APPENDIX A

Notice of Preparation and Scoping Meeting

ESA

A-1 Notice of Preparation

COUNTY OF LOS ANGELES
DEPARTMENT OF PUBLIC WORKS

NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT AND NOTICE OF PUBLIC SCOPING MEETING

Date: August 9, 2017

To: State Clearinghouse, Responsible and Trustee Agencies, and Interested Individuals

Lead Agency: County of Los Angeles c/o Department of Public Works

900 S. Fremont Ave., 5th Floor, Alhambra, California 91803

Subject: Notice of Preparation of an Environmental Impact Report and Notice of Public Scoping Meeting Date and Location for the Rancho Los Amigos South Campus Project

The County of Los Angeles (County), as the lead agency under the California Environmental Quality Act (CEQA), is preparing an Environmental Impact Report (EIR) for the proposed Rancho Los Amigos South Campus Project (proposed Project) described below. The Department of Public Works (DPW), on behalf of the County, is soliciting input from responsible and trustee agencies, other agencies required to receive this notice, and the State Office of Planning and Research, and is also extending the outreach for early public consultation to members of the public, organizations, and any other interested parties on the scope and content of the information to be included and analyzed in the Project's EIR. Agencies should comment on the elements of the environmental information that are relevant to their statutory responsibilities in connection with the proposed Project. The EIR will serve as the environmental document for responsible and trustee agencies when considering any discretionary approvals related to the proposed Project. The Project description, location, and potential environmental effects of the proposed Project are described in this Notice of Preparation (NOP), which is prepared in accordance with the requirements of CEQA.

Comments to NOP: Due to time limits mandated by state law, public agencies, members of the public, or any other interested parties are requested to respond to this NOP in writing no later than 30 days after receipt of the NOP. The County will accept written comments regarding this NOP through the close of business on **Monday, September 11, 2017**. Please send all written comments, including emailed comments, to Mr. Luis Ramirez at the address below (page 3). Comments should include the name of the contact person.

1. Project Location: The Rancho Los Amigos Campus (Campus) is located on approximately 123 acres of County-owned land within the city of Downey. The Campus is crossed by Imperial Highway, creating two distinct campuses: a 49-acre campus north of Imperial Highway (North Campus), and a 74-acre campus south of Imperial Highway (South Campus). All activities associated with the proposed Project would be located entirely on the South Campus (also referred to as the Project Site). New County facilities would be constructed within a portion of the Project Site, referred to as the Development Area. The Project Site, including the Development Area, is located entirely on land owned by the County, and is on the western edge of the city of Downey. The Project Site is approximately 1 mile east of U.S. Interstate 710 (Long Beach Freeway), 1 mile north of U.S. Interstate 105 (Century Freeway), 3.3 miles west of U.S. Interstate 605 (San Gabriel River Freeway), and 3.3 miles northeast of U.S. Interstate 5 (Golden State Freeway) (see Figure 1). The Project Site is bound by Flores Street and Golondrinas Street to the north, Gardendale Street to the south, Laurel Avenue to the west, the Union Pacific Railroad to the southwest, and a strip that runs east along Consuelo Street to Paramount Boulevard. The proposed Development Area is on approximately 28 acres of the 74-acre Project Site. It is located in the north part of the Project Site and is bound by Flores Street and Golondrinas Street to the north, the parking lot adjacent to Dahlia Street to the east, Descanso Street and Consuelo Street to the south, and Laurel Avenue to the west (Figure 1).

2. Existing Conditions: At present, the Project Site is almost entirely unoccupied, with the exception of Los Angeles County Building No. (LACO No.) 1100, Office of Public Safety. There are approximately 113 buildings and structures on the Project Site, which are in various stages of abandonment and deterioration, and which have been boarded up since roughly 1991. The majority of the Project Site is not readily accessible to the public. The majority of the Project Site has previously been identified as a Historic District, and contains buildings that have been previously identified as being individually eligible for listing in the National Register of Historic Places. As part of the EIR being prepared,

the County will be assessing and updating the evaluation of the Historic District. The proposed 28-acre Development Area within the Project Site is currently developed with 51 vacant structures in various states of disrepair, some of which were previously deemed contributors to the Historic District.

Several buildings on the Project Site have been damaged by recent fires, where arson was suspected. On February 1, 2017, a fire damaged a portion of LACO No. 1204, Men's Psychiatric Ward, which is located in the Development Area. A subsequent fire on June 26, 2017, severely damaged LACO No. 1101, Harriman House, and destroyed LACO No. 1287, Oil and Storage Building, both of which are outside the proposed Development Area. The County is currently implementing safety measures, including the installation of an 8-foot-tall chain-link fence around the perimeter of the Project Site, increased public safety patrolling, and additional security lighting.

3. Description of Proposed Project: The County will prepare an EIR to analyze environmental impacts associated with implementation of the proposed Rancho Los Amigos South Campus Project. The County proposes to develop three new County administrative buildings in the Development Area on the Project Site, including the Internal Services Department (ISD) Headquarters, Probation Department Headquarters, and a Sheriff's Department Crime Laboratory. Staffing for each of these buildings would be filled by approximately 3,000 County-budgeted positions that are currently at other existing County facilities located within the region. Staffing numbers may be adjusted as the design is developed. The ISD Headquarters would be up to approximately 370,000 square feet; the Probation Department Headquarters would be up to approximately 220,000 square feet; and the Sheriff's Crime Laboratory would be up to approximately 60,000 square feet. The ISD and Probation Headquarters buildings may be co-located in one building, which would have an approximate height of six stories. The Sheriff's Crime Laboratory building would have an approximate height of two stories. The final configuration of these buildings may potentially change through the design process, however, the total square footage for the proposed Project would be up to approximately 650,000 square feet. The proposed Project would include development of a parking structure, with a height not to exceed approximately nine stories, and surface parking lots to be used for employee and visitor parking. The proposed Project would include all necessary utilities and points of connection, roadways, curbs and gutters, sidewalks, medians, site structures, hydrants, vaults, manholes, substations, street lights, street signage, landscaping, and irrigation for the proposed new development. The proposed Project would also include the widening and other street improvements along Erickson Avenue. Off-site improvements, such as those required for utilities, would also likely be necessary. All staging during construction would occur on the Project Site in a location to be determined.

Demolition: The proposed Project would require demolition of approximately 51 existing buildings and structures within the proposed 28-acre Development Area to allow for construction of new facilities. Some of the structures were previously identified as contributors to a Historic District. Analysis of the impacts and any proposed feasible mitigation to address the demolition will be included in the EIR.

Additional Demolition: In addition to the demolition of the approximately 51 existing buildings and structures within the proposed 28-acre Development Area, some or all of the approximately 62 remaining buildings and structures on the larger Project Site would be removed. Some of the structures remaining on the Project Site were previously identified as contributors to the Historic District. Analysis of the impacts and proposed feasible mitigation to address the demolition of the structures remaining within the Project Site will be included in the EIR.

The proposed Project would be designed to achieve the Leadership in Energy and Environmental Design (LEED) gold rating (or a successor equivalent standard established by the U.S. Green Building Council) or better. The proposed Project would be executed in multiple phases by various contractors using various contracting methods, including design-bid-build, design-build, job order contracting, and best value construction. Design-build allows for the procurement of effort in which both the design and the construction of a project are procured from a single entity. Construction could begin as early as the first quarter of 2019 and is anticipated to last for up to approximately 30 months.

4. Probable Environmental Effects: The County will be preparing a comprehensive EIR that evaluates all potential environmental impact areas. The County is beginning work directly on the EIR process and will focus on potentially significant effects of the proposed Project in the EIR, while indicating the reasons that other effects will not be potentially significant. An initial study is not required to determine that an EIR will be prepared, and as such, an initial study was not prepared for the proposed Project. The EIR will discuss potential environmental impacts of the proposed Project, including potential pre-construction, construction, and operation impacts. The EIR will evaluate all environmental topics required by CEQA, including aesthetics, agricultural and forestry resources, air quality, biological resources, cultural resources, energy, geology and soils, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use, mineral resources, noise, population and housing, public services, recreation, tribal cultural resources, transportation and traffic, and utilities and service systems. The County

has identified specifically 12 primary environmental areas where impacts are most likely to occur. These impacts, which will be analyzed in detail in the EIR, include: aesthetics**,** air quality, biological resources, cultural resources, energy, greenhouse gas emissions, hazards and hazardous materials, hydrology and water quality, land use, noise, transportation and traffic, and utilities and service systems.

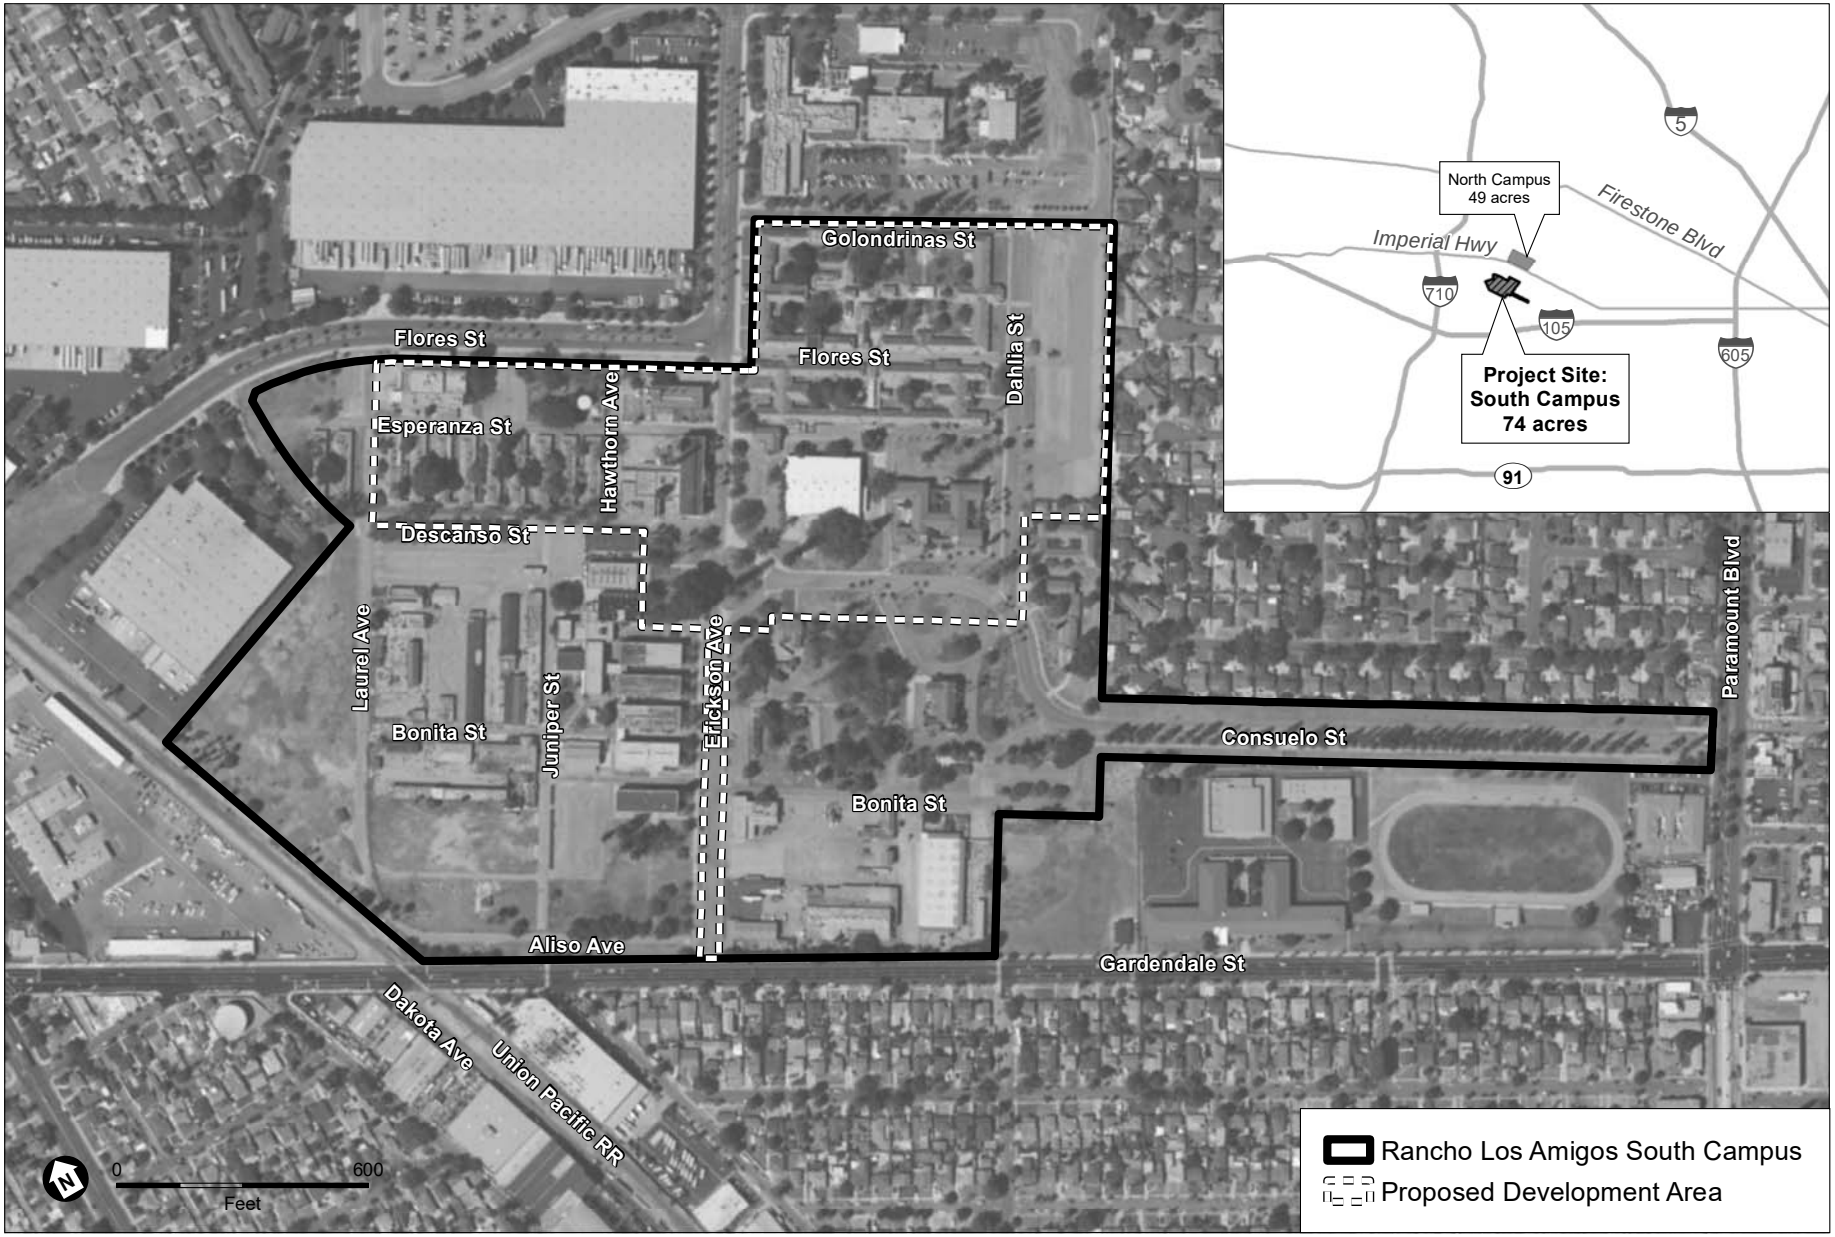
The EIR will address the short- and long-term effects of the proposed Project on the environment. Feasible mitigation measures will be proposed for impacts that are determined to be potentially significant. A mitigation monitoring program will also be developed for any mitigation measures incorporated in the analysis.

This NOP is available for review and comment from August 9, 2017, to September 11, 2017. A digital copy of this NOP can be viewed at: ftp://dpwftp.co.la.ca.us/pub/pmd/Rancho Los Amigos South Campus EIR/. Hard copies are available for public review at the following locations:

Hollydale Library 12000 South Garfield Avenue South Gate, CA 90280	Lynwood Library 11320 Bullis Road Lynwood, CA 90262	Rancho Los Amigos North Campus Public Works Site Office 7402 Leeds Street, Trailer E, Downey, CA 90242
Downey City Library 11121 Brookshire Avenue Downey, CA 90241	Leland R. Weaver Library 4035 Tweedy Boulevard South Gate, CA 90280	Los Angeles County, Chief Executive Office 754 Kenneth Hahn Hall of Administration 500 W. Temple Street, Room 754 Los Angeles, CA 90012

The County is seeking input from both agencies and members of the public on the scope and content of the environmental information and analysis in the EIR. Due to the time limits mandated by state law, written comments must be sent via mail or email no later than 5:30 p.m. on September 11, 2017. Please send your comments at the earliest possible date. Any parties interested in receiving information in the future related to the proposed Project EIR may submit their names and mailing addresses to the same contact address.

Interested parties may submit their written comments by the deadline to:



ATTN: Mr. Luis Ramirez
Capital Projects Program Manager
County of Los Angeles Department of Public Works
Project Management Division II
900 South Fremont Ave., 5th Floor
Alhambra, CA 91803
Email: luramire@dpw.lacounty.gov

Questions regarding this notice should be directed to Luis Ramirez at the address shown above, or he can be reached by telephone Monday through Thursday, between the hours of 7:30 a.m. and 5:30 p.m., at (626) 300-3230. All parties that are interested in receiving information in the future related to the proposed Project may submit their name and mailing address with that request to Luis Ramirez, Program Manager.

Public Scoping Meeting: A public scoping meeting will be held on August 30, 2017, from 5:30 p.m. to 7:30 p.m., to solicit input from any interested parties on the scope and content of the EIR in conformance with Section 21083.9 of the California Public Resources Code. While staff will summarize the issues raised at these meetings, anyone wishing to make formal scoping comments on the scope of issues or content of the Draft EIR must do so in writing. A later public notice and comment process will take place during the public circulation of a Draft EIR for the proposed Project. This meeting will provide a public forum for information and dialogue regarding the proposed Project. Anyone wishing to submit formal comments may do so in writing at the scoping meeting. However, you may also send a written response to this NOP to the address listed above by the deadline date of September 11, 2017, without attending the scoping meeting that provides an additional opportunity to discuss the EIR to be prepared for the proposed Project. The public scoping meeting will be held at the location identified below.

Location: Barbara J. Riley Community and Senior Center
Downey Room
7810 Quill Drive
Downey, CA 90242

CONDADO DE LOS ÁNGELES
DEPARTAMENTO DE OBRAS PÚBLICAS

AVISO DE PREPARACIÓN DE UN INFORME DE IMPACTO AMBIENTAL Y AVISO DE REUNIÓN PÚBLICA DE ALCANCE

Fecha:	9 de agosto de 2017
A:	Centro de Información del Estado, Agencias Responsables y Fiduciarias, y Personas Interesadas
Agencia Principal:	Condado de Los Ángeles c/o Departamento de Obras Públicas 900 S. Fremont Ave 5th Floor, Alhambra, California 91803
Asunto:	Notificación de Preparación de un Informe de Impacto Ambiental y Notificación de Fecha de Reunión de Alcance Público y Lugar para el Proyecto de Rancho Los Amigos South Campus

El Condado de Los Ángeles (Condado), como el organismo principal bajo la Ley de Calidad Ambiental de California (CEQA), está preparando un informe del impacto ambiental (EIR) para el proyecto propuesto de Rancho Los Amigos South Campus (Proyecto propuesto) descrito abajo. El Departamento de Obras Públicas (DPW), en nombre del Condado, está solicitando aportes de agencias responsables y fiduciarias, otras organizaciones a los que se les requiere recibir este aviso, y la Oficina Estatal de Planificación e Investigación, y también está extendiendo el alcance para consulta pública temprana a los miembros del público, las organizaciones y cualquier otra parte interesada sobre el alcance y el contenido de la información que se incluirá y analizará en el EIR del proyecto. Las agencias deberían comentar sobre los elementos de la información ambiental que son relevantes para sus responsabilidades estatutarias con respecto al Proyecto propuesto. El EIR servirá como documento ambiental para las organizaciones responsables y fiduciarias al considerar cualquier aprobación discrecional relacionada con el Proyecto propuesto. La descripción del Proyecto, la ubicación y los posibles efectos ambientales del Proyecto propuesto se describen en este Aviso de Preparación (NOP), que se prepara de acuerdo con los requisitos de CEQA.

Comentarios a NOP: Debido a los plazos establecidos por la ley estatal, se pide a las organizaciones públicas, a los miembros del público o a cualquier otra parte interesada que respondan a este NOP por escrito a más tardar 30 días después de recibir el NOP. El Condado aceptará comentarios por escrito sobre este NOP hasta el cierre de negocios el lunes, 11 de septiembre de 2017. Por favor envíe todos los comentarios por escrito, incluyendo comentarios por correo electrónico, al Sr. Luis Ramírez a la dirección abajo (página 3). Los comentarios deben incluir el nombre de la persona de contacto.

1. Ubicación del Proyecto: El Rancho Los Amigos Campus (Campus) está ubicado en aproximadamente 123 acres de propiedad del Condado dentro de la ciudad de Downey. El Campus es dividido por Imperial Highway, creando dos campus distintos: un campus de 49 acres al norte de Imperial Highway (Campus Norte) y un campus de 74 acres al sur de Imperial Highway (Campus Sur). Todas las actividades asociadas con el Proyecto propuesto estarían ubicadas enteramente en el Campus Sur (también conocido como el Sitio del Proyecto). Las nuevas instalaciones del Condado serían construidas dentro de una porción del Sitio del Proyecto, denominado Área de Desarrollo. El Sitio del Proyecto, incluyendo el Área de Desarrollo, está ubicado enteramente en tierra propiedad del Condado, y está en el borde occidental de la ciudad de Downey. El Sitio del Proyecto está aproximadamente a 1 milla al este de la Interestatal 710 de EE.UU. (Long Beach Freeway), 1 milla al norte de la Interestatal 105 de los EE.UU. (Century Freeway), 3.3 millas al oeste de la Interestatal 605 de EE.UU. (San Gabriel River Freeway) y 3.3 millas al noreste de la Interestatal 5 de EE.UU. (Golden State Freeway) (ver Figura 1). El Sitio del Proyecto está limitado por Flores Street y Golondrinas Street al norte, Gardendale Street al sur, Laurel Avenue al oeste, Union Pacific Railroad al suroeste y una franja que corre hacia el este por Consuelo Street hasta Paramount Boulevard. El Área de Desarrollo propuesta está en aproximadamente 28 acres del Sitio del Proyecto de 74 acres. Está ubicado en la parte norte del Sitio del Proyecto y está dividido por Flores Street y Golondrinas Street al norte, el estacionamiento junto a Dahlia Street al este, Descanso Street y Consuelo Street al sur y Laurel Avenue al oeste (Figura 1).

2. Condiciones Existentes: Actualmente, el Sitio del Proyecto está casi completamente desocupado, con la excepción del Edificio del Condado de Los Ángeles No. (LACO No.) 1100, Oficina de Seguridad Pública. Hay aproximadamente 113 edificios y estructuras en el Sitio del Proyecto, que se encuentran en diversas etapas de abandono y deterioro, y que han sido clausurados desde aproximadamente 1991. La mayoría del Sitio del Proyecto no es fácilmente accesible al público. La mayoría del Sitio del Proyecto ha sido previamente identificada como un Distrito Histórico, y contiene edificios que previamente han sido identificados como elegibles individualmente para ser listados en el Registro Nacional de Lugares Históricos. Como parte del EIR que se está preparando, el Condado evaluará y actualizará la evaluación del Distrito Histórico. El Área de Desarrollo de 28 acres propuesta en el Sitio del Proyecto se desarrolla actualmente con 51 estructuras vacías en varios estados de deterioro, algunos de los cuales han sido previamente identificados como contribuyentes al Distrito Histórico.

Varios edificios en el Sitio del Proyecto han sido dañados por incendios recientes, donde se sospechó de incendio premeditado. El 1 de

febrero de 2017, un incendio dañó una porción de LACO No. 1204, el Pabellón de Psiquiatría Masculina, que se encuentra en el Área de Desarrollo. Un incendio posterior el 26 de junio de 2017, dañó severamente LACO No. 1101, Harriman House, y destruyó LACO No. 1287, Edificio de Aceite y Almacenamiento, ambos se encuentran fuera del Área de Desarrollo propuesto. Actualmente, el Condado está implementando medidas de seguridad, incluyendo la instalación de un cerco malla metálica de 8 pies de altura en el perímetro del Campus Sur, aumento de la patrulla de seguridad pública e iluminación de seguridad adicional.

3. Descripción del Proyecto Propuesto: El Condado preparará un EIR para analizar los impactos ambientales asociados con la implementación del Proyecto propuesto en el Sitio del Proyecto. El Condado propone desarrollar tres nuevos edificios administrativos del Condado en el Área de Desarrollo en el Sitio del Proyecto, incluyendo la Sede del Departamento de Servicios Internos (ISD), la Sede del Departamento de Libertad Condicional y un Laboratorio Forense del Sheriff. La dotación de personal para cada uno de estos edificios se llenaría con aproximadamente 3,000 puestos presupuestados en el Condado que actualmente se encuentran en otras instalaciones existentes del Condado ubicadas dentro de la región. Los números de personal pueden ser ajustados a medida que se desarrolla el diseño. La Sede de ISD sería de aproximadamente 370,000 pies cuadrados; la Sede del Departamento de Libertad Condicional sería de aproximadamente 220,000 pies cuadrados; y el Laboratorio Forense del Sheriff sería de hasta aproximadamente 60,000 pies cuadrados. Los edificios de la Sede de ISD y la Oficina de Libertad Condicional pueden estar ubicados en un solo edificio, que tendría una altura aproximada de seis pisos. El Laboratorio Forense del Sheriff se alojaría en un edificio que tendría una altura aproximada de dos pisos. Las configuraciones finales de estos edificios pueden potencialmente cambiar durante el proceso de diseño, sin embargo, el total de pies cuadrados para el Proyecto propuesto sería de aproximadamente 650,000 pies cuadrados. El proyecto propuesto incluiría el desarrollo de una estructura de estacionamiento, con una altura que no exceda aproximadamente nueve pisos y estacionamientos de superficie para ser utilizados para el estacionamiento de empleados y visitantes. El Proyecto propuesto incluiría todos los servicios públicos y puntos de conexión necesarios, calzadas, aceras, medianas, estructuras de sitio, bocas de incendio, bóvedas, pozos de registro, subestaciones, iluminación de calles, letreros, jardinería e irrigación para el nuevo desarrollo propuesto. El Proyecto propuesto también incluiría la ampliación y otras mejoras de calles a lo largo de Erickson Avenue. También es probable que se necesiten mejoras fuera del sitio, como las requeridas para los servicios públicos. Todas las etapas durante la construcción ocurrirían en el Sitio del Proyecto en un lugar a ser determinado.

Demolición: El Proyecto propuesto requeriría la demolición de aproximadamente 51 edificios y estructuras existentes dentro del Área de Desarrollo propuesta de 28 acres para permitir la construcción de los nuevos edificios. Algunas de las estructuras han sido previamente identificadas como contribuyentes a un Distrito Histórico. El análisis de los impactos y cualquier mitigación viable propuesta para abordar la demolición se incluirá en el EIR.

Demolición Adicional: Además de la demolición de aproximadamente 51 edificios y estructuras existentes dentro del Área de Desarrollo propuesta de 28 acres, algunos o todos los aproximadamente 62 edificios y estructuras restantes en el mayor Sitio del Proyecto serían removidos. Algunas de las estructuras que permanecen en el Sitio del Proyecto han sido previamente identificadas como contribuyentes al Distrito Histórico. El análisis de los impactos y cualquier mitigación viable propuesta para abordar la demolición de las estructuras restantes dentro del Sitio del Proyecto se incluirá en el EIR.

El Proyecto propuesto estaría diseñado para lograr la calificación de oro de LEED (Leadership in Energy and Environmental Design) [Liderazgo en diseño energético y ambiental] (o una norma equivalente de reemplazo establecida por U.S. Green Building Council) o mejor. El Proyecto propuesto sería ejecutado en múltiples fases por varios contratistas usando varios métodos de contratación, incluyendo diseño-licitación-construcción, diseño-construcción, contratación de orden de trabajo y construcción de mejor valor. Diseño-construcción permite la adquisición de esfuerzo en el que tanto el diseño como la construcción de un proyecto se obtienen de una sola entidad. La construcción podría comenzar tan pronto como el primer trimestre de 2019 y se prevé que dure hasta aproximadamente 30 meses.

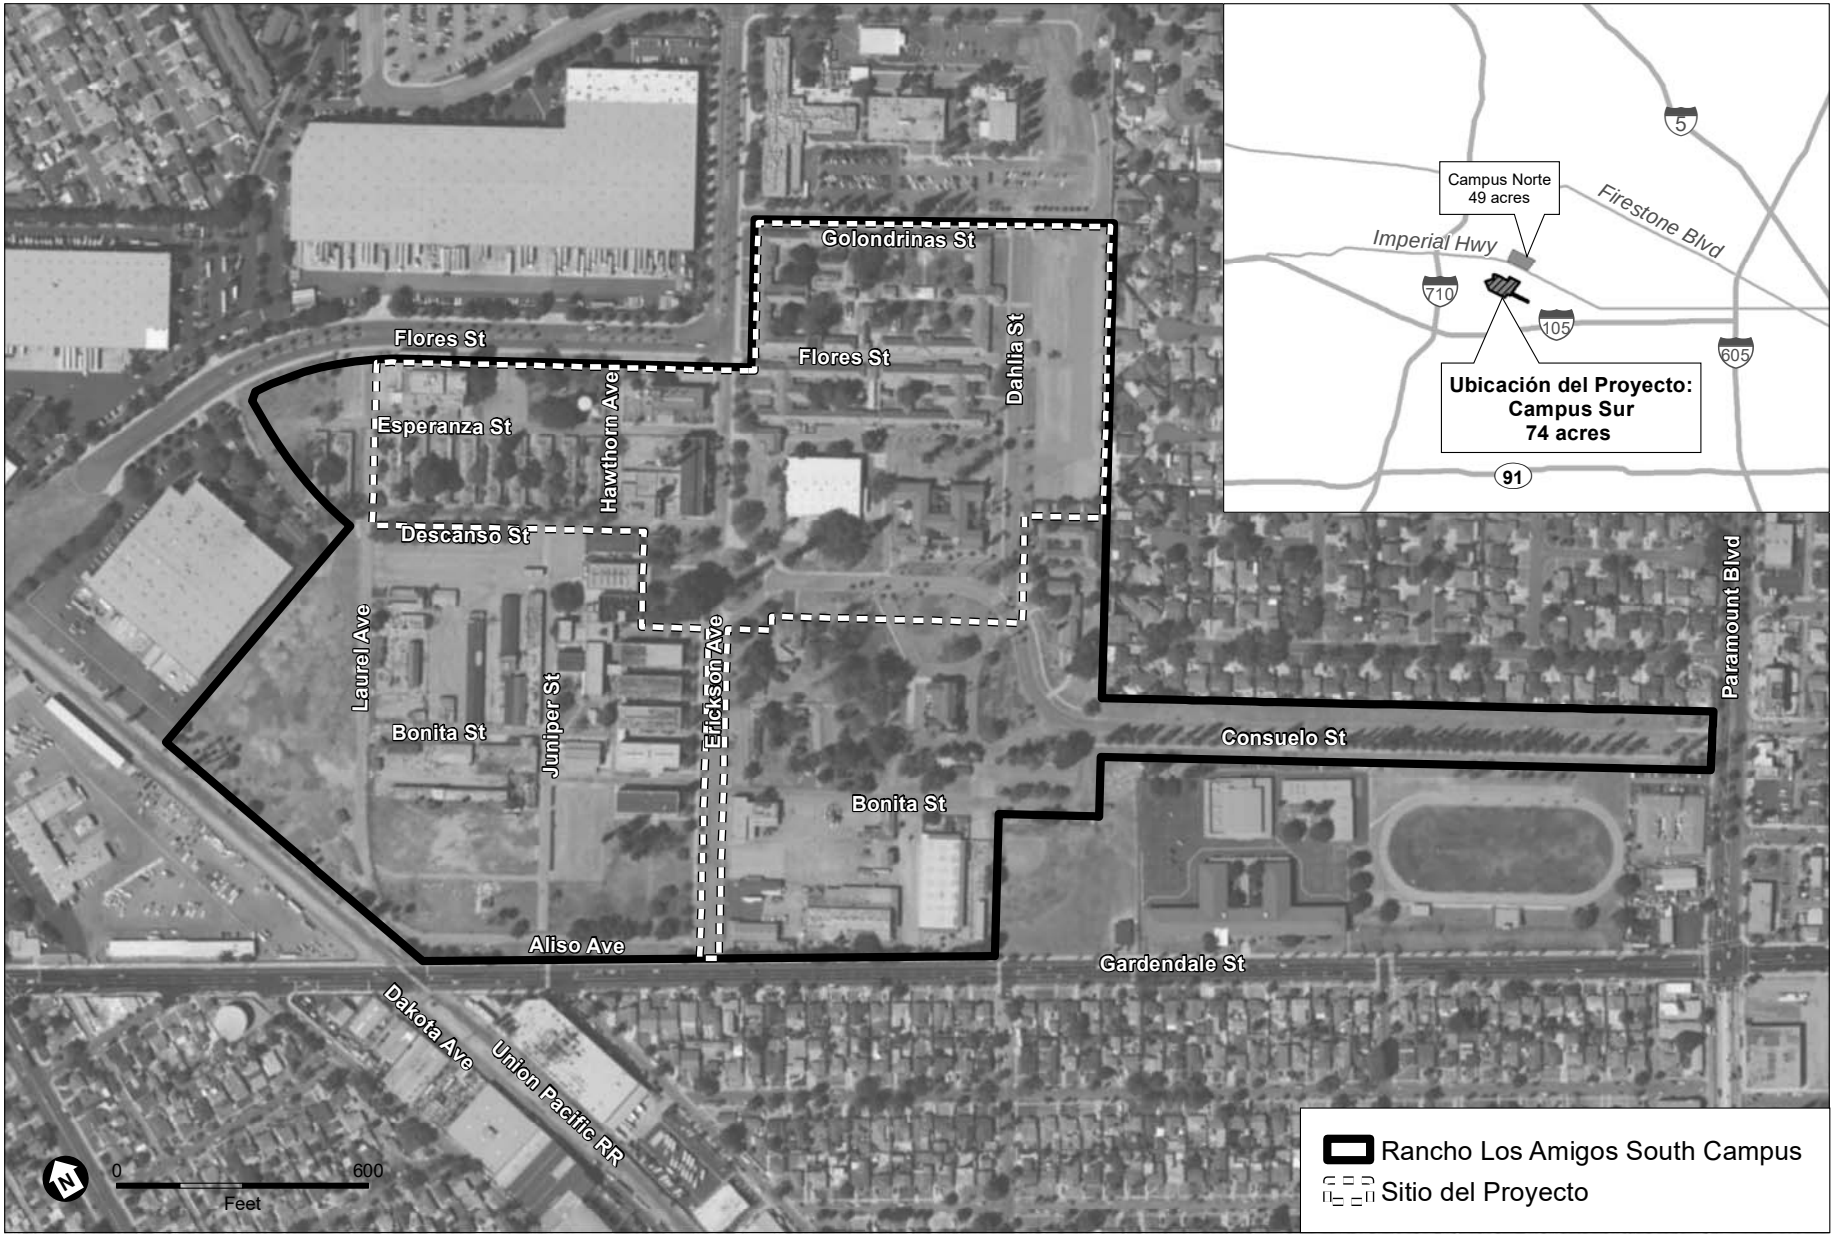
4. Efectos ambientales probables: El Condado estará preparando un EIR comprensivo que evalúa todas las áreas posibles de impacto ambiental. El Condado está comenzando a trabajar directamente en el proceso de EIR y se enfocará en los efectos potencialmente significativos del Proyecto propuesto en el EIR, al tiempo que indicará las razones por las cuales otros efectos no serán potencialmente significativos. No se requiere un estudio inicial para determinar que se preparará un EIR y, como tal, no se preparó un estudio inicial para el Proyecto propuesto. El EIR discutirá los posibles impactos ambientales del Proyecto propuesto, incluyendo posibles impactos previos a la construcción, construcción y operación. El EIR evaluará todos los temas ambientales requeridos por CEQA, incluyendo la estética, recursos agrícolas y forestales, calidad del aire, recursos biológicos, recursos culturales, energía, geología y suelos, emisiones de gases de efecto invernadero, peligros y materiales peligrosos, hidrología y calidad del agua, recursos minerales, ruido, población y vivienda, servicios públicos, recreación, recursos culturales tribales, transporte y tráfico, sistemas de servicios públicos y servicios. El Condado ha identificado específicamente 12 áreas ambientales primarias donde los impactos tienen más probabilidades de ocurrir. Estos impactos, que serán analizados en detalle en el EIR, incluyen: estética, calidad del aire, recursos biológicos, recursos culturales, energía, emisiones de gases de efecto invernadero, peligros y materiales peligrosos, hidrología y calidad del agua, uso del suelo, ruido, transporte y tráfico, y sistemas de servicios públicos y servicios.

El EIR abordará los efectos a corto y largo plazo del Proyecto propuesto sobre el medio ambiente. Se propondrán medidas de mitigación factibles para impactos que se determinen como potencialmente significativos. También se desarrollará un programa de monitoreo de mitigación para cualquier medida de mitigación incorporada en el análisis.

Este NOP está disponible para revisión y comentarios del 9 de agosto de 2017 al 11 de septiembre de 2017. Una copia digital de este NOP se puede ver en: ftp://dpwftp.co.la.ca.us/pub/pmd/Rancho Los Amigos South Campus EIR/. Copias impresas están disponibles para su revisión pública en los siguientes lugares:

Hollydale Library 12000 South Garfield Avenue South Gate, CA 90280	Lynwood Library 11320 Bullis Road Lynwood, CA 90262	Rancho Los Amigos North Campus Public Works Site Office 7402 Leeds Street, Trailer E, Downey, CA 90242
Downey City Library 11121 Brookshire Avenue Downey, CA 90241	Leland R. Weaver Library 4035 Tweedy Boulevard South Gate, CA 90280	Los Angeles County, Chief Executive Office 754 Kenneth Hahn Hall of Administration 500 West Temple Street, Room 754 Los Angeles, CA 90012

El Condado está buscando aportes tanto de agencias como de miembros del público sobre el alcance y contenido de la información y análisis ambiental en el EIR. Debido a los plazos establecidos por la ley estatal, los comentarios por escrito deben enviarse por correo o correo electrónico a más tardar a las 5:30 p.m. del 11 de septiembre de 2017. Por favor envíe sus comentarios a la mayor brevedad posible. Cualquier parte interesada en recibir información en el futuro relacionada con el Proyecto EIR propuesto podrá presentar su nombre y dirección postal a la misma dirección de contacto.



Las partes interesadas podrán presentar sus observaciones por escrito antes de la fecha límite a:

ATTN.: Mr. Luis Ramirez
Capital Projects Program Manager
County of Los Angeles, Department of Public Works
Project Management Division II
900 South Fremont, 5th Floor
Alhambra, CA 91803
Correo electrónico: luramire@dpw.lacounty.gov

Las preguntas con respecto a esta notificación deben dirigirse a Luis Ramírez a la dirección indicada arriba, o puede comunicarse con él por teléfono de lunes a jueves, entre las 7:30 y las 5:30 p.m., al (626) 300-3230. Todas las partes interesadas en recibir información en el futuro relacionada con el Proyecto propuesto podrán enviar su nombre y dirección postal a Luis Ramírez, Gerente del Programa.

Reunión de Alcance Público: Una reunión de alcance público se llevará a cabo el 30 de agosto de 2017, a partir de las 5:30 p.m. hasta las 7:30 p.m., para solicitar la opinión de cualquier parte interesada sobre el alcance y contenido del EIR de conformidad con la Sección 21083.9 del Código de Recursos Públicos de California. Mientras que el personal resumirá las cuestiones planteadas en estas reuniones, cualquier persona que desee hacer comentarios formales sobre el alcance de las cuestiones o contenido del borrador del EIR debe hacerlo por escrito. Un proceso posterior de notificación y comentario público tendrá lugar durante la circulación pública de un Borrador del EIR para el Proyecto propuesto. Esta reunión proporcionará un foro público de información y diálogo sobre el Proyecto propuesto. Cualquier persona que desee presentar comentarios formales puede hacerlo por escrito en la reunión de alcance. Sin embargo, también puede enviar una respuesta por escrito a este NOP a la dirección antes mencionada antes de la fecha límite del 11 de septiembre de 2017, sin asistir a la reunión de alcance que brinda una oportunidad adicional para discutir el EIR que se preparará para el Proyecto propuesto. Le reunión de Alcance Público se realizará en la siguiente ubicación:

Subject: NOP Related Call

Addie,
Received a call from Alicia Santana regarding the NOP. She had questions regarding the probation headquarters building. Her concern was that probationers were going to be coming to the campus to see their probation officers. I told her the building will only house administrative functions. I also instructed her to submit any questions/comments in writing so we can address them in the EIR. In addition, I invited her to attend the scoping meeting on the 30th.

Addie,
Received a call from Berta Yontomo regarding the NOP (Spanish). She had general questions about the project and wanted to know why the County had sent out the notice. I explained the CEQA process to her and gave her a rundown of the scope of work. She is excited for the project to move forward and wants to see the south campus developed. I instructed her to submit any questions/comments in writing so we can address them in the EIR. In addition, I invited her to attend the scoping meeting on the 30th.

Subject: NOP for Rancho Los Amigos South Campus

Dear Mr. Ramirez,

My name is Severin Martinez and I am assisting in Caltrans' review process for the Rancho Los Amigos South Campus NOP. We received a mailed notice but no digital copy and I could be making some mistake but the url in the notice doesn't seem to work, nor am I able to find a copy easily available online. Might you have a functioning URL you could send my way?

Thank you,

Severin

Subject: Rancho Los Amigos NOP

RE: Rancho Los Amigos South Campus Project

Good morning Mr. Ramirez,

Yesterday, I received the NOP. Please allow me to introduce myself:
-James Fountain
-Retired L.A. County employee (40 years)
-Previously worked at Rancho Los Amigos South Campus, 12838 Erickson Ave.
-Homeowner at 7814 Adoree next to the South Campus for 43 years
-Requested by former Downey City Mayor, Meredith Perkins (also a homeowner on Smallwood Ave. Next to the South Campus) to be an advocate for nearby concern residents.

My main concern about the EIR is whether or not Downey and South Gate (Holydale area) can implement widening Gardendale St from 2 to 4 lanes and removing the bicycle lanes and parralel parking to accommodate thousands of vehicles access the South Campus on Erickson Ave. From the South off of Gardendale.

A second concern is the major improvements needed for access by vehicle traffic off of Imperial Highway to Erickson Ave on the North of the South Campus.

My third and final concern is the sight lines from our mostly one story, singe family homes to the East of the South Campus. The NOP speaks of a 9 level garage and 6 story building.

Maybe the homeowners should file an injunction through the Cities of Downey and South Gate if there's no mitigation.

Please feel free to call me at:
cell: (562) 896-5461
home: (562) 869-0895

Respectfully,
Jim Fountain

Luis:

Since wrote to you last Friday I have been in communication with Adrian Scott Fine (Director of Advocacy for the Los Angeles Conservancy) and George Redfox, a member of both Downey Conservancy & Downey Historical. They are both CCed.

Please know that both Adrian and George would like their respective organizations to be at the table regarding the campus and preservation.

Perhaps a site visit with all parties in September is a good idea?

Thanks,

Richard

Luis:

Jocelyn from LABOS Hahn's office sent me over.

My wife, Kim Cooper(CC'ed), and I are _very_ interested in being at the table for the discussion of the preservation of the historic buildings on the southern Rancho Los Amigos campus.

We are eager to not only provide public comment, but once the DEIR is out, meet with you.

We are quite active in the Los Angeles preservation community, and feel that this is a great time for a great site to get the preservation it needs as part of the policy over it.

Please let me know when the DEIR is expected out and if there are any documents supporting it which you might be able to share in advance.

BTW, your office building is one of the iconic sights of the SG Valley, our hats go off to the County for keeping the building in such great shape.

Thanks,

Richard Schave

RE: Notice of Preparation of an Environmental Impact Report

Dear Mr. Luis Ramirez,
I have read the notice that was sent out with the details about the Rancho Los Amigos South Campus Project and I am interested in receiving ongoing information related to the proposed project.

One of my main concerns is what is planned for the corridor down Consuelo Street. My back yard borders that vacant land along side Consuelo Street and I am interested to know if anything is planned for that land. That strip of land is not maintained by anyone and is a constant source of rodents that come into our homes. Are there any plans for that Consuelo Street Corridor yet? If there are no plans, who can I contact to submit a petition for all the bordering neighbors to acquire that land?

Sincerely,

Ernesto Diaz

SUBJECT: RANCHO LOS AMIGOS SOUTH CAMPUS PROJECT EIR

Dear Mr. Ramirez,

This letter is in response to the Notice of Preparation of an Environmental Impact Report ("EIR") and Notice of Public Scoping Meeting ("PSM") dated August 9, 2017. My mother owns a property at 7912 Puritan St in the city of Downey. Her property, along with several other parcels located along the southern part of Puritan Street, backs to Consuelo Street which is a County-owned private street. Consuelo Street along with Gardendale Street are the two main thoroughfares providing access from Paramount Blvd to the Rancho's South Campus. Therefore, it is our concern, along with the concern of several other neighbors, that excessive traffic noise and air pollution will have a negative impact on our properties once the South Campus project is completed. It is not clear to us what plans will be in place particularly for Consuelo Street. However we urge Los Angeles County, the City of Downey and any other organizations involved in this project to take a very close look at these issues and take it into serious consideration. Please forward any future communications on this matter to the address and telephone indicated in the letterhead.

Sincerely,

A. Yotsov

RE: SCH# 2017081017; Rancho Los Amigos South Campus Project, City of Downey; Los Angeles County, California

Dear Mr. Ramirez:

The Native American Heritage Commission has received the Notice of Preparation (NOP) for Draft Environmental Impact Report for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code § 21000 et seq.), specifically Public Resources Code section 21084.1, states that a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, § 15064.5 (b) (CEQA Guidelines Section 15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an environmental impact report (EIR) shall be prepared. (Pub. Resources Code § 21080 (d); Cal. Code Regs., tit. 14, § 15064 subd. (a)(1) (CEQA Guidelines § 15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources with the area of project effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a **separate category of cultural resources**, "tribal cultural resources" (Pub. Resources Code § 21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment (Pub. Resources Code § 21084.2). Please reference California Natural Resources Agency (2016) "Final Text for tribal cultural resources update to Appendix G: Environmental Checklist Form," http://resources.ca.gov/ceqa/docs/ab52/Clean-final-AB-52-App-G-text-Submitted.pdf. Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code § 21084.3 (a)). **AB 52 applies to any project for which a notice of preparation or a notice of negative declaration or mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements**. If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. § 800 et seq.) may also apply.

The NAHC recommends **lead agencies consult with all California Native American tribes** that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments. **Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws**.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a **lead agency** shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
    a. A brief description of the project.
    b. The lead agency contact information.
    c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code § 21080.3.1 (d)).
    d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code § 21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A **lead agency** shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code § 21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or environmental impact report. (Pub. Resources Code § 21080.3.1(b)).
    a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code § 65352.4 (SB 18). (Pub. Resources Code § 21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
    a. Alternatives to the project.
    b. Recommended mitigation measures.
    c. Significant effects. (Pub. Resources Code § 21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
    a. Type of environmental review necessary.
    b. Significance of the tribal cultural resources.
    c. Significance of the project's impacts on tribal cultural resources.
    d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code § 21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code sections 6254 (r) and 6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code § 21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
    a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
    b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code section 21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code § 21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:
    a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
    b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code § 21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code section 21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code section 21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code § 21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code section 21084.3 (b). (Pub. Resources Code § 21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:
    a. Avoidance and preservation of the resources in place, including, but not limited to:
        i. Planning and construction to avoid the resources and protect the cultural and natural context.
        ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
    b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
        i. Protecting the cultural character and integrity of the resource.
        ii. Protecting the traditional use of the resource.
        iii. Protecting the confidentiality of the resource.
    c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
    d. Protecting the resource. (Pub. Resource Code § 21084.3 (b)).
    e. Please note that a federally recognized California Native American tribe or a nonfederally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code § 815.3 (c)).
    f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code § 5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An environmental impact report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
    a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code sections 21080.3.1 and 21080.3.2 and concluded pursuant to Public Resources Code section 21080.3.2.
    b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
    c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code section 21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code § 21082.3 (d)).

    This process should be documented in the Cultural Resources section of your environmental document.

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires **local governments** to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code § 65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code § 65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code section 65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code sections 5097.9 and 5097.993 that are within the city's or county's jurisdiction. (Gov. Code § 65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have been already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.

b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, section 15064.5(f) (CEQA Guidelines section 15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code section 7050.5, Public Resources Code section 5097.98, and Cal. Code Regs., tit. 14, section 15064.5, subdivisions (d) and (e) (CEQA Guidelines section 15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

Please contact me if you need any additional information at gayle.totton@nahc.ca.gov.

Sincerely,

Gayle Totton, M.A., PhD.

GRACE ROBINSON HYDE
Chief Engineer and General Manager

August 28, 2017
Ref. Doc. No.: 4243608

Mr. Luis Ramirez
Capital Projects Program Manager
County of Los Angeles
Department of Public Works
900 South Fremont Avenue, 5th Floor
Alhambra, CA 91803

RECEIVED
SEP 06 2017
DEPT. PUBLIC WORKS
PROJECT MANAGEMENT DIVISION II

Dear Mr. Ramirez:

NOP Response for the Rancho Los Amigos South Campus Project

The Sanitation Districts of Los Angeles County (Districts) received a Notice of Preparation of a Draft Environmental Impact Report (NOP) for the subject project on August 9, 2017. The proposed project is located within the jurisdictional boundary of District No. 2. We offer the following comments regarding sewerage service:

1. The proposed project may require a Districts' permit for Industrial Wastewater Discharge. Project developers should contact the Districts' Industrial Waste Section at (562) 908-4288, extension 2900, to reach a determination on this matter. If this permit is necessary, project developers will be required to forward copies of final plans and supporting information for the proposed project to the Districts for review and approval before beginning project construction. For additional Industrial Wastewater Discharge Permit information, go to http://wwwlacsd.org/wastewater/industrial_waste/permit.asp.

2. The Districts maintain sewerage facilities within the project area that may be affected by the proposed project. Approval to construct improvements within a Districts' sewer easement and/or over or near a Districts' sewer is required before construction may begin. For a copy of the Districts' buildover procedures and requirements go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and click on the Buildover Procedures and Requirements link. For more specific information regarding the buildover procedure, please contact Mr. Ed Stewart at (562) 908-4288, extension 2766.

3. The wastewater flow originating from the proposed project will discharge directly to the Districts' Joint Outfall B Unit 1C Replacement Trunk Sewer, located in a private right of way within the project site. The Districts' 66-inch diameter trunk sewer has a capacity of 65.8 million gallons per day (mgd) and conveyed a peak flow of 54.9 mgd when last measured in 2012. A 6-inch diameter or smaller direct connection to a Districts' trunk sewer requires a Trunk Sewer Connection Permit, issued by the Districts. An 8-inch diameter or larger direct connection to a Districts' trunk sewer requires submittal of Sewer Plans for review and approval by the Districts. For additional information, please contact the Districts' Engineering Counter at (562) 908-4288, extension 1205.

4. The wastewater generated by the proposed project will be treated at the Joint Water Pollution Control Plant located in the City of Carson, which has a capacity of 400 mgd and currently produces an average recycled water flow of 253.4 mgd.

Recycled Paper

5. The expected average wastewater flow from the proposed project, described in the notice as a 370,000-square-foot ISD Headquarters building, a 220,000-square-foot Probation Department Headquarters building, and a 60,000-square-foot Sheriffs Crime Laboratory, is 136.000 gallons per day. For a copy of the Districts' average wastewater generation factors, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and click on the Table 1, Loadings for Each Class of Land Use link.

6. The Districts are empowered by the California Health and Safety Code to charge a fee for the privilege of connecting (directly or indirectly) to the Districts' Sewerage System or for increasing the strength or quantity of wastewater discharged from connected facilities. This connection fee is a capital facilities fee that is imposed in an amount sufficient to construct an incremental expansion of the Sewerage System to accommodate the proposed project. Payment of a connection fee will be required before a permit to connect to the sewer is issued. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and search for the appropriate link. In determining the impact to the Sewerage System and applicable connection fees, the Districts' Chief Engineer and General Manager will determine the user category (e.g. Condominium, Single Family home, etc.) that best represents the actual or anticipated use of the parcel or facilities on the parcel. For more specific information regarding the connection fee application procedure and fees, please contact the Connection Fee Counter at (562) 908-4288, extension 2727.

7. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CAA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise you that the Districts intend to provide this service up to the levels that are legally permitted and to inform you of the currently existing capacity and any proposed expansion of the Districts' facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2717.

Very truly yours,

Adriana Raza

Mr. Luis Ramirez, Capital Project Manager
County of Los Angeles Department of Public Works
Project Management Division II
900 South Fremont Avenue. 5th Floor
Alhambra, CA 91803

Subject: Letter sent to home owners within the impacted community area; Notice of Preparation of an Environmental Impact Report and Notice of Public Scoping Meeting Date and Location for the Rancho Los Amigos South Campus Project.

Dear Mr. Luis Ramirez:

We like to thank all involve in the idea of developing the subject area into a successful plan.

This are as currently is know is a total hazard in all senses, such as old and hazardous construction material used when the building were constructed, collection of dead vagrant animals, at time becomes vagrants encampment (in area of Gardendale Avenue and along the rail road tracks), vandalism, graffiti, and several arson episodes in addition in being a major eye sore.

Developing the area to house the proposed 3000.00 LA County Employees seem to be a good plan. As such it seems that it will be generating many trips in and out of proposed project, therefore we would like you to consider the relocation of a Fire Station which is located at approximately one block west from the proposed LA County proposed project. This Fire Station is along Gardendale and is an old and antiquated Fire Station structure. Large fire engines go in and out. The Fire Engines (trucks) go into the Fire Station from Monroe Avenue and discharge the Fire Station through Gardendale Avenue. Housing this old and antiquated Fire Station inside the Rancho Los Amigos Campus would greatly improve service to the community. A new improved Fire Station would take into consideration several impacts such as air quality, cultural resources, energy, green house gas emissions, hazards and hazardous materials, land use, noise pollution, population and housing public services, Transportation and Traffic circulation, a better housing for the Fireman and Fire women, which in turn a new relocated and improve Fire Station will provide the upmost Public Safety service in our community.

Therefore, we would like you to consider including into the study (EIR) in relocating the old and antiquated Fire Station into the Rancho Los Amigos South Campus area.

Should you have any questions, please do not hesitate in contacting us at (562) 881-2185 or e-mail at cdillon343@aol.com.

Best Regards,

Carlos Dillon

Notice of Preparation of an Environmental Impact Report for the Rancho Los Amigos South Campus Project

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. SCAQMD staff's comments are recommendations regarding the analysis of potential air quality impacts from the Proposed Project that should be included in the Environmental Impact Report (EIR). Please send SCAQMD a copy of the EIR upon its completion. Note that copies of the EIR that are submitted to the State Clearinghouse are not forwarded to SCAQMD. Please forward a copy of the EIR directly to SCAQMD at the address shown in the letterhead. **In addition, please send with the EIR all appendices or technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all air quality modeling and health risk assessment files[1]. These include emission calculation spreadsheets and modeling input and output files (not PDF files). Without all files and supporting documentation, SCAQMD staff will be unable to complete our review of the air quality analyses in a timely manner. Any delays in providing all supporting documentation will require additional time for review beyond the end of the comment period.**

Air Quality Analysis

SCAQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. SCAQMD recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analysis. Copies of the Handbook are available from SCAQMD's Subscription Services Department by calling (909) 396-3720. More guidance developed since this Handbook is also available on SCAQMD's website at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993). SCAQMD staff also recommends that the Lead Agency use the CalEEMod land use emissions software. This software has recently been updated to incorporate up-to-date state and locally approved emission factors and methodologies for estimating pollutant emissions from typical land use development. CalEEMod is the only software model maintained by the California Air Pollution Control Officers Association (CAPCOA) and replaces the now outdated URBEMIS. This model is available free of charge at: www.caleemod.com.

SCAQMD has also developed both regional and localized significance thresholds. SCAQMD staff requests that the Lead Agency quantify criteria pollutant emissions and compare the results to

[1] Pursuant to the CEQA Guidelines Section 15174, the information contained in an EIR shall include summarized technical data, maps, plot plans, diagrams, and similar relevant information sufficient to permit full assessment of significant environmental impacts by reviewing agencies and members of the public. Placement of highly technical and specialized analysis and data in the body of an EIR should be avoided through inclusion of supporting information and analyses as appendices to the main body of the EIR. Appendices to the EIR may be prepared in volumes separate from the basic EIR document, but shall be readily available for public examination and shall be submitted to all clearinghouses which assist in public review.

SCAQMD's CEQA regional pollutant emissions significance thresholds to determine air quality impacts. SCAQMD's CEQA regional pollutant emissions significance thresholds can be found here: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf. In addition to analyzing regional air quality impacts, SCAQMD staff recommends calculating localized air quality impacts and comparing the results to localized significance thresholds (LSTs). LSTs can be used in addition to the recommended regional significance thresholds as a second indication of air quality impacts when preparing a CEQA document. Therefore, when preparing the air quality analysis for the Proposed Project, it is recommended that the Lead Agency perform a localized analysis by either using the LSTs developed by SCAQMD staff or performing dispersion modeling as necessary. Guidance for performing a localized air quality analysis can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis.

In the event that the Proposed Project generates or attracts vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment. Guidance for performing a mobile source health risk assessment ("*Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*") can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis. An analysis of all toxic air contaminant impacts due to the use of equipment potentially generating such air pollutants should also be included.

In addition, guidance on siting incompatible land uses (such as placing homes near freeways) can be found in the California Air Resources Board's *Air Quality and Land Use Handbook: A Community Health Perspective*, which can be found at: http://www.arb.ca.gov/ch/handbook.pdf. CARB's Land Use Handbook is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process. Guidance[2] on strategies to reduce air pollution exposure near high-volume roadways can be found at: https://www.arb.ca.gov/ch/rd_technical_advisory_final.PDF.

Mitigation Measures

In the event that the Proposed Project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize these impacts. Pursuant to CEQA Guidelines Section 15126.4 (a)(1)(D), any impacts resulting from mitigation measures must also be discussed. Several resources are

[2] In April 2017, CARB published a technical advisory, *Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways: Technical Advisory*, to supplement CARB's Air Quality and Land Use Handbook: A Community Health Perspective. This technical advisory is intended to provide information on strategies to reduce exposures to traffic emissions near high-volume roadways to assist land use planning and decision-making in order to protect public health and promote equity and environmental justice. The technical advisory is available at: https://www.arb.ca.gov/ch/landuse.htm.

available to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project, including:

- Chapter 11 of SCAQMD's CEQA Air Quality Handbook
- SCAQMD's CEQA web pages available here: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies
- SCAQMD's Rule 403 – Fugitive Dust, and the Implementation Handbook for controlling construction-related emissions and Rule 1403 – Asbestos Emissions from Demolition/Renovation Activities
- SCAQMD's Mitigation Monitoring and Reporting Plan (MMRP) for the 2016 Air Quality Management Plan (2016 AQMP) available here (starting on page 86): http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2017/2017-mar3-035.pdf?sfvrsn=5
- CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures* available here: http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf

Alternatives

In the event that the Proposed Project generates significant adverse air quality impacts, CEQA requires the consideration and discussion of alternatives to the project or its location which are capable of avoiding or substantially lessening any of the significant effects of the project. The discussion of a reasonable range of potentially feasible alternatives, including a "no project" alternative, is intended to foster informed decision-making and public participation. Pursuant to CEQA Guidelines Section 15126.6(d), the EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the Proposed Project.

Permits

In the event that the Proposed Project requires a permit from SCAQMD, SCAQMD should be identified as a responsible agency for the Proposed Project. For more information on permits, please visit SCAQMD webpage at: http://www.aqmd.gov/home/permits. Questions on permits can be directed to SCAQMD's Engineering and Permitting staff at (909) 396-3385.

Data Sources

SCAQMD rules and relevant air quality reports and data are available by calling SCAQMD's Public Information Center at (909) 396-2039. Much of the information available through the Public Information Center is also available at SCAQMD's webpage at: http://www.aqmd.gov.

SCAQMD staff is available to work with the Lead Agency to ensure that project air quality impacts are accurately evaluated and any significant impacts are mitigated where feasible. If you have any questions regarding this letter, please contact me at lsun@aqmd.gov or call me at (909) 396-3308.

Sincerely,

Lijin Sun

DEPT. PUBLIC WORKS
PROJECT MANAGEMENT DIVISION II

August 31, 2017

Luis Ramirez, Program Manager
Department of Public Works
Project Management Division II
900 South Fremont Avenue
Alhambra, CA 91803

Dear Mr. Ramirez:

NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT, "RANCHO LOS AMIGOS SOUTH CAMPUS PROJECT," WOULD REQUIRE DEMOLITION OF APPROXIMATELY 51 EXISTING BUILDINGS AND STRUCTURES WITHIN THE PROPOSED 28-ACRE DEVELOPMENT AREA, AND DEVELOP THREE NEW COUNTY ADMINISTRATIVE BUILDINGS, DOWNEY, FFER 201700091

The Notice of Preparation of an Environmental Impact Report has been reviewed by the Planning Division, Land Development Unit, Forestry Division, and Health Hazardous Materials Division of the County of Los Angeles Fire Department.

The following are their comments:

PLANNING DIVISION:

The subject property is entirely within the City of Downey which is not a part of the emergency response area of the Los Angeles County Fire Department (also known as the Consolidated Fire Protection District of Los Angeles County). Therefore, this project does not appear to have any impact on the emergency responsibilities of this department.

LAND DEVELOPMENT UNIT:

The development of this project must comply with all applicable code and ordinance requirements for construction, access, water mains, fire flows, and fire hydrants.

Specific comments and requirements will be addressed as this project moves forward with the submittal of an Environmental Impact Report and the submittal of design or construction plans to the Fire Department.

Should any questions arise regarding the above comment please contact Juan Padilla of the Fire Prevention Division's Land Development Unit at (323) 890-4243 or Juan.Padilla@fire.lacounty.gov.

FORESTRY DIVISION – OTHER ENVIRONMENTAL CONCERNS:

The statutory responsibilities of the County of Los Angeles Fire Department's Forestry Division include erosion control, watershed management, rare and endangered species, vegetation, fuel modification for Very High Fire Hazard Severity Zones or Fire Zone 4, archeological and cultural resources, and the County Oak Tree Ordinance. Potential impacts in these areas should be addressed in the Draft Environmental Impact Report.

The County of Los Angeles Fire Department's Forestry Division has no further comments regarding this project.

HEALTH HAZARDOUS MATERIALS DIVISION:

The Health Hazardous Materials Division of the Los Angeles County Fire Department recommends that a Phase I Environmental Site Assessment be conducted at project site if not conducted already. Also, there is a contaminated property adjacent to the project site that was impacted by a leaking underground gasoline storage tank (UST). The soil and groundwater at this adjacent property has been impacted by gasoline. The Los Angeles Regional Water Quality Control Board is the lead environmental oversight agency overseeing the assessment and cleanup of the adjacent impacted property (Case #90240016). In addition, the Los Angeles County Department of Public Works, UST Program is also involved with UST permitting and closure issues at the adjacent impacted property.

If you have any additional questions, please contact this office at (323) 890-4330.

Very truly yours,

MICHAEL Y. TAKESHITA, ACTING CHIEF, FORESTRY DIVISION
PREVENTION SERVICES BUREAU

SEP 11 2017
DEPT. PUBLIC WORKS
PROJECT MANAGEMENT DIVISION II

September 6, 2017

Mr. Luis Ramirez, Capital Project Manager
County of Los Angeles Department of Public Works
Project Management Division II
900 South Fremont Avenue. 5th Floor
Alhambra, CA 91803

Subject: Letter sent to home owners within the impacted community area; Notice of Preparation of an Environmental Impact Report and Notice of Public Scoping Meeting Date and Location for the Rancho Los Amigos South Campus Project.

Dear Mr. Luis Ramirez:

We like to thank all involved in the idea of developing the subject area into a successful plan.

This area, as currently known, is a total hazard in all senses, such as old and hazardous construction material were used when these buildings went up, collection of dead vagrant animals, at times it becomes vagrant's (homeless) encampment (in area of Gardendale Avenue and along the rail road tracks), vandalism, graffiti, and several arson episodes, and in addition, being a major eye sore.

Developing the area to house the proposed 3000.00 LA County Employees seems to be a good plan. As such, it seems that it will be generating many trips in and out of proposed project. More likely, a large percentage of trips will be using Erickson Avenue to Gardendale Avenue and then south on Garfield Avenue in order to get to the 105 and 710 Freeways' on-ramps access.

Our concern regarding the above described traffic circulation is the additional anticipated traffic on Monroe Avenue, which is at the fork with westbound Gardendale Avenue. Currently, most drivers wanting to get onto southbound Garfield Avenue resist making the left turn from Gardendale and Garfield Avenues' intersection due to the wait for the traffic signal phasing, and instead drivers on westbound Gardendale Avenue make a slight left at the fork towards Monroe Avenue and then by making a left turn from Monroe Avenue onto southbound Garfield Avenue in order to get to the 105 and 710 on-ramps. This described traffic circulation has added additional traffic on Monroe Avenue due to the recent and continue changes on Gardendale Avenue pavement's striping which currently restricts traffic to one lane in each direction. See attached Exhibit "A".

Fire Station # 57 is located approximately one block west from the proposed LA County project. This Fire Station is bounded by Gardendale Avenue in the north and by Monroe Avenue in the southeast and by an Alley way on the west. Garfield Avenue is approximately 100 feet west of the Alley Way. Large fire engines go in and out. The Fire Engines (trucks) go into the Fire Station from Monroe Avenue and discharge from Gardendale Avenue. See attached Exhibit "B".

The current traffic circulation conditions on Gardendale Avenue and specifically on Monroe Avenue, in the area near and around the Fire Station are impacting the residents of Monroe Avenue in the described area.

Additional traffic on Monroe Avenue due to left turners onto Garfield Avenue and fire Engines in and out of the Fire Station, along with the massive red curbing due to the latest traffic modification has contributed to difficult and complicated maneuvering for the Monroe Avenue residents when trying to come in and out of their driveways. Residents have had many close calls (accidents).

In fact drivers coming down on Monroe Avenue at times come with excessive speeds. We have had several hit and run, resulting with some major damages to parked vehicles, and at times these vehicles became total losses.

Speeders on Monroe Avenue usually end up knocking down trash cans on trash pickup days.

The increase in traffic volume on Monroe Avenue happens during pick morning and afternoon hours due to the left turners avoiding the traffic signal on Gardendale and Garfield Avenues.

Traffic accidents are very common at the intersection of Garfield and Monroe Avenue's. These accidents are due to left turns, or drivers just going through the intersection, which mostly, which we assume has to do with the lack of lateral sight distance of approaching vehicles from Garfield Avenue.

Also, at times, fire engines are left parked for hours on Monroe Avenue, in front of the station's driveway, making it very difficult for residents to go in or come out of their driveways.

Therefore, we proposed the following be included for considerations in the Environmental Impact Report (EIR):

1. Relocating this old and antiquated Fire Station inside the Rancho Los Amigos Campus (provided it is feasible; such as, securing right-of-way, securing cost and allowable time for design construction) would greatly improve service to the community. A new improved Fire Station would take into consideration several impacts such as air quality, cultural resources, energy, green house gas emissions, hazards and hazardous materials, land use, noise pollution, population and housing public services, Transportation and Traffic circulation, a better housing for the Firefighters, which in turn, a new relocated and improved Fire Station would provide the upmost Public Safety service in our community.
2. we would appreciate considerations be given to improving traffic circulation safety and parking conditions in the area of Monroe Avenue bounded by Garfield and Gardendale Avenues, which has been extremely affected in the area near and around the Fire Station # 57.
3. If consideration # 1 is not feasible, we would appreciate considerations be given to # 2.

Should you have any questions, please do not hesitate in contacting us at (562) 881-2185 or e-mail at cdillon343@aol.com.

Subject: Ranch Los Amigos

Mr. Ramirez,
Regarding the property on Rancho Los Amigos South Campus. It's good that something is finally going to be done with this property. The only thing l am concerned about is where the varmints are going to go when they get kicked out. They've got to go someplace! I'm talking about anything from skunks, gophers, squirrels, raccoons, rats, etc. Not to mention insects. My wife and I have lived close by for a long time and have seen all of these critters (include insects) often. I'm writing this in hopes that this problem will be given the proper attention it deserves.
Thank you and regards,
Bruce Kenmir

SCH# 2017081017

Dear Mr. Ramirez,

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced project. The project proposes to develop three new County administrative buildings on the project site, including an Internal Services Department (ISD) Headquarters, Probation Department Headquarters, and a Sheriff's Department Crime Laboratory. The proposed project would include all necessary utilities and points of connection, roadways, curbs and gutters, sidewalks, medians, site structures, hydrants, vaults, manholes, substations, street lights, street signage, landscaping and irrigation for the proposed new development. The project would also include street modifications along Erickson Avenue.

Upon reviewing the Notice of Preparation (NOP), Caltrans has the following comments:

State-level policy goals related to sustainable transportation seek to reduce the number of trips made by driving, reduce greenhouse gas emissions, and encourage alternative modes of travel. Caltrans' Strategic Management Plan has set targets of tripling trips made by bicycling and doubling trips made by walking and public transit by 2020. The Strategic Plan also seeks to achieve a 15% reduction in statewide per capita vehicle miles traveled by 2020. Similar ambitious goals are embedded in Caltrans' 2040 Transportation Plan, and Southern California Association of Governments' Regional Transportation Plan. Statewide legislation such as AB 32 and SB 375, as well as Executive Orders S-3-05 and B-16-12, echo the need to pursue more sustainable development. Such climate change goals can only be achieved through support from local partners.

In an effort to reduce the possibility of conflicts that may occur from traffic generated by this project, the Office of Traffic Operations requests a Transportation Impact Study (TIS). In light of state legislation SB 743, at this stage the lead agency may choose to proceed with a vehicle miles traveled (VMT) transportation analysis instead of or in addition to a more traditional level of service (LOS) analysis. However, irrespective of methodology used, any transportation-related impacts should be addressed through appropriate multi-modal mitigation measures to reduce the number of vehicle trips generated by the project.

In the DEIR, Caltrans would like to see discussion of the role parking plays in shaping transportation habits. Research on parking suggests that abundant car parking enables and encourages driving. The amount of car parking supplied may undermine the project's ability to encourage more sustainable and active transportation. Similarly, Caltrans would like to see some discussion related to the inclusion of convenient and high quality on-site bicycle parking and how it may encourage bicycling.

Also, site design that omits or makes needs of active transportation modes secondary would be inconsistent with desired State goals of promoting sustainable transportation and reducing greenhouse gas emissions. Although the County has a limited role in shaping transportation habits, the design of the facilities (pedestrian-oriented vs automobile-oriented) and amenities it provides (greenspace, car parking, bicycle parking, etc) can influence how site users go to and from the site and this should be discussed in the DEIR. Since the project will include modifications to Erickson Avenue, some consideration should be given to including complete streets elements such as Class II or Class IV bikeways, enhanced sidewalks, or other features to promote active transportation.

In order for the project to better promote public transit, reduce vehicle miles traveled and reduce transportation-related impacts, we recommend the implementation of Transportation Demand Management (TDM) improvement measures. The simplest TDM measure that could be included deals directly with parking- such as reducing the amount of car parking supplied. Other measures can also help ensure the project is actively consistent with efforts to reduce vehicle trips, transportation-related GHG emissions while promoting public transit.

Any transportation of heavy construction equipment and/or materials requiring use of oversized-transport vehicles on State highways will require a Caltrans transportation permit. Caltrans recommends that large size truck trips be limited to off-peak commute periods. Also, storm water run-off is a sensitive issue for Los Angeles and Ventura counties. We encourage including greening and other stormwater management elements such as permeable surfaces. Be mindful that the project needs to be designed to discharge clean run-off water.

If you have any questions or concerns regarding these comments, please contact project coordinator, Severin Martinez at (213)-897-0067 or severin.martinez@dot.ca.gov and refer to GTS# 07-LA-2017-01058.

Sincerely,

for

RE: SCAG Comments on the Notice of Preparation of a Draft Environmental Impact Report for the Rancho Los Amigos South Campus Project [SCAG NO. IGR9358]

Dear Mr. Ramirez,

Thank you for submitting the Notice of Preparation of a Draft Environmental Impact Report for the Rancho Los Amigos South Campus Project ("proposed project") to the Southern California Association of Governments (SCAG) for review and comment. SCAG is the authorized regional agency for Inter-Governmental Review (IGR) of programs proposed for Federal financial assistance and direct Federal development activities, pursuant to Presidential Executive Order 12372. Additionally, SCAG reviews the Environmental Impact Reports of projects of regional significance for consistency with regional plans pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.

SCAG is also the designated Regional Transportation Planning Agency under state law, and is responsible for preparation of the Regional Transportation Plan (RTP) including the Sustainable Communities Strategy (SCS) pursuant to Senate Bill (SB) 375. As the clearinghouse for regionally significant projects per Executive Order 12372, SCAG reviews the consistency of local plans, projects, and programs with regional plans.[1] SCAG's feedback is intended to assist local jurisdictions and project proponents to implement projects that have the potential to contribute to attainment of Regional Transportation Plan/Sustainable Community Strategies (RTP/SCS) goals and align with RTP/SCS policies.

SCAG staff has reviewed the Notice of Preparation of a Draft Environmental Impact Report for the Rancho Los Amigos South Campus Project in Los Angeles County. The proposed project consists of the development of three administrative buildings featuring a total of 650,000 square feet (sf) of County office space on 74 acres.

When available, please send environmental documentation to *SCAG's office in Los Angeles or by email to au@scag.ca.gov* providing, at a minimum, the full public comment period for review. If you have any questions regarding the attached comments, please contact the Inter-Governmental Review (IGR) Program, attn.: Anita Au, Assistant Regional Planner, at (213) 236-1874 or au@scag.ca.gov. Thank you.

Sincerely,

Ping Chang
Ping Chang
Acting Manager, Compliance and Performance Monitoring

[1] Lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the 2016 RTP/SCS for the purpose of determining consistency for CEQA. Any "consistency" finding by SCAG pursuant to the IGR process should not be construed as a determination of consistency with the 2016 RTP/SCS for CEQA.

COMMENTS ON THE NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE RANCHO LOS AMIGOS SOUTH CAMPUS PROJECT [SCAG NO. IGR9358]

CONSISTENCY WITH RTP/SCS

SCAG reviews environmental documents for regionally significant projects for their consistency with the adopted RTP/SCS. For the purpose of determining consistency with CEQA, lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the RTP/SCS.

2016 RTP/SCS GOALS

The SCAG Regional Council adopted the 2016 RTP/SCS in April 2016. The 2016 RTP/SCS seeks to improve mobility, promote sustainability, facilitate economic development and preserve the quality of life for the residents in the region. The long-range visioning plan balances future mobility and housing needs with goals for the environment, the regional economy, social equity and environmental justice, and public health (see http://scagrtpscs.net/Pages/FINAL2016RTPSCS.aspx). The goals included in the 2016 RTP/SCS may be pertinent to the proposed project. These goals are meant to provide guidance for considering the proposed project within the context of regional goals and policies. Among the relevant goals of the 2016 RTP/SCS are the following:

SCAG 2016 RTP/SCS GOALS	
RTP/SCS G1:	*Align the plan investments and policies with improving regional economic development and competitiveness*
RTP/SCS G2:	*Maximize mobility and accessibility for all people and goods in the region*
RTP/SCS G3:	*Ensure travel safety and reliability for all people and goods in the region*
RTP/SCS G4:	*Preserve and ensure a sustainable regional transportation system*
RTP/SCS G5:	*Maximize the productivity of our transportation system*
RTP/SCS G6:	*Protect the environment and health for our residents by improving air quality and encouraging active transportation (e.g., bicycling and walking)*
RTP/SCS G7:	*Actively encourage and create incentives for energy efficiency, where possible*
RTP/SCS G8:	*Encourage land use and growth patterns that facilitate transit and active transportation*
RTP/SCS G9:	*Maximize the security of the regional transportation system through improved system monitoring, rapid recovery planning, and coordination with other security agencies**
	**SCAG does not yet have an agreed-upon security performance measure.*

For ease of review, we encourage the use of a side-by-side comparison of SCAG goals with discussions of the consistency, non-consistency or non-applicability of the goals and supportive analysis in a table format. Suggested format is as follows:

SCAG 2016 RTP/SCS GOALS	
Goal	Analysis
RTP/SCS G1: *Align the plan investments and policies with improving regional economic development and competitiveness*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
RTP/SCS G2: *Maximize mobility and accessibility for all people and goods in the region*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
etc.	etc.

2016 RTP/SCS STRATEGIES

To achieve the goals of the 2016 RTP/SCS, a wide range of land use and transportation strategies are included in the 2016 RTP/SCS. Technical appendances of the 2016 RTP/SCS provide additional supporting information in detail. To view the 2016 RTP/SCS, please visit: http://scagrtpscs.net/Pages/FINAL2016RTPSCS.aspx. The 2016 RTP/SCS builds upon the progress from the 2012 RTP/SCS and continues to focus on integrated, coordinated, and balanced planning for land use and transportation that the SCAG region strives toward a more sustainable region, while the region meets and exceeds in meeting all of applicable statutory requirements pertinent to the 2016 RTP/SCS. These strategies within the regional context are provided as guidance for lead agencies such as local jurisdictions when the proposed project is under consideration.

DEMOGRAPHICS AND GROWTH FORECASTS

Local input plays an important role in developing a reasonable growth forecast for the 2016 RTP/SCS. SCAG used a bottom-up local review and input process and engaged local jurisdictions in establishing the base geographic and socioeconomic projections including population, household and employment. At the time of this letter, the most recently adopted SCAG jurisdictional-level growth forecasts that were developed in accordance with the bottom-up local review and input process consist of the 2020, 2035, and 2040 population, households and employment forecasts. To view them, please visit http://www.scag.ca.gov/Documents/2016GrowthForecastByJurisdiction.pdf. The growth forecasts for the region and applicable jurisdictions are below.

	Adopted SCAG Region Wide Forecasts			Adopted County of Los Angeles Forecasts		
	Year 2020	**Year 2035**	**Year 2040**	**Year 2020**	**Year 2035**	**Year 2040**
Population	19,663,000	22,091,000	22,138,800	10,326,200	11,145,100	11,514,800
Households	6,458,000	7,325,000	7,412,300	3,493,700	3,809,300	3,946,600
Employment	8,414,000	9,441,000	9,871,500	4,662,500	5,062,100	5,225,800

	Adopted City of Alhambra Forecasts		
	Year 2020	**Year 2035**	**Year 2040**
Population	85,300	87,800	88,800
Households	30,300	31,400	31,900
Employment	30,500	32,300	33,500

MITIGATION MEASURES

SCAG staff recommends that you review the Final Program Environmental Impact Report (Final PEIR) for the 2016 RTP/SCS for guidance, as appropriate. SCAG's Regional Council certified the Final PEIR and adopted the associated Findings of Fact and a Statement of Overriding Considerations (FOF/SOC) and Mitigation Monitoring and Reporting Program (MMRP) on April 7, 2016 (please see: http://scagrtpscs.net/Pages/FINAL2016PEIR.aspx). The Final PEIR includes a list of project-level performance standards-based mitigation measures that may be considered for adoption and implementation by lead, responsible, or trustee agencies in the region, as applicable and feasible. Project-level mitigation measures are within responsibility, authority, and/or jurisdiction of project-implementing agency or other public agency serving as lead agency under CEQA in subsequent project- and site- specific design, CEQA review, and decision-making processes, to meet the performance standards for each of the CEQA resource categories.

Re: Comments on Notice of Preparation of a Draft EIR for the Rancho Los Amigos South Campus Project

Dear Mr. Ramirez:

Thank you for the opportunity to provide input on the County of Los Angeles, Department of Public Works' preparation of an Environmental Impact Report (EIR) for the Rancho Los Amigos South Campus Project (hereinafter 'Project'). The County is proposing to develop three new administrative buildings and a new parking structure within the Rancho Los Amigos South Campus. The Project will also include demolishing various buildings throughout the South Campus. The Rancho Los Amigos Campus is located within the southwestern portion of the City of Downey.

The intent of this letter is to ensure that the County of Los Angeles considers all potential environmental impacts that the development of the Rancho Los Amigos Campus may have on the City of Downey, its residents, and the surrounding communities. In preparing the EIR, the following areas of environmental concern should be analyzed and mitigated if significant impacts are found:

Aesthetics

The Rancho Los Amigos South Campus has played a critical role in the development of the County of Los Angeles. Its history includes its use as a poor farm and a polio hospital. Improper architectural design can have a negative aesthetic impact to the surrounding area. Architectural and building massing guidelines should be

developed in a manner that reflects the aesthetic history of the site, as well as, that are consistent with the surrounding area. Particular concern should be paid to the design of the nine (9) story parking structure to ensure it is architecturally compatible with the other buildings in the development area. Proper design will reduce the appearance of this large structure.

In addition to the architectural design and massing of the structures, all proposed lighting should be analyzed to safeguard against light and glare impacts to the surrounding area. While proper lighting is needed for pedestrian safety and easy of maneuverability, lighting should be designed, positioned, and/or shielded so it does not illuminate surrounding properties or create excessive glare from the site.

Air Quality

The project site is located within the South Coast Air Basin, which is a nonattainment area under the National Ambient Air Quality Standard (NAAQS) and the California Ambient Air Quality Standard (CAAQS). Accordingly, AQMD standards alone should not be used when determining air quality impacts. Any increase in the degradation of air quality should be considered significant and mitigation measures should be identified to address environmental effects. Air quality impacts can be generated from construction and long-term use of the site. The EIR should identify all potential sources of air quality impacts, such as demolition of the buildings, construction of new buildings, and operation of the site.

Proper mitigation measures should be identified to ensure construction equipment and activities comply with the California Air Resources Board's and the South Coast Air Quality Management District's regulations. This should include mitigation measures that comply with South Coast Air Quality Management District's Rule 403 for fugitive dust control. Furthermore, according to the NOP, the County of Los Angeles is proposing to demolish approximately 113 buildings on site. These buildings pre-date 1970 and most likely contain asbestos. The EIR should identify mitigation measures for the demolition of these buildings to prevent air quality impacts created from the accidental release of asbestos.

Biological Resources

Rancho Los Amigos South Campus has become notorious for its population of feral cats, raccoons, possums, birds, and rats. These animals have made their home in fields, trees, and the abandoned buildings of the South Campus for decades. A complete and sudden eradication of these animals could be detrimental to the natural environment of the South Campus, particularly during breeding season. The EIR should include a biological survey of the area that identifies the species and number of animals living in the South Campus. Mitigation measures should be developed to minimize impacts to wildlife resources, including relocation of animals where feasible.

Similarly, the South Campus has an abundance of mature trees, including several large oak trees. The EIR should include a tree survey that lists the age of all mature trees and identifies all potentially historically significant trees. Mature landscape should be preserved in place, where feasible. In any case, all historically significant trees shall be preserved in place.

Cultural Resources

Originally established in 1888, Rancho Los Amigos was used to care for indigent patients from the Los Angeles County Hospital. During the ensuing century, Rancho Los Amigos went through several transitions, including serving as a mental health care facility, respiratory therapy center, and eventually becoming the premiere rehabilitation hospital that is in use today. Given the contribution that the project site has played in the development of Los Angeles County, it is without doubt that the site contains historical and/or cultural resources. A historical analysis should be performed to determined which buildings are contributing factors to the historical significance of the site. Mitigation measures should be developed to protect these historically significant buildings and determine how they can be reused. Likewise, landscaping can be a contributing factor to the historically significance of the site. The EIR should include a tree survey that lists the age of all mature trees and identifies all potentially historically significant trees. All historically significant trees shall be preserved in place.

An analysis of historical documents and aerial photographs should be performed to determine potential archeological resources that could be uncovered. Mitigation measures should be developed to address the preservation of archeological resources if found. Additionally, the County should conduct the required AB 52 tribal consultation, to determine any potential mitigation measures to address Native American resources.

A 2003 LA Times article (http://articles.latimes.com/2003/dec/07/local/me-then7) noted, "*When many patients died, they were buried in paupers' graves at the southwest corner of what is now Downey, between Garfield Avenue and the Union Pacific Railroad tracks.*" The EIR should investigate whether these graves have been moved or if they still exist on the site. In either case, mitigation measures should be included in case any grave sites are discovered.

Hazards and Hazardous Material

The EIR should study the potential impact on any proposed materials that may be transported onto and out of the South Campus once the County buildings are in full operation. Specifically, the Crime lab and Internal Services Department may utilize hazardous materials. These should be identified in the EIR and include mitigation measures for the transportation of the materials on and off the site, as well as on-site storage.

Hydrology and Water Quality

All storm-water runoff should comply with the Los Angeles County MS4 permit. This should include the entire South Campus and proposed parking areas. Being that infiltration is the preferred method within the City of Downey to address storm-water runoff, the EIR should include measures that are in-line with this direction. The final design of the retention and detention basins should be reviewed with the City to ensure they do not create an aesthetic impact.

Land Use/Planning

The City of Downey currently has a grant from Los Angeles Metropolitan Authority to create a specific plan for Transit-Oriented Development at the Rancho Los Amigos South Campus. This is due to the proposed West Santa Ana Branch Transit Corridor, which will provide a new light-rail station along the southern portion of the South Campus, along Gardendale St. With up to 3,000 employees at the site, there is a potential need for non-County support uses (coffee shops, restaurants, etc.), which will be subject to the City of Downey's zoning regulations. Mitigation measures should identify these non-County uses and set a method to ensure they obtain all required City approvals.

Pursuant to Government Code 65402(b), the County shall not "*...construct or authorize a public building or structure, in another county or within the corporate limits of a city, if such city or other county has adopted a general plan...*" The EIR should include mitigation measures to ensure the County of Los Angeles obtain a General Plan Consistency Finding from the City of Downey prior to the commencement of construction.

Noise

The South Campus is currently abandoned and has been vacant for over 20 years. As a result, the Rancho South Campus does not contribute to ambient noise levels. The EIR should include an analysis of all potential short-term (construction) and long-term (operation) noise impacts. Noise levels along Gardendale St., Garfield Avenue, Imperial Highway, Paramount Blvd., and Erickson Ave should be included in the study as these are direct pathways onto the site. Mitigation measures should be identified to reduce construction noise impacts on the surrounding residential areas.

Public Services

Recently, there has been confusion and miscommunication on which agency (City of Downey Police Department or Los Angeles County Sherriff's Department) is responsible for security for the Rancho South Campus. The EIR should clearly identify which agency will take the lead on patrolling, responding to alarms, and responding to 911 calls. Where the City of Downey Police Department will take the lead, the EIR should analyze impacts to City's police resources and identify any mitigation needed to eliminate all impacts.

The City of Downey Fire Department will be responsible to provide fire services to the Rancho South Campus. The EIR should analyze how the development of the Project will impact the City's Fire Department. This should include, but may not be limited to, emergency medical calls, and potential staffing and equipment limitations on responding to fire emergencies at the site.

Recreation

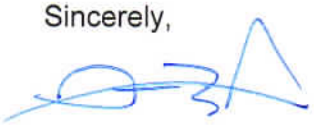
The City of Downey has concluded negotiations with the County of Los Angeles to construct a new sports center, which will feature three soccer fields on the South Campus (known as the Rancho Los Amigos South Campus Sports Center). These fields will ideally be occupied by soccer camps and the City of Downey Parks and Recreation Department. The EIR should include any potential impacts the development of the County buildings will have on sports center and should include mitigation measures on any influx of pedestrian traffic during work hours and during soccer events. It should also touch on any potential impacts for a spike in noise, traffic, and impacts on air quality during times when County buildings may be fully occupied at the same time as events are occurring at the sports center. Furthermore, mitigation measures should be identified to ensure County employees and visitors do not park in the sports center parking lots.

Transportation/Traffic

One of the most critical components of the EIR is the transportation/traffic analysis. The traffic study should analyze the following intersections:

- Garfield Ave. at Gardendale St.
- Garfield Ave at Imperial Hwy
- Paramount Blvd. at Gardendale St.
- Downey Ave. at Gardendale St.
- Brookshire Ave. at Gardendale St.
- Lakewood Blvd. at Gardendale St.
- Imperial Hwy. at Old River School Rd.
- Imperial Hwy. at Paramount Blvd.

The analysis should study the AM and PM peak hours on a typical weekday for the existing traffic conditions; the existing traffic conditions, with background growth projected out to opening year; and existing traffic, with background growth projected out to opening year and anticipated traffic generated by the project.



In addition to traffic conditions, the EIR should analyze parking for the proposed County buildings, potential parking impacts and parking spill over onto the local streets. Finally, the transportation analysis should study potential bicycle parking and on-site bicycle parking needs. The City of Downey has recently adopted a Bicycle Master Plan and added bicycle lanes to Gardendale Street, which could be impacted by the new development.

Utilities/Service Systems

As identified in the NOP, the proposed Project will include constructing approximately 650,000 s.f. of building space and adding 3,000 new employees the Rancho South Campus. The EIR should analyze all wet and dry utilities to ensure there is sufficient capacity to accommodate the new buildings. Specifically, pursuant to Water Code section 10910 et seq., a Water Supply Assessment (WSA) shall be performed to ensure there is sufficient water supply to service the site.

If you have any questions or would like to discuss these concerns further, please feel free to call me at (562) 904-7154 or email me at dblumenthal@downeyca.org.

Sincerely,

David Blumenthal
City Planner

RE: Rancho Los Amigos South Campus Project NOP

Dear Mr. Ramirez:

On behalf of the Los Angeles Conservancy, thank you for the opportunity to comment on the Notice of Preparation (NOP) for the Rancho Los Amigos South Campus Project and the proposed demolition of the entire California Register-listed Rancho Los Amigos Historic District. Given the rarity and historical significance of this resource, we are deeply disappointed in the County's current direction, especially as we have worked previously with the County throughout the past ten years to identify ways to repurpose this campus. The Conservancy and our many supporters are strongly concerned about the loss of this important community asset. Rancho Los Amigos has long been on the Conservancy's radar and we consider it highly significant to the heritage of all of Los Angeles County.

With wholesale demolition proposed, a significant adverse impact will occur; therefore the County will need to consider potentially feasible alternatives to demolition. As required by the California Environmental Quality Act (CEQA), the Draft Environmental Impact Report (EIR) shall fully consider and include a range (more than one) of preservation alternatives that could accomplish the goals of the project while retaining the continued eligibility of the historic district.

I. Historical Significance of Rancho Los Amigos

The South Campus of Rancho Los Amigos contains the Rancho Los Amigos Historic District (historic district), which was determined eligible for listing in the National Register of Historic Places by a consensus through the Section 106 process in 1995 and subsequently listed in the California Register of Historical Resources in 1998.[1]

The historic district was deemed significant under Criterion A of the National Register for its association with turn-of-the-century health care in Los Angeles County's indigent population, and for its later treatment of those in Los Angeles County with chronic illnesses, both mental and physical.

[1] County of Los Angeles Data Center, Draft EIR. April 2010. Section 3.4-10.

The historic district contains a mix of buildings that housed both staff and patients, and a range of supporting services that collectively chart Rancho Los Amigos' transformation from a Poor Farm and rehabilitative care facility into a hospital to house long-term invalid patients. Additionally, the site plan and placement of the various structures, often grouped by particular uses, reflects the operation of the facility and the relationships the individual structures and their uses had with one another.

Of the 103 buildings, structures and features identified in the district at the time of the determination, 78 were determined to be district contributors. In 1998, the 78 buildings, structures and a Moreton Bay fig tree were automatically listed in the California Register. Additionally, Rancho Los Amigos is one of the six historical resources recognized in Downey Vision 2025, the City of Downey's General Plan, as being a significant historical resource. The Design Element of the General Plan contains a policy dedicated to preserving the city's cultural resources, calling for specific efforts such as:

- Program 8.4.2.3: Promote the preservation and restoration of older structures, and
- Program 8.4.2.4: Encourage adaptive re-use of older structures

In recent years and as part of previous projects proposed by the County of Los Angeles, the campus has been repeatedly evaluated and determined to retain eligibility as a historic district. In April 2010, an updated historic resource evaluation of the historic district prepared for the County of Los Angeles Data Center project draft EIR concluded that, of the 78 original district contributors, 72 remained extant with 68 retaining sufficient integrity to continue contributing to the historic district.

II. Project Description, Purpose and Need

According to the NOP, the project proposes to develop three new County administrative buildings and a parking structure in a 28-acre Development Area within the overall 74-acre South Campus. Although the proposed new construction is limited to the 28-acre Development Area, the entire South Campus has been identified as the "Project Site."

The project description cites a total square footage of up to approximately 650,000 square feet of office space in new construction comprised of new facilities to house Internal Services Department (ISD) Headquarters, Probation Department Headquarters, and a Sherriff's Department Crime Laboratory. These spaces are to be filled by approximately 3,000 County-budgeted positions that are currently at other existing County facilities location within the region. A stated goal of the project is to achieve the Leadership in Energy and Environmental Design (LEED) gold rating or better.

To make room for the new construction, the project is proposing the demolition of all 51 existing buildings and structures within the 28-acre Development Area. The NOP also contemplates the demolition of some or all of the remaining structures of the South Campus, even though no further construction is being proposed and evaluated in the current environmental review.

Several questions have arisen as we attempt to understand the cumulative scope of the County's long range plans for the South Campus and the proposed, wholesale destruction of the California Register-listed historic district.

The Conservancy has previously worked closely with the County in our review of several past project proposals for the South Campus at Rancho Los Amigos, including the Data Center Project in 2010-13 and the Rancho Los Amigos South Campus Sports Center in 2016. Discussion of ways to retain contributing resources within the historic district factored into both conversations, so we're very surprised at the direction the County is currently taking by proposing the complete demolition of the historic district.

While we understand the County's goal of consolidating particular administrative offices to the Rancho Los Amigos property and have reviewed the program summary and formulas for establishing the desired square footage for each headquarters in the "Imperial Highway Relocation Feasibility Analysis," we question the need for the desired square footage and suggested footprints to house staff in large-scale structures. Given the County's responsibility, per CEQA, to reduce project impacts to historic resources when possible, we ask why a creative approach that could provide the desired square footage through the adaptive reuse of numerous small-scale structures is not being considered. Such a creative approach is not without precedent and it could both revitalize long vacant historic structures while advancing the project's goal of achieving a LEED gold rating.

III. Project cannot be subdivided into small sub-projects to eliminate potentially feasible alternatives from consideration

The proposed project impacts the historic resource which is the California Register historic district, which comprises the majority of the 74-acre South Campus. Why is the County instead identifying and primarily focusing on a sub-project area, in this case a 28-acre Development Area? The boundaries for this sub-area appear to be arbitrary and include a portion but not all of the historic district resources, in this case 51 structures. Why is the County not looking at the entire 74-acre South Campus as the project scope, and as an effort to consider alternatives and avoid impacts to historic resources? This is curious given other parts of the campus might be better positioned and capable of meeting the County's needs, where open space currently exists and could allow for larger building footprints of new construction while avoiding historic buildings.

If the project presented in this NOP is part of a larger, multi-phase development effort that the County is anticipating for the South Campus, why is the County attempting to circumvent the CEQA process through project splitting? This larger phased project is clearly contemplated in the Imperial Highway Relocation Feasibility Analysis (Feasibility Analysis), dated August 2015 and developed for the County by Gensler. Our understanding is this report came about through a motion in 2014 by Supervisor Knabe, instructing the County to "complete a 90-day Feasibility Analysis and Preliminary space plan for the relocation of County Departments located in the facilities at 9150 & 9300 E. Imperial Highway in Downey, CA."[2]

The consultant apparently did not fully factor in historic resources as the report does not contemplate or understand the mandate under CEQA as it states, "this report find[s] no significant obstacles to relocating Internal Services Headquarters and the Probation Headquarters to the Rancho Los Amigos South Campus in Downey." In part, this may be due to Gensler's recommendation to the County to adaptively reuse some of the historic buildings, a direction the County is apparently now disregarding. In August of 2016 the County authorized the Rancho Los Amigos South Campus Project to move forward and award a consultant agreement. Has an updated version of the August 2015 Feasibility Analysis, or a new study, been completed for the County?

While it appears that the Feasibility Analysis did not specifically evaluate whether historic district contributors might be adaptively reused for any of the new facilities being proposed in the NOP, the Gensler study notably does suggest that "several of the buildings may feasibly be converted to office use to reduce the amount of new construction needed" and that such a feasibility analysis "will require a more

[2] *Imperial Highway Relocation Feasibility Analysis*, Executive Report, C. Project Scope. August, 2015. Los Angeles County Department of County Works.

detailed programming effort to fully assess."[3] The County, as lead agency, is required to evaluate alternatives that could reduce project impacts to a less than significant level where possible and should prioritize the preparation of this analysis. The consultant further recommends "renovating approximately 240,247 GSF of the existing buildings to be used as adaptive reuse amenity spaces for the planned development."[4]

Under CEQA Guidelines Section 15378, a "project" is defined as "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment…" An accurate and complete project description is essential to a legally sufficient EIR:

> A curtailed or distorted project description may stultify the objectives of the [CEQA] reporting process. Only through an accurate view of the project may affected outsiders and public decision-makers balance the proposal's benefit against its environmental cost, consider mitigation measures, assess the advantage of terminating the proposal (i.e., the 'no project' alternative) and weigh other alternatives in the balance.[5]

Accordingly, a public agency cannot segment a single project into smaller individual sub-projects in order to avoid reviewing the impacts of the project as a whole, or to eliminate potentially feasible alternatives from consideration.[6] The draft EIR must acknowledge whether future phases of development are indeed anticipated for the South Campus. If that is the case, and the County is not yet ready to proceed with the evaluation of project proposals for other portions of the South Campus, then the Specific Plan which the County and the City of Downey have jointly commenced should evaluate all of the 74-acre campus along with the anticipated project phases so impacts to the entire historic district can be considered from the outset.

IV. Draft EIR Must Evaluate a Range of Potentially Feasible Preservation Alternatives

A key policy under CEQA is the lead agency's duty to "take all action necessary to provide the people of this state with historic environmental qualities and preserve for future generations examples of major periods of California history."[7] To this end, CEQA requires public agencies to deny approval of a project with significant adverse effects when feasible alternatives or feasible mitigation measures can substantially lessen such effects."[8]

Courts often refer to the EIR as "the heart" of CEQA because it provides decision makers with an in-depth review of projects with potentially significant environmental impacts and analyzes a range of alternatives that reduce those impacts.[9] Based on objective analyses found in the EIR, agencies "shall mitigate or avoid the significant effects on the environment whenever it is feasible to do so."[10] The lead agency cannot

[10] Public Resource Code, Sec. 21002.1.

merely adopt a statement of overriding considerations and approve a project with significant impacts; it must first adopt feasible alternatives and mitigation measures.[11]

In the past the County has committed itself to the review of preservation alternatives for previous projects proposed for the South Campus of Rancho Los Amigos, and the environmental review of this current proposed project should be no different. There is precedent for the successful adaptive reuse of buildings comprising historic campuses, such as the Presidio in San Francisco's Golden Gate Park.

The South Campus Conceptual Site Plan included in the Feasibility Analysis locates the proposed ISD Headquarters, Probation Department Headquarters, and parking structure serving both buildings in the southwest portion of the campus in what is referred to as Development Site C. Development Site C currently contains a number of non-contributors to the historic district and far fewer contributing structures than the Development Area proposed as the project site in the NOP. Additionally, the same feasibility analysis contains suggestions for creative adaptive reuse of the historic structures in the historic district, including: a visitor/historic center, a fitness center, a café/coffee house, a dining hall, a daycare facility, a farmers market, a conference center, and even a dry cleaners and a pharmacy.

About the Los Angeles Conservancy:
The Los Angeles the Conservancy has the largest membership of any local preservation organization in the U.S., with nearly 6,000 members throughout the Los Angeles area. Established in 1978, the Conservancy works to preserve and revitalize the significant architectural and cultural heritage of Los Angeles County through advocacy and education.

Thank you for the opportunity to comment on the NOP for the Rancho Los Amigos South Campus Project. We would like to meet with the County soon before the draft EIR is out to discuss further. Please do not hesitate to contact me at (213) 430-4203 or afine@laconservancy.org should you have any questions or concerns.

Sincerely,

Adrian Scott Fine
Director of Advocacy

3.4.2.3 Historical Resources

The proposed project site is located within the boundaries of the Rancho Los Amigos Historic District (Historic District) (Figure 3.4.2.3-1, *Rancho Los Amigos Historic District*). This determination was the result of a records search for the proposed project area conducted at the SCCIC, which included relevant data from the HRI database,[26] historical research, and consultation with the Office of Historic Preservation (OHP), which revealed that two previously prepared historic survey reports documented the Historic District.[27,28]

In 1995, the Rancho Los Amigos Historic District was determined eligible for inclusion in the NRHP under Criterion A (an association with events that have made a significant contribution to the broad patterns of history) for "its association with the turn-of-the century health care of Los Angeles County's indigent population and for its later treatment of those in Los Angeles County with chronic illnesses, both mental and physical."[29] The period of significance for the Historic District was determined to be 1888 to 1945.[30] Of the 103 buildings, structures, and features identified in the district at the time of the determination, 78 were determined to be district contributors.[31] In 1998, the 78 buildings, structures, and a Moreton Bay fig tree were automatically listed in the CRHR.

