SECTION 1.0

INTRODUCTION

1.1 SUMMARY OF THE PROPOSED ACTION AND ENVIRONMENTAL REVIEW PROCESS

This Environmental Assessment (EA)/Tribal Environmental Impact Report (TEIR), herein referred to as an EA, has been prepared pursuant to the requirements of the National Environmental Policy Act (NEPA; 42 United States Code [USC] §4321 et seq.) and the Tribal-State Gaming Compact (Compact) between the State of California and the Agua Caliente Band of Cahuilla Indians (Tribe) with an effective date of October 31, 2016. The EA assesses the environmental impacts of taking approximately 13.6 acres contiguous to the Tribe's reservation in the City of Cathedral City (City), in Riverside County (County), California (North Site or Section 33 Parcel), into federal trust status for the Tribe for gaming purposes (Proposed Action). The Tribe subsequently proposes to develop the contiguous trust parcel with a casino, parking, bars, restaurants, retail, mixed-use space, and tribal government office space (Proposed Project).

The statutory authority for acquiring lands in trust status for Indian tribes is provided in the Indian Reorganization Act of 1934 (IRA; 25 USC §5108), with regulations codified at 25 Code of Federal Regulations (CFR) §151 *et seq*. Pursuant to 25 CFR Part 151, the Assistant Secretary of Indian Affairs, as an authorized representative of the Secretary of the Interior (Secretary), is charged with reviewing and approving tribal applications to take land into federal trust status. The Tribe is seeking to acquire land contiguous to the Agua Caliente Indian Reservation (Reservation) into trust for gaming purposes; thus, to be eligible for gaming land must comply with Section 20 of the Indian Gaming Regulatory Act (IGRA; 25 USC §2719[a][1]). Under Section 20 of IGRA (25 USC §2701 *et seq.*), gaming on lands acquired in trust by the Secretary after October 17, 1988, is prohibited, with some exceptions. Here, the relevant exception is that the North Site is located contiguous to the boundaries of the reservation of the Tribe on October 17, 1988 (25 USC § 2719 [a][1]).

This EA has been completed in accordance with NEPA; the Council on Environmental Quality's (CEQ) Guidelines for Implementing NEPA (40 CFR §1500 *et seq.*); and the Bureau of Indian Affairs' (BIA's) NEPA Guidebook (59 Indian Affairs Manual [IAM] 3-H). For the purpose of this EA, the BIA serves as the Lead Agency for compliance with NEPA. This EA provides a detailed description of the Proposed Action and an analysis of the potential environmental consequences associated with the Proposed Action. This EA also includes a discussion and analysis of alternatives, including a Reduced Intensity Alternative, Non-Gaming Alternative, and No Action Alternative. The Off-site Alternatives Evaluation Report, **Appendix A**, provides an analysis of the eliminated South Site Alternative, as well as a description of other off-site alternatives eliminated from consideration within this EA, as described in **Section 2.7**.

Additionally, this EA has been prepared to comply with the requirements of the Compact. Section 11.0 of the Compact requires the Tribe to prepare a TEIR assessing the off-Reservation environmental impacts of the Proposed Project. To reduce paperwork and eliminate redundancy, this EA and the required Compact TEIR have been prepared in coordination, resulting in a joint EA/TEIR, hereinafter referred to as an EA.

1.2 PURPOSE AND NEED FOR PROPOSED ACTION

The federal Proposed Action is the acquisition of the 13.6-acre North Site in trust for gaming purposes for the Tribe pursuant to the Secretary's authority under the Indian Reorganization Act, 25 USC 5108 and the Indian Gaming Regulatory Act (IGRA), 25 U.S.C. § 2719 (a)(1). The purpose of the Proposed Action is to facilitate tribal self-sufficiency, self-determination, and economic development, thus, satisfying both the Department's land acquisition policy as articulated in the Department's trust land regulations at 25 C.F.R. Part 151, and the principle goal of IGRA as articulated in 25 U.S.C. § 2701. The need for the Department to act on the Tribe's application is established by the Department's regulations at 25 C.F.R. §§ 151.10(h) and 151.12, and the Tribe's needs related to facilitation of tribal self-sufficiency, self-determination, and economic development are described further in **Section 1.3**.

1.3 BACKGROUND

The Tribe is a federally-recognized Tribe with an approximately 30,000-acre Reservation in Riverside County, California. In 1876 and 1877, executive orders established the Tribe's Reservation to comprise, in a checkerboard pattern, all of the even-numbered sections in three townships, with some exceptions. With some exceptions, the odd numbered sections were granted to the Southern Pacific Railroad in fee, who sold the bulk of its grant to others who, over time, formed the three primary local municipalities of Palm Springs, Cathedral City, and Rancho Mirage. In the past 75 years, the Tribe has acquired various other parcels within the Reservation and surrounding vicinity as both tribal trust land and fee simple holdings.

Within the Reservation, approximately 4,000 acres are held in trust for the Tribe, approximately 18,000 acres are held in trust for individual Indian allottees, and approximately 9,300 acres are in fee simple. The Tribe also owns 5,800 acres off-Reservation, with approximately 3,700 of those acres held in trust. Since establishment of the Reservation, the Tribe itself has lost approximately 27,000 acres due to allotment and assimilation policies with over 9,000 acres having passed into fee simple ownership. The Tribe continuously seeks to re-establish its historic land base with a particular focus on acquiring parcels with cultural significance and parcels that can be used for tribal economic development or governmental purposes, as well as to mitigate the effects of checkerboard jurisdiction caused by the legacy of federal allotment policies.

Due to high acquisition costs and the location of several desirable resort communities within the Reservation boundaries, it is extremely difficult for the Tribe to re-acquire lands on or contiguous to the Reservation. The median price per acre in Palm Springs in 2012 was $2,387,097, which is significantly higher than the average price per acre of the Section 33 Parcel of $507,300. Although the Reservation encompasses over 30,000 acres, the total amount of tribally-owned land that is available for development of any kind is extremely limited, and the total amount of tribally-owned land that is available for gaming development is even smaller (refer to the Tribe's fee-to-trust application and **Section 2.7** for additional information).

The Tribe submitted a fee-to-trust application for the Section 33 Parcel (North Site), which is contiguous to the Tribe's Reservation land in Cathedral City, to help ameliorate the historical loss of tribal lands and enable the Tribe to utilize its own resources to remedy the continuing impacts of allotment and assimilation, and to generate revenue to provide essential governmental services and consolidate existing trust allotments within the Reservation. The Tribe requires additional revenues to allow the tribal government to provide a wider variety of essential governmental services to its tribal members and more effectively exercise jurisdiction over tribal members and Indian lands. The Tribe anticipates that revenues from the Proposed Project will be used to develop a much needed tribal court system, create a robust tax commission, and to address the growing homelessness problem on the Reservation. Acquisition of the Section 33 Parcel will also further the Tribe's goal of re-establishing its historic land base, and generate funding to re-acquire more of the tens of thousands of acres divested from the Tribe as a result of the previous allotment policy.

Additionally, as described further in **Section 1.5** below, the Proposed Action is needed to strengthen the Tribe's partnership with the City, as a significant portion of the Tribe's lands are located within the City boundaries. The Tribe, City of Cathedral City, and the City Urban Revitalization Corporation (CURC) have worked cooperatively to share a common goal to redevelop the Section 33 Parcel with gaming, retail and mixed use development. This site is within the City's long blighted downtown area, which is slated for redevelopment. The development of a gaming facility at the Section 33 Parcel is envisioned to serve as an anchor that would promote growth of a walkable Cathedral City entertainment district adjacent to the existing Cathedral City Civic Center, which houses the City Police Department and City Hall buildings, restaurants, theaters, and retail.

In summary, the Tribe's need for requesting the Proposed Action is to promote the Tribe's long-term economic vitality and self-governance capability by providing and sustaining essential government services for current and future generations, including a tribal court system, a tax commission, and to address the growing homelessness problem on the Reservation. In addition, the Tribe's need for the Proposed Action is to help achieve the Tribe's goal of re-establishing its historic land base through funding generated by the facility.

1.4 OVERVIEW OF THE ENVIRONMENTAL REVIEW PROCESS

As mentioned above in **Section 1.1**, this document has been prepared to meet NEPA and Compact environmental review requirements. A brief overview of both processes is provided below.

1.4.1 NATIONAL ENVIRONMENTAL POLICY ACT

Notice of Preparation (NOP) and Scoping

Although not required by NEPA for the preparation of an EA, the BIA as Lead Agency elected to conduct a 30-day scoping comment period and to hold a scoping meeting to solicit input from the public and agencies regarding the scope of the EA.

Pursuant to the Compact, a Notice of Preparation (NOP) describing the Proposed Project and announcing a 30-day scoping period and the date and location of a public scoping meeting was prepared and circulated for public and agency review on December 29, 2017. The NOP was published in the *Desert Sun*, posted online at on www.cathedralcitycasino.com, filed with the State Clearinghouse for distribution to state agencies, and was sent to various federal and local agencies through direct mailings, including Riverside County. A public scoping meeting was conducted at 6:00 pm on January 18, 2018, at the Doubletree by Hilton, located at 67967 Vista Chino, Cathedral City, to provide project information and to solicit public input on the EA scope and alternatives. Approximately 10 people attended the public meeting; of these, one provided oral comments.

The issues that were raised during the scoping period have been summarized within the *NEPA Scoping Process Summary Report for the Agua Caliente Band of Cahuilla Indians Cathedral City Casino Fee-to-Trust Project*, dated June 2018 (**Appendix B**). This EA addresses the issues and concerns summarized in the scoping report.

Environmental Assessment

This EA was prepared in accordance with NEPA to analyze and document the environmental consequences of constructing a casino and associated facilities subsequent to the transfer of 13.6 acres into federal trust status for the Tribe. Preparation of this EA included consultation with the BIA, Tribe, City, and others (see **Section 6.0**). The BIA will use this EA to determine whether or not the Proposed Action would result in adverse effects to the environment and to satisfy the environmental review process of 59 IAM 3-H, 40 CFR § 1501.3 and 40 CFR § 1508.9. The Draft EA was released for a 45-day comment period pursuant to Section 11.3 of the Compact. The comments received and responses thereto are provided in **Appendix P**. Comments will be considered by the BIA, and either a Finding of No Significant Impact (FONSI) will be prepared, or additional environmental analysis will be conducted. After the NEPA process is complete, the BIA may issue a determination on the Tribe's fee-to-trust application for gaming.

1.4.2 TRIBAL-STATE COMPACT ENVIRONMENTAL REVIEW REQUIREMENTS

The Tribe entered into a new Class III gaming compact with the State of California in 2016. Pursuant to Section 11.0 of the Compact, the Tribe is required to prepare a TEIR to analyze the potential off-Reservation environmental impacts of the Proposed Project. The TEIR checklist included as Appendix B of the Compact is provided in **Appendix C**. This EA has been prepared to address all relevant checklist items.

As described above, an NOP for the joint EA/TEIR was submitted to the State Clearinghouse and Riverside County on December 29, 2017, pursuant to Section 11.2 of the Compact. Concerns raised in response to the NOP were considered during preparation of this EA.

The joint Draft EA/TEIR was been released for a 45-day comment period pursuant to Section 11.3 of the Compact. Comments received and responses are provided within this Final TEIR as Appendix P, and show good faith, reasoned analysis of the significant environmental points raised. This Final TEIR and mitigation recommendations will be considered by the Tribal Council in its decision to proceed with the Proposed Project. In accordance with Section 11.7 of the Compact, prior to the commencement of the Proposed Project and no later than the issuance of the Final TEIR, the Tribe shall offer to commence negotiations with the County and/or City and, upon acceptance of the Tribe's offers, shall negotiate with the County and/or City and enter into enforceable written agreements with respect to the matters set forth below:

"(1) The timely mitigation of any Significant Effect on the Off- Reservation Environment (which effects may include, but are not limited to, aesthetics, agricultural resources, air quality, biological resources, cultural resources, geology and soils, hazards and hazardous materials, water resources, land use, mineral resources, traffic, noise, utilities and service systems, and cumulative effects), where such effect is attributable, in whole or in part, to the Project unless the parties agree that the particular mitigation is infeasible, taking into account economic, environmental, social, technological, or other considerations.

(2) Compensation for law enforcement, fire protection, emergency medical services and any other public services to be provided to the Tribe for the purposes of the Gaming Operation, including the Gaming Facility, as a consequence of the Project.

(3) Reasonable compensation for programs designed to address and treat gambling addiction.

(4) Mitigation of any effect on public safety attributable to the Project, including any compensation to the County and/or city as a consequence thereof."

1.5 COORDINATION WITH THE CITY OF CATHEDRAL CITY

The Tribe has worked in cooperation with the CURC, and the City to realize a common vision for redevelopment of the City's downtown area, which includes the alternative sites analyzed in this EA. Ordinance No. 624 was adopted in 2006, which stated that the purpose of redeveloping the downtown area was "to eliminate conditions of blight by: providing needed public improvements, encouraging rehabilitation of deteriorating structures, and facilitating land assembly and development which will result in employment opportunities…." The Tribe, CURC, and City share a common goal to redevelop a site in the downtown area for gaming, retail, and mixed-use development. The CURC and City have emphasized the importance of the proposed facility including a gaming component as an anchor to enable further growth of a walkable Downtown/Art and Design Village.

CURC received proceeds from the land acquisition transaction, which CURC is now utilizing to design and construct a much needed new fire station (411) for the City. The new fire station will be located immediately north of the North Site. This new station will provide improved off-Reservation and on-Reservation fire protection services, and is being sized to accommodate future development of the downtown area.

The City supported the 2016 Compact between the Tribe and the State of California with full knowledge that the Tribe intended to develop the North Site with a casino and related commercial development.

1.6 REGULATORY REQUIREMENTS AND APPROVALS

The Proposed Project, as described in **Section 2.0**, may require federal, State, and local approvals and actions. **Table 1-1** identifies each responsible agency and the potential permit or approval required. Additionally, approval of the Proposed Project by the Tribal Council would also be required prior to implementation of the Proposed Project.

Table 1-1
POTENTIAL PERMITS AND APPROVALS REQUIRED

Agency	Permit or Approval	Alternatives
Federal/State		
Secretary of the Interior	Transfer of alternative site into federal trust status for the Tribe	PP, RI, NG
United States Environmental Protection Agency (USEPA)	Verification of project coverage under the National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges from Construction Activities as required by the Clean Water Act (CWA)	PP, RI, NG
	General Conformity Determination review	NG
California Office of Historic Preservation	Consultation under Section 106 of the National Historic Preservation Act (NHPA)	PP, RI, NG
Local		
City of Cathedral City	Approval of water, wastewater, and/or drainage connections	PP, RI, NG
	Approval of off-site road improvements	PP, RI, NG
	Issuance of encroachment permits for frontage and access improvements, and traffic mitigations	PP, RI, NG
Notes: PP – Proposed Project Alternative; NA – No Action Alternative; RI – Reduced Intensity Alternative; NG – Non-Gaming Alternative		

SECTION 2.0
ALTERNATIVES

This section describes the alternatives that are analyzed within this EA. A reasonable range of alternatives has been selected based on consideration of the purpose and need of the Proposed Action and opportunities for potentially reducing environmental effects. These alternatives include the Proposed Project Alternative, the No Action Alternative, the Reduced Intensity Alternative, and the Non-Gaming Alternative. Consistent with CEQ guidelines (40 CFR §1502.14), this section summarizes and compares the potential environmental consequences, benefits, and/or detriments of the project alternatives (**Section 2.6**). Alternatives that were considered but are not analyzed in this EA are also described (**Section 2.7**).

2.1 SITE LOCATION

The development site location considered in this EA is the North Site, or Section 33 Parcel, which is the 13.6-acre property contemplated in the Tribe's fee-to-trust application. As described in **Section 2.7** and **Appendix A**, off-site alternatives were considered but eliminated from detailed analysis within this EA. The Proposed Project Alternative, Reduced Intensity Alternative, and Non-Gaming Alternative, if selected, would be built on the North Site. As shown on **Figures 2-1** and **2-2** of **Appendix D**, the North Site is located within the City, in Riverside County, California and shares its eastern border with the Agua Caliente Reservation. The approximately 13.6-acre North Site is bordered by East Palm Canyon Drive/Highway 111 on the south, Date Palm Drive on the east, Buddy Rogers Avenue on the north, and commercial and vacant parcels within the City to the west (**Figure 2-2** of **Appendix D**). Table 1 of **Appendix B** provides the County Assessor Parcel Numbers (APNs) and acreage for the North Site.

2.2 PROPOSED PROJECT ALTERNATIVE

The Proposed Project Alternative consists of the following components: (1) transfer of the 13.6-acre North Site into federal trust status for the benefit of the Tribe for gaming purposes; and (2) the subsequent development by the Tribe of a casino, mixed use facilities, and associated infrastructure on the trust property.

2.2.1 FEE-TO-TRUST TRANSFER

The Tribe has submitted an application to the BIA for the transfer of the 13.6-acre North Site into federal trust for the development of a casino and related facilities (Proposed Action). The proposed trust parcel boundaries are shown in **Figure 2-2** of **Appendix D**. The BIA will make its determination regarding the proposed fee-to-trust acquisition in accordance with the procedures set forth in 25 CFR Part 151. The regulations in 25 CFR Part 151 implement Section 5 of the IRA, codified at 25 USC §5108, which is the general statute that provides the Secretary with authority to acquire lands in trust status for tribes and individual Indians. The Tribe and the federal government would exercise civil regulatory jurisdiction over the site once it is taken into trust.

2.2.2 CASINO DEVELOPMENT

The Tribe proposes to develop a casino and ancillary facilities on the North Site after it is conveyed into federal trust status. A conceptual site plan for the Proposed Project Alternative is shown in **Figure 2-3** of **Appendix D**. Proposed facilities include a casino with 40,000 square feet (sf) of gaming floor space, parking, and mixed-use facilities, including a combination of tribal government office space, restaurants, and retail uses totaling 125,000 sf of development. A breakdown of the components of the Proposed Project Alternative is provided in **Table 2-1**.

The casino would be open 24 hours a day, 7 days a week. The Proposed Project Alternative would create a total of 556 direct employment opportunities at the casino and mixed-use facilities within the North Site (**Appendix E**). The casino would have approximately 500 Class III gaming devices, and 8 table games.

Table 2-1
PROPOSED PROJECT ALTERNATIVE COMPONENTS

Component	Units	Approximate Square Footage
Casino		
Gaming Floor	500 Class III gaming devices and 8 table games	40,000
Back of House/Support		17,500
Restaurants		5,000
Retail		2,500
	Total	***65,000***
Mixed-Use		
Building A		6,800
Building B		4,000
Building C		6,500
Building D		13,000
Building E		25,000
Building F		4,500
	Total	***60,000***
	Overall Project Total	**125,000**
Parking	~1,000 spaces	
Source: Allen+Philp Partners, 2018.		

Mixed use space is anticipated to be developed within a combination of office, restaurants, and retail facilities. Tribal governmental office space is anticipated to be located within Building A as shown on **Figure 2-3** of **Appendix D** and would be occupied by several tribal governmental departments that are currently located in non-tribal leased office space or have outgrown their existing space at the Tribal Administration Plaza, including Tribal Realty, Emergency Services, the Tribal Historic Preservation Officer (THPO), and Tribal Education Services. Although the exact uses have not been established, it is anticipated that retail development would occupy approximately 40 percent of the remaining space with restaurant uses occupying approximately 60 percent.

Architecture, Signage, Lighting, and Landscaping

The buildings architecture and exterior signage would enhance the natural characteristics of the site and vicinity by incorporating native materials and colors. Illuminated signs would be designed to blend with the light levels of the building and landscape lighting in both illumination levels and color characteristics. The exterior lighting of the Proposed Project would be integrated into components of the architecture and would be strategically positioned to minimize off-site lighting and any direct site lines to the public. The architectural design of the Proposed Project would be enhanced by landscaping using drought tolerant plants native to the region.

Parking

Approximately 1,000 surface-level parking spaces would be constructed to accommodate patrons and employees. The development of a parking deck may be necessary if the 1,000 surface parking spaces are not adequate to serve patrons of the Proposed Project Alternative. This two-level parking deck would provide an additional 240 parking stalls, and would be constructed with a maximum height of 28 feet above grade for light poles on the top level. The deck would be located within the planned parking area on the site, in the approximate location shown on **Figure 2-3** of **Appendix D**.

Construction

Construction of the casino and adjoining mixed use facilities is conservatively assumed to occur in one phase starting in 2019. Construction of the parking lot, on-site utilities, and landscaping would occur simultaneously

with construction of the casino. In accordance with the Compact, the proposed facilities would conform to the applicable building code requirements of the California Building Code (CBC) and California Public Safety Code (CPSC), including building, electrical, energy, mechanical, plumbing, fire protection, and safety as adopted under the Tribal Building and Safety Code (Tribal Ordinance No. 26). An indoor sprinkler system would be installed to provide fire protection.

Water Supply

Water supply for existing (and historical) uses within the North Site is provided through the Desert Water Agency (DWA). The estimated average daily water usage for the Proposed Project Alternative would be approximately 33,929 gallons per day (gpd), with an annual consumption of approximately 38 acre-feet (AF; **Appendix F**). As described in **Section 4.9**, DWA anticipates it will have a sufficient water supply to serve the Proposed Project Alternative and existing users.

While there are several existing DWA water mains on and in the immediate vicinity of the North Site, these mains in their current layout would be insufficient to accommodate the projected potable water demand and fire flow requirement of the Proposed Project Alternative (**Appendix F**). Therefore, the Proposed Project Alternative includes the construction of a new 12-inch main that would run west along the southern boundary of the North Site within East Palm Canyon Drive from an existing water main at the intersection of East Palm Canyon Drive and Date Palm Drive, and would then run north through the North Site along Allen Avenue, terminating at the existing water main running east-to-west in Buddy Rogers Avenue. This proposed main would provide adequate fire flow to the North Site under the Proposed Project Alternative (**Appendix F**). The Proposed Project Alternative would also require the removal or abandonment of the existing water mains on the North Site that are between Allen Avenue and Date Palm Drive. The remaining existing water mains located west of Allen Avenue would be connected to the new water main and would remain in service, though they may be relocated within the site to accommodate new construction and/or follow new roadway alignments. All water supply infrastructure improvements would occur within or immediately adjacent to the North Site.

Wastewater Treatment

All wastewater generated within the North Site is currently conveyed by DWA sewer lines and treated at the Coachella Valley Water District's (CVWD) Water Reclamation Plant 10 (WRP-10) facilities. As described in **Section 4.9.1**, CVWD's treatment facilities would have sufficient excess capacity to accommodate the increase in wastewater flows resulting from the Proposed Project Alternative. While there are several sewer mains and branch lines on and in the vicinity of the North Site, these lines are inadequate in their current layout to serve the Proposed Project Alternative. Therefore, the Proposed Project Alternative involves the construction of a new 8-inch sewer main that would run west along the northern site boundary within Buddy Rogers Avenue from the existing lift station at the intersection of Buddy Rogers Avenue and Date Palm Drive and then south through the North Site along Allen Avenue to the point where Allen Avenue currently intersects with Grove Street. The portion of the existing sewer main in Grove Street between Allen Avenue and Date Palm Drive would need to be removed or abandoned, while the portion west of Allen Avenue would be connected to the new sewer line and remain in service, though it may be relocated on-site to accommodate construction activities or the realignment of roadways. All wastewater infrastructure improvements would occur within or immediately adjacent to the North Site, and no improvements to other downline components of the DWA or CVWD conveyance and treatment infrastructure would be required.

Grading and Drainage

Construction would involve grading and excavation for building pads and parking lots. Grading of the North Site to accommodate the Proposed Project Alternative is anticipated to require the net import of a maximum of 91,933 cubic yards (cy) of fill (**Appendix G**). Structural fill would be transported in accordance with State and County requirements during normal construction hours (6 a.m. to 5 p.m.), and dust suppression Best Management Practices (BMPs) would be used for roadways and trucks.

On the North Site there is currently a 26-foot difference in elevation from southwest corner to northeast corner. Because the casino building is anchored at the southeast corner, a slope of less than 2 percent down to the East

Palm Canyon Drive curb was used. However, there is a more than 16-foot difference in elevation remaining from the low end of East Palm Canyon Drive to the northeast corner. Going west on East Palm Canyon Drive the buildings were placed at street grade, and the other buildings were stepped down from one to the next to the maximum extent without introducing stairs and ramps at all the entrances. This grading strategy resulted in a conservatively high level of fill material required for development of the North Site. Imported fill volumes may be reduced during final design of the Proposed Project Alternative. The final design phase of the Proposed Project Alternative will also include finalization of the grading plan for the site.

The North Site currently has a total impervious area of approximately 3.1 acres. An existing 48-inch storm drain pipe runs underground through the North Site beneath Allen Avenue from Date Palm Drive to the North Cathedral Channel, but is not able to directly receive stormwater flows from the North Site. Development of the Proposed Project Alternative would increase the total impervious acreage on the North Site to approximately 12.24 acres (**Appendix G**). City standards require the on-site retention of 100 percent of stormwater flows resulting from a 100-year, 3-hour storm event. To provide the necessary 137,244 cubic feet of storage required to accommodate flows from such an event, the Proposed Project Alternative involves the installation of approximately 2,010 linear feet of 96-inch perforated corrugated metal pipe surrounded by porous stone beneath the proposed parking areas in the northeast portion of the North Site (**Appendix G**). These pipes, which would provide approximately 138,166 cubic feet of storage, would contain stormwater flows and allow them to infiltrate slowly into the underlying aquifer. Grates and filter bags would also be installed around drainage inlets to remove trash, debris, and sediment from the runoff before it flows to the retention facilities. Runoff to off-site drainage facilities would not occur.

Other Low Impact Development (LID) features designed to reduce impacts to surface waters and filter stormwater runoff that may be incorporated into the design of the Proposed Project Alternative include bio-retention facilities, vegetated filter strips, and possibly permeable pavement. Bio-retention facilities are low points that store runoff and allow it to infiltrate; these would be incorporated between rows of vehicles in the parking lots. Proposed vegetated filter strips are areas of landscaped vegetation adjacent to impervious areas that would reduce the velocity of runoff and allow pollution to be deposited into the vegetated areas. Permeable pavement, which is an option being considered by the Tribe for parking lot areas, would have a high infiltration rate while accommodating heavy vehicle loads.

The Proposed Project Alternative would comply with the NPDES general construction permit and implement stormwater discharge management controls that effectively reduce or prevent the discharge of pollutants into receiving waters during construction in accordance with the CWA. In accordance with NPDES general permit requirements, a Stormwater Pollution Prevention Plan (SWPPP) would be prepared prior to construction. The SWPPP would include BMPs to minimize storm water effects to water quality during construction.

Roadway Access

The Proposed Project would be accessible via one full-access driveway on East Palm Canyon Drive, with secondary access along Buddy Rogers Avenue (as shown in **Figure 2-3** of **Appendix D**). Parking lot access would also be provided to the northeastern lot, which includes the loading docks and service entry. This area would be primarily used for employees and service vehicles.

The design of the Proposed Project Alternative includes the construction of full width improvements on all internal roadways, including traffic calming measures in parking lots and internal roadways. The Proposed Project Alternative contemplates construction of roadway improvements and appropriate signage and striping adjacent to the North Site's boundary to provide three westbound lanes on East Palm Canyon Drive, three southbound lanes on Date Palm Drive, and one eastbound lane on Buddy Rogers Avenue. Additionally, modifications at existing traffic signals adjacent to the North Site will be constructed as needed.

The driveway for the Proposed Project Alternative at Buddy Rogers Avenue would be restriped with a one-way stop control to provide one left turn and one shared through-right turn northbound lanes; one shared left-through-right southbound lane; one shared left-through-right eastbound lane; and one shared left-through-right westbound

lane. The driveway for the Proposed Project Alternative at East Palm Canyon Drive would be restriped with signalized control to provide one left turn and one right turn southbound lanes; one left turn, two through, and one right turn eastbound lanes; and one left turn, three through, and one right turn westbound lanes. Further, sight distances at these driveways will be reviewed with respect to Riverside County sight distance standards at the time of preparation of final grading, landscape, site development, and street improvement plans.

Law Enforcement, Fire Protection, and Emergency Medical Services

The Cathedral City Police Department (CCPD) provides law enforcement services to the area of Cathedral City in which the North Site is located and would be the primary agency responsible for law enforcement associated with the Proposed Project Alternative. Tribe-managed security personnel and security cameras would provide surveillance of proposed structures, parking areas, and ancillary facilities.

The Cathedral City Fire Department (CCFD) currently serves the North Site and vicinity and would provide fire protection services to the project under the Proposed Project Alternative. CCFD's Station 411 is currently located in the northeast corner of the North Site, but the City is planning to move Station 411 to a location immediately north of its existing location, north of Buddy Rodgers Avenue and east of Second Street Park. Station 411 will continue to serve the vicinity of the North Site following its relocation. Building plans and specifications would comply with the International Fire Code (IFC) requirements as adopted under the Tribal Building and Safety Code for commercial structures, including requirements for sprinkler systems and fire extinguishers. CCFD would also be the primary provider of EMS to the Proposed Project Alternative. In the event that the CCFD EMS team is unable to respond to a service call at the Proposed Project Alternative, American Medical Response (AMR) or Riverside County EMS, both based in the City of Riverside, may also be contacted.

As described in **Section 1.4.2**, Section 11.7 of the Compact requires that if it is determined that law enforcement, fire protection, emergency medical services (EMS), and any other public services will be burdened as a result of the Proposed Project despite the mitigation measures identified in this EA and the voluntary payment of the development impact fees identified in Chapter 3.17 of the City's Municipal Code, prior to commencement of the Proposed Project Alternative, and no later than the issuance of the Final TEIR to the County, the Tribe shall offer to commence negotiations with the City and if necessary, the County. These negotiations would allow for all parties to enter into enforceable intergovernmental agreements with respect to the matters set forth in Section 11.7(a) of the Compact to ensure that the mitigation contemplated herein is sufficient.

Electricity and Natural Gas

Southern California Edison (SCE) provides electrical services to the North Site and vicinity and would provide electricity to the Proposed Project Alternative. There are existing underground and overhead electrical lines on and adjacent to the North Site which may need to be reoriented to accommodate and serve the development of the Proposed Project Alternative.

Southern California Gas Company (SoCalGas) provides natural gas services to the North Site and vicinity and would provide natural gas to the Proposed Project Alternative. There are existing high pressure distribution lines running immediately adjacent to the southern and eastern boundaries of the North Site beneath East Palm Canyon Drive and Date Palm Drive.

The Proposed Project Alternative is estimated to have an electrical load of approximately 7.33 megavolt-amperes (MVA), and a natural gas load of approximately 21,800 cubic feet per hour (CFH; MSA Engineering Consultants, 2018).

2.2.3 PROTECTIVE MEASURES AND BEST MANAGEMENT PRACTICES

Protective measures and BMPs, including regulatory requirements, green construction methods as adopted under the Tribal Building and Safety Code, and voluntary measures that would be implemented by the Tribe, have been incorporated into the design of the Proposed Project Alternative. Where applicable, these measures will be incorporated into any design or construction contracts to eliminate or substantially reduce environmental consequences from the Proposed Project Alternative. These measures are discussed below in **Table 2-2**.

TABLE 2-2
PROPOSED PROJECT ALTERNATIVE BEST MANAGEMENT PRACTICES

Resource Area	Best Management Practices
Land Resources	▪ A grading report will be prepared and submitted with the working design plans. All recommendations of the report will be adhered to. ▪ All site clearing, removal of all unsuitable soil, proper moisture conditioning, review of imported fill material, fill placement, observation of foundation excavations, and other site grading will be verified during construction to ensure compliance with standard engineering practices. ▪ All structures will meet CBC and CPSC requirements as adopted under the Tribal Building and Safety Code. ▪ Erosion control measures will implemented during construction as described further under the Water Resources BMPs.
Water Resources	The Tribe shall comply with the NPDES General Construction Permit from the USEPA, for construction site runoff during the construction phase in compliance with the CWA. A SWPPP shall be prepared, implemented, and maintained throughout the construction phase of the development, consistent with Construction General Permit requirements. The SWPPP prepared for the site would include, but would not be limited to, the following BMPs: ▪ To the extent feasible, grading activities shall be limited to the immediate area required for construction and remediation. ▪ Temporary erosion control measures (such as silt fences, fiber rolls, vegetated swales, a velocity dissipation structure, staked straw bales, temporary re-vegetation, rock bag dams, erosion control blankets, and sediment traps) shall be employed for disturbed areas. ▪ Construction activities shall be scheduled to minimize land disturbance during peak runoff periods. ▪ Disturbed areas shall be paved or re-vegetated following construction activities. ▪ Construction area entrances and exits shall be stabilized with large-diameter rock. ▪ A spill prevention and countermeasure plan shall be developed which identifies proper storage, collection, and disposal measures for potential pollutants (such as fuel, fertilizers, pesticides, etc.) used on site. ▪ Petroleum products shall be stored, handled, used, and disposed of properly in accordance with provisions of the CWA (33 USC §1251 to 1387). ▪ Construction materials, including topsoil and chemicals, shall be stored, covered, and isolated to prevent runoff losses and contamination of surface and groundwater. ▪ Fuel and vehicle maintenance areas shall be established away from all drainage courses and designed to control runoff. ▪ Sanitary facilities shall be provided for construction workers. ▪ Disposal facilities shall be provided for soil wastes, including excess asphalt during construction. ▪ Wheel wash or rumble strips and sweeping of paved surfaces shall be used to remove any and all tracked soil. ▪ LID methods shall be implemented that would help store, infiltrate, evaporate, and detain stormwater runoff. Techniques that may be included in the design of the Proposed Project include: bio-retention facilities, vegetated filter strips, and permeable pavement.
Air Quality Construction	The following dust suppression measures will be implemented to control the production of fugitive dust (PM_{10}) and prevent wind erosion of bare and stockpiled soils: ▪ Spray exposed soil with water or other suppressant twice a day or as needed to suppress dust. ▪ Use non-toxic chemical or organic dust suppressants on unpaved roads and traffic areas. ▪ Minimize dust emissions during transport of fill material or soil by wetting down loads, ensuring adequate freeboard (space from the top of the material to the top of the truck bed) on trucks, cleaning the interior of cargo compartments on emptied haul trucks before leaving a site, and/or covering loads. ▪ Promptly clean up spills of transported material on public roads. ▪ Restrict traffic speeds on site to 15 miles per hour to reduce soil disturbance. ▪ Provide wheel washers to remove soil that would otherwise be carried off site by vehicles to decrease deposition of soil on area roadways. ▪ Cover dirt, gravel, and debris piles as needed to reduce dust and wind-blown debris. The following measures will be implemented to reduce emissions of criteria pollutants, greenhouse gases (GHGs), and diesel particulate matter (DPM) from construction: ▪ The Tribe shall control criteria pollutants and GHG emissions from the facility by requiring all diesel-powered equipment be properly maintained and minimize idling time to five minutes when construction equipment is not in use, unless per engine manufacturer's specifications or for safety reasons more time is required. Since these emissions would be generated primarily by construction equipment, machinery engines shall be kept in good mechanical condition to minimize exhaust emissions. The Tribe shall employ periodic and unscheduled inspections to accomplish the above measures. ▪ Require all construction equipment with a horsepower rating of greater than 50 be equipped with diesel particulate filters, which would reduce approximately 85 percent of DPM.

Resource Area	Best Management Practices
	▪ Require all construction equipment with a horsepower rating of greater than 50 be equipped with CARB-rated Tier 3 engines, with the exception of scrapers. ▪ Require the use of low reactive organic gases (ROG; 150 grams per liter or less) for architectural coatings to the extent practicable. ▪ Environmentally preferable materials, including recycled materials, shall be used to the extent readily available and economically practicable for construction of facilities.
Air Quality Operation	The Tribe will reduce emissions of criteria air pollutants and GHGs during operation of the Proposed Project through the following actions: ▪ The Tribe shall use clean fuel vehicles in the vehicle fleet where practicable, which would reduce criteria pollutants and GHG emissions. ▪ The Tribe shall provide preferential parking for employee vanpools, carpools, and or other rideshare vehicles (such as ZIP car) which would reduce criteria pollutants and GHGs. ▪ The Tribe shall consider and to the extent feasible will incorporate preferential parking for Plug-In Electric Vehicles, along with the installation of corresponding electric vehicle (EV) charging stations into the design of the Proposed Project. ▪ Shuttle service to and from population centers shall be provided as feasible, which would reduce criteria pollutants and GHGs. ▪ Water consumption shall be reduced through low-flow appliances, drought resistant landscaping, and the incorporation of "Save Water" signs near water faucets throughout the development. ▪ The Tribe shall control criteria pollutants, GHG, and diesel particulate matter (DPM) emissions during operation of the Proposed Project by requiring all diesel-powered vehicles and equipment be properly maintained and minimizing idling time to five minutes at loading docks when loading or unloading food, merchandise, etc. or when diesel-powered vehicles or equipment are not in use; unless per engine manufacturer's specifications or for safety reasons more time is required. The Tribe shall employ periodic and unscheduled inspections to accomplish the above mitigation. ▪ All buildings within the Proposed Project site will be constructed generally consistent with Title 24 requirements and green building standards as adopted under the Tribal Building and Safety Code, and thus will incorporate energy efficiency features. The Tribe may elect to participate in the SCE Savings by Design Program to identify further energy saving measures. These may include: o Use of energy-efficient lighting, appliances, and heating and cooling systems o Reflective roofing o Use of automatic temperature and lighting controls ▪ The Tribe shall install recycling bins throughout the casino for glass, cans, and paper products. Trash and recycling receptacles shall be placed strategically outside to encourage people to recycle. In addition, the Tribe will promote the use of non-polystyrene take-out containers and encourage food waste composting programs at all restaurants that serve more than 100 meals per day. The Tribe will reduce solid waste stream of the facility by at least 50 percent. ▪ The Tribe shall plant trees and vegetation on site or fund such plantings off site. The addition of photosynthesizing plants would reduce atmospheric carbon dioxide (CO_2), because plants use CO_2 for elemental carbon and energy production. Trees planted near buildings would result in additional benefits by providing shade to the building; thus reducing heat absorption, reducing air conditioning needs and saving energy. ▪ The Tribe shall discourage buses from idling for extended periods during operation of the Proposed Project. ▪ On-site pedestrian facility enhancements such as walkways, benches, proper lighting, and building access will be provided, which are physically separated from parking lot traffic. ▪ Adequate ingress and egress at entrances will be provided to minimize vehicle idling and traffic congestion.
Cultural Resources	▪ Any inadvertent discovery of archaeological resources shall be subject to Section 106 of the National Historic Preservation Act as amended (36 CFR § 800), the Native American Graves Protection and Repatriation Act (NAGPRA; 25 USC § 3001 et seq.), and the Archaeological Resources Protection Act of 1979 (16 USC § 470aa-mm). Specifically, procedures for post review discoveries without prior planning pursuant to 36 CFR § 800.13 shall be followed. The purpose of the following BMPs is to minimize the potential adverse effect of construction activities to previously unknown archaeological or paleontological resources in the case of inadvertent discovery: o All work within 50 feet of the find shall be halted until a professional archaeologist meeting the Secretary of the Interior's qualifications (36 CFR §61), or paleontologist if the find is of a paleontological nature, can assess the significance of the find in consultation with the BIA, other appropriate agency and the Tribe. o If any archaeological find is determined to be significant by the archaeologist or paleontologist, the THPO shall meet with the archaeologist, or paleontologist, to determine the appropriate course of action, including the development of a Treatment Plan and implementation of appropriate provisions, if necessary.

Resource Area	Best Management Practices
	○ All significant cultural or paleontological materials recovered shall be subject to scientific analysis, professional curation, and a report prepared by the professional archaeologist, or paleontologist, according to current professional standards. ○ If human remains are discovered during ground-disturbing activities on Tribal lands, pursuant to NAGPRA, the THPO and a BIA representative shall be contacted immediately, and shall determine whether the remains are Native American. If Native American, the provisions of NAGPRA shall apply. No further disturbance shall occur until the THPO and BIA representative have made the necessary findings as to the origin and disposition.
Public Services and Utilities Fire Safety	▪ The Tribe will voluntarily pay development impact fees to the City, as identified in Chapter 3.17 of the City's Municipal Code, to provide compensation for public services to be provided to the proposed development. ▪ Areas surrounding the gaming facilities will have "No Loitering" signs in place, be well lit and be patrolled regularly by roving security guards. This will aid in the prevention of auto theft and other similar criminal activity. ▪ The Tribe will conduct background checks of all gaming employees, as that term is defined in Section 2.11 of the Compact, and ensure that all gaming employees meet licensure requirements established by IGRA, National Indian Gaming Commission regulations, the Tribe's Gaming Ordinance, and the Compact. ▪ The Tribe will comply with Section 12.8 of the Compact, which specifically requires that the purchase, sale, and service of alcoholic beverages by or to patrons be subject to California alcoholic beverage laws. ▪ Construction equipment will contain spark arrestors, as provided by the manufacturer. ▪ Staging areas, welding areas, or areas slated for development using spark-producing equipment will be cleared of dried vegetation or other materials that could serve as fire fuel.
Visual Resources	▪ Placement of floodlights on buildings will be designed so as to not cast light off site. ▪ Outdoor light fixtures shall be fully or partially shielded and filtered consistent with the City Municipal Code §9.89.050. ▪ Perimeter lighting shall be installed consistent with the City Municipal Code §8.34.110.
Noise	▪ Unless an early work permit is issued by the Tribe in consultation with the City, construction activities will be limited to daytime hours consistent with the City's Municipal Code 11.96.070: ○ October 1 through April 30: Monday through Friday 7:00 am to 5:30 pm; Saturday: 8:00 am to 5:00 pm; Sunday: none; State holidays: none. ○ May 1 through September 30: Monday through Friday: 6:00 am to 7:00 pm; Saturday: 8:00 am to 5:00 pm; Sunday: none: State holidays: none. ▪ All powered equipment will comply with applicable federal regulations and all such equipment will be fitted with adequate mufflers according to the manufacturer's specifications to minimize construction noise effects. ▪ Heating, ventilation, and air conditioning (HVAC) equipment will be shielded to reduce noise. ▪ Pile driving will not occur prior to 9:00 a.m. or after 5:00 p.m.
Hazardous Materials	▪ Personnel shall follow BMPs for filling and servicing construction equipment and vehicles. BMPs that are designed to reduce the potential for incidents/spills involving the hazardous materials include the following: ○ To reduce the potential for accidental release, fuel, oil, and hydraulic fluids shall be transferred directly from a service truck to construction equipment. ○ Catch-pans shall be placed under equipment to catch potential spills during servicing. ○ Refueling shall be conducted only with approved pumps, hoses, and nozzles. ○ All disconnected hoses shall be placed in containers to collect residual fuel from the hose. ○ Vehicle engines shall be shut down during refueling. ○ No smoking, open flames, or welding shall be allowed in refueling or service areas. ○ Refueling shall be performed away from bodies of water to prevent contamination of water in the event of a leak or spill. ○ Service trucks shall be provided with fire extinguishers and spill containment equipment, such as absorbents. ○ Should a spill contaminate soil, the soil shall be put into containers and disposed of in accordance with local, state, and federal regulations. ○ All containers used to store hazardous materials shall be inspected at least once per week for signs of leaking or failure. ▪ In the event that contaminated soil and/or groundwater is encountered during construction related earth-moving activities, all work shall be halted until a professional hazardous materials specialist or other qualified individual assesses the extent of contamination. If contamination is determined to be hazardous, the Tribe shall consult with the USEPA to determine the appropriate course of action, including development of a Sampling and Remediation Plan if necessary. Contaminated soils that are determined to be hazardous shall be disposed of in accordance with federal regulations.

Resource Area	Best Management Practices
Transportation/ Circulation	▪ The Tribe or the Tribe's contractor will contact SunLine Transit Agency at least thirty days in advance of work commencing so that arrangements can be made to remove, replace, and/or relocate the existing bus stop facilities within the site (bench and waste container for bus stops #234 and #46). ▪ The Tribe will remove, replace, and/or relocate bus stops #234 and #46 in coordination with SunLine Transit Agency. The relocated and/or replaced bus stops will be designed to meet the needs of all passengers, including the disabled, seniors, and children.

2.3 REDUCED INTENSITY ALTERNATIVE

The Reduced Intensity Alternative consists of the transfer of the North Site into federal trust status for gaming purposes for the benefit of the Tribe and the subsequent development of a casino on the site. Under the Reduced Intensity Alternative, the casino would include 40,000-sf of gaming floor space, parking, and mixed-use facilities, including a combination of tribal government office space, restaurants, and retail uses totaling 103,000 sf of development. The Reduced Intensity Alternative is similar to the Proposed Project, except that mixed-use facilities would be reduced in size when compared to the Proposed Project Alternative as described within the EA. A breakdown of the facilities proposed under the Reduced Intensity Alternative is provided in **Table 2-3**, and the proposed site plan is provided as **Figure 2-4** of **Appendix D**.

TABLE 2-3
REDUCED INTENSITY ALTERNATIVE COMPONENTS

Component	Units	Approximate Square Footage
Casino		
Gaming Floor	500 Class III gaming devices and 8 table games	40,000
Back of House/Support		17,500
Restaurants		5,000
Retail		2,500
	Total	***65,000***
Mixed-Use		
Building D		13,000
Building E		25,000
	Total	***38,000***
	Overall Project Total	**103,000**
Parking (surface only)	~850 spaces	
Source: Allen+Philp Partners, 2018.		

As with the Proposed Project Alternative, the Reduced Intensity Alternative would be open 24 hours a day, 7 days a week. The Reduced Intensity Alternative would employ fewer people (480 direct employment opportunities) and attract fewer patrons than the Proposed Project Alternative. The casino would have approximately 500 Class III gaming machines devices, and 8 table games. Water supply, wastewater treatment and disposal, grading and drainage, roadway access, public health and safety standards, fire protection, and law enforcement under the Reduced Intensity Alternative would be similar to the Proposed Project Alternative (**Section 2.2.2**) but with a reduced demand for services due to the smaller development size. The construction methods and BMPs for the Reduced Intensity Alternative would be identical to those described for the Proposed Project Alternative (**Section 2.2.3**).

In addition to the roadway access design construction described for the Proposed Project Alternative (refer to **Section 2.2.2**), the eastern project driveway contemplated under the Reduced Intensity Alternative at Buddy Rogers Avenue would be restriped with a one-way stop control to provide one shared left-right turn northbound lane; one shared through-right eastbound lane; and one shared left-through westbound lane.

2.4 NON-GAMING ALTERNATIVE

The Non-Gaming Alternative consists of the transfer of the North Site into federal trust status for the benefit of the Tribe and the subsequent development of commercial uses on the site, including a combination of tribal government office space, restaurants, and retail uses totaling 90,000 sf of development. A breakdown of the facilities proposed under the Non-Gaming Alternative is provided in **Table 2-4**, and the proposed site plan is provided as **Figure 2-5** of **Appendix D**.

TABLE 2-4
NON-GAMING ALTERNATIVE COMPONENTS

Component	Units	Approximate Square Footage
Mixed-Use		
Building A		9,500
Building B		4,500
Building C		6,500
Building D		12,500
Building E		20,000
Building F		5,000
Building G		5,000
Building H		10,000
Building I		12,000
Building J		5,000
Overall Project Total		**90,000**
Parking	~700 spaces	
Source: Allen+Philp Partners, 2018.		

The Non-Gaming Alternative would employ fewer people (313 direct employment opportunities) and attract fewer patrons than the Proposed Project Alternative as described within the EA. Water supply, wastewater treatment and disposal, grading and drainage, roadway access, public health and safety standards, fire protection, and law enforcement under the Non-Gaming Alternative would be similar to the Proposed Project Alternative (**Section 2.2.2**), but with a reduced demand for services due to the smaller development size. The construction methods and BMPs for the Non-Gaming Alternative would be identical to those described for the Proposed Project Alternative (**Section 2.2.3**).

In addition to the roadway access design construction described for the Proposed Project Alternative (refer to **Section 2.2.2**), the eastern project driveway contemplated under the Non-Gaming Alternative at Date Palm Drive would be restriped with a one-way stop control to provide three through northbound lanes; two through and one shared through-right southbound lanes; and one right turn eastbound lane.

2.5 NO ACTION ALTERNATIVE

Under the No Action Alternative, none of the development alternatives would be implemented. No land would be placed in federal trust for the benefit of the Tribe, and no development would occur.

2.6 COMPARISON OF THE ALTERNATIVES

- **Proposed Project Alternative.** Among the project alternatives considered, the Proposed Project Alternative, which is fully evaluated in **Section 4.0**, would best meet the Tribe's objectives and would provide the greatest socioeconomic benefit to the Tribe and City.
- **Reduced Intensity Alternative.** This alternative would result in similar effects to the environment as the Proposed Project Alternative but would provide the Tribe and the community with less economic benefit than the Proposed Project Alternative. Potential effects associated with traffic, air, and noise would be

less due to the smaller sized mixed use development that would be constructed under the Reduced Intensity Alternative.

- **Non-Gaming Alternative.** This alternative would result in similar effects to the environment as the Proposed Project Alternative but would provide the Tribe and the community with less economic benefit than the Proposed Project Alternative. Potential effects associated with traffic, air, and noise would be greater due to the higher volume of traffic generated by the retail and restaurants uses under the Non-Gaming Alternative.
- **No Action Alternative.** Under the No Action Alternative, the North Site would remain in its existing condition and would not be taken into trust. No environmental effects would occur. Under the No Action Alternative, the Tribe would not achieve any of the economic benefit that would be achieved with development of the Proposed Project Alternative. Moreover, the Tribe would not be able to utilize its landholdings in a manner that would most benefit its members. This alternative would be less preferable than the Proposed Project Alternative since it would not meet the stated purpose and need of facilitating tribal self-sufficiency, self-determination, and economic development.

2.7 ALTERNATIVES ELIMINATED FROM FURTHER ANALYSIS

The intent of the analysis of alternatives in the EA is to present to decision makers and the public a reasonable range of alternatives that are both feasible and sufficiently different from each other in critical aspects. Alternatives were considered and excluded from full EA analysis either because these alternatives were deemed infeasible, would not fulfill the stated purpose and need of the Proposed Action, and/or were not sufficiently distinguishable from the project alternatives that the analysis would offer additional information to assist the BIA in its consideration of impacts under NEPA. A number of potential off-site alternatives were considered but ultimately eliminated due to either the infeasibility of acquiring new off-site properties, the unavailability of off-site properties currently owned by the Tribe for development, or inability of these alternatives to lessen the environmental consequences of the Proposed Project Alternative. These eliminated alternatives are discussed in detail below.

2.7.1 SOUTH SITE ALTERNATIVE

The South Site Alternative would develop a 13.9-acre property located immediately south of the North Site with development sized similarly to the Proposed Project Alternative. A detailed description of this alternative is provided within **Appendix A**, as well as a full analysis of the potential environmental effects of the South Site Alternative. This alternative was ultimately eliminated based on the conclusion that it would not eliminate any of the significant effects of the Proposed Project Alternative (as shown in the analysis provided in **Alternative A**), and would not as effectively meet the purpose and need (as stated in **Section 1.2**) because the Tribe does not currently own the site. The South Site is identified within the figures provided in **Appendix D** and **Appendix H**, and the full analysis prior to elimination is included in **Appendix A**.

2.7.2 OTHER ALTERNATIVE SITES

In addition to the South Site, off-site alternatives were considered that would involve a gaming development on (1) trust land already owned by the Tribe, (2) fee land already owned by the Tribe, or (3) land purchased for use. As described in **Section 1.3**, although the Tribe's Reservation encompasses over 30,000 acres, the total amount of tribally-owned land that is available for development of any kind is extremely small. The total amount of tribally-owned land that is available for gaming development is even smaller. The Tribe's total inventory of land that could be developed for any non-residential commercial purpose is approximately 480 acres. Of these 480 acres, approximately 214 acres is not eligible for a gaming project because it is land acquired in trust after 1988 that does not currently meet any of the exceptions provided in the IGRA; approximately 243 acres are either already developed or is subject to a development plan that does not contemplate a gaming use; approximately 10 acres house the existing Tribal cemetery including planned future expansion; and approximately 13.6 acres is the North Site, analyzed as the Proposed Project Alternative, above.

Further, the cost of re-acquiring new parcels that are located in Palm Springs, Cathedral City, and Rancho Mirage is extremely high, compared to other parts of the country. Due to high acquisition costs and the location of

several desirable resort communities within the Reservation boundaries, it is extremely difficult for the Tribe to re-acquire lands on the Reservation. The median price per acre in Palm Springs has climbed from a recession low in 2009 of $1,011,236 per acre to almost pre-recession levels. The median price per acre in 2017 year-to-date is now at $2,387,097. The pre-recession median price per acre in 2007 was $2,477,632. Generally speaking, these prices far outpace real estate prices on and near Indian reservations in other parts of the country.

In addition to the land restrictions described above, the majority of tribal trust and fee land located on (and off) the Reservation is not suitable for development of this kind for one or more of the following reasons: (1) it has already been developed, (2) it is subject to land planning agreements between the Tribe and other jurisdictions or habitat conservation limitations which do not support such a land use, (3) it is not suitable for development because of its size or its location in inaccessible and/or rugged mountain terrain, (4) it lacks infrastructure necessary for development, or (5) some combination of these issues. The majority (approximately 8,640 acres) of tribally-owned trust and fee lands are located within the Santa Rosa and San Jacinto National Monument and are undevelopable. In total, development restrictions apply to approximately 14,718 acres of tribal trust and tribal fee land, located both on and off-Reservation, making those lands unsuitable for the proposed gaming development.

As described above, additional off-site alternatives are not feasible for a variety of reasons, including restrictions on existing tribally-owned lands, high acquisition costs of new parcels in the vicinity, and suitability for development on existing tribally-owned lands. Further, any off-site alternatives outside of the area identified by the City would not fulfill the joint vision of the City, Tribe, and CURC to redevelop and eliminate conditions of blight in downtown. As noted in **Section 1.5**, the CURC and City have emphasized the importance of the proposed facility including a gaming component as an anchor to enable further growth of a walkable Downtown/Art and Design Village.

Moreover, as described in detail in other sections of this EA, the Tribe's preferred trust site (the North Site), is an infill site that has previously been developed and lacks sensitive resources. All environmental effects of the Proposed Project Alternative can be reduced to less than significant levels with mitigation. Thus, the consideration of a third alternative site would be unlikely to substantially reduce or lessen the environmental effects of the project, and thus would not aid the BIA in its consideration of a reasonable range of alternatives under NEPA.

SECTION 3.0
AFFECTED ENVIRONMENT

A detailed description of the Affected Environment, including applicable regulations and the environmental setting of the North Site (Proposed Project Alternative, Reduced Intensity Alternative, and Non-Gaming Alternative) is provided in **Appendix H**. Please note that **Appendix H** also includes the environmental setting for the South Site, which was ultimately eliminated from consideration, as described in **Section 2.7** and **Appendix A**. **Table 3-1** summarizes key characteristics of the potentially affected environmental setting on the North Site. The following environmental issue areas are described: Land Resources, Water Resources, Air Quality, Biological Resources, Cultural Resources, Socioeconomic Conditions/Environmental Justice, Transportation/Circulation, Land Use, Public Services and Utilities, Visual Resources, Noise, and Hazardous Materials.

TABLE 3-1
ENVIRONMENTAL SETTING

Resource Area	Summary of Environmental Setting
Land Resources	▪ Relatively level topography on the North Site, with a gradual slope down to northeast corner. ▪ North Site is approximately 300 feet above mean sea level. ▪ Nearest mapped fault is the Garnet Hill fault, located 5 miles north of the North Site. ▪ Lateral spreading and other earthquake-induced ground failures are unlikely on the North Site. ▪ Soils on the North Site include Carsitas gravelly sand and Carsitas cobbly sand, which both are excessively drained and have a high hydraulic conductivity, low erosion potential, and high wind erosion potential. These soils are not expansive and have a low shrink-swell potential. ▪ Soils have low liquefaction susceptibility; high seismically-induced settlement susceptibility; unlikely lateral spreading and ground failures; deep, excessively-drained soils with low runoff potential; high susceptibility to wind erosion; high rate of water transmission; moderate to near-severe wind erosion hazard zone; low shrink-swell potential; moderate corrosivity to steel; flooding and ponding not probable; high saturated hydraulic conductivity.
Water Resources	▪ Located within Flood Zone X (outside 100-year floodplain, within 500-year floodplain). ▪ The North Site is within the Cathedral Canyon-Whitewater River Subwatershed of the Upper Whitewater River Watershed, within the Whitewater River Subbasin of the Salton Sea Basin. ▪ The nearest surface water body is the Whitewater River, approximately 0.1 mile northeast of the site. ▪ Nearest 303(d) impaired surface water body is 10.2 miles east of the North Site; contaminants of concern in the groundwater subbasin include mineral concentration, salinity, total dissolved solids, arsenic, chromium-6, uranium, nitrate, and perchlorate. ▪ Drainage is by overland sheet flow on site to the northern and northeastern boundaries, and existing gutters and storm drains convey stormwater to the North Cathedral Channel (**Appendix G**). An existing storm drain runs south-to-north through the North Site beneath Allen Avenue from Date Palm Drive to the North Cathedral Channel. ▪ The underlying groundwater subbasin (Indio Subbasin, located within the Coachella Valley Groundwater Basin) is overdrafted; DWA and CVWD use imported water to supplement the groundwater supply. ▪ Recharge to the groundwater subbasin occurs primarily from surface runoff and subsurface inflow. ▪ Contaminants of concern within the groundwater subbasin include mineral concentration, salinity, total dissolved solids (TDS), arsenic, chromium-6, uranium, nitrate, and perchlorate.
Air Quality	▪ The North Site is within the Riverside County – Coachella Valley region of the Salton Sea Air Basin (SSAB), which is designated by the USEPA as nonattainment for ozone and PM_{10} National Ambient Air Quality Standards (NAAQS). ▪ Emissions of criteria air pollutants (CAPs) in the vicinity of the site are primarily from mobile transportation sources. ▪ Sensitive air quality receptors include children, the elderly, people with illnesses, or others sensitive to the effects of air pollutants. This includes hospitals, schools, convalescent facilities, and residential areas. ▪ Air quality sensitive receptors in the vicinity of the site include: residential areas (440 feet northwest and 500 feet southwest), and parks (25 feet north). The nearest school is 4,000 feet north of the site.
Biological Resources	▪ North Site and surrounding areas are entirely disturbed/developed in an urban area, including structures, paved parking areas, remnant bisecting roadways, power poles, hydrants, manhole covers, roofing tile fragments, plowed soil, and gravel.

Resource Area	Summary of Environmental Setting
	▪ Minimal vegetation consists of ornamental species along roadsides and sidewalks, including palms, and non-managed areas dominated by immature non-native ruderal species; no wildlife was observed during the biological site survey. ▪ Surrounding areas are also highly disturbed by development, including commercial and residential buildings, roadways, sidewalks, and fencing. ▪ No sensitive habitat types, critical habitat, wetlands, or Waters of the U.S. occur on or adjacent to the site. ▪ No federally-listed special-status species have the potential to occur on site. ▪ One state-listed special-status species has the potential to occur: western yellow bat (**Appendix I**). ▪ Migratory birds may forage and nest on or near the site.
Cultural Resources	▪ A record search with the Eastern Information Center identified 72 previously recorded cultural resources within 1.0 mile of the North Site, 22 of which were recorded within the North Site. ▪ A total of 45 cultural resource inventories have been completed within 1.0 mile of the North Site, 2 of which include a portion of the project footprint. ▪ A pedestrian field survey by a qualified archaeologist identified residual features of historic properties; however, all properties identified in the records search, including residential and commercial historic age structures, had been removed. ▪ No eligible or potentially-eligible historic properties are located within the North Site; no paleontological resources have been discovered and recorded within 5 miles of the site. ▪ Analytical Environmental Services (AES) consulted the Native American Heritage Commission (NAHC), which identified no cultural resources and two individuals to contact for information about the area (**Appendix J**).
Socioeconomic Conditions/ Environmental Justice	▪ The City had a labor force of 24,805 and an unemployment rate of 9.9 percent in 2016. ▪ In 2017, the City's population was 54,596, which is a 6.52 percent increase from the City's 2010 population level. ▪ In 2016, the City had a 19 percent vacancy rate, which is expected to decline in the next five years. ▪ The assessed value of the North Site for FY 17-18 is $8,515,491.00, with collected property taxes of $105,367 (**Appendix E**). ▪ The two closest gaming facilities are owned by the Tribe. The next nearest is 15 miles southeast, owned by the Cabazon Band of Mission Indians. Four additional facilities are located within 50 miles of the site. ▪ The North Site is within the Palm Springs Unified School District (PSUSD) service boundary, which enrolled 10,625 students in the 2017-18 school year; the closest public school is 4,000 feet north of the site. ▪ The closest library is 1.6 miles north of the site. ▪ The closest park is located adjacent to the northern boundary of the site. ▪ The Census tract that encompasses the site is contains a minority population (55.0 percent); members of the Tribe are also considered a minority population. Several adjacent Census tracts also contain substantial minority populations. ▪ No low-income communities are located in the vicinity of the North Site.
Transportation/ Circulation	▪ 29 intersections and 10 roadway segments were analyzed in the Traffic Impact Analysis (TIA; **Appendix K**). ▪ The peak hour periods were determined to be the PM peak hour (4:00 to 5:00 pm) and the Saturday midday peak hour (1:00 to 2:00 pm) based on traffic counts conducted at similar casinos. ▪ Level of service (LOS) D is considered to be acceptable based on local General Plan documents. ▪ Cathedral Canyon Drive and Paseo Real does not operate acceptably in existing conditions; all other study intersections and roadway segments do operate acceptably. ▪ There are two bus stops adjacent to the North Site on East Palm Canyon Drive at Allen Avenue and Date Palm Drive at Grove Street, which are served by Sunline Transit Agency Routes 30 and 111. ▪ Sidewalks are generally located nearby, including along Date Palm Drive and East Palm Canyon Drive. ▪ Bike lanes are not generally located along study area roadways, except along certain roadways, including Frank Sinatra Drive.
Land Use	▪ The North Site is designated for Downtown Commercial (DTC) land uses (City General Plan), and for Downtown/Art and Design Village development (Date Palm Drive Corridor Connector Plan, Date Palm Drive Specific Plan). ▪ The North Site is zoned by the City for Mixed Use Commercial (MXC) and Downtown Residential Neighborhood (DRN). ▪ City Council Resolution 2017-44 supports the Tribe's use of the North Site for gaming purposes. ▪ The North Site is located within the incorporated boundaries of the City of Cathedral City, in Riverside County. ▪ The North Site is adjacent to East Palm Canyon Drive (Highway 111), which provides local access to the City, along with Interstate 10 (I-10).

Resource Area	Summary of Environmental Setting
	▪ The North Site is comprised of 66 County tax parcels, and is bound by Buddy Rogers Avenue to the north, Date Palm Drive to the east, and East Palm Canyon Drive to the south. Adjacent parcels are to the west. ▪ The entire North Site has been previously developed, however, most structures have been demolished. Existing roadways and infrastructure remain within the site, including paved roadways, utilities, and gravel lots. Two buildings remain on the North Site: the fire station at the northeast corner (which the City is relocating to parcels north of the site) and a fast food restaurant (Carl's Jr) at the southeast corner of the site. ▪ Adjacent land uses include commercial, park, and undeveloped land; zoned MXC and DRN, with some Open Space, Planned Community Commercial, and Commercial Tourist and Recreation east of the site.
Public Services and Utilities	▪ The North Site contains or is adjacent to existing water supply infrastructure (12-inch mains run along the north and east boundaries of the North Site beneath Buddy Rogers Avenue and Date Palm Drive, with 6- and 8-inch mains located within the site), wastewater collection infrastructure (12-inch main along Date Palm Drive, with 8-inch branch lines from this main running west along Grove Street through the site and north along Monty Hall Drive to the North Cathedral Channel, and east to a lift station near the intersection of Date Palm Drive and Buddy Rogers Avenue), electricity infrastructure (underground utility lines run through the site, and electrical poles are located along Allen Avenue, Buddy Rogers Avenue, Grove Street, and Dawes Street), and natural gas infrastructure (high pressure distribution lines beneath East Palm Canyon Drive and Date Palm Drive). ▪ DWA would provide water services to the North Site with 95 percent groundwater. DWA uses imported surface water to recharge the groundwater aquifer. ▪ DWA projects it has sufficient water supply to accommodate estimated demand through 2040. ▪ CVWD is responsible for wastewater collection and treatment in the region. WRP-10 would treat wastewater from the site; this plant has a capacity of 18.0 million gallons per day (MGD), and treated 9.5 MGD in 2015. ▪ Burrtec provides private solid waste service to the vicinity of the North Site. Solid waste is conveyed to the Edom Hill Transfer Station (7.5 miles north of the site) and then the Lamb Canyon Landfill (31.5 miles west of the site, with a permitted capacity of 5,000 tons per day and estimated maximum capacity of 38,935,653 cubic yards). The Lamb Canyon Landfill is a Class III landfill, permitted to receive construction and demolition waste, green materials, and mixed municipal waste. ▪ No recreational activities occur on the North Site. The nearest parks (Second Street Park and Cathedral City Dog Park) are located 25 feet north of the site. ▪ SCE provides electricity to the site, from SCE's Sumac 12kV Circuit and the Tamarisk 115/12 kV Substation (1.1 miles northeast of the site), which has a total generation capacity of 112.0 MW. ▪ SoCalGas provides natural gas service to the site. ▪ The North Site is within the service area of the CCPD (headquarters located less than 0.2 miles from the site). CCPD's patrol division includes 1 lieutenant, 3 sergeants, and 25 patrol officers; and responds to an average of 42,500 calls per year. ▪ CCFD serves the site, with the closest CCFD station currently located on the North Site to be moved across Buddy Rogers Avenue immediately adjacent to the site. CCFD employs 40 individuals, 36 of which work in fire suppression or paramedic units. In 2016, CCFD responded to 5,660 incidents, including fire and medical emergency calls. ▪ The closest 24-hour medical facility is the Eisenhower Medical Center 3.0 miles east of the site, which has plans for expansion.
Visual Resources	▪ The North Site consists of empty gravel lots (with two remaining structures at the northeast and southeast corners of the site) located within downtown Cathedral City. ▪ The North Site is visible in the background from an apartment building located 440 feet to the northwest and single-family homes 500 feet southwest. Vehicles along local roadways can also view the site. ▪ There are no scenic resources immediately adjacent to or within the North Site. ▪ Viewsheds of the site include from Date Palm Drive and Palm Canyon Drive and along Buddy Rogers Drive, as shown in **Figures 3.10-1** and **3.10-2** of **Appendix D**. ▪ No state scenic highways are adjacent to or in the vicinity of the site. ▪ No significant existing sources of lighting, shadow, or glare are currently present on the site.
Noise	▪ The City General Plan Noise Element has the following standards: 55 A-weighted decibels (dBA) community noise equivalent level (CNEL) for residences, 62.5 dBA CNEL for parks, and 62.5 dBA CNEL for commercial developments. ▪ Existing traffic is the primary source of ambient noise at the site. Noise measurement data is included in **Appendix L** and summarized in **Appendix H**. 24-hour ambient noise measures taken in the vicinity of the site ranged between 55.0 to 67.2 dBA Leq. ▪ No existing sources of vibration are located near the North Site. ▪ Noise-sensitive land uses include residential housing, schools, and health care facilities. ▪ The nearest noise sensitive receptors include residences 440 feet northwest and 500 feet southwest, parks 25 feet north, and commercial facilities adjacent to the western boundary and 100 feet east.

Resource Area	Summary of Environmental Setting
	▪ Peak particle velocity (PPV) is the maximum instantaneous peak (inches per second) of the vibration signal, which is used to estimate Lv or VdB levels (vibration decibels with a reference velocity of one micro-inch per second). ▪ The Federal Transportation Administration's (FTA's) guideline vibration damage criteria for buildings is 90 VdB. ▪ The FTA's guideline for maximum vibration at sensitive receptors is 70 VdB. ▪ Background vibration velocity in residential areas is usually 50 VdB or lower.
Hazardous Materials	▪ No visible signs of gross contamination, odors indicative of hazardous materials releases, or asbestos-containing materials observed during the December 2017 site visit; but concrete water lines and crushed in-place concrete septic tanks may contain asbestos. ▪ A Phase I Environmental Site Assessment (ESA) identified one historical recognized environmental conditions (HREC) and five potential recognized environmental conditions (RECs) within the North Site. The HREC former leaking underground storage tank (LUST) case was closed in 2006. The five potential RECs included three historic auto stations, one gasoline service station, and the existing fire station. These five sites were recommended to be evaluated for potential petroleum hydrocarbon contamination. (**Appendix M**) ▪ A Limited Phase II Environmental Evaluation, conducted in 2017, identified underground storage tanks (USTs) and/or remnants of UST excavation. One former UST excavation site was identified and recommended for subsurface assessment for petroleum hydrocarbon soil residues, and the remaining four sites were not considered RECs. (**Appendix M**) ▪ The 2018 Phase of the Limited Phase II collected 12 soil boring samples to test for total petroleum hydrocarbons (TPH), lead, and pH in January 2018. All samples' results were below the screening level for TPH, lead was not detected in any of the samples, and pH was determined to be moderately to strongly alkaline. No further testing was recommended. (**Appendix M**)

SECTION 4.0
ENVIRONMENTAL CONSEQUENCES

This section assesses the environmental consequences of the Proposed Project Alternative, Reduced Intensity Alternative, Non-Gaming Alternative, and No Action Alternative, described in **Section 2.0**. Effects are measured against the environmental baseline, which is briefly summarized in **Section 3.0** and described in detail in **Appendix H**. Indirect and cumulative effects are identified in **Section 4.13**. Measures to mitigate for adverse impacts identified in this section are presented in **Section 5.0**.

4.1 LAND RESOURCES

4.1.1 PROPOSED PROJECT ALTERNATIVE

Topography

The topography of the North Site is relatively flat and only interrupted by an elevated pad that lies between Dawes Street and East Palm Canyon Drive (Highway 111). The majority of the structures proposed for development under the Proposed Project Alternative would be built north of East Palm Canyon Drive and east of Allen Avenue, bridging the elevated pad, but overall on levelled ground (see **Figure 2-3** of **Appendix D**).

The Proposed Project Alternative would involve grading within the project footprint discussed in **Section 2.2** and would require an import of 91,933 cy of fill material. Topographic features of the site would be altered by earthwork. However, changes to topography resulting from leveling the site would not affect significant existing topographic features on the North Site, as there are none. The final grading plan would be in compliance with standard engineering practices. The site has no topographic problems that would affect the grading of the site, such as shallow bedrock, wetlands, or high groundwater conditions. With preparation of and adherence to the measures within a grading plan, development of the Proposed Project Alternative would not result in an adverse impact to topography. No mitigation is required.

Geology/Soils

Soils within the North Site have low shrink-swell potential, which indicates that soil reclamation or special design measures should not be required (NRCS, 2018). Given that the site was formerly developed primarily as a residential community, it is likely that existing soils on the site are capable and suitable for the proposed uses. With preparation of and adherence to measures within the final grading plan prepared by a qualified engineer (refer to **Section 2.2.2**), these soils would not preclude development of the site and impacts would be less than significant.

The soils on the areas of the North Site that will be developed have been characterized as moderately corrosive to steel, as well as moderately corrosive to concrete (NRCS, 2018). In anticipation of these soil limitations, the final project design will incorporate protective measures to minimize adverse impacts relative to soil corrosivity. These measures include non-corrosive materials and/or protective coatings for buried facilities to be used for construction in corrosive soils per CBC requirements. With incorporation of these protective measures, impacts resulting from corrosive soils will be less than significant.

The Proposed Project Alternative could affect soils due to erosion during construction, operation, and maintenance activities. Such construction activities could include clearing, grading, trenching, and backfilling. Site grading would further expose soils on the North Site to erosion by water and wind. Under the Proposed Project Alternative, approximately 12.24 acres of the North Site will become impervious.

Table 3-1 of **Section 3.0** describes the soil types, erosion potential, permeability, and general gradients for the soil units mapped on the site. The Carsitas gravelly sand and cobbly sand soil types are only slightly susceptible to water erosion, while the entire North Site is susceptible to wind erosion.

Sediment discharge into navigable (surface) Waters of the U.S. is regulated by the CWA, which establishes water quality goals for sediment control and erosion prevention for any project that would disturb more than 1 acre of soil. One of the mechanisms for achieving the goals of the CWA is the NPDES permitting program, administered by the USEPA. As part of the NPDES General Construction Permit, a SWPPP must be prepared and implemented. The SWPPP must make provisions for (1) erosion prevention and sediment control and (2) control of other potential pollutants. Construction of the Proposed Project Alternative would disturb more than one (1) acre; therefore, the Tribe is required by the CWA to obtain coverage under, and comply with the terms of, the NPDES General Construction Permit for construction activities subsequent to federal trust property acquisition of the North Site.

The NPDES General Construction Permit requirements would reduce any potential adverse impacts to less-than-significant levels. With regulatory requirements and BMPs described in **Section 2.2.3**, impacts from implementation of the Proposed Project Alternative on soils and geology would be minimal and, therefore, less than significant.

Seismic Hazards

The North Site is not located on any known active fault trace; thus, the risk of fault rupture is low. The Garnet Hill fault, the nearest fault, is located approximately five miles north of the North Site (DOC, 2007). As described in **Section 2.2.2**, all structures would conform to the applicable building code requirements of the CBC and CPSC, including building, electrical, energy, mechanical, plumbing, fire protection, and safety as adopted under the Tribal Building and Safety Code (Tribal Ordinance No. 26). Use of the CBC, CPSC, and Tribal Building and Safety Code design and construction standards would allow ground shaking-related hazards to be managed from a geologic, geotechnical, and structural standpoint such that adverse impacts to the health or safety of workers or members of the public would be minimized. Therefore, no adverse impacts due to geologic or seismic conditions on site would occur.

4.1.2 REDUCED INTENSITY ALTERNATIVE

Impacts to land resources under the Reduced Intensity Alternative would be the same as under the Proposed Project Alternative (refer to **Section 4.1.1**). Fewer structures would be built, but the remaining portions of the North Site would then be used for parking, resulting in the same amount of soil and topography manipulation as the Proposed Project Alternative. The Reduced Intensity Alternative would comply with the applicable NPDES General Construction Permit requirements and BMPs described in **Section 2.2.3**, which would ensure that the Reduced Intensity Alternative would have minimal impacts on soils within the North Site. Therefore, impacts resulting from seismic conditions would be the same as under the Proposed Project Alternative.

4.1.3 NON-GAMING ALTERNATIVE

Impacts to land resources under the Non-Gaming Alternative would be the same as under the Proposed Project Alternative (refer to **Section 4.1.1**). The entire North Site would be developed, and the same amount of soil and topography manipulation would be required for this alternative when compared to the Proposed Project Alternative. The Non-Gaming Alternative would comply with the applicable NPDES General Construction Permit requirements and BMPs described in **Section 2.2.3**, which would ensure that this alternative would have minimal impacts on soils within the North Site. Therefore, impacts resulting from seismic conditions would be the same as under the Proposed Project Alternative.

4.1.4 NO ACTION ALTERNATIVE

Under the No Action Alternative, the North Site would not be taken into trust and no development would occur. The site would remain in its current state. Therefore, topographic features and soils would remain undisturbed and the No Action Alternative would have no adverse impacts related to land resources.

4.2 WATER RESOURCES

4.2.1 PROPOSED PROJECT ALTERNATIVE

Surface Water

Construction Impacts

Construction impacts under the Proposed Project Alternative would include ground-disturbing activities such as grading and excavation, which could lead to erosion of topsoil. Erosion from construction sites can increase sediment discharge to surface waters during storm events, thereby degrading downstream water quality. Construction activities would also include the routine use of potentially hazardous construction materials such as concrete washings, oil, and grease, which may spill onto the ground and be dissolved in stormwater. Discharges of pollutants, including grease, oil, fuel, and sediments, to surface waters from construction activities and accidents are a potentially significant impact. Regulated construction activities in excess of one (1) acre are required to apply for coverage under the NPDES General Construction Permit. The provisions of this permit include preparation of a SWPPP, which would be developed prior to any ground disturbance and would include BMPs to reduce potential surface water contamination during storm events. A list of BMPs that may be included in the SWPPP and that would be implemented during construction of the Proposed Project is presented in **Section 2.2.3**. These BMPs would minimize adverse impacts to the local and regional watershed from construction activities associated with the Proposed Project Alternative by reducing detachment of soil particles from bare soil or by preventing movement of loose soil into waterways. With adherence to the NPDES permitting program and implementation of the SWPPP, impacts to surface water quality from construction activities would be less than significant.

Operation

Water Supply

The water supply for the Proposed Project Alternative would be provided through the DWA, which, as described in **Appendix H** derives the majority of its water supply from groundwater. Based on the analysis provided in **Appendix F**, the operational potable water demand of the Proposed Project Alternative would not have a significant impact on any regional surface water supplies. Refer to the *Groundwater – Water Supply* subheading below for an analysis of the Proposed Project Alternative's impacts on the regional groundwater supply. Refer to **Section 4.9** for an analysis of impacts to water providers.

Stormwater Runoff

Pollutants that accumulate in dry periods, such as oil and grease, asbestos, pesticides, and herbicides, may adversely affect water quality because of their presence in high concentrations during the first storm event of the season. Development of the casino, mixed-used, and parking facilities would result in a greater area of impervious surfaces, approximately 12.24 total acres, potentially increasing stormwater runoff flow rates. An increase in impervious surfaces reduces infiltration of stormwater through the soil, and can cause an increase in on-site or off-site flooding or erosion by directing water towards areas that typically do not receive concentrated surface water runoff. As described in **Section 2.2.2**, in order to retain 100 percent of the stormwater flows associated with a 100-year, 3-hour storm event, the Proposed Project Alternative includes the installation of a total of approximately 2,010 linear feet of 96-inch perforated corrugated metal pipe surrounded by porous stone beneath the proposed parking lots in the northeast portion of the North Site. This retention facility would provide approximately 138,166 cubic feet of storage, which would be adequate to retain the approximately 137,244 cubic feet of flows associated with a 100-year, 3-hour storm event (**Appendix G**). Because all stormwater would be retained on site, impacts to surface water would not occur, and no mitigation is required.

Flooding

Impacts to the floodplain or floodplain management could occur if construction of the Proposed Project Alternative were to place people or structures in a floodplain or change flood elevations. The North Site is outside of a 100-flood zone as designated by the Federal Emergency Management Agency (FEMA; FEMA, 2017). Construction and operation of the Proposed Project Alternative would not alter the 100-year floodplain boundaries or flooding elevations. The North Site is located in Zone X, a 500-year floodplain designated by FEMA; however, there are no additional design or construction requirements for buildings in this zone (FEMA,

2005). Therefore, no adverse impact associated with flooding or floodplain management would occur as a result of the Proposed Project Alternative.

Groundwater

Water Supply

As described in **Section 2.2.2** and **Appendix F**, the Proposed Project Alternative has a projected average day potable water demand of approximately 33,929 gpd, or approximately 38 acre-feet per year (AFY). Potable water would be supplied to the Proposed Project Alternative by DWA, which, as stated above and in **Appendix H**, derives the vast majority of its potable water supply from groundwater pumped from the Indio (Whitewater) Subbasin. According to CVWD, in 2020, the western portion of the Coachella Valley Groundwater Basin (which encompasses the portion of the Indio Subbasin that underlies the North Site) is projected to experience total outflows of 177,400 AFY (CVWD, 2011). Operational water demand under the Proposed Project Alternative would constitute only approximately 0.02 percent of the total projected outflows in 2020. Therefore, operational water demand under the Proposed Project Alternative would have a less-than-significant impact on regional groundwater levels, and no mitigation is required.

The introduction of impervious surfaces to the North Site under the Proposed Project Alternative could prevent water from percolating to the underlying aquifer, resulting in lower rates of groundwater recharge. However, the stormwater features that have been incorporated into the project design would include perforated corrugated metal pipes surrounded by porous stone designed to capture and retail 100 percent of the stormwater flows associated with a 100-year, 3-hour storm event, which would allow stormwater to slowly permeate into the underlying groundwater aquifer, as described in **Section 2.2.2**. Therefore, with the incorporation of these features, no adverse effects due to groundwater recharge would occur.

Water Quality

Contaminated runoff from project facilities could infiltrate through the soil and potentially affect groundwater. As described in in **Section 2.2.2** and **Appendix G**, design of the Proposed Project Alternative includes the installation of grates and filter bags at the entrances to drainage inlets, which would remove trash, debris, and sediment from stormwater runoff. These features and the other potential LID techniques described (including bio-retention facilities, vegetated filter strips, and permeable pavement) would adequately filter runoff before it enters the groundwater table, assuring that the impact to groundwater quality from stormwater runoff would be less than significant.

4.2.2 REDUCED INTENSITY ALTERNATIVE

The location and size of the stormwater retention facilities developed under the Reduced Intensity Alternative would be the same as under the Proposed Project Alternative (refer to **Section 4.2.1**). Further, the Reduced Intensity Alternative would comply with the applicable NPDES General Construction Permit requirements and BMPs described therein (refer to **Section 2.2.3**). Therefore, impacts to surface water resources and groundwater quality from the development and operation of the Reduced Intensity Alternative would be less than significant, similar to the Proposed Project Alternative. Additionally, the Reduced Intensity Alternative would not place people or structures in a floodplain or change flood elevations; therefore, as with the Proposed Project Alternative, no adverse impact associated with flooding or floodplain management would occur as a result of the Reduced Intensity Alternative. In regards to groundwater supply, the Reduced Intensity Alternative would require approximately 5 percent less potable water than the Proposed Project Alternative, with an approximate average daily water demand of 32,159 gpd, or approximately 36 AFY. As described in **Section 4.2.1**, the Proposed Project Alternative would not have a significant adverse impact on groundwater levels; therefore, the Reduced Intensity Alternative, which would be supplied by the same source and has a lower water demand, would have a further reduced impact.

4.2.3 NON-GAMING ALTERNATIVE

The location and size of the stormwater retention facilities developed under the Non-Gaming Alternative would be the same as under the Proposed Project Alternative (refer to **Section 4.2.1**). Further, the Non-Gaming Alternative would comply with the applicable NPDES General Construction Permit requirements and BMPs

described therein. Therefore, impacts to surface water resources and groundwater quality from the development and operation of the Non-Gaming Alternative would be less than significant, similar to the Proposed Project Alternative. Additionally, the Non-Gaming Alternative would not place people or structures in a floodplain or change flood elevations; therefore, as with the Proposed Project Alternative, no adverse impact associated with flooding or floodplain management would occur as a result of the Non-Gaming Alternative. In regards to groundwater supply, the Non-Gaming Alternative would require approximately 29 percent less potable water than the Proposed Project Alternative, with an approximate average daily water demand of 24,134 gpd, or approximately 27 AFY. As described in **Section 4.2.1**, the Proposed Project Alternative would not have a significant adverse impact on surface or groundwater levels; therefore, the Non-Gaming Alternative, which would be supplied by the same source and has a lower water demand, would have a further reduced impact.

4.2.4 NO ACTION ALTERNATIVE

Under the No Action Alternative, the North Site would not be taken into trust, and no development would occur. The site would remain in its current state. Therefore, the No Action Alternative would have no adverse impacts related to surface water or groundwater resources.

4.3 AIR QUALITY

4.3.1 METHODOLOGY

Development and operation of the Proposed Project Alternative would emit CAPs, hazardous air pollutants (HAPs), and GHGs. This section presents the methodology used to assess the affected environment and to evaluate the potential air quality effects of the project alternatives.

Assessment Criteria

Adverse effects to ambient air quality could result if either construction or operation would result in violations of the federal Clean Air Act (CAA) provisions, or if emissions would impede a state's ability to meet NAAQS.

While the North Site is located within the SSAB and the South Coast Air Quality Management District's (SCAQMD) jurisdictional boundaries, SCAQMD thresholds do not apply to federal actions. The effects of proposed federal actions on SCAQMD air quality management are assessed under General Conformity as required under the CAA.

Construction Analysis

Construction would entail mass earthwork, fine grading, and building, road, and parking lot construction. A variety of heavy equipment, including trucks, scrapers, excavators, and graders, would be used to complete each phase. A detailed list of the proposed equipment and emissions resulting from the equipment is located in **Appendix N**. Effects on air quality during construction were evaluated by estimating the amount of criteria pollutants that would be emitted over the duration of the construction period (for each phase of construction where applicable). Particulate matter 10 microns in diameter (PM_{10}) and ozone (O_3) precursors (NO_x and reactive organic gases [ROG]) are the primary pollutant of concern resulting from operation of construction equipment, earth-moving activities, and soil hauling. Soil hauling trips, which are included in the 11,492 hauling trips for grading work, were calculated assuming the maximum 91,933 cy of fill material is required (**Appendix G**, **Appendix N**).[1] This provides for a conservative analysis.

ROG, nitrogen oxides (NO_x), sulfur dioxide (SO_2), carbon monoxide (CO), and DPM emissions from construction would primarily be produced by diesel-fueled equipment use from on and off-road construction equipment and truck use. Emissions from construction equipment were calculated using the USEPA approved 2016 California Emissions Estimator Model, Version 2016.3.2 (CalEEMod; CalEEMod, 2016). The majority of PM_{10} and Particulate matter 2.5 microns in diameter ($PM_{2.5}$) emissions would result from fugitive dust generated during earth-moving activities, such as site grading. CalEEMod was used to estimate PM_{10} and $PM_{2.5}$ project-related

[1] Note these values are for the Proposed Project Alternative. The Reduced Intensity Alternative included 9,082 hauling trips during grading, calculated from the maximum 72,653 cy of fill material; and the Non-Gaming Alternative included 12,327 hauling trips during grading, calculated from the maximum 98,965 of fill material (**Appendix G**, **Appendix N**).

emissions and precursors from equipment exhaust and fugitive dust. CAP emissions were estimated assuming that construction would begin in January 2019 and continue at an average rate of 22 days per month for all project alternatives. The construction duration for project alternatives is conservatively assumed to be approximately 12 months[2]. Emissions results are summarized below and included in **Appendix N**.

Operational Analysis

CalEEMod was also used to estimate emissions associated with operation of the project alternatives. Input values for the CalEEMod included data from the TIA provided in **Appendix K**, water/wastewater estimates from **Appendix F**, and solid waste generation estimates from **Section 4.9**. Trip generation specific to each of the project alternatives provided in the TIA was incorporated into CalEEMod, including internal capture rates. The TIA estimated approximately 61 percent of retail patrons would patronize the casino or restaurant and 62 percent of restaurant patrons would patronize the casino or retail. Default trip length values included in CalEEMod were used for all land uses.

Appendix N includes additional details regarding CalEEMod inputs as well as the CalEEMod output files.

- **Federal General Conformity**. Conformity regulations apply to Federal actions that would cause emissions of CAPs to occur in locations designated as non-attainment or maintenance areas for the emitted pollutants. As discussed in **Appendix H**, the North Site is located in an area that is classified as severe nonattainment for ozone (NO_x and ROG, ozone precursors) and PM_{10} under the NAAQS; therefore, if project emissions are equal to or exceed applicable *de minimis* levels for any CAP provided in 40 CFR §93.153 (b)(1) and (2), then a federal general conformity determination analysis would be required.
- **Carbon Monoxide Hot Spot Analysis**. Implementation of the project alternatives would result in emissions of CO. Because CO disperses rapidly with increased distance from the source, emissions of CO are considered localized pollutants of concern rather than regional pollutants, and can be evaluated by Hot Spot Analysis. "Hot Spots" include high traffic volume intersections with poor operating conditions resulting in extensive idling time for cars and subsequently can be concentrated areas with elevated CO levels. Refer to **Appendix H** for additional details related to Hot Spot analysis and screening criteria. The North Site is not in an area or category of site that has been identified in a CO plan. As shown in the TIA, provided as **Appendix K**, no intersection after mitigation would operate at LOS E or F. The North Site is not located in a CO nonattainment or maintenance area. Therefore, in accordance with 40 CFR §93.123, no further quantitative analysis is required.
- **Climate Change**. This EA considers whether project emissions have individual or cumulative effects on climate change. Given the global nature of climate change impacts, individual project impacts are most appropriately addressed in terms of the incremental contribution to a global cumulative impact; therefore, refer to in **Section 4.13**, cumulative effects, for the analysis of impacts related to climate change. This approach is consistent with the view articulated by the *Intergovernmental Panel on Climate* (IPCC) *Change Fifth Assessment Report* (IPCC, 2014).
- **Federal Class I Areas**. If any alternative emits greater than the Prevention of Significant Deterioration (PSD) threshold of 250 tons per year (tpy) of any one criteria pollutant from stationary sources during construction or operation then a best available control technology analysis will be conducted. San Gorgonio Wilderness, San Jacinto Wilderness, and Joshua Tree NP are within the preconstruction review distance of the North Site and analysis is required.
- **Tribal New Source Review (NSR)**. The Tribe would be required to apply for a permit under the newly implemented NSR requirements of the CAA if stationary source operational emissions of regulated pollutants would exceed the thresholds presented in Table 3 of **Appendix H**. For this analysis, stationary source project-related operational emissions will be quantified and compared to the applicable threshold.

