

Plant: Carroll Canyon
Camino Santa Fe
Plant Discharge Location: Desilt Basin

Month and Year: May 2015

Inspector(s): Ron Thompson

Inspector(s) Job Title: Manager

Fill out this section during the month:

1 DATE	2 AMOUNT OF RAIN	3 DISCHARGE? Yes or No	4 1ST HOUR OF DISCHARGE DURING OPERATING HOURS? Yes, No, or N/A	5 DISCHARGE PRECEDED BY 3 DAYS OF NO DISCHARGE? Yes, No, or N/A	6 COMMENTS
5/15	.43	No	N/A	N/A	
5/22	.08	No	N/A	N/A	

Is yes entered in columns 3, 4, and 5?

☒ No ☐ Yes

- If you answered *"No"*, then do not fill out the below Observations data.
- If you answered "Yes" and this is the first discharge of the month, then fill in the below Observation and BMP data

Observation Summary of ***First*** Discharge of Month, During Operating Hours:

Date of Discharge Observation	Time of Discharge Observation	Time Discharge Began (est)

Characteristics of Discharge:

Discharge turbid or colored?	☐ No	☐ Yes
Discharge have sheen?	☐ No	☐ Yes
Discharge leave staining?	☐ No	☐ Yes
Discharge have odor?	☐ No	☐ Yes
Discharge have debris?	☐ No	☐ Yes

Source of any pollutants in discharge: _____

BMP's in place?	☐ No	☐ Yes
New BMP's needed to reduce pollutants in discharge?	☐ No	☐ Yes

If "Yes," describe new BMP's: _____

Inspector's Signature

Date 6/1/15

Date should reflect the last operating day of the month or the first operating day of the following month.

Wet Weather Season Monthly Stormwater Visual Observation Form 4

Observation Summary of ***First*** Discharge of Month, During Operating Hours:

Date of Discharge Observation	Time of Discharge Observation	Time Discharge Began (est)

Characteristics of Discharge:

Discharge turbid or colored?	☐ No	☐ Yes
Discharge have sheen?	☐ No	☐ Yes
Discharge leave staining?	☐ No	☐ Yes
Discharge have odor?	☐ No	☐ Yes
Discharge have debris?	☐ No	☐ Yes

Source of any pollutants in discharge: _____

BMP's in place?	☐ No	☐ Yes
New BMP's needed to reduce pollutants in discharge?	☐ No	☐ Yes

If "Yes," describe new BMP's: _____

Inspector's Signature _____ Date 11/3/14

Date should reflect the last operating day of the month or the first operating day of the following month.

2014-2015

ANNUAL REPORT

SIDE A

FORM 5-ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION
POTENTIAL POLLUTANT SOURCE/INDUSTRIAL ACTIVITY BMP STATUS

EVALUATION DATE: 2/24/2015 **INSPECTOR NAME:** Aaron Lund **TITLE:** Environmental Manager **SIGNATURE:**

POTENTIAL POLLUTANT SOURCE/INDUSTRIAL ACTIVITY AREA (as identified in your SWPPP)			Describe deficiencies in BMPs or BMP implementation	Describe additional/revised BMPs or corrective actions and their date(s) of implementation
Mine Area-Excavation, loading, and conveying of sand and gravel	HAVE ANY BMPs NOT BEEN FULLY IMPLEMENTED? ☐YES ☒NO	If yes, to either question, complete the next two columns of this form		
	ARE ADDITIONAL/REVISED BMPs NECESSARY? ☐YES ☒NO			
POTENTIAL POLLUTANT SOURCE/INDUSTRIAL ACTIVITY AREA (as identified in your SWPPP)			Describe deficiencies in BMPs or BMP implementation	Describe additional/revised BMPs or corrective actions and their date(s) of implementation
Rock and sand Plant-Crushing and screening	HAVE ANY BMPs NOT BEEN FULLY IMPLEMENTED? ☐YES ☒NO	If yes, to either question, complete the next two columns of this form		
	ARE ADDITIONAL/REVISED BMPs NECESSARY? ☐YES ☒NO			
POTENTIAL POLLUTANT SOURCE/INDUSTRIAL ACTIVITY AREA (as identified in your SWPPP)			Describe deficiencies in BMPs or BMP implementation	Describe additional/revised BMPs or corrective actions and their date(s) of implementation
Rock and Sand plant- washing of processed material; sand washing	HAVE ANY BMPs NOT BEEN FULLY IMPLEMENTED? ☐YES ☒NO	If yes, to either question, complete the next two columns of this form		
	ARE ADDITIONAL/REVISED BMPs NECESSARY? ☐YES ☒NO			
POTENTIAL POLLUTANT SOURCE/INDUSTRIAL ACTIVITY AREA (as identified in your SWPPP)			Describe deficiencies in BMPs or BMP implementation	Describe additional/revised BMPs or corrective actions and their date(s) of implementation
Rock and Sand Plant-storage of sand and gravel in stockpiles	HAVE ANY BMPs NOT BEEN FULLY IMPLEMENTED? ☐YES ☒NO	If yes, to either question, complete the next two columns of this form		
	ARE ADDITIONAL/REVISED BMPs NECESSARY? ☐YES ☒NO			