Of the 78 contributors that were identified within the Historic District, 72 are still extant and 68 have been determined to retain sufficient integrity to continue to contribute to the Historic District. One of the contributors, Patient Ward / Building 211 (LACO No. 1199), has been previously approved for demolition under a related project, Link Road, as part of the Rancho Business Center Specific Plan 88-1 (SP 88-1). Seventeen (17) of the Historic District contributing features are located

[27] McAvoy, C. July 1995. *Survey of Earthquake Damaged Properties for Purposes of Section 106 Review, Determination of Eligibility*. Prepared by: Historic Resources Group. On file at the Office of Historic Preservation, Sacramento, CA.

[28] Post/Hazeltine Associates. October 2003. *Intensive Historic Structures/Sites Survey for the South Campus of Rancho Los Amigos Rehabilitation Center, Los Angeles County, California*. Prepared for: County of Los Angeles. The Historic District was assessed for historic significance twice, first in 1995 and later in 2004. The 1995 study determined the Historic District to be eligible for listing as a historic district in the NRHP, and as a result, the Historic District was listed in the CRHR when regulations implementing the CRHR were adopted in 1998. The subsequent 2004 study limited eligibility to six individual buildings and complexes; however, the 1995 finding was a formal, consensus-based determination of eligibility, and takes precedence over the 2004 survey.

NOTE:

1. Construction dates to calculate the age of contributing resources are based on the results of the current survey and were calculated using historical aerials, maps, and personal narratives. The current year-built dates may contradict previously estimated construction years; however, the LACO numbers have not changed.

Rancho Los Amigos is one of the six historical resources recognized by Downey Vision 2025 as being significant. In addition to the general importance placed on Rancho Los Amigos, particular emphasis is placed on two of its resources: the Harriman Building (located on the north campus, 2,120 feet north of the proposed project site) and the Moreton Bay fig tree located 149 feet south of the proposed project site.

Historic Context

Begun in 1887/1888 as the new County Poor Farm, Rancho Los Amigos upon its inception was an agricultural facility that provided work, housing, and medical care for the indigent. The original purchase of 124.4 acres in the vicinity of the town of Downey, founded in 1873, was graded for roads, supplied with water from an artesian well, and improved with a Refectory Building, the

North and South Wards, an aviary, and an Office Building by 1889. During the following decade, barns and ancillary buildings with agricultural functions, a freight and passenger railroad depot, a combined bathhouse and laundry facility, and an additional ward were added to the campus. All these improvements, with the exception of the aviary that was moved in 1931, are no longer extant.

The County's goal was to make the Poor Farm as self sufficient as possible through the planting of crops and the raising of dairy cows, chickens and pigs. The inmates at the Poor Farm largely provided the labor for the agricultural efforts, with the assistance of several farm supervisors. Inmates also tended to the numerous trees, lawns and gardens, which decorated the farm landscape. The agricultural program at the Poor Farm was highly successful; throughout the first half of the twentieth century, it was a nationally recognized institution in the fields of cultivation and scientific breeding as a successful producer of prized crops and livestock.

In addition to operating a successful agricultural enterprise, the Poor Farm gradually expanded its role as a County medical facility. By the 1910s, an increasing number of inmates with chronic medical disorders were being admitted to the Poor Farm, prompting administrators to employ a staff of physicians and nurses to treat them. This surge in patients and subsequently employees created the impetus for expanded development at the Poor Farm. Many of the extant buildings were constructed during this surge in growth, which occurred primarily during the first quarter of the 20th century. By the end of the 1920s, the Poor Farm environment reflected its transition from a rehabilitative care facility for indigents into a hospital to house long-term invalid patients.

During the 1930s, funding for the Poor Farm was significantly reduced as a result of the Depression, slowing ongoing expansion efforts. Improvements during this period primarily consisted of maintenance to existing buildings; nonetheless, several significant buildings were erected, including the Harriman Building (not within the Historic District), which became the first modern medical facility on the property grounds. Despite the lack of funds, the Poor Farm managed to maintain all of its existing services and features, including its landscaping department, thanks to the supply of labor provided by the increasing number of admitted inmates. One change that required no funding occurred in 1932; the County changed the official name from County Poor Farm to "Rancho Los Amigos", which means the Friend's Ranch or Ranch of the Friends. This name change served as public notice of the evolving medical mission of the facility, as well as helping to shed the stigma associated with the title of "Poor Farm."

By late 1937, Rancho Los Amigos was treating close to 3,000 patients annually. The average patient age had been dramatically reduced, due to the 1933 enactment of the National Social Security Act, which gave individuals over the age of 65 a $35 monthly allowance. This allowed these individuals to leave institutional care and provide for themselves. Their departure freed space for chronically ill children to be admitted to the new medical center.[32] This shift in types of patients propelled Rancho Los Amigos into becoming a hospital facility. The majority of patients could no longer contribute to the production of the farm, which increased the cost of patient care and forced the gradual phasing out of farming operations. This was confirmed in an April 14, 1941, *Los Angeles Times* article, which stated:" For several years the institution has been more of a convalescent hospital than a county farm, therefore the persons cared for there are designated as patients rather than inmates."[33]

---

[32] *Los Angeles Times*. "County Moving Sick Children." 4 October 1937. p. A18.

[33] *Los Angeles Times*. "Poor Farm's Cost Declines." 14 April 1941. p. 26.

The next important shift in the development of Rancho Los Amigos came in 1944, when its doctors began treating polio patients during the mass outbreak in the County. As the epidemic continued for several years, Rancho Los Amigos became a well-known polio rehabilitation center and eventually the world's leading post-polio respiratory center.[34] Many of the existing buildings underwent first floor improvements to accommodate polio patients. Most of the polio ward staff became polio treatment experts who taught their methods to other medical professionals all over the country.

With the waning of the polio epidemic by the 1950s, Rancho Los Amigos made its transition to rehabilitative care through the development of a cutting edge rehabilitative program. By the end of the decade Rancho Los Amigos was recognized as a quality medical facility and the farming facilities of the old Poor Farm were phased out.[35] Today, Rancho Los Amigos National Rehabilitation Center remains one of five hospitals in the Los Angeles County Department of Health Services and has become a leading center for rehabilitative care.

Resource Characterization

The proposed project area contains 17 buildings and structures that were previously identified as contributors to the Rancho Los Amigos Historic District and are historical resources as defined by CEQA.

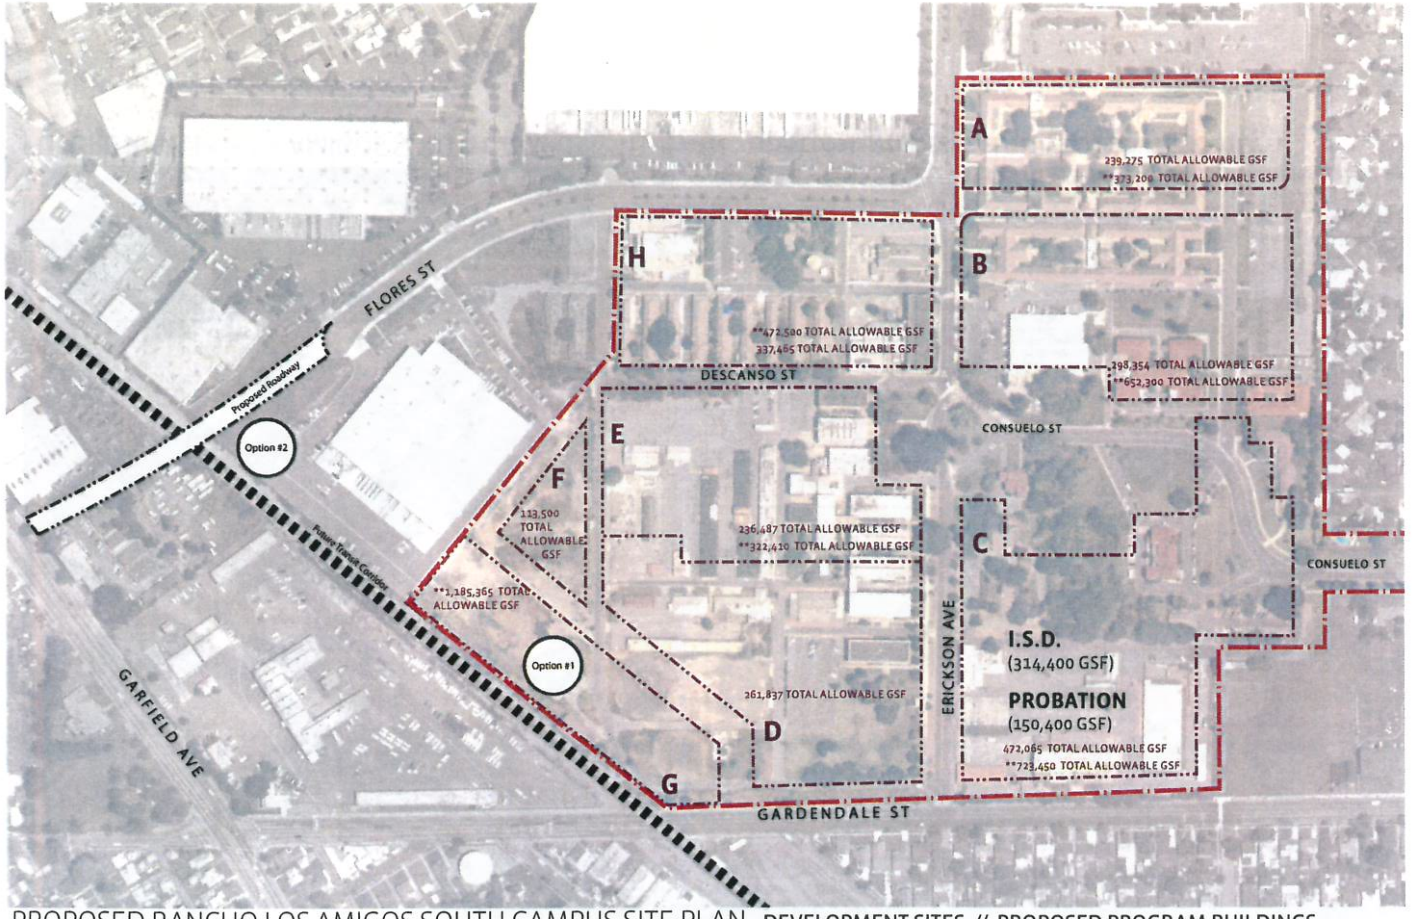
Staff Cottages (LACO Nos. 1121 and 1123)

The single-story, Craftsman style, Staff Cottages (LACO Nos. 1121 and 1123) were built in 1921 and 1924, respectively, during the pivotal transition period in the 1920s when Rancho Los Amigos evolved from a poor farm and rehabilitative care facility for indigents into a hospital to house long-term invalid patients. The Staff Cottages are significant contributing features to the Historic District as they exhibit integrity as an important property type associated with the Historic District, which supported the Rancho Los Amigos function as a residential medical care facility.

Patient Wards (LACO Nos. 1189–1199)

The 11 single-story, Craftsman-influenced Patient Wards located within the proposed project site were completed between 1923 and 1928. The Patient Wards are a significant contributing feature to the Historic District, as they exhibit integrity as a critical property type associated with the Historic District and illustrate the transition of the poor farm from a rehabilitative care facility for indigents into a hospital to house long-term invalid patients. The patient wards collectively retain a substantial level of integrity.

Kitchen and Dining Building (LACO No. 1295)



The one-story Kitchen and Dining Building was constructed in 1927 and displays stripped Classical Revival styling. The Kitchen and Dining Building is a significant contributing feature to the Historic District, as it exhibits architectural character and quality, and it illustrates the use and significance of the Historic District as a medical care facility during the period of significance. The building retains a substantial level of integrity.

ENVIRONMENTAL IMPACT REPORT

PUBLIC SCOPING MEETING

WEDNESDAY, AUGUST 30, 2017

5:39 P.M. - 7:04 P.M.

REPORTER'S TRANSCRIPTION OF HEARING

BARBARA J. RILEY COMMUNITY & SENIOR CENTER
7810 QUILL DRIVE
DOWNEY, CALIFORNIA 90242

REPORTER: LAURA D. GUERRERO, CSR NO. 7684

DOWNEY, CALIFORNIA

WEDNESDAY, AUGUST 30, 2017, 5:39 P.M.

* * *

LUIS RAMIREZ: SO GOOD AFTERNOON. WE WANT TO THANK YOU FOR COMING TO THE PUBLIC SCOPING MEETING FOR THE ENVIRONMENTAL IMPACT REPORT THAT'S GOING TO BE PREPARED FOR THE PROPOSED RANCHOS LOS AMIGOS SOUTH CAMPUS PROJECT. I WANT TO THANK THE CITY FOR HOSTING US IN THE BUILDING TODAY. LET ME MAKE SURE THIS WORKS.

UP ON THE SCREEN IS THE ADDENDUM THAT WE'RE GOING TO BE GOING OVER TONIGHT. WE'RE GOING TO -- WE'RE GOING TO START WITH SOME INTRODUCTIONS AND GO OVER THE PURPOSE OF TONIGHT'S MEETING. WE ARE GOING TO GO OVER A PROJECT OVERVIEW, INCLUDING BACKGROUND INFORMATION THAT LED TO THE -- THE PROJECT. WE'RE GOING TO GO OVER THE ENVIRONMENTAL REVIEW PROCESS, AND THEN WE'RE GOING TO OPEN UP THE FLOOR TO RECEIVE PUBLIC COMMENTS; AND ONCE WE'RE DONE WITH PUBLIC COMMENTS, WE'RE GOING TO HAVE AN OPEN HOUSE WHERE YOU'RE GOING TO HAVE THE OPPORTUNITY TO REACH OUT TO THE STAFF THAT'S HERE AND ASK ANY QUESTIONS THAT YOU MAY HAVE REGARDING THE PROJECT THAT DO NOT GET ANSWERED DURING THE PRESENTATION.

SO MY NAME IS LUIS RAMIREZ AND I AM A PROGRAM MANAGER WITH LOS ANGELES COUNTY OF PUBLIC WORKS; AND MY

SECTION IS OVERSEEING THE PROJECT THAT IS CURRENTLY HAPPENING OVER HERE IN THE RANCHO LOS AMIGOS HOSPITAL, AND WE'RE GOING TO BE OVERSEEING THE PROJECTS THAT ARE GOING TO BE PROPOSED FOR THE RANCHO LOS AMIGOS SOUTH CAMPUS.

WITH ME TONIGHT, I HAVE WALEED JOUZY. HE IS ONE OF THE PROJECT MANAGERS THAT HAS BEEN WORKING ON THE PLANNING OF THIS PROJECT. WE ALSO HAVE ANTHONY -- EXCUSE ME -- ANTHONY BROWER. HE IS WITH GENSLER ARCHITECTS, AND THEY HAVE BEEN ASSISTING US WITH THE PROGRAMMING FOR THE PROJECT. WE HAVE HANNAH CHEN WITH THE CEO, THE CHIEF EXECUTIVE OFFICE. THE CHIEF EXECUTIVE OFFICE ESSENTIALLY IS THE PROGRAM MANAGER FOR THE COUNTY, SO WE ARE HELPING THEM WITH THE -- WITH THE PREPARATION OF THE PROGRAM DOCUMENTS. WE ALSO HAVE OUR CONSULTANT ENVIRONMENTAL SCIENCE ASSOCIATES, OR E.S.A., AND WITH US TONIGHT IS ADDIE FARRELL. SHE'S THE PROJECT MANAGER; AND WE HAVE MARGARITA JERABEK. SHE IS OUR SENIOR ARCHITECTURAL HISTORIAN. WE HAVE JESSIE FAN, WHO HAS BEEN ASSISTING WITH THE ENVIRONMENTAL IMPACT REPORT; AND JASON SHENDER, WHO IS WORKING ON THE TRAFFIC STUDY THAT WILL BE PREPARED FOR THE PROJECT. FROM SUPERVISOR HAHN'S OFFICE, WE HAVE IVAN SULIC --

IVAN SULIC: HI.

LUIS RAMIREZ: -- JESSICA HO AND

JOCELYN OLIVARES.

JOCELYN RIVERA-OLIVARES: "RIVERA."

LUIS RAMIREZ: SORRY. "RIVERA-OLIVARES," THERE YOU GO.

AND FROM THE CITY OF DOWNEY, WE HAVE SEAN ASHTON, WHO IS MAYOR PRO TEM.

SO THE COUNTY, AS LEAD AGENCY UNDER CEQA, IS HOLDING THIS PUBLIC SCOPING MEETING TO COMPLY WITH CEQA; AND THE PURPOSE OF THE MEETING IS TO PROVIDE THE PUBLIC AND OTHER AGENCIES THE OPPORTUNITY TO PROVIDE INPUT IN THE SCOPE THAT GETS STUDIED AS PART OF THE ENVIRONMENTAL IMPACT REPORT FOR THE PROJECT. SO TONIGHT WE'RE GOING TO GIVE YOU AN OVERVIEW OF THE PROJECT, AS I MENTIONED EARLIER, THEN WE'RE GOING TO OPEN UP THE FLOOR FOR PUBLIC COMMENTS.

WHEN YOU SIGNED IN, YOU SHOULD HAVE RECEIVED A PUBLIC SPEAKER CARD. IF YOU WISH TO MAKE PUBLIC COMMENTS, PLEASE FILL IT OUT AND GIVE IT TO ONE OF THE STAFF THAT'S HERE; OTHERWISE, YOU ALSO SHOULD HAVE RECEIVED A COMMENT CARD THAT YOU CAN FILL OUT AND EITHER TURN IN TONIGHT OR MAIL IN. JUST KNOW THAT IN ORDER FOR THE COMMENTS OR QUESTIONS TO BE TAKEN INTO ACCOUNT IN THE E.I.R., THEY NEED TO BE RECEIVED BY SEPTEMBER 11TH AT 5:30 P.M.

SO THE RANCHO LOS AMIGOS CAMPUS --

JAMES FOUNTAIN: CAN WE HAVE THE LIGHTS TURNED OFF, PLEASE? IT'S REALLY HARD TO SEE IT.

LUIS RAMIREZ: SURE.

JAMES FOUNTAIN: THAT'S BETTER.

LUIS RAMIREZ: OKAY. PERFECT. SO FOR SOME REASON, THIS IS SWITCHING (INDICATING), BUT THERE WE GO.

SO THE RANCHO LOS AMIGOS CAMPUS INCLUDES BOTH THE NORTH AND SOUTH CAMPUS. WE ARE ACTUALLY IN THIS BUILDING RIGHT HERE (INDICATING), WHICH IS ADJACENT TO THE NORTH CAMPUS WHERE THE RANCHO LOS AMIGOS HOSPITAL IS CURRENTLY LOCATED. AS SOME OF YOU OR MOST OF YOU MAY KNOW, THE HOSPITAL IS ACTUALLY, CURRENTLY UNDERGOING A MAJOR CAPITAL UPGRADE. WE'RE BUILDING A NEW HOSPITAL AND ALSO A NEW OUTPATIENT FACILITY.

THE NORTH CAMPUS IS APPROXIMATELY 50 ACRES. WITHIN THE -- THE RANCHO CAMPUS THERE IS ALSO THE SOUTH CAMPUS, WHICH IS WHERE OUR CURRENT PROJECT IS PROPOSED TO BE LOCATED. THIS IS ABOUT 75 ACRES, AND THIS IS IMPERIAL HIGHWAY (INDICATING), SO THE NORTH CAMPUS IS NORTH OF IMPERIAL, AND THE SOUTH CAMPUS IS DIRECTLY SOUTH OF IMPERIAL, AND BOTH OF THEM ARE CONNECTED THROUGH ERIKSON AVENUE, WHICH RUNS PERPENDICULAR TO IMPERIAL FROM THE NORTH CAMPUS TO THE SOUTH CAMPUS.

ON THIS AERIAL (INDICATING), YOU CAN ALSO SEE THE LOCATION WHERE METRO IS PROPOSING TO -- TO INSTALL A

TRANSIT STOP FOR THE -- IT IS FOR THE WEST SANTA ANA BRANCH. THEY ARE ACTUALLY, CURRENTLY PREPARING AN ENVIRONMENTAL IMPACT REPORT FOR THAT PROJECT, AND IT IS A SEPARATE PROJECT FROM THE ONE -- FROM THE SOUTH CAMPUS PROJECT.

SO THE PROJECT SITE IS -- IT KEEPS CHANGING (INDICATING). HELLO.

SO THIS IS ACTUALLY A BLOW-UP OF THE SOUTH CAMPUS (INDICATING), SO THE PROJECT SITE INCLUDES THE ENTIRE SOUTH CAMPUS. IT IS ACTUALLY SHOWN BY THIS BLACKED-OUT LINE THAT YOU SEE HERE ON THE EXHIBIT (INDICATING); AND WITHIN THAT PROJECT SITE -- WITHIN THAT 74-ACRE SITE, THERE IS A PROPOSED DEVELOPMENT AREA WHICH IS DEPICTED HERE WITH THE WHITE-DASHED LINE (INDICATING). THE DEVELOPMENT AREA IS THE AREA WHERE WE'RE PLANNING ON -- ON CONSTRUCTING THE IMPROVEMENTS THAT ARE GOING TO BE DISCUSSED AS PART OF THE PROJECT; AND IT IS, AS I MENTIONED, APPROXIMATELY 28 ACRES.

SO TO THE NORTH, WE HAVE FLORENCE STREET, THEN WE HAVE GARDENDALE. AS I MENTIONED, ERIKSON GOES RIGHT THROUGH IT (INDICATING); AND THIS IS CONSUELO STREET (INDICATING), WHICH RUNS THROUGH THE CAMPUS AND OUT TO PARAMOUNT.

A BRIEF HISTORY OF THE SOUTH CAMPUS. IT WAS ORIGINALLY DEVELOPED BACK IN 1888 AS THE L.A. COUNTY

POOR FARM; AND IT WAS FOR INJURED, ILL AND ELDERLY INMATES, AND THERE WERE ACTUALLY PATIENTS -- BACK THEN, THEY CALLED THEM "INMATES" -- WHO COULD NOT TAKE CARE OF THEMSELVES OR HAD PEOPLE THAT COULD ASSIST IN TAKING CARE OF THEM. SO AT THE POOR FARM, ABLE-BODIED PATIENTS, ESSENTIALLY, DID FARM LABOR TO DEFRAY THE COST OF STAYING WITHIN -- WITHIN THE POOR FARM.

IN 1915, WILLIAM HARRIMAN BECAME THE SUPERINTENDENT OF THE -- OF THE FARM AND HE BEGAN TO OVERSEE A MAJOR EXPANSION OF THE FARM AND, ULTIMATELY, BEGAN THE TRANSFORMATION OF THE POOR FARM FROM THE FARM INTO THE HOSPITAL.

IN 1932, HARRIMAN SUCCESSFULLY MANAGED TO CHANGE THE NAME OF THE FACILITY FROM "THE COUNTY POOR FARM" TO "RANCHO LOS AMIGOS," AND HE DID THIS ESSENTIALLY TO SHED THE STIGMA THAT WAS ASSOCIATED WITH IT BEING A POOR FARM AND ALSO TO SIGNAL THE FACT THAT IT WAS -- IT WAS BEING DEVELOPED INTO A MEDICAL FACILITY.

IN THE MID-'50'S, RANCHO LOS AMIGOS ACTUALLY BECAME A POLIO TREATMENT CENTER.

IN THE LATER 50'S, EUGENE ERIKSON BEGAN THE RELOCATION OF THE RANCHO LOS AMIGOS HOSPITAL FROM THE SOUTH CAMPUS UP TO THE NORTH CAMPUS, WHERE IT CURRENTLY IS LOCATED.

SO IN THE 1950'S IS WHEN THE BUILDINGS BEGAN

TO BE VACATED AND SHUT DOWN; AND IN THE 1970'S AND '80'S, ESSENTIALLY, THE MAJORITY OF THE BUILDINGS WITHIN THE SOUTH CAMPUS WERE BOARDED UP AND REMAINED VACANT.

THIS IS A HISTORIC PHOTO OF THE SOUTH CAMPUS FROM 1926 (INDICATING), SO IMPERIAL HIGHWAY APPROXIMATELY RUNS ALONG IN THIS DIRECTION (INDICATING). THIS IS ERIKSON (INDICATING). THIS IS APPROXIMATELY WHERE GARDENDALE IS (INDICATING), AND THIS IS CONSUELO STREET (INDICATING), WHICH ULTIMATELY WOULD HAVE LED INTO -- INTO PARAMOUNT. AS YOU CAN SEE, THE MAJORITY OF THE BUILDINGS THAT ARE SHOWN IN THIS PHOTO STILL REMAIN WITHIN THE CAMPUS.

SO GIVEN THE HISTORIC SETTING, PORTIONS OF THE SOUTH CAMPUS HAVE BEEN DESIGNATED AS A HISTORIC DISTRICT IN SEVERAL PAST STUDIES THAT THE COUNTY HAS CARRIED OUT. THE LATEST ONE WAS COMMISSIONED IN 2011; SO BEING THAT IT'S BEEN OVER FIVE YEARS SINCE THE LAST HISTORIC SURVEY, WE ARE ACTUALLY, AS PART OF THE E.I.R., GOING TO UNDERGO A COMPREHENSIVE CAMPUSWIDE EVALUATION OF ALL OF THE BUILDINGS WITHIN THE SOUTH CAMPUS.

THIS SLIDE DEPICTS SOME OF THE EXISTING CONDITIONS WITHIN THE SOUTH CAMPUS (INDICATING). CURRENTLY, THIS SITE HAS APPROXIMATELY 113 BUILDINGS. THEY INCLUDE SOME HOSPITAL WARDS, INFIRMARIES, SOME RESIDENTIAL UNITS, SEVERAL ADMINISTRATION BUILDINGS, A

POWER PLANT, AND VARIOUS SUPPORT BUILDINGS, AS WELL AS A COUPLE OF REMNANTS FROM WHEN IT USED TO BE THE POOR FARM, WHICH INCLUDES A STABLE AND THE BROODER HOUSE.

SO WITH THE EXCEPTION OF THE OFFICE OF PUBLIC SAFETY, WHICH IS CURRENTLY BEING USED BY THE SHERIFF'S DEPARTMENT, THE REMAINING BUILDINGS WITHIN THE SOUTH CAMPUS ARE VACANT AND THEY ARE CURRENTLY IN VARIOUS STATES OF ABANDONMENT AND DISREPAIR. AS I MENTIONED EARLIER, THEY WERE VACATED IN THE '70'S AND '80'S AND THEY WERE BOARDED UP IN THE '90'S. THE MAJORITY OF THE SITE IS INACCESSIBLE TO THE PUBLIC, WITH THE EXCEPTION, AS I MENTIONED, OF THE PUBLIC SAFETY BUILDING WHICH IS USED BY THE SHERIFF'S DEPARTMENT. THERE IS CURRENTLY A FENCE AROUND THE SOUTH CAMPUS, SO IT IS NOT READILY -- READILY ACCESSIBLE.

OVER THE PAST COUPLE OF YEARS, WE HAVE SEEN -- ACTUALLY, WITHIN THE LAST SIX MONTHS, THERE'S BEEN VARIOUS FIRES WITHIN THE SOUTH CAMPUS WHICH ARE SUSPECTED TO BE THE RESULT OF ARSON. IN ADDITION TO THAT, THERE'S BEEN VANDALISM WITHIN THE SOUTH -- SLIDE CHANGED AGAIN (INDICATING) -- VANDALISM WITHIN SOUTH CAMPUS. A LOT OF THE COPPER IN THE ELECTRICAL LINES HAS BEEN -- HAS BEEN STOLEN. IN FACT -- IT'S LIKE MAGIC (INDICATING). YEAH, IT'S VERY SENSITIVE.

IN FACT, I THINK WITHIN THE LAST SIX MONTHS,

THERE WAS A PERIOD OF TIME WHERE -- THERE YOU GO (INDICATING). BACK AT IT AGAIN. I'M GOING TO BE -- OKAY. WELL, WE'LL LEAVE IT THERE. SO WITHIN THE LAST SIX MONTHS, THERE WAS ACTUALLY -- IS IT CHANGING STILL? NO, IT ISN'T -- WE HAD SOME COPPER LINES STOLEN, AND THE CRIME LAB -- THE EXISTING CRIME LAB THAT IS OUTSIDE OF THE SOUTH CAMPUS AND THE SAFETY POLICE WERE WITHOUT POWER FOR SEVERAL DAYS BECAUSE SOMEBODY BROKE INTO AN ELECTRICAL MANHOLE.

SO AS A RESULT OF THAT, SUPERVISOR HAHN ASKED THAT WE COME UP WITH INTERNAL MEASURES TO BETTER SECURE THE SOUTH CAMPUS, SO OVER THE PAST COUPLE OF MONTHS, WE HAVE ACTUALLY GONE AHEAD AND INSTALLED AN EIGHT-FOOT FENCE AROUND THE ENTIRE PERIMETER OF THE CAMPUS TO BETTER SECURE THE BUILDINGS AND TO PREVENT THE PUBLIC FROM COMING IN AND OUT. THERE'S BEEN AN INCREASE IN THE NUMBER OF PATROLS FROM THE SHERIFF'S DEPARTMENT THAT CIRCULATE THE AREA, AND WE ARE IN THE PROCESS OF INSTALLING ADDITIONAL SECURITY LIGHTING WITHIN THE SITE IN HOPES THAT THAT DETERS PEOPLE FROM COMING INTO THE CAMPUS AND ESSENTIALLY PROTECT THE BUILDINGS WITHIN THE CAMPUS FROM THE PUBLIC.

JAMES FOUNTAIN: CAN I MAKE A SUGGESTION ON THAT? I THINK A COUPLE OF SECURITY CAMERAS MIGHT GIVE YOU A CLUE AS TO WHO IS COMING AND GOING. IT CAN'T BE

THAT EXPENSIVE. YOU CAN GET RHEEM CAMERAS FOR LIKE 200 BUCKS.

LUIS RAMIREZ: YEAH, THAT'S A GOOD SUGGESTION. THANK YOU.

SO A BRIEF PROJECT BACKGROUND, WHAT LED TO THE PROJECT COMING TO FRUITION, OVER THE PAST SEVERAL YEARS, THE COUNTY HAS BEEN IN THE PROCESS OF EVALUATING AND ASSESSING ALL OF THE EXISTING COUNTY-OWNED FACILITIES. THEY -- THEY HIRED -- THEY TASKED THE CEO ESSENTIALLY WITH ASSESSING ALL OF THE BUILDINGS AND STARTING LOOKED AT KNOWN DEFICIENCIES, SOME OF THEM DUE TO MAINTENANCE. THE ASSESSMENT INCLUDED SOME OF THE EXISTING FACILITIES HERE WITHIN DOWNEY THAT ARE CURRENTLY HOUSING THE PROBATION DEPARTMENT, INTERNAL SERVICES DEPARTMENT, AND THAT ALSO INCLUDED THE EXISTING CRIME LAB THAT THE SHERIFF DEPARTMENT HAS NORTH OF THE SOUTH CAMPUS.

SO A LOT OF THESE DEPARTMENTS ARE IN BUILDINGS THAT HAVE -- OR ARE NEAR THE POINT OF LIVING THEIR USEFUL LIFE SPAN; AND, ALSO, SOME OF THESE BUILDINGS ARE FROM THE 1950'S AND '60'S, SO THE DEPARTMENTS HAVE ESSENTIALLY OUTGROWN THE SPACE THAT THEY'RE CURRENTLY LOCATED AT, AND THE COUNTY HAS HAD TO GO OUT AND LEASE ADDITIONAL SPACE TO BE ABLE TO HOUSE THE DEPARTMENT.

SO IN 2014, THE BOARD OF SUPERVISORS ASKED THAT WE LOOK INTO POSSIBLE WAYS OF CONSOLIDATING THESE

DEPARTMENTS OUT OF LEASED SPACE AND INTO COUNTY-OWNED FACILITIES, SO THERE WAS A FEASIBILITY STUDY THAT WAS COMMISSIONED, WHICH WAS COMPLETED IN 2016, WHICH LOOKED AT PROBATION, I.S.D., THE SHERIFF'S CRIME LAB, AS WELL AS SEVERAL OTHER DEPARTMENTS, AND BEGAN TO LOOK AT WAYS OF CONSOLIDATING THEM INTO EXISTING COUNTY FACILITIES.

UNFORTUNATELY, NONE OF THE EXISTING FACILITIES THAT THE COUNTY OWNS WERE BIG ENOUGH TO HOUSE ANY OF THE INDIVIDUAL DEPARTMENTS, SO THE FEASIBILITY STUDY ACTUALLY FOUND THAT THE MOST COST EFFECTIVE WAY TO CONSOLIDATE THE DEPARTMENTS WOULD BE TO CONSTRUCT NEW COUNTY-OWNED FACILITIES WITHIN THE LARGELY UNDEVELOPED SOUTH CAMPUS.

SO THE PROPOSED PROJECT THAT WE WILL BE DOING THE ENVIRONMENTAL IMPACT REPORT INCLUDES ADMINISTRATIVE OFFICES. IT'S ACTUALLY ADMINISTRATIVE HEADQUARTERS FOR THE PROBATION DEPARTMENT, INTERNAL SERVICE -- AND INTERNAL SERVICES DEPARTMENT. THE INTERNAL SERVICES DEPARTMENT BUILDING IS GOING TO BE APPROXIMATELY 370,000 SQUARE FEET, AND IT WILL BE UP TO SIX STORIES HIGH OR ABOUT 90 FEET. THE PROBATION DEPARTMENT WILL BE ABOUT 220,000 SQUARE FEET AND WILL ALSO BE APPROXIMATELY SIX STORIES HIGH OR 90 FEET; AND THE CRIME LAB WILL BE ABOUT 60,000 SQUARE FEET, AND IT IS PROPOSED TO BE APPROXIMATELY TWO STORIES OR 30 FEET.

SO PROBATION, I HAVE TO STRESS THE FACT THAT THESE ARE ADMINISTRATIVE BUILDINGS, SO THE PROBATION HEADQUARTERS, THERE WILL -- PROBATIONERS WILL NOT BE COMING IN TO SEE PROBATION OFFICERS IN THERE. IT WILL JUST BE THEIR ADMINISTRATION. PROBATION OFFICERS MAY COME TO THE BUILDING FOR TRAINING AND OTHER -- OTHER FUNCTIONS, BUT PROBATIONERS WILL NOT BE COMING INTO THE SOUTH CAMPUS. SAME THING WITH I.S.D., I.S.D., INTERNAL SERVICES, IT WILL BE JUST THEIR ADMINISTRATION.

SO WE ARE CURRENTLY STILL IN THE EARLY PLANNING PROCESS, SO EVEN THOUGH WE LOOKED AT THE POTENTIAL SQUARE FOOTAGE THAT THESE PROGRAMS OR BUILDINGS WILL TAKE, UNTIL WE HIRE AN ARCHITECT TO DESIGN THE PROJECT, WE WILL NOT KNOW WHAT THE FINAL CONFIGURATION OF THE -- OF THE BUILDINGS WILL BE; HOWEVER, WE DO NOT ANTICIPATE THAT IT WILL BE A PROJECT LARGER THAN 650,000 SQUARE FEET. THERE'S ALSO A POSSIBILITY THAT PROBATION AND I.S.D. MAY BE HOUSED IN TWO SEPARATE BUILDINGS OR THEY MAY BE HOUSED IN A SINGLE BUILDING WHERE THEY'RE GOING TO BE CO-LOCATED.

SO WE ARE -- AS PART OF THE PROJECT, WE WILL BE PROVIDING SOME PARKING. IT WILL BE A COMBINATION OF SURFACE LOTS AND A PARKING STRUCTURE. THE PARKING STRUCTURE IS NOT EXPECTED TO BE TALLER THAN 90 FEET.

THE PROJECTS ARE GOING TO BE L.E.E.D. --

ACHIEVE A CERTIFICATION OF L.E.E.D. GOLD RATING, AND THAT IS FOR SUSTAINABILITY; AND THE INFRASTRUCTURE COMPONENT OF THE PROJECT WILL BE RATED ENVISION GOLD. AS PART OF THE PROJECT, WE'LL ALSO BE PROVIDING INFRASTRUCTURE FOR THE BUILDINGS, AND THAT'S GOING TO INCLUDE UTILITIES SUCH AS SEWER, WATER, STORM DRAINS, POWER, AS WELL AS SOME IMPROVEMENTS TO THE ROADS AROUND THE PROPOSED DEVELOPMENT AREAS.

THERE IS A POSSIBILITY THAT THE PROJECTS WILL BE DELIVERED USING A COMBINATION OF DESIGN BUILD. AND FOR THOSE OF YOU WHO ARE NOT FAMILIAR WITH THAT, DESIGN BUILD IS WHERE WE HIRE ONE CONTRACTOR THAT DOES BOTH THE DESIGN AND THE CONSTRUCTION OF THE PROJECT AS OPPOSED TO A TYPICAL DELIVERY METHOD WHERE WE HIRE AN ARCHITECT; THEY DESIGN THE PROJECT; AND THEN WE BID THE PROJECT OUT. SO IT'S A SINGLE ENTITY THAT WE CONTRACT WITH, AND THAT BECOMES -- ACTUALLY FACILITATES THE DEVELOPMENT OF THE PROJECT SINCE YOU ONLY CONTRACT WITH ONE INDIVIDUAL. IT TENDS TO ALLOW US TO DELIVER THE PROJECTS A LITTLE BIT QUICKER, OBTAIN BETTER QUALITY, AND ALSO DOING IT AT A LESS EXPENSIVE COST.

THE SCOPE IN HERE SHOULD BE CONSISTENT WITH THE SCOPE THAT WAS DESCRIBED IN THE NOTICE OF PREPARATION THAT WE MAILED OUT ON AUGUST 9. IF YOU DON'T HAVE A COPY OF IT, WE DO HAVE EXTRA COPIES HERE

THAT YOU CAN TAKE WITH YOU.

SO THIS EXHIBIT SHOWS THE PROPOSED DEVELOPMENT AREAS WITHIN THE SOUTH CAMPUS. SO AS WE SAW EARLIER, THIS IS THE PERIMETER OF THE ENTIRE SOUTH CAMPUS (INDICATING). THIS IS ERIKSON (INDICATING), WHICH, AGAIN, TAKES US ALL THE WAY UP TO THE NORTH CAMPUS. WITHIN PARCEL "A," WHICH IS ON THE NORTHEAST CORNER OF THE CAMPUS, WE'RE PLANNING -- DEVELOPING THE TWO -- THE PROBATION AND I.S.D. HEADQUARTERS, ALONG WITH THE PARKING STRUCTURE, APPROXIMATELY 12.7 ACRES; AND WITHIN PARCEL "B," WE'RE PLANNING ON BUILDING THE NEW CRIME LAB FOR THE SHERIFF'S DEPARTMENT. THIS IS APPROXIMATELY 4.1 ACRES. THIS IS GARDENDALE STREET (INDICATING), AND THE HIGH SCHOOL IS RIGHT IN THIS AREA (INDICATING).

IN THIS EXHIBIT, YOU CAN ALSO SEE THE LOCATION OF THE FUTURE SOUTH CAMPUS SPORTS CENTER. THAT IS A SEPARATE PROJECT THAT WAS APPROVED BY THE BOARD IN THE FALL OF 2016, AND IT WILL CONSIST OF SPORTS FIELDS WITH A CONCESSION BUILDING. AGAIN, IT'S -- IT'S A SEPARATE PROJECT; HOWEVER, OUR ENVIRONMENTAL IMPACT REPORT WILL TAKE INTO ACCOUNT THE CUMULATIVE IMPACTS OF THAT PROJECT. WE JUST WANTED TO KIND OF GIVE YOU AN IDEA OF ALL OF THE DEVELOPMENT THAT WILL BE HAPPENING WITHIN THE SOUTH CAMPUS.

SO AS PART OF THE PROJECT, WE ANTICIPATE THE

DEMOLITION OF SOME EXISTING BUILDINGS TO MAKE ROOM OR MAKE SPACE FOR THE NEW CONSTRUCTION. WITHIN THE DEVELOPMENT AREA, WHICH IS THE -- THE DOTTED-WHITE LINE (INDICATING), WHICH CONTAINS PARCEL "A" FOR I.S.D. AND PROBATION AND PARCEL "B" FOR THE CRIME LAB, THERE ARE 51 STRUCTURES; AND THE ENVIRONMENTAL IMPACT REPORT -- THE REPORT WILL NEED TO ASSESS THE DEMOLITION OF POTENTIALLY ALL 51 STRUCTURES.

OUTSIDE OF THE DEVELOPMENT AREA AND THE REMAINDER OF THE SOUTH CAMPUS, THE PROJECT MAY DEMOLISH UP TO AN ADDITIONAL 62 STRUCTURES. AT THIS POINT, AGAIN, WE REALLY DON'T KNOW IF THAT WILL BE THE CASE OR NOT. SOME OF THOSE STRUCTURES, AS I BRIEFLY MENTIONED EARLIER, ARE PART OF THE HISTORIC DISTRICT. THEY HAVE BEEN DEEMED TO BE CONTRIBUTORS TO THE DISTRICT, SO OUR CURRENT ASSESSMENT OF THOSE BUILDINGS WILL GIVE US A LITTLE BIT MORE INFORMATION AS TO WHICH BUILDINGS REMAIN CONTRIBUTORS AND WHICH DO NOT, AND IT WILL HELP THE COUNTY MAKE DECISIONS AS TO WHICH BUILDINGS REMAIN ON SITE AND WHICH ONES ARE DEMOLISHED. SO THAT, IN A NUTSHELL, IS OUR PROJECT AND IT'S WHAT THE COUNTY IS PROPOSING TO DEVELOP WITHIN THE SOUTH CAMPUS.

AFTER THE PRESENTATION IS DONE, AS I MENTIONED, WE'RE GOING TO HAVE AN OPEN HOUSE, SO IF YOU HAVE ANY SPECIFIC OR DETAILED QUESTIONS THAT WE DIDN'T

COVER DURING THE PRESENTATION, WE'D BE HAPPY TO ANSWER THEM. RIGHT NOW, I'M GOING TO TURN THE PRESENTATION OVER TO ADDIE, WHO WILL WALK YOU THROUGH THE ENVIRONMENTAL PROCESS.

ADDIE FARRELL: OKAY. THANK YOU, LUIS.

CAN EVERYONE HEAR ME OKAY?

WELL, AS LUIS MENTIONED --

JAMES FOUNTAIN: SPEAK UP.

ADDIE FARRELL: -- IN THE BEGINNING --

JAMES FOUNTAIN: A LITTLE CLOSER. CLOSER.

ADDIE FARRELL: OKAY. IT'S TOUCHING MY MOUTH.

AS LUIS HAD MENTIONED IN THE BEGINNING OF HIS PRESENTATION, THE COUNTY OF LOS ANGELES BOARD OF SUPERVISORS IS THE LEAD AGENCY WHO IS GOING TO BE DETERMINING WHETHER OR NOT TO APPROVE THIS PROJECT, AND THAT IS WHAT IS CALLED A DISCRETIONARY ACTION OR A DISCRETIONARY DECISION; AND BECAUSE THE COUNTY HAS TO MAKE THIS DECISION, IT IS SUBJECT TO THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT OR CEQA.

SO THE PURPOSES OF CEQA ARE REALLY FOR THE LEAD AGENCY, IN THIS CASE, LOS ANGELES COUNTY, TO INFORM GOVERNMENTAL DECISION MAKERS, THE PUBLIC, STAKEHOLDERS, ABOUT WHAT THE POTENTIAL, SIGNIFICANT ENVIRONMENTAL IMPACTS COULD BE THAT WOULD RESULT FROM IMPLEMENTATION OF THIS PARTICULAR PROJECT THAT LUIS JUST DESCRIBED.

THE LEAD AGENCY UNDER CEQA IS ALSO REQUIRED TO IDENTIFY WAYS THAT THOSE ENVIRONMENTAL IMPACTS CAN BE REDUCED, SO IT DOES NOT -- THROUGH IDENTIFYING WHAT WE CALL MITIGATION MEASURES THAT ATTEMPT TO REDUCE IMPACTS, WHERE FEASIBLE, AND ALSO THROUGH LOOKING AT DIFFERENT ALTERNATIVES OF THE PROJECT TO ALSO LOOK AT WAYS TO REDUCE THOSE IMPACTS.

THE LEAD AGENCY UNDER CEQA IS ALSO REQUIRED TO PREVENT SIGNIFICANT AND UNAVOIDABLE IMPACT BY REQUIRING CHANGES TO THE PROJECT DESIGN, AND THAT COULD BE THROUGH ELEMENTS OF THE PROJECT DESIGN OR THROUGH THOSE MITIGATION MEASURES THAT I HAD DESCRIBED.

IF THE E.I.R. OR, YOU KNOW, THE EVALUATION DETERMINES THAT EVEN WITH ALL OF THE IMPLEMENTATION OF MEASURES OR PROJECT DESIGN FEATURES THAT THERE COULD BE SIGNIFICANT IMPACTS THAT REMAIN, THE LEAD AGENCY THAT -- IS REQUIRED TO DISCLOSE TO THE PUBLIC WHY THEY WOULD ADOPT THIS PROJECT EVEN IN LIGHT OF THOSE SIGNIFICANT IMPACTS, AND THAT HAPPENS AT THE END OF THE CEQA PROCESS AND IT'S CALLED "MAKING A STATEMENT OF OVERRIDING CONSIDERATIONS" AND MAKING THEIR FINDINGS THAT REALLY JUSTIFY WHY THEY'RE APPROVING THE PROJECT.

SO AT THE BEGINNING OF THIS PROCESS, THE COUNTY REALIZED THAT GIVEN THE RESOURCES THAT ARE PRESENT ON THE SITE -- IT'S A HISTORIC DISTRICT. THERE

ARE OTHER RESOURCES ON -- ON THE SITE. THERE ARE HOUSES' MATERIALS ISSUES, OTHER CONCERNS THAT, REALLY, AN ENVIRONMENTAL IMPACT REPORT OR E.I.R. WAS THE APPROPRIATE LEVEL OF CEQA DOCUMENTATION TO REALLY STUDY THOSE ENVIRONMENTAL IMPACTS. SO AN E.I.R. IS KIND OF THE HIGHEST-TIER ENVIRONMENTAL DOCUMENT -- DOCUMENT THAT COULD BE DONE FOR A PROJECT.

SO THE PURPOSES OF AN E.I.R., OR THE E.I.R. THAT'S GOING TO BE PREPARED FOR THIS PROJECT, ARE REALLY TO ANALYZE THE SIGNIFICANT IMPACTS OF THE PROJECT, BOTH THE TEMPORARY CONSTRUCTION-RELATED IMPACT, THE LONG-TERM OPERATIONAL IMPACT, IDENTIFY MITIGATION MEASURES AND ALTERNATIVES THAT COULD REDUCE THOSE IMPACTS, AND THEN DISCLOSE WAYS THAT THEY COULD BE REDUCED -- THAT THE IMPACTS COULD BE REDUCED.

SO THIS SLIDE DEMONSTRATES THE CEQA PROCESS FOR PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT (INDICATING). YOU CAN SEE WITH THE RED ARROW THERE IN THE LEFT, THIS IS WHERE WE ARE (INDICATING), SO WE'RE AT THE VERY INITIAL STAGES OF THIS PROCESS. IT STARTED WITH THE COUNTY DISTRIBUTING WHAT WE CALL "THE NOTICE OF PREPARATION" OR THE "N.O.P." ON AUGUST 9TH, AND THAT REALLY SIGNALED THE START OF THIS CEQA PROCESS.

THE SCOPING MEETING THAT WE'RE HAVING THIS AFTERNOON IS PART OF THAT PUBLIC SCOPING PROCESS, AS

WELL. THROUGH THIS 30-DAY COMMENT PERIOD, THE COUNTY IS GOING TO BE GATHERING ALL OF THE COMMENTS AND FEEDBACK THAT WE RECEIVE, AND WE WILL BE LOOKING AT THAT AND CONSIDERING WHETHER OR NOT OR HOW IT GOES INTO DEVELOPING THE ENVIRONMENTAL ANALYSIS. SO AT THIS SCOPING LETTER -- AT THIS SCOPING PHASE, THE COUNTY DOESN'T PREPARE RESPONSES TO THE COMMENTS. TONIGHT WE'RE NOT RESPONDING TO COMMENTS. WE'RE MERELY TRYING TO GATHER ALL OF THE INFORMATION THAT WE CAN TO ASSURE IN THE BEGINNING STAGES THAT THE E.I.R. IS ADDRESSING ALL OF THE ISSUES.

AT THE CONCLUSION OF THIS PERIOD, WE WILL BEGIN PREPARING A SERIES OF TECHNICAL ANALYSES. WE'RE GOING TO BE LOOKING AT VARIOUS -- A VARIETY OF DIFFERENT TOPICS, WHICH I'LL TALK ABOUT NEXT, AND THEN WE WILL BE PREPARING THE DRAFT E.I.R.

THE NEXT OPPORTUNITY FOR PUBLIC COMMENT IS GOING TO BE WHEN THE DRAFT E.I.R. IS COMPLETE AND WE PUT IT OUT FOR AN ADDITIONAL COMMENT PERIOD, AND THAT'S TYPICALLY A 45-DAY COMMENT PERIOD, AND RIGHT NOW OUR SCHEDULE IS ANTICIPATING SOMETIME IN SPRING OF 2018 FOR THE RELEASE OF THAT DRAFT E.I.R. AT THAT PHASE, THE COUNTY WILL HAVE A 45-DAY COMMENT PERIOD. WE'LL RECEIVE ALL OF THE COMMENTS. WE WILL HAVE ANOTHER PUBLIC MEETING; AND FOR ALL OF THOSE COMMENTS, CEQA REQUIRES

THAT THE LEAD AGENCY DOES AT THAT TIME RESPOND TO ALL THE COMMENTS THAT ARE RECEIVED THAT PERTAIN TO THE ENVIRONMENTAL ISSUES THAT ARE IDENTIFIED IN THE E.I.R., AND THEN THE COUNTY WILL THEN COLLECT ALL OF THOSE COMMENTS, RESPOND TO THE COMMENTS.

THERE MAY BE SOME REVISIONS TO THE DRAFT E.I.R. THAT ARE NECESSARY, AND ALL OF THAT INFORMATION, THEN, GOES TOGETHER FOR THE COUNTY BOARD OF SUPERVISORS FOR THEM TO MAKE AN INFORMED DECISION AS TO WHETHER OR NOT TO APPROVE THIS PROJECT, AND THAT WOULD ALSO INCLUDE A FINDING -- AS I MENTIONED, THAT STATEMENT OF OVERRIDING CONSIDERATIONS IN THE EVENT THAT THERE ARE SIGNIFICANT ENVIRONMENTAL IMPACTS.

THAT IS CURRENTLY ANTICIPATED FOR FALL OF 2018, AND AT THAT TIME THERE WOULD BE A PUBLIC -- THAT'S AN OPEN SESSION. SO THERE WOULD BE PUBLIC COMMENT THAT COULD BE COLLECTED DURING THAT TIME, AND THEN IT'S ANTICIPATED THAT IN THE FALL OF 2018 THERE WOULD BE WHAT'S CALLED "A NOTICE OF DETERMINATION," IF THE COUNTY DOES CHOOSE TO APPROVE THIS PROJECT, CERTIFY THE E.I.R., AND ADOPT ALL OF THE MITIGATION MEASURES THAT ARE GOING TO BE REQUIRED.

SO YOU CAN SEE THE -- WITH THE -- WITH THE LITTLE BUBBLES HERE (INDICATING), THESE ARE THE OPPORTUNITIES FOR -- FOR PUBLIC COMMENT.

SO -- BUT FOR TONIGHT, AGAIN, WE'RE IN THIS SCOPING PERIOD, SO I JUST WANTED TO KIND OF REITERATE THE PURPOSE OF WHERE WE ARE IN THE CEQA PROCESS. THE PURPOSE OF THE NOTICE OF PREPARATION, AGAIN, THAT WENT OUT ON AUGUST 11, IS REALLY TO ANNOUNCE THAT THE ENVIRONMENTAL IMPACT REPORT IS GOING TO BE INITIATED, SO WE HAVE A POTENTIAL PROJECT WE'RE GOING TO CONSIDER. WE'RE STARTING THE CEQA PROCESS, AND THAT'S THE PURPOSE OF THIS KIND OF SIGNAL OF THE NOTICE OF PREPARATION. IT INCLUDES A BRIEF DESCRIPTION OF THE PROJECT. IT'S ON PAGE 2 OF THE N.O.P., IF YOU'VE SEEN THAT. AGAIN, WE HAVE COPIES HERE IN THE BACK.

THE N.O.P. ALSO PROVIDES SOME PRELIMINARY INFORMATION ABOUT WHAT THE POTENTIAL IMPACTS OF THIS PROJECT ARE LOOKING LIKE AT THIS POINT, AND THEN, AGAIN, IT STARTS THE 30-DAY COMMENT PERIOD; AND THIS -- THE SCOPING PERIOD IS REALLY, AGAIN, TO OBTAIN PUBLIC AGENCY STAKEHOLDER INPUT EARLY ON IN THE PROCESS. WE WANT TO BRING TOGETHER, RESOLVE ANY ISSUES OR CONCERNS, REALLY UNDERSTAND WHAT THE POTENTIAL ENVIRONMENTAL IMPACTS COULD BE FOR THE RESIDENTS WHO LIVE IN THE COMMUNITY AROUND HERE WHO UNDERSTAND THE SITE. WE JUST WANT TO GET FEEDBACK FROM THE VERY BEGINNING. WE ALSO WANT TO REALLY TRY TO REFINE THE SCOPE OF THE ENVIRONMENTAL IMPACT REPORT.

SO AN ISSUE THAT WE IDENTIFY AS NOT SIGNIFICANT, FOR EXAMPLE, MAYBE FORESTRY RESOURCES OR MINERAL RESOURCES, WE WANT TO KIND OF ELIMINATE THOSE FROM THE BEGINNING. WE'LL DISCUSS THEM IN THE -- IN THE E.I.R., BUT NOT AS ONE OF THE PRIMARY TOPICS OF CONCERN.

SO THIS SLIDE PRESENTS KIND OF THE MAIN CHAPTERS THAT ARE GOING TO BE WITHIN THE DRAFT E.I.R. THAT YOU'LL SEE IN -- NEXT YEAR. IT STARTS OFF WITH A SUMMARY, AND THE SUMMARY IS USUALLY NICE BECAUSE IT HAS A BIG TABLE THAT SUMMARIZES ALL OF THE DIFFERENT IMPACTS AND THE MITIGATION MEASURES, SO WHEN YOU DO GET THAT, I THINK IT'S A REALLY NICE PLACE TO START.

THERE'S ALSO GOING TO BE AN INTRODUCTORY DISCUSSION, AND THAT'S KIND OF SIMILAR TO EVERYTHING THAT WE'VE PROVIDED TODAY, THE PURPOSE OF CEQA, THE BACKGROUND OF THE PROJECT. THERE WILL BE A PROJECT DESCRIPTION THAT KIND OF ILLUSTRATES AND BUILDS UPON WHAT LUIS HAD DESCRIBED, AND THEN KIND OF THE HEART OF THE E.I.R. IS THE IMPACT ANALYSIS; AND THE NEXT SLIDE WILL KIND OF TALK ABOUT HOW -- HOW THAT WILL BE LAID OUT.

AND THEN, YOU KNOW, LUIS HAD MENTIONED A COUPLE -- CUMULATIVE PROJECTS THAT ARE HAPPENING -- THAT ARE REASONABLY FORESEEABLE. WE CALL THEM IN CEQA PROJECTS THAT REALLY SHOULD BE LOOKED AT IN COMBINATION

WITH THIS PROJECT -- THE METRO PROJECT, THE SPORTS CENTER PROJECT, AND THEN ALL OF THE ACTIVITIES HAPPENING AT THE NORTH CAMPUS, AS WELL -- SO THOSE ARE ALL CUMULATIVE ISSUES THAT THIS E.I.R. WILL REALLY ADDRESS. WE WILL ALSO LOOK AT ALTERNATIVES TO THE PROJECT AND MITIGATION MEASURES; AND, AGAIN, THE INTENT OF BOTH OF THOSE IS TO REALLY REDUCE IMPACTS WHERE THEY CAN.

SO TO GET TO THE IMPACT ANALYSIS, THE COUNTY HAS IDENTIFIED AT THIS POINT THAT THERE ARE 13 PRIMARY AREAS WHERE WE REALLY ANTICIPATE SIGNIFICANT ENVIRONMENTAL IMPACTS TO OCCUR, WHERE WE ANTICIPATE NEEDING TO LOOK AT CLOSELY. THEY RANGE IN TOPIC HERE. WE'RE GOING TO BE LOOKING AT -- FOR ALL OF THESE TOPICS, THE SHORT-TERM IMPACTS FROM CONSTRUCTION, FROM THE DEMOLITION ACTIVITIES, ALL THE WAY THROUGH THE LONG-TERM OPERATION OF THE PROJECT FOR ALL OF THESE TOPICS. SOME OF THEM ARE GOING TO BE REALLY QUANTITATIVE STUDIES LIKE TRAFFIC, NOISE, AIR QUALITY. THOSE ARE ALL TOPICS THAT HAVE THRESHOLDS THAT ARE VERY NUMBERS-BASED AND WE RUN MODELS AND DO -- QUANTIFY ASSESSMENTS TO LOOK AT THOSE TOPICS, AND THEN THERE'S OTHERS THAT ARE MORE QUALITATIVE, LIKE AESTHETICS OR, YOU KNOW, VISUAL IMPACTS OR LAND USE, AND WE WILL BE ADDRESSING ALL OF THOSE IN THIS E.I.R.

THERE ARE SEVERAL OTHER TOPICS THAT ARE

REQUIRED BY CEQA THAT WE LOOK AT; AGAIN, LIKE I MENTIONED -- MINERAL RESOURCES, FORESTRY RESOURCES, AGRICULTURAL RESOURCES -- THAT AREN'T REALLY RESOURCES THAT WE ANTICIPATE WOULD BE IMPACTED BY THIS PROJECT. THOSE WILL BE IDENTIFIED AND ADDRESSED IN THE E.I.R., ALSO, BUT THEY'RE NOT ONE OF THE PRIMARY TOPICS.

SO JUST TO REITERATE, THE SCOPING COMMENT PERIOD GOES THROUGH -- SEPTEMBER 11TH AT 5:30 P.M. IS WHEN WE NEED TO HAVE ALL COMMENTS POSTMARKED OR E-MAILED TIME-STAMPED COMMENTS RECEIVED. THE CONTACT INFORMATION FOR LUIS IS UP HERE. IT'S ALSO IN THE NOTICE OF PREPARATION, WHICH CAN BE FOUND ON THE COUNTY'S WEBSITE. WE ARE ALSO, AS I MENTIONED, GOING TO HAVE ANOTHER COMMENT PERIOD THAT WILL BE CENTERED ON THE RELEASE OF THE DRAFT E.I.R., SO THAT WILL HAPPEN IN THE SPRING OF 2018, SO THIS ISN'T THE LAST OPPORTUNITY.

SO WITH THAT, I THINK WE WERE GOING TO OPEN IT UP TO VERBAL COMMENTS. I KNOW WE RECEIVED -- IS IT JUST ONE? WE RECEIVED ONE COMMENT CARD. I DON'T KNOW IF ANYONE ELSE IS INTERESTED IN PROVIDING VERBAL COMMENTS. IF YOU DON'T FEEL COMFORTABLE DOING THAT, YOU CAN ALSO -- OKAY.

CAN WE GET THIS GENTLEMAN HERE A CARD TO FILL OUT?

JAMES FOUNTAIN: I ALREADY FILLED ONE OUT. I

HAVE ABOUT ANOTHER EIGHT --

ADDIE FARRELL: OH, OKAY. OKAY. WELL, YOU CAN --

JAMES FOUNTAIN: CAN I VERBALIZE?

ADDIE FARRELL: YEAH, YEAH.

JAMES FOUNTAIN: OKAY.

ADDIE FARRELL: SO JUST A COUPLE ADDITIONAL THOUGHTS BEFORE I TURN OVER THE MIC, MAYBE. IT LOOKS LIKE WE ONLY HAVE ONE SPEAKER. WE WERE GOING TO TRY TO LIMIT IT TO ABOUT THREE MINUTES JUST TO BE RESPECTIVE OF EVERYBODY'S TIME. IF YOU DON'T FEEL COMFORTABLE COMING UP HERE TO SPEAK, YOU CAN ALSO HAVE ONE OF US READ YOUR COMMENT FOR YOU IF YOU'D LIKE. YOU CAN ALSO -- AFTER THE MICROPHONE PART HERE, YOU CAN GO OVER TO OUR COURT REPORTER AND SPEAK TO HER DIRECTLY AND SHE CAN DICTATE THEM ALL FOR YOU. AGAIN, WE ALSO ENCOURAGE EVERYBODY TO PROVIDE WRITTEN COMMENT, AND THIS PART OF THE MEETING ISN'T ABOUT QUESTION/ANSWER. IT'S REALLY ABOUT RECEIVING PUBLIC COMMENTS, GETTING THAT FOR THE RECORD THROUGH THE -- THROUGH THE TRANSCRIBER SO WE CAN RESPOND TO IT THROUGH THE CEQA PROCESS.

DO YOU HAVE ANYTHING ELSE TO ADD?

LUIS RAMIREZ: NO.

ADDIE FARRELL: DO YOU HAVE A QUESTION?

BOBBI BRUCE: I -- I JUST WANT TO MAKE A

COMMENT. I DON'T KNOW WHAT HE'S COVERING ON HIS EIGHT QUESTIONS OR WHATEVER; BUT IF HE DOESN'T INCLUDE WHAT I WOULD LIKE AN ANSWER TO, CAN --

ADDIE FARRELL: SURE.

BOBBI BRUCE: -- CAN WE DISCUSS THAT?

LUIS RAMIREZ: ABSOLUTELY.

ADDIE FARRELL: ABSOLUTELY.

BOBBI BRUCE: BECAUSE HE SEEMS LIKE HE'S PROBABLY GOING TO BE VERY COMPREHENSIVE. SO IF NOT --

JAMES FOUNTAIN: TOO MUCH COLLEGE.

ADDIE FARRELL: AND IF YOU WANT TO REITERATE ANY OF IT, FEEL FREE TO DO SO. WE'LL JUST --

BOBBI BRUCE: OKAY. WELL, THE ONLY QUESTION -- I CAN MAKE IT VERY SHORT -- IS DURING THIS PERIOD OF TIME WHEN YOU'RE DOING THE SCOPING, ARE YOU DOING ANY DEMOLITION AT THE SAME TIME?

ADDIE FARRELL: NO, NO. SO NOTHING --

BOBBI BRUCE: SO NOTHING IS GOING TO CHANGE OVER THERE?

ADDIE FARRELL: NOTHING HAPPENS -- NOTHING HAPPENS ON THE SOUTH CAMPUS UNTIL COMPLETION OF THE CEQA PROCESS AND UNTIL THE BOARD OF SUPERVISORS MAKES THAT WELL-EDUCATED DECISION BASED ON ALL OF THE INFORMATION ON THE RECORD AS TO WHETHER OR NOT TO APPROVE THE PROJECT, SO THAT ISN'T UNTIL, YEAH, FALL OF

2018. SO --

BOBBI BRUCE: NOTHING IS GOING TO DISAPPEAR?

ADDIE FARRELL: NO.

BOBBI BRUCE: OKAY.

ADDIE FARRELL: SO -- OKAY.

BOB THOMPSON: WELL, WHEN ARE YOU GOING TO --

JAMES FOUNTAIN: I WAS THE FIRST ONE TO RAISE MY HAND.

BOB THOMPSON: WELL, GO AHEAD AND SPEAK.

JAMES FOUNTAIN: LET ME SPEAK BECAUSE I WAS THE FIRST AND I'VE GOT NOTES.

BOBBI BRUCE: OKAY. WELL --

JAMES FOUNTAIN: THAT'S ONLY FAIR.

LUIS RAMIREZ: YES.

BOBBI BRUCE: GO AHEAD.

ADDIE FARRELL: SO WHY DON'T YOU COME, AND IF YOU COULD, JUST STATE YOUR NAME SO THAT THE COURT REPORTER -- WE WOULD APPRECIATE IT IF ANYBODY HAS A COMMENT, TO STATE YOUR NAME SO THAT WE CAN CAPTURE THAT AND MAKE SURE THAT WE'RE RESPONDING, SO --

JAMES FOUNTAIN: MY NAME IS JAMES FOUNTAIN, F-O-U-N-T-A-I-N; AND I'VE BEEN A RESIDENT OF DOWNEY ALL MY MARRIED LIFE, WHICH IS 45 YEARS, AND I'VE BEEN IN THIS NEIGHBORHOOD THE SAME AMOUNT OF TIME, AND I'VE LIVED RIGHT NEXT TO RANCHO THE ENTIRE TIME. I EVEN

WORKED ON THE RANCHO CAMPUS, AND MY DAD STUDIED POLIO HERE AS A DOCTOR IN 1953.

OKAY. HOW MANY EMPLOYEES CURRENTLY WORK AT RANCHO? LET'S JUST SAY 3,000 WORK AT RANCHO. IT'S A LOT OF PEOPLE. YOU NOTICE THEY PARK ON DOWNEY STREETS, NOT JUST THE PARKING STRUCTURE. IF YOU BRING IN 3,000 MORE EMPLOYEES, YOU'VE JUST DOUBLED THE NUMBER OF PEOPLE IN THIS PART OF DOWNEY.

ALSO, THE BIGGEST ISSUE I HAVE IS NOT THE BUILDINGS BEING NINE STORIES OR SIX STORIES. THE BIGGEST ISSUE IS INFRASTRUCTURE AS FAR AS THE ROADS, BECAUSE RIGHT NOW IMPERIAL HAS A MARKET CALLED "VALLARTA," AND EVERYBOOY NOTICES CARS CUTTING ACROSS SIX LANES OF TRAFFIC, AND WE OWE THAT TO THE PREVIOUS OWNERS OF THE -- OF THE GROCERY STORE AND THE BEACH BROTHERS. THEY SAID TO THE CITY, "OH, DON'T CONTINUE THAT ISLAND." WELL, WITHOUT THAT ISLAND DOWN THE STREET, EVERYBODY IS GOING TO BE CUTTING ACROSS.

WELL, IMAGINE 3,000 MORE EMPLOYEES EITHER COMING IN, MOST OF WHICH WOULD BE IMPERIAL BECAUSE THE OTHER STREET, GARDENDALE, IS VERY INADEQUATE. I THINK IT'S BEEN TURNED INTO A TWO-LANE ROAD NOW FROM A FOUR-LANE ROAD WITH BIKE PATHS ON IT, AND YOU'RE GOING TO OPEN UP THE GARDENOALE AND EVERYBODY'S GOING TO BE COMING IN OFF THE I-105, BECAUSE A LOT OF COUNTY

EMPLOYEES -- AND I USED TO BE ONE -- ARE COMING FROM ORANGE COUNTY. SO HOW DO THEY GET HERE FROM ORANGE COUNTY? THEY WILL PROBABLY END UP ON I-105, GET OFF AT PARAMOUNT, AND THERE'S NO LEFT-TURN LIGHTS AT THE CORNER OF GARDENDALE AND PARAMOUNT.

UTILITIES, WE'RE GOING TO PROBABLY DOUBLE THE NUMBER OF EMPLOYEES IN THIS AREA, BECAUSE WE ALREADY GOT RANCHO ON THE NORTH SIDE, SO THEY WILL PROBABLY NEED A SUBSTATION. WHAT ABOUT THOSE KEY HISTORIC BUILOINGS? WELL, WE LOST ONE AT THE MOST RECENT FIRE, THE HARRIMAN BUILDING, WHICH WAS -- THAT CIRCLE WHERE THOSE BEAUTIFUL TREES ARE.

ALSO, THE SMALL ANIMALS, YOU SAID, "WELL, TRE AGRICULTURE IS NOT IMPORTANT" OR "THE FOREST." WELL, DO YOU KNOW THAT THERE'S ALL KINDS OF LITTLE VARMINTS LIKE POSSUMS AND THESE OTHER SQUIRRELS? WHERE ARE THEY GOING TO GO WHEN YOU BUILD OUT THIS, YOU KNOW, PLACE FOR 3,000 EMPLOYEES TO PUT IN A PARKING STRUCTURE AND ALL THAT? THEY'RE GOING TO HEAD EAST RIGHT INTO WHERE WE LIVE.

SO THERE'S A LOT OF CONSIDERATIONS, BUT I THINK THE BIGGEST PROBLEM WILL BE YOUR ROAD TRAFFIC, ANO THAT -- THAT'S TKE MAIN ISSUE I -- I WANTED TO BE ADDRESSED.

AND, ALSO, IF EVERYTHING IS APPROVED BY THE

BOARD OF SUPERVISORS IN THE FALL OF 2018, HOW MANY YEARS WILL IT TAKE TO BUILD OUT THE PROJECT? ANYBODY HERE HAVE A GUESSTIMATE ON THAT?

ADDIE FARRELL: YEAH. IN AN N.O.P., WAS IT --

LUIS RAMIREZ: 30 MONTHS.

ADDIE FARRELL: 30 MONTHS.

JAMES FOUNTAIN: 30 MONTHS, SO THAT'S UNDER THREE YEARS, SO THAT WOULD MEAN PROBABLY BY 2021. IT'S ALMOST GOING TO BE SIMULTANEOUS WITH THE OPENING OF THE NEW BUILDINGS ON THE NORTH CAMPUS BECAUSE THEY'RE SUPPOSED TO BE DONE BY 2020. SO WE HAVE GOT A LOT GOING ON HERE IN SOUTHEAST DOWNEY, AND I DON'T KNOW IF WE CAN REALLY HANDLE IT BECAUSE RIGHT NOW IT'S REALLY HARD TO GET OUT. IF YOU COME OUT OF THE TRACK OVER HERE ON -- THERE'S ONLY ONE STREET THAT COMES OUT ON IMPERIAL. IT HAS A LIGHT, BUT A LOT OF TIMES TRAFFIC IS BACKED UP, SO IN THE MORNING YOU'RE GOING TO HAVE IT BACKED UP FROM THE EAST, AND IN THE EVENING YOU'RE GOING TO HAVE IT BACKED UP FROM THE WEST, SO YOU NEED TO -- LIKE THE CITY OF DOWNEY WILL PROBABLY HAVE TO PUT DOWN, YOU KNOW, "KEEP CLEAR" RIGHT ON THE PAVEMENT. YOU HAVE GOT TO WORK WITH THE CITY OF DOWNEY. YOU CAN'T IGNORE THEM EVEN THOUGH YOU'RE THE COUNTY AND YOU'RE THE NEXT GOVERNMENT UP.

AND THE SAME THING -- THE PROBLEM WITH

GARDENDALE IS YOU'VE THREE CITIES: YOU'VE GOT PARAMOUNT, SOUTH GATE, AND DOWNEY. DOWNEY HAS TWO CORNERS; PARAMOUNT HAS ONE; ANO SOUTH GATE HAS ANOTHER.

DO YOU THINK YOU CAN GET THREE CITIES TO AGREE ON ANYTHING? THAT'S A PROBLEM. THANK YOU.

LUIS RAMIREZ: THANK YOU.

ADDIE FARRELL: THANK YOU.

DID YOU WANT TO -- I CAN TAKE THAT. OH, DO YOU NEED IT? YEAH, GO AHEAD.

KATIE WRIGHT: MY NAME IS KATIE WRIGHT. I'M A RESIDENT OF DOWNEY ANO I'VE BEEN A RESIDENT OF DOWNEY SINCE 1959. WE -- I LIVE NORTH OF HERE AND WE DIDN'T GET NOTICE OF THIS MEETING. I HAPPENED TO SEE IT ON FACEBOOK, SO WHOEVER IN THE CITY OF DOWNEY THAT POSTED IT, THANK YOU VERY MUCH.

SO I'M CONCERNEO THAT THE E.I.R.'S ONLY DEALING WITH SOUTH OF IMPERIAL, AND YET THIS IS REALLY GOING TO AFFECT THOSE OF US NORTH OF IMPERIAL, ALSO. RIVES AVENUE IS SEVERELY ALREADY IMPACTED BY WHAT'S GOING ON ACROSS THE STREET. TRAFFIC HAS INCREASED TERRIBLY AND I LIVE ON RIVES AVENUE; BUT I WAS THINKING ALSO, SITTING HERE, NOW THAT BOTH OF MY GRANDSONS ARE GOING TO OLD RIVER SCHOOL AND THEN THEY'RE GOING TO BE GOING TO STAUFFER, OLD RIVER SCHOOL ROAD IS HORRENDOUS, SO IF WE'RE GOING TO ADD -- I WOULD TAKE YOUR NUMBER OF

3,000 NEW EMPLOYEES. THAT'S GOING TO BE A MAJOR ACCESS, ESPECIALLY IN THE CRIME LAB BUILDING, THAT PARCEL "B." TRAFFIC ON OLD RIVER SCHOOL ROAD IS GOING TO BE IMPACTED AND IT'S ALREADY BAD ENOUGH WITH THE TWO SCHOOLS, SO I'M HOPING THAT THE E.I.R. TAKES INTO MORE THAN JUST SOUTH OF IMPERIAL, THAT IT DOES TAKE INTO NORTH OF IMPERIAL, ALSO. THAT'S MY CONCERN.

LUIS RAMIREZ: I'LL TAKE IT.

ADDIE FARRELL: DID YOU WANT TO COME? YOU CAN FILL IT OUT. SHE JUST SPOKE. JUST MAYBE STATE YOUR NAME.

VIRGINIA JOHNSON: HI. VIRGINIA JOHNSON, 5751 MCKINLEY AVENUE.

HELLO, MR. BETANCORT.

YEAH, THIS IS A LOT TO PROCESS, OF COURSE, AND I JUST HEARD ABOUT THE MEETING. WELL, I READ IT IN THE LEGAL NOTICES, SO YEAH. WHAT I AM RIGHT NOW CONCERNED ABOUT IS THAT, OF COURSE, WHAT MR. FOUNTAIN SAID, YOD KNOW, THEY TOOK AWAY A BIKE -- I MEAN, THEY TOOK AWAY A CAR LANE ON GARDENDALE AND PUT IN A BIKE LANE, AND SO NOW WE ARE DOWN TO ONE ONE-WAY STREETS INSTEAD OF TWO ONE-WAY LANES, AND THAT -- AND ALL OF THE CITIES SURROUNDING US ARE GETTING MONEY FROM THE CALIFORNIA GOVERNMENT TO PUT IN BIKE LANES, AND SO THAT'S THE BIG THING WITH THE CITIES NOW, IS THEY WANT TO PUT IN BIKE

LANES ALL OVER, SO I'M -- I'M A LITTLE AFRAID THAT THEY MIGHT WANT TO PUT IN BIKE -- BIKE LANES ON IMPERIAL.

NOW, ON THE -- ANOTHER ONE IS MAKING A STATEMENT OVERRIDING THE DRAFT E.I.R. REPORT. THE L.A.C. BOARD CAN DO THAT AND THAT DOES CONCERN ME. THEY CAN OVERRIDE A BAD E.I.R. REPORT. THAT WOULD BE, YOU KNOW, GOOD.

AND BACK THERE ON THE SIGN, I'M WONDERING HOW MANY MEETINGS THAT WE HAVE BEEN HAVING BECAUSE IT SAYS "AUGUST 8, BUT MUST BE IN BY SEPTEMBER 3RD," AND TODAY IS THE 30TH, SO WE ACTUALLY ONLY HAVE 11 DAYS TO GET IN OUR COMMENT, SO I'M WONDERING WHY IT SAYS "AUGUST 8." WERE THERE OTHER MEETINGS AT THAT TIME LEADING UP TO THIS ONE?

THAT'S ALL I HAVE RIGHT NOW. THANK YOU.

ADDIE FARRELL: MAYBE JUST TO CLARIFY YOUR LAST QUESTION, IF I MAY --

JAMES FOUNTAIN: SPEAK LOUD.

ADDIE FARRELL: -- THE COMMENT PERIOD STARTED ON AUGUST 9 AND IT RUNS THROUGH SEPTEMBER 11TH, WHICH IS, I THINK, 32 DAYS BECAUSE OF A WEEKEND; BUT THIS IS THE FIRST AND ONLY PUBLIC MEETING THAT'S HAPPENING DURING THAT 30-DAY PERIOD.

VIRGINIA JOHNSON: THANK YOU.

BOBBI BRUCE: I DON'T BELIEVE I HAVE TO GO ALL

THE WAY UP THERE. ANYBODY CAN'T HEAR ME?

LUIS RAMIREZ: I CAN HEAR YOU.

BOBBI BRUCE: ALL RIGHT. MY NAME IS BOBBI BRUCE AND I REPRESENT THE DOWNEY HISTORICAL SOCIETY, AND I JUST WANTED TO GO ON RECORD BECAUSE I HEARD YOU SAY, "NOTHING'S GOING TO BE DEMOLISHED. NOTHING'S GOING TO BE DISAPPEARING UNTIL --" BUT I JUST WANT -- BECADSE WE HAVE BEEN TOLD THAT BEFORE ON OTHER ISSUES, AND LO AND BEHOLD, SOMETHING DISAPPEARS, SO I WANT JUST TO GO ON RECORD THAT YOU HAVE SAID, "NOTHING'S GOING TO BE DISAPPEARING. NOTHING'S GOING TO HAPPEN TO THAT AREA OVER THERE UNTIL WE GET THE COMPREHENSIVE REPORT OF WHAT YOU'RE DOING."

BECAUSE I NOTICED IT SAID 51 AREAS WERE DESIGNATED AS HISTORICAL, BUT NOW WE'RE STARTING ALL OVER AGAIN. SO IS THE BUILDING STILL GOING TO HAVE THAT "HISTORIC" DESIGNATION OR ARE WE STARTING OVER SCRATCH AND WE'RE GOING TO HAVE TO KEEP WATCHING TO SEE WHAT'S BEEN ESTABLISHED AND WHAT HASN'T? SO THAT'S JUST MY -- MY COMMENT THAT -- MY CONCERN IS THINGS HAPPEN, THINGS CHANGE, THINGS DISAPPEAR, SO --

JAMES FOUNTAIN: RIGHT, RIGHT, RIGHT.

ADDIE FARRELL: THANK YOU.

LUIS RAMIREZ: OKAY.

BOB THOMPSON: MY NAME IS -- MY NAME

BOB THOMPSON AND I'M THE PRESIDENT OF THE DOWNEY HISTORICAL SOCIETY. AND WHAT I'D LIKE TO KNOW IS WHEN ARE YOU GOING TO SHOW WHAT BUILDINGS ARE GOING TO BE DESTROYED?

JAMES FOUNTAIN: YEAH.

BOB THOMPSON: WHEN ARE YOU GOING TO DO THAT? I MEAN, HOW CAN YOU WRITE A COMMENT ON SOMETHING IF YOU DON'T KHOW WHAT'S GOING ON?

ADDIE FARRELL: SO THAT WOULD BE PART OF THE E.I.R. PROJECT DESCRIPTION.

BOBBI BRUCE: THAT'S COMING IN THE FALL?

ADDIE FARRELL: IT WILL BE IN PART OF THE DRAFT DOCUMENTS THAT COMES IN THE FALL.

BOB THOMPSON: AND THAT'S COMING WHEN?

LUIS RAMIREZ: IN THE SPRING OF 2018.

BOBBI BRUCE: IN THE SPRING?

BOB THGMPSON: OKAY. THANK YOU.

LUIS RAMIREZ: ANYBODY ELSE?

IRENE MARTINEZ: MY NAME IS IRENE MARTINEZ AND I REPRESENT -- IRENE MARTINEZ AND I DO LIVE IN THIS AREA.

OKAY. SO, ULTIMATELY, IF YOU OVERRULE ANYTHING, IT'S -- IT'S GOING TO BE THE -- THE GOVERNMENT'S DECISION TO SAY, "HEY, WE HAVE THE POWER AND WE'RE GOING TO DO WHAT WE WANT"? I MEAN, IT'S NOT

US, THAT WE'RE GOING TO, YOU KNOW, SAY, "HEY, WE DON'T WANT THIS." YOU'RE GOING TO OVERRIDE IT, RIGHT? I MEAN --

LUIS RAMIREZ: SO MAYBE YOU CAN SPEAK TO THAT. E.I.R. WILL MAKE RECOMMENDATIONS TO THE BOARD REGARDING THE PROJECT, AND THE BOARD WILL THEN TAKE THOSE RECOMMENDATIONS INTO ACCOUNT AND MAKE A DECISION AS TO WHETHER THEY MOVE FORWARD WITH THE PROJECT OR NOT.

SO RIGHT NOW, WE ARE -- AS ADDIE MENTIONED, PART OF THE -- THE PURPOSE OF THE SCOPING PERIOD IS TO GET ALL OF YOUR CONCERNS, GET THEM AS PART OF THE RECORD, SO THAT WHEN WE START DRAFTING THE E.I.R., WE MAKE SURE THAT WE ADDRESS THEM OR WE INCLUDE THEM AS PART OF THE STUDY.

IRENE MARTINEZ: OKAY. NOW, WHEN YOU START TEARING IT DOWN, YOU KNOW, A LOT OF THOSE BUILDINGS HAVE ASBESTOS AND STUFF LIKE THAT, RIGHT?

LUIS RAMIREZ: CORRECT.

IRENE MARTINEZ: SO THAT'S A CONCERN, YEAH.

LUIS RAMIREZ: SO ANY DEMOLITION THAT HAPPENS, WHEN IT HAPPENS AND IF IT HAPPENS, IT WILL HAVE TO GO THROUGH THE PROPER PROCESS WHERE YOU REMOVE THE HAZARDOUS MATERIALS USING -- YOU KNOW, CONTAIN THE STRUCTURE, REMOVE IT, DISPOSE OF IT PROPERLY, AND THEN PROCEED WITH DEMOLITION.

ADDIE FARRELL: THAT WAS ONE OF THE TOPICS LISTED, THAT THE E.I.R. WILL BE --

IRENE MARTINEZ: NO, I UNDERSTAND; BUT I JUST WANT TO MAKE SURE THAT --

LUIS RAMIREZ: YEAH. WE'RE NOT GOING TO TAKE A BULLDOZER AND START DEMOLISHING BUILDINGS WITHOUT PROPERLY ABATING THE HAZARDOUS MATERIALS.

IRENE MARTINEZ: OKAY. AND -- OKAY. BECAUSE OF ALL THE TRAFFIC THAT IS GOING TO BE CREATED AND -- I MEAN, ARE MEASURES GOING TO BE -- I MEAN, YOU KNOW, LIKE LIGHTS ARE GOING TO BE IN PLACE TO -- YOU KNOW, BECAUSE IT IS -- IT'S HORRIBLE AS IT IS NOW.

LUIS RAMIREZ: THAT'S PART OF WHAT THE TRAFFIC STUDY IS GOING TO DO IS LOOK AT THE IMPACTS THAT THE PROJECT WILL HAVE ON TRAFFIC CIRCULATION AROUND THE AREA, AND IT WILL MAKE SOME RECOMMENDATIONS AS TO WHAT MEASURES NEED TO BE IMPLEMENTED TO ADDRESS IT. RIGHT NOW, WE DON'T KNOW BECAUSE WE HAVEN'T FINISHED THE TRAFFIC STUDY, SO THERE MAY BE TRAFFIC SIGNALS THAT GET ADDED. THERE MAY NOT. WE'LL KNOW ONCE WE COMPLETE THE STUDIES, AND THAT INFORMATION WILL BE AVAILABLE WHEN THE DRAFT E.I.R. IS PUBLISHED IN THE SPRING.

YES?

BOBBI BRUCE: CAN I JUST ADD ONE MORE THING?

LUIS RAMIREZ: UH-HUH.

BOBBI BRUCE: WILL YOU BE WORKING CLOSELY WITH THE DOWNEY CITY COUNCIL IN THAT? SO IF WE HAVE ANY PERTINENT QUESTIONS OR SOMETHING, ARE YOU GOING TO KEEP THEM APPRAISED OF WHERE THIS PROJECT IS GOING, OR IS THIS JUST STRICTLY L.A. COUNTY?

LUIS RAMIREZ: NO.

BOBBI BRUCE: THEY'RE IN CHARGE OF IT AND THAT'S IT?

LUIS RAMIREZ: ACTUALLY, WE'RE WORKING REALLY CLOSELY WITH THE CITY. THE CITY IS ACTUALLY IN THE PROCESS OF UPDATING THE -- THE -- THE SPECIFIC PLAN THAT COVERS THE SOUTH CAMPUS, SO THE COUNTY IS WORKING REALLY CLOSELY WITH THE CITY PLANNING DEPARTMENT AND UPDATING THE SPECIFIC PLAN. WE HAVE BEEN WORKING REALLY CLOSELY WITH THE CITY AND THE SPORTS CENTER, THE DEVELOPMENT OF THAT PROJ- -- PROJECT, SORRY, AND WE WILL HAVE TO GO TO THE CITY PLANNING COMMISSION TO GET THE PROJECT APPROVED FOR PLANNING SINCE IT IS WITHIN THE CITY OF DOWNEY, EVEN THOUGH IT'S COUNTY-OWNED LAND. YOU KNOW, THEY WILL GIVE AN APPROVAL SAYING THAT IT MEETS WITH THE -- THE -- THAT IT COMPLIES WITH THE CITY'S GENERAL PLAN, SO WE ARE WORKING CLOSELY WITH THEM, YEAH.

BOBBI BRUCE: OKAY.

LUIS RAMIREZ: YES, SIR?

JAMES FOUNTAIN: I JUST WANT TO ADD ONE MORE

THING. SINCE I LIVE IN THE TRACT RIGHT ON THE OTHER SIDE OF IMPERIAL, THERE'S ONLY THREE STREETS IN OUR TRACT, AND SMALLWOOD IS THE ONE THAT COMES OUT TO IMPERIAL THAT HAS THE LIGHT. A LOT OF THE NEIGHBORS NOW, WE'RE ON NEIGHBORHOOD -- NEIGHBOR.COM. IT'S SOCIAL MEDIA, AND PEOPLE ARE SPEEDING THROUGH OUR TRACT AS IT IS, AND NOW THEY WANT THE CITY OF DOWNEY -- AND LISTEN TO THIS, SEAN.

SEAN ASHTON: NO, I'M ON IT.

JAMES FOUNTAIN: HE'S OUR COUNCILMAN. THEY WANT A SPEED BUMP PUT IN, A GOOD ONE, SO THE LOW RIDERS, YOU KNOW, TAKE OUT THEIR TRANSMISSION, I GUESS; BUT THE POINT IS WE MIGHT NEED SPEED BUMPS BECAUSE IF WE'VE GOT 3,000 PEOPLE COMING IN AND A NUMBER COMING IN ON THE I-105/PARAMOUNT, THEY MAY WANT TO TAKE A SHORTCUT OVER TO IMPERIAL AND COME THAT WAY BECAUSE GARDENDALE MIGHT NOT BE A GOOD STREET TO COME IN. IT'S SORT OF NARROW, SMALL, OLD, NEEDS TO BE REPAVED, SO THEY WILL COME THROUGH THE TWO STREETS OFF OF PARAMOUNT, MORRISON AND PURITAN, AND THEN GET ON SMALLWOOD, AND THERE'S A LIGHT THERE, AND THAT'S LIKE AN EASY ACCESS -- AND PEOPLE ARE DOING THAT ALREADY. YOU SEE BUSSES GOING THROUGH, TRUCKS GOING THROUGH. IT'S A SHORTCUT THROUGH OUR TRACT, AND SO I FEEL WITH 3,000 MORE EMPLOYEES, THEY'RE GOING TO FIND OUT REAL QUICK WHAT ARE THE SHORTCUTS.

LUIS RAMIREZ: AND AS I MENTIONED, THE TRAFFIC STUDY --

JAMES FOUNTAIN: YEAH.

LUIS RAMIREZ: -- WILL EVALUATE THAT.

ANY MORE COMMENTS? QUESTIONS?

SO WE'RE GOING TO GO AHEAD AND OPEN IT UP TO AN OPEN HOUSE, SO IF YOU GUYS HAVE ANY SPECIFIC DETAILED QUESTIONS, PLEASE FEEL FREE TO COME UP AND WE'LL DO OUR BEST TO -- TO ANSWER THEM, OR IF YOU WANT TO MAKE ADDITIONAL COMMENTS, YOU CAN GO SEE THE COURT REPORTER AND VOICE YOUR CONCERNS OR QUESTIONS TO HER AND SHE WILL MAKE SURE TO RECORD THEM AS PART OF THE RECORD. ALL RIGHT?

THANK YOU.

(WHEREUPON, AT 6:35 P.M. THE OPEN HOUSE COMMENCED AND THEREAFTER CONCLUDED AT 7:04 P.M.)

Rancho Los Amigos South Campus Project

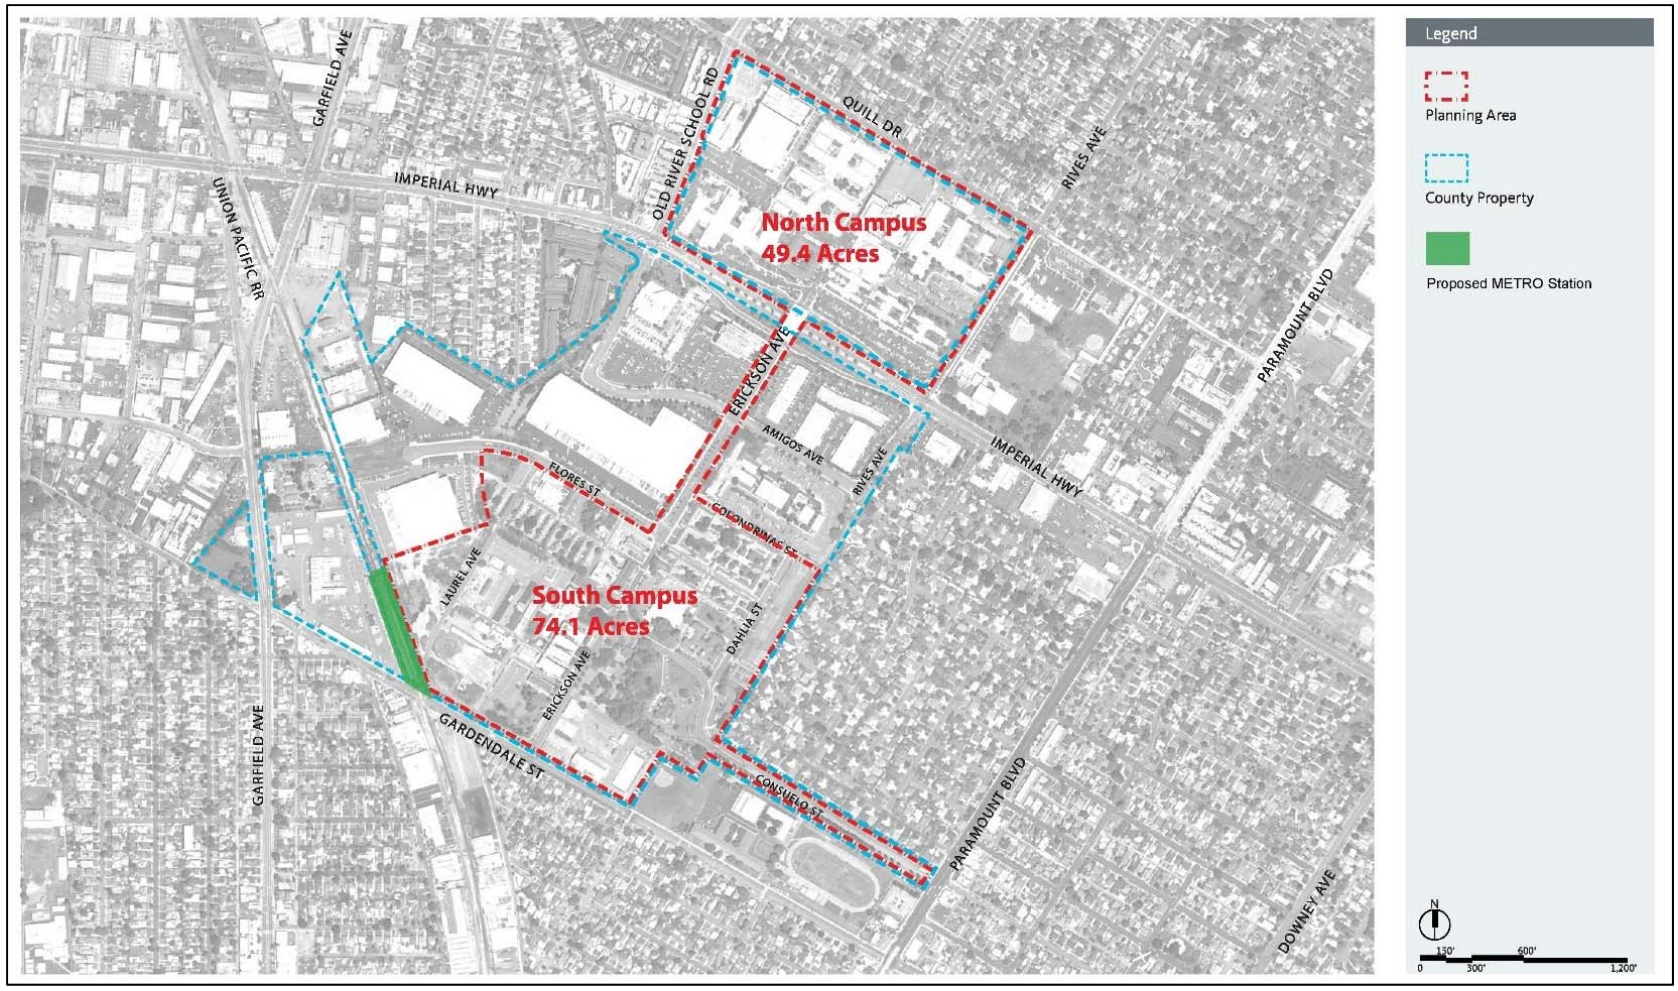
Environmental Impact Report

Public Scoping Meeting

August 30, 2017

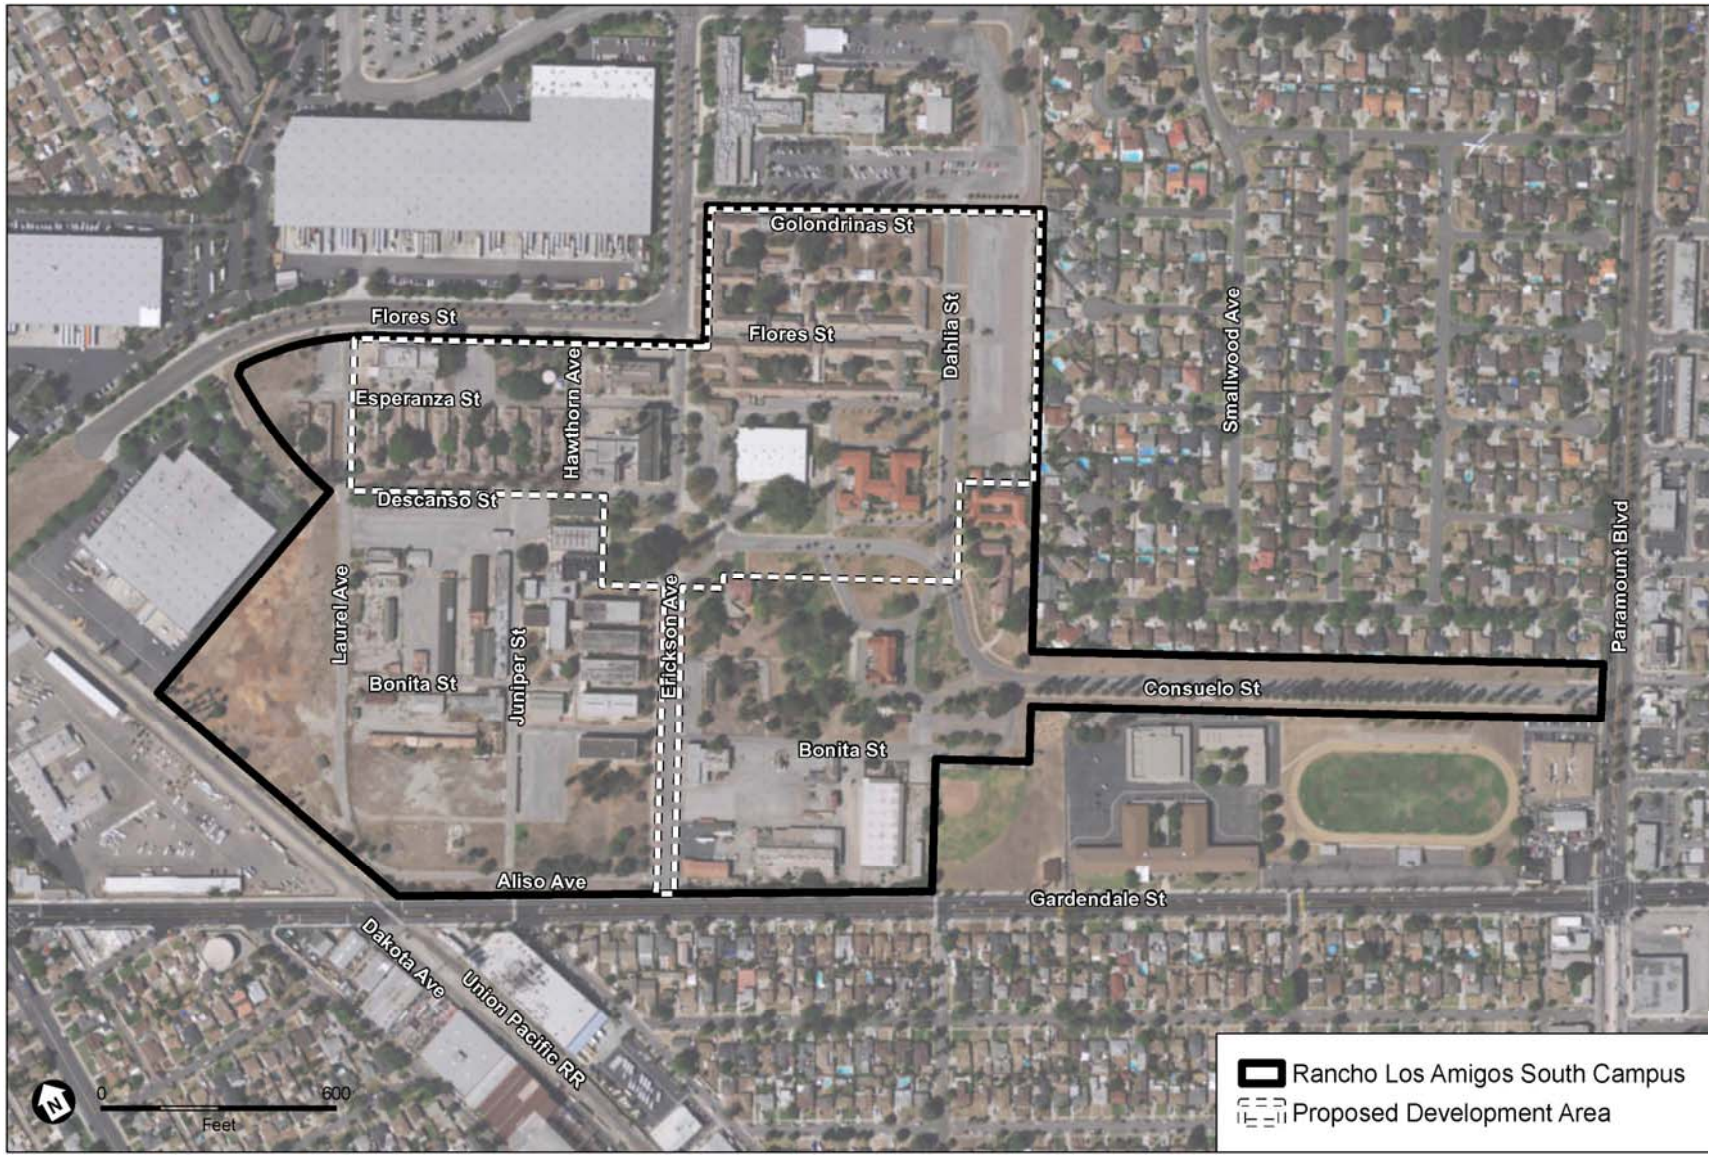
Scoping Meeting Agenda

- Introductions and Meeting Purpose
- Project Background / Existing Facilities
- Proposed Project Overview
- Environmental Review Process
- Receive Verbal Comments
- Open House
- Adjournment



Team Introductions

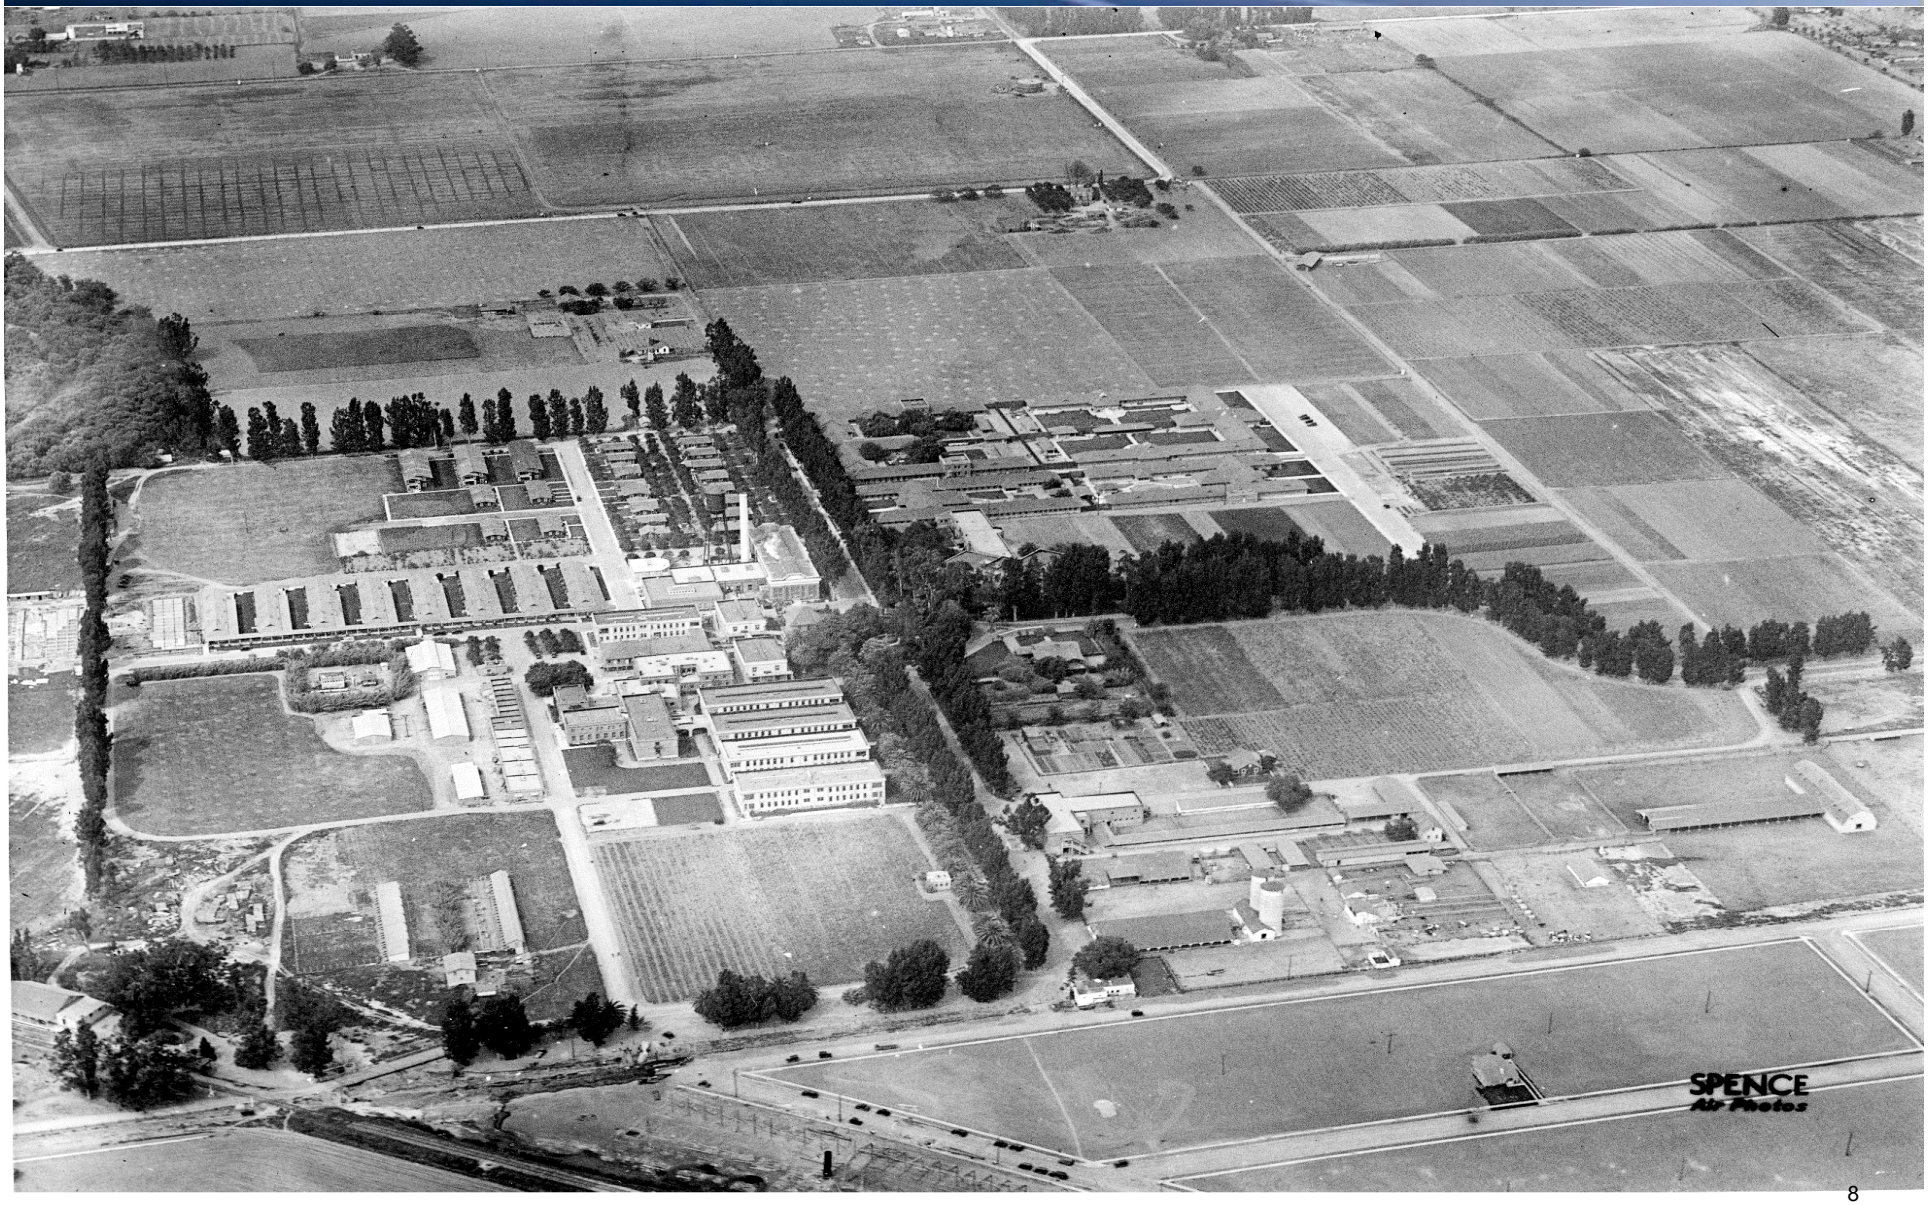
- Lead Agency under CEQA
  - County of Los Angeles
  - Department of Public Works
    - Luis Ramirez, Project Manager
- Environmental Science Associates (ESA)
  - Addie Farrell, Project Manager
- Other elected officials or agencies



Meeting Purpose

- The County is holding this Public Scoping Meeting consistent with the California Environmental Quality Act (CEQA)
- Requesting your written input on the “scope” of the EIR for Rancho Los Amigos South Campus Project
- Presentation followed by opportunity to provide verbal comments
- Comment cards to provide written comments at this meeting or during the scoping period

Rancho Los Amigos Campus



South Campus Location

South Campus History

- Property originally developed in 1888 as the L.A. County Poor Farm for injured, ill, and elderly “inmates” (patients) who could not take care of themselves and had no outside support. Able-bodies patients did farm labor to defray the cost of their stay.
- William Harriman is Superintendent from 1915 to 1952, overseeing major expansions and beginning the transition from Poor Farm to Hospital.
- Harriman successfully gets name changed to Rancho Los Amigos in 1932 to shed stigma and signal “evolving medical mission of the facility.”
- Polio treatment center established in 1952.
- Eugene Erickson becomes administrator in 1956, accelerating RLA’s transition.
- Last elements of farm, dairy, and mental health wards closed in late 1950s.
- Process of abandonment begins in 1970s/80s as virtually all activity moves to North Campus.

