Sunset Gower Studios Enhancement Plan

Case Number: ENV-2017-5091-EIR

Project Addresses: 6010, 6050 and 6060 Sunset Boulevard, 1455 North Beachwood Drive, 1455 Gordon Street, and 1438 and 1440 North Gower Street, Los Angeles, CA 90028

Community Plan Area: Hollywood

Council District: 13—Mitch O'Farrell

Project Description: The Project would demolish approximately 160,500 square feet of existing floor area and preserve and enhance portions of the existing Sunset Gower Studios. Specifically, the Project would develop new studio-related creative office, production office/production support and storage uses within three new buildings. The proposed buildings would total approximately 628,000 square feet of floor area and would range from five to 18 stories, up to 300 feet in height. Overall, the Project would result in a net increase of approximately 467,500 square feet of floor area.

The Project would provide parking, as required by the Los Angeles Municipal Code, and provide up to 1,335 new parking spaces, including 525 spaces within a new parking structure with six above-grade levels and three subterranean levels, 531 spaces within three subterranean parking levels below the existing basecamp and below a proposed 1,450-square-foot bicycle parking facility, and 279 spaces within three subterranean levels below one of the new buildings.

PROJECT DESCRIPTION:

The Project proposes to preserve and enhance portions of the existing Sunset Gower Studios and develop new studio-related creative office, production office/production support and storage uses within three new buildings that would comprise approximately 628,000 square feet of floor area. The proposed buildings would range from five to 18 stories up, to 300 feet in height. The Project would provide up to 1,335 new parking spaces, including up to 525 spaces within a new parking structure with six above-grade levels and three subterranean levels, up to 531 spaces within three subterranean parking levels below the existing basecamp and below a proposed 1,450-square-foot bicycle parking facility, and up to 279 spaces within three subterranean levels below one of the new buildings. Overall, the Project would result in a net increase of approximately 467,500 square feet of floor area upon buildout of the Project and an associated floor area ratio of 1.47:1. For a detailed description of the Project, refer to the attached Project Description.

ENVIRONMENTAL SETTING:

The Project Site is the 16.5-acre Sunset Gower Studios at 1438 North Gower Street, bounded by Sunset Boulevard to the north, Gordon Street to the east, Fountain Avenue to the south, and Gower Street to the west. The immediate vicinity includes historic and modern low- to high-rise buildings occupied by commercial/retail uses, tourist and entertainment-related commercial/retail uses, offices, hotels, educational institutions, and single-family and multi-family residences such as the Sunset Gower Plaza, Siren Studios, the EastWest Studios, Emerson College, and the Columbia Square Complex. For additional detail, refer to the attached Project Description.

Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, has consultation begun?

No.

Other public agencies whose approval is required (e.g. permits, financing approval, or participation agreement.):

Potentially including, but not limited to, the Regional Water Quality Control Board, South Coast Air Quality Management District.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Hazards & Hazardous Materials	☐ Recreation
☐ Agriculture and Forestry Resources	☐ Hydrology / Water Quality	☒ Transportation / Traffic
☒ Air Quality	☒ Land Use / Planning	☒ Tribal Cultural Resources
☐ Biological Resources	☐ Mineral Resources	☒ Utilities / Service Systems
☒ Cultural Resources	☒ Noise	☒ Mandatory Findings of Significance
☐ Geology / Soils	☐ Population / Housing	
☒ Greenhouse Gas Emissions	☒ Public Services	

DETERMINATION (to be completed by Lead Agency)

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions on the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☒ I find the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Alejandro Huerta	City Planner
PRINTED NAME	**TITLE**
	(213) 978-1454
SIGNATURE	**TELEPHONE NUMBER**

EVALUATION OF ENVIRONMENTAL IMPACTS:

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less that significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4) "Negative Declaration: Less Than Significant With Mitigation Incorporated" applies where the incorporation of a mitigation measure has reduced an effect from "Potentially Significant Impact" to "Less Than Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from "Earlier Analysis," as described in (5) below, may be cross referenced).

5) Earlier analysis must be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR, or negative declaration. Section 15063 (c)(3)(D). In this case, a brief discussion should identify the following:

    a) Earlier Analysis Used. Identify and state where they are available for review.

    b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

    c) Mitigation Measures. For effects that are "Less Than Significant With Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated

7) Supporting Information Sources: A sources list should be attached, and other sources used or individuals contacted should be cited in the discussion.

8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whichever format is selected.

9) The explanation of each issue should identify:

    a) The significance criteria or threshold, if any, used to evaluate each question; and

    b) The mitigation measure identified, if any, to reduce the impact to less than significance.

A. Project Description

Initial Study

Project Description

A. Project Summary

The Sunset Gower Studios Enhancement Plan (the Project) proposes improvements, which could occur in phases, on a 15.9-acre (693,432 square feet) portion of the existing 16.5-acre Sunset Gower Studios (Project Site).[1] The Project Site is currently occupied by creative offices, production support, and sound stages totaling 550,300 square feet of floor area.[2] Approximately 1,400 square feet of existing service areas are also located within the Project Site.[3]

The Project would preserve and enhance portions of the existing Sunset Gower Studios and develop new studio-related creative office, production office/production support and storage uses within three new buildings that would result in approximately 628,000 square feet of floor area. The three new buildings would range from five to 18 stories, up to 300 feet in height. The Project would provide parking in accordance with the requirements of the Los Angeles Municipal Code (LAMC) and could provide up to 1,335 new parking spaces, consisting of up to 525 spaces within a new parking structure with six above-grade levels and three subterranean levels, up to 531 spaces within three subterranean parking levels below the existing basecamp[4] and below a proposed 1,450-square-foot bicycle parking facility, and up to 279 spaces within three subterranean levels below one of the new buildings. The existing 1,398 parking spaces would remain. Thus, upon buildout of the Project, up to 2,733 parking spaces could be provided within the Project Site.

The Project would include landscaped courtyards and walkways to connect the proposed buildings. The Project would remove approximately 160,500 square feet of existing floor area, consisting of approximately 125,500 square feet of creative office floor area, 29,400 square feet of production support floor area, and 5,600 square feet of sound stage floor area. The approximately

---

[1] *The northwest corner of Sunset Gower Studios (1448 N. Gower Street) is not included in the 15.9-acre portion of the Project Site because it is under separate ownership.*

[2] *All square-footage numbers represent floor area as defined by the Los Angeles Municipal Code. Specifically, floor area includes the area in square feet confined within the exterior walls of a building, but not including the area of the following: exterior walls, stairways, shafts, rooms housing Building-operating equipment or machinery, parking areas with associated driveways and ramps, space dedicated to bicycle parking, space for the landing and storage of helicopters, and basement storage areas.*

[3] *The existing service areas totaling approximately 1,400 square feet do not meet the LAMC definition of floor area and are not included in the total existing floor area of the Project Site.*

[4] *The existing basecamp comprises the exterior surface production parking and production staging area located in the interior of the Project Site.*

1,400 square feet of existing service areas would also be removed. Overall, the Project would result in a net increase of approximately 467,500 square feet of floor area.

B. Environmental Setting

1. Project Location

The approximately 16.5-acre Sunset Gower Studios is located at 1438 North Gower Street within the Hollywood Community Plan Area of the City of Los Angeles. The Sunset Gower Studios is bounded by Sunset Boulevard to the north, Gordon Street to the east, Fountain Avenue to the south, and Gower Street to the west. A vicinity map is provided in Figure A-1 on page A-3, and an aerial view of the Project Site and vicinity is included in Figure A-2 on page A-4.

2. Background and Existing Conditions

a. Project Site Background

The Sunset Gower Studios has been developed with studio-related uses since 1912. Columbia Pictures occupied the Project Site from 1920 until 1972, when Columbia Pictures relocated to Burbank. In 1976, the Pick Vanoff Company purchased the studio lot and the name was changed to Sunset Gower Studios. At that time, the Sunset Gower Studios became a rental facility for independent film companies and includes facilities for music rehearsal. In 2004, Sunset Gower Studios was purchased by GI Partners and, since 2007, has been owned by Hudson Pacific Properties.

b. Existing Project Site Conditions

As summarized in Table A-1 on page A-5, existing development within the Project Site includes approximately 550,300 square feet of floor area, consisting of approximately 319,300 square feet of creative office space, 56,000 square feet of production support, and approximately 175,000 square feet of sound stages. The Project Site also includes approximately 1,400 square feet of service areas. In addition, the Project Site includes three parking structures providing a total of 1,398 parking spaces. The northwest corner of Sunset Gower Studios (1448 N. Gower Street) is not included in the 15.9-acre portion of the Project Site because it is under separate ownership. The existing vacant structure located at 1448 N. Gower Street was previously used as a restaurant.

A site plan of the existing uses within the Project Site is provided in Figure A-3 on page A-6. The majority of the sound stages are located along Gower Street, and the parking structures are located along Gordon Street, with the creative office and production support uses dispersed in buildings that are mostly centrally located on the Project Site.

Table A-1
Existing Uses on the Project Site

Use	Total (sf)[a,b]
Creative Office	319,300 sf
Production Support	56,000 sf
Sound Stages	175,000 sf
Total Existing	**550,300 sf**

sf = square feet

[a] *In accordance with LAMC Section 12.03, floor area is defined as "[t]he area in square feet confined within the exterior walls of a building, but not including the area of the following: exterior walls, stairways, shafts, rooms housing building-operating equipment or machinery, parking areas with associated driveways and ramps, space for the landing and storage of helicopters, and basement storage areas."*

[b] *The existing service areas totaling approximately 1,400 square feet do not meet the LAMC definition of floor area and are not included in the total existing floor area of the Project Site.*

Source: Gensler, 2017.

The Project Site contains limited to sparse landscaping in the form of non-native/ non-protected trees,[5] hedges, and shrubs. The Project Site is currently fenced off, with access limited to the tenants and their guests.

Vehicular access to the Project Site is provided along Sunset Boulevard at North Beachwood Drive and along Gordon Street through gated entries. Emergency and limited access is provided along Fountain Avenue. Limited pedestrian access is also provided along Gower Street through a gated entry.

c. Land Use and Zoning

The Project Site is located within the Hollywood Community Plan Area and has a Limited Manufacturing General Plan land use designation.

The Project Site is zoned M1-1 (Limited Industrial, Height District 1). The M1 Zone permits MR1 uses (Restricted Industrial), limited industrial and manufacturing uses, any enclosed C2 use, wireless telecommunications, and household storage.

[5] *The City of Los Angeles Protected Tree Regulations apply to Oak, Southern California Black Walnut, Western Sycamore, and California Bay tree species that are native to Southern California, and excludes trees grown by a nursery or trees planted or grown as part of a tree planting program.*

Existing to Remain

Proposed Demolition

Entitlement Area (Property Line)

Project Site

Figure A-3

Existing Site and Proposed Demolition Plan

Source: Gensler, 2017.

Height District 1 within the M1 Zone has no height limit with a maximum Floor Area Ratio (FAR) of 1.5:1. The Project Site is located in a Transit Priority Area, as defined by Zoning Information File 2452.[6]

3. Surrounding Land Uses

The Project Site is within the highly urbanized Hollywood Community Plan Area, which is characterized by a mix of uses within a range of building types, such as historic and modern low- to high-rise buildings with commercial/retail uses, tourist and entertainment-related commercial/retail uses, offices, hotels, educational institutions, and single-family and multi-family residences. In general, the major arterials in the vicinity of the Project Site, including Sunset Boulevard, Hollywood Boulevard, and Santa Monica Boulevard, are lined with commercial, industrial, and some residential mixed-use developments, with residential neighborhoods primarily interspersed between the major arterials.

Land uses surrounding the Project Site specifically include retail and restaurant uses within the Sunset Gower Plaza, Siren Studios, a motel, and other commercial/retail uses to the north, along Sunset Boulevard; the EastWest Studios, Emerson College, and single- and multi-family residential uses to the east, along Gordon Street; single- and multi-family residential and commercial uses to the south, along Fountain Avenue; and commercial, retail, restaurant, and multi-family residential uses to the west, along Gower Street. Also to the west of the Project Site is an existing vacant structure located at the southeast corner of Sunset Boulevard and Gower Street that was previously used as a restaurant.

4. Freeways and Transit

As shown in Figure A-1 on page A-3, primary regional access in the vicinity of the Project Site is provided by the Hollywood Freeway (US-101), which runs generally north–south approximately 0.4 mile east of the Project Site. Major arterials providing regional access to the Project Site and vicinity include Sunset Boulevard, Hollywood Boulevard, Van Ness Avenue, and La Brea Avenue. As illustrated in Figure A-4 on page A-8, the Project Site and vicinity are also well served by public transit provided by the Los Angeles County Metropolitan Transit Authority (Metro) and the Los Angeles Department of Transportation DASH. Several bus stops are located along Sunset Boulevard and Gower Street, including Metro bus line 2, DASH Hollywood, and DASH Hollywood/Wilshire. The Metro Hollywood/Vine Station is located approximately 0.6 mile northwest of the Project Site.

---

[6] *The City's Zone Information and Map Access System (ZIMAS) confirms the Project Site's location within a Transit Priority Area, as defined in the City's Zoning Information File No. 2452.*

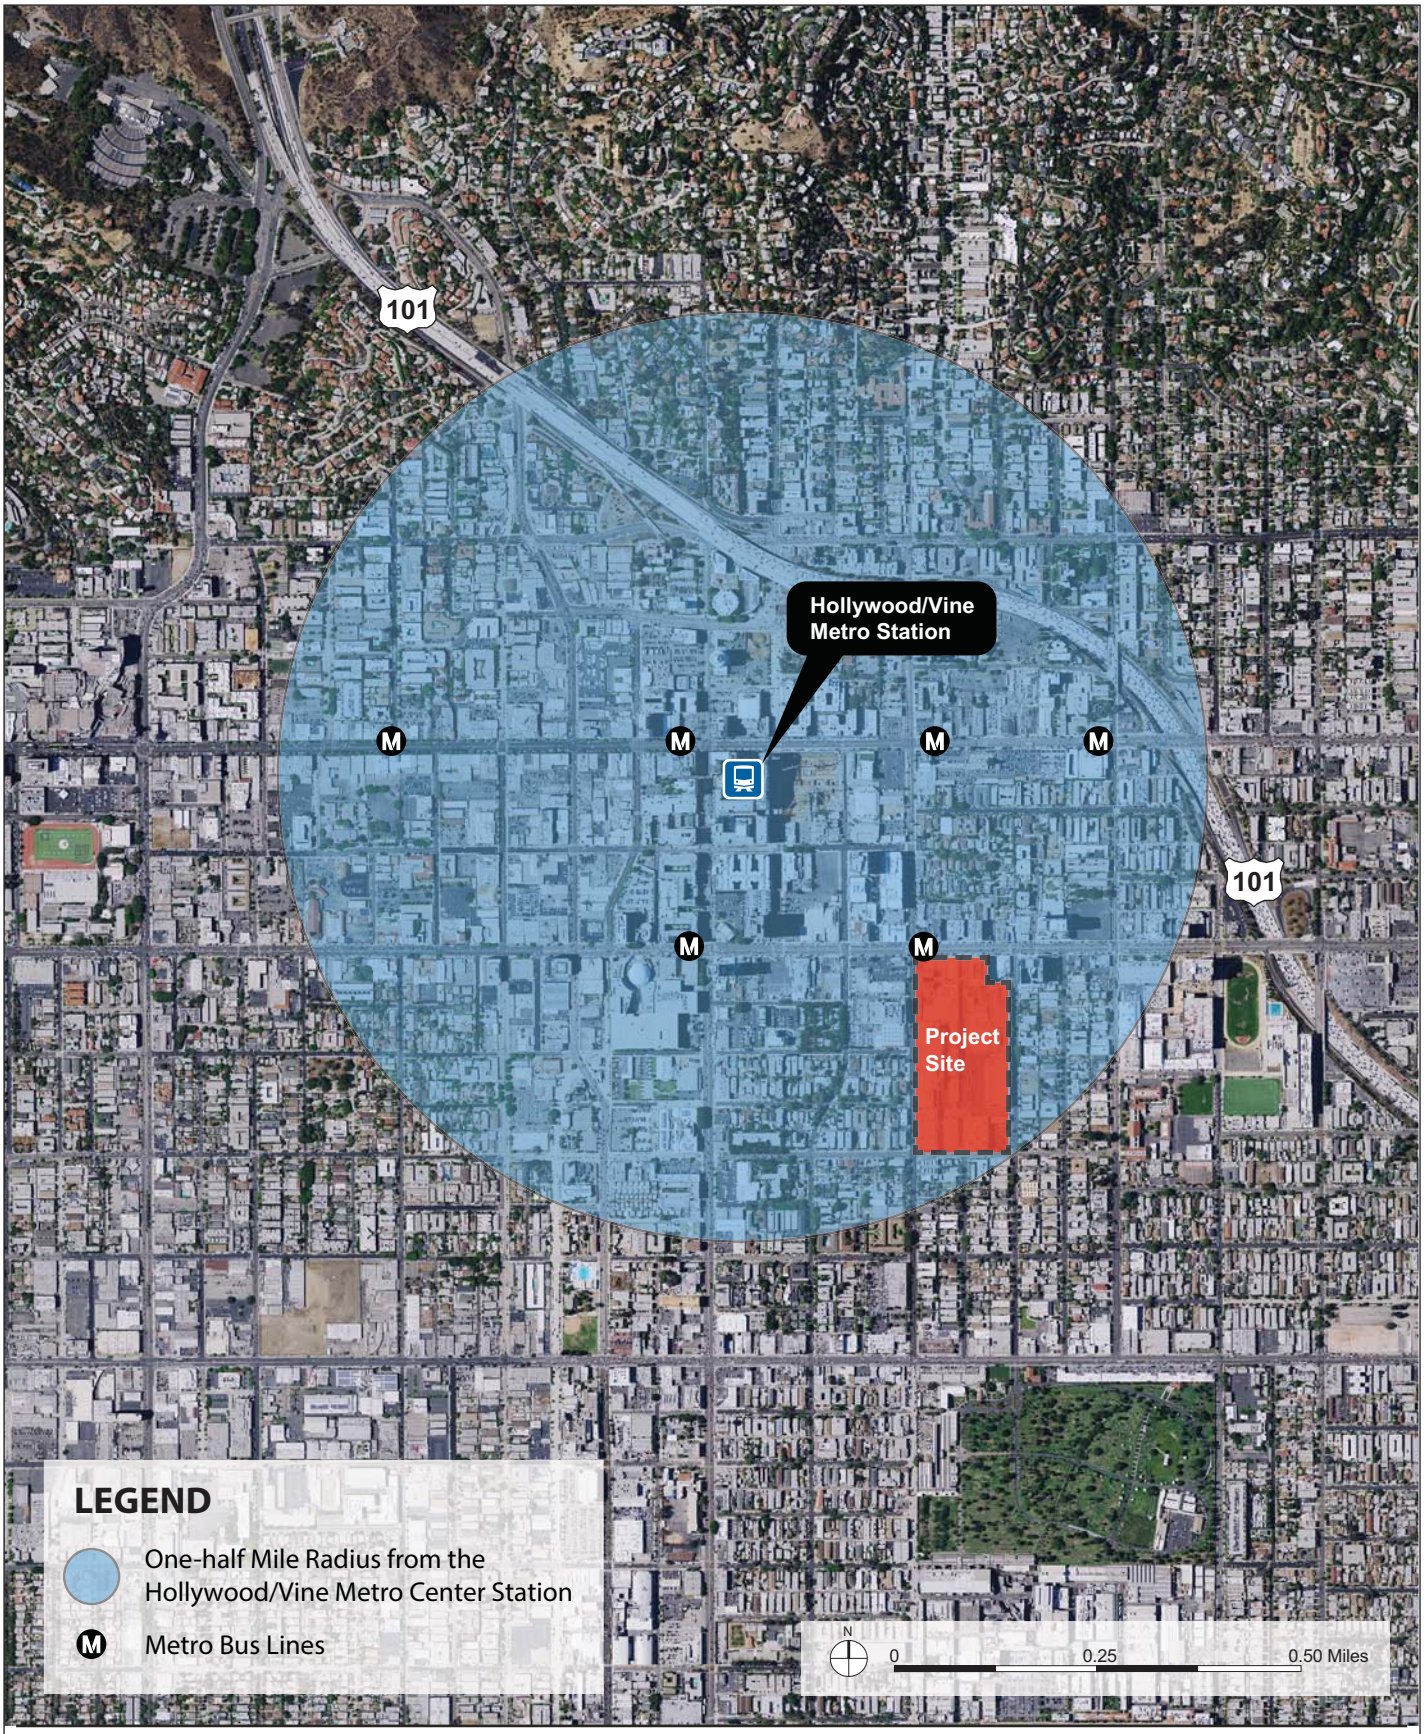

Figure A-4
Location of Project Site within a Transit Priority Area

Source: Eyestone Environmental, 2018.

C. Description of the Project

1. Project Overview

The proposed studio-related creative office, production office/production support and storage uses would be provided within three new buildings (referred to herein as Buildings A, B, and C). To build the proposed improvements, the Project would demolish approximately 160,500 square feet of existing floor area, consisting of approximately 125,500 square feet of creative office floor area, 29,400 square feet of production support floor area, and 5,600 square feet of sound stage floor area, as shown in Figure A-3 on page A-6. The approximately 1,400 square feet of existing service areas would also be removed. Three buildings on the Project Site could be eligible for historic status. The Project proposes to retain two of these: the building at 1440 Gower Street and the building at 1455 Gordon Street. The third building, at 6050 Sunset Boulevard, would be demolished.

Overall, as shown in Table A-2 on page A-10, the Project would remove approximately 160,500 square feet of existing floor area and develop approximately 628,000 square feet of floor area, resulting in a net increase of approximately 467,500 square feet of floor area. The Project would have a FAR of 1.47:1, which would be below the allowable FAR of 1.5:1. Upon buildout of the Project, a total of up to 2,733 parking spaces (including the existing 1,398 parking spaces to remain) would be provided within the Sunset Gower Studios. A conceptual site plan of the proposed development is provided in Figure A-5 on page A-11.

As shown in Figure A-5, Building A would be located along Sunset Boulevard, and Buildings B and C would be centrally located within the Project Site. The proposed parking structure would be located in the southeastern portion of the Project Site, at the corner of Gordon Street and Fountain Avenue.

Building A would contain approximately 478,950 square feet of creative office space. Building A would be 18 stories with a height of 300 feet. Three levels of subterranean parking would be provided in Building A. Building B would contain approximately 68,600 square feet of creative office and production support space. Building B would be five stories with a height of approximately 89 feet. Building C would contain approximately 79,000 square feet of creative office and production support space. Building C would be six stories with a height of approximately 89 feet. As illustrated in Figure A-5, the Project would locate the tallest buildings along Sunset Boulevard, similar to other developments in the near vicinity. The proposed buildings would be designed in a contemporary architectural style. Building A would feature varying façade planes articulated by sawtooth windows, glass curtain walls, and exposed black steel beams. Buildings B and C would also feature varying façade planes articulated by steel-frame windows, curtain walls, exposed black steel beams, textured concrete, and polycarbonate panels.

Because there are potential historical resources on the Project Site, a Historic Resources Plan would be prepared and implemented as part of the Project to guide the preservation of a majority of the Project Site's historical resources, as well as construction of new structures. The Historic Resources Plan would include detailed guidelines for the rehabilitation and preservation of

Table A-2
Summary of Proposed Floor Area

Land Use	Existing	Proposed Demolition	Proposed Construction	Net New
Creative Office	319,300 sf	(125,500 sf)	599,350 sf	473,850 sf
Production Support	56,000 sf	(29,400 sf)	27,200 sf	(2,200) sf
Sound Stages	175,000 sf	(5,600 sf)	—	(5,600) sf
Total	**550,300 sf**	**(160,500 sf)**	**628,000 sf[a]**	**467,500 sf[a]**

sf = square feet

[a] *Includes proposed 1,450-square-foot bicycle parking facility.*

Source: Eyestone Environmental, 2017.

most of the existing buildings that contribute to a potential Historic Studio District following Project development.

2. Access and Parking

As shown in Figure A-5 on page A-11, existing vehicular access to the Project Site would be maintained and would be provided via driveways along Sunset Boulevard and Gordon Street. Pedestrian-only access would also continue to be provided along Gower Street.

The Project would provide parking in accordance with the requirements of the LAMC and could provide up to 1,335 new parking spaces, consisting of up to 525 spaces within a new parking structure with six above-grade levels and three subterranean parking levels, up to 531 spaces within three subterranean parking levels below the existing basecamp and below a proposed 1,450-square-foot bicycle parking facility, and up to 279 spaces within three subterranean levels below Building A. The proposed subterranean parking levels would extend to a maximum depth of 42 feet. The Project would also comply with City requirements for providing electric vehicle charging capabilities and electric vehicle charging stations within the new parking facilities. In addition, in accordance with the requirements of the LAMC, approximately 284 bicycle parking spaces consisting of 102 short-term spaces and 182 long-term spaces would be provided.

3. Internal Landscape Areas

As shown in Figure A-6 on page A-12, the landscape plan would create a variety of landscaped gathering areas to enhance the existing pedestrian environment internal to the Project Site, including a paseo, a central plaza area, courtyards, and roof gardens and terraces. These areas would include trees, accent paving, seating, and other landscaping features throughout the Project Site.

4. Lighting and Signage

The Project would include low-level exterior lights adjacent to the proposed buildings and along pathways for security and wayfinding purposes. In addition, low-level lighting to accent signage, architectural features, and landscaping elements would be incorporated throughout the Project Site. All lighting would comply with current energy standards and codes, as well as design Requirements, while providing appropriate light levels. Project lighting would be designed to provide efficient and effective on-site lighting while minimizing light trespass from the Project Site, reducing sky-glow, and improving nighttime visibility through glare reduction.

Specifically, all on-site exterior lighting would be automatically controlled via photo sensors to illuminate only when required and would be shielded or directed toward areas to be illuminated to limit spill-over onto nearby residential uses. Where appropriate, interior lighting would be equipped with occupancy sensors and/or timers that would automatically extinguish lights when no one is present. All exterior and interior lighting shall meet high energy efficiency requirements utilizing light-emitting diode (LED) or efficient fluorescent lighting technology.

Proposed signage would be designed to be aesthetically compatible with the existing and proposed architecture of the Project Site and would comply with the Los Angeles Municipal Code. Proposed signage would include identity signage, building and tenant signage, and general ground level and way-finding pedestrian signage. No off premises or billboard advertising is proposed as part of the Project. The Project would not include signage with flashing, mechanical, or strobe lights. New signage would be architecturally integrated into the design of the proposed buildings and would establish appropriate identification for the proposed uses. Project signage would be illuminated via low-level, low-glare external lighting, internal halo lighting, or ambient light. Exterior lighting for signage would be directed onto signs to avoid creating off-site glare. Illumination used for Project signage would comply with light intensities set forth in the LAMC and as measured at the property line of the nearest residentially zoned property.

5. Project Sustainability

The Project would be constructed to incorporate environmentally sustainable design features required by the Los Angeles Green Building Code and the sustainability intent of the U.S. Green Building Council's Leadership in Energy Efficiency and Design (LEED) green building program to achieve LEED Silver certification or equivalency. LEED standards would be incorporated to reduce energy and water usage and waste, thereby reducing associated greenhouse gas emissions. The Project would incorporate, but not be limited to, the following features to support and promote environmental sustainability: Energy Star appliances; reduced indoor water use by at least 20 percent; plumbing fixtures (water closets and urinals) and fittings (faucets) that comply with the performance requirements specified in the Green Building Code; weather-based irrigation system; and water-efficient landscaping. The Project would also utilize sustainable planning and building strategies and would incorporate the use of environmentally friendly materials, such as non-toxic paints and recycled finish materials wherever possible.

In accordance with CEQA Guidelines Appendix F, the Environmental Impact Report (EIR) to be prepared for the Project will provide further information on energy conservation, energy implications, and the energy-consuming equipment and processes that would be used during

construction and operation of the Project. Design features of the Project, energy supplies that would serve the Project, and total estimated daily vehicle trips that would be generated by the Project will also be analyzed. While development of the Project would not be anticipated to cause the wasteful, inefficient, and unnecessary consumption of energy, further analysis of the Project's consistency with Appendix F will be provided in the EIR.

6. Anticipated Construction Schedule

Project construction could occur in phases, with buildout in 2028. Approximately 211,000 cubic yards of soil would be hauled from the Project Site during the excavation phase. The haul route from the Project Site is anticipated to be via Sunset Boulevard to the Hollywood Freeway (US-101) to the east.

D. Requested Permits and Approvals

The discretionary entitlements, reviews, permits and approvals required to implement the Project include, but are not limited to, the following:

- Pursuant to LAMC Sections 12.24-T,3(B) and 12.24-U,14, a Major Development Project Conditional Use Permit to permit a Major Development Project;
- Pursuant to LAMC Section 12.24-W,19, a Conditional Use Permit to permit Floor Area Ratio Averaging in Unified Developments;
- Pursuant to LAMC Sections 12.22-A,23 and 12.24-W,27, a Commercial Corner Development Conditional Use Permit to permit a Commercial Corner Development;
- Pursuant to LAMC Section 17.15, Vesting Tentative Tract Map No. 80310 for merger and subdivision purposes; and
- Pursuant to LAMC Section 16.05, Site Plan Review to authorize the Project's new buildings and uses.

B. Environmental Checklist

INITIAL STUDY

Environmental Checklist

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
I. AESTHETICS. Would the project:				
a. Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☐	☒
c. Substantially degrade the existing visual character or quality of the site and its surroundings?	☐	☐	☒	☐
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐

Senate Bill 743 [Public Resources Code Section 21099(d)] sets forth new guidelines for evaluating project transportation impacts under CEQA, as follows: "Aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment." Public Resources Code Section 21099 defines a "transit priority area" as an area within 0.5 mile of a major transit stop that is "existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to Section 450.216 or 450.322 of Title 23 of the Code of Federal Regulations." Public Resources Code Section 21064.3 defines "major transit stop" as "a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods." Public Resources Code Section 21099 defines an "employment center project" as "a project located on property zoned for commercial uses with a floor area ratio of no less than 0.75 and that is located within a transit priority area. Public Resources Code Section 21099 defines an "infill site" as a lot located within an urban area that has been previously developed, or on a vacant site where at least 75 percent of the perimeter of the site adjoins, or is separated only by an improved public right-of-way from, parcels that are developed with qualified urban uses. This State law supersedes the aesthetic

impact thresholds in the 2006 L.A. CEQA Thresholds Guide, including those established for aesthetics, obstruction of views, shading, and nighttime illumination.

The related City of Los Angeles Department of City Planning Zoning Information File ZI No. 2452 provides further instruction concerning the definition of transit priority projects and that "visual resources, aesthetic character, shade and shadow, light and glare, and scenic vistas or any other aesthetic impact as defined in the City's CEQA Threshold Guide shall not be considered an impact for infill projects within TPAs pursuant to CEQA."[1]

Pursuant to Public Resources Code Section 21099, the Project is an employment center project because it is located on property that is zoned to permit commercial uses with a maximum FAR greater than 0.75. In addition, the Project Site is located on an infill site[2] that is less than 0.5 mile from several bus lines along Sunset Boulevard, including bus transit service operated by the Los Angeles County Metropolitan Transportation Authority (Metro) and the Los Angeles Department of Transportation (LADOT). Therefore, the Project Site is located in a transit priority area as defined in Public Resources Code Section 21099. The City's Zone Information and Map Access System (ZIMAS) also confirms the Project Site's location within a transit priority area, as defined in the City's Zoning Information File ZI No. 2452.[3] Thus, any aesthetic impacts that might be identified for the Project would not be considered significant impacts on the environment pursuant to Public Resources Code Section 21099. Nevertheless, the following aesthetics analysis is provided for information purposes only. The discussion considers factors from the City's *L.A. CEQA Thresholds Guide*.

Would the project:

a) Have a substantial adverse effect on a scenic vista?

Less Than Significant Impact. A scenic vista is a panoramic view of a valued visual resource. Based on the *L.A. CEQA Thresholds Guide*, panoramic views or vistas provide visual access to a large geographic area, for which the field of view can be wide and extend into the distance. According to the *L.A. CEQA Thresholds Guide*, panoramic views are typically associated with vantage points looking out over a section or urban or natural areas that provide a geographic orientation not commonly available. Examples of panoramic views include an urban skyline, valley mountain range, the ocean, or other water bodies. The *L.A. CEQA Thresholds Guide* provides the following factors to consider in evaluating a project's effect on a scenic vista: (1) the nature and quality of recognized or valued views (such as natural topography, settings, man-made or natural features of visual interest, and resources such as mountains or the ocean); (2) whether the project affects views from a designated scenic highway, corridor, or parkway; (3) the extent of obstruction (e.g., total blockage, partial interruption, or minor diminishment); and (4) the extent to which the

---

1 City of Los Angeles Department of City Planning, Zoning Information File ZI No. 2452, Transit Priority Areas (TPAs)/Exemptions to Aesthetics and Parking Within TPAs Pursuant to CEQA.

2 Infill can be defined as the use of land within a built-up area for further construction. The Project would be developed on a portion of the existing Sunset Gower Studios, which is within a built-up area in the City of Los Angeles. Therefore, the Project is considered an infill development.

3 City of Los Angeles, Zone Information and Map Access System (ZIMAS), http://zimas.lacity.org/, accessed December 14, 2017.

project affects recognized views available from a length of a public roadway, bike path, or trail, as opposed to a single, fixed vantage point. Publicly available scenic vistas of the Hollywood Hills and the Hollywood sign, approximately 2.3 to 2.5 miles to the north of the Project Site, are available from Gower Street, the western boundary of the existing Sunset Gower Studios. However, the Project does not propose any new development along Gower Street. Therefore, views of the Hollywood Hills and Hollywood sign would remain along the length of Gower Street. There would be no publicly available scenic vistas of the Hollywood Hills from Sunset Boulevard because the area is highly urbanized and developed with one- to four-story buildings (i.e., Siren Studios buildings at 6087, 6069, 6061, 6063 Sunset Boulevard) on the north side of Sunset Boulevard. Therefore, views are already obstructed along Sunset Boulevard. Finally, while there are views of the Hollywood Hills along the eastern boundary, Gordon Street, of the Project Site, these views would not be obstructed by the proposed development since the proposed garage structure would not encroach on the public right-of-way. Overall, as the area is fully developed and highly urbanized, the Project would not have a substantial adverse effect on a publicly available scenic vista. Moreover, pursuant to Senate Bill 743 and ZI No. 2452, the Project's aesthetics impact would not be considered significant. Therefore, no further evaluation of this topic in an EIR is required.

b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings, or other locally recognized desirable aesthetic natural feature within a state scenic highway?

No Impact. The Project Site is not located along a State scenic highway. The nearest officially eligible State scenic highway is along the Foothill Freeway (I-210), approximately 15 miles northeast of the Project Site,[4] and the nearest City-designated scenic highway is along Sunset Boulevard, approximately 7 miles west of the Project Site.[5] Therefore, the Project would not substantially damage scenic resources within a State or City-designated scenic highway. . Moreover, pursuant to Senate Bill 743 and ZI No. 2452, the Project's aesthetics impact would not be considered significant. Therefore, no further evaluation of this topic in an EIR is required.

The Project's potential impacts to historical resources are discussed below in Checklist Question V, Cultural Resources.

c) Substantially degrade the existing visual character or quality of the site and its surroundings?

Less Than Significant Impact. As previously discussed, under Senate Bill 743, the aesthetic impacts of the Project shall not be considered a significant impact on the environment. Nevertheless, for informational purposes, the EIR will discuss the Project's effects on visual character and visual quality of the site and its surroundings, including from shading and shadows.

---

[4] California Scenic Highway Mapping System, Los Angeles County, www.dot.ca.gov/hq/LandArch/16_livability/scenic_highways/index.htm, accessed November 27, 2017.

[5] Mobility Plan 2035, Maps A3 and A4.

d) Create a new source of substantial light or glare which would adversely affect daytime or nighttime views in the area?

Less Than Significant Impact. Based on the *L.A. CEQA Thresholds Guide*, this considers the following factors: (1) the change in ambient illumination levels as a result of project sources; and (2) the extent to which project lighting would spill off the project site and affect adjacent light-sensitive areas. Regarding the first factor above, the Project Site currently generates moderate levels of artificial light and glare from low-level security lighting, and glass building surfaces. Although the Project would introduce new exterior lighting on the buildings and along pathways , the outdoor lighting would be low-level and not result in a substantive change in ambient illumination levels over existing conditions. In addition, outdoor lighting would be shielded such that the light source cannot be seen from adjacent residential properties to the south and east of the Project Site, or the public right-of-way, and would be dark-sky compliant.

While the new Project buildings would feature glass surfaces, the sawtooth windows and curtain walls would minimize the use of mirror coatings. There would be no other use of highly polished surfaces since the rest of the elevations of Buildings A, B, and C would feature black standing seam metal panels and exposed black steel beams and the proposed parking structure would feature polycarbonate panels and vertical black metal fins. In addition, only a part of the proposed new development would occur adjacent to streets. Specifically, only proposed Building A would front Sunset Boulevard, while the proposed parking structure at the corner of Fountain Avenue and Gordon Street would be feature an approximate 16-foot landscaped buffer along Gordon Street. Meanwhile, Buildings B, C, and the bike parking facility would be located entirely within the Project Site and away from any adjacent streets. Therefore, daytime glare would not interfere with the safe operation of motor vehicles on adjacent street. Moreover, pursuant to Senate Bill 743 and ZI No. 2452, the Project's aesthetic impacts would not be considered significant.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
II. AGRICULTURE AND FORESTRY RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d. Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	☒

Would the project:

a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

No Impact. The Project Site is located in an urbanized area of the City of Los Angeles. As discussed in Attachment A, Project Description, of this Initial Study, the Project Site is currently developed with creative office, production support, sound stage, and service uses. The Project Site also includes three parking structures. No agricultural uses or operations occur on-site or in the vicinity of the Project Site. The Project Site and surrounding area are not mapped as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency Department of Conservation.[6] As such, the Project would not convert farmland to a non-agricultural use. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

No Impact. The Project Site is zoned by the Los Angeles Municipal Code (LAMC) as M1-1 (Limited Industrial Zone, Height District 1). The Project Site is not zoned for agricultural use. Furthermore, none of the surrounding properties are zoned for agricultural use. The Project Site and

[6] City of Los Angeles Department of City Planning, Zone Information and Map Access System (ZIMAS), Parcel Profile Report, http://zimas.lacity.org/, accessed December 12, 2017.

surrounding area are also not enrolled under a Williamson Act Contract.[7] Therefore, the Project would not conflict with any zoning for agricultural uses or a Williamson Act Contract. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

No Impact. As previously discussed, the Project Site is located in an urbanized area and is currently developed with one low-rise residential building. The Project Site does not include any forest land or timberland. In addition, the Project Site is currently zoned for industrial uses and is not zoned and/or used as forest land.[8] Therefore, the Project would not conflict with existing zoning for, or cause rezoning of, forest land or timberland as defined by the Public Resources Code. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

d) Result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. As previously discussed, the Project Site is located in an urbanized area and does not include any forest land or timberland. Therefore, the Project would not result in the loss or conversion of forest land to non-forest use. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

No Impact. The Project Site is located in an urbanized area of the City of Los Angeles and does not include farmland. The Project Site and surrounding area are not mapped as farmland, are not zoned for farmland or agricultural use, and do not contain any agricultural uses.[9] As such, the Project would not result in the conversion of farmland to non-agricultural use. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
III. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations.				
Would the project:				
a. Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐
b. Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	☒	☐	☐	☐
c. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	☒	☐	☐	☐
d. Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐
e. Create objectionable odors affecting a substantial number of people?	☐	☐	☒	☐

Would the project:

a) Conflict with or obstruct implementation of the Air Quality Management Plan or Congestion Management Plan?

Potentially Significant Impact. The Project Site is located within the 6,700-square-mile South Coast Air Basin (Air Basin). Within the Air Basin, the South Coast Air Quality Management District (SCAQMD) is required, pursuant to the federal Clean Air Act, to reduce emissions of criteria pollutants for which the Air Basin is in non-attainment (i.e., ozone, particulate matter less than 2.5 microns in size [$PM_{2.5}$], and lead[10]). The SCAQMD's 2016 Air Quality Management Plan (AQMP) contains a comprehensive list of pollution control strategies directed at reducing emissions and achieving ambient air quality standards. These strategies are developed, in part, based on regional population, housing, and employment projections prepared by the Southern California Association of Governments (SCAG). Construction and operation of the Project may result in an increase in stationary and mobile source air emissions. As a result, development of the Project could have a potential adverse effect on the SCAQMD's implementation of the AQMP. Therefore, the EIR will provide further analysis of whether the Project would conflict with or obstruct implementation of the AQMP.

[10] Partial Nonattainment designation for lead for the Los Angeles County portion of the Air Basin only.

b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?

Potentially Significant Impact. The Project would result in increased air pollutant emissions from the Project Site during construction (short-term) and operation (long-term). Construction-related pollutants would be associated with sources, such as construction worker vehicle trips, the operation of construction equipment, site grading and preparation activities, and the application of architectural coatings. During Project operation, air pollutants would be emitted on a daily basis from motor vehicle travel, natural gas consumption, and other on-site activities. Therefore, air quality standards could be violated and the EIR will provide further analysis of the Project's construction and operational air pollutant emissions.

c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?

Potentially Significant Impact. As discussed above, construction and operation of the Project would result in the emission of air pollutants in the Air Basin, which is currently in non-attainment of federal air quality standards for ozone, $PM_{2.5}$ and lead, and State air quality standards for ozone, particulate matter less than 10 and 2.5 microns in size (PM_{10} and $PM_{2.5}$). Therefore, implementation of the Project could potentially contribute to air quality impacts, which could cause a cumulative impact in the Air Basin. The EIR will provide further analysis of cumulative air pollutant emissions associated with the Project.

d) Expose sensitive receptors to substantial pollutant concentrations?

Potentially Significant Impact. As discussed above, the Project would result in increased short- and long-term air pollutant emissions from the Project Site during construction (short-term) and operation (long-term). Sensitive receptors located in the vicinity of the Project Site include residential uses. Therefore, the Project could expose sensitive receptors to substantial pollutant concentrations and the EIR will provide further analysis of the Project's potential to result in substantial adverse impacts to sensitive receptors.

e) Create objectionable odors affecting a substantial number of people?

Less Than Significant Impact. No objectionable odors are anticipated as a result of either construction or operation of the Project. Specifically, construction of the Project would involve the use of conventional building materials typical of construction projects of similar type and size. Any odors that may be generated during construction would be localized and temporary in nature and would not be sufficient to affect a substantial number of people.

With respect to Project operation, according to the SCAQMD *CEQA Air Quality Handbook*, land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. The Project would not involve these types of uses. On-site trash receptacles

would be contained, located, and maintained in a manner that promotes odor control, and would not result in substantially adverse odor impacts. Construction and operation of the Project would also comply with SCAQMD Rules 401, 402, and 403, regarding visible emissions violations.[11] In particular, SCAQMD Rule 402 provides that a person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.[12]

Based on the above, the potential odor impact during construction and operation of the Project would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
IV. BIOLOGICAL RESOURCES. Would the project:				
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☐	☒
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?	☐	☐	☐	☒
c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐

[11] SCAQMD, Visible Emissions, Public Nuisance, and Fugitive Dust, www.aqmd.gov/home/regulations/compliance/inspection-process/visible-emissions-public-nuisance-fugitive-dust, accessed December 12, 2017.

[12] SCAQMD, Rule 402, Nuisance.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☒	☐
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

Would the project:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

No Impact. The Project Site is located in an urbanized area and is currently occupied by creative offices, production support, and sound stages. Due to the urbanized and disturbed nature of the Project Site and the surrounding developed areas, as well as lack of large expanses of open space areas, species likely to occur on-site are limited to small terrestrial and avian species typically found in developed settings. In addition, as discussed in the attached Project Description, the Project Site contains limited to sparse landscaping in the form of non-native/non-protected trees, hedges, and shrubs that are dispersed across the Project Site. Thus, based on the lack of habitat on the Project Site, special status species listed by the California Department of Fish and Wildlife[13] or by the U.S. Fish and Wildlife Service[14] would not be anticipated to be present on-site. Furthermore, the Project Site is not located in or adjacent to a Biological Resource Area as defined by the City of Los Angeles.[15] Therefore, the Project would not have any adverse effect, either directly or through habitat modification, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

---

[13] California Department of Fish and Wildlife, California Natural Diversity Database, Special Animals List, April 2017.

[14] United States Fish and Wildlife Service, ECOS Environmental Conservation Online System, Listed species believed to or known to occur in California, https://ecos.fws.gov/ecp0/reports/species-listed-by-state-report?state=CA&status=listed, accessed December 13, 2017.

[15] City of Los Angeles, Department of City Planning, Los Angeles Citywide General Plan Framework, Draft Environmental Impact Report, January 19, 1995, P. 2-18-4.

No Impact. The Project Site is located in an urbanized area and is currently occupied by creative offices, production support, and sound stages. No riparian or other sensitive natural community exists on the Project Site.[16,17] Furthermore, the Project Site is not located in or adjacent to a Biological Resource Area or Significant Ecological Area as defined by the City of Los Angeles or County of Los Angeles.[18,19] In addition, there are no other sensitive natural communities identified by the California Department of Fish and Wildlife or the U.S. Fish and Wildlife Service.[20,21,22] Therefore, the Project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community. No impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact. The Project Site is located in an urbanized area and is currently occupied by creative offices, production support, and sound stages. No water bodies or federally protected wetlands as defined by Section 404 of the Clean Water Act exist on the Project Site.[23] As such, the Project would not have an adverse effect on federally protected wetlands. No impact would occur, and no mitigation measures are required. Therefore, no further evaluation of this topic in an EIR is required.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less Than Significant Impact. As described above, the Project Site is located in an urbanized area and is currently occupied by creative offices, production support, and sound stages. In addition, the areas surrounding the Project Site are fully developed, and there are no large expanses of open space areas within and surrounding the Project Site that provide linkages to natural open spaces areas and that may serve as wildlife corridors. Furthermore, the Project Site is not located in or

adjacent to a Biological Resource Area or Significant Ecological Area as defined by the City of Los Angeles or County of Los Angeles.[24,25]

Although unlikely, the on-site trees that would be removed during construction of the Project could potentially provide nesting sites for migratory birds. However, the Project would comply with the Migratory Bird Treaty Act, which regulates vegetation removal during the nesting season to ensure that significant impacts to migratory birds would not occur. In accordance with the Migratory Bird Treaty Act, tree removal activities would take place outside of the nesting season (February 15–September 15), to the extent feasible. Should vegetation removal activities occur during the nesting season, a biological monitor would be present during the removal activities to ensure that no active nests would be affected. If active nests are found, a 300-foot buffer (500 feet for raptors) would be established until the fledglings have left the nest. With compliance with the Migratory Bird Treaty Act, impacts related to wildlife movement would be less than significant.

Based on the above, the Project would not interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites. Impacts would be less than significant, and no mitigation measures are required. Therefore, no further evaluation of this topic in an EIR is required.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance (e.g., oak trees or California walnut woodlands)?

Less Than Significant Impact. The City of Los Angeles Protected Tree Ordinance (LAMC Chapter IV, Article 6) regulates the relocation or removal of all Southern California native oak trees (excluding scrub oak), California black walnut trees, Western sycamore trees, and California Bay trees of at least four inches in diameter at breast height. These tree species are defined as "protected" by the City of Los Angeles. Trees that have been planted as part of a tree planting program are exempt from the City's Protected Tree Ordinance and are not considered protected. The City's Protected Tree Ordinance prohibits, without a permit, the removal of any regulated protected tree, including "acts which inflict damage upon root systems or other parts of the tree..." and requires that all regulated protected trees that are removed be replaced on at least a 2:1 basis with trees that are of a protected variety.

Based on the Tree Report included in Appendix IS-1 of this Initial Study, the Project would not involve the removal of any trees considered protected under the City of Los Angeles Native Tree Protection Ordinance either within the Project Site or in the adjacent right-of-way (street trees). To allow for development of the Project, 29 non-protected trees would be removed within the Project Site and two street trees would be removed in the adjacent right-of-way. Pursuant to the requirements of the City of Los Angeles Urban Forestry Division, the trees to be removed within the Project Site would

---

[25] Los Angeles County, Los Angeles County General Plan, Figure 9.3 Significant Ecological Areas and Coastal Resource Areas Policy Map, October 6, 2015.

be replaced on a 1:1 basis and the street trees would be replaced on a 2:1 basis. Therefore, the Project would not conflict with any local policies or ordinances protecting biological resources. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. The Project Site is located in an urbanized area and is currently occupied by creative offices, production support, and sound stages. As described above, the Project Site does not support any habitat or natural community.[26,27] No Conservation Plan, Natural Community Conservation Plan, or other approved habitat conservation plans apply to the Project Site.[28] Thus, the Project would not conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other related plans. No impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
V. CULTURAL RESOURCES: Would the project:				
a. Cause a substantial adverse change in the significance of a historical resource as defined in § 15064.5?	☒	☐	☐	☐
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?	☒	☐	☐	☐
c. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☒	☐	☐	☐
d. Disturb any human remains, including those interred outside of dedicated cemeteries?	☒	☐	☐	☐

Would the project:

a) Cause a substantial adverse change in the significance of a historical resource as defined in State CEQA Guidelines §15064.5?

---

[26] City of Los Angeles Department of City Planning, ZIMAS, Parcel Profile Report, http://zimas.lacity.org/, accessed December 8, 2017.

[27] United States Environmental Protection Agency, NEPAssist, www.epa.gov/nepa/nepassist, accessed November 27, 2017.

[28] California Department of Fish and Wildlife, California Regional Conservation Plans, October 2017.

Potentially Significant Impact. CEQA Guidelines Section 15064.5 generally defines a historical resource as a resource that is: (1) listed in, or determined to be eligible for listing in the California Register of Historical Resources (California Register); (2) included in a local register of historical resources (pursuant to Public Resources Code Section 5020.1(k)); or (3) identified as significant in a historical resources survey (meeting the criteria in Public Resources Code Section 5024.1(g)). Additionally, any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be a historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register. The California Register automatically includes all properties listed in the National Register of Historic Places (National Register) and those formally determined to be eligible for listing in the National Register. The local register of historical resources is managed by the Los Angeles Office of Historic Resources, which established SurveyLA, a comprehensive program to identify potentially significant historic resources throughout the City.

As previously discussed, within the Sunset Gower Studios, there are three buildings that could be eligible for historic status. These buildings include the building at 6050 Sunset Boulevard, the building at 1455 Gordon Street, and the building at 1440 Gower Street. As part of the Project, the building at 6050 Sunset Boulevard would be removed. The remaining two buildings would be retained. The Sunset Gower Studios has also been identified as a potential historic district based on SurveyLA's Historic Context Statement for motion picture studio properties developed by one of the major studios during the Studio Era as well as National Register and California Register criteria. Therefore, the EIR will provide further analysis of the Project's potential impacts on historical resources.

b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to State CEQA Guidelines §15064.5?

Potentially Significant Impact. CEQA Guidelines Section 15064.5(a)(3)(D) generally defines archaeological resources as any resource that "has yielded, or may be likely to yield, information important in prehistory or history." Archaeological resources are features, such as tools, utensils, carvings, fabric, building foundations, etc., that document evidence of past human endeavors and that may be historically or culturally important to a significant earlier community. The Project Site is located within an urbanized area of the City of Los Angeles and has been subject to grading and development in the past. Therefore, surficial archaeological resources that may have existed at one time have likely been previously disturbed. Nevertheless, it is estimated that approximately 211,000 cubic yards of export material would be hauled from the Project Site during the demolition and excavation phase. Thus, the Project could have the potential to disturb previously undiscovered archaeological resources. Therefore, the EIR will provide further analysis of the Project's potential impacts to archaeological resources.

c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Potentially Significant Impact. Paleontological resources are the fossilized remains of organisms that have lived in a region in the geologic past and whose remains are found in the accompanying geologic strata. This type of fossil record represents the primary source of information on ancient life forms since the majority of species that have existed on earth from this era are extinct. Although the Project Site has been previously graded and developed, the Project would require additional grading and excavation which would have the potential to disturb undiscovered paleontological resources that may exist within the Project Site. Therefore, the EIR will provide further analysis of the Project's potential impacts to paleontological resources.

d) Disturb any human remains, including those interred outside of formal cemeteries?

Potentially Significant Impact. Although no human remains are known to have been found on the Project Site, there is the possibility that unknown resources could be encountered during Project construction, particularly during ground-disturbing activities, such as grading. Therefore, the EIR will provide further analysis of this topic.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
VI. GEOLOGY AND SOILS. Would the project:				
a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault, caused in whole or in part by the project's exacerbation of the existing environmental conditions? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii. Strong seismic ground shaking caused in whole or in part by the project's exacerbation of the existing environmental conditions?	☐	☐	☒	☐
iii. Seismic-related ground failure, including liquefaction, caused in whole or in part by the project's exacerbation of the existing environmental conditions?	☐	☐	☒	☐
iv. Landslides, caused in whole or in part by the project's exacerbation of the existing environmental conditions?	☐	☐	☐	☒
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
c. Be located on a geologic unit that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse, caused in whole or in part by the project's exacerbation of the existing environmental conditions?	☐	☐	☒	☐
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property caused in whole or in part by the project's exacerbation of the existing environmental conditions?	☐	☐	☒	☐
e. Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒

In 2015, the California Supreme Court in California Building Industry Association v. Bay Area Air Quality Management District (CBIA v. BAAQMD), held that CEQA generally does not require a lead agency to consider the impacts of the existing environment on the future residents or users of the project. The revised thresholds are intended to comply with this decision. Specifically, the decision held that an impact from the existing environment to the project, including future users and/or residents, is not an impact for purposes of CEQA. However, if the project, including future users and residents, exacerbates existing conditions that already exist, that impact must be assessed, including how it might affect future users and/or residents of the project. In accordance with Appendix G of the State CEQA Guidelines and the CBIA v. BAAQMD decision, the project would have a significant impact related to geology and soils if it would result in any of the following impacts.

The following analysis is based on the Soils and Geology Issues Report (Soils and Geology Report) prepared for the Project by Geotechnologies, Inc., dated December 1, 2017. All specific information on geologic and soils conditions in the discussion below is from this report unless otherwise noted. This report is included as Appendix IS-2 of this Initial Study.

Would the project:

a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault, caused in whole or in part by the project's

exacerbation of the existing environmental conditions? Refer to Division of Mines and Geology Special Publication 42.

Less Than Significant Impact. Fault rupture occurs when movement on a fault deep within the earth breaks through to the surface. Based on criteria established by the California Geological Survey, faults can be classified as active, potentially active, or inactive. Active faults are those having historically produced earthquakes or shown evidence of movement within the past 11,000 years (during the Holocene Epoch). Potentially active faults have demonstrated displacement within the last 1.6 million years (during the Pleistocene Epoch) while not displacing Holocene Strata. Inactive faults do not exhibit displacement younger than 1.6 million years before the present. In addition, there are buried thrust faults, which are faults with no surface exposure. Due to their buried nature, the existence of buried thrust faults is usually not known until they produce an earthquake.

The California Geological Survey establishes regulatory zones around active faults, called Alquist-Priolo Earthquake Fault Zones (previously called Special Study Zones). These zones, which extend from 200 to 500 feet on each side of the known fault, identify areas where a potential surface fault rupture could prove hazardous for buildings used for human occupancy. Development projects located within an Alquist-Priolo Earthquake Fault Zone are required to prepare special geotechnical studies to characterize hazards from any potential surface ruptures. In addition, the City of Los Angeles designates Fault Rupture Study Areas along the sides of active and potentially active faults to establish areas of potential hazard due to fault rupture.