2014-2015
ANNUAL REPORT

SIDE B

FORM 5 (Continued)-ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION
POTENTIAL POLLUTANT SOURCE/INDUSTRIAL ACTIVITY BMP STATUS

EVALUATION DATE: 2/24/2015 **INSPECTOR NAME:** Aaron Lund **TITLE:** Environmental Manager **SIGNATURE:**

POTENTIAL POLLUTANT SOURCE/INDUSTRIAL ACTIVITY AREA (as identified in your SWPPP)			Describe deficiencies in BMPs or BMP implementation	Describe additional/revised BMPs or corrective actions and their date(s) of implementation
Concrete Plant-Storage of sand and gravel; cement and fly ash in silos; admixtures and colors	HAVE ANY BMPs NOT BEEN FULLY IMPLEMENTED? ☐YES ☒NO	If yes, to either question, complete the next two columns of this form		
	ARE ADDITIONAL/REVISED BMPs NECESSARY? ☐YES ☒NO			
POTENTIAL POLLUTANT SOURCE/INDUSTRIAL ACTIVITY AREA (as identified in your SWPPP)			**Describe deficiencies in BMPs or BMP implementation**	**Describe additional/revised BMPs or corrective actions and their date(s) of implementation**
Concrete Plant- Interior and exterior truck washing	HAVE ANY BMPs NOT BEEN FULLY IMPLEMENTED? ☐YES ☒NO	If yes, to either question, complete the next two columns of this form		
	ARE ADDITIONAL/REVISED BMPs NECESSARY? ☐YES ☒NO			
POTENTIAL POLLUTANT SOURCE/INDUSTRIAL ACTIVITY AREA (as identified in your SWPPP)			**Describe deficiencies in BMPs or BMP implementation**	**Describe additional/revised BMPs or corrective actions and their date(s) of implementation**
Quality Control Areas; Boneyards	HAVE ANY BMPs NOT BEEN FULLY IMPLEMENTED? ☐YES ☒NO	If yes, to either question, complete the next two columns of this form		
	ARE ADDITIONAL/REVISED BMPs NECESSARY? ☐YES ☒NO			
POTENTIAL POLLUTANT SOURCE/INDUSTRIAL ACTIVITY AREA (as identified in your SWPPP)			**Describe deficiencies in BMPs or BMP implementation**	**Describe additional/revised BMPs or corrective actions and their date(s) of implementation**
Fueling and Shop	HAVE ANY BMPs NOT BEEN FULLY IMPLEMENTED? ☐YES ☒NO	If yes, to either question, complete the next two columns of this form		
	ARE ADDITIONAL/REVISED BMPs NECESSARY? ☐YES ☒NO

Dear Mr. Zagar:

SUBJECT: MIRAMAR PLANT, CARROLL CANYON PLANT, CONCRETE BATCHING PLANT, CHANNEL ROAD SAND PLANT, OTAY PLANT, SLAUGHTERHOUSE CANYON PLANT

This is to acknowledge receipt of the January – December Annual 2008 Monitoring Reports submitted by Hanson Aggregates in accordance with Monitoring and Reporting Program No. 94-63, No. 95-104, No. 94-34, No. 88-65, No. 94-07, No. 94-06 for the subject facilities.

The California Regional Water Quality Control Board, San Diego Region (Regional Board) has the following comments regarding the reports referenced above:

1. No violations of Order No. 94-63, No. 95-104, No. 94-34, No. 88-65, No. 94-07, No. 94-06 were identified in the submitted reports.