South Campus History (1926)

UCLA Department of Geography, Benjamin and Gladys Thomas Air Photo Archives, Spence Air Photo Collection

South Campus History

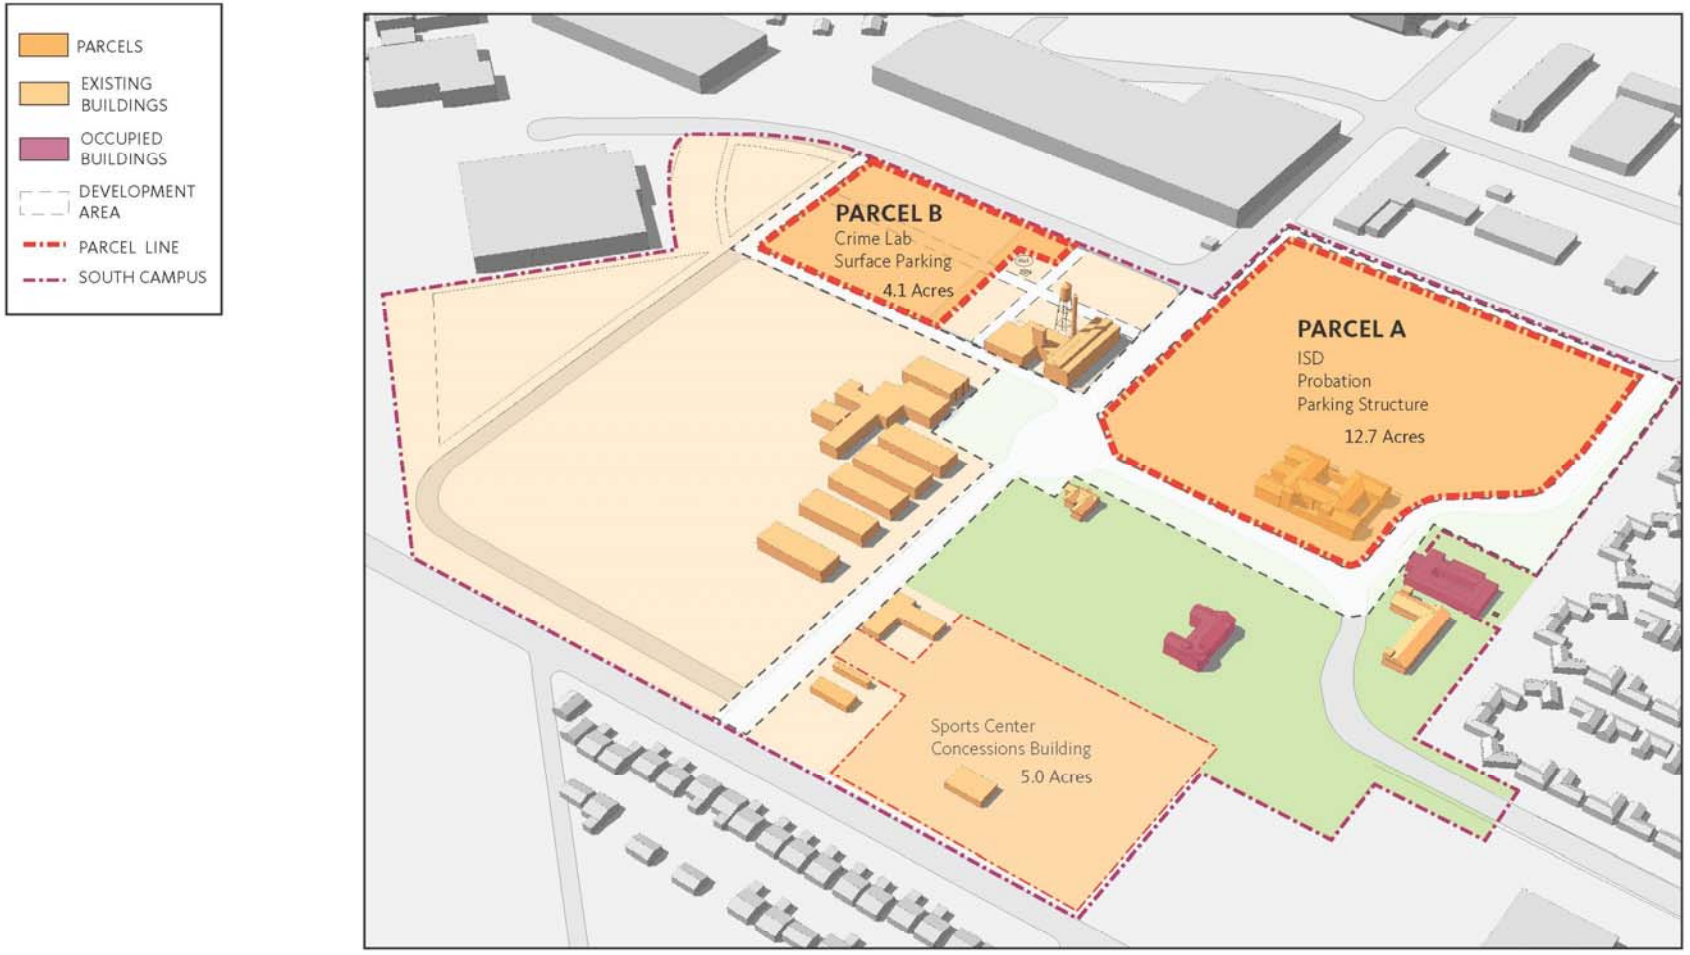
- Has been identified as a “Historic District”
  - Eligible for listing in the National Register of Historic Places
  - Listed in the California Register of Historical Resources

- As part of the environmental analysis in support of the EIR, the County will be conducting Historic District Analysis Report

Project Site Conditions

Proposed Project Background

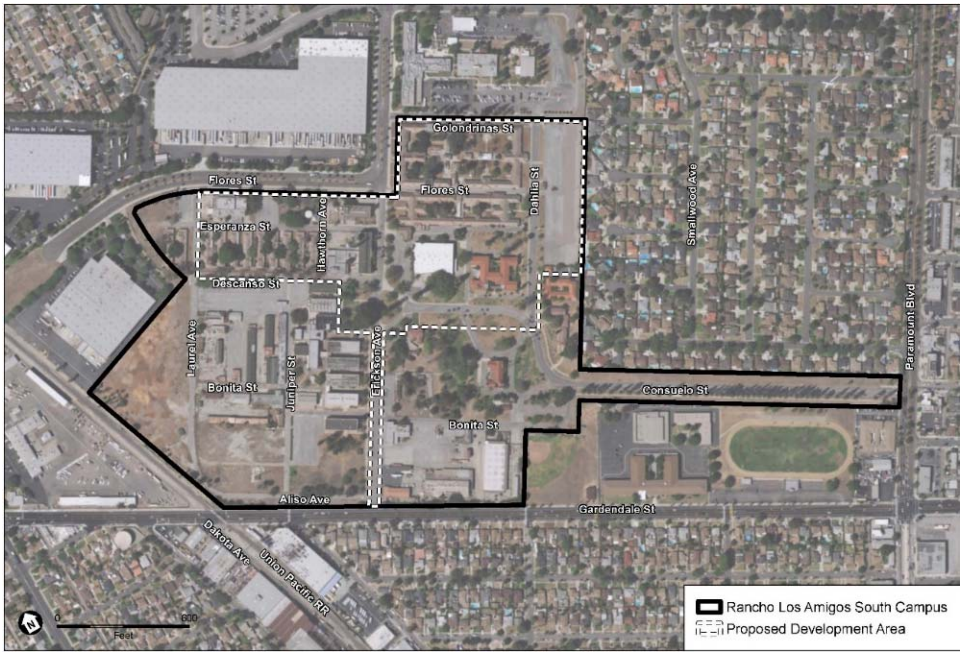
- In 2014, the Board directed the CEO to carry out a feasibility study and preliminary space planning to consolidate the administrative functions of various County Departments including Probation Department, Internal Services Department, and the Sheriff's Department Crime Laboratory



- A goal of the study was to identify cost-effective ways of relocating County Departments out of leased space and into existing County-owned facilities

Proposed Project Summary

- County proposes to develop three new County administrative buildings in the Development Area
  - Internal Services Department (ISD) Headquarters (370,000 SF, up to 6 stories, or 90-feet)
  - Probation Department Headquarters (220,000 SF, up to 6 stories, or 90-feet)
  - Sheriff's Department Crime Laboratory (60,000 SF, up to 2 stories, or 30-feet)
- Total of up to 650,000 SF
- Parking structure (up to 9 stories, or 90-feet)
- All necessary utilities and points of connection, roadways, curbs and gutters, sidewalks, medians, site structures, hydrants, vaults, manholes, substations, street lights, street signage, landscaping, and irrigation
- LEED gold rating
- The project would be delivered through a combination of Design-Build and standard design-bid-build



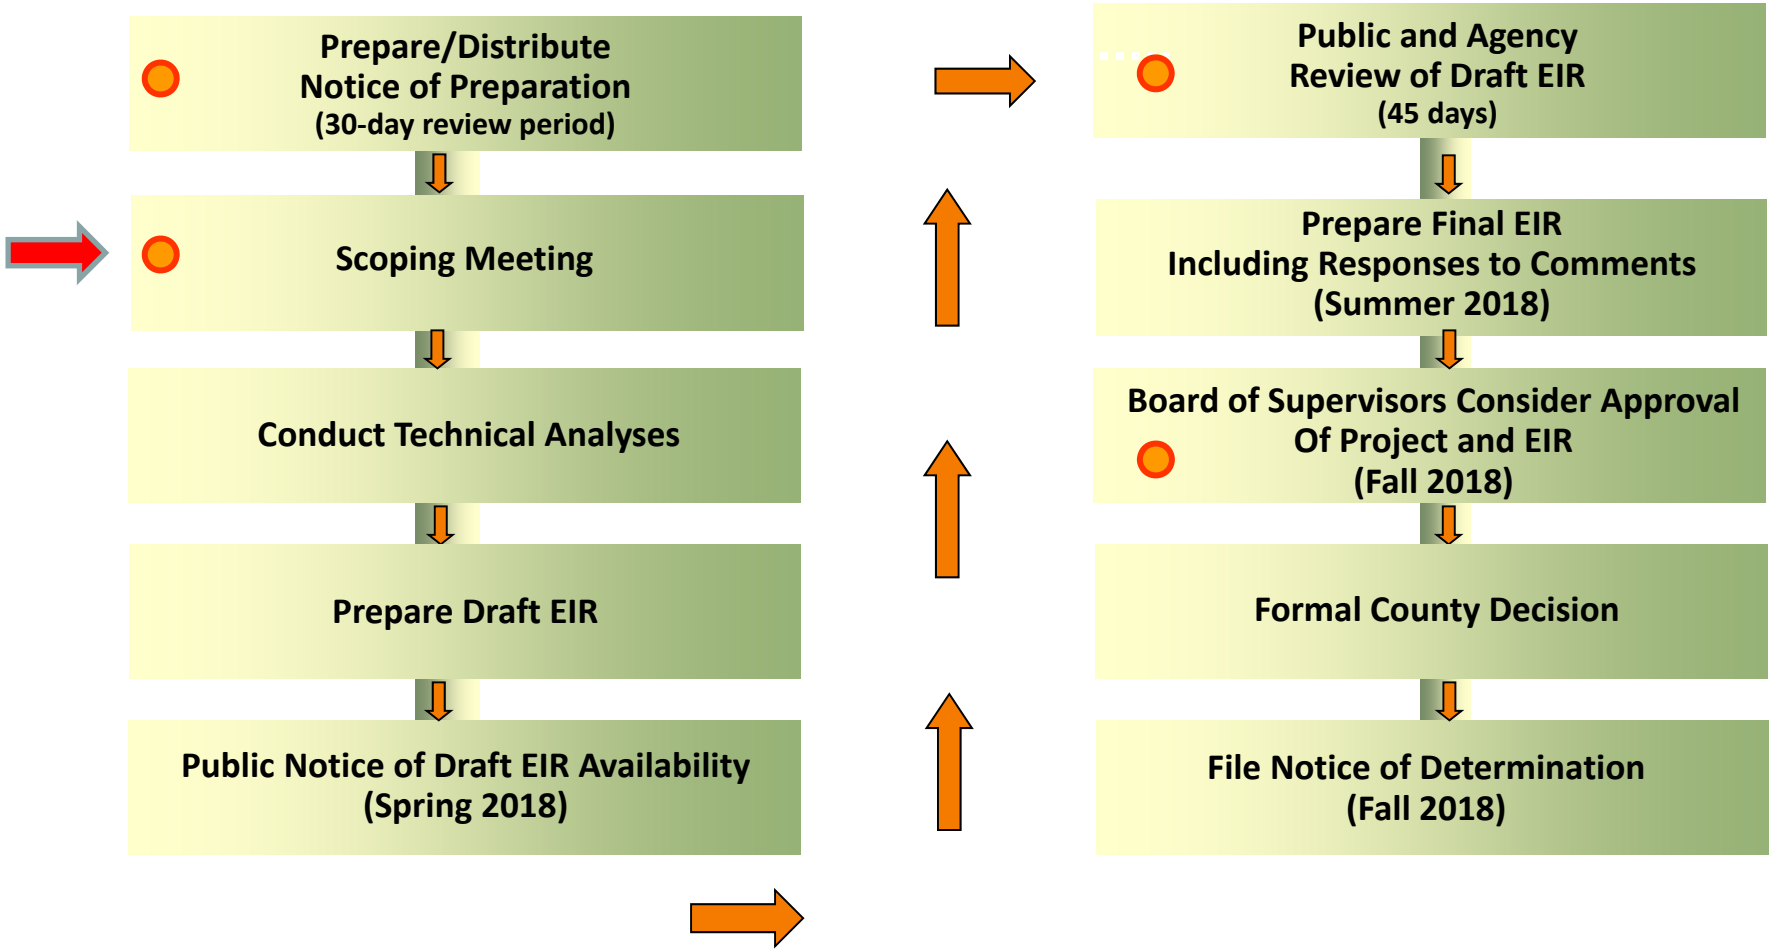
Conceptual Site Plan

Parcel Diagram

Proposed Project Demolition

- Demolition within the Development Area may include up to 51 structures
- Additional demolition on remaining South Campus may include up to 62 structures
- Some of the structures were previously identified as contributors to a Historic District

California Environmental Quality Act



The basic purposes of CEQA are to:

- **Inform** governmental decision-makers and the public about the potential significant environmental effects of a proposed project
- **Identify** ways that environmental impacts can be avoided or reduced
- **Prevent** significant, unavoidable impacts to the environment by requiring changes in projects
- **Disclose** to the public the reasons why an agency approved the project in the manner the agency chose if significant effects are involved

The basic purpose of an EIR is to:

- **Analyze** the significant environmental effects of a proposed project
- **Identify** alternatives
- **Disclose** possible ways to reduce or avoid possible environmental impacts

CEQA EIR Process

= Opportunities for public Input

= Current step in CEQA process

EIR Scoping Process

- **PURPOSE OF NOTICE OF PREPARATION**
  - Announce that an Environmental Impact Report (EIR) has been initiated
  - Describe the proposed project
  - Provide preliminary information on potential environmental effects of the project
  - Start public scoping process
- **PURPOSE OF SCOPING PERIOD**
  - Obtain agency and public input on scope and content of the EIR
  - Identify range of alternatives, mitigation measures, and significant effects to be analyzed in the EIR
  - Eliminate issues found not to be significant from the detailed study
  - Identify potential issues early in the environmental review process
  - Bring together and resolve concerns of agencies and the public

Environmental Impact Report

- Summary
- Introductory Discussion
- Project Description
- Impact Analysis
- Cumulative Impacts
- Alternatives to the Project
- Mitigation

Environmental Impact Report

The County has identified 13 primary environmental areas where impacts are most likely to occur:

- Aesthetics
- Air Quality
- Biological Resources
- Cultural Resources
- Energy
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use
- Noise
- Transportation and Traffic
- Tribal Cultural Resources
- Utilities and Service Systems

Public Comments

- Scoping Period Comment Period

  August 9, 2017, to September 11, 2017

- All comments must be submitted in writing via email or regular mail to:

  Mr. Luis Ramirez
  Capital Projects Program Manager
  County of Los Angeles Department of Public Works
  Project Management Division II
  900 South Fremont Ave., 5th Floor
  Alhambra, CA 91803
  Email: luramire@dpw.lacounty.gov

- Additional comment period at the Draft EIR stage

Rancho Los Amigos-Construction - Los Angeles-South Coast County, Summer

Rancho Los Amigos-Construction

Los Angeles-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Government Office Building	315.00	1000sqft	1.21	315,000.00	0
Government Office Building	168.00	1000sqft	0.64	168,000.00	0
Government Office Building	167.00	1000sqft	0.77	167,000.00	0
Other Asphalt Surfaces	5.02	Acre	5.02	218,671.20	0
Other Non-Asphalt Surfaces	4.25	Acre	4.25	185,130.00	0
Unenclosed Parking with Elevator	2,167.00	Space	1.96	866,800.00	0
Unenclosed Parking with Elevator	525.00	Space	1.41	210,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2022
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - per construction assumptions

Construction Phase - per construction assumptions

Off-road Equipment - per construction assumptions

Trips and VMT - per construction assumptions

Demolition - per construction assumptions

Grading - total of 35 acre development area

Vehicle Trips - per construction assumptions

Water And Wastewater - per construction assumptions

Solid Waste - per construction assumptions

Construction Off-road Equipment Mitigation - Assumes watering 3x per day during construction

Mobile Land Use Mitigation -

Energy Mitigation - per construction assumptions

Waste Mitigation - per construction assumptions

Stationary Sources - Emergency Generators and Fire Pumps -

Stationary Sources - Process Boilers -

Stationary Sources - User Defined -

Other Non-Asphalt Surfaces	4.25	Acre	4.25	185,130.00	0
Unenclosed Parking with Elevator	2,167.00	Space	1.96	866,800.00	0
Unenclosed Parking with Elevator	525.00	Space	1.41	210,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2022
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - per construction assumptions

Construction Phase - per construction assumptions

Off-road Equipment - per construction assumptions

Trips and VMT - per construction assumptions

Demolition - per construction assumptions

Grading - total of 35 acre development area

Vehicle Trips - per construction assumptions

Water And Wastewater - per construction assumptions

Solid Waste - per construction assumptions

Construction Off-road Equipment Mitigation - Assumes watering 3x per day during construction

Mobile Land Use Mitigation -

Energy Mitigation - per construction assumptions

Waste Mitigation - per construction assumptions

Stationary Sources - Emergency Generators and Fire Pumps -

Stationary Sources - Process Boilers -

Stationary Sources - User Defined -

11.0 Vegetation

Rancho Los Amigos-Construction

Los Angeles-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Government Office Building	315.00	1000sqft	1.21	315,000.00	0
Government Office Building	168.00	1000sqft	0.64	168,000.00	0
Government Office Building	167.00	1000sqft	0.77	167,000.00	0
Other Asphalt Surfaces	5.02	Acre	5.02	218,671.20	0
Other Non-Asphalt Surfaces	4.25	Acre	4.25	185,130.00	0
Unenclosed Parking with Elevator	2,167.00	Space	1.96	866,800.00	0
Unenclosed Parking with Elevator	525.00	Space	1.41	210,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2022
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - per construction assumptions

Construction Phase - per construction assumptions

Off-road Equipment - per construction assumptions

Trips and VMT - per construction assumptions

Demolition - per construction assumptions

Grading - total of 35 acre development area

Vehicle Trips - per construction assumptions

Water And Wastewater - per construction assumptions

Solid Waste - per construction assumptions

Construction Off-road Equipment Mitigation - Assumes watering 3x per day during construction

Mobile Land Use Mitigation -

Energy Mitigation - per construction assumptions

Waste Mitigation - per construction assumptions

Stationary Sources - Emergency Generators and Fire Pumps -

Stationary Sources - Process Boilers -

Stationary Sources - User Defined -

Unmitigated Localized Construction Emissions

Unmitigated LST Analysis Summary

Pollutant/Averaging Time	Project Impact (ug/m^3)	Background (ppm)[1]	Project Impact (ppm)	Project Total	Threshold	Threshold Units	Exceeds Threshold?
1st High 1-Hour NO_2	309.79	0.099	0.165	0.264	0.180	ppm	Yes
8th High 1-Hour NO_2	185.64	0.061	0.099	0.160	0.100	ppm	Yes
Annual NO_2	6.95	0.017	0.004	0.021	0.030	ppm	No
1st High 1-Hour CO	443.26	6.1	0.4	6.5	20.0	ppm	No
1st High 8-Hour CO	73.11	4.6	0.1	4.7	9.0	ppm	No
1st High 24-Hour PM10	6.81	--	--	6.8	10.4	ug/m^3	No
Annual-PM10	0.35	--	--	0.3	1.0	ug/m^3	No
1st High 24-Hour PM2.5	4.23	--	--	4.2	10.4	ug/m^3	No

1. Consistent with SCAQMD modeling guidance, background concentrations for analyzing PM10 and PM2.5 CAAQS and NAAQS are not required due to the nonattainment status for the South Coast Basin.

Source Receptor Area #12: South Central Los Angeles County[1]

Background Concentrations for LST Analysis[2]

1. The Project is located in SRA #5, Southeast Los Angeles County, however SCAQMD no longer provides monitoring data for this SRA. SRA 12 was used since is the closest monitoring site to the Project Site.
2. Background concentrations from SCAQMD Historical Monitoring Data
http://www.aqmd.gov/home/air-quality/air-quality-data-studies/historical-data-by-year
3. For 1-hour NO2 NAAQS, background concentration is the 3 year average of the 98th percentile of the daily maximum 1-hour average in accordacne with SCAQMD Modeling Guidance

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - per construction assumptions

Construction Phase - per construction assumptions

Off-road Equipment - per construction assumptions

Trips and VMT - per construction assumptions

Demolition - per construction assumptions

Grading - total of 35 acre development area

Vehicle Trips - per construction assumptions

Water And Wastewater - per construction assumptions

Solid Waste - per construction assumptions

Construction Off-road Equipment Mitigation - Assumes watering 3x per day during construction

Mobile Land Use Mitigation -

Energy Mitigation - per construction assumptions

Waste Mitigation - per construction assumptions

Stationary Sources - Emergency Generators and Fire Pumps -

Stationary Sources - Process Boilers -

Stationary Sources - User Defined -

State	Annual	0.03	56

1. The Project is located in SRA #5, Southeast Los Angeles County, however SCAQMD no longer provides monitoring data for this SRA. SRA 12 was used since is the closest monitoring site to the Project Site.
2. Background concentrations from SCAQMD Historical Monitoring Data
http://www.aqmd.gov/home/air-quality/air-quality-data-studies/historical-data-by-year
3. For 1-hour NO2 NAAQS, background concentration is the 3 year average of the 98th percentile of the daily maximum 1-hour average in accordacne with SCAQMD Modeling Guidance

Rancho Los Amigos-Construction

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Government Office Building	315.00	1000sqft	1.21	315,000.00	0
Government Office Building	168.00	1000sqft	0.64	168,000.00	0
Government Office Building	167.00	1000sqft	0.77	167,000.00	0
Other Asphalt Surfaces	5.02	Acre	5.02	218,671.20	0
Other Non-Asphalt Surfaces	4.25	Acre	4.25	185,130.00	0
Unenclosed Parking with Elevator	2,167.00	Space	1.96	866,800.00	0
Unenclosed Parking with Elevator	525.00	Space	1.41	210,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2022
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - per construction assumptions

Construction Phase - per construction assumptions

Off-road Equipment - per construction assumptions

Trips and VMT - per construction assumptions

Demolition - per construction assumptions

Grading - total of 35 acre development area

Vehicle Trips - per construction assumptions

Water And Wastewater - per construction assumptions

Solid Waste - per construction assumptions

Construction Off-road Equipment Mitigation - Assumes watering 3x per day during construction

Mobile Land Use Mitigation -

Energy Mitigation - per construction assumptions

Waste Mitigation - per construction assumptions

Stationary Sources - Emergency Generators and Fire Pumps -

Stationary Sources - Process Boilers -

Stationary Sources - User Defined -

1 Table A - Updated CEIDARS Table with PM2.5 Fractions, INTERNAL COMBUSTION - DISTILLATE AND DIESEL-ELECTRIC GENERATION

2 Policy: CARB Emission Factors for CI Diesel Engines – Percent HC in Relation to NMHC + Nox: http://www.baaqmd.gov/~/media/Files/Engineering/policy_and_procedures/Engines/EmissionFactorsforDieselEngines.ashx

3 Load Factor based on CalEEMod Generator Set Load Factor

4 Number of hours permitted for testing and maintenance consistent with SCAQMD Rule 1470

5 ARB 2011 Final Regulation Order for the ATCM for stationary engines, Table 1, Model year 2008+: https://www.arb.ca.gov/regact/2010/atcm2010/finalregorder.pdf

6 VOC and NOx emission factor were calculated from the combined NMHC+NOx emission factor of 4.8 g/bhp-hr

7 Emission factor for SO2: U.S. Environmental Protection Agency, AP-42 Compilation of Air Pollutant Emission Factors, Fifth Edition, Section 3.4, Table 3.4-1.
Emission Factor for SO2 is based on 15 ppm (0.0015%) S1 from the EPA Nonroad Diesel Fuel Program, and assumes complete conversion to SO2.

-Intersection volumes from Project Traffic Impact Study prepared by LLG, March 2019.
-Highlighted cells indicates intesections that do not have a LOS of D,E, or F and are therefore not evaluated in the CO Hotpsot Analysis.

Estimated Cancer Burden

RANCHOS LOS AMIGOS SOUTH CAMPUS PROJECT
Draft Environmental Impact Report
Estimated Cancer Burden (in area > 1 in one million cancer risk)

- Total Cancer risk estimated to drop below 1 in 1 million where the unitized concentration falls below 5E+04.
- The distance at which unit concentration falls to below 5E+04 is within 175 meters (0.18 km) from the approximate center of the Project Site (i.e., the dominant sources of on-site cancer risk).

Estimated Cancer Burden

Radius:	0.18	km
Area:	0.10	km^2
Population in Are	50	County Office of Public Safety Employees
	50	Rose Float Association Volunteers
	2,570	Staff to be relocated to South Campus (see DEIR Section 2.2, Project Background)
	5,589	111,772 Downey Residents, estimated 5% of residents within the cancer burden area (population from Section 5.4.4 Population and Housing
	1,000	Miscellaneous population and employees in area (conservative assumption)
	9,259	Total Residents+Employees in Cancer Burden Area
Cancer Burden:	0.37	
Indicator of Signi	0.5	
Exceeds Indicato	No

subject	Estimating the air quality and greenhouse gas emissions impacts using EMFAC2017

As background, the California Emissions Estimator Model® (CalEEMod) is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects. The most recent version of CalEEMod is version 2016.3.2.

CalEEMod utilizes emission factors for off-road equipment from the California Air Resources Board's (CARB) OFFROAD model and on-road vehicles from CARB's EMission FACtors (EMFAC) model.

The EMFAC emissions model is developed and used by CARB to assess emissions from on-road vehicles including cars, trucks, and buses in California, and to support CARB's regulatory and air quality planning efforts to meet the Federal Highway Administration's transportation planning requirements. The United States Environmental Protection Agency (USEPA) approves EMFAC for use in State Implementation Plan and transportation conformity analyses.

In accordance with the California Environmental Quality Act (CEQA), the Notice of Preparation (NOP) for the Rancho Los Amigos South Campus Project (Project) was published on August 9, 2017. At that time, and throughout the approximately two-year process of preparing the Draft Environmental Impact Report (EIR), EMFAC2014 was the latest model for calculating air quality and greenhouse gas emissions from on-road mobile sources approved by USEPA. Accordingly, the Draft EIR calculated Project emissions using EMFAC2014, which is embedded in the most recent CalEEMod version 2016.3.2. On August 15, 2019, during the final stages of preparation of the Draft EIR, the USEPA approved EMFAC2017.

According to CARB, EMFAC2017 updated vehicle population in the fleet characterization, integrated more recent and extensive vehicle emission testing, and included both household travel survey data and heavy-duty vehicle activity data. Emission factors decrease over time as a general trend in both EMFAC2014 and EMFAC2017. Based on its research, CARB has revised the rate of decline in EMFAC2017 as compared to EMFAC2014. The change in the rate of decline in emission factors depends on the criteria air pollutant, vehicle

type, year of analysis, use scenario, and activity profile (**Table 1**) (CARB, 2017c and CARB, 2017d). For the Project, EMFAC2017 would impact both construction and operation as both have emissions from on-road mobile sources. These sources include worker, vendor, and hauling trips.

This memorandum explores the differences between EMFAC2017 and EMFAC2014 with regard to the Project and its environmental impacts for air quality and GHG emissions. Specifically, it evaluates whether updating the Draft EIR analysis to calculate emissions using EMFAC2017 would have any effect on the significance thresholds and resulting significance conclusions.

TABLE 1
KEY DIFFERENCES BETWEEN EMFAC2017 AND EMFAC2014

Light-duty Vehicles	**EMFAC 2017**
In-use emissions	• Net NOx increase • Higher start emission rates for criteria pollutants • Lower running emission rates • Much less emission deterioration
Activity profile	• Lower number of start per day • Lower mileage accrual rates for newer vehicles • Higher mileage accrual rates for older vehicles • Updated mileage accrual rates for PEVs
Heavy-duty Vehicles	**EMFAC 2017**
In-use emissions	• Higher NOx emissions (NOx increase) • Higher PM emissions (PM increase) • Lower start emission rates (NOx decrease) • Higher idling emission rate (PM and NOx increase) • Higher PM deterioration (PM increase)
Activity profile	• Higher portion of low speed activities (PM and NOx increase) • Lower number of cold starts per day (for several major categories) • Lower number of idle hours (for most categories)
Fleet Characterization	**EMFAC 2017**
	• Higher gasoline, diesel, and electric vehicle populations for years 2013 through 2016 • Increased penetration of 2010+MY Engine Heavy-Heavy Duty trucks

Air Quality: Construction

During construction, the heavy heavy duty trucks (HHDT)[1] used for truck trips would dominate the on-road emissions. Using EMFAC2017 for HHDT, emission factors for PM2.5 and PM10 would be one to two times greater while reactive organic gas (ROG), CO, and SOx would be generally lower or similar compared to EMFAC2014 for aggregated speed (**Table 2**). For a conservative EMFAC2017 analysis, the 349 vendor truck trips during Phase D - ISD Building Construction[2] were assumed to all be HHDT. Converting from EMFAC2014 to EMFAC2017 for vendor trips would only affect Phase D, as shown in **Table 4**. Neither Phase D nor any overlap with Phase D results in the maximum daily emissions in the initial analysis with EMFAC2014 or in the

1 HHDT is a vehicle class used in EMFAC. It was used to have a conservative analysis for calculating emissions from truck trips.

2 Phase D – ISD Building Construction is the name used in the model for Section 3.2 Air Quality of the EIR. It is the same phase as "Building Construction" in Table 2-5, Estimated Construction Schedule, of the Project Description.

estimation with EMFAC2017. Therefore, the use of EMFAC2017 in place of EMFAC2014 for construction would have no effect on significance thresholds and resulting conclusions.

Worker trips, which are assumed to be light duty passenger vehicles, would affect all phases of construction. For passenger vehicles, aggregated speed during the years of construction, ROG, NOx, PM10, PM2.5, and SOx emission factors are lower in EMFAC2017 by as much as 24 percent than in EMFAC2014 (**Table 3**). CO emission factors are higher by as much as 14 percent in EMFAC2017 compared to EMFAC2014. If the analysis were conducted using the newly approved EMFAC2017, applying these percentages across the board for construction (as it applies to worker trips) would only increase CO emission estimates, but all criteria air pollutants would remain well below the significance threshold (**Table 4**).

TABLE 2
PERCENT CHANGE IN DIESEL HHDT RUNNING EXHAUST EMISSION FACTORS FROM EMFAC2014 TO EMFAC2017 FOR AGGREGATED SPEED

Year	ROG	NOX	CO	SOX	PM10	PM2.5

Air Quality: Operation

The on-road mobile emissions during operation would mainly come from the passenger cars. In practice for the Project, there is the potential for trucks to be used for delivery or other service needs to the offices. For the purposes of this estimation, it is assumed that 20 percent of the operational mobile emissions come from trucks starting in the operational year of 2022. While the 2022 NOx emission factor decreased slightly for HHDT from EMFAC2014 to EMFAC2017, larger increases are consistently seen in future years when forecasting out to 2050 (**Table 2**). In order to estimate the long-term effects, 2050 emission factors from EMFAC2017 for both passenger cars (LDT) and trucks (HHDT) were used in the analysis below. Therefore, if the analysis were conducted using the newly approved EMFAC2017 factors for mobile emissions during operation, there would be no change to the Draft EIR's conclusion of significant and unavoidable (**Table 5**).

Greenhouse Gases

For GHGs, EMFAC2017 contains a new GHG module, consistent with CARB's official GHG inventory. The module calculates tailpipe CO_2 emissions using complete combustion methodology and replaces previous CO_2 emission factors derived from vehicle testing. CH_4 and N_20 emission factors are updated for both light and heavy-duty vehicles using recent vehicle testing data. The module updates fuel efficiency assumptions and reflects the benefits of regulations adopted before the model release date. The overall change to CO_2e from EMFAC2014 to

EMFAC2017 is about a five percent increase, mainly driven by CO_2 (CO_2 estimates increase by approximately three percent; CH_4 has no significant change; N_2O estimates increase by 50 percent) (CARB, 2017c). If the analysis were conducted using the newly approved EMFAC2017 instead of the default EMFAC2014 built into CalEEMod 2016.3.2 for mobile sources, GHG emissions would be approximately 12,570 $MTCO_2e$/year (**Table 6**). GHG emissions would continue to exceed the SCAQMD threshold of 3,000 MTCO2e/year and be considered significant and unavoidable.

Re: Los Angeles County Rancho los Amigos South Campus – Arboricultural Consulting Services

Dear Ms. Farrell,

Enclosed are the tree evaluation data, photographic, and graphic exhibits for the trees located on the Rancho los Amigos South Campus that Carlberg Associates inventoried in July and August 2017. We were retained to assist ESA in support of their CEQA/NEPA documentation and evaluated 598 trees during our site visits conducted between July 17 and August 18, 2017.

Of these 598 trees,

- 72 tree species are represented
- Five species are California natives
- One species is "protected" by the Los Angeles County Oak Tree Ordinance No. 22.56.2050 (coast live oak; seven trees are represented – nos. 189, 191, 200, 202, 244, 245, 385)
- Seven species are palms
- 13 species have edible fruit
- 12 trees are typically prized for their showy flowers
- 27 trees appear to be in irreversible decline, and
- 23 trees are dead, most likely as a result of drought stress

Table 1 on the next page summarizes the inventoried tree species. The full inventory is enclosed at the end of this letter. Exhibit 1 illustrates the boundaries of our inventory. Eleven TreeWorks® Location Exhibits are

shamel ash	*Fraxinus uhdei*	No	9
shiny xylosma	*Xylosma congestum*	No	2
southern magnolia	*Magnolia grandiflora*	No	54
Spanish dagger	*Yucca gloriosa*	No	3
sweetshade	*Hymenosporum flavum*	No	7
unknown dead tree	*N/A*	No	2
variegated orchid tree	*Bauhinia variegata*	No	3
weeping fig	*Ficus benjamina*	No	2
white sapote	*Casimiroa edulis*	No	4
windmill palm	*Trachycarpus fortunei*	No	14
yew pine	*Podocarpus macrophyllus*	No	2
TOTALS	**72 species**		**598 trees**

The southern campus of Ranch los Amigos contains many beautiful trees and several unique specimens. A number of trees could be designated as scenic. A scenic tree is highly visible, prominent and possesses unique or distinctive aesthetic qualities due to its size, structure, unusual specimen, etc. The following individual trees, in our opinion, could qualify as scenic due to their age, stature, and their distinctive aesthetic qualities:

Tree Number	Common Name
87	Bunya bunya tree
88	Bunya bunya tree
121	Camphor tree
122	Camphor tree
128	Bunya bunya tree
355	Morton Bay fig
379	Bunya bunya
511	Italian stone pine
530	Bunya bunya tree

In addition to the individual trees listed above, other individuals or groups of trees merit consideration for retention based on their age, stature, health, potential for relocation on-site, and their statement in the landscape. For example, the Canary Island pines that line the southern side of Consuelo Street west of Paramount create a dramatic statement as you enter the property from the east. Similarly, the mature Mexican and California date palms and Canary Island date palms around the campus provide a stately and classic southern California feel to the campus. Clusters of fruit trees and smaller palms, as well as stately native oaks and bright flowering trees, provide oases of green and spots of color throughout the campus. Trees that are highly suitable for retention are noted in the master inventory table. Trees that are moderately suited for retention may need pruning, additional irrigation, or other treatment. Trees that are noted as low suitability are in decline or have defects that render them poor choices for retention or relocation.

The onsite coast live oaks are protected by Los Angeles County Ordinance and every effort should be made to preserve them in place. The protected zone for oak trees extends five feet beyond the dripline, or 15 feet from the trunk, whichever is greater. This is the Tree Protection Zone (TPZ). Tree protection fencing will be required and any encroachment or removal requests must be approved by the County of Los Angeles Department of Regional Planning prior to commencement of any work onsite.

Please feel welcome to contact me at 626.428.5072, if you have any immediate questions or concerns.

Park Specialist/Naturalist, City of Monrovia, 1988-1996

Certificates — Certified Arborist, WE-1982A, International Society of Arboriculture, 1998
Registered Consulting Arborist, #502, American Society of Consulting Arborists, 2011
Qualified Tree Risk Assessor, International Society of Arboriculture, 2013

AREAS OF EXPERTISE

Ms. Cuba is experienced in the following areas of tree management and preservation:

- Tree health & risk assessments
- Inventories & reports for native and non-native trees
- Master planning
- Evaluation of trees for preservation, encroachment, relocation, restoration, and hazards
- Value assessments (appraisals) for native and non-native trees
- Post-fire inventories, assessments, and valuations for native and non-native trees
- Guidelines for tree preservation, planting, pruning and maintenance specifications
- Pest and disease identification
- Tree and landscape resource mapping – GPS, GIS, and AutoCAD
- Planning Commission, City Council, and community meetings representation
- Review of landscape plans for mitigation compliance & fire fuel modification planning
- Preparation of native habitat and woodland management plans
- Performance of long-term mitigation compliance monitoring & reporting
- Expert testimony

PREVIOUS CONSULTING EXPERIENCE

Ms. Cuba has performed hundreds of tree inventories, health evaluations, impact analyses, hazard, and value assessments for counties, cities, sanitation districts, and water districts, as well as private developers, architects, engineers, and homeowners. She has over 24 years of experience in arboriculture and is trained in environmental planning, state and federal regulatory permitting, preparation of CEQA analyses, and habitat mitigation planning and implementation. Representative clients include:

City of Pasadena
City of Monrovia
City of Santa Clarita
Los Angeles County Fire Department
California Institute of Technology
Mia Lehrer + Associates
Pulte/Centex Homes
Newhall Land and Farming
KOVAC Design Studio
Pamela Burton & Company
Chandler School
Mesivta of Greater Los Angeles
San Diego Gas & Electric
Quinn, Emanuel, Urquhart and Sullivan (attorneys at law)
The New Home Company
City of Sierra Madre
Belzberg Architects
Occidental College
Rose Bowl Stadium
Las Encinas Hospital/Aurora Health Services
EPT Design
Gensler Architects
The Claremont Colleges (Pomona College, Claremont University Consortium, Claremont Graduate University)

AFFILIATIONS

Ms. Cuba serves with the following national and regional professional organizations:

- Member, American Society of Consulting Arborists
- Member, International Society of Arboriculture, Western Chapter
- Past President (2015), Street Tree Seminar, Inc.

Education — B.A., Environmental Studies, University of California, Santa Barbara, 2000

Experience — Project Planner & Senior Arborist, Land Design Consultants, Inc.
Pasadena, 1999 – 2014

Certificates — Certified Arborist, WE-7011A, International Society of Arboriculture, 2004
Qualified Tree Risk Assessor, International Society of Arboriculture, 2015

AREAS OF EXPERTISE

Mr. McAllaster is experienced in the following areas of tree management and preservation:

- Tree health & risk assessments
- Inventories & reports for native and non-native trees
- Master planning
- Evaluation of trees for preservation, encroachment, relocation, restoration, and hazards
- Construction monitoring and reporting
- Value assessments (appraisals) for native and non-native trees
- Post-fire inventories, assessments, and valuations for native and non-native trees
- Guidelines for tree preservation, planting, pruning and maintenance specifications
- Tree and landscape resource mapping – GPS, GIS, and AutoCAD
- Planning Commission, City Council, and community meetings representation
- Review of landscape plans for mitigation compliance & fire fuel modification planning
- Performance of long-term mitigation compliance monitoring & reporting

PREVIOUS CONSULTING EXPERIENCE

Mr. McAllaster has performed hundreds of tree inventories, health evaluations, impact analyses, hazard, and value assessments for counties, cities, sanitation districts, and water districts, as well as private developers, architects, engineers, and homeowners. He has over 11 years of experience in arboriculture and is trained in environmental planning, state and federal regulatory permitting, preparation of CEQA analyses, and habitat mitigation planning and implementation. Representative clients include:

City of Pasadena
City of Santa Clarita
City of Glendora
Los Angeles County Fire Department
Los Angeles County Sanitation Districts
Newhall County Water District
Pulte/Centex Homes
Newhall Land and Farming
E & S Ring, Inc.
Hollywood Forever Cemetery
Archdiocese of Los Angeles
St. John's Hospital, Santa Monica
Kovac Architects
Tim Barber, Ltd., Architects
Ojai Valley Community Hospital
The Kibo Group
El Monte Garden Senior Center
IMT Capital, LLC
San Diego Gas & Electric
Corky McMillin Companies
City of South Gate
City of Arcadia
D2 Development
Burrtec, Inc.
The Claremont Colleges
The New Home Company
William Carey University
Claremont Golf Course
Universal Hilton
Gensler Architects

NAC Architecture
Aurora/Signature Health Services
Monte Vista Grove Homes
Highpointe Communities
Claremont University Center

AFFILIATIONS

Mr. McAllaster serves with the following national and regional professional organizations:

- Member, International Society of Arboriculture, Western Chapter
- Member, Street Tree Seminar, Inc.

ARBORIST DISCLOSURE STATEMENT

Arborists are tree specialists who use their education, knowledge, training and experience to examine trees, recommend measures to enhance the beauty and health of trees, and attempt to reduce the risk of living near trees. Clients may choose to accept or disregard the recommendations of the arborist, or to seek additional advice.

Arborists cannot detect every condition that could possibly lead to the structural failure of a tree. Trees are living organisms that fail in ways we do not fully understand. Conditions are often hidden within trees and below ground. Arborists cannot guarantee that a tree will be healthy or safe under all circumstances, or for a specified period of time. Likewise, remedial treatments, like any medicine, cannot be guaranteed.

Treatment, pruning and removal of trees may involve considerations beyond the scope of the arborist's services such as property boundaries, property ownership, site lines, disputes between neighbors, and other issues. Arborists cannot take such considerations into account unless complete and accurate information is disclosed to the arborist. An arborist should then be expected to reasonably rely upon the completeness and accuracy of the information provided.

Trees contribute greatly to our enjoyment and appreciation of life. Nonetheless, they are subject to the laws of gravity and physiological decline. Therefore, neither arborists nor tree owners can be reasonably expected to warrant unfailing predictability or elimination of risk.

Trees can be managed, but they cannot be controlled. To live near trees is to accept some degree of risk. The only way to eliminate all risk associated with trees is to eliminate all trees.

HEALTH AND STRUCTURE GRADE DEFINITIONS

Health and structure ratings of the trees are based on the archetype tree of the same species through a subjective evaluation of its physiological health, aesthetic quality, and structural integrity.

Overall physiological condition (health) and structural condition were rated A-F:

Health

A) Outstanding – Exceptional trees of good growth form and vigor for their age class; exhibiting very good to excellent health as evidenced by normal to exceptional shoot growth during current season, good bud development and leaf color, lack of leaf, twig or branch dieback throughout the crown, and the absence of decay, bleeding, or cankers. Common leaf and/or twig pests may be noted at very minor levels.

B) Above average – Good to very good trees that exhibit minor necrotic or physiological symptoms of stress and/or disease; shoot growth is less than reasonably expected, leaf color is less than optimal in some areas, the crown may be thinning, minor levels of leaf, twig, and branch dieback may be present, and minor areas of decay, bleeding, or cankers may be manifesting. Minor amounts of epicormic growth may be present. Minor amounts of fire damage or mechanical damage may be present. Still healthy, but with moderately diminished vigor and vitality. No significant decline noted.

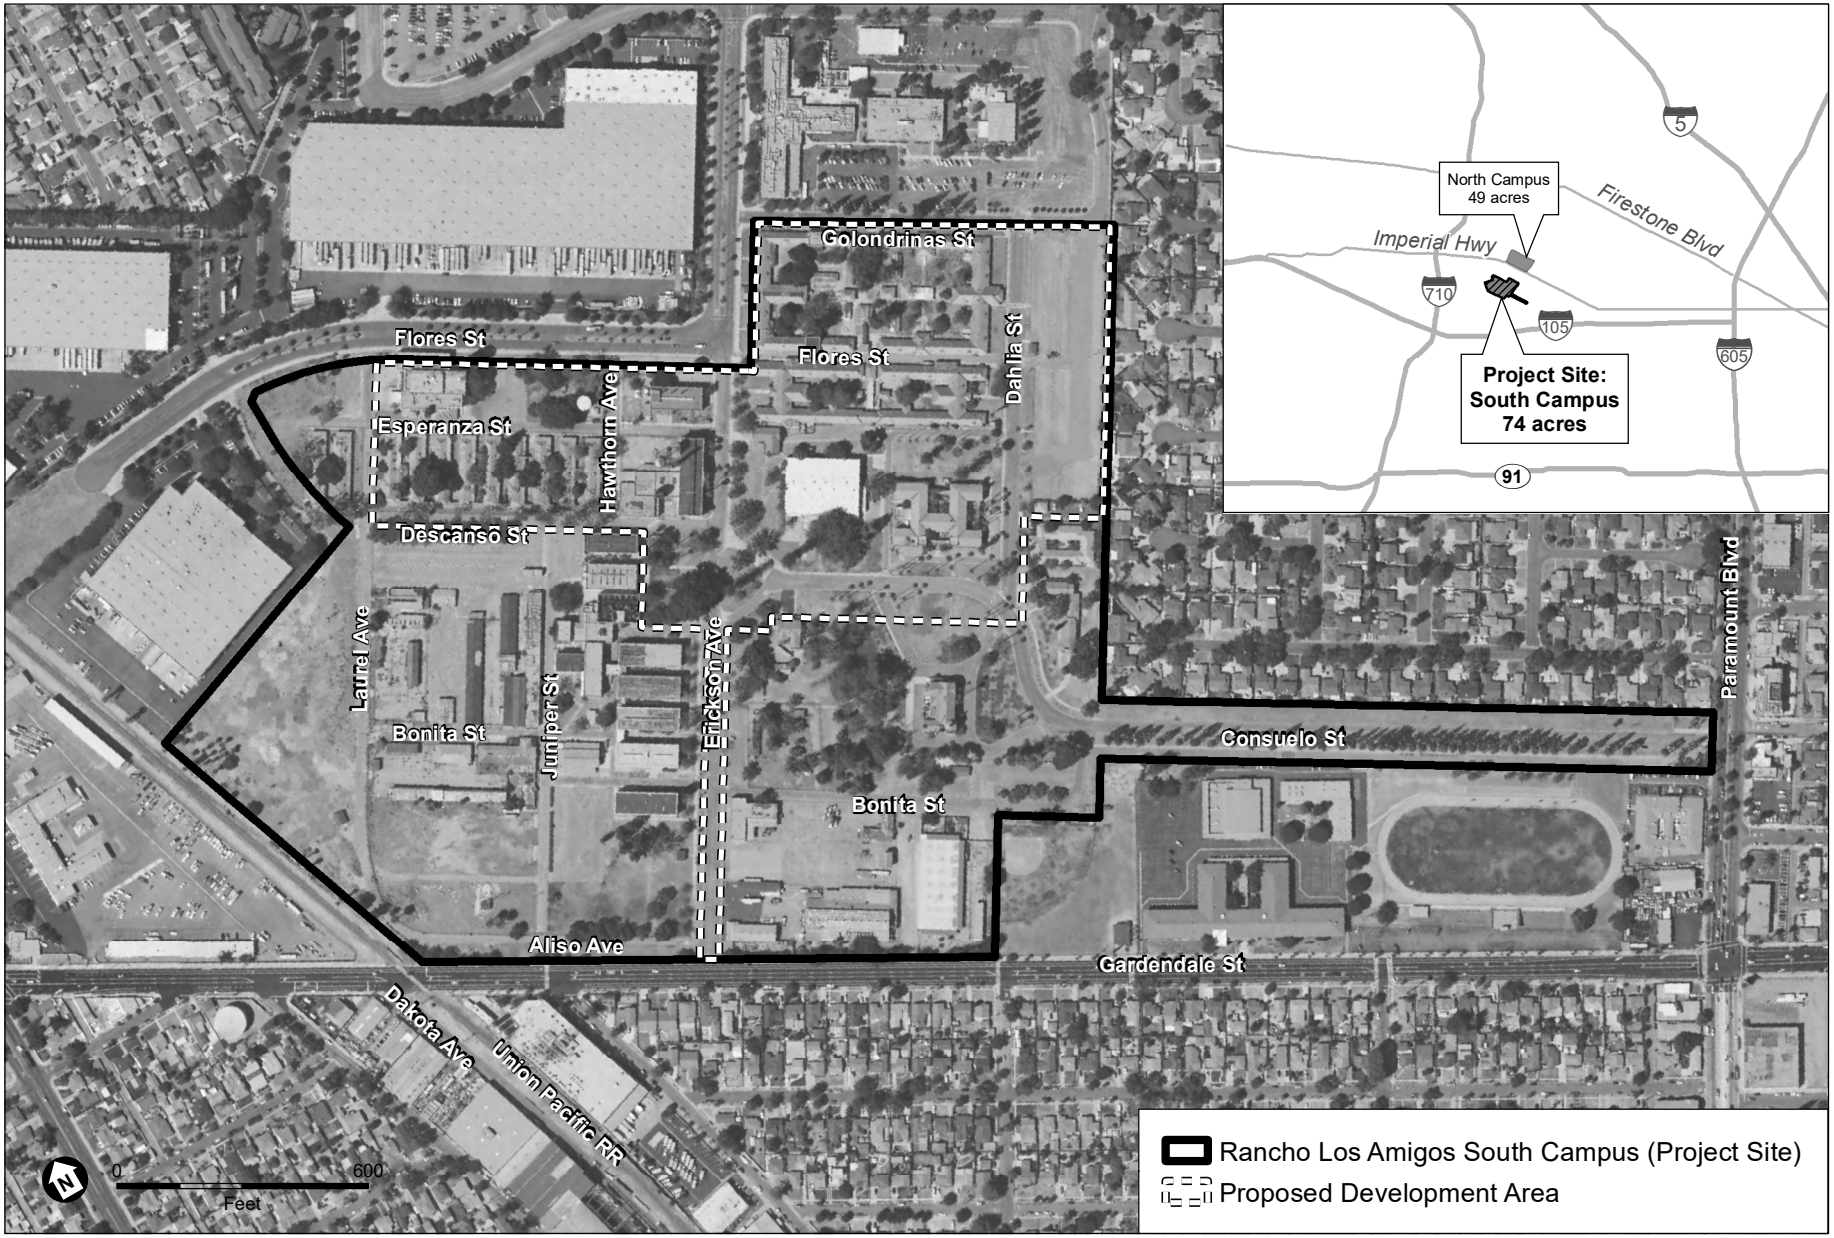
C) Average – Average, moderately good trees whose growth habit and physiological or fire-induced symptoms indicate an equal chance to either decline or continue with good health into the near future. Most of these trees exhibit moderate to significant small deadwood in outer crown areas, decreased shoot growth and diminished leaf color and mass. Some stem and branch dieback is usually present and epicormic growth may be moderate to extensive. Cavities, pockets of decay, relatively significant fire damage, bark exfoliation, or cracks may be present. Moderate to significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it is expected to negatively impact the lifespan of the tree. Tree may be in early decline.

D) Below Average/Poor - trees whose growth habit and physiological or fire-induced symptoms indicate significant, irreversible decline. Most of these trees exhibit significant dieback of wood in the crown, possibly accompanied by significant epicormic sprouting. Shoot growth and leaf color and mass is either significantly diminished or nonexistent throughout the crown. Cavities, pockets of decay, significant fire damage, bark exfoliation, and/or cracks may be present. Significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it has negatively impacted the lifespan of the tree. Tree appears to be in irreversible decline.

F) Dead or in spiral of decline – this tree exhibits very little to no signs of life.

Structure

A) Outstanding – Trees with outstanding structure for their species exhibit trunk and branch arrangement and orientation that result in a sturdy form or architecture that resists failure under normal circumstances. The spacing, orientation, and size of the branches relative to the trunk are quintessential for the species and free from defects. No outward sign of decay or pathological disease



is present. Some trees exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, which would preclude them from achieving an “A” grade.

B) Above average - Trees with good to very good structure for their species. They exhibit trunk and branch arrangement and orientation that result in a relatively sturdy form or architecture that resists failure under normal circumstances, but may have some mechanical damage, over-pruning, or other minor structural defects. The spacing, orientation, and size of the branches relative to the trunk are still in the normal range for the species, but they exhibit a minor degree of defects. Minor, sub-critical levels of decay or pathological disease may be present, but the degree of damage is not yet structurally significant. Trees that exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, would generally fall in to this category. A small percentage of the canopy may be shaded or crowded, but not in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree.

C) Average - Trees with moderately good structure for their species, but with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a less than sturdy form or architecture, which reduces their resistance to failure under normal circumstances. Moderate levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of some of the branches relative to the trunk are not in the normal range for the species. Moderate to significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A moderate to significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be moderately elevated.

D) Well Below Average/Poor - Trees poor structure for their species and with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a significantly less than sturdy form or architecture, significantly reducing their resistance to failure under normal circumstances. Significant levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of many of the branches relative to the trunk are not in the normal range for the species. Significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be advanced.

F) Severely Compromised – trees with very poor structure and numerous or severe defects due to growing conditions, historical or recent pruning, mechanical damage, history of limb or trunk failures, advanced and irreparable decay, disease, or severe fire damage. Trees with this rating are in severe, irreparable decline, or are barely alive. Risk of full or partial failures in the near future may be severe.

Path: U:\GIS\GIS\Projects\17xxxxD170230_Rancho_Los_Amigos\03_MXDs_Projects\PDEx1_SouthCampus_Tree_Inventory_Boundary.mxd jln 12/11/2017

TABLE 2 - RANCHO LOS AMIGOS SOUTH CAMPUS TREE INVENTORY

Notes:

1. DBH = diameter at breast height (4 ½ feet from grade)
2. Suitability for Preservation – H = high, M = Moderate, and L = Low. This designation takes in to consideration the species, the suitability for potential relocation, the health and structure grades, and the potential for pruning or irrigation to enhance the tree.
3. Tree Height – estimated heights in feet (Brown Trunk heights for palms). When possible, a laser measuring device was used.
4. Canopy Spread – dripline measurements in four compass directions. When possible, a laser measuring device was used.
5. Wound wood development – P = Poor, A = Average, and E = Excellent
6. Foliage Density – S = sparse, A = Average, D = Dense
7. Dieback – N = None, Mi = Minor, Mo = Moderate, Ex = Extreme
8. Vigor – E = Excellent, A = Average, F = Fair, and P = Poor

List of comment abbreviations:

DB – dieback
HOB – history of breakage
MBA – Multiple branch attachments
MPE – Multiple pruning events
RLA – Rancho los Amigos

Additional arboricultural and dendrological terms are defined at the end of this table.

GLOSSARY OF ARBORICULTURAL & DENDROLOGICAL TERMS

Abiotic: Non-living agents including environmental, physiological, & other nonbiological factors (i.e., aeration or water deficit, mechanical injury, or gas line leak).

***Arboriculture*:** Management of individual trees or groups of trees primarily for their amenity value.

***Basal wound*:** A cut or puncture at the base of the trunk of a tree, particularly bad in younger (developing) specimens. Often these wounds are caused by mowers and other gardening equipment and can be prevented by protective staking and the creation of dirt (no turf) surrounding areas - adjacent to the trunk.

Bleeding (from wood): Flow of sap, typically from pruning wounds.

Branch collar: The swelling at the base of a branch, to be left intact in any pruning.

Callus / wound wood: Lignified, partially differentiated tissue which develops from the callus associated with wounds.

Cambium / cambial: Meristematic tissue that gives rise to phloem & xylem.

Canker: An area of dead or malformed bark caused by a pathogen.

Canopy: A term used for the crown or spread of a tree's branches to emphasize its size and enclosing character. Parts of the tree above the trunk, including scaffold limbs, lateral branches, twigs, and leaves.
The canopy spread is often measured in feet.

Cavity: A void in a tree trunk, branch or root that may or may not be open to the exterior, generally created by decay. Over many years the wound may become entirely grown over (occluded) while the decay progresses within.

Co-dominant stems: Branches and *stems* that are nearly equal in size and relative importance

Compartmentalization: A form of defense in woody plants, in which barriers resistant to invasion by pathogens or wood decay fungi are laid down while the wood is living (sapwood), and which continue to act passively once the wood is incorporated into heartwood.

***Conifer*:** A botanical definition embracing trees with cones (ie. seeds not formed within ovaries), mostly with needle-like or scale-like leaves and mostly evergreen. Sometimes conifers are called 'softwoods'.

***Crotch*:** Where two branches of a tree intersect. A narrow crotch arise at an acute (narrow) angle, as when both branches are close to the vertical. The union is relatively weak if there is included bark.

Crown: The branches, twigs and foliage of a tree, considered collectively.

***Crown thinning, crown reduction and crown raising*:** Crown thinning removes branches from the crown without reducing the extent of the crown. Crown reduction decreases the extent of the crown without decreasing its density. Crown raising increases the headroom to the base of the canopy by removing lower branches.

Crown cleaning: The removal of dead, dying, damaged or diseased wood from the crown of a tree.

Deadwood: In the growth and development of a tree, branches compete with each other and weaker branches are eventually suppressed and die. The deadwood is then liable to fall (sometimes called 'natural pruning'). Deadwood develops naturally, largely in the inner and lower crown, of all trees that are mature and unmanaged.

***Decay*:** The progressive degradation of woody tissues caused by specialized fungi & bacteria through decomposition of cellulose & lignin. The pathogen typically enters through wounds in the roots (root rots), main stem or branches (butt and stem rots) and can then extend internally, over a timescale of years or decades, longitudinally or horizontally.

Deciduous: Leaves are lost in winter, as opposed to evergreen.

Diameter at breast height (dbh): The diameter of a tree measured at height 4.5 feet above natural grade. Typically used as a representation of tree size.

***Dieback*:** Death of shoots or roots starting at the extremities.

***Dripline*:** The outermost edge of the tree's canopy. When depicted on a map, the dripline will appear as an irregular shape that follows the contour of the tree's branches as seen from overhead.

***Epicormic shoots*:** Shoots arising from the base of a tree, its trunk or main framework branches, from buds dormant more than one season. May be stimulated by pruning (which increases the light reaching the lower part of the tree), or indicative of damage or decline in the upper crown.

Evergreen: Foliated throughout the year (although there is a gradual turnover of leaves).

Flush cut: A pruning cut that removes the branch collar and/or part of the branch ridge, slowing the occlusion of the wound or damaging its compartmentalization.

***Framework*:** Typically, the main branches (sometimes also called scaffold branches), each of which supports a significant portion of the crown. They largely determine the shape of the tree's crown depending on their height of origin, orientation etc. There is no precise distinction between framework branches and other lesser branches.

Gall: Abnormal growth of leaves, buds, stems etc. in reaction to the presence of an intrusive parasite, often an insect or mite.

***Girdle/girdling*:** Damage that kills the bark all the way round the stem; such as caused by wires or ties that were never removed when the tree was young. That which circles & constricts the stem or roots causing death of phloem &/or cambial tissue.

Habit (growth habit): Giving a tree its characteristic form, for example owing to the stoutness and orientation (fastigiated, ascending, spreading, pendulous, weeping etc.) of a tree's branches.

Hanger: Dead branch fallen from the crown but caught by, and resting on, branches lower down, which be liable to fall.

Heart rot: Decay in the center of the tree (heartwood).

***Included bark*:** Areas of bark on adjacent parts of a tree, typically on the inner faces of a narrow fork, which becomes grown over to occupy part of the internal joint. The bark-to-bark contact is weaker than the more usual woody union.

Lateral branch / limb: The next order of branch that rises from the scaffold limbs.

Leader: The topmost vertical shoot of a tree, present if the tree has strong apical dominance, characteristic of young trees and conifers. Trees with a rounded crown have no leader.

Mulch: a material (such as decaying leaves, bark, or compost) spread around or over a plant to enrich or insulate the soil.

***Parasite*:** An organism that exploits another, e.g., for food, to the prejudice of the host. Parasites may kill their hosts, be pathogenic or have little significant effect.

***Pathogen*:** A kind of parasite that causes disease.

Phloem: A transport tissue characterized by sieve tubes and companion cells, found the vascular bundles of higher plants. Functions in the transport of dissolved organic substances by translocation.

Photosynthesis: The chemical process by which chlorophyll-containing plants use light to convert carbon dioxide and water into carbohydrates, releasing oxygen as a by-product.

Pruning: The cutting off or cutting back of shoots or branches from a tree, whether to direct growth (formative pruning), make safe, to remove an obstructing or diseased part, to increase longevity (veteran trees), to maintain productivity (fruit trees) etc.

Root crown /collar / Root flare: The outwardly curving base of a tree where it joins the roots, often distinguishable as individual root buttresses.

Root crown inspection: Extensive examination of the junction of root & stem, including the area immediately below, aimed at determining stability, presence of disease, decay, etc.

Root plate**:** The area needed by a tree's root system to keep the tree stable; broadly, that part of the root system displaced when a tree is uprooted.

Root zone: The area of ground around the base of a tree that supports root growth; often extends far beyond the dripline of a tree.

Scaffold branch / limb**:** The first order of limbs or branches that arise from the trunk of a tree.

Soil: A mixture of mineral particles, often of various sizes due to weathering, roots and other living things, soil organic matter and the associated voids (pores) filled with air and/or water.

Soil aeration: The movement of gases in soil, primarily by diffusion through the soil pores. For example, oxygen diffuses from the atmosphere to the vicinity of the plant root while carbon dioxide diffuses in the opposite direction. The rate of diffusion is related to the proportion of the soil volume that contains air

Soil compaction: An increase in bulk density due to the pressure exerted by animals, vehicles, (locally) by root growth *etc*. Pore space is reduced, which may also restrict soil aeration, water infiltration and drainage.

Soil structure: The aggregation of soil particles into clumps (peds) of various shapes and the associated spaces between them, affecting many properties of soil including its porosity to air and water, and its fertility.

Soil texture: The size of the mineral particles in the soil, classified (from fine to coarse) as clay, silt, sand, gravel or stones, or some mixture of these to give a characteristic particle size distribution. Sandy soils give a light texture, clayey soils give a heavy texture.

Stub**:** That part of a pruned branch protruding beyond the branch collar. It is not good practice to leave stubs since they impede occlusion and are prone to decay.

Suckers: Shoots arising from the roots of a tree, which can arise surprisingly far from the parent.

Target: A target is the subject of injury or damage within range of a tree hazard

Topping**:** A kind of pruning in which the branches of a tree are all decapitated to reduce the tree to a specific height. An indiscriminate form of pruning not regarded as good practice, to which some trees, such most conifers, are intolerant.

Training: To change the shape of a tree by means other than (formative) pruning, typically by tying young branches into a particular position.

Transpiration**:** Loss of water vapor from the surface of leaves & other aboveground parts of the plant.

Vigor / vigorous**:** Overall health; the capacity to grow & resist physiological stress.

EXECUTIVE SUMMARY

Rancho Los Amigos South Campus Historic District Evaluation Report

Environmental Science Associates (ESA) has been retained by the County of Los Angeles, Department of Public Works (County or DPW) to conduct a survey update and prepare an updated historic district evaluation report (Report) for the Rancho Los Amigos (RLA) South Campus (subject property). The 74-acre County-owned RLA South Campus is located in the south-westernmost part of the City of Downey (City) on Assessor Parcel Number (APN) 6245-016-934.

An archival records search that includes the subject property and a one-quarter-mile radius was conducted on June 13, 2017, at the California Historical Resources Information System (CHRIS) South Central Coastal Information Center (SCCIC) housed at the California State University, Fullerton. Resource P-19-189330, the Rancho Los Amigos Historic District (District), located within the subject property, is the focus of this evaluation. The District includes facilities related to the County of Los Angeles Poor Farm established in 1888 and renamed the Los Angeles County Farm in 1915, and Rancho Los Amigos in 1932. The records search results also indicate that two historic architectural resources (P-19-186110 and P-19-189330) have been previously recorded within a one-quarter-mile radius of the subject property. Resource P-19-186110, adjacent to the subject property, is part of the first transcontinental railroad and was previously recommended eligible for the National Register of Historic Places (National Register) under Criteria A and B. The District has been previously recorded and documented in several historic resources surveys in 1995, 2004, and 2007-2011.

A. The District was originally recorded in 1995 by Historic Resources Group (HRG) during a survey of earthquake damaged properties by the Federal Emergency Management Agency (FEMA) after the 1994 Northridge Earthquake, in compliance with Section 106 of the National Historic Preservation Act of 1966 (NHPA) that requires Federal agencies to assess the effects of their undertakings on historic properties prior to the approval of expenditure of federal funds or to the issuance of any federal license or permit.[1] As a result of HRG's survey, the District was determined eligible for the National Register under Criterion A, for its association with events that have made a significant contribution to the broad patterns of history, through the Section 106 process, by a consensus among the County, FEMA, the California Office of Historic Preservation (OHP), and the Advisory Council for Historic Preservation (Advisory Council). With this determination of eligibility, the District was listed in the California Register of Historical Resources (California Register), under Criterion 1 for

[1] 36 CFR Section 800.1.

its association with events that have made a significant contribution to the broad patterns of our history, for its importance in the early healthcare of the County's indigent population, and later treatment of patients with chronic illnesses or mental disorders.[2] HRG recommended a period of significance of 1888 to 1945, documenting the District on Department of Parks and Recreation (DPR) forms. HRG's survey included documentation of 102 buildings, structures, and features within the boundaries of the District, of which 76 were identified as contributors. HRG did not identify any individually eligible resources in the District.

B. The District was resurveyed in 2004 by Post/Hazeltine Associates and recommended ineligible due to a lack of integrity.[3] However, Post/Hazeltine Associates identified 11 buildings and structures as individually eligible as distinctive examples of a type, period, or method of construction under National Register Criterion C and California Register Criterion 3: LACO Nos. 1100, 1101, 1177, 1178, 1238, 1261, 1262, 1263, 1300, 1301, and 1302.

C. The District was resurveyed again between 2007 and 2011 by Sapphos Environmental, Inc. (Sapphos), who concurred with HRG's original eligibility determination, but recommended that the period of significance be extended to 1952.[4] As of 2011, 68 contributors and 49 non-contributors had been identified as part of the District. Sapphos also recommended nine buildings and structures individually eligible for listing in the National Register under Criterion C and California Register under Criterion 3 for architectural distinction: LACO Nos. 1100, 1101, 1177, 1238, 1262, 1263, 1300, 1301, and 1302.

This Report presents the results of the historic resources survey update of the District conducted by ESA between June 19 and June 23, 2017. The District was resurveyed pursuant to Public Resources Code (PRC), Article 2, Section 5024.1(g)(4), which provides for the update of survey and re-evaluation of historical resources after five years to account for changed circumstances or further documentation. During the survey, 109 buildings, structures, and features within the District boundary were identified and documented. Although Sapphos previously surveyed 117 buildings, structures, and features, two have since been demolished and seven are located outside the District boundary.[5] In addition to the remaining 108 buildings, structures, and features within the District boundaries, ESA concluded that the landscape should be included as a contributing feature. These changes in condition were documented and incorporated into the ESA survey update. On June 26, 2017, shortly after completion of the District Survey, LACO Nos. 1101 and 1287 also suffered arson-related fire damage. On August 8, 2017, ESA conducted intensive pedestrian surveys of these buildings to document them after the fire damage and the results of these evaluations are also included in this Report.

Based upon extensive research and fieldwork, the existing District was found by ESA to continue to remain eligible under National Register Criterion A and California Register Criterion 1 at the local level of significance. Furthermore, ESA found that the District meets Criterion 1 of the Los

2 Christy J. McAvoy, 1994 Northridge Earthquake Project Review, 1995

4 Sapphos Environmental, Inc., *Rancho Los Amigos Historic District: Update Report*, 2011.

5 LACO Nos. 3020 and 5393 have been demolished since Sapphos' survey of the District. Moreover, LACO Nos. 7704, 2637, 1991, 3591, as well two buildings associated with the Family Home, and an unnumbered Shed are located outside the District boundary and were not considered contributors.

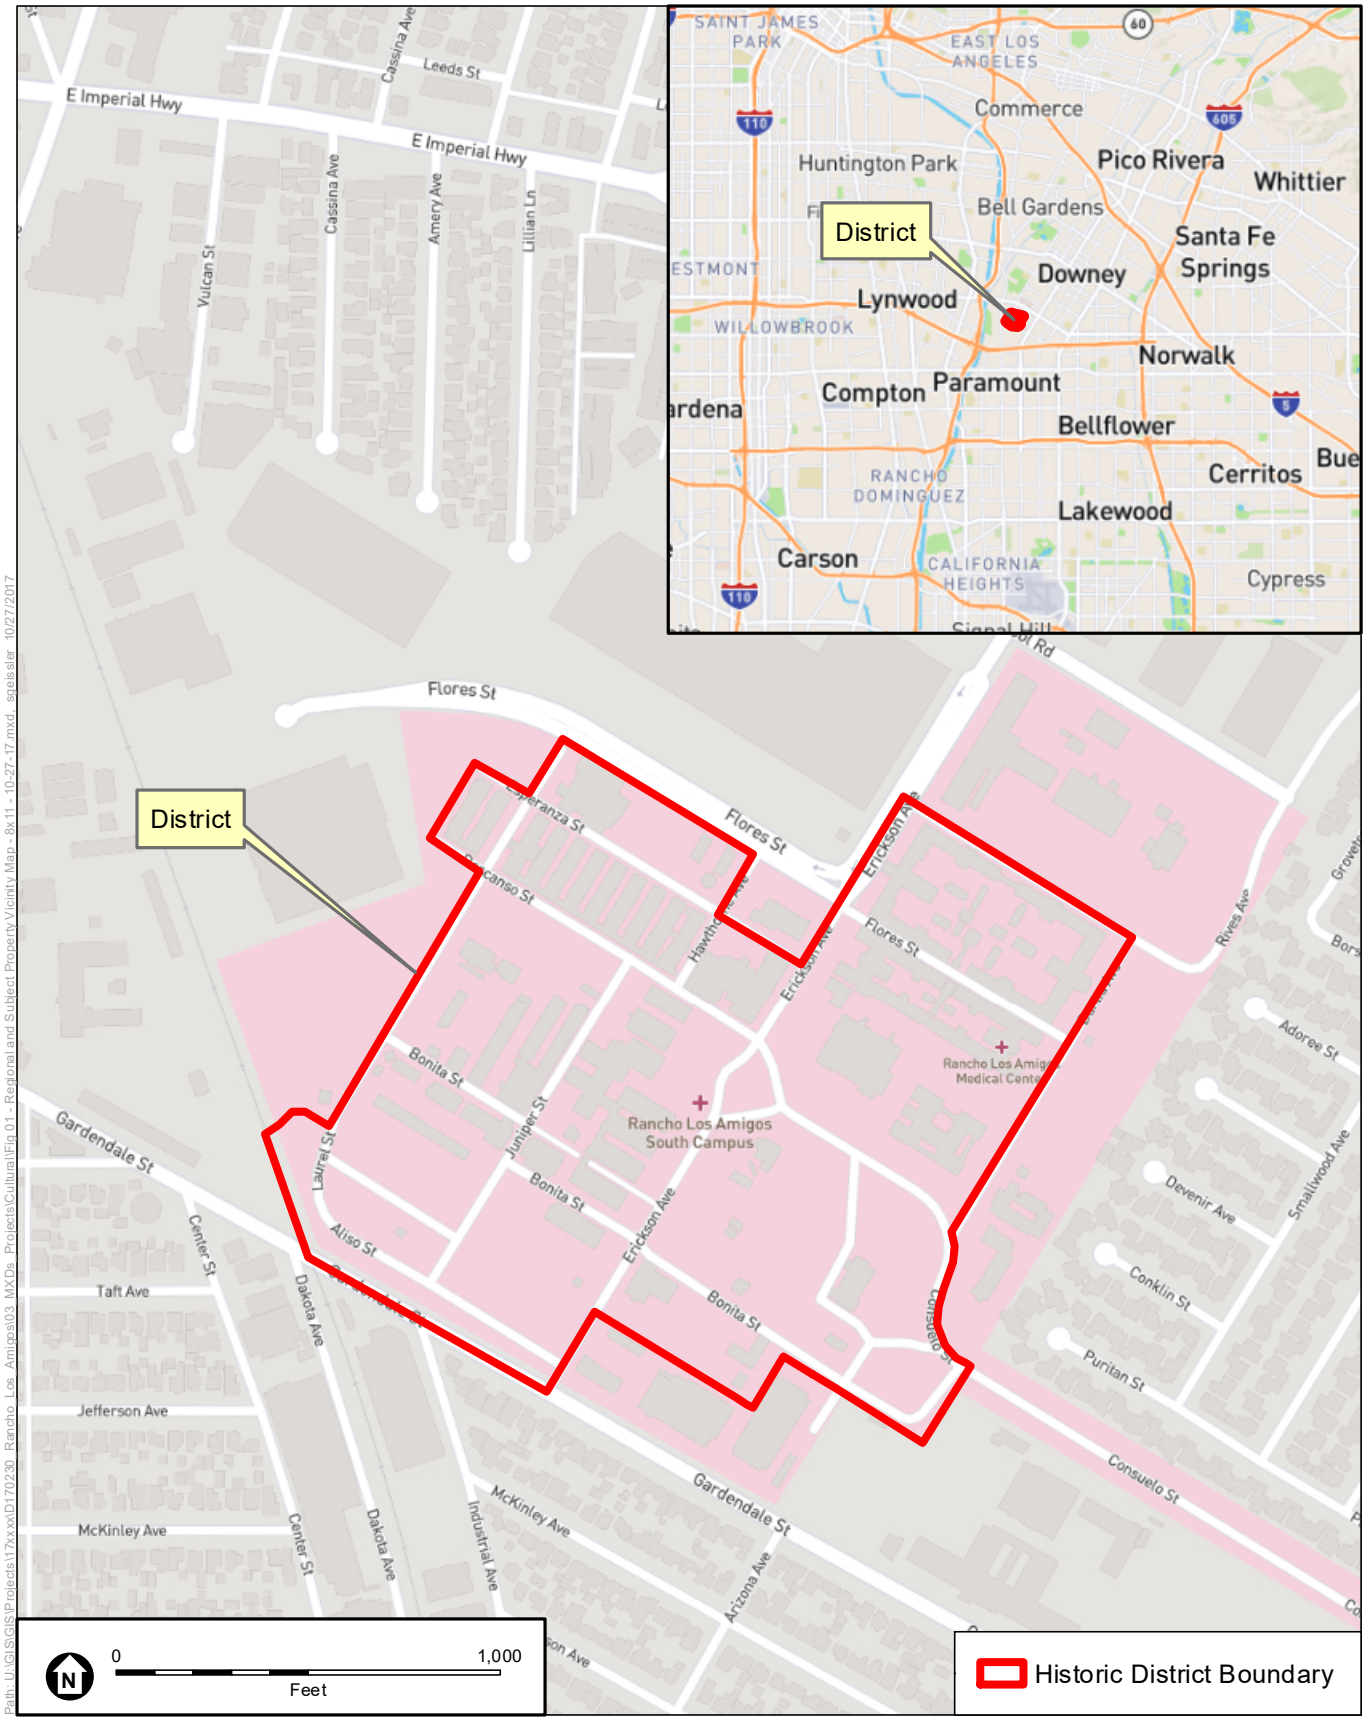
Angeles County Historic Preservation Ordinance established in September of 2015. The Los Angeles County Poor Farm and its evolution into a long-term healthcare facility (Rancho Los Amigos) during the late nineteenth and early twentieth centuries, reflects broader trends in medical history across the United States. The District's development over time illustrates changing approaches to healthcare and the treatment of Los Angeles County's indigent population. Furthermore, the District appears eligible under National Register Criterion C as a distinguishable entity whose components may lack individual distinction (i.e., a district) and meets Los Angeles County Criterion 5 as a listed historical resource on the California Register, eligible for listing on the National Register. Concurrent with Sapphos' findings and based upon substantial evidence, the District's period of significance is 1888-1952, beginning with the Los Angeles County Poor Farm's opening and incorporating the full conversion and build-out of the health-care facilities, ending with the final sale and subdivision of the adjacent agricultural lands originally associated with the Poor Farm, marking the completion of the subject property's transformation into a long-term healthcare facility. Furthermore, it is recommended that the District's boundary be expanded near the southeast corner to include the portions of Consuelo Street, Bonita Street, and Dalia Avenue and the associated landscape areas east of the Administration Building (LACO No. 1100) that based upon survey and research documentation retain integrity and were originally a part of the facility during the period of significance.

The existing District appears to continue to meet the National Register and California Register integrity requirements, retaining its integrity of location, design, workmanship, materials, setting, feeling, and association. The District remains in its original location since it opened as a poor farm in 1888. Although the District no longer reflects its original design for the Poor Farm, as constructed in 1888, later changes to the subject property have acquired significance under National Register Criterion A, California Register Criterion 1, and Los Angeles County Criterion 1, for their association with the development of healthcare in Los Angeles County. Many of the buildings and features constructed during the period of significance (1888-1952) remain intact with few alterations. Of the 109 buildings, structures, and features identified within the District, there are 61 contributors, representing seven different building types and landscape features, that reflect the overall function of the subject property as it evolved into a long-term healthcare facility.

Sapphos previously identified nine individually eligible buildings and structures in the District. The historical significance of these buildings and structures is directly tied to the overall use of the subject property as a poor farm or a long-term healthcare facility. As such, these nine buildings and structures do not all exhibit individual historic significance and are not considered individually eligible for listing in the National Register or California Register under Criteria A/1, but they are considered to be District contributors. This updated evaluation identifies five of these buildings and structures as individually eligible under Criteria C/3 because they are distinctive examples of their type, period, and method of construction. These buildings and structures include: Administration/Safety Police Building (LACO No. 1100), Casa Consuelo (LACO No. 1238), and the grouping of the Power Plant (LACO No. 1300), Water Tower (LACO No. 1301), and Shop, Laundry and Ice Plant (LACO No. 1302). Additionally, the Moreton Bay Fig Tree appears individually eligible under Los Angeles County Criterion 6 as one of the oldest and largest of its species in the county and Criterion 7 as a significant feature of a neighborhood.

RANCHO LOS AMIGOS SOUTH CAMPUS

Historic District Evaluation Report



Introduction

Environmental Science Associates (ESA) has been retained by the County of Los Angeles, Department of Public Works ("County" or "DPW") to conduct an updated historic district survey and prepare a historic resources evaluation report (Report) for the Rancho Los Amigos (RLA) South Campus (subject property). The 74-acre RLA South Campus is located in the south-westernmost part of the City of Downey (City), California on Assessor Parcel Number (APN) 6245-016-934 (**Figure 1**). The subject property is situated north of Gardendale Street, south of Imperial Highway, east of Garfield Avenue, and west of Paramount Boulevard. Specifically, the subject property is located in an un-sectioned portion of Township 3 South, Range 12 West on the South Gate USGS 7.5-minute topographic quadrangle (**Figure 2**).

The subject property contains a historic district (District) that has been determined eligible for listing in the National Register of Historic Places (National Register) by consensus through the Section 106 process and is listed in the California Register of Historical Resources (California Register).[6] The District presently contains 109 buildings, structures, and features, including several hospital wards, infirmaries, residential units, an administration building, a power plant, and support buildings such as mechanical shops, kitchen and dining quarters, storage structures, laundry and toilet buildings, and a bathhouse. At present, the District is almost entirely unoccupied, with the exception of the County Office of Public Safety, which is housed in the former Administration/Safety Police Building (LACO No. 1100). The other buildings and structures have been vacant since approximately 1991 and are boarded up and in various stages of deterioration.

This Report includes the results of an updated historic resource survey and evaluation of the District, pursuant to Public Resources Code (PRC), Article 2, Section 5024.1(g)(4), which provides for the update of survey and re-evaluation of historical resources after five years to account for changed circumstances or further documentation. ESA personnel involved in the preparation of this report are as follows: Margarita Jerabek, Ph.D., Director of Historic Resources, who served as Principal Investigator; Amanda Kainer, M.S., Senior Architectural Historian, who acted as technical team lead and is a co-author; Adam Rajper, M.S., and Christian Taylor, M.H.P, who served as project architectural historians and are co-authors; and Max Loder, M.A, who served as supporting project historian and is a contributing author.

6 California historical resources listed in, or formally determined eligible for, the National Register are automatically listed in the California Register, pursuant to California Public Resources Code Section 5024.1(d)(1). "Formally determined eligible" for the purpose of this section means determined eligible through one of the federal preservation programs administered by the California Office of Historic Preservation. Specifically, these programs are the National Register, Tax Certification (Evaluation of Significance, Part 1, 36 CFR Part 67), and National Historic Preservation Act (Section 106, 16 U.S.C. 470f) reviews of federal undertakings.

All staff meet or exceed the Secretary of the Interior's professional qualification standards for architectural history or history. Addie Farrell, Monica Strauss, M.A., Director of Cultural Resources, and Candace Ehringer, M.A., served as project managers. Jason Nielson, Stephan Geissler, and Jessie Lee provided GIS support. Resumes of key personnel are included in **Appendix A**.

Regulatory Framework

Numerous laws and regulations require federal, state, and local agencies to consider the effects a project may have on cultural resources. These laws and regulations stipulate a process for compliance, define the responsibilities of the various agencies proposing the action, and prescribe the relationship among other involved agencies.

Federal

National Historic Preservation Act

Cultural resources fall within the jurisdiction of several levels of government. Federal laws provide the framework for the identification, and in certain instances, protection of cultural resources. Additionally, states and local jurisdictions play active roles in the identification, documentation, and protection of such resources within their communities. The National Historic Preservation Act (NHPA) of 1966, as amended, and the California Public Resources Code (PRC), Section 5024.1, are the primary federal and state laws and regulations governing the evaluation and significance of cultural resources of national, state, regional, and local importance. Descriptions of these relevant laws and regulations are presented below.

National Register of Historic Places

The National Register was established by the NHPA of 1966, as "an authoritative guide to be used by federal, State, and local governments, private groups and citizens to identify the Nation's historic resources and to indicate what properties should be considered for protection from destruction or impairment."[7] The National Register recognizes a broad range of cultural resources that are significant at the national, state, and local levels and can include districts, buildings, structures, objects, prehistoric archaeological sites, historic-period archaeological sites, traditional cultural properties, and cultural landscapes.

To be eligible for listing in the National Register, a property must be significant in American history, architecture, archaeology, engineering, or culture. Properties of potential significance must meet one or more of the following four established criteria:

A. Are associated with events that have made a significant contribution to the broad patterns of our history;

B. Are associated with the lives of persons significant in our past;

7 36 CFR Section 60.2.

C. Embody the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or

D. Have yielded, or may be likely to yield, information important in prehistory or history.

Ordinarily religious properties, moved properties, birthplaces or graves, cemeteries, reconstructed properties, commemorative properties, and properties that have achieved significance within the past 50 years are not considered eligible for the National Register unless they meet one of the Criteria Considerations (A-G), in addition to meeting at least one of the four significance criteria and possessing integrity.[8]

In addition to meeting one or more of the criteria of significance, a property must have integrity. Integrity is defined as "the ability of a property to convey its significance."[9] The National Register recognizes seven qualities that, in various combinations, define integrity:

- *Location* is the place where the historic property was constructed or the place where the historic event occurred. The relationship between the property and its location is often important to understanding why the property was created or why something happened. The actual location of a historic property, complemented by its setting, is particularly important in recapturing the sense of historic events and persons. Except in rare cases, the relationship between a property and its historic associations is destroyed if the property is moved.

- *Design* is the combination of elements that create the form, plan, space, structure, and style of a property. It results from conscious decisions made during the original conception and planning of a property (or its significant alteration) and applies to activities as diverse as community planning, engineering, architecture, and landscape architecture. Design includes such elements as organization of space, proportion, scale, technology, ornamentation, and materials. A property's design reflects historic functions and technologies as well as aesthetics. It includes such considerations as the structural system; massing; arrangement of spaces; pattern of fenestration; textures and colors of surface materials; type, amount and style of ornamental detailing; and arrangement and type of plantings in a designed landscape.

- *Setting* is the physical environment of a historic property. Whereas location refers to the specific place where a property was built or an event occurred, setting refers to the *character* of the place in which the property played its historic role. It involves *how*, not just where, the property is situated and its relationship to surrounding features and open space.

- *Workmanship* is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. It is the evidence of artisans' labor and skill in constructing or altering a building, structure, object, or site. Workmanship can apply to the property as a whole or to its individual components.

- *Materials* are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property. The choice and combination of materials reveal the preferences of those who created the property

8 National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation, 44-45, http://www.nps.gov/nr/publications/bulletins/pdfs/nrb15.pdf, accessed October 3, 2017.

9 National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation, 44-45, http://www.nps.gov/nr/publications/bulletins/pdfs/nrb15.pdf, accessed October 3, 2017.

and indicate the availability of particular types of materials and technologies. A property must retain key exterior materials dating from the period of its historic significance.

- *Feeling* is a property's expression of the aesthetic or historic sense of a particular period of time. It results from the presence of physical features that, taken together, convey the property's historic character.

- *Association* is the direct link between an important historic event or person and a historic property. A property retains association if it *is* the place where the event or activity occurred and is sufficiently intact to convey that relationship to an observer.

To retain historic integrity, a property will always possess most of the aspects and depending upon its significance, retention of specific aspects of integrity may be paramount for a property to convey its significance. Determining which of these aspects are most important to a particular property requires knowing why, where and when a property is significant. For properties that are considered significant under National Register Criteria A and B, *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation (National Register Bulletin 15)* explains, "a property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s)." In assessing the integrity of properties that are considered significant under National Register Criterion C, *National Register Bulletin 15* states, "a property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique."[10]

State

California Environmental Quality Act

CEQA is the principal statute governing environmental review of projects occurring in the state and is codified at PRC Section 21000 et seq. CEQA requires lead agencies to determine if a proposed project would have a significant effect on the environment, including significant effects on historical resources. Under CEQA Section 21084.1, a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment.

The CEQA Guidelines recognize that historical resources include: (1) a resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register; (2) a resource included in a local register of historical resources, as defined in PRC Section 5020.1(k) or identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g); and (3) any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California by the lead agency, provided the lead agency's

[10] National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation, 44-45, http://www.nps.gov/nr/publications/bulletins/pdfs/nrb15.pdf, accessed October 3, 2017.

determination is supported by substantial evidence in light of the whole record.[11] The fact that a resource does not meet the three criteria outlined above does not preclude the lead agency from determining that the resource may be an historical resource as defined in PRC Sections 5020.1(j) or 5024.1.

A significant effect under CEQA would occur if a project results in a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines Section 15064.5(a). Substantial adverse change is defined as "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired."[12] According to CEQA Guidelines Section 15064.5(b)(2), the significance of a historical resource is materially impaired when a project demolishes or materially alters in an adverse manner those physical characteristics that:

A. Convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or

B. Account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in a historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

C. Convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a Lead Agency for purposes of CEQA.

In general, a project that complies with the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings (Standards) is considered to have mitigated its impacts to historical resources to a less-than-significant level.[13]

California Register of Historical Resources

The California Register is "an authoritative listing and guide to be used by State and local agencies, private groups, and citizens in identifying the existing historical resources of the State and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change."[14] The criteria for eligibility for the California Register are based upon National Register criteria.[15] Certain resources are determined by the statute to be automatically included in the California Register, including California properties formally determined eligible for, or listed in, the National Register.

11 Title 14 California Code of Regulations Section 15064.5
12 CEQA Guidelines Section 15064.5(b)(1)
13 CEQA Guidelines Section 15064.5(b)(3)
14 PRC Section 5024.1[a]
15 PRC Section 5024.1[b]

To be eligible for the California Register, a prehistoric or historic-period property must be significant at the local, state, and/or federal level under one or more of the following four criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important in prehistory or history.

A resource eligible for the California Register must meet one of the criteria of significance described above, and retain enough of its historic character or appearance (integrity) to be recognizable as a historical resource and to convey the reason for its significance. It is possible that a historic resource may not retain sufficient integrity to meet the criteria for listing in the National Register, but it may still be eligible for listing in the California Register.

Additionally, the California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed on the National Register and those formally determined eligible for the National Register;
- California Registered Historical Landmarks from No. 770 onward; and
- Those California Points of Historical Interest that have been evaluated by the OHP and have been recommended to the State Historical Commission for inclusion on the California Register.

Other resources that may be nominated to the California Register include:

- Historical resources with a significance rating of Category 3 through 5 (those properties identified as eligible for listing in the National Register, the California Register, and/or a local jurisdiction register);
- Individual historical resources;
- Historical resources contributing to historic districts; and,
- Historical resources designated or listed as local landmarks, or designated under any local ordinance, such as an historic preservation overlay zone.

Local

Los Angeles County Historic Preservation Ordinance

The Los Angeles County Board of Supervisors adopted the County's Historic Preservation Ordinance (HPO) on September 1, 2015.[16] The HPO establishes criteria for designating landmarks and historic districts and provides protective measures for designated and eligible historic resources. The HPO applies to all privately owned property within the unincorporated

[16] Los Angeles County Historic Preservation Ordinance, Ord. 2015-0033 § 3, 2015.

territory of the County and all publicly owned landmarks, except properties that were not listed prior to the issuance of a demolition permit or properties affiliated with religious organizations. The HPO defines a landmark as "any property, including any structure, site, place, object, tree, landscape, or natural feature, that is designated as a landmark by the Board of Supervisors." The HPO defines a historic district as, "A contiguous or noncontiguous geographic area containing one or more contributing properties which has been designated as an historic district by the Board of Supervisors." Landmarks and historic districts may be designated if it is fifty years of age and meets one of the following criteria:

1. It is associated with events that have made a significant contribution to the broad patterns of the history of the nation, State, County, or community in which it is located;
2. It is associated with the lives of persons who are significant in the history of the nation, State, County, or community in which it is located;
3. It embodies the distinctive characteristics of a type, architectural style, period, or method of construction, or represents the work of an architect, designer, engineer, or builder whose work is of significance to the nation, State, County, or community in which it is located; or possesses artistic values of significance to the nation, State, County, or community in which it is located;
4. It has yielded, or may be likely to yield, significant and important information regarding the prehistory or history of the nation, State, County, or community in which it is located;
5. It is listed, or has been formally determined eligible by the United States National Park Service for listing, in the National Register of Historic Places, or is listed, or has been formally determined eligible by the State Historical Resources Commission for listing, on the California Register of Historical Resources;
6. If it is a tree, it is one of the largest or oldest trees of the species located in the County; or
7. If it is a tree, landscape, or other natural land feature, it has historical significance due to an association with an historic event, person, site, street, or structure, or because it is a defining or significant outstanding feature of a neighborhood.

Historic Districts

A property less than 50 years of age may be designated as a landmark if it meets one or more of the criteria and exhibits exceptional importance.

A geographic area, including a noncontiguous grouping of related properties, may be designated as an historic district if all of the following requirements are met:

1. More than 50 percent of owners in the proposed district consent to the designation;
2. The proposed district satisfies one or more of criteria 1 through 5; and
3. The proposed district exhibits either a concentration of historic, scenic, or sites containing common character-defining features, which contribute to each other and are unified aesthetically by plan, physical development, or architectural quality; or significant geographical patterns, associated with different eras of settlement and growth, particular transportation modes, or distinctive examples of parks or community planning.

County of Los Angeles General Plan

The Conservation and Natural Resources Element (the Element) of the County's General Plan indicates that "Historic, cultural, and paleontological resources are an important part of Los Angeles County's identity" (Los Angeles County General Plan, 2015:163). The Element provides the following goal and policies for the treatment of historic resources:

Goal C/NR 14: Protected historic, cultural, and paleontological resources.

Policy C/NR 14.1: Mitigate all impacts from new development on or adjacent to historic, cultural, and paleontological resources to the greatest extent feasible.

Policy C/NR 14.2: Support an inter-jurisdictional collaborative system that protects and enhances historic, cultural, and paleontological resources.

Policy C/NR 14.3: Support the preservation and rehabilitation of historic buildings.

Policy C/NR 14.5: Promote public awareness of historic, cultural, and paleontological resources.

Policy C/NR 14.6: Ensure proper notification and recovery processes are carried out for development on or near historic, cultural, and paleontological resources.

Historic Context

This thematic historic context presents the history of the region and the subject property, and was developed to document and support the identification and evaluation of historic architectural resources. Research indicates the property is associated with the following historical and architectural themes: Advancements in Public Health and Medical Care (1870-1920); Caring for the Poor and Sick in California (1850-1930); Settlement of Downey (1784-1956); Los Angeles County Poor Farm and Rancho Los Amigos (1887-1952); and Early Hospital Architecture (1880-1930). Key events related to these historic themes, as well as the subject property, are identified in a timeline which is included in **Appendix B**. Additionally, as part of this study, contexts were developed for the identified architectural styles of existing buildings on the subject property and the architects responsible for designing the buildings.

