K4 PROJECT OPERATION

K4 - Operation

Riverside-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	718.00	1000sqft	20.00	718,000.00	0
Parking Lot	669.75	1000sqft	15.38	669,749.10	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.4	**Precipitation Freq (Days)**	28
Climate Zone	10			**Operational Year**	2020
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	475.95	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

DRAFT

Project Characteristics - 2020 RPS (33%)

Land Use - Project data

Energy Use -

Water And Wastewater - Project data

Solid Waste - 75% waste diversion

Land Use Change -

Sequestration -

Area Mitigation - Super-low VOC content

Energy Mitigation - All lighting fixtures will be Energy Star certified

Construction Phase - Construction emissions evaluated separately

Off-road Equipment - Construction emissions evaluated separately.

Trips and VMT - Construction emissions evaluated separately.

Vehicle Trips - Mobile emissions evaluated separately.

APPENDIX C
COUNTY OF RIVERSIDE CLIMATE ACTION PLAN (CAP) SCREENING TABLE

DRAFT

Table C-1. Screening Table for GHG Implementation Measures for Commercial Development and Public Facilities
K4 and Cactus Channel Improvement Project
Riverside County, California

	Description	Assigned Point Values	Project Points	Evaluation Basis
Implementation Measure IM E5: Energy Efficiency for Commercial/Public Development				
E5.A Building Envelope				
E5.A.1 Insulation	Baseline standard (walls R-13; roof/attic: R-30)	0 points	0	Project will meet mandatory 2016 T24 requirements.
	Modestly Enhanced Insulation (walls R-13; roof/attic: R-38)	15 points		
	Enhanced Insulation (rigid wall insulation R-13; roof/attic: R-38)	18 points		
	Greatly Enhanced Insulation (spray foam wall insulated walls R-15 or higher, roof/attic R-38 or higher)	20 points		
E5.A.2 Windows	Baseline Standard (required)	0 points	0	Project will meet mandatory 2016 T24 requirements.
	Modestly Enhanced Window Insulation (5% > Title 24)	7 points		
	Enhanced Window Insulation (15%> Title 24)	8 points		
	Greatly Enhanced Window Insulation (20%> Title 24)	12 points		
E5.A.3 Cool Roofs	Modest Cool Roof (CRRC Rated 0.15 aged solar reflectance, 0.75 thermal emittance)	12 points	12	**Per MM-AQ-4** - Modest Cool Roof will be constructed.
	Enhanced Cool Roof (CRRC Rated 0.2 aged solar reflectance, 0.75 thermal emittance)	14 points		
	Greatly Enhanced Cool Roof (CRRC Rated 0.35 aged solar reflectance, 0.75 thermal emittance)	16 points		
E5.A.4 Air Infiltration	Minimizing leaks in the building envelope is as important as the insulation properties of the building. Insulation does not work effectively if there is excess air leakage.	0	0	No Project Commitment.
	Air barrier applied to exterior walls, calking, and visual inspection such as the HERS Verified Quality Insulation Installation (QII or equivalent)	12 points		
	Blower Door HERS Verified Envelope Leakage or equivalent	10 points		
	Title 24 standard (required)	0 points		
	Modest Building Envelope Leakage (5% > Title 24)	4 points		
	Reduced Building Envelope Leakage (15% > Title 24)	8 point		
	Minimum Building Envelope Leakage (20% > Title 24)	12 points		
E5.A.5 Thermal Storage of Building	Thermal storage is a design characteristic that helps keep a constant temperature in the building. Common thermal storage devices include strategically placed water filled columns, water storage tanks, and thick masonry walls.		0	No Project Commitment.
	Modest Thermal Mass (10% of floor or 10% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	4 points		
	Enhanced Thermal Mass (20% of floor or 20% of walls: 12" or more thick exposed concrete or masonry. No permanently installed floor covering such as carpet, linoleum, wood or other insulating materials)	6 points		
E5.B Indoor Space Efficiencies				
E5.B.1 Heating/Cooling System	Minimum Duct Insulation (R-4.2 required)	0 points	0	Project will meet mandatory 2016 T24 requirement.
	Modest Duct insulation (R-6)	8 point		
	Enhanced Duct Insulation (R-8)	10 points		
	Distribution loss reduction with inspection (HERS Verified Duct Leakage or equivalent)	14 points		

DRAFT

Table C-1. Screening Table for GHG Implementation Measures for Commercial Development and Public Facilities
K4 and Cactus Channel Improvement Project
Riverside County, California

Description		Assigned Point Values	Project Points	Evaluation Basis
E5.B.2 Space Heating/Cooling Equipment	Baseline VAC Efficiency (SEER 13/60% AFUE or 7.7 HSPF) Improved Efficiency HVAC (SEER 14/65% AFUE or 8 HSPF) High Efficiency HVAC (SEER 15/72% AFUE or 8.5 HSPF) Very High Efficiency HVAC (SEER 16/80% AFUE or 9 HSPF)	0 points 7 point 8 points 12 points	7	**Per MM-AQ-4** - Project will include HVAC equipment of 14 SEER or higher.
E5.B.3 Commercial Heat Recovery Systems	Heat recovery strategies employed with commercial laundry, cooking equipment, and other commercial heat sources for reuse in HVAC air intake or other appropriate heat recovery technology. Point values for these types of systems will be determined based upon design and engineering data documenting the energy savings.	TBD	0	No Project Commitment.
E5.B.4 Water Heaters	2008 Minimum Efficiency (0.57 Energy Factor) Improved Efficiency Water Heater (0.675 Energy Factor) High Efficiency Water Heater (0.72 Energy Factor) Very High Efficiency Water Heater (0.92 Energy Factor) Solar Pre-heat System (0.2 Net Solar Fraction) Enhanced Solar Pre-heat System (0.35 Net Solar Fraction)	0 points 14 points 16 points 19 points 4 points 8 points	19	**Per MM-AQ-4** - The water heaters installed will be of .92 energy factor or higher.
E5.B.5 Daylighting	Daylighting is the ability of each room within the building to provide outside light during the day reducing the need for artificial lighting during daylight hours. All peripheral rooms within building have at least one window or skylight All rooms within building have daylight (through use of windows, solar tubes, skylights, etc.) All rooms daylighted to at least 1,000 lumens	 1 point 5 points 7 points	5	**Per MM-AQ-4** - All rooms will have some form of daylighting be it skylights or windows.
E5.B.6 Artificial Lighting	Baseline standard (required) Efficient Lights (25% of in-unit fixtures considered high efficacy. High efficacy is defined as 40 lumens/watt for 15 watt or less fixtures; 50 lumens/watt for 15-40 watt fixtures, 60 lumens/watt for fixtures >40watt) High Efficiency Lights (50% of in-unit fixtures are high efficacy) Very High Efficiency Lights (100% of in-unit fixtures are high efficacy)	0 points 9 points 12 points 14 points	12	**Per MM-AQ-4** - 50% of in unit fixtures will be high efficacy.
E5.B.7 Appliances	Energy Star Commercial Refrigerator (new) Energy Star Commercial Dish Washer (new) Energy Star Commercial Cloths Washing	4 points 4 points 4 points	0	No Energy Star commitment for non-residential appliances.

DRAFT

Table C-1. Screening Table for GHG Implementation Measures for Commercial Development and Public Facilities
K4 and Cactus Channel Improvement Project
Riverside County, California

Description		Assigned Point Values	Project Points	Evaluation Basis
E5.C Miscellaneous Commercial Building Efficiencies				
E5.C.1 Building Placement	North/South alignment of building or other building placement such that the orientation of the buildings optimizes conditions for natural heating, cooling, and lighting.	6 points	0	No Project Commitment
Shading	At least 90% of south-facing glazing will be shaded by vegetation or overhangs at noon on Jun 21st.	6 points	0	No Project Commitment
E5.C.2 Other	This allows innovation by the applicant to provide design features that increases the energy efficiency of the project not provided in the table. Note that engineering data will be required documenting the energy efficiency of innovative designs and point values given based upon the proven efficiency beyond Title 24 Energy Efficiency Standards.	TBD	0	No Project Commitment
E5.C.3 Existing Commercial building Retrofits	The applicant may wish to provide energy efficiency retrofit projects to existing residential dwelling units to further the point value of their project. Retrofitting existing commercial buildings within the unincorporated County is a key reduction measure that is needed to reach the reduction goal. The potential for an applicant to take advantage of this program will be decided on a case by case basis and must have the approval of the Riverside County Planning Department. The decision to allow applicants to participate in this program will be evaluated based upon, but not limited to the following: Will the energy efficiency retrofit project benefit low income or disadvantaged communities? Does the energy efficiency retrofit project provide co-benefits important to the County? Point value will be determined based upon engineering and design criteria of the energy efficiency retrofit project.	TBD	0	No Project Commitment
Implementation Measure IM E6: New Commercial / Industrial Renewable Energy				
E6.A.1 Photovoltaic	Solar Photovoltaic panels installed on commercial buildings or in collective arrangements within a commercial development such that the total power provided augments: Solar Ready Roofs (sturdy roof and electric hookups) 10 percent of the power needs of the project 20 percent of the power needs of the project 30 percent of the power needs of the project 40 percent of the power needs of the project 50 percent of the power needs of the project 60 percent of the power needs of the project 70 percent of the power needs of the project 80 percent of the power needs of the project 90 percent of the power needs of the project 100 percent of the power needs of the project	2 points 8 points 14 points 20 points 26 points 32 points 38 points 44 points 50 points 56 points 62 points	62	**Per MM-AQ-4** - The Project will install approximately 4.5 MW of solar PV electricity generation, which exceeds 100% of the electricity needs of the project.

DRAFT

Table C-1. Screening Table for GHG Implementation Measures for Commercial Development and Public Facilities
K4 and Cactus Channel Improvement Project
Riverside County, California

	Description	Assigned Point Values	Project Points	Evaluation Basis
E6.A.2 Wind turbines	Some areas of the County lend themselves to wind turbine applications. Analysis of the areas capability to support wind turbines should be evaluated prior to choosing this feature. Wind turbines as part of the commercial development such that the total power provided augments: 10 percent of the power needs of the project 20 percent of the power needs of the project 30 percent of the power needs of the project 40 percent of the power needs of the project 50 percent of the power needs of the project 60 percent of the power needs of the project 70 percent of the power needs of the project 80 percent of the power needs of the project 90 percent of the power needs of the project 100 percent of the power needs of the project	 8 points 14 points 20 points 26 points 32 points 38 points 44 points 50 points 56 points 62 points	0	No Project Commitment
E6.A.3 Off-site renewable energy project	The applicant may submit a proposal to supply an off-site renewable energy project such as renewable energy retrofits of existing residential or existing commercial/industrial. These off-site renewable energy retrofit project proposals will be determined on a case by case basis accompanied by a detailed plan documenting the quantity of renewable energy the proposal will generate. Point values will be based upon the energy generated by the proposal.	TBD	0	No Project Commitment
E6.A.4 Other Renewable Energy Generation	The applicant may have innovative designs or unique site circumstances (such as geothermal) that allow the project to generate electricity from renewable energy not provided in the table. The ability to supply other renewable energy and the point values allowed will be decided based upon engineering data documenting the ability to generate electricity.	TBD	0	No Project Commitment
Implementation Measure IM W1: Water Use Reduction Initiative				
W1.C Irrigation and Landscaping				
W1.C.1 Water Efficient Landscaping	Limit conventional turf to < 20% of each lot (required) Eliminate conventional turf from landscaping Eliminate turf and only provide drought tolerant plants Only California Native landscape that requires no or only supplemental irrigation	0 points 3 points 4 points 8 points	4	**Per MM-AQ-4** - No turf only drought tolerant plants
W1.C.2 Water Efficient irrigation systems	Low precipitation spray heads < .75"/hr or drip irrigation Weather based irrigation control systems or moisture sensors (demonstrate 20% reduced water use)	1 point 5 points	5	**Per MM AQ-4** - Smart irrigation controllers only
W1.C.3 Storm water Reuse Systems	Innovative on-site stormwater collection, filtration and reuse systems are being developed that provide supplemental irrigation water and provide vector control. These systems can greatly reduce the irrigation needs of a project. Point values for these types of systems will be determined based upon design and engineering data documenting the water savings.	TBD	0	No Project Commitment

DRAFT

Table C-1. Screening Table for GHG Implementation Measures for Commercial Development and Public Facilities
K4 and Cactus Channel Improvement Project
Riverside County, California

Description		Assigned Point Values	Project Points	Evaluation Basis
W1.D Potable Water				
W1.D.1 Showers	Water Efficient Showerheads (2.0 gpm)	3 points	0	Project will meet CalGreen Building Code requirements.
W1.D.2 Toilets	Water Efficient Toilets/Urinals (1.5gpm) Waterless Urinals (note that commercial buildings having both waterless urinals and high efficiency toilets will have a combined point value of 6 points)	3 points 4 points	0	Project will meet CalGreen Building Code requirements.
W1.D.3 Faucets	Water Efficient faucets (1.28 gpm)	3 points	0	Project will meet CalGreen Building Code requirements.
W1.D.4 Commercial Dishwashers	Water Efficient dishwashers (20% water savings)	4 points	0	No Project Commitment
W1.D.5 Commercial Laundry Washers	Water Efficient laundry (15% water savings) High Efficiency laundry Equipment that captures and reuses rinse water (30% water savings)	3 points 6 points	0	No Project Commitment
W1.D.6 Commercial Water Operations Program	Establish an operational program to reduce water loss from pools, water features, etc., by covering pools, adjusting fountain operational hours, and using water treatment to reduce draw down and replacement of water. Point values for these types of plans will be determined based upon design and engineering data documenting the water savings.	TBD	0	No Project Commitment
Implementation Measure IM W2: Increase Reclaimed Water Use				
W2.A.1 Recycled Water	Graywater (purple pipe) irrigation system on site	5 points	0	Project will meet CalGreen Building Code/Local Ordinance requirements.
Implementation Measure IM T1: Employment Based Trip and VMT Reduction Policy				
T1.A.1 Alternative Scheduling	Encouraging telecommuting and alternative work schedules reduces the number of commute trips and therefore VMT traveled by employees. Alternative work schedules could take the form of staggered starting times, flexible schedules, or compressed work weeks. Provide flexibility in scheduling such that at least 30% of employees participate in 9/80 work week, 4-day/40-hour work week, or telecommuting 1.5 days/week.	5 points	0	No Project Commitment
T1.A.2 Car/Vanpools	Car/vanpool program Car/vanpool program with preferred parking Car/vanpool with guaranteed ride home program Subsidized employee incentive car/vanpool program Combination of all the above	1 point 2 points 3 points 5 points 6 points	0	No Project Commitment

DRAFT

Table C-1. Screening Table for GHG Implementation Measures for Commercial Development and Public Facilities
K4 and Cactus Channel Improvement Project
Riverside County, California

Description		Assigned Point Values	Project Points	Evaluation Basis
T1.A.3 Employee Bicycle/ Pedestrian Programs	Complete sidewalk to residential within ½ mile Complete bike path to residential within 3 miles Bike lockers and secure racks Showers and changing facilities Subsidized employee walk/bike program Note: combine all applicable points for total value	1 point 1 point 1 point 2 points 3 points	3	**Per MM-AQ-5** - The Project will provide plentiful short- and long- term bicycle parking facilities to meet peak season maximum demand (one bike rack space per 20 vehicle/employee parking spaces) and "end-of-trip" facilities including showers, lockers, and changing spaces.
T1.A.4 Shuttle/Transit Programs	Local transit within ¼ mile Light rail transit within ½ mile Shuttle service to light rail transit station Guaranteed ride home program Subsidized Transit passes Note: combine all applicable points for total value	1 point 3 points 5 points 1 points 2 points	0	No Project Commitment
T1.A.5 CTR	Employer based Commute Trip Reduction (CTR). CTRs apply to commercial, offices, or industrial projects that include a reduction of vehicle trip or VMT goal using a variety of employee commutes trip reduction methods. The point value will be determined based upon a TIA that demonstrates the trip/VMT reductions. Suggested point ranges: Incentive based CTR Programs (1-8 points) Mandatory CTR programs (5-20 points)	TBD	0	No Project Commitment
T1.A.6 Other Trip Reduction Measures	Point values for other trip or VMT reduction measures not listed above may be calculated based on a TIA and/or other traffic data supporting the trip and/or VMT reductions.	TBD	0	No Project Commitment
Implementation Measure IM T3: Mixed Use Development				
T3.B.1 Mixed Use	Mixes of land uses that complement one another in a way that reduces the need for vehicle trips can greatly reduce GHG emissions. The point value of mixed use projects will be determined based upon traffic studies that demonstrate trip reductions and/or reductions in vehicle miles traveled	TBD	0	No Project Commitment
T3.B.2 Local Retail Near Residential (Commercial only Projects)	Having residential developments within walking and biking distance of local retail helps to reduce vehicle trips and/or vehicle miles traveled. The point value of residential projects in close proximity to local retail will be determined based upon traffic studies that demonstrate trip reductions and/or reductions in vehicle miles traveled.	TBD	0	Not Applicable
Implementation Measure IM T4: Preferential Parking				
T4.A.1 Parking	Provide reserved preferential parking spaces for car-share, carpool, and ultra-low or zero emission vehicles. Provide larger parking spaces that can accommodate vans used for ride- sharing programs and reserve them for vanpools and include adequate passenger waiting/loading areas.	1 point 1 point	1	**Per MM-AQ-5 -** Five percent (5%) of vehicle/employee parking spaces shall be reserved for preferential spaces for car pools and van pools.

Table C-1. Screening Table for GHG Implementation Measures for Commercial Development and Public Facilities
K4 and Cactus Channel Improvement Project
Riverside County, California

	Description	Assigned Point Values	Project Points	Evaluation Basis
Implementation Measure IM T5: Signal Synchronization and Intelligent Traffic Systems				
T5.B.1 Signal improvements	Techniques for improving traffic flow include: traffic signal coordination to reduce delay, incident management to increase response time to breakdowns and collisions, Intelligent Transportation Systems (ITS) to provide real-time information regarding road conditions and directions, and speed management to reduce high free-flow speeds. Synchronize signals along arterials used by project. Connect signals along arterials to existing ITS.	1 point/ signal 3 points/ signal	3	At least one traffic signal along a nearby arterial will be synchronized.
Implementation Measure IM T6: Bicycle and Pedestrian Infrastructure				
T6.B.1 Sidewalks	Provide sidewalks on one side of the street (required) Provide sidewalks on both sides of the street Provide pedestrian linkage between commercial and residential land uses within 1 mile	0 points 1 point 3 points	1	Sidewalks exist on the north side of the street and will be added on the south side.
T6.B.2 Bicycle paths	Provide bicycle paths within project boundaries Provide bicycle path linkages between commercial and other land uses Provide bicycle path linkages between commercial and transit	TBD 2 points 5 points	0	No Project Commitment.
Implementation Measure IM T7: Electric Vehicle Use				
T7.B.1 Electric Vehicle Recharging	Provide circuit and capacity in garages/parking areas for installation of electric vehicle charging stations. Install electric vehicle charging stations in garages/parking areas.	2 points/area 8 points/station	520	**Per MM-AQ-4** - The Project will additionally install 11 on-site and 54 off-site EV charging stations. Additionally, 2013 CALGreen (Title 24, Part 11) requires circuit and capacity for electric vehicle charging in non-residential areas where the total number of parking spaces is >50.
Implementation Measure IM T8: Anti-Idling Enforcement				
T8.A.1 Commercial Vehicle Idling Restriction	All commercial vehicles are restricted to 5-minutes or less per trip on site and at loading docks.	2 points Required of all Commercial	2	Assuming Compliance.
Implementation Measure IM T9: Increase Public Transit				
T9.B.1 Public Transit	The point value of a projects ability to increase public transit use will be determined based upon a Transportation Impact Analysis (TIA) demonstrating decreased use of private vehicles and increased use of public transportation. Increased transit accessibility (1-15 points)	TBD	0	No Project Commitment.
Implementation Measure IM L2: Prohibit Gas-Powered Landscaping Equipment				
L2.B.1 Landscaping Equipment	Electric lawn equipment including lawn mowers, leaf blowers and vacuums, shredders, trimmers, and chain saws are available. When electric landscape equipment is used in place of conventional gas-powered equipment, direct GHG emissions from natural gas combustion are replaced with indirect GHG emissions associated with the electricity used to power the equipment. Project provides electrical outlets on the exterior of all buildings so that electric landscaping equipment is compatible with all built facilities.	2 points	0	No Project Commitment.

Upland, California 91786

Attention: Mr. Timothy Reeves

Subject: Phase I and Limited Phase II Environmental Site Assessment, Proposed Industrial Warehouse Site K-4, Unincorporated Riverside County, Near City of Moreno Valley, California

Leighton Consulting, Inc. (Leighton) is pleased to present this Phase I and Limited Phase II Environmental Site Assessment Report (ESA) for the 36.74-acre property located south of Cactus Avenue between Veterans Way and extending east of Frederick Street, near the City of Moreno Valley, Unincorporated area of Riverside County, California (subject site). Leighton declares that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 Code of Federal Regulations (CFR) 312, and the ASTM International E1527-13.

Leighton has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. Leighton has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

If you have questions regarding this report, please contact us. We appreciate the opportunity to be of service to Meridian Park LLC.

Respectfully submitted,

LEIGHTON CONSULTING, INC.

Zachary Freeman, P.G.
Project Geologist

1.0 INTRODUCTION

1.1 Authorization

Leighton Consulting, Inc. (Leighton) performed a Phase I Environmental Site Assessment (ESA) for the 36.74-acre property located south of Cactus Avenue between Veterans Way and extending east of Frederick Street, near the City of Moreno Valley, Unincorporated area of Riverside County, California (subject site – Figure 1) in accordance with Meridian Park, LLC (Client) authorization.

1.2 Purpose

The purpose of the Phase I ESA was to identify, to the extent feasible and pursuant to the processes prescribed in ASTM International (ASTM) E1527-13, recognized environmental conditions (RECs), historical RECs (HRECs), or controlled RECs (CRECs) in connection with the subject site.

- RECs are defined, according to ASTM E1527-13 as "*the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not RECs.*"

- HRECs are defined, according to ASTM E1527-13 as "*a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.*"

- CRECs are defined, according to ASTM E1527-13 as "*a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.*" (ASTM E1527-13, 2013).

The purpose of the Limited Phase II ESA was to assess the soil stockpiles of unknown origin observed in the southeastern area of the property for arsenic and organochlorine pesticides (OCPs).

1.3 Scope of Work

The scope of work was performed in accordance with Leighton's proposal and included the following tasks:

- A reconnaissance-level visit of the subject site for evidence of the release(s) of hazardous materials and petroleum products and to assess the potential for onsite releases of hazardous materials and petroleum products;
- Records review (including review of previous environmental reports, selected governmental databases, and historical review);
- Interviews;
- A limited Phase II ESA soil investigation; and
- Preparation of a report presenting our findings.

1.4 Significant Assumptions

Leighton assumes that the purpose of this Phase I and Limited Phase II ESA is to provide appropriate inquiry into the previous ownership and use of the subject site so that the Client may qualify for the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) landowner liability protections as defined in CERCLA, 42 USC §9601(35)(B). Leighton also assumes that the information provided by the Client and its agents, regulatory database provider, and regulatory agencies is true and reliable.

1.5 Limitations and Exceptions

Leighton performed the Phase I and Limited Phase II ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the subject site. Other than the non-scope items observed in Section 1.6 that was not applicable, there were no exceptions to, or deletions from, this practice.

Property specific activities performed by Leighton and information collected regarding these activities are summarized in the following sections. The findings of this Phase I and Limited Phase II ESA are presented in Section 8.0. Opinions,

and Conclusions drawn by Leighton, based on the information collected as part of the Phase I and Limited Phase II ESA, are presented in Sections 9.0 and 10.0, respectively. References are included as Appendix A. Site Photographs are presented in Appendix B. Client Supplied documentation is included as Appendix C. Research of Environmental Liens is documented in Appendix D. The Environmental Radius Report is included as Appendix E. Regulatory records requests and responses are included as Appendix F. Historical documentation is provided in Appendix G. The laboratory documentation is included in Appendix H. The Geoprofessional Business Association (GBA) Geoenvironmental Report informational guide is provided in Appendix I.

This Phase I and Limited Phase II ESA was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing in the same locality under similar conditions.

The observations and conclusions presented in this report are professional opinions based on the scope of activities, work schedule, and information obtained through the Phase I and Limited Phase II ESA described herein. Opinions presented herein apply to property conditions existing at the time of our study and cannot necessarily be taken to apply to property conditions or changes that we are not aware of or have not had the opportunity to evaluate. It must be recognized that conclusions drawn from these data are limited to the amount, type, distribution, and integrity of the information collected at the time of the investigation, and the methods utilized to collect and evaluate the data. Although Leighton has taken steps to obtain true copies of available information, we make no representation or warranty with respect to the accuracy or completeness of the information provided by others.

This practice does not address whether requirements in addition to all appropriate inquiry have been met in order to qualify for the landowner liability protections including the continuing obligation not to impede the integrity and effectiveness of activity and use limitations, or the duty to take reasonable steps to prevent releases, or the duty to comply with legally required release reporting obligations. Users should also be aware that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the subject site that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

1.6 Special Terms and Conditions

The scope of work for this Phase I and Limited Phase II ESA did not include non-scope considerations, such as, but not limited to, those listed in Section 13 of ASTM E1527-13. The scope of work for this Phase I and Limited Phase II ESA did not include non-scope items such as testing of electrical equipment for the presence of polychlorinated biphenyls (PCBs) or collection of other environmental samples, such as, water, building materials, paint or other media; assessment of natural hazards such as naturally occurring asbestos, radon gas, methane gas, or mold; assessment of the potential presence of radionuclides, biological agents, or lead in drinking water; assessment of indoor air quality (such as vapor intrusion assessment); or assessment of nonchemical hazards such as the potential for damage from earthquakes or floods, or the presence of endangered species or wildlife habitats. This Phase I and Limited Phase II ESA also did not include an extensive assessment of the environmental compliance status of the subject site or of businesses operating at the subject site, or a health-based risk assessment.

1.7 User Reliance

This report is for the exclusive use of the Meridian Park, LLC. Use of this report by any other party shall be at such party's sole risk.

1.8 Important Information about Geoenvironmental Reports

The Client is referred to Appendix I regarding important information provided by the Geoprofessional Business Association (GBA) on geoenvironmental studies and reports.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The subject site is located south of Cactus Avenue between Veterans Way and east of Frederick Avenue, near the City of Moreno Valley, in the unincorporated area of Riverside County, California (Figure 1). According to the Riverside County Assessor's office the Assessor Parcel Numbers (APNs) associated with the subject site are 297-160-005-8, 297-200-004-0, 297-150-006-8, 297-150-007-9 and 297-150-038-7. A legal description of the subject site is included in the Environmental Lien Search Report provided by EDR (Appendix D).

2.2 Property and Vicinity General Characteristics

The subject site vicinity and the surrounding area consists of vacant land, commercial and industrial properties and March Air Reserve Base.

2.3 Current Use of the Subject Property

The subject site is currently vacant land with the exception of an area with soil piles on the eastern portion of the site.

2.4 Descriptions of Structures, Roads and Other Improvements

The subject site consists of 36.74 acres of vacant land with an area of soil piles located on the east portion of the site (Photos 1 through 12, Appendix B, Figures 2 and 3). No buildings or structures are located onsite; the southeastern perimeter of the subject site wraps around an electrical substation that is not included as part of the subject site. The substation has two paved entrances on the east that are accessible by Chanute Avenue, these entrances and Chanute Avenue are part of the subject site.

The following utilities are expected to provide future service to the subject site:

Natural Gas:	The Gas Company
Source of Potable Water:	Eastern Municipal Water District
Electric:	Southern California Edison (SCE)
Sewage Disposal:	City of Moreno Valley
Solid Waste Disposal:	Waste Management

2.5 Current Uses of Adjoining Properties

The subject site is bordered to the north by Cactus Avenue. Adjacent to the north, across Cactus Avenue, is an industrial and commercial center. To the east, the subject site is bounded by vacant land and an electrical substation. To the south, the subject site is bordered by March Air Reserve Base and to the west the subject property is bordered by a vacant lot and March Reserve Air Base.

3.0 USER PROVIDED INFORMATION

The user of this Phase I and Limited Phase II ESA is identified as Meridian Park, LLC. As a part of the ASTM E1527-13 process, Mr. Timothy Reeves, Vice President of Meridian Park, LLC, completed a questionnaire regarding the property on the behalf of the Meridian Park, LLC. A copy of this questionnaire is provided in Appendix C.

3.1 Environmental Liens or Activity and Use Limitations

Mr. Reeves indicated that he was not aware of environmental liens recorded for the subject site. Also, it was unknown if there were activity and land use limitations filed for the subject site.

Leighton also researched environmental liens and activity and land use limitations through EDR. According to the Environmental Lien Search, dated April 6, 2018, environmental liens or activity use limitations were not identified for the subject site. A copy of the lien search is included in Appendix D and references are provided in Appendix A.

3.2 Specialized Knowledge

Mr. Reeves indicated that he did not have specialized knowledge or experience related to the subject site.

3.3 Commonly Known or Reasonably Ascertainable Information

Mr. Reeves is not aware of commonly known or reasonably ascertainable information related to the subject site.

3.4 Valuation Reduction for Environmental Issues

Mr. Reeves stated that the purchase price being paid for the subject site is based on fair market value.

3.5 Owner, Property Manager, and Occupant Information

Mr. Reeves stated that the property is owned by Meridian Park, LLC and that the property is vacant land.

3.6 Reason for Performing Phase I and Limited Phase I ESA

According to the user questionnaire, the reason for requesting this Phase I ESA is for the entitlements of the property.

3.7 Other

Leighton was not provided with other reports completed for the subject site.

4.0 RECORDS REVIEW

4.1 Physical Setting Source(s)

Leighton reviewed pertinent maps and readily available literature for information on the physiography and hydrogeology of the subject site. A summary of this information is presented in the following subsections.

4.1.1 Topography

The subject site is located in Sections 13 and 14 of Township 3 South, Range 4 West of the San Bernardino Baseline and Meridian. Topographic map coverage of the site vicinity is provided by the United States Geological Survey (USGS) Riverside East 7.5-Minute Quadrangle (2012). The subject site elevations range from approximately 1,547 feet above mean sea level (msl) along the south to approximately 1,552 feet above msl along the north border of the subject site.

4.1.2 Surface Water

Surface water was not observed on the subject site. The subject site is located approximately 9 miles west of Perris Reservoir, approximately 15 miles southeast of Santa Ana River and approximately 15 miles east of Lake Mathews.

4.1.3 Geology and Soils

The subject site is located within the Perris Block of the Peninsular Ranges Geomorphic Province, a tectonic region bounded by Cucamonga-Sierra Madre fault and the San Gabriel/San Bernardino Mountains to the north, the San Jacinto fault to the east and the Elsinore and Chino faults to the west. The block is characterized by relatively shallow alluvial basins and low seismic activity in comparison with the surrounding regions. The subject site consists of Quaternary age alluvial soils (Dibblee and Minch, 2003). Surface soils in the vicinity of the subject site consist of younger aged alluvium consisting of sand, gravel and clay of valley areas covered with soil.

4.1.4 Hydrogeology

The subject site is situated in the San Jacinto Basin. The San Jacinto Basin is bounded by the San Jacinto Mountains on the east, the San Timoteo Badlands on the northeast, the Box Mountain on the north, the Santa Rosa Hills and Bell Mountain on the south and unnamed hills on the west (DWR, 2006). The major hydrostratagraphic unit in the basin is Quaternary alluvium primarily consisting. Based on well data the specific yield for the aquifer in the younger alluvium is approximately 5 to 15 percent. Groundwater quality is generally good within the subbasin. Water chemistry is dominated by sodium bicarbonate, calcium bicarbonate, or sodium chloride. Total dissolved solids average 463 milligrams per liter (mg/L) and range between 160 and 1,390 mg/L within the basin.

According to the California Department of Water Resources (DWR), the historic high for groundwater depth near the subject site is approximately 82 feet below ground surface (Well 338995N1171958W001). Leighton conducted a geotechnical investigation for the subject site in 2018; groundwater was encountered at approximately 19 feet below ground surface (bgs) in LB-2 and 23 feet bgs in LB-4 (Leighton, 2018).

4.1.5 Oil and Gas Fields

On April 5, 2018, Leighton reviewed the California Department of Conservation (CDC), Division of Oil, Gas, and Geothermal Resources, Online Mapping System (CDC, 2017). Evidence of oil wells or oil field-related facilities was not indicated on the subject site.

4.2 Standard Environmental Record Sources

A search of selected government databases was conducted by Leighton using the Environmental Data Resources (EDR) Radius Report environmental database report system. Details and descriptions of the database search are provided in the EDR report. The report meets the government records search requirements of ASTM E1527-13 Standard Practice for Environmental Property Assessments: Phase I Environmental Property Assessment Process. The database listings were reviewed within the specified radii established by the ASTM E1527-13. A copy of this report is included in Appendix E.

4.2.1 Subject Property

The subject site was identified in the EDR™ database report.

4.2.2 Offsite

The database search results for offsite properties, including those found within the “orphaned” unmapped listings, with potential to adversely impact the subject site are listed in the table below:

Table 1 - Databases Searched

Database	Search Distance (radius)	Properties Identified
Federal NPL List	**1.0-mile**	**Yes (1)**
Federal Delisted NPL List	1.0-mile	No
Federal CERCLIS List	**0.5-mile**	**Yes (1)**
Federal CERCLIS NFRAP List	0.5-mile	No
Federal RCRA CORRACTS Facility List	1.0-mile	No
Federal RCRA non-CORRACTS TSDF List	0.5-mile	No
RCRA Generators List	**0.25-mile**	**Yes (3)**
US ENG Controls List	**0.5-mile**	**Yes (1)**
US INST Controls List	**0.5-mile**	**Yes (1)**
US Brownfields	0.5-mile	No
Historic CAL-Sites	1.0-mile	No
SWRCY	**0.5-mile**	**Yes (1)**
Response	1.0-mile	No
Envirostor	**1.0-mile**	**Yes (3)**
SCH	0.25-mile	No
SWL Facilities	0.5-mile	No
LUST Facilities	**0.5-mile**	**Yes (3)**
CAL FID UST	**0.25-mile**	**Yes(1)**
SLIC	0.5-mile	No
UST	**0.25-mile**	**Yes (2)**
Historical UST	0.25-mile	No
AST	0.25-mile	No
SWEEPS UST	**0.25-mile**	**Yes(1)**
DEED	0.5-mile	No
VCP	0.5-mile	No
Drycleaners	0.25-mile	No
Indian RESERV	1.0-mile	No
Indian LUST	0.5-mile	No
Indian UST	0.25-mile	No
Manufactured Gas Plants	1.0-mile	No
EDR Historical Auto Stations	0.25-mile	No
EDR Historical Cleaners	0.25-mile	No

See EDR® Radius Report (Appendix E) for list of acronyms and data sources

Information in the environmental database report was reviewed for facilities of potential environmental concern to the subject site. The State Water Resources Control Board (SWRCB) Geotracker website and the Department of Toxic Substance Control (DTSC) Envirostor website were used to supplement the information in the database report.

The subject site is located within the former boundaries of the March Air Reserve Base (March ARB), in the northern area. According to the EDR report, March ARB was reported on the DOD, NPL, CERCLIS, RCRA-LQG, US Eng Controls, US Inst Control, ROD, NY Manifest, and PRP databases. According to the EDR radius map report the former March Air Force Base was originally used to train pilots during World War I, and by 1938, it became the central location for west-coast bombing and gunnery training. Due to the facility's purpose in national defense, there was a wide variety of operations that involved the use, storage, and disposal of hazardous materials and waste such as fuel, solvents and waste oil. As a result, 30 different areas of soil and groundwater contamination have been identified on the base. By November 1989, March Air Force Base was added to the NPL due to the contamination of the groundwater. According to the EDR radius map report the facilities status is "currently on the Final NPL." Operational Units (OU) were identified on the facility based on the groundwater plumes. There were numerous contaminants of concern (COCs) detected in the groundwater at the OUs including trichloroethylene (TCE), perchloroethylene (PCE), vinyl chloride, and fuel. The area that required groundwater remediation includes the southern and eastern boundary and extends 1,500 feet south of the base property, and does not include the current subject site boundary.

The listings in the database report were reviewed and not interpreted to represent an adverse effect to the subject site at the time this report was prepared based on one or more of the following:

- Nature of the database listing and not appearing on a database that reports unauthorized releases of hazardous substances;
- Reported regulatory agency status (example Case Closed);
- Reported nature of the case (soil contamination only);
- Distance of the facility to the subject site; and/or
- Location of the facility with respect to anticipated groundwater flow direction.

4.2.3 Vapor Encroachment

Leighton Consulting reviewed the Vapor Encroachment Screen (VES) produced using EDR®'s Vapor Encroachment Worksheet application that gathers regulatory database information from the accompanying Radius Report and allows the user to integrate groundwater information, regional geology, and other information to evaluate the concern for potential vapor encroachment from onsite activities and from adjacent properties. The VES application was designed by EDR® to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E2600-10), also referred to as the Tier 1 VES, as defined by ASTM E2600-10.

Using the VES application, there were no on-site listings for the subject site and one off-site listing within the standard search radius. There does not appear to be a potential for vapor encroachment and therefore does not appear to be a potential REC as it relates to the adjacent properties.

4.2.4 Regulatory Agency Contacts

Leighton requested regulatory records for the APN and address associated with the subject site. The following agencies were contacted:

Department of Toxic Substances Control (DTSC)

On April 5, 2018, a file review request was forwarded to the Department of Toxic Substances Control (DTSC), Cypress Office and the DTSC, Chatsworth Office via email. On April 6, 2018, Leighton received an email from the DTSC – Cypress Office stating that no records were found for the subject site. On April 12, 2018, Leighton received a letter from the DTSC – Chatsworth Office stating that no records were found for the subject site.

California Water Resources Control Board (CWRCB)

On April 5, 2018, a file review request was forwarded to the Santa Ana Regional Water Quality Control Board (SARWQCB) via email. On April 13, 2018 the file review request was updated and resubmitted to

CWRCB via email. On April 16, 2018, Leighton received an email from the CWRCB stating that records could not be found for the for the subject property based on APN's. Physical addresses or facility names are needed to search the subject site.

South Coast Air Quality Control District

Leighton searched the South Coast Air Quality Control District's Facility Information Detail (FIND) online database. No permits were identified for the subject site within the FIND database.

Riverside County Department of Environmental Health (RCDEH)

On April 5, 2018, a file review request was forwarded to the Riverside County Department of Environmental Health (RCDEH) via email. On April 11, 2018, Leighton received an email from the RCDEH stating that records could not be found for the for the subject property based on APN's. Physical addresses are needed to search the subject site.

National Pipeline Mapping System (NPMS)

Leighton reviewed records posted on the National Pipeline Mapping System's NPMS Public Map Viewer on April 13, 2018. No hazardous liquid pipelines, liquid petroleum lines, or natural gas lines were observed on the subject site or in surrounding areas (NPMS, 2018).

Copies of records requests and responses are provided in Appendix F.

Radon

Radon is not regulated within the State of California. Nonetheless, the California Department of Health Services (CDPH) and the United States Environmental Protection Agency (US EPA) both recommend a threshold of 4 picocuries per liter (pCi/L) above which certain precautions be taken to mitigate radon buildup in structures.

The State of California Department of Health Services (CDEH) conducts ongoing radon monitoring in the state. The results of the survey indicate that of the 13 indoor air samples collected from zip code 92553, none

contained radon concentrations greater than the U. S. EPA radon action level of 4 pCi/l of air. Therefore, the potential for elevated radon levels at the subject site appears to be low (CDEH, 2016).

4.2.5 Other Reports

Leighton was not provided with previous reports completed for the subject site.

4.3 Historical Use Information on the Property

Leighton reviewed selected historical information on the subject site. These references were reviewed for evidence of activities, which would suggest the presence of hazardous substances at the subject site and to evaluate the potential for the subject site to be impacted by offsite sources of contamination. The following paragraphs are a chronological summary of the review.

4.3.1 Aerial Photographs

Historical aerial photographs were reviewed for information regarding past subject site uses. Aerial photographs dated 1938, 1949, 1953, 1959, 1967, 1978, 1985, 1985, 1989, 1994, 2006, 2010 and 2014 were reviewed. References are provided in Appendix A and copies of the aerial photographs are included in Appendix G.