Based on the Soils and Geology Report and a review of the City of Los Angeles General Plan Safety Element, the Project Site is not within an Alquist-Priolo Earthquake Fault Zone or within a City-designated Fault Rupture Study Area.[29] The closest active fault is the Hollywood Fault, which is located approximately 0.78 mile (1.26 kilometers) north of the Project Site.[30] Furthermore, no active faults with the potential for surface fault rupture are known to pass directly beneath the Project Site. The Grading Division of the Los Angeles Department of Building and Safety confirms that the Project Site is located outside of a State fault-rupture hazard zone.[31] Therefore, since there are no known faults beneath the Project Site, the Project would not exacerbate existing environmental conditions such that people or structures would be exposed to rupture of a known earthquake fault. Furthermore, even though the Project would involve excavation for the underground parking levels, the proposed development would not involve mining operations, deep excavation into the earth, or boring of large areas, which could create unstable seismic conditions or stresses in the Earth's crust. Therefore, the Project would not result in the rupture of a known earthquake fault caused in whole or in part by the Project's exacerbation of the existing environmental conditions and impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

ii) Strong seismic ground shaking caused in whole or in part by the project's exacerbation of the existing environmental conditions?

Less Than Significant Impact. The Project Site is located in the seismically active Southern California region, which generally experiences moderate to strong ground shaking in the event of an earthquake. However, as previously stated in i) above, no active faults are known to pass directly beneath the Project Site and, therefore, the Project would not exacerbate existing environmental conditions (i.e., trigger an earthquake by disrupting a known earthquake fault) such that people or structures would be exposed to strong seismic ground shaking. . In addition, the Project is located in a highly urbanized and fully developed area and these existing environmental conditions are not such that strong seismic ground shaking would be exacerbated by the Project. Furthermore, the Project would not involve mining operations, deep excavation into the earth, or boring of large areas, which could create unstable seismic conditions like strong seismic ground shaking. . Based on the above, development of the Project would not result in strong seismic ground shaking caused in whole or in part by the Project's exacerbation of the existing environmental conditions. Impacts would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

Although the Project would not exacerbate existing environmental conditions such that people or structure would be exposed to strong seismic ground shaking, the following discussion about seismic building codes is provided for informational purposes only. State and local code requirements ensure that buildings are designed and constructed in a manner that, although the buildings may sustain damage during a major earthquake, would reduce the substantial risk that buildings would collapse. As with other development projects in the City of Los Angeles, the Project would comply with the Los Angeles Building Code, which incorporates current seismic design provisions of the 2016 California Building Code with City amendments. The 2016 California Building Code incorporates the latest seismic design standards for structural loads and materials, as well as provisions from the National Earthquake Hazards Reduction Program to lessen the effect of losses from an earthquake and maximize earthquake safety. The Los Angeles Department of Building and Safety is responsible for implementing the provisions of the Los Angeles Building Code. The Project would therefore be required to comply with the plan check review and permitting requirements of the Los Angeles Department of Building and Safety, including the incorporation of the recommendations provided in a final, site-specific geotechnical report. In addition, before permits can be issued for construction, the Project must demonstrate compliance with the applicable provisions of seismic safety plans and regulations, including, but not limited to, the Seismic Safety Act and Seismic Hazards Mapping Act .

iii) Seismic-related ground failure, including liquefaction, caused in whole or in part by the project's exacerbation of the existing environmental conditions?

Less Than Significant Impact. Liquefaction is a seismic phenomenon in which loose, saturated, granular soils behave similarly to a fluid when subjected to high-intensity ground shaking. Liquefaction occurs when three general conditions exist: shallow groundwater; low density, fine, clean sandy soils; and strong ground motion. Neither the City of Los Angeles nor the State of California

classifies the Project Site as part of a potentially liquefiable area.[32,33] The Grading Division of the Los Angeles Department of Building and Safety confirms that the Project Site is located outside of a State liquefaction zone.[34] In addition, the historically highest groundwater level at the Project Site ranges between 40 and 50 feet below ground surface.[35] Thus, there is no shallow groundwater on the Project Site. The Soils and Geology Report explains that the soils underlying the Project Site consist of silty sands, sandy silts, clayey sands, and sands that are medium dense to very dense. Even though there are sandy soils at the Project Site, there is no shallow ground water and, as discussed above in Response to Checklist Question No. VI.a.ii, development of the Project would not exacerbate existing conditions that would cause people or structures to be exposed to strong seismic ground shaking. Thus, not all three conditions are met (i.e., shallow groundwater, sandy soils and strong ground motion) that could cause liquefaction. Therefore, based on these considerations, the Project would not exacerbate existing environmental conditions that could cause seismic-related ground failure, including liquefaction. As such, impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

iv) Landslides, caused in whole or in part by the project's exacerbation of the existing environmental conditions?

No Impact. Landslides generally occur in loosely consolidated, wet soil, and/or rocks on steep sloping terrain. The Project Site and surrounding area are fully developed and generally characterized by flat topography. In addition, the Project Site is not located in a landslide area as mapped by the State[36] or the City of Los Angeles.[37,38] The Grading Division of the Los Angeles Department of Building and Safety confirms that the Project Site is located outside of a State earthquake-induced landslide hazard zone.[39] Development of the Project would not substantially alter the existing topography of the Project Site. Specifically, the Project does not propose creating any steep slopes and the Project Site would remain flat. Therefore, the Project would not exacerbate existing conditions that would result in landslides. As such, no impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

b) Result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. The Project Site is currently fully developed with buildings and surface parking areas. As such, there are no open spaces with exposed topsoil. However,

39 Email communication from Casey Lee Jensen, Engineering Geologist Associate III, Los Angeles Department of Building and Safety, Grading Division. Refer to Appendix IS-2 of this Initial Study.

development of the Project would require grading, excavation, and other construction activities that have the potential to disturb existing soils underneath the Project Site and expose these soils to rainfall and wind during construction, thereby potentially resulting in soil erosion. But this potential would be reduced by implementation of standard erosion controls imposed during site preparation and grading activities. Specifically, all grading activities would require grading permits from the Los Angeles Department of Building and Safety, which would include requirements and standards designed to limit potential effects associated with erosion to acceptable levels. In addition, on-site grading and site preparation would comply with all applicable provisions of Chapter IX, Article 1 of the LAMC, which addresses grading, excavations, and fills. Furthermore, as discussed below in Response to Checklist Question IX.a., the Project would be required to comply with the City's Low Impact Development (LID) ordinance and implement standard erosion controls to limit stormwater runoff, which can contribute to erosion. Regarding soil erosion during Project operations, the potential is negligible since the Project Site would mostly remain fully developed, except for a small landscape buffer to the south of the proposed parking structure at Gordon Street and Fountain Avenue. However, this buffer would be landscaped with trees to prevent soil erosion. Therefore, with compliance with applicable regulatory requirements, impacts regarding soil erosion or the loss of topsoil would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse, caused in whole or in part by the project's exacerbation of the existing environmental conditions?

Less Than Significant Impact. As discussed in the Soils and Geology Report, no large scale extraction of groundwater, gas, oil or geothermal energy is occurring or planned at the Project Site or in the general Project Site vicinity. Therefore, the Project Site is not located on a geologic unit or soil that is unstable nor would the Project cause a geologic unit or soil to become unstable. In addition, as discussed above, the Project Site is not located near slopes or geologic features that would result in on- or off-site landsliding or lateral spreading. The Grading Division of the Los Angeles Department of Building and Safety confirms that the Project Site does not require the removal of potential geologic hazards.[40] As such, the Project would not exacerbate existing conditions such as unstable geologic units or unstable soil. In addition, as discussed in greater detail in Response to Checklist Question VI.a.iii above, based on the depth to groundwater, liquefaction is unlikely at the Project Site. In addition, there is no evidence of natural or manmade voids or low density soils (see Response iii above) that could lead to ground subsidence or collapse. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

d) Be located on expansive soil, as defined in Table 18 1 B of the Uniform Building Code (1994), creating substantial risks to life or property caused in whole or in part by the project's exacerbation of the existing environmental conditions?

[40] Email communication from Casey Lee Jensen, Engineering Geologist Associate III, Los Angeles Department of Building and Safety, Grading Division. Refer to Appendix IS-2 of this Initial Study.

Less Than Significant Impact. Expansive soils are typically associated with fine-grained clayey soils that have the potential to shrink and swell with repeated cycles of wetting and drying. Although there are clayey sands underneath the Project Site, according to the Soils and Geology Report (page 17), the soils are considered to have a very low to moderate expansion potential. In addition, the Project Site and immediate vicinity are fully developed, so no soil would be exposed to water and swell. Finally, the Project does not propose to expose the underlying soils permanently. Therefore, the Project would not exacerbate any existing environmental conditions that could create substantial risk to life or property due to expansive soil. In addition, through standard construction practices involving excavation activities and the associated removal of underlying soils as well as the subsequent use of engineered soils, any potential effects associated with expansive soils would be addressed. As such, the Project would not increase the expansion potential of underlying soils. Therefore, impacts would be less than significant. No mitigation measures and no further analysis of this topic in an EIR is required.

e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact. Since the Project Site is located within a community served by existing wastewater infrastructure, the Project would not require the use of septic tanks or alternative wastewater disposal systems. Therefore, the Project would have no impact related to the ability of soils to support septic tanks or alternative wastewater disposal systems. No impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. GREENHOUSE GAS EMISSIONS. Would the project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐

Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Potentially Significant Impact. Gases that trap heat in the atmosphere are called greenhouse gases (GHG) since they have effects that are analogous to the way in which a greenhouse retains heat. GHGs are emitted by both natural processes and human activities. The accumulation of GHGs in the atmosphere affects the earth's temperature. The State has undertaken initiatives designed to address the effects of GHG emissions and to establish targets and emission

reduction strategies for GHG emissions in California. Activities associated with the Project, including construction and operational activities, could result in GHG emissions that may have a significant impact on the environment. Therefore, the EIR will provide further analysis of the Project's GHG emissions.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Potentially Significant Impact. As the Project would have the potential to emit GHGs, the EIR will include further evaluation of Project-related emissions and associated emission reduction strategies to determine whether the Project conflicts with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment caused in whole or in part from the project's exacerbation of existing environmental conditions?	☐	☐	☒	☐
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
f. For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
h. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands, caused in whole or in part from the project's exacerbation of existing environmental conditions?	☐	☐	☐	☒

In 2015, the California Supreme Court in CBIA v. BAAQMD, held that CEQA generally does not require a lead agency to consider the impacts of the existing environment on the future residents or users of the project. The revised thresholds are intended to comply with this decision. Specifically, the decision held that an impact from the existing environment to the project, including future users and/or residents, is not an impact for purposes of CEQA. However, if the project, including future users and residents, exacerbates existing conditions that already exist, that impact must be assessed, including how it might affect future users and/or residents of the project. For example, if construction of the project on a hazardous waste site will cause the potential dispersion of hazardous waste in the environment, the EIR should assess the impacts of that dispersion to the environment, including to the project's residents. In accordance with Appendix G of the State CEQA Guidelines and the CBIA v. BAAQMD decision, the project would have a significant impact related to hazards and hazardous materials if it would result in any of the following impacts.

The following analysis is based, in part, on the *Phase I Environmental Site Assessment Report* (Phase I ESA) prepared for the Project by Citadel Environmental Services, Inc., dated November 27, 2017. All specific information on historic and existing on-site conditions in the discussion below is based on the Phase I ESA unless otherwise noted. The Phase I ESA is included as Appendix IS-3 of this Initial Study.

Would the project:

a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less Than Significant Impact. The types and amounts of hazardous materials that would be used in connection with the Project would be typical of those used during construction of commercial developments, including vehicle fuels, paints, oils, and transmission fluids. Similarly, the types and amounts of hazardous materials used during operation of the proposed uses would be typical of such developments and would include cleaning solvents, pesticides for landscaping, painting supplies, and petroleum products. Studio uses, in particular, would involve the use of hazardous materials such as paints, adhesives, aerosol spray paint, and film/photo developer solutions during movie and television

production, set making, and general maintenance/cleaning. All potentially hazardous materials to be used during construction and operation of the Project would be contained, stored, used and disposed of in accordance with manufacturers' instructions and handled in accordance with all applicable standards and regulations, including, but not limited to, those set forth by the federal and State Occupational Safety and Health Acts (i.e., the Federal Resource Conservation and Recovery Act and California Hazardous Waste Control Law). Such requirements include obtaining material safety data sheets from chemical manufacturers, making these data sheets available to employees, labeling chemical containers in the workplace, developing and maintaining a written hazard communication program, and developing and implementing programs to train employees about hazardous materials. Finally, the Project would not involve the routine transport of hazardous materials. Any associated risk would be adequately reduced to a less-than-significant level through compliance with these standards and regulations. Impacts would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less Than Significant Impact. The Phase I ESA included a review of environmental records for the Project Site and a site reconnaissance to identify potential on-site hazards. According to available historical sources, the Project Site was developed with two small structures, likely residences, as early as 1894. By 1919, a film laboratory, a studio with an office, an open stage, and dressing rooms appeared in the north portion of the Project Site, along Sunset Boulevard. An oil and gasoline station also appeared in the northwest corner of the Project Site. Based on reviewed building permits and aerial photographs, the gasoline station was developed in 1919 and removed by 1928. By 1928, the Project Site appeared densely developed with commercial structures and residences. By 1950, the Project Site appeared developed with auto repair shops with pumps for two gasoline tanks in the southwest portion of the Project Site. Stages and buildings were developed through 1970, and several parking structures were built between 1979 and 2016.

Based on the previous uses of the Project Site, the Phase I ESA identified recognized environmental conditions (RECs)[41] associated with the gasoline station previously located in the northwest corner of the Project Site, machine shop and paint spray booth located in the northeastern portion of the Project Site, auto repair are and gasoline pumps, and auto repair and oil storage area.

As part of the Phase I ESA, a geophysical survey was completed at each of the proposed areas of exploration to evaluate the possible presence of buried utilities and possible abandoned in-place underground storage tanks (USTs) associated with the former gasoline station and gasoline pumps, and oil storage tanks associated with the auto repair areas. No large metallic objects, which would be indicative of buried USTs or septic tanks, were detected in any of the areas surveyed. In addition, a total of 15 soil borings were completed at the Project Site and three soil samples were retained from each boring for laboratory analytical analysis. Soil samples collected from the former

[41] A recognized environmental condition, or REC, means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat to a future release to the environment.

gasoline station area were analyzed for total petroleum hydrocarbon (TPH) in the gasoline range. Soil samples collected in the northeast portion of the Project Site were analyzed for volatile organic compounds (VOCs), TPH, and metals. One sample was also analyzed for chromium VI (hexavalent chrome). Soil samples collected from the former auto repair areas were analyzed for TPH and benzene, toluene, ethylbenzene, and xylenes (BTEX). TPH, BTEX, and VOCs were not detected in any of the soil samples. Arsenic was detected in three of the soil samples, exceeding EPA Preliminary Remediation Goals of 0.39 milligram per kilogram (mg/kg) for residential soil. However, these detections were below the average concentration range of arsenic in California (0.59 to 11 mg/kg). The metal concentrations in the samples analyzed did not exceed the Total Threshold Limit Concentration, and would not be classified as a California hazardous waste. Based on these findings, the identified RECs would be considered historical recognized environmental conditions (HRECs). An historical recognized environmental condition, or HREC, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

A Phase I ESA was previously prepared for the building at 6060 Sunset Boulevard. According to the Phase I ESA prepared for that building, the property was occupied as a film developing studio from 1918 until 2005. Various chemicals, including solvents, were used and stored during that time. A subsurface soil and soil vapor assessment conducted in 2006 showed elevated levels of VOCs in soils at the property. Soil vapor extraction was conducted for a year in 2008; however, VOCs remained above human health screening levels in one area. Therefore, an Indoor Air Quality assessment for VOCs was conducted in 2009. While select VOCs were detected, the total VOC concentrations were below Permissible Exposure Limits established by Cal-OSHA and the recommended American Conference of Governmental Industrial Hygienists Threshold Limit Values.

With regard to the existing uses on the Project Site, potential environmental concerns identified during site reconnaissance in the Phase I ESA included one aboveground storage tank (AST) used for diesel storage to support the emergency generator; various identified hazardous materials typical of the existing on-site uses, including spray paints/enamels, paint thinners, oils, acetylene and oxygen cylinders, plasters, sealers, cooling water treatment chemicals, propane tanks, and diesel for gardening tools; polychlorinated biphenyls (PCBs) associated with the on-site pad-mounted transformers and transformer stations, a hydraulic lift/dock with a five-gallon reservoir, and on-site elevators; radioactive man-made materials associated with the on-site self-luminescent tritium exit signs typical of many public and private office buildings in the United States; wells, cisterns, sumps, and drains; and wastewater or grease interceptors. No spills, staining, or leaks were observed by the AST. Routine janitorial and maintenance supplies were stored properly with no signs of staining or leaking. Minor staining was observed around the five-gallon reservoir associated with the hydraulic lift/dock and at one of the elevator rooms; however, as determined in the Phase I, such staining is not expected to represent a significant environmental concern. The radioactive materials associated with the exit signs were also found to not constitute a recognized environmental condition.

Similarly, the presence of wells, cisterns, sumps, drains, and wastewater and grease interceptors were not found to represent a significant environmental concern.[42]

Based on the age of the buildings on-site, there are presumed to be asbestos-containing materials (ACMs) and lead-based paints (LBPs) at the Project Site. However, in the event any suspect ACMs or LBPs is found during demolition activities, the Project would adhere to all federal, State, and local regulations prior to their disturbance and removal. These regulations include, but are not limited to, the Toxic Substances Control Act, the Resource Conservation and Recovery Act, the federal and State Occupational Safety and Health Acts, SCAQMD Rule 1403 pertaining to asbestos emissions from renovation/demolition activities, and the Residential Lead-Based Paint Reduction Act. Mandatory compliance with applicable federal and State standards and procedures would reduce risks associated with ACMs and LBP to less-than-significant levels.

The Phase I ESA identified PCBs associated with the on-site pad-mounted transformers and transformer stations, a hydraulic lift/dock with a 5-gallon reservoir, and on-site elevators. In the event that PCBs are encountered during Project construction, suspect materials would be removed in accordance with all applicable local, State and federal regulations prior to demolition activities. Specifically, the disposal of PCB wastes is regulated by 40 Code of Federal Regulations 761 to ensure the safe handling of these materials. With compliance with relevant regulations and requirements, Project construction activities would not expose people to a substantial risk resulting from the release of PCBs in the environment. Therefore, impacts related to PCBs would be less than significant and no mitigation measures are required.

The Project Site is not within an active or inactive oil field and is not within a Methane Zone or Methane Buffer Zone identified by the City.[43] The Division of Oil, Gas & Geothermal Resources Online Mapping System shows that there is an oil well approximately 960 feet west of the Project Site that was operated by Chevron USA Inc. The oil well was drilled to a depth of 4,724 feet in May 1969, but never produced oil and was abandoned by August 1969. The Division of Oil, Gas & Geothermal Resources Online Mapping System lists the status for the oil well as inactive and plugged. Therefore, there is a negligible risk of subsurface methane release.

Based on the above, with compliance with regulatory requirements, the Project would not result in a significant hazard to the public or the environment through reasonably foreseeable upset or accident conditions involving the release of hazardous materials into the environment. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

---

[42] Citadel Environmental Services, Inc., Phase I Environmental Site Assessment Report, November 27, 2017. See Appendix IS-3, of this Initial Study.

[43] City of Los Angeles Department of City Planning, ZIMAS, Parcel Profile Report, http://zimas.lacity.org/, accessed March 20, 2017.

Less Than Significant Impact. Joseph Le Conte Middle School is located approximately 0.25 mile east of the Project Site at 1316 North Bronson Avenue. As discussed above, the types and amounts of hazardous materials that would be used in connection with the Project would be typical of those used during construction of commercial developments, including vehicle fuels, paints, oils, and transmission fluids. Similarly, the types and amounts of hazardous materials used during operation of the proposed uses would be typical of office and studio developments and would include cleaning solvents, pesticides for landscaping, painting supplies, and petroleum products. Therefore, the types of potentially hazardous materials that would be used in connection with the Project would be consistent with other potentially hazardous materials currently used within and in the vicinity of the Project Site. In addition, the Project would not involve the use or handling of acutely hazardous materials, substances, or waste. Specifically, the Project does not involve the development of industrial or other uses that would emit large amounts of chemicals or acutely hazardous materials. Furthermore, all materials used during both the construction and operation of the Project would be used in accordance with manufacturers' instructions and handled in compliance with applicable federal, State, and local regulations. Additionally, truck haul routes during construction of the Project would likely be along Sunset Boulevard to and from the Hollywood Freeway and trucks would not travel adjacent to the school. As such, the Project would not emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school. Impacts would be less than significant, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment, caused in whole or in part from the project's exacerbation of existing environmental conditions?

Less Than Significant Impact. California Government Code Section 65962.5 requires the California Environmental Protection Agency (CalEPA) to develop and update annually the Cortese List, which is a "list" of hazardous waste sites and other contaminated sites. While California Government Code Section 65962.5 makes reference to the preparation of a "list," many changes have occurred related to web-based information access since 1992 and information regarding the Cortese List is now compiled on the websites of the California Department of Toxic Substances Control (DTSC), the State Water Board, and CalEPA. The DTSC maintains the EnviroStor database, which includes sites on the Cortese List and also identifies potentially hazardous sites where cleanup actions or extensive investigations are planned or have occurred. The database provides a listing of federal Superfund sites, State response sites, voluntary cleanup sites, and school cleanup sites.

The Phase I ESA included the results of consultation with local agency representatives and a review of available federal, State, and local databases including, but not limited to, EnviroStor database, Geotracker, ZIMAS, and the Division of Oil, Gas, and Geothermal Resources.

A review of available federal, State, and local databases found that the Project Site was located on hazardous materials lists, due to the use of materials specifically related to studio productions and sets. Namely, the Project Site was listed on the Resource Conservation and Recovery Act (RCRA) Small Quantity Generators list in 2007. The RCRA regulations establish basic hazardous waste management standards found in title 40 of the Code of Federal Regulations for

hazardous waste generators. In the case of the Project Site, the listing was for the generation of ignitable waste and spent halogenated and non-halogenated solvents. Solvents can be used as cleaning agents or in paint thinning and coating, etc. and may be hazardous wastes when can no longer be used. However, the RCRA generator regulations ensure that hazardous waste is appropriately identified and handled safely to protect human health and the environment. With compliance with these regulations, no violations were reported associated with this listing. The Project Site was also listed on the RCRA Non Generators list associated with NBC Universal TV's generation of ignitable waste, barium, cadmium, chromium, lead, methyl ethyl ketone, and spent non-halogenated solvents in 2006. With compliance with the RCRA generator regulations, no violations were reported associated with this listing. In addition, the Project Site was listed on the DTSC Hazardous Waste Information System (HAZNET) database as a generator of hazardous wastes including solvents, latex waste, paint sludge, aqueous solutions, and other organic solids. These materials are all typical of studio productions and sets and no violations associated with this listing were reported. The Project Site was also identified on the HAZNET database for generating oil/water separation sludge in 2006 and asbestos containing waste in 2006, 2014, and 2015. While the Project Site is included on the aforementioned lists, these listings are due to the use of specific hazardous materials that are typical of studio productions and sets. The Phase I ESA concluded that there are no reported violations from the identified hazardous materials.

Based on the above, the Project could not exacerbate any existing environmental conditions that could otherwise create a significant hazard to the public or the environment associated with the Project Site being located on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

No Impact. The Project Site is not located within an area subject to an airport land use plan or within 2 miles of an airport. The closest airport is Burbank Bob Hope Airport, located approximately 7.2 miles from the Project Site. Given the distance between the Project Site and Burbank Bob Hope Airport and the Project height, the Project would not have the potential to result in a safety hazard. Therefore, no impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?

No Impact. The Project Site is not located within the vicinity of a private airstrip. Therefore, no impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact. The City of Los Angeles' General Plan Safety Element addresses public protection from unreasonable risks associated with natural disasters (e.g., fires, floods, earthquakes) and sets forth guidance for emergency response. Specifically, the Safety Element includes Exhibit H, Critical Facilities and Lifeline Systems, which identifies emergency evacuation routes, or disaster routes, along with the location of selected emergency facilities. According to the Safety Element of the City of Los Angeles General Plan, the Project Site is not located along a designated disaster route.[44] The closest disaster routes include the Hollywood Freeway, located approximately 0.5 mile east of the Project Site, and Santa Monica Boulevard, located approximately 0.4 mile south of the Project Site. The majority of construction activities for the Project would be confined to the Project Site with limited off-site construction activities occurring in adjacent street rights-of-way (e.g., Sunset Boulevard, Gordon Street, Gower Street) during certain periods of the day. As such, Project-related construction activities would not occur within or adjacent to the City-designated disaster routes stated above (i.e., the Hollywood Freeway and Santa Monica Boulevard). With regard to operation, the Project does not propose the permanent closure of any local public streets and primary access to the Project Site would continue to be provided from Sunset Boulevard. In addition, the Project would not install barriers that would impede access in the vicinity of the Project Site. Therefore, construction and operation of the Project would not have the potential to interfere with access to and along the aforementioned City-designated disaster routes. Accordingly, the Project would not impair implementation of or physically interfere with an adopted emergency response plan or evacuation plan. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including, where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands, caused in whole or in part from the project's exacerbation of existing environmental conditions?

No Impact. There are no wildlands located in the vicinity of the Project Site. The Project Site is not located within a City-designated Very High Fire Hazard Severity Zone[45] or within a City-designated fire buffer zone.[46] Therefore, the Project would not exacerbate existing conditions (i.e., here are no wildlands adjacent to the Project Site) that would subject people or structures to a significant risk of loss, injury, or death as a result of exposure to wildland fires. No impacts would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

IX. HYDROLOGY AND WATER QUALITY. Would the project:				
a. Violate any water quality standards or waste discharge requirements?	☐	☐	☒	☐
b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	☐	☐	☒	☐
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?	☐	☐	☒	☐
d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	☐	☐	☒	☐
e. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	☐	☐	☒	☐
f. Otherwise substantially degrade water quality?	☐	☐	☒	☐
g. Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	☐	☐	☐	☒
h. Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	☐	☐	☐	☒
i. Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	☐	☐	☒	☐
j. Inundation by seiche, tsunami, or mudflow?	☐	☐	☐	☒

The following analysis is based, in part, on the *Technical Report: Water Resources* (Water Resources Technical Report) prepared for the Project by KPFF Consulting Engineers, dated February 26, 2018. The Water Resources Technical Report is included as Appendix IS-4 of this Initial Study.

Would the project:

a) Violate any water quality standards or waste discharge requirements?

Less Than Significant Impact. During Project construction, particularly during the grading phase, stormwater runoff from precipitation events could cause exposed and stockpiled soils to be subject to erosion and convey sediments into municipal storm drain systems. In addition, on-site watering activities to reduce airborne dust could contribute to pollutant loading in runoff. Pollutant discharges relating to the storage, handling, use and disposal of chemicals, adhesives, coatings, lubricants, and fuel could also occur. However, as Project construction would disturb more than one acre of soil, the Project would be required to implement a Stormwater Pollution Prevention Plan (SWPPP) under the National Pollutant Discharge Elimination System (NPDES) Construction General Permit (Order No. 2009-0009-DWQ, as well as its subsequent amendments 2010-0014-DWQ and 2012-0006-DWQ). The SWPPP would set forth Best Management Practices (BMPs) for stormwater and non-stormwater discharges, including, but not limited to, sandbags, storm drain inlets protection, stabilized construction entrance/exit, wind erosion control, and stockpile management, to minimize the discharge of pollutants in stormwater runoff during construction. The SWPPP would be carried out in compliance with State Water Resources Control Board requirements and would also be subject to review by the City for compliance with the City of Los Angeles' *Best Management Practices Handbook*, *Part A Construction Activities*. In addition, Project construction activities would occur in accordance with City grading permit regulations (Chapter IX, Division 70 of the LAMC), such as the preparation of an erosion control plan, to reduce the effects of sedimentation and erosion.

Based on the depth to groundwater identified by the geotechnical investigation (48 feet below ground surface), the Project's maximum proposed excavation of up to 42 feet below ground surface is not anticipated to disturb the groundwater table during construction. Even if seasonal or perched groundwater is encountered during excavation, a temporary dewatering system, such as pumping or wellpoints, would be implemented in accordance with NPDES permit requirements. Prior to the issuance of a grading permit, the Project Applicant would be required to provide the City with evidence that a Notice of Intent has been filed with the State Water Resources Control Board to comply with the NPDES Construction General Permit. With compliance with these existing regulatory requirements, impacts to water quality and waste discharge requirements during construction would be less than significant, and no mitigation measures would be required. No further evaluation of this topic in an EIR is required.

Operation of the Project would introduce sources of potential water pollution that are typical of commercial developments, including studio uses (e.g., cleaning solvents, pesticides for landscaping, and petroleum products associated with circulation areas). Stormwater runoff from precipitation events could also potentially carry urban pollutants into municipal storm drains. However, in accordance with the City's Low Impact Development (LID) Ordinance (Ordinance No. 181899), best management practices (BMPs) would be implemented on-site to address City and State water quality

requirements. The Project would not violate any water quality standards or waste discharge requirements through compliance with these regulatory requirements for stormwater and non-stormwater discharges; i.e.,implementation of LID standards and best management practices. Therefore, impacts to surface water quality would be less than significant. No mitigation measures are required, and no further evaluation of this topic in the EIR is required.

b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?

Less Than Significant Impact. As discussed above, groundwater was identified at 48 feet below ground surface. However, the Project would only require excavation to maximum depths of 42 feet for construction of the subterranean parking levels. In addition, dewatering during construction or operation is not anticipated. As such, the Project would not substantially deplete groundwater supplies.

With regard to groundwater recharge, the percolation of precipitation that falls on pervious surfaces is variable, depending on the soil type, condition of the soil, vegetative cover, and other factors. According to the Water Resources Technical Report, the Project Site is almost entirely impervious (99 percent impervious surfaces) under existing conditions. Therefore, the degree to which surface water infiltration and groundwater recharge occurs on-site is negligible. With implementation of the Project, impervious surfaces would comprise 99 percent of the Project Site, as with existing conditions. As such, operation of the Project would not alter the existing limited groundwater recharge that occurs within the Project Site. Therefore, the Project would not interfere substantially with groundwater recharge.

Based on the above, the Project would not substantially deplete groundwater supplies or interfere with groundwater recharge such that there would be a net deficit in the aquifer volume or lowering of the local groundwater table level. Therefore, impacts on groundwater would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?

Less Than Significant Impact. As discussed in the Water Resources Report, the Project Site primarily drains to Fountain Avenue. Areas that drain to Gordon Street and Gower Street flow along gutters to catch basins at Fountain Avenue.

Construction activities associated with the Project, which would involve removal of some of the existing structures and grading, have the potential to temporarily alter existing drainage patterns on the Project Site by exposing the underlying soils, modifying flow direction, and making the Project Site

temporarily more permeable. However, as discussed above in Response to Checklist Question IX.a, the Project would be required to obtain coverage under the NPDES Construction General Permit. The SWPPP prepared pursuant to this permit requires BMPs and erosion control measures to be used during construction to manage runoff flows so that runoff would not impact off-site drainage facilities and receiving waters. In addition, the Project would be required to comply with all applicable City permit regulations, erosion control plans, LID, and inspections to reduce sedimentation and erosion.

As discussed in the Water Resources Report, the Project Site is 99 percent impervious under existing conditions. At buildout of the Project, the Project Site would be comprised of approximately 99 percent impervious areas. As such, similar to existing conditions, there would be a limited potential for erosion or siltation to occur from exposed soils or large expanses of pervious areas. In addition, as determined in the Water Resources Report, the overall flow rate would be reduced compared to existing conditions. With implementation of the Project, stormwater would flow to discharge points at the curb face and then discharge the stormwater to the public storm drain system, which would be an improvement over existing conditions wherein some of the on-site stormwater sheet flows directly into the street curb.

Based on the above, the Project would not substantially alter the existing drainage pattern of the Project Site or surrounding area such that substantial erosion, siltation, or on-site or off-site flooding would occur. Therefore, impacts would be less than significant, and no mitigation measures would be required. No further evaluation of this topic in an EIR is required.

d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?

Less Than Significant Impact. There are no streams or rivers within the Project Site. In addition, As described above in Response to Checklist Question IX.c, the Project would not substantially alter drainage patterns. As discussed in the Water Resources Report, existing runoff flows during a 50-year storm event[47] are 44.27 cubic feet per second. At buildout of the Project, the Project Site would be comprised of approximately 99 percent impervious areas, like existing conditions. Accordingly, there would be no incremental increase in the imperviousness of the Project Site that would substantially increase runoff volumes into the existing storm drain system. Moreover the Water Resources Report determines that post-development runoff flows would decrease from 44.27 cubic feet per second to 43.75 cubic feet per second during a 50-year storm event. Therefore, stormwater flows from the Project Site would not substantially increase with = the Project. Thus, the Project would not substantially increase the rate or amount of surface runoff in a manner which would

[47] Per the City's Special Order No. 007-1299, the City has adopted the Los Angeles County Department of Public Works (LACDPW) Hydrology Manual as its basis of design for storm drainage facilities. The Hydrology Manual requires projects to have drainage facilities to meet the Urban Flood level of protection, which is defined as runoff from a 25-year frequency storm falling on a saturated watershed. The L.A. CEQA Thresholds Guide, however, establishes the 50-year frequency design storm event as the threshold to evaluate potential impacts on surface water hydrology. Therefore, to provide a more conservative analysis of the ability of storm drain infrastructure to accommodate the demand generated by the Project, the higher 50-year storm event threshold was used.

result in flooding on-site or off-site. Impacts would be less than significant, and no mitigation measures are required**.** No further evaluation of this topic in an EIR is required.

e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less Than Significant Impact. As discussed in Response to Checklist Question IX.c, above, the Project would maintain the existing percentage of impervious surfaces within the Project Site and would therefore not create new potential for runoff water to exceed the capacity of existing stormwater drainage systems. . In addition, as discussed in Response to Checklist Question IV.d, post-development runoff flows would actually decrease from 44.27 cubic feet per second to 43.75 cubic feet per second during a 50-year storm event. Therefore, stormwater flows from the Project Site would not increase with due to the Project. In terms of polluted runoff, the Project's proposed uses would be typical of studio-related operations and would not introduce substantial sources of polluted water that an industrial operation would introduce, for example. Moreover, even if there were polluted runoff generated by the studio uses, the Project would be required to comply with the City's LID requirements, which would address these potential discharges. As such, the Project would not create or contribute additional runoff water that would exceed the capacity of the existing stormwater system or provide substantial sources of polluted runoff. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

f) Otherwise substantially degrade water quality?

Less Than Significant Impact. As discussed above in Response to Checklist Question IX.a, the Project would implement BMPs to filter, treat, and reduce stormwater pollutants prior to discharge from the Project Site, in accordance with the City's LID requirements and SWPPP (see Checklist Question IX.a). Non-stormwater runoff associated with typical operations of the Project Site would also be filtered to some extent by the BMPs (e.g., through the use of biofiltration) provided on-site prior to discharging from the Project Site. Therefore, the Project would not substantially degrade water quality. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

No Impact. The Project does not include housing and the Project Site is not located within a 100-year flood hazard area as mapped by the Federal Emergency Management Agency (FEMA) or by the City of Los Angeles.[48,49] Thus, the Project would not place housing within a 100-year flood hazard area. No impacts would occur, and no mitigation measures are required. No further analysis of this topic in an EIR is required.

---

[48] Federal Emergency Management Agency, Flood Insurance Rate Map, Panel Number 06037C1075F, effective September 26, 2008.

[49] City of Los Angeles, Safety Element of the Los Angeles City General Plan, November 26, 1996, Exhibit F, p. 57.

h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?

No Impact. As discussed above in Response to Checklist Question IX.g, the Project Site is not located within a designated 100-year flood hazard area. Thus, the Project would not place structures that would impede or redirect flood flows within a 100-year flood hazard area. No impacts would occur, and no mitigation measures are required.

i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

Less Than Significant Impact. As discussed above, the Project Site is not located within a designated 100-year flood plain. In addition, the Project would not increase runoff flows such that flooding could occur. Moreover, the Safety Element of the City of Los Angeles General Plan does not map the Project Site as being located within a flood control basin.[50] The Project Site is located within the potential inundation area for the Hollywood Reservoir, which is held by the Mulholland Dam.[51] The Mulholland Dam is a Los Angeles Department of Water and Power (LADWP) dam located in the Hollywood Hills approximately 1.5 miles north of the Project Site. The Mulholland Dam was built in 1924 and designed to hold 2.5 billion gallons of water. This dam, as well as others in California, are continually monitored by various governmental agencies (such as the State of California Division of Safety of Dams and the U.S. Army Corps of Engineers) to guard against the threat of dam failure. Current design and construction practices and ongoing programs of review, modification, or total reconstruction of existing dams are intended to ensure that all dams are capable of withstanding the maximum considered earthquake for the site. Pursuant to these regulations, the Mulholland Dam is regularly inspected and meets current safety regulations. In addition, the LADWP has emergency response plans to address any potential impacts to its dams. Given the oversight by the Division of Safety of Dams, including regular inspections, and the LADWP's emergency response program, the potential for substantial adverse impacts related to flooding at the Project Site as a result of dam failure would be less than significant. No further evaluation of this topic in the EIR is required.

j) Inundation by seiche, tsunami, or mudflow?

No Impact. A seiche is an oscillation of a body of water in an enclosed or semi-enclosed basin, such as a reservoir, harbor, lake, or storage tank. A tsunami is a great sea wave, commonly referred to as a tidal wave, produced by a significant undersea disturbance such as tectonic displacement associated with large, shallow earthquakes. Mudflows result from the downslope movement of soil and/or rock under the influence of gravity.

The Project Site is located approximately 11.6 miles northeast of the Pacific Ocean. In addition, the Safety Element of the General Plan does not map the Project Site as being located within an area potentially affected by a tsunami.[52] Given the Project Site's location approximately

[50] City of Los Angeles, Safety Element of the Los Angeles City General Plan, Exhibit G, November 26, 1996, p. 59.

[51] City of Los Angeles, Safety Element of the Los Angeles City General Plan, Exhibit G, November 26, 1996, p. 59.

[52] City of Los Angeles, Safety Element of the Los Angeles City General Plan, Exhibit G, November 26, 1996, p. 59.

1.3 miles south of the Hollywood Reservoir, impacts from mudflow or a seiche occurring within the reservoir are unlikely. Moreover, as discussed above in Response to Checklist Question IX.i, given the oversight of the Hollywood Reservoir's Mulholland Dam by the Division of Safety of Dams, including regular inspections, as well as the LADWP's emergency response program, the potential for substantial adverse impacts at the Project Site relating to seiche or mudflow as a result of dam failure would be less than significant. Therefore, no seiche, tsunami, or mudflow events would be expected to impact the Project Site. No impacts would occur, and no mitigation measures would be required. No further evaluation of this topic in an EIR is required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
X. LAND USE AND PLANNING. Would the project:				
a. Physically divide an established community?	☐	☐	☒	☐
b. Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	☒	☐	☐	☐
c. Conflict with any applicable habitat conservation plan or natural community conservation plan?	☐	☐	☐	☒

Would the project:

a) Physically divide an established community?

Less Than Significant Impact. As discussed in Attachment A, Project Description, of this Initial Study, the Project Site is located in a highly urbanized area characterized by a mixture of historic and modern low- to high-rise buildings occupied by neighborhood-serving commercial/retail uses, tourist and entertainment-related commercial/retail uses, offices, hotels, educational institutions, and single-family and multi-family residences. The Project proposes the preservation and enhancement of portions of the existing Sunset Gower Studios including the development of new studio-related creative office, production office/production support and storage uses, and parking facilities. All proposed development would occur within the boundaries of the Sunset Gower Studios, which is fully developed, and the Project does not propose a freeway or other large infrastructure or barrier that would divide a community. Therefore, the Project would not physically divide, disrupt, or isolate an established community. Impacts would be less than significant, and no mitigation measures are required. No further analysis of this topic in the EIR is required.

b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

Potentially Significant Impact. The EIR will provide further analysis of whether the Project conflicts with applicable land use plans, policies, and regulations that were adopted for the purpose of avoiding or mitigating an environmental effect.

c) Conflict with any applicable habitat conservation plan or natural community conservation plan?

No Impact. The Project Site is located in an urbanized and fully developed area and is currently occupied by creative offices, production support, and sound stages. As discussed above in Checklist Question IV, Biological Resources, the Project Site does not support any habitat or natural community. No Conservation Plan, Natural Community Conservation Plan, or other approved habitat conservation plans apply to the Project Site.[53,54] Thus, the Project would not conflict with the provisions of an adopted habitat conservation plan or natural community conservation plan. No impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XI. MINERAL RESOURCES. Would the project:				
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒

Would the project:

a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

No Impact. No mineral extraction operations currently occur on the Project Site. The Project Site is located within an urbanized area and has been previously disturbed by development. Furthermore, the Project Site is not located within a City-designated Mineral Resource Zone where significant mineral deposits are known to be present, or within a mineral producing area as classified by the California Geologic Survey.[55,56] The Project Site is also not located within a City-designated oil

55 City of Los Angeles, Department of City Planning, Los Angeles Citywide General Plan Framework, Draft Environmental Impact Report, January 19, 1995. Figure GS-1.

field or oil drilling area.[57] Therefore, the Project would not result in the loss of availability of a mineral resource or a mineral resource recovery site. No impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. No mineral extraction operations currently occur on the Project Site. Furthermore, the Project Site is not located within a City-designated Mineral Resource Zone where significant mineral deposits are known to be present, or within a mineral producing area as classified by the California Geologic Survey.[58,59,60] The Project Site is also not located within a City-designated oil field or oil drilling area.[61, 62] Therefore, the Project would not result in the loss of availability of a mineral resource or a mineral resource recovery site. No impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XII. NOISE. Would the project result in:				
a. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☒	☐	☐	☐
b. Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	☒	☐	☐	☐
c. A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	☒	☐	☐	☐
d. A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	☒	☐	☐	☐

---

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
f. For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒

Would the project:

a) Exposure of persons to, or generation of, noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Potentially Significant Impact. During construction activities associated with the Project, the use of heavy equipment (e.g., bulldozers, backhoes, cranes, loaders, etc.) would generate noise on a short-term basis. In addition, because the Project would introduce additional studio-related uses to the Project Site, noise levels from on-site sources may also increase during operation of the Project. Therefore, further evaluation of this topic will be provided in the EIR.

b) Exposure of persons to, or generation of, excessive groundborne vibration or groundborne noise levels?

Potentially Significant Impact. Construction of the Project could generate groundborne noise and vibration associated with demolition, site grading, other clearing activities, the installation of building footings, and construction truck travel. As such, the Project would have the potential to generate and expose people to excessive groundborne vibration and noise levels during short-term construction activities. Therefore, further evaluation of this topic will be provided in the EIR.

c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Potentially Significant Impact. As discussed in Response to Checklist Question XII.a, above, human activity associated with the Project would have the potential to permanently increase ambient noise levels above existing levels. Therefore, further evaluation of this topic will be provided in the EIR.

d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?

Potentially Significant Impact. As discussed above in Response to Checklist Questions XII.a and XII.b, construction activities associated with the Project would have the potential to temporarily or periodically increase ambient noise levels above existing levels. Therefore, further evaluation of this topic will be provided in the EIR.

e) For a project located within an airport land use plan, or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The Project Site is not located within an airport land use plan or within 2 miles of an airport. The closest airport to the Project Site, Burbank Bob Hope Airport, is located approximately 7.2 miles from the Project Site. Given the distance between the Project Site and Burbank Bob Hope Airport, the Project would not have the potential to expose people working or residing in the Project area to excessive noise levels. Therefore, no impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

f) For a project located within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The Project Site is not located within the vicinity of a private airstrip. Given the Project height and the fact that there are no private airstrips in the immediate vicinity, the Project would not expose people working or residing in the Project area to excessive noise levels. Therefore, no impact would occur, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIII. POPULATION AND HOUSING. Would the project:				
a. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
c. Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Would the project:

a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less Than Significant Impact. The Project would result in the construction of new creative office, production support, and sound stage uses. Since the Project does not propose a housing component, it would not directly induce a new residential population which would contribute to population growth in the vicinity of the Project Site or Hollywood Community Plan area.

While construction of the Project would create temporary construction-related jobs, the work requirements of most construction projects are highly specialized so that construction workers remain at a job site only for the time in which their specific skills are needed to complete a particular phase of the construction process. Thus, Project-related construction workers would not be anticipated to relocate their household's place of residence as a consequence of working on the Project and, therefore, no new permanent residents would be generated during construction of the Project which could induce substantial population growth.

With regards to operation, the Project Site is located within the highly urbanized Hollywood Community Plan Area, which is already fully developed with homes and businesses. The Project would not introduce new homes or businesses since the Project calls for the continuation of the commercial uses at the existing Sunset Gower Studios. Even if the new employment opportunities generated by the proposed creative office, production support, and sound stage uses, which is estimated to be approximately 2,500 employees, could induce population growth, the increase in population would not be substantial since not all employees would necessarily move close to the Project Site. Some employment opportunities may be filled by people already residing in the vicinity of the Project Site, and other persons would commute to the Project Site from other communities in and outside of the City. Therefore, given that the Project would not directly contribute to substantial population growth in the Project area through the development of residential uses and as some of the employment opportunities generated by the Project would be filled by people already residing in the vicinity of the Project Site or who would commute, the potential growth associated with Project employees who may relocate their place of residence would not be substantial. As such, the Project would not result in substantial population growth by proposing new homes and businesses. Further, as the Project would be located in a highly developed area with an established network of roads and other urban infrastructure, the Project would not require the extension of such infrastructure in a manner that would indirectly induce substantial population growth.

Based on the above, the Project would not induce substantial population or housing growth. Impacts would be less than significant and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?

No Impact. As no housing currently exists on the Project Site, the Project would not displace any existing housing. No impacts would occur and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?

No Impact. As no housing currently exists on the Project Site, the development of the Project would not cause the displacement of any persons or require the construction of housing elsewhere. No impact would occur and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV. PUBLIC SERVICES. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
a. Fire protection?	☒	☐	☐	☐
b. Police protection?	☒	☐	☐	☐
c. Schools?	☐	☐	☒	☐
d. Parks?	☐	☐	☒	☐
e. Other public facilities?	☐	☐	☒	☐

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

a) Fire protection?

Potentially Significant Impact. The LAFD provides fire protection and emergency medical services for the Project Site. The Project would increase the building square footage on-site, which has the potential to result in an increased demand for fire protection services and associated facilities, the construction of which might result in adverse physical impacts. Therefore, further analysis of this issue will be included in the EIR.

b) Police protection?

Potentially Significant Impact. Police protection for the Project Site is provided by the City of Los Angeles Police Department. The Project would increase the building square footage on-site and increase the daytime population in the service area. This could result in the need for additional

police services and associated facilities, the construction of which might result in adverse physical impacts. Therefore, the EIR will provide further analysis of this issue.

c) Schools?

Less Than Significant Impact. The Project Site is located within the boundaries of the Los Angeles Unified School District (LAUSD). LAUSD is divided into six local districts.[63] The Project Site is located in Local District–West.[64] As previously discussed, the Project does not propose the development of residential uses. Therefore, implementation of the Project would not result in a direct increase in the number of students within the service area of LAUSD from the introduction of a residential population. In addition, not all new employees of the Project would necessarily relocate to the vicinity of the Project Site, which could otherwise trigger a demand for new or expanded school facilities. Furthermore, even if there were new school facilities that would need to be built, pursuant to Senate Bill 50, the Project Applicant would be required to pay development fees for schools to LAUSD prior to the issuance of building permits. Pursuant to Government Code Section 65995, the payment of these fees is considered mitigation of Project-related school impacts. Therefore, impacts would be less than significant, and no mitigation measures are required. No further analysis of this issue in an EIR is required.

d) Parks?

Less Than Significant Impact. Parks and recreational facilities in the vicinity of the Project Site are primarily operated and maintained by the Los Angeles Department of Recreation and Parks. Nearby parks and recreational facilities within an approximate 2-mile radius of the Project Site include: Carlton Way Park (located 0.4 mile northeast of the Project Site); Seily Rodriguez Park (located 0.8 mile southeast of the Project Site); Hollywood Pool and Recreation Center (located 0.8 southwest of the Project Site); Selma Park (located 0.8 mile west of the Project Site); De Longpre Park (located 1.0 mile west of the Project Site); Yucca Community Park (located 1.1 mile northwest of the Project Site); La Mirada Park (located 1.2 miles southeast of the Project Site); Las Palmas Senior Center (located 1.3 miles northwest of the Project Site); Dorothy & Benjamin Smith Park (located 1.7 miles northwest of the Project Site); Lemon Grove Recreation Center (located 1.8 miles southeast of the Project Site); Robert L. Burns Park (located 1.9 miles south of the Project Site); Barnsdall Art Park (located 1.9 miles east of the Project Site); and Runyon Canyon Park (located 2.0 miles northwest of the Project Site).

As previously discussed, the Project does not propose the development of residential uses. Therefore, implementation of the Project would not result in on-site residents who would utilize nearby parks and/or recreational facilities. Additionally, the new employment opportunities that would be generated by the Project may be filled, in part, by employees already residing in the vicinity of the Project Site who already utilize existing parks and recreational facilities. Therefore, only a fraction of the new employees generated by the Project could create a demand for parks. While it is possible

---

[63] Los Angeles Unified School District, Board of Education Districts Maps 2015-2016, http://achieve.lausd.net/Page/8652, accessed December 11, 2017.

[64] Los Angeles Unified School District, Board of Education Local District—West Map, July 2015.

that some of these employees may utilize local parks and recreational facilities, such use would be anticipated to be limited due to work obligations and the amount of time it would take for employees to access off-site local parks. In addition, Project employees would be more likely to use parks near their homes during non-work hours. Furthermore, the Project proposes on-site open space amenities such as landscaped courtyards with seating for use by employees, reducing the likelihood they would use local parks. Therefore, the Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered parks or the need for new or physically altered parks. Impacts would be less than significant, and no mitigation measures are required. No further analysis of this issue in an EIR is required.

e) Other public facilities?

Less Than Significant Impact. Other public facilities available include libraries. The Los Angeles Public Library (LAPL) provides library services to the City of Los Angeles through its Central Library, eight regional branch libraries, and 64 neighborhood branch libraries, as well as through Web-based resources.[65] The Project area is served by existing libraries within the Hollywood Community Plan area, including the Frances Howard Goldwyn Hollywood Regional Library, located 0.6 mile northwest of the Project Site.

As previously discussed, the Project does not propose the development of residential uses. Therefore, implementation of the Project would not result in a direct increase in the number of residents within the service population of the Hollywood Regional Library. In addition, Project employees would have internet access to LAPL and other web-based resources, decreasing the demand on library facilities. Furthermore, as Project employees would be more likely to use library facilities near their homes during non-work hours and given that some of the employment opportunities generated by the Project would be filled by people already residing in the vicinity of the Project Site, Project employees and the potential indirect population generation that could be attributable to those employees would generate minimal demand for library services. Therefore, the Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered library facilities or the need for new or physically altered library facilities. Impacts would be less than significant, and no mitigation measures are required. No further analysis of this issue in an EIR is required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XV. RECREATION.				
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐

[65] Los Angeles Public Library, Library Directory.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☐	☒

a) Would the project Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facilities would occur or be accelerated?

Less Than Significant Impact. As described above in Response to Checklist Question XIV.d, many public parks and recreational facilities are located in the vicinity of the Project Site. There is one regional park, Runyon Canyon Park, located in the vicinity of the Project Site, approximately 2 miles northwest of the Project Site. As previously discussed, the Project does not propose the development of residential uses which would create a demand on nearby parks and/or recreational facilities. Additionally, the new employment opportunities that would be generated by the Project may be filled, in part, by employees already residing in the vicinity of the Project Site who already utilize existing parks and recreational facilities. Therefore, only a fraction of the new employees generated by the Project could create a demand for parks and recreational facilities. While it is possible that some of these employees may utilize local parks and recreational facilities, such use would be anticipated to be limited due to work obligations and the amount of time it would take for employees to access off-site local parks and recreational facilities. In addition, Project employees would be more likely to use parks near their homes during non-work hours.

Based on the above, the Project would not substantially increase the demand for off-site public parks and recreational facilities, such that substantial physical deterioration of those facilities would occur or be accelerated. The impact on parks and recreational facilities would be less than significant and mitigation measures would not be required. No further evaluation of this topic in an EIR is required.

b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

No Impact. The Project would not include the development of recreational facilities or require the expansion of recreational facilities, as discussed above in Response to Checklist Question XIV.d. Therefore, no impact would occur and no mitigation measures would be required. No further evaluation of this topic in an EIR is required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVI. TRANSPORTATION/TRAFFIC. Would the project:				
a. Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	☒	☐	☐	☐
b. Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	☒	☐	☐	☐
c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	☐	☐	☒	☐
d. Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☐	☒
e. Result in inadequate emergency access?	☒	☐	☐	☐
f. Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?	☒	☐	☐	☐

Would the project:

a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?

Potentially Significant Impact. The Project proposes development that has the potential to result in an increase in daily and peak-hour traffic within the vicinity of the Project Site. In addition, construction of the Project has the potential to affect the transportation system through the hauling of excavated materials and debris, the transport of construction equipment, the delivery of construction

materials, and travel by construction workers to and from the Project Site. Once construction is completed, the Project's employees and visitors would generate vehicle and transit trips throughout the day. The resulting increase in the use of the area's transportation facilities could affect the capacity of the roadway and transit system. Therefore, further analysis of this issue will be provided in the EIR.

b) Conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

Potentially Significant Impact. In Los Angeles County, Metro administers the Congestion Management Program (CMP), a State-mandated program designed to address the impacts urban congestion has on local communities and the region as a whole. The CMP provides an analytical basis for the transportation decisions contained in the State Transportation Improvement Program. The CMP for Los Angeles County requires an analysis of any Project that could add 50 or more trips to any CMP intersection or more than 150 trips to a CMP mainline freeway location in either direction during either the A.M. or P.M. weekday peak hours. Implementation of the Project has the potential to generate additional vehicle trips, which could potentially add more than 50 trips to a CMP roadway intersection or more than 150 trips to a CMP freeway segment. Therefore, further analysis of this issue will be provided in the EIR.

c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?

Less Than Significant Impact. The Project proposes a new 300-foot-tall, 18-story building and two mid-rise buildings with maximum heights of 89 feet each. However, the Project Site is not located within the vicinity of any private or public airport or planning boundary of any airport land use plan. Additionally, the Project does not propose any uses that would increase the frequency of air traffic. Furthermore, the Project would be required to comply with the notice requirements imposed by the FAA for all new buildings taller than 200 feet and would complete Form 7460-1 (Notice of Proposed Construction or Alteration). Therefore, the Project would not result in a change in air traffic patterns that could result in substantial safety risks. Impacts would be less than significant, and no mitigation measures would be required. No further analysis of this topic in the EIR is required.

d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

No Impact. The Project's design does not include hazardous design features (e.g., sharp curves or dangerous intersections). The roadways adjacent to the Project Site are part of the urban roadway network and contain no sharp curves or dangerous intersections, and the development of the Project would not result in roadway improvements such that safety hazards would be introduced adjacent to the Project Site. In addition, the proposed uses would be consistent with the surrounding uses (i.e., commercial) and would not introduce hazards due to incompatible uses such as farm equipment. Therefore, no impact would occur and no mitigation measures would be required. No further evaluation of this topic in an EIR is required.

e) Result in inadequate emergency access?

Potentially Significant Impact. Project construction would be primarily confined on-site; however, Project construction activities may cause the potential closure of travel lanes in adjacent off-site streets for the installation or upgrading of local infrastructure. Construction within these roadways has the potential to impede access to adjoining uses, as well as reduce the rate of flow of the affected roadway. The Project would also generate construction traffic, particularly haul trucks, which may affect the capacity of adjacent streets and highways, which may affect emergency access. Therefore, further analysis of this topic in an EIR is required.

f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?

