Attention: Ms. Margaret Park

Subject: **Phase I Environmental Site Assessment; *Fee to Trust Application*, 13.6 Acres of Land Located at the Northwest Corner of Date Palm Drive and Palm Canyon Drive, Cathedral City, Riverside County, California 92234**

Dear Ms. Park:

Petra Geosciences, Inc. (Petra) presents this Phase I Environmental Site Assessment for the above-referenced site. This assessment has been conducted in general accordance with our Proposal No. 17-246P, dated May 15, 2017, and in general conformance with the scope and limitations of the standards set forth in the American Society for Testing and Materials (ASTM) Practice E 1527-13, and the EPA's All Appropriate Inquiry (AAI) regulations 40 CFR Part 312. This assessment has revealed one recognized environmental conditions and five possible recognized environmental conditions on the subject site associated with former gasoline stations and/or auto repair facilities historically located along Highway 111.

This opportunity to be of service to you is sincerely appreciated. Please do not hesitate to call this office if you have questions pertaining to this report.

Respectfully submitted,

PETRA GEOSCIENCES, INC.

Edward Lump, PG
Associate Geologist

Siamak Jafroudi, PhD
President

EXECUTIVE SUMMARY

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Fee to Trust Application, 13.6 Acres of Land
Located at the Northwest Corner of Date Palm Drive and Palm Canyon Drive
Cathedral City, Riverside County, California 92234

INTRODUCTION

The information presented in this report includes the results of our recent site reconnaissance, as well as a review of pertinent literature and recent federal, state, and local government agency records search. Our recent field reconnaissance was performed by Mr. Levon Holmes, Environmental Assistant, and data gathering and compilation were performed by Mr. Edward Lump, Associate Geologist, with oversight by Dr. Siamak Jafroudi, President and Principal Engineer.

SITE DESCRIPTION AND GENERAL INFORMATION

- The approximately 13.6 acre subject property is situated along the north side of Highway 111, south of Interstate 10 (I-10), west of Date Palm Drive and east of Van Fleet Drive in the city of Cathedral City, Riverside County, California. The subject property consists of 65 contiguous parcels identified as Riverside County Assessor Parcel Numbers (APN's) 687-201-005 to -011; 687-202-001 to -012 and -015; 687-203-008 to 015; 687-204-001 to 009, -013, -014 and -016; 687-205-005 to-008; 687-206-001 to -016 and, 687-208-015 and -022 to -026. It is our understanding that the property will include any public streets and right-of-way that the city of Cathedral City has vacated.

- The subject property is bounded by Date Palm Drive on the east, Highway 111 (Palm Canyon Drive) on the south, Buddy Rogers Avenue on the north. A mix of commercial properties and vacant land bounds the subject property on the west. The subject property is mostly vacant land with two structures located on the northeast corner (fire station) and one building (Carl's Jr.) on the southeast corner of the property. These two sites are occupied and operational as of the date of our site reconnaissance. Soil covers a large majority of the vacant property with minor amounts of finely crusted asphalt and gravel. This material appears to be from demolition performed on the subject property. Interior streets consist of weathered asphalt. Multiple fire hydrants, water valve cans and sewer manholes were observed within the vacant lots. Recent surface disturbance of soils on the triangular-shaped lot near the southeast corner of Allen Drive and Dawes Road suggested recent demolition of the former Goody's Restaurant. Erosion retardant appeared to have been recently sprayed on this lot. No signs of surface staining, noxious odors, stressed vegetation, and/or dumped trash or debris, were noted during our site reconnaissance. The only readily detectable remnants of demolition observed were a buried steel pipe and large electrical wires on the parcel west of Carl's Jr. Some irrigation piping, and minor amounts of windblown trash and debris were observed during our site reconnaissance.

- Based on aerial photograph and topographic map information obtained during this assessment, the site appears to have been predominantly developed for residential purposes from at least 1941 to sometime after 2005 and before 2009. By 2009, it appeared that all residential buildings had been removed from the subject property. What appeared to be commercial buildings noted on the site, were typically situated along Palm Canyon Drive (Highway 111), from at least 1953 to 2016. What appeared to be a gasoline service station was depicted onsite (APN 687-208-015), at the northwest corner of Date Palm Drive and Palm Canyon Drive from at least 1966 to sometime after 1972 and before 1984 (existing Carl's Jr. site). A second gasoline station was noted at the southwest corner of the property (APN 687-205-005) from at least 1966 to sometime after 2002 and before 2005 (currently vacant). A third

gasoline service station was noted east of the intersection of Highway 111, Allen Avenue and Dawes Street from at least 1966 to sometime after 1996 and before 2002 (formerly Goody's Diner). The gasoline station formerly occupying APN 687-205-005 (68830 Palm Canyon Drive) is considered a Historical Recognized Environmental Conditions (HREC). The gasoline station formerly occupying APN 687-208-015 (68950 Palm Canyon Drive) is considered a possible Recognized Environmental Conditions (REC). The former gasoline station occupying APN 687-208-24, -025 and -026 is considered a possible Recognized Environmental Conditions (pREC). As such, further assessment is recommended.

- The City Directory Search by EDR listed Auto Truck Repair at 68930 E. Palm Canyon Drive and Bob's Choice Cars at 68920 E. Palm Canyon Drive within the subject property in 1975. The Radius Search report by EDR listed Pyles Robert (service station) at 68904-96 Palm Canyon Drive in 1974. Based upon current street address locations on Bing Maps, these former sites, within the subject property, appear to be have been located on APN's 687-208-022 and -023. Readily available records of these 3 sites were not found indicating regulatory agency oversight of UST removal or cleanup. In addition, the EDR Radius Search report also listed a 1,000 gallon underground diesel storage tank (UST) within the Cathedral Fire Department parcel (APN 687-202-015) in 1975 and a 100 gallon UST of unknown use in 1990.

  The Regional Water Quality Control Board (RWQCB) was recently contacted regarding the 1,000 gallon diesel UST on the fire station site. The RWQCB responded that they have no files pertaining to the address. Based upon readily available information pertaining to these five sites, which is limited in nature, the sites are considered possible Recognized Environmental Conditions (pRECs). As such, further assessment is recommended. Documentation of this information is provided in Appendix D.

- No aboveground or underground storage tanks were observed onsite during our site reconnaissance. An attached diesel fuel tank under the emergency generator at the rear of the fire station was observed. It is our understanding that due to the attached configuration, the generator fuel tank is not required to be permitted as an aboveground storage tank.

- Multiple containers of household chemicals and small volume hydrocarbon-based fluid containers were observed in the fire department's storage and laundry room. The containers included multiple paint cans, bleach, two 5 gallon bottles of diesel and gasoline, two 1 gallon containers of gasoline, and one 2.5 gallon bottle of diesel exhaust fluid. In addition there was an air compressor, quart-sized oil containers, an oily rag canister, and six Scott air pack oxygen tanks. Four 55-gallon plastic barrels of drinking water were observed within the truck bay.

- Ten pole-mounted transformers and two transformer pads were observed onsite during our site reconnaissance. No readily obvious signs of corrosion, leaking, or staining was observed below or around the transformers.

- Petra contacted The Desert Water Authority regarding two wells on the fire station parcel. Ms. Heather Marcks (Senior Engineering Technician) responded that the monitoring wells were used several years back to track the affects septic systems were having on the water quality in the area. She indicated that The Desert Water Authority stopped using them for monitoring a while ago and they went dry. Ms. Marcks indicated that they have no relevant chemical test data on these wells. Documentation of this information is provided in Appendix D.

- At the time of our reconnaissance, no vegetation was observed onsite. There were, however, small bushes and palm tree observed around the two occupied parcels at the northeast and southeast corners of the property.

- There was no evidence of sumps, pits, pools, or lagoons identified during our site walk. Building Department and City records indicate that a majority of the former residential lots and commercial/retail buildings contained onsite septic systems. Records indicate that a number of the septic systems were removed during demolition. Documentation of this information is provided in Appendix D.

- No offsite properties within the vicinity were identified in our search of various government agency database records, which appear to have impacted the soils or groundwater beneath the subject site.

RECOGNIZED ENVIRONMENTAL CONDITIONS

Recognized environmental conditions (REC's) are defined by the American Society of Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, soil vapor or surface water at the subject site. If the presences of recognized environmental conditions are identified on a subject site, it may warrant additional research, site assessment, and/or action.

Controlled recognized environmental conditions (CREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-13 as a recognized environmental condition resulting from the past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (i.e., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls. For example, if a leaking underground storage tank has been cleaned up to a commercial use standard but does not meet unrestricted residential cleanup criteria; this would be considered a controlled recognized environmental condition. The "control" is represented by the (inferred) restriction that the property remains commercial.

Historical recognized environmental conditions (HREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-13 as a past release of any *hazardous substances or petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory agency, without subjecting the *property* to any required controls (i.e., *property* use restrictions, *activity and use limitations*, *institutional controls* or *engineering controls*).

We have performed this Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM Practice E 1527 for APN's 687-201-005 to -011; 687-202-001 to -012 and -015;

687-203-008 to 015; 687-204-001 to 009, -013, -014 and -016; 687-205-005 to-008; 687-206-001 to -016 and, 687-208-015 and -022 to -026, in the city of Cathedral City, Riverside County, California. Any exceptions to, or deletions from, this practice are described in section titled data gaps of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property, except the following:

- Five former and one current occupant of the subject property were identified during this Phase I ESA as either historic gasoline stations and/or vehicle repair shops, and an existing fire station, where records indicate or suggest USTs were present, and where the potential existence for petroleum hydrocarbon-based soil and/or soil vapor residues to be detected cannot be entirely precluded.

  One of the sites, Palm Springs Oil #9, 68830 Palm Canyon Drive (APN 687-205-005), was identified as a former LUST case where soil vapor extraction remediation reportedly removed most of the subsurface contamination. The case was closed in 2006 by the County of Riverside with hydrocarbon soil vapors left in-place at a depth of approximately 48 feet. The site was closed with no restrictions to redevelopment. This site is considered a HREC. At this time, however, no further assessment is recommended.

  Three of the sites within the property were identified as EDR Historic Auto Stations: Pyles Robert (service station), 68904 Palm Canyon Drive (APN 687-205-024, -025 and -026); Bob's Choice Cars, 68920 E. Palm Canyon Drive (APN 687-205-023); and Auto Truck Repair, 68930 E. Palm Canyon Drive (APN 687-208-022). One of the sites, Bob's Choice Cars and Auto Truck Repair were also listed in the EDR City Directory Search. The Existing Cathedral City Fire Station (36913 Date Palm Drive [APN 687-202-015]) was reported to contain a 1,000 gallon diesel UST from 1975 to at least 1988 (possibly removed in 1998). Based solely upon interpretation of aerial photographs, the sixth site is considered likely a gasoline service station which existed at 68980 E. Palm Canyon Drive (APN 687-208-015) from at least 1966 to sometime after 1972 and before 1978. No regulatory oversight agency database records were found for these four former and one active onsite facilities indicating removal of USTs or cleanup of soil residues. As a result, these sites are considered potential REC's.

  To evaluate the potential for detectable concentrations of petroleum hydrocarbon-base soil and soil vapor residues on these 5 former sites, with very limited information and/or no apparent regulatory oversight involvement, Petra recommends further assessment. A limited proposed scope of work is provided herein.

SITE CONSIDERATIONS

The following items are not considered recognized environmental conditions in accordance with ASTM 1527-13. However, these items may warrant considerations in conjunction with any planned development activities. The information regarding possible actions relative to these items has been provided as guidance.

- With redevelopment of any historically developed property, a certain amount of unknown near-surface and subsurface conditions should be anticipated such as buried utility conduits and foundations. If encountered, concrete piping should be evaluated by an asbestos consultant prior

to removal. Any discolored soils, noxious odors, and/or buried objects/debris encountered during clearing and grubbing or future grading and development should be left in place until an experienced environmental professional (such as Petra) has had the opportunity to evaluate the conditions, and provide recommendations if needed.

- Information provided by the city of Cathedral City indicates that septic systems were abandoned, including crushing in-place, on 57 of the 65 parcels within the subject property. Although not considered a recognized environmental condition, septic systems (including tanks) and potentially vertical seepage pits may remain within the subject property. If encountered during site development, these systems should be properly abandoned in accordance with Cathedral City and/or Riverside County guidelines.

- Ten pole-mounted electrical transformers and two ground transformer were observed onsite during our site walk. Our visual observations noted no staining or leakage from the transformers. Based upon the age of the former residential development (early 1940's), there is a potential for some or all of the pole-mounted transformers to contain PCB's. As a result, removal of transformers should be completed by SCE or an experienced contractor. Power poles and associated equipment should be removed from the site and disposed of following proper regulatory specifications.

- It is recommended that all demolition debris and trash generated on the site be removed and disposed in accordance with current local regulations. Waste concrete may be incorporated into fill materials within the subject property, provided it is approved by the geotechnical engineer of record. Solely from an environmental point of view, however, asphalt fragments should be removed from future building pads within the subject property.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Fee to Trust Application, 13.6 Acres of Land
Located at the Northwest Corner of Date Palm Drive and Palm Canyon Drive
Cathedral City, Riverside County, California 92234

INTRODUCTION

The information presented in this report includes the results of our recent field reconnaissance, a review of various federal, state, and local government agency records, and a review of historic aerial photographs and topographic maps for the site vicinity. This report includes a summary of our findings, our opinion as to the current environmental condition of the site, and recommendations for additional work, if needed.

Purpose

This Phase I Environmental Site Assessment (ESA) was conducted to determine if any recognized environmental conditions exist on the subject site. Recognized environmental conditions are defined by the American Society for Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, or surface water at the subject site.

This assessment is also intended to satisfy the requirement for conducting all appropriate inquiries into the previous ownership and uses of a property for the purposes of meeting the all appropriate inquiries provisions necessary to qualify for certain landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

We have performed this assessment in general conformance with the scope and limitations of the standards set forth in the ASTM Practice E 1527-13 and the EPA's All Appropriate Inquiry (AAI) regulations 40 CFR Part 312.

Involved Parties

This report was prepared by Petra Geosciences, Inc. (Petra), at the request of Agua Caliente Band of Cahuilla Indians, for their exclusive use. Use of this report or reliance thereon by other parties or projects is not authorized. The report may not be suitable for other parties or other purposes.

SCOPE OF ASSESSMENT

The scope of this Phase I Environmental Site Assessment (ESA) included the following:

1. Performing a recent site reconnaissance to identify the current conditions and land use of the subject site and adjoining properties, during which visual evidence of prior uses of the subject site and adjoining properties (if possible) were noted. The site reconnaissance included an observation of the site surface and the site perimeter.

2. Researching historical land use of the subject site and vicinity by reviewing readily available historical aerial photographs, United States Geologic Survey (USGS) topographic maps, fire insurance maps, city directories, and other reasonably ascertainable maps and data.

3. Conducting a search for environmental liens and Activities and Use Limitations (AULs) for the property.

4. Performing a cursory review of literature to identify local and regional geologic conditions as they apply solely to potential environmental aspects of the site.

5. Obtaining and reviewing a search of pertinent federal, state, and local regulatory agency databases concerning environmental conditions on and in the vicinity of the site. As specified in the ASTM and AAI standards, the following databases were searched using, at a minimum, the recommended search radius:

   - Federal National Priority List (NPL) site list,
   - Federal Delisted NPL site list,
   - Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) site list,
   - Federal CERCLIS- No Further Remedial Action Planned (CERC-NFRAP) site list, Federal Resource Conservation and Recovery Act Information (RCRA) Corrective Action Report (CORRACTS) facilities list,
   - Federal RCRA non-CORRACTS Treat, Store and Dispose (RCRA-TSD) facilities list,
   - Federal RCRA generators list,
   - Federal institutional control/engineering control registries,
   - Federal Emergency Response Notification System (ERNS) list,
   - State and tribal lists of hazardous waste sites identified for investigation or remediation including: State- and tribal-equivalent NPL, State, and tribal-equivalent CERCLIS lists,
   - State and tribal landfill and/or solid waste disposal site lists,
   - State and tribal leaking storage tank lists,
   - State and tribal registered storage tank lists,
   - State and tribal institutional control/engineering control registries,
   - State and tribal voluntary cleanup sites, and
   - State and tribal Brownfield sites.

   In the interest of thoroughness, multiple non-ASTM and non-AAI required databases were also searched. These databases are listed and discussed in the database search included within this report.

6. Contacting and interviewing knowledgeable persons, such as property owners, managers, and representatives of local government agencies regarding historical site use and current site conditions, if possible.

7. Evaluating the presence of recognized environmental conditions at the subject site through visual observation and research of reasonably ascertainable records. Recognized environmental conditions may include the presence of hazardous materials, petroleum products, underground storage tanks, above ground storage tanks, drums, chemical containers, polychlorinated biphenyls, liquid or solid wastes, oil wells, and areas indicative of potential contamination including stained soils and/or pavement, stressed vegetation, drains, sumps, pits, ponds, lagoons, and noxious odors.

8. Preparing a report presenting the results of our Phase I ESA.

Unless listed above, this assessment does not include any testing or sampling of materials (such as an assessment for the potential presence of methane or radon, asbestos or lead-based paints, or the sampling and testing of soil, air, soil vapor, surface water, or groundwater). This assessment does not include evaluating the site for the presence of wetlands, regulatory compliance, or other items beyond the scope of ASTM E 1527-13 or 40 CFR Part 312, nor is it an assessment for vapor intrusion as defined by ASTM E 2600-15.

SITE OVERVIEW

According to the Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System (2017), the site is located within Section 33, of Township 05 South, Range 05 East, within the San Bernardino Base and Meridian. A United States Geological Survey (USGS) topographic map of the Cathedral City 7.5-Minute Quadrangle (2012) indicates that the site slopes in a northerly direction, toward the Whitewater River Channel. Information provided on the topographic map indicate elevations onsite range from 300± feet to 320± feet above mean sea level (msl). A site location map is included as Figure 1.

The subject site consists of 65 contiguous parcels in the City of Cathedral, Riverside County, California. The subject property is identified as Riverside County Assessor's Parcel Numbers (APN's) 687-201-005 to -011; 687-202-001 to -012 and -015; 687-203-008 to 015; 687-204-001 to 009, -013, -014 and -016; 687-205-005 to-008; 687-206-001 to -016 and, 687-208-015 and -022 to -25. It is our understanding that the property will also include any public streets and right-of-way that the city of Cathedral City has vacated (i.e., 1st Street, Grove Street, Dawes Street and Allen Road). A photographic map showing the overall property conditions in January 2017 is included as Figure 2.

PREVIOUS LAND USE

Based on aerial photograph and topographic map information obtained during this assessment, the site appears to have been predominantly developed for residential purposes from at least 1941 to sometime after 2005 and before 2009. By 2009 it appeared that all residential buildings had been removed from the subject property. What appeared to be larger commercial buildings noted on the site, were typically situated along Palm Canyon Drive (Highway 111) from at least 1953 to 2016. A gasoline service station was depicted onsite (APN 687-208-015), at the northwest corner of Date Palm Drive and Palm Canyon Drive from at least 1966 to sometime after 1972 and before 1984. A second gasoline station was noted at the southwest corner of the property (APN 687-205-005) from at least 1966 to sometime after 2002 and before 2005. By 2012, development onsite consisted of commercial buildings depicted along Palm Canyon Drive east of

Allen Drive and the fire station at the southwest corner of Date Palm Drive and Buddy Rogers Drive. Minimal changes to the property were noted on Google Earth aerial photograph from 2012 to 2017, except all of the residential buildings appeared to have been removed by December 2012. The last photograph reviewed, April 2017, indicated site conditions are similar to that visible today, except Goody's Diner was still visible onsite.

PREVIOUS REPORTS

Pertinent reports regarding the subject property were not provided to Petra to review. Petra reviewed readily available files on the State's Regional Water Quality Control Board's (RWQCB) GeoTracker website pertaining to a leaking underground fuel storage tank (LUST) case on a parcel within the subject property (APN 687-205-005), at 68830 Highway 111, Cathedral City, California. Readily available records indicate the LUST case was closed by the County of Riverside Hazardous Materials Management Division in 2005. A brief summary of environmental-related conditions are provided below. Please note that the 2005 status report summarized below pertains to hydrocarbon concentrations from soil vapor extraction, and the case summary report pertains to hydrocarbon concentrations from soil samples.

> *"Quarter 2, 2005 Status Report, Palm Springs Oil Company, Former Station No. 9, 68830 Highway 111, Cathedral City, California, Site 99-15711" by The Source Group, Inc., dated October 13, 2005.*

Due to low influent hydrocarbon concentrations into the oxidizer, the vapor extraction system (VES) was again cycled throughout the reporting period to test for concentration rebound. Influent vapor concentrations, however, have not increased to levels which warrant continued operations at the site (i.e., no longer effective/feasible). As a result, the VES unit was deployed to another Palm Springs Oil station on October 6, 2005. The Source Group, Inc. (SGI) will prepare a case closure request package to be submitted to the County of Riverside Hazardous Materials Management Division (HMMD) during Quarter 4, 2005.

A site map of the property depicted the 5 former underground fuel storage tanks (USTs) along the northerly portion of the parcel. Twelve soil vapor extraction wells are mapped within the property. For this reporting period, two vapor extraction wells were the source, located near the northeasterly portion of the site. The VES operations summary for the reporting period, Quarter 3, 2005 listed the laboratory results for Total Petroleum Hydrocarbon-gas (TPHg) concentration from January 16, 2002 as 6,930 parts per million by volume (ppmv); benzene at 98 ppmv; and methyl-tert butyl ether (MTBE) at 29 ppmv (*Petra: these concentrations appear to be the highest reported soil vapor concentrations onsite).* Results from the aforementioned 2 wells from September 7, 2005, reported levels of TPHg at <5 ppmv; Benzene at <0.1 ppmv; and MTBE at <0.5 ppmv.

The report also provided a summary of TPHg concentrations from the 12 soil vapor extraction (SVE) wells between 2003 and 2005. Maximum concentrations reportedly ranged from 240 ppmv to 5,000 ppmv (November 11, 2003). Minimum concentrations reportedly ranged from 20 ppmv to 340 ppmv, with 11 of the 12 wells listed with either 20 or 40 ppmv TPHg (*Petra-concentrations reported a relatively steady decline over the 16 reported dates).*

> *"Case Closure Summary, Leaking Underground Fuel Storage Tank Program, Palm Springs Oil Company, Former Station No. 9, 68830 Highway 111, Cathedral City, LOP/Local Case No. 9915711," by County of Riverside, Department of Environmental Health, Hazardous Materials Management Division, dated November 14, 2005.*

The case summary reported that 5, 12,000 gallon USTs were removed from the site on July 2, 1999. No groundwater monitoring wells were installed (*Petra-groundwater was reported between 220-260 feet in depth).* Drink water wells were reported as not affected. Additional comments noted that two initial borings were drilled at the site after TPHg was detected under the USTs upon removal. Boring 1 in the former tank pit was drilled to a depth of 115 feet and detected up to 4,600 ppm TPHg, 18 ppm benzene and 5.7 ppm MTBE at 50 feet. Both borings were converted to SVE wells. A SVE system was started in January 2002 and performed until December 2002. Up to 13,329 pounds of hydrocarbons were removed. A confirmation boring was drilled to a depth of 75 feet in the former tank pit, and detected TPHg at 15,500 ppm; 0.019 ppm MTBE; and 1.8 ppm benzene at a depth of 50 feet where a sandy silt layer was encountered. In September 2003, an additional 3 borings were drilled in the former tank pit and nested SVE wells were installed. Two of the boring reported ND for TPHg, benzene and MTBE. The third reported 1,800 to 2,300 ppm TPHg between 40 and 60 feet in depth. The SVE unit was re-started in November 2003 and ran through February 2004. In February 2005, 3 confirmation borings were drilled. Two of the borings reportedly detected no concentrations of TPHg, benzene and MTBE. The third detected 1,900 ppm TPHg at a depth of 45 feet; 15,000 ppm TPHg at a depth of 48 feet; and 2,000 ppm TPHg at a depth of 50 feet. No MTBE or benzene was detected. It was estimated that approximately 502 pounds of hydrocarbons remained in the soils. The SVE system was re-started in February 2005. A rebound test was conducted in August 2005, and the influent was reported to range from 130 ppmv to 180 ppmv to ND. The SVE system was removed from the site on September 15, 2005. A total of 22,984 pounds of hydrocarbons were removed from the site.

Maximum documented soil contaminant concentrations (before and after cleanup) were reported for depths of 45 and 50 feet before cleanup and 45 to 48 feet after cleanup. In summary, TPHg ranged from 19,000 parts per million (ppm) before cleanup to 15,000 ppm after cleanup; Benzene ranged from 5.25 ppm to non-detect (ND); Toluene ranged from 1,300 ppm to 4 ppm; Xylene ranged from 3,440 ppm to 1,380 ppm; ethylbenzene ranged from 520 to ND; and, MTBE ranged from 5.7 ppm to ND.

The consultant requested closure as the station no longer exists, the hydrocarbon impacts were delineated at the site, SVE reached ND levels, no public wells are located within 0.5 mile of the site, and the minimal hydrocarbon mass (approximately 502 pounds) in the soil in the sandy silt layer located between 42.5 and 52.5 feet below the ground surface was remediated to the extent feasible. Closure was approved once the SVE wells were removed in March 2006.

The case summary report indicated that the corrective action plan protected existing and potential beneficial uses (of groundwater) as per the Regional Board Basin Plan. It also indicated that the corrective action plan protected public health for the current land use, and noted that the corrective action should not be reviewed if land-use changes.

A copy of the case summary report in provided in Appendix B.

ENVIRONMENTAL SETTING

The following section provides a limited overview of the regional and local geologic setting and includes information pertaining to groundwater conditions in the vicinity of the subject site. Geotechnical hazard

information (faults, landslides, etc.) is not part of this assessment. This section does not constitute a geotechnical evaluation of the subject site and should not be taken as such.

Geology

Geologically, the site lies within the Coachella Valley in the western portion of the Colorado Desert Geomorphic Province (Norris and Webb, 1990). The Coachella Valley lies within the northern portion of the Salton Trough, a large northwest-trending structural depression that extends approximately 180 miles from San Gorgonio Pass to the Gulf of California. Part of this basin, including the Salton Sea, lies below sea level and has progressively been filling with sediments eroded from local bounding mountain ranges, sediments from the Colorado River, and by incursions by the Gulf of California since at least the late-Miocene Epoch. Sediments within the Salton Trough are estimated to be on the order of two to five miles thick (Kohler and Fuis, 1986; Fuis and Kohler, 1984; Biehler, et. al., 1964). The San Andreas Fault zone is considered the dominant feature of the geomorphic province, and is well known for its exposures and related fault systems that form the margin between the Pacific and North American Plates.

A regional geologic map of the subject property and vicinity maps the majority of the site as being underlain predominantly by Late Holocene Alluvial Wash Deposits and Holocene to late Pleistocene Young Alluvial Fan Deposits (Lancaster, Hayhurst & Bedrossian, 2012). Alluvial Wash deposits, mapped over half of the site, are described as unconsolidated sandy and gravelly sediment deposited in recently active channels of streams and rivers. Alluvial Fan deposits are described as unconsolidated to slightly consolidated, undissected to slightly dissected boulder, cobble, gravel, sand, and silt deposits issued from a confined valley or canyon.

Surface Water

No surface water was observed on the property at the time of the site visit. The Whitewater River Channel is located approximately 580 feet northeast of the property. North Cathedral Channel is situated approximately 130 feet to the north of Buddy Rogers Avenue, and East Cathedral Channel approximately 190 feet south of Highway 111.

The subject property, situated within Flood Insurance Rate Maps (FIRMS) 06065C1589G, Panel 1589 of 3805, is mapped within Zone X, defined as an area defined as areas of 0.2 percent annual chance flood; areas of 1 percent annual chance flood with average depths of less than 1 foot or within drainage areas less than 1 square mile; and areas protected by levees from 1 percent annual chance flood. The FIRM map (dated August 28, 2008) is provided in Appendix B.

Groundwater

The site is located within the Coachella-Indio Groundwater Sub-Basin (California Department of Water Resources [CDWR], Water Data Library, 2017), and the Whitewater-Coachella-Indio CALWATER Watershed (GeoTracker, 2017). Groundwater depth varies within the area, and though recent flow direction beneath the subject site is unknown, it is regionally estimated to parallel the Whitewater River in a southeasterly direction.

A 2006 Case Closure Summary report from a leaking underground fuel storage tank (LUST) facility on the subject property (APN 687-205-005, at 68830 Highway 111, Cathedral City, California) estimated groundwater at depths on the order of 220-260 feet below the ground surface (bgs). The flow direction was not reported.

One observation well is mapped approximately 1,500 feet north-northwest of the subject site (CDWR Water Data Library, 2017). Between April 2011 and April 2017, groundwater was reported at depths of approximately 170 to 200 feet bgs. Printouts from this review are included in Appendix B.

A March 1, 2017 letter from the City of Cathedral City to the Desert Water Agency indicates that monitoring wells are situated on the fire station parcel. According to this letter, the City has requested Desert Water Authority to abandon the wells. Discussions with Ms. Tami Scott (City Urban Revitalization Corporation) indicated that there are two wells on the vacant land directly behind the main fire station building (personnel communication July 10, 2017). These wells are to be abandoned in July 2017.

On July 10, 2017, Petra contacted The Desert Water Authority regarding the wells on the fire station parcel. On July 11, 2017, Ms. Heather Marcks (Senior Engineering Technician) responded via e-mail that the monitoring wells were used several years back to track the affects septic system were having on the water quality in the area. She indicated that The Desert Water Authority stopped using them for monitoring a while ago and they went dry. Ms. Marcks indicated that they have no relevant chemical test data on these wells. Documentation of this information is provided in Appendix D.

RESULTS OF ASSESSMENT

The results of our site reconnaissance and observation of adjacent sites, agency database review, and historical land use study are presented in the following sections.

Site Reconnaissance

Petra conducted a reconnaissance of the subject site on June 29, 2017. Site photographs are included in Appendix A. Our site observations are summarized below.

- The approximately 13.6 acre subject property is situated along the north side of Highway 111, south of Interstate 10 (I-10), west of Date Palm Drive and east of Van Fleet Drive in the city of Cathedral City, Riverside County, California. The subject property consists of 65 contiguous parcels identified as Riverside County Assessor Parcel Numbers (APN's) 687-201-005 to -011; 687-202-001 to -012 and -015; 687-203-008 to 015; 687-204-001 to 009, -013, -014 and -016; 687-205-005 to-008; 687-206-001 to -016 and, 687-208-015 and -022 to -026. It is our understanding that the property will include any public streets and right-of-way that the city of Cathedral City has vacated.

- The subject property is bounded by Date Palm Drive on the east, Highway 111 (Palm Canyon Drive) on the south, Buddy Rogers Avenue on the north. A mix of commercial properties and vacant land bounds the subject property on the west. The subject property is mostly vacant land with two structures located on the northeast corner (fire station) and one building (Carl's Jr.) on the southeast corner of the property. These two sites are occupied and operational as of the date of our site reconnaissance. Soil covers a large majority of the vacant property with minor amounts of finely crusted asphalt and gravel. This material appears to be from demolition performed on the subject property. Interior streets consist of weathered asphalt. Multiple fire hydrants, water valve cans and sewer manholes were observed within the vacant lots. Recent surface disturbance of soils on the triangular-shaped lot near the southeast corner of Allen Drive and Dawes Road suggested recent demolition of the former Goody's Restaurant. Erosion retardant appeared to have been recently sprayed on this lot. No signs of surface staining, noxious odors, stressed vegetation, and/or dumped trash or debris, were noted during our site reconnaissance. The only readily detectable remnants of demolition observed were a buried steel pipe and large electrical wires on the parcel west of Carl's Jr. Some irrigation piping, and minor amounts of windblown trash and debris were observed during our site reconnaissance.

- No aboveground or underground storage tanks were observed onsite during our site reconnaissance. An attached diesel fuel tank under the emergency generator at the rear of the fire station was observed. It is our understanding that due to the attached configuration, the generator fuel tank is not required to be permitted as an aboveground storage tank.

- Multiple containers of household chemicals and small volume hydrocarbon-based fluid containers were observed in the fire department's storage and laundry room. The containers included multiple paint cans, bleach, two 5 gallon bottles of diesel and gasoline, two 1 gallon containers of gasoline, and one 2.5 gallon bottle of diesel exhaust fluid. In addition there was an air compressor, quart-sized oil containers, an oily rag canister, and six Scott air pack oxygen tanks. Four 55-gallon plastic barrels of drinking water were observed within the truck bay.

- Ten pole-mounted transformers and two transformer pads were observed onsite during our site reconnaissance. No readily obvious signs of corrosion, leaking, or staining was observed below or around the transformers.

- At the time of our reconnaissance, no vegetation was observed onsite. There were however, small bushes and palm tree observed around the two occupied parcels at the northeast and southeast corners of the property.

- There was no evidence of sumps, pits, pools, or lagoons identified during our site walk. Building Department and City records indicate that a majority of the former residential lots and commercial/retail buildings contained onsite septic systems. Records indicate that a number of the septic systems were removed during demolition.

- No offsite properties within the vicinity were identified in our search of various government agency database records, which appear to have impacted the soils or groundwater beneath the subject site.

Adjacent Site and Vicinity Observations

The site is situated in a mix land use area north of Highway 111 (S. Palm Canyon Drive), with vacant land, residential properties and commercial property development.

North To the north of the subject property is Buddy Rogers Avenue, with Second Street Park, North Cathedral Channel, and a mix of commercial and residential properties beyond.

East To the east of the subject site is Date Palm Drive, with Cathedral Gateway Plaza (Salsas Restaurant, Big Lots, Colin's Beauty Salon, Flooring to Ceiling, Roger Dunn Golf Shop and Denny's) and South Cathedral Channel and residential development beyond.

South To the south of the subject site is E. Palm Canyon Drive (Highway 111) with vacant property, Small Mountain, and residential development beyond.

West To the west of the subject site are El Gallito Restaurant and Cozy Massage, with Monty Hall Drive and a mix of commercial property beyond.

Government Agency Database Research

An updated search of federal, state, and local government listings was performed by Environmental Data Resources, Inc. (EDR) for the purposes of this report. The search radius used for all government databases meets or exceeds the standard search distance adopted by ASTM and AAI.