In the **1938** aerial photographs, the subject site and the surrounding adjacent properties was observed to be vacant native shrubland.

In the **1949** aerial photographs, the subject site and the surrounding properties were observed to be the northern portion of March Air Force Base. The subject site was observed to be primarily vacant land with small structures in the eastern area of the property. Unimproved roads cross the center and southwestern area of the subject site. Cactus Avenue was observed to be an unimproved dirt road in its present day location along the northern boundary of the subject site. The northern adjacent property was observed to be vacant land. Structures and tents belonging to March Air Force Base were observed to the east, south and west of the current boundaries of the subject site.

In the **1953** and **1959,** aerial photographs, the subject site was observed to be vacant land with vehicles and small structures observed in the eastern areas of the subject site. The northern adjacent property was observed to be vacant land. The western adjacent property was observed to contain three large above ground storage tanks. Cactus Avenue appears to be a paved road.

In the **1967,** aerial photograph, the subject site and the eastern and southern adjacent properties were observed to be vacant land, cleared of the previously observed structures and vehicles. The northern adjacent property was observed to be vacant land. The western adjacent property was observed to contain three large above ground storage tanks.

In the **1978,** aerial photograph, land use changes were not observed with the subject site or the surrounding properties.

In the **1985** and **1989,** aerial photographs, the subject site was observed to be vacant land with an unimproved road in the eastern area of the property. Overhead powerlines were observed transecting the eastern area of the subject site and within the northern border of the subject site. Land use changes are not observed with the western and eastern adjacent properties. Additional structures were observed within the southern adjacent property and further south of the subject site. In the 1989 aerial photograph, Frederick Street was observed to be a paved road in its present day configuration within the northern adjacent property. Commercial Structures were observed north of the subject site.

In the **1994,** aerial photograph, land use changes are not observed on the subject site and the surrounding properties with the exception of an electrical substation located in the property the subject site surrounds in the eastern area of the subject site. Additional commercial structures were observed in the northern adjacent property.

In the **2006 and 2010,** aerial photographs, land use changes are not observed on the subject site or the surrounding properties with the exception of additional structures within the southern and northern adjacent properties.

In the **2014,** aerial photograph, significant land use changes are not observed on the subject site or adjacent properties with the exception of a large commercial building observed in the northern adjacent property.

4.3.2 Historical Topographic Maps

Historical topographic maps were reviewed to obtain information regarding past site uses. Topographic map coverage of the site vicinity is provided by "Riverside" Quadrangle (1901, 1942 and 1947), "Perris" Quadrangle (1942), "Riverside East" Quadrangle (1953, 1967, 1980 and 2012) and "Sunnymead" Quadrangle (1953, 1967, 1980 and 2012). References are provided in Appendix A and a copy of the report is included in Appendix G.

Riverside 1901: Structures, tanks, or wells were not depicted on the subject site or adjacent properties.

Riverside 1942 and Perris 1942: Structures, tanks, or wells were not depicted on the subject site or adjacent properties.

Riverside 1947: Structures, tanks, or wells were not depicted on the subject site or adjacent properties.

Riverside East 1953 and Sunnymead 1953: Structures, tanks, or wells were not depicted on the subject site. Properties adjacent to the east of the subject site are depicted with buildings and roads.

Riverside East 1967 and Sunnymead 1967: Structures, tanks, or wells were not depicted on the subject site. The property adjacent to the west is depicted as having tanks. No buildings or structures are depicted on properties adjacent to the north, east and south of the structure. Cactus Avenue is depicted to the north of the subject site in its present day configuration.

Riverside East 1980 and Sunnymead 1980: Significant changes are not observed on the subject site or adjacent properties.

Riverside East 2012 and Sunnymead 2012: Significant changes are not observed on the subject site or adjacent properties.

4.3.3 Fire Insurance Maps

Fire insurance maps, or Sanborn® maps, are detailed city plans showing building footprints, construction details, use of structure, street address, etc. The maps were designed to assist fire insurance agents in determining the degree of hazard associated with a particular property. Sanborn® Maps were produced from approximately 1867 to the present for commercial, industrial, and residential sections of approximately 12,000 cities and towns in the United States.

According to the EDR Certified Sanborn® Map Report, there is no Sanborn map coverage for the subject site. A copy of this report has been provided in Appendix G.

4.3.4 Historical City Directories

Fire insurance maps, or Sanborn® maps, are detailed city plans showing building footprints, construction details, use of structure, street address, etc. The maps were designed to assist fire insurance agents in determining the degree of hazard associated with a particular property. Sanborn® Maps were produced from approximately 1867 to the present for commercial, industrial, and residential sections of approximately 12,000 cities and towns in the United States.

According to the report by EDR®, Sanborn Fire Insurance Maps were not identified for the subject site (Appendix G).

4.3.5 Building Permits

The subject site does have an address associated with the property, however, a review of the historical topographic maps did not depict structures within the subject site boundaries while aerial photographs depicted structures in the subject site. According to the EDR Building Permit Report, dated April 5, 2018, EDR does not have access to building permits in the city of the target property. A copy of the building permit report can be found in Appendix G.

4.3.6 Other Historical Sources

Additional resources were not researched as a part of this assessment.

4.3.7 Summary of Historical Land Use

Based on historical records, land usage is summarized as follows:

Time Period	Land Usage	Reference
Prior to 1901	Unknown	None Available
Approximately 1901 to approximately 1949	Native shrubland	Aerial Photographs Topographic Maps
Approximately 1949 to 1967	Vacant with some structures to the east of the site	Aerial Photographs Topographic Maps
Approximately 1967 to 2014	Vacant	Aerial Photographs Topographic Maps

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

On April 11, 2018, representatives of Leighton Zachary Freeman and Richard Orr conducted a reconnaissance–level assessment of the subject site. The subject site reconnaissance consisted of observing and documenting existing conditions of the subject site and nature of the neighboring development. Photographs of the subject site are presented in Appendix B and their view directions are noted on Figure 2. Items noted during the property reconnaissance are also depicted on Figure 2.

5.2 General Property Setting

The subject site vicinity is vacant undeveloped land.

The subject site consists of 5 parcels, approximately 36.74 acres of land. No structures were observed on the subject site. The properties adjacent to the north across Cactus Avenue are commercial or industrial in nature. To the west and south the subject site is surrounded by portions of the March Air Reserve Base. To the east the subject site is bordered by vacant land that was formerly part of the March Air Reserve Base. The remainder of the subject site is unpaved vacant property (Photos 1 through 12, Appendix B, Figure 2).

5.3 Exterior and Interior Observations

5.3.1 Hazardous Substances, Drums, and Other Chemical Containers

No hazardous substances, drums, or other chemical containers were observed on the subject site.

5.3.2 Storage Tanks

No aboveground or underground storage tanks were observed on the subject site.

5.3.3 Polychlorinated Biphenyls (PCBs)

PCBs were once used as industrial chemicals whose high stability contributed to both their commercial usefulness and their long-term deleterious environmental and health effects. PCBs can be present in

coolants or lubricating oils used in older electrical transformers, hydraulic systems, and other similar equipment. In 1979, the USEPA generally prohibited the domestic manufacture of PCBs in electrical capacitors, electrical transformers, vacuum pumps, hydraulic pumps, and gas turbines.

One pad mounted transformer was observed on the eastern portion of the subject site, adjacent to the large, off-site electrical substation located near the eastern boundary of the subject site (Photo 1, Appendix B, Figure 2). The transformer appeared in good condition and no evidence of staining or leakage was observed.

5.3.4 Waste Disposal

The subject site is vacant and does not generate waste.

5.3.5 Dumping

Evidence of dumping was observed on the southeastern portion of the subject site. An area of approximately 3.2 acres is covered with small soil piles from end dump trucks. The soils appeared to be clean and locally derived (Photos 2, 4, and 5, Appendix B).

5.3.6 Pits, Ponds, Lagoons, Septic Systems, Wastewater, Drains, Cisterns, and Sumps

Evidence of pits, lagoons, cisterns, and sumps was not observed on the subject site. A long narrow marshy pond was observed along the northern boundary of the subject site (Photo 7, Appendix B).

5.3.7 Pesticide Use

Evidence of pesticide use was not observed on the subject site.

5.3.8 Staining, Discolored Soils, Corrosion

Stained soil was not observed on the subject site.

5.3.9 Stressed Vegetation

Evidence of stressed vegetation was not observed on the subject site.

5.3.10 Unusual Odors

Unusual odors were not detected on the subject site.

5.3.11 Onsite Wells

Evidence of onsite wells was not observed on the subject site.

5.3.12 Other Observations

No other items or conditions were noted on the subject site.

6.0 INTERVIEWS

Leighton conducted interviews with persons having knowledge of current or past subject site usage. Interviews were conducted either orally or in the form of a written questionnaire. Written responses are included as Appendix C.

6.1 Interview with Owner

Leighton received a Phase I ESA Owner/Site Contact Interview Form completed by Mr. Timothy Reeves, Project Manager for Meridian Park, LLC, owner of the subject site. Mr. Reeves was not aware of environmental issues or concerns regarding the subject site.

6.2 Interview with Site/Property Manager

Mr. Reeves stated that the subject site was vacant land and that Meridian has owned it since 2016.

6.3 Interviews with Occupants

Mr. Reeves stated that the subject site was vacant land.

6.4 Interviews with Local Government Officials

Leighton did not interview employees with local government agencies to request information regarding historic and current uses of the subject site with the exception of those noted in Section 4.

6.5 Interviews with Others

Leighton did not conduct additional interviews for this Phase I and Limited Phase II ESA with the exception of the User interview discussed in Section 3.

7.0 LIMITED PHASE II ESA

On April 27, 2018, Leighton completed a limited Phase II ESA of the subject site based on the observation of several soil stockpiles of unknown origin in the southeastern area of the subject site. The scope of work for the limited Phase II ESA is described below.

7.1 Pre-field Activities

Health and Safety Plan

Leighton prepared a site-specific Health and Safety Plan (HSP) for the field work to be performed. The HSP documented the safety aspects of the work and complied with Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1910.120. The HSP was onsite with Leighton personnel at all times. The HSP outlined all site procedures, potential hazards, and contained a hospital location map. Leighton personnel acknowledged acceptance of the plan by signing the HSP.

7.2 Field Activities

On April 27, 2018, Leighton staff observed that the soil stockpile area had recently been modified into one large soil stockpile. In accordance with the Department of Toxic Substances (DTSC) Information Advisory Clean Imported Fill Material (DTSC, 2001) guidance, twenty soil samples (SP1 through SP20) were collected from this single large soil stockpile. The upper 0.5 feet were removed using a hand trowel and a sample was collected 0.5 feet below the surface of the stockpile. Soil samples were retained in laboratory-supplied, 4-ounce glass jars, clearly marked with sample identification, placed in an ice-cooled chest for temporary storage, and transported to Enviro-Chem, Inc., a California Certified laboratory, located in Pomona, California, for chemical analysis.

7.3 Laboratory Analysis

Soil samples collected at depths of 0.5 feet bgs from borings SP1 through SP20 were analyzed for arsenic by EPA Method 6010B and OCPs by EPA Method 8081A.

7.4 Results

The soil analytical results were compared to one or more of the following regulatory screening criteria:

- DTSC Southern California Background concentration of 12 mg/kg for arsenic only; and
- November 2017 EPA Region 9 Regional Screening Levels (RSLs) for residential land use for OCPs and arsenic; and.
- January 2018 DTSC Human Health Risk Assessment Note 3.

The complete laboratory report and chain-of-custody form are included in Appendix H. A summary of laboratory results is presented in Table 1.

Arsenic was detected in each of the soil samples analyzed at concentrations ranging from 1.25 milligram per kilogram (mg/kg) to 2.74 mg/kg. The detected concentrations of arsenic were below the DTSC Southern California Background concentration of 12 mg/kg.

The OCP 4,4'-DDE was detected in seven of the twenty soil samples analyzed at concentrations ranging from 0.001 milligrams per kilogram (mg/kg) to 0.009 mg/kg. The OCP 4,4'-DDT was detected in four of the twenty soil samples analyzed at concentrations ranging from 0.001 mg/kg to 0.004 mg/kg. The concentrations of 4,4'-DDE and 4,4'-DDT were below their residential RSLs of 2.0 mg/kg and 1.9 mg/kg, respectively.

Laboratory analytical reports and chain of custody documents are included in Appendix H. Analytical results are summarized in Table 1.

8.0 FINDINGS

Leighton performed Phase I and Limited Phase II ESA Report for the 36.74-acre property located south of Cactus Avenue between Veterans Way and extending east of Frederick Street, near the City of Moreno Valley, Unincorporated area of Riverside County, California (subject site – Figure 1) in accordance with Meridian Park, LLC (Client) authorization.

8.1 Onsite

Historically, the subject site has been native shrubland and the subject site currently consists of 36.74 acres of vacant land (Photos 1 through 12, Appendix B, Figure 2).

One pad mounted transformer was observed on the eastern portion of the subject site, adjacent to the large, off-site electrical substation located near the eastern boundary of the subject site (Photo 1, Appendix B, Figure 2). The transformer appeared in good condition, no evidence of leakage was observed.

A search of selected government databases was conducted by Leighton using the EDR Radius Report environmental database report system. Details of the database search along with descriptions of each database researched are provided in the EDR database report. The report meets the government records search requirements of ASTM E1527-13 Standard Practice for Environmental Property Assessments: Phase I ESA Environmental Property Assessment Process. The database listings were reviewed within the specified radii established by the ASTM E1527-13. The subject site is located within the former boundaries of the March Air Reserve Base (March ARB), in the northern area. According to the EDR radius map report, March ARB was reported on the DOD, NPL, CERCLIS, RCRA-LQG, US Eng Controls, US Inst Control, ROD, NY Manifest, and PRP databases. The former March Air Force Base was originally used to train pilots during World War I, and by 1938, it became the central location for west-coast bombing and gunnery training. Due to the facility's purpose in national defense, there was a wide variety of operations that involved the use, storage, and disposal of hazardous materials and waste such as fuel, solvents and waste oil. As a result, 30 different areas of soil and groundwater contamination have been identified on the base. By November 1989, March Air Force Base was added to the NPL due to the contamination of the groundwater. According to the EDR radius map report the facilities status is "currently on the Final NPL." Operational Units (OU) were identified on the facility based on the

groundwater plumes. There were numerous contaminants of concern (COCs) detected in the groundwater at the OUs including trichloroethylene (TCE), perchloroethylene (PCE), vinyl chloride, and fuel. The OU areas that required groundwater remediation includes the southern and eastern boundary of March Air Force Base and extends 1,500 feet south of the base property, and does not include the current subject site boundary (Geotracker, 2018).

Based on the results of our concurrent limited Phase II ESA, OCPs and arsenic were not detected in the undocumented soil at concentrations exceeding the US EPA residential RSL or the DTSC HHRA Note 3 screening levels for OCPs, or the DTSC recognized Southern California background arsenic concentration of 12 mg/kg.

8.2 Offsite

Historically, the surrounding adjacent properties were native shrubland prior to the construction of March Air Force Base between 1938 and 1949. The northern adjacent property remained vacant land until commercial development began in the late 1990's. The subject site is bordered to the north by Cactus Avenue and an industrial and commercial center, to the east by vacant land and an electrical substation, to the south by March Air Reserve Base and to the west by a vacant lot and March Reserve Air Base.

Surrounding properties of environmental concern were not identified in the EDR report.

8.3 Data Gaps

Data gaps were identified by Leighton:

- Historical records between 1901 and 1938 were not available.
- EDR does not have access to building permits in the city where the subject site is located.

It is Leighton's opinion that these data gaps are not significant to identifying recognized environmental conditions on the subject site.

9.0 OPINION

9.1 Onsite

It is Leighton's opinion that no RECs, CRECs or HRECs were identified for the subject site.

9.2 Offsite

No offsite RECs, HRECs, or CRECs were identified that would negatively impact the subject site.

10.0 CONCLUSIONS

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527-13 for the 36.74-acre property located south of Cactus Avenue between Veterans Way and extending east of Frederick Street, near the City of Moreno Valley, Unincorporated area of Riverside County, California, the subject site. Exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

It is Leighton's opinion that no RECs, CRECs or HRECs were identified for the subject site.

In general, observations should be made during future property development for areas of possible contamination such as, but not limited to, the presence of underground facilities, buried debris, waste drums, and tanks, stained soil or odorous soils. Should such materials be encountered, further investigation and analysis may be necessary at that time.

11.0 DEVIATIONS

Leighton did not deviate from or alter the scope of work, as defined in Section 1.3 of this report. Significant data gaps were not identified that affect the ability of Leighton to identify recognized environmental conditions at the subject site.

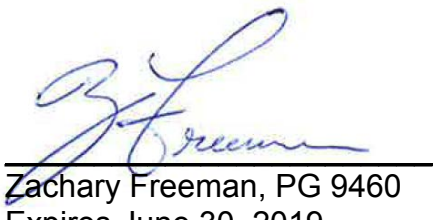
12.0 ADDITIONAL SERVICES

Leighton did not perform work outside the scope of work as defined in Section 1.3 of this report.

13.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

13.1 Corporate

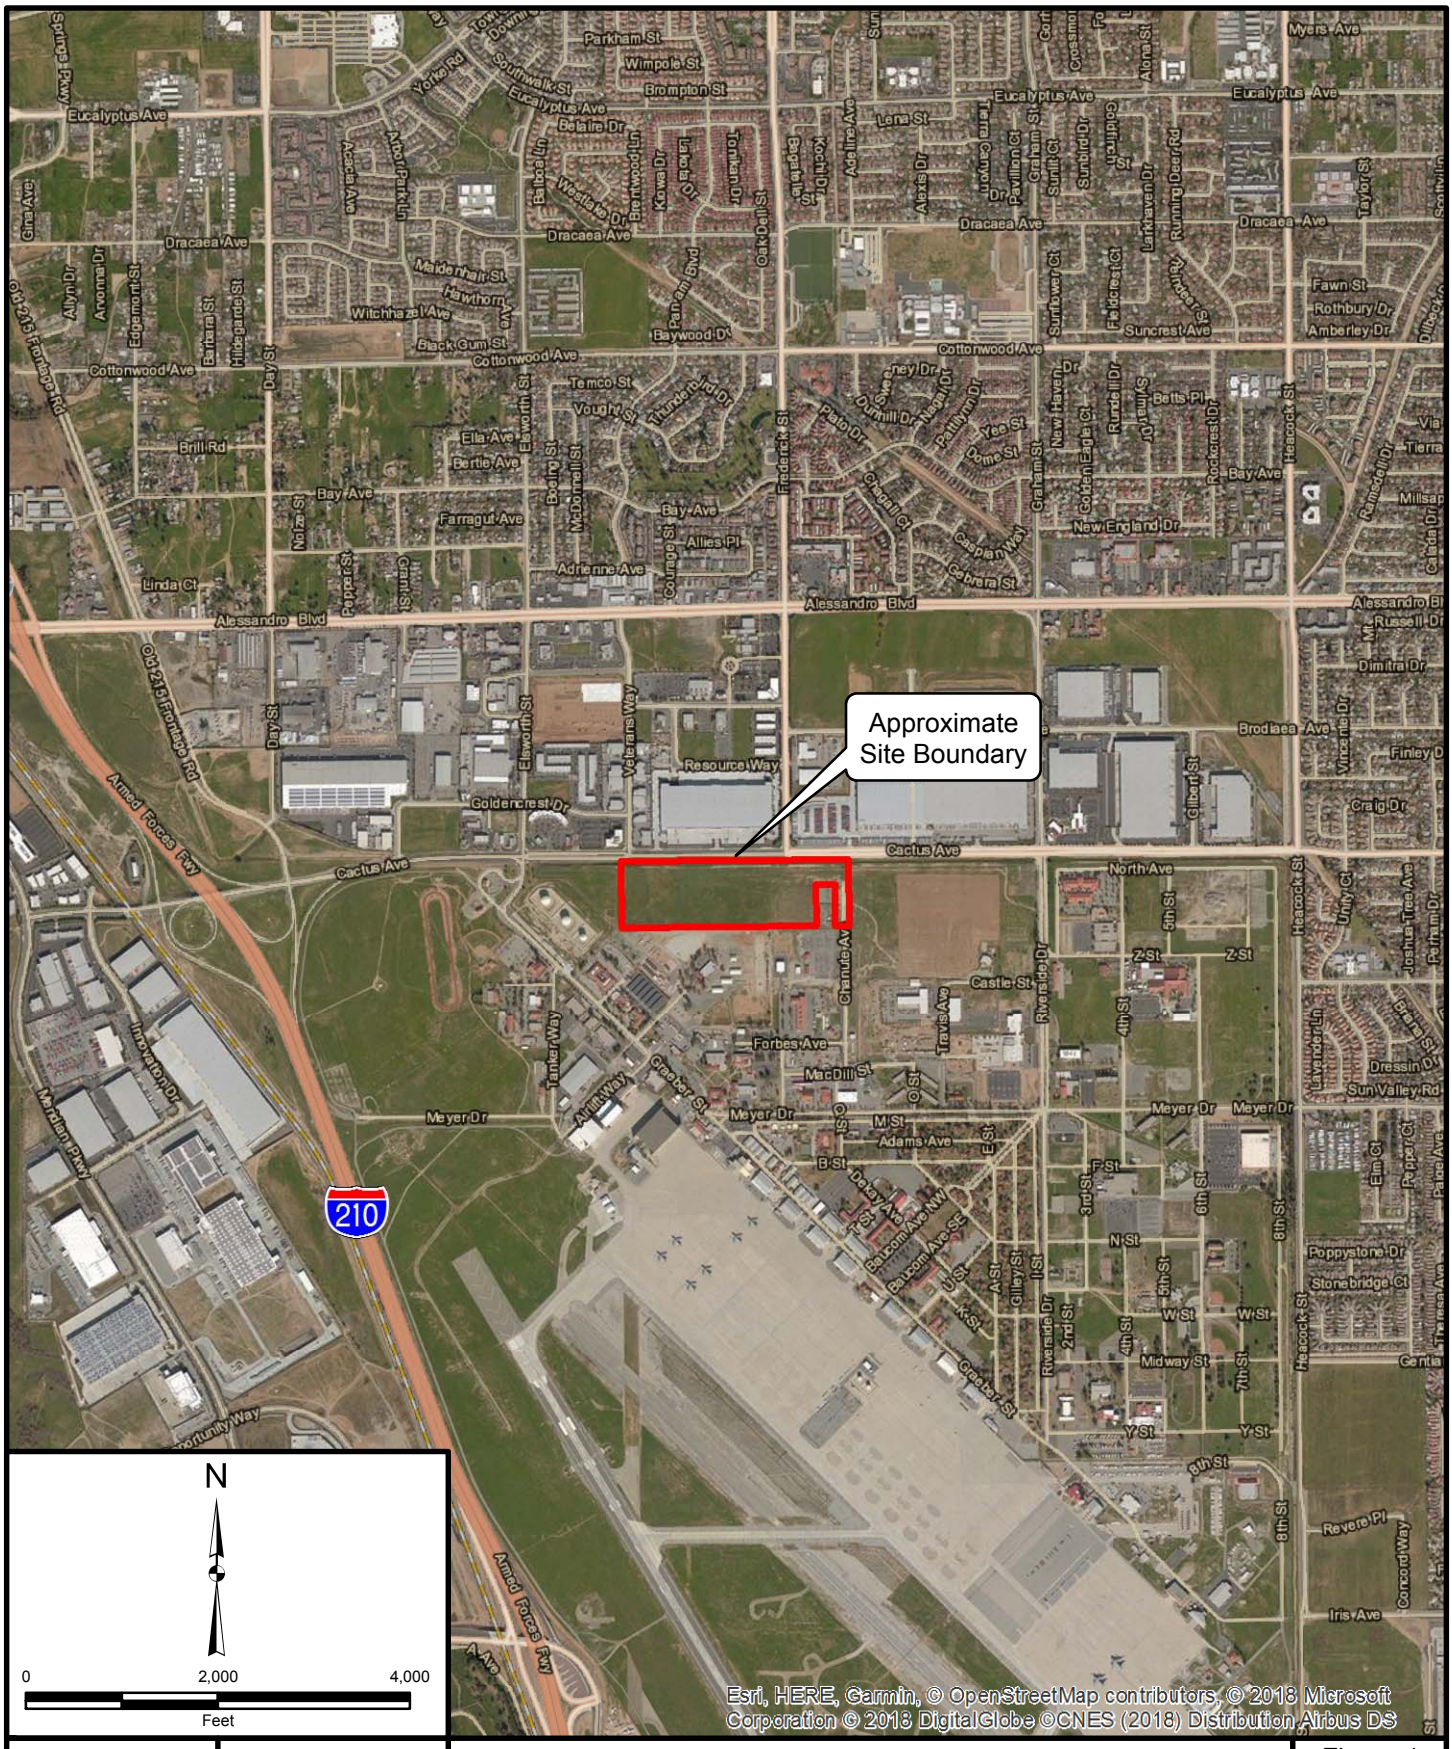
Leighton is a California corporation, providing geotechnical and environmental consulting services throughout California. We are solely a consulting firm without interests in real property other than our offices in Southern California. We provide professional environmental consulting services including application of science and engineering to environmental compliance, hazardous materials/waste assessment and cleanup, and management of hazardous, solid and industrial waste. Phase I Environmental Property Assessments are a part of this practice area and have been conducted by us.



13.2 Individual

The qualifications of the Project Manager and the other Leighton environmental professionals involved in this Phase I ESA meet the Leighton corporate requirements for performing Phase I ESAs as specified by ASTM E1527-13.

13.3 Environmental Professional Statement



I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by §312.10 of 40 CFR Part 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

CLIENT SUPPLIED DOCUMENTATION

Leighton

Leighton

Phase I ESA Users Questionnaire

Project Name: K4

Project Address or APN: See attached sheet for APM numbers

Client (or user of the Phase I Environmental Site Assessment): Meridian Park K4, LLC

Name/Title: Timothy C. Reeves/Vice President

Client Phone: 909-581-2609

Reason Phase I is required: Entitlements

Type of property: Vacant

Type of property transaction (e.g., Sale, purchase, exchange): None

Complete and Correct Address of the property and APN(s): See attached sheet for APN's

Any scope of services beyond the ASTM Practice E 1527: Soils Report

All Parties that will rely on the Phase I report: March JPA. potential tenants, lenders, and others

Name and Contact Information for Site Contact: Timothy C. Reeves 909-581-2609

Any special terms or conditions: Site is difficult to access

Any other pertinent knowledge or experience with the property (e.g., prior reports, documents, correspondence concerning the environmental conditions of the property): nothing at this time

(1). Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? ☐ Yes | ☑ No

If Yes, Describe:

(2). Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? ☐ Yes | ☑ No

If Yes, Describe:

(3). Specialized knowledge or experience of the person seeking to qualify for the Landowners Liability Protections (LLP) (40 CFR 312.28).

As the user of this ESA do you have any specialized knowledge or experience related to the property or the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? ☐ Yes | ☑ No

If Yes, Describe:

(4). Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 DRF 312.29).

Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? ☐ Yes | ☑ No

If Yes, Describe:

(5). Commonly known or reasonable ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the property that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as user,

(a.) Do you know the past uses of the property? ☑ Yes | ☐ No

(b.) Do you know of specific chemicals that are present or once were present at the property? ☐ Yes | ☑ No

(c.) Do you know of spills or other chemical releases that have taken place at the property? ☐ Yes | ☑ No

(d.) Do you know of any environmental cleanups that have taken place at the property? ☐ Yes | ☑ No

If Yes, Describe: March Air Force Base

(6). The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the *user of this ESA,* based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property?* ☐ Yes | ☑ No

If Yes, Describe:

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

GRANT DEED

APN ITRA:
ATTACHED

THE UNDERSIGNED GRANTOR DECLARES:
Documentary transfer tax is $ 2,640 —
(X) computed on full value of property conveyed, or
( ) computed on full value, less value of liens and encumbrances remaining at time of sale.

FOR VALUABLE CONSIDERATION, receipt of which is hereby acknowledged, LNR RIVERSIDE, LLC, a California limited liability company (the "**Grantor**"), hereby GRANTS to MERIDIAN PARK, LLC, a Delaware limited liability company (the "**Grantee**"), the following described real property (the "**Property**") located in the jurisdiction of the March Joint Powers Authority, in the County of Riverside, State of California:

SEE SCHEDULE "1" ATTACHED HERETO AND
INCORPORATED HEREIN BY THIS REFERENCE

SUBJECT TO AND GRANTEE SHALL HEREBY BE BOUND BY:

1. That certain Assignment of Agreement (Development Agreement) and that certain Assignment of Agreement (Disposition and Development Agreement), each recorded concurrently herewith.

2. The Grantee herein covenants by and for itself, its successors and assigns, heirs, executors, administrators and all persons claiming under or through them, that there shall be no discrimination against or segregation of, any person or group of persons on account of any basis listed in subdivision (a) or (d) of Section 12955 of the Government Code, as those bases are defined in Sections 12926, 12926.1, subdivision (m) and Section (1) of subdivision (p) of Section 12955, and Section 12955.2 of the Government Code, in the sale, lease, sublease, rental, transfer, use, occupancy, tenure or enjoyment of all or any portion of the Property, nor shall the Grantee or any

person claiming under or through the Grantee, establish or permit any practice or practices of discrimination or segregation with reference to the selection, location, number, use or occupancy of tenants, lessees, subtenants, sublessees, or vendees in any portion of the Property. The foregoing covenants shall run with the land in perpetuity.

Notwithstanding the preceding paragraph, with respect to familial status, the preceding paragraph shall not be construed to apply to housing for older persons, as defined in Section 12955.9 of the Government Code. With respect to familial status, nothing in Section (1) shall be construed to affect Section 51.2, 51.2, 51.4, 51.10, 51.11 and 799.5 of the Civil Code, relating to housing for senior citizens. Subdivision (d) of Section 51 and Section 1360 of the Civil Code and subdivision (n), (o) and (p) of Section 12955 of the Government Code shall apply to the preceding paragraph.

[Signature on Next Page]

IN WITNESS WHEREOF, Grantor has caused this Grant Deed to be executed as of the 3 Rd day of August, 2015.

"GRANTOR":

LNR RIVERSIDE, LLC,
a California limited liability company

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MARCH AIR FORCE BASE	*22 CSG/CC*	*0 - 1/8 (0.000 mi.)*	*0*	*9*

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MARCH AIR FORCE BASE	*22 CSG/CC*	*0 - 1/8 (0.000 mi.)*	*0*	*9*

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MARCH AIR FORCE BASE	*22 CSG/CC*	*0 - 1/8 (0.000 mi.)*	*0*	*9*

TEXACO SERVICE STATI	*22470 CACTUS AVE*	*WNW 1/8 - 1/4 (0.202 mi.)*	*B7*	*49*

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 11/13/2017 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MARCH AIR FORCE BASE	***22 CSG/CC***	***0 - 1/8 (0.000 mi.)***	***0***	***9***

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 11/13/2017 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MARCH AIR FORCE BASE	***22 CSG/CC***	***0 - 1/8 (0.000 mi.)***	***0***	***9***

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

Scoring:	2

Summary Details:

Conditions at proposal July 14, 1989): March Air Force Base MAFB) covers approximately 7,000 acres near Riverside in the Moreno Valley in Riverside County, California. MAFB is adjacent to light industrial, agricultural, and residential areas. Established in 1918 as the Alessandro Aviation Field, MAFB has served as a training base and refueling operations base. Industrial operations including aircraft maintenance and repair) involved use of solvents and disposal of solvent wastes. MAFB is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part ofIRP, the Air Force investigated 28 potentially contaminated disposal areas. MAFB Well No. 1 on-base was found to be contaminated with trichloroethylene, tetrachloroethylene, and cis-1,2-dichloroethylene at levels that exceed State drinking water standards. It was taken out of service. Soils on the base are contaminated with toluene and ben ene. An estimated 11,600 people obtain drinking water from municipal wells within 3 miles of ha ardous substances on MAFB. The Air Forceis conducting a remedial investigation/ feasibility study RI/FS) to determine the type and extent of contamination at the base and identify alternatives for remedial action. Status November 21, 1989): Field work continues on the RI/FS.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Universal Waste Summary:
Waste type: Batteries
Accumulated waste on-site: Yes
Generated waste on-site: No

Waste type: Lamps
Accumulated waste on-site: Yes
Generated waste on-site: No

Waste type: Thermostats
Accumulated waste on-site: Yes
Generated waste on-site: No

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 15899.4

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 186

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF

MARCH AIR FORCE BASE (Continued) **1000169261**

DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110013305191

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Worker:	Not reported
RB Case Number:	Not reported
Local Agency:	Not reported
File Location:	Local Agency
Local Case Number:	200219022
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	***Data prior to 2005 does not appear in GeoTracker. Consult agency files for all site data*** 3 USTs removed October 3, 2002. Up to 1800 ppm TPHg, 61 ppm MTBE and 2.4 ppm TBA was detected. The east end of T1, dispenser D5 and dispenser D2 were overexcavated. 243.97 tons of soil was taken to TPS for recycling. The site was entered into LOP October 22, 2002 4 gw mon wells (MW-1 through MW-4) were installed in April 2003. MW-1, MW-2, MW-3 were screened 20-50 ft bgs and MW-4 from 15-45 ft bgs. GW was not encountered in MW-4 at the time of installation, however, gw was present some time later. Wells MW-1,

TEXACO (SHELL) CACTUS AVE (Continued) **S105747989**

MW-2, and MW-3 remained dry after installation. MTBE & other constituents were detected in the soil from MW-2 (5 to 50) and in the bottom of MW-4 (35-50). The gw was impacted in MW-4 (2300 ppb TPHg, ND<0.5 ppb B, 3900 ppb MTBE, 450 ppb TBA). 12 CPT soil borings were drilled in February 2004. Soil samples were collected only from CPT1 and CPT9, however, gw samples were collected from all CPT locations and the new wells. Pore pressure dissipation test were conducted in 6 of the CPT borings. TPHg in the groundwater ranged from 84 ppb to 1700 ppb. MTBE ranged from 1.2 to 42 ppb. 3 gw mon wells (MW-5 through MW-7) were installed in August 2004. No TPHg or BTEX were detected in any soil sample. No oxygenates were detected in MW-5 and MW-6. MW-7 had 0.098 ppm at 20. MW-3 was destroyed in September 2004. A Batch Extraction Pilot Test was conducted in February 2006. 1332 gallons of gw and 12.4 lbs of hydrocarbons were extracted during the two events. The pneumatic and hydraulic ROI were interpreted to be <30. 2 monitoring wells (MW-8 and MW-9) were installed in January 2006. No TPHg, BTEX or fuel oxygenates were detected in the soil of MW-9 and MW-9. 1 extraction well MW-2R) was installed in June 2006. MW-2R had MTBE and TBA at 55 and 60. The groundwater extraction system was started October 12, 2006 using MW-2R and MW-7. Soil vapor extraction well SVE-1 was installed in November 2006. Two days of SVE testing were completed December 5 and 6, 2006. TPHg removal rate was 7 lb/day (2 lb were removed during the 7-hr extended test), 0.37 lb/day MTBE (0.11 lb removed) and 0.004 lb/day B (0.001 lb removed). MTBE concentrations increased during the test and the final concentration at the end of the test was 32 ppmV MTBE. 2 monitoring wells (MW-10 and MW-11) were installed in March 2007. A 5-day SVE test was conducted using SVE-1 in March 2007. 21.91 lb TPHg, 1.73 lb MTBE, and 0.021 lb B were removed. The max MTBE vapor concentration was 18 ppmV and decreased to 5.6 ppmV. No further SVE remediation was recommended and RCDEH concurred. 3 confirmation borings (SB-1 through SB-3) were drilled to 60 in July 2007. GW was encountered at 55-55.5 ft bgs. SB-2 and SB-3 were ND for all constituents. SB-1 detections: 0.24 ppm TPHg (15), 0.011 ppm M (25), 0.0093 ppm M (30). BTXE, oxygenates and ethanol were all ND. The groundwater extraction system was shut down Sept. 6, 2007. A total of 182650 gallons of groundwater, 4.546 lbs of TPHg, 15.32 lbs of MTBE and 5.77 lbs of TBA were recovered. MW-12 was installed in April 2008 to replace MW-2R which could not be sampled due to a pump lodged in its casing. Up to 0.69 ppm MTBE and 3.1 ppm TBA was detected in the soil. ~50 gallons of 3% hydrogen peroxide was added to MW-2R on August 12, 19, and 26, 2010 for a total of 165 gallons. Water samples were taken August 19, 2010 during hydrogen peroxide infiltration. Post-infiltration groundwater samples were taken September 10 and October 7, 2010. MW-2R TPHg went from 110 to <50 to 52 to <50 ppb. MTBE went from 8.8 to <1 to 6.1 to 6.5 ppb. TBA went from 1500 to <10 to 770 to 700 ppb. Chromium hexavalent went from <10 to 72 to 4.1 to 1.7 ppb 3 wells (MW-13 through MW-15) were installed March 18 and 22, 2011. TPHg was detected in only one soil sample at 222 ppm (MW-13@50). MTBE was detected in all the samples from MW-13 ranging from 1.6J to 203 ppb. TBA was detected from 40-50 in MW-13 ranging from 39.2J to 971 ppb. The RCDEH approved closure in April 2013 and the SARWQCB concurred with closure in May 2013. The 60 day public comment period for comments on site closure ended on August 2013 with no comments. The wells were destroyed September 9-13, 2013. The site was closed October 13, 2013.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 12/11/2017
Date Data Arrived at EDR: 12/22/2017

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/11/2017
Date Data Arrived at EDR: 12/26/2017

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/11/2017

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 04/22/2013

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Northeast Map:	5641326 SUNNYMEAD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

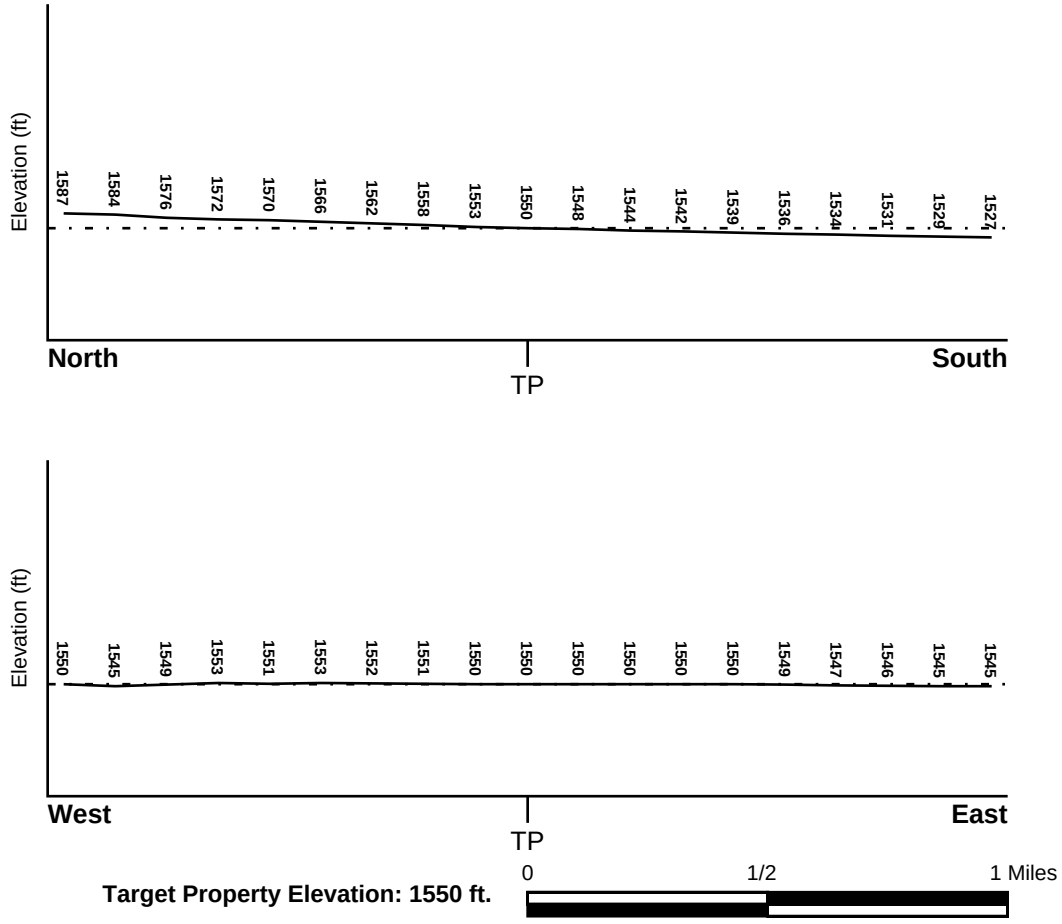
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C0745G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06065C0761G	FEMA FIRM Flood data
06065C0765G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
2	1/2 - 1 Mile NNE	Not Reported
1G	1/2 - 1 Mile NNE	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: MONSERATE

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 6.1
2	9 inches	27 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 7.3 Min: 6.1
3	27 inches	44 inches	indurated	Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:
4	44 inches	57 inches	cemented	Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:
5	57 inches	70 inches	loamy coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

Summary Details:

Conditions at proposal July 14, 1989): March Air Force Base MAFB) covers approximately 7,000 acres near Riverside in the Moreno Valley in Riverside County, California. MAFB is adjacent to light industrial, agricultural, and residential areas. Established in 1918 as the Alessandro Aviation Field, MAFB has served as a training base and refueling operations base. Industrial operations including aircraft maintenance and repair) involved use of solvents and disposal of solvent wastes. MAFB is participating in the Installation Restoration Program IRP), established in 1978. Under this

MARCH AIR FORCE BASE, 22 CSG/CC, RIVERSIDE, CA 92518 (Continued)

program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part ofIRP, the Air Force investigated 28 potentially contaminated disposal areas. MAFB Well No. 1 on-base was found to be contaminated with trichloroethylene, tetrachloroethylene, and cis-1,2-dichloroethylene at levels that exceed State drinking water standards. It was taken out of service. Soils on the base are contaminated with toluene and ben ene. An estimated 11,600 people obtain drinking water from municipal wells within 3 miles of ha ardous substances on MAFB. The Air Forceis conducting a remedial investigation/ feasibility study RI/FS) to determine the type and extent of contamination at the base and identify alternatives for remedial action. Status November 21, 1989): Field work continues on the RI/FS.