[2] While actual construction activities associated with the alternatives may be phased over a longer period, assuming that all construction would take place within a one-year condensed time frame results in a higher concentration of daily emission estimates, and thus is a conservative assumption.

4.3.2 PROPOSED PROJECT ALTERNATIVE

Construction Emissions

Construction of the Proposed Project Alternative would emit PM_{10}, NO_x, SO_2, CO, ROG, and HAPs (primarily in the form of DPM) from the operation of construction equipment and earth-moving grading activities. Emissions from construction equipment have the potential to increase the concentration of DPM in the close vicinity (within approximately 500 feet) of the construction site, if control measures are not implemented.

Construction is assumed to occur 8 hours a day, 5 days a week. Unmitigated construction emission totals for the Proposed Project Alternative are shown in **Table 4-1**, and mitigated construction emission totals after the implementation of BMPs listed in **Section 2.2.3** are shown in parentheses (also see **Appendix N** model output files).

TABLE 4-1
UNMITIGATED (MITIGATED) CONSTRUCTION EMISSIONS FROM THE PROJECT ALTERNATIVES

Construction Year – 2019	Criteria Pollutants (tpy)					
	ROG	**NO_x**	**CO**	**SO_x**	**PM_{10}**	**$PM_{2.5}$**
Proposed Project Alternative	1.7 (1.5)	5.3 (4.3)	3.1 (3.2)	0.0 (0.0)	0.6 (0.4)	0.3 (0.2)
Reduced Intensity Alternative	1.5 (1.3)	5.0 (4.0)	3.1 (3.3)	0.0 (0.0)	0.6 (0.4)	0.3 (0.2)
Non-Gaming Alternative	1.6 (1.4)	5.4 (4.4)	3.1 (3.2)	0.0 (0.0)	0.6 (0.4)	0.3 (0.2)
De Minimis Levels	*25*	*25*	*N/A*	*N/A*	*70*	*N/A*
Exceed Level?	**No**	**No**	**N/A**	**N/A**	**No**	**N/A**

Notes: N/A = Not Applicable; levels are not applicable due to attainment status (refer to **Appendix H**).
Mitigated emission levels after the implementation of BMPs in **Section 2.2.3** are shown in parenthesis.
Source: CalEEMod, 2016.

As shown in **Table 4-1**, emissions of individual criteria pollutants from construction of the Proposed Project Alternative would not exceed applicable *de minimis* levels; therefore, a conformity determination is not required. However, to further reduce project-related construction criteria pollutants and DPM emissions, BMPs would be implemented by the Tribe and are listed in **Section 2.2.3**. These measures would reduce DPM emissions from construction equipment by approximately 85 percent, avoiding potentially adverse effects to nearby sensitive receptors. Therefore, construction of the Proposed Project Alternative would not result in significant adverse effects associated with the regional air quality environment.

Operational Emissions

Buildout of the Proposed Project Alternative would result in the generation of mobile emissions from patron, employee, and delivery vehicles, as well as area and energy criteria pollutant emissions from combustion of natural gas in boilers, stoves, heating units, and other equipment. Unmitigated operational emission totals for the Proposed Project Alternative are shown in **Table 4-2**. It should be noted that stationary and area sources are exempt under conformity regulations and therefore not subject to *de minimis* levels. Detailed calculations of vehicle and area emissions are included as **Appendix N**.

As shown in **Table 4-2**, operational emissions of individual criteria pollutants from the Proposed Project Alternative would not exceed applicable *de minimis* levels and emissions of individual criteria pollutants from stationary sources (area and stationary) would not exceed the Tribal NSR thresholds shown in Table 3 of **Appendix H**. Therefore, a conformity determination is not required and a Tribal NSR permit would not be required. Further, **Table 4-2** shows that the Proposed Project Alternative would not result in stationary source emissions (under the categories of Area and Stationary sources) of any one pollutant in excess of the Federal Class I Areas major source threshold of 250 tpy. Therefore, operation of the Proposed Project Alternative would not result in significant adverse effects associated with the regional air quality environment.

TABLE 4-2
PROPOSED PROJECT ALTERNATIVE UNMITIGATED OPERATIONAL EMISSIONS

Sources	Criteria Pollutants (tpy)					
	ROG	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$

Exceed Level?	**No**	**No**	**N/A**	**N/A**	**No**	**N/A**

Notes: N/A = Not Applicable; levels are not applicable due to attainment status (refer to **Appendix H**, Table 3-8).
1 - Only applies to Non-Exempt Emissions.
Source: CalEEMod, 2016.

However, to further reduce project-related operational criteria pollutants, BMPs are provided in **Section 2.2.3**. These measures would minimize CAP emissions from operation of the Proposed Project Alternative through the reduction of on-site area emissions, vehicle idling, and mobile emissions.

4.3.3 REDUCED INTENSITY ALTERNATIVE

Construction Emissions

As with the Proposed Project Alternative (refer to **Section 4.3.2**), construction of the Reduced Intensity Alternative is assumed to occur 8 hours a day, 5 days a week. Construction emission totals for the Reduced Intensity Alternative are shown in **Table 4-1**. As shown in **Table 4-1**, emissions of individual criteria pollutants from construction of the Reduced Intensity Alternative would not exceed *de minimis* levels; therefore, no conformity determination is required and project-related emissions would be less than significant. However, to further reduce project-related construction criteria pollutants and DPM, BMPs are provided in **Section 2.2.3**.

Operational Vehicle and Area Emissions

Buildout of the Reduced Intensity Alternative would result in the generation of operational emissions similar to the Proposed Project Alternative. Unmitigated operational emission totals for the Reduced Intensity Alternative are shown in **Table 4-3** for detailed estimates).

As shown in **Table 4-3**, emissions of individual criteria pollutants from operation of the Reduced Intensity Alternative would not exceed applicable *de minimis* levels and emissions of individual criteria pollutants from stationary sources (area, energy, and stationary) would not exceed the Tribal NSR threshold of 2 tpy for ROG and NO_x. Therefore, a conformity determination is not required and no Tribal NSR permit would be required. Further, **Table 4-3** shows that the Reduced Intensity Alternative would not result in stationary source emissions of any one pollutant in excess of the Federal Class I Areas major source threshold of 250 tpy. Therefore, operation of the Reduced Intensity Alternative would not result in significant adverse effects associated with the regional air quality environment. However, to further reduce project-related operational criteria pollutants, BMPs are provided in **Section 2.2.3**. These measures would minimize CAP emissions from operation of the Reduced Intensity Alternative through the reduction of on-site area emissions, vehicle idling, and mobile emissions.

1 - Only applies to Non-Exempt Emissions.
Source: CalEEMod, 2016.

4.3.4 NON-GAMING ALTERNATIVE

Construction Emissions

Construction of the Non-Gaming Alternative would emit PM_{10}, NO_x, SO_2, CO, ROG, and HAPs (primarily in the form of DPM) from the operation of construction equipment and grading activities. Construction is assumed to occur 8 hours a day, 5 days a week. Unmitigated construction emission totals for the Non-Gaming Alternative are shown in **Table 4-1**, and mitigated construction emission totals are shown in parentheses (also see **Appendix N** for model output files). As shown in **Table 4-1**, emissions of individual criteria pollutants from construction of the Non-Gaming Alternative would not exceed *de minimis* levels; therefore, no general conformity determination would be required and project-related emissions would be less than significant. However, to further reduce project-related construction criteria pollutant emissions, BMPs are provided in **Section 2.2.3**.

Operational Vehicle and Area Emissions

The Non-Gaming Alternative proposes less development than the Proposed Project Alternative (refer to **Section 4.3.2**), consisting of all components of the Proposed Project Alternative with the exception of the casino. However, fewer trips from retail and recreational land uses are internally captured due to the absence of a casino from this alternative, therefore increasing total vehicle miles traveled and emissions from mobile sources. Buildout of the Non-Gaming Alternative would result in the generation of mobile emissions from patron, employee, and delivery vehicles, as well as area and energy criteria pollutant emissions from combustion of natural gas in boilers, stoves, heating units, and other equipment. Unmitigated operational emission totals for the Non-Gaming Alternative are shown in **Table 4-4**. Detailed estimated emissions are provided in **Appendix N**.

As shown in **Table 4-4**, without mitigation, non-exempt emissions of the ozone precursor NO_x from operation of the Non-Gaming Alternative would exceed applicable levels by approximately 2 tpy. Therefore, this would be a significant adverse impact. BMPs provided in **Section 2.2.3** would minimize CAP emissions from operation of the Non-Gaming Alternative through the implementation of measures intended to reduce on-site area emissions, vehicle idling, and mobile emissions. Additionally, mitigation in **Section 5.0** requires the purchase of credits to fully offset NO_x emissions to below *de minimis* levels. After mitigation, impacts to the regional air quality environment resulting from operation of the Non-Gaming Alternative would be reduced to less-than-significant.

TABLE 4-4
NON-GAMING ALTERNATIVE UNMITIGATED OPERATIONAL EMISSIONS

Sources	Criteria Pollutants					
	ROG	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	tons per year (tpy)					
Exempt Conformity Emissions						
Area	1	0	0	0	0	0
Stationary	0	1	1	0	0	0
Total Exempt Emissions	*1*	*1*	*1*	*0*	*0*	*0*
Non-Exempt Conformity Emissions						
Mobile	3	26	32	0	8	2
Energy	0	1	1	0	0	0
Total Non-Exempt Emissions	*3*	*27*	*33*	*0*	*8*	*2*
Total Emissions	**4**	**28**	**34**	**0**	**8**	**2**
De Minimis Levels[1]	25	25	N/A	N/A	70	N/A
Exceed Level?	***No***	***Yes***	***N/A***	***N/A***	***No***	***N/A***

Notes: N/A = Not Applicable; levels are not applicable due to attainment status (refer to **Appendix H**).
1 - Only applies to Non-Exempt Emissions.
Source: CalEEMod, 2016.

As shown in **Table 4-4**, emissions of individual criteria pollutants from stationary sources (area, energy, and stationary) would not exceed the Tribal NSR threshold of 2 tpy for ROG and NO_x; therefore, no Tribal NSR permit would be required. Further, **Table 4-4** shows that the Non-Gaming Alternative would not result in stationary source emissions (under the categories of Area and Stationary sources) of any one pollutant in excess of the Federal Class I Areas major source threshold of 250 tpy.

4.3.5 NO ACTION ALTERNATIVE

Under the No Action Alternative, the North Site would not be taken into trust and no development would occur. No construction or operational mobile or stationary criteria pollutants or DPM emissions would be generated under this alternative.

4.4 BIOLOGICAL RESOURCES

4.4.1 PROPOSED PROJECT ALTERNATIVE

Sensitive Communities

No unique or sensitive ecosystems or biological communities occur within the North Site, as discussed in **Appendix H**. The North Site is comprised of disturbed/developed land formerly utilized for residential uses, and is designated as "urban" in the City General Plan (City of Cathedral City, 2009). Existing development includes several structures, paved parking areas, roadways, and utilities. Vegetation is minimal and consists of ornamental species planted along roadsides and sidewalks, including palms and non-managed areas dominated by immature non-native ruderal species. No wildlife was observed on the North Site. The North Site does not contain sensitive or natural communities that could be adversely affected during development associated with the Proposed Project Alternative. Therefore, the Proposed Project Alternative would result in no effect to sensitive communities.

Special-Status Species

For the purposes of this assessment, "special-status" has been defined to include those species that are listed as endangered or threatened under the Federal Endangered Species Act (FESA), formally listed by the state and/or recognized by state agencies, the California Native Plant Society (CNPS), or other local jurisdictions due to rarity, vulnerability to habitat loss, or population decline. If adverse effects to special-status species are determined to potentially occur, this would be considered a significant effect and would require mitigation.

As discussed in **Appendix H**, the North Site provides potential habitat for one special-status species: the western yellow bat. The western yellow bat is a state species of special concern. Potential roosting habitat on the North Site occurs within palm skirts located on the outer perimeter of the site along roadways and sidewalks. Occurrence potential is low due to highly disturbed surrounding areas and heavy vehicular traffic on the adjacent East Palm Canyon Drive. Additionally, the nearest documented occurrence of this species was observed approximately 5.5 miles from the North Site in 1998 (CDFW, 2018b). Mitigation measures are presented in **Section 5.0** to ensure that potential impacts to the western yellow bat are avoided, should this species occur within the North Site. With implementation of mitigation measures, this alternative may affect, but is not likely to adversely affect, special-status wildlife species.

Migratory Birds and Other Birds of Prey

Construction of the Proposed Project Alternative has the potential to disturb migratory birds and other birds of prey that may forage or nest on and near the North Site. The nesting season ranges from February 15 through September 15. Trees and vegetation are minimal on the North Site; however, palms occur around the perimeter and near sidewalks. Mitigation measures are presented in **Section 5.0** to ensure that potential impacts to migratory birds and other birds of prey are avoided. With implementation of mitigation measures, this alternative may affect, but is not likely to adversely affect, migratory birds and other birds of prey.

Wetlands and Waters of the U.S.

The North Site does not contain potentially jurisdictional wetlands or Waters of the U.S. Therefore, the Proposed Project Alternative would result in no effect to wetlands or Waters of the U.S.

4.4.2 REDUCED INTENSITY ALTERNATIVE

Potential impacts of the Reduced Intensity Alternative are similar to those discussed in **Section 4.4.1**. Therefore, the Reduced Intensity Alternative would result in no effect to sensitive communities or wetlands and Waters of the U.S. Mitigation measures are presented in **Section 5.0** to ensure that potential impacts to the western yellow bat, and migratory birds and other birds of prey are avoided. With implementation of mitigation measures, this alternative may affect, but is not likely to adversely affect, special-status wildlife species, and migratory birds and other birds of prey.

4.4.3 NON-GAMING ALTERNATIVE

Potential impacts of the Non-Gaming Alternative are similar to those discussed in **Section 4.4.1**. Therefore, the Non-Gaming Alternative would result in no effect to sensitive communities or wetlands and Waters of the U.S. Mitigation measures are presented in **Section 5.0** to ensure that potential impacts to the western yellow bat, and migratory birds and other birds of prey are avoided. With implementation of mitigation measures, this alternative may affect, but is not likely to adversely affect, special-status wildlife species, and migratory birds and other birds of prey.

4.4.4 NO ACTION ALTERNATIVE

Under the No Action Alternative, the North Site would not be taken into trust, and no development would occur. Therefore, the No Action Alternative would not result in adverse impacts to biological resources.

4.5 CULTURAL RESOURCES

4.5.1 PROPOSED PROJECT ALTERNATIVE

As discussed in **Appendix H** and **Appendix J**, no historic properties, known archaeological sites or cultural materials are currently located within the Area of Potential Effects (APE) for the North Site under the Proposed Project. The North Site was once the location of a 1920s-1940s residential community; however, those structures have been demolished. No known historic, cultural, religious, or archaeological resources or paleontological resources would be affected by the Proposed Project Alternative, and the degree of disturbance to the site suggests a low probability for buried cultural resources. There is always a possibility, however, that previously unknown archaeological or paleontological resources could be encountered during construction. Any inadvertent discovery of archaeological resources would be subject to Section 106 of the NHPA as amended (36 CFR § 800), NAGPRA

(25 USC § 3001 *et seq.*), and the Archaeological Resources Protection Act of 1979 (16 USC § 470aa-mm). BMPs listed in **Section 2.2.3** outline procedures for compliance with these applicable regulations in the event of an unanticipated discovery of archaeological materials, human remains or paleontological resources. With adherence to applicable laws and the implementation of BMPs in **Section 2.2.3**, no adverse effects to previously unknown cultural resources would occur.

4.5.2 REDUCED INTENSITY ALTERNATIVE

As discussed in Section 3.5 of **Appendix H**, no historic properties, known archaeological sites, cultural materials, or paleontological resources are located within the APE for the North Site under the Reduced Intensity Alternative. There is always a possibility, however, that previously unknown archaeological or paleontological resources could be encountered during construction. Adherence to applicable laws and implementation of BMPs discussed in **Section 2.2.3** would reduce potential adverse impacts to cultural resources to a less-than-significant level.

4.5.3 NON-GAMING ALTERNATIVE

As discussed in Section 3.5 of **Appendix H**, no historic properties, known archaeological sites, cultural materials, or paleontological resources are located within the APE for the North Site under the Non-Gaming Alternative. There is always a possibility, however, that previously unknown archaeological or paleontological resources could be encountered during construction. With adherence to applicable laws and the implementation of BMPs in **Section 2.2.3**, no adverse effects to previously unknown cultural resources would occur.

4.5.4 NO ACTION ALTERNATIVE

Under the No Action Alternative, the North Site would not be taken into trust and no development would occur in the near-term. No change in land use is proposed, and the site would remain in its current state. No significant cultural or paleontological resource effects would occur as a result of the No Action Alternative. Therefore, no impacts would occur, and no mitigation is required.

4.6 SOCIOECONOMIC RESOURCES/ENVIRONMENTAL JUSTICE

4.6.1 PROPOSED PROJECT ALTERNATIVE

Economy and Employment

As described in the *Economic & Community Impact Analysis* (**Appendix E**) study developed by The Innovation Group, the Proposed Project Alternative would result in a variety of benefits to the regional economy, including increases in overall economic output, and employment opportunities. Construction and operation of the Proposed Project Alternative would generate substantial temporary and ongoing employment opportunities and wages that would be primarily filled by the available labor force in Riverside County.

New one-time employment opportunities would be generated during the construction phase of the project. These include an estimated 474 direct jobs, 62 indirect jobs, and 145 induced jobs, for a total of 680 jobs that would accrue to Riverside County residents. Operation of the Proposed Project Alternative would generate a total of approximately 556 new direct employment positions, with an additional 139 indirect and 113 induced jobs also created as a result of the Proposed Project Alternative. Total labor income is estimated to exceed $27.6 million annually and the total increase in spending (or value of industry production) in Riverside County is expected to be $93.2 million (**Appendix E**). Employment opportunities generated at the proposed casino would include entry-level, mid-level, and management positions. Average salaries offered are expected to be consistent with those of other tribal gaming facilities and competitive in the local labor market.

The anticipated increase in employment opportunities throughout the City could result in employment and wages for persons previously unemployed, which would increase the ability of the population to obtain health and safety services and would contribute to the alleviation of poverty among lower income households. However, a significant impact to the local unemployment rate would not be anticipated to occur. Nonetheless, overall, the Proposed Project Alternative would result in beneficial impacts to the regional economy. For additional details

regarding the economic impacts anticipated to be generated by the construction and operation of the Proposed Project Alternative, please refer to **Appendix E**.

Tax Impacts

The Proposed Project Alternative would result in a variety of fiscal impacts. The Tribe would not pay corporate income taxes on revenue or property taxes on tribal trust land. However, potential effects on state and federal tax revenues resulting from the operation of the Proposed Project Alternative are expected to be positive as a result of increased local, state, and federal tax revenues resulting from construction and operation of the Proposed Project Alternative. Tax revenues would be generated for federal, state, and local governments from activities including secondary economic activity generated by tribal gaming (i.e., the indirect and induced effects of the economic impact analysis). The taxes on secondary economic activity include corporate profits tax, income tax, sales tax, excise tax, property tax, and personal non-taxes, such as motor vehicle licensing fees, fishing/hunting license fees, other fees, and fines. However, the Proposed Project Alternative's increase in demand for public services would result in increased costs for local governments to provide these services (refer to **Section 4.9** for an analysis of these impacts). The estimated net fiscal impact to the City would be a decrease of $119,885 under the Proposed Project Alternative (**Appendix E**). As discussed in **Section 2.2.3**, the Tribe intends to voluntarily pay development impact fees to the City. Based on the size of the proposed development and the fees contained in Chapter 3.17 of the City's Municipal Code, the anticipated development impact fee for the Proposed Project Alternative would be $18,750. This would reduce the estimated net fiscal impact to the City to $101,135. This is a potentially significant impact. Mitigation measures are provided in **Section 5.0** to avoid this potential fiscal impact to the City. As described in **Section 1.4.2**, Section 11.7 of the Compact requires that if it is determined that law enforcement, fire protection, emergency medical services, and any other public services will be burdened as a result of the Proposed Project despite the mitigation measures identified in this EA and the voluntary payment of the development impact fees identified in Chapter 3.17 of the City's Municipal Code, prior to commencement of the Proposed Project, and no later than the issuance of the Final TEIR to the County, the Tribe will offer to commence negotiations with the City and if necessary, the County. These negotiations would allow for all parties to enter into enforceable intergovernmental agreements with respect to the matters set forth in Section 11.7(a) of the Compact to ensure that the mitigation contemplated herein is sufficient. After mitigation, fiscal impacts would be less-than-significant.

Housing

Based on the information presented in **Appendix E**, the City's housing market has a 19 percent vacancy rate (U.S. Census Bureau, 2016c). As indirect and induced employment opportunities would be dispersed among a variety of different businesses throughout the region, it is expected that available employees would already be located near these locations and would not require relocation. It is estimated that the increase in employment generated by the Proposed Project Alternative would result in approximately 60 new employees relocating to the City. It is anticipated that sufficient vacant homes would be available to accommodate any potential increase in population resulting from impacts to the regional labor market under the Proposed Project Alternative (**Appendix E**). Therefore, the Proposed Project Alternative is not expected to stimulate regional housing development. A significant impact to the housing market would not occur. Potential indirect effects resulting from growth inducement are discussed further in **Section 4.13**.

Social Effects

Pathological and Problem Gambling

Approximately 86 percent of Americans report having gambled at least once during their lifetimes, with 0.4 to 1.6 percent being classified as pathological gamblers. A three-level metric for types of gambling can be used, which includes recreational gambling (no appreciable harmful effects), problem gambling (urge to gamble despite harmful negative consequences or a desire to stop), and pathological gambling (compulsive gambling; periodic loss of control over gambling; irrational thinking) (**Appendix E**).

Residents of the City and County have already been exposed to many forms of gambling, including from the existing casinos described in **Section 3.0**, **Appendix H**, and **Appendix E**. Prevention and treatment programs already exist in the vicinity of the site, and are funded by the State. The Proposed Project Alternative would not

substantially increase the prevalence of problem gamblers as several existing gaming facilities are already established within relatively short driving distances from the site, and is therefore not expected to increase costs to the surrounding community of treatment programs for compulsive gambling.

Furthermore, a portion of payments to the State of California pursuant to the Compact would be dedicated to funding problem gambling treatment programs. These payments made by the Tribe would further reduce the already less-than-significant impacts to problem gambling. Therefore, the impact is less than significant and no further mitigation measures are warranted.

Crime

There is a general belief that the introduction of legalized gambling into a community increases crime. However, this argument is based more on anecdotal evidence rather than empirical evidence. Whenever large volumes of people are introduced into an area, the volume of crime would also be expected to increase. This is true of any large-scale development. Given the availability of gaming in the region, the addition of gaming in the City is not expected to lead to a material increase in crime rates in the area.

The Proposed Project Alternative would result in an increased number of patrons and employees traveling/commuting into the community on a daily basis. As a result, under the Proposed Project Alternative, criminal incidents may increase in the vicinity of the project, as with any other development of this size. This may result in an increase in the calls for law enforcement service. See **Section 4.9** for an analysis of effects to law enforcement services. Mitigation measures are provided in **Section 5.0** to avoid potential fiscal impacts to the City that would offset the increased cost of law enforcement services to the Proposed Project Alternative. Therefore, with mitigation, the Proposed Project Alternative would not result in significant adverse effects associated with crime.

Tribal Casino Gaming Market Substitution Effects

Appendix E provides a detailed review of competitive gaming facilities based on identification of local and regional gaming facilities. Based on this review, potential substitution effects of the Proposed Project Alternative on other gaming facilities were calculated. Existing regional gaming facilities with the greatest potential to be affected by the Proposed Project Alternative include the two other facilities owned and operated by the Tribe (which would experience a decrease in revenue between 6.2 and 8.5 percent). The Proposed Project Alternative would result in a less than 2.0 percent decrease in revenue at three other nearby casinos (Fantasy Springs Resort Casino, Augustine Casino, and Spotlight 29 Casino), and a less than 1.0 percent decrease at seven casinos located at further distances from the North Site. Anticipated decreases in revenue at existing casinos are not considered to be significant.[3] Therefore, the operation of the Proposed Project Alternative would not cause a significant impact, as it would not affect the ability of the Tribe or any other tribal government to provide essential services and facilities to its membership, or result in the closure of any of the competing gaming facilities.

Further, given the extensive supply of gaming facilities already operating in the area, no substantial substitution effects to local business is projected. It is anticipated that the Proposed Project Alternative would have a beneficial impact to local businesses and local hotels from increased patronage to the area, as the project is designed as an anchor for development in the surrounding area.

Environmental Justice for Minority and Low Income Populations

As discussed in **Section 3.0** and **Appendix E**, there are no identified low-income Census tracts in the vicinity of the North Site; however, minority communities, including the Tribe, are located within the Census tract that contains the site as well in one adjacent Census tract. As described throughout this section of this EA, after mitigation, all environmental impacts of the Proposed Project Alternative would be reduced to a less-than-significant level. Furthermore, the Proposed Project Alternative would not displace any residential populations in the vicinity of the North Site. Effects to minority populations would include positive impacts from the Proposed

[3] The decrease in revenue at the Tribe's existing casino will be offset by the increase in revenue from the Proposed Project Alternative.

Project Alternative's beneficial impacts to the local economy (including the creation of permanent jobs). Impacts include an increased revenue base for strengthening the Tribe's government and tribal services, as discussed further below. Therefore, the Proposed Project Alternative would not result in disproportionately high and adverse environmental effects to minority or low-income communities, including the Tribe.

Effects to the Agua Caliente Band of Cahuilla Indians

As discussed in **Section 1.3**, the Proposed Project Alternative would provide important economic and social benefits to the Tribe by generating the revenues needed to fund government services, including the creation of a tribal court system, development of a robust tax commission, and address homelessness on the Reservation. Further, the Tribe aims to re-establish its historic land base, which requires substantial revenues due to high acquisition costs. Revenue from the Proposed Project Alternative would have a long-term beneficial impact on the Tribe.

4.6.2 REDUCED INTENSITY ALTERNATIVE

The gaming component of the Reduced Intensity Alternative is identical to the Proposed Project Alternative; refer to **Section 4.6.1** and **Appendix E** for socioeconomic impacts related to the Reduced Intensity Alternative gaming facility. However, as a result of the smaller non-gaming component, the Reduced Intensity Alternative would generate fewer employment opportunities, less revenue, less off-site tax revenue, and lower construction costs than that under the Proposed Project Alternative. Socioeconomic effects, such as social effects and effects to the tribal casino gaming market would be reduced proportionally to the size of the development. Therefore, the Reduced Intensity Alternative would still have beneficial socioeconomic effects; however, these effects would be reduced from the Proposed Project Alternative.

The net fiscal impact to the City would be a decrease of $109,383 under the Reduced Intensity Alternative (**Appendix E**). As discussed in **Section 2.2.3**, the Tribe intends to voluntarily pay development impact fees to the City. Based on the size of the proposed development and the fees contained in Chapter 3.17 of the City's Municipal Code, the anticipated development impact fee for the Reduced Intensity Alternative would be $15,450. This would reduce the estimated net fiscal impact to the City to $93.933. This is a potentially significant impact. Mitigation measures are provided in **Section 5.0** to avoid this potential fiscal impact to the City. As described in **Section 1.4.2**, Section 11.7 of the Compact requires that prior to commencement of the Reduced Intensity Alternative, and no later than the issuance of the Final TEIR to the County, if it is determined that law enforcement, fire protection, emergency medical services, and any other public services will be burdened as a result of the Reduced Intensity Alternative despite the mitigation measures identified in this EA and the voluntary payment of the development impact fees identified in Chapter 3.17 of the City's Municipal Code, the Tribe shall offer to commence negotiations with the City and if necessary, the County. These negotiations would allow for all parties to enter into enforceable intergovernmental agreements with respect to the matters set forth in Section 11.7(a) of the Compact. After mitigation, fiscal impacts would be less than significant.

4.6.3 NON-GAMING ALTERNATIVE

The Non-Gaming Alternative does not include a gaming component, but has expanded mixed-use facilities when compared to the Proposed Project Alternative (refer to **Section 4.6.1**). See **Appendix E** for specific socioeconomic effects, such as the number of jobs created and economic activity anticipated under the Non-Gaming Alternative. Compared with the gaming facility under the Proposed Project Alternative, the increase in size of the mixed-use facilities would create less economic and employment benefits because the lack of a gaming component would result in fewer new jobs and less economic activity. Certain socioeconomic effects, such as social effects and effects to the tribal casino gaming market would be reduced. The Non-Gaming Alternative would still have beneficial socioeconomic effects; however, these effects would be smaller than those of the Proposed Project Alternative. The Non-Gaming Alternative would result in competitive effects to local retailers. However, such effects would be less than significant due to the existence of spare capacity or "gap" in the local retail market (**Appendix E**).

The net fiscal impact to the City would be a decrease of $145,480 under the Non-Gaming Alternative (Appe**ndix E**). As discussed in **Section 2.2.3**, the Tribe intends to voluntarily pay development impact fees to the City.

Based on the size of the proposed development and the fees contained in Chapter 3.17 of the City's Municipal Code, the anticipated development impact fee for the Non-Gaming Alternative would be $13,500. This would reduce the estimated net fiscal impact to the City to $131,980. This is a potentially significant impact. Mitigation measures are provided in **Section 5.0** to avoid this potential fiscal impact to the City, including requiring the Tribe to enter into a Municipal Services Agreement with the City, which would require compensation for law enforcement and fire protection services utilized by the Non-Gaming Alternative.

4.6.4 NO ACTION ALTERNATIVE

Under the No Action Alternative, the North Site would not be taken into trust, and no development would occur. Therefore, none of the potential effects identified under the Proposed Project Alternative would occur.

4.7 TRANSPORTATION/CIRCULATION

METHODOLOGY

Study Intersections and Roadway Segments

A TIA was conducted by Webb Associates in July 2018 to determine the effects the proposed development would have on study intersections and roadway segments, review the available access to the development, and provide recommendations for improvements that may be necessary to accommodate the traffic expected to be generated by the development. The TIA is provided as **Appendix K** to this EA.

To assess project-related impacts on the transportation system, opening year background traffic conditions were estimated for the year 2020. As described in **Appendix K**, the 2020 background traffic conditions were determined by applying an average annual growth rate of 2 percent to the 2018 existing traffic described in Section 3.7 of **Appendix H**. Table 5-1 of **Appendix K** shows the study intersections under 2020 baseline conditions.

The study area intersections were analyzed using procedures published in the 2010 Highway Capacity Manual and PTV Vistro 5.00, a computer-based traffic analysis program (**Appendix K**). Estimated traffic generated by the project was added to the 2020 opening year background traffic to determine whether the project would cause the study intersections or roadways to operate at an unacceptable LOS. For the purposes of this analysis, an overall intersection LOS of D or better is considered acceptable (**Appendix K**). If an intersection operates at LOS E or F without the addition of the project, a significant impact would occur if the project would add 50 or more trips to the intersection or if the vehicle-to-capacity ratio of a roadway segment exceeds 1.0. These thresholds apply to all study intersections and roadways. For roadways or intersections operating unacceptably without the addition of the project, an increase in the volume to capacity (v/c) ratio of 0.05 or greater as a result of the project would result in a significant impact.

Trip Generation Rates

Trip generation relates land uses to the number of vehicles entering or exiting the site and the directional splits of inbound/outbound traffic. A trip is defined as a vehicle either entering or exiting the site. The trip generation rates were derived for the project based on information published in the *Institute of Transportation Engineers (ITE) 10th Edition of Trip Generation Manual* (**Appendix K**). The ITE Manual does not provide a standard trip generation rate for casino land uses; therefore, counts at nearby existing casinos of a similar size were utilized to determine the casino trip generation rate. The ITE standard trip rates were used for the restaurants and shopping center land uses, as described in **Appendix K**. Due to the close proximity of the casino, restaurant, and retail facilities, and their shared access, there would be internal capture between these land uses and, therefore, a trip reduction was applied to account for this internal capture. Tables 4-1 and 4-2 of **Appendix K** provide a summary of the trip generation rates used for the proposed casino and mixed use facilities.[4]

[4] Note that the tribal governmental land use was included in the square footage for Building A and analyzed at the mixed-use rate assumed for Building A. This resulted in a conservative estimate of generated trips, as office uses generate fewer trips than mixed-use buildings.

Trip Distribution

Estimated traffic generated by the Proposed Project Alternative was distributed on the surrounding street system based on anticipated site use. Figures 4-A through 4-D of **Appendix K** show the traffic volumes and distribution for the Proposed Project Alternative.

4.7.1 PROPOSED PROJECT ALTERNATIVE

Study Intersections and Roadway Segments

Trip generation and trip distribution are provided in **Table 4-5** below and in Figure 4-A of **Appendix K**, respectively, for the Proposed Project Alternative. Tables 5-1 and 5-5 of **Appendix K** provide a summary of the future LOS at each study intersection and roadway segment with the addition of traffic from the Proposed Project Alternative. With the addition of traffic generated by the Proposed Project Alternative, all intersections and roadway segments would operate acceptably, with the exception of:

- Date Palm Drive/Buddy Rogers Avenue (increased from LOS C to LOS E/F);
- Cathedral Canyon Drive/Paseo Real (increased from LOS E to LOS F);
- East Palm Canyon Drive between Cathedral Canyon Drive and Date Palm Drive (LOS F; v/c ratio increase from 1.00 to 1.04); and
- East Palm Canyon Drive between Date Palm Drive and Frank Sinatra Drive (LOS E; v/c ratio increase from 0.82 to 0.85).

TABLE 4-5
PROPOSED PROJECT ALTERNATIVE TRIP GENERATION

Land Use	PM Peak Hour			Saturday MD Peak Hour			Daily
	Total	In	Out	Total	In	Out	
Casino	**289**	**125**	**164**	**306**	**169**	**138**	**5,224**
Shopping Center	189	91	98	200	118	82	2,278

Project Total	***445***	***224***	***230***	***543***	***308***	***235***	***8,509***

Source: **Appendix K**.

However, the segment of East Palm Canyon Drive between Cathedral Canyon Drive and Date Palm Drive would not increase the v/c ratio by 0.05 or greater; therefore, this does not constitute a significant impact. Further, because the segment between Date Palm Drive and Frank Sinatra Drive would not increase above a v/c ratio of 1.0, it is not considered a significant impact. Mitigation provided in **Section 5.0** would ensure that impacts to the intersections listed above are reduced to less-than-significant levels.

Transit, Bicycle, and Pedestrian Facilities

As described in **Section 3.0** and **Appendix K**, transit, bicycle, and pedestrian facilities are generally present in the vicinity of the North Site. The project incorporates design features to ensure the site meets the City's walkability goal for the downtown area (City of Cathedral City, 2012). An increase in transit ridership may be experienced as

a result of the Proposed Project Alternative. Mitigation is included in **Section 5.0** to ensure potential impacts are less than significant by contributing to transit development funds.

4.7.2 REDUCED INTENSITY ALTERNATIVE

Study Intersections and Roadway Segments

Trip generation and trip distribution are provided in Table 4-4 and Figure 4-B of **Appendix K** for the Reduced Intensity Alternative. Tables 5-2 and 5-6 of **Appendix K** provide a summary of the future LOS at each study intersection and roadway segment with the addition of traffic from the Reduced Intensity Alternative. The same intersections and roadway segments would operate unacceptably under the Reduced Intensity Alternative and the Proposed Project Alternative; refer to **Section 4.7.1** and mitigation provided in **Section 5.0**. Therefore, the Reduced Intensity Alternative would not result in a significant impact to LOS.

Transit, Bicycle, and Pedestrian Facilities

Similar to the Proposed Project Alternative, the Reduced Intensity Alternative would have no adverse impacts on local transit systems or bicycle and pedestrian facilities after mitigation provided in **Section 5.0**.

4.7.3 NON-GAMING ALTERNATIVE

Study Intersections and Roadway Segments

Trip generation and trip distribution are provided in Table 4-5 and Figure 4-C of **Appendix K** for the Non-Gaming Alternative. Tables 5-3 and 5-7 of **Appendix K** provide a summary of the future LOS at each study intersection and roadway segment with the addition of traffic from the Non-Gaming Alternative. The same intersections and roadway segments would operate unacceptably under the Non-Gaming Alternative and the Proposed Project Alternative; refer to **Section 4.7.1** and mitigation provided in **Section 5.0**. Therefore, the Non-Gaming Alternative would not result in a significant impact to LOS.

Transit, Bicycle, and Pedestrian Facilities

Similar to the Proposed Project Alternative, the Non-Gaming Alternative would have no adverse impacts on local transit systems or bicycle and pedestrian facilities after mitigation provided in **Section 5.0**.

4.7.4 NO ACTION ALTERNATIVE

Under the No Action Alternative, the North Site would not be taken into trust and no development would occur in the near term. No change in land use is proposed, and the site would remain in its current state. The traffic conditions under the No Action Alternative would continue as described in **Section 3.0** and **Appendix K** for the baseline without project conditions, and no traffic would be added to local intersections. Therefore, no significant traffic effects would occur, and no mitigation is required.

4.8 LAND USE

4.8.1 PROPOSED PROJECT ALTERNATIVE

As described in **Section 2.1**, the Proposed Project Alternative includes the transfer of the approximately 13.6-acre North Site from fee to trust status, and the subsequent development of a casino, restaurants, retail, and ancillary infrastructure, including parking lots. Once the federal government acquires the North Site in trust for the Tribe, the parcels would no longer be subject to City land use regulations but would be under the civil regulatory jurisdiction of the Tribe and the federal government.

Land Use Plans

City planning documents currently in effect for the North Site include the City General Plan, Date Palm Drive Specific Plan, and City Zoning Ordinance. The proposed land uses within the site would be compatible with the Land Use Map provided in the City General Plan, which identifies the entirety of the North Site as DTC, which is a land use designation that specifically allows for commercial and entertainment uses. The North Site is zoned as MXC and DRN. The Proposed Project Alternative would develop the land with entertainment and commercial mixed uses, which would be compatible with the City's MXC designation, but not with the DRN designation;

however, when multiple parcels are developed together with mixed MXC or DRN zoning, the provisions of either zone can apply to the entire development (City Municipal Code § 9.31.040). Additionally, the Proposed Project Alternative would be consistent with the City's plan for its downtown area as described by the Downtown/Art and Design Village designation within the Date Palm Drive Specific Plan, which specifies the North Site for the development of a major retail anchor. It should also be noted that Cathedral City Council Resolution 2017-14, which is included as Exhibit H to the Fee-to-Trust Application, supports the Tribe's use of the North Site for gaming purposes. Overall, development of the Proposed Project Alternative is consistent with the existing and planned uses of the North Site. Therefore, the Proposed Project Alternative would result in less-than-significant impacts associated with conflicts with local land use plans.

Land Use Compatibility

The areas immediately adjacent to the North Site are either empty lots that were previously developed, contain commercial uses, or are a public park. The North Site and the surrounding areas are planned for DTC development by the City, which the Proposed Project Alternative would be compatible with. The proposed development would not physically disrupt neighboring land uses, prohibit access to neighboring parcels, or otherwise significantly conflict with neighboring land uses. The fire station currently located at the northeastern corner of the North Site would be relocated across Buddy Rogers Avenue to the adjacent parcel that is part of the existing public park; however, this is not a part of the project and would occur regardless of the implementation of the Proposed Project Alternative. While the proposed uses within the site are generally compatible with the commercial nature of the area and adjacent restaurant and shopping centers, the increase in intensity of development within the site as a result of the Proposed Project Alternative could result in conflicts with nearby sensitive land uses (including the apartment complex 440 feet to the northwest, Second Street Park 25 feet to the north, and single family residential neighborhood approximately 500 feet to the southwest); potential conflicts may include air quality and noise impacts from construction activities and the increase in traffic (**Sections 4.3** and **4.11**, respectively), and an increase in lighting (**Section 4.10**). Implementation of protective measures and BMPs identified in **Section 2.2.3** and mitigation measures identified in **Section 5.0** would reduce potential adverse impacts to less-than-significant levels. Therefore, the Proposed Project Alternative would result in less-than-significant impacts associated with land use compatibility.

4.8.2 REDUCED INTENSITY ALTERNATIVE

The Reduced Intensity Alternative would result in the development of four fewer structures than the Proposed Project Alternative on the North Site (refer to **Section 4.8.1**). The land use compatibility of the Reduced Intensity Alternative would be similar to the Proposed Project Alternative, with regards to the City's land use and zoning designations. Refer to **Sections 2.2.3**, **4.3**, **4.8.1**, **4.11**, **4.10**, and **5.0** for related impacts, BMPs, and mitigation measures. Therefore, the Reduced Intensity Alternative would result in less-than-significant impacts associated with land use conflicts.

4.8.3 NON-GAMING ALTERNATIVE

The Non-Gaming Alternative would result in a similarly-sized development on the North Site, with no casino proposed, as compared with the Proposed Project Alternative (refer to **Section 4.8.1**). The land use compatibility of the Non-Gaming Alternative would be similar to the Proposed Project Alternative, with regards the City's land use and zoning designations; refer to **Sections 2.2.3**, **4.3**, **4.8.1**, **4.11**, **4.10**, and **5.0** for related impacts, BMPs, and mitigation measures. Therefore, the Non-Gaming Alternative would result in less-than-significant impacts associated with land use conflicts.

4.8.4 NO ACTION ALTERNATIVE

Under the No Action Alternative, the North Site would not be taken into trust and would remain in its current condition. No project-related development would take place on any part of the site in the near term, although it is possible the land would be eventually developed in accordance with the City General Plan. No land use conflicts would occur under the No Action Alternative. Therefore, the No Action Alternative would not result in adverse impacts related to land use.

4.9 PUBLIC SERVICES AND UTILITIES

4.9.1 PROPOSED PROJECT ALTERNATIVE

Water Supply

The estimated average daily water usage for the Proposed Project Alternative would be approximately 33,929 gpd, or approximately 38 AFY (**Appendix F**).[5] Water to serve the casino development would be supplied by DWA. As described in **Section 2.2.2**, while DWA water mains exist on and adjacent to the North Site, these mains are inadequate to serve the Proposed Project Alternative. Therefore, the Proposed Project Alternative includes the placement of a 12-inch water main along the southern boundary of the North Site within East Palm Canyon Drive from an existing water main at the intersection of East Palm Canyon Drive and Date Palm Drive, and would then run north through the project site along Allen Drive, terminating at the existing water main running east-to-west in Buddy Rogers Avenue (refer to **Figure 4.9-1** of **Appendix D**). As described in **Appendix F**, this new main would provide sufficient fire flows to meet the Proposed Project Alternative demands. The Proposed Project Alternative would also involve the removal or abandonment of the existing water mains on the North Site to accommodate construction of the project. These improvements would occur on or immediately adjacent to the North Site. Refer to **Section 4.13.4** regarding the potential impacts of the off-site water infrastructure improvements.

The total water demand experienced by DWA in 2017 (the most recent year for which actual use data are available) was approximately 34,689 AFY (DWA, 2018d); demand is anticipated to increase to 42,708 AFY by 2020 (DWA, 2016). Therefore, the estimated annual water demand of the Proposed Project Alternative represents only 0.1 percent of DWA's actual total demand in 2015 and less than 0.1 percent of DWA's projected total demand in 2020. Additionally, as described in **Appendix F**, the DWA water supply infrastructure in the vicinity of the North Site was constructed based on an assumption that future development on the site would demand significantly more water (a total of approximately 76,320 gpd) than is projected under the Proposed Project Alternative. Therefore, with the exception of the water main improvements described above, DWA has an adequate water supply and regional supply infrastructure to serve the Proposed Project Alternative and impacts on water service providers would be less than significant.

Wastewater Service

Under the Proposed Project Alternative, wastewater generated by the project would be collected by DWA sewer lines and treated at CVWD facilities. As described in **Section 2.2.2**, there are existing DWA sewer mains and branch lines on and in the immediate vicinity of the North Site. However, because these existing sewer mains and branch lines would be inadequate and improperly positioned to serve the Proposed Project Alternative, the project involves the construction of a new 8-inch sewer main along the northern site boundary within Buddy Rogers Avenue and then south through the project site along Allen Avenue to the point where Allen **A**venue currently intersects with Grove Street (refer to **Figure 4.9-1** of **Appendix D**). As with the existing water mains, the existing sewer mains on the North Site would need to be removed or abandoned to accommodate construction of the Proposed Project Alternative. These improvements would occur on or immediately adjacent to the North Site, and no improvements to other downline components of the DWA or CVWD conveyance and treatment infrastructure would be required. Refer to **Section 4.13.4** regarding the potential impacts of the off-site wastewater infrastructure improvements.

The Proposed Project Alternative would generate average daily wastewater flows of approximately 17,892 gpd (**Appendix F**). As described in **Section 3.0** and **Appendix H**, WRP-10 currently has a significant excess capacity of approximately 17 MGD, which would be more than sufficient to accommodate the flows generated by the Proposed Project Alternative. Furthermore, as described in **Appendix F**, the regional DWA wastewater conveyance infrastructure was constructed under the assumption that significantly more wastewater flows would be generated by future development on the North Site (a total of approximately 40,068 gpd) than would occur

[5] The casino water demand rate was based on the supermarket water demand rate established by the AWWA Research Foundation, because no standardized casino water demand rates exist. This rate is considered to be conservative, as it is greater than the water demand rates used for other similar facilities owned and operated by the Tribe, including the rates used in the 2017 Master Plan Draft Tribal Environmental Impact Report for the Tribe's Spa Resort Casino expansion project.

under the Proposed Project Alternative. Therefore, with the on-site improvements to the wastewater conveyance infrastructure, operational impacts to wastewater treatment service providers would be less than significant, and no mitigation or additional off-site improvements are required.

Solid Waste Service

Construction of the Proposed Project Alternative would result in a temporary increase in waste generation. The waste stream would consist of excess construction materials. Waste that cannot be recycled would be disposed of at the Lamb Canyon Landfill. Therefore, the minimal adverse effects on solid waste services during construction would be considered less than significant.

As shown in **Table 4-6**, based on similar facilities, the operation of the Proposed Project Alternative would generate an estimated 1.03 tons of solid waste per day, or 375.95 tpy. Under the Proposed Project Alternative, the Tribe would contract with Burrtec to provide solid waste collection, transfer, and recycling services for solid waste generated at the Proposed Project Alternative. The daily amount of solid waste generated by the Proposed Project Alternative is equivalent to approximately 0.02 percent of Lamb Canyon Landfill's permitted daily disposal capacity of 5,000 tons per day, which is a negligible increase to the solid waste stream that the facility could easily accommodate. Fees paid to Burrtec pursuant to the contract would compensate for expansion of services to the North Site. Therefore, the impacts to solid waste services would be less than significant.

TABLE 4-6
PROPOSED PROJECT ALTERNATIVE SOLID WASTE GENERATION

Waste Generation Source	Waste Generation Rate	Units	Value	Total Waste (lb/day)
Casino (other services)[1]	3.12	lb/100 sf/day	57,500 sf	1,794.00
Restaurant[2]	0.005	lb/sf/day	41,000 sf	205.00
Retail[3]	2.5	lb/1,000 sf/day	26,500 sf	66.25
			Total lb/day	**2,065.25**
			Total ton/day	**1.03**
			Total ton/year	**375.95**

Note:
1 – To be conservative, back of house square footage is included.
2 – Assumes 60% of the mixed-use development is restaurants.
3 – Assumes 40% of the mixed-use development is retail.
Source: CalRecycle, 2016.

Recreation

Because the Proposed Project Alternative would not result in a substantial increase in population or housing, as discussed in **Section 4.6.1**, demand for additional recreation facilities would not increase substantially under the Proposed Project Alternative. While the Proposed Project Alternative would be located in close proximity to the existing Second Street Park and Cathedral City Dog Park, the construction and operation of the Proposed Project Alternative would not impede access to these facilities. Therefore, the minimal impacts to recreational facilities would be less than significant.

Electricity and Natural Gas

Under the Proposed Project Alternative, electricity would be obtained from SCE. The Proposed Project Alternative would have an estimated electrical load of approximately 7.33 megavolt-amperes (MVA; MSA Engineering Consultants, 2018). The most recent transmission plan prepared by the California Independent System Operator (ISO) Corporation did not identify a need for any transmission upgrades to satisfy projected electricity demand in the SCE service region that includes the North Site (California ISO, 2017). Additionally, SCE's ongoing West of Devers Upgrade Project, which is projected to be completed in 2021, would further improve the reliability of the electricity supply in the Palm Springs area (SCE, 2017c). Thus, it is not anticipated that implementation of the Proposed Project Alternative alone would require upgrades to SCE's transmission infrastructure. Payment for electrical service and for any distribution infrastructure upgrades or renovations necessary to provide service to the North Site would be negotiated through an agreement with SCE. Therefore, no significant impacts would occur.

Natural gas service would be obtained from SoCalGas under the Proposed Project Alternative. The Proposed Project Alternative would have an estimated natural gas load of approximately 21,800 CFH (MSA Engineering Consultants, 2018). SoCalGas currently has extensive distribution infrastructure in the immediate vicinity of the North Site, and under the Proposed Project Alternative, natural gas services would continue to be provided to the North Site by SoCalGas. Any improvements to or reorientations of natural gas supply infrastructure required by the development of the Proposed Project Alternative would abide by all California Environmental Quality Act (CEQA) regulations and other applicable federal, State, and local laws. Therefore, the Proposed Project Alternative would not result in significant adverse effects to natural gas services or the physical environment.

Law Enforcement

An analysis of the impact of casino gambling on local crime rates is included in **Section 4.6**. As described in **Section 2.2.2**, the CCPD would provide law enforcement services to the Proposed Project Alternative. Tribe-managed security cameras and security personnel would provide surveillance of the Proposed Project Alternative structures, parking areas, and ancillary facilities. Security guards would patrol the facilities to reduce and prevent criminal and civil incidents. Security guards would carry two-way radios to request and respond to back up or emergency calls. Because CCPD currently provides law enforcement services to the North Site, it is not anticipated that CCPD would require additional facilities to continue to provide services subsequent to the development of the Proposed Project Alternative. However, operation of the Proposed Project Alternative has the potential to increase the number of calls for service placed to CCPD. As discussed in the Economic and Community Impact Analysis prepared for the Proposed Project Alternative (**Appendix E**), the Casino is projected to generate approximately 164 to 269 annual calls for law enforcement services beginning in 2021 (its first year of operation), between a 0.3 and 0.5 percent increase over CCPD's most recent (2017) annual call volume. This would constitute a potentially significant impact. The BMPs described in **Section 2.2.3** and the mitigation measures described in **Section 5.0**, which include the voluntary payment of the development impact fees identified in Chapter 3.17 of the City's Municipal Code and the possible implementation of an intergovernmental agreement, respectively, would reduce potential impacts to law enforcement services to less than significant.

Fire Protection and Emergency Medical Services

Equipment and vehicles used during construction activities may create sparks, which could ignite vegetation on the North Site. The use of power tools and acetylene torches may also increase the risk of fire during construction. BMPs listed in **Section 2.2.3** would ensure that construction of the Proposed Project Alternative would not create a substantial fire hazard.

Structural fire protection would be provided through voluntary compliance with IFC requirements as adopted under the Tribal Building and Safety Code for commercial structures, including requirements for fire flow as described in **Section 2.2.2**, sprinkler systems, and fire extinguishers. CCFD would provide both fire protection and emergency medical services to the Proposed Project Alternative. As discussed in the *Economic and Community Impact Analysis* prepared for the Proposed Project Alternative (**Appendix E**), the casino is projected to generate approximately 17 annual calls for fire protection services beginning in 2021 (its first year of operation), an approximately 0.3 percent increase over CCFD's most recent (2017) annual call volume. While the minimal increase in demand for fire protection and emergency medical services is not anticipated to trigger the need to construct new facilities, this would nonetheless constitute a potentially significant impact. The BMPs described in **Section 2.2.3** and the mitigation measures described in **Section 5.0**, which include the voluntary payment of the development impact fees identified in Chapter 3.17 of the City's Municipal Code and the possible implementation of an intergovernmental agreement, respectively, would ensure impacts to fire protection and emergency medical services remain less than significant.

4.9.2 REDUCED INTENSITY ALTERNATIVE

The Reduced Intensity Alternative involves the construction and operation of similar project components as the Proposed Project Alternative (refer to **Section 4.9.1**), but the components would be approximately 18 percent smaller than under the Proposed Project Alternative. Service providers for the Reduced Intensity Alternative would be the same as those under the Proposed Project Alternative and similar water and wastewater line improvements would also be required. Refer to **Figure 4.9-2** of **Appendix D** regarding the location of water and

wastewater infrastructure improvements under the Reduced Intensity Alternative. As the Reduced Intensity Alternative would have reduced demand for services due to the smaller scale of development, impacts would be similar to those described under **Section 4.9.1** for water supply, wastewater supply, solid waste service, recreation, electricity and natural gas providers, law enforcement, and fire protection and emergency medical services, though to a lesser extent. With incorporation of the BMPs provided in **Section 2.2.3** and mitigation provided in **Section 5.0**, public services impacts under the Reduced Intensity Alternative would be less than significant.

4.9.3 NON-GAMING ALTERNATIVE

The Non-Gaming Alternative involves the construction and operation of similar project components as the Proposed Project Alternative (refer to **Section 4.9.1**), but the components would be approximately 28 percent smaller than under the Proposed Project Alternative. Service providers for the Non-Gaming Alternative would be the same as those under the Proposed Project Alternative and similar water and wastewater line improvements would also be required. Refer to **Figure 4.9-3** of **Appendix D** regarding the location of water and wastewater infrastructure improvements under the Non-Gaming Alternative. As the Non-Gaming Alternative would have reduced demand for services due to the smaller scale of development, impacts would be similar to those described under **Section 4.9.1** for water supply, wastewater supply, solid waste service, recreation, electricity and natural gas providers, law enforcement, and fire protection and emergency medical services, though to a lesser extent. With incorporation of the BMPs provided in **Section 2.2.3** and mitigation provided in **Section 5.0**, public services impacts under the Non-Gaming Alternative would be less than significant.

4.9.4 NO ACTION ALTERNATIVE

Under the No Action Alternative, the North Site would not be taken into trust, and no development would occur. No additional public services would be extended to the site. Therefore, no increase in demand for any public services would occur under the No Action Alternative.

4.10 VISUAL RESOURCES

4.10.1 PROPOSED PROJECT ALTERNATIVE

Aesthetics

Implementation of the Proposed Project Alternative would result in development of a casino and multi-use buildings on the North Site, which would constitute a change to the existing visual setting. An architectural rendering of the Proposed Project Alternative is provided as **Figure 4.10-1** of **Appendix D**. In general, views of undeveloped, gravel lots and abandoned utilities infrastructure would change to views of more modern commercial development. The tallest proposed building height for the casino would be 60 feet and the tallest multi-use building height would be 36 feet. This is consistent with the heights of nearby commercial development, and would not substantially block scenic views of the mountains surrounding the valley. While the buildings would be highly visible to travelers on Date Palm Drive and East Palm Canyon Drive, the development would not be highly visible from roadways not adjacent to the North Site.

The nearest residential development to the North Site is an apartment building located approximately 400 feet northwest of the site. However, the closest proposed building is more than 700 feet from this residential development, and the intervening land within the North Site will include landscaping and trees surrounding and within the parking area in the western portion of the site (refer to **Figure 2-3** of **Appendix D**). The proposed development would not block views of scenic resources in the vicinity of the North Site. Therefore, the Proposed Project Alternative would not result in significant adverse impacts associated with visual resources.

Lighting

The Proposed Project Alternative would introduce new sources of light to the North Site, for aesthetic and security purposes at the facility and throughout the parking lots, similar to the sources of light from nearby commercial developments. This lighting associated with the Proposed Project Alternative would constitute an increase over the existing ambient light levels on the North Site; however, lighting would be consistent with the

designated commercial use of the North Site. Even so, BMPs included in **Section 2.2.3**, including shielded and filtered lighting, ensure no significant adverse impacts associated with lighting would occur.

4.10.2 REDUCED INTENSITY ALTERNATIVE

The Reduced Intensity Alternative would develop fewer buildings than the Proposed Project Alternative (refer to **Figure 2-4** of **Appendix D**); therefore, visual impacts related to development under the Reduced Intensity Alternative would be similar to those described above for the Proposed Project Alternative, but would be diminished in scope due to the smaller size of the proposed facilities. An architectural rendering of the Reduced Intensity Alternative is identical to the rendering of the Proposed Project Alternative provided as **Figure 4.10-1** of **Appendix D**. Therefore, the Reduced Intensity Alternative would not result in significant adverse impacts associated with visual resources, and BMPs included in **Section 2.2.3** would also apply to the Reduced Intensity Alternative.

4.10.3 NON-GAMING ALTERNATIVE

The Non-Gaming Alternative would result in a similar intensity of development as the Proposed Project Alternative (refer to **Figure 2-5** of **Appendix D**); therefore, visual impacts related to development under the Non-Gaming Alternative would be similar to those described above for the Proposed Project Alternative. Refer to **Section 4.10.1**. An architectural rendering of the Non-Gaming Alternative is provided as **Figure 4.10-2** of **Appendix D**. The tallest proposed building height would be 36 feet. This is consistent with the heights of nearby commercial development, and would not substantially block scenic views of the mountains surrounding the valley. Therefore, the Non-Gaming Alternative would not result in significant adverse impacts associated with visual resources, and BMPs included in **Section 2.2.3** would also apply to the Non-Gaming Alternative.

4.10.4 NO ACTION ALTERNATIVE

Under the No Action Alternative, the North Site would not be taken into trust, and no development would occur. The site would remain in its current state. Therefore, the No Action Alternative would have no impact related to visual resources.

4.11 NOISE

ASSESSMENT CRITERIA AND METHODOLOGY

The assessment of project effects is based on the Federal Highway Administration (FHWA) construction noise level thresholds in its 2006 Construction Noise Handbook, City General Plan, and Federal Interagency Committee on Noise (FICON) noise guidance. The assessment of vibration noise is based on the Federal Transportation Administration (FTA) standards. Adverse noise-related effects would occur during construction and operation if the following occurs:

- Project construction results in an increase in the ambient noise environment of greater than 78 dBA, equivalent noise level (Leq), or a 5-dBA increase in the ambient noise level above the existing noise level for daytime residential receptors, or an increase of greater than 83 dBA Leq or a 5-dBA increase for daytime commercial receptors (FHWA, 2006).
- Project operation causes ambient noise levels to exceed noise standards adopted by the City, including 55 dBA CNEL for residential receptors, and 62.5 dBA CNEL for public parks and commercial development (City of Cathedral City, 2009).
- If the ambient noise level exceed City standards under existing conditions, increases in the ambient noise level will be analyzed based on FICON guidance, where an increase of +5 dB is significant for ambient levels less than 60 dB, an increase of + 3 dB is significant for ambient levels between 60 and 65 dB, and an increase of + 1.5 dB is significant for ambient levels greater than 65 dB (FICON, 1992).
- Construction or operation of the project exceeds the FTA vibration standards of 90 vibration decibels (VdB) for structures and 70 VdB for annoyance of people (FTA, 2006).

4.11.1 PROPOSED PROJECT ALTERNATIVE

Noise-sensitive receptors are land uses associated with indoor and outdoor activities that may be subject to stress or significant interference from noise, including educational, health care, and residential areas. The nearest noise-sensitive receptors to the North Site are a public park located 25 feet north, a residential apartment complex located approximately 440 feet northwest, and commercial buildings located adjacent to the western boundary.

Construction Noise

Construction noise at the North Site would result from construction equipment and activities and vehicle traffic, which consists of trucks hauling materials and workers entering and exiting the North Site. Construction would result in temporary periods of elevated noise levels, typically generating maximum noise levels up to 85 dBA at a distance of 50 feet, as indicated in **Table 4-7**. These noise levels may vary depending on the particular type, number, and duration of use of various pieces of construction equipment.

TABLE 4-7
TYPICAL CONSTRUCTION NOISE LEVELS

Construction Equipment	Maximum Noise Level at 50 feet (dBA)	Construction Equipment	Maximum Noise Level at 50 feet (dBA)
Crane (mobile or stationary)	85	Tractor	84
Dozer	85	Generator (more than 25 kVA)	82
Excavator	85	Backhoe	80
Grader	85	Compressor (air)	80
Paver	85	Front end loader	80
Scraper	85	Pickup truck	55
Source: FHWA, 2006.			

During construction, a maximum of approximately 303 worker and vendor truck trips would occur per day. Material haul trips have the potential to raise ambient noise levels along haul routes, depending on the number of haul trips made and the types of vehicles used. It is estimated that 384 material hauling trips would occur each day during construction. Because trucks are louder than passenger cars, a passenger car equivalence (PCE) multiplier of 10 cars per truck was used to assume 3,840 PCE material hauling trips per day. With the addition of worker vehicle trips, the total trips added to area roadways would be 4,143 vehicle trips. The majority of these trips would occur outside the traffic peak hours, when traffic noise would be greatest. The existing traffic volumes on Date Palm Drive (19,500 average daily traffic [ADT]) and East Palm Canyon Drive (39,900 ADT) are greater than the 4,143 ADT added by the Proposed Project Alternative construction; therefore, as construction trips would less than double traffic on nearby roadways, the increase in ambient noise levels would be less than 1.0 dBA. Therefore, construction traffic would not result in a significant increase in the existing ambient noise level.

Noise from stationary point sources attenuates (lessens) at a rate of 6 to 9 dBA per doubling of distance from the source, depending on environmental conditions (e.g., atmospheric conditions, noise barriers). An attenuation factor of 6.0 dBA per doubling of distance is appropriate for the North Site given the relatively flat topography and lack of ground cover on the site. Based on the estimates of construction noise described above, the maximum construction noise level at the North Site would be 85 dBA at 50 feet. Using an attenuation factor of 6.0 dBA, the noise level at the nearest sensitive noise receptor located approximately 440 feet from the North Site, would be less than 67 dBA. This noise level would be below the federal noise construction threshold of 78 dBA for residences. The noise level at the nearest commercial receptor located adjacent to the western boundary of the North Site would be 85 dBA, which would be above the federal noise construction threshold of 83 dBA for commercial facilities. Mitigation provided in **Section 5.0** would require the erection of a temporary sound barrier during construction to reduce noise levels at this commercial receptor. Additionally, the majority of construction will occur at least 100 feet from the western boundary of the site; therefore, temporary construction noise would not have a significant effect on nearby commercial buildings.

Construction noise BMPs identified in **Section 2.2.3** would further reduce noise during construction activities and would limit construction to daytime hours to reduce the potential for sleep disturbance, which is consistent with the City's Noise Ordinance as codified in Municipal Code Chapter 11.96. Therefore, because of the distance of sensitive noise receptors to North Site, short-term and temporary nature of construction noise, and implementation of mitigation and BMPs to reduce construction noise levels to the extent feasible, there would not be a significant adverse impact due to construction noise.

Construction Vibration

The vibration levels of typical construction equipment at a distance of 25 feet from the equipment are shown in **Table 4-8**. As shown in **Table 4-8**, with the exception of vibratory rollers, vibrations associated with construction equipment are below the thresholds for structural damage (90 VdB) at a distance of 25 feet; however, vibration levels associated with all the equipment in **Table 4-8** are above the threshold for annoyance of humans at a distance of 25 feet. The nearest building is approximately adjacent to the western boundary of the North Site. At this distance, the vibration amplitude of a vibratory roller would be greater than 90 VdB, which exceeds the threshold for structural damage (90.0 VdB). Mitigation provided in **Section 5.0** would restrict the use of vibratory equipment in the vicinity of this commercial building, which would reduce this impact to a less-than-significant level. The nearest residential receptor to on-site construction is located approximately 440 feet from the North Site. Construction vibration from a vibratory roller at this receptor would be approximately 56.6 VdB, which is lower than the thresholds for structural damage (90.0 VdB) and the annoyance of people (70.0 VdB). Therefore, vibration associated with on-site construction under the Proposed Project Alternative would not have a significant adverse impact on neighboring receptors.

TABLE 4-8
VIBRATION LEVELS FOR CONSTRUCTION EQUIPMENT

Vibration Source	Approximate Lv (VdB) at 25 ft
Vibratory Roller	94
Large Bulldozers	87
Loaded Trucks	86
Jackhammer	79
Source: FTA, 2006.	

Operational Noise

The Proposed Project Alternative would result in an increase of on-site operational noise, primarily resulting from traffic and parking-related activities in parking lots; use of fans for HVAC; and truck loading and unloading.

Traffic Noise

The level of traffic noise depends on three things: (1) the volume of the traffic, (2) the speed of the traffic, and (3) the number of trucks in the flow of the traffic. It is not anticipated that traffic speed or the mix of trucks in project-area traffic would change during the operational phase; however, implementation of the Proposed Project Alternative would increase traffic volumes. As discussed in **Section 3.0** and **Appendix H**, the primary source of noise in the project area is traffic on East Palm Canyon Drive and Date Palm Drive. The estimated ambient noise level along these roadways in the vicinity of the North Site is approximately 67.2 dBA Leq (**Appendix L**).

Date Palm Drive

Date Palm Drive experiences approximately 19,500 ADT adjacent to the North Site (City of Cathedral City, 2009). Operation of the Proposed Project Alternative would add approximately 2,102 ADT to the existing traffic volume on this roadway (**Appendix K**). The ambient noise level along Date Palm Drive is 62.8 dBA Leq (**Appendix L**), which exceeds the City's ambient noise level standards for residential uses, parks, and commercial receptors. The increase in traffic from operation of the Proposed Project Alternative would result in a 0.44 dBA Leq ambient noise level increase, which is below the FICON threshold for ambient noise increases. Therefore, the Proposed Project Alternative would not result in significant adverse effects associated with traffic noise levels for sensitive noise receptors located along Date Palm Drive.

East Palm Canyon Drive

East Palm Canyon Drive experiences approximately 39,900 ADT adjacent to the North Site (City of Cathedral City, 2009). Operation of the Proposed Project Alternative would add approximately 2,872 ADT to the existing traffic volume on this roadway (**Appendix K**). The ambient noise level along East Palm Canyon Drive is 67.2 dBA Leq (**Appendix L**), which exceeds the City's ambient noise level standards for residential uses, parks, and commercial receptors. The increase in traffic from operation of the Proposed Project Alternative would result in a 0.30 dBA Leq ambient noise level increase, which is below the FICON threshold for ambient noise increases. Therefore, the Proposed Project Alternative would not result in significant adverse effects associated with traffic noise levels for sensitive noise receptors located along East Palm Canyon Drive.

Buddy Rogers Avenue

Buddy Rogers Avenue experiences approximately 66 PM peak hour trips adjacent to the North Site (**Appendix K**). Operation of the Proposed Project Alternative would add approximately 99 PM peak hour trips to the existing traffic volume on this roadway (**Appendix K**). The ambient noise level along Buddy Rogers Avenue is 63.4 dBA Leq (**Appendix L**), which exceeds the City's ambient noise level standards for parks. The increase in traffic from operation of the Proposed Project Alternative would result in a 4 dBA Leq ambient noise level increase, which is above the FICON threshold for ambient noise increases. Therefore, the Proposed Project Alternative would result in significant adverse effects associated with traffic noise levels at Second Street Park and the Cathedral City Dog Park located along Buddy Rogers Avenue. Mitigation provided in **Section 5.0** would reduce the ambient noise levels at these parks to below the existing ambient noise level measurements; therefore, impacts would be less than significant.

Other Roadways

The increase in traffic along other study area roadways and intersections would be no greater than 20 percent of the total project trip generation. The anticipated increases in traffic along these roadways would not double traffic volumes along these roadways and would not increase ambient noise levels by more than 3 dBA. Therefore, noise impacts along other roadways would be less than significant and no mitigation would be required.

Operational Vibration and Other Noise Sources

Noise due to traffic in parking lots is limited by low speeds and, as a result, is not expected to represent a significant source of noise. Human activity in parking lots can also produce noise, including talking, yelling, and opening and closing of car doors and trunk lids. Such activities can occur any time, but frequently occur in the daytime and evening. The noise level in parking lots is generally dominated by slow-moving vehicles; thus, the ambient noise level in parking structures and parking lots is approximately 60.0 dBA (Illingworth & Rodkin, Inc., 2014), which is lower than the existing ambient noise level of 63.4 dBA.

Buildings would be equipped with HVAC units that would most likely be mounted on the roof. The HVAC equipment would have noise shielding and other industry-standard noise abatement measures installed. The noise levels produced by HVAC systems vary substantially with the capacities of the units, as well as with individual unit design, but generally result in a noise level of 60.0 dBA Leq at a distance of 20 feet (Berger et al., 2015). HVAC noise would be less than 48 dBA at the nearest commercial and residential receptors from the site, which is below the City's noise thresholds for operational noise.

Loading docks are potential noise sources. Although trucks on site would be moving at low speeds, the engine noise could be audible at nearby locations. As discussed in **Section 2.2** and shown on **Figure 2-4** of **Appendix D**, loading docks would be located on the north side of the casino building, approximately 1,200 feet from the nearest residence and approximately 250 feet from the nearest commercial facility. Based on similar commercial projects, idling trucks at loading docks have the potential to generate a noise level of up to 63.0 dBA Leq at a distance of 100 feet from the source (j.c. brennan, 2010). Loading dock noise would be less than 57 dBA at the nearest commercial receptor, and less than 45 dBA at the nearest residential receptor, both of which are below the City's acceptable noise levels. Noise levels from truck movements at the loading docks would be also shielded by the surrounding proposed buildings, further reducing the noise levels at the nearest sensitive receptors.

Commercial uses do not include sources of perceptible vibration. Therefore, because the Proposed Project Alternative would not result in vibration and noise levels at nearby sensitive receptors and would not exceed the federal noise abatement criteria, no significant adverse impacts would occur.

4.11.2 REDUCED INTENSITY ALTERNATIVE

The Reduced Intensity Alternative would result in operational noise levels lower than those presented for the Proposed Project Alternative (refer to **Section 4.11.1**) because the scope of the Reduced Intensity Alternative is smaller than the Proposed Project Alternative and the increase in traffic volumes would be approximately 87 percent of those for the Proposed Project Alternative (refer to **Appendix K**). Additionally, construction duration and activities would be similar but reduced because the Reduced Intensity Alternative is approximately 82 percent of the size and intensity of the Proposed Project Alternative. Therefore, implementation of the Reduced Intensity Alternative would not result in significant adverse impacts to the ambient noise environment.

4.11.3 NON-GAMING ALTERNATIVE

Construction duration and activities would be similar to the Proposed Project Alternative (refer to **Section 4.11.1**) but reduced because the Non-Gaming Alternative's development footprint is approximately 72 percent of the size and intensity of the Proposed Project Alternative. The construction worker and vendor trips would be lesser than under the Proposed Project Alternative. However, the hauling trips would be greater, resulting in a total of 4,406 PCE construction trips per day, which would still result in an increase of less than 1.0 dBA from construction traffic noise. However, the mix of land uses under the Non-Gaming Alternative would result in greater operational noise levels than those presented for the Proposed Project Alternative, as the increase in traffic volumes would be approximately 60 percent greater than those for the Proposed Project Alternative (refer to **Appendix K**). The Non-Gaming Alternative would add approximately 3,487 ADT to Date Palm Drive, and approximately 4,765 ADT to East Palm Canyon Drive. This would result in noise increases along these roadways of 0.71 dBA and 0.49 dBA, respectively, which is below the FICON noise thresholds. Further, the operational vibration and other noise sources from the Non-Gaming Alternative would be similar to the Proposed Project Alternative. Therefore, implementation of the Non-Gaming Alternative would not result in significant adverse impacts to the ambient noise environment.

4.11.4 NO ACTION ALTERNATIVE

Under the No Action Alternative, the North Site would not be taken into trust and no development would occur. No construction or operational noise from mobile or stationary sources would occur; therefore, no adverse impacts would occur.

4.12 HAZARDOUS MATERIALS

4.12.1 PROPOSED PROJECT ALTERNATIVE

Incidents associated with hazardous materials that would be most likely to occur during construction include the incidental release of fuels, oil, and grease during the operation of construction equipment, as well as accidental releases associated with handling and transferring hazardous material-containing substances. Typical construction management practices limit the incidence of such accidental releases. In addition, the CWA requires that stormwater management BMPs be implemented during construction in accordance with a SWPPP. The SWPPP would further ensure that incidental releases of hazardous materials would not migrate off site during a storm event.

Although no hazardous materials issues are known to be associated with the North Site, the possibility exists that undiscovered contaminated soil and/or groundwater is present on the site due to the migration of hazardous materials from off-site properties or unknown hazardous materials dumping, or that construction personnel could encounter concrete piping from previous development that may contain asbestos. This could pose a risk to human health and/or the environment. BMPs presented in **Section 2.2.3** and mitigation measures provided in **Section 5.0** would minimize or eliminate adverse effects from undiscovered contaminated materials.

During operation of the Proposed Project Alternative, small quantities of cleaning materials, solvents, pesticides, herbicides, fuels, and paints would be stored and used throughout the proposed facilities. These materials are

common to most commercial operations and do not pose any unusual or substantial threat to public health and safety, even if stored or used improperly, because of the relatively small quantities involved. Therefore, with proper handling and storage, operation of the Proposed Project Alternative would not result in significant adverse effects associated with hazardous materials.

4.12.2 REDUCED INTENSITY ALTERNATIVE

The Reduced Intensity Alternative would be similar to the Proposed Project Alternative (refer to **Section 4.12.1**) with regards to construction-related hazardous materials impacts; however, these impacts would be somewhat diminished in scope due to the reduced size of development proposed under this alternative. The recommended measures presented in **Section 2.2.3** and mitigation measures provided in **Section 5.0** would minimize or eliminate adverse effects from the unanticipated discovery of hazardous materials during construction of the Reduced Intensity Alternative.

The types of hazardous materials that would be stored, used, and generated during the operation of the Reduced Intensity Alternative would be similar to those described under the Proposed Project Alternative; however, the amount would be smaller due to the reduction in size of development components under the Reduced Intensity Alternative. As discussed for the Proposed Project Alternative, with proper handling and storage, operation of the Reduced Intensity Alternative would not result in significant adverse effects associated with hazardous materials.

4.12.3 NON-GAMING ALTERNATIVE

The Non-Gaming Alternative would be similar to the Proposed Project Alternative (refer to **Section 4.12.1**) with regards to construction-related hazardous materials impacts; however, these impacts would be somewhat diminished in scope due to the reduced size of development proposed under this alternative. The BMPs presented in **Section 2.2.3** and mitigation measures provided in **Section 5.0** would minimize or eliminate adverse effects from the unanticipated discovery of hazardous materials during construction of the Non-Gaming Alternative.

The Non-Gaming Alternative would be similar to the Proposed Project Alternative in most aspects related to potential operational impacts from hazardous materials. Therefore, as with the Proposed Project Alternative, no significant impact associated with hazardous materials would occur during construction or operation of the Non-Gaming Alternative.

4.12.4 NO ACTION ALTERNATIVE

Under the No Action Alternative, neither of the North Site would be taken into trust, and no development would occur in the near-term. Therefore, no significant effects from the use, storage, or handling of hazardous materials would result from this alternative.

4.13 CUMULATIVE IMPACTS AND INDIRECT EFFECTS

4.13.1 CUMULATIVE SETTING

Cumulative impacts are defined by the CEQ as effects "on the environment which result from the incremental effect of the action when added to other past, present, and reasonably foreseeable future actions" (40 CFR §1508.7). There are several major development projects proposed, planned, and/or currently being constructed in the region. A listing of the projects, including the acreage and status of the development, is provided in **Table 4-9**. As shown in **Table 4-9**, within approximately 10 miles of the North Site, there are approximately 158 acres of planned and ongoing development within the region. Additionally, the Tribe is currently planning several development projects, including an expansion of the Agua Caliente Resort Spa in Rancho Mirage (including 310 hotel rooms, 41,000 sf of meeting space, 120,000 sf of commercial space, 25,000 sf of restaurant, and 58,000 sf of gaming floor), a large-scale cultural center and spa complex in downtown Palm Springs (48,000 sf gallery), and an expansion of the Agua Caliente Spa Resort Casino in Palm Springs (including 68,000 sf of gaming floor, 350 hotel rooms, 60,000 sf of meeting space, 50,000 sf of mixed use/retail space, and a 40,000-sf spa/fitness center).

TABLE 4-9
PLANNED DEVELOPMENT PROJECTS WITHIN THE REGION

Project Name	Acres	Distance to North Site (miles)	Project Location	Project Description	Project Status as of June 2018
City of Cathedral City					
Pending Downtown Development	13.5	<1	East Palm Canyon Drive and Van Fleet Avenue	Mixed-use development to include a lifestyle retail center, hotel, and residences.	Pending
Quick Quack Car Wash	1.63	3.3	Ramon Rd. and Avenida Ximino	Full service car wash facility with outdoor vacuums.	Pending
Carlos Campos Pest Control	<1	3.4	68761 Aliso Rd.	Pest control building, parking lot, outdoor storage area for vehicles.	Approved
CCBC Resort Runway Restaurant	<1	<1	68300 Gay Resort Drive	Restaurant with outdoor patio dining area within an existing resort hotel.	Approved
Cathedral City Senior Living	4.96	2.1	67670 Carey Rd.	Senior living facility with 140 living units.	Approved
Ramon 19	19.14	4.3	69375 Ramon Rd.	Medical cannabis cultivation and production facility to be constructed in two phases over the next three years.	Under Construction
Best Western Plus Hotel	9	6.4	I-10/Bob Hope intersection	91-room hotel joined by adjacent fast food options.	Under Construction
The District	7	2	Cree Rd. and Carey Rd.	47 single-family units with common areas including recreational amenities.	Under Construction
Ecoplex Park	2.8	1.5	67905 East Palm Canyon Drive	Construction of two warehouse-style buildings that will house a medical cannabis cultivation operation.	Under Construction
Horizon Gardens	--	--	Cathedral City	Addition of 28 units to a senior living facility.	Under Construction
Alchemy Works	6.51	1.3	67575 Canyon Plaza	Cannabis cultivation facility	Pending
City of Rancho Mirage					
Estilo Tract 34227	0.43	5.1	72-277 Victory Drive	Single family housing	Under Construction
Bella Clancy	--	4.2	Rancho Palmeras east of Follansbee Rd.	Modification to allow 15 ft. setbacks for side entry garages. Construction of 20 single family homes	Under Construction
Mirada Villas	27	1.8	North of Frank Sinatra Dr across from The Ritz	Single family housing - 46 units	Under Construction
Ken Catanzarite	--	1.5	South of Mirage Cove Dr. at Highway 111	Single family housing - 20 units	Approved
Horizon pacific, Rancho Cove, MSA Consulting	13.05	0.8	Highway 111 & One Mirage Place	Hotel & single family housing	Under Review
RMSW LLC	23.71	1.3	W. Side Highway 111/Frank Sinatra & Mirage Cove	Resort and Condominium	Approved
Rancho Mirage Rehabilitation Hospital, Inc.	9.69	3.6	Ramon Rd. and DaVall Dr.	Rehabilitation center	Under Construction

Project Name	Acres	Distance to North Site (miles)	Project Location	Project Description	Project Status as of June 2018
City of Palm Springs					
Canyon View / Summit Project	14.83	2.4	SW corner of East Palm Canyon Dr. & Matthew Dr.	Single family housing	Approved
Porsche Car Dealership	2.7	3.1	3737 East Palm Canyon Dr.	Auto Sales	Approved
Source: Cathedral City Economic Development Department, 2018; **Appendix K**; City of Rancho Mirage, 2018.					

In addition to the buildout of the projects listed above, the cumulative impact analysis within this EA and associated technical studies conservatively assumed a 1.5 percent annual growth rate for the population of the surrounding region until 2040 (**Appendix K**). Cumulative impacts for each environmental issue area are discussed below.

4.13.2 CUMULATIVE IMPACTS

Unless otherwise specified below, the following analysis applies to the Proposed Project Alternative, Reduced Intensity Alternative, and the Non-Gaming Alternative, referred to collectively as project alternatives or the development alternatives.

Land Resources

The principal effects to land resources associated with any future development in the vicinity of the North Site would include localized, minor topographical changes and soil attrition. Other projects in the area would be required to implement measures consistent with local permitting requirements for construction to address any regional geotechnical, seismic, or mining hazards. It is anticipated that approved developments would follow appropriate permitting procedures; therefore, implementation of the development alternatives would not contribute to cumulatively considerable adverse impacts to land resources.

Water Resources

Effects related to water supply for the development alternatives are discussed in **Section 4.2**. The projected water demands for the Proposed Project Alternative and Reduced Intensity Alternative are approximately 38 AFY and 36 AFY, respectively, which represents only approximately 0.02 percent of the 189,700 AFY of total outflows anticipated to occur from the western portion of the Coachella Valley Groundwater Basin in 2045 (CVWD, 2011); the Non-Gaming Alternative's demand of 27 AFY represents only approximately 0.01 percent. Therefore, the demand associated with the development alternatives and future developments would not significantly affect surface or groundwater levels in the vicinity of the North Site. Furthermore, projects that may be constructed in the vicinity of the North Site are required to comply with the CWA as it relates to stormwater and point source discharges. Compliance with USEPA's stormwater pollution prevention requirements, adherence to the BMPs listed in **Section 2.2.3**, and the fact that 100 percent of stormwater flows associated with a 100-year, 3-hour storm event would be retained on site would prevent development associated with the development alternatives from contributing to cumulatively considerable adverse stormwater-related effects. Therefore, implementation of the development alternatives would not contribute to cumulatively considerable adverse impacts to water resources.

Air Quality

Operational Emissions

Past, present and future development projects contribute to a region's air quality conditions on a cumulative basis; therefore by its very nature, air pollution is largely a cumulative impact. No single project is sufficient in size to, by itself, result in nonattainment of the NAAQS. If a project's individual emissions contribute toward exceedance of the NAAQS, then the project's cumulative impact on air quality would be significant. In developing attainment designations for criteria pollutants, the USEPA considers the relevant region's past, present and future emission levels. As stated in **Section 3.0** and **Appendix N**, the USEPA has designated the SSAB as nonattainment (Severe 15) for O_3 and nonattainment (serious) for $PM_{2.5}$. All other NAAQS are designated as unclassified or in attainment. The main source of CAP emissions from foreseeable development is mobile

sources from automobiles, the generation of which will be reduced as fuel efficiency increases. As automobiles use less, or even run without gasoline, emissions of CAPs per mile will decrease.

Emission estimates for the development alternatives in the cumulative year 2040 were estimated using the CalEEMod air quality modeling program and are included in **Appendix N**. Increased gas mileage and improved fleet emission controls of trucks and vehicles in the future are accounted for in CalEEMod. The increase in future gas mileage is attributed to improved fuel efficiency technology and stricter federal and state regulations. Therefore, under future year conditions, emissions resulting from the development alternatives are expected to be less than opening year, and would continue to be below *de minimis* thresholds. The development alternatives would not cumulatively adversely impact the region's air quality, and BMPs listed in **Section 2.2.3** as well as mitigation measures provided in **Section 5.0** would further reduce project-related emissions.

Climate Change

Methodology

Climate change is a global issue that is not being caused by any single development project, but by global cumulative increases in atmospheric GHG concentrations. Thus, global warming is most effectively addressed on a global or regional level. California's global warming policies and legislation (most notably Executive Order [EO] S-3-05 and Assembly Bill [AB] 32) are intended to be regional approaches to ensure that statewide emissions are reduced substantially in the future (to levels much lower than existing levels).

No project-specific quantitative limits have been established by Riverside County, the California Air Resources Board (CARB), USEPA, or any other state or federal agency for climate change or GHG emissions. While there is no federal guidance memo related to the consideration of climate change impacts in NEPA documents (a former 2016 CEQ guidance memorandum was withdrawn with issuance of EO 13783), this EA includes a quantification of GHG emissions resulting from the development alternatives (in carbon dioxide equivalents [CO_2e]) and a discussion of reduction measures to address comments received during scoping.

In addition to quantification of GHG emissions and recommended reduction measures, this EA considers the impacts of the development alternatives in relation to the GHG reduction targets established by the state of California and compliance with Cathedral City's Climate Action Plan (CCCAP). Due to the inherent nature of climate change, GHG impacts are considered to be exclusively cumulative impacts. Therefore, assessment of significance is based on a determination of whether the GHG emissions from a project represent a cumulatively considerable contribution to the global atmosphere and conforms to the applicable CARB, CAT, and CCCAP measures.

Impact Assessment

Development of the project alternatives would result in an increase in GHG emissions related to construction, mobile sources (trips generated by the project), stationary sources (components of the development alternatives that directly emit GHGs from the combustion of natural gas or diesel in boilers, emergency generators, and HVAC units), and indirect sources related to electricity (combustion of fuels use to produce electricity), solid waste (solid waste decomposition at the landfill and haul trucks), wastewater processing (decomposition of waste and electric and diesel pumps), and water transport (electricity and diesel pumps).

USEPA- and CARB-approved CalEEMod.2016.3.2 was used to estimate construction, area, energy, mobile, stationary, water and wastewater, and solid waste project-related GHG emissions. Model input and output files are provided in **Appendix N**. The trip generation rates used to estimate GHG emissions are derived from the TIA (**Appendix K**). **Table 4-10** provides a breakdown of project-related GHG emissions for the development alternatives.

GHG emissions resulting from the development alternatives are primarily indirect (either indirect mobile emissions from delivery, patron, and employee vehicles or indirect off-site electricity generation, waste pickup, water and wastewater transport, etc.). The federal government has enacted measures that would reduce GHG emissions from mobile sources, some of which have been accounted for in the air quality model used to estimate

mobile emissions. BMPs have been incorporated into the project design to reduce project-related GHG emissions and are listed in **Section 2.2.3**. Construction BMPs include reduced idling of heavy equipment, thereby, reducing CO_2 during the construction of the development alternatives. Operational BMPs would reduce indirect GHG emissions from electricity use, water and wastewater transport, and waste transport through the installation of energy efficient lighting, heating and cooling systems, low-flow appliances, drought resistant landscaping, and recycling receptacles. Operational BMPs would also reduce indirect mobile GHG emissions by requiring adequate ingress and egress to minimize vehicle idling and preferential parking for vanpools and carpools to reduce project-related trips. Therefore, with the implementation of all GHG reduction measures into the project design, the development alternatives would not result in a significant adverse cumulative impact associated with climate change.

TABLE 4-10
PROJECT-RELATED UNMITIGATED ANNUAL GHG EMISSIONS – ALL ALTERNATIVES

Emission Source	GHG Emissions (MT CO_2e)		
	Proposed Project Alternative	**Reduced Intensity Alternative**	**Non-Gaming Alternative**
Construction[1]			
Construction	986	922	1,011
Operation			
Area	0	0	0
Mobile (Vehicle Trips)	7,044	6,110	11,375
Stationary Sources	802	802	802
Energy Usage	2,467	2,030	1,793
Solid Waste	339	286	219
Water/Wastewater	189	161	115
Operation Subtotal	*10,841*	*9,389*	*14,304*
Total Project-Related GHG Emissions	**11,827**	**10,311**	**15,315**

Notes: 1 – Construction is based on a 12-month schedule and will only occur during the year 2019.
Source: CalEEMod, 2016.

As discussed in **Appendix N**, CARB identifies the GHG reduction targets of the state and the types of measures that will be used to reach them in California's adopted Climate Change Scoping Plan. Of the approximately 126 strategies and measures identified in the Scoping Plan that would achieve a statewide reduction in GHG emissions, only two would apply to the development alternatives (refer to **Table 4-11**). The other policies do not apply to the development alternatives because they either apply to state entities, such as CARB, are planning-level measures, or they apply to particular industries, such as the auto repair industry. In addition to the State's GHG reduction targets, CCCAP identifies strategies to reduce GHG emissions. As shown in **Table 4-11**, the development alternatives would comply with California's and Cathedral City's applicable emission reduction strategies.