Advancements in Public Health and Medical Care (1830-1920)

The history of Rancho Los Amigos reflects changes brought about by broad advancements in Public Health and Medical Care during an important period of social change and scientific progress. The rapid industrialization of nations during the eighteenth and nineteenth centuries resulted in the consolidation of labor sources to central locations. People seeking work moved from the agricultural fields to the cities where new factories were sprouting up. Industrial development brought significant urban growth and with the increasing population came unsanitary conditions and disease. In 1831 and 1832, a cholera epidemic in England strengthened the need for sanitary reform and disease prevention. The nineteenth century was known as a period of great epidemics. "On four occasions during the nineteenth century, Europe and America

were scourged by severe invasions of Asiatic cholera resulting from world pandemics."[17] England's implementation of public health programs was derived from earlier solutions to its poverty problem. "Each parish was responsible for the maintenance of its own poor and consequently attempted to reduce this burden as far as possible."[18] A similar concept was replicated by the State of California in the 1850s, which assigned the burden of the poor and the sick upon the county governments. Evidence of this approach to caring for the poor and sick is seen locally with the opening of the Los Angeles County Poor Farm in 1888 on the subject property.

Throughout the nineteenth century, physicians in the United States found themselves closing the gap with their European counterparts in terms of medical research. "… the Americans overtook the English in the 1880s, the French in the 1890s, and the Germans in the 1910s. By 1920 they led the world in medical research."[19] However, developments in clinical medicine (diagnosis and treatment of disease) did not reflect the same pattern of development as the basic medical sciences. "Although Americans admired the superior clinical facilities of Europe, they commonly believed that singular circumstances in the United States demanded uniquely American responses to disease and made European knowledge suspect and in certain respects irrelevant."[20] In the United States, ideas of diagnosis and treatment developed based on a localized approach, piecing together natural historical assessments including meteorological, epidemiological, and therapeutic observations. By the early 1870s, these beliefs would be confronted by medical researchers advocating for a laboratory based approach to studying therapy and treatment. The early twentieth century marked a transition in medical research advocating more long-term care. "By 1904 only 27.8 percent of the total patient population for the U.S. had been institutionalized for 12 months or less. Within six years this percentage had fallen to 12.7, although rising to 17.4 in 1923. The greatest change, however, came among patients hospitalized for five years or more. In 1904, 39.2 percent of patients fell into this category; in 1910 and 1923 the respective percentages were 52 and 54."[21] Evidence of this transition in therapy and treatment is seen locally in the transformation of the Los Angeles County Poor Farm into a long-term care medical facility during the first and second quarters of the twentieth century. Despite this clash of ideology, the belief that one's environment played a significant role in their recovery would be a driving force in the settlement of California, making Los Angeles the epicenter for studies in medical climatology at a time when these kinds of studies were playing a significant role in American medical research, and the healthful benefits of Southern California's Mediterranean climate was an important consideration in the location and design of state and county sanitariums and hospitals.

Caring for the Poor and Sick in California (1850-1930)

One of the earliest examples of health-related migration in California occurred in 1826 when Governor José Echeandía moved the State capitol from Monterey to San Diego, hoping the warm, dry climate would improve his health. By 1849, the perceived health benefits of California's climate were becoming widespread knowledge. Although the Gold Rush drew many Americans to the region, not all where simply seeking a fortune in gold. A small portion of would-be gold miners were also seeking the health benefits of the California climate they had heard so much about. "A group of them had fled the great Mississippi Valley cholera epidemic of 1848-49 only to find that it had arrived in the diggings before them."[22] California's reputation as a place of healing would grow rapidly over the late nineteenth century. In 1869, J.D.B. Stillman, editor of the *California Medical Gazette,* suggested the formation of a group to study the health benefits of southern California's climate.[23] Many of those who traveled to California to study its climate were invalids themselves and therefore their work tended to be biased toward promoting a positive image of the healing properties of the mild, warm climate. "Their literary products, though both copious and sincere, oversimplified situations and sinned on the side of enthusiasm."[24] The tales of the California climate's health benefits were further exaggerated by the railroad industry seeking to sell property it acquired when the transcontinental railroad was completed in 1869.

The completion of the transcontinental railroad connected Los Angeles to the rest of the nation, resulting in a large population boom. Many of the new residents brought with them their ailments in hopes that the warm California weather would cure them. At that time, the problematic incurable diseases were leprosy and tuberculosis. However, tuberculosis was the main concern with only a handful of leprosy cases in the state. In Los Angeles, community leaders expressed concern that the city's hotel owners lacked the necessary amenities to attract health seekers. "Hotel builders should watch the sun to determine at what hour it shone in the certain directions and then construct their rooms accordingly. Flues should be used instead of pipes. In conclusion, the newspaper advised, 'publish these facts—fire and sunshine in all the rooms of the house—and every steamer will bring you guests; you cannot drive them away."[25] To compete with growing neighboring communities, Los Angeles sought to improve its sanitary facilities, resulting in the establishment of multiple sanitariums throughout the region during the late nineteenth and early twentieth centuries.

Many of the early sanitariums in Los Angeles were private enterprises and often failed to maintain a level of sanitation necessary to provide adequate lodging for their sick patrons. As medical professionals began to better understand the contagious nature of these illnesses, especially tuberculosis, the movement for state and county operated sanitariums gained momentum. The State Board of Health established a committee to determine a suitable location for a state-run sanitarium. The Board of Health decided on a location in northern California citing

that "transportation facilities of southern California at the beginning of the eighties (1880s) were comparatively primitive."[26] The decision was disappointing for Los Angeles, which had been advocating for state assistance with its indigent population as far back as 1869. The Los Angeles County Hospital was founded in 1878 and was first affiliated with the University of Southern California (USC) Medical School in 1885, five years after USC was founded.[27] A second state hospital was constructed in San Bernardino County in 1890, temporarily relieving the strain placed upon the county hospitals due to the growing indigent population throughout the region.

The Almshouse

Another source of relief for many county hospitals was the county almshouse, also known as the poorhouse or in some cases the poor farm. The Los Angeles County Poor Farm's opening (1888) and ending with the complete transformation of the site into a long-term care medical facility is part of a much larger context. The institution of the almshouse extends back to British Colonies, more than a hundred years before the American Revolution. "Although the poorhouses, workhouses, and poor farms lasted from 1660 to the 1960s, their most predominant role was between (1830-1940) the third decade of the nineteenth century and the forth decade of the twentieth century."[28] England's poor law reform in 1834 was a focal point for social change in western civilization. In the United States, state and local governments passed similar laws placing the burden of the poor on local governments. In 1850, the State of California's legislature enacted requirements that county governments should perform all acts necessary to the county welfare. This decision eventually led to the California "Poor Law of 1855," which made the care of the aged and needy the responsibility of local governments.

Laws passed throughout the states resulted in the expansion of almshouses to provide for their indigent populations. The early patrons of the Almshouse were often referred to as inmates, employing the simplest definition of the word as "a group occupying a single place of residence."[29] Many of the almshouses added farms to help provide food to the inmate population. "In some instances, superintendents who were both good managers and good farmers ran productive farms that grew a large share of the inmates' food."[30] The inmates were expected to work on the farm as it was strongly believed that hard work would help improve their health. Poor farms struggled on the east coast because many of the able bodied inmates would leave for paying jobs on other farms during the more productive summer months, while relying on the poor farm for lodging during the rough winter months. While poor farms in the eastern United States struggled due to varying conditions throughout the year, poor farms in California experienced year round success due to the moderate climate. The successes reduced the overall cost to operate the institutions by providing food for the inmates. "The 1890s were turning point both in terms of

numbers of inmates (the poorhouses were often quite a bit smaller before this) and in terms of reform of the physical structures and organizational forms of the poorhouse, in that charges of squalor and disrepair of many of the homes were no longer generally characteristic."[31] However, the public still viewed almshouses in a negative light despite the improved conditions and reduced costs.

Taxpayers began to question the use of government funds to provide for those they believed undeserving, most of which were immigrants. These feelings were exacerbated by economic decline during the 1890s, which strained the finances of most Americans. Local governments attempted to rename the almshouses to "county home" in the hopes of combating the negative reputation of the institution. Changes in terminology included phasing out the use of "inmate" to describe patients. The Los Angeles County Poor Farm began referring to its residents as patients as early as 1908.[32] "Although some citizens considered these terms euphemisms as well, they did mark an important turn toward the transition of most poorhouses into hospitals and old age, boarding, nursing homes by the post-World War II period."[33] While economic decline in the 1890s led to the institutions growth, it would be another economic decline that would lead to the demise of the almshouse. The New Deal reforms resulting from the Great Depression in the 1930s reduced the need for almshouses. By this time, many of the institutions had already started to transition into long-term healthcare facilities.

Settlement of Downey (1784-1956)

The first European presence in California came in 1542, when Juan Rodriguez Cabrillo led an expedition along the coast. Europeans did not return until 1769, when the expedition of Gaspar de Portola traveled overland from San Diego to San Francisco. In the late 18th century, the Spanish began establishing missions in California and forcibly relocating and converting native peoples to Catholicism. Founded by Franciscans in 1771, Mission San Gabriel Arcángel established a Spanish presence in the Los Angeles area.[34] The mission was soon followed by the settlement of El Pueblo de Nuestra Señora la Reina de Los Ángeles in 1781. As the pueblo continued to grow, the Spanish Government began a land grant program awarding large tracts of land called ranchos to Spanish soldiers who helped settle the region.[35] From the ranchos, some of the most prominent families in the region developed. The boundaries of these ranchos would be the main division of land throughout the Los Angeles area through the Spanish, Mexican, and early American periods.

The region that would eventually develop into the community of Downey was once part of Rancho Los Nietos. The property, one of the first and largest Spanish ranchos occupying 300,000

acres, was awarded to José Manuel Nieto in 1784.[36] "Other provisions of the grant were that a stone house be built; that the land be stocked with at least 2,000 head of cattle and supervision be provided to prevent the stock from wandering."[37] Nieto died in 1804, leaving the property to his four children who continued to manage the rancho. In 1821, Mexico was granted independence from Spain after a successful revolution. Despite the changing government, Rancho Los Nietos remained the property of the Nieto family. In 1833, Nieto's heirs petitioned the Mexican government to partition the property. "The heirs undoubtedly wanted reconfirmation of the grant by the authorities in Mexico as well as individual titles to portions of the land."[38] In 1834, the division of Rancho Los Nietos into six smaller properties was approved by the Mexican government, resulting in the formation of Rancho Santa Gerdtrudes.

Rancho Santa Gertrudes was awarded to the widow of Nieto's son Antonio, Josefa Cota Nieto. Josefa sold the rancho to an Anglo named Lemuel Carpenter in 1834. Carpenter had been living on the property where he made soap and eventually married into the Nieto family. "He spent and additional $5,000 in making the estate a show-place for gracious, but costly living. He raced fast horses. He took a hand in cards. He involved himself in the turmoil of California politics."[39] Carpenter's ownership of the rancho survived the aftermath of the Mexican-American War following the Treaty of Guadalupe Hidalgo in 1848, which resulted in the cessation of California to the United States. New American settlers soon flooded the territory seeking wealth after the discovery of gold. With them came wealthy investors and the concept of credit. Using his land as collateral, Carpenter drifted deep into debt in an attempt to maintain his lavish lifestyle. In 1859, Rancho Santa Gertrudes was auctioned to repay Carpenter's creditors. "The buyers of Rancho Santa Gertrudes were John Gately Downey and James McFarland."[40]

John Gately Downey arrived in the Los Angeles area in 1850, where he established a drug store with his partner Dr. James P. McFarland. The store was an instant success, netting Downey $30,000 in three years.[41] Both McFarland and Downey would play a vital role in Los Angeles' health care industry. In 1855, Downey and Abel Stearns, another of Los Angeles' wealthy land owners and Anglo pioneers, helped establish the city's first hospital with the aid of the Sisters of Charity of St. Vincent de Paul.[42] Downey would go on to become the first elected governor of California in 1860. The purchase of Rancho Santa Gertrudes in 1859 began Downey's foray into the soon-to-be booming real estate market. By 1866, he was advertising the property as "The best land for homesteads and vineyards in this section of the states."[43] He was selling lots for $10an acre. "In 1873, a 96-acre parcel of Rancho Santa Gertrudes became the central district of a

community called 'Downey City'."[44] The city of Downey began to take shape as the railroad arrived in 1874, constructing a station in the Santa Gertrudes area. Merchants soon followed, establishing a commercial district. "As might be expected in a community of potential, the first business to be established was a lumber company."[45] However, the city would not become formally incorporated until 1956.[46]

Los Angeles County Poor Farm and Rancho Los Amigos (1887-1952)

Research results indicate that the period of significance for the subject property is 1888 to 1952, beginning with the Los Angeles County Poor Farm's opening (1888) and ending with the complete transformation of the site into a long-term care medical facility, and the subdivision and sale of its former agricultural lands east of Dahlia Avenue and north of Consuelo Street (1952) for a residential neighborhood. The period can be further divided into three eras, including the early Los Angeles County Poor Farm Era (1888-1906), Development of Rancho Los Amigos (1907-1932), and the Establishment of the Long Term Care Facility (1933-1952). These eras relate to the subject property's pattern of development during the period of significance.

Los Angeles County Poor Farm (1887-1906)

Prior to the Poor Farm's construction, care of the County's indigent population was the responsibility of the County Hospital. The first hospital in Los Angeles County was established in 1858 by the Sisters of Charity, who were contracted by the County to take care of the poor and the sick.[47] In 1860, there was legislation that extended the services of the county hospitals to include care for anyone who was unable to care for themselves (indigent) in addition to the sick. This led to overcrowding at the County Hospital by 1869, prompting the Board of Supervisors to build a new hospital. The new hospital grounds included nine acres of orange groves, pepper trees, and walnut trees. The arrival of the first railroad into Southern California, the Southern Pacific Railroad, resulted in a significant population boom throughout Los Angeles County in 1876. The County Hospital was outgrown by the rapidly expanding population once again. In 1887, the Los Angeles County Board of Supervisors agreed to purchase approximately 124 acres of undeveloped property (including the subject property) near the community of Downey, California. "L. M. Grider, Francis M. Matthew and W. C. Smith, appointed to appraise the land of A. W. Ryan, which the board propose to purchase for a poor farm, reported its value at $100 per acre. The purchase of the Poor Farm cost the county approximately $35,000, which was paid for by the subdivision and sale of agricultural land surrounding the County Hospital.[48] The new Poor

Farm would relieve the County Hospital's overcrowded patient wards by admitting the hospital's more able-bodied patients.[49]

By August of 1888, a well and windmill had been constructed on the property, as well as a barn. "In a few weeks, at the most, the inmates of the present County Hospital will be transferred to their new quarters out in the sunlight and healthful country between the two branches of the San Gabriel."[50] Los Angeles County Supervisor J. W. Venable claimed three additional buildings designed by Kysor, Morgan, and Walls would be completed within 90 days. Architect Octavius Morgan described the buildings under construction as "45x75, of brick, two stories high, and will be very plain, but they will have all the modern conveniences and will accommodate about 200 patients."[51] While additional buildings had been designed, they would only be constructed as needed. The Poor Farm's agricultural lands included orchards, vineyards, and a poultry yard intended to keep the inmates active. In addition to providing activities for the inmates, the agricultural fields allowed for the potential of self-sustainability, which would dramatically reduce the economic burden caused by the indigent upon the County. Supervisor Venable estimated the cost to support each inmate would be reduced by half and the returns from the farm's produce would further decrease costs.[52]

The first superintendent of the County Poor Farm was B.V. Dougall, whose brief term at the institution ended with consternation.[53] However, despite his protests, Dougall vacated the office of superintendent after having served less than a year. In February of 1889, the Board of Supervisors appointed Dr. Edwin L. Burdick to the newly created post of Physician and General Superintendent. "He is equally at home among the big bottles and vials in the laboratory of the farm or out among the hogs and horses and in the Orange grove."[54] Dr. Burdick moved into the second floor of the Office Building (not extant) with his wife and son where they would reside throughout his tenure with the institution. The Poor Farm would grow significantly during Burdick's term, adding forty acres to the property in 1892 and an additional 30 acres purchased from Laura B. Smith and Andrew Glassell in 1897, increasing the total area of the property to approximately 180 acres.[55]

The Poor Farm quickly became an example for other neighboring counties seeking solutions to their growing indigent populations. "The county poor farm is a model institution in every way. Ably managed and admirably situated, it commands respect of the entire counties of the state, in none of which is it surpassed."[56] While the Poor Farm was praised by many, it was not without its detractors. However, the criticisms were a symptom of larger concerns regarding taxes circulating among Los Angeles County's citizenry. "The county hospital and the county poor farm furnish

good places for a number of lesser leaders of the Republican faith, who crop off $1,300 a month of the money that people are now standing in line at the tax collector's office waiting for a chance to pay in."[57] The Los Angeles Herald led the political discourse, publishing several articles questioning the funding and expenses associated with the Poor Farm. In 1896, the Herald asked the important question "Who paid for turkeys?" referring to a lavish banquet given by Dr. Burdick.[58]

By 1900, the Poor Farm's agricultural programs were beginning to turn a significant profit, prompting the County Board of Supervisors to reevaluate the institution's management structure. Members of the Board believed the responsibilities of the superintendent and chief physician should be separated into two distinct positions in order to better manage the profitable farm; between 1888 and 1906, four superintendents and five chief physicians successively held tenure at the Poor Farm (**Table 1**) When Dr. Burdick abruptly resigned as the institution's superintendent in 1901 due to health concerns, the Board of Supervisors appointed T. F. Simpson as the new superintendent and gave Dr. F. L. Norton the position of resident physician. Despite the success of its agricultural programs, the Poor Farm began to deteriorate under the new leadership. Inspections of the facilities in 1903 and again in 1906 revealed unsanitary conditions.[59] In 1906, the City of Los Angeles and Los Angeles County introduced a ballot measure for a bond including $70,000 for much needed improvements at the Poor Farm. However, the measure failed to collect the necessary two-thirds majority of the vote. Continued concerns of excessive taxation expressed throughout the 1890s and rising anxiety surrounding the growing number of tuberculosis sufferers in Southern California may have contributed to the measure's defeat. Despite the bond's failure at the ballot, the County Supervisors were determined to make improvements to the Poor Farm using the normal funds available.

Development of Rancho Los Amigos (1907-1932)

The era between 1907 and 1932 marked a period of rapid change for the Poor Farm. The property struggled with its identity as it experienced changes leading it in the direction of becoming a long-term healthcare facility. However, the agricultural programs remained a key part of the institution's daily operations. George Clark's tenure as superintendent ended in 1907 when he was temporarily replaced by Donald Chick, who was then closely followed by Andrew Wade (**Table 2**). Also in 1907, the facility added a new patient ward (LACO No. 1205) to house the "harmless insane" in anticipation of an influx of patients from the overburdened state hospital. The construction of the new patient ward signified the beginning of the farm's growing responsibility to treat patients suffering with mental illness. However, 1907 also brought continued conversations regarding potential improvements to the facility's productivity as a farm.

SOURCES: *Los Angeles Times, Los Angeles Herald,* Fliedner, *Centennial.*

The primary motivation for agricultural improvements was the hope in making the facility self-sustaining, which had been the County's goal since the farm's inception. County Supervisor S. T. Eldridge was confident that his proposed improvements to the facility would make it self-sustaining by 1909. Additional improvements to the facility included plans for a new laundry and a water pumping plant, electric lighting, and a blacksmith shop.[60] The improvements succeeded in making the farm more profitable, significantly reducing the cost of the facility's operation. By 1910, the press jokingly labeled the Poor Farm as the "rich farm," stating that the orange orchard alone would net the County over $13,000.[61] That year, the Poor Farm finally achieved sustainability, recording a profit of over $3,000.

In 1911, Charles C. Manning took over as the Poor Farm superintendent. Manning's appointment drew criticism due to the fact that his father was a county supervisor and chairman of the County Poor Farm Committee.[62] Despite public cries of nepotism, Manning remained in the position until 1915. During his tenure as superintendent, the Poor Farm experienced significant growth,

60 "May Sustain Itself Soon," *Los Angeles Times,* April 24, 1907.
61 "County Poor Farm Really is Reasonably Rich Farm," *Los Angeles Times,* September 18, 1910.
62 "Gets Grilling, Also Praise," *Los Angeles Times,* October 4, 1911.

increasing the inmate population from 198 to 479.[63] Manning implemented a substantial building campaign to accommodate the growing population, adding a new dining room and kitchen, hospital wards, water tower, and horse stable, in 1913.[64] In addition to the new facilities accommodating the growing number of patients and staff, Manning had plans drawn up for a new superintendent's residence (LACO No. 1101). "The approximately 5,000 square-foot home included four large bedrooms, each with its own screened sleeping porch for hot summer nights; a maid's room and bathroom behind the kitchen; a den and dining room, each having built-in cupboards or bookcases with leaded glass and a modern kitchen."[65] However, Manning never had a chance to reside in the home. He resigned in April of 1915, after a scathing review by the County Grand Jury who accused him of incompetence and mismanagement of county property.

In 1915, the County Board of Supervisors appointed William Ruddy Harriman as the Poor Farm's new superintendent. Harriman would serve the Poor Farm for over 37 years, becoming the longest tenured superintendent in the facility's history. During his career, he oversaw significant changes to the subject property as it transitioned from a poor farm into a long term care facility. At 26 years of age, Harriman had been working as a soil expert upon graduation from the University of Southern California.[66] He was immediately faced with substantial challenges at the Poor Farm after severe flooding in 1914 resulted in significant damage to the fields and orchards. "The water left the fields under two to four feet of thick layers of river debris and sand. This was the end of the lucrative orange-and-lemon-growing business at the County Farm."[67] Naturally, Harriman's first order of business was to restore the farm fields. He consulted experts at the University of California's Agricultural Extension Service and by 1917, 60 acres of farm land had been replanted.[68] Two years earlier, the County had renamed the Poor Farm to simply, the County Farm hoping to remove the growing stigma surrounding poor houses.[69]

Overcrowding in the County Hospital was forcefully converting the farm into a healthcare facility. Hospital administrators relocated patients with minor illnesses to the County Farm. However, the farm was ill-equipped to accept the influx of new patients. "There are 100 inmates of the general wards who must receive food-tray service, whereas the farm is equipped only for those able to go to the dining-rooms."[70] The farm had become so overcrowded that men were being housed in the hay loft of the horse stable. To accommodate the patients coming from the County Hospital, new wards were constructed and dining facilities were expanded throughout the 1920s. "Either the county had to stop sending these people to the Farm, or it had to provide the funds for Infirmary Buildings, additional nurses, orderlies, porters, cleaners, a special diet kitchen, and living facilities for all of these additional employees."[71] As the County accepted

Harriman's request for more funding, the agricultural facilities would gradually make way for the new hospital wards making the 1920s the "beginning of the end" for the County Farm.[72]

While the County Farm was evolving, Harriman worked hard to make the agricultural programs profitable again. Throughout the farm's history it had established a lucrative dairy operation. However, no records of the herd's ancestry had been kept. Harriman traced the pedigrees of the heard and restored the records, establishing the farms Holstein cattle stock as one of the most notable in Southern California. The farm began to advertise itself as a premier breeder of Holstein cattle.[73] Harriman's efforts proved to be a significant achievement as the farm was applauded for its cattle and dairy programs.

Misfortune struck the County Farm in 1924 when the prize dairy herd was diagnosed with hoof and mouth disease. "When it was all over, over 400 animals—107 pigs, 13 sheep, and 315 cattle—were dead."[74] The institution set out to rebuild the prized herd by gathering new cows from the state's top breeders. In 1926, the County purchased 68 acres of land north of the Poor Farm known as Tract 6. There, Harriman would oversee the construction of a new dairy. The location had multiple benefits, including being closer to the alfalfa fields and reducing the amount of dust, flies, and odor around the County Farm's patient population. Despite the tragedy of the 1924 hoof and mouth disease, the farm's agricultural programs had become productive once again. "The Los Angeles County Farm's agriculture today represents some of the very best farming theories in practice."[75] By 1926, the property consisted of over 250 acres of agricultural land, 120 of which were planted with alfalfa in support of the new dairy program.

In 1930, the County began construction of the Harriman Building (located on the RLA North Campus), a new hospital building near the County Farm. The new building was intended to treat people suffering chronic illness further pushing the farm's transition toward becoming a long-term healthcare facility. In the same year, the County Board of Supervisors announced an attempt to rename the Poor Farm with the intention of removing the stigma of poverty from the institution. "Many people, persons who are in actual need of the county farm, folks who are eligible for admission, have fear of going to the institution because of its name."[76] The Los Angeles County Farm was the first institution of its type in California to consider distancing itself from its past. In 1931, Assistant Superintendent Everett J. Gray took over as County Farm Superintendent. Harriman had left the position to become the County Superintendent of Charities, however, he continued to keep a watchful eye on the institution. A year later, the County Farm officially changed its name to Rancho Los Amigos honoring the mission architecture found throughout the property.[77] By then, the facility was housing nearly 3,000 patients.

Establishment of the Long Term Healthcare Facility (1933-1952)

William Harriman's brief tenure as the County Superintendent of Charities ended in 1933 when the Board of Supervisors granted his request to return to Rancho Los Amigos where he remained until 1952. Beginning with the construction of a new patient ward in 1930 (Harriman Building, North Campus), the long-term healthcare facility began to spread north of Imperial Highway. While construction at Rancho Los Amigos was focused on its growing north campus, the old farm had experienced very little development as far as physical construction of new buildings was concerned. Damage caused by the Long Beach earthquake in 1933 meant that this following era would be a time of rebuilding for the former County Farm. It was also during this period that the Poor Farm completed its transition into a long-term healthcare facility. The implementation of new treatments combined with the evolving patient population and a reduction of the agricultural programs resulted in the end of the County Farm and the emergence of Rancho Los Amigos as a long term healthcare facility.

This period in Rancho Los Amigos' history literally began with a bang. The Long Beach earthquake struck at 5:54 P.M. on March 10, 1933, resulting in significant damage to many of the buildings throughout the facility. The power house suffered significant damage to interior and exterior walls as well as the boiler, disrupting the power throughout the facilities.[78] "Although there had been $300,000 in structural damage and 15 injuries, remarkably, no one was killed at Rancho."[79] Several ward buildings were damaged, resulting in the establishment of a tent city to house the displaced patients. The original patient wards (North and South Wards) designed by Kysor, Morgan, and Wells in 1888 were condemned and demolished as a result of the earthquake damage.

Later in 1933, economic hardships incurred due to the Great Depression forced the County to announce budget cuts affecting the County Hospital, Olive View Sanitarium, and the County Farm. The cuts resulted in the downsizing of Rancho Los Amigos' staff and agricultural programs. "The blue ribbon Belgian horses and the registered sheep at the Los Angeles County Farm will be among those looking for new homes soon as a result of the new 10 per cent cut in the budget."[80] The cost to operate the facilities had increased exponentially since the early days of the County Farm. "The gross cost includes room, board, clothing, shoes, laundry, medical and nursing care, salaries, maintenance of property and production of light, heat and power."[81] By 1935 there were close to 3,000 inmates, each costing 88 cents per day.

Occupational therapy programs developed at Rancho Los Amigos played a significant role in patient recovery. "On a quiet avenue of this 540-acre rancho is an attractive building known to visitors as the Occupational Therapy Shop. But patients of the institution call it the 'life shop.'"[82] However, budget reductions affected the Rancho's occupational therapy program resulting in a

82 "Patients Find New Interests in Rancho Los Amigo Shop," *Los Angeles Times,* September 27, 1937.

temporary shutdown of all but the printing department and the Shoe Shop in 1934.[83] William Harriman emphasized the importance of occupational therapy by describing what he called muscular re-education. Patients were able to perform shop activities exercising their crippled limbs back to health. Despite decreased budgets, the County Board of Supervisors agreed the programs were important and worked to find a way to provide funding.

Up until the 1930s, Rancho Los Amigos served mostly elderly patients nearing the end of their lives. However, as the facilities and programs expanded, they began to welcome new patients from other age groups. "With the enactment of the State old-age pension, many patients are leaving the institution, making room for the youngsters."[84] In 1937, the Rancho accepted forty new patients ranging in age from 22 months old to 15 years of age. In 1938, new programs were introduced to occupy chronically ill patients between the ages of 20 and 40 years old. The programs included a school teaching reading, writing, and arithmetic. "The institution also provides classes in artistic learning. There are art classes, citizenship classes, and short-story writing."[85]

During World War II, the patients and staff of Rancho Los Amigos contributed in a number of ways. Staff members volunteered for the County' civilian defense effort. The employees served as lookouts and air raid wardens.[86] Many of the patients contributed by working in nearby factories. "Mr. Donovan Perkins, formerly an assistant administrator at Rancho, explained that a truck picked up these men in front of the General Wards (LACO Nos. 1184-1188) and took them to work at the defense plants each day."[87] Patients who couldn't leave the Rancho contributed an hour or more of their time to "war work." "The patients will smooth metal stampings by hand for the Douglas Aircraft Corp."[88] In 1944, the Rancho started a subcontracting company called Warco, staffed by Rancho employees and handicapped patients. "Wages are set at the same rate for normal workers but the patients are limited to two to six hours a day."[89] The company produced rubber materials and aircraft parts. The program was so successful that it was continued after the war ended.

During the post-war years, the facility continued to expand the North Campus with the addition of multiple patient wards. New treatment programs included tending to paralysis and polio sufferers. "Victims of infantile paralysis are coming to the County's Rancho Los Amigos for post-polio care faster than the present staff can take care of them."[90] Rancho Los Amigos would eventually establish itself as one of the premier polio treatment facilities in the Nation. By 1951, Rancho Los Amigos had fully developed into a long-term healthcare facility, providing geriatric, medical and nursing care, treatment for those suffering from chronic illness, and care for patients recovering from medical or surgical conditions. "Rancho also provided the necessary medical, surgical and

ancillary care for the largest concentration of respirator-dependent poliomyelitis patients in history."[91] By the late 1950s, most of the significant activities taking place at Rancho Los Amigos occurred on the developing North Campus, located on the north side of Imperial Highway. Construction of new facilities were focused in this area, beginning with the 1930 construction of what would become known as the Harriman Building, at the corner of Erickson Avenue and Imperial Highway. The development of the North Campus was the result of William Harriman's master plan to develop a 2,500 bed hospital.[92]

While the general wards on the subject property continued to serve the need of ambulatory patients with less than serious illnesses through the 1950s, the North Campus developed into a world-famous rehabilitation center.[93] Harriman would retire in 1952, citing health concerns as the primary reason for his departure. He was relieved by Robert Thomas. Under the direction of Thomas between 1952 and 1956, Rancho Los Amigos restructured its administration by grouping staff members into new departments and sub-departments, including "Clinical Laboratories, X-Ray, Dental, Pharmacy, Physical Therapy, Occupational Therapy and other ancillary services."[94] In 1952, the large fields east of the old County Farm were subdivided for residential development. In 1954, the polio service vacated the patient wards on the subject property, which were then used to house infirmary patients and "the ever-shrinking population of ambulatory, mostly recovering, alcoholic men."[95] By 1957, Rancho Los Amigos began phasing out its mental wards in order to focus on becoming a modern hospital. That same year, the County officially reported the discontinuation of all agricultural activities.[96]

Construction History of Rancho Los Amigos (1888-1952)

As described in the Historic Context above, the period of significance for the subject property is 1888 to 1952; it begins with the Los Angeles County Poor Farm's opening (1888) and ends with the complete evolution of the subject property into a long-term healthcare facility, marked by the residential subdivision and sale of former agricultural lands east of Dahlia Avenue and north of Consuelo Street (1952). The construction history of the subject property is described below and illustrated by historic maps and aerial photographs dating from 1923 to 1963 (see **Figures 7 to 13** in the *Research* section). Construction dates were identified based upon available architectural drawings at USC Libraries Special Collections and Rancho Los Amigos Archive, as well as Colleen Fliedner's book, *Centennial: Rancho Los Amigos Medical Center: 1888-1988*. Dates were also approximated using the aforementioned historic maps and aerial photographs. In instances where these sources did not yield dates, the previous evaluation by Sapphos was consulted.

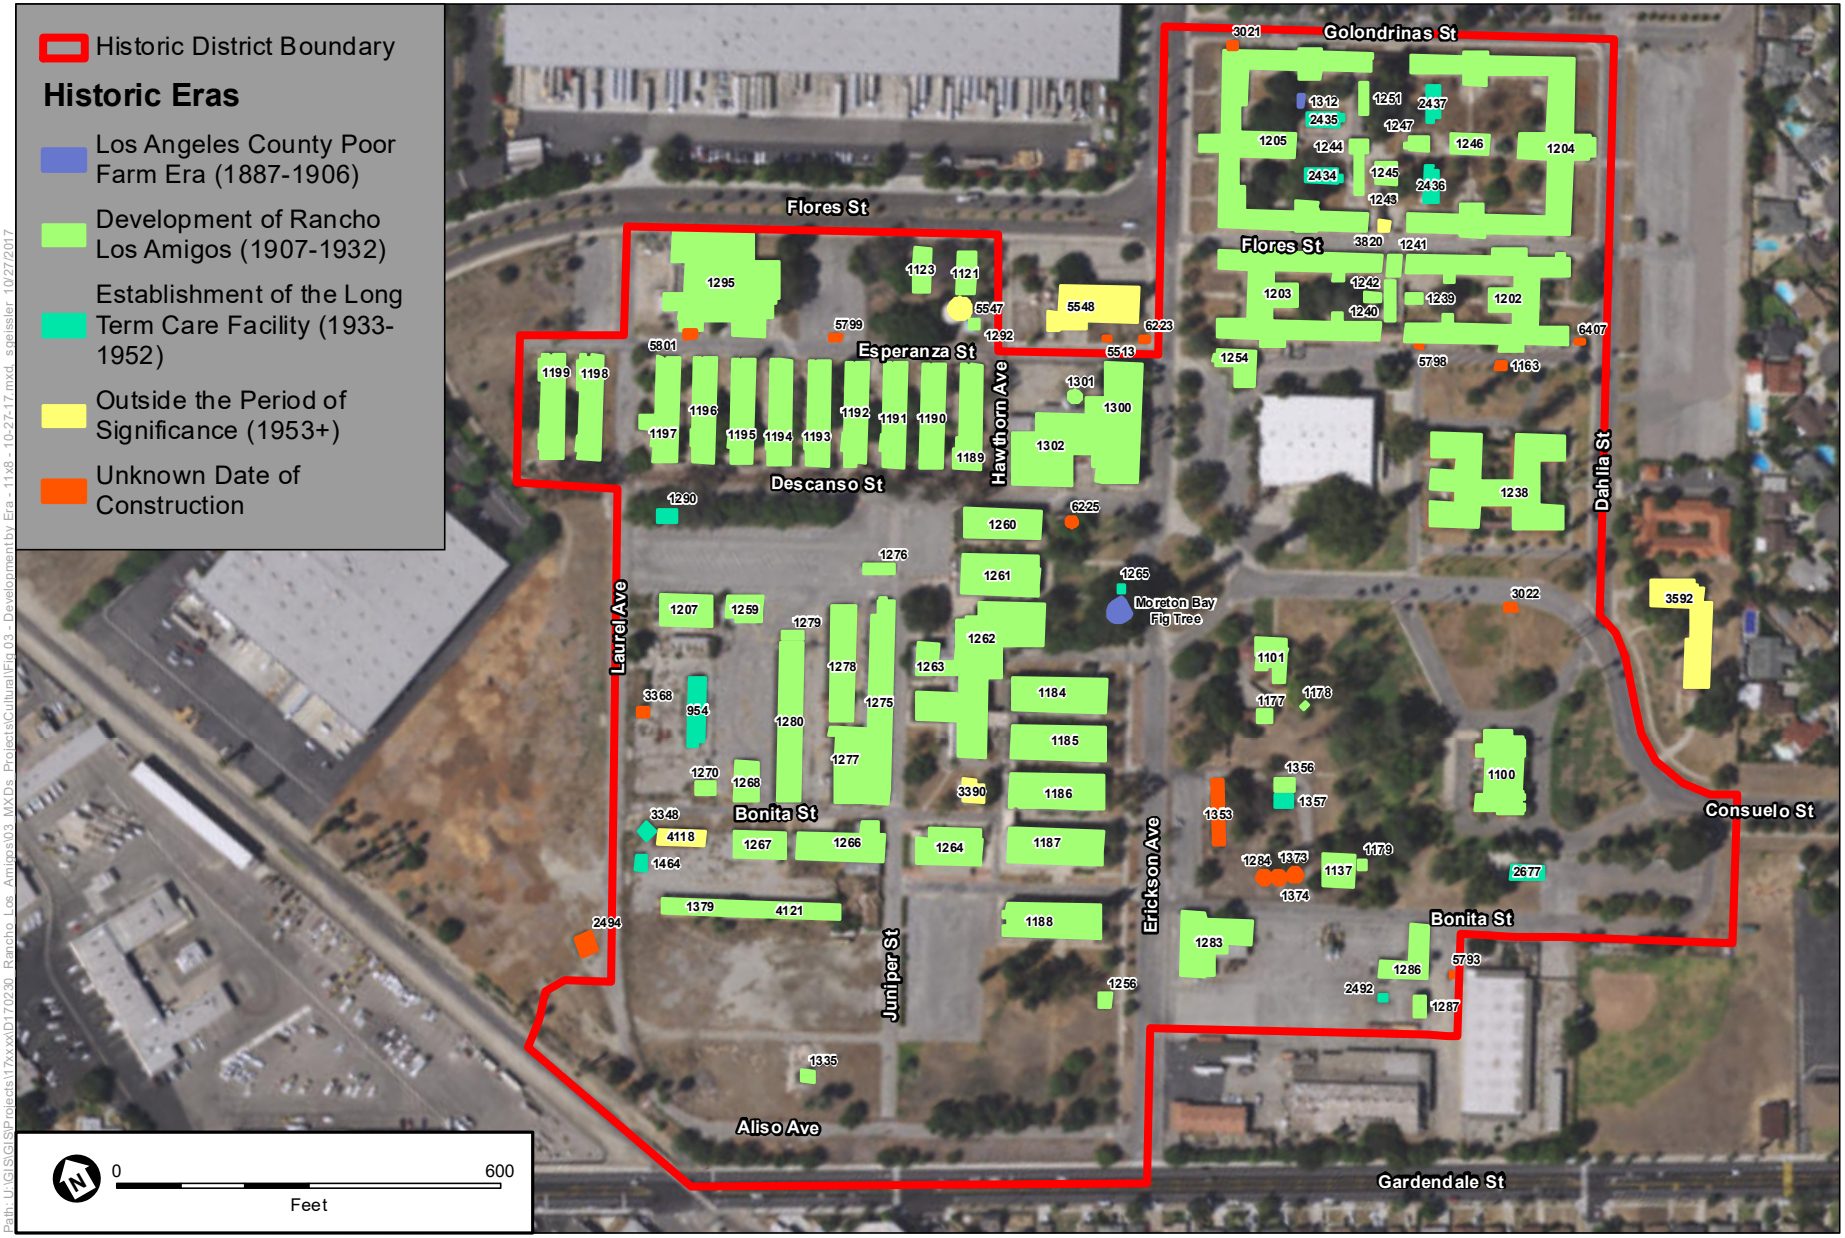
As a result of this study, the District's period of significance was divided into three eras: Los Angeles County Poor Farm Era (1888-1906), Development of Rancho Los Amigos (1907-1932), and Establishment of the Long Term Care Facility (1933-1952). These eras relate to the subject property's pattern of development during the period of significance. Described below is the history of the District's construction across these three eras. The subject property's development between 1888 and 1952 is also illustrated in **Figure 3** below. As will be explained, the subject property developed throughout the period of significance, but especially during the Development of Rancho Los Amigos Era.



The evolution of the subject property from a poor farm to long-term healthcare facility was a result of overcrowding at the county and state hospitals as the indigent population grew over time. Patients with less serious illnesses were sent to the County Farm to receive treatment. The growth in population at the Poor Farm required the construction of new patient wards. These buildings were added as needed, utilizing land that was available at the time. A 1926 aerial illustrates the Poor Farm at a significant moment in its history (see Figure 8). That year, the farm's livestock became infected with hoof and mouth disease, prompting Superintendent Harriman to relocate many of the agricultural programs and associated buildings to a new location further north. The 1926 aerial depicts the subject property at critical point in its transition with patient wards mixed indiscriminately among agricultural buildings and fields.

Los Angeles County Poor Farm (1887-1906)

The original core of the Los Angeles County Poor Farm was established in the vicinity of the area presently occupied by LACO No. 1261 (Auditorium). In 1888, architectural firm Kysor, Morgan, and Walls designed the site plan and most of the original core, including the North Ward (Women's Ward) and South Wards (Men's Ward). The North Ward was originally intended for female patients but was soon reassigned to indigent men whose numbers were steadily increasing.[97] The North and South Wards originally flanked an open courtyard situated immediately to the east of the area where LACO No. 1261 now sits. In 1888, architect Jacob Friedlander added a Dining Hall (Refectory) on the west side of the courtyard, on the site where LACO No. 1261 (Auditorium) presently stands.[98] In 1889, Kysor, Morgan, and Walls infilled the courtyard with a three-story Office Building.[99]

Following the reassignment of the original North Ward to male patients, a new Women's Ward (also referred to as "Old Ladies' Ward") was constructed in 1897 at the northeast corner of Consuelo Street and Erickson Avenue. Situated at an angle overlooking the traffic circle, this building was expanded in 1916 and again during the 1920s; the latter addition extended north towards LACO No. 1203 (Women's Psychiatric Ward) constructed in 1919 and described below.

Figure 3

Development by Era

ESA

The ground floor of the Women's Ward housed physiotherapy and x-ray offices, among other services. In 1930, the Women's Ward was also reassigned to male ambulatory patients. Female patients were moved to a new ward constructed that year, directly to the east, which is described below: Casa Consuelo (LACO No. 1238).[100]

Various structures were added to the Poor Farm, as needed, including, a windmill, barn, and Aviary (LACO No. 1312). Other improvements included a laundry and water pumping plant, electric lighting, and a blacksmith shop.[101] The Poor Farm's agricultural lands were also developed with orchards, vineyards, and a poultry yard. Originally, Consuelo Street appears to have been plotted as the Poor Farm's main entrance, with Erickson Avenue (originally Eucalyptus Avenue) serving as a secondary circulation path.

Excepting LACO No. 1312, which was relocated around 1924 to the courtyard of LACO No. 1205, all of the buildings originally associated with the Poor Farm were demolished by the 1960s. The Office Building and Dining Hall (Refectory) were razed in 1929.[102] Moreover, the original North and South Wards were condemned around 1933, following the Long Beach earthquake which left them uninhabitable. Finally, the Women's Ward at the northeast corner of Consuelo Street and Erickson Avenue was partially demolished after sustaining damage during the earthquake; it was fully demolished in 1965.[103]

Development of Rancho Los Amigos (1907-1932)

Research suggests that the Los Angeles County Poor Farm's transition to Rancho Los Amigos was not formally planned; rather, development occurred over time in response to specific needs. Under the direction of William Ruddy Harriman, who served as Superintendent from 1915 to 1952, significant changes were made to the subject property. Building campaigns reached their height during the Development of Rancho Los Amigos Era (1907-1932), when the District essentially achieved its present appearance.

In 1907, during the brief administration of Donald Chick, a much needed ward was constructed for "harmlessly insane" patients, as they were then called, on the east side of Erickson Avenue: LACO No. 1205 (Men's Psychiatric Ward). The construction of this ward was a significant turning point in the subject property's evolution as it marked the emergence of the long-term healthcare facility.[104] By the time the subject property's name was officially changed to Rancho Los Amigos in 1932, three major groupings of patient wards had been constructed, each containing buildings featuring identical or very similar designs.

The first grouping, comprised of four U-shaped psychiatric wards, including LACO No. 1205, was established at the northeast corner of the subject property. The U-shape of LACO No. 1205, which was built first, was actually the result of various additions over time, the dates of which are not known with absolute certainty. Research indicates that this building originally featured a

rectangular plan with a north-south orientation; however, in 1909, two wings with east-west orientations were added, altering the original footprint to a U-shape. In 1916, the north and south wings were further elongated, resulting in an even deeper U-shape; in the process, each wing received a two-story addition (additional ward space with a floor above serving as housing for patient attendants) and a one-story addition serving as more ward space. A cafeteria addition was also made to the center of LACO No. 1205 in 1916.[105]

The ultimate U-shaped plan of LACO No. 1205 set an important precedent for later wards on the subject property, as it was replicated or mimicked three times. In 1919, LACO No. 1203 (Women's Psychiatric Ward), a smaller U-shaped ward, was erected immediately to the south of LACO No. 1205.[106] In 1924, two additional wards mirroring the plans of LACO Nos. 1205 and 1203 were added, completing the grouping: LACO No. 1204 (Men's Psychiatric Ward) and LACO No. 1202 (Women's Psychiatric Ward).[107]

The U-shaped wards were clearly designed to contain and control the movements of those deemed "harmlessly insane." [108] Windows were fitted with security bars and all doors were kept locked. It remains unclear if these patients posed a threat to their own safety, as well as the safety of others. In some cases, it was necessary to relocate these individuals to state mental hospitals.[109] Colleen Fliedner describes the overall floorplan of LACO No. 1205 and how "inmates," as patients were originally called, used the building:

> *The floor plan…was designed so that there would be rows of rooms on each side of the central corridor. In that way, each inmate would have a window. The men occupied the north portion of the building and the women were kept on the south wing. Two fenced courtyards along the back of the building with shady trees, benches and drinking fountains encouraged the patients to sit in the fresh air and sunshine. Further encouragement for spending time outside was provided by locking the patients out of their rooms during the day. This was also the practice in the other wards.[110]*

Prevailing attitudes towards healthcare are evident in the designs of the U-shaped wards, as well as other wards on the subject property. At the time of their construction, the curative properties of the temperate Southern California climate were being lauded. Moreover, great emphasis was being placed on creating a salubrious living environment for patients, achieved through the provision of cross-ventilation and abundant natural light. Finally, aesthetics mattered; it was important to create a "domestic" living environment with direct access to attractively landscaped outdoor areas. As will be explained further, these considerations factored prominently in ward design on the subject property. Overall, living conditions at the subject property were probably superior to those at state mental hospitals.[111] At the subject property, patients could enjoy

intimate private living quarters and healthful diets, and could participate in occupational therapy programs and recreational activities. The second grouping of wards on the subject property, consisting of five identical two-story general wards, was established on the west side of Erickson Avenue, just north of its southern terminus, beginning with the construction of LACO Nos. 1184 and 1185 in 1913.[112] LACO No. 1186 (built in 1916),[113] LACO No. 1187 (built in 1926),[114] and LACO No. 1188 (built in 1928)[115] were subsequently added to the south, completing the row of wards. The original architects of LACO Nos. 1184 to 1188 are not known with absolute certainty. Drawings dating from 1915 in the RLA Archive appear to be original plans identifying architect George Low as the designer of LACO No. 1186.[116] Moreover, drawings dating from 1925 in the RLA Archives appear to be original plans identifying architect Montrose S. Warm as the designer of LACO Nos. 1187 and 1188.[117] LACO Nos. 1184 to 1188 appear to have originally featured open floorplans permitting the accommodation of large numbers of patients (probably ambulatory), with toilet facilities concentrated in the middle. The otherwise utilitarian concept of these wards included a feature intended to create an indoor-outdoor living experience for patients; open porches at both ends (east and west) of the first and second floors, allowing for sunlight penetration and cross-ventilation.

Finally, the third grouping, comprised of thirteen one-story cottage-style infirmary wards of similar design, was situated on the north side of Descanso Street (referred to as "Infirmary Drive"),[118] at the northwestern corner of the subject property. This grouping included nine cottages on the east side of Laurel Street, connected by a long verandah along their primary (south) elevations, and four cottages on the west side of Laurel Street, also unified by a verandah fronting their primary (south) elevations. The cottages were constructed in three phases.[119] The first phase included the construction of LACO Nos. 1189, 1190, 1191, and 1192 in 1922. During the second phase, LACO Nos. 1193, 1194, 1195, and 1196 were constructed in 1923. Finally, as part of the third phase, LACO Nos. 1197, 1198, 1199 were added in 1928. LACO Nos. 1200 and 1201 were also erected during the third phase at the end (east side) of the row of cottages; however, they were demolished between 1994 and 2003 according to aerial photographs.[120] The construction dates of the cottages are confirmed by a 1923 topographic map (see Figure 7). The cottages housed a variety of patients, including invalid women and male diabetic, urology, and bedridden patients; one cottage also served as the director of nursing's office.[121] As in the case of the two-story wards on the west side of Erickson Avenue, the original architects of the cottages are not confirmed. Drawings dating from 1926 in the RLA Archives appear to be original plans

[112] Fliedner, *Centennial*, 63. Blueprints for LACO Nos. 1184 and 1185 were prepared in 1912, with construction occurring the following year.

identifying architect Montrose S. Warm as the designer of LACO No. 1197, 1198, and 1199.[122] As will be explained under Early Hospital Architecture (1880-1908), the cottage-style patient wards on the subject property derived their overall design from similar one-story pavilions on the Southern California State Hospital (The Patton State Hospital), established in 1908. Constructed under the direction of John McGonigle, these pavilions were connected by a large porch, similar to those on the subject property. According to Colleen Fliedner, "By 1927 all of the [cottages] were bulging at the seams, and it became necessary to keep around 15 patients on the sleeping porches."[123] By 1936, the porches were enclosed.[124]

The cottages were designed to evoke a domestic setting, achieved through the incorporation of the pavilion concept and Craftsman style elements commonly applied to residential architecture, such as shaded porches and wood siding. Consistent with the designs of the U-shaped and two-story wards described above, the cottages were configured to maximize light and air. To this effect, the cottages were laid out with narrow interstitial outdoor spaces. Moreover, each cottage included a screened porch along one of its long sides, overlooking a narrow courtyard separating it from the adjacent cottage. Finally, the large verandahs unifying these cottages provided shaded areas for patients to socialize in and survey their surroundings.

Gender played a role in the both the placement and use of wards on the subject property. Male and female patients were routinely segregated, with specific wards or portions of wards designated for either sex. By 1930, a cluster of three exclusively female wards established at the northeast corner of the subject property.[125] This cluster included two previously described wards: LACO Nos. 1203 and 1202 constructed in 1919 and 1924, respectively. Casa Consuelo (LACO No. 1238), the third women's ward, was constructed in 1930; it replaced the Women's Ward, constructed in 1897 and described above, at the northeast corner of Consuelo Street and Erickson Avenue, which was reassigned to male patients at this time.[126] Situated immediately to the south of LACO No. 1202, Casa Consuelo was designed for female ambulatory patients by architect Karl Wilhelm Muck[127] in the Spanish Colonial Revival style and originally contained dormitory-style accommodations, including one-hundred-thirty-two bedrooms, both private and shared. The irregular floorplan of this two-story ward included "three courtyards, sun porches, and six smaller parlors on each floor."[128] While the other wards did not contain a recreation room, Casa Consuelo featured eleven "small day rooms furnished in a variety of styles to suit individual tastes. Reportedly, Mrs. Elinor Harriman had a great deal to do with decorating the new facility."[129]As the subject property developed, its utility needs grew rapidly. LACO No. 1302 (Shop, Laundry, Ice Plant) was built in 1909.[130] Shortly thereafter in 1913, the Water Tower (LACO No. 1301)

was erected.[131] It was not until 1925, however, that the current Power Plant was erected (LACO No. 1300).[132] The Power Plant was designed in the Neoclassical Revival style with an imposing primary façade overlooking the west side Erickson Avenue. The Power Plant contained one-thousand horsepower boilers and was fitted "with a most up-to-date and efficient arrangement of pumps, heaters and auxiliary equipment, as well as two new steam-driven electrical generators with modern switching equipment and transformers for high-tension lines delivering the power to distant parts of the property."[133]

In 1915, a five-thousand-square-foot single-family residence designed by architect George Low[134] in the Craftsman style was erected in the area below LACO No. 1205, on the south side of Consuelo Street, for the Superintendent and his family: LACO No. 1101 (Harriman/Superintendent's House).[135] Although LACO No. 1101 was constructed during Charles Manning's administration, it appears that William R. Harriman, who served as Superintendent from 1915 to 1952, was the first to reside there. The residence included four spacious bedrooms, "each with its own screened sleeping porch for hot summer nights; a maid's room and bathroom behind the kitchen; a den and dining room, each having built-in cupboards or bookcases with leaded glass and a modern kitchen."[136] By the early 1920s, the residential setting of LACO No. 1101 included a detached garage (LACO No. 1177) and shed (LACO No. 1178). The construction dates of LACO Nos. 1177 and 1178 are not known with absolute certainty. LACO No. 1177 appears on an aerial photograph dating from 1926 (see Figure 8), but LACO No. 1178 is either non-extant or concealed by foliage. According to the previous evaluation by Sapphos, LACO Nos. 1177 and 1178 were constructed in 1917 and c. 1917 to 1922, respectively.[137]

During the Development of Rancho Los Amigos Era, the subject property's administrative center shifted to the vicinity of LACO No. 1101, on the south side of Consuelo Street. The demolition of the original Office Building on the subject property, as described earlier, followed the construction of a new administration building overlooking Consuelo Street in 1926: LACO No. 1100 (Administration/Safety Police Building).[138] LACO No. 1100 housed various offices, including those belonging to department heads and Mr. Harriman himself. Mr. Harriman's office was located on the ground floor where there was also a lobby.[139] North of the subject property's administrative center, a chapel (LACO No. 1254) designed by architectural firm Hudson & Munsell in the Craftsman style, was constructed in 1907.[140] Situated on the east side of Erickson Ave, north of LACO No. 1101 and directly to the south of LACO No. 1205, LACO No. 1254 was relocated in 1919, further to the south, to make way for LACO No. 1203 (Women's Psychiatric Ward). LACO No. 1254 was used until the 1950s when a new chapel was built at the northeast

corner of Consuelo Street and Dahlia Avenue, outside the District boundary. Following the erection of LACO No. 1254, several more social, as well as dining, facilities were constructed on the subject property for patient use; these are described below. The subject property's dining facilities include LACO Nos. 1263 (Commissary and Receiving Room) and 1262 (Dining Room, Kitchen, Staff Room). Both of these buildings were constructed in phases, the dates of which are not known with absolute certainty. LACO No. 1263 was built just south of the Poor Farm's original core. According to Sapphos, the first portion (Commissary) of LACO No. 1263was built in 1912 while the second portion (Receiving Room) was built in 1926. In 1913, according to Sapphos, LACO No. 1262 was constructed adjacent to LACO No. 1263. LACO No. 1262 was built in stages, reaching its current configuration in 1924, according to Sapphos. Sapphos describes LACO No. 1262's evolution as follows. The Dining and Reading Room, the earliest portion of LACO No. 1262 was built first and designed by architectural firm Hudson & Munsell. The Kitchen was added in 1917. Next came the Dining Extension in 1920. The final Dining Room addition was built in 1924. LACO Nos. 1262 and 1263 are both brick masonry buildings whose original designs appears to be influenced by Renaissance Revival architecture, particularly in their use of brick arches.

In 1928, the Auditorium (LACO No. 1261), designed by architect Karl Wilhelm Muck,[141] was erected on the site which the original Dining Hall (Refectory) formerly occupied. The following year, Amigos Hall (LACO No. 1266), designed by architect Karl Wilhelm Muck,[142] was built just north of the original poultry yards.[143] Finally, in 1932,[144] Bonita Hall (LACO No. 1264), designed by architect Edward C. N. Brett[145] in the Spanish Colonial Revival style, was added just south of LACO No. 1262. This building provided a recreational space for patients, including areas for music and games. Bonita Hall's original design included a large south-facing shaded porch intended for socializing; it was partially infilled in 1974.[146]

In 1913, a two-story horse stable (LACO No. 1283) designed by architect George Low[147] was erected on the east side of Erickson Avenue, just north of that street's south end. Located on the first floor were the stableman's room and a toilet. The second floor originally served as a hayloft but was soon turned over to male ambulatory patients.[148] After the Long Beach earthquake of 1933, LACO No. 1283 (Trunk Storage), which was extensively damaged, underwent substantial alteration, with the removal of its second story.

The subject property's agricultural functions continued through the 1920s, as marked by the construction of the Broder House/Vivarium (LACO No. 1335) the poultry yard established at the

[148] Fliedner, *Centennial*, 78.

southwest corner of the subject property. The exact construction date of LACO No. 1335 is not known; according to the previous evaluation by Sapphos, it was constructed in 1929.[149]

In the 1920s, the area to the west of Juniper Street was improved with several buildings and structures associated with occupational therapy. For example, in 1925, the Work Preparation Center (LACO No. 1207) was constructed immediately to the west of LACO No. 1262 (Dining Room, Kitchen, Staff Room). The occupational therapy area was situated within short walking distance of two groupings of patient wards: the cottage-style Patient Wards (LACO Nos. 1189-1199) and two-story General Wards (LACO Nos. 1184-1188). As such, these patients had easy access to the buildings and structures associated with occupational therapy.

Whereas William R. Harriman resided near the new administration center along Consuelo Street, staff were quartered at the northwest corner of the subject property. By 1926, according to an aerial photograph (see Figure 8), several staff cottages occupied this area. One staff housing block was situated in the area presently bound by Erickson Avenue to the east, Hawthorne Avenue to the west, and Descanso Street to the south, partially outside the present RLA South Campus. This block was improved with fifteen staff cottages (three duplexes and twelve single-family dwellings) set behind landscaped front yards and arranged in two rows; eight overlooked Erickson Avenue while seven fronted Hawthorne Avenue. A second staff housing block sat directly to the west of the aforementioned block, occupying the area at the southeast corner of Hawthorne Avenue and Flores Street, also partially outside the present RLA South Campus. This second block consisted of four staff cottages designed by Parker Orasmus Wright, Jr.,[150] each containing four staff living units. Of these, only two remain: LACO Nos. 1121 and 1123. The exact construction dates of LACO Nos. 1121 and 1123 are not known; according to the previous evaluation by Sapphos, they were built in 1921 and 1924, respectively.[151] A Kitchen and Dining Building (LACO No. 1295), intended for staff, was constructed to the east of the second staff housing block. The exact construction date of LACO No. 1295 is also not known; according to the previous evaluation by Sapphos, they were built in 1927.[152] With the exception of LACO Nos. 1121 and 1123, all staff cottages were gradually demolished after 1963, according to aerial photographs (see Figure 13).[153]

During the 1920s, Erickson Avenue became the primary entry to the subject property. The construction of the Power Plant (LACO No. 1300) in 1925, with its grand primary elevation fronting Erickson Avenue, is consistent with this trend. In 1931, Imperial Highway, situated to the north of the subject property, was plotted as a major east-west transportation corridor in the surrounding area. Erickson Avenue connected to Imperial Highway, facilitating vehicular access to the subject property.

Establishment of the Long Term Healthcare Facility (1933-1952)

Under the direction of William R. Harriman, the Los Angeles County Poor Farm changed its name to Rancho Los Amigos in 1932; this represented a turning point in the subject property's transition from a poor farm to long-term healthcare facility. By 1933, Rancho Los Amigos was fully developed. There was very little site development during between 1933 and 1952, with only a few buildings added to the site during this time, including the Lumber Shed (LACO No. 954), Landscape Office (LACO No. 1357), and Post Office (LACO No. 2677). The Poor Farm's post office had been located in the Administration Building since 1908, and Superintendents were generally elected as postmasters until 1933 when the amount of mail received required a full-time postmaster to attend the Poor Farm's post office. The existing Post Office (LACO No. 267) was moved to Rancho Los Amigos in 1949. The war surplus building originally served as an army barracks for a nearby military base but was remodeled as a post office when it was relocated to an area just south of the Administration Building (Building No. 1100). Several modifications, including the stuccoing of the exterior walls and replacement of several doors have been made to the building since 1949 (Post/Hazeltine Associates 2003, BSO record).

Early Hospital Architecture (1880-1908)

The various patient wards constructed within the subject property reflect the development of hospital building design. Most of the patient wards are simple structures intended to provide patients with ample natural light, fresh air, and access to outdoor space. Hospital architecture dates back to some of the earliest civilizations in mankind's long history. Researchers have debated over the origin of these building types, however some of the earliest documented cases of facilities designed specifically for healthcare purposes were Roman military hospitals. "The plans for the one in Vindossa in present day Switzerland built in the 1st century AD shows small patient rooms with ante rooms built around courtyards. Each room was thought to hold three beds indicating the ward concept was used early in the history of hospital development."[154] While modern hospitals have evolved over time due to advancements in technology, medical or otherwise, the ward has continued to be a vital characteristic of the property type.

The growth of hospital wards over time resulted in increased concerns regarding sanitation and access to adequate healthcare. "The wards were dark, poorly ventilated, unsanitary, and often located adjacent to other wards with infectious patients."[155] The "pavilion" plan was developed to address these concerns, incorporating the ward concept while providing fresh air and daylight to the patients housed within. In 1880, the California Board of Health published a suggested design concept for future hospital construction, noting that the existing county hospitals were poorly designed for their purpose. The Board of Health commissioned A. A. Cook of Sacramento, and architect knowledgeable in methods of heating and ventilation, to design a recommended hospital plan. Cook's design incorporated a version of the pavilion plan, connected various wards by a series of verandas. "They are designed for cheap structures, within the means of almost any

[154] Tom Gormley, "The History of Hospitals and Wards." March 11, 2010. https://www.healthcaredesignmagazine.com/architecture/history-hospitals-and-wards/, accessed October 13, 2017.

[155] Gormley, "The History of Hospitals and Wards." March 11, 2010. https://www.healthcaredesignmagazine.com/architecture/history-hospitals-and-wards/, accessed October 13, 2017.

county, and can be enlarged from the present plans if desired."[156] Each of the wards were large enough to contain seven to twelve beds while providing each bed with access to windows for fresh air. Fireplaces in each ward provided heat during the cool evenings and winter months. Centrally located in the plan was the service building, which contained lavatories, kitchen and dining facilities, a reception room, and an examining room.

In 1908, the Southern California State Hospital (The Patton State Hospital) opened its new McGonigle Cottages, named after former director John McGonigle, using the pavilion concept. "The new Southern California State Hospital's McGonigle cottages were 'of one story, well lighted and ventilated, and have a large connecting porch, which also connected with the nurses' cottage, where the patients can sit practically out of doors.'"[157] The cottage design provided the patients with a residential environment as opposed to the more common institutional hospital architecture.

Identified Architectural Styles

Craftsman Architecture (1905-1930)

The Craftsman style, which is indigenous to the United States, was popular in Southern California from the early 1900s to the early 1930s. Brothers Charles Summer Greene and Henry Mather Greene, who established the noted architectural firm Greene and Greene in Pasadena around 1894, were influential upon the development of the style. In the early twentieth century, Greene and Greene designed what have been called "ultimate bungalows," including the Robert Roe Blacker House (1907) and iconic Gable House (1908) in Pasadena. The designs of these bungalows stemmed from the Greene brothers' early training at the Manual Training School of Washington University, St, Louis, Missouri, in metal and woodworking and drew inspiration from the English Arts and Crafts movement and traditional East Asian wood architecture. Greene and Greene's residences were popularized by contemporary magazines including *House Beautiful* and *Architectural Record* and provided a major impetus in the publication of pattern books featuring Craftsman bungalows.[158] Ready-cut bungalows also became widely available, providing an attractive and economical housing solution. Because of these factors, the Craftsman style became extremely popular in the country and ubiquitous throughout the County of Los Angeles.

Craftsman style buildings are typically one- or one and one-half stories in height and feature: low-pitched gabled roofs; broad overhanging eaves with exposed structural members; decorative false beams or braces commonly added under gables; full or partial width porches with a roof; double hung windows or grouped casement windows; and shingled, and less frequently, clapboard or stucco, exteriors. LACO No. 1101 (Superintendent's Residence/Harriman House), the only single-family residence on the subject property, was designed by George Low in the Craftsman style and constructed in 1915. LACO Nos. 1189 to 1199 (Patient Wards) erected between 1923 and 1928, also exhibit strong Craftsman influences through their overall massing

and cladding materials. Originally serving as wards, the Craftsman-inspired design of these cottages helped create a "domestic" atmosphere for patients.

Neoclassical Revival Architecture (1885-1930)

Neoclassical Revival style architecture is derived from eighteenth- and nineteenth-century Georgian, Federal, Classical, and Greek Revival residential architecture and often freely incorporates regional elements from the New England, mid-Atlantic, and southern variants of those forms. The style is characterized by a full-height porch supported by columns, a façade symmetrically balanced around a center door, and evenly positioned and sized windows. A full-façade porch, a variant in which a colonnaded porch occupies the full width and height of the façade, covered by a flat roof extending forward from a long cross-gable roof on the house itself, was popular in the early twentieth-century. Also common at this time were slender square columns, lacking the decorative capitals and fluting common in earlier Neoclassical Revival buildings. Doors commonly have elaborate decorative surrounds based on Greek-Revival, Federal or Georgian precedents; cornices generally have a boxed eave, often with a wide frieze band beneath; windows are rectangular with double-hung sashes.

The popularity of the Neoclassical Revival Style stems from interest in classical models, sparked in large part by the Chicago's World's Columbian Exposition in 1903. The central buildings of the exposition imitated earlier Classical and Greek-Revival styles and inspired countless public, commercial, and residential imitations. The Virginia State pavilion, that copied Mount Vernon with its full-façade porch added onto an earlier Georgian house, inspired a particular enthusiasm that spread nationwide as an inaccurately identified "Southern colonial" form.[159]

Within the District, Neoclassical Revival is not a common style. The only extant example is LACO No. 1300 (Power Plant), constructed in 1925. Strong Neoclassical Revival influences are evident in this building's symmetrical façade composition, prominent triangular pediment overlooking Erickson Avenue, and regular arrangement of fenestration and Classical pilasters.

Renaissance Revival and Brick Vernacular (1895-1935)

Renaissance Revival architecture is characterized by its Palladian style arched apertures, hipped roof, and use of wide eaves with brackets. More ornate examples of the style were usually designed by architects or master builders. The Italian Renaissance Revival style is an important architectural movement associated with the identity of Southern California as Mediterranean. Closely associated with the Spanish Colonial Revival style, which is discussed below, the Italian Renaissance Revival style is a derivative of renaissance-era Italian domestic architecture that differs from Spanish-inspired designs in several identifiable ways.

Typically, examples of the Renaissance Revival style feature rectangular plans, brick masonry exterior walls, symmetrical façades beneath a low pitched or flat roof hidden by cornices, short parapet walls, and balustrades. More ornate examples are distinguished by an arcaded or rusticated ground level with quoins at the corners of the primary façade. The division of floors is frequently articulated with elaborate string courses which define the sills of windows. Rows of

[159] McAlester*, A Field Guide to American Houses*, 435-446.

round-arch windows, often separated by colonnettes, can mix with windows of different shapes on different floors and are commonly highlighted with strongly marked voussoirs, pilasters, spandrel panels, or pediments. These details are most frequently applied in a contrasting cast stone or terra cotta material.

Brick Vernacular is an architectural style that follows regional building traditions, accommodates local climate conditions, utilizes local building materials (i.e. brick) and construction techniques, and incorporates local styles and types. Vernacular architecture relies on the design skills and traditions of local builders, is usually designed without an architect, and are built by local contractors to serve functional requirements.

Throughout the District, numerous buildings are vernacular brick structures that exhibit Renaissance Revival influences. Examples include: LACO Nos. 1202-1205 (Men and Women's Psychiatric Wards), constructed between 1907 and 1924; LACO No. 1263 (Commissary and Receiving Room), constructed in 1912; LACO No. 1262 (Dining Room, Kitchen, Staff Room), constructed between 1913 and 1926; and LACO No. 1275 (Workshop), constructed in 1917. These brick masonry buildings feature regular façade compositions, arched window and door openings, and low parapets.

Spanish Colonial Revival (1915-1940)

The beginnings of the Spanish Colonial Revival style date to 1915, when it was introduced at the Panama-California Exposition in San Diego. The period revival styles grew in popularity just after World War I, and were patterned after buildings of earlier historic periods. The most common style in the Southwest was the Spanish Colonial Revival. Inspired by the Panama-California Exposition, many architects found Southern California the ideal setting for this architectural style. Numerous publications argued in favor of this period revival style for the "Mediterranean environment" of California, including W. Sexton's Spanish Influence on *American Architecture and Decoration* (1926) and Rexford Newcomb's *The Spanish House for America Its Design, Furnishing, and Garden* (1927).

Architect Bertram Grosvenor Goodhue's comprehensive set of Spanish Revival structures for the Panama-California Exposition catalyzed a region-wide building trend that incorporated Spanish and Moorish influences and even supplanted the previously popular Mission Revival style. The many Spanish Colonial Revival and Mediterranean Revival commercial, civic and residential structures that were built became a key component in the forging of regional identity and quest for legitimacy, since the style helped perpetuate powerful romantic myths about California's origins tied to New Spain. Decorative elements that were appropriated from indigenous American cultures (Native American, Mayan, Aztec) were sometimes incorporated into these eclectic designs to infuse exoticism, along with a certain brand of perceived cultural authenticity. The Spanish Colonial Revival style and its variants were widely used throughout southern California for both commercial and residential properties. The typical identifying features of the Spanish Revival style are a low-pitched red tile roof with little or no eave overhang, the use of arches on

principal fenestration, stucco walls, and an asymmetrical facade.[160] Spanish Colonial Revival is one of several period revival styles commonly applied to single-family residences in the early twentieth-century.

The Spanish Colonial Revival style was regularly applied across many different building types. Examples of the style in the District include: LACO No. 1100 (Administration/Safety Police Building), constructed in 1926; LACO No. 1238 (Casa Consuelo), constructed in 1930; and LACO No. 1264 (Bonita Hall), constructed in 1932.

The Architects of Rancho Los Amigos

Rancho Los Amigos is the result of several building campaigns carried out at different times over the years to serve the functional needs of the facility. The design of building improvements on the campus is attributed to at least eight architects.

Edward C. N. Brett

Edward C. N. Brett was the chief architect of Los Angeles County from approximately 1940 to 1970, and worked as an architect for the County before then.[161] He designed LACO No. 1264 (Bonita Hall) in 1932 (extant).[162] His other work at Rancho Los Amigos includes designing alterations for several buildings, including LACO Nos. 1189-1199 (Patient Wards) and LACO Nos. 1202-1205 (Men's and Women's Psychiatric Wards) in 1950; LACO Nos. 1184 (General Ward 30) and 1189-1199 (Patient Wards) in 1953; and LACO Nos. 1202-1204 (Men's and Women's Psychiatric Wards) in 1956, which are all extant.[163]

Born in Coronado, California, in 1892, he received his education from the University of California in 1917.[164] He also designed the Great Hall/Long Hall at Plummer Park in then-unincorporated West Hollywood (1938), the only known structure in that city built through New Deal programs.[165]

Jacob Friedlander

Jacob Friedlander designed the Dining Hall (Refectory), part of the original core of buildings on the County Poor Farm, in 1888.[166] As of that year he had an architectural office at 104 North

Main Street in Los Angeles, and resided at 117 Banning Street.[167] The Dining Hall (Refectory) was demolished in 1929.[168] Little else is known about Friedlander or why the Los Angeles County Board of Supervisor's awarded him the contract for the building over firm Kysor, Morgan, and Walls, who designed the remainder of the Poor Farm's original buildings.

Hudson & Munsell (Frank Dale Hudson & William A. O. Munsell)

The well-known firm of Hudson & Munsell designed LACO No. 1254 (Chapel/Computer Center) in 1907 (extant);[169] LACO No. 1262 (Dining Room, Kitchen, Staff Room) in 1913 (extant);[170] and the Milk House (non-extant). Comprised of Frank Dale Hudson and William A.O. Munsell, the firm was active in Southern California from 1895 to approximately 1925. They designed many buildings for public and private clients. Other County buildings, for example, include the Administration Building of the General Hospital (now the Coroner's Department) in 1909; the Detention Home (1910); the first Hall of Records Buildings (1908); and the Natural History Museum (1913). They also designed schools for the Los Angeles Unified School District, a Los Angeles City fire station, churches, lodges for Elks and Masons, and private homes.[171]

Frank Dale Hudson was born in 1868 in Oakland, California and received his higher education at London International College in 1885. He settled in San Francisco and worked as an architect at the offices of William Curlett until 1895, when he moved to Los Angeles and partnered with Munsell. By 1899, Mayor Fred Eaton had appointed him building inspector for a two-year tenure. He was president of the Southern California chapter of the American Institute of Architects in 1910.[172]

Born in Ohio in 1866, William A.O. Munsell's family moved frequently around the Midwest as a child. As an adult he moved to Denver, Colorado, then Portland, Oregon, where he worked as a draftsman, then Wichita, Kansas, where he worked as an architect. He moved to Los Angeles in the late 1890s. He served as president of the Los Angeles chapter of the American Institute of Architects in 1902. He also was a city judge in San Marino, California, and an artist.[173]

Kysor, Morgan, and Walls (Charles H. Kysor, Ezra Frank Kysor, Octavius Morgan, Newton James Tharp, and John A. Walls)

The famous Los Angeles firm of Kysor, Morgan, and Walls designed most of the original core of the County Poor Farm, including the North and South Wards in 1888 and the Office Building in 1889 (no longer extant).[174] The firm was active from 1887 to 1890 and was a partnership between

[174] Fliedner, *Centennial*, 24

architects Ezra Frank Kysor and his son Charles H. Kysor (later Kyson), Octavius Morgan, Newton James Tharp, and John A. Walls.

Ezra Kysor was born in Cattaraugus, New York, in 1835 and moved west shortly after the American Civil War. After spending some time in Virginia City, Nevada, Kysor settled in Los Angeles in 1868. He partnered with E. J. Weston before forming a partnership with Octavius Morgan in 1876.[175] Octavius Morgan was born near Canterbury, England in 1850 and migrated to the United States in 1870. After spending time in Denver, Colorado, Morgan established himself in Los Angeles in 1873. He began working as a draftsman for Ezra Kysor before becoming Kysor's partner in 1876.

Kysor and Morgan designed many notable structures throughout Los Angeles prior to Kysor's retirement around 1887, including Saint Vibiana's Roman Catholic Cathedral in 1876 as well as several business blocks along Main Street in downtown Los Angeles.[176] When Kysor retired, J.A. Walls joined the firm and the name of Kysor was retained, forming Kysor, Morgan and Walls (later becoming Morgan and Walls and then Morgan, Walls, and Morgan in 1910).[177] The firm is responsible for downtown landmarks, including the I.N. Van Nuys Building (1911) listed in the National Register. Octavius Morgan was once one of the oldest members of the American Institute of Architects on the Pacific Coast and a charter member and former president of the Southern California Architect's Association. Octavius Morgan is considered a notable architect due to his numerous contributions to the field of architecture, the development of California, and the architecture of Los Angeles.

George Low

George Low was an architect with the Los Angeles County Mechanical department, as identified in original plan sets and Los Angeles City directories.[178] He designed LACO No. 1101 (Harriman/Superintendent's House) in 1913;[179] additions to LACO No. 1205 (Men's Psychiatric Ward) in 1913;[180] LACO No.1186 (General Ward) in circa 1915;[181] LACO No. 1283 (Trunk Storage) in circa 1915[182] and remodeling of two unspecified ward buildings, which are all extant. He shared a name with a Los Angeles builder of the era, though they are unlikely to be the same person. Little else is known about George Low.

Karl Wilhelm Muck

Karl Wilhelm Muck was the Los Angeles County Architect in the latter part of the 1920s. He designed LACO No. 1295 (Kitchen and Dining Building) in 1927;[183] a pump house in 1927; LACO No. 1238 (Casa Consuelo) in 1928;[184] LACO No. 1261 (Auditorium) in 1928;[185] and, also in 1928, LACO No. 1266 (Amigos Hall).[186] He also designed the iconic Harriman Building (1930) on the North Campus.[187] With the exception of the pump house, all of these buildings are extant.

He was born in 1892 in Los Angeles to parents from Wisconsin.[188] By 1917 he was living in El Dorado, Kansas, with his wife and child and working as an architect.[189] The U.S. Census of 1920 places him and his family in Los Angeles, working as a residential architect. By 1930, he was listed as the County Architect.[190] He was laid off in 1931 due to the effects of the Great Depression on Los Angeles County's finances. His office was absorbed into the Mechanical Department to be managed by a chief architect, where it had been prior to the creation of the office of County Architect.[191]

Some other buildings he designed for the County include a health center in Santa Monica (1928); a health and welfare center in East Los Angeles (1928); structures at the County Fairgrounds in Pomona (1928); and the Alhambra Health and Welfare Center (1930).[192] Examples of homes he designed as a residential architect in El Dorado include a two-story single-family home and a seven-room "modern bungalow," both built in 1918.[193]

Montrose S. Warm

Montrose S. Warm was an architect who worked for the County Mechanical Department. In 1921 he designed LACO No. 1260 (Bathhouse and Ward);[194] in 1924 he designed an addition to the dining room in one of the Men's Psychiatric Wards, a new entrance at the west side of LACO No. 1203 (Women's Psychiatric Ward), inclines for various buildings throughout the District, and an Employee Building;[195] in 1925 he designed LACO Nos. 1187 and 1188 (General Wards 60 and

70);[196] and in 1926 he designed LACO Nos. 1197, 1198, and 1199 (Patient Wards 209, 210, and 211).[197] With the exception of the Employee Building, all of these buildings extant.

Further information on Warm is sparse. The 1908 San Francisco City directory identifies him as a draftsman working with his father Eugene M. S. Warm at their building company Warm and Son, located at Eugene's home at 501 Anderson Street. Montrose's home at 506 Ellsworth Street was nearly adjacent, likely demonstrating a close working relationship with his father.[198] It is unknown when or why he began working with Los Angeles County, or what further buildings he designed.

Parker Orasmus Wright, Jr.

Parker Orasmus Wright, Jr., designed four staff cottages that were built in 1918. Two of them (LACO Nos. 1121 and 1123) are still extant.[199] He was born in New York in 1873, and worked with the architectural firm Wright and Gentry before striking out on his own. He seems to have had much of his work in the Long Beach area. Other buildings he designed include the Reliance Motion Picture Company's film vault in Hollywood (1914); Long Beach Unified School District's Horace Mann School (1922); 1st Methodist Episcopal Church in Long Beach (1924); Los Angeles Unified School District's Figueroa Street Elementary School (1925); the Scottish Rite Cathedral in Long Beach (1926); the York Rite Temple in Long Beach (1927); and the Long Beach Fire Station #8 (1929). The Church and Scottish Rite Cathedral and Long Beach Historic Landmarks.[200]

Research

Extensive archival research and documentation has been previously prepared for the District. Pertinent background documents were reviewed to develop an understanding of the history, construction, and alterations of the District. Existing documentation was supplemented with additional research as necessary. An intensive pedestrian survey was conducted to document the existing conditions of the District utilizing the survey methodology of the State Office of Historic Preservation. In addition, the following tasks were performed in support of the preparation of this Report:

- Review of previous evaluations and associated documentation of the District by HRG (1995), Post/Hazeltine Associates (2004), and Sapphos (2007-2011);
- Review of past CEQA documentation including the 2010 Data Center EIR and 2016 Sports Center Categorical Exemption and related supporting technical documentation;
- Review of previous correspondence between the Los Angeles Conservancy and the County;

196 RLA Archive, Downey, California, drawings for LACO Nos. 1187 and 1188, 1925.
197 RLA Archive, Downey, California, drawings for LACO Nos. 1197-1199, 1926.
198 San Francisco City Directory, 1908.
199 USC Libraries Special Collections, Rancho Los Amigos Hospital Records 0407, Box 33, drawings for LACO Nos. 1121 and 1123, 1918.

- Research at the following libraries, archives, and historical societies: Los Angeles Public Library; USC Libraries Special Collections; Rancho Los Amigos Archive; Benjamin and Gladys Thomas Air Photo Archives, University of California, Los Angeles (UCLA); United States Geological Survey (USGS); and Downey Historical Society;
- Research utilizing Sanborn fire insurance maps, United States Census records, historic photographs and aerials, newspaper and journal articles, historic and geologic maps, and historic site and architectural plans;
- Environmental Data Resources (EDR) search to obtain historic maps and aerial photographs;
- Review and analysis of ordinances, statutes, regulations, bulletins, and technical materials relating to federal, state, and local historic preservation, designation assessment processes, and related programs;
- And evaluation of the District based upon criteria used by the National Register and California Register.

SCCIC Records Search

A records search was conducted on June 13, 2017 at the California Historical Resources Information System (CHRIS) South Central Coastal Information Center (SCCIC) housed at the California State University, Fullerton. The records search included a review of all previous studies within a one-half-mile radius of the subject property, and previously-documented historic architectural resources within a quarter-mile radius of the subject property.

The records search results indicate that two historic architectural resources (P-19-186110 and -189330) have been previously recorded within a ¼-mile radius of the subject property (**Table 3**). Resource P-19-189330 encompasses the boundaries of the subject property, while resource P-19-186110 is located immediately adjacent (approximately 35 feet west) to the subject property. Resources P-19-189330 and P-19-186110 are described in more detail below.

TABLE 3
PREVIOUSLY RECORDED RESOURCES

P-Number (P-19-)	Other Designation	Description	Eligibility
P-19-186110	30-176630; C-Los Angeles-A-1	Union Pacific Railroad	3S
P-19-189330	Los Angeles County Poor Farm	Rancho Los Amigos Historic District	2S2

2S2: Individual property determined eligible for NR by a consensus through Section 106 process. Listed in CR.
3S: Appears eligible for NR as an individual property through survey evaluation.

P-19-186110 – Southern Pacific Railroad/Union Pacific Railroad

Resource P-19-186110 was originally recorded in 1999 and consists of a standard gauge railroad (with associated features including railroad stations, sidings, spurs, and railyards) that was part of the first transcontinental railroad. The railroad is composed of smaller lines, such as the Pacific Electric, the Los Angeles and San Pedro Railroad, and the Los Angeles and Salt Lake Railroad, which were absorbed by the Southern Pacific in the 1880s. In the 1990s, the Union Pacific

Railroad acquired the holdings of the Southern Pacific. This resource was previously recommended eligible for the National Register under Criterion A for its association with the development Los Angeles as a major business center and under Criterion B for its association with important historical figures, including the Big Four (Mark Hopkins, Collis P. Huntington, Leland Stanford, and Charles Crocker).[201] A small portion (approximately 770 feet long) of this resource is located immediately adjacent (approximately 35 feet west) of the subject property.

P-19-189330 – Rancho Los Amigos Historic District

Resource P-19-189330 consists of the Rancho Los Amigos Historic District (District). The District is located on the subject property and includes facilities related to the County of Angeles Poor Farm and Rancho Los Amigos. The District was originally recorded in 1995 by Historic Resources Group (HRG) in 1995.[202] At that time, the District was determined eligible for the National Register under Criterion A by a consensus through the Section 106 process and was listed in the California Register under Criterion 1 for its association with the early healthcare of the County's indigent population and later treatment of patients with chronic illnesses or mental disorders. The District was resurveyed in 2004 by Post/Hazeltine Associates and recommended ineligible due to a lack of integrity. It was resurveyed again in 2007-2011 by Sapphos Environmental, Inc.[203] (Sapphos), who concurred with the original eligibility determination. As of 2011, there were 68 contributors within the District.[204] The following section provides additional details about these previous studies.

Previous Studies

Three previous evaluations have been conducted of the District and are included in **Figures 4, 5,** and **6**. In 1995, HRG conducted a survey of earthquake damaged properties for the purpose of Section 106 review by the Federal Emergency Management Agency (FEMA) after the 1994 Northridge Earthquake and documented the subject property on Department of Parks and Recreation (DPR) forms.[205] [206] [207] HRG identified the subject property as a historic district eligible under National Register Criterion A and California Register Criterion 1. HRG identified the period of significance as 1888-1945.[208] Their survey included documentation of 102 buildings, structures, and features within the boundaries of the District, of which 76 were identified as contributors (Figure 4). HRG did not identify any individually eligible resources in the District.

This page intentionally left blank

The District was determined eligible for National Register by consensus with SHPO through Section 106 process and listed in the California Register on September 30, 1996 (assigned a California Historical Resources Status Code of 2S2).[209]

Nearly ten years later, in 2004, the County of Los Angeles Administrator's Office (CAO) contracted with Post/Hazeltine Associates to resurvey the District. to determine if it remained eligible as a historic district. Their study included 1) preparation of a historical context and site history; 2) survey and documentation of existing conditions; 3) assessment of integrity of individual buildings and the District as a whole; 4) evaluation of the current eligibility of the District for the National Register and California Register under all four criteria (A/1, B/2, C/3, and D/4); and 5) preparation of a report and DPR 523 addendum. Post/Hazeltine Associates recommended it ineligible for listing in the National Register and California Register due to a lack of integrity.[210] Post/Hazeltine Associates recommended the District not eligible under Criterion A/1 since almost all of the original agricultural facilities and staff cottages had been demolished, and the property no longer conveyed its significance as a poor farm.[211] They also recommended the District not eligible under Criterion B/2 due to a lack of significant association with particular individuals.[212] The District as a whole was found to lack sufficient integrity to be eligible under Criterion C/3.[213] Under Criterion D/4, they found that the property was well documented and did not have the potential to contribute to our understanding of history.[214] They identified 11 buildings and structures as individually eligible under National Register Criterion C and California Register Criterion 3: LACO Nos. 1100, 1101, 1177, 1178, 1238, 1261, 1262, 1263, 1300, 1301, and 1302 (Figure 5).

In 2006, the County of Los Angeles Chief Executive Office retained Sapphos to resurvey the District and to assess the feasibility of rehabilitation and adaptive reuse of historic buildings, structures, and features within the District. The survey update was undertaken to assist the County with preparation of a potential Campus Plan to accommodate redevelopment of portions of the former Rancho Los Amigos National Rehabilitation Center, and to inform a corresponding Specific Plan that would be adopted by the City of Downey to update zoning to reflect the potential Campus Plan. However, the Campus Plan was never enacted. The survey update also resolves contradictory results from two previous historic surveys, in 1995 by HRG, and in 2004 by Post/Hazeltine, discussed above.[215] The objectives of the survey update were to examine the existing District boundaries, develop a historic context and period of significance, and to re-evaluate the significance and integrity of the District as a whole as well as individual buildings and structures.[216]

[213] Post/Hazeltine Associates, 2004, pg. 115.
[214] Post/Hazeltine Associates, 2004, pg. 115.
[215] Sapphos, 2011, pg. 1-1.
[216] Sapphos, 2011, pg. 1-1.

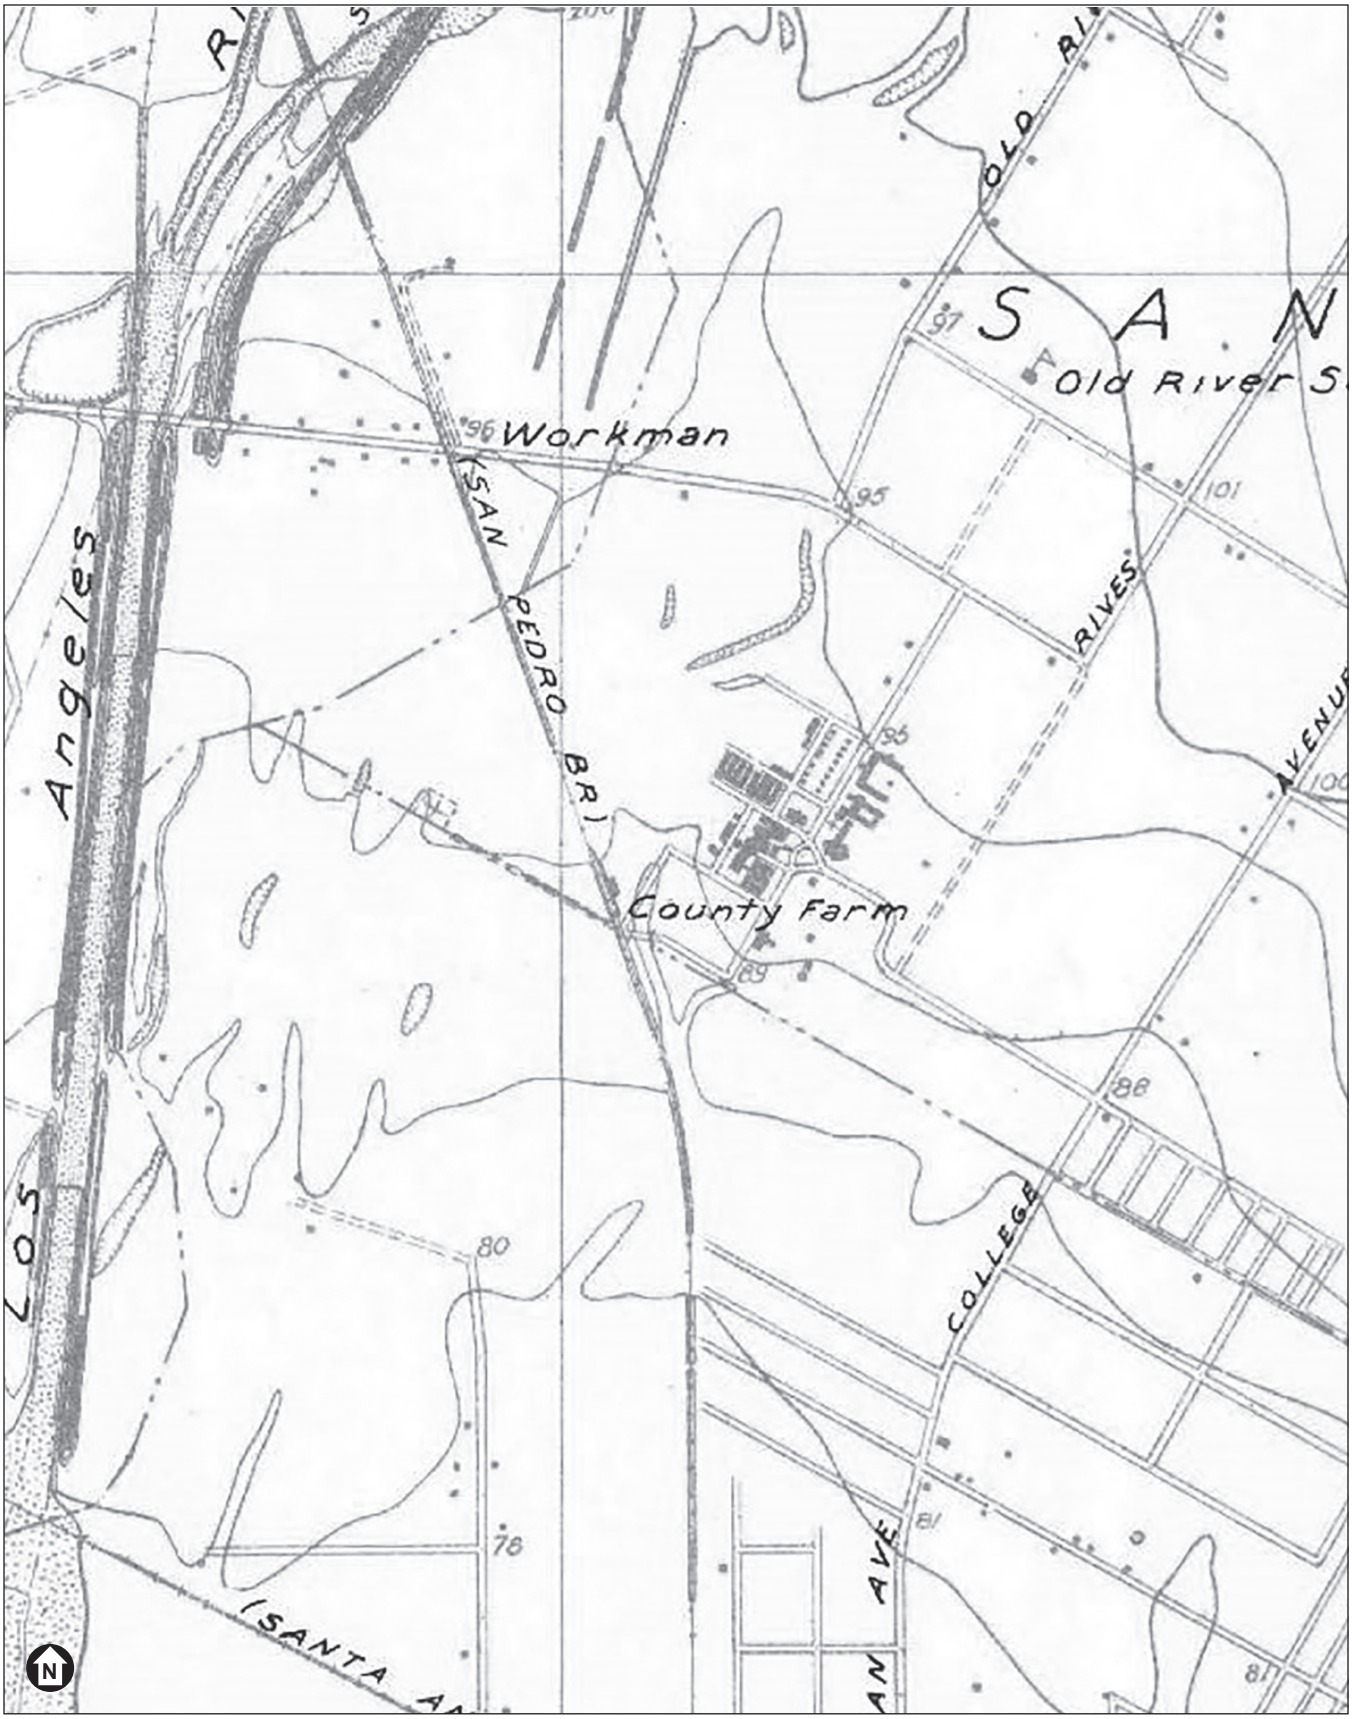
From 2007-2011, Sapphos resurveyed the District and indicated that it "exhibited sufficient integrity to maintain its significance under National Register Criterion A and California Register Criterion 1 for its important role in the public welfare and healthcare history of the County of Los Angeles."[217] Sapphos updated the District boundary and recommended that the period of significance be extended to 1952. They documented 117 buildings, structures, and features, 68 of which were identified as contributors and 49 of which were identified as non-contributors (Figure 6). Sapphos also recommended nine buildings and structures individually eligible for listing in the National Register under Criterion C and California Register under Criterion 3 for architectural merit: LACO Nos. 1100, 1101, 1177, 1238, 1262, 1263, 1300, 1301, and 1302 (Figure 6).

Historic Maps and Aerial Photographs

Historic maps and aerial photographs were examined to provide historical information about land uses of the subject property. Sources consulted include the U.S. Geological Survey (USGS) aerial photography and topographic map databases, University of California – Los Angeles (UCLA) Benjamin and Gladys Thomas Air Photo Archive, University of Southern California (USC) Libraries Special Collections, and NETR Online. A site-specific search was also requested from EDR. The following map set depicts the chronological development of the subject property from 1923 to 1963 (Figures **7** to **13**).

Environmental Data Resources, Inc.

Available topographic maps include the 1896, 1899, 1902, 1942, 1943, and 1947 Downey 15-minute quadrangles; 1923, 1925, and 1936 Bell 7.5-minute quadrangles; 1949, 1952, 1964, 1972, 1981, and 2012 South Gate 7.5-minute quadrangles. Sanborn Fire Insurance maps were available for the years 1929 and 1932 (see Figure 10). Historic aerial photographs were available for the years 1928 (see Figure 9), 1938, 1954 (see Figure 12), 1963 (see Figure 13), 1961, 1972, 1977, 1981, 1989, 1994, 2002, 2005, 2009, 2010, and 2012 (EDR, 2017).



USGS Aerial Photography Database

The earliest aerial photograph of the property on file with the USGS was from 1994, showing a dense urban area surrounding the site. The database included additional aerial photographs of the property dating from 2004, 2008, 2010, and 2013.

USGS Topographic Map Database

The USGS Topographic Map Database contains several maps of the area dating from as early as 1896 to 1964 and range in scale from 1:24,000 to 1:250,000. Small scale topographic maps (1:250,000) drawn in 1901, 1904, and 1949 show a broad overview of the Los Angeles area but the Poor Farm is not depicted. Topographic maps (1:62,500) drawn in 1896, 1899, 1902, 1942, and 1943 provide a broad overview of the town of Downey and its surrounding communities. Located southeast of Downey along the Los Angeles Terminal rail line is a small structure labeled "Poor Farm Station."

Beginning in 1943, the maps of this scale label the property as the County Hospital. Larger scale topographic maps from 1923 (see Figure 7), 1925, 1936, 1949 (see Figure 11), and 1964 show a closer view of Downey and the County Farm, including the many of the individual building footprints.

UCLA Benjamin and Gladys Thomas Air Photo Archive

UCLA's Benjamin and Gladys Thomas Air Photo Archive contained three aerial photos of the property and surrounding area. The earliest aerial image is dated 1926 (see Figure 8) and shows a detailed overview of the County Farm and the nearby agricultural fields. Additional aerial photographs from 1929 and 1955 show the property at a distance among the broader context of the surrounding fields and residential development.

USC Libraries Special Collections

An extensive archive of Rancho Los Amigos related material is housed within the USC Libraries Special Collections. The archive includes several aerial images of the property dating from 1929 to 1983. The earliest aerial photographs in the collection were taken by the County Farm's superintendent, William Harriman, in 1929. They provide a candid view of the subject property during its greatest period of transition in the 1920s. Additional aerial photographs from 1929 depict dairy facilities, which were constructed away from the subject property, closer to the present location of the Rancho Los Amigos North Campus. An aerial photograph dated 1930 provides a detailed view of the County Farm with the beginnings of the north campus and new dairy facilities in the distance. Aerial photographs from 1963, 1975, 1982, and 1983 provide a detailed images of Rancho Los Amigos among the encroaching suburban development in the surrounding area.

NETR Online

NETR Online (www.historicaerials.com) provided aerial images of the property from 1954 to 2012. Also included in NETR Online's database were topographic maps from 1896 to 1988, which appear to be similar to those found among the USGS database.

Archival Research

Sources conducted to develop the historical context and architectural history of the subject property include the County of Los Angeles' Rancho Los Amigos Facilities Management Department archives (Warm, Montrose S.), the University of Southern California (USC) Libraries Special Collections, the Downey Historical Society, the Downey City Library, and the Los Angeles County Department of Public Works.

Material from the RLA Archives is located in the Central Plant on the RLA North Campus. Its collections comprise site plans, maps, and architectural plans for approximately 35 buildings and structures on the subject property, most of which are extant. It was especially helpful in developing architectural histories of the subject property. The RLA Archives were consulted in June and July of 2017.

The USC Libraries Special Collections are located primarily at the Doheny Memorial Library on the main USC campus southwest of downtown Los Angeles. Collection number 0407 of the California Social Welfare Archives, titled the Rancho Los Amigos Hospital Records, was consulted. Dating from circa 1887 to 1999, the collection includes "administrative and financial records, internal and external publications generated by Rancho staff, retrospective and historical accounts, oral history tapes, blueprints, plans, and similar material. The collection includes large numbers of photographs, both of staff members and therapeutic techniques. Likewise, there are many films and audio-recordings on issues involving physical therapy and rehabilitation."[218] Within the collection, boxes 14, 15, 17, 19-23, and 25-41 contained photographs, publications, reports, maps, and architectural plans that helped develop the historical context and architectural history of the Project Site. The Special Collections was consulted in July and August of 2017.

The Downey Historical Society is located at 12540 Rives Avenue in Downey, immediately southeast of the North Campus. Its holdings are wide-ranging and include yearbooks, periodicals, photographs, books, memorabilia, and other resources relating to the history of Downey. Researchers consulted periodicals and photographs related to the subject property, which were helpful in developing its historical context. The Downey Historical Society was consulted in July and August of 2017.