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Universal Waste Summary:

Waste type:	Batteries
Accumulated waste on-site:	Yes
Generated waste on-site:	No
Waste type:	Lamps
Accumulated waste on-site:	Yes
Generated waste on-site:	No

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs):	15899.4
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs):	186
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Dear Mr. Castillo and Mr. Hardison:

Leighton Consulting Inc. is requesting information for the property located south of Cactus Avenue, between Veterans Way and Fredrick Street. The Riverside County Assessor's Office identifies the subject site as Assessor Parcel Numbers (APNs) 297-160-005, 297-200-004, 297-150-006, 297-150-007, and 297-150-038, in the City of Moreno Valley.

Leighton Consulting Inc. is requesting any information concerning hazardous waste/materials, underground storage tanks, leaking underground storage tank cleanup, inspections, violations, or any other environmentally sensitive spills, responses, or concerns your agency may have on file associated with this site.

Thank you very much for your time and assistance.

Respectfully submitted,

Michelle Manzano

VARIOUS SITES
PR3-040518-03

Dear Ms. Manzano:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control. After a thorough review of our files we have found that no such records exist at this office pertaining to the sites/facilities referenced below.

- Assessor Parcel Numbers 297-160-005, 297-200-004, 297-150-006, 297-150-007, and 297-150-038 Moreno Valley.

We would like to inform you about EnviroStor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor.

If you have any questions or would like further information regarding your request, please contact me at (818) 717-6522.

Sincerely,

Glenn Castillo /JVT
Regional Records Coordinator

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

Year	*Scale*	*Details*	*Source*

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Certified Sanborn® Map Report

04/05/18

Site Name:	Client Name:
March Air Reserve Base	Leighton Consulting
Cactus Avenue Between Veter	17781 Cowan
March Air Reserve Ba, CA 925	Irvine, CA 92614
EDR Inquiry # 5249358.3	Contact: Michelle Manzano

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Leighton Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # E846-4E99-91AE

PO # 11979.001

Project Meridian Park Warehouse

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: E846-4E99-91AE

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Dear Mr. Freeman:

The **analytical results** for the soil samples, received by our lab on April 27, 2018, are attached. The samples were received chilled, intact and with chain of custody record.

Trace concentrations between the MDL and the PQL have been reported with a "J" flag indicator.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manger

EPA 6010B FOR TTLC-ARSENIC; PAGE 2 OF 2
UNITS: mg/Kg = MILLIGRAM PER KILOGRAM = PPM

SAMPLE I.D.	LAB I.D.	ARSENIC RESULT	DF
SP8	180427-31	1.26	1
SP9	180427-32	1.25	1
SP10	180427-33	1.60	1
SP11	180427-34	1.76	1
SP12	180427-35	1.76	1
SP13	180427-36	2.03	1
SP14	180427-37	1.97	1
SP15	180427-38	1.72	1
SP16	180427-39	2.14	1
SP17	180427-40	1.73	1
SP18	180427-41	2.68	1
SP19	180427-42	1.84	1
SP20	180427-43	1.66	1
Method Blank	---	ND	1
	MDL	0.248	
	PQL	0.30	

COMMENTS:
DF = Dilution Factor
MDL = Method Detection Limit
PQL = Practical Quantitation Limit
J = Trace Concentration between MDL and PQL
Actual Detection Limit = PQL X DF
ND = Below the Actual Detection Limit or non-detected
TTLC = Total Threshold Limit Concentration
STLC = Soluble Threshold Limit Concentration
STLC Limit for Arsenic = 5 PPM
* = STLC analysis is recommended (if marked)
*** = The concentration exceeds the TTLC Limit @ 500 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

Data Reviewed and Approved by: _____

GBA GEOENVIRONMENTAL REPORT

Leighton

Important Information about This

Geoenvironmental Report

Geoenvironmental studies are commissioned to gain information about environmental conditions on and beneath the surface of a site. The more comprehensive the study, the more reliable the assessment is likely to be. But remember: Any such assessment is to a greater or lesser extent based on professional opinions about conditions that cannot be seen or tested. Accordingly, no matter how many data are developed, risks created by unanticipated conditions will always remain. *Have realistic expectations.* Work with your geoenvironmental consultant to manage known and unknown risks. Part of that process should already have been accomplished, through the risk allocation provisions you and your geoenvironmental professional discussed and included in your contract's general terms and conditions. This document is intended to explain some of the concepts that may be included in your agreement, and to pass along information and suggestions to help you manage your risk.

Beware of Change; Keep Your Geoenvironmental Professional Advised

The design of a geoenvironmental study considers a variety of factors that are subject to change. Changes can undermine the applicability of a report's findings, conclusions, and recommendations. *Advise your geoenvironmental professional about any changes you become aware of.* Geoenvironmental professionals cannot accept responsibility or liability for problems that occur because a report fails to consider conditions that did not exist when the study was designed. Ask your geoenvironmental professional about the types of changes you should be particularly alert to. Some of the most common include:

- modification of the proposed development or ownership group,
- sale or other property transfer,
- replacement of or additions to the financing entity,
- amendment of existing regulations or introduction of new ones, or
- changes in the use or condition of adjacent property.

Should you become aware of any change, *do not rely on a geoenvironmental report.* Advise your geoenvironmental professional immediately; follow the professional's advice.

Recognize the Impact of Time

A geoenvironmental professional's findings, recommendations, and conclusions cannot remain valid indefinitely. The more time that passes, the more likely it is that important latent changes will occur. *Do not rely on a geoenvironmental report if too much time has elapsed since it was completed.* Ask your environmental professional to define "too much time." In the case of Phase I Environmental Site Assessments (ESAs), for example, more than 180 days after submission is generally considered "too much."

Prepare To Deal with Unanticipated Conditions

The findings, recommendations, and conclusions of a Phase I ESA report typically are based on a review of historical information, interviews, a site "walkover," and other forms of noninvasive research. When site subsurface conditions are not sampled in any way, the risk of unanticipated conditions is higher than it would otherwise be.

While borings, installation of monitoring wells, and similar invasive test methods can help reduce the risk of unanticipated conditions, *do not overvalue the effectiveness of testing.* Testing provides information about actual conditions only at the precise locations where samples are taken, and only when they are taken. Your geoenvironmental

professional has applied that specific information to develop a general opinion about environmental conditions. *Actual conditions in areas not sampled may differ (sometimes sharply) from those predicted in a report.* For example, a site may contain an unregistered underground storage tank that shows no surface trace of its existence. *Even conditions in areas that were tested can change*, sometimes suddenly, due to any number of events, not the least of which include occurrences at adjacent sites. Recognize, too, that *even some conditions in tested areas may go undiscovered,* because the tests or analytical methods used were designed to detect only those conditions assumed to exist.

Manage your risks by retaining your geoenvironmental professional to work with you as the project proceeds. Establish a contingency fund or other means to enable your geoenvironmental professional to respond rapidly, in order to limit the impact of unforeseen conditions. And to help prevent any misunderstanding, identify those empowered to authorize changes and the administrative procedures that should be followed.

Do Not Permit Any Other Party To Rely on the Report

Geoenvironmental professionals design their studies and prepare their reports to meet the specific needs of the clients who retain them, in light of the risk management methods that the client and geoenvironmental professional agree to, and the statutory, regulatory, or other requirements that apply. The study designed for a developer may differ sharply from one designed for a lender, insurer, public agency...or even another developer. *Unless the report specifically states otherwise, it was developed for you and only you.* Do not unilaterally permit any other party to rely on it. The report and the study underlying it may not be adequate for another party's needs, and you could be held liable for shortcomings your geoenvironmental professional was powerless to prevent or anticipate. Inform your geoenvironmental professional when you know or expect that someone else—a third-party—will want to use or rely on the report. *Do not permit third-party use or reliance until you first confer with the geoenvironmental professional who prepared the report.* Additional testing, analysis, or study may be required and, in any event, appropriate terms and conditions should be agreed to so both you and your geoenvironmental professional are protected from third-party risks. *Any party who relies on a geoenvironmental report without the express written permission of the professional who prepared it and the client for whom it was prepared may be solely liable for any problems that arise.*

Avoid Misinterpretation of the Report

Design professionals and other parties may want to rely on the report in developing plans and specifications. They need to be advised, in writing, that their needs may not have been considered when the study's scope was developed, and, even if their needs were considered, they might misinterpret geoenvironmental findings, conclusions, and recommendations. *Commission your geoenvironmental professional to explain pertinent elements of the report to others who are permitted to rely on it, and to review any plans, specifications or other instruments of professional service that incorporate any of the report's findings, conclusions, or recommendations.* Your geoenvironmental professional has the best understanding of the issues involved, including the fundamental assumptions that underpinned the study's scope.

Give Contractors Access to the Report

Reduce the risk of delays, claims, and disputes by giving contractors access to the full report, *providing that it is accompanied by a letter of transmittal that can protect you* by making it unquestionably clear that: 1) the study was not conducted and the report was not prepared for purposes of bid development, and 2) the findings, conclusions, and recommendations included in the report are based on a variety of opinions, inferences, and assumptions and are subject to interpretation. Use the letter to also advise contractors to consult with your geoenvironmental professional to obtain clarifications, interpretations, and guidance (a fee may be required for this service), and that—in any event—they should conduct additional studies to obtain the specific type and extent of information each prefers for preparing a bid or cost estimate. Providing access to the full report, with the appropriate caveats, helps prevent formation of adversarial attitudes and claims of concealed or differing conditions. If a contractor elects to ignore the warnings and advice in the letter of transmittal, it would do so at its own risk. Your geoenvironmental professional should be able to help you prepare an effective letter.

Do Not Separate Documentation from the Report

Geoenvironmental reports often include supplemental documentation, such as maps and copies of regulatory files, permits, registrations, citations, and correspondence with regulatory agencies. If subsurface explorations were performed, the report may contain final boring logs and copies of laboratory data. If remediation activities occurred on site, the report may include: copies of daily field reports; waste manifests; and information about the disturbance of subsurface materials, the type and thickness of any fill placed on site, and fill placement practices, among other types of documentation. *Do not separate supplemental documentation from the report. Do not, and do not permit any other party to redraw or modify any of the supplemental documentation for incorporation into other professionals' instruments of service.*

Understand the Role of Standards

Unless they are incorporated into statutes or regulations, standard practices and standard guides developed by the American Society for Testing and Materials (ASTM) and other recognized standards-developing organizations (SDOs) are little more than aspirational methods agreed to by a consensus of a committee. The committees that develop standards may not comprise those best-qualified to establish methods and, no matter what, no standard method can possibly consider the infinite client- and project-specific variables that fly in the face of the theoretical "standard conditions" to which standard practices and standard guides apply. In fact, these variables can be so pronounced that geoenvironmental professionals who comply with every directive of an ASTM or other standard procedure could run afoul of local custom and practice, thus violating the standard of care. Accordingly, when geoenvironmental professionals indicate in their reports that they have performed a service "in general compliance" with one standard or another, it means they have applied professional judgement in creating and implementing a scope of service designed for the specific client and project involved, and which follows some of the general precepts laid out in the referenced standard. To the extent that a report indicates "general compliance" with a standard, you may wish to speak with your geoenvironmental professional to learn more about what was and was not done. *Do not assume a given standard was followed to the letter.* Research indicates that that seldom is the case.

Realize That Recommendations May Not Be Final

The technical recommendations included in a geoenvironmental report are based on assumptions about actual conditions, and so are preliminary or tentative. Final recommendations can be prepared only by observing actual conditions as they are exposed. For that reason, you should retain the geoenvironmental professional of record to observe construction and/or remediation activities on site, to permit rapid response to unanticipated conditions. *The geoenvironmental professional who prepared the report cannot assume responsibility or liability for the report's recommendations if that professional is not retained to observe relevant site operations.*

Understand That Geotechnical Issues Have Not Been Addressed

Unless geotechnical engineering was specifically included in the scope of professional service, a report is not likely to relate any findings, conclusions, or recommendations about the suitability of subsurface materials for construction purposes, especially when site remediation has been accomplished through the removal, replacement, encapsulation, or chemical treatment of on-site soils. The equipment, techniques, and testing used by geotechnical engineers differ markedly from those used by geoenvironmental professionals; their education, training, and experience are also significantly different. If you plan to build on the subject site, but have not yet had a geotechnical engineering study conducted, your geoenvironmental professional should be able to provide guidance about the next steps you should take. The same firm may provide the services you need.

Read Responsibility Provisions Closely

Geoenvironmental studies cannot be exact; they are based on professional judgement and opinion. Nonetheless, some clients, contractors, and others assume geoenvironmental reports are or certainly should be unerringly precise. Such assumptions have created unrealistic expectations that have led to wholly unwarranted claims and disputes. To help prevent such problems, geoenvironmental professionals have developed a number of report provisions and contract terms that explain who is responsible for what, and how risks are to be allocated. Some people mistake these for "exculpatory clauses," that is, provisions whose purpose is to transfer one party's rightful responsibilities and liabilities to someone else. Read the responsibility provisions included in a report and in the contract you and your geoenvironmental professional agreed to. *Responsibility provisions are not "boilerplate."* They are important.

Rely on Your Geoenvironmental Professional for Additional Assistance

Membership in the Geoprofessional Business Association exposes geoenvironmental professionals to a wide array of risk management techniques that can be of genuine benefit for everyone involved with a geoenvironmental project. Confer with your GBA-member geoenvironmental professional for more information.

Attention: Mr. Timothy Reeves

Subject: Phase I Environmental Site Assessment, Former March Air Force Base, K-4 Parcel and Cactus Channel, 46± Acres of Vacant Land, March Air Reserve Base (Moreno Valley Area), Riverside County, California

Attached herewith is the Phase I Environmental Site Assessment (ESA) for the K-4 Parcel and Cactus Channel, located at March Air Reserve Base in the Moreno Valley area of Riverside County, California.

This Phase I ESA was planned and executed based upon a scope of services generally outlined in our Work Authorization Agreement dated July 17, 2018, and written and verbal communication with your office.

DRAFT

We appreciate the opportunity to provide this environmental assessment for the subject site. If you have any questions or comments regarding this evaluation, please do not hesitate to contact this firm at your convenience.

EXECUTIVE SUMMARY

A Phase I Environmental Site Assessment (ESA) was conducted by this firm for the K-4 Parcel and Cactus Channel, approximately 46 acres of vacant land, located along/near the south side of Cactus Avenue, at March Air Reserve Base in the Moreno Valley area of Riverside County, California. The Phase I ESA was conducted in conformance with American Society for Testing and Materials (ASTM) E1527-13, and All Appropriate Inquiries (AAI) set forth in 40 CFR (Code of Federal Regulations) Part 312.

In the 1930s, the subject site was vacant land, including dry farm land. Some time during World War II, by 1943, the site was part of United States (US) Army Air Force March Field. US Army Corps of Engineers maps from 1943 and 1944 indicate no buildings or structures were located onsite, except for patrol road(s) and levee(s) along the north side of the base, suggesting the presence of a storm drain channel along the present day Cactus Channel. Immediately adjacent structures to the east were temporary truck shelters, with nearby offices for utilities and US (Army) Engineering Department. Other nearby features included a bomb storage facility over 100 feet west and southwest of the west end of the Cactus Channel at the subject site. Skeet ranges and a “High Tower Shot Gun Range” is also shown with a turret or control house and nearby storage building. A map suggested a portion of the area with these shooting range features was located within the east portion of the K-4 Parcel; however, the other two maps reviewed and historical aerial photograph from 1949 indicate these shooting range features are located north of the subject site, just beyond the Cactus Channel, and are estimated to fall within the present day Cactus Avenue and property beyond. Per historical aerial photographs, during and following World War II, as late as the early 1960s, activity was present onsite within the K-4 Parcel of the subject site, with numerous objects, structures, and/or buildings were present, none of which appeared permanent, and may have been a storage or staging area. The Cactus Channel was first evident in historical aerials photographs from the late 1940s. The K-4 Parcel of the subject site has remained largely vacant since the 1960s, and the Cactus Channel remains an earthen storm drain channel to the present day. Following the end of World War II, the United States Air Force (USAF) assumed operation of March Field, eventually becoming March Air Force Base (MAFB). The skeet and shotgun ranges were removed by the 1960s, and the bomb storage facility was moved west of the 215 Freeway to the former US Army Camp Haan, which came under ownership and usage by the USAF, often referred to as “West March”. By the early 1950s, the location immediately east/northeast of the former bomb storage facility was constructed as a bulk fuels storage facility, with three large ASTs within an earthen bermed area, including two 2.31 million-gallon jet fuel tanks (USAF Facility Nos. 2203 and 2204) and one 1.26 million-gallon

DRAFT

aviation gas tank (USAF Facility No. 2205), apparently discontinued as such in the 1970s, and more recently used for jet fuel. Jet fuel JP-4 and/or JP-8 has been reportedly stored in these tanks. The closest approach to the fenced area that includes these ASTs is approximately 55 feet west-southwest of the southwest corner of the K-4 Parcel and over 100 feet south of the west end of the Cactus Channel, with the ASTs themselves over 300 feet from the subject site. From the 1950s to the 1990s, commercial buildings, electrical substations, and a base hospital and dental clinic were added within a couple hundred of the subject site. In 1993, MAFB was chosen for realignment under the Base Realignment and Closure (BRAC) process, closing in 1996, and became March Air Reserve Base (MARB). Some time later, ownership of the K-4 Parcel of the subject site was transferred from the United State of America (USA), acting by and through the USAF, to the March Joint Powers Authority (MJPA), and was conveyed to Meridian Park, LLC in 2015.

Recent onsite observations indicate the area to the west of the north-south trending power poles and the offsite electrical substations at the K-4 Parcel contains approximately 3 to 5 feet of loose, smoothed out, fill material stockpiles, estimated at roughly 20,000 cubic yards. Some construction debris, mainly concrete, was noted within areas of these fill materials. These fill materials reportedly came from an Eastern Municipal Water District (EMWD) pipeline project within a public roadway in relative proximity to the subject site.

DRAFT

A few empty 1-quart motor oil containers are present along the north side of the Cactus Channel and south side of Cactus Avenue, with no other containers of hazardous materials or wastes observed onsite. No chemical odor or soil staining were noted onsite.

During future grading subsurface utility lines will be encountered, including water, electric, and telecommunications. If water lines are encountered, asbestos-containing materials may be present. Appropriate precautions and handling of such materials should be undertaken. If any of these materials are to be disposed, they should be lawfully transported offsite to an appropriate disposal facility.

Numerous environmental reports for sites within the former MAFB and current MARB, not specifically for the subject site, have been prepared, and information gathered as part of the BRAC process. Sites with releases of hazardous materials or wastes in relative close proximity to the subject site, within a few hundred feet, include Installation Restoration Program (IRP) Site No. 11, the bulk fuels storage area, and the former base hospital and dental clinic area. Soil gas survey and soil sampling at IRP Site No. 11 suggest no significant impact to the subject site is likely, with PAHs remaining in surficial soils greater than the United States Environmental Protection Agency (USEPA) Region IX Preliminary

Remediation Goal (PRG) for residential soils, but less than the PRG for industrial soils. As documented in a 2005 Record of Decision (ROD), the USAF selected land use controls as the remedial alternative, which consisted of a prohibition of residential type uses to prevent exposure to contamination by PAHs in surface soils and limiting access to the site to authorized personnel. The land use controls specifically prohibited the construction or use of the site for residences, public or private schools, day care centers, or hospitals for human care. This selected remedy was subject to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) 5-Year Review requirement. The latest 5-Year Review from 2014 indicated no significant change to the condition of IRP Site No. 11 since the 2005 ROD. The former base hospital and dental clinic area had reported releases of mercury to the sanitary sewer system. However, indoor air and subsurface soil sampling indicated no mercury concentrations above residential USEPA PRGs. In a 2005 ROD, the USAF selected No Further Action (NFA) as the remedial alternative, which would allow for the unrestricted use of the site. Groundwater plumes at the former MAFB have not been identified within 500 feet of the subject site.

There are around a dozen sites and the former MAFB and/or associated sites, not including the subject site, listed in environmental regulatory databases within 1 mile of the subject site. Based on the results of our Vapor Encroachment Screen (VES), Tier 1 and 2 screening, a vapor encroachment condition (VEC) at the subject site can be ruled out because a VEC does not or is not likely to exist. Based on our review of environmental regulatory databases, review of previously prepared environmental reports, and VES, no environmentally impaired properties, listed within these databases, have current or former releases of hazardous substances and/or petroleum products that have migrated to and/or significantly impacted the subject site.

DRAFT

Based on the findings of the Phase I ESA and with consideration given to the recommendations contained in this report, the subject site exhibits no evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), and/or controlled recognized environmental conditions (CRECs) indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject site, except for the following:

- The subject site has historical use under three former military bases, including US Army Air Force March Field during World War II, USAF MAFB following World War II, and MARB from 1996 until some time later, being transferred to the MJPA, constituting a REC.

Based on the research conducted during this Phase I ESA, including the review of numerous environmental reports prepared under the BRAC process, the above REC does not appear to have significantly impacted the subject site. However, the specific nature of the objects, buildings, and/or structures onsite within the K-4 Parcel during World War II and years following into the early 1960s are undetermined. Any impacts to the subject site from this time period are likely localized and not anticipated to have a significant impact to the planned industrial development of the subject site. Similarly, no significant impact to the planned onsite development from the imported fill materials from a local EMWD pipeline project is anticipated. To confirm these conclusions regarding the environmental condition of the subject site, soil sampling should be conducted. Such sampling would be from random, gridded locations across the site and/or fill materials, and would include analysis for heavy metals, hydrocarbons, pesticides, herbicides, polychlorinated biphenyls, volatile organic compounds, and/or semi-volatile organic compounds. If desired, a work plan to conduct this sampling can be prepared.

Based on the past use of the subject site as part of military bases for over 50 years, both the US Army Air Force and USAF, future development of the subject site, including grading activities, have the potential to encounter subsurface hazardous materials and/or wastes, buried trash and debris, unexploded ordnance (UXO), and contaminated media, including soil, soil vapor/gas, and/or groundwater. If any of these are encountered during site development, further environmental assessment, evaluation, and/or remediation may be necessary.

DRAFT

The former base hospital and dental clinic area, within a couple hundred feet to the south of the east end of the subject site, is an HREC, and IRP Site No. 11, the past and current bulk fuels storage area within 100 feet of the west end of the K-4 Parcel, is a CREC. Based on past environmental assessment in these areas, neither of these sites appear to have had a significant environmental impact to the subject site.

INTRODUCTION

During July and August 2018, a Phase I ESA was conducted by this firm for the K-4 Parcel and Cactus Channel, approximately 46 acres of vacant land, located along/near the south side of Cactus Avenue, at March Air Reserve Base in the Moreno Valley area of Riverside County, California. The subject site is currently vacant land, including a storm drain channel (Cactus Channel). The subject site was formerly part of US Army Air Force March Field during World War II, followed by USAF March Air Force Base (now March Air Reserve Base). The planned use of the K-4 Parcel is an industrial development, including a building (718,000 square feet) with office area and over 100 loading docks, truck trailer parking, vehicle parking, and drive areas.

The Cactus Channel and associated property, roughly 10.6 acres, are situated along the south side of Cactus Avenue, between Elsworth Street and Heacock Street. The "K-4 Parcel" was designated such under the BRAC process, and is approximately 35.4 acres situated along the south side of Cactus Avenue, roughly coincident with Veterans Way and Frederick Street which are north-south streets located north of Cactus Avenue. An approximate 2,360-foot section of the Cactus Channel cuts through the K-4 parcel.

DRAFT

This Phase I ESA was conducted in conformance with the Standard Practice for Environmental Site Assessments: Phase I ESA Process, ASTM E1527-13, and AAI set forth in 40 CFR Part 312. The purpose was to identify RECs, HRECs, and/or CRECs that may be associated with the subject site. A REC is defined as the presence or likely presence of any hazardous substance or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. A HREC is defined as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meets the unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (i.e., property use restrictions, activity and use limitations, institutional controls, or engineering controls, which would fall under a controlled recognized environmental condition or CREC). This does not include de minimis conditions, that generally, do not present a threat to human health or the environment and generally would not be the subject of an enforcement action if brought to the attention of the appropriate government agency. Conditions determined to be de minimis are not recognized environmental conditions or controlled recognized environmental conditions.

The approximate location of the site within its regional setting is presented on an Index Map (Figure 1). The Preliminary Site Plan, showing the proposed development of the K-4 Parcel, is shown on Figure 2.

The findings of our Phase I ESA, as well as our conclusions and recommendations, are presented in the following sections of this report.

NON-SCOPE CONSIDERATIONS

The following environmental issues are outside the scope of ASTM E1527-13 and 40 CFR Part 312, and may not have been addressed in this report:

- Lead in Drinking Water
- Lead-Based Paint
- Wetlands
- Methane
- Radon
- Cultural Land Historical Resources
- Industrial Hygiene
- Health and Safety
- Ecological Resources
- Endangered Species
- Indoor Air Quality
- Mold and Mildew
- Asbestos-Containing Materials
- Mineral Resources
- Regulatory Compliance
- Natural Hazards
- High Voltage Power Lines

DRAFT

METHODOLOGY AND PROCEDURES

Per ASTM E1527-13 and AAI, User provided information was evaluated with respect to site history, usage, and environmental concerns.

A general review of the physical setting of the subject site, including geology and hydrogeology, was performed. This review, in part, provides information regarding the potential for groundwater to be contaminated and the potential pathways for contaminant

transport.

Historical maps, aerial photographs, and other records and information were researched and examined, as available, to investigate the use of the subject site and surrounding area.

As available, person(s) knowledgeable about the subject site were interviewed to obtain any known information regarding site usage and potential environmental concerns.

Concurrent with our public and governmental agency interviews and literature research, a site reconnaissance of the property was conducted. The site reconnaissance was conducted in order to determine current uses of the site and the potential for soil and/or possible groundwater contamination based on aboveground visual observation.

During this Phase I ESA, public regulatory agencies, potentially including environmental, building, etc. were contacted directly or online research was conducted, as warranted, for information regarding permits, underground storage tanks (USTs), hazardous materials incidents, and general information about the subject site and surrounding area to ascertain the past uses with respect to environmental concerns. Based on the subject site being part of former military bases, the USAF Administrative Record website was researched, and was the primary source for reports and other information regarding the subject site and adjacent properties.

DRAFT

Federal, state, local, tribal, and proprietary lists and databases were reviewed to ascertain the presence of known environmentally impaired sites on the subject site or within the immediate area, and to determine their impact, if any, to the site.

As part of this Phase I ESA, a Vapor Encroachment Screen was conducted to determine if a vapor encroachment condition exists, based on the information obtained during the Phase I ESA.

USER PROVIDED INFORMATION

ASTM E1527-13 defines a User as the party seeking to use Practice E1527 to complete an environmental site assessment of the property. A User may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager.

Under ASTM E1527-13 and AAI, specific tasks are assigned to the User that will help identify the possibility of RECs in connection with the property. These tasks do not require the technical expertise of an environmental professional and are generally not performed by environmental professionals performing a Phase I ESA. The User may provide the information gathered from these tasks, including the following:

- Any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law;

- Any activity and land use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place at the subject site and/or have been filed or recorded in a registry under federal, tribal, state, or local law;

- Specialized knowledge or experience (that is material to RECs in connection with the property) of the User related to the property or nearby properties (for example, is the User involved in the same line of business as the current or former occupants of the property or an adjoining property so that the User would have specialized knowledge of the chemicals and processes used by this type of business);
- Relationship of the purchase price to the fair market value of the property if it were not contaminated (reason for significantly lower purchase price, such as contamination is known or believed to be present at the property);

DRAFT

- Commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases (such as the past uses of the property, specific chemicals that are present or once were present at the property, spills or other chemical releases that have taken place at the property, and any environmental cleanups that have taken place at the property);

- Any obvious indicators that point to the presence or likely presence of contamination at the property, based on the knowledge and experience of the User related to the property; and

- Other information, including the reason why the Phase I ESA is required and/or is being performed, the type of property and type of property transaction (sale, purchase, exchange, etc.), the complete and correct address for the property, the scope of services desired for the Phase I ESA, identification of all parties who will rely on the Phase I ESA report, identification of the subject site contact and how the

contact can be reached, any special terms and conditions which must be agreed upon by the environmental professional, and any other knowledge or experience with the property that may be pertinent to the environmental professional (for example, copies of any available prior environmental site assessment reports, documents, correspondence, etc., concerning the property and its environmental condition).

A User Questionnaire was completed by a representative of a User (client) of this report. The purchase price of the site is indicated to reflect fair market value with no discount for environmental concerns. The information provided in the completed questionnaire indicates the subject site was formerly USAF property, the client is unaware of any spills, etc., and if there had been any spills when the site was USAF property, they would have been cleared prior to conveyance. The purpose for conducting this assessment is future development of the subject site. The subject site is indicated to have been owned for several years, and ownership is beginning entitlements, an Environmental Impact Report, etc. No previous environmental studies are known by the client to have been performed onsite. Meridian Park, LLC, the client, local jurisdiction, lenders, and future tenants or buyers were stated to be the parties who will rely on this Phase I ESA report.

DRAFT

A copy of the completed User Questionnaire is provided in Appendix A.

The User also provided maps and figures for the K-4 Parcel and Cactus Channel, and a geotechnical report prepared by Leighton Consulting, Inc. (LCI) for the K-4 Parcel. A map and figure provided by the User are presented within this report (Figures 2 and 3) and the LCI geotechnical report is discussed under the **REVIEW OF EXISTING REPORTS** section of this report.

Environmental Cleanup Liens and Activity and Use Limitations

Under AAI and ASTM, a search for environmental cleanup liens and AULs must be conducted, typically by the User. The subject site, whose researched historical use has been vacant land, dry farm land, and part of three former military bases (US Army March Field, MAFB, and MARB) did not appear in any state and/or federal liens or deed databases in The Environmental Data Resources, Inc. (EDR) Radius Map™ Report with GeoCheck® (Appendix G). However, MAFB, of which the subject site was a part, is listed in the US Engineering Controls and US Institutional Controls databases for issues related to soil, soil vapor, and/or groundwater contamination, with respect to remediation, monitoring, and/or use restrictions. Based on research by this firm, none of these

contamination or use restrictions appear to be associated with the subject site.

REVIEW OF EXISTING REPORTS

Geotechnical

The following geotechnical report was provided for our review during this Phase I ESA.

Leighton Consulting, Inc., 2018, Geotechnical Exploration, Proposed Industrial Warehouse Site K-4, Cactus Avenue, Unincorporated Riverside County, near Moreno Valley, California, Project No. 11979.002, May 15, 2018.

The above-referenced geotechnical report was provided by the client, and was prepared by LCI for the K-4 Parcel of the subject site. This investigation included the placement of nine exploratory soil borings, sampled to maximum depths ranging from approximately 11.5 to 51 feet below the ground surface (bgs) across the subject site. Bedrock was not encountered, and no fill materials were noted. Groundwater was encountered in two of the nine borings at depths of approximately 19 and 23 feet bgs. Although done specifically to address the engineering properties of the onsite soils, no subsurface structures, unusual odors, or stained soils were noted.

DRAFT

Environmental

There were numerous environmental reports and maps that were prepared for properties surrounding and/or including the subject site that were briefly reviewed, and some of the information obtained from our review of these reports is incorporated into this Phase I ESA. Of the numerous reports we reviewed, the following were the most pertinent to the subject site. Most of the reports and maps reviewed were obtained from the online USAF Civil Engineer Center Air Force Administrative Record search under BRAC sites for MAFB.

War Department (US Army Corps of Engineers), 1944, March Field, General Plan (with Building Schedule), June 1944.

War Department (US Army Corps of Engineers), 1944, March Field, Landing Field: Parking Apron & Landing Field Expansion Schedule for Paving Operations, December 1944.

US Army Corps of Engineers, 1994, Defense Environmental Restoration Program for Formerly Used Defense Sites, Ordnance and Explosive Waste Chemical Warfare Materials, Archives Search Report Findings, March Air Force Base and Associated Sites, Riverside, California, Site Nos. J09CA001100, J09CA047600, and J09CAT82600, September 1994, USAF Administrative Record File Number 423.

A few maps were reviewed which show March Field during World War II, which included the subject site. These maps are of poorer quality due to age and reduction, scanning, and/or copying. However, the maps are of sufficient quality to discern the locations of onsite and offsite features. One of the three maps reviewed is included within the above-referenced Archives Search Report, presented as “Map M-3" and shown to be from November 1943, and is highlighted with a bomb storage facility and skeet range. The bomb storage facility is immediately west/southwest of the present day bulk fuel storage area that includes three jet fuel ASTs within a fenced area approximately 55 feet west-southwest of the southwest corner of the subject site K-4 Parcel. The bomb storage facility was over 100 feet west and southwest of the west end of the Cactus Channel at the subject site. Skeet ranges and a “High Tower Shot Gun Range” is also shown with a turret and nearby storage building. The map suggests a portion of the area with these shooting range features (one map shows a control house instead of turret) are located within the east portion of the K-4 Parcel. However, the other two maps referenced indicate these shooting range features are located north of the subject site, just beyond the Cactus Channel, and are estimated to fall within the present day Cactus Avenue and property beyond. Patrol road and levees are indicated, likely along the present day Cactus Channel. No buildings or other features are shown for the subject site, except for a north-south road along the present day Chanute Avenue. A long, narrow, rectangular structure is shown immediately adjacent to the east of the southeast corner of the K-4 Parcel. This structure, according to the building schedule provided with the June 1944 map, is a temporary truck shelter, situated at the north end of a north-south alignment of smaller, narrow, rectangular structures which are mostly indicated to also be temporary truck shelters. A 5-car wash rack is indicated along this north-south alignment of truck shelters, located over 500 feet south-southeast of the K-4 Parcel. An east-west oriented, smaller, rectangular structure, near and northeast of the long, narrow, rectangular truck shelter, is indicated to be offices for utilities and “U.S.E.D.”, which likely stands for United States (Army) Engineering Department. South-southeasterly from this office and along the east side of a looping road, are seven small, rectangular structures, which may be associated with these offices. East/southeast of these small, rectangular structures is a utility yard, over 200 feet from the K-4 Parcel. In the general area, farther away, are a motor pool, salvage yard, oil & paint building, and utility shop yard.

DRAFT

CH2M Hill, 1984, Installation Restoration Program Records Search, March Air Force Base, California, April 1984, USAF Administrative Record File Number 02.

The Records Search Report was conducted to try and identify known and potential sites of contamination across MAFB. Sites identified near the subject site were Site No. 21 - Bulk Fuels Storage Area and Site No. 27 - Civil Engineering Storage Yard. The maps shown identifying these areas does not include some present day improvements, which makes it somewhat difficult to tell exactly where the identified sites are situated in relation to the subject site. However, it appears Site No. 21 - Bulk Fuels Storage Area is defined by the present day concrete bermed area which includes three ASTs (USAF Facility Nos. 2203, 2204, and 2205), two 2.31 million gallons and one 1.26 million gallons, situated within a fenced area approximately 55 feet west-southwest of the K-4 Parcel of the subject site. The northwest corner of Site No. 27 - Civil Engineering Storage Yard appears to be located immediately adjacent to the east of the southeast corner of the K-4 Parcel.

The referenced report includes a discussion of fuels storage and usage. Jet fuel (JP-4) was stated to be piped from off-base to two ASTs (USAF Facility Nos. 2203 and 2204). A third AST (USAF Facility No. 2205) was used for aviation gasoline storage until the use of such fuel was discontinued in 1975. This AST was reported to be inactive. Fuel was indicated to be piped to two pump stations with 41 jet fuel USTs, 50,000 gallons each, except for one 25,000-gallon tank. The pumping stations supplied flightline hydrant refueling systems. IN 1976, a transfer valve malfunction resulted in a discharge of 10,000 gallons of jet fuel from the second bulk storage AST (USAF Facility No. 2204). Approximately 4,000 gallons of fuel were recovered, with the remaining 6,000 gallons either evaporating or percolating into the ground southwest of the bulk fuels storage area. Routine maintenance also resulted in the loss of 5 gallons per week from the two active ASTs for at least the previous 4 years, and a loss of 10 to 15 gallons per week from each tank was reported prior to installation of the product recovery system. Base personnel interviewed indicated this lost fuel was usually disposed of on the ground adjacent to the tanks, and that during rainstorms, fuel floated to the surface in the bulk fuels storage area.

DRAFT

Site No. 21 - Bulk Fuels Storage Area was rated using the USAF Hazard Assessment Rating Methodology (HARM), receiving a HARM rating score of 58, primarily due to: 1) the confirmed disposal of a large quantity of hazardous wastes; 2) the proximity to a well (approximately 2,500 feet); 3) the proximity to the base boundary (approximately 800 feet); 4) the presence of a population greater than 1,000 people served by groundwater supply within 3 miles; 5) the proximity to the base drainage ditch system (approximately 400 feet); and 6) permeable soils with clay contents between 0% and 15%.

Site No. 27 - Civil Engineering Storage Yard had various hazardous materials stored onsite. Multiple spills of possibly contaminated oils, disposal of refrigeration shop waste fluids and solvents, and discharges of other wastes had reportedly occurred. Numerous drums, tanks, and transformers were being stored at the yard. Two recent spills of transformer oils, possibly containing PCBs (polychlorinated biphenyls), had also occurred.

Site No. 27 - Civil Engineering Storage Yard was rated using the USAF Hazard Assessment Rating Methodology (HARM), receiving a HARM rating score of 58, primarily due to: 1) the confirmed presence of a moderate quantity of hazardous wastes; 2) the proximity to a well (approximately 1,000 feet); 3) the proximity to the base boundary (approximately 800 feet); 4) the presence of a population greater than 1,000 people served by groundwater supply within 3 miles; 5) the proximity to the base drainage ditch system (approximately 300 feet); and 6) permeable soils with clay contents between 0% and 15%.

The Earth Technology Corporation, 1993, Installation Restoration Program, Expanded Source Investigation/RCRA Facility Investigation, March Air Force Base, California, May 1993, USAF Administrative Record File Number 230.

DRAFT

This report, which covered all of MAFB, included the base hospital building (USAF Building No. 2990) and electrical substation (USAF Building No. 2991) for the base hospital complex, located within a few hundred feet south of the east end of the Cactus Channel at the subject site.