2. The next monitoring report is the January - December 2009 Annual Monitoring Report, which is due on January 30, 2010.

In the subject line of any response, please include the requested "in reply refer to" information located in the heading of this letter. Please contact Amanda Dai at 858-627-3977 or at adai@waterboards.ca.gov if you have any questions on this matter.

Respectfully,

CAROL TAMAKI
Water Resource Control Engineer
Ground Water Branch

State of California
STATE WATER RESOURCES CONTROL BOARD

2006-2007
ANNUAL REPORT
FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2006 through June 30, 2007

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at http://www.waterboards.ca.gov/stormwtr/contact.html. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information:

2006-2007

ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

   ☒ **YES** Go to Item D.2 ☐ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

   i. ☒ Participating in an Approved Group Monitoring Plan **Group Name:** Building Materials Industry

   ii. ☐ Submitted **No Exposure Certification (NEC)** Date Submitted: ___/___/___

   Re-evaluation Date: ___/___/___

   Does facility continue to satisfy NEC conditions? ☐ YES ☐ NO

   iii. ☐ Submitted **Sampling Reduction Certification (SRC)** Date Submitted: ___/___/___

   Re-evaluation Date: ___/___/___

   Does facility continue to satisfy SRC conditions? ☐ YES ☐ NO

   iv. ☐ Received Regional Board Certification Certification Date: ___/___/___

   v. ☐ Received Local Agency Certification Certification Date: ___/___/___

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

   ☒ **YES** *Go to Section E* ☐ **NO** *Go to Section F*

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 1 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

   ☒ **YES** ☐ **NO** **attach explanation** **(Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)**

3. How many storm water discharge locations are at your facility? 1

2006-2007

ANNUAL REPORT

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's' storm water discharge locations? ☒ YES, go to Item E.6 ☐ NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ YES ☐ NO, **attach explanation**

   If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.

   Date facility's drainage areas were last evaluated ___/___/____

6. Were all samples collected during the first hour of discharge? ☒ YES ☐ NO, **attach explanation**

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☒ YES ☐ NO, **attach explanation**

8. Were there any discharges of storm water that had been temporarily stored or contained? (such as from a pond) ☒ YES ☐ NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☒ YES ☐ NO, **attach explanation**

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

    a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☒ YES ☐ NO, Go to Item E.11

    b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☒ YES ☐ NO

    c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

    _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

    _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

    _____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler
- Parameters tested
- Name of analytical testing laboratory
- Discharge location identification
- Testing results
- Test methods used
- Test detection limits
- Date of testing
- Copies of the laboratory analytical results

2006-2007

ANNUAL REPORT

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

☒ **YES** ☐ **NO** Go to Item F.2

b. Indicate whether you visually observed **all** authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July-September	☐ **YES**	☐ **NO**	☒ **N/A**	October-December	☐ **YES**	☐ **NO**	☒ **N/A**
January-March	☐ **YES**	☐ **NO**	☒ **N/A**	April-June	☐ **YES**	☐ **NO**	☒ **N/A**

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the *following information:*

i. name of each authorized non-storm water discharge
ii. date and time of observation
iii. source and location of each authorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non- storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July-September	☒ **YES**	☐ **NO**	October-December	☒ **YES**	☐ **NO**
January-March	☒ **YES**	☐ **NO**	April-June	☒ **YES**	☐ **NO**

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

☐ **YES** ☒ **NO** Go to Item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

☐ **YES** ☐ **NO** **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information:

i. name of each unauthorized non-storm water discharge
ii. date and time of observation
iii. source and location of each unauthorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

2006-2007

ANNUAL REPORT

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	☐	☒	February	☐	☒
November	☐	☒	March	☐	☒
December	☒	☐	April	☐	☒
January	☐	☒	May	☐	☒

2. Report monthly wet season visual observations using **Form 4** or provide the following information:

   a. date, time, and location of observation
   b. name and title of observer
   c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed
   d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
   The following areas should be inspected:

   - areas where spills and leaks have occurred during the last year
   - outdoor wash and rinse areas
   - process/manufacturing areas
   - loading, unloading, and transfer areas
   - waste storage/disposal areas
   - dust/particulate generating areas
   - erosion areas
   - building repair, remodeling, and construction
   - material storage areas
   - vehicle/equipment storage areas
   - truck parking and access areas
   - rooftop equipment areas
   - vehicle fueling/maintenance areas
   - non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