TABLE 4-11
COMPLIANCE WITH STATE EMISSIONS REDUCTION STRATEGIES

Regulation or Policy	Project Compliance
EO S-3-05 / AB 32 Strategy	
Diesel Anti-Idling: In July 2004, CARB adopted a measure to limit diesel-fueled commercial motor vehicle idling.	The development alternatives would be located on trust land and thus not subject to CARB restrictions on on-site diesel-fueled commercial vehicle idling. BMPs provided in **Section 2.2.3** would make the project consistent with this strategy.
Achieve 50 percent statewide Recycling Goal: Achieving the State's 50 percent waste diversion mandate as established by the Integrated Waste Management Act of 1989, (AB 939, Sher, Chapter 1095, Statutes of 1989), will reduce climate change emissions associated with energy intensive material extraction and	Solid waste services are expected to be provided by Burrtec, which is subject to the state's recycling requirements. The development would not affect County diversion goals as waste from tribal land is classified as

Regulation or Policy	Project Compliance
production as well as methane emission from landfills. A diversion rate of 48 percent has been achieved on a statewide basis. Therefore, a 2 percent additional reduction is needed.	out-of-state waste and is not calculated in local waste diversion statistics. Although the diversion stream will not be affected, the waste stream would increase. BMPs provided in **Section 2.2.3** would make the project consistent with this strategy.
Water Use Efficiency: Approximately 19 percent of all electricity, 30 percent of all natural gas, and 88 million gallons of diesel are used to convey, treat, distribute and use water and wastewater. Increasing the efficiency of water transport and reducing water use would reduce GHG emissions.	With implementation of BMPs provided in **Section 2.2.3**, water use would be reduced through installation of low-flow appliances and the installation of drought-tolerant landscaping, which would make the project consistent with this strategy.
Cathedral City CAP	
Solid Waste ▪ **Diversion:** Increase solid waste diversion to achieve an average annual goal of 65 percent through 2020. ▪ **Food Waste Composting at Restaurants:** Restaurant composting program for food waste with a goal to reach all restaurants that serve more than 100 meals a day. ▪ **Recyclable Take-Out Containers:** Promote/mandate take-out alternative containers with a goal to eliminate the use of polystyrene packaging.	The Cathedral City CAP identifies the solid waste diversion strategy as a residential measure; therefore, the retail and recreational land uses that would be developed as a result of the development alternatives would not be subject to this reduction strategy. However, the project would work to achieve City waste diversion goals through the implementation of the 50 percent statewide recycling goal as discussed above. In addition, all restaurants developed under the development alternatives serving greater than 100 meals per day would be encouraged to implement a composting program for food waste, and the Tribe will promote/mandate the use of non-polystyrene take-out containers. These measures are included as BMPs in **Section 2.2.3**.
Water ▪ **Conservation Ordinance:** ▪ Build on and exceed current CVWD water conservation ordinance by 15% community-wide by 2020. ▪ Build on ordinance with goal to exceed current commercial-sector water conservation ordinance by 20 percent community-wide by 2020. ▪ **Drought Tolerant Planting**: Promote and augment City, DWA and CVWD rebates for drought tolerant planting, turf replacement and buy-back.	The Tribe will implement the BMPs provided in **Section 2.2.3**, including the installation of low-flow appliances and drought-tolerant landscaping. These measures will help achieve the City's water conservation goals.
Commercial Buildings ▪ **Peak Demand Reduction:** Collaborate with SCE and encourage 200 businesses to enroll in Energy Efficiency and Demand Response programs such as the Summer Discount Program. ▪ **Energy-Efficient, Commercial-Sector Lighting:** With DCEP promote and leverage existing incentives for efficient lighting with special local focus on building owner education and action with goal to eliminate any remaining T-12 lamps in commercial buildings. ▪ **"The Temperature Club":** Promote community partnership through policies to adjust indoor temperatures to save/degree. ▪ **Lighting Controls:** Promote SCE programs to encourage energy-efficient lighting linked to building controls and occupancy sensors. ▪ **"Cool Roofs":** Promote the installation of reflective roofing on commercial properties in the community with recognition for first ten early adopters.	All proposed facilities would be designed to be energy efficient, consistent with the BMPs incorporated into the project design listed in **Section 2.2.3**.
Governmental Initiatives ▪ **Commercial PACE Program:** Partner and aggressively promote commercial PACE program to provide commercial property owners —from retail to resorts— with property-secured funding for 100% of the cost of energy efficiency upgrades/renewable energy installations. ▪ **Green Building Program**. Promote Voluntary Green Building Program to prepare for enhanced Title 24 requirements and green building standards. ▪ **Green Building Support Services**. Advance the Voluntary Green Building Program to mandatory green building requirement with technical support services. ▪ **New and Efficient Construction**. Promote the Savings by Design Program from SCE for new commercial buildings.	The Tribe shall install energy efficient appliances in all buildings in accordance with the BMPs provided in **Section 2.2.3**. The buildings will be constructed generally consistent with Title 24 requirements and green building standards as adopted under the Tribal Building and Safety Code.

Regulation or Policy	Project Compliance
Transportation ▪ **Car-Pooling and Mass Transit:** Promote "Shared Vehicle at Work" programs with a goal to increase carpooling and mass transit by 20% with a "guaranteed-ride home". ▪ **Charging Stations:** Foster public/private partnerships to promote 10 additional public access EV charging stations for existing EV and NEV fleets. ▪ **Van Pools:** Partner and recognize all CC major employers with over 50 employees for van pools. ▪ **Car Sharing:** Promote ZIP and/or other Car Share programs through preferential parking and promotion with signage with a goal to serve 5% of existing drivers who each reduce their driving by 25%. ▪ **Plug-In Electric Vehicle Charging Stations:** Seek grant funding to install 10 EV charging stations on public and private property and promote Plug-In Electric Vehicles for public use. ▪ **Visitor Shuttles:** Collaborate with local hotels and resorts to support and establish effective point-to-point transportation for visitors, e.g. shuttles to airports, hotels, and business districts.	All workplaces shall promote employee rideshare programs and the use of nearby mass transit. Preferential parking for ZIP cars and other rideshare vehicles shall be implemented in accordance with the BMPs outlined in **Section 2.2.3** to further promote workplace and consumer ridesharing. The Tribe shall consider and to the extent feasible will incorporate preferential parking for Plug-In Electric Vehicles, along with the installation of corresponding EV charging stations into the project design. In addition, the Tribe shall provide shuttle service to and from population centers as feasible.
Notes: EO = Executive Order; AB = Assembly Bill. Source: CARB, 2017; City of Cathedral City, 2013.	

The effect of climate change on the development alternatives is also considered in this EA. Average temperature in County could increase, resulting in projected extreme heat days and a greater chance of extreme weather conditions. The intensity of these effects is uncertain and will depend on future GHG emissions worldwide (CEC, 2012).

No characteristics of the development alternatives are unique or especially vulnerable to the impacts from climate change. The effects of increasing temperatures and frequency of extreme heat days or extreme weather conditions will be dampened by the use of on-site HVAC. The North Site is located at approximately 300 feet above mean sea level and thus are not susceptible to impacts from sea level rise. The North Site is located in a primarily urban area, which is adequately served by emergency services and, therefore, is not uniquely sensitive to increased extreme weather conditions as a result of climate change.

Biological Resources

The North Site does not contain unique or sensitive ecosystems or biological communities. No federally-listed special-status species have the potential to occur on the North Site. One state-listed special-status species has the potential to occur on or in the vicinity of the site: the western yellow bat, a state-listed species of special concern. Mitigation measures discussed in **Section 5.0** require preconstruction surveys prior to construction activities for the western yellow bat as well as for migratory nesting birds, should construction activities occur during the migratory bird breeding season. The North Site does not contain potentially jurisdictional wetlands or Waters of the U.S. Therefore, implementation of the development alternatives would not contribute to cumulatively considerable adverse impacts to biological resources.

Cultural Resources

BMPs have been included in **Section 2.2.3** to address unknown cultural resources found during project construction, and similar measures would be required for any development in the vicinity of the North Site. With implementation of these BMPs, no cumulatively considerable adverse impacts to cultural resources would occur as a result of construction of the development alternatives.

Socioeconomic Conditions

Cumulative socioeconomic effects could occur in the project area as the result of developments that affect the lifestyle and economic well-being of residents. When considered with other growth in the City, particularly the Tribe's planned expansions of its other two casino resorts in Palm Springs and Rancho Mirage, there may be cumulative socioeconomic effects including impacts to economy, employment, housing availability, problem gambling, and crime. The development alternatives, in addition to the Tribe's other proposed projects in the

region, would result in beneficial impacts to economic output, tax revenues, and employment, as well as various beneficial impacts to the Tribe. Further, planning documents for the region will continue to designate land uses for businesses, industry, and housing, as well as plan public services to anticipate and accommodate growth in the region. Therefore, no significant cumulative socioeconomic effects would occur.

Transportation/Circulation

2040 Baseline Traffic Volumes

Cumulative baseline traffic volumes include the forecasted traffic from the Cathedral City General Plan traffic model, which utilizes a refined version of the Coachella Valley Area Transportation Study forecasting model (**Appendix K**). To calculate 2040 volumes from the 2035 traffic model predictions, a 1.5 percent per year increase in traffic volume was assumed. Tables 5-13 and 5-17 of **Appendix K** shows traffic volumes at study intersections and roadway segments for cumulative baseline conditions (2040) without implementation of the development alternatives. The following study intersections and roadway segments are expected to operate at unacceptable levels of service in the cumulative year:

- Date Palm Drive/Buddy Rogers Avenue;
- Cathedral Canyon Drive/Paseo Real;
- East Palm Canyon Drive between Golf Club Drive and Perez Road;
- East Palm Canyon Drive between Perez Road and Cathedral Canyon Drive;
- East Palm Canyon Drive between Date Palm Drive and Frank Sinatra Drive; and
- East Palm Canyon Drive between Frank Sinatra Drive and Country Club Drive.

2040 Cumulative Year Plus Project Alternatives

Tables 5-13 through 5-15 and 5-17 through 5-19 of **Appendix K** provide a summary of the LOS at each study intersection and roadway segment, respectively, under cumulative baseline (2040) conditions with implementation of the development alternatives. These tables show that two study intersections and four roadway segments are projected to operate unacceptably in cumulative year 2040 (refer to **Section 4.7** for acceptable operation criteria). With the installation of traffic signals and reconfiguration of turning lanes at Date Palm Drive/Buddy Rogers Avenue and Cathedral Canyon Drive/Paseo Real (refer to **Section 5.0**), the development alternatives would have a less-than-significant impact on study area intersections, as shown in Tables 5-21 through 5-23 of **Appendix K**. However, because the segments of East Palm Canyon Drive between Golf Club Drive and Canyon Plaza Drive would not increase the v/c ratio by 0.05 or greater, this does not constitute a significant impact. Further, the segments between Date Palm Drive and Country Club Drive are projected to already exceed a v/c ratio of 1.0 under baseline cumulative conditions without project-related traffic. Contributions to traffic funds for roadway improvements, as described in **Section 5.0**, will reduce roadway segment impacts to less-than-significant levels.

Land Use

If taken into federal trust, the North Site would not be subject to state or local land use jurisdiction. However, development on the North Site would not disrupt neighboring land uses or prohibit access to neighboring parcels. Further, the development alternatives are generally consistent with land use designations within the City's General Plan. As such, the project would not result in changes to local land use patterns. Future cumulative developments would be subject to City and County land use and zoning restrictions and would be required to comply with General Plan policies. Therefore, no cumulatively considerable adverse land use impacts would occur.

Public Services

Water Supply

The projected water demands for the Proposed Project Alternative, Reduced Intensity Alternative, and Non-Gaming Alternative are approximately 38 AFY, 36 AFY, and 27 AFY, respectively, which represents only approximately 0.02 percent, 0.02 percent, and 0.01 percent, respectively, of the 189,700 AFY of total outflows anticipated to occur from the western portion of the Coachella Valley Groundwater Basin in 2045 (CVWD, 2011). As described in detail in **Appendix F**, the water supply infrastructure in the vicinity of the North Site was

constructed under the assumption that future development on the site would demand significantly more water than is projected under the development alternatives. Additionally, other permitted developments in the region would be required to pay service fees to DWA and fund any infrastructure improvements or modifications required by those developments. Therefore, the construction and operation of the development alternatives in conjunction with other reasonably foreseeable regional development would not result in a cumulatively significant adverse impact to water supply providers.

Wastewater Service

As described in **Section 4.9.1**, under the development alternatives wastewater generated at the North Site would be conveyed by DWA sewage lines to CVWD's WRP-10 treatment facility, which currently has a significant surplus capacity of approximately 8.5 MGD (compared to the total capacity of 18.0 MGD) to treat wastewater flows from the development alternatives and other future developments in the region. As with the water supply infrastructure, the wastewater conveyance infrastructure in the vicinity of the North Site was sized to accommodate significantly higher wastewater flows than is anticipated to occur under the development alternatives (**Appendix F**). Furthermore, future development projects would be required to pay service fees to DWA and/or CVWD and fund any improvements or modifications to existing wastewater conveyance and treatment infrastructure necessary to serve these projects. Therefore, development of the project alternatives in conjunction with other reasonably foreseeable projects in the region would not result in a significant cumulative impact to wastewater service providers.

Solid Waste Service

Due to the likely excess capacity at Lamb Canyon Landfill (refer to **Section 4.9.1**), the development of the project alternatives, in conjunction with the other planned development projects listed in **Section 4.13.1**, would not result in a cumulatively considerable adverse effect to solid waste service.

Schools

Implementation of the development alternatives would not substantially increase enrollment or otherwise adversely affect public or private schools. Therefore, development of the project alternatives, in conjunction with the other planned development projects listed above, would not result in a cumulatively adverse effect to school facilities.

Recreation

As described in **Section 4.9.1**, development and operation of the development alternatives would not adversely affect any recreational activities. Therefore, no cumulatively considerable adverse effects would occur.

Electricity and Natural Gas

As described in **Section 3.0**, **Appendix H**, and **Section 4.9.1**, there is considerable existing electricity and natural gas infrastructure on and in the vicinity of the North Site, and the development alternatives would not result in significant adverse impacts to electricity or natural gas service providers. The individual planned projects listed above would be responsible for paying development, connection, or user fees to the utility if necessary, to receive services, and the utilities would be compensated for any capital improvements through user rates. Therefore, implementation of the development alternatives would not result in cumulatively considerable adverse effects to electricity or natural gas providers.

Law Enforcement

Increased demand for law enforcement services resulting from cumulative developments may require additional facilities, equipment, or employees. New development, including the cumulative projects listed above, would fund in part City services, including law enforcement, through development fees and property tax. In addition, as described in **Section 1.4.2**, Section 11.7 of the Compact requires that if it is determined that law enforcement, fire protection, emergency medical services, and any other public services will be burdened as a result of the development alternatives despite the mitigation measures identified herein and the voluntary payment of the development impact fees identified in Chapter 3.17 of the City's Municipal Code, prior to commencement of the development alternatives, and no later than the issuance of the Final TEIR the County, the Tribe will offer to commence negotiations with the City and if necessary, the County. These negotiations would allow for all parties

to enter into enforceable intergovernmental agreements with respect to the matters set forth in Section 11.7(a) of the Compact to ensure that the mitigation contemplated herein is sufficient to address cumulative impacts.

Fire Protection and Emergency Medical Services

New development, including the cumulative projects listed above, would be required to fund City services, including fire protection and emergency medical services, through development fees and property taxes. Although it is not expected that the development alternatives would require additional fire protection services or emergency medical services from the CCFD that would trigger the need to construct new facilities, as described in **Section 1.4.2**, Section 11.7 of the Compact requires that if it is determined that law enforcement, fire protection, emergency medical services, and any other public services will be burdened as a result of the development alternatives despite the mitigation measures identified herein and the voluntary payment of the development impact fees identified in Chapter 3.17 of the City's Municipal Code, prior to commencement of the development alternatives, and no later than the issuance of the Final TEIR to the County, the Tribe will offer to commence negotiations with the City and if necessary, the County. These negotiations would allow for all parties to enter into enforceable intergovernmental agreements with respect to the matters set forth in Section 11.7(a) of the Compact to ensure that the mitigation contemplated herein is sufficient to address cumulative impacts.

Visual Resources

New development, including cumulative projects listed in **Section 4.13.1**, would be consistent with local land use regulations, including associated design guidelines. Cumulative effects would include a shift from open, undeveloped lots to views of developed areas, as well as an increase in the density of urban uses within the City and County. However, the development alternatives would be visually compatible with urban land uses in the project vicinity and would be generally consistent with local policies related to design, landscaping, and signage. Additionally, with the implementation of BMPs outlined in **Section 2.2.3**, the development alternatives would not contribute towards adverse cumulative impacts to visual resources.

Noise

Approved projects in the vicinity of the North Site would be required to comply with any applicable noise regulations during construction and operation. In the cumulative year 2040, the development alternatives would not increase traffic volumes over the projected maximum of 4,782 vehicles per day in the opening year (**Section 4.11.1**); however, there would be an increase in background traffic volumes on local roadways, as captured in the estimated 1.5 percent annual growth rate (**Appendix K**). The development alternatives' contribution to traffic volumes under cumulative conditions would not double the current traffic on local roadways and thus would not result in an audible increase in ambient noise levels at nearby sensitive receptors (refer to **Section 4.11.1**). Therefore, the development alternatives' contribution to cumulative noise impacts would be less than significant.

Hazardous Materials

Any future cumulative development projects in the vicinity of the North Site would be required to comply with applicable federal and state regulations concerning hazardous materials management. With the implementation of BMPs outlined in **Section 2.2.3**, no cumulatively considerable adverse impacts related to hazardous materials would occur as a result of the development alternatives.

4.13.3 NO ACTION ALTERNATIVE

Under the No Action Alternative, it is reasonably foreseeable that under year 2040 cumulative conditions, the North Site would be developed consistent with the current land uses and zoning designations for the properties. Therefore, under cumulative conditions, the No Action Alternative would likely result in similar cumulative effects as those described above for the development alternatives.

4.13.4 INDIRECT EFFECTS

According to CEQ regulations, indirect effects are removed in time or in distance from a project, but are caused by the project and are reasonably foreseeable. These include growth-inducing effects, as well as changes in land use, population density, and related effects on natural systems (40 CFR §1508.8).

Construction of Off-Site Traffic Mitigation Improvements

Implementation of the development alternatives would require roadway improvements at the following intersections: Buddy Rogers Avenue/Date Palm Drive and Cathedral Canyon Drive/Paseo Real. These intersections consist of previously disturbed areas with only landscaped vegetation present. Further, the restriping of the intersections does not require widening of the roadway, and installation of traffic signals will result in minimal ground disturbance. No historic properties or known archaeological sites or cultural materials are located within the intersection improvement areas (refer to **Appendix J**). As no road widening is required, intersection improvements will result in no net loss of habitat, and will not result in adverse impacts to biological resources. Construction of the off-site mitigation improvements would require lane or shoulder closures; however, the closures would be temporary and would not cause a significant traffic impact. Adherence to federal and state environmental regulations during construction of intersection improvements would avoid any potentially significant indirect effects from off-site intersection improvements.

Construction of Off-Site Infrastructure Improvements

Implementation of the development alternatives would require additional water and sewer lines, as shown on **Figure 4.9-1** of **Appendix D**. This includes the placement of an 8-inch sewer main along Buddy Rogers Avenue and a 12-inch water main along East Palm Canyon Drive. No portions of the proposed pipelines would be placed outside of previously disturbed roadways. No historic properties or known archaeological sites or cultural materials are located within the proposed pipeline route (refer to **Appendix J**). The proposed pipelines pass through ruderal/disturbed habitat. Once construction is complete, the pipeline corridor will be repaved. Utility improvements will result in no net loss of habitat, and will not result in adverse impacts to biological resources. Construction of the off-site infrastructure improvements would require lane or shoulder closures; however, the closures would be temporary and would not cause a significant traffic impact. Adherence to federal and state environmental regulations during utility construction would avoid any potentially significant indirect effects from off-site utility construction.

Growth-Inducing Effects

Although the project is considered an anchor for downtown development within the City, construction and operation of the development alternatives would not in itself induce growth. The number of new employees requiring new facilities (including housing and schools) would not be significant (refer to **Section 4.6**); as such, no new housing, schools, or other facilities would be constructed as a result of development on the North Site. The project's contribution to the planned development of the City's Downtown/Art and Design Village has the potential to induce economic growth within the City. This output would be generated from direct, indirect, and induced economic activity. Indirect and induced output could stimulate further commercial growth; however, such demand would be diffused and distributed among a variety of different sectors and businesses in the City. As such, significant regional commercial growth inducing impacts would not be anticipated to occur under the project. Furthermore, if the project were not approved, similar levels of economic growth in the Downtown/Art and Design Village would still be likely to occur in the future. The construction of the development alternatives would only induce economic growth sooner than if the project were not approved. The development of the City's downtown area is subject to the City General Plan policies as well as environmental review requirements pursuant to CEQA. Therefore, no significant adverse growth-inducing effects relevant to any environmental issue area would occur.

SECTION 5.0
MITIGATION MEASURES

NEPA requires that, if a project would have significant adverse effects on the environment, mitigation for those impacts must be identified. Mitigation consists of:

(a) Avoiding the impact altogether by not taking a certain action or parts of an action.
(b) Minimizing impacts by limiting the degree or magnitude of the action and its implementation.
(c) Rectifying the impact by repairing, rehabilitating, or restoring the affected environment.
(d) Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action.
(e) Compensating for the impact by replacing or providing substitute resources or environments. (40 CFR 1508.20)

Mitigation measures to be implemented during construction and operation of the Proposed Project Alternative, Reduced Intensity Alternative, and Non-Gaming Alternative are summarized in **Table 5-1** below. All mitigation is enforceable because it is 1) inherent to the project design; and/or 2) required through provisions of the Tribal-State Compact, or federal or state statute, where applicable.

TABLE 5-1
PROPOSED MITIGATION MEASURES FOR THE PROPOSED PROJECT ALTERNATIVE, REDUCED INTENSITY ALTERNATIVE, AND NON-GAMING ALTERNATIVE

Resource Area	Proposed Mitigation
Air Quality Operation	As shown in Table 3 of **Appendix N**, operational emissions would exceed *de minimis* levels for NOx for the Non-Gaming Alternative. Therefore, in addition to the operational air quality BMPs outlined in **Section 2.2.3**, the following mitigation is recommended for the Non-Gaming Alternative in accordance with CAA General Conformity requirements: A. The Tribe shall purchase 27 tons of nitrogen oxides (NOx) emission reduction credits (ERCs) as specified in the Conformity Determination in **Appendix O** to fully offset NOx emissions with the development of the Non-Gaming Alternative. Because the air quality effects are associated with operation of the facility and not with construction of the facility, real, surplus, permanent, quantifiable, and enforceable ERCs will be purchased prior to the opening day of the facility. ERCs shall be purchased in accordance with the 40 CFR 93 Subpart B, conformity regulations. With the purchase of the ERCs the project would conform to the applicable SIP and result in a less than adverse effect to regional air quality. B. Implement ride sharing programs at the North Site. C. Use 100 percent electric vehicles at the North Site. D. Implement other feasible mitigation measures that are at the North Site, which would reduce project-related NOx and ROG emissions.
Biological Resources	To prevent violation of state regulations related to state listed special status species imposed for the protection of the environment (40 CFR 1508.27b(10)), the following measures are recommended for the Proposed Project Alternative, Reduced Intensity Alternative, and Non-Gaming Alternative to avoid and/or reduce impacts to the western yellow bat: A. A qualified biologist shall conduct a habitat assessment of palms within the North Site no more than three days prior to the start of construction occurring within 100 feet of palms. If the habitat assessment reveals suitable palm skirts large enough to accommodate roosting bats, the qualified biologist shall conduct a sunset fly-out survey on palms with skirts. Should bats be detected, identified palms shall be flagged and buffered by 100 feet. B. Should the avoidance of identified bat-roosting palms not be feasible, replacement of suitable bat roosting habitat shall occur at a 1:1 ratio elsewhere on the North Site outside clearing limits. Replacement habitat may consist of bat boxes or similar structures. A qualified biologist shall determine bat box placement and a 100-foot avoidance buffer will be placed around each box. C. Palms identified to contain roosting bats that are proposed for removal shall be removed as late in the day as possible to reduce the likelihood of potential bat mortality. On the first day, limbs may be removed as late in the day as possible. This amount of disturbance should cause roosting bats to seek other roosting habitat. The rest of the palm can then be harvested on the afternoon of the second day. A qualified biologist shall be present for the removal of these palms in the event that bats are found to have been roosting.

Resource Area	Proposed Mitigation
	The following measures are recommended for the Proposed Project Alternative, Reduced Intensity Alternative, and Non-Gaming Alternative to avoid and/or reduce impacts to potentially nesting migratory birds and other birds of prey in accordance with the federal MBTA: D. If construction activities (e.g., building, grading, ground disturbance, removal of vegetation) are scheduled to occur during the nesting season (February 15-September 15), a preconstruction nesting bird survey shall be conducted by a qualified biologist throughout the areas of suitable habitat within 500 feet of proposed construction activity. The surveys shall occur no more than 14 days prior to the scheduled onset of construction. If construction is delayed or halted for more than 14 days, another preconstruction survey for nesting bird species shall be conducted. If no nesting birds are detected during the preconstruction survey, no additional surveys or mitigation measures are required. E. If nesting bird species are observed within 500 feet of construction areas during the surveys, appropriate "no construction" buffers shall be established. The size and scale of nesting bird buffers shall be determined by a qualified biologist and shall be dependent upon the species observed and the location of the nest. Buffers shall be established around active nest locations. The nesting bird buffers shall be completely avoided during construction activities. The qualified biologist shall also determine an appropriate monitoring plan and decide whether construction monitoring is necessary during construction activities. Monitoring requirements are dependent upon the species observed, the location of the nests, and the number of nests observed. The buffers may be removed when the qualified biologist confirms that the nest(s) is no longer occupied and all birds have fledged. F. If impacts (i.e., take) to migratory nesting bird species are unavoidable, consultation with the United States Fish and Wildlife Service shall be initiated. Through consultation, an appropriate and acceptable course of action shall be established.
Transportation/ Circulation	To prevent violation of federal, state and local policies related to traffic operations imposed for the protection of the environment (40 CFR 1508.27b(10)), the following traffic mitigation measures shall be implemented as identified within the Traffic Impact Analysis for the project alternatives (Appendix K). Prior to the initiation of project construction, the Tribe shall complete the traffic mitigation measures identified below or make an in lieu fair share contribution equivalent to the cost of the mitigation measures identified below to fund completion of the mitigation measures. Notwithstanding the foregoing, the Tribe may complete one of the mitigation measures identified below and contribute its fair share contribution to fund the other mitigation measure, complete both of the mitigation measures, or contribute its fair share contribution to fund completion of both the mitigation measures. The following mitigation measures are proposed for study intersections under the Proposed Project Alternative, Reduced Intensity Alternative, and Non-Gaming Alternative: A. **Buddy Rogers Avenue/Date Palm Drive**: On the eastbound approach, restripe to include one left turn lane and one right turn lane. On the northbound approach, restripe to include one left turn lane and three through lanes. On the southbound approach, restripe to include two through lanes and one shared through-right lane. Install a traffic signal. The percentage of any mitigation cost to the Tribe for the Proposed Project Alternative, Reduced Intensity Alternative, and Non-Gaming Alternative is 100 percent. B. **Cathedral Canyon Drive/Paseo Real**: On the eastbound and westbound approaches, restripe to include one shared left-through-right lane. On the northbound and southbound approaches, restripe to include one left turn lane, one through lane, and one shared through-right turn lane. Install a traffic signal. The percentage for any mitigation cost to the Tribe for the Proposed Project Alternative is 16 percent, for the Reduced Intensity Alternative is 15 percent, and for the Non-Gaming Alternative is 21 percent. C. The Tribe shall contribute an equivalent mitigation payment for the Transportation Uniform Mitigation Fee (TUMF), Transit Development Fee, and City Facilities Impact Fees, current at the time of construction.
Public Services and Utilities	The following measure is recommended for the Proposed Project Alternative and Reduced Intensity Alternative: A. In accordance with Section 11.7 of the Compact, prior to commencement of the project, and no later than the issuance of the Final TEIR to the County, the Tribe shall offer to commence negotiations with the City and if necessary, the County, related to the provision of public services to meet the increase in demands resulting from the project. These negotiations would occur if it is determined by the City that law enforcement, fire protection, emergency medical services, and any other public services will be burdened as a result of the project despite the voluntary payment of the development impact fees identified in Chapter 3.17 of the City's Municipal Code as well as other identified mitigation measures. These negotiations would allow for all parties to enter into enforceable intergovernmental agreements with respect to the matters set forth in Section 11.7(a) of the Compact to address the estimated $101,135 net impact anticipated under the Proposed Project Alternative and the estimated $93,933 net impact under the Reduced Intensity Alternative. The following measure is recommended for the Non-Gaming Alternative: B. Prior to operation the Tribe shall enter into a Municipal Services Agreement with the City of Cathedral City to reimburse the Cathedral City Police Department (CCPD) and the Cathedral City Fire Department (CCFD) for

Resource Area	Proposed Mitigation
	quantifiable direct and indirect costs incurred in conjunction with providing law enforcement and fire protection services to address the estimated $131,980 net impact anticipated under the Non-Gaming Alternative.
Noise	The following mitigation measures will be implemented for the Proposed Project Alternative, Reduced Intensity Alternative, and Non-Gaming Alternative during to prevent violation of the Federal Noise Abatement Criteria (NAC) standards used by the FHWA and City and FTA's guideline vibration damage criteria imposed for the protection of the environment (40 CFR 1508.27b(10)): A. The use of vibrational construction equipment shall be restricted such that vibration levels will not exceed 90 VdB at commercial building adjacent to the North Site. Should any vibrational construction equipment be required for construction of the parking lot that results in vibration decibel levels that would exceed 90 VdB at the adjacent commercial building, a buffer or set back may be utilized. The Tribe may elect to establish a landscaped area within this buffer in place of parking facilities. B. Prior to construction, it shall be determined if the commercial building adjacent to the western boundary of the North Site is vacant. If it is occupied, or should it become occupied during construction, a temporary sound barrier shall be erected during construction on the western boundary of the North Site to reduce noise levels at adjacent commercial receptors by at least 2 dBA. C. In coordination with the City, the Tribe shall fund mutually acceptable noise reduction measures along Buddy Rogers Avenue adjacent to the existing parks (Second Street Park and the Cathedral City Dog Park). This may include the construction of a noise wall, additional landscaping, or other noise reduction techniques to attenuate traffic noise levels within the parks. Noise reduction measures should achieve a noise reduction of at least 4 dBA at the parks from traffic along Buddy Rogers Avenue. Should a noise wall be acceptable to the City, the material and height of the wall would be determined in consultation with the City and it is anticipated that the noise wall would need to be at least 4 feet in height.
Hazardous Materials	The following measures are recommended for the Proposed Project Alternative, Reduced Intensity Alternative, and Non-Gaming Alternative as recommended in the Phase I ESA (Appendix M) to prevent violation of federal and state regulations related to hazardous material imposed for the protection of the environment (40 CFR 1508.27b(10)): A. Concrete piping/crushed concrete encountered during grading/development should be evaluated by an asbestos consultant prior to removal from the site and subsequent off-site disposal. Any discolored soils, noxious odors, and/or buried objects/debris encountered during clearing and grubbing or future grading and development should be left in place until an experienced environmental professional has had the opportunity to evaluate the conditions, and provide recommendations if needed. An experienced environmental professional should monitor excavation and removal of buried concrete structures and/or debris.

SECTION 6.0

CONSULTATION AND COORDINATION

This section lists persons and agencies consulted during the preparation of this EA. Persons consulted for this EA that are associated with an agency or organization are listed underneath their agency or organization.

AGENCIES, ORGANIZATIONS, AND INDIVIDUALS CONSULTED

United States Department of the Interior, Bureau of Indian Affairs (BIA), Pacific Regional Office

Summary of Consultation and Coordination:

The BIA was consulted regarding the scope and content of this EA.

State Historic Preservation Officer (SHPO)

Native American Heritage Commission (NAHC)

Summary of Consultation and Coordination:

The NAHC was consulted to obtain a list of federally-recognized tribes culturally affiliated with the project area. A copy of the search results is included in Appendix A of Appendix J.

United States Fish and Wildlife Service (USFWS)

Summary of Consultation and Coordination:

USFWS was consulted to obtain a list of federally-listed special status species with the potential to occur in the project area. A copy of the search results is included in Appendix I.

City of Cathedral City (City)

Summary of Consultation and Coordination:

The City was consulted to determine the intersections and roadways that may be impacted as a result of the project, for inclusion within the Traffic Impact Analysis (TIA; refer to Appendix K). Additionally, the City was consulted to determine the appropriate growth rate for 2020 Opening Year Conditions within the TIA.

California Department of Fish and Wildlife (CDFW)

Summary of Consultation and Coordination:

CDFW's California Natural Diversity Database (CNDDB) was consulted to obtain a list of state-listed special status species with the potential to occur in the project area. A copy of the results of the CNDDB search is included in Appendix I.

California Native Plant Society (CNPS)

Summary of Consultation and Coordination:

CNPS's Inventory of Rare and Endangered Plants list was consulted to obtain a list of state-listed special status species with the potential to occur in the project area. A copy of the search results is included in Appendix I.

Desert Water Agency (DWA)

Summary of Consultation and Coordination:

DWA's 2015 Urban Water Management Plan and online information on the system overview, pipelines, and imported water were consulted to obtain the water service information for the district.

Coachella Valley Water District (CVWD)

Summary of Consultation and Coordination:

CVWD's Coachella Valley Water Management Plan Update, 2015 Urban Water Management Plan, Development Design Manual, and stormwater protection and flood control online information were consulted to obtain the water service information for the district.

Palm Springs Unified School District (PSUSD)

Summary of Consultation and Coordination:

PSUSD's Current Attendance Boundaries map and 2015-16 School Accountability Report Card were consulted to obtain the public school service information for the district.

Southern California Edison (SCE)

Summary of Consultation and Coordination:

SCE's Workpapers for the 2015 General Rate Case Application, online webpage, online distribution system interactive map, and West of Devers Upgrade Project Overview were consulted to obtain the electrical service information for the company.

Southern California Gas Company (SoCalGas)

Summary of Consultation and Coordination:

SoCalGas's Transmission Pipeline Interactive Map and Pipeline Basics document were consulted to obtain the natural gas service information for the company.

Cathedral City Police Department (CCPD)

Summary of Consultation and Coordination:

CCPD's website was consulted to obtain the law enforcement service information for the department.

Cathedral City Fire Department (CCFD)

Summary of Consultation and Coordination:

CCFD's 2016 Annual Report was consulted to obtain the fire protection service information for the department.

APPENDICES

APPENDIX A

OFF-SITE ALTERNATIVES EVALUATION REPORT

OFF-SITE ALTERNATIVES EVALUATION REPORT

INTRODUCTION

As described in the EA, the Agua Caliente Band of Cahuilla Indians (Tribe) has submitted an application to the Bureau of Indian Affairs (BIA) for the transfer of approximately 13.6 acres in the City of Cathedral City, California (Section 33 Parcel or North Site) into federal trust for the benefit of the Tribe (Proposed Action). The Nation proposes to subsequently develop the trust parcel with a casino, mixed-use facilities, and associated infrastructure (Proposed Project). The purpose of the Proposed Action is to improve the long-term economic vitality and self-governance capability of the Tribe, as well as assist the Tribe in restoring its historic land base through funding generated by the Proposed Project. This report has been prepared to assist the BIA in the identification of a reasonable range of alternatives to the Proposed Action.

During the NEPA process, federal agencies are required to identify and assess reasonable alternatives to a Proposed Action that will avoid or minimize the adverse effects of the Proposed Action upon the quality of the human environment (40 CFR Part 1500.2). The BIA NEPA Guidebook states that an "EIS must consider a range of reasonable alternatives, including the Proposed Action and No Action alternative, and provide a description of any alternatives eliminated from further analysis with the rationale for elimination (40 CFR 1502.14(a); 43 CFR 46.420(c)). The No Action alternative is the only alternative that must be analyzed in an EIS that does not respond to the purpose and need for the action." The Council on Environmental Quality (CEQ) indicates that "[r]easonable alternatives include those that are practical or feasible from the technical and economic standpoint and using common sense, rather than simply desirable from the standpoint of the applicant" (CEQ, 1981).

Based on the requirements described above, alternatives were screened using four criteria:

1) ability to meet the purpose and need for the Proposed Action;
2) feasibility;
3) ability to avoid or minimize the adverse environmental impacts of the Proposed Action; and
4) ability to contribute towards a reasonable range of alternatives.

This report describes in detail off-site alternatives that were considered but ultimately eliminated from analysis within the Environmental Assessment (EA), including the South Site Alternative, based on the screening criteria described above. Further, the South Site Alternative was more thoroughly analyzed than the other eliminated alternatives, and a more in depth discussion of its components, environmental consequences, and recommended mitigation measures is provided below. Additional figures describing the South Site can be found in Appendices D and H of the EA, and the environmental setting, as described below, can be found in Appendix H of the EA.

A.1 SOUTH SITE ALTERNATIVE

The South Site Alternative would be located on the South Site, which is an approximately 13.9-acre site bordered by East Palm Canyon Drive/Highway 111 on the north, Van Fleet Avenue to the west, D Street to the south, and vacant parcels to the southeast and east (Figure 2-2 of Appendix D of the EA). The South Site is comprised of 15 parcels; Table 3 of Appendix B of the EA provides the Assessor's Parcel Numbers (APNs) and acreage for the South Site. The Tribe does not currently own the South Site parcels, and would need to acquire them prior to development on the South Site.

SOUTH SITE ALTERNATIVE COMPONENTS

The South Site Alternative consists of the transfer of the 13.9-acre South Site into federal trust status for gaming purposes for the benefit of the Tribe and the subsequent development of a casino on the site. The South Site Alternative would include 40,000-sf of gaming floor space, parking, and mixed-use facilities, including a combination of tribal government office space, restaurants, and retail uses totaling 125,000 sf of development. The South Site Alternative is sized the same as the Proposed Project Alternative as described within the EA, except that the casino and associated facilities would be located on the South Site instead of the North Site. A breakdown of the facilities proposed under the South Site Alternative is provided in **Table 1**, and the proposed site plan is provided as **Figure 2-6**.

TABLE 1
SOUTH SITE ALTERNATIVE COMPONENTS

Component	Units	Approximate Square Footage
Casino		
Gaming Floor	500 Class III gaming devices and 8 table games	40,000
Back of House/Support		17,500
Restaurants		5,000
Retail		2,500
Total		***65,000***
Mixed-Use		
Building A		9,500
Building B		6,000
Building C		14,000
Building D		9,500
Building E		21,000
Total		***60,000***
Overall Project Total		**125,000**
Parking	~1,150 spaces	
Source: Allen+Philp Partners, 2018.		

As with the Proposed Project Alternative, the South Site Alternative would be open 24 hours a day, 7 days a week. The South Site Alternative would employ the same number of people (556 direct employment opportunities) and attract the same number of patrons as the Proposed Project Alternative. The casino would have approximately 500 Class III gaming machines devices, and 8 table games.

SOURCE: Allen + Philp Partners, 1/9/2018; AES, 7/27/2018

Figure 2-6
South Site Alternative Site Plan

Roadway access, public health and safety standards, fire protection, and law enforcement under the South Site Alternative would be similar to the Proposed Project Alternative (Section 2.2.2 of the EA) but would be provided to the South Site instead of the North Site. The construction methods and BMPs for the South Site Alternative would be identical to those described for the Proposed Project Alternative (Section 2.2.3 of the EA).

Water Supply and Wastewater Treatment

The existing water and sewer mains along the East Cathedral Channel levee near the southeastern boundary of the South Site would interfere with the proposed development under the South Site Alternative and would need to be removed or abandoned. The existing sewer main within D Street would also require replacement (Appendix F of the EA). The South Site Alternative includes the construction of a new 12-inch sanitary sewer main that would run west from the east end of D Street to Van Fleet Street (where it would be connected to existing 8-inch branch lines) before running north in Van Fleet Street and east in East Palm Canyon Drive to connect with an existing water main near Date Palm Drive. A new 12-inch water main would follow the same route as the new sewer main, except its southern terminus would be a connection to an existing water main at the intersection of Van Fleet Street and D Street. These improvements and removals/abandonments of the sewer and water supply system would occur in the immediate vicinity of the South Site.

Grading and Drainage

Grading of the South Site to accommodate the development of the South Site Alternative would require the net export of a maximum of 140,948 cubic yards of material (Appendix G of the EA). The same construction and fill hauling practices that would be implemented under the Proposed Project Alternative (refer to Section 2.2.2 of the EA) would also be implemented under the South Site Alternative. Development of the South Site Alternative would result in a total of 12.51 acres of impervious surfaces on the South Site. In order to retain the 140,283 cubic feet of stormwater runoff resulting from a 100-year, 3-hour storm event per City standards, the South Site Alternative involves the installation of 2,050 linear feet of 96-inch perforated corrugated metal pipe surrounded by porous stone beneath the proposed parking areas on the northern portion of the South Site (Appendix G of the EA). These facilities would provide 140,901 cubic feet of storage, slightly more than the required volume. As with Proposed Project Alternative, no off-site drainage infrastructure would be utilized. The South Site Alternative would involve the installation of similar additional features to retain and filter stormwater runoff as described under the Proposed Project Alternative in Section 2.2.2 of the EA.

Roadway Access

The South Site Alternative would be accessible via one full-access driveway on East Palm Canyon Drive, with secondary access along Van Fleet Street (as shown in **Figure 2-6**). Loading docks and service entry is provided at the intersection of Date Palm Drive and East Palm Canyon Drive for the casino building, and in the southernmost parking lot for the mixed used buildings. The design contemplated for the South Site Alternative includes the construction of full width improvements on all internal roadways, including traffic calming measures in parking lots and internal roadways. The South Site Alternative contemplates construction of roadway improvements and appropriate signage and striping adjacent to the South Site's boundary to provide three eastbound lanes on East Palm Canyon Drive, one northbound lane on Van Fleet

Street, and one westbound lane on D Street. Additionally, modifications at existing traffic signals adjacent to the South Site will be constructed as needed.

The project driveway at Van Fleet Street and B Street contemplated under the South Site Alternative would be restriped with two-way stop control to provide one left turn and one shared through-right turn northbound lanes; one left and one shared through-right southbound lanes; one shared left-through-right eastbound lane; and one shared left-through-right westbound lane. The project driveway at D Street contemplated under the South Site Alternative would be restriped with one-way stop control to provide one shared left-through-right southbound lane; one shared left-through eastbound lane; and one shared through-right westbound lane. The project driveway at East Palm Canyon Drive contemplated under the South Site Alternative would be restriped with signalized control to provide one left and one shared through-right northbound lane; one shared left-through-right southbound lane; one left, three through, and one right eastbound lanes; and one left, two through, and one right westbound lanes. Further, sight distances at these project driveways will be reviewed with respect to Riverside County sight distance standards at the time of preparation of final grading, landscape, site development, and street improvement plans.

AFFECTED ENVIRONMENT

The South Site is located in close proximity to the North Site, which results in a similar affected environment of both sites. Refer to Appendix H of the EA for a detailed description of the regulatory and environmental setting for the South Site.

ENVIRONMENTAL CONSEQUENCES

This section assesses the environmental consequences of the South Site Alternative, as described above. Effects are measured against the environmental baseline presented in Appendix H of the EA. Indirect and cumulative effects are identified in the *Cumulative Impacts and Indirect Effects* subheading. Measures to mitigate for adverse impacts identified in this section are presented in the **Mitigation Measures** heading below.

Land Resources

Impacts to land resources under the South Site Alternative would be the same as under the Proposed Project Alternative (described within the EA), although the South Site Alternative would require the export of fill material rather than import. The South Site is approximately 13.9 acres (0.3 acres larger than the North Site). Therefore, a similar amount of soil and topography manipulation would be required for this alternative when compared to the Proposed Project Alternative. The South Site Alternative would comply with the applicable NPDES General Construction Permit requirements and BMPs described in Section 2.2.3 of the EA, which would ensure that the alternative would have minimal impacts on soils within the project area. Therefore, impacts resulting from seismic conditions would be the same as under the Proposed Project Alternative.

Water Resources

As described in **Section 2.3**, the South Site Alternative would comply with the applicable NPDES General Construction Permit requirements and BMPs described therein; therefore, impacts to surface

water resources and groundwater quality from the development of the South Site Alternative would be less than significant, similar to the Proposed Project Alternative (described within the EA). Additionally, the South Site Alternative would not place people or structures in a floodplain or change flood elevations; therefore, as with the Proposed Project Alternative, no adverse impact associated with flooding or floodplain management would occur as a result of the South Site Alternative. Impacts from stormwater runoff and groundwater use which are unique to the South Site Alternative are addressed below.

Stormwater Runoff

Development of the South Site Alternative would result in a total of 12.51 acres of impervious surfaces on the South Site and would generate approximately 140,283 cubic feet of stormwater flows as a result of a 100-year, 3-hour storm event, which is slightly more than under the Proposed Project Alternative. As described in **Section 2.3.2**, 2,050 linear feet of 96-inch perforated corrugated metal pipe surrounded by porous stone would be installed under the proposed parking areas in the northern portion of the South Site, which would provide adequate storage volume to contain 100 percent of the flows resulting from a 100-year, 3-hour storm event. Because runoff would be retained entirely on site, no impacts would occur to surface water resources. The South Site Alternative would involve the installation of similar stormwater filtering features as described under the Proposed Project Alternative in Section 4.2.1 of the EA, which would filter debris, trash, and sediment from stormwater runoff before it is retained in the drainage network and ensure that impacts to groundwater quality are less than significant.

Groundwater Supply

The South Site Alternative would require approximately 3 percent more potable water than the Proposed Project Alternative, with an approximate average daily water demand of approximately 34,113 gpd, or approximately 38 AFY. While this is slightly higher than the estimated water demand of the Proposed Project Alternative (due to an approximately 1 AFY increase in projected landscaping water use compared to the Proposed Project Alternative), it nonetheless also represents only approximately 0.02 percent of projected total outflows from the western portion of the Coachella Valley Groundwater Basin in 2020. Therefore, as with the Proposed Project Alternative, the South Site Alternative's operational water demand would not have a significant adverse effect on regional groundwater levels. While the development of the South Site Alternative would increase the amount of impervious surfaces on the South Site, the above-described stormwater infrastructure that would be installed under the South Site Alternative would allow retained stormwater flows to infiltrate to the underlying groundwater, thereby recharging the regional aquifer.

Air Quality

Methodology

Development and operation of the project alternatives would emit criteria air pollutants (CAPs), hazardous air pollutants (HAPs), and greenhouse gases (GHGs). This section presents the methodology used to assess the affected environment and to evaluate the potential air quality effects of the project alternatives.

Assessment Criteria

Adverse effects to ambient air quality could result if either construction or operation would result in violations of the Federal Clean Air Act (CAA) provisions, or if emissions would impede a state's ability to meet National Ambient Air Quality Standards (NAAQS).

While the alternative sites are located within the Salton Sea Air Basin (SSAB) and the South Coast Air Quality Management District's (SCAQMD) jurisdictional boundaries, SCAQMD thresholds do not apply to federal actions. The effects of proposed federal actions on SCAQMD air quality management are assessed under General Conformity as required under the CAA.

Construction Analysis

Construction would entail mass earthwork, fine grading, and building, road, and parking lot construction. A variety of heavy equipment, including trucks, scrapers, excavators, and graders, would be used to complete each phase. A detailed list of the proposed equipment and emissions resulting from the equipment is located in Appendix N of the EA. Effects on air quality during construction were evaluated by estimating the amount of criteria pollutants that would be emitted over the duration of the construction period (for each phase of construction where applicable). Particulate matter 10 microns in diameter (PM_{10}) and ozone precursors (NO_x and reactive organic gases [ROG]) are the primary pollutant of concern resulting from operation of construction equipment, earth-moving activities, and soil hauling.

ROG, nitrogen oxides (NO_x), sulfur dioxide (SO_2), carbon monoxide (CO), and diesel particulate matter (DPM) emissions from construction would primarily be produced by diesel-fueled equipment use from on and off-road construction equipment and truck use. Emissions from construction equipment were calculated using the United States Environmental Protection Agency (USEPA) approved 2016 California Emissions Estimator Model, Version 2016.3.2 (CalEEMod; CalEEMod, 2016). The majority of PM_{10} and $PM_{2.5}$ emissions would result from fugitive dust generated during earth-moving activities, such as site grading. CalEEMod was used to estimate PM_{10} and $PM_{2.5}$ project-related emissions and precursors from equipment exhaust and fugitive dust. CAP emissions were estimated assuming that construction would begin in January 2019 and continue at an average rate of 22 days per month for all project alternatives. The construction duration for project alternatives is conservatively assumed to be approximately 12 months[1]. Emissions results are summarized below and included in Appendix N of the EA.

Operational Analysis

CalEEMod was also used to estimate emissions associated with operation of the project alternatives. Input values for the CalEEMod included data from the Traffic Impact Analysis (TIA) provided in Appendix K of the EA, water/wastewater estimates from Appendix F of the EA, and solid waste generation estimates from Section 4.9 of the EA. Trip generation specific to each of the project alternatives provided in the TIA was incorporated into CalEEMod, including internal capture rates. The TIA estimated approximately 61 percent of retail patrons would patronize the casino or restaurant and 62 percent of restaurant patrons would patronize the casino or retail. Default trip length values included in CalEEMod were used for all land uses.

Appendix N of the EA includes additional details regarding CalEEMod inputs as well as the CalEEMod output files.

- **Federal General Conformity**. Conformity regulations apply to Federal actions that would cause emissions of CAPs to occur in locations designated as non-attainment or maintenance areas for

[1] While actual construction activities associated with the alternatives may be phased over a longer period, assuming that all construction would take place within a one-year condensed time frame results in a higher concentration of daily emission estimates, and thus is a conservative assumption.

the emitted pollutants. As discussed in Section 3.3 of Appendix H of the EA, the alternative sites are located in an area that is classified as severe nonattainment for ozone (NO_x and ROG, ozone precursors) and PM_{10} under the NAAQS; therefore, if project emissions are equal to or exceed applicable *de minimis* levels for any CAP provided in 40 Code of Federal Regulations (CFR) §93.153 (b)(1) and (2), then a federal general conformity determination analysis would be required.

- **Carbon Monoxide Hot Spot Analysis**. Implementation of the project alternatives would result in emissions of CO. Because CO disperses rapidly with increased distance from the source, emissions of CO are considered localized pollutants of concern rather than regional pollutants, and can be evaluated by Hot Spot Analysis. "Hot Spots" include high traffic volume intersections with poor operating conditions resulting in extensive idling time for cars and subsequently can be concentrated areas with elevated CO levels. Refer to Appendix H of the EA for additional details related to Hot Spot analysis and screening criteria. The project alternatives are not in an area or category of site that has been identified in a CO plan. As shown in the TIA, provided as Appendix K of the EA, no intersection after mitigation would operate at level of service (LOS) E or F. The project alternatives are not located in a CO nonattainment or maintenance area. Therefore, in accordance with 40 CFR §93.123, no further quantitative analysis is required.
- **Climate Change**. This EA considers whether project emissions have individual or cumulative effects on climate change. Given the global nature of climate change impacts, individual project impacts are most appropriately addressed in terms of the incremental contribution to a global cumulative impact; therefore, refer below to the *Cumulative Impacts and Indirect Effects* subheading, for the analysis of impacts related to climate change. This approach is consistent with the view articulated by the *Intergovernmental Panel on Climate* (IPCC) *Change Fifth Assessment Report* (IPCC, 2014).
- **Federal Class I Areas**. If any alternative emits greater than the Prevention of Significant Deterioration (PSD) threshold of 250 tons per year (tpy) of any one criteria pollutant from stationary sources during construction or operation then a best available control technology analysis will be conducted. San Gorgonio Wilderness, San Jacinto Wilderness, and Joshua Tree NP are within the preconstruction review distance of the alternative sites and analysis is required.
- **Tribal New Source Review (NSR)**. The Tribe would be required to apply for a permit under the newly implemented NSR requirements of the CAA if stationary source operational emissions of regulated pollutants would exceed the thresholds presented in Table 3-7 of Appendix H of the EA. For this analysis, stationary source project related operational emissions will be quantified and compared to the applicable threshold.

Environmental Consequences

Construction Emissions

Construction of the South Site Alternative would be similar to the Proposed Project Alternative (described within the EA); however the South Site Alternative would be located at the South Site. Construction emission totals for the South Site Alternative are shown in **Table 2** and mitigated construction emission totals are shown in parentheses (also see Appendix N of the EA for model output files). As shown in **Table 2**, emissions of individual criteria pollutants from construction of the South Site Alternative would not exceed applicable *de minimis* levels; therefore, a conformity determination is not required. However, to further reduce project-related construction criteria pollutants and DPM emissions, recommended mitigation measures are provided under the **Mitigation Measures** heading, below. These measures would reduce DPM emissions from construction equipment by approximately 85

percent, avoiding potentially adverse effects to nearby sensitive receptors. Therefore, construction of the South Site Alternative would not result in significant adverse effects associated with the regional air quality environment.

TABLE 2
UNMITIGATED (MITIGATED) CONSTRUCTION EMISSIONS FROM PROJECT ALTERNATIVES

Construction Year – 2019	Criteria Pollutants					
	ROG	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	tons per year (tpy)					
South Site Alternative	1.8 (1.6)	6.4 (5.4)	3.5 (3.6)	0.0 (0.0)	0.8 (0.5)	0.4 (0.2)
De Minimis Levels	*25*	*25*	*N/A*	*N/A*	*70*	*N/A*
Exceed Level?	**No**	**No**	**N/A**	**N/A**	**No**	**N/A**

Notes: N/A = Not Applicable; levels are not applicable due to attainment status (refer to Appendix H of the EA). Mitigated emission levels after the implementation of BMPs in Section 2.2.3 of the EA are shown in parenthesis.
Source: CalEEMod, 2016.

Operational Emissions

Buildout of the South Site Alternative would be similar to the Proposed Project Alternative. Unmitigated operational emission totals for the South Site Alternative are shown in **Table 3**. It should be noted that stationary and area sources are exempt under conformity regulations and therefore not subject to *de minimis* levels. Detailed calculations of vehicle and area emissions are included as Appendix N of the EA.

TABLE 3
SOUTH SITE ALTERNATIVE UNMITIGATED OPERATIONAL EMISSIONS

Sources	Criteria Pollutants					
	ROG	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	tons per year (tpy)					
Exempt Conformity Emissions

1 - Only applies to Non-Exempt Emissions.
Source: CalEEMod, 2016.

As shown in **Table 3**, emissions of individual criteria pollutants from operation of the South Site Alternative would not exceed applicable *de minimis* levels and emissions of individual criteria pollutants from stationary sources (area and stationary) would not exceed the Tribal NSR threshold of 2 tpy for ROG. Therefore, a conformity determination is not required and a Tribal NSR permit would not be

required. Further, **Table 3** shows that the South Site Alternative would not result in stationary source emissions (under the categories of Area and Stationary sources) of any one pollutant in excess of the Federal Class I Areas major source threshold of 250 tpy. Therefore, operation of the South Site Alternative would not result in significant adverse effects associated with the regional air quality environment. However, to further reduce project-related operational criteria pollutants, BMPs are provided in Section 2.2.3 of the EA. These measures would minimize CAP emissions from operation of the South Site Alternative through the reduction of on-site area emissions, vehicle idling, and mobile emissions.

Biological Resources

Potential impacts of the South Site Alternative are similar to those discussed in Section 4.4.1 of the EA; as the South Site is similar to the North Site in its habitat types (including wetlands and Waters of the U.S.), observed wildlife, past uses, and potential for use by special-status species. Therefore, the South Site Alternative would result in no effect to sensitive communities or wetlands and Waters of the U.S. Mitigation measures are presented under the **Mitigation Measures** heading, below, to ensure that potential impacts to the western yellow bat, and migratory birds and other birds of prey are avoided. With implementation of mitigation measures, this alternative may affect, but is not likely to adversely affect, special-status wildlife species, and migratory birds and other birds of prey.

Cultural Resources

As discussed in Section 3.5 of Appendix H of the EA, no historic properties, known archaeological sites, cultural materials or paleontological resources are located within the APE for the South Site under the South Site Alternative. The South Site was once the location of a 1920s-1940s residential community which has been demolished, and the degree of disturbance to the site suggests a low probability for buried cultural resources. There is always a possibility, however, that previously unknown archaeological or paleontological resources could be encountered during construction. With adherence to applicable laws and the implementation of BMPs in Section 2.2.3 of the EA, no adverse effects to previously unknown cultural resources would occur.

Socioeconomic Resources/Environmental Justice

The gaming and retail components of the South Site Alternative are identical to the Proposed Project Alternative (described within the EA); therefore, socioeconomic impacts would be essentially identical. Refer to Section 4.6.1 and Appendix E of the EA for the socioeconomic impacts related to the South Site Alternative. The South Site currently generates less property tax revenue, so a smaller reduction in tax collection would occur under the South Site Alternative.

The net fiscal impact to the City would be a decrease of $108,945 under the South Site Alternative (Appendix E of the EA). As discussed in Section 2.2.3 of the EA, the Tribe intends to voluntarily pay development impact fees to the City. Based on the size of the proposed development and the fees contained in Chapter 3.17 of the City's Municipal Code, the anticipated development impact fee for the South Site Alternative would be $18,750. This would reduce the estimated net fiscal impact to the City to $90,195. This is a potentially significant impact. Mitigation measures are provided below to avoid this potential fiscal impact to the City. As described in Section 1.3.2 of the EA, Section 11.7 of the Compact

requires that prior to commencement of the South Site Alternative, and no later than the issuance of the final EA to the County, if it is determined that law enforcement, fire protection, emergency medical services, and any other public services will be burdened as a result of the South Site Alternative, the Tribe shall offer to commence negotiations with the City and if necessary, the County. These negotiations would occur if it is determined that identified mitigation measures and the voluntary payment of the development impact fees identified in Chapter 3.17 of the City's Municipal Code, are not adequate to off-set the fiscal impacts described above. These negotiations would allow for all parties to enter into enforceable intergovernmental agreements with respect to the matters set forth in Section 11.7(a) of the Compact. After mitigation, fiscal impacts would be less than significant.

Transportation/Circulation

Methodology

Study Intersections and Roadway Segments

A TIA was conducted by Webb Associates in July 2018 to determine the effects the proposed development would have on study intersections and roadway segments, review the available access to the development, and provide recommendations for improvements that may be necessary to accommodate the traffic expected to be generated by the development. The TIA is provided as Appendix K of the EA.

To assess project-related impacts on the transportation system, opening year background traffic conditions were estimated for the year 2020. As described in Appendix K of the EA, the 2020 background traffic conditions were determined by applying an average annual growth rate of 2 percent to the 2018 existing traffic described in Section 3.7 of Appendix K of the EA. Table 5-1 of Appendix K of the EA shows the study intersections under 2020 baseline conditions.

The study area intersections were analyzed using procedures published in the 2010 Highway Capacity Manual (HCM) and PTV Vistro 5.00, a computer-based traffic analysis program (Appendix K of the EA). Estimated traffic generated by the project was added to the 2020 opening year background traffic to determine whether the project would cause the study intersections or roadways to operate at an unacceptable LOS. For the purposes of this analysis, an overall intersection LOS of D or better is considered acceptable (Appendix K of the EA). If an intersection operates at LOS E or F without the addition of the project, a significant impact would occur if the project would add 50 or more trips to the intersection or if the vehicle-to-capacity ratio of a roadway segment exceeds 1.0. These thresholds apply to all study intersections and roadways. For roadways or intersections operating unacceptably without the addition of the project, an increase in the volume to capacity (v/c) ratio of 0.05 or greater as a result of the project would result in a significant impact.

Trip Generation Rates

Trip generation relates land uses to the number of vehicles entering or exiting the site and the directional splits of inbound/outbound traffic. A trip is defined as a vehicle either entering or exiting the site. The trip generation rates were derived for the project based on information published in the *Institute of Transportation Engineers (ITE) 10th Edition of Trip Generation Manual* (Appendix K of the EA). The ITE Manual does not provide a standard trip generation rate for casino land uses; therefore, counts at nearby existing casinos of a similar size were utilized to determine the casino trip generation rate. The ITE standard trip rates were used for the restaurants and shopping center land uses, as described in Appendix K of the EA. Due to the close proximity of the casino, restaurant, and retail facilities, and their

shared access, there would be internal capture between these land uses and, therefore, a trip reduction was applied to account for this internal capture. Tables 4-1 and 4-2 of Appendix K of the EA provide a summary of the trip generation rates used for the proposed casino and mixed use facilities.[2]

Trip Distribution

Estimated traffic generated by the development alternatives was distributed on the surrounding street system based on anticipated site use. Figures 4-A through 4-D of Appendix K of the EA show the traffic volumes and distribution for each of the project alternatives.

Environmental Consequences

Study Intersections and Roadway Segments

Trip generation and trip distribution are provided in Table 4-3 and Figure 4-D of Appendix K of the EA for the South Site Alternative. Tables 5-4 and 5-8 of Appendix K of the EA provide a summary of the future LOS at each study intersection and roadway segment with the addition of traffic from the South Site Alternative. With the addition of traffic generated by the South Site Alternative, all intersections and roadway segments would operate acceptably, with the exception of Cathedral Canyon Drive/Paseo Real and East Palm Canyon Drive between Cathedral Canyon Drive and Date Palm Drive. Mitigation provided under the **Mitigation Measures** heading, below, would ensure these impacts are reduced to a less-than-significant level. Therefore, the South Site Alternative would not result in a significant impact to LOS.

Transit, Bicycle, and Pedestrian Facilities

The South Site Alternative is located on the South Site, immediately adjacent to the North Site. Similar to the Proposed Project Alternative (described within the EA), the South Site Alternative would have no adverse impacts on local transit systems or bicycle and pedestrian facilities after mitigation provided in **Section 5.0**.

Land Use

The South Site Alternative would result in the transfer of the South Site, approximately 13.9 acres, from fee to trust status, as well as the subsequent development of a casino, restaurant, and retail facilities. Similar to the Proposed Project Alternative (described within the EA), the South Site Alternative would not be consistent with the DRN zoning designation of part of the South Site, but would be consistent with the MXC zoning designation and DTC land use designation; however, when multiple parcels are developed together with mixed MXC or DRN zoning, the provisions of either zone can apply to the entire development (City Municipal Code § 9.31.040). The Tribe and the federal government would have jurisdictional authority over the land once it is taken into trust.

The South Site Alternative has the potential to result in land use compatibility impacts with nearby sensitive receptors, particularly the residential receptors to the south and west of the South Site, as discussed in detail in the other topical sections of the EA. Please refer to Sections 2.2.3 and 4.8.1 of the EA; and refer to subheadings *Air Quality*, *Noise*, and *Visual Resources*, as well as the **Mitigation**

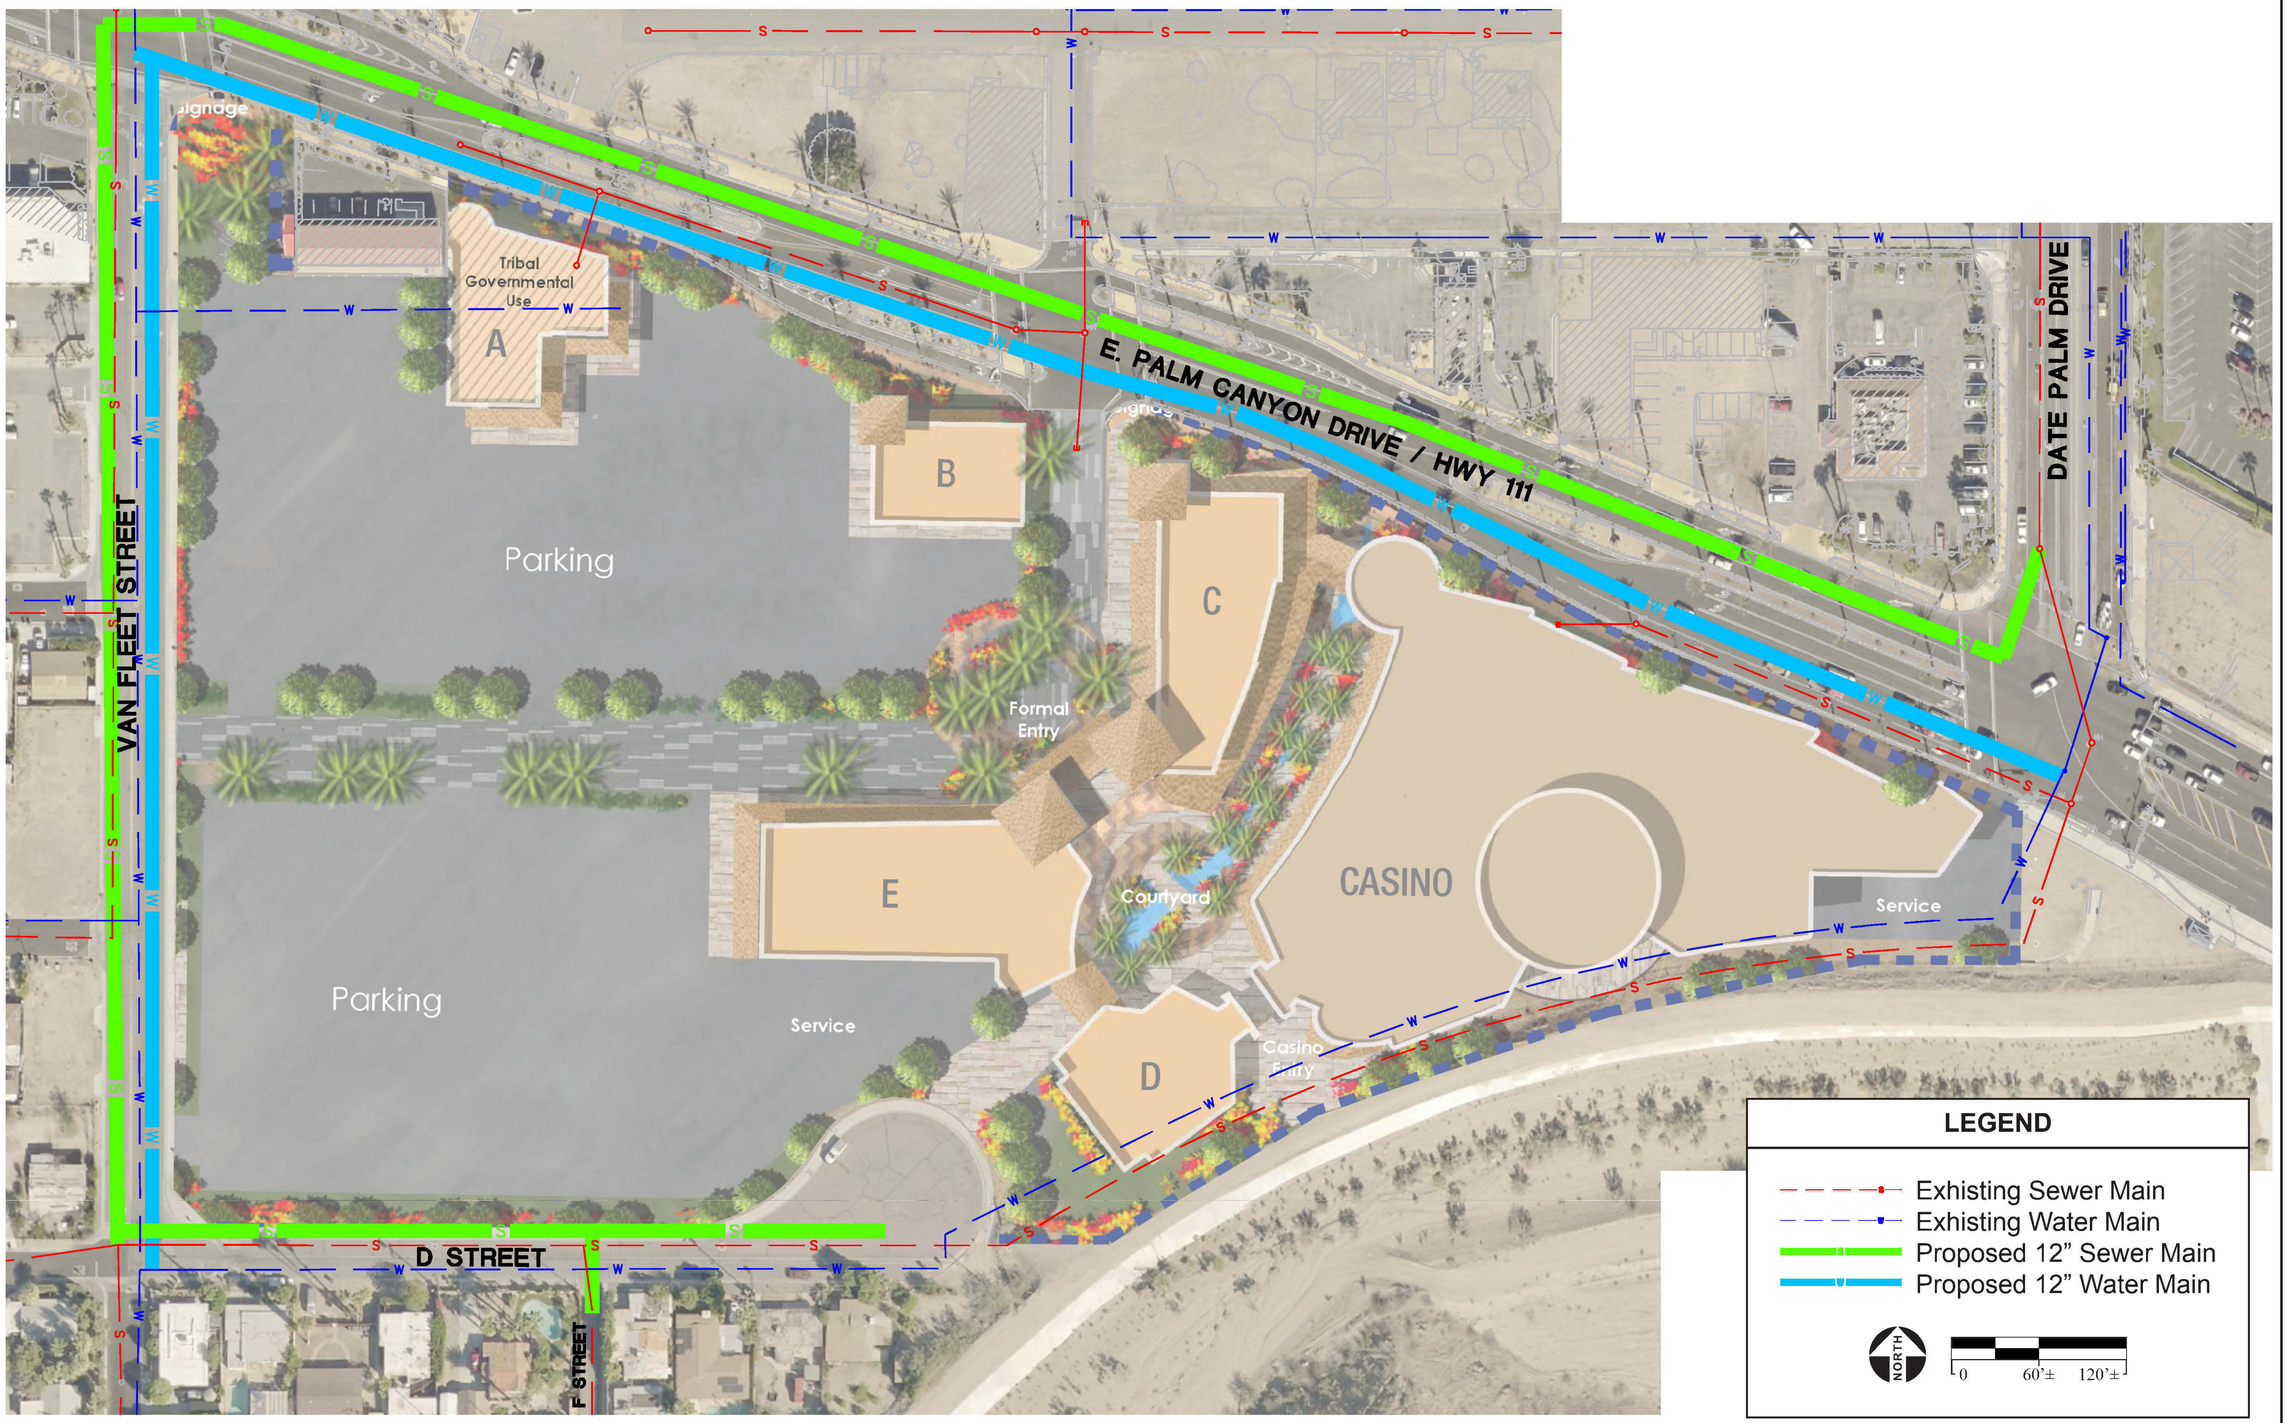
[2] Note that the tribal governmental land use was included in the square footage for Building A and analyzed at the mixed-use rate assumed for Building A. This resulted in a conservative estimate of generated trips, as office uses generate fewer trips than mixed-use buildings.

Measures heading of this appendix for related impacts, BMPs, and mitigation measures. The South Site Alternative would not physically disrupt neighboring land uses, prohibit access to neighboring parcels, or otherwise significantly conflict with neighboring land uses. Therefore, the South Site Alternative would result in less-than-significant impacts associated with land use conflicts.

Public Services and Utilities

The South Site Alternative involves the construction and operation of the same or very similar project components as the Proposed Project Alternative (described within the EA), and service providers for the South Site Alternative would be the same as those under the Proposed Project Alternative. As with the Proposed Project Alternative, the South Site Alternative would require the construction of an additional 12-inch water main and 12-inch sewer main (refer to Section 2.2.2 of the EA). These improvements would be constructed in East Palm Canyon Drive, Van Fleet Street, and D Street immediately adjacent to the South Site, as shown in **Figure 4.9-4**. Therefore, the impacts would be similar to or less than those described under Section 4.9.1 of the EA for water supply, wastewater supply, solid waste service, recreation, electricity and natural gas providers, law enforcement, and fire protection and emergency medical services. With incorporation of the BMPs provided in Section 2.2.3 of the EA and mitigation provided under the **Mitigation Measures** heading, below, public services impacts under the South Site Alternative would be less than significant.

Visual Resources



Aesthetics

Implementation of the South Site Alternative would result in development of a casino and multi-use buildings on the South Site, which would constitute a change to the existing visual setting. An architectural rendering of the South Site Alternative is provided as **Figure 4.10-3**. In general, views of undeveloped, gravel lots and abandoned utilities infrastructure would change to views of more modern commercial development. While the buildings would be highly visible to travelers on East Palm Canyon Drive, the development would not be highly visible from roadways not adjacent to the South Site.

The nearest residences to the South Site are single-family homes located approximately 40 feet south of the South Site. However, the closest proposed building is more than 250 feet from these residences, and the intervening land within the South Site will include a landscaped buffer between the existing turnaround and Building D (refer to **Figure 2-6**). The proposed development would not block views of scenic resources in the vicinity of the South Site. Therefore, the South Site Alternative would not result in significant adverse impacts associated with visual resources.

Lighting

The South Site Alternative would introduce new sources of light to the South Site, for aesthetic and security purposes at the facility and throughout the parking lots, similar to the sources of light from nearby commercial developments. This lighting associated with the South Site Alternative would constitute an increase over the existing ambient light levels on the South Site; however, lighting would be consistent with the designated commercial use of the South Site. Even so, BMPs included in Section 2.2.3 of the EA, including downcast and shielded lighting, ensure no significant adverse impacts associated with lighting would occur.

Noise

Assessment Criteria and Methodology

The assessment of project effects is based on the Federal Highway Administration (FHWA) construction noise level thresholds in its 2006 Construction Noise Handbook, City General Plan, and Federal Interagency Committee on Noise (FICON) noise guidance. The assessment of vibration noise is based on the Federal Transportation Administration (FTA) standards. Adverse noise-related effects would occur during construction and operation if the following occurs:

- Project construction results in an increase in the ambient noise environment of greater than 78 A-weighted decibels (dBA), equivalent noise level (Leq), or a 5-dBA increase in the ambient noise level above the existing noise level for daytime residential receptors, or an increase of greater than 83 dBA Leq or a 5-dBA increase for daytime commercial receptors (FHWA, 2006).
- Project operation causes ambient noise levels to exceed noise standards adopted by the City, including 55 dBA Community Noise Equivalency Level (CNEL) for residential receptors, and 62.5 dBA CNEL for public parks and commercial development (City of Cathedral City, 2009).
- If the ambient noise level exceed City standards under existing conditions, increases in the ambient noise level will be analyzed based on FICON guidance, where an increase of +5 dB is significant for ambient levels less than 60 dB, an increase of + 3 dB is significant for ambient levels between 60 and 65 dB, and an increase of + 1.5 dB is significant for ambient levels greater than 65 dB (FICON, 1992).
- Construction or operation of the project exceeds the FTA vibration standards of 90 VdB for structures and 70 VdB for annoyance of people (FTA, 2006).

Environmental Consequences

Unless otherwise noted below, the analysis and noise level estimates under the South Site Alternative are identical to the Proposed Project Alternative (described within the EA).

Construction Noise

Construction of the South Site Alternative would require a maximum of approximately 425 worker and vendor trips and 588 material hauling trips per day during construction (5,880 PCE trips per day), for a total of 6,305 vehicle trips.[3] The existing traffic volumes on Date Palm Drive and East Palm Canyon Drive are at least twice the 6,305 ADT added by the South Site Alternative construction; therefore, construction trips would increase ambient noise levels by less than 1.5 dBA (from 67.2 dBA). Therefore, construction traffic would not result in a significant noise impact.

The maximum noise level at the nearest sensitive noise receptor located approximately 40 feet from the South Site would be greater than 85 dBA, which is above the federal noise construction threshold of 78 dBA for residences. The noise level at the nearest commercial receptor located at the northern boundary of the South Site would also be greater than 85 dBA, which is above the federal noise construction threshold of 83 dBA for commercial facilities. Construction noise BMPs identified in Section 2.2.3 of the EA would reduce noise during construction activities and would limit construction to daytime hours.

[3] Although the proposed building sizes are the same, construction worker trips for the South Site Alternative are not identical the Proposed Project Alternative. Because the South Site is a different acreage and grade, the grading plan requires a different number of material haul trips. Additionally, the total development acreage on the South Site is greater from the North Site, resulting in a greater number of worker trips.

Although construction noise is anticipated to be greater than the noise thresholds, construction is short-term and temporary in nature and would not impact receptors for a significant period of time. Therefore, because of the short-term and temporary nature of construction noise, and implementation of BMPs to reduce construction noise levels to the extent feasible, there would not be a significant adverse impact due to construction noise.

Construction Vibration

The nearest vibration-sensitive commercial receptor is adjacent to the northwestern boundary of the South Site. Construction vibration from a vibratory roller at this receptor would be greater than 90 VdB, which exceeds the threshold for structural damage (90.0 VdB) and is higher than the threshold for annoyance of people (70.0 VdB). Mitigation provided under the **Mitigation Measures** heading, below, would restrict the use of vibratory equipment in the vicinity of this commercial building, which would reduce this impact to a less-than-significant level.

Operational Traffic Noise

Operation of the South Site Alternative would add the same number of traffic trips as the Proposed Project Alternative to study area roadways (refer to Appendix K of the EA).[4] Therefore, the South Site Alternative would not result in significant adverse effects after mitigation associated with traffic noise levels for sensitive noise receptors located along study area roadways.

Operational Vibration and Other Noise Sources

Anticipated parking lot noise (60.0 dBA) would be lower than the existing ambient noise level (66.0 dBA). Heating, ventilation, and air conditioning (HVAC) noise (60.0 dBA at 20 feet) would be approximately 54.0 dBA at the nearest residential receptors, and 60.0 dBA Leq at the nearest commercial building, which are below the City's noise thresholds for commercial land uses.

As discussed in Section 2.2.2 of the EA, loading docks would be located on the southwest side of Building E and on the east side of the casino building, approximately 200 feet from the nearest residence and 425 feet from the nearest commercial facility. Loading dock noise (63.0 dBA Leq at 100 feet) would be less than 51 dBA at the commercial receptor and less than 57 dBA at the residential receptor, which are below the City's noise thresholds. Noise levels from truck movements at the loading docks would be shielded from the nearby residences by the surrounding proposed buildings, further reducing the noise levels at the nearest sensitive receptors.

Commercial uses do not include sources of perceptible vibration. Therefore, because the South Site Alternative would not result in vibration and noise levels at nearby sensitive receptors that would exceed the federal noise abatement criteria, no significant adverse impacts would occur.

Hazardous Materials

No hazardous materials issues are known to be associated with the South Site. The South Site Alternative would be similar to the Proposed Project Alternative (described within the EA) with regards to construction-related hazardous materials impacts. As under the Proposed Project Alternative,

[4] The trip distribution of the South Site Alternative is greater along East Palm Canyon Drive between Date Palm Drive and the project driveway; however, this area does not contain any sensitive receptors along the roadway.

construction personnel could encounter unanticipated contamination during construction-related earth moving activities associated with the South Site Alternative. Therefore, the unanticipated discovery of contaminated soil and/or groundwater is a potentially significant effect. The BMPs presented in Section 2.2.3 of the EA would minimize or eliminate effects associated with unanticipated discovery of contaminated soil and/or groundwater during construction of the South Site Alternative.

The South Site Alternative would be similar to the Proposed Project Alternative in most aspects related to potential operational impacts from hazardous materials. Therefore, as with the Proposed Project Alternative, no significant impact associated with hazardous materials would occur during construction or operation of the South Site Alternative.

Cumulative Impacts and Indirect Effects

Cumulative Setting

Cumulative impacts are defined by the Council on Environmental Quality (CEQ) as effects "on the environment which result from the incremental effect of the action when added to other past, present, and reasonably foreseeable future actions" (40 CFR §1508.7). There are several major development projects proposed, planned, and/or currently being constructed in the region. A listing of the projects, including the acreage and status of the development, is provided in **Table 4**. As shown in **Table 4**, within approximately 10 miles of the North Site, there are approximately 158 acres of planned and ongoing development within the region. Additionally, the Tribe is currently planning several development projects, including an expansion of the Agua Caliente Resort Spa in Rancho Mirage (including 310 hotel rooms, 41,000 sf of meeting space, 120,000 sf of commercial space, 25,000 sf of restaurant, and 58,000 sf of gaming floor), a large-scale cultural center and spa complex in downtown Palm Springs (48,000 sf gallery), and an expansion of the Agua Caliente Spa Resort Casino in Palm Springs (including 68,000 sf of gaming floor, 350 hotel rooms, 60,000 sf of meeting space, 50,000 sf of mixed use/retail space, and a 40,000-sf spa/fitness center).

TABLE 4
PLANNED DEVELOPMENT PROJECTS WITHIN THE REGION

Project Name	Acres	Distance to North Site (miles)	Project Location	Project Description	Project Status as of July 2018
City of Cathedral City					
Pending Downtown Development	13.5	<1	East Palm Canyon Drive and Van Fleet Avenue	Mixed-use development to include a lifestyle retail center, hotel, and residences.	Pending
Quick Quack Car Wash	1.63	3.3	Ramon Rd. and Avenida Ximino	Full service car wash facility with outdoor vacuums.	Pending
Carlos Campos Pest Control	<1	3.4	68761 Aliso Rd.	Pest control building, parking lot, outdoor storage area for vehicles.	Approved
CCBC Resort Runway Restaurant	<1	<1	68300 Gay Resort Drive	Restaurant with outdoor patio dining area within an existing resort hotel.	Approved
Cathedral City Senior Living	4.96	2.1	67670 Carey Rd.	Senior living facility with 140 living units.	Approved
Ramon 19	19.14	4.3	69375 Ramon Rd.	Medical cannabis cultivation and production facility to be constructed	Under

Project Name	Acres	Distance to North Site (miles)	Project Location	Project Description	Project Status as of July 2018
				in two phases over the next three years.	Construction
Best Western Plus Hotel	9	6.4	I-10/Bob Hope intersection	91-room hotel joined by adjacent fast food options.	Under Construction
The District	7	2	Cree Rd. and Carey Rd.	47 single-family units with common areas including recreational amenities.	Under Construction
Ecoplex Park	2.8	1.5	67905 East Palm Canyon Drive	Construction of two warehouse-style buildings that will house a medical cannabis cultivation operation.	Under Construction
Horizon Gardens	--	--	Cathedral City	Addition of 28 units to a senior living facility.	Under Construction
Alchemy Works	6.51	1.3	67575 Canyon Plaza	Cannabis cultivation facility	Pending
City of Rancho Mirage					
Estilo Tract 34227	0.43	5.1	72-277 Victory Drive	Single family housing	Under Construction
Bella Clancy	--	4.2	Rancho Palmeras east of Follansbee Rd.	Modification to allow 15 ft. setbacks for side entry garages. Construction of 20 single family homes	Under Construction
Mirada Villas	27	1.8	North of Frank Sinatra Dr across from The Ritz	Single family housing - 46 units	Under Construction

Source: Cathedral City Economic Development Department, 2018; Appendix K of the EA; City of Rancho Mirage, 2018.

Although a development application has not been submitted, it is reasonably foreseeable that the South Site will be built out. The City has a proposed hotel, commercial, and residential development planned for the South Site (see the first row in **Table 4** above).

In addition to the buildout of the projects listed above, the cumulative impact analysis within this EA and associated technical studies conservatively assumed a 1.5 percent annual growth rate for the population of

the surrounding region until 2040 (Appendix K of the EA). Cumulative impacts for each environmental issue area are discussed below.

Environmental Consequences

Land Resources

The principal effects to land resources associated with any future development in the vicinity of the South Site would include localized, minor topographical changes and soil attrition. Other projects in the area would be required to implement measures consistent with local permitting requirements for construction to address any regional geotechnical, seismic, or mining hazards. It is anticipated that approved developments would follow appropriate permitting procedures; therefore, implementation of the South Site Alternative would not contribute to cumulatively considerable adverse impacts to land resources.

Water Resources

Effects related to water supply for the South Site Alternative are discussed in the *Water Resources* subheading, above. The projected water demand for the South Site Alternative is approximately 38 AFY, which represents only approximately 0.02 percent of the 189,700 AFY of total outflows anticipated to occur from the western portion of the Coachella Valley Groundwater Basin in 2045 (CVWD, 2011). Therefore, the demand associated with the South Site Alternative and future developments would not significantly affect surface or groundwater levels in the vicinity of the South Site. Furthermore, projects that may be constructed in the vicinity of the South Site are required to comply with the CWA as it relates to stormwater and point source discharges. Compliance with USEPA's stormwater pollution prevention requirements, adherence to the BMPs listed in Section 2.2.3 of the EA, and the fact that 100 percent of stormwater flows associated with a 100-year, 3-hour storm event would be retained on site would prevent development associated with the South Site Alternative from contributing to cumulatively considerable adverse stormwater-related effects. Therefore, implementation of the South Site Alternative would not contribute to cumulatively considerable adverse impacts to water resources.

Air Quality

Past, present, and future development projects contribute to a region's air quality conditions on a cumulative basis; therefore, by its very nature, air pollution is largely a cumulative impact. No single project is sufficient in size to, by itself, result in nonattainment of the NAAQS. If a project's individual emissions contribute toward exceedance of the NAAQS, then the project's cumulative impact on air quality would be significant. In developing attainment designations for criteria pollutants, the USEPA considers the relevant region's past, present and future emission levels. As stated in Section 3.3.2 of Appendix H of the EA, the USEPA has designated the SSAB as nonattainment (Severe 15) for O_3 and nonattainment (serious) for $PM_{2.5}$. All other NAAQS are designated as unclassified or in attainment. The main source of CAP emissions from foreseeable development is mobile sources from automobiles, the generation of which will be reduced as the fuel efficiency increases. As automobiles use less, or even run without gasoline, emissions of CAPs per mile will decrease.

Emission estimates for the South Site Alternative in the cumulative year 2040 were estimated using the CalEEMod air quality modeling program and are included in Appendix N of the EA. Increased gas mileage and improved fleet emission controls of trucks and vehicles in the future are accounted for in CalEEMod. The increase in future gas mileage is attributed to improved fuel efficiency technology and stricter federal and state regulations. Therefore, under future year conditions, emissions resulting from the South Site Alternative are expected to be less than opening year, and would continue to be below *de*

minimis thresholds. The South Site Alternative would not cumulatively adversely impact the region's air quality, and BMPs listed in Section 2.2.3 of the EA as well as mitigation measures provided under the **Mitigation Measures** heading, below, would further reduce project-related emissions.

Climate Change

Methodology

Climate change is a global issue that is not being caused by any single development project, but by global cumulative increases in atmospheric GHG concentrations. Thus, global warming is most effectively addressed on a global or regional level. California's global warming policies and legislation (most notably Executive Order [EO] S-3-05 and AB 32) are intended to be regional approaches to ensure that statewide emissions are reduced substantially in the future (to levels much lower than existing levels).