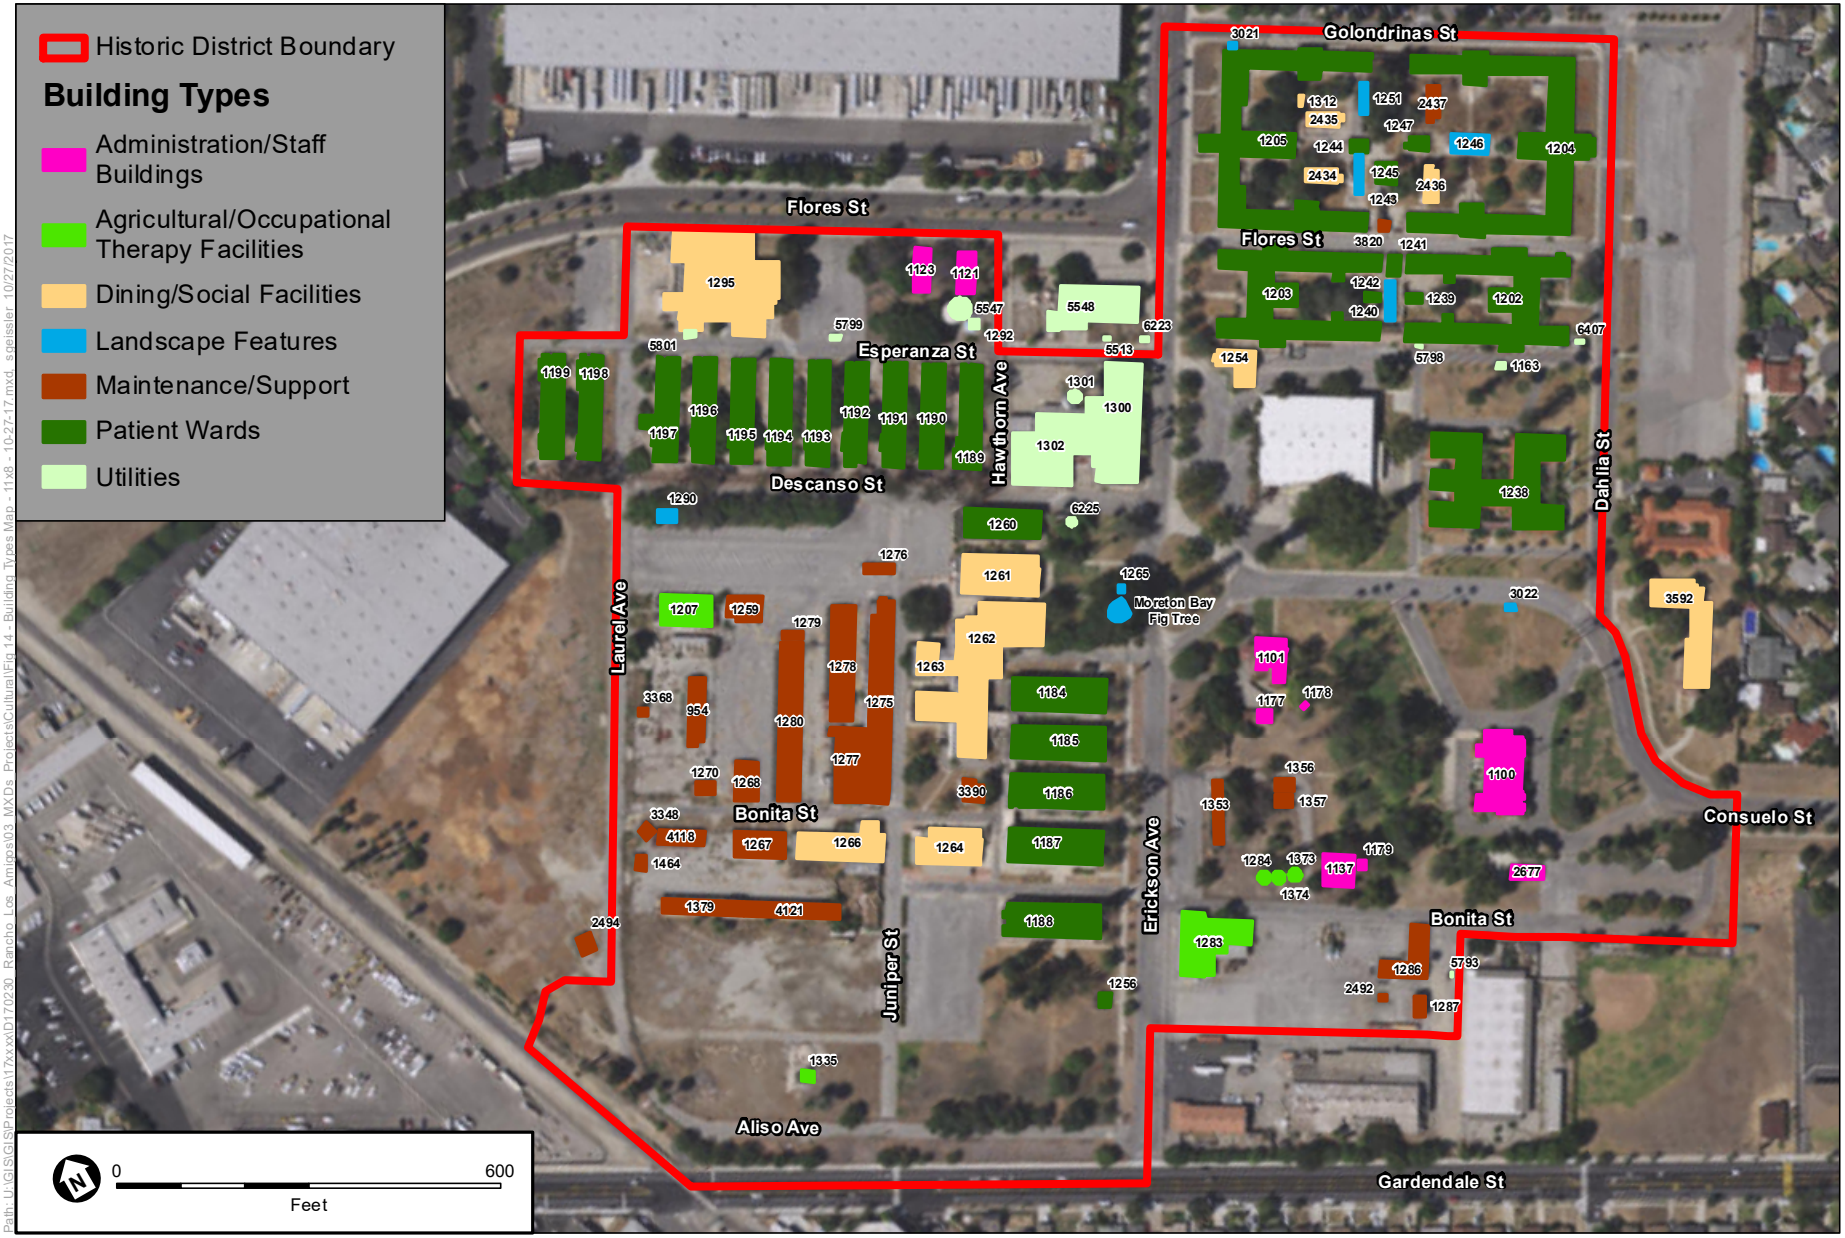
The Downey City Library, located at 11121 Brookshire Avenue in Downey, and the Los Angeles County Department of Public Works, located at 900 Fremont Avenue in Alhambra, were also visited. The Downey City Library contained information already gleaned from other sources. The Department of Public Works provided building permits for Rancho Los Amigos, but these were mainly from the second half of the twentieth century and mostly pertained to the North Campus. Therefore, these two sources did not contribute information to ESA's research efforts. Both of these locations were visited in July of 2017.

Historic Resources Survey

Methods

A historic resources survey update of the subject property was conducted on June 19-23, 2017 by ESA architectural historians Amanda Kainer, Adam Rajper, Christian Taylor, and Max Loder. Dr. Margarita Jerabek attended the survey kick-off, provided an orientation for staff, and provided senior guidance for the duration of fieldwork. The survey was aimed at documenting the current conditions of all existing buildings, structures, and features on the subject property and documenting the overall landscape. The subject property was documented using digital photography and hand-written notes.

[218] John Howard Fowler, "Finding Aid for the Rancho Los Amigos Hospital records 0407" (Los Angeles: USC Libraries Special Collections, 2002).



A DPR 523D form (District Record) documenting current evaluation findings was prepared and is included in **Appendix C**. All survey work was conducted in accordance with the California Office of Historic Preservation's Instructions for Recording Historical Resources (March 1995). Buildings, structures, and features that have undergone substantial change in condition since the previous survey, or about which new information was found, resulting in a change in eligibility, were reevaluated and documented on DPR 523 series forms, including DPR 523A (Primary Record), DPR 523B (Building, Structure, Object), and 523L (Continuation Sheets). These forms are included in **Appendix D**. The three previous evaluations of the District, including DPR 523 series forms, by HRG (2004), Post/Hazeltine Associates (2004), and Sapphos (2007-2011) are provided in **Appendices E, F, and G**, respectively.

The intensive level pedestrian survey of the District documented 109 buildings, structures, and features.

Rancho Los Amigos Historic District Description

The District is an institutional district located in Los Angeles County, in the southwest portion of the city of Downey. Based on the current survey conducted in June of 2017, the District contains 109 buildings, structures, and features. Development in the District is primarily institutional, containing mostly one- and two story patient wards, surrounded by support and administrative facilities. While the subject property first began operating as a poor farm in 1888, the majority of the buildings that remain on the property were constructed between 1907 and 1932, and were largely designed in the Renaissance Revival style and brick vernacular, although the District also exhibits examples of Craftsman, Neoclassical Revival, Spanish Colonial Revival, and modest utilitarian buildings. The District is roughly bound by Golondrinas Street, Erickson Avenue, and Flores Street to the north, Dahlia Avenue and Consuelo Street to the east, Bonita Street, Erickson Avenue, and Aliso Street to the south, and Laurel Street to the west.

As presented in **Table 4** below, seven different building types, which together allowed the facility to operate as a poor farm and later as a long-term healthcare facility, are found in the District: Administration and Staff Buildings, Patient Wards, Dining and Social Facilities, Utilities, Agricultural and Occupational Therapy Facilities, Maintenance and Support Buildings, and Landscape Features (**Figure 14**). The District occupies flat terrain with streets generally arranged in a grid pattern. The District is traversed by several streets including Consuelo Street, Bonita Street, Descanso Street, Esperanza Street, and Flores Street. The streets feature concrete curbs and sidewalks with landscaped parkways and original lampposts. A landscaped traffic circle occupies the intersection of Consuelo Street and Erickson Avenue.

SOURCE: ESA Site Survey (2017)

Administration/Staff Buildings

These buildings represent the subject property's administrative and staff functions and generally date from the Development of Rancho Los Amigos Era (1907-1932). Primarily located in the southeast and northwest portions of the District, these buildings feature architectural styles including the Craftsman and Spanish Colonial Revival styles. A total of nine buildings within the District boundary fall within this type. During the Development of Rancho Los Amigos Era (1907-1932), the administrative core of the District shifted from the vicinity of the area presently occupied by LACO NO. 1261 (Auditorium) to the south side of Consuelo Street. The construction of LACO No. 1100 (Administration/Safety Police Building) in 1926 reflects this (**Figure 15**). Overlooking Consuelo Street and featuring the Spanish Colonial Revival style, LACO No. 1100 served as the subject property's second and last administrative center.

Extant staff-related buildings are Craftsman style staff residences, including LACO No. 1137 (Dairyman's House) built in 1907, and LACO Nos. 1121 and 1123 built in 1921 and 1924, respectively (**Figure 16**). The Superintendent's Residence/Harriman House (LACO No. 1101), built in 1915 is no longer extant after it was destroyed in an arson fire on June 26, 2017.

Patient Wards

These buildings represent the subject property's patient wards, as well as related facilities such as toilet buildings, and all date from the Development of Rancho Los Amigos Era (1907-1932).

Located in the northeast, south, and northwest portions of the District, these buildings feature architectural styles including the Renaissance Revival and Brick Vernacular and Colonial Revival styles. A total of 29 buildings within the District boundary fall within this type. The Patient Wards found throughout the District can be divided into three main groups.

The first group consists of four Renaissance Revival and Brick Vernacular U-shaped psychiatric wards at the northeast corner of the District. LACO No. 1205 (Men's Psychiatric Ward), built in 1909 and given a U-shape in 1916, is the oldest. The U-shape of LACO No. 1205 is replicated in the design of three additional adjacent wards: LACO No. 1203 (Women's Psychiatric Ward) built in 1919, LACO No. 1202 (Women's Psychiatric Ward) built in 1924, and LACO No. 1204 (Men's Psychiatric Ward) also built in 1924 (**Figure 17**). LACO No. 1204 was partially damaged by arson-related fire in February 2017 that affected the southern half of the building and a portion of the roof.

Rancho Los Amigos South Campus

SOURCE: ESA, June 2017

Figure 17
East Elevation of the Men's Ward (LACO No. 1204), Fire Damage Visible on Roof, View Southwest

The second group consists of a row of five identical two-story general wards located on the west side of Erickson Avenue, just north of its southern terminus, without a distinct style. LACO Nos. 1184 and 1185, built in 1913, are the oldest and sit at the north end of the row (**Figure 18**).

LACO No. 1186 (built in 1916), LACO No. 1187 (built in 1926), and LACO No. 1188 (built in 1928) were added later, completing the row of wards.

Figure 18
East and North Elevations of a Patient Ward (LACO No. 1184), View Southwest

Just south of the first group of wards described above stands LACO No. 1238 (Casa Consuelo), designed in the Spanish Colonial Revival style and constructed in 1930 (**Figure 19**).

Rancho Los Amigos South Campus

SOURCE: ESA, June 2017

Figure 19
East Elevation of the women's patient ward, Casa Consuelo (LACO No. 1238), View West

The third group consists of eleven cottage-style patient wards constructed during the Development of Rancho Los Amigos Era (1907-1932). Located in the northwest portion of the District, these buildings demonstrate Craftsman style influences. With similar designs, these buildings include nine cottages on the east side of Laurel Street, connected by a long verandah along their primary (south) elevations, and two cottages on the west side of Laurel Street, also unified by a verandah fronting their primary (south) elevations. The cottage-style patient wards on the subject property were constructed in three phases. The first phase included the construction of LACO Nos. 1189, 1190, 1191, and 1192 in 1923 (**Figures 20 and 21**). During the second phase in 1926, LACO Nos. 1193, 1194, and 1195 were built. Finally, in 1928, as part of the third phase, LACO Nos. 1196, 1197, 1198, and 1199 were added.

Dining/Social Facilities

These buildings represent the subject property's social activities, including dining and entertainment, and generally date from the Development of Rancho Los Amigos Era (1907-1932). Primarily located in the central portion of the District, these buildings feature architectural styles including the Renaissance Revival and Brick Vernacular and Spanish Colonial Revival styles. A total of 12 buildings within the District boundary fall within this type. Examples include LACO No. 1263 (Commissary and Receiving Room) designed in the Renaissance Revival and Brick Vernacular style and built between 1913 and 1924, LACO No. 1262 (Dining Room, Kitchen, Staff Room) designed in the Renaissance Revival and Brick Vernacular style and built between 1913 and 1926 (**Figure 22**), LACO No. 1261 (Auditorium) built in 1928 (**Figure 23**), LACO No. 1264 (Bonita Hall) designed in the Spanish Colonial Revival style and built in 1932 (**Figure 24**). LACO Nos. 1263 and 1262 have experienced recent incidents of arson, resulting in damage to some of their interior and exterior features.

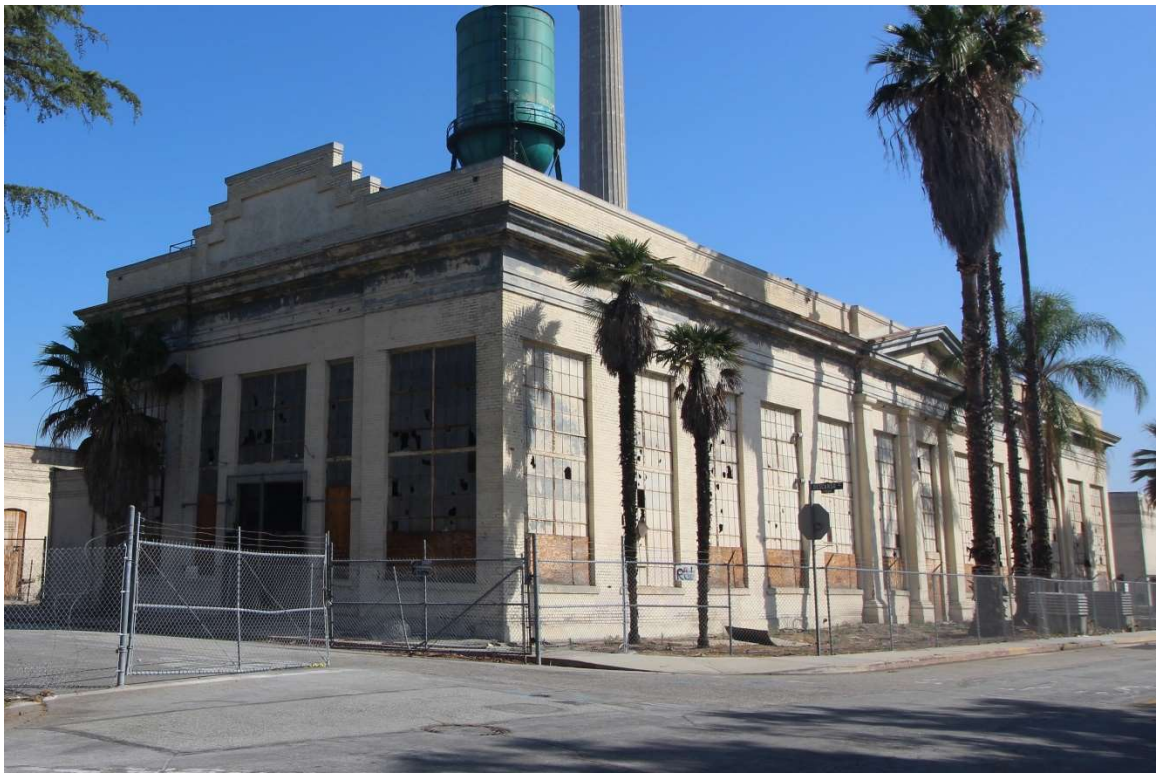
Utilities



These buildings and structures represent the subject property's utility infrastructure, including power and water, and generally date from the Development of Rancho Los Amigos Era (1907-1932). Located throughout the District but concentrated on the west side of Erickson Avenue, associated buildings feature architectural styles including the Neoclassical Revival style. A total of 15 buildings within the District boundary fall within this type. Examples include LACO No. 1302 (Shop, Laundry, Ice Plant) built in two stages in 1909 and 1911 (**Figure 25**), LACO No. 1301 (Water Tower built in 1913, and LACO No. 1300 (Power Plant) designed in the Neoclassical Revival style and built in 1925 (**Figure 26**).

Agricultural/Occupational Therapy Facilities

These buildings and structures represent the subject property's agricultural uses and occupational therapy programs and generally date from the Development of Rancho Los Amigos Era (1907-1932). This building type consists mostly of utilitarian buildings and structures concentrated in the southwest portion of the District. A total of six buildings and structures within the District boundary fall within this type. Examples include LACO No. 1207 (Work Preparation Center) built in the 1920s (**Figure 27**), LACO No. 1283 (Trunk Storage) originally built in 1915 as a stable (**Figure 28**), and LACO No. 1335 (Brooder House/Vivarium Annex) built in 1929. The basic designs of these structures is directly related to their functions, featuring simple (usually rectangular) floorplans constructed of inexpensive and readily available materials with no applied ornamentation.

Maintenance/Support

These buildings represent the subject property's support functions, and generally date from the Development of Rancho Los Amigos Era (1907-1932). Concentrated in the southeast and western portions of the District, these buildings feature architectural styles including Brick Vernacular and Utilitarian. A total of 27 buildings and structures within the District boundary fall within this type. Examples include LACO No. 1276 (Lock Shop) designed in the Brick Vernacular style and built in 1913, LACO No. 1275 (Workshop) designed in the Brick Vernacular style and built in 1917 (**Figure 29**), LACO No. 1357 (Landscape Office) designed in the utilitarian style and built in 1938 (**Figure 30**), LACO No. 954 (Lumber Shed) designed in the utilitarian style and built in 1942.

Landscape Features

These features represent the subject property's overall landscape and circulation paths and generally date from the Los Angeles County Poor Farm Era (1887-1906) when the facility was first established. While there is only one building from the original period remaining, the site plan and circulation network laid out by Kysor, Morgan, and Walls remains extant today. A total of eleven features within the District boundary fall within this type. Examples include the overall Site Plan of the subject property, the Moreton Bay Fig Tree (**Figure 31**), shelters, canopies (**Figure 32**), and bus stops. The Site Plan consists of significant circulation patterns such as Consuelo Street, which was the original primary approach to the Poor Farm, and Erickson Avenue, which eventually became a primary approach after the construction of Imperial Highway to the north. The Site Plan also includes open landscaped spaces between the Harriman Residence (LACO No. 1101) and the Administration Building (LACO No. 1100), as well as the traffic circle at the intersection of Erickson Avenue and Consuelo Street, and the landscaped areas in front of the Auditorium (LACO No. 1262). It is recommended that the District's boundary be expanded at the southeast corner to encompass important aspects of the landscape and circulation paths that retain integrity (**Figure 33**). The new boundary follows the natural contours of the landscape and preserves important spatial relationships between the landscape, circulation paths, and nearby Administration Building (LACO No. 1100).

ESA

Eligibility Assessment of the District

In order to qualify for eligibility, the District must possess significance under one or more of the applicable National Register, California Register, and Los Angeles County criteria and retain sufficient integrity to convey its historical significance. The District and its contributing buildings, structures, and features identified during the survey have been re-evaluated against the applicable criteria as historic resources within the themes of the historic context statement.

Significance Evaluation

The District is associated with the following historical and architectural themes: Advancements in Public Health and Medical Care (1870-1920); Housing the Poor in the California (1850-1930); Los Angeles County Poor Farm and Rancho Los Amigos (1887-1952); Early Hospital Architecture (1880-1930); Craftsman Architecture (1905-1930); Neoclassical Revival Architecture (1885-1930); Renaissance Revival and Brick Vernacular (1895-1935); and Spanish Colonial Revival (1915-1940). The subject property contains multiple buildings, structures, and features, many of which lack individual architectural distinction but still express their historic function and share a common association with the history of Rancho Los Amigos and was previously determined eligible for the National Register and is listed on the California Register as a historic district.

Criterion A/1/1: Events

With regard to significant events in history, the following are the relevant criteria:

> **National Register Criterion A:** It is associated with events that have made a significant contribution to the broad patterns of our history.
>
> **California Register Criterion 1:** It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
>
> **Los Angeles County Landmark Criterion 1:** It is associated with events that have made a significant contribution to the broad patterns of the history of the nation, State, County, or community in which it is located.

The District was first developed by the County of Los Angeles in 1888. Nearly 30 years earlier, the State of California's legislature enacted requirements that county governments should perform all acts necessary to the county welfare. This decision eventually led to the California "Poor Law of 1855," which made the care of the aged and needy the responsibility of local governments. Los Angeles County's obligation to provide for the poor and its growing indigent population resulted in significant overcrowding of the County Hospital. In 1888, the County opened a poor farm on the subject property, near the outskirts of the newly established town of Downey. Initially, the Poor Farm housed the elderly or those suffering minor illnesses and physical disabilities, relieving the overcrowded County Hospital. By the late nineteenth century, it had become common place for county governments throughout the country to operate almshouses, poorhouses, or poor farms. The concept of the almshouse, dating back to the early

history of the British Colonies, had changed very little up until the late nineteenth century. When the Los Angeles County Poor Farm opened, advancements in medicine and new laws governing the treatment of the sick and old aged were beginning to result in significant changes to almshouses throughout the country.

The District's period of significance is 1888-1952, beginning with the Los Angeles County Poor Farm's opening and incorporating the full conversion and build-out of the health-care facilities, ending with the final sale and subdivision of the adjacent agricultural lands originally associated with the Poor Farm, marking the completion of the subject property's transformation into a long-term healthcare facility. Development of the subject property from the Poor Farm's inception in 1888 to the subdivision of its former agricultural fields in the 1950s reflects the changing attitude toward healthcare in Los Angeles County as well as the evolving medical trends in the United States and California. Initially, labor on the Poor Farm was intended to expose inmates (patients) to the medicinal qualities of California's mild climate. Produce from the agricultural programs was used to feed the inmate population, giving the Poor Farm the added benefit of self-sustainability. Over time, the Poor Farm's agricultural fields were replaced with new patient wards, administration buildings, utilities, and maintenance buildings, while healing work in the fields was replaced by occupational therapy programs in workshops. These changes were largely motivated by the overcrowding of the county and state hospitals at the time and reflect the broader changes to almshouses, poorhouses, and poor farms throughout the country during the early twentieth century.

The history of the Los Angeles County Poor Farm and its evolution into a long-term healthcare facility (Rancho Los Amigos) during the late nineteenth and early twentieth century reflects the broader trends in medical history across the United States. Furthermore, the property's development over time illustrates the changing approaches healthcare and treatment of the indigent population in Los Angeles County. Consistent with Sapphos' previous recommendation, this study recommends the period of significance associated with the District should be extended to 1952, when the adjacent agricultural lands were no longer needed and subdivided for residential development, marking the Poor Farm's completed transformation into a long-term healthcare facility. **The District appears to meet National Register Criterion A, California Register Criterion 1, and Los Angeles County Criterion 1 with a period of significance of 1888-1952.**

Criterion B/2/2: Significant Persons

With regard to associations with important persons, the following are the relevant criteria:

> **National Register Criterion B:** It is associated with the lives of persons significant in our past.
>
> **California Register Criterion 2:** It is associated with the lives of persons important in our past.

> **Los Angeles County Landmark Criterion 2:** It is associated with the lives of persons who are significant in the history of the nation, State, County, or community in which it is located.

The District does not appear to be significantly associated with personages important to national, state, or local history. The property originally served as a poor farm, experiencing a high rate of turnover among the inmates. Overtime, the patients began to stay on the property for longer periods of time as medical professionals started to favor more long-term treatment approaches. However, research of the property did not reveal any significant achievements by personages administered as patients. Furthermore, there is no indication in primary or secondary source material that any staff member of the Los Angeles County Poor Farm/Rancho Los Amigos made a significant contribution to our history that is not tied to the broad history of the institution.

While the institution thrived under the lengthy tenure of William R. Harriman, who served as the superintendent of Los Angeles County Poor Farm/Rancho Los Amigos between 1915 and 1952, he does not appear to reach the level of significance to warrant consideration as a historic personage at the national or state level. Under the leadership of Superintendent Harriman, the Poor Farm added multiple patient wards, service buildings, and other structures, evolving into a long term-care facility. However, the Poor Farm had already started developing into a healthcare facility prior to Harriman's arrival. The first purpose-built patient ward for the "harmless insane" was constructed in 1907, followed by multiple patient wards added to the property between 1907 and 1915, when Harriman assumed the office of Superintendent. Furthermore, Harriman's leadership did not influence the development of other similar institutions in California or the United States. **Therefore, the District does not appear to meet National Register Criterion B, California Register Criterion 2, or Los Angeles County Criterion 2.**

Criterion C/3/3: Design/Construction

With regard to architecture, design or construction, the following are the relevant criteria:

> **National Register Criterion C:** Embodies the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.
>
> **California Register Criterion 3:** Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
>
> **Los Angeles County Landmark Criterion 3:** It embodies the distinctive characteristics of a type, architectural style, period, or method of construction, or represents the work of an architect, designer, engineer, or builder whose work is of significance to the nation, State, County, or community in which it is located; or possesses artistic values of significance to the nation, State, County, or community in which it is located.

The District was originally planned by Los Angeles based architects, Ezra Kysor, Octavius Morgan, and John Walls. When it initially opened 1888, the property served the community of Los Angeles County as a poor farm to house the local indigent population. The residents, collectively known as inmates, were made up of mostly elderly men and women, many of whom were suffering minor illnesses. The purpose of the Poor Farm was to provide food, clothes, and shelter to those who could no longer support themselves. The property's initial design was based on agriculture, consisting of two dormitories and an administration building surrounded by agricultural fields where the inmates could work while experiencing the medicinal qualities of the California climate. However, significant alterations to the property occurred over time, converting the former farm into a long-term healthcare facility. The four original buildings designed by Kysor, Morgan, and Walls, and another locally based architect named Jacob Friedlander are no longer extant on the property and the surrounding agricultural fields have been subdivided with residential development. While there is only one building from the original period remaining, the site plan laid out by Kysor, Morgan, and Walls, and in particular the landscape elements and roadway features they first established gave the property the park-like campus setting that continued to form the basis for its development in the following years. However, except for surviving remnants of the site plan and campus landscape, the District's built environment no longer reflects the original design of a poor farm implemented by Kysor, Morgan, and Walls, nor does it embody its original use as a poor farm.

Over time, the District evolved into an example of an early twentieth century healthcare campus, consisting of a combination of building types working together to provide adequate patient care (see Figure 14). However, the District does not embody the distinctive characteristics of the healthcare campus property type because it was not originally designed at one time for this purpose. The property evolved through multiple additions of new patient wards, administration facilities, and support buildings intended to relieve the burden on the surrounding county and state hospitals by taking in patients with non-life-threatening illnesses. These new facilities were added to the property over a 40-year period. Their locations and designs were not directed by a master plan designed to provide long-term healthcare, but rather the specific need at the time and the space available. Furthermore, as the use of the property changed, the institution continued to adhere to its agricultural beginnings until the early 1950s when the last remaining fields were subdivided for residential development. As such, the District no longer reflects its agricultural functions. Nonetheless, the District still reflects its origins in its site plan, and the cumulative fashion in which the various building types and functions were added to the property over a 40-year period and its slow transition into a long-term healthcare facility.

The District does not appear to embody the distinctive characteristics of a type, period, or method of construction, represent the work of a master, or possess high artistic values. It does not embody the distinctive architecture of a Poor Farm, hospital or long-term healthcare facility. Therefore, it does not appear significant under National Register Criterion C, California Register Criterion 3, or Los Angeles County Criterion 3 due to a lack of architectural merit.

While California Register Criterion 3 and Los Angeles County Landmark Criterion 3 focus on architectural significance, National Register Criterion C has an additional provision related to historic districts. National Register Bulletin 15, *How to Apply the National Register Criteria for*

Evaluation, identifies historic districts under Criterion C as "a significant and distinguishable entity whose components may lack individual distinction."[219] To be eligible for the National Register, districts much possess significance as well as be a distinguishable entity. "Therefore, districts that are significant will usually meet the last portion of Criterion C plus Criterion A, Criterion B, other portions of Criterion C, or Criterion D."[220] In this case, the District appears to be historically significant as previously discussed under Criteria A, and also appears eligible under Criterion C as a distinguishable entity with multiple components, many of which lack individual distinction, but which together physically express the historic function and significance of the facility. As stated previously, Criterion 3 of the California Register and the County's preservation ordinance do not include this provision regarding historic districts. **Therefore, while not eligible under Criterion 3 of the California Register or the Los Angeles County Landmark Criterion 3, the District appears to meet National Register Criterion C, as a distinguishable entity whose components may lack individual distinction (i.e. district).**

Criterion D/4/4: Data Potential

> **National Register Criterion D:** It yields, or may be likely to yield, information important in prehistory or history.
>
> **California Register Criterion 4:** It has yielded, or may be likely to yield, information important in prehistory or history.
>
> **Los Angeles County Landmark Criterion 4:** It has yielded, or may be likely to yield, significant and important information regarding the prehistory or history of the nation, State, County, or community in which it is located.

While most often applied to archaeological districts and sites, Criterion D/4 can also apply to buildings, structures, and objects that contain important information related to history or pre-history. In order for a property to be eligible under Criterion D/4, it must be, or must have been, the principal source of the important information. The District does not appear to yield significant information that would expand our current knowledge or theories of design, methods of construction, operation, or other information that is not already documented in other primary or secondary source material. **Therefore, the District has not yielded and is not likely to yield information important to prehistory or history and does not satisfy National Register Criterion D, California Register Criterion 4, or Los Angeles Criterion 4.**

Los Angeles County Criterion 5: National and State Listed Resources

> **Los Angeles County Landmark Criterion 5:** It is listed, or has been formally determined eligible by the United States National Park Service for listing, in the National Register of Historic Places, or is listed, or has been formally determined eligible by the

[219] National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation, 17, http://www.nps.gov/nr/publications/bulletins/pdfs/nrb15.pdf, accessed October 3, 2017.

[220] National Register Bulletin 15, 5.

State Historical Resources Commission for listing, on the California Register of Historical Resources

Los Angeles County Criterion 5 recognizes historic resources that have been formally listed or found eligible for listing on the National Register and/or California Register. The District was determined eligible for the National Register and subsequently listed on the California Register, following the first survey completed in 1995 by Historic Resources Group (HRG). **Therefore, the District appears to meet Los Angeles County Criterion 5 because it has been determined eligible for the National Register and is listed in the California Register.**

Integrity Analysis

The National Register and California Register recognizes a property's integrity through seven aspects or qualities: location, design, setting, materials, workmanship, feeling, and association. Eligible properties should retain several, if not most, of these aspects. Both registers require that a resource retain sufficient integrity to convey its significance, and the property must retain the essential physical features that enable it to convey its historical identity. Integrity is based on significance and understanding why a property is important. National Register Bulletin 15 states that "only after significance is fully established can you proceed to the issue of integrity" (U.S. Department of the Interior 2002).

With regard to integrity under Criteria A and B, National Register Bulletin 15 further states, "a property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s)" (VIII. How to Evaluate the Integrity of a Property, Defining the Essential Physical Features, Criteria A and B, U.S. Department of the Interior, 2002).

National Register Bulletin 15 also states that "for a district to retain integrity as a whole, the majority of the components that make up the district's historic character must possess integrity even if they are individually undistinguished. In addition, the relationships among the district's components must be substantially unchanged since the period of significance. When evaluating the impact of intrusions upon the district's integrity, take into consideration the relative number, size, scale, design, and location of the components that do not contribute to the significance. A district is not eligible if it contains so many alterations or new intrusions that it no longer conveys the sense of a historic environment. A component of a district cannot contribute to the significance if it has been substantially altered since the period of the district's significance, or it does not share the historic associations of the district" (VIII. How to Evaluate the Integrity of a Property, Defining the Essential Physical Features, Historic Districts, U.S. Department of the Interior, 2002).

The District was identified as significant under National Register Criterion A, California Register Criterion 1, and Los Angeles County Criterion 1 for its association with evolving medical care in Los Angeles County during the late nineteenth and early twentieth centuries. Based upon this significance finding, a period of significance has been identified as 1888, when the property began operation as the Los Angeles County Poor Farm, and 1952 when the former Poor Farm had

fully converted into a long-term healthcare facility and most of the agricultural fields had been subdivided for residential development.

Additionally, the property was determined significant under Criteria C as a significant and distinguishable entity whose components lack individual distinction (historic district) and under Los Angeles County Criterion 5 as a resource that was determined eligible for the National Register and is listed in the California Register. The District consists of seven different building types that played a role in the District's history as an agricultural property and medical institution. To convey its significance under National Register Criteria A and C, California Register Criteria 1, and Los Angele County Criteria 1 and 5, the District would need to retain its circulation paths, open landscape, and contributors that embody each building type. Furthermore, it would need to retain the majority of the components and essential physical features that made up its character or appearance during the period of significance, and the relationships among the district components must be substantially unchanged since the period of significance, without many new alterations or new intrusions that would detract from the sense of a historic environment.

Location

The National Register defines integrity of location as "the place where the historic property was constructed or the place where the historic event occurred."[221] The District has remained in its original location since it opened as the Los Angeles County Poor Farm in 1888. Therefore, the District retains its integrity of location for the period of significance (1888-1952). Furthermore, the various components that make up the District retain their original locations, and the relationships among district components are unchanged since the period of significance with little alterations or new intrusions.

Design

Integrity of design is defined by the National Register as "the combination of elements that create the form, plan, space, structure, and style of a property."[222] When the District was originally planned by the Los Angeles based architectural firm of Kysor, Morgan, and Walls in 1887, the intent was to build a poor farm. Initially conceived as the Los Angeles County Poor Farm, the District was intended to provide food, shelter, and clothing to the County's indigent population. The four original buildings were centrally located among agricultural fields. Overtime, the District expanded as the needs of the institution evolved. The agricultural fields receded as new patient wards were constructed alongside support and administration facilities. While the current architecture of the District does not reflect the original design intent of Kysor, Morgan, and Walls, the original site plan and circulation patterns laid out by the architects in the late nineteenth century remain. The changes to the District reflected changing approaches to healthcare that were occurring locally as well as nationwide. Although the long-term health facilities were not constructed at one time based on a master plan developed by the sites original designers, their addition over a 40-year period reflects the changing needs of the institution. The District retains intact examples of each of the building types that were present throughout the period of significance (1888-1952). Furthermore, the District retains the majority of its

[221] National Register Bulletin 15, 44.
[222] National Register Bulletin 15, 44.

components, and these components (i.e. contributors) retain integrity of Design in terms of structural system (i.e. wood-frame or masonry), massing, fenestration pattern, textures and colors of materials, type, amount and style of ornamental detailing. With its historic layout of roads and circulation paths, spatial relationships between major features and among components with little alterations or intrusions, original topography and open landscape areas, and mature landscape features, the District retains its integrity of design reflecting the evolution of the property throughout its transition from a poor farm to a long-term healthcare facility.

Workmanship

The National Register defines integrity of workmanship as "the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory."[223] Workmanship can apply to the property as a whole or to its individual components, and can be expressed in vernacular methods of construction and plain finishes or in highly sophisticated configurations and ornamental detailing. As stated previously, the District developed over a period of time, transitioning from a poor farm into a long-term healthcare facility. Throughout the period of significance (1888-1952), new buildings were constructed to meet the evolving needs of the institution. These buildings reflect a variety of architectural styles and construction techniques based upon their purpose and date of construction. Currently the District retains examples of a variety of architectural styles, including Craftsman, Neoclassical Revival, Spanish Colonial Revival, Renaissance Revival and brick vernacular, as well as utilitarian structures. Additionally, the District retains 61 contributing buildings and features, constructed over a 60-year period. Although these buildings are vacant and in varying states of decay due to a lack of use or maintenance, their features remain largely intact and retain enough evidence of the workmanship employed at the time of their construction with limited alterations or loss. The District's contributing buildings reflect a wide variety of uses, construction techniques, and workmanship including period examples of masonry, carpentry, and the use of plaster and concrete. Therefore, the District retains integrity of workmanship.

Materials

Integrity of Materials is defined by the National Register as a resource's "physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property."[224] According to National Register Bulletin 15, "a property must retain the key exterior materials dating from the period of its historic significance." The District has suffered from deterioration of its original materials overtime due to the elements, arson, and vandalism. Despite the deterioration that has occurred, the contributing buildings found throughout the District retain enough of their original exterior materials including, wood, masonry, cast iron, concrete, and plaster to convey their historic configurations. The contributing buildings represent each of the building types that were located on the property during the period of significance (1888-1952), reflecting the changes that occurred to the institution as it adapted to the healthcare needs of the County. In its current condition, the District possesses the necessary materials to reflect its significance. Therefore, the District retains its integrity of materials.

[223] National Register Bulletin 15, 45.
[224] National Register Bulletin 15, 45.

Setting

Integrity of Setting is defined by the National Register as the physical environment of a historic resource.[225] Whereas location refers to a specific place where a property was built or an event occurred, setting refers to the character of the place in which the property played its historic role. The historic setting surrounding the District has been altered significantly over time due to the subdivision of the former agricultural fields. Properties north of the District have been redeveloped with warehouses and office buildings, while properties to the east were subdivided for residential development in the 1950s. Although these changes to the setting have removed the former Poor Farm from its agricultural setting, the changes reflect the property's transformation from a poor farm into a long-term healthcare facility and the corresponding development patterns of the surrounding County. While the fields surrounding the former Poor Farm have been lost due to infill development, the immediate setting of the District and its contributors remains intact with little alterations or intrusions. The original circulation paths remain, reflecting the property's original layout during its inception in 1888. The District retains 61 contributing buildings and features, constituting a majority of the buildings present during the District's period of significance (1888-1952). Although the landscaping has evolved over time, the open areas throughout the District's interior remain without infill development, reflecting the conditions of the property during the period of significance. While the broader setting outside of the District has been altered by infill development, the immediate setting within the District that contributes to the District's significance remains intact. Therefore, the District retains its integrity of setting.

Feeling

According to the National Register guidelines, integrity of feeling is a historic resource's "expression of the aesthetic or historic sense of a particular period of time."[226] The District retains examples of the seven different building types that were present during the period of significance (1888-1952). Each of the building types contributed to the overall function of the institution. In addition to the contributing buildings, the District retains its original circulation paths and open landscape with very little infill development. With 61 contributing buildings and features reflecting a variety of architectural styles and uses, the District retains the relationships between the majority of its components with little alterations or intrusions and continues to convey the feeling of an early twentieth century healthcare facility and retains its integrity of feeling.

Association

Integrity of association is "the direct link between an important historic event or person and a historic property."[227] The District continued to operate as a healthcare facility until the 1980s, when the County began to abandon the buildings. Currently, only the former Administration Building (LACO No. 1100) is in regular use. However, none of the contributing buildings, including the Administration Building, have been significantly altered for new uses. Therefore,

[225] National Register Bulletin 15, 45.
[226] National Register Bulletin 15, 45.
[227] National Register Bulletin 15, 45.

because the contributing buildings continue to reflect their original healthcare related uses, the District retains its integrity of association.

Summary

The District meets the National Register and California Register integrity requirements, retaining its integrity of location, design, workmanship, materials, setting, feeling, and association. The District remains in its original location since it opened as a poor farm in 1888. It has been identified as significant for its association with the evolving healthcare needs of Los Angeles County during the late nineteenth and early twentieth centuries. Although the District no longer reflects the original design intent of the architects as constructed in 1888, the changes that occurred to the property overtime have contributed to its significance. New buildings were added to the site overtime based on need and space available. Many of the buildings constructed during the period of significance (1888-1952) remain intact with little modification. The 61 contributing buildings, structures, and features represent seven different building types, reflecting their different uses and the overall function of the institution as it evolved into a long-term healthcare facility. Therefore, the District retains its integrity of design as it evolved over time. While some of the materials have deteriorated due to the abandonment of the site, the materials are largely intact and continue reflect the workmanship of the builders and designers at the time of their construction. The surrounding setting has changed significantly since the District was first developed as a poor farm. The former agricultural fields that once surrounded the property have been subdivided for residential and commercial development. However, these changes reflect the property's significance as it evolved from a poor farm into a healthcare facility. The immediate setting within the district boundaries remains intact and continues to reflect the District's historic appearance. Consequently, the District retains its integrity of feeling as an early twentieth century healthcare facility, retaining key building types like the several patient wards and the administration building. The District retains integrity of association because the majority of the contributing buildings remain in the original condition. None of the buildings have been repurposed in a manner that resulted in substantial change. The property has been mostly abandoned for the last thirty years, with the exception of the Administration Building (LACO No. 1100), which has continued to operate as an office building. Therefore, the District retains integrity of location, design, workmanship, materials, setting, feeling, and association (**Table 5**) and continues to convey its significance under National Register Criteria A and C, California Register Criteria 1, and Los Angeles County Criteria 1 and 5.

District Contributors

The contributing buildings, structures, and features were organized into seven different building types associated with the historical development of the District. Each of the building types played a role in the District's history as a poor farm and long-term healthcare facility. The District conveys its significance under National Register Criteria A and C and California Register Criterion 1, by retaining contributors that embody each building type, including the three subtypes of patient wards. The combination of the various building types allow the District to demonstrate the various functions and services historically associated with the Los Angeles County Poor Farm and later Rancho Los Amigos.

Each potential contributor was categorized based on its historic use associated with the building types found in the District. Buildings dating from the period of significance were evaluated for integrity and identified as contributors or non-contributors. *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation* states "For a district to retain integrity as a whole, the majority of the components that make up the district's historic character must possess integrity even if they are individually undistinguished."[228] In accordance with the guidelines of the National Register, integrity is evaluated in regard to the retention of location, design, setting, materials, workmanship, feeling, and association. The property must retain, however, the essential physical features that enable it to convey its historic identity. According to *National Register Bulletin 15*, "A property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s)."[229] In accordance with these guidelines, out of the seven aspects of integrity, District contributors would need to retain integrity of location, setting, feeling, and association in order to convey the District's significance under National Register Criterion A and California Register Criterion 1 and as a historic district defined under National Register Criterion C. The California Register requires that a resource retain enough of its historical character or appearance to be recognizable as a historical resource and to convey the reasons for its significance. The results of the survey are indicated in **Table 6.** A more extensive table with photographs of the contributing and non-contributing buildings is included in **Appendix H**. The map presented in **Figure 34** illustrates the important contributing elements of the site plan and landscape, while The map presented in **Figure 35** shows the locations of District contributors, non-contributors, and individually eligible buildings.

Eligibility Assessment of Individual Buildings and Features

Post/Hazeltine Associates and Sapphos previously identified eleven individually eligible buildings in the District (**Table 7**). The results of this study indicate that five of these buildings are individually eligible under National Register Criteria C, California Register Criteria 3 and Los Angeles County Criteria 3 due to their architectural merit:

- Administration/Safety Police Building (LACO No. 1100)
- Casa Consuelo (LACO No. 1238)
- Power Plant (LACO No. 1300),
- Water Tower (LACO No. 1301)
- Shop, Laundry and Ice Plant (LACO No. 1302)

These five buildings and structures appear to be distinctive examples of architecture and retain a high level of integrity of design, materials, workmanship, feeling, and association. Further, the Moreton Bay Fig Tree appears to meet the significance requirements of Los Angeles County Criteria 6 and 7 as an individual feature. Los Angeles County Criterion 6 recognizes trees that are the largest or oldest of their species in the County, while Criterion 7 recognizes trees, landscapes, or other natural features that are a defining or significant feature of a neighborhood. The Moreton Bay Fig Tree appears to meet these criteria and retains integrity of location, setting, feeling, and association. The tree was not previously identified as an individual resource because the Los Angeles County ordinance pertaining to historic resources did not exist at the time of the prior evaluations.

The other six previously identified individually eligible buildings either lack significance and/or integrity and are recommended ineligible as individual historical resources:

- Harriman/Superintendent's House (LACO No. 1101)
- Superintendent's Garage (LACO No. 1177)
- Superintendent's Shed (LACO No. 1178)
- Auditorium (LACO No. 1261)
- Dining Room, Kitchen, and Staff Room (LACO No. 1262)
- Commissary and Receiving Room (LACO No. 1263)

The evaluation of their significance and integrity, as well as an updated architectural description, for these six buildings are included in the analysis below.

Lastly, this study considered all buildings and structures on the subject property for potential individual eligibility under National Register Criterion C, California Register Criterion 3, and Los Angeles County Criterion 3. As a result of archival research and site investigations, beyond the eleven previously identified buildings, none of the other buildings individually were found to meet the national and state thresholds for architectural significance.

Superintendent's Residence (Harriman House) (LACO No. 1101)

Architectural Description

An arson fire destroyed much of the Superintendent's Residence (Harriman House) (LACO No. 1101) on June 26, 2017. The current appearance of the primary (north) elevation is shown in the photograph presented in **Figure 36**. What remains is mostly limited to the first floor: the brick porch columns and low walls comprising the wrap-around porch; the red concrete comprising the porch floor and stairs; the porte-cochere; the two doors and three of the four windows on the north façade, the pair of windows on the west façade, the window on the west façade, and the southernmost window on the east façade; most of the wood clapboard siding on the north, west, and south façades, and some of the clapboard siding on the east façade; most of the "pop-out" attached to the south façade; the chimney; and the red concrete comprising the porch pathways and stairs. Portions of the interior survived the fire including the entrance foyer and living room with fireplace and mantel, dining room, parlor and kitchen, including the interior woodwork, built-ins and wood trim (door and window surrounds, and ceiling beams).

To the rear of the Superintendent's Resident (Harriman House) (LACO No. 1101) are two associated ancillary buildings (LACO Nos. 1177 & 1178), which both did not suffer fire damage. The Superintendent's Garage (LACO No. 1177), shown in **Figure 37**, is a Craftsman style garage

built in 1917 to support the operations of the Superintendent's Residence (LACO No. 1101). There are no physical changes to the Superintendent's Garage (LACO No. 1177) from the 2007-2011 Sapphos survey. Located in the southeast corner of the Superintendent's Residence's domestic backyard, is the Superintendent's Shed (LACO No. 1178), shown in **Figure 38**, a utilitarian Wood Vernacular shed built c. 1917 to support the operations of the Superintendent's Residence (LACO No. 1101). There are no physical changes Superintendent's Shed (LACO No. 1178) from the 2007-2011 Sapphos survey. The lawn is retained, as is the setback, paving around the residence, the side driveway, and pathway to the residence. The trees and smaller vegetation surrounding LACO No. 1101 have largely been destroyed except for those adjacent to the residence's west and south elevations.

Significance Evaluation

The Superintendent's Residence (LACO No. 1101), along with the Superintendent's Garage (LACO No. 1177) and Superintendent's Shed (LACO No. 1178), have been previously evaluated three times: in 1995 by HRG, in 2004 by Post/Hazeltine Associates, and between 2007-2011 by Sapphos. In 1995, HRG identified the Superintendent's Residence (LACO No. 1101) and Superintendent's Garage (LACO No. 1177) as contributors to the District and did not evaluate them for individual significance. HRG did not address the Superintendent's Shed (LACO No. 1178) in its 1995 evaluation. Next, in 2004 Post/Hazeltine Associates resurveyed the District and recommended the District ineligible for listing in the National Register and California Register. However, Post/Hazeltine Associates recommended LACO No. 1101 as individually eligible for the National Register under Criterion C and California Register Criterion 3 (NRHP status code of 3S) as "an excellent example of the Craftsman style." At this time, Post/Hazeltine Associates recommended both the Superintendent's Garage (LACO No. 1177) and Superintendent's Shed (LACO No. 1178) as contributing to the individual eligibility of the Superintendent's Residence (LACO No. 1101) as associated buildings. Lastly, between 2007-2011, Sapphos recommended LACO No. 1101 as individually eligible under National Register Criterion C and California Register Criterion 3 (assigned NRHP status coded of 2D2 and 3S). Also, Sapphos recommended the Superintendent's Garage (LACO No. 1177) as an associated building contributing to the significance of the Superintendent's Residence (LACO No. 1101) individual eligibility, but on its own architectural merits it was recommended individually ineligible. Sapphos recommended the Superintendent's Shed (LACO No. 1178) as individually ineligible and not contributing to the significance of the Superintendent's Residence's (LACO No. 1101) individual eligibility.

Because the Superintendent's Residence (LACO No. 1101) was previously recommended individually eligible under National Register Criterion C and California Register Criterion 3 in two previous evaluations completed by Post/Hazeltine Associates and Sapphos evaluations, LACO No. 1101 was revaluated along with its two associated buildings LACO Nos. 1177 and 1178. LACO No. 1101 was evaluated in its present fire damaged condition under the following historical and architectural themes: Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1988-1952); and Craftsman Residential Architecture (1905-1930). Prior to the June 2017 fire, LACO No. 1101 was an excellent and intact example of Craftsman architecture constructed in 1914 to house the Superintendent of the Poor Farm and his family and is presently the only extant building of its style and property type (single-family residence intended for use by staff) on both campuses of the Rancho Los Amigos property. However, the fire damage substantially damaged and destroyed character-defining features embodying the Craftsman style and as result the Superintendent's Residence (LACO No. 1101) is no longer a distinctive or recognizable example of a Craftsman style residence. **Therefore, the Superintendent's Residence (LACO No. 1101) is not individually significant under National Register Criterion C, California Register Criteria 3 or Los Angeles County Criteria 3 for architecture.**

In regards to Superintendent's Garage (LACO No. 1177) and Superintendent's Shed (LACO No. 1178), due to the Superintendent's Residence's (LACO No. 1101) aforementioned destruction and loss of architectural significance, both buildings have also lost their significant architectural

associations as associated buildings supporting the significance of the Superintendent's Residence. Without the Superintendent's Residence, the function of the Superintendent's Garage (LACO No. 1177) as a place to store the Superintendent's cars is no longer discernable and on its own merits it is not architecturally distinctive. **Therefore, the both LACO Nos. 1177 and 1178 are not individually significant under National Register Criterion C, California Register Criterion 3, or Los Angeles County Criteria 3 for architecture.**

Integrity Analysis

In its pre-fire condition, the Superintendent's Residence (LACO No. 1101) was substantially intact (i.e. it retained integrity of location, design, setting, workmanship, materials, feeling, and association); as such, it conveyed its original use as a residence for the Superintendent and his family. However, the June 2017 fire destroyed more than 50% of the building including the entire second-story and much of the first-story, and as a result, it presently only retains integrity of location and setting. As a result of the fire, only a portion of the first floor (entrance foyer, living room, dining room, kitchen), front porch (wrap around porch), and porte-cochere remain. The second floor was entirely consumed by fire as was approximately a third of the first floor (middle-to-rear section).

In summary, resulting from the extensive fire damage on June 26, 2017, the Superintendent's Residence (LACO No. 1101) does not retain integrity of design, workmanship, materials, feeling, and association. Due to a lack of integrity, LACO No. 1101 no longer conveys its historical associations with past Superintendents or with Craftsman style architecture. Therefore, in its present condition, it lacks architectural significance and sufficient integrity to be considered individually eligible as a Craftsman style residence, and it is recommended that Superintendent's Residence (LACO No. 1101) now be assigned a NRHP Status Code of 6Z, noting it as ineligible for listing in the National Register and California Register through survey evaluation. Furthermore, consistent with Sapphos' previous recommendations, both associated buildings, the Superintendent's Garage (LACO No. 1177) and Superintendent's Shed (LACO No. 1178), are recommended ineligible individually and should also be assigned NRHP Status Codes of 6Z.

Auditorium (LACO No. 1261)

Architectural Description

The Auditorium (LACO No. 1261) is in the central area of the District, west of the Moreton Bay Fig Tree and Shelter (LACO No. 1265), across a grassy setback from Erickson Avenue. It is a two-story, unreinforced masonry building with a rectangular plan and smooth stucco siding (**Figure 39**). It was originally designed in the Spanish Colonial Revival style, but was modified to resemble a relatively bare Art Deco building. Minor changes were observed in the 2017 survey as compared with the 2007-2011 Sapphos survey. These physical changes since the last survey include the further boarding of most windows and doors; deterioration of stucco to reveal brick underneath on all elevations; and further elaboration of the landscape description to include wrought iron railing with a drinking fountain and double sloping concrete walkways and a concrete pad in front of the east (primary) elevation). During the 2017 survey, the overall condition of the Auditorium (LACO No. 1261) as degraded.

Rancho Los Amigos South Campus

Significance Evaluation

Because the Auditorium (LACO No. 1261) was previously recommended individually eligible under National Register Criterion C and California Register Criteria 3 by Post/Hazeltine Associates in 2004, the Auditorium's (LACO No. 1261) individual eligibility was reevaluated under National Register Criterion C and California Register Criterion 3. The most recent survey conducted by Sapphos in 2007-2011 recommended the Auditorium (LACO No. 1261) individually ineligible attributable to alterations to the original Spanish Colonial Revival style design. The Auditorium (LACO No. 1261) was reevaluated under the following historical and architectural themes: Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1988-1952) and Spanish Colonial Revival Style Architecture (1915-1940). The 850-seat Auditorium (LACO No. 1261) was built in 1927, in order to provide a larger entertainment venue for the growing campus. The Auditorium (LACO No. 1261) was designed by County architect Karl Wilhelm Muck in the Spanish Colonial Revival style. Based upon intensive research and site visit observations, the Auditorium (LACO No. 1261) has been substantially altered and the once restrained Spanish Colonial Revival style is no longer discernable. The design now reflects an Art Deco inspired style. The original character-defining features on the Auditorium (LACO No. 1261) that embodied the Spanish Colonial Revival style have been removed; stucco has been applied over the exposed brick on all elevations and the cast stone lintels above the first-story fenestration, the front Spanish-tile pent roof and decorative wrought iron grilles over the second-story windows have all been removed, the three pairs of entry doors were replaced, steel windows on the side elevations were removed and openings were infilled. As such, the Auditorium (LACO

No. 1261) is not a distinctive or recognizable example of a Spanish Colonial Revival style social facility and in its current altered conditions it does not represent a notable work of County architect Karl Wilhelm Muck. **Therefore, the Auditorium (LACO No. 1261) is not individually significant under National Register Criterion C, California Register Criterion 3, or Los Angeles County Criteria 3 for architecture.**

Integrity Analysis

Due to the removal of Spanish Colonial Revival style character-defining features, the Auditorium (LACO No. 1261) does not retain integrity of design, workmanship or materials. Exterior alterations noted during the 2017 survey in comparison with historic photographs and the 1927 plans have substantially compromised its integrity of design, workmanship, and materials, and include: the application of smooth stucco over the exposed brick on all elevations and the cast stone lintels above the first-story fenestration; the removal of the front Spanish-tile pent roof and decorative wrought iron grilles over the second-story windows; the replacement of the three pairs of entry doors; removal of the cornices on all elevations; new exterior lighting; the demolition of the covered walkway between the north elevation of LACO No. 1261 and the south elevation of the adjacent LACO No. 1260 (Bathhouse and Ward); and the boarding of most windows and doors. Additionally, the associated landscape adjacent to the east elevation has been changed from its former lush state to a simple green lawn and adjacent original wrought iron railings have been replaced. Plans from January 1971 show the installation of air conditioning, new interior light fixtures, a new bathroom at the northeast corner of the first floor, and the replacement of all side elevations windows and the infill of their openings.

Despite these alterations to the original design, the Auditorium retains its integrity of association under the historical theme of Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1988-1952) and its feeling as a social hub on the subject property. The Auditorium (LACO No. 1261) retains its historical setting adjacent to LACO Nos. 1260, 1262, 1263, 1265, 1184, 1185, the Moreton Bay Fig Tree, and courtyard. Lastly, the Auditorium (LACO No. 1261) retains its original location.

As explained under the significance evaluation, the Auditorium (LACO No. 1261) is not individually significant under National Register Criterion C and California Register Criterion 3for architecture because it is not a distinctive example of Spanish Colonial Revival style architecture. Furthermore, the lack of design, materials, and workmanship further substantiates its individual ineligibility under National Register Criterion C, California Register Criterion 3, or Los Angeles County Criteria 3 for architectural significance.

Dining Room, Kitchen, and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263)

Architectural Description

The Dining Room, Kitchen, and Staff Room (LACO No. 1262) (**Figures 40 and 41**) is located in the central area of the District, in an area south of the Auditorium (LACO No. 1261), north and west of General Wards 30 and 40 (LACO Nos. 1184 and 1185), east of Workshop (LACO No.

1275), and north of Prosthetic Shop (LACO No. 3390). It is connected to its west elevation is the Commissary and Receiving Room (LACO No. 1263). Consisting of a series of additions completed between 1912 and 1926, it is a two-story brick building with an irregular footprint. Minor changes were observed during the 2017 survey as compared with the 2007-2011 Sapphos survey. These changes in the physical condition include the presence of a new metal "roll up" door within an original door opening on the east façade of the Dining and Reading Room portion, adjacent to another large door opening which appears to have been infilled with a smaller door. Based upon the 2017 survey, the LACO No. 1262 is in an overall deteriorated condition.

The Commissary and Receiving Room (LACO No. 1263) (**Figures 42 and 43**) is connected to the west elevation of the Dining Room, Kitchen, and Staff Room (LACO No. 1262). It is a two-story brick building with a rectangular plan and a "receiving" hyphen connecting it to LACO No. 1263. No changes were noted from the 2007-2011 Sapphos survey. Based upon the 2017 survey observations the building is in an overall deteriorated condition.

Significance Evaluation

Because the Dining Room, Kitchen and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) were previously recommended individually eligible in two previous evaluations under National Register Criterion C and California Register Criterion 3 by Post/Hazeltine Associates and Sapphos, their individual eligibility under National Register Criterion C and California Register Criterion 3 was reevaluated. Both Post/Hazeltine and Sapphos evaluated LACO Nos. 1262 and 1263 as one building because they are physically connected, so following their precedent LACO Nos. 1262 and 1263 were reevaluated as one resource under the following historical and architectural themes: Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1988-1952), Renaissance Revival and Brick Vernacular Architecture (1895-1935), and Hudson and Munsell. LACO Nos. 1262 and 1263 were built in approximately seven stages between 1912 and 1926 to accommodate the expanding patient population. The first portion of LACO No. 1263, the Commissary, was built in 1912 followed by the Receiving Room in 1926, the Dining Extension in 1920, and the final Dining Room addition, branching off the 1920 area, in 1924. The Dining and Reading Room, the earliest portion of the LACO NO. 1262, was constructed in 1913 and designed by architectural firm Hudson and

Munsell, and followed by the Kitchen addition in 1917, the Dining Extension in 1920, and the final Dining Room addition in 1924. Therefore, due to the seven additions in the space of 14 years, the architecture does not embody the distinctive characteristics of the Brick Vernacular style with Renaissance Revival style details. Rather, LACO Nos. 1262 and 1263 are representation of utilitarian architecture without a cohesive design. While the architecture firm of Hudson and Munsell designed the Dining Room in LACO No. 1262, it is an altered example and certainly not the most notable of their body of work. Additionally, the other additions are not identified with prominent architects. As such, the Dining Room, Kitchen and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) are not a distinctive or recognizable example of Renaissance Revival and Brick Vernacular Architecture (1895-1935) and do not represent a notable work Hudson and Munsell. **Therefore, the Dining Room, Kitchen and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) is not individually significant under National Register Criterion C, California Register Criterion 3, or Los Angeles County Criteria 3 for architecture.**

Integrity Analysis

Due to the substantial deterioration and alterations, the Dining Room, Kitchen, and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) do not retain integrity of design, workmanship or materials from the period of significance 1912 to 1926, when the buildings were constructed. Exterior alterations noted during the 2017 survey in comparison with historical photographs and plans have substantially compromised LACO Nos. 1262 and 1263's integrity of design, workmanship, and materials. Alterations to LACO No. 1262 include fire damage to the second story of the 1913 portion of the building; a non-original metal roll-up door on the east elevation; a large entryway infilled with a new door; removal of windows and doors; boarding up of most of the windows and doors; a small stucco addition along the west elevation; an added metal loading dock and canopy; masonry removed from the ornamental frieze at a corner downspout on the west elevation. And alterations to LACO No. 1263 include a small stucco addition along the northeast portion and boarded doors and windows. Furthermore, there is substantial deterioration of the brick masonry work on both exteriors of LACO Nos. 1262 and 1263.

Despite these alterations to the original design, the Dining Room, Kitchen, and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) retain their integrity of association under the historical theme of Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1988-1952) and their feeling as a social hub on the subject property. LACO Nos. 1262 and 1263 retain their historical setting adjacent to LACO Nos. 1184-1188, 1262, 1264, 1275, the Moreton Bay Fig Tree, and courtyard. Lastly, the LACO Nos. 1262 and 1263 retain their original location.

As explained under the significance evaluation, the Dining Room, Kitchen, and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) are not individually significant under National Register Criterion C and California Register Criterion 3 for architecture because they are not a distinctive example of Brick Vernacular architecture. Furthermore, alterations and the substantial deterioration of the exterior masonry has eroded the simplistic Brick Vernacular architecture and the refined Renaissance Revival style details.

Therefore, the lack of design, materials, and workmanship further substantiates their individual ineligibility under National Register Criterion C, California Register Criterion 3, or Los Angeles County Criteria 3 for architectural significance.

Conclusion

The District was previously determined eligible for the National Register under Criterion A by a consensus through the Section 106 process and was listed in the California Register under Criterion 1 for its association with the early healthcare of the County's indigent population and later treatment of patients with chronic illnesses or mental disorders. The District was assigned a period of significance of 1888-1945. The District was resurveyed in 2004 by Post/Hazeltine Associates and recommended ineligible. It was resurveyed again in 2007-2011 by Sapphos, who concurred with the original eligibility determination, identifying 68 contributors within the District. Sapphos also recommended extending the period of significance to 1952.

In this current survey, the District has been reevaluated under the following expanded historical and architectural themes based upon additional research: Advancements in Public Health and Medical Care (1870-1920); Housing the Poor in the California (1850-1930); Los Angeles County Poor Farm and Rancho Los Amigos (1887-1952); Early Hospital Architecture (1880-1930); Craftsman Architecture (1905-1930); Neoclassical Revival Architecture (1885-1930); Renaissance Revival and Brick Vernacular (1895-1935); and Spanish Colonial Revival (1915-1940).

Based upon extensive research and fieldwork, this survey concludes that the District remains eligible under National Register Criterion A and California Register Criterion 1 at the local level of significance. Furthermore, the District appears eligible under Los Angeles County Criterion 1. The Los Angeles County Poor Farm and its evolution into a long-term healthcare facility (Rancho Los Amigos) during the late nineteenth and early twentieth century reflect broader trends in medical history across the United States. The District's development over time illustrates changing approaches to healthcare and the treatment of Los Angeles County's indigent population. Additionally, the District appears eligible under National Register Criterion C as a distinguishable entity whose components may lack individual distinction (i.e., a district) and meets Los Angeles County Criterion 5 as a resource determined eligible for the National Register and listed in the California Register. This survey concludes that the District's period of significance extends to 1952, when the adjacent agricultural lands were subdivided for residential development, reflecting the completion of the subject property's transformation into a long-term healthcare facility. This survey also concludes that the District's boundary extends near the southeast corner to include the entirety of the Site Plan. The new District boundary encompasses additional portions of Consuelo Street, Bonita Street, and Dalia Avenue and the associated landscape areas east of the Administration Building (LACO No. 1100). These elements of Rancho Los Amigos' site plan contribute to the District's character and setting and continue to exhibit a high level of integrity from the period of significance. The new District boundary follows the natural contours of the landscape and would contain the contiguous grouping of 61 buildings and features contributing to the district's significant association with healthcare in Los Angeles County during the late nineteenth and early twentieth centuries (see Figure 33).

The District continues to meet the National Register and California Register integrity requirements, retaining its integrity of location, design, workmanship, materials, setting, feeling, and association. The District remains in its original location since it opened as a poor farm in 1888. Although the District no longer reflects Kysor, Morgan, and Walls' original design for the Poor Farm, as constructed in 1888, later changes to the subject property have acquired significance under National Register Criterion A, California Register Criterion 1, and Los Angeles County Criterion 1.

Furthermore, many of the buildings constructed during the period of significance (1888-1952) remain largely intact with few alterations, are representative examples of their property type and style and continue to convey their function and have acquired significance under National Register Criterion C. Of the 109 buildings, structures, and features identified within the District, there are 61 contributors, representing seven different building types, that reflect their different uses and the overall function of the subject property as it evolved into a long-term healthcare facility. The remaining 48 buildings, structures, and features within the District are non-contributors. A complete record of contributing and non-contributing buildings, structures, and features, including their previous evaluations, is presented in Appendix H.

A majority of the buildings and structures in the District lack individual distinction. Their historical significance is directly tied to the overall use of the subject property as a poor farm or a long-term healthcare facility and therefore do not exhibit individual significance and are not eligible for individual listing on the National Register or California Register. However, this survey identifies five buildings and structures as individually eligible under Criteria C/3/3 due to their architectural merit. These include: Administration/Safety Police Building (LACO No. 1100), Casa Consuelo (LACO No. 1238), and the Power Plant (LACO No. 1300), Water Tower (LACO No. 1301), and Shop, Laundry and Ice Plant (LACO No. 1302). Further, the Moreton Bay Fig Tree appears to meet the significance requirements of Los Angeles County Criterion 6 and 7 as an individual feature. Los Angeles County Criterion 6 recognizes trees that are the largest or oldest of their species in the County, while Criterion 7 recognizes trees, landscapes, or other natural features that are a defining or significant feature of a neighborhood.

Monica has successfully completed dozens of cultural resources projects throughout California and the greater southwest, where she assists clients in navigating cultural resources compliance issues in the context of CEQA, NEPA, and Section 106. Monica has extensive experience with archaeological resources, historic buildings and infrastructure, landscapes, and Tribal resources, including Traditional Cultural Properties. Monica manages a staff of cultural resources specialists throughout the region who conduct Phase 1 archaeological/ paleontological and historic architectural surveys, construction monitoring, Native American consultation, archaeological testing and treatment, historic resource significance evaluations, and large-scale data recovery programs. She maintains excellent relationships with agency staff and Tribal representatives. Additionally, Monica manages a general compliance monitoring team who support clients and agencies in ensuring the daily in-field compliance of overall project mitigation measures.

Relevant Experience

County of Los Angeles, Department of Public Works, Rancho Los Amigos South Campus EIR, Downey. CA. *Project Manager*. The County of Los Angeles (County) proposes redevelopment of a portion of the Rancho Los Amigos (RLA) South Campus which is located in the City of Downey. The 74-acre RLA South Campus was the home of the "Los Angeles County Poor Farm" that was established in 1880s to provide room and board to indigent citizens in exchange for agricultural labor, then served as an infirmary and later evolved into a hospital facility in 1932. The RLA South Campus functioned as a major hospital complex from 1956 to the 1990s, when it was abandoned. The RLA South Campus is currently unoccupied and has been designated as the RLA Historic District in the National Register of Historic Places. The County is proposing redevelopment of a 21-acre portion of the RLA South Campus with County uses, including a Sheriff's Station Crime Laboratory, Internal Services Department Headquarters, and Probation Department Headquarters. The project will include supporting parking and installation of utilities and other features on a site that has been abandoned for nearly 30 years. Building demolition and/or repurposing or relocation of existing buildings will be required. ESA is leading the CEQA process on behalf of the County, including preparation of all technical studies in support of a full-scope EIR for the RLA South Campus Project. This includes a Historic District Evaluation, archaeological surveys, traffic, water supply, arborist services, and all other CEQA-required topics. ESA is also serving in an Executive Consultant role to the County, to advise on other potential future projects at the RLA Campus.

County of Los Angeles, Department of Public Works, Arroyo Seco Bike Path Phase I Cultural Resources Evaluation, Los Angeles, CA. *Project Director.* Working for the County of Los Angeles, Department of Public Works in connection with a project to make improvements to the Arroyo Seco Channel, Monica managed all aspects of Section 106 review in accordance with Caltrans Cultural

Resources Environmental guidelines. Monica and her team evaluated the Arroyo Seco Channel, identified character-defining features, informed the design of channel improvements to retain such features, and addressed the channels' potential for eligibility as part of a larger Los Angeles Country water management district. She developed the research strategy, directed the field teams, and prepared cultural resources assessment documentation for approval by Caltrans and FHWA, as well as the cultural resources section for a Mitigated Negative Declaration.

Los Angeles Department of Water and Power La Kretz Innovation Campus, Los Angeles County, CA. *Project Director.* The project involved the rehabilitation of the 61,000-square-foot building located at 518-524 Colyton Street, demolition of the building located at 537-551 Hewitt Street, and construction of an open space public plaza and surface parking lot, and involved compliance with Section 106 of the National Historic Preservation Act and consultation with the California State Historic Preservation Officer. ESA is providing archaeological monitoring and data recovery services and is assisting LADWP with meeting their requirements for Section 106 of the National Historic Preservation Act. Monica is providing oversight to archaeological monitors and crew conducting resource data recovery and laboratory analysis, and is providing guidance to LADWP on meeting Section 106 requirements.

Los Angeles Unified School District (LAUSD) Florence Nightingale Middle School Historic Architectural Review, Los Angeles County, CA. *Cultural Resources Project Director*. Monica managed the historical analysis of the LAUSD Florence Nightingale Middle School. The analysis included a cultural resources survey that photo-documented buildings that would be affected by the project. The project includes HVAC replacement to a 1967 Classroom Buildings, kitchen upgrades within the 1937 Domestic Science/Cafeteria Building, and improvements to the 1965 chiller yard. Florence Nightingale Middle School was previously recommended eligible for listing in the California Register.

Los Angeles Unified School District, Central Los Angeles High School #9. Los Angeles, CA. *Project Director.* ESA contributed to Data Recovery Report sections for Los Angeles Unified School District's Central High School #9, constructed in downtown Los Angeles. Between 2004 and 2009, Monica led a team of archaeological staff of ten who conducted archaeological monitoring and data recovery of archaeological materials in connection with the 19th century Los Angeles City Cemetery. She coordinated with the Los Angeles County Coroner and office of Vital Statistics to obtain disinterment permits and developed a mitigation plan incorporating components related to the future disposition of remains, artifact curation, and commemoration. She directed an extensive historical research effort to identify the human remains, and at the request of the client, participated in public outreach and coordination with media.

Margarita Jerabek has 30 years of professional practice in the United States with an extensive background in historic preservation, architectural history, art history and decorative arts, and historical archaeology. She specializes in Visual Art and Culture, 19th-20th Century American Architecture, Modern and Contemporary Architecture, Architectural Theory and Criticism, Urbanism, and Cultural Landscape, and is a regional expert on Southern California architecture. Her qualifications and experience meet and exceed the Secretary of the Interior's Professional Qualification Standards in History, Architectural History, and Archaeology.

Dr. Jerabek has managed and conducted a wide range of technical studies in support of environmental compliance projects, developed preservation and conservation plans, and implemented preservation treatment projects for public and private clients throughout California and the United States. She provides expert assistance with environmental review, from due diligence through planning/design review and permitting and when necessary, implements mitigation and preservation treatment measures. Dr. Jerabek regularly performs assessments to ensure conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties, and assists clients with adaptive reuse/rehabilitation projects by providing preservation design and treatment consultation, agency coordination, legally defensible documentation, construction monitoring and conservation treatment.

As primary investigator and author of hundreds of technical reports, plan review documents, preservation and conservation plans; Historic American Buildings Survey (HABS), Historic American Engineering Record (HAER), Historic American Landscapes Survey (HALS) reports; construction monitoring reports; and salvage reports and relocation plans, she is a highly experienced practitioner and expert in addressing historical resources issues while supporting and balancing project goals. Dr. Jerabek is an expert in the evaluation, management and treatment of historic properties for compliance with Sections 106 and 110 of the National Historic Preservation Act (NHPA), National Environmental Policy Act (NEPA), Section 4(f) of the Department of Transportation Act, California Environmental Quality Act (CEQA), and local ordinances and planning requirements.

Relevant Experience

County of Los Angeles, Department of Public Works, Rancho Los Amigos South Campus EIR, Downey. CA. *Principal Investigator*. The County of Los Angeles (County) proposes redevelopment of a portion of the Rancho Los Amigos (RLA) South Campus which is located in the City of Downey. The 74-acre RLA South Campus was the home of the "Los Angeles County Poor Farm" that was established in 1880s to provide room and board to indigent citizens in exchange for agricultural labor, then served as an infirmary and later evolved into a hospital facility in 1932. The RLA South Campus functioned as a major hospital complex from 1956 to the 1990s, when it was abandoned. The RLA South Campus is

currently unoccupied and has been designated as the RLA Historic District in the National Register of Historic Places. The County is proposing redevelopment of a 21-acre portion of the RLA South Campus with County uses, including a Sheriff's Station Crime Laboratory, Internal Services Department Headquarters, and Probation Department Headquarters. The project will include supporting parking and installation of utilities and other features on a site that has been abandoned for nearly 30 years. Building demolition and/or repurposing or relocation of existing buildings will be required. ESA is leading the CEQA process on behalf of the County, including preparation of all technical studies in support of a full-scope EIR for the RLA South Campus Project. This includes a Historic District Evaluation, archaeological surveys, traffic, water supply, arborist services, and all other CEQA-required topics. ESA is also serving in an Executive Consultant role to the County, to advise on other potential future projects at the RLA Campus.

Fred C. Nelles School, 11850 Whittier Boulevard, Whittier, CA. *Project Manager and Senior Architectural Historian*. ESA is providing on-going historical resources management and preservation consultation services for the redevelopment of a 72-acre site and rehabilitation of four principal historic buildings on the now vacant, formerly state-owned Fred C. Nelles Youth Correctional Facility (Whittier State School). Opened in 1891, the school is a California State Historical Landmark (1997) and is an historical resource pursuant to CEQA. ESA prepared a Historic American Building Survey (HABS) report as part of the mitigation program and provided preservation design consultation for development of the preferred project, including the rehabilitation of four historic buildings to be retained including the Superintendent's Residence, Administration Building, Assistant Superintendent's Residence, and Chapels Building. The consultation included plan reviews for the site development plan, Certificate of Appropriateness submittal package for the architectural plans, and Tenant Improvement plans, ensuring that the project conformed with the Secretary of the Interior's Standards for Rehabilitation.

The Culver Studios, Culver City, CA. *Project Manager and Senior Architectural Historian.* ESA completed a Historic Resources Assessment report for The Culver Studios, a motion picture studio located in downtown Culver City. Originally constructed by Thomas Ince in 1919, the Studio eventually became the home of RCA, identified as one of the "Big Eight" major motion picture companies in the Los Angeles metropolitan area. The Studio was the production site of historically significant motion pictures like King Kong, Gone with the Wind, and Citizen Kane. ESA's architectural evaluation involved an intensive pedestrian site survey and photography of the studio property and the 21 buildings constructed within the Studio's period of significance (1918–1949). Historic research included a review of past survey reports, building permits, assessor's records, historic maps, and historic aerial photos. In order to assess the property as a potential historic district, ESA developed a motion picture studio property type using guidelines developed by the City of Los Angeles' SurveyLA program and investigated the types of facilities historically found at all of the Big Eight studios up to the 1950s, generally considered the end of the Big Eight era. Using the developed property type, ESA determined that The Culver Studios lacked enough primary contributing features to accurately represent one of the Big Eight major motion picture studios and therefore, was not eligible for consideration as a historic district. Although the site did not qualify as a historic district, ESA found several of the buildings individually eligible at the local, state, and national level for their architectural significance. Based on these findings, ESA recommended mitigation measures allowing the proposed project to move forward without causing a significant impact to historic resources.

Candace is a cultural resources project manager with 19 years of experience working across California. She provides technical and compliance oversight for projects involving archaeological survey, evaluation, and treatment; built environment studies, including the documentation and evaluation of buildings, structures, and districts; and paleontological resources survey and sensitivity assessments. She is proficient in the areas of California Environmental Quality Act (CEQA), National Environmental Policy Act (NEPA), and Section 106 compliance and routinely provides planning and strategic guidance to clients within the larger scope of state and federal regulations. Candace manages multi-disciplinary cultural resources projects that include archaeological, historic architectural, and paleontological resources components. She is adept at building teams of specialists from these resource areas that are uniquely qualified for the particular project at hand and has brought hundreds of projects to successful completion for both public agency and private development clients.

Relevant Experience

County of Los Angeles, Department of Public Works, Rancho Los Amigos South Campus EIR, Downey. CA. *Project Manager*. The County of Los Angeles (County) proposes redevelopment of a portion of the Rancho Los Amigos (RLA) South Campus which is located in the City of Downey. The 74-acre RLA South Campus was the home of the "Los Angeles County Poor Farm" that was established in 1880s to provide room and board to indigent citizens in exchange for agricultural labor, then served as an infirmary and later evolved into a hospital facility in 1932. The RLA South Campus functioned as a major hospital complex from 1956 to the 1990s, when it was abandoned. The RLA South Campus is currently unoccupied and has been designated as the RLA Historic District in the National Register of Historic Places. The County is proposing redevelopment of a 21-acre portion of the RLA South Campus with County uses, including a Sheriff's Station Crime Laboratory, Internal Services Department Headquarters, and Probation Department Headquarters. The project will include supporting parking and installation of utilities and other features on a site that has been abandoned for nearly 30 years. Building demolition and/or repurposing or relocation of existing buildings will be required. ESA is leading the CEQA process on behalf of the County, including preparation of all technical studies in support of a full-scope EIR for the RLA South Campus Project. This includes a Historic District Evaluation, archaeological surveys, traffic, water supply, arborist services, and all other CEQA-required topics. ESA is also serving in an Executive Consultant role to the County, to advise on other potential future projects at the RLA Campus.

California Department of Water Resources, Serrano Beach Project, Los Angeles County, CA. *Project Manager*. Candace managed a Phase I cultural resources study, including archival research, survey, and report. DWR proposes to repair culverts along the Serrano Beach access road near the Pyramid Lake Vista

Del Lago Visitors Center, replacement of a fence surrounding an existing water tank, and installation of a new water pipeline near the Warne Powerplant. The project is located within the Angeles National Forest, requiring compliance with Section 106 of the National Historic Preservation Act. The study concluded that the area is sensitive for archaeological resources and monitoring was recommended.

Metropolitan Water District of Southern California (MWD), F.E. Weymouth Treatment Plant Improvement Program, Los Angeles County, CA. *Senior Reviewer.* MWD is proposing to implement the F.E. Weymouth Treatment Plant Improvement Program. The proposed project consists of the following elements: Chlorine Transloading Project, Filter Rehabilitation Project, Solar Power Generation Project, Weymouth Improvement Projects, and Miscellaneous Studies and Investigations. The proposed project would upgrade and/or construct new facilities at the existing Weymouth Plant to accommodate the plant's maximum operating capacity and update the overall facility. Candace provided senior review of the cultural resources section of the EIR.

Santa Clarita Valley Sanitation District, Facilities Plan Update EIR, Los Angeles County, CA. *Cultural Resources Project Manager.* Candace managed the Phase I cultural resources study for the project. The study identified 26 cultural resources within or adjacent to the project, including the historical San Fernando Road. Candace authored a historical context and evaluated the road for its eligibility to the National Register and California Register. The results of the study were incorporated in the EIR. The project includes installation of an approximately 35-mile recycled water pipeline from the Santa Clarita Valley to east Los Angeles.

Port of Los Angeles, Marine Oil Terminal Engineering Maintenance Standards Historic Resources Evaluation, Los Angeles County, CA. *Archival Researcher.* Candace conducted historic research in support of the evaluation of approximately 16 timber wharves and co-authored the historical context. The wharves date to circa 1925 and would be subject to alterations, including new piling, decking, and fendering systems, in order to accommodate greater shipping loads, as well as seismic and life/safety improvements. Two sets of timber wharves at Berths 150-151 and 163-164 were identified as eligible for listing in the National Register and California Register as contributors to two marine oil terminal districts.

Los Angeles Unified School District, Florence Nightingale Middle School Historic Architectural Review, Los Angeles, CA. *Surveyor.* Candace conducted the cultural resources survey and photo-documented buildings that would be affected by the project. The project includes HVAC replacement to a 1967 Classroom Buildings, kitchen upgrades within the 1937 Domestic Science/Cafeteria Building, and improvements to the 1965 chiller yard. Florence Nightingale Middle School was previously recommended eligible for listing in the California Register.

This includes a Historic District Evaluation, archaeological surveys, traffic, water supply, arborist services, and all other CEQA-required topics. ESA is also serving in an Executive Consultant role to the County, to advise on other potential future projects at the RLA Campus.

Historical Resources Consultation Services for the Redevelopment of the Nelles School Site and Implementation of Mitigation Measures. *Deputy Project Manager.* Amanda is providing historical resources management and preservation consultation services for a project to redevelop the Fred C. Nelles School site, located in Whittier, California. Originally named the "Reform School for Juvenile Offenders," the Fred C. Nelles Youth Correctional Facility is the State's oldest school for juvenile offenders, which is a California State Historical Landmark (1997). The scope of work included and architectural survey and assessment of the Nelles site, preparation of an assessment report, community outreach, preservation

design consultation for development of project alternatives for the Environmental Impact Report (EIR), peer review of the Draft EIR prepared by the City and a historic resources technical report prepared by the City's consultant, and preparation of a HABS HALS recordation documents for the Nelles site. Currently, Amanda is assisting with the provision of oversight on implementation of the mitigation program, which includes providing preservation consultation to the project team for the rehabilitation and the preparation of four buildings on the site, which has involved the following services: character-defining features treatment schedule, SOI Standards plan reviews, paint analyses, a salvage plan, and a relocation plan for one of the buildings.

The Culver Studios, Culver City, CA. *Architectural Historian.* ESA completed a Historic Resources Assessment report for The Culver Studios, a motion picture studio located in downtown Culver City. Originally constructed by Thomas Ince in 1919, the Studio eventually became the home of RCA, identified as one of the "Big Eight" major motion picture companies in the Los Angeles metropolitan area. The Studio was the production site of historically significant motion pictures like King Kong, Gone with the Wind, and Citizen Kane. ESA's architectural evaluation involved an intensive pedestrian site survey and photography of the studio property and the 21 buildings constructed within the Studio's period of significance (1918–1949). Historic research included a review of past survey reports, building permits, assessor's records, historic maps, and historic aerial photos. In order to assess the property as a potential historic district, ESA developed a motion picture studio property type using guidelines developed by the City of Los Angeles' SurveyLA program and investigated the types of facilities historically found at all of the Big Eight studios up to the 1950s, generally considered the end of the Big Eight era. Using the developed property type, ESA determined that The Culver Studios lacked enough primary contributing features to accurately represent one of the Big Eight major motion picture studios and therefore, was not eligible for consideration as a historic district. Although the site did not qualify as a historic district, ESA found several of the buildings individually eligible at the local, state, and national level for their architectural significance. Based on these findings, ESA recommended mitigation measures allowing the proposed project to move forward without causing a significant impact to historic resources.

The Academy Museum of Motion Pictures, Los Angeles, CA. *Architectural Historian.* ESA prepared the EIR for development of the Academy Museum of Motion Pictures, which will be dedicated to films and filmmaking. The Museum, which is currently under construction, will be located on the Los Angeles County Museum of Art campus, at the western edge of Wilshire Boulevard's Museum Row. The project involves the rehabilitation and adaptive reuse of the historic May Company Building originally built in 1939, and the addition of a new wing. ESA was involved with the project in its early design stages and helped influence proactive changes and refinements to the project to avoid impacts associated with historic resources. ESA prepared a comprehensive Historic Resources Assessment, defined a Materials Conservation and Preservation Plan as a design feature, and provided input on changes to the May Company Building and the design of the new wing to support compliance with the Secretary of the Interior's Standards for Rehabilitation.

Based on these findings, ESA recommended mitigation measures allowing the proposed project to move forward without causing a significant impact to historic resources.

Rocketdyne Historic American Engineering Record, Los Angeles, CA. *Architectural Historian.* ESA prepared a Historic American Engineering Record (HAER), documenting the former home of Rocketdyne in Canoga Park, Los Angeles, California. The HAER included a thorough investigation of the site's history, description of the various buildings and their uses, historic images, plans, and HAER level photography of the site. The report has been compiled and is currently being reviewed for submission to the Library of Congress in compliance with mitigation required for the redevelopment of the site.

Capitol Milling Company, 1231 N. Spring Street, Los Angeles, CA. *Architectural Historian*. ESA's Historic Resources Division conducted an intensive pedestrian survey, historical research, and evaluation of the mill. Research included a review of building permits, assessor's records, historical Los Angeles Times articles, historical maps, and historical aerial photos. Based on this research, ESA identified the Capitol Milling Company Building as eligible for listing on the National Register, California Register, and as a local landmark for its significant association with the early industrial development of Los Angeles and the national trend of milling advancements in the late 19th century. ESA developed a character-defining features table and provided guidance to the client's architect, ensuring the project plans complied with the Secretary of the Interior's Standards for Rehabilitation and gained approval from the City of Los Angeles' Office of Historic Resources. Upon completion, the project will successfully reintroduce this important historic resource to the public, highlighting Los Angeles' rich industrial and agricultural heritage.

Adam is an architectural historian with over five years of experience in the research and education of cultural resources in the United States and abroad, as well as the assessment of historic structures and preparation of California Environmental Quality Act (CEQA)-level documents. His qualifications and experience meet and exceed the Secretary of the Interior's Professional Qualification Standards in History and Architectural History. Adam's professional experience and combination of academic degrees provides him with a broad and advantageous skillset, including strong technical and research skills, as well as the ability to approach preservation from a multi-disciplinary perspective.

Relevant Experience

County of Los Angeles, Department of Public Works, Rancho Los Amigos South Campus EIR, Downey. CA. *Architectural Historian*. The County of Los Angeles (County) proposes redevelopment of a portion of the Rancho Los Amigos (RLA) South Campus which is located in the City of Downey. The 74-acre RLA South Campus was the home of the "Los Angeles County Poor Farm" that was established in 1880s to provide room and board to indigent citizens in exchange for agricultural labor, then served as an infirmary and later evolved into a hospital facility in 1932. The RLA South Campus functioned as a major hospital complex from 1956 to the 1990s, when it was abandoned. The RLA South Campus is currently unoccupied and has been designated as the RLA Historic District in the National Register of Historic Places. The County is proposing redevelopment of a 21-acre portion of the RLA South Campus with County uses, including a Sheriff's Station Crime Laboratory, Internal Services Department Headquarters, and Probation Department Headquarters. The project will include supporting parking and installation of utilities and other features on a site that has been abandoned for nearly 30 years. Building demolition and/or repurposing or relocation of existing buildings will be required. ESA is leading the CEQA process on behalf of the County, including preparation of all technical studies in support of a full-scope EIR for the RLA South Campus Project. This includes a Historic District Evaluation, archaeological surveys, traffic, water supply, arborist services, and all other CEQA-required topics. ESA is also serving in an Executive Consultant role to the County, to advise on other potential future projects at the RLA Campus.

Historic Structures Report for the RMS Queen Mary, 1126 Queens Highway, Long Beach, CA. *Architectural Historian.* Adam assisted with the preparation of a historic structures report for the Cunard-White Star ocean liner, the RMS Queen Mary, now permanently moored in Long Beach and listed, as of 1993, in the National Register of Historic Places. The purpose of the report, prepared for the City of Long Beach, was to record existing conditions and serve as a guide for a maintenance plan and any changes made to the ship during repair, rehabilitation, or restoration. While co-authoring the report, Adam conducted extensive research

on the RMS Queen Mary's historic spaces and materials and identified the most appropriate approaches to treatment and maintenance.

CEQA Plan Review and Certificate of Appropriateness Report, The Bijou Building, 1221 and 1227 Hermosa Avenue, Hermosa Beach, CA. *Architectural Historian.* The Bijou Building, designed by architect Richard Douglas King in the Neoclassical Revival style and constructed in 1923, is a designated City of Hermosa Beach landmark. In 2017, the City retained ESA to prepare a CEQA plan review and Certificate of Appropriateness report for conformance with the Secretary of the Interior's Standards for two interior tenant improvement projects. Adam's responsibilities included meeting attendance, fieldwork, research, character-defining features analysis, and report preparation.

LAUSD, Palms Middle School, Los Angeles, CA. *Architectural Historian. In 2012,* SurveyLA determined Palms Middle School eligible for listing in the National Register of Historic Places and California Register of Historical Resources, as well as a City of Los Angeles Historic-Cultural Monument. As such, the school is considered a historical resource pursuant to CEQA. In April 2016, LAUSD retained ESA PCR to prepare a plan review for the Palms Middle School Minor Upgrades Project consisting of restroom upgrades in the Physical Education Building as well as playground improvements and asphaltic concrete resurfacing. Adam reviewed the project for conformance with the Secretary of the Interior's Standards for Rehabilitation and assessed potential impacts.

LAUSD, San Pedro High School, San Pedro, CA. *Architectural Historian.* In 1994, San Pedro High School was determined eligible for listing in the National Register of Historic Places through the Section 106 process and listed in the California Register of Historical Resources. As such, the school is considered a historical resource pursuant to CEQA. In June 2015, LAUSD retained ESA PCR to prepare a Character-Defining Features Memorandum for the school, to be used in conjunction with the LAUSD Guidelines and Treatment Approaches for Historic Schools to avoid significant adverse impacts resulting from a modernization and upgrades project. As a member of ESA PCR's Historic Resources Division, Adam provided assistance in the preparation of the character-defining features analysis.

Max Loder

Associate Architectural Historian

EDUCATION

M.A., Public History with a concentration in Historic Preservation, University of California, Riverside

B.A, History, University of California, Los Angeles

4 YEARS EXPERIENCE

Max Loder is an architectural historian with more than four years of professional experience performing field surveys and preparing DPR forms; preparing statements of significance; conducting historical analysis, composing architectural descriptions; and conducting necessary project research. He also has a year of public sector planning experience in design review. He has worked closely with private individuals, public officials, and large and small organizations to help work toward solutions to their historic and planning needs.

Experience

Department of City Planning, City of Los Angeles. *Historic Preservation Overlay Zones (HPOZ) Unit in the Office of Historic Resources.* Assisted HPOZ staff with client walk-ins, conducting design review, drafting casework letters/certificates, and public outreach/presentations regarding adoption of HPOZs. Conducted field surveys of several HPOZs, using photography and making note of historical elements. Corrected technical elements on databases of HPOZ properties and research historical patterns of neighborhood growth. Communicated with project applicants to improve their projects' conformance with preservation guidelines.

SR 710 North Project, South Pasadena, CA. *Architectural Historian.* Worked on a project-hire basis for a consulting firm on findings of no adverse effect related to the SR 710 North project. Specifically worked on the descriptions of historic properties and resources sections of the findings.

University of California, Riverside. *History Graduate Teaching Assistant.* Engagingly led three sections of approximately 25 undergraduates each. Prepared detailed lessons to review course material and primary sources in depth. Fielded student questions/concerns and evaluated students' examinations, papers and course performance.

The Young Oak Kim Center for Korean American Studies, UC Riverside. *Research Intern.* Researched primary sources to build list of Koreans present in Riverside around 1900. Assisted with oral histories of prominent Korean American individuals. Augmented and edited statement of historical significance for NRHP application for the Willows Airfield in Glenn County, California, a place of significance to the history of Korean American aviation.

VinCate & Associates Preservation Consultants, Riverside, CA. *Architectural Historian.* Completed successful application for City Landmark status for property in Riverside. Researched and composed statement of significance and architectural description. Completed necessary DPR forms. Liaised with City of Riverside planning staff to guide application to completion.

Appendix B
Timeline

Year	Event	Building	Constructed	Altered	Demolished	Notes	Citation
1760-1850 (Industrial Revolution in England)	Development of poorhouse model of treatment for poor, disabled and elderly					Poor Farm "founded on the basic principles of the poorhouse system developed during the Industrial Revolution in England to provide care to the poor, disabled and elderly. It was not unusual for the dual goals of welfare for the indigent and medical care for the impoverished to overlap." "[The English Poor Law] system was based on the principle that society had a corporate obligation for poor and dependent persons. Virtually every American colony enacted laws that replicated the English system. Under this arrangement local communities, rather than the colony or mother country, had to assume fiscal and supervisory responsibility for those persons incapable of surviving without some form of assistance. Indeed, the very concept of social policy involving the creation of systematic structures to deal with individual and group distress and dependency was largely absent during the colonial era." 335	Sapphos 2011 Grob, Gerald N. "The Severely and Chronically Mentally Ill in America: Retrospect and Prospect." In Sickness and Health in America: Readings in the History of Medicine and Public Health, edited by Judith Walzer Leavitt & Ronald L. Numbers. Madison: University of Wisconsin Press, 1997. Third Edition.
1771	Mission San Gabriel Arcangel founded						
1773	Colony of Virginia opens first mental institution in America, in Williamsburg "for persons of insane and disordered minds."						Sickness and Health in America: Readings in the History of Medicine and Public Health, edited by Judith Walzer Leavitt & Ronald L. Numbers. Madison: University of Wisconsin Press, 1997. Third Edition. 307.
1798	Federal funding to government and private hospitals that served as marine hospitals for the "relief of sick and disabled men."						Sapphos 2011
1781	El Pueblo de la Reina de Los Angeles established						
1784	Spanish land grant given to Jose Manuel Nieto (Rancho Los Nietos)						
Early 1800s	Poor farms or poorhouses first appear in the United States						
1821	Mexico gains independence from Spain						
1823	Worcester State Lunatic Hospital opens in Massachusetts, the first state-run asylum.						Sickness and Health in America: Readings in the History of Medicine and Public Health, edited by Judith Walzer Leavitt & Ronald L. Numbers. Madison: University of Wisconsin Press, 1997. Third Edition. 307.
1833-1834	Secularization of mission system						
1834	Rancho Santa Gertrudes (awarded to Antonio Maria Nieto upon Jose's death) confirmed upon Antonio's widow						
1843	Lemuel Carpenter purchases Rancho Santa Gertrudes						
1846-1848	Mexican-American War						
1848	Signing of Treaty of Guadalupe Hidalgo Mexico cedes Alta California to United States						
1848	California Gold Rush begins						
1850-1890	U.S. Census includes "paupers" as a category						https://books.google.com/books?id=R7WxAAAAIAAJ&pg=PA1&lpg=PA1&dq=pauper+in+almshouses&source=bl&ots=VvoOD6-Oy4&sig=qGwUmfRbiXYlFTo-EDdIFvpmh3Q&hl=en&sa=X&ved=0ahUKEwjW1ezHlpvVAhXCvhQKHQBTBxgQ6AEINDAC#v=onepage&q=pauper%20in%20almshouses&f=false
1850	California admitted to the Union as 31st state County of Los Angeles formed						
1850	California legislature enacts requirement that county governments should, "perform all acts necessary to the county welfare."						