Results of Agency Records Search

A data search of the various government agency records listed in Appendix C revealed 16 listings at 6 addresses mapped within the subject property boundary. Five of the database listings are associated with a leaking underground storage tank (LUST) case identified as Palm Springs Oil #9, mapped at 68830 Highway 111, Cathedral City, California. Seven database listings are related to hazardous waste disposal permits and a historic underground storage tank (UST) on the Cathedral City Fire Department facility at 36914 Date Palm Drive, Cathedral City, California. One of the other database listing is associated with a historical automobile service station (Pyles Robert) at 68904-96 Highway 111, Cathedral City, California. Outside the subject property boundary, there are 13 LUST case listings reported at 6 addresses. All of the

LUST cases are listed as "Case Closed" associated with soil contamination only. Two orphan sites (sites with inadequate data and/or address information to be mapped by EDR) were identified during the agency database search. Refer to the EDR Radius Map™ Report in Appendix C for the search radii completed for this assessment. A brief description for the listings in the EDR report, situated up groundwater gradient and within a third of a mile of the subject property, is provided below:

Sites A1, A3-A5, & A7-A9: Cathedral City Fire Department, 36913 Date Palm Dr., Cathedral City, CA 92234: These listings are mapped in the northeasterly portion of the subject site, and at a lower elevation than the central portion of the property (i.e., point of radius search). The actual location is at the northeast corner of the subject property. This facility is listed on the State Facility and Manifest (HAZNET), the Statewide Environmental Evaluation and Planning System (SWEEPS UST), the Facility Index System/Facility Registry System (FINDS), the EDR Historical Underground Storage Tank (HIST UST), and the California EPA's Facility Inventory (CA FID UST) databases. Under HAZNET, the waste category is reported as approximately 0.01 to 1.05 tons of "other organic solids." The disposal method is reported as "Transfer Station" and "Landfill" for 2000 and 2002 to 2005. The HIST UST listing is associated with a 1,000 gallon diesel tank installed in 1975 at the fire station site. No other information was provided. The SWEEPS UST listing is reportedly related to a 100 gallon tank of unknown use with an origin date of July 7, 1990. Two 1998 HAZNET permits were listed for disposal of "tank bottom waste" and "other empty containers 30 gallons or more." (*Petra: the permit for "tank bottom waste" disposal suggests that a "tank" was removed in 1998*). No pertinent information was provided under CA FID UST and FINDS. Further assessment is recommended for this site. A scope of work is provided below.

Site B2: Carl's Jr. #724, 68980 E. Palm Canyon Dr., Cathedral City, CA 92234:
This site is located at the southeast corner of the subject property (APN 687-208-015). The facility is listed under the U.S. Environmental Protection Agency's Facility Index System/Facility Registry System (FINDS) database. This database may contain references to out of date records formerly associated with the site. The date the database listing was created in October 14, 2015, based upon "environmental interest." No additional information is provided. Based upon the absence of a violation-based dual database listing for the site, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time. (*Petra: review of a historical aerial photograph from 1975 indicates that a gasoline station was situated at the northwest corner of Palm Canyon Drive and Date Palm Drive. The FINDS listing may be related to this former gasoline station*). Further assessment is recommended for this site. A scope of work is provided below.

Site C6: Tri Millenium, 68901 Grove St., Cathedral City, CA 92234:
This site is located in the central portion of the subject property (APN 687-204-001). This facility is listed under California Environmental Protection Agency's (CAL EPA) Facility and Manifest Data (HAZNET) database. The waste category is listed as "asbestos containing waste" and the volume is reported as 0.84 tons. The disposal method is listed as "Landfill." The date of the listing is reported as 2005. No additional information is provided. Based upon the absence of a violation-based dual database listing for the site, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

Site A10: Multi-Commercial Units, 37111 Date Palm Dr., Cathedral City, CA 92234:
This site is located in the central portion of the eastern edge of the subject property (APN 687-206-018). This facility is listed under California Environmental Protection Agency's (CAL EPA) Facility and Manifest Data (HAZNET) database. The waste category is not listed but the volume is reported as 0.4 tons. The disposal method is listed as "Landfill or surface impoundment that will be closed as landfill (to include

on-site treatment and/or stabilization)." The date of the listing is reported as 2012. No additional information is provided. Based upon the absence of a violation-based dual database listing for the site, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

Sites C11, C12, C13, C14 & C15: Palm Springs Oil #9, 68830 Highway 111, Cathedral City, CA 92234:
This address is a triangular-shaped lot located in the southwest corner of the subject property (APN 687-205-005). This facility is listed under the State Water Quality Control Board's Hazardous Substance Storage Container (HIST UST), EDR's Historical Gas Station (EDR Hist Auto), the State Water Resources Control Board's Leaking Underground Storage Tank (LUST), the Statewide Environmental Evaluation and Planning System (SWEEPS UST), the Historic Cortese Hazardous Waste and Substances Sites (HIST CORTESE), the U.S. Environmental Protection Agency's Facility Index System/Facility Registry System (FINDS), the CAL EPA's Facility Inventory Database (CA FID UST), the Resource Conservation and Recovery Act Small Quantity Generator (RCRA-SQG), and Enforcement and Compliance History Information (ECHO) databases.

The RCRA-SQG listing is describes as a Handler that generates more than 100 and less than 1000 kilograms (kgs) of hazardous waste during any calendar month and accumulates less than 6000 kgs at any one time. The owner/operator is reported as Stagg Oil Company, Inc. No violations were reported as found. The HIST UST listing is associated with a station with four, 12,000 gallon UST's containing regular, unleaded and premium gasoline. The leak detection method is listed as "stock inventory." Information sheets from the State Water Quality Control Board report a date of June 1, 1988. The EDR Hist Auto listing refers to a gasoline station on the site in 1986 and 1987. The LUST case type is reported as LUST Cleanup Site. The potential media affected is reported as soil. The potential contaminants of concern are reported as gasoline. The case status is listed as "Completed-Case Closed" on May 5, 2006. Two SWEEPS UST listings were created February 29, 1988 and September 17, 1992 and the status of both are reported as "active." The referral action for the first listing is November 17, 1992. The referral action for the second listing is September 17, 1992. Five, 12,000 gallon gasoline USTs are reported on the site in the first listing and four, 12,000 gallon USTs on the second. The ECHO listing Compliance Status reported no violations. Additional information regarding this former gasoline station is provided below under the *GeoTracker* section.

Site D16: Pyles Robert, 68904-96 Highway 111, Cathedral City, CA 92234:
This address is located in the central portion of the subject parcels adjacent to Highway 111 (APN 687-208-024, -025 and -026). This facility is listed under EDR's Historical Gas Station (EDR Hist Auto) database. The date of this listing is 1974. No additional information is provided. Based upon the location of the address situated within the subject property and the absence of regulatory agency oversight and/or additional knowledge of the former gasoline station, this site may represent a recognized environmental condition with regards to the subject site at this time. Further assessment is recommended for this site. A scope of work is provided below.

Sites B17, B18, B19, B20, B21, B22, B23, B24 & B25: Shell Station, Saylor Harry C., Cathedral City Oil, 69010 Highway 111, Cathedral City, CA 92234:
This address is mapped less than 1/8 of a mile to the southeast and at a lower elevation than the subject property. This site was situated near the northeast corner of Highway 111 and Date Palm Drive; however, the facility has been removed. This site is listed on the LUST, HIST CORTESE, EDR Hist Auto, RCRA-SQG, FINDS, HAZNET, ECHO, Notify 65, SWEEPS UST, CA FID UST, Indian LUST, Indian UST and the State Water Quality Control Board's Active Underground Storage Tank (UST) databases.

The LUST listing is reported as a LUST Cleanup Site. The potential contaminant of concern is listed as gasoline. The potential media affected is reported as "Aquifer used for drinking water supply. The site history indicated that 5 borings drilled to a depth of 100 to 140 feet reported detectable concentrations of Total Petroleum Hydrocarbons-diesel (TPH-d) at depths of 10 to 140 feet. Soil vapor sells reported elevated levels of MTBE and TBA at screened depths of 15-30 feet and 35-45 feet below the ground surface, with maximum concentrations of TPHg at 35 feet, MTBE at 30 feet, and TBA at 30 feet. Low levels of other VOCs were reported. After soil vapor extraction cleanup operations, TPHg went from 74 parts per million by volume (ppmv) to less than 3 ppmv; MTBE decreased from 56 ppmv to 0.07 ppmv; TBA dropped from 15 ppmv to less than 0.0023 ppmv, and ethanol went from -.014 to 0.0084 ppmv (June 2007). One groundwater monitoring well, drilled to a depth of 193 feet, reported levels of methyl-tert butyl ether (MTBE) at 11 parts per billion (ppb). The case status is listed as "Completed-Case Closed" on August 26, 2010. A second LUST cleanup case was reported in 1989. The potential contaminant of concern is listed as gasoline. The potential media affected is reported as soil. The cases status is listed as "Completed-Case Closed" on September 13, 1996.

The Indian LUST case status is reported as "Closed" on February 25, 2002. The last status is listed as, "Cleanup Completed (NFA-Confirmed Release)." The Indian UST database listing refers to four underground storage tanks containing gasoline and used oil. The Tanks status is noted as, "permanently out of service" on February 23, 2004.

The EDR Hist Auto database listing refers to a gasoline service station (Saylor Harry C) at the address from 1977 to 1988 and Cathedral Shell at the site from 1989 to 2001. No other information is provided. A second EDR Hist Auto listing refers to Cathedral City Shell in operation at the address from 1994 to 2006. The RCRA-SQG listing is related to benzene waste and ignitable waste disposal. No violation were reportedly found. The waste category under HAZNET is reported in 2004 as "Aqueous solution with total organic residues less than 10 percent." Volume is reported as 1.25 tons. The disposal method is described as, "Treatment, Tank." The disposal method for a second listing for the same waste category is reported as "Recycler" for 4.17 tons. Two additional listings under HAZNET consisted of the permitted disposal of "Other empty containers 30 gallons or more" and a disposal method of "Recycler." The SWEEPS UST listing reports three, 12,000 gallon leaded and unleaded gasoline tanks and one, 550 gallon waste oil tank on the site. The status of the tanks are listed as active in 1992.

The location of this site is considered to be at a down groundwater gradient from the subject property. This site is situated at approximately 115 feet from the southeast corner of the subject property, beyond the 100 foot vapor encroachment screening distance suggested for down-gradient petroleum-contaminated sites where a light non-aqueous phase liquid (LNAPL) floating on the water table is reported. Based upon this information, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

<u>Sites C26, C27 & C28: Shell Swift Stop & World Oil Station #7, 68869 E. Palm Canyon Dr., Cathedral City, 92234:</u>
This address is mapped less than 1/8 of a mile to the south and at a higher elevation than the subject property. This site is listed on the EDR Hist Auto database for 1991 to 1995, and World Oil Marketing Company/WORAD Oil Company from 1996 to 1997. No additional information is provided. This site is also listed on the LUST, RCRA-SQG, SWEEPS, HIST UST, CA FID UST, FINDS, HIST CORTESE and ECHO databases.

The LUST listing case type is reported as LUST Cleanup Site. The potential media affected is listed as soils. The potential contaminant of concern is listed as gasoline. The case status is reported as "Completed-Case Closed" as of June 3, 1996. The SWEEPS UST listing refers to seven active USTs containing diesel,

regular unleaded and leaded gasoline ranging from 10,000 to 12,000 gallons in volume. The active date is June 19, 1989. The HIST UST database listing referenced 6 USTs onsite of similar volume. The ECHO Compliance Status reported no violations.

The location of this site, south of Highway 111, is considered to be at a cross groundwater gradient from the subject property. This site is situated at approximately 110 feet from the south edge of the subject property, beyond the 95 foot vapor encroachment screening distance suggested for cross-gradient petroleum-contaminated sites where only petroleum is dissolved in the groundwater (*Petra: groundwater contamination is not reported at this offsite property; however, this screening distance is used as a conservative basis for assessment*). Based upon this information, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

Site C29: Route 66 Riders, Inc., 68885 E. Palm Canyon Dr, Cathedral City, CA 92234:
This address is located south of the central portion of the subject site, across E. Palm Canyon Drive. This facility is mapped by EDR less that a 1/8 mile to the south-southeast and at a higher elevation that the subject property. This offsite property is listed under EDR's Historical Gas Station (EDR Hist Auto) database. Cathedral City Firestone (general auto repair shop) reportedly occupied the address from 1989 to 1997, and then occupied by Route 66 Riders (gasoline service station) from 1998 to 2008. No additional information is provided.

The location of this site, south of Highway 111, is considered to be at a cross groundwater gradient from the subject property; however, groundwater is reported to exceed a depth of 150 feet below the ground surface. If groundwater was impacted by this site, it is considered at a depth where the health risk to future onsite residents is considered a de minimis condition.

This site is situated at approximately 110 feet from the south edge of the subject property, beyond the 95 foot vapor encroachment screening distance suggested for cross-gradient petroleum-contaminated sites where only petroleum is dissolved in the groundwater (*Petra: groundwater contamination is not reported at this offsite property; however, this screening distance is used as a conservative basis for assessment*). Based upon this information, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

Site E30: Desert Jewelry Mart, 68783 E. Palm Canyon Dr, Cathedral City, CA 92234:
This address is located southwest of the subject property, across E. Palm Canyon Drive. This facility is mapped by EDR less that a 1/8 mile to the west-southwest and at a higher elevation that the subject property. This offsite property is listed under EDR's Historical Gas Station (EDR Hist Auto) database. Desert Jewelry Mart reportedly occupied the address from 1995 to 1996, and then occupied by Penuries, Inc. from 1997 to 2008. No additional information is provided. (*Petra: it is anticipated that this listing is likely due to a gasoline station occupying the address prior to 1995*).

The location of this site, south of Highway 111, is considered to be at an up groundwater gradient from the subject property; however, groundwater is reported to exceed a depth of 150 feet below the ground surface. If groundwater was affected by a pre-1995 gas station, the likelihood is high that contaminants have degraded over 22 years to concentrations sufficiently low as to not present a health risk to future residents. Strict definition of the potential warrants it to be labeled as a Historic Recognized Environmental Condition; however, depth to groundwater and the anticipated decreasing contamination levels, if a plume exists, it is considered as a de minimis condition.

This site is situated at approximately 460 feet from the south edge of the subject property, less than the 528 foot vapor encroachment screening distance suggested for up-gradient petroleum-contaminated sites

(*Petra: groundwater contamination is not reported at this offsite property; however, this screening distance is used as a conservative basis for assessment*). The closest parcel to this offsite property (*Palm Springs Oil Company, APN 687-205-005)* conducted soil vapor extraction remediation, achieving "Case Closed" cleanup status in 2005 (County of Riverside, 2005). Based upon the removal of soil vapors under regulatory guidance, the likelihood of additional vapor migration onto the site is considered very low. As a result, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

Site E31: Oliver & Winston, Inc., 68759 E. Palm Canyon Dr, Cathedral City, CA 92234:
This address is located west of the subject property, across E. Palm Canyon Drive. This facility is mapped by EDR less that a 1/8 mile to the west-southwest and at a higher elevation that the subject property. This offsite property is listed under EDR's Historical Gas Station (EDR Hist Auto) database. Oliver & Winston, Inc. (auto & home supply store) reportedly occupied the address from 1989 to 1994. No additional information is provided. It is our opinion that an auto and home supply store would represent a very low potential for underground or aboveground fuel storage tanks or used hazardous materials in a way that would potentially impact the environment. Based upon this assumption, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

Site D32: Immediate Auto Care, 68900 B St,, Cathedral City, CA 92234:
This address is located south of the subject property, across E. Palm Canyon Drive. This facility is mapped by EDR less that a 1/8 mile to the south and at a higher elevation that the subject property. This offsite property is listed under EDR's Historical Gas Station (EDR Hist Auto) database. Immediate Auto Care reportedly occupied the address in 1988 and from 1989 to 1994. This site was reportedly occupied by Phil's immediate Auto Care in 1989. No additional information is provided.

The location of this site is considered to be at a cross groundwater gradient from the subject property; however, groundwater is reported to exceed a depth of 150 feet below the ground surface. If groundwater was affected, the likelihood is high that contaminants have degraded over 13 years to concentrations sufficiently low as to not present a health risk to future residents. Strict definition of the potential warrants it to be labeled as a Historic Recognized Environmental Condition (HREC); however, depth to groundwater and the anticipated decreasing contamination levels, if a plume exists, it is considered as a de minimis condition.

This site is situated over 110 feet from the south edge of the subject property, greater than the 95 foot vapor encroachment screening distance suggested for cross-gradient petroleum-contaminated sites (*Petra: groundwater contamination is not reported at this offsite property; however, this screening distance is used as a conservative basis for assessment*). Based upon the information provided above this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

Site E30: Palm Springs Tire & Auto, 68759 E. Palm Canyon Dr, Cathedral City, CA 92234:
This address is located west-southwest of the subject property, across E. Palm Canyon Drive. This facility is mapped by EDR less that an 1/8 mile to the west-southwest and at a higher elevation that the subject property. This offsite property is listed under EDR's Historical Gas Station (EDR Hist Auto) database. Palm Springs Tire & Auto reportedly occupied the address from 1995 to 1996, and then occupied by Penoriss, Inc. from 1998 to 2004. No additional information is provided.

The location of this site, south of Highway 111 (E. Palm Canyon Drive), is considered to be at an up groundwater gradient from the subject property; however, groundwater is reported to exceed a depth of 150 feet below the ground surface. If groundwater was affected, the likelihood is considered high that contaminants have degraded over the past 13 years, to concentrations sufficiently low as to not present a

health risk to future residents. Strict definition of the potential warrants this listing to be labeled as a Historic Recognized Environmental Condition; however, depth to groundwater and the anticipated decreasing contamination levels, if a plume exists, it is considered as a de minimis condition.

This site is situated at approximately 560 feet from the southwest edge of the subject property, exceeding the 528 foot vapor encroachment screening distance suggested for up-gradient petroleum-contaminated sites (*Petra: groundwater contamination is not reported at this offsite property; however, this screening distance is used as a conservative basis for assessment*). As a result, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

Sites F34 & F35: Super Clean, 69040 E. Palm Canyon Dr., Suite A, Cathedral City, CA 92234:
This address is located southeast of the subject property, across E. Palm Canyon Drive. This facility is mapped by EDR less that an 1/8 mile to the west-southwest and at a lower elevation that the subject property. This offsite property is listed under the DTSC's Cleaner Facilities (DRYCLEANERS) and the EDR Historic Dry Cleaners (EDR HIST CLEANER) databases. The created date for the DRYCLEANERS listing is December 5, 2007 and the inactive date is June 30, 2008. No violations were listed for this facility. The EDR HIST CLEANER listing reported occupancy by Best Cleaners of the Desert, Super Cleaners, and Dakota 150 Cleaners from 1999 to 2009. No additional information was provided. Based upon this site being located at least 450 feet from the subject property and at a down groundwater gradient, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

Site 36: Cathedral City Auto Supply, 68733 Hwy 111, Cathedral City, CA 92234:
This address is located west of the subject property, across E. Palm Canyon Drive. This facility is mapped by EDR less that an 1/8 mile to the west and at a higher elevation that the subject property. This offsite property is listed under EDR's Historical Gas Station (EDR Hist Auto) database from 1987. No additional information is provided. It is our opinion that an auto parts supply store would represent a very low potential for underground or aboveground fuel storage tanks or used hazardous materials in a way that would potentially impact the environment. Based upon this assumption, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

Sites G37, G39, G39 & G40: Chevron Station #9-3045, 68630 E. Palm Canyon Dr., Cathedral City, CA 92234:
The site is mapped between 1/8 and 1/4 of a mile to the west and at a higher elevation than the subject property. The facility is listed under the LUST, HIST CORTESE, HIST UST, SWEEPS UST and CA FID UST databases. The LUST case type is reported as LUST Cleanup Site. The potential media affected is reported as soil. The potential contaminants of concern are reported as gasoline. The case status is listed as "Completed-Case Closed" on October 5, 2006. The HIST UST listing refers to 3 product USTs and a waste (oil?) tank on the site in 1971. The SWEEPS UST listing was created February 29, 1988 for three, 12,000 gallon fuel USTs and one, 1,000 gallon waste oil UST. The status is reported as "active." This address is mapped west and at an up groundwater gradient from the subject property; however, groundwater contamination was not reported. As a result, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

This site is mapped by GeoTracker at approximately 830 feet from the west edge of the subject property, exceeding the 528 foot vapor encroachment screening distance suggested for up-gradient petroleum-contaminated sites (*Petra: groundwater contamination is not reported at this offsite property; however, this screening distance is used as a conservative basis for assessment*). As a result, this listing does not appear to represent a potential for soil vapor migration (i.e., recognized environmental condition) with regards to the subject site at this time.

G41: Beep-Beep Lube & Tune, 68635 Hwy 111, Cathedral City, CA 92234:
The site is mapped between 1/8 and 1/4 of a mile to the west and at a higher elevation than the subject property. The facility is listed under the SWEEPS UST and CA FID UST databases. The SWEEPS UST listing was created August 21, 1991 for fuel USTs and one waste oil UST. The status is reported as "active." No violations were reported. Permits for USTs do not necessarily indicate contamination has occurred unless the site has a dual listing associated with a spill, leak and/or unauthorized release of hazardous materials. This facility and address are no listing on any other database reviewed herein; therefore, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

The remaining identified sites report no violations and/or dual listings, or report soil contamination only, or are located at a down groundwater gradient from the subject property, or exceed a distance of 1/3 of a mile from the subject site. As a result, these listings do not appear to represent a recognized environmental condition with regards to the subject site at this time.

Orphan Sites

Orphan sites are unable to be located due to lack of complete data and/or address information. Two orphan sites were listed in the EDR Radius Map™ report. One site is listed as LUST case at a CVWD Lift Station (80-06) located at Country Club Drive and the Whitewater River, in Rancho Mirage, California. It appears that this facility is situated at least 1 mile southeast of the subject property. Limited information provided on the EDR website indicated that groundwater was affected. The status of the case is reported as "Closed/Action Completed." No additional data was provided. The second listing, also a LUST case, was reported as Tramway Shell located on North Palm Canyon Drive in Palm Springs, California. It appears that this facility is situated at least 1 mile northwest of the subject property. Limited information provided on the EDR website indicated that groundwater was affected. The status of the case is reported as "Closed/Action Completed." No additional data was provided. Based upon limited location information, these sites do not appear to represent a recognized environmental condition with regards to the subject site at this time.

Local Agencies

Petra reviewed information held by the agencies listed below during the course of this assessment.

A. Riverside County Department of Environmental Health

The Riverside County Department of Environmental Health - Hazardous Materials Management Division maintains records related to underground storage tanks and tank cleanup sites in the County of Riverside. Records held by this agency were accessed by EDR during the government database search (Appendix C). One listing for the subject site was reported by EDR (Palm Springs Oil #9, 68830 Highway 111, Cathedral City, California). Additional information pertaining to this facility is provided below under *GeoTracker*.

Petra also reviewed the most recent Environmental Resources Management Division Local Oversight Program (LOP) listing (dated July 11, 2017); the Hazardous Materials Management Division Disclosure Facility Listing (dated July 11, 2017); the Hazardous Materials Management Branch Generator Facility Listing (dated July 11, 2017); and, the Hazardous Materials Management Branch Tank Facility Listing (dated July 11, 2017). No addresses for the subject site were found in any of the listings.

B. California Regional Water Quality Control Board

The California Regional Water Quality Control Board-Colorado River Basin (RWQCB) maintains records of leaking underground storage tank sites and groundwater cleanups for sites in the Colorado River Region. Records held by the RWQCB were accessed by EDR during the government database search. One listing for the subject site was reported by EDR (Palm Springs Oil #9, 68830 Highway 111, Cathedral City, California). Additional information pertaining to this facility is provided below under *GeoTracker*.

During our research, a State Water Resources Control Board Hazardous Substance Container Information sheet, dated June 1, 1988, was found for the fire station site. The owner of the tank was reported as Riverside County Fire Department. This sheet indicated that a 1,000 gallon diesel tank was installed at the Cathedral City Fire Station #34 (36-913 Date Palm Drive) in 1975. Underground piping was listed as unknown. Leak detection was reported as, "stock inventory." No additional pertinent information was provided. Petra contacted the RWQCB on July 5, 2017 to request a file search for this site. The RWQCB responded on July 7, 2017 indicating that no files exist for the address. A copy of the information sheet is provided in Appendix B.

C. GeoTracker

The GeoTracker website maintains a record of environmental data for regulated facilities in California. One database listing for the subject site was reported on GeoTracker (Palm Springs Oil #9, 68830 Highway 111, Cathedral City, California). A summary of this former LUST case is provided below. In addition, a summary of soil vapor extraction remediation results and a summary of the closure report for the site (County of Riverside, 2005) are provide above under the *Previous Reports* section. Summaries of other LUST cases mapped up-gradient and in close proximity to the subject property are provided below. The memorandum documenting this inquiry is included in Appendix B.

Palm Springs Oil #9, 68830 Highway 111, Cathedral City, CA 92234 (EDR Mapped Sites C11 – C15)
Five, 12,000 gallon USTs were removed from the site on July 2, 1999. No groundwater monitoring wells were installed due to groundwater estimated between 220-260 feet in depth. Two initial borings were drilled at the site after TPHg was detected under the USTs upon removal. One boring in the former tank pit was drilled to a depth of 115 feet and detected up to 4,600 ppm TPHg, 18 ppm benzene and 5.7 ppm MTBE at 50 feet. Both borings were converted to soil vapor extraction (SVE) wells. A SVE system remediated soil vapors from January 2002 to December 2002. A confirmation boring was drilled to a depth of 75 feet in the former tank pit, and detected TPHg at 15,500 ppm; 0.019 ppm MTBE; and 1.8 ppm benzene in a sandy silt layer at a depth of 50 feet. In September 2003, an additional 3 borings were drilled in the former tank pit and nested SVE wells were installed. Two of the boring reported ND for TPHg, benzene and MTBE. The third reported 1,800 to 2,300 ppm TPHg between 40 and 60 feet in depth. The SVE unit was re-started in November 2003 and ran through February 2004. In February 2005, 3 confirmation borings were drilled. Two of the borings reportedly detected no concentrations of TPHg, benzene and MTBE. The third detected 1,900 ppm TPHg at a depth of 45 feet; 15,000 ppm TPHg at a depth of 48 feet; and 2,000 ppm TPHg at a depth of 50 feet. No MTBE or benzene was detected. The SVE system was re-started in February 2005. A rebound test was conducted in August 2005, and the influent was reported to drop from 130 ppmv to non-detect (ND). The SVE system was removed from the site on September 15, 2005. A total of 22,984 pounds of hydrocarbons were removed from the site.

The consultant requested closure as the station no longer exists and the hydrocarbon impacts were delineated at the site, SVE reached ND levels, no public wells are located within 0.5 mile of the site, and the minimal hydrocarbon mass (approximately 502 pounds) in the soil in the sandy silt layer located between 42.5 and 52.5 feet below the ground surface was remediated to the extent feasible. Closure was approved once the SVE wells were removed in March 2006.

The case summary report indicated that the corrective action plan protected existing and potential beneficial uses (of groundwater) as per the Regional Board Basin Plan. It also indicated that the corrective action plan protected public health for the current land use, and noted that the corrective action should not be reviewed if land-use changes. As a result, this site is considered a Historical Recognized Environmental Condition (HREC). No further assessment is recommended for this site at this time.

World Oil Station #7, 68869 E. Palm Canyon Dr., Cathedral City, 92234 (EDR Mapped Sites C26-C28)
Review of a Case Closure Summary report (County of Riverside, 1996) indicated that three, 10,000 gallon and three, 12,000 gallon gasoline USTs were active on the site. Original soil sample was taken from the turbine box when hand borings hit refusal due to cobbles at a depth of 3 feet. An assessment boring drilled near the tanks reported a maximum TPHg at 40 feet in soil of 5.4 ppm and ND at 60 and 65 feet below the ground surface, respectively. Benzene was ND throughout the boring. Groundwater was estimated at a depth of 160-165 feet. Closure was approved in June 1996. Based upon this information, this listing does not appear to represent a recognized environmental condition with regards to the subject site at this time.

Chevron Station #9-3045, 68630 E. Palm Canyon Dr., Cathedral City, CA 92234 (EDR Mapped Sites G37-G40)
Review of a Case Closure Summary report (County of Riverside, 1995) indicated that one, 5,000 gallon gasoline UST and two, 10,000 gallon gasoline USTs were removed from this site in October 1990. The case type and release was reported as soil contamination under the pump island. Groundwater was listed at a depth of 200 feet. No monitoring wells were installed. Concentrations of TPHg were listed at 6,000 ppm. Treatment and disposal of the affected (surficial soils) materials consisted of the removal of 480 cubic yards of soil taken to the BKK and Laidlaw landfills. Original contamination was reported at depths between 10 and 35 feet. These soils were remediated through vapor extraction. Soil levels reported after remediation were reported as 0.54 ppm TPHg and benzene at non-detect (ND). Closure was approved in October 2005.

As a result, this site may be considered a Historical Recognized Environmental Condition (HREC); however, readily available information indicates this site represents a de minimis condition with regards to the subject site at this time.

D. Department of Toxic Substances Control

The online database EnviroStor (DTSC, 2017), which provides records on LUSTs, SLICs, Priority cleanup sites and state sites, is maintained by the Department of Toxic Substances Control (DTSC). No database listings for the subject site or the immediate site vicinity were reported on EnviroStor.

E. California Division of Oil, Gas, and Geothermal Resources

According to the California Division of Oil, Gas, and Geothermal Resources (DOGGR), there are no active or abandoned oil, or gas wells located on the subject site. Further, there were no indications of any such wells found during our reconnaissance of the subject site. A copy of this map is included in Appendix B.

F. National Pipeline Mapping System

Petra reviewed the National Pipeline Mapping System (NPMS, 2017) public viewer website for gas transmission pipelines and hazardous liquid trunk lines on or close to the subject property. For security purposes, detailed map views are not available. According to the information reviewed, no pipelines appear to be located on the subject property. A copy of these maps is included in Appendix B.

Vapor Migration

Recent standard revisions presented in ASTM E1527-13, considers the assessment of vapor migration similar to that of groundwater contamination. As a result, Petra reviewed documentation regarding surrounding sites near the subject property with known soil, soil vapor and/or groundwater contamination to preliminarily evaluate potential areas of concern for vapor migration/encroachment onto the subject property. An area of concern typically includes active or abandoned gas stations and dry cleaners, industrial facilities, and hazardous waste disposal and landfill facilities with known or suspected soil and/or groundwater contamination.

Petra also assessed onsite parcels with known and/or possible soil, soil vapor and/or groundwater contamination to preliminarily evaluate potential areas of concern for vapor migration. For vapor encroachment to represent a potential for vapor intrusion to structures within the subject property, vapors must have a pathway to create an indoor air quality condition (i.e., Recognized Environmental Condition). Vapor encroachment from an onsite or offsite release onto the subject property does not immediately equate to vapor intrusion into existing or proposed structures within the subject property, and cannot be ascertained without additional field work.

In the absence of specific criteria within ASTM Standard E1527-13, Petra considered the linear distance and groundwater gradient guidelines provided in ASTM E2600-15 (Tier 1 Areas of Concern) as a reasonable screening tool for vapor migration to identify a recognized environmental condition (REC) associated with the subject site (ASTM, 2015; Buonicore, 2014). No "open case" leaking underground storage tank (LUST) sites were identified in our search of various government agency database records, which have been reported to impact soils or groundwater onsite or in the immediate vicinity of the subject property, and that may have also impacted soils or groundwater beneath the subject site, except one onsite parcel, APN 687-205-005 (Palm Springs Oil #9, 68830 Highway 111, Cathedral City, CA 92234). This parcel is a former LUST case where gasoline reportedly affected soil only. Vapor extraction was utilized for remediation of the site. Closure was approved once the SVE wells were removed in March 2006. No known development restrictions were placed on this site. This site is considered a Historical Recognized Environmental Condition (HREC).

The City Directory Search by EDR listed Auto Truck Repair at 68930 E. Palm Canyon Drive and Bob's Choice Cars at 68920 E. Palm Canyon Drive in 1975. The Radius Search report by EDR listed Pyles Robert (service station) at 68904-96 Palm Canyon Drive in 1974. Based upon current street address locations on Bing Maps, these former sites appear to be within the subject property, within APN's 687-208-023, -024, -025 and -026. Readily available records were not found indicating regulatory oversight of UST removal or cleanup of these former sites. The EDR Radius Search report also listed a 1,000 gallon underground diesel storage tank (UST) within the Cathedral Fire Department parcel (APN 687-202-015) in 1975 and 1988 and a 100 gallon UST of unknown use in 1990. Readily available records were not found indicating regulatory oversight of UST removal or cleanup of the fire station parcel. Additionally, historic aerial photographs reviewed herein suggest a gasoline station was located at the northwest corner of Date Palm Drive and Palm Canyon Drive from at least 1966 to sometime after 1972 and before 1984. Based upon the absence of readily available information pertaining to these five sites, these sites may represent potential Recognized Environmental Conditions (pRECs) due to the potential for petroleum hydrocarbon soil vapor (and soil) residues to be detected onsite. Based upon the age of these former gas stations, USTs and/or vehicle repair facilities as well as natural decomposition of hydrocarbons, the potential may be considered low to moderate; however, the potential cannot be entirely precluded. Further assessment is recommended for this site. A scope of work is provided below.

No surrounding offsite facilities have been identified during this assessment, situated in close proximity to the property and at an up or cross groundwater gradient, which would represent a concern in regards to vapor encroachment on to the subject site at this time.

Evaluation of Records Search Results

In summary, no former onsite businesses were identified in our search of various government agency database records, which are reported to have impacted or have the potential to have affected soils, soil vapor or groundwater beneath the subject site at this time, except the following:

- Palm Springs Oil #9, 68830 Palm Canyon Drive (APN 687-205-005)
- Pyles Robert (service station), 68904 Palm Canyon Drive (APN 687-208-025, -026)
- Bob's Choice Cars, 68920 E. Palm Canyon Drive (APN 687-208-023)
- Auto Truck Repair, 68930 E. Palm Canyon Drive (APN 687-208-022)
- Unknown gasoline station, 68980 E. Palm Canyon Drive (APN 687-208-015)
- Cathedral Fire Department, 36913 Date Palm Drive (APN 687-202-015)

It should be noted that the APN's related to the onsite addresses above are in some cases estimated, based solely upon the historic addresses provided versus the current addresses searched on Bing Maps.

Results of Aerial Photo Analysis

Although aerial photographs can often be a valuable source of information in the assessment of historical land usage, it should be understood that information extrapolated from photographic images is strictly interpretation and not necessarily fact. For this reason, it may not be appropriate to draw conclusions regarding previous site activities based solely upon aerial photograph analysis.

In order to provide an assessment of historical land usage on and in the vicinity of the subject site, aerial photographs with coverage of the subject site and vicinity were obtained from EDR and viewed by a representative of this firm. Photographs from the years 1953, 1966, 1972, 1984, 1996, 2002, 2005, 2009, 2010, and 2012 were provided by EDR. A summary of the information obtained during the aerial photograph review follows. Copies of the aerial photographs obtained from EDR are included in Appendix C.