No project-specific quantitative limits have been established by Riverside County, the California Air Resources Board (CARB), USEPA, or any other state or federal agency for climate change or GHG emissions. While there is no federal guidance memo related to the consideration of climate change impacts in NEPA documents (a former 2016 CEQ guidance memorandum was withdrawn with issuance of EO 13783), this EA includes a quantification of GHG emissions resulting from the South Site Alternative (in carbon dioxide equivalents [CO_2e]) and discussion of reduction measures to address comments received during scoping.

In addition to quantification of GHG emissions and recommended reduction measures, this EA considers the impacts of the South Site Alternative in relation to the GHG reduction targets established by the state of California and compliance with the City's Climate Act Plan. Due to the inherent nature of climate change, GHG impacts are considered to be exclusively cumulative impacts. Therefore, assessment of significance is based on a determination of whether the GHG emissions from a project represent a cumulatively considerable contribution to the global atmosphere and conforms to the applicable CARB, CAT, and Cathedral City's Climate Action Plan (CCCAP) measures.

Impact Assessment

Development of South Site Alternative would result in an increase in GHG emissions related to construction, mobile sources (trips generated by the project), stationary sources (components of the South Site Alternative that directly emit GHGs from the combustion of natural gas or diesel in boilers, emergency generators, and HVAC units), and indirect sources related to electricity (combustion of fuels use to produce electricity), solid waste (solid waste decomposition at the landfill and haul trucks), wastewater processing (decomposition of waste and electric and diesel pumps), and water transport (electricity and diesel pumps).

USEPA- and CARB-approved CalEEMod.2016.3.2 was used to estimate construction, area, energy, mobile, stationary, water and wastewater, and solid waste project-related GHG emissions. Model input and output files are provided in Appendix N of the EA. The trip generation rates used to estimate GHG emissions are derived from the TIA (Appendix K of the EA). **Table 5** provides a breakdown of project-related GHG emissions for the South Site Alternative.

TABLE 5
PROJECT-RELATED UNMITIGATED ANNUAL GHG EMISSIONS

Emission Source	GHG Emissions (MT CO_2e)		
			South Site Alternative
Construction[1]			
Construction			1,318
Operation			
Area			0
Mobile (Vehicle Trips)			7,044
Stationary Sources			802
Energy Usage			2,474
Solid Waste			339
Water/Wastewater			189
Operation Subtotal			*10,848*
Total Project-Related GHG Emissions			**12,166**

Notes: 1 – Construction is based on a 12-month schedule and will only occur during the year 2019.
Source: CalEEMod, 2016.

GHG emissions resulting from the South Site Alternative are primarily indirect (either indirect mobile emissions from delivery, patron, and employee vehicles or indirect off-site electricity generation, waste pickup, water and wastewater transport, etc.). The federal government has enacted measures that would reduce GHG emissions from mobile sources, some of which have been accounted for in the air quality model used to estimate mobile emissions. BMPs have been incorporated into the project design to reduce project-related GHG emissions and are listed in Section 2.2.3 of the EA. Construction BMPs include reduced idling of heavy equipment, thereby, reducing CO_2 during the construction of the South Site Alternative. Operational BMPs would reduce indirect GHG emissions from electricity use, water and wastewater transport, and waste transport through the installation of energy efficient lighting, heating and cooling systems, low-flow appliances, drought resistant landscaping, and recycling receptacles. Operational BMPs would also reduce indirect mobile GHG emissions by requiring adequate ingress and egress to minimize vehicle idling and preferential parking for vanpools and carpools to reduce project-related trips. Therefore, with the implementation of all GHG reduction measures into the project design, the South Site Alternative would not result in a significant adverse cumulative impact associated with climate change.

As discussed in Appendix H of the EA, CARB identifies the GHG reduction targets of the state and the types of measures that will be used to reach them in California's adopted Climate Change Scoping Plan. Of the approximately 126 strategies and measures identified in the Scoping Plan that would achieve a statewide reduction in GHG emissions, only two would apply to the South Site Alternative (refer to **Table 6**). The other policies do not apply to the South Site Alternative because they either apply to state entities, such as CARB, are planning-level measures, or they apply to particular industries, such as the auto repair industry. In addition to the State's GHG reduction targets, CCCAP identifies strategies to reduce GHG emissions. As shown in **Table 6**, the South Site Alternative would comply with California's and Cathedral City's applicable emission reduction strategies.

TABLE 6
COMPLIANCE WITH STATE EMISSIONS REDUCTION STRATEGIES

Regulation or Policy	Project Compliance
EO S-3-05 / AB 32 Strategy	
Diesel Anti-Idling: In July 2004, CARB adopted a measure to limit diesel-fueled commercial motor vehicle idling.	The South Site Alternative would be located on trust lands and thus not subject to CARB restrictions on on-site diesel-fueled commercial vehicle idling. BMPs provided in Section 2.2.3 of the EA would make the project consistent with this strategy.
Achieve 50 percent statewide Recycling Goal: Achieving the State's 50 percent waste diversion mandate as established by the Integrated Waste Management Act of 1989, (AB 939, Sher, Chapter 1095, Statutes of 1989), will reduce climate change emissions associated with energy intensive material extraction and production as well as methane emission from landfills. A diversion rate of 48 percent has been achieved on a statewide basis. Therefore, a 2 percent additional reduction is needed.	Solid waste services are expected to be provided by Burrtec, which is subject to the state's recycling requirements. The development would not affect County diversion goals as waste from tribal land is classified as out-of-state waste and is not calculated in local waste diversion statistics. Although the diversion stream will not be affected, the waste stream would increase. BMPs provided in Section 2.2.3 of the EA would make the project consistent with this strategy.
Water Use Efficiency: Approximately 19 percent of all electricity, 30 percent of all natural gas, and 88 million gallons of diesel are used to convey, treat, distribute and use water and wastewater. Increasing the efficiency of water transport and reducing water use would reduce greenhouse gas emissions.	With implementation of BMPs provided in Section 2.2.3 of the EA, water use would be reduced through installation of low-flow appliances and the installation of drought-tolerant landscaping, which would make the project consistent with this strategy.
Cathedral City CAP	
Solid Waste • **Diversion:** Increase solid waste diversion to achieve an average annual goal of 65 percent through 2020. • **Food Waste Composting at Restaurants:** Restaurant composting program for food waste with a goal to reach all restaurants that serve more than 100 meals a day. • **Recyclable Take-Out Containers:** Promote/mandate take-out alternative containers with a goal to eliminate the use of polystyrene packaging.	The Cathedral City CAP identifies the solid waste diversion strategy as a residential measure; therefore, the retail and recreational land uses that would be developed as a result of the South Site Alternative would not be subject to this reduction strategy. The project would work to achieve City waste diversion goals through the implementation of the 50 percent statewide recycling goal as discussed above. In addition, all restaurants developed under the South Site Alternative serving greater than 100 meals per day would be encouraged to implement a composting program for food waste, and the Tribe will promote/mandate the use of non-polystyrene take-out containers. These measures are included as BMPs in Section 2.2.3 of the EA.
Water • **Conservation Ordinance:** • Build on and exceed current CVWD water conservation ordinance by 15% community-wide by 2020. • Build on ordinance with goal to exceed current commercial-sector water conservation ordinance by 20 percent community-wide by 2020. • **Drought Tolerant Planting:** Promote and augment City, DWA and CVWD rebates for drought tolerant planting, turf replacement and buy-back.	The Tribe will implement the BMPs provided in Section 2.2.3 of the EA, including the installation of low-flow appliances and drought-tolerant landscaping. These measures will help achieve the City's water conservation goals.
Commercial Buildings • **Peak Demand Reduction:** Collaborate with SCE and encourage 200 businesses to enroll in Energy Efficiency and Demand Response programs such as the Summer Discount Program. • **Energy-Efficient, Commercial-Sector Lighting:** With DCEP promote and leverage existing incentives for efficient lighting with special local focus on building owner education and action with goal to eliminate any remaining T-12 lamps in commercial buildings. • **"The Temperature Club":** Promote community partnership through policies to adjust indoor temperatures to save/degree.	All proposed facilities would be designed to be energy efficient, consistent with the BMPs incorporated into the project design listed in Section 2.2.3 of the EA.

Regulation or Policy	Project Compliance
• **Lighting Controls:** Promote SCE programs to encourage energy-efficient lighting linked to building controls and occupancy sensors. • **"Cool Roofs":** Promote the installation of reflective roofing on commercial properties in the community with recognition for first ten early adopters.	
Governmental Initiatives • **Commercial PACE Program:** Partner and aggressively promote commercial PACE program to provide commercial property owners —from retail to resorts—with property-secured funding for 100% of the cost of energy efficiency upgrades/renewable energy installations. • **Green Building Program**. Promote Voluntary Green Building Program to prepare for enhanced Title 24 requirements and green building standards. • **Green Building Support Services**. Advance the Voluntary Green Building Program to mandatory green building requirement with technical support services. • **New and Efficient Construction**. Promote the Savings by Design Program from SCE for new commercial buildings.	The Tribe shall install energy efficient appliances in all buildings in accordance with the BMPs provided in Section 2.2.3 of the EA. The buildings will be constructed generally consistent with Title 24 requirements and green building standards as adopted under the Tribal Building and Safety Code.
Transportation ▪ **Car-Pooling and Mass Transit:** Promote "Shared Vehicle at Work" programs with a goal to increase carpooling and mass transit by 20% with a "guaranteed-ride home". ▪ **Charging Stations:** Foster public/private partnerships to promote 10 additional public access EV charging stations for existing EV and NEV fleets. ▪ **Van Pools:** Partner and recognize all CC major employers with over 50 employees for van pools. ▪ **Car Sharing:** Promote ZIP and/or other Car Share programs through preferential parking and promotion with signage with a goal to serve 5% of existing drivers who each reduce their driving by 25%. ▪ **Plug-In Electric Vehicle Charging Stations:** Seek grant funding to install 10 EV charging stations on public and private property and promote Plug-In Electric Vehicles for public use. ▪ **Visitor Shuttles:** Collaborate with local hotels and resorts to support and establish effective point-to-point transportation for visitors, e.g. shuttles to airports, hotels, and business districts.	All workplaces shall promote employee rideshare programs and the use of nearby mass transit. Preferential parking for ZIP cars and other rideshare vehicles shall be implemented in accordance with the BMPs outlined in Section 2.2.3 of the EA to further promote workplace and consumer ridesharing. The Tribe shall consider and to the extent feasible will incorporate preferential parking for Plug-In Electric Vehicles, along with the installation of corresponding EV charging stations into the project design. In addition, the Tribe shall provide shuttle service to and from population centers as feasible.
Note: EO = Executive Order; AB= Assembly Bill. Source: CARB, 2017; City of Cathedral City, 2013.	

The effect of climate change on the South Site Alternative is also considered in this EA. Average temperature in County could increase, resulting in projected extreme heat days and a greater chance of extreme weather conditions. The intensity of these effects is uncertain and will depend on future GHG emissions worldwide (CEC, 2012).

No characteristics of the South Site Alternative are unique or especially vulnerable to the impacts from climate change. The effects of increasing temperatures and frequency of extreme heat days or extreme weather conditions will be dampened by the use of on-site HVAC. The South Site is located at approximately 300 feet above mean sea level and thus is not susceptible to impacts from sea level rise. The South Site is located in a primarily urban area, which is adequately served by emergency services and, therefore, is not uniquely sensitive to increased extreme weather conditions as a result of climate change.

Biological Resources

The South Site does not contain unique or sensitive ecosystems or biological communities. No federally-listed special-status species have the potential to occur on the South Site. One state-listed special-status species has the potential to occur on or in the vicinity of the site: the western yellow bat, a state-listed species of special concern. Mitigation measures discussed under the **Mitigation Measures** heading, below, require preconstruction surveys prior to construction activities for the western yellow bat as well as for migratory nesting birds, should construction activities occur during the migratory bird breeding season. The South Site does not contain potentially jurisdictional wetlands or Waters of the U.S. Therefore, implementation of South Site Alternative would not contribute to cumulatively considerable adverse impacts to biological resources.

Cultural Resources

BMPs have been included in Section 2.2.3 of the EA to address unknown cultural resources found during project construction, and similar measures would be required for any development in the vicinity of the South Site. With implementation of these BMPs measures, no cumulatively considerable adverse impacts to cultural resources would occur as a result of construction of the South Site Alternative.

Socioeconomic Conditions

Cumulative socioeconomic effects could occur in the project area as the result of developments that affect the lifestyle and economic well-being of residents. When considered with other growth in the City, particularly the Tribe's planned expansions of its other two casino resorts in Palm Springs and Rancho Mirage, there may be cumulative socioeconomic effects including impacts to economy, employment, housing availability, problem gambling, and crime. The South Site Alternative, in addition to the Tribe's other proposed projects in the region, would result in beneficial impacts to economic output, tax revenues, and employment, as well as various beneficial impacts to the Tribe. Further, planning documents for the region will continue to designate land uses for businesses, industry, and housing, as well as plan public services to anticipate and accommodate growth in the region. Therefore, no significant cumulative socioeconomic effects would occur.

Transportation/Circulation

2040 Baseline Traffic Volumes

Cumulative baseline traffic volumes include the forecasted traffic from the Cathedral City General Plan traffic model, which utilizes a refined version of the Coachella Valley Area Transportation Study forecasting model (Appendix K of the EA). To calculate 2040 volumes from the 2035 traffic model predictions, a 1.5 percent per year increase in traffic volume was assumed. Tables 5-13 and 5-17 of Appendix K of the EA shows traffic volumes at study intersections and roadway segments for cumulative baseline conditions (2040) without implementation of South Site Alternative. The following study intersections and roadway segments are expected to operate at unacceptable levels of service in the cumulative year:

- Date Palm Drive/Buddy Rogers Avenue;
- Cathedral Canyon Drive/Paseo Real;
- East Palm Canyon Drive between Golf Club Drive and Perez Road;
- East Palm Canyon Drive between Perez Road and Cathedral Canyon Drive;
- East Palm Canyon Drive between Date Palm Drive and Frank Sinatra Drive; and
- East Palm Canyon Drive between Frank Sinatra Drive and Country Club Drive.

2040 Cumulative Year Plus the South Site Alternative

Tables 5-16 and 5-20 of Appendix K of the EA provide a summary of the LOS at each study intersection and roadway segment, respectively, under cumulative baseline (2040) conditions with implementation of the South Site Alternative. These tables show that two study intersections and four roadway segments are projected to operate unacceptably in cumulative year 2040 (refer to Section 4.7 of the EA for acceptable operation criteria). With the installation of traffic signals and reconfiguration of turning lanes at Cathedral Canyon Drive/Paseo Real (refer to the **Mitigation Measures** heading, below), the South Site Alternative would have a less-than-significant impact on study area intersections, as shown in Table 5-24 of Appendix K of the EA. However, because the segments of East Palm Canyon Drive between Golf Club Drive and Canyon Plaza Drive would not increase the v/c ratio by 0.05 or greater, it is not considered a significant impact. Further, the segments between Date Palm Drive and Country Club Drive are projected to already exceed a v/c ratio of 1.0 under baseline cumulative conditions without project related traffic. Contributions to traffic funds for roadway improvements, as described in the **Mitigation Measures** heading, below, will reduce roadway segment impacts to less-than-significant levels.

Land Use

If taken into federal trust, the South Site would not be subject to state or local land use jurisdiction. However, development on the South Site would not disrupt neighboring land uses or prohibit access to neighboring parcels. Further, the South Site Alternative is generally consistent with land use designations within the City's General Plan. As such, the project would not result in changes to local land use patterns. Future cumulative developments would be subject to City and County land use and zoning restrictions and would be required to comply with General Plan policies. Therefore, no cumulatively considerable adverse land use impacts would occur.

Public Services

Water Supply

The projected water demands for the South Site Alternative is approximately 38 AFY, which represents only approximately 0.02 percent of the 189,700 AFY of total outflows anticipated to occur from the western portion of the Coachella Valley Groundwater Basin in 2045 (CVWD, 2011). As described in detail in Appendix F of the EA, the water supply infrastructure in the vicinity of the South Site was constructed under the assumption that future development on the site would demand significantly more water than is projected under the South Site Alternative. Additionally, other permitted developments in the region would be required to pay service fees to the Desert Water Agency (DWA) and fund any infrastructure improvements or modifications required by those developments. Therefore, the construction and operation of the South Site Alternative in conjunction with other reasonably foreseeable regional development would not result in a cumulatively significant adverse impact to water supply providers.

Wastewater Service

As described in Section 4.9.1 of the EA, under the South Site Alternative wastewater generated at the South Site would be conveyed by DWA sewage lines to the Coachella Valley Water District's (CVWD's) Water Reclamation Plant 10 (WRP-10) treatment facility, which currently has a significant surplus capacity of approximately 17.1 million gallons per day (MGD; compared to the total capacity of 18.0 MGD) to treat wastewater flows from both the South Site Alternative and other future developments in the region. As with the water supply infrastructure, the wastewater conveyance infrastructure in the vicinity of the South Site was sized to accommodate significantly higher wastewater flows than is

anticipated to occur under the South Site Alternative (Appendix F of the EA). Furthermore, future development projects would be required to pay service fees to DWA and/or CVWD and fund any improvements or modifications to existing wastewater conveyance and treatment infrastructure necessary to serve these projects. Therefore, development of the South Site Alternative in conjunction with other reasonably foreseeable projects in the region would not result in a significant cumulative impact to wastewater service providers.

Solid Waste Service

Due to the likely excess capacity at Salton City Landfill (refer to Section 4.9.1 of the EA), the development of the South Site Alternative in conjunction with the other planned development projects listed in the *Cumulative Setting* subheading, above, would not result in a cumulatively considerable adverse effect to solid waste service.

Schools

Implementation of the South Site Alternative would not substantially increase enrollment or otherwise adversely affect public or private schools. Therefore, development of the South Site Alternative in conjunction with the other planned development projects listed above would not result in a cumulatively adverse effect to school facilities.

Recreation

As described in Section 4.9.1 of the EA, development and operation of the South Site Alternative would not adversely affect any recreational activities. Therefore, no cumulatively considerable adverse effects would occur.

Electricity and Propane

As described in Section 3.9.6 of Appendix H of the EA and Section 4.9.1 of the EA, there is considerable existing electricity and natural gas infrastructure on and in the vicinity of the South Site, and the South Site Alternative would not result in significant adverse impacts to electricity or natural gas service providers. The individual planned projects listed above would be responsible for paying development, connection, or user fees to the utility if necessary, to receive services, and the utilities would be compensated for any capital improvements through user rates. Therefore, implementation of the South Site Alternative would not result in cumulatively considerable adverse effects to electricity or natural gas providers.

Law Enforcement

Increased demand for law enforcement services resulting from cumulative developments may require additional facilities, equipment, or employees. New development, including the cumulative projects listed above, would fund in part City services, including law enforcement, through development fees and property tax. In addition, as described in Section 1.3.2 of the EA Section 11.7 of the Compact requires that if it is determined that law enforcement, fire protection, emergency medical services (EMS), and any other public services will be burdened as a result of the Proposed Project despite the mitigation measures identified in this EA and the voluntary payment of the development impact fees identified in Chapter 3.17 of the City's Municipal Code, prior to commencement of the South Site Alternative, and no later than the issuance of the Final TEIR to the County, the Tribe shall offer to commence negotiations with the City and if necessary, the County. These negotiations would allow for all parties to enter into enforceable

intergovernmental agreements with respect to the matters set forth in Section 11.7(a) of the Compact to ensure that the mitigation contemplated herein is sufficient.

Fire Protection and Emergency Medical Services

New development, including the cumulative projects listed above, would be required to fund City services, including fire protection and emergency medical services, through development fees and property taxes. Although it is not expected that the South Site Alternative would require additional fire protection services or emergency medical services from the Cathedral City Fire Department (CCFD) that would trigger the need to construct new facilities, as described in Section 1.3.2 of the EA Section 11.7 of the Compact requires that if it is determined that law enforcement, fire protection, emergency medical services (EMS), and any other public services will be burdened as a result of the Proposed Project despite the mitigation measures identified in this EA and the voluntary payment of the development impact fees identified in Chapter 3.17 of the City's Municipal Code, prior to commencement of the South Site Alternative, and no later than the issuance of the final EA to the County, the Tribe shall offer to commence negotiations with the City and if necessary, the County. These negotiations would allow for all parties to enter into enforceable intergovernmental agreements with respect to the matters set forth in Section 11.7(a) of the Compact to ensure that the mitigation contemplated herein is sufficient.

Visual Resources

New development, including cumulative projects listed in the *Cumulative Setting* subheading, above, would be consistent with local land use regulations, including associated design guidelines. Cumulative effects would include a shift from open, undeveloped lots to views of developed areas, as well as an increase in the density of urban uses within the City and County. However, the South Site Alternative would be visually compatible with urban land uses in the project vicinity and would be generally consistent with local policies related to design, landscaping, and signage. Additionally, with the implementation of BMPs outlined in Section 2.2.3 of the EA, the South Site Alternative would not contribute towards adverse cumulative impacts to visual resources.

Noise

Approved projects in the vicinity of the South Site would be required to comply with any applicable noise regulations during construction and operation. In the cumulative year 2040, the South Site Alternative traffic volumes would not increase over the projected maximum of 4,782 vehicles per day in the opening year (Section 4.11.1 of the EA); however, there would be an increase in background traffic volume on local roadways, as captured in the estimated 1.5 percent annual growth rate (Appendix K of the EA). The South Site Alternative's contribution to traffic volumes under cumulative conditions would not double the current traffic on local roadways and thus would not result in an audible increase in ambient noise levels at nearby sensitive receptors (refer to Section 4.11.1 of the EA). Therefore, the South Site Alternative's contribution to cumulative noise impacts would be less than significant.

Hazardous Materials

Any future cumulative development projects in the vicinity of the South Site would be required to comply with applicable federal and state regulations concerning hazardous materials management. With the implementation of BMPs outlined in Section 2.2.3 of the EA, no cumulatively considerable adverse impacts related to hazardous materials would occur as a result of the South Site Alternative.

Indirect Effects

According to CEQ regulations, indirect effects are removed in time or in distance from a project, but are caused by the project and are reasonably foreseeable. These include growth-inducing effects, as well as changes in land use, population density, and related effects on natural systems (40 CFR §1508.8).

Construction of Off-Site Traffic Mitigation Improvements

Implementation of the South Site Alternative would require roadway improvements at the following intersections: Buddy Rogers Avenue/Date Palm Drive and Cathedral Canyon Drive/Paseo Real. These intersections consist of previously disturbed areas with only landscaped vegetation present. Further, the restriping of the intersections does not require widening of the roadway, and installation of traffic signals will result in minimal ground disturbance. No historic properties or known archaeological sites or cultural materials are located within the intersection improvement areas (refer to Appendix J of the EA). As no road widening is required, intersection improvements will result in no net loss of habitat, and will not result in adverse impacts to biological resources. Construction of the off-site mitigation improvements would require lane or shoulder closures; however, the closures would be temporary and would not cause a significant traffic impact. Adherence to federal and state environmental regulations during construction of intersection improvements would avoid any potentially significant indirect effects from off-site intersection improvements.

Construction of Off-Site Infrastructure Improvements

Implementation of the South Site Alternative would require additional water and sewer lines, as shown on **Figure 4.9-4**. This includes the placement of a 12-inch sewer main and 12-inch water main along Van Fleet Street and East Palm Canyon Drive, with an additional segment of 12-inch sewer main along D Street. No portions of the proposed pipelines would be placed outside of previously disturbed roadways. No historic properties or known archaeological sites or cultural materials are located within the proposed pipeline route (refer to Appendix J of the EA). The proposed pipelines pass through ruderal/disturbed habitat. Once construction is complete, the pipeline corridor will be repaved. Utility improvements will result in no net loss of habitat, and will not result in adverse impacts to biological resources. Construction of the off-site infrastructure improvements would require lane or shoulder closures; however, the closures would be temporary and would not cause a significant traffic impact. Adherence to federal and state environmental regulations during utility construction would avoid any potentially significant indirect effects from off-site utility construction.

Growth-Inducing Effects

Although the project is considered an anchor for downtown development within the City, construction and operation of the South Site Alternative would not in itself induce growth. The number of new employees requiring new facilities (including housing and schools) would not be significant (refer to the *Socioeconomic Resources/Environmental Justice* subheading, above); as such, no new housing, schools, or other facilities would be constructed as a result of development on the South Site. The project's contribution to the planned development of the City's planned Downtown/Art and Design Village has the potential to induce economic growth within the City. This output would be generated from direct, indirect, and induced economic activity. Indirect and induced output could stimulate further commercial growth; however, such demand would be diffused and distributed among a variety of different sectors and businesses in the City. Furthermore, if the project were not approved, similar levels of economic growth in the Downtown/Art and Design Village would still be likely occur on the South Site in the future. The construction of the South Site Alternative would only induce economic growth sooner than if the project

were not approved. As such, significant regional commercial growth inducing impacts would not be anticipated to occur under the South Site Alternative. The development of the City's downtown area is subject to the City General Plan policies as well as environmental review requirements pursuant to California Environmental Quality Act (CEQA). Therefore, no significant adverse growth-inducing effects relevant to any environmental issue area would occur.

MITIGATION MEASURES

Mitigation measures to be implemented during construction and operation of the South Site Alternative are summarized in **Table 7** below. All mitigation is enforceable because it is 1) inherent to the project design; and/or 2) required through provisions of the Tribal-State Compact, or federal or state statute, where applicable.

TABLE 7

PROPOSED MITIGATION MEASURES FOR THE SOUTH SITE ALTERNATIVE

Resource Area	Proposed Mitigation
Air Quality Construction	The following dust suppression measures are recommended to be implemented to control the production of fugitive dust (PM_{10}) and prevent wind erosion of bare and stockpiled soils: A. Spray exposed soil with water or other suppressant twice a day or as needed to suppress dust. B. Use non-toxic chemical or organic dust suppressants on unpaved roads and traffic areas. C. Minimize dust emissions during transport of fill material or soil by wetting down loads, ensuring adequate freeboard (space from the top of the material to the top of the truck bed) on trucks, cleaning the interior of cargo compartments on emptied haul trucks before leaving a site, and/or covering loads. D. Promptly clean up spills of transported material on public roads. E. Restrict traffic speeds on site to 15 miles per hour to reduce soil disturbance. F. Provide wheel washers to remove soil that would otherwise be carried off site by vehicles to decrease deposition of soil on area roadways. G. Cover dirt, gravel, and debris piles as needed to reduce dust and wind-blown debris. The following measures are recommended to be implemented to reduce emissions of criteria pollutants, greenhouse gases (GHGs), and diesel particulate matter (DPM) from construction. H. The Tribe shall control criteria pollutants and GHG emissions from the facility by requiring all diesel-powered equipment be properly maintained and minimize idling time to five minutes when construction equipment is not in use, unless per engine manufacturer's specifications or for safety reasons more time is required. Since these emissions would be generated primarily by construction equipment, machinery engines shall be kept in good mechanical condition to minimize exhaust emissions. The Tribe shall employ periodic and unscheduled inspections to accomplish the above mitigation. I. Require all construction equipment with a horsepower rating of greater than 50 be equipped with diesel particulate filters, which would reduce approximately 85 percent of DPM. J. Require all construction equipment with a horsepower rating of greater than 50 be equipped with California Air Resources Board (CARB) rated Tier 3 engines, with the exception of scrapers. K. Require the use of low reactive organic gases (ROG; 150 grams per liter or less) for architectural coatings to the extent practicable. L. Environmentally preferable materials, including recycled materials, shall be used to the extent readily available and economically practicable for construction of facilities.
	A.
Biological Resources	The following measures are recommended for the South Site Alternative to avoid and/or reduce impacts to the western yellow bat: A. A qualified biologist shall conduct a habitat assessment of palms within the North Site no more than three days prior to the start of construction occurring within 100 feet of palms. If the habitat assessment reveals suitable palm skirts large enough to accommodate roosting bats, the qualified biologist shall conduct a sunset fly-out survey on palms with skirts. Should bats be detected, identified palms shall be flagged and buffered by 100 feet.

Resource Area	Proposed Mitigation
	B. Should the avoidance of identified bat-roosting palms not be feasible, replacement of suitable bat roosting habitat shall occur at a 1:1 ratio elsewhere on the North Site outside clearing limits. Replacement habitat may consist of bat boxes or similar structures. A qualified biologist shall determine bat box placement and a 100-foot avoidance buffer will be placed around each box. C. Palms identified to contain roosting bats that are proposed for removal shall be removed as late in the day as possible to reduce the likelihood of potential bat mortality. On the first day, limbs may be removed as late in the day as possible. This amount of disturbance should cause roosting bats to seek other roosting habitat. The rest of the palm can then be harvested on the afternoon of the second day. A qualified biologist shall be present for the removal of these palms in the event that bats are found to have been roosting. The following measures are recommended for the South Site Alternative to avoid and/or reduce impacts to potentially nesting migratory birds and other birds of prey: D. If construction activities (e.g., building, grading, ground disturbance, removal of vegetation) are scheduled to occur during the nesting season (February 15-September 15), a preconstruction nesting bird survey shall be conducted by a qualified biologist throughout the areas of suitable habitat within 500 feet of proposed construction activity. The surveys shall occur no more than 14 days prior to the scheduled onset of construction. If construction is delayed or halted for more than 14 days, another preconstruction survey for nesting bird species shall be conducted. If no nesting birds are detected during the preconstruction survey, no additional surveys or mitigation measures are required. E. If nesting bird species are observed within 500 feet of construction areas during the surveys, appropriate "no construction" buffers shall be established. The size and scale of nesting bird buffers shall be determined by a qualified biologist and shall be dependent upon the species observed and the location of the nest. Buffers shall be established around active nest locations. The nesting bird buffers shall be completely avoided during construction activities. The qualified biologist shall also determine an appropriate monitoring plan and decide whether construction monitoring is necessary during construction activities. Monitoring requirements are dependent upon the species observed, the location of the nests, and the number of nests observed. The buffers may be removed when the qualified biologist confirms that the nest(s) is no longer occupied and all birds have fledged. F. If impacts (i.e., take) to migratory nesting bird species are unavoidable, consultation with USFWS shall be initiated. Through consultation, an appropriate and acceptable course of action shall be established.
Transportation/ Circulation	Prior to the initiation of project construction, the Tribe shall complete the traffic mitigation measures identified below or make an in lieu fair share contribution equivalent to the cost of the mitigation measures identified below to fund completion of the mitigation measures. Notwithstanding the foregoing, the Tribe may complete one of the mitigation measures identified below and contribute its fair share contribution to fund the other mitigation measure, complete both of the mitigation measures, or contribute its fair share contribution to fund completion of both the mitigation measures. The following mitigation measures are proposed for study intersections under the South Site Alternative: A. **Buddy Rogers Avenue/Date Palm Drive**: On the eastbound approach, restripe to include one left turn lane and one right turn lane. On the northbound approach, restripe to include one left turn lane and three through lanes. On the southbound approach, restripe to include two through lanes and one shared through-right lane. Install a traffic signal. The percentage of any mitigation cost to the Tribe for the South Site Alternative is 39 percent (Cumulative Year 2040 only). B. **Cathedral Canyon Drive/Paseo Real**: On the eastbound and westbound approaches, restripe to include one shared left-through-right lane. On the northbound and southbound approaches, restripe to include one left turn lane, one through lane, and one shared through-right turn lane. Install a traffic signal. The percentage for any mitigation cost to the Tribe for the South Site Alternative is 16 percent. C. The Tribe shall contribute an equivalent mitigation payment for the Transportation Uniform Mitigation Fee (TUMF), Transit Development Fee, and City Facilities Impact Fees, current at the time of construction.
Public Services and Utilities	The following measures are recommended for the South Site Alternative: A. In accordance with Section 11.7 of the Compact, prior to commencement of the South Site Alternative, and no later than the issuance of the Final TEIR to the County, the Tribe shall offer to commence negotiations with the City and if necessary, the County, related to the provision of public services to meet the increase in demands resulting from the development alternatives. These negotiations would occur if it is determined that law enforcement, fire protection, emergency medical services, and any other public services will be burdened as a result of the project despite voluntary payment of the development impact fees identified in Chapter 3.17 of the City's Municipal Code as well as other identified mitigation measures. These negotiations would allow for all

Resource Area	Proposed Mitigation
	parties to enter into enforceable intergovernmental agreements with respect to the matters set forth in Section 11.7(a) of the Compact to address the estimated $90,195 net impact anticipated under the South Site Alternative. B.
Noise	The following measures are recommended for the South Site Alternative: A. The use of vibrational construction equipment shall be restricted such that vibration levels will not exceed 90 VdB at commercial building adjacent to the North and South Sites. Should any vibrational construction equipment be required for construction of the parking lot that results in vibration decibel levels that would exceed 90 VdB at the adjacent commercial building, a buffer or set back may be utilized. The Tribe may elect to establish a landscaped area within this buffer in place of parking facilities. B. Prior to construction, it shall be determined if the commercial building adjacent to the western boundary of the North Site is vacant. If it is occupied, or should it become occupied during construction, a temporary sound barrier shall be erected during construction on the western boundary of the North Site to reduce noise levels at adjacent commercial receptors by at least 2 dBA. C.
	D.

A.2 OTHER OFF-SITE ALTERNATIVES

Other off-site alternatives were considered that would involve a gaming development on (1) trust land already owned by the Tribe, (2) fee land already owned by the Tribe, or (3) land purchased for use.

TRIBALLY OWNED LAND

Exhibit E of the Tribe's Fee-to-Trust Application for the Section 33 Parcel provides a detailed description of tribally-owned parcels and the possibility for development upon these parcels. This description is herein incorporated by reference. Aside from the Section 33 Parcel (North Site), other tribally-owned lands are unsuitable for development for various reasons, including inaccessible terrain, sizing, proximity to neighborhoods, or other development restrictions.

As described in Section 1.2.2 of the EA, although the Tribe's Reservation encompasses over 30,000 acres, the total amount of tribally-owned land that is available for development of any kind is extremely small. The total amount of tribally-owned land that is available for gaming development is even smaller. The Tribe's total inventory of land that could be developed for any non-residential commercial purpose is approximately 480 acres. Of these 480 acres, approximately 214 acres is not eligible for a gaming project because it is land acquired in trust after 1988 that does not currently meet any of the exceptions provided in the IGRA; approximately 243 acres are either already developed or is subject to a development plan that does not contemplate a gaming use; approximately 10 acres house the existing Tribal cemetery including planned future expansion; and approximately 13.6 acres is the North Site, analyzed as the Proposed Project Alternative within the EA.

In addition to the land restrictions described above, the majority of tribal trust and fee land located on (and off) the Reservation is not suitable for development of this kind for one or more of the following reasons: (1) it has already been developed, (2) it is subject to land planning agreements between the Tribe and other jurisdictions or habitat conservation limitations which do not support such a land use, (3) it is not suitable for development because of its size or its location in inaccessible and/or rugged mountain terrain, (4) it lacks infrastructure necessary for development, or (5) some combination of these issues. The majority (approximately 8,640 acres) of tribally-owned trust and fee lands are located within the

Santa Rosa and San Jacinto National Monument and are undevelopable. In total, development restrictions apply to approximately 14,718 acres of tribal trust and tribal fee land, located both on- and off-Reservation, making those lands unsuitable for the proposed gaming development.

LAND NOT OWNED BY THE TRIBE

The cost of re-acquiring new parcels that are located in Palm Springs, Cathedral City, and Rancho Mirage is extremely high, compared to other parts of the country. Due to high acquisition costs and the location of several desirable resort communities within the Reservation boundaries, it is extremely difficult for the Tribe to re-acquire lands on the Reservation. The median price per acre in Palm Springs has climbed from a recession low in 2009 of $1,011,236 per acre to almost pre-recession levels. The median price per acre in 2017 year-to-date is now at $2,387,097. The pre-recession median price per acre in 2007 was $2,477,632. Generally speaking, these prices far outpace real estate prices on and near Indian reservations in other parts of the country. Despite the potential infeasibility of acquiring new parcels in the area, an evaluation of the South Site, which is not owned by the Tribe, was conducted and is summarized above.

A.3 CONCLUSION

Off-site alternatives are not feasible for a variety of reasons, including restrictions on existing tribally-owned lands, high acquisition costs of new parcels in the vicinity, and suitability for development on existing tribally-owned lands. Further, any off-site alternatives outside of the area identified by the City would not fulfill the joint vision of the City, Tribe, and CURC to redevelop and eliminate conditions of blight in downtown. As noted in Section 1.4 of the EA, the CURC and City have emphasized the importance of the proposed facility including a gaming component as an anchor to enable further growth of a walkable Downtown/Art and Design Village.

Moreover, as described in detail in the EA, the Tribe's preferred trust site (the North Site), is an infill site that has previously been developed and lacks sensitive resources. All environmental effects of the Proposed Project Alternative can be reduced to less than significant levels with mitigation. Thus, the consideration of an alternative site would be unlikely to substantially reduce or lessen the environmental effects of the project, and thus would not aid the BIA in its consideration of a reasonable range of alternatives under NEPA.

As shown in **Section A.1**, the South Site Alternative was subjected to a greater detail of analysis than the additional off-site alternatives described in **Section A.2**. However, the results of this analysis indicate that the South Site Alternative would not eliminate any of the significant effects of the Proposed Project Alternative, and the South Site Alternative would not as effectively meet the purpose and need of the project (as described within the EA) because the Tribe does not own the parcels encompassing the South Site. Therefore, this alternative was eliminated from consideration.

APPENDIX B

SCOPING MEMORANDUM

AGUA CALIENTE BAND OF CAHUILLA INDIANS
CATHEDRAL CITY FEE-TO-TRUST CASINO PROJECT
NEPA SCOPING PROCESS SUMMARY REPORT

September 2018

1.0 INTRODUCTION

The Bureau of Indian Affairs (BIA) has initiated preparation of an Environmental Assessment (EA) in accordance with the requirements of the National Environmental Policy Act (NEPA) for the Agua Caliente Band of Cahuilla Indians (Tribe) proposed Cathedral City Casino Fee-to-Trust Casino Project in Cathedral City, California. The requested federal action consists of the transfer of 66 Riverside County Assessor's Parcel Numbers (APN) and adjacent right-of-way (ROW) totaling approximately 13.6 acres (North Site) from fee to trust status for purposes of gaming (Proposed Action). Refer to **Table 1** for a summary of the APN and ROW acreages for the North Site. The Tribe proposes to subsequently develop the North Site with a casino and associated facilities (Proposed Project).

TABLE 1
NORTH SITE PARCEL INFORMATION

Notes: APN = Assessor Parcel Number; ROW = right-of-way
1 – Total may not add due to rounding

Public involvement in an EA is conducted at the discretion of the Lead Agency. For the Proposed Project, the BIA elected to conduct a 30-day scoping comment period and to hold a scoping meeting to solicit input from the public and agencies regarding the scope of the EA. The scoping process was also conducted to meet the requirements of the 2016 Gaming Compact between the Tribe and the State of California (Compact). This memorandum describes the EA scoping process, summarizes the issues raised during scoping, explains the range of alternatives to be addressed in the EA, and discusses the topics eliminated from detailed consideration. As further described in **Section 3.0**, no areas of controversy or concern were identified.

2.0 SCOPING PROCESS

Pursuant to the Compact, a Notice of Preparation (NOP) describing the Proposed Project and announcing a 30-day scoping period was prepared and circulated for public and agency review on December 29, 2017. The NOP, included as **Attachment A**, also announced the date and location of a public scoping meeting, described further in **Section 2.0**. The NOP was published in the *Desert Sun*, posted online at www.cathedralcitycasino.com, filed with the State Clearinghouse for distribution to state agencies, and was sent to various federal and local agencies through direct mailings (**Attachment B**). All comments received during the scoping process are included as **Attachment C**, and a transcript of the public scoping meeting is provided as **Attachment D**.

3.0 SCOPING MEETING

A public scoping meeting was conducted at 6:00 pm on January 18, 2018, at the Doubletree by Hilton, located at 67967 Vista Chino, Cathedral City, to provide information on the Proposed Action, Proposed Project, and to solicit public input on the EA scope and alternatives. A court reporter/stenographer was available at the public scoping meeting to record oral comments, and the transcript is included in **Attachment D**. Approximately 10 people attended the public meeting; of these, one provided oral comments. Sign-in sheets for the public meeting are also included in **Attachment D**. Comment forms were available for attendees to provide input during the scoping meeting or to take home and mail later; none were returned.

4.0 ISSUES IDENTIFIED DURING SCOPING

Comments received during the scoping period are shown in **Table 2**, and the issues that were raised during the scoping period have been summarized below. No areas of controversy were identified.

TABLE 2
SCOPING COMMENTS RECIEVED

Number	First Name	Last Name	Organization	Date

COMMENTS

A-1: Gayle Totton, MA, PhD, Native American Heritage Commission

- Follow tribal consultation requirements pursuant to Section 106 of the National Historic Preservation Act (NHPA).
- Consult with Native American tribes.
- Follow Native American Heritage Commission (NAHC) procedures for identifying cultural resources, including contacting the appropriate regional California Historical Research Information System (CHRIS) Center for a records search, and contacting the NAHC for a Sacred Lands File search and a Native American Tribal Consultation List.
- Note that a lack of surface evidence of archaeological resources does not preclude their subsurface existence.
- The environmental document should include a separate section for tribal cultural resources and conduct AB 52 consultation under the California Environmental Quality Act (CEQA).

A-2: Johnson P. Abraham, California Department of Toxic Substances Control

- Identify and determine whether current or historic uses of the site have resulted in any release of hazardous materials.
- Conduct a Phase I Environmental Site Assessment to identify recognized environmental conditions (RECs).
- Investigate, sample, and remedy RECs, if any, prior to new development or construction.
- If a part of the Proposed Project, demolition of structures containing lead-based paints, mercury, and asbestos-containing materials (ACMs) should be addressed.
- Residual pesticides may be present in the soil, if the site was previously used for agriculture. Investigation and mitigation is recommended.
- Evaluation, investigation, and mitigation is recommended for any current or historic PCB-containing transformers.

- Aerially-deposited lead (ADL) may be present in unpaved or formerly unpaved areas adjoining older roads, which may be relevant due to the proximity to Highway 111.
- Contamination of imported and/or exported soil should be addressed and properly disposed of. Evaluation and sampling of imported material should be conducted to test for contamination. If construction or demolition is suspected to cause soil contamination, construction should cease. Investigation and remediation should be conducted.
- If construction or demolition is suspected to cause groundwater contamination, construction should cease. Investigation and remediation should be conducted.
- A NPDES Permit may be required for wastewater discharge into a storm drain.

A-3: Lijin Sun, JD, South Coast Air Quality Management District (SCAQMD)

- Use the CalEEMod land use emissions software to predict air quality emissions.
- Use SCAQMD's air quality significance thresholds to determine air quality impacts, or perform dispersion modeling to determine thresholds.
- Analyze air quality impacts from all phases of the Proposed Project, including construction and operation. Include emissions from grading equipment, earth loading/unloading, paving, architectural coatings, off-road mobile sources, on-road mobile sources, stationary sources, area sources, and vehicular trips.
- Perform a mobile source health risk assessment for generated trips, especially heavy-duty diesel-fueled vehicle trips. This should include an analysis of all toxic air contaminant impacts.
- Consider CARB's guidance on siting incompatible land uses in relation to pollution exposure near high-volume roadways.
- Mitigate any significant air quality impacts by minimizing them beyond what is required by law.
- Provide a copy of the Tribal Environmental Impact Report (TEIR) to the SCAQMD, including any appendices related to air quality, health risks, and greenhouse gas analysis.
- Discuss the project's effect on air quality, including trips indirectly generated.
- Include a "No Project" Alternative.
- Discuss impacts resulting from proposed mitigation measures.

A-4: Anita M. Petke, SunLine Transit Agency

- SunLine Transit Agency would not be impacted by the project.
- If transit service is needed, SunLine is willing to coordinate with the City.

A-5: Anita Petke, SunLine Transit Agency

- Existing bus stops #234 (located on the northwest corner of Highway 111 at Allen) and #46 (located at Date Palm at Grove) would be impacted by the project, as they would need to be temporarily closed while construction takes place; therefore, the contractor performing work should contact SunLine at least 30 days in advance of work so arrangements can be made to have existing amenities (bench and waste container) removed.

P-1: Donald Damron

- The project should expand open space and parks in downtown Cathedral City, such as improving Buddy Rogers Park.
- Jointly develop a public swimming pool and water-feature complex.
- Address impacts as related to existing City plans, including the City's Parks and Recreation Master Plan.
- Address impacts to Buddy Rogers Park.
- Define the relationship between the project and surrounding land.
- The City should pursue an updated downtown plan that should include future land uses.

PH-1: Stone James, City of Cathedral City

- The City believes key transportation corridors will be able to accommodate any increase in traffic.
- The City supports this project, and the Tribe has the full support of the City.
- The project would complement the City's downtown area and catalyze growth there.

5.0 ALTERNATIVES TO BE ANALYZED WITHIN THE EA

No alternatives were raised during the EA scoping process. Alternatives, other than the No Action/No Development Alternative, were screened based on four criteria: 1) extent to which they meet the purpose and need for the Proposed Action, 2) feasibility, 3) ability to reduce environmental impacts, and 4) ability to contribute to a reasonable range of alternatives. The intent of the analysis of alternatives is to present to decision-makers and the public a reasonable number of alternatives that are both feasible and sufficiently different from each other in critical aspects. The following list briefly summarizes the reasonable range of development alternatives to be analyzed in detail in the EA:

- **Proposed Project Alternative**: Fee-to-trust transfer of the North Site and development of the North Site with a casino and mixed use facilities.
- **Reduced Intensity Alternative**: Fee-to-trust transfer of the North Site and development of the North Site with a casino and mixed uses, with fewer retail and restaurant facilities than the Proposed Project Alternative.
- **Non-Gaming Alternative**: Fee-to-trust transfer of the North Site and development of the North Site with non-gaming mixed uses, including restaurants and retail facilities.
- **South Site Alternative**: Fee-to-trust transfer of the South Site and development on the South Site with a casino and mixed uses sized similar to the Proposed Project Alternative. The APNs and ROW acreages for the South Site's 15 parcels totaling approximately 13.9 acres are summarized in **Table 3**.

TABLE 3
SOUTH SITE PARCEL INFORMATION

APN	Acreage	APN	Acreage	APN	Acreage
687-207-003	0.075	687-500-005	0.116	687-500-010	0.089
687-207-005	0.229	687-500-006	0.200	687-500-011	0.205
687-500-001	4.259	687-500-007	0.197	687-500-012	0.413
687-500-003	1.009	687-500-008	0.236	687-500-014	0.047
687-500-004	0.089	687-500-009	0.084	687-500-018	5.698
				ROW	1.1
				South Site Total[1]	**13.9**

Notes: APN = Assessor Parcel Number; ROW = right of way
1 – Total may not add due to rounding

6.0 SCOPE OF THE ENVIRONMENTAL ASSESSMENT

This section describes the recommended scope of the EA based on the issues raised during scoping and a preliminary investigation of the setting and potential project impacts. A checklist, prepared in accordance with the Compact, is included as Appendix C to the EA, and was used to further refine the range and scope of issues to be addressed in the EA.

6.1.1 ISSUES TO BE EVALUATED IN THE EA

Topics identified for detailed evaluation within the EA include:

- Land Resources
- Water Resources
- Air Quality
- Biological Resources
- Cultural Resources
- Socioeconomic Conditions and Environmental Justice
- Transportation and Circulation
- Land Use
- Public Services and Utilities
- Visual Resources
- Noise
- Hazardous Materials
- Cumulative Impacts
- Indirect and Growth-Inducing Impacts

6.1.2 ISSUES ELIMINATED FROM DETAILED CONSIDERATION

This section describes topics eliminated from further consideration within the EA based on the results of the scoping process and preliminary investigation of the environmental setting and potential project impacts. The following issue areas will not be discussed within the EA: agriculture, mineral resources, odor, and schools.

Agriculture

Agricultural Regulations

Farmland Protection Policy Act (FPPA)

The Farmland Protection Policy Act (FPPA) is intended to minimize the impact federal programs have on the unnecessary and irreversible conversion of farmland to nonagricultural uses. It assures that federal programs are administered in a manner that is compatible with state and local units of government and private programs and policies to protect farmland.

The Natural Resource Conservation Service (NRCS), an agency of the United States Department of Agriculture (USDA), fulfills the directives of the Soil and Water Conservation Act by identifying significant areas of concern for the protection of our resources. NRCS uses a land evaluation and site assessment system to establish a Farmland Conversion Impact Rating (FCIR) score. This evaluation is completed on Form AD 1006 (FCIR Form). The FCIR Form has two components: the land evaluation, which rates soil quality up to 100 points, and the site assessment, which measures other factors that affect the farm's viability up to 160 points. The total FCIR score is used as an indicator for the project's sponsor to consider alternative sites if the potential adverse impacts on the farmland exceed the recommended allowable level. Sites receiving a combined score of less than 160 (out of 260 possible points) do not require further evaluation; alternative project locations should be considered for sites with a combined score greater than 160 points.

Riverside County

The Riverside County Right-to-Farm Ordinance 625.1 was adopted to promote a good neighbor policy between agriculturalists and other residents by making clear what rights each has when they live near one another. The ordinance is designed to protect agricultural land uses from conflicts with non-agricultural uses, as well as to reduce the loss of agricultural resources.

City of Cathedral City

The City General Plan does not contain any provisions related to agricultural uses that are relevant to the North and South Sites.

Potential for Agricultural Impacts

According to the Farmland Mapping and Monitoring Program (FMMP), the North Site and the South Site are both classified as Urban and Built-Up Land. Urban and Built-Up Land includes residential, industrial, commercial, institutional facilities, cemeteries, airports, golf courses, sanitary landfills, sewage treatment, and water control structures.[1] The North and South Sites are not designated for agriculture, nor are any agriculture activities currently occurring on the sites. The North and South Sites are not currently under Williamson Act Contracts, nor is any adjacent land.[2] There are no agricultural operations on or in the vicinity of the North Site. None of the soils on either site are considered prime farmland, unique

[1] DOC, 2017. *Riverside County Important Farmland 2016 Sheet 2 of 3*. July 2017. Available online at: ftp://ftp.consrv.ca.gov/pub/dlrp/FMMP/pdf/2016/riv16_c.pdf. Accessed January 25, 2018.
[2] DOC, 2016. *Riverside County Williamson Act FY 2015/2016 Sheet 2 of 3*. Available online at: ftp://ftp.consrv.ca.gov/pub/dlrp/wa/Riverside_c_15_16_WA.pdf. Accessed January 25, 2018.

farmland, or land of statewide or local importance.[3] Therefore, development alternatives will have no effect on agricultural resources and this issue area will not be discussed within the EA.

Odor

Types of operations that are typically evaluated for odor concerns include waste processing and heavy industrial facilities such as wastewater treatment plants (WWTPs), landfills and composting facilities, chemical manufacturing, and confined animal facilities. There are no WWTPs, landfills, composting facilities or other major sources of odor within two miles of the alternative sites. The development alternatives do not include a wastewater treatment plant or other source of odors; therefore, no odor impacts will occur and this topic will not be discussed within the EA.

Mineral Resources

The City General Plan identifies aggregate minerals such as sand and gravel as significant mineral deposits within the vicinity of the alternative sites.[4] Sand and gravel mines are dispersed throughout Riverside County. The nearest mining operation is the Sam Jones Mine, an active open pit sand and gravel mine located approximately 8.5 miles northeast of the North Site. Construction of project alternatives would not result in the loss of mineral resources. Therefore, mineral resource impacts will not be discussed within the EA.

Schools

Both the North and South Sites are located within the Palm Springs Unified School District (PSUSD).[5] PSUSD currently operates 4 high schools, 5 middle schools, 16 elementary schools, and 2 alternative schools.[6] PSUSD has a total enrollment of approximately 23,200 students.[7] There are three schools located within approximately one mile of the North and South Sites: Cathedral City Elementary School and Nellie Coffman Middle School, both within PSUSD, are located approximately 4,000 feet north and 1.0 mile northeast, respectively, of the northern boundary of the North Site, while Palm Valley School, a private kindergarten through 12th grade school, is located approximately 0.9 miles northeast of the northern boundary of the North Site. The Proposed Project would not result in a substantial increase in population or housing; therefore, demand for additional schools or additional classroom capacity would not increase significantly under the project, and the construction of additional school facilities would not be required. Therefore, no impacts to schools will occur and this issue will not be discussed within the EA.

NOTICE OF PREPARATION

NOTICE OF PREPARATION OF AN ENVIRONMENTAL ASSESSMENT / TRIBAL ENVIRONMENTAL IMPACT REPORT

PROJECT TITLE: Agua Caliente Band of Cahuilla Indians Cathedral City Fee-to-Trust Casino Project

NEPA LEAD AGENCY: Bureau of Indian Affairs, Department of the Interior

SCOPING COMMENT PERIOD: December 29, 2017 – January 29, 2018

SCOPING HEARING: 6 p.m. on January 18, 2018, DoubleTree by Hilton, located at 67967 Vista Chino in Cathedral City, CA 92234

SUMMARY: The Agua Caliente Band of Cahuilla Indians (Tribe) proposes to build a gaming facility and ancillary amenities on land that it owns contiguous to the Tribe's Reservation within the City of Cathedral City (City), in Riverside County, California (Proposed Project). As part of the Proposed Project, an application has been filed with the Bureau of Indian Affairs (BIA) to take approximately 13 acres of land into trust on behalf of the Tribe for gaming purposes. The federal actions necessary to implement the Proposed Project trigger the requirements of the National Environmental Policy Act (NEPA).

This notice advises the public that the BIA, as NEPA lead agency, intends to gather information necessary for preparing an Environmental Assessment (EA) pursuant to NEPA in connection with the Proposed Project. This notice also announces and opens the public scoping process. Interested parties are invited to submit comments identifying potential environmental issues, concerns, reasonable mitigation measures, and alternatives to be considered in the EA. Additionally, based on Section 11 of the 2016 Tribal-State Compact between the State of California and the Tribe, the Tribe will be required to prepare a Tribal Environmental Impact Report (TEIR) to analyze the potential off-reservation environmental impacts of the Proposed Project. To reduce paperwork and eliminate redundancy, the TEIR will be prepared in

coordination with the EA, resulting in a joint "EA/TEIR" (herein referred to as an "EA"). Thus, this notice is also intended to fulfill the requirements of Section 11 of the Tribal-State Compact, which requires that interested parties are provided with information describing the Proposed Project and its potential significant effects and are notified of the opportunity to provide comments related to the scope and alternatives to be addressed within the environmental document.

DATES: To ensure consideration during the development of the EA, written comments on the scope of the EA should be sent as soon as possible and no later than January 29, 2018 (30 days after publication of this notice in the Desert Sun). The public scoping meeting will be held on January 18, 2018 starting at 6 p.m.

ADDRESSES: You may mail or hand-deliver written comments to Amy Dutschke, Regional Director, Bureau of Indian Affairs, Pacific Region, 2800 Cottage Way, Sacramento, CA 95825. Please include your name, return address, and "Scoping Comments on the Agua Caliente Cathedral City Fee-to-Trust Casino Project" on the first page of your written comments. You may also submit comments through email to Chad Broussard, Environmental Protection Specialist, Bureau of Indian Affairs, at chad.broussard@bia.gov. If emailing comments, please use "Scoping Comments on the Agua Caliente Cathedral City Fee-to-Trust Casino Project" as the subject of your email.

The public scoping meeting will take place at DoubleTree by Hilton, located at 67967 Vista Chino in Cathedral City, CA 92234.

FOR FURTHER INFORMATION CONTACT: Chad Broussard, Environmental Protection Specialist, Bureau of Indian Affairs, Pacific Regional Office, 2800 Cottage Way, Room W–

2820, Sacramento, CA 95825; telephone: (916) 978–6165; e-mail: chad.broussard@bia.gov. Information is also available online at www.cathedralcitycasino.com.

SUPPLEMENTARY INFORMATION:

The full copy of this notice, including supplementary information (a brief description of the project and location, potential alternatives, and a summary of potential environmental effects) is available on the project website at www.cathedralcitycasino.com.

PUBLIC COMMENT AVAILABILITY: Comments, including names and addresses of respondents, will be available for public review at the BIA address shown in the ADDRESSES section, during regular business hours, 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. Before including your address, telephone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment – including your personal identifying information – may be made publicly available at any time. While you can ask in your comment that your personal identifying information be withheld from public review, the BIA cannot guarantee that this will occur.

DECLARANT

NOTICE OF PREPARATION OF AN ENVIRONMENTAL ASSESSMENT / TRIBAL ENVIRONMENTAL IMPACT REPORT

PROJECT TITLE: Agua Caliente Band of Cahuilla Indians Cathedral City Fee-to-Trust Casino Project

NEPA LEAD AGENCY: Bureau of Indian Affairs, Department of the Interior

SCOPING COMMENT PERIOD: December 29, 2017 – January 29, 2018

SCOPING HEARING: 6 p.m. on January 18, 2018, DoubleTree by Hilton, located at 67967 Vista Chino in Cathedral City, CA 92234

SUMMARY: The Agua Caliente Band of Cahuilla Indians (Tribe) proposes to build a gaming facility and ancillary amenities on land that it owns contiguous to the Tribe's Reservation within the City of Cathedral City (City), in Riverside County, California (Proposed Project). As part of the Proposed Project, an application has been filed with the Bureau of Indian Affairs (BIA) to take approximately 13 acres of land into trust on behalf of the Tribe for gaming purposes. The federal actions necessary to implement the Proposed Project trigger the requirements of the National Environmental Policy Act (NEPA).

This notice advises the public that the BIA, as NEPA lead agency, intends to gather information necessary for preparing an Environmental Assessment (EA) pursuant to NEPA in connection with the Proposed Project. This notice also announces and opens the public scoping process. Interested parties are invited to submit comments identifying potential environmental issues, concerns, reasonable mitigation measures, and alternatives to be considered in the EA.

Additionally, based on Section 11 of the 2016 Tribal-State Compact between the State of California and the Tribe, the Tribe will be required to prepare a Tribal Environmental Impact Report (TEIR) to analyze the potential off-reservation environmental impacts of the Proposed Project. To reduce paperwork and eliminate redundancy, the TEIR will be prepared in coordination with the EA, resulting in a joint "EA/TEIR" (herein referred to as an "EA"). Thus, this notice is also intended to fulfill the requirements of Section 11 of the Tribal-State Compact, which requires that interested parties are provided with information describing the Proposed Project and its potential significant effects and are notified of the opportunity to provide comments related to the scope and alternatives to be addressed within the environmental document.

DATES: To ensure consideration during the development of the EA, written comments on the scope of the EA should be sent as soon as possible and no later than January 29, 2018 (30 days after publication of this notice in the Desert Sun). The public scoping meeting will be held on January 18, 2018 starting at 6 p.m.

ADDRESSES: You may mail or hand-deliver written comments to Amy Dutschke, Regional Director, Bureau of Indian Affairs, Pacific Region, 2800 Cottage Way, Sacramento, CA 95825. Please include your name, return address, and "Scoping Comments on the Agua Caliente Cathedral City Fee-to-Trust Casino Project" on the first page of your written comments. You may also submit comments through email to Chad Broussard, Environmental Protection Specialist, Bureau of Indian Affairs, at chad.broussard@bia.gov. If emailing comments, please use "Scoping Comments on the Agua Caliente Cathedral City Fee-to-Trust Casino Project" as the subject of your email.

The public scoping meeting will take place at DoubleTree by Hilton, located at 67967 Vista Chino in Cathedral City, CA 92234.

FOR FURTHER INFORMATION CONTACT: Chad Broussard, Environmental Protection Specialist, Bureau of Indian Affairs, Pacific Regional Office, 2800 Cottage Way, Room W–2820, Sacramento, CA 95825; telephone: (916) 978–6165; e-mail: chad.broussard@bia.gov. Information is also available online at www.cathedralcitycasino.com.

SUPPLEMENTARY INFORMATION: The full copy of this notice, including supplementary information (a brief description of the project and location, potential alternatives, and a summary of potential environmental effects) is available on the project website at www.cathedralcitycasino.com.

PUBLIC COMMENT AVAILABILITY: Comments, including names and addresses of respondents, will be available for public review at the BIA address shown in the ADDRESSES section, during regular business hours, 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. Before including your address, telephone number, e-mail address, or other personal identifying information in your comment, you should be aware that your entire comment – including your personal identifying information – may be made publicly available at any time. While you can ask in your comment that your personal identifying information be withheld from public review, the BIA cannot guarantee that this will occur.

Project Description: *(please use a separate page if necessary)*

The proposed action is the acquisition of approximately 13 acres of fee land in trust by the United States upon which the Agua Caliente Band of Cahuilla Indians would construct a gaming facility and ancillary development. The proposed project site is located within the City of Cathedral City, and bordered by East Palm Canyon Drive/Highway 111 on the south, Date Palm Drive on the east, Buddy Rogers Avenue on the north, and commercial and vacant parcels within the City to the west. More information, including details regarding the EA scoping meeting, is provided in the attached Notice of Preparation.

Note: The State Clearinghouse will assign identification numbers for all new projects. If a SCH number already exists for a project (e.g. Notice of Preparation or previous draft document) please fill in.

RE: SCH# 2017124002; Agua Caliente Band of Cahuilla Indians Cathedral City Fee-to-Trust Casino Project, City of Cathedral City; Riverside County, California

Dear Mr. Broussard:

The Native American Heritage Commission has received the Notice of Preparation (NOP) for Draft Environmental Impact Report for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code § 21000 et seq.), specifically Public Resources Code section 21084.1, states that a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, § 15064.5 (b) (CEQA Guidelines Section 15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an environmental impact report (EIR) shall be prepared. (Pub. Resources Code § 21080 (d); Cal. Code Regs., tit. 14, § 15064 subd. (a)(1) (CEQA Guidelines § 15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources with the area of project effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a **separate category of cultural resources**, "tribal cultural resources" (Pub. Resources Code § 21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment (Pub. Resources Code § 21084.2). Please reference California Natural Resources Agency (2016) "Final Text for tribal cultural resources update to Appendix G: Environmental Checklist Form," http://resources.ca.gov/ceqa/docs/ab52/Clean-final-AB-52-App-G-text-Submitted.pdf. Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code § 21084.3 (a)). **AB 52 applies to any project for which a notice of preparation or a notice of negative declaration or mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements**. If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. § 800 et seq.) may also apply.

The NAHC recommends **lead agencies consult with all California Native American tribes** that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments. **Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws**.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a **lead agency** shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
   a. A brief description of the project.
   b. The lead agency contact information.
   c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code § 21080.3.1 (d)).
   d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code § 21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A **lead agency** shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code § 21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or environmental impact report. (Pub. Resources Code § 21080.3.1(b)).
   a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code § 65352.4 (SB 18). (Pub. Resources Code § 21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
   a. Alternatives to the project.
   b. Recommended mitigation measures.
   c. Significant effects. (Pub. Resources Code § 21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
   a. Type of environmental review necessary.
   b. Significance of the tribal cultural resources.
   c. Significance of the project's impacts on tribal cultural resources.
   d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code § 21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code sections 6254 (r) and 6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code § 21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
   a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
   b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code section 21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code § 21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:
    a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
    b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code § 21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code section 21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code section 21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code § 21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code section 21084.3 (b). (Pub. Resources Code § 21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:
    a. Avoidance and preservation of the resources in place, including, but not limited to:
        i. Planning and construction to avoid the resources and protect the cultural and natural context.
        ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
    b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
        i. Protecting the cultural character and integrity of the resource.
        ii. Protecting the traditional use of the resource.
        iii. Protecting the confidentiality of the resource.
    c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
    d. Protecting the resource. (Pub. Resource Code § 21084.3 (b)).
    e. Please note that a federally recognized California Native American tribe or a nonfederally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code § 815.3 (c)).
    f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code § 5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An environmental impact report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
    a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code sections 21080.3.1 and 21080.3.2 and concluded pursuant to Public Resources Code section 21080.3.2.
    b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
    c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code section 21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code § 21082.3 (d)).

    This process should be documented in the Cultural Resources section of your environmental document.

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires **local governments** to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code § 65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code § 65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code section 65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code sections 5097.9 and 5097.993 that are within the city's or county's jurisdiction. (Gov. Code § 65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have been already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.

b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, section 15064.5(f) (CEQA Guidelines section 15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code section 7050.5, Public Resources Code section 5097.98, and Cal. Code Regs., tit. 14, section 15064.5, subdivisions (d) and (e) (CEQA Guidelines section 15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

Please contact me if you need any additional information at gayle.totton@nahc.ca.gov.

Sincerely,

Gayle Totton, M.A., PhD.

NOTICE OF PREPARATION (NOP) FOR AN ENVIRONMENTAL ASSESSMENT/ TRIBAL ENVIRONMENTAL IMP ACT REPORT AN ENVIRONMENTAL IMPACT REPORT (EA/TEIR) FOR AGUA CALIENTE BAND OF CAHUILLA INDIANS CATHEDRAL CITY FEE-TO-TRUST CASINO PROJECT (SCH# 2017124002)

Dear Ms. Dutschke:

The Department of Toxic Substances Control (DTSC) has reviewed the subject NOP. The following project description is stated in the NOP: "The proposed action is the acquisition of approx. 13 acres of fee land in trust by the US upon which the Agua Caliente Band of Cahuilla Indians would construct a gaming facility and ancillary development. The proposed project site is located within the City of Cathedral City, and bordered by East Palm Canyon Drive/Hwy 111 on the south, Date Palm Dr. on the east, Buddy Rogers Avenue on the north, and commercial and vacant parcels within the City to the west."

Based on the review of the submitted document, DTSC has the following comments:

1. The EA/TEIR should identify and determine whether current or historic uses at the project site may have resulted in any release of hazardous wastes/substances. A Phase I Environmental Site Assessment may be appropriate to identify any recognized environmental conditions.

2. If there are any recognized environmental conditions in the project area, then proper investigation, sampling and remedial actions overseen by the appropriate regulatory agencies should be conducted prior to the new development or any construction.

Printed on Recycled Paper

3. If the project plans include discharging wastewater to a storm drain, you may be required to obtain an NPDES permit from the overseeing Regional Water Quality Control Board (RWQCB).

4. If the proposed project involves the demolition of existing structures, lead-based paints or products, mercury, and asbestos containing materials (ACMs) should be addressed in accordance with all applicable and relevant laws and regulations.

5. If the site was used for agricultural or related activities, residual pesticides may be present in onsite soil. DTSC recommends investigation and mitigation, as necessary, to address potential impact to human health and environment from residual pesticides.

6. DTSC recommends evaluation, proper investigation and mitigation, if necessary, of onsite areas with current or historic PCB-containing transformers.

7. The NOP states, "The project site is bordered by East Palm Canyon Drive/Highway 111 on the south, Date Palm Drive on the east, Buddy Rogers Avenue on the north, and commercial and vacant parcels within the City to the west (Figure 3)." Aerially deposited lead (ADL) is generally encountered in unpaved or formerly unpaved areas adjoining older roads, primarily as a result of deposition from historical vehicle emissions when gasoline contained lead. As the project site is adjacent to Highway 111, this issue should be addressed in accordance with all applicable and relevant laws and regulations.

8. If the project development involves soil export/import, proper evaluation is required. If soil contamination is suspected or observed in the project area, then excavated soil should be sampled prior to export/disposal. If the soil is contaminated, it should be disposed of properly in accordance with all applicable and relevant laws and regulations. In addition, if imported soil was used as backfill onsite and/or backfill soil will be imported, DTSC recommends proper evaluation/sampling as necessary to ensure the backfill material is free of contamination.

9. If during construction/demolition of the project, soil and/or groundwater contamination is suspected, construction/demolition in the area should cease and appropriate health and safety procedures should be implemented. If it is determined that contaminated soil and/or groundwater exist, the EA/TEIR should identify how any required investigation and/or remediation will be conducted and the appropriate government agency to provide regulatory oversight.

If you have any questions regarding this letter, please contact me at (714) 484-5380 or by email at Johnson.Abraham@dtsc.ca.gov.

Notice of Preparation of Tribal Environmental Impact Report[1] for the Agua Caliente Band of Cahuilla Indians Cathedral City Fee-to-Trust Casino Project

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. SCAQMD staff's comments are recommendations regarding the analysis of potential air quality impacts from the Proposed Project that should be included in the Tribal Environmental Impact Report (EIR). Please send SCAQMD a copy of the Tribal EIR upon its completion. Note that copies of the Tribal EIR that are submitted to the State Clearinghouse are not forwarded to SCAQMD. Please forward a copy of the Tribal EIR directly to SCAQMD at the address shown in the letterhead. **In addition, please send with the Tribal EIR all appendices or technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all air quality modeling and health risk assessment files[2]. These include emission calculation spreadsheets and modeling input and output files (not PDF files). Without all files and supporting documentation, SCAQMD staff will be unable to complete our review of the air quality analyses in a timely manner. Any delays in providing all supporting documentation will require additional time for review beyond the end of the comment period.**

Air Quality Analysis

SCAQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. SCAQMD recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analysis. Copies of the Handbook are available from SCAQMD's Subscription Services Department by calling (909) 396-3720. More guidance developed since this Handbook is also available on SCAQMD's website at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993). SCAQMD staff also recommends that the Lead Agency use the CalEEMod land use emissions software. This software has recently been updated to incorporate up-to-date state and locally approved emission factors and methodologies for estimating pollutant emissions from typical land use development. CalEEMod is the only software model maintained by the California Air Pollution Control Officers Association (CAPCOA) and replaces the now outdated URBEMIS. This model is available free of charge at: www.caleemod.com.

[1] A Tribal Environmental Impact Report is prepared to analyze the potential off-reservation environmental impacts of the Proposed Project pursuant to Section 11 of the 2016 Tribal-State Compact between the State of California and the Tribe. Accessed at: https://www.gov.ca.gov/docs/Agua_Caliente_Band_of_Cahuilla_Indians_Compact.pdf.

[2] Pursuant to the CEQA Guidelines Section 15174, the information contained in an EIR shall include summarized technical data, maps, plot plans, diagrams, and similar relevant information sufficient to permit full assessment of significant environmental impacts by reviewing agencies and members of the public. Placement of highly technical and specialized analysis and data in the body of an EIR should be avoided through inclusion of supporting information and analyses as appendices to the main body of the EIR. Appendices to the EIR may be prepared in volumes separate from the basic EIR document, but shall be readily available for public examination and shall be submitted to all clearinghouses which assist in public review.

SCAQMD has also developed both regional and localized significance thresholds. SCAQMD staff requests that the Lead Agency quantify criteria pollutant emissions and compare the results to SCAQMD's CEQA regional pollutant emissions significance thresholds to determine air quality impacts. SCAQMD's CEQA regional pollutant emissions significance thresholds can be found here: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf. In addition to analyzing regional air quality impacts, SCAQMD staff recommends calculating localized air quality impacts and comparing the results to localized significance thresholds (LSTs). LSTs can be used in addition to the recommended regional significance thresholds as a second indication of air quality impacts when preparing a CEQA document. Therefore, when preparing the air quality analysis for the Proposed Project, it is recommended that the Lead Agency perform a localized analysis by either using the LSTs developed by SCAQMD staff or performing dispersion modeling as necessary. Guidance for performing a localized air quality analysis can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis.

In the event that the Proposed Project generates or attracts vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment. Guidance for performing a mobile source health risk assessment ("*Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*") can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis. An analysis of all toxic air contaminant impacts due to the use of equipment potentially generating such air pollutants should also be included.

In addition, guidance on siting incompatible land uses (such as placing homes near freeways) can be found in the California Air Resources Board's *Air Quality and Land Use Handbook: A Community Health Perspective*, which can be found at: http://www.arb.ca.gov/ch/handbook.pdf. CARB's Land Use Handbook is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process. Guidance[3] on strategies to reduce air pollution exposure near high-volume roadways can be found at: https://www.arb.ca.gov/ch/rd_technical_advisory_final.PDF.

Mitigation Measures

In the event that the Proposed Project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize these impacts. Pursuant to CEQA Guidelines Section 15126.4

[3] In April 2017, CARB published a technical advisory, *Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways: Technical Advisory*, to supplement CARB's Air Quality and Land Use Handbook: A Community Health Perspective. This technical advisory is intended to provide information on strategies to reduce exposures to traffic emissions near high-volume roadways to assist land use planning and decision-making in order to protect public health and promote equity and environmental justice. The technical advisory is available at: https://www.arb.ca.gov/ch/landuse.htm.

(a)(1)(D), any impacts resulting from mitigation measures must also be discussed. Several resources are available to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project, including:

- Chapter 11 of SCAQMD's CEQA Air Quality Handbook
- SCAQMD's CEQA web pages available here: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mitigation-measures-and-control-efficiencies
- SCAQMD's Rule 403 – Fugitive Dust, and the Implementation Handbook for controlling construction-related emissions and Rule 1403 – Asbestos Emissions from Demolition/Renovation Activities
- SCAQMD's Mitigation Monitoring and Reporting Plan (MMRP) for the 2016 Air Quality Management Plan (2016 AQMP) available here (starting on page 86): http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2017/2017-mar3-035.pdf
- CAPCOA's *Quantifying Greenhouse Gas Mitigation Measures* available here: http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf

Alternatives

In the event that the Proposed Project generates significant adverse air quality impacts, CEQA requires the consideration and discussion of alternatives to the project or its location which are capable of avoiding or substantially lessening any of the significant effects of the project. The discussion of a reasonable range of potentially feasible alternatives, including a "no project" alternative, is intended to foster informed decision-making and public participation. Pursuant to CEQA Guidelines Section 15126.6(d), the Tribal EIR shall include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the Proposed Project.

Data Sources

SCAQMD rules and relevant air quality reports and data are available by calling SCAQMD's Public Information Center at (909) 396-2039. Much of the information available through the Public Information Center is also available at SCAQMD's webpage at: http://www.aqmd.gov.

SCAQMD staff is available to work with the Lead Agency to ensure that project air quality impacts are accurately evaluated and any significant impacts are mitigated where feasible. If you have any questions regarding this letter, please contact me at lsun@aqmd.gov or call me at (909) 396-3308.

Sincerely,

Lijin Sun

RE: Agua Caliente Band of Cahuilla Indians Cathedral City Fee-to-Trust Casino Project

Dear Ms. Amy Dutschke:

This letter responds to your request for comments regarding the proposed Agua Caliente Band of Cahuilla Indians Cathedral City Fee-to-Trust Casino Project bordered by East Palm Canyon Drive/Highway 111 on the south, Date Palm Drive on the east, Buddy Rogers Avenue on the north and within the city of Cathedral City. The SunLine Transit Agency (SunLine) staff has reviewed the project and offers the following comments.

SunLine staff's assessment concludes the proposed annexation will have no impact on transit services. Please keep staff informed of any approvals and/or future changes to the proposed annexation so we can keep all existing bus stops and services routes current. Additionally, if there is a need for transit service and/or transit amenities in the future, SunLine staff will coordinate it with the city of Cathedral City.

Should you have questions or concerns regarding this letter, please contact me at 760-343-3456, ext. 1603.

Sincerely,

Anita M. Petke
Transit Communications Service Specialist

RE: Agua Caliente Band of Cahuilla Indian Cathedral City Fee-to-Trust Casino Project

Dear Ms. Amy Dutschke:

This letter responds to your request for comments regarding Cathedral City Fee-to-Trust Casino Project . As you are aware, SunLine Transit Agency (SunLine) currently operates fixed route service along Hwy 111 and Date Palm Drive, with transit service provided within the project area.

After future review of transit amenities within the defined project area, it indicates that the proposed Fee-to-Trust Casino Project will impact transit amenities utilized by passengers. Therefore, we are recommending the City of Cathedral City work with SunLine on the following issues:

A. Impacts to Existing Bus Stops

Based on our review, the existing bus stop #234 located on the northwest corner of Highway 111 at Allen will be impacted by the improvement project, as well as, bus stop #46 at Date Palm at Grove. According to the proposed plans, bus stops #234 and #46 will need to be temporarily closed while work is being performed at those locations. Please have the contractor performing work for this project contact SunLine at least thirty (30) days in advance of work commencing so arrangements can be made to have the existing amenities (bench and waste container) removed.

Should you have any questions or concerns regarding our comments, please do not hesitate to contact me. You may reach me at 760-343-3456, ext. 1603.

Respectfully,

Anita Petke
Transit Communications Service Specialist

Scoping Comments on the Agua Caliente
Cathedral City Fee-to-Trust Casino Project

January 24, 2018
Donald Damron
69-333 E. Palm Canyon Dr.
Cathedral City, CA

The scope of the proposed Agua Caliente Casino Project, which is located on valuable downtown land in Cathedral City, should clearly define project amenities that are appropriate to the needs of a developing, yet somewhat undefined downtown community. The planned relationships and the connections from the Casino to the surrounding land should be defined within the scope of the casino alternatives. In conjunction with the development of the casino, an updated downtown plan should be pursued. At a minimum, future land uses and their connections to the casino should be defined as part of the project.

As a family-oriented community, the continued expansion of open space and parks in downtown Cathedral City should be addressed and incorporated into the scope of the Agua Caliente Casino Project. For example, a plan to improve Buddy Rogers Park, which abuts the project site, should be addressed and incorporated into the Casino plan. At a minimum, the impact that the Casino will have on Buddy Rogers Park will need to be assessed.

The impact of the Casino should be assessed as it relates to existing city plans. The Cathedral City Parks and Recreation Master Plan identifies the expansion of the city's park system as a priority. As example, the park plan suggests:
• "The resources of parkland, tennis courts, swimming pools and recreation center space is not current with nationally established space standards"; and
• "The residents spoke of a swimming pool complex as a high priority and the Park Master Plan lists the need for a public swimming pool as a high priority. The Plan also suggests that consideration should be given to the creation of a joint use agreement with community partners regarding a new swimming pool venture"

The Casino Project creates many opportunities to jointly-develop appropriate amenities in the downtown area. As one way to mitigate potential negative impacts on the downtown community, the scope of the Agua Caliente Casino Project should assess the potential to jointly-develop a public swimming pool and water-feature complex that would enhance both the Casino Project and the downtown area.

THURSDAY, JANUARY 18, 2018, CATHEDRAL CITY, CALIFORNIA

6:07 P.M.

--oOo--

MR. BROUSSARD: Good evening. Can I have your attention, please?

The Bureau of Indian Affairs welcomes you to the Scoping Hearing for the proposed Agua Caliente Cathedral City Casino Fee-to-Trust Project.

My name is Chad Broussard, and I'm an environmental protection specialist with the Pacific Region of the Bureau of Indian Affairs, or "BIA" for short. The BIA is a bureau within the United States Department of Interior. I will be your facilitator at this evening's public hearing. At the table with me is Ryan Sawyer, with Analytical Environmental Services, the BIA's consultant.

So we're here tonight to conduct public scoping for the Environmental Assessment, or "EA" for short, that will be prepared for the proposed Fee-to-Trust land acquisition and the subsequent proposed development of a casino for the federally recognized Agua Caliente Tribe.

The location of the proposed Fee-to-Trust property can be seen on the large information boards in

the back. If the BIA approves the proposed Fee-to-Trust acquisition, it will hold the property in trust for the Tribe, allowing for the development of a gaming facility on site.

The National Environmental Policy Act, or "NEPA" for short, requires that the BIA conduct an environmental review before deciding whether or not to take the land into trust. So we're at the very beginning of that process with the process known as "scoping."

The purpose of the scoping process is to determine what the scope of the environmental review should be, the geographical scope of the analysis, the time frame, the number of topics to study, the intensity of analysis for each study, and any issues of concern to focus on, the number of types -- and types of alternatives to study.

And the purpose of this hearing is to provide information on the process and the proposed action to the public and to solicit input from the public on the scope of the EA. So, for example, relevant input might include concerns about specific types of impacts that might result from the action, information on historical environmental conditions in the area, or suggestions on alternatives to the proposed action.

With that in mind, I want to be clear that tonight's hearing is not a question-and-answer period, nor a forum for debate. I won't respond to any questions, nor engage in debate. Instead, this is your opportunity to tell us before the start of the project what you think should be analyzed, how the analysis should take place, and what environmental issues you might be concerned with.

Now, we'll have our NEPA consultant, AES, provide you with a brief PowerPoint presentation on the proposed Fee-to-Trust property, the proposed action, and the environmental process.

Ryan.

MS. SAWYER: Thank you, Chad.

As Chad mentioned, my name is Ryan Sawyer. I'm with the Analytical Environmental Services. I will be preparing the environmental document for the proposed project.

This slide provides a brief overview of the PowerPoint presentation topics. We'll be going over the purpose of the meeting, the NEPA process, the Tribal State Compact and TEIR process. I'll provide a summary of the proposed project and potential alternatives under consideration, a general overview of the scoping process, and anticipated issues to be addressed in the

EA, as well as opportunities for submitting scoping comments and the next steps in the process.

So as Chad mentioned, the purpose of the meeting tonight is to explain the environmental review process, introduce the project, present potential environmental issues to be analyzed in the EA, and also to provide an opportunity for the public agencies to provide an input on the proposed scope of the environmental analysis.

The National Environmental Policy Act, or NEPA, is a procedural statute that requires federal agencies to conduct an environmental analysis of the potential impacts of proposed major federal actions.

In this case, the proposed major federal action is the request for the Agua Caliente Band of Cahuilla Indians, or "Tribe," as I'll refer to them throughout this presentation, that the BIA place approximately 13 acres of land into trust in Cathedral City for gaming purposes.

This slide provides an overview of the NEPA process. We are, at this point, preparing -- we'll be preparing an Environmental Assessment, or EA, to address the impacts of the proposed project. Should the EA determine that no significant impacts will occur or that all potentially significant impacts can be mitigated to

a less than significant level, a Finding of No Significant Impact -- of No Significant Impact, or FONSI, may be signed.

In the event that potentially significant adverse effects that cannot be mitigated are identified through the EA process, the Environmental Impact Statement may need to be prepared. That's a longer process with more public noticing requirements and opportunities for comments. And at the end of that process, the end result would be a record and decision.

The 2016 Tribal-State Compact between the State of California and the Tribe requires preparation of a Tribal Environmental Impact Report to analyze the off-reservation impacts of the project. The resulting -- and so in this case, because we're also preparing a NEPA document, we'll be doing a joint EA/TEIR to satisfy the requirements of both NEPA and the Compact. I'll be referring to the joint EA/TEIR throughout this presentation as the EA.

The three major steps in the Compact environmental review process are Notice of Preparation of the Draft TEIR and scoping period, a 30-day scoping period, which we're currently engaged in now. Following that, a Draft TEIR is -- or a Draft TEIR is to be prepared and the notice of completion issued announcing

a 45-day comment period for the Draft TEIR. And then the final stage of the Compact environmental review process is issuance of a final TEIR, which consists of a draft of the TEIR and any responses to comments that came in during the 45-day review period.

The proposed project that will be analyzed within the EA is the trust acquisition of approximately 13 acres within Cathedral City for gaming purposes. And then subsequent to the trust acquisition, the Tribe proposes to develop the land with a casino, restaurants, bars, retail and mixed use space, tribal government offices, and parking.

The location of the proposed trust property is shown in this slide. The project site is located contiguous to the Tribe's reservation and is bordered by East Palm Canyon Drive or Highway 111 on the south, Date Palm Drive on the east, Buddy Rogers Avenue on the north, and commercial and vacant parcels within the city to the west.

This slide shows an aerial photograph of the site. The entire site has been previously subject to development. The City has plans to relocate the existing fire station located on the northeast portion of the site directly north of the parcel across Buddy Rogers Avenue.

As shown on this slide, the proposed project is currently anticipated to encompass the entire 13-acre site. The casino facility itself is proposed to be approximately 65,000 square feet in size, with an additional 60,000 square feet of restaurant, commercial, mixed use, and office facilities. Parking areas, including a potential parking deck, are proposed in the western areas of the site. The proposed uses shown here are generally consistent with the site's land use designation of downtown commercial given by the City.

As required by NEPA and the Compact, the EA will evaluate a reasonable range of alternatives. Which alternatives are chosen for analysis will depend partly on the results of the scoping process. Some alternatives may be considered -- that may be considered will include a reduced intensity alternative, a non-gaming alternative, and a potential off-site alternative site alternative.

I don't have a slide showing the locations of the alternative sites that we're currently considering, but there is a large exhibit of it in the back of the room if anyone is interested in taking a look.

The anticipated issues to be analyzed in the EA are shown on this slide. The issues bolded, air quality and greenhouse gas emissions, noise, traffic and

transportation, are the issues where we anticipate the potential for impacts and possible mitigation measures or a greater potential for impacts, I should say, at this point in the process.

We are currently in the information-gathering stage of the environmental review process referred to as "Scoping," which was initiated with publication of the Notice of Preparation in the Desert Sun on December 29th, 2017.

The NOP can be viewed at www.cathedralcitycasino.com. We will post future NEPA documents online at this -- online at this site for public review as well.

The NOP solicits input from the public and interested agencies on the nature and extent of issues and effects to be addressed in the EA. The scope of the document refers to the extent of the action, range of alternatives, and types of impacts to be evaluated.

The scoping comment period ends on January 29th. Please hand in your written comments or mail them to the BIA before this date. The BIA's address and e-mail address is noted on the comment cards provided here tonight and within the NOP. All scoping comments, whether written or spoken at this meeting, will be considered equally by the BIA.

After the close of the scoping period, scoping comments will be reviewed and the scope of the environmental review will be refined. A Draft EA analyzing the environmental impacts of the proposed action and a reasonable range of alternatives will be prepared and made available to the public for at least a 45-day review and comment period. The BIA will review and consider the comments received, and written responses to comments related to environmental issues will be prepared. If needed, edits or revisions will be made to the EA.

Based on the findings of the EA, the BIA will either issue a Finding of No Significant Impact, or FONSI, or prepare an Environmental Impact Statement. And the Tribe may certify the EA, or at that point, it would be the Final TEIR.

Contact information for the BIA is shown on this slide. As previously mentioned, written comments should be mailed to Ms. Amy Dutschke at this address. If you have any questions, you can contact Chad.

And also, please make a note to bookmark the cathedralcitycasino.com site because we will be posting all future notices and environmental documents at this site.

That concludes my presentation. I'll hand it

back over to Chad.

MR. BROUSSARD: Okay. Thanks, Ryan.

So I wanted to point out real quickly, the restrooms are located to the left right around the corner, and there's emergency exits to the right and the left as you exit the room.

Okay. So both spoken and written comments will be accepted at tonight's hearing. If you have a written letter that you'd like to submit, you can hand it to me or to one of the representatives at the back table.

We also have cards available. If you wanted to make a written comment on the card, those are at the back table as well. You just grab a card, write out the comment, and either hand it in to me or in to one of the representatives at the table.

As Ryan mentioned, the close of the scoping comment period is January 29th. If you'd like to make a spoken comment at the hearing, please fill in one of the speaker cards, which is also at the back table, and hand it in to one of the representatives. Please write as legibly as possible so I can understand your name.

We will take speakers in the order that we receive them. And typically, we give everyone Three minutes, but that's usually when we have a larger

crowd. We have a pretty small crowd here tonight, so we'll still use the -- we have a timer system. We'll still set it for three minutes, but I think you'll have a little extra time if you want to finish your remarks after the time goes off.

So a public hearing is not the best forum for lengthy comments due to the constraints of time. If you have a lengthy comment, we encourage you to submit a written letter. All comments will receive equal weight whether they're spoken or written.

We have a stenographer here so that all spoken comments will be recorded word for word and so they'll be considered fully as comments on the record. With that said, please restate your name for the record before giving your comment and please speak as clearly as possible so that the stenographer can understand and accurately document your words.

Please remember, again, that this is not a forum for debate. And I'd like to offer the following ground rules as suggestions for participation.

First, summarize your main points within Three minutes, if possible. Be as specific as you can. Only comments that relate to the scope of the EA will be useful to us in preparing the EA.

Second, the best opportunity to state your

views convincingly is through a brief actual presentation. It's okay to disagree but do so in a manner of mutual respect. And please address me specifically with your comments so that I can hear what you're saying and so that our stenographer can accurately record your words.

And please -- again, the purpose of the hearing is to collect comments on the scope of the EA, and all comments will be considered equally no matter how many times they're made.

So with that, do we have any -- do we have any speakers?

Go ahead. And she'll take that.

MS. SAWYER: And, Chad, we're going to have to switch around the microphones to that stand up there.

MR. BROUSSARD: Okay. Does this one work?

MS. SAWYER: Yes. I just got it turned on.

MR. BROUSSARD: Mr. James?

MR. JAMES: Yes, it is.

MR. BROUSSARD: All right. Thanks. Go ahead.