Potentially Significant Impact. The Project Site is served by a variety of transit options. The development of the Project would increase demand for alternative transportation modes in the vicinity of the Project Site. Therefore, further analysis of the potential for the Project to conflict with adopted policies, plans, or programs regarding public transit, bicycle facilities, or pedestrian facilities will be provided in the EIR.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XVII. TRIBAL CULTURAL RESOURCES.				
a. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or	☒	☐	☐	☐
ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☒	☐	☐	☐

Would the project:

a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1 (k)?

b) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

Potentially Significant Impact. Approved by Governor Jerry Brown on September 25, 2014, Assembly Bill 52 establishes a formal consultation process for California Native American Tribes to identify potential significant impacts to Tribal Cultural Resources, as defined in Public Resources Code Section 21074, as part of CEQA. Effective July 1, 2015, AB 52 applies to projects that file a Notice of Preparation or Notice of Negative Declaration/Mitigated Negative Declaration on or after July 1, 2015. As specified in Assembly Bill 52, lead agencies must provide notice to tribes that are traditionally and culturally affiliated with the geographic area of a proposed project if the tribe has submitted a written request to be notified. The tribe must respond to the lead agency within 30 days of receipt of the notification if it wishes to engage in consultation on the project, and the lead agency must begin the consultation process within 30 days of receiving the request for consultation.

As noted above, the Project would require additional excavations within the Project Site. Therefore, the potential exists for the Project to significantly impact a site, feature, place, cultural landscape, sacred place, or object with cultural value to a California Native American Tribe. In compliance with Assembly Bill 52, the City will notify all applicable tribes and the Project will participate in any requested consultations. Further analysis of this topic will be provided in the EIR.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact

g. Comply with federal, state, and local statutes and regulations related to solid waste?	☐	☐	☒	☐

Would the project:

a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

Less Than Significant Impact. The City of Los Angeles Department of Public Works provides wastewater collection and treatment services for the Project Site. As is the case under existing conditions, wastewater generated during operation of the Project would be collected and discharged into existing sewer mains and conveyed to the Hyperion Water Reclamation Plant in Playa del Rey. Incoming wastewater to the treatment plant initially passes through screens and basins to remove coarse debris and grit. This is followed by primary treatment, which is a physical separation process where heavy solids settle to the bottom of tanks while oil and grease float to the top. These solids, called sludge, are collected, treated, and recycled. The portion of water that remains, called primary effluent, is treated through secondary treatment using a natural, biological approach. Living micro-organisms are added to the primary effluent to consume organic pollutants. These micro-organisms are later harvested and removed as sludge.[66] Treated water from the Hyperion

[66] LASAN, Hyperion Water Reclamation Plant, www.lacitysan.org/san/faces/wcnav_externalId/s-lsh-wwd-cw-p-hwrp?_adf.ctrl-state=grj40dmqj_1780&_afrLoop=3950078628628745#!, accessed January 30, 2018.

Water Reclamation Plant is discharged through an outfall pipe 5 miles into the Santa Monica Bay and Pacific Ocean.[67] The discharge from the Hyperion Water Reclamation Plant into Santa Monica Bay is regulated by the Hyperion Water Reclamation Plant's National Pollutant Discharge Elimination System Permit issued under the Clean Water Act and is required to meet the Regional Water Quality Control Board's requirements for a recreational beneficial use.[68] Accordingly, the Hyperion Water Reclamation Plant's effluent that is released to Santa Monica Bay is continually monitored to ensure that it meets or exceeds prescribed water quality standards. The City's Environmental Monitoring Division also monitors flows into the Santa Monica Bay.[69]

The wastewater generated by the Project would be typical of office and studio uses. No industrial discharge into the wastewater system would occur as part of the Project as no such uses are proposed. As the Hyperion Water Reclamation Plant is in compliance with the State's wastewater treatment requirements, the Project would not exceed the wastewater treatment requirements of the Regional Water Quality Control Board. Therefore, impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Less Than Significant Impact. . Despite the Project's increase in the amount of developed floor area on the Project Site, as determined in Checklist Question XVIII.a, the Project would not cause an exceedance of wastewater treatment requirements at the Hyperion Water Reclamation Plant. Therefore, the Project would not cause there to be the need for the construction of new water or wastewater treatment facilities or the expansion of such facilities. As such, there would be no significant environmental effects from the potential construction of such facilities. Even if there were the need for construction of new water or wastewater treatment facilities or expansion of existing facilities, environmental review would be completed to analyze whether the construction of these facilities would cause significant environmental effects. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

c) Require or result in the construction of new storm water drainage facilities, or expansion of existing facilities, the construction of which could cause significant environmental effects?

Less Than Significant Impact. As discussed in Response to Checklist Question IX.c, above, the Project would maintain the existing percentage of impervious surfaces within the Project Site. In addition, as discussed in Response to Checklist Question IV.d, post-development runoff flows would

[67] California Regional Water Quality Control Board, Los Angeles Region, Order No. R4-2010-0200, NPDES No. CA0109991, Waste Discharge Requirements and National Pollutant Discharge Elimination System Permit for the City of Los Angeles, Hyperion Treatment Plant Discharge to the Pacific Ocean.

[68] California Regional Water Quality Control Board, Los Angeles Region, Order No. R4-2010-0200, NPDES No. CA0109991, Waste Discharge Requirements and National Pollutant Discharge Elimination System Permit for the City of Los Angeles, Hyperion Treatment Plant Discharge to the Pacific Ocean.

[69] LASAN, Environmental Monitoring, www.lacitysan.org/san/faces/wcnav_externalId/s-lsh-wwd-wp-ec-em?_adf.ctrl-state=xsmd2kqwx_131&_afrLoop=21105064772207683#!, accessed January 30, 2018.

decrease from 44.27 cubic feet per second to 43.75 cubic feet per second during a 50-year storm event. Therefore, stormwater flows from the Project Site would not increase with implementation of the Project. Thus, the existing public stormwater system would have sufficient capacity to accommodate the Project and the Project would not require or result in the construction of new stormwater drainage facilities, or expansion of existing facilities, the construction of which could cause significant environmental effects. Impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?

Potentially Significant Impact. LADWP supplies water to the Project Site. The Project would increase the demand for water provided by LADWP. Therefore, further analysis of this issue in an EIR will be provided.

e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Potentially Significant Impact. Given the Project's increase in the amount of developed floor area and associated wastewater generation, further analysis of the ability of the existing infrastructure to serve the Project will be provided in an EIR.

f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?

Less Than Significant Impact. While the Bureau of Sanitation generally provides waste collection services to single-family and some small multi-family developments, private haulers permitted by the City provide waste collection services for most multi-family residential and commercial developments within the City. Solid waste transported by both public and private haulers is either recycled, reused, or transformed at a waste-to-energy facility, or disposed of at a landfill. Landfills within the County are categorized as either Class III or inert waste landfills. Non-hazardous municipal solid waste is disposed of in Class III landfills, while inert waste such as construction waste, yard trimmings, and earth-like waste are disposed of in inert waste landfills.[70] Ten (10) Class III landfills and one inert waste landfill with solid waste facility permits are currently operating within the County.[71] In addition, there are two solid waste transformation facilities within Los Angeles County that convert, combust, or otherwise process solid waste for the purpose of energy recovery.

---

[70] Inert waste is waste which is neither chemically or biologically reactive and will not decompose. Examples of this are sand and concrete.

[71] County of Los Angeles, Department of Public Works, Los Angeles County Integrated Waste Management Plan 2016 Annual Report, September 2017. The 10 Class III landfills within the County include the Antelope Valley Landfill, the Burbank Landfill, the Calabasas Landfill, Chiquita Canyon Landfill, Lancaster Landfill, Pebbly Beach Landfill, San Clemente Landfill, Savage Canyon Landfill, the Scholl Canyon Landfill, and the Sunshine Canyon City and County Landfill. Azusa Land Reclamation is the only permitted Inert Waste Landfill in the County that has a full solid waste facility permit.

In 2016, the City of Los Angeles disposed of approximately 2.71 million tons of solid waste at the County's Class III landfills and approximately 44,942 tons at transformation facilities.[72,73] The 2.71 million tons of solid waste accounts for approximately 3.17 percent of the total remaining capacity (85.45 million tons) for the County's Class III landfills open to the City as of December 31, 2016.[74,75]

The permitted inert waste landfill serving the County is Azusa Land Reclamation. This facility currently has 56.34 million tons of remaining capacity and an average daily in-County disposal rate of 897 tons per day. Los Angeles County continually evaluates landfill disposal needs and capacity through preparation of the Los Angeles County Countywide Integrated Waste Management Plan (ColWMP) Annual Reports. Within each annual report, future landfill disposal needs over the next 15-year planning horizon are addressed in part by determining the available landfill capacity.[76] Based on the most recent 2016 ColWMP Annual Report, the remaining total disposal capacity for the County's Class III landfills is estimated at 103.18 million tons.

Based on the 2016 ColWMP Annual Report, the countywide cumulative need for Class III landfill disposal capacity through the year 2031 will exceed the 2016 remaining permitted Class III landfill capacity of 103 million tons. Therefore, the Annual Report evaluated seven scenarios to increase capacity and determined that the County would be able to meet the disposal needs of all jurisdictions through the 15-year planning period with six of the seven scenarios. Only the scenario involving utilization of permitted in-county disposal capacity only would result in a shortfall. The Annual Report also concluded that in order to maintain adequate disposal capacity, individual jurisdictions must continue to pursue strategies to maximize waste reduction and recycling, expand existing landfills, study, promote, and develop alternative technologies, expand transfer and processing infrastructure, and use out of county disposal, including waste by rail. The City's Recovering Energy, Natural Resources and Economic Benefit from Waste for Los Angeles (RENEW LA) Plan sets a goal of becoming a "zero waste" city by 2030. To this end, the City of Los Angeles implements a number of source reduction and recycling programs such as curbside recycling, home composting demonstration programs, and construction and demolition debris recycling.[77] The City of Los Angeles is currently diverting 76 percent of its waste from landfills.[78] The City has adopted the goal of achieving 90 percent diversion by 2025, and zero waste by 2030.

---

72 These numbers represent waste disposal, not generation, and thus do not reflect the amount of solid waste that was diverted via source reduction and recycling programs within the City.

78 LA Sanitation, Recycling, www.lacitysan.org/san/faces/home/portal/s-lsh-wwd/s-lsh-wwd-s/s-lsh-wwd-s-r?_adf.ctrl-state=alxbkb91s_4&_afrLoop=1885068689149411#!, accessed December 12, 2017.

The following analysis quantifies the Project's construction and operation solid waste generation.

Construction

The Project Site is currently developed with 550,300 square feet of floor area, including approximately 319,300 square feet of creative office uses, 56,000 square feet of production support uses, and approximately 175,000 square feet of floor area associated with sound stages. To provide for the proposed improvements, the Project would remove approximately 160,500 square feet of existing floor area, consisting of 125,500 square feet of creative office, 29,400 square feet of production support, and 5,600 square feet of sound stage uses. The 1,400 square feet of existing service uses would also be removed. Overall, the Project proposes the construction of 628,000 square feet of floor area, resulting in a net increase of approximately 467,500 square feet of floor area upon buildout.

Pursuant to the requirements of Senate Bill 1374,[79] the Project would implement a construction waste management plan to recycle and/or salvage a minimum of 75 percent of non-hazardous demolition and construction debris. Materials that could be recycled or salvaged include asphalt, glass, and concrete. Debris not recycled could be accepted at the inert waste landfill (Azusa Land Reclamation) within Los Angeles County and within the Class III landfills open to the City. As shown in Table B-1 on page B-55, after accounting for mandatory recycling, the Project would result in approximately 3,414 tons of construction and demolition waste. This would represent approximately 0.006 percent of the remaining permitted capacity at the Azusa Land Reclamation facility and approximately 0.004 percent of the remaining permitted capacity at Class III landfills open to the City. Given the remaining permitted capacity of the Azusa Land Reclamation facility, which is approximately 56.34 million tons, as well as the remaining 85.45 million tons of capacity at the Class III landfills open to the City, the landfills serving the Project Site would have sufficient capacity to accommodate the Project's construction solid waste disposal needs.

Operation

As shown in Table B-2 on page B-56, the Project's net increase in solid waste generation would be approximately 1,715 tons of solid waste per year. The estimated solid waste is conservative because the waste generation factors used do not account for recycling or other waste diversion measures such as compliance with AB 341, which requires California commercial enterprises and public entities that generate four cubic yards or more per week of waste, and multi-family housing with five or more units, to adopt recycling practices. Likewise, the analysis does not include implementation of the City's upcoming Zero Waste LA franchising system, which is expected to result in a reduction of landfill disposal Citywide with a goal of reaching a Citywide recycling rate of

[79] Senate Bill 1374 requires that jurisdictions include in their annual AB 939 report a summary of the progress made in diverting construction and demolition waste. The legislation also required that CalRecycle adopt a model ordinance for diverting 50 to 75 percent of all construction and demolition waste from landfills.

Table B-1
Project Demolition and Construction Waste Generation

Building	Size	Generation Rate (lbs/sf)[a,b]	Total (tons)[b]
Construction Waste			
Creative Office	599,350 sf	3.89	1,166
Production Support	27,200 sf	3.89	53
Total Construction Waste			*1,219*
Demolition Waste			
Creative Office	125,500 sf	155	9,726
Production Support	29,400 sf	155	2,279
Sound Stages	5,600 sf	155	434
Total Demolition Waste			*12,439*
Total for Construction and Demolition Waste			***13,657***
Total After 75-Percent Recycling			**3,414**

lb = pound

sf = square feet

[a] *U.S. Environmental Protection Agency, Report No. EPA530-98-010, Characterization of Building-Related Construction and Demolition Debris in the United States, June 1998, Table 4 and Table 6. Generation rates used in this analysis are based on an average of individual rates assigned to specific building types.*

[b] *Numbers have been rounded to the nearest whole number.*

90 percent by the year 2025.[80] The estimated annual net increase in solid waste that would be generated by the Project represents approximately 0.06 percent of the City's annual solid waste disposal[81] and approximately 0.002 percent of the remaining capacity for the County's Class III landfills open to the City of Los Angeles.[82] The Project's estimated solid waste generation would therefore represent a nominal percentage of the remaining daily disposal capacity of the County's Class III landfills.

Based on the above, the landfills that serve the Project Site would have sufficient permitted capacity to accommodate the solid waste that would be generated by the construction and operation

[80] The Zero Waste LA Franchise System would divide the City into 11 zones and designate a single trash hauler for each zone. Source: LA Sanitation, "Zero Waste LA—Franchise," www.lacitysan.org/san/faces/home/portal/s-lsh-wwd/s-lsh-wwd-s/s-lsh-wwd-s-zwlaf;jsessionid=nJABd_CcLHL4DCOkGSCJWv1buV9atyQtoUkP50TwYHe5jczy6OaK!782088041!NONE?_afrLoop=17071741526736871&_afrWindowMode=0&_afrWindowId=null#!%40%40%3F_afrWindowId%3Dnull%26_afrLoop%3D17071741526736871%26_afrWindowMode%3D0%26_adf.ctrl-state%3Dge1mehnju_4, accessed December 13, 2017.

[81] 1,715 tons per year/2.71 million tons per year x 100 = 0.06%

[82] 1,715 tons per year/85.45 million tons x 100 = 0.002%

Table B-2
Estimated Project Solid Waste Generation

Building	Size	Employees per 1,000 sf[a]	Estimated No. of Employees[c]	Solid Waste Generation Rate[b]	Total Generation (tons/year)[c]
Existing to be Removed

of the Project. Therefore, impacts would be less than significant, and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

g) Comply with federal, state, and local statutes and regulations related to solid waste?

Less Than Significant Impact. Solid waste management in the State is primarily guided by the California Integrated Waste Management Act of 1989 (AB 939), which emphasizes resource conservation through reduction, recycling, and reuse of solid waste. AB 939 establishes an integrated waste management hierarchy consisting of (in order of priority): (1) source reduction; (2) recycling and composting; and (3) environmentally safe transformation and land disposal. In addition, AB 1327 provided for the development of the California Solid Waste Reuse and Recycling Access Act of 1991, which requires the adoption of an ordinance by any local agency governing the provision of adequate areas for the collection and loading of recyclable materials in development projects. Furthermore, AB 341, which became effective on July 1, 2012, requires businesses and public entities that generate four cubic yards or more of waste per week and multi-family dwellings with five or more units, to recycle. The purpose of AB 341 is to reduce greenhouse gas emissions by diverting commercial solid waste from landfills and expand opportunities for recycling in California. In addition,

in March 2006, the Los Angeles City Council adopted RENEW LA, a 20-year plan with the primary goal of shifting from waste disposal to resource recovery within the City, resulting in "zero waste" by 2030. The plan also calls for reductions in the quantity and environmental impacts of residue material disposed in landfills. In October 2014, Governor Jerry Brown signed AB 1826, requiring businesses to recycle their organic waste[83] on and after April 1, 2016, depending on the amount of waste generated per week. Specifically, beginning April 1, 2016, businesses that generate eight cubic yards of organic waste per week were required to arrange for organic waste recycling services. In addition, beginning January 1, 2017, businesses that generate four cubic yards of organic waste per week were required to arrange for organic waste recycling services.

The Project would comply with and be consistent with the applicable regulations associated with solid waste. Specifically, the Project would provide adequate storage areas in accordance with the City of Los Angeles Space Allocation Ordinance (Ordinance No. 171687), which requires that development projects include an on-site recycling area or room of specified size.[84] The Project would also comply with AB 939, AB 341, AB 1826 and City waste diversion goals, as applicable, by providing clearly marked, source-sorted receptacles to facilitate recycling. Since the Project would comply with federal, State, and local statutes and regulations related to solid waste, impacts would be less than significant and no mitigation measures are required. No further evaluation of this topic in an EIR is required.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
XIX. MANDATORY FINDINGS OF SIGNIFICANCE.				
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☒	☐	☐	☐

[83] Organic waste refers to food waste, green waste, landscape and pruning waste, nonhazardous wood waste, and food-soiled paper waste that is mixed in with food waste.

[84] Ordinance No. 171687, adopted by the Los Angeles City Council on August 6, 1997.

	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less Than Significant Impact	No Impact
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☒	☐	☐	☐

a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Potentially Significant Impact. As discussed above, the Project is located in a highly urbanized area and does not serve as habitat for fish or wildlife species. No sensitive plant or animal community or special status species occur on the Project Site. However, the Project does have the potential to degrade the quality of the environment or affect important examples of California's history or prehistory. Therefore, further evaluation of this topic will be provided in the EIR.

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

Potentially Significant Impact. Located within the vicinity of the Project Site are other past, current and probable future projects, the development of which may have cumulative impacts. Potential cumulative impacts will be addressed in the EIR for the following environmental factors: aesthetics; air quality; cultural resources; greenhouse gas emissions; land use and planning; noise; public services (fire protection and police protection); transportation/traffic; tribal cultural resources; and utilities and service systems (water supply and infrastructure and wastewater generation and infrastructure).

With regard to cumulative effects on agriculture/forestry resources, biological resources, and mineral resources, no such resources are located on the Project Site or in the surrounding area. Due to the highly urbanized and developed nature of the Project Site and surrounding area, no agriculture and forestry resources, sensitive biological species or natural communities or mineral resources are present within the Project Site or in the surrounding area. Therefore, cumulative impacts would be less than significant.

With regard to the cumulative effects of past, present and future projects on geology and soils, the Hollywood Community Plan Area is built out and, therefore, it is unlikely that any projects would propose mining operations, or other similar uses that require boring or deep excavation into the Earth that could exacerbate existing environmental conditions (i.e., trigger rupture of a known earthquake fault, strong seismic ground shaking, or trigger seismic-related ground failure or landslides) such that people or structures would be exposed to potential adverse effects. Similarly, sewers are already

available and soil adequacy would not be an issue if there were the need for alternative wastewater disposal systems. In addition, the Project Site area is relatively flat and impervious and, as such, there would be less-than-significant impacts from landslides, soil erosion/loss of topsoil, unstable geologic units, or expansive soils.

With regard to cumulative effects of hazards and hazardous materials, the presence of these materials are generally site specific and need to be evaluated within the context of each individual project. In addition, since the Hollywood Community Plan Area is developed with mostly commercial and residential uses, none of the past, present or future projects would likely involve the routine use or transport of hazardous materials beyond those already that are commonly used (e.g., cleaning agents and paint thinners, etc. used for studio and set production uses). Furthermore, projects would be required to comply with existing regulatory requirements regarding the storage, handling and disposal of hazardous materials. Finally, in terms of hazardous sites, EnviroStor shows that there are no identified federal superfund or State response sites within the vicinity of the Project Site, only school investigation, school cleanup or voluntary cleanup sites. Therefore, past, present and future projects would not exacerbate existing environmental conditions and cumulative impacts would be less than significant.

With regard to cumulative effects of hydrology and water quality, due to the highly urbanized nature of the Hollywood Community Plan Area, there are no streams or rivers, FEMA flood hazard areas or other existing hydrological features that could be physically altered such that there would be substantial erosion, siltation or flooding. Similarly, past, present and future projects are unlikely to materially impair the Hollywood Reservoir and Mulholland Dam. In terms of runoff, all projects would be required at minimum to create stormwater mitigation plans and/or comply with the City's LID ordinance, thereby minimizing the potential for polluted runoff. In terms of groundwater, USGS maps indicate that there are no active wells nearby, or wells that are below normal groundwater levels. Nevertheless, all projects would comply with standard construction practices should dewatering be required. Therefore, it is unlikely that the projects would substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or lowering of the local groundwater table level. Cumulative impacts on hydrology and water quality would be less than significant.

In terms of, population and housing, the past, present and future projects would not induce substantial population growth since the Hollywood Community Plan Area is already fully developed and occupied by a long-standing residential population. In addition, not all projects, like the Sunset Gower Studios Enhancement Plan Project, would propose residential uses. While this Project would not displace housing or people, other projects might displace existing housing and people residing in them. However, because the Hollywood Community Plan Area is built out, it is likely that those proposed projects would be located on infill sites and, as such, substantial numbers of housing or people would not be displaced such that replacement housing would be required elsewhere. Even if construction of replacement housing were required elsewhere, such developments would likely occur on infill sites within the City of Los Angeles and the appropriate level of environmental review would be conducted to analyze the extent to which the projects could cause significant environmental impacts. Cumulative impacts from population and housing would be less than significant.

With regard to public services and recreation (schools, parks and recreation, libraries) , the past, present and future projects could increase the demand for these services and facilities. However, since the Hollywood Community Plan Area is fully developed, it contains numerous facilities (i.e., libraries, parks and parks/recreational facilities) that provide these services. Therefore, it is unlikely that expanded or new facilities would be required. Even if they were, because of the built out, urbanized nature of the area, such facilities would likely be located on infill sites, which may either qualify for categorical exemptions or would be required to undergo environmental review on a case-by-case basis. Appropriate mitigation measures for each project would address potential environmental impacts. In the case of recreation (i.e., existing neighborhood and regional parks), projects would be required to provide amenity space (e.g. gyms, outdoor decks with pools, etc.) that would help reduce the demand on neighborhood and regional parks, thereby reducing the likelihood that there would be substantial deterioration of parks. Therefore, it is unlikely that the past, present and future projects would have significant cumulative environmental impacts from the construction or expansion of such facilities.

Lastly, in terms of utilities and service systems, since the Hyperion Water Reclamation Plant is in compliance with the State's wastewater treatment requirements, and the wastewater generated by that past, present and future projects would most likely be typical of urban uses, no industrial discharges into the wastewater system are likely to occur that would exceed the wastewater treatment requirements of the Regional Water Quality Control Board. Consequently, there would be no need to construct new or expand wastewater treatment facilities, the construction of which could cause significant environmental effects. Similarly, since the Hollywood Community Plan Area is fully developed with stormwater drainage facilities, the projects would not require the construction of new storm water drainage facilities, the construction of which could cause significant environmental effects. In terms of water supplies and wastewater treatment providers, the projects would be served by the existing commitments of the LADWP and LA Sanitation. Similarly, in terms of solid waste, the estimated net increase in solid waste generated by the projects would most likely represent a minor percentage of the remaining disposal capacity for the County's Class III landfills open to the City. Also, since the 2016 CoIWMP Annual Report anticipates that future solid waste disposal needs can be adequately met through 2031 throughout the County, it is unlikely the projects would require the expansion or opening of a new landfill. Therefore, cumulative impacts on utilities and service systems would be less than significant.

c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Potentially Significant Impact. Based on the analysis contained in this Initial Study, the Project could result in potentially significant impacts with regard to the following topics: air quality; cultural resources; greenhouse gas emissions; land use and planning; noise; fire protection; police protection; transportation/circulation; tribal cultural resources; water supply and infrastructure; and wastewater generation and infrastructure. As a result, these potential environmental effects, which could cause adverse effects on humans, will be analyzed further in additional environmental review.

Re: 1438 North Gower Street (Sunset Gower Studios), Los Angeles, California

Dear Mr. Pearson,

Enclosed are the tree evaluation data, photographic, and graphic exhibits for the trees located on the Sunset Gower Studios property that Carlberg Associates inventoried in November 2017. We were retained to provide this work product as part of Eyestone Environmental's Initial Study submittal. We evaluated 37 private property trees and 45 City of Los Angeles rights-of-way trees. ***None of the private property species is considered protected*** by the City of Los Angeles Tree Preservation Ordinance No. 177.044. The table on the following page is a summary of the data, and is presented in its entirety in the inventory beginning on page 6. A reduced copy of the tree location exhibit and photographs of all trees are included within the following pages.

In our opinion, none of the trees within the Sunset Gower campus would be eligible for designation as a 'scenic' tree. According to CEQA, a scenic tree is highly visible, prominent and possesses unique or distinctive aesthetic qualities due to its size, structure, unusual specimen, etc. None of the 48 private property trees meet those guidelines. The eleven Mexican fan palms lining Sunset Boulevard would be considered "scenic."

Please feel welcome to contact me at 310.451.4804 if you have any immediate questions or concerns.

Respectfully submitted,

Cy Carlberg, Registered Consulting Arborist #405

Note: This letter plus the enclosures comprise a total of 27 pages and one full-size map. Unauthorized separation or removal of any portion of this report deems it invalid as a whole.

Conditions represented in this report are limited to the inventory date and time. Risk assessments were not requested nor performed for the purposes of this report. Ratings for health, aesthetics, and structure do not constitute a health or structural guarantee beyond the date and time of the inspection.

TABLE 1 - SUMMARY OF TREE SPECIES LOCATED AT THE SUNSET GOWER STUDIOS

Common Name	Botanical Name	California native	Quantity represented
African sumac	*Rhus lancea*	No	2
Brisbane box	*Lophostemon confertus*	No	4 (All are ROW trees)
Burgundy willow myrtle	*Agonis flexuosa* 'Burgundy'	No	1
Carolina cherry	*Prunus caroliniana*	No	7
Carrotwood	*Cupaniopsis anacardioides*	No	8 (All are ROW trees)
Chinese elm	*Ulmus parvifolia*	No	1
Chinese flame tree	*Koelreuteria bipinnata*	No	1 (ROW tree)
Chinese holly	*Ilex cornuta*	No	1 (ROW tree)
Crape myrtle	*Lagerstroemia indica*	No	2
Evergreen pear	*Pyrus kawakamii*	No	2
Fern pine	*Afrocarpus gracilior*	No	5
Japanese crape myrtle	*Lagerstroemia faurei*	No	4
Mexican fan palm	*Washingtonia robusta*	No	13 (12 are ROW trees)
Queen palm	*Syagrus romanzoffianum*	No	12 (One is a ROW tree)
Southern magnolia	*Magnolia romanzoffianum*	No	10 (All are ROW trees)
Strawberry tree	*Arbutus* 'Marina'	No	1
Sweetshade	*Hymenosporum flavum*	No	7 (All are ROW trees)
Victorian box	*Pittosporum undulatum*	No	1 (ROW tree)
TOTALS	**18 Species**		**82 Trees 45 ROW trees; 37private property trees**

Note: No trees that are protected by City of Los Angeles Tree Protection Ordinance occur on the Sunset Gower Studios project area. City of Los Angeles rights-of-way (ROW) trees are noted above.

HEALTH AND STRUCTURE GRADE DEFINITIONS

Health and structure ratings of the trees are based on the archetype tree of the same species through a subjective evaluation of its physiological health, aesthetic quality, and structural integrity.

Overall physiological condition (health) and structural condition were rated A-F:

Health

A) Outstanding – Exceptional trees of good growth form and vigor for their age class; exhibiting very good to excellent health as evidenced by normal to exceptional shoot growth during current season, good bud development and leaf color, lack of leaf, twig or branch dieback throughout the crown, and the absence of decay, bleeding, or cankers. Common leaf and/or twig pests may be noted at very minor levels.

B) Above average – Good to very good trees that exhibit minor necrotic or physiological symptoms of stress and/or disease; shoot growth is less than reasonably expected, leaf color is less than optimal in some areas, the crown may be thinning, minor levels of leaf, twig, and branch dieback may be present, and minor areas of decay, bleeding, or cankers may be manifesting. Minor amounts of epicormic growth may be present. Minor amounts of fire damage or mechanical damage may be present. Still healthy, but with moderately diminished vigor and vitality. No significant decline noted.

C) Average – Average, moderately good trees whose growth habit and physiological or fire-induced symptoms indicate an equal chance to either decline or continue with good health into the near future. Most of these trees exhibit moderate to significant small deadwood in outer crown areas, decreased shoot growth and diminished leaf color and mass. Some stem and branch dieback is usually present and epicormic growth may be moderate to extensive. Cavities, pockets of decay, relatively significant fire damage, bark exfoliation, or cracks may be present. Moderate to significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it is expected to negatively impact the lifespan of the tree. Tree may be in early decline.

D) Below Average/Poor - trees whose growth habit and physiological or fire-induced symptoms indicate significant, irreversible decline. Most of these trees exhibit significant dieback of wood in the crown, possibly accompanied by significant epicormic sprouting. Shoot growth and leaf color and mass is either significantly diminished or nonexistent throughout the crown. Cavities, pockets of decay, significant fire damage, bark exfoliation, and/or cracks may be present. Significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it has negatively impacted the lifespan of the tree. Tree appears to be in irreversible decline.

F) Dead or in spiral of decline – this tree exhibits very little to no signs of life.

Structure

A) Outstanding – Trees with outstanding structure for their species exhibit trunk and branch arrangement and orientation that result in a sturdy form or architecture that resists failure under normal circumstances. The spacing, orientation, and size of the branches relative to the trunk are quintessential for the species and free from defects. No outward sign of decay or pathological disease

is present. Some trees exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, which would preclude them from achieving an “A” grade.

B) Above average - Trees with good to very good structure for their species. They exhibit trunk and branch arrangement and orientation that result in a relatively sturdy form or architecture that resists failure under normal circumstances, but may have some mechanical damage, over-pruning, or other minor structural defects. The spacing, orientation, and size of the branches relative to the trunk are still in the normal range for the species, but they exhibit a minor degree of defects. Minor, sub-critical levels of decay or pathological disease may be present, but the degree of damage is not yet structurally significant. Trees that exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, would generally fall in to this category. A small percentage of the canopy may be shaded or crowded, but not in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree.

C) Average - Trees with moderately good structure for their species, but with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a less than sturdy form or architecture, which reduces their resistance to failure under normal circumstances. Moderate levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of some of the branches relative to the trunk are not in the normal range for the species. Moderate to significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A moderate to significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be moderately elevated.

D) Well Below Average/Poor - Trees poor structure for their species and with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a significantly less than sturdy form or architecture, significantly reducing their resistance to failure under normal circumstances. Significant levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of many of the branches relative to the trunk are not in the normal range for the species. Significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be advanced.

F) Severely Compromised – trees with very poor structure and numerous or severe defects due to growing conditions, historical or recent pruning, mechanical damage, history of limb or trunk failures, advanced and irreparable decay, disease, or severe fire damage. Trees with this rating are in severe, irreparable decline, or are barely alive. Risk of full or partial failures in the near future may be severe.

ARBORIST DISCLOSURE STATEMENT

Arborists are tree specialists who use their education, knowledge, training and experience to examine trees, recommend measures to enhance the beauty and health of trees, and attempt to reduce the risk of living near trees. Clients may choose to accept or disregard the recommendations of the arborist, or to seek additional advice.

Arborists cannot detect every condition that could possibly lead to the structural failure of a tree. Trees are living organisms that fail in ways we do not fully understand. Conditions are often hidden within trees and below ground. Arborists cannot guarantee that a tree will be healthy or safe under all circumstances, or for a specified period of time. Likewise, remedial treatments, like any medicine, cannot be guaranteed.

Treatment, pruning and removal of trees may involve considerations beyond the scope of the arborist's services such as property boundaries, property ownership, site lines, disputes between neighbors, and other issues. Arborists cannot take such considerations into account unless complete and accurate information is disclosed to the arborist. An arborist should then be expected to reasonably rely upon the completeness and accuracy of the information provided.

Trees contribute greatly to our enjoyment and appreciation of life. Nonetheless, they are subject to the laws of gravity and physiological decline. Therefore, neither arborists nor tree owners can be reasonably expected to warrant unfailing predictability or elimination of risk.

Trees can be managed, but they cannot be controlled. To live near trees is to accept some degree of risk. The only way to eliminate all risk associated with trees is to eliminate all trees.

Soils and Geology Report

From: **Casey Jensen** <casey.jensen@lacity.org>
Date: Fri, Jan 19, 2018 at 3:16 PM
Subject: VTT-80310; 6010, 6050 & 6060 Sunset Blvd., 1455 N. Beachwood, 1455 Gordon St., 1438, 1440 N. Gower St. LADBS-Grading Report
To: Planning Major Projects <Planning.MajorProjects@lacity.org>

1/19/2018

Planning,

The Grading Division of the Department of Building and Safety has reviewed the subject Vesting Tentative Tract Map No. VTT-80310 located at 6010, 6050 & 6060 Sunset Blvd., 1455 N. Beachwood, 1455 Gordon St., 1438, 1440 N. Gower St. and it appears that geology/soils reports are not required prior to planning approval of the Tract Map as the property is located outside of a City of Los Angeles Hillside Area; is exempt or located outside of a State of California liquefaction, earthquake induced landslide, or fault-rupture hazard zone; and, does not require any grading or construction of an engineered retaining structure to remove potential geologic hazards.

Per Sec. 17.56 of the Los Angeles Municipal Code, each approved Tract Map recorded with the County Recorder shall contain the following statement; "The approval of this Tract Map shall not be construed as having been based upon geological investigatpion such as will authorize the issuance of building permits on the subject property. Such permits will be issued only at such time as the Department of Building and Safety has received such topographic maps and geological reports as it deems necessary to justify the issuance of such building permits."

The applicant shall, "Comply with any requirements with the Department of Building and Safety, Grading Division for recordation of the final map and issuance of any permit."

If you have any questions, or need additional information, please let me know.

Thank you,

Casey

Subject: Environmental Impact Report, Soils and Geology Issues
Proposed Tower A, Buildings C and D, Convertible Parking Structure, and Basecamp with Below Grade Parking
Sunset Gower Studios
1438 North Gower Street, Los Angeles, California

Ladies and Gentlemen:

1.0 INTRODUCTION

This document is intended to discuss potential soil and geological issues for the proposed development, as required by Appendix G of the California Environmental Quality Act (CEQA) Guidelines. This report includes information from previous geotechnical investigations performed at the site, engineering analysis, review of published geologic data, review of available geotechnical engineering information and the preparation of this report.

2.0 SITE CONDITIONS

The Sunset Gower Studio Lot is located at 1438 North Gower Street, in the Hollywood area of the City of Los Angeles, California. The Studio Lot occupies a city block delimited by Sunset Boulevard to the north, Gordon Street to the east, Fountain Avenue to the south and Gower Street to the west. The site is shown relative to nearby topographic features in the enclosed Vicinity Map.

As shown in the enclosed Site Plan, the Studio Lot is developed with several stages, miscellaneous buildings, and three parking structures. The current structures range from one to five stories in height. The topography observed across the Studio Lot descends gently to the south. Based on the site elevation contours presented in the NavigateLA Website, developed by the City of Los Angeles, Bureau of Engineering, Department of Public Works, there is an elevation difference of approximately 28 feet across the site.

Vegetation at the site consists of a few mature trees, and limited amount of grass lawns, bushes and shrubs, contained in small manicured landscaped areas. Drainage across the site appears to be by sheetflow to the city streets to the south.

3.0 PROJECT SCOPE

Preliminary information concerning the proposed development was obtained by review of the Design Progress Set prepared by Gensler, dated October 24, 2017.

The proposed development consists of the construction of a new 18-story office tower (Tower A), a 5-story office and production building (Building B), a 6-story office and production building (Building C), a 6-story parking structure, and a 3-level below-grade parking structure with an at-grade basecamp. The enclosed Site Plan shows the location of the proposed structures.

Buildings B and C will be built near the existing site grade. Tower A and the 6-story parking structure will each be built over 3 subterranean parking levels. Based on the experience of this firm, excavations of the order of 30 to 40 feet below grade are anticipated for the construction of the proposed subterranean parking, including foundation elements.

The proposed structures will be designed in accordance with the provisions of the applicable City of Los Angeles Building Code.

4.0 PREVIOUS SITE INVESTIGATIONS

This firm has conducted two previous geotechnical engineering investigations at the site, pertaining to the design of previously proposed developments. These investigations are summarized below. Pertinent results and observations from these previous investigations have been incorporated into the preparation of this report. Logs of the exploratory excavations performed during these previous investigations are included in the Appendix, and the location of the excavations is shown on the enclosed Site Plan.

1. ***Geotechnologies, Inc., June 6, 2014, revised August 26, 2014, Geotechnical Engineering Investigation, Proposed Parking Structure Expansion, 1443 North Gordon Street, Los Angeles, California, File Number 20648.***
   Five geotechnical borings were excavated within the southeastern quadrant of the studio lot for the preparation of this investigation. One boring was excavated to a depth of 60 feet, while the other four borings were excavated to a depth 30 feet. Groundwater was observed in the deepest boring, to a depth of 45½ feet below the existing grade. The location of these borings is shown in the enclosed Site Plan, and the individual logs may be found in the Appendix of this report.

2. ***Geotechnologies, Inc., September 27, 2016, Geotechnical Engineering Investigation, Proposed Improvements to Stages 1 and 5 and Building 62, 1438 North Gower Street, Los Angeles, California, File Number 21272.***
   One boring and four test pits were excavated within the northwestern quadrant of the studio lot for the preparation of this investigation. The boring and test pits were all excavated to a depth of 20 feet below grade. The location of these excavations is shown in the enclosed Site Plan, and the individual logs may be found in the Appendix of this report.

5.0 GEOLOGIC MATERIALS

This section is based on subsurface observations performed during previous site explorations, as discussed in the previous Sections.

Fill:

Fill materials observed on the exploratory excavations consist of silty sands, sandy silts, clayey sands, and sands, which are brown to dark brown in color, slightly moist to moist, medium dense to dense, or stiff, and fine grained, with occasional gravel. Fill thickness ranging from ½ to 6 feet were encountered in the exploratory excavations.

Alluvium:

The existing fill materials are underlain by alluvial deposits. The native soils consists of sandy clays, sandy silts, and silty sands to sands, which are brown to dark reddish brown in color, slightly moist to wet, stiff to very stiff, or medium dense to very dense, and fine to coarse grained.

More detailed descriptions of the earth materials encountered may be obtained from the enclosed log of the subsurface excavations.

6.0 GROUNDWATER

The historically highest groundwater level was established by review of the Hollywood 7½ Minute Quadrangle Seismic Hazard Evaluation Report, Plate 1.2, Historically Highest Ground Water Contours (CDMG, 2006). Review of this plate indicates that the historically highest groundwater level at the site ranges between 50 feet below grade at the northern end of the site, and 40 feet at the southern end of the site. A copy of this plate is included in the Appendix as Historically Highest Groundwater Levels Map.

Groundwater was encountered during a previous site exploration at a depth of 45½ feet below grade. This groundwater level was observed in one boring (Boring B1 – File No. 20648), which was excavated within the southeastern quadrant of the site. The location of this boring is shown in the enclosed Site Plan, and its excavation log is included in the Appendix of this report.

Due to the topographic relief observed across the studio lot, it is anticipated that the current groundwater level will be deeper at the northern area of the lot, and shallower towards the southern area.

7.0 LOCAL GEOLOGY

The subject site is located in the Los Angeles Basin. The Los Angeles Basin is located at the northern end of the Peninsular Ranges Geomorphic Province. The basin is bounded by the east and southeast by the Santa Ana Mountains and San Joaquin Hills, to the northwest by the Santa

Monica Mountains. The distribution of nearby geologic materials is shown on the Local Geologic Map enclosed in the Appendix of this report.

8.0 REGIONAL GEOLOGIC SETTINGS

The subject site is located within the Peninsular Ranges Geomorphic Province. The Peninsular Ranges are characterized by northwest-trending blocks of mountain ridges and sediment-floored valleys. The dominant geologic structural features are northwest trending fault zones that either die out to the northwest or terminate at east-west trending reverse faults that form the southern margin of the Transverse Ranges (Yerkes, 1965).

9.0 PRELIMINARY RECOMMENDATIONS

Based upon the exploration, laboratory testing, and research, it is the preliminary finding of Geotechnologies, Inc. that construction of the proposed structures is considered feasible from a geotechnical engineering standpoint. These recommendations are preliminary in nature because they are based on information obtained from subsurface explorations conducted for previous site projects. Additional subsurface geotechnical exploration, laboratory testing and engineering analysis will be required to prepare a geotechnical investigation required prior to issuance of building permits.

Three of the proposed structures will include a 3-level subterranean parking garage, while the other two structures will be built near the existing grade. It is anticipated that the lowest finished grade of the proposed subterranean levels would extend to depths ranging between 30 and 36 feet below grade. Excavations up to 40 feet in depth may be anticipated for construction of the proposed subterranean parking garages, including foundation elements. Excavation of the proposed subterranean levels will require temporary shoring in order to achieve a stable excavation. Based on the anticipated depth of the proposed subterranean levels, it is expected that the proposed structures will be built above the current and historically highest groundwater level.

It is anticipated that a mat foundation would be suitable for support of the proposed Tower A. This mat foundation may bear in the native soils expected at the subgrade of the proposed subterranean levels.

Besides Tower A, it is expected that all other proposed structures may be supported on conventional foundations. Conventional foundations to support the proposed convertible structure and below-grade base camp parking structure may bear in the native soils expected at the subgrade of the proposed subterranean levels. Conventional foundations to support Buildings C and D may bear in a newly built engineered compacted fill pad.

10.0 SOIL AND GEOLOGY ISSUES

a) Regional Faulting

Based on criteria established by the California Division of Mines and Geology (CDMG) now called California Geologic Survey (CGS), faults may be categorized as active, potentially active, or inactive. Active faults are those which show evidence of surface displacement within the last 11,000 years (Holocene-age). Potentially-active faults are those that show evidence of most recent surface displacement within the last 1.6 million years (Quaternary-age). Faults showing no evidence of surface displacement within the last 1.6 million years are considered inactive for most purposes, with the exception of design of some critical structures.

Buried thrust faults are faults without a surface expression but are a significant source of seismic activity. They are typically broadly defined based on the analysis of seismic wave recordings of hundreds of small and large earthquakes in the Southern California area. Due to the buried nature of these thrust faults, their existence is usually not known until they produce an earthquake. The risk for surface rupture potential of these buried thrust faults is inferred to be low (Leighton, 1990). However, the seismic risk of these buried structures in terms of recurrence and maximum potential magnitude is not well established. Therefore, the potential for surface rupture on these surface-verging splays at magnitudes higher than 6.0 cannot be precluded.

A list of faults located within 60 miles (100 kilometers) from the project sites has been provided in the enclosed table titled: Seismic Source Summary Table. This table is based on information provided by the USGS in their 2008 National Seismic Hazard Maps – Source Parameters database. The distances provided in this table are measured from a point selected near the center of the studio lot. A Southern California Fault Map has also been enclosed. The following sections describe some of the regional active faults, potentially active faults, and blind thrust faults.

i) Active Faults

Hollywood Fault

The Hollywood fault is part of the Transverse Ranges Southern Boundary fault system. The Hollywood fault is located approximately 0.90 miles north of the center of the site. This fault trends east-west along the base of the Santa Monica Mountains from the West Beverly Hills Lineament in the West Hollywood–Beverly Hills area to the Los Feliz area of Los Angeles. The Hollywood fault is the eastern segment of the reverse oblique Santa Monica–Hollywood fault. Based on geomorphic evidence, stratigraphic correlation between exploratory borings, and fault trenching studies, this fault is classified as active.

Until recently, the approximately 9.3-mile long Hollywood fault was considered to be expressed as a series of linear ground-surface geomorphic expressions and south-facing ridges along the south margin of the eastern Santa Monica Mountains and the Hollywood Hills. Multiple recent fault rupture hazard investigations have shown that the Hollywood fault is located south of the ridges and bedrock outcroppings along portions of Sunset Boulevard. The Hollywood fault has not produced any damaging earthquakes during the historical period and has had relatively minor micro-seismic activity. It is estimated that the Hollywood fault is capable of producing a maximum 6.7 magnitude earthquake. In 2014, the California Geological Survey established an Earthquake Fault Zone for the Hollywood Fault. A copy of this map may be fund in the Appendix.

Santa Monica Fault

According to the USGS database, a segment of the Santa Monica Fault is located within the southeastern quadrant of the site, approximately 0.02 miles from the center of the studio lot. However, as discussed in a following section of this report, this appears to be a segment of what Hill *et al* (1979) mapped to be the Southern Santa Monica fault, which alternatively Hildenbrand *et al* (2001) labeled as the North Salt Lake fault. In the 2014 Fault Evaluation Report FER 253 for the Hollywood Quadrangle, the California Geological Survey (CGS) concluded that there is no clear evidence that the North Salt Lake fault is a surface fault. Furthermore, CGS found no indication in the literature, or their observations, of Holocene surface rupture along this fault projection. The enclosed "Fault Mapping of the Hollywood Quadrangle" (CGS, 2014) shows the location of this fault segment as mapped by Weber *et al* (1980).

Based on the USGS database, the nearest segment of the active portion of the Santa Monica fault is located approximately 5.57 miles to the west of the site. The Santa Monica fault is a part of the Transverse Ranges Southern Boundary fault system, extending east from the coastline in Pacific Palisades through Santa Monica and West Los Angeles and merges with the Hollywood fault at the West Beverly Hills Lineament in Beverly Hills where its strike is northeast. It is believed that at least six surface ruptures have occurred in the past 50 thousand years. In addition, a well-documented surface rupture occurred between 10 and 17 thousand years ago, although a more recent earthquake probably occurred 1 to 3 thousand years ago. This leads to an average earthquake recurrence interval of 7 to 8 thousand years.[a] It is thought that the Santa Monica fault system may produce earthquakes with a maximum magnitude of 7.4.

[a] *Southern California Earthquake Center, a National Science Foundation and U.S. Geological Survey Center. Active Faults in the Los Angeles Metropolitan Region, www.scec.org/research/special/SCEC001activefaultsLA.pdf; accessed May 24, 2012.*

Newport-Inglewood Fault System

The Newport-Inglewood fault system is located 5.40 miles to the southwest of the site. The Newport-Inglewood fault zone is a broad zone of discontinuous north to northwestern echelon faults and northwest to west trending folds. The fault zone extends southeastward from West Los Angeles, across the Los Angeles Basin, to Newport Beach and possibly offshore beyond San Diego (Barrows, 1974; Weber, 1982; Ziony, 1985).

The onshore segment of the Newport-Inglewood fault zone extends for about 37 miles from the Santa Ana River to the Santa Monica Mountains. Here it is overridden by, or merges with, the east-west trending Santa Monica zone of reverse faults.

The surface expression of the Newport-Inglewood fault zone is made up of a strikingly linear alignment of domal hills and mesas that rise on the order of 400 feet above the surrounding plains. From the northern end to its southernmost onshore expression, the Newport-Inglewood fault zone is made up of: Cheviot Hills, Baldwin Hills, Rosecrans Hills, Dominguez Hills, Signal Hill-Reservoir Hill, Alamitos Heights, Landing Hill, Bolsa Chica Mesa, Huntington Beach Mesa, and Newport Mesa. Several single and multiple fault strands, arranged in a roughly left stepping en echelon arrangement, make up the fault zone and account for the uplifted mesas.

The most significant earthquake associated with the Newport-Inglewood fault system was the Long Beach earthquake of 1933 with a magnitude of 6.3 on the Richter scale. It is believed that the Newport-Inglewood fault zone is capable of producing a 7.5 magnitude earthquake.

Raymond Fault

The Raymond fault is located approximately 5.85 miles to the northeast of the site. The Raymond fault is an effective groundwater barrier which divides the San Gabriel Valley into groundwater sub-basins. Much of the geomorphic evidence for the Raymond fault has been obliterated by urbanization of the San Gabriel Valley. However, a discontinuous escarpment can be traced from Monrovia to the Arroyo Seco in South Pasadena. The very bold, “knife edge” escarpment in Monrovia parallel to Scenic Drive is believed to be a fault scarp of the Raymond fault. Trenching of the Raymond fault is reported to have revealed Holocene movement (Weaver and Dolan, 1997).

The recurrence interval for the Raymond fault is probably slightly less than 3,000 years, with the most recent documented event occurring approximately 1,600 years ago (Crook, et al, 1978). However, historical accounts of an earthquake that occurred in July 1855 as reported by Toppozada and others, 1981, places the

epicenter of a Richter Magnitude 6 earthquake within the Raymond fault. It is believed that the Raymond fault is capable of producing a 6.8 magnitude earthquake. The Raymond Fault is considered active by the California Geological Survey.

Verdugo Fault

The Verdugo Fault is located approximately 6.46 miles to the north of the site. The Verdugo Fault runs along the southwest edge of the Verdugo Mountains. The fault displays a reverse motion. According to Weber, et. al., (1980) 2 to 3 meter high scarps were identified in alluvial fan deposits in the Burbank and Glendale areas. Further to the northeast, in Sun Valley, a fault was reportedly identified at a depth of 40 feet in a sand and gravel pit. Although considered active by the County of Los Angeles, Department of Public Works (Leighton, 1990), and the United States Geological Survey, the fault is not designated with an Earthquake Fault Zone by the California Geological Survey. It is estimated that the Verdugo Fault is capable of producing a maximum 6.9 magnitude earthquake.

Sierra Madre Fault System

The Sierra Madre fault alone forms the southern tectonic boundary of the San Gabriel Mountains in the northern San Fernando Valley. It consists of a system of faults approximately 75 miles in length. The individual segments of the Sierra Madre fault system range up to 16 miles in length and display a reverse sense of displacement and dip to the north. The most recently active portions of the zone include the Mission Hills, Sylmar and Lakeview segments, which produced an earthquake in 1971 of magnitude 6.4. Tectonic rupture along the Lakeview Segment during the San Fernando Earthquake of 1971 produced displacements of approximately 2½ to 4 feet upward and southwestward.

It is believed that the Sierra Madre fault zone is capable of producing an earthquake of magnitude 7.3. The closest trace of the fault is located approximately 10.89 miles northeast of the site.

Malibu Coast Fault

The Malibu Coast fault is part of the Transverse Ranges Southern Boundary fault system, a west-trending system of reverse, oblique-slip, and strike-slip faults that extends for more than approximately 124 miles along the southern edge of the Transverse Ranges and includes the Hollywood, Raymond, Anacapa–Dume, Malibu Coast, Santa Cruz Island, and Santa Rosa Island faults.

The Malibu Coast fault zone runs in an east-west orientation onshore subparallel to and along the shoreline for a linear distance of about 17 miles through the Malibu City limits, but also extends offshore to the east and west for a total length of approximately 37.5 miles. The onshore Malibu Coast fault zone involves a broad, wide zone of faulting and shearing as much as 1 mile in width. While the Malibu Coast Fault Zone has not been officially designated as an active fault zone by the State of California and no Special Studies Zones have been delineated along any part of the fault zone under the Alquist-Priolo Act of 1972, evidence for Holocene activity (movement in the last 11,000 years) has been established in several locations along individual fault splays within the fault zone. Due to such evidence, several fault splays within the onshore portion of the fault zone are identified as active.[b]

Large historic earthquakes along the Malibu Coast fault include the 1979, 5.2 magnitude earthquake and the 1989, 5.0 magnitude earthquake.[c] The Malibu Coast fault zone is approximately 12.64 miles northwest of the site and is believed to be capable of producing a maximum 7.0 magnitude earthquake.

San Gabriel Fault System

The San Gabriel fault system is located approximately 15.45 miles north of the site. The San Gabriel fault system comprises a series of subparallel, steeply north-dipping faults trending approximately north 40 degrees west with a right-lateral sense of displacement. There is also a small component of vertical dip-slip separation. The fault system exhibits a strong topographic expression and extends approximately 90 miles from San Antonio Canyon on the southeast to Frazier Mountain on the northwest. The estimated right lateral displacement on the fault varies from 34 miles (Crowell, 1982) to 40 miles (Ehlig, 1986), to 10 miles (Weber, 1982). Most scholars accept the larger displacement values and place the majority of activity between the Late Miocene and Late Pliocene Epochs of the Tertiary Era (65 to 1.8 million years before present).

Portions of the San Gabriel fault system are considered active by California Geological Survey. Recent seismic exploration in the Valencia area (Cotton and others, 1983; Cotton, 1985) has established Holocene offset. Radiocarbon data acquired by Cotton (1985) indicate that faulting in the Valencia area occurred between 3,500 and 1,500 years before present.

It is hypothesized by Ehlig (1986) and Stitt (1986) that the Holocene offset on the San Gabriel fault system is due to sympathetic (passive) movement as a result of north-south compression of the upper Santa Susana thrust sheet. Seismic evidence

[b] *City of Malibu Planning Department, Malibu General Plan, Chapter 5.0, Safety and Health Element, http://qcode.us/codes/malibu-general-plan/; accessed October 25, 2012.*
[c] *California Institute of Technology, Southern California Data Center. Chronological Earthquake Index, www.data.scec.org/significant/malibu1979.html; accessed October 25, 2012.*

indicates that the San Gabriel fault system is truncated at depth by the younger, north-dipping Santa Susana-Sierra Madre faults (Oakeshott, 1975; Namson and Davis, 1988).

Palos Verdes Fault

Studies indicate that there are several active on-shore extensions of the strike-slip Palos Verdes fault, which is located approximately 16.08 miles southwest of the site. Geophysical data also indicate the off-shore extensions of the fault are active, offsetting Holocene age deposits. No historic large magnitude earthquakes are associated with this fault. However, the fault is considered active by the California Geological Survey. It is estimated that the Palos Verdes fault is capable of producing a maximum 7.7 magnitude earthquake.

Whittier-Elsinore Fault System

The Whittier fault is located approximately 17.11 miles to the southeast of the site. The Whittier fault together with the Chino fault comprises the northernmost extension of the northwest trending Elsinore fault system. The mapped surface of the Whittier fault extends in a west-northwest direction for a distance of 20 miles from the Santa Ana River to the terminus of the Puente Hills. The Whittier fault is essentially a strike-slip, northeast dipping fault zone which also exhibits evidence of reverse movement along with en echelon[d] fault segments, en echelon folds and anatomizing (braided) fault segments. Right lateral offsets of stream drainages of up to 8800 feet (Durham and Yerkes, 1964) and vertical separation of the basement complex of 6,000 to 12,000 feet (Yerkes, 1972), have been documented. It is believed that the Whittier fault is capable of producing a 7.8 magnitude earthquake.