1953 Photograph

In this black and white photograph, the subject property appears to be developed predominantly single-family residential development. There were, however, larger structures scattered onsite that may have been multi-family dwellings, motels and/or commercial development. Palm Canyon Drive, Date Palm Drive, Buddy Rogers Avenue, 1st Street, Grove Street, Dawes Street and Allen Avenue are visible but only Palm Canyon Drive appeared to be improved. Minimal vegetation was readily detectable.

1966 Photograph

In this black and white photograph, the subject property appears to remain predominantly single-family residential development, with decreased larger structures. What appeared to be a gasoline station was depicted in the southeast corner of the subject property, and a second station may be present in the southwest corner of the subject site. Gasoline stations appeared to be present to the south (across Highway 111) and to the southeast (across Date Palm Drive).

1972 Photograph

In this black and white photograph, the subject property appears to remain predominantly residential development. Highway 111, Date Palm Drive, Buddy Rogers Avenue, 1st Street, Grove Street, Dawes Street and Allen Avenue appeared to be improved. The northeast and southeast corners of the property appeared to be undeveloped, except for what appeared to be a gasoline station at the southeast corner.

Vacant parcels are also scattered throughout. Locally dense trees are visible within some of the developed lots. Gasoline stations appeared to remain to the south (across Highway 111) and to the southeast (across Date Palm Drive).

1984 and 1996 Photographs

In the 1984 infrared photograph, the subject property remained predominantly developed and similar to previous photographs; however, a relatively large building (fire station?) was depicted in the northeast corner of the property. A large area of land (APN 687-204-016), bounded by 1st Street, Grove Drive and Date Palm Drive was vacant in 1984 but developed for commercial purposes by 1996. The service station in the southwest corner of the property (APN 687-208-015) appeared to be re-developed for commercial purposes (Carl's Jr.?) in 1984. The gasoline station at the southwest corner of the subject property remained visible. Development of the shopping center east of the site was depicted in 1984, as was the service station at the northeast corner of Highway 111 and Date Palm Drive.

2002 Photograph

In this infrared photograph, minimal changes were noted within the site, except for building removals/vacant parcels north of 1st Street, between the fire station and Allen Drive. Additionally, the pump islands and awning associated with service station at the southwest corner of the property appeared to be removed.

2005, 2009, 2010 and 2012 Photographs

In these color photographs, minimal changes were noted on the site, except for the removal of buildings within the property limits. By 2009 a majority of structures had been removed, except for the fire station, Carl's Jr., Goody's Diner, a commercial building at the northwest corner of Grove Drive and Date Palm Drive, a commercial building between Carl's Jr. and Goody's Diner, 5 residences at the corner of Date Palm Drive and Dawes Road, and 3 scattered buildings within the western portion of the site. Very minimal changes were depicted to the property in 2010. By 2012, development was only observed along Date Palm Drive and Highway 111 east of Allen Drive.

2012 to 2017 Google Earth Photographs

Petra also reviewed historical aerial photographs on Google Earth from 2012 to 2017. All of the residential buildings appeared to have been removed by December 2012. By July 2016, the commercial building west of Carl's Jr. had been removed. The last photograph reviewed, April 2017, indicated site conditions similar to that visible today, except Goody's Diner was still present onsite.

Historical USGS Topographic Maps

Petra reviewed the historical USGS topographic maps of the site and vicinity provided by EDR® (1904, 1941, 1944, 1947, 1958, 1972, 1981 and 2012). The 1904 map depicts no development of the subject property or vicinity, except for a road near the southern portion of the site (Palm Canyon Drive?). Improvements to the subject site and vicinity were depicted in the map from 1941, where the entire subject property appeared developed along with land to the west and south. Date orchards were depicted across the Whitewater River to the north and east. Indian Reservation (IR) Lands were shown on the 1941, 1944 and 1947 maps directly east of the property and to the north. Minimal changes to the subject property were noted until the 1958 map where the northwesterly portion of the property appeared as undeveloped. This map also depicted Agua Caliente Indian Reservation Land to the north and east. The 1972 map exhibited small structures within the northeasterly portion of the property while the remainder of the site was infilled with urban development. The 2012 map depicted a fire station in the northeast corner of the site. Overall, land improvements in the vicinity of the subject property were similar to that described in the aerial photographs. Copies of the maps reviewed are provided in Appendix C.

Environmental Liens & Activity and Use Limitations

Environmental Liens and Activity and Use Limitations (AUL) indicate restrictions on a property, which may represent a recognized environmental condition for the subject site. A search for Environmental Liens and AULs was initially conducted by EDR as part of this assessment for APN 687-205-005 (formerly 68830 Highway 111, Cathedral City, California). The results from this search indicated that there were no recorded Environmental Liens or AULs listed for the parcel. One Grant Deed provided with this lien search shows the title is vested in City Urban Revitalization Corporation. The Deed was recorded on May 1, 2005. A Legal Description of the real property (Exhibit "A" dated May 1, 2015) list 61 parcels, some of which refer to other parcels within the subject property. A copy of the lien and AUL search report is provided in Appendix C.

Subsequently, it was determined to conduct an Environmental Liens and AUL search on 5 additional parcels along Palm Canyon Drive (Highway 111). Deed information for APNs 687-208-015 and 687-208-022 indicate that the Title is vested in City Urban Revitalization Corporation. The Title was received from Wessman Holdings, LLC. The Deed was recorded April 8, 2016. No environmental liens or AUL were found. A Legal Description of the real property (Deed 1) list 23 parcels which refer to other parcels within the subject property. Quitclaim Deed information for APNs 687-208-023, 687-208-024 and 687-208-026 indicate the Title is vested in the Agua Caliente Band of Cahuilla Indians. The Title was received from Meridian Reality Investors, LLC. The deed was recorded on January 2, 2017. A Legal Description of the

real property (Exhibit 'A' Deed 2) list 4 parcels which refer to other parcels within the subject property. A copy of the lien and AUL search report is provided in Appendix C.

Fire Insurance Maps

Fire Insurance Maps provide information on structure locations and operations, which were present at the time of the survey. These maps were completed for most major cities and metropolitan areas, dating from 1867, and provide information into past usage of buildings and how commercial and industrial zoning has changed over time. Sanborn™ Fire Insurance maps were requested for this study. EDR reports that no Sanborn™ Fire Insurance map coverage is available for the site. The memorandum documenting this inquiry is included in Appendix C.

City Directories

City Directories provide information for a specific address at a specific time. A search of city directories, on a five year interval dating from 1975 to 2013, was conducted by EDR for this assessment. The search was conducted for the target streets E. Palm Canyon Drive (Highway 111) and Date Palm Drive. Listings on E. Palm Canyon Drive and Date Palm Drive were recorded for all years covered. Multiple listings were included in the EDR city directory abstract for the subject property. In 1975, MAG Gasoline was listed at 68830 E. Palm Canyon Drive; Bobs Choice Cars at 68920 E. Palm Canyon Drive; and Auto Truck Repair was listed at 68930 E. Palm Canyon Drive. No listings were provided for these addresses from 1980 – 1990. Goody's Diner was listed at 68930 E. Palm Canyon Drive in 2003 and 2013. From 1992 to 1999, Palm Spring Oil was listed at 68830 E. Palm Canyon Drive; however, this address was listed as "unknown" in 2003 and not list in 2008. Carl's Jr. Restaurant was listed at 68980 E. Palm Canyon Drive in 2003 and 2013. County of Riverside Fire Department-Cathedral City was listed at 36913 Date Palm Drive in 1980 and 1985. A copy of this search is presented in Appendix C.

Building Permits

Building Permit data provides information to identify current and/or former operations and structures/features which may represent a recognized environmental condition for the subject site. EDR reported no building permits for the target property at the northwest corner of Highway 111 and Date Palm Drive; however, multiple building permits for addresses within the subject property from the Cathedral City Building and Safety Department from 1997 to 2016 were listed. Permits at Riverside County Building and Safety Department from 1973 to 2017 were also searched. Building permits pertaining to demolition at 16 addresses estimated to have been within the subject property are summarized below.

- 68780 1st St. – (3-21-2011) demo 2,850 square foot commercial building including removal of septic system and CMU wall. Asbestos report on file.
- 68904 1st St. – (3-13-208) demo existing single family dwelling and carport, including septic system. Filed with AQMD, asbestos survey attached.
- 68935 1st St. – (3-13-2008) demo existing single family dwelling structure, carport and patio cover, including septic system. Filed with AQMD, asbestos survey attached.
- 36968 Allen Ave. – (1-30-2007) demo single family dwelling 1,000 SQ.FT. excluding slab, foundation, CMU walls and septic system.
- 68821 Buddy Rogers Ave. – (11-4-2008) demo single family dwelling (two), bedroom (1). Bathroom including removal of septic system after local fire departments complete their fire & rescue exercises (exempt fee per redevelopment).
- 68835 Buddy Rogers Ave. – (11-4-2008) demo single family dwelling (two), bedroom (1). Bathroom including removal of septic system after local fire departments complete their fire & rescue exercises (exempt fee per redevelopment).
- 37055 Date Palm Dr. – (11-9-2010) demo 12,000 SQ. FT. commercial building including removal of septic system. Asbestos report on file.
- 37111 Date Palm Dr. – (10-29-2012) common demo of one 2-story commercial building and two 1-story buildings, including slabs, footings and concrete flatwork.
- 68830 E. Palm Canyon Dr. – (10-18-2001) temporary pole for vapor extraction system.
- 68830 E. Palm Canyon Dr. – (5-12-1999) demo gas station – single story 450 SQ. FT. building.
- 68950 E. Palm Canyon Dr. – (5-4-2015) demo of existing 10,800 Sq. Ft. commercial building including concrete & footings per City standards. AQMD & asbestos reports in file.
- 68792 Grove St. – (6-1-2009) replace seepage pit.
- 68917 Grove St. – (10-21-2008) demo of single family dwelling including removal of septic system. Asbestos survey on file.
- 68926 Grove St. – (3-13-2008) demo existing of two apartment units including septic system. Filed with AQMD, asbestos survey attached.
- 68937 Grove St., - (6-23-2008) demo of single family dwelling including removal of septic system. Filed with AQMD, asbestos survey attached.
- 68947 Grove St., - (3-13-2008) demo existing of seven apartment units including septic system. Filed with AQMD, asbestos survey attached.
- 68963 Grove St., - (6-12-2012) demo 2-unit two-story apartment complex (Units 4 & 5) including removal of septic system. Asbestos report on file.

A copy of this summary list provided by the City of Cathedral City is presented in Appendix D.

Interviews

Owner Knowledge

An e-mail was sent to the client, Mr. Jeff Vatter (Senior Project Manager, Economic Development) containing Owner and Client/User Questionnaires (i.e., interview document) regarding the subject site. The Owner questionnaire was forwarded to Ms. Tami Scott (CFO, City Urban Revitalization Corporation). A summary of the response to questions by Ms. Scott is provided below.

1. According to Ms. Scott, she does not have a good knowledge regarding the uses and physical characteristics of the property; however, she does have a good knowledge regarding the activities/processes conducted at the property.

2. Ms. Scott stated that, to the best of her knowledge, the past uses of the property consisted of a combination of commercial, retail and residential uses. The current uses include a Cathedral City Fire Station and a Carl's Jr. operating onsite.

3. Ms. Scott indicated that, to the best of her knowledge, there are no hazardous substances or petroleum products present on the site. She did note that a diesel fuel tank was on the fire station site.

4. According to Ms. Scott, she does not have good knowledge regarding the identity of any existing documents relating to the property; however, she noted no existing Phase I ESA's and environmental permits related with the subject property.

5. Ms. Scott noted that asbestos, asbestos-containing materials and lead-based paint were removed from the structures prior to demolition. She also indicated that there is a diesel tank at the fire station site.

6. Ms. Scott indicated that to the best of her knowledge, there are no utility corridors within the parcel and there are no clarifiers or disposal wells onsite. She did indicate that there is a Southern California Edison utility corridor and she suggested reviewing the ALTA Survey provided to the client. Ms. Scott noted that the (fire station) property has two monitoring wells that are in the process of being abandoned (July 2017).

7. According to Ms. Scott, based on her knowledge and experience related to the property, there are no notices or other correspondence from any government agency relating to past of current violations of environmental laws; are no notices or other correspondence from any governmental agency relating to environmental liens encumbering the property; are no pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property; and, there are no notices from any governmental entity regarding any possible violations of environmental laws, or possible liability relating to hazardous substances or petroleum products.

8. Ms. Scott provided a summary list of subject property addresses identifying septic systems removal status with APN's. The list is provided in Appendix D.

A copy of the complete Owner Questionnaire is provided in Appendix D.

Client Knowledge

An e-mail was sent to Mr. Jeff Vatter (Senior Project Manager, Economic Development, Agua Caliente Band of Cahuilla Indians) containing interview questionnaire documents regarding the subject site. A summary of the response to questions is provided below.

1. According to Mr. Vatter, the only environmental related reports he has on the subject property is a seller-provided monitoring well abandonment letter and underlying license agreement.

2. To the best of his knowledge, Mr. Vatter noted that he is aware of commonly known or reasonably ascertainable information about the property. Mr. Vatter noted that a portion of the property was previously a residential subdivision, and Goody's Café was located onsite prior to being demolished in May 2017.

3. Mr. Vatter indicated that he is not aware of hazardous substances or petroleum products on the site. Additionally, he is not aware of an existing release, past release of threat of release of hazardous substances or petroleum products on the site.

4. According to Mr. Vatter, based on his knowledge of the property, there are no obvious indicators that point to the presence of likely presence of contamination at the property.

5. Mr. Vatter indicated he is not aware of any chemicals present, or once present, on the property; known spills or other chemical releases on the site; or any environmental cleanups taken place at the site or adjacent properties.

A copy of the owner questionnaire completed by Mr. Vatter is provided in Appendix D.

Mr. Vatter also presented questions to Mr. Carl Karcher (President of CLK, Inc.) from Petra pertaining to the Carl's Jr. parcel. Mr. Karcher indicated that the restaurant has been in business at the location since 1978, and that he has been involved with the restaurant since 1985. Mr. Karcher indicated that he is not aware of what the historic use of the parcel was. Mr. Karcher noted that he was not involved with construction, and the landlord (Mr. Wessman) may have information. To the best of his knowledge, no walls have been moved and no construction has occurred since the restaurant opening in 1978. Mr. Karcher stated, that to the best of his knowledge, no illegal dumping has occurred on the parcel or on adjacent sites. Mr. Karcher stated that the grease trap is located in the parking lot of the east side, and it has been serviced routinely by a qualified vendor, and no issues were noted.

National Environmental Policy Act

The National Environmental Policy Act (NEPA) requires that Federal agencies include in their decision-making processes appropriate and careful consideration of all environmental effects and actions, analyze potential environmental effects of proposed actions and their alternatives for public understanding and scrutiny, and restore and enhance environmental quality as much as possible. It should not be concluded that coverage information in this report regarding the subject property or surrounding areas does not exist from other sources.

A NEPA review was conducted by EDR® for the subject property. The NEPACheck report provides maps and data from the following items, and is provided in Appendix C:

- National Areas Map - officially designated Wilderness Areas/Preserves; threatened or endangered species or critical habitat
- Historic Sites Map – listed or eligible for National Register
- Flood Plain Maps
- Wetlands Map – change is surface features (wetland fill)
- FCC & FAA Map – antenna, power lines and airports

National Areas Map

This map depicted 3 California Endangered Species, 2 California Protected Area and 2 California Land Ownership Area within a 1/8-mile radius from the central of the subject property; however, only State Areas were mapped within the site property.

- Second Street Park, mapped near the northeastern edge of the subject site, is designated as owned by Cathedral City (California Land Ownership) and is a California Protected Area.
- Slender Cottonheads, Chaparral Sand Verbena and Prairie Falcons, mapped between 0 and 1/8 mile north of the site, area California Endangered Species.
- Town Square Park, mapped between 1/8 and ¼-mile west of the subject property, is designated as owned by Cathedral City (California Land Ownership) and is a California Protected Area.

Historic Sites Map

No sites were found in the search of available government records within a 1/4 mile radius of the subject site on the Historic Sites Map. Three sites, identified as Indian Reservation land (Agua Caliente Indian Reservation) were mapped within a 1 mile radius. Three sites are listed that are unmappable due to an incomplete address. They area Andreas Canyon; El Mirador Hotel and Tower; and Tahquitz Canyon. These sites are listed on the National Register of Historic Places. Based upon our review, it appears that none of these sites appear to be within a 1/4 mile radius of the site.

Flood Plain Maps

FEMA FIRM Flood Plain Panel for the subject site (06065C1589G) and three adjacent panels for the area were searched. The subject property was not mapped within a designated flood plain.

National Wetlands Inventory Map

No State Wetlands were mapped within the subject property. One State Wetlands site was identified in close proximity to the subject site. The improved drainage located less than 1/8 mile northeast of the site and east of Date Palm Drive, identified as a Palustrine, Emergent and Temporarily Flooded, is mapped as a State Wetlands.

FCC and FAA Sites Map

Four sites within a 1-mile radius of the subject site were identified. A wireless antenna tower (SBA Monarch II, LLC) and a FFA Tower are located between ¼ and ½ mile to the north. SCE Palm Springs Heliport is mapped over approximately ¼ mile northeast of the subject site. Southern California Edison active powerlines are mapped less than 1 mile north of the site.

Data Failures and Data Gaps

In the event that data gaps are identified, the Environmental Professional (EP) will endeavor to comment on the significance of those data gaps. However, the EP cannot, and does not warrant or guarantee that no significant events, releases, or conditions arose, during periods such as data gaps.

Petra reviewed several sources for historical information regarding the subject site. These sources included a government agency database search, a city directory search, a review of historical aerial photographs and historical USGS topographic maps, and interviews with people knowledgeable about the site. No fire insurance maps are reported to be available for the site. Gaps in aerial photograph and map coverage exceeded 10 years. Files on identified HRECs and/or potential RECs were not readily available or found.

Data gaps exist in the historic information reviewed. These gaps are due to the limited resources available, which are reasonably ascertainable and practically reviewable in the local area. However, it is our opinion that if additional historic information were to become available, it is not likely to change the conclusions or recommendations of this assessment.

DISCUSSION OF POTENTIAL ENVIRONMENTAL CONCERNS

The following discussions of potential environmental concerns are presented to inform the client as to the existence, or lack thereof, of recognized environmental conditions present on the subject site.

Regulatory Actions

Based upon a thorough search of readily available federal, state, and local records, no known current regulatory action is pending with respect to the subject property.

Adjacent and Nearby Properties

No information has been obtained during this Phase I Environmental Site Assessment which would indicate the presence of recognized environmental conditions adjacent to the subject site that are considered likely to pose a significant impact to soils, soil vapors, surface water or groundwater beneath the subject site. A

limited reconnaissance of offsite adjacent and nearby properties, however, was completed as part of this assessment.

Polychlorinated Biphenyls (PCB's)

Polychlorinated biphenyls (PCB's) are historically linked to electrical equipment, such as capacitors and transformers, due to their physical and chemical characteristics. PCB's, persistent in the environment, are known to accumulate in organisms and the food chain.

Any electrical equipment (i.e., transformers, capacitors, and fluorescent light fittings) containing dielectric insulating fluids or coolants, manufactured prior to 1976, should be considered to potentially contain PCB's. PCB's may also be found in older lubricating oils, cutting oils, hydraulic fluids, paints, sealants, and flame retardants (UNEP, 2002).

Ten pole-mounted electrical transformers and two ground transformers were observed onsite during our site walk. Our visual observations noted no staining or leakage from the transformers. Based upon the age of the former residential development (early 1940's), there is a potential for some or all of the pole-mounted transformers to contain PCB's. As a result, removal of transformers should be completed by SCE or an experienced contractor. Power poles and associated equipment should be removed from the site and disposed of following proper regulatory specifications.

Underground Storage Tanks (UST)

No information has been obtained during this assessment which would indicate fuel underground storage tanks (USTs) currently located on the subject site; however, information has been obtained that USTs were documented on one site (*Palm Springs Oil*, 68830 Palm Canyon Drive), or may have been located on five historic sites fronting Palm Canyon Drive within the subject property (*Pyles Robert* [service station], 68904 Palm Canyon Drive; *Bob's Choice Cars*, 68920 E. Palm Canyon Drive; *Auto Truck Repair*, 68930 E. Palm Canyon Drive; *unknown gasoline station*, 68980 E. Palm Canyon Drive; and *Cathedral Fire Department,* 36913 Date Palm Drive). A discussion of these sites are provided in the above text. No surface indications of USTs were observed on the subject site during the site reconnaissance.

Above Ground Storage Tanks (AST)

No information from readily available agency database reviews or provided by EDR® has been obtained during this assessment which would indicate above ground fuel storage tanks (ASTs) to be located on the subject site currently, except for a diesel AST attached to a generator near the out building at the fire station

site. ASTs were not reported within agency reviews or provided by EDR® to have been located on the site in the past.

Storm Water/Waste Water Discharge

At this time, storm water discharge from the site appears to be limited to surface water runoff. No wastewater discharge was observed.

Pesticide and Herbicide Residues

Based on information obtained during this assessment, the site was not developed for agricultural purposes prior to at least 1941 until the present day. It is likely that typical small volume residential use of pesticides and herbicides occurred onsite; however, it is reasonable to believe that these restricted agricultural chemicals were applied to the subject property in such a volume that the potential for elevated pesticide and herbicide soil residues to exist onsite is very low to nil.

Asbestos-Containing Materials

An asbestos survey was not completed as a part of this assessment. No potential asbestos-containing materials were observed on the site; however, information was found which indicated that the former residential and commercial buildings onsite contained asbestos-containing materials (ACMs). Discussions with Ms. Tami Scott (CFO, City Urban Revitalization Corporation) indicated that demolition permits would not have been issued without ACM clearance.

Petra's field reconnaissance of the property noted multiple water valve cans located on the vacant parcels and interior streets. Based solely upon the age of the former residential development, there is a potential for concrete water lines to contain asbestos. Consideration should be given to exposing water lines onsite to assess the existence of ACM's.

A summary table of septic system abandonment for parcels within the subject property (provided by Ms. Scott) indicated a majority of the septic tanks were pumped, crushed and filled per City code. Since asbestos was used to strengthen concrete, and considering the potential age of the septic systems, there is a potential (albeit small) for the crushed in-place concrete tanks to contain ACM. It is considered unlikely that asbestos-containing materials represent a recognized environmental condition with regards to the subject site at this time; however, crushed concrete encountered during grading and/or development of the property should be evaluated by an experienced asbestos consultant prior to removal from the excavation and offsite disposal.

Lead-Based Paints

No potential lead-based materials were observed on the site, and no indication of the use, storage, or disposal of lead-based materials on the site; however, a lead-based paint survey was not completed as a part of this assessment. Although records were not found, discussions with Ms. Tami Scott (CFO, City Urban Revitalization Corporation) indicated that demolition permits would not have been issued without lead-based paint clearance. It is considered very unlikely that lead-based paint represent a recognized environmental condition with regards to the subject site.

Landfills

The EDR report does not list any known landfills within the search radius conducted for this assessment. Therefore, landfills do not appear to represent a recognized environmental condition with regards to the subject site.

Water Supplies

It appears that the site is serviced by municipal water. The Desert Water Authority operates two water wells behind the main fire station building at the southwest corner of Date Palm Drive and Buddy Rogers Avenue. These wells were used to monitor the effects of septic systems on groundwater quality. It is our understanding that these wells will be abandoned in July 2017. Documentation of this information is provided in Appendix D.

Waste Generation and Storage

Waste generation and storage was not observed onsite during of site reconnaissance.

CONCLUSIONS

General Site Information

1. The approximately 13.6 acre subject property is situated along the north side of Highway 111, south of Interstate 10 (I-10), west of Date Palm Drive and east of Van Fleet Drive in the city of Cathedral City, Riverside County, California. The subject property consists of 65 contiguous parcels identified as Riverside County Assessor Parcel Numbers (APN's) 687-201-005 to -011; 687-202-001 to -012 and -015; 687-203-008 to 015; 687-204-001 to 009, -013, -014 and -016; 687-205-005 to-008; 687-206-001 to -016 and, 687-208-015 and -022 to -026. It is our understanding that the property will include any public streets and right-of-way that the city of Cathedral City has vacated.

2. The subject property is bounded by Date Palm Drive on the east, Highway 111 (Palm Canyon Drive) on the south, Buddy Rogers Avenue on the north. A mix of commercial properties and vacant land bounds the subject property on the west. The subject property is mostly vacant land with two structures located on the northeast corner (fire station) and one building (Carl's Jr.) on the southeast corner of the

property. These two sites are occupied and operational as of the date of our site reconnaissance. Soil covers a large majority of the vacant property with minor amounts of finely crusted asphalt and gravel. This material appears to be from demolition performed on the subject property. Interior streets consist of weathered asphalt. Multiple fire hydrants, water valve cans and sewer manholes were observed within the vacant lots. Recent surface disturbance of soils on the triangular-shaped lot near the southeast corner of Allen Drive and Dawes Road suggested recent demolition of the former Goody's Restaurant. Erosion retardant appeared to have been recently sprayed on this lot. No signs of surface staining, noxious odors, stressed vegetation, and/or dumped trash or debris, were noted during our site reconnaissance. The only readily detectable remnants of demolition observed were a buried steel pipe and large electrical wires on the parcel west of Carl's Jr. Some irrigation piping, and minor amounts of windblown trash and debris were observed during our site reconnaissance.

3. Based on aerial photograph and topographic map information obtained during this assessment, the site appears to have been predominantly developed for residential purposes from at least 1941 to sometime after 2005 and before 2009. By 2009 it appeared that all residential buildings had been removed from the subject property. What appeared to be commercial buildings noted on the site, were typically situated along Palm Canyon Drive (Highway 111), from at least 1953 to 2016. What appeared to be a gasoline service station was depicted onsite (APN 687-208-015), at the northwest corner of Date Palm Drive and Palm Canyon Drive from at least 1966 to sometime after 1972 and before 1984 (existing Carl's Jr. site). A second gasoline station was noted at the southwest corner of the property (APN 687-205-005) from at least 1966 to sometime after 2002 and before 2005 (currently vacant). A third gasoline service station was noted east of the intersection of Highway 111, Allen Avenue and Dawes Street from at least 1966 to sometime after 1996 and before 2002 (formerly Goody's Diner). The gasoline station formerly occupying APN 687-205-005 (68830 Palm Canyon Drive) is considered a Historical Recognized Environmental Conditions (HREC). The gasoline station formerly occupying APN 687-208-015 (68950 Palm Canyon Drive) is considered a possible Recognized Environmental Conditions (REC). The former gasoline station occupying APN 687-208-24, -025 and -026 is considered a possible Recognized Environmental Conditions (pREC). As such, further assessment is recommended.

4. The City Directory Search by EDR listed Auto Truck Repair at 68930 E. Palm Canyon Drive and Bob's Choice Cars at 68920 E. Palm Canyon Drive within the subject property in 1975. The Radius Search report by EDR listed Pyles Robert (service station) at 68904-96 Palm Canyon Drive in 1974. Based upon current street address locations on Bing Maps, these former sites, within the subject property, appear to be have been located on APN's 687-208-022 and -023. Readily available records of these 3 sites were not found indicating regulatory agency oversight of UST removal or cleanup. In addition, the EDR Radius Search report also listed a 1,000 gallon underground diesel storage tank (UST) within the Cathedral Fire Department parcel (APN 687-202-015) in 1975 and a 100 gallon UST of unknown use in 1990.

5. The Regional Water Quality Control Board (RWQCB) was recently contacted regarding the 1,000 gallon diesel UST on the fire station site. The RWQCB responded that they have no files pertaining to the address. Based upon readily available information pertaining to these five sites, which is limited in nature, the sites are considered possible Recognized Environmental Conditions (pRECs). As such, further assessment is recommended. Documentation of this information is provided in Appendix D.

6. No aboveground or underground storage tanks were observed onsite during our site reconnaissance. An attached diesel fuel tank under the emergency generator at the rear of the fire station was observed. It is our understanding that due to the attached configuration, the generator fuel tank is not required to be permitted as an aboveground storage tank.

7. Multiple containers of household chemicals and small volume hydrocarbon-based fluid containers were observed in the fire department's storage and laundry room. The containers included multiple paint cans, bleach, two 5 gallon bottles of diesel and gasoline, two 1 gallon containers of gasoline, and one 2.5 gallon bottle of diesel exhaust fluid. In addition there was an air compressor, quart-sized oil containers, an oily rag canister, and six Scott air pack oxygen tanks. Four 55-gallon plastic barrels of drinking water were observed within the truck bay.

8. Ten pole-mounted transformers and two transformer pads were observed onsite during our site reconnaissance. No readily obvious signs of corrosion, leaking, or staining was observed below or around the transformers.

9. Petra contacted The Desert Water Authority regarding two wells on the fire station parcel. Ms. Heather Marcks (Senior Engineering Technician) responded that the monitoring wells were used several years back to track the affects septic systems were having on the water quality in the area. She indicated that The Desert Water Authority stopped using them for monitoring a while ago and they went dry. Ms. Marcks indicated that they have no relevant chemical test data on these wells. Documentation of this information is provided in Appendix D.

10. At the time of our reconnaissance, no vegetation was observed onsite. There were, however, small bushes and palm tree observed around the two occupied parcels at the northeast and southeast corners of the property.

11. There was no evidence of sumps, pits, pools, or lagoons identified during our site walk. Building Department and City records indicate that a majority of the former residential lots and commercial/retail buildings contained onsite septic systems. Records indicate that a number of the septic systems were removed during demolition. Documentation of this information is provided in Appendix D.

12. No offsite properties within the vicinity were identified in our search of various government agency database records, which appear to have impacted the soils or groundwater beneath the subject site.

RECOGNIZED ENVIRONMENTAL CONDITIONS

Recognized environmental conditions (REC's) are defined by the American Society of Testing and Materials (ASTM) as any hazardous substance or petroleum product under conditions that indicate an existing, past, or material threat of release into the structures, ground, groundwater, soil vapor or surface water at the subject site. If the presences of recognized environmental conditions are identified on a subject site, it may warrant additional research, site assessment, and/or action.

Controlled recognized environmental conditions (CREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-13 as a recognized environmental condition resulting from the past *release* of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (i.e., as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls. For example, if a

leaking underground storage tank has been cleaned up to a commercial use standard but does not meet unrestricted residential cleanup criteria; this would be considered a controlled recognized environmental condition. The "control" is represented by the (inferred) restriction that the property remains commercial.

Historical recognized environmental conditions (HREC'S) are defined by the American Society of Testing and Materials (ASTM) Practice E 1527-13 as a past release of any *hazardous substances or petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory agency, without subjecting the *property* to any required controls (i.e., *property* use restrictions, *activity and use limitations*, *institutional controls* or *engineering controls*).

We have performed this Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM Practice E 1527 for APN's 687-201-005 to -011; 687-202-001 to -012 and -015; 687-203-008 to 015; 687-204-001 to 009, -013, -014 and -016; 687-205-005 to-008; 687-206-001 to -016 and, 687-208-015 and -022 to -026, in the city of Cathedral City, Riverside County, California. Any exceptions to, or deletions from, this practice are described in section titled data gaps of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property, except the following:

- Five former and one current occupant of the subject property were identified during this Phase I ESA as either historic gasoline stations and/or vehicle repair shops, and an existing fire station, where records indicate or suggest USTs were present, and where the potential existence for petroleum hydrocarbon-based soil and/or soil vapor residues to be detected cannot be entirely precluded.

  One of the sites, Palm Springs Oil #9, 68830 Palm Canyon Drive (APN 687-205-005), was identified as a former LUST case where soil vapor extraction remediation reportedly removed most of the subsurface contamination. The case was closed in 2006 by the County of Riverside with hydrocarbon soil vapors left in-place at a depth of approximately 48 feet. The site was closed with no restrictions to redevelopment. This site is considered a HREC. At this time, however, no further assessment is recommended.

  Three of the sites within the property were identified as EDR Historic Auto Stations: Pyles Robert (service station), 68904 Palm Canyon Drive (APN 687-205-024, -025 and -026); Bob's Choice Cars, 68920 E. Palm Canyon Drive (APN 687-205-023); and Auto Truck Repair, 68930 E. Palm Canyon Drive (APN 687-208-022). Two of the sites, Bob's Choice Cars and Auto Truck Repair were also listed in the EDR City Directory Search. The Existing Cathedral City Fire Station (36913 Date Palm Drive [APN 687-202-015]) was reported to contain a 1,000 gallon diesel UST from 1975 to at least 1988 (possibly removed in 1998). Based solely upon interpretation of aerial photographs, the sixth site is considered likely a gasoline service station which existed at 68980 E. Palm Canyon Drive (APN 687-208-015) from at least 1966 to sometime after 1972 and before 1978. No regulatory oversight agency database records were found for these four former and one active onsite facilities indicating removal of USTs or cleanup of soil residues. As a result, these sites are considered potential REC's.

To evaluate the potential for detectable concentrations of petroleum hydrocarbon-base soil and soil vapor residues on these 5 former sites, with very limited information and/or no apparent regulatory oversight involvement, Petra recommends further assessment. A limited proposed scope of work is provided herein.

SITE CONSIDERATIONS

The following items are not considered recognized environmental conditions in accordance with ASTM 1527-13. However, these items may warrant considerations in conjunction with any planned development activities. The information regarding possible actions relative to these items has been provided as guidance.

- With redevelopment of any historically developed property, a certain amount of unknown near-surface and subsurface conditions should be anticipated such as buried utility conduits and foundations. If encountered, concrete piping should be evaluated by an asbestos consultant prior to removal. Any discolored soils, noxious odors, and/or buried objects/debris encountered during clearing and grubbing or future grading and development should be left in place until an experienced environmental professional (such as Petra) has had the opportunity to evaluate the conditions, and provide recommendations if needed.

- Information provided by the city of Cathedral City indicates that septic systems were abandoned, including crushing in-place, on 57 of the 65 parcels within the subject property. Although not considered a recognized environmental condition, septic systems (including tanks) and potentially vertical seepage pits may remain within the subject property. If encountered during site development, these systems should be properly abandoned in accordance with Cathedral City and/or Riverside County guidelines.

- Ten pole-mounted electrical transformers and two ground transformer were observed onsite during our site walk. Our visual observations noted no staining or leakage from the transformers. Based upon the age of the former residential development (early 1940's), there is a potential for some or all of the pole-mounted transformers to contain PCB's. As a result, removal of transformers should be completed by SCE or an experienced contractor. Power poles and associated equipment should be removed from the site and disposed of following proper regulatory specifications.

- It is recommended that all demolition debris and trash generated on the site be removed and disposed in accordance with current local regulations. Waste concrete may be incorporated into fill materials within the subject property, provided it is approved by the geotechnical engineer of record. Solely from an environmental point of view, however, asphalt fragments should be removed from future building pads within the subject property.

