RE: Correction Request for Notice of Determination, SCH Number 2014061081

On October 30, Merced County Regional Waste Management Authority (MCRWMA) filed a Notice of Determination (NOD) related to a Supplemental EIR under State Clearinghouse (SCH) Number 2014061081. There was a typo in this NOD that reflected a total capacity of the composting facility under consideration. It should be “up to 75,000 tons per year of green waste and food waste”, however the NOD mistakenly says up to 50,000 tons. We are requesting that the typo be corrected on the SCH website. The decision documents related to the capacity of the project and the ultimate approval of the document all said up to 75,000 tons per year and the Supplement EIR evaluated the correct capacity.

The general project description for SCH Number 2014061081 (as shown on the State Clearinghouse website and below) is also correct.

The proposed modification to the approved Valley Fill Project involves expansion of the current 25,000-ton-per-year green waste windrow composting facility and development and operation of a covered aerated static pile (CASP) green waste and food waste compost facility to comply with California's Short-Lived Climate Pollutant Reduction Strategy organic waste disposal targets. The compost facility would be designed to accept up to 75,000 tons per year of green waste and food waste and capable of storing up to 100,000 cubic yards on-site of organic material. Additional site improvements would include construction of a new lined wastewater storage pond, on-site drainage improvements, and improvements to working surfaces such as paving active composting and/or processing areas or amending/compacting the soil.

If you have any questions, please don't hesitate to contact Patrick Womble at (209) 723-4481 x225 or pwomble@mcrwma.org.

Sincerely,

James Moore
Director
Merced County Regional Waste Management Authority