   - facility boundaries
   - outline of all storm water drainage areas
   - areas impacted by run-on
   - storm water discharges locations
   - storm water collection and conveyance system
   - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

2006-2007

ANNUAL REPORT

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

   The following records should be reviewed:

   - quarterly authorized non-storm water *discharge visual observations*
   - monthly storm water discharge visual observation
   - records of spills/leaks and associated clean-up/response activities
   - quarterly unauthorized non-storm water discharge *visual observations*
   - Sampling and Analysis records
   - preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

   The following SWPPP items should be reviewed:

   - pollution prevention team
   - list of significant materials
   - description of potential pollutant sources
   - assessment of potential pollutant sources
   - identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

   The following BMP categories should be reviewed:

   - good housekeeping practices
   - spill response
   - employee training
   - erosion control
   - quality assurance
   - preventative maintenance
   - material handling and storage practices
   - waste handling/storage
   - structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit? ☒ YES ☐ NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

2006-2007

ANNUAL REPORT

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

1.	*Have you attached Forms 1,2,3,4, and 5 or their equivalent?*	☒ YES *(Mandatory)*		
2.	If you conducted sampling and analysis, have you attached the laboratory analytical reports?	☒ YES	☐ NO	☐ NA
3.	If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications?	☐ YES	☐ NO	☒ NA
4.	Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J?	☒ YES	☐ NO	☐ NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

2006-2007

ANNUAL REPORT

DESCRIPTION OF BASIC ANALYTICAL PARAMETERS

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC),and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

pH is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

Total Suspended Solids (TSS) is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

Specific Conductance (SC) is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. *Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for* drinking, irrigation, and other commercial or industrial use.

Total Organic Carbon (TOC) is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in *animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include* pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of *TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.*

Oil and Grease (O&G) is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at http://www.waterboards.ca.gov. It is contained in the Sampling and Analysis Reduction Certification.

Response to Annual Report Items

Item Number:	Explanation
F.1	Authorized non-storm water discharges do occur at this facility in the form of dust control using water trucks. Visual observations were conducted on a quarterly and monthly basis and no discharges were observed leaving the property.
G.1	Although a monthly visual observation was attempted, there was no discharge observed during the months of October and November 2006 and January through May 2007 that presented a significant, qualifying rain event at the site. On March 27 and April 20 light rain was observed, but no discharge occurred. Discharge was observed from the site on December 27, 2006 and a storm water sample was collected.

FORM 2-QUARTERLY VISUAL OBSERVATIONS OF AUTHORIZED NON-STORM WATER DISCHARGES (NSWDs)

- Quarterly dry weather visual observations are required of each authorized NSWD.
- Observe each authorized NSWD source, impacted drainage area, and discharge location.
- Authorized NSWDs must meet the conditions provided in Section D (pages 5-6), *of the General Permit.*
- Make additional copies of this form as necessary.

QUARTER: **JULY-SEPT.** DATE: 8/15/06	**Observers Name:** Sean Leffler **Title:** Junior Environmental Scientist **Signature:**	**WERE ANY AUTHORIZED NSWDs DISCHARGED DURING THIS QUARTER?**	☐ **YES** ☒ **NO**	If **YES**, complete reverse side of this form.
QUARTER: **OCT.-DEC.** DATE: 11/10/06	**Observers Name:** Sean Leffler **Title:** Junior Environmental Scientist **Signature:**	**WERE ANY AUTHORIZED NSWDs DISCHARGED DURING THIS QUARTER?**	☐ **YES** ☒ **NO**	If **YES**, complete reverse side of this form.
QUARTER: **JAN.-MARCH** DATE: 2/16/07	**Observers Name:** Sean Leffler **Title:** Junior Environmental Scientist **Signature:**	**WERE ANY AUTHORIZED NSWDs DISCHARGED DURING THIS QUARTER?**	☐ **YES** ☒ **NO**	If **YES**, complete reverse side of this form.
QUARTER: **APRIL-JUNE** DATE: 5/ 30 / 07	**Observers Name:** Amy Tufts **Title:** Associate Environmental Scientist **Signature:** Amy Tufts	**WERE ANY AUTHORIZED NSWDs DISCHARGED DURING THIS QUARTER?**	☐ **YES** ☒ **NO**	If **YES**, complete reverse side of this form.