PROPOSED LIMITED ENVIRONMENTAL ASSESSMENT

Based upon the identification of five potential REC's described herein, Petra is providing the following limited proposed scope of work to aid in the assessment of potential detectable petroleum hydrocarbon-base soil and soil vapor residues within the subject property which may impact site development. Based upon the depth of groundwater exceeding 150 feet beneath the property, assessment of groundwater at this time does not appear to be warranted. Records of regulatory agency oversight are so far absent from the

database files, and in some cases, the age of the former facilities may pre-date the regulatory framework of local, state and federal underground storage tank regulations (circa 1984). More detailed review of regulatory agencies files and assessment of existing subsurface conditions is also recommended.

Scope of Work

To evaluate whether USTs and piping remain buried within the property, and to help evaluate potential locations for exploratory borings, Petra recommends that non-destructive geophysical surveys be completed within the five potential REC sites within the subject property by a State Registered Geophysicist. The surveys would identify buried metallic objects and outline of the former UST excavation(s) may be discernable.

We propose to utilize a combination of Ground Penetrating Radar (GPR) and magnetic gradiometer to traverse the parcels systematically in multiple, organized directions. Additional traverses would be taken for detailing and confirmation of anomalous conditions found. We anticipate field work to be completed in 1 day.

The geophysical report would provide results of the surveys on each site, including discernable former UST excavations. Coupled with further file reviews at the Regional Water Quality Control Board, Riverside County Hazardous Materials Management Division, Riverside County Department of Building and Safety, and the City of Cathedral City, recommendations would be made for the number, location and depth of borings associated with a Limited Phase II Environmental Assessment of subsurface soils and soil vapors underlying the sites of potential concern.

Preliminary Estimate of Fees

Petra proposes to charge for our services on a time and cost basis in accordance with our standard fee schedule prevalent at the time the services are provided. However, based upon the scope of services outlined above, our charges for our environmental services are estimated to be **$7,400.00**. Petra will provide a more detailed scope of work and generalized breakdown of costs in a separate supplemental proposal.

LIMITATIONS

This Phase I ESA is based upon the project as described and the environmental data obtained from the field reconnaissance and research performed as outlined in this report. This report has been prepared for Agua Caliente Band of Cahuilla Indians, and not for use by parties or projects other than those named or described in this report.

Since our assessment is based upon a review of available data and visual inspection of the site, without any invasive evaluation, the conclusions presented herein are professional opinions. These opinions have been derived in accordance with current standards of practice, and no warranty is expressed or implied.

This firm's evaluation of previous reports and/or subconsultant reports, if provided, focuses on the completeness of the information presented in the document, in accordance with applicable rules and regulations, and does not include the establishment of data sufficiency or accuracy.

QUALIFICATIONS

Resumes for the staff who contributed to this report are presented in Appendix E.

"We the undersigned declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. We have the specific qualification based on education, training, and experience to assess a property of the nature, history, and setting of the subject site. We have developed and performed the all appropriate inquiries in general conformance with the standards and practices set forth in 40 CFR Part 312."

Respectfully submitted,

Water Data Library

Use the map below to locate monitoring stations. You can find an area of interest if you zoom and pan the map. Quickly find an area searching for named features on a map such as the name of a city, park, landmark, lake, water feature, or zip code within California. Once at the area of interest, select the desired Site Type and click the "Refresh Map" button to show monitoring stations in the area. Additional searches by data type are possible by clicking the links on the left. For help on these and other ways to find your data click here.

Groundwater Levels for Station 337850N1164647W001

Data for your selected well is shown in the tabbed interface below. To view data managed in the updated WDL tables, including data collected under the CASGEM program, click the "Recent Groundwater Level Data" tab. To view data stored in the former WDL tables, click the "Historical Groundwater Level Data" tab. To download the data in CSV format, click the "Download CSV File" button on the respective tab. Please note that the vertical datum for "recent" measurements is NAVD88, while the vertical datum for "historical" measurements is NGVD29. To change your well selection criteria, click the "Perform a New Well Search" button.

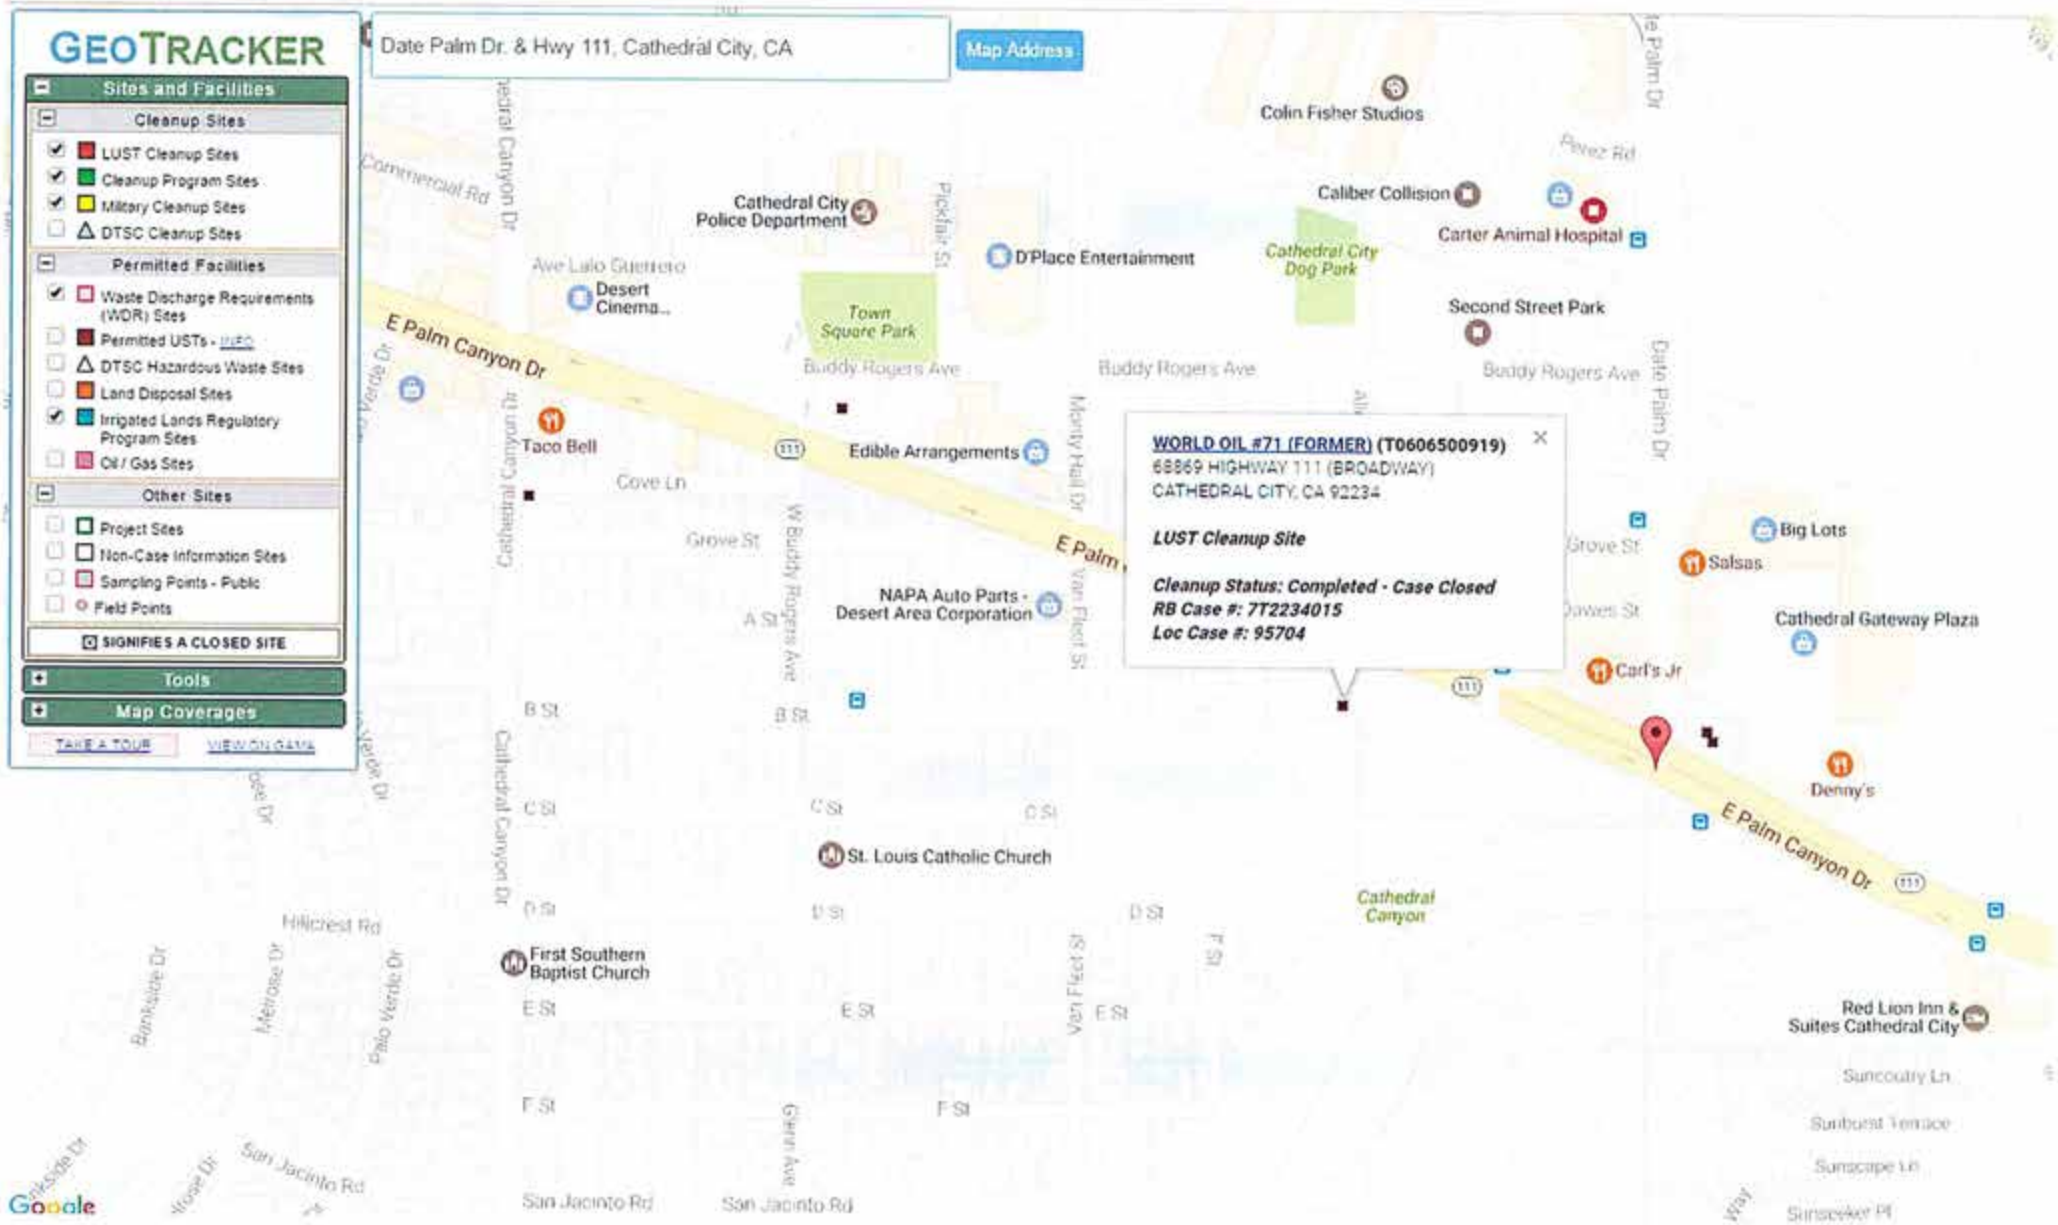
VII. Additional Comments, Data, Etc.

5 gasoline tanks were removed July 2, 1999. Up to 10,900 ppm TPHg was detected under the tanks. No MTBE or benzene was detected.



On February 15, 2000, two borings were drilled; one in the tank pit and one near the former dispenser. The boring near the former dispenser was drilled to 75' and was ND for TPHg, BTEX and MTBE. Boring 1 through the tank pit was drilled to 115'. Up to 4600 ppm TPHg, 18 ppm benzene and 5.7 ppm MTBE were detected at 50'. Both borings were converted to SVE wells.

The SVE system was started January 16, 2002 and run until Dec. 19, 2002 when it was shut down. The system was restarted January 23, 2003 for a rebound test. Up to 13329 lbs of hydrocarbons were removed. On March 11, 2003, a confirmation boring was drilled to 75' in the former tank pit. Up to 15,500 ppm TPHg, 0.019 ppm MTBE and 1.8 ppm benzene detected at 50' where a sandy silt layer exists at the 40-50' depth.

On Sept. 8-10 2003, three additional borings were drilled in the former tank pit and nested SVE wells were installed. Two of the borings were ND for TPHg, benzene, and MTBE. The third had from 1,800 ppm to 2300 ppm TPHg between 40-60'. The SVE system was restarted 11/25/03 and run to Feb. 20, 2004 when it was shut down due to obtaining new permits from AQMD. It was restarted March 20, 2004 and this was used as a rebound test. On Feb. 14-16, 2005 three confirmation borings were drilled. 2 of the borings were ND for TPHg, benzene and MTBE. The third had 1900 ppm, 15000 ppm and 2000 ppm TPHg at 45', 48', and 50' in the sandy silt layer. No benzene or MTBE was detected. The boring was converted to an SVE well and screened from 41-51'. It was estimated that ~502 lbs of hydrocarbons remained in the soils. The SVE system was restarted on Feb. 22, 2005.

The SVE system was cycled starting in May 2005 due to low influent. A rebound test was conducted August 31, 2005 and the influent went from 130 ppmv to 180 ppmv to ND. The system was shut down and removed on Sept. 15, 2005. A total of 22984 lbs (~3482 gal.) of hydrocarbons were removed from the site. TPHg began at 6930 ppmv and ended at ND, benzene began at 98.4 ppmv and ended at ND and MTBE began at 29.3 ppmv and ended at ND.

The consultant is requesting closure as the station no longer exists, the hydrocarbon impacts were delineated at the site, SVE reached ND levels, no public wells are located within ½ mile of the site, and the minimal hydrocarbon mass (~502 lbs) estimated in the soil in the sandy silt layer located between 42.5-52.5' was remediated to the extent feasible. Closure was approved once the SVE wells are destroyed. The wells were destroyed ~~March 14 and 15, 2006~~.

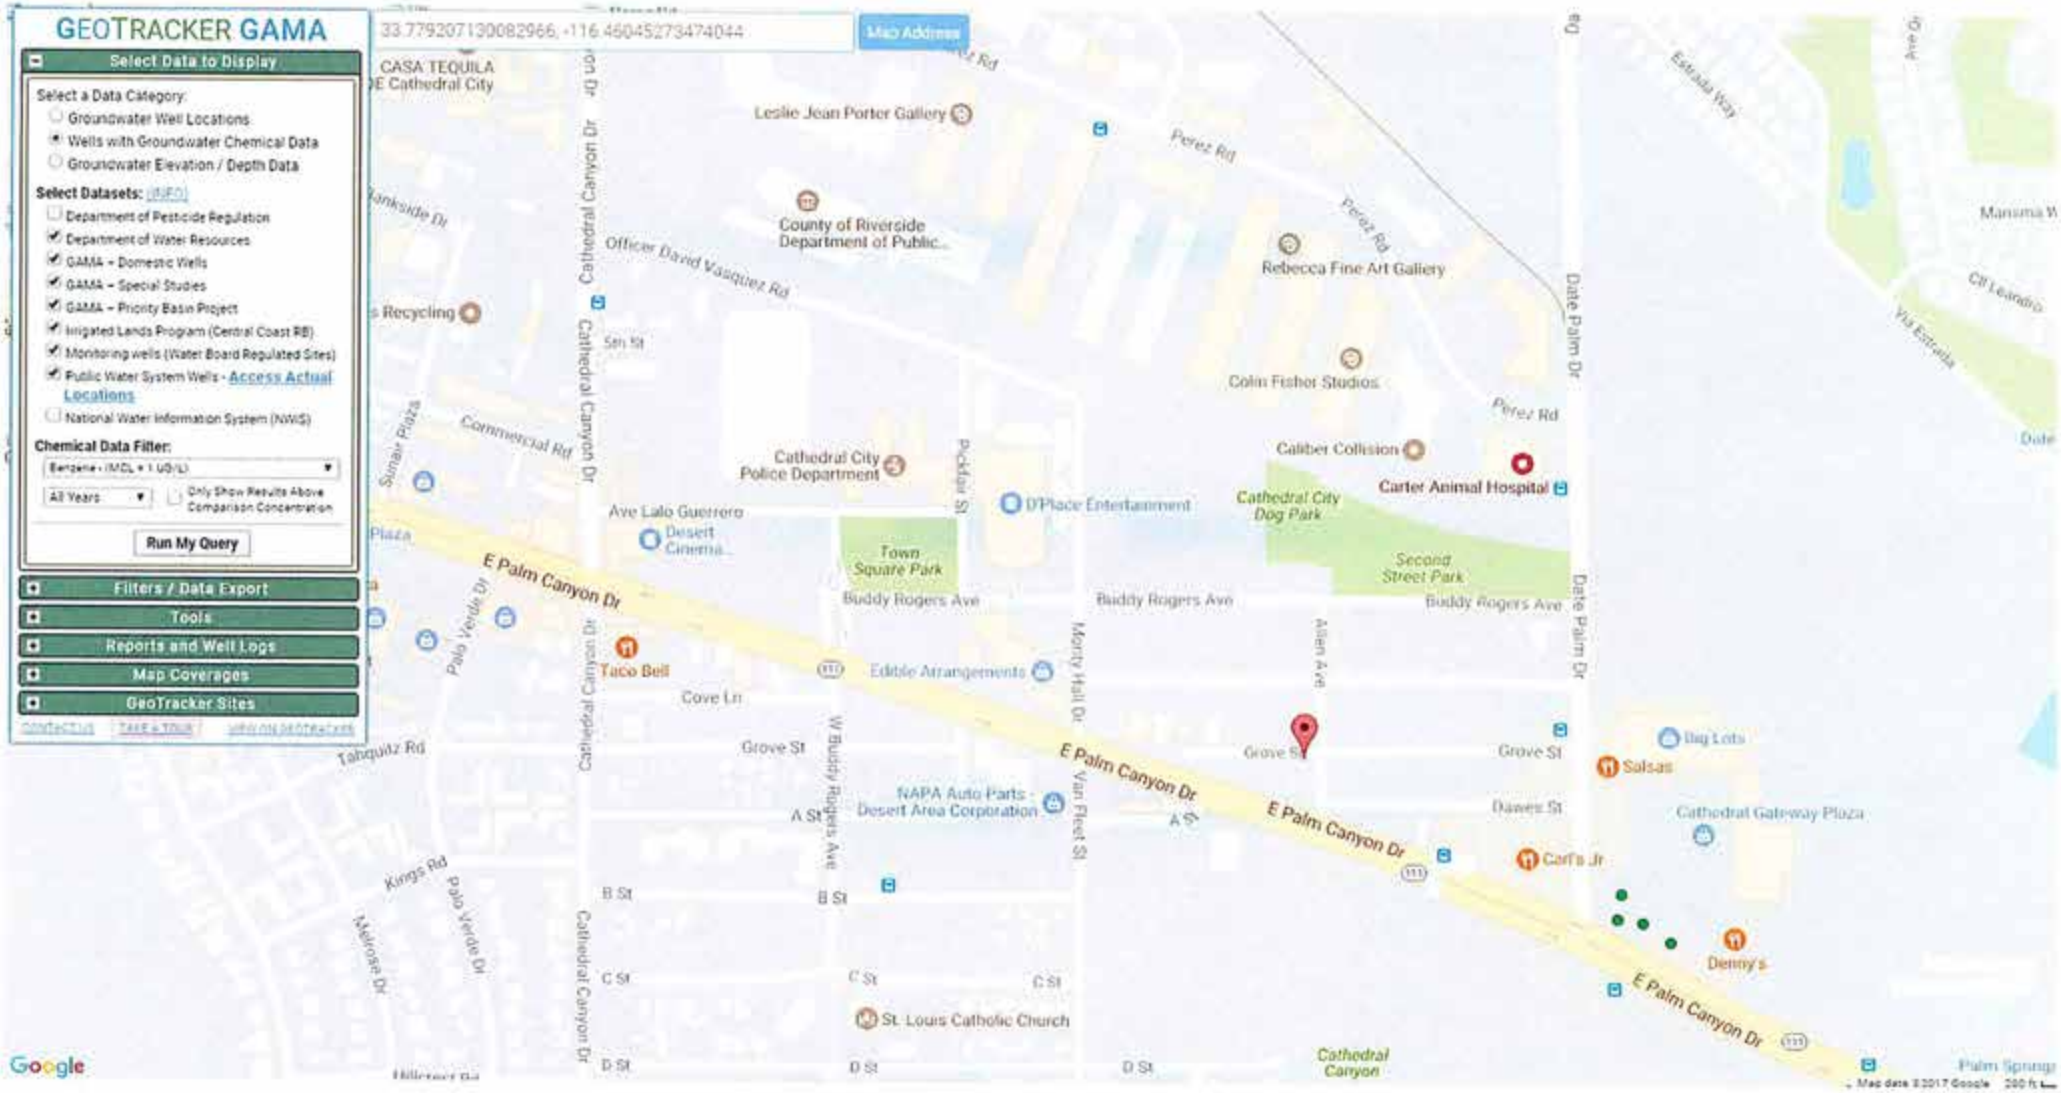
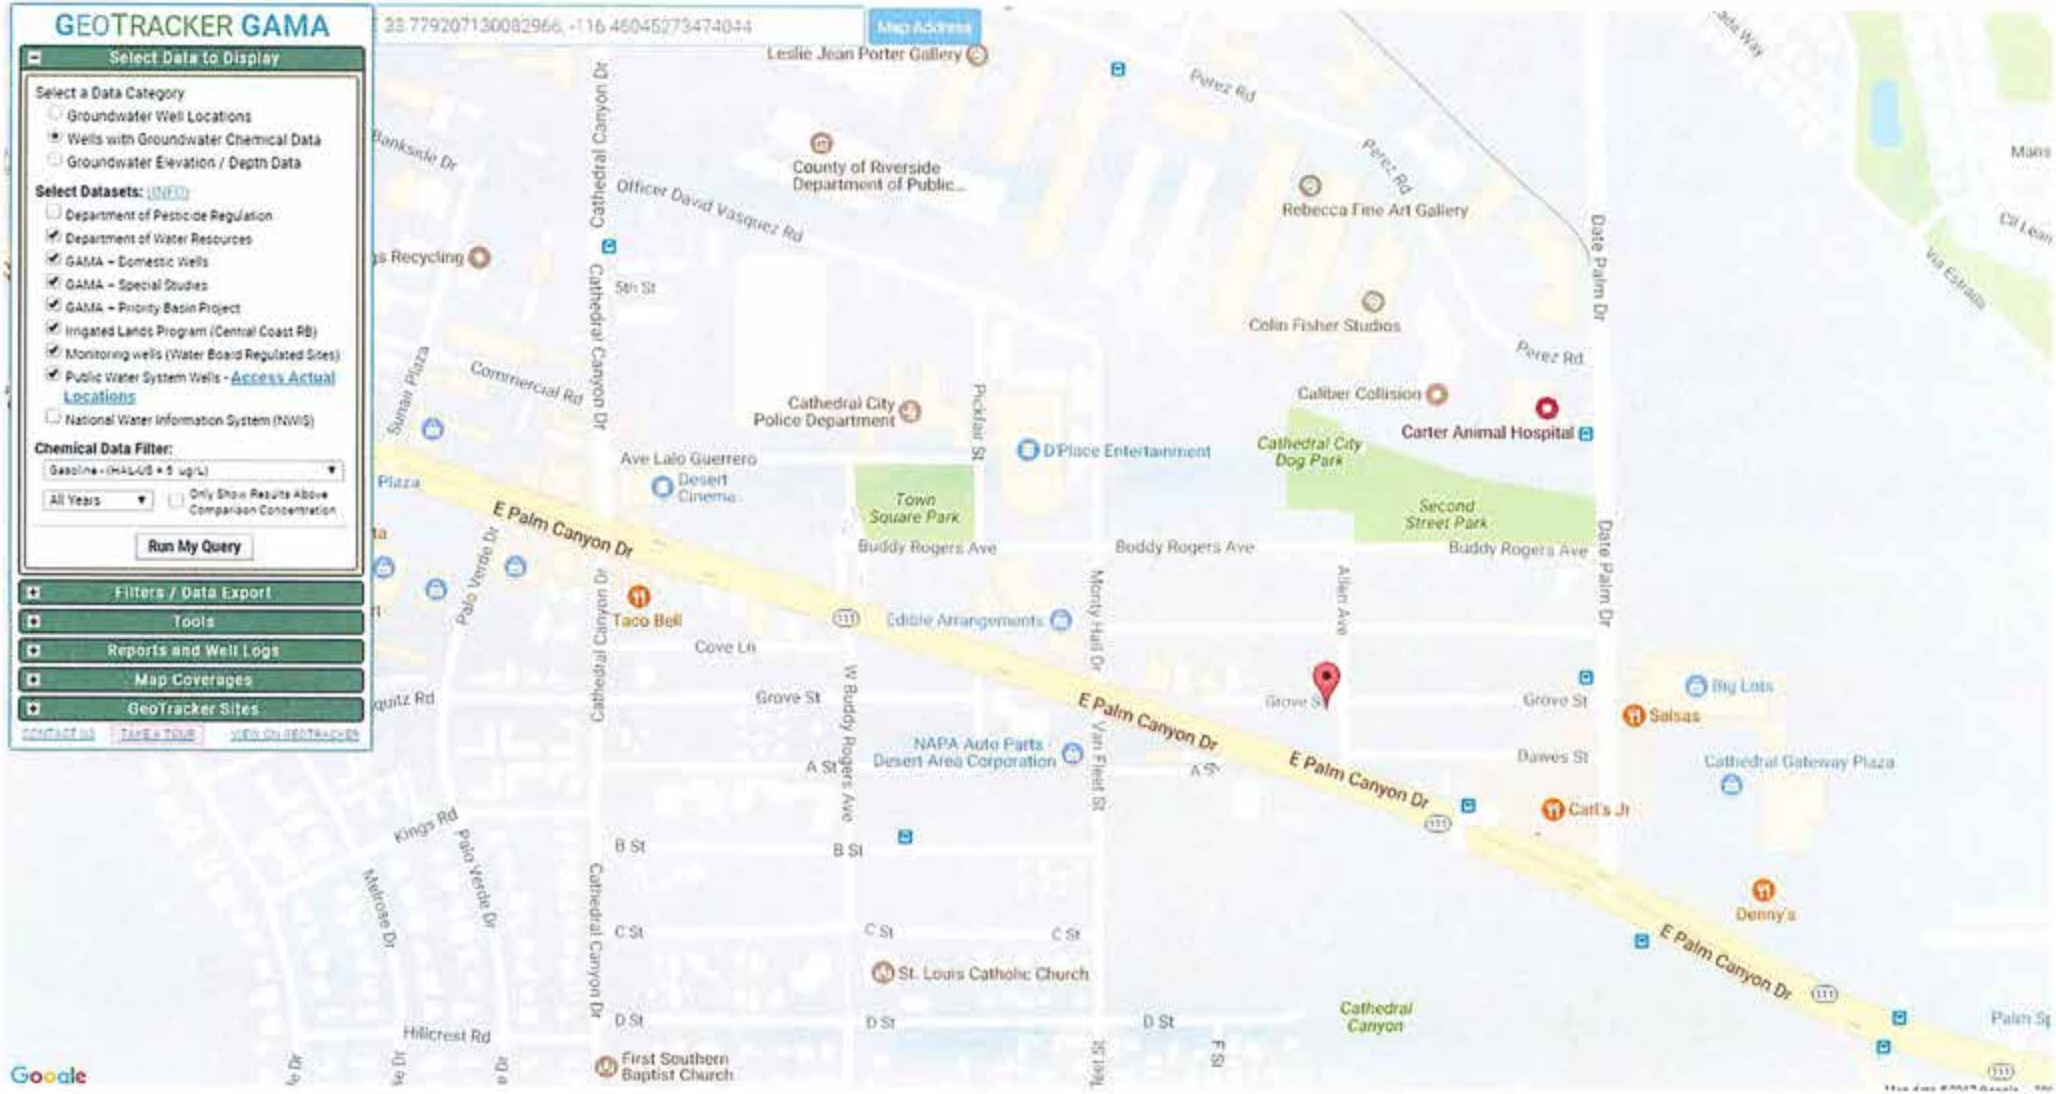
IV DESCRIPTION
A. CONTAINER TYPE : TANK
B. MANUFACTURER/YR OF MFG: /
C. YEAR INSTALLED : 1975
D. CAPACITY (GALLONS) : 1,000
E. REPAIRS : NONE IF YES WHEN :
F. CURRENTLY USED : YES IF NO, YEAR OF LAST USE:
G. STORES : PRODUCT
H. MOTOR VEHICLE FUEL/WASTE OIL : YES CONTAINS: DIESEL