The Whittier Narrows earthquakes of October 1, 1987, and October 4, 1987, occurred in the area between the westernmost terminus of the mapped trace of the Whittier fault and the frontal fault system. The main 5.9 magnitude shock of October 1, 1987 was not caused by slip on the Whittier fault. The quake ruptured a gently dipping thrust fault with an east-west strike (Haukson, Jones, Davis and others, 1988). In contrast, the earthquake of October 4, 1987, is assumed to have occurred on the Whittier fault as focal mechanisms show mostly strike-slip movement with a small reverse component on a steeply dipping northwest striking plane (Haukson, Jones, Davis and others, 1988).

Santa Susana Fault

The Santa Susana fault extends approximately 17 miles west-northwest from the northwest edge of the San Fernando Valley into Ventura County and is at the surface high on the south flank of the Santa Susana Mountains. The fault ends

[d] *En echelon refers to closely-spaced, parallel or subparallel, overlapping or step-like minor structural features*

near the point where it overrides the south-side-up South strand of the Oak Ridge fault. The Santa Susana fault strikes northeast at the Fernando lateral ramp and turns east at the northern margin of the Sylmar Basin to become the Sierra Madre fault. This fault is exposed near the base of the San Gabriel Mountains for approximately 46 miles from the San Fernando Pass at the Fernando lateral ramp east to its intersection with the San Antonio Canyon fault in the eastern San Gabriel Mountains, east of which the range front is formed by the Cucamonga fault. The Santa Susana fault has not experienced any recent major ruptures except for a slight rupture during the 6.5 magnitude 1971 Sylmar earthquake.[e] The Santa Susana Fault is considered to be active by the County of Los Angeles. It is believed that the Santa Susana fault has the potential to produce a 6.9 magnitude earthquake. The closest trace of the fault is located approximately 18.51 miles north of the site.

San Andreas Fault System

The San Andreas Fault system forms a major plate tectonic boundary along the western portion of North America. The system is predominantly a series of northwest trending faults characterized by a predominant right lateral sense of movement. At its closest point the San Andreas Fault system is located approximately 33.39 miles to the northeast of the site.

The San Andreas and associated faults have had a long history of inferred and historic earthquakes. Cumulative displacement along the system exceeds 150 miles in the past 25 million years (Jahns, 1973). Large historic earthquakes have occurred at Fort Tejon in 1857, at Point Reyes in 1906, and at Loma Prieta in 1989. Based on single-event rupture length, the maximum Richter magnitude earthquake is expected to be approximately 8.25 (Allen, 1968). The recurrence interval for large earthquakes on the southern portion of the fault system is on the order of 100 to 200 years.

ii) Potentially Active Faults

Anacapa-Dume Fault

The Anacapa–Dume fault, located approximately 14.29 miles to the northwest of the site, is a near-vertical offshore escarpment exceeding 600 meters locally, with a total length exceeding 62 miles. This fault is also part of the Transverse Ranges Southern Boundary fault system. It occurs as close as 3.6 miles offshore south of Malibu at its western end, but trends northeast where it merges with the offshore segments of the Santa Monica Fault Zone. It is believed that the Anacapa–Dume fault is responsible for generating the historic 1930 magnitude 5.2 Santa Monica earthquake, the 1973 magnitude 5.3 Point Mugu earthquake, and the 1979 and

[e] *California Institute of Technology, Southern California Data Center. Chronological Earthquake Index, www.data.scec.org/significant/santasusana.html; accessed May 24, 2012.*

1989 Malibu earthquakes, each of which possessed a magnitude of 5.0.[f] The Anacapa–Dume fault is thought to be capable of producing a maximum magnitude 7.2 earthquake.

iii) Blind Thrusts Faults

Blind or buried thrust faults are faults without a surface expression but are a significant source of seismic activity. By definition, these faults have no surface trace, therefore the potential for ground surface rupture is considered remote. They are typically broadly defined based on the analysis of seismic wave recordings of hundreds of small and large earthquakes in the Southern California area. Due to the buried nature of these thrust faults, their existence is sometimes not known until they produce an earthquake. Two blind thrust faults in the Los Angeles metropolitan area are the Puente Hills blind thrust and the Elysian Park blind thrust. Another blind thrust fault of note is the Northridge fault located in the northwestern portion of the San Fernando Valley.

The Elysian Park anticline is thought to overlie the Elysian Park blind thrust. This fault has been estimated to cause an earthquake every 500 to 1,300 years in the magnitude range 6.2 to 6.7. The Elysian Park anticline is approximately 1.76 miles to the southeast of the site.

The Puente Hills blind thrust fault extends eastward from Downtown Los Angeles to the City of Brea in northern Orange County. The Puente Hills blind thrust fault includes three north-dipping segments, named from east to west as the Coyote Hills segment, the Santa Fe Springs segment, and the Los Angeles segment. These segments are overlain by folds expressed at the surface as the Coyote Hills, Santa Fe Springs Anticline, and the Montebello Hills.

The Los Angeles segment of the Puente Hills blind thrust is located approximately 4.46 miles to the southeast of the site.

The Santa Fe Springs segment of the Puente Hills blind thrust fault is believed to be the cause of the October 1, 1987, Whittier Narrows Earthquake. Based on deformation of late Quaternary age sediments above this fault system and the occurrence of the Whittier Narrows earthquake, the Puente Hills blind thrust fault is considered an active fault capable of generating future earthquakes beneath the Los Angeles Basin. A maximum moment magnitude of 7.0 is estimated by researchers for the Puente Hills blind thrust fault.

The Mw 6.7 Northridge earthquake was caused by the sudden rupture of a previously unknown, blind thrust fault. This fault has since been named the Northridge Thrust, however it is also known in some of the literature as the Pico

[f] *City of Malibu Planning Department. Malibu General Plan, Chapter 5.0, Safety and Health Element, http://qcode.us/codes/malibu-general-plan/; accessed May 24, 2012.*

Thrust. It has been assigned a maximum magnitude of 6.9 and a 1,500 to 1,800 year recurrence interval. The Northridge thrust is located 15.08 miles to the northwest of the site.

b) Surface Ground Rupture

In 1972, the Alquist-Priolo Special Studies Zones Act (now known as the Alquist-Priolo Earthquake Fault Zoning Act) was passed into law. The Act defines "active" and "potentially active" faults utilizing the same aging criteria as that used by California Geological Survey (CGS). However, established state policy has been to zone only those faults which have direct evidence of movement within the last 11,000 years. It is this recency of fault movement that the CGS considers as a characteristic for faults that have a relatively high potential for ground rupture in the future.

CGS policy is to delineate a boundary from 200 to 500 feet wide on each side of the known fault trace based on the location precision, the complexity, or the regional significance of the fault. If a site lies within an Earthquake Fault Zone, a geologic fault rupture investigation must be performed that demonstrates that the proposed building site is not threatened by surface displacement from the fault before development permits may be issued.

Surface rupture is defined as surface displacement which occurs along the surface trace of the causative fault during an earthquake. Based on review of the Earthquake Fault Zone Map for the Hollywood fault (CGS, 2014), the nearest Earthquake Fault Zone is located approximately ¼-mile to the north of the site, for the Hollywood Fault. A copy of this map may be found in the Appendix of this report.

North Salt Lake Fault (Southern Santa Monica Fault)

Based on review of the enclosed "Previous Fault Mapping of the Hollywood Quadrangle" (CGS, 2014), Weber *et al* (1980) identified a strand of a fault crossing the southwestern corner of the studio lot. This strand is believed to be a segment of what Hill *et al* (1979) mapped to be the Southern Santa Monica fault, which alternatively Hildenbrand *et al* (2001) labeled as the North Salt Lake fault.

According to Hildenbrand *et al* (2001): *"Vertical movement associated with the opening of the Los Angeles Basin resulted in numerous folds and faults in the footwall of the Santa Monica-Hollywood fault zone. For example, Wright (1991) suggested that the North Salt Lake fault may have been formed at this time by extension behind the uplifted Las Cienegas basement block that was sagging literally into the deeply subsided basin to the southwest. The North Salt Lake fault, a steeply-dipping normal fault, may form the southern margin of the Hollywood Basin (Wright, 1991)."*

In the 2014 Fault Evaluation Report FER 253 for the Hollywood Quadrangle, the California Geological Survey (CGS) concluded that there is no clear evidence that the North Salt Lake fault is a surface fault. CGS opinion is that the zone of differential subsidence identified in the enclosed "Previous Fault Mapping of the Hollywood Quadrangle" may be attributed to causes other than active fault displacement. CGS found no indication in the literature, or their observations, of Holocene surface rupture along this fault projection. Furthermore, the USGS database indicates that the rupture top for this fault is expected to be located approximately ½-mile below the ground surface.

No Special Studies Zones have been delineated by the State of California, or the City of Los Angeles, along any part of the North Salt Lake fault. Based on these considerations, the potential for surface ground rupture at the subject sites is considered low.

c) Seismicity

As with all of Southern California, the project site is subject to potential strong ground motion, should a moderate to strong earthquake occur on a local or regional fault. Design of any proposed structures on the site in accordance with the provisions of the applicable City of Los Angeles Building Code will mitigate the potential effects of strong ground shaking.

d) Deaggregated Seismic Source Parameters

The peak ground acceleration (PGA) and modal magnitude for the site was obtained from the USGS Probabilistic Seismic Hazard Deaggregation program (USGS, 2008). The parameters are based on a 2 percent in 50 years ground motion (2475 year return period). A shear wave velocity (Vs30) of 259 meters per second was utilized in the computation. The deaggregation program indicates a PGA of 0.89g and a modal magnitude of 6.5 for the site.

e) 2016 California Building Code Seismic Parameters

Based on information derived from the subsurface investigation, the subject site is classified as Site Class D, which corresponds to a "Stiff Soil" Profile, according to Table 20.3-1 of ASCE 7-10. This information and the site coordinates were input into the USGS U.S. Seismic Design Maps tool (Version 3.1.0) to calculate the ground motions for the site.

2016 CALIFORNIA BUILDING CODE SEISMIC PARAMETERS	
Site Class	D
Mapped Spectral Acceleration at Short Periods (S_S)	2.343g
Site Coefficient (F_a)	1.0
Maximum Considered Earthquake Spectral Response for Short Periods (S_{MS})	2.343g
Five-Percent Damped Design Spectral Response Acceleration at Short Periods (S_{DS})	1.562g
Mapped Spectral Acceleration at One-Second Period (S_1)	0.862g
Site Coefficient (F_v)	1.5
Maximum Considered Earthquake Spectral Response for One-Second Period (S_{M1})	1.292g
Five-Percent Damped Design Spectral Response Acceleration for One-Second Period (S_{D1})	0.862g

f) Liquefaction

Liquefaction is a phenomenon in which saturated silty to cohesionless soils below the groundwater table are subject to a temporary loss of strength due to the buildup of excess pore pressure during cyclic loading conditions such as those induced by an earthquake. Liquefaction-related effects include loss of bearing strength, amplified ground oscillations, lateral spreading, and flow failures.

Based on review of the Seismic Hazards Maps of the State of California (CDMG, 1999), the site is not located within a "Liquefiable" area. This determination is based on groundwater depth records, soil type and distance to a fault capable of producing a substantial earthquake. A copy of this map is included in the Appendix.

g) Dynamic Settlement

Seismically-induced settlement or compaction of dry or moist, cohesionless soils can be an effect related to earthquake ground motion. Such settlements are typically most damaging when the settlements are differential in nature across the length of structures.

Some seismically-induced settlement of the proposed structure should be expected as a result of strong ground-shaking, however, due to the uniform nature of the underlying geologic materials, excessive differential settlements are not expected to occur.

h) Regional Subsidence

The site is not located within a zone on known subsidence due to oil or other fluid withdrawal.

i) Landsliding

The probability of seismically-induced landslides occurring on the site is considered to be negligible due to the general lack of substantive elevation difference across or adjacent to the site. Therefore, potential impacts related to landsliding would be less than significant.

j) Collapsible Soils

Based on previous geotechnical investigations conducted by this firm at the site, the soils to underlain the proposed structures would not be considered prone to hydroconsolidation.

k) Tsunamis, Seiches and Flooding

Tsunamis are large ocean waves generated by sudden water displacement caused by a submarine earthquake, landslide, or volcanic eruption. The site is high enough and far enough from the ocean to preclude being prone to hazards of a tsunami.

Review of the County of Los Angeles Flood and Inundation Hazards Map (Leighton, 1990), indicates the site lies within the inundation boundaries of the Mulholland Dam. A determination of whether a higher site elevation would remove the site from the potential inundation zones is beyond the scope of this investigation.

Review of the applicable Flood Insurance Rate Map indicates the site lies within an area of minimal flood hazard. A copy of this map is enclosed.

l) City of Los Angeles Methane Zone

Based on review of the NavigateLA Website, developed by the City of Los Angeles, Bureau of Engineering, Department of Public Works, the subject site is not located within the limits of a City of Los Angeles Methane Zone or Methane Buffer Zone.

m) Oil Fields and Oil Wells

Based on review of the California State Division of Oil, Gas and Geothermal Resources (DOGGR) On-line Mapping System, the site is not located within the limits of an oil field. In addition, no oil or gas wells have been drilled at the site. The nearest well was drilled approximately 1,000 feet to the west of the site.

n) Temporary Excavations

All required excavations are expected to be sloped, or properly shored, in accordance with the provisions of the applicable City of Los Angeles Building Code. Therefore, the project would not result in any on-site or off-site landslide. Shoring systems may include soldier piles with rakers and/or tiebacks. Tiebacks would extend below adjacent properties and public right of ways. Appropriate notifications and agreements will be obtained by the development team prior to tieback installations.

o) Ground Failure

The proposed construction will not cause, or increase the potential for any seismic related ground failure on the project site or adjacent sites.

p) Expansive Soils

The onsite geologic materials previously tested by this firm were in the very low to moderate expansion range. The Expansion Index was found to be between 7 and 90 for representative samples. Design of the proposed structures in accordance with the provisions of the applicable City of Los Angeles Building Code will mitigate the potential effects of moderately expansive soils.

q) Sedimentation and Erosion

Grading, excavation and other earth moving activities could potentially result in erosion and sedimentation. For any grading proposed in the site from November to April (generally considered the rainy season) an erosion control plan consistent with the City of Los Angeles requirements would need to be prepared. Compliance with minimum code requirements will render project impacts related to sedimentation and erosion less than significant.

r) Landform Alterations

There are no significant hills, canyons, ravines, outcrops or other geologic or topographic features on the site. Therefore, any proposed project would not adversely affect any prominent geologic or topographic features.

s) Septic Tanks

It is the understanding of this firm that sewers are available at the site for wastewater disposal. No septic tanks or alternative disposal systems are necessary or anticipated for any future site projects.

The conditions identified in this document are typical of sites within this area of Los Angeles, and of a type that are routinely addressed through regulatory measures. Geotechnologies, Inc. appreciates the opportunity to provide our services on this project. Should you have any questions please contact this office.

Respectfully submitted,
GEOTECHNOLOGIES, INC.

LEGEND

Qae: Older Surficial Sediments - Elevated and Dissected Alluvium consisting of clay, sand and gravel

Tush: Unnamed Shale - Gray to light brown, thin-bedded silty clay shale, soft and crumbly

Tm: Monterey Formation - White weathering, thin bedded, platy silicous shale

Ttusi: Upper Topanga Formation - Mostly gray micaceous clay shale or claystone, crumbly where weathered

Ttusc: Upper Topanga Formation - Light gray massive sandstone, with pebble-cobble conglomerate

Ttucg: Upper Topanga Formation - Light to medium gray, from coarse sandstone to cobble conglomerate

—····? Fault - dashed where indefinite or inferred, dotted where concealed, queried where existence is doubtful

Re: CITADEL Project No. 5113.1287.0
Phase I Environmental Site Assessment Report
Sunset Gower Studios
1438 North Gower Street
Los Angeles, California 90028

Dear Mr. Pearson:

Enclosed please find Citadel Environmental Services, Inc.'s Phase I Environmental Site Assessment Report for the above-referenced location.

The Phase I Environmental Site Assessment Report was conducted for Hudson Pacific Properties, Inc., in accordance with Citadel's Proposal 5113.1287.P, dated November 1, and a mutually agreed upon scope of work.

If after your review, you have any questions or require additional information, please do not hesitate to telephone me at the Citadel Office in Glendale at (818) 246-2707.

Sincerely,
CITADEL ENVIRONMENTAL SERVICES, INC.

Mark Drollinger

Citadel Environmental Services, Inc. (Citadel) was contracted by Hudson Pacific Properties, Inc. (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the Sunset Gower

Studios located at 1438 North Gower Street, in the City of Los Angeles, Los Angeles County, California; hereinafter referred to as the "Site."

Current Site Conditions

According to the County of Los Angeles' Assessor's Parcel Maps, the Site is comprised of 11 parcels encompassing approximately 15.6 acres of land. These parcels are legally identified by the following Assessor's Parcel Numbers (APNs) and associated addresses:

- APN 5545-013-401: 1440 North Gower Street
- APN 5545-013-043: 6060 West Sunset Boulevard
- APN 5545-013-051: 6050 West Sunset Boulevard
- APN 5545-013-056: no address associated with the parcel
- APN 5545-013-055: no address associated with the parcel
- APN 5545-013-403: 6010 Sunset Boulevard
- APN 5545-013-002: 1455 Gordon Street
- APN 5545-013-404: no address associated with the parcel
- APN 5545-013-057: 1437 Gordon Street
- APN 5545-013-058: no address associated with the parcel
- APN 5545-013-059: no address associated with the parcel

The Site consists of 12 sound stage facilities, and 368,000 square feet (SF) of office and support space for productions. The office and support space include the following as identified by the APNs.

APN	DESCRIPTION/BUILDINGS	APPROXIMATE SQUARE FOOTAGE AND FLOORS	LOCATION
5545-013-401	Vacant restaurant building	One-story, 6,650 SF	Northwest corner of Site
	Cohn Building (Building 35)	Five-story, 68,000 SF	Along Gower Street, south of the vacant restaurant building
5545-013-043	Building 6060	Two-story, 7,817 SF	Along Sunset Boulevard, east of the vacant restaurant building
5545-013-051	United Building	Two-story, 18,126 SF	Along Sunset Boulevard, east of Building 6060
	Beachwood Drive driveway/entrance	n/a	Along Sunset Boulevard, east of the United Building
5545-013-056	Building 55	One-story, 4,440 SF	South of the United Building
5545-013-055	Security booth	One-story	East of Building 55
5545-013-403	Technicolor Building	Six-story, 113,725 SF	Along Sunset Boulevard, east of the Beachwood Drive driveway/entrance
5545-013-002	1455 Gordon Building	One-story, 1,720 SF	Along Gordon Street, east/southeast of the Technicolor Building
5545-013-404	Building 16	Two-story, 12,675 SF	Along Beachwood Drive driveway, south of Building 55
	Building 19	Two-story, 2663 SF	South of Building 6060 and west of Building 16
	Building 15	Two-story, 4,630 SF	South of Buildings 16 and 19
	Building 62	Two-story, 20,095 SF	Along Beachwood Drive driveway, south of Building 16
	Food and Bounty (restaurant) structure	One-story, 8,065 SF	Along Beachwood Drive driveway, south of Building 62
	Stage 5	One-story, 5,329 SF	West of Building 62 and south of Building 15
	Building 2	Three-story, 4,338 SF	West of Stage 5

APN	DESCRIPTION/BUILDINGS	APPROXIMATE SQUARE FOOTAGE AND FLOORS	LOCATION
	Columbia Building (Building 1)	Two-story, 11,715 SF	Along Gower Street, south of Building 35 and west of Building 2
	Building 5	Four-story, 14,808 SF	Along Gower Street, south of Building 1
	Stage 1	One-story, 16,050 SF	South of Stage 5 and Building 2; east of Building 5
	Building 34	Three-story, 1,884 SF	South of Stage 1
	Stage 2	One-story, 12,538 SF	Along Gower Street, south of Building 5
	Building 38	Two-story, 1,012 SF	West of Stage 2
	Building 42	Three-story, 21,776 SF	West of Stage 2 and south of Building 38

5545-013-059	Stage 12	One-story, 17,315 SF	Southwest corner of the Site
	Stage 14	One-story, 18,602 SF	Along Gower Street, north of Stage 12
	Building 70	Two-story, 33,220 SF	Along Fountain Avenue, east of Stages 12 and 14
	Stage 15	One-story, 16,743 SF	Along Fountain Avenue, east of Building 70
	Stage 16	One-story, 16,248 SF	North of Stage 15
	Building 74	Two-story, 10,408 SF	Along Gordon Street, east of Stage 16

APN	DESCRIPTION/BUILDINGS	APPROXIMATE SQUARE FOOTAGE AND FLOORS	LOCATION
5545-013-057	Portion of Parking Structure A	Four-story	Along Gordon Street
5545-013-058	Surface parking areas	N/A	North APN 5545-013-059

Stationary equipment at the Site include cable traction and hydraulic elevators, pad-mounted transformer, boilers, hot water heaters, air compressors, hydraulic lift/dock, cooling towers, grease interceptor, and sump pumps. In general, the Site appeared to be well maintained and the observed building/ground conditions were good.

Site History

A review of historical sources showed that the Site was developed with two small structures, likely residences, as early as 1894. By 1919, a film laboratory; a studio with an office, an open stage, and several small support structures; and an open stage with offices and dressing rooms appeared developed in the north portion of the Site along Sunset Boulevard. An oil and gasoline station also appeared developed in the northwest corner of the Site. The south portion of the center and south portions of the Site appeared generally developed with single-family residences. Additional stages and support structures appeared developed in the center-east portion of the Site along Gordon Street. By 1928, the Site appeared densely developed with commercial structures in the north/northeast portions of the Site and with primarily single-family residences along with several multi-family residences in the south portion of the Site. Stages 1 and 2 and the nearby support buildings to the north of the Stages appeared developed similar to its current configuration with the exception of the current restaurant structure located in the northwest corner of the Site and the smaller structures near the 6060 Building. Stage 7 and several of the nearby support buildings (Buildings 7, 43, 48, 49, and 50) also appeared developed similar to its current configuration. Stages also appeared developed in the northeast corner of the Site. By 1938, Stages 8 and 9 also appear developed similar to its current configuration.

By 1950, the Site appeared developed with auto repair shops with pumps for two gasoline tanks in the southwest portion of the Site. The southeast portion of the Site and properties along Gordon Street remained as residences and the remaining areas of the Site appeared relatively unchanged. By 1957, Stages 12 and 14 appeared developed in the southwest corner of the Site; and the auto repair shops appeared to have been relocated closer to Beachwood Drive. The gasoline tanks were no longer depicted. Stages 15 and 16 appeared developed by 1966; and Building 70 appears developed by 1970. Parking Structure A and B (separate structures) appeared developed in 1979 and 1983, respectively. The structure in the northwest corner of the Site was developed in 1985. The Technicolor Building was constructed in 2006. A small parking structure was also built in 2006 to connect Parking Structures A and B. The structure was extended in 2016 with the development of Parking Structure C.

Citadel reviewed several environmental documents:

- ATC Associates Inc. (ATC) performed a Phase II Subsurface Investigation at the Site in July 2004. The objective of the investigation was to evaluate the recognized environmental conditions (RECs) identified by a Phase I ESA completed by ATC, dated May 11, 1997. Citadel was not provided with the 1997 Phase I ESA Report. The following RECs were identified:
  - Gasoline station, located at the southeast corner of Gower Street and Sunset Boulevard.
  - Machine shop and paint spray booth, located in the northeast portion of the Site.
  - Auto repair area and gasoline pumps.
  - Auto repair and oil storage area.

A geophysical survey was completed at each of the proposed areas of exploration to evaluate the possible presence of buried utilities and possible abandoned in place USTs associated with the former gasoline station and gasoline pumps, and oil storage tanks associated with the auto repair areas. The geophysical survey consisted of an electromagnetic induction (EM) and ground penetrating radar (GPR) survey. No large metallic objects, which would be indicative of buried USTs or septic tanks, were detected in any of the areas surveyed.

A total of 15 soil borings were completed at the Site and three soil samples were retained from each boring for laboratory analytical analysis. No groundwater was encountered at a depth of 26 feet bgs. Soil samples were collected at depths of five, 10, 15, 20, and 25 feet bgs in all boring with the exception of two borings that were only samples to a maximum depth of 21 feet bgs. TPH, BTEX, and VOCs were not detected in any of the soil samples. Arsenic was detected in three of the soil samples, exceeding its EPA Preliminary Remediation Goals (PRGs) of 0.39 milligram per kilogram (mg/kg) for residential soil. However, according to ATC, these detections were between the background concentration range of arsenic in California (0.59 to 11 mg/kg). The metal concentrations in the samples analyzed did not exceed the Total Threshold Limit Concentration (TTLC), and would not be classified as a California hazardous waste. No figures or laboratory data were included in the report.

- EMG performed a Phase I ESA at 6060 Sunset in March/April 2010. According to EMG, the property was originally constructed in 1918 through 1957, and was occupied as a commercial office facility at the time of the assessment. Prior to the current use, the property was occupied as a film developing studio from 1918 until 2005. EMG identified this as a REC. Various chemicals, including solvents, were used and stored during that time. A subsurface soil and soil vapor assessment conducted in 2006 showed elevated levels of VOCs in soils at the property. Soil vapor extraction (SVE) was conducted for a year in 2008; however, VOCs remained above human health screening levels in one area. An Indoor Air Quality (IAQ) assessment for VOCs was conducted in 2009 to establish a baseline for the building. While select VOCs were detected, the total VOC concentrations were below Permissible Exposure Limits (PELs) established by Cal-OSHA and the recommended American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Values (TLVs). It was concluded that the levels of tetrachloroethylene (PCE) detected would not likely cause irritation and discomfort to the building occupants, and did not present any indoor air quality concerns at the time. EMG recommended that periodic IAQ monitoring continue until contamination levels are below action levels.

- Citadel performed a Phase I ESA at 6050 Sunset Boulevard in December 2011. At the time of the assessment, the property was occupied by a recording studio and offices. Previous occupancy uses have consisted of businesses related to the film and music industry, including the use as a stage for television and for voice recordings. The assessment revealed no evidence of RECs in connection with the property.

- Citadel performed a Phase I ESA at 1455 Beachwood Drive in December 2011. At the time of the assessment, the property was vacant and unoccupied. Prior to the current structure, previous smaller structures were on-Site and used as storage vaults for film. Since 1963, occupancy uses appeared to have been primarily related to the storage of film and other items supporting the film industry, and offices supporting the film and music industry. The assessment revealed no evidence of RECs in connection with the property.

- Citadel performed a Phase I ESA at 1455 Gordon Street in September 2012. At the time of the assessment, the property was occupied as a business office by Emerson College.

Historical records reviewed indicate that the property was largely vacant and unoccupied prior to 1931. The current building was constructed for use as a sound studio and appeared to have historically been used for sound studio, bindery, dance studio, photography studio, and offices. The assessment revealed no evidence of RECs in connection with the property.

- Citadel provided a report of a SVE system evaluation and a supplemental soil vapor investigation in August 2017. Citadel concluded that soil vapor extraction activities at the Site have resulted in 140.07 lbs. of PCE vapors to have been removed from the subsurface since 2008. A rebound test was conducted to determine if additional mass can be removed by SVE. Based on the very low mass removal rate that ranged from 0.002 to 0.014 lbs./day since the rebound test started on August 26, 2016, and asymptotic levels of total mass removed, Citadel recommended that SVE activities be discontinued. Citadel further recommended entering into a Voluntary Cleanup Program such as with the Los Angeles County Fire Department – Site Mitigation Unit for the purpose of obtaining environmental case closure.

Environmental Database Review

The Site was identified on several environmental databases including FINDS, ECHO, HAZNET, RCRA NonGen/NLR, and RCRA-SQG. The Site was identified on the Facility Index System/Facility Registry System (FINDS) and Enforcement and Compliance History Information (ECHO) databases. FINDS contains facility information and "pointers" to other sources that contain more detail and ECHO provides integrated compliance and enforcement information. The Site was identified on this database due to being identified as a hazardous waste generator. The Site was identified on the HAZNET database mainly as a generator of unspecified solvent mixture, latex waste, other organic solids, unspecified organic liquid mixture, oxygenated solvents, unspecified aqueous solution, unspecified aqueous solution, other organic solids, aqueous solutions, paint sludge, hydrocarbon solvents, and liquids with halogenated solvents. These were typically part of productions and sets.

Citadel reviewed information provided by Environmental Data Resources (EDR) regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a leaking underground storage tank (LUST) occurred within 0.25-mile and upgradient of the Site. KTLA Broadcasting, located at Athens Mt. Wilson Road, is listed as a LUST site. According to EDR, the property is approximately 685 feet northeast of the Site and the diesel leak was discovered in January 1991. The leak was limited to soil only. The case was completed and closed by the Los Angeles Regional Water Quality Control Board (LARWQCB) on November 7, 1991. Due to the case closure and that the contamination was limited to soil, this property is not expected to have adversely affected the Site.

Nine properties were identified as within 0.125-mile and upgradient of the Site on the Historical Gas Station database; and thirteen properties were identified as within 0.125-mile and upgradient of the Site on the Historical Dry Cleaners database. These properties are not likely to have adversely affected the Site.

RECOGNIZED ENVIRONMENTAL CONDITIONS

According to American Society for Testing and Materials (ASTM) Standard of Practice E1527-13, recognized environmental conditions (REC) fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A recognized environmental condition, or REC, means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

A controlled recognized environmental condition, or CREC, is a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

An historical recognized environmental condition, or HREC, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Based on our review of these databases, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC were not identified. Based on these reviews, the oil and gasoline station located in the northwest corner of the Site as identified on the 1919 Sanborn Map is considered a REC. According to reviewed building permits and aerial photographs, the gasoline station was developed in 1919 and removed by 1928. It is unclear whether the USTs were removed. In addition, the 1950 Sanborn Map depicted automobile repair shops with pumps for two gasoline tanks just east of the existing Stage 14. The repair shops were relocated in 1957 and the gasoline tanks were no longer shown. No information has been reviewed regarding any UST removals. The Site was not identified on the historical UST databases. However, the Site address 1438 Gower Street was identified on the City of Los Angeles Fire Department List of Inactive USTs. Citadel has sent in a request to review the records.

In addition, a 2004 Phase II Subsurface Investigation was conducted to address these RECs. TPH, BTEX, and VOCs were not detected in any of the soil samples. Arsenic was detected between the background concentration range of arsenic in California (0.59 to 11 mg/kg). The metal concentrations in the samples analyzed did not exceed the TTLC, and would not be classified as a California hazardous waste. Based on the findings of this report, the identified RECs would be considered HRECs. However, no attachments such as laboratory reports and geophysical survey findings were included with the report.

The contamination at 6060 Sunset is also considered a REC. However, based on the latest soil vapor activities, it appears that further removal of PCE is not feasible. Citadel had recommended entering a Voluntary Cleanup Program to obtain an environmental case closure. Upon acquiring closure, this would be considered a HREC.

No evidence for designating the Site as a CREC from reviews of historical documents and present Site conditions was found.

NON-ASTM SCOPE CONSIDERATIONS

The current Site building was constructed prior to bans using asbestos-containing building materials (ACBMs), lead-based paint (LBP), and polychlorinated biphenyls (PCBs) in electrical equipment came into effect in 1989, 1978, and 1978, respectively. Operation and maintenance (O&M) programs for asbestos and lead were prepared for the Site between 2009 and 2012.

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the United States EPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the EPA action level of 4.0 picoCuries per liter (pCi/L).

The Federal EPA Radon Zone for Los Angeles County is Zone 2, which indicates an average indoor concentration greater than or equal to 2.0 pCi/L of air and less than or equal to 4.0 pCi/L. In a survey, 13 tests were performed within the 90028 zip code for the presence of radon. Of these, no tests was found to contain radon in excess of 4.0 pCi/L. Site-specific radon values were not available and were not a part of this ASTM Phase I ESA.

A potable well was not observed on-Site and the Site does not lie within a known or potential flood zone or wetlands.

1.0 INTRODUCTION

Citadel Environmental Services, Inc. (Citadel) was contracted by Hudson Pacific Properties, Inc. (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the Sunset Gower Studios located at 1438 North Gower Street, in the City of Los Angeles, Los Angeles County, California; hereinafter referred to as the "Site."

1.1 PURPOSE

The purpose of the Phase I ESA was to review past and present land use practices and to evaluate the presence, or likely presence, of any hazardous substances or petroleum products that have been discharged into the property's structure, ground, groundwater, or surface water. This qualitative assessment was accomplished by review of current and readily available information regarding past and current land use for indications of the manufacture, generation, use, storage and/or disposal of hazardous substances at the Site. A Site visit was also conducted to observe existing Site conditions. This report provides the results of the Phase I ESA performed.

1.2 INVOLVED PARTIES

The involved party(s) in this study, to the best of our knowledge, is Hudson Pacific Properties, Inc.

Citadel understands that this Phase I ESA is being requested in conjunction with due diligence activities by Hudson Pacific Properties, Inc. Citadel recognizes that this report is to be used exclusively by Hudson Pacific Properties, Inc. and its successors, lenders, and assigns. It is a report upon which Hudson Pacific Properties, Inc.and its successors, lenders, and assigns, can rely.

This assessment and report were prepared on behalf of and for the exclusive use of Hudson Pacific Properties, Inc., their lenders and assigns (Client) solely for its use and reliance, subject to the terms and conditions agreed upon between Citadel and the Client.

1.3 SCOPE OF SERVICES

This Phase I ESA was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-13 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The scope of services for this assessment consisted of the following:

- Performed a Site inspection to verify current Site conditions, and check for visible evidence of previously disposed and/or currently present hazardous waste, surface contamination, underground and above ground storage tanks (USTs/ASTs), suspect polychlorinated biphenyls (PCBs), and other potential environmental hazards.

- Conducted a visual survey of the adjacent properties and the immediate vicinity to determine if any nearby sites posed a significant environmental threat to the Site.

- Reviewed currently and readily available documents, including maps, aerial photographs, governmental databases of known hazardous waste sites and underground tanks, other consultant reports (if any), fire insurance maps, and other accessible records.

- Reviewed results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

- Consulted with appropriate governmental agencies having jurisdiction relative to past history of the property, complaints or incidents in the immediate area, and permits that may have been issued.

- Prepared a Phase I report, inclusive of our findings and recommendations, with applicable illustrations and documentation.

The scope of services outlined above is generally considered sufficient to properly assess the Site based on the data search, reasonably ascertainable documents, and Site inspection.

2.0 GENERAL SITE CHARACTERISTICS

2.1 LOCATION

The irregular-shaped Site is located in the neighborhood of Hollywood and approximately 0.3 mile southwest of the U.S. Route 101, locally referred to as the Hollywood Freeway. The Site is bounded by Sunset Boulevard to the north; Gordon Street to the east; Fountain Avenue to the south; and North Gower Street to the west. The general Site vicinity is occupied by commercial and residential properties.

According to the U.S. Geological Survey (USGS) Hollywood Quadrangle (7.5 Minute Series), dated 2012, the Site is at an elevation of approximately 342 feet above mean sea level (AMSL) and appears to slope to the south-southwest. The Site is located at approximate coordinates of 34° 5' 46.75" North Latitude and 118° 19' 16.37" West Longitude.

A Site Location Map identified as Figure 1 is included in Appendix A.

2.2 SITE DESCRIPTION

According to the County of Los Angeles' Assessor's Parcel Maps, the Site is comprised of 11 parcels encompassing approximately 15.6 acres of land. These parcels are legally identified by the following Assessor's Parcel Numbers (APNs) and associated addresses:

- APN 5545-013-401: 1440 North Gower Street
- APN 5545-013-043: 6060 West Sunset Boulevard
- APN 5545-013-051: 6050 West Sunset Boulevard
- APN 5545-013-056: no address associated with the parcel
- APN 5545-013-055: no address associated with the parcel
- APN 5545-013-403: 6010 Sunset Boulevard
- APN 5545-013-002: 1455 Gordon Street
- APN 5545-013-404: no address associated with the parcel
- APN 5545-013-057: 1437 Gordon Street
- APN 5545-013-058: no address associated with the parcel
- APN 5545-013-059: no address associated with the parcel

The Site consist of 12 sound stage facilities, and 368,000 square feet (SF) of office and support space for productions. The office and support space include the following as identified by the APNs.

APN	DESCRIPTION/BUILDINGS	APPROXIMATE SQUARE FOOTAGE AND FLOORS	LOCATION
5545-013-401	Vacant restaurant building	One-story, 6,650 SF	Northwest corner of Site
	Cohn Building (Building 35)	Five-story, 68,000 SF	Along Gower Street, south of the vacant restaurant building
5545-013-043	Building 6060	Two-story, 7,817 SF	Along Sunset Boulevard, east of the vacant restaurant building
5545-013-051	United Building	Two-story, 18,126 SF	Along Sunset Boulevard, east of Building 6060
	Beachwood Drive driveway/entrance	n/a	Along Sunset Boulevard, east of the United Building
5545-013-056	Building 55	One-story, 4,440 SF	South of the United Building
5545-013-055	Security booth	One-story	East of Building 55
5545-013-403	Technicolor Building	Six-story, 113,725 SF	Along Sunset Boulevard, east of the Beachwood Drive driveway/entrance
5545-013-002	1455 Gordon Building	One-story, 1,720 SF	Along Gordon Street, east/southeast of the Technicolor Building
5545-013-404	Building 16	Two-story, 12,675 SF	Along Beachwood Drive driveway, south of Building 55
	Building 19	Two-story, 2663 SF	South of Building 6060 and west of Building 16
	Building 15	Two-story, 4,630 SF	South of Buildings 16 and 19
	Building 62	Two-story, 20,095 SF	Along Beachwood Drive driveway, south of Building 16
	Food and Bounty (restaurant) structure	One-story, 8,065 SF	Along Beachwood Drive driveway, south of Building 62
	Stage 5	One-story, 5,329 SF	West of Building 62 and south of Building 15
	Building 2	Three-story, 4,338 SF	West of Stage 5
	Columbia Building (Building 1)	Two-story, 11,715 SF	Along Gower Street, south of Building 35 and west of Building 2
	Building 5	Four-story, 14,808 SF	Along Gower Street, south of Building 1
	Stage 1	One-story, 16,050 SF	South of Stage 5 and Building 2; east of Building 5
	Building 34	Three-story, 1,884 SF	South of Stage 1
	Stage 2	One-story, 12,538 SF	Along Gower Street, south of Building 5
	Building 38	Two-story, 1,012 SF	West of Stage 2
	Building 42	Three-story, 21,776 SF	West of Stage 2 and south of Building 38
	Stage 3	One-story, 13,942 SF	Along Gower Street, south of Stage 2 and Building 42
	Stage 4	One-story, 11,885 SF	Along Gower Street, south of Stage 3

APN	DESCRIPTION/BUILDINGS	APPROXIMATE SQUARE FOOTAGE AND FLOORS	LOCATION
	Stage 8	One-story, 10,916 SF	Along Gower Street, south of Stage 4
	Stage 9	One-story, 16,275 SF	Along Gower Street, south of Stage 8
	Building 22	Two-story, 3,357 SF	East of Stage 8
	Building 8/9	Two-story, 7,862 SF	East of Stages 8 and 9
	Building 9	Two-story, 5,635 SF	East of Stage 9
	Building 13	Four-story, 17,022 SF	Along Beachwood Drive driveway, east of Stage 3
	Building 14	One-story, 1,380 SF	Along Beachwood Drive driveway, south of Building 13
	Building 20	Two-story, 6,305 SF	Along Beachwood Drive driveway, south of Building 14
	Building 21	Two-story, 3,260 SF	Along Beachwood Drive driveway, south of Building 20
	Building 27 (Mill)	One-story, 8,192 SF	Along Beachwood Drive driveway, south of Building 21
	Parking Structures A, B, and C	Four-story	Along Gordon Street, south of 1455 Gordon Street
	Stage 7	One-story, 19,720 SF	West of Parking Structure B
	Building 28	Two-story, 4,730 SF	West of Stage 7
	Building 7	Two-story, 6,323 SF	West of Parking Structure B and north of Stage 7
	Building 48/49	Three-story, 18,925 SF	West of Parking Structure A and north of Building 7
	Building 43	Two-story, 2,320 SF	Between Beachwood Drive driveway and Building 48
	Building 50	Two-story, 2,605 SF	Along Beachwood Drive driveway and north of Building 49
5545-013-059	Stage 12	One-story, 17,315 SF	Southwest corner of the Site
	Stage 14	One-story, 18,602 SF	Along Gower Street, north of Stage 12
	Building 70	Two-story, 33,220 SF	Along Fountain Avenue, east of Stages 12 and 14
	Stage 15	One-story, 16,743 SF	Along Fountain Avenue, east of Building 70
	Stage 16	One-story, 16,248 SF	North of Stage 15
	Building 74	Two-story, 10,408 SF	Along Gordon Street, east of Stage 16
5545-013-057	Portion of Parking Structure A	Four-story	Along Gordon Street
5545-013-058	Surface parking areas	N/A	North APN 5545-013-059

Stationary equipment at the Site include cable traction and hydraulic elevators, pad-mounted transformer, boilers, hot water heaters, air compressors, hydraulic lift/dock, cooling towers, grease interceptor, and sump pumps. In general, the Site appeared to be well maintained and the observed building/ground conditions were good.

A Site Plan is included as Figure 2 in Appendix A. Select photographs of the Site and vicinity is included as Appendix B.

2.3 ADJACENT PROPERTIES

The immediately surrounding properties of the Site consist of the following:

Direction from Site	Address – Tenant/Use
North	6091 West Sunset Boulevard – Sunset Gower Plaza including restaurants, H&R Block, and liquor store 6061 to 6087 West Sunset Boulevard – Siren Studios 6055 West Sunset Boulevard – Hollywood Palms Inn and Suites 6000 West Sunset Boulevard (northeast) – East West Studios
East	5960 West Sunset Boulevard – Emerson College Los Angeles Center 1306 to 1456 Gordon Street – Single- and multi-family residences 5965 Fountain Avenue – Multi-family residence
South	6000 Fountain Avenue – Multi-tenant commercial property including a market and a beauty salon 6050 and 6062 Fountain Avenue – Single-family residences 6065 and 6075 West Studio Court – Multi-family residences 1260 North Beachwood Drive – Multi-family residence
West	6102 West Sunset Boulevard – Retail strip mall including Rite Aid and restaurants 1429 North Gower Street – AT&T 6100 and 6101 Afton Place – Multi-family residences 6100 De Longpre Avenue – Multi-family residence 6101 Fountain Avenue – Multi-family residence

2.4 UTILITIES

Electrical service is supplied to the Site by the Los Angeles Department of Water and Power (LADWP). Gas service is supplied by Southern California Gas. General rubbish (non-hazardous) is removed from the Site on a regular basis by a contracted waste hauler.

3.0 ENVIRONMENTAL SETTING

3.1 PHYSICAL SITE CHARACTERISTICS

Based upon the National American Datum (NAD) of 1983, the Site is at an elevation of approximately 342 feet AMSL.

The Site is located on the Hollywood Piedmont Slope, a subsection of the Los Angeles Coastal Plan of, an east-west trending older alluvial apron that has been deposited along the southern foothills of the Santa Monica Mountains and north of the La Brea Plain. This area consists of several small alluvial fans deposited by streams draining from the Santa Monica Mountains. These fans form a relatively flat surface, with minor undulations, that slopes to the south and southwest with a gradient of about 90 feet per mile. The Hollywood Piedmont Slope has been deposited partly on the La Brea Plan, Beverly Hills, and the Elysian Hills. The Elysian Hills and Newport-Inglewood Fault Zone are located east and west, respectively, of the Site (Department of Water Resources [DWR], 1961).

The Site is relatively flat, with a slight downhill gradient from north to south. The Site is located at an elevation of approximately 340 feet above mean sea level. The Site is overlain by Pleistocene aged older surficial sediments described as slightly elevated and dissected alluvium including alluvial fan deposits. These deep deposits are described as clay, sand and gravel, including gravel

and sand of minor stream channels. Shallow soils encountered during previous investigations (Citadel, 2017) revealed dense, very clayey sand, overlain by firm sandy silty clay with minor amounts of small gravel to a depth of 10 to 12 feet bgs. Underlying the clayey sand is very firm sandy clay.

USGS Topographic Map	Hollywood Quadrangle
Groundwater Basin	Coastal Plain of Los Angeles Groundwater Basin, Hollywood Subbasin (No. 4-11.02)
Nearest Surface Water to Site	Hollywood Reservoir, approximately 1.4 mile northwest of Site
Gradient Direction (Source)	South-southwest (topographic maps)
Estimated Depth to Groundwater (Source)	40 to 50 feet below ground surface (bgs) at the Site (Citadel, 2017)
Nearest Wetland to Site (Source)	0.4 mile southeast of Site (National Wetlands Inventory)
Nearest 100 or 500-year Flood Zone	500-year flood zone, approximately 370 feet west of Site (Federal Emergency Management Agency)

4.0 SITE RECONNAISSANCE

Citadel representative Ms. Shirley Lee conducted the Phase I ESA reconnaissance on November 8, 2017. Ms. Lee was accompanied by Mr. Ron Herschberger, Construction Manager at Sunset Gower Studios. The Site reconnaissance consisted of an inspection of the Site and a perimeter survey of the surrounding properties. Mr. Mark Drollinger of Citadel served as the Project Manager and reviewed this Phase I ESA. Findings from the Site inspection, research and perimeter survey are presented below.

4.1 SITE RECONNAISSANCE FINDINGS

Yes	No	Observation
X		Aboveground Storage Tanks (ASTs) and Underground Storage Tanks (USTs)
X		Identified Hazardous Materials
X		Polychlorinated Biphenyls (PCBs) – Electric or Mechanical Equipment Likely to Contain Fluids
X		Radioactive Man-Made Materials
	X	Pits, Ponds, and Lagoons
	X	Septic Tanks and Cesspools
X		Wells, Cisterns, Sumps, and Drains
X		Wastewater or Grease Interceptors
	X	Interior Stains or Corrosion
	X	Strong, Pungent, or Noxious Odors
	X	Pools of Liquid
	X	Stained Soil or Pavement
	X	Stressed Vegetation
X		Other

The above-identified observed items are further discussed below.

ABOVEGROUND AND UNDERGROUND STORAGE TANKS

UST/AST	Capacity	Contents	Material of Construction	Secondary Containment	Registered	Location	Purpose
AST (belly tank)	884 Gallon	Diesel	Steel	Yes	No	Exterior enclosure north of Building 49	Services the emergency generator

No spills, staining or leaks were observed by the AST. Based on the conditions observed, the AST is not expected to represent a significant environmental concern.

IDENTIFIED HAZARDOUS MATERIALS

Hazardous Material (size/quantity)	Location	Secondary Containment	Staining/Leaks	SDS
Spray paints/enamels, paint thinners, oils, and paints (one-gallon or less capacities)	Stage 7 – Ground Floor, Flammable Cabinet	No	None identified	No
Acetylene and oxygen cylinders	Stage 7 – Ground Floor	No	None identified	No
Paints, plasters, sealers, etc. (one-gallon or less capacities)	Stage 7 – Ground Floor	No	None identified	No
Paints (five-gallon and one-gallon capacities)	Building 19 – Ground Floor	No	None identified	No
Paints	Building 27 (Mill)	No	None identified	No
Cooling water treatment chemicals (55-gallon containers)	Building 35 – Roof	No	None identified	No
Diesel for gardening tools (five-gallon containers)	Building 42 – Ground Floor	No	None identified	No
Propane tanks	Exterior, along the east wall of Building 70	No, caged	None identified	No
Paints to be disposed	Parking Structure C – Ground Floor	No	None identified	No
Cooling water treatment chemicals (55-gallon, 20-gallon, and five-gallon containers)	Technicolor Building – Roof	Yes	None identified	No

Routine janitorial and maintenance supplies were observed in containers sized for commercial use and properly stored with no signs of staining or leaking. The janitorial supplies were stored on the Third Floor of Building 70; and maintenance supplies were stored in various locations including Buildings 19 and 20, and Stage 7. The hazardous materials observed are not expected to represent a significant environmental concern.

POLYCHLORINATED BIPHENYLS

Typical sources of polychlorinated biphenyls (PCBs) include electrical transformer cooling oils, fluorescent light fixture ballasts and hydraulic oil. In 1976, the U.S. EPA banned the manufacture and sale of PCB-containing transformers. Prior to this date, transformers were frequently filled with a dielectric fluid containing PCB-laden oil. By 1985, the US EPA required that commercial property owners with transformers containing more than 500 parts per million (ppm) PCBs must register the

transformer with the local fire department, provide exterior labeling, and remove combustible materials within 16 feet (40 Code of Federal Regulations 761.30: "Fire Rule").

Component Type	Pad/Pole Mounted	Location	Owner	PCB Labels	Staining/Leaking
Transformer station	Pad-mounted	Building 35	LADWP	No	No access
Transformer station	Pad-mounted	Building 14	LADWP	Yes – No PCBs	No access
Transformer	Pad-mounted	Exterior, along the east wall of Building 70	LADWP	No	None identified
Transformer	Pad-mounted	Exterior enclosure north of Building 49	LADWP	No	None identified

A hydraulic lift/dock with a five-gallon reservoir was observed in the breezeway of Building 10. The concrete around the reservoir appeared moderately stained and dirty; however, the staining is not expected to represent a significant environmental concern.

Several elevators were observed at the Site. These include:

- One cable traction elevator at Building 5.
- One hydraulic elevator at Stages 12/14.
- One hydraulic elevator at Building 13.
- One hydraulic elevator at Building 16.
- Two cable traction elevators at Building 35.
- One hydraulic elevator at Building 42.
- One hydraulic elevator at Building 48.
- One hydraulic elevator at Building 70.
- One hydraulic elevator at Parking Structure A.
- One hydraulic elevator at Parking Structure B.
- One cable traction elevator at Parking Structure C.
- Three cable traction elevators at the Technicolor Building.

The elevators at the Technicolor Building are serviced by Otis Elevator Company on a quarterly basis. The remaining on-Site elevators are maintained by Liftech Elevator Services, Inc. on a weekly and as-needed basis. All observed elevator equipment appeared to be in good condition; no staining or leaking was observed in the elevator rooms with the exception of the elevator room at Stages 12/14. Minor staining was observed on the concrete floor. However, the staining is not expected to represent a significant environmental concern.

RADIOACTIVE MAN-MADE MATERIALS

Many public and private office buildings in the United States have self-luminescent tritium exit signs that contain radioactive materials. While these do not constitute a recognized environmental condition, the exit signs must be properly identified to ensure proper handling and disposal practices.

WELLS, CISTERNS, SUMPS, AND DRAINS

A vapor extraction system and associated wells were observed at Building 6060. This system is further discussed in Section 5.6. A catch basin was observed south of the Technicolor Building. According to Mr. Herschberger, runoff from the parking lot is collected in the catch basin and pumped to the street. The presence of the catch basin is not expected to represent a significant environmental concern.

Several sumps were observed at the Site. These include:

- Sump in the basement of Building 35. Water collected in the sump is pumped to the sewer.
- Sump in the basement of Stages 12/14. Water collected in the sump is pumped to the sewer.
- Sump in the basement of Building 74. Water collected in the sump is pumped to the sewer.

The presence of sumps is not expected to represent a significant environmental concern.

GREASE INTERCEPTORS

One grease interceptor was observed in the northwest corner of the Site, outside of the vacant restaurant building. According to Mr. Herschberger, the grease interceptor was installed by a former restaurant tenant, who vacated a week after occupying the space. The interior of the building has been cleared of furnishings and finishes. The building is reportedly to be occupied as an office space in the future.

OTHER

A grease container was observed in the loading dock area of the Food and Bounty restaurant structure. According to a representative, the grease is collected and disposed of on a weekly basis by Green Source Renewables. The storage and handling of this material is not expected to represent a significant environmental concern.

4.2 NON-ASTM SERVICES

ASBESTOS CONTAINING MATERIALS

The EPA issued a final rule under Section 6 of Toxic Substances Control Act (TSCA) banning most asbestos-containing building materials (ACBMs) in 1989. The ban on ACBMs was vacated in 1991 allowing some building materials to continue to contain asbestos. The applicability of the EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP, 40 CFR Chapter 61, Subpart M) apply to the owner or operator of a facility where an inspection for the presence of asbestos-containing materials (ACM), including Category I (asbestos containing packings, gaskets, resilient floor coverings and asphalt roofing products), and Category II (all remaining types of non-friable asbestos containing material not included in Category I that when dry, cannot be crumbled, pulverized or reduced to powder by hand pressure), non-friable ACM must occur prior to the commencement of demolition or renovation activities.

Based on the construction date for the Site building, asbestos-containing building materials (ACBMs) were likely used in the construction of the Site buildings. A survey for ACBMs was not requested or conducted as part of this Phase I ESA. Citadel prepared Asbestos Operations and Maintenance (O&M) Programs for the majority of the Site in March 2009; the United Building (at 6050 Sunset Boulevard) in January 2012; and the 1455 Gordon Building in November 2012.

LEAD-BASED PAINTS

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has greater than or equal to one milligram per square centimeter (mg/cm^2) (5,000 microgram per gram (µg/g) or 5,000 parts per million (ppm)) of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm^2 to 2.0 mg/cm^2. The US Consumer Product Safety Commission (16 Code of Federal Regulations CFR 1303)

banned paint containing more than 0.06% lead for residential use in 1978. Buildings built before 1978 are much more likely to have LBP.

Based on the construction date for the Site building, lead-based paints were likely used within the Site buildings. A survey for lead containing materials was not requested or conducted as part of this Phase I ESA. Citadel prepared a Lead O&M Program for the majority of the Site in December 2010; the United Building (at 6050 Sunset Boulevard) in January 2012; and the 1455 Gordon Building in December 2012.

DRINKING WATER

The Site is supplied with municipal drinking water by the LADWP. An assessment of lead in drinking water was not requested or conducted as part of this Phase I ESA.

RADON

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the United States EPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the EPA action level of 4.0 picoCuries per liter (pCi/L).

The Federal EPA Radon Zone for Los Angeles County is Zone 2, which indicates an average indoor concentration greater than or equal to 2.0 pCi/L of air and less than or equal to 4.0 pCi/L. In a survey, 13 tests were performed within the 90028 zip code for the presence of radon. Of these, no tests was found to contain radon in excess of 4.0 pCi/L. Site-specific radon values were not available and were not a part of this ASTM Phase I ESA.

METHANE

In March 2004, Ordinance Number 175790 was adopted into the Los Angeles Municipal Code (Section 91.106.4.1 and Division 71, Chapter IX) to establish citywide methane mitigation requirements, and included updated construction standards to control methane intrusion into buildings. This ordinance established defined geographic areas as Methane Zones and Methane Buffer Zones, which relate to specific assessment and mitigation requirements per area, and set forth a standard of assessment and mitigation in the planning stages of all new construction in these areas.

The Site is not located within the City of Los Angeles Methane or Methane Buffer Zones recognized by the Los Angeles Department of Building Services.

5.0 SITE HISTORY

The purpose of the records review is to obtain and review reasonably ascertainable/standard sources that will help identify recognized environmental conditions in connection with the property. Reasonably ascertainable records from standard sources is (1) information that is publicly available, (2) information that is obtainable from its source within reasonable time and cost constraints, and (3) information that is practically reviewable.

Reasonable time and cost means that the information will be provided by the source within 20 calendar days of receiving a written, telephone, or in-person request at no more than a nominal

cost intended to cover the source's cost of retrieving and duplicating the information. Information that can only be reviewed by a visit to the source is reasonably ascertainable if the visit is permitted by the source within 20 days of request.

To investigate the history of the Site, Citadel reviewed select historic aerial photographs, building permits, city directories, and Sanborn Fire Insurance Maps provided by Environmental Data Resources Inc. (EDR). In addition, Citadel reviewed client-supplied information, and oil and gas maps, and Citadel interviewed selected individuals regarding historic Site use. Citadel's reviews of these reports and interviews are discussed below.