MR. JAMES: Okay. Chad, my name is Stone James, and I'm Director of Economic Development for the City of Cathedral City. And I just wanted to let you know that I support this project. I think it will be a tremendous complement to our downtown. We believe that given its

situation on key transportation corridors, that the -- those transportation corridors will be able to more than accommodate any increase on traffic. And overall, we believe that this is going to be a fantastic catalyst for the energy and the enthusiasm of the potential that our downtown possesses. So we hope this project goes forward, and the Tribe has our full support.

Very good. Thank you.

MR. BROUSSARD: All right. Thanks very much.

Do we have any other speakers?

Okay. Well, it's going to be a short hearing tonight. So given that there are no other speakers, we're going to go ahead and conclude the hearing.

Thank you for your participation and have a good night.

(Proceedings adjourned at 6:24 p.m.)

REPORTER'S CERTIFICATE

I, BRENDA S. LADNIER, certified shorthand reporter, in and for the State of California, do hereby certify under the laws of the State of California:

That the foregoing oral proceedings, taken down by me in stenotype, were thereafter reduced to typewriting by computer-aided transcription under my direction;

That this typewritten transcript is a true record of the foregoing oral proceedings;

I further certify that I am not in any way interested in the outcome of this action and that I am not related to any of the parties thereto.

In witness whereof, I have subscribed my name this date: February 6, 2018.

APPENDIX C

OFF-RESERVATION ENVIRONMENTAL IMPACT ANALYSIS CHECKLIST

Off-Reservation Environmental Impact Analysis Checklist

I. Aesthetics

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b) Substantially damage off-reservation scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
c) Create a new source of substantial light or glare, which would adversely affect day or nighttime views of historic buildings or views in the area?	☐	☐	☒	☐

Refer to Section 4.10, Visual Resources, of the Environmental Assessment (EA).

II. Agricultural and Forest Resources

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Involve changes in the existing environment, which, due to their location or nature, could result in conversion of off-reservation farmland to non-agricultural use?	☐	☐	☐	☒

Neither the North Site or the South Site are designated or currently used for agricultural uses. Thus, no impact to agricultural resources would occur, and this topic has been eliminated from further consideration in the EA. For further information, refer to the Scoping Memorandum dated August 2018.

III. Air Quality

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Violate any air quality standard or contribute to an existing or projected air quality violation?	☐	☐	☒	☐

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions, which exceed quantitative thresholds for ozone precursors)?	☐	☐	☒	☐
d) Expose off-reservation sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
e) Create objectionable odors affecting a substantial number of people off-reservation?	☐	☐	☐	☒

a-d Refer to Section 4.3, Air Quality, of the EA.

e No odor-producing facilities (such as landfills, wastewater treatment plants, or composing facilities) are located within two miles of alternative sites. Project alternatives would not include a wastewater treatment plant or other source of odor. Thus, no impact to odor would occur, and this topic has been was eliminated from further consideration in the EA. For further information, refer to the Scoping Memorandum dated August 2018.

IV. Biological Resources

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a) Have a substantial adverse impact, either directly or through habitat modifications, on any species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
b) Have a substantial adverse effect on any off-reservation riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☐	☒	☐
c) Have a substantial adverse effect on federally protected off-reservation wetlands as defined by Section 404 of the Clean Water Act?	☐	☐	☒	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
e) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☒	☐

Refer to Section 4.4, Biological Resources, of the EA.

V. Cultural Resources

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Cause a substantial adverse change in the significance of an off-reservation historical or archeological resource?	☐	☐	☒	☐
b) Directly or indirectly destroy a unique off-reservation paleontological resource or site or unique off-reservation geologic feature?	☐	☐	☒	☐
c) Disturb any off-reservation human remains, including those interred outside of formal cemeteries?	☐	☐	☒	☐

Refer to Section 4.5, Cultural Resources, of the EA.

VI. Geology and Soils

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Expose off-reservation people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii) Strong seismic ground shaking?	☐	☐	☒	☐

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
iii) Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv) Landslides?	☐	☐	☒	☐
b) Result in substantial off-reservation soil erosion or the loss of topsoil?	☐	☐	☒	☐

Refer to Section 4.1, Land Resources, of the EA.

VII. Hazards and Hazardous Materials

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a) Create a significant hazard to the off-reservation public or the off-reservation environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the off-reservation public or the off-reservation environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☒	☐	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed off-reservation school?	☐	☐	☒	☐
d) Expose off-reservation people or structures to a significant risk of loss, injury or death involving wildland fires.	☐	☐	☒	☐

Refer to Section 4.12, Hazardous Materials, of the EA.

VIII. Water Resources

Would the project:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less than Significant Impact	No Impact
a) Violate any water quality standards or waste discharge requirements?	☐	☐	☒	☐

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
b) Substantially deplete off-reservation groundwater supplies or interfere substantially with groundwater recharge such that there should be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion of siltation off-site?	☐	☐	☒	☐
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding off-site?	☐	☐	☒	☐
e) Create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff off-reservation?	☐	☐	☒	☐
f) Place within a 100-year flood hazard area structures, which would impede or redirect off-reservation flood flows?	☐	☐	☒	☐
g) Expose off-reservation people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	☐	☐	☒	☐

Refer to Section 4.2, Water Resources, of the EA.

IX. Land Use

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Conflict with any off-reservation land use plan, policy, or regulation of an agency adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐
b) Conflict with any applicable habitat conservation plan or natural communities conservation plan covering off-reservation lands?	☐	☐	☒	☐

Refer to Section 4.8, Land Use, of the EA.

X. Mineral Resources

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Result in the loss of availability of a known off-reservation mineral resource classified MRZ-2 by the State Geologist that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of an off-reservation locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

The nearest mining operation to the alternative sites is located 8.5 miles to the northeast. Construction of project alternatives would not result in the loss of mineral resources. Thus, no impact to mineral resources would occur, and this topic has been eliminated from further consideration. For further information, refer to the Scoping Memorandum dated August 2018.

XI. Noise

Would the project result in:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Exposure of off-reservation persons to noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☒	☐	☐
b) Exposure of off-reservation persons to excessive groundborne vibration or groundborne noise levels?	☐	☒	☐	☐
c) A substantial permanent increase in ambient noise levels in the off-reservation vicinity of the project?	☐	☒	☐	☐
d) A substantial temporary or periodic increase in ambient noise levels in the off-reservation vicinity of the project?	☐	☐	☒	☐

Refer to Section 4.11, Noise, of the EA.

XII. Population and Housing

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Induce substantial off-reservation population growth?	☐	☐	☒	☐
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere off-reservation?	☐	☐	☒	☐

Refer to Section 4.6, Socioeconomic Conditions/Environmental Justice, and Section 4.13, Cumulative Impacts and Indirect Effects, of the EA.

XIII. Public Services

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered off-reservation governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the off-reservation public services:				
i. Fire protection?	☐	☒	☐	☐
ii. Police protection?	☐	☒	☐	☐
iii. Schools?	☐	☐	☐	☒
iv. Parks?	☐	☐	☒	☐
v. Other public facilities?	☐	☐	☒	☐

i-ii Refer to Section 4.9, Public Services and Utilities, of the EA.

iii Project alternatives would not result in a substantial increase in population and housing, and therefore would not increase the student population. Thus, no impact to schools would occur, and this topic has been eliminated from further consideration in the EA. For further information, refer to the Scoping Memorandum dated August 2018.

iv-v Refer to Section 4.9, Public Services and Utilities, of the EA.

XIV. Recreation

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Increase the use of existing off-reservation neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐

Refer to Section 4.9, Public Services and Utilities, of the EA.

XV. Transportation / Traffic

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Cause an increase in off-reservation traffic, which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume-to-capacity ratio on roads, or congestion at intersections)?	☐	☒	☐	☐
b) Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated off-reservation roads or highways?	☐	☒	☐	☐
c) Substantially increase hazards to an off-reservation design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
d) Result in inadequate emergency access for off-reservation responders?	☐	☐	☒	☐

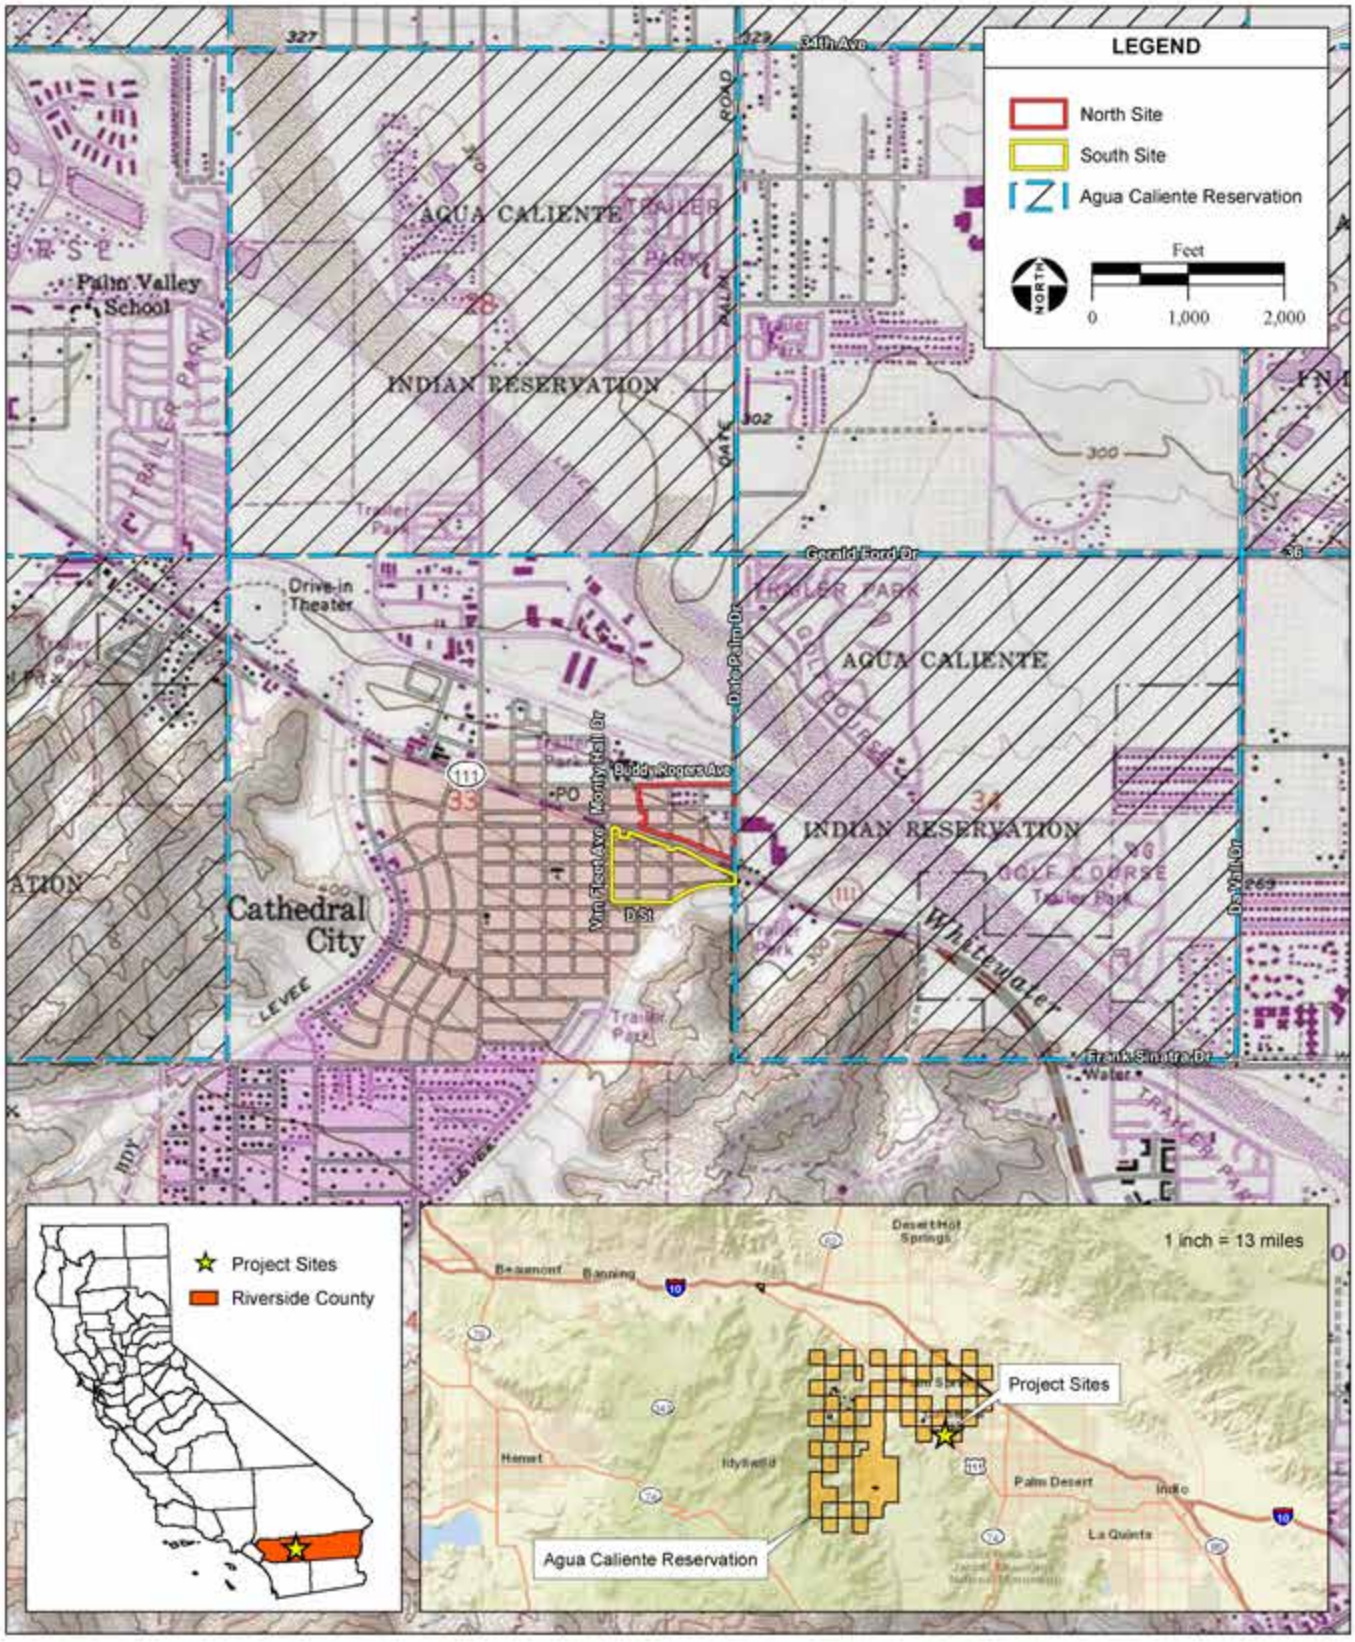
Refer to Section 4.7, Transportation/Circulation, of the EA.

XVI. Utilities and Service Systems

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Exceed off-reservation wastewater treatment requirements of the applicable Regional Water Quality Control Board?	☐	☐	☒	☐
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing	☐	☐	☒	☐

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
facilities, the construction of which could cause significant off-reservation environmental effects?				
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant off-reservation environmental effects?	☐	☐	☒	☐
d) Result in a determination by an off-reservation wastewater treatment provider (if applicable), which serves or may serve the project that it has inadequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐

Refer to Section 4.9, Public Services and Utilities, of the EA.



XVII. Cumulative Effects

Would the project:	*Potentially Significant Impact*	*Less Than Significant With Mitigation Incorporation*	*Less than Significant Impact*	*No Impact*
a) Have impacts that are individually limited, but cumulatively considerable off-reservation? "Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past, current, or probable future projects.	☐	☒	☐	☐

Refer to Section 4.13, Cumulative Impacts and Indirect Effects, of the EA.

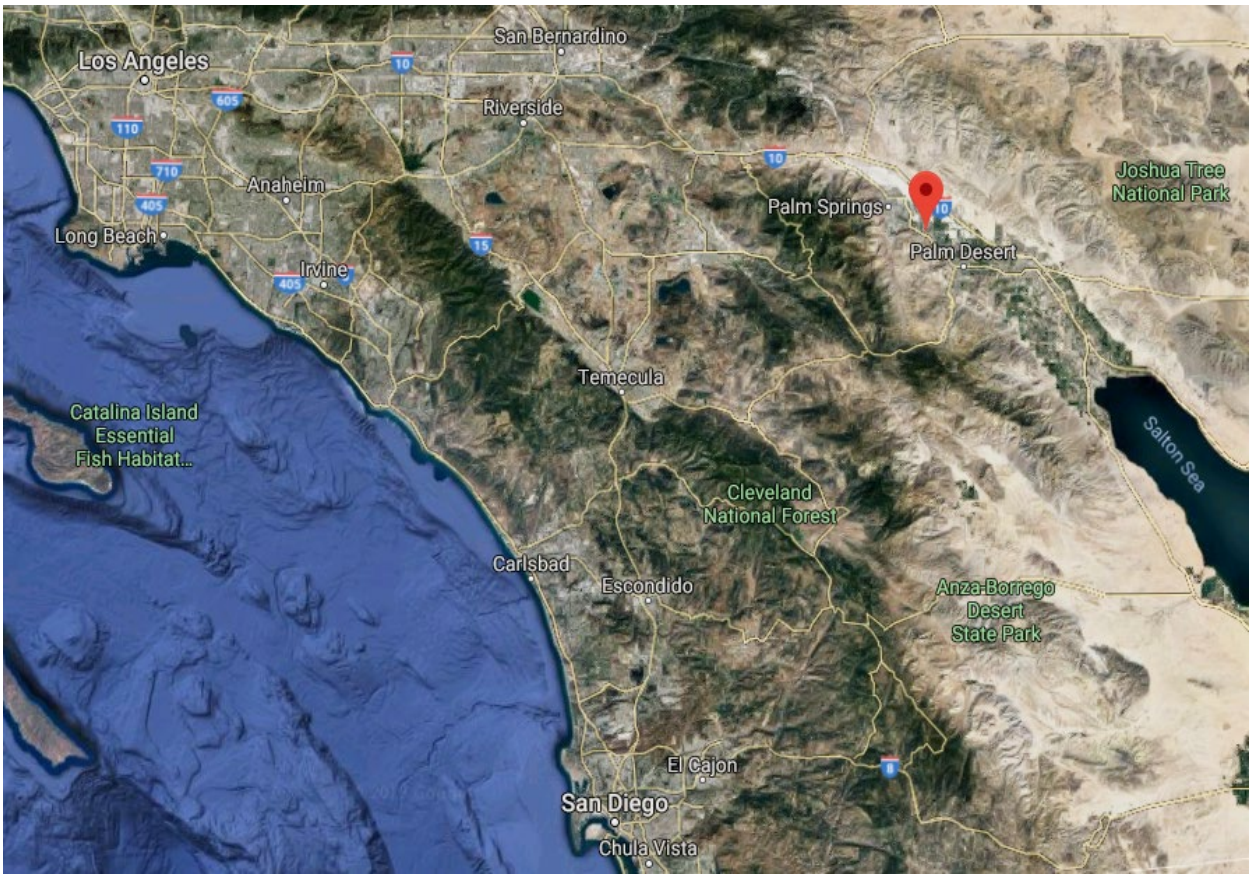
INTRODUCTION

The Agua Caliente Band of Cahuilla Indians ("Tribe") is seeking property in Cathedral City, California for the development of a casino and mixed-use retail space. This analysis will address the economic impact of gaming and retail operations, as well as the one-time impacts of construction. The Cathedral City casino is scheduled to house approximately 500 slot machines and six-eight table games, food and beverage options and a casino retail shop. A mixed-use development consisting of 38,000-90,000-square feet of space is also planned.

The economic impact analysis is based on results in The Innovation Group's gaming and mixed-use retail market assessments located in the first portions of this report. For operating impacts, the Innovation Group's internal models were utilized, the results of which are reasonably consistent with the separate third-party feasibility study commissioned by the Tribe for the Tribe's business planning. Construction cost estimates provided by the Tribe were used to establish the one-time impact of construction activities.

The report covers the following four development options: the proposed project, a reduced intensity alternative, a non-gaming alternative, and an off-site alternative. The proposed project consists of a 65,000-square foot casino building and 60,000-square feet of additional mixed-use buildings. The reduced intensity alternative reduces the size of the mixed-use buildings to 38,000-square feet. The non-gaming alternative consists of 90,000-square feet of mixed used retail development.

The off-site alternative has the same program as the proposed project and is located directly across E. Palm Drive from the proposed site. Therefore, the off-site alternative would have no material difference in socio-economic impact as the proposed project.



General Assumptions

In evaluating prospective gaming and ancillary revenues, the following assumptions were made:

- The facility is expected to open by 2020, with its first full year of operations in 2021;
- No major economic downturn will be experienced in the region during the timeframe of this report;
- The gaming environment in Southern California will not vary substantially from what currently exists; and
- The facility will contain the 500 slot machines and six-eight table games as well as appropriate amenities as noted by the site plans.

Site Analysis

The proposed project site is in the central portion of Riverside County, California, in Cathedral City. Located in the Coachella Valley between Palm Springs and Rancho Mirage, the area is nestled between three mountain ranges, the San Bernardino, San Jacinto, and Santa Rosa. The Coachella Valley, known primarily as a resort destination, is also considered part of the Sonoran Desert. Despite its isolated location, the region is accessible by Interstate I-10 from Los Angeles and Phoenix as well as several State Routes that cut across the mountain ranges.

The proposed project site is in downtown Cathedral City, at the junction of State Highway CA-111 and Date Palm Dr. State Highway 111, known locally as E. Palm Canyon Drive, is a five-lane semi-divided highway that runs through Coachella Valley connecting Interstate I-10 just north of Palm Springs down to the U.S.-Mexico border. The heavily used corridor is lined with small businesses, shopping centers, restaurants and automotive dealerships.

The proposed project site is currently comprised of a few small businesses and several undeveloped lots. A few lots fronting E. Palm Canyon Drive are zoned for Mixed-Use Commercial (MXC) development, although the remaining lots north of Dawes St. are zoned Downtown Residential (DRN). However, the latest land use map revised in 2014 indicates the entire site falls under the Downtown Commercial (DTC) district. The proposed points of entry for the proposed project will be on Allen Ave. from E. Palm Canyon and Buddy Roger Ave. from Date Palm Dr.

The alternative site is directly across E. Palm Canyon Drive from the proposed project site.

The following site plans show the four options: the proposed project, a reduced intensity alternative, a non-gaming alternative, and off-site alternative. The proposed project consists of a 65,000-square foot casino building, 60,000-square feet of additional mixed-use buildings, and adjacent parking lots for up to 1,000 vehicles. The reduced intensity alternative is identical to the proposed project, except it reduces the size of the adjacent mixed-use building to 38,000-square feet and total parking spaces to 850. The non-gaming alternative consists of 90,000-square feet of mixed used retail development. The off-site alternative also consists of a 65,000-square foot casino building and 60,000-square feet of additional mixed-use buildings, identical to the proposed project.

REGIONAL CASINO SUPPLY

The Agua Caliente Band of Cahuilla Indians compete with other Native American gaming facilities in California. The following section presents the legislative background including the various compacts in the state, as well as the competitive landscape in southern California.

Commercial card rooms also operate in California, but there are no commercial card rooms in the Coachella Valley. Commercial card rooms are not permitted to offer slot machines or house-banked card games. The closest card rooms to the subject site are in Blythe and Lake Elsinore, well outside the primary markets of impact relevant to the proposed Cathedral City casinos. No measurable impact on any commercial card room is expected.

Legislative Background of Tribal Gaming in California

Native American gaming in the United States commenced as a result of the National Indian Gaming Regulatory Act (IGRA), which was passed by the U.S. Congress in 1988. It was lead in part due to work from the Cabazon Band of Mission Indians in their break through case known as the Cabazon Decision of 1987. It effectively overturned the existing gaming laws regarding Indian reservations in the U.S. The IGRA provides for a system of joint regulation of Class II gaming on Indian lands by tribes and the Federal Government and establishes a system for compacts between tribes and states concerning the regulation of Class III gaming. By law, Class II gaming is defined as (1) bingo or lotto, whether or not electronic, computer or other technological aids are used; (2) pull-tabs, punch-boards, tip jars, instant bingo, and other similar games if played in the same location as bingo or lotto; (3) non-banking card games that a) state law explicitly authorizes, or does not explicitly prohibit, and are played legally anywhere in the state, and b) players play in conformity with state laws and regulations concerning hours, periods of operation, and limitations on wagers and pot sizes; (4) or other Class II gaming facilities in operation prior to 1988. By default, Class III gaming is defined as gaming activities that are not Class I or II, or those generally referred to as house-banked, which include Vegas-style games such as blackjack, roulette, craps and video lottery terminals, or slot machines.

IGRA established a process of compact negotiation between federally recognized tribes and state governments, which precedes casino development. States have the right to place limitations on the number and type of games as well as the location of casinos (off or on reservation land) and the selling and consumption of alcohol. Class II operations do not require a compact for negotiation and usually consist of bingo halls and non-house-banked gaming devices.

Class III tribal gaming can vary by state, depending upon the results of compact negotiation between federally recognized tribes and individual governors. Some states execute compacts that restrict the games casinos can offer, number or size, as well as tax payment agreements and compact expiration dates.

Existing Properties

The following table presents all existing casinos The Innovation Group considered as competitive properties for the proposed development and its market areas.

Cathedral City Casino Competition and Market

Company	Slots	Tables	Positions	Hotel Rooms	F&B Venues
50 Miles					
Agua Caliente Casino Resort Spa	1,300	36	1,516	340	5

Proposed

There are no other proposed casinos in the market area that have been approved for development. The La Jolla tribe has been attempting to re-open casino operations in a mountainous region of San Diego County, but the remote location would not pose a competitive impact on Cathedral City.

GAMING MARKET ANALYSIS

The Innovation Group conducted a Gaming Market Assessment for the Agua Caliente casino in Cathedral City using a complex drive-time gravity model. The assessment estimates gamer visits and resulting gaming revenue, as well as "win per visit" and "win per position" per day for the facility.

Methodology

In developing this analysis, a gravity model was employed. Gravity models are commonly used in location studies for commercial developments, public facilities and residential developments. First formulated in 1929 and later refined in the 1940s, the gravity model is an analytical tool that defines the behavior of a population based on travel distance and the availability of goods or services at various locations. The general form of the equation is that attraction is directly related to a measure of availability such as square feet and inversely related to the square of the travel distance. Thus, the gravity model quantifies the effect of distance on the behavior of a potential patron and considers the impact of competing venues.

The basic formulation is that the interaction between two or more gaming venues is based on Newton's Law of Universal Gravitation: two bodies in the universe attract each other in proportion to the product of their masses and inversely as the square distance between them. Thus, expected interaction between gaming venue i and market area j is shown as:

$$k \times \frac{P_i \times P_j}{d_{ij}^2}$$

where Pi = the gaming positions in gaming venue i, Pj = the population in market area j, dij = the distance between them, and k = an attraction factor relating to the quality and amenities to be found at each gaming venue in comparison to the competing set of venues. When this formulation is applied to each gaming venue gaming trips generated from any given zip code are then distributed among all the competing venues.

The gravity model included the identification of 18 discrete market areas based on drive times and other geographic features and the competitive environment. Using our GIS software and CLARITAS database[1], the adult population (21 and over), latitude and longitude, and average household income is collected for each zip code.

[1]The GIS software used was MapInfo. This software allows for custom data generally in a tabular format with a geographic identification code (census tract, zip code, latitude and longitude, or similar identifier) to be mapped or displayed and integrated with other geographic census based information such as location of specific population or roadways. MapInfo is one of the most widely used programs in the geographic information systems industry. Nielsen Claritas is a vendor of demographic information located in the United States. Nielsen Claritas provides census demographic and psychographic data on a variety of geographic levels of detail ranging from census block groups and counties to postal zip codes. Their information is updated every six months and includes a current year

Each of these market areas is assigned a unique set of propensity and frequency factors. Gamer visits are then generated from zip codes within each of the areas based on these factors. The gamer visits thus generated are then distributed among the competitors based upon the size of each facility, its attractiveness and the relative distance from the zip code in question. The gravity model then calculates the probabilistic distribution of gamer visits from each market area to each of the gaming locations in the market.

Each travel distance/time is evaluated to determine the likely alternative gaming choices for residents of the region. The model is constructed to include only those alternative venues that are considered to be within a reasonable travel time. These include competing casinos that have the potential to attract patrons from the market. Travel distances and time have been developed through use of our GIS system.

The following section provides a description and definition of the various components of the model.

Gamer Visits

This measure is used to specify the number of patron trips to a gaming market, where an individual can make any number of separate visits in the course of a year. In order to estimate the gamer visits, market penetration rates, made up of the separate measures of propensity and frequency, are applied to the adult population in each zip code. A gamer visit can include more than one visit to a casino.

Propensity

Propensity measures the percentage of adults who will participate in casino gaming within the zip code. This varies based upon a number of factors, which includes the number of gaming venues, their type (i.e. landbased versus cruising riverboat versus dockside riverboat), games permitted, availability of other entertainment and leisure options, and most importantly distance from a gaming venue. Propensity in the inner market areas from 0-50 miles can vary between the high thirty per cent range in a single cruising riverboat market to the fifty percent range, or more, for multiple land based casinos with a well-developed array of amenities.

Frequency

This measures the average number of visits that an adult will make annually to casinos in the subject market. Frequency is a function of annual gaming budget as indicated by income variations, the number of venues in the market, the type of gaming facility and most importantly distance from a gaming venue.

---

estimate and provides a five year forecast for the future. The Innovation Group has utilized this data for inputs to its models for the last six years and has purchased full access to their demographic database for the entire United States.

MPI (Market Potential Index)

Propensity also varies as a function of each market's average market potential index (MPI) score. MPI scores are generated by Simmons Survey, a respected consumer research firm that conducts a nationwide survey of consumer behavior, including propensity to gamble at a casino. This score is an indication of the degree of likelihood that a person will participate in gaming based upon their lifestyle type. The MPI score inflates or discounts the participation rate of each zip code. For example, if a market area has an overall participation rate of 4.0 (propensity of 40% times frequency of 10), an MPI score of 120 for a particular zip code would effectively inflate the participation rate of that zip code to 4.8 (4.0 times 120%). The overall MPI score for the market area is a weighted average of all the zip codes within the area.

Win per Visit

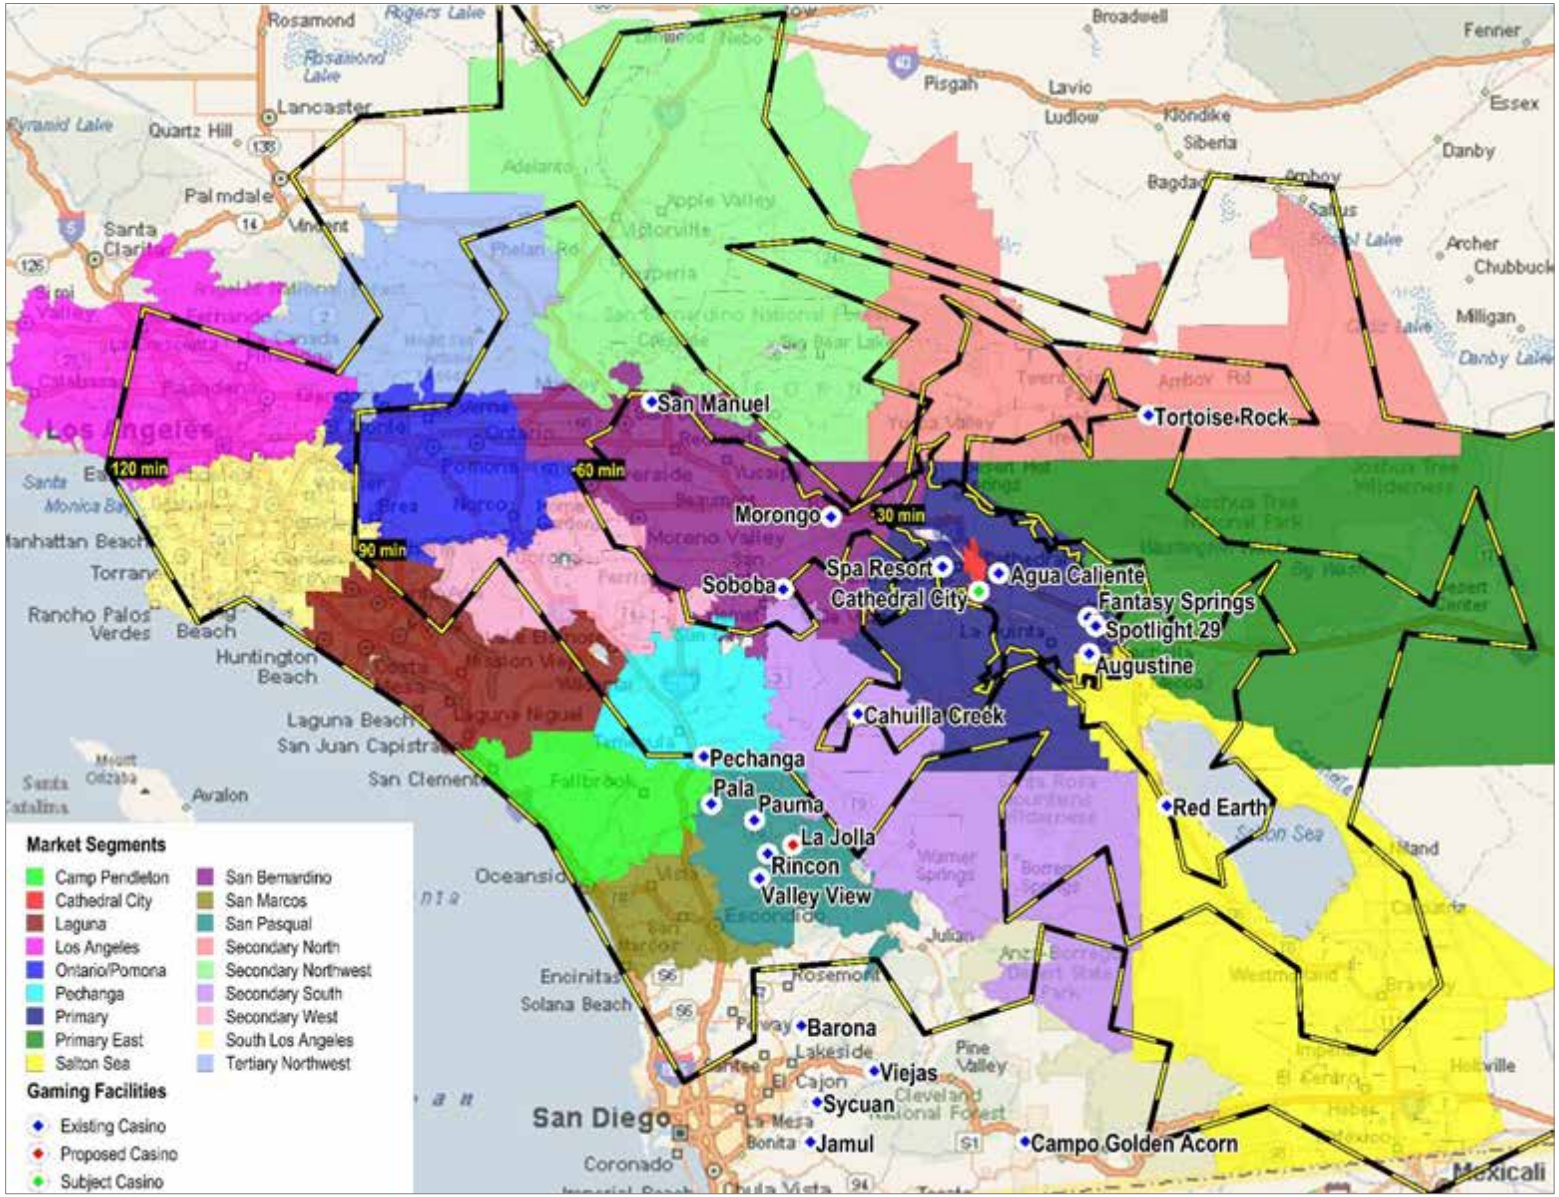
Win per visit varies not only by gaming jurisdiction, but also in some cases by individual facilities. Normatively, win per visit is a function of distance and income. Gamers traveling greater distances tend to spend more per visit, typically making fewer gamer visits on average.

Attraction Factors

Attraction factors measure the relative attraction of one gaming venue in relation to others in the market. Attraction factors are applied to the size of the gaming venue as measured by the number of positions it has in the market. Positions are defined as the number of gaming machines plus the number of seats at gaming tables. A normative attraction factor would be one. When this is applied to the number of positions in a gaming venue there is no change in the size of the gaming venue as calculated by the model and hence its attraction to potential patrons. A value of less than one adjusts the size of the gaming venue downwards and conversely a value greater than one indicates that the gaming venue has characteristics that make it more attractive. Attraction factors can be based on a number of components including branding, the level and effectiveness of marketing efforts, and the level of quality and amenities of a facility. Attraction factors are also adjusted to model the presence of natural and man-made boundaries which impact ease of access and convenience of travel in the market area.

The sensitivity of the model to changes in these factors is not in the nature of a direct multiplication. For example, a doubling of the attraction factor will not lead to a doubling of the gamer visits attracted to the site. It will however cause a doubling of the attractive power of the gaming venue, which is then translated via non-linear equations into an increase in the number of gamer visits attracted to the gaming venue. This is based upon the location, size and number of competing gaming venues and their relationship to the market area to which the equation is applied. The variation of these factors is based upon The Innovation Group's experience in developing and applying these models, and consideration of the existing visitation and revenues. The latter represents the calibration of the model and has been accomplished by adjusting attraction factors to force the model to recreate the existing revenues and patron counts. In this case attraction factors have been adjusted for each casino for each market area. This is based upon known visitation patterns.

Market Carve-out



The Cathedral City market has been carved into 18 distinct market areas, from which it could be expected that different participation rates may be expected depending on the level and location of competition that is present in the market currently and in the future. The following map and table show the market areas and their respective adult population (21 and over) and average household income.

Market Area Demographics

	Adult Pop 2017	Adult Pop 2022	CAGR 2017-2022	Average HHI 2017	Average HHI 2022	CAGR 2017-2022

Cathedral City Market Area

Calibration

The modeling starts with a base calibration. Inputs are entered into the calibration model to recreate the estimated gaming visits and revenue for a previous 12-month period, in this case calendar year 2017. The calibration was performed with gaming revenue and player data provided by the Tribe for the Agua Caliente Casino (ACC) and the Spa Resort. Gaming revenue for competing casinos was estimated based on the Innovation Group's extensive experience in the region, having worked for several of the major competitors in the market.

The following table shows the rates for propensity, frequency, and win per visit (WPV) by market area that were used to re-create the actual conditions in the Base 2017 model. WPV has been varied based on differences between market areas in average household income and travel time.

Participation Rates Base 2017

	Propensity	Frequency	WPV
Cathedral City	44.1%	18.4	$73
Primary East	23.9%	7.3	$81
Secondary Northwest	29.6%	9.7	$80
San Bernardino	35.8%	14.0	$79
Primary	46.1%	18.8	$78
Ontario/Pomona	31.1%	11.1	$85
Secondary North	37.5%	15.0	$74
Secondary South	35.9%	14.1	$76
Secondary West	31.8%	11.6	$85
Tertiary Northwest	30.3%	10.7	$82
Pechanga	38.5%	15.7	$82
South Los Angeles	24.9%	7.9	$85
Laguna	24.5%	7.6	$92
Los Angeles	24.5%	7.6	$87
Camp Pendleton	32.9%	12.2	$86
San Pasqual	38.7%	15.8	$80
San Marcos	34.5%	13.2	$84
Salton Sea	28.8%	9.9	$79

Source: The Innovation Group

The following table shows gravity model gaming visits and revenues for the base calibration. The revenues reflect the total potential gaming revenue from the defined market area in 2017.

Gravity Model Base 2017: Total Market

	Gaming Visits	WPV	Revenues (MMs)
Cathedral City	326,606	$73	$23.9
Primary East	26,797	$81	$2.2
Secondary Northwest	1,027,389	$80	$82.3
San Bernardino	5,444,746	$79	$427.8
Primary	2,452,132	$78	$192.2
Ontario/Pomona	5,423,077	$85	$463.0
Secondary North	234,309	$74	$17.4
Secondary South	216,828	$76	$16.6
Secondary West	1,480,922	$85	$125.6
Tertiary Northwest	238,980	$82	$19.6
Pechanga	1,655,239	$82	$135.8
South Los Angeles	7,726,391	$85	$654.0
Laguna	3,336,804	$92	$306.2
Los Angeles	7,424,864	$87	$649.1
Camp Pendleton	732,048	$86	$63.0
San Pasqual	371,093	$80	$29.7
San Marcos	2,115,080	$84	$178.1
Salton Sea	366,970	$79	$29.1
Total	**40,600,274**	**$84**	**$3,415.6**

Source: The Innovation Group

The next step in the analysis is to create a base model for 2021 using projected population growth. This forecast represents the baseline against which the impact of adding the subject project will be measured.

Gravity Model Base 2021: Total Market

	Gaming Visits
Cathedral City	345,693
Primary East	27,182
Secondary Northwest	1,092,279
San Bernardino	5,738,739
Primary	2,598,212

Source: The Innovation Group

Forecast Results Alternatives A, B and D

As discussed, we developed a comprehensive drive-time gravity model which forecasts local market gamer visits and gaming revenue. The gravity model weighs the impact of the proposed Cathedral City casino based on its size in terms of gaming positions combined with an attraction factor which measures quality and scope. The additional gaming location would slightly enhance the convenience of gaming for residents in the Cathedral City market area, and thus slightly increase their propensity and frequency. There is no difference in the casino development in the three gaming alternatives (A, B and D); therefore, the results in this section apply to all three alternatives.

The following table shows the participation rates used in the forecasted scenario (Alternatives A, B and D).

Participation Rates Forecast 2021: Alternatives A, B and D

	Propensity	Frequency
Cathedral City	44.4%	18.6
Primary East	23.9%	7.3
Secondary Northwest	29.6%	9.7
San Bernardino	35.8%	14.0
Primary	46.1%	18.8
Ontario/Pomona	31.1%	11.1
Secondary North	37.5%	15.0
Secondary South	35.9%	14.1
Secondary West	31.8%	11.6
Tertiary Northwest	30.3%	10.7
Pechanga	38.5%	15.7
South Los Angeles	24.9%	7.9
Laguna	24.5%	7.6
Los Angeles	24.5%	7.6
Camp Pendleton	32.9%	12.2
San Pasqual	38.7%	15.8
San Marcos	34.5%	13.2
Salton Sea	28.8%	9.9

Source: The Innovation Group

The gravity model apportions gamer visits based on the travel time between the market segments and the gaming facilities, while considering the size (gaming positions), quality, and scope of each competitor. The model gauges the quality and scope of the competitive set using an attraction factor. The proposed casino is estimated to capture the majority of its gamer visits from the Primary market area.

Gravity Model Forecast 2021 Alternatives A, B and D

Market Segments	Total Market Gamer Visits	Subject Capture	Subject Gamer Visits
Cathedral City	351,374	23.8%	83,608
Primary East	27,182	3.2%	870
Secondary Northwest	1,092,279	1.2%	13,340
San Bernardino	5,738,739	0.5%	28,243
Primary	2,598,212	9.1%	235,996
Ontario/Pomona	5,664,935	0.4%	23,857
Secondary North	242,806	3.5%	8,533
Secondary South	227,526	0.6%	1,472
Secondary West	1,565,486	1.0%	16,315
Tertiary Northwest	252,792	1.6%	3,943
Pechanga	1,803,172	0.2%	4,130
South Los Angeles	8,046,023	0.4%	34,554
Laguna	3,503,107	0.5%	17,927
Los Angeles	7,701,894	1.0%	77,146
Camp Pendleton	770,344	0.3%	2,035
San Pasqual	390,276	0.1%	245
San Marcos	2,224,758	0.1%	3,033
Salton Sea	384,059	1.5%	5,792
Total	**42,584,963**	**1.3%**	**561,040**

Including capture of traffic and tourism, total visits are estimated at more than 586,000.

Total Gaming Visits 2021 Alternatives A, B and D

Local Market	561,040
Out-of-market, Traffic & Tourism	25,247
Total	**586,287**

MIXED-USE RETAIL MARKET ASSESSMENT

The Mixed-Use Retail Assessment that follows provides market research conducted by The Innovation Group to determine the feasibility of retail development on the proposed sites. We tested the feasibility of a mixed-used retail development, including food & beverage outlets, ranging in size from 38,000 square feet to 90,000 square feet. As described below, we utilized a "GAP Analysis" report from Environics Analytics to conduct our assessment.

Existing Conditions

To understand the current retail market dynamics within Cathedral City, we consulted a database of consumer-expenditure and retail-sales data that supports a summary of the under- or over-supply of different retail segments in the area.

The following table presents the results of this "GAP Analysis" for all retail sectors and sub-sectors. At first glance, the table indicates that there is a retail over-supply in Cathedral City of nearly $190 million. This over-supply, however, is due in large part to the significant over-supply in the "Motor Vehicle and Parts Dealers" category. This is likely due to the large number of auto dealerships and service centers in Cathedral City. This agglomeration of car dealers and service centers likely serves as a destination for the greater regional area. Removing this category from the GAP Analysis results in a retail under-supply for Cathedral City.

Cathedral City GAP Analysis, 2018 Estimate (thousands)

Store Type	Demand	Supply	Opportunity
Total Retail Sales Incl. Eating and Drinking Places	$768,323	$955,438	($187,115)
General Merchandise Stores	$97,001	$66,821	$30,180
Motor Vehicle and Parts Dealers	$134,243	$547,480	($413,238)
Foodservice and Drinking Places	$98,700	$74,429	$24,271
Clothing and Clothing Accessories Stores	$34,190	$13,569	$20,621
Building Material, Garden Equip Stores	$52,719	$17,944	$34,775
Food and Beverage Stores	$105,193	$82,645	$22,548
Furniture and Home Furnishings Stores	$14,036	$24,676	($10,640)
Sporting Goods, Hobby, Book, Music Stores	$11,597	$2,919	$8,678
Non-Store Retailers	$80,836	$6,517	$74,319
Electronics and Appliance Stores	$12,998	$7,460	$5,539
Health and Personal Care Stores	$45,700	$24,215	$21,486
Gasoline Stations	$65,407	$75,901	($10,494)

Source: Environics Analytics, The Innovation Group

Of course, not all the retail types included above would be appropriate as part of the development strategy under consideration. We would, for example, not include "Non-Store Retailers," which includes internet retail, traveling salesmen, kiosks, and other miscellaneous forms of retail trade. Excluding the "Motor Vehicle and Parts Dealers" as well as the "Non-Store Retailers" categories results in a retail under-supply of nearly $150 million. This is summarized in the table below.

Cathedral City GAP Analysis (Excluding Motor Vehicle and Parts Dealer & Non-Store Retailers), 2018 Estimate (thousands)

Store Type	Demand	Supply	Opportunity
Total Retail Sales Incl. Eating and Drinking Places	$537,541	$390,579	$146,962
General Merchandise Stores	$97,001	$66,821	$30,180
Foodservice and Drinking Places	$98,700	$74,429	$24,271
Clothing and Clothing Accessories Stores	$34,190	$13,569	$20,621
Building Material, Garden Equip Stores	$52,719	$17,944	$34,775
Food and Beverage Stores	$105,193	$82,645	$22,548
Furniture and Home Furnishings Stores	$14,036	$24,676	($10,640)
Sporting Goods, Hobby, Book, Music Stores	$11,597	$2,919	$8,678
Electronics and Appliance Stores	$12,998	$7,460	$5,539
Health and Personal Care Stores	$45,700	$24,215	$21,486
Gasoline Stations	$65,407	$75,901	($10,494)

Source: Environics Analytics, The Innovation Group

As illustrated in the table above, the categories with the largest retail opportunities include "Building Material, Garden Equipment Stores," "General Merchandise Stores," and "Foodservice and Drinking Places."

Given the development size range in consideration (38,000 sq. ft. to 90,000 sq. ft.), it is unlikely that that a retail offering in the "Building Material, Garden Equipment Stores" would be an appropriate fit for the development. The average store size for both Home Depot and Lowe's, for instance, are over 100,000 square feet.

Similarly, the "General Merchandise Store" category generally includes Big Box retailers, such as Wal-Mart and Target, which typically have an average store size above 100,000 square feet.

Focusing on other retail categories with retail under-supply—"Foodservice and Drinking Places," "Clothing and Clothing Accessories Stores," and "Health and Personal Care Stores"—indicates a retail opportunity of over $66 million in Cathedral City, as illustrated in the table below. These categories were chosen to assess the potential retail opportunity as they fit the "mixed use" nature of the development and will likely be complementary to the gaming development.

Cathedral City GAP Analysis - Mixed Used Development, 2018 Estimate (thousands)

Store Type	Demand	Supply	Opportunity
Total Retail Sales Incl. Eating and Drinking Places	$178,590	$112,212	$66,378
Foodservice and Drinking Places	$98,700	$74,429	$24,271
Clothing and Clothing Accessories Stores	$34,190	$13,569	$20,621
Health and Personal Care Stores	$45,700	$24,215	$21,486

Source: Environics Analytics, The Innovation Group

Analysis

The section outlines our analysis for the potential feasibility of a mixed-use retail development at the proposed site and off-site alternative. Our analysis considers the supply-demand dynamics described above as well as the average sales per square foot statistics for a variety of retail operators that could operate within the development.

Assessment

To assess the feasibility of the mixed-use retail development we first conducted an analysis of the average sales per-square-foot (psf) of typical mixed use development retail tenants. The comparable set we analyzed ranged from fast food retailers to processional care services among others. As shown below, the highest sales psf came from quick service or fast food restaurants with Chipotle having the highest sales psf at over $750. The average sales psf for the comparable set is just over $450.

Retail Average Sales Per Square Feet

Company or Business Type	Average Sales Per Square Feet
Chipotle	$767
Jack in The Box*	$570
Qdoba Mexican Grill*	$570
Wendy's*	$522
Francesca's	$517
Dunkin' Doughnuts	$403
Vitamin Shoppe	$375
GNC	$316
Five Below	$273
Regis Salons	$202
Total Average	**$452**
Average without Top Two Performers	***$397***

Source: Company 10K, The Innovation Group

*Only represents company owned stores

Next, we assessed this figure against the data provided from the GAP Analysis in order to understand if Cathedral City could sustain the average sales psf at a development that ranging from 38,000 square feet to 90,000 square feet in size. Specifically, the GAP Analysis provides data on local market consumer expenditure as well as local market retail sales broken out by industry classification. As described previously, the GAP Analysis then shows the opportunity/GAP in the market for each particular industry. If it is positive it shows there is room for growth; however, if it is negative it means the market is already saturated with that business type. Therefore, the GAP Analysis allows The Innovation Group to quantify if there is enough demand to sustain a development based upon demand in a given market. As noted above, we focused the GAP Analysis on the "Foodservice and Drinking Places," "Clothing and Clothing Accessories Stores," and "Health and Personal Care Store."

Using data from the GAP Analysis for Cathedral City, displayed previously, we were able to calculate the maximum retail area available to build. We found that there is an opportunity for a mixed used development that would generate annual sales in excess of $66.4 million. Applying this to the comparable set's average sales psf at approximately $452, we determined that the maximum size for the development that could be sustained in the local market would be slightly above 147,000 square feet. Based on this analysis, we believe a 38,000 sq. ft. to 90,000 sq. ft. mixed used retail development presents a feasible option for the proposed retail development.

Potential SQFT: Mixed Used Development

GAP Analysis ($000)*	$66,378
Comparable Average Sales PSF	$452
Maximum Potential SQFT	**147,016**

Sales Forecast

For the purpose of providing inputs into the economic and community impact analysis, we have utilized the following revenue forecasts based on the sales psf average of $397 as shown in a previous table, with a further adjustment factor applied to the non-gaming alternative based on the larger size and lack of casino anchor. As shown on the maps in the Site Analysis section, a portion of the mixed-use space is to be set aside for tribal operations, and therefore has been discounted from the gross square footage. At the direction of the Tribe, the mix of remaining space is forecast to be 60% food and beverage and 40% retail.

Sales Forecast: Mixed Used Development

	Full Build	Reduced	Non-Gaming
F&B	$13,633,620	$9,057,300	$18,705,708
Retail	$9,089,080	$6,038,200	$12,470,472

Source: The Innovation Group

COMPETITIVE EFFECTS ANALYSIS

Three possible categories of substitution effects would arise from development of the Cathedral City project:

1. The casino's impact on other casinos in the region;
2. The casino's impact on local non-gaming businesses; and,
3. The mixed-use retail development's impact on local non-gaming businesses.

Impacts on Other Casinos

Based on the results of the gravity model analysis—that is, comparing the Cathedral City forecast model to the future baseline—the Innovation Group has estimated the impact the Cathedral City would have on other casinos in the region.

First, we assess the impact on the Tribe's two existing casinos: Agua Caliente (ACC) & Spa Resort. As noted, the baseline model was calibrated to existing performance at these two casinos. Revenue at competing casinos was estimated based on our extensive experience in the region. The table below depicts the impact that Cathedral City is projected to have on gaming revenues at Agua Caliente's two existing properties. It should be noted that the baseline forecasts for ACC and Spa assume expansions at both facilities. A new hotel is being developed at the Spa property in Palm Springs, along with gaming expansion, and preliminary plans for the ACC include additional gaming space and hotel rooms.

Substitution Effect 2021 on Agua Caliente Band (Alternatives A, B and D)

Agua Caliente	Spa Resort Casino
-8.5%	-6.2%

Cathedral City's market penetration is expected to impact other competitors in the region as well. The table below summarizes the anticipated decline in revenues at competitive facilities within a 90-minute radius, based on the gravity model comparing the Cathedral City forecast model results to the future baseline. The largest impacts would be felt to the East at the three casinos in the Coachella area, but even those impacts are estimated at less than 2%.

Substitution Effect on Regional Competitors 2021 (Alternatives A, B and D)

Fantasy Springs	Augustine	Spotlight 29	Red Earth	Tortoise Rock	Cahuilla Creek	Morongo	San Manuel	Soboba	Pechanga
-1.8%	-1.6%	-1.7%	-0.8%	-0.8%	-0.7%	-0.6%	-0.4%	-0.4%	-0.3%

It should be noted that these substitution effects are "but-for" effects, not year-over-year effects. In other words, they are 2021 revenue forecasts measured against a 2021 baseline assuming Cathedral City does not open. On a year-over-year basis, regional competitors are not generally expected to notice declines.

Impact on Local Businesses

Casino Impacts: Academic Research

Casino development sometimes elicits concern, which research has dispelled, that substitution of consumer spending (the substitution effect) will impact local businesses, especially smaller "mom and pop" retail, restaurant and entertainment businesses. This argument has its origins in long-ago controversies regarding Atlantic City. Clyde Barrow, Director for the Center of Policy Analysis at the University of Massachusetts Dartmouth, traces the Atlantic City "myth" to a misinformation campaign by the Atlantic City Restaurant and Tavern Association "to win more concessions for its members from the city's casino hotels."[2]

Research by Kathryn Hashimoto and George Fenich found that contrary to a negative impact, casinos in Atlantic City actually reversed a downward trend:

> The number of eating and drinking establishments in Atlantic County was actually declining in the years *prior* to the opening of the first casinos. However, this decline was actually reversed after the first casinos opened, when the number of non-casino eating and drinking places increased from 415 in 1978 to 569 in 1994 (37 percent). Moreover, in the 11 years since the Hashimoto and Fenich study, the number of non-casino eating and drinking places in Atlantic County has continued to increase to 625 (9.8 percent) in 2004 with 9,020 employees (36 percent).[3]

For more information on this research, see Appendix C.

Given the extensive supply of gaming already operating in the local area, no material substitution effect on local businesses is projected to result from customer spending at the casino.

Moreover, the proposed Cathedral City development is anticipated to have a positive impact on local businesses. In fact, it is expected to anchor further development in the surrounding area, which as can be seen on the site map on page 4 is largely undeveloped. The City's General Plan and Date Palm Drive Corridor Connector Plan has designated the location as an important node for commercial development.

[3] Ibid.

Casino Impact on the Local Hotel Market

Local businesses in Cathedral City are expected to benefit from casino development. Local hotels in particular would benefit from the introduction of a new market segment: casino-related room demand. As shown in numerous casino jurisdictions across the country, non-casino hotels benefit even when casinos operate their own hotel.

Casino development increases room demand at non-casino hotels even when casino hotels are built. For example, in Shreveport-Bossier City, Louisiana, hotel occupancy rates averaged about 60% before casinos but rose to 74% by 2005.[4] Such a boost to non-casino hotel demand results from the overall increased visitation to the area and the overflow from peak periods when casino hotels are fully booked. On the Mississippi Gulf Coast occupancy rates in non-casino hotels remained steady at 55% despite a 143% increase in total rooms, including a 60% increase in non-casino hotel rooms.[5]

Within the City of San Diego, the Transient Occupancy Tax (TOT) has grown substantially since recovering from the 2009-10 recession effects, despite the opening of several large hotels at casinos on the outskirts of the market (and not within the City), including an 1,100-room hotel at Harrah's Rincon. Furthermore, HVS reports that hotel occupancy in the San Diego market posted its third straight record occupancy in 2016 at 77%. RevPAR (revenue per available room, a measure of hotel performance) has also seen steady increases since the recession.[6]

City of San Diego, CA Transient Occupancy Tax Collections (MMs)

2008	2009	2010	2011	2012	2013	2014	2015	2016	2017
$160.24	$136.32	$128.11	$139.77	$150.82	$157.03	$170.17	$186.24	$202.80	$221.10

Source: San Diego Tourism Authority

The Coachella Valley is known as a major resort destination in the southwest. As such, there is an abundant supply of local accommodations. In the Coachella Valley surrounding Cathedral City, there are a total of 131 hotels, with 65 of those hotels falling within the Palm Springs city limits. The hotels provide a total of 14,434 hotel rooms in the cities surrounding Cathedral City, with over 6,500 of those rooms classified as being either upscale or upper-upscale. The table below shows the competitive supply within the region.

[4] Shreveport-Bossier Convention and Tourism Bureau 2011 Lodging Report.

Regional Hotel Supply

Name of City	Number of Hotels	Total # of Hotel Rooms
Desert Hot Springs, CA	16	679
Indian Wells, CA	4	1,460
Indio, CA	17	1,309
La Quinta, CA	5	1,108
Palm Desert, CA	16	2,555
Palm Springs, CA	65	5,364
Rancho Mirage, CA	7	1,843
Thousand Palms, CA	1	116
Total	**131**	**14,434**

Source: The Innovation Group; Smith Travel Research

The local supply includes 6 hotels within the Cathedral City, California area for a total of 764 rooms as provided by Smith Travel Research (STR). The market has several upscale hotels and a few economy class to upper-midscale options. The Red Lion Inn & Suites is the closest property to the proposed casino site, only 0.5 miles south on E. Palm Canyon Drive. However, as part of the downtown redevelopment initiative, the city has announced plans for a 100-room nationally branded hotel to be built on the vacant parcel directly across from the casino on Date Palm Drive (not the Alternative site D). This planned hotel as well as the other local hotels would be expected to benefit by overnight demand from casino patrons.

Local Hotel Supply

Name of Establishment	City & State	Class	Rooms
Travelodge Cathedral City	Cathedral City, CA	Economy Class	43
Red Lion Inn & Suites Cathedral City	Cathedral City, CA	Midscale Class	97
Holiday Inn Express & Suites Cathedral City Palm Springs	Cathedral City, CA	Upper Midscale Class	94
DoubleTree Golf Resort Palm Springs	Cathedral City, CA	Upscale Class	289
Staybridge Suites Cathedral City Golf Resort	Cathedral City, CA	Upscale Class	197
CCBC Resort Hotel	Cathedral City, CA	Upscale Class	44
Total			**764**

Source: The Innovation Group; Smith Travel Research

It should also be noted that the proposed Cathedral City development will not include a casino hotel; therefore, we would expect positive impact on local hotels in the Cathedral City market beyond what would be experienced if the casino were to include a hotel.

Mixed-Use Retail Impact

As discussed in the Mixed-Use Retail Assessment, there is currently a large gap in Cathedral City between retail sales and consumer spending in most retail categories except in the categories of motor vehicles, furniture, and gas stations, implying a limited supply of retail opportunities for residents of Cathedral City in other categories.

Further, as noted, the proposed development is planned to be 60% food and beverage development, for which there is a $24 million opportunity according to the GAP analysis, with the remaining and 40% expected in the categories Clothing and Clothing Accessories Stores and Health and Personal Care Stores, for which there is a $42 million opportunity according to the GAP analysis.

The sales forecast for all four scenarios is well within these GAP opportunities, which would significantly reduce the potential for material impacts on local businesses. Moreover, as detailed in the Gaming Market Analysis, most gaming visits are projected to be derived from outside of Cathedral City, and a portion of the retail sales would be attributed to these visitors in Alternatives A, B and D. This outside spending would not occur in Alternative C, which also has the largest planned retail development of the four alternatives. As a result, the greatest potential for substitution effects on local businesses would be expected from Alternative C.

ECONOMIC IMPACT ASSESSMENT

Methodology

This economic impact assessment evaluates the costs and benefits to Riverside County that could be expected during the ongoing operational stage as well as the construction phase of the proposed development. The economic effects that accrue from the annual operations of the casino are termed ongoing impacts, as they are revenues, jobs, earnings, and tax dollars that can be expected to accrue annually as a result of gaming operations and the attraction of gaming patrons. The construction phase of the project is considered a one-time benefit to the area. This refers to the fact that these dollars will be introduced into the economy only during the construction phase of the project and cannot be expected to continue to provide permanent jobs or revenues beyond the project's completion.

Direct, indirect, and induced impacts are assessed for both ongoing operations and the construction of the facility. Additionally, impacts are assessed for ongoing operations from the mixed-use retail space in the different building program scenarios.

Direct impacts result from the economic activity that occurs on the property itself. In the case of ongoing operations, these expenditures ultimately derive from patron spending. The direct impact effectively represents the expenditures made by the facility in the form of employee compensation, purchases of goods and services, and patron spending on the food, beverage, hospitality, and retail sectors of the complex. Patron spending on the casino floor has been discounted to exclude promotional allowances as well as payments to local governments, since those payments represent direct transfers to government coffers and are accounted for in the fiscal impact analysis.

Indirect impacts reflect the economic spin-off that is made possible by the direct purchases of the facility. Local firms providing goods and services to the proposed facility will have incomes partially attributable to these gaming operations. These dollars contribute to the vendors' spending power, and therefore the incremental increase in their spending attributable to this income is considered an indirect impact. These additional expenditures and revenues continue to flow throughout the economy in a rippling effect.

Induced impacts result from the direct impacts on labor income. As household incomes are affected by direct employment and spending, this money is re-circulated through the household spending patterns causing further local economic activity.

It is standard practice to evaluate local impacts at the county level since that is the geographic level at which Census data is organized and economic impact multipliers are available. However, although by necessity the results are presented for Riverside County, it is estimated that the majority of economic impacts will accrue to Cathedral City and its residents. The Innovation Group obtained data from IMPLAN for zip code 92234 (Cathedral City) and tested the results against the Riverside County results.

Direct effects from operations are attributed 100% to the host geography regardless of the geography's size; for example, the direct casino employment takes place in Cathedral City as well

as in Riverside County. Therefore, the direct effects are unchanged from the county to the city level. However, the multiplier effects (indirect and induced) for Cathedral City are approximately half of those estimated for Riverside County. For construction impacts, more leakage occurs out of Cathedral City. Some direct effects occur elsewhere in the county (estimated by IMPLAN to be 5%), and the multipliers for indirect and induced effects are lower (43% on average of the county multipliers).

For the full analysis, the county level data is preferred because it is a more fulsome data set[7] and because some impacts will occur elsewhere in Riverside County outside the city of Cathedral City.

The economic impact analysis results in the following outputs:

1. Employment—or number of total jobs supported. This includes full and part-time workers (headcount).*

2. Labor Income (Earnings/Salaries) in IMPLAN consists of two parts. First is the total payroll cost of the employee paid by the employer: wage and salary, all benefits, and employer-paid payroll taxes (e.g. employer side of social security, unemployment taxes, etc). Second, proprietor income consists of payments received by self-employed individuals and unincorporated business owners.

3. Value Added is comprised of Labor Income, Indirect Business Taxes, and Other Property Type Income. It demonstrates an industry's value of production over the cost of its purchasing the good and services required to make its products. Value Added is often referred to as Gross Regional Product (GRP). Value Added = Labor Income + Indirect Business Taxes + Other Property Type Income.

4. Output (Total Spending) represents the value of industry production. In IMPLAN these are annual production estimates for the year of the data set and are in producer prices. For manufacturers, this will be sales plus/minus change in inventory. For service sectors production = sales. For retail and wholesale trade, output = gross margin and not gross sales. Output = Intermediate Inputs + Value Added.

---

[7] As explained by IMPLAN: "Due to its internal consistency and ability to account for spatial variables like the proximity and size of alternative markets, the Trade Flow method is presumed to be superior to the Econometric method for estimating Regional Purchasing Coefficients (RPCs). For this reason, it is the default and recommended method of trade flow estimation for all state- and county-level models. For the US total (where domestic interregional trade estimation is not required), RPCs are derived using Supply/Demand pooling. Zip Code level RPCs are derived using the Econometric RPC method as trade flow data is not currently available at the ZIP Code level."

* Employment is headcount (or total number of jobs, full and part time) in keeping with US Census data and IMPLAN. Since it includes part-time employees, headcount is a higher number than FTE (full-time equivalent).

Economic impact analyses use industry multipliers that have been developed based on U.S. Census data to determine the indirect impacts that occur from direct expenditures. The Innovation Group has utilized IMPLAN 3.0 software and data for the purpose of these calculations. IMPLAN accounts closely follow the accounting conventions used in the "Input-Output Study of the U.S. Economy" by the Bureau of Economic Analysis.

However, as noted by the Center for Policy Analysis at the University of Massachusetts Dartmouth in a study from 2004, IMPLAN multipliers are lower than those calculated by the Bureau of Economic Analysis:

> The IMPLAN modeling system accounts for substitution effects by applying local and regional multipliers to disposable personal income only. The modeling system's balanced accounts matrix insures that disposable income which is spent on one type of good or service cannot be spent simultaneously on some other good or service. The application of multipliers to disposable personal income and the imposition of a balanced account matrix results in multiplier effects that are substantially less than those recommended in the U.S. Bureau of Economic Analysis Regional Input-Output Modeling System II (RIMS II). … Thus, the indirect and induced impacts represent *net* new job creation and not merely a transfer of jobs from one sector to another.

ONGOING IMPACTS

The ongoing economic effects result from the casino operations and retail development operations. As discussed, the projected gaming revenue was adjusted, removing revenue sharing payments and promotional allowances in order to establish the gaming input. Projected food and beverage and casino retail revenue figures were used as well.

Casino Operations

The Agua Caliente Band of Cahuilla Indians is seeking to purchase property in Cathedral City, California for the development of a casino and mixed-use retail space. The casino is scheduled to house approximately 500 slot machines, six-eight table games, food and beverage outlets and a small retail shop. A combination of surface and structured parking will accommodate up to 1,000 vehicles.

Operating Inputs

The first step is to analyze the impact generated by direct operations of the facility in 2021, the first full year of operations. This step accounts for the workers employed at the facility and the compensation they earn as well as the purchases of goods and services by the casino property. To model these impacts, we utilized industry change activities in IMPLAN for casino, restaurant, and retail sectors. The revenue inputs were generated by the Innovation Group from the gaming and retail market assessments.

Staffing and employment compensation estimates were based on The Innovation Group's operating pro forma model and input into the IMPLAN software. Our staffing model has been calibrated to actual operating data from existing casinos in California and other jurisdictions and is on a Full-Time Equivalent ("FTE") basis (see Appendix D). These FTEs (estimated at approximately 270 in our model) were converted by sector into total number of employees (full and part time) using IMPLAN's conversion matrix, which for the casino sector is 0.82136 FTEs for each employee on a headcount basis, or 328 jobs for the casino operations portion of the proposed project.

Gaming revenue input into the IMPLAN model is net of the Tribal Compact and related payments and promotional allowances. The following table shows the total operating parameters and the adjusted inputs utilized in the IMPLAN modeling. All ongoing impacts are for stabilized (Year 1) operations; therefore, they are expressed in 2021 dollars.

2021 Combined Operating Inputs ($MMs)

Department	Revenue
Casino	$41.72
Food and Beverage	$3.35
Retail & Other	$0.65
Total Direct	**$45.72**

The Innovation Group

The Innovation Group has reviewed the gaming and retail feasibility study commissioned by the Tribe that is the basis of the Tribe's business planning for the Cathedral City development. We find that the revenue and EBITDA (earnings before interest, taxes, depreciation and amortization) projections in that feasibility study are reasonable and reasonably consistent with our own modeling, the results of which constitute the inputs used in this economic impact analysis.

There is no difference in the casino development in the three gaming alternatives (A, B and D); therefore, the results are identical in all three alternatives.

Proposed Project, Reduced Intensity, and Off-Site Alternatives (A, B & D)

The proposed casino project for Alternatives A, B and D is estimated to support 328 direct jobs in Riverside County, along with 115 indirect jobs and 79 induced jobs for a total of 522 in the county. Total labor income is estimated to exceed $19.3 million annually and total spending in Riverside County to reach $69.44 million. It should be noted that Labor Income in the Direct Effect consists solely of Employee Compensation; no Proprietor Income is attributed to the casino owner.

The gross impact of ongoing casino operations is shown in the following table.

Casino Operating Impacts Riverside County 2021 ($MMs): Alternatives A, B & D

	Employment	Labor Income	Value Added	Output
Direct Effect	328	$12.49	$27.17	$45.25
Indirect Effect	115	$3.77	$8.04	$14.07
Induced Effect	79	$3.05	$5.91	$10.12
Total	**522**	**$19.31**	**$41.12**	**$69.44**

IMPLAN Group, LLC, IMPLAN System (data and software); The Innovation Group

As noted previously, while 100% of the direct effects from casino operations by definition occur in Cathedral City, only approximately 50% of the indirect and induced effects are estimated to accrue to Cathedral City. Further, as shown in the Substitution Effects section in the gaming market analysis, a portion of gaming revenue is expected to have otherwise occurred at other casinos in Riverside County, meaning the net impact on the county is lower than shown in the table above.

Mixed-Use Retail Development Operations

The following section identifies the economic impacts from the proposed mixed-use retail development under three scenarios, proposed, reduced intensity and non-gaming alternative. The only difference between the proposed and reduced intensity alternative is that the total space will reduce from 60,000-square feet to 38,000-square feet. In the non-gaming alternative, the space is 90,000-square feet.

Operating Inputs

Retail sales from the mixed-use market assessment were categorized in IMPLAN under the Retail Sector 405 for General merchandise stores and food and beverage sales were split between full-service and limited-service restaurants.

2021 Retail Development Inputs ($MMs)

Industry Segment	Proposed Project Revenue	Reduced Intensity Revenue	Non-Gaming Alternative
405 Retail - General merchandise stores	$9.09	$6.04	$12.47
501 Full-service restaurants	$6.82	$4.53	$9.35
502 Limited-service restaurants	$6.82	$4.53	$9.35
Total	**$22.72**	**$15.10**	**$31.18**

IMPLAN Group, LLC, IMPLAN System; The Innovation Group

Margins were applied in IMPLAN to properly reflect the portion of the sales that are attributable to Riverside County. The Gross Retail Margin in IMPLAN is the difference between the price paid by consumers and the price paid by the retailer, with the remaining portion of the sales considered to be leakages outside of the county. The retail margin for this sector in Riverside County is 27.2%; therefore, only $2.5 million of $9.09 million in retail sales is considered the direct effect of this development (and $1.6 million of $6.04 million for the reduced intensity scenario or $3.4 million of $12.47 million for the non-gaming alternative scenario). Margins do not exist in IMPLAN for any service producing sector; therefore the annual sales for restaurants were not margined in this analysis.

Proposed Project (Alternatives A & D)

According to the IMPLAN analysis, the proposed mixed-use development is estimated to support 228 direct jobs in Riverside County, along with 24 indirect jobs and 34 induced jobs for a total of 286 in the county. Total labor income is estimated to be $8.3 million annually and total spending in Riverside County is estimated at over $23.8 million. As noted previously, only approximately 50% of the indirect and induced effects are estimated to accrue to Cathedral City.

Mixed-Use Development Impacts Riverside County 2021 ($MMs): Alternatives A & D

	Employment	Labor Income	Value Added	Output
Direct Effect	228	$6.02	$9.60	$16.11
Indirect Effect	24	$0.99	$1.85	$3.29
Induced Effect	34	$1.32	$2.55	$4.37
Total	**286**	**$8.33**	**$14.00**	**$23.77**

IMPLAN Group, LLC, IMPLAN System (data and software); The Innovation Group

Reduced Intensity (Alternative B)

The reduced-intensity mixed-use development is estimated to support 151 direct jobs in Riverside County, along with 16 indirect jobs and 23 induced jobs for a total of 190 in the county. Total labor income is estimated to be nearly $5.5 million annually and total spending in Riverside County is estimated at over $15.8 million. As noted previously, only approximately 50% of the indirect and induced effects are estimated to accrue to Cathedral City.

Mixed-Use Development Impacts Riverside County 2021 ($MMs): Reduced Intensity Alternative B

	Employment	Labor Income	Value Added	Output
Direct Effect	151	$4.00	$6.38	$10.70
Indirect Effect	16	$0.66	$1.23	$2.19
Induced Effect	23	$0.87	$1.69	$2.90
Total	**190**	**$5.53**	**$9.30**	**$15.79**

IMPLAN Group, LLC, IMPLAN System (data and software); The Innovation Group

Non-gaming Alternative C

The non-gaming mixed-use development is estimated to support 313 direct jobs in Riverside County, along with 33 indirect jobs and 47 induced jobs for a total of 392 in the county. Total labor income is estimated to exceed $11.4 million annually and total spending in Riverside County is estimated at over $32.6 million. As noted previously, only approximately 50% of the indirect and induced effects are estimated to accrue to Cathedral City.

Mixed-Use Development Impacts Riverside County 2021 ($MMs): Non-Gaming Alternative C

	Employment	Labor Income	Value Added	Output
Direct Effect	313	$8.26	$13.17	$22.10
Indirect Effect	33	$1.36	$2.54	$4.52
Induced Effect	47	$1.81	$3.50	$5.99
Total	**392**	**$11.43**	**$19.21**	**$32.61**

IMPLAN Group, LLC, IMPLAN System (data and software); The Innovation Group

Total Ongoing Impacts

In total, the proposed project alternative is estimated to support 556 direct jobs in Riverside County, along with 139 indirect jobs and 113 induced jobs for a total of 807 in the county. Total labor income is estimated to exceed $27.6 million annually and total spending in Riverside County to reach $93.2 million.

Total Operating Impacts Riverside County 2021 ($MMs): Alternatives A & D

	Employment	Labor Income	Value Added	Output
Direct Effect	556	$18.51	$36.77	$61.35
Indirect Effect	139	$4.76	$9.89	$17.37
Induced Effect	113	$4.37	$8.47	$14.49
Total	**807**	**$27.64**	**$55.12**	**$93.21**

IMPLAN Group, LLC, IMPLAN System (data and software); The Innovation Group

In total, the reduced-intensity alternative is estimated to support 479 direct jobs in Riverside County, along with 131 indirect jobs and 102 induced jobs for a total of 712 in the county. Total labor income is estimated to be nearly $24.8 million annually and total spending in Riverside County is estimated at over $85 million.

Total Operating Impacts Riverside County ($MMs): Reduced Intensity Alternative B

	Employment	Labor Income	Value Added	Output
Direct Effect	479	$16.49	$33.55	$55.95
Indirect Effect	131	$4.43	$9.27	$16.26
Induced Effect	102	$3.93	$7.61	$13.02
Total	**712**	**$24.84**	**$50.42**	**$85.23**

IMPLAN Group, LLC, IMPLAN System (data and software); The Innovation Group

In total, the non-gaming alternative is estimated to support 313 direct jobs in Riverside County, along with 33 indirect jobs and 47 induced jobs for a total of 392 in the county. Total labor income is estimated to exceed $11.4 million annually and total spending in Riverside County is estimated at over $32.6 million.

Total Operating Impacts Riverside County ($MMs): Non-Gaming Alternative C

	Employment	Labor Income	Value Added	Output
Direct Effect	313	$8.26	$13.17	$22.10
Indirect Effect	33	$1.36	$2.54	$4.52
Induced Effect	47	$1.81	$3.50	$5.99
Total	**392**	**$11.43**	**$19.21**	**$32.61**

IMPLAN Group, LLC, IMPLAN System (data and software); The Innovation Group

CONSTRUCTION IMPACTS

The construction of the alternatives would inject capital into the region, supporting the local construction industry and suppliers. The following section presents the one-time construction impacts associated with the development of the alternatives. This section produces a project description and breakdown of the county impacts for the construction scenarios of the project. All construction costs estimates have been provided by the Tribe.

Proposed Project and Off-site Alternatives A & D

Estimated Construction Costs

The construction of the proposed casino is scheduled to begin in 2019. The 65,000-square foot casino will house approximately 500 slot machines and 6-8 table games in addition to food and beverage outlets and a small retail shop. The proposed project also includes 60,000-square feet of adjacent buildings for a mix-use development. A combination of surface and structured parking will accommodate up to 1,000 vehicles. Current plans for this phase have a development budget of $74 million dollars, including $15 million in FF&E (furniture, fixtures and equipment).

Construction Cost Estimate ($MMs): Alternatives A & D

	Proposed
Design	$13.0
Utilities/Site Work	$16.0
Casino	$24.0
Mixed-Use	$ 6.0
Sub-Total	***$ 59.0***
Wholesale Trade/Furnishings (FFE)	$15.0
Total	**$74.0**

Source: Agua Caliente Band of Cahuilla Indians

The following table outlines the inputs used to calculate the economic impact by sector. Site Work and Design & Studies are included as part of the spending pattern for the construction sector in the IMPLAN software. An estimate for slot machine costs—a very specialized product—was separated out of the $15 million FF&E budget; IMPLAN's Social Accounting Matrix (SAM) estimates that only 2.5% of the $8.28 million slot purchase will originate from within the study area.

Construction Inputs ($MMs): Alternatives A & D

	Budget
Industry Sector	
57 Construction of New Commercial Structures, including farm structures	$59.00
Commodity Sector	
3395 Wholesale trade distribution services	$6.72
3394 All other miscellaneous manufactured products	$8.28
Total Construction	**$74.00**

IMPLAN Group, LLC, IMPLAN System; The Innovation Group

Economic Impacts from Construction

The following section presents the one-time construction impacts associated with developing the proposed Cathedral City Casino in Riverside County. The impacts are expressed on a single-year basis. Therefore, the employment figures, for example, represent person-year equivalents.

Based on the construction budget, the IMPLAN model estimates that construction of the facility will directly support 474 workers in Riverside County, with labor income equaling $26.48 million. The direct spending for construction is estimated to generate a further $9.35 million in indirect purchases or spending through supply chains in the county. Household spending by the workers employed through construction (directly and indirectly through the local supply chain) is estimated to support induced employment of 145 workers with labor income of $5.5 million.

In total, Riverside County is estimated to see a one-time employment impact of 680 workers, providing $35 million in labor income, and $92 million in total spending, as shown in the following table.

Construction Impacts Riverside County ($MMs): Alternatives A & D

	Employment	Labor Income	Value Added	Output
Direct Effect	474	$26.48	$36.59	$64.19
Indirect Effect	62	$2.96	$5.11	$9.35
Induced Effect	145	$5.52	$10.70	$18.34
Total	**680**	**$34.96**	**$52.40**	**$91.89**

IMPLAN Group, LLC, IMPLAN System (data and software); The Innovation Group

Of these impacts, approximately 95% of direct effects and 43% of secondary effects (indirect and induced) are projected to accrue to Cathedral City.

Reduced Intensity Project Alternative B

Estimated Construction Costs

The reduced intensity alternative is nearly identical to the proposed project plan except for the reduction of adjacent mixed-use buildings to 38,000-square feet and total parking spaces to 850. Construction under the reduced intensity scenario is scheduled to begin in 2019. The reduced intensity program is slated to have a development budget of $67 million dollars, including $15 million in FF&E (furniture, fixtures and equipment).

Construction Cost Estimate ($MMs): Reduced Intensity Alternative B

	Proposed
Design	$11.0
Utilities/Site Work	$13.0
Casino	$24.0
Mixed-Use	$4.0
Sub-Total	***$52.0***
Wholesale Trade/Furnishings	$15.0
Total	**$67.0**

Source: Agua Caliente Band of Indians

The following table outlines the inputs used to calculate the economic impact by sector. Site Work and Design & Studies are included as part of the spending pattern for the construction sector in the IMPLAN software. An estimate for slot machine costs—a very specialized product—was separated out of the $15 million FF&E budget; IMPLAN's Social Accounting Matrix (SAM) estimates that only 2.5% of the $8.28 million slot purchase will originate from within the study area.

3394 All other miscellaneous manufactured products	$8.28
Total Construction	**$67.00**

IMPLAN Group, LLC, IMPLAN System; The Innovation Group

Economic Impacts from Construction

The following section presents the one-time construction impacts associated with developing the proposed Cathedral City Casino in Riverside County. The impacts are expressed on a single-year basis. Therefore, the employment figures, for example, represent person-year equivalents.

Based on the construction budget for the reduced intensity program, the IMPLAN model estimates that construction of the facility will directly support 420 workers in Riverside County, with labor income equaling $23.50 million. The direct spending for construction is estimated to generate a further $8.41 million in indirect purchases or spending through supply chains in the county. Household spending by the workers employed through construction (directly and indirectly through the local supply chain) is estimated to support induced employment of 129 workers with labor income of $4.9 million.

In total, Riverside County is estimated to see a one-time employment impact of 605 workers, providing $31 million in labor income, and $82 million in total spending, as shown in the following table.

Construction Impacts Riverside County ($MMs): Reduced Intensity Alternative B

	Employment	Labor Income	Value Added	Output
Direct Effect	420	$23.50	$32.62	$57.19
Indirect Effect	56	$2.66	$4.60	$8.41
Induced Effect	129	$4.91	$9.52	$16.31
Total	**605**	**$31.08**	**$46.73**	**$81.91**

IMPLAN Group, LLC, IMPLAN System (data and software); The Innovation Group

Of these impacts, approximately 95% of direct effects and 43% of secondary effects (indirect and induced) are projected to accrue to Cathedral City.

Non-gaming Alternative C

Estimated Construction Costs

The non-gaming alternative consists of 90,000-square feet of mixed used retail development and 700 parking spaces. Construction under the non-gaming scenario is scheduled to begin in 2019. The non-gaming alternative program is slated to have a development budget of $45 million dollars, including $7 million in FF&E (furniture, fixtures and equipment).

Construction Cost Estimate ($MMs): Non-Gaming Alternative C

	Proposed
Design	$10.0
Utilities/Site Work	$19.0
Mixed-Use	$9.0
Sub-Total	***$38.0***
Wholesale Trade/Furnishings	$7.0
Total	**$45.0**

Source: Agua Caliente Band of Indians

The following table outlines the inputs used to calculate the economic impact by sector. Site Work and Design & Studies are included as part of the spending pattern for the construction sector in the IMPLAN software.

Construction Inputs ($MMs): Non-Gaming Alternative C

	Budget
Industry Sector	
57 Construction of New Commercial Structures, including farm structures	$38.00
Commodity Sector	
3395 Wholesale trade distribution services	$7.00
Total Construction	**$45.00**

IMPLAN Group, LLC, IMPLAN System; The Innovation Group

Economic Impacts from Construction

The following section presents the one-time construction impacts associated with developing the proposed mixed-use retail space in Riverside County. The impacts are expressed on a single-year basis. Therefore, the employment figures, for example, represent person-year equivalents.

Based on the construction budget for the non-gaming alternative program, the IMPLAN model estimates that construction of the facility will directly support 325 workers in Riverside County, with labor income equaling $18.19 million. The direct spending for construction is estimated to generate a further $7.09 million in indirect purchases or spending through supply chains in the county. Household spending by the workers employed through construction (directly and indirectly through the local supply chain) is estimated to support induced employment of 101 workers with labor income of $3.84 million.

In total, Riverside County is estimated to see a one-time employment impact of 474 workers, providing $24 million in labor income, and $65 million in total spending, as shown in the following table.

Construction Impacts Riverside County ($MMs): Non-Gaming Alternative C

	Employment	Labor Income	Value Added	Output
Direct Effect	325	$18.19	$26.08	$45.36
Indirect Effect	49	$2.27	$3.89	$7.09
Induced Effect	101	$3.84	$7.44	$12.75
Total	**474**	**$24.30**	**$37.41**	**$65.21**

IMPLAN Group, LLC, IMPLAN System (data and software); The Innovation Group

Of these impacts, approximately 99% of direct effects and 48% of secondary effects (indirect and induced) are projected to accrue to Cathedral City.

SOCIAL AND COMMUNITY IMPACT ANALYSIS

This section assesses the social and community impacts of the proposed casino in Cathedral City, California. The Cathedral City casino is scheduled to house approximately 500 slot machines and six-eight table games, food and beverage options and a casino retail shop. A mixed-use development consisting of 38,000-60,000-square feet of leasable space is also planned. The complete development, fully-built, is projected to employ 556 people. A non-gaming alternative development plan will consist of 90,000-square feet of leasable space and employ 313 people. Increased local services and costs as a result of casino gaming operations generally fall into three categories: those arising from population and development growth, those arising from the impacts of increased visitation and traffic, and social impacts resulting from problem gambling.

The analysis draws upon social science research as well as data analysis conducted by the Innovation Group. Although casinos are perceived to be different in kind from other commercial developments of comparable size and visitor base, inordinate negative impacts from casino development have not materialized, even in small communities with limited infrastructure and resources. In fact, experience over the past two decades has demonstrated that mitigation payments designed in anticipation of drastic impacts have often exceeded the actual need of the communities.

The perception that casinos breed crime is not supported by the evidence. While the *number* of reported crimes can increase, as with any commercial development that attracts visitors, casino gaming has not been shown to lead to an increase in crime *rates*.

Host communities should expect impacts similar in kind to other commercial development of similar scope and visitor potential. The projected increase in visitor population should be expected to lead to increases in public safety services and judicial system caseload. The one significant difference in kind relates to the association between problem gambling and other social pathologies as discussed in Appendix A. Given the current availability of gaming in the region, the addition of gaming in Cathedral City is not expected to lead to a material increase in prevalence rates in the local area.

In summary, evidence suggests that on-going impacts to local communities are highly manageable, typically requiring only a small fraction of gaming revenues to address fully. The Agua Caliente Band of Cahuilla Indians will negotiate a local service agreement with Cathedral City and/or Riverside County to address impacts on municipal services and create dedicated funding structures.

Infrastructure impacts are highly site-dependent. The Cathedral City site was previously undeveloped, but its location along two major thoroughfares is well suited to handle visitor and traffic volume with minimal local impact. State Highway 111 currently has a traffic light and dedicated turn lanes onto Allen Ave. and traffic lights are in place on Date Palm Drive that will serve additional access routes onto the casino property. Minimal improvements on these roadways, such as dedicated turn signals, are expected.

Section One: Population and Employment Related Impacts

The Cathedral City Casino is expected to draw over 586,000 annual gaming visits[8] to the area in 2021 and directly employ 328 people. The mixed-use retail space is estimated to employ between 151-313 people depending on the development scenario, as detailed in the economic impact assessment.

For the purposes of this section, Cathedral City will be used as the primary study area of impacts as it pertains to employment and increased population.

Employment Impact

As noted, the proposed development is projected to require 556 jobs[9] in 2021, the first full year of operations, 480 jobs under the reduced intensity building program or 313 jobs in the non-gaming alternative.[10] These jobs are expected to be filled by a combination of local unemployed workers, local out-bound commuters, residents of neighboring cities, and new residents. Cathedral City unemployment currently stands at slightly over 1,100 workers. Local trends have shown consistent declines in levels of unemployment; therefore, for the future baseline conditions, we have forecasted 1,000 unemployed residents in 2021.