USAF Building No. 2990 was constructed in 1965, and included office space, patient rooms, a cafeteria, various laboratories, and X-ray facilities. Mercury and radioactive materials had been disposed in the drain in the past. Numerous mercury releases had occurred from thermometers and other medical products. Tests of the hospital plumbing indicated mercury levels above acceptable limits. Tests of sewer lines indicated no levels above acceptable limits. P-traps in the plumbing system were replaced, and 3 pounds of mercury were recovered. Approximately 30 gallons a year of various reagents were disposed in the sanitary sewer system until 1992, when such reagents were stored in 55-gallon drums for disposal.

A 15,000-gallon diesel UST was located east of USAF Building No. 2990, connected to a backup generator.

An X-ray developer was located inside USAF Building No. 2990, and prior to February 1992, the silver and cadmium wastes produced by the developer were disposed in the

drain. Waste formaldehyde was stored in a sealed 55-gallon plastic drum in the morgue.

USAF Building No. 2991 was constructed in 1965. One 5,000-gallon diesel UST was located north of the building, connected to a backup generator. There were no hazardous wastes associated with this building.

US Army Corps of Engineers, 1994, Defense Environmental Restoration Program for Formerly Used Defense Sites, Ordnance and Explosive Waste Chemical Warfare Materials, Archives Search Report Findings, March Air Force Base and Associated Sites, Riverside, California, Site Nos. J09CA001100, J09CA047600, and J09CAT82600, September 1994, USAF Administrative Record File Number 423.

The above-referenced report indicates conventional ordnance was present and used in training at the former MAFB. In 1947, the bomb storage facility at March Field near the subject site was relocated to storage facilities at West March (former US Army Camp Haan), west of the 215 Freeway.

This report includes a map ("M-3") from November 1943 previously referenced, which highlighted a bomb storage facility and skeet range that were located near the subject site. The referenced report indicates that in April 1994, a US Army Corps of Engineers inspection team visited property just north of the former MAFB which was used as a safety fan for a skeet range. This area was reported to be an open field, a portion of which had been plowed and had a crop. No ordnance was found.

DRAFT

It was concluded that it was not likely any ordnance and explosive waste (OEW) contamination remained in the buffer zone for the skeet range.

USAF, 1994, Basewide Environmental Baseline Survey, March Air Force Base, California, November 1994, USAF Administrative Record File Number 860.

The referenced Basewide Environmental Baseline Survey (EBS) report was prepared to document the environmental condition of the real property at the former MAFB, resulting from the storage, release, and disposal of hazardous substances and petroleum products and their derivatives over the installation's history. Study areas were defined, and included the K-4 Parcel of the subject site within Areas A and I. It is unclear if the Cactus Channel was included in these study areas, but if so, would have fallen within Areas A, E, G, and I. All of the property within the former base was categorized into seven different categories. Most of the subject site was deemed to be Category 1 (uncontaminated property).

However, the far southeast portion of the K-4 Parcel appears to have been deemed Category 7 (areas unevaluated or requiring additional evaluation), apparently due to the benzene, tetrachloroethylene (PCE), and/or trichloroethylene (TCE) groundwater plumes. The bulk fuels storage area near the west end of the subject site and hospital complex near and south of the east end of the subject site were apparently deemed Category 7 as well. An area south of the K-4 Parcel was deemed either Category 2 (hazardous substance stored, no release) or Category 6 (hazardous substance release, no actions taken). The reproduced copy of the provided map makes it difficult to discern the shading used to designate some of the categories.

Land use maps for the years circa 1934 and 1944, the subject site is largely shown as vacant land adjoined by vacant land, but the far southeast portion of the K-4 Parcel likely encroaches into an industrial area in 1944. The land use map for the year circa 1968 indicates the far east portion of the K-4 Parcel encroaches into an industrial area. The hospital area (institutional, medical) is indicated south of the east end of the subject site (Cactus Channel). The present day bulk fuels storage area is shown as industrial. The land use map for the year circa 1993 indicates again the far east portion of the K-4 Parcel encroaches into an industrial area. West of the hospital area are two commercial areas, straddling the present day Riverside Drive. The northern tip of an industrial area, previously mentioned to be either Category 2 or 6, is shown near or immediately south of the central portion of the K-4 Parcel. These land use maps do not appear to specifically include the onsite Cactus Channel.

DRAFT

No RCRA Facility Assessment (RFA) sites were identified at or in close proximity to the subject site. A map with IRP sites includes IRP Site No. 11 for the bulk fuels storage area, previously designated Site No. 21, and IRP Site No. 12 for the civil engineering storage yard, previously designated Site No. 27. The location of the IRP Site No. 12 area is now shown farther away, over 500 feet from the subject site K-4 Parcel. Both IRP Site Nos. 11 and 12 were assigned to Operable Unit 2. Both IRP Sites were considered to be Category 7 (areas unevaluated or requiring additional evaluation).

Maps with locations of identified USTs and ASTs include the three large ASTs in the bulk fuels storage area (IRP Site No. 11), two USTs and one AST in the hospital area located over 200 feet south of the subject site, and a UST southeast of the intersection at North Avenue and 2nd Street, east of Riverside Drive, over 400 feet south of the subject site. The three large ASTs in the bulk fuels storage area, USAF Facility Nos. 2203 and 2204 (2,310,000 gallons each) and USAF Facility No. 2205 (1,260,000 gallons) were indicated to be used for storage of jet fuel (JP-8), which was piped to the former MAFB via a pipeline

from a fuel terminal in Colton, California.

Five silver recovery units were in use at the former MAFB, including the hospital building (USAF Building No. 2990). Because no reported releases were associated with these units, which appeared in good condition, they were deemed to be Category 2 (hazardous substance stored, no release).

The base hospital (USAF Building No. 2990) utilized numerous radioactive sources, including radiopharmaceuticals for diagnostic and treatment purposes, calibration of medical equipment, and check source. No records of radioactive mixed waste generation or waste storage were identified, and no radioactive material or mixed waste spill or contaminated sites were identified during a records search, visual site inspections, or through interviews with base personnel; therefore, all facilities associated with the use and/or storage of radioactive materials were considered to be Category 2.

In 1991, several mercury spills were identified in the sewer system of the base hospital (USAF Building No. 2990), probably from the accidental breakage of mercury-containing thermometers and manometers. In May 1992, a detailed sampling program was implemented to characterize the level and extent of mercury contamination. Of the fifty-nine (59) samples taken from the interior piping, fifty-four (54) had detectable mercury concentrations, of which thirty-nine (39) exceeded or had the potential to exceed California hazardous waste criteria for mercury. Approximately 500 linear feet of mercury-contaminated piping was identified within the hospital. Although none of the samples taken from the exterior sewer line were above the California hazardous waste limits, it was recommended additional testing be conducted. The exterior sewer lines were noted to be generally structurally sound and free of significant corrosion. The hospital was considered to be Category 6 (hazardous substance release, no actions taken) because of the known mercury contamination.

DRAFT

The referenced Basewide EBS report addresses surface/storm water, and discusses flightline discharge which is conveyed to the Heacock Channel and ultimately to the Perris Valley Storm Drain Lateral A. Other surface or storm water features are discussed, but there is no mention of the onsite Cactus Channel.

EG&G, Inc., 1991, Draft Soil Gas Survey, March Air Force Base Site 11, April 1991, USAF Administrative Record File Number 85.

The referenced soil gas survey was part of a characterization and soil cleanup in the bulk fuels storage area (IRP Site No. 11). Construction activities were planned in December 1991 to replace the floating lid on one of the ASTs (USAF Facility No. 2205), paved the bermed areas with concrete, and replace the earthen containment dikes surrounding all three ASTs (USAF Facility Nos. 2203 through 2205) with concrete dikes.

The soil gas survey included eighty-five soil vapor probe locations, placed at approximate 50- to 100-foot intervals, and advanced to approximately 4 to 9 feet bgs. Hard soils were encountered in some locations, resulting in a lack of deeper sampling or no sampling at all. The analytical results shown include reporting limits around 5 to 10 times higher than is typical at present day for total petroleum hydrocarbons (TPH), and benzene, toluene, ethylbenzene, and total xylenes (BTEX). However, of the ninety-eight (98) samples analyzed, only ten (10) samples had reportable concentrations of TPH, ethylbenzene, and/or o- and p-xylenes up to 53 micrograms per liter (µg/L), 15 µg/L, and 22 µg/L, respectively. No samples had reportable concentrations of benzene, toluene, and o-xylene. The reported soil vapor concentrations of ethylbenzene are greater than the present California Regional Water Quality Control Board, San Francisco Bay (CRWQCB-SFR) Environmental Screening Levels for residential and commercial/industrial scenarios, with the reported soil vapor concentrations of TPH and xylenes less than these scenarios. The closest soil vapor sample with reportable concentrations was over 400 feet from the subject site. The closest soil vapor samples were collected approximately 200 feet or more from the subject site.

DRAFT

Air Force Base Conversion Agency, 1997, Final Finding of Suitability to Transfer (FOST) in Support of an Easement to the City of Moreno Valley, Culvert at the Intersection of Cactus Avenue and Heacock Street, March Air Force Base, California, March 13, 1997.

The FOST was prepared to document environmentally-related findings and the suitability to transfer in support of a 25-year easement to be granted to the City of Moreno Valley for expanding an existing box culvert. The FOST was a thorough analysis of information contained in the following documents:

1) The Final Environmental Impact Statement (FEIS) for the Disposal and Reuse of MAFB, dated February 1996;

2) The Basewide EBS for MAFB, dated November 1994;

3) Supplemental EBS (SEBS) for an Easement to the City of Moreno Valley, dated September 3, 1996; and

4) Visual Site Inspection (VSI) report, dated June 4, 1996, and the follow-on VSI dated March 4, 1997.

Based on the Attachment 1, Map 2 within the FOST, the project area for the easement is at the east end of the subject site, where the Cactus Channel transitions to the Heacock Channel.

Based on the Basewide EBS, the proposed easement was indicated to be located within a large parcel considered to be DOD Environmental Condition Category 7 (areas unevaluated or requiring additional evaluation). Based on the VSIs and SEBS, the Category 7 rating was the result of environmental concerns primarily located at USAF Building No. 2990 and 2991 (base hospital and dental clinic area). These buildings were approximately 900 feet away, and did not appear to affect the proposed easement. It was concluded that based on an analysis of the data, and upon completion of the closure actions related to two USTs and resolution of the Category 6 (hazardous substance release, no actions taken) rating based upon mercury found in the sewer system of USAF Building No. 2990, regulatory concurrence of "No Further Action" (NFA) along with reclassification to Category 4 (hazardous substance release, all actions have been taken) was to be formally documented in the update to the Basewide EBS.

DRAFT

The USAF determined the property required neither deed restrictions nor notifications to the City of Moreno Valley. No evidence of release of any hazardous substances to the environment was identified during the VSI.

The FOST concluded that the easement proposal had been adequately assessed and evaluated for environmental hazards, environmental impacts anticipated from future use of the property, and adequate notice of disclosure resources. The future use of the property was concluded to not present current or future risk to human health or to the environment, subject to inclusion and compliance with the appropriate easement covenants regarding flood plains and wetlands. The property was deemed to be suitable for an easement.

Earth Tech, Inc., 2004, Final Focused Remedial Investigation, OU4, Former March AFB, California, July 2004, USAF Administrative Record File Number 1995.

The above-referenced report includes documentation of assessment and evaluation of health risk. Past investigation was report in 1992, similar to that discussed in this Phase I ESA report for the Basewide EBS. A total of 146 samples were collected, including 57 samples from internal waste collection lines, 73 real-time air monitoring samples from sewer ventilation exhaust pipe outlets, 10 samples from the “floor drain” clean-outs of the internal lines, and 6 samples from the exterior sewer lines. Approximately 86 percent of the interior waste collection line samples had mercury concentrations above the analytical detection limit, with more than one-third of these samples with mercury concentrations ranging from 25.8 to 71,200 milligrams per kilogram (mg/kg). Fourteen percent had no detectable mercury or were visually clean. Of the 12 exterior sewer line sample locations in manholes, 6 were visually clean, and no samples taken. Of the 6 exterior sewer line samples, 3 had concentrations of mercury above analytical detection limits, but below the residential USEPA PRG of 23 mg/kg.

Additional sampling was conducted in 1997, with 4 internal line samples collected with mercury reported at 85 and 110 mg/kg in 2 samples, above the residential USEPA PRG. One sample collected from an external sewer line had a concentration of mercury of 2,100 mg/kg. Neither this, nor the previous sampling in 1992 collected soil samples from outside of the hospital and dental clinic facilities or from around the sewer line.

DRAFT

The OU4 field investigation was performed between November 2002 and March 2003. Sludge and sediment samples were collected from the sewer main, the sewer main was video surveyed, subsurface soil samples were collected where the video survey showed potential breaks or separations in the sewer pipe, and indoor air samples were collected within the hospital and dental clinic. The sludge samples collected from within the sewer main were reported with mercury concentrations up to 999 mg/kg. Three soil samples were collected, with mercury concentrations reported up to 0.21 mg/kg, well below the USEPA residential PRG at 23 mg/kg. The fourteen indoor air samples, including two duplicate samples, had mercury concentrations less than the USEPA residential PRG at 0.31 micrograms per cubic meter ($\mu g/m^3$).

The maps provided indicate the sewer lines associated with the base hospital (USAF Building No. 2990) and dental clinic (USAF Building No. 2991) generally lead easterly and southerly, away from the subject site, which is located over 100 feet from the former hospital and dental clinic buildings and over 200 feet from the sewer lines shown.

Based on the reported mercury concentrations in soil and indoor air samples, it was concluded that no unacceptable risk was associated with the base hospital or dental clinic,

and no apparent release of mercury above residential USEPA residential PRGs was identified. The base hospital and dental clinic were recommended for NFA.

Earth Tech, 2005, Installation Restoration Program, Operable Unit 4, Final Record of Decision, Former March Air Force Base and March Air Reserve Base, California, September 2005, USAF Administrative Record File Number 2238.

The Record of Decision (ROD) by the USAF indicated that the OU4 Focused Remedial Investigation concluded that the base hospital and dental clinic did not pose an unacceptable risk to human health. The USAF determined that the mercury found did not pose a potential risk for human health or the environment. The USAF selected NFA as the remedial alternative, which would allow for the unrestricted use of the site.

USAF Reserve Command, 2005, Final Record of Decision, March Air Force Base/Air Reserve Base, Operable Unit 2, Air Force Reserve Command Sites 1, 11, 37, and 39, September 2005, USAF Administrative Record File Number 2289.

The ROD by the USAF indicated that IRP Site No. 11 had soil sampling that found elevated concentrations of PAHs in the surface soil, but no significant amount of fuel contamination (it was stated that evaporation removes a fraction of fuel spilled on the surface), and no significant groundwater contamination was found. Concentrations of PAHs were within acceptable risk values for industrial land, but exceeded residential levels. The baseline risk assessment indicated the carcinogenic risk for future residents was 2×10^{-4} verus 6×10^{-5} for industrial and construction workers. The risk to industrial and construction workers fell within the acceptable risk management range of 1×10^{-4} to 1×10^{-6}, whereas the risk to future residents was unacceptable, falling outside this range. Benzo(a)pyrene was the only chemical found at concentrations exceeding the USEPA residential PRG.

DRAFT

The reasonable anticipated future land use at IRP Site No. 11 was industrial. In order to remain protective of human health and the environment, the remedial action objectives included: preventing unacceptable exposure to soil; prohibit future residential-type land uses; and limit access to authorized personnel.

The USAF selected land use controls as the remedial alternative, which consisted of a prohibition of residential type uses to prevent exposure to contamination by PAHs in surface soils and limiting access to the site to authorized personnel. The land use controls specifically prohibited the construction or use of the site for residences, public or private

schools, day care centers, or hospitals for human care. This selected remedy was subject to the CERCLA 5-Year Review requirement.

AECOM Technical Services, Inc., 2014, Final Third Five-Year Review Report, Performance-Based Remediation at March Air Reserve Base and Former March Air Force Base, California, September 29, 2014, USAF Administrative Record File Number 421538.

No significant changes to the condition of IRP Site No. 11 were noted since the 2005 ROD.

Tetra Tech, Inc., 1995, Final Installation Restoration Program (IRP) Stage 5, Basewide Groundwater Monitoring Program, Fall Quarter 1993, Analytical Data, Informal Technical Information Report, Volume 5, March Air Force Base, California, December 1995, USAF Administrative Record File Number 570.

Montgomery Watson, 2001, Fourth Quarter 2000, Long-Term Groundwater Monitoring, Informal Technical Information Report (ITIR), March Air Reserve Base, California, April 2001, USAF Administrative Record File Number 1285.

DRAFT

AECOM Technical Services, Inc., 2018, Final Fourth Quarter 2017 Groundwater Monitoring, Informal Technical Information Report, CG049 Basewide Groundwater Monitoring Program, Operable Unit 5, March Air Reserve Base and Former March Air Force Base, California, March 5, 2018, USAF Administrative Record File Number 570681.

The above three groundwater monitoring reports, spanning from the early 1990s to 2000 to recently this year, were reviewed to evaluate the groundwater plumes at the former MAFB that may have impacted the subject site. Based on this reviewed, it appears no groundwater plumes, including those for benzene, 1,2-dichloroethane, PCE, and TCE. The closest well to the subject site with reported concentrations of PCE and TCE was well 5M12MW3, over 600 feet south-southeast of the K-4 Parcel of the subject site. Plumes for benzene and 1,2-DCA were located farther away. In the early years of groundwater monitoring, wells on or near the subject site were non-detect, including wells 2MW3, 2MW11, 5M11MW1, 5M11MW2, 28MW6, OW1, and OW6. The latest maps included in the Fourth Quarter 2017 Groundwater Monitoring report only include well 5M11MW1, suggesting the rest have been abandoned/destroyed and/or not actively used, suggesting there are no plumes currently near the subject site. Groundwater flow direction over various

monitoring periods is generally shown to the southeast, though occasionally a northerly/northwesterly flow is shown in the northwest portion of the former main base.

Aerostar SES, LLC, 2018, Final Site Inspection Report for Aqueous Film Forming Foam Areas, Former March Air Force Base, July 2018, USAF Administrative Record File Number 574458.

This report documents a Preliminary Assessment in 2015 that identified five potential areas and two fire training areas that may be impacted by the emergent chemical compounds perfluorooctanesulfonic acid (PFOS), perfluorooctanoic acid (PFOA), and perfluorobutanesulfonic acid (PFBS) in the environment related to historical USAF use of aqueous film forming foam (AFFF). These compounds are a class of synthetic fluorinated chemicals used in industrial and consumer products, including defense-related applications. None of these fire training or potential areas were located at or near the subject site, and based on the known history of the subject site and nearby areas, no significant impact to the subject site from PFOS, PFOA, or PFBS compounds are anticipated.

DRAFT

PHYSICAL SETTING

The geologic and hydrogeology for the region, former MAFB/MARB, and subject site, were referenced from documents reviewed during this Phase I ESA. The main document referenced is the Final Focused Remedial Investigation, Operable Unit 4, July 2004, USAF Administrative Record File No. 1995, prepared by Earth Tech.

Geology

The regional geology surrounding the former MAFB/MARB is characterized by igneous and metamorphic crystalline rock overlain, or outcropping through, alluvial sediments. The former MAFB/MARB lies within the northern part of the Peninsular Ranges Geomorphic Province. The Peninsular Ranges are a northwest- to southeast-oriented complex of blocks separated by similarly trending faults. Within the Peninsular Range, the former MAFB/MARB lies on an eroded mass of Cretaceous and older crystalline rock that is known as the Perris Block.

The Perris Block is bounded on the west by the Elsinore-Chino fault zone and on the east by the San Jacinto fault zone. The Elsinore-Chino fault zone is approximately 14 miles southwest of the base and the San Jacinto fault zone is approximately 7 miles northeast

of the base. The Casa Loma Fault, a sub-parallel splay of the San Jacinto Fault Zone, is located approximately 5 miles northeast of the base, and trends southeast from Reche Canyon to approximately 5 miles east of the Perris Reservoir Dam.

The bedrock at and around the former MAFB/MARB is granitic in composition, ranging from granodiorite to tonalite. The subsurface bedrock is characterized by a highly weathered zone near the bedrock-alluvium interface. Drilling records indicate that the weathered bedrock material can be up to 150 feet thick over the bedrock highs, and as thin as 10 feet or less over areas of buried bedrock channels. Additionally, drilling data show that the upper portion of the weathered bedrock is saturated, transmits water, and has characteristics similar to tighter, finer-grained sediments.

In the subsurface, three prominent buried bedrock highs can be observed beneath the former MAFB/MARB, exclusive of the former West MAFB/MARB. Based on geophysical data, one bedrock high is situated at the northern end of the base just north of the intersection of Meyer Drive and Graeber Street. A second bedrock high is near the central part of the main cantonment area beginning just north of the intersection of Graeber Street and Riverside Drive (Graeber Bedrock Ridge) and extending southeast to the former base boundary near Iris and Heacock Streets, just east of the former base boundary. The third and largest of the bedrock highs is south of Taxiway 2, and trends southeast, parallel to the active runway to the south end of the former base boundary (Runway Bedrock Ridge). Scoured bedrock channels between these bedrock highs appear to coalesce with the deeper bedrock tributary channel that runs parallel to the 215 Freeway to the west.

DRAFT

The Perris Valley consists of deeply eroded bedrock subsurface that was subsequently filled with alluvium. The alluvial material consists of interbedded layers of gravel, sand, silt, and clay of varying thickness. The thickness of the alluvial deposits range from a few feet thick, in areas of bedrock highs, to over 900 feet thick southeast of the base. Based on the recent geotechnical investigation by LCI, the subject site and surrounding area are anticipated to be underlain by older alluvial soils, comprised of sandy and silty clays, silty and clayey sands, and sands to a depth of approximately 51 feet bgs.

Hydrogeology

Groundwater beneath the main former MAFB/MARB, which includes the subject site, generally occurs in alluvial deposits. The bedrock is considered non-water bearing, with the exception of groundwater that occurs in joints or fracture zones, or in the weathered zones that exist in some areas of the bedrock-alluvium contact. The water-bearing zones vary in

thickness and composition throughout the base. There is no single water-bearing zone that can be traced continuously across the base. The strata are discontinuous and may interfinger with adjacent alluvial units. In general, the water-bearing zones consist of varying amounts of sandy zones (with occasional gravel lenses) separated by leaky confining beds of finer-grained silts and clays. These deposits are moderately to highly permeable and capable of yielding large amounts of water under unconfined conditions. Based on previous studies, the permeability of the alluvium varies both laterally and vertically.

The groundwater system in the Perris and Moreno Valleys (San Jacinto Groundwater Basin) is almost completely surrounded by non-water-bearing rocks, such that water flowing into or out of the basin should be negligible. Natural recharge to the aquifer results primarily from infiltration of precipitation. Artificial recharge on base occurs from infiltration of irrigation water near the central portion of the base shop and housing areas and from the Perris Valley Storm Drain located along the east side of the main base. Infiltration of irrigation water and seepage from unlined canals and septic systems also contributes to the artificial recharge.

DRAFT

Historically, the amount of water removed by pumping often exceeded the amount of water naturally recharged to the aquifer. Pumping has caused groundwater levels in some wells to decrease by as much as 185 feet between 1941 and the mid 1980s. Monitoring of groundwater levels on-base since 1987 indicates a local rise in groundwater levels. Changes in land use, most notably a reduction in the amount of agricultural land and an increase in urbanization, have resulted in a rising water table. Specifically, reductions in the amount of groundwater withdrawal caused by decreased use of agriculture and increased surface infiltration has resulted in rising water tables. In recent years, the filling of the Perris Reservoir southeast of the base, and subsequent seepage below and across the earth-filled dam are also a suspected contributor to recharge and rising water levels in the basin.

Groundwater generally flows toward the southeast across the main base. This southeasterly direction is consistent with the regional flow in this portion of Perris Valley. Tetra Tech identified a groundwater high from the September 1996 groundwater elevation data in the vicinity of IRP Site 2, approximately 0.4 mile south of the subject site, near the north-central portion of the main base. It is assumed that this groundwater high may be associated with the bedrock high observed in this area. The groundwater gradient in the northern portion of the base, which includes the subject site, is relatively gentle but steepens at the southeast portion of the base. In the north portion of the main base,

groundwater elevations indicate the direction of flow toward the north. This northern flow may be caused by groundwater withdrawal in production wells north of the base or may be the result of a buried channel thought to exist in this area.

Based on a 2012 potentiometric map of the main base from the Final Third Five-Year Review Report, September 29, 2014, prepared by AECOM Technical Services, Inc., groundwater elevations at the subject site ranged from approximately 1513 to 1524 feet above mean sea level (amsl). Based on the range in ground surface elevations from approximately 1547 to 1552 feet amsl, the groundwater beneath the subject site is anticipated to be first encountered around 30 feet bgs. The recent geotechnical investigation by LCI encountered groundwater at the K-4 Parcel of the subject site at depths of approximately 19 and 23 feet bgs.

HISTORY OF SITE USAGE

To obtain a history of previous site usage, this firm conducted a search for historical aerial photographs, researched property ownership/parcel information, and researched building information. EDR was contacted for Sanborn Fire Insurance Map coverage, city directory information, and historical topographic maps and aerial photographs. A representative of the owner of the subject site was interviewed to obtain historical information and knowledge of any potential environmental concerns.

DRAFT

Sanborn Fire Insurance Maps

No coverage of Sanborn Fire Insurance Maps was available for the subject site. The Certified Sanborn® Map Report from EDR is provided in Appendix B.

Topographic Maps

Historical topographic maps provided by EDR from 1901, 1942, 1943, 1947, 1953, 1967, 1973, 1980, and 2012 were reviewed. These maps, along with the approximate subject site boundaries shown, are included in the EDR Historical Topographic Map Report, provided in Appendix C.

The 1901 map, at a scale of 1"=2,200', shows partial coverage of the subject site and surrounding properties. The east approximate 2,100 feet of the subject site (Cactus Channel) and adjacent properties and area are not covered. The portion of the subject site and surrounding properties covered are shown as vacant land. The site is situated along

the south side of an east-west alignment for the present day Cactus Avenue, along which are segments of road. Two north-south roads cross the subject site, roughly coincident with Graham Street/Riverside Drive and former Joy Street.

The 1942 map, at a scale of 1"=2,200', shows the subject site as vacant land with no indication of a military base on or near the subject site. The north-south Graham Street/Riverside Drive is shown cutting across the subject site. A north-south dirt road, the present day Heacock Street, is shown adjacent to the east of the site with a “blue line” stream along its west side. No development is shown near the subject site.

The 1943 map, at a scale of 1"=2,200', shows partial coverage of the subject site and surrounding properties. The east approximate 2,100 feet of the subject site (Cactus Channel) and adjacent properties and area are covered, with that to the west of it not shown. The area covered shows the subject site and surrounding properties the same as on the 1942 map.

The 1947 map, at a scale of 1"=2,200', shows partial coverage of the subject site and surrounding properties. The east approximate 1,900 feet of the subject site (Cactus Channel) and adjacent properties and area are not covered. The portion of the subject site and surrounding properties covered are shown as vacant land, essentially the same as on the 1942 map.

DRAFT

The 1953 map, at a scale of 1"=2,200', shows the subject site inclusive of a “blue line” stream, the present day Cactus Channel, the west end of which appears to still be natural, with the remainder channelized. The west end is situated at the south end of a natural drainage coursing north-northeast to south-southwest. A boundary line immediately south of the Cactus Channel appears to mark the military base boundary for March Field, of which the subject site is a part. Within the east end of the subject site K-4 Parcel is a smaller building or structure shown, located along the west/northwest side of a road (present day Chanute Avenue), a small square structure is shown. Adjacent to the east of the K-4 Parcel, near and just east of Chanute Avenue, is a north-south oriented, long rectangular structure, south of which are similarly oriented, but shorter structures in north-south alignment. These structures, according to a June 1944 US Army Corps of Engineers Map for March Field, “General Plan” (with building schedule), were temporary truck shelters. A second road is shown near and just east of these truck shelters, which connects with Chanute Avenue north of these shelters at an upside down “U”. Just south of the Cactus Channel and just east of the K-4 Parcel, two smaller, square structures are shown. These structures are not shown on the above-referenced 1944 map. A smaller, square

building is shown along the west side of Graham Street (present day Riverside Drive), approximately 150 feet south of the subject site. Approximately 500 feet west-southwest of this building is a smaller, square structure at the northwest end of the northwest-southeast trending road. Neither this building or structure are shown on the above-referenced 1944 map. Graham Street, a divided road, cuts across the subject site, north to south, at its present day location (as Riverside Drive). Other roads present at March Field, near the subject site, include 2nd Street, 4th Street, 8th Street, North Avenue, and Z Street. Heacock Street leads from the south, curving to the east, becoming Cactus Avenue adjacent to the east, apparently as paved roads. Many of the present day military base buildings and structures are shown over 1,000 feet from the subject site. A railroad spur track, trending southeast to northwest before bending to the west along the north side of the base, is located approximately 500 feet southwest of the west end of the subject site.

The 1967 map, at a scale of 1"=2,200', shows the subject site with no buildings or structures, and structures and buildings previously shown within approximately 1,000 feet of the subject site are absent, or perhaps a couple may have had significant additions. The three present day jet fuel ASTs are shown within several hundred feet of the west end of the subject site, including the Cactus Channel and K-4 Parcel. A paved road along Cactus Avenue is shown along the north side of the subject site, terminating at 4th Street. The north end of a partially truncated Chanute Avenue is shown encroaching into the south portion of the east end of the K-4 Parcel. The west end of the Cactus Channel onsite is indicated to be channelized. Two buildings are shown, one of which may be an addition to or replacement of the building previously present along the west side of Graham Street, south of the subject site. The former MAFB hospital area is shown with the hospital building present, along with 5th Street, 7th Street and Hospital Way. This area is south of the east end of the subject site. West of the hospital area, at the northwest corner of Z Street and 4th Street is a rectangular building of commercial size, about two-thirds the size of the hospital building, located over 500 feet south of the subject site.

DRAFT

The 1973 map, at a scale of 1"=2,200', shows partial coverage of the subject site and surrounding properties. The east approximate 2,100 feet of the subject site (Cactus Channel) and adjacent properties and area are covered, with that to the west of it not shown. The area covered shows the subject site and surrounding properties the same as on the 1967 map.

The 1980 map, at a scale of 1"=2,200', shows the subject site and surrounding properties the same as on the 1973 map.

The 2012 map, at a scale of 1"=2,200', shows no buildings or structures, but does show infrastructure, such as roads. Cactus Avenue is shown along the entirety of the subject site north boundary. North-south roads intersecting Cactus Avenue, not previously shown, include Elsworth Street to the west, Newhope Street (present day Veterans Way), and Frederick Street. Roads at the base, now labeled under March Field, MAFB, and MARB, have increased in the general area of the west end of the subject site. The present day 215 Freeway, which began as a roadway shown on the 1942 map, is located approximately 0.6 mile west-southwest of the subject site.

Aerial Photographs

A search was conducted for available aerial photographs of the area on file at the County of Riverside Flood Control and Water Conservation District (CRFCWCD). The search revealed aerial photographs taken of the subject site and surrounding area in 1948, 1962, 1974, 1980, 1984, 1990, 1995, 2005, and 2010, the latest photog raph available.

The aerial photographs reviewed at the CRFCWCD consisted of vertical aerial stereo graphic photographic pairs of varying scales. These photographs were viewed using stereoscopes with magnifications of 2X and 4X for three-dimensional enhancement. Due to the relatively large photographic scales involved, the analysis and subsequent interpretation of detail from aerial photographs sometimes requires a degree of subjective judgement. The degree of certainty on the interpretation of details depends upon factors such as the scale and the quality of the photograph. However, an analysis of aerial photographs will reveal the general site history as to the relative us of the land, possible ground disturbance, activities, etc.

DRAFT

Digital aerial photographs of the subject site and surrounding area were provided by EDR for the years 1938, 1949, 1953, 1966, 1978, 1985, 1989, 1994, 2006, 2009, 2012, and 2016. These photographs were reviewed to enhance and/or supplement the review of the CRFCWCD photographs. Copies of the electronic aerial photographs provided by EDR, with the approximate site boundaries shown, are presented in Appendix D.

A summary of the site and surrounding conditions during the various times, as reflected in the CRFCWCD photographs is given below:

1. January 19, 1948, Photo Nos. 13 and 14, Scale 1" = 2,625'

[The EDR 1938 digital aerial photograph shows the subject site as vacant dry farm land surrounded by similar properties, with no storm drain (Cactus) channel present, and Graham Street/Riverside Drive as a paved road, cutting through the subject site.]

These early photographs are of average quality. The subject site is generally vacant land with the exception of two small, east- to west-trending, rectangular apparent buildings, trailers, and/or tents along the southern boundary of the K-4 Parcel. Several items are stored along the west perimeter of a fenced area within the northeast portion of the K-4 Parcel. This fenced area extends offsite to the east. The Cactus Channel appears as a straight, east- to west-trending, unlined channel with a roadway crossing at Riverside Drive. The channel bends southward along the west side of Heacock Street, a dirt roadway. The present day Cactus Avenue does not exist. The land to the north of the site is generally vacant land in a relatively natural state. However, there is an area near and north of the subject site, approximately 2,425 feet long (east-west), and very similar to that depicted for a skeet range(s) , storage building, high tower shotgun range, control house, and/or turret on Map M-3 from November 1943 presented within the September 1994 Archives Search Report Findings, March Air Force Base and Associated Sites, a June 1944 US Army Corps of Engineers Map for March Field, “General Plan” (with building schedule), and December 1944 US Army Corps of Engineers Map for March Field, “Landing Field: Parking Apron & Landing Field Expansion Schedule for Paving Operations”, discussed under the **REVIEW OF EXISTING REPORTS** section of this Phase I ESA report. This shooting range area appears to be situated along and immediately north of the present day Cactus Avenue. In the area west of the K-4 Parcel, numerous stored items and small apparent buildings, trailers, and/or tents are present. This area looks very similar to that depicted for a bomb storage facility on the above-referenced maps from the 1940s. This area is generally coincident with the present day three jet fuel ASTs. The present day Chanute Avenue is not present. Just east of the future Chanute Avenue, long, north- to south-trending, rectangular buildings, structures, and/or tents are present. The longest and northernmost of these structures is estimated to be situated adjacent to the east of the K-4 Parcel. These structures, according to the above-referenced June 1944 US Army Corps of Engineers map, are temporary truck shelters. East of the northernmost temporary truck shelter are seven east- to west-trending, small rectangular buildings, structures, and/or tents are present. These structures may have included offices for utilities and/or US (Army) Engineering Department or District. A running track (shown as “Athletic Field” on above-referenced maps from the 1940s) is located along the south side of the Cactus Channel, east of Riverside Drive, a paved roadway. The area to the south of the K-4 Parcel contains

DRAFT

small amounts of stored items. Overall, the subject site and adjacent areas are very similar to that depicted on the above-referenced maps from the 1940s.

[The EDR 1949 and 1953 digital aerial photographs show numerous smaller objects, possibly including equipment, vehicles, materials, and/or structures (likely temporary) within the east portion of the K-4 Parcel.]

2. <u>January 28, 1962, Photo Nos. 1-85 through 1-87, Scale 1" = 2,000'</u>

These photographs are of poor quality, blurry. The two small, rectangular structures previously noted in the south portion of the K-4 Parcel are gone. A dirt path leads from the central portion of the K-4 Parcel from the south, terminating in a circle-shaped clearing in the central portion of the K-4 Parcel. This circle-shaped clearing may coincide with a small concrete foundation observed in the south-central portion of the K-4 Parcel during our site reconnaissance. The fenced area within the northeast portion of the K-4 Parcel is still present, but notably vacant. Chanute Avenue is now present as a dirt road. The area bound by the fenced area within the northeast portion of the K-4 Parcel on the north, Chanute Avenue on the east, approximately 800 feet west of Chanute Avenue, and on the south by the approximate current K-4 Parcel southern boundary, contains numerous rows of north- to south-trending, thin, rectangular items and apparent buildings, trailers, and/or tents. The previously noted features west of the site (bomb storage facility) are no longer present, and three cylindrical ASTs are now present. These tanks trend northwest to southeast, with the southeasternmost tank smaller than the other two. Cactus Avenue is now present as a paved roadway adjacent to the Cactus Channel on the north, from the western subject site boundary to Riverside Drive. Internal roadways east of Riverside Drive, south of the Cactus Channel, are now present as small, paved roadways (North Avenue, 2nd, 4th, 5th, and 7th Streets, and Z Street). The structures previously noted east of Chanute Avenue are no longer present. The land north of Cactus Avenue and the channel is vacant land in a relatively natural state, with the shooting range area features absent. A structure is present in the south half of the previously noted running track. The north half of the running track is faintly visible. A structure is present at the southwest corner of Cactus Avenue and Riverside Drive. The area south of the K-4 Parcel contains abundant stored items and some buildings, trailers, and/or tents.

DRAFT

[The EDR 1966 digital aerial photograph, though of poor quality, indicates the K-4 Parcel is vacant land.]

3. May 24, 1974, Photo Nos. 233 through 235, Scale 1" = 2,000'

The K-4 Parcel is vacant with exception to Chanute Avenue, which appears paved. The area previously noted to contain numerous rows of north- to south-trending, thin, rectangular items and buildings, trailers, and/or tents in the eastern portion of the K-4 Parcel is cleared of such, and appears to be paved in these better quality photos. The previously noted fenced area in the northeast portion of the K-4 Parcel and adjacent area to the east is no longer present. A roadway crossing (4th Street) over the Cactus Channel is present approximately 725 feet of east of Riverside Drive, just north of the previously noted running track, which is now completely unidentifiable. A parking lot is present adjacent to the previously noted building on the south portion of the previous running track on the east. The hospital, Hospital Way roadway (paved), and parking lot areas are present at the southwest corner of North Avenue and 8th Street. The land to the north of the subject site remains vacant land in a relatively natural state. The area south of the K-4 Parcel is now vacant.

4. February 1, 1980, Photo Nos. 243 and 244, Scale 1" = 2,000'

DRAFT

The K-4 Parcel is vacant with exception to Chanute Avenue and previously noted paved area. An apparent dirt path trends north to south across the K-4 Parcel in the area of the current power poles (approximately 725 feet west of Chanute Avenue). It is difficult to discern, but it appears that power poles are present along this path. A small dirt path trends east to west along the south side of the Cactus Channel from the west subject site boundary to Riverside Drive. A structure is present at the northeast corner of the Cactus Channel and Riverside Drive/Graham Street, at the terminus of the dirt path. Cactus Avenue is not present along the south side of this development, however, a partially paved roadway is present in this area and connects to the crossing at 4th Street. Additional parking lot areas for the hospital have been added. The remainder of the land to the north remains essentially the same as previously described. Ponded water is visible north of Cactus Avenue, just west of the western boundary of the K-4 Parcel.

5. February 7, 1984, Photo Nos. 1482 and 1483, Scale 1" = 1,600'

The K-4 Parcel is generally the same as previously described with exception to a dirt path that leads from the off-site ASTs to the west, to the northwest corner of the paved area on the K-4 Parcel which previously contained numerous rows of north- to south-trending, thin, rectangular items and buildings, trailers, and/or tents. Power poles are clearly visible along the previously noted north to south dirt path across the K-4 Parcel, approximately 700 feet

west of Chanute Avenue, and turns east along the south side of the Cactus Channel within the previously noted dirt path within the north portion of the K-4 Parcel to the building at the southeast corner of the Cactus Channel and Riverside Drive. A building is now present south of the K-4 Parcel, and oriented northeast to southwest with a perimeter fence. The remaining area of the K-4 Parcel remains as previously described.

6. January 23, 1990, Photo Nos. 5-26 through 5-28, Scale 1" = 1,600'

Chanute Avenue appears recently re-surfaced. A small trailer is present on the K-4 Parcel in the southeast portion of the previously noted paved area that contained numerous rows of north- to south-trending, thin, rectangular items and buildings, trailers, and/or tents. Frederick Street is now present and paved. The portion of Cactus Avenue south of the building located at the northeast corner of the Cactus Channel and Riverside Drive/Graham Street is paved wider (north to south) than previously noted. The Cactus Channel appears to have been mowed, due to the lack of vegetation evident. A building is present adjacent to the ASTs on the southeast to the west of the K-4 Parcel. The tops of the two larger ASTs appear different than previously viewed. The remainder of the surrounding land appears generally as previously described.