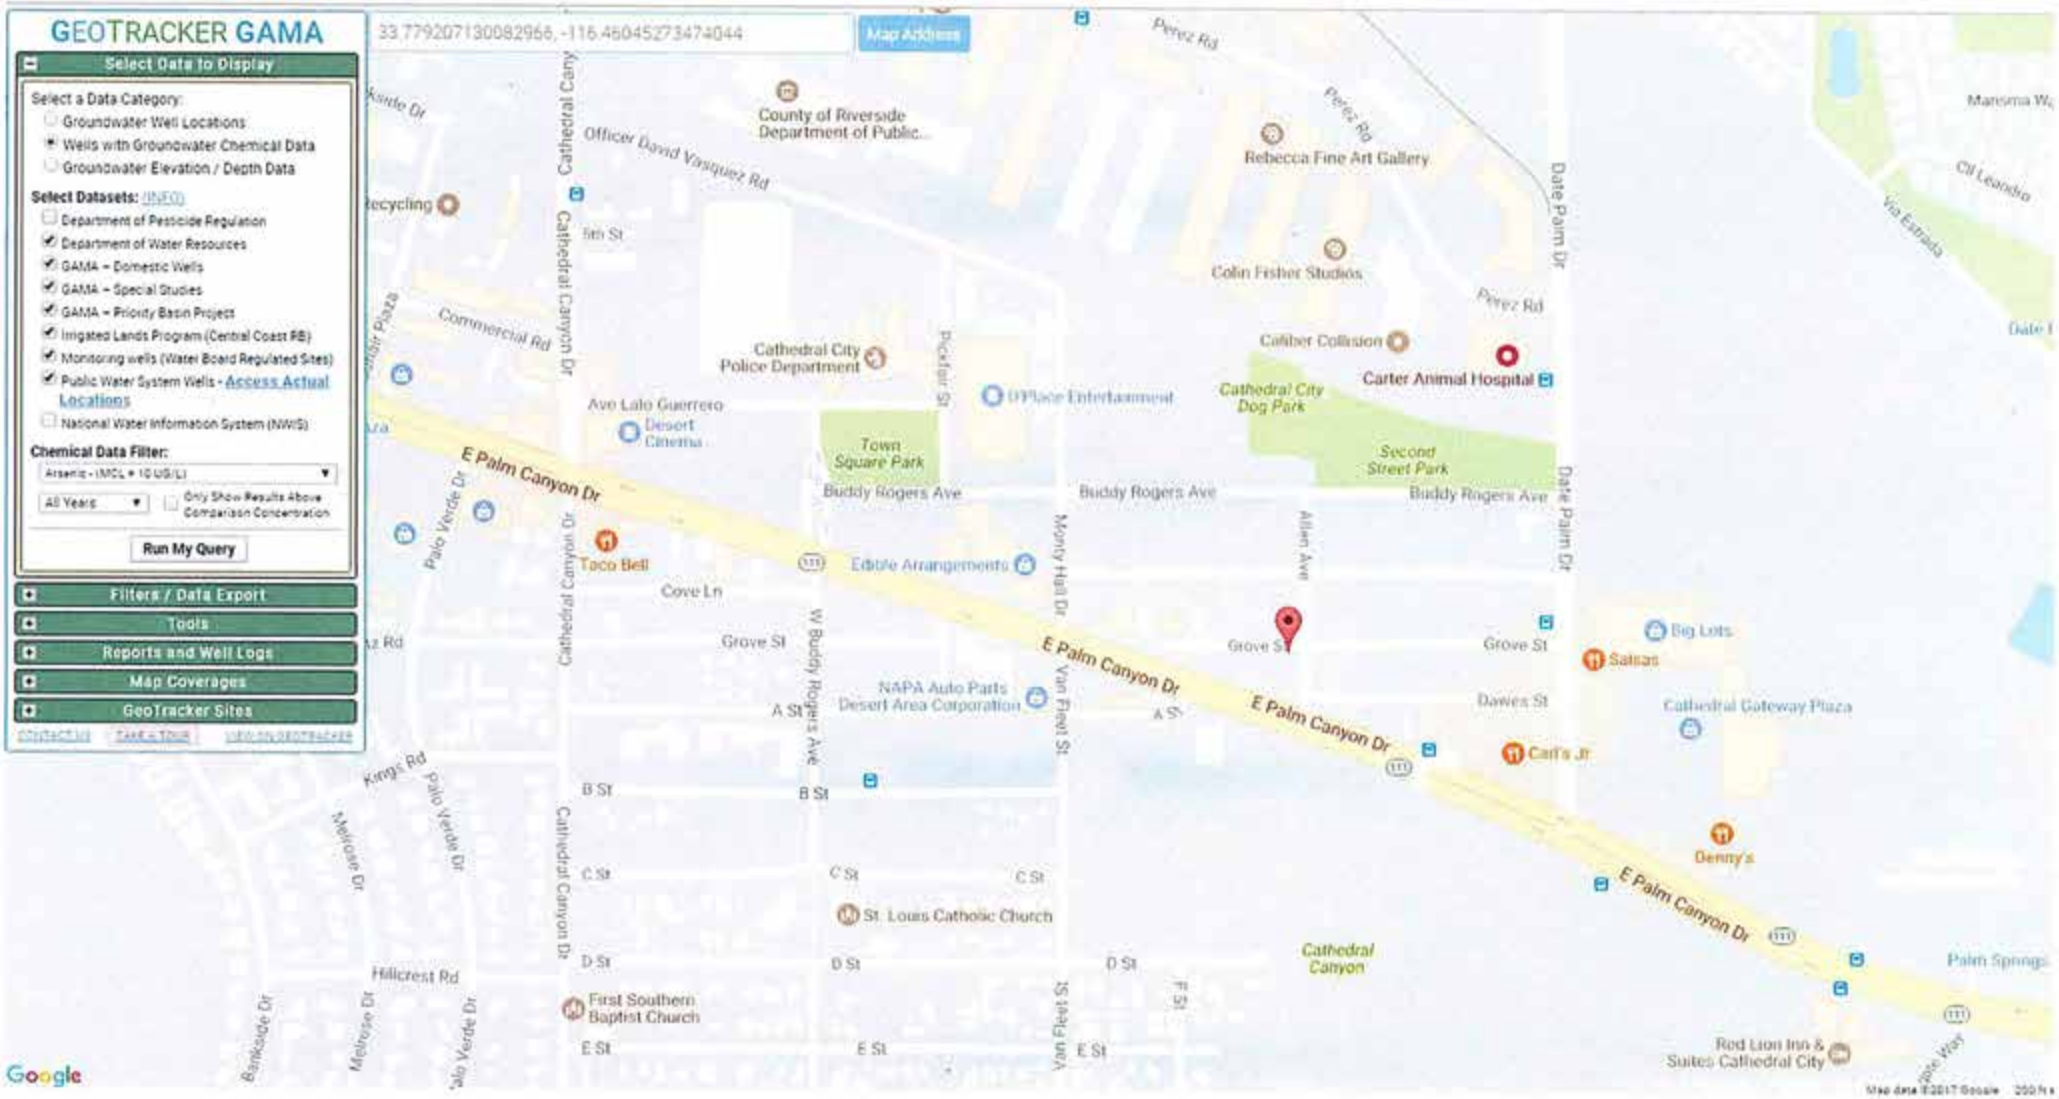
IS CONTAINER LOCATED ON A FARM : NO



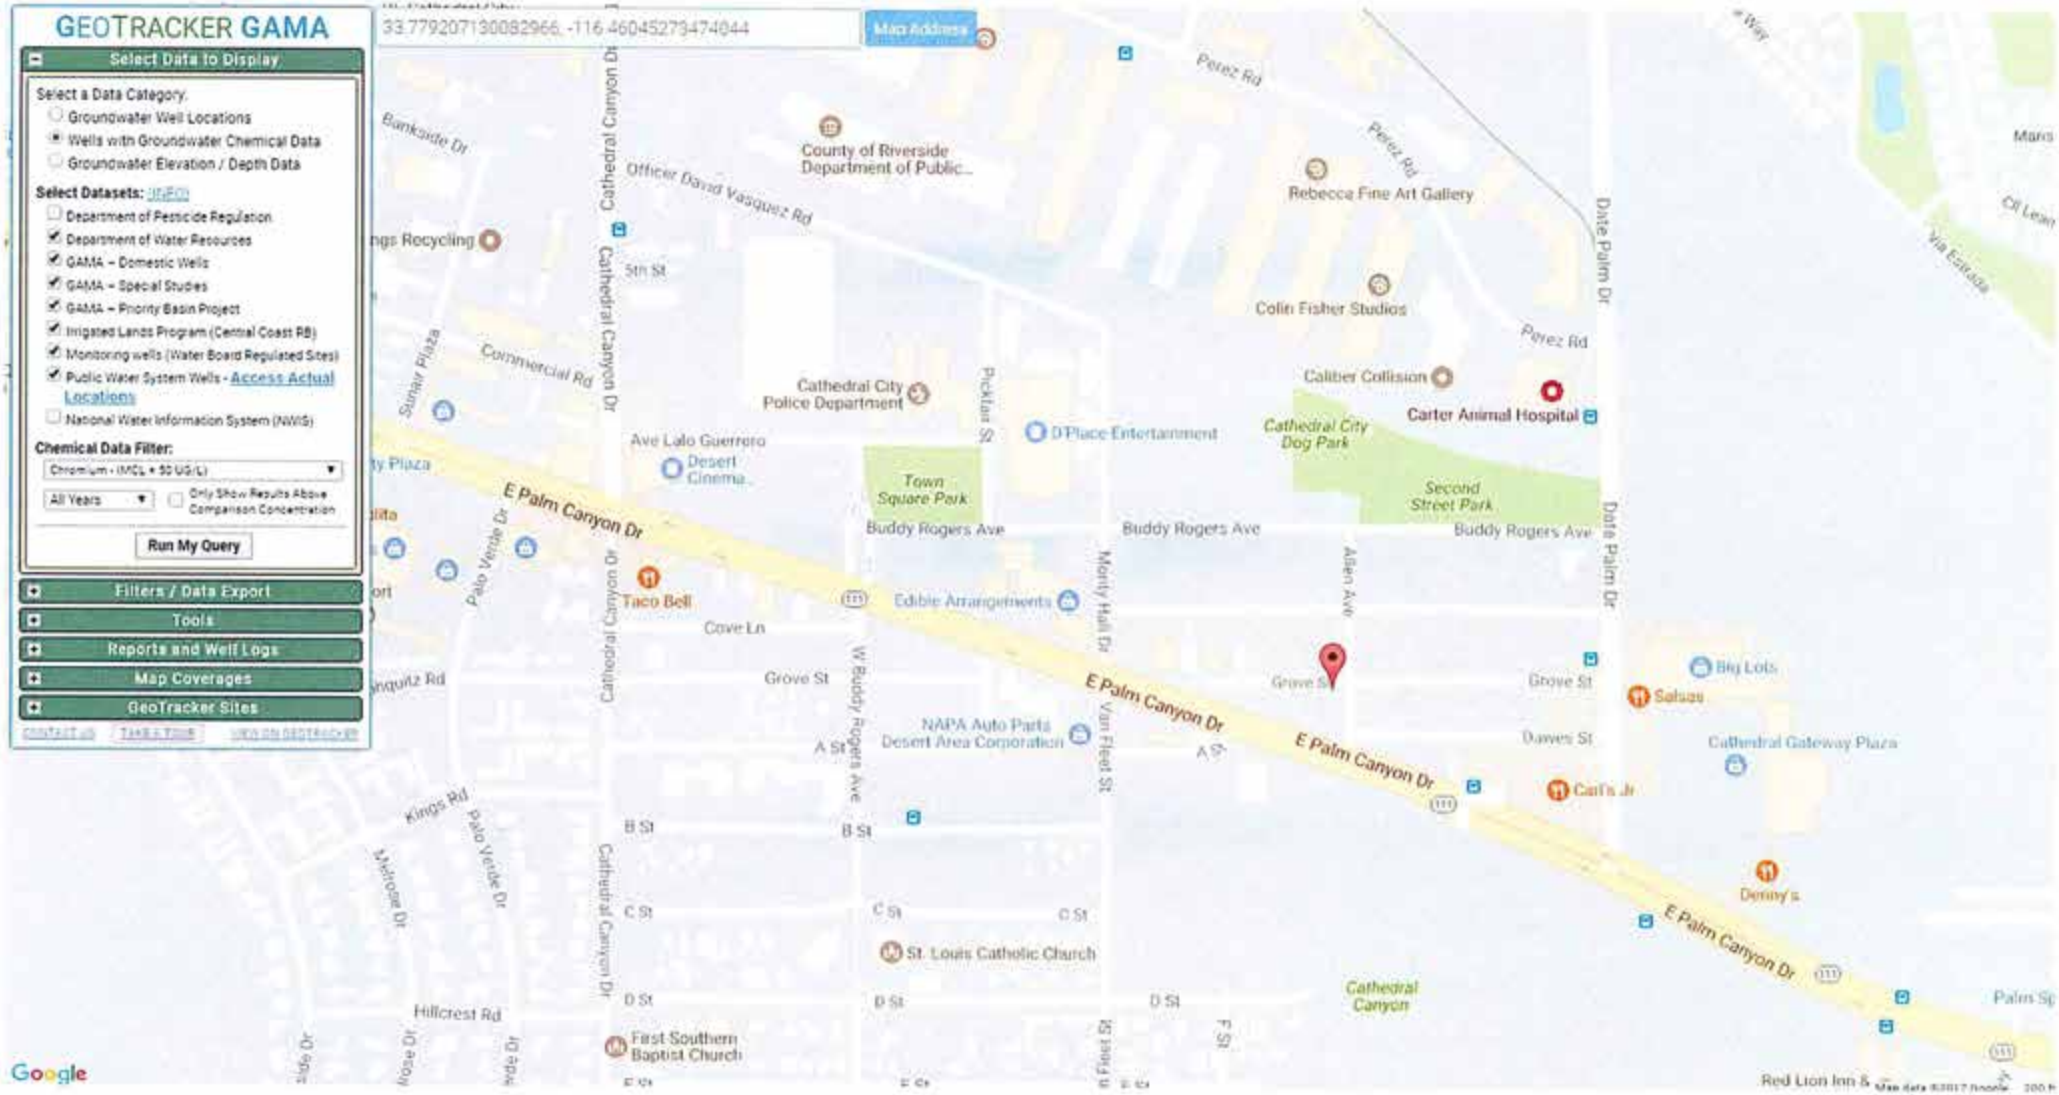
V CONTAINER CONSTRUCTION
A. THICKNESS:
B. VAULTING: NON-VAULTED C. WALLING: LINED
D. MATERIAL : UNKNOWN
E. LINING : UNKNOWN
F. WRAPPING : UNKNOWN



VI PIPING
A. ABOVEGROUND PIPING :
B. UNDERGROUND PIPING : UNKNOWN
C. REPAIRS : NONE IF YES, YEAR OF MOST RECENT REPAIR:



VII LEAK DETECTION
VISUAL STOCK INVENTORY



COMPOSITION OF SUBSTANCES CURRENTLY STORED IN CONTAINER
12034 DIESEL MOTOR VEHICLE FUEL

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 02/07/2017 has revealed that there is 1 SEMS

site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2017 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

INDIAN RESERV: This map layer portrays Indian administered lands of the United States that have any area equal to or greater than 640 acres.

A review of the INDIAN RESERV list, as provided by EDR, and dated 12/31/2014 has revealed that there is 1 INDIAN RESERV site within approximately 0.001 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
AGUA CALIENTE INDIAN		0 - 1/8 (0.000 mi.)	0	8

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 04/04/2017 has revealed that there are 2 FINDS sites within approximately 0.001 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, and dated 03/09/2017 has revealed that there is 1 DRYCLEANERS site within approximately 0.25 miles of the target property.

SUPER CLEAN EPA Id: CAL000327519	69040 E PALM CANYON	SE 0 - 1/8 (0.061 mi.)	F34	49

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2015 has revealed that there are 6 HAZNET sites within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past

sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 11 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110005994923

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SHELL STATION (Continued) **S105023150**

Potential Contaminants of Concern: Gasoline
Site History: ***Data prior to 2005 does not appear in GeoTracker. Consult agency file for all site data*** On February 23, 2004, 3-12K gasoline and 1-500 gallon waste oil tank were removed. Up to 1400 ppm TPHg was detected at 3 under dispenser 5, 36 ppb MTBE at 14 in the tank pit, 42 ppm TBA at 14 in the tank pit and 1.5 ppm ethanol at 14 in the tank pit. On March 13, 2004 the tank pit was over excavated down to 19. Up to 51 ppm TBA was detected at the bottom of the pit. 5 borings were drilled October 24-28, 2005 to 100-140. All borings had TPHd, up to 53 ppm. All borings had TPHg, up to 7.8 ppm. All borings had MTBE, up to 13 ppm, and all borings had TBA, up to 52 ppm. Detectable concentrations of hydrocarbons were detected to 140 where the boring was terminated. Two borings were converted to dual nested vapor wells. VE-1 was screened from 15-25 and 30-45. VE-2 was screened from 15-30 and 35-45. Monitoring well MW-1 was drilled March 23-24, 2006. Groundwater was encountered at 193. Up to 0.21 ppm MTBE was detected in the soil. A grab water sample was obtained prior to development and 48 ppb MTBE was detected. A water sample was taken on March 29, 2006 and showed 11 ppb MTBE. Based on the results of the grab sample, one additional boring and two additional wells were installed March 30 through April 5, 2006. Up to 8.6 ppm MTBE and 210 ppm TBA was detected in the soils. An additional boring was drilled June 5, 2006 to 100 near the north property line. 10 ppm TPHd was detected at 10 and 2.5 ppm naphthalene was detected at 35. Another boring was drilled in the old tank pit to 45 and a nested SVE well was installed, screened from 22-27 and 35-45. A maximum of 2.4 ppm TPHg was detected at 35, MTBE was detected to a maximum of 0.82 to 30 and TBA was detected t a maximum of 90 ppm at 30. SVE-4 was installed April 14, 2006 as a dual nested SVE well screened from 15-30 and 35-45. TPHg was detected in the 30-45 samples with a maximum of 4.8 ppm. Benzene was detected at 40 at 4.6 ppb. MTBE was detected from 25-45 with a maximum of 0.3 ppm. TBA was detected from 30-45 with a maximum of 2.4 ppm. Low levels of VOCs were detected. The SVE system began operating September 25, 2006 using all 4 SVE wells and was run until June 25, 2007 when a rebound test was successfully completed. Influent TPHg went from 74 ppmv to ND<3 ppm. MTBE went from 56 ppmv to 0.07 ppmv. TBA went from 15 ppmv to ND<0.002 ppmv. Ethanol went from 0.014 to 0.0084 ppmv. Case closed 08/26/2010 following well abandonments

FINDS:

Registry ID: 110012212961

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/05/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/05/2017

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Varies

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

Date of Government Version: 10/12/2016

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

AGUA CALIENTE BAND OF CAHUILLA INDIAN
NWC HIGHWAY 111 AND DATE PALM DRIVE
CATHEDRAL CITY, CA 92234

TARGET PROPERTY COORDINATES

Latitude (North):	33.779514 - 33° 46' 46.25''
Longitude (West):	116.460087 - 116° 27' 36.31''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	549989.6
UTM Y (Meters):	3737646.5
Elevation:	304 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5639316 CATHEDRAL CITY, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

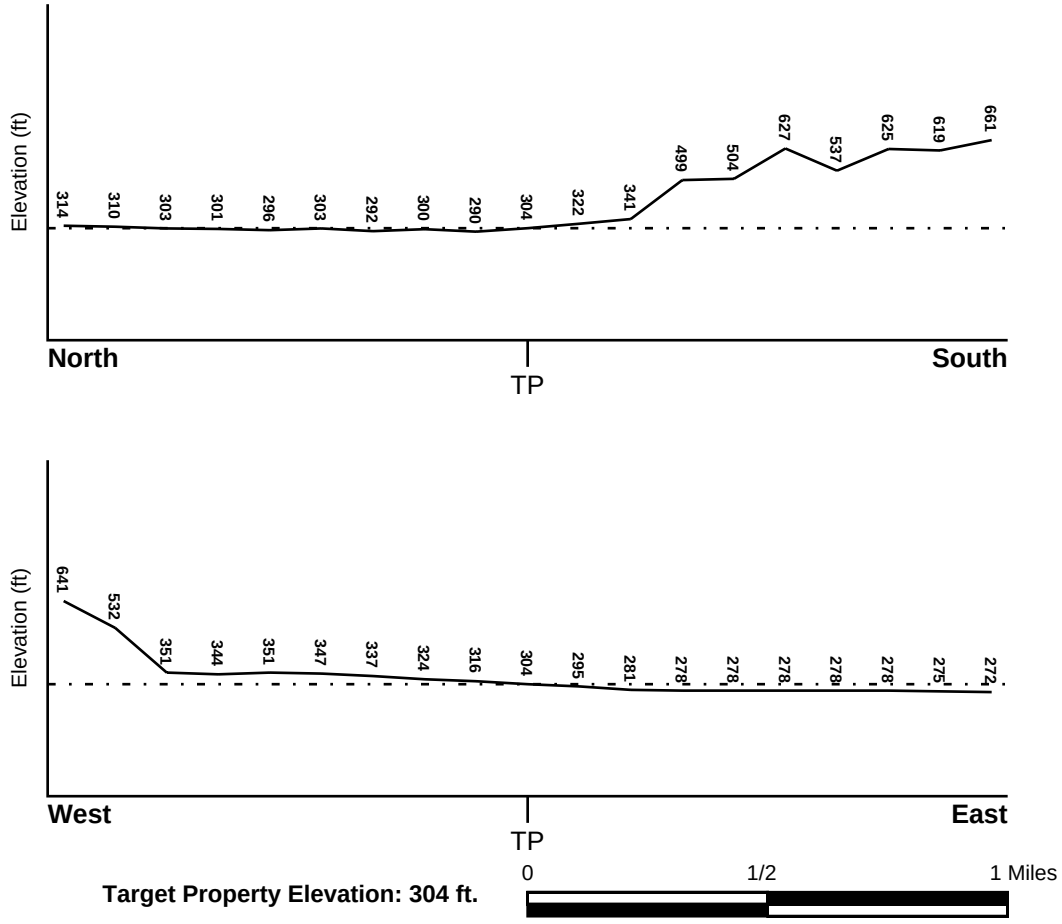
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 304 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06065C1589G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06065C1586G	FEMA FIRM Flood data
06065C1587G	FEMA FIRM Flood data
06065C1588G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
CATHEDRAL CITY	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Carsitas

Soil Surface Texture: gravelly sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9
2	9 inches	59 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: Carsitas

Soil Surface Texture: cobbly sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	cobbly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9
2	9 inches	59 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9

Soil Map ID: 3

Soil Component Name: Coachella

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9
2	11 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 7.9

Soil Map ID: 4

Soil Component Name: Myoma

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 9 Min: 7.9
2	18 inches	59 inches	sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 9 Min: 7.9

Soil Map ID: 5

Soil Component Name: Rock outcrop

Soil Surface Texture: unweathered bedrock

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	59 inches	unweathered bedrock	Not reported	Not reported	Max: 141 Min: 0.07	Max: Min:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 6

Soil Component Name: Indio

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 8.4 Min: 7.9
2	9 inches	59 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 8.4 Min: 7.9

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Petra Geotechnical Inc were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

EDR Environmental Lien and AUL Search

EDR® Environmental Data Resources Inc

6 Armstrong Road
Shelton, CT 06484
800.352.0050
www.edrnet.com

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

GRANT DEED

FOR VALUE RECEIVED, THE SUCCESSOR AGENCY TO THE REDEVELOPMENT AGENCY OF THE CITY OF CATHEDRAL CITY, a public body, corporate and politic, as ("Grantor") hereby grants to CITY URBAN REVITALIZATION CORPORATION, a California non-profit corporation ("Grantee") that certain real property (the "Property") situated in the City of Cathedral City, County of Riverside, State of California, described in Exhibit "A" hereto, incorporated herein by reference. **WHO ACQUIRED TITLE AS SHOWN ON EXHIBIT "B" ATTACHED HERETO

THE PROPERTY IS CONVEYED TO GRANTEE SUBJECT TO:

A. All liens, encumbrances, easements, covenants, conditions and restrictions of record; and

B. Liens for taxes on real property and liens for any general or special assessments of record against the Property.

C. The following covenants concerning non-discrimination:

1. Grantee agrees that the covenants set forth in this Paragraph C shall bind it, for itself and its successors and assigns, and all subsequent holders of any interest in the Property. The covenants set forth in this Paragraph C shall be covenants running with the Property.

2. There shall be no discrimination against or segregation of any person or group of persons on account of race, color, creed, religion, sex, marital status, sexual orientation, domestic arrangement, national origin or ancestry in the development, construction, sale, lease, sublease, transfer, use, occupancy, tenure or enjoyment of the Property, or any interest to be conveyed therein, nor shall Grantee or any grantees or any persons claiming under or through the Grantee establish or permit any such practice or practices of discrimination or segregation with reference to the selection, location, number, use or occupancy of tenants, lessees, subtenants, sublessees or vendees in the Property. This

covenant shall remain in effect in perpetuity.

3. All of the foregoing agreements and covenants shall run with the land, and shall inure to the benefit of and be enforceable by Grantor, and the City of Cathedral City, California ("City"), which is specifically made a third party beneficiary of these covenants, and their successors and assigns.

4. In the event of any breach of the covenants contained herein, Grantor and/or the City shall have the right to exercise all the rights and remedies available at law or in equity to enforce these covenants.

IN WITNESS WHEREOF, the undersigned Grantor has executed this Grant Deed as of April 22, , 2015.

SUCCESSOR AGENCY TO THE REDEVELOPMENT AGENCY OF CATHEDRAL CITY,
a public body, corporate and politic.
(Grantor)

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILD FAX PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Petra Geotechnical Inc on Jun 26, 2017.

TARGET PROPERTY

NWC Highway 111 and Date Palm Drive
Cathedral City, CA 92234

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

Date: **10/21/2008**
Permit Type: **MISC PERMIT**
Description: **DEMOLITION OF SINGLE FAMILY DWELLING INCLUDING REMOVAL OF SEPTIC SYSTEM. ASBESTOS SURVEY ON FILE**

Permit Description:
Work Class: Demolition
Proposed Use:
Permit Number: B08-1310
Status:
Valuation: $2,450.00
Contractor Company:
Contractor Name: THREE D SERVICE

ADJOINING PROPERTY FINDINGS

Date:	**6/7/1999**
Permit Type:	**PLUMBING PERMIT**
Description:	**PLUMBING - WATER HEATER REPLACEMENT**
Permit Description:	
Work Class:	
Proposed Use:	
Permit Number:	B99-00765
Status:	
Valuation:	$0.00
Contractor Company:	
Contractor Name:	FLOS PLUMBING

68926 GROVE ST

Date:	**3/13/2008**
Permit Type:	**MISC PERMIT**
Description:	**DEMO - DEMO EXISTING OF TWO APARTMENT UNITS INCLUDING SEPTIC SYSTEM . FILED WITH AQMD, ASBESTOS SURVEY ATTACHED.**
Permit Description:	
Work Class:	Demolition
Proposed Use:	
Permit Number:	B08-0396
Status:	
Valuation:	$2,775.00
Contractor Company:	
Contractor Name:	THREE D SERVICE

ADJOINING PROPERTY FINDINGS

68937 GROVE ST

Date:	**6/23/2008**
Permit Type:	**MISC PERMIT**
Description:	**DEMO - EXISTING OF SINGLE FAMILY DWELLING INCLUDING REMOVAL OF SEPTIC SYSTEM . FILED WITH AQMD, ASBESTOS SURVEY ATTACHED.**
Permit Description:	
Work Class:	Demolition
Proposed Use:	
Permit Number:	B08-0005
Status:	
Valuation:	$1,400.00
Contractor Company:	
Contractor Name:	THREE D SERVICE

68947 GROVE ST

Date:	**3/13/2008**
Permit Type:	**MISC PERMIT**
Description:	**DEMO - DEMO EXISTING OF SEVEN APARTMENTS UNITS INCLUDING SEPTIC SYSTEM . FILED WITH AQMD, ASBESTOS SURVEY ATTACHED.**
Permit Description:	
Work Class:	Demolition
Proposed Use:	
Permit Number:	B08-0398
Status:	
Valuation:	$7,900.00
Contractor Company:	
Contractor Name:	THREE D SERVICE

ADJOINING PROPERTY FINDINGS

68963 GROVE ST

Date:	**6/13/2012**
Permit Type:	**MISC PERMIT**
Description:	**DEMO 2-UNIT, TWO-STORY APARTMENT COMPLEX (UNITS 4 & 5) INCLUDING REMOVAL OF SEPTIC SYSTEM. ASBESTOS REPORT ON FILE.**

Permit Description:	
Work Class:	Demolition
Proposed Use:	
Permit Number:	B12-0935
Status:	FINALED
Valuation:	$2,750.00
Contractor Company:	
Contractor Name:	THREE D SERVICE

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR NEPASearch DESCRIPTION

The National Environmental Policy Act of 1969 (NEPA) requires that Federal agencies include in their decision-making processes appropriate and careful consideration of all environmental effects and actions, analyze potential environmental effects of proposed actions and their alternatives for public understanding and scrutiny, avoid or minimize adverse effects of proposed actions, and restore and enhance environmental quality as much as possible.

The EDR NEPASearch Map Report provides information which may be used, in conjunction with additional research, to determine whether a proposed site or action will have significant environmental effect.

Federal Endangered Species from the U.S. Fish and Wildlife for RIVERSIDE County

Group:Amphibians

Common Name: Desert slender salamander — Scientific Name: Batrachoseps aridus
Status: Endangered

Common Name: Mountain yellow-legged frog — Scientific Name: Rana muscosa
Status: Endangered

Common Name: California red-legged frog — Scientific Name: Rana draytonii
Status: Threatened

Common Name: Arroyo (=arroyo southwestern) toad — Scientific Name: Anaxyrus californicus
Status: Endangered

Group:Birds

Common Name: Western snowy plover — Scientific Name: Charadrius alexandrinus nivosus
Status: Threatened

Common Name: Least Bell's vireo — Scientific Name: Vireo bellii pusillus
Status: Endangered

Common Name: Southwestern willow flycatcher — Scientific Name: Empidonax traillii extimus
Status: Endangered

Common Name: Yuma clapper rail — Scientific Name: Rallus longirostris yumanensis
Status: Endangered

Common Name: Coastal California gnatcatcher — Scientific Name: Polioptila californica californica
Status: Threatened

Group:Crustaceans

Common Name: Riverside fairy shrimp — Scientific Name: Streptocephalus woottoni
Status: Endangered

Common Name: Vernal pool fairy shrimp — Scientific Name: Branchinecta lynchi
Status: Threatened

Group:Fishes

Common Name: Santa Ana sucker — Scientific Name: Catostomus santaanae
Status: Threatened

Common Name: Desert pupfish — Scientific Name: Cyprinodon macularius
Status: Endangered

Common Name: Razorback sucker — Scientific Name: Xyrauchen texanus
Status: Endangered

Group:Flowering Plants

Common Name: Nevin's barberry — Scientific Name: Berberis nevinii
Status: Endangered

Common Name: Thread-leaved brodiaea — Scientific Name: Brodiaea filifolia
Status: Threatened

Federal Endangered Species from the U.S. Fish and Wildlife for RIVERSIDE County (Continued...)

Common Name: Parish's daisy — Scientific Name: Erigeron parishii
Status: Threatened

Common Name: Gambel's watercress — Scientific Name: Rorippa gambellii
Status: Endangered

Common Name: Braunton's milk-vetch — Scientific Name: Astragalus brauntonii
Status: Endangered

Common Name: San Diego button-celery — Scientific Name: Eryngium aristulatum var. parishii
Status: Endangered

Common Name: Del Mar manzanita — Scientific Name: Arctostaphylos glandulosa ssp. crassifolia
Status: Endangered

Common Name: San Diego ambrosia — Scientific Name: Ambrosia pumila
Status: Endangered

Common Name: Hidden Lake bluecurls — Scientific Name: Trichostema austromontanum ssp. compactum
Status: Threatened

Common Name: San Jacinto Valley crownscale — Scientific Name: Atriplex coronata var. notatior
Status: Endangered

Common Name: Coachella Valley milk-vetch — Scientific Name: Astragalus lentiginosus var. coachellae
Status: Endangered

Common Name: Santa Ana River woolly-star — Scientific Name: Eriastrum densifolium ssp. sanctorum
Status: Endangered

Common Name: California Orcutt grass — Scientific Name: Orcuttia californica
Status: Endangered

Common Name: Spreading navarretia — Scientific Name: Navarretia fossalis
Status: Threatened

Common Name: Munz's onion — Scientific Name: Allium munzii
Status: Endangered

Common Name: Triple-ribbed milk-vetch — Scientific Name: Astragalus tricarinatus
Status: Endangered

Common Name: Vail Lake ceanothus — Scientific Name: Ceanothus ophiochilus
Status: Threatened

Common Name: Slender-horned spineflower — Scientific Name: Dodecahema leptoceras
Status: Endangered

Common Name: Santa Monica Mountains dudleyea — Scientific Name: Dudleya cymosa ssp. ovatifolia
Status: Threatened

Group:Insects

Common Name: Casey's June Beetle — Scientific Name: Dinacoma caseyi
Status: Endangered

Federal Endangered Species from the U.S. Fish and Wildlife for RIVERSIDE County (Continued...)

Common Name: Quino checkerspot butterfly — Scientific Name: Euphydryas editha quino (=E. e. wrighti)
Status: Endangered

Common Name: Delhi Sands flower-loving fly — Scientific Name: Rhaphiomidas terminatus abdominalis
Status: Endangered

Group:Mammals

Common Name: San Bernardino Merriam's kangaroo rat — Scientific Name: Dipodomys merriami parvus
Status: Endangered

Common Name: Peninsular bighorn sheep — Scientific Name: Ovis canadensis nelsoni
Status: Endangered

Common Name: Stephens' kangaroo rat — Scientific Name: Dipodomys stephensi (incl. D. cascus)
Status: Endangered

Group:Reptiles

Common Name: Coachella Valley fringe-toed lizard — Scientific Name: Uma inornata
Status: Threatened

Common Name: Desert tortoise — Scientific Name: Gopherus agassizii
Status: Threatened

Federal Endangered Species from the U.S. Fish and Wildlife for CA State

Group:Amphibians

Common Name: Western spadefoot — Scientific Name: Spea hammondii
Status: Under Review

Common Name: Channel Islands slender salamander — Scientific Name: Batrachoseps pacificus pacificus
Status: Species of Concern

Common Name: Limestone salamander — Scientific Name: Hydromantes brunus
Status: Under Review

Common Name: Large-blotched ensatina — Scientific Name: Ensatina eschscholtzii klauberi
Status: Species of Concern

Common Name: Oregon spotted frog — Scientific Name: Rana pretiosa
Status: Threatened

Common Name: Lowland leopard (=San Felipe leopard) frog — Scientific Name: Rana yavapaiensis
Status: Species of Concern

Common Name: Del Norte salamander — Scientific Name: Plethodon elongatus
Status: Species of Concern

Common Name: Owens Valley web-toes salamander — Scientific Name: Hydromantes sp.
Status: Species of Concern

Common Name: Mount Lyell salamander — Scientific Name: Hydromantes platycephalus
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Foothill yellow-legged frog — Scientific Name: Rana boylii
Status: Under Review

Common Name: Breckenridge Mountain slender salamander — Scientific Name: Batrachoseps sp.
Status: Species of Concern

Common Name: California tiger Salamander — Scientific Name: Ambystoma californiense
Status: Endangered

Common Name: Kern Plateau salamander — Scientific Name: Batrachoseps robustus
Status: Under Review

Common Name: Lesser slender salamander — Scientific Name: Batrachoseps minor
Status: Under Review

Common Name: Yellow-blotched ensatina — Scientific Name: Ensatina eschscholtzii croceator
Status: Species of Concern

Common Name: Northern red-legged frog — Scientific Name: Rana aurora aurora
Status: Species of Concern

Common Name: Relictual slender salamander — Scientific Name: Batrachoseps relictus
Status: Under Review

Common Name: Cascades frog — Scientific Name: Rana cascadae
Status: Under Review

Common Name: Inyo Mountains slender salamander — Scientific Name: Batrachoseps campi
Status: Under Review

Common Name: Shasta salamander — Scientific Name: Hydromantes shastae
Status: Under Review

Common Name: Arizona toad — Scientific Name: Bufo microscaphus microscaphus
Status: Under Review

Common Name: Kern Canyon slender salamander — Scientific Name: Batrachoseps simatus
Status: Under Review

Common Name: Black toad — Scientific Name: Bufo exsul
Status: Species of Concern

Common Name: Tailed frog — Scientific Name: Ascaphus truei
Status: Species of Concern

Group:Arachnids

Common Name: Carlow’s Cave pseudoscorpion — Scientific Name: Aphrastochthonius similis
Status: Species of Concern

Common Name: Hom’s micro-blind harvestman — Scientific Name: Microcina homi
Status: Species of Concern

Common Name: Lum’s micro-blind harvestman — Scientific Name: Microcina lumi
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Edgewood blind harvestman
Scientific Name: Calcina minor
Status: Species of Concern

Common Name: Lee's micro-blind harvestman
Scientific Name: Microcina leei
Status: Species of Concern

Common Name: Jung's micro-blind harvestman
Scientific Name: Microcina jungi
Status: Under Review

Common Name: Grubbs' cave pseudoscorpion
Scientific Name: Aphrastochthonius grubbsi
Status: Species of Concern

Common Name: Music Hall Cave pseudoscorpion
Scientific Name: Pseudogarypus orpheus
Status: Species of Concern

Common Name: Lacey's cave pseudoscorpion
Scientific Name: Larca laceyi
Status: Species of Concern

Common Name: Empire Cave pseudoscorpion
Scientific Name: Microcreagris imperialis
Status: Species of Concern

Common Name: Santa Cruz telemid spider
Scientific Name: Telema sp.
Status: Species of Concern

Common Name: Aalbu's cave pseudoscorpion
Scientific Name: Archeolarca aalbui
Status: Species of Concern

Common Name: Monterey Dunes scorpion
Scientific Name: Pauroctonus maritimus
Status: Species of Concern

Common Name: Tiburon micro-blind harvestman
Scientific Name: Microcina tiburona
Status: Species of Concern

Group:Birds

Common Name: Xantus'sMurrelet
Scientific Name: Synthliboramphus hypoleucus
Status: Candidate

Common Name: Spotted Towhee
Scientific Name: Pipilo maculatus clementae
Status: Species of Concern

Common Name: Cooper's hawk
Scientific Name: Accipiter cooperii
Status: Species of Concern

Common Name: Grasshopper sparrow
Scientific Name: Ammodramus savannarum ssp. perpallidus
Status: Species of Concern

Common Name: Black-backed woodpecker
Scientific Name: picoides arcticus
Status: Under Review

Common Name: Tufted Puffin
Scientific Name: Fratercula cirrhata
Status: Under Review

Common Name: Sharp shinned hawk
Scientific Name: Accipiter striatus
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Common Yellowthroat
Scientific Name: Geothlypis trichas sinuosa
Status: Species of Concern

Common Name: Yuma clapper rail
Scientific Name: Rallus longirostris yumanensis
Status: Endangered

Common Name: Southwestern willow flycatcher
Scientific Name: Empidonax traillii extimus
Status: Endangered

Common Name: Southern California rufous-crowned sparrow
Scientific Name: Aimophila ruficeps canescens
Status: Species of Concern

Common Name: California spotted Owl
Scientific Name: Strix occidentalis occidentalis
Status: Under Review

Common Name: Tricolored blackbird
Scientific Name: Agelaius tricolor
Status: Under Review

Common Name: San Joaquin LeConte's thrasher
Scientific Name: Toxostoma lecontei macmillanorum
Status: Species of Concern

Common Name: Eagle Mountain scrub jay
Scientific Name: Aphelocoma coerulescens cana
Status: Species of Concern

Common Name: Elegant tern
Scientific Name: Sterna elegans
Status: Species of Concern

Common Name: Least bittern
Scientific Name: Ixobrychus exilis hesperis
Status: Species of Concern

Common Name: Song Sparrow
Scientific Name: Melospiza melodia pusillula
Status: Species of Concern

Common Name: Little willow flycatcher
Scientific Name: Empidonax traillii brewsteri
Status: Species of Concern

Common Name: Song Sparrow
Scientific Name: Melospiza melodia samuelis
Status: Species of Concern

Common Name: Large-billed savannah sparrow
Scientific Name: Passerculus sandwichensis rostratus
Status: Species of Concern

Common Name: Black tern
Scientific Name: Chlidonias niger
Status: Species of Concern

Common Name: Song Sparrow
Scientific Name: Melospiza melodia maxillaris
Status: Species of Concern

Common Name: Fulvous whistling duck
Scientific Name: Dendrocygna bicolor
Status: Species of Concern

Common Name: Belding's savannah sparrow
Scientific Name: Passerculus sandwichensis beldingi
Status: Species of Concern

Common Name: Bell's sage sparrow
Scientific Name: Amphispiza belli belli

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Status: Species of Concern

Group:Conifers and Cycads

Common Name: Monterey cypress — Scientific Name: Cupressus macrocarpa
Status: Species of Concern

Common Name: Torrey, Del Mar pine — Scientific Name: Pinus torreyana torreyana
Status: Species of Concern

Common Name: Tecate cypress — Scientific Name: Cupressus forbesii
Status: Species of Concern

Common Name: Bolander's beach pine — Scientific Name: Pinus contorta bolanderi
Status: Species of Concern

Common Name: Monterey pine — Scientific Name: Pinus radiata
Status: Species of Concern

Common Name: Torrey Island pine — Scientific Name: Pinus torreyana insularis
Status: Species of Concern

Common Name: Mendocino cypress — Scientific Name: Cupressus goveniana pigmaea
Status: Species of Concern

Common Name: Yellow cedar — Scientific Name: Calliptropsis nootkatensis
Status: Under Review

Group:Crustaceans

Common Name: [Unnamed] isopod — Scientific Name: Caecidotea tomalensis
Status: Species of Concern

Common Name: Vernal pool tadpole shrimp — Scientific Name: Lepidurus packardi
Status: Endangered

Common Name: Longhorn fairy shrimp — Scientific Name: Branchinecta longiantenna
Status: Endangered

Common Name: California freshwater shrimp — Scientific Name: Syncaris pacifica
Status: Endangered

Common Name: Mono Lake brine shrimp — Scientific Name: Artemia monica
Status: Species of Concern

Common Name: Conservancy fairy shrimp — Scientific Name: Branchinecta conservatio
Status: Endangered

Group:Ferns and Allies

Common Name: Crater Lake grap fern — Scientific Name: Botrychium pumicola nealleyi
Status: Species of Concern

Common Name: No common name — Scientific Name: Botrychium crenulatum
Status: Species of Concern

Group:Fishes

Common Name: Rough sculpin
Status: Species of Concern
Scientific Name: Cottus asperrimus

Common Name: Kern River rainbow trout
Status: Species of Concern
Scientific Name: Oncorhynchus mykiss gilberti

Common Name: Steelhead
Status: Endangered
Scientific Name: Oncorhynchus (=Salmo) mykiss

Common Name: Goose Lake redband trout
Status: Species of Concern
Scientific Name: Oncorhynchus mykiss ssp.