5.1 HISTORICAL AERIAL PHOTOGRAPHS

Historical aerial photographs of the Site and vicinity were obtained from EDR to ascertain historical land uses and to identify any evidence of hazardous material generation or storage. Below are brief descriptions of observations made from the aerial photographs of the Site and vicinity.

Dates(s)	Site Description	Surrounding Area Descriptions
1928	Beachwood Drive appears developed traversing in a north-south trajectory in the center of the Site. The Site appears densely developed with commercial structures in the north/northeast portions of the Site. Properties in the south portion of the Site and along Gordon Street appears developed with primarily single-family residences along with several multi-family residences.	**North:** Adjoining property northeast of the Site appears vacant and undeveloped; Sunset Boulevard appears developed north of the Site with single-family residences beyond **East:** Gordon Street with single-family and multi-family residences beyond; several commercial/industrial structures appear developed along Sunset Boulevard **South:** Fountain Street with single-family and multi-family residences beyond **West:** Gower Street with single-family and multi-family residences, vacant land, and a commercial/industrial structure beyond
1938, 1948	The north portion, and east and south boundaries of the Site appear relatively unchanged. The center-west portion of the Site appears increasingly developed with commercial structures (stages and support buildings).	**North:** Adjoining property northeast of the Site appears developed with an office structure; remaining nearby properties appear relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** A large parking garage appears developed south of the commercial/industrial structure; remaining areas appear relatively unchanged
1952, 1954	The Site continues to increasingly appear commercialized. The southwest portion of the Site now appear as surface parking areas. The remaining areas of the Site appear relatively unchanged.	**North:** Commercial structures appear to have replaced several single-family residences; remaining nearby properties appear relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged

Dates(s)	Site Description	Surrounding Area Descriptions
1964	The south portion of the Site no longer appears residential; it appears developed with the current stages (12 and 14) and surface parking areas. The remaining areas of the Site appear relatively unchanged.	**North:** Additional commercial structures appear to have replaced single-family residences; remaining nearby properties appear relatively unchanged **East:** Relatively unchanged with the exception of the development of a gasoline station along Sunset Boulevard **South:** Relatively unchanged **West:** Relatively unchanged
1977, 1979, 1981	The south portion of the Site appears developed with additional structures (stages and office structures). Beachwood Drive no longer appears as a public street. The remaining areas of the Site appear relatively unchanged. By 1981, additional residences in the south portion of the Site appears to have been demolished to make way for surface parking areas.	**North:** Relatively unchanged **East:** Relatively unchanged; by 1979, the gasoline station appears to have been demolished **South:** Relatively unchanged **West:** Relatively unchanged with the exception of an additional commercial/retail structure along Sunset Boulevard
1989, 1994	An additional structure appears developed in the southwest portion of the Site. Two parking structures appear developed along the east boundary of the Site. The remaining areas of the Site appear relatively unchanged. By 1994, the structures located at APN 5545-013-403 appears to have been demolished; and the parcel appears as a surface parking lot.	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged
2002, 2005	One of the parking structures appear to have expanded to the south. The remaining areas of the Site appear relatively unchanged.	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged
2009, 2010, 2012	Technicolor Building appears developed in the north portion of the Site. The remaining areas of the Site appear relatively unchanged.	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged

Copies of the Aerial Photographs provided by EDR can be found in Appendix C.

5.2 HISTORIC BUILDING PERMITS

EDR provides a listing of building permits for the Site and adjoining properties, if available. In addition, Citadel reviewed building permits with the City of Los Angeles Building Department.

1438 Gower Street

- New building permits issued in 1920 included a carpenter shop, office structure, storage building, and garage.
- Studios were relocated between 1924 and 1926.
- A studio was demolished in 1926.
- New building permits issued in 1926 included a camera vault, film storage, and lumber shed.
- New building permits issued in 1928 included an incinerator and a stage.
- New building permits issued in 1929 included a stage and a two-story recording building.
- An engine room and paint shop was demolished in 1930.
- New building permits issued in 1933 included a temporary two-story office building and shops.
- New building permit issued in 1934 included a two-story electric and paint building.
- New building permits issued in 1935 included a four-story studio scoring building, a four-story dressing room building, a two-story camera and music department structure.
- A scene dock was demolished in 1935.
- New building permits issued in 1936 included a transformer building, a stage, and a four-story office building.
- New building permit issued in 1937 included a loading platform.
- New building permits issued in 1940 included an incinerator, and a two-story shop and dressing room building.
- New building permit issued in 1944 included a vault and cutting room building.
- New building permit issued in 1959 included an underground tunnel for utilities along Beachwood Drive.
- New building permits issued in 1965 included Stages 15 and 16.
- New building permit issued in 1969 included Building 70 for warehouse storage.
- New building permit issued in 1979 included Parking Structure A.
- New building permit issued in 1983 including Parking Structure B.
- The entrance gate arch was built in 1993.
- Certificates of occupancy reviewed included the following:
    - 1936: motion picture laboratory (scoring room and film vault).
    - 1944: three-story film vault and cutting room.
    - 1951: two-story, 12' x 105' addition to existing office building.
    - 1951: two-story, 18' x 26' addition to a five-story building.
    - 1956: two-story, 122 x 125' addition to an existing three-story building, creating a five-story building (Building 35).
    - 1957: one-story, 130' x 260' motion picture stage.
    - 1965: 60' x 100' parking lot.
    - 1966: a 19' x 33' sixth floor addition to an existing 122' x 125' five-story office building.
    - 1966: one-story, 104' x 140' sound stage #15.
    - 1966: one-story, 104' x 140' sound stage #16.
    - 1970: two-story, 90' x 187' warehouse and storage building (Building 70).

1440/1448 Gower Street

- New building permits issued in 1926 included a camera vault and film storage.
- Permits reviewed indicated that the property was occupied by a store from at least 1937 to at least 1953.
- New building permit issued in 1983 included surface parking areas.
- New building permit issued in 1985 included an office shell that was changed to restaurant use.

6060 Sunset Boulevard

- New building permits issued in 1918 and 1919 included a film laboratory, cutting room, dressing room and storage, residence, and workshop.
- New building permits issued in 1921 and 1922 included storage structures.
- New building permits issued in 1926 included generator, projection room, and studio storage.
- New building permit issued in 1937 included camera storage (no film storage).
- New building permits issued in 1940 and 1947 included film vaults.
- Two stages were demolished in 1992.

6040 Sunset Boulevard

- New building permits issued in 1919 and 1920 included a two-story dress room structure, an open stage, and a storage room.
- New building permit issued in 1960 included film storage.
- New building permit issued in 2006 included a six-story office building (Technicolor Building).
- New building permit issued in 2008 included the entrance guard/attendant booth.

1432 Beachwood Drive

- New building permits issued in 1923 and 1925 included shed, office, toilet, offices, and generator building.
- New building permit issued in 1928 included a workshop.
- New building permit issued in 1932 included a film storage.
- Offices and studio storage were demolished in 1965.
- Certificates of occupancy reviewed included the following:
    - 1933: film storage.
    - 1982: one-story, 50' x 135' building converted from a studio to a warehouse.

1445 Beachwood Drive

- New building permits issued in 1920 included a studio and dressing room, and a property room and carpenter shop.
- An application to alter, repair, or demolish permit was issued in 1925 to enclose three steel tanks. Present use of the building at the time was laboratory and stage.
- New building permit issued in 1926 included a carpenter shop.
- New building permits issued in 1930 and 1931 included a film laboratory, a one-story office building, and a film storage vault.
- An application to alter, repair, or demolish permit was issued in 1954 to add a liquid dispensing room in the first floor of a film laboratory.
- A storage building was demolished in 1962.
- New building permit issued in 1962 included a three-story film laboratory.
- Certificates of occupancy reviewed included the following:
    - 1954: a 4'6" x 11' dangerous chemicals dispensing room constructed within a two-story 54' x 60' film laboratory. Chemicals are described as Group F-1 Flammable Liquids) with a maximum of 98 gallons.
    - 1963: three-story, 20' x 75' film laboratory.

1443 Gordon Street

- New building permit issued in 1922 included a double bungalow.
- A duplex was demolished in 1965.

- New building permits issued in 1987 included a stage and support rooms, and a parking structure.
- A new parking structure was constructed in 2006 to join two existing parking structures.
- An addition parking structure was completed in 2016.

1455 Gordon Street

- New building permits issued in 1931 included a sound research and scoring building.
- Permits reviewed indicated that a print shop operated at the property between 1948 and 1957.

A copy of the EDR Building Permit Report is included as Appendix D.

5.3 HISTORICAL FIRE INSURANCE MAPS

Citadel requested that EDR review its collection of Sanborn Fire Insurance Maps for potential coverage of the Site and vicinity. Below are brief descriptions of observations made from the Sanborn Maps of the Site and vicinity.

1919 Sanborn Map

Sunset Boulevard, Gordon Street, Fountain Avenue, and Gower Street are depicted north, east, south, and west of the Site, respectively. Beachwood Drive is depicted traversing in a north-south trajectory in the center of the Site.

APN 5545-013-401

An oil and gasoline station is depicted in the northwest corner of the Site with the address 6094 Sunset Boulevard. According to the reviewed building permits and aerial photographs, the station was developed in 1919 and removed by 1928.

APNs 5545-013-043, 5545-013-051, 5545-013-056, and 5545-013-055

The southwest corner of Sunset Boulevard and Beachwood Drive is shown with two large structures occupied as a film laboratory (at 6044 Sunset Boulevard) and a studio with an office and open stage (at 6038 Sunset Boulevard); and several small structures occupied as an office, film vault, carpenter shop, and storage.

APN 5545-013-403

The southeast corner of Sunset Boulevard and Beachwood Drive is shown as occupied by the Francis Ford Studio with one stage building (which includes a cutting room) (at 6024 Sunset Boulevard); an office and dress room building (at 6016 Sunset Boulevard); film vault; and carpenter shop.

APNs 5545-013-404, 5545-013-057, 5545-013-058, and 5545-013-059

The center and south portions of the Site are generally depicted with dwellings with the exception of the center-east portion of the Site where Bulls-Eye Film Corporation (1329-1343 Gordon Street) is depicted along Gordon Street. This property is depicted with 12 structures including two open stages; two scene docks; two dressing rooms; property rooms; laboratory, dressing rooms, projecting room, and office; and film vault.

Nearby Properties

The adjoining property northeast of the Site is depicted as vacant. Properties north and south of the Site are not shown on this map. Properties east of Gordon Street are depicted as moderately developed with dwellings with the property located along Sunset Boulevard occupied by the City of Los Angeles Engineering Department as storage yard. Properties west of Gower Street include offices; restaurants; sewing and wardrobe rooms; an open stage; structure occupied by the Southern California Telephone Co. Exchange; and apartments.

1950, 1955, 1957, 1960, 1961, and 1962 Sanborn Maps

APN 5545-013-401

The oil and gasoline station is no longer depicted in the northwest corner of the Site. It is now shown as occupied by a one-story two-tenant store building. A restaurant is shown east of the store building. Building 35 is depicted south of these two buildings and shown as occupied as offices and projection room.

APN 5545-013-043

Several structures are depicted on this parcel as occupied as offices; washing and drying; film vaults; printing room; and developing room. By 1957, the larger structure with printing rooms replaced several vaults.

APN 5545-013-051

A structure is depicted on this parcel as occupied as a sound stage, studio, office, projection room, and carpenter shop.

APNs 5545-013-056 and 5545-013-055

This parcel is shown with several film vaults.

APN 5545-013-403

This parcel is shown as occupied by Columbia Pictures Corporation; and includes two sound stages, storage structures, scene dock; and offices.

APN 5545-013-002

The parcel is occupied by a structure with offices, projection room, and bindery.

APNs 5545-013-404 and 5545-013-057

These parcels are shown as primarily occupied by Columbia Pictures Corporation. The northeast portion of the parcel is occupied by the existing Stages 1, 2, and 5; and the existing office structures (Building 1, 2, 5, 17, and 34). The existing Building 16 is depicted as occupied as a film laboratory with a cutting room and developing tanks. Building 15 appears developed; it is unclear how the structure was occupied. The location of Building 19 is depicted with film vaults. The existing Building 62 is depicted as occupied as offices and dressing rooms; and the existing restaurant (Food and Bounty) is depicted as occupied as a mill with lumber storage.

The southwest portion of the parcels is occupied by the existing Stages 3, 4, 8, and 9; and the existing Building 13. The existing Building 22 is depicted as occupied as camera storage; and the existing Building 9 is depicted as occupied as stock rooms. The existing Buildings 14, 20, and 21 are depicted as occupied as electric and maintenance use; sign and scene painting; and time office.

The northeast portion of the parcels is primarily occupied by dwellings along Gordon Street and by the existing Stage 7. Structures north of Stage 7 include prop storage and warehouses; offices; art laboratory and blue print room; music department; film cutting rooms; and a machine shop.

The southeast portion of the parcels is primarily occupied by dwellings, apartments, general storage areas, a movie studio structure, and a surface parking area. By 1957, the movie studio structure is depicted as an apartment and several apartments in the southeast boundary of the parcel are depicted as offices.

APN 5545-013-058 and 5545-013-059

These parcels are shown as primarily occupied by dwellings, apartments, and surfacing parking areas. In addition, an automobile repair area with pumps for two gasoline tanks are depicted just east of the existing Stage 14. An oil storage area is shown along the north boundary of the parcels, just west of Beachwood Drive driveway. By 1957, the west portion of the parcel is depicted with three stages in the location of the existing Stages 12 and 14. The previously identified auto repair shop structures is now depicted as located closer to Beachwood Drive. The gasoline tanks are no longer shown. By 1966, the existing Stages 15 and 16 is shown on the map. By 1970, the existing Building 70 is shown as occupied for commercial use.

Nearby Properties

The adjoining property to the northeast is occupied by an office building. Properties north and south of the Site are not shown on this map. Properties east of Gordon Street are depicted as densely developed with dwellings, apartments, and auto repair shops. By 1962, the auto repair shops are no longer shown; they are replaced by a gasoline and oil station.

Properties west of Gower Street include stores; a restaurant; a structure occupied by the Southern California Telephone Co. Exchange with a private garage; and apartments.

A copy of the EDR Sanborn Map Report is included as Appendix E.

5.4 CITY PARCEL PROFILE REPORT

Citadel reviewed the on-line parcel profile report from the City of Los Angeles interactive database, NavigateLA. Alias addresses identified for the Site include:

- 1432 North Beachwood Drive
- 1445 North Beachwood Drive
- 1455 North Beachwood Drive
- 1443 North Gordon Street
- 1438 North Gower Street
- 1448 North Gower Street
- 6040 Sunset Boulevard
- 6065 West Fountain Avenue

5.5 HISTORICAL CITY DIRECTORIES

City directories were researched by EDR in order to identify previous Site tenants and/or neighboring properties with a potential for hazardous materials generation and/or storage. EDR researched city directory listings from 1920 through 2014 (non-inclusive) and provided their search results to Citadel for review. The following table summarizes information provided by the city directory search.

Dates(s)	Occupant Listed
1432 NORTH BEACHWOOD DRIVE	
1976	Album Artesa Company, Mark Roberts Company
2000	Wealth Code
1443 NORTH GORDON STREET	
1951, 1958	Residences
1438 NORTH GOWER STREET	
1924	Monty Banks Comedies, Chester Productions, Inc.
1929	Columbia Pictures Corporation
1933	Columbia Pictures Corporation, Meteor Productions
1937, 1942	Columbia Pictures Corporation
1967	Jim Flood, Jackson Perry Company
1971	Columbia Pictures Corporation, Curry Vem Enterprises Inc., Jackson Perry Company, Jaguar Pictures Company, Producer Photographic Lab Inc.
1976	Aman Folk Ensemble, Barr Bette PR & Advertising, California Dance Movement, Kiel Enterprises Inc.

5.6 CLIENT-SUPPLIED ENVIRONMENTAL INFORMATION

Citadel reviewed the Phase II Subsurface Investigation Report, Sunset Gower Studios, 1438 North Gower Street, Hollywood, California 90028, prepared by ATC Associates Inc., dated July 20, 2004.

ATC Associates Inc. (ATC) performed a Phase II Subsurface Investigation at the Site in July 2004. The objective of the investigation was to evaluate the recognized environmental conditions (RECs) identified by a Phase I ESA completed by ATC, dated May 11, 1997. Citadel was not provided with the 1997 Phase I ESA Report. The following RECs were identified:

- Gasoline station, located at the southeast corner of Gower Street and Sunset Boulevard.
- Machine shop and paint spray booth, located in the northeast portion of the Site.
- Auto repair area and gasoline pumps.
- Auto repair and oil storage area.

A geophysical survey was completed at each of the proposed areas of exploration to evaluate the possible presence of buried utilities and possible abandoned in place USTs associated with the former gasoline station and gasoline pumps, and oil storage tanks associated with the auto repair areas. The geophysical survey consisted of an electromagnetic induction (EM) and ground penetrating radar (GPR) survey. No large metallic objects, which would be indicative of buried USTs or septic tanks, were detected in any of the areas surveyed.

A total of 15 soil borings were completed at the Site and three soil samples were retained from each boring for laboratory analytical analysis. No groundwater was encountered at a depth of 26 feet bgs. Soil samples were collected at depths of five, 10, 15, 20, and 25 feet bgs in all boring with the exception of two borings that were only samples to a maximum depth of 21 feet bgs. Odorous soils were encountered in the three borings from the area located in the northeast portion of the Site. Soil samples collected from the former gasoline station area were analyzed for total petroleum hydrocarbon (TPH) in the gasoline range. Soil samples collected in the northeast portion of the Site were analyzed for volatile organic compounds (VOCs), TPH, and metals. One sample was also analyzed for chromium VI (hexavalent chrome). Soil samples collected from the former auto repair areas were analyzed for TPH and benzene, toluene, ethylbenzene, and xylenes (BTEX).

TPH, BTEX, and VOCs were not detected in any of the soil samples. Arsenic was detected in three of the soil samples, exceeding its EPA Preliminary Remediation Goals (PRGs) of 0.39 milligram per kilogram (mg/kg) for residential soil. However, according to ATC, these detections were between the background concentration range of arsenic in California (0.59

to 11 mg/kg). The metal concentrations in the samples analyzed did not exceed the Total Threshold Limit Concentration (TTLC), and would not be classified as a California hazardous waste. No figures or laboratory data were included in the report.

Citadel reviewed the *Phase I Environmental Site Assessment, 6060 West Sunset Boulevard, Los Angeles, California 90028*, prepared by EMG, dated April 2, 2010.

EMG performed a Phase I ESA at 6060 Sunset Boulevard in March/April 2010. According to EMG, the property was originally constructed in 1918 through 1957, and was occupied as a commercial office facility at the time of the assessment. Prior to the current use, the property was occupied as a film developing studio from 1918 until 2005. EMG identified this as a REC. Various chemicals, including solvents, were used and stored during that time. A subsurface soil and soil vapor assessment conducted in 2006 showed elevated levels of VOCs in soils at the property. Soil vapor extraction (SVE) was conducted for a year in 2008; however, VOCs remained above human health screening levels in one area. An Indoor Air Quality (IAQ) assessment for VOCs was conducted in 2009 to establish a baseline for the building. While select VOCs were detected, the total VOC concentrations were below Permissible Exposure Limits (PELs) established by Cal-OSHA and the recommended American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Values (TLVs). It was concluded that the levels of tetrachloroethylene (PCE) detected would not likely cause irritation and discomfort to the building occupants, and did not present any indoor air quality concerns at the time. EMG recommended that periodic IAQ monitoring continue until contamination levels are below action levels.

Citadel reviewed the *Phase I Environmental Site Assessment Report and Limited Asbestos and Lead Paint Surveys, 6050 Sunset Boulevard, Los Angeles, California 90028*, prepared by Citadel, dated December 12, 2011.

Citadel performed a Phase I ESA at the property in December 2011. At the time of the assessment, the property was occupied by a recording studio and offices. Previous occupancy uses have consisted of businesses related to the film and music industry, including the use as a stage for television and for voice recordings. The assessment revealed no evidence of RECs in connection with the property.

Citadel reviewed the *Phase I Environmental Site Assessment Report, 1455 Beachwood Drive, Los Angeles, California 90028*, prepared by Citadel, dated December 16, 2011.

Citadel performed a Phase I ESA at the property in December 2011. At the time of the assessment, the property was vacant and unoccupied. Prior to the current structure, previous smaller structures were on-Site and used as storage vaults for film. Since 1963, occupancy uses appeared to have been primarily related to the storage of film and other items supporting the film industry, and offices supporting the film and music industry. The assessment revealed no evidence of RECs in connection with the property.

Citadel reviewed the *Phase I Environmental Site Assessment Report, 1455 Gordon Street, Los Angeles, California 90028*, prepared by Citadel, dated September 18, 2012.

Citadel performed a Phase I ESA at the property in September 2012. At the time of the assessment, the property was occupied as a business office by Emerson College. Historical records reviewed indicate that the property was largely vacant and unoccupied prior to 1931. The current building was constructed for use as a sound studio and appeared to have historically been used for sound studio, bindery, dance studio, photography studio,

and offices. The assessment revealed no evidence of RECs in connection with the property.

Citadel reviewed the *Soil Vapor Extraction System Evaluation and Supplemental Soil Vapor Investigation Report, 6060 Sunset Boulevard, Hollywood, California 90028*, prepared by Citadel, dated August 22, 2017.

Citadel provided a report of a SVE system evaluation and a supplemental soil vapor investigation in August 2017. On August 4, 2016, Citadel collected samples in preparation for a rebound test. The SVE system had been running continuously since February 2015 to at least June 2016. Upon completion of sampling, the SVE system was shut down for the rebound period of approximately three weeks. The results from the sampling reported a maximum PCE concentration of 1,520 micrograms per cubic meter (µg/m^3) at vapor extraction well VE1. This concentration is below the San Francisco Regional Water Quality Control Boards (SFRWQCB) Environmental Screening Levels (ESLs) as a Human Health Risk and the Office of Environmental Health Hazard Assessment's (OEHHA) California Human Health Screening Level (CHHSL) of 2,100 µg/m^3 and 1,600 µg/m^3 (structures with engineered fill), respectively. The current CHHSL, as of 2010, for sites with a non-engineered fill base is 600 µg/m^3.

The system was restarted and samples were collected on August 26, 2016. Additional samples were collected during weekly visits on September 1, 9, and 16, 2016, and monthly samples were collected on October 21 and December 27, 2016. Samples were collected from wells VE1, VE2, VE4 through VE6, system influent, and system effluent. Wells VE1, VE2, VE5 and VE6 were closed on January 12, 2017, leaving only VE4 being utilized by the SVE system. Vapor samples from VE4 were collected on January 20, and March 20, 2017.

On March 20, 2017, in addition to vapor sampling activities at VE4, two soil vapor probes were installed in the northern portion of the site. SV9 was installed at a depth of five feet bgs in the crawl space, and SV10 was installed at an angle of 45 degrees at a depth of four feet bgs below the ramp.

SVE system influent concentrations peaked at 2,090 µg/m^3 on September 1, 2016 and then declined to below the method detection limit (MDL) of 500 µg/m^3 on December 27, 2016. Due to the non-detect levels reported in each of the wells with the exception of VE4, VEs 1, 2, 5 and 6 were closed on January 12, 2017, allowing the SVE system to maximize extraction from VE4. No VOCs were detected in the sample collected from VE4 during the SVE sampling event on March 20, 2017. PCE and TCE were detected below the ESLs and CHHSLs in the two soil vapor probe samples collected from the northern portion of the site on March 20, 2017.

Citadel concluded that soil vapor extraction activities at the Site have resulted in 140.07 lbs. of PCE vapors to have been removed from the subsurface since 2008. A rebound test was conducted to determine if additional mass can be removed by SVE. Based on the very low mass removal rate that ranged from 0.002 to 0.014 lbs./day since the rebound test started on August 26, 2016, and asymptotic levels of total mass removed, Citadel recommended that SVE activities be discontinued.

Citadel further recommended entering into a Voluntary Cleanup Program such as with the Los Angeles County Fire Department – Site Mitigation Unit for the purpose of obtaining environmental case closure.

A copy of the reviewed report can be found in Appendix G.

5.7 HISTORICAL TOPOGRAPHIC MAPS

Historical topographic maps were provided by EDR in order to identify natural features and changes in development over a long period of time. The topographic maps provides the user with a regional view of changes to the Site and vicinity that other historical databases such as aerial photographs may not provide. Below are brief descriptions of observations made from the topographic maps of the Site and vicinity.

Dates(s)	Site Description	Surrounding Area Descriptions
1894, 1896, 1898, 1900, 1902	Two small structures, likely residences, appear developed at the Site along the north and west boundaries of the Site	**North:** Sunset Boulevard, with two small structures, likely residences, beyond **East:** Undeveloped land **South:** Undeveloped land **West:** Gower Street, with undeveloped land beyond; small structures, likely residences, appear developed further west
1920, 1921	Beachwood Drive appears partially developed in the south portion of the Site; structures appear densely developed along the streets within the Site	**North:** Properties beyond Sunset Boulevard appear densely developed **East:** Properties beyond Gordon Street appear densely developed **South:** Properties beyond Fountain Avenue appear densely developed **West:** Properties beyond Gower appear sparsely developed
1924, 1926	Beachwood Drive appears developed as a street traversing through the Site. The Site appears developed with large structures in the north and northwest portions of the Site. The remaining portions of the Site appear developed with small structures.	**North:** Moderately developed with small structures **East:** Moderately to densely developed with small structures **South:** Moderately to densely developed with small structures **West:** Moderately to densely developed with small structures and several large structures along Sunset Boulevard
1953,	Shading indicative of urban development. The Site appears developed with a large structure in the west portion of the Site and occupied by Columbia Pictures Studio.	**North:** Shading indicative of urban development **East:** Shading indicative of urban development **South:** Shading indicative of urban development **West:** Shading indicative of urban development
1966, 1972, 1981, 1991,	Shading indicative of urban development. Beachwood Drive no longer appears on the map. Additional structures appear developed on the east portion of the Site.	**North:** Shading indicative of urban development **East:** Shading indicative of urban development **South:** Shading indicative of urban development **West:** Shading indicative of urban development
2012	Structures are not depicted on this map	Structures are not depicted on this map

Copies of the historical topographic maps provided by EDR are included as Appendix H.

5.8 HISTORIC OIL AND GAS MAPS

Citadel reviewed information available on-line through the California Department of Conservation's website. The Division of Oil, Gas & Geothermal Resources (DOGGR) Online Mapping System (DOMS) shows that there is an oil well approximately 960 feet west of the Site. The oil well is identified by API 03720765. According to DOMS, the well operator for the well is listed as Chevron USA Inc. and the status for the well is inactive and plugged. The well was drilled to a depth of 4,615 feet in April 1969, and was abandoned by March 1970.

5.9 INTERVIEWS

Citadel interviewed Mr. Ron Herschberger during the Site reconnaissance. With the exception of the SVE system at the 6060 Building, Mr. Ron Herschberger was not aware of any historic or current environmental concerns or hazards at the Site. Citadel also submitted a User Questionnaire to Hudson Pacific Properties. The completed User Questionnaire can be found in Appendix I.

A copy of Citadel's User Questionnaire can be found in Appendix I.

5.10 ENVIRONMENTAL LIEN

Citadel contracted with EDR to perform an Environmental Lien Search for the Site. The Environmental Lien Search report reviewed did not identify any current environmental liens or other activity and use limitations (AUL) for the Site. Four deeds were included in the report:

- A deed, dated September 20, 2012, for APN 5545-013-002, granted the title from John Vonk and Rayne Vonk, Trustees of the Rayna Vonk Trust to SGS Ancillary Parcels LLC;
- A deed, dated May 24, 2010, for APN 5545-013-043, granted the title from SGS Realty II LLC to SGS Holdings LLC;
- A deed, dated August 14, 2013, for APNs 5545-013-051, 5545-013-055, and 5545-013-056, granted the title from Hudson 6050 Sunset LLC to Sunset Gower Entertainment Properties LLC; and
- A deed, dated February 11, 2011, for APNs 5545-013-057, 5545-013-058, 5545-013-059, 5545-013-401, and 5545-013-404, granted the title from Donald T. Chadwick and Britt-Marie Chadwick, Trustees, to Sunset Gower Entertainment Properties LLC.

A copy of the environmental lien and AUL search can be found in Appendix J.

5.11 SUMMARY OF SITE HISTORY

A review of historical sources showed that the Site was developed with two small structures, likely residences, as early as 1894. By 1919, a film laboratory; a studio with an office, an open stage, and several small support structures; and an open stage with offices and dressing rooms appeared developed in the north portion of the Site along Sunset Boulevard. An oil and gasoline station also appeared developed in the northwest corner of the Site. The south portion of the center and south portions of the Site appeared generally developed with single-family residences. Additional stages and support structures appeared developed in the center-east portion of the Site along Gordon Street. By 1928, the Site appeared densely developed with commercial structures in the north/northeast portions of the Site and with primarily single-family residences along with several multi-family residences in the south portion of the Site. Stages 1 and 2 and the nearby support buildings to the north of the Stages appeared developed similar to its current configuration with the exception of the current restaurant structure located in the northwest corner of the Site and

the smaller structures near the 6060 Building. Stage 7 and several of the nearby support buildings (Buildings 7, 43, 48, 49, and 50) also appeared developed similar to its current configuration. Stages also appeared developed in the northeast corner of the Site. By 1938, Stages 8 and 9 also appear developed similar to its current configuration.

By 1950, the Site appeared developed with auto repairs shops with pumps for two gasoline tanks in the southwest portion of the Site. The southeast portion of the Site and properties along Gordon Street remained as residences and the remaining areas of the Site appeared relatively unchanged. By 1957, Stages 12 and 14 appeared developed in the southwest corner of the Site; and the auto repair shops appeared to have been relocated closer to Beachwood Drive. The gasoline tanks were no longer depicted. Stages 15 and 16 appeared developed by 1966; and Building 70 appears developed by 1970. Parking Structure A and B (separate structures) appeared developed in 1979 and 1983, respectively. The structure in the northwest corner of the Site was developed in 1985. The Technicolor Building was constructed in 2006. A small parking structure was also built in 2006 to connect Parking Structures A and B. The structure was extended in 2016 with the development of Parking Structure C.

Citadel reviewed several environmental documents:

- ATC performed a Phase II Subsurface Investigation at the Site in July 2004. The objective of the investigation was to evaluate the RECs identified by a Phase I ESA completed by ATC, dated May 11, 1997. Citadel was not provided with the 1997 Phase I ESA Report. The following RECs were identified:
  - Gasoline station, located at the southeast corner of Gower Street and Sunset Boulevard.
  - Machine shop and paint spray booth, located in the northeast portion of the Site.
  - Auto repair area and gasoline pumps.
  - Auto repair and oil storage area.

  A geophysical survey was completed at each of the proposed areas of exploration to evaluate the possible presence of buried utilities and possible abandoned in place USTs associated with the former gasoline station and gasoline pumps, and oil storage tanks associated with the auto repair areas. The geophysical survey consisted of an EM and GPR survey. No large metallic objects, which would be indicative of buried USTs or septic tanks, were detected in any of the areas surveyed.

  A total of 15 soil borings were completed at the Site and three soil samples were retained from each boring for laboratory analytical analysis. No groundwater was encountered at a depth of 26 feet bgs. Soil samples were collected at depths of five, 10, 15, 20, and 25 feet bgs in all boring with the exception of two borings that were only samples to a maximum depth of 21 feet bgs. TPH, BTEX, and VOCs were not detected in any of the soil samples. Arsenic was detected in three of the soil samples, exceeding its EPA PRGs of 0.39 mg/kg for residential soil. However, according to ATC, these detections were between the background concentration range of arsenic in California (0.59 to 11 mg/kg). The metal concentrations in the samples analyzed did not exceed the TTLC, and would not be classified as a California hazardous waste. No figures or laboratory data were included in the report.

- EMG performed a Phase I ESA at 6060 Sunset in March/April 2010. According to EMG, the property was originally constructed in 1918 through 1957, and was occupied as a commercial office facility at the time of the assessment. Prior to the current use, the property was occupied as a film developing studio from 1918 until 2005. EMG identified this

as a REC. Various chemicals, including solvents, were used and stored during that time. A subsurface soil and soil vapor assessment conducted in 2006 showed elevated levels of VOCs in soils at the property. Soil vapor extraction (SVE) was conducted for a year in 2008; however, VOCs remained above human health screening levels in one area. IAQ assessment for VOCs was conducted in 2009 to establish a baseline for the building. While select VOCs were detected, the total VOC concentrations were below PELs established by Cal-OSHA and the recommended ACGIH TLVs. It was concluded that the levels of PCE detected would not likely cause irritation and discomfort to the building occupants, and did not present any indoor air quality concerns at the time. EMG recommended that periodic IAQ monitoring continue until contamination levels are below action levels.

- Citadel performed a Phase I ESA at 6050 Sunset Boulevard in December 2011. At the time of the assessment, the property was occupied by a recording studio and offices. Previous occupancy uses have consisted of businesses related to the film and music industry, including the use as a stage for television and for voice recordings. The assessment revealed no evidence of RECs in connection with the property.

- Citadel performed a Phase I ESA at 1455 Beachwood Drive in December 2011. At the time of the assessment, the property was vacant and unoccupied. Prior to the current structure, previous smaller structures were on-Site and used as storage vaults for film. Since 1963, occupancy uses appeared to have been primarily related to the storage of film and other items supporting the film industry, and offices supporting the film and music industry. The assessment revealed no evidence of RECs in connection with the property.

- Citadel performed a Phase I ESA at 1455 Gordon Street in September 2012. At the time of the assessment, the property was occupied as a business office by Emerson College. Historical records reviewed indicate that the property was largely vacant and unoccupied prior to 1931. The current building was constructed for use as a sound studio and appeared to have historically been used for sound studio, bindery, dance studio, photography studio, and offices. The assessment revealed no evidence of RECs in connection with the property.

- Citadel provided a report of a SVE system evaluation and a supplemental soil vapor investigation in August 2017. Citadel concluded that soil vapor extraction activities at the Site have resulted in 140.07 lbs. of PCE vapors to have been removed from the subsurface since 2008. A rebound test was conducted to determine if additional mass can be removed by SVE. Based on the very low mass removal rate that ranged from 0.002 to 0.014 lbs./day since the rebound test started on August 26, 2016, and asymptotic levels of total mass removed, Citadel recommended that SVE activities be discontinued. Citadel further recommended entering into a Voluntary Cleanup Program such as with the Los Angeles County Fire Department – Site Mitigation Unit for the purpose of obtaining environmental case closure.

6.0 REGULATORY AGENCY REVIEW

6.1 DATABASE REVIEW

As part of the Phase I ESA, Citadel utilized EDR of Milford, Connecticut, as an information source for regulatory agency database records.

The following summary of the database information is divided into five columns. The first column identifies the environmental database researched; the second column indicates the distance from the Site that was used for the research; the third column indicates if the Site was identified in the specified database; the fourth column lists the number of listings identified on the database within the specified distance of the Site; and the fifth column indicates if the sites identified are potential environmental concerns to the Site.

Although locations of the orphan sites are frequently unknown, Citadel attempts to evaluate the potential adverse environmental impact that these facilities may have on the Site. This evaluation consists of reviewing street names in an effort to learn whether the street on which the Site is located lies within the search distance of the subject property, a drive-by view of surrounding properties during the Site visit, and evaluating the Site type and information provided by government agencies. The orphan sites included in the following table are those Citadel identified as potentially located within the identified search distance.

Database	Radius	Site Identified	No. of Listings Identified	Potential Environmental Concern to the Site
National Priorities List	1 mile	No	0	
RCRA Corrective Action Treatment/Storage/Disposal (TSD) Facilities (CORRACTS)	1 mile	No	0	
Delisted National Priorities List	1 mile	No	0	
CERCLIS Sites	½ mile	No	0	
CERCLIS No Further Remedial Action Planned (NFRAP) Sites	½ mile	No	0	
RCRA Non-Corrective Action TSD Facilities	½ mile	No	0	
State/Tribal Voluntary Cleanup Sites	½ mile	No	1	No
State/Tribal Leaking Registered Storage Tank Sites	½ mile	No	24	No
State/Tribal Brownfield Sites/CERCLIS Equivalent	1 mile	No	25	No
Historic CORTESE List	½ mile	No	14	No
State/Tribal Solid Waste Landfill Sites/Facilities	½ mile	No	0	
Federal/State/Tribal Engineering Controls Registries	½ mile	No	0	
Federal/State/Tribal Institutional Controls Registries	½ mile	No	0	
RCRA Large Quantity Generators	¼ mile	No	5	No
RCRA Small Quantity Generators	¼ mile	Yes	12	See discussion below
RCRA Non Generators	¼ mile	Yes	3	
State/Tribal Registered Storage Tank Sites	¼ mile	No	8	No
HIST UST	¼ mile	No	11	No
CA FID UST	¼ mile	No	10	No

Database	Radius	Site Identified	No. of Listings Identified	Potential Environmental Concern to the Site
SWEEPS UST	¼ mile	No	10	No
Facility Index System (FINDS)	Site	Yes	1	See discussion below
HAZNET	Site	Yes	49	See discussion below
Orphan	N/A	No	3	No

A brief discussion of select facilities and their database listings are included following the table. The full report provided by EDR and reviewed by Citadel can be found in Appendix K.

Site Name	SGS Studios for various productions
Database(s)	HAZNET
Address	1438 North Gower Street
Distance/Direction	Target Property
Comments	The Site was identified on the HAZNET database for the following facilities/productions for the following years: ➢ Minim Productions Inc.: 2016 ➢ Six Feet Under: 2000 to 2005 ➢ Nocturnal Animals: 2015 ➢ Touchstone TV Productions/Disney: 2003 to 2006 ➢ ABC Studios "How to Get Away with Murder": 2015 and 2016 ➢ First Monday: 2001 and 2002 ➢ Big Ticket Production: 1998 to 2001, and 2013 ➢ I Didn't Do It: 2014 ➢ "17": 2008 ➢ NBC Studios Inc.: 2002 and 2003 ➢ Avery Pix Inc./Blade II: 2001 ➢ FTP Productions LLC – In The Motherhood: 2009 ➢ NBC Universal TV: 1998, 2006 to 2011 ➢ Studios USA Television – This Life: 2001 ➢ FTP Productions LLC – Scandal: 2012 to 2016 ➢ News Room: 2013, 2014 ➢ The Parkers: 2003 and 2004 ➢ NBC Studios: 2002, 2004, 2005 ➢ Videosyncrasy: 2014 and 2015 ➢ Blind Decker Productions: 2006, 2008 to 2010 ➢ National Broadcasting Company: 1999 to 2000 ➢ Tatira 2 LLC: 2014 ➢ It's a Laugh Productions Inc. – Pair of Kings: 2011 and 2016 ➢ More as the Storm Develops: 2011, 2012 ➢ Picrow Streaming: 2016 ➢ High Crimes Productions Inc.: 2001 ➢ NBC Universal: 2010 ➢ FTP Productions LLC: 2011 ➢ Bunheads Show – Prodco: 2012 ➢ Moot Point Secret, Inc.: 2015 ➢ The Ugly Truth Lakeshore Entertainment: 2008 These wastes generally include unspecified solvent mixture, latex waste, other organic solids, unspecified organic liquid mixture, oxygenated solvents, unspecified

	aqueous solution, unspecified aqueous solution, other organic solids, aqueous solutions, paint sludge, hydrocarbon solvents, and liquids with halogenated solvents.

Site Name	Sunset Gower Studios NBC Universal TV
Database(s)	RCRA NonGen/NLR
Address	1438 North Gower Street
Distance/Direction	Target Property
Comments	The Site was identified as a RCRA Non Generator in 2008. NBC Universal TV was identified as a RCRA Small Quantity Generator (SQG) in 2006 for generating ignitable waste, barium, cadmium, chromium, lead, methyl ethyl ketone, and spent nonhalogenated solvents. No violations were reported.

Site Name	Sunset Gower Studios
Database(s)	RCRA-SQG, HAZNET
Address	1438 North Gower Street
Distance/Direction	Target Property
Comments	The Site was identified as a RCRA SQG in 2007 for generating ignitable waste, and spent halogenated and nonhalogenated solvents. No violations were reported. The Site was also identified on the HAZNET database for generating oil/water separation sludge in 2006; and asbestos containing waste in 2006, 2014, and 2015.

Site Name	Hollywood Film and Video, SGS Realty II LLC
Database(s)	FINDS, ECHO, HAZNET, RCRA-SQG
Address	6060 Sunset Boulevard
Distance/Direction	Target Property
Comments	The Site was identified on the Facility Index System/Facility Registry System (FINDS) and Enforcement and Compliance History Information (ECHO) databases. FINDS contains facility information and "pointers" to other sources that contain more detail and ECHO provides integrated compliance and enforcement information. The Site was identified on this database due to being identified as a hazardous waste generator. SGS Realty II LLC was identified as a RCRA SQG in 2009 for generating ignitable waste, corrosive waste, spent halogenated solvents, and spent nonhalogenated solvents. No violations were reported. The Site was also identified on the HAZNET database for generating photochemicals/photoprocessing waste between 1993 and 1995; other inorganic solid waste between 1995 and 1997, and in 2008; metal sludge between 1996 and 1998; other inorganic solids in 1998 and 2008; off-specification, aged or surplus organics in 1999 and 2008; liquids with halogenated organic compounds between 2000 and 2003; laboratory waste chemicals, and unspecified aqueous solution in 2008; and asbestos-containing waste in 2008 and 2009. The use of these materials likely contributed to contamination at the Site. This is currently being addressed by the SVE system.

Site Name	East West Communications, Cello Studio
Database(s)	HAZNET
Address	6000 West Sunset Boulevard

Distance/Direction	Adjoining Property – northeast of Site
Comments	The property was identified on the HAZNET database for generating asbestos-containing waste in 1999, 2003, and 2007.

Maps showing the location of these facilities and additional information are provided in the Government Records Report in Appendix K.

6.2 VAPOR ENCROACHMENT CONDITION

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a VEC, which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Tier 1 screening begins with the default area of concern (AOC) defined by the approximate minimum search distances adjusted as appropriate for local conditions, and then determining if known or suspected contaminated properties with contaminants of concern (COCs) exist within the established AOC. The default AOC is one third of a mile around the TP for COCs and one-tenth of a mile for petroleum hydrocarbon COCs. The AOC is measured from the TP boundary to a contaminated property with known or suspected COC contamination of soil or groundwater or both. The default AOC may be expanded or reduced by the environmental professional (adjusted AOC) using experience and professional judgment, based on factors like groundwater flow direction, subsurface characteristics, surficial features and man-made features.

If groundwater flow direction is known or can be inferred from the Phase I ESA investigation of the TP, the default AOC in the down-gradient direction may be reduced to the area within the critical distance of 100 feet. The AOC in the cross-gradient direction may also be reduced, depending upon the critical distance and the width of the COC-contaminated plume associated with a known or likely COC-contaminated property located in a cross-gradient direction from the TP. The critical distance is the lineal distance in any direction between the nearest edge of the contaminated plume and the nearest TP boundary, and is equal to 100 feet for COCs or 30 feet for dissolved petroleum hydrocarbon COCs.

For a COC-contaminated property identified in Tier 1 located down-gradient from the TP, it is not necessary to have information on migrating groundwater contaminated plume dimensions as the critical distance is measured from the nearest TP boundary to the source of contamination at the off-site down-gradient property. In this case, the AOC may be reduced to the area within the critical distance.

For a contaminated property identified in Tier 1 located crossgradient from the TP, the AOC will be the area within the critical distance plus one half of a reasonable estimation of the contaminated plume width (at the point nearest the closest TP boundary) that might be associated with the nearby known or suspected COC-contaminated property (that is, the COC-contaminated property where the groundwater contamination originated). The environmental professional's judgment and experience can be used to estimate the width of the COC-

contaminated plume that might be associated with the nearby known or suspected COC-contaminated property. If it is not possible to estimate the contaminated plume width, then the AOC cannot be reduced in the cross-gradient direction.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a leaking underground storage tank (LUST) occurred within 0.25-mile and upgradient of the Site. KTLA Broadcasting, located at Athens Mt. Wilson Road, is listed as a LUST site. According to EDR, the property is approximately 685 feet northeast of the Site and the diesel leak was discovered in January 1991. The leak was limited to soil only. The case was completed and closed by the Los Angeles Regional Water Quality Control Board (LARWQCB) on November 7, 1991.

EDR also provided the following listings on the Historical Gas Station and Dry Cleaners databases as within 0.125-mile of the Site.

Historical Gas Stations	
Site Name	Joseph Reindl
Address	6009 South Sunset Boulevard
Distance/Direction	74 feet north-northeast of the Site
Comments	According to EDR, the property was occupied as an auto repair shop between 1933 and 2012. The property was not identified on the historical UST databases. No violations were reported. Based on the occupancy as an auto repair shop and that no USTs were installed at the property, this listing is not likely to have adversely affected the Site.
Site Name	Larry Butler
Address	5960 Sunset Boulevard
Distance/Direction	148 feet northeast of the Site
Comments	According to EDR, the property was occupied as a gasoline station between 1971 and 1974. The property was recently redeveloped; any USTs or soil contamination found would have likely been addressed during redevelopment. This listing is not likely to have adversely affected the Site.
Site Name	Harry Miller's Auto Service
Address	6063 South Sunset Boulevard
Distance/Direction	220 feet north of the Site
Comments	According to EDR, the property was occupied as an auto repair and service station in 1929. According to reviewed building permits, this property was occupied as a public garage in 1925 and was vacant/an auto sales and garage in 1930. This listing is not likely to have adversely affected the Site.

Historical Dry Cleaners	
Site Name	Isadore Needle
Address	6044 South Sunset Boulevard
Distance/Direction	29 feet
Comments	According to EDR, the property was occupied as a clothes pressers and cleaners between 1929 and 1933. Based on the address, this property may be identified as part of the Site; however, the 1919 Sanborn Map and reviewed building permits did

Historical Dry Cleaners	
	not indicate this occupancy at the Site. The 1919 Sanborn Map identified this property as occupied as a film laboratory. This listing is not likely to have adversely affected the Site.
Site Name	Henry Kobayashi
Address	6092 South Sunset Boulevard, 6093 South Sunset Boulevard
Distance/Direction	34 and 97 feet north-northwest of the Site
Comments	According to EDR, the property was occupied as a clothes cleaners, pressers, and dyers in 1924. Based on the address, this property may be identified as part of the Site; however, the 1919 Sanborn Map and reviewed building permits did not indicate this occupancy at the Site. However, an additional listing at 6093 South Sunset Boulevard indicated that the property was also occupied by Henry Kobayashi as a clothes pressers, cleaners, and repairers in 1929; and by Thomas Keimi as a clothes pressers and cleaners between 1933 and 1937. The 6092 South Sunset Boulevard address is likely misidentified. Based on the distance from the Site and that large amounts of dry cleaning solvents were unlikely used, these listings are not likely to have adversely affected the Site.
Site Name	Loera Barker
Address	6089 South Sunset Boulevard
Distance/Direction	97 feet north-northwest of the Site
Comments	According to EDR, the property was occupied as a hand laundry in 1937. Based on the occupancy as a hand laundry and that dry cleaning solvents were unlikely used, this listing is not likely to have adversely affected the Site.

Additional properties on the Historical Gas Stations and Dry Cleaners databases are located greater than 246 feet and 112 feet from the Site, respectively. These properties are not likely to have adversely affected the Site based on distance from the Site and/or its occupancy as an auto repair shop or oriental laundry. Additional information on these properties can be reviewed in the vapor encroachment screen provided by EDR, which is included as Appendix L.

6.3 REGULATORY AGENCIES

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the Site.

BUILDING DEPARTMENT

Citadel contacted the City of Los Angeles Building Department for information regarding the Site in order to identify historical tenants and property use. Please see Section 5.2 for further discussion.

FIRE DEPARTMENT

The City of Los Angeles Fire Department (LAFD) has recently issued lists of active and inactive ASTs, USTs, and hazardous materials inventories (HMI) as of April 4, 2017. The Site was identified on these lists.

Citadel contacted the LAFD for more information regarding the Site. The agency has not yet responded at the time of this report. However, this limitation is not expected to significantly alter the findings of this assessment.

AIR QUALITY MANAGEMENT DISTRICT

Citadel reviewed information available on-line through the South Coast Air Quality Management District's Facility Information Detail (FIND) database. The Site was identified on the database with the following facilities:

- Hollywood Film and Video Inc. at 6060 Sunset Boulevard
  - Facility ID 125286
  - Equipment identified include an inactive permit to operate organic chemical blending in 2001 and inactive permits to operate two film cleaning machine, two wet gate printer with perchloroethylene, and an activated carbon adsorber drum vent issued in 2003
  - A notice of violation was issued in October 2000, for failure to obtain permits to operate two film cleaning machines and two wet gate printers. The case was closed on February 9, 2001
  - A notice to comply was issued in October 2000, for failure to obtain permit to construct and permit to operate for two batch mixers. The status is in compliance as of January 21, 2001
- Studio Restaurant Associated Limited/Columbia Bar and Grill at 1448 North Gower Street
  - Facility ID 68895
  - Equipment identified include an inactive permit to operate a charbroiler issued in 1992
  - No notices of violation or to comply was identified
- Columbia Pictures Television at 1438 North Gower Street
  - Facility ID 85746
  - No equipment was identified
- Technicolor Creative Services at 6040 West Sunset Boulevard
  - Facility ID 158432
  - Equipment identified include an active permit to operate a diesel emergency generator issued in 2009; and an inactive permit to operate a film cleaning machine issued in 2010
  - No notices of violation was identified
  - Two notices to comply was issued in September 2010 and February 2011. The status for both notices is in compliance.

REGIONAL WATER QUALITY CONTROL BOARD

The GeoTracker Database is the California State Water Resources Control Board's (SWRCB) Internet-accessible database system used by the SWRCB, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. According to Geotracker, the nearest LUST Cleanup Site is the Mobil Station/Circle K Store located at 5857 West Sunset Boulevard, approximately 750 feet east-northeast of the Site. According to information provided by Geotracker, the case was opened in November 1998 and remediation began in August 2006. The case is open and in remediation as of March 27, 2008. Based on the distance from the Site, this LUST property is not likely to have adversely affected the Site.

7.0 DATA GAPS

A data gap is a lack of or inability to obtain information despite good faith efforts to gather such information. A data failure is a failure to achieve the historical research objectives even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful.

The following data gaps have been identified during the course of this investigation:

- Additional governmental agencies that are not included in the Government Records report may maintain information regarding environmental conditions at the Site and nearby facilities. A request has been sent to the LAFD. At the time of this report, the LAFD has not yet responded.

With regard to these data gaps, Citadel believes that the most significant potential sources for on-site contamination have been identified during the current investigation.

8.0 FINDINGS

Citadel Environmental Services, Inc. (Citadel) was contracted by Hudson Pacific Properties, Inc. (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the Sunset Gower Studios located at 1438 North Gower Street, in the City of Los Angeles, Los Angeles County, California; hereinafter referred to as the "Site."

Current Site Conditions

According to the County of Los Angeles' Assessor's Parcel Maps, the Site is comprised of 11 parcels encompassing approximately 15.6 acres of land. These parcels are legally identified by the following Assessor's Parcel Numbers (APNs) and associated addresses:

- APN 5545-013-401: 1440 North Gower Street
- APN 5545-013-043: 6060 West Sunset Boulevard
- APN 5545-013-051: 6050 West Sunset Boulevard
- APN 5545-013-056: no address associated with the parcel
- APN 5545-013-055: no address associated with the parcel
- APN 5545-013-403: 6010 Sunset Boulevard
- APN 5545-013-002: 1455 Gordon Street
- APN 5545-013-404: no address associated with the parcel
- APN 5545-013-057: 1437 Gordon Street
- APN 5545-013-058: no address associated with the parcel
- APN 5545-013-059: no address associated with the parcel

The Site consists of 12 sound stage facilities, and 368,000 square feet (SF) of office and support space for productions. The office and support space include the following as identified by the APNs.

APN	DESCRIPTION/BUILDINGS	APPROXIMATE SQUARE FOOTAGE AND FLOORS	LOCATION
5545-013-401	Vacant restaurant building	One-story, 6,650 SF	Northwest corner of Site
	Cohn Building (Building 35)	Five-story, 68,000 SF	Along Gower Street, south of the vacant restaurant building

APN	DESCRIPTION/BUILDINGS	APPROXIMATE SQUARE FOOTAGE AND FLOORS	LOCATION
5545-013-043	Building 6060	Two-story, 7,817 SF	Along Sunset Boulevard, east of the vacant restaurant building
5545-013-051	United Building	Two-story, 18,126 SF	Along Sunset Boulevard, east of Building 6060
	Beachwood Drive driveway/entrance	n/a	Along Sunset Boulevard, east of the United Building
5545-013-056	Building 55	One-story, 4,440 SF	South of the United Building
5545-013-055	Security booth	One-story	East of Building 55
5545-013-403	Technicolor Building	Six-story, 113,725 SF	Along Sunset Boulevard, east of the Beachwood Drive driveway/entrance
5545-013-002	1455 Gordon Building	One-story, 1,720 SF	Along Gordon Street, east/southeast of the Technicolor Building
5545-013-404	Building 16	Two-story, 12,675 SF	Along Beachwood Drive driveway, south of Building 55
	Building 19	Two-story, 2663 SF	South of Building 6060 and west of Building 16
	Building 15	Two-story, 4,630 SF	South of Buildings 16 and 19
	Building 62	Two-story, 20,095 SF	Along Beachwood Drive driveway, south of Building 16
	Food and Bounty (restaurant) structure	One-story, 8,065 SF	Along Beachwood Drive driveway, south of Building 62
	Stage 5	One-story, 5,329 SF	West of Building 62 and south of Building 15
	Building 2	Three-story, 4,338 SF	West of Stage 5
	Columbia Building (Building 1)	Two-story, 11,715 SF	Along Gower Street, south of Building 35 and west of Building 2
	Building 5	Four-story, 14,808 SF	Along Gower Street, south of Building 1
	Stage 1	One-story, 16,050 SF	South of Stage 5 and Building 2; east of Building 5
	Building 34	Three-story, 1,884 SF	South of Stage 1
	Stage 2	One-story, 12,538 SF	Along Gower Street, south of Building 5
	Building 38	Two-story, 1,012 SF	West of Stage 2
	Building 42	Three-story, 21,776 SF	West of Stage 2 and south of Building 38
	Stage 3	One-story, 13,942 SF	Along Gower Street, south of Stage 2 and Building 42
	Stage 4	One-story, 11,885 SF	Along Gower Street, south of Stage 3
	Stage 8	One-story, 10,916 SF	Along Gower Street, south of Stage 4
	Stage 9	One-story, 16,275 SF	Along Gower Street, south of Stage 8
	Building 22	Two-story, 3,357 SF	East of Stage 8
	Building 8/9	Two-story, 7,862 SF	East of Stages 8 and 9
	Building 9	Two-story, 5,635 SF	East of Stage 9
	Building 13	Four-story, 17,022 SF	Along Beachwood Drive driveway, east of Stage 3
	Building 14	One-story, 1,380 SF	Along Beachwood Drive driveway, south of Building 13

APN	DESCRIPTION/BUILDINGS	APPROXIMATE SQUARE FOOTAGE AND FLOORS	LOCATION
	Building 20	Two-story, 6,305 SF	Along Beachwood Drive driveway, south of Building 14
	Building 21	Two-story, 3,260 SF	Along Beachwood Drive driveway, south of Building 20
	Building 27 (Mill)	One-story, 8,192 SF	Along Beachwood Drive driveway, south of Building 21
	Parking Structures A, B, and C	Four-story	Along Gordon Street, south of 1455 Gordon Street
	Stage 7	One-story, 19,720 SF	West of Parking Structure B
	Building 28	Two-story, 4,730 SF	West of Stage 7
	Building 7	Two-story, 6,323 SF	West of Parking Structure B and north of Stage 7
	Building 48/49	Three-story, 18,925 SF	West of Parking Structure A and north of Building 7
	Building 43	Two-story, 2,320 SF	Between Beachwood Drive driveway and Building 48
	Building 50	Two-story, 2,605 SF	Along Beachwood Drive driveway and north of Building 49
5545-013-059	Stage 12	One-story, 17,315 SF	Southwest corner of the Site
	Stage 14	One-story, 18,602 SF	Along Gower Street, north of Stage 12
	Building 70	Two-story, 33,220 SF	Along Fountain Avenue, east of Stages 12 and 14
	Stage 15	One-story, 16,743 SF	Along Fountain Avenue, east of Building 70
	Stage 16	One-story, 16,248 SF	North of Stage 15
	Building 74	Two-story, 10,408 SF	Along Gordon Street, east of Stage 16
5545-013-057	Portion of Parking Structure A	Four-story	Along Gordon Street
5545-013-058	Surface parking areas	N/A	North APN 5545-013-059

Stationary equipment at the Site include cable traction and hydraulic elevators, pad-mounted transformer, boilers, hot water heaters, air compressors, hydraulic lift/dock, cooling towers, grease interceptor, and sump pumps. In general, the Site appeared to be well maintained and the observed building/ground conditions were good.