DRAFT

7. January 28, 1995, Photo Nos. 5-23 through 5-25, Scale 1" = 1,600'

The paved area and trailer on the K-4 Parcel are gone, and the present day offsite and adjacent electrical substations are now present. Veterans Way is now present (paved). Cactus Avenue, paved, now extends to Heacock Street from Riverside Drive/Graham Street. There is a large pond of water approximately 500 feet south of central portion of the K-4 Parcel. Some development has occurred south of the east third of the K-4 Parcel, east of the ponded water. Commercial developments are present along the north side of Cactus Avenue, east of Veterans Way to Elsworth Street. Buildings are now present at the southeast corner of Cactus Avenue and Riverside Drive.

8. April 14, 2005, Photo Nos. 5-22 through 5-24, Scale 1" = 1,600'

Chanute Avenue onsite is in disrepair. The remainder of the subject site is generally as previously described. A small, paved access road is present south and west of the K-4 Parcel. Continued development has occurred south of the K-4 Parcel, which includes a clearing with stored items, small buildings, and a large, rectangular concrete slab. Heavy vegetation is visible in the Cactus Channel.

9. March 11, 2010, Photo Nos. 5-23 through 5-25, Scale 1" = 1,600'

End-dumped piles of fill soil are present in the east portion of the K-4 Parcel, from the electrical substations west approximately 420 feet and from the southern K-4 Parcel boundary north approximately 430 feet. The remainder of the subject site generally appears as described in the previous photographs. Joy Street, no longer existing at the present day, is now shown, as is the current eastern portion of the Harbor Freight building north of Cactus Avenue. From Joy Street westward to Heacock Street, numerous concrete tilt-up buildings are now present.

[The EDR digital aerial photographs from 2012 and 2016 show the subject site and adjacent properties largely the same as in the 2010 CRFCWCD photographs. However, the former MAFB hospital area at the southwest corner of North Avenue and 8th Street was cleared, and buildings and pavement were removed at the southwest corner of Cactus Channel and Riverside Drive. North of the subject site, between just east of Veterans Way and what was Joy Street, industrial development, including two large buildings, took place.]

Ownership/Assessor's Parcel Information

DRAFT

The subject site is located in the County of Riverside, with the March Air Reserve Base area. The K-4 Parcel of the subject site is comprised of Assessor's Parcel Numbers (APNs) 297-150-006, -007, and -038, 297-160-005, and 297-200-004, roughly 35 acres of vacant land (Parcel Quest Lite, 2018). The Cactus Channel portion of the subject site crosses all of the K-4 Parcel Assessor's parcels, except for APN 297-160-005, and also crosses APNs 297-150-037, 297-200-012, 297-250-011, -013, and -014. These latter parcels are currently owned by the MJPA.

The subject site was formerly part of March Field during World War II under the US Army, followed by the USAF as part of MAFB/MARB. Some time following closure of MAFB in 1996, ownership was transferred to the MJPA for redevelopment. Parcel K-4 was conveyed from LNR Property Corp. to Meridian Park, LLC around August 2015.

Building Information Review

To develop a history of buildings/construction at the subject site, various sources were researched and reviewed. Based on historical aerial photographs, the subject site was vacant in 1938 with no development. During World War II and extending into the 1950s, the site was part of March Field, followed by MAFB. Maps from the 1940s during World

War II indicate no structures or buildings on the subject site. A review of historical aerial photographs from the 1940s and 1950s indicate numerous small structures or objects were present at the K-4 Parcel of the subject site, possibly including buildings, trailers, and/or tents. As indicated by historical aerial photographs from the 1960s, the K-4 Parcel was vacant land. The bridge crossover at Graham Street/Riverside Drive was originally constructed in the 1940s. The bridge crossover at 4th Street was constructed some time between 1953 and 1966.

City Directory Information

Historical city directories from 1975 to 2014 were searched by EDR for addresses along Cactus Avenue. Listings were available from 1992 to 2014, primarily commercial, which included fast food restaurants, credit union, financial services, truck supply, gasoline station (under Chevron, Inc.), engineering firms, church, and government agencies. None of the provided listings are for the subject site or adjacent properties within the bounds of the former MAFB.

The EDR-City Directory Image Report is provided in Appendix E.

DRAFT

Interview

On August 7, 2018, a representative of Meridian Park, LLC, Mr. Jeff Gordon, was interviewed by telephone. Mr. Gordon indicated the K-4 Parcel had been owned since around August 2015, and was purchased from LNR Property Corp., who may have been the entity that previously purchased it from the MJPA, who took ownership of the parcel following transfer from the USAF.

The Cactus Channel is not owned by Meridian Park, LLC, but is under the county flood control district by ownership and/or easement. Meridian Park, LLC and other property owners have planned to make improvements to the channel (including a concrete box channel structure), which will be included under an Environmental Impact Report, and thus, is part of the study area of this Phase I ESA.

Mr. Gordon stated they have no environmental reports for the K-4 parcel, which would have been previously assessed under the BRAC process. He also indicated they have no knowledge of the specific history of the parcel, other than it was formerly part of MAFB.

When asked about the area with end-dumped materials in the southeast portion of the K-4 parcel, Mr. Gordon indicated the previous property owner accepted these materials which were generated during an EMWD pipeline project within a public roadway in relative proximity to the subject site.

SITE RECONNAISSANCE

On July 27, 2018, a representative from this firm conducted a reconnaissance of the subject site and immediate surrounding areas. To orient our site reconnaissance, a Preliminary Site Plan for K-4 Parcel (Figure 2), a Site Overview aerial photograph for the Cactus Channel (Figure 3), and a recent color aerial photograph image of the subject site from Google Earth Pro (Figure 4) were obtained.

The K-4 Parcel lies within the greater March Air Reserve Base area along the south side of Cactus Avenue from Veterans Way to approximately 600 feet east of Frederick Street, and extending approximately 700 feet south of Cactus Avenue. The roughly rectangular site comprises 35.4 ± acres, and contains a small 'cut out' within the east portion. This 'cut out' is approximately 200 feet east to west and 430 feet north to south, beginning approximately 140 feet west of the southeast corner of the site. This 'cut out' contains two electrical substations. The southern substation is surrounded by a masonry wall, while the northern substation, identified by signage as the Tanker Substation belonging to Southern California Edison (SCE), is surrounded by a chain-link fence. An electrical box on a pedestal was present outside the SCE substation on the southeast side. A telecommunications manhole was also noted in this area.

DRAFT

Chanute Avenue trends northward from the southeastern portion of the K-4 Parcel, east of the 'cut out', along the eastern site boundary for approximately 350 feet as a highly dilapidated paved roadway. As previously mentioned, the north boundary of the K-4 Parcel is Cactus Avenue, a paved roadway. South of this roadway is an unlined drainage channel (Cactus Channel). Just beyond the drainage channel, on the south side, is a chain-link fence with barbed wire on top. A dirt roadway traverses the K-4 Parcel from east to west just south of this chain-link fence. Along this dirt roadway, numerous marker identifiers, manholes, and other features belonging to EMWD are present. In addition, numerous manholes associated with underground electrical lines were also noted to trend east to west near this dirt roadway. Two sets of power poles and lines, trending from the east, enter the K-4 Parcel around the dirt roadway in the northeast portion. One of these trends onto the eastern portion of the K-4 Parcel, and turns south to connect with the existing electrical substations. The second remains trending east to approximately 120 feet west

of Frederick Street, where it turns and trends south across the K-4 Parcel and offsite. In the northeast corner of the K-4 Parcel, one of the power poles has a mounted electrical transformer with no leakage was noted. Near this power pole, EMWD features, including a cathodic protection rectifier, a pad-mounted electrical transformer (no leakage was noted), and manhole cover for underground electric lines are present. A small pile of gravel and two rolls of chain-link fencing were also observed in this area.

The area to the west of the north-south trending power poles and the electric substations contains approximately 3 to 5 feet of loose, smoothed out, fill material stockpiles. It is estimated that roughly 20,000 cubic yards of fill materials are present. Some construction debris, mainly concrete, was noted within areas of these fill materials. The area to the west of the smoothed out fill materials is vacant. However, a small, approximate 14-inch by 14-inch, square foundation was noted in the south-central portion of the K-4 Parcel, and may coincide with a dirt path terminating in a circle-shaped clearing, as shown in the historical CRFCWCD 1962 aerial photographs.

Within the northwest corner of the K-4 Parcel, several EMWD markings, electrical- and telecommunication-related manhole covers, a pile of old sand bags, and one 10-foot section of plastic pipe were noted.

DRAFT

Evidence of previous soil engineering work was observed at two locations of percolation/infiltration testing along the north portion of the K-4 Parcel, south of the dirt roadway. The locations contain 3-inch polyvinylchloride (PVC) pipe in the ground to depths of approximately 5.1 and 6.1 feet bgs. Both locations are dry; however, the bottoms were muddy. Another location within the south-central portion appeared to be a deeper boring location with some spoils piled and a white stake with red flagging.

Two electrical-related manhole covers were noted along the southern K-4 Parcel boundary, one just west of the electrical substations and the other at the approximate location of the north-sound trending power poles on the site.

The K-4 Parcel was generally void of vegetation, and was recently mowed. Chain-link fence with barbed wire on top bounded the parcel on the north, south, and west. A small, paved perimeter road lies beyond the fence to the west and south, with various structures of MARB beyond, including three large jet fuel ASTs.

The Cactus Channel area of the site stretches from approximately Elsworth Street to Heacock Street, approximately 1.5 miles, and is bound by vacant land on the south, a

portion of which is located at the K-4 Parcel, and Cactus Avenue, a paved roadway on the north. Two roadway bridges are present across the channel at Riverside Drive and 4th Street.

The Cactus Channel is typically a broad, low-lying channel with various locations of standing water from Elsworth Street to Frederick Street. Heavy vegetation exists within the areas of standing water. The sides of the channel have been recently mowed. Beyond Frederick Street eastward to Heacock Street, the channel was dry and became slightly deeper and "V"-shaped, and contained very minor vegetation, being recently mowed along the edges.

Various storm drain inlets were observed along the north side of the Cactus Channel, the westernmost of which is roughly 100 feet east of Elsworth Street, effectively the beginning/west end of the channel. One storm drain inlet, towards the east end, was noted along the south side of the channel. These varied in size. Also noted along the northern edge of the channel, were utility improvements, consisting of traffic signals, EMWD fixtures, and an AT&T facility.

DRAFT

The eastern end of the channel contained a retaining wall with chain-link fence on top along the northern edge. This wall is associated with a right turn lane on Cactus Avenue onto Heacock Street. An old, concrete retaining wall was present along the mid-portion of the southern wall of the eastern end of the channel. At the eastern end of the channel, construction of large, concrete storm drain boxes was being conducted to connect the Cactus Channel to the channel along the west side of Heacock Street.

Trash mainly consisted of windblown trash, bottles, tires, aluminum cans, empty paint can, and clothes. Minor asphalt and concrete debris was observed. Two areas along the northern edge of the channel were noted to contain 1-quart sized, empty, plastic motor oil containers. One location had two such containers, and the second location had one. No soil staining was noted at either location.

The topography of the subject site is generally planar with a gentle fall to the south-southeast. Along the Cactus Channel, elevation differences range from approximately 3 to 5 feet bgs along much of the channel, starting at the west end, leading east to just past the 4th Street bridge, where the channel bottom increases from around 7 to 8 feet bgs to around 15 to 16 feet bgs at the far east end where construction of large, concrete storm drain boxes is taking place.

Adjoining Properties

The subject site is bordered to the north by Cactus Avenue, an asphalt-paved, 6-lane thoroughfare, whose right-of-way is greater than 100 feet wide (north-south). Beyond Cactus Avenue to the north are numerous commercial and industrial properties, including Harbor Freight Distribution Center, Serta Simmons Bedding, Moreno Valley United States Post Office Distribution, Federal-Mogul Corporation, Altura Credit Union, County of Riverside Department of Public Social Services, restaurants (including fast food), Circle K convenience store, and two gasoline stations. The gasoline stations include a Chevron at the northeast corner of the intersection at Cactus Avenue and Elsworth Street, addressed 22520 Cactus Avenue, and a Union 76 at the northwest corner of the same intersection, associated with the Circle K convenience store, addressed 22470 Cactus Avenue. Bordering to the east of the subject site is an earthen channel along the west side of Heacock Street, an asphalt-paved, 5- to -6 lane roadway. Beyond Heacock Street to the east generally are single-family residences. An apparent EMWD water pumping facility is located at the southeast corner of the intersection at Cactus Avenue and Heacock Street. Bordering to the south of the subject site are vacant or developed portions of the former MAFB, now MARB, with most of the active military base adjacent to the south of the most of the west portion of the site, including the K-4 Parcel. This active portion of the base includes three large jet fuel (JP-8) ASTs (one tank is 1.26 million gallons and two tanks are 2.31 million gallons), located within a fenced area approximately 55 feet west-southwest of the southwest corner of the K-4 Parcel, the closest distance to the subject site. The ASTs and associated concrete bermed areas are approximately 200 feet or more from the subject site. The ‘cut out’ bordering the east portion of the subject site appears to be a northerly extension of the active base, including the two previously mentioned electrical substations, the northern of which belongs to SCE. No other features of environmental concern were observed at the active base (MARB). A rectangular, ‘island’ area of the active MARB with two east-west oriented, roughly rectangular office buildings, just south of the Cactus Channel portion of the subject site between 2nd and 4th Streets, includes various military agencies, including a US Marine Corps recruiting station, USAF 452d Communications Squadron, US Army Corps of Engineers, and USAF 362d Recruiting Squadron. The former base area to the south of the central portion of the subject site includes newly constructed complex of over half a dozen commercial buildings over 500 feet away.

DRAFT

Color photographs of the subject site and adjoining properties are presented within Appendix F.

REGULATORY AGENCY RECORDS REVIEW

For records relating to environmental compliance and hazardous materials/waste within the County of Riverside, the County of Riverside Department of Environmental Health (CRDEH) generally is the lead agency. The California Regional Water Quality Control Board, Santa Ana Region (CRWQCB-SAR) or CRDEH may be the lead agency for soil and groundwater investigations and remediation.

County of Riverside Department of Environmental Health

As the subject site has no known associated addresses, no specific records request for the subject site could be made, and based on the historical military usage of the site, site-specific records are held by other agencies, including the SARWQCB and USAF. Previously prepared environmental reports and other information reviewed, much of which was obtained from the USAF online Administrative Records website, is discussed under the **REVIEW OF EXISTING REPORTS**.

California Regional Water Quality Control Board - Santa Ana Region

DRAFT

The California State Water Resources Control Board (SWRCB) maintains the online GeoTracker database, which includes CRWQCB-SAR records for: 1) cleanup sites, including leaking underground storage tank (LUST) sites, cleanup program sites, military cleanup sites, and California Department of Toxic Substances Control (DTSC) cleanup sites; 2) permitted facilities, including waste discharge requirements sites, permitted USTs, DTSC hazardous waste sites, land disposal sites, irrigated lands regulatory program sites, and oil/gas sites; and 3) other sites, including project sites, non-case information sites, sampling points - public, and field points.

This database was searched for records that may pertain to the subject site, and none were found. Sites are identified that are associated with the former MAFB, the two closest of which to the subject site are OU2-A - Site No. 11 (bulk fuel storage area) and OU-4 - Base Hospital and Clinic.

The ROD document for Site No. 11 indicates no interim remedial actions were undertaken, but land use controls for soil were implemented. Elevated polycyclic aromatic hydrocarbons (PAHs) were reported to be above residential, but below industrial acceptable risk levels.

Summary information for the Base Hospital and Clinic indicate the main hospital building was five stories and the dental clinic was a one-story structure. Construction of the hospital was completed in 1966 and modified in subsequent years. The dental clinic was completed in 1985. Investigations were incited to investigate and evaluate the potential risk form release of mercury to the environment through leaks from sewer pipes, as well as risk to potential risk to workers inside the hospital and dental clinic from mercury vapors emanating from the sink drains. During investigations, sludge and sediment samples were taken from sewer piping within the hospital and dental clinic, and from all sewer manholes leading away from the hospital and dental clinic to determine the extent of mercury contamination in the sewer line. Additionally, indoor air samples were collected within the former Base Hospital and Clinic to evaluate potential inhalation hazards. Of the thirty (30) sludge/sediment sample results, only four exceeded the residential Preliminary Remediation Goal (PRG) of 23 mg/kg. A potential sewer line leak source was investigated and remedied. The sewer line was plugged down-gradient to allow for high pressure washing of the line to remove all sediment and sludge. All wash water and sludge were properly disposed of. The Remedial Investigation Report was released to the public on July 23, 2004, and the Proposed Plan was released on August 31, 2004. These documents were not available for review through GeoTracker. Twelve ambient indoor air samples were taken inside the hospital and dental clinic to confirm previous results obtained in July 2000. Every indoor air sample taken was below the residential PRG of 0.31 micrograms per cubic meter. The USAF determined that mercury was not a potential risk for human health and environment at this site.

DRAFT

ENVIRONMENTAL DATABASE REVIEW

EDR was contacted to provide an environmental database search for the subject site. The database search provides information regarding landfills, USTs, hazardous waste generators, etc., at the subject site and surrounding properties in accordance with ASTM Standards and AAI. Around a dozen sites and the former MAFB and/or associated sites, not including the subject site, were found in EDR's database search. A copy of the EDR database report, which provides a complete list of the federal, state, tribal, and proprietary records searched, is provided in Appendix G.

NPL/SEMS

Pursuant to the Comprehensive Environmental Resource Conservation and Liability Act of 1980 (CERCLA), the USEPA has developed and maintained lists of contaminated properties under the Federal Superfund Program.

There is one site identified within 1 mile of the subject site, which is included in the USEPA Superfund Enterprise Management System (SEMS) list and the National Priority List (NPL) database. The site is MAFB, of which the subject site was formerly a part. MAFB is also listed in other databases, including as a Resource Conservation and Recovery Act (RCRA) large quantity generator (LQG), under the US ENG (engineering) CONTROLS and US INST (institutional) CONTROL databases, multiple listings under the ENVIROSTOR database, and as AST, DOD (Department of Defense), ROD, PRP (Potentially Responsible Parties), and UXO (unexploded ordnance) sites. MAFB started out in 1918 as Alessandro Aviation Field, and has served as a training base and refueling operations base. Industrial operations (including aircraft maintenance and repair) involved use of solvents and disposal of solvent wastes. Various uses of the base have occurred over time, including pilot, bombing, and gunnery training. MAFB participated in the IRP, established in 1978. Under this program, the United States DOD sought to identify, investigate, and clean up contamination from hazardous materials. As part of the IRP, the USAF investigated potentially contaminated disposal areas. MAFB Well No. 1, on-base, was found to be contaminated with TCE, PCE, and cis-1,2-dichloroethene at levels that exceeded State of California drinking water standards. The well was taken out of service. Soils at the base are contaminated with toluene and benzene. An estimated 11,600 people obtain drinking water from municipal wells within 3 miles of hazardous substances at MAFB. The USAF conducted remedial investigation and identified alternatives for remedial action. At least 38 areas (IRP sites) of soil and/or groundwater contamination have been identified at MAFB. Three operable units were designated, which include these sites of contamination. Contamination has occurred at MAFB in association with various activities, including disposal of waste in waste pits, landfill placement, fuel storage, discharge into effluent ponds and a drainage channel, fire training, and maintenance. Contaminants identified at MAFB include PCBs, solvents (including TCE and PCE), petroleum hydrocarbons (including diesel, gasoline, oil, hydraulic fluids, and jet fuel), paint thinners, paint strippers, and battery acids. Onsite and offsite TCE and PCE groundwater plumes have impacted several groundwater production wells. MAFB, identified as a RCRA LQG, has generated numerous hazardous wastes, including heavy metals (include cadmium, lead, mercury, and silver), volatile organic compounds (including solvents), and ignitable and corrosive wastes. General generator Notices of Violation were issued in 1984 and 1995. MAFB is listed with numerous engineering controls in place, including operation and maintenance of groundwater extraction and discharge with the use of liquid-phase carbon adsorption, soil vapor extraction (in-situ), bioremediation (ex-situ), groundwater monitoring, areas of contaminated soil that have been capped, soil disposal, soil recycling, soil excavation, impermeable barrier of some type for soil, low temperature thermal desorption of soil, and no action regarding areas of soil and/or groundwater. Institutional controls are in place as

DRAFT

well, including covenants, deed notices, base use plan change, and subdivision, zoning, and building, demolition, or excavation regulations. The groundwater plumes and most of the IRP sites are located south of the subject site, 500 feet or more away. A couple of sites, including the bulk fuels storage area and Base Hospital and Clinic, have associated IRP sites, and are located within 500 feet. These sites are discussed under the **REGULATORY AGENCY RECORDS REVIEW** and **REVIEW OF EXISTING REPORTS** sections of this report. These IRP sites are not anticipated to have a significant environmental impact to the subject site.

RCRA-LQG

RCRA large quantity generators include sites that generate over 1,000 kilograms (kg) of hazardous waste or over 1 kg of acutely hazardous waste per month. Three RCRA-LQG sites are listed within 0.25 mile of the subject site, including MAFB, which is discussed above. The other two sites are Chevron Station No. 200908 at 22520 Cactus Avenue and Moreno Valley Unocal at 22470 Cactus Avenue, both located across Cactus Avenue to the north or northwest over 100 feet from the subject site. The Chevron site is listed with generation of aqueous solution with <10% total organic residues, other organic solids, ignitable, and benzene hazardous wastes. The Unocal site is listed with generation of benzene, ignitable, and corrosive hazardous wastes. Neither the Chevron or Unocal sites have reported violations, and based on that and their distance away, these two RCRA-LQG sites should have no significant environmental impact to the subject site.

DRAFT

RCRA-SQG

RCRA small quantity generators include sites that generate between 100 and 1,000 kg of hazardous waste per month. Four RCRA-SQG sites are listed within 0.25 mile of the subject site, including MAFB, which was previously above. All four of the RCRA-SQG sites have no reported violations. The closest site, Harbor Freight Tools Distribution, across Cactus Avenue from the subject site, over 100 feet away, is listed with generation of numerous hazardous waste categories, including ignitable, corrosive, heavy metals, benzene, methyl ethyl ketone, PCE, and TCE. Based on the distances away and lack of reported violations, these RCRA-SQG sites are not anticipated to have an adverse environmental impact to the subject site.

ENVIROSTOR

The California DTSC Site Mitigation and Brownfields Reuse Program's ENVIROSTOR database identifies sites that have known contamination or sites for which there may be reasons to investigate further. There are four sites, in addition to MAFB previously discussed, listed in the ENVIROSTOR database. Most of these four sites are school evaluation sites located over 0.5 mile from the subject site. The closest listed site, Alper Cleaners at 14420 Elsworth Street, is located several hundred feet north of the subject site. This site has a status indicating a regulatory case was referred to the local agency. Based on distance from the subject site, no adverse environmental impact to the subject site from these four ENVIROSTOR sites is anticipated.

LUST

The State Water Resource Control Board (SWRCB) maintains a list of all leaking underground storage tanks (LUST) within the state. According to the SWRCB LUST database, there are four sites (two are listed twice) within 0.5 mile of the subject site. All four of these sites have closed LUST environmental cases, including the Chevron and Unocal (under Texaco (Shell)) sites across Cactus Avenue from the subject site. None of these LUST sites should have an adverse environmental impact to the subject site based on their closed regulatory case and/or distance from the subject site.

DRAFT

UST

The UST database is maintained by the SWRCB and lists all registered USTs. This database lists two sites, Chevron Station #200908 and Moreno Valley Unocal, located across Cactus Avenue from the subject site, listed under other databases, including the LUST database. The Chevron is listed with 4 USTs and the Unocal with 3 USTs. These UST sites should have no adverse environmental impact to the subject site due to the distance away and closed LUST environmental regulatory case.

AST

The SWRCB maintains a list of aboveground storage tanks (ASTs). The data comes from their hazardous substance storage container database. One site, Department of Defense, Media Center AFRTS-BC, located at 23755 Z Street, over 400 feet south of the subject site, is listed in the AST database. This site is listed with 2,050 gallons of unspecified hazardous substance, but may be for diesel fuel for a backup generator. Based on the lack

of reported AST release(s), distance away, and being topographically downgradient, this AST site is not anticipated to have an adverse environmental impact to the subject site.

SWRCY

This state database is a listing of recycling facilities in California. One site, Menlo Recycling Center at 22405 Golden Crest Drive, is listed over 0.1 mile west of the subject site. This site is listed as being non-rural, not a grandfathered facility, and with an operation start date on August 3, 2016. This recycling facility receives aluminum, glass, plastic, and bimetal. Based on the distance away and nature of the recycling operation, this site should present no adverse environmental impact to the subject site.

SWEEPS UST

The Statewide Environmental Evaluation and Planning System (SWEEPS) database is an UST listing that was updated and maintained by a company contracted by the SWRCB. Two sites are listed in this database within 0.25 mile of the subject site. The closest site, Chevron #200908 at 22520 Cactus Avenue, over 100 feet from the subject site, is also listed in other regulatory databases, including the LUST database. This site is listed with four 10,000-gallon unleaded gasoline USTs. Based on the closed LUST regulatory case, lack of reported UST release, and/or distance from the subject site, the listed SWEEPS UST sites should have no adverse environmental impact to the subject site.

DRAFT

CA FID UST

The California Facility Inventory Database (CA FID) contains a historical listing of active and inactive UST locations from the SWRCB. The same two sites listed in the SWEEPS UST are also listed in the CA FID UST database.

DRYCLEANERS

This database is a list of drycleaner-related facilities that have EPA identification numbers. These are facilities with certain Standard Industrial Classification (SIC) codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; and laundry and garment services. Alper Cleaners, under three listings, is shown in this database, and is located several hundred feet north of the subject site. This site is listed under the ENVIROSTOR database as being referred to a

local regulatory agency. Based on the distance away and lack of reported release(s), this drycleaner site should have no adverse environmental impact to the project site.

HIST CORTESE

The historical Cortese (HIST CORTESE) list is a historical listing from the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (CALSITES). Two of the sites listed in the LUST database are also listed in the HIST CORTESE database, including Chevron #200908 and ARCO AM/PM Mini Market #5128.

EDR Hist Auto

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. One site Chevron USA, Inc. at 22520 Cactus Avenue, is listed in this database. This site is shown with listings from 2000 through 2011. Based on the closed LUST regulatory case and distance from the subject site, this EDR Hist Auto is not anticipated to have an adverse environmental impact to the subject site.

DRAFT

EDR Hist Cleaner

This EDR proprietary United States Historical Cleaners (US Hist Cleaners) database includes records based on EDR's search of selected national collections of business directories, and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches. One site, Alper Cleaners at 14420 Elsworth Street, several hundred feet from the subject site, is listed in the EDR Hist Cleaner database. This site is listed under Alper Cleaners from 1993, 2002

through 2011, and 2014. Based on the distance away and no reported environmental release, this EDR Hist Cleaner site should have no adverse environmental impact to the project site.

Orphan Summary

The EDR Radius Map™ Report with GeoCheck® Orphan Summary, which is a list of all sites whose location is not readily identified and may be near or at the subject site, was reviewed. The subject site and adjoining properties do not appear to be listed in the Orphan Summary. A clandestine drug lab (CDL) listing is shown on Cactus Avenue within the zip code 92518, in which the subject site is located. Based on the listing, abandoned drug lab waste or equipment were located away from an actual illegal drug lab. This listing may or may not pertain to the subject site. However, this listing is not anticipated to have a significant impact to the subject site, as the equipment or waste were likely cleaned up following discovery, and may not have been located on or near the subject site.

Division of Oil, Gas, and Geothermal Resources

DRAFT

The California Division of Oil, Gas, and Geothermal Resources (DOGGR) maintains a list of all producing and abandoned oil and gas wells within the State of California. We reviewed the online DOGGR Well Finder, which indicates no abandoned or producing gas and/or oil wells have been located within one mile of the subject site (DOGGR, 2018).

VAPOR ENCROACHMENT EVALUATION

As part of this Phase I ESA, a VES was conducted to determine if a VEC exists, based on the information obtained during the Phase I ESA. A VEC is the presence or likely presence of chemicals of concern (COC) vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater either on or near the target property (i.e., subject site).

Vapor Encroachment Screen

A VES, comprised of Tier 1 and 2 (non-invasive) screening, was conducted by this firm for the subject site. The VES was conducted in general accordance with the Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions, American Society for Testing and Materials E2600-15. Although not required to satisfy the requirements of the Phase I ESA under ASTM E1527-13, ASTM E2600-15 was chosen

as a methodology to evaluate potential contaminant vapor concerns at or adjoining the subject site.

The subject site is storm drain channel and vacant land with remnant roads and features from former military bases, and is currently planned for industrial development. The site was formerly part of March Field during World War II, followed by MAFB/MARB. Some time following closure of MAFB in 1996, ownership was transferred to the MJPA for redevelopment, and conveyed in relative recent years to private parties. It is located in a mixed residential, commercial, and industrial area. Based on the recent geotechnical investigation by LCI, the subject site and surrounding area are anticipated to be underlain by older alluvial soils, comprised of sandy and silty clays, silty and clayey sands, and sands. Based on the local geology and groundwater hydrogeology, groundwater beneath the subject site is shallow, and anticipated to be present within 30 feet bgs. Based on the shallow onsite groundwater, groundwater is considered to be a potential source of vapor into the subject site.

Based on the results of Tier 1 screening, utilizing the EDR Radius Map™ Report with Geocheck® and research of the history of the subject site and adjoining properties, the sites within 0.33 mile with current and/or former potential sources of soil vapor intrusion or encroachment include the former March Field and MAFB/MARB, both of which the subject site has been a part of, Alper Cleaners, Chevron Station No. 200908, and Texaco (Shell) Cactus Avenue/Moreno Valley Unocal. Based on the results of the VES, Tier 1 screening, a VEC at the subject site could not be ruled out.

DRAFT

Under VES, Tier 2 screening, using the critical distance determination, the above-listed gasoline stations and drycleaners are located over 100 feet from the subject site. The two closest potential sources of soil vapor at the former March Field/former MAFB/MARB are IRP Site Nos. 11 (bulk fuel storage area) and former base hospital and dental clinic area (USAF Building Nos. 2990 and 2991, respectively). The reported releases of hydrocarbons or mercury at these sites are over 200 feet from the subject site. All of these sites are located beyond the critical distance for hydrocarbons at 30 feet or all chemicals of concern at 100 feet away from the subject site. Based on the results of the Tier 2 screening, a VEC at the subject site can be ruled out because a VEC does not or is not likely to exist.

DATA GAPS

Under AAI, data gaps that remain after the conduct of all required activities must be identified. The source of information consulted to address the data gaps should be

identified, and the significance of the data gaps with respect to our ability to identify conditions indicative of releases or threatened release of hazardous substances on, at, in, or to the property should be addressed.

No interviews were conducted with the USAF or MJPA, the owners of the subject site with the longest history. The MJPA was previously interviewed for an offsite property formerly part of the former MAFB/MARB, and they could provide no information of pertinence. The MJPA previously referred us to the USAF, who referred us to the MJPA. Given the extensive history and documentation of past and recent environmental assessment and/or remediation near the subject site, provided mostly in USAF online documents, there are no significant data gaps remaining after our conduct of the AAI.

CONCLUSIONS AND RECOMMENDATIONS

During future grading subsurface utility lines will be encountered, including water, electric, and telecommunications. If water lines are encountered, asbestos-containing materials may be present. Appropriate precautions and handling of such materials should be undertaken. If any of these materials are to be disposed, they should be lawfully transported offsite to an appropriate disposal facility.

DRAFT

There are around a dozen sites and the former MAFB and/or associated sites, not including the subject site, listed in environmental regulatory databases within 1 mile of the subject site. Based on the results of our VES, Tier 1 and 2 screening, a VEC at the subject site can be ruled out because a VEC does not or is not likely to exist. Based on our review of environmental regulatory databases, review of previously prepared environmental reports, and VES, no environmentally impaired properties, listed within these databases, have current or former releases of hazardous substances and/or petroleum products that have migrated to and/or significantly impacted the subject site.

We have performed this Phase I ESA in conformance with ASTM E1527-13 and AAI set forth in 40 CFR Part 312 for the for the K-4 Parcel and Cactus Channel, approximately 46 acres of vacant land, located along/near the south side of Cactus Avenue, at March Air Reserve Base in the Moreno Valley area of Riverside County, California. Based on the findings of the Phase I ESA and with consideration given to the recommendations contained in this report, the subject site exhibits no evidence of RECs, HRECs, and/or CRECs indicative of releases or threatened releases of hazardous substances on, at, in,

or to the subject site, except for the following:

- The subject site has historical use under three former military bases, including US Army Air Force March Field during World War II, USAF MAFB following World War II, and MARB from 1996 until some time later, being transferred to the MJPA, constituting a REC.

Based on the research conducted during this Phase I ESA, including the review of numerous environmental reports prepared under the BRAC process, the above REC does not appear to have significantly impacted the subject site. However, the specific nature of the objects, buildings, and/or structures onsite within the K-4 Parcel during World War II and years following into the early 1960s are undetermined. Any impacts to the subject site from this time period are likely localized and not anticipated to have a significant impact to the planned industrial development of the subject site. Similarly, no significant impact to the planned onsite development from the imported fill materials from a local EMWD pipeline project is anticipated. To confirm these conclusions regarding the environmental condition of the subject site, soil sampling should be conducted. Such sampling would be from random, gridded locations across the site and/or fill materials, and would include analysis for heavy metals, hydrocarbons, pesticides, herbicides, polychlorinated biphenyls, volatile organic compounds, and/or semi-volatile organic compounds. If desired, a work plan to conduct this sampling can be prepared.

DRAFT

Based on the past use of the subject site as part of military bases for over 50 years, both the US Army Air Force and USAF, future development of the subject site, including grading activities, have the potential to encounter subsurface hazardous materials and/or wastes, buried trash and debris, UXO, and contaminated media, including soil, soil vapor/gas, and/or groundwater. If any of these are encountered during site development, further environmental assessment, evaluation, and/or remediation may be necessary.

The former base hospital and dental clinic area, within a couple hundred feet to the south of the east end of the subject site, is an HREC, and IRP Site No. 11, the past and current bulk fuels storage area within 100 feet of the west end of the K-4 Parcel, is a CREC. Based on past environmental assessment in these areas, neither of these sites appear to have had a significant environmental impact to the subject site.

STATEMENT OF QUALIFICATIONS

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the property. We have developed and performed the all appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312.

Mr. John Leuer is the President of LOR Geotechnical Group, Inc., founded in 1988. As a cofounder and President of the company, Mr. Leuer has managed LOR through hundreds of Phase I Environmental Site Assessments, as well as numerous Phase II Environmental Site Assessments and remediation projects, primarily remedial excavation. Mr. Leuer has over 36 years experience in the geotechnical and environmental fields. Mr. Leuer has substantial experience coordinating projects for many city, county and state agencies, as well as in the public sector, gaining a reputation for being responsive to clients needs while providing strong technical expertise. LOR Geotechnical Group, Inc. is one of three firms that previously provided report review for underground storage tank closure for the County of San Bernardino, Fire Department Hazardous Materials Division.

DRAFT

Mr. Leuer holds a B.S. in Civil Engineering from Cal State University at Northridge. He is a registered Geotechnical and Civil Engineer in the State of California. Mr. Leuer is a member of the American Society of Civil Engineers.

Mr. Mathew L. Hunt has over 19 years experience in the environmental field. Mr. Hunt works under LOR Geotechnical Group's environmental operations and has conducted over 350 Phase I Environmental Site Assessments for the private and public sectors. The properties have ranged from agricultural to residential to commercial/industrial. In addition to his experience with environmental assessments for property transfers, he has worked on projects that require mitigation prior to development. Mr. Hunt is well versed in hazardous waste sampling and characterization methodologies in soil and groundwater regimes for groundwater monitoring, site assessment, and site remediation. Projects have ranged from leaking USTs at gasoline stations to commercial and government (including Superfund/CERCLA sites) projects involving metals, perchlorate, and solvents.

Mr. Hunt has a B.S. in soil science from California Polytechnic State University, San Luis Obispo and a M.S. in soil and water science from the University of California, Riverside.

LIMITATIONS

This report was prepared solely for the use and benefit of LOR's client, Meridian Park, LLC, their affiliates, and assigns, including local jurisdiction, lenders, and future tenants or buyers/owners. They may release this information to third parties, who may use and rely upon this information at their discretion. However, any use of or reliance upon this information by a party other than Meridian Park, LLC, their affiliates, and assigns, including local jurisdiction, lenders, and future tenants or buyers/owners, shall be solely at the risk of such third party and without legal recourse against LOR Geotechnical Group, Inc.; its subsidiaries and affiliates; or their respective employees, officers, or directors; regardless of whether the action in which recovery of damages is sought is based upon contract, statute, or otherwise. This information shall not be used or relied upon by a party which does not agree to be bound by the above statement.

The content and conclusions provided by LOR in this assessment are based on information collected during our investigation, which may include, but is not limited to, visual site inspections, interviews with the site owner, regulatory agencies and other pertinent individuals, a review of available public documents, subsurface exploration and laboratory testing of soil samples, and our professional judgement based on said information at the time of preparation of this document. Any subsurface samples results and observations presented herein are considered to be representative of the area of investigation; however, soil conditions may vary between sample locations and may not necessarily apply to the general site as a whole. If future subsurface or other conditions are revealed which may vary from these findings, the newly-revealed conditions must be evaluated and may invalidate the conclusions of this report.

DRAFT

This report has been prepared in accordance with generally accepted practices using standards of care and diligence normally practiced by recognized consulting firms performing services of a similar nature. LOR Geotechnical Group, Inc. (LOR) is not responsible for the accuracy of information provided by other individuals or entities which is used in this report. This report presents our professional judgement based upon data and findings identified in this report, and the interpretation of such data based upon our experience and background, and no warranty, either expressed or implied, is made. The conclusions presented are based upon the current regulatory climate and may require revision if future regulatory changes occur.

TIME LIMITATIONS

The findings of this report are valid as of this date. Changes in the condition of a property can, however, occur with the passage of time, whether they be due to natural processes or the work of man on this or adjacent properties. In addition, changes in the Standards-of-Practice and/or Governmental Codes may occur. Due to such changes, the findings of this report may be invalidated wholly or in part by changes beyond our control. Therefore, this report should not be relied upon after a significant amount of time without a review by LOR Geotechnical Group, Inc., verifying the suitability of the conclusions and recommendations. Based on ASTM E1527-13 and AAI, certain components of this report are no longer valid after 180 days of their being performed, including interviews, visual inspection of the subject property and adjoining properties, and review of federal, tribal, state, and local government records. Once this 180-day period has expired, this report should be updated or revised to meet the requirements for continued viability under the ASTM and AAI standards.

DRAFT

CLOSURE

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR part 312.

We appreciate this opportunity to be of service and trust this report provides the information desired at this time. Should questions arise, please do not hesitate to contact this office.

Respectfully submitted,
LOR Geotechnical Group, Inc.

Mathew L. Hunt

APPENDIX A

Complete ASTM E1527-13 User Questionnaire

DRAFT

E1527–13

USER QUESTIONNAIRE

INTRODUCTION

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"), the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

(1.) Environmental liens that are filed or recorded against the property (40 CFR 312.25).
Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law?

NO.

(2.) Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi)).
Are you aware of any activity and land use limitations (AULs), such as *engineering controls*, land use restrictions, or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

NO.

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).
As the user of this Phase I Environmental Site Assessment (ESA) do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

NO.

(4.) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

Yes.

(5.) Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *user*, (a.) Do you know the past uses of the *property*? (b.) Do you know of specific chemicals that are present or once were present at the *property*? (c.) Do you know of spills or other chemical releases that have taken place at the *property*? (d.) Do you know of any environmental cleanups that have taken place at the *property*?

We do not know of any spills, etc. We do know that if there were any spills while this was Air Force property, they would have been cleared prior to conveyance

6.) The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the *user* of this *ESA*, based on your knowledge and experience related to the *property*, are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*?

None

In addition to the above information, certain information should be collected, if available, and provided to the *environmental professional* selected to conduct the Phase I ESA. This information is intended to assist the *environmental professional*, but is not necessarily required to qualify for one of the LLPs. The information includes:

(a) the reason why the Phase I ESA is required and/or is being performed:

Prior to future development of the property.