ANNUAL REPORT
FORM 3-QUARTERLY VISUAL OBSERVATIONS OF UNAUTHORIZED NON-STORM WATER DISCHARGES (NSWDs)

- Unauthorized NSWDs are discharges (such as wash or rinse waters) that do not meet the conditions provided in Section D (pages 5-6) of the General Permit.
- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- *Quarterly visual observations are required during dry weather and at all facility drainage areas.*
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordance with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

FORM 4-MONTHLY VISUAL OBSERVATIONS OF STORM WATER DISCHARGES

SIDE A

- Storm water discharge visual observations are required for at least one storm event per month between October 1 and May 31.
- Visual observations must be conducted during the first hour of discharge at all discharge locations.
- Discharges of temporarily stored or contained storm water must be observed at the time of discharge.
- Indicate "None" in the first column of this form if you did not conduct a monthly visual observation.
- Make additional copies of this form as necessary.
- Until a monthly visual observation is made, record any eligible storm events that do not result in a storm water discharge and note the date, time, name, and title of who observed there was no storm water discharge.

#311

Linda S. Adams
Secretary for
Environmental Protection

State of California
STATE WATER RESOURCES CONTROL BOARD

SAN DIEGO REGIONAL
WATER QUALITY
CONTROL BOARD

Arnold Schwarzenegger
Governor

2010-2011

ANNUAL REPORT

2011 JUN 29 P 2:53

FOR
STORM WATER DISCHARGES ASSOCIATED
WITH INDUSTRIAL ACTIVITIES

Reporting Period July 1, 2010 through June 30, 2011

An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year. This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at http://www.waterboards.ca.gov/stormwtr/contact.html. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

GENERAL INFORMATION:

A. Facility Information:

Facility WDID No: 937I014663

Facility Business Name: Hanson Aggregates (Carroll Canyon)
Contact Person: Jud Harvey
Physical Address: 9255 Camino Santa Fe
e-mail: Jud.Harvey@hanson.com
City: San Diego
CA Zip: 92121 Phone: (760) 591-0952
Standard Industrial Classification (SIC) Code(s): 1442, 3273, 2875, 7699

B. Facility Operator Information:

Operator Name: Hanson Aggregates (Pacific Southwest Region)
Contact Person: Steve Zacks
Mailing Address: P.O. Box 639069
e-mail: steve.zacks@hanson.com
City: San Diego
State: CA Zip: 92163 Phone: 805 748-0128

C. Facility Billing Information:

Operator Name: Hanson Aggregates (Pacific Southwest Region)
Contact Person: Steve Zacks
Mailing Address: P.O. Box 639069
e-mail: steve.zacks@hanson.com
City: San Diego

2010-2011

ANNUAL REPORT

SPECIFIC INFORMATION

MONITORING AND REPORTING PROGRAM

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

   ☒ **YES** Go to Item D.2 ☐ **NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

   i. ☒ Participating in an Approved Group Monitoring Plan **Group Name:** Building Materials Industry

   ii. ☐ Submitted **No Exposure Certification (NEC)** Date Submitted: ___/___/___

   Re-evaluation Date: ___/___/___

   Does facility continue to satisfy NEC conditions? ☐ YES ☐ NO

   iii. ☐ Submitted **Sampling Reduction Certification (SRC)** Date Submitted: ___/___/___

   Re-evaluation Date: ___/___/___

   Does facility continue to satisfy SRC conditions? ☐ YES ☐ NO

   iv. ☐ Received Regional Board Certification Certification Date: ___/___/___

   v. ☐ Received Local Agency Certification Certification Date: ___/___/___

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

   ☐ **YES** Go to Section E ☒ **NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? _____ If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

   ☐ **YES** ☐ **NO** **attach explanation** **(Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)**

3. How many storm water discharge locations are at your facility? _____

2010-2011

ANNUAL REPORT

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's' storm water discharge locations? ☐ YES, go to Item E.6 ☐ NO

5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit? ☐ YES ☐ NO, **attach explanation**

   If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.