Year	Event	Building	Constructed	Altered	Demolished	Notes	Citation
1851	California establishes short-lived state accident hospital near gold-mining areas of Stockton and Sacramento.						Sapphos 2011
1851	California Insane Asylum opens at Stockton (State Historical Landmark #1016). Closes in 1995. It had an associated farm.					It was constructed as the Insane Asylum of California at Stockton in 1851. It was on 100 acres of land donated by Captain Charles Maria Weber. The legislature at the time felt that existing hospitals were incapable of caring for the large numbers of people who suffered from mental and emotional conditions as a result of the California Gold Rush, and authorized the creation of the first public mental health hospital in California. The hospital is #1016 on the Office of Historic Preservation's California Historical Landmark list, and today is home to California State University's Stanislaus - Stockton Center. A cemetery for patients who died there is located on the property.	http://www.sanjoaquinhistory.org/documents/HistorianOS12-3.pdf
1852	Los Angeles County Board of Supervisors created						
1854	President Franklin Pierce vetoes "Bill for the Benefit of the Indigent Insane" a.k.a. "Land-Grant Bill for Indigent Insane Persons"					Set 70+ year precedent of state and local (as opposed to federal) involvement/control of aid to poor, mentally ill, and blind, deaf and mute persons.	https://en.wikipedia.org/wiki/Bill_for_the_Benefit_of_the_Indigent_Insane
1855	Jose Ramirez purchases portion of Rancho Santa Gertrudes						
1855	Care of the aged and needy formally becomes local responsibility with California "Poor Law of 1855"						
1858	First L.A. County public hospital opens in house of resident Cristobal Aguilar (future mayor of L.A.)					Abel Stearns and John Downey appointed by County to head effort to found hospital. Operated by the Sisters of Charity and overseen by County physicians. Consisted of two wards, one for paying patients, other for charity patients.	Sapphos 2011
1859	John Gately Downey and James P. McFarland purchase remainder of Rancho Santa Gertrudes						
1860	By this year most states have established hospitals to care for the mentally ill.					Thanks in large part to reformers like Dorothy Dix.	Sickness and Health in America: Readings in the History of Medicine and Public Health, edited by Judith Walzer Leavitt & Ronald L. Numbers. Madison: University of Wisconsin Press, 1997. Third Edition. 307.
1860	State passes law requiring county hospitals to care for all indigent persons, of any health or income level.						Sapphos 2011
c. 1860s	County hospital relocated to larger, nine-acre lot. Consisted of building and landscaping of orange groves, pepper and walnut trees.						Fliedner (1990): 11
1860	Downey becomes Governor of California (1860-1862)						
1862-1865	The "Great Drought"					"California has had worse droughts in terms of rainfall, Roos said. But in terms of economic loss, the so-called Great Drought was probably most devastating because the early ranchos lacked today's reservoir water storage." (2.)	1. http://articles.latimes.com/1991-06-13/news/nc-780_1_cattle-industry 2. http://articles.latimes.com/1991-05-06/local/me-1024_1_three-year-drought
1865-c.1880s	Downey's portion of Rancho Santa Gertrudes subdivided						Larry Latimer, *The History of Downey, California* (2010)
1866	Similar property type: San Francisco Almshouse (now the Laguna Honda Hospital and Rehabilitation Center)					"Laguna Honda opened in 1866 to care for one of the first generations of San Franciscans, the Gold Rush pioneers. Many people who had come west seeking their fortunes in the gold and silver mines of Northern California went bust	http://lagunahonda.org/OurHistory https://californiapreservation.org/laguna-honda/

Year	Event	Building	Constructed	Altered	Demolished	Notes	Citation
	Very similar to RLA					instead. The burgeoning city responded to its growing numbers of people in need by constructing a four story wood frame building to house indigent San Franciscans on the old San Miguel Rancho west of Twin Peaks. The rancho had been the property of José de Noe, the last alcalde, or mayor, of San Francisco in the days when the city was still part of Mexico. It was a good place for people to grow their own food and tend animals. Nearby, on the sloping land behind Twin Peaks, a natural spring fed a deep lagoon, a *laguna honda*. The building was known as the Almshouse, which until the 20th century was a common term for a place of refuge housing people who were chronically ill or impoverished with nowhere else to go. Like many such places, the Almshouse grew its own food and livestock on 87 acres of farmland. By 1870 the farm not only fed an Almshouse population of over 500 men, women and children, but produced a surplus harvest as well, enough to cart into town, three miles to the northeast, to sell at market. There were scant amenities for the people of the Almshouse. They made their own clothes and their own shoes. But in 1872 the administrator reported to city officials that "together with the food, clothing and general cleanliness of the place [it] is equal, if not superior, to any of the same nature either in the U.S. or Europe." The first medical services were provided in 1868 when the city opened a 24-bed hospital during a smallpox epidemic. After the epidemic abated in 1870, the hospital closed and was replaced by a small asylum. Like many such institutions throughout the country, the Almshouse was a refuge for a wide variety of people who lived at the margins of society. As the century ended, new buildings went up on the Almshouse grounds to serve an increasingly diverse population. In 1890, the administrator reported that Almshouse residents represented some forty different nationalities. The defining event of the early part of the new century was the great earthquake and fire of 1906. The Almshouse was pressed into service to house and care for thousands of displaced San Franciscans. Now known as the Relief Home, it consolidated earthquake victims living in refugee camps scattered across the city. A new pavilion-style building was constructed, able to accommodate 1,000 people. The building was dedicated in 1909 by President Theodore Roosevelt. By 1910, the city had added another stately new building to the Relief Home. Known as Clarendon Hall, it housed 250 people, and for the first time was intended specifically for people who needed long term medical care. Clarendon Hall was demolished in 2008 to make room for today's Laguna Honda, a facility able to withstand an earthquake many times more powerful than the one that caused Clarendon to be built. The leap from Relief Home to skilled nursing facility began in earnest in the 1920's when Mayor James "Sunny Jim" Rolph turned over the first spade of earth for the Spanish Revival-style buildings that would become Laguna Honda Hospital and Rehabilitation Center. Those buildings, whose Mediterranean tile work is echoed in the architecture of today's Laguna Honda, were opened in 1926 and continued to grow in the decades that followed	

Year	Event	Building	Constructed	Altered	Demolished	Notes	Citation
						with the addition of new “finger wings,” the long, Florence Nightingale-style open wards that were customary at the time. In the 1930s, Laguna Honda became a teaching center for the University of California medical school. Surgery began to be performed, and cardiograph and x-ray technology was introduced. The entryway to the main building was graced with now-classic WPA murals, which are still on display. After the war, Laguna Honda was the site of a cancer research program funded by the National Cancer Institute and the University of California. Occupational therapy was introduced with a technical arts program in weaving and basketry. A large room fitted with looms became known as the “rug room,” named for the acclaimed products of the resident weavers. The program grew into a fully fledged department of occupational therapy in 1953. In 1957, local businessman Gerald Simon founded the Laguna Honda Volunteers, Inc., a philanthropic organization that to this day funds amenities for Laguna Honda residents such as personal items, assistive devices, books, music, outings, and celebrations. In the 1960s and 1970s, the Gerald Simon theatre at Laguna Honda was a venue for performers like Bing Crosby, Merv Griffin, Eddie Fisher, Phil Harris, Donald O’Connor and Frankie Lane. Laguna Honda became accredited as a hospital in 1963 as it continued to redefine itself in ways that would allow it to meet the needs of its diverse service population. The 1920s-era buildings underwent a major renovation in the mid-70s. Today, Laguna Honda is a hospital specializing in skilled nursing and rehabilitation. It serves people who have an extraordinary variety of clinical and social needs, and who come from a wealth of cultural backgrounds. The new Laguna Honda is a community of care where practitioners and residents alike are creating possibilities for well-being in a new century.”	
c.1865	Andrew W. Ryan purchases XXXX acres of farmland, where he raises corn and hogs						https://archive.org/stream/historyofcalifor02guin#page/n595/mode/2up/search/ryan
1870-1900	California population grew from 560,247 to 1,485,053						Kevin Starr, *Inventing the Dream: California Through the Progressive Era* (New York: Oxford University Press, 200).
1872	Napa State Hospital opens in 1872					“In 1872, a site was selected and work began for the erection of the 500-bed, four- story, Gothic Hospital building. The Hospital originated in response to overcrowding at Stockton Asylum, the first State Hospital. Napa State Hospital opened on Monday November 15, 1875 and is the oldest State Hospital still in operation. The Hospital was once self-sufficient, with its own dairy and poultry ranches, vegetable gardens, orchards and other farming operations. Treatment programs for developmentally disabled residents were present from October 1968 to August 1987and from October 1995 to March 2001. The Hospital does not accept voluntary admissions.”	http://www.dsh.ca.gov/Napa/default.aspx

Kevin Starr, *Inventing the Dream: California Through the Progressive Era* (New York: Oxford University Press, 40-4).
1876	Similar property type: San Mateo County Poor Farm established					"After Dr. W. H. Kellogg, director of the California State Department of Health, sent a scathing report in 1918 to the San Mateo County Board of Supervisors, they decided it was time to replace the original San Mateo County Community Hospital and Poor Farm. The hospital and farm on Polhemus Road had been established in 1876 (The site is now occupied by the Crystal Springs Rehabilitation Center). The main building of the poor farm was a fire trap, Dr. Kellogg reported. Lighting was inadequate, the building was badly ventilated and the four wards were overcrowded. Toilets were flushable, but there was no water, he continued, as the wells had run dry. The nurse dispensed medicine at her own discretion, clinical records were not taken of the patients and there were no regular visits by the county physician — and the place smelled bad." "The first hospital -- public or private -- erected in San Mateo County was called Poor Farm. Located in a valley south east of the Crystal Spring Reservoir, Poor Farm first occupied the site of the county's Tower Road facilities in the 1870's. Providing medical care for the indigent, major health concerns faced by the 19th century facility included malaria and consumption, later known as tuberculosis. During the 1906 earthquake, many victims of bubonic plague came to Poor Farm for treatment. The facility also led the Peninsula's fight against influenza in 1918, tending to patients and distributing face masks to prevent the spread of the disease. Poor Farm became Crystal Springs Rehabilitation Center in the 1920's, offering long term care to elderly patients, including those so destitute as to afford no other means of care."	http://www.everythingsouthcity.com/the-hidden-history-of-the-san-mateo-county-poor-farm/ http://archives.smdailyjournal.com/article_preview.php?id=98696 http://archives.smdailyjournal.com/article_preview.php?id=361

1903	Newspapers report overcrowding and poor conditions at Poor Farm						
1903	George S. Clarke appointed Superintendent Marshall E. Price becomes Resident Physician						
1904	U.S. Census Bureau conducts special census for paupers in almshouses.					Report released in 1906. "California: The board of supervisors of each county has the duty to construct or lease, officer, and maintain hospitals and almshouses, or, at their discretion, to provide otherwise for the indigent sick or dependent poor of the county: and for such purposes may levy the necessary tax. The board of supervisors appoints the superintendents and the necessary medical officers of such hospitals and almshouses. The board may let out the care or attendance of the sick and poor by contract to the lowest bidder. The board has authority to provide a farm in connection with the county hospital or poorhouse. It is incumbent upon every county… to relieve at the expense of the county the indigent sick and the poor who cannot otherwise be provided for. But if such person has not resided in the county or city for three months immediately preceding the application for aid, then the expense shall be borne by the county in which such person has a lawful residence. It is the duty of the superintendent of any county hospital or almshouse to inquire into the ability of persons admitted and of their kindred to bear the cost of maintaining them in hospitals. If a person who is a public charge becomes possessed of property at any time the cost of his support may be recovered through process of law. Kindred in the degree of husband, wide, child, parents, grandparents, grandchildren, brothers, or sisters are liable for the support of a poor person. It is a misdemeanor to bring any poor or incompetent person into any county… wherein he is not lawfully settled. The state board of charities has authority to investigate and report upon county hospitals and almshouses."	https://books.google.com/books?id=jNO7gH2ZVFQC&pg=PR3&lpg=PR3&dq=pauper+in+almshouses&source=bl&ots=sep9RZQEku&sig=kRlVko96PzNII9O0cjely20ne5g&hl=en&sa=X&ved=0ahUKEwjW1ezHIpvVAhXCvhQKHQBTBxgQ6AEIOTAD#v=onepage&q=pauper%20in%20almshouses&f=false
1905	New water pump installed						
1906	Progressive reformer Arthur Judson Pillsbury publishes *Institutional Life*, containing a series of nationwide best practices to reform social welfare system in California. 1915	Harriman/Superintendent's House built (#1101) shortly before Harriman hired		1915	Damaged by fire 2017.		Associated with William Ruddy Harriman. Damaged by fire (arson?) June 26, 2017.	

Year	Event	Building	Constructed	Altered	Demolished	Notes	Citation
1915	William R. Harriman hired as superintendent						
1915	Position of "Farmer" abolished; responsibilities merged into role of superintendent					"The Board of Supervisors had abolished the position of 'Farmer' at this 540-acre tract so Harriman had the personal responsibility of rehabilitating the farm with some 400 patients also in need of rehabilitation. He had to use the latter to accomplish the former, as the County had provided few paid employees. Nor did the County provide much medical assistance in a patient rehabilitation program. You might say it provided none. There was not even a resident physician at the Farm anymore. Interns would be sent down from the County Hospital to look at patients if they became acutely ill. Nor were there any graduate nurses, psychiatrists, dentists, pharmacists; although these might be called in from time to time. There was no physiotherapy or hydrotherapy."	Charles Russell Quinn, *The History of Downey, California* (Downey, CA: Elena Quinn, 1973), 142.

1933	RLA patients number at 3,325						
1934	RLA begins to admit large numbers of professionals due to Great Depression					"By 1934 the administration at Rancho noted the changing character of the indigents. The trend was toward the professional and white collar worker. The records bring out an interesting picture of the times. Before the Depression the	Charles Russell Quinn, *The History of Downey, California* (Downey, CA: Elena Quinn, 1973), 146.

Year	Event	Building	Constructed	Altered	Demolished	Notes	Citation
						majority of indigents had a work background in mining and agriculture. The Depression seemed to hit those engaged in the building trades first. Evidently construction came to a sudden halt. Then the trend rose to hotel and domestic workers. People were not traveling, and chauffeurs and maids were being let go. Then, by 1934, the 'Poor Farm' began to admit large numbers of attorneys, physicians, university professors, musicians, certified public accountants and the like. The upper middle class was now running out of savings."	
1937	Nearly 54% of inmates under 65 years of age; 61% of patients require nursing care (of the 61%, 1150 are in infirmary wards, 550 in psychopathic wards)						
Late 1937	RLA patients number at 3,000					Average age of patients dramatically reduced due to 1933 National Social Security Act, which have people over 65 a monthly allowance of $35. This made more space for chronically ill children, helping RLA transition into a hospital facility.	Sapphos 2011
1938	Landscape Office (#1357)						
1940s	"The humane and progressive policies established by the [RLA] administration now moved into the medical field."					"For over half a century Rancho had built an international reputation in scientific farming and cattle raising circles, but in the 1940s a change began to take place. The humane and progressive policies established by the administration now moved into the medical field. Rancho, of course, was not started as a hospital. The County had one on Mission Road. But when you have the care of several thousand enfeebled old people, you are going to have health problems on your hands. They are going to get sick, and quite often." "As early as 1923, William Harriman induced the Supervisors to build an infirmary on the ranch staffed by resident physicians. This was a first step. Then just about the time of the earthquake Harriman had convinced the Supervisors of the necessity of building a modern hospital for the patients. That ill wing probably blew some good in forcing a reappraisal of the needs at the Farm. Some of the older buildings were condemned. Fifty-five acres of land was purchased north of Imperial Highway on which hospital facilities were built in beautiful Mission style architecture. Plans were projected to eventually care for as many as 5,000 patients." "Rehabilitation of human lives was still the goal. Advances in medical science would now be enlisted in the program. Rancho would not be concerned solely with custodial care. It would take the difficult cases which required long-time treatment and use all the resources at its command to restore the patient to a useful life." *Resource Name or # (Assigned by recorder) Rancho Los Amigos Historic District

D1. Historic Name: LA County Poor Farm D2. Common Name: Rancho Los Amigos Medical Center

***D3. Detailed Description** (Discuss overall coherence of the district, its setting, visual characteristics, and minor features. List all elements of district.): The Rancho Los Amigos Historic District is an institutional district located in Los Angeles County, in the southwest portion of the town of Downey. The district contains 109 buildings, structures, and features. Development in the district is primarily institutional, containing mostly one- and two story patient wards, surrounded by support and administrative facilities. While the property first began operating as a poor farm in 1888, the majority of the buildings that remain on the property were constructed between 1907 and 1932 and were largely designed in the Renaissance Revival style and brick vernacular, although the district also exhibits examples of Craftsman, Neoclassical Revival, Spanish Colonial Revival, and modest utilitarian buildings. Of the 109 buildings, structures, and features, 61 are contributors to the district and 48 are non-contributors due to extensive alterations or construction outside the period of significance. The contributing buildings represent seven different building types including Administration and Staff Buildings, Patient Wards, Dining and Social Facilities, Utilities, Agricultural and Occupational Therapy Facilities, Maintenance and Support Buildings, and Landscape Features. The district occupies flat terrain with streets generally arranged in a grid pattern. Streets within the district include Consuelo Street, Bonita Street, Descanso Street, Esperanza Street, and Flores Street. The streets feature concrete curbs and sidewalks with landscaped parkways and original lampposts. A landscaped traffic circle occupies the intersection of Consuelo Street, and Erickson Avenue. (See Continuation Sheets)

***D4. Boundary Description** (Describe limits of district and attach map showing boundary and district elements.): The district is bounded by Golondrinas Street, Erickson Avenue, and Flores Street to the north, Dahlia Avenue, Consuelo Street, and Bonita Street to the east, Bonita Street, Erickson Avenue, and Aliso Street to the south, and Laurel Street to the west.

***D5. Boundary Justification:** It is recommended that the District's boundary be expanded near the southeast corner to include the entirety of the Site Plan, which was overlooked by previous evaluations. The new District boundary encompasses additional portions of Consuelo Street, Bonita Street, and Dalia Avenue and the associated landscape areas east of the Administration Building (LACO No. 1100). These elements of Rancho Los Amigos' site plan contribute to the District's character and setting and continue to exhibit a high level of integrity from the period of significance. The new District boundary follows the natural contours of the landscape and would contain the contiguous grouping of 61 buildings and features contributing to the district's significant association with healthcare in Los Angeles County during the late 19th and early 20th centuries.

D6. Significance: Theme Public Health; Housing the Poor in California **Area** Los Angeles County
Period of Significance 1888-1952 **Applicable Criteria** National Register Criteria A and C, California Register Criterion 1, and Los Angeles County Criteria 1 and 5
(Discuss district's importance in terms of its historical context as defined by theme, period of significance, and geographic scope. Also address the integrity of the district as a whole.)

The Rancho Los Amigos South Campus was first developed by the County of Los Angeles in 1888. Nearly thirty years earlier, the State of California's legislature enacted requirements that county governments should perform all acts necessary to the county welfare. This decision eventually led to the California "Poor Law of 1855," which made the care of the aged and needy the responsibility of local governments. Los Angeles County's obligation to provide for the poor and its growing indigent population resulted in significant overcrowding of the County Hospital. In 1888, the County opened a poor farm on the subject property, near the outskirts of the newly established town of Downey. Initially, the poor farm housed the elderly or those suffering minor illnesses and physical disabilities, relieving the overcrowded County Hospital. By the late nineteenth century, it had become common place for county governments throughout the country to operate almshouses, poorhouses, or poor farms. The concept of the almshouse, dating back to the early history of the British Colonies, had changed very little up until the late nineteenth century. (See Continuation Sheets.)

D4. Description Continued:

The South Campus achieved its present appearance during the Development of Rancho Los Amigos Era (1907-1932), which began with the construction of the first patient ward (LACO No. 1205) in 1907 on the east side of Erickson Avenue; this signified the start of the Los Angeles County Poor Farm's transition to a long-term care medical facility. In 1913, in response to growing utility needs, the Water Tower (LACO No. 1301) was erected. It was not until 1925, however, that the current Power Plant was erected (LACO No. 1300).

Three major groupings of patient wards were created on the subject property. Each grouping contained wards featuring identical or very similar designs. The first grouping, comprised of four U-shaped psychiatric wards, was established at the northeast corner of the subject property, beginning with the erection, as mentioned above, of LACO No. 1205 (Men's Psychiatric Ward). LACO No. 1205 originally featured a rectangular plan; in 1909, however, the north and south wings were added, altering its original footprint to a U-shape. In 1916, the north and south wings were further elongated; in the process, each wing received a two-story addition (the second story served to house attendants) and a one-story addition (additional ward space). A cafeteria addition was also made to the center of LACO No. 1205 in 1916. The new U-shape of LACO No. 1205 was replicated three additional times on the subject property. In 1919, LACO No. 1203 (Women's Psychiatric Ward), a smaller U-shaped ward, was erected immediately to the south of LACO No. 1205. In 1924, two additional wards mirroring the plans of LACO Nos. 1205 and 1203 were added, completing the grouping: LACO No. 1204 (Men's Psychiatric Ward) and LACO No. 1204 (Women's Psychiatric Ward).

The second grouping, consisting of five identical two-story general wards, was established on the west side of Erickson Avenue, just north of its southern terminus, beginning with the construction of LACO Nos. 1184 and 1185 in 1913. LACO No. 1186 (built in 1916), LACO No. 1187 (built in 1926), and LACO No. 1188 (built in 1928) were subsequently added to the south, completing the row of wards.

Finally, the third grouping, comprised of thirteen patient wards designed as cottages, each with a similar design. The grouping is situated on the north side of Descanso Street, at the northwestern corner of the subject property. This grouping included nine patient wards on the east side of Laurel Street, connected by a long verandah along their primary (south) elevations, and four additional patient wards on the west side of Laurel Street, also unified by a verandah fronting their primary (south) elevations. The patient wards were constructed in three phases. The first phase included the construction of LACO Nos. 1189, 1190, 1191, and 1192 in 1923. During the second phase in 1926, LACO Nos. 1193, 1194, and 1195 were built. Finally, in 1928, as part of the third phase, LACO Nos. 1196, 1197, 1198, and 1199 were added. LACO Nos. 1200 and 1201 were also erected during the late 1920s at the end (east side) of the row of patient wards; however, they were demolished between 1994 and 2003 according to aerial photographs.

In response to the growing number of female patients, a women's ward was constructed at an unknown date before 1926, based upon an aerial photograph, directly to the south of LACO No. 1203. This ward was demolished between 1963 and 1974, according to aerial photographs. Another women's ward, LACO No. 1238 (Casa Consuelo), was designed by architect Karl Wilhelm Muck and constructed in 1930 to the south of LACO No. 1202 (Women's Psychiatric Ward).

***Recorded by:** ESA ***Date** June 19-24, 2017 X Continuation □Update

In 1907, a single-family residence designed by architect George Low was erected in the area below LACO No. 1205, on the south side of Consuelo Street, for the Superintendent and his family: LACO No. 1101 (Harriman/Superintendent's House). William R. Harriman, who served as Superintendent from 1915 to 1952, took up residence there. During the Development of Rancho Los Amigos Era (1907-1932), the subject property's administrative center shifted to the vicinity of LACO No. 1101, on the south side of Consuelo Street. The demolition of the original Office Building on the subject property, as described earlier, coincided with the construction of a new administration building overlooking Consuelo Street in 1926: LACO No. 1100 (Administration/Safety Police Building).

In 1908, a chapel (LACO No. 1254) designed by architectural firm Hudson & Munsell was constructed on the east side of Erickson Ave, north of LACO No. 1101 and directly to the south of LACO No. 1205. In 1919, LACO No. 1254 was relocated further to the south to make way for LACO No. 1203 (Women's Psychiatric Ward). Following the erection of the chapel, several more social, as well as dining, facilities were constructed on the subject property for patient use. In 1912, just south of the Poor Farm's original core, the Commissary and Receiving Room (LACO No. 1263) was built; the following year, the Dining Room, Kitchen, and Staff Room (LACO No. 1262) designed by architectural firm Hudson & Munsell was attached to it (LACO No. 1263 underwent several additions until 1926 when it attained its current appearance). In 1928, Amigos Hall (LACO No. 1266), designed by architect Karl Wilhelm Muck, was built just north of the original poultry yards. During the same year, the Auditorium (LACO No. 1261), designed by architect Karl Wilhelm Muck, was erected on the site which the original Dining Hall (Refectory) formerly occupied. Finally, in 1932, Bonita Hall (LACO No. 1264), designed by architect Edward C. N. Brett, was added just south of LACO No. 1262.

The subject property's agricultural functions continued through the 1920s, as marked by the construction of the Broder House/Vivarium (LACO No. 1335) in 1929 in the poultry yard established at the southeast corner of the subject property. In 1923, horse stables (LACO No. 1283) designed by architect George Low were erected on the east side of Erickson Avenue, just north of that street's south end. After the Long Beach earthquake of 1933, LACO No. 1283 (Trunk Storage), which was extensively damaged, underwent substantial alteration, with the removal of its second story. In the 1920s, the area to the west of Juniper Street was improved with several buildings and structures associated with occupational therapy. For example, in 1925, the Work Preparation Center (LACO No. 1207) was constructed immediately to the west of LACO No. 1262 (Dining Room, Kitchen, Staff Room).

Whereas William R. Harriman resided near the new administration center along Consuelo Street, staff were quartered at the northwest corner of the subject property. By 1926, according to an aerial photograph, several staff cottages occupied this area. One staff housing block was situated in the area presently bound by Erickson Avenue to the east, Hawthorne Avenue to the west, and Descanso Street to the south. This block was improved with fifteen staff cottages (three duplexes and twelve single-family dwellings) set behind landscaped front yards and arranged in two rows; eight overlooked Erickson Avenue while seven fronted Hawthorne Avenue. A second staff housing block sat directly to the west of the aforementioned block, occupying the area at the southeast corner of Hawthorne Avenue and Flores Street. This second block consisted of four staff cottages designed by Parker Orasmus Wright, Jr., each containing four staff living units. In 1927, the Kitchen and Dining Building (LACO No. 1295), intended for staff, was constructed to the

east of the second staff housing block. Of all the staff cottages, only two remain on the subject property: LACO Nos. 1121 (built in 1921) and 1123 (built in 1924). The other staff cottages were gradually demolished after 1963, according to aerial photographs.

Under the direction of Harriman, the Los Angeles County Poor Farm changed its name to Rancho Los Amigos in 1932. During the 1920s, Erickson Avenue became the primary entry to the South Campus due to its connection with Imperial Highway to the north, a major east-west transportation corridor in the surrounding area.

By 1933, Rancho Los Amigos had completed its transition from a poor farm to a long-term care medical facility under the continued direction of William R. Harriman, and was fully developed. There was very little site development between 1933 and 1952, with only a few buildings erected during this time, including the Lumber Shed (LACO No. 954), Landscape Office (LACO No. 1357), and Post Office (LACO No. 2677).

CONTRIBUTING BUILDINGS AND FEATURES

LACO No.	Building Name	P-Number	Date of Construction

D6. Significance Continued:

When the Los Angeles County Poor Farm opened, advancements in medicine and new laws governing the treatment of the sick and old aged, were beginning to result in significant changes to almshouses throughout the country. Development on the South Campus from its inception in 1888 as a poor farm to the subdivision of its former agricultural fields in the 1950s, reflects the changing attitude toward healthcare in Los Angeles County as well as the evolving medical trends in the United States and State of California. Initially, labor on the poor farm was intended to expose inmates (patients) to the medicinal qualities of California's mild climate. Produce from the agricultural programs was used to feed the inmate population, giving the poor farm the add added benefit of self-sustainability. Overtime, the agricultural fields were replaced with new patient wards, administration buildings, utilities, and maintenance buildings, while healing work in the fields was replaced by occupational therapy programs in workshops.

The history of the Los Angeles County Poor Farm and its evolution into a long-term healthcare facility (Rancho Los Amigos) during the late nineteenth and early twentieth century reflect the broader trends in

medical history across the United States. Furthermore, the property's development over time illustrates the changing approaches healthcare and treatment of the indigent population in Los Angeles County. The South Campus of Rancho Los Amigos appears have a significant association with the broad patterns of our history and appears eligible as a historic district under the National Register Criterion A, California Register Criterion 1 and Los Angeles County Criterion 1.

National Register Bulletin 15, How to Apply the National Register Criteria for Evaluation, identifies historic districts under Criterion C as "a significant and distinguishable entity whose components may lack individual distinction." The South Campus appears to be a significant entity (as previously discussed under Criteria A/1) with multiple components, many of which lack individual distinction. Therefore, the South Campus of Rancho Los Amigos does appear significant as historic district under National Register Criterion C.

In addition to being eligible under Los Angeles County Criterion 1, the District is eligible under Los Angeles County Criterion 5, which recognizes historic resources that have been formally listed or found eligible for listing on the National Register and/or California Register. The Rancho Los Amigos Historic District was formally listed on the California Register by the Keeper and determined eligible for the National Register following the initial survey completed in 1995 by Historic Resources Group (HRG).

The National Register and California Register recognizes a property's integrity through seven aspects or qualities: location, design, setting, materials, workmanship, feeling, and association. Eligible properties should retain several, if not most, of these aspects. Both registers require that a resource retain sufficient integrity to convey its significance, and the property must retain the essential physical features that enable it to convey its historical identity. The South Campus of Rancho Los Amigos was identified as significant under Criteria A/1 for its association with evolving medical care in Los Angeles County during the late nineteenth and early twentieth centuries. Based upon this significance finding, a period of significance has been identified as 1888, when the property began operation as the Los Angeles County Poor Farm, and 1952 when the former poor farm had fully converted into a long-term healthcare facility and most of the agricultural fields had been subdivided for residential development. Additionally, the property was determined significant under National Register Criterion C as a significant and distinguishable entity whose components lack individual distinction (historic district).

Location

The South Campus has remained in its original location since it opened as the Los Angeles County Poor Farm in 1888. Therefore, the South Campus retains its integrity of location for the period of significance (1888-1952).

Design

When the South Campus was originally planned by the Los Angeles based architectural firm of Kysor, Morgan, and Walls in 1887, the intent was to build an agricultural institution. Initially conceived as the Los Angeles County Poor Farm, the South Campus was intended to provide food, shelter, and clothing to the County's indigent population. The four original buildings were centrally located among agricultural fields. Overtime, the South Campus expanded as the needs of the institution evolved. The agricultural fields

receded as new patient wards were constructed alongside support and administration facilities. While the current conditions of the South Campus do not reflect the original design intent of Kysor, Morgan, and Walls, the changes that occurred to the property throughout the late nineteenth and early twentieth centuries are what make it significant. The changes to the South Campus reflect changing approaches to healthcare that were occurring locally as well as nationwide. The greatest period of change for the property occurred between 1907 and 1932, when XX buildings were constructed, many of which remain extant. Although they were not constructed based on a master plan developed by the sites original designers, they reflect the changing needs of the institution. The South Campus retains intact examples of each of the building types that were present throughout the period of significance (1888-1952). Therefore, the South Campus retains its integrity of design reflecting the evolution of the property throughout its transition from a poor farm to a long-term healthcare facility.

Workmanship

As stated previously, the South Campus developed over a period of time, transitioning from a poor farm into a long-term healthcare facility. Throughout the period of significance (1888-1952), new buildings and features were constructed to meet the evolving needs of the institution. These buildings and features reflect a variety of architectural styles and construction techniques based upon their purpose and date of construction. Currently the South Campus retains examples of a variety of architectural styles, including Craftsman, Neoclassical Revival, Spanish Colonial Revival, Renaissance Revival and brick vernacular, as well as utilitarian structures. Additionally, the South Campus retains 62 contributing buildings and features, constructed over a sixty-year period. These buildings and features, which remain intact and retain enough integrity to contribute to the District, reflect a wide variety of uses, construction techniques, and workmanship. Therefore, the South Campus retains integrity of workmanship.

Materials

The South Campus has suffered from deterioration of its original materials overtime. Despite the deterioration that has occurred, the contributing buildings found throughout the District retain their original materials including, wood, masonry, cast iron, concrete, and plaster. The contributing buildings represent each of the building types that were located on the property during the period of significance (1888-1952), reflecting the changes that occurred to the institution as it adapted to the healthcare needs of the County. In its current condition, the South Campus possesses the necessary materials to reflect its significance. Therefore, the South Campus retains its integrity of materials.

Setting

The historic setting of the South Campus has been altered significantly over time due to the subdivision of the former agricultural fields. Properties north of the South Campus have been redeveloped with warehouses and office buildings, while properties to the east were subdivided for residential development in the 1950s. Although these changes to the setting have removed the former poor farm from its agricultural setting, the changes reflect the property's transformation from a poor farm into a long-term healthcare facility. While the fields surrounding the former poor farm have been lost due to infill development, the immediate setting of the District and its contributors remains intact. The original circulation paths remain,

reflecting the property's original layout during its inception in 1888. The District retains 62 contributing buildings and features, constituting a majority of the buildings present during the District's period of significance (1888-1952). Although the landscaping has evolved over time, the open areas throughout the District's interior remain without infill development, reflecting the conditions of the property during the period of significance. While the broader setting outside of the District has been altered by infill development, the immediate setting that contributes to the District's significance remains intact. Therefore, the District retains its integrity of setting.

Feeling

The District retains examples of the eight different building types that were present during the period of significance (1888-1952). Each of the building types contributed to the overall function of the institution. In addition to the contributing buildings, the District retains its original circulation paths and open landscape with very little infill development. With 62 contributing buildings and features reflecting a variety of uses, the South Campus continues to convey the feeling of an early twentieth century healthcare facility and retains its integrity of feeling.

Association

The South Campus continued to operate as a healthcare facility until the 1980s, when the County began to abandon the buildings. Currently, only the former Administration Building is in regular use. However, none of the contributing buildings, including the administration building, have been significantly altered for new uses. Therefore, because the contributing buildings continue to reflect their original healthcare related uses, the District retains its integrity of association.

Summary

The South Campus meets the National Register and California Register integrity requirements, retaining its integrity of location, design, workmanship, materials, setting, feeling, and association. The District remains in its original location since it opened as a poor farm in 1888. It has been identified as significant for its association with the evolving healthcare needs of Los Angeles County during the late nineteenth and early twentieth centuries. Although the District no longer reflects the original design intent of the architects as constructed in 1888, the changes that occurred to the property overtime have contributed to its significance. New buildings were added to the site overtime based on need and space available. Many of the buildings constructed during the period of significance (1888-1952) remain intact with little modification. The 62 contributing buildings, structures, and features represent eight different building types, reflecting their different uses and the overall function of the institution as it evolved into a long-term healthcare facility. Therefore, the District retains its integrity of design as it evolved over time. While some of the materials have deteriorated due to the abandonment of the site, the materials are intact and continue reflect the workmanship of the builders and designers at the time of their construction. The surrounding setting has changed significantly since the District was first developed as a poor farm. The former agricultural fields that once surrounding the property have been subdivided for residential and commercial development. However, these changes reflect the property's significance as it evolved from a poor farm into a healthcare facility. The immediate setting within the district boundaries remains intact and continues to reflect the District's historic

appearance. Consequently, the District retains its integrity of feeling as an early twentieth century healthcare facility, retaining key building types like the several patient wards and the administration building. The District retains integrity of association because the majority of the contributing buildings remain in the original condition. None of the buildings have been repurposed in a manner that resulted in substantial change. The property has been mostly abandoned for the last thirty years, with the exception of the Administration Building (LACO No. 1100), which has continued to operate as an office building. Therefore, the Rancho Los Amigos Historic District retains integrity of location, design, workmanship, materials, setting, feeling, and association.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
LACO No. 1240 is located in the interior courtyard created by two U-shaped patient wards, LACO No. 1204 to the east, and LACO No. 1203 to the west, with Flores Street to the north. It is situated in the northeast area of the South Campus of Rancho Los Amigos. It is a single-story rectangular shaped canopy, featuring metal posts set in a concrete pad. The post support wood beams and a flat aluminum roof and scalloped fascia board. The shelter is partially enclosed with screened chain-link fencing.

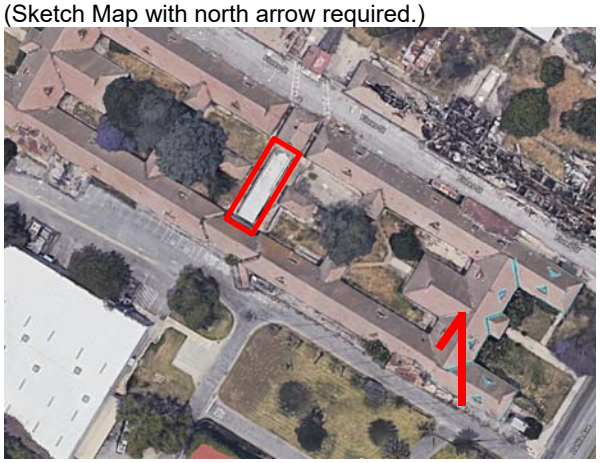
BUILDING, STRUCTURE, AND OBJECT RECORD

***Resource Name or #** (Assigned by recorder) Shelter
***NRHP Status Code** 6Z

B1. Historic Name: Shelter
B2. Common Name: Shelter
B3. Original Use: Shelter B4. Present Use: Shelter
***B5. Architectural Style:** Utilitarian
***B6. Construction History:** (Construction date, alterations, and date of alterations)
LACO No. 1240 is a metal and wood canopy located in the courtyards of LACO No. 1202 and LACO No. 1203. The construction date of the currently extant shelter is unknown. Early historical aerials of the property show a smaller structure with a pitched roof in the same location as LACO No. 1240. This is confirmed in a 1932 Sanborn map of the property, which depicts a smaller structure in the location of LACO No. 1240. A 1963 aerial of the property shows a similar structure in the location of LACO No. 1240 but it has a dark colored roof in the black and white photo, as opposed to the white metal roof of the current structure. The materials and design of LACO No. 1240 match the materials and design of similar canopies found in the courtyards of neighboring patient wards (LACO No. 1205 and LACO No. 1204). The similar canopies are not present on the property until sometime after 1963. Alterations to the shelter include the partial enclosure with screened chain-link fencing completed at an unknown date.



***B7. Moved?** ☒**No** ☐**Yes** ☐**Unknown** **Date:** _____ **Original Location:** _____
***B8. Related Features:**
The shelter is located in the courtyard areas of LACO No. 1202 and LACO No. 1203.

B9a. Architect: Unknown **b. Builder**: Los Angeles County
***B10. Significance: Theme** Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1887-1952)
Area Downey, Los Angeles County
Period of Significance 1888-1952 **Property Type** Patient Ward (Ancillary Building) **Applicable Criteria** A/1
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
Based upon extensive research, it was determined that the District continues to remain eligible under National Register Criterion A and California Register Criterion 1 at the local level of significance. The Los Angeles County Poor Farm and its evolution into a long-term healthcare facility (Rancho Los Amigos) during the late nineteenth and early twentieth century reflect broader trends in medical history across the United States. The District's development over time illustrates changing approaches to healthcare and the treatment of Los Angeles County's indigent population. Furthermore, the District appears eligible under National Register Criterion C as a distinguishable entity whose components may lack individual distinction (i.e., a district). Consistent with the previous evaluation by Sapphos, it is recommended that the District's period of significance be extended to 1952, when the adjacent agricultural lands were subdivided for residential development, reflecting the completion of the subject property's transformation into a long-term healthcare facility. LACO No. 1240 was originally identified as a contributing structure to the Rancho Los Amigos Historic District.

B11. Additional Resource Attributes: (List attributes and codes) None

*B10. Significance (continued)

LACO No. 1240 (P-19-189364) (continued from the BSO Record)

Previous evaluations identified the structure's construction date as 1930. However, historical aerial images from 1963 and earlier show different shelter structures in the location of LACO No. 1240. The Shelter appears to have been constructed after the district's period of significance had ended in 1952 and should be considered a non-contributor to the historic district. As utilitarian structure, the Shelter does not appear to have a significant association historic events or personages and is not an excellent example of a type or style of architecture or the work of a master architect. The structure is not a significant source of information associated with history or prehistory. Therefore, the Shelter is not eligible as an individual resource under any of the applicable nation, state, or local criteria and is not a contributor to the Rancho Los Amigos Historic District.

LACO No. 1259 is located near the western boundary of the Rancho Los Amigos Historic District, directly adjacent to LACO No. 1207, Work Preparation Center. The Wheelchair Repair building is bound by Descanso Street to the north, LACO No. 1207 and Laurel Street to the west. To the south and east of the Wheelchair Repair building are open parking lots and metal shed structures. The Wheelchair Repair building is a single-story rectangular shaped utilitarian building with vertical board and batten wood siding. The main portion of the building features a pitched roof with overhanging eaves, while an addition to the south elevation is topped with a shed-style roof. The building's south elevation has a single, partially glazed wood door and metal security screen flanked by three window openings that are boarded. The north elevation has two door openings that are boarded and a door opening that has been infilled with board and batten siding. Window openings at the west end of the north elevation are boarded. The east and west elevations feature window openings that are boarded or infilled with board and batten siding. The west elevation features a single wood, partially glazed door hidden behind a plywood barrier. The doorway is accessed by a small concrete ramp.

B9a. Architect: Unknown **b. Builder**: Los Angeles County
***B10. Significance: Theme** Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1887-1952) **Area** Downey, Los Angeles County
Period of Significance 1888-1952 **Property Type** Wheelchair Repair Building (Ancillary Building) **Applicable Criteria** A/1
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
Based upon extensive research, it was determined that the District continues to remain eligible under National Register Criterion A and California Register Criterion 1 at the local level of significance. The Los Angeles County Poor Farm and its evolution into a long-term healthcare facility (Rancho Los Amigos) during the late nineteenth and early twentieth century reflect broader trends in medical history across the United States. The District's development over time illustrates changing approaches to healthcare and the treatment of Los Angeles County's indigent population. Furthermore, the District appears eligible under National Register Criterion C as a distinguishable entity whose components may lack individual distinction (i.e., a district). Consistent with the previous evaluation by Sapphos, it is recommended that the District's period of significance be extended to 1952, when the adjacent agricultural lands were subdivided for residential development, reflecting the completion of the subject property's transformation into a long-term healthcare facility. LACO No. 1259 was originally identified as a contributing structure to the Rancho Los Amigos Historic District.

***B10. Significance (continued)**

LACO No. 1259 (P-19-189364) (continued from the BSO Record)
Previous evaluations identified the structure's construction date as 1932. However, a historical aerial image from 1963 and a Sanborn map image from 1932 show an L-shape building in the location of LACO No. 1259. The Wheelchair Repair Building appears to have been altered with additions after the district's period of significance had ended in 1952. Because of this, it should be considered a non-contributor to the historic district. Furthermore, as utilitarian structure, the Wheelchair Repair Building does not appear to have a significant association with historic events or personages and is not an excellent example of a type or style of architecture or the work of a master architect. The structure is not a significant source of information associated with history or prehistory. Therefore, the Wheelchair Repair Building is not eligible as an individual resource under any of the applicable national, state, or local criteria and is not a contributor to the Rancho Los Amigos Historic District.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
The Auditorium (LACO No. 1261) is in the central area of the Rancho Los Amigos campus, west of the Moreton Bay Fig Tree and Shelter (LACO No. 1265), across a grassy setback from Erickson Avenue. It is a two-story, unreinforced masonry building with a rectangular plan and smooth stucco siding. It was originally designed in the Spanish Colonial Revival style, but was modified to resemble a relatively bare Art Deco building. Minor changes were observed in the 2017 survey as compared with the 2007-2011 Sapphos survey. These physical changes since the last survey include the further boarding of most windows and doors, and deterioration of stucco to reveal brick underneath on all elevations. The 2017 survey revealed an overall degraded condition of Auditorium (LACO No. 1261).

BUILDING, STRUCTURE, AND OBJECT RECORD

***Resource Name or #** (Assigned by recorder) Auditorium (LACO No. 1261)
***NRHP Status Code** 2D2

B1. Historic Name: Auditorium
B2. Common Name: Auditorium
B3. Original Use: Auditorium/Theater B4. Present Use: Auditorium
***B5. Architectural Style:** Utilitarian
***B6. Construction History:** (Construction date, alterations, and date of alterations)
No building permits were found for this building. By the mid-1950s, the exposed brick walls of the Spanish style building had been whitewashed, according to a photograph taken at the time. Subsequent modifications made in 1972 had the effect of changing the Spanish Colonial Revival appearance of the building to a style influenced by the Art Deco, which was experiencing a new appreciation during the period. Alterations as they appear from original building plans and historic photographs include: painted stucco applied to the building's once exposed brick exterior walls and over the concrete lintels of the first-floor windows and doors; the removal of the tile roof; and the removal of original wrought-iron grilles attached to the three windows on the second-story façade.

*B10. Significance (continued)

Auditorium LACO No. 1261 (P-19-189378) (continued from the BSO Record)
The Auditorium (LACO No. 1261) was originally identified as a contributing structure to the Rancho Los Amigos Historic District. The 2017 Survey revealed that little has changed since the Auditorium was last surveyed in 2007 and appears to remain eligible as a contributing structure to the Rancho Los Amigos Historic District.

The Auditorium (LACO No. 1261) was previously recommended individually eligible under National Register Criterion C and California Register Criteria 3 by Post/Hazeltine Associates in 2004. The Auditorium's (LACO No. 1261) individual eligibility was reevaluated under National Register Criterion C and California Register Criterion 3. The most recent survey conducted by Sapphos in 2007-2011 recommended the Auditorium (LACO No. 1261) individually ineligible attributable to alterations to the original Spanish Colonial Revival style design. The Auditorium (LACO No. 1261) was reevaluated under the following historical and architectural themes: Development of the Los Angeles County Poor Farm and

Rancho Los Amigos (1988-1952) and Spanish Colonial Revival Style Architecture (1915-1940). The 850-seat Auditorium (LACO No. 1261) was built in 1928, in order to provide a larger entertainment venue for the growing campus. The Auditorium (LACO No. 1261) was designed by County architect Karl Wilhelm Muck in the Spanish Colonial Revival style. Based upon intensive research and site visit observations, the Auditorium (LACO No. 1261) has been substantially altered and the once restrained Spanish Colonial Revival style is no longer discernable. The design now reflects an Art Deco inspired style.
The original character-defining features on the Auditorium (LACO No. 1261) that embodied the Spanish Colonial Revival style have been removed; stucco has been applied over the exposed brick on all elevations and the cast stone lintels above the first-story fenestration, the front Spanish-tile pent roof and decorative wrought iron grilles over the second-story windows have all been removed, the three pairs of entry doors were replaced, steel windows on the side elevations were removed and openings were infilled. As such, the Auditorium (LACO No. 1261) is not a distinctive or recognizable example of a Spanish Colonial Revival style social facility and in its current altered conditions it does not represent a notable work of County architect Karl Wilhelm Muck. Therefore, the Auditorium (LACO No. 1261) is not individually significant under National Register Criterion C, California Register Criterion 3, or Los Angeles County Criteria 3 for architecture.

***B5. Architectural Style:** Utilitarian/Brick Vernacular
***B6. Construction History:** (Construction date, alterations, and date of alterations)
No building permits were found for this building. Architectural drawings for the 1913 additions and alterations are on file with the County of Los Angeles and were drawn by Hudson and Munsell, Architects, Los Angeles. Alterations as they appear from historic photographs include: fire damage to the second floor and roof of the 1913 Dining, Game, and Staff Building and the removal of some original wood-framed windows and doors. Minor changes were observed during the 2017 survey as compared with the 2007-2011 Sapphos survey. These changes in the physical condition include the presence of a new metal "roll up" door within an original door opening on the east façade of the Dining and Reading Room portion, adjacent to another large door opening which appears to have been infilled with a smaller door.

***B10. Significance (continued)**

Dining Room, Kitchen, and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) (P-19-189379) (continued from the BSO Record)

Furthermore, the District appears eligible under National Register Criterion C as a distinguishable entity whose components may lack individual distinction (i.e., a district). Consistent with the previous evaluation by Sapphos, it is recommended that the District's period of significance be extended to 1952, when the adjacent agricultural lands were subdivided for residential development, reflecting the completion of the subject property's transformation into a long-term healthcare facility. The Dining Room, Kitchen and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) were originally identified as contributing structures to the Rancho Los Amigos Historic District. While the Dining Room, Kitchen and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) have changed slightly since the last evaluation by Sapphos in 2007, the changes do not detract from its status as a district contributor.

Because the Dining Room, Kitchen and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) were previously recommended individually eligible in two previous evaluations under National Register Criterion C and California Register Criterion 3 by Post/Hazeltine Associates in 2004 and Sapphos in 2007, their individual eligibility under National Register Criterion C and California Register

Criterion 3 was reevaluated during the recent survey in 2017. Both Post/Hazeltine and Sapphos evaluated LACO Nos. 1262 and 1263 as one building because they are physically connected, so following their precedent LACO Nos. 1262 and 1263 were reevaluated as one resource under the following historical and architectural themes: Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1988-1952), Renaissance Revival and Brick Vernacular Architecture (1895-1935), and Hudson and Munsell. LACO Nos. 1262 and 1263 were built in approximately seven stages between 1912 and 1926 to accommodate the expanding patient population of Rancho Los Amigos. The first portion of LACO No. 1263, the Commissary, was built in 1912 followed by the Receiving Room in 1926.

The Dining and Reading Room, the earliest portion of the LACO NO. 1262, was constructed in 1913 and designed by architectural firm Hudson and Munsell, and followed by the Kitchen addition in 1917, the Dining Extension in 1920, and the final Dining Room addition in 1924.

Therefore, due to the seven additions in the space of 14 years, the architecture does not embody the distinctive characteristics of the Brick Vernacular style with Renaissance Revival style details. Rather, LACO Nos. 1262 and 1263 are representation of utilitarian architecture without a cohesive design. While the architecture firm of Hudson and Munsell designed the Dining Room in LACO No. 1262, it is an altered example and certainly not the most notable of their body of work. Furthermore, the later additions to LACO Nos. 1262 and 1263 are not identified with prominent architects. As such, the Dining Room, Kitchen and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) are not a distinctive or recognizable example of Renaissance Revival and Brick Vernacular Architecture (1895-1935) and do not represent a notable work Hudson and Munsell. The Dining Room, Kitchen and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) is not individually significant under National Register Criterion C, California Register Criterion 3, or Los Angeles County Criteria 3 for architecture.

Due to the substantial deterioration and alterations, Dining Room, Kitchen, and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) does not retain integrity of design, workmanship or materials from the period of significance 1912 to 1926, when the buildings were constructed. Exterior alterations noted during the 2017 survey in comparison with historical photographs and plans have substantially compromised LACO Nos. 1262 and 1263's integrity of design, workmanship, and materials. Alterations to LACO No. 1262 include fire damage to the second story of the 1913 portion of the building; a non-original metal roll-up door on the east elevation; a large entryway infilled with a new door; removal of windows and doors; boarding up of most of the windows and doors; a small stucco addition along the west elevation; an added metal loading dock and canopy; masonry removed from the ornamental frieze at a corner downspout on the west elevation. Alterations to LACO No. 1263 include a small stucco addition along the northeast portion and boarded doors and windows.

Furthermore, there is substantial deterioration of the brick masonry work on both exteriors of LACO Nos. 1262 and 1263. Despite these alterations to the original design, the Dining Room, Kitchen, and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) retains its integrity of association under the historical theme of Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1988-1952) and its feeling as a social hub on the subject property. LACO Nos. 1262 and 1263 retains its historical setting adjacent to LACO Nos. 1184-1188, 1262, 1264, 1275, the Moreton Bay Fig Tree, and courtyard. Lastly, the LACO Nos. 1262 and 1263 retain their original location.

As explained under the significance evaluation, the Dining Room, Kitchen, and Staff Room (LACO No. 1262) and Commissary and Receiving Room (LACO No. 1263) is not individually significant under National Register Criterion C and California Register Criterion 3 for architecture because it is not a distinctive example of Brick Vernacular architecture. Furthermore, alterations and the substantial deterioration of the exterior masonry has eroded the simplistic Brick Vernacular architecture and the refined Renaissance Revival style details. Therefore, the lack of design, materials, and workmanship

further substantiates its individual ineligibility under National Register Criterion C, California Register Criterion 3, or Los Angeles County Criteria 3 for architectural significance.

LACO No. 1279 is located in the western half of the Rancho Los Amigos Historic District, adjacent to LACO No. 1280, Garage Storage. The Garage is bound by a paved parking lot and Descanso Street to the north and to the west by a paved parking lot, LACO Nos. 1207 and 1259, and Laurel Avenue. To the south is the adjacent LACO No. 1280, and to the east is LACO 1278. The Garage is a single-story rectangular utilitarian building with wood board siding punctuated by flat wooden beams toward the western end of the building. The building features a corrugated metal gabled roof with a shallow pitch, narrow eaves, and exposed rafter tails at the gables. The building's west (primary) elevation has a boarded window opening and a boarded door opening. The east (rear) elevation comprises a wider opening, which is also boarded. The north elevation has no fenestration. The south elevation has one small, un-boarded window opening toward the western half of the building.

***B10. Significance: Theme** Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1887-1952)
Area Downey, Los Angeles County
Period of Significance 1888-1952 **Property Type** Garage (Ancillary Building) **Applicable Criteria** A/1
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
Based upon extensive research, it was determined that the District continues to remain eligible under National Register Criterion A and California Register Criterion 1 at the local level of significance. The Los Angeles County Poor Farm and its evolution into a long-term healthcare facility (Rancho Los Amigos) during the late nineteenth and early twentieth century reflect broader trends in medical history across the United States. The District's development over time illustrates changing approaches to healthcare and the treatment of Los Angeles County's indigent population. Furthermore, the District appears eligible under National Register Criterion C as a distinguishable entity whose components may lack individual distinction (i.e., a district). Consistent with the previous evaluation by Sapphos, it is recommended that the District's period of significance be extended to 1952, when the adjacent agricultural lands were subdivided for residential development, reflecting the completion of the subject property's transformation into a long-term healthcare facility. LACO No. 1279 was originally identified as a non-contributing structure to the Rancho Los Amigos Historic District.

*B10. Significance (continued)

LACO No. 1279 (P-19-189404) (continued from the BSO Record)
Due to its high quality and early date of construction, LACO No. 1279 appears to have a significant association with the operation of the L.A. County Poor Farm and is an excellent example of a type or style of architecture or the work of a master architect. The structure is a significant source of information associated with history or prehistory. Therefore, the Garage is a contributor to the Rancho Los Amigos Historic District. It is not eligible as an individual resource under any of the applicable national, state, or local criteria.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
LACO No. 1286 is located near the southern boundary of the Rancho Los Amigos Historic District, near LACO Nos. 1287 (Oil & Storage), and 2492 (Shed). Garage-Storage is bound by Bonita Street to the north, and open lots and Erickson Avenue west. To the south are LACO Nos. 1287 and 2492 as well as the District boundary. To the east is an alleyway and the District boundary. Garage-Storage is a single-story L-shaped utilitarian building with siding types including vertical board and batten wood siding, corrugated metal siding, and horizontal wood shiplap siding. The roof is an intersecting gabled roof with overhanging eaves and exposed rafter tails. The building's south elevation has two boarded, wood-framed windows and a pair of large wooden entry doors. The north elevation features a large door opening with a pair of large hinged wooden doors. The east and west elevations feature deteriorated wood-framed windows with sliding or multi-lite casement windows and large doors made of wood or corrugated metal. The doorway on the east elevation is accessed by a shallow concrete ramp. The part of the west elevation ending in a gable features two large openings closed by pairs of chain link gates.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
LACO No. 1379 is located adjacent to the western boundary of the Rancho Los Amigos Historic District, attached to LACO No. 4121, Garage, to the east. The Garage is bound by Laurel Avenue/District boundary to the west and a paved courtyard with several metal utilitarian structures to the north (LACO Nos. 1267, 1464, 3348, and 4118). To the south of the Garage is a large open field and to the east is attached LACO No. 4121 and Juniper Street. The Garage is a single-story rectangular shaped utilitarian building with corrugated metal siding. The building features a metal saltbox roof with the larger slope south of the roofline. The shorter, steeper slope ends in an unboxed eave at the entirely open north elevation, which is supported by thin metal poles. The building's south elevation comprises corrugated metal with two boarded windows openings at the western edge. The west elevation has a single window opening. The east elevation comprises a much narrower, slightly taller structure which connects LACO No. 1379 to LACO No. 4121. The exposed interior features wooden rafters, concrete flooring, and wooden trusses on the walls.

*B10. Significance (continued)

LACO No. 1379 (P-19-189404) (continued from the BSO Record)

Previous evaluations identified the structure's construction date as Unknown (Post 1954). However, a historical aerial image from 1963 shows the Garage extant in its current location. This does not change its construction outside of the district's period of significance, which ends in 1952. Because it was constructed outside of the period of significance, it should be considered a non-contributor to the historic district. Furthermore, as utilitarian structure, the Garage does not appear to have a significant association with historic events or personages and is not an excellent example of a type or style of architecture or the work of a master architect. The structure is not a significant source of information associated with history or prehistory. Therefore, the Garage is not eligible as an individual resource under any of the applicable national, state, or local criteria and is not a contributor to the Rancho Los Amigos Historic District.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
LACO No. 3348 is located in the southwestern quadrant of the Rancho Los Amigos Historic District, adjacent to the western boundary. It is grouped with, but not oriented toward, LACO Nos. 1464 and 4118. The Garbage Can Room is bound by Laurel Avenue/the District boundary to the west, Bonita Street immediately to the north, LACO No. 4118 to the east, and LACO No. 1464 to the south. The Garbage Can Room is a single-story rectangular utilitarian building on a concrete pad supported by piers. It features a shingle gabled roof with wood clapboard siding in the gables and narrow eaves with hidden rafter tails. The building's north (primary) features a full-length loading dock and a pair of large, partially boarded wooden doors. The south (rear) elevation comprises fenestration which is entirely boarded. The west elevation has all fenestration boarded except for a pair of wooden doors elevated from the ground by concrete piers. The east elevation had entirely boarded fenestration.

B9a. Architect: Unknown **b. Builder**: Los Angeles County
***B10. Significance: Theme** Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1887-1952)
Area Downey, Los Angeles County
Period of Significance 1888-1952 **Property Type** Garbage Can Room (Ancillary Building) **Applicable Criteria** A/1
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.)
Based upon extensive research, it was determined that the District continues to remain eligible under National Register Criterion A and California Register Criterion 1 at the local level of significance. The Los Angeles County Poor Farm and its evolution into a long-term healthcare facility (Rancho Los Amigos) during the late nineteenth and early twentieth century reflect broader trends in medical history across the United States. The District's development over time illustrates changing approaches to healthcare and the treatment of Los Angeles County's indigent population. Furthermore, the District appears eligible under National Register Criterion C as a distinguishable entity whose components may lack individual distinction (i.e., a district). Consistent with the previous evaluation by Sapphos, it is recommended that the District's period of significance be extended to 1952, when the adjacent agricultural lands were subdivided for residential development, reflecting the completion of the subject property's transformation into a long-term healthcare facility. LACO No. 3348 was originally identified as a non-contributing structure to the Rancho Los Amigos Historic District.

*B10. Significance (continued)

LACO No. 3348 (continued from the BSO Record)

Because it was constructed within the period of significance and appears to represent a building type that contributed to the overall operation of Rancho Los Amigos, LACO No. 3348 appears to have a significant association with the operation of Rancho Los Amigos and is an excellent example of a type or style of architecture or the work of a master architect. The structure is a significant source of information associated with history or prehistory. Therefore, the Garbage Can Room is a contributor to the Rancho Los Amigos Historic District. It is not eligible as an individual resource under any of the applicable national, state, or local criteria.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
LACO No. 4121 is located adjacent to the western boundary of the Rancho Los Amigos Historic District, attached to LACO No. 1379, Garage, to the west. The Garage is bound by Laurel Avenue/District boundary to the west, along with attached LACO No. 1379, and a paved courtyard with several metal utilitarian structures to the north (LACO Nos. 1267, 1464, 3348, and 4118). To the south of the Garage is a large open field and to the east is the courtyard of LACO No. 1266 and Juniper Street. The Garage is a single-story rectangular shaped utilitarian building with corrugated metal siding. The building features a metal saltbox roof with the larger slope south of the roofline. The shorter, steeper slope ends in an unboxed eave at the north elevation, which is supported by thin metal poles and has chain-link fences obstructing access into the otherwise open interior. The building's south and east elevations comprise corrugated metal siding. The west elevation comprises a much narrower, slightly taller structure which connects LACO No. 4121 to LACO No. 1379. The exposed interior features wooden rafters, concrete flooring, and wooden trusses on the walls.

*B10. Significance (continued)

LACO No. 4121 (P-19-189404) (continued from the BSO Record)

Previous evaluations identified the structure's construction date as Unknown (Post 1954). However, a historical aerial image from 1963 shows the Garage extant in its current location. This does not change its construction outside of the district's period of significance, which ends in 1952. Because it was constructed outside of the period of significance, it should be considered a non-contributor to the historic district. Furthermore, as utilitarian structure, the Garage does not appear to have a significant association with historic events or personages and is not an excellent example of a type or style of architecture or the work of a master architect. The structure is not a significant source of information associated with history or prehistory. Therefore, the Garage is not eligible as an individual resource under any of the applicable national, state, or local criteria and is not a contributor to the Rancho Los Amigos Historic District.

P3a. Updated Description:

The Staff Cottage (LACO No. 1121) is located in the northwest area of the South Campus, immediately west of Hawthorne Avenue and south of Flores Street. It is a rectangular one-story building with wood clapboard siding and a gable roof with cross-gable porches. Its adjacent landscape consists mostly of sparse vegetation, with trees near the east elevation. Minor changes were observed in the 2017 survey as compared with the 2007-2011 survey. These changes include the boarding of most windows. Its condition is degraded.

***B6. Updated Construction History:**

No building permits or original architectural drawings were found for LACO No. 1121. It was constructed in 1921.

***B10. Updated Significance:**

A resource must have both significance and integrity to be considered potentially eligible as a historical resource. With regard to district contribution, relative importance of location and visual prominence, date of construction, historic function, architectural merit and spatial relationships are also considered.

The Staff Cottage (LACO No. 1121) was constructed in 1921 as living quarters for staff of the County Poor Farm who worked in the patient ward buildings. ESA evaluated LACO No. 1121 under the following historical theme: Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1888-1952). Based upon its date of construction and building type, LACO No. 1121 appears significant for its association with the Development of Rancho Los Amigos (1907-1932) era. LACO No. 1121 retains sufficient integrity to convey its original use as staff cottages. Though degraded, it is still intact and, in its present condition, retains integrity of location, feeling, and association. It does not retain integrity of setting due to the removal of the additional rows of staff cottages to the northeast sometime in the 1980s when the County rezoned former Rancho Los Amigos land and sold it for commercial development. It also does retain integrity of design, materials, and workmanship due to the alterations and deterioration it has sustained, as recorded by Sapphos in 2007-2011 and ESA in 2017. LACO No. 1121 retains sufficient integrity, however, to convey its historical associations with the transition of the property from a poor farm to long-term care facility. Therefore, ESA recommends that the eligibility of LACO No. 1121 remain unchanged and that it continue to be considered a contributor to the District. ESA recommends that LACO No. 1121 retain its existing NRHP status code of 2D2, noting it as a contributor to the District.

P3a. Updated Description:

The Staff Cottage (LACO No. 1123) is located in the south central area of the South Campus west of Hawthorne Avenue and south of Flores Street. It is a rectangular one-story building with wood clapboard siding and a gable roof with cross-gable porches. Its adjacent landscape consists mostly of sparse vegetation, with trees near the west elevation. Minor changes were observed in the 2017 survey as compared with the 2007-2011 survey. These changes include the boarding of most windows. Its condition is degraded.

***B6. Updated Construction History:**

No building permits or original architectural drawings were found for LACO No. 1123. It was constructed in 1924. Condition issues include deteriorated wood, cracking paint, broken windows, and failing brackets on the porch canopy at the east elevation.

***B10. Updated Significance:**

A resource must have both significance and integrity to be considered potentially eligible as a historical resource. With regard to district contribution, relative importance of location and visual prominence, date of construction, historic function, architectural merit and spatial relationships are also considered.

The Staff Cottage (LACO No. 1123) was constructed in 1924 as living quarters for staff of the County Poor Farm who worked in the patient ward buildings. . ESA evaluated LACO No. 1123 under the following historical theme: Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1888-1952). Based upon its date of construction and building type, LACO No. 1123 appears significant for its association with the Development of Rancho Los Amigos (1907-1932) era. LACO No. 1123 retains sufficient integrity to convey its original use as staff cottages. Though degraded, it is still intact and, in its present condition, retains integrity of location, feeling, and association. It does not retain integrity of setting due to the removal of the additional rows of staff cottages to the northeast sometime in the 1980s when the County rezoned former Rancho Los Amigos land and sold it for commercial development. It also does retain integrity of design, materials, and workmanship due to the alterations and deterioration it has sustained, as recorded by Sapphos in 2007-2011 and ESA in 2017. LACO No. 1123 retains sufficient integrity, however, to convey its historical associations with the transition of the property from a poor farm to long-term care facility. Therefore, ESA recommends that the eligibility of LACO No. 1123 remain unchanged and that it continue to be considered a contributor to the District. ESA recommends that LACO No. 1123 retain its existing NRHP status code of 2D2, noting it as a contributor to the District.

P3a. Updated Description:

The Dairyman's House (LACO No. 1137) is located in the southeast area of the South Campus in a grassy area just north of Bonita Street. It is a rectangular, one-story building with a partially enclosed porch, clapboard siding, and a chimney at the east elevation. Its condition is degraded. Moderate changes were observed in the 2017 survey as compared with the 2007-2011 survey. These changes include most windows boarded, portions of the roof missing, fascia boards failing, and holes in the ceiling. The remains of a pulley system are present at the north elevation. There is severe deterioration at the rear (east) kitchen addition. Overgrowth of adjacent plants has affected some of the northern half of the building.

LACO No. 1179 (P-19-189340)
The Dairyman's Garage (LACO No. 1179) is a utilitarian wood structure constructed to support the operations of the Dairyman's House (LACO No. 1137). It is located immediately to the northeast of LACO No. 1137. It is in degraded condition. Minor changes as compared with the 2007-2011 survey include boarded window openings, deteriorated siding, and a deteriorating roof.

***B6. Updated Construction History:**

No building permits or original architectural drawings were found for LACO No. 1137. It was constructed in 1907. There appear to have been multiple reroofs, done at unknown dates.

LACO No. 1179 (P-19-189340)
No building permits or original architectural drawings were found for LACO No. 1179. The Dairyman's Garage (LACO No. 1179) was built in 1926. The only alteration appears to be a reroof done at an unknown date.

***B10. Updated Significance:**

A resource must have both significance and integrity to be considered potentially eligible as a historical resource. With regard to district contribution, relative importance of location and visual prominence, date of construction, historic function, architectural merit and spatial relationships are also considered.

The Dairyman's House (LACO No. 1137) was constructed in 1907 as a staff residence for various staff members of the County Poor Farm. It continued to serve as this until it was converted to storage for the landscaping department in 1970. ESA evaluated LACO No. 1137 under the following historical theme: Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1888-1952). Based upon its date of construction and building type, LACO No. 1137 appears significant for its association with the Development of Rancho Los Amigos (1907-1932) era. LACO No. 1137 retains sufficient integrity to convey its original use as a residence for staff. It is still intact and, in its current condition, retains integrity of location, setting, feeling, and association. It does not retain integrity of design, materials, and workmanship due to its degraded condition. LACO No. 1137 retains sufficient integrity, however, to

convey its historical associations with the transition of the property from a poor farm to long-term care facility. Therefore, ESA recommends that the eligibility of LACO No. 1137 remain unchanged and that it continue to be considered a contributor to the District. ESA recommends that LACO No. 1137 retain its existing NRHP status code of 2D2, noting it as a contributor to the District.

LACO No. 1179 (P-19-189340)

The Dairyman's Garage (LACO No. 1179) was constructed in 1926 to serve as vehicle and equipment storage for the Dairyman's House (LACO No. 1137). ESA evaluated LACO No. 1179 under the following historical theme: Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1888-1952). Based upon its date of construction and building type, LACO No. 1179 appears significant for its association with the Development of Rancho Los Amigos (1907-1932) era. LACO No. 1179 retains sufficient integrity to convey its original use as a garage for the staff member living at the Dairyman's House. It is still intact and, in its current condition, retains integrity of location, setting, feeling, and association. It does not retain integrity of design, materials, and workmanship due to its degraded condition. LACO No. 1179 retains sufficient integrity, however, to convey its historical associations with the transition of the property from a poor farm to long-term care facility. Therefore, ESA recommends that the eligibility of LACO No. 1179 remain unchanged and that it continue to be considered a contributor to the District. ESA recommends that LACO No. 1179 retain its existing NRHP status code of 2D2, noting it as a contributor to the District.

P3a. Updated Description:

General Ward 30 (LACO No. 1184) is located in the central area of the South Campus, immediately west of Erickson Avenue. It is the first and northernmost of a row of five nearly identical buildings that run along Erickson Avenue. It is a rectangular two-story building of reinforced concrete with stucco siding and a flat roof. To the north, its adjacent landscape consists the grassy area anchored by the Moreton Bay Fig Tree while to the east and south it consists of grass and shrubbery. A one-story concrete outbuilding sits adjacent to the northeast corner of LACO No. 1184. Minor changes were observed in the 2017 survey as compared with the 2007-2011 survey. These changes include overgrowth of vines on its west elevation and part of its north elevation. Its condition is degraded.

***B6. Updated Construction History:**

No building permits were found for LACO No. 1184. Original architectural drawings indicate it was constructed in circa 1915, which differs from the construction date of 1913 that the 2007-2011 survey identified. Further changes identified in original architectural drawings include new freight elevator alterations and equipment from 1953. Air conditioning units in some windows were added at unknown dates. Lighting fixtures are non-original.

***B10. Updated Significance:**

A resource must have both significance and integrity to be considered potentially eligible as a historical resource. With regard to district contribution, relative importance of location and visual prominence, date of construction, historic function, architectural merit and spatial relationships are also considered.

General Ward 30 (LACO No. 1184) was constructed in circa 1915 to house patients of the Poor Farm. It was converted into a pharmacy building in the 1930s, then office and storage space until circa the 1980s and 1990s, when it was abandoned along with much of the rest of the South Campus. ESA evaluated LACO No. 1184 under the following historical themes: Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1888-1952). Based upon its date of construction and building type, LACO No. 1184 appears significant for its association with the Development of Rancho Los Amigos (1907-1932) era. LACO No. 1184 retains sufficient integrity to convey its original use as living quarters for patients of the Poor Farm. Though degraded, it is still intact and, in its present condition, retains integrity of location, setting, design materials, workmanship, feeling, and association. LACO No. 1184 retains sufficient integrity to convey its historical associations with the transition of the property from a poor farm to long-term care facility. Therefore, ESA recommends that the eligibility of LACO No. 1184 remain unchanged and that it continue to be considered a contributor to the District. ESA recommends that LACO No. 1184 retain its existing NRHP status code of 2D2, noting it as a contributor to the District.

P3a. Updated Description:

General Ward 40 (LACO No. 1185) is located in the central area of the South Campus, immediately west of Erickson Avenue. It is the second and of a row of five nearly identical buildings that run along Erickson Avenue. It is a rectangular two-story building of reinforced concrete with stucco siding and a flat roof. Its adjacent landscape consists of the grassy and shrubbery linking it to its neighbors. Minor changes were observed in the 2017 survey as compared with the 2007-2011 survey. These changes include the presence of square ceramic tiles underneath damaged portions of stucco on the south elevation.

***B6. Updated Construction History:**

No building permits were found for LACO No. 1185. Original architectural drawings indicate it was constructed in circa 1915, which differs from the construction date of 1913 that the 2007-2011 survey identified. Further changes identified in original architectural drawings include new freight elevator alterations and equipment from 1953. Air conditioning units in some windows were added at unknown dates. Lighting fixtures are non-original.

***B10. Updated Significance:**

A resource must have both significance and integrity to be considered potentially eligible as a historical resource. With regard to district contribution, relative importance of location and visual prominence, date of construction, historic function, architectural merit and spatial relationships are also considered.

General Ward 40 (LACO No. 1185) was constructed in circa 1915 to house patients of the Poor Farm. It also functioned as a wheelchair repair shop, then office and storage space until circa the 1980s and 1990s, when it was abandoned along with much of the rest of the South Campus. ESA evaluated LACO No. 1185 under the following historical themes: Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1888-1952). Based upon its date of construction and building type, LACO No. 1185 appears significant for its association with the Development of Rancho Los Amigos (1907-1932) era. LACO No. 1185 retains sufficient integrity to convey its original use as living quarters for patients of the Poor Farm. Though degraded, it is still intact and, in its present condition, retains integrity of location, setting, design materials, workmanship, feeling, and association. P3a. Updated Description:

General Ward 50 (LACO No. 1186) is located in the central area of the South Campus, immediately west of Erickson Avenue. It is the third patient ward in a row of five nearly identical buildings that run along Erickson Avenue. It is a rectangular two-story building of reinforced concrete with stucco siding and a flat roof. To the north, its adjacent landscape consists the grassy area anchored by the Moreton Bay Fig Tree while to the east and south it consists of grass and shrubbery. A one-story concrete outbuilding sits adjacent to the northeast corner of LACO No. 1186. Minor changes were observed in the 2017 survey as compared with the 2007-2011 survey. These changes include deterioration of stucco to reveal ceramic underneath. Its condition is degraded.

***B6. Updated Construction History:**

No building permits were found for LACO No. 1186. Original architectural drawings indicate it was constructed in circa 1915, which differs from the construction date of 1913 that the 2007-2011 survey identified. Further changes identified in original architectural drawings include new freight elevator alterations and equipment from 1953. Air conditioning units in some windows were added at unknown dates. Detail of South Elevation of LACO No. 1186, View Facing North (ESA, June 21, 2017)

P3a. Updated Description:

General Ward 60 (LACO No. 1187) is located in the central area of the South Campus, immediately west of Erickson Avenue. It is the fourth patient ward in a row of five nearly identical buildings that run along Erickson Avenue. It is a rectangular two-story building of reinforced concrete with stucco siding and a flat roof. Its adjacent landscape consists of grass and shrubbery. Minor changes were observed in the 2017 survey as compared with the 2007-2011 survey. These changes include overgrowth of vines on its west elevation and part of its north elevation. Its condition is degraded.

***B6. Updated Construction History:**

No building permits were found for LACO No. 1187. Constructed in 1926, LACO No. 1187 was one of the later additions to the grouping of general wards along Erickson Avenue. No major alterations are apparent but air conditioning units were added in some windows at unknown dates. Lighting fixtures are non-original.

***B10. Updated Significance:**

A resource must have both significance and integrity to be considered potentially eligible as a historical resource. With regard to district contribution, relative importance of location and visual prominence, date of construction, historic function, architectural merit and spatial relationships are also considered.

General Ward 60 (LACO No. 1187) was constructed in circa 1926 to house patients of the Poor Farm. P3a. Updated Description:

The Toilet Building (LACO No. 1256) is located in the south central area of the South Campus west of Erickson Avenue and northwest of the intersection of Erickson Avenue and Aliso Street. It is a square, one-story building with stucco siding and a flat roof. It is set on a concrete pad in a grassy area, with a concrete pathway to adjacent Erickson Avenue at its east elevation. Minor changes were observed in the 2017 survey as compared with the 2007-2011 survey. These changes include re-boarded entrances and windows in October 2011.

***B6. Updated Construction History:**

No building permits or original architectural drawings were found for LACO No. 1256. It was constructed in 1925.

***B10. Updated Significance:**

A resource must have both significance and integrity to be considered potentially eligible as a historical resource. With regard to district contribution, relative importance of location and visual prominence, date of construction, historic function, architectural merit and spatial relationships are also considered.

The Toilet Building (LACO No. 1256) was constructed in circa 1925 as restrooms for patients and staff of the County Poor Farm, which it continued to serve as until it was abandoned along with most of the rest of the South Campus in the 1980s and 1990s in favor of the North Campus. ESA evaluated LACO No. 1256 under the following historical theme: Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1888-1952). Based upon its date of construction and building type, LACO No. 1256 appears significant for its association with the Development of Rancho Los Amigos (1907-1932) era. LACO No. 1256 retains sufficient integrity to convey its original use as a restroom facility. It is still intact and, in its present condition, retains integrity of location, design, materials, workmanship, feeling, and association. It does not retain integrity of setting due to the addition of General Ward 70 (LACO No. 1188) to the northeast and removal and addition of landscaping features since the period of significance, especially trees. LACO No. 1256 retains sufficient integrity, however, to convey its historical associations with the transition of the property from a poor farm to long-term care facility. Therefore, ESA recommends that the eligibility of LACO No. 1256 remain unchanged and that it continue to be considered a contributor to the District. ESA recommends that LACO No. 1256 retain its existing NRHP status code of 2D2, noting it as a contributor to the District.

Overview of South Elevation of LACO No. 1256, View Facing North (ESA, June 20, 2017)

P3a. Updated Description

Constructed of wood frame on a circular concrete foundation, LACO No. 1312 is a Wood Vernacular style utilitarian structure. It is oriented from northeast to southwest, and is located in the northern portion of the courtyard of the Men's Psychiatric Ward (LACO No. 1205). It has a rectangular floor plan consisting of one floor divided into two three spaces: on either end of the building are areas enclosed by mesh wire, with a central transitionary portion enclosed by wood walls with entrances on either end. LACO No. 1312 has a moderately-pitched, front-gabled roof with overhanging eaves and exposed rafter tails capped by a fascia. The single entrance consists of a wire mesh door at the center of the south elevation. LACO No. 1312's condition is deteriorated. Landscape surrounding LACO No. 1312 consists of mature trees and grass. A substantial change observed in June 2017 as compared with the 2010 survey is that the top half of the entrance door is missing.

*B6. **Updated Construction History**

No building permits or original architectural drawings were found for LACO No. 1312. Alterations as they appear from historic photographs and ESA's 2017 survey include replacement of original roof materials with composition shingles; painted and/or replaced siding; and the top half of the entrance door is missing.

*B10. **Updated Significance**

A resource must have both significance and integrity to be considered potentially eligible as a historical resource. With regard to district contribution, relative importance of location and visual prominence, date of construction, historic function, architectural merit and spatial relationships are also considered.

LACO No. 1312 was constructed in 1888 as an aviary to calm "inmates" by exposing them to nature. ESA evaluated LACO No. 1312 under the following historical theme: Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1988-1952). Based upon its date of construction and building type, LACO No. 1312 appears significant both for its association with the Los Angeles County Poor Farm (1888-1906) era and the Development of Rancho Los Amigos (1907-1932) era. It was built in 1888 in the central court of the original three buildings of the Poor Farm, near where the Auditorium (LACO No. 1261) is currently located. It was relocated in c. 1924 to its present location in the courtyard of LACO No. 1205 to provide a healing effect to male psychiatric patients, reflecting the transition of the farm to a hospital. LACO No. 1312 retains sufficient integrity to convey its original use as an aviary to sooth "inmates" and later psychiatric patients by exposing them to nature. LACO No. 1312 is still intact and, in its present condition, retains integrity of location. Its integrity of setting, design, materials, workmanship, feeling, and association are deteriorated due to its advanced age and material alterations such as replaced roofing and siding. However, the LACO No. 1312 retains sufficient integrity to convey its historical associations with the development of the poor farm at the property as well as the transition of the property from a poor farm to long-term care facility. Therefore, ESA recommends that the eligibility of LACO No. 1312 remain unchanged and that it continue to be considered a contributor to the District. ESA recommends that LACO No. 1312 retain its existing NRHP status code of 2D2, noting it as a contributor to the District.

Overview of West Elevation of LACO No. 1312, View Facing East (ESA, June 2017)

P3a. Updated Description:

The Brooder House/Vivarium Annex (LACO No. 1335) is located in the open, southwest area of the South Campus west of Juniper Street and north of Aliso Street. It is a rectangular, one-story, building made of unreinforced brick walls and a gable roof. It is set in a mostly hardscape area, with remains of concrete channels at its north and south elevations attesting to its former role as a poultry building. Minor changes were observed in the 2017 survey as compared with the 2007-2011 survey. These changes include boarded entrances and windows on both the building and detached shed (where one of the two openings is boarded), metal fence posts in the west, east, and south areas adjacent to the building, and the removal of an electrical connection to the shed from the adjacent electric power pole. Formerly adjacent structures Vivarium (LACO No. 1334) and Shed (LACO No. 1333) are no longer extant.

***B6. Updated Construction History:**

No building permits or original architectural drawings were found for LACO No. 1335. Examination of aerial photographs appears to date its construction to 1926 or earlier, three years earlier than identified in the 2007-2011 survey. Associated structures Vivarium (LACO No. 1334) and Shed (LACO No. 1333) are no longer extant, having been demolished sometime after 1972 in line with the end of farming operations in the 1950s and the movement of activity to the North Campus in the 1980s and 1990s.

***B10. Updated Significance:**

A resource must have both significance and integrity to be considered potentially eligible as a historical resource. With regard to district contribution, relative importance of location and visual prominence, date of construction, historic function, architectural merit and spatial relationships are also considered.

The Brooder House/Vivarium Annex (LACO No. 1335) was constructed in circa 1926 as an annex to the Vivarium. Its purpose was to house hens and incubate eggs. ESA evaluated LACO No. 1335 under the following historical theme: Development of the Los Angeles County Poor Farm and Rancho Los Amigos (1888-1952). Based upon its date of construction and building type, LACO No. 1335 appears significant for its association with the Development of Rancho Los Amigos (1907-1932) era. LACO No. 1335 retains sufficient integrity to convey its original use as an integral part of the Rancho's poultry operations. Despite alterations, it is still intact and, in its present condition, retains integrity of location, design, materials, workmanship, feeling, and association. It does not retain integrity of setting because it the only remaining building or structure left in the large southwestern portion of the South Campus that was dedicated to poultry operations. LACO No. 1335 retains sufficient integrity to convey its historical associations with the transition of the property from a poor farm to long-term care facility that had to supply its own food and sell surplus to maintain a profit. Therefore, ESA recommends that the eligibility of LACO No. 1335 remain unchanged and that it continue to be considered a contributor to the District. ESA recommends that LACO No. 1335 retain its existing NRHP status code of 2D2, noting it as a contributor to the District.

D1. Resource Identifier: Rancho Los Amigos Medical Center

D2. Historic Name: Los Angeles County Farm.

D3. Common Name: Rancho Los Amigos Medical Center

D4. Detailed Description (Discuss overall coherence of the district, its setting, visual characteristics, and minor features. List all elements of district.): This district consists of a portion of an hospital campus located in the city of Downey, California. A number of bungalows, hospital wards, infirmaries, and support buildings including a train station, a print shop, mechanical shops and vocational training buildings, and outbuildings, form the historic core of the hospital campus. The district also contains a number of mature trees, particularly eucalyptus, a Moreton Bay Fig tree, camphor and deodar trees which contribute to the historic character of the site. Building styles include turn-of-the century-era vernacular wards and support buildings, Craftsman residences and wards, Spanish Colonial Revival offices and hospital buildings, and functional outbuildings and storage. The oldest building still (See Continuation Sheet, Page 2.)

D5. Boundary Description (Describe limits of district and attach map showing boundary and district elements.): Boundaries of the district were established by outlining the concentration of 50-year old buildings which form the historic core of the hospital campus.

D6. Boundary Justification: The district boundaries incorporate a group of historic hospital buildings which are over 50 years old and retain a sense of time and place.

D7. District Attributes (List major attributes and codes.): HP--41 Hospital

D8. Significance: Theme Public Poor Farm, Public Hospital Area Los Angeles County
Period of Significance 1888-1945 Applicable Criteria A
(Discuss district's importance in terms of its historical context as defined by theme, period of significance, and geographic scope. Also address the integrity of the district as a whole.)The district at Rancho Los Amigos Medical Center consists of the historic core of the hospital campus and is significant under National Register Criterion A for its association with the turn-of-the-century health care of Los Angeles County's indigent population and for its later treatment of those in Los Angeles County with chronic illnesses, both mental and physical.

The history of the Los Angeles County Farm and of its later incarnations as Rancho Los Amigos Hospital and Rancho Los Amigos Medical Center begins even before its founding in 1888. On September 5, 1876, a railroad tunnel connecting Southern California to the rest of the nation was opened, facilitating substantial (See Continuation Sheet Page 6.)

D9. References (Give full citations including the names and addresses of any informants, where possible.):

D4 DESCRIPTION CONTINUED

standing at the site is an aviary dating from 1888 and currently located in the courtyard of Building 304. This aviary is still in use as such and was originally located in the courtyard of the original Men's and Women's Wards. When surveyed in February of 1995, the historic campus core included a total of 102 buildings. Of these 102 buildings, 76 contribute to the character of the district, 23 do not contribute to the character of the district, two were not surveyed, and one was demolished prior to survey.

To the greatest extent possible, building names and dates of construction have been paired with Los Angeles County Building Numbers (LACO #). Where discrepancies do occur, the attached map is the most accurate indicator of contributing and non-contributing buildings and features.

D8 SIGNIFICANCE CONTINUED

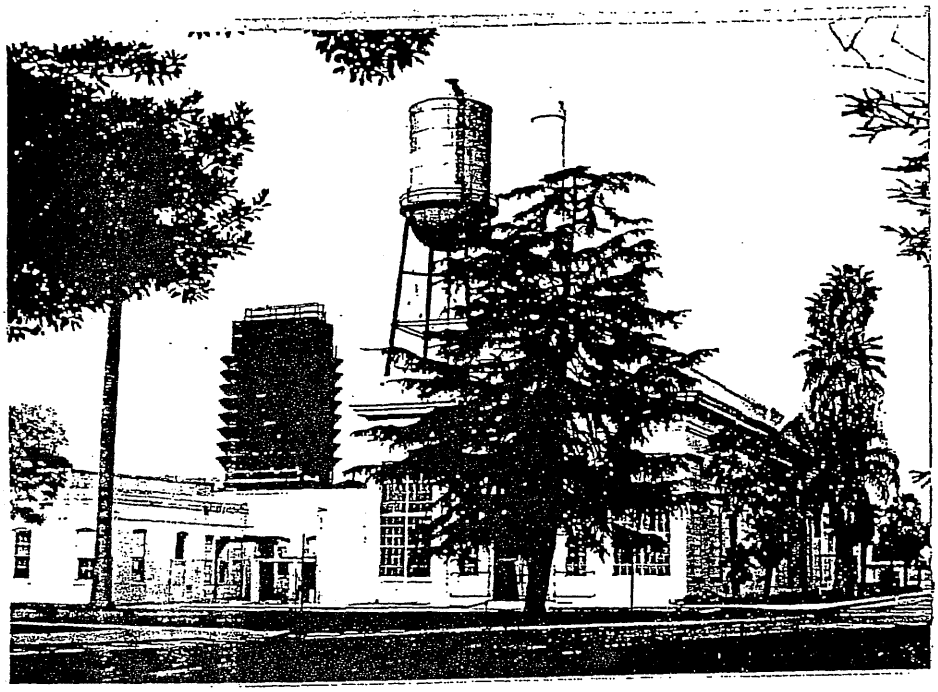
emigration to Southern California which continues to this day. As many of the new-comers to the Southland were health-seekers desperate for a cure for tuberculosis and other respiratory illnesses, Los Angeles County experienced an health crisis unlike any it had seen in its years as a tiny pueblo. Often, the cost of attempting to cure these diseases quickly outstripped the patient's ability to pay, and thus many soon became as desperate for public assistance as they were for a cure. The County hospital, then run by the Sisters' of Charity, was so overwhelmed by the number of people needing care for serious and life-threatening illness, that it could no longer care for the merely indigent. Demand rose for an "Alm's House" or a "Poor Farm" where the relatively able-bodied but indigent could receive food and shelter in exchange for agricultural and light manual labor. On May 12, 1887, the Los Angeles County Board of Supervisors passed a resolution of intent to purchase 124.4 acres of land owned by Andrew W. Ryan in the Los Nietos Valley for $100 per acre. The first "inmates" were transferred to the County Farm in December of 1888.

During its first ten years of operation the County Farm rapidly grew to an average of 200 inmates. Most required little treatment, and the staff was accordingly quite small. Many of the Farm's inmates came only for a month or two and then re-entered society. The bulk of the population was from Northern Europe, and many had come to recover from the last stages of respiratory illness or from work-related injuries. By the early 1890's the Farm boasted 85 Jersey and Holstein cows, 800 chickens, 150 hogs, and a small herd of sheep. Crops grown included many vegetables as well as alfalfa and oats, oranges and olives. In 1888, an artesian well had been found at the site and in 1890 a 10 horsepower pump was added. The remnants of both can still be found under Building 30.

By 1915, the County Farm had a population of 500 patients and 45 staff, and had come under the leadership of its most influential and well-known superintendent, William Ruddy Harriman, who would head the County Farm until 1931.

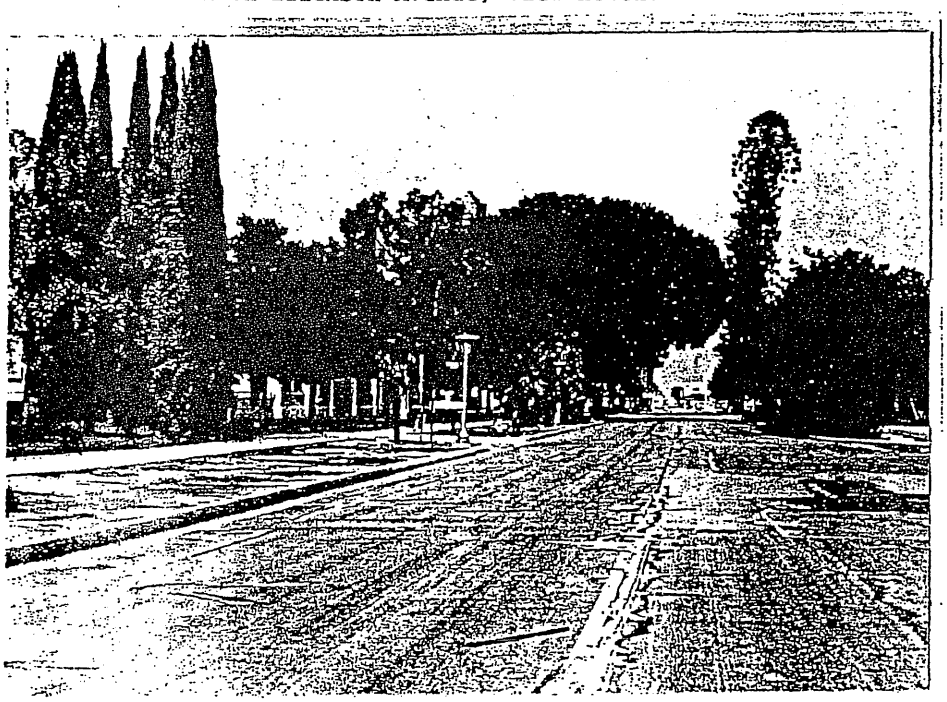
Following further growth during World War I, the Los Angeles County Farm began its transition from farm to infirmary. Ground was broken for the Farm's first infirmary wards in 1922, and this move was quickly followed by the construction of four more such wards within a year. (These eight buildings are now known as the "200 Buildings.") By 1924, the Farm housed 1142 patients, 257 of whom

(See Continuation Sheet, Page 7)



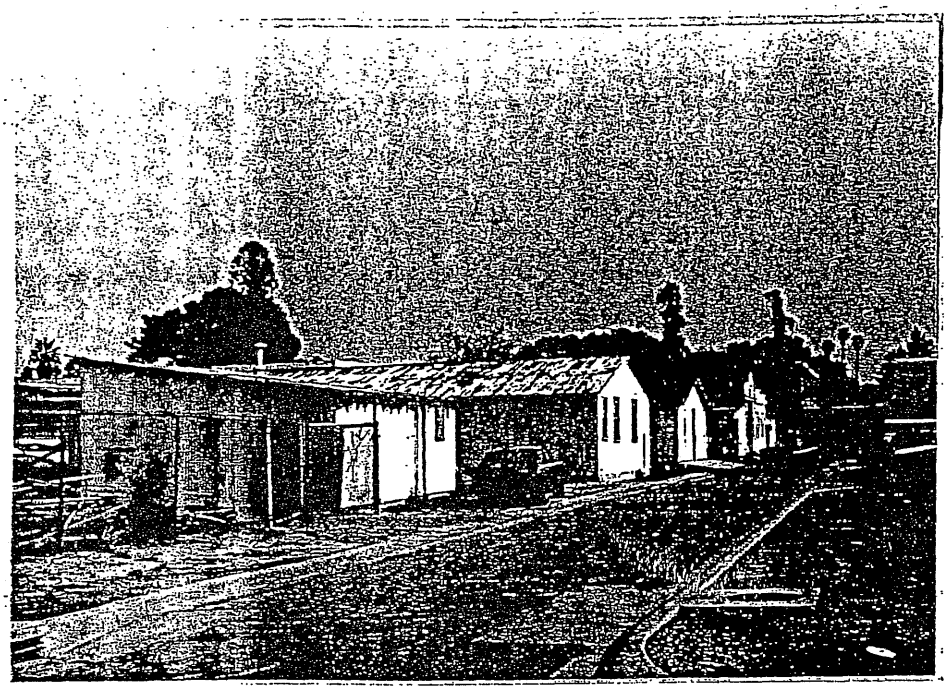
D8. SIGNIFICANCE CONTINUED

were diagnosed as insane, and 260 of whom were chronically ill. By 1925, the Farm was widely considered to be one of the largest hospitals for chronic disease in the United States. Its facilities had expanded to include a research department, a morgue, a pharmacy, a dental department, psychopathic wards, and a physical therapy department. Occupational therapy was becoming increasingly important to the Farm, and tasks included carpentry, weaving, basket making, and other crafts. Since the first World War, the demographic make-up of the Farm had also changed dramatically. Seventy percent of the patient population was now American-born.



The Depression brought dramatic increases in the size of the patient population, as more and more middle-class and even wealthy citizens became destitute. By 1929, the patient population had nearly doubled. However, the greatest change to the Farm during the Depression resulted from an increase in disabled patients. By the early 1930's, over 400 patients were confined to wheelchairs, and by the mid-1930's Rancho Los Amigos' (as it had been officially re-named in 1932) Physiotherapy Department was treating thousands of patients a year.

The advent of World War II only served to increase this trend. By 1943, Rancho Los Amigos had a surplus of over 500 beds, as many of its patients left for the State Guard or for war-time factory jobs. Because of this ready availability of space, the County transferred many of its polio patients to Rancho Los Amigos for care. Earlier that year, the director of the Physiotherapy Department, Elberta Arnold, had traveled to the University of Minnesota to train under Sister Elizabeth Kenny in her method of physical therapy. Within two years of Arnold's return, fifty percent of Rancho Los Amigos' polio patients were recovering within six weeks, and the majority of the remainder were discharged within a year. This shift in focus, from general care to the specialization in treatment of polio and other physical disabilities, would sharpen as polio swept across the country in the years to come.



The portion of Rancho Los Amigos identified as an historic district is an intact collection of structures used for health care and social services from 1888-1950. The district retains its sense of time and place and contains examples of property types associated with its history.

F. HISTORICAL RESOURCES

The following information was derived from the Los Angeles County's Development Strategy for the Rancho Los Amigos Medical Center property. This document identifies five potentially significant buildings on the project site: Casa Consuelo, the Learning Center, the Harriman Building, and two residential structures. The following section provides the history of the buildings and any significant characteristics warranting the preservation of the buildings.

1. EXISTING CONDITIONS

Existing Rancho Los Amigos Medical Buildings consist mostly of one- and two-story structures, ranging in age from 10 years to 80 years. Originally founded in 1888, Rancho Los Amigos was a living site for the County's poor and dependent. However, in the 1920s, the site's uses were expanded to include care for patients suffering from chronic diseases. This marked the introduction of Rancho Los Amigos as a health care facility as opposed to its former role as a home for the less fortunate.

During the 1950s, post-polio patients who could no longer be cared for at the Los Angeles County Medical Center, were transferred to Rancho Los Amigos for rehabilitation. In subsequent years, the Center continued to specialize in rehabilitative medicine and continues now to be in the forefront of research, training, and clinical applications for rehabilitation patients.

Although the evolution of the site represents a development of social interest in the history of Downey, the buildings have no federally registered historical significance. None of the buildings exhibit exceptional architectural significance for their periods. There are, however, several buildings which warrant discussion because of their aesthetic, historic or symbolic value (see Exhibit 9 for their location).

The Business Services/Nursing Education Center, constructed in 1926, is one of the older buildings on the site. Located in the southern portion of the project site, the Spanish-style building forms an interesting focal point for Consuelo Street which provides access to the site from Paramount Boulevard.

Casa Consuelo, located north of this building, is also Spanish-styled. Built in 1928, the building presently provides only a minimal standard of accommodation for transitional-living patients. Because of its age, it does not

in California, being compiled for Stanford University Press by Douglas E. Kyle. Our Society receives frequent requests for lists of sites in Downey noted for their historical or architectural merit and is in the process of developing a new pamphlet for distribution. Rancho Los Amigos is always included, for the reasons already mentioned.

We feel it is important to address the overall historical/architectural significance of Rancho Los Amigos, which a parcel by parcel study may not accomplish. For ease of communication, however, the following comments will be by parcel designation.

Parcel C may be ruled out as containing any existing historical importance.

Parcels B, D and H all contain structures and landscape features which are of historical value:

Parcel B

Contains many pre-1932 buildings which are noteworthy for their architectural style and for their original uses at the "County Farm." The Spanish Colonial Revival residences along Erickson Drive (late 1920s) are excellent examples of their style. Dwellings to the west of these were originally constructed in an isolated setting for night shift employees who needed quiet sleeping. The 2-story wooden frame buildings south of Golondrinas were used as nurses' residences. Other buildings housed patient wards and a shoe shop, organized about 1930 by a Downey resident (Caesar Mattei) to manufacture orthopedic shoes and to train disadvantaged farm residents in a productive skill. Handcrafts were produced here to support the farm (mattresses and brooms) as well as to sell (Navajo-type rugs, baskets, leather goods, etc.). Rancho was noted for these crafts and did a thriving business even outside the community. A former packing house, built before 1909, still stands at the railroad tracks near Laurel Avenue. Near this packing house is a uniquely shaped tree which exhibits the horticultural attentions of some past employee. Parcel B also contains many other mature trees which date from at least the early part of this century. Our society is currently trying to learn more about them.

Parcel H

While not currently up for evaluation, this parcel must be considered at the same time as Parcels B and D because they are contiguous and share all the

c. that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that posses high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction;

d. that have yielded, or may be likely to yield, information important in prehistory or history.

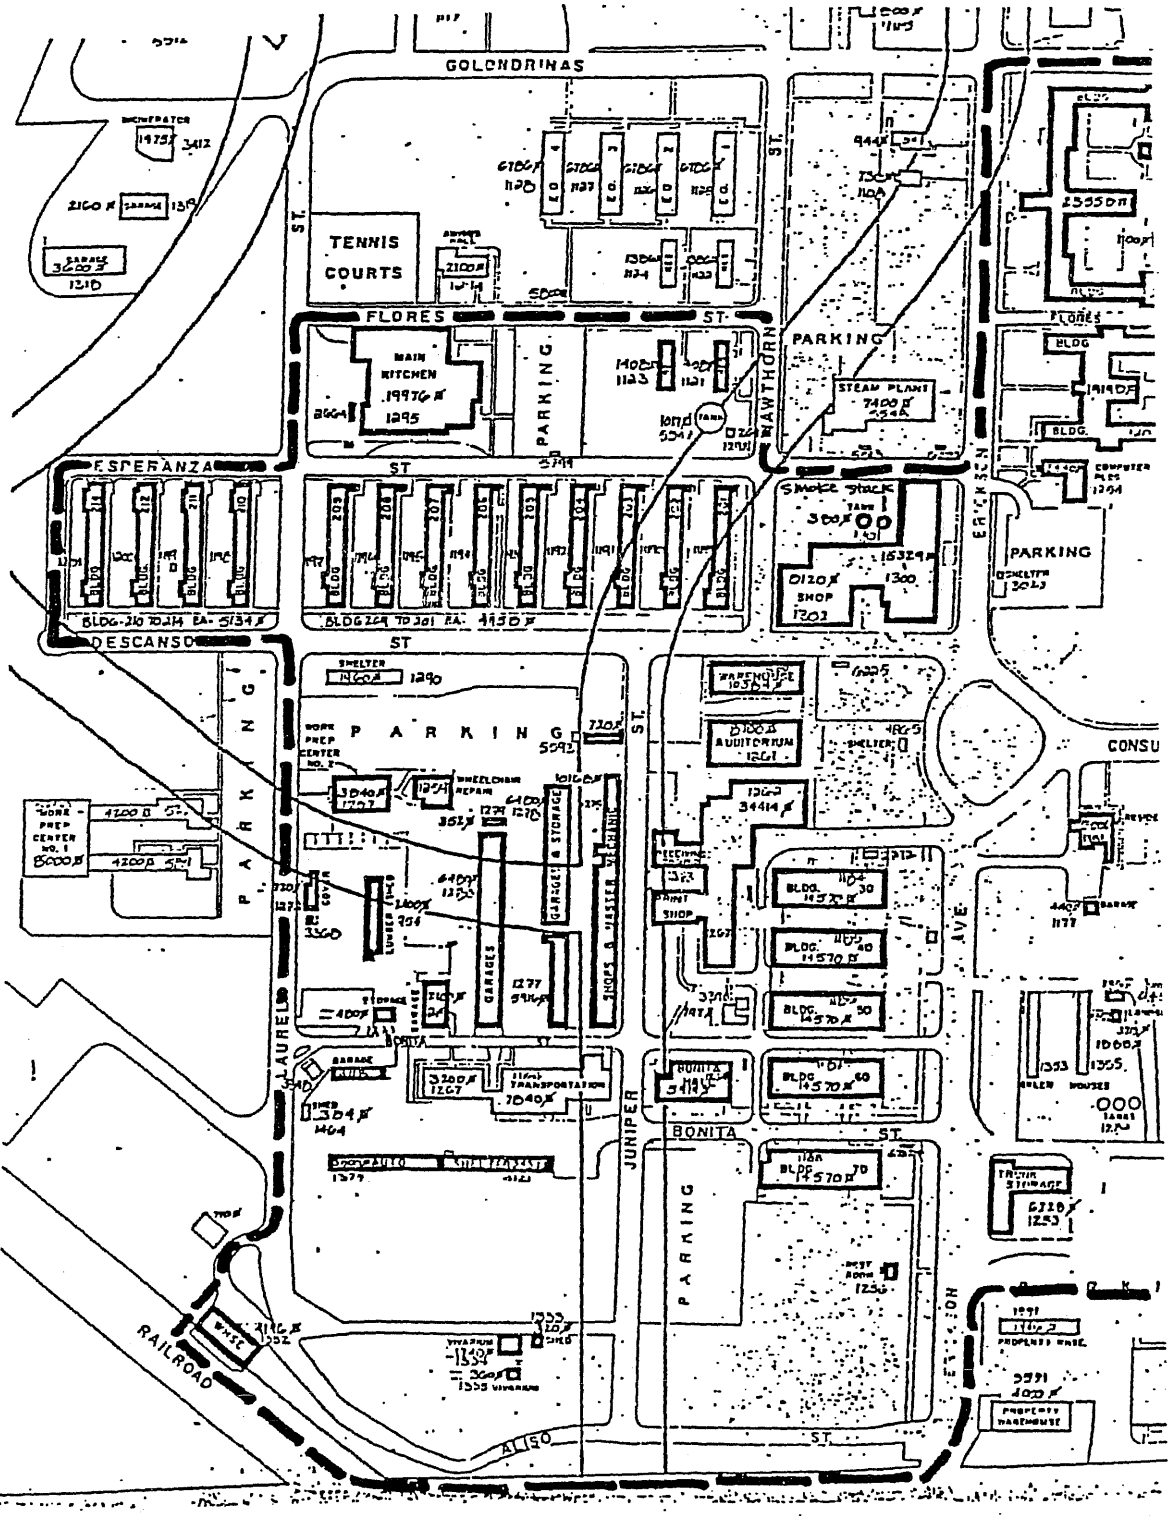
Although the proposal may result in the demolition of several buildings that have aesthetic value and add to the visual identity of the Rancho Los Amigos Hospital, there are no historically significant buildings on site (according to the National Register).

3. MITIGATION MEASURES

#19. No measures to mitigate historical impacts are required, as no significant historical impacts have been identified. However, the Business Services/ Nursing Education Building and the Harriman Building are interesting focal points of the hospital site and could be considered aesthetic resources. Because of their visual importance, these buildings should be considered for preservation. However, this recommendation recognizes the need for land currently occupied by the buildings and costs for remodeling or maintenance. If these are not significant variables, then the buildings should be retained.

No other mitigation measures are recommended for the remaining buildings, since no significant historical impact is anticipated to result from the removal of the structures.

4. UNAVOIDABLE ADVERSE IMPACTS



No unavoidable adverse impacts have been identified.

1.0 INTRODUCTION

Rancho Los Amigos, a county operated rehabilitative hospital, is located on an approximately 65-acre parcel in Los Angeles County, California Figures 1 - 2a). This Historic Structures/Sites Report includes an intensive survey of the South Campus of Rancho Los Amigos. The survey follows the guidelines set forth by the County of Los Angeles for Historic Structures/Sites Reports.

2.0 ADMISTRATIVE SETTING

In 2002 the Los Angeles County Administrator's Office (CAO) contracted with *Post/Hazeltine Associates* to carry out a comprehensive survey of the South Campus of Rancho Los Amigos. Rancho Los Amigos is a public rehabilitative center that is part of the County of Los Angeles Public Hospital Division of the Department of Health Services. The purpose of the study was to evaluate the South Campus for the presence of historic resources and to determine if these resources were eligible for designation individually or as a part of a historic district. The results of the study will help guide the LACO's office as it plans the future use of the property. The assessment included the following components: 1) Preparation of an historical context and site history for the property; 2) Survey of existing conditions; 3) Documentation of existing conditions; 4) Assessment of integrity of individual buildings and the South Campus as a whole; 5) Evaluation of potential eligibility of property or its individual buildings for nomination to the National Register of Historic Resources and the California Register of Historical Resources; and 6) Addendum including State Parks Department DPR 523 forms.

3.0 HISTORICAL CONTEXT AND SITE HISTORY (History of Rancho Los Amigos)

3.1 History of the Property (1769-1887)

Rancho Los Amigos did not begin as a rehabilitative hospital. Rather, the rich and varied history of the hospital extends over a period of a hundred and seventeen years, beginning in 1887, when it was founded as a poor farm for the County of Los Angeles. In that year the County purchased 124.4 acres of farmland from Andrew Ryan (While the deed showed Ryan selling the county all 124.4 acres, in actuality he owned 91 acres. The remaining 33.4 acres belonged to a bank, the Farmers and Merchants Bank, and a conglomerate of individuals, including John Downey, James McFarland and two brothers, James and Mason Miller). Located in Los Nietos Valley, a few miles from the city of Downey, Ryan's property was first proposed as a suitable site for the County Poor Farm by Board of Supervisor member and a resident of Downey, Judge J. W. Venable (Fliedner 1990: 20-21). The land purchased from Ryan was once a part of a large Spanish land grant awarded to Manuel Nieto, a soldier serving in California in the later decades of the eighteenth and early decades of the nineteenth century. Following his death, in 1834, Nieto's land grant was divided among his six heirs, then over the succeeding years it was sold and parceled off into smaller farm and ranch lands, including Andrew Ryan's.