(b) the type of *property* and type of *property* transaction, for example, sale, purchase, exchange, etc.:

Property has been owned for several years. Beginning ent. Rewards, EIE, etc.

(c) the complete and correct address for the *property* (a map or other documentation showing the *property* location and boundaries is helpful):

no address at this time

(d) the scope of services desired for the Phase I ESA (including whether any parties to the *property* transaction may have a required standard scope of services on whether any considerations beyond the requirements of Practice E1527 are to be considered):

Standard.

(e) identification of all parties who will rely on the Phase I ESA report:

ownership, local jurisdiction, lenders, future tenants or buyers.

(f) identification of the site contact and how the contact can be reached:

Jeff Gordon (949) 279-7339

(g) any special terms and conditions which must be agreed upon by the *environmental professional*:

Only to notify ownership when visiting site. It is necessary to cross adjacent property for access.

(h) any other knowledge or experience with the property that may be pertinent to the *environmental professional* (for example, copies of any available prior *environmental site assessment reports*, documents, correspondence, etc., concerning the *property* and its environmental condition):

We know of no previous environmental studies performed on the property.

ADDITIONAL SPACE FOR ANSWERS (if needed):

The *User* Questionnaire was completed by:

Name:	Jeff Gordon
Title:	Project Manager
Firm:	Waypoint Property Group
Address:	567 San Nicolas Dr. #220, Newport Beach, CA 92660
Phone:	(949)279-7339
Date:	8/2/18
User's relationship to the *property*:	Waypoint is a partner of Meridian Park, LLC the owner

Copies of the completed questionnaire will be filed at:

LOR Geotechnical Group, Inc.; 6121 Quail Valley Court; Riverside, California 92507

Copies of the completed questionnaire may be mailed or delivered to:

LOR Geotechnical Group, Inc.; 6121 Quail Valley Court; Riverside, California 92507

User represents that to the best of their knowledge, the above statements and facts are true and correct, and to the best of their actual knowledge, no material facts have been suppressed or misstated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by LOR Geotechnical Group, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

APPENDIX F

Color Site Photographs

DRAFT

PHOTO 1 - VIEW FACING SOUTH, LOOKING ALONG CHANUTE AVENUE, HIGHLY DILAPIDATED ONSITE. THE CHAIN-LINK FENCE SHOWN IN THE FOREGROUND MARKS THE SOUTH BOUNDARY OF THE K-4 PARCEL OF THE SUBJECT SITE, BEYOND WHICH IS THE ACTIVE MILITARY MARCH AIR RESERVE BASE (MARB). THE SOUTHEAST CORNER OF THE K-4 PARCEL IS OUT OF VIEW TO THE LEFT (EAST).

PHOTO 2 - VIEW TO THE LEFT OF THAT SHOWN IN THE PREVIOUS PHOTOGRAPH, TOWARDS THE SOUTHEAST CORNER OF THE K-4 PARCEL, WHICH IS COINCIDENT WITH THE FENCE CORNER JUST RIGHT OF CENTER. THE COMMERCIAL BUILDINGS IN THE FAR BACKGROUND TO THE LEFT WERE BUILT WITHIN THE LAST YEAR AND A HALF.

PHOTO 3 - WESTERLY VIEW FROM NEAR THE SOUTHEAST CORNER OF THE K-4 PARCEL, LOOKING TOWARDS THE OFFSITE, ADJACENT 'CUT OUT' AREA WITH ELECTRICAL SUBSTATION.

PHOTO 4 - VIEW TO THE NORTH FROM THE SOUTHEAST PORTION OF THE K-4 PARCEL, ADJACENT TO THE EAST OF THE NEIGHBORING 'CUT OUT' ELECTRICAL SUBSTATIONS.

PHOTO 5 - VIEW LOOKING OFFSITE TO THE NORTHEAST FROM THE EAST-CENTRAL PORTION, NEAR THE EAST BOUNDARY OF THE K-4 PARCEL. THE DILAPIDATED ASPHALT OF CHANUTE AVENUE IS VISIBLE IN THE FOREGROUND.

PHOTO 6 - VIEW TO THE WEST, SHOWING THE ENTRANCE GATE INTO THE SOUTHERN CALIFORNIA EDISON (SCE) ELECTRICAL "TANKER" SUBSTATION, SITUATED IN THE 'CUT OUT' AREA INTERNALLY ADJACENT TO THE EASTERN PORTION OF THE K-4 PARCEL. RELATIVELY MINOR AMOUNTS OF ELECTRICAL EQUIPMENT ARE PRESENT WITHIN THIS SUBSTATION COMPOUND. THE SECOND ELECTRICAL SUBSTATION TO THE LEFT, WITHIN THE BLOCK WALLED COMPOUND, LIKELY BELONGS TO MARB.

PHOTO 7 - VIEW TO THE SOUTHWEST FROM THE NORTHEAST CORNER OF THE K-4 PARCEL. NO LEAKAGE WAS OBSERVED AT THE POLE-MOUNTED ELECTRICAL TRANSFORMER TO THE LEFT OR PAD-MOUNTED ELECTRICAL TRANSFORMER RIGHT OF CENTER. NEAR THE POWER POLE TO THE LEFT IS EASTERN MUNICIPAL WATER DISTRICT (EMWD) EQUIPMENT, INCLUDING A CONTROL BOX, VALVE BOX, AND CATHODIC PROTECTION RECTIFIER.

PHOTO 8 - VIEW TO THE WEST FROM THE NORTHEAST CORNER OF THE K-4 PARCEL. THE UNLINED DRAINAGE CHANNEL PORTION OF THE SUBJECT SITE, CACTUS CHANNEL, IS SHOWN TO THE RIGHT OF THE CHAIN-LINK FENCING WITH BARBED WIRE TO THE RIGHT.

PHOTO 9 - SOUTHERLY VIEW ALONG THE WESTERN SIDE OF THE SCE ELECTRICAL SUBSTATION FROM THE NORTHEASTERN PORTION OF THE K-4 PARCEL OF THE SUBJECT SITE. IN UPPER MIDDLE AND RIGHT OF THE PHOTOGRAPH ARE SOMEWHAT SMOOTHED OUT, END-DUMPED PILES OF FILL MATERIALS.

PHOTO 10 - VIEW TO WEST FROM JUST OFF THE NORTHWEST CORNER OF THE EDISON ELECTRICAL SUBSTATION. IN THE BACKGROUND ARE THREE LARGE JET FUEL (JP-8) ABOVEGROUND STORAGE TANKS (ASTs), LOCATED OFFSITE TO THE WEST AND SOUTHWEST OF THE K-4 PARCEL, WITHIN MARB.

PHOTO 11 - VIEW TO THE SOUTH FROM THE SOUTHEAST PORTION OF THE K-4 PARCEL NEAR/AT THE SOUTH BOUNDARY, JUST SOUTH OF THE SOUTHWEST CORNER OF THE 'CUT OUT', OFFSITE SOUTHERNMOST ELECTRICAL SUBSTATION WHICH LIKELY BELONGS TO MARB.

PHOTO 12 - VIEW TO THE RIGHT OF THAT SHOWN IN THE PREVIOUS PHOTOGRAPH, FACING WEST ALONG THE SOUTH BOUNDARY OF THE K-4 PARCEL. WHAT APPEARS TO BE DISTURBED SOIL TO THE RIGHT (NORTH), ARE END-DUMPED FILL MATERIALS THAT HAVE BEEN SOMEWHAT SMOOTHED OUT.

PHOTO 13 - VIEW TO THE RIGHT OF THAT SHOWN IN THE PREVIOUS PHOTOGRAPH, FACING NORTHWEST ACROSS THE SOMEWHAT SMOOTHED OUT FILL MATERIALS IN THE CENTRAL AND SOUTH PARTS OF THE EAST PORTION OF THE K-4 PARCEL, JUST WEST OF THE OFFSITE, 'CUT OUT' ELECTRICAL SUBSTATIONS.

PHOTO 14 - VIEW TO THE RIGHT OF THAT SHOWN IN THE PREVIOUS PHOTOGRAPH, FACING NORTH. THE SOMEWHAT SMOOTHED OUT FILL MATERIALS ARE VISIBLE TO THE LEFT.

PHOTO 15 - VIEW TO THE WEST WITHIN THE NORTHERN PORTION OF THE K-4 PARCEL, SOUTH OF THE INTERSECTION AT CACTUS AVENUE AND FREDERICK STREET. WATER UTILITY MARKINGS AND A PERCOLATION/INFILTRATION TEST HOLE WITH PLASTIC PIPE IS VISIBLE. OTHER EVIDENCE OF SOILS INVESTIGATION WAS OBSERVED, INCLUDING ANOTHER PERCOLATION/INFILTRATION TEST HOLE AND SOIL BORING (FILLED IN).

PHOTO 16 - VIEW THE WEST FROM THE NORTHWEST CORNER OF THE K-4 PARCEL. MARB BOUNDARY FENCING IS SHOWN WITH WARNING SIGNS. SOME FENCING DEBRIS IS PRESENT ON THE GROUND. TO THE RIGHT IS THE ONSITE CACTUS CHANNEL, FOLLOWED BY CACTUS AVENUE.

PHOTO 17 - VIEW TO THE EAST FROM THE NORTHWEST CORNER OF THE K-4 PARCEL. DENSE VEGETATION IS PRESENT TO THE LEFT BEYOND THE FENCE LINE, ALONG THE ONSITE CACTUS CHANNEL.

PHOTO 18 - VIEW TO THE RIGHT OF THAT SHOWN IN THE PREVIOUS PHOTOGRAPH, FACING SOUTHEAST. A CORRUGATED, PARTIALLY CRUSHED, PLASTIC PIPE WITH METAL COLLARS AT THE ENDS IS FAINTLY VISIBLE IN THE UPPER RIGHT OF THE PHOTOGRAPH AS A DARKER LINEAR FEATURE. NO CHEMICAL ODOR OR SOIL STAINING WAS NOTED AT THIS ABANDONED PIPE.

PHOTO 19 - VIEW TO THE RIGHT OF THAT SHOWN IN THE PREVIOUS PHOTOGRAPH, FACING SOUTH ALONG THE WEST BOUNDARY FOR THE K-4 PARCEL. AT THE RIGHT EDGE OF THE PHOTOGRAPH IS THE SMALLEST OF THE OFFSITE JET FUEL ASTs AT 1.26 MILLION GALLONS, LOCATED OVER 350 FROM THE K-4 PARCEL.

PHOTO 20 - VIEW TO THE NORTH FROM THE SOUTHWEST CORNER OF THE K-4 PARCEL. IN THE FAR BACKGROUND, ACROSS (ON THE NORTH SIDE OF) CACTUS AVENUE ARE OFFICE BUILDINGS AND INDUSTRIAL BUILDING.

PHOTO 21 - VIEW TO THE RIGHT OF THAT SHOWN IN THE PREVIOUS PHOTOGRAPH, FACING NORTHEAST, LOOKING ACROSS THE K-4 PARCEL.

PHOTO 22 - VIEW TO THE RIGHT OF THAT SHOWN IN THE PREVIOUS PHOTOGRAPH, FACING EAST FROM THE SOUTHWEST CORNER OF THE K-4 PARCEL. THE AREA OF MARB TO THE RIGHT (SOUTH), BEYOND THE BASE BOUNDARY FENCING, IS TYPICAL OF THAT BORDERING THE K-4 PARCEL, WITH AN AREA OF VACANT LAND FOLLOWED BY ACCESS/PERIMETER ROAD.

PHOTO 23 - VIEW TO THE SOUTH FROM THE SOUTHWEST CORNER OF THE K-4 PARCEL. BEYOND THE BASE BOUNDARY FENCE SHOWN IN THE FOREGROUND IS MARB.

PHOTO 24 - VIEW TO THE RIGHT OF THAT SHOWN IN THE PREVIOUS PHOTOGRAPH, FACING WEST FROM THE SOUTHWEST CORNER OF THE K-4 PARCEL. THE JET FUEL AST SHOWN O THE LEFT IS 1.26 MILLION GALLONS AND THE MIDDLE AND RIGHT JET FUEL ASTs ARE 2.31 MILLION GALLONS, ALL THREE OF WHICH ARE SITUATED WITHIN A CONCRETE BERMED AREA. THESE ASTs ARE AT LEAST 300 FEET FROM THE SUBJECT SITE.

PHOTO 25 - VIEW OF SMALL CONCRETE FOUNDATION LOCATED WITHIN SOUTH-CENTRAL PORTION OF THE K-4 PARCEL. THIS FOUNDATION MAY HAVE BEEN ASSOCIATED WITH A DIRT PATH TERMINATING IN A CIRCLE-SHAPED CLEARING, AS SHOWN IN THE HISTORICAL COUNTY OF RIVERSIDE FLOOD CONTROL AND WATER CONSERVATION DISTRICT 1962 AERIAL PHOTOGRAPHS.

PHOTO 26 - VIEW TO THE WEST FROM THE WESTERN END OF THE ONSITE CACTUS CHANNEL PORTION OF THE SUBJECT SITE. THE INTERSECTION OF CACTUS AVENUE AND ELSWORTH STREET/MARB ENTRANCE IS EVIDENT IN THE UPPER RIGHT.

PHOTO 27 - VIEW IN THE OPPOSITE DIRECTION OF THAT FOR THE PREVIOUS PHOTOGRAPH, LOOKING EAST ALONG THE CACTUS CHANNEL. THE STORM DRAIN INLET AT WHICH THE CHANNEL BEGINS, JUST EAST OF ELSWORTH STREET, IS PRESENT AT THE LEFT EDGE.

PHOTO 28 - VIEW TO THE EAST ALONG THE NORTH SIDE OF THE CACTUS CHANNEL. AN EMWD BOX WITH TRAFFIC SIGNAL BOX BEYOND ARE PRESENT, AMONG THE MANY UTILITY FEATURES PRESENT ALONG THE NORTH SIDE OF THE CHANNEL AND SOUTH SIDE OF CACTUS AVENUE. THE INTERSECTION OF CACTUS AVENUE AND VETERANS WAY IS EVIDENT TO THE LEFT IN THE BACKGROUND.

PHOTO 29 - VIEW TO THE EAST ALONG THE CACTUS CHANNEL, EAST OF VETERANS WAY. EMWD UTILITY FEATURES AND A TIRE ARE PRESENT. AS SHOWN, THE WEST PORTION OF THE CACTUS CHANNEL IS RELATIVELY SHALLOW, AROUND 3 TO 5 FEET DEEP, AND IS EFFECTIVELY A LARGE SWALE, MUCH OF WHICH IS DENSELY VEGETATED ALONG THE BOTTOM.

PHOTO 30 - VIEW TO THE EAST AT THE STORM DRAIN INLET EAST OF VETERANS WAY. SOME STANDING WATER IS PRESENT IN THE CACTUS CHANNEL BOTTOM.

PHOTO 31 - VIEW TO THE EAST FROM JUST WEST OF FREDERICK STREET. UTILITY FEATURES, INCLUDING A TRAFFIC SIGNAL BOX AND EMWD MARKINGS AND HYDRANT ARE PRESENT ALONG THE CACTUS AVENUE ROADSIDE. SOME TRASH, MINOR WEEDS, ARE VISIBLE IN THE DRY PORTION OF THE CACTUS CHANNEL TO THE RIGHT.

PHOTO 32 - VIEW TO THE NORTH, SHOWING THE STORM DRAIN INLET AT THE SOUTH SIDE OF THE INTERSECTION AT CACTUS AVENUE AND FREDERICK STREET.

PHOTO 33 - VIEW TO THE SOUTH, SHOWING A STORM DRAIN INLET ALONG CACTUS AVENUE, WHICH CONVEYS STORM WATER INTO THE CACTUS CHANNEL APPROXIMATELY 200 FEET EAST OF FREDERICK STREET.

PHOTO 34 - VIEW TO THE EAST FROM A STORM DRAIN INLET APPROXIMATELY 450 FEET EAST OF THE INTERSECTION AT CACTUS AVENUE AND FREDERICK STREET. SOME CONCRETE, BRICK, AND FOOD PAPER TRASH ARE PRESENT.

PHOTO 35 - VIEW OF TWO EMPTY, 1-QUART SIZED, AUTOMOBILE MOTOR OIL PLASTIC CONTAINERS ALONG THE NORTH SIDE OF THE CACTUS CHANNEL, APPROXIMATELY 550 FEET WEST OF HARBOR FREIGHT. NO SOIL STAINING WAS OBSERVED.

PHOTO 36 - VIEW FACING WEST, JUST WEST OF THE HARBOR FREIGHT AND CACTUS AVENUE INTERSECTION. SOME MINOR WINDBLOWN TRASH IS VISIBLE IN THE DRY CACTUS CHANNEL TO THE RIGHT.

PHOTO 37 - VIEW TO THE EAST AT THE INTERSECTION OF CACTUS AVENUE AND HARBOR FREIGHT. AN EMPTY, 1-QUART SIZED, AUTOMOBILE MOTOR OIL PLASTIC CONTAINER IS PRESENT AT THE BOTTOM OF THE PHOTOGRAPH. NO SOIL STAINING WAS OBSERVED.

PHOTO 38 - VIEW TO THE NORTH, SHOWING A STORM DRAIN INLET ALONG THE NORTH SIDE OF THE CACTUS CHANNEL, JUST EAST OF HARBOR FREIGHT.

PHOTO 39 - VIEW TO THE EAST FROM JUST WEST OF THE RIVERSIDE DRIVE BRIDGE CROSSING OVER THE CACTUS CHANNEL. SOME MINOR WINDBLOWN TRASH IS EVIDENT IN THE CHANNEL. THE TOP OF A STORM DRAIN INLET ALONG THE SOUTH SIDE OF CACTUS AVENUE IS SLIGHTLY VISIBLE IN THE UPPER LEFT OF THE PHOTOGRAPH.

PHOTO 40 - VIEW FACING EAST ALONG THE CACTUS CHANNEL, FROM THE BRIDGE CROSSING AT RIVERSIDE DRIVE. THE WHITISH-COLORED MATERIAL MAY BE A CEMENT, GYPSUM, OR SALT MATERIAL CAUSING THE LIGHT COLORING.

PHOTO 41 - VIEW TO THE EAST TOWARDS 4TH STREET BRIDGE CROSSING OVER THE CACTUS CHANNEL. A TIRE AND SOME WINDBLOWN TRASH ARE PRESENT IN THE CHANNEL TO THE RIGHT.

PHOTO 42 - VIEW FACING EAST ALONG THE CACTUS CHANNEL FROM EAST OF THE 4TH STREET BRIDGE CROSSING OVER THE CACTUS CHANNEL.

PHOTO 43 - VIEW TO THE EAST FROM JUST WEST OF GILBERT STREET, THE INTERSECTION OF WHICH AT CACTUS AVENUE IS EVIDENT IN THE BACKGROUND TO THE LEFT. THE CACTUS CHANNEL BOTTOM IS BECOMING MORE INCISED WITH STEEPER SIDES.

PHOTO 44 - VIEW TO THE SOUTHEAST FROM THE NORTH SIDE OF THE CACTUS CHANNEL, SHOWING THE ONLY OBSERVED STORM DRAIN INLET ALONG THE SOUTH SIDE OF THE CHANNEL. SOME ROCK RIP RAP IS VISIBLE IN CHANNEL, BENEATH THE INLET. BEYOND THE CHAIN-LINK FENCE AND PAVED ROAD (NORTH AVENUE) IS THE FORMER BASE HOSPITAL AREA.

PHOTO 45 - VIEW TO THE EAST ALONG THE NORTH SIDE OF THE CACTUS CHANNEL, TOWARDS THE EAST END, WHERE IT IS THE DEEPEST, WITH THE STEEPEST SIDES. CURRENT CONSTRUCTION AT THE EAST END OF THE CACTUS CHANNEL AND NORTH END OF THE HEACOCK CHANNEL ALONG THE WEST SIDE OF HEACOCK STREET IS VISIBLE IN THE DISTANCE.

PHOTO 46 - VIEW TO THE EAST, APPROXIMATELY 300 FEET WEST OF THE HEACOCK CHANNEL. THE WOODEN FORMS AND SUPPORTS SHOWN WITHIN THE EAST END OF THE CACTUS CHANNEL, WHERE IT TURNS SOUTHERLY AND MERGES INTO THE HEACOCK CHANNEL, MARK THE ONGOING CONSTRUCTION.

PHOTO 47 - VIEW TO THE SOUTHEAST, SHOWING THE EAST END OF THE CACTUS CHANNEL AND SUBJECT SITE. THIS CLOSEUP VIEW SHOWS THE CURRENT CONSTRUCTION OF CONCRETE BOX STRUCTURES AT THE EAST END OF CACTUS CHANNEL WHERE IT MEETS WITH A NORTH- TO SOUTH-TRENDING CHANNEL ALONG THE WEST SIDE OF HEACOCK STREET.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 05/13/2018 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MARCH AIR FORCE BASE	*22 CSG/CC*	*0 - 1/8 (0.000 mi.)*	*0*	*8*

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 05/18/2018 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MARCH AIR FORCE BASE	*22 CSG/CC*	*0 - 1/8 (0.000 mi.)*	*0*	*8*

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

CHEVRON STATION NO 2	*22520 CACTUS AVE*	*W 0 - 1/8 (0.018 mi.)*	*A1*	*36*
MORENO VALLEY UNOCAL	*22470 CACTUS AVE*	*W 0 - 1/8 (0.041 mi.)*	*A6*	*58*

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 02/13/2018 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MARCH AIR FORCE BASE	***22 CSG/CC***	***0 - 1/8 (0.000 mi.)***	***0***	***8***

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 02/13/2018 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where

environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/30/2018 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station,

service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

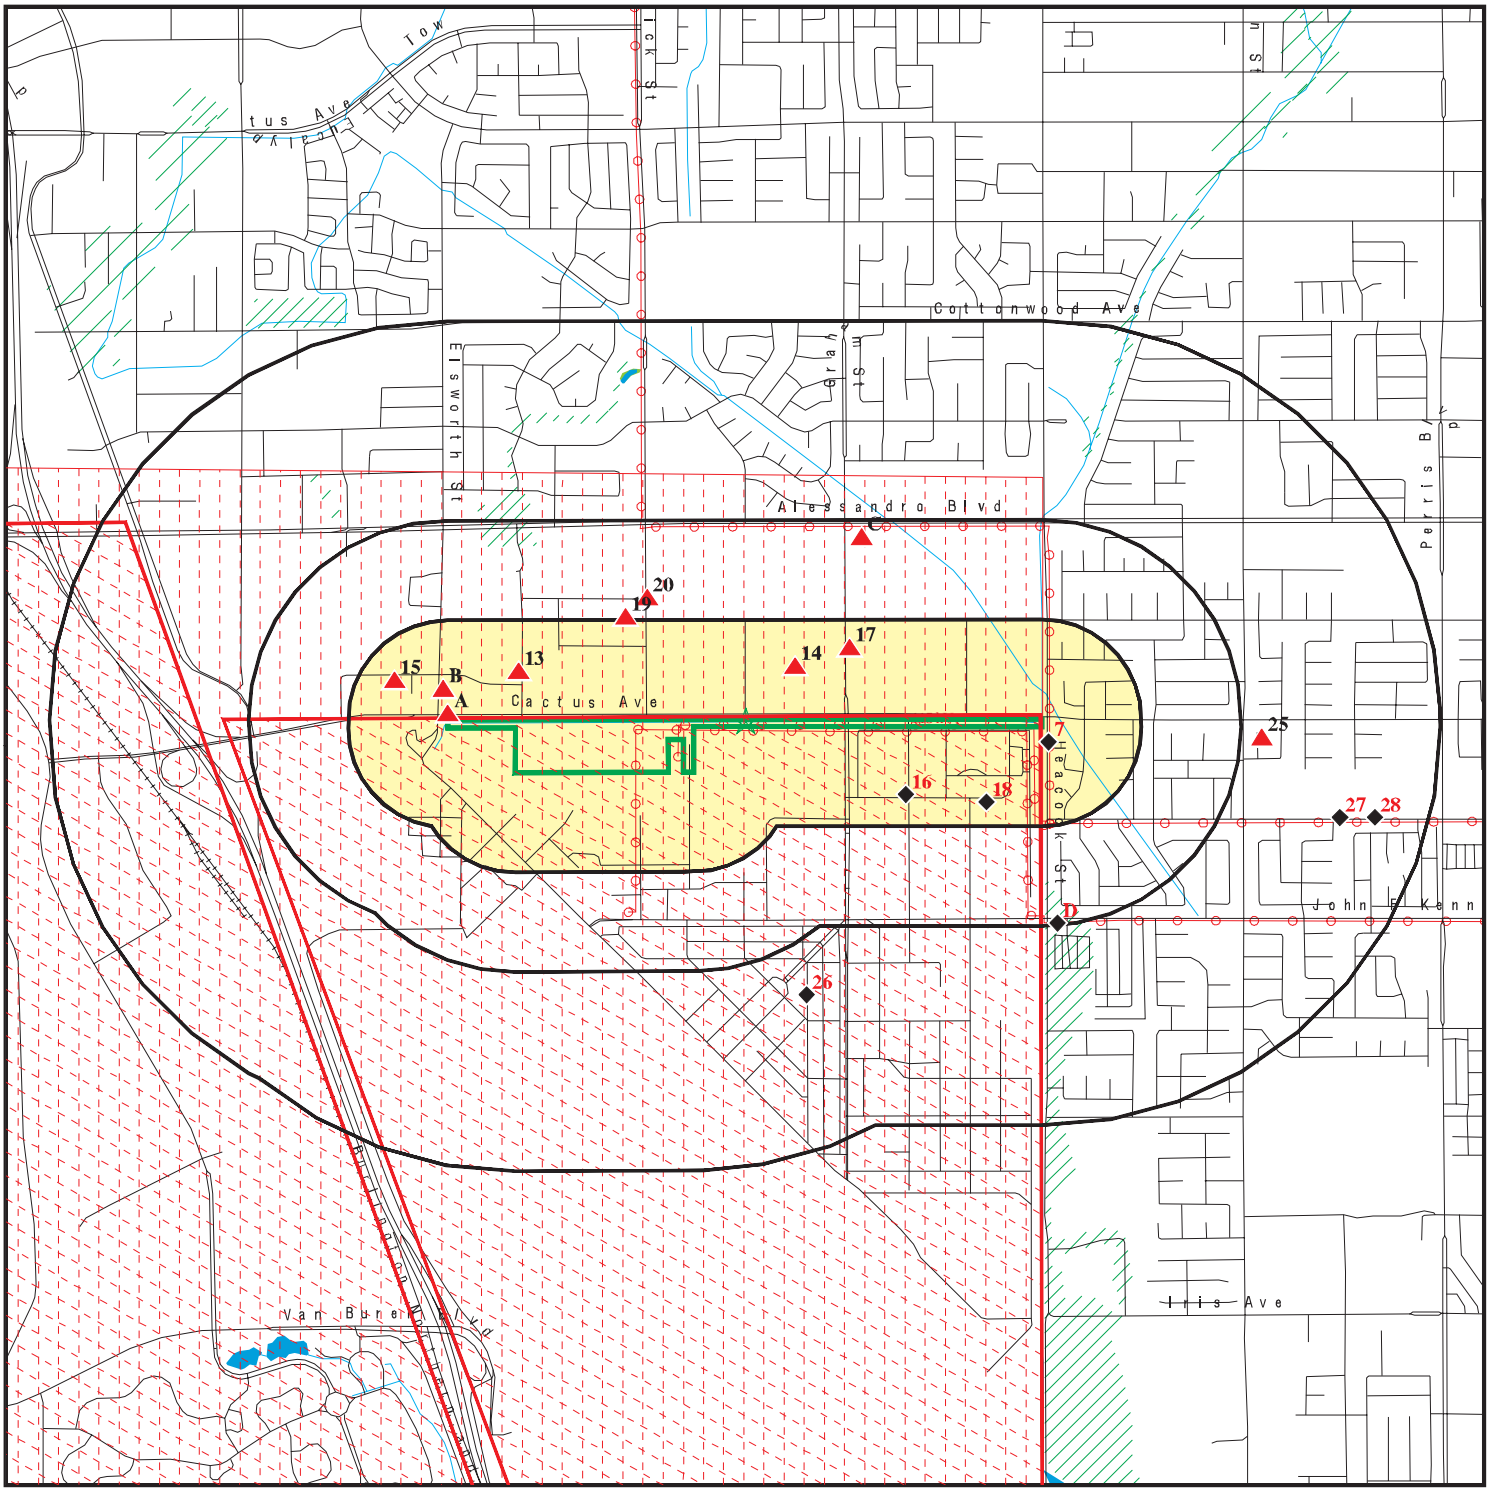
EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.



Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Summary Details:

Conditions at proposal July 14, 1989): March Air Force Base MAFB) covers approximately 7,000 acres near Riverside in the Moreno Valley in Riverside County, California. MAFB is adjacent to light industrial, agricultural, and residential areas. Established in 1918 as the Alessandro Aviation Field, MAFB has served as a training base and refueling operations base. Industrial operations including aircraft maintenance and repair) involved use of solvents and disposal of solvent wastes. MAFB is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part ofIRP, the Air Force investigated 28 potentially contaminated disposal areas. MAFB Well No. 1 on-base was found to be contaminated with trichloroethylene, tetrachloroethylene, and cis-1,2-dichloroethylene at levels that exceed State drinking water standards. It was taken out of service. Soils on the base are contaminated with toluene and ben ene. An estimated 11,600 people obtain drinking water from municipal wells within 3 miles of ha ardous substances on MAFB. The Air Forceis conducting a remedial investigation/ feasibility study RI/FS) to determine the type and extent of contamination at the base and identify alternatives for remedial action. Status November 21, 1989): Field work continues on the RI/FS.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Universal Waste Summary:
Waste type: Batteries
Accumulated waste on-site: Yes
Generated waste on-site: No

Waste type: Lamps
Accumulated waste on-site: Yes
Generated waste on-site: No

Waste type: Thermostats
Accumulated waste on-site: Yes
Generated waste on-site: No

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 151

MARCH AIR FORCE BASE (Continued) **1000169261**

. Waste code: 723
. Waste name: Liquids with chromium (VI) > 500 mg/l

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: D005
. Waste name: BARIUM

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 15899.4

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 186

MARCH AIR FORCE BASE (Continued) **1000169261**

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs): 1

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: ***Data prior to 2005 does not appear in GeoTracker. Consult agency files for all site data*** 3 USTs removed October 3, 2002. Up to 1800 ppm TPHg, 61 ppm MTBE and 2.4 ppm TBA was detected. The east end of T1, dispenser D5 and dispenser D2 were overexcavated. 243.97 tons of soil was taken to TPS for recycling. The site was entered into LOP October 22, 2002 4 gw mon wells (MW-1 through MW-4) were installed in April 2003. MW-1, MW-2, MW-3 were screened 20-50 ft bgs and MW-4 from 15-45 ft bgs. GW was not encountered in MW-4 at the time of installation, however, gw was present some time later. Wells MW-1, MW-2, and MW-3 remained dry after installation. MTBE & other constituents were detected in the soil from MW-2 (5 to 50) and in the bottom of MW-4 (35-50). The gw was impacted in MW-4 (2300 ppb TPHg, ND<0.5 ppb B, 3900 ppb MTBE, 450 ppb TBA). 12 CPT soil borings were drilled in February 2004. Soil samples were collected only from CPT1 and CPT9, however, gw samples were collected from all CPT locations and the new wells. Pore pressure dissipation test were conducted in 6 of the CPT borings. TPHg in the groundwater ranged from 84 ppb to 1700 ppb. MTBE ranged from 1.2 to 42 ppb. 3 gw mon wells (MW-5 through MW-7) were installed in August 2004. No TPHg or BTEX were detected in any soil sample. No oxygenates were detected in MW-5 and MW-6. MW-7 had 0.098 ppm at 20. MW-3 was destroyed in September 2004. A Batch Extraction Pilot Test was conducted in February 2006. 1332 gallons of gw and 12.4 lbs of hydrocarbons were extracted during the two events. The pneumatic and hydraulic ROI were interpreted to be <30. 2 monitoring wells (MW-8 and MW-9) were installed in January 2006. No TPHg, BTEX or fuel oxygenates were detected in the soil of MW-9 and MW-9. 1 extraction well MW-2R) was installed in June 2006. MW-2R had MTBE and TBA at 55 and 60. The groundwater extraction system was started October 12, 2006 using MW-2R and MW-7. Soil vapor extraction well SVE-1 was installed in November 2006. Two days of SVE testing were completed December 5 and 6, 2006. TPHg removal rate was 7 lb/day (2 lb were removed during the 7-hr extended test), 0.37 lb/day MTBE (0.11 lb removed) and 0.004 lb/day B (0.001 lb removed). MTBE concentrations increased during the test and the final concentration at the end of the test was 32 ppmV MTBE. 2 monitoring wells (MW-10 and MW-11) were installed in March 2007. A 5-day SVE test was conducted using SVE-1 in March 2007. 21.91 lb TPHg, 1.73 lb MTBE, and 0.021 lb B were removed. The max MTBE vapor concentration was 18 ppmV and decreased to 5.6 ppmV. No further SVE remediation was recommended and RCDEH concurred. 3 confirmation borings (SB-1 through SB-3) were drilled to 60 in July 2007. GW was encountered at 55-55.5 ft bgs. SB-2 and SB-3 were ND for all constituents. SB-1 detections: 0.24 ppm TPHg (15), 0.011 ppm M (25), 0.0093 ppm M (30). BTXE, oxygenates and ethanol were all ND. The groundwater extraction system was shut down Sept. 6, 2007. A total of 182650 gallons of groundwater, 4.546 lbs of TPHg, 15.32 lbs of MTBE and 5.77 lbs of TBA were recovered. MW-12 was installed in April 2008 to replace MW-2R which could not be sampled due to a pump lodged in its casing. Up to 0.69 ppm MTBE and 3.1 ppm TBA was detected in the soil. ~50 gallons of 3% hydrogen peroxide was added to MW-2R on August 12, 19, and 26, 2010 for a total of 165 gallons. Water samples were taken August 19, 2010 during hydrogen peroxide infiltration. Post-infiltration groundwater samples were taken September 10 and October 7, 2010. MW-2R TPHg went from 110 to <50 to 52 to <50 ppb. MTBE went from 8.8 to <1 to 6.1 to 6.5 ppb. TBA went from 1500 to <10 to 770 to 700 ppb.