   Date facility's drainage areas were last evaluated ___/___/_____

6. Were all samples collected during the first hour of discharge? ☐ YES ☐ NO, **attach explanation**

7. Was all storm water sampling preceded by three (3) working days without a storm water discharge? ☐ YES ☐ NO, **attach explanation**

8. Were there any discharges of storm water that had been temporarily stored or contained? (such as from a pond) ☐ YES ☐ NO, go to Item E.10

9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above) ☐ YES ☐ NO, **attach explanation**

10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.

    a. Does Table D contain any additional parameters related to your facility's SIC code(s)? ☐ YES ☐ NO, Go to Item E.11

    b. Did you analyze all storm water samples for the applicable parameters listed in Table D? ☐ YES ☐ NO

    c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:

    _____ In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**

    _____ The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**

    _____ Other. **Attach explanation**

11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:

- Date and time of sample collection
- Name and title of sampler
- Parameters tested
- Name of analytical testing laboratory
- Discharge location identification
- Testing results
- Test methods used
- Test detection limits
- Date of testing
- Copies of the laboratory analytical results

2010-2011

ANNUAL REPORT

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

☐ **YES** ☒ **NO** Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July-September	☐ YES	☐ NO	☐ N/A	October-December	☐ YES	☐ NO	☐ N/A
January-March	☐ YES	☐ NO	☐ N/A	April-June	☐ YES	☐ NO	☐ N/A

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information:

i. name of each authorized non-storm water discharge
ii. date and time of observation
iii. source and location of each authorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non- storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July-September	☒ YES	☐ NO	October-December	☒ YES	☐ NO
January-March	☒ YES	☐ NO	April-June	☒ YES	☐ NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

☐ **YES** ☒ **NO** Go to Item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

☐ **YES** ☐ **NO** **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information:

i. name of each unauthorized non-storm water discharge
ii. date and time of observation
iii. source and location of each unauthorized non-storm water discharge
iv. characteristics of the discharge at its source and impacted drainage area/discharge location
v. name, title, and signature of observer
vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

2010-2011
ANNUAL REPORT

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers**. Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	☒	☐	February	☐	☒
November	☐	☒	March	☒	☐
December	☒	☐	April	☐	☒
January	☐	☒	May	☐	☒

2. Report monthly wet season visual observations using **Form 4** or provide the following information:

   a. date, time, and location of observation
   b. name and title of observer
   c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed
   d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1-June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas? ☒ YES ☐ NO
   The following areas should be inspected:

   - areas where spills and leaks have occurred during the last year
   - outdoor wash and rinse areas
   - process/manufacturing areas
   - loading, unloading, and transfer areas
   - waste storage/disposal areas
   - dust/particulate generating areas
   - erosion areas
   - building repair, remodeling, and construction
   - material storage areas
   - vehicle/equipment storage areas
   - truck parking and access areas
   - rooftop equipment areas
   - vehicle fueling/maintenance areas
   - non-storm water discharge generating areas

2. *Have you reviewed your SWPPP to assure that its BMPs address existing* potential pollutant sources and industrial activities areas? ☒ YES ☐ NO

3. Have you inspected the entire facility to verify that the SWPPP's site map is up-to-date? The following site map items should be verified: ☒ YES ☐ NO

   - facility boundaries
   - outline of all storm water drainage areas
   - areas impacted by run-on
   - storm water discharges locations
   - storm water collection and conveyance system
   - structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

2010-2011
ANNUAL REPORT

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation? ☒ YES ☐ NO

   The following records should be reviewed:

   - quarterly authorized non-storm water discharge visual observations
   - monthly storm water discharge visual observation
   - records of spills/leaks and associated clean-up/response activities
   - quarterly unauthorized non-storm water discharge visual observations
   - Sampling and Analysis records
   - preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit? ☒ YES ☐ NO

   The following SWPPP items should be reviewed:

   - pollution prevention team
   - list of significant materials
   - description of potential pollutant sources
   - assessment of potential pollutant sources
   - identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented? ☒ YES ☐ NO

   The following BMP categories should be reviewed:

   - good housekeeping practices
   - spill response
   - employee training
   - erosion control
   - quality assurance
   - preventative maintenance
   - material handling and storage practices
   - waste handling/storage
   - structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected? ☒ YES ☐ NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken

ATTACHMENT SUMMARY

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

1.	Have you attached Forms 1,2,3,4, and 5 or their equivalent?	☒ YES (Mandatory)		
2.	If you conducted sampling and analysis, have you attached the laboratory analytical reports?	☐ YES	☐ NO	☒ NA
3.	If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications?	☐ YES	☐ NO	☒ NA
4.	Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J?	☒ YES	☐ NO	☐ NA

ANNUAL REPORT CERTIFICATION

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Printed Name: Steve Zacks

Title: Environmental Manager

2010- 2011

ANNUAL REPORT

No Answers for G-1: There were no industrial stormwater discharges to Waters of the US during operating hours, except during the months of October and December 2010, and March 2011. The date, time, name, and title of the person who observed there were no stormwater discharges are shown on the attached Form 4's. The Form 4's contain rain records for the reporting period.