Common Name: Eagle Lake rainbow Trout
Status: Under Review
Scientific Name: Oncorhynchus mykiss aquilarum

Common Name: Flannelmouth sucker
Status: Species of Concern
Scientific Name: Catostomus latipinnis

Common Name: Steelhead
Status: Under Review
Scientific Name: Oncorhynchus (=Salmo) mykiss

Common Name: longfin smelt
Status: Candidate
Scientific Name: Spirinchus thaleichthys

Common Name: Benton Valley speckled dace
Status: Species of Concern
Scientific Name: Rhinichthys osculus ssp.

Common Name: Jenny Creek sucker
Status: Species of Concern
Scientific Name: Catostomus rimiculus ssp.

Common Name: Arroyo chub
Status: Species of Concern
Scientific Name: Gila orcuttii

Common Name: Steelhead
Status: Threatened
Scientific Name: Oncorhynchus (=Salmo) mykiss

Common Name: Owens speckled dace
Status: Species of Concern
Scientific Name: Rhinichthys osculus ssp.

Common Name: Red Hills roach
Status: Species of Concern
Scientific Name: Lavinia symmetricus ssp.

Common Name: Santa Ana speckled dace
Status: Species of Concern
Scientific Name: Rhinichthys osculus ssp.

Common Name: Shoshone pupfish
Status: Species of Concern
Scientific Name: Cyprinodon nevadensis shoshone

Common Name: Long Valley speckled dace
Status: Species of Concern
Scientific Name: Rhinichthys osculus ssp.

Common Name: Klamath largescale sucker
Status: Species of Concern
Scientific Name: Catostomus snyderi

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Goose Lake sucker — Scientific Name: Catostomus occidentalis lacusanserinus
Status: Species of Concern

Common Name: Sacramento perch — Scientific Name: Archoplites interruptus
Status: Species of Concern

Common Name: green sturgeon — Scientific Name: Acipenser medirostris
Status: Threatened

Common Name: Pit roach — Scientific Name: Lavinia symmetricus mitrulus
Status: Species of Concern

Common Name: Warner Valley redband trout — Scientific Name: Oncorhynchus mykiss ssp.

Common Name: Pallid birds-beak — Scientific Name: Cordylanthus tenuis pallescens
Status: Species of Concern

Common Name: San Clemente Island evening-primrose — Scientific Name: Camissonia guadalupensis clementina
Status: Species of Concern

Common Name: Carmel Valley bush-mallow — Scientific Name: Malacothamnus palmeri involucratus
Status: Species of Concern

Common Name: Coast wallflower — Scientific Name: Erysimum ammophilum
Status: Species of Concern

Common Name: Hutchinson’s delphinium — Scientific Name: Delphinium hutchinsonae
Status: Species of Concern

Common Name: Otay manzanita — Scientific Name: Arctostaphylos otayensis
Status: Species of Concern

Common Name: Jacumba milk-vetch — Scientific Name: Astragalus douglasii perstrictus
Status: Species of Concern

Common Name: Santa Susana tarweed — Scientific Name: Hemizonia minthornii
Status: Species of Concern

Common Name: Santa Lucia pogogyne — Scientific Name: Pogogyne clareana
Status: Species of Concern

Common Name: Moreno currant — Scientific Name: Ribes canthariforme
Status: Species of Concern

Common Name: Pine City stonecrop — Scientific Name: Sedum pinetorum
Status: Species of Concern

Common Name: [Unnamed] milk-vetch — Scientific Name: Astragalus tegetarioides
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Cienega Seca oxytheca — Scientific Name: Oxytheca parishii ciengensis
Status: Species of Concern

Common Name: Tracy's sanicle — Scientific Name: Sanicula tracyi
Status: Species of Concern

Common Name: Tulare horkelia — Scientific Name: Horkelia tularensis
Status: Species of Concern

Common Name: Palmer's haplopappus — Scientific Name: Haplopappus palmeri palmeri
Status: Species of Concern

Common Name: Northcoast semaphore grass — Scientific Name: Pleuropogon hooverianus
Status: Species of Concern

Common Name: Mt. Hamilton jewelflower — Scientific Name: Streptanthus callistus
Status: Species of Concern

Common Name: Recurved larkspur — Scientific Name: Delphinium recurvatum
Status: Species of Concern

Common Name: Hospital Canyon larkspur — Scientific Name: Delphinium californicum interius
Status: Species of Concern

Common Name: Island wallflower — Scientific Name: Erysimum insulare insulare
Status: Species of Concern

Common Name: Talus fritillary — Scientific Name: Fritillaria falcata
Status: Species of Concern

Common Name: Mendocino gentian — Scientific Name: Gentiana setigera
Status: Species of Concern

Common Name: Lost Hills saltbush — Scientific Name: Atriplex vallicola
Status: Species of Concern

Common Name: Vine Hill manzanita — Scientific Name: Arctostaphylos densiflora
Status: Species of Concern

Common Name: Bolander's horkelia — Scientific Name: Horkelia bolanderi
Status: Species of Concern

Common Name: Howell's montia — Scientific Name: Montia howellii
Status: Species of Concern

Common Name: July gold — Scientific Name: Dedeckera eurekensis
Status: Species of Concern

Common Name: Santa Catalina figwort — Scientific Name: Scrophularia villosa
Status: Species of Concern

Common Name: Ahart's whitlow-wort — Scientific Name: Paronychia ahartii
Status: Species of Concern

Common Name: Fern-leaved ironwood — Scientific Name: Lyonothamnus floribundus asplenifolius
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: The Lassics sandwort — Scientific Name: Minuartia decumbens
Status: Species of Concern

Common Name: Fremont's rosinweed — Scientific Name: Calycadenia fremontii
Status: Species of Concern

Common Name: Valley spearscale — Scientific Name: Atriplex joaquiniana
Status: Species of Concern

Common Name: Secund jewelflower — Scientific Name: Streptanthus glandulosus hoffmanii
Status: Species of Concern

Common Name: Plumas ivesia — Scientific Name: Ivesia sericoleuca
Status: Species of Concern

Common Name: Arid northern clarkia — Scientific Name: Clarkia borealis arida
Status: Species of Concern

Common Name: Bonny Doon manzanita — Scientific Name: Arctostaphylos silvicola
Status: Species of Concern

Common Name: Santa Catalina monkey-flower — Scientific Name: Mimulus traskiae
Status: Species of Concern

Common Name: No common name — Scientific Name: Eschscholzia multiflora twisselmannii
Status: Species of Concern

Common Name: Barstow wooly-sunflower — Scientific Name: Eriophyllum mohavense
Status: Species of Concern

Common Name: Pitkin Marsh paintbrush — Scientific Name: Castilleja uliginosa
Status: Species of Concern

Common Name: Pleasant Valley mariposa lily — Scientific Name: Calochortus clavatus avius
Status: Species of Concern

Common Name: Short-jointed beavertail cactus — Scientific Name: Opuntia basilaris brachyclada
Status: Species of Concern

Common Name: San Bernardino Mountains monkey-flower — Scientific Name: Mimulus exiguus
Status: Species of Concern

Common Name: Scott Valley phacelia — Scientific Name: Phacelia greenei
Status: Species of Concern

Common Name: San Luis serpentine dudleya — Scientific Name: Dudleya abramsii bettinae
Status: Species of Concern

Common Name: Marble Mountain catchfly — Scientific Name: Silene marmorensis
Status: Species of Concern

Common Name: Parrish's brittlescale — Scientific Name: Atriplex parishii
Status: Species of Concern

Common Name: Flax-like monardella — Scientific Name: Monardella linoides oblonga
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Western bog violet
Scientific Name: Viola primulifolia occidentalis
Status: Species of Concern

Common Name: Johnston's buckwheat
Scientific Name: Eriogonum microthecum johnstonii
Status: Species of Concern

Status: Species of Concern

Common Name: Borrego bedstraw — Scientific Name: Galium angustifolium borregoense
Status: Species of Concern

Common Name: Hickman's onion — Scientific Name: Allium hickmanii
Status: Species of Concern

Common Name: One-awned spineflower — Scientific Name: Chorizanthe rectispina
Status: Species of Concern

Common Name: Inyo laphamia — Scientific Name: Perityle inyoensis
Status: Species of Concern

Common Name: DeDecker's lupine — Scientific Name: Lupinus padre-crowleyi
Status: Species of Concern

Common Name: Thurber's reedgrass — Scientific Name: Calamagrostis crassiglumis
Status: Species of Concern

Common Name: Stebbins' lomatium — Scientific Name: Lomatium stebbinsii
Status: Species of Concern

Common Name: Sp. nov. ined. (Pit River) jewelflower — Scientific Name: Streptanthus sp.
Status: Species of Concern

Common Name: Mountains Springs bush lupine — Scientific Name: Lupinus excubitus medius
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Gander butterweed
Scientific Name: Packera ganderi
Status: Species of Concern

Common Name: Forest Camp sandwort
Scientific Name: Arenaria macradenia kuschei
Status: Species of Concern

Common Name: Monterey ceanothus
Scientific Name: Ceanothus cuneatus rigidus
Status: Species of Concern

Common Name: Most beautiful jewelflower
Scientific Name: Streptanthus albidus peramoenus
Status: Species of Concern

Common Name: San Francisco gumplant
Scientific Name: Grindelia hirsuta maritima
Status: Species of Concern

Common Name: Mt. Hamilton harebell
Scientific Name: Campanula sharsmithiae
Status: Species of Concern

Common Name: Congdon’s lomatium
Scientific Name: Lomatium congdonii
Status: Species of Concern

Common Name: Plaskett Meadows linanthus
Scientific Name: Linanthus harknessii condensatus
Status: Species of Concern

Common Name: Lemon colored fawn-lily
Scientific Name: Erythronium citrinum rodrickii
Status: Species of Concern

Common Name: Raven’s milk-vetch
Scientific Name: Astragalus monoensis ravenii
Status: Species of Concern

Common Name: Nevin’s wooly-sunflower
Scientific Name: Eriophyllum nevinii
Status: Species of Concern

Common Name: California ditaxis
Scientific Name: Ditaxis serrata
Status: Species of Concern

Common Name: Tehama dwarf-flax
Scientific Name: Hesperolinon tehamense
Status: Species of Concern

Common Name: Piute Mountains jewelflower
Scientific Name: Streptanthus cordatus piutensis
Status: Species of Concern

Common Name: No common name
Scientific Name: Calochortus weedii vestus
Status: Species of Concern

Common Name: Slender pentachaeta
Scientific Name: Pentachaeta exilis aeolica
Status: Species of Concern

Common Name: Purple monkey-flower
Scientific Name: Mimulus purpureus purpureus
Status: Species of Concern

Common Name: Calistoga ceanothus
Scientific Name: Ceanothus divergens
Status: Species of Concern

Endangered Species Codes

Global Imperilment Rank Codes - GRANK: Priority rank (1-5) based on number of occurrences through element's range.

G1 - Critically imperiled globally because of extreme rarity (5 or fewer occurrences or very few remaining individuals or acres) or because of some factor(s) making it especially vulnerable to extinction.

G2 - Imperiled globally because of rarity (6-20 occurrences or few remaining individuals or acres) or because of some factor(s) making it especially vulnerable to extinction.

G3 - Vulnerable. Either very rare and local throughout its range or found locally (even abundantly at some of its locations) in a restricted range. (e.g., a single western state, a physiographic region in the East) or because of other factors making it vulnerable to extinction throughout its range; in terms of occurrences, in the range of 21 - 100.

G4 - Apparently secure globally, though it may be quite rare in parts of its range, especially at the periphery.

G5 - Demonstrably secure globally, though it may be quite rare in parts of its range, especially at the periphery.

GH - Possibly extinct or eliminated. Of historical occurrence throughout its range, i.e., formerly part of the established biota, with the expectation that it may be rediscovered (e.g., Bachman's Warbler). For historic and ecological communities, no likelihood for rediscovery, but possibility of restoration (e.g., American Chestnut Forest).

GNA - Not applicable to the element at a global level. Includes Hybrids, Invasive species, species of Domestic Origin, Cultural communities, and communities that have been managed.

GNR - Rank not assigned.

GU - Unrankable. Possibly in peril range-wide but status uncertain; more information is needed.

GX - Believed to be extinct throughout range (e.g., Passenger Pigeon) with virtually no likelihood that it will be rediscovered. For an ecological community, no restoration potential.

G#G# - Rank with a range. Used to show the range of uncertainty, will not skip more than 1 rank.

T-RANKS - T subranks are given to global ranks when a subspecies, variety, or race is considered at the state level. The subrank is made up of a "T" plus a number or letter (1, 2, 3, 4, 5, H, U, X) with the same ranking rules as a full species.

State Rank Codes - SRANK: Priority rank (1-5) based on number of occurrences through element's range.

S1 - Critically imperiled, Extremely rare. Typically 5 or fewer estimated occurrences in the state, or only a few remaining individuals, may be especially vulnerable to extirpation.

S2 - Imperiled, very rare. Typically between 5 and 20 estimated occurrences or with many individuals in fewer occurrences, often susceptible to becoming extirpated.

S3 - Vulnerable, rare to uncommon. Typically between 21 and 100 estimated occurrences, may have fewer occurrences but with large number of individuals in some populations, may be susceptible to large-scale disturbances.

S4 - Common, apparently secure under present conditions. Typically 100 or more estimated occurrences, but may be fewer with many large populations, may be restricted to only a portion of the state, usually not susceptible to immediate threats.

S5 - Demonstrably widespread, common, and secure in the state and essentially ineradicable under present conditions.

SA - Accidental.

SH - Historically known from the state, but not verified for an extended period, usually 15 years.

SU - Unrankable, not assessed. Possibly in peril in the state, but status uncertain, more information is needed. When possible, the most likely rank is assigned and a question mark is added to show uncertainty.

SX - Apparently extirpated from state.

SNR - Unranked. The state rank not yet assessed.

SRF - Reported falsely in the state.

SE - Exotic for local area.

SZ - Birds that migrate through the state but have no identifiable location.

S#S# - State level of G#G#.

Endangered Species Codes, (Continued...)

General Ranking Notes

Q - A "Q" in the global rank indicates the element’s taxonomic classification as a species is a matter of conjecture among scientists.

A - Accidental - far outside usual range

C - Captive or Cultivated only

HYB - Element represents an interspecific hybrid, not a species

R - Reported but not confirmed

Z - Zero Occurrences

Breeding Status Qualifiers (animals only)

B - Breeding population of the element

N - Nonbreeding population of the element

M - Migrant population

WETLANDS CLASSIFICATION SYSTEM

National Wetland Inventory Maps are produced by the U.S. Fish and Wildlife Service, a sub-department of the U.S. Department of the Interior. In 1974, the U.S. Fish and Wildlife Service developed a criteria for wetland classification with four long range objectives:

- to describe ecological units that have certain homogeneous natural attributes,
- to arrange these units in a system that will aid decisions about resource management,
- to furnish units for inventory and mapping, and
- to provide uniformity in concepts and terminology throughout the U.S.

High altitude infrared photographs, soil maps, topographic maps and site visits are the methods used to gather data for the productions of these maps. In the infrared photos, wetlands appear as different colors and these wetlands are then classified by type. Using a hierarchical classification, the maps identify wetland and deepwater habitats according to:

- system
- subsystem
- class
- subclass
- modifiers

(as defined by Cowardin, et al. U.S. Fish and Wildlife Service FWS/OBS 79/31. 1979.)

The classification system consists of five systems:

1. marine
2. estuarine
3. riverine
4. lacustrine
5. palustrine

The marine system consists of deep water tidal habitats and adjacent tidal wetlands. The riverine system consists of all wetlands contained within a channel. The lacustrine systems includes all nontidal wetlands related to swamps, bogs & marshes. The estuarine system consists of deepwater tidal habitats and where ocean water is diluted by fresh water. The palustrine system includes nontidal wetlands dominated by trees and shrubs and where salinity is below .5% in tidal areas. All of these systems are divided in subsystems and then further divided into class.

National Wetland Inventory Maps are produced by transferring gathered data on a standard 7.5 minute U.S.G.S. topographic map. Approximately 52 square miles are covered on a National Wetland Inventory map at a scale of 1:24,000. Electronic data is compiled by digitizing these National Wetland Inventory Maps.

KEY CONTACTS & GOVERNMENT RECORDS SEARCHED

Various Federal laws and executive orders address specific environmental concerns. NEPA requires the responsible offices to integrate to the greatest practical extent the applicable procedures required by these laws and executive orders. EDR provides key contacts at agencies charged with implementing these laws and executive orders to supplement the information contained in this report.

Historic Places

Government Records Searched in This Report

National Register of Historic Places:
The National Register of Historic Places is the official federal list of districts, sites, buildings, structures, and objects significant in American history, architecture, archeology, engineering, and culture. These contribute to an understanding of the historical and cultural foundations of the nation.
The National Register includes:
- All prehistoric and historic units of the National Park System;
- National Historic Landmarks, which are properties recognized by the Secretary of the Interior as possessing national significance; and
- Properties significant in American, state, or local prehistory and history that have been nominated by State Historic Preservation Officers, federal agencies, and others, and have been approved for listing by the National Park Service.

Date of Government Version: 07/19/2015

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

PHASE I USER/CLIENT QUESTIONNAIRE

The purpose of this questionnaire is to obtain information from the client regarding the Property.

Date Sent to Client June 27, 2017 Date Received from Client 6/28/17

A. SITE INFORMATION

1. Property Name/APN: Riverside County Assessor Parcel Numbers (APNs) 687-201-005 to -011; 687-202-001 to -012 and -015; 687-203-008 to 015; 687-204-001 to 009, -013, -014 and -016; 687-205-005 to-008; 687-206-001 to -0161 and, 687-208-015 and -022.

2. Location (If a map is available, please include it): 12.6 acres of land at the NWC of Highway 111 and Date Palm Drive, Cathedral City, CA 92234

3. Why is the Phase I required? (Development as a residential parcel, protection from CERCLA liability, etc?): NEPA Compliance

4. Is there an Interview Contact for this job? (A current owner/operator, or someone with knowledge of the history and/or processes occurring at the site). ☑ Yes ☐ No

   If yes, please provide the following information:
   Person to be interviewed: Tami Scott
   Title/Company: Administrative Services Director, City of Cathedral City
   Phone number and/or email address:
   (760) 770-0354 TScott@cathedralcity.gov

5. Do you have any reports for this job (such as previous Phase I's, biology reports, cultural resource reports, geotechnical reports, etc.) ☑ Yes* ☐ No
   * Seller only provided monitoring well abandonment letter and ~~lease~~ license underlying agreement
   If yes, please provide them for Petra to review. *Date Received from Client*

6. As part of our assessment, Petra contacts local agencies to obtain miscellaneous information about the project site such as previous investigations, zoning, and flood zone. Do you have any current restrictions regarding Petra contacting these agencies?
   ☐ Yes ☑ No

   If yes, please contact us to discuss further.

B. SITE ACESS

1. Does Petra have access to the property at this time? ☑ Yes ☐ No

2. Are there any access restrictions such as a locked gate or required insurance forms? Per correspondence w/ Ed Lump, Carl's Jr. access is restricted to public area only.

3. Is there a site manager that Petra needs to contact prior to visiting the site? N/A

C. LANDOWNER LIABILITY PROTECTIONS

In order to qualify for one of the Landowner Liability Protections offered by the Small Business liability Relief and Brownfields Revitalization of 2001 (the "Brownfields Amendments"), the client must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

1. Are you aware of any environmental clean-up liens against the property that are filed or recorded under federal, tribal, state, or local law? (40 CFR 312.25) ☐ Yes ☑ No

   If no, have you or will you conduct a search for any environmental cleanup liens against the property that are filed or recorded in a registry? ☑ Yes ☐ No

   If yes, please provide Petra with this information. _____

   _____

   _____

   If no, do you require Petra to complete this task? ☐ Yes ☐ No
   TBD - Jeff Vatter to notify Ed Lumsp upon decision

2. Are you aware of any activity and land use limitations (AULs), such as engineering controls, land use restrictions, or institutional controls that are in place on or for the site and/or have been filed or that environmental cleanup liens against the property that are filed or recorded under federal, tribal, state, or local law? (40 CFR 312.25) ☐ Yes ☑ No

   If no, have you or will you conduct a search for any AULs against the property that are filed or recorded in a registry? ☐ Yes ☑ No

   If yes, please provide Petra with this information. _____

   _____

   _____

   If no, do you require Petra to complete this task? ☐ Yes ☐ No Jeff Vatter to notify
   TBD - Ed Lumsp upon decision

3. As the user of this Environmental Site Assessment, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the potential chemicals and processes used by this type of business?
   ☐ Yes ☑ No

   If yes, please provide Petra with this information. _____

   _____

   _____

PETRA GEOSCIENCES, INC.
40880 County Center Dr., Suite R, Temecula, CA * (951) 600-9271 * (951) 719-1499

4. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? ☑ Yes ☐ No

If you conclude that there is a difference, have you considered whether the lower purchase price is because of any environmental concerns are known or believed to be present at the property?
☐ Yes ☐ No

If yes, please provide Petra with that information. _____

5. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of hazardous materials/chemical releases or threatened releases? For example,

A. Do you know the past uses of the property? ☑ Yes ☐ No

If yes, please provide Petra with the information. A portion of the property was previously a residential subdivision. Additionally Goody's cafe was located on site, prior to being demolished in May 2017.

B. Do you know of specific chemicals that are present or once were present at the property?
☐ Yes ☑ No

If yes, please provide Petra with the information. _____

C. Do you know of spills or other chemical releases that have taken place at the property?
☐ Yes ☑ No

If yes, please provide Petra with the information. _____

D. Do you know of any environmental cleanups that have taken place at the property or adjacent properties? ☐ Yes ☑ No

If yes, please provide Petra with the information. _____

6. As the user of this ESA, based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?
☐ Yes ☑ No

If yes, please provide Petra with the information. _____

Subject: Request for records review; Cathedral City Fire Station, 36913 Date Palm Dr., Cathedral City, CA 92234
Importance: High

I am conducting a Phase I ESA for a property in Cathedral City.
In my research, I came across a State Water Resources Control Board Hazardous Substance Storage Container Information sheet regarding the Cathedral City Fire Station #34, located at 36913 Date Palm Dr., Cathedral City, CA 92234.
The State Board Assigned Container ID number is 00000057339001.
The Sheet, dated 6/01/1988 indicated there was a 1,000 gallon diesel UST on the property. No information is available on Geotracker.

Please let me know if you have any records on this site to review.

Please do not hesitate to contact me if you have any questions or require additional information.

Thank you,

Ed Lump

Subject: RE: Request for information on two monitoring wells at Cathedral City fire Station, 36913 Date Palm Dr

Ed,

Beth informed me that Well 19 is no longer active and we do not take samples from it we only use it for monitoring depth to water. The next nearest Well is approximately 1-2 miles to the NW. The last samples for EPA 524.2 were taken September 7, 2016 and all VOCs were non detected.

Thank you,
Heather Marcks

Subject: RE: Request for information on two monitoring wells at Cathedral City fire Station, 36913 Date Palm Dr

Ed,

The monitoring wells you mentioned were used several years back to track the affects septic systems were having on water quality in the area. We had stopped using them for monitoring a while ago and they went dry and are slated to be abandoned soon. SO I have no relevant data on them.

The closest active well we have to that area is Well 19 approximately ½-1 mile to the NW with an average depth to water around 170'. I will have our Lab Director, Beth Amheiser work with you on getting you our latest state reported results for the constituents your requested in that area. Please let myself or Beth know if you have any further questions.

Thank you,
Heather Marcks

Subject: Request for information on two monitoring wells at Cathedral City fire Station, 36913 Date Palm Dr
Importance: High

Heather,
Thank you for taking the time to talk with me this afternoon.
I am doing a Ph. I ESA on the property at the NWC of Palm Canyon Drive & Date Palm Dr., Cathedral City, CA.
Ms. Tami Scott at the City indicated to me that Desert Water Authority has 2 monitoring wells behind the fire station at 36913 Date Palm Dr. (APN 687-202-15). The parcel is located at the southwest corner of Date Palm & Buddy Rogers.

I am interested in historical water depth information, as well as chemical analysis data (related to petroleum hydrocarbon-based chemicals & VOCs) that may be available.

Please let me know if you have any questions or require additional information.
Thank you,

Ed Lump

PHASE I PROPERTY OWNER INTERVIEW QUESTIONNAIRE

The purpose of this questionnaire is to obtain information from knowledgeable individuals regarding the Subject Site. This questionnaire will become part of the assessment report.

A. SITE INFORMATION

Project Number: 17-246

Property Location: 12.6 Acres of vacant land at the NWC of Highway 111 and Date Palm Drive, Cathedral City, CA 92234

B. INTERVIEW INFORMATION

Date/Time: 7/3/17
Interviewer: ED Lump
Person Interviewed: Tami Scott
Title/Company: City URBAN Revitalization Corp

☐ In Person
☒ By Telephone, Number: 951- 253-4452
☐ By ~~Facsimile~~ Email, Number:
☒ Email: TSCOTT@ CATHEDRALCITY.GOV

1. What is your relationship to the property? CFO for the City URBAN Revitalization Corporation

Tami Phone number - 760-770-0354

2. Do you have a good knowledge regarding the uses and physical characteristics of the property?
☐Yes
☒No If not, who does? UNKNOWN - No Longer employed Phone Number:

3. Do you have a good knowledge regarding the activities/processes conducted at the property?
☒Yes
☐No If not, who does? Phone Number:

C. PROPERTY INFORMATION

1. To the best of your knowledge, what are the current and past uses of the property? Please describe with approximate dates.

PAST Combination of Commercial, Retail & Residential uses

Current. A portion Houses Cathedral City Fire Station

A portion of site has a Caltrans Operations on site

2. To your knowledge, are there:

Hazardous substances present on the site? ☐Yes ☒No
Petroleum products present on the site? — only Diesel @ Fire Station ☒Yes ☐No

If the preceding items are present, are there indications of any of the following:

An existing release? ☐Yes ☒No
A past release? ☐Yes ☒No
A threat of their release? ☐Yes ☒No

If yes to any of the above, please describe: _____

3. Are you aware of the presence of any of the following either currently or previously on the property or any nearby properties:

Potential Recognized Environmental Conditions	Site		Adjacent	
Hazardous substances? Asbestos —	☒ Yes	☐ No	☐ Yes	☒ No
Petroleum products? Diesel Fuel @ Fire Station	☒ Yes	☐ No	☐ Yes	☒ No
Chemicals?	☐ Yes	☒ No	☐ Yes	☒ No
Asbestos or asbestos-containing materials? Removed	☒ Yes	☐ No	☐ Yes	☒ No
Lead-based paints? Removed	☒ Yes	☐ No	☐ Yes	☒ No
Underground storage tanks?	☐ Yes	☒ No	☐ Yes	☒ No
Above-ground storage tanks? (1) Above Ground Storage for Diesel Generator	☒ Yes	☐ No	☐ Yes	☒ No
Oil Wells?	☐ Yes	☒ No	☐ Yes	☒ No
Sumps?	☐ Yes	☒ No	☐ Yes	☒ No

Removed Before Demo Permit

Unknown

If yes to any of the above, please describe: Homes & Businesses that previously occupied the now vacant land had some asbestos in the Building, which is now all removed as all the Buildings have been demolished

4. Are you aware of any current or previous uses of the property or nearby properties that would suggest the presence of the foregoing items, substances, or materials? ☒Yes ☐No

If yes to any of the above, please describe: Same Answer as Above

5. To your knowledge, are there any utility corridors on the property? ☒Yes ☐No

If yes to any of the above, please describe: Southern California Edison - Also see ALTA Survey Provided to ACBCI

6. To your knowledge, are you aware of any of the following on the property:

Water Wells?	☒Yes ☐No	Disposal Wells?	☐Yes ☒No
Clarifiers?	☐Yes ☒No	Underground Irrigation Systems?	☐Yes ☐No UNKNOWN

If yes to any of the above, please describe: DWA has two monitoring wells that are on the site & in the process of being ABANDONED

7. Are there any occupants on the property? ☒Yes ☐No

If yes to any of the above, please describe: Cafe for Business & Cathedral City Fire Station. Rest of the property is VACANT LAND

8. Do you have good knowledge regarding the identity of any existing documents relating to the property?
☒Yes - to some documents - Demo permits & septic tank removals
☐No If not, who does? UNKNOWN Phone Number: _____

9. To your knowledge, do any of the following documents exist with respect to the subject property? If yes, please name the document and comment upon whether it is available for review.

Document	Yes	No	Name/Availability
Environmental site assessment reports?		✓	
Environmental audit reports?		✓	
Environmental permits?		✓	
Storage tank registration?		✓	
Material safety data sheets (MSDS)?		✓	
Community right-to-know plans?		✓	
Safety plans?		✓	
Spill Prevention, Countermeasure, & Control Plans?		✓	
Illness and Injury Prevention Plans?		✓	
Reports regarding hydrogeologic conditions on the property or surrounding area?		✓	
Hazardous waste generator notices or reports?		✓	
Geotechnical studies?		✓	

10. To your knowledge, do any of the following exist with respect to the subject property?

a. Notices or other correspondence from any government agency relating to past or current violations of environmental laws? ☐Yes ☒No

If yes to any of the above, please describe: _____

b. Notices or other correspondence from any government agency relating to environmental liens encumbering the property? ☐Yes ☒No

If yes to any of the above, please describe: _____

c. Pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances, or petroleum products in, on, or from the property? ☐Yes ☒No

If yes to any of the above, please describe: _____

d. Notices from any government al entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? ☐Yes ☒No

If yes to any of the above, please describe: _____

11. Please provide any additional information relative to this project.

_____

RESUMES

PETRA

ED LUMP

MR. ED LUMP
Associate Geologist

EDUCATION
B.Sc Geology, San Diego State University, San Diego, California

PROFESSIONAL SUMMARY
Mr. Lump has been in the field of Engineering Geology since 1984 and in the field of Environmental Assessment since 1990. Serving as a field technician, soils laboratory technician, and geologist he has gained field experience on numerous hillside and flatland residential and commercial developments throughout southern California. As an engineering geologist he supervised field personnel and conducted numerous geologic and geotechnical evaluations on residential, commercial and industrial developments in California, Arizona and Nevada. His projects have included landslide and fault evaluations, single and multi-tract residential properties, shopping centers/national chain retail developments, and forensic evaluations, as well as grading and construction oversight. Mr. Lump has also conducted and managed numerous Phase I Environmental Site Assessments and Phase II soil, groundwater and soil vapor assessments for vacant, agricultural, residential, commercial and industrial properties in California, Arizona and Nevada.