The County's purpose in building a new poor farm was to provide an expanded facility to replace the existing, but overcrowded County Hospital and Farm opened in 1878. Located less than a mile from downtown Los Angeles, it was not large enough to serve the County's growing indigent population, many of whom were former miners from the Gold Rush era, now old and penniless and often without family to support them. Other patients were drawn from those who had come to California seeking the curative powers of the state's benign climate (many of the people had tuberculosis and sought the dry air of southern California for what they believed to be its restorative powers). Having exhausted their funds and being too ill to return to their former homes, they, like the

miners, were stranded without support. Within a decade of opening the first County owned and operated hospital it was clear that the 106-bed facility was simply too small to serve Los Angeles's growing burden of caring for the poor and needy.

3.2 Initial Development of the County Poor Farm (1888 – 1901)

The property the County purchased from Andrew Ryan was undeveloped, having been used prior to its sale as grazing land for sheep and cattle. Now the acreage had to be prepared for its new role as the County's Poor Farm. First, local laborers were hired to clear the land and plant eucalyptus saplings along the newly graded roads, and boundaries of the property. Finding water was essential to the maintenance of the landscaping, as well as the anticipated needs of the prospective facility. In 1888, an artesian well was dug and a pumphouse and water tower built (The since demolished well, pumphouse and water tower were located on what is now the site for Building 30) (Fliedner, 1990: 74). The principle access, Main Drive, was lined on one side by palm trees and on the other by a row of eucalyptus trees (Now Erickson Avenue, Main Avenue subsequently was renamed Eucalyptus Avenue and then Horton Avenue. In 1976, Horton Avenue was renamed Erickson Avenue in honor of Eugene Erickson, chief administrator of Rancho Los Amigos between 1956 and 1976). The planting of trees, along with other foliage, was intended to instill a degree of lushness to the property. Landscaping of this type was particularly popular in California in the late nineteenth century and early twentieth century as a way of providing a haven from the harshness of the area's semi-arid environment.

With the planting and grading underway the Board of Supervisors began the process of soliciting bids to build the facility's first three buildings. On June 11, 1888, a bid was accepted from Jacob Friedlander to build the two-story 30-foot-by-60-foot Eastlake Style Refectory Building at the site of the present-day Auditorium Building. The first floor of the Refectory housed a kitchen, staff bathroom, storeroom, pantry and patient reading room. On the second floor were rooms for the employees. The attic was used as trunk room (The building was demolished in 1926) (Fliedner, 1990: 24). A short

time later construction began on two other buildings, North Ward (intended for the women patients) and South Ward (for the male patients) located to the east of the Refectory Building, (Both wards subsequently were demolished as a result of the damage they suffered in the 1933 Long Beach earthquake). Designed by the architectural firm of Kysor, Morgan and Walls, (later, under the partnership of Morgan, Walls and Clement, the firm would go on to become one of the most prestigious firms in Southern California,), the two-story brick buildings were completed shortly before the end of 1888. Sometime during the first year of construction a bird aviary was built, no doubt in the belief that the colorful plumage and lively sounds of the birds would help enliven the spirits of both the patients and staff. The oldest surviving structure at Rancho Los Amigos, the aviary is located adjacent to the north wing of Building 303 and 304 (LACO # 1205). The aviary, which originally had been located in the courtyard of the Office Building, was relocated when the building was demolished in 1929.

On November 22, 1888, the first group of indigent patients was transferred from the old County Hospital and Farm to the new facility in Downey (Fliedner, 1990: 27). In February 1889, following the appointment of several temporary superintendents, a physician Dr. E. L. Burdick, was hired by the Board of Supervisors to act as both superintendent and resident physician to the County Poor Farm. In the same year that Burdick was hired, a fourth structure, the Office Building, was built. Designed again by Kysor, Morgan and Walls, the three-story brick building was erected between the North and South Wards (Figure 3). Since demolished, it was located in front of the present-day Auditorium Building. By the last decade of the nineteenth century the County Poor Farm housed 126 patients and was fast becoming self-sufficient. Knowing the vagaries of County support Burdick initiated measures to insure the economic viability of the facility. Herds of Holstein and Jersey cows were purchased and by the turn-of-the-twentieth century the County Poor Farm's dairy herd was producing 200 hundred gallons of milk a day. During the 1890s a number of ancillary buildings were constructed, including a small bunkhouse and barn completed in 1893. A second, larger barn was built in the late 1890s, along with a freight and passenger depot (The barn was subsequently converted to a patient ward in 1931). Constructed by the Terminal Railroad Company, the depot was

added to the company's line after the County paid for its construction (Fliedner, 1990: 34-35). The two barns and the bunkhouse have been since demolished. The train depot was torn down in the early 1900s when a second depot was built to replace it.

In addition to the dairy herd, the County facility raised chickens, hogs, and sheep. Percheron horses were used as draft animals, until they were replaced by Belgian horses in the 1920s and shortly thereafter, by mechanized farm machinery. The County Poor Farm raised not only farm animals, but it also developed and propagated groves of orange and lemon trees. By 1898, the orange grove covered 32 acres. To maintain its sustainability, part of the County farm's acreage, in addition to the orchards, was devoted to row crops. The more ambulatory and healthier patients helped earn their upkeep by working the fields and orchards, receiving approximately $1.50 per day for their labor.

By the late 1890s the inmate population had grown considerably. The County facility now housed approximately 200 individuals, increasing the need to expand, as well as build, additional facilities. At this time the majority of the people living at the facility were drawn from the blue collar labor ranks, many of who had been hurt on the job. Lacking the kind of safety net available to others through the support of family and friends, or a reserve of money, the County Poor Farm offered these individuals a place to stay while they recovered from their injuries. In other cases, some of the farm inhabitants were elderly individuals who had no family to rely on for support. Included among the structures built during this period was a combined bathhouse and laundry building. Demolished in 1965, it was located just to the southwest of Building 30 (LACO #1184). In 1897, a new Woman's Ward was built at the northeast corner of Consuelo Street and Erickson Avenue. Also since demolished, the two-story building housed 20 beds on each level.

Photographs taken during the late nineteenth century show that the landscaping during this period continued to be an integral component of the facility. Extensive flowerbeds, hardscape features, fountains and newly planted trees increased the pleasant ambience of the facility. To Burdick and others attractive surroundings were important as

an aid in the recovery of the men and women who made up the farm's population. Though planned as farm facility the institution employed the type of urban planning popular with adherents of the late nineteenth/early twentieth century City Beautiful movement. City Beautiful paradigms like the Columbian World Exposition of 1893 helped popularize the classical imagery and planning that would be instituted in hundreds of towns and cities across America at the turn-of-the-twentieth-century. The Beaux Art plan initiated by the County Farm's architects can be seen in the symmetrically aligned buildings, radiating paths and garden parterres. Bisected by the curvilinear boundaries of the farm's public space, even the orange and lemon orchard maintains a balanced symmetry (Figure 4). As in the case of larger urban environments the buildings and landscaped features of the County Poor Farm's public space were combined in a "mutually supportive system" (Stern, 1986: 306).

3.3 Growth of the County Poor Farm: The Tenure of Thomas F. Simpson, George S. Clark, Andrew Fuller Wade and Charles C. Manning (1901 – 1915)

The dawn of a new century initiated far-reaching changes to the County Poor Farm. One of these included the appointment, in May, 1901, of Thomas F. Simpson as superintendent. Simpson's appointment came as a result of the retirement of Burdick in that same month. From this point on the dual position once held by Burdick, that of superintendent and resident physician would now be divided into two separate jobs. In addition to Simpson, Dr. Norton, who had been Burdick's medical assistant, was elevated to the position of the County Poor Farm's resident physician. Other changes were brought about by a change in the character of the inmate population. In the first twelve years of its existence the facility primarily treated the elderly poor and those who needed to recover from work-related injuries. However, as a result of the devastating economic depression of 1893, an increasing number of the facility's inmates were made up of the penniless. In addition, there was an growing influx of those suffering from alcoholism, drug addiction and mental illness (Thought at the time to be an inheritable condition, alcoholics were classified as "insane" and it was believed that they, unlike other mental

patients, could never be fully cured). Simpson's tenure as superintendent was short lived. In 1903, George S. Clarke took over Simpson's job, but as in the case of Simpson, Clarke too only served a few years, resigning in 1907. During this period Marshall E. Price assisted Clarke as the County Poor Farm's resident physician.

By the first decade of the twentieth century it was obvious that the County facility's physical plant was too small to meet the needs of its steadily increasing patient population. Between the end of Clarke's tenure, in 1907, and the appointment, on September 7, 1907, of a new superintendent, Andrew Fuller Wade, some inroads had been made in helping alleviate the County Poor Farm's overcrowded conditions. Construction on several new structures had begun, including a ward to house what was referred to at the time as the harmless insane. The Insane Ward, completed in 1907, was designed by the architectural firm of Hudson and Munsell as a single-story brick building (USC Rancho Los Amigos Archives, Box 34, File 8). Subsequently added to over the years, today it comprises the center portion of Building 303-304, located on the southeast corner of Erickson Avenue and Golondrinas Street (LACO #1205).

At the same time that work was proceeding on the construction of the Insane Ward, a small brick clad chapel (LACO # 1254) was built to serve the needs of the staff and patients. Completed in 1907, and located adjacent to the Insane Ward on Erickson Avenue, the chapel was subsequently moved in the 1920s to its present site, just south of the Insane Ward. In 1955, after a larger chapel was built, the original chapel ceased being used for religious services. Over the years the former chapel was employed for various purposes, including a library, as the Building Crafts Planning Division, later as a Computer Center and until recently, as the Office of Public Safety. Today, the heavily modified building, exhibits the type of alterations found on many of the Rancho Los Amigos buildings whose functions have changed overtime. Modifications to the former chapel include, among others, the covering of its original brick façade with asbestos clapboard siding and the removal of its original windows, steeple and rose window.

Three other structures were completed in 1907, including a depot, with its adjunct supply warehouse, and a dairyman's house. Located adjacent to the rail tracks, at the far southwest end of the property near Gardendale Street, the depot (LACO #1352) and warehouse (LACO # 1352) were vandalized and burned to the ground in 2001. The dairyman's house (LACO # 1137) is located on the north side of Bonita Street. Occupied as residence until 1970, then used until 1988, and possibly longer, as storage for the Landscaping Department, today, the modest Craftsman bungalow is vacant and badly deteriorated.

Over the years the County facility continued to expand its infrastructure, acreage, staff and patient population. By 1908 the farm had grown to 333 acres. The number of resident patients continued to increase and by 1910 the institutionalized patients had reached an average of between 210 and 220 per month. The staff now comprised 20 full-time employees. During Superintendent Wade's tenure several more structures were built, including the Power House (LACO #1300). Constructed in 1909, the single-story brick building was built north of Building 201 (LACO #1189), at the corner of Hawthorn and Descanso Streets. As recently as 1988 the Building Crafts Department used it for its Sheet Metal and Plumbing Shops. A second structure, a two-story clapboard sided vernacular styled building (LACO # 1287) also was completed in 1909. Judging from its second-story hayloft, the building most likely was used as a barn in conjunction with the County's farm operation. Located at the far southeast end of the property, between Gardendale and Bonita Streets, the now vacant building's last function was as a Pest Control facility. Despite its building program, by the end of Wade's tenure, the County possessed a facility that even in its expanded state could not house its burgeoning indigent population. In the coming years the County Poor Farm would face the challenge of updating its infrastructure in order to support and care for the needs of its increasing inmate population.

In 1911, Charles C. Manning was appointed the new superintendent of the County Poor Farm, replacing Andrew Wade. During Manning's tenure, between 1911 and 1915, the Poor Farm's population increased a dramatic 280 percent, from 198 to 479 inmates

(Fliedner, 1990:74). Manning, whose father, C. D. Manning, was a County Supervisor, worked to ensure that the County Poor Farm received the funding necessary to increase the number of beds and support facilities required for the expanding institution. During Manning's tenure a one-story brick addition was added to the Power House, in 1911 (LACO # 1302). Now vacant, it was last used as a mechanical shop and equipment warehouse. By 1912, plans were underway to construct two more patient wards, Buildings 30 and 40 (respectively LACO # 1183 and LACO # 1185), located on the west side of Erickson Avenue. Prior to construction the original 1888 pumphouse building and water tower were demolished to make way for the new buildings (Fliedner, 1990: 74). Both of the two-story stucco-clad wards were completed in 1913. A two-story dining, staff residency and commissary wing, located behind and to the south of the two wards (LACO # 1262 and LACO # 1263) was also built in 1913. Designed by the architect, George Low, the new brick wing housed the General Dining Room. The dining room, which served meals on the first floor for both working, as well as infirm, non-working patients, also contained a commissary on the first floor and staff housing on the second (USC, Rancho Los Amigos Archives, Box 31, File 11). The building, located to the west of Buildings 30 and 40, was built as an extension to the south end of the existing kitchen and dining room building. Later, a pedestrian bridge was added connecting Building 30 to the dining room. The bridge was subsequently demolished, and in the 1930s, replaced by the existing bridge. Until recently the former dining/staff/commissary wing served as a print shop, record storage and receiving facility.

In the last two years of Manning's tenure the staff had grown to 46, almost all of them living at the County Poor Farm. During this period several more structures and features were built, including a stable (LACO # 1283) designed by the architect George Low, in 1913 (USC, Rancho Los Amigos Archives, Box 31, File 11). The two-story brick stable, located on the corner of Erickson Avenue and Bonita Street, replaced an earlier wood stable, built in the early 1890s (Fliedner: 77). Less than a decade after its construction its second floor was remodeled to serve as a ward for ambulatory male patients. Later, it was used as a trunk and storage room and most recently, as the Medical Equipment Repair Shop. A steel tank and water tower (LACO # 1301) also was built in

1913. The steel tank and water tower, located behind the Power Plant at Hawthorn and Esperanza Streets, is longer in use.

In 1914, a devastating flood hit the County Poor Farm. The flood, which caused over a $100,000 in damage, left two to four feet of flood debris and salt concentrated sand over the farm's once fertile fields and orchards. The alfalfa crops, as well as all but a few acres of fruit trees, were lost. The flood damaged some of the new buildings, the warehouse next to the depot, and even stacks of lumber intended for the new superintendent's house. It would take many years before the farmland was usable again. The following year, on February 1, 1915, Charles Manning resigned as superintendent, the same day the County instigated its own County Department of Charities (Fliedner: 1990, 80). The new department, divided into five divisions, included the County Hospital, County Farm, Outdoor Relief, the Olive View Sanatorium (to treat tuberculosis patients) and the County Cemetery. Each division was to be headed by a superintendent. With this in mind, a search was begun for a new superintendent for the County Farm.

3.4 The Tenure of William Ruddy Harriman (1915-1931; 1933-1952)

On June 1, 1915 William Ruddy Harriman was appointed the County Farm's new superintendent (Figure 5). This, despite the fact that the County's grand jury recommended that the superintendent of the County Farm be someone well versed in animal husbandry and farming. Interestingly, Harriman fit neither of those categories, in fact his degree was in chemical engineering from the University of Southern California. Nevertheless, the choice was a fortuitous one, as Harriman proved to be a capable and skilled administrator. In the years Harriman was superintendent of the County Farm he would see its mission changing from a poor farm, whose purpose was primarily to take care of the indigent and poor, to a hospital facility serving the needs of its ailing patients.

It was clear that when Harriman took the position at the County Farm that one of his first concerns was to see the facility recover from the flood damage of the year before. In the first few years Harriman and his staff devoted themselves to reclaiming the alkali-

soaked land and rebuilding the animal stock. Eventually, the soil reclamation program proved successful and the farmland was made usable again. The number of livestock, including poultry, sheep and pigs increased dramatically. Harriman purchased Percheron brood mares to replace the aging stock of workhorses. Within a short time the farm was once again raising record amounts of alfalfa, corn, beets and other row crops.

Harriman saw the need of increasing the facility's infrastructure, as well. Between 1915 and 1917 a number of buildings were constructed, including a new supervisor's residence, completed in 1915. Though initially commissioned by Charles Manning, Harriman, who was appointed superintendent in June, 1915, was most likely the first to live in the house (To this day it is referred to as the Harriman House). Built in the Craftsman tradition, the large, two-story clapboard sheathed house (LACO # 1101) is located near the corner of Erickson Avenue and Consuelo Street. Now vacant, the house was used last as the Older Adult Center. Other physical improvements to the County Farm included the construction of a wood frame hay barn, completed in 1915 (Located next to the stable, it burned to the ground in 1921) (Fliedner, 1990: 101).

In 1916, a third patient ward, Building 50, was built (LACO # 1186). The two-story stuccoed brick building was designed to accommodate male ambulatory patients. In the same year two wings and three freestanding accessory buildings were added to the existing Psychopathic Ward (LACO # 1205). Built to the rear of the Psychopathic Ward, they were completed in 1916 and included two open shelters (LACO # 1243 and LACO # 1251) and a toilet room (LACO # 1244). Much of this new construction was in response to the facility's growing population; which by the end of 1916 had grown to more than 600 patients (Three years later there were 990 inmates) (Fliedner, 1990: 89; 99). Even after the completion of the third ward, in 1916, there still was not enough room to house all of the County Farm's inmates. As a temporary measure the second story of the brick stable (LACO #1283) was converted into a ward to house 70 male patients. Seen initially as a temporary stopgap measure, the converted stable would be in continuous use for the next 17 years until damage caused by the 1933 Long Beach earthquake required the stable's second story to be removed (Figure 6).

As the County Farm approached the second decade of the twentieth century mechanized equipment began to replace the horse-drawn carriages, wagons and plows that had been used for farming and transportation. In 1917, a wood frame automobile garage was built to the rear of the Harriman House (LACO # 1177). Other improvements were made to the superintendent's house during this period, including the construction of a small wood frame shed (LACO # 1178), located adjacent to the superintendent's house. The shed, built between 1915 and 1922, appears to have been used to store garden equipment to maintain the house's garden.

By the late teens a number of significant improvements had been made to the farm's support facilities, including the construction, in 1917, of a 100-foot long, single-story brick building located across Juniper Street from the General Dining Room (LACO#1275). Built to house the maintenance and staff workshops and the office of the master mechanic this building enabled the farm to centralize its support staff at a single location. The institution's mechanized farm equipment, as well as its fleet of transportation vehicles, was housed in buildings, such as Building LACO #1286 built in 1920. A 1917 plot plan of the County Poor Farm (excluding the farm-related buildings and features) illustrates those buildings constructed between 1888 and 1917 (Figure 7). Two years later, in 1919, a residence for female psychopathic patients was constructed at the intersection of Flores Street and Erickson Avenue (LACO #1205). Designed by the County Building Department, the one-story, H-shaped brick building was comprised of isolation wards, a dining room for the patients and sleeping rooms for on-duty nurses. At the time it was built there were some 160 mentally ill people living at the County Farm, a third of them housed in the general wards because of the lack of room in the existing Psychopathic Building. This proved to be an untenable situation, as many of these patients, living in the loosely supervised environment of the general wards, were a danger not only to themselves, but to others, as well. The construction of the new ward was symptomatic of the philosophical shift in Rancho Los Amigos' mission. Initially, begun as a provider of short term care of indigents and the very old, the County Farm was now inexorably moving in the direction of assisting in the long term care of the physically and mentally ill.

In just a few years under Harriman's direction the County Farm had become not only self-sustaining, but profitable, as well. In a report to the County Harriman reported that between June 1915 and July, 1918, the County Farm had saved taxpayers approximately a half-million dollars (Fliedner, 1990: 96). The increasing professionalism instilled by Harriman and others, is illustrated by the appointment, in 1920, of Frank Moore as the head of the Dairy Department, where he oversaw the supervision of 19 civilian employees and a large number inmate laborers (Fliedner, 1990: 100). By the early 1920s the dairy herd numbered some 300 purebred Holstein cows. Several years later, in 1926, the Board of Supervisors authorized the purchase of the 68-acre Monteleone Ranch to allow further expansion of the dairy herd and other livestock. The newly purchased land was located north of Imperial Highway and west of Old River School Road (Fliedner, 1990: 114).

An aerial photograph taken in 1922 shows just how extensive and significant farming and the raising of livestock had become to the economic viability of the County Farm. Fruit orchards had been reduced considerably following the 1914 flood. Increasingly, more and more acreage was planted in alfalfa and row crops (By 1921 there were only six acres of orange trees, from a high seven years earlier of between 40 and 50 acres). In addition, dairy and other livestock production had risen in importance indicated by the completion during this period of several large dairy barns, hog and sheep pens and chicken houses. Ancillary farm structures included a number of barns, stables and grain silos. One of these accessory farm buildings was an L-shaped single-story structure clad in vertical board, located off of Bonita Street (LACO #1286). Built in 1920, its original use, other than it was used in conjunction with farm operations, is unknown. Currently it is being used as a garage and storage shed.

As superintendent of the County Farm Harriman continued to initiate programs to make Rancho Los Amigos self-sustaining. For the most part, profitability revolved around the raising of row crops, dairy herds, hogs, and chickens. In the early years there were enough healthy ambulatory inmates to fulfill labor tasks. Now this was becoming more difficult. By the early 1920s it was becoming increasingly obvious that the County

Farm was transitioning from a facility to aid the destitute and those temporarily incapacitated, to an infirmary for the chronically ill. The transformation of Rancho Los Amigos from a County farm to a hospital had the full support of Harriman, who had lobbied the County for the change. Due largely to Harriman's tireless efforts there were sufficient facilities to meet the needs of its new mission. Harriman pointed out to the Board of Supervisors that the County could save money if the ill were treated at the County Farm, where it cost $1.58 per day to treat a patient, versus $3.75 a day at the County Hospital in Los Angeles (Fliedner 1990: 119-120). The County agreed and soon increasing numbers of invalid patients were being transferred to the County Farm. In 1923, 130 bedridden patients were transferred from the Los Angeles County Hospital to newly built infirmaries at the County Farm. The admission of these patients "signaled the end of the farm era and the beginning of the hospital era ... The Farming and Dairy Departments and General Wards with their indigent, able-bodied men and women would gradually make way for hospital wards" (Fliedner, 1990:105).

As an indication of this change, between 1922 and 1924, a number of wards were constructed to accommodate the influx of seriously and chronically ill patients (Figure 8). These included a two-story patient building and eight, one-story, wood frame "temporary" infirmary buildings. Building 60 (LACO #1187) was the fourth two-story patient ward constructed on Erickson Avenue. Built in circa 1922, it was designed to recapitulate the scale and massing of the three existing two-story stuccoed brick wards, constructed between 1913 and 1916. In addition, eight infirmary buildings, built between 1922 and 1924, were added to accommodate the growing patient load (Figure 9). These included Building 201 (LACO #1189), Building 202 (LACO #1190), Building 203 (LACO #1191), Building 204 (LACO #1192), Building 205 (LACO #1193), Building 206 (LACO #1194), Building 207 (LACO #1195) and Building 208 (LACO #1196). Bounded by Descanso, Esperanza, Hawthorne and Laurel Streets the eight wards filled the block. All built using the same plan, they were capped by modified, hipped roofs, and linked by a porch running the length of the west elevation. Each unit accommodated 30 patients, bedrooms for attending staff, bathrooms, a diet kitchen, and a sun porch for the patients.

In 1922, the men's bathhouse was built to accommodate the bathing needs of patients living in the wards. Located on the south side of Descanso Street, adjacent to the Auditorium Building, Building 20 (LACO #1260), was designed by Montrose Warn (USC, Rancho Los Amigos Archive, Box 31, File 9). Less than a year after their completion, the eight wards were filled to capacity. Two years later, in 1926, the Board of Supervisors authorized the construction five additional "temporary" infirmary buildings including, Building 209 (LACO #1197), Building 210 (LACO #1198), Building 211 (LACO #1199), Building 212 (LACO #1200) and Building 214 (LACO #1201). The wards were allocated for the following purposes: Buildings 201 through 208 were occupied by invalid women, Building 209 by male diabetics, Building 210 by male urology patients and Buildings 211, 212 and 214 by male invalid patients (There was no Building 213)(Fliedner, 1990: 120). An indication of the facility's chronic shortage of hospital beds was the porch enclosure of Buildings 201 through 214. The incorporation of the sun porches as bed space was intended to be temporary, as were the wards themselves, but they continued to be used for bed space from the time the infirmary buildings were modified in 1936, until they were closed some years later.

In conjunction with the increase in the number of patients dozens of new employees, including a large number of nurses, were hired. In 1924 the staff numbered 242, serving a patient population of 1,142. By this time almost half of the inmates were classified as either insane (257) or chronically ill (260) (Fliedner, 1990: 110). Much needed employee housing was provided by the addition of four two-story nurse's dormitories and a series of single-story vernacular styled bungalows intended for married workers. Two of the four dormitories were built between circa 1922 -1924, the third, designed by Montrose Warn, in circa 1924-1925, the fourth, sometime between 1924 and 1930 (USC, Rancho Los Amigos Archives, Box 33, File 4). All of the dormitories, once located within the block bounded by Golondrinas and Flores Streets, have been since demolished.

Located near the intersection of Hawthorne and Flores Streets, the married employee housing was constructed over a three-year period, between 1921 and 1924.

Two of the original bungalows, (LACO #1121), constructed in 1921 and (LACO #1123), built in 1924, are still in place (By the time the new bungalows were built the County Farm already had at least seven bungalows for its employees. Designed by P. O. Wright, and located along Erickson Avenue, some were in place as early as 1918 – 1919 (USC, Rancho Los Amigos Archive, Box 33, File 3, "Architectural Drawings for Type D Employee Bungalows"). In 1926, two single-family residences were built to house the chief resident physician and the assistant superintendent. A short time later two more houses were built nearby as residences for other administrative personnel. Designed in a Spanish Colonial Revival style, the cottages were located at the corner of Erickson Avenue and Golondrinas Street (Fliedner, 1990:150). All of the Erickson Avenue bungalows, as well as the four cottages, were demolished sometime between 1974 and 1990.

Another capital improvement made in the early 1920s was the conversion of an existing one-story brick building on Juniper Avenue into a morgue (The building was constructed in 1913, its original use unknown). This morgue replaced an earlier facility that had been located since 1915 in the Power House. Opened in 1924, the new morgue (LACO #1276) was equipped with eight refrigerated drawers, a laboratory, and an autopsy examining room. Sometime in the late 1940s or early 1950s the morgue was moved to another location and the building converted to a lock shop. The construction of a state-of-the-art morgue facility was only one of numerous improvements in equipment and staff that were necessary to transform the County Farm into a full-fledged hospital facility. Other changes included the construction of a pharmacy, and the purchase of medical equipment, including a x-ray machine, cystoscope, spirometer, manometer, and sterilizers (Fliedner 1990: 126-127). By 1925 the County Farm, which now included a pharmacy, a x-ray facility, a dentist's office, and a fully equipped surgical room, could perform many of the medical treatments and procedures that required patients prior to this to be treated at the County Hospital in Los Angeles.

Throughout the 1920s the number of mentally ill patients at Rancho Los Amigos continued to increase. By the end of 1924 the County Farm had 257 patients termed

"harmlessly insane." In response, the Board of Supervisors approved the construction of expansive additions to both the men and women's psychopathic wards. When completed in 1925, the men's psychopathic ward, Building 307 and 308 (LACO #1204), held 156 male patients. The women's ward, Building 305 and 306 (LACO #1202), intended to hold 98 female patients, was completed in the summer of 1925 (Fliedner, 1990: 133). Designed to simulate the style and material of the existing brick wards, the additions transformed each ward from a u-shaped building into a four-sided structure surrounding a central courtyard. Over the years the wards underwent a series of alterations and additions. Within each courtyard small support buildings were added, such as shower facilities and a toilet room (LACO #1247). Built in 1925, the toilet room is located in the courtyard of the women's psychopathic ward. Other modifications included an addition, designed by Montrose Warn in 1924, to the dining room of the older men's psychopathic ward, built in 1907 (LACO #1205). In 1928, hydrotherapy baths were installed, one in the men's ward and one in the women's. Another patient ward, Ward 104 (LACO #1207), was built in 1925 (Ward 104 last was used as Work Center Number 2 for vocational training).

Sometime in the mid-to-late teens the County Farm instigated a program of occupational therapy for its patients. From its inception it had been a matter of policy that all of the County Farm's inmates contribute to their upkeep, based upon their physical and mental ability to carry out tasks. The belief was that it would give the patient a greater sense of dignity and self-respect, and allow them to be less dependent on the charitable largesse of the County Farm. Initially, the more ambulatory patients helped in the field, harvesting crops, picking fruit and/or taking care of the facility's farm animals. But, as Rancho Los Amigos moved away from its role of serving the temporarily incapacitated and the penniless elderly, to increasingly providing accommodations for the chronically sick and the mentally ill, it was becoming more difficult to find enough able-bodied patients to fulfill the type of physical labor required of a farm-based facility. By the mid-1920s occupational therapy turned increasingly to vocational training, partially as a result of the increased emphasis by the medical profession on rehabilitating patients. This form of therapy was seen as an

integral component in the recovery of the patient's physical and mental health and as a means of re-integrating the patient into society.

William Harriman saw the implementation of occupational therapy as beneficial in helping "patients to again become self-supporting in whole or part and [the County] could no doubt eventually support the extra cost undertaken by producing articles used here and elsewhere in the county service." Harriman would go on to note that, "Such facilities would certainly improve both the physical and mental health and add to the patients' contentment" (Annual Report of the County Farm, 1917-1918). Furthermore, some of the craft training proved practical to the needs of the County Farm, such as furniture produced for the facility made in its woodworking shops. In addition to woodworking, patients were trained in other crafts, such as rug weaving, needle work, printmaking, basket weaving, leatherwork and ceramics. Just as in the case of appointing a professional to head the dairy operations, Harriman realized that Rancho Los Amigos needed an experienced supervisor to lead the vocational program. In 1926, after several years of lobbying Harriman convinced the Board of Supervisors to approve the hiring of Jack Holland to head the Occupational Therapy Department (Fliedner, 1990: 138). Two years later, in 1928, the Occupational Therapy Building (LACO #1266) was built to house the basket weaving and carpentry shops (Figure 10). Later, called Descanso Hall it is located at the corner of Juniper and Bonita Streets. More recently used as the Crafts Center, today it no longer is used for either occupational therapy or craft making. Occasionally, the building is used as a meeting hall.

Construction moved at a rapid pace at the County Farm in the 1920s, particularly between the years 1924 and 1930. During this period, in addition to residential units for the patients and staff, a number of ancillary structures were built to support the growing infrastructure of Rancho Los Amigos. Among these was a garage and storage building (LACO #1278), built in 1924 fronting on Juniper Street, a carpenter's office (LACO #1277), located adjacent to the garage and storage building, a small detached office (LACO #1279), located to the rear of the garage and storage building and a wood framed free-standing shelter (LACO #1290), constructed near the corner of Descanso and Laurel

Streets in circa 1920-1930 (It may have been rebuilt in 1952). In 1925, a larger power plant was built adjacent to the existing Power House, constructed in 1909 (LACO #1300). A free-standing smoke stack was constructed as a component to the new building. The new power plant generated so much energy that its one thousand horsepower engine provided enough energy to supply heat, light, power and water to all of the buildings at Rancho Los Amigos well into the 1950s. Following the construction of the larger power plant, the old Power House was used to house the facility's plumbing, sheet-metal, steamfitting, and electrical shops. Other, smaller additions to Rancho Los Amigos in the mid-1920s, included the construction of a garage in 1926 (LACO #1177), for the dairyman's house (LACO #1137) and a restroom (LACO #1256). Built in 1926, it is located at mid-block, along Erickson Avenue, south of Building 70. Other structures were constructed in conjunction with the farm's poultry enterprises. A feed barn (LACO #1334) built in 1926 and brooder house (LACO #1335) built in 1929, were located along an access road, between Laurel and Juniper Streets. One of the buildings, subsequently referred to as the vivarium (feed barn), has been since demolished (An aerial map shows the County Farm as it looked on May 24, 1926) (Figure 11).

By the time the patient and staff housing had been completed in the mid-1920s the County Farm began to address the need for improving other aspects of its infrastructure, including the construction of a new administration building, a new service building (which included two kitchens and an employee dining facility), another men's ward (Building 70), a new women's ward (Casa Consuelo), an auditorium and new streets to connect both old and new buildings. (Sometime between 1925 and 1928 the street names were changed, those running in an east and west direction were given Spanish names, the roads and streets running in a north and south direction were named after trees and plants).

For 37 years the original administrative building, a three-story structure built in 1889, had served as the County Farm's administrative headquarters. As early as 1920 it had become patently clear that the Office Building had not only seriously deteriorated, but, that its small nine office-space was completely inadequate for the purposes of

courtyard, are motifs associated with the style, though the building is a reductive interpretation of it. Several more service buildings were built in the waning years of the 1920s, including a second garage and storage building (LACO #1280). Built in 1928, the vernacularly styled structure is located to the rear of a garage (LACO #1278), completed four years earlier. Three more auto and garage sheds were built in the same general location as the two above-mentioned garage/storage buildings, including two auto sheds (LACO #1379 and LACO #4121), built in 1929, and a garage and shed (LACO #4118), also built in 1929.

3.5 The Depression Era and War Years at Rancho Los Amigos (1931-1945)

Under the direction of William Harriman the decade-long period of the 1920s saw tremendous growth at Rancho Los Amigos, both in its infrastructure and in patient and staff population. During this period some forty buildings and structures were built. The number of patients had nearly doubled, as had the staff. As importantly, by the end of the decade the County Farm had entered a transitional phase in its mission, from one in which its initial focus was on the care of the elderly poor and those suffering from work-related injuries, to the nurturing of the chronically physically and mentally ill. Now as Rancho Los Amigos moved forward into the next decade it would encounter the greatest challenge since its opening as a County Poor Farm in 1888. The Depression years of the 1930s and war years that followed would prove to be some of the most challenging years of the County Farm, not only financially, but, as importantly, in its purpose, who it would serve, and how it would survive to provide for those in need.

Little new construction took place between 1930 and the end of World War II, in 1945. With the exception of the Hospital Building (later renamed the Harriman Building), completed in 1931 and Bonita Hall, built in 1932, there were no large-scale projects within the fifteen-year period. The devastating economic stock market crash of 1929 signaled the onset of the most protracted economic collapse in America's history. Los Angeles County, in particular, was hard hit by the Depression. At its height as many as 25% of the American workforce was unemployed. The war years proved equally

difficult regarding the new construction at the County Farm facilities when nearly all non-defense-related construction came to a halt.

Those seeking admission to the County Farm increased dramatically during the Depression, regardless of the category, whether they were patients needing minimal care, the mentally ill or the chronically sick. Prior to this the majority of the County Farm's inmate population was drawn primarily from the ranks of blue-collar workers. Now as the 1930s progressed, the demographics of the patient population began to reflect a dramatic increase in white-collar workers. "A definite trend had begun in 1930, when it was noted that a large percentage of those admitted to the Farm were certified public accountants, attorneys, physicians, ministers, teachers, university professors, musicians and other professionals" (Fliedner, 1990: 169-170). Other problems that added to the increased inmate population in the early 1930s, included epidemics in polio, an unnamed neuromuscular disorder and paralysis caused by the consumption of bootlegged liquor (Fliedner, 1990: 157-158).

In 1932, with a staff of 700, there were nearly 3,000 patients residing at the 540-acre institution. By the late 1930s patient demographics began to change. Many of the Rancho's elderly patients were now leaving, their self-sufficiency made possible by the enactment of the Social Security program. In their place patients were now being drawn from the ranks of the working poor, many of them migrant farmers who had come to California from the Dust Bowl regions of the Midwest and South. By the end of the 1930s "these people made up 74 percent of all persons entering California. Most were poor. Many were malnourished. Thousands needed medical care and eventually came to the Rancho" (Fliedner, 1990: 189). During this same period dramatic changes were being instituted at the County Farm. The farming division was being phased out, as it was becoming less economically viable as a means to pay for patient care. Increasingly, professionals at the County Farm, as well as a number of officials at the County of Los Angeles, were realizing that Rancho Los Amigos "would inevitably become a hospital facility for the county's poor" (Fliedner, 1990: 192).

Throughout the 1930s William Harriman continued to tirelessly pursue the completion of the master plan he had developed for the County Farm in 1924. During a brief two-year period, between July 1931 and August 1933, Harriman resigned as superintendent to become head of the Department of Charities. Nevertheless, he continued to remain titular head of the institution. While, the assistant to Harriman, Everett Gray, served in the interim as superintendent of the County Farm, Harriman and his family continued to live in the superintendent's house, as well as attend most of the staff and other County Farm meetings. In addition, he maintained his office in the Administration Building (Fliedner, 1990: 172-173).

One of the major achievements of Harriman's master plan instituted in the early 1930s was the construction of the Hospital Building. Begun in late 1930, it officially opened on March 27, 1931 (Fliedner, 1990: 160). The 2,500-bed hospital, designed in a conflation of Mission Revival and Spanish Colonial Revival Styles, was built in stages, with the main building completed during the first phase of construction. It would be approximately another decade before the second phase, the arcaded wing, located to the east of the main building, would be completed. What perhaps few perceived at the time was the significance of the Hospital Building's site, located just to the north of Imperial Highway. The first major construction of a building north of Imperial Highway eventually created a bisected institution, with Rancho Los Amigos having both a South and North Campus. In the succeeding years building would increasingly be concentrated at the North Campus. As the years progressed the South Campus, with its older buildings and decreasingly important farm component, would become less critical to the County's needs when compared to the medically and technological more modern North Campus.

A number of small buildings and structures were constructed between 1930 and 1932. Two buildings were added to the Women's Psychopathic Ward, include an accessory building (LACO #1239), built in 1930 and a shelter (LACO #1240) also built in 1930. A freestanding shelter (LACO #1246), completed in 1930, was added to the Men's Psychopathic Ward. The Paint, Shoe and Print Shop (LACO #1267) (more recently the Transportation Office) and a shed to store flammable material (LACO

#1272) were both completed in 1930. In 1931 two structures were built, a laundry room (LACO #1259) (more recently the Wheelchair Repair, Sign and Locker Room) and another shed (LACO #1333). In addition, a dairy barn built in the 1890s, located near Erickson Avenue and Gardendale, was converted in 1931 as a ward for male patients. Remodeled as a patient ward because of overcrowded conditions, it continued in use until it was demolished in 1951(Following the end of the war it was used for a brief time to house 50 elderly Japanese-American men returning from the internment camp at Manzinar. After the Japanese left the Barn Ward, as it was called, general ward patients occupied the building until it was razed in 1951). Six structures were completed in 1932. They include the pump house (LACO #1292), a woman's gymnasium, added to the Women's Psychopathic Ward (LACO #1292), an accessory building, later used as a snack bar (LACO #1245), a garage (LACO #1268) a garage/storage building (LACO #1270) and Bonita Hall.

Bonita Hall (LACO #1264), located on Bonita Avenue, was designed by the architect, Edward C. N. Brett. Only the second large building built during the 1930s it was designed in a schematized interpretation of the Spanish Colonial Revival (Figure 16). The hall was constructed to provide a larger space for patient social activities, replacing the recreational room located in the Social Dining Hall. Fortunately, funds for the building had already been allocated before the stock market crash of October, 1929. (The Social Dining Hall now was used only for the purpose of patient dining). At the east end of Bonita Hall space was allocated for tables and chairs where patients could read or play games. Later, patients formed their own impromptu orchestra. Calling themselves the "Liver and Onion Band," they played music to entertain fellow patients and staff. A cooperative canteen was built adjacent to Bonita Hall to provide patients and employees with snacks, drinks, magazines, cigarettes and cigars. Remolded in 1974, more recently Bonita Hall has been used as the Rehabilitation Engineering Center.

Several more structures were constructed by the end of the 1930s. Small, like most of the construction that took place during the Depression, they were built in the location of three or four lath houses built in 1926 (Only one of the lath houses (LACO

#1353), located near the corner of Bonita Street and Erickson Avenue, is still intact today). These buildings and structures include a tool house (LACO #1356), a landscape/nursery office (LACO #1357) and three circular metal tanks (LACO #1284, LACO #1373, and LACO #1374). The tool house, completed circa 1936, was used to store garden equipment for the nearby lath houses. Two years later, in 1938, a landscape/nursery office was built adjacent to the tool house. It is most likely that three metal tanks, located just east of the dairyman's house (LACO #1137) near Bonita Street, were built sometime in the mid-to-late 1930s. One other small structure, a toilet building (LACO #2492), located near Bonita Street, between Building #1286 and #1287, was built circa 1930 - 1945. Federal participation in the expansion of the County Farm was minimal and involved only several beautification projects undertaken by the Federal government's Works Progress Administration (WPA), including the landscaping of both sides of Consuelo Avenue in the late 1930s. It is likely that the pine trees that line the street were planted as part of the WPA's contribution.

Between 1941 and 1945, less than a half dozen structures were built. Not only was it difficult to obtain supplies to construct new buildings during this period, but the staff to build them. During the war years the County Farm lost a number of employees, some to the armed services, others to the defense industry. More ambulatory patients left as well, many of them to work in the nearby aircraft plants. As a result a number of the positions at Rancho Los Amigos, even highly skilled ones, went unfulfilled. Four buildings constructed during this period include two vocational training buildings (LACO #589 and LACO #590). Built in 1941 the two inter-connected buildings, since demolished, were located along the west side of Laurel Street. In addition, a lumber shed (LACO #954), located on the east side of Laurel Street was built in 1942 and a small shed (LACO #1464), also located on the east side of Laurel Street, was completed in 1945.

3.6 The Post-War Years and the Establishment of Rancho Los Amigos as a Rehabilitation Institute (1946-1965)

In 1944, with the end of the war successfully in sight Rancho Los Amigos officials, led by William Harriman, solicited the Board of Supervisors for $2,000,000 to pay for the institution's much needed improvements, almost all of it involving plans to develop its North Campus (William Harriman retired as Superintendent of Rancho Los Amigos in January, 1952. He died of a heart attack the following year on December 28, 1953 at the age of 64). Among the new buildings projected for the coming years were new infirmaries, a children's convalescent home, and a physiotherapy and hydrotherapy building. While great progress in developing the North Campus was either under construction or in the planning stages, the South Campus had little in the way of large building projects. Beginning in the postwar period the primary focus of Rancho Los Amigos' medical and hospital care would be concentrated on the North Campus and not the South. In 1949 there were 2,405 patients residing at the institution, including 775 individuals housed in the general ward, 1,088 in the infirmary wards (76 of which were patients in the post-poliomyelitis wards), and 317 male inmates and 225 female inmates in the mental hygiene wards (Fliedner, 1990: 234).

As Rancho Los Amigos entered the decade of the 1950s construction on the North Campus continued at an increased pace. Among the first of the large-scale postwar projects was the construction of a series of six infirmary wards located adjacent to the Medical Building. In 1950 the first three infirmary buildings were finished, followed a year later by the completion of three more. At the same time that the North Campus was under development, the South Campus was beginning the initial stages of dismantling its patient residential wards and support facilities. In 1951, both the Barn Ward (Ward 103) and Tent City were dismantled (Comprised of 30 tents intended to temporarily house patients evacuated from wards damaged in the 1933 earthquake, the tents had been in continuous use for 18 years). Beginning in the late 1940s a coordinated treatment program based on the physical manipulation the body rather an emphasis on craft training was changing the way disabled patients were being treated. As a consequence,

occupational therapy was now concentrated in the physical therapy facilities on North Campus, rather than the craft shops located on South Campus.

The lessening of importance of the South Campus and the increasing significance of the North Campus is best illustrated by Rancho Los Amigos' construction program in the postwar years. Between 1946 and 1965, there were only three buildings of any size and significance built on the South Campus. These included a new laundry facility (1951), chapel (built 1955), and general ward (1963). Of the three buildings, only the general ward, was directly related to patient housing. Increasingly, patient care and services were being transferred to the newly built facilities on the North Campus.

In 1951 a new laundry facility was constructed in the area of the demolished dairy located east of Erickson Avenue and south of Bonita Street, replacing the original laundry on Descanso Street. By the postwar period the old facility had become outdated, its equipment in need of repair and the physical plant too small to serve the current needs of the institution. When the new Laundry Building (LACO #2637) was completed in 1951 it comprised 24,034 square feet and included vast areas for flat ironing, as well as sections for washers and dryers. The building was so large that it handled not only its own needs, but provided laundry service for several area hospitals, as well. The facility continued in operation until 1983 when it was closed after Rancho Los Amigos contracted out their laundry to a private company. Responding to the expanding, as well as divergent needs of Rancho's staff and patient population, a new chapel was built in 1955. Located on the corner of Dahlia and Consuelo Streets, the chapel (LACO #3592) was designed to serve Protestant, Jewish and Catholics faiths. Comprised of two distinct chapels, each had an approximately 70-seat capacity.

Despite the fact that Rancho Los Amigos was beginning to accelerate its rehabilitation programs in the late 1950s, it still served primarily as a chronic-disease general hospital. In 1960 there were 1,700 long-term chronically ill patients compared to 200 patients housed in the rehabilitation wards (Fliedner, 1990: 305). The general infirmary ward, (LACO #5028), built in 1963, signaled the last major construction of a

building on the South Campus (It should be noted, however, that its location is relatively close to the North Campus, on the corner of Erickson Avenue and Golondrinas). Upon its completion patients who had been housed in the 40-year old "200" infirmary wards were moved to the new facility. When the last of them had been transferred in 1964 the old infirmary wards were closed.

With exception of the general infirmary ward, laundry and chapel, the rest of South Campus' new construction during this period was comprised of less then a dozen ancillary structures, including four sheds, a decontamination room, a prosthetic shop, a and small vernacular building (the loading dock). One building, a post office (LACO #2677), was moved onto the grounds of Rancho Los Amigos in 1949. The war surplus building originally served as an army barracks but was remodeled as a post office when it was relocated to an area just south of the Administrative Building (Building #1100). The four vernacular style sheds (LACO #2434, #2435, #2436, and #2437), built in 1949, are located in the interior courtyard of the Men's and Women's Psychopathic Wards. Built in 1951, the decontamination room (LACO #3348), later used as a garbage can room, is located at the intersection Laurel and Bonita Streets. The prosthetic shop (LACO #3390), built in 1953, is located behind the rear elevation of Building 50 (LACO #1186), along Bonita Street. The prosthetic shop is one of the few examples of a schematic interpretation of postwar Modernist design on the South Campus. Built in 1954, LACO #3820, subsequently referred to as the Loading Dock, is located in the interior courtyard of the Men's Psychopathic Ward.

The postwar period was a critical time for Rancho Los Amigos, a time when its long-term emphasis on the care of the chronically and mentally ill was beginning include the treatment of epidemic diseases. Polio outbreaks were particularly endemic between the late 1940s and early 1950s. At this time Rancho Los Amigos was the only facility in Los Angeles County treating cases of polio requiring lung machines. In 1951 there were 85 people being treated for polio at Rancho Los Amigos. Of these 85, 63 were respirator cases (Fliedner, 1990: 239). Unfortunately, during this period there was little in the way of treatment for the severe polio cases. Understaffing, particularly in regard to physical

therapists and lack of money, made it difficult to develop efficacious programs to treat these types of patients.

In 1954 the Polio Respiratory Center was opened on the North Campus. Under Superintendent Robert Thomas, who took office as head administer in 1952, "Rancho Los Amigos was transformed from a farm to a hospital" (Fliedner, 1990: 246). Heading a staff of 1,500 employees, of which 50% were nurses, Rancho Los Amigos was grouped into departments and sub departments under two divisions, general medical care and post-polio medical care. Recognizing that Rancho Los Amigos had been functioning primarily as a hospital since the 1940s, and that shortly the farming and dairy divisions would be phased out, the Board of Supervisors, on October 5, 1955, changed the name of the facility to Rancho Los Amigos Hospital. As a part of the divesting of the farming and dairy programs the Rancho began to sell off its extensive acreage. By the mid-1950s the Rancho property had been reduced to 350 acres, approximately half of what it once represented in the earlier part of the century.

After the polio respiratory program was established on the North Campus, becoming the largest polio respiratory center in the world, Rancho Los Amigos began to expand its other services, including the opening of a "state of the art" Orthopedic Center (Fliedner, 1990:282). In some cases buildings on the South Campus, such as the old Wards 50 and 70, were converted for patients undergoing rehabilitative treatment in preparation for returning home. An interesting re-adaptive use of the South Campus' Auditorium occurred in 1953 when it was filled with polio patients in respirators in preparation for filming a theatrical trailer for a March of Dimes drive. The Respiratory Center had been open only a year when, in 1955, Dr. Jonas Salk discovered a polio vaccine. By the end of the 1950s the cases of polio had dropped dramatically, the Salk vaccine having brought to an end the outbreaks of periodic epidemics that had plagued generations of children and adults. Rancho Los Amigos now began the joyful task of warehousing their iron lung respirators. In the succeeding years the mass inoculation of the Salk vaccine eventually would completely eradicate polio as a disease.

Though it would be many years before the last of the polio patients would leave the hospital, the medical staff began to increasingly focus on their non-polio patients. Many of the rehabilitative techniques that had been used on their polio cases could be applied to those debilitated by long-term injuries and diseases. By the time administrative head Robert Thomas had left Rancho Los Amigos, to be succeeded in 1956 by Eugene Erickson, "the hospital was well into its evolutionary transition from a custodial unit to an active hospital engaged in rehabilitation, teaching and research" (Fliedner, 1990:285). While the activity and energy emanated by the medical staff was palpable on the North Campus, the South Campus was increasingly diminishing in significance. With its older, outdated facilities and the decreasing importance of its farm and dairy complexes, it was fast becoming extraneous and irrelevant. Beginning in 1957 Rancho Los Amigos began to phase out its mental wards and in the following year, the farm, dairy, and dormitory patients. In 1963 the last of the Rancho's farm and dairy operations was closed (Fliedner, 1990: 295; 300; 308).

3.7 The South Campus of Rancho Los Amigos in Transition (1965-2003)

In 1967 there were approximately 1,200 patients residing at Rancho Los Amigos, the vast majority housed in the North Campus wards and infirmaries. As the years progressed there was less and less new construction on the South Campus. Instead, changes to the area were primarily concentrated on the demolition of some of its older structures. In 1964, the Women's Ward, built in 1897, on the corner of Erickson Avenue and Consuelo Street, was demolished. A master plan proposed new buildings for the site to be used for hospital and administrative staff, though this never came to fruition. Instead, the now vacant site was employed as a parking lot. It was becoming obvious by this time that the South Campus was to be used as an ancillary component to the more modern facilities located on the North Campus. Several of the old "200" infirmary wards were converted from patient wards to offices. The library, which had been housed in the old chapel on Erickson Avenue, was transferred in 1967 to Building 601 on the North Campus.

With the number of patients decreasing dramatically on the South Campus by the mid-1960s, Bonita Hall, which had served as a recreational facility and canteen for the patients, was closed and remodeled into offices. More changes to South Campus included the closure of the Dining Room and Kitchen, located opposite Buildings 30 and 40, in the mid-1960s, the staff residency in Wards 105 and 106 and the Bathhouse Building in the late 1960s. Subsequently, the ward buildings and the Bathhouse Building were used to store supplies and records and a portion of the Dining Room was readapted for use as a Print Shop.

During this period there were several new projects constructed on South Campus. In 1966, a new $1,000,000 steam plant, along with a 200,000 gallon water tank (respectively LACO #5548 and LACO #5547), were built on the corner of Hawthorn and Esperanza Streets, necessitating the removal of several of the 40-year old employee cottages. Built to compensate for the increasing number of facilities on North Campus, which required more power and energy than the older buildings of the prewar period, the new steam plant also had to provide power for a larger staff and patient population (there were 1,957 patients in 1967 and by the end of the decade, a staff of 2,869) (Fliedner, 1990: 312; 317). By the end of the 1960s and the beginning of the 1970s those requiring rehabilitative care were supplanting the long-term, chronically ill patient. Part of this reduction in the housing of the chronically ill and elderly was due to recently passed federal programs, such as Medicare, which provided similar services to those offered by Rancho Los Amigos. Following the passage of the federally implemented laws, Rancho's chronically ill and elderly population dropped drastically. Now, more than ever, it saw its role as a provider of rehabilitation programs to treat the long-term care of those debilitated by strokes, brain traumas, paralysis, and accidents.

In 1970 Rancho Los Amigos was given official recognition by the Commission on Accreditation of Rehabilitation Facilities (CARF) when it was accredited by CARF as a rehabilitation center (Fliedner, 1990: 316). Over the next decade the North Campus continued to expand. In 1971 the University of Southern California's (USC) Departments of Physical and Occupational Therapy relocated on the South Campus,

occupying for a time, Buildings 30, 40, 50 and 70, until they returned to USC in 1988. In 1971 the Whittier Narrows earthquake damaged a number of the older buildings on the South Campus. This, coupled with the inflationary period of the 1970s, and the passage of Proposition 13 in 1978, effectively placed a ceiling on government spending and impacted dramatically both the building and maintenance programs at Rancho Los Amigos. As a result only a few of the buildings projected by the Rancho's 1970 master plan were ever built and brought to a halt the implementation on the North Campus of a new rehabilitation center, a 210-bed Catastrophic-Illness Center, and a 30-bed Clinic Building.

Over next several decades the South Campus would see a gradual decline in the use and maintenance of its buildings. Deterioration through benign neglect had rendered a number of the buildings unusable, and in some cases, unsafe. By the early 1990s a majority of the buildings on the South Campus had been abandoned or employed for passive purposes, primarily as storage for records and papers. The older buildings, whose function was no longer applicable for more current times, simply had lost their relevance. This situation was exacerbated by the damage caused to many of the buildings during the 1994 Northridge earthquake. Today, the South Campus is essentially abandoned. Many of the buildings are no longer safe, their poor physical condition due in many cases to earthquake damage and deferred maintenance. More recently a number of these buildings have been further ravaged by acts of arson and vandalism.

The South Campus stands today as a ghost of its once productive past. Its agricultural and animal husbandry components, including much of its acreage, are gone. Of the some 40 buildings once associated with its farming and dairy years, only three or four remain. Its patient wards, as well as buildings associated with the long-term patient care of the chronically ill, such as employee housing, the Auditorium, the Laundry Building, the old chapel, the Harriman House and the Administrative Building, either have been demolished, closed or readapted and in some cases, reconfigured for alternative uses. If one were to look back at the 116-year history of the South Campus

the change over the succeeding years would reveal how dramatically the function and condition of this component of Rancho Los Amigos has changed.

4.0 EXISTING CONDITIONS ASSESSMENT OF RANCHO LOS AMIGO, SOUTH CAMPUS

The following section of the report includes a description of the South Campus of Rancho Los Amigos as well as architectural descriptions for each of the existing buildings. The description includes a summary of alterations and additions to each building or structure.

The South Campus of Rancho Los Amigos

The South Campus of Rancho Los Amigos is designed around an orthogonal street grid. The two main streets, Erickson Avenue and Consuelo/Descanso Streets divide the campus into four quadrants (see Figure 2). To some degree the four quadrants were devoted to different functions. The northwest quadrant contained staff housing, one-story patient wards, the power plant and main kitchen. The northeast quadrant housed the psychopathic men's and women's wards. The southwest quadrant contained the main infirmary wards, men's wards, support facilities for the Rancho, as well as a number of farm buildings and livestock pens. The southeast quadrant contained the main administrative building, the director's house, greenhouses and part of the main farm complex.

4.1 Northwest Quadrant (bounded by Descanso Street, Erickson Avenue and Imperial Highway (see Figure 2):

General Description

The northwest quadrant contains one of the most imposing buildings in South Campus, the Power Plant/Ice House complex (Building #1300-1302) (Figure 17). This

large brick and concrete building encompasses several wings, a 100,000 gallon water tower and a wood cooling tower, built between 1909 and 1925. To the west of the power plant are two ranges of one-story, wood frame patient wards (Building #1189-1201) that fill the two blocks between Hawthorn, Descanso, Laurel and Esperanza Streets (Figure 18). The large one-story concrete building located just north of the patient wards at the intersection of Laurel and Esperanza Street, was built in 1926 (Building #1295). Two one-story wood frame cottages are located east of the kitchen at the intersection of Hawthorn and Flores Streets (Building #1121 and 1123). A circular metal tank (Building #5547), built sometime after 1930, is located just south of the cottages.

Building Inventory for the Northwest Quadrant

LACO #1121 (Staff Cottage)

Located near the intersection of Hawthorn and Flores Streets this wood-frame, single-story vernacular building is one of two surviving examples of staff housing at Rancho Los Amigos (Figure 19). The rectangular building is supported by a concrete slab foundation. Its cross-gabled roof is covered in a combination of rolled asphalt and composition shingles. Triangular wood brackets support the roof's projecting eaves. The wood frame cottage is clad in horizontal lapped wood siding. Its wood-frame windows are one-over-one single hung sash type.

East Elevation

The east elevation functions as the cottage's primary façade. Its entrance door is embellished with a decorative gable. The roof's eave extends over a projecting stoop that is capped by a shed-roofed porch supported by wood posts. A four-step concrete stoop leads to a single leaf front door. On the south side of the elevation a wood shed has been attached to the side of the cottage.

West Elevation

The west elevation mimics the design and details of the east elevation. The elevation's doorway is approached by a wheelchair ramp with a metal pipe style railing.

LACO #1123 (Staff Cottage)

Located near the intersection of Hawthorn and Flores Streets, just west of Building #1121, this wood-frame, single-story vernacular building is one of two surviving examples of staff housing at Rancho Los Amigos (the other is Building #1121). The rectangular building is supported by a concrete slab foundation. Its cross-gabled roof is covered in a combination of rolled asphalt and composition shingles. Triangular wood brackets support the roof's projecting eaves. The wood frame cottage is clad in horizontal lapped wood siding. Its wood-frame windows are one-over-one single hung sash type.

East Elevation

The east elevation of the cottage functions as the building's rear elevation. It has two separate entries located at the top of a five-step concrete stoop placed in the center of the elevation.

West Elevation

The west elevation is the cottage's primary elevation. Its entrance is embellished with a decorative gable-end (Figure 20). The extended eave shelters a projecting stoop capped by a shed roof. A wood single-leaf door is the primary entry. The stoop has metal pipe railings.

North Elevation

The north elevation faces toward Flores Street. A centrally placed doorway placed at the top of a concrete stoop provides access to the cottage's interior.

South Elevation

The south elevation is linear in configuration. Its fenestration is comprised of an asymmetrical arrangement of wood sash windows.

LACO #1189-1197 (One-Story Infirmary Wards)

Nine freestanding one-story wood frame wings are linked by a continuous portico on the south side of each ward (Figures 21 and 22 and see Figure 2). Each ward is capped by a modestly pitched, composition shingle roof. Skylights have been inserted in some of the ward's roofs. Recessed doorways are located on the north and south elevations (Figure 23). Each ward is capped by hipped roofs and is clad in horizontal wood siding. The fenestration of the west elevation is comprised of a linear arrangement of wood sash windows. The east elevation's fenestration is comprised of a linear arrangement of multi-light wood windows. The interior of each ward is comprised of two large rectangular wards, flanked at their south end by smaller rooms that were used for staff room, a small kitchen and bathrooms. At the east end of the building a rectangular room acted as a vestibule to the main ward.

LACO #1189-1197: Post-Construction Alterations and Modifications:

Building #1197

At mid-point of the east elevation, a flat-roofed, stucco clad projection with a single door and window has been added (construction date unknown). Another addition,

Building #1189

A carport has been added to the west elevation of Building #1189. A concrete ramp has been added to the building's north elevation. A concrete loading dock, capped by a metal awning, has been added to the east elevation. On the east elevation a concrete ramp allowing access to entrance door was added at an unknown date.

LACO #1198 and 1199 (one-story infirmary wards)

Buildings #1198-1199 consist of two freestanding one-story wood frame wards linked by a continuous portico on the south side of each ward (Figure 24). A modestly pitched, composition shingle roof caps each ward. Skylights have been inserted in the roof of each ward. Recessed doorways are located on the north and south elevations. Each ward is capped by a hipped roof and is clad in horizontal wood siding. The fenestration of the west elevation is comprised of a linear arrangement of wood sash windows. The east elevation's fenestration is comprised of a linear arrangement of multi-light wood windows (Figure 25). The interior of each ward is comprised of two large rectangular wards flanked at their south end by smaller rooms that were used for staff room, a small kitchen and bathrooms. At the east end of the building a rectangular room acted as a vestibule to the main ward.

LACO #1198 and #1199: Post-Construction Alterations and Modifications:

Originally, this complex of buildings included four free-standing wards whose south elevations were linked by a continuous portico (see Figure 4a). Sometime between 1999 and 2002 two of these wards, Buildings #1200 and #1201 were demolished.

LACO #1295 (Kitchen and Employee Dining Room)

Architectural Description

Built in 1926, this one-story, flat-roofed, concrete building is an example of Stripped Classicism, a style that enjoyed widespread popularity for public works projects during the late 1920s and 1930s (Figure 26). The building's footprint consists of an irregular rectangle with projecting elements on the east and west elevations. At the top of the wall plate a projecting cornice delineates the base of the solid parapet that hides the flat roof from view. The building's fenestration is comprised of a linear arrangement of multi-light casement windows.

The east elevation functions as the building's primary façade (Figure 27). It has two entrances placed on the north and south sides of a projecting wing. The doors are double-leaf, with single lights and transoms. A six-step concrete stoop leads to the left door and a wheelchair ramp allows universal access to the right door. Both entries have metal pipe handrails. At the left end of the building is a concrete loading dock with a metal roll-up freight door. The north elevation is comprised of a projecting wing flanked on its east side by a slightly recessed wing (Figure 28). A loading dock is inset into this elevation. Metal stairs lead to the roof on the left corner. Concrete stairs at the left corner of the elevation lead to the basement. The west elevation is comprised of a centrally placed recessed element flanked by slightly projecting wings (Figure 29). The south elevation is comprised of a number of projections and recessions.

LACO # 1295: Post-Construction Alterations and Modifications:

North Elevation:

Aluminum vertical sliders have replaced the original wood sash windows.

South Elevation:

Aluminum vertical sliders have replaced the original wood sash windows.

East Elevation:

Aluminum vertical sliders have replaced the original wood sash windows. A single-story metal addition with standing-seam metal siding and flat roofs supporting two loading docks has been added at the east elevation. The metal roll-up freight door may represent a later replacement.

West Elevation:

Aluminum vertical sliders have replaced the original wood sash windows.

LACO #1300 and #1301 and #1302 (Old Power Plant, Water Tower, Machine Shop, Laundry and Ice Plant)

Architectural Description (Building #1300)

Located at the northwest corner of the intersection of Erickson and Descanso Streets, the power plant building is comprised of three, one-to-three story brick and concrete wings flanked by a freestanding water tower and concrete chimney (see Figure 2). Building #1300 was built over three separate building campaigns. In 1909 a one-story brick building was constructed to house the facility's steam powered power plant. In 1926 a more monumental wing, with classically inspired embellishments was built along Erickson Avenue. Later, the building underwent further expansion when a one-story wing (Building #1302) was built off the southwest corner of the 1909 wing. Designed with a minimum of ornamental embellishments, it is an example of the type of utilitarian design common to many early twentieth century institutional buildings.

East Elevation (Building #1300)

Built in 1926-27, this wing of the building has poured-in-place concrete walls that support a steel truss roof. Facing toward Erickson Avenue the building's street façade is linear in configuration. The Classical style tripartite façade is comprised of a centrally

placed temple façade flanked on either side by flat-roofed wings (Figure 30). The temple façade is comprised of four Tuscan style pilasters that support a projecting cornice that delineates the base of a solid parapet that hides the building's flat roof. The cornice supports a triangular pediment. A centrally placed doorway is flanked on either side by multi-light metal frame windows. The flanking wings are linear in configuration, and are capped by a continuous cornice that runs the length of the elevation (Figure 31). Their fenestration consists of a series of symmetrically arranged, multi-light metal windows that provide light to the building's two-story tall power room. The Power Plant was built to house four steam-driven turbines that provided power and heat to the Rancho campus.

South Elevation (Buildings # 1300, #1301 and #1302)

The south elevation consists of three wings built over a period of 19 years. A projecting wing of Building #1300 forms the east end of the elevation. The wing's centrally placed doorway is flanked on either side by oversized rectangular windows that rise to a height of two stories (Figure 32). A massive cornice, capped by a stepped parapet, caps this end of the power plant. A recessed, one story brick wing flanks the power plant. Capped by a wood truss roof, this wing of the brick building was constructed in 1909 to house the Rancho's first power plant (Figure 33). It later housed the facilities ice house and machine shop. The icehouse's large wood cooling tower, added sometime between 1933 and 1936 is located at the southwest corner of the roof. The wing's fenestration is comprised of a series of large metal frame windows. A projecting one-story brick wing (Figure 34) flanks the west end of the recessed wing. Built in 1911 this one-story brick wing was built to house Rancho's laundry. The fenestration of the south elevation of this wing is comprised of a central doorway flanked on either side by arched windows. The fenestration of the wing's east elevation is also comprised of a centrally placed doorway flanked by arched windows.

West Elevation (Buildings #1300, #1301, #1302)

The west elevation is L-shaped in configuration. The fenestration of the projecting wing at the south end of the elevation is comprised of an asymmetrical arrangement of arched and square windows (Figure 35). The recessed section of the building is comprised of the rear elevation of Building #1300. Its most notable feature is a freestanding, circular chimney that rises to a height of 125 feet (Figure 36). Built in 1927, the tower's fluting references the classical design of the 1926 power plant. The chimney is flanked by a 125-foot tall water tower that supports a 100,000-gallon water tank (Figure 37).

North Elevation (Buildings #1300 and #1301)

The north elevation, which faces toward Esperanza Street, is L-shaped in configuration. At the east end of the elevation the 1926 power plant forms a projecting wing that is flanked on its west side by the one-story wing built in 1909 (Figure 38). At the far west end of the elevation is the slightly recessed 1909 wing that once housed the Rancho's laundry facility. The fenestration of the 1909 and 1926 wings are comprised of an asymmetrical arrangement of arched windows. The north elevation of the 1926 power plant is comprised of a symmetrical arrangement of oversized metal frame windows that flank a central entrance.

LACO # 1300, #1301 and #1302: Post-Construction Alterations and Modifications

Building #1300 (including the concrete chimney)

The exterior of Building #1300 has undergone few significant alterations since its construction in 1926. However, portions of the building's interior, including its original steam turbine engines have been removed. In addition, it should be noted that over the last 35 years the building has suffered significant damage from vandalism and deferred

maintenance. The concrete chimney has remained unaltered since its construction in 1926.

Building #1301 (Water Tank)

The metal water tank and tower have undergone few, if any, alterations since their construction in 1913.

Building #1302 (former Laundry facility)

The exterior of Building #1302 has undergone a number of alterations since its construction in 1909-1926. These include the construction, in 1917, of a one-story addition at the southwest corner of the building. Sometime in the last 20 years a prefabricated metal addition was made to the northwest corner of the building. The interior has undergone several alterations over the last 50 years.

LACO #5547 (Circular Metal Tank)

This circular metal tank is located just south of Building #1121 (Figure 39). It was built in 1966.

LACO #5548 (1966 Power Plant):

The power plant is located at the northwest corner of Esperanza and Hawthorn Streets. Built in 1966, this flat-roofed, single-story brick building houses a steam power plant (Figure 40). It was constructed to replace the old power plant located across Esperanza Street. This utilitarian building is constructed of hollow concrete blocks. Three chimneys cap the power plant's flat roof. A stringcourse visually delineates the top of the wall plate from the solid parapet that hides the flat roof from view.

North Elevation

The elevation has a forty-foot-long, ten-foot-high standing seam metal insert. A metal door capped by a shed roof cover stands at the right corner. Detached metal tanks and compression equipment are located near the building's northwest corner.

South Elevation

The building's primary entrance is placed near the east end of this elevation. The primary entry is through a set of glass door enclosed with a decorative glass surround. A projecting metal roof supported by wood posts shelters the entry.

East Elevation

A metal roll-up door allowing access to the building's interior is placed near the north end of the elevation.

West Elevation

The west elevation faces toward Hawthorn Street. It is comprised of a slightly projecting element at the south end of the elevation that houses a doorway that accesses the building's interior.

LACO #5548: History and Post-Construction Alterations and Modifications:

The power plant was built in 1966 to replace the older facility that was completed in 1926. The new power plant is still in operation.

4.2 Northeast Quadrant

The northeast quadrant is delineated by Consuelo Street to the south, Erickson Street to the west, Imperial Highway to the north and to the east by the property boundary of Rancho Los Amigos (see Figure 2). A total of 22 buildings, almost all devoted to patient services, are located in this part of the Rancho site. The largest building in this quadrant is the former Men's Psychopathic Ward located on the southeast corner of the Erickson Avenue and Golondrinas Street. This building is comprised of a large quadrangle that surrounds a central courtyard containing ten small structures and buildings (Building 303-304/307-308). Just north of the Men's Psychopathic Ward is a large one-story building (Building #5028) that once housed patient wards.

Another large quadrangle is located across Flores Street from the Men's Psychopathic Ward (Building #301-302/305-306). This one-story brick building originally functioned as the Women's Psychopathic Ward. Within its quadrangle are four small structures. A small one-story L-shaped building, located near the southwest corner of the Women's Psychopathic Ward, once functioned as the Rancho's chapel. Casa Consuelo, a large, two-story, H-shaped building is located at the corner of Dahlia and Consuelo Streets. The landscaping of this part of the campus is characterized by large expanses of lawn with foundation plantings around the perimeters of the larger buildings. Street trees line parts of Erickson, Golondrinas and Dahlia Streets.

LACO #5028 (former patient ward building)

Built in 1963, this one-story T-shaped building replaced the one-story wards located at the intersection of Descanso and Hawthorn Streets (Figure 41). Capped with a flat roof, and clad in a combination of brick and stucco, the building is an example of Second Modernism, the dominant architectural style for corporate and institutional buildings from the mid-1940s through the late 1960s.

West Elevation (Street Façade)

Facing toward Erickson Avenue, the west elevation is linear in configuration. Its symmetrical arrangement of fenestration is centered on the centrally placed front entrance. Square posts support the building's oversized projecting parapet.

North Elevation (facing toward Imperial Boulevard)

The north elevation is L-shaped in configuration. The façade of the projecting wing is clad in brick and is unbroken by doorways or fenestration. The fenestration of the recessed wing is comprised of a series of ribbon windows that provide light to the individual wards.

East Elevation

The east elevation is comprised of a centrally placed projecting wing flanked on either side by recessed wings. Its fenestration is comprised of a series of ribbon windows interrupted by the occasional door. The façade of the projecting wing has a centrally paced entrance that accesses the main corridor of this wing of the building.

South Elevation (facing toward Golondrinas Street)

The south elevation is essentially a mirror image of the north elevation.

LACO#5028: History and Post-Construction Alterations and Modifications:

A number of modifications have been made to the building. These include the replacement of several windows and doors. Overall the building has retained good physical and visual integrity.

LACO #1204/1205

Building #1204/1205 was constructed over a 17 year period between 1907 and 1924 to house wards for male psychopathic patients. Designed around a central courtyard, the brick building is composed of two u-shaped buildings that form a quadrangle (see Figure 2). Within the building's central courtyard are ten accessory buildings and structures that housed restrooms, linen rooms, and outdoor shelters for the patients.

West Elevation (Street Elevation, facing toward Erickson Avenue)

The west elevation is the building's street façade. It is comprised of a central projection (with a modified front gable roof) flanked by recessed wings that are capped by a modified hipped roof with triangular vents (Figure 42). The façade is clad in metal siding that simulates the appearance of wood siding. At the center of the façade a porch shelters the building's main entrance. The fenestration of the recessed wing is comprised of sliding metal windows.

North Elevation (Facing toward Golondrinas Street)

The north elevation is linear in configuration. It is comprised of two wings that are linked by a concrete masonry wall (Figure 43). The eastern wing is part of Building #1205 and the western wing is part of Building #1204. Each of the wings is linear in configuration, with a two-story, flat-roofed block at its midpoint. The fenestration of both wings is essentially symmetrical, with a balanced arrangement of rectangular or arched windows. The west wing is sheathed in the same type of metal cladding that is found on the building's façade. The windows are the same type of metal sliders that are found on the façade. The east wing has the same configuration as the west wing. However, the wing's original brick walls have not been sheathed in metal siding and the original wood sash windows, placed in arched or rectangular openings, are still in place.

East Elevation (Facing toward Dahlia Street)

In its configuration and design, the east elevation of Building #1204 references the west elevation of the Men's Psychopathic Ward (#1205) (Figure 44). The wing at the center of the façade has a projecting porch that shelters the wing's primary entrance. The recessed wings on either side of the porch are linear in configuration. Their fenestration is comprised of a symmetrical arrangement of rectangular wood sash windows.

South Elevation (Facing toward Flores Street)

The south elevation of the Men's Psychopathic Ward recapitulates the appearance and configuration of the building's north elevation (Figure 45). However, the building's two wings are not linked by a wall, as is the case with the north elevation. Instead, a small freestanding building, capped by a front gable roof, fills the gap between the two wings. The west wing is sheathed in the same type of metal siding that is found on the building's west elevation. The fenestration of the west wing of the building is comprised of an essentially symmetrical arrangement of arched and rectangular windows. At the east end of Building #1205 is a small front gable building (Building #3820) that is placed on an elevated platform. The east side of Building #3820 is flanked by the south elevation of Building #1204. The fenestration of this wing recapitulates the south elevation of Building #1205.

Interior Courtyard of Building #1204/1205

The interior of the Men's Psychopathic Ward Building is a large courtyard that houses a symmetrical arrangement of ten small buildings and ancillary structures (see Figure 2). The courtyard's west elevation is comprised of recessed wings that flank a centrally placed projecting element (Figure 46). At either end of the elevation are two wood frame sunrooms, whose fenestration is comprised of a series of wood frame sash windows (Figure 47). The fenestration of the projecting block is comprised of large,

rectangular wood sash windows that flank a centrally placed doorway. The fenestration of the recessed wings is comprised of a symmetrical arrangement of arched and rectangular wood sash windows. The north elevation is linear in configuration. It is comprised of the side wings of Building #1204/1205. Its fenestration is primarily wood sash windows placed in arched or rectangular window openings. At the centerpoint of the interior elevation a stucco-covered cinderblock wall links the building's freestanding wings. The south interior elevation recapitulates the appearance of the north elevation (Figure 48). At the elevation's centerpoint a small front gable building (Building #3820) fills the gap between the side wings of Building #1204 and Building #1205.

Buildings and Structures within the Central Courtyard

Eleven small buildings and structures are located within the courtyard of Building #1204/1205 (see Figure 2). Three of the buildings are brick construction, four are prefabricated metal, one is wood frame and the remaining three are free standing metal canopy shelters (see Figures 49-57).

LACO#1243 (Canopy Shelter)

This narrow, rectangular prefabricated metal canopy shelter is located at the north end of the courtyard (Figure 49). It is capped by shallow metal shed roof. The structure was erected sometime between the early 1960s and the mid-1970s (the building is depicted on a 1974 map of the facility). It replaced an earlier canopy shelter depicted on a 1929 site plan of Rancho Los Amigos.

LACO#1244

This small, rectangular brick building is set on an elevated foundation. It is axially aligned with Building #1205. The building is capped by hipped roof and its fenestration is comprised of wood sash windows (see Figure 53). Doorways on the east

and west elevations provide access to the toilet facilities. The building was constructed in 1916 to house toilet facilities for the inmates of the psychopathic wards.

LACO#1245

This small, rectangular brick building is set on an elevated foundation. It is placed at the center of the courtyard and is axially aligned with the gap between Building #1204 and Building #1205. The building is capped by hipped roof and its fenestration is comprised of wood sash windows. Doorways on the east and west elevations provide access to the interior. The building was constructed sometime between 1917 and 1925 as a linen room for the Men's Psychopathic Wards.

LACO #1246

Building #1246 is axially aligned with the center of Building #1204. This aluminum canopy shelter is comprised of metal poles supporting a slightly pitched metal roof. The shelter was erected sometime between the early 1960s and the mid-1970s (the shelter is depicted on a 1974 map of the facility; however, it does not appear on the Sanborn Fire Insurance maps of the Rancho.

LACO #1249

This small, rectangular brick building is set on an elevated foundation. It is axially aligned with Building #1204. The building is capped by hipped roof and its fenestration is comprised of wood sash windows. Doorways on the east and west elevations provide access to the toilet facilities. The building was constructed to house toilet facilities for the inmates of the psychopathic wards.

LACO #1251

This narrow, rectangular prefabricated metal canopy shelter, supported by metal poles, is located in the northwest quadrant of the courtyard (see Figure 54). The shelter was erected sometime in the late 1950s or early 1960s (the shelter is depicted on a 1974 map of the facility; however, it does not appear on the Sanborn Fire Insurance maps of the facility.

Aviary (no number)

The aviary is a small rectangular structure capped by a gable roof (Figure 55). Its walls are primarily comprised of screening. Built in the late nineteenth century the aviary was originally located adjacent to the 1889 Office Building.

LACO #2434

Building #2434 is located in the southwest quadrant of the courtyard. This prefabricated metal building has a rectangular footprint and is capped by a shallow front gable roof (see Figure 51). Doorways to the interior are located in the north and south elevations. Its fenestration is comprised of multi-light metal frame windows. This building was erected in 1949. The original function of this structure is unknown. In later years it was used as a gymnasium.

LACO #2435

Building #2435 is located in the northwest quadrant of the courtyard. This prefabricated metal building has a rectangular footprint and is capped by a shallow front gable roof. Doorways to the interior are located in the north and south elevations. Its fenestration is comprised of multi-light metal frame windows. This building was erected in 1949. The original function of the structure is unknown.

LACO #2436

Building #2437 is located in the northeast quadrant of the courtyard. This prefabricated metal building has a rectangular footprint and is capped by a shallow front gable roof. Doorways to the interior are located in the north and south elevations. Its fenestration is comprised of multi-light metal frame windows. The building was erected in 1949. The original function of this structure is unknown.

LACO #2437

Building #2437 is located in the southeast quadrant of the courtyard. Like Building #2436, this prefabricated metal building has a rectangular footprint and is capped by a shallow front gable roof. Doorways to the interior are located in the north and south elevations. Its fenestration is comprised of multi-light metal frame windows. The building was erected in 1949. The original function of this structure is unknown.

LACO #3820

This small, stucco clad, rectangular building is placed in the center of the south elevation, in the gap between the wings of Building #1204 and Building #1205. It is placed on an elevated platform that allows its south elevation to function as a loading dock for trucks (see Figure 58). The north elevation is accessed via a concrete ramp that leads to a centrally placed doorway. Small windows are placed on the east and west elevations. The building was constructed in 1954.

LACO #1204/1205: History and Post-Construction Alterations and Modifications:

In 1925 the facility consisted of Buildings #1204 and #1205, as well as four small brick building in the courtyard that housed toilets and a linen room. In the mid-1930s the dining room in Building #1205 was extended into the courtyard. This alteration necessitated the demolition of one of the brick toilet buildings. At a later date the two

porches on the east elevation of Building #1205 were enclosed. Shortly after 1945 the north, south and west elevations of Building #1205 were clad in metal siding and the original roof was replaced with composition shingle. As part of this renovation metal frame windows replaced the west elevation's original wood sash windows and the roof of the front porch was altered from a hipped to a front gable roof. Building #1204, which has undergone relatively few alterations since its construction in 1925, has largely preserved its original configuration. A number of alterations have been made to the courtyard since 1925, including the erection of several prefabricated metal buildings in 1949. In 1952 a small wood frame building (Building #3820) was constructed to fill the gap between Building #1204 and Building #1205. The two of the three existing canopy shelters in the courtyard represent replacements of canopy shelters erected in 1916. In the 1950s the facility began to transfer patients out of the Men's Psychopathic Wards to other facilities. By 1963 the buildings no longer functioned as patient wards. For the next 40 years the former wards were used for staff offices, to house patient services and finally as an informal records storage facility.

LACO#1202/1203 (Women's Psychopathic Ward)

In 1919 construction began on a building to house female psychopathic patients. The one-story brick building (Building #1203) was u-shaped in configuration and its primary façade faced toward Erickson Avenue. In 1924-25 the women's wards were expanded through the construction of another u-shaped building, Building #1202, placed to the east of Building #1203. After the completion of Building #1202 the Women's Psychopathic Wards consisted of a quadrangle with a central courtyard that contained three freestanding building housing toilets and a linen room. The courtyard was landscaped with pathways and plantings for the use of the ward's inmates. In their design, materials and architectural scheme the women's wards recapitulate the Men's Psychopathic Ward Building on Flores Street. The vernacular style one-story buildings are constructed of brick masonry, and are capped by complex hipped roofs covered in composition shingles. Both buildings' fenestration is comprised of wood frame sash windows set into arched window openings. The main exterior entrances are located at

the center of the north elevation of Building #1203 and the south elevation of Building #1202.

West Elevation (Street Façade) (Building #1203)

The west elevation is comprised of a recessed central block, flanked on either side by projecting wings (Figure 59). It is entirely clad in metal siding. A hipped roof caps the centrally placed entrance porch. A set of double metal and glass doors provides access to the interior. Secondary entrances are located at the end of the projecting wings. The entrance porch is flanked on either side by a series of metal framed windows.

North Elevation (Building #1202 and Building #1203)

The north elevation is comprised of the side wings of Building #1202 and Building #1203 (Figure 60). The elevation is linear in configuration with the exception of small projections at its east and west ends. At the building's centerpoint a small brick building, capped by a gable roof, fills the gap between the north elevation's two wings. Fenestration is comprised of a series of rectangular windows that provide light to the interior.

East Elevation (Building #1202) (facing toward Dahlia Street)

The east elevation mirrors the west elevation's configuration and design scheme (Figure 61). However, unlike the west elevation, it has not been clad in metal siding and it retains its original multi-light wood sash windows.

South Elevation (Building #1202 and Building #1203) (facing toward Consuelo Street)

The south elevation recapitulates the configuration and design scheme of the west elevation. At its centerpoint a masonry wall links the side wings of Building #1202 and Building #1203 (Figure 62).

Interior Courtyard of Building #1202/1203

The interior of the Women's Psychopathic Ward Building recapitulates, on a smaller scale, the design scheme of the adjacent Men's Psychopathic Wards (Building #1204 and Building #1205). It is configured as a large courtyard that houses a symmetrical arrangement of four small buildings and ancillary structures (see Figure 2). The courtyard's west elevation is comprised of recessed wings that flank a centrally placed projecting porch (later enclosed). The fenestration of the projecting block is comprised of large, rectangular wood sash windows that flank a centrally placed doorway. The fenestration of the recessed wings is comprised of a symmetrical arrangement of arched and rectangular wood sash windows. The north elevation, with the exception of small projections at its east and west ends, is linear in configuration. It is comprised of the side wings of Building #1202 and Building #1203. This elevation's fenestration is primarily wood sash windows placed in arched or rectangular window openings. At the centerpoint of the interior elevation Building #1240 fills the gap between the building's freestanding wings. The south interior elevation, with its series of wood sash windows, essentially recapitulates the scheme of the north elevation. At the elevation's centerpoint a masonry wall fills the gap between the side wings of Building #1202 and Building #1203.

Buildings and Structures within the Central Courtyard

Four small buildings and structures are located within the courtyard of Building #1203 and Building #1204. Three of the buildings are brick construction and one is prefabricated metal.

Building #1239

Built in 1924-1925, this small, rectangular vernacular style brick building is set on an elevated foundation. It is axially aligned with Building #1202 (Figure 63). The building is capped by hipped roof and its fenestration is comprised of wood sash windows. Concrete ramps lead to doorways on the east and west elevations that provide access to toilet rooms. The building was constructed to house toilet facilities for inmates of the psychopathic wards.

Building #1240

This rectangular shelter building is placed at the center of the quadrangle's courtyard. Available documentation suggests that it was built in 1930 (Figure 64). It replaced an earlier wood canopy that is depicted on the 1929 Fire Insurance Map of Rancho Los Amigos. The structure was built to provide shade for the inmates of the psychopathic ward.

Building #1241

Built in 1924-25, this small, rectangular vernacular style brick building is set on an elevated foundation (Figure 65). It is placed in the gap at the center of the north elevation. The building is capped by hipped roof and its fenestration is comprised of wood sash windows. Concrete ramps lead to doorway on the north elevation. The building was constructed as a linen storeroom. It was later used as a women's gymnasium.

Building #1242

Built in circa 1919-1925, this small, rectangular vernacular style brick building is set on an elevated foundation. It is axially aligned with Building #1203. The building is capped by hipped roof and its fenestration is comprised of wood sash windows. Concrete ramps lead to doorways on the east and west elevations that provide access to toilet rooms. The building was constructed to house toilet facilities for inmates of the psychopathic wards.

LACO#1202/1203: Building History and Post-Construction Alterations and Modifications:

Buildings #1202 and #1203 were built over a six-year period between 1919 and 1925. In 1919 Building #1203, which comprised the west side of the present quadrangle, was opened. The new building was almost immediately filled to capacity. Four years later, in 1924, construction began on Building #1202. It was designed as a mirror image of the existing west wing. As part of this expansion project, two brick toilet buildings, a linen room, and a free standing canopy shelter, were built in the courtyard. At a later date the courtyard's two porches were enclosed. In the post World War II period the entire west elevation and portions of the north and south elevations of Building #1203 were clad in metal siding. As part of this renovation metal frame windows replaced the west elevation's original wood sash windows and the original front entrance doors were replaced by glass and metal doors. Building #1202, which has undergone relatively few alterations since its construction in 1919, has largely preserved its original configuration. A number of alterations have been made to the courtyard since 1925, including the replacement of its original metal canopy shelter (Building #1240). In the 1950s the County began to transfer patients out of the Women's Psychopathic Wards to other facilities. By 1963 the buildings no longer functioned as patient wards. For the next 40 years the former wards were used for staff offices, to house patient services and finally, as informal records storage facilities.

LACO#1254 (Former Chapel)

The former chapel is located just southwest of the Women's Psychopathic Ward building (see Figure 2). Built in 1907, the L-shaped wood frame building is capped by an intersection front gable roof with boxed eaves. The building is clad in metal siding.

West Elevation (facing toward Erickson Avenue)

The west elevation is comprised of a projecting wing that is flanked on its south side by a recessed wing (Figure 66). The projecting wing, which once functioned as the chapel for Rancho Los Amigos, has an elevated front porch capped by a hipped roof. The porch shelters the building's main doorway. It is flanked on either side by metal frame windows set into rectangular openings. A doorway, accessed via a concrete ramp, is placed at the north end of the recessed wing.

North Elevation

The north elevation is linear in configuration. Its fenestration is comprised of a series of five metal windows set into rectangular openings.

East Elevation (rear elevation)

The east elevation is linear in configuration. It is comprised of the rear elevation of the chapel and the side elevation of the attached wing. Its fenestration is comprised of a series of rectangular metal frame windows.

South Elevation (facing toward Consuelo Street)

The south elevation is comprised of a recessed wing flanked on the east by a projecting wing. The fenestration of the projecting wing is comprised of two aluminum

sliders. The fenestration of the former chapel is a series of four metal frame windows. A concrete ramp, leading to a door, flanks the entire length of the chapel's side elevation.

LACO #1254 Building History and Post-Construction Alterations and Modifications:

The chapel was built in 1907. This vernacular style building was originally about 50 feet north of its current location. The building was moved in 1919 to make way for the Women's Psychopathic Ward. In 1955 the chapel was replaced by a larger double chapel located near the intersection of Dahlia and Consuelo Streets. The building has undergone several significant modifications since 1919. These include the replacement of the original windows, the re-cladding of the exterior with metal siding and the addition of a wing to the south elevation. Based on the type of metal cladding and the style of the replacement windows these alterations took place sometime after 1955.

LACO#1238 (Casa Consuelo)

Casa Consuelo is a two-story, H-shaped reinforced concrete and tile building located near the intersection of Dahlia and Consuelo Streets (see Figure 2). It is set in an expanse of lawn and is surrounded by foundation shrubs. Large fan tail palms delineate the perimeter of the building. The building was built in 1928 as a women's residential ward. Capped by end gable roofs covered in c-shaped terra cotta tiles, and embellished with arcades and wrought-iron balconies and staircases, Casa Consuelo was designed in the Spanish Colonial Revival style.

West Elevation (facing toward Erickson Avenue)

The west elevation is comprised of a number of projections and recessions. Its first floor and second floor fenestration consists of a balanced arrangement of wood casement windows. At the south end of the elevation an iron staircase provides access from the second floor to the ground level.

South Elevation (facing toward Consuelo Street)

The south elevation is comprised of recessed courtyard flanked on either side by linear wings (Figures 67 & 68). The courtyard is embellished with an arcuated portico capped by a solid parapet. On either side of the arcade flat-roofed towers embellished with wrought-iron balconies on the second floor, rise above the eave line. The towers are flanked by linear wings whose fenestration is comprised of a double row of rectangular wood casement windows. Double French doors are placed in the tower's second floor and at the end of each wing.

East Elevation

The east elevation is u-shaped in configuration. The elevation's projecting wings are linked by an arcuated portico (Figure 69). At the center of the façade a set of double doors provides access to the buildings interior. The fenestration of the east elevation consists of a symmetrical arrangement of wood casement windows.

North Elevation (facing toward Building #1202/1203)

The north elevation recapitulates the configuration and design scheme of the south elevation configuration. The elevation's projecting wings are linked by an arcuated portico (Figure 70). Its fenestration is comprised of a balanced arrangement of wood casement windows.

LACO #1238 Building History and Post-Construction Alterations and Modifications:

By the late 1920s the women's residential ward located across Erickson Avenue from the power station had become overcrowded; this despite the fact that a large addition had been made to the building in the mid-1920s. In order to alleviate this problem, a large two-story H-shaped building was constructed just east of the old

women's ward. Post-construction alterations to the building's exterior have been fairly modest. These include the replacement of a number of exterior doors.

Building #3592 (former Protestant, Jewish and Roman Catholic Chapels)

Building #3592 was constructed 1955 to replace the smaller chapel built in 1907 (Building #1254). It is comprised of two chapels set at right angles to each other (Figure 71). The Protestant/Jewish chapel and Catholic chapel are joined at the rear which creates an L-shaped configuration. The roof is front-gabled with an intersecting gable at the northern end. Roof materials are composition shingles and the wall cladding is stucco. Fenestration is primarily three-light, double metal casement type.

West Elevation (facing toward the Consuelo Street)

The west elevation is comprised of the projecting wing that forms the Roman Catholic chapel and side elevation of the Protestant/Jewish chapel. The facade of the former Roman Catholic chapel is capped by a front gable roof. A one-story tall shed-roofed porch shelters the centrally placed double entrance doors. A quatrefoil window is placed below the peak of the slightly projecting roof. A Mission Style bell tower is placed at the peak of the roof. The side elevation of the Protestant/Jewish chapel is linear and comprised of lower aisles flanking a taller nave. The fenestration of the nave and aisles is comprised of a symmetrical arrangement of multi-light, metal hopper windows. At the south end of the Protestant/Jewish chapel a one-story porch shelters the door leading to the chapel's vestibule.

South Elevation (facing toward Consuelo Street)

The south elevation is comprised of the façade of the Protestant/Jewish chapel and the side elevation of the Roman Catholic chapel. A Mission Revival style bell tower (similar to that of Mission San Gabriel) stands on the west end of the façade of the Protestant/Jewish chapel. This bell tower has three arched openings for bells. A

centrally placed round window is above the shed roofed entrance porch of the Protestant/Jewish chapel. The porch roof is supported with square piers. Two porches, capped with side-gabled roofs and supported with piers, project from the ends of the Protestant/Jewish chapel. The fenestration of this elevation of the Roman Catholic chapel is linear in configuration. This elevation of the Roman Catholic chapel is linear and comprised of a lower aisle flanking a taller nave. The fenestration of the nave and aisles is comprised of a symmetrical arrangement of multi-light, metal hopper windows.

East Elevation

The east elevation is comprised of the nave of the Protestant/Jewish chapel and the rear elevation of the Roman Catholic chapel. Fenestration is a symmetrical arrangement of metal casement windows. A one-story wing that projects from the sanctuary of the Roman Catholic chapel is attached to the rear of the Roman Catholic chapel.

North Elevation

The north elevation is comprised of the nave of the Roman Catholic chapel and the rear elevation of the Sanctuary of the Protestant/Jewish chapel. The fenestration of the nave is a symmetrical arrangement of metal casement windows. A one-story wing that projects from the Protestant /Jewish chapel's sanctuary is attached to the rear of the Roman Catholic chapel.

LACO#3592: Building History and Post-Construction Alterations and Modifications

As noted above the chapels were built in 1955 to replace the chapel built in 1907. The newer chapel was the last building constructed on the Rancho campus designed in a Mediterranean Style. By the mid-1950s the style had become less fashionable compared to the 1920s and 1930s when period revival styles enjoyed great popularity. In the

postwar period architectural motifs, ranging from Minimal Traditional to Ranch to Second Modernism achieved greater success in both residential and non-residential design. However, in the case of ecclesiastical architecture, the Mediterranean style continued to be favored by a number of churches. Both chapels continued to be used for religious services until sometime in the late 1960s or early 1970s. Since their closure the building has been used occasionally for meetings. It should be noted that Building #3592 has undergone no significant alterations since its construction in 1955.

4.3 Southeast Quadrant

The southeast quadrant contains the South Campus' Administrative Building and the former residence of the Superintendent (see Figure 2). Several of the few remaining buildings from the County Farm era are also located in the part of the South Campus. The Superintendent's residence is located near the intersection of Consuelo Street and Erickson Avenue. Surrounded by expansive lawns and exotic specimen trees the house is flanked on its south side by a small garage (Building #1177). To the southeast of the house is the Spanish Colonial Revival style Administrative Building (Building #1100). The former administrative building is flanked on its south side by the former post office (Building #2677). Behind and south of the Superintendent's house are nine small buildings and structures that have housed the Rancho Los Amigos' landscape department since the mid-1920s.

Across Bonita Road from the landscape department is a complex of buildings that include seven service buildings. These include the former stable (Building #1283). Located near the intersection of Erickson Avenue and Bonita Street, it is flanked on its south side by a prefabricated metal building (Building #1991). Another prefabricated metal building (Building #3591) is near the intersection of Erickson Avenue and Gardendale Street. Building #3591 is flanked on its east side by a large metal building (Building #2637) that once housed the Rancho's laundry. Just northeast of the former laundry are three wood frame building that were once part of the Rancho's farm operations. One of these is an L-shaped building (Building #1286) that faces toward

Bonita Street. Just southeast of Building #1286 is a two-story wood frame building (Building #1287) whose original use is unknown. A wood frame toilet building (Building #2492) is located just west of Building #1287.

LACO #1101 (Superintendent's House)

The Superintendent's house was built in 1915 to serve as the residence of the Superintendent of the County Farm. The two-story house is designed in the Craftsman Style, which enjoyed widespread popularity in the United States between circa 1900 and the mid-1920s. The wood frame house exhibits several character-defining elements of the style including its informal plan, use of natural materials such as wood and brick, horizontal wood siding, exposed rafter tails, overhanging eaves with triangular brackets, sleeping porches and lack of formal architectural embellishments.

North Elevation (primary façade)

The north elevation functions as the house's façade. Its most notable element is the one-story porch that runs the length of the elevation (Figure 72). Four brick piers support the porch's hipped roof. A set of brick stairs set at the east end of the elevation provides access to the porch from the front lawn. The steps lead to a Craftsman style front door that is flanked by oversized wood sash windows, one of which is set into a slightly projecting bay. The second floor is capped by a side gable roof with a small cross gable set over the projecting bay. A second floor sleeping porch, supported by brick piers, projects from the west end of the façade. The fenestration of the second floor is comprised of a number of large and small casement and sash windows.

West Elevation (facing toward Erickson Avenue)

The west elevation is asymmetrical in its massing (Figure 73). At the north end of the elevation a two-story projection, capped by a cross gable roof has a sleeping porch on its second floor and a porte-cochere on the first floor. A set of brick stairs leads from the

porte-cochere to the house's front porch. The port-cochere is flanked on its south side by a slightly projecting bay capped by shed roof. Brick piers support the small projecting wing at the south end of the elevation. The fenestration of this elevation is an asymmetrical arrangement of wood sash and casement windows.

South Elevation (facing toward Bonita Street)

The south elevation functions as the building's rear elevation. It is u-shaped in configuration (Figure 74). The eaves of the two-story wings are capped by cross gable roofs that are supported by triangular brackets. The wing on the east side of the elevation has an enclosed porch, capped by a hipped roof. Once again the fenestration is an asymmetrical arrangement of wood sash and sliding windows.

East Elevation

The east elevation is linear in configuration. It is capped by a complex gable roof. At the south end of the elevation a concrete stoop leads to a service door that is capped a shed-style metal awning (Figure 75). The door is flanked on its north side by a one-story projecting bay capped by an extension of the north elevation's porch roof. Its fenestration is comprised of wood sash windows.

LACO#1101: Building History and Post-Construction Alterations and Modifications:

Built in 1915, the house served as the Superintendent's residence until sometime in the early 1960s. After that date the house was used for a variety of purposes, including its last function as the Older Adult Center. Today the house is used as a record storage facility. In the 88 years since its construction the house has undergone a number of alterations and modifications, including the enclosure of second floor sleeping porches on south and west elevations and the enclosure of a first floor porch at the west end of the south elevation.

LACO#1177 (Superintendent's Garage)

The wood frame garage is located across an asphalt driveway and parking area from the Superintendent's house. The Craftsman Style garage was built in 1917. Many architectural details of the garage, including its wood siding, projecting side gable roof, and window types mimic those of the Superintendent's house (Figure 76).

North Elevation (Façade)

The north elevation faces toward the house. Two large garage door bays that are fitted with sliding wood doors take up most of its length. A shed-roofed carport is attached to the west end of the elevation.

West Elevation (facing toward Erickson Avenue)

A shed-roofed carport is attached to the north elevation.

South and East Elevations

Both the south and east elevation are linear in configuration. They are unbroken by fenestration or doorways.

LACO #1177: Building History and Post-Construction Alterations and Modifications:

Built in 1917, the garage served as the Superintendent's garage until sometime in the early 1960s. Sometime within the last 30 years a carport was added off of the building's west elevation. Otherwise the garage appears to have undergone few alterations since its construction.

LACO #1178 (Garden Shed)

Built in circa 1915-1922, this small wood frame structure, capped by a shed roof is located just southeast of the Superintendent's residence. The shed was used as a garden shed for the residence (Figure 77).

LACO #1178: Building History and Post-Construction Alterations and Modifications

The garden shed appears to have undergone no significant alterations since its construction in circa 1915-1922.

LACO #1100 (former Administrative Building)

This large two-story reinforced concrete office building was constructed in 1926. Several features of the building, including its intersecting gable roof covered in terra cotta tiles, stucco-clad walls, arched windows and Churrigueresque style door surround, are stylistic attributes of the Spanish Colonial Revival style.

East Elevation (Axially aligned with Consuelo Street)

The east elevation functions as the building's entrance façade. The linearity of the elevation is relieved by slightly projecting elements at the north and south ends of the façade (Figure 78). The recessed entrance is through a Churrigueresque style cast stone portal, located at the south end of the elevation (Figure 79). The portal embellishes an eight-sided tower that is capped by a domed cupola. The linear element of the façade is comprised of three large arched windows that are capped by tripartite windows on the second floor. At the north end of the elevation the projecting part of the elevation is capped by a front gable roof. The remaining fenestration of the façade is comprised of a number of small multi-light wood frame windows.

South Elevation (facing toward Bonita Street)

The south elevation, with the exception of a slight projection at its east end, is essentially linear in configuration (Figure 80). Its fenestration is comprised of series of rectangular multi-light windows on both the first and second floors.

West Elevation (Facing toward Erickson Street)

The west elevation is u-shaped in configuration (Figure 81). Its fenestration is comprised of series of rectangular multi-light windows on both the first and second floors.

North Elevation (facing toward Consuelo Street)

The north elevation is linear in configuration, with the exception of modest one-story projection at its west end (Figure 82). Its fenestration is comprised of an asymmetrical arrangement of multi-light windows on its first and second floors.

LACO #1100: Building History and Post-Construction Alterations and Modifications

Building #1100 was built in 1926 to house the administrative staff of the County Farm. For many years the staff had occupied a three-story brick building that was located just east of the Auditorium building. By the mid-1920s the old office building was in some disrepair and too small to serve the present needs of the institution. As a result, Building #1100 was constructed to replace the old administrative building. It is one of only three "high-style" Spanish Colonial Revival Style buildings at Rancho Los Amigos (the other two are Casa Consuelo (Building #1238) and the Harriman Building on the North Campus of Rancho Los Amigos). The building continued to function as the facilities administrative center until the late 1970s. It was subsequently renovated to serve as the Office of Public Safety. The building's exterior has undergone relatively few

modifications since its construction in 1926. Those alterations that have taken place are modest in scale, and have not diminished the visual or physical integrity of the building.

LACO #2677 (Post Office)

The post office is located just southeast of Building #1100. It was moved onto the campus in 1949. The one-story wood frame building is capped by a front gable roof and is clad in asbestos type shingles (Figure 83). Its fenestration is primarily multi-light wood sash windows.

East Elevation (Street Façade)

The east elevation functions as the building's façade. Two flush panel doors provide access to the building's interior.

North and South Elevations

The north and south elevation are linear in configuration. Their fenestration is comprised of a series of rectangular multi-light sash windows.

West Elevation (rear elevation)

The west elevation is linear in configuration. Its fenestration is comprised of two multi-light wood sash windows.

LACO #2677: Building History and Post-Construction Alterations and Modifications

The post office building was moved onto the campus in 1949. Built during World War II as a barracks for a nearby military base, the structure was declared surplus after the war and subsequently acquired for use as the Rancho's post office. Several

modifications, including the replacement of several doors, have been made to the building since 1949.