Site History

A review of historical sources showed that the Site was developed with two small structures, likely residences, as early as 1894. By 1919, a film laboratory; a studio with an office, an open stage, and several small support structures; and an open stage with offices and dressing rooms appeared developed in the north portion of the Site along Sunset Boulevard. An oil and gasoline station also appeared developed in the northwest corner of the Site. The south portion of the center and south portions of the Site appeared generally developed with single-family residences. Additional stages and support structures appeared developed in the center-east portion of the Site along Gordon Street. By 1928, the Site appeared densely developed with commercial structures in the north/northeast portions of the Site and with primarily single-family residences along with several multi-family residences in the south portion of the Site. Stages 1 and 2 and the nearby support buildings to the north of the Stages appeared developed similar to its current configuration with the exception of the current restaurant structure located in the northwest corner of the Site and the smaller structures near the 6060 Building. Stage 7 and several of the nearby support buildings (Buildings 7, 43, 48, 49, and 50) also appeared developed similar to its current configuration. Stages

also appeared developed in the northeast corner of the Site. By 1938, Stages 8 and 9 also appear developed similar to its current configuration.

By 1950, the Site appeared developed with auto repair shops with pumps for two gasoline tanks in the southwest portion of the Site. The southeast portion of the Site and properties along Gordon Street remained as residences and the remaining areas of the Site appeared relatively unchanged. By 1957, Stages 12 and 14 appeared developed in the southwest corner of the Site; and the auto repair shops appeared to have been relocated closer to Beachwood Drive. The gasoline tanks were no longer depicted. Stages 15 and 16 appeared developed by 1966; and Building 70 appears developed by 1970. Parking Structure A and B (separate structures) appeared developed in 1979 and 1983, respectively. The structure in the northwest corner of the Site was developed in 1985. The Technicolor Building was constructed in 2006. A small parking structure was also built in 2006 to connect Parking Structures A and B. The structure was extended in 2016 with the development of Parking Structure C.

Citadel reviewed several environmental documents:

- ATC Associates Inc. (ATC) performed a Phase II Subsurface Investigation at the Site in July 2004. The objective of the investigation was to evaluate the recognized environmental conditions (RECs) identified by a Phase I ESA completed by ATC, dated May 11, 1997. Citadel was not provided with the 1997 Phase I ESA Report. The following RECs were identified:
    - Gasoline station, located at the southeast corner of Gower Street and Sunset Boulevard.
    - Machine shop and paint spray booth, located in the northeast portion of the Site.
    - Auto repair area and gasoline pumps.
    - Auto repair and oil storage area.

  A geophysical survey was completed at each of the proposed areas of exploration to evaluate the possible presence of buried utilities and possible abandoned in place USTs associated with the former gasoline station and gasoline pumps, and oil storage tanks associated with the auto repair areas. The geophysical survey consisted of an electromagnetic induction (EM) and ground penetrating radar (GPR) survey. No large metallic objects, which would be indicative of buried USTs or septic tanks, were detected in any of the areas surveyed.

  A total of 15 soil borings were completed at the Site and three soil samples were retained from each boring for laboratory analytical analysis. No groundwater was encountered at a depth of 26 feet bgs. Soil samples were collected at depths of five, 10, 15, 20, and 25 feet bgs in all boring with the exception of two borings that were only samples to a maximum depth of 21 feet bgs. TPH, BTEX, and VOCs were not detected in any of the soil samples. Arsenic was detected in three of the soil samples, exceeding its EPA Preliminary Remediation Goals (PRGs) of 0.39 mg/kg for residential soil. However, according to ATC, these detections were between the background concentration range of arsenic in California (0.59 to 11 mg/kg). The metal concentrations in the samples analyzed did not exceed the TTLC, and would not be classified as a California hazardous waste. No figures or laboratory data were included in the report.

- EMG performed a Phase I ESA at 6060 Sunset in March/April 2010. According to EMG, the property was originally constructed in 1918 through 1957, and was occupied as a commercial office facility at the time of the assessment. Prior to the current use, the property was occupied as a film developing studio from 1918 until 2005. EMG identified this

as a REC. Various chemicals, including solvents, were used and stored during that time. A subsurface soil and soil vapor assessment conducted in 2006 showed elevated levels of VOCs in soils at the property. Soil vapor extraction (SVE) was conducted for a year in 2008; however, VOCs remained above human health screening levels in one area. An IAQ assessment for VOCs was conducted in 2009 to establish a baseline for the building. While select VOCs were detected, the total VOC concentrations were below PELs established by Cal-OSHA and the recommended ACGIH TLVs. It was concluded that the levels of PCE detected would not likely cause irritation and discomfort to the building occupants, and did not present any indoor air quality concerns at the time. EMG recommended that periodic IAQ monitoring continue until contamination levels are below action levels.

- Citadel performed a Phase I ESA at 6050 Sunset Boulevard in December 2011. At the time of the assessment, the property was occupied by a recording studio and offices. Previous occupancy uses have consisted of businesses related to the film and music industry, including the use as a stage for television and for voice recordings. The assessment revealed no evidence of RECs in connection with the property.

- Citadel performed a Phase I ESA at 1455 Beachwood Drive in December 2011. At the time of the assessment, the property was vacant and unoccupied. Prior to the current structure, previous smaller structures were on-Site and used as storage vaults for film. Since 1963, occupancy uses appeared to have been primarily related to the storage of film and other items supporting the film industry, and offices supporting the film and music industry. The assessment revealed no evidence of RECs in connection with the property.

- Citadel performed a Phase I ESA at 1455 Gordon Street in September 2012. At the time of the assessment, the property was occupied as a business office by Emerson College. Historical records reviewed indicate that the property was largely vacant and unoccupied prior to 1931. The current building was constructed for use as a sound studio and appeared to have historically been used for sound studio, bindery, dance studio, photography studio, and offices. The assessment revealed no evidence of RECs in connection with the property.

- Citadel provided a report of a SVE system evaluation and a supplemental soil vapor investigation in August 2017. Citadel concluded that soil vapor extraction activities at the Site have resulted in 140.07 lbs. of PCE vapors to have been removed from the subsurface since 2008. A rebound test was conducted to determine if additional mass can be removed by SVE. Based on the very low mass removal rate that ranged from 0.002 to 0.014 lbs./day since the rebound test started on August 26, 2016, and asymptotic levels of total mass removed, Citadel recommended that SVE activities be discontinued. Citadel further recommended entering into a Voluntary Cleanup Program such as with the Los Angeles County Fire Department – Site Mitigation Unit for the purpose of obtaining environmental case closure.

Environmental Database Review

The Site was identified on several environmental databases including FINDS, ECHO, HAZNET, RCRA NonGen/NLR, and RCRA-SQG. The Site was identified on the Facility Index System/Facility Registry System (FINDS) and Enforcement and Compliance History Information (ECHO) databases. FINDS contains facility information and "pointers" to other sources that contain more detail and ECHO provides integrated compliance and enforcement information. The Site was identified on this database due to being identified as a hazardous waste generator. The Site was identified on the

HAZNET database mainly as a generator of unspecified solvent mixture, latex waste, other organic solids, unspecified organic liquid mixture, oxygenated solvents, unspecified aqueous solution, unspecified aqueous solution, other organic solids, aqueous solutions, paint sludge, hydrocarbon solvents, and liquids with halogenated solvents. These were typically part of productions and sets.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a LUST occurred within 0.25-mile and upgradient of the Site. KTLA Broadcasting, located at Athens Mt. Wilson Road, is listed as a LUST site. According to EDR, the property is approximately 685 feet northeast of the Site and the diesel leak was discovered in January 1991. The leak was limited to soil only. The case was completed and closed by the Los Angeles Regional Water Quality Control Board (LARWQCB) on November 7, 1991. Due to the case closure and that the contamination was limited to soil, this property is not expected to have adversely affected the Site.

Nine properties were identified as within 0.125-mile and upgradient of the Site on the Historical Gas Station database; and thirteen properties were identified as within 0.125-mile and upgradient of the Site on the Historical Dry Cleaners database. These properties are not likely to have adversely affected the Site.

9.0 CONCLUSIONS AND RECOMMENDATIONS

According to ASTM Standard of Practice E1527-13, recognized environmental conditions (REC) fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A recognized environmental condition, or REC, means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

A controlled recognized environmental condition, or CREC, is a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

An historical recognized environmental condition, or HREC, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

According to ASTM E2600-10, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a VEC, which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by

Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be rules out. Tier 2 has two data collective components: non-invasive and invasive.

Based on our review of these databases, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC were not identified. Based on these reviews, the oil and gasoline station located in the northwest corner of the Site as identified on the 1919 Sanborn Map is considered a REC. According to reviewed building permits and aerial photographs, the gasoline station was developed in 1919 and removed by 1928. It is unclear whether the USTs were removed. In addition, the 1950 Sanborn Map depicted automobile repair shops with pumps for two gasoline tanks just east of the existing Stage 14. The repair shops were relocated in 1957 and the gasoline tanks were no longer shown. No information has been reviewed regarding any UST removals. The Site was not identified on the historical UST databases. However, the Site address 1438 Gower Street was identified on the City of Los Angeles Fire Department List of Inactive USTs. Citadel has sent a file review request to LAFD. The LAFD has not responded in time to include a review with this Phase I ESA. Citadel recommends reviewing these files to locate any documentation on UST removals.

In addition, a 2004 Phase II Subsurface Investigation was conducted to address these RECs. TPH, BTEX, and VOCs were not detected in any of the soil samples. Arsenic was detected between the background concentration range of arsenic in California (0.59 to 11 mg/kg). The metal concentrations in the samples analyzed did not exceed the TTLC, and would not be classified as a California hazardous waste. Based on the findings of this report, the identified RECs would be considered HRECs. However, no attachments such as laboratory reports and geophysical survey findings were included with the report. Citadel recommends acquiring the full Phase II Subsurface Investigation Report to review and confirm the report findings.

The contamination at 6060 Sunset is also considered a REC. However, based on the latest soil vapor activities, it appears that further removal of PCE is not feasible. Citadel had recommended entering a Voluntary Cleanup Program to obtain an environmental case closure. Upon acquiring closure, this would be considered a HREC.

No evidence for designating the Site as a CREC from reviews of historical documents and present Site conditions was found.

Citadel recommends that the tenant follow best management practices, in conformance with all appropriate current regulations, in regards to potential use of regulated hazardous materials and/or waste generated during everyday operations.

12.0 PROFESSIONAL CERTIFICATION

Citadel has completed a Phase I ESA of the Sunset Gower Studios located at 1438 North Gower Studios, in the City of Los Angeles, Los Angeles County, California. The Phase I ESA was performed at the Clients request in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-2013 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The independent conclusions represent our professional judgment based on information and data available to Citadel during the course of this project. Information regarding historical and present operations, conditions and test data provided by the Client or their representative, is assumed to be correct and complete. The conclusions presented by this Phase I ESA are based on information provided to Citadel and from observations and perceived conditions existing on the date of the site reconnaissance.

In expressing the opinions stated in this report, Citadel has exercised the degree of skill and care ordinarily exercised by a reasonable prudent environmental professional. Documentation provided by the Client, Client-designated representatives, interested third-parties, or from the public domain, and referenced in preparation of the Phase I ESA report, have been assimilated with the understanding that Citadel assumes no responsibility or liability for their accuracy.

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by the final All Appropriate Inquiry (AAI) Rule published in 40 CFR Part 312.10 (November 1, 2013). I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting described in this Phase I ESA. I have developed and performed the AAI in conformance with the standard and care of this Rule.

EXPERIENCE

With over **30 years** of experience in environmental engineering, compliance, permitting and management projects, Mr. Drollinger has a strong working knowledge of EPA, DTSC, AQMD/APCD, OSHA and DOT regulations; and with local agencies, fire departments and public works. Mr. Drollinger has provided environmental engineering, assessment and compliance, safety management, and engineering construction management services on numerous projects for the US Navy, Veterans Administration, US Department of Agriculture, Cal Trans, EPA and numerous private projects throughout the western United States. In addition, Mr. Drollinger has developed and implemented programs to train managers and staff in storm water and NPDES compliance, soil and groundwater sample collection and data interpretation, Hazcomm, IIPP, and safe-work practices such as identifying and handling hazardous materials, fall protection, confined space, traffic control, LO/TO and ergonomics; and has conducted environmental and permitting audits of facilities including health and safety assessments.

ROLE

As Director of Environmental Geology & Engineering, Mr. Drollinger's primary responsibility includes developing and implementing health and safety protocols; safety training of management, staff and subcontractor personnel; establishing and managing budgets and personnel; negotiating with local, regional, state, and federal agencies; litigation support; and coordinating tasks with multi-discipline project teams.

Mr. Drollinger works closely with, and often develops protocols for conducting assessments related to Environmentally Regulated Materials Management (ERM), Industrial Hygiene (IH), and Occupational Safety and Training (OST) departments.

EDUCATION

Mr. Drollinger has a B.S. in Applied and Natural Sciences from the University of Alabama, and a M.Eng. in Advanced Safety Engineering and Management, University of Alabama, Birmingham.

Mr. Drollinger is also a certifying board member of the American Council of Accredited Certifications (formerly known as the American Indoor Air Quality Council), and is a member of the American Society of Safety Engineers, Board of Certified Safety Professionals, Institute of Hazardous Materials Management, Institute of Industrial Engineers and International Facilities Management Association.

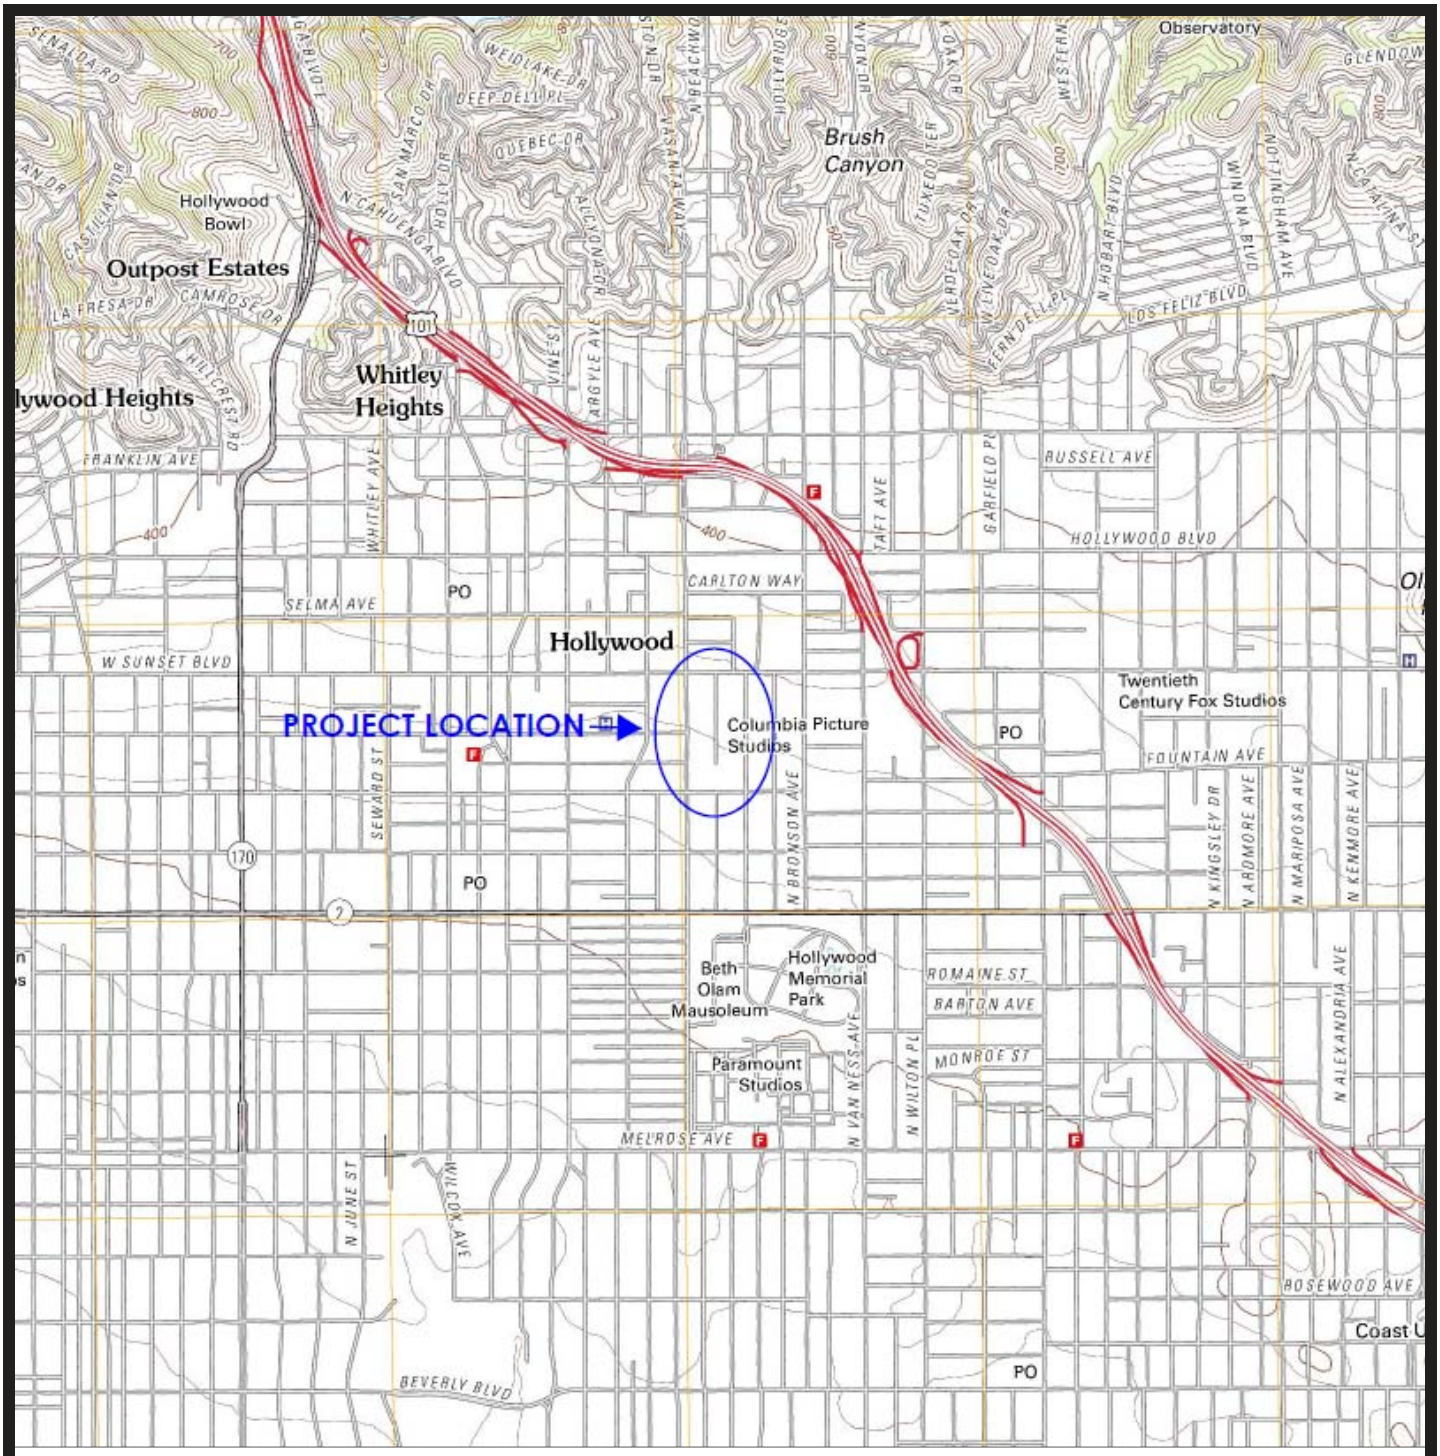
Shirley Lee

Environmental Specialist, Environmental Geology and Engineering

EXPERIENCE

Ms. Lee has **ten years** of experience as an Environmental Specialist. Her responsibilities includes performing Phase I and Phase II Environmental Site Assessments, NPDES monitoring and permitting, groundwater monitoring, indoor air quality inspections, hazardous materials inventory, and preparation of health and safety plans and hazardous materials business and contingency plans.

ROLE



As an Environmental Specialist, Ms. Lee provides on-site organization, direction, control, and coordination necessary for the successful implementation, execution, and completion of environmental geology and environmental compliance-related projects awarded to Citadel. She also assists the Director of Environmental Geology and Engineering in the completion of all assigned projects so that the client is satisfied with the finished work product and the working relationship. Her assignments include a combination of field-based activities in a number of varying environments and office-based activities.

EDUCATION

Ms. Lee holds a Bachelor of Arts in Environmental Analysis and Design from the University of California, Irvine; with a minor in Urban and Regional Planning. Ms. Lee also holds a 40-hour HAZWOPER General Site Worker Certification. She has recently received her Environmental Management Certification from the University of California, Irvine.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Application for the Erection of Frame Buildings

CLASS "D"

To the Board of Public Works of the City of Los Angeles:

Application is hereby made to the Board of Public Works of the City of Los Angeles, through the office of the Chief Inspector of Buildings, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

CLASS "D"

To the Board of Public Works of the City of Los Angeles:

Application is hereby made to the Board of Public Works of the City of Los Angeles, through the office of the Chief Inspector of Buildings, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

NOTE—Answer the Following Questions For Dwellings and Flats Only:—

STATE DWELLING HOUSE ACT

14. Are there any living rooms in basement?

15. What is least area of any room, other than kitchens, bath rooms or closets?

16. What is the least width of any room, other than kitchens, bath rooms or closets?

17. What is the minimum ceiling height?

18. Give least size of window courts (width and length)

(A window court is the unoccupied ground area, in front of any and all windows, as required by the State Law, and such area must be entirely open and uncovered, and be at least 4 feet in width, and at least 36 sq. ft. in area. Eaves or cornices may project into such window courts not to exceed 8 inches; if a greater projection is desired, window court must be increased in width as much as eaves.)

19. Give maximum cornice projection into such court

20. Will windows in each room be equal to one-eighth (1/8) of floor area?

21. Give maximum width of porch to edge of cornice or eaves

22. What is the minimum height of floor joists above ground?

23. Will entire space underneath building be enclosed and be provided with ventilating screens?

24. Will a water-closet be provided for each family?

25. Give least width of water-closet compartment or room, when finished

26. Give size of windows for toilet and bath rooms

27. Will all provisions of State Dwelling House Act be complied with?

I have carefully examined and read the above blank and know the same is true and correct, and that all provisions of the Ordinances and Laws governing Building Construction will be complied with, whether herein specified or not.

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

Application for the Erection of Frame Buildings

CLASS "D"

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

14. APPLICATION COMMENTS

** Approved Seismic Gas Shut-Off Valve may be required. ** Expedite fee paid 3/7/06. A modification was granted to allow an enclosed stairway to exit below an overhang. The ovehang is limited to 3'-6" and is located approx. 25'-0" above the exit level. A modification has been granted to allow fire sprinklers in lieu of a 3/4 hour fire assembly within 10'-0" of PL. Water curtain also allowed between office and S-3 occupancy in lieu of a 3/4 hour protected openings.

In the event that any box (i.e. 1-16) is filled to capacity, it is possible that additional information has been captured electronically and could not be printed due to space restrictions. Nevertheless, the information printed exceeds that required by Section 19825 of the Health and Safety Code of the State of California.

15. Building Relocated From:

16. CONTRACTOR, ARCHITECT, & ENGINEER NAME	ADDRESS		CLASS	LICENSE#	PHONE #
(C) Synergetic Building Systems Inc	6678 Eagle Ridge Road,	Penngrove, CA 94951	B	423953	

PERMIT EXPIRATION/REFUNDS: This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by LADBS (Sec. 22.12 & 22.13 LAMC). The permittee may be entitled to reimbursement of permit fees if the Department fails to conduct an inspection within 60 days of receiving a request for final inspection (HS 17951).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. The following applies to B contractors only: I understand the limitations of Section 7057 of the Business and Professional Code related to my ability to take prime contracts or subcontracts involving specialty trades.

License Class: **B** Lic. No.: **423953** Contractor: **SYNERGETIC BUILDING SYSTEMS INC**

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

( ) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

(✓) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: **CA Ins. Co.** Policy Number: **460088940102**

( ) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION / LEAD HAZARD WARNING

I certify that notification of asbestos removal is either not applicable or has been submitted to the AQMD or EPA as per section 19827.5 of the Health and Safety Code. Information is available at (909) 396-2336 and the notification form at www.aqmd.gov. Lead safe construction practices are required when doing repairs that disturb paint in pre-1978 buildings due to the presence of lead per section 6716 and 6717 of the Labor Code. Information is avaiable at Health Services for LA County at (800) 524-5323 or the State of California at (800) 597-5323 or www.dhs.ca.gov/childlead.

20. CONSTRUCTION LENDING AGENCY DECLARATION

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).
Lender's name (if any): Lender's address:

21. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Licensed Contractor's Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration / Lead Hazard Warning, Construction Lending Agency Declaration and Final Declaration; and
(2) This permit is being obtained with the consent of the legal owner of the property.

Application for the Erection of Buildings

CLASS [redacted] "B" — "C"

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in the property described in such permit.

PERMIT EXPIRATION/REFUNDS: This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by LADBS (Sec. 22.12 & 22.13 LAMC). The permittee may be entitled to reimbursement of permit fees if the Department fails to conduct an inspection within 60 days of receiving a request for final inspection (HS 17951).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. The following applies to B contractors only: I understand the limitations of Section 7057 of the Business and Professional Code related to my ability to take prime contracts or subcontracts involving specialty trades.

License Class: **C36** License No.: **486785** Contractor: **HELLMUTH M J PLUMBING INC**

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

(X) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

( ) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: **INS. CO. OF THE WEST** Policy Number: **WSA5029301**

( ) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION / LEAD HAZARD WARNING

I certify that notification of asbestos removal is either not applicable or has been submitted to the AQMD or EPA as per section 19827.5 of the Health and Safety Code. Information is available at (909) 396-2336 and the notification form at www.aqmd.gov. Lead safe construction practices are required when doing repairs that disturb paint in pre-1978 buildings due to the presence of lead per section 6716 and 6717 of the Labor Code. Information is available at Health Services for LA County at (800) 524-5323 or the State of California at (800) 597-5323 or www.dhs.ca.gov/childlead.

20. CONSTRUCTION LENDING AGENCY DECLARATION

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).

Lender's Name (If Any): _____ Lender's Address : _____

21. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Licensed Contractor's Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration / Lead Hazard Warning, Construction Lending Agency Declaration, and Final Declaration; and

(2) This permit is being obtained with the consent of the legal owner of the property.

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

16. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date _____ Lic. Class _____ Lic. Number _____ Contractor _____ (Signature)

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____ B. & P. C. for this reason _____

Date _____ Owner's Signature _____

WORKERS' COMPENSATION DECLARATION

OWNER-BUILDER DECLARATION

16. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

Application for the Erection of Frame Buildings

CLASS "D"

To the Board of Public Works of the City of Los Angeles:

Application is hereby made to the Board of Public Works of the City of Los Angeles, through the office of the Chief Inspector of Buildings, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

Application for the Erection of Buildings

CLASS "~~A~~ ~~B~~ ~~C~~" D- Concrete

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

15. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date ____ Lic. Class ____ Lic No. ____ Contractor's Signature ____

Contractor's Mailing Address ____

OWNER-BUILDER DECLARATION

16. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☒ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. ____, B. & P. C. for this reason ____

BOARD OF PUBLIC WORKS

DEPARTMENT OF BUILDINGS

Application for the Erection of Frame Buildings

CLASS "D"

To the Board of Public Works of the City of Los Angeles:

Application is hereby made to the Board of Public Works of the City of Los Angeles, through the office of the Chief Inspector of Buildings, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

PERMIT EXPIRATION/REFUNDS: This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by LADBS (Sec. 22.12 & 22.13 LAMC). The permittee may be entitled to reimbursement of permit fees if the Department fails to conduct an inspection within 60 days of receiving a request for final inspection (HS 17951).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. The following applies to B contractors only: I understand the limitations of Section 7057 of the Business and Professional Code related to my ability to take prime contracts or subcontracts involving specialty trades.

License Class: **B** License No.: **982113** Contractor: **PARKCO BUILDING COMPANY**

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

( ) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

(X) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: **OLD REPUBLIC GEN. INS. CORP.** Policy Number: **A1CW56351309**

( ) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION / LEAD HAZARD WARNING

I certify that notification of asbestos removal is either not applicable or has been submitted to the AQMD or EPA as per section 19827.5 of the Health and Safety Code. Information is available at (909) 396-2336 and the notification form at www.aqmd.gov. Lead safe construction practices are required when doing repairs that disturb paint in pre-1978 buildings due to the presence of lead per section 6716 and 6717 of the Labor Code. Information is available at Health Services for LA County at (800) 524-5323 or the State of California at (800) 597-5323 or www.dhs.ca.gov/childlead.

20. CONSTRUCTION LENDING AGENCY DECLARATION

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).

Lender's Name (If Any): _____ Lender's Address : _____

21. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Licensed Contractor's Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration / Lead Hazard Warning, Construction Lending Agency Declaration, and Final Declaration; and

(2) This permit is being obtained with the consent of the legal owner of the property.

In the event that any box (i.e. 1-16) is filled to capacity, it is possible that additional information has been captured electronically and could not be printed due to space restrictions. Nevertheless the information printed exceeds that required by section 19825 of the Health and Safety Code of the State of California.

15. BUILDING RELOCATED FROM:

16. CONTRACTOR, ARCHITECT & ENGINEER NAME	ADDRESS		CLASS	LICENSE #	PHONE #
(C) PARKCO BUILDING COMPANY	3190-F AIRPORT LOOP DR,	COSTA MESA, CA 92626	B	982113	

PERMIT EXPIRATION/REFUNDS: This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by LADBS (Sec. 22.12 & 22.13 LAMC). The permittee may be entitled to reimbursement of permit fees if the Department fails to conduct an inspection within 60 days of receiving a request for final inspection (HS 17951).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. The following applies to B contractors only: I understand the limitations of Section 7057 of the Business and Professional Code related to my ability to take prime contracts or subcontracts involving specialty trades.

License Class: **B** License No.: **982113** Contractor: **PARKCO BUILDING COMPANY**

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

( ) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

(X) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: **OLD REPUBLIC GEN. INS. CORP.** Policy Number: **A1CW56351309**

( ) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION / LEAD HAZARD WARNING

I certify that notification of asbestos removal is either not applicable or has been submitted to the AQMD or EPA as per section 19827.5 of the Health and Safety Code. Information is available at (909) 396-2336 and the notification form at www.aqmd.gov. Lead safe construction practices are required when doing repairs that disturb paint in pre-1978 buildings due to the presence of lead per section 6716 and 6717 of the Labor Code. Information is available at Health Services for LA County at (800) 524-5323 or the State of California at (800) 597-5323 or www.dhs.ca.gov/childlead.

20. CONSTRUCTION LENDING AGENCY DECLARATION

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).

Lender's Name (If Any): _____ Lender's Address : _____

21. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Licensed Contractor's Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration / Lead Hazard Warning, Construction Lending Agency Declaration, and Final Declaration; and

(2) This permit is being obtained with the consent of the legal owner of the property.

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☒ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

Application for the Erection of Buildings

CLASS "A"—~~"B"~~ ~~"C"~~ Conc

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS' DECLARATION

16. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date _____ Lic. Class _____ Lic. Number _____ Contractor _____ (Signature)

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500):):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____ B. & P. C. for this reason.

X Date 2-3-88 Owner's Signature

WORKERS' COMPENSATION DECLARATION

18. I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Worker's Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. _____ Insurance Company _____

☐ Certified copy is hereby furnished.

☐ Certified copy is filed with the Los Angeles City Dept. of Bldg. & Safety.

Date _____ Applicant's Signature _____

Applicant's Mailing Address _____

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

19. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

X Date 2-3-88 Applicant's Signature

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

20. I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____ Lender's Address _____

21. I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

I realize that this permit is an application for inspection, that it does not approve or authorize the work specified herein, that it does not authorize or permit any violation or failure to comply with any applicable law, that neither the city of Los Angeles nor any board, department, officer or employee thereof make any warranty or shall be responsible for the performance or results of any work described herein or the condition of the property or soil upon which such work is performed. (See Sec. 91.0202 LAMC)

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

16. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date 4/1/87 Lic. Class C-21 Lic. Number 27665 Contractor James E. Hammons (Signature)

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

Date _____ Owner's Signature X _____

WORKERS' COMPENSATION DECLARATION

18. I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Worker's Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.).

15. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date _____ Lic. Class _____ Lic. No. _____ Contractor _____

Contractor's Mailing Address _____

OWNER-BUILDER DECLARATION

16. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☒ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

Date Sept. 27, 1983 Owner Pick-Vanoff dba Sunset-Gower Studios Managing Partner

WORKERS' COMPENSATION DECLARATION

17. I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Worker's Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. _____ Company _____

☐ Certified copy is hereby furnished.

☐ Certified copy is filed with the Los Angeles City Dept. of Bldg. & Safety.

Date _____ Applicant _____

Applicant's Mailing Address _____

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

18. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

Date Sept. 27, 1983 Pick-Vanoff dba Sunset-Gower Studios

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

19. I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____

Lender's Address _____

20. I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

I realize that this permit is an application for inspection, that it does not approve or authorize the work specified herein, that it does not authorize or permit any violation or failure to comply with any applicable law, that neither the city of Los Angeles nor any board, department, officer or employee thereof make any warranty or shall be responsible for the performance or results of any work described herein or the condition of the property or soil upon which such work is performed. (See Sec. 91.0202 LAMC)

STATEMENT OF RESPONSIBILITY

I certify that in doing the work authorized hereby I will not employ any person in violation of the Labor Code of the State of California relating to workmen's compensation insurance.

"This permit is an application for inspection, the issuance of which is not an approval or an authorization of the work specified herein. This permit does not authorize or permit, nor shall it be construed as authorizing or permitting the violation or failure to comply with any applicable law. Neither the City of Los Angeles, nor any board, department, officer or employee thereof make any warranty or shall be responsible for the performance or results of any work described herein, or the condition of the property or soil upon which such work is performed." (See Sec. 91.0202 L.A.M.C.)

HOLLYWOOD 28, CALIFORNIA
HOLLYWOOD 9-3-8[illegible]

September 5, 1950

Department of Building and Safety
City of Los Angeles
Los Angeles, California

Gentlemen:

Columbia Pictures Corporation proposes to construct a two story cutting room building eighteen feet by twenty-six feet, as per blue print which has been previously submitted to you covering the same. This cutting room building will be added to the reinforced concrete scoring stage built in 1935, which is located between Stages 1 and 2 and the present Editorial Department of Columbia.

Columbia Pictures Corporation will issue instructions that nothing but safety film will be handled in said cutting rooms included in the proposed addition, and will post notices in the cutting rooms to the effect that nothing but safety film is to be handled in said cutting rooms.

Columbia Pictures Corporation respectfully requests such clearances be given so that a building permit may be obtained permitting the construction of said cutting rooms as per blue print previously submitted to be used only in connection with safety film.

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

DEPARTMENT OF BUILDING AND SAFETY

Application to Alter, Repair or Demolish

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

SET-BACK AGREEMENT

(Date) 2/20/25

Mr. J. J. Backus,
Chief Inspector of Buildings,
Los Angeles, California.

Dear Sir: re/ Widening of Glover

I hereby agree to erect the building and every portion thereof referred to in this application at least 5 feet back from the street property line, except that the eaves or cornice, platforms and unenclosed porches, one story in height, may extend into the area between the main wall of the building and the front property line, in accordance with the action of the City Council in establishing a set-back line for this property; and I further agree not to erect any fence, wall or other structure or any portion thereof, between said set-back line and the street property line.

I heredy agree to accept the permit issued for the erection of this building subject to the foregoing conditions.

(Signed) H Kostin
Owner

The building referred to in this application will be more than 100 feet from the Street

17. What is the minimum ceiling height?.....
18. Give least size of window courts (width and length).....

{ A window court is the unoccupied ground area, in front of any and all windows, as required by the State Law, and such area must be entirely open and uncovered, and be at least 4 feet in width, and at least 36 sq. ft. in area. Eaves or cornices may project into such window courts not to exceed 8 inches; if a greater projection is desired, window court must be increased in width as much as eaves. }

19. Give maximum cornice projection into such court.....
20. Will windows in each room be equal to one-eighth (1/8) of floor area?.....
21. Give maximum width of porch to edge of cornice or eaves.....
22. What is the minimum height of floor joists above ground?.....
23. Will entire space underneath building be enclosed and be provided with ventilating screens?.....
24. Will a water-closet be provided for each family?.....
25. Give least width of water-closet compartment or room, when finished.....
26. Give size of windows for toilet and bathrooms.....
27. Will all provisions of State Dwelling House Act be complied with?.....x Yes.....

I have carefully examined and read the above blank and know the same is true and correct, and that all provisions of the Ordinances and Laws governing Building Construction will be complied with, whether herein specified or not.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILD FAX® PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Citadel Environmental Services on Nov 07, 2017.

TARGET PROPERTY

1438 North Gower Street
Los Angeles, CA 90028

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Citadel Environmental Services were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RE: Phase II Subsurface Investigation
Sunset Gower Studios
1438 North Gower Street
Hollywood, California 90028
ATC Project Number 52.75241.0013

Dear Mr. Peterson:

Enclosed please find a copy of the Phase II Subsurface Investigation Report for the above referenced site. This report includes a description of the field procedures and the results of the subsurface investigation conducted on June 25, 2004.

The following recommendations are made based on observations and data collected during the field program:

- The soil samples analyzed from the areas investigated contained no detectable concentrations of total petroleum hydrocarbons (TPH), aromatic hydrocarbons (benzene, toluene, ethylbenzene, and xylenes, (BTEX)), or volatile organic compounds (VOCs). Analysis for California Assessment Metals (CAM 17) indicated detectable concentrations of metals within acceptable ranges.
- The geophysical survey completed in the areas of investigation detected no subsurface anomalies, or features that would indicate the presence of underground storage tanks (USTs), septic tanks or similar buried structures.

ATC appreciates the opportunity to be of service to Global Innovation Partners on this project and looks forward to working with you on future assignments. If you have questions regarding information in this report or if we can be of further assistance, please do not hesitate to contact the Arcadia, California office at (626) 447-5216.

Sincerely,
ATC Associates Inc.

Mark E. Pate
Director of Building Sciences

Lynn Edlund, RG #5350
Senior Geologist

1.0 INTRODUCTION

1.1 Purpose

ATC Associates Inc. (ATC) was retained by Global Innovation Partners to conduct a Phase II Subsurface Investigation at the Sunset Gower Studios, located at 1438 North Gower Street in Hollywood, California (site). The objective of the investigation was to evaluate the Recognized Environmental Conditions (RECs) identified by a Phase I Environmental Site Assessment (ESA) completed by ATC, dated May 11, 1997. This report presents a brief project background and the results of the subsurface investigation conducted on June 25, 2004.

1.2 Site Location

The site is located at 1438 North Gower Street in Hollywood, Los Angeles County, California. The site is bound to the north by Sunset Boulevard, to the east by Gordon Street, to the south by Fountain Avenue and to the west by North Gower Street. The site is approximately 15 acres in size and is developed with 43 office, stage, and support buildings, and two multi-level parking structures. The site is currently occupied by Sunset Gower Studios. Studios and office space is rented out to various studios, television and film producing companies. The site has been utilized as a studio from as early as 1912.

A site vicinity map is provided as Figure 1 and Site Plot Plan as Figure 2.

1.3 Project Background

ATC completed a Phase I ESA of the site (ATC Project No. 52.82461.0002), dated May 11, 1997. The ESA identified the following RECs from historical Sanborn Fire Insurance Maps (Sanborn):

- **Gasoline station, located at the southeast corner of Gower Street and Sunset Boulevard.** A gasoline station was identified on several historical Sanborn Maps from approximately 1919 to 1930. The Pinot Restaurant currently occupies the corner and covers most of the former gasoline station site. Only a small portion of the former gasoline station is accessible from the service driveway and alleyway that separates Building 35 from Pinot Restaurant.

- **Machine shop and paint spray booth, located in the northeast portion of the Site**. Sanborn maps identified a machine shop and spray booth from approximately 1950 to at least 1962. The northwest ground-level parking lot and adjacent multi-level Parking Structure A currently occupy this area.

- **Auto repair area and gasoline pumps**. An auto repair area and associated gasoline pumps were identified on the 1950 and 1955 Sanborn Maps in the southwestern portion of the site. This area is located on the south side of building Support 9.

- **Auto repair and oil storage area.** A second auto repair and associated oil storage area were identified on Sanborn Maps from approximately 1950 to at least 1970. The facility was located in the south-central portion of the site, partially within and south of Building 27.

2.0 SCOPE OF WORK

The scope of work for the field portion of the Phase II Subsurface Investigation consisted of developing a site specific health and safety plan, completing an initial site visit to mark the borehole locations for utility clearance, geophysical survey and collection of soil samples. Groundwater samples were to be collected, but no groundwater was encountered during the field investigation. Each of these tasks are described below.

Development of a site-specific health and safety plan. Prior to initiating fieldwork, a site-specific Health and Safety Plan (HSP) was prepared in accordance with 29 CFR 1910.120, to cover the tasks for personnel conducting fieldwork at the site. The plan identified and described the potentially hazardous substances that would be encountered during the field work, specified protective clothing and monitoring equipment to be used during on-site activities, and outlines measures to be implemented in the event of an emergency. On-site personnel were required to review the HSP prior to commencement of the site investigation and conduct all field activities in accordance with plan specifications.

Initial Site Visit. Mr. Mark Pate of ATC completed an initial site visit to locate the four areas to be investigated, check for general drill rig clearances, and any above ground structures and/or obstructions that may impede drilling. It was discovered that the restricted clearance between the Pinot Restaurant and Building 35 would required a limited-access drill rig.

After the boring locations were identified, Underground Services Alert was contacted, and the appropriate utility companies were notified.

Geophysical Survey. A geophysical survey was completed at each of the proposed areas of exploration to evaluate to possible presence of buried utilities (both active and inactive), and possible abandoned in place underground storage tanks (USTs) associated the former gasoline station and gasoline pumps, and oil storage tanks associated with the auto repair areas near Buildings 9 and 27.

Soil Sampling. A total of 15 soil borings were completed at the site**.** Two soil borings were completed in the alleyway between Pinot Restaurant and Building 35 and one soil boring in the service driveway of the Pinot Restaurant. Two soil borings were advanced in the ground floor level of Parking Structure A, and two soil borings just west of Parking Structure A, on the ground-level parking lot. One soil boring was advanced inside the south end of Building 27, and three soil borings to the south of Building 27. Four soil borings were advanced south and southeast of building Support 9. Three soil samples were retained from each boring for laboratory analytical analysis. Laboratory analysis including the following;

- Total Petroleum Hydrocarbons, modified for gasoline (TPH-gas) using EPA Method 8015M (samples collected at the former gasoline station and auto repair area that had gasoline pumps, south of Building 9);
- Total Petroleum Hydrocarbons, modified for carbon-chain (TPH-cc) using EPA Method 8015M (samples collected at the machine shop area and auto repair area that had oil storage, inside and south of Building 27);
- Aromatic Hydrocarbons (benzene, toluene, ethylbenzene and total xylenes – BTEX) using EPA Method 8020 (samples collected from former gasoline station, and both auto repair areas)
- California Assessment Metals 17 (CAM 17) metals using EPA Method 6010B/7471A (samples collected from the former machine shop/paint booth area); and,

- Volatile Organic Compounds (VOCs) using EPA Method 8260B (samples collected from the former machine shop/paint booth area).

Water Sampling. No groundwater was encountered at a depth of 26 feet beneath the surface, the maximum depth explored. Based on conversation with Studio Supervisor Bob Morse, depth to groundwater, based on passed geotechnical and engineering studies, is approximately 40-45 feet.

3.0 FIELD ACTIVITIES

The following field procedures were completed when collecting the soil samples and submitting the soil samples to a laboratory for analysis.

3.1 Geophysical Survey

On June 24, 2004 a geophysical survey was completed at each of the areas where soil borings were to be advanced. ATC retained Subsurface Survey of Solana Beach to conduct an electromagnetic induction (EM) and ground penetrating radar (GPR) survey. A utility locator with line tracing capabilities was also utilized in areas where utility risers were present, onto which a signal could be impressed and traced. Multiple methods were utilized because each instrument senses different material properties of the ground and buried objects.

A Geonic EM61 and Fischer M-Scope were used for the EM survey. A Sensors & Software Noggin Ground Penetrating Radar unit was used for the GPR survey. Piping and utilities were detected during the survey in each of the areas where soil borings were advanced. Several unknown lines were detected near Buildings 27 and 9, along with a possible post tension cables in the floor of Building 27. No large metallic objects, which would be indicative of buried underground storage tanks (USTs) or septic tanks, were detected in any of the areas surveyed. A copy of the Survey Report is provided in Appendix A.

3.2 Soil Boring and Sampling Procedures

On June 26, 2004, soil borings B1 through B15 were completed at the site at the locations indicated on Figure 3 through 5. Kehoe Testing and Engineering Inc., located in Huntington Beach, California, was retained by ATC to collect the soil samples using a Geoprobe® rig. Enviro-Chem, a state certified laboratory located in Pomona, California was retained by ATC to analyze the soil samples. Mr. David Baltazar, an ATC Technician, and Mr. David Hankins, an ATC Geologist was on site during the investigation activities to observe and document the field procedures, and to collect the appropriate soil and water samples. Mr. Bob Morse, Studio Supervisor, and Mr. Mark Pate of ATC were also on site to observe each of the sampling locations.

An inspection of the each of the areas to be investigated revealed no staining or surface expressions of environmental concern. Past historical usage of each of the areas was not evident.

The fifteen boreholes were located as follows:

- Soil borings B1, B2 and B3 were completed in the approximate vicinity of the former gasoline service station. Soil borings B1 and B2 were located in the alleyway that separates Building 35 from Pinot Restaurant. Boring B3 was located in the service driveway of Pinot Restaurant, just west of the back service door. All three borings were advanced with a limited-access Geoprobe drill rig. Soil borings B1 and B2 were advanced to a total depth of 26 feet below ground surface (bgs) and B3 to 21 feet. Please refer to Figure 3 for detailed soil boring locations, and Appendix B for soil boring logs.
- Soil Borings B4, B5, B6 and B7 were completed at the approximate location of the former machine shop and spray booth, at the location of Parking Structure A. Soil borings B4 and B6 were advanced near the northwest entrance to the parking structure. Borings B5 and B7 were advanced on the first

level (ground) of the parking structure. Soil borings B4, B5 and B6 were advanced to 26 feet bgs using a truck-mounted Geoprobe drill rig, while B7 was advanced to a depth of 21 feet using a limited-access Geoprobe rig. Please refer to Figure 4 for detailed soil boring locations, and Appendix B for soil boring logs.

- Soil Borings B8, B9, B10, and B11 were completed at the approximate location of the former auto repair and oil storage location. B8 was completed inside Building 27, near the south end, while borings B9, B10 and B11 were completed outside Building 27, approximately18 to 20 feet south of the building. All soil borings in this area were advanced to a depth of 26 feet bgs, using a truck mounted Geoprobe drill rig. Please refer to Figure 5 for detailed soil boring locations, and Appendix B for soil boring logs.
- Soil Borings B12, B13, B14, and B15 were completed at the approximate location of the former auto repair and gasoline pump location. All soil borings were completed to the south, southeast of building Support 9, and to the west of Building 27. All soil borings in this area were advanced to a depth of 26 feet bgs, using a truck mounted Geoprobe drill rig. Please refer to Figure 5 for detailed soil boring locations, and Appendix B for soil boring logs.

Soil samples were collected at depths of 5, 10, 15, 20 and 25 feet bgs in all soil borings with the exception of B3 and B7 that were only sampled to a maximum depth of 21 feet bgs. All soil samples were collected in acetate liners. Upon retrieval of the liner, the ends were sealed with Teflon sheets, followed by plastic end caps, labeled, and immediately placed in an ice-filled cooler. All soil samples were subsequently transported under chain-of-custody documentation to Enviro-Chem. The remaining soil was observed for soil type and described in accordance with the Unified Soil Classification System (ASTM D-2488), and to inspect the soil samples for staining and other indications of contamination. A photo-ionization detector (PID) was also used to monitor the soil samples for total volatile organic vapors. Geologic conditions and PID readings were recorded on the soil boring logs, which are provided in Appendix A.

Downhole sampling equipment was washed by Kehoe Testing in Alconox and double rinsed prior to re-using. Upon the completion of sample collection, each borehole was backfilled with bentonite grout and finished flush with grade with asphalt or concrete patch, to match the surrounding surface. Cuttings were not generated during this project.

Odorous soils, indicating the potential presence of hydrocarbons or chemicals, were encountered in soil borings B4, B6 and B7. The highest PID readings were found in borings B4, B6 and B7, which ranged from 215 parts per million (ppm) in B4 to 1750 ppm in B4. PID readings in soil borings B8 through B15 were not noted in the samples collected.

A total of three soil samples were analyzed from each boring. Samples that exhibited PID readings and/or odors were submitted for analysis. Borings that exhibited no PID readings, staining or odors were randomly selected in each borehole to cover all soil lithologies encountered in the area of investigation. A total of 45 soil samples were submitted for analysis.

Soil samples collected from borings B1, B2 and B3 were analyzed for TPH-gas using EPA Method 8015M and for BTEX using EPA Method 8021B. Samples collected from B4, B5, B6 and B7 were analyzed for VOCs using EPA Method 8260B, TPH-cc, and for metals by EPA Methods 6010B/7471A. One sample was also analyzed for Chromium VI (hexavalent chrome) by EPA Method 7196A. Soil samples collected from borings B8, B9, B10 and B11 were analyzed for TPH-cc and BTEX, while soil samples collected from B12, B13, B14 and B15 were analyzed for TPH-gas and BTEX (the samples,

B12-5', B12-15' and B12-25' were analyzed for TPH-cc, instead of TPH-gas). The laboratory analytical report is included in Appendix C.

4.0 RESULTS

4.1 Stratigraphy

In general, the site area is underlain with fine silty sand, clayey silt and silty clay to the total depth drilled of 26 feet bgs. A sandy layer was encountered in borings B2, B4 and B6 at a depth of approximately 17 feet and in B11 at approximately 12.5 feet and extending to the terminus in each of the borings.

4.2 Depth to Groundwater

Groundwater was not encountered during the drilling of the fifteen boreholes. The depth to groundwater beneath the vicinity of the site is estimated to be approximately 40-45 feet bgs, based on discussions with Studio Supervisor Bob Morse from past geotechnical and engineering studies completed at the site.

4.3 Analytical Results for Soil Samples

A total of 45 soil samples were collected from 15 boreholes, representing four different locations. The depths of the soil samples varied from 5 to 25 feet bgs. The sample locations are designated as B1 through B15, and the sample depths are designated after the sample location (i.e. B1-10 indicates the sample was collected from location B1 at a depth of 10 feet).

The analytical results for CAM 17 metals were compared to the California Environmental Protection Agency Region 9 Preliminary Remediation Goals (PRGs) for residential soil, dated October 2, 2002. PRGs have been developed for VOCs and metals. In addition to PRGs, the metal concentrations were also compared to Total Threshold Limit Concentration (TTLCs) and the Soluble Threshold Limit Concentrations (STLC). If a metal concentration exceeds its respective TTLC or STLC, then the soil sample would be classified as a California Hazardous Waste. Analyses of STLCs are completed only if the total metal concentration exceeds ten times the STLC concentration.

The analytical results for the soil samples are summarized below and in Table 1.

- TPH-gas was not detected in any of the soil samples**.**
- TPH-cc was not detected in any of the soil samples.
- BTEX was not detected in any of the soil samples.
- VOCs were not detected in any of the soil samples.
- Arsenic was the only metal which exceeded the PRGs. Arsenic was detected in three of the soil samples that exceeded the PRG. Sample B4-20 was found to contain arsenic at a concentration of 0.831 milligram per kilogram (mg/kg), in B5-15 at a concentration of 0.660 mg/kg and in B5-25 at a concentration of 0.624 mg/kg. These three samples exceed the PRG concentration of 0.39 mg/kg. Arsenic is typically present in California soils at concentrations higher than the PRG. The

background concentrations of arsenic in California range from 0.59 to 11 mg/kg (Bradford, et al, 1996, "Background Concentrations of Trace and Major Elements in California Soils", Kearney Foundation Special Report, UC-Riverside and Cal-EPA DTSC, March). The range of arsenic concentrations in the soil samples is likely due to the variability of native soils.

- The metal concentrations in the samples analyzed did not exceed the TTLCs, as shown on the analytical reports in Appendix C, and would not be classified as a California hazardous waste. The sample containing the highest Total Chromium, B7-5 (42.9 mg/kg) was also analyzed for Chromium VI (hexavalent chrome). Chromium VI was not detected in sample B7-5.

5.0 CONCLUSIONS

ATC completed a Phase II Subsurface Investigation at four locations located at the Sunset Grower Studios, located at 1438 North Gower Street, Hollywood, California. A total of fifteen soil borings were completed in the following areas: the approximate location of a former gasoline station, a former machine shop and spray booth, an auto repair and gasoline pump area, and an auto repair and oil storage area.

The analytical results of the subsurface investigation indicate the following:

- TPH-gas was not detected in any of the soil samples**.**
- TPH-cc was not detected in any of the soil samples.
- BTEX was not detected in any of the soil samples.
- VOCs were not detected in any of the soil samples.
- Arsenic was detected in three of the soil samples at concentrations exceeding the PRG for arsenic. However, arsenic is typically present in California soils at concentrations higher than the PRG, and the concentrations detected in the soil samples are likely due to variations in native soil conditions.
- Based on the results of the total metal concentrations, the soil samples collected would not be classified as California hazardous waste.

6.0 LIMITATIONS

Our professional services have been performed, our findings obtained, and our recommendations prepared in accordance with customary principles and practices in the fields of environmental science and engineering. This warranty is in lieu of all other warranties either expressed or implied. This company is not responsible for the independent conclusions, opinions, or recommendations made by others based on the records review, site inspection, field exploration, and laboratory test data presented in this report.

It should be noted that all surficial environmental assessments are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and site evaluation. For these types of evaluations, it is often necessary to use information prepared by others and ATC cannot be responsible for the accuracy of such information. In addition, the passage of time may result in a change in the environmental characteristics at this site and surrounding properties. This report does not warrant against future operations or conditions, nor does it warrant operations or conditions present of a type or at a location not investigated. This report is not a regulatory compliance audit and is not intended to satisfy the requirements of any state, federal, or local real estate transfer laws.