TEXACO (SHELL) CACTUS AVE (Continued) **S105747989**

Chromium hexavalent went from <10 to 72 to 4.1 to 1.7 ppb 3 wells (MW-13 through MW-15) were installed March 18 and 22, 2011. TPHg was detected in only one soil sample at 222 ppm (MW-13@50). MTBE was detected in all the samples from MW-13 ranging from 1.6J to 203 ppb. TBA was detected from 40-50 in MW-13 ranging from 39.2J to 971 ppb. The RCDEH approved closure in April 2013 and the SARWQCB concurred with closure in May 2013. The 60 day public comment period for comments on site closure ended on August 2013 with no comments. The wells were destroyed September 9-13, 2013. The site was closed October 13, 2013.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Historical Generators:
Date form received by agency: 09/16/2002
Site name: TEXACO SERVICE STATION
Classification: Small Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

MORENO VALLEY UNOCAL (Continued) **1006805485**

. Waste code: D018
. Waste name: BENZENE

FINDS:

Registry ID: 110013305191

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HARBOR FREIGHT TOOLS DISTRIBUTION (Continued) **1016168229**

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Generated waste on-site: Not reported

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 151
. Waste name: Asbestos-containing waste

. Waste code: 281
. Waste name: Adhesives

. Waste code: 291
. Waste name: Latex waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 512
. Waste name: Other empty containers 30 gallons or more

. Waste code: 513
. Waste name: Empty containers less than 30 gallons

. Waste code: 561
. Waste name: Detergent and soap

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE

NAVY OPERATIONAL SUPPORT CENTER (NOSC) MORENO VALLEY (Continued) **1014387258**

FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: D005
. Waste name: BARIUM

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: D018
. Waste name: BENZENE

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Site History:	***Data prior to 2005 does not appear in GeoTracker. Consult agency file for all site data*** May 17, 2004-- Six soil borings (B1 through B6) were drilled using a Geoprobe unit for due diligence assessment purposes. A total of three samples were analyzed from the six borings, the 21 feet bgs samples from borings B2 and B3 and the soil sample collected from 11 feet bgs from boring B6. The B2 and B3 samples detected TPHg (2.5 ppm), E (0.19 ppm), X (1.0 ppm), MTBE (0.77 ppm), and TBA (0.36 ppm). The site was placed into LOP on July 14, 2004. April 2005--three soil borings (SB1 through SB3) were drilled and hydropunch groundwater sampling was conducted. Up to 8200 ppm TPHg (SB3@30), 74 ppm benzene (SB3@30), 2000 ppm MTBE(SB3@30) and 10,000 ppm TBA (SB3@30) were detected in the soil. Groundwater was encountered at approx 35 ft bgs. All three hydropunch samples had TPHg with the highest in SB3 at 430,000 ppb. SB3 also had 48000 ppb benzene and 56000 ppb MTBE. The soil and groundwater impact was not delineated. June 2006-- four groundwater monitoring wells (MW-1 through MW-4) were installed. Wells MW-1, MW-2, and MW-4 were screened from 25 to 45 feet and MW-3 from 20 to 45 feet. GW was encountered at 35 ft bgs and stabilized at 19.15 to 20.02 ft bgs, above the top of the screens. Groundwater samples were taken and the

CIRCLE K #1775 (Continued) **S108201629**

highest hydrocarbon concentrations were observed in well MW-1 which contained TPHg, benzene, ethylbenzene, total xylenes, MTBE, and TBA at concentrations of 22,000 ppb, 7,000 ppb, 1,100 ppb, 320 ppb, 120 ppb, and 45,000 ppb, respectively. 1,2,4-trimethylbenzne and naphthalene were reported in two wells (MW-1 and MW-4) at the site at maximum concentrations of 310 "g /L (MW-1) and 110 ppb (MW-1), respectively. April 9 and 10, 2007-- three air sparge wells (AS-1 through AS-3) and three soil vapor extraction (SVE) wells (VE-1 through VE-3) were installed. Up to 0.47 ppm MTBE (VE3@20) and 4.6 ppm TBA (AS1@35) was detected in the soil. Groundwater was encountered at ~30 feet and rose to ~21 feet bgs. The air sparge wells were screened from 33 to 38 feet and the vapor wells were screened from 15 to 25 feet. November 2007--monitoring wells MW-1 to MW-4 were destroyed by over-drilling as it was thought they may have been installed with screen intervals that intersected a confining layer. Additionally, groundwater was extracted from SVE wells VE-1 through VE-3. June 10 through 21, 2008-- five dual-completion monitoring wells (MW-8S/MW-8D through MW-12S/MW-12D) were installed. The wells were screen from ~15-25 and from ~31-37. Groundwater was encountered between 28 and 32. No TRPH, BTEX or MTBE detected in the soil. TBA was detected at up to 1.5 ppm. Groundwater was sampled and up to 59000 ppb TPHg, 2800 ppb B, 4000 ppb T, 1800 ppb E, 8400 ppb X, 20000 ppb MTBE, 31000 ppb TBA, 270 ppb TAME was detected in the wells with MW-11S showing the highest hits. June 19, 2008six soil gas samples were taken using soil gas probes. Benzene ranged from <5 to 29 a%g/m%, toluene ranged from <5 to 87 a%g/m%, ethylbenzene ranged from <5 to 140 a%g/m%, xylenes ranged from 7 to 860 a%g/m%, MTBE was <5, All levels were below the residential CHHSLs. 1,2,4-TMB ranged from 7.4 to 530 a%g/m%, 1,3,5 TMB ranged from 5.9 to 450 a%g/m%. No CHHSLs have been set for these. September 2008--four individual dual phase extraction feasibility tests were conducted. The cumulative mass of TPHg, benzene, and MTBE removed from soil vapor during the test was estimated to be approximately 31.5 pounds, 0.05 pound, and 0.04 pound, respectively. The radius of influences (ROIs) ranged between 38 and 144 feet. SVE appeared to be a feasible remedial technology for use at the site, however, DPE did not. December 16, 2008 through April 27, 2009--interim weekly vacuum truck extraction of groundwater was conducted. A total of 18 batch extraction events were conducting resulting in the removal of 6472 gallons of groundwater.March 2009-- two dual-completion monitoring wells (MW-13S/MW-13D and MW-14S/MW-14D) and two groundwater extraction wells (E-1 and E-2) were installed. MW-13 and MW-14 were screened from 15 to 25 and 30 to 37. E-1 was screened from 15 to 15. E-2 was screened from 35-45. Soil samples from MW-14 showed 0.19 ppm TBA at 19. Up to 0.23 ppm TPHg, 0.083 ppm MTBE and 0.14 ppm TBA was detected in E-1. E-2 had up to 0.66 ppm TPHg, 0.2 ppm MTBE, and 1.1 ppm TBA. July 22, 2009-- An Air Sparge test was conducted. Wells AS-1 and AS-2 were tested. Wells 3 and 4 would not take air flow and the test was not completed. Based on the results of AS-1 and AS-2, air or ozone sparing appeared to be feasible. Aquifer testing was completed using E-1 and 2. The capture zone was calculated to be 60 and groundwater extraction appeared to be feasible. September 2009-- three off-site dual-completion monitoring wells (MW-5S/MW-5D, MW-6S/MW-6D, and MW-7S/MW-7D) were installed in the adjacent mobile home park. Up to 0.093 ppm MTBE and 1.1 ppm TBA was detected in the soil. Up to 360 ppb TPHg, 1100 ppb MTBE, and 11000 ppb TBA was detected in the groundwater of the three off-site wells. April 2010-- four off-site

CIRCLE K #1775 (Continued) **S108201629**

dual-completion monitoring wells (MW-15S/MW-15D through MW-18S/MW-18D) were installed in the adjacent mobile home park. Soil samples were taken every 5 beginning at the capillary fringe to the depth of the well. No TPHg, BTEX or oxygenates were detected in the soil. Carbon tetrachloride was detected in the groundwater in MW-15S at 0.75 ppb. TCE was detected in the groundwater in MW16S and MW16D at 0.76 and 1 ppb. Chloroform was detected in the groundwater in MW-18S and MW-18D at 25 and 2.8 ppb. These chemicals were not believed to have originated from the Circle K site. February 2011-- two on-site single completion sparge wells (AS-5 and AS-7), one on-site dual-completion sparge well (AS-6S/D), one off-site vapor extraction well (VE-4), and nine off-site injection wells (IP-1 through IP-9) were installed. Additionally, AS-3 was destroyed by pressure grouting. The two on-site air sparge wells (AS-5 and AS-7) were drilled to 26 and screened from 23 to 26. The one-site dual completion air sparge well (AS-6S/D) was drilled to 38. One well was screened from 23 to 26 and the other from 33 to 38. The off-site SVE well (VE-4) was drilled to 25 and screened from 15 to 25. The injection wells (IP-1 through IP9) were drilled to 38 and screened from 33 to 38. July 1 2011 through December 13, 2012--mobile oxygen injection events and mobile SVE events commenced. The system was connected to SVE-1 through SVE-4. 150 cubic feet of oxygen was injected into each sparge well during each event. October 3 through 6, 2011-- A three day SVE event was conducted. Individual well head samples were taken upon initiation and just prior to the conclusion of the SVE event. Influent vapor samples were taken daily. 112 lbs of TPHg, 1.1 lbs of benzene, and 0.17 lbs of MTBE were removed. Influent TPHg went from 280 to 390 ppmV. Benzene went from 2.8 to 3.8 ppmV. MTBE went from 1.1 to 0.26 ppmV. March 5 through 7, 2012--a hydrogen peroxide injection event was performed at the site. Due to low injection rates and increasing backpressure, the hydrogen peroxide injection event was terminated after three days.. A review of pre- and post-injection groundwater monitoring data suggested the hydrogen peroxide injection event had no clear impact on dissolved-phase petroleum hydrocarbon concentrations or groundwater chemistry in samples collected from the off-site groundwater monitoring wells. March 12, 2012 through March 16, 2012a mobile SVE event commenced. The system was connected to vapor extraction wells SVE-1 through SVE-4. Individual well-head vapor sample concentrations were collected upon initiation and just prior to conclusion of the SVE event. Petroleum hydrocarbon concentrations were generally observed to decrease over the course of the SVE event, both in samples collected from the combined influent stream and from the individual wellheads; the one exception being TPHg and xylenes concentrations in VE-3 were higher at the conclusion of the SVE event than at the beginning. Maximum beginning vapor levels were 600 ppmV TPHg, 10 ppmV benzene, 95 ppmV toluene, 4.9 ppmV ethylbenzene, and 28 ppmV xylenes in VE-1. Maximum ending vapor levels were 530 ppmV in VE-3, 2.4 ppmV benzene, 25 ppmV toluene, and 2.2 ppmV ethylbenzene in VE-1 and 56 ppmV xylenes in VE-3. Cumulatively, the mobile SVE events removed approximately 363 pounds of TPHg, 4.3 pounds of benzene, and 1.3 pounds of MTBE from the subsurface. 3780 cubic feet of oxygen was injected. 1443 gallons of 4% hydrogen peroxide solution was injected. Residual Mass in Soil: 987 lb TPHg, 63 lb B, 141 lb T, 141 lb X, 270 lb E, 273 lb MTBE, 1875 lb TBA. GW monitoring has been conducted from June 2006 to October 2013. Water levels have fluctuated from 14.42 to 23.39 ft bg with flow directions predominantly to the east with a

CIRCLE K #1775 (Continued) **S108201629**

southeast component. Existing monitoring wells are dual-cased with screens across two water bearing zones, which appear to be in communication. The hydrogeologic conditions indicate a leaky aquifer exists where sandy clay lenses preclude water transmission. The historical maximum dissolved concentrations have been reduced as follows: TPHg 69000 ppb (MW-11S) 5/2009 1800 ppb (MW-11S) 10/2013 Benzene 7400 ppb (MW-1) 8/2006 170 ppb (MW-11S) 10/2013 Toluene 7200 ppb (MW-11S) 8/2008 <0.5 ppb (All wells) 10/2013 Ethylbenzene 4200 ppb (MW-11S) 8/2008 24 ppb (MW-11S) 10/2013 Xylenes 16000 ppb (MW-11S) 8/2008 110 ppb (MW-11S) 10/2013 MTBE 34000 ppb (MW-11S) 8/2008 440 ppb (MW-10D) 10/2013 TBA 74000 ppb (AS-1) 5/2008 1200 ppb (MW-10D) 10/2013 These maximum concentrations were detected in wells located southeast of the tank pit. The case was determined to eligible for closure in April 2014 once a public comment period was over and the wells were destroyed. Between September 24 and 30, 2014, monitoring wells MW-5S through MW-18S, vapor wells VE-1 through VE-4 and gw extraction well E-1 were destroyed by overdrilling and backfilling with cement grout. Between September 22 and October 1, 2014, wells MW-5D through MW-18D, air sparge wells AS-1, AS-2, AS-5, AS-6S/D and AS-7, extraction well E-2 and injection wells IP-2 through IP-9 were destroyed by pressure grouting. IP-1 could not be located and therefore was not destroyed. During the destruction activities, approximately 7.12 tons of soil and 100 gallons of rinse water were generated. The soil cuttings were transported to American Integrated Services in Adelanto and the waste water was transported to Crosby & Overton in Long Beach. 11/21/2014 RCDEH issued NFA/closure letter

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/13/2018

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/13/2018

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Data Release Frequency: No Update Planned

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/22/2018

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region’s active disposal pits are operating without permission.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Target Property Map:	5641312 RIVERSIDE EAST, CA
Version Date:	2012
Northeast Map:	5641326 SUNNYMEAD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

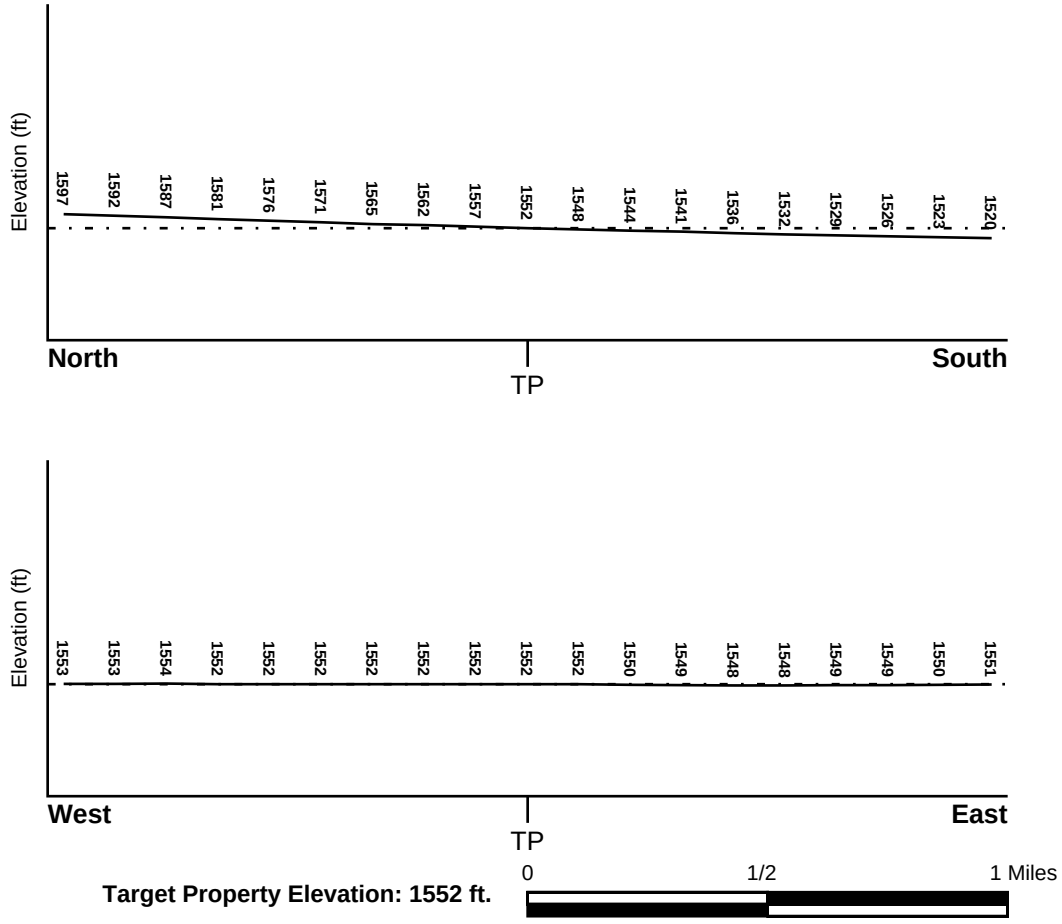
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C0745G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06065C0761G	FEMA FIRM Flood data
06065C0765G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
NOT AVAILABLE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
2	1/2 - 1 Mile NNW	Not Reported
1G	1/2 - 1 Mile NNW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: MONSERATE

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 6.1
2	9 inches	27 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 7.3 Min: 6.1
3	27 inches	44 inches	indurated	Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:
4	44 inches	57 inches	cemented	Not reported	Not reported	Max: 0.01 Min: 0	Max: Min:
5	57 inches	70 inches	loamy coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 8.4 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Section I Introduction

The following preliminary hydrology study has been prepared for the development of the Meridian Park K-4 Parcel property on the south side of Cactus Avenue, generally between Veterans Way and Frederick Street in the March Joint Powers Authority Jurisdictional Area of Riverside County. The subject site is approximately 35.43 acres. The general location of the site is illustrated on the Vicinity Map, (see Appendix A of this report).

Section II Methodology

For both, the existing and proposed conditions, the peak storm discharge for the drainage sub-areas was calculated using the Riverside County Hydrology Manual. Rational Method Equation (1978 April), using AES Software (Ratscx), was used to calculate the 2-year and 100-year storm event (see calculations in Appendix C). A soil type of C was assigned to the project site based on the Riverside County Flood Control and Water Conservation District Hydrology Manual Hydrologic Soils Group Map Plate C-1.16 (see portion of map in Appendix A). Soil group C is defined as soils having slow infiltration rates when thoroughly wetted and consisting chiefly of silty-loam soils with a layer that impedes downward movement of water, or soils with moderately fine to fine texture. These soils have a slow rate of water transmission.

The Riverside county unit hydrograph was used to calculate hydrographs for the existing and proposed 2-year and 100-year storms. The existing and proposed condition 2-year runoff volumes and Tc were used in determining the hydromodification conditions of concern. The existing and proposed condition 100-year storm runoff was calculated to size the underground detention system. A detention analysis was calculated using Hydraflow Hydrographs Extension version 6.066 for the proposed 2-year 24 hour and 100-year 24 hour storm events (see calculations in Appendix D).

Section III Project Description

Existing site conditions

The existing site is approximately 35.4 acres of natural open brush. The site is bounded by existing earthen Cactus channel to the north and generally surface flows to the south, onto March Reserve Base. The surface flows from the site, eventually enters the Heacock channel, which is located approximately 1.5 miles to the south east. For study purposes, the site has been divided into three (3) separate drainage subareas, refer to the “Existing Hydrology Map” in Appendix B.

Proposed site Conditions

The proposed development will consist of the construction of paved parking areas, drive aisles, storm drains, utilities, associated landscaping areas, and an approximately ±703,234 SF proposed industrial building. The proposed building finish floor will be sloping 0.5% from north to south. The site will be draining to three separate underground detention systems. The westerly 14.8 acres of the project site will drain to underground detention system 'A'. Detention system 'A' will consist of 14 rows of 750 linear feet of 42" diameter pipe for a total volume provided of 101,042 cf. The central 15.37 acres of the project site will drain to underground detention system 'B'. Detention system 'B' will consist of 13 rows of 685 linear feet of 42" diameter pipe for a total volume provided of 85,693 cf. The easterly 2.47 acres of the project site will drain to underground detention system 'C'. Detention system 'C' will consist of 10 rows of 515 linear feet of 42" diameter pipe for a total volume provided of 49,559 cf. Refer to the "Proposed Hydrology Map" in Appendix B for an illustration of the proposed drainage zones.

The following tables summarize the data and results for the 2-year and 100-year storm in the existing and proposed conditions. All calculations can be found in Appendix C and D of this report

Vol. to be Detained	---	64,397 CF	57,475 CF	6,295 CF	126,780 CF	
Flowrate after Detention	---	0.16 CFS	0.37 CFS	0.14 CFS	0.67 CFS	12% Decrease

100-YEAR – 24 HOUR STORM HYDROGRAPH TABLE

	EXIST. TOTAL	PROP. SYSTEM A	PROP. SYSTEM B	PROP. SYSTEM C	PROP. TOTAL	DIFFERENCE
Flowrate	14.85 CFS	7.44 CFS	7.73 CFS	1.22 CFS	16.37 CFS	
Vol. to be Detained	---	96,028 CF	75,152 CF	13,206 CF	184,386 CF	
Flowrate after Detention	---	6.90 CFS	6.98 CFS	0.90 CFS	14.78 CFS	0.5% Decrease

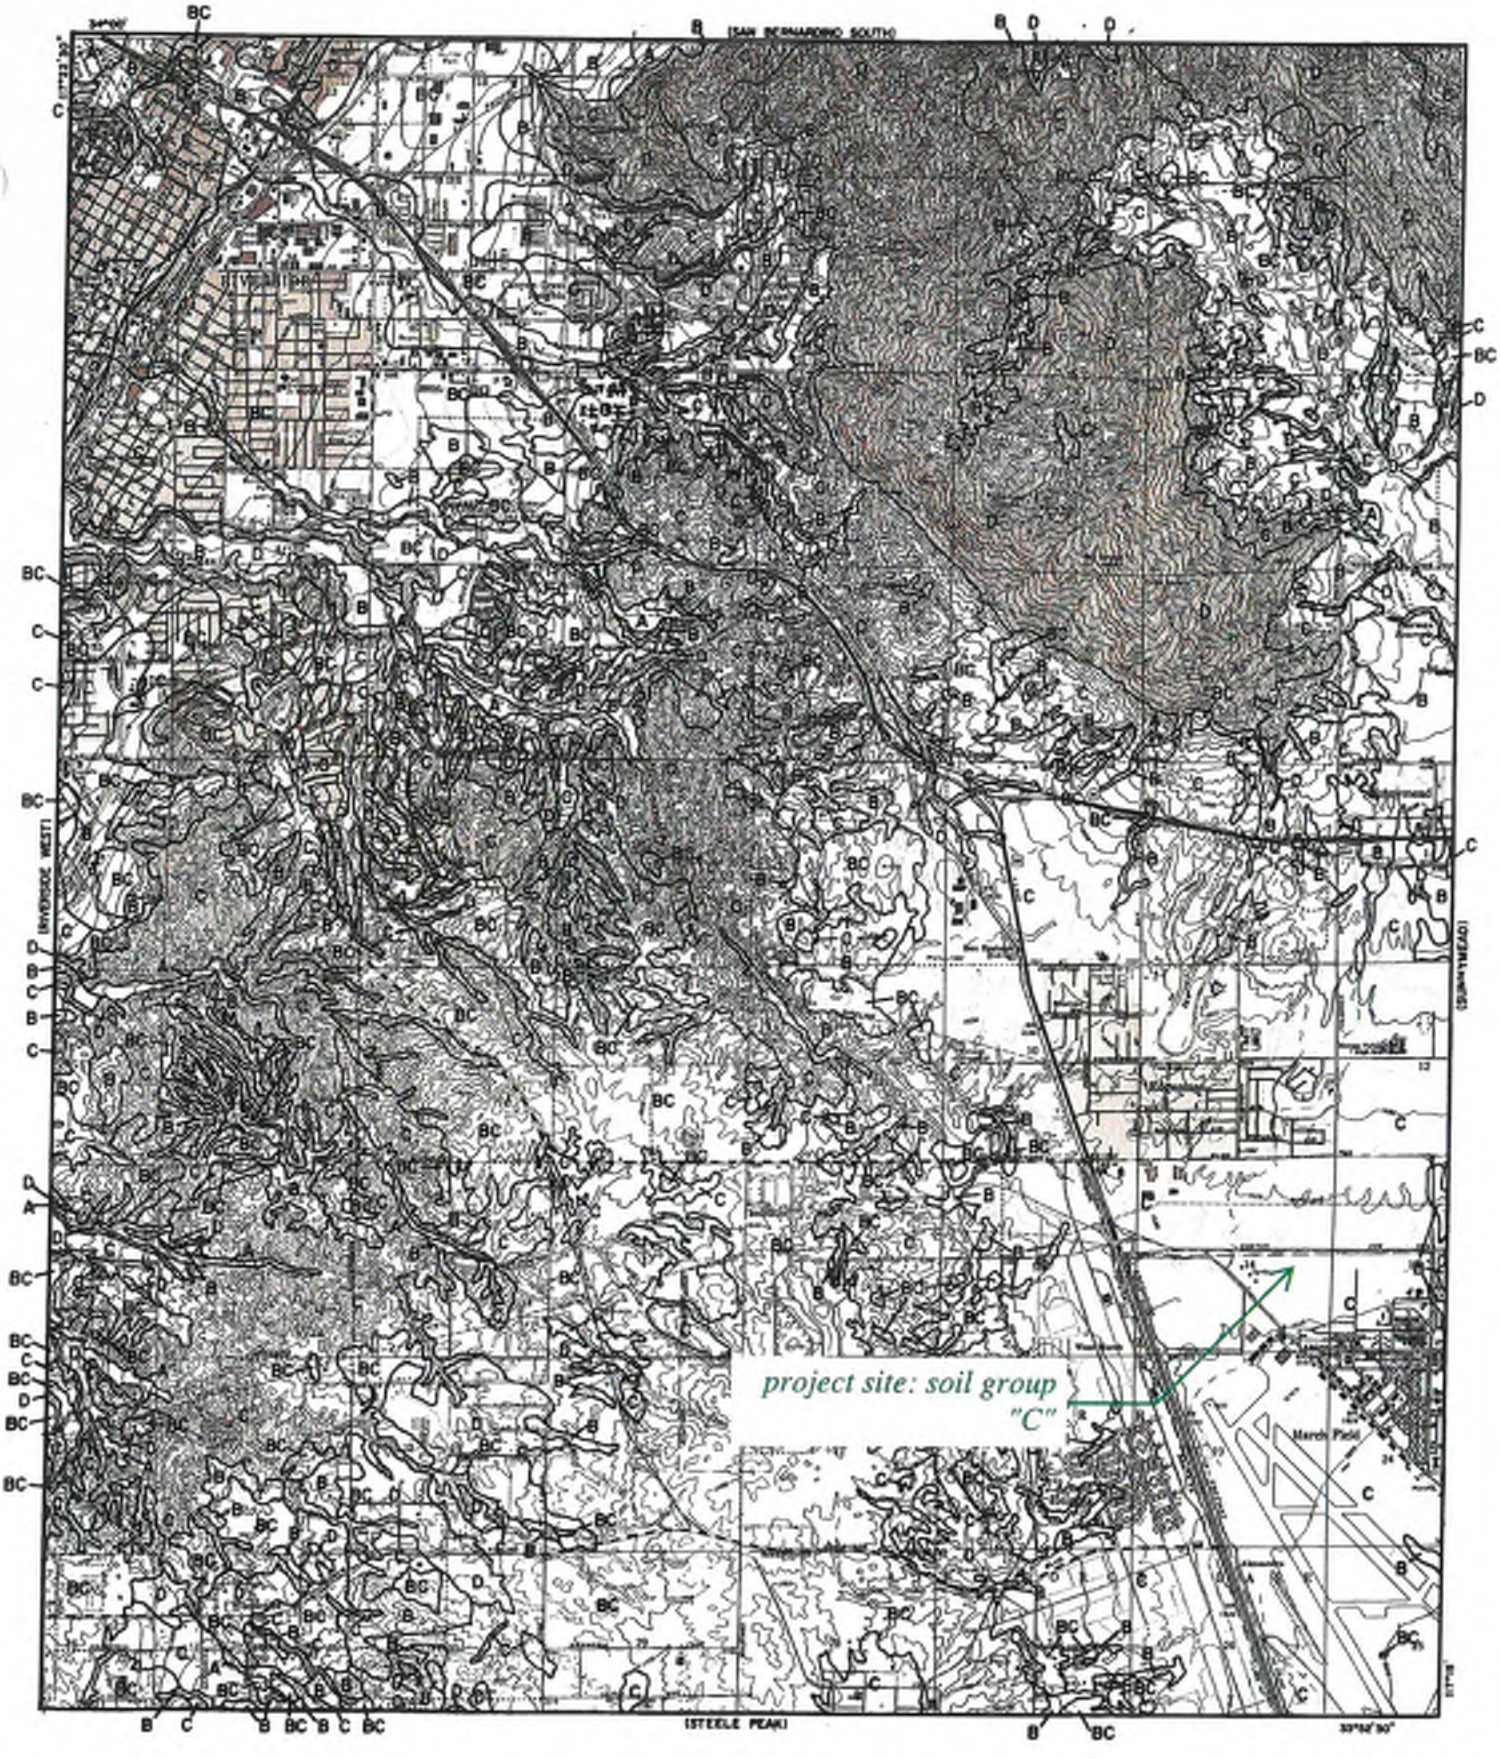
Section IV Conclusion

The 2-year storm flow rates were calculated using the Riverside county unit hydrograph dividing the project site roughly into 3 portions. For the 2-year storm, the flow rate increases in the proposed condition from 0.76 cfs to 6.23 cfs. Riverside County unit hydrograph was utilized to generate the 2-year hydrographs for the proposed drainage areas. Hydraflow Hydrographs used this hydrograph information to generate a peak discharge rate for the proposed storm drain system. Three proposed underground detention systems will be provided with system DET "1" made of 10,500 feet of parallel 42" storm drain pipes for a total volume of 101,042 cf, system DET 2 made of 8,220 feet of parallel 42" storm drain pipes for a total volume of 85,693 cf, system DET 3 made of 5,150 feet of parallel 42" storm drain pipes for a total volume of 49,559 cf. One 2" orifice will be set at the invert elevation of the system outlet for DET 1, a 3" orifice for DET 2, a 2.50" orifice for DET 3. With the proposed detention system DET 1, the peak discharge rate for the westerly 14.8 acres of the site will be reduced from 2.83 cfs to 0.16 cfs. With the proposed detention system DET 2, the peak discharge rate for the central 15.37 acres of the site will be reduced from 2.94 cfs to 0.37 cfs. With the proposed detention system DET 3, the peak discharge rate for the easterly 2.47 acres of the site will be reduced from 0.46 cfs to 0.14 cfs.



The 100-year storm flow rates were similarly calculated using the Riverside county unit hydrograph and Hydraflow Hydrographs dividing the project site roughly into three portions. For the 100-year storm, the total flow rate increases in the proposed condition from 14.85 cfs to 16.37 cfs. Three proposed underground detention systems will be provided with system DET 1 made of 10,500 feet of parallel 42" storm drain pipes for a total volume of 101,042 cf, system DET 2 made of 8,220 feet of parallel 42" storm drain pipes for a total volume of 85,693 cf, system DET 3 made of 5,150 feet of parallel 42" storm drain pipes for a total volume of 49,559 cf, and system. One 2" orifice will be set at the invert elevation of the system outlet for DET 1, a 3" orifice for DET 2, a 2.50" orifice for DET 3. With the proposed detention system DET 1, the peak discharge rate for the westerly 14.8 acres of the site will be reduced from 7.44 cfs to 6.90 cfs. With the proposed detention system DET 2, the peak discharge rate for the central 15.37 acres of the site will be reduced from 7.73 cfs to 6.98 cfs. With the proposed detention system DET 3, the peak discharge rate for the easterly 2.47 acres of the site will be reduced from 1.22 cfs to 0.90 cfs. The total reduced flow rate is 14.78 cfs, which is less than the existing flow rate of 14.85 cfs.

The site will have three separate underground detention systems consisting of a series of parallel 42" storm drain pipes (DET 1, DET 2 and DET 3). In the proposed condition, the low flows will outlet from the detention system to a Modular Wetlands treatment system. For systems DET 1 DET 2 and DET 3, the high flows will bypass the treatment system and outlet to the existing Cactus channel or proposed RCB channel. The development of this site will contain measures to control the peak flows and will not have a negative impact on downstream facilities.

Riverside County Synthetic Unit Hydrology Method
RCFC & WCD Manual date - April 1978

Program License Serial Number 6310

English (in-lb) Input Units Used
English Rainfall Data (Inches) Input Values Used

English Units used in output format

17-380
EXISTING CONDITION
2 YEAR 24 HOUR
AREA B

Drainage Area = 14.74(Ac.) = 0.023 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 14.74(Ac.) = 0.023 Sq. Mi.
Length along longest watercourse = 638.00(Ft.)
Length along longest watercourse measured to centroid = 318.00(Ft.)
Length along longest watercourse = 0.121 Mi.
Length along longest watercourse measured to centroid = 0.060 Mi.
Difference in elevation = 4.60(Ft.)
Slope along watercourse = 38.0690 Ft./Mi.
Average Manning's 'N' = 0.030
Lag time = 0.056 Hr.
Lag time = 3.33 Min.
25% of lag time = 0.83 Min.
40% of lag time = 1.33 Min.

Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
14.74	1.70	25.06

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
14.74	3.90	57.49

STORM EVENT (YEAR) = 2.00
Area Averaged 2-Year Rainfall = 1.700(In)
Area Averaged 100-Year Rainfall = 3.900(In)

Point rain (area averaged) = 1.700(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 1.700(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
14.740	85.00	0.000

Total Area Entered = 14.74(Ac.)

RI AMC2	RI AMC-1	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
85.0	70.0	0.362	0.000	0.362	1.000	0.362

Sum (F) = 0.362
Area averaged mean soil loss (F) (In/Hr) = 0.362
Minimum soil loss rate ((In/Hr)) = 0.181
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.900

Riverside County Synthetic Unit Hydrology Method
RCFC & WCD Manual date - April 1978

Program License Serial Number 6310

English (in-lb) Input Units Used
English Rainfall Data (Inches) Input Values Used

English Units used in output format

17-380
EXISTING CONDITION
2 YEAR 24 HOUR
AREA C

Drainage Area = 3.00(Ac.) = 0.005 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 3.00(Ac.) = 0.005 Sq. Mi.
Length along longest watercourse = 667.00(Ft.)
Length along longest watercourse measured to centroid = 321.00(Ft.)
Length along longest watercourse = 0.126 Mi.
Length along longest watercourse measured to centroid = 0.061 Mi.
Difference in elevation = 4.80(Ft.)
Slope along watercourse = 37.9970 Ft./Mi.
Average Manning's 'N' = 0.025
Lag time = 0.047 Hr.
Lag time = 2.84 Min.
25% of lag time = 0.71 Min.
40% of lag time = 1.13 Min.

Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.00	1.70	5.10

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.00	3.90	11.70

STORM EVENT (YEAR) = 2.00
Area Averaged 2-Year Rainfall = 1.700(In)
Area Averaged 100-Year Rainfall = 3.900(In)

Point rain (area averaged) = 1.700(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 1.700(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
3.000	85.00	0.200

Total Area Entered = 3.00(Ac.)

RI AMC2	RI AMC-1	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
85.0	70.0	0.362	0.200	0.297	1.000	0.297

Sum (F) = 0.297
Area averaged mean soil loss (F) (In/Hr) = 0.297
Minimum soil loss rate ((In/Hr)) = 0.148
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.900

Riverside County Synthetic Unit Hydrology Method
RCFC & WCD Manual date - April 1978

Program License Serial Number 6310

English (in-lb) Input Units Used
English Rainfall Data (Inches) Input Values Used

English Units used in output format

17-380
PROPOSED CONDITION
2 YEAR 24 HOUR
AREA A

Drainage Area = 14.80(Ac.) = 0.023 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 14.80(Ac.) = 0.023 Sq. Mi.
Length along longest watercourse = 1398.00(Ft.)
Length along longest watercourse measured to centroid = 794.00(Ft.)
Length along longest watercourse = 0.265 Mi.
Length along longest watercourse measured to centroid = 0.150 Mi.
Difference in elevation = 9.54(Ft.)
Slope along watercourse = 36.0309 Ft./Mi.
Average Manning's 'N' = 0.015
Lag time = 0.054 Hr.
Lag time = 3.21 Min.
25% of lag time = 0.80 Min.
40% of lag time = 1.28 Min.

Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
14.80	1.70	25.16

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
14.80	3.90	57.72

STORM EVENT (YEAR) = 2.00
Area Averaged 2-Year Rainfall = 1.700(In)
Area Averaged 100-Year Rainfall = 3.900(In)

Point rain (area averaged) = 1.700(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 1.700(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
14.800	69.00	0.900

Total Area Entered = 14.80(Ac.)

RI AMC2	RI AMC-1	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
69.0	49.8	0.574	0.900	0.109	1.000	0.109

Sum (F) = 0.109
Area averaged mean soil loss (F) (In/Hr) = 0.109
Minimum soil loss rate ((In/Hr)) = 0.055
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.180

Riverside County Synthetic Unit Hydrology Method
RCFC & WCD Manual date - April 1978

Program License Serial Number 6310

English (in-lb) Input Units Used
English Rainfall Data (Inches) Input Values Used

English Units used in output format

17-380
PROPOSED CONDITION
2 YEAR 24 HOUR
AREA B

Drainage Area = 15.37(Ac.) = 0.024 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 15.37(Ac.) = 0.024 Sq. Mi.
Length along longest watercourse = 1398.00(Ft.)
Length along longest watercourse measured to centroid = 794.00(Ft.)
Length along longest watercourse = 0.265 Mi.
Length along longest watercourse measured to centroid = 0.150 Mi.
Difference in elevation = 9.54(Ft.)
Slope along watercourse = 36.0309 Ft./Mi.
Average Manning's 'N' = 0.015
Lag time = 0.054 Hr.
Lag time = 3.21 Min.
25% of lag time = 0.80 Min.
40% of lag time = 1.28 Min.

Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
15.37	1.70	26.13

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
15.37	3.90	59.94

STORM EVENT (YEAR) = 2.00
Area Averaged 2-Year Rainfall = 1.700(In)
Area Averaged 100-Year Rainfall = 3.900(In)

Point rain (area averaged) = 1.700(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 1.700(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
15.370	69.00	0.900

Total Area Entered = 15.37(Ac.)

RI AMC2	RI AMC-1	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
69.0	49.8	0.574	0.900	0.109	1.000	0.109

Sum (F) = 0.109
Area averaged mean soil loss (F) (In/Hr) = 0.109
Minimum soil loss rate ((In/Hr)) = 0.055
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.180

Unit Hydrograph
VALLEY S-Curve

Unit Hydrograph Data

Unit time period (hrs)	Time % of lag Graph %	Distribution (CFS)	Unit Hydrograph
1 0.083	155.690	34.524	5.348
2 0.167	311.381	46.590	7.217
3 0.250	467.071	10.860	1.682
4 0.333	622.762	4.712	0.730
5 0.417	778.452	2.311	0.358
6 0.500	934.142	1.003	0.155
	Sum = 100.000	Sum=	15.490

The following loss rate calculations reflect use of the minimum calculated loss rate subtracted from the Storm Rain to produce the maximum Effective Rain value

Unit Time (Hr.)	Pattern Percent	Storm Rain (In/Hr)	Loss rate(In./Hr) Max |	Low	Effective (In/Hr)
1 0.08	0.07	0.014	(0.193)	0.002	0.011

17-380
PROPOSED CONDITION
2 YEAR 24 HOUR
AREA C

Drainage Area = 2.42(Ac.) = 0.004 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 2.42(Ac.) = 0.004 Sq. Mi.
Length along longest watercourse = 658.00(Ft.)
Length along longest watercourse measured to centroid = 311.00(Ft.)
Length along longest watercourse = 0.125 Mi.
Length along longest watercourse measured to centroid = 0.059 Mi.
Difference in elevation = 5.13(Ft.)
Slope along watercourse = 41.1647 Ft./Mi.
Average Manning's 'N' = 0.015
Lag time = 0.027 Hr.
Lag time = 1.65 Min.
25% of lag time = 0.41 Min.
40% of lag time = 0.66 Min.

Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
2.42	1.70	4.11

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
2.42	3.90	9.44

STORM EVENT (YEAR) = 2.00
Area Averaged 2-Year Rainfall = 1.700(In)
Area Averaged 100-Year Rainfall = 3.900(In)

Point rain (area averaged) = 1.700(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 1.700(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
2.420	69.00	0.900

Total Area Entered = 2.42(Ac.)

RI AMC2	RI AMC-1	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
69.0	49.8	0.574	0.900	0.109	1.000	0.109

Sum (F) = 0.109
Area averaged mean soil loss (F) (In/Hr) = 0.109
Minimum soil loss rate ((In/Hr)) = 0.055
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.180

Unit Hydrograph
VALLEY S-Curve

Unit Hydrograph Data

Unit time period (hrs)		Time % of lag Graph %	Distribution (CFS)	Unit Hydrograph
1	0.083	303.601	57.047	1.391
2	0.167	607.202	36.931	0.901
3	0.250	910.803	6.022	0.147
		Sum = 100.000	Sum=	2.439

The following loss rate calculations reflect use of the minimum calculated loss rate subtracted from the Storm Rain to produce the maximum Effective Rain value

Unit Time		Pattern	Storm Rain	Loss rate(In./Hr)		Effective
	(Hr.)	Percent	(In/Hr)	Max	Low	(In/Hr)

17-380
EXISTING CONDITION
100 YEAR 24 HOUR
AREA A

Drainage Area = 14.95(Ac.) = 0.023 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 14.95(Ac.) = 0.023 Sq. Mi.
Length along longest watercourse = 696.00(Ft.)
Length along longest watercourse measured to centroid = 373.00(Ft.)
Length along longest watercourse = 0.132 Mi.
Length along longest watercourse measured to centroid = 0.071 Mi.
Difference in elevation = 4.70(Ft.)
Slope along watercourse = 35.6552 Ft./Mi.
Average Manning's 'N' = 0.030
Lag time = 0.062 Hr.
Lag time = 3.71 Min.
25% of lag time = 0.93 Min.
40% of lag time = 1.48 Min.

Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
14.95	1.70	25.41

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
14.95	3.80	56.81

STORM EVENT (YEAR) = 100.00
Area Averaged 2-Year Rainfall = 1.700(In)
Area Averaged 100-Year Rainfall = 3.800(In)

Point rain (area averaged) = 3.800(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 3.800(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
14.950	85.00	0.000

Total Area Entered = 14.95(Ac.)

RI AMC2	RI AMC-3	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
85.0	94.0	0.078	0.000	0.078	1.000	0.078

Sum (F) = 0.078
Area averaged mean soil loss (F) (In/Hr) = 0.078
Minimum soil loss rate ((In/Hr)) = 0.039
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.900

Unit Hydrograph
VALLEY S-Curve

Unit Hydrograph Data

Unit time period (hrs)		Time % of lag Graph %	Distribution (CFS)	Unit Hydrograph
1	0.083	134.943	29.353	4.423

AREA A

Drainage Area = 14.80(Ac.) = 0.023 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 14.80(Ac.) = 0.023 Sq. Mi.
Length along longest watercourse = 1398.00(Ft.)
Length along longest watercourse measured to centroid = 794.00(Ft.)
Length along longest watercourse = 0.265 Mi.
Length along longest watercourse measured to centroid = 0.150 Mi.
Difference in elevation = 9.54(Ft.)
Slope along watercourse = 36.0309 Ft./Mi.
Average Manning's 'N' = 0.015
Lag time = 0.054 Hr.
Lag time = 3.21 Min.
25% of lag time = 0.80 Min.
40% of lag time = 1.28 Min.

Unit time = 5.00 Min.
Duration of storm = 6 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
14.80	1.00	14.80

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
14.80	2.50	37.00

STORM EVENT (YEAR) = 100.00
Area Averaged 2-Year Rainfall = 1.000(In)
Area Averaged 100-Year Rainfall = 2.500(In)

Point rain (area averaged) = 2.500(In)
Areal adjustment factor = 99.99 %
Adjusted average point rain = 2.500(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
14.800	69.00	0.900

Total Area Entered = 14.80(Ac.)

RI AMC2	RI AMC-3	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
69.0	84.4	0.194	0.900	0.037	1.000	0.037

Sum (F) = 0.037
Area averaged mean soil loss (F) (In/Hr) = 0.037
Minimum soil loss rate ((In/Hr)) = 0.018
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.180

English Units used in output format

17-380
PROPOSED CONDITION
100 YEAR 24 HOUR
AREA A

Drainage Area = 14.80(Ac.) = 0.023 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 14.80(Ac.) = 0.023 Sq. Mi.
Length along longest watercourse = 1398.00(Ft.)
Length along longest watercourse measured to centroid = 794.00(Ft.)
Length along longest watercourse = 0.265 Mi.
Length along longest watercourse measured to centroid = 0.150 Mi.
Difference in elevation = 9.54(Ft.)
Slope along watercourse = 36.0309 Ft./Mi.
Average Manning's 'N' = 0.015
Lag time = 0.054 Hr.
Lag time = 3.21 Min.
25% of lag time = 0.80 Min.
40% of lag time = 1.28 Min.

Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
14.80	1.70	25.16

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
14.80	3.90	57.72

STORM EVENT (YEAR) = 100.00
Area Averaged 2-Year Rainfall = 1.700(In)
Area Averaged 100-Year Rainfall = 3.900(In)

Point rain (area averaged) = 3.900(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 3.900(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
14.800	69.00	0.900

Total Area Entered = 14.80(Ac.)