SELECTED PROJECT EXPERIENCE

Environmental Site Assessments
- Limited Phase II and Soil Vapor Survey, 2013, County of Riverside, future Eastvale fire station, Riverside County, CA
- Phase I ESA, 2013, Wakeland Housing Development, 10 apartment complex portfolio, San Diego County, CA
- Phase I ESA and Limited Phase II, 2013, William Lyon Homes, Upland Residential Development, San Bernardino County, CA
- Limited Phase II Assessment, 2013, KB Homes, Spring Mountain Ranch, Riverside County, CA
- Environmental demolition and grading oversight, 2011/2012, Standard Pacific Homes, Harmony Grove residential development, San Diego County, CA
- Groundwater Mounding Evaluation, 2008, Lowe's HIW, Lowe's of Pacoima, Los Angeles County, CA
- Phase I ESA, Pesticide Residue Survey, Remedial Earthwork Guidelines, and Final As-Built Assessment, 2003/2004, Lennar Homes, Bressi Ranch, San Diego County, CA

Geologic and Geotechnical Evaluations
- Lake Elsinore Marketplace, Diamond Development, Riverside County, CA
- Salton Sea Solar Plant, Chevron Solar, Inc., Imperial County, CA
- Lowe's of Sparks, Nevada, Lowe's HIW, Washoe County, NV
- Walmart Murrieta, Walmart, Inc., Riverside County, CA
- Santa Fe Hills/Paloma Residential Development, KB Homes, San Diego County, CA
- Carmel Mountain Ranch Residential Development, Presley of San Diego, San Diego County, CA
- Lowe's of Bullhead City, Arizona, Lowe's HIW, Mohave County, AZ

ED LUMP

Grading and Construction

- Discovery Hills Residential Development, Presley of San Diego, San Diego County, CA
- Lowe's of Prescott, Arizona, Lowe's HIW, Yavapai County, AZ
- Salt Creek Residential Development, KB Homes, San Diego County, CA
- Lowe's of Pacoima, Lowe's HIW, Los Angeles County, CA
- Lake Elsinore Marketplace, Diamond Development, Riverside County, CA
- Carmel Mountain Ranch Residential Development, Presley of San Diego, San Diego County, CA
- Santa Fe Hills/Paloma Residential Development, KB Homes, San Diego County, CA
- Cobra Golf Facility-Carlsbad, Cobra Golf, San Diego County, CA

SIAMAK JAFROUDI

DR. SIAMAK JAFROUDI
President
Principal-in-Charge

EDUCATION
PhD, Geotechnical Engineering, 1983,
UC Davis
MS, Civil Engineering, 1978, UC Davis

REGISTRATIONS
Civil Engineering, California, PE 36641
Geotechnical Engineer, California, GE 2024
Environmental Assessor, REA 01655

PROFESSIONAL SUMMARY
Dr. Jafroudi has over 34 years of professional experience in geotechnical engineering. His area of specialization is “material characterization” in relation to slope stability evaluation, liquefaction analysis, pavement design, collapse potential, earth retaining structures and earthquake engineering. Dr. Jafroudi’s experience encompasses the design and supervision of a multitude of soil mechanics laboratory tests and drilling programs. With a broad range of project experience, he has served as a Principal Engineer on several key projects for such clients as school, university and college districts, public agencies; transportation agencies; residential and commercial developers, as well as private sector clients.

Acquiring a doctorate degree in Geotechnical Engineering as well as a Master of Science degree in Civil Engineering, Dr. Jafroudi maintains extensive working knowledge and experience with respect to these challenging fields. Dr. Jafroudi is a Registered Geotechnical Engineer (GE), a Registered Environmental Assessor (REA), and is registered in Civil Engineering (PE), all in the state of California. Additionally, he is an active member of the American Society of Civil Engineers, the Earthquake Engineering Research Institute and California Geotechnical Engineering Association.

SELECTED PROJECT EXPERIENCE

Environmental Site Assessments
- KB Homes, Hollywood Beverly Christian Church, Hollywood
- Castle & Cooke, Lake Elsinore Outlet Mall, Lake Elsinore
- Covina Transit Plaza, Foothill Transit, Covina
- First Street Bridge Widening, Los Angeles County
- Overland Street Bridge Improvements, Los Angeles County
- 801 Office Tower, Mani Brothers, Los Angeles
- Harmony Grove Site Acquisition, New Urban West, San Diego County
- Site Acquisitions, County of Los Angeles Office of Education, Los Angeles
- Eleven Projects, City of Mission Viejo, Mission Viejo
- Site Acquisitions, Paramount USD, Paramount
- Site Acquisitions, Santa Ana USD, Santa Ana

NORTH SITE – LIMITED PHASE II EVALUATION

December 22, 2017
J.N. 17-246

AGUA CALIENTE BAND OF CAHUILLA INDIANS
5401 Dinah Shore Drive
Palm Springs, California 92264

Attention: Ms. Margaret Park

Subject: **Limited Phase II Environmental Evaluation; *Fee to Trust Application*, A Portion of 13.6 Acres of Land Located at the Northwest Corner of Date Palm Drive and Palm Canyon Drive, APN's 687-202-015, 687-208-015 and 687-208-022 to -026, Cathedral City, Riverside County, California 92234**

Reference: Phase I Environmental Site Assessment; *Fee to Trust Application*, 13.6 Acres of Land Located at the Northwest Corner of Date Palm Drive and Palm Canyon Drive, Cathedral City, Riverside County, California 92234; report by Petra Geosciences, Inc., J.N. 17-246, dated July 31, 2017.

Dear Ms. Park:

As requested, **Petra Geosciences, Inc. (Petra)** is submitting herein the results of our Limited Phase II Environmental Evaluation on a portion of the subject property along Palm Canyon Drive (Highway 111) and Date Palm Drive in Cathedral City, California. The purpose of this limited Phase II Environmental Evaluation was to assess near-surface conditions within three areas of the subject property, which were identified as potential recognized environmental conditions (RECs) in our Phase I Environmental Site Assessment (ESA), due to historical information indicating the areas may have contained underground or aboveground storage tanks (Petra, 2017).

Brief Site Summary

Five former and one current occupant of the subject property were identified in our above referenced Phase I ESA as either historic gasoline stations and/or vehicle repair shops, and an existing fire station where the potential existence for detectable levels of petroleum hydrocarbon-based soil residues cannot be entirely precluded.

One of the former sites, Palm Springs Oil #9, 68830 Palm Canyon Drive (APN 687-205-005), was identified as a former LUST case where soil vapor extraction remediation reportedly removed most of the subsurface contamination. The case was closed in 2006 by the County of Riverside with hydrocarbon soil vapors left in-place at a depth of approximately 48 feet. The site was closed with no restrictions to redevelopment.

This site is considered a Historical Recognized Environmental Condition (HREC). At this time, however, no further assessment is recommended.

Three of the sites within the property were identified based solely upon non-regulatory agency database listings such as EDR's City Directory Search and EDR's Historic Auto Stations (Petra, 2017): *Pyles Robert*, 68904 Palm Canyon Drive (APN 687-208-024, -025 and -026); *Bob's Choice Cars*, 68920 E. Palm Canyon Drive (APN 687-208-023); and *Auto Truck Repair*, 68930 E. Palm Canyon Drive (APN 687-208-022). In addition, the existing *Cathedral City Fire Station* (36913 Date Palm Drive [APN 687-202-015]) was reported to contain a 1,000 gallon diesel UST from 1975 to at least 1988 (possibly removed in 1998). The Cathedral City Fire Station at 36913 Date Palm Drive (APN 687-202-015), was listed in the Statewide Environmental Evaluation and Planning System (SWEEPS UST) database, and the EDR Historical Underground Storage Tank (HIST UST) database. Based upon interpretation of aerial photographs and the address listed in the U.S. Environmental Protection Agency's Facility Index System/Facility Registry System (FINDS) database, the sixth site is likely a gasoline service station which existed at 68980 E. Palm Canyon Drive (APN 687-208-015) from at least 1966 to sometime after 1972 and before 1978. The location of these areas within the project area is provided on Figure 2.

Based upon our preliminary inquiries into the above mentioned sites, including the existing Cathedral City Fire Station and the former service station site at the northwest corner of Palm Canyon Drive and Date Palm Drive (Carl's Jr.), no known information on former USTs or former land use was available (Petra, 2017).

SCOPE OF SERVICES

Prior to "blind" placement of environmental borings within the subject parcels identified as potential RECs, we recommended an initial evaluation of whether USTs and piping remain buried within the properties. To aid in evaluating potential environmental boring locations, Petra coordinated geophysical surveys to be completed on the five potential REC sites within the subject property. The surveys would identify buried metallic objects (such as piping/debris, USTs, concrete structures/debris), and outline of the former UST excavation(s) may be discernable.

Geophysical surveys were conducted within three areas of potential RECs: the Carl's Jr. site; the fire station site; and the contiguous vacant parcels along the north side of Palm Canyon Drive, between Carl's Jr. and Allen Avenue. The limited Phase II Environmental Evaluation included the following services:

Task 1 – Geophysical Survey – An experienced geophysicist under the supervision of a State Registered Geophysicist conducted surveys within the three areas of the site. A combination of three survey instruments were used: ground penetrating radar (GPR), electromagnetic induction (EM), and magnetic gradiometer. The surveys traversed the sites systematically in multiple, organized directions. Additional traverses, and possible other geophysical data, were taken for detailing and confirmation of anomalous conditions found. Additionally, a utility locator with line tracing capabilities was utilized where existing risers were observed, which a signal could be impressed and traced.

Task 2 – Geophysical Survey Analysis – Survey results, site conditions and field data were assessed. A discussion of preliminary results occurred between the geophysicist and Petra's Professional Geologist the first day. Anomalies were physically delineated on the ground surface by colored spray paint, and a photographic record was made.

Task 3 – Additional Agency Research – Petra requested file and records review of specific addresses of the five potential REC businesses. Requests were submitted to the Regional Water Quality Control Board, the County of Riverside Hazardous Materials Management Division, and the Cathedral City Building Department.

Task 4 – Data Evaluation and Reporting – The report presenting the results of our limited Phase II evaluation includes the following information:

i. Site location and a vicinity map identifying the subject sites;
ii. A brief description of current site physical conditions;
iii. A discussion of the field procedures and the work completed;
iv. A geophysical survey report, including explanation of findings and location plan(s);
v. Findings of our additional agency research;
vi. Conclusions regarding findings associated with the field and agency research; and
vii. Recommendations concerning additional assessment or mitigating measures, if appropriate, including possible environmental boring locations.

Site Description

The subject areas of potential environmental conditions are comprised of approximately 2.5 acres of the approximately 13.6 acre property situated along the north side of Highway 111, south of Buddy Rogers Avenue, west of Date Palm Drive and east of Van Fleet Drive in Cathedral City, Riverside County, California. The subject survey area consists of 6 contiguous parcels along Palm Canyon Drive identified as Riverside County Assessor Parcel Numbers (APN's) 687-208-015 and -022 to -026, and one parcel situated at the southwest corner of Date Palm Drive and Buddy Rogers Avenue, APN 687-202-015. The general location of the parcels is provided on Figures 1 and 2.

The subject property as a whole is bounded by Date Palm Drive on the east, Highway 111 (Palm Canyon Drive) on the south, Buddy Rogers Avenue on the north. A mix of commercial properties and vacant land bounds the subject property on the west. The parcel at the northwest corner of Date Palm Drive and Palm

Canyon Drive is occupied by a Carl's Jr. restaurant. Five parcels along Palm Canyon Drive, situated between Allen Avenue and the Carl's Jr. parcel, are vacant land. Soil covers a large majority of the vacant property with minor amounts of finely crusted asphalt and gravel. This material appears to be from demolition performed on the subject property. Recent surface disturbance of soils on the triangular-shaped lot near the southeast corner of Allen Avenue and Dawes Street represents relatively recent demolition of the former Goody's Restaurant. An active Cathedral City fire station is located on the southwest corner of Date Palm Drive and Buddy Rogers Avenue. No signs of surface staining, noxious odors, stressed vegetation, and/or dumped trash or debris, were noted during our site reconnaissance. An aerial photograph of the subject survey parcels are depicted In Appendix A.

Field Work - Geophysical Survey

They geophysical survey was conducted by SubSurface Surveys on October 11 and 12, 2017. The survey was completed by a staff geophysicist under the direct supervision of a California licensed Geophysicist. A representative from Petra was onsite the first day to provide orientation to the subject parcels, discuss former development of the sites, and observe preliminary results from the two occupied parcels. Interpretation of data took place while the surveys were being conducted.

As previously noted, the purpose of the geophysical survey on the subject parcels was to identify, to the extent practical, the existence of underground storage tanks (USTs) and/or remnants of a UST excavation backfills, piping and conduits, or other near-surface objects that may provide knowledge pertaining to the former usage of the sites as service stations or auto repair shops.

A summary of the geophysical survey, including explanation of the equipment used, interpretation of findings and conclusions, and color photographs depicting the survey anomalies is provided in Appendix A.

SUMMARY OF FINDINGS

Research of Agency Records

As a part of this Limited Phase II Environmental Evaluation, Petra conducted further research into readily available records/files regarding former development and/or UST records related to the seven subject parcels (Petra, 2017). Petra requested review of additional agency files from the Cathedral City Building Department, the Colorado River Basin Regional Water Quality Control Board (RWQCB) and the Riverside County Department of Environmental Health (RCDEH), Environmental Protection and Oversight Branch. A summary of our research and review is provided below.

Cathedral City Building Department

On October 2, 2017, Petra contacted Ms. Tami Scott, Administrative Services Director with Cathedral City to request a physical file review of building records associated with the addresses related to our assessment. Public records forms were completed and submitted to Mr. Jim Sherman with the Building Department the same day. Mr. Sherman provided copies of all City and County of Riverside building permit records in their possession for the requested addresses on October 9, 2017. A copy of the building permit files can be provided upon request. A summary of the records received is provided below.

- Fire Station, 36913 Date Palm Dr., Cathedral City, CA:

  No city files. Structure constructed prior to incorporation. Construction completed under County of Riverside jurisdiction.

- Vacant property, 68904 E. Palm Canyon Dr., Cathedral City, CA:

  Special inspection permit for gas installation dated January 17, 1968. Letter pertaining to a drywall permit to Desert Oasis Restaurant and Hotel Supply dated May 22, 1990.

- Vacant property-Palm Spring Oil, 68830 E. Palm Canyon Dr., Cathedral City, CA:

  Permit for addition of 2 ton AC unit with heat pump, dated October 31, 1979. Letter indicating closure of Union 76 gas station dated June 14, 1998. South coast AQMD notification permit for demolition or asbestos removal dated May 10, 1999. Demolition permit for 450 square foot gas station issued May 12, 1999. Miscellaneous permit for septic and drywall demolition issued May 12, 1999, and finalized August 3, 1999. Permit for installation of temporary power pole for soil vapor extraction unit issued October 18, 2001. Permit for "gas test" related to power pole also issued October 18, 2001.

- Carl's Jr. Restaurant, 68980 E. Palm Canyon Dr., Cathedral City, CA:

  Plan Check permit for construction of 2,881 square foot restaurant building dated March 7, 1977. Construction permit for onsite utilities dated March 9, 1977, and finalized February 8, 1978. Permit to add canopy to restaurant dated September 13, 1977, and finalized February 8, 1978. Application to construct building issued to Carl Karcher Enterprises dated June 4, 1980. Construction permit for repair of roof and overhang issued October 21, 2011. Construction permit for replacement of exterior column darted June 6, 2013.

  Also included in the building permit records for 68980 E. Palm Canyon Drive was a permit for construction of a 64 square foot retail store at 68-802 Highway 111 dated September 20, 1973, and finalized February 6, 1974. Permit was issued to Bob Pyles. Address changed on permit to 68-980 Highway 111.

- Vacant-Goody's Restaurant and former Kentucky Fried Chicken Restaurant, 68930 E. Palm Canyon Dr., Cathedral City, CA:

  Plan check permit for 2,435 square foot restaurant (Kentucky Fried Chicken [KFC]) issued August 1, 1979 and expired July 22, 1980. Permit to review structural plans for KFC approved May 24, 1982. Certification of occupancy for KFC dated December 7, 1982. Building permit for addition/alteration to vestibule dated March 9, 1992, and finalized April 17, 1992. County of Riverside Department of Environmental Health septic system installation form dated May 11, 1999. Certificate of occupancy

for Goody's Restaurant dated July 28, 1999. Permit for demolition of building, parking lot removal, grease trap removal and cap sewer 5 foot inside property line issued May 2, 2017. Demolition was finalized June 1, 2017.

- Vacant-former parking lot for Goody's Restaurant and former Kentucky Fried Chicken Restaurant, 68920 Palm Canyon Dr., Cathedral City, CA:

  No building files and no property files available.

County of Riverside Building and Safety Department

On October 30, 2017, Petra submitted electronic requests to the County of Riverside for a building permit records search on the existing fire department parcel (APN 687-202-015), and the Carl's Jr. parcel situated at the northwest corner of Date Palm Drive and Palm Canyon Drive (APN 687-208-015). The County responded that they were unable to locate any building records for 68-802 Highway 111 which is the former address of the service station noted in Cathedral City building records at the Carl's Jr. parcel. The County also indicated they were not able to locate any building records for 68980 E. Palm Canyon Drive (Carl's Jr. site). The County noted that building records dated prior to 1963 have been destroyed.

A response was received on November 1, 2017, indicating that they have building permits for construction of a 4,032 square foot fire station at 36913 Date Palm Drive (dated January 9, 1975) that was finalized on October 16, 1975. The permit noted that a 2,000 gallon septic tank was installed near the northeast corner of the lot with what appeared to be two vertical seepage pits situated further west. Permits were also found for construction of a 320 square foot detached storage building (dated October 8, 1975) that was finalized June 29, 1976. Of note was permits for electrical wiring to a diesel dispenser pump, dated January 6, 1976. The work was finalized on June 29, 1976. No additional information was available.

Colorado River Basin Regional Water Quality Control Board

On September 29, 2017, Petra contacted the Colorado River Basin RWQCB public records review desk regarding a search of records/files pertaining to five addresses associated with the subject parcels. A response was received on October 3, 2017, indicating that the Regional Board has no files for any of the listed addresses. The addresses listed were 36913 Date Palm Drive, and 68904, 68920, 68930 and 68980 Palm Canyon Drive, Cathedral City, California.

On October 27, 2017, Petra requested a file review search for an old address found on a County building permit received from the City of Cathedral City for a retail store owned by Bob Pyles at 68802 Highway 111. Pyles, Robert was listed as the owner of a Historic Service Station in the EDR Radius Search report identified during the Phase I Environmental Site Assessment (ESA) for the project as a whole (Petra, 2017).

As noted above, this address was subsequently changed on the permit to 68980 Highway 111 (i.e., Carl's Jr. site). A response was received from the RWQCB on October 27, 2017, indicating that the Regional Board has no files for the listed addresses.

Riverside County Department of Environmental Health

Petra reviewed database lists from the Riverside County Department of Environmental Health (RCDEH) – Hazardous Materials Management Branch, dated July 11, 2017. They included a Disclosure Facility List, a Generator Facility List, a Tank Facility List, and a Listing of Underground Tank Cleanup Sites from the Local Oversight Program (LOA). The following results were found:

- Under the Disclosure Facility List, Carl's Jr. #724 (68980 E. Palm Canyon Dr.) was reported.
- Under the Generator Facility List, none of the addresses were reported.
- Under the Tank Facility List, none of the addresses were reported.
- Under the Listing of Underground Tank Cleanup Sites, none of the addresses were reported. For referenced purposes, Palm Springs Oil #9 (68830 Highway 111) was listed with a case type of "Soil" and a case status of "Case Closed."

On November 1, 2017, Petra submitted a written request to review public records on the fire station site (36913 Date Palm Drive) and the Carl's Jr. site (68980 E. Palm Canyon Drive). On November 6, 2017, the County of Riverside Department of Environmental Health responded that there were records available for the Fire Station site (36913 Date Palm Drive) and the Carl's Jr. site (68980 E. Palm Canyon Drive). Records for Carl's Jr. were (in part) redacted. A brief summary is provided below.

Cathedral City Fire Department (36913 Date Palm Drive)

- County of Riverside Department of Health, Underground Storage Tank Monitoring Alternative Application, dated October 28, 1986 – one 1,000 gallon UST, installation date 1975. Type of monitoring equipment-inventory reconciliation. Product piping is suction.
- County of Riverside Department of Health Tank Permit, dated December 31, 1986.
- County of Riverside Department of Health Tank Permit, dated February 4, 1988.
- Cathedral City, Purchase Order, dated February 1990 – underground storage tank permits for 36-913 Date Palm Dr.
- County of Riverside Department of Health Tank Permit, dated February 22, 1991.
- RCDEH Underground Tank Permit, dated October 5, 1993.
- County of Riverside Hazardous Materials UST Data Sheet – undated. One 1,000 gallon diesel tank. Tank Year 1975. Operating fees paid June 10, 1986- November 10, 1993.
- Data Chart for Tank System Tightness Test, dated November 5, 1992 – passed.

- RCDEH Special Handler Disclosure permit (Class C), dated May 27, 1994.
- Underground Storage Tank (one) permit and Special Handler Disclosure, dated October 3, 1995.
- RCDEH Business Emergency Plan Inspection Report, dated October 24, 1996 – RCDEH noted violations due to absence of Business Plan, chemical inventory disclosure, emergency response plan, and improper labeling.
- RCDEH Supplemental Underground Storage Tank (UST) Official Inspection Report, dated October 24, 1996 – UST and pipeline not tested, no leak monitoring system and no inventory reconciliation. Records indicated last tank integrity test done on November 5, 1992. Dispenser must be calibrated.
- RCDEH Tank Integrity Test Report, dated November 18, 1996 - passed.
- RCDEH Business Emergency Plan Inspection Report, dated March 6, 1997 – facility requested that RCDEH exempt them from the disclosure requirement.
- Delinquent Account for RCDEH Underground Storage Tank UST permit for one underground tank, dated January 21, 1998.
- RCDEH UST Closure/Abandonment Application, dated March 9, 1998 – permit for removal of one 500 gallon diesel tank, steel construction.
- RCDEH Underground Storage Tank Closure Report, dated June 17, 1998 – one, 1,000 gallon diesel tank, no apparent holes.
- Tank Destruction Certificates, G&M Construction, dated July 7, 1998 – Plan Check No. 98-071, one 1,000 gallon diesel UST.

RCDEH records also contained a sampling report with analytical results of soils collected during UST removal, dated July 7, 1998, by G&M Construction. One sample was collected from a depth of 2 feet below the bottom of the middle of the UST excavation and one sample was collected from a depth of 6 feet. Both samples were tested for Fuel Hydrocarbons by Modified EPA Test Method 8015. Results were reported as "non-detect" for gasoline, mineral spirits, kerosene, diesel fuel and heavy hydrocarbons. RCDEH issued a "No Further Action" letter dated August 4, 1998. A copy of the soil sampling report, map of the former UST location, and the RCDEH letter is provided in Appendix B.

Carl's Jr. #724 (68980 E. Palm Canyon Drive)

County of Riverside Department of Environmental Health, Certified Unified Program Agency Hazardous Materials Management Permits were issued yearly for the restaurant from March 28, 2007 to March 31, 2016. The regulated activity was listed as "special handler." A February 29, 2008 Unified Program Consolidated, Business Activities form noted that the site is not an UST facility. A County of Riverside Department of Environmental Health (RCDEH) Change of Status form, dated February 23, 2004, reported the Carl's Jr. as a "new facility" and a "new permit." The purpose of the change of status was to identify a carbon dioxide tank within the restaurant (bulk liquefied, non-flammable compressed gas). A RCDEH

Hazardous Materials Disclosure Re-Inspection report, dated May 10, 2016, indicated that a previous violation for not providing training plan/procedures for the carbon dioxide tank was corrected.

Geophysical Survey

A geophysical survey of the subject site area, consisting of 7 parcels, took place on October 11 and 12, 2017. The first day survey consisted of the Carl's Jr. parcel at the northwest corner of Palm Canyon Drive and Date Palm Drive, and the Cathedral City Fire Station parcel at the southwest corner of Date Palm Drive and Buddy Rogers Avenue. The remainder of the contiguous parcels, located along Palm Canyon Drive, were surveyed the second day.

Interpretation of data took place in real time as each of the surveys progressed. Based upon these interpretations, anomalies were marked on the ground surface with spray paint for delineation and documentation. Ultimately, each delineation was marked and photographed. Explanation of the colored markings, photographs and radar images of each detected anomaly are included in Appendix A.

The area surveyed within the fire station parcel included the fenced parking area west of the building, as well as the asphalt-paved drive area outside the fencing to the west. Interpretation of data indicated that the anomalies detected were directly related to existing underground utilities. Based upon the absence of unusual anomalies detected on the fire station parcel, no delineation and colored surface markings were completed.

As expected on a commercially-developed site, multiple anomalies were detected within exterior areas of the Carl's Jr. parcel. Of note were at least six small manhole covers observed in the northeasterly portion of the parking lot, between the driveway entrance off Date Palm Drive and the drive-thru entrance; however, a few manholes were also observed along the west side of the parking spaces along Date Palm Drive, between the existing sewer lines, grease trap and northeast driveway entrance. A seventh isolated manhole cover was observed near the southwestern portion of the parcel, near an existing active sewer manhole. These manholes were labeled as either "water" or "sewer." Further assessment indicated one capped vertical pipe at each location. Where assessed, the pipes extending to a depth of approximately 18 feet below the ground surface, and no fluids were encountered at the time. Discussions with Mr. Ed Luna, maintenance personnel for the Carl's Jr. restaurant (onsite at the time), indicated that he was not aware of the purpose of these subsurface pipes, and he was not aware of a septic system ever being used by the restaurant. The purpose of these pipes is not known, but they may be remnants of a former septic system.

Also discovered during the survey of the Carl's Jr. site was a 40 foot by 28 foot rectangular-shaped anomaly in the southeastern portion of the parking lot. Historical aerial photographs indicated development of this intersection corner, from sometime before 1966 to sometime after 1972 and before 1978, was similar to that of a gasoline service station (Petra, 2017): however, our review of readily available agency records provided no verification. Based upon our interpretation of what appeared to be pump island canopies in aerial photographs, the ground penetrating radar anomaly found in the southeast corner of this site what is interpreted to possibly be a former underground storage tank backfill area.

Within the six contiguous vacant parcels fronting Palm Canyon Drive, nine electromagnetic and three ground penetrating radar anomalies were discovered. What appeared to be an irregularly-shaped feature was interpreted underlying the former footprint of the Goody's Restaurant. Interpretation of this feature suggests a possible concrete foundation. The remainder of anomalies was interpreted as junk piles, shallow junk pipe, metal debris and small concrete structures. A detailed description, interpretation and conclusions of the geophysical survey including color aerials and photographs are provided in Appendix A.

CONCLUSIONS AND RECOMMENDATIONS

Based upon geophysical survey results and our requests for a physical review of additional Regional Water Quality Control Board, Riverside County Department of Environmental Health, Cathedral City, and County of Riverside records pertaining to the seven parcels, no information is readily available that either confirms or denies the existence of former gasoline service stations, auto repair facilities, and/or underground fuel storage tanks within the subject parcels, except the following:

1. Riverside County Department of Environmental Health (RCDEH) records indicated that one 1,000 gallon diesel underground storage tank was installed within the Cathedral City Fire Department Station in 1975. The fire station, located at 36913 Date Palm Drive, Cathedral City, California 92234 is identified as APN 687-202-015. Analytical test results of soil samples collected from beneath the UST removal excavation (June 17, 1998) reported non-detect levels of petroleum hydrocarbons in the gasoline to heavy hydrocarbon range. No odors, staining and no apparent holes in the steel UST were noted. RCDEH provided a "no further action" letter regarding the UST abandonment removal on July 4, 1998. Based on this information, as well as the site receiving a "no further action" status from RCDEH, this site is not considered a recognized environmental condition at this time. No further assessment is recommended at this time.

2. Our interpretation of aerial photographs and historic agency database records (Petra, 2017) indicated that a gasoline service station more than likely existed at 68980 E. Palm Canyon Drive (APN 687-208-015) from at least 1966 to sometime after 1972 and before 1978. No agency records, however, were found pertaining to the historic station located at the northwest corner of Date Palm Drive and E. Palm Canyon Drive. The site has apparently been occupied by a Carl's Jr. Restaurant from at least 2004 to the present. Based upon the absence of permits and/or documents verifying the service station location and status of the underground fuel storage tanks, a geophysical

survey was undertaken on the parcel. Results of the survey (provided in Appendix A) suggested that a backfilled, former underground storage tank excavation was likely situated in the southeastern portion of the Carl's Jr. parking lot. Subsurface assessment of the possible former tank excavation is recommended to evaluate the potential for detectable levels of petroleum hydrocarbon soil residues to exist at elevated concentrations requiring remediation.

3. No agency records were found pertaining to the three remaining contiguous parcels east of Carl's Jr., along the north side of E. Palm Canyon Drive (APN's 687-208-022 through -026). Based upon the absence of permits and/or documents verifying the use of the properties and/or the existence of former underground/aboveground fuel storage tanks, a geophysical survey was undertaken on the parcels. Results of the survey (provided in Appendix A) found no anomalies suggesting a backfilled, former underground storage tank excavation within the parcels. From an environmental viewpoint, these parcels are not considered to represent a recognized environmental condition at this time. No further assessment is recommended at this time.

   The geophysical survey did, however, encountered buried concrete structures and/or debris within these five parcels, particularly APN 687-208-024 through -026. While it appears unlikely that these buried items represent recognized environmental conditions, it cannot be entirely precluded. As such, an experienced environmental consultant should monitor excavation and removal of these items. Any areas exposed during removal and/or rough grading exhibiting discolored soils or noxious odors should be left undisturbed until an experienced environmental consultant has conducted an evaluation of the soils for potential environmental conditions.

LIMITATIONS

The limited environmental scope of work described herein provided subsurface information regarding potential Recognized Environmental Conditions within the subject property. This information is a means to evaluate whether underground storage tanks or piping remain within the parcels from former gasoline stations and auto repair shops active in the 1960's and 1970's, delineation of former UST excavations, and location of future environmental borings as needed.

Since no environmental evaluation can wholly eliminate uncertainty regarding potential recognized environmental conditions, some uncertainty regarding potential recognized environmental conditions at the site may remain at the conclusion of this evaluation.

Subject: Geophysical Survey
Multiple properties near intersection of
Date Palm Dr & US Hwy 111
Cathedral City, California

Project Number: 17-427

This report is to present the results of our geophysical survey carried over multiple properties located near the intersection of Date Palm Drive and US Highway 111 in Cathedral City, California (Figure 1), on October 11th and 12th, 2017. Purpose of the survey was to locate and identify, insofar as possible, the existence of any underground storage tanks (USTs), backfilled excavations, piping, conduit, and other buried features that may exist within all the accessible exterior portions of three separate properties designated in the field by the client.

A combination of electromagnetic induction (EM), magnetometry, and ground penetrating radar (GPR) were applied to the search. A utility locator with line tracing capabilities was also brought to the field and used where risers exist onto which a signal could be impressed and traced.

FIGURE 1 –Site Location Map (Map data ©2017 Google)

Survey Design – Although the survey objective was the same, the survey approach was different at each specific site.

Site 1 (Figure 2a): *Carls Jr, 68980 East US Hwy 111, Cathedral City, CA.*

The area to be surveyed for this site included all accessible exterior portions of the subject property.

The magnetic gradiometer, line tracer, EM61, M-Scope and GPR were systematically traversed in many directions over the entire property. Additional traverses were taken, access permitting, for detailing and confirmation where anomalous conditions were found. Multiple GPR profiles were also collected throughout the area and in specific areas for confirmation where other instruments detected anomalies. The line tracer was also used to trace out all detectable utilities in the area.

Because this was an active business a hard copy of the EM data was not acquired, that is, discrete readings on the nodes of a grid were not recorded that could be put into a contoured map format. Rather, the instruments' meters were read continuously, and in real-time, during each traverse. This free-traversing method allowed for immediate detection of anomalous objects and facilitated the opportunity to investigate them further, without first having to download data in the office. The lack of hard copy for EM data sets does not degrade the quality of the survey in any way.

The line tracers were used to impress signals onto pipes, generally through accessible risers and tracer wires when present, to delineate the lines' locations and orientations. The instruments were also used in passive mode, configured to detect 60 Hz electrical signals and other common radio-frequency signals.

Site 2 (Figure 2b): *Empty Lot, 68950 East Palm Canyon Drive, Cathedral City, CA.*

The area to be surveyed for this site included all accessible portions of the subject property sandwiched between Carls Jr, East Palm Canyon Drive and Dawes Street.

A rectilinear grid was established over this area to guide the acquisition of recorded data. It was a triangular grid measuring 380 feet wide and 170 feet long in its longest dimensions. The EM61 was then used to collect EM data at 0.66 foot intervals along south trending grid lines spaced 5.0-feet apart. This data was then downloaded for further analysis where anomalous conditions were encountered.

The magnetic gradiometer, line tracer, EM61, M-Scope and GPR were then traversed systematically in many directions over the area. Additional traverses were taken, access permitting, for detailing and confirmation where anomalous conditions were found. Multiple GPR profiles were also collected throughout the area and in specific areas for confirmation where other instruments detected anomalies. The line tracer was also used to trace out all detectable utilities in the area.

Site 3: *Cathedral City Fire Department Station #411, 36913 Date Palm Drive, Cathedral City, CA.*

The EM61 and GPR were traversed in a reconnaissance mode over all the accessible exterior portions of this property in attempts to locate and identify, insofar as possible, the existence of any underground storage tanks (USTs), and/or backfilled excavation candidates. If such candidates exist, then a full geophysical investigation would commence.

A Geonic's model EM61 and a Fischer M-Scope was used for the EM sampling. A Sensors and Software Noggin Ground Penetrating Radar unit with a 500 MHz antenna produced the radar images. The magnetic gradiometer was a Schonstedt GA-52, and a Metrotech 9890 and RIDGID SR-60 SeekTech utility locator rounded out the tools applied.

Brief Description of the Geophysical Methods Applied - The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz), VLF signals (14-22 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the object, and a signal (9.8-82 kHz) is sent traveling along the conductor, pipe, conduit, etc. In the absence of a riser, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

The EM61 and EM61MK2 instruments are high resolution, time-domain devices for detecting buried conductive objects. They both consists of a powerful transmitter that generates a pulsed primary magnetic field when their coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instruments are super-sensitive metal detectors. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets up to 12-feet below ground surface depending on target size.

Standard total-field magnetic surveying employs a small, portable magnetometer to measure changes in the Earth's total magnetic field intensity, and can detect variations as minute as 0.1 nanoTeslas (nT). Non-native buried ferrous objects will distort the Earth's magnetic field immediately around the object resulting in sudden spatial variations that deviate suddenly and unexpectedly from the Earth's normal background levels; and the location of these sudden distortions generally correspond to the location of the anomalous object. Note that USTs and other large metallic objects produce highly robust anomalies with amplitudes deviating up to 2000 nT above background and are thus relatively easy to locate with this geophysical method.

The magnetic gradiometer has two flux gate magnetic fixed sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits a sound signal at a low frequency. When the instrument passes over a buried iron or steel object, so that locally there is a high magnetic gradient, the frequency of the emitted sound increases. The frequency is a function of the gradient between the two sensors.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at a boundary in the subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth of penetration and image resolution produced are a function of ground electrical conductivity and dielectric constant, but generally averaged approximately 10-feet below ground surface.

The TW-6 M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field

produced by these eddy currents, and outputs the response to a meter in the form of ground conductivity values for the M-Scope. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 7-feet for the M-Scope are sensed. The devices are also somewhat focused; that is, they are more sensitive to conductors below the instrument than they are to conductors off to the side.

Interpretation and Conclusions – The interpretation took place in real time as the survey progressed, and accordingly, the findings of our investigation were marked on the ground cover with spray marking paint and further documented with two Google™ earth maps (Figures 2a and 2b); along with site photographs and radar images of each detected anomaly (Figures 3-50).