It must be noted that no investigation can absolutely rule out the existence of any hazardous materials at a given site. This assessment has been based upon prior site history, observable conditions, and the subsurface soil sampling described in this report. Existing hazardous materials and contaminants can escape detection using these methods.

Project Summary Table

Report Section	Acceptable	Routine Solution	Phase II	REC	Estimated Cost
Historical Review	Yes	Yes (1)		Yes	N/A (1)
Operational Activities	Yes				
Hazardous Materials / Petroleum Products	Yes				
Wastes	Yes				
Polychlorinated Biphenyls (PCBs)	Yes				
Asbestos-Containing Materials (ACM)	Yes				
Radon Gas	N/A				
Lead-Based Paint (LBP)	N/A				
Lead in Drinking Water	N/A				
Storage Tanks / Pipelines	Yes				
Surface Areas	Yes				
Mold	Yes				
Regulatory Review	Yes				
Adjacent Properties	Yes				

Conditions noted in the Project Summary Table are representative of the overall conditions of the property. There may be more detail on specific assessment components in the report text, therefore the Project Summary Table should not be used as a stand alone document. Costs depicted are for investigation/program development activities. Remediation costs, if required, will be identified as a result of the activities.

Footnotes:

(1) The review of the historical data identified the Project was historically used as a film processing laboratory from approximately 1918 until 2005. Various chemicals, including solvents, were used and stored on the site during that time. A subsurface soil and soil vapor assessment conducted in 2006 showed elevated levels of volatile organic compounds (VOCs) in soils at the Project (detailed in Section 6.7). Soil vapor extraction was conducted on the site for a year in 2008 which greatly reduced the levels of VOCs in the soil; however, VOCs remained above human health screening levels in one area. An Indoor Air Quality (IAQ) assessment for VOCs was conducted on the Project in 2009 to establish a current baseline for the Project building. The IAQ assessment detected select VOCs in representative areas of the site building; however, all buildings contain a large variety of chemical sources. The total VOC concentrations were below Permissible Exposure Limits (PELs) established by Cal-OSHA and the recommended American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Values (TLVs). Based on research studies, it was concluded that the levels of PCE detected would not likely cause irritation and discomfort to the building occupants, and do not present any indoor air quality concerns at this time. EMG recommends that periodic IAQ monitoring continue until contamination levels are below action levels in all three shallow vapor wells.

1 Certification

EMG has completed a Phase I Environmental Site Assessment of the property located at 6060 West Sunset Boulevard (the "Project") in Hollywood, California 90028. The assessment was performed at the Client's request using the methods and procedures consistent with good commercial and customary practice designed to conform with acceptable industry standards.

The independent conclusions represent our professional judgment based on information and data available to us during the course of this assignment. Factual information regarding operations, conditions, and test data provided by the Client or their representative has been assumed to be correct and complete. The conclusions presented are based on the data provided, observations, and conditions that existed on the date of the on-site visit.

In expressing the opinions stated in this report, EMG has exercised the degree of skill and care ordinarily exercised by a reasonable prudent environmental professional in the same community and in the same time frame given the same or similar facts and circumstances. Documentation and data provided by the Client, designated representatives of the Client or other interested third parties, or from the public domain, and referred to in the preparation of this assessment, have been used and referenced with the understanding that EMG assumes no responsibility or liability for their accuracy.

If you have any questions regarding this report, please contact the Senior Environmental Consultant listed on the Cover Page of this Report.

Written By: Kimberly Belka, Project Manager

Reviewed By:

Justin J. Arias
Technical Report Reviewer

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Project. I have developed and performed the all appropriate inquiries in conformance with the standard and practices set forth in 40 CFR Part 312.

1.1 Reliance

This report is exclusively for the use and benefit of the Client identified on the first page of this report. The purpose for which this report shall be used shall be limited to the use as stated in the contract between the client and EMG.

This report is not for the use or benefit of, nor may it be relied upon by any other person or entity, for any purpose without the advance written consent of EMG.

2.0 Executive Summary

EMG performed a Phase I Environmental Site Assessment, that included on-site observations of the accessible areas of the property located at 6060 West Sunset Boulevard (the "Project"), on March 8, 2010. The Project is located at in Hollywood, California 90028, and consists of approximately 0.24 acre.

The Project, originally constructed in 1918 through 1957, is currently a commercial office facility. Prior to the current use, the Project was a film developing studio. Properties in the general vicinity of the Project include commercial land uses.

The following summarizes the independent conclusions representing EMG's best professional judgment based on information and data available to us during the course of this assignment. Factual information regarding operations, conditions, and test data provided by the Client, owner, or their representative has been assumed to be correct and complete. Additionally, the conclusions presented are based on the conditions that existed at the time of the assessment.

The assessment was conducted utilizing generally accepted Phase I industry standards using the American Society for Testing and Materials (ASTM) Practice E 1527-05 and the Barclays Capital Real Estate Scope of Work.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of 6060 West Sunset Boulevard in Hollywood, Los Angeles, California 90028. Any exceptions to, or deletions from, this practice are described in Section 3 of this report. This assessment has revealed no evidence of Recognized Environmental Conditions (RECs) or Historic Recognized Environmental Conditions (HRECs) in connection with the Project, except for the following:

Historical Review (Section 6)

- Review of available historical data identified the Project was historically occupied by a film processing laboratory from approximately 1918 through 2005. Refer to the **Historical Review** heading in Section 2.1 for further discussion.

2.1 Findings and Conclusions

Historical Review

The review of the historical data identified the Project was historically used as a film processing laboratory from approximately 1918 until 2005. Various chemicals, including solvents, were used and stored on the site during that time. A subsurface soil and soil vapor assessment conducted in 2006 showed elevated levels of volatile organic compounds (VOCs) in soils at the Project (detailed in Section 6.7). Soil vapor extraction was conducted on the site for a year in 2008 which greatly reduced the levels of VOCs in the soil; however, VOCs remained above human health screening levels in one area. An Indoor Air Quality (IAQ) assessment for VOCs was conducted on the Project in 2009 to establish a current baseline for the Project building. The IAQ assessment detected select VOCs in representative areas of the site building; however, all buildings contain a large variety of chemical sources. The total VOC concentrations were below Permissible Exposure Limits (PELs) established by Cal-OSHA and the recommended American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Values (TLVs). Based on research studies, it was concluded that the levels of PCE detected would not likely cause irritation and discomfort to the building occupants, and do not present any indoor air quality concerns at this time. EMG recommends that periodic IAQ monitoring continue until contamination levels are below action levels in all three shallow vapor wells.

Operational Activities

EMG observed no circumstances of environmental concern associated with the operational activities at the Project. No further action or investigation is recommended regarding operational activities at the Project.

Hazardous Materials / Petroleum Products

No hazardous materials or petroleum products were observed at the Project. No further action or investigation is recommended regarding the use of hazardous materials or petroleum products at the Project.

Wastes

No wastes were observed at the Project. No further action or investigation is recommended regarding wastes at the Project.

Polychlorinated Biphenyls (PCBs)

No equipment with the potential to contain dielectric or hydraulic fluid was identified at the Project. No further action or investigation is recommended regarding PCBs at the Project.

Asbestos-Containing Materials (ACM)

Suspect ACM in the form of stucco was identified as part of the assessment were not sampled. This material is in good condition and should be sampled prior to repair, renovation, or demolition activities.

The basis for "suspect" determination is taken from the materials listed in Appendix G of the United States Environmental Protection Agency (USEPA) publication Managing Asbestos in Place (the "Green Book"). Therefore, all materials listed in the Green Book that were installed prior to 1989 are considered suspect with the exception of resilient floor tile, asbestos-cement board (transite), and roofing felt, which are considered suspect regardless of installation date (these materials continue to be manufactured and installed in the United States)-refer to Section 3 for further discussion.

Radon Gas

Radon gas was not addressed due to the non-residential use of the Project.

Lead-Based Paint (LBP)

LBP was not addressed due to the non-residential use of the Project.

Lead in Drinking Water

Lead in drinking water was not addressed based on the Scope of Work.

Storage Tanks / Pipelines

No evidence of storage tanks or pipelines (above or below ground) was identified. No further action or investigation is recommended regarding storage tanks or pipelines at the Project.

Surface Areas

No issues associated with surface areas were identified. No further action or investigation is recommended regarding surface areas at the Project.

Visual observation of the storm water system did not identify any abnormal accumulation of petroleum run-off or foreign material. No unusual blockages of the storm water control system were observed. No unusual ponding of storm waters was observed. No further action or investigation is recommended regarding storm water systems at the Project.

Mold

EMG performed a limited visual assessment for the presence of mold, conditions conducive to mold, and evidence of moisture in readily accessible interior areas of the Project. EMG did not note obvious visual indications of the presence of mold, conditions conducive to mold, or evidence of moisture in readily accessible interior areas of the Project. No further action or investigation is recommended regarding mold at the Project.

Regulatory Review

Based on review of the regulatory database report, a former Project tenant is listed on the RCRA-Generator database. The RCRA-Generator database is a listing of facilities that, due to the amount of hazardous waste generated, are required to register with the USEPA for tracking purposes and are not necessarily sites with reported contamination incidents. The Project is not reported as being non-compliant with the requirements of the RCRA regulations. Furthermore, the Project is not identified on any database which reports spills or releases. Considering the current regulatory status and the absence of reported releases, no further action or investigation is recommended regarding the regulatory review.

In addition, there are no off-site facilities anticipated to have negatively impacted the environmental integrity of the Project.

Adjacent Properties

EMG identified no current adjacent property uses that are anticipated to have a negative impact on the environmental integrity of the Project. No further action or investigation is recommended regarding the adjacent properties.

2.2 Recommendations

EMG recommends that periodic IAQ monitoring continue until contamination levels are below action levels in all three shallow vapor wells.

3 Survey Approach/Purpose

EMG conducted a Phase I Environmental Site Assessment of the Project that consisted of a walk-through observation of the accessible areas and interviews with facility personnel and local agency representatives.

The user informed EMG that the reason for the assessment is for financing purposes.

On-site activities and/or interviews were conducted by Ms. Kimberly Belka, EMG Project Manager, with:

- Mr. John Rippel, On-site Point of Contact (POC) and the Facility Electrician

A Pre-Survey Questionnaire was completed as a part of this assessment, which is included in the Appendix. The Questionnaire was completed with the Point of Contact. Information obtained from the Questionnaire has been used in the preparation of this report.

Areas accessed included:
- All areas of the building
- The roof
- The Project boundaries

Specific areas to which access was limited include the following:
- Pipe chases
- Behind walls

According to the Point of Contact, the areas not assessed were similar in construction and conditions to the areas assessed. The Point of Contact also stated that he/she is unaware of any practices in the unaccessed areas (such as the improper handling of hazardous materials or the generation of hazardous, medical, or regulated wastes) that would constitute a material threat or release to the environment, or a hazard to human health. Based on a review of tenant activities and interviews with knowledgeable personnel, it is unlikely that the operations in the unaccessed areas have had an adverse impact on the environmental integrity of the Project.

Weather conditions at the time of the Project assessment were partly cloudy, with temperatures in the low-60s (F) and light winds.

EMG reviewed available federal, state, and local records in an effort to identify sites of known or suspected hazardous waste activity located at or near the Project that could have an adverse impact on the Project. In an attempt to determine whether historical uses of the Project and surrounding area have had an environmental impact on the Project, EMG interviewed individuals knowledgeable about the Project and reviewed available pertinent records and documents. This assessment is based on the evaluation of the information gathered, laboratory analyses of samples collected (when required), and accessibility at the time of the assessment.

The purpose of this report is to provide the Client an assessment concerning environmental conditions (limited to those issues identified in the report) as they existed at the Project. The assessment was conducted utilizing generally accepted Phase I industry standards using the American Society for Testing and Materials (ASTM) Standard Practice E 1527-05 and the Barclays Capital Real Estate Scope of Work. The Scope of Work included an evaluation of:

- The Project history in an attempt to identify any possible ownership(s) and/or uses that would suggest an impact to the environmental integrity of the Project as identified through review of reasonably ascertainable standard historical sources.

- Physical characteristics of the Project as identified through review of reasonably ascertainable topographic wetlands, flood plain, soils, geology, and groundwater data.

- Current Project conditions (as applicable), including compliance with appropriate regulations as they pertain to the presence or absence of:- Facility storage tanks, drums, containers (above or below ground), etc.- Transformers and other electrical equipment which utilize fluid which may potentially contain PCBs- The use of hazardous materials/chemicals and petroleum products, and/or the generation, treatment, storage, or disposal of hazardous, regulated, or medical wastes

- An evaluation of information contained in programs such as the NPL, CERCLIS, SHWS, RCRIS, SWF, LUST, and other governmental information systems within specific search distances of the Project. This evaluation was performed to identify any sites that would have the potential to impact the environmental integrity of the Project.The regulatory agency report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The report is based on a radius search that focuses on both the Project and neighboring sites that might impact the Project. Neighboring sites listed in governmental environmental records are identified within a specific search distance. The search distance varies depending upon the particular government record being checked. The search is designed to meet the requirements of ASTM Standard E 1527-05. The information provided is assumed to be correct and complete.

- Visual observation of the adjacent properties to identify high-risk neighbors and the potential for known or suspected contamination to migrate onto the Project.

In addition, at the Client's request, the assessment included a screening approach for the potential existence of:

- Mold, including the identification of visible mold growth, conditions conducive for mold growth, and evidence of moisture in accessible areas of the Project. In addition, EMG interviewed Project personnel regarding any known or suspected mold contamination, water intrusion, or mildew like odor problems. Sampling was not performed as a part of this assessment. EMG notes that this assessment does not constitute a comprehensive mold survey of the Project, and the conclusions made are based solely on observable conditions in readily accessible interior areas of the Project on the assessment date.

- Asbestos, including the identification of all suspect materials in accessible areas (interior and exterior). The materials are considered suspect until tested and proven otherwise. Friable materials are those that can be easily crumbled or pulverized by hand pressure.

  This screening approach is not a comprehensive (i.e., AHERA-Style) asbestos survey, nor is it intended to fulfill the NESHAP requirements for demolition/renovation purposes, but is intended to identify the potential for an asbestos hazard in accessible areas. This screening is not intended to be used for demolition, abatement, renovation, or repair work.

  The basis for "suspect" determination is taken from the materials listed in Appendix G of the United States Environmental Protection Agency (USEPA) publication *Managing Asbestos in Plac*e (the "Green Book"). Therefore, all materials listed in the Green Book that were installed prior to 1989 are considered suspect with the exception of resilient floor tile, asbestos-cement board (transite), and roofing felt, which are considered suspect regardless of installation date (these materials continue to be manufactured and installed in the United States).

3.1 Data Gaps

Data gaps in information exist and are addressed in the appropriate sections of this report. However, because the data gaps were not determined to be material in identifying Recognized Environmental Conditions (RECs), they are not considered by ASTM standards to be *significant* and, therefore, are not individually addressed in this section.

4 User Provided Information

This Section documents whether the user reported to EMG information pursuant to the responsibilities described in Section 6 of the ASTM Standard E 1527-05.

EMG submitted a User Questionnaire to the user to assist the user and EMG in gathering information from the user that may be material to identifying RECs. A copy of the User Questionnaire is appended (Section 11).

Litigation

Question: *Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?*

Response: The user did not provide a response to this question or responded "Unknown/No Response". The lack of or inability to obtain this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Administrative Proceedings

Question: *Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?*

Response: The user did not provide a response to this question or responded "Unknown/No Response". The lack of or inability to obtain this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Notices From Governmental Entities

Question: *Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?*

Response: The user did not provide a response to this question or responded "Unknown/No Response". The lack of or inability to obtain this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Environmental Cleanup Liens

Question: *Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?*

Response: The user did not provide a response to this question or responded "Unknown/No Response". The lack of or inability to obtain this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Activity and Use Limitations

Question: *Are you aware of any Activity and Use Limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?*

Response: The user did not provide a response to this question or responded "Unknown/No Response". The lack of or inability to obtain this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Specialized Knowledge

Question: *As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?*

Response: The user did not provide a response to this question or responded "Unknown/No Response". The lack of or inability to obtain this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Relationship of Purchase Price

Question: *Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?*

Response: The user did not provide a response to this question or responded "Unknown/No Response". The lack of or inability to obtain this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Commonly Known Information

Question: *Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user:*

- *Do you know the past uses of the property?*
- *Do you know of specific chemicals that are present or once were present at the property?*
- *Do you know of spills or other chemical releases that have taken place at the property?*
- *Do you know of any environmental cleanups that have taken place at the property?*

Response: The user did not provide a response to this question or responded "Unknown/No Response". The lack of or inability to obtain this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Obvious Indicators of Contamination

Question: *As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?*

Response: The user did not provide a response to this question or responded "Unknown/No Response". The lack of or inability to obtain this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

Environmental Lien and AUL Review

The user did not engage EMG to review title and judicial records for environmental liens or Activity and Use Limitations (AULs) recorded against the Project. Furthermore, these documents were not provided to EMG for review. The lack of or inability to obtain this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a *significant* data gap.

5 Project Location/Description

The Project is located at 6060 West Sunset Boulevard in Hollywood, Los Angeles County, California 90028. The Project lands consist of approximately 0.24 acre.

5.1 Project Description

The Project is currently an unoccupied commercial office facility. The Project was constructed in 1918 through 1957 in four phases and is currently undergoing renovations. Renovations reportedly consisted of painting and removal of some of the stucco from the exterior, installing a new roof, and gutting and remodeling the interior. Project improvements consist of one structure.

Structural components of the building consists of a concrete slab-on-grade foundation; wood and concrete interior framing; CMU and stucco perimeter walls; and plywood and concrete floor decks. The building utilizes a flat-style roof with built-up roofing. The building has a partial basement consisting of one small room.

The Project is serviced by public water and sanitary sewer systems. The Project is supplied with water from the Los Angeles Department of Water and Power.
HVAC systems observed consisted of the following:

- Heat and air-conditioning are supplied to the Project from electric rooftop packaged units and from a split system with a roof-mounted heat pump and an electric furnace/air handling unit. Conditioned air is distributed via thermostatically controlled, ducted supply and return systems.

Urea formaldehyde foam insulation was not observed.

5.2 Miscellaneous Systems

- **Sump Pump** - One sump pump is located at the Project. The presence of this equipment is not anticipated to negatively impact the environmental integrity of the Project.

5.3 Environmental Setting

5.3.1 Topography

Review of the Los Angeles, California Topographic Quadrangle, published by the United States Geological Survey (USGS) and dated 1994, indicated the following:

- The Project has an average elevation of approximately 350 feet above mean sea level. Elevations do not vary significantly across the Project lands. The slope of the Project is estimated between nine and 30 percent in a southwesterly direction.

- Slope in the general area of the Project is to the south. The nearest surface water feature, Hollywood Reservoir, is located approximately one mile northwest of the Project.

- The Project is shown as improved with one outlined structure, interpreted to represent the current improvements at the Project.

A copy of the topographic map is included in Appendix C.

5.3.2 Wetlands

Review of National Wetlands Inventory (NWI) data provided by Environmental Data Resources (EDR), indicated the following:

- No wetland areas are indicated at the Project or adjacent properties.

A copy of the wetland map is included in Appendix C.

5.3.3 Floodplain

Review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency (FEMA) and dated December 2, 1980, indicated the following:

- The Project is located in Zone C, areas outside the 1-percent annual chance floodplain, areas of 1% annual chance sheet flow flooding where average depths are less than 1 foot, areas of 1% annual chance stream flooding where the contributing drainage area is less than 1 square mile, or areas protected from the 1% annual chance flood by levees. No Base Flood Elevations or depths are shown within this zone. Insurance purchase is not required in these zones.

A copy of the flood map is included in Appendix C.

5.3.4 Soils/Geology

Review of the United States Department of Agriculture Soil Conservation Service Soil Survey Geographic Database (SSURGO) data, indicated the following:

- The Project is located in an area comprised of two soil types known as Altamont and Diablo. The Altamont soil series is considered to be a well drained, clay textured soil with a depth of at least 39 inches. The Diablo soil series is considered to be a well drained, clay textured soil with a depth of at least 39 inches.

Review of the Geologic Map of California, Los Angeles Sheet, published by the California Department of Mines and Geology and dated 1969, indicated the following:

- The Project is located within an area consisting of of recent clay, silt, sand and gravel, poorly stratified to well stratified which includes alluvial fan, flood plain and stream bed deposits the Quaternary era.

5.3.5 Groundwater Hydrology

Review of the Water Resources Data Report for California, published by the California Department of Water Resources and dated 1985, indicated the following:

- The Project is located within the Los Angeles County Coastal Plain groundwater basin with estimated groundwater levels between 70 and 120 feet below ground surface (bgs).

Shallow groundwater flow is expected to follow the ground level slope of surface elevations. The direction of this flow at the Project is anticipated to be toward the southwest.

Estimated groundwater levels may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or dewatering operations.

6 Historical Review

Review of information available from the Los Angeles County Assessor Office indicated that the Project is shown as Assessor Parcel Number 5545-013-043.

A copy of the tax map is included in the Appendix C.

6.1 Chain of Title

Review of available ownership information did not identify any previous environmentally suspect ownership associated with the Project.

Review of information from the Los Angeles County Assessor Office identified the ownership information listed in the table below:

Ownership Information	
Owner	**Year Purchased**
SGS Realty II LLC	2007

6.2 Prior Use Interviews

EMG met with Mr. John Rippel, On-site Point of Contact (POC) and Facility Electrician, who was cooperative and provided information that appeared to be accurate based upon our subsequent site observations. It is EMG's opinion that the POC was knowledgeable about the Project and questions EMG posed during the interview process. According to the POC, the Project was developed in 1918 through 1957 into the current use. The POC was unaware of any prior uses of the Project. The POC has been associated with the Project since 2009.

6.3 Local and/or State Government Agency Record Review/Interviews

The following information was identified at the City of Los Angeles Building Department:

- Records dating back to the early 1900s are maintained by this department.
- This review indicated that the present building at the Project was built in 1918, 1927, 1955 and 1957. General building permits for the Project were on file, but did not reveal any information or condition that could impact the environmental integrity of the Project.
- No environmentally significant information was identified.

EMG submitted a written request for information to the Los Angeles County Fire Department. No response has been received to date. Any environmentally significant information will be provided upon receipt and review.

The following information was identified at the City of Los Angeles Planning Department:

- Review of the available zoning records indicates that the Project is currently zoned M1-1 for heavy manufacturing use.
- No environmentally significant information was identified.

6.4 Historical Maps

Historic Sanborn Maps:

Historic Sanborn maps are detailed scale drawings that show the location and use of buildings and structures that occupied a given area. EMG contacted Environmental Data Resources (EDR) in an attempt to determine if there were any historic Sanborn maps in the EDR Historic Map Collection covering the years 1867 to present. EMG's historic Sanborn map search results are discussed below.

Review of the 1919 historic Sanborn map indicated the following:

- **Project:** The Project is shown as developed with four structure. Notations on the map indicate it is a film lab. Vehicular access is available from the north.
- **Off-site:** The area north of the Project is shown as residential and vacant land. The area east of the Project is shown as offices, a studio and storage. The area south of the Project is shown as vacant land. The area west of the Project is shown as a gas station.

The 1950 historic Sanborn map differs from the previous historical map in that:

- **Project:** The Project is shown as developed with one structure. Notations on the map indicate the site is Hollywood Film Enterprises.
- **Off-site:** The area north of the Project is shown as offices, a restaurant and a store. The area east of the Project is shown as Scientific Films Inc. The area south of the Project is shown as film processing. The area west of the Project is shown as a restaurant and projection room.

The 1955 historic Sanborn map differs from the previous historical map in that:

- **Off-site:** The area east of the Project is shown as Terry Fairbanks Productions.

The 1957, 1960, 1961, 1962, 1966, 1968, 1969 and 1970 historic Sanborn maps differ from the previous historical map in that:

- **Off-site:** The area east of the Project is shown as a studio.

Copies of representative historic Sanborn maps are included in Appendix C.

Historic Topographic Maps:

Historic topographic maps show the location of buildings and structures that occupied a given area. EMG contacted Environmental Data Resources (EDR) in an attempt to determine if there were any historic topographic maps in the EDR Historic Map Collection. EMG's historic topographic map search results are discussed below.

Review of the 1966 and 1972 historic topographic maps indicated the following:

- **Project:** The Project is shown as developed with one building. Vehicular access is available from the north.
- **Off-site:** The area north of the Project is shown as high density development. The area east of the Project is shown as undeveloped. The area south of the Project is shown as commercial development. The area west of the Project is shown as commercial development.

The 1981 and 1994 historic topographic maps differ from the previous historical maps in that:

- **Off-site:** The area east of the Project is shown as commercial development.

Copies of representative historic topographic maps are included in Appendix C.

6.5 City Directories

EMG contacted EDR in an attempt to determine if there were any city directories available for the area of the Project. City directories have tenant listings by address and are researched at approximately five-year intervals, as available.

Project Listings:

This review revealed the following listings associated with the Project:

- **1924 to 1929** - The Project is listed as William Horsley Film Laboratories.
- **1933 to 1967** - The Project is listed as Hollywood Film Enterprises.

Adjacent Property Listings:

No environmentally significant listings were identified for adjacent properties.

6.6 Aerial Photography

EMG contacted EDR in an attempt to determine if there were any historic aerial photographs available for the area of the Project. EMG's historic aerial search results are discussed below.

Review of the 1928 and 1938 historic aerial photographs indicated the following:

- **Project:** The Project is shown as developed with one building. Vehicular access is available from the north.
- **Off-site:** The area north of the Project is shown as commercial and residential development. The area east of the Project is shown as commercial development. The area south of the Project is shown as commercial development. The area west of the Project is shown as commercial development.

The 1947, 1956, 1965, 1976, 1989, 1994, 2002 and 2005 historic aerial photographs differ from the previous aerial photographs in that:

- **Off-site:** The area north of the Project is shown as commercial development.

Copies of representative historic aerial photographs are included in Appendix C.

6.7 Previous Investigations

EMG was provided a copy of a previous Phase I Environmental Site Assessment report for the Project, prepared by California Environmental Geologists and Engineers, Inc. (CEGE) and dated August 2005. Pertinent information identified in that report is as follows:

- The Project was occupied by the current improvements at the time of the previous assessment; however, two additional parcels were included in this report.
- The Scope of Work for this previous assessment consisted of ASTM E 1527.
- The review of historical data identified that the site had been occupied by a film processing laboratory from 1918 through 2005.

- The review of operations at the Project identified that film processing was being conducted onsite which used various film processing chemicals and solvents.

- Hazardous materials used at the Project included film processing chemicals, silver recovery units and solvents.

- Project was not involved in the generation of hazardous, regulated, or medical waste. No environmental concerns were noted.

- Environmental sampling (lead paint, radon, asbestos, mold, etc.) was not performed.

- Approximately thirty aboveground storage tanks containing film processing chemicals were identified onsite. No evidence of underground storage tanks or pipelines was identified.

- The review of regulatory agency data identified that the Project was listed on the RCRA-Generator, HAZNET and FINDS databases. No environmental concerns were noted.

- CEGE recommended that a subsurface assessment in the form of soil and soil vapor sampling be conducted on the site to assess potential impacts from the long-term film processing activities conducted on the site.

EMG was provided a copy of a previous Phase II Subsurface Assessment report for the Project, prepared by CEGE and dated August 2006. Pertinent information identified in that report is as follows:

- The Project was occupied by the current improvements at the time of the previous assessment; however, this report also includes two additional parcels.

- The purpose of this Report was the evaluation of the historical film processing activities conducted on the Project from 1918 through 2005.

- The Scope of Work of this Report included the the placement of nine soil vapor probes to depths up to five feet bgs, the advancement of four hand-augered soils borings to depths up to five feet bgs, the advancement of three soil borings to depths up to 50 feet bgs, the placement of two temporary groundwater sampling points, and analysis of soil and groundwater samples.

- Detectable levels of VOCs were found in three of the soil vapor samples. Detectable levels of tetrachloroethene (PCE), trichloroethane (TCA) and dichloromethane (DCA) were found in three of the soils borings. The groundwater samples showed low levels of chloroform and acetone.

- The highest concentrations of PCE, TCA and DCA were found in the northwest corner of the film development room. Lower concentrations of PCE and TCA were found in the eastern end of the maintenance shop and the south end of the film development room, near two boilers.

- CEGE concluded that the presence of PCE in the shallow soils in the northwest portion of the film development room was an indication of a small onsite release. Impacts to groundwater from this release were not found.

- CEGE recommended additional assessment of the northwest portion of the film development room to assess the vertical and lateral extent in of the impacts in the area.

- The levels of PCE in the soil vapor samples exceeded the recommended screening levels for shallow soils gas for commercial and residential properties, and CEGE recommended removal of the identified pockets of PCE impacted soils. CEGE also recommended that a site specific risk assessment analysis be performed to predict future indoor air quality and that follow-up sampling be conducted after removal of the PCE-impacted soils.

EMG was provided a copy of a previous Phase I Environmental Site Assessment report for the Project, prepared by Citadel Environmental Services, Inc. (CES) and dated September 12, 2007. Pertinent information identified in that report is as follows:

- The Project was occupied by the current improvements at the time of the previous assessment.

- The Scope of Work for this previous assessment consisted of ASTM E 1527.

- The review of historical data identified that the site had been used for film processing operations from the 1910s until approximately 2006. CES reviewed two previous reports for the Project prepared by California Environmental Geologists and Engineers, Inc. (CEGE), including a Phase I report completed in August 2005 and a Phase II Subsurface assessment completed in August 2006. The CEGE Phase I reported identified recognized environmental conditions associated with the Project in connection with the site's usage as a film processing facility and the use of chlorinated solvents from at least 1918 through 2005. As such, CEGE recommended a subsurface assessment of soil and soil vapor at the site. The subsurface investigation consisted of nine soil vapor points located throughout the processing and chemical storage areas, four hand-augered soil borings, and three deep soil borings, three of which encountered groundwater. The soil vapor samples were analyzed for volatile organic compounds (VOCs) and mixed gases. The soil samples from the hand-augered and deep soil borings were analyzed for VOCs, semi-volatile organic compounds (SVOCs) and pH. Additionally, select soil samples were analyzed for Title 22 Metals. The soil vapor samples detected the presence of tetrachloroethene (PCE) in three locations (in the film development room, near the boilers and in an off-site location). Soil samples from two locations identified slightly elevated levels of silver, and soil samples from three locations detected concentrations of PCE (in the film development room and immediately to the west and south of the film development room). Additionally, low levels of trichloroethane (TCA) and dichloromethane (DCA) were identified in soil vapor and soil samples from the film development room. Neither of the groundwater samples contained concentrations of PCE, TCA or DCA. CEGE concluded that the presence of PCE in the soil vapor and soils in the northwest portion of the film development room indicated a small-scale release and recommended further investigation. CEGE stated that the soil vapor levels of PCE exceeded the California Human Health Screening Level and recommended removal of the soils in this area. Additionally, CEGE recommended that a site specific risk assessment analysis be performed to predict future indoor air quality and that follow-up sampling be conducted after removal of the PCE-impacted soils.

- The review of operations at the Project did not identify any significant environmental concerns.

- The Project was unoccupied at the time of the CES assessment; however, the site had previously been occupied by a film processing laboratory and CES identified partially filled containers located in the film processing, chemical mixing and former chemical storage areas. CES indicated that the concrete floor in these areas were heavily stained, and in some areas showed extensive deposits and deterioration. Additionally, CES noted the odor of film processing chemicals in the film processing, chemical mixing and former chemical storage areas.

- The Project was unoccupied and not involved in the generation of hazardous, regulated, or medical waste. No environmental concerns were noted.

- Environmental sampling (lead paint, radon, asbestos, mold, etc.) was not performed.

- No evidence of underground storage tanks or pipelines was identified; however, multiple aboveground storage tanks were identified in the the former film processing and chemical mixing areas.

- The review of regulatory agency data identified that the Project was listed on the RCRA-Generator, HAZNET and FINDS databases. The EDR report indicated that waste streams generated at the site included photoprocessing chemicals, metal sludge, alkaline solution, inorganic solid waste, halogenated organic compounds, and surplus inorganics. The generator was listed as Hollywood Film and Video and no violations were identified. No environmental concerns were noted.

- CES recommended that the ASTs observed onsite be properly decontaminated and removed from the site. CES recommended that all remaining chemical containers and associated equipment be properly removed from the site. CES recommended that if future demolition or renovation plans for the site occur, asbestos and lead-based paint (LBP) surveys should be performed and any identified ACM or LBP should be removed in accordance with regulatory agency requirements. Based on the historical site usage and onsite observations, CES performed an additional subsurface assessment of the site (discussed below).

EMG was provided a copy of a previous Phase II Environmental Site Assessment report for the Project, prepared by Citadel Environmental Services, Inc. (CES) and dated September 12, 2007. Pertinent information identified in that report is as follows:

- The Project was occupied by the current improvements at the time of the previous assessment.

- Nine soil borings were advanced on the southern portion of the Project, three in the chemical mixing room and six in the film development room.

- Soil samples were submitted for laboratory analysis of Title 22 Metals utilizing EPA Method 6010B/7470. Results indicated elevated concentrations of chromium and copper in the sample collected from boring M-1, located in the chemical mixing room. Laboratory analysis of the remaining soil samples indicates that metals concentrations reported were either below the method detection limit or below 10% of the Total Threshold Limit Concentrations (TTLCs). Additional analysis of the soil sample from boring M-1 indicated that the levels of chromium and copper do not require disposal as a State of California or Federal regulated waste.

- On August 31, 2007, Citadel completed a soil vapor survey across the southern portion of the Project using 12 soil vapor sampling points. The samples were analyzed for VOCs using a laboratory-grade Hewlett Packard Model 5890 Series II gas chromatograph equipped with a Hewlett Packard Model 5971 Mass Spectra Detector (GC/MS) in an on-site mobile laboratory. Results indicated PCE was the primary contaminant and was detected in all but two of the sampling points (SV-83107-01 and SV-83107-04), with concentrations ranging up to 111.3 ug/l or ppb in sample SV-83107-08. This probe was located immediately adjacent to probe SV7 of the previous investigation, which had the highest PCE concentration at the time with 34 ug/l. These probes are located in the northwest corner of the film developing room, where the highest concentrations of PCE were also detected in soil. The area just south of the film developing room also had modest PCE concentrations with 22.8 and 32 ug/l detected in probes SV-83107-11 and SV-83107-12. Two of the samples also had detectable levels of TCA, with a maximum of 28.4 ug/l in SV-83107-08. No additional VOCs were detected in any of the samples.

- Following the collection of soil vapor samples, the results were modeled with respect to prospective building occupancy. The Johnson and Ettinger model is a one-dimensional analytical solution to diffusive and convective transport of volatile chemical vapor into indoor spaces made available by the EPA. The model provides a theoretical description of vapor intrusion from the subsurface into an indoor air space and relates vapor concentrations at a subsurface source to potential vapor concentrations in an enclosed air space. The results of the model provide an assessment of the potential exposure risk to humans in the structure, using accepted risk factors. Results indicated the building had a calculated carcinogen risk of 6.7E-06 for PCE. This exceeds the standard by almost seven times. The hazard quotient for non-carcinogenic TCA is 2.5E-04, well below the threshold value. These results indicate that additional analysis of the indoor air quality is warranted. Additionally, these combined concerns (health risk due to vapor intrusion and the protection of groundwater resources) suggest that remediation of the existing contaminant mass is likely necessary.

- Based upon the findings of the soil vapor investigation and model, Citadel proposed the collection and analysis of indoor air samples from the site for VOCs. Air sampling was conducted at representative locations on all levels (basement - third floor). An ambient sample was also collected at an exterior location to serve as a background for comparison. All sampling was conducted in accordance with standard industry sampling practices. Select Volatile Organic Compounds (VOCs) were detected in the representative areas sampled at the subject facility. The VOC concentrations for any individual compound were below Permissible Exposure Limits (PELs) established by the California Occupational Safety and Health Administration (Cal-OSHA), Recommended Exposure Limits (RELs) established by the National Institute of Occupational Safety and Health (NIOSH) and Threshold Limit Values (TLVs) recommended by the American Conference of Governmental Industrial Hygienists (ACGIH). NIOSH states that if there is no listed REL for a known or suspected carcinogen, respiratory protection should be utilized at "any detectable concentration". This information pertains to Tetrachloroethane and Chloromethane only.

- Based upon the findings of the soil vapor investigation and model, Citadel proposed the collection and analysis of indoor air samples from the site for VOCs. Air sampling was conducted at representative locations on all levels (basement - third floor). An ambient sample was also collected at an exterior location to serve as a background for comparison. All sampling was conducted in accordance with standard industry sampling practices. Select Volatile Organic Compounds (VOCs) were detected in the representative areas sampled at the subject facility. The VOC concentrations for any individual compound were below Permissible Exposure Limits (PELs) established by the California Occupational Safety and Health Administration (Cal-OSHA), Recommended Exposure Limits (RELs) established by the National Institute of Occupational Safety and Health (NIOSH) and Threshold Limit Values (TLVs) recommended by the American Conference of Governmental Industrial Hygienists (ACGIH). NIOSH states

that if there is no listed REL for a known or suspected carcinogen, respiratory protection should be utilized at "any detectable concentration". This information pertains to Tetrachloroethane and Chloromethane only.

- Based on the assessment activities performed, limited soil contamination in the form of VOCs and metals existed below areas of the site buildings. However, based on the indoor air quality survey completed, the buildings will be safe to occupy once the initial safety and exposure concerns have been eliminated. In order to address the identified soil contamination below the site, Citadel recommended using in-situ remediation. The most cost-effective solution would involve vapor extraction using a series of wells installed in and around the film development room (near borings SB1 and HA4 and vapor probes SV7 and SV-83107-08). Citadel estimates that operation of the system would be required for at least 3 months to reduce the levels of VOC in the soil and soil vapor to acceptable levels. After completion of remediation, a few additional soil vapor and soil samples could be collected to define the lowered vapor intrusion risk and soil concentrations.

EMG was provided a copy of a previous Limited Indoor Air Quality Investigation report for the Project, prepared by Citadel Environmental Services, Inc. (CES) and dated October 14, 2009. Pertinent information identified in that report is as follows:

- The Project was occupied by the current improvements at the time of the previous assessment.

- The Scope of Work of this Report included conducting air sampling for VOCs at representative locations on all levels of the building, and submitting the samples for analysis. An ambient air sample was also collected at an exterior location to serve as a background reference.

- The report indicated that CES performed an indoor air quality assessment (IAQ) for VOCs in September 2007 following a soil vapor assessment of the site in August 2007 (discussed above). The results of the air monitoring and sampling were within regulatory limits and guidelines established by the California Occupational Safety and Health Administration (Cal-OSHA). In July 2008, CES began operation of a vapor extraction system on the site in an effort to mitigate the levels of PCE contamination identified in previous investigations. Vapor extraction was conducted using three shallow vapor wells, VE1 through VE3. Initially, wells VE1 and VE3 produced the highest concentration levels of PCE. By the second quarter of 2008, the PCE concentrations in wells VE1 and VE2 had been greatly reduced, and the operation of the system focused on well VE3. By the end of the second quarter of 2008, the PCE levels had significantly declined in all of the wells. However, the progress slowed and although the system continued to operate for a year, there were only slight changes in the levels detected in VE3, and this well maintained a PCE concentration which exceeded the current California Department of Toxic Substances Control's (DTSC's) California Human Health Screening Levels (CHHSLs) for soil gas. CES recommended an additional IAQ assessment be conducted in order to establish a more current baseline for the site building.

- Select VOCs were detected in representative areas of the site building; however, all buildings contain a large variety of chemical sources. The total VOC concentrations were below Permissible Exposure Limits (PELs) established by Cal-OSHA and the recommended American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Values (TLVs). Based on research studies, CES concluded that the levels of PCE detected would not likely cause irritation and discomfort to the building occupants, and did not present any indoor air quality concerns at this time.

6.8 Plans and Specifications

As-built/renovation-site plans, drawings, or specifications were not available for review at the Project or local agency offices visited for this assessment.

6.9 Historical Summary

Based upon historical review, the previous Project use includes film development since 1918; however, the Project is currently an unoccupied facility.

As previously indicated, the Project was historically used as a film processing laboratory from approximately 1918 until 2005. Various chemicals, including solvents, were used and stored on the site during that time. A subsurface soil and soil vapor assessment conducted in 2006 showed elevated levels of volatile organic compounds (VOCs) in soils at the Project. Soil vapor extraction was conducted on the site for a year in 2008 which greatly reduced the levels of VOCs in the soil; however, VOCs remained above human health screening levels in one area. An Indoor Air Quality assessment (IAQ) for VOCs was conducted on the Project in 2009 to establish a current baseline for the Project building. The IAQ assessment detected select VOCs in representative areas of the site building; however, all buildings contain a large variety of chemical sources. The total VOC concentrations were below Permissible Exposure Limits (PELs) established by Cal-OSHA and the recommended American Conference of Governmental Industrial Hygienists (ACGIH) Threshold Limit Values (TLVs). Based on research studies, it was concluded that the levels of PCE detected would not likely cause irritation and discomfort to the building occupants, and do not present any indoor air quality concerns at this time.

EMG was not able to obtain the Project history in five year intervals. This data failure represents a data gap; however, this data gap is not considered a *significant* data gap and therefore is not addressed in Section 3.1.

7 Project Reconnaissance

7.1 Operational Activities/Noteworthy Tenants

The Project is currently a commercial office facility. No noteworthy tenants occupy the Project and no environmentally significant operations are conducted at the Project. Considering the operations assessed at the Project, no environmental permits, registrations, or notifications appear to be required.

7.2 Hazardous Materials/Petroleum Products Storage and Handling

Visual observation for the use and/or storage of hazardous materials and petroleum products was performed. The Project is currently a vacant facility, and no hazardous materials or petroleum products were observed at the Project.

7.3 Waste Generation, Treatment, Storage and Disposal

Visual observation for the generation, treatment, storage, and disposal of wastes was performed. The Project is currently a vacant facility, and no wastes were observed.

7.4 Polychlorinated Biphenyls (PCBs)

The Project is supplied with underground secondary electrical service from off-site transformers.

7.5 Asbestos-Containing Materials (ACM)

As-built/renovation-site plans, drawings, or specifications were not available for review at the Project or local agency offices visited for this assessment.

Suspect non-friable ACM in the form of stucco was identified. This material was observed to be in good condition.

The basis for "suspect" determination is taken from the materials listed in Appendix G of the United States Environmental Protection Agency (USEPA) publication Managing Asbestos in Place (the "Green Book"). Therefore, all materials listed in the Green Book that were installed prior to 1989 are considered suspect with the exception of

resilient floor tile, asbestos-cement board (transite), and roofing felt, which are considered suspect regardless of installation date (these materials continue to be manufactured and installed in the United States)-refer to Section 3 for further discussion.

7.6 Radon Gas

Radon gas was not addressed due to the non-residential use of the Project.

7.7 Lead-Based Paint (LBP)

LBP was not addressed due to the non-residential use of the Project.

7.8 Lead in Drinking Water

Lead-in-Drinking Water was not addressed based on the Scope of Work.

7.9 Facility Storage Tanks and Pipelines (above or below ground)

Visual observations for manways, vent pipes, fill connections, concrete pads, and saw cuts in paved areas did not identify any surface connections or disturbances that would indicate the potential for an underground storage tank (UST) installation at the Project.

No aboveground storage tanks (ASTs) were observed at the Project.

The manways and surface caps observed at the Project were for site services (i.e., domestic water, storm water, and sanitary sewer system).

Review of currently installed mechanical equipment, and historical information concerning mechanical equipment, identified the use of alternate fuel sources (i.e., electric, natural gas), thereby eliminating the need for on-site fuel storage at the Project.

Based on the review of the state list of registered USTs, no USTs are registered for the Project.

Interviews with persons knowledgeable of the Project did not identify any evidence of current or historic storage tanks (above or below ground) at the Project.

Visual observations did not identify any surface markings indicating the existence of subsurface product pipelines at the Project.

7.10 Surface Areas

Observations during EMG's assessment identified that the Project lands are graded to provide slope and swale to direct storm water away from the on-site building. Surface water flows in a southerly direction.

Visual observation of the Project and adjacent properties did not identify any evidence of distressed vegetation, staining, or surface migration of petroleum releases or hazardous materials onto or off the Project.

Visual observations did not identify any evidence of on-site surface impoundment facilities, pits, dry wells, or dumping of apparent hazardous substances at the Project.

Visual observations did not identify any surface water features, including lagoons, ponds, or other bodies of water at the Project.

Storm water from the roof areas is directed to underground stormwater drains via downspouts.

7.11 Mold

EMG performed a limited visual assessment for the presence of mold, conditions conducive to mold, and evidence of moisture in readily accessible interior areas of the Project. EMG did not note obvious visual indications of the presence of mold, conditions conducive to mold, or evidence of moisture in readily accessible interior areas of the Project.

This assessment does not constitute a comprehensive mold survey of the Project. The reported observations and conclusions are based solely on interviews with Project personnel and conditions as observed in readily accessible interior areas of the Project on the assessment date.

8 Interviews

8.1 Key Site Manager

A Pre-Survey Questionnaire was completed as a part of this assessment, which is included in the Appendices. The Questionnaire was completed with the Key Site Manager, Mr. John Rippel. Information obtained from the Questionnaire has been used in the preparation of this report.

The Key Site Manager indicated he is not aware of any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products, or notices from any governmental entity regarding possible violation of environmental laws, or possible liability related to hazardous substances or petroleum products.

8.2 Owner

EMG submitted an Owner Questionnaire to the user in an effort to identify the owner of the Project that could be interviewed to provide information regarding proceedings involving the Project. The Owner Questionnaire was completed by Mr. Bob Morse, designated representative of the owner. Mr. Morse indicated that he was not aware of any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products, or notices from any governmental entity regarding possible violation of environmental laws, or possible liability related to hazardous substances or petroleum products.

8.3 User

EMG submitted a User Questionnaire in an effort to obtain information regarding proceedings involving the Project. Refer to Section 4, for discussion of the User Questionnaire.

8.4 Occupants

The Project is an unoccupied facility. Therefore no occupants were interviewed.

The lack of or inability to obtain this information represents a data gap. However, based on the findings of this report, the absence of this information is not considered a significant data gap.

8.5 Past Owners, Operators, and Occupants

No past owners, operators, or occupants of the Project who would likely have material information regarding the potential for contamination at the Project were identified.

8.6 Owners or Occupants of Adjacent or Nearby Properties

The Project was not an abandoned property with evidence of unauthorized uses or uncontrolled access; therefore, interviews were not conducted with adjacent or nearby property owners or occupants.

8.7 Interviews with Others

The following individuals were interviewed as part of this assessment:

Name and Title	Organization	Phone Number
Mr. John Rippel, Facility Electrician	6060 West Sunset Boulevard	323.997.7736
File review	Los Angeles Building Department	213.473.3231
Zoning map	Los Angeles Planning Department	213.473.3231
Written request	Los Angeles Fire Department	213.482-7115

9 Regulatory Database Review

EMG obtained a regulatory database report from Environmental Data Resources, Inc. (EDR) in an effort to determine if the Project is a listed regulatory site and whether there are any mappable regulatory database sites. The regulatory database search was run in accordance with the Scope of Work for this assessment. In addition, EMG reviewed the unmappable sites in the database report, cross-referencing addresses and site names. Unmappable sites are environmental risk sites that cannot be plotted with confidence, but can be located by zip code or city name. In general, a site cannot be geocoded because of inaccurate or missing location information in the record provided by the agency. A copy of the regulatory database report is included in the Appendices, Section 10.

Based on review of the regulatory database report, and by cross-referencing name, address, and zip code, EMG concludes that the Project is a listed site. Details regarding any listings for the Project are discussed after the table below.

The search for sites listed on regulatory databases in the area surrounding the Project identified various sites within the specified search radii. Adjacent and nearby off-site listed properties of significant environmental concern are discussed after the table below. Based on various factors such as distance, topographic relations, estimated groundwater flow direction, and/or regulatory status, the remaining off-site listed properties are not anticipated to have adversely impacted the environmental integrity of the Project.

The following are some of the databases which were reviewed for this assessment. See the appended regulatory database report for a complete listing of databases reviewed for this assessment:

- **NPL** - The National Priority List (NPL) is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program.

- **Proposed NPL** - A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

- **NPL LIENS** - Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability.

- **Delisted NPL** - In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

- **CERCLIS** - The Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) contains sites that are either proposed to or on the National Priorities List (NPL) and sites that are in the screening and assessment phase for possible inclusion on the NPL.

- **CERCLIS-NFRAP** - CERCLIS No Further Remedial Action Planned (NFRAP) sites are sites that the EPA has determined no further steps will be taken to list on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

- **CORRACTS** - Corrective Action Report (CORRACTS) identifies hazardous waste handlers with RCRA corrective action activity.

- **RCRA-TSDF** - Resource Conservation and Recovery Act (RCRA) - Transporters, Storage and Disposal (TSDF) database includes information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by the RCRA.

- **RCRA-LQG** - The RCRA - Large Quantity Generators (LQG) database includes information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

- **RCRA-SQG** - The RCRA - Small Quantity Generators (SQG) database includes information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. Small quantity generators generate between 100 kg and 1,000 kg of hazardous waste per month.

- **RCRA-CESQG** - The RCRA - Conditionally Exempt Small Quantity Generators (CESQG) database includes information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. Conditionally exempt small quantity generators generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

- **US ENG CONTROLS** - A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

- **US INST CONTROL** - A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

- **ERNS** - The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances.

- **FINDS** - The Facility Index System (FINDS) contains both facility information and 'pointers' to other sources that contain more detail.
- **SWF** - The Solid Waste Facilities (SWF) database contains an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps.

- **LUST** - Leaking underground storage tank (LUST) records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

- **INDIAN LUST** - Leaking Underground Storage Tanks (LUST) on Indian Land.

- **UST** - Registered Underground Storage Tank (UST) facilities.

- **AST** - Registered Aboveground Storage Tank (AST) facilities.

- **INDIAN UST** - Registered Underground Storage Tank (UST) facilities on Indian Land.

- **INDIAN VCP** - A listing of voluntary cleanup priority (VCP) sites located on Indian Land.

- **US BROWNFIELDS** - This database contains information on brownfield sites.

9.1 Regulatory Database Site Discussion

Hollywood Film and Video
6060 Sunset Boulevard
Distance: Not Applicable (the Project)
Direction: Not Applicable (the Project)
Databases Listed On: RCRA-Generator

The RCRA-Generator database is a listing of facilities that are required to register for tracking purposes due to the amount of hazardous waste generated and are not necessarily sites with reported contamination incidents. According to the RCRA-Generator database, the facility is a small quantity generator of hazardous wastes with no violations reported. Furthermore, the Project is not identified on any database that reports spills or releases, such as the LUST database. Based on the fact that the Project is currently a vacant facility and the information discussed above, no further action or investigation is recommended regarding the regulatory database listing for the Project.

Sunset Gower Studios
1438 North Gower Street
Distance: Adjacent
Direction: West
Databases Listed On: RCRA-Generator

The RCRA-Generator database is a listing of facilities that are required to register for tracking purposes due to the amount of hazardous waste generated and are not necessarily sites with reported contamination incidents. According to the RCRA-Generator database, the facility is a small quantity generator of hazardous wastes with no violations reported. Furthermore, this facility is not identified on any database that reports spills or releases, such as the LUST database. Based on the current regulatory status and lack of any reported releases, this site is not anticipated to have adversely impacted the environmental integrity of the Project.

The above discussion includes any listings for the Project or adjacent sites. Approximately 72 additional sites are listed on the regulatory database report. Due to the urban setting of the Project and the large number of identified listings, a detailed discussion of each listing is not practical. Based on the proximity of these sites, there is a potential the Project has been impacted. However, assessment of the Project does not indicate that the Project would be investigated as a source of this contamination since there were no historic or current activities identified at the Project that could lead to this type of contamination. In addition, there does not appear to be an immediate health risk to the occupants of the Project since the Project is serviced by public water and sewer systems. Therefore, based on this information, no action or investigation is recommended at this time. However, EMG recommends that the Project be closely monitored by a qualified environmental consultant during any future redevelopment activities and any subsurface equipment and/or contamination identified should be properly removed and remediated in accordance with all applicable Federal, State, and local regulations. This is standard practice during construction activities and therefore an associated cost estimate is not applicable.

10 Adjacent Properties

The general vicinity of the Project consists of commercial land uses. The following adjacent properties were identified:

- The property is bordered to the north by Sunset Boulevard. Farther north are a strip mall, Complete Post Inc. (6097 Sunset Boulevard), and Siren Studios (6063 Sunset Boulevard).
- The property is bordered to the south by Sunset Gower Studios (6040 Sunset Boulevard).
- The property is bordered to the east by Ocean Way Studios (6050 Sunset Boulevard).
- The property is bordered to the west by La Vida restaurant and Sunset Gower Studios.

The adjacent property use to the west was identified on the RCRA-Generator database. More information regarding this site is included in the Regulatory Review discussion (Section 9). Based on observations and available regulatory information, the remaining adjacent property uses are not anticipated to adversely impact the environmental integrity of the Project.

Questionnaires

KEY SITE MANAGER PRE-SURVEY QUESTIONNAIRE

Date: 03/08/2010
Name of person completing questionnaire: Mr. John Rippel
Company Name: Hudson
Association with the property: Facility electrician
Length of association with property: 1 year
Phone Number: 323.997.7736
Property Name/Address: 6060 West Sunset Boulevard, Hollywood, California 90028
EMG Project Number: 92438.10R-008.135

Directions: Please answer all questions to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response. Additional details necessary to explain any yes or unknown responses should be provided in the "Comments" column.
Note: U/NR indicates "Unknown" or "No Response", and "N/A" indicates not applicable.