RI AMC2	RI AMC-3	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
69.0	84.4	0.194	0.900	0.037	1.000	0.037

Sum (F) = 0.037
Area averaged mean soil loss (F) (In/Hr) = 0.037
Minimum soil loss rate ((In/Hr)) = 0.018
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.180

Unit Hydrograph
VALLEY S-Curve

Unit Hydrograph Data

Unit time period (hrs)		Time % of lag Graph %	Distribution (CFS)	Unit Hydrograph
1	0.083	155.690	34.524	5.149
2	0.167	311.381	46.590	6.949
3	0.250	467.071	10.860	1.620
4	0.333	622.762	4.712	0.703
5	0.417	778.452	2.311	0.345
6	0.500	934.142	1.003	0.150
		Sum = 100.000	Sum=	14.916

The following loss rate calculations reflect use of the minimum calculated loss rate subtracted from the Storm Rain to produce the maximum Effective Rain value

Unit Time (Hr.)		Pattern Percent	Storm Rain (In/Hr)	Loss rate(In./Hr) Max	Low	Effective (In/Hr)
1	0.08	0.07	0.031	(0.065)	0.006	0.026

Riverside County Synthetic Unit Hydrology Method
RCFC & WCD Manual date - April 1978

Program License Serial Number 6310

English (in-lb) Input Units Used
English Rainfall Data (Inches) Input Values Used

English Units used in output format

17-380
EXISTING CONDITION
100 YEAR 1 HOUR
AREA B

Drainage Area = 14.74(Ac.) = 0.023 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 14.74(Ac.) = 0.023 Sq. Mi.
Length along longest watercourse = 638.00(Ft.)
Length along longest watercourse measured to centroid = 318.00(Ft.)
Length along longest watercourse = 0.121 Mi.
Length along longest watercourse measured to centroid = 0.060 Mi.
Difference in elevation = 4.60(Ft.)
Slope along watercourse = 38.0690 Ft./Mi.
Average Manning's 'N' = 0.030
Lag time = 0.056 Hr.
Lag time = 3.33 Min.
25% of lag time = 0.83 Min.
40% of lag time = 1.33 Min.

Unit time = 5.00 Min.
Duration of storm = 1 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
14.74	0.40	5.90

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
14.74	1.10	16.21

STORM EVENT (YEAR) = 100.00
Area Averaged 2-Year Rainfall = 0.400(In)
Area Averaged 100-Year Rainfall = 1.100(In)

Point rain (area averaged) = 1.100(In)
Areal adjustment factor = 99.99 %
Adjusted average point rain = 1.100(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
14.740	85.00	0.000

Total Area Entered = 14.74(Ac.)

RI AMC2	RI AMC-3	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
85.0	94.0	0.078	0.000	0.078	1.000	0.078

Sum (F) = 0.078
Area averaged mean soil loss (F) (In/Hr) = 0.078
Minimum soil loss rate ((In/Hr)) = 0.039
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.900

Slope of intensity-duration curve for a 1 hour storm =0.5000

Unit Hydrograph
VALLEY S-Curve

Unit Hydrograph Data

Unit time period (hrs)	Time % of lag Graph %	Distribution (CFS)	Unit Hydrograph

17-380
PROPOSED CONDITION
100 YEAR 1 HOUR
AREA B

Drainage Area = 15.37(Ac.) = 0.024 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 15.37(Ac.) = 0.024 Sq. Mi.
Length along longest watercourse = 1398.00(Ft.)
Length along longest watercourse measured to centroid = 794.00(Ft.)
Length along longest watercourse = 0.265 Mi.
Length along longest watercourse measured to centroid = 0.150 Mi.
Difference in elevation = 9.54(Ft.)
Slope along watercourse = 36.0309 Ft./Mi.
Average Manning's 'N' = 0.015
Lag time = 0.054 Hr.
Lag time = 3.21 Min.
25% of lag time = 0.80 Min.
40% of lag time = 1.28 Min.

Unit time = 5.00 Min.
Duration of storm = 1 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
15.37	0.40	6.15

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
15.37	1.10	16.91

STORM EVENT (YEAR) = 100.00
Area Averaged 2-Year Rainfall = 0.400(In)
Area Averaged 100-Year Rainfall = 1.100(In)

Point rain (area averaged) = 1.100(In)
Areal adjustment factor = 99.99 %
Adjusted average point rain = 1.100(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
15.370	69.00	0.900

Total Area Entered = 15.37(Ac.)

RI AMC2	RI AMC-3	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
69.0	84.4	0.194	0.900	0.037	1.000	0.037

Sum (F) = 0.037
Area averaged mean soil loss (F) (In/Hr) = 0.037
Minimum soil loss rate ((In/Hr)) = 0.018
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.180

Slope of intensity-duration curve for a 1 hour storm =0.5000

Program License Serial Number 6310

English (in-lb) Input Units Used
English Rainfall Data (Inches) Input Values Used

English Units used in output format

17-380
EXISTING CONDITION
100 YEAR 24 HOUR
AREA C

Drainage Area = 3.00(Ac.) = 0.005 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 3.00(Ac.) = 0.005 Sq. Mi.
Length along longest watercourse = 667.00(Ft.)
Length along longest watercourse measured to centroid = 321.00(Ft.)
Length along longest watercourse = 0.126 Mi.
Length along longest watercourse measured to centroid = 0.061 Mi.
Difference in elevation = 4.80(Ft.)
Slope along watercourse = 37.9970 Ft./Mi.
Average Manning's 'N' = 0.025
Lag time = 0.047 Hr.
Lag time = 2.84 Min.
25% of lag time = 0.71 Min.
40% of lag time = 1.13 Min.

Unit time = 5.00 Min.
Duration of storm = 24 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.00	1.70	5.10

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
3.00	3.80	11.40

STORM EVENT (YEAR) = 100.00
Area Averaged 2-Year Rainfall = 1.700(In)
Area Averaged 100-Year Rainfall = 3.800(In)

Point rain (area averaged) = 3.800(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 3.800(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
3.000	85.00	0.200

Total Area Entered = 3.00(Ac.)

RI AMC2	RI AMC-3	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
85.0	94.0	0.078	0.200	0.064	1.000	0.064

Sum (F) = 0.064
Area averaged mean soil loss (F) (In/Hr) = 0.064
Minimum soil loss rate ((In/Hr)) = 0.032
(for 24 hour storm duration)
Soil low loss rate (decimal) = 0.900

Unit Hydrograph
VALLEY S-Curve

Unit Hydrograph Data

Unit time period (hrs)		Time % of lag Graph %	Distribution (CFS)	Unit Hydrograph
1	0.083	176.353	38.997	1.179
2	0.167	352.705	45.050	1.362
3	0.250	529.058	9.831	0.297
4	0.333	705.410	4.067	0.123
5	0.417	881.763	2.056	0.062
		Sum = 100.000	Sum=	3.023

The following loss rate calculations reflect use of the minimum calculated loss rate subtracted from the Storm Rain to produce the maximum Effective Rain value

	Unit Time (Hr.)	Pattern Percent	Storm Rain (In/Hr)	Loss rate(In./Hr) Max |	Low	Effective (In/Hr)

17-380
PROPOSED CONDITION
100 YEAR 1 HOUR
AREA C

Drainage Area = 2.42(Ac.) = 0.004 Sq. Mi.
Drainage Area for Depth-Area Areal Adjustment = 2.42(Ac.) = 0.004 Sq. Mi.
Length along longest watercourse = 658.00(Ft.)
Length along longest watercourse measured to centroid = 311.00(Ft.)
Length along longest watercourse = 0.125 Mi.
Length along longest watercourse measured to centroid = 0.059 Mi.
Difference in elevation = 5.13(Ft.)
Slope along watercourse = 41.1647 Ft./Mi.
Average Manning's 'N' = 0.015
Lag time = 0.027 Hr.
Lag time = 1.65 Min.
25% of lag time = 0.41 Min.
40% of lag time = 0.66 Min.

Unit time = 5.00 Min.
Duration of storm = 1 Hour(s)
User Entered Base Flow = 0.00(CFS)

2 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
2.42	0.40	0.97

100 YEAR Area rainfall data:

Area(Ac.)[1]	Rainfall(In)[2]	Weighting[1*2]
2.42	1.10	2.66

STORM EVENT (YEAR) = 100.00
Area Averaged 2-Year Rainfall = 0.400(In)
Area Averaged 100-Year Rainfall = 1.100(In)

Point rain (area averaged) = 1.100(In)
Areal adjustment factor = 100.00 %
Adjusted average point rain = 1.100(In)

Sub-Area Data:

Area(Ac.)	Runoff Index	Impervious %
2.420	69.00	0.900

Total Area Entered = 2.42(Ac.)

RI AMC2	RI AMC-3	Infil. Rate (In/Hr)	Impervious (Dec.%)	Adj. Infil. Rate (In/Hr)	Area% (Dec.)	F (In/Hr)
69.0	84.4	0.194	0.900	0.037	1.000	0.037

Sum (F) = 0.037
Area averaged mean soil loss (F) (In/Hr) = 0.037
Minimum soil loss rate ((In/Hr)) = 0.018

Hydrograph Report

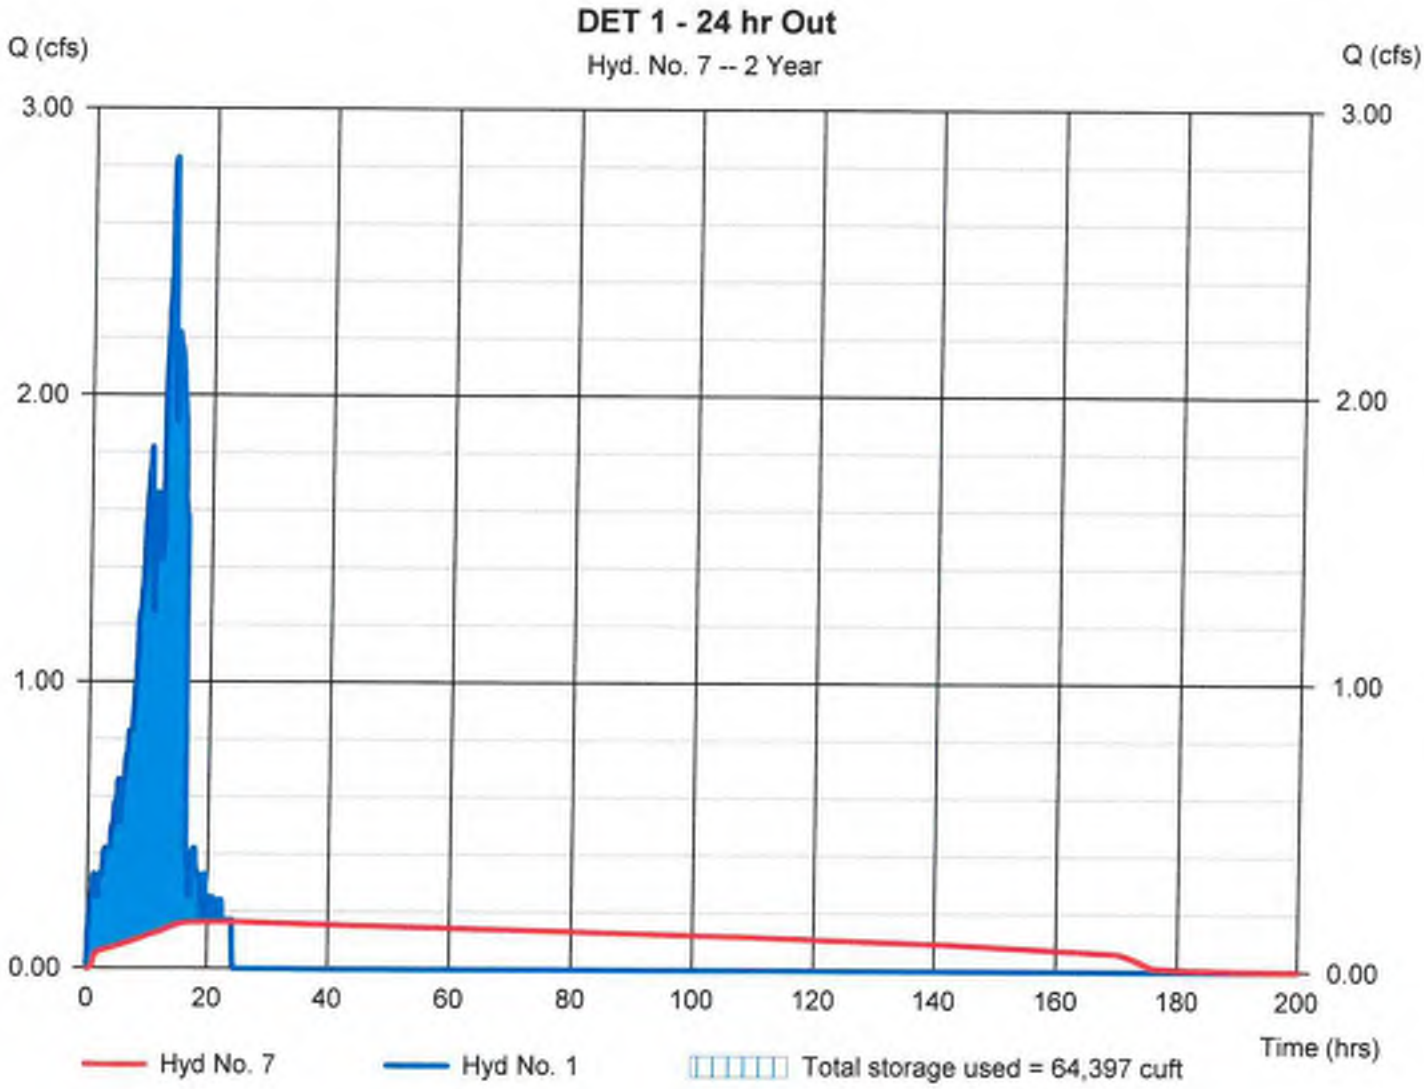
Hydraflow Hydrographs Extension for AutoCAD® Civil 3D® 2016 by Autodesk, Inc. v10.514 — Wednesday, 07 / 11 / 2018

Hyd. No. 1

Drainage Area A - 24 hour

Hydrograph type	= Manual	Peak discharge	= 2.830 cfs
Storm frequency	= 2 yrs	Time to peak	= 13.50 hrs
Time interval	= 5 min	Hyd. volume	= 74,904 cuft

Hydrograph Report



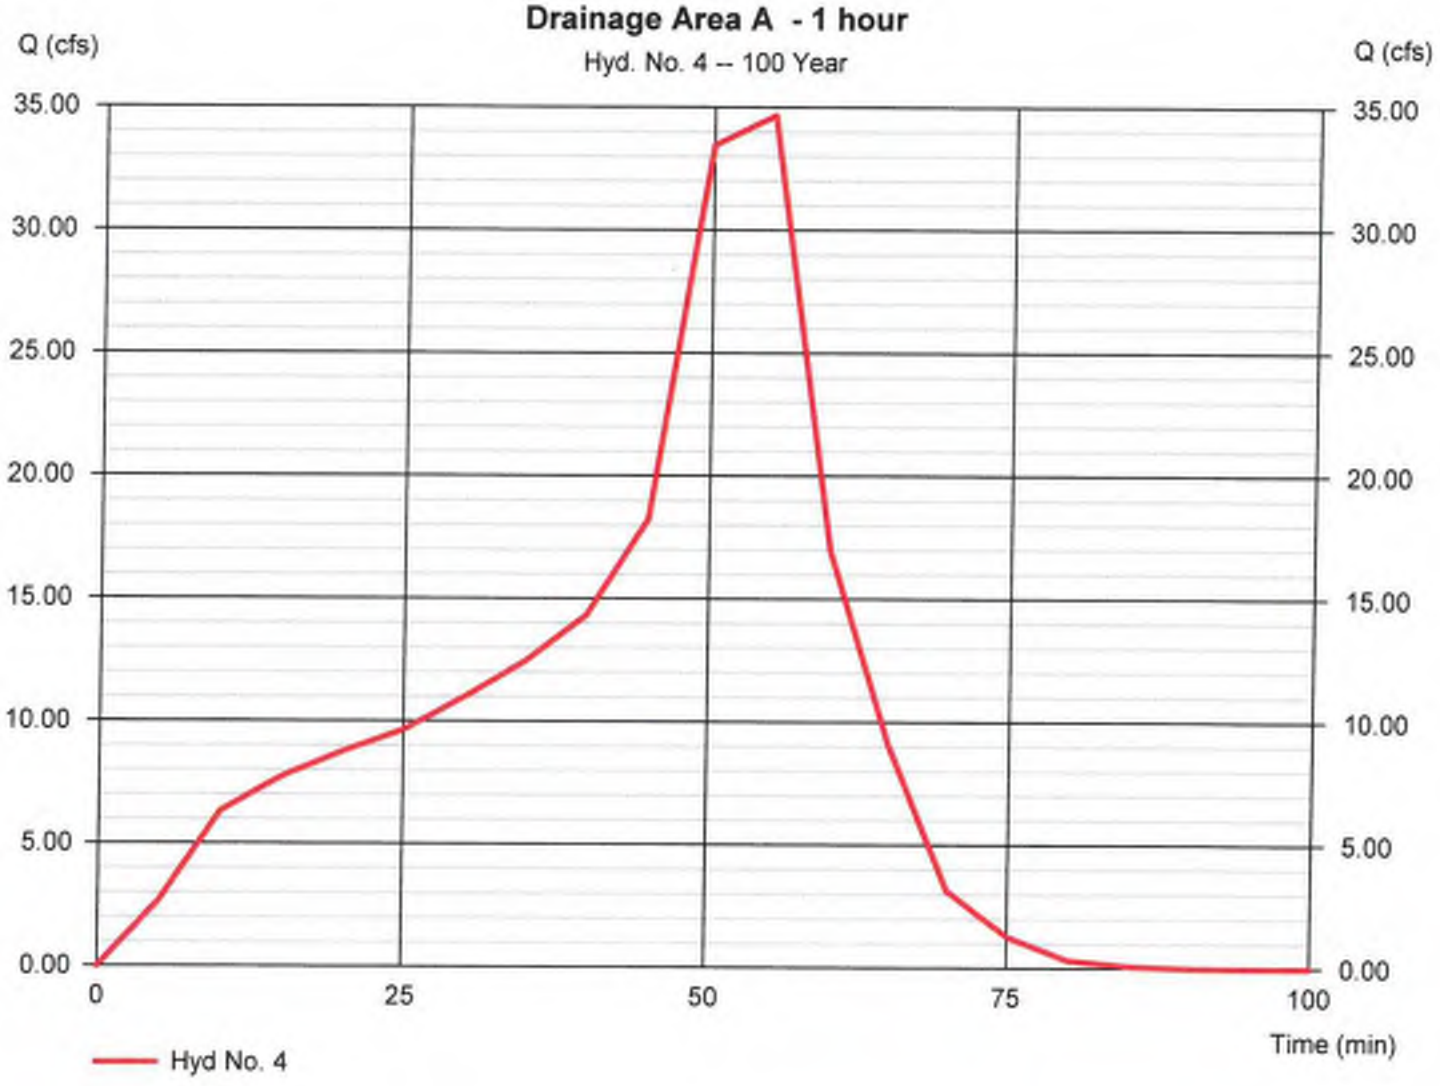
Hydraflow Hydrographs Extension for AutoCAD® Civil 3D® 2016 by Autodesk, Inc. v10.514 Wednesday, 07 / 11 / 2018

Hyd. No. 7

DET 1 - 24 hr Out

Hydrograph type	= Reservoir	Peak discharge	= 0.164 cfs
Storm frequency	= 2 yrs	Time to peak	= 24.00 hrs
Time interval	= 5 min	Hyd. volume	= 74,824 cuft
Inflow hyd. No.	= 1 - Drainage Area A - 24 hou	Max. Elevation	= 1551.01 ft
Reservoir name	= DETENTION SYSTEM A	Max. Storage	= 64,397 cuft

Storage Indication method used.



Hydrograph Report

Hydraflow Hydrographs Extension for AutoCAD® Civil 3D® 2016 by Autodesk, Inc. v10.514 — Wednesday, 07 / 11 / 2018

Hyd. No. 4

Drainage Area A - 1 hour

Hydrograph type	= Manual	Peak discharge	= 34.67 cfs
Storm frequency	= 100 yrs	Time to peak	= 55 min
Time interval	= 5 min	Hyd. volume	= 57,099 cuft

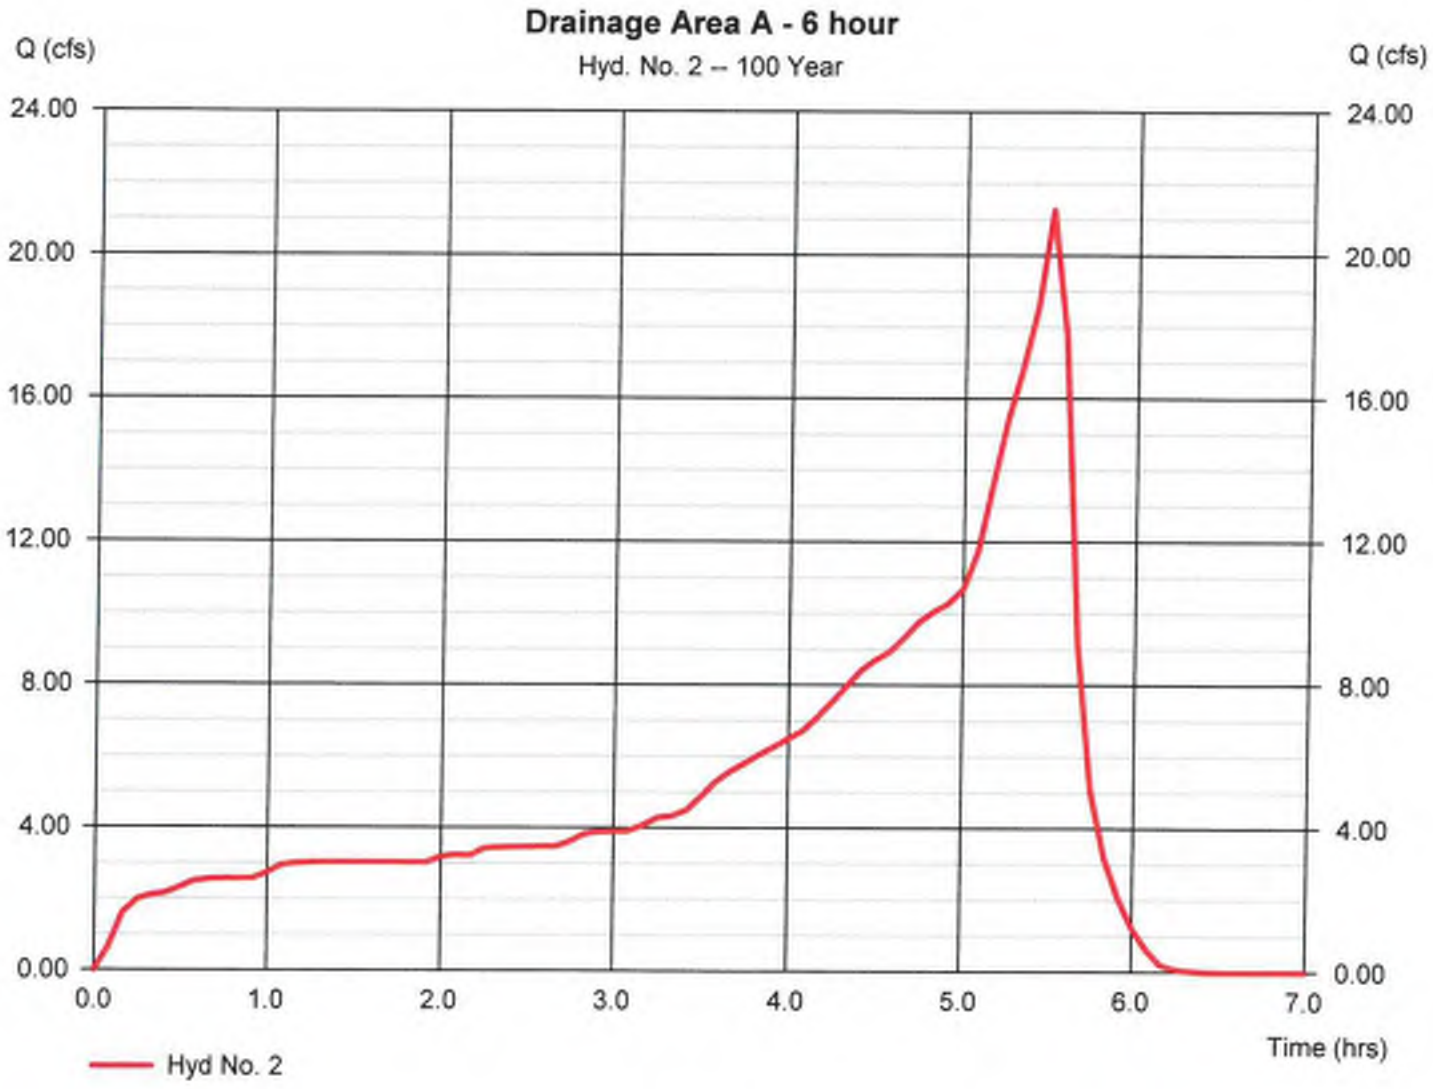
Hydrograph Report

Hydraflow Hydrographs Extension for AutoCAD® Civil 3D® 2016 by Autodesk, Inc. v10.514 — Wednesday, 07 / 11 / 2018

Hyd. No. 3

Drainage Area A - 3 hour

Hydrograph type	= Manual	Peak discharge	= 24.26 cfs
Storm frequency	= 100 yrs	Time to peak	= 2.58 hrs
Time interval	= 5 min	Hyd. volume	= 96,183 cuft



Hydrograph Report

Hydraflow Hydrographs Extension for AutoCAD® Civil 3D® 2016 by Autodesk, Inc. v10.514 — Wednesday, 07 / 11 / 2018

Hyd. No. 2

Drainage Area A - 6 hour

Hydrograph type	= Manual	Peak discharge	= 21.28 cfs
Storm frequency	= 100 yrs	Time to peak	= 5.50 hrs
Time interval	= 5 min	Hyd. volume	= 122,820 cuft

Section I Introduction

The following presents the results of the existing condition hydrology study for existing flood control facilities along the south of Cactus Street, in the city of Moreno Valley, Riverside County, State of California as shown in the vicinity map in Appendix A. The report was prepared by DRC Engineering for Riverside County Flood Control and Water Conservation District.

The purpose of this study is to determine the peak flows along the Cactus Street Channel and use the data to design and upgrade the existing earthen open channel to be a box culvert channel. Cactus Channel collects a portion of the Sunnymead Watershed located within Western Riverside County. The channel is located on the northern edge of March Air Force Base and southern edge of Moreno Valley. Drainage is mostly from residential and commercial property in the city of Moreno Valley draining from the North. Cactus Channel flows west to east into Heacock Channel, which flows north to south, then outlets into the Perris Valley Storm Drain Lateral A, which flows west to east.

Section II Methodology

The peak storm discharge for the drainage sub-areas was calculated using the Riverside County Hydrology Manual. Rational Method Equation (1978 April), using AES Software (Ratscx), was used to calculate the 100-year storm event (see calculations in Appendix C). A soil type of C was assigned to the project site based on the Riverside County Flood Control and Water Conservation District Hydrology Manual Hydrologic Soils Group Map Plate C-1.16 (see portion of map in Appendix A). Small portions of the area are classified as Soil Group B, however, soil group C was chosen as a conservative choice. Soil group C is defined as soils having slow infiltration rates when thoroughly wetted and consisting chiefly of silty-loam soils with a layer that impedes downward movement of water, or soils with moderately fine to fine texture. These soils have a slow rate of water transmission. Impervious covers were estimated based on plate D-5.6 of the Riverside County Hydrology Manual. The Land Use Exhibit in Appendix B was used to identify land uses based on city of Moreno Valley zoning. 2 year – 1 hour, 100 year – 1 hour and intensity duration slope were found from Plate D-4.3, 4.4 & 4.6 respectively. These pages can be found in Appendix A.

Hydraulic calculations for Cactus Channel were performed using Civil Design Water Surface and Pressure Gradient Hydraulic Analysis System Program (WSPG). Manning's number (N) was estimated to be anywhere from 0.012-0.013 for the open channel. The maximum flow was divided up based on the peak flows in Lines A, T & C, therefore, creating three junctions into the channel. This simplified approach gives a higher flow at certain points along the channel and creates a more conservative design.

Section III Project Description

Existing site conditions

Cactus Channel is a vegetated earthen channel located south of Cactus Street and north of March Air Reserve Base. The earthen channel collects flows discharging from the storm drains along Elsworth, Frederick and Graham Streets. Cactus Channel also receives relatively small runoff from Cactus Avenue via public catch basins that discharge at various locations downstream along the channel.

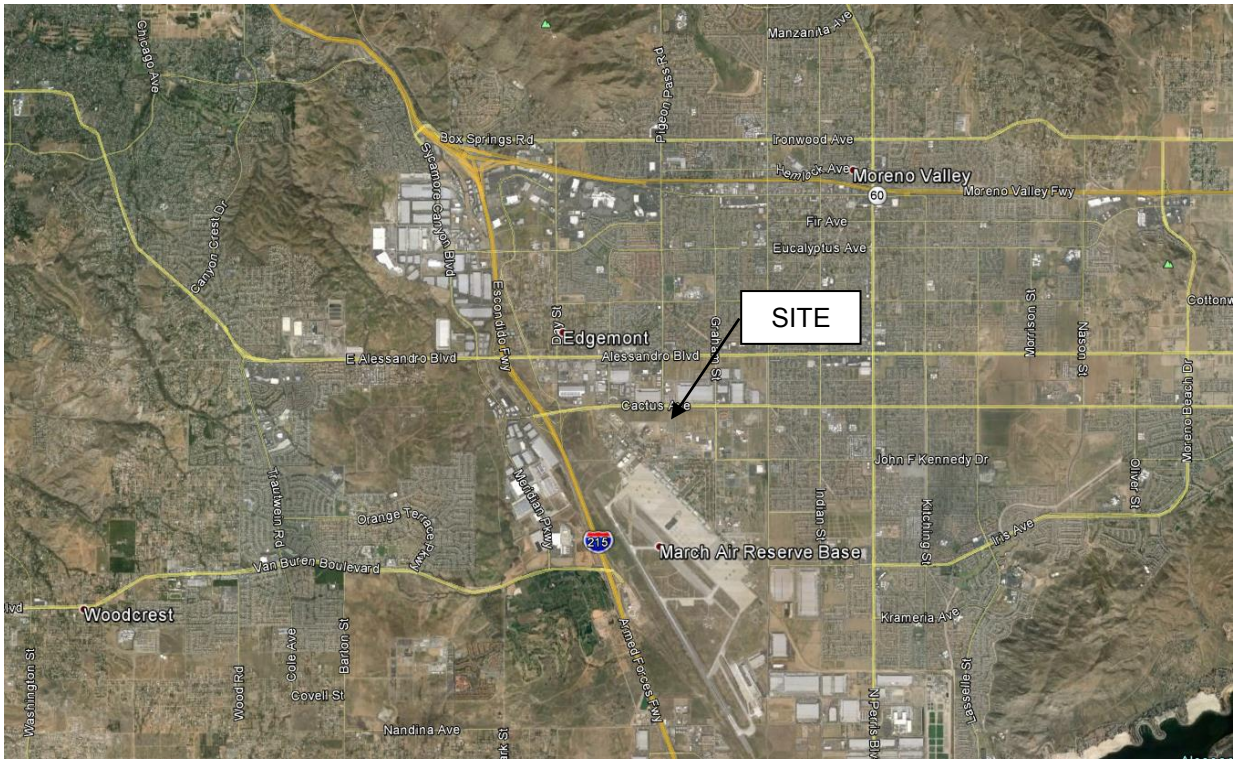
Proposed Site Conditions

The existing/base watershed hydrology is considered the same as the future condition for Cactus Channel. This assumption is based on the fact that the watershed is almost fully developed and most flood control facilities upstream and downstream of Cactus Channel have been constructed. Since few areas are still in the process of being developed, all assumptions in the development of the hydrologic model assumed full development. A Hydrology Map can be found in Appendix B.

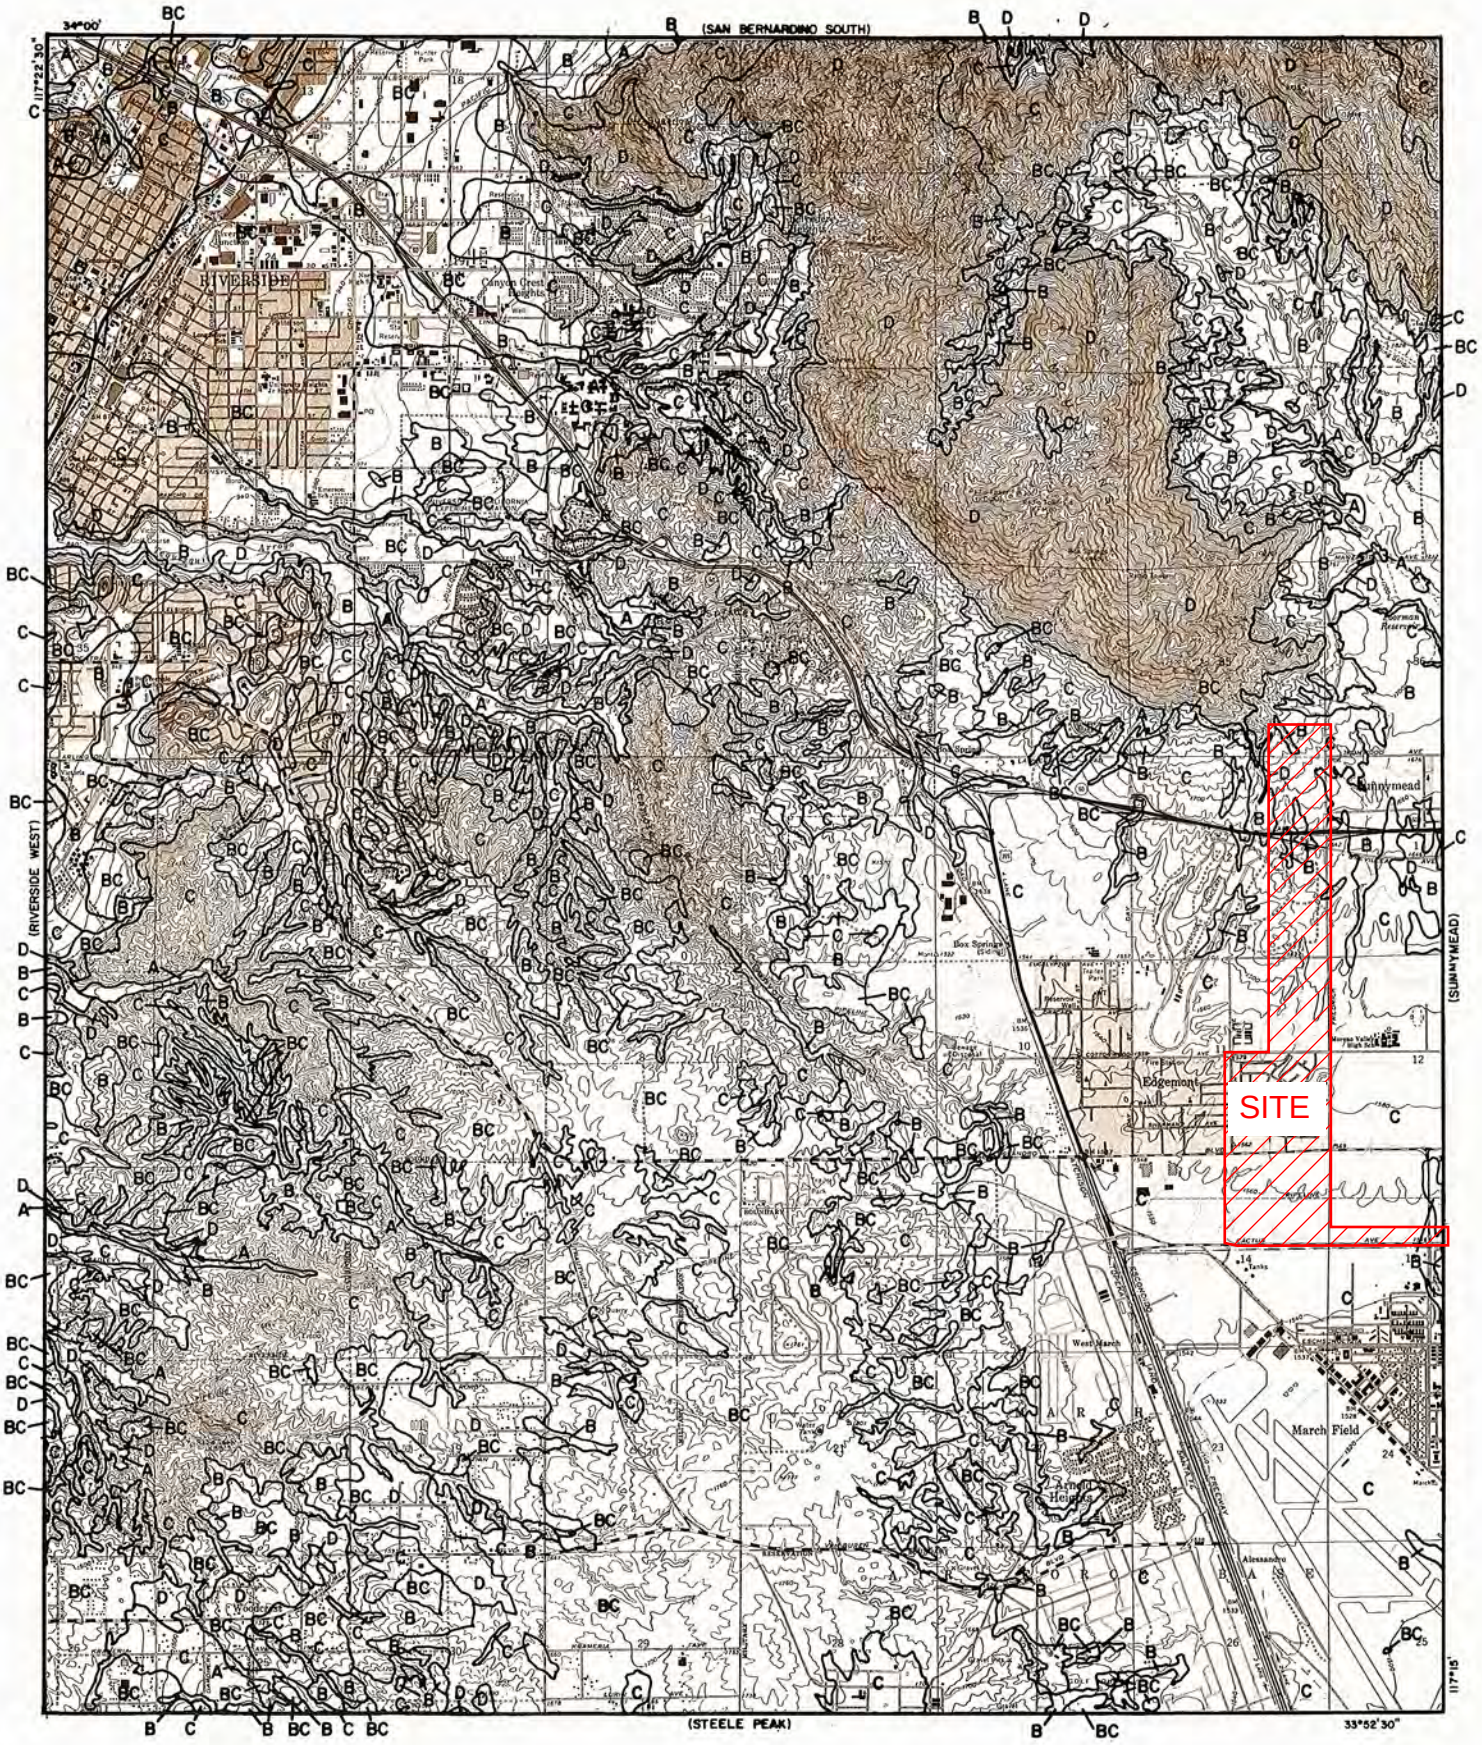
The proposed design for Cactus Channel features underground reinforced concrete boxes carrying flow to Heacock Channel at a slope of 0.18%. The channel was designed to take the place of the existing earthen channel and carry the cumulative maximum flow relative to the junctions upstream. The design also includes a proposed 30' easement for Riverside County Flood Control District. Cactus Channel Improvement Plans have been included in Appendix D for reference.

Section IV Conclusion

Watershed Hydrology



Based on the fully developed current condition, Cactus Channel will receive a peak flow rate of 1,144.83 cfs for the 100 year storm at the outlet to Heakcock Channel. The majority of this flow will be provided by Lines A, T and C towards the upstream end of the channel. Hydrology calculations can be found in Appendix B.



Cactus Channel Hydraulics

A total of 1,144.83 cfs was ran through the channel design using WSPG. HGL elevations for the 100 year flow can be seen reaching an elevation of 1552.87 and at no point does the HGL go above the existing surface elevation. The HGL at the outlet to Heacock Channel is 1539.0. Hydraulic analysis can be found in Appendix C.