Annual Comprehensive Site Evaluation

The evaluation was conducted on 5/13/2011 with the plant manager. The SWPPP was updated in May 2011 to reflect new BMP's (new desiltation basin, jute netting installation) implemented during the reporting year. The SWPPP site map was also updated to show these new BMP's.

FORM 2-QUARTERLY VISUAL OBSERVATIONS OF AUTHORIZED NON-STORM WATER DISCHARGES (NSWDs)

N/A- No Authorized NSWD's

* Quarterly dry weather visual observations are required of each authorized NSWD.
- Observe each authorized NSWD source, impacted drainage area, and discharge location.
- Authorized NSWDs must meet the conditions provided in Section D (pages 5-6), of the General Permit.
- Make additional copies of this form as necessary.

QUARTER: **JULY-SEPT.** DATE: __/__/__	**Observers Name:** _____ **Title:** _____ **Signature:** _____	**WERE ANY AUTHORIZED NSWDs DISCHARGED DURING THIS QUARTER?** ☐ **YES** ☐ **NO** If **YES**, complete reverse side of this form.

FORM 3-QUARTERLY VISUAL OBSERVATIONS OF UNAUTHORIZED NON-STORM WATER DISCHARGES (NSWDs)

- Unauthorized NSWDs are discharges (such as wash or rinse waters) that do not meet the conditions provided in Section D (pages 5-6) of the General Permit. Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordance with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

ANNUAL REPORT

FORM 4-MONTHLY VISUAL OBSERVATIONS OF STORM WATER DISCHARGES

SIDE A

SEE ATTACHED FORM 4'S

- Storm water discharge visual observations are required for at least one storm event per month between October 1 and May 31.
- Visual observations must be conducted during the first hour of discharge at all discharge locations.
- Discharges of temporarily stored or contained storm water must be observed at the time of discharge.
- Indicate "None" in the first column of this form if you did not conduct a monthly visual observation.
- *Make additional copies of this form as necessary.*
- Until a monthly visual observation is made, record any eligible storm events that do not result in a storm water discharge and note the date, time, name, and title of who observed there was no storm water discharge.

Wet Weather Season Monthly Stormwater Visual Observation Form 4

Instructions: Complete this form for each month during the Stormwater Wet Weather Season months of October through May. This form is used to document no discharge during the month or any discharge that occurs during the first hour of the first stormwater discharge of that month. This form is also used to record any rain events throughout the month. Keep all completed forms in your plant files.

Plant: Carroll Canyon

Plant Discharge Location: Access Road #1 (Low point in road)

Month and Year: 10/2016

Inspector(s): Jud Harvey

Inspector(s) Job Title: Site Manager

Fill out this section during the month:

DATE	AMOUNT OF RAIN	DISCHARGE? Yes or No	COMMENTS
oct 4,5 & 6th	TRACE	NO	
oct 19	.95	NO	
oct 25	TRACE	NO	

Was there any discharge of stormwater to a storm drain, creek or other drainage during the month, during operating hours?

☑ **No** ☐ **Yes**

- If you answered *"No,"* sign and date the bottom of the form. This form is now completed.
- If you answered *"Yes,"* fill out the below data before signing and dating the form.

Observation Summary of ***First*** Discharge of Month, During Operating Hours:

Date of Discharge Observation	Time of Discharge Observation	Time Discharge Began (est)

Characteristics of Discharge:

Discharge turbid or colored?	☐ No	☐ Yes
Discharge have sheen?	☐ No	☐ Yes
Discharge leave staining?	☐ No	☐ Yes
Discharge have odor?	☐ No	☐ Yes
Discharge have debris?	☐ No	☐ Yes

Source of any pollutants in discharge: _____

BMP's in place?	☐ No	☐ Yes
New BMP's needed to reduce pollutants in discharge?	☐ No	☐ Yes

If "Yes," describe new BMP's: _____

_____ 11/1/2016