Landscape Department

The Landscape Department has been located just south of the former Superintendent's house since the late teens (see Figure 2). In mid-1930s it included at least three lath houses, a greenhouse, and a number of storage buildings and an office. Today only three of these buildings survive. These include the following structures:

LACO #1353: (Lath House)

The lath house is a long rectangular building located south of the Superintendent's House. Its wood frame is covered in lath. Built sometime between 1922 and 1925, the lath house was used to propagate landscape plants (Figure 84).

LACO #1353: Building History and Post-Construction Alterations and Modifications

Originally, a series of three or four lath houses were located in this part of the Rancho grounds. Two of these were in still place as late as 1974. However, in the early 1990s one of the surviving lath houses was destroyed by fire, leaving only Building #1353. The structure is dilapidated, and much of its lath is missing or damaged.

LACO #1356 (Tool House)

Built in 1933, the vernacular style tool house is capped by a front gable roof, and clad in board-and-batten siding (Figure 85). A small storage shed, capped by a shed roof, projects from the building's south elevation. Its fenestration is comprised of a number of wood sash windows. The building's primary doorway is located on the west elevation.

LACO #1356: Building History and Post-Construction Alterations and Modifications

The tool house was constructed in circa 1933. A building of similar dimension, located in the area of the Landscape Department, is depicted on the circa-1933 map of Rancho Los Amigos and it is probable that Building #1356 represents this building. The shed that projects off of the building's east elevation represents a later addition to the building. In addition, several of the original windows have been replaced.

LACO #1357: (Landscape/Nursery Office)

Located just south of the tool house, Building #1357 is a vernacular style, rectangular board-and-batten structure capped by a shed roof (Figure 86). An elevated porch capped by a shed roof, projects from the building's east elevation. The building's fenestration is comprised of aluminum slider windows of varying dimension. The primary entrance is located on the east elevation, where a flush panel wood door, located at the north end of the elevation provides access to the interior.

LACO #1357: Building History and Post-Construction Alterations and Modifications

The Landscape Office was constructed in 1938. The building's aluminum frame windows are later additions to the building. The addition of aluminum frame windows has significantly altered the building's exterior.

LACO #1284, #1373 and #1374 (Circular Tanks)

Three circular metal tanks, capped by cone-shaped roofs, are located southeast of the Landscape Office (Figure 87). The tanks are made of rectangular sheets of metal that have been riveted together. The tanks' slightly overhanging roofs are constructed of triangular sections of metal sheeting.

LACO #1284, #1373, and #1374: Building History and Post-Construction Alterations and Modifications

The three tanks post-date 1933, as they are not depicted on the aerial photograph of Rancho Los Amigos taken that year.

Building #1137 (former Dairyman's House)

This wood frame vernacular style cottage is located just east of the metal tanks, near Bonita Street (see Figure 2). The wood frame house is capped by a side gable roof, and is clad in horizontal wood siding. Its fenestration is primarily comprised of wood sash windows.

West Elevation

The west elevation is the cottage's façade (Figure 88). Its most distinguishing feature is the projecting porch that runs along most of the elevation. Square wood posts set on a solid wood parapet support the porch's shed roof. The north end of the porch has been enclosed with wood frame windows. A solid wood Craftsman Style front door is located at the north end of the porch. It is flanked on its south side by large wood frame window.

South Elevation (facing Bonita Street)

The south elevation of the cottage is linear in configuration (see Figure 88). Its fenestration is comprised of a symmetrical arrangement of two wood sash windows. A louvered vent is located just below the peak of the side gable roof.

East Elevation (rear elevation)

The projecting element at the north end of the elevation is the cottage's kitchen (Figure 89). The fenestration of this side of the building is comprised of an asymmetrical arrangement of the wood sash windows.

North Elevation

The north side of the building is linear in configuration (Figure 90). Its fenestration consists of a symmetrical arrangement of wood sash windows. A rectangular wood louver is located just under the eave line.

LACO #1137: Building History and Post-Construction Alterations and Modifications

Built in 1907, the dairyman's house is one of the oldest surviving buildings on the South Campus of Rancho Los Amigos. It was originally built as a residence for the County Farm's gardener, Fred Wyman (Fliedner, 1990: 74). Later, it became the home of the superintendent of the farm's large herd of dairy cows. Last used by the Landscaping Department for storage, it was vacated sometime in the early 1980s and has remained empty since then. The cottage has undergone a number of alterations, including, sometime after 1930, the enclosure of part of its front porch. The building is in very poor condition. Part of the kitchen roof has collapsed and much of the interior has been vandalized.

LACO #1179 (Garage for Dairyman's House)

The garage for the dairyman's house is located just northeast of the cottage (see Figure 2). It is a wood frame, single-car garage capped by a front gable roof (Figure 91). The garage's entrance is located on the south elevation. The building is clad in horizontal wood siding. The buildings other elevations have no windows or doorways.

LACO#1179: Building History and Post-Construction Alterations and Modifications

The garage was built sometime between 1907 and 1922. The building, with the exception of the replacement of the garage door, has remained essentially unaltered since its construction. The physical condition of the building is poor.

LACO #1283 (former Stable)

The former stable is an L-shaped, one-story brick building constructed in 1913. It is located at the corner of Erickson Avenue and Bonita Street. The building is capped by a flat roof that is hidden by a solid parapet. Fenestration is primarily double hung sash windows.

West Elevation (Street façade, facing Erickson Avenue)

The west elevation is linear in configuration. Its most notable feature is the arched entrance near the north end of the elevation (Figure 92). Pairs of arched windows flank the arched entrance on either side. Near the elevation's center point a rectangular window has been set into a sealed doorway. The doorway is flanked on its south side by for small arcuated windows.

North Elevation (facing Bonita Street)

The north elevation is linear in configuration (Figure 93). Its fenestration is comprised of a linear arrangement of wood sash windows of varying size.

East Elevation (rear elevation)

The rear elevation is L-shaped in configuration (Figure 94). An arched opening is set at the center of the elevation's projecting wing. A pre-fabricated addition capped by a shed roof runs the length of the recessed wing.

South Elevation

The south elevation is L-shaped in configuration (see Figure 94). A metal canopy shelters the doorway in the elevation's projecting wing. A pre-fabricated addition capped by a shed roof runs the length of the south elevation of the projecting wing. The same addition encapsulates the west end of the recessed wing. A metal canopy supported by metal poles shelters the remainder of the wing.

LACO #1283: Building History and Post-Construction Alterations and Modifications

The former stable, built to house the farm's draft horses, was a two-story building when completed in 1913. Less than a decade later its second floor was converted into a general ward for male patients. While this was intended as a temporary measure, it remained a residential ward until damage by the Long Beach earthquake of 1933 necessitated the removal of its second floor. Subsequently, the building was used to store patient's luggage (it was thereafter known as the 'Trunk Building'). Sometime, within the last 25 years, prefabricated additions were made to the east and south elevations. It is not clear as to when the building's brick walls were painted. The building's physical condition is good; however, the integrity of the building has been compromised by the additions to the first floor and the demolition of the second floor.

LACO #1286 (former garage and storage building)

Building #1286 is located south of the former stable building. This vernacular style, one-story, L-shaped wood frame building is capped by an intersecting gable roof covered with rolled asphalt. It is clad in a combination of corrugated metal siding, board and batten and wood planks.

North Elevation (facing Bonita Street)

The north elevation is L-shaped in configuration (Figure 95). The north elevation of its projecting wing is clad in corrugated metal. The elevation's recessed wing is clad in a combination of corrugated metal, board-and-batten and horizontal wood siding.

East Elevation

The east elevation is linear in configuration. The south end of the elevation is capped by a front gable roof, and is clad in board-and-batten siding (Figure 96). Its fenestration is comprised of two wood sash windows. The next segment of the elevation is clad in horizontal wood siding. Its fenestration consists of two small rectangular windows that are flanked on the north by a pair of sliding wood plank doors. The remainder of the façade is clad in corrugated metal siding with a pair of wood frame doors covered in corrugated metal at is north end.

South Elevation

The south elevation is linear in configuration (Figure 97). The east end of this elevation is clad in board-and-batten siding. The fenestration of this part of the elevation is comprised of a single wood sash window that is flanked on its east side by a set of double doors. The remainder of the elevation is covered in corrugated metal siding.

West Elevation

The west elevation is L-shaped in configuration (Figure 98). Its projecting wing consists of two sets of double doors clad in corrugated metal sheeting. The south end of the recessed wing is clad in horizontal wood siding. Its fenestration consists of two small rectangular windows that are flanked on the north by a pair of wood plank doors. The remainder of the façade is clad in corrugated metal siding with a pair of wood frame doors covered in corrugated metal at is north end.

LACO #1286: Building History and Post-Construction Alterations and Modifications

The variety of cladding and building materials found in Building #1286 suggests that it may represent at least three separate construction episodes. The board-and-batten section of the building, constructed in 1920, appears to be the earliest section of the building. The section of the building that is clad in horizontal wood siding would appear to be slightly later in date. The building attained its L-shaped configuration by 1925, according the Sanborn Fire Insurance map of that year. As depicted on the Sanborn map, the sections of the building that are now covered in corrugated metal were originally open and appear to have functioned as covered parking for vehicles or farm equipment. Sometime after 1929 the building's open bays were enclosed with corrugated metal siding. The building is in fair physical condition and retains most of its historic fabric. However, later modifications, including the enclosure of the open bays with corrugated metal, have impacted the integrity of the building.

LACO #1287 (Former Oil and Storage Building)

Building #1287 is located just south of Building #1286 (see Figure 2). The two-story, vernacular style, wood frame building is clad in horizontal wood siding and is set on a raised foundation. Its front gable roof is covered in composition shingles and its fenestration is comprised of wood sash windows.

North Elevation (primary façade)

The north elevation is linear in configuration (Figure 99). Wood rafters support the projecting eaves of the front gable roof. A concrete stoop with a metal pipe railing leads to a sliding wood plank door that is flanked on its west side by a rectangular wood sash window. The fenestration of the second floor is comprised of a single wood sash window that is set just below the roof's eave line. The window is flanked on its east side by a freight door that is closed by a pair of wood plank doors.

East Elevation

The east elevation is linear in configuration (Figure 100). Its first floor fenestration is comprised of three wood sash windows. The second floor fenestration is comprised of a similar arrangement of smaller wood sash windows.

South Elevation

The south elevation is linear in configuration. The projecting eaves of the front gable roof are supported by wood rafters (Figure 101). The fenestration of the first floor is comprised of a symmetrical arrangement of two wood sash windows. The fenestration of the second floor is comprised of a single wood sash window that is set just below the roof's eave line.

West Elevation

The west elevation is linear in configuration (Figure 102). Its first floor fenestration is comprised of three wood sash windows. The second floor fenestration is comprised of a similar arrangement of smaller wood sash windows.

LACO#1287: Building History and Post-Construction Alterations and Modifications

Building #1287 was constructed in 1909. The original function of the building is unclear, however, given its location in the midst of the County Farm's complex of barns, poultry yards, silos and stables, it must have been used for some agriculturally related function. By 1925 the building was being used for storage. Still later, it housed the Pest Control facility. For the last 20 or more years the building has been used for storage. The building has undergone a number of changes since its construction in 1909. These alterations include the addition of a concrete stoop and second floor freight door to the north elevation. The building's over-all physical condition is fair and it has retained most of its original fabric and architectural details.

LACO#2492 (Toilet Building)

Building #2492 is a small wood frame building that is located just west of Building #1287 (see Figure 102). The wood frame, stucco building is capped by a shallow front gable roof. It contains two toilet rooms that are accessed through doors on the east and west elevations. Small rectangular, wood frame windows are set into the north and south elevations.

LACO#2492: Building History and Post-Construction Alterations and Modifications

The Toilet Building was constructed sometime after 1930. Based on the style of the building it was probably built between circa 1930 and 1945. The building's over-all physical condition is fair and it has retained most of its original fabric and architectural details.

LACO#1991 (Property Warehouse)

The warehouse is located south of the former stable building (see Figure 2). It is a narrow, rectangular prefabricated metal building capped by shallow front gable roof (Figure 103). The north and south elevations are linear in configuration. Fenestration is comprised of a series of nine rectangular windows that have been covered by wood planks. Two rectangular windows flank a single panel door located on the east elevation. The west elevation mimics the arrangement of the east elevation.

LACO#1991: Building History and Post-Construction Alterations and Modifications

Building #1991 was probably erected in the late 1940s or early 1950s (several other prefabricated metal buildings of the same type are located in the quadrangle of the former Men's' Psychopathic Wards). It is possible that the building was originally sited somewhere else on South Campus and was moved to its current location in the mid-1950s, a time when the former complex of farm buildings were being demolished to make way for the new Laundry Building. The building's over-all physical condition is fair and it has retained most of its original fabric and architectural details.

LACO#3591 (Property Warehouse)

Building #3591 is a prefabricated metal building that is used as a storage facility. It is rectangular in configuration (see Figure 103). Capped by a front gable roof the building's primary entrance is a roll-up door located on the east elevation.

LACO#3591: Building History and Post-Construction Alterations and Modifications

Building #3591 was constructed sometime between 1965 and 1974. The prefabricated building is used as a storage facility. It appears to have undergone no significant alterations since its construction.

LACO#2637 (Steam Laundry)

Located near the intersection of Gardendale Street and Erickson Avenue, Building #2637 is a rectangular metal frame industrial style building (Figure 104). It is clad in corrugated metal and is capped by a monitor style roof. A series of ten vents lines the roof's ridgeline. It fenestration is comprised primarily of multi-light metal frame hopper style windows.

West Elevation

The west elevation faces toward Erickson Avenue (Figure 104). At the south end of the elevation a set of sliding doors, flanked by hopper style windows, provides access to the building's interior. A concrete loading dock, flanked by a hopper window, is located at the north end of the elevation. At the second floor level a series of hopper windows provides light to the interior.

North Elevation

The north elevation is essentially linear in configuration (see Figure 103). A series of doors and hopper windows run the length of the first floor elevation. A linear series of hopper windows runs the length of the upper story. A number of small metal clad additions have been made to the west end of the elevation.

East Elevation

The east elevation mimics the window arrangement of the west elevation (Figure 106).

South Elevation (facing toward Gardendale Street)

The south elevation is essentially linear in configuration. It largely mimics the appearance of the building's north elevation (Figure 107).

LACO#2637: Building History and Post-Construction Alterations and Modifications

The Laundry Building was constructed in 1951, to replace an existing laundry facility in Building #1302 (adjacent to the 1926 Power Plant). The new laundry was built in the location of what had been the Rancho's complex of farm buildings. After the end of World War II Rancho's agricultural activities began to be phased out. This left a complex of redundant buildings such as barns, corrals, poultry yards, chicken coops and a creamery that were no longer necessary to the facility's mission. While some structures were converted for alternative uses, others, such as silos, cow barns, were demolished. The Laundry Building was one of the last large-scale industrial buildings constructed on South Campus. In 1983 the Rancho contracted out its laundry service and the Laundry Building was shut down. The building has been unused since that time.

4.4 Southwest Quadrant

The southwest quadrant is delineated on its north side by Descanso Street, on its east side by Erickson Avenue, on its south side by Gardendale Street and the railroad tracks and on its west side by the Rancho's west boundary (see Figure 2). Juniper and Bonita Streets divide the area into four smaller quadrants. Patient services, such as the general wards, the Auditorium, dining rooms, and Social/Dining Hall were located

primarily in the area delineated by Juniper and Gardendale Streets. The remainder of the quadrant is taken up with support facilities, such as garages, machine shops and storage buildings. Formal landscaping is limited to the corridor along Erickson Avenue, the rest of the area is either paved or graveled.

LACO#1260 (Bathhouse)

Built in 1922, the Bathhouse building is a two-story, rectangular, masonry building (Figure 108). The building's flat roof is hidden from view by a solid brick parapet. At the base of the parapet a brick cornices projects from the top of the wall plate. All four of its elevations are embellished with blind arcades inset with rectangular wood sash windows. The entire exterior is sheathed in stucco.

East Elevation (primary façade)

The east elevation is divided into two arcades (see Figure 108). At one end of the elevation an exterior staircase leads to the second floor. A sealed door is located just north of the façade's central pier. The second floor is recessed behind a second floor loggia. Two doors set into the second floor provide access to the building's second floor.

North Elevation (facing toward Descanso Street)

The north elevation is linear in configuration. Its wall surface is divided into an arcade by eight flattened arches (see Figure 108). Sets of paired wood sash windows, on the first and second floors, fill blind arcades. Several of the original sets of pair windows have been altered, removed or replaced by doors. Doors, reached via a concrete ramp, are placed at the base of the second and fourth arcades.

West Elevation (facing Juniper Street)

The west elevation is the rear of the building (Figure 109). On the first floor the fenestration is comprised of two sets of pair sash windows flanked on their south side by a sealed window. The second floor fenestration is comprised of a series of what appear to be double casement windows (the windows have been covered with wood sheeting making precise identification difficult). Originally, the second floor was a screened porch.

South Elevation

The south elevation essentially mimics the design of the north elevation (Figure 110). Its wall surface is divided into an arcade by eight flattened arches. Sets of paired wood sash windows, on the first and second floors, fill blind arcades. Several of the original sets of pair windows have been altered, removed or replaced by doors. A staircase is set into a recessed entry at the west end of the elevation.

LACO#1260: Building History and Post-Construction Alterations and Modifications

Building #1260 is located across Descanso Street from the Power Plant. It was constructed in 1922 to serve as a bathhouse for the County Farm's patients. Its second floor housed patient wards. The plan and design scheme of the building replicates that of Buildings #1184, #1185, and #1185, which were built in 1914. Later in its history the bathhouse was used as the linen mending room. In the late 1950s the building was transformed into a storage facility. Over the years the building has undergone a number of alterations, including the replacement of doors and windows, others of which were sealed over. Sometime after 1930 the screened-in porch on the second floor was remodeled into an interior space. The physical condition of the building is poor. The alteration of original doors and windows and the enclosure of the original second floor porch on the west elevation have diminished the integrity of the building.

LACO#1261 (Auditorium)

Building #1261 is located across a narrow walkway from the Bathhouse Building. The flat-roofed, stucco clad, two-story masonry building represents a reductive example of the Art Deco Style. The building's auditorium contains an Art Deco style proscenium arch.

East Elevation (Primary Façade)

The east elevation is linear in configuration. At the center of the façade a pylon-shaped projection houses the front entrance (Figure 111). The set of three paired doors is flanked on either side by masonry piers. The pylon is flanked on either side by multi-light windows that are set into deep reveals. The second floor fenestration consists of a symmetrical arrangement of three narrow, rectangular windows placed above the entrance.

South Elevation

The south elevation is linear in configuration. Its fenestration is confined to a number of small rectangular windows set at the west end of the elevation (Figure 112).

West Elevation (rear elevation)

The west elevation is linear in configuration. A sealed doorway is located at the west end of the doorway (Figure 112). The doorway, which is not set at ground level, is missing its access ramp or stairway.

North Elevation

The north elevation is linear in configuration. Its fenestration is confined to a number of small rectangular windows set at the west end of the elevation (see Figure 112).

LACO#1261: Building History and Post-Construction Alterations and Modifications

The Auditorium was built in 1928 on the site of the 1888 Refectory Building, demolished shortly before the Auditorium was built. The Auditorium is the only Art Deco style building at Rancho Los Amigos. The building has undergone several alterations and modifications since its construction. Sometime in the past the building's brick exterior was covered in stucco. The original front doors have been replaced and some of the Art Deco style detailing of the interior has been removed or destroyed.

LACO #1262/1263 (Dining Rooms, Kitchen, Commissary and staff rooms)

Building #1262/1263 flanks the south side of the Auditorium (see Figure 2). It is a two-story, vernacular style brick building made up of a series of interlocking rectangular volumes. The first floor of the building contained staff and patient dining rooms, a kitchen, a reading room, kitchen and general stores. The second floor contained staff rooms. While the building was constructed in several phases, its different wings share several design motifs including arched windows, decorative stringcourses, flat roofs, and solid parapets.

East Elevation (facing Erickson Avenue)

The east elevation is comprised of a number of projections and recessions. At the north end of the elevation is a two-story tall projecting wing (Figure 113). Its fenestration is comprised a series of arched windows and two large bay doors on the first

floor. Brick cornices delineate division between the first and second floors. The second floor fenestration is comprised of a series of arched windows. A projecting brick cornice that is capped by a solid parapet delineates the base of the wall plate. This wing's first floor once housed staff and patient dining rooms, and a reading room. Its second floor housed staff rooms. A recessed one-story wing attached to the southwest corner of the dining room wing housed the main kitchen (Figure 114). Its fenestration is comprised of an asymmetrical arrangement of four square windows. At the south corner of the elevation metal stairs lead to the flat roof. Near the center of the roof a glass and metal skylight provided light to the kitchen. The kitchen wing of the building is flanked on its south side by a two-story block that contained additional dining rooms on the first floor and rooms for staff on the second floor (see Figure 114). The fenestration of both its first and second floors is comprised of a series of arched windows. At the elevation's center point an arched bridge links the building's second floor with the general wards located just east of Building #1262. The bridge shelter's the wing's main entrance.

South Elevation

The south elevation is essentially L-shaped in configuration. The recessed element of the elevation is U-shaped in configuration and is two-stories in height. Its fenestration is comprised of a symmetrical arrangement of rectangular windows (Figure 115). The projecting wing of the elevation is linear in configuration. Its fenestration is comprised of series of arched windows on the first and second floors.

West Elevation (facing Juniper Street)

The west elevation is comprised of a complex series of projections and recessions that form a centrally placed u-shaped courtyard flanked by projecting wings (Figures 116-118). The fenestration is primarily comprised of sash windows set into arched openings. A metal canopy runs the length of the recessed wing at the south end of the elevation. This wing was originally a freestanding building (Building #1263) that was later joined to Building #1262 by a one-story hyphen (Figure 119). At the north end of

the elevation a metal canopy shelters the building's primary main loading bay (Figure 120).

North Elevation

The north elevation is comprised of a number of projections and recessions. Its fenestration is comprised of arched door and window openings (Figure 121).

LACO#1262/1263: Building History and Post-Construction Alterations and Modifications

Buildings #1262/1263 were built over a 11- year period, between 1910 and 1921. Building #1263 was built in 1910 to serve as the commissary for the County Farm. Three years later, in 1913, a two-story building (Building #1262) was built to house the kitchen and main dining rooms. Between circa 1914 and 1920, a one-story kitchen wing was added to the southwest corner of the building and later a two-story wing to the south elevation of the kitchen wing. Finally, in 1921, a one-story wing was built to link the kitchen wing to the commissary. The second floor of the building housed staff residential rooms. Several modifications have been made to the building since its last large-scale expansion in 1921. Since that time the building's exterior has been painted and modifications have been made to its interior. Within the last ten years arson and vandalism have damaged the building's interior.

LACO #1184, #1185, #1186, #1187, and #1188 (General Ward Buildings)

The five general ward buildings share a similar design scheme. Each building is designed as a two-story rectangular masonry building, whose facade faces toward Erickson Avenue (Figure 122 and see Figure 2). The building's flat roof is hidden from view by a solid brick parapet. At the base of the parapet a brick cornices projects from the top of the wall plate (Figure 123). All four elevations are embellished with blind arcades inset with rectangular wood sash windows. The entire exterior is sheathed in

stucco. Originally, the east and west elevations had screened porches, which were later glazed (Figure 124).

East Elevation (primary façade)

The east elevation of each ward is divided into two arcades (see Figure 123). At the east end of the elevation an exterior staircase leads to the second floor. A sealed door is located just north of the façade's central pier. The second floor is recessed behind a second floor loggia. Two doors set into the second floor provide access to the building's second floor.

North Elevation

The north elevation of each ward is linear in configuration (Figure 125). Its wall surface is divided into an arcade by eight flattened arches. Sets of paired wood sash windows, on the first and second floors, fill the blind arcades. Several of the original sets of pair windows have been altered, removed or replaced by doors. Doors reached via a concrete ramp are placed at the base of the second and fourth arcades.

West Elevation

The west elevation of each ward is the rear of the building (see Figure 124). On the first floor the fenestration is comprised of two sets of pair sash windows flanked on their south side by a sealed window. The second floor fenestration is comprised of a series of what appear to be double casement windows (the windows have been covered with wood sheeting making precise identification difficult). Originally the second floor was a screened porch. The rear elevation of Buildings #1184, #1185 and #1186 are joined by one-story hyphens (Figure 126). A one story arched bridge joins Building #1184 and #1185 to Building #1162 (Figure 127).

South Elevation

The south elevation of each ward references the design of the north elevation. Its wall surface is divided into an arcade by ten flattened arches (see Figure 124). Sets of paired wood sash windows, on the first and second floors, fill blind arcades. Several of the original sets of pair windows have been altered, removed or replaced by doors. A staircase is set into a recessed entry at the west end of the elevation.

LACO #1184, #1185, #1186 and #1187 and #1188: Building History and Post-Construction Alterations and Modifications

Buildings #1184, #1185 and #1186 were constructed in 1914 to serve as general wards for the County Farm. In 1926, two more wards, Buildings #1187 and #1188 were added to the row of two-story wards along Erickson Avenue. The buildings have undergone a number of significant alterations, including the enclosure of the open porches on the east and west elevations, and the replacement of a number of the building's original doors and windows. Over the last fifteen years the buildings have been severely damaged by vandalism and arson. As a result, the condition of the five ward buildings is poor.

LACO#1256 (Toilet Building)

Located southeast of the row of five general wards, Building #1256 is a one-story concrete masonry building capped by a flat roof (Figure 128). The east elevation faces toward Erickson Avenue. Doorways flank two rectangular windows set at the center of the façade. The north and west elevations each have two small windows. The west elevation is a blank wall.

LACO#1256: Building History and Post-Construction Alterations and Modifications

The Toilet Building was constructed in 1926 the same year that the nearby two-story wards were built. It has undergone few modifications since its construction. The physical condition of the buildings is fair.

LACO#1264 (Bonita Hall)

Bonita Hall is located at the intersection of Juniper and Bonita Streets. It is one story building capped by a composition shingle, monitor style roof. An arcade, which has largely been filled in runs the length of the south elevation.

South Elevation

The south elevation is linear in configuration. An arcade, capped by a shed roof and supported by square masonry piers, runs the length of the elevation (Figure 129). Three of the arcades six bays have been infilled with masonry. Metal frame slider windows are set into the infilled walls. The main entrance is set into the elevation's third bay. At the west end of the elevation a shed roofed wing projects from the side of the building.

West Elevation

The west elevation is comprised of a one-story shed-roofed wing (Figure 130). Its fenestration is comprised of two rectangular windows set at either end of the elevation. At the north end of the elevation a pre-fabricated metal structure has been added to the building.

North Elevation

The north elevation is linear in configuration (see Figure 130). Rectangular windows flank a doorway near the east end of the elevation. A series of seven windows, placed just above the top of the shed roof, provide light to the building's interior.

East Elevation

The east elevation consists of a central element capped by front gable roof that is flanked by lower, shed roofed aisles. Its fenestration consists of a large, arched multi-light window (Figure 131).

LACO#1264: Building History and Post-Construction Alterations and Modifications

Bonita Hall was built in 1932 to serve the recreational and social functions for the residents of Rancho Los Amigos. Designed in the Spanish Colonial Revival style the building originally had a tile roof, and arcaded façade. The building was extensively remodeled in 1974 resulting in the removal of its tile roof, the replacement or alterations of its windows and the infilling of the arcade. These alterations have so altered the building that it no longer retains its design integrity. The physical condition of the building is good.

LACO#3390 (Prosthetic Shop)

The Prosthetic Shop is located just north of Bonita Hall (see Figure 2). It is a one-story building, u-shaped building that is capped by a combination of shed and gable roofs. The fenestration is primarily of casement type.

West Elevation

The west elevation is linear in configuration (Figure 132). Its fenestration consists of a ribbon window divided into of four segments.

North Elevation

The north elevation is U-shaped in configuration. The roofline of this elevation is made up of three shed roof of varying pitches (see Figure 132).

East Elevation

The east elevation is essentially U-shaped in configuration. Its two diminutive wings are capped by front gable roofs (Figure 133).

South Elevation

The south elevation is linear in configuration. Its fenestration is primarily composed of wood casement windows (see Figure 134). A single leaf doorway is place near the east end of the elevation.

LACO#3390: Building History and Post-Construction Alterations and Modifications

Building #3390 was built in 1953 to house the Prosthetic Shop. It is one of the few buildings on the Rancho's South Campus to incorporate references to Modernist architecture. The building is in good condition and retains good integrity of design.

LACO#1266 (Occupational Therapy Building)

The Occupational Therapy Building is located across Juniper Street from Bonita Hall (see Figure 2). The one-story wood framed, stucco-clad building is capped by a complex hipped roof (Figure 134). Exposed rafter tails supports the roof's overhanging eaves. Fenestration is primarily comprised of multi-light wood casement windows.

East Elevation (facing Juniper Street)

The east elevation is the building's façade. At the center of the façade a hipped dormer style roof caps a multi-light wood frame window (see Figure 134). The window is flanked on either side by circular plaster medallions that depict a man planning a log (Figure 135). Decorative quoins decorated either end of the façade. At the south end of the elevation a shed-roofed porch is attached to the building.

North Elevation (facing Bonita Street)

The north elevation, with the exception of a small projecting wing at the south end of the elevation, is linear in configuration (Figure 136). Its fenestration is comprised of a series of rectangular wood frame windows. Most of the windows at the west end of the building have been removed.

West Elevation

The west elevation is linear in configuration. Its fenestration, which once consisted of a series of several rectangular windows, has been removed (see Figure 136). Remnants of a breezeway that once linked the Occupational Therapy Building to Building #1267 exist at the south end of the elevation.

South Elevation

A shed roof porch shelters the east end of the elevation. The porch's posts are supported by masonry piers (Figure 137). The porch looks out on an elaborate series of garden beds that are surrounded by a masonry wall. A series of double French doors comprises the fenestration of this part of the elevation. The porch is flanked on its west side by a projection. This part of the building has been, to a large extent, stripped down to the studs. Most of the original windows and the exterior cladding has been removed (Figure 138).

LACO#1266: Building History and Post-Construction Alterations and Modifications

Originally called Descanso Hall, Building #1266 was built in 1928 to house the Occupational Therapy Department. In Occupational Therapy the patients could learn a range of crafts, which included basket weaving, printing and rug making. In the post-World War II period the Occupational Therapy Department was gradually phased out. The building was later used as a social center. In the 1980s the building was renovated and a landscaped courtyard was added to the south side of the building. The renovation also removed the façade's front entrance and added a porch and series of French doors to the south elevation. Sometime in the last 15 years the rear of the building was gutted. This resulted in the removal of wall cladding and many of the building's windows. Because of these alterations the building has a low level of integrity and is in poor physical condition.

LACO#1267 (Occupational Therapy Building Addition)

Building #1267 is a vernacular style building that was once attached to the rear of the main Occupational Therapy Building Addition by a one-story hyphen (see Figure 2). Today it is a freestanding building. It is a one-story, wood frame building capped by a hipped roof covered in composition shingles (Figure 139). Each of the four elevations

has an asymmetrical arrangement of multi-light sash windows and flush panel doors. All doors are accessed via concrete ramps. A shed roof porch projects from the west elevation.

LACO #1267: Building History and Post-Construction Alterations and Modifications

Building #1267 was built in 1930 to house the print shop, paint shop and shoe making departments. These departments were largely staffed by patients, and were part of the Rancho's occupational therapy program. After the occupational therapy programs were phased out in the mid-to-late 1950s the building was used for a variety of purposes. It last housed the transportation department. It is currently vacant. The building, which is in fair condition, has retained good integrity of design.

LACO #1335 (Brooder House)

Located at the southern boundary of the Rancho, the building, including its roof and walls is entirely built of concrete (Figure 140). The building is capped by a peaked roof. A series of small openings pierce the building's north wall.

LACO #1335: Building History and Post-Construction Alterations and Modifications

The Brooder House was built in 1929. It is the only surviving element of the Rancho's once extensive poultry yards, which encompassed four rows of poultry coops, a feed barn and several ancillary buildings. The poultry coops were demolished sometime after the mid-1930s. The Brooder House, feed barn and shed were all damaged or destroyed by arson within the last eight years. Only the Brooder House survives. Severely damaged by fire it retains a poor level of architectural integrity.

LACO #1379/4121 (Garage)

Building #1379/4121 is located just south of Building #1267 (see Figure 2). The rectangular, wood frame building is clad in corrugated metal siding (Figure 141). Its modified shed roof is also covered in corrugated metal. The east, west and south elevations are clad in corrugated metal sheeting. Two hopper windows are placed at the north end of the south elevation. Another window of the same type is placed at the center of the west elevation. The north elevation is divided into a series of open bays by metal poles (Figure 142). The roof of the central bay projects above the roof's ridgeline.

LACO #1379/4121: Building History and Post-Construction Alterations and Modifications

Building #1379/4121 was a garage for the Rancho's fleet of trucks and cars. Its precise construction date could not be ascertained. It was built on the site of the poultry yards, which were in place as late as 1930-1932. This suggests that the garage was not built until sometime after 1932. Based on its design, the building would appear to date somewhere between 1933 and the mid-1940s. The building has been unused since the early 1990s. It has undergone few alterations and has retained good integrity of design.

LACO# 4118 (Garage)

Building #4118 is located just northwest of Building #1379/4121. It mimics on a smaller scale the design features and building materials of Building #1379/4121. A modified shed roof caps the building. Both the walls and roof are covered in corrugated metal sheeting (Figure 143). The south elevation is divided into a series of five open bays by pipe style posts.

LACO#4118: Building History and Post-Construction Alterations and Modifications

This structure, like Building #1379/4121, was a garage for the Rancho's fleet of trucks and cars. Its precise construction date could not be ascertained. It is not depicted on the 1929-1931 Sanborn Fire Insurance Map or on site plan of the Rancho prepared in circa 1932. This suggests that the garage was not built until sometime after 1932. Based on its design, the building would appear to date somewhere between 1933 and the mid-1940s. The building has been unused since the early 1990s. It has undergone few alterations and has retained good integrity of design.

LACO#1464 (shed)

Building #1464 is located just northwest of Building #4118. It is a small, rectangular wood frame building capped by a shed roof covered in composition shingles (Figure 144). It walls are clad in vertical planks. Doorways, flanked by a window are placed at either end of the east elevation. The other elevation's have no doors or windows.

LACO#1464: Building History and Post-Construction Alterations and Modifications

The shed was built in 1945. It appears to have been constructed of salvaged materials, perhaps from one of the farm buildings demolished in the mid-1940s. The building has been unused since at least the early 1990s. It has undergone few alterations and has retained good integrity of design.

LACO#3348 (Decontamination/Garbage Can Room)

Building #3348 is located on the southeast corner of the intersection of Bonita and Laurel Streets. The wood frame stucco-clad building is capped by a composition shingle,

front gable roof (Figure 145). Raised on piers the building has a loading dock running the length of its west elevation. The upper two-thirds of the exterior walls is mostly taken up with screened openings. Double flush panel doors are located at the center of the south elevation.

LACO#3348: Building History and Post-Construction Alterations and Modifications

According to available documentation the building was constructed in 1951 to serve as storage and collection point for the facilities garbage cans. Like several other post World War II buildings it may have been built of materials salvaged from demolished buildings. It appears to have undergone few if any alterations since its construction. It is fair condition and has good integrity of design.

Service Area

The following twelve service buildings are located in the block bounded by Descanso, Juniper, Bonita and Laurel Streets. All of these building were associated with the maintenance of Rancho Los Amigos.

LACO#1275 (Workshop)

The Workshop Building is a long narrow building that is approximately 160 feet in length. The brick building is capped brick parapet that hides the flat roof from view. A decorative cornice delineates the base of the parapet from the wall plate.

East Elevation (façade, facing Juniper Street)

The east elevation is linear in configuration. Its façade is comprised of a series of rectangular windows that alternate with doors that open into the individual shop spaces (Figure 146).

South Elevation (facing Bonita Street)

This elevation is the short side of the building. Its fenestration is comprised of two multi-light wood frame windows. At the west end of the elevation a wood frame addition capped by a front gable roof links Building #1276 with the nearby garage building (Building #1277) (Figure 147). The additions central sliding wood plank and multi-light doors are flanked by sets of multi-light wood frame windows.

West Elevation

The west elevation forms the east and west sides of u-shaped courtyard (the west side of the courtyard is formed by the east elevation of Building #1277). This elevation is comprised of a series of rectangular windows that alternate with doors that open into the individual shop spaces. The south end of the elevation is comprised of the gable end of the wood frame wing that links Building #1275 with Building #1277). The fenestration of this wing consists of a pair of sliding wood plank and multi-light doors that are flanked by sets of multi-light wood frame windows.

North Elevation

The north elevation is linear in configuration. The elevation's entrance is sheltered by a projecting shed roof.

LACO#1275: Building History and Post-Construction Alterations and Modifications

According to available documentation the south end of the building was constructed in 1917 to house the Maintenance Department workshops. Later, in the mid-1920s, an addition was made to the north end of the building. By circa 1930 the building housed the carpentry and paints shops at its south end and a series of seven storerooms at the north end of the building. Sometime after circa 1945 a wood frame wing linking the

workshops to Building #1277 was added. Like several other post-worlds War II structures it may have been built of materials salvaged from demolished buildings. It appears to have undergone few if any alterations since its construction. It is fair condition and has good integrity of design.

LACO#1277 (Garage)

Building #1277 is located just west of Building #1275. It is joined to Building #1275 by wood frame wing capped by a gable roof. The wood frame building's shed roof and walls are clad in corrugated metal (Figure 148). The building does not have windows, however, a number of doors, which are also clad in corrugated metal, provide access to the interior.

LACO#1277: Building History and Post-Construction Alterations and Modifications

According to available documentation the building was constructed in 1925 as a lumber store. Originally its east elevation comprised a number of open bays. In the post World War II period, these bays were altered when a wing was built that linked Building #1277 to the nearby Maintenance Department Building. For at least the last ten years the building has been empty. The Lumber Storage Building is in fair condition and has good integrity of design.

LACO#1278 (Garage)

Building #1278 is a one-story wood frame building clad in corrugated metal and capped by a complex front gable roof (Figure 149). A series of double doors clad in corrugated metal line its east and west elevations. These doors provided access to a number of bays that were used to store automobiles and trucks.

LACO#1278: Building History and Post-Construction Alterations and Modifications

According to available documentation the building was constructed in 1924 as an automobile garage. Since that time it has also been used as a storage building. It appears to have undergone few alterations since its construction. It is fair condition and has good integrity of design.

LACO#1280 (Garage)

Building #1280 is one-story wood frame building capped by a shed roof that is located west of Buildings #1277 and #1278. Both its walls and roof are clad in corrugated metal siding (Figure 150). A series of double doors clad in corrugated metal line its east and west elevations. These doors provided access to a number of bays that were used to store automobiles and trucks.

LACO#1280: Building History and Post-Construction Alterations and Modifications

According to available documentation the building was constructed in 1928 as an automobile garage. Since that time it has also been used as a storage building. It appears to have undergone few alterations since its construction. It is fair condition and has good integrity of design.

LACO#1268 (Storage Building)

Building #1268 is one-story wood frame building capped by a front gable roof that is located west of Building 1280 (Figure 151). Both its walls and roof are clad in corrugated metal siding. A series of double doors clad in corrugated metal line its east elevation. These doors provided access to the buildings interior.

LACO#1268: Building History and Post-Construction Alterations and Modifications

According to available documentation the building was constructed sometime before 1931, as it is depicted on the Sanborn Fire Insurance Map of that year. Since its construction it has been used as a storage building. It appears to have undergone few alterations since its construction. It is fair condition and has good integrity of design.

LACO #1270 (Garage Building)

Building #1270 is a rectangular wood frame garage capped by a shed roof that is located near the intersection of Bonita and Laurel Streets. The sides and roof of the building are clad in corrugated metal siding. The north elevation is divided into two open bays. At the east end of the elevation a window provides light to the interior (Figure 152).

LACO#1270: Building History and Post-Construction Alterations and Modifications

Building #1270 was constructed in 1932. It is depicted on site map published in 1933. In later years it was used as storage building. It appears to have undergone few alterations since its construction. It is fair condition and has good integrity of design.

LACO#954 (Lumber Shed)

Building #954 is a vernacular style building located north of Building #1270. Its wood frame is capped by a front gable roof. The side walls are clad in vertical board sidings. A porch capped with a front gable roof, projects from the south elevation (Figure 153). The east and west elevations are lined with a series of sliding wood doors that access individual lumber bins.

LACO# 954: Building History and Post-Construction Alterations and Modifications

Building #954 was constructed in 1942. Like several other structures built during the war or immediately afterward it appears to have been built of materials salvaged from demolished buildings. Within the last 20 years it has been damaged by vandalism. Most of the sliding wood doors on the east and west elevations have been removed. It is in poor condition, but has fair integrity of design.

LACO#3368 (Shed)

Building #3368 is a small shed roofed building that is located west of Building #954. Set on a raised foundation, the building is entirely constructed of concrete (Figure 154). Its façade faces east. It consists of two doors that open onto a solid concrete stoop that is lined with a pipe style railing. The building's only fenestration is comprised of two wood frame windows on the west elevation.

LACO#3368: Building History and Post-Construction Alterations and Modifications

Building #3368 was constructed sometime in the early to late 1950s. Its fireproof construction suggests that it may have been used to store flammable materials. A canopied structure (Building #1272) once located adjacent to the building's north elevation was demolished sometime after 1974. Within the last ten years Building #3368 has been damaged by vandalism. Its condition is fair and it has maintained a fair integrity of design.

LACO#1207 (Work Preparation Center)

Building #1207 faces toward Laurel Street. It is a barn style building capped by a monitor style roof (Figure 155). The rectangular building's roof and walls are clad in

configuration and construction details the building resembles a monitor style barn depicted on the 1922 aerial photograph of the Rancho. At that time it was located behind Building #1259. In the mid-1920s the building was converted into a general ward building (Ward 104). While this was supposed to be a temporary measure, it appears to have remained a ward until World War II. During the war the barn housed a war effort scheme that was staffed by hospital inmates. After the war the building became the Work Preparation Center Number 2. The building is in fair condition, and has maintained fair integrity of design.

LACO#1259 (Wheelchair Repair Building)

The Wheelchair Repair Building is located directly behind Building #1207. The one-story, wood frame, vernacular style building is capped by an intersecting gable roof (Figure 157). Its fenestration is a combination of metal frame and wood sash windows. The south elevation represents a more recent addition to the building.

LACO#1259 Building History and Post-Construction Alterations and Modifications

Building #1259 was built in 1931. Originally it was a rectangular one-story building flanked by an open loggia on its east side. It was built to house a laundry. In later years it was altered and expanded. Sometime in the 1930s or 1940s an addition was built off of the south elevation that enclosed the loggia. The building eventually housed the wheelchair repair and sign shops, as well as a small locker room. The building is in poor condition. Because it has undergone many alterations over the last 70 years its architectural integrity is poor.

LACO#1279 (garage)

Located adjacent to the north elevation of Building #1280 is a small wood frame garage whose walls and roof are clad in corrugated metal. The building's bay doors are located on the south elevation (Figure 158).

LACO#1279: Building History and Post-Construction Alterations and Modifications

Building #1279 was constructed sometime between 1925 and 1931 to serve as a garage. The building is in fair condition, and it has maintained good integrity of design.

LACO#1276 (Lock Shop)

Building #1276 is located just north of Building #1275. It is a one-story brick building with a flat roof (Figure 159). With its brick parapet and cornice the building is similar to other vernacular style brick buildings erected at Rancho Los Amigos between 1910 and 1925. The façade of the building faces toward Juniper Street. The façade's central doorway is flanked on either side by metal frame windows. A rectangular addition was added to the rear of the building sometime in the-mid to-late 1920s (Figure 160). This addition lacks the ornamental cornice found on the building's original wing.

LACO#1276: Building History and Post-Construction Alterations and Modifications

Building #1276 was built in 1913. Its original use is unknown. In 1925 it was converted into a morgue. By 1933 it had been enlarged and was serving as the gas and oil building for the Rancho's fire department. It later served as a lock shop. The building is in fair condition. However, alterations to the building such the replacement of original doors and windows, the painting of the exterior and the construction of an addition off of the building's west elevation have diminished the buildings architectural integrity. Therefore, the building only retains a fair level of architectural integrity.

LACO#1290 (Shelter)

Building #1290 is located near the intersection of Descanso and Laurel Streets. It is a vernacular style wood frame shelter capped by shed roof. The roof is supported by wood posts with triangular braces. The west end of the building is enclosed.

LACO#1290: Building History and Post-Construction Alterations and Modifications

Building #1290 was built sometime between 1920 and 1930 (it is depicted on the 1931 Sanborn Fire Insurance Map). It may have been substantially rebuilt in 1952. The building is in fair condition, and it has maintained fair integrity of architectural integrity.

5.0 ASSESSMENT OF INTEGRITY AND POTENTIAL ELIGIBILITY OF THE PROPERTY FOR NOMINATION TO THE NATIONAL REGISTER OF HISTORIC PLACES AND THE STATE REGISTER OF HISTORICAL RESOURCES

5.1 Previous Historical Designations

In 1994 the Northridge earthquake damaged a number of structures at Rancho Los Amigos. In 1995, Historic Resources Group surveyed the buildings on the South Campus of Rancho Los Amigos for the purposes of Section 106 Review for the Federal Emergency Management Agency (FEMA). The study surveyed 102 buildings on the South Campus. As a result of their survey Historic Resources Group concluded that part of the South Campus was eligible for designation to the National Register of Historic Places as a historic district. A total of 80 buildings were determined to contribute to the historic character of the property, 23 did not contribute, two were not surveyed and one was demolished before it could be assessed (McAvoy 1995: 2) (please see Addendum A for a list of buildings surveyed by Historic Resources Group). An earlier assessment concluded that while five buildings on South Campus had local significance, neither the

campus as a whole, nor any of its individual buildings or features was eligible for nomination to the National Register of Historic Resources.

None of the buildings on the South Campus of Rancho Los Amigos are included in a local register of historic resources (Rancho Los Amigos lies within the corporate boundaries of the City of Downey, but is outside of the jurisdiction of that city). Neither Rancho Los Amigos, nor its individual buildings, are listed on the California Register of Historical Resources. The proposed National Register Historic District was not formally presented for nomination to the National Register of Historic Places.

5.2 Potential Eligibility of the South Campus or its Individual Structures and Features for Designation as State Landmark or Site of Historical Interest.

In 1995 Historic Resources Group carried out a survey of the South Campus of Rancho Los Amigos. The study determined that part of south campus was eligible for nomination to the National Register of Historic Places as a historic district. Of the 102 buildings, structures, or features that were surveyed 80 were determined to be eligible for listing as contributing elements to the district (McAvoy 1995: 1). The district was found to be eligible for designation as a district because Historic Resources Group found it met Criterion *a* of the National Register of Historic Places, preserved a sense of time and place and contained examples of property types associated with its history (McAvoy 1995: 3). The following section of the study includes a re-evaluation of South Campus using the criteria established by the National Register of Historic Places and the California Register of Historical Resources.

5.3 Application of the National Register of Historic Place Criteria for Evaluation

The quality of significance in American history, architecture, archaeology, and culture is present in districts, sites, buildings, structures, and objects of State and local importance that possess integrity of location, design, setting, materials, workmanship, feeling and association, and:

(a) That are associated with events that have made a significant contribution to the broad patterns of our history; or
(b) That are associated with the lives of persons significant in our past; or
(c) That embody the distinctive characteristics of a type, period or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
(d) That have yielded, or may be likely to yield, information important in prehistory or history.

5.3.1 Application of the National Register of Historic Places Criteria to the South Campus (Potential Historic District)

The South Campus of Rancho Los Amigos would potentially meet Criterion *a* if it retained sufficient integrity to convey its period of significance.

(a) That are associated with events that have made a significant contribution to the broad patterns of our history; or

If the South Campus of Rancho Los Amigos retained sufficient integrity it would be potentially eligible for nomination to the National Register of Historic Places under *Criterion a.* Its major historical theme is public health care in Los Angeles County and its historical period of significance, between 1888 and 1950. Founded in 1887 as the site of the Los Angeles County Poor Farm, the facility gradually transitioned from a facility caring for the indigent, to subsequently include the chronically, physically and mentally ill. Still later, after World War II, it became a major center for the treatment of polio. After the development of a polio vaccine, Rancho Los Amigos established a reputation as one of the preeminent rehabilitation facilities in the United States. The period of significance for the South Campus of Rancho Los Amigos encompasses the period between 1888 and 1950. During this period the South Campus was the focus of patient care, support services, staff housing, and farm operations. Beginning in the late 1940s

and early 1950s more and more of Rancho Los Amigos' hospital and research activities was concentrated in a series of new buildings located on its North Campus. In the succeeding years the Rancho's South Campus receded in importance. By the late 1950s/early 1960s it had been largely relegated to the role of support facility, those buildings which had not been closed or demolished, used primarily as offices and record storage.

History of the South Campus of Rancho Los Amigos

The genesis of poor farms like Rancho Los Amigos began in the late nineteenth century when such institutions, integral components of Victorian era public charity, were founded on the philosophical belief the destitute should contribute to their upkeep. While the draconian elements that typified earlier poor farms had been largely eliminated, inmates of the Los Angeles County Poor Farm were expected, when able, to work at the farm or dairy, assisting with the maintenance of the facility and the day-to-day operation of the farm. By the beginning of World War I, the County Poor Farm encompassed extensive dairy herds, poultry yards, and croplands. The physical plant of South Campus saw its greatest expansion between 1913 and 1931 (primarily during the tenure of the facility's most notable superintendent, William R. Harriman, who was superintendent from 1915-1952). This growth was in large part driven by the increasing emphasis placed on the care of invalids and the mentally ill after World War I. Beginning with less than two hundred inmates when it first opened, by 1925 there were over 1,100 inmates residing at the County Poor Farm, many of them working in the Rancho's fields and dairies. The increased patient population necessitated a larger staff, which in turn required the construction of a significant number of staff units, including houses, duplexes, and multi-story dormitories, along with attendant recreational and dining facilities. The majority of the buildings constructed during this period were vernacular in style. Avoiding architectural embellishments they were designed with an eye toward utility and budget, rather than to architectural aesthetics. The construction, in 1931, of the Harriman Building, located across Imperial Highway on the North Campus,

portended the time in the postwar period when the facility's epicenter would move away from its original setting on the South Campus.

With the onset of the Great Depression, budget constraints forced the County of Los Angeles to curtail the further expansion of the Rancho's physical plant, despite the fact that the inmate population continued to increase. Because of this Rancho Los Amigos had to convert several of its farm buildings into patient wards. During World War II a number of Rancho Los Amigos' patients took jobs in defense plants, an industry that boomed in Los Angeles County during and after the war. Seeing a need to readapt to its shrinking inmate population Rancho Los Amigos decided to focus much of its energy on establishing a facility for the care of polio patients. During this period a number of advances were made in the area of physical therapy. Rancho Los Amigos', Elberta Arnold, the head of the Physiotherapy Department employed these latest advances to treat polio victims. This emphasis on the rehabilitation of patients was to increase in importance in the postwar years. Having had to defer the expansion of its infrastructure during the Depression and the war years that followed it was obvious by the postwar years that the facility's antiquated hospital and infirmary ward buildings on the South Campus were sadly outdated and ill equipped to treat the large numbers of polio patients. With increased funding in the late 1940s a new range of buildings devoted to patient care was built on the undeveloped land of the Rancho's North Campus. These new facilities reduced the relevance of the South Campus as center for patient care.

By the mid-to-late-1950s Rancho Los Amigos was used more and more for the care of polio patients, while the long-term care of the elderly infirm and the mentally ill was gradually phased out. At the same time the South Campus' farming component, which had been in operation since 1888, was finally terminated. With the closure of the last of its farm operations in 1963 and the transfer of patients and medical services to the North Campus or other County of Los Angeles heath care facilities, the South Campus was relegated primarily to the role of being a repository for records and storage.

By circa 1950 the South Campus of Rancho Los Amigos no longer retained the operative component that defined its significance as a caregiver for the indigent and chronically ill. The majority of its buildings no longer functioned as originally intended, the farm component, which was one of the most important and integral aspect of Rancho Los Amigos' early development, was nearly gone. The extensive patient and staff housing had been demolished, closed or used for passive purposes, such as records storage. As a result, the South Campus of Rancho Los Amigos does not retain sufficient integrity to convey those qualities and associations that would make it an historic district. Namely, it cannot represent two vital aspects of its history. First, all but three or four of its farm buildings and facilities have been demolished and the immediate environs of the property profoundly transformed from rural farmland to a dense urban environment. Secondly, all but two of the some 60 staff housing units that once existed on the South Campus has been demolished (see Table 2). The removal of these vitally important components necessary for interpreting the significance of the South Campus' contribution to the history of Rancho Los Amigos make the remaining structures and features on the South Campus ineligible for designation as an historic district under Criterion *a.*

(b) That are associated with the lives of persons significant in our past;

While several individuals including William Harriman, made notable contributions to the development of Rancho Los Amigos, they do not rise to the level of significance that would make the property eligible for nomination to the National Register of Historic Places on the basis of its association with a particular individual. Therefore, the South Campus of Rancho Los Amigos is not eligible for designation under this criterion.

(c) That embody the distinctive characteristics of a type, period or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction;

The majority of buildings and structures on the South Campus of Rancho Los Amigos date from 1913 to 1931. These buildings, with the exception of a few structures designed in either the Craftsman or Spanish Colonial Revival styles, are vernacular in style, and employ the stock building materials and construction technology of their time. The buildings, despite their mostly vernacular schemes, could potentially meet Criterion *c* if the South Campus retained sufficient integrity to be designated as a historic district. However, as noted below in Section 5.4.1 of this report, the South Campus of Rancho Los Amigos does not retain sufficient integrity to convey those qualities and associations that make it an historic district. Namely, it cannot represent a critical aspect of its history, when as a County Poor Farm it cared for the indigent, the elderly and the chronically ill. Almost all of its farm buildings and associated facilities have been demolished and the immediate environs of the property profoundly transformed from rural farmland to a dense urban environment. In addition, much of the physical plant, which included employee and patient housing, as well as support facilities, has been demolished. The degradation of these important components necessary for interpreting the history of Rancho Los Amigos' South Campus make it ineligible for designation under Criterion *c*.

(d) That have yielded, or may be likely to yield, information important in prehistory or history.

The property, which has been well documented, does not have the potential for meeting Criterion *d*.

5.4 Assessment of Integrity (For the Potential Historic District)

The period of significance of the South Campus of Rancho Los Amigos has been established as encompassing the period between 1888 and 1950. In order to properly interpret the period of significance the following four components of the facility's history, as manifested in the physical plant of Rancho Los Amigos, must retain their integrity. These four components are as follows: 1) Patient care and services; 2) Farm Operations; 3) Maintenance of the plant's physical plant (facilities management); and 4)

Staff facilities. Integrity establishes the authenticity of the resource's physical identity, by evidence of lack of deterioration, and significant survival of the characteristics that existed during its period of importance. Properties nominated to the National Register of Historic Places or the California Register of Historical Resources must possess integrity in the following seven categories:

1) Integrity of Location
2) Integrity of Design
3) Integrity of Setting
4) Integrity of Materials
5) Integrity of Workmanship
6) Integrity of Feeling
7) Integrity of Association

1) Integrity of Location

Integrity of location means that the resource remains at its original location.

The South Campus of Rancho Los Amigos has operated from its Downey site since 1888. It, therefore, has retained its overall integrity of location.

2) Integrity of Design

Integrity of design means that the resource accurately reflects its original plan.

The South Campus' integrity of design has been diminished by postwar alterations that have resulted in the demolition of many buildings and features that were present during its period of significance (1888-1950). Of the 135 buildings and structures constructed between 1888 and 1950, only 88 are still extant today. The loss of 43 buildings and structures has been compounded by the loss of original landscaping and the insertion of several large "box style" buildings on the grounds of the Rancho's South

Campus. In addition, the reconfiguration of the street grid at the northwest corner of South Campus has diminished the original configuration of streets that once characterized the South Campus during its period of significance (1888-1950). Over the years Rancho Los Amigos' has modified its mission, from a poor farm, to a hospital, to a rehabilitative center. The loss of almost all of its agricultural component, including barns, silos, dairies, coops, pens, fencing and agricultural fields, has severely diminished the property's ability to interpret the 62 year period (1888-1950) during which the farm played a central role in the operation of Rancho Los Amigos (see Table 1). The County Farm, with its patient wards, infirmaries, farmland, dairy, kitchens, dining halls, and staff housing, was a self-contained community. The ability of the property to interpret this aspect of its history has been compromised by the loss of many of the buildings on South Campus related to its period of significance (1888-1950). Therefore, the property's integrity of design is rated as poor.

3) Integrity of Setting

Integrity of setting means those buildings, structures or features associated with a later development period have not intruded upon the surrounding area to the extent that the original context is lost.

When the County Poor Farm was first established in 1887, it was surrounded by vast tracks of undeveloped land. Much of this land was devoted to farming and ranching. The nearest community was Downey, a small farming town located approximately a mile to the east of the County Poor Farm. Remarkably, the surrounding area remained essentially rural until circa 1945 when a rapidly expanding population, coupled with the development of the freeway system, fueled the suburbanization and subsequently, urbanization, of many of the communities in the Los Angeles basin. As a part of the continuous development of the nearby area Rancho Los Amigos terminated the last of its farming operations in 1963. The cessation of the farm operations was followed by the sale of the Rancho's surplus land, subsequently developed as suburban housing tracts. By the mid-1960s Rancho Los Amigos was surrounded by housing tracts. In addition,

incursions to the immediate area surrounding the South Campus included the completion, in 1974, of a public library at the intersection of Imperial Highway and Old River Road, followed several years later by the construction of a four-story courthouse, to the east of the library. By the late 1990s three large "box style" buildings had been built within the core area of Rancho Los Amigos' South Campus. Because of their large size, and contemporary architectural style these buildings are out of character with the historic scheme of Rancho Los Amigos. As a result South Campus' integrity of setting is poor.

(This area left intentionally blank for the statistical table that follows)

Table 2: Inventory of Demolished/Destroyed Buildings and Features: South Campus

4) Integrity of Materials

Integrity of materials means that the physical elements present are still present, or if materials have been replaced the replacements have been based on the original.

All of the surviving buildings have undergone alterations and additions since their construction date within the South Campus' period of significance (1888 – 1950). In some cases, such as LACO # 1264, LACO # 1266, and LACO# 1283, these alterations have been so extensive that the buildings no longer retain sufficient integrity to communicate their original design or significance. Modifications to other buildings, such as LACO #1203 and #1205, include the replacement of original fenestration, and the re-cladding of brick buildings in stucco or metal siding. These alterations have diminished the integrity of these buildings. It also should be noted that many of the buildings, including the general wards along Erickson Avenue (LACO #1184-1188) have been severely damaged by arson or suffer from deferred maintenance. While the grounds surrounding the director's residence have preserved the expansive open spaces and some of the landscaping that characterized it during the South Campus' period of significance, the rest of the property has largely lost its landscaped grounds that once characterized the property between the late nineteenth century and circa 1950. Therefore, Rancho Los Amigos, only retains a fair level of integrity in regards to integrity of materials.

5) Integrity of Workmanship

Integrity of workmanship means that the original character of construction details is present. These elements can not have deteriorated or been disturbed to the extent that their value as examples of craftsmanship have been lost.

When assessing the overall integrity of Rancho Los Amigos' South Campus, the integrity of the individual buildings that make up the property must be considered. It should be noted that a number of buildings on the South Campus of Rancho Los Amigos retain fair to good integrity of Workmanship (please see Table 2, pg.144-146, for

a list of these buildings). These include LACO # 1300 – 1302 (power plant complex), LACO #1238 (Casa Consuelo), LACO #1100 (Public Safety Building), and Building 1101, (Superintendent's Residence). However, a significant number of buildings have deteriorated through deferred maintenance or arson. Other buildings have been remodeled to the extent that their original architectural details or finishes have been lost. Therefore, Rancho Los Amigos only retains a fair level of integrity in regards to integrity of workmanship.

6) Integrity of Feeling:

The South Campus of Rancho Los Amigos has undergone a significant series of alterations and modifications since the end of its period of significance (1950). These include the removal of at least 42 buildings and features and the insertion of three large "box style" buildings in or adjacent to the core of the South Campus. Many of the remaining buildings have suffered from loss of historic fabric through deferred maintenance or vandalism. The loss of almost all the buildings and features associated with the Rancho's farm operations has diminished the ability of the property to represent a vital component of its history. The additional loss of all but two of the staff housing has severely diminished the ability of the property to convey its appearance during its period of significance. While the core area of the campus has retained a large number of original buildings, they cannot fully interpret and convey those qualities that characterized the property during its period of significance. Therefore, Rancho Los Amigos only retains a fair level of integrity in regard to integrity of feeling.

7) Integrity of Association

Integrity of association refers to those qualities that help convey a property's appearance during its period of significance. As detailed above, the South Campus of Rancho Los Amigos has undergone a significant number of alterations since the postwar years. These alterations have resulted in the demolition of more than 42 buildings, the insertion of buildings that are out of character with the historic buildings of the Rancho

Los Amigos' South Campus, and the transformation of the surrounding environs from farm land to suburban housing tracts. These changes have diminished the ability of the South Campus of Rancho Los Amigos to convey its historic associations. Of the four primary elements, 1) patient care and housing; 2) farming; 3) staff housing; and 4) maintenance services, only two can be sufficiently conveyed through the remaining buildings. These two are 1) patient care and housing and 4) maintenance/support services. It should be noted that a large number of facilities, such as the general wards and the psychopathic wards, survive. In addition, a large number of service buildings, such as the Power Plant, garage and maintenance buildings, survive. Consequently, these two aspects of the property maintain good integrity of association. However, it should be noted that two elements that were integral to Rancho Los Amigos and its historic development, its staff and farm operations, cannot be interpreted because they are not well represented by the surviving buildings on the South Campus.

5.4.1 Summary Statement of Integrity

The South Campus of Rancho Los Amigos retains a good level of integrity in regard to location; a fair level of integrity in regard to materials and workmanship, and a poor level of integrity for design, setting, feeling and association. The numerous changes that have taken place since the postwar period have led to the destruction of numerous buildings and the insertion of larger buildings whose scale, bulk and massing are out of character with those buildings constructed on South Campus during its period of significance (1888-1950). In addition, the farm and dairy module, once a significant contributory component of Rancho Los Amigos is no longer there and the setting of the property has been altered from rural to urban. Therefore, the South Campus of Rancho Los Amigos does not retain sufficient integrity for nomination as a historic district.

Post/Hazeltine Associates notes that this conclusion is at variance with the findings of a previous historic survey prepared by Historic Resources Group in 1995 that determined that the South Campus was a National Register eligible historic district. *Post/Hazeltine Associates* believes that the current survey accurately reflects the integrity

of the property and its potential eligibility for nomination as a National Register Historic District.

5.4.2 Integrity of Individual Buildings

The following section summarizes the integrity of individual buildings on the South Campus of Rancho Los Amigos (Please refer to Table 2 for list of these buildings and features).

Northwest Quadrant (bounded by Descanso Street, Laurel street Erickson Avenue and Imperial Highway (see Figure 2):

LACO #1121 (Staff Cottage)

The cottage's physical condition is considered to be fair. However the building retains sufficient architectural integrity for further analysis.

LACO #1123 (Staff Cottage)

The cottage's physical condition is considered to be fair. However the building retains sufficient architectural integrity for further analysis.

LACO #1189-1197 (One-Story Wards)

Post-construction alterations, including the transformation of the screened-in porches into interior space, the stuccoing of some of the elevations, the replacement of part of the fenestration, and the insertion of a number of small additions, have diminished the integrity of the nine wards. In addition vandalism and deferred maintenance has resulted in significant deterioration to the building's fabric. However, the complex of nine wards has retained sufficient physical integrity for further analysis.

LACO #1198 and #1199 (General Wards)

The loss of two of the four ward buildings has significantly diminished the overall integrity of this complex.

LACO #1295 (Kitchen and Employee Dining Room)

Though a number of the building's original windows have been replaced. Nevertheless, the building has retained sufficient physical integrity for further evaluation.

LACO #1300, #1301 and #1302 (Old Power Plant, Water Tower, Machine Shop, Laundry and Ice Plant)

Deferred maintenance and vandalism has resulted in significant damage to the fabric of the Power Plant complex. However, the complex has retained a high degree of integrity. Therefore, the building has retained sufficient physical integrity for further evaluation.

LACO #5547 (Circular Metal Tank)

The tank was built in 1966. It was built after the property's period of significance and is less than 50 years of age. Therefore, it will not require further evaluation.

LACO #5548 (1966 Power Plant):

Built in 1966, the power plant is less than 50 years of age and was built after the property's period of significance. Therefore, it will not require further evaluation.

Northeast Quadrant

LACO #5028 (former patient ward building)

The building is less than 50 years of age and was built after the property's period of significance. Therefore, it will not require further evaluation.

LACO #1204/1205 (Men's Psychopathic Wards)

The original brick exterior walls on the west elevation and on the west end of the north and south elevations have been clad in metal siding. The west elevation's original fenestration and doors have been replaced. The remainder of the building's exterior has retained a high degree of integrity.

Buildings and Structures within the Central Courtyard of LACO #1204/1205

Eleven small buildings and structures are located within the courtyard of Building #1204/1205.

LACO #1243 (Canopy Shelter)

This canopy shelter was built sometime after circa 1950, replacing an earlier circa-1916 structure. Because the shelter is a recent addition, it does not require further evaluation.

LACO #1244 (Toilet Building)

The Toilet Building is in fair physical condition. It has been damaged by deferred maintenance and vandalism. The building has maintained good physical integrity. Therefore, the building has retained sufficient physical integrity for further evaluation.

LACO #1245 (Linen Room)

The Linen Room Building is in fair physical condition. It has been damaged by deferred maintenance and vandalism. The building has maintained good physical integrity. Therefore, the building has retained sufficient physical integrity for further evaluation.

LACO #1246 (Metal Canopy)

The metal canopy was constructed sometime after 1950. Because the canopy is a recent addition, and post-dates the property's period of significance, it does not require further evaluation.

LACO #1249 (Toilet Building)

The Toilet Building is in fair physical condition. It has been damaged by deferred maintenance and vandalism. The building has maintained good physical integrity. Therefore, the building has retained sufficient integrity for further evaluation.

LACO #1251(Metal Canopy Shelter)

The metal canopy shelter was constructed sometime after 1950. Because the shelter is a recent addition, and post-dates the property's period of significance it does not require further evaluation.

LACO #2434 (original use unknown)

The building was constructed in 1949, and represents one of the last significant additions to the complex of building's that makes up the Men's Psychopathic Wards. The building is in fair physical condition. Therefore, the building has retained sufficient integrity for further evaluation.

LACO #2435 (Metal Building)

This prefabricated metal building was constructed in 1949, and represents one of the last significant additions to the complex of building's that makes up the Men's Psychopathic Wards. The building is in fair physical condition. Therefore, the building has retained sufficient integrity for further evaluation.

LACO #2436 (Metal Building)

This prefabricated metal was constructed in 1949, and represents one of the last significant additions to the complex of building's that makes up the Men's Psychopathic Wards. The building is in fair physical condition. Therefore, the building has retained sufficient integrity for further evaluation.

LACO #2437 (Metal Building)

This prefabricated metal was constructed in 1949, and represents one of the last significant additions to the complex of building's that makes up the Men's Psychopathic Wards. The building is in fair physical condition. Therefore, the building has retained sufficient integrity for further evaluation.

LACO #3820 (Loading Dock)

The Loading Dock Building was constructed in 1954; it represents the last significant addition to the complex of buildings that makes up the Men's Psychopathic Wards. The building is in fair physical condition. However, the building is less than 50 years of age. Therefore, it does not require further evaluation.

LACO #1202 and #1203 (Women's Psychopathic Ward)

The original brick exterior walls on the west elevation and on the west end of the north and south elevations have been clad in metal siding. The west elevation's original fenestration and doors have been replaced. The remainder of the building's exterior, however, has retained a high degree of integrity. Therefore, the building has retained sufficient integrity for further evaluation.

Buildings and Structures within the Interior Courtyard of the Women's Psychopathic Wards

The following four small buildings and structures are located within the courtyard of LACO #1203/1204.

LACO #1239 (Toilet Building)

The Toilet Building is in fair physical condition. It has been damaged by deferred maintenance and vandalism. The building has maintained good physical integrity. Therefore, the building has retained sufficient integrity for further evaluation.

LACO #1240 (Canopy Shelter)

The metal canopy shelter is in fair physical condition. It has been damaged by deferred maintenance and vandalism. The building has maintained good physical integrity. Therefore, the building has retained sufficient integrity for further evaluation.

LACO #1241 (Linen Room)

The Linen Room Building is in fair physical condition. It has been damaged by deferred maintenance and vandalism. The building has maintained good physical integrity and the building has retained sufficient integrity for further evaluation.

LACO #1242 (Toilet Building)

The Toilet Building is in fair physical condition. It has been damaged by deferred maintenance and vandalism. The building has maintained good physical integrity. Therefore, the building has retained sufficient integrity for further evaluation.

LACO #1254 (Former Chapel)

The former chapel building is not at its original location. It has undergone a fairly extensive series of alterations, including the addition of a side wing, the addition of metal siding, and the replacement of the original wood windows with metal windows. Because of these alterations the building as a low level of integrity in regard to its design and location. Because of these alterations the building does not retain sufficient integrity for further evaluation.

LACO #1238 (Casa Consuelo)

Casa Consuelo underwent a large-scale renovation in the mid-1980s. These alterations resulted in the replacement of many of the building's exterior windows. However, the building has retained its original exterior configuration and details, roofing type, and wrought iron embellishments. Therefore, the building has retained sufficient physical and design integrity to merit further evaluation.

LACO #3592 (former Protestant, Jewish and Roman Catholic Chapel)

The chapel has retained its original exterior configuration and details, roofing type, and fenestration. The building is in good physical condition. However, since the building is 48 years of age, it does not meet the 50 years-of-age criterion generally necessary for evaluation.

Southeast Quadrant

LACO #1101 (Superintendent's House)

The building has retained its original exterior configuration and details, roofing type, and most of its original fenestration. The building is in good physical condition. Post-construction modifications to the house's exterior include the enclosure of two second floor sleeping porches and a first floor porch. The house's exterior has not suffered from significant deterioration or vandalism. Therefore, the building has retained sufficient integrity to represent its architectural style and period of historic significance.

LACO #1177 (Superintendent's Garage)

The garage has retained its original exterior configuration and details, roofing type, and most of its original fenestration. The building is in fair physical condition. Post-construction modifications to the house's exterior include the addition of a carport off of the west elevation. This alteration has somewhat diminished the integrity of the building. In other respects the garage's exterior has not been significantly altered since its construction. The garage's exterior has not suffered from significant deterioration or vandalism. Therefore, the building has retained sufficient integrity to represent its architectural style and period of historic significance.

LACO #1178 (Garden Shed)

The small garden shed associated with the nearby Superintendent's house has retained its original configuration. The building is in fair physical condition. No significant post-construction modifications have been made to the shed's exterior. The shed's exterior has not suffered from significant deterioration or vandalism. Therefore, the building has retained sufficient integrity to represent its architectural style and period of historic significance.

LACO #1100 (former Administrative Building)

The former Administrative Building has retained its original ornamental cast stone embellishments, wrought iron work, roofing type, and most of its original fenestration. Sometime after 1931, the exterior configuration was altered when the north elevation's arcaded portico was removed. With the exception of this one modification, the exterior configuration has remained substantially intact. The building is in excellent physical condition, having been rehabilitated in the late 1980s. Therefore, the building has retained sufficient integrity to represent its architectural style and period of historic significance.

LACO #2677 (Post Office)

The Post Office is not in its original location. Several modifications, including the replacement of several doors and the stuccoing of the exterior walls have been made to the building since it was moved onto its present site in 1949. Therefore, since the building does not retain its integrity of location, it does not retain sufficient integrity and potential historic significance to require further evaluation.

LACO #1353: (Lath House)

The Lath House is dilapidated, and much of its lath is missing or damaged. However, the building has retained sufficient design and physical integrity to communicate its original design and period of significance.

LACO #1356 (Tool House)

The Tool House has been at its current location since 1936. It original fenestration was replaced by aluminum frame windows sometime in the last 20 or 30 years. The building is in poor physical condition. However, the building has retained

sufficient design and physical integrity to communicate its original design and period of significance.

LACO #1357: (Landscape/Nursery Office)

The Landscape /Nursery Office has retained its original exterior configuration and cladding. Post-construction modifications to the house's exterior include the addition of aluminum frame windows, and the replacement of the original doors. These alterations have significantly diminished the ability of the building to represent its architectural style and period of historic significance. Therefore, the building does not retain sufficient design and physical integrity to communicate its period of significance.

LACO #1284, #1373 and #1374 (Circular Tanks)

The three tanks post-date 1933, as they are not depicted on the aerial photograph of Rancho Los Amigos taken in that year. The tanks appear to have undergone no significant alterations since their construction sometime between circa 1933 and circa 1950. Therefore, they have retained sufficient physical integrity to represent their type and period of historic significance.

LACO #1137 (former Dairyman's House)

The Dairyman's house has retained its original exterior configuration and cladding as well as almost all of its fenestration. Post-construction modifications to the house's exterior include the demolition of the north end of the front porch and enclosure of the middle section of the front porch. The building is in very poor condition. Part of the kitchen roof has collapsed and much of the interior has been vandalized or damaged by arson. Despite the fact that the Dairyman's house is in poor condition, it, nevertheless, retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1179 (Garage for Dairyman's House)

The garage for the Dairyman's house has retained its original exterior configuration and cladding. Post-construction modification to the garage's exterior includes the replacement of the bay door. The building is in very poor condition. While the garage is in poor condition, it retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1283 (former Stable)

Post-construction modifications to the stable's exterior include the removal of the building's second floor shortly after it was damaged by 1933 Long Beach earthquake. In addition, more recently, prefabricated additions have been added to the rear elevation. The building's physical condition is good. However the loss of the original second floor and the non-contextual additions to the rear elevation, have significantly diminished the ability of the building to represent its architectural type and period of historic significance. Therefore, the building does not retain sufficient design and physical integrity to communicate its period of significance.

LACO #1286 (former Garage and Storage Building)

The Garage and Storage Building has retained its original exterior configuration. Post-construction modifications to the garage's exterior include the enclosure of the open bays on the north and west elevations with sheets of corrugated metal. The building is in fair condition and retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1287 (Former Oil and Storage Building)

The Oil and Storage Building has retained its original exterior configuration, cladding and fenestration. Post-construction modifications to the building's exterior

include the addition of a freight door to the second floor and the addition of a concrete ramp to the north elevation. The building is in fair condition and retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #2492 (Toilet Building)

The Toilet Building has retained its original exterior configuration, cladding and fenestration. The building is in fair condition and retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1991 (Property Warehouse)

The Property Warehouse is a pre-fabricated metal building has retained its original exterior configuration, cladding and fenestration. It should be noted that the building was probably built in the late 1940s or early 1950s. The building retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #3591 (Property Warehouse)

The Property Warehouse is a pre-fabricated metal building that was erected in circa -1970 or later. The building is less than 50 years of age and post-dates the property's period of significance (1888-1950). Therefore, further evaluation will not be required.

LACO #2637 (Steam Laundry)

The Steam Laundry was built in 1951. The building has retained its original exterior configuration, cladding and fenestration. The building retains sufficient physical integrity to represent its architectural type and period of historic significance.

Southwest Quadrant

LACO #1260 (Bathhouse)

The Bathhouse Building has retained its original exterior configuration and cladding. Over the years the building has undergone a number of alterations, including the replacement of doors and windows, some of which have been sealed over. Sometime after 1930 the screened-in porch on the west elevation's second floor was remodeled into interior space. The physical condition of the building is poor. The alteration of original doors and windows and the enclosure of the original second floor porch on the west elevation have diminished the integrity of the building. However, despite these changes the building retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1261 (Auditorium)

The Auditorium Building has undergone several alterations and modifications since its construction. Sometime in the past the building's brick exterior was covered in stucco. The original front doors have been replaced and some of the Art Deco detailing of the interior has been removed or destroyed. These alterations have diminished the integrity of the building. However, despite these changes the building retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1262/1263 (Building with Dining, Kitchen, Commissary and Staff Rooms)

The building's exterior has remained substantially unaltered since circa 1921. Since that time the building's exterior has been painted and modifications have been made to its interior. Within the last ten years the building's interior has been damaged by arson and vandalism. However, even with these changes the building retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1184, #1185, #1186, #1187, and #1188 (General Ward Buildings)

The General Ward Buildings have retained their original configuration and exterior cladding. The buildings have undergone a number of significant alterations, including the enclosure of the open porches on the east and west elevations, and the replacement of a number of the buildings' original doors and windows. Over the last fifteen years the buildings have been severely damaged by vandalism and arson. Therefore, the condition of the five ward buildings is poor. While the General Ward Buildings are in poor condition they have retained sufficient physical integrity and design integrity to represent their architectural type and period of historic significance.

LACO #1256 (Toilet Building)

The building has retained its original exterior configuration, cladding and fenestration. The building retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1264 (Bonita Hall)

Bonita Hall was extensively remodeled in 1974 when its tile roof was removed, windows replaced or altered, and its open arcade partially infilled. These alterations have so altered the building that it no longer retains sufficient integrity to convey its original design or represent its period of significance.

LACO # 3390 (Prosthetic Shop)

The Prosthetic Shop is one of the few buildings on the Rancho's South Campus to incorporate references to Modernist architecture. The building has retained its original exterior configuration, cladding and fenestration. The building retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO # 1266 Descanso Hall (former Occupational Therapy Building)

Descanso Hall (the former Occupational Therapy Building) has undergone a significant number of alterations and modifications since its construction in 1928. A landscaped courtyard, porch, and a series of French doors have been added to the south side of the building. The façade's front entrance has been replaced by window. Sometime in the last 15 years the rear of the building was gutted. This resulted in the removal of wall cladding and many of the building's windows. Because of these alterations the building has a low level of integrity and is in poor physical condition. Therefore, the building does not retain sufficient design integrity or physical integrity to represent its architectural type and period of significance.

LACO #1267 (Occupational Therapy Building)

The building has retained its original exterior configuration, cladding and fenestration. A breezeway that connected the building to LACO #1266 has been removed. The building is in fair condition and retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1335 (Brooder House)

The Brooder House has been extensively damaged by arson and is missing several of its ancillary features, such as the feed barn. Therefore, the building does not retain sufficient physical integrity or design integrity to represent its original function, architectural type or period of historic significance.

LACO #1379/4121 (Garage)

The garage has retained its original exterior configuration, cladding and fenestration. The building is in good condition. It retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #4118 (Garage)

The garage has retained its original exterior configuration, cladding and fenestration. The building is in good condition. It retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1464 (Shed)

The shed has retained its original exterior configuration and cladding. The structure is in good condition. It retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #3348 (Decontamination Room)

The Decontamination Room (later called the Garbage Can Room) has retained its original exterior configuration, cladding and fenestration. The building is in fair condition. It retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1275 (Workshop Building)

The Workshop Building has retained it original brick walls and fenestration. The addition of a wood frame wing off of the south elevation occurred during the building's period of significance, and has not impacted the building's integrity of design. The painting of the exterior brick walls has somewhat diminished the integrity of the building. However, it retains sufficient physical integrity to represent its architectural type and period of historic significance. It is fair condition and has good integrity of design.

LACO #1277 (Garage)

The garage has retained its original cladding and fenestration. The addition of a wood frame wing connecting the garage to the Workshop Building (LACO #1275) occurred during the building's period of significance, and has not significantly impacted its integrity of design. The garage is in fair condition. It retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1278 (Garage)

The garage has retained its original cladding and configuration. The building is fair condition and has good integrity of design. Therefore, it retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1280 (Garage)

The garage has undergone few alterations since its construction. It has retained its original cladding and configuration. It is fair condition and has good integrity of design. Therefore, it retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1268 (Storage Building)

The Storage Building has undergone few alterations since its construction. It has retained its original cladding and configuration. It is fair condition and has good integrity of design. Therefore, it retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1270 (Garage Building)

The garage has undergone few alterations since its construction. It has retained its original cladding and configuration. It is fair condition and has good integrity of design. Therefore, it retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #954 (Lumber Shed)

Within the last 20 years deferred maintenance and vandalism have damaged the Lumber Shed. Most of the sliding wood doors on the east and west elevations have been removed. It is poor condition, but has fair integrity of design. The building, however, does not retain sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #3368 (function of building unknown)

This structure has retained its original concrete walls, roof and configuration. It is fair condition. Within the last ten years Building #3368 has been damaged by vandalism. Its condition is fair and it has maintained fair integrity of design. Despite damage to it, the building retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1207 (Work Preparation Center)

The Work Preparation Center has undergone a number of alterations since its construction, including the conversion of its interior into a patient ward. However, these alterations occurred during the building's period of significance, and have not significantly impacted its integrity of design. The building is in fair condition and has good integrity of design. Therefore, it retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1259 (Wheelchair Repair Building)

The Wheelchair Repair Building has undergone a series of alterations and modifications. The loggia that projected off of the east elevation was enclosed and an addition was made to the south elevation. Many of the existing metal frame windows have been replace within the last 35 years. A number of these alterations occurred during the building's period of significance. However the scope of these modifications has so altered the building that it no longer represents the original vernacular style of the building. Therefore, it does not retain sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1279 (Garage)

The garage has undergone few alterations, retains its original cladding and configuration, is fair condition and has good integrity of design. It retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1276 (Lock Shop)

The building has retained its original configuration and brick walls. Alterations to the building include replacement of original doors and windows, painting of the exterior and the construction of an addition off of the west elevation. These alterations have somewhat diminished the building's architectural integrity. However, it retains sufficient physical integrity to represent its architectural type and period of historic significance.

LACO #1290 (Shelter)

The shelter has undergone a number of alterations since its construction. These include the enclosure of the west end of the shelter and the replacement of the original lattice style roofing material. It is fair condition. However the structure retains sufficient physical integrity to represent its architectural type and period of historic significance.

Table Summarizing the Integrity of the Remaining Buildings on South Campus

Table 2

LACO #	Building Name	Construction Date	Retains sufficient integrity for further evaluation	Does not retain sufficient integrity for further evaluation	Less than 50 years of age; no further evaluation required

5.4.3 Integrity of the Landscape Component of Rancho Los Amigos

Rancho Los Amigos began as the County Poor Farm. With the exception of a small group of institutional buildings at its core, the property resembled other farm and ranch properties of the era. During the late nineteenth and early twentieth century farms in California usually consisted of a main house surrounded by landscaped grounds that provided a buffer between the residence and the surrounding fields and farm buildings. Rancho Los Amigos was organized along similar lines. Examination of historic photographs, site plans and an examination of the remaining landscaping features reveal that formal landscaping was concentrated along Erickson Avenue around the Superintendent's house and the nearby administrative and infirmary buildings.

Much of the campus, especially those areas devoted to farming operations and support services (facilities management) were not landscaped in the formal sense. Formal landscaping on South Campus was in the semi-naturalistic tradition popular in the late Victorian era. The style was typified by extensive use of exotic specimen plants planted out in formal beds that were surrounded by a semi-naturalistic landscape of expansive lawns planted with large trees. The landscaping of the County Poor Farm did not reach the level of complexity found in gardens designed simply for pleasure. However, with its avenues of Eucalyptus and palm trees, formal flower beds and large specimen trees the farm did incorporate references to this style. Set within an expansive network of fields and farm buildings, Rancho Los Amigos' maintained its essentially rural landscape for the 62-year period between 1888 and 1950. However in the post-World War II period the rapid suburbanization of the Los Angeles basin profoundly altered the setting of Rancho Los Amigos, which was soon surrounded by housing tracts and a commercial corridor paralleling Imperial Highway.

On the Rancho itself, postwar development was increasingly focused on establishing new hospital facilities north of Imperial Highway. During this same period, its farming operations were being phased out and many of the buildings and structures that supported the Rancho's crop growing and animal husbandry were demolished. By

the mid-1960s most of the South Campus was no longer the focus of patient care, its vacated buildings having been relegated to housing storage and records for the Rancho's hospital facilities, now located on the North Campus. In the 43-year period since 1960 many of South Campus' buildings have been demolished, thereby changing the historic spatial arrangements that had characterized the property during its period of significance. Landscape features that had once defined the property, such as Esperanza Park, the lush landscaping along Erickson Avenue and removal of the avenues of trees that once lined several of the main thoroughfares, have been removed.

The insertion of several large prefabricated buildings has also diminished the original arrangement of buildings that once characterized the complex. Finally, the construction of large 'big box' commercial buildings within the grounds of South Campus has removed hardscape features, such as streets and sidewalks, changed the spatial layout, and removed historic plantings. Because of these alterations, the South Campus of Rancho Los Amigos has not retained a sufficient level of integrity in regard to the character-defining features that characterized its landscape during the property's period of significance.

5.5 Potential Eligibility of the Individual Structures and Features for Nomination to the National Register of Historic Places

5.5.1 Northwest Quadrant (bounded by Descanso Street, Laurel Street, Erickson Avenue and Imperial Highway (see Figure 2):

Building #1121 (Staff Cottage): The cottage is a vernacular style building whose original context has been significantly diminished by the demolition of other staff residences. The building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

Building #1123 (Staff Cottage): The cottage is a vernacular style building whose original context has been significantly diminished by the demolition of other staff residences. The building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1189-#1197 (Infirmary wards): Post-construction alteration to the buildings' interiors and exteriors, which include the stuccoing of some of the elevations, the replacement of part of the fenestration, and the insertion of a number of small additions have diminished the integrity of the buildings. The buildings represent a common type of construction that was prevalent through out most of the twentieth century. While in fair condition, the buildings do not have the type of historic associations or architectural significance that would make them eligible for nomination to the National Register of Historic Places on an individual level. In addition, they are not part of a distinguishable entity that would make them eligible for nomination as a contributing element to a historic district.

.

LACO #1295 (Kitchen and Employee Dining Room): The kitchen building does not embody the level of architectural or historical significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1300, #1301 and #1302 (Power House, Water Tower, Machine Shop, Laundry and Ice Plant): The Power House complex, with its chimney and water tower, represents an important example of early twentieth century industrial design. The complex's water tower and chimney have been visually prominent features of the viewscape of Downey since 1913 (water tower) and 1926 (chimney). The 1926 wing of the building, with its classical style façade and large over-scaled windows, represents a regionally important example of the application of classical imagery to an industrial

building. This was a not uncommon phenomenon during the early twentieth century, a period when Classical Revival style architecture enjoyed widespread popularity for public works projects. Examples of this style in Los Angeles County can be seen in such buildings and engineering works as the Department of Water and Power Distributing Station #2 (1916), the Hall of Justice (1925), the Fourth and Lorena Streets Bridge (Boyle Heights 1928), and the Macy Street Viaduct (1926). The vernacular brick wings of the Power House building still contain many of the working features that communicate its original use as a power/ice plant, including the steel water tower, concrete chimney and wood evaporating tower. Because the building retains both its vernacular and high style architectural elements it is eligible for designation to the National Register under Criterion *c*. It also should be noted that the building has formed an integral and important element of the skyline of the nearby communities of Downey and Southgate for 77 years, and may derive historic significance from this fact.

5.5.2 Northeast Quadrant

LACO #1204/1205 (Men's Psychopathic Ward): Alterations to the Men's Psychopathic Ward's primary street façade (west elevation) have significantly reduced the integrity of the building. The addition of several freestanding buildings to the building's courtyard has also altered the original configuration of this space. Alterations to the interior have modified the configuration of interior spaces that characterized the building during its period of significance. Therefore, the building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

Buildings and Structures within the Central Courtyard of LACO #1204/1205

Eleven small buildings and structures are located within the courtyard of Building #1204/1205. A total of five buildings either post-date the South Campus's period of

significance (which ended in 1950) or are prefabricated structures that do not require further evaluation. These include the following: LACO #1243, LACO #1246, LACO #1251 and LACO #3820. The remaining structures are evaluated below:

LACO #1244 (Toilet Building): As an individual structure the Toilet Building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1245 (Linen Room): As an individual structure the Linen Room Building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1249 (Toilet Building): As an individual structure the Toilet Building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #2435, #2436, #2437, (Metal Buildings): As an individual structures these prefabricated buildings do not have the type of historic associations or architectural significance that would make them eligible for nomination to the National Register of Historic Places on an individual level. In addition, each individual structure is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

Aviary (no number): The Aviary (constructed 1888) is the oldest surviving structure on Rancho Los Amigos. However, the utilitarian structure lacks the level of craftsmanship,

design or historical association that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1202/1203 (Women's Psychopathic Ward): Alterations to the Women's Psychopathic Ward's primary street façade (west elevation) have significantly reduced the integrity of the building. The addition of several freestanding buildings to the building's courtyard has also altered the original configuration of this space. Alterations to the interior have modified the configuration of interior spaces that characterized the building during its period of significance. As an individual structure the Women's Psychopathic Ward does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

Buildings and Structures within the Interior Courtyard of the Women's Psychopathic Ward

LACO #1239 (Toilet Building): As an individual structure the Toilet Building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1240 (Shelter): This modest prefabricated structure does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1241 (Linen Room): As an individual structure the Linen Room Building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1242 (Toilet Building): As an individual structure the Toilet Building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1238 (Casa Consuelo): Casa Consuelo is an excellent example of the Spanish Colonial Revival style applied to a large institutional building. The building has several character-defining features of the Spanish Colonial Revival style, including its arcuated porticos, moderately pitched roof covered in c-shaped Spanish style tiles, wrought iron embellishments, u-shaped courtyards, and the primacy of the wall surface over window openings. The building's symmetrical massing, while somewhat uncharacteristic of the style, is a characteristic feature of institutional architecture, which often necessitated the used of rational floor plans. Because the building is an excellent example of the Spanish Colonial Revival style as applied to public institutional architecture it is eligible for designation to the National Register of Historic Places under Criterion *c*.

5.5.3 Southeast Quadrant

LACO #1101 and #1177 (Superintendent's House and Garage): The Superintendent's house (Harriman House) and garage are both excellent examples of Craftsman architecture built in the early decades of the twentieth century. Both buildings exhibit a number of the attributes that identify them with the Craftsman aesthetic, including their clapboard siding, moderately pitched roof, deep eaves and exposed rafter tails. Like many structures constructed in this style the design was predicated, in large measure, on

the artistic tenets of the mid-nineteenth century English Arts and Crafts Movement. Promoted by such men as John Ruskin and William Morris and later, Gustave Stickley, in America, adherents of the Craftsman movement rejected what they perceived as the overly elaborated, machine-made decorative motifs of late nineteenth century High Victorian design and ornamentation. Instead, they favored simpler compositions based on an open plan, horizontal massing, integration with the landscape, smooth, unadorned wood surfaces and understated decorative schemes. The Superintendent's house, which possesses all of these features, is an excellent example of the Craftsman style, a style popular from circa 1900 to the mid-1920s. Therefore, the Superintendent's House and its attendant garage possess sufficient architectural significance to qualify under Criterion *c*, at the local level, for nomination to the National Register of Historic Places.

LACO #1100 (former Administrative Building): The former Administrative Building has retained almost all of its features that identify it as an example of the Spanish Colonial Revival style, including the retention of its original ornamental cast stone embellishments, wrought iron work, terra cotta tile roof, and the majority of its original fenestration. This period revival style was popular from circa 1915 to 1940 and drew much of its aesthetic inspiration from the regional style of California's Spanish/Mexican Colonial period. The former Administrative Building is an excellent example of its type and possesses sufficient architectural significance to qualify under Criterion *c*, at the local level, for nomination to the National Register of Historic Places.

LACO #1138 (Shed): As an individual structure the shed does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. However, because it represents an intact, integral and contemporaneous component of the Superintendent's House's (Harriman House) property, it qualifies under Criterion *c,* at the local level, for nomination to the National Register of Historic Places.

LACO #1353: (Lath House): As an individual structure the Lath House does not have the type of historic associations or architectural significance that would make it eligible

for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1356 (Tool House): As an individual structure the Tool House does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1284, #1373 and #1374 (Circular Tanks): The three tanks are a fairly standard type of industrial design, dating from between the mid-1930s to the late 1940s. As individual structures they do not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1137 and #1179 (Dairyman's House and Garage): The former Dairyman's house and its garage represents fairly common examples of an early twentieth century, vernacular style buildings. As an individual structures the house and garage do not have the type of historic associations or architectural significance that would make either eligible for nomination to the National Register of Historic Places on an individual level. In addition, neither structure is a part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1286 (Former Garage and Storage Building): The Garage and Storage Building represents a fairly common example of an early twentieth century industrial/farm building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1287 (Former Oil and Storage Building): The Oil and Storage Building represents a fairly common example of an early twentieth century industrial/farm building. As an individual structure the building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #2492 (Toilet Building): As an individual structure the Toilet Building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1991 (Property Warehouse): The Property Warehouse is a prefabricated building dating to circa 1949. As an individual structure the building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #2637 (Steam Laundry): The Steam Laundry was built in 1951. The building post-dates the South Campus' period of significance. The building represents a fairly standard type of industrial design dating from the early 1950s. As an individual structure the building does not embody the level of craftsmanship, design or historical association that would make it eligible for nomination to the National Register of Historic Places on the individual level.

5.5.4 Southwest Quadrant

LACO #1260 (Bathhouse): Utilitarian in design the Bathhouse Building is a fairly common example of an early twentieth century institutional building that eschewed explicit references to a particular architectural style. As an individual structure the building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1261 (Auditorium): The Art Deco designed Auditorium Building has undergone a number of alterations that have somewhat diminished the integrity of the building. These changes, however, are not significant enough to have affected the building's eligibility as an historic resource. Because the building is the only architectural example of Art Deco design on Rancho Los Amigos and because it forms visually connective link with other nearby eligible buildings, including the Harriman House and the old Power Plant, it is eligible to qualify under Criterion c, at the local level, for nomination to the National Register of Historic Places.

LACO #1262/1263 (Building with Dining, Kitchen, Commissary and Staff Rooms): Unlike many of the other vernacular buildings on the South Campus of Rancho Los Amigos the exterior of the Building #1262/1263, which has retained its integrity, represents an excellent example of an early twentieth century vernacular building. While utilitarian in design, the building's brick walls, arched windows and simple cubic volumes are representative of a type of industrial/vernacular design that was a common feature of Los Angeles' urban buildings during the early twentieth century. Because Building #1262/1263 is an excellent example of its type and possesses sufficient architectural significance it qualifies under Criterion *c*, at the local level, for nomination to the National Register of Historic Places.

LACO #1184, #1185, #1186, #1187, and #1188 (General Ward Buildings): Utilitarian in design the General Ward Buildings represent fairly common examples of early twentieth century institutional buildings that eschewed explicit references to a particular architectural style. As an individual structures none of these buildings have the type of historic associations or architectural significance that would make them eligible for nomination to the National Register of Historic Places on an individual level. In addition, none of the individual buildings are part of a distinguishable entity that would make them eligible for nomination as contributing elements to a historic district.

LACO #1256 (Toilet Building): Utilitarian in design the Toilet Building represents a fairly common example of an early twentieth century institutional building that eschewed explicit references to a particular architectural style. As an individual structure the building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO # 3390 (Prosthetic Shop): While the building does include references to the modernist design, the building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1267 (Occupational Therapy Building): Utilitarian in design the Occupational Therapy Building represents a fairly common example of early twentieth century institutional buildings that eschewed explicit references to a particular architectural style. As an individual structure the building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a

distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1379/4121 (Garage): Utilitarian in design the garage represents a fairly common example of an early twentieth century industrial style building that eschewed explicit references to a particular architectural style. As an individual structure the garage does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #4118 (Garage): Utilitarian in design the garage represents a fairly common example of an early twentieth century industrial style building that eschewed explicit references to a particular architectural style. As an individual structure the building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1464 (Shed): Utilitarian in design the shed represents an extremely common example of an early twentieth century vernacular style building that eschewed explicit references to a particular architectural style. As an individual structure the shed does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #3348 (Decontamination Building): Utilitarian in design the Decontamination Building represents a fairly common example of a mid-twentieth century, vernacular style institutional building that eschewed explicit references to a particular architectural style. As an individual structure the building does not have the type of historic

associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1275 (Workshop Building): Utilitarian in design the Workshop Building represents a fairly common example of a early-twentieth century, vernacular style institutional building that eschewed explicit references to a particular architectural style. As an individual structure the building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1277 (Garage): Utilitarian in design the garage represents a fairly common example of an early twentieth century industrial style building that eschewed explicit references to a particular architectural style. As an individual structure the building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1278 (Garage): Utilitarian in design the garage represents a fairly common example of an early twentieth century industrial style building that eschewed explicit references to a particular architectural style. As an individual structure the garage does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1280 (Garage): Utilitarian in design the garage represents a fairly common example of an early twentieth century industrial style building that eschewed explicit references to a particular architectural style. As an individual structure the garage does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1268 (Storage Building): Utilitarian in design the Storage Building represents a fairly common example of an early twentieth century industrial style building that eschewed explicit references to a particular architectural style. As an individual structure the storage building As an individual structure the garage does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1270 (Garage Building): Utilitarian in design the garage represents a fairly common example of an early twentieth century industrial style building that eschewed explicit references to a particular architectural style. As an individual structure the garage does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #3368 (function unknown): Utilitarian in design this building represents a fairly common example of an mid-twentieth century industrial style building that eschewed explicit references to a particular architectural style. As an individual structure the building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an

individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1207 (Work Preparation Center): Utilitarian in design the Work Preparation Center represents a fairly common example of an early twentieth century vernacular style building that eschewed explicit references to a particular architectural style. As an individual structure the building does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1279 (Garage): Utilitarian in design the garage represents a fairly common example of an early twentieth century industrial style building that eschewed explicit references to a particular architectural style. As an individual structure the garage does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1276 (Lock Shop): Utilitarian in design the Lock Shop represents a fairly common example of an early twentieth century industrial style building that eschewed explicit references to a particular architectural style. As an individual does not have the type of historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

LACO #1290 (Shelter): The shelter a fairly common example of an early twentieth century vernacular style building that eschewed explicit references to a particular architectural style. As an individual structure the shelter does not have the type of

historic associations or architectural significance that would make it eligible for nomination to the National Register of Historic Places on an individual level. In addition, it is not part of a distinguishable entity that would make it eligible for nomination as a contributing element to a historic district.

The following buildings and structures are potentially eligible for nomination to the National Register on an individual basis (Table 3) (Figure 161):

1) Superintendent's House (Harriman House), its garage, shed and surrounding grounds: (LACO #1101, #1177 and #1178);
2) Power House Complex (LACO #1300, #1301 and #1302);
3) Administrative Building (LACO #1100);
4) Old Kitchen, Dining, Commissary, and Staff Room Building (LACO # 1262/1263);
5) Casa Consuelo (LACO #1238); and
6) Auditorium Building (LACO #1261)

The remaining buildings do not embody sufficient historic importance or architectural significance to merit nomination to the National Register of Historic Places (Please refer to Table 3 for a list of those buildings, structures and features that are not eligible for designation).

5.6 Determination for Eligibility by the State Historical Resources Commission for listing in the California Register of Historical Resources

(a) For purposes of this section, the term "historical resources" shall include the following:

1.) A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (Pub. Res. Code SS5024.1, Title 14 CCR, Section 4850 et seq.).

2.) *A resource included in a local register of historical resources, as defined in section 5020.1(k) of the Public Resources Code or identified as significant in an historical resource survey meeting the requirements section 5024.1(g) of the Public Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.*

3.) *Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architecturally, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (Pub. Res. Code SS5024.1, Title 14 CCR, Section 4852) including the following:*

a) *Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;*

b) *Is associated with the lives of persons important in our past;*

c) *Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values;* or

d) *Has yielded, or may be likely to yield, information important in prehistory or history.*

The South Campus of Rancho Los Amigos does not retain sufficient integrity to merit placement on the California Register of Historic Resources as an historic district (please refer to

the discussion in Sections 5.3 and 5.4 of this report). However, the following buildings do possess sufficient historic and architectural values to be eligible for placement on the California Register of Historical Resources under Criterion 3c (please refer to Section 5.4 for a discussion of the significance of individual structures) (see Figure 161):

1) Superintendent's House (Harriman House), its garage, shed and its surrounding grounds: (LACO #1101, #1177 and #1178);
2) Power House Complex (LACO #1300, #1301 and #1302);
3) Administrative Building (LACO #1100);
4) Old Kitchen, Dining, Commissary and Staff Room Building (LACO # 1262/ 1263);
5) Casa Consuelo (LACO #1238); and
6) Auditorium Building (LACO #1261)

5.7 Summary Statement of Significance and Recommendations for Further Study

Post/Hazeltine Associates carried out a historic resources study and survey of the South Campus of Rancho Los Amigos in 2002-2003. The study included a survey of the entire South Campus, including its buildings, structures and features. The study also included a re-evaluation of the property's eligibility for nomination as a National Register eligible historic district. The study determined that the property was not eligible for designation as an historic district meeting the criteria established for nomination to the National Register of Historic Places. It should be noted that this determination is at variance with that of a previous survey of the property carried out in 1995 by Historic Resources Group. *Post/Hazeltine Associates* also evaluated the property using the criteria set forth for nomination to the California Register of Historical Resources. The study determined that the property was not eligible for nomination to the California Register of Historical Resources as a historic district. However, five structures were found eligible for designation as individual nominations to the National Register of Historic Places, and the California Register of Historical Resources.