Cathedral City Average Annual Employment Statistics

Year	Civilian labor force	Employment	Unemployment	Unemployment rate (%)
2007	25,897	24,371	1,526	5.9
2008	26,152	23,960	2,192	8.4
2009	26,246	22,882	3,364	12.8
2010	23,728	21,022	2,706	11.4
2011	23,751	21,177	2,574	10.8
2012	23,927	21,644	2,283	9.5
2013	24,147	22,195	1,952	8.1
2014	24,456	22,824	1,632	6.7
2015	24,921	23,570	1,351	5.4
2016	25,343	24,097	1,246	4.9
2017	25,656	24,552	1,104	4.3

Source: Bureau of Labor Statistics, LAUS series, Not-seasonally adjusted; The Innovation Group

Cathedral City is primarily zoned residential, creating a jobs-housing imbalance with substantially more workers than jobs. As such, Cathedral City acts as a bedroom community to other employment centers such as Palm Springs, Palm Desert and Rancho Mirage. Data produced by the Coachella Valley Economic Partnership shows the total workers that both live and work in the valley are around 70,000 or 54% of the total workforce. In Cathedral City alone, there are roughly

[8] Visits, not individual patrons. Casino customers typically make more than one visit per year.
[9] Headcount, including full and part-time workers.
[10] Only direct jobs are included in these employment impacts. Jobs supported by indirect and induced effects are diffuse and not expected to have the same migratory impact as direct jobs.

10,000 workers that commute to other parts of the valley that could otherwise work in their community.

Residence and Place of Work in Coachella Valley

Source: Coachella Valley Economic Partnership 2017

According to the most recent LEHD Origin-Destination Employment Statistics (LODES)[11] data from the US Census (2015), only 9.7% of workers living in Cathedral City work there, meaning more than 90% commute out to other areas or work remotely for businesses located elsewhere. Of those commuter residents, 56% work in other Coachella Valley cities. Similarly, 78% of the 8,816 jobs in Cathedral City are occupied by workers that live outside of the city limits, nearly half of which live in other areas of Coachella Valley.

Cathedral City Commuting Patterns

Workers residing in Cathedral City	20,241
Number of Jobs in Cathedral City	8,816
Live & work in Cathedral City	1,954
% who live & work in Cathedral City	9.7%
% who commute OUT	90.3%
% who commute IN	78%

Source: US Census. (2015) LEHD Origin-Destination Employment Statistics (2002-2015)

As the following table shows, it is estimated that the existing area workforce in the Cathedral City and Coachella Valley will account for the majority of employment under all three development scenarios. Only 11.8% of workers are estimated to represent new residents moving into the area.

[11] More information about the data source can be found here: https://lehd.ces.census.gov/doc/help/onthemap/OnTheMapDataOverview.pdf

Cathedral City Project Source of Workforce

C.C.= Cathedral City

These estimates were based on previous Innovation Group research and results from a recent analysis of Plainridge casino in Plainville, Massachusetts. The survey of Plainridge employees demonstrates that casino employment is comprised mainly of workers already residing within commuting distance: a mixture of previously employed local residents looking for a better opportunity or the ability to work closer to home, along with previously unemployed local residents. The percentage of workers who moved to take the position with Plainridge was a small percentage of the staff. Furthermore, most casino workers had not had prior casino work experience.

Plainridge Casino Source of Workforce

	# of Responses	Percentage
Prior Employment status:		
Unemployed	162	15.5%
Employed Part-time	363	34.7%
Underemployed	*189*	*18.1%*
Employed Full-time	522	49.9%
Total	1,047	100.0%
Reason for taking the position		
Job closer to home	305	29.1%
Other results		
No prior casino experience	902	86.2%
Moved to take the position	75	7.2%

New Employee Survey at Plainridge Park Casino: Analysis of First Two Years of Data Collection
University of Massachusetts Donahue Institute, Economic and Public Policy Research Group, May 10, 2017

Other studies show similar impacts on employment. The Rappaport Institute for Greater Boston and the John F. Kennedy School of Economics at Harvard University (Baxandall and Sacerdote

2005) in a national, county-level study of Native American casinos found a slight decrease in unemployment rates after casinos opened. The analysis included all California casinos in existence in the 1990s. From their total sample of 156 casino counties, the Rappaport study isolated out 57 counties with large casinos and relatively low population and nine counties with both large casinos and large populations to see if there were statistical differences in terms of community impacts. The authors compared the county unemployment rate averaged for the year before and after a casino opens in a county, and then subtracted that number from the average state change in unemployment to isolate the county-specific effect. The following table shows their results:

Rappaport Study Employment Results

	All Casino-Counties[1]	Counties with Large-Capacity Casinos[2]	Populous Casino Counties[3]
Population Growth (%)	+5*	8.6	+8.1*
Total Employment (%)	+6.7*	+14.9*	5.7
Unemployment (%)	-0.3	-1.2*	0.5

*Statistically significant results at 99% confidence interval.
1. Reports how adjusted outcomes in 156 counties that introduced Indian-run casinos during the 1990s differed from the other 2,959 that did not.
2. The effect for 21 counties in the top 10th percentile in terms of number of slot machines (over 1,760).
3. The effect for the 57 casino counties in the top population quartile (over 55,000 residents).

The Rappaport study also highlighted results for three counties in southern California: Riverside, San Bernardino, and San Diego. In all three counties, the unemployment decreased relative to the state average. For example, before casino development, Riverside County had a slightly lower unemployment rate than the state average (by 0.3%). After casino development, the county's unemployment rate was 1.7% lower than the state average, a relative decrease of 1.4 percentage points. San Bernardino had a relative decrease of 0.5 points and San Diego 0.4.

Rappaport Study California County Results for Employment (%)

	Relative Unemployment % (County - State Average) Before	Relative Unemployment % (County - State Average) After	Change in Relative % Unemployment (Before - After)
Riverside, CA	-0.3	-1.7	-1.4
San Bernardino, CA	-2.2	-2.7	-0.5
San Diego, CA	-4.1	-4.5	-0.4

Household and Population Impact

Assuming approximately 1.1 workers per household, the total number of new households to Cathedral City is estimated between 11-60 depending on the development scenario. On average, households in California comprise 2.9 persons, bringing the total population increase to Cathedral City between 32-173 people. This represents less than 0.3% of the projected 2021 population.

Cathedral City Project Impact on Households and Population

	Proposed Project	Reduced Intensity	Non-Gaming
New employees moving to C.C.	66	49	12
# of jobs per household	1.1	1.1	1.1

**California's average number of children per family with children

All the public schools in Cathedral City fall into the Palm Springs Unified School District. Given the suburban area, some students will attend schools outside of Cathedral City; however, the primary impact will fall on the Palm Springs Unified School District as employees are more likely to find housing near the development. There are 28 schools within the district, therefore an additional 36 students can be easily absorbed into the system. The following table shows the enrollment trends for the affected school district.

Palm Springs Unified School District: Annual School Enrollment

	11/12	12/13	13/14	14/15	15/16	16/17

Housing Impact

The Cathedral City Casino will be located along a major commercial corridor and will have a minimal impact on the local residential neighborhoods. There are a number of existing attractions and retail in the area which already draw significant visitation, in addition to the thru-traffic on East Palm Canyon Dr. (Highway 111).

The additional households that are projected to locate in and around the Cathedral City area will have small, but positive impact on the housing market. New households will support the current and future development of housing in the community.

Coachella Valley, and Cathedral City in particular, was hit hard by the mortgage crisis in 2008 but has experienced a significant recovery. According to an article from the Desert Sun, Coachella Valley is shifting from a "buyers' market" to a "sellers' market" as home prices have soared in recent years.[12] As a consequence, over the past few years as home values and ownership rates increased, the rental supply in the area has become somewhat constrained. However, in Cathedral City specifically it is still a good time to buy as average home prices in 2017 were still below their pre-recessionary highs.[13]

Currently, the number of housing units is 22% greater than the number of households in Cathedral City, denoting an adequate number of units available for residents. Five-year projections estimate that the growth of families and households will occur at a faster rate than housing units, bringing the housing supply down to 20% greater than the number of households. According to the Nielsen/Claritas data, the number of housing units is projected to grow by 970 units by 2022 in Cathedral City, which will be sufficient to absorb the 60 households estimated to relocate.

Cathedral City Population and Housing Trends

	2010 Census	2017 Estimated	2022 Projection
Population	51,200	55,126	58,107
Percent Change		*7.7%*	*5.4%*
Households	17,045	18,353	19,323
Percent Change		*7.7%*	*5.3%*
Families	11,078	11,939	12,585
Percent Change		*7.8%*	*5.4%*
Housing Units	21,033	22,380	23,374
Percent Change		*6.4%*	*4.4%*

[13] http://desertrealestate.com/annual/cathedral-city-real-estate-trends-annual.html

Cathedral City has lower than average rates of renter-occupied housing than the state of California, but higher than Riverside County. Ongoing operations are slated to create approximately 556 new jobs at the proposed facility, providing stable employment for existing residents that can support homeownership, increasing homeownership figures throughout the local area. The addition of new families has the potential to support current and planned housing development throughout the city without overwhelming existing infrastructure.

2017 Occupied Housing Units by Tenure

	Cathedral City	Riverside County	California	United States
Owner-Occupied	63%	68%	56%	65%
Renter-Occupied	37%	32%	44%	35%

Conclusion

Overall, the Cathedral City casino and retail developments are projected to bring up to an additional 173 people to Cathedral City. This is a small increase in local population and will not have a substantial impact on local services, including the Palm Springs Unified School District.

Section Two: Municipal Services Impact

Host communities should expect impacts similar in kind to other commercial development of similar scope and visitor potential. The projected increase in visitor population should be expected to lead to increases in public safety services and judicial system caseload.

The one significant difference in kind relates to the association between problem gambling and other social pathologies as discussed in this report. According to the California Department of Public Health, the nearest provider offering free Gambling Education and Treatment Services is currently four miles from Cathedral City in Rancho Mirage, CA. Given the availability of gaming in Coachella Valley and the region, the addition of gaming in Cathedral City is not expected to lead to a material increase in prevalence rates in the local area.

Evidence suggests that on-going impacts to local communities are highly manageable, typically requiring only a small fraction of gaming revenues to address fully. As noted earlier in the report, the Agua Caliente Band of Cahuilla Indians is expected to negotiate a local service agreement with Cathedral City and/or Riverside County to address impacts on municipal services and create dedicated funding structures.

Of most direct consequence to casino development are police, fire, and EMS, which will largely fall into the purview of the Cathedral City Police Department and Cathedral City Fire Department.

Police

The 2017/18 fiscal year budget accounts for a total of 76 budgeted personnel in the Cathedral City Police Department (CCPD) which include 49 police officers and investigators and 27 professional staff. At this time, there is one vacancy for a Senior Public Safety Dispatcher.[14] The officers respond to emergency calls for assistance and reports of impending crimes or crimes in progress. The patrol officers also serve warrants, make arrests and assist other divisions. In addition to the Patrol and Administration Divisions, there is an Investigations Unit, K-9 Unit, Detective Bureau, Special Weapons and Tactics (SWAT) Team, School Resource Officer, Crime Scene Unit, and a Police Reserves Unit.[15]

The Police Headquarters are located at 60-700 Avenida Lalo Guerrero, less than 1 mile from the casino site.

According to the City's FY2018/19 budget, the Police Department's budget will exceed $17 million in order to cover future service needs, with $14.8 million (85%) allocated to the department's salaries and benefits.

Fire

Fire protection will be provided by Cathedral City Fire Department (CCFD). In 2016, the department responded to over 10,000 calls, which were primarily emergency incident calls. The Fire Department provides emergency medical services (EMS) and advanced lifesaving support services (ALS). The department employs 40 persons, 36 of whom work in either the fire suppression or paramedic services units.

There are three fire stations located in Cathedral City and operated by the CCFD. On the north-end of the city Station 413 is located at 27610 Landau Blvd, the fire department headquarters are located at 32100 Desert Vista Rd., and Station 411, the downtown location, is at 36913 Date Palm Dr. Currently, Station 411 is located directly on the site of the potential casino development; proceeds received by the City related to the purchase of the project site by the Tribe are currently being used by the City to design and construct a much needed new and modern fire station directly across the street. The three fire stations within the City provide service to approximately 54,000 people within the city and an incident rate of 10.6 per 100 residents in 2017.

The Fire Department budget is projected to increase in FY 2018/19, coming to $11 million. The clear majority of the budget goes towards salaries and benefits; however the amount allotted to operations has increased in recent years. In the 2016/15 fiscal year, operations accounted for only 8.4% of the budget, and in the 2018/19 budget operations account for 14.1% of the total.

Emergency Medical Services (EMS)

The Cathedral City Fire Department has two department ambulances staffed with two firefighter/paramedics on each unit. In 2016, the Agua Caliente Band of Cahuilla Indians provided EMS workers with iPads for electronic patient care reporting, with the goal of coordinating the system with the Riverside County Emergency Medical Services Agency. The Cathedral City Fire Department EMS team is the primary first response agency used within the city's jurisdiction.

If the Cathedral City Fire Department EMS service is unable to respond to a call, American Medical Response (AMR) or Riverside County EMS may be contacted. AMR is a national company based out of Greenwood Village, CO, with offices located in 40 states and the District of Columbia. Their main office in Coachella Valley is located in Riverside, CA. Riverside County EMS Agency is also located in the city of Riverside. They provide transportation to 16 different medical facilities within Riverside County, including Eisenhower Medical Center and Desert Regional Medical Center, the two closest hospitals to Cathedral City.

Comparative Analysis

Research in other jurisdictions show that impacts to local communities are manageable, typically requiring only a small fraction of gaming revenues to address fully. Based on casino evaluations performed by Purdue University and other research institutions on behalf of the Indiana Gaming Commission, statewide average actual costs borne by host communities are approximately 0.3% of gaming revenues. A study of the fiscal impact of Belterra on Switzerland County, Indiana in 2005 concluded, "…the added property, wagering and admissions taxes, and the incentive

payments, exceeded the costs imposed by the riverboat. This allowed the county to increase appropriations—to cover added riverboat costs and to provide more public services—while charging Switzerland taxpayers less".[16]

The introduction of a casino can lead to an increase in traffic patrol requirements and in the number of calls for police service. Arrests or citations related to increased visitation to the local area will create increased caseloads for the local judiciary. Even calls not resulting in arrest or citation can result in a need for increased police staffing.

A large, well-equipped fire department, such as Cathedral City Fire Department usually does not have to increase fire personnel in order to respond to incidents at a new casino. However, rural communities which do not have the types of equipment needed to respond to incidents at buildings beyond a certain height (e.g. ladder truck) often invest in new equipment. In general, rural municipalities have more limited service-infrastructure to handle large-scale developments and increased visitation than large cities, where impacts are marginal relative to resources.

Criminal Incident Rates

The following section provides data for the number of calls police respond to and the numbers of arrests made at a sampling of casinos throughout the country. The analysis includes three individual properties, SugarHouse in Philadelphia, Pennsylvania, Rivers Casino in Pittsburgh, Pennsylvania and Rivers Casino in Des Plaines, Illinois.

SugarHouse Casino – Philadelphia, Pennsylvania

SugarHouse Casino is located along the Delaware River, outside of downtown Philadelphia in an urban neighborhood. The following statistics provide an overview of the number of calls and arrests the police department has made near the casino. It should be noted that the following data overstates the number of calls to the casino as the Philadelphia Police Department collects data based on address, which in this case also includes adjacent commercial properties. The Pennsylvania State Police respond to incidents within the casino. The number of calls to the area near the casino declined from 2012 to 2014 by over 50% and offenses declined by 75%. This is due to a steep decline in the all "all other offenses" category, indicating change in police procedure or local ordinances.

[16] *Five-Year License Renewal: Belterra Resort Indiana, LLC*, performed by Indiana University-Purdue University Indianapolis on behalf of the Indiana Gaming Commission, October 2005, page 36.

Rivers Casino – Pittsburgh, Pennsylvania

Rivers Casino is located near Heinz Field, along the Ohio River in Pittsburgh, Pennsylvania. Police protection is provided by two entities, the Pennsylvania State Police and the Pittsburgh Police. The Pennsylvania State Police address incidents within the casino, while the local Pittsburgh Police respond to incidents outside of the casino. The following provides an overview of the calls made to the state and local police.

Sources: Open Justice, California DOJ; The Innovation Group; US Census

The projected increase in service calls for the proposed project is estimated at 0.48% of the existing Cathedral City Police department service call volume.

For additional information on criminal incidents and qualitative data from other jurisdictions, see appendix.

Fire Incident Rates

The following section provides data for the number of calls the local fire department responds to of the three casino properties, SugarHouse in Philadelphia, Pennsylvania, Rivers Casino in Pittsburgh, Pennsylvania and Rivers Casino in Des Plaines, Illinois. Additionally, data from the Grand Victoria Casino in Elgin, Illinois was used. The majority of calls made to the area around the casino are calls for EMS service or traffic accidents. There are a very small number of calls that are labeled as fire and usually involve a false alarm.

SugarHouse Casino – Philadelphia, Pennsylvania

The Philadelphia Fire Department responded to an average of 28 calls from 2012 to 2014. Of those calls, the majority were in connection with EMS or traffic accidents.

Philadelphia Fire Department Calls

	2012	2013	2014	Average

Again, some communities have seen a smaller impact on services. The Kenner Department reported a small number of fire incidents at the Treasure Chest Casino, averaging approximately seven medical calls and only one fire call in the last five years.

Conclusion and Implications for Cathedral City

Fiscal Impacts and Municipal Services

Local fiscal benefits from tribal developments are difficult to define. First of all, according to standard state-tribal compacts, including Agua Caliente's, local communities receive a portion of

slot revenue sharing that the Tribe pays into the State Special Distribution Fund. But that portion is not defined. Secondly, tribal operations can be exempt from property and sales taxes, and thus a Municipal Service Agreement (MSA) is typically negotiated to compensate for that exemption. However, to date there is not an MSA in place although one is anticipated.

Impacts arising from population and development growth would be effectively diluted by the size of Cathedral City's existing labor force, housing stock, and school capacity. Impacts arising from increased visitation—such as police, fire and EMS calls—are less than significant but detailed below. Moreover, the gains in tax revenues that will accrue to the City as a result of increased economic activity generated by the casino and its employees will mitigate increases in municipal services expenses. In sum, the casino and mixed-use development will have a significant positive impact on Cathedral City's governmental services.

Estimated Municipal Expenses

The following table shows the estimated expenses attributable to the subject development from police and fire/EMS services, based on the Comparative Analysis section above, with percent change estimates from that analysis applied to future budget estimates. For future budget estimates, the City's FY2018/19 budget was grown by 6%.

Cathedral City Police and Fire/EMS Expense Increase 2021

2021 Budget Estimate		Alternatives A & D	Alternative B	Alternative C
Police: $18,020,000	*Incremental %*	*0.48%*	*0.42%*	*0.30%*
		$86,496	$75,684	$54,060
Fire/EMS: $11,660,000	*Incremental %*	*0.50%*	*0.40%*	*0.30%*
		$58,300	$46,640	$34,980
Total Increase in Municipal Services		**$144,796**	**$122,324**	**$89,040**

Property Tax Impact

The following table shows the current value assessments and property taxes attributable to the parcels of land proposed for development. Alternatives A – C are proposed for the site north of East Palm Canyon Drive while Alternative D is proposed for the site south of East Palm Canyon Drive, as detailed in the site analysis section of this report. The total loss of property tax that Cathedral City could expect to incur from the development of either property is between $94,427 and $105,367.

2017 Property Tax Information

	Number of Parcels	Total Acres	Assessed Value	Property Taxes
Alternative A - C	66	9.88	$8,515,491	$105,367
Alternative D	15	12.94	$7,543,575	$94,427

Source: Riverside County, CA Office of the Treasurer – Tax Collector

Estimated Municipal Revenues

Excluding property and sales taxes,[17] ongoing operations from the alternative developments would directly contribute between $0.56 million to $1.26 million to the local and state government, according to IMPLAN results.

Riverside County State and Local Tax Impact: Direct Effect

	Alternatives A & D	Alternative B	Alternative C
Dividends	$16,142	$15,385	$3,094

However, the impacts from indirect and induced effects of ongoing operations would not be subject to the property and sales tax exemptions. IMPLAN estimates that indirect and induced effects from ongoing operations would generate between $0.7 million and $2.0 million in tax revenue to local and state government depending on the proposed alternative.

[17] As a trust property, it has been assumed the subject development would be exempt from these local taxes.

Summary

As discussed, the impact on police and fire/EMS services provided by Cathedral City is estimated to be minimal, or 0.5% at most. A portion of this impact is expected to be mitigated by sales and property taxes from indirect and induced effects. As noted in the economic impact methodology section, approximately 50% of the indirect and induced effects forecast by IMPLAN for Riverside

County is estimated to accrue to Cathedral City. The sales tax rate in Cathedral City is 8.75%, with 6% going to the State, 2.5% to Cathedral City and 0.25% to Riverside County, meaning that the City retains 28.6% of the sales taxes occurring within its borders. According to the Riverside County Assessor's Annual Report for 2016, approximately 7% of the property taxes collected in the county was distributed to cities. In total, as detailed in the following table, the fiscal gain to Cathedral City attributable only to indirect and induced effects would total $130,278 in the Proposed Project.

Cathedral City, Estimated Sales and Property Tax Impact: Indirect and Induced Effects

	Alternatives A & D	Alternative B	Alternative C
Total County & State Indirect and Induced Sales Tax	$756,514	$687,005	$284,116
Portion Occurring within the City	$378,257	$343,503	$142,058
City's Share of Total Sales Taxes	28.6%	28.6%	28.6%
Cathedral City Fiscal Impact from Sales Taxes	**$108,073**	**$98,144**	**$40,588**
Total County Indirect and Induced Property Tax	$634,423	$576,131	$238,264
Portion Occurring within the City	$317,212	$288,066	$119,132
City's Share of Total Property Taxes	7.0%	7.0%	7.0%
Cathedral City Fiscal Impact from Property Taxes	**$22,205**	**$20,165**	**$8,339**
Total	**$130,278**	**$118,308**	**$48,927**

Sources: IMPLAN, Riverside County Assessor, The Innovation Group

This positive fiscal impact would help mitigate the approximately $250,000 total negative impact from increased city services and loss of property taxes, as shown in the following table.

Cathedral City Net Impact

	Alternative A	Alternative B	Alternative C	Alternative D
Total Increase in Municipal Services	$144,796	$122,324	$89,040	$144,796
Loss of Property Tax	$105,367	$105,367	$105,367	$94,427
Total Negative Impact	$250,163	$227,691	$194,407	$239,223
Mitigated by Indirect & Induced Taxes	$130,278	$118,308	$48,927	$130,278
Variance	**-$119,885**	**-$109,383**	**-$145,480**	**-$108,945**

Source: The Innovation Group

It should be noted that this analysis does not include any PILOT (payments in lieu of taxes) or other benefits to the City resulting from either a Municipal Services Agreement or from the terms of the Agua Caliente compact.

Problem Gambling

There is not expected to be any fiscal impact on Cathedral City municipal services from problem gambling, since prevention and treatment programs are funded by the State (see Appendix A). Further, problem gambling prevalence is not anticipated to increase from this development given the widespread availability of casino gaming already present throughout the Coachella Valley. In fact, in our gravity modeling analysis, the proposed location is on average only a few minutes closer than existing casinos to residents of Cathedral City, meaning that increased gaming participation over current levels is expected to be minimal.

Moreover, the Agua Caliente compact contains the following requirements to take preventative steps to mitigate problem gambling:

> The Tribe will continue to maintain the following safeguards against problem gambling:
>
> > (a) Train Gaming Facility supervisors and gaming floor employees on responsible gaming, and to identify and manage problem gambling.
> >
> > (b) Display at all public entrances, automated teller machines, and exits of the Gaming Facility signage bearing a toll-free helpline number where patrons may obtain assistance for gambling problems.
> >
> > (c) Maintain a self-exclusion program whereby a self-identified problem gambler may request the halt of promotional mailings, the revocation of privileges for casino services, denial of or restraint on the issuance of credit and check cashing services, and exclusion from the Gaming Facility.
> >
> > (d) Establish an involuntary exclusion program that allows a Gaming Operation to halt promotional mailings, deny or restrain the issuance of credit and check cashing services, and deny access to the Gaming Facility to persons who have exhibited signs of problem gambling.
> >
> > (e) Make diligent efforts to prevent underage individuals from loitering in the area of the Gaming Facility where gaming activities take place.
> >
> > (f) Reasonably assure that advertising and marketing of Gaming Activities at the Gaming Facility contain both a responsible gaming message and on printed advertisements, include a toll-free helpline telephone number for problem gamblers, where practical.

Further, the Tribe will be required to contribute a portion of slot machine revenue to the Special Distribution Fund, which is used for the following purposes:

> > (a) Grants, including any administrative costs, for programs designed to address and treat gambling addiction;

(b) Grants, including any administrative costs and environmental review costs, for the support of State and local government agencies impacted by tribal government gaming;

(c) Compensation for regulatory costs incurred by the State including, but not limited to, the Commission, the California Department of Justice, the Office of the Governor, the California Department of Public Health Programs, Office of Problem Gambling, the State Controller, the Department of Human Resources, the Financial Information System for California, and State Designated Agencies in connection with the implementation and administration of Class III Gaming compacts in California;

As noted, there is a California Department of Public Health-sanctioned provider offering free Gambling Education and Treatment Services (CalGETS) in Rancho Mirage, four miles from Cathedral City.

More information on problem gambling research is contained in Appendix A.

APPENDIX A: PROBLEM GAMBLING RESEARCH

Definition and Prevalence

A majority of Americans, about 86%, report having gambled at least once in their lifetime[18]. Most people gamble for recreational purposes without the behavior becoming a problem. Studies, however, estimate that 0.4%-1.6% of the United States population can be classified as pathological gamblers.[19,20] Pathological gambling has been commonly associated with relationship problems, employment issues, and significant financial difficulties.

The American Psychiatric Association (2004) defines a pathological gambler as a person who features a continuous loss of control over gambling. Furthermore this gambler illustrates a progression, in gambling frequency and amounts wagered, in the preoccupation with gambling and in obtaining monies with which to gamble. However, problem gambling is a more loosely defined term and is commonly associated with gaming-related difficulties that are considered less serious than those of a pathological gambler. For the sake of this report we will utilize the definition by noted researchers Cox, Rosenthal and Volberg which defines problem gambling as a pattern of gambling behavior that compromise, disrupt or damage personal, family or vocational pursuits.[21]

The National Research Council[22] utilizes a three-level metric. Level 1 gambling is considered social and or recreational gambling with no appreciable harmful effects. Level 2 gambling is synonymous with problem gambling. Level 3 gambling is synonymous with pathological gambling. Problem gambling is an urge to gamble despite harmful negative consequences or a desire to stop. It is often defined by whether harm is experienced by the gambler or others, such as the gamblers family, significant other, spouse, friends, or coworkers. A problem gambler may or may not be a pathological gambler. Pathological or compulsive gambling is defined as a mental disorder characterized by a continuous or periodic loss of control over gambling, a preoccupation with gambling and with obtaining money with which to gamble, irrational thinking, and a continuation of the behavior despite adverse consequences.

Prevalence rates to determine adult problem gambling rates are measured by administering a survey (often a variation of the South Oaks Gambling Screen or a modified DSM-IV questionnaire) to a statistically valid sample of the adult population of the jurisdiction being

[22] National Research Council, pp. 20-21.

measured. Adolescent rates are measured in a similar manner. Such a method and analysis of data that accompanies the process is referred to as a general population prevalence study.

Jurisdictions in several countries have conducted studies to estimate the percentage of the population that could be classified as having some level of problem gambling behavior. These studies, commonly referred to as prevalence studies, are designed to reflect the scope and severity of problem gambling behavior.[23]

One of the most frequently cited studies on prevalence rates is *Estimating the Prevalence of Disordered Gambling Behavior in the United States and Canada: A Meta-analysis by the Harvard Medical School Division on Addictions*. The meta-analysis method of estimating prevalence rates has been used in related addiction fields of drug prevention and patterns of alcohol use and alcohol treatment and is considered a more cost-effective method than a national study since it makes use of existing research already conducted in a field.

The Harvard Medical School study, believed to be the first to use meta-analysis measurements for problem gambling prevalence rates, analyzed 152 distinct previous prevalence studies available for review by June 15, 1997. The study determined that 2.0 percent of the adult population could be considered as Level 2 of disordered gambling (often referred to as problem gambling) and 0.9 percent of Level 3 or disordered gambling (also referred to as pathological gambling) during the past year. The vast majority of adults in the general population, then, do not experience gambling-related problems of any clinical significance.

The meta-analysis raw data was given to the Committee on the Social and Economic Impact of Pathological Gambling of the National Research Council (NRC) in its analysis for the National Gaming Impact Study Commission. After an extensive review, the NRC agreed with the above rates of problem gambling and used the numbers in its own analysis of problem gambling in its final report.

It should be noted that problem gambling is not limited to states with casinos, since most states have other forms of gambling and since casino options are available in other states.

A study in California in 2006 found that "the lifetime prevalence of pathological gambling in California is 1.5% and the lifetime prevalence of problem gambling is 2.2%."[24] However, California did not begin offering publicly funded treatment services until 2010,[25] and in 2006 there were no residential treatment providers and insufficient outpatient providers.[26] The only public services were a helpline and Gamblers Anonymous.

[23] *Estimating the Prevalence of Disordered Gambling Behavior in the United States and Canada: A Meta-analysis*, Harvard Medical School Division on Addictions, 1997.
[24] Volberg RA, Nysse-Carris KL, Gerstein DR, *2006 California Problem Gambling Prevalence Survey*. Submitted to the California Department of Alcohol and Drug Programs Office of Problem and Pathological Gambling
[25] Wheeler M. *UCLA, California partner on new publicly funded program to treat state's problem gamblers*, October 18, 2010, UCLA Newsroom.
[26] Volberg, *IBID*.

The California Department of Public Health's Gambling Education and Treatment Services (CalGETS) now offers a variety of treatment options at no cost to problem gamblers and affected individuals. Telephone counseling is available at no cost Monday-Friday from 9AM-5PM, in addition to the 24/7 helpline. Outpatient providers are located throughout the state, including two centers providing Intensive Outpatient treatment, and there are now two residential treatment centers.

Funding for these services comes from the tribal Special Distribution Fund, the Lottery Fund, and the Gambling Addiction Fund (which is derived from a $100 per-table fee on gaming tables at commercial cardrooms).

The introduction of casino gambling can lead to negative social impacts that can be controlled and minimized through proper planning, awareness campaigns, and prevention and treatment programs applied in a coordinated manner by all relevant stakeholders. Utilizing the many proven prevention and treatment programs and the requirements relating to problem/responsible gaming being utilized in California, the potential social impact of the advent of gaming in the state can be minimized. Through enhanced funding provided by a local services agreement, problem gambling services will be more effective in mitigating problem gambling and promoting responsible gambling.

By devoting more resources to prevention and treatment, Connecticut was able to cut prevalence rates despite further gaming development. In 1996, Connecticut had only a single clinic, but by the time of an updated study in 2008, the state had 17 clinics.[27] Prevalence rates declined substantially during that period, despite the opening of Mohegan Sun late in 1996 and further expansion at Foxwoods, including the opening of Grand Pequot Tower hotel in 1997.

Connecticut Prevalence Rates

	2008 Survey	1997 Study
Problem Gamblers	0.90%	2.20%
Probable Pathological Gamblers	0.70%	0.60%
Total Disordered Gamblers	1.60%	2.80%

Source: Spectrum Gaming Group.

The presence of casinos in California complicates an assessment of any impact on prevalence rates from further casino development in the state. In the case of the proposed Cathedral City facility, a salient point is that casino gambling is already available in the area. Given this existing availability, the addition of gaming in Riverside County is not expected to lead to an increase in prevalence rates in the local area.

[27] Spectrum Gaming Group, *Gambling in Connecticut: Analyzing the Economic and Social Impacts*, prepared for the State of Connecticut, Division of Special Revenue, June 2009.

APPENDIX B: CASINOS AND CRIME

The social and community impacts of gaming development have been extensively studied. In many areas research findings have been inconclusive and thus considerable resources continue to be devoted to researching possible negative impacts given the unique nature of gaming compared to other commercial enterprises.

A number of broad studies of the social and economic impact of casinos have been conducted in the United States. In the late 1990s, prompted by the expansion of casinos throughout the United States, mainly in the form of riverboat casinos, Native American casinos, and racetrack slot parlors, Congress set up the National Gambling Impact Study Commission (NGISC). Its findings were released in 1999.

The Commission retained the National Research Council (NRC) to review the existing research on the socio-economic impacts of casino development. The NRC concluded that the existing research on the subject was inadequate:

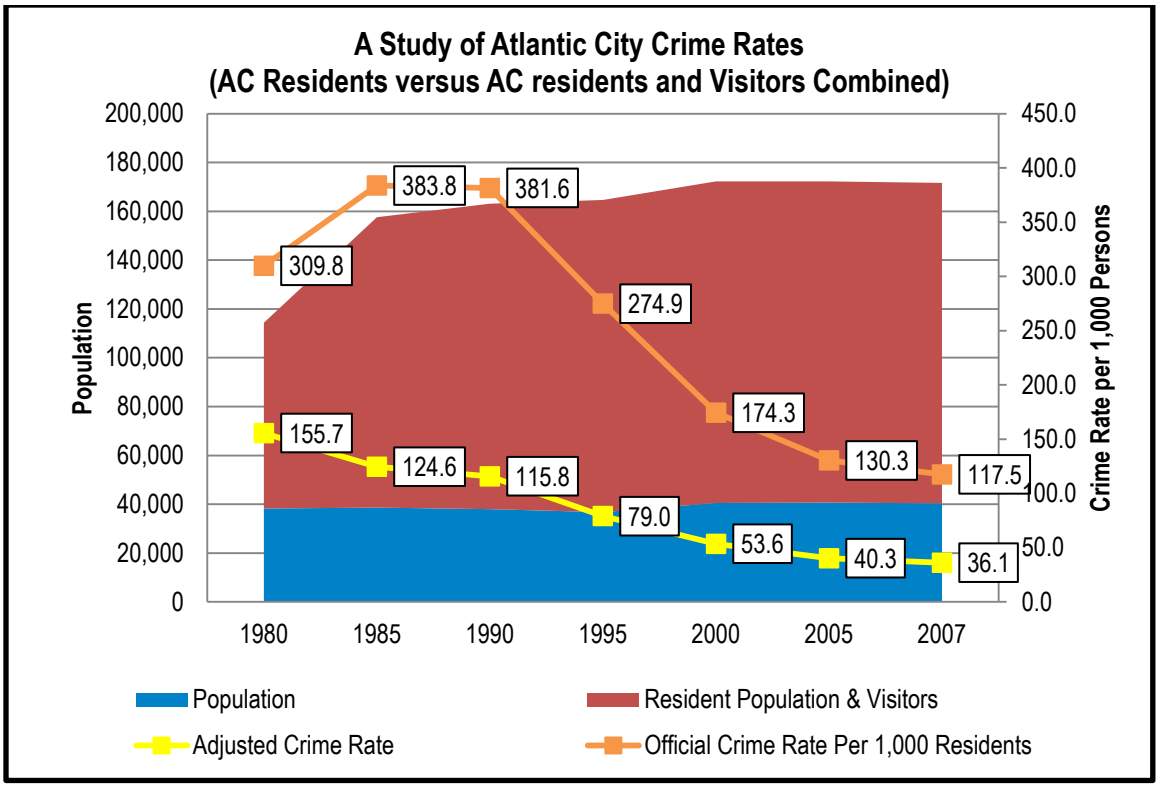
> The NRC project involved a review of all existing and relevant studies by representatives of a variety of scientific fields. In the end, NRC recommended that further study be initiated. Study of the benefits and costs of gambling "is still in its infancy." Lamenting past studies that utilized "methods so inadequate as to invalidate their conclusions," the absence of "systematic data," the substitution of "assumptions for the missing data," the lack of testing of assumptions, "haphazard" applications of estimations in one study by another, the lack of clear identification of the costs and benefits to be studied, and many other problems, NRC concluded the situation demands a "need for more objective and extensive analysis of the economic impact that gambling has on the economy."[28]

The Commission then retained the National Opinion Research Center (NORC) to undertake said "objective and extensive analysis" concerning impacts. The NORC came to the following conclusion:

> First, the casino effect is not statistically significant for any of the bankruptcy or crime outcome measures…….. This is not to say that there is no casino-related crime or the like; rather, these effects are either small enough as not to be noticeable in the general wash of the statistics, or whatever problems that are created along these lines when a casino is built may be countered by other effects.[29]

Despite the NGISC's authoritative findings, some researchers continue to claim that casinos cause crime.[30] However, there are three major flaws in much of this research:

---



[28] National Gambling Impact Study, Chapter 7. 1999. Gambling's Impact on People and Places.
[29] The National Gambling Impact Study Commission, "National Gambling Impact Study" (1999).
[30] See Grinols and NBER discussion below.

1. Much of the research that attributes an increase in crime to casinos has ignored the temporary population increases brought about by casino visitation. When crime rates are calculated not accounting for the influx of visitors, there appears to be an increase in crime. While this may be true in absolute terms, it radically overestimates the increase in likelihood of residents being victims of crime.
2. Further to #1, some research applies crimes such as on-site thefts of casino visitors to the local population, leading to an invalid increase in the local crime rate.
3. The crimes rates are not studied over a sufficient period of time and therefore temporary increases or long term trends attributable to more primary causal factors are not always recognized or are misinterpreted.

One of the earliest examples of flawed research is related to Atlantic City. The ***number*** of crimes tripled after casinos opened in 1978, and some researchers applied the increase to the local resident population, which in the resulting invalid calculation resulted in a tripling of the crime ***rate***. However, most of the increase related to thefts within the casinos, which did not impact the local population. A valid calculation of the crime rate has to include the visitation base.

In fact, there has been a ***decreased*** chance of being a victim of crime since casinos were developed in Atlantic City. Factors likely include an increase in casino employment and law enforcement resources, safer infrastructure with well-lit garages, and an increase in general tourism activity. According to more recent data supplemented to the study completed by Margolis et al, [31] this decline in crime rates per 1,000 residents continued through 2007 to a rate of 36.1 per thousand residents. The chart below illustrates the crime rate trends from 1980 to 2007.

[31] Margolis, J. & Altheimer & Gray. (December 1997). "Casinos and crime: An analysis of the evidence." American Gaming Association. http://www.americangaming.org/assets/files/studies/Crime.pdf . The Innovation Group.

The Rappaport Institute for Greater Boston and the John F. Kennedy School of Economics at Harvard University (Baxandall and Sacerdote 2005) in a national, county-level study of Native American casinos found a slight decrease in crime rates after casinos opened. The analysis included all California casinos in existence in the 1990s. From their total sample of 156 casino counties, the Rappaport study isolated out 57 counties with large casinos and relatively low population and nine counties with both large casinos and large populations to see if there were statistical differences in terms of community impacts. The following table shows their results:

Rappaport Study Results

	All Casino-Counties[1]	Counties with Large-Capacity Casinos[2]	Populous Casino Counties[3]
Population Growth (%)	+5*	8.6	+8.1*
Total Employment (%)	+6.7*	+14.9*	5.7
Unemployment (%)	-0.3	-1.2*	0.5
House Prices	$5,869	$8,924	$7,083
Crime (Per 1,000 People)	-3	-6	-1

*Statistically significant results at 99% confidence interval.
1. Reports how adjusted outcomes in 156 counties that introduced Indian-run casinos during the 1990s differed from the other 2,959 that did not.
2. The effect for 21 counties in the top 10th percentile in terms of number of slot machines (over 1,760).
3. The effect for the 57 casino counties in the top population quartile (over 55,000 residents).

The Rappaport study concluded:

> Our analysis shows that while total crime can be expected to increase when casinos open, the increase is due to increased population, not to a casino-created crime wave. Looking at FBI indexed crimes per resident in all [156] counties; we find that introducing a casino is associated with a decrease of 3 reported crimes per 1,000 people. The introduction of a casino, however, had no statistically significant effect on per-capita crime rates in either large-population casino counties or in large-casino counties. The per-capita crime rate in the 9 large-population counties that also hosted large-capacity casinos dropped 9 crimes per 1,000 residents, however.[32]

It is worth noting that the study included two of the largest casinos in the world, Foxwoods and Mohegan Sun. In Ledyard, Connecticut (which hosts the Foxwoods casino), crimes outside the casino increased from 214 in 1991 to 364 in 1998, but in subsequent years, State Police data show that off-casino crimes in Ledyard fell below pre-casino levels. In Montville, Connecticut (host to Mohegan Sun), as with Ledyard, the number of crimes reported "remained relatively constant," which the authors conclude is "surprising since the sheer increase in activity around these towns might have led to greater crime."[33]

The study also highlighted results for three counties in southern California: Riverside, San Bernardino, and San Diego. In all three counties, crime decreased relative to the state average. For example, before casino development, Riverside County suffered 22 more crimes per 1,000 residents than the state average. After casino development, the county had just 6 more crimes per 1,000 residents than the state average, a relative decrease of 16 crimes per thousand residents. San Bernardino had a relative decrease of 10 crimes per thousand, and San Diego 9.

Rappaport Study California County Results for Crime

	Relative Crime (Before)	Relative Crime (After)	Change in Relative Crime (After - Before)
Riverside, CA	0.022	0.006	-0.016
San Bernardino, CA	0.016	0.006	-0.01
San Diego, CA	0.008	-0.001	-0.009

In other western jurisdictions, the Montana legislature in 1997 commissioned a study on the video gaming industry. The resulting analysis found no impact on crime rates in Montana:

> While gambling may have caused an increase of certain types of crime, Montana's overall crime rate increase is not any higher than the increases in matched cities with little or no

[32] IBID. As summarized in their 2008 report, "Betting on the Future: The Economic Impact of Legalized Gambling."

33 Baxandall, P. & B. Sacerdote (January 2005). *The Casino Gamble in Massachusetts: Full Report and Appendices*. Rappaport Institute for Greater Boston, John F. Kennedy School of Economics, Harvard University. Page 14.

legal gambling. In fact, in almost three-quarters of the specific comparisons carried out, crime rates rose more (or decreased less) in the matched cities than in the Montana cities.

Each of the seven largest Montana cities was matched with an out-of-state city in the region with similar population size, similar population growth rate, similar racial composition, but with little or no legal gambling. The percentage change in crime rates for three indices of crime (total serious crime, property crime, and violent crime) was computed for three time periods… between 1984 and 1994. [The data] illustrate the lack of a systematic pattern in crime rate changes between Montana cities and those in states with little or no gambling. For example, the violent crime rate grew faster in Cheyenne, Wyo., than in Great Falls between 1984 and 1994, yet the index of property crime decreased in Cheyenne while it increased in Great Falls during the same period.[34]

In summary, there is no evidence from gross level data that the advent of casinos has a measurable impact on local crime rates in general, whether in Eastern, Midwestern, or Western jurisdictions. It is highly likely any crimes associated with casinos are either offset by economic benefits or that the level of crime is so small as to be overwhelmed by other factors such as economic trends.

Primary Research from Select Casino Jurisdictions

The figures from the casinos used in the Comparative Analysis Criminal Incidents section, provide a general picture of criminal activity at a casino. Other communities have found lower and higher levels of incidents. For example, figures from the Kenner Police Department note an average of 9 criminal incidents at the Treasure Chest Casino from 2012 to 2014. Attendance at the Treasure Chest Casino in Kenner is over one million annually.

A recent article in The Enterprise provided additional qualitative data from the casinos in this analysis. An officer from the Pittsburgh Police department compared the number of calls to games at the local baseball and football stadiums, "Nothing different than when there's a ball game," Luczak said. "I wouldn't say there's much change."[35]

Des Plaines Police Deputy Chief Nick Treantafeles had similar sentiments, "It's just like any place that serves alcohol," he said. "You get drunk and disorderly, but their security handles 98 percent of the issues there. We might get called for a fight that gets out of hand. ... It hasn't put a damper on the services we offer the rest of the community."[36]

While specific increase in police staffing varies from community to community, many communities found no need to increase police staffing, as shown below in the examples from Indiana. The Center for Urban Policy and the Environment at Indiana University-Purdue University has prepared 5-year evaluations of riverboat licensees for the Indiana Gaming

[34] Montana Gambling Commission Study, 1998, Chapter 8.
[35] http://www.enterprisenews.com/article/20150517/NEWS/150516955/12741/NEWS/?Start=1
[36] http://www.enterprisenews.com/article/20150517/NEWS/150516955/12741/NEWS/?Start=1

Commission which contain sections on community impacts. The following bullet points include summaries and excerpts from these reports with respect to police and fire protection.

Casino Aztar:

- The Evansville Police Department reports no increases in crime since the riverboat opening. They do report a drop in crime in 1999 when compared to the previous year.
- "No new police officers or firefighters were added. Traffic control has not been a problem..."

Majestic Star:

- The community purchased 12 police cars with Year 1 incentive payments.
- Gary's Chief of Police reports no additional criminal activity surrounding the riverboat.

Horseshoe Hammond (formerly Empress Casino Hammond):

- The Hammond Police Department reports crime has fallen in most categories when compared to before the boat opened.

Hollywood (formerly Argosy):

- According to the Lawrenceburg Police Department, casino-related arrests for public intoxication, DWI, and minor theft, as well as traffic accidents in the area have increased slightly each year from 1997 to 2000.
- Lawrenceburg has added two police officers since the boat opened to deal with the increased caseload.

Ameristar (formerly Harrah's East Chicago):

- According to East Chicago's police department, no additional criminal activity can be attributed to the riverboat's presence.
- "Crime in East Chicago has decreased substantially over this time period due to increased cooperation with federal agencies, community policing and increased staffing."

Blue Chip Casino:

- According to Michigan City's chief of police, no additional criminal activity can be attributed to Blue Chip's presence.

On the issue of crime, Jeremy Margolis, who had served as Assistant U.S. Attorney in Chicago, Illinois Inspector General, and Director of the Illinois State Police, found in a 1997 study[37] that the chance of being victim of a crime decreases after casino development. Factors include an

[37] Margolis, J. (December 1997). "Casinos and crime: An analysis of the evidence." American Gaming Association.

increase in employment brought by casinos, increased law enforcement resources, safer infrastructure with well-lit garages, and an increase in general tourism activity.

In testimony before the Pennsylvania Gaming Control Board (PGCB) in 2006, Margolis was asked to give an update of his seminal study. Margolis concluded, based on examining updated crime data from the F.B.I. as well as interviews with the Executive Director of the Illinois Crime Commission, the Illinois State Police, and the Illinois Gaming Board, that the situation is "really unchanged except for the maturation of the industry, the maturation of the regulatory process has probably settled things down more than it had settled when I completed my study in 1997. It's just not an issue."[38]

[38] PGCG hearing transcript, September 7, 2006, pages 22-23.

APPENDIX C: IMPACT ON LOCAL BUSINESS

Research Results

There is a substantial body of research and case studies demonstrating the impacts that casinos have on surrounding local businesses. There are several important reasons that local businesses benefit from the development of a casino:

- Casino visitors stopping at local retail outlets and restaurants.
- Long-distance patrons staying at area hotels; even in markets with casino hotels, non-casino hotels enjoy boosts in occupancy.
- Casino expenditures on local goods and services put more money into the local economy.

A review of studies of casino impacts on local business shows that casinos can stimulate local economies, resulting in communitywide growth, including in the local food and beverage business and retail businesses. There is little evidence of significant economic substitution after the introduction of new casinos, particularly for casinos in urban areas.

Casino development increases room demand at non-casino hotels even when casino hotels are built. For example, in Shreveport-Bossier City, Louisiana, hotel occupancy rates averaged about 60% before casinos but rose to 74% by 2005.[39] Such a boost to non-casino hotel demand results from the overall increased visitation to the area and the overflow from peak periods when casino hotels are fully booked. On the Mississippi Gulf Coast occupancy rates in non-casino hotels remained steady at 55% despite a 143% increase in total rooms, including a 60% increase in non-casino hotel rooms.[40]

Within the City of San Diego, the Transient Occupancy Tax (TOT) has grown substantially since recovering from the 2009-10 recession effects, despite the opening of several large hotels at casinos on the outskirts of the market (and not within the City), including an 1,100-room hotel at Harrah's Rincon. Furthermore, HVS reports that hotel occupancy in the San Diego market posted its third straight record occupancy in 2016 at 77%. RevPAR (revenue per available room, a measure of hotel performance) has also seen steady increases since the recession.[41]

City of San Diego, CA Transient Occupancy Tax Collections (MMs)

2008	2009	2010	2011	2012	2013	2014	2015	2016	2017
$160.24	$136.32	$128.11	$139.77	$150.82	$157.03	$170.17	$186.24	$202.80	$221.10

The research division of the Federal Reserve Bank of St. Louis concluded in a 2003 report that the results are "mixed" regarding the impacts of casinos on other local businesses. The report references one study that "found that the growth in retail sales tax collections from various industries slowed after the introduction of casino gambling." However, another referenced study from Indiana showed that casino development retained spending by patrons "who would have, without the casino, spent their money outside of the local area."[42]

Furthermore, there is substantial economic research from throughout the country contradicting the substitution effect. Hashimoto and Fenich's 1997 research shows that "in jurisdictions from the seashore to the riverfront to rural areas, north and south, east and west, local restaurants tended to thrive after a casino opened nearby." Furthermore, Hashimoto and Fenich conclude: "When casinos are developed, all aspects of the local food and beverage business increase: the number of establishments increases, the number of people employed increases and payroll increases at an even greater rate than the first two."[43]

Research conducted in 1996 by Nancy Reeves and Associates for the Mille Lacs Band of Ojibwe, entitled "The Economic Impact of Grand Casino Mille Lacs and Grand Casino Hinckley on Their Surrounding Areas" concluded that:

> At least 15 businesses have either opened, expanded, or re-opened since the opening of Grand Casino Mille Lacs. Included are 4 hotels/motels and resorts, 8 restaurants and fast food establishments, 2 gas stations and a go-kart track. Together, these businesses have added an estimated 142 jobs in the area.
>
> With the opening of Grand Casino Hinckley in 1992, the hospitality business in Hinckley was transformed from a rest stop for travelers to a tourist destination. In addition to the casino complex, with its 1,275 jobs, Hinckley has added 11 new businesses and expanded 4 more since 1992, adding 87 new jobs. As is the case in the Mille Lacs area, Hinckley is now a year round destination because of the casino. Also similar to the Mille Lacs situation, the main street businesses in Hinckley have seen increases in customer spending attributed primarily to casino employees living in the area.

The Center for Policy Analysis University of Massachusetts Dartmouth came to similar conclusions analyzing a number of gaming jurisdictions throughout the country. The number of restaurants and retail sales excluding those from casinos increased in Bossier City, Louisiana; Biloxi/Gulfport, Mississippi; Connecticut; Gilpin County, Colorado, and; Tunica County, Mississippi.

---

[42] Thomas A. Garrett, Senior Economist, Federal Reserve Bank of St. Louis, *Casino Gambling in America and Its Economic Impacts,* August 2003.

[43] George Fenich and Kathryn Hashimoto, "The Effects of Casinos on Local Restaurant Business," paper presented at the International Conference on Gambling and Risk-Taking, Montreal, 1997.

> There was a net increase of eight restaurants in Bossier City, Louisiana following the introduction of riverboat casinos. The city's taxable restaurant sales, excluding restaurants in the hotels and casinos, increased by 5 percent in 1994 and by 7 percent in 1995 *after* the introduction of riverboat casinos. In Biloxi/Gulfport, Mississippi, the rate of non-casino retail sales growth increased from an average of 3 percent annually (1990-1992) in the years prior to riverboat gambling to 12 percent annually in the years after riverboat gaming began in the locality.
>
> …the number of restaurants in the area surrounding Foxwoods and Mohegan Sun increased from 472 to 506 following the casino's opening, while restaurant employment increased from 5,911 to 6,628 during the same period.… In Gilpin County Colorado, the number of restaurants increased from 31 to 40 after the introduction of casino gaming. In Tunica County, Mississippi, the number of restaurants increased by 13 percent and restaurant employment grew by 9 percent after the introduction of casino gaming in the county.[44]

Similar conclusions have been reached in other studies:

- Even after accounting for substitution effect, economists at the University of Missouri and Washington University concluded that casino gambling in Missouri had a net positive annual impact on Missouri output of $759 million, corresponding to a continuing higher level of employment of 17,932 jobs generating $508 million more in personal income.[45]
- A multijurisdictional analysis of retail spending found that in Biloxi/Gulfport, Miss., annual retail sales growth rates increased an average of 3 percent per year from 1990 to 1992, the year when casinos were introduced. Between 1993 and 1995, retail sales jumped 13 percent. In Will County, Ill., retail sales growth trailed statewide trends until 1992, when riverboat casinos were introduced in the local economy. But each year between 1992 and 1995, retail sales growth in Will County exceeded the state rate. In Shreveport/Bossier City, La., retail sales increased by more than 10 percent during 1994, the year that riverboat casinos opened, as the region enjoyed the highest retail sales increase in more than a decade.[46]

In summary, there is a wealth of evidence contradicting the proposition that gaming substitutes for other expenditures. The positive spillover effect on local hotels for one is unequivocally demonstrated in numerous jurisdictions, even in markets where casinos operate hotels for their gaming customers.

APPENDIX D: CASINO EMPLOYMENT STATISTICS

The following data is presented to support the employment and payroll as estimated by the Innovation Group's operating pro forma and utilized in the economic impact analysis.

The California Nations Indian Gaming Association (CNIGA) commissions every two years a statewide economic impact report based on confidential data from California tribal gaming operations. The latest version of the report is 2016, which is based on data from 2014. The 2016 report revealed total direct employment of 40,705 FTEs in 2014, which in IMPLAN's conversion matrix equals 46,558 jobs on a headcount basis. Applied to a statewide gaming position count of 83,266, the headcount figure results in a ratio of 0.60 (of employees to gaming positions). The data set utilized in the analysis was provided by the following properties, but estimates were made for the unknown properties to result in a statewide total:

CNIGA Study Contributing Properties

Casino	City	County
Blue Lake Casino & Hotel	Blue Lake	Humboldt
Colusa Casino Resort	Colusa	Colusa
Cher-Ae Heights Casino	Trinidad	Humboldt
Elk Valley Casino	Crescent City	Del Norte
Feather Falls Casino	Oroville	Butte
Morongo Casino, Resort & Spa	Banning	Riverside
Pala Casino, Resort & Spa	Pala	San Diego
Pit River Casino	Burney	Shasta
Win-River Resort & Casino	Redding	Shasta
Harrah's Rincon Casino & Resort	Valley Center	San Diego
San Manuel Indian Bingo & Casino	Highland	San Bernardino
Chumash Casino	Santa Ynez	Santa Barbara
Sycuan Casino	El Cajon	San Diego
Black Oak Casino	Tuolumne	Tuolumne

Source: CNIGA, Beacon Economics; 2016 California Tribal Gaming Impact Study: An Economic, Fiscal, and Social Impact Analysis with Community Attitudes Survey Assessment

This represents a wide range of properties, including a number of large resorts with staffing at amenities that would tend to inflate the headcount to position ratio. Payroll data was not included in the study; however, proprietary data at comparably located California properties to Cathedral City show annual wages and salaries averages in the $30,000 to $32,000 range on an FTE basis.

The State of Louisiana provides employment data for its casinos, revealing employee to position ratios and average pay data highly consistent with California. Average pay per employee headcount was $28,404 in FY 2015, and average number of employees per gaming position is 0.67. As shown in the table below, many properties have hotels requiring staffing which would tend to inflate the headcount to position ratio.

Louisiana Employment Data

	$ Payroll	Employees (Headcount)	$ Per Employee	Gaming pos.	Employees per Position	Hotel Rooms
Amelia Belle Casino	7,715,171	333	23,169	934	0.36	0
Belle of Baton Rouge	19,257,997	539	35,729	860	0.63	300
Boomtown New Orleans	15,773,901	655	24,082	1,440	0.45	150
Boomtown Bossier City	12,919,561	553	23,363	1,093	0.51	188
Cypress Bayou (Chitimacha Tribe)	18,804,836	807	23,302	1,560	0.52	102
Hollywood Baton Rouge	14,558,535	419	34,746	1,011	0.41	0
L'Auberge Baton Rouge	21,160,374	1,074	19,702	1,776	0.60	205
Eldorado Shreveport	23,791,268	1,136	20,943	1,747	0.65	403

These Louisiana payroll totals do not include benefits.

APPENDIX E: INNOVATION GROUP QUALIFICATIONS

The Innovation Group has extensive experience completing economic and community impact studies for gaming and hospitality development. The list of projects below represents a sample of The Innovation Group Project Team's community impact work to date.

Recent Social, Community & Economic Impact Experience

Government of Bermuda and the Bermuda Hotel Association (BHA)

The Innovation Group was engaged to provide consulting services to the Bermuda Government and the Bermuda Hotel Association regarding the potential implementation of gaming in Bermuda. This highly visible project involved working for a combined public/private Tribe (a joint effort between the Government of Bermuda and the local Hotel Association) and was of a highly comprehensive and complex nature. In order to help determine the potential and methodologies for the tourism-focused jurisdiction, we applied a series of qualitative and quantitative tools including a gaming market assessment, a legislation study, tax considerations, and economic/social impact analysis.

Advisor to City of Springfield, Massachusetts

Through the prominent legal firm Shefsky & Froelich, who had been engaged to represent City of Springfield in its negotiations with potential casino developers, The Innovation Group was engaged in 2013 as an expert advisor to assist with the review of operator bids for a proposed casino resort in Springfield. The Innovation Group helped the city develop economic impact estimates for each submission, including such services as police, fire, EMS, schools and other impacted departments. We reviewed each of the applicant's proposals and provided a critical review of each with respect to fiscal economic impacts.

State of Massachusetts

The Innovation Group was tasked by the State Senate of Massachusetts to evaluate several development scenarios based on pending legislation to enable casino gaming in the Commonwealth. The State Senate request included the preparation of a tax and regulatory discussion providing competitive intelligence into other jurisdictions, recommendations on specific legislative elements based on the Commonwealth's goals, and their fiscal impacts. Statewide gaming revenue estimates forecasted the gross gaming revenues and job creation that could be generated under a number of development scenarios. The revenue estimates were further evaluated to answer two key policy questions: the amount of revenue that would have accrued out of state in the absence of enabling legislation and the impact that casino gaming would have on the lottery.

Based on the recommendations and conclusions in our report, the State Senate of Massachusetts drafted legislation that created three development zones for large scale casino developments in the state. The tax and regulatory discussion in our report was included in the final legislative proposal that the Governor signed into law.

The legislation being considered was expansive and scope and included a large amount of stakeholders, including our Tribe, the Massachusetts State Senate and the potential developers and the Native American Tribes. Because of the different goals of each stakeholder, we developed a model that allowed us to evaluate multiple scenarios and iterations. The outcome of our modeling provided results that showed the full gaming potential to maximize the state's tax revenue potential while weighing the feasibility of the casino developments across the state.

Sullivan County, New York, Community Service Mitigation Analysis

In 2003, the Innovation Group was engaged by counsel for a proposed Native American casino in Sullivan County to provide a community mitigation analysis as part of a federal Environmental Impact Assessment for the Department of Interior.

Plainridge Racecourse Social/Community Impact Analysis & Strategic Research

In 2012, the Innovation Group was engaged by Plainridge Racecourse to provide market analysis, financial pro forma, and socio-economic social impact in support of a gaming license application in Massachusetts, which has the most intensive application requirements of any gaming jurisdiction. Included in our analysis were a comprehensive social impact analysis and an assessment of community mitigation, with applicants being required to negotiate a Community Host Agreement.

Ohio Statewide Economic and Community Impact Assessments

The Innovation Group recently completed an economic impact study for two locations being considered in Ohio for development by the Eastern Shawnee Tribe. Included was a cost-benefit analysis for local host communities relative to the proposed development. Benefits examined included employment from construction and on-going operations, earnings, spending on local goods and services, and fiscal impacts from sales, hotel room, and income taxes.

Laurel Park, Maryland, Gaming Market Assessment and Economic Impact Assessment

The Innovation Group recently completed the feasibility analysis for a gaming license application at Laurel Park, Maryland. In addition to a gaming market assessment and operating pro formas, our services included an economic impact analysis as part of the application requirements.

Grand Ronde Economic and Community Impact Study

The Innovation Group was asked to complete a "reverse" economic impact study to gauge the potential impact on tribal income and departments of the proposed Cascade Locks casino. The IG assessed the potential impacts on Grand Ronde's departmental services, programs, and employment from a reduction in income from Spirit Mountain. Our involvement with this assignment provides our team with important insight into the current tribal organization and the future economic challenges facing the Grand Ronde.

State of New Hampshire Economic Impact

The Innovation Group prepared an analysis of the potential New Hampshire gaming market for the state legislature in considering options for development. Following a preliminary

review of the state, The Innovation Group developed six scenarios involving one or two casinos in three locations around the state. The scenarios were developed considering the state's two goals of maximizing revenue to the state and providing economic development opportunities to specific regions. The analysis projected both increased gaming revenues as well as potential impacts on other industries in the state such as the pari-mutuel industry, restaurants and bars, and increased governmental costs in the areas of enforcement and regulation.

Florida Statewide Economic Impact Analysis

The seven major racing operators in Florida engaged The Innovation Group to analyze the potential economic impact of the tax rate adjustment and addition of table games that are currently being discussed for the state of Florida. The goal of the assessment was to determine the aggregate construction expenditure and annual gaming revenue potential for Dade and Broward county pari-mutuel facilities assuming anticipated competitive environment and proposed legislative changes.

Economic Impact Assessment, Mile High USA, Inc., Aurora, Colorado

Mile High USA retained The Innovation Group to complete an Economic Impact Assessment for the potential addition of Video Lottery Terminals ("VLT's") at Arapahoe Park in Aurora, CO, including an optional scenario assuming the addition of VLT's to the South Colorado Gaming and Events Center in Pueblo, CO as well. We delivered a report including patron demand and revenue forecasts for each selected location; a sizing and supply distribution analysis looking at the appropriate number of VLT's for each site; an estimate of substitution to existing CO casinos; and an estimate of net direct and indirect economic impacts associated with construction and operation of each development, including a community needs assessment.

Kentucky Statewide Market & Social Impact Assessments

The Innovation Group was engaged to provide a statewide gaming market assessment, return on investment analysis and economic impact study for (2) two gaming scenarios in Kentucky. The first scenario assumed full-service slot and table gaming facilities at the state's (7) existing racetracks. The second scenario included several non-racetrack gaming locations. Using a gravity model, we developed revenue estimates, sizing and local capture potential from residents currently traveling out of state to gamble. The Innovation Group also conducted a qualitative study regarding the social cost of gaming, focusing on the impact to existing businesses in the area. A strategic plan acceptable to all participants was presented to the legislature with The Innovation Group providing supporting expert witness testimony regarding the findings.

Caesars Entertainment Economic & Social Impact Assessments, Suffolk Downs, Massachusetts

Caesar's Entertainment retained the Innovation Group to complete an analysis of the potential social and cultural impacts of casino at Suffolk Downs per the State of Massachusetts's Gaming Legislation. The report updated a feasibility study we conducted in 2009 with added analyses on the impact a casino could have on local and small businesses, bankruptcy, problem gambling, property values, unemployment, cultural institutions, and the Massachusetts State Lottery.

Kahnawake First Nation Economic & Social Impact Studies, Quebec, Canada

In 2013, The Innovation Group completed a gaming market assessment and operational pro forma for a proposed First Nations casino in Montreal, Quebec. Accompanying that study was a complete economic impact for the First Nations community assessing the impact the casino would have on jobs, local businesses, and visitation to the area, as well as a complete socio-economic impact analysis to help the First Nation understand the various positive and negative social impacts that a casino may have on the surrounding population.

Las Vegas Sands, Bethlehem, Pennsylvania: Housing and Tourism Impact Study

General Scope: The Innovation Group completed an impact analysis of a proposed casino in Bethlehem, Pennsylvania, detailing the impact to the local housing market and existing tourism market. Comparisons were made to changes in housing values of other jurisdictions where gaming has been initiated. Impacts studied included the existing tourism market as well as potential new tourism opportunities generated by the development and indirect benefits from advertising and increased visibility. The study also included analyses of historical and other cultural impacts.

Additional Public Sector Related Experience

State of Illinois

The Innovation Group recently completed work for the Office of the Governor, Patrick Quinn. The project included analyzing multiple development scenarios and tax structures to determine the optimal strategy for casino expansion in the state. We worked closely with the Governor's office staff to ensure that our analysis matched the evolving nature of the negotiations between the Governor and the state legislature. This work was completed as a continuation from a previous project for the state that included analyzing the impacts of the Lottery and ambient video lottery terminals (VLT's) being introduced across the state.

The Governor has used The Innovation Group's analysis to guide the actions of the office as it evaluated all of the potential legislative actions for expanded gaming in the state.

The development scenarios, sizing parameters and tax structure for the expansion to gaming in the stated were constantly evolving de nature of the discussions and negotiations between the governor and the state legislature. In order to be responsive to these changes and provide up to date results, we made our staff available and flexible to the needs of the Governor's Office. The ever evolving development scenario required our staff to be diligent with the modeling process in order to make sure that the correct results tied to each iteration of the discussion and negotiation.

OLG: Greater Toronto Area Market Assessment

The Innovation Group provided a market assessment for the greater Toronto Area (GTA), considering the 27 gaming facilities across Ontario (4 resort casinos, 17 racetrack slots and 6 charity casinos). To complete the scope of work, we referred to previous market studies and existing performance data, to consider opportunities within the GTA to further

maximize revenue and profitability at some GTA gaming facilities. Particular consideration was offered to the long term future of Casino Rama, as well as general substitution consideration for all OLG locations. We reviewed the supply and demand for GTA gaming facilities and developed a market assessment for the GTA that clarified which areas of unmet demand could be defined in a variety of scenarios. The key objectives of our analysis were to determine the unmet demand (gaming revenue) within the GTA, estimate gaming demand and substitution impacts, based on a variety of scenarios to be determined together by OLG and The Innovation Group, and determine the optimal scenario(s) for best capturing this unmet demand, including supply requirements and resulting gaming revenue impacts. OLG also asked us to explore various sizing options with respect specific properties.

Based on the results and recommendations in our report, The Ontario Lotteries and Gaming commission has initiated its privatization and modernization program for more than 25 casinos and slot clubs in the Greater Toronto Area.

In order to comprehensively address the gaming revenue potential for the market, The Innovation Group had to determine a solution to estimate the latent demand in the market. The latent demand is not usually addressed in projects like this because of the complexity needed in order to estimate the potential. We established a methodology that addressed the maximum potential demand in the market based on comparables from other mature operating markets in the world. In order to accomplish this we created a metric that estimated the average gaming spend per adult and benchmarked this spend against comparable mature markets to establish the maximum.

Pennsylvania Statewide Table Game Analysis

In 2009, on behalf of several casino operators, The Innovation Group assessed the revenue potential that table game operations would generate in the Commonwealth of Pennsylvania. Our services included a statewide economic impact study evaluating the benefits to the Commonwealth from the introduction of table games, as well as testimony to the legislature regarding our findings. Key to allowing this program to proceed was convincing the legislature to assess a low tax rate on table games which they eventually accepted. In addition we projected increase in slot revenue as a result of companion play.

Based on the conclusions in the report and testimony, the state legislature passed a bill that allowed for table games to be introduced at casinos at a competitive tax rate. The lower tax rate bill spurred development at the casinos which included capital improvements to the casino floor and non gaming amenities including food and beverage and hotel development.

On the outset of the report, the state legislature was seeking a tax rate and structure that would have been prohibitive to the growth of the gaming industry in the state of Pennsylvania. In order to realign the stance of the legislature, The Innovation Group relied on our expertise to show both the numerical explanation of the issue as well as the expository writing to relay the point.

City of Philadelphia, Philadelphia Gaming Advisory Task Force Advisory Services

The Innovation Group was engaged to complete comprehensive analysis of the proposed new slot operations in the city and to make recommendations as to the city's oversight of these facilities. The input we provided aided officials in understanding a range of issues related to the operations so that they could more proactively take part in the development of the new industry. Our work included performing site analyses for 11 sites, developing market assessments and revenue projections for 14 scenarios, developing 28 pro formas, estimating local and overnight modal splits, estimating the fiscal impacts of problem gambling and impacts of crime and providing secondary research on trends in gaming. As primary consultants, we also oversaw the work of other consultants including input into the design and analysis of surveys and focus groups, and input into traffic impact assessments. The Innovation Group won this coveted contract through an open bid process.

The city used our recommendations in the report to assign two locations for potential casino development. One of the locations is currently developed and operating as one of the state's highest revenue generating casinos.

There were two main complications with this project: (1) the management of all the subcontractors and (2) addressing the needs of the various stakeholders on the city's development and oversight committee. In order to manage the many sub contractors on this project, The Innovation Group utilized a comprehensive timeline and communication strategy that allowed all of the subcontractors to be able to complete their tasks in a timely manner. In order to address all of the stakeholders, The Innovation Group created a communication protocol that allowed the committee members to voice their opinions and concerns and the results were addressed and included in the reports outcome and recommendations. The committee members felt their concerns addressed based on the outcome of the report.

Pennsylvania Statewide Market Assessment, Senate Democratic Appropriations Committee

In support of a bill that became the basis for subsequent gaming legislation and a state goal to generate $1 billion in revenue, The Innovation Group conducted a gaming market analysis (using a gravity model at the statewide level) to determine the number, size and location of gaming licenses for 12 proposed facilities. Multiple scenarios were addressed in order to determine the distribution which would maximize state tax revenues and ensure viable developments. The report also included a financial analysis of the break-even point for development given a proposed $50 million license fee and construction and financing costs. The recommendations of the report were eventually accepted by the state and incorporated into legislation. Following the passage of the bill, The Innovation Group also took a lead role on Philadelphia's Gaming Advisory Task Force to recommend optimum locations for gaming facilities in the city.

Legislation was drafted and passed through the state legislature based on the outcome and recommendation from The Innovation Group Report. The report identified the proximate sizing and location of casinos in the state that would generate over $1 billion in gaming tax revenue. Subsequent to the development of the casinos the state has received over $1 billion in total tax revenue.

Maryland Senate

Paul Girvan, a Managing Director/Partner of The Innovation Group and member of our proposed project team, testified before the Maryland Senate and provided revenue estimates in support of the legislation in 2004 and then again in 2007. The bill's success was partially based on our projections of gaming revenues that the state could put into its school system.

Government of Jamaica, Tourism Development & Strategic Planning Advisory Services

The Innovation Group has been retained and is working on an on-going basis for the Government of Jamaica's Public-Private Joint Venture to develop leisure and tourism attraction on the Country's north coast between Montego Bay and Ocho Rios in an area called Harmony Cove. The Innovation Group provided strategic planning, feasibility analysis, economic impact analysis, capital cost estimates and business planning support for a master plan development that will leverage landside uses drawing from a new cruise ship terminal at Falmouth and include hotels, casinos and other themed recreation all based upon a cultural fabric embedded in the country's musical history. The Innovation Group has played a key role in sourcing management for the proposed property, and structuring the operating agreement for management.

National Government of Panama

The Innovation Group assessed the potential gaming market in Panama under a number of scenarios relating to privatization, facility placement, and mixture of full casinos and slot rooms. Subsequent to our analysis, the state-run, hotel-based casinos and slot rooms were privatized and upgraded by international operators.

The Innovation Group Project Team

Thomas J. Zitt, Ph.D. – Executive Vice President

Since joining The Innovation Group in 1997, Thomas Zitt has excelled at market analytics and high-level strategic planning, earning his reports a reputation for accuracy and reliability unsurpassed in the gaming industry.

Tom lives in New Orleans but directs training, modeling and quality control for all Innovation Group offices. The depth of his analysis provides tribes, developers and government bodies with the confidence that their decisions are being made on sound economic foundations, and the methodological soundness and comprehensiveness of his expert witness reports have been critical in his Tribes' success in a number of legal proceedings.

Market sizing is a particular strength. Tom conducted the statewide gravity model analysis used by Pennsylvania legislators in structuring the state's highly successful gaming legislation. He has also consulted for the Illinois Governor's office and numerous developers in assessing potential revenue impacts of statewide gaming expansion. Additional statewide gravity models include Alabama, California, Florida, Georgia, Kentucky, Massachusetts, Michigan, New York, Ohio, Virginia, and West Virginia. He has also worked extensively in Atlantic City, Indiana, Iowa, Louisiana, Mississippi, Missouri, New Mexico, Oregon, Washington, and Wisconsin. His

international experience extends to the United Kingdom, Isle of Man, Cambodia, Japan, Kazakhstan, Laos, Macau, Mongolia, the Philippines, Russia and Russian Far East, Spain, and South Korea.

His work for tribes extends beyond gaming as he has completed economic diversification and strategic planning studies for tribal councils in California, Michigan, and Oregon.

In addition, Tom has assessed the economic, social and fiscal impacts of gaming in numerous developing jurisdictions, including Massachusetts, New York, and Ohio. He has also conducted regional analyses for investment firms like CIBC World Markets, Deutsche Bank and Bear Stearns looking to understand the impacts of new gaming development. Tom received his doctorate in American Culture Studies from Bowling Green University.

Angela Slovachek, Project Manager

Angela joined The Innovation Group in February 2015 while finishing her Master's degree in Urban and Regional Planning at the University of New Orleans. Angela's previous work as a research analyst at a New Orleans consulting firm in addition to ten years of managerial experience in the restaurant industry makes her a viable asset to our team.

Based out of our New Orleans office, Angela's primary focus has been in the domestic market for both commercial and Native American projects. Since joining our team she has assisted in market analyses, financial forecasts, economic impact studies and diversification strategies for our Tribes in the Gaming and Hospitality Industries. She also collaborates on some of the company's International projects providing market research for feasibility studies and white papers. Angela contributes to our Emerging Leaders of Gaming initiative by writing for the Global Gaming Business Magazine's column on 40 Under 40 award recipients.

She is currently an active member of the American Planning Association (APA) and Louisiana Urban & Regional Information Systems Association (LAURISA), an organization dedicated to the effective and ethical use of spatial information technologies.

In addition to her MURP degree, Angela obtained a B.A. in Economics and International Development and a Certificate in Peace Studies and Conflict Resolution while attending the University of Wisconsin in Milwaukee. With a lifelong commitment to community service, Angela proudly served as a United States Peace Corps volunteer in Benin, West Africa from 2010-12.

MSA Project No. 2443

September 21, 2018

Rodney Reed, P.E.

Introduction

The discussion within this section is based on a variety of information sources. The City of Cathedral City General Plan Update (2002) and its corresponding Environmental Impact Report (EIR) (March 2002), the Desert Water Agency 2015 Urban Water Management Plan, and the 2012 Coachella Valley Water Management Plan Update.

The Department of Water Resources is responsible for the management of water usage including the delivery of water to two thirds of California's population through the State Water Project.

The Project Site is located within the boundaries of the Coachella Valley Planning Area of the Colorado River Basin (Region 7). Region 7 covers approximately 13 million acres (20,000 square miles) in the southeastern portion of California and includes all of Imperial County and portions of San Bernardino, Riverside, and San Diego Counties. It is bounded on the east by the Colorado River; to the south by Mexico; to the west by the Laguna, San Jacinto, and San Bernardino Mountains; and to the north by the New York, Providence, Granite, Old Dad, Bristol, Rodman, and Ord Mountain Ranges.

The Coachella Valley is located in the central portion of Riverside County and can be divided into the West Valley and East Valley. The West Valley includes the cities of Palm Springs, Desert Hot Springs, Cathedral City, Rancho Mirage, Indian Wells, Palm Desert, and a portion of the City of Indio, and the unincorporated communities of Sun City and Thousand Palms. This area is a predominately resort/recreation based economy. Water demand in the West Valley is supplied by several sources: groundwater, surface water from local streams, and recycled water. The East Valley includes the cities of Coachella, Indio, La Quinta, and the unincorporated communities of Bermuda Dunes, Mecca, Oasis, Thermal, and Vista Santa Rosa. Historically, the East Valley has had a primarily agriculture based economy.

Groundwater is the primary source of domestic water supply in the Coachella Valley. The Coachella Valley's principal groundwater basin, the Whitewater River Subbasin, extends from Whitewater in the northwest to the Salton Sea in the southeast. Per the 2010 CVWD Water Management Plan, the basin has an estimated storage capacity of 30 million acre-feet (AF). The Whitewater River Watershed covers 1,920 square miles in the west central portion of Region 7 and includes the majority of Riverside County and a small portion of southern San Bernardino County. The watershed consists mainly of sparsely populated mountains, desert, and agricultural lands. The watershed is bounded on the south by the San Jacinto and Santa Rosa Mountains, on the west by the Santa Ana Watershed, on the east by the Salton Sea, the Hexie and Cottonwood Mountains, and Southern Mojave Watershed, and on the north east by the little San Bernardino Mountains and Southern Mojave Watershed. The highest elevations (upper reaches) of the watershed occur in the San Jacinto Mountains at 10,000 feet above mean sea level.

Desert Water Agency (DWA) was formed in 1961 to import State Water Project (SWP) water into the Palm Springs and Desert Hot Springs areas. DWA is a public agency and retail water supplier serving 325 square miles that includes the City of Palm Springs, the southwestern portion of Cathedral City, portions of Desert Hot Springs, as well as some incorporated areas of Riverside County.

DWA provides water service through two different separate systems (potable and recycled) within its service area. DWA's source of supply include groundwater produced by local potable water wells, surface water diverted from creeks in the San Jacinto Mountains, imported SWP water exchanged for Colorado River water, and recycled water (for irrigation use). DWA pumps from 29 active wells which includes about 23,000 active services throughout 392 miles of pipeline.

DWA extracts groundwater for municipal use from the upper portion of the Whitewater River Subbasin of the Coachella Valley Groundwater Basin. There are five groundwater subbasins in the Coachella Valley: Whitewater River, Mission Creek, San Gorgonio Pass, Desert Hot Springs, and Garnett Hill. All imported water is used to replenish or recharge the Coachella Valley Groundwater Basin, particularly the Whitewater River and Mission Creek Subbasins, and subsequently the Garner Hill Subbasin.

The Whitewater River Subbasin is partially recharged naturally with runoff from the San Jacinto, Santa Rosa, and San Bernardino Mountains. Since the 1950's or earlier, groundwater extractions in the Whitewater River Subbasin have exceeded the long-term natural recharge, a condition called "overdraft", resulting in declining groundwater levels.

For the project site, as defined later, DWA provides wastewater collection service but CVWD provides wastewater treatment. DWA collects wastewater through the local municipal sanitary sewer system, which terminates at a sewer lift station at the northwest corner of Date Palm Drive and Buddy Rogers Avenue. From there the wastewater is pumped to a junction structure on a CVWD gravity line that terminates at CVWD's Water Reclamation Plant 10 (WRP-10) in Palm Desert. The WRP-10 plant capacity is 18 million gallons per day, with tertiary treatment capacity of 15 million gallons per day, distributing recycled water to 13 non-potable water customers for uses such as irrigation for parks and golf courses. Operations, maintenance, and safety at WRP-10 are conducted in accordance to environmental and regulatory standards.

Recycled water has been a priority water supply in the Valley since 1965. Currently, DWA and CVWD provide more than 14,000 AFY of recycled water for golf course and greenbelt irrigation purposes from four wastewater treatment facilities.

Tribal Land Use Ordinance

The purpose of the Agua Caliente Band of Cahuilla Indians (Tribe) Land Use Ordinance (Land Use Ordinance) is to provide standards and regulations to control land uses on the Agua Caliente Indian Reservation, maintain and protect the Reservation's unique natural and cultural resources, and to preserve the natural environment. Article VII, Landscaping Standards, promotes the use of native, desert, and other drought tolerant plants to reduce water demand on the Reservation. The landscape management practices identified in this article of the Land Use Ordinance ensure maximum water efficiency, comprehensive landscaping plans, irrigation plans, plant materials, decorative water features, and limitations on turf material.

Project Site Description

The purpose of this section is to estimate the water and sewer demand for the Cathedral City Fee-to-Trust Casino Project (Project) in Cathedral City, CA, as it would relate to the five (5) alternatives being studied as part of the Environmental Assessment (EA) prepared for the Project. The approximately 13.6 acre project site for Alternatives A, B, and C is located on the northwest corner of Date Palm Drive and East Palm Canyon Drive (Highway 111) in Cathedral City, California (North Site), with the project site for Alternative D being approximately 13.9 acres located on the south side of Highway 111 between Date Palm Drive and Van Fleet Street (South Site).

The five (5) alternatives analyzed are further described in this report. A brief summary of characteristics follows:

Alternative A: Proposed Casino and Mixed Use Complex

- Fee-to-trust transfer of 13.6 acres in Cathedral City, CA, and resulting development of a 125,000 square foot casino-mixed use complex.
- 65,000 square foot casino.
- 60,000 square feet of mixed use structures (Buildings A-F)

Alternative B: Reduced Intensity Alternative

- Fee-to-trust transfer of 13.6 acres in Cathedral City, CA, and resulting development of a 103,000 square foot casino-mixed use complex.
- 65,000 square foot casino.
- 38,000 square feet of mixed use structures (Buildings D-E)

Alternative C: Alternative Use (Non-Gaming)

- Fee-to-trust transfer of 13.6 acres in Cathedral City, CA, and resulting development of a 90,000 square foot mixed use complex.
- 90,000 square foot mixed use complex (Buildings A-J)

Alternative D: SWC of East Palm Canyon Drive and Date Palm Drive – Site Alternative

- Fee-to-trust transfer of 13.9 acres in Cathedral City, CA, and resulting development of a 125,000 square foot casino-mixed use complex.
- 65,000 square foot casino.
- 60,000 square feet of mixed use structures (Buildings A-E)

Alternative E: No action

- No new development or change of land use.

Background

The North Site (Alternatives A, B and C) is bounded by East Palm Canyon Drive on the south, Date Palm Drive on the east, Buddy Rogers Avenue on the north, and abuts existing developed and vacant parcels on the west. The existing alignments of Allen Avenue and Dawes Street cross the site in their entirety, as do portions of Hillery Road and Grove Street. The South Site (Alternative D) is bounded by East Palm Canyon Drive on the north, Van Fleet Street on the west, D Street on the south and the East Cathedral flood channel along the southeast.

Both the North and South Sites were previously developed with residential and/or commercial uses. Except for the existing fire station at the northeast corner and the fast food restaurant at the southeast

corner, the North Site has been cleared and reconditioned to generally flat-graded pads, with existing streets remaining in use. The South Site has been re-developed into a single graded pad, although the roughly 300 foot alignment of A Street is still in use, along with two parking areas on its north side. Between the two existing parking areas, and between East Palm Canyon Drive and A Street, is an existing commercial structure whose parcel not a part of the Project.

Design Analysis

The objective of an analysis for any land use change (development) is to show no adverse impact between the permitted and proposed conditions. The analysis for development on an individual tract must take into account allotted development for the entire project. The proposed scenario cannot impact other development.

Conceptual development of the North and South Sites was examined based four conceptual site layout alternatives provided by Analytical Environmental Services. Alternative A consists of a 65,000 square foot casino structure and 60,000 square feet of mixed use structures on the North Site, with the remaining area used for parking and circulation, yielding approximately 1,000 parking spaces. Alternative B represents a smaller development footprint, with the same 65,000 square foot casino but with 38,000 square feet of mixed use structures and about 850 parking spaces. Alternative C eliminates the casino use, with all 90,000 square feet of structures designated for mixed use and a total of approximately 700 parking spaces. Alternative D applies the 65,000 square foot casino option on the South Site, with 60,000 square feet of mixed use structures and about 1,150 parking spaces.

Description of Analysis

The following is a general discussion of the alternatives and design assumptions. Proposed Development within the Alternatives A through D are shown in the exhibits at the end of this report. Alternatives A, B, and C are on the North Site and Alternative D is on the South Site. Alternative E is representative of the current condition on the North and South Sites.

Conceptual Water and Sewer Infrastructure

The design of domestic water and sanitary sewer facilities requires consideration of the proposed number of fixtures, the proposed usage and the demand required for fire protection, in addition to the physical constraints of the environment. For planning-level purposes, broad and conservative assumptions are sufficient to anticipate the primary infrastructure required to serve projected future demands. Design of site-level private facilities is much more dependent on more detailed site-driven issues and constraints and, as such, those private facilities are not projected in this assessment.

Domestic water service is provided by DWA, with a network of water mains surrounding and running through both the North and South Sites. Existing 12-inch mains currently run along the north and east boundaries of the North Site in Buddy Rogers Avenue and Date Palm Drive, and along the east, south and west boundaries of the South Site in D Street and Van Fleet Street, as well as along the southeast side adjacent to the East Cathedral Channel levee. Additionally, 8-inch and 6-inch mains currently exist in Hillery Road, Grove Street, Dawes Street, Allen Avenue and A Street.

Sanitary sewer is collected by DWA in existing mains within and adjacent to the North and South Sites

and conveyed to a lift station at the northwest corner of Buddy Rogers Avenue and Date Palm Drive, as previously described. The existing DWA sanitary sewer mains serving the North and South Sites include a 12-inch main running south from the lift station along Date Palm Drive and crossing East Palm Canyon Drive, then running along the north side of the East Cathedral Channel levee to D Street and continuing west on D Street beyond Van Fleet Street. Additional 8-inch branches run south from D Street at F Street and Van Fleet Street. An 8-inch line also extends west from Date Palm Drive through the north site along Grove Street. In a separate branch of the system, an 8-inch main runs north along Van Fleet Street from C Street, continuing along Monty Hall Drive to the North Cathedral Channel, then following the channel to the aforementioned lift station.

At the time that East Palm Canyon Drive was redeveloped in the 1990s, a portion of a sanitary sewer network was constructed in East Palm Canyon Drive providing future connectivity from the north and south portions of Allen Avenue, and also running west in East Palm Canyon Drive to a point just beyond the A Street intersection, with an A Street stub-out included. Best available evidence indicates that this sewer network segment was never connected to any active system, as the prior consolidation and redevelopment of the South Site rendered the segment obsolete and it remains as an unused vestige.

As the configuration of these current sanitary sewer and domestic water facilities are not suitable to serve the needs of the proposed Project, particularly as it pertains to fire protection, a conceptual layout of proposed improvements was developed to provide services for each of the four Alternatives.

Alternative A – Proposed Casino and Mixed Use Project

In this alternative, the proposed development represents full build-out of the Project with the assumption that the North Site is brought into federal trust status for the Tribe for gaming purposes.

Alternative B – Reduced Intensity Alternative

This scenario maintains the casino use in Alternative A but reduces the square footage of the mixed use element by more than a third.

Alternative C – Non-Gaming

In this alternative, the casino use in Alternative A is replaced by additional mixed-use buildings and the North Site is brought into federal trust status for the Tribe for non-gaming purposes.

Despite the reduced use in Alternative B or the absence of the casino in Alternative C, the incremental decrease in demand is not sufficient to downsize the primary mains, so the required layouts for Alternatives A, B, and C may be discussed as one layout for both sewer and water. For all three Alternatives, the proposed mains required for construction are a 12-inch domestic water main and an 8-inch sanitary sewer main. Additionally, existing infrastructure facilities within the North Site for Alternatives A, B, and C will require removal and/or abandonment to facilitate construction of new proposed improvements.

A proposed 12-inch water main would connect to the existing main in Buddy Rogers Avenue at Allen Avenue, continue south in the redeveloped right of way of Allen Avenue and turn east along East Palm Canyon Drive to the intersection of Date Palm Drive, where it would connect with the existing main that extends south from Date Palm Drive. The portions of the existing mains in Hillery Road, Grove Street and Dawes Street between Allen Avenue and Date Palm Drive would be removed or abandoned. West of Allen Avenue, the existing mains would remain in service, connected to the new main, although they

likely would be relocated onsite to accommodate new construction and/or follow new roadway alignments.

A new 8" sanitary sewer main would intercept the existing main in Grove Street at Allen Avenue, then continue north to Buddy Rogers Avenue, then east to connect with the existing sewer main in Date Palm Drive. The portion of the existing main in Grove Street between Allen Avenue and Date Palm Drive would be removed or abandoned, and the portion west of Allen Avenue would remain in service, connected to the new main, with likely relocation onsite.

Alternative D – Site Alternative

In this alternative, the proposed building area remains the same as Alternative A, but moves to the larger South Site located south of East Palm Canyon Drive/Highway 111, which would be brought into federal trust status for the Tribe for gaming purposes.

For Alternative D, the existing water and sewer mains along the East Cathedral Channel levee interfere with the location of the proposed casino structure, so they would have to be removed or abandoned between D Street and East Palm Canyon Drive, and the existing sewer main in D Street would require replacement as well. A new 12-inch sanitary sewer main would extend west from the east end of D Street to Van Fleet Street, picking up the existing branches from the south and west, then run north in Van Fleet Street and east in East Palm Canyon Drive to reconnect at Date Palm Drive. A new 12-inch water main would follow the same route except that its initial connection to the existing main would be at the intersection of Van Fleet Street and D Street.