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
1	Is the Project used for an industrial use?		X		
1B	Are any adjoining properties used for an industrial use?		X		
2a	To the best of your knowledge, has the Project been used for an industrial use in the past?		X		
2b	To the best of your knowledge, has any adjoining properties been used for an industrial use in the past?		X		
3a	Is the Project used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?		X		
3b	Is any adjoining property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?		X		
4a	To the best of your knowledge, has the Project been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?			X	
4b	To the best of your knowledge, has any adjoining property been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?			X	
5a	Are there currently any automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers of greater than five gallons in volume or fifty gallons in the aggregate, stored on or used at the Project?		X		
5b	To the best of your knowledge, have there been previously any automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers of greater than five gallons in volume or fifty gallons in the aggregate, stored on or used at the Project?		X		
6a	Are there currently any industrial drums (typically 55 gallon) or sacks of chemicals located on the Project?		X		
6b	To the best of your knowledge, have there been previously any industrial drums (typically 55 gallon) or sacks of chemicals located on the Project?		X		
7a	Are there currently any groundwater monitoring wells or other groundwater wells (i.e., potable drinking water wells) located on the Project?		X		
7b	To the best of your knowledge, have there been previously any groundwater monitoring wells or other groundwater wells (i.e., potable drinking water wells) located on the Project?		X		

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
8a	Has fill dirt been brought onto the Project which originated from a contaminated site?		X		
8b	Has fill dirt been brought onto the Project which is of an unknown origin?		X		
9a	Are there currently any pits, ponds or lagoons located on the Project in connection with waste treatment or waste disposal?		X		
9b	To the best of your knowledge, have there been previously any pits, ponds or lagoons located on the Project in connection with waste treatment or waste disposal?		X		
10a	Is there currently, any stained soil on the Project?		X		
10b	To the best of your knowledge, has there been previously any stained soil on the Project?		X		
11a	Are there currently any registered or unregistered storage tanks (above or underground) located on the Project?		X		
11b	To the best of your knowledge, have there been previously any registered or unregistered storage tanks (above or underground) located on the Project?		X		
12a	Are there currently any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the Project or adjacent to any structure located on the Project?		X		
12b	To the best of your knowledge, have there been previously any vent pipes, fill pipes or access ways indicating a fill pipe protruding from the ground on the Project or adjacent to any structure located on the Project?		X		
13a	Are there currently any flooring, drains, or walls located at the Project that are stained by substances other than water or are emitting foul odors?		X		
13b	To the best of your knowledge, have there been previously any flooring, drains, or walls located at the Project that are stained by substances other than water or are emitting foul odors?		X		
14a	If the Project is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system?				NA
14b	If the Project is served by a private well or non-public water system, has the well been designated as contaminated by any government environmental/health agency?				NA
15a	Have you been informed of the past existence of hazardous substances or petroleum products with respect to the Project or any facility located on the Project?		X		
15b	Have you been informed of the current existence of hazardous substances or petroleum products with respect to the Project or any facility located on the Project?		X		
16a	Are there any environmental liens or governmental notification relating to past or current violations of environmental laws with respect to the Project or any facility located on the Project?		X		
16b	Have you been informed of the past existence of environmental violations with respect to the Project or any facility located on the Project?		X		
16c	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances of petroleum products in, on or from the property?		X		
16d	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?		X		

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
16e	Are you aware of any notices from any governmental entity regarding any possible violation or environmental laws or possible liability relating to hazardous substances or petroleum products?		X		
17	Have there been any environmental site assessments of the Project that indicated the presence of hazardous substances or petroleum products on, or contamination of, the Project or recommended further assessment of the Project?		X		
18	Does the Project discharge waste water on or adjacent to the project, other than storm water, into a storm water sewer system?		X		
19	Does the Project discharge waste water on or adjacent to the project, other than storm water, or into a sanitary system?		X		
20	Have any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the Project?		X		
21	Is there a transformer, capacitor or any hydraulic equipment for which there are any records indicating the presence of PCBs?		X		
22	Is there now or has there ever been any asbestos-containing materials (ACM), in any application, on the Project?		X		
23	Has there ever been any ACM testing conducted on the Project?	X			
24	Is there an asbestos Operations and Maintenance (O&M) program in place at the Project?		X		
25	Is there now or has there ever been any lead-based paint (LBP) applications on the Project?			X	
26	Has there ever been LBP testing conducted on the Project?		X		
27	Is there a Lead Paint Operations and Maintenance (O&M) Program in place at the Project?		X		
28	Has the water at the Project ever been tested for lead?			X	
29	Has Radon testing ever been conducted at the Project?			X	
30	Are there any other Operations and Maintenance (O&M) programs in place that we should be made aware of?		X		
31	Is the Project or any portion of the Project located or involved in any environmentally sensitive areas (i.e., wetlands, coastal barrier resource areas, coastal barrier improvement act areas, flood plains, endangered species, etc.)?		X		
32	Do you know or suspect that mold was or is present in the building(s) or HVAC system? - If "Yes", proceed to question #33. - If "No"", skip question #33 and proceed to question #34.		X		
33	Are there reliable procedures that specify the actions (i.e. operations and maintenance) to be taken to prevent and/or respond to mold or mold producing problems?		X		
34	Is there a mold Operations and Maintenance (O&M) program in place at the Project?		X		
35	Is the HVAC system inspected at least annually?	X			
36	Have identified HVAC problems been corrected in a timely manner?	X			
37	Is there now, or has there ever been evidence of mold or mildew present at the building(s)? If so, when?		X		
38	Is there now, or has there ever been any water damage in the building(s), whether from flooding, plumbing, roof leaks, or other sources? If so, when?		X		
39	Has there ever been any sort of Indoor Air Quality (IAQ) or mold testing conducted in the building(s)?		X

USER QUESTIONNAIRE

EMG has been retained to conduct a Phase I Environmental Site Assessment (ESA) of the following property. The Phase I ESA will involve site observations, interviews, and a review of available documentation. To ensure the success of the assessment, and in accordance with the ASTM 05 Scope of Work for this assessment, which documents certain User responsibilities, we are submitting this questionnaire to help you meet those responsibilities. Please complete this questionnaire and return via email or by fax to 410-785-6220 (within one business day of receipt).

1	Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property?				
2	Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the property?				
3	Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?				
4	Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?				
5	Are you aware of any Activity and Use Limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?				
6	As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?				
7	Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?				
8	Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user				
8a	Do you know the past uses of the property?				
8b	Do you know of specific chemicals that are present or once were present at the property?				

QUESTION		RESPONSE			COMMENTS
		Y	N	U/NR	
8c	Do you know of spills or other chemical releases that have taken place at the property?				
8d	Do you know of any environmental cleanups that have taken place at the property?				
9	As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?				

OWNER QUESTIONNAIRE

EMG has been retained to conduct a Phase I Environmental Site Assessment (ESA) of the following property. The Phase I ESA will involve site observations, interviews, and a review of available documentation. To ensure the success of the assessment, and in accordance with the ASTM 05 Scope of Work for this assessment we are required to ask the following questions to the Owner or Owner representative. Please complete this questionnaire and return via email or by fax to 410-785-6220 (within one business day of receipt).

Date:	02/25/2010
Name of person completing questionnaire:	Mr. Bob Morse
Company:	Hudson
Length of association with property:	4 years
Phone Number:	323.997.7739
Property Name/Address:	6060 West Sunset Boulevard, Hollywood, California 90028
EMG Project Number:	92438.10R-008.135
Please check one:	Owner Representative

Directions: Please answer all questions to the best of your knowledge and in good faith. Mark the column corresponding to the appropriate response. Additional details necessary to explain any yes or unknown responses should be provided in the "Comments" column.
Note: U/NR indicates "Unknown" or "No Response", and "N/A" indicates not applicable.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 01/13/2010 has revealed that there is 1 RCRA-LQG site within approximately 0.125 miles of the target property.

Site	Address	Dist / Dir	Map ID	Page
HOLLYWOOD PALLADIUM	***6215 W SUNSET BLVD***	***0 - 1/8 (0.109 mi.) W***	***I39***	***38***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 01/13/2010 has revealed that there are 5 RCRA-SQG sites within approximately 0.125 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 02/08/2010 has revealed that there are 8 ENVIROSTOR sites within approximately 1 mile of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, and dated 12/22/2009 has revealed that there is 1 DRYCLEANERS site within approximately 0.125 miles of the target property.

EDR Proprietary Records

EDR Historical Auto Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there are 26 EDR Historical Auto Stations sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

SUNSET GOWER STUDIOS (Continued) **1010562264**

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Summary:
Waste code: D001

HOLLYWOOD FILM AND VIDEO (Continued) **1000857091**

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Completed Document Type:	Supplemental Site Investigation Report
Completed Date:	2003-07-24 00:00:00
Comments:	approved.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	2001-12-12 00:00:00
Comments:	Approximately 136 cubic yards of soil were removed. Based on confirmation sampling, the estimated mean for surface soil based on 95% UCL was 0.860 mg/kg and for subsurface 1.91 mg/kg. Based on this, residual arsenic levels are below the cleanup goal.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Workplan
Completed Date:	2001-12-07 00:00:00
Comments:	RAW/CEQA - DTSC approved the Removal Action Workplan for the removal of arsenic contaminated soil. CEQA completed.

CENTRAL LOS ANGELES HS #1 AKA METROMEDIA (Continued) **S107736102**

Comments: DTSC has determined that all appropriate response actions have been completed, that all acceptable engineering practices were implemented and that no further removal/remedial action is necessary, specific only to the removal around the underground storage tank. Additional sampling will be conducted post- demolition near on-site hydraulic elevators and residential structures. For Arsenic only. FA for hydraulic elevators and lead

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/01/2009
Date Data Arrived at EDR: 01/14/2010
Date Made Active in Reports: 02/18/2010
Number of Days to Update: 35

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/01/2009

Next Scheduled EDR Contact: 04/26/2010
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/01/2009
Date Data Arrived at EDR: 01/14/2010

Next Scheduled EDR Contact: 04/26/2010
Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 06/23/2009

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 01/13/2010

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 01/13/2010
Date Data Arrived at EDR: 01/15/2010
Date Made Active in Reports: 02/18/2010
Number of Days to Update: 34

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 01/13/2010
Date Data Arrived at EDR: 01/15/2010
Date Made Active in Reports: 02/18/2010
Number of Days to Update: 34

Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Last EDR Contact: 12/10/2009
Next Scheduled EDR Contact: 03/29/2010
Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 10/01/2009

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 08/19/2009
Date Data Arrived at EDR: 12/29/2009

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007
Date Data Arrived at EDR: 08/26/2009
Date Made Active in Reports: 09/11/2009
Number of Days to Update: 16

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

SUNSET GOWER STUDIOS
1448 NORTH GOWER STREET
LOS ANGELES, CA 90028

TARGET PROPERTY COORDINATES

Latitude (North):	34.09660 - 34° 5' 47.8''
Longitude (West):	118.3212 - 118° 19' 16.3''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	378121.5
UTM Y (Meters):	3773460.0

USGS TOPOGRAPHIC MAP

Target Property Map:	34118-A3 HOLLYWOOD, CA
Most Recent Revision:	1994

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06037C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/2 - 1 Mile SW	SW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Miocene
Code:	Tm *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

2009 Enhancements to EDR City Directory Abstract

New for 2009, the EDR City Directory Abstract has been enhanced with additional information and features. These enhancements will make your city directory research process more efficient, flexible, and insightful than ever before. The enhancements will improve the options for selecting adjoining properties, and will speed up your review of the report.

City Directory Report. Three important enhancements have been made to the EDR City Directory Abstract:

1. *Executive Summary.* The report begins with an Executive Summary that lists the sources consulted in the preparation of the report. Where available, a parcel map is also provided within the report, showing the locations of properties researched.

2. *Page Images.* Where available, the actual page source images will be included in the Appendix, so that you can review them for information that may provide additional insight. EDR has copyright permission to include these images.

3. *Findings Listed by Location.* Another useful enhancement is that findings are now grouped by address. This will significantly reduce the time you need to review your abstracts. Findings are provided under each property address, listed in reverse chronological order and referencing the source for each entry.

Options for Selecting Adjoining Properties. Ensuring that the right adjoining property addresses are searched is one of the biggest challenges that environmental professionals face when conducting city directory historical research. EDR's new enhancements make it easier for you to meet this challenge. Now, when you place an order for the EDR City Directory Abstract, you have the following choices for determining which addresses should be researched.

1. *You Select Addresses and EDR Selects Addresses.* Use the "Add Another Address" feature to specify the addresses you want researched. Your selections will be supplemented by addresses selected by EDR researchers using our established research methods. Where available, a digital map will be shown, indicating property lines overlaid on a color aerial photo and their corresponding addresses. Simply use the address list below the map to check off which properties shown on the map you want to include. You may also select other addresses using the "Add Another Address" feature at the bottom of the list.

2. *EDR Selects Addresses.* Choose this method if you want EDR's researchers to select the addresses to be researched for you, using our established research methods.

3. *You Select Addresses.* Use this method for research based solely on the addresses you select or enter into the system.

4. *Hold City Directory Research Option.* If you choose to select your own adjoining addresses, you may pause production of your EDR City Directory Abstract report until you have had a chance to look at your other EDR reports and sources. Sources for property addresses include: your Certified Sanborn Map Report may show you the location of property addresses; the new EDR Property Tax Map Report may show the location of property addresses; and your field research can supplement these sources with additional address information. To use this capability, simply click "Hold City Directory research" box under "Other Options" at the bottom of the page. Once you have determined what addresses you want researched, go to your EDR Order Status page, select the EDR City Directory Abstract, and enter the addresses and submit for production.

Questions? Contact your EDR representative at 800-352-0050. For more information about all of EDR's 2009 report and service enhancements, visit www.edrnet.com/2009enhancements

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2006. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

Draft - For Discussion Purposes Only

Appendix G:

Resumes

CHRISTOPHER J. BABLIN, P.G., CPG

Senior Environmental Consultant-Capital Markets Region

Education

- Bachelor of Arts, Geology, Concentration in Environmental Science, State University of New York (SUNY), College at Cortland
- Geology-related coursework-University of Albany

Project Experience

- Hospitality Centers, International – Mr. Bablin managed a portfolio of 15 international hospitality assets (hotels) located in Canada, Mexico, Bermuda, and Barbados. Mr. Bablin researched international environmental regulations and standards in these countries, and apply them to various issues. Mr. Bablin evaluated these issues, made recommendations, discussed the issues with the client and various subcontractors, and proposed Phase II Subsurface Investigations accordingly.
- Skilled Nursing Centers, National – Mr. Bablin managed a portfolio of 144 skilled nursing center assets throughout the US. As part of his duties, Mr. Bablin prepared the Project's report master document, reviewed daily tracking reports, communicated issues with the client, and provided overall management to the project.
- Retail Strip Centers, National – Mr. Bablin managed a portfolio of 157 retail strip center assets throughout the US. As part of his duties, Mr. Bablin prepared the Project's report master document, reviewed daily tracking reports, communicated issues with the client, and provided overall management to the project. Many of the assets had issues with current and former dry cleaners. Mr. Bablin evaluated these issues, made recommendations, discussed the issues with the client and various subcontractors, and proposed Phase II Subsurface Investigations accordingly.

Industry Tenure

- Environmental: 1989
- EMG: May 2005

Related Experience

- Sr. Project Geologist, HRP Associates, 1997-2005. Performed numerous Phase I and Phase II ESAs in a variety of commercial, industrial settings.
- Staff Geologist, O'Brien and Gere Engineers, Inc., 1994-97.
- Staff Geologist, Environmental Hydrogeology Corporation, 1989-1994

Industry Experience

- Retail
- Housing
- Gasoline Service Stations
- Small Industrial Warehouses
- Dry Cleaners
- Brownfield Investigations
- RI/FS investigations
- Water Supply investigations

Active Licenses/Registrations

- OSHA Certified, and subsequent refreshers (1990-present)
- Professional Geologist, Commonwealth of Pennsylvania (#PG003935)
- Certified Professional Geologist, American Institute of Professional Geologists (CPG #10831)
- New York State Licensed Asbestos inspector and management planner (Certificate #98-18247)

Regional Location

- Albany, New York

JUSTIN ARIAS

Technical Report Reviewer

Education

- Bachelor of Science, Natural Resources and Environmental Sciences, University of Illinois, 2003

Project Experience

- ***Gasoline Service Station, Chicago, IL –*** Mr. Arias performed a Phase I Environmental Assessment for an existing gasoline service station. The service station had a documented Leaking Underground Storage Tank (LUST) Incident. A Phase II Subsurface Investigation was recommended and implemented by Mr. Arias. Levels were reported and the Underground Storage Tanks (USTs) and contaminated soil were removed.

- ***Retail Strip Center, Naperville, IL –*** Mr. Arias performed a Phase I Environmental Assessment for an existing strip center, which included an on-site dry cleaner. The dry cleaner had documented staining outside of the rear entrance. A Phase II Subsurface Investigation was recommended and implemented by Mr. Arias. Levels were reported and the appropriate cleanup monitoring was implemented.

- ***Industrial Building, Chicago, IL –*** Mr. Arias performed a Phase I Environmental Assessment for a 70,000 square foot industrial building. Mr. Arias' duties included the review of numerous prior reports and documentation, a review of historical information, and on-site activities. Historical research identified the former use of the property as an oil refining facility which formerly housed a number of USTs and bulk storage tanks. Mr. Arias' expertise and recommendations were highly valued by the client.

- ***Taxi Company, Chicago, IL*** – Mr. Arias conducted a Phase I Environmental Assessment at this three acre site, which included a review of historical information and on-site activities. This investigation identified a number on-site USTs, associated with a former on-site taxi company whose operations included repair, maintenance, and refueling. Identified on site were hazardous and regulated wastes and asbestos. Several areas of concern were identified and Phase II Subsurface Investigation, Asbestos Sampling, and Geotechnical Survey were subsequently recommended.

Re: CITADEL Project No. 5113.1039.1
Phase I Environmental Site Assessment Report and Limited Asbestos and Lead Paint Surveys
6050 Sunset Boulevard
Los Angeles, California 90028

Dear Mr. Barton:

Citadel Environmental Services, Inc. is pleased to provide you and Hudson Pacific Properties, LP (HPP) with this Phase I Environmental Site Assessment and Limited Asbestos and Lead Paint Survey Report for the above-referenced location.

The Phase I Environmental Site Assessment Report was conducted for HPP in accordance with Citadel's Proposal 5113.1039.P, dated November 8, 2011, and a mutually agreed upon scope of work.

If, after your review, you have any questions or require additional information, please do not hesitate to telephone me at the Citadel Office in San Jose at 408.573.6905.

Sincerely,
CITADEL ENVIRONMENTAL SERVICES, INC.

EXECUTIVE SUMMARY

Citadel Environmental Services, Inc. (Citadel) was contracted by Hudson Pacific Properties, L.P. (client) to perform a Phase I Environmental Site Assessment (Phase I ESA) and Limited Asbestos and Lead Paint Surveys at the property located at 6050 Sunset Boulevard, in the City of Los Angeles, County of Los Angeles, California; hereinafter referred to as the "Site."

The Site inspection focused on general site conditions, on-site hazardous materials (use and storage), hazardous waste (generation, storage, and disposal), the presence of surface impoundments, underground and/or aboveground storage tanks (USTs and ASTs), the use of hydraulically operated equipment, and the presence of asbestos containing materials, lead-containing paint and on-site power transformers.

The Site is located at the southwest corner of the intersection of Sunset Boulevard and Beachwood Drive in a densely developed urban area. The Site is located adjoining the Sunset Gower Studios within close proximity to major transportation points, as well as shopping and entertainment areas along Sunset Boulevard.

The Site consists of a rectangular lot of approximately 18,126 square feet, comprised of a two-story concrete block and steel building constructed in 1917. The parcel is identified by the Los Angeles County Assessor's Parcel Number 5545-013-051. The Site is currently occupied by a recording studio and offices. Previous occupancy uses have consisted of businesses related to the film and music industry, including use as a stage for television and for voice recordings. In general, the Site appeared to be well maintained and the building/ground conditions observed were good.

During the course of the Phase I ESA, Citadel inspected the site for chemical and hazardous waste storage and handling practices. At the time of the inspection, the on-site building was occupied by Oceanway Recording studios and offices. No evidence for the historical use, generation, storage or disposal of chemical or hazardous waste was observed. No medical, radiological or photo-developing wastes were observed or reported during the site reconnaissance.

Citadel conducted a limited asbestos survey of the on-site building. Mr. Lloyd Tangunan, a Certified Asbestos Consultant with Citadel identified suspect materials to be sampled. The suspect materials were grouped into homogenous areas and collected. The samples were delivered to a state-certified laboratory and analyzed for asbestos content. Based on the analytical results, the laboratory reported the presence of asbestos in select 9x9 vinyl floor tiles (VFT) found on the 1st and 2nd floors, 12 x12 VFT from the 2nd floor, floor tile mastic, vinyl sheet flooring on the 1st floor and several roofing materials.

A lead-containing paint (LCP) survey was conducted by Citadel. No historical documentation relative to lead-containing paint on the site was reviewed during the course of this assessment. Based on the original age of the current on-site buildings, there was a potential for the presence of lead-based paint. All painted surfaces were observed to be in fair to good condition at the time of the survey. Paint chip samples were collected of interior painted surfaces and exterior stucco. The samples were delivered to a state-certified laboratory for analysis of lead. Based on the results, the laboratory reported that paint chips collected from the interior concrete walls of the 2nd floor echo studio was reported above the regulatory level of 0.05% lead by weight, and is classified as a LBP. The paint chips collected

from exterior stucco and interior beams were reported to contain lead and are classified as a LCP.

The historical records reviewed included aerial photographs, Sanborn Fire Insurance Maps, city telephone directories, building permits, and other sources. A review of these resources indicates that the Site was first developed in 1917, with subsequent build-outs in the early 1930's. The neighboring properties surrounding the Site along Sunset Boulevard, Gower and Beachwood Streets appear to have been developed during the same time period. Properties across Sunset Boulevard to the north were primarily residential into the 1960's. Historic use of the Site vicinity appears to have been primarily related to the entertainment industry, listed as a Studio in 1919 and then various production companies until becoming a Columbia Pictures Property through the 1970's. Adjacent properties to the east, west and south appear to have had similar occupancies and uses during these time periods.

No visual indicators of current USTs or above-ground storage tanks (AST's) were identified during the site reconnaissance. The Los Angeles Fire Department (LAFD) has not responded to our request for information at this time. Any response from the LAFD will be forwarded once received.

The neighboring properties identified on federal and state environmental lists do not represent an immediate environmental concern to the site, based on their distance, current regulatory status (Case Closed) and/or direction hydrogeologically down or cross gradient from the Site.

Citadel has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-05 and the All Appropriate Inquiries (AAI) Rule published in 40 CFR Part 312, of the property identified as 6050 Sunset Boulevard in the City of Los Angeles, County of Los Angeles, California. Any exceptions to, or deletions from, this practice are described in the Scope of Services section of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the aforementioned property, and no recommendations or response actions are warranted, with the exception of the appropriate removal of the ACMs and LBP/LCPs on-site.

1.0 INTRODUCTION

Citadel Environmental Services, Inc. (Citadel) was contracted by Hudson Pacific Properties, L.P. (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 6050 Sunset Boulevard in the City of Los Angeles, County of Los Angeles, California; hereinafter referred to as the "Site."

1.1 Purpose

The purpose of the Phase I ESA was to review past and present land use practices and to evaluate the presence, or likely presence, of any hazardous substances or petroleum products that have been discharged into the property's structure, ground, groundwater, or surface water. This qualitative assessment was accomplished by review of current and readily available information regarding past and current land use for indications of the manufacture, generation, use, storage and/or disposal of hazardous substances at the site. A site visit was also conducted to observe existing site conditions. This report provides the results of the Phase I ESA performed.

1.2 Involved Parties

The involved party(s) in this study, to the best of our knowledge, is Hudson Pacific Properties, L.P.

1.3 Scope of Services

This Phase I ESA was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-05 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The scope of services for this assessment consisted of the following:

- Performed a site inspection to verify current site conditions, and check for visible evidence of previously disposed and/or currently present hazardous waste, surface contamination, underground and above ground storage tanks (USTs/ASTs), suspect polychlorinated biphenyls (PCBs), and other potential environmental hazards.

- Conducted a visual survey of adjacent properties and immediate vicinity to determine if any nearby property use posed a significant environmental threat to the Site.

- Reviewed currently and readily available documents, including maps, aerial photographs, governmental databases of known hazardous waste sites and underground tanks, other consultant reports (if any), fire insurance maps, and other accessible records.

- Consulted with appropriate governmental agencies having jurisdiction relative to past history of the Site, complaints or incidents in the immediate area, and permits that may have been issued.

- Collected bulk material and paint chip samples for analysis of asbestos and lead content, respectively.

- Prepared a report, inclusive of our findings and recommendations, with applicable illustrations and documentation.

The scope of services outlined above is generally considered sufficient to properly assess the subject site based on the data search, reasonably ascertainable documents, and site inspection.

2.0 GENERAL SITE CHARACTERISTICS

2.1 Location

The Site is located at the southwest corner of the intersection of Sunset Boulevard and Beachwood Drive in a densely developed urban area. The Site is located adjoining the Sunset Gower Studios within close proximity to major transportation points, as well as shopping and entertainment areas along Sunset Boulevard.

The Site consists of a rectangular lot of approximately 16,554 square feet, comprised of a two-story concrete block and steel building constructed in 1917. The parcel is identified by the Los Angeles County Assessor's Parcel Number 5545-013-051. The Site is currently occupied by a recording studio and offices. In general, the Site appeared to be well maintained and the building/ground conditions observed were good.

According to the U.S. Geological Survey (USGS) Hollywood, Quadrangle (7.5 Minute Series), dated 1994, the Site is at an elevation of approximately 357 feet above mean sea level (AMSL). The site is located at approximate coordinates of 33°55' 03" North Latitude and 118° 19' 16" West Longitude. The site property and surrounding vicinity slope moderately to the south.

2.2 Site Description

The Site consists of a nearly square lot of approximately 16,554 square feet, comprised of a two-story concrete block and steel building constructed in 1917, and built-out to its current size of approximately 18,126 square feet of office and production areas in 1932. The roof area is covered with a built-up roofing system over a wood deck. Previous occupancy uses have consisted of businesses related to the film and music industry, including use as a stage for television and for voice recordings. In general, the Site appeared to be well maintained and the building/ground conditions observed were good.

The roof areas are covered with rolled composite roofing materials. The majority of the mechanical equipment for the building is located on the roof. Rooftop mechanical equipment for the building consists of smaller air conditioning units.

A site plan is included in the report as Figure 2 in Appendix A. Photographs of the site are included as Appendix B.

2.3 Adjacent Properties

The Site is bound to the north Sunset Boulevard, north of which are several multi-level mixed use properties consisting of retail and office; a parking lot and local convenience stores. The Site is bound to the east by Beachwood Drive, east of which is a mixed-use area of entertainment, office and commercial/retail spaces. The Site is bound to the south by office, and entertainment properties that abut the Site building. The Site is bound to the west by mixed-use occupancies, beyond which is Gower Street.

Based upon Citadel's observations and the information provided in the environmental database report, current operations at the surrounding properties do not appear to represent a current environmental concern to the Site. Photographs depicting adjacent property conditions can be found in Appendix B.

2.4 Utilities

Gas and electrical service are provided to the Site by the Los Angeles Department of Water and Power. Sewer service is supplied to the site by the City of Los Angeles. General rubbish (non-hazardous) is removed from the site on a regular basis by a public waste hauler.

3.0 ENVIRONMENTAL SETTING

3.1 Physical Site Characteristics

Based upon the National Geodetic Vertical Datum (NGVD) of 1929, the site is at an elevation of approximately 357 AMSL. Regional topography in the area of the site slopes moderately to the south-southwest. The surface drainage is east to west along Sunset Boulevard and north to south along Beachwood Drive.

3.2 Geologic Conditions and Soils

The subject site is located in the Peninsular Ranges Geomorphic Province of Southern California. The Peninsular Ranges are a series of northwest-southeast trending ranges separated by subparallel longitudinal valleys. The Peninsular Ranges are bounded on the east by the Mojave Desert, on the north by the Transverse Ranges (e.g., Santa Monica Mountains) and extend to the south into lower California. Within the Peninsular Ranges, the Subject Property is located in the Torrance Plain of the Los Angeles Basin. The Los Angeles Basin is underlain by thousands of feet of alluvium and associated recent deposits of Pleistocene age. Many of these deposits are water-bearing (aquifers) and the many physiographic features of the basin play major roles in the occurrence of groundwater in the area of the subject site.

The soils in the site area have been classified by the U.S. Department of Agriculture (USDA) Soil Conservation Service (SCS) as "Urban Land". This classification for soil does not define any specific soil qualities, such as soil type, depth, permeability, or drainage.

3.3 Groundwater/Hydrogeological Conditions

Precise groundwater information for the site area is unavailable, due to the absence of groundwater monitoring or production wells on the site. However, based on local well information obtained from the State of California Regional Water Quality Control Board, via their GeoTracker website, depth to regional groundwater in the area of the site is generally estimated at a minimum of 18 to 30 feet below ground surface (bgs), with a flow gradient toward the south-southwest. Groundwater occurrence, depth and flow direction can be influenced by fluctuations in precipitation, pumping and other seasonal factors.

3.4 Wetlands and Flood Zone

According to the U.S. Department of the Interior, Los Angeles, California, National Wetlands Inventory Map, there are no designated wetlands on-site or within a 1.0-mile radius of the site. According to the EDR report, no flood zone information was available.

4.0 SITE RECONNAISSANCE

Citadel representative Mr. Lloyd Tangunan conducted the Phase I ESA inspection on November 15, 2011, including the site reconnaissance and perimeter survey of the surrounding properties. Mr. Mark Drollinger conducted the historical and regulatory research and served as the project manager. The site reconnaissance included observations at the Site. The reconnaissance also included observations of exterior portions of neighboring properties from public right of ways.

The findings of the site inspection are presented in the following sections:

4.1 On-Site Storage Tanks

No visual indicators of current underground storage tanks (USTs) were identified during the site reconnaissance. The City of Los Angeles Fire Department (LAFD) reported no permitted USTs in response to an inquiry by Citadel.

4.2 Identified Hazardous Materials

Citadel inspected the Site for chemical and hazardous waste storage and handling practices. At the time of the inspection, the Site building was occupied and used as recording studio and offices. No cleaning equipment, chemical storage, or evidence of use or spills was observed during the site reconnaissance.

4.3 Asbestos Containing Materials

Citadel conducted a limited asbestos survey of the on-site building. Mr. Lloyd Tangunan, a Certified Asbestos Consultant with Citadel identified suspect materials to be sampled. The suspect materials were grouped into homogenous areas and collected. The samples were delivered to a state-certified laboratory and analyzed for asbestos content. Based on the analytical results, the laboratory reported the presence of asbestos in select 9x9 vinyl floor tiles (VFT) found on the 1st and 2nd floors, 12 x12 VFT from the 2nd floor, floor tile mastic, vinyl sheet flooring on the 1st floor and several roofing materials. Citadel recommends that the asbestos-containing materials (ACM's) found during the survey be

removed by a licensed and qualified asbestos removal company in accordance with applicable regulations.

Documentation of our survey methodologies and results is provided as a separate report.

4.4 Lead Paints

A lead-containing paint (LCP) survey was conducted by Citadel. No historical documentation relative to lead-containing paint on the site was reviewed during the course of this assessment. Based on the original age of the current on-site buildings, there was a potential for the presence of lead-based paint. All painted surfaces were observed to be in fair to good condition at the time of the survey. Paint chip samples were collected of interior painted surfaces and exterior stucco. The samples were delivered to a state-certified laboratory for analysis of lead. Based on the results, the laboratory reported that paint chips collected from the interior concrete walls of the 2nd floor echo studio was reported above the regulatory level of 0.05% lead by weight, and is classified as a LBP. The paint chips collected from exterior stucco and interior beams were reported to contain lead and are classified as a LCP. Citadel recommends that the LCP materials found during the survey be removed by a licensed and qualified LCP removal company in accordance with applicable regulations.

Documentation of our survey methodologies and results is provided as a separate report.

4.5 Polychlorinated Biphenyls

Typical sources of polychlorinated biphenyls (PCBs) include electrical transformer cooling oils, fluorescent light fixture ballasts and hydraulic oil. In 1976, the U.S. EPA banned the manufacture and sale of polychlorinated biphenyl (PCB)-containing transformers. Prior to this date, transformers were frequently filled with a dielectric fluid containing PCB-laden oil. By 1985, the US EPA required that commercial property owners with transformers containing more than 500 parts per million (ppm) PCBs must register the transformer with the local fire department, provide exterior labeling, and remove combustible materials within 5.0 meters (40 Code of Federal Regulations 761.30: "Fire Rule").

No oil-filled transformers were observed on-site during the site reconnaissance.

PCBs may also be found in capacitors and fluorescent lighting unit ballasts. At the time of the Site inspection, the fluorescent lighting ballasts were inaccessible for inspection. Given the age of the structure and that fluorescent fixtures have been in long-term use, PCBs are unlikely to be used at this property. However, if upon inspection during replacement and routine maintenance, if ballast labels do not include the statement “No PCBs”, the ballast(s) should be disposed of as PCB-containing waste.

4.6 Pits, Ponds, and Lagoons

No pits, ponds, or lagoons were visually observed during the site reconnaissance.

4.7 Septic Tanks and Cesspools

No septic tanks or cesspools were visually observed during the site reconnaissance.

4.8 Wells, Cisterns and Sumps

No wells, cisterns or sumps were visually observed during the site reconnaissance.

4.9 Wastewater Interceptors / Grease Interceptors

No waste water interceptors or grease interceptors were visually observed during the site reconnaissance.

4.10 Drinking Water

The Site is supplied with municipal drinking water by the Los Angeles Department of Water and Power.

4.11 Radon

The California Bureau of Mines and Geology and the Department of Health Services (DHS) participated in the United States EPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states in the country. Thirty-four (34) states had participated by 1990. The interim results published by the DHS in 1993 indicate that in Los Angeles County, which is in Region 9 of the survey, an average concentration of radon was 0.6. pCi/l (pico curies of activity per liter of air). A total of 182 homes in Region 9 were surveyed. Based on the results of this survey, DHS predicted that approximately 0.5% of homes in Region 9 will have radon concentrations over the EPA action level of 4.0 picoCuries per liter (pCi/L).

The Federal EPA Radon Zone for Los Angeles County is Zone 2, which indicates an average indoor concentration of between 2.0 pCi/l and 4.0 pCi/l of air.

Based on documented regional radon levels, radon gas is not expected to pose an environmental concern at the Site. If accurate levels of radon on-site need to be documented, site specific testing by licensed personnel would be required.

5.0 SITE HISTORY

To investigate the history of the Site, Citadel reviewed select historic aerial photographs, building permits, city directories and Sanborn Fire Insurance Rate Maps. Results of these investigations are discussed below.

5.1 Historical Aerial Photographs

Historical aerial photographs of the Site and vicinity were obtained from EDR to ascertain historical land uses and to identify any evidence of hazardous materials generation or storage. Nine (9) aerial photographs dating from 1928 to 2005 were reviewed. Below are brief descriptions of observations made from the aerial photographs of the Site and vicinity.

1928 Aerial Photograph

The Site is developed with a structure similar to that currently located on the Site. The size of the building appears to be smaller than its current configuration. Adjoining properties to west and south appear to be similar to that currently in-place. Most of the site vicinity is built-out, with some vacant land ad unimproved land parcels. No pits or tanks were observed on, or near the Site in this aerial photograph.

1938, 1947 and 1956 Aerial Photographs

The Site and neighboring properties to the north, west, south and east appear to be essentially unchanged from the 1928 aerial photograph, with the exception that fewer residential structures were observed, having been replaced with larger, office/commercial type buildings. In 1956 aerial photograph, the adjoining property to the east appears to be comprised of several smaller buildings.

1967, 1976, 1989 and 1994 Aerial Photographs

The Site and neighboring properties appear to be essentially unchanged from the 1956 aerial photograph, with the exception of what appears to be a vacant lot to the east of the Site. The lot appears to be used as a parking area.

2005 Aerial Photograph

The Site and vicinity appear in its current configuration.

Copies of the Aerial Photographs can be found in Appendix D.

5.2 Historic Building Permits

Building permits for the years 1998 through 2008 were provided by Environmental Data Resources. Permits on-file included permits for interior tenant improvements. Older permits are on file (microfiche) at the Los Angeles Building Department. A review of these permits has not been scheduled at this time. No documented hazardous materials usage at the Site was identified in the building department files reviewed.

5.3 Historical Sanborn Fire Insurance Rate Maps

Sanborn Fire Insurance Rate Maps of the subject site were obtained from EDR to ascertain historical land uses and to identify any evidence of hazardous materials usage, generation or storage. Sanborn Maps dating from 1919, 1950, 1955, 1957, 1960, 1961, 1962, 1966, 1968 and 1970 were provided for review.

1919 Sanborn Map

The Site is depicted as a "Movie Studio and offices." The on-site structure appears to be smaller than that currently on-site. The adjoining properties to the south are undeveloped and vacant. The Francis Ford Movie Studio is located east of the Site, across Beachwood Drive. Single and multi-family structures are located across Sunset Boulevard and further south of the Site. An oil and gas station was observed on the southeast corner of the intersection of Sunset Boulevard and Gower Street.

1950, 1955 and 1957 Sanborn Maps

The Site appears to be developed with a similar configuration as the current Site. The four-story structure at 1445 Beachwood is shown as two single-story buildings used as "Film Vaults." According to the 1950 Sanborn, these vaults were constructed in 1948. The Site is part of the Columbia Pictures Corporation studios. The on-site building is listed as a TV Studio and sound stage, with several offices.

The Site is bordered to the north by Sunset Boulevard with mixed use occupancies comprised of residential, offices and retail; to the east by Beachwood Drive and Columbia Studios properties; to the south by Columbia Studios and to the west by portions of Columbia Studios and other offices and restaurants.

1960, 1961, 1962, 1966, 1968 and 1969 Sanborn Maps

The Site and site vicinity appear to be very similar in development and occupancies as the 1957 Sanborn. In the 1966 Sanborn Map, the current structure located at 1445 Beachwood Drive was observed and listed as "offices and stage." No other significant changes were observed in the site vicinity.

1970 Sanborn Map

The Site and site vicinity appear to be very similar in development and occupancies as the 1966 Sanborn. No significant changes were observed.

5.4 Historical City Directories

City Directories were reviewed in order to identify previous site tenants and/or neighboring properties with a potential for hazardous materials generation and/or storage. City Directories dating from 1924 through 2006 (non-inclusive) were researched. The current site address (6050 Sunset Boulevard) was identified in city directories from 1924 through 2006. In 1924, the Site was listed as "various production companies." From 1924 through 2006 the Site was occupied with businesses related to the entertainment industry and various professional offices.

5.5 Previous Environmental Reports

No Environmental reports were provided to Citadel as part of this Phase I ESA

5.6 Interviews

Citadel did not conduct any on-site interviews with respect to the Site history or current operations as part of this Phase I ESA.

5.7 Environmental Lien Search

An Environmental Lien Search was not conducted as part of this Phase I ESA.

5.8 Summary of Site History

The historical records reviewed included aerial photographs, Sanborn Fire Insurance Maps, city telephone directories, building permits, and other sources. A review of these

resources indicates that the Site was first developed in 1917, with subsequent build-outs in the early 1930's. The neighboring properties surrounding the Site along Sunset Boulevard, Gower and Beachwood Streets appear to have been developed during the same time period. Properties across Sunset Boulevard to the north were primarily residential into the 1960's. Historic use of the Site vicinity appears to have been primarily related to the entertainment industry, listed as a Studio in 1919 and then various production companies until becoming a Columbia Pictures Property through the 1970's. Adjacent properties to the east, west and south appear to have had similar occupancies and uses during these time periods.

6.0 REGULATORY AGENCY REVIEW

6.1 Database Review

Citadel contracted Environmental Data Resources, Inc. (EDR) to conduct a database search of standard environmental records sources to help identify recognized environmental conditions in connection with the subject site. A full description of the regulatory agency lists researched can be found in Appendix C. Lists identifying facilities within the search radii and the subject site are discussed below.

Major Hazardous Waste Sites Databases		
DATABASE	**AGENCY**	**RADIUS**
National Priority List (NPL); Delisted NPL List	United States Environmental Protection Agency (USEPA)	1.0 mile
Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); No Further Remediation Action Planned (NFRAP)	United States Environmental Protection Agency (USEPA)	0.5 mile
Resource Conservation and Recovery Act (RCRA), Corrective Action Report (CORRACTS), Treatment Storage and Disposal (TSD), Large Quantity Generators (LQG), and Small Quantity Generators (SQG)	United States Environmental Protection Agency (USEPA)	CORRACTS = 1.0 mile; TSD = 0.50 mile; LQG / SQG = 0.25 mile
Engineering Institutional Control / Engineering Control Registries	United States Environmental Protection Agency (USEPA)	0.50 mile
Annual Workplan Sites / CAL-Sites	California Environmental Protection Agency (Cal/EPA)	1.0 mile

Major Hazardous Waste Sites Databases		
DATABASE	**AGENCY**	**RADIUS**
Leaking Underground Storage Tank Report (LUST)	California Division of Environmental Protection; Regional Water Quality Control Board (RWQCB)	0.50 mile
Underground Storage Tank (UST)	State Water Resources Control Board (SWRCB)	0.25 mile
Spills, Leaks, Investigations, and Cleanups (SLIC)	State Water Resources Control Board (SWRCB)	0.25 mile
Solid Waste Information System (State Landfill)	Integrated Waste Management Board (IWMB)	0.50 mile
Cleaner Facilities (Drycleaners)	California Division of Environmental Protection; Department of Toxic Substance Control (DTSC)	0.25 mile
Indian Reservations Hazardous Waste Sites, Indian- - Equivalent NPL, CERCLIS, Landfill, Engineering Controls, Brownfields	Indian Reservations	1.0 mile or equivalent State / Federal distances
Indian Leaking Underground Storage Tanks (LUST)	Indian Leaking Underground Storage Tanks (LUST)	0.5 mile
Indian Registered Underground Storage Tank (UST)	Indian Registered Underground Storage Tank (UST)	0.25 mile

No visual indicators of current USTs or above-ground storage tanks (AST's) were identified during the site reconnaissance. The Los Angeles Fire Department (LAFD) has not responded to our request for information at this time. Any response from the LAFD will be forwarded once received.

The neighboring properties identified on federal and state environmental lists do not represent an environmental concern to the site, based on their distance, current regulatory status (Case Closed) and/or direction hydrogeologically down or cross gradient from the Site.

6.2 Agency Correspondence

Citadel submitted requests to the following agencies for information regarding the subject site:

- Δ Los Angeles Fire Department (LAFD) Underground Tank Division.
- Δ South Coast Air Quality Management District (SCAQMD).

LAFD

At the time of issuance of this report, the LAFD UST and Hazardous Materials Department has not responded to Citadel's request for information.

SCAQMD

According to the SCAQMD records, there are no violation notices for the Site with this agency. The SCAQMD had no other information regarding the Site in their files.

7.0 CONCLUSIONS

Citadel was contracted by Hudson Pacific Properties, L.P. to perform a Phase I Environmental Site Assessment (Phase I ESA) and Limited Asbestos and Lead Paint Surveys at the property located at 6050 Sunset Boulevard, in the City of Los Angeles, County of Los Angeles, California.

The Site inspection focused on general site conditions, on-site hazardous materials (use and storage), hazardous waste (generation, storage, and disposal), the presence of surface impoundments, underground and/or aboveground storage tanks (USTs and ASTs), the use of hydraulically operated equipment, and the presence of asbestos containing materials, lead-containing paint and on-site power transformers.

The Site is located at the southwest corner of the intersection of Sunset Boulevard and Beachwood Drive in a densely developed urban area. The Site is located adjoining the Sunset Gower Studios within close proximity to major transportation points, as well as shopping and entertainment areas along Sunset Boulevard.

The Site consists of a rectangular lot of approximately 18,126 square feet, comprised of a two-story concrete block and steel building constructed in 1917. The parcel is identified by the Los Angeles County Assessor's Parcel Number 5545-013-051. The Site is currently occupied by a recording studio and offices. Previous occupancy uses have consisted of businesses related to the film and music industry, including use as a stage for television and for voice recordings. In general, the Site appeared to be well maintained and the building/ground conditions observed were good.

During the course of the Phase I ESA, Citadel inspected the site for chemical and hazardous waste storage and handling practices. At the time of the inspection, the on-site building was occupied by Oceanway Recording studios and offices. No evidence for the historical use, generation, storage or disposal of chemical or hazardous waste was observed. No medical, radiological or photo-developing wastes were observed or reported during the site reconnaissance.

Citadel conducted a limited asbestos survey of the on-site building. Mr. Lloyd Tangunan, a Certified Asbestos Consultant with Citadel identified suspect materials to be sampled. The suspect materials were grouped into homogenous areas and collected. The samples were delivered to a state-certified laboratory and analyzed for asbestos content. Based on the analytical results, the laboratory reported the presence of asbestos in select 9x9 vinyl floor tiles (VFT) found on the 1st and 2nd floors, 12 x12 VFT from the 2nd floor, floor tile mastic, vinyl sheet flooring on the 1st floor and several roofing materials.

A lead-containing paint (LCP) survey was conducted by Citadel. No historical documentation relative to lead-containing paint on the site was reviewed during the course of this assessment. Based on the original age of the current on-site buildings, there was a potential for the presence of lead-based paint. All painted surfaces were observed to be in fair to good condition at the time of the survey. Paint chip samples were collected of interior painted surfaces and exterior stucco. The samples were delivered to a state-certified laboratory for analysis of lead. Based on the results, the laboratory reported that paint chips collected from the interior concrete walls of the 2nd floor echo studio was reported above the regulatory level of 0.05% lead by weight, and is classified as a LBP. The paint chips collected from exterior stucco and interior beams were reported to contain lead and are classified as a LCP.

The historical records reviewed included aerial photographs, Sanborn Fire Insurance Maps, city telephone directories, building permits, and other sources. A review of these resources indicates that the Site was first developed in 1917, with subsequent build-outs in the early 1930's. The neighboring properties surrounding the Site along Sunset Boulevard, Gower and Beachwood Streets appear to have been developed during the same time period. Properties across Sunset Boulevard to the north were primarily residential into the 1960's. Historic use of the Site vicinity appears to have been primarily related to the entertainment industry, listed as a Movie Studio in 1919 and then various production companies until becoming a Columbia Pictures Property through the 1970's. Adjacent properties to the east, west and south appear to have had similar occupancies and uses during these time periods.

No visual indicators of current USTs or above-ground storage tanks (AST's) were identified during the site reconnaissance. The Los Angeles Fire Department (LAFD) has not responded to our request for information at this time. Any response from the LAFD will be forwarded once received.

The neighboring properties identified on federal and state environmental lists do not represent an immediate environmental concern to the site, based on their distance, current regulatory status (Case Closed) and/or direction hydrogeologically down or cross gradient from the Site.

Citadel has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-05 and the All Appropriate Inquiries (AAI) Rule published in 40 CFR Part 312, of the property identified as 6050 Sunset Boulevard in the City of Los Angeles, County of Los Angeles, California. Any exceptions to, or deletions from, this practice are described in the Scope of Services section of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the aforementioned property, and no recommendations or response actions are warranted, with the exception of the appropriate removal of the ACMs and LBP/LCPs on-site.

8.0 LIMITATIONS

The information and opinions rendered in this report are exclusively for use by the Client. Citadel Environmental Services, Inc. will not distribute this report without the Client's written consent, except as may be required by law or court order. The recommendations expressed in this report took into consideration the purpose and scope of this limited assignment. We accept responsibility for the competent performance of our duties in executing the assignment and preparing this report in accordance with the normal standards of our profession, but disclaim any responsibility for consequential damages resulting from inaccuracies in information provided by the Client, federal, state, county, or local regulatory agencies.

9.0 REFERENCES

Interviews

Citadel did not conduct any interviews of the Site as part of this Phase I ESA.

10.0 SIGNATURES

Citadel has completed a Phase I Environmental Site Assessment (ESA) for the property located at 6050 Sunset Boulevard in the City of Los Angeles, County of Los Angeles, California. The Phase I ESA was performed at the Clients request in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-2005 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The independent conclusions represent our professional judgment based on information and data available to Citadel during the course of this project. Information regarding historical and present operations, conditions and test data provided by the Client or their representative, is assumed to be correct and complete. The conclusions presented by this Phase I ESA are based on information provided to Citadel and from observations and perceived conditions existing on the date of the site reconnaissance.

In expressing the opinions stated in this report, Citadel has exercised the degree of skill and care ordinarily exercised by a reasonable prudent environmental professional. Documentation provided by the Client, Client-designated representatives, interested third-parties, or from the public domain, and referenced in preparation of the Phase I ESA report, have been assimilated with the understanding that Citadel assumes no responsibility or liability for their accuracy.

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by the final All Appropriate Inquiry (AAI) Rule published in 40 CFR Part 312.10 (November 1, 2005). I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting described in this Phase I ESA. I have developed and performed the AAI in conformance with the standard and care of this Rule.

EXPERIENCE

With 25 years of experience in environmental compliance, permitting and environmental management projects, Mr. Drollinger has a strong working knowledge of EPA, DTSC, AQMD/APCD, OSHA and DOT regulations. Among his vast experience, Mr. Drollinger has provided environmental assessment and compliance expertise, safety management, and engineering construction management services on numerous projects for the US Navy, Veterans Administration, US Department of Agriculture, Cal Trans, EPA and numerous private projects throughout the western United States. In addition, Mr. Drollinger has developed and implemented programs to train managers and staff in storm water and NPDES compliance, soil and groundwater sample collection and data interpretation, Hazcomm, IIPP, and safe-work practices such as identifying and handling hazardous materials, fall protection, confined space, traffic control, LO/TO and ergonomics; and has conducted environmental and permitting audits of facilities including health and safety assessments.

Specific Cal-Trans projects Mr. Drollinger has been involved with include managing and providing environmental compliance services for the I-605 South to I-10 East Interchange and developing NEPA 2 Level environmental assessment protocols for a right-of-way corridor study along I-10 in the Coachella Valley.

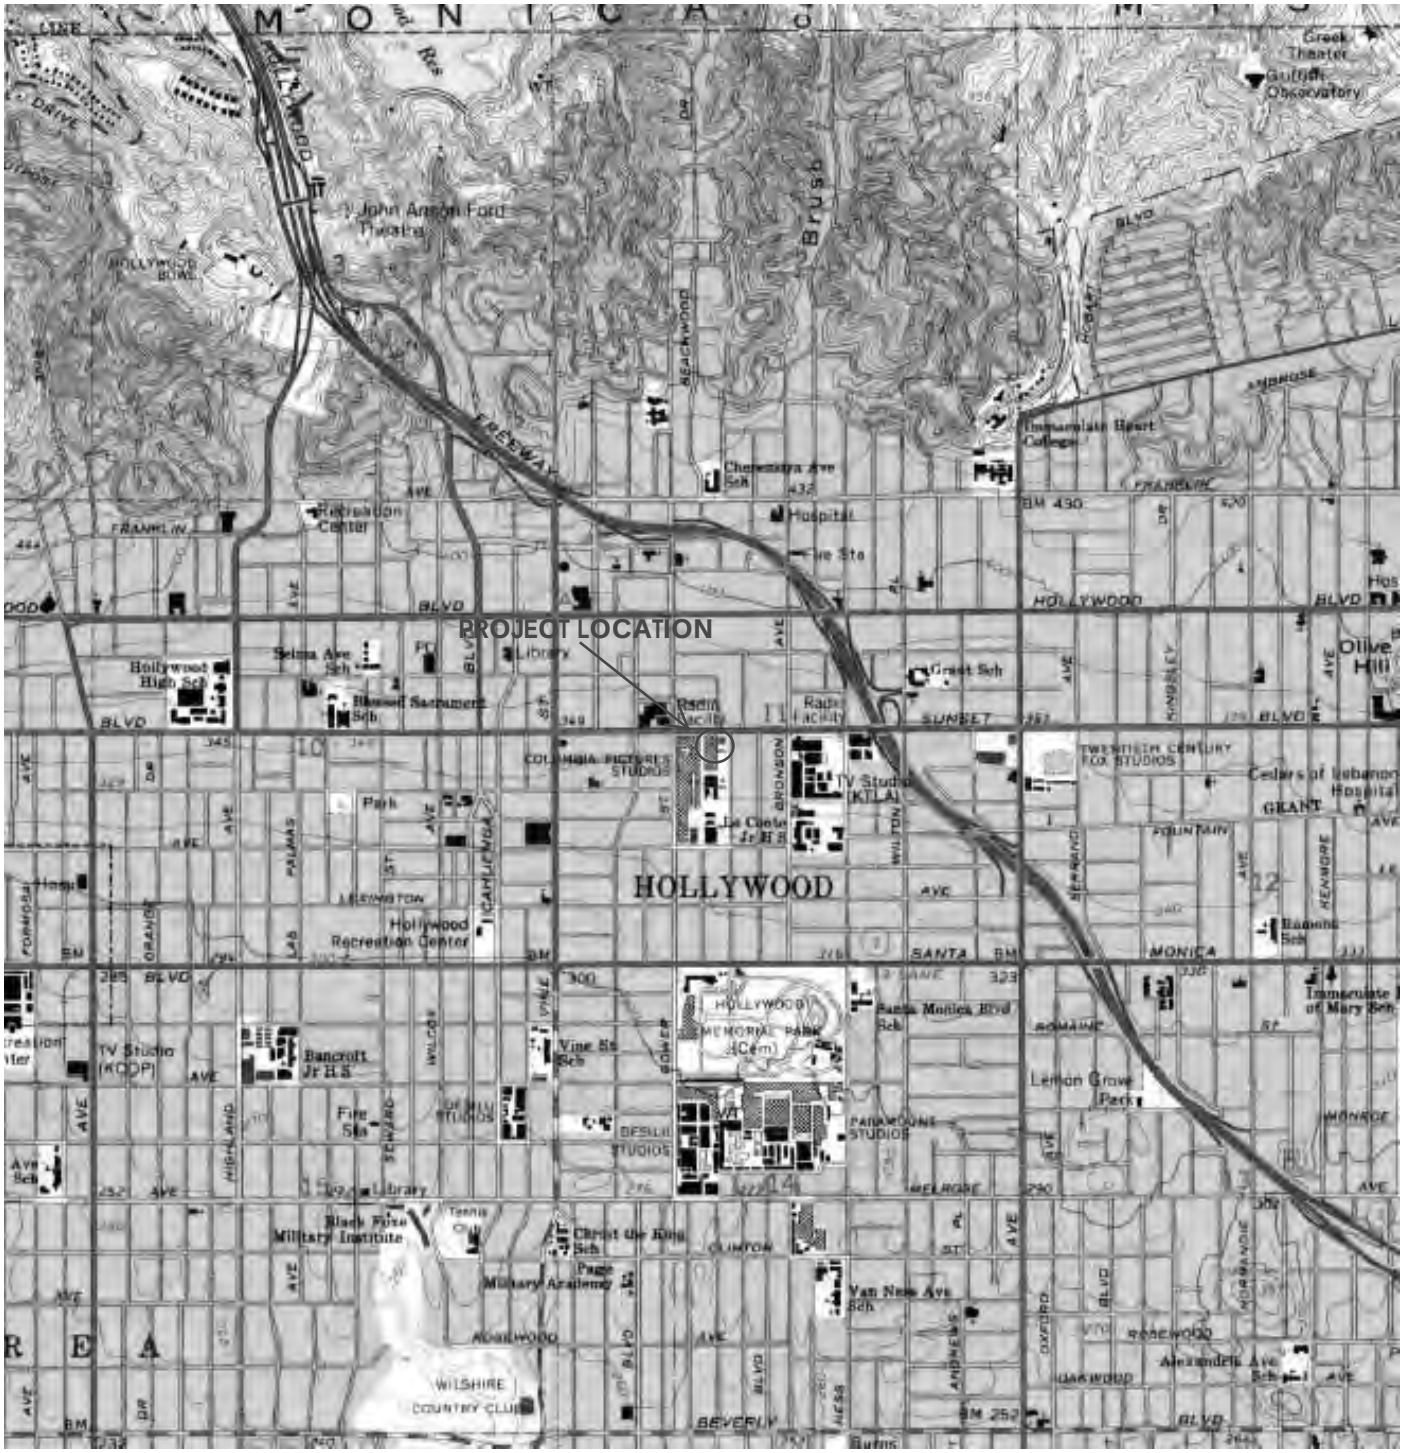
ROLE

As Principal Engineer and Director of the Environmental Geology Group, Mr. Drollinger's primary responsibilities include managing all areas of environmental assessment, environmental compliance including permitting, and achieving closure for sites under regulatory review. As a Qualified Storm Water Developer, Mr. Drollinger manages all aspects of Storm Water compliance and developing Storm Water Pollution Prevention Plans to comply with both Industrial and Construction NPDES permitting.

Mr. Drollinger works closely with, and often develops protocols for conducting assessments related to Environmentally Regulated Materials Management (ERM), Industrial Hygiene (IH), and Occupational Safety and Training (OST) departments. Mr. Drollinger's responsibilities also include developing and implementing health and safety protocols; safety training of management, staff and subcontractor personnel; establishing and managing budgets and personnel; negotiating with local, regional, state, and federal agencies; and coordinating tasks with multi-discipline project teams.

EDUCATION

Mr. Drollinger has a B.S. in Applied and Natural Sciences from the University of Alabama (Tuscaloosa), and an M.S. in Engineering, Advanced Safety Engineering and Management, University of Alabama, Birmingham (in progress).



Mr. Drollinger is also a certifying board member of the American Council of Accredited Certifications (formerly known as the American Indoor Air Quality Council), and is a member of the American Industrial Hygiene Association, American Society of Safety Engineers, Board of Certified Safety Professionals, and Institute of Hazardous Materials Management.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-05 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records – The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.