Piping and utilities detected during the survey were marked with spray marking paint on the ground cover using red for electric, yellow for gas, orange for communications (dark orange in graphics), green for sanitary sewer/storm drain, pink and white for lines of unknown utility type (dark pink in graphics), pink was also used for EM Anomalies (light pink in graphics), and orange was used for GPR Anomalies (light orange in graphics). Please note that green marking paint was used to delineate GPR Anomaly's #2, #3 and #4 for visualization purposes; however, light orange was used in all graphic pages.

There were 18 metallic anomalies and 4 non-metallic anomalies detected within the boundaries of the first two survey areas. Dimensions and characteristics are listed on the chart below.

EM	Figures	Dimension	~depth	Characteristics:	Possible object
1	3, 4	5' x 6'	Unknown	No definitive radar imagery	NA
2	5, 6	4' x 10'	1.0' to 3.0'	Flat and hyperbolic feature	Concrete + UST
3	7, 8	6' x 6'	2.0'	Hyperbolic feature	Junk pipe
4	9, 10	5' x 6'	1.5'	Hyperbolic feature	Merging pipes
5	11, 12	5' x 5'	1.0'	Subtle flat segment	Concrete
6	13, 14	7' x 4'	<1.0'	Small hyperbolic features	Shallow junk pipes
7	15, 16	5' x 4'	1.5' to 2.0'	Flat feature	Concrete
8	17, 18	9' x 3'	Unknown	No definitive radar imagery	NA
9	19, 20	12' x 10'	Unknown	Backfilled excavation-like feature	Debris pile
10	21, 22	4' x 3'	2.0'	Hyperbolic feature	Junk pipe
11	23, 24	4' x 3'	Unknown	No definitive radar imagery	NA
12	25, 26	4' x 9'	<1.0'	Near surface hyperbolic feature	Junk pipe
13	27, 28	2' x 4'	<1.0'	Small hyperbolic features	Shallow junk pipes
14	29, 30	3' x 4'	Unknown	No definitive radar imagery	NA
15	31-34	35' x 45'	1.0'	Flat underground feature	Concrete foundation
16	35, 36	4' x 4'	Unknown	No definitive radar imagery	NA
17	37, 38	4' x 9'	1.5'	Flat feature	Metal junk debris
18	39, 40	5' x 5'	1.5'	Hyperbolic features	Shallow junk pipes

GPR	Figures	Dimension	~depth	Characteristics:	Possible theory
1	41-44	40' x 28'	Unknown	Backfilled excavation-like	Former tank hold
2	45, 46	7' x 7'	2.0'	Non-metallic flat feature	Concrete structure
3	47, 48	7' x 7'	2.0'	Non-metallic flat feature	Concrete structure
4	49, 50	7' x 7'	2.0'	Non-metallic flat feature	Concrete structure

Although it is possible that any localized underground metallic object could be a potential candidate for a UST, the use of geophysical instrumentation can potentially limit and/or rule out these anomalous conditions. As can be seen on the chart above, most EM Anomalies were likely attributed to near surface junk piping. In some cases the underground metallic object associated with each EM Anomaly is not definitive on the radar system so the object itself is unknown aside from its known metallic content. This was the case for EM Anomalies #1, #8, #11, #14 and #16. There was one candidate anomaly; however, that possessed both metallic content along with a hyperbolic feature at a common depth, 3.0 feet, to an underground storage tank, EM Anomaly #2. It should be noted however, that the EM and magnetic instruments may have been responding to a near surface flat layer viewed at approximately 1.0' to 1.5' bgs. If this near-surface underground feature does indeed possess metal, and is the true cause of the high EM response, then it might be less likely that the 3.0 foot deep hyperbolic feature is metallic as well.

There were four radar anomalies detected within the boundaries of the survey. GPR Anomaly #1 possessed backfilled excavation-like characteristics and contains no metal with its boundaries. Based on information along with historical figures provided in the field by the client, this was the most likely locale for former underground storage tanks. Numerous traverses were taken around the Carls Jr property and this was the best backfilled excavation candidate.

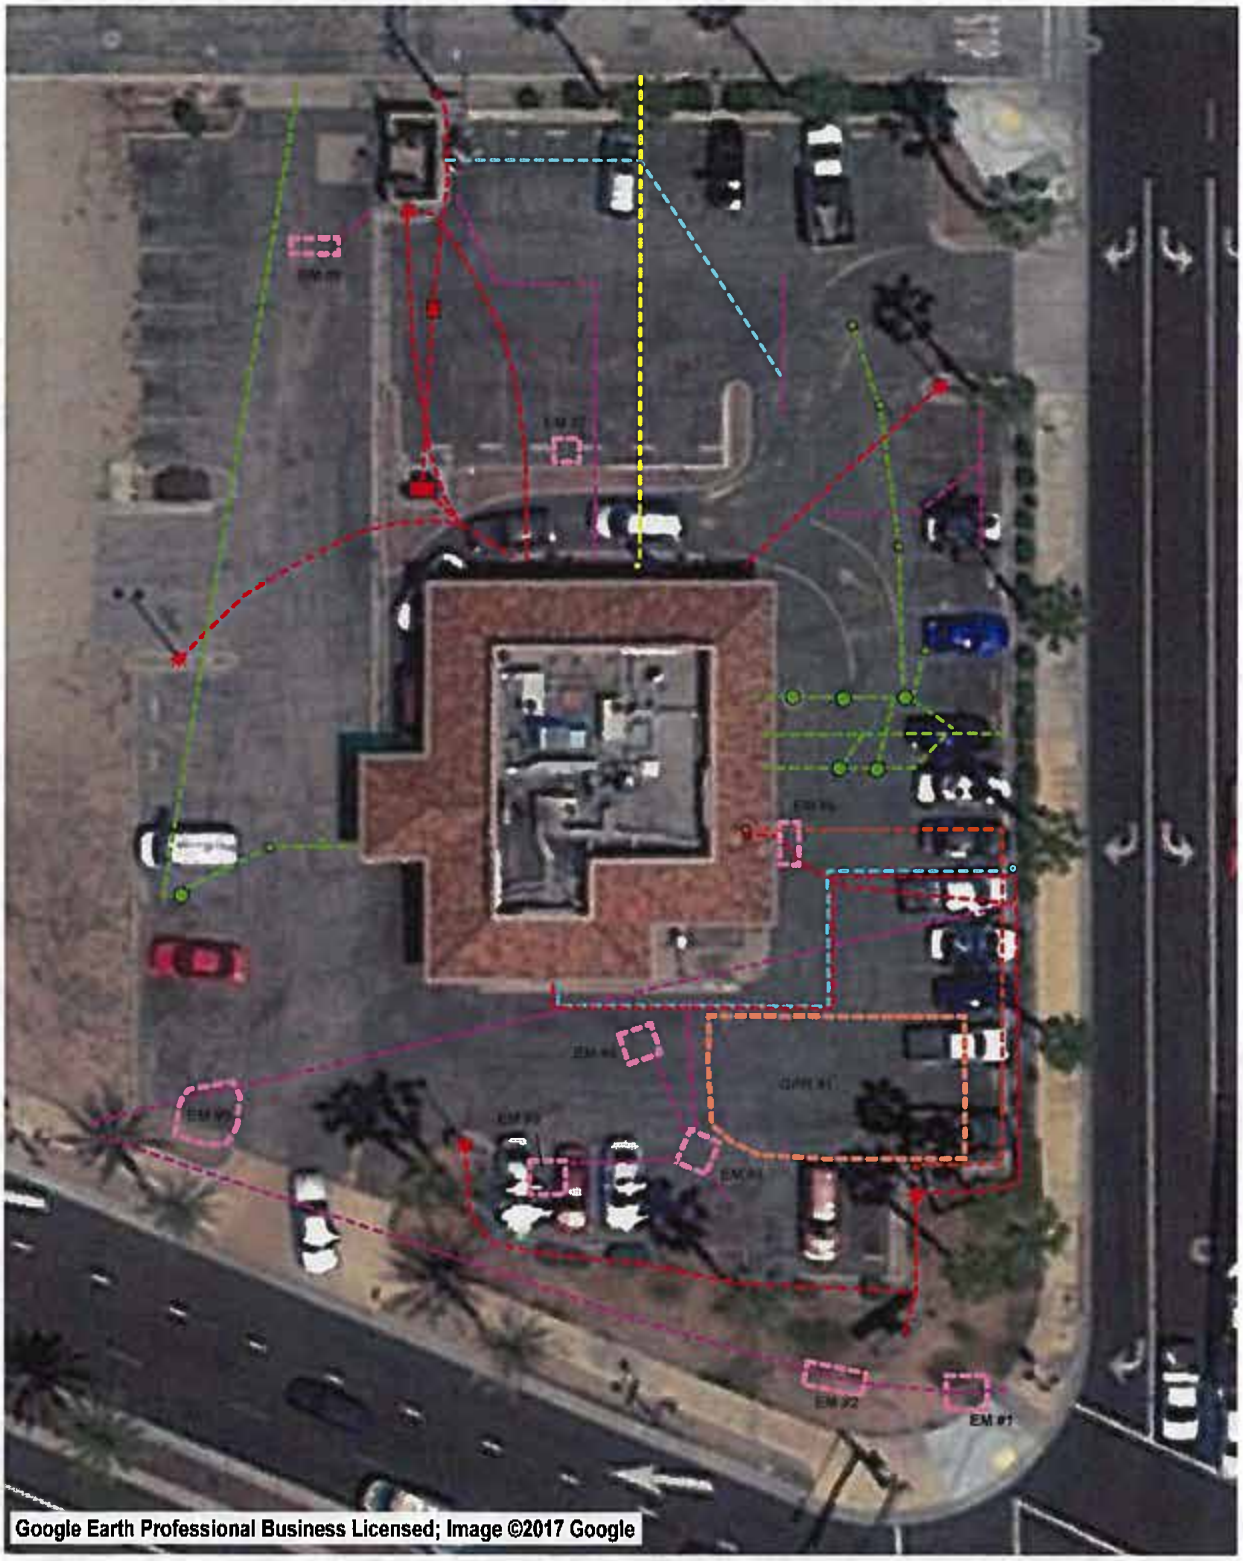
The other three non-metallic anomalies were located on adjacent empty lot (GPR Anomalies #2, #3 and #4). Each of these anomalies possessed the same reflective characteristic at approximately 2.0 feet bgs. Although these anomalies do not contain metal, and it is most likely a concrete pad, it is still recommended that ground truthing be performed by Petra Geosciences to determine the cause of this reflective layer.

It should be noted that there was no detected geophysical evidence for an existing underground storage tank or a backfilled excavation at the Cathedral City Fire Department Station #411.

Limitations and Further Recommendations - It should be understood that limitations inherent in geophysical instruments and/or surveying techniques exist at all sites, and nearly all sites exhibit conditions under which instruments might not perform optimally. Consequently, the detection of buried objects in all circumstances **cannot be guaranteed**. Such limitations are numerous and include, but are not limited to, rebar-reinforced ground cover, abrupt changes in ground cover type, above-ground obstacles preventing full traverses or traverses in one direction only, above-ground conductive objects interfering with instrument signal, nearby powerlines or EM transmitters, highly conductive background soil conditions, limiting GPR penetration, non-metallic targets, shallower or larger objects shielding deeper or smaller targets, tracing signal jumping from one line to another, and inaccessible risers, cleanouts, valve boxes, and manholes. If one or more geophysical instrument is rendered ineffective and cannot be utilized, the quality of the survey can be somewhat degraded.

For the above reasons, and in the interest of maximum safety, we encourage our clients to take advantage of Underground Service Alert (USA), Dig Alert, or other similar services, when possible. Furthermore, we recommend hand-auguring and the use of a drilling method known as air knifing and vacuum extraction, when feasible or if applicable to this project. These methods may significantly limit damage to underground pipes, conduits, and utilities that might not have been detectable during the course of this survey. Please bear in mind,

that geophysical surveying is only one of several levels of protection that is available to our clients.



SubSurface Surveys may include maps in some reports. While they are an accurate general representation of the site and our findings, they are not of engineering quality (i.e., measured and mapped by a licensed land surveyor).

SubSurface Surveys and Associates makes no guarantee either expressed or implied regarding the accuracy of the findings and interpretations present. And, in no event will SubSurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from interpretations and opinions presented herewith.

All data acquired in these surveys are in confidential file in this office, and are available for review by your staff, or by us at your request, at any time. We appreciate the opportunity to participate in this project. Please call, if there are questions.

Mr. Michael Youngberg
Cathedral City Fire Department
P.O. Box 5001
Cathedral City, CA 92235-5001

Re: Underground Storage Tank Closure Plan Check #98-071 for
1 tank at 36913 Date Palm Drive, Cathedral City, CA 92234.

Dear Mr. Youngberg:

This letter confirms the completion of the underground storage tank closure of 1 tank at the above site. Based on the assumption that the information provided to this agency was accurate and representative of the existing conditions, it is the position of this office that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site, which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

If you have any questions regarding this matter, contact this office at (760) 863-8976.

Sincerely,

Bradley Ballen
Hazardous Materials Specialist III

NORTH SITE – SECOND PHASE OF PHASE II

February 12, 2018
J.N. 17-246

AGUA CALIENTE BAND OF CAHUILLA INDIANS
5401 Dinah Shore Drive
Palm Springs, California 92264

Attention: Ms. Margaret Park

Subject: **Second Phase of Limited Phase II Environmental Evaluation; *Fee to Trust Application*, 68980 E. Palm Canyon Drive, APN's 687-208-015, Cathedral City, Riverside County, California 92234**

References: See Attached List

Dear Ms. Park:

As requested, **Petra Geosciences, Inc. (Petra)** is submitting the results of the second phase of a Limited Phase II Environmental Evaluation on the parcel at 68980 E. Palm Canyon Drive (Highway 111), Cathedral City, California. The purpose of this second phase was to evaluate the potential for detectable concentrations of petroleum hydrocarbon residues to exist is soils associated with a former service station underground storage tank pit identified at the northwest corner of Palm Canyon Drive and Date Palm Drive, in Cathedral City, California (Figure 1).

Brief Site Location and Description

The subject property, located at 68980 E. Palm Canyon Drive, Cathedral City, California is occupied by a Carl's Jr. Restaurant. The property is identified by Riverside County Assessor's Parcel Number (APN) 687-208-015. The roughly rectangular-shaped parcel is comprised of a single-story fast-food restaurant in the southern half of the site. A drive-thru isle is located along the north and west sides of the building. The remainder of the property is asphalt paved drive isles and parking. Landscape vegetation is situated along the east property boundary with Date Palm Drive, and along the south boundary with Palm Canyon Drive. Dawes Street is located along the north edge of the parcel. Vacant parcel APN 687-208-022 is located to the west.

According to the Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System (2017), the site is located within Section 33, of Township 05 South, Range 05 East, within the San Bernardino Base and Meridian. A United State Geological Survey (USGS) topographic map of the Cathedral City Mirage 7.5-Minute Quadrangle (2012) indicates that the site slopes in a northerly direction.

Information provided on the topographic map indicate elevations onsite range from 300± feet to 320± feet above mean sea level (msl). A site location map is included as Figure 1.

Background

Petra completed a Phase I Environmental Site Assessment (ESA) on a 13.6 acre property in Cathedral City, bounded by Palm Canyon Drive on the south, Date Palm Avenue on the east, and Buddy Rogers Avenue on the north (Petra, 2017a). Five former and one current occupant of the overall property were identified during our Phase I ESA as either historic gasoline stations and/or vehicle repair shops, and an existing fire station, where records indicate or suggest underground storage tanks (USTs) were present, and where the potential existence for petroleum hydrocarbon-based soil and/or soil vapor residues may be detected cannot be entirely precluded.

One of the sites, Palm Springs Oil #9, 68830 Palm Canyon Drive (APN 687-205-005), was identified as a former LUST case where soil vapor extraction remediation reportedly removed most of the subsurface contamination. The case was closed in 2006 by the County of Riverside with hydrocarbon soil vapors left in-place at a depth of approximately 48 feet. The site was closed with no restrictions to redevelopment. This site is considered a HREC. At this time, however, no further assessment is recommended.

The six sites were identified as Potential Recognized Environmental Concerns (PRECs). Based upon interpretation of aerial photographs and the address listed in the U.S. Environmental Protection Agency's Facility Index System/Facility Registry System (FINDS) database, the Carl's Jr. restaurant site was likely a gasoline service station which existed at 68980 E. Palm Canyon Drive (APN 687-208-015) from at least 1966 to sometime after 1972 and before 1978 (Petra, 2017a).

Three of the sites within the property were identified as EDR Historic Auto Stations: Pyles Robert (service station), 68904 Palm Canyon Drive (APN 687-205-024, -025 and -026); Bob's Choice Cars, 68920 E. Palm Canyon Drive (APN 687-205-023); and Auto Truck Repair, 68930 E. Palm Canyon Drive (APN 687-208-022). One of the sites, Bob's Choice Cars and Auto Truck Repair were also listed in the EDR City Directory Search (Petra, 2017a). The Existing Cathedral City Fire Station (36913 Date Palm Drive [APN 687-202-015]) was reported to contain a 1,000 gallon diesel UST from 1975 to at least 1988. Based solely upon interpretation of aerial photographs, the sixth site is considered likely a gasoline service station which existed at 68980 E. Palm Canyon Drive (APN 687-208-015) from at least 1966 to sometime after 1972 and before 1978. No regulatory oversight agency database records were found for these four

former and one active onsite facilities indicating removal of USTs or cleanup of soil residues. As a result, these sites are considered potential REC's (Petra, 2017a).

Petra recommended, therefore, an initial Phase II Environmental Evaluation to ascertain whether USTs and/or piping remain buried within the five aforementioned properties, as well as to aid in evaluating potential environmental boring locations. The first phase of environmental evaluation included geophysical surveys within the five potential REC sites. Results of the initial Phase II Environmental Evaluation are provided in a separate report by Petra, dated December 2, 2017.

In addition to numerous underground utility conduits, and what may be remnants of a former septic system discovered during the survey of the Carl's Jr. site (68980 E. Palm Canyon Drive), was a 40 foot by 28 foot rectangular-shaped anomaly in the southeastern portion of the parking lot. Historical aerial photographs indicated development of this intersection corner, from sometime before 1966 to sometime after 1972 and before 1978, was similar to that of a gasoline service station (Petra, 2017a); however, our review of readily available government and/or regulatory agency records provided no verification. Based upon interpretation of what appeared to be pump island canopies in aerial photographs, the ground penetrating radar anomaly found in the southeast corner of this site was interpreted to possibly be a former underground storage tank backfill area (Petra, 2017b).

As a result, Petra conducted subsurface exploration in the geophysical anomaly area to evaluate soils associated with the former gasoline service station at the Carl's Jr. Restaurant parcel (Figure 1). Soil samples collected from the borings were analyzed to assess the potential for detectable levels of petroleum hydrocarbon soil residues to exist at elevated concentrations within what is likely considered the former service station's UST excavation (Petra, 2017b).

Environmental Setting

The following section provides a limited overview of the regional and local geologic setting and includes information pertaining to groundwater conditions in the vicinity of the subject site. Geotechnical hazard information (faults, landslides, etc.) is not part of this assessment. This section does not constitute a geotechnical evaluation of the subject site and should not be taken as such.

Geology

A regional geologic map of the subject property and vicinity maps the majority of the site as being underlain predominantly by Late Holocene Alluvial Wash Deposits and Holocene to late Pleistocene Young Alluvial Fan Deposits (Lancaster, Hayhurst & Bedrossian, 2012). Alluvial Wash deposits, mapped over half of the

site, are described as unconsolidated sandy and gravelly sediment deposited in recently active channels of streams and rivers. Alluvial Fan deposits are described as unconsolidated to slightly consolidated, undissected to slightly dissected boulder, cobble, gravel, sand, and silt deposits issued from a confined valley or canyon.

Soils encountered in the 3 borings placed within the subject property were found to consist of predominantly light brown, slightly moist, silty fine- to coarse-grained sand to a depth of 25 feet below the ground surface. Minor gravel was encountered below a depth of 15 feet.

Groundwater

The site is located within the Coachella-Indio Groundwater Sub-Basin (California Department of Water Resources [CDWR], Water Data Library, 2017), and the Whitewater-Coachella-Indio CALWATER Watershed. Groundwater depth varies within the area, and though recent flow direction beneath the subject site is unknown, it is regionally estimated to parallel the Whitewater River in a southeasterly direction.

A 2006 Case Closure Summary report from a leaking underground fuel storage tank (LUST) facility on the subject property (APN 687-205-005, at 68830 Highway 111, Cathedral City, California) estimated groundwater at depths on the order of 220-260 feet below the ground surface (bgs). The flow direction was not reported.

SCOPE OF SERVICES

Petra conducted limited Phase II soil testing of subsurface soils to evaluate an area of potential environmental concern as discussed above. Laboratory testing would identify detectable petroleum hydrocarbon soil residues in excess of regulatory screening levels that may be required remediation under the applicable oversight agency (Riverside County Department of Environmental Health).

Soil samples were collected from three geoprobe (direct push) borings placed within the former UST pit area identified by the geophysical survey (Petra, 2017b). Soil samples were collected at depth intervals of five feet. Samples were also field screened for volatile petroleum hydrocarbon vapors using a hand-held photo-ionization detector (PID) meter. All samples collected during the sampling phase will be submitted under chain-of-custody documentation to a state-certified laboratory. All borings were backfilled with bentonite granules and capped with cold-patch asphalt.

Petra completed the following services:

Task 1 – Preparation. Petra conducted a site visit prior to field exploration to mark-out borings. As required by law, Petra notified Underground Services Alert (USA) at least 48 hours prior to conducting field operations (Dig Alert Ticket A180162292).

Task 2 - Soil Sampling. Petra collected soil samples from three Geoprobe (direct push) borings within the former UST pit area identified by the geophysical survey. Discrete soil samples were collected at depth intervals of five feet to a maximum depth of 25 feet below the ground surface. Samples were hand cut from the acetate liner at a 0.5± foot length, immediately capped with Teflon sheets and a plastic cap, and properly labeled with a unique number. Samples were properly labeled with sample date, time, boring location and depth, and placed in a chilled cooler for transport to a certified testing laboratory. Sampling equipment was pre-cleaned onsite before boring operations begin and cleaned onsite between each boring.

Discrete soil samples were also field screened for volatile organic vapors using the hand-held PID meter. No detectable volatile organic vapors were recorded.

Quality Control Samples

Petra collected quality control samples, consisting of field duplicates and equipment rinsates. Typically, one in every ten discrete samples, per analysis, will require a duplicate. One duplicate soil sample was collected for analysis. Equipment rinsates will be tested upon detection of elevated levels of petroleum hydrocarbon soil residues.

Task 2 - Laboratory Analysis. All samples collected during the sampling phase were submitted under chain-of-custody documentation to a state-certified laboratory. Sample analysis will be conducted on a standard turn-around basis of approximately 7 to 10 working days.

Samples collected from depths of 10, 15, 20 and 25 feet below the ground surface will be discretely tested. Samples collected from a depth of 5 feet below the ground surface were archived by the laboratory, pending analysis results. Samples collected will be analyzed discretely for total lead according to EPA Test Method 6010B/7471A, Total Petroleum Hydrocarbons (TPH)-carbon chain by EPA Test Method 8015B, and pH using EPA Test Method 9045.

Task 3 – Data Evaluation and Reporting. Petra reviewed the laboratory findings and a summary of the results of the subsurface soil evaluation are discussed below. A copy of the laboratory results and chain-of-custody form is provided in Appendix A.

SAMPLING PROTOCOL

Soil Sampling

All soil borings were completed utilizing a 2.5-inch diameter direct push rig. Samples collected from the direct push borings were collected in situ using new acetate liners. The discrete soil samples were cut to a 0.5-1.0 foot length and the ends were immediately covered with Teflon sheets and sealed with a tight-fitting plastic cap. The soil samples were immediately sealed with a cap and placed in a cooler with ice for

subsequent laboratory analysis. Chain-of-custody procedures, including sample labeling, preservation, and handling protocols were followed for identification and tracking of all samples obtained.

All samples collected were transported to, and analyzed by Enviro-Chem, Inc. in Pomona, California, (a state certified laboratory). Sample security was maintained and documented using sample labels and chain-of-custody records. Copies of the official laboratory reports and chain-of-custody records are included in Appendix A.

Petra conducted the limited Phase II Environmental Evaluation within the subject property on January 22, 2018. A discussion of the field activities is provided below. The boring locations are shown on Figure 2.

Field Activities

To assess the potential for elevated levels of petroleum hydrocarbon soil residues associated within what is estimated to be the backfilled UST tank pit of the former service station, a total of 3 shallow borings (DP-1 through DP-3) were excavated on the site to a depth of either 20 or 25 feet below the ground surface. Soil samples were collected at 5 foot intervals. Once completed, all borings were backfilled with bentonite granules and capped with asphalt cold-patch. Boring locations are depicted in Figure 2.

Laboratory Analysis

All soil samples analyzed during this assessment were analyzed by Enviro-Chem, Inc. (ECI) in Pomona, California. ECI is accredited by the California Environmental Protection Agency, Department of Health Services, Environmental Laboratory Accreditation Program (ELAP). Analyses were requested on a chain-of-custody record. Below is a discussion of the laboratory results.

The following analytical tests were performed:

- Total lead using EPA Method 6010B/7471A
- pH using EPA Method 9045
- Total Petroleum Hydrocarbons (TPH) using EPA Method 8015M

Total Lead

The results for lead were reported ranging from 1.75 milligrams per kilogram (mg/kg) to 6.06 mg/kg. California Environmental Protection Agency (CalEPA) Human Health Screening Levels (CHHSLs) and USEPA Regional Screening Levels (RSLs) were evaluated for lead residues in soil pertaining to residential land use. A RSL of 400 mg/kg was listed for lead and compounds (USEPA, 2018) and a CHHSL of 80

mg/kg was listed (CalEPA, 2009). Test results for samples collected from the subject site are well below both regulatory screening levels for lead is residential soils. A summary of laboratory test results are provided in Table 1 below.

Total Petroleum Hydrocarbons (TPH) – Carbon Chain

Twelve discreet samples were tested for TPH-Carbon Chain. No concentrations were detected above the laboratory detection limit in the C4-C10 Gasoline Range, C11-C22 Diesel Range, and/or C23-C35 Motor Oil Range in any of the samples analyzed, except one sample from boring DP-1 at 10 feet, where 133 mg/kg TPH in the Motor Oil Range was recorded. Sample DP-1 at a depth of 15 feet detected no TPH. A summary of laboratory test results are provided in Table 1 below.

RSL's and CHHSL's for TPH-gas, TPH-diesel and TPH-motor oil are not available; however, they are provided in the 2013 San Francisco Bay Regional Water Quality Control Board's Environmental Screening Levels (ESLs). Considering deep soil (i.e., less than or equal to approximately 10 feet below the ground surface), and groundwater is a current or potential source of drinking water, the ESL for TPH-motor oil is 500 mg/kg.

pH

The results for pH were reported ranging from 8.41 to 8.61. These results are moderately to strongly alkaline. A summary of laboratory test results are provided in Table 1 below.

TABLE 1 – SUMMARY OF LABORATORY TEST RESULTS

Sample ID	TPH(1)-Carbon Chain (mg/kg)(2)	Lead (mg/kg)	pH
DP-1 @ 10'	TPH-gas & -diesel ND(3); TPH-oil 133 mg/kg	2.30	8.45
DP-1 @ 15'	ND(3)	3.14	8.42
DP-1 @ 20'	ND	2.3	8.44
DP-1 @ 25'	ND	2.62	8.41
DP-2 @ 05'	ND	1.75	8.61
DP-2 @ 10'	ND	6.06	8.54
DP-2 @ 15'	ND	3.14	8.45
DP-2 @ 20'	ND	2.25	8.47
DP-3 @ 10'	ND	2.58	8.60
DP-3 @ 15'	ND	2.30	8.59
DP-3 @ 20'	ND	3.26	8.54
DP-3 @ 25'	ND	2.93	8.43
Residential Regulatory Screening Level	TPH-gas, 500 mg/kg(4) TPH-diesel, 110 mg/kg(4) TPH-motor oil, 500 mg/kg(4)	80 mg/kg(5) 400 mg/kg(6)	<2 = pH(7) =12.5<

Notes: (1)-Total Petroleum Hydrocarbons (2) micrograms per kilogram
(3)-Non-detected or below the detection limit (4) - SF Bay RWQCB, 2013, Environmental Screening Levels
(5) California Human Health Screening Levels, CHHSLs (Cal EPA, 2010) (6) Regional Screening Levels, RSL's (US EPA, 2018)
(7) US EPA Hazardous Waste Criteria, Soils

CONCLUSIONS

Total Petroleum Hydrocarbons

Total Petroleum Hydrocarbons (TPH)-carbon chain (gasoline-, diesel- and motor-oil range) concentrations in the eleven of the twelve soil samples analyzed were reported below the laboratories PQL (i.e., non-detect). One soil sample collected from boring DP1 at a depth of 10 feet below the ground surface, reported a concentration of TPH-motor oil at 133 mg/kg. TPH was non-detect in the sample from DP-1 and 15 feet.

RSL's and CHHSL's for TPH-gas, TPH-diesel and TPH-motor oil are not available; however, they are provided in the 2013 San Francisco Bay Regional Water Quality Control Board's Environmental Screening Levels (ESLs). Considering deep soil (i.e., less than or equal to approximately 10 feet below the ground surface), and groundwater is a current or potential source of drinking water, the ESL for TPH-motor oil is 500 mg/kg.

Based on our Limited Phase II Environmental Evaluation of the former underground fuel storage tank pit, petroleum-based hydrocarbon residues in near surface soils onsite do not appear to represent a recognized environmental condition with regards to the site soils analyzed at this time. No further evaluation and/or testing appears warranted for the intended use of the subject property at this time.

Lead

Twelve discreet samples were tested for Lead. No concentrations were detected above the Total Threshold Limit Concentration (TTLC) for any of the individual elements tested in the samples.

The laboratory test results for detected concentrations of lead were reported as 1.75 mg/kg to 6.06 mg/kg. California Environmental Protection Agency (CalEPA) Human Health Screening Levels (CHHSLs) and USEPA Regional Screening Levels (RSLs) were evaluated for lead residues in soil pertaining to residential land use. A RSL of 400 mg/kg was listed for lead and compounds (USEPA, 2016) and a CHHSL of 80 mg/kg was listed (CalEPA, 2009). Both test results for samples collected from the subject site are well below both regulatory screening levels for lead in residential soils. No further evaluation and/or testing appears warranted for the intended use of the subject property at this time.

Recommendations

With redevelopment of any historically developed property, a certain amount of unknown conditions in the subsurface should be anticipated (i.e., buried debris and foundations, utility conduits, etc.). Any discolored soils or unanticipated buried objects should be left in place until an experienced environmental professional has had the opportunity to evaluate the conditions, and provide recommendations if needed.

LIMITATIONS

Petra has completed the above scope of work in general accordance with our Revised Supplemental Proposal No. 17-246, dated January 3, 2018. The work activities described herein were conducted to address the specific issues identified by the historical use of the property as a service station (as discussed in this report), and is not intended to assess all possible environmental concerns associated with the subject property. This limited assessment should not be inferred to be a numerical study of the subject property, but is reasonably intended to provide a preliminary assessment of property impacts from previous site use and/or the release of hazardous materials. If substantial signs of the presence of hazardous materials and/or petroleum contamination are not encountered during this assessment, this does not exclude their presence.

Involved Parties

This report was prepared by Petra Geosciences, Inc. (Petra), at the request of Agua Caliente Band of Cahuilla Indians, for their exclusive use. Use of this report or reliance thereon by other parties or projects is not authorized. The report may not be suitable for other parties or other purposes.

If you have questions regarding the content or terminology of these conditions, please contact us immediately. Revisions must be agreed upon by both parties prior to commencement of work.

Respectfully submitted,

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/30/2017 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 07/23/2017 has revealed that there are 5 FINDS sites within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2016 has revealed that there are 5 HAZNET sites within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 7 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and

operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 3 RGA LUST sites within approximately 0.001 miles of the target property.

FINDS:

Registry ID: 110002678460

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

WORLD OIL CO (Continued) **1000278380**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: ***Data prior to 2005 does not appear in GeoTracker. Consult agency file for all site data*** On February 23, 2004, 3-12K gasoline and 1-500 gallon waste oil tank were removed. Up to 1400 ppm TPHg was detected at 3 under dispenser 5, 36 ppb MTBE at 14 in the tank pit, 42 ppm TBA at 14 in the tank pit and 1.5 ppm ethanol at 14 in the tank pit. On March 13, 2004 the tank pit was over excavated down to 19. Up to 51 ppm TBA was detected at the bottom of the pit. 5 borings were drilled October 24-28, 2005 to 100-140. All borings had TPHd, up to 53 ppm. All borings had TPHg, up to 7.8 ppm. All borings had MTBE, up to 13 ppm, and all borings had TBA, up to 52 ppm. Detectable concentrations of hydrocarbons were detected to 140 where the boring was terminated. Two borings were converted to dual nested vapor wells. VE-1 was screened from 15-25 and 30-45. VE-2 was screened from 15-30 and 35-45. Monitoring well MW-1 was drilled March 23-24, 2006. Groundwater was encountered at 193. Up to 0.21 ppm MTBE was detected in the soil. A grab water sample was obtained prior to development and 48 ppb MTBE was detected. A water sample was taken on March 29, 2006 and showed 11 ppb MTBE. Based on the results of the grab sample,

SHELL STATION (Continued) **S105023150**

one additional boring and two additional wells were installed March 30 through April 5, 2006. Up to 8.6 ppm MTBE and 210 ppm TBA was detected in the soils. An additional boring was drilled June 5, 2006 to 100 near the north property line. 10 ppm TPHd was detected at 10 and 2.5 ppm naphthalene was detected at 35. Another boring was drilled in the old tank pit to 45 and a nested SVE well was installed, screened from 22-27 and 35-45. A maximum of 2.4 ppm TPHg was detected at 35, MTBE was detected to a maximum of 0.82 to 30 and TBA was detected t a maximum of 90 ppm at 30. SVE-4 was installed April 14, 2006 as a dual nested SVE well screened from 15-30 and 35-45. TPHg was detected in the 30-45 samples with a maximum of 4.8 ppm. Benzene was detected at 40 at 4.6 ppb. MTBE was detected from 25-45 with a maximum of 0.3 ppm. TBA was detected from 30-45 with a maximum of 2.4 ppm. Low levels of VOCs were detected. The SVE system began operating September 25, 2006 using all 4 SVE wells and was run until June 25, 2007 when a rebound test was successfully completed. Influent TPHg went from 74 ppmv to ND<3 ppm. MTBE went from 56 ppmv to 0.07 ppmv. TBA went from 15 ppmv to ND<0.002 ppmv. Ethanol went from 0.014 to 0.0084 ppmv. Case closed 08/26/2010 following well abandonments

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CIRCLE K STORE #333 (Continued) **1000174048**

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.