As a less costly option, the Alternative D conceptual site plan could be modified to shift the casino westerly out of interference with the existing water and sewer mains along the channel levee, allowing them to remain in service. A 12-inch water main would continue to be required along East Palm Canyon Drive from Date Palm to Van Fleet Street, connected to existing mains at each end, in order to provide fire protection to the site. The exhibit depicting this option has only a coarse and fragmented representation of the site plan, as it is intended only to indicate the rough repositioning of the casino building away from the levee. No attempt was made to rework the remainder of the site plan to accommodate this shift or clean up the fragmented overlap.

Alternative E – No Action

The "No Action" alternative assumes that the proposed construction of the 125,000 sf casino-mixed use complex and water/sewer infrastructure does not occur. It is expected that the North and South Sites would remain in their current, vacant condition under this alternative. Therefore, there would be no additional demand to dry utilities or the service systems.

Conclusions

For purposes of assessing the impacts of the proposed development on water and sewer infrastructure, proposed domestic water usage and sanitary sewer demands were calculated for the project site alternatives. DWA records of design projections and assumptions used sizing for existing infrastructure were not available but MSA personnel coordinated with DWA to establish demand calculations consistent with DWA practices. Prior projections for water and wastewater demand were

calculated using the DWA Master Sewer Plan density of 11.1 Equivalent Dwelling Units (EDUs) per acre, resulting in prior assumed densities of 159 EDUs for the north site and 172 EDUs for the south site. Applying a conservative practical average of 480 gallons per day of domestic water usage per EDU, the water use for the North and South Sites would be 76,002 gallons per day and 82,216 gallons per day, respectively. Standard DWA engineering design practice would have added 50% to these usages for pipe sizing purposes. Similarly, with an average of 252 gallons per day of wastewater generation, the prior projected sanitary sewer demand for the North and South sites would be 40,068 gallons per day and 43,344 gallons per day, respectively.

The included Water Demand Calculations tables show the anticipated domestic water usage and wastewater demands for the Alternatives A through D, along with the assumptions used in the calculations. These assumptions again are in accordance with DWA standard practices and were established in coordination with DWA personnel. As shown, the expected domestic water and sanitary sewer usages in gallons per day for the four site alternatives are:

	Water	Sewer
Alternative A	33,929	17,892
Alternative B	32,159	16,884
Alternative C	24,134	12,852
Alternative D	34,113	18,144

The projected domestic water and sanitary sewer usage for the North Site is about 32% to 45% of the prior projected (existing) usage, and about 41% to 42% of prior projection for the South Site. As such, the proposed developments are not anticipated to warrant construction or modification of existing water and wastewater infrastructure outside of the immediate Project needs described previously, which may be regarded as project-specific, even where occurring as off-site improvements. The proposed developments therefore do not contribute significant cumulative impacts to the overall DWA and CVWD systems.

Domestic Demand Rate Categories:
Supermarkets Domestic Demand is established using prior accepted reference (Rate of 64 gallons/year/square foot of office space as obtained from Commercial and Institutional End Uses of Water, AWWA Research Foundation Table 6.19)
Office Building Domestic Demand is established using prior accepted reference (Rate of 35 gallons/year/square foot of office space as obtained from Commercial and Institutional End Uses of Water, AWWA Research Foundation Table 6.18)
Restaurant Domestic Demand is established using prior accepted reference (Rate of 331 gallons/year/square foot of Restaurant space as obtained from Commercial and Institutional End Uses of Water, AWWA research Foundation Table 6.16)
DWA Design Guidelines for residential flow rate is **720** gallons per day per home.
Water Supply Assessment approved residential flow rate 55 gallons per day per capita (derived from California Water Code, Section 1, Division 6, provides for indoor water use performance standard of 55 gallons per capita per day.
City of Cathedral City density per home is 3.02 people per home = 166.1 gallons per day per home.

Landscape Irrigation Demand
Rate of 3.44 AC-ft per year per acre is applied to the Open Space Category landscaped area (Plant Factor of 0.38 and IE efficiency of 0.75) - this rate is applied to determint the outdoor for Residential, Hotel, Restaurant, and Supermarkets areas
Rate of 6.02 AC-ft per year per acre is applied to the Open Space 2 Category landscaped area (Plant Factor 0.7 and IE efficiency of 0.8)
DWA's - Maximum Water Allotment per DWA's table is 3.44 ac-ft/year/ac

Rate of 3.44 AC-ft per year per acre is applied to the Open Space Category landscaped area (Plant Factor of 0.38 and IE efficiency of 0.75) - this rate is applied to determint the outdoor for Residential, Hotel, Restaurant, and Supermarkets areas
Rate of 6.02 AC-ft per year per acre is applied to the Open Space 2 Category landscaped area (Plant Factor 0.7 and IE efficiency of 0.8)
DWA's - Maximum Water Allotment per DWA's table is 3.44 ac-ft/year/ac

water use	**34,113 gpd**
sewer use	**18,144 gpd**
per site density (4 EDU/AC)	56
Ex. water use	26,544 gpd
Ex. sewer use	14,112 gpd
per DWA sewer master plan (11.1 EDU/AC)	172.00
Ex. water use	**82,216 gpd**
Ex. sewer use	**43,344 gpd**

MSA Project No. 2443

July 27, 2018

Rodney Reed, P.E.

Introduction

The discussion within this section is based on a variety of information sources. The City of Cathedral City General Plan Update (2002) and its corresponding Environmental Impact Report (EIR) (March 2002), the current Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRMs) effective on August 28, 2008, for the Project Site, and the Agua Caliente Band of Cahuilla Indians (Tribe) "*Tribal Ordinance Controlling Pollutant Discharges into the Waters of the Agua Caliente Indian Reservation*," "*Land Use Ordinance*," and "*Floodplain Management Ordinance for the Agua Caliente Indian Reservation*."

The Clean Water Act (CWA) of 1972 establishes regulations pertaining to the discharge of pollutants to waters of the U.S. from point sources. Subsequent amendments to the CWA in 1987 established a framework for regulating non-point source stormwater discharges under the National Pollutant Discharge Elimination System (NPDES).

The NPDES is a program created to implement the Clean Water Act. In November 1990, the United States Environmental Protection Agency (USEPA) published final regulations that establish requirements for specific categories of industries, including construction projects that encompass greater than or equal to 5 acres of land. The Phase II Rule became final in December 1999, expanding regulated construction sites to those greater than or equal to 1 acre. The regulations require that stormwater and non-stormwater runoff associated with construction activity that discharges either directly to surface waters or indirectly through municipal separate storm sewer systems (MS4), must be regulated by an NPDES permit.

The USEPA has delegated management of California's NPDES program to the State Water Resources Control Board (SWRCB) and the nine regional board offices that grant permits to regulate point source discharges of industrial and municipal wastewater into the waters of the United States. The NPDES program was established in 1972 to regulate the quality of effluent discharged from easily detected point sources of pollution such as wastewater treatment plants and industrial discharges. The 1987 amendments to the CWA21 recognized the need to address non-point-source stormwater runoff pollution and expanded the NPDES program to operators of MS4s, construction projects, and industrial facilities.

Presently in the State of California, the SWRCB, and nine California Regional Water Quality Control Boards (RWQCBs) administer the regulation, protection, and administration of water quality pursuant to the NPDES. Their regulations encompass storm water discharges from construction sites, MS4s, and major industrial facilities.

Stormwater runoff for tribal construction projects is managed by the USEPA through the USEPA's approval of coverage under the USEPA Construction General Permit (CGP) for Indian country within the State of California. Pursuant to the CGP, onsite BMPs required as part of a project specific Stormwater Pollution Prevention Plan (SWPPP) will be utilized to maintain the water quality of the Project during construction activities that disturb surface area in excess of one acre.

The Project Site, as defined below, is located within the boundaries of the Coachella Valley Planning Area of the Colorado River Basin RWQCB, also known as Region 7. Region 7 covers approximately 13 million acres (20,000 square miles) in the southeastern portion of California, and includes all of Imperial County and portions of San Bernardino, Riverside, and San Diego Counties. It is bounded on the east by the Colorado River; to the south by Mexico; to the west by the Laguna, San Jacinto, and San Bernardino Mountains; and to the north by the New York, Providence, Granite, Old Dad, Bristol, Rodman, and Ord Mountain Ranges.

The Coachella Valley Planning Area consists of the Whitewater River Watershed and East Salton Sea Watershed, with the Project Site located within the Whitewater River Watershed. The Whitewater River Watershed covers 1,920 square miles in the west central portion of Region 7 and includes the majority of Riverside County and a small portion of southern San Bernardino County. The watershed consists mainly of sparsely populated mountains, desert, and agricultural lands. The watershed is bounded on the south by the San Jacinto and Santa Rosa Mountains, on the west by the Santa Ana Watershed, on the east by the Salton Sea, the Hexie and Cottonwood Mountains, and Southern Mojave Watershed, and on the north east by the little San Bernardino Mountains and Southern Mojave Watershed. The highest elevation (upper reaches) of the watershed occur in the San Jacinto Mountains at 10,000 feet above mean sea level.

The SWRCB administers the NPDES permit program regulating stormwater from construction activities for projects greater than 1 acre in size. This is known as the General Permit for Storm Water Discharges Associated with Construction Activities, Order No. 2009-0009-DWQ, as amended by Order No. 2012-0006-DWQ, NPDES No. CAS000002. However, the USEPA is the NPDES permitting authority for Indian lands in California and USEPA's CGP CAR10I000 includes similar requirements as those identified in CAS000002.

The main compliance requirement of NPDES permits is the development and implementation of a SWPPP. The purpose of a SWPPP is to identify potential on-site pollutants and identify and implement appropriate stormwater pollution prevention measures to reduce or eliminate discharge of pollutants to surface water from stormwater and non-stormwater discharges. Stormwater Best Management Practices (BMPs) to be implemented during construction and grading, as well as post-construction BMPs will be outlined in the SWPPP prepared for the proposed Project as required by CGP CAR 10I000.

The City of Cathedral City is permittee of the Whitewater River Watershed Municipal Separate Storm Sewer System (MS4) (Order No. R72013-0011, NPDES No. CAS617002) and the Whitewater River Region Water Quality Management Plan (WQMP) for Urban Runoff (January 2011). Under this permit, projects within the City are required to prepare a project specific WQMP, and projects are required to treat the "first flush" of storm water runoff prior to any release into the City's MS4 system. While not subject to City requirements, the Tribe will voluntarily prepare and maintain a WQMP throughout the life of the Project.

Tribal Ordinance Controlling Pollutant Discharges into the Waters of the Reservation

The purpose of this Tribal Ordinance is to regulate and control all pollutant discharges into the waters of the Reservation. Per this Ordinance, no pollutant discharges are allowed into the waters of the Reservation unless there is prior consultation with the Federal, Tribal, or State agency with jurisdiction under the Clean Water Act and/or the Safe Drinking Water Act, and if required, appropriate permit(s) are obtained.

(Agua Caliente Band of Cahuilla Indians, *"Tribal Ordinance Controlling Pollutant Discharges into the Waters of the Agua Caliente Indian Reservation,"* http://www.aguacaliente.org/downloads/Ordinance24.pdf)

Tribal Land Use Ordinance

The purpose of the Agua Caliente Band of Cahuilla Indians Land Use Ordinance (Land Use Ordinance) is to provide standards and regulations to control land uses on the Reservation, maintain and protect the Reservation's unique natural and cultural resources, and to preserve the natural environment. Article VII, Landscaping Standards, promotes the use of native, desert, and other drought tolerant plants to reduce water demand on the Reservation. The landscape management practices identified in this article of the Land Use Ordinance ensure maximum water efficiency, comprehensive landscaping plans, irrigation plans, plant materials, decorative water features, and limitations on turf material.

(Agua Caliente Band of Cahuilla Indians *"Land Use Ordinance,"* http://www.aguacaliente.org/downloads/TribalLandUseCode.pdf)

Tribal Ordinance for Floodplain Management

The purpose of the Floodplain Management Ordinance is to promote the public health, safety, general welfare, and to minimize the public and private losses due to flood conditions in specific areas. The Floodplain Management Ordinance was modeled after the ordinance prepared by the California Department of Water Resources, Division of Flood Management. In order to accomplish the primarily purpose of the Ordinance, the following methods and provisions are included to reduce flood losses:

- Minimize damage to public facilities and utilities such as water and gas mains, electric, telephone and sewer lines, and streets and bridges located in areas of special flood hazard.
- Restrict or prohibit uses which are dangerous to health, safety, and property due to water or erosion hazards, or which result in damaging increases in erosion or flood heights or velocities.
- Require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction.
- Control the alteration of natural floodplains, stream channels, and natural protective barriers, which help accommodate or channel flood waters.
- Control filling, grading, dredging, and other development which may increase flood damage.

- Prevent or regulate the construction of flood barriers which will unnaturally divert flood waters or which may increase flood hazards in other areas.

(Agua Caliente Band of Cahuilla Indians, *"Floodplain Management Ordinance for the Agua Caliente Indian Reservation,"* http://www.aguacaliente.org/downloads/Ordinance21.pdf)

The Project includes a drainage plan designed to convey flows on-site; without modification to existing off-site drainage conditions. Off-site flows from the half streets adjacent to the Project Site are collected at natural concentration points along the boundaries of the Project Site and conveyed via piped flow to the North Cathedral Channel. The proposed on-site drainage system is designed to convey 100-year storm flows via surface and piped flows to an underground retention system sized to contain and infiltrate the 100-year, 3-hour storm in accordance with the City of Cathedral City requirements. Although an existing 48-inch storm drain pipe runs beneath Allen Avenue from Date Palm Drive to the North Cathedral Channel, it is not available to receive direct stormwater discharge, other than perhaps as an overflow route.

During construction, the Project will comply with South Coast Air Quality Management District's (SCAQMD) Rule 403 and 403.1, which prompt the requirement for preparation and implementation of a Fugitive Dust (PM10) Control Plan. Implementation of the Fugitive Dust Control Plan primarily pertains to air quality, but also supports water quality protection through the requirement of soil stabilization measures to prevent sediment erosion and track-out. The concurrent implementation of the required SWPPP and PM-10 plans will prevent the potential construction-related impacts to water quality at the site and its surroundings.

The Tribe will voluntarily prepare a Project-Specific Water Quality Management Plan (WQMP) to comply with the most current standards of the Whitewater River Region Water Quality Management Plan for Urban Runoff and the Whitewater River Watershed MS4 Permit and the above Tribal Ordinances by preventing the off-site discharge and transport of potential pollutants associated with Project runoff. The Project-Specific WQMP, currently in a preliminary form, identifies a strategy of site design, source controls, and treatment controls with a component of maintenance and monitoring to address post-construction runoff quality and quantity.

All Project development avoids on-site flooding and flooding onto downstream properties. An agreement would be executed between the Tribe and/or developers and CVWD to maintain consistency with Coachella Valley Water District (CVWD) Ordinance 1234.1. A flood control facility operations and maintenance manual would be submitted to CVWD and/or the City for review and approval prior to issuance of grading or building permits. Furthermore, since the Project Site currently does not fall within a FEMA 100-year flood zone, the Project would not be required to obtain a Conditional Letter of Map Revision (CLOMR) through FEMA. The comment will be reviewed by the Tribal Council in their consideration of the Record of Decision for the Project.

Project Site Description

The purpose of this section is to substantiate the grading and drainage needed for the Cathedral City Fee-to-Trust Casino Project (Project) in Cathedral City, CA, as it would relate to the five (5)

alternatives studied as part of the Environmental Assessment (EA) prepared for the Project. The approximately 13.6 acre Project site for Alternatives A, B, and C (North Site) is located on the northwest corner of Date Palm Drive and East Palm Canyon (Highway 111) and generally slopes down to the northeast at an average of 2.5%, falling about 26 feet over roughly 1,000 feet, with surface elevations ranging from approximately 310 feet to 284 feet above mean sea level. The approximately 13.9 acre Project site for Alternative D (South Site), located on the south side of Highway 111 between Date Palm Drive and Van Fleet Street, generally falls to the northeast as well, with an average slope of about 3.1%, falling almost 40 feet over nearly 1,000 feet, with surface elevations ranging from 339 feet to 299 feet above mean sea level.

According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Map Number's 06065C1587G and 06065C1589G, effective since August 28, 2008, the North and South Sites are not in a designated 100-year flood hazard area but are designated as being in Zone X, which indicates areas of 0.2% annual chance flood, areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile, and areas protected by levees from 1% annual chance flood.

The five (5) alternatives analyzed are further described in this report. A brief summary of characteristics follows:

Alternative A: Proposed Casino and Mixed Use Complex

- Fee-to-trust transfer of 13.6 acres in Cathedral City, CA, and resulting development of a 125,000 square foot casino-mixed use complex.
- 65,000 square foot casino.
- 60,000 square feet of mixed use structures (Buildings A-F)

Alternative B: Reduced Intensity Alternative

- Fee-to-trust transfer of 13.6 acres in Cathedral City, CA, and resulting development of a 103,000 square foot casino-mixed use complex.
- 65,000 square foot casino.
- 38,000 square feet of mixed use structures (Buildings D-E)

Alternative C: Alternative Use (Non-Gaming)

- Fee-to-trust transfer of 13.6 acres in Cathedral City, CA, and resulting development of a 90,000 square foot mixed use complex.
- 90,000 square foot mixed use complex (Buildings A-J)

Alternative D: SWC of East Palm Canyon Drive and Date Palm Drive – Site Alternative

- Fee-to-trust transfer of 13.9 acres in Cathedral City, CA, and resulting development of a 125,000 square foot casino-mixed use complex.
- 65,000 square foot casino.
- 60,000 square feet of mixed use structures (Buildings A-E)

Alternative E: No action

- No new development or change of land use.

Background

The North Site (Alternatives A, B, and C) is bounded by East Palm Canyon Drive on the south, Date Palm Drive on the east, Buddy Rogers Avenue on the north, and abuts existing developed and vacant parcels on the west. The existing alignments of Allen Avenue and Dawes Street cross the site in their entirety, as do portions of Hillery Road and Grove Street. The South Site (Alternative D) is bounded by East Palm Canyon Drive on the north, Van Fleet Street on the west, D Street on the south and the East Cathedral flood channel along the southeast.

Both North and South Sites were previously developed with residential and/or commercial uses. Except for the existing fire station at the northeast corner and the fast food restaurant at the southeast corner, the North Site has been cleared and reconditioned to generally flat-graded pads, with existing streets remaining in use. The South Site has been re-developed into a single graded pad, although the roughly 300 foot alignment of A Street is still in use, along with two parking areas on its north side. Between the two existing parking areas, and between East Palm Canyon Drive and A Street, is an existing commercial structure whose parcel not a part of the Project.

As a sub-basin within the Whitewater River basin, the North and South Sites permitted receiving water body is the Coachella Valley Storm Channel. However, due to Tribal and Cathedral City Municipal Code requirements, the Project is required to retain the 100-year, 3-hour storm onsite.

The Project will provide pretreatment within the site. In doing so, pretreatment is established prior to run-off entering into the proposed onsite underground storage facility. Water quality is provided through infiltration within the landscaped areas and the perforated pipe storage facility as is storage for storm events equivalent to, or less than the 100-year, 3-hour event.

Off-Site Discharge

The Project is located in the central portion of the Whitewater River basin and will therefore meet the criteria governing improvements within that basin for stage and discharge. Offsite discharge is not authorized by Cathedral City Municipal Code Title 15.10 and while the Tribe is not subject to Title 15.10 requirements, the Tribe will voluntarily comply.

Design Criteria

The design criteria for any development within the Project must meet the minimum standards for the Whitewater River Region and the Tribal Ordinance Controlling Pollutant Discharges into the Waters of the Agua Caliente Indian Reservation. The parameters are as follows:

Pretreatment

Pretreatment will be utilized within the Project prior to runoff entering the storm drain system. Grates and filter bags at the inlets will remove trash, debris, and sediment from the runoff.

Water Quality

Cathedral City Municipal Code Chapter 15.10 and the Tribal Ordinance Controlling Pollutant Discharges into the Waters of the Agua Caliente Indian Reservation prohibit the discharge of non-storm water discharges to the district drain system and/or waters of the Agua Caliente Indian Reservation without the applicable discharge permit.

In addition to pretreatment, run-off will be retained onsite. Water Quality is a form of secondary treatment that allows further retention of run-off for infiltration of stormwater. Water quality for the Project is met by infiltrating storm events within the underground retention facility. The retention volume is determined by the 100-year, 3-hour storm event. A smaller design storm is utilized for treatment of the "first flush" of stormwater runoff. As such, the underground retention facility for each alternative will have sufficient capacity to capture and retain the WQMP design volume as this volume is a fraction of the 100 year storm event.

Stormwater Quantity

The Cathedral City Municipal Code Chapter 8.24.070 (storm water storage facilities) states: *Development of all land within the city must include provisions for the management of storm water runoff from the property which is to be developed, in compliance with this chapter and with Chapter 15.10 of this code, and with the following provisions. Management of storm water shall consist of constructing storm drain systems and storm water storage facilities, which includes detention basins. As a minimum, all development will make provisions to store runoff from rainfall events up to and including the one-hundred-year, three-hour duration event. If a suitable outlet for a detention basin is not available, or if engineering analysis indicates that available outlet systems would be overtaxed by a detention basin outflow, a retention basin shall be constructed in lieu of a detention basin.*

On-site Storage

In addition to pretreatment and water quality, conditions for development within Cathedral City require that:

- runoff from the 100-year, 3-hour storm event does not exceed the maximum onsite storage capacity.

Design Analysis

The objective of an analysis for any land use change (development) is to show no adverse impact between the permitted and proposed conditions. The analysis for development on an individual property must take into account allotted development for the entire Project. The proposed scenario cannot significantly impact other development.

Proposed scenarios were compared against the permitted conditions. The proposed model includes the ultimate build-out condition for the Project with modification of existing conditions accounting for proposed development. To accommodate the development of the Alternatives, the proposed model includes requirements for the infrastructure system on the South Site.

The drainage models for Alternatives A through D include proposed onsite storage and infiltration of stormwater runoff. The models simulate the property as constructed according to all Alternative project descriptions.

Proposed systems are modeled and analyzed using:

- The proposed improvements on Tribal land with proposed infrastructure upgrades within the property.

To be compliant with conditions of the Cathedral City Municipal Code and other regulatory requirements, each analysis must demonstrate:

- 100% retention of the 100-year, 3-hour storm event.
- No adverse impact to the surrounding properties.

Description of Analysis

The following is a general discussion of the Alternatives and design assumptions. Proposed Development within Alternatives A through D are shown in the exhibits at the end of this report. Alternatives A, B, and C are on the North Site and Alternative D is on the South Site. Alternative E is representative of the current condition on the North and South Sites.

For the analysis, a conceptual grading plan was developed for each Alternative, fitting the site plans vertically to the existing perimeter features and maintaining standard parameters for grades and slopes in a commercial application. From these grading concepts, preliminary earthwork volumes were calculated to determine the cut/fill and import/export dirt volumes required for the Project. Hydrologic calculations were performed to determine the necessary onsite stormwater storage volumes for the 100-year, 3-hour storm event and, under the assumption of full underground stormwater retention to maximize site use, dimensioned areas were delineated for underground stormwater storage on the site.

Conceptual Grading

The conservative approach of the preliminary grading design was to achieve a practical physical interaction with the existing boundary constraints while maintaining efficient vertical relationships and transitions. However, it was important to avoid subjective design decisions that plot aesthetic and experiential choices against cost, as such considerations typically are undertaken by project owners and their architects and should not be dictated at the planning level through quantitative pragmatism. In the conceptual grading design, dirt import or export volumes were minimized only to the point where such subjective value judgments were not in consideration. In the eventual Project design, choices may be made to reduce import or export through the use of stepped floor elevations within buildings, stem walls, retaining walls, ramps and stairs, and so on.

For instance, the curb line running east along Palm Canyon Drive and then north on Date Palm Drive falls about 26 feet. The casino building in Alternatives A and B, anchored at the southeast corner, occupies about 40% of the East Palm Canyon frontage and about 75% of the Date Palm frontage, all presumably at the same floor level. The proposed conceptual grading design included the assumption that the casino building would be built with a single floor elevation throughout and

would not be situated below street level along East Palm Canyon Drive, the most visible frontage. The result was a significant elevation differential from street to pad at the northeast corner of the site, and a substantial volume of imported fill dirt required. Of course, in the eventual design of the site there are many choices that can be made to reduce the import volume — the building can be lowered with architectural mitigation on the street frontage, the casino building can be stepped down internally, etc., but those value judgments should not be imposed unilaterally at this stage.

As mentioned, the North Site generally slopes down to the northeast at an average of 2.5%, falling about 26 feet over roughly 1,000 feet. The conceptual grading designs for its three Alternatives are similar, owing to the similarities of the site layouts, and all generally follow the existing lay of the site and have an overall low point at the northeast corner; the variation of these elevation differentials is a product of multiple spatial relationships throughout the site. At the southeast corner the vertical relationships are more uniform.

The conceptual grading of the redeveloped Allen Avenue, running north-south through the site, primarily slopes down to the north at 2%, save for the northernmost 125 feet which is at 5.5%. Similarly, the portion of the site west of Allen Avenue is comparable for all three options, generally sloping down to the east at 0.5% to 1.5%.

The South Site for Alternative D generally falls to the northeast as well, with an average slope of about 3.1%, falling almost 40 feet over nearly 1,000 feet. The conceptual grading design here again follows the existing lay of the site and has an overall low point at the northeast corner. The proposed casino is located at the low end of the site, with a finished floor elevation sitting above East Palm Canyon Drive, increasing eastward. The proposed entry street approaches the Formal Entry from Van Fleet Street, falling at 4.1% and flattening to a maximum of 1.5% along the building frontages.

Conceptual Earthwork Analyses

The conceptual grading schemes described above were used to create surfaces, which were compared to the existing surfaces created topography obtained from aerial photography. Raw volumes were obtained for each Alternative. The figures represent raw earthwork estimates that do not account for shrinkage and subsidence of soil, over-excavation, thickness of pavement, soil generated through excavation of the underground retention systems, or other factors typically determined or recommended by a geotechnical engineer after performing a soil analysis. Also, grading schemes may be designed with a goal of balancing or minimizing import/export, but such designs require more in-depth site design and cost choices which are not appropriate or available at this planning-level stage.

Conceptual Hydrologic Analyses

The hydrologic analyses of the North and South Sites involved the generation of synthetic unit hydrographs to model a 100-year, 3-hour storm event, based on rainfall values provided by the National Oceanic and Atmospheric Administration (NOAA). For purposes of this analysis, the onsite stormwater storage is presumed to be fully underground in a relatively economical perforated

corrugated metal pipe (CMP) manifold and wrapped in stone bedding, and utilizing an efficient 96" diameter pipe size. The existing Project sites have total impervious areas of about 3.1 acres for the North Site and about 0.6 acres on the South Site.

Conclusions

Each Alternative was modeled for the improvements described previously. The analysis stormwater runoff and includes an estimate of earthwork.

Alternative A – Proposed Casino and Mixed Use Project

In Alternative A, the proposed development represents full build-out of the Project with the assumption that the North Site is brought into federal trust status for the Tribe for gaming purposes. **Table 1** provides a general summary of land use breakdown for this Alternative:

Table 1

Casino (s.f.)	Mixed-Use (s.f.)	Parking (spaces)	Impervious Area (ac)	Pervious Area (ac)
65,000	60,000	1,000	12.24	1.36

This scenario maximizes the building square footage on the northern North Site.

On-site retention will be provided in the northeast corner of the Project under the proposed parking lot. 2,010 lineal feet of 96" perforated corrugated metal pipe will be placed in ten rows and surrounded by porous stone to create a 203 ft by 95.5 ft underground retention system that will provide 138,166 cubic feet of storage, based on the 100-year, 3-hour storm event.

The earthwork analysis for this scenario indicates a 91,933 cubic-yard (cy) import, with no factors included.

Alternative B – Reduced Intensity Alternative

In Alternative B, the proposed development represents a reduction in mixed-use building area from Alternative A. **Table 2** provides a general summary of the land use for this Alternative:

Table 2

Casino (s.f.)	Mixed-Use (s.f.)	Parking (spaces)	Impervious Area (ac)	Pervious Area (ac)
65,000	38,000	850	12.24	1.36

Alternatives A, B, and C have the same total area of impervious area, leading to the 100-year, 3-hour storm totals resulting in the same volume to be retained. As such, the underground retention systems are identical, except for their placement. On-site retention will be provided in the northeast corner of the North Site under the proposed parking lot in this Alternative. Total

impervious area increase for the north site is approximately 9.1 acres.

The earthwork analysis for this scenario indicates a 72,653 cy import, with no factors included.

Alternative C – Non-Gaming

In Alternative C, the casino use in Alternative A is replaced by additional mixed-use buildings and the North Site is brought into federal trust status for the Tribe for non-gaming purposes. **Table 3** provides a general summary of the land use for this Alternative:

Table 3

Casino (s.f.)	Mixed-Use (s.f.)	Parking (spaces)	Impervious Area (ac)	Pervious Area (ac)
0	90,000	700	12.24	1.36

Alternatives A, B, and C have the same total area of impervious area, leading to the 100-year, 3-hour storm totals resulting in the same volume to be retained. As such, the underground retention systems are identical, except for their placement. On-site retention will be provided in the northeast corner of the North Site under the proposed parking lot in this Alternative.

The earthwork analysis for this scenario indicates a 98,613 cy import, with no factors included.

Alternative D – Site Alternative

In Alternative D, the proposed building area remains the same as Alternative A, but moves to the larger South Site located south of East Palm Canyon Drive/Highway 111, which would be brought into federal trust status for the Tribe for gaming purposes. **Table 4** provides a general summary of the land use for this Alternative:

Table 4

Casino (s.f.)	Mixed-Use (s.f.)	Parking (spaces)	Impervious Area (ac)	Pervious Area (ac)
65,000	60,000	1,150	12.51	1.39

On-site retention will be provided on the north side of the South Site under the proposed parking lot between buildings A and B. 2,050 lineal feet of 96" perforated corrugated metal pipe will be placed in ten rows and surrounded by porous stone to create a 207 ft by 95.5 ft underground retention system that will provide 140,901 cubic feet of storage, based on the 100-year, 3-hour storm event. Total impervious area increase for the south site is approximately 11.9 acres.

The earthwork analysis for this scenario indicates a 140,948 cy export, with no factors included.

Alternative 'E' – No Action

No changes to the Project site.

APPENDIX H

EXPANDED AFFECTED ENVIRONMENT

EXPANDED AFFECTED ENVIRONMENT

This section presents relevant information about the existing environment of the area that may be affected by the Proposed Action and alternatives, including development alternatives analyzed in Appendix A to the Environmental Assessment (EA), as summarized in Section 3.0 of the EA. Both the North Site and the South Site environmental setting are discussed below, although alternatives on the South Site were eliminated from analysis within the EA, as described in Section 2.7 of the EA and Appendix A to the EA. The following environmental issue areas are described: Land Resources, Water Resources, Air Quality, Biological Resources, Cultural Resources, Socioeconomic Conditions/Environmental Justice, Transportation/Circulation, Land Use, Public Services and Utilities, Visual Resources, Noise, and Hazardous Materials. The heading numbers used herein correspond with Section 3.0 of the EA.

3.1 LAND RESOURCES

3.1.1 REGULATORY SETTING

The land resources regulatory setting is summarized in **Table 3-1**, and described in detail below.

TABLE 3-1
REGULATORY POLICIES AND PLANS RELATED TO LAND RESOURCES

Regulation	Description
Alquist-Priolo Earthquake Fault Zoning Act	Ensures public safety by prohibiting the siting of most structures for human occupancy across traces of active faults
Seismic Hazards Mapping Act	Requires the California State Geologist to create maps delineating zones where data suggest amplified ground shaking, liquefaction, or earthquake-induced landslides may occur

Alquist-Priolo Earthquake Fault Zoning Act

The Alquist-Priolo Earthquake Fault Zoning Act (Alquist-Priolo Act; formerly the Alquist-Priolo Special Studies Zone Act), signed into law December 1972 after the 1971 San Fernando earthquake, requires the delineation of zones along active and potentially active faults in California. The United States Geological Survey (USGS) defines a fault as "active" if it has moved one or more times in the last 10,000 years. The California Geological Survey (CGS) defines an "active" fault as one that exhibits evidence of activity during the last 11,000 years. Faults that exhibit evidence of Quaternary activity (within the last 1.6 million years) are considered to be "potentially active." The purpose of the Alquist-Priolo Act is to regulate development on or near fault traces to reduce the hazard of fault rupture and to prohibit the location of most off-Reservation structures for human occupancy across these traces. Fault zones defined by the Alquist-Priolo Act are areas around active faults, averaging approximately one-quarter mile wide, within which cities and counties having jurisdiction must regulate certain development projects (DOC, 2016a).

Seismic Hazards Mapping Act

The Seismic Hazards Mapping Act was enacted in 1990 to protect the public from the effects of strong ground shaking, liquefaction, landslides, ground failure, or other hazards caused by earthquakes. This act

requires a state geologist to delineate various seismic hazard zones and requires cities, counties, and other local permitting agencies to regulate certain development projects within the portions of those zones where they have jurisdiction. Before a development permit is granted by a city, county or other local permitting agency for a site within a seismic hazard zone, a geotechnical investigation must be conducted and appropriate mitigation measures must be incorporated into the project's design. Ground shaking probability maps have been developed in conjunction with the USGS for all of California (DOC, 2016b).

3.1.2 ENVIRONMENTAL SETTING

Topography

Both the alternative sites are relatively level, with the only changes in elevation occurring along Dawes Street, where soil has been deposited to raise the pad for the buildings in the southeastern corner of the North Site. The elevation of the North Site is approximately 300 feet above mean sea level (amsl), and the elevation of the South Site is approximately 310 feet amsl.

Geology

Geomorphic regions are broad-scale subdivisions based on terrain, texture, rock type, and geologic structure and history. The USGS uses a three-tiered classification of the United States, by division, province, and section, to provide a spatial organization for the great variety of the country's physical features. The alternative sites fall within the Intermontane Plateaus major physiographic division, Basin and Range province, Salton Trough region (USGS, 2008).

The City of Cathedral City (City) is located within the Coachella Valley, in the northwesterly portion of the Salton Trough, a narrow, low-lying tectonic depression that began forming about 5 million years ago. The rocks and sediments exposed at the surface can be classified based on their age, and include Mesozoic and older rocks in the Santa Rosa Mountains, Pleistocene sediments on Edom Hill, Flat Top Mountain, and the northwestern portion of the City, and Holocene sediments on the valley floor, including the North Site and South Site (City of Cathedral City, 2009).

The most recently deposited sediments in the region are of alluvial (stream-deposited) or aeolian (wind-deposited) origin. Alluvial surfaces can be differentiated based on age and the degree of dissection and soil development. The youngest alluvial materials, known as active channel deposits, have no soil development and occur within the active stream channels. These sediments are associated with the watershed of the Whitewater River, including the Salvia and Morongo Washes south of the Indio Hills and the Cathedral Canyon drainages at the base of the Santa Rosa Mountains, where the alternative sites lie. Coarse, poorly sorted sands and gravels are referred to as alluvial fan and stream-wash deposits, and occur at the base of the Santa Rosa Mountains, on the alluvial fans emanating from Cathedral Canyon (City of Cathedral City, 2009).

Wind-deposited (aeolian) sediments, which are typically alluvial in origin, are also referred to as sand dune deposits. These silty, fine, and medium-grained soils are picked up and transported by strong winds emanating from the San Gorgonio Pass at the northwesterly edge of the Coachella Valley. They are redistributed along the central valley floor where they form shifting sand dunes.

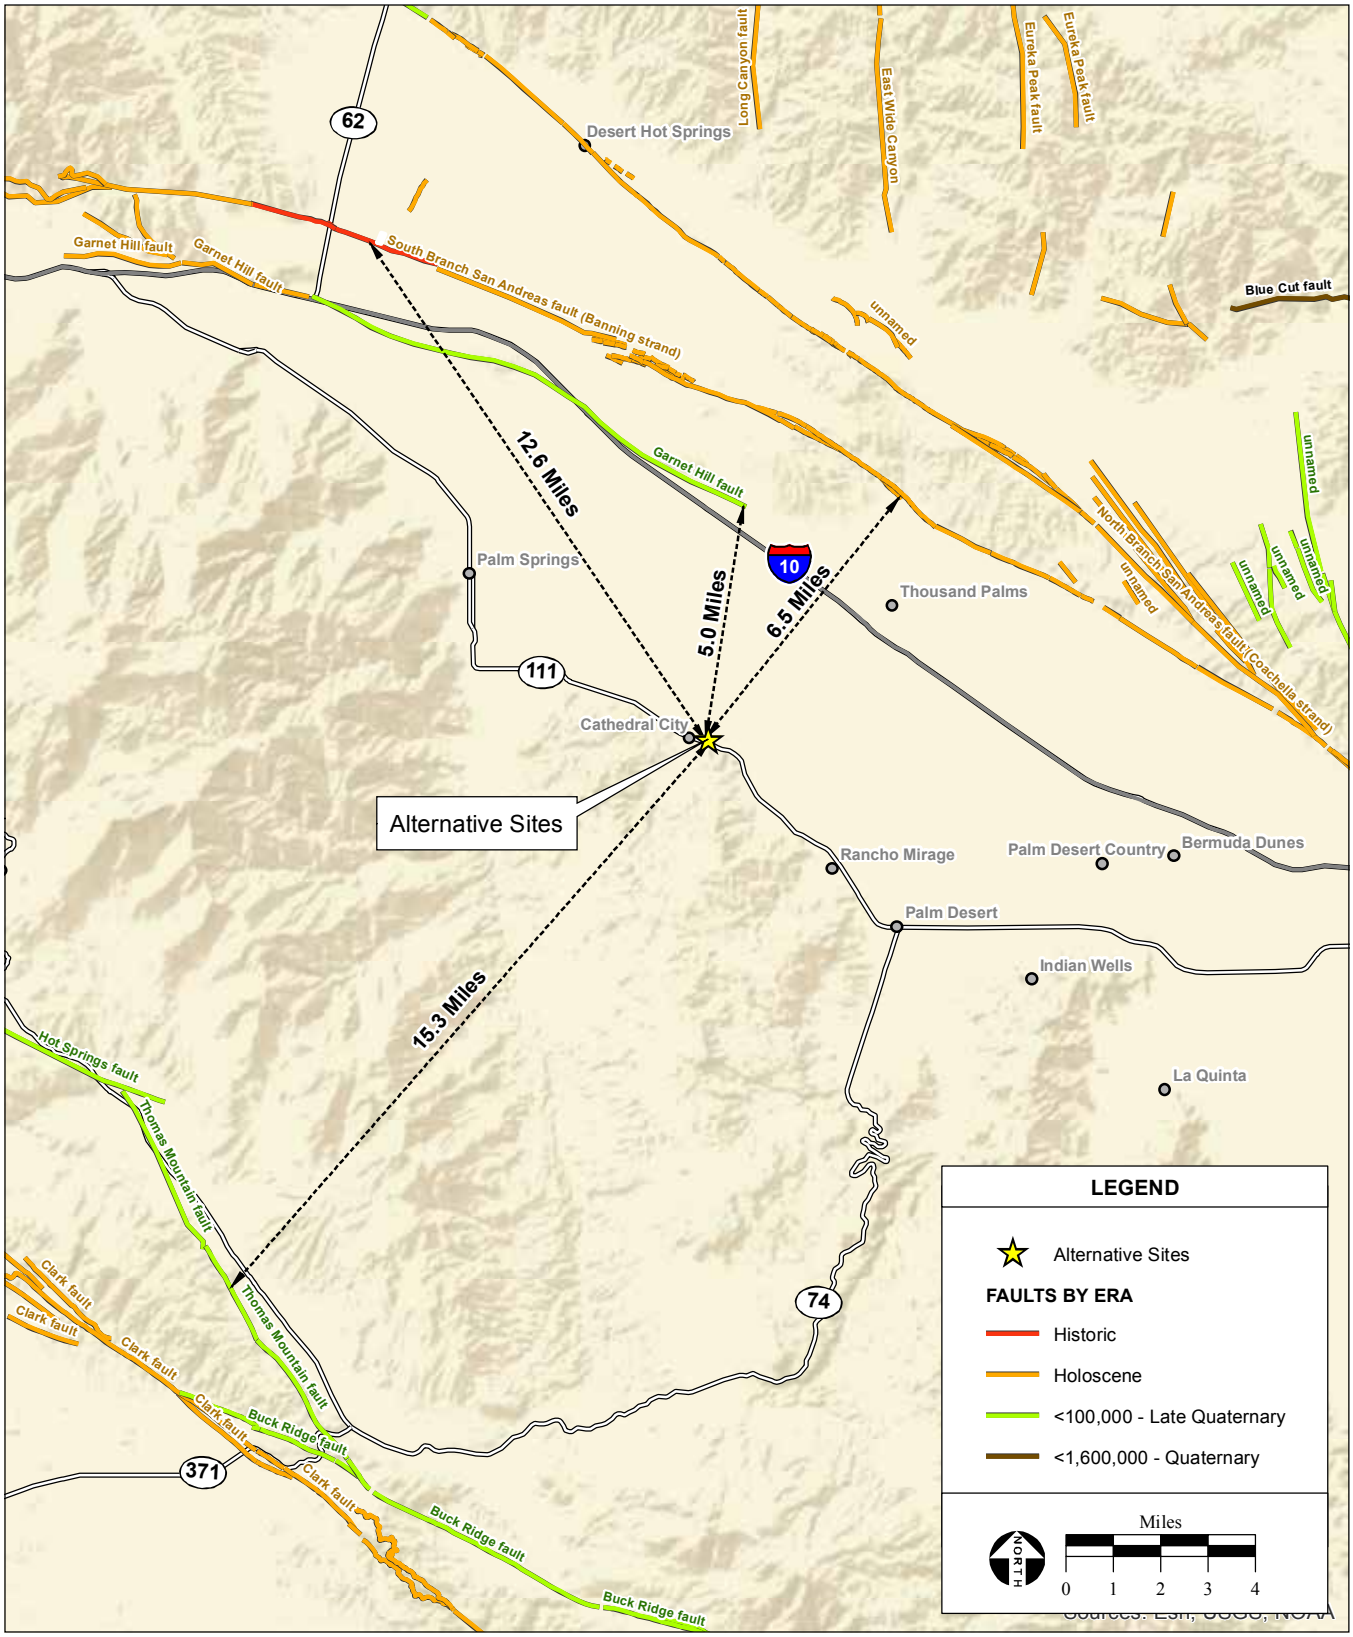
Seismic Hazards

The Coachella Valley, like most of California, is a seismically active region; however, the nearest Zone of Required Investigation (i.e. areas mapped by the State Geologist around the surface traces of active faults) is located approximately 10 miles northeast of the alternative sites (CGS, 1974), and the closest mapped fault is the Garnet Hill fault, located approximately 5 miles north of the alternative sites (DOC, 2007) (refer to **Figure 3.1-1**).

Liquefaction and Lateral Spreading

Soil liquefaction can occur in seismic conditions. Liquefaction is the temporary transformation of saturated, non-cohesive material from a relatively stable, solid condition to a liquefied state as a result of increased soil pore water pressure. Soil pore water pressure is the water pressure between soil particles. The alternative sites are in a low to very low liquefaction susceptibility area (City of Cathedral City, 2009: Exhibit V-4); however, the alternative sites are in an area with high susceptibility to seismically induced settlement (City of Cathedral City, 2009: Exhibit V-5).

Lateral spreading is a type of ground failure that typically occurs during a seismic event in the form of horizontal ground displacement. Due to the relatively stable geologic formation and lack of active faults, earthquake-induced ground failures such as lateral spreading are unlikely to occur on the alternative sites.



Soil Types and Characteristics

It is typical where soils are deep and soft and the ground surface is relatively flat and comprised of alluvium or depositional sediment. This movement in soils is generally due to failure along a weak sub-layer that is formed within an underlying liquefied layer. Cracks develop within the weakened material, while blocks of soil move laterally toward the free face, resembling a flowing liquid.

The hydrologic soil group is a classification based on the runoff potential of the soils when thoroughly saturated by a long duration storm. Soils are grouped into four classes lettered from A to D, with A being coarse-grained soils with high infiltration and low runoff potential, and D being mostly fine-grained clays with extremely slow infiltration and high runoff potential.

Saturated hydraulic conductivity is a quantitative measurement of the movement of water through saturated soil, abbreviated "Ksat." Ksat is a factor in determining the hydrologic soil group, and is often used in the design of water and wastewater disposal applications such as percolation ponds and septic systems. Ksat measures transport only in the vertical direction under completely saturated conditions, which is an analog of the percolation pond application. It is considered an inherent property irrespective of a soil's native surroundings, and does not account for site-specific variations such as confining layers, degree of saturation, or topography. The following descriptions for the range of measured Ksat are used by the Natural Resources Conservation Service (NRCS; NRCS, 2018):

- Very High > 100 µm/s,
- High 10 - 100 µm/s,
- Moderately High 1 - 10 µm/s,
- Moderately Low 0.1 - 1 µm/s,

SOURCE: USGS Earthquake Hazards Program, 2010; AES, 6/12/2018

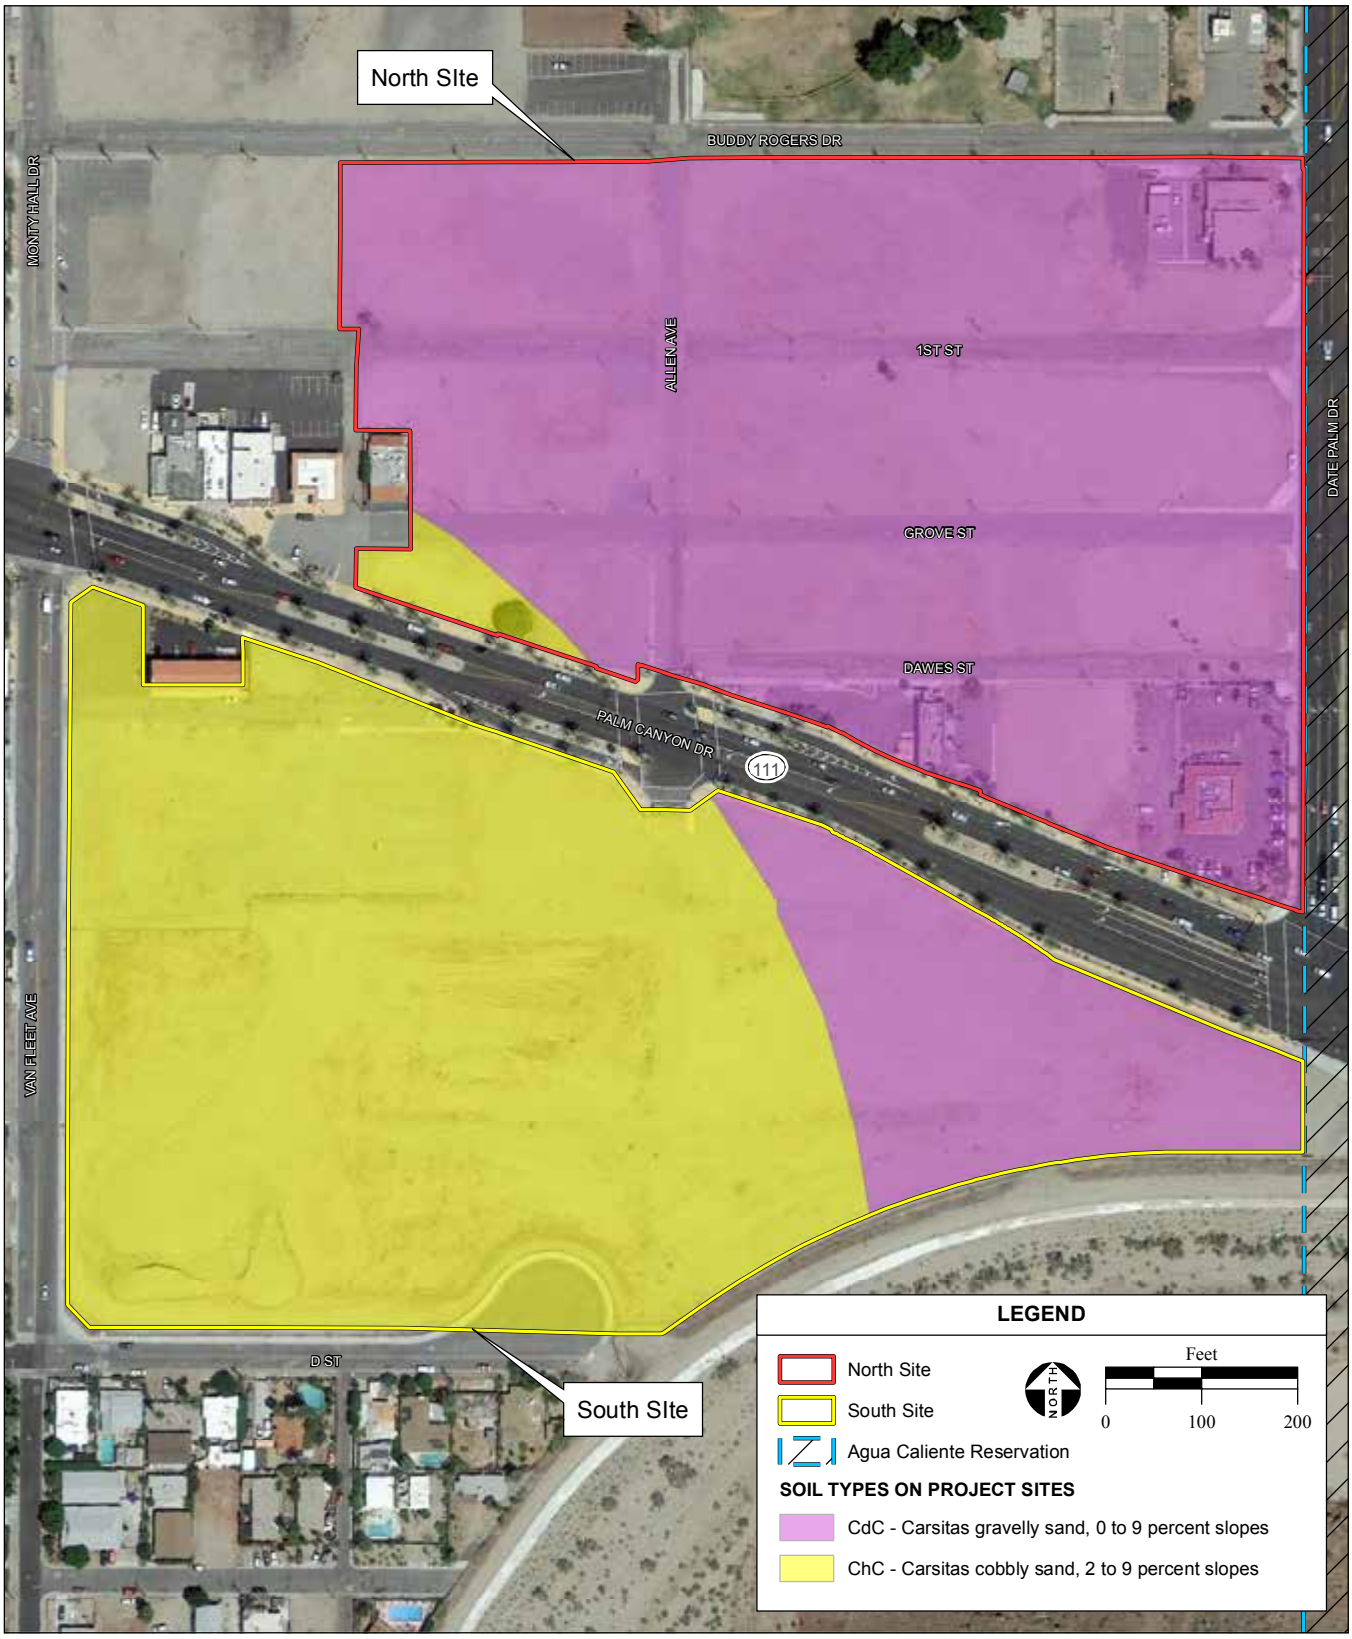
Figure 3.1-1
Regional Faults

- Low 0.01 - 0.1 μm/s, and
- Very Low < 0.01 μm/s

The drainage class is a measure of the frequency and duration of wet periods under the conditions in which the soil developed. While this classification is similar to Ksat, drainage class accounts for conditions of the soil in its natural state. In an excessively drained soil such as that present on the Proposed Project site, water is rapidly removed from the soil. Free moisture is not likely to be encountered except at very deep levels (NRCS, 2018).

The United States Department of Agriculture (USDA) NRCS aggregates soil survey and mapping data. Each survey maps soil units and provides a summary of major physical characteristics for each unit with management recommendations. The soil types on the alternative sites are shown in **Figure 3.1-2** and described in detail in **Table 3-2**. As shown in the figure, the majority of the North Site is comprised of Carsitas gravelly sand and the majority of the South Site is comprised of Carsitas cobbly sand. These soils form from gravelly alluvium derived from granite and are found as channel deposits. They are fairly deep and excessively drained, with low runoff potential but high susceptibility to wind erosion (NRCS, 2018).

TABLE 3-2
SITE SOIL PROPERTIES



Soil	Hydrologic Soil Group	Drainage Class	Saturated Hydraulic Conductivity: Ksat (in/hr)	Erosion Susceptibility	Wind Erodibility	Corrosion of Concrete	Corrosion of Steel	Linear Extensibility
Carsitas gravelly sand, 0-9 percent slopes	A	Excessively drained	High	Low	High	Moderate	Moderate	Low
Carsitas cobbly sand, 2-9 percent slopes	A	Excessively drained	High	Low	High	Moderate	Moderate	Low
Source: NRCS, 2018.								

The Carsitas soils on the alternative sites have a hydrologic rating of A, indicating the soils are deep and well-drained with a high rate of water transmission (NRCS, 2018).

Moderate wind erosion hazard zones are areas partially protected from erosive winds, where soils show evidence of wind removal and/or accumulation in hummocks up to 48 inches high. The alternative sites are in a moderate, near-severe, wind erosion hazard zone (City of Cathedral City, 2009: Exhibit V-2). The wind erodibility index is a numerical value indicating the susceptibility of soil to wind erosion, or the tons per acre per year that can be expected to be lost to wind erosion. According to the soils report, the alternative sites have a Wind Erodibility Index of 220 (NRCS, 2018).

Soil Hazards

Expansive soils are largely comprised of clays, which may increase in volume when water is absorbed, and shrink when dried. Expansive soils are of concern because building foundations may rise during the rainy season and fall during the dry season in response to the clay's action, potentially causing structural distortion. A majority of the soil classifications on the alternative sites have low shrink-swell potential (NRCS, 2018).

SOURCE: USDA NRCS Soil Survey of Riverside County, Coachella Valley, 2013-2017; LandStatusPublic, 9/11/2017; Riverside County GIS, 2017; Digitalglobe aerial photograph, 4/2017; ESRI Data, 2017; AES, 7/20/2018

Figure 3.1-2
NRCS Soil Survey

Corrosivity pertains to a soil-induced electrochemical or chemical action that corrodes concrete or steel. The soils within the alternative sites are classified as moderately corrosive to concrete (NRCS, 2018). Additionally, the soils on the alternative sites are moderately corrosive to steel (NRCS, 2018).

Flooding and ponding on the alternative sites' soils is not probable. The soils on the alternative sites generally have a high-saturated hydraulic conductivity (Ksat). Saturated hydraulic conductivity refers to the ease with which pores in a saturated soil transmit water (NRCS, 2018).

3.2 WATER RESOURCES

The following discussion describes the existing surface water hydrology, flooding conditions, groundwater hydrology, and water quality in the vicinity of the alternative sites. Wetlands and Waters of the U.S. are discussed in **Section 3.4**.

3.2.1 REGULATORY SETTING

The water resources regulatory setting is summarized in **Table 3-3**, and described in detail below.

Executive Orders 11988 and 13690

EO 13690, which amends EO 11988, requires that federal agencies evaluate the potential effects of any actions they may take in a floodplain. Specifically, EO 11988 states that agencies shall first determine whether the proposed action will occur in a floodplain. EO 11988 defines a floodplain as an area that has a one percent or greater chance of flooding in any given year. Second, if an agency proposes to allow an action to be located in a floodplain, "the agency shall consider alternatives to avoid adverse effects and incompatible development in the floodplains," which EO 13690 amended to add that, "[w]here possible, an agency shall use natural systems, ecosystem processes, and nature-based approaches when developing alternatives for consideration." If the only practicable alternative action requires siting in a floodplain, the agency shall "minimize potential harm to or within the floodplain." Additionally, EO 13960 established a Federal Flood Risk Management Standard for federal actions that are located in or affect floodplains, and also expanded the definition of a floodplain to which the Federal Flood Risk Management Standard would apply to those areas subject to flooding by the 0.2 percent annual chance flood (FEMA, 2016).

Clean Water Act

The federal Clean Water Act (CWA), 33 United States Code (USC) Section 1251(a)(2), sets forth national goals that waters shall be "fishable, swimmable" waters (CWA Section 101 [a][2]). The CWA addresses both point and non-point sources of pollution (Sections 402 and 319, respectively), both of which are controlled through NPDES. A NPDES permit must be obtained in order to discharge pollutants into "Waters of the U.S." In some states, the USEPA has delegated permitting authority to the regional water quality agency, in this case the SWRCB. However, the USEPA retains authority to regulate discharges to waters on tribal lands. The CWA also directs states to establish water quality standards for waterways in their jurisdiction and to review and update these standards every three years (Section 303[c]).

TABLE 3-3
FEDERAL AND STATE WATER RESOURCES REGULATIONS

Regulation	Description
Federal	
Executive Order (EO) 11988	▪ Requires that federal agencies evaluate the potential effects of any actions they may take in a floodplain ▪ Defines a floodplain as an area that has a one percent or greater chance of flooding in any given year ▪ Requires agencies proposing that an action be allowed in a floodplain to consider alternatives to avoid adverse effects ▪ If the only practicable alternative action requires siting in a floodplain, requires the agency to minimize potential harm to or within the floodplain
EO 13690	▪ Amends EO 11988 to require agencies to use natural systems and nature-based approaches when developing alternatives for consideration ▪ Established a Federal Flood Risk Management Standard ▪ Extended the definition of a floodplain to which the Federal Flood Risk Management Standard would apply to areas subject to flooding by the 0.2 percent annual chance flood
Clean Water Act (CWA)	▪ Establishes national water quality goals ▪ Regulates both point and non-point sources of pollution through the National Pollution Discharge Elimination System (NPDES) ▪ Requires an NPDES permit be obtained to discharge pollutants into "Waters of the U.S." ▪ Requires states to establish water quality standards for waters in their jurisdiction and to periodically prepare a list of surface waters where beneficial uses are impaired by pollutants
Safe Drinking Water Act (SDWA)	▪ The United States Environmental Protection Agency (USEPA) sets National Primary Drinking Water Regulations (primary standards) that apply to public water systems ▪ Defines National Secondary Drinking Water Regulations (secondary standards) for contaminants that cause cosmetic and aesthetic effects, but not health effects ▪ Primary and secondary standards are expressed as either Maximum Contaminant Levels (MCLs), which define the highest level of contaminant allowed in drinking water, or MCL Goals, which define the level of a contaminant below which there is no known or expected health risk
State	
Porter-Cologne Water Quality Act	▪ Requires the State, through the State Water Resources Control Board (SWRCB) and Regional Water Quality Control Boards (RWQCBs), to designate beneficial uses of surface and groundwaters and to specify water quality objectives for those uses ▪ Water quality objectives are described in Regional Water Quality Control Plans
Sustainable Groundwater Management Act	▪ Established a definition of "sustainable groundwater management" based on halting overdraft and balancing levels of pumping from and recharge of groundwater basins ▪ Requires the adoption of a Groundwater Sustainability Plan (GSP) for the most important groundwater basins in the State ▪ Encourages local agencies to form or join Groundwater Sustainability Agencies (GSAs) to draft GSPs for their respective groundwater basins ▪ Contemplates the voluntary participation of Indian tribes in the preparation or administration of a GSP or groundwater management plan through a joint powers authority or other agreement with local agencies and basins ▪ Acknowledges the federally reserved water rights of Indian tribes for purposes of adjudicating or managing these rights and mandates that these rights be respected in full ▪ Recognizes that federal law prevails in the adjudication or management of tribal federally reserved water rights

Section 303(d) of the CWA requires states to periodically prepare a list of all surface waters in their respective jurisdictions for which beneficial uses of the water – such as for drinking, recreation, aquatic habitat, and industrial use – are impaired by pollutants. These include water bodies that do not meet state surface water quality standards and are not expected to improve within the next two years. States establish a priority ranking of these impaired waters for purposes of developing water quality control plans that include Total Maximum Daily Loads (TMDLs). A TMDL is a calculation of the maximum

amount of a pollutant that a water body can receive and still meet water quality standards, and includes an allocation for each of the pollutant's sources. These water quality control plans describe how an impaired water body will meet water quality standards through the use of TMDLs.

Safe Drinking Water Act

Under the mandate of the Safe Drinking Water Act, the USEPA sets legally enforceable National Primary Drinking Water Regulations (primary standards) that apply to public water systems. These standards are established to protect human health by limiting the levels of contaminants in drinking water. The USEPA does not oversee the construction and permitting of groundwater wells, but requires that public health standards, such as an effectively installed sanitary seal, are in place, and recommends that water systems be installed to meet California Department of Public Health Standards. The USEPA will also primarily establish monitoring and operational requirements, which will typically be specific to the alternative sites.

The USEPA also defines National Secondary Drinking Water Regulations (secondary standards) for contaminants that cause cosmetic and aesthetic effects, but not health effects. The USEPA recommends that these secondary standards be met. Both primary and secondary drinking water standards are expressed as either MCLs, which define the highest level of a contaminant allowed in drinking water, or Maximum Contaminant Level Goals, which define the level of a contaminant below which there is no expected risk to health.

Porter-Cologne Water Quality Act

The Porter-Cologne Water Quality Control Act provides the basis for surface water and groundwater quality regulation within California. The act established the authority of the SWRCB and the nine RWQCBs. The act requires the State, through the SWRCB and the RWQCBs, to designate beneficial uses of surface waters and groundwater and specify water quality objectives designed to protect those uses. These water quality objectives are presented in the Regional Water Quality Control Plans. The Colorado River Basin Water Quality Control Plan (Basin Plan) designates beneficial uses for groundwater within the Coachella Hydrologic Area, sets water quality objectives based on these uses, and proposes a plan to implement these objectives.

The surface water quality standards for State of California include both narrative and numerical water quality objectives to keep California's waters swimmable, fishable, drinkable, and suitable for use by industry, agriculture, and the citizens of the state. The water quality objectives for surface waters within the scope of the Colorado River Basin Plan are summarized in **Table 3-4**. The water quality objectives for groundwater within the Colorado River Basin Plan are summarized in **Table 3-5**.

TABLE 3-4
WATER QUALITY OBJECTIVES FOR SURFACE WATER WITHIN THE COLORADO RIVER BASIN PLAN

Constituent	Objectives
Aesthetic Qualities	All waters shall be free from substances attributable to wastewater of domestic or industrial origin or other discharges which adversely affect beneficial uses not limited to: setting to form objectionable deposits; floating as debris, scum, grease, oil, wax, or other matter that may cause nuisances; and producing objectionable color, odor, taste, or turbidity.
Tainting Substances	Water shall be free of unnatural materials which individually or in combination produce undesirable flavors in the edible portions of aquatic organisms.

<table>
<tr><th>Constituent</th><th>Objectives</th></tr>
<tr><td>Toxicity</td><td>All waters shall be maintained free of toxic substances in concentrations which are toxic to, or which produce detrimental physiological responses in human, plant, animal, or indigenous aquatic life. Compliance with this objective will be determined by use of indicator organisms, analyses of species diversity, population density, growth anomalies, 96-hour bioassay or bioassays of appropriate duration or other appropriate methods as specified by the Regional Board. Effluent limits based upon bioassays of effluent will be prescribed where appropriate, additional numerical receiving water objectives for specific toxicants will be established as sufficient data become available, and source control of toxic substances will be encouraged.
The survival of aquatic life in surface waters subjected to a waste discharge or other controllable water quality factors, shall not be less than that for the same water body in areas unaffected by the waste discharge, or other control water which is consistent with the requirements for "experimental water" as described in Standards Methods for the Examination of Water and Wastewater, 18th Edition. As a minimum, compliance with this objective as stated in the previous sentence shall be evaluated with a 96-hour bioassay.</td></tr>
<tr><td>Temperature</td><td>The natural receiving water temperature of surface waters shall not be altered by discharges of wastewater unless it can be demonstrated to the satisfaction of the Regional Board that such alteration in temperature does not adversely affect beneficial uses.</td></tr>
<tr><td>pH</td><td>Since the regional waters are somewhat alkaline, pH shall range from 6.0-9.0. Discharges shall not cause any changes in pH detrimental to beneficial water uses.</td></tr>
<tr><td>Dissolved Oxygen</td><td>The dissolved oxygen concentration shall not be reduced below the following minimum levels at any time: 5.0 mg/L for waters designated “Warm,” 8.0 mg/L for waters designated “Cold,” and 8.0 mg/L for waters designated “Warm and Cold.”</td></tr>
<tr><td>Suspended Solids and Settleable Solids</td><td>Discharges of wastes or wastewater shall not contain suspended or settleable solids in concentrations which increase the turbidity of receiving waters, unless it can be demonstrated to the satisfaction of the Regional Board that such alteration in turbidity does not adversely affect beneficial uses.</td></tr>
<tr><td>Total Dissolved Solids (TDS)</td><td>Discharges of wastes or wastewater shall not increase the TDS content of receiving waters, unless it can be demonstrated to the satisfaction of the Regional Board that such an increase in TDS does not adversely affect beneficial uses of receiving waters.
Additionally, any discharge, excepting discharges from agricultural sources, shall not cause concentration of TDS in surface waters to exceed the following limits:
<table>
<tr><th rowspan="2">Water Body</th><th colspan="2">TDS (mg/L)</th></tr>
<tr><th>Annual Average</th><th>Maximum</th></tr>
<tr><td>New River</td><td>4,000</td><td>4,500</td></tr>
<tr><td>Alamo River</td><td>4,000</td><td>4,500</td></tr>
<tr><td>Imperial Valley Drains</td><td>4,000</td><td>4,500</td></tr>
<tr><td>Coachella Valley Drains</td><td>2,000</td><td>2,500</td></tr>
<tr><td>Palo Verde Valley Drains</td><td>2,000</td><td>2,500</td></tr>
</table></td></tr>
<tr><td>Bacteria</td><td>In waters designated for water contact recreation (REC I) or noncontact water recreation (REC II), the following bacterial objectives apply. Although the objectives are expressed as fecal coliforms, E. coli, and enterococci bacteria, they address pathogenic microorganisms in general1 (e.g., bacteria, viruses, and fungi).
Based on a statistically sufficient number of samples (generally not less than five samples equally spaced over a 30-day period), the geometric mean of the indicated bacterial densities should not exceed one or the other of the following:</td></tr>
</table>

<table>
<tr><th>Constituent</th><th>Objectives</th></tr>
<tr><td></td><td>
<table>
<tr><th>Bacteria</th><th>REC I</th><th>REC II</th></tr>
<tr><td>E. coli</td><td>126 per 100 ml</td><td>630 per 100 ml</td></tr>
<tr><td>enterococci</td><td>33 per 100 ml</td><td>165 per 100 ml</td></tr>
</table>
nor shall any sample exceed the following maximum allowables:
<table>
<tr><th>Bacteria</th><th>REC I</th><th>REC II</th></tr>
<tr><td>E. coli</td><td>400 per 100 ml</td><td>2,000 per 100 ml</td></tr>
<tr><td>enterococci</td><td>100 per 100 ml</td><td>500 per 100 ml</td></tr>
</table>
except that for the Colorado River, the following maximum allowables shall apply:
<table>
<tr><th>Bacteria</th><th>REC I</th><th>REC II</th></tr>
<tr><td>E. coli</td><td>235 per 100 ml</td><td>1,175 per 100 mL</td></tr>
<tr><td>enterococci</td><td>61 per 100 ml</td><td>305 per 100 ml</td></tr>
</table>
In addition to the objectives above, in waters designated for water contact recreation (REC I), the fecal coliform concentration based on a minimum of not less than five samples for any 30-day period, shall not exceed a log mean of 200 MPN per 100 ml, nor shall more than ten percent of total samples during any 30-day period exceed 400 MPN per 100 ml.
</td></tr>
<tr><td>Biostimulatory Substances</td><td>Waters shall not contain biostimulatory substances in concentrations that promote aquatic growths to the extent that such growths cause nuisance or adversely affect beneficial uses. Nitrate and phosphate limitations will be placed on industrial discharges to New and Alamo Rivers and irrigation basins on a case-by-case basis, taking into consideration the beneficial uses of these streams.</td></tr>
<tr><td>Sediment</td><td>The suspended sediment load and suspended sediment discharge rate to surface waters shall not be altered in such a manner as to cause nuisance or adversely affect beneficial uses.</td></tr>
<tr><td>Turbidity</td><td>Waters shall be free of changes in turbidity that cause nuisance or adversely affect beneficial uses.</td></tr>
<tr><td>Radioactivity</td><td>
Radionuclides shall not be present in waters in concentrations which are deleterious to human, plant, animal or aquatic life or that result in the accumulation of radionuclides in the food web to an extent which presents a hazard to human, plant, animal or aquatic life.
Waters designated for use as domestic or municipal supply (MUN) shall not contain concentrations of radionuclides in excess of the limits specified in the California Code of Regulations (CCR), Title 22, Chapter 15, Article 5, Section 64443, as listed below:
<table>
<tr><th>Constituent</th><th>MCL (pc/L)</th></tr>
<tr><td>Combined Radium-226 and Radium-228</td><td>5</td></tr>
<tr><td>Gross Alpha particle activity (including Radium-226 but excluding Radon and Uranium)</td><td>15</td></tr>
<tr><td>Tritium</td><td>20,000</td></tr>
<tr><td>Strontium-90</td><td>8</td></tr>
<tr><td>Gross Beat particle activity</td><td>50</td></tr>
<tr><td>Uranium</td><td>20</td></tr>
</table>
</td></tr>
</table>

<table>
<tr><th>Constituent</th><th>Objectives</th></tr>
<tr><td>Chemical Constituents</td><td>
No individual chemical or combination of chemicals shall be present in concentrations that adversely affect beneficial uses. There shall be no increase in hazardous chemical concentrations found in bottom sediments or aquatic life. Waters designated for use as domestic or MUN shall not contain concentrations of chemical constituents in excess of the limits specified below:
<table>
<tr><th>Inorganic Chemical Constituent</th><th>MCL (mg/L)</th></tr>
<tr><td>Arsenic</td><td>0.05</td></tr>
<tr><td>Barium</td><td>1.0</td></tr>
<tr><td>Cadmium</td><td>0.01</td></tr>

TABLE 3-5
WATER QUALITY OBJECTIVES FOR GROUNDWATER WITHIN THE COLORADO RIVER BASIN PLAN

Constituent	Objectives
Tastes and Odors	Ground waters for use as domestic or municipal supply shall not contain taste or odor-producing substances in concentrations that adversely affect beneficial uses as a result of human activity.
Bacteriological Quality	In ground waters designated for use as domestic or municipal supply (MUN), the concentration of total coliform organisms shall not exceed the limits specified in Section 64426.1 of Title 22 of the CCR
Chemical and Physical Quality	Ground waters designated for use as domestic or municipal supply (MUN) shall not contain concentrations of chemical constituents in excess of the maximum contaminant levels (MCLs) specified in the following provisions of Title 22 of the CCR, which are incorporated by reference into this plan: Table 64431-A of Section 64431 (Inorganic Chemicals), Table 64444-A of Section 64444 (Organic Chemicals), and Table 64678-A of Section 64678 (Determination of Exceedances of Lead and Copper Action Levels). This incorporation is prospective, including future revisions to the incorporated provisions as the revisions take effect. The Regional Board acknowledges that specific treatment requirements are imposed by state and federal drinking water regulations on the consumption of surface waters under specific circumstances. To protect all beneficial uses, the Regional Board may apply limits more stringent than MCLs.
Brines	Discharges of water softener regeneration brines, other mineralized wastes, and toxic wastes to disposal facilities which ultimately discharge in areas where such wastes can percolate to ground waters usable for domestic and municipal purposes are prohibited.
Radioactivity	Ground waters designated for use as domestic or municipal supply (MUN) shall not contain radioactive material in excess of the maximum contaminant levels (MCLs) specified in Tables 64442 and 64443 of Sections 64442 and 64443, respectively, of Title 22 of the CCR, which are incorporated by reference into this plan. This incorporation-by-reference is prospective, including future changes to the incorporated provisions as the revisions take effect.
Ground Water Overdraft	A number of ground water basins in the Region are in overdraft, and in some areas there have been indications of possible increase of mineral content of the ground water. Investigative studies will be conducted to develop ground water objectives and implementation plans for the following ground water basins: ▪ Indio Subarea of the Whitewater Hydrologic Unit ▪ Warren Subunit of the Joshua Tree Hydrologic Unit ▪ Twentynine Palms Subunit of the Dale Hydrologic Unit ▪ Borrego Subarea of the Anza-Borrego Hydrologic Unit ▪ Lucerne Hydrologic Unit ▪ Terwilliger Subarea of the Anza-Borrego Hydrologic Unit ▪ Ocotillo Subunit of the Anza-Borrego Hydrologic Unit

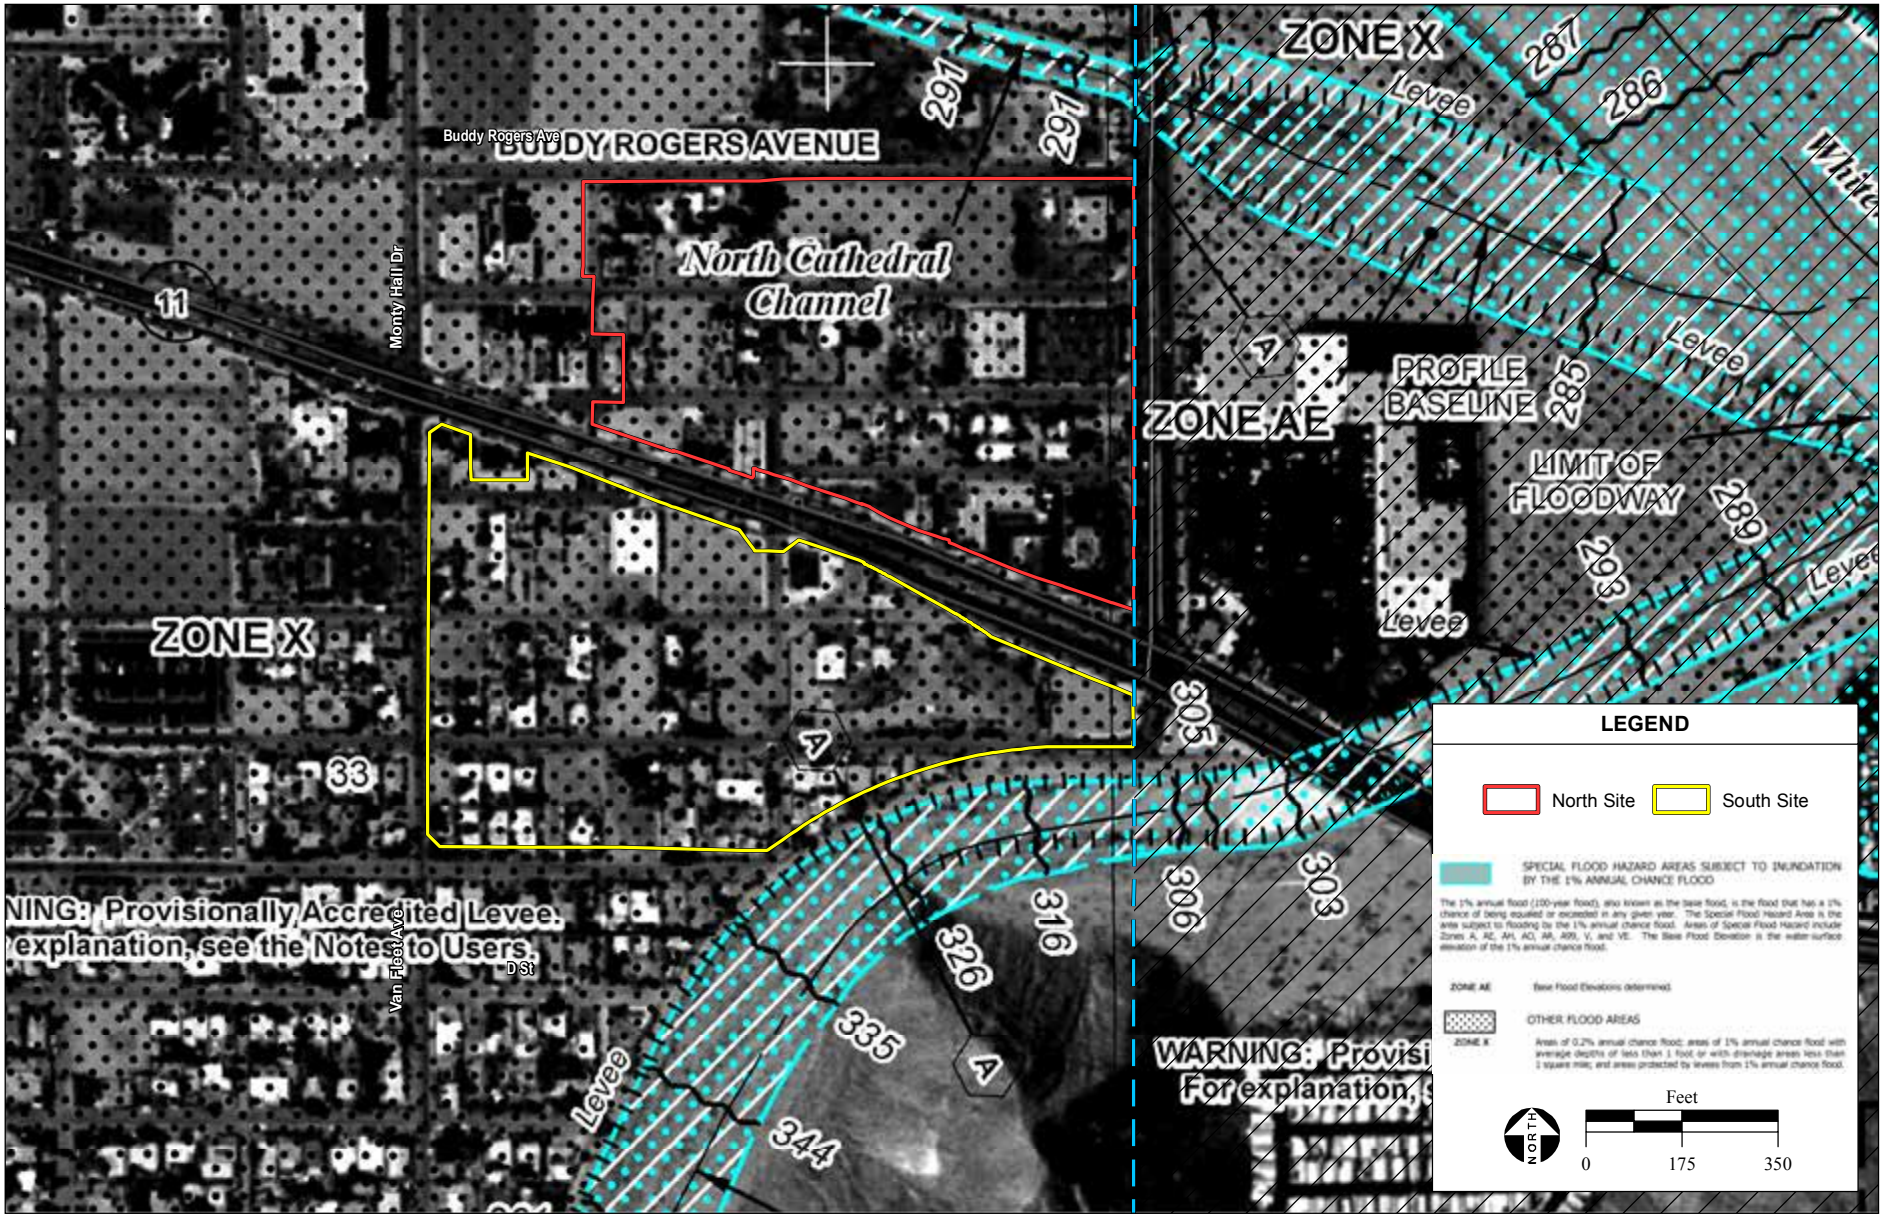
Sustainable Groundwater Management Act (SGMA)

The intent of the California Sustainable Groundwater Management Act (SGMA; Water Code § 10720 et seq.) is to "enhance local management of groundwater consistent with rights to use or store groundwater… [and] to preserve the security of water rights in the state to the greatest extent possible consistent with the sustainable management of groundwater." The SGMA states that "any local agency or combination of local agencies overlying a groundwater basin may elect to be a groundwater sustainability agency [GSA] for that basin" (Water Code § 10723). A GSA will be formed within each groundwater basin to prepare and implement a plan for long-term groundwater sustainability (GSP). Finally, the SGMA (i) contemplates the voluntary participation of Indian tribes in the preparation or administration of a GSP or groundwater management plan through a joint powers authority or other agreement with local

agencies and basins; (ii) acknowledges the federally reserved water rights of Indian tribes for purposes of adjudicating or managing these rights and mandates that these rights be respected in full; and (iii) recognizes that federal law prevails in the adjudication or management of tribal federally reserved water rights.

Under the SGMA, several water agencies in the Coachella Valley elected to form or join GSAs. The GSA for the Indio Subbasin, which underlies the alternative sites, consists of the Coachella Valley Water District (CVWD), Desert Water Agency (DWA), Indio Water Authority, Coachella Water Authority, and Mission Springs Water District. In 2016, the GSA for the Indio Subbasin adopted a modified version of the Coachella Valley Water Management Plan (CVWMP) as an SGMA bridge document based on the fact that its contents are functionally equivalent to the elements of a GSP required by Articles 5 and 7 of CCR Title 23, Division 2, Chapter 1.5, Subchapter 2, and that the CVWMP would be able to achieve the objectives of the SGMA. Specifically, the 2010 Update to the CVWMP, which is one of several documents incorporated into the SGMA bridge document, includes an intention to reduce water use intensity within the Indio Subbasin by 20 percent by 2020 (MWH, 2016).

3.2.2 ENVIRONMENTAL SETTING



Floodplain

Both alternative sites are located within Flood Insurance Rate Map (FIRM) number 06065C1589G. As shown in **Figure 3.2-1**, the sites are located in Flood Zone X (FEMA, 2017). This portion of Zone X is determined to be outside the 1 percent annual chance (100-year) flood plains, but within the 0.2 percent annual chance (500-year) flood plain (FEMA, 2017).

Surface Water

Regional Watershed

The alternative sites are located within the Cathedral Canyon-Whitewater River Subwatershed of the Upper Whitewater River Watershed, which is located within the Whitewater River Subbasin of the Salton Sea Basin (USEPA, 2018a). The alternative sites are also located within the Whitewater Hydrologic Unit, as designated by the Colorado River RWQCB (CRRWQCB). Specifically, the alternative sites are located within the Indio Hydrologic Subarea of the Coachella Hydrologic Area, which is encompassed by the Whitewater Hydrologic Unit (Caltrans, 2018a). The surface waterbody nearest to the alternative sites is the Whitewater River, which runs generally northwest to southeast through the City approximately 0.1 mile northeast of the alternative sites (USEPA, 2018a). The portion of the Whitewater River nearest to the alternative sites flows through the Coachella Valley Stormwater Channel (CVSC), which follows the natural alignment of the River. While this portion of the Whitewater River is usually completely void of surface flow, the CVSC was built to withstand flood flows of up to 80,000 cubic feet per second (cfs) resulting from extreme precipitation events (CVWD, 2018a). Other ephemeral drainages in the area include Palm Canyon Wash and Cathedral Canyon, the latter of which runs adjacent to the South Site's southeastern boundary. Like the CVSC, these features rarely experience surface water flow. However, during extreme precipitation events, flows from these features are contained and funneled to the CVSC by a system of channels and levees (CVWD, 2018a).

SOURCE:FEMA FIRM, effective, 8/28/2008; AES, 7/20/2018

Figure 3.2-1
FEMA FIRM

There are no water bodies listed on the California state 303(d) list of impaired waters on or adjacent to the alternative sites. The nearest impaired waterbody is the segment of the Whitewater River/CVSC running from the Washington Street bridge in La Quinta, California in the west to the Salton Sea in the east. At its closest point, this segment of the CVSC is approximately 10.2 miles east of both the alternative sites. Portions of CVSC are impaired for dichlorodiphenyltrichloroethane (DDT), dieldrin, indicator bacteria, polychlorinated biphenyls (PCBs), and toxaphene; however, TMDLs have not yet been completed (SWRCB, 2017).

Site Drainage

The North Site is relatively flat with a gradual slope to the northeast corner (Appendix G of the EA). Existing stormwater flows on the North Site generally consist of overland sheet flows to the northern and northeastern boundaries, where the runoff is conveyed by gutters, culverts, and storm drains on adjacent roadways (including Buddy Rogers Avenue and Date Palm Drive) and conveyed north to the North Cathedral Channel (Appendix G of the EA). Similar gutters and storm drains exist on Hillery Road, on Monty Hall Road, and are adjacent to the western portion of the North Site, and these facilities also convey stormwater to the North Cathedral Channel. There is an existing 48-inch storm drain pipe that runs south-to-north through the North Site beneath Allen Avenue from Date Palm Drive to the North Cathedral Channel.

The South Site is relatively flat with a gentle slope to the northeast, near the intersection of East Palm Canyon Drive and Date Palm Drive (Appendix G of the EA). Existing stormwater flows generally consist of overland sheet flows to the northern boundary of the South Site, where the flows are collected and conveyed by gutters and storm drains in East Palm Canyon Drive to the North Cathedral Channel.

Groundwater

The alternative sites are located within the 525-square mile Indio Subbasin, which is located within the broader Coachella Valley Groundwater Basin (DWR, 2004). The Indio Subbasin is referred to as the Whitewater River Subbasin by the DWA, which supplies water to the portion of the City in which the alternative sites are located (DWA, 2016). Neither the Indio Subbasin nor the Coachella Valley Groundwater Basin is adjudicated, meaning that a court has not defined and quantified groundwater rights for all users within the basin (DWA, 2016). The Salton Sea is the Indio Subbasin's primary discharge point (DWR, 2004). The predominant water-bearing materials in the Indio Subbasin are unconsolidated alluvial deposits. These deposits consist of older alluvium and the Ocotillo Conglomerate Formation, a sequence of poorly bedded coarse sand and gravel that is over 1,000 feet thick in many areas (DWR, 2004).

Groundwater Supply

This most significant historical sources of groundwater recharge to the Indio Subbasin are surface runoff and subsurface inflow (DWR, 2004). From approximately 1950 to 2010, the Indio Subbasin experienced a continuous decline in groundwater availability as a result of groundwater extraction rates exceeding the rate of groundwater recharge (DWA, 2016). Due to the substantial overdraft in the Subbasin, DWA and the CVWD have used imported surface water to artificially recharge the Subbasin since the early 1960s (DWA, 2016). Water is diverted from the Colorado River to the Whitewater River via the All-American

and Coachella Canals eventually flowing to the Whitewater River Spreading Grounds, located approximately 10 miles northeast of the alternative sites, where it percolates into the Indio Subbasin (DWA, 2016). In the western portion of the Subbasin where the alternative sites are located total outflows exceed total inflows in the 10-year historical moving average (CVWD, 2018b).

Groundwater data from the California Department of Water Resources (DWR) Water Data Library indicate there are 1 active and 6 historic wells located within a one-mile radius of the alternative sites (DWR, 2018a). Groundwater elevations in the vicinity of the alternative sites were measured at State Well Number (SWN) 337850N1164647W001, located approximately 0.3 miles from the northern boundary of the North Site. The groundwater elevation at SWN 337850N1164647W001 was 185.6 feet below ground surface (BGS) on September 18, 2017 (DWR, 2018b), the most recent date for which groundwater level data are available. From April 2011 to September 2017, groundwater elevations at this well have ranged from 173.2 feet BGS at their highest in March 2015 to 201.8 feet BGS at their lowest in September 2011 (DWR, 2018b).

Groundwater Quality

The alternative sites are located within the boundaries of the CRRWQCB. Beneficial uses for groundwater within the Coachella Hydrologic Area, in which the alternative sites are located, include municipal and domestic supply, agriculture supply, and industrial service supply (CRRWQCB, 2017). Contaminants of concern in the Indio Subbasin include mineral concentration, salinity, total dissolved solids (TDS), arsenic, chromium-6, uranium, nitrate, and perchlorate. The sources of these contaminants are thought to include diversions from the Colorado River, artificial recharge, fertilizer application, septic discharges, wastewater infiltration, as well as natural occurring contaminants.

3.3 AIR QUALITY

3.3.1 REGULATORY SETTING

The air quality and greenhouse gas (GHG) regulatory setting is summarized in **Table 3-6**, and described in detail below.

National Ambient Air Quality Standards

The CAA of 1970, as amended, authorizes the USEPA to identify common air pollutants that impact air quality on a national level and establish corresponding NAAQS to protect public health and welfare. Accordingly, the USEPA has identified six CAPs: O_3, CO, PM, NO_2, SO_2, and Pb. The NAAQS are divided into primary standards, to protect public health, and secondary standards, to protect public welfare. Areas are designated attainment, nonattainment, or maintenance by the USEPA depending on whether concentrations of CAPs in each area exceed the established NAAQS. Non-attainment areas are required to take steps towards attainment within a specific period of time. Once an area reaches attainment for a particular CAP, then the area is re-designated as attainment or maintenance. The CAA places most of the responsibility on states to achieve compliance with the NAAQS. States, municipal statistical areas, and counties that contain areas of non-attainment are required to develop a SIP that outlines policies and procedures designed to bring the nonattainment area into compliance with the NAAQS.

TABLE 3-6
REGULATORY POLICIES AND PLANS RELATED TO AIR QUALITY

Regulation	Description
Federal	
Federal Clean Air Act (CAA) of 1970	▪ CAA created the National Ambient Air Quality Standards (NAAQS) for six criteria air pollutants (CAPs): ozone (O_3), carbon monoxide (CO), particulate matter (PM), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), and lead (Pb) ▪ States are required to have State Implementation Plans (SIPs) for areas that are not achieving the NAAQS (non-attainment areas) ▪ General Conformity Rule requires demonstrating a proposed federal action will conform to the applicable SIP ▪ Prevention of Significant Deterioration (PSD) program protects Class I areas ▪ Tribal minor new source review (NSR) permits are required if emissions would exceed certain standards ▪ CAA authorizes technology-based National Emissions Standards for Hazardous Air Pollutants (NESHAPs)
State	
California Clean Air Act (CCAA) of 1988	▪ CCAA requires nonattainment areas to achieve and maintain California Ambient Air Quality Standards (CAAQs)
Executive Order (EO) S-3-05	▪ EO S-3-05 set GHG emission reductions targets ▪ Climate Action Team (CAT) created
California Global Warming Solutions Act of 2006 (AB 32)	▪ AB 32 codifies GHG emission reduction goals, including reducing GHG emissions to 2000 levels by 2010, to 1990 levels by 2020, and to 80 percent below 1990 levels by 2050
EO S-1-07	▪ Mandates a statewide goal to reduce carbon intensity of transportation fuels by at least 10 percent by 2020 from a 2010 baseline level
EO B-30-15	▪ Set interim GHG target of 40 percent below 1990 levels by 2030
Local	
Cathedral City Climate Action Plan (CCCAP)	▪ Provides 77 measures to reduce GHG emissions over 8 years within the City and the Tribe's Reservation, with a reduction goal of 23.4 percent from 2010 emissions

Ozone

Photochemical reactions involving reactive organic gases (ROGs) and oxides of nitrogen (NO_X) resulting from the incomplete combustion of fossil fuels are the largest source of ground-level O_3. Because photochemical reaction rates depend on the intensity of ultraviolet light and air temperature, O_3 is primarily a summer air pollution problem. As a photochemical pollutant, O_3 is formed only during daylight hours under appropriate conditions, but is destroyed throughout the day and night. O_3 is considered a regional pollutant, as the reactions forming it take place over time and are often most noticeable downwind from the sources of the emissions.

PM_{10}

Particle pollution is a mixture of microscopic solids and liquid droplets suspended in air. This pollution is made up of a number of components, including acids (such as nitrates and sulfates), organic chemicals, metals, soil or dust particles, and allergens (such as fragments of pollen or mold spores). The size of particles is directly linked to their potential for causing health problems. Particles larger than 10 µm (PM_{10}) are referred to as "coarse" PM. Small particles less than 10 µm, also referred to as "respirable suspended particulates," pose the greatest problems, because they can be inhaled deep into the lungs.

In addition to the above-listed CAPs, HAPs, CO hotspots, DPM, and odor can be considered pollutants of concern in the vicinity of the alternative sites.

Hazardous Air Pollutants

In the vicinity of the alternative sites, HAPs are primarily emitted by mobile sources, such as diesel trucks and airplanes. Other sources of HAP emissions in the region include landfills and fossil fuel electric power generation.

Diesel Particulate Matter

An additional pollutant of concern in the region is DPM. DPM is not defined by the USEPA as a HAP; however, its components are defined as HAPs. According to the California Air Resources Board (CARB), the estimated health risk from HAPs can be primarily attributed to relatively few compounds, including DPM. DPM differs from other HAPs in that it is not a single substance but a complex mixture of air HAPs, composed of gaseous and solid material from the combustion of diesel fuels. The visible emissions in diesel exhaust include PM and carbon particles or "soot." Due to the potential impact of DPM on air quality, an assessment has been included in Section 4.3 of the EA.

Carbon Monoxide

CO is not readily dispersed throughout the atmosphere; therefore, it is considered a localized air quality issue, close to the emission source. CO emissions generally cause acute (short-term) health threat. CO is a pollutant of concern at major signalized intersections (greater than 100,000 vehicles per day) that exhibit prolonged vehicle idling times. The SSAB is not designated as nonattainment or maintenance for CO.

State Implementation Plan

Nonattainment areas must take steps towards attainment by a specific timeline. These steps are consolidated within the SIP as mandated by the CAA. The SIP sets forth the state's strategy for achieving NAAQS.

Federal General Conformity

Under the General Conformity Rule, the lead agency with respect to a federal action conducted in an area designated nonattainment or maintenance for any CAP is required to demonstrate that the proposed federal action conforms to the applicable SIP before the action is taken. The purpose of the rule is to ensure that federal activities do not cause or worsen existing violations of the NAAQs, or delay attainment for maintenance areas. There are two phases to a demonstration of general conformity:

1) The Conformity Review process, which entails an initial review of the federal action to assess whether a full conformity determination is necessary; and
2) The Conformity Determination process, which requires that a proposed federal action be demonstrated to conform to the applicable SIP.

The Conformity Review requires the lead agency to compare estimated emissions of CAPs to the applicable general conformity *de minimis* levels (40 Code of Federal Regulations [CFR] 153 (b)(1) and (2)). If the emission estimates from step one are below the applicable threshold(s), then a general conformity determination is not necessary and the full Conformity Determination is not required. If emission estimates are greater than the applicable threshold(s), the lead agency must conduct a Conformity Determination.

Hazardous Air Pollutants

In addition to CAPs, the CAA requires the USEPA to regulate HAPs; a group of chemical pollutants that can cause adverse effects to human health and/or the environment. The USEPA maintains a list of over 180 airborne chemicals that are recognized as HAPs. Section 112 of the CAA includes provisions for the promulgation of NESHAPs. NESHAPs are not based on effects to human health since specific concentrations of HAPs have not been evaluated to determine health-based thresholds; instead, NESHAPs are technology-based, meaning that they represent the best available control technology that an industrial sector can reasonably afford. The NESHAPs are additional federal emission limitations established for less widely emitted, but highly dangerous or toxic air pollutants that are not covered by the NAAQS.

Federal Class I Areas

Title 1, Part C of the CAA was established, in part to preserve, protect, and enhance the air quality in national parks, national wilderness areas, national monuments, national seashores, and other areas of special national or regional natural, recreational, scenic, or historic value. The CAA designates all international parks, national wilderness areas, and memorial parks larger than 5,000 acres and national parks larger than 6,000 acres as "Class I areas." The CAA prevents significant deterioration of air quality in Class I areas under the PSD program. The PSD program protects Class I areas by allowing only a small increment of air quality deterioration in these areas by requiring assessment of potential impacts on air quality related values of Class I areas.

Tribal New Source Review

A Tribal NSR permit is required prior to construction in both attainment and nonattainment areas if the projected aggregate operational emissions from stationary sources at the proposed facility exceed the minor NSR thresholds listed in 40 CFR 49.153 and shown in **Table 3-7** below. NSR programs must comply with the standards and control strategies of the Tribal Implementation Plan (TIP) or SIP. If there is not an applicable SIP or TIP, the USEPA issues permits and implements the program. If applicable, the Tribe would apply for and obtain a site-specific or, if promulgated prior to the start of construction, a general minor NSR permit in accordance with the USEPA guidelines and Tribal NSR regulations.

California Air Resources Board

The CARB, a part of the California EPA, is responsible for the coordination and administration of both federal and State air pollution control programs within California. In this capacity, CARB conducts research, sets CAAQS, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (such as hairspray or aerosol paints), and various types of commercial equipment. It

also sets fuel specifications to further reduce vehicular emissions. CARB also has primary responsibility for the development of California's SIP, for which it works closely with Air Quality Management Districts and the USEPA.

California Clean Air Act and Regional Air Quality Standards

The California Clean Air Act of 1988 requires non-attainment areas to achieve and maintain the CAAQS by the earliest practicable date, as well as requires local air districts to develop plans for attaining the State standards for O_3, CO, SO_2, and NO_X.

Global Climate Change

State

California has been a leader among the states in outlining and aggressively implementing a comprehensive climate change strategy that is designed to result in a substantial reduction in total statewide GHG emissions in the future. California's climate change strategy is multifaceted and involves a number of State agencies implementing a variety of State laws and policies. California laws and policies summarized below would assist in reducing GHG emissions from patrons of the Proposed Project.

Executive Order S-3-05

EO S-3-05 was signed by the Governor on June 1, 2005. EO S-3-05 established the following statewide emission reduction targets:

- Reduce GHG emissions to 2000 levels by 2010;
- Reduce GHG emissions to 1990 levels by 2020; and
- Reduce GHG emissions to 80 percent below 1990 levels by 2050.

EO S-3-05 created a "Climate Action Team" or "CAT" headed by the California EPA and including several other State jurisdictional agencies. The CAT is tasked by EO S-3-05 with outlining the effects of climate change on California and recommending an adaptation plan. The CAT is also tasked with

creating a strategy to meet the target emission reductions. In April 2006, the CAT published an initial report that accomplished these two tasks.

The CARB and CAT have identified approximately 126 strategies and measures that may be utilized by the state to meet its emissions reduction targets in 2010, 2020, and 2050. Most of these measures focus on statewide action meant to curb emissions by changes in statewide planning or policies rather than changes to individual development projects. However, some of the measures may be directly applicable to specific industries or individual commercial developments. Should a development alternative comply with all directly applicable measures, the alternative would support the State's efforts to significantly reduce its cumulative contribution to global climate change (to levels recommended by the Intergovernmental Panel on Climate Change (IPCC) and CARB's 2014 and 2017 Updated Climate Change Scoping Reports and the associated impacts.

California Global Warming Solutions Act of 2006 (AB 32)

Signed by the Governor on September 27, 2006, AB 32 codifies a key requirement of EO S-3-05: the requirement to reduce Statewide GHG emissions to 1990 levels by 2020. AB 32 tasks CARB with monitoring State sources of GHGs and designing emission reduction measures to comply with the law's emission reduction requirements. However, AB 32 also continues the CAT's efforts to meet the requirements of EO S-3-05 and states that the CAT should coordinate overall state climate policy.

In order to accelerate the implementation of emission reduction strategies, AB 32 requires that CARB identify a list of discrete early action measures that can be implemented relatively quickly. In October 2007, CARB published a list of early action measures that could be implemented and would serve to meet about a quarter of the required 2020 emissions reductions (CARB, 2007). In order to assist CARB in identifying early action measures, the CAT published a report in April 2007 that updated their 2006 report and identified strategies for reducing GHG emissions (CAT, 2007). In the October 2007 report, CARB cited the CAT strategies and other existing strategies that may be utilized in achieving the remainder of the emissions reductions. AB 32 required that CARB prepare a comprehensive "scoping plan" that identifies all strategies necessary to fully achieve the required 2020 emissions reductions.

Executive Order S-01-07

EO S-01-07 was signed by the Governor on January 18, 2007. It mandates a statewide goal to reduce the carbon intensity of transportation fuels by at least 10 percent by 2020 from a 2010 baseline level. This target reduction was identified by CARB as one of the AB 32 early action measures in its October 2007 report.

Executive Order B-30-15

EO B-30-15 was signed by the Governor on April 29, 2015. It sets interim GHG targets of 40 percent below 1990 by 2030, to ensure California will meet its 2050 targets set by AB 32.

California's Scoping Plan and Cap and Trade Program

In the 2008 initial Climate Change Scoping Plan, CARB lays out the GHG reductions that need to be achieved and the types of measures that will be used to reach them. The Plan predicts that under a "business as usual" scenario, 2020 GHG emissions would equal 596 million metric tons (MMT) CO_2e. Consequently, compared to the 1990 GHG emissions inventory, emissions would need to be reduced by 169 MMT CO_2e in 2020. The initial Scoping Plan establishes an overall framework for the measures that will be adopted to reduce California's GHG emissions. The Scoping Plan evaluates opportunities for sector-specific reductions, integrates all CARB and CAT early actions and additional GHG reduction measures by both entities, identifies additional measures to be pursued as regulations, and outlines the role of a cap-and-trade program. Some of the key elements of the Scoping Plan are, expanding and strengthening existing energy efficiency programs, and building and appliance standards, achieving a statewide renewables energy mix of 33 percent, developing a California cap-and-trade program that links with other Western Climate Initiative partner programs to create a regional market system and caps sources contributing 85 percent of California's GHG emissions, and establishing targets for transportation-related GHG emissions for regions throughout California, and pursuing policies and incentives to achieve those targets.

The 2008 Scoping Plan set forth approximately 126 strategies and measures currently under consideration that would ensure a statewide reduction in GHG emissions, most strategies and measures are planning-level measures, or they apply to particular industries. There are several that can be applied to a project level analyses, such as the following:

- Diesel Anti-Idling: In July 2004, the CARB adopted a measure to limit diesel-fueled commercial motor vehicle idling;
- Achieve 50 percent statewide Recycling Goal: Achieving the State's 50 percent waste diversion mandate as established by the Integrated Waste Management Act of 1989, (AB 939, Sher, Chapter 1095, Statutes of 1989);
- Water Use Efficiency: Approximately 19 percent of all electricity, 30 percent of all natural gas, and 88 million gallons of diesel are used to convey, treat, distribute and use water and wastewater. Increasing the efficiency of water transport and reducing water use would reduce greenhouse gas emissions.

The first update to the 2007 Climate Action Scoping Plan was released in May 2014 (CARB, 2014). The purpose of the update is to identify the next steps for California's leadership on climate change. The updated Plan outlines the progress California has made to date regarding near-term 2020 GHG limits, such as cleaner and more efficient energy, cleaner transportation, and the CARB's Cap-and-Trade Program. The 2007 Plan identifies six key areas where further control strategies are needed, which are: energy, transportation (vehicles/equipment, sustainable communities, housing, fuels, and infrastructure), agriculture, water, waste management, and natural and working lands.

In 2017 CARB provided a draft Scoping Plan, which provides strategies for achieving California's 2030 GHG reduction target. The 2017 draft Scoping Plan provides a summary of recent legislation, such as AB 398, EO B-30-15, Senate Bill (SB) 350, SB 32, SB 1383, etc.). Climate change mitigation policies provided in the draft Scoping Plan include the following:

- Implementing SB 350 by 2030, which will reduce GHG emissions in the electricity sector;
- Implement Mobile Source Strategy (cleaner technology and fuels), which will reduce GHG emissions in the transportation sector;
- Increase stringency of SB 375 (sustainable communities strategy);
- Develop pricing policies to support low-GHG transportation;
- Adopt Low Carbon Fuel Standard with and carbon Intensive reduction of 18 percent;
- Develop regulation and programs to support organic waste landfill reductions;
- Implement carbon accounting framework for natural and working lands (SB 859); and
- Implement forest carbon plan.

In addition to the new mitigation policies provided in the 2017 draft Scoping Plan it incorporates past policies from the initial and first updated Scoping Plans.

Local

Cathedral City Climate Action Plan (CCCAP)

The 2013 Cathedral City Climate Action Plan (CCCAP) was approved by the City Council of Cathedral City on November 13, 2013. The CCCAP provides 77 measures to reduce GHG emissions over eight years within the City and the Agua Caliente Indian Reservation, which was included in the CCCAP for that portion included within the City limits. The CCCAP provides a GHG emission reduction goal of 23.4 percent from 2010 emissions. Implementation of applicable measures, including those listed below, would show consistency with Cathedral City GHG emissions goals.

Solid waste emissions can be reduced by employing the following measures:

- **Solid Waste Diversion**. Increase solid waste diversion to achieve an average annual goal of 65% through 2020.
- **Food Waste Composting at Restaurants**. Restaurant composting program for food waste with a goal to reach all restaurants that serve more than 100 meals a day.
- **Recyclable Take-Out Containers**. Promote/mandate take-out alternative containers with a goal to eliminate the use of polystyrene packaging.

GHG emissions related to water use can be reduced by employing the following measures:

- **Water Conservation Ordinance**. Build on and exceed current CVWD water conservation ordinance by 15% community-wide by 2020.
- **Drought Tolerant Planting**. Promote and augment City, DWA and CVWD rebates for drought tolerant planting, turf replacement and buy-back.
- **Water Conservation Ordinance**. Build on ordinance with goal to exceed current commercial-sector water conservation ordinance by 20% community-wide by 2020.

Commercial buildings can reduce emissions be employing the following measures:

- **Peak Demand Reduction**. Collaborate with SCE [Southern California Edison] and encourage 200 businesses to enroll in Energy Efficiency and Demand Response programs such as the Summer Discount Program.

- **Energy-Efficient, Commercial-Sector Lighting**. With DCEP promote and leverage existing incentives for efficient lighting with special local focus on building owner education and action with goal to eliminate any remaining T-12 lamps in commercial buildings.
- **"The Temperature Club"**. Promote community partnership through policies to adjust indoor temperatures to save/degree.
- **Lighting Controls**. Promote SCE programs to encourage energy-efficient lighting linked to building controls and occupancy sensors.
- **"Cool Roofs"**. Promote the installation of reflective roofing on commercial properties in the community with recognition for first ten early adopters.

Governmental incentives can reduce emissions by employing the following measures:

- **Commercial PACE Program**. Partner and aggressively promote commercial PACE program to provide commercial property owners —from retail to resorts—with property-secured funding for 100% of the cost of energy efficiency upgrades/renewable energy installations.
- **Green Building Program**. Promote Voluntary Green Building Program to prepare for enhanced Title 24 requirements and green building standards.
- **Green Building Support Services**. Advance the Voluntary Green Building Program to mandatory green building requirement with technical support services.
- **New and Efficient Construction**. Promote the Savings by Design Program from SCE for new commercial buildings.

Transportation emissions can be reduced by employing the following measures:

- **Car-Pooling and Mass Transit**. Promote "Shared Vehicle at Work" programs with a goal to increase carpooling and mass transit by 20% with a "guaranteed-ride home".
- **Charging Stations**. Foster public/private partnerships to promote 10 additional public access electric vehicle (EV) charging stations for existing EV and NEV fleets.
- **Biking and Walking**: Expand bikeways, trails, and walking paths connecting residential neighborhoods and commerce.
- **Bike, Walking, NEV "Parkway:"** Support Parkway 1e11 as a Valley amenity and means to alternative forms of transportation and to promote health in Cathedral City.
- **Van Pools**: Partner and recognize all CC major employers with over 50 employees for van pools.
- **Car Sharing**: Promote ZIP and/or other Car Share programs through preferential parking and promotion with signage with a goal to serve 5% of existing drivers who each reduce their driving by 25%.
- **Plug In Electric Vehicle Charging Stations**. Seek grant funding to install 10 EV charging stations on public and private property and promote Plug In Electric Vehicles for public use.
- **Visitor Shuttles**. Collaborate with local hotels and resorts to support and establish effective point-to-point transportation for visitors, e.g. shuttles to airport, hotels, business district.

Carbon Monoxide Hot Spot Analysis

In accordance with 40 CFR §93.123, quantitative analysis is required if the following criteria are met:

- For projects in or affecting locations, areas, or categories of sites which are identified in the applicable implementation plan as sites of violation or possible violation;
- For projects affecting intersections that are at Level of Service (LOS) D, E, or F, or those that will change to LOS D, E, or F because of increased traffic volumes related to the project;
- For any project affecting one or more of the top three intersections in the CO nonattainment or maintenance area with highest traffic volumes, as identified in the applicable implementation plan; and
- For any project affecting one or more of the top three intersections in the CO nonattainment or maintenance area with the worst LOS, as identified in the applicable implementation plan.

3.3.2 ENVIRONMENTAL SETTING

Regional Air Quality

National Ambient Air Quality Standards Designations

The alternative sites are located in Cathedral City within the Coachella Valley, east of Los Angeles in the Salton Sea Air Basin (SSAB). Air pollutants of concern for an air basin include CAPs that are currently listed as having a nonattainment or maintenance status according to the applicable NAAQS and violation criteria. Areas that have not been classified are assumed to be in attainment. As shown in **Table 3-8**, the USEPA has designated the Riverside County – Coachella Valley region of the SSAB as nonattainment for O_3 and PM_{10} (particulate matter less than 10 microns in diameter).

Sources of Emissions

CAPs in the vicinity of the alternative sites are primarily emitted by mobile sources associated with transportation due to the urban nature of Cathedral City, Palm Springs, Rancho Mirage, and other cities in the vicinity of the alternative sites. Emissions are estimated and documented through the combined effort of the Riverside County and CARB. **Table 3-9** summarizes estimated 2020 emissions of CAPs from major categories of air pollutant sources in Riverside County.

TABLE 3-8
NAAQS ATTAINMENT STATUS FOR SSAB (RIVERSIDE COUNTY – COACHELLA VALLEY)

Pollutant	NAAQS

Sensitive Receptors

Sensitive receptors are facilities that house or attract children, the elderly, people with illnesses, or others who are especially sensitive to the effects of air pollutants. Hospitals, schools, convalescent facilities, and residential areas are examples of sensitive receptors.

The nearest residences to the North Site include an apartment building located approximately 440 feet to the northwest and single family homes located approximately 500 feet to the southwest, across East Palm Canyon Drive and Monty Hall Drive. The nearest residences to the South Site include a single family residential neighborhood located 40 feet directly to the south and west. There are no hospitals within two miles of the alternative sites. The closest public school to the alternative sites is the Cathedral City Elementary School of Palm Springs Unified School District (PSUSD) located 4,000 feet north of the alternative sites. The closest park to the alternative sites is the Second Street Park and Cathedral City Dog Park located 25 feet north of the North Site (625 feet from the South Site).

3.3.3 CLIMATE CHANGE ENVIRONMENTAL SETTING

Existing Climate Setting

Climate change is a global phenomenon attributable to the sum of all human activities and natural processes. Certain gases in the earth's atmosphere, classified as GHGs, play a critical role in determining the earth's surface temperature. GHGs include all of the following: carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6) (California Health and Safety Code §38505[g]).

In 2014, transportation generated 39 percent of California's GHG emissions, followed by the industrial sector (23 percent), electricity generation in state (11 percent), electricity generation imports (8 percent), commercial and residential (5 percent), agriculture and forestry (8 percent), high-global warming potential (4 percent) and recycling and waste (2 percent; CARB, 2017).

California Implications

Climate change could impact California's natural environment in the following ways (CEC, 2012):

- extreme heat conditions, such as heat waves and very high temperatures, which could last longer and become more frequent;

- an increase in heat-related human deaths and infectious diseases and a higher risk of respiratory problems caused by deteriorating air quality;
- reduced stream flow in the mountains, affecting water supplies;
- potential increase in the severity of winter storms, affecting peak stream flows and flooding;
- changes in growing season conditions that could affect California agriculture, causing variations in crop quality and yield; and
- changes in distribution of plant and wildlife species due to changes in temperature, competition of colonizing species, changes in hydrologic cycles, and other climate-related effects.

3.4 BIOLOGICAL RESOURCES

3.4.1 REGULATORY SETTING

The regulatory setting concerning biological resources is summarized in **Table 3-10**, and described in detail below.

TABLE 3-10
REGULATORY POLICIES AND PLANS RELATED TO BIOLOGICAL RESOURCES

Regulation	Description
Federal	
Federal Endangered Species Act (FESA)	▪ Enforced by the United States Fish and Wildlife Service (USFWS) for terrestrial species. ▪ Provisions protect federally-listed wildlife and their habitat from take. ▪ Requires consultation under Section 7 of the FESA for federal agencies if take of a listed species is necessary to complete an otherwise lawful activity. ▪ Considers habitat loss an impact to the species. ▪ Defines critical habitat as specific geographic areas within a listed species range that contain features considered essential for the conservation of the listed species.
Migratory Bird Treaty Act (MBTA)	▪ Protects migratory birds and requires project-related disturbances to be reduced or eliminated during the nesting season (February 15 through September 15).
Bald and Golden Eagle Protection Act	▪ Prohibits take, possession, and commerce of bald and golden eagles and associated parts, feathers, nests, or eggs with limited exceptions. ▪ The bald eagle was federally delisted under the FESA in 2007; however, provisions of the act remain in place for bald and golden eagles.
Wetlands and Waters of the U.S.	▪ Natural drainage channels and adjacent wetlands may be considered "Waters of the United States" subject to jurisdiction of the United States Army Corps of Engineers (USACE). ▪ The USACE regulates the filling or dredging of Waters of the U.S. under the authority of Section 404 of the CWA.
State and Local	
California Endangered Species Act (CESA)	▪ Provisions protect species of wildlife designated by the California Fish and Game Commission as endangered, threatened, or candidate species and their habitat from take.
California Fish and Game Code	▪ Prohibits take of a species listed under the CESA or otherwise special-status. ▪ Allows the California Department of Fish and Wildlife (CDFW) to issue an incidental take permit for a state-listed species if specific criteria outlined in Title 14 of the CCR, Sections 783.4(a), (b) and CDFW Code Section 2081(b) are met.
Native Plant Protection Act of 1977	▪ Administered by the CDFW. ▪ Designates special-status plant species and provides protection measures for identified

Regulation	Description
	populations.
City of Cathedral City General Plan	▪ The Biological Resources Element provides for the preservation and conservation of environmental resources within Cathedral City. ▪ Includes goals, policies, programs, and maps of preservation areas and habitat for fish and wildlife species. ▪ Portions of the alternative sites fall within City-designated "Core Areas" for the Palm Springs pocket mouse (*Perognathus longimembris bangsi*), Palm Springs ground squirrel (*Spermophilus tereticaudus chlorus)*, and the desert tortoise (*Gopherus agassizii*).
Coachella Valley Multiple Species Habitat Conservation Plan	▪ Participants include cities within Riverside County, the CVWD, Mission Springs Water District, Imperial Irrigation District, Coachella Valley Association of Governments, California State Parks, Coachella Valley Mountains Conservancy, and Caltrans. ▪ Managed by the Coachella Valley Conservation Commission. ▪ Received a California state permit in September 2008, a federal permit in October 2008, and an amendment was completed in August 2016. ▪ Conserves and protects over 240,000 acres of open space and 27 plant and animal species. The alternative sites are designated as "private/non-conservation" areas.

Federal

Federal Endangered Species Act

The USFWS enforces the provisions of FESA for all terrestrial species. Provisions of the FESA, as amended (16 USC 1531), protect federally-listed threatened and endangered wildlife and their habitat from take (50 CFR §17.11, 17.12). Under the FESA, "take" includes activities that "harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect" as well as any "attempt to engage in any such conduct" (16 USC 1531[3]). USFWS defines the term "harm" to include "significant habitat modification or degradation" (50 CFR §17.3). On June 29, 1995, the Supreme Court ruled that harm may include habitat modification "where it actually kills or injures wildlife by significantly impairing essential behavioral patterns, including breeding, feeding, or sheltering" (U.S. No. 94-859; [1995]). If "take" of a listed species is necessary to complete an otherwise lawful activity, this triggers the need for consultation under Section 7 of the FESA for federal agencies. A Section 7 Biological Opinion with incidental take provisions from the USFWS would be required.

The USFWS and the National Oceanic and Atmospheric Administration's National Marine Fisheries Service (NMFS) implement §10(a)(1)(b) of the FESA, which allows non-federal entities under consultation with the USFWS and NMFS to obtain incidental take permits for federally listed wildlife. Compliance with §10(a)(1)(b) is not required for federally-listed plants.

Pursuant to the requirements of the FESA, a federal agency reviewing a proposed project within its jurisdiction must determine whether any federally-listed species may be present on the alternative sites and whether the Proposed Project will have a potentially significant impact on such species. A discussion of regionally-listed species is provided in consideration of potential impacts associated with project implementation under each alternative below. Under the FESA, habitat loss is considered to be an impact to the species. In addition, the agency is required to determine whether the project is likely to jeopardize the continued existence of any species that is proposed for listing under the FESA or to result in the destruction or adverse modification of critical habitat proposed to be designated for such species (16 USC

§1536[3], [4]). Therefore, should it be determined that a project would result in impacts to these species, or their habitats, it would be considered significant and require mitigation.

Critical Habitat

Critical habitat is defined under the FESA as specific geographic areas within a listed species range that contain features considered essential for the conservation of the listed species. Designated critical habitat for a given species supports habitat deemed by USFWS to be important for the recovery of the species. Under FESA, habitat loss is considered to be an impact to the species.

Migratory Bird Treaty Act

Migratory birds are protected under the federal MBTA of 1918 (16 USC 703-712). The MBTA makes it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird (50 CFR 10), including feathers or other parts, nests, eggs, or products, except as allowed by implementing regulations (50 CFR 21). The direct injury or death of a migratory bird, due to construction activities or other construction-related disturbance that causes nest abandonment, nestling abandonment, or forced fledging would be considered take under federal law. As such, project-related disturbances must be reduced or eliminated during the nesting season. The general nesting season extends from February 15 through September 15.

Bald and Golden Eagle Protection Act

The Bald and Golden Eagle Protection Act was originally enacted in 1940 to protect bald eagles and was later amended to include golden eagles (16 USC §668-668). This act prohibits take, possession, and commerce of bald and golden eagles and associated parts, feathers, nests, or eggs with limited exceptions. The definition of take is the same as the definition under the FESA. The USFWS established five recovery programs in the mid-1970's based on geographical distribution of the species, with California located in the Pacific Recovery Region. Habitat conservation efforts in the Pacific Recovery Region, including laws and management practices at federal, state, and community levels, have helped facilitate bald eagle population increases. Critical habitat for bald and golden eagles was not designated as part of the Pacific Recovery Plan created under FESA. Likewise, critical habitat was not designated by regulation under FESA. In 1995, the USFWS reclassified the bald eagle from endangered to threatened under FESA in the contiguous 48 states, excluding Michigan, Minnesota, Wisconsin, Oregon, and Washington where it had already been listed as threatened. In 2007, the bald eagle was federally delisted under FESA. However, the provisions of the act remain in place for protection of bald eagles and golden eagles.

Wetlands and Waters of the U.S.

Natural drainage channels and adjacent wetlands may be considered "Waters of the United States" subject to jurisdiction of USACE. The extent of jurisdiction has been defined in the CFR and is subject to interpretation of federal courts. The USACE regulates the filling or dredging of Waters of the U.S. under the authority of Section 404 of the CWA. The extent of jurisdiction within drainage channels is defined by "ordinary high water mark" on opposing channel banks. All activities that involve the discharge of dredge or fill material into Waters of the U.S. are subject to the permit requirements of the USACE. Such permits are typically issued on the condition that the applicant agrees to provide mitigation that result in

"no net loss" of wetland functions or values. No permit can be issued until the USEPA issues a Section 401 Water Quality Certification verifying that the proposed activity will meet water quality standards.

The term "Waters of the U.S." is defined as:

- All waters currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters subject to the flow of the tide;
- All interstate waters including interstate wetlands;
- All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sand flats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use or degradation of which could affect interstate or foreign commerce including any such waters; or
- Tributaries of waters identified in the bulleted items above.

The term "Wetlands" is defined as:

- Waters of the U.S. that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands that meet these criteria during only a portion of the growing season are classified as seasonal wetlands.

State and Local

California Endangered Species Act

CESA declares that deserving plant or animal species will be given protection by the state because they are of ecological, educational, historical, recreational, aesthetic, economic, and scientific value to the people of the state. The CESA established that it is state policy to conserve, protect, restore, and enhance state-listed species and their habitats. Under State law, plant and animal species may be formally listed by the California Fish and Game Commission.

The CESA authorizes that private entities may take listed species under FESA and CESA, pursuant to a federal incidental take permit issued in accordance with Section 10 of the FESA, if the CDFW certifies that the incidental take statement or incidental take permit is consistent with the CESA (Fish & Game Code §2080.1[a]).

California Fish and Game Code

The California Fish and Game Code defines "take" (§86) and prohibits take of a species listed under the CESA (California Fish and Game Code §2080), or otherwise special-status (California Fish and Game Code §3511, 4700, and 5050). Section 2081(b) and (c) of the CESA allows CDFW to issue an incidental take permit for a state-listed species if specific criteria outlined in Title 14 CCR, §783.4(a), (b) and CDFW Code §2081(b) are met. The CDFW Code §3503 states that it is unlawful to take, possess, or needlessly destroy the nest or eggs of any bird, except as otherwise provided by the code. Section 3503.5 states that it is unlawful to take, possess, or destroy any birds in the order *Falconiformes* or *Strigiformes* (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird. Section 3513 states that it is unlawful to take or possess any migratory nongame bird as designated in the MBTA or any part of such

migratory nongame bird except as provided by rules and regulations adopted by the Secretary of the Interior under provisions of the MBTA. If a project is planned in an area where a species or specified bird occurs, an applicant must design the project to avoid all take; the CDFW cannot provide take authorization under the CESA.

Native Plant Protection Act of 1977

Native Plant Protection Act of 1977 and implementing regulations in §1900 et seq. of the California Fish and Game Code designate special-status plant species, and provide specific protection measures for identified populations. The CDFW administers the Native Plant Protection Act.

Waters of the State

Lake or Streambed Alteration Agreements pursuant to Fish and Game Code Subsection 1601-1616, 5650 are required if a project were to result in the alteration or degradation of a stream, river, or lake in California. The RWQCB may require State Water Quality Certification (CWA Section 401 permit) before other permits are issued.

City of Cathedral City General Plan

The City General Plan was prepared pursuant to state law, which requires cities and counties to adopt a general plan. The General Plan guides growth and land development of the community, and is the foundation for establishing goals, purposes, and zoning and activities. The Biological Resources Element provides for the preservation and conservation of environmental resources within Cathedral City. The element includes goals, policies, programs, and maps of preservation areas and habitat for fish and wildlife species. Portions of the North and South Sites fall within City-designated "Core Areas" for the Palm Springs pocket mouse, Palm Springs ground squirrel, and the desert tortoise.

Coachella Valley Multiple Species Habitat Conservation Plan

The Coachella Valley Multi-Species Habitat Conservation Plan (Plan) became effective on October 2, 2008, and is implemented by the City, Riverside County, and other Coachella Valley cities. The Plan is a comprehensive approach to conserving protected species and associated habitats, and establishes a uniform mechanism for mitigating the effects of development through the payment of a Local Development Mitigation Fee (fee). The fee applies to projects within the Plan's jurisdiction, and the amount varies based on the type and extent of a project. Indian reservation land is not subject to the Plan or fee. The North and South Sites are designated as "private/non-conservation" areas.

3.4.2 METHODOLOGY

Throughout this document, federal special-status species include the federally-listed species and species of concern as identified by the USFWS official species list. State special-status species are those that are formally listed by the state and/or recognized by state agencies or other local jurisdictions because of their rarity or vulnerability to habitat loss or population decline. Prior to conducting the biological survey on the alternative sites, the following information was obtained and reviewed:

- USFWS Official Species List, dated January 23, 2018, of federal special-status species with the potential to occur on the alternative sites (Appendix I of the EA);
- California Native Plant Society (CNPS) query, dated January 5, 2018, of federal and state special-status plant species known to occur on the Cathedral City quadrangle (Appendix I of the EA);
- California Natural Diversity Database (CNDDB) query, dated January 5, 2018, of state and federal special-status species known to occur on the Cathedral City quadrangle (Appendix I of the EA);
- USFWS National Wetlands Inventory map of wetland features (USFWS, 2018a);
- Soil Report of the alternative sites (NRCS, 2018); and
- A critical habitat map (USFWS, 2018b).

Biological Surveys

A biological survey was conducted on the alternative sites on December 26 and 27, 2017. The purpose of the biological survey was to identify biological communities, special-status species, and potential habitat for special-status species. Species and habitat types encountered were classified using the *General Rare Plant Survey Guidelines* (CDFW, 2002), *Botanical Survey Guidelines of the California Native Plant Society* (CNPS, 2001), and *The Jepson Manual* (Baldwin et al., 2012).

Analysis

The USFWS, CNDDB, and CNPS lists of regionally occurring federal and state special-status species are included for reference purposes within Appendix I of the EA. An analysis to determine special-status species with the potential to occur on the alternative sites was conducted. Habitat requirements for each species were assessed and compared to the type and quality of habitat observed during the biological survey. Several regionally occurring species were eliminated due to a lack of suitable habitat, elevation range, lack of suitable substrate/soils, and/or geographic distribution.

3.4.3 VEGETATION AND HABITAT

The alternative sites consist entirely of disturbed/developed habitat (**Figure 3.4-1**), and are designated as "urban" in the City General Plan (City of Cathedral City, 2009). Site photographs are shown in **Figure 3.4-2**. Several structures, paved parking areas, remnant bisecting roadways, power poles, hydrants, manhole covers, roofing tile fragments, plowed soil, and gravel, were observed during the biological survey. Vegetation is minimal and consists of ornamental species planted along roadsides and sidewalks, including palms and non-managed areas dominated by immature non-native ruderal species. No wildlife was observed on the alternative sites. Surrounding areas are highly disturbed by development, including commercial and residential buildings, major roadways, sidewalks, and fencing. No sensitive habitat types, wetlands, or Waters of the U.S. occur on or adjacent to the alternative sites.

3.4.4 SPECIAL-STATUS SPECIES

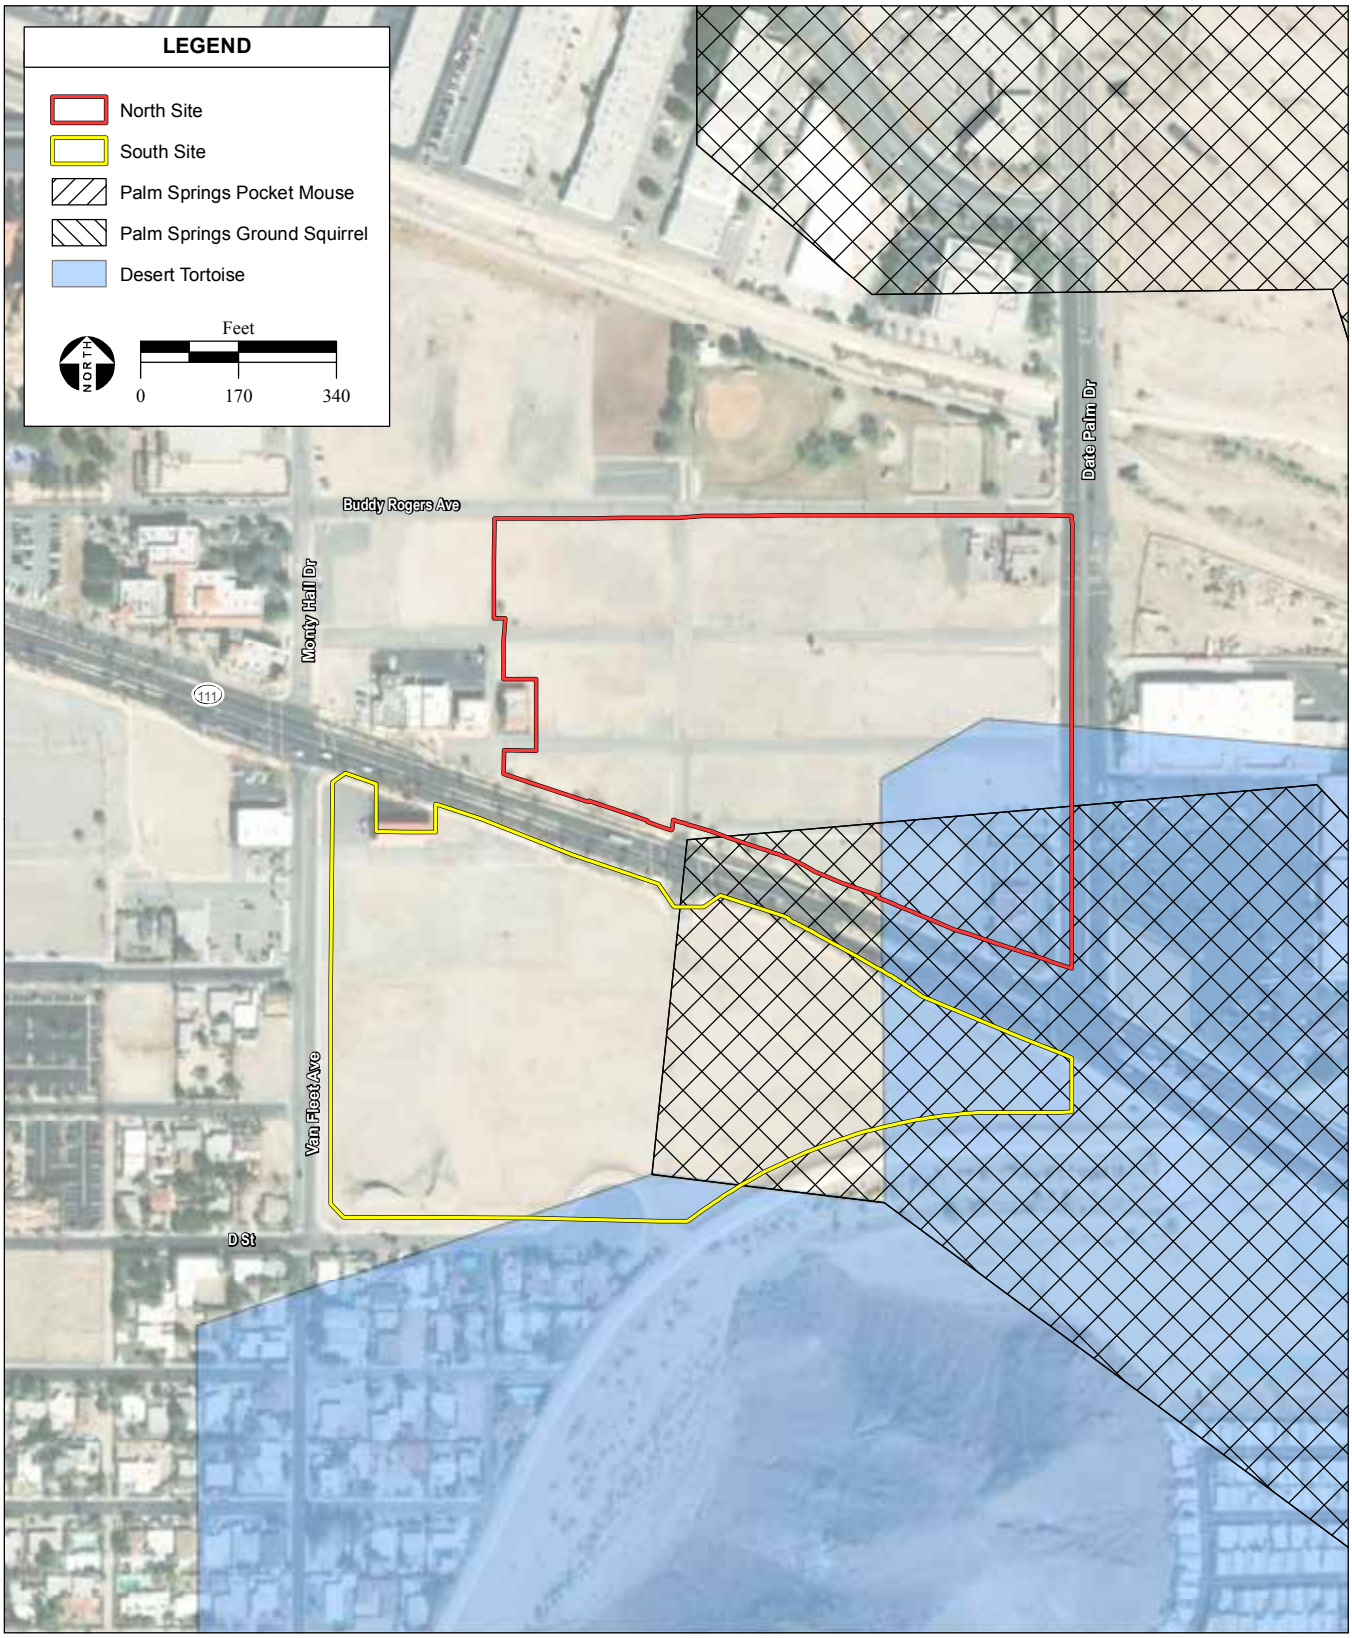
Appendix I of the EA includes a table listing special-status species with the potential to occur in the region and a discussion of their potential to occur within the alternative sites. Based on biological desktop review and survey results, no federally listed special-status species have the potential to occur within the alternative sites, and only one state-listed special-status species has the potential to occur within the alternative sites: western yellow bat. This special-status species is further discussed below. Although portions of the alternative sites are designated by the City General Plan as "Core Areas" for the Palm Springs pocket mouse (*Perognathus longimembris bangsi*), Palm Springs ground squirrel (*Spermophilus tereticaudus chlorus)*, and the desert tortoise (*Gopherus agassizii*) (City of Cathedral City, 2009) (see **Figure 3.4-3**), suitable habitat for these species does not occur within the alternative sites (Appendix I of the EA). It should be noted that the areas within the North Site designated in the City's General Plan as potential habitat for these species are currently developed with a fast-food restaurant and parking areas.

Western Yellow Bat (*Lasiurus xanthinus*)

Federal Status: None
State Status: Species of Special Concern

The western yellow bat is primarily distributed in Mexico and Central America, with a range that extends into the southern portions of California, Arizona, New Mexico, and potentially southwestern Texas. The first recorded western yellow bat in California occurred in Palm Springs in 1945 (Pierson and Rainey, 1998). Western yellow bats are a foliage-roosting species associated with dry, thorny vegetation in desert regions. This species can occur in palm oases, and has been observed roosting in ornamental palm skirts used in landscaping up to elevations of approximately 2,000 meters (Pierson and Rainey, 1998). The nearest documented occurrence of this species was observed approximately 5.5 miles from the alternative sites in 1998 (CDFW, 2018b). Potential roosting habitat may occur within the palms located on the outer perimeter of the alternative sites along roadways and sidewalks, although unlikely, as surrounding areas are highly disturbed.

Critical Habitat



No designated critical habitat occurs on or in the immediate vicinity of the alternative sites.

Migratory Birds and Other Birds of Prey

Migratory birds and other birds of prey have the potential to nest and forage on and near the alternative sites. Birds such as the western bluebird (*Sialia mexicana*), hooded oriole (*Icterus cucullatus*), and Scott's oriole (*Icterus parisorum*) may nest within palms located on the outer perimeter of the alternative sites. The nesting season ranges from February 15 through September 15.

3.4.5 WETLANDS AND WATERS OF THE U.S.

The alternative sites do not contain potentially jurisdictional wetlands or Waters of the U.S. No evidence of hydrophytic vegetation, hydric soils, or wetland hydrology were observed.

3.5 CULTURAL RESOURCES

3.5.1 REGULATORY SETTING

The cultural resources regulatory setting information is summarized in **Table 3-11**, and described in detail below.

TABLE 3-11
REGULATORY POLICIES AND PLANS RELATED TO CULTURAL RESOURCES

Regulation	Description
Section 106 of the National Historic Preservation Act (NHPA)	▪ Federal agencies must identify cultural resources that may be affected by actions involving federal lands, funds, or permitting actions ▪ Significance of the resources must be evaluated for National Register of Historic Places (NRHP) eligibility ▪ If a NRHP-eligible resource will be adversely affected, measures to avoid or reduce adverse effects must be taken
Archaeological Resources Protection Act	▪ Archaeological resources and sites on public and Indian lands are protected resources
Native American Graves Protection and Repatriation Act	▪ Includes provisions governing the intentional and inadvertent discovery of Native American burials and cultural items on federal and tribal lands, and penalties for noncompliance and illegal trafficking
Paleontological Resources Preservation Act	▪ Paleontological resources on federal lands are protected resources

Cultural resources include buildings, sites, structures, or objects, which may have historical, architectural, archaeological, cultural, and/or scientific importance. Numerous laws, regulations, and statutes at the federal and state level govern archaeological and historic resources deemed to have scientific, historic, or cultural value. The pertinent regulatory framework, as it applies to the proposed action appears below.

Section 106 of the National Historic Preservation Act

Section 106 of the NHPA as amended, and its implementing regulations found at 36 CFR Part 800, require federal agencies to identify cultural resources that may be affected by actions involving federal lands, funds, or permitting actions. The proposed project may involve a Federal undertaking and therefore be subject to Section 106 review.

The significance of the resources must be evaluated using established criteria outlined at 36 CFR §60.4, as described below. If a resource is determined to be an *historic property*, Section 106 of the NHPA requires that effects of the undertaking on the resource be determined. A historic property is:

> *…any prehistoric or historic district, site, building, structure or object included in, or eligible for inclusion in the National Register of Historic Places, including artifacts, records, and material remains related to such a property…(NHPA Sec. 301[5])*

Section 106 of the NHPA prescribes specific criteria for determining whether an undertaking would adversely affect an historic property, as defined in 36 CFR §800.5. An impact is significant when the following occurs to prehistoric or historic archaeological sites, structures, or objects that are NRHP listed, or eligible for NRHP listing:

- physical destruction or damage to all or part of the property;
- alteration of a property;
- removal of the property from its historic location;
- change of the character of the property's use or of physical features within the property's setting that contribute to its historic significance;
- introduction of visual, atmospheric, or audible elements that diminish the integrity of the property's significant historic features; or
- neglect of a property that causes its deterioration; and the transfer, lease, or sale of the property.

If it is determined that a historic property would be adversely affected by implementation of a proposed action, prudent and feasible measures to avoid or reduce adverse impacts must be taken. The State Historic Preservation Officer (SHPO) must be provided an opportunity to review and comment on these measures prior to implementation of the proposed action.

National Register of Historic Places

The eligibility of a resource for listing in the NRHP is determined by evaluating the resource using criteria defined in 36 CFR 60.4, as quoted below.

> The quality of significance in American history, architecture, archaeology, and culture is present in districts, sites, buildings, structures, and objects of state and local importance that possess integrity of location, design, setting, materials, workmanship, feeling, association, and:
>
> A. That are associated with events that have made a significant contribution to the broad patterns of our history;
> B. That are associated with the lives of persons significant in our past;
> C. That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
> D. That has yielded, or may be likely to yield, information important to prehistory or history.

Sites less than 50 years old, unless of exceptional importance, are not eligible for listing in the NRHP. In addition to meeting at least one of the criteria outlined above, the property must also retain enough integrity to enable it to convey its historic significance.

While most historic buildings and many historic archaeological properties are significant because of their association with important events, people, or styles (Criteria A, B, and C), the significance of prehistoric and historic-period archaeological properties is usually assessed under Criterion D. This criterion stresses the importance of the information contained in an archaeological site, rather than its intrinsic value as a

surviving example of a type or its historical association with an important person or event. It places importance not on physical appearance but rather on information potential.

Archaeological Resources Protection Act (ARPA)

The Archaeological Resources Protection Act of 1979 (ARPA; PL 96-95; 16 USC §470aa-mm), provides for the protection of archaeological resources and sites which are on public and Indian lands, and fosters increased cooperation and exchange of information between governmental authorities, the professional archaeological community, and private individuals having collections of archaeological resources and data which were obtained before October 31, 1979. ARPA also provides for penalties for noncompliance and illegal trafficking.

Native American Tribes

In 1992, the NHPA was amended to allow Native American tribes the opportunity to assume the functions of the SHPO in the Section 106 process for undertakings on tribal lands. The responsibilities can include identifying and maintaining inventories of culturally significant properties, nominating properties for inclusion on national and tribal registers of historic places, and conducting Section 106 reviews of federal agency projects on tribal lands and on tribal ancestral lands. This includes designating a Tribal Historic Preservation Office (THPO) with whom federal agencies are required to consult in lieu of the SHPO for undertakings occurring on or affecting historic properties on tribal lands or on tribal ancestral lands.

Native American Graves Protection and Repatriation Act

NAGPRA is a federal law passed in 1990. NAGPRA provides a process for museums and federal agencies to return certain Native American cultural items -- human remains, funerary objects, sacred objects, or objects of cultural patrimony -- to lineal descendants, and culturally affiliated Indian tribes and Native Hawaiian organizations. NAGPRA includes provisions for unclaimed and culturally unidentifiable Native American cultural items, intentional and inadvertent discovery of Native American burials and cultural items on federal and tribal lands, and penalties for noncompliance and illegal trafficking.

Paleontological Resources Preservation Act

The Paleontological Resources Preservation subtitle of the Omnibus Public Land Management Act, 16 USC §470aaa to aaa-11 requires the USDA and the U.S. Department of the Interior to issue implementation regulations to provide for the preservation, management, and protection of paleontological resources on Federal lands, and ensure that these resources are available for current and future generations to enjoy as part of America's national heritage.

Paleontological resources are defined as the traces or remains of prehistoric plants and animals. Such remains often appear as fossilized or petrified skeletal matter, imprints or endocasts, and reside in sedimentary rock layers. Fossils are important resources, due to their scientific and educational value. Fossil remains of vertebrates are considered significant. Invertebrate fossils are considered significant if they function as index fossils. Index fossils are those that appear in the fossil record for a relatively short

and known period of time, allowing geologists to interpret the age range of the geological formations in which they are found.

3.5.2 ENVIRONMENTAL SETTING

Prehistoric Setting

The prehistory of this portion of southern California, beginning 12,000 years ago, is the history of people adapting to a changing environment through the development of an increasingly sophisticated technological base, exploitation of seasonally available resources, and by the development of trade networks. Detailed information regarding the prehistory and ethnographic history of the region may be found in the cultural resources report in Appendix J of the EA.

Historic Setting

Spanish explorers arrived in what would become Riverside County in the late 18th century; missions established in neighboring counties nonetheless exerted influence within Riverside County. However, the establishment of railroads allowed bulk shipping of orange crops and brought people to Palm Springs, where mineral springs were developed for tourism. With the arrival of the automobile, the region rapidly developed as more people came for the spas and resorts, eventually becoming a Hollywood playground in the 1950s. Detailed information regarding the history of the region may be found in the cultural resources report in Appendix J of the EA.

Cultural Resources Investigation

A record search was completed on October 30, 2017, at the Eastern Information Center (EIC) of the California Historical Resources Information System (CHRIS). The EIC search included the alternative sites and a 1.0-mile buffer zone. This record search included, but was not necessarily restricted, to a review of the following sources: NRHP, California Register of Historical Resources (CRHR), California Historical Landmarks, California Inventory of Historic Resources, and the Historic Properties directory.

The EIC identified 72 previously recorded cultural resources within the record search area, 22 of which are within the North Site, 26 of which are within the South Site, and 24 of which are outside of the alternative sites. Taken as a whole, these resources are largely related to a 1920s-1940s residential community. A total of 45 cultural resource inventories have been completed within the record search area, two of which include at least a portion of the project footprint. The known prehistoric sites within the search radius include trails, quarries, and lithic scatters.

The OHP Directory of Historic Properties includes three properties that have been found potentially eligible for listing on the NRHP; of these, only one—a 1925 Pueblo Revival-style residence—was located within the South Site; however, the residence has been razed. Analytical Environmental Services (AES) examined General Land Office (GLO) records for Township 4 South, Range 5 East, Section 33 from 1856 and 1886, both of which depicted a trail crossing near the alternative sites (BLM, 2017a, b); this trail appears to be the precursor to East Palm Canyon Drive (Highway 111). The only land patents in the area are those made to the Southern Pacific Railroad.

Petra Geosciences reviewed historic aerial photographs from 1953, 1966, 1972, 1984, 1996, 2002, 2005, 2009, 2010, and 2012 and historical USGS topographic maps of the alternative sites' vicinity from 1904, 1941, 1944, 1947, 1958, 1972, 1981 and 2012, all of which confirmed the presence of a mostly residential community on both the alternative sites beginning in the 1920s which has since been razed, leaving the alternative sites vacant except for the modern fire station and limited commercial development (Appendix J of the EA).

Paleontological Resources

A search of the online archives of the University of California Museum of Paleontology (UCMP, 2017) shows that 1870 fossil specimens have been recorded in the County. Those closest to the alternative sites include bivalves and gastropods 15 miles to the west in San Gorgonio Pass, gastropods and invertebrates 9 miles to the northeast in Willis Palms, mammals 15 miles to the east in Indio, and invertebrates 10 miles to the northeast in Indio Hills.

Native American Coordination

On October 19, 2017, AES sent a letter to the Native American Heritage Commission (NAHC) requesting a Sacred Lands File search and a list of Native American contacts who may have information about the Area of Potential Effects (APE). The NAHC responded in a letter dated October 24, 2017, that the Sacred Lands file does not indicate the presence of Native American cultural resources in the APE, but that this does not indicate they are absent. The NAHC provided names of two individuals who might have information about the area. A copy of the NAHC response is included in Appendix J of the EA. It is assumed that any consultation with these, or other individuals, will be completed by the Bureau of Indian Affairs (BIA) in compliance with the requirements of the NHPA and 36 CFR §800.

Field Survey

On December 26, 2017, AES Senior Archaeologist Charlane Gross, who meets the requirements of the Secretary of the Interior's Standards and Guidelines for Archaeology, completed a pedestrian survey of the alternative sites using meandering transects spaced approximately 30 meters apart. There was 100 percent ground surface visibility. While the record search results depicted numerous residences and commercial buildings on both the alternative sites, by the time of the survey, all historic-era structures had been razed and the sites cleared of any residual features or artifacts except for power poles, remnant bisecting roadways, and a thin scatter of roofing tile fragments, plastic, gravel, concrete, asphalt, wire, and brown bottle glass. One glazed whiteware cup fragment was also noted.

3.6 SOCIOECONOMIC CONDITIONS/ENVIRONMENTAL JUSTICE

3.6.1 REGULATORY SETTING

The socioeconomic regulatory setting is summarized in **Table 3-12**, and described in detail below.

TABLE 3-12
REGULATORY POLICIES AND PLANS RELATED TO SOCIOECONOMICS

Regulation	Description
EO 12898	▪ Disproportionately high impacts to minority or low-income populations should be considered. ▪ A minority population is defined as a Census tract containing greater than 50 percent minorities, or a Census tract with a meaningfully greater percentage of minorities than surrounding tracts. Minority races include American Indian or Alaskan Native, Asian or Pacific Islander, Black (not of Hispanic origin), and Hispanic. ▪ A low-income population is defined as a Census tract with a median household income lower than the poverty threshold.

Executive Order 12898

EO 12898, Federal Actions to Address Environmental Justice in Minority and Low-Income Populations, directs federal agencies to develop an Environmental Justice Strategy that identifies and addresses disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations and low-income populations. The Council on Environmental Quality (CEQ) has oversight responsibility of the federal government's compliance with EO 12898 and NEPA, and, in consultation with the USEPA and other agencies, has developed guidance to ensure environmental justice concerns are effectively identified and addressed.

According to guidance from the CEQ (1997) and USEPA (1998), agencies should consider the composition of the affected area to determine whether minority populations, low-income populations, or Indian tribes are present in the area affected by a proposed action and, if so, whether there may be disproportionately high and adverse environmental effects to those populations. The geographic scale of this analysis is the Census tract. Census tracts are small, relatively permanent statistical subdivisions of a county designed to be relatively homogeneous units with respect to population characteristics, economic status, and living conditions at the time of establishment. Therefore, statistics of Census tracts provide a more accurate representation of a community's racial and economic composition.

Communities may be considered "minority" if one of the following characteristics apply:

- The cumulative percentage of minorities within a Census tract is greater than 50 percent (primary method of analysis); or
- The cumulative percentage of minorities within a Census tract is less than 50 percent, but the percentage of minorities is meaningfully greater than the minority population percentage in the general population or other appropriate unit of geographic analysis (secondary method of analysis).

The following races are considered minorities under EO 12898:

- American Indian or Alaskan Native;
- Asian or Pacific Islander;
- Black, not of Hispanic origin; and
- Hispanic.

Populations of two or more races and populations classified as "other" were also considered to be minority races for the purpose of the environmental justice analysis.

According to USEPA, either the county or the state can be used when considering the scope of the "general population." A definition of "meaningfully greater" is not given by the CEQ or USEPA, although the latter has noted that any affected area that has a percentage of minorities above the state's percentage is a potential minority community and any affected area with a minority percentage double that of the state's is a definite minority community under EO 12898.

Communities may be considered "low-income" if one of the following characteristics applies:

- The median household income for a Census tract is below the poverty line (primary method of analysis); or
- Other indications are present that indicate a low-income community is present within the Census tract (secondary method of analysis).

In most cases, the primary method of analysis will suffice to determine whether a low-income community exists in the affected environment. However, when a Census tract income may be just over the poverty line or where a low-income pocket within the tract appears likely, the secondary method of analysis may be warranted. Other indications of a low-income community under the secondary method of analysis include limited access to health care, overburdened or aged infrastructure, and dependence on subsistence living.

3.6.2 ENVIRONMENTAL SETTING

Economy and Employment

The average unemployment rate of people 16 years of age and older from 2012-2016, the most recent five-year estimate available, was approximately 8.7 percent statewide, 11.3 percent for the County, and 9.9 percent for the City (U.S. Census Bureau, 2016a). In 2016, the City and County had a labor force of 24,805 and 1,067,758, respectively (U.S. Census Bureau, 2016a).

Demographics and Housing

In 2017, the population of the County was 2,423,266, and the population of the City was 54,596. Between 2010 and 2017, the County's population increased by approximately 10.7 percent relative to its 2010 population of 2,189,753, while the City's population increased by approximately 6.52 percent compared its 2010 population of 51,254 (U.S. Census Bureau, 2017). The on-Reservation population of the Agua Caliente Band of Cahuilla Indians (Tribe) is 25,575, which includes both members and non-members (U.S. Census Bureau, 2016b).

Based on the 2012-2016 American Community Survey (ACS) 5-Year Estimates, the County has 820,300 housing units, with a vacancy rate of 14.0 percent (U.S. Census Bureau, 2016c). The City has a 19 percent vacancy rate, which is expected to decline in the next five years (U.S. Census Bureau, 2016c).

Property Taxes

The total assessed value of the North Site for fiscal year 2017-2018 is $8,515,491.00, with collected property taxes of $105,367. The total assessed value of the South Site for fiscal year 2017-2018 is $7,543,575, with collected property taxes of $94,427 (Appendix E of the EA).

Gaming Market

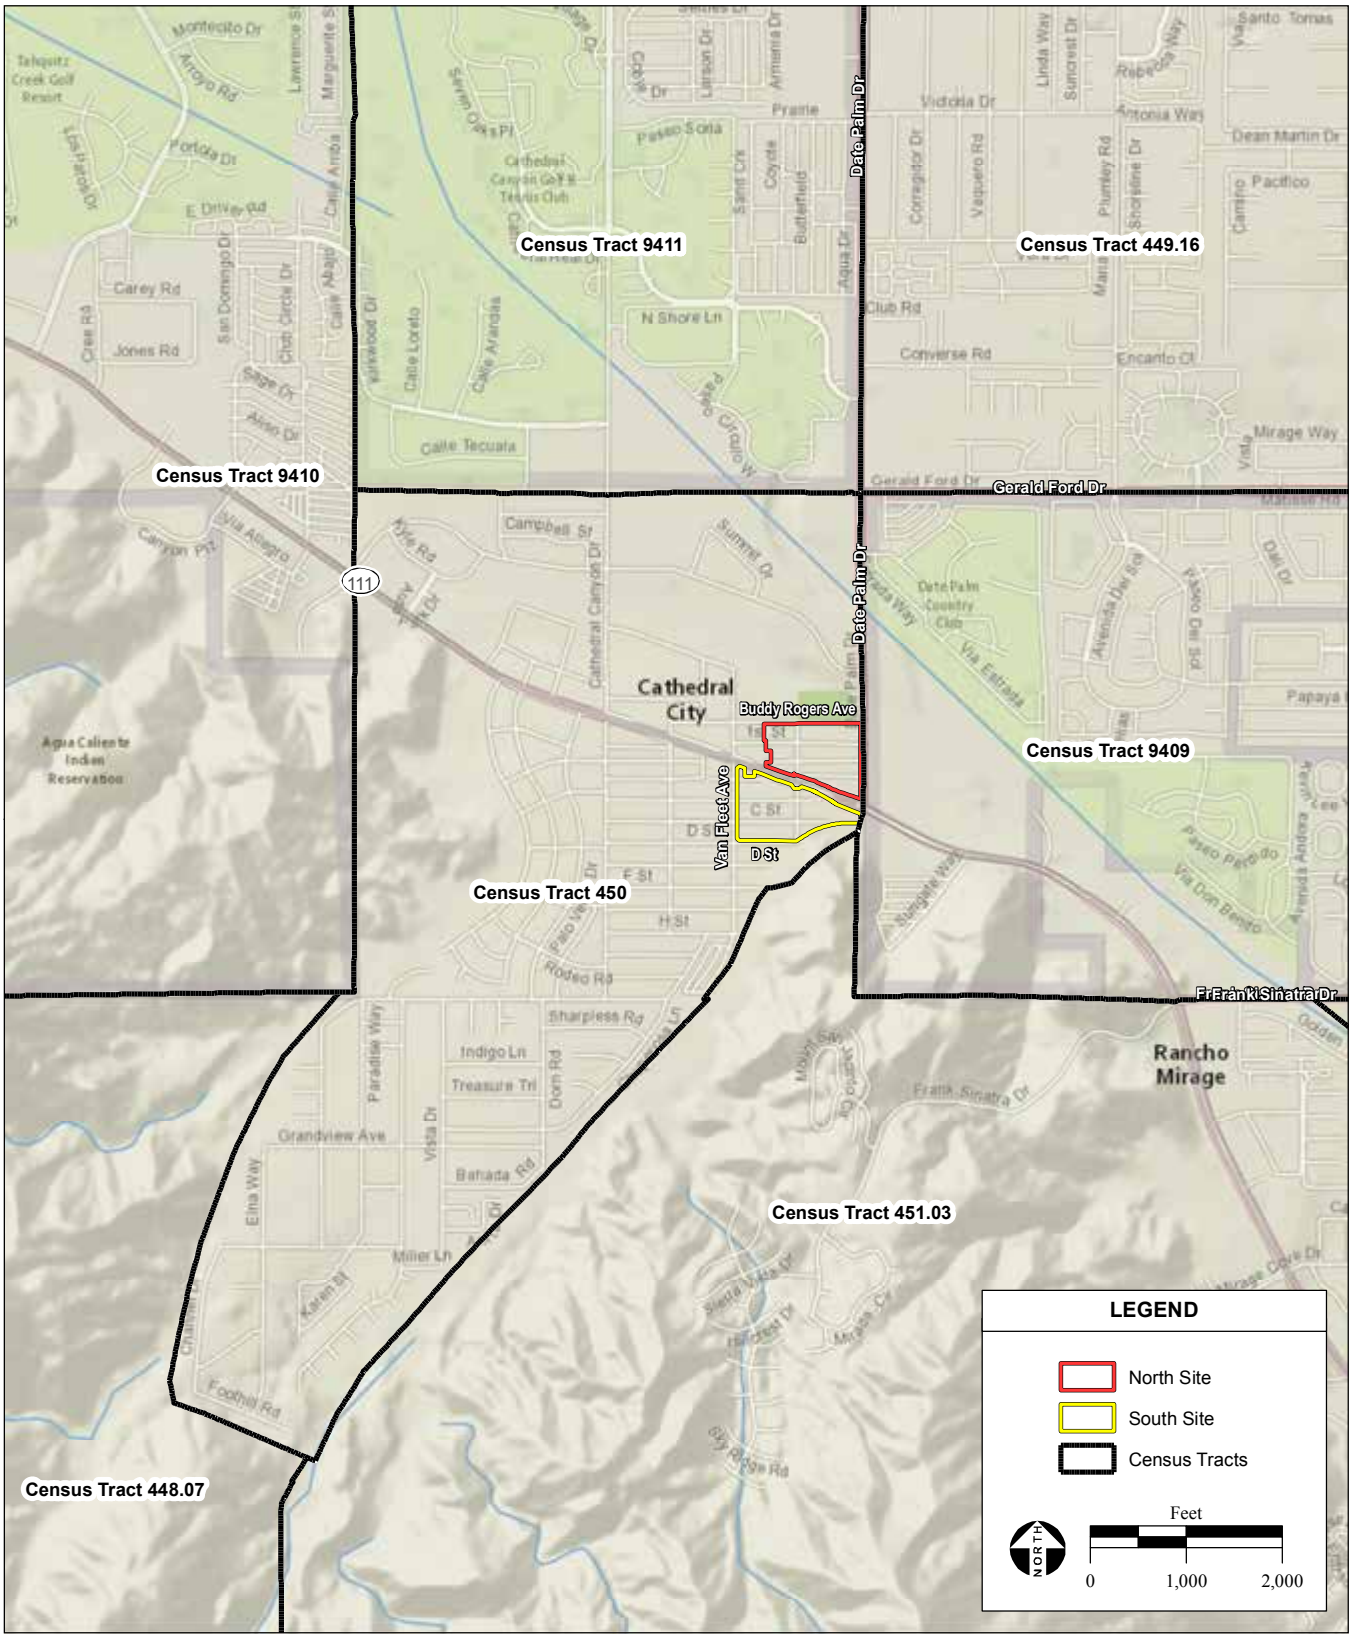
There are nine existing gaming facilities within 50 miles of the alternative sites whose market areas may overlap with the potential market area of the project, as described in Appendix E of the EA. The two nearest gaming facilities are owned and operated by the Tribe. The nearest tribal gaming facility not owned by the Tribe is the Fantasy Springs Resort Casino, which is located approximately 15 miles southeast and owned by the Cabazon Band of Mission Indians.

Schools, Libraries, and Parks

The alternative sites and vicinity are served by the PSUSD. PSUSD currently operates 13 elementary schools, five middle schools, five high schools, and two alternative schools. The 2017-2018 enrollment at PSUSD elementary schools was 10,625; the middle school enrollment was 5,087; the high school enrollment was 7,188; the alternative school enrollment was 203; for a total of 23,103 students (CDE, 2018). The closest public school to the alternative sites is the Cathedral City Elementary School of PSUSD located 4,000 feet north of the alternative sites.

The closest library to the alternative sites is the Cathedral City Branch Library at Date Palm Drive and Dave Kelley Road, approximately 1.6 miles north of the sites.

The closest park to the alternative sites is the Second Street Park and Cathedral City Dog Park located adjacent to the northern boundary of the North Site (625 feet from the South Site). The next closest park is the Town Square Park located approximately 650 feet west of the northwestern corner of the North Site (720 feet from the South Site).



Environmental Justice

Census tracts that are analyzed within this EA include Census tract 450, which contains the alternative sites, as well as adjacent Census tracts. Refer to **Figure 3.6-1** for the location of each tract.

Race

The U.S. Census Bureau 2012-2016 ACS 5-Year Estimates provide the most current racial data available by Census tract. The racial composition of the Census tracts is not expected to have changed substantially since the time the data was reported. **Table 3-13** displays the population of each minority race by Census tract in the vicinity of the alternative sites.

The State of California has a 61.7 percent minority population out of over 38 million residents. The population in the Census tract containing the alternative sites (Census tract 450) is composed of approximately 55.0 percent minorities, qualifying it as a minority population. Adjacent Census tracts vary in minority population numbers, several of which include substantial minority populations.

Source: U.S. Census Bureau, 2016b.

Members of the Tribe, regardless of where they reside, are considered a minority population. The Tribe is considered to be a minority community for the purposes of the required EO 12898 analysis.

Income

A low-income community is defined as a Census tract where the median household income falls below the poverty limit. The U.S. Census Bureau's 2012-2016 ACS 5-Year Estimates is the most current household income dataset available by Census tract. The alternative sites are within Census Tract 450, which is surrounded by the following Census tracts: 448.07, 449.16, 451.03, 9409, 9410, and 9411. **Table 3-14** displays the median household income and poverty income limit for the State of California, the County, the City, and each identified Census tract.

TABLE 3-14
POVERTY LEVEL – ALTERNATIVE SITES AND ADJACENT CENSUS TRACTS

Area (State, County, Census Tract)	Median Household Income	Average Household Size	Poverty Threshold
California State	$63,783	2.99	$20,160
Riverside County	$57,972	3.20	$24,300
City of Cathedral City	$41,696	2.82	$20,160
448.07	$38,571	1.84	$16,020
449.16	$41,403	2.04	$20,160
450 (contains North Site and South Site)	$35,617	1.94	$16,020
451.03	$49,167	1.89	$16,020
9409	$50,227	1.77	$16,020
9410	$38,883	1.46	$16,020
9411	$37,013	1.57	$16,020
Source: U.S. Census Bureau, 2016a; U.S. Census Bureau, 2016c; HHS, 2016.			

The poverty threshold for each Census tract was determined from the average household size of the Census tract. The poverty threshold assumes average household size is conservatively rounded up to the nearest person. As shown in **Table 3-14**, in the State, County, City, and nearby Census tracts, the median household income is more than twice the poverty threshold. No low-income communities have been identified in the vicinity of the alternative sites.

3.7 TRANSPORTATION/CIRCULATION

Automobiles are the primary mode of travel for most trips in the vicinity of the alternative sites. This section describes the existing transportation system, traffic volumes, and transit, bicycle, and pedestrian systems in the project area. Information in this section is summarized from the Traffic Impact Analysis (TIA) prepared for the project alternatives by Albert A. Webb Associates (Appendix K of the EA).

3.7.1 ROADWAY SYSTEM

Existing roadways in the vicinity of the alternative sites are shown in Figure 3-A of Appendix K of the EA and described in Section 3.1.1 of Appendix K of the EA.

To determine the appropriate peak hour periods, traffic counts at similar nearby casinos were conducted Thursday, March 1, 2018, through Saturday March 3, 2018, from 7:00 am to 7:00 pm each day. The peak hour periods were determined to be the PM peak hour (4:00 pm to 5:00 pm) and the Saturday mid-day (MD) peak hour (1:00 pm to 2:00 pm). Existing PM and Saturday MD peak hour traffic volumes at the study intersections and average daily traffic (ADT) roadway segments, shown on Figures 3-C through 3-E of Appendix K of the EA, were conducted by Counts Unlimited, Inc. between April 7 and April 14, 2018. A traffic signal warrant analysis was conducted at each unsignalized study intersection to evaluate the potential need for a traffic signal. "Signal warrants" refers to the list of established criteria in the California Manual on Uniform Traffic Control Devices (MUTCD) to determine the need for a traffic signal at an unsignalized intersection.

Intersections

The following intersections in the vicinity of the alternative sites were identified as intersections of concern in coordination with City staff:

1. Project Driveway (western)-Allen Avenue/Buddy Rogers Avenue
2. Date Palm Drive/Buddy Rogers Avenue
3. Date Palm Drive/East Palm Canyon Drive
4. Project Driveway-Allen Avenue/East Palm Canyon Drive
5. Monty Hall Drive/East Palm Canyon Drive
6. Date Palm Drive/Project Driveway-Hillery Road
7. Project Driveway (eastern)/Buddy Rogers Avenue
8. Monty Hall Drive/Buddy Rogers Avenue
9. Buddy Rogers Avenue/East Palm Canyon Drive
10. Cathedral Canyon Drive/East Palm Canyon Drive
11. Perez Road/East Palm Canyon Drive
12. Canyon Plaza Drive/East Palm Canyon Drive
13. Golf Club Drive/East Palm Canyon Drive
14. Cathedral Canyon Drive/Officer David Vasquez Road
15. Cathedral Canyon Drive/Perez Road
16. Cathedral Canyon Drive/Paseo Real
17. Cathedral Canyon Drive/Dinah Shore Drive
18. Date Palm Drive/Gerald Ford Drive
19. Date Palm Drive/Dinah Shore Drive
20. Date Palm Drive/Ramon Road
21. Da Vall Drive/Dinah Shore Drive
22. Da Vall Drive/Gerald Ford Drive
23. East Palm Canyon Drive/Frank Sinatra Drive
24. East Palm Canyon Drive/Mirage Cove Drive
25. East Palm Canyon Drive/Country Club Drive
26. Morningside/Frank Sinatra Drive
27. Van Fleet Street/B Street
28. Van Fleet Street/D Street
29. Project Driveway/D Street

Table 3-4 of Appendix K of the EA presents the existing peak hour delay and LOS for each of the above study intersections.

Roadways

The following roadway segments in the vicinity of the alternative sites were identified as roadway segments of concern in coordination with City staff:

1. East Palm Canyon Drive between Golf Club Drive and Canyon Plaza Drive
2. East Palm Canyon Drive between Canyon Plaza Drive and Perez Road
3. East Palm Canyon Drive between Perez Road and Cathedral Canyon Drive
4. East Palm Canyon Drive between Cathedral Canyon Drive and Date Palm Drive
5. East Palm Canyon Drive between Date Palm Drive and Frank Sinatra Drive
6. East Palm Canyon Drive between Frank Sinatra Drive and Country Club Drive
7. Cathedral Canyon Drive between East Palm Canyon Drive and Perez Road
8. Cathedral Canyon Drive between Perez Road and Dinah Shore Drive
9. Date Palm Drive between East Palm Canyon Drive and Gerald Ford Drive
10. Date Palm Drive between Gerald Ford Drive and Dinah Shore Drive

Table 3-5 of Appendix K of the EA presents the existing ADT for each of the above roadway segments.

3.7.2 LEVEL OF SERVICE STANDARDS

Traffic operations have been quantified through determination of LOS. LOS was calculated using the methodology described in the 2010 Highway Capacity Manual (HCM; Transportation Research Board, 2010). In accordance with the HCM, intersections are rated between LOS A and F, representing progressively worsening traffic conditions. For signalized intersections and all-way stop controlled (AWSC) intersections, the LOS is determined by the weighted average control delay. For two-way stop controlled (TWSC) intersections, the LOS is determined based on the highest control delay of all controlled movements. Roadway segment LOS is evaluated based on daily volume and roadway capacity. These criteria are shown below in Tables 3-1, 3-2, and 3-3 of Appendix K of the EA, respectively. For all study intersections and roadway segments, LOS D is considered to be acceptable, based on local General Plan documents (including the City, the City of Rancho Mirage, and the City of Palm Springs General Plans). With the exception of Cathedral Canyon Drive and Paseo Real, all study area intersections and roadway segments operate at an acceptable LOS in existing conditions (Appendix K of the EA).

3.7.3 TRANSIT, BICYCLE, AND PEDESTRIAN FACILITIES

The alternative sites are currently served by Sunline Transit Agency Routes 30 and 111. There are two bus stops located on East Palm Canyon Drive at Allen Avenue and Date Palm Drive at Grove Street, directly adjacent to the North Site, and across the street from the South Site. (Appendix K of the EA)

Sidewalks existing along study area roadways near the alternative sites, including along Date Palm Drive and East Palm Canyon Drive. Designated bike lanes do not generally existing along study area roadways, except along certain roadways, including Frank Sinatra Drive.

3.8 LAND USE

3.8.1 REGULATORY SETTING

The land use regulatory setting is summarized in **Table 3-15**, and described in detail below.

TABLE 3-15
REGULATORY POLICIES AND PLANS RELATED TO LAND USE

Regulation	Description
State	
Farmland Mapping and Monitoring Program (FMMP)	▪ Provides data to decision makers for use in planning for the present and future of California's agricultural land resources. ▪ Provides maps and statistical data to the public; academia; and local, state, and federal governments to assist them in making informed decisions for the best utilization of California's farmland.
Williamson Act	▪ Designed to preserve farmlands and open space lands by discouraging premature and unnecessary conversion to urban uses. ▪ Landowners contract with the County to maintain agricultural or open space use of their lands in return for a reduced property tax assessment. ▪ The contract is self-renewing and the landowner may notify the county at any time of intent to withdraw the land from its preserve status.
Local	
Riverside County Airport Land Use Compatibility Plan	▪ Ensures incompatible development does not occur near airports; but does not have jurisdiction over federal lands, including trust land
City General Plan	▪ Alternative sites are designated as Downtown Commercial (DTC) in the City General Plan, which allows residential neighborhoods or mixed use commercial development (including lodging and entertainment establishments)
Date Palm Drive Corridor Plan and Date Palm Drive Specific Plan	▪ Designate the North Site for Downtown/Art and Design Village development, which allows mixed uses within the art and design theme (including small businesses, residential uses, and landscaping with a major retail anchor). This designation specifically calls for a casino on the North Site
City Zoning Ordinance	▪ Alternative sites are zoned for Mixed Use Commercial (MXC; allows retail, dining, spas, hotels, performing arts facilities, professional services, etc) and Downtown Residential Neighborhood (DRN; allows home occupations, single and multi-family housing, etc)
Tribal-Cathedral City Land Use Contract	▪ This contract states that City land use controls do not apply to tribal trust land ▪ Cathedral City Council Resolution 2017-44 supports the Tribe's use of the North Site for gaming

State

Farmland Mapping and Monitoring Program

The State of California developed the FMMP to provide data to decision makers for use in planning for the present and future of California's agricultural land resources. To meet this goal, FMMP's objective is to provide maps and statistical data to the public; academia; and local, state, and federal governments to assist them in making informed decisions for the best utilization of California's farmland. The Center for Disease Control and Prevention classifies lands into seven agriculture-related categories: Prime Farmland, Farmland of Statewide Importance, Unique Farmland, Farmland of Local Importance, Grazing Land, Urban and Built-Up Land, and Other Land.

Williamson Act

The California Land Conservation Act of 1965, commonly known as the Williamson Act, is designed to preserve farmlands and open space lands by discouraging premature and unnecessary conversion to urban uses. Under the provisions of the Williamson Act, landowners contract with the county to maintain agricultural or open space use of their lands in return for a reduced property tax assessment. The contract

is self-renewing and the landowner may notify the county at any time of intent to withdraw the land from its preserve status. Withdrawal involves a 10-year period of tax adjustment to full market value before protected open space can be converted to urban uses. Alternatively, landowners can petition the County Board of Supervisors to withdraw prematurely from a Williamson Contract. In order to cancel a contract without instituting the 10-year tax adjustment period, the Board of Supervisors make the required findings that the cancellation is consistent with the purposes of the Williamson Act, and that cancellation is in the public interest.

Local

While local land use policies would not apply to lands taken into federal trust, impacts to the community may occur in terms of a federal project's relation to growth and development visions as described in these guidance documents.

Riverside County Airport Land Use Compatibility Plan (ALUCP)

The purpose of the Riverside County Airport Land Use Compatibility Plan (ALUCP) is to ensure that incompatible development does not occur on lands surrounding airports. The enforcement of the ALUCP falls upon local governments (such as the City) via their general plan.

As stated therein, the Airport Land Use Commission (ALUC) has no jurisdiction over federal lands, including trust land; however, as the North and South Sites are not yet in federal trust status, the ALUCP currently applies to the sites.

The ALUCP identifies six distinct zones, referred to as Airport Compatibility Zones, which represent relative noise levels and safety risks in the event of an airport contingency. These Airport Compatibility Zones and risk factors are summarized in **Table 3-16** below.

TABLE 3-16
RIVERSIDE COUNTY AIRPORT COMPATIBILITY ZONES

Zone	Noise and Overflight Factors	Safety and Airspace Protection Factors
A	*Noise Impact: Very High* ▪ Includes 65-CNEL [Community Noise Equivalency Level] contour at airports where this contour extends beyond RPZs *Note: In all zones, contours for peak-season average day, rather than annual average day, are used for airports with strong seasonal activity characteristics*	*Risk Level: Very High* ▪ Lateral to runways, zone boundary defined by the Building Restriction Line as depicted on adopted Airport Layout Plan drawing ▪ Length set to include Runway Protection Zones as indicated on Airport Layout Plan drawing ▪ Nearly 40% of off-runway general aviation accidents near airports occur in this zone
B1	*Noise Impact: High* ▪ Generally encompasses 60-CNEL contour (55-CNEL at outlying airports) ▪ Single-event noise sufficient to disrupt wide range of land use activities including indoors if windows open	*Risk Level: High* ▪ Encompasses areas overflown by aircraft at low altitudes—typically only 200 to 400 feet above runway ▪ Some 10% to 20% of off-runway general aviation accidents near airports take place here ▪ Object heights restricted to as little as 50 feet
B2	*Noise Impact: Moderate to High* ▪ Encompasses 55-CNEL contour lateral to runway	*Risk Level: Low to Moderate* ▪ Area not normally overflown by aircraft; primary risk is with aircraft (especially twins) losing directional control on takeoff ▪ About 3% of off-runway general aviation accidents near airports happen in this zone

Zone	Noise and Overflight Factors	Safety and Airspace Protection Factors
	▪ Exposed to loud single-event noise from takeoffs and jet thrust-reverse on landing; also from pre-flight run-ups	▪ Object heights restricted to as little as 35 feet
C	*Noise Impact: Moderate* ▪ Encompasses most of 55-CNEL contour beyond runway ends ▪ Aircraft typically below 1,000 feet altitude on arrival; individual events occasionally loud enough to intrude upon indoor activities	*Risk Level: Moderate* ▪ Includes areas where aircraft: ▪ Turn from base to final approach legs of standard traffic pattern and descend from traffic pattern altitude ▪ On departure, normally complete transition from takeoff power and flap settings to climb mode and begin turns to en route heading ▪ On an instrument approach procedure, have descended below about 500 feet AGL ▪ Some 10% to 15% of off-runway general aviation accidents near airports occur in this zone ▪ Object heights restricted to as little as 50 feet
D	*Noise Impact: Moderate* ▪ Contains remaining 55-CNEL contour, if any ▪ Aircraft at or above traffic pattern except for instrument approaches ▪ More concern with respect to individual loud events than with cumulative noise contours ▪ Residential density criteria for this zone provide two options on basis that noise concerns can be minimized either by limiting number of dwelling units in affected areas or by allowing high-density development which tends to have comparatively high ambient noise levels	*Risk Level: Low* ▪ Aircraft on instrument approaches below 1,000 feet ▪ About 20% to 30% of general aviation accidents take place in this zone, but large area encompassed means low likelihood of accident occurrence in any given location ▪ Risk concern is primarily with uses for which potential consequences are severe (e.g. very-high intensity activities in a confined area) ▪ Object height limits generally at least 100 feet
E	*Noise Impact: Low* ▪ Beyond 55-CNEL contour ▪ Occasional overflights intrusive to some outdoor activities	*Risk Level: Low* ▪ Only 10% to 15% of near-airport accidents here ▪ Risk concern only with uses for which potential consequences are severe (e.g. very-high-intensity activities in a confined area)
* Height Review Overlay	*Noise Impact: Low* ▪ Individual noise events slightly louder because high terrain reduces altitude of overflights	*Risk Level: Moderate* ▪ Modest risk because high terrain constitutes airspace obstruction ▪ Concern is tall single objects (e.g., antennas)
Source: Riverside County, 2004.		

The North Site and South Site are located approximately 3.0 miles southeast of the Palm Springs International Airport, within Zone D (Primary Traffic Patterns) (Riverside County, 2004; City of Palm Springs, 2015). Zone D generally limits building heights to less than 100 feet, and is often within the 55-CNEL noise contour (Riverside County, 2004). The 55-CNEL noise contour for the Palm Springs International Airport is not designated within the ALUCP or the Palm Springs International Airport Master Plan (2015). The Airport Master Plan provides this same information; however, the purpose of the master plan is to assess the demand for the airport and provide a development plan for the airport to meet existing and anticipated demands.

City of Cathedral City General Plan

The central purpose of the City General Plan is to provide goals, policies, programs, and implementation mechanisms that provide decision-makers with direction as they consider development within the City.

The North Site and South Site lie within the City's boundaries, as well as the planning boundaries set forth in the City General Plan. The horizon year of the City General Plan is 2020. The plan consists of 24 elements, including a Land Use element (City of Cathedral City, 2009).

The City General Plan shows the land use designation of the North Site and South Site as Downtown Commercial, as shown on **Figure 3.8-1** (DTC; City of Cathedral City, 2009). The DTC designation allows for residential neighborhood or mixed use commercial development, including lodging and entertainment establishments.

Table 3-17 depicts the City General Plan's guiding and implementation policies that may be applicable to the North Site and South Site.

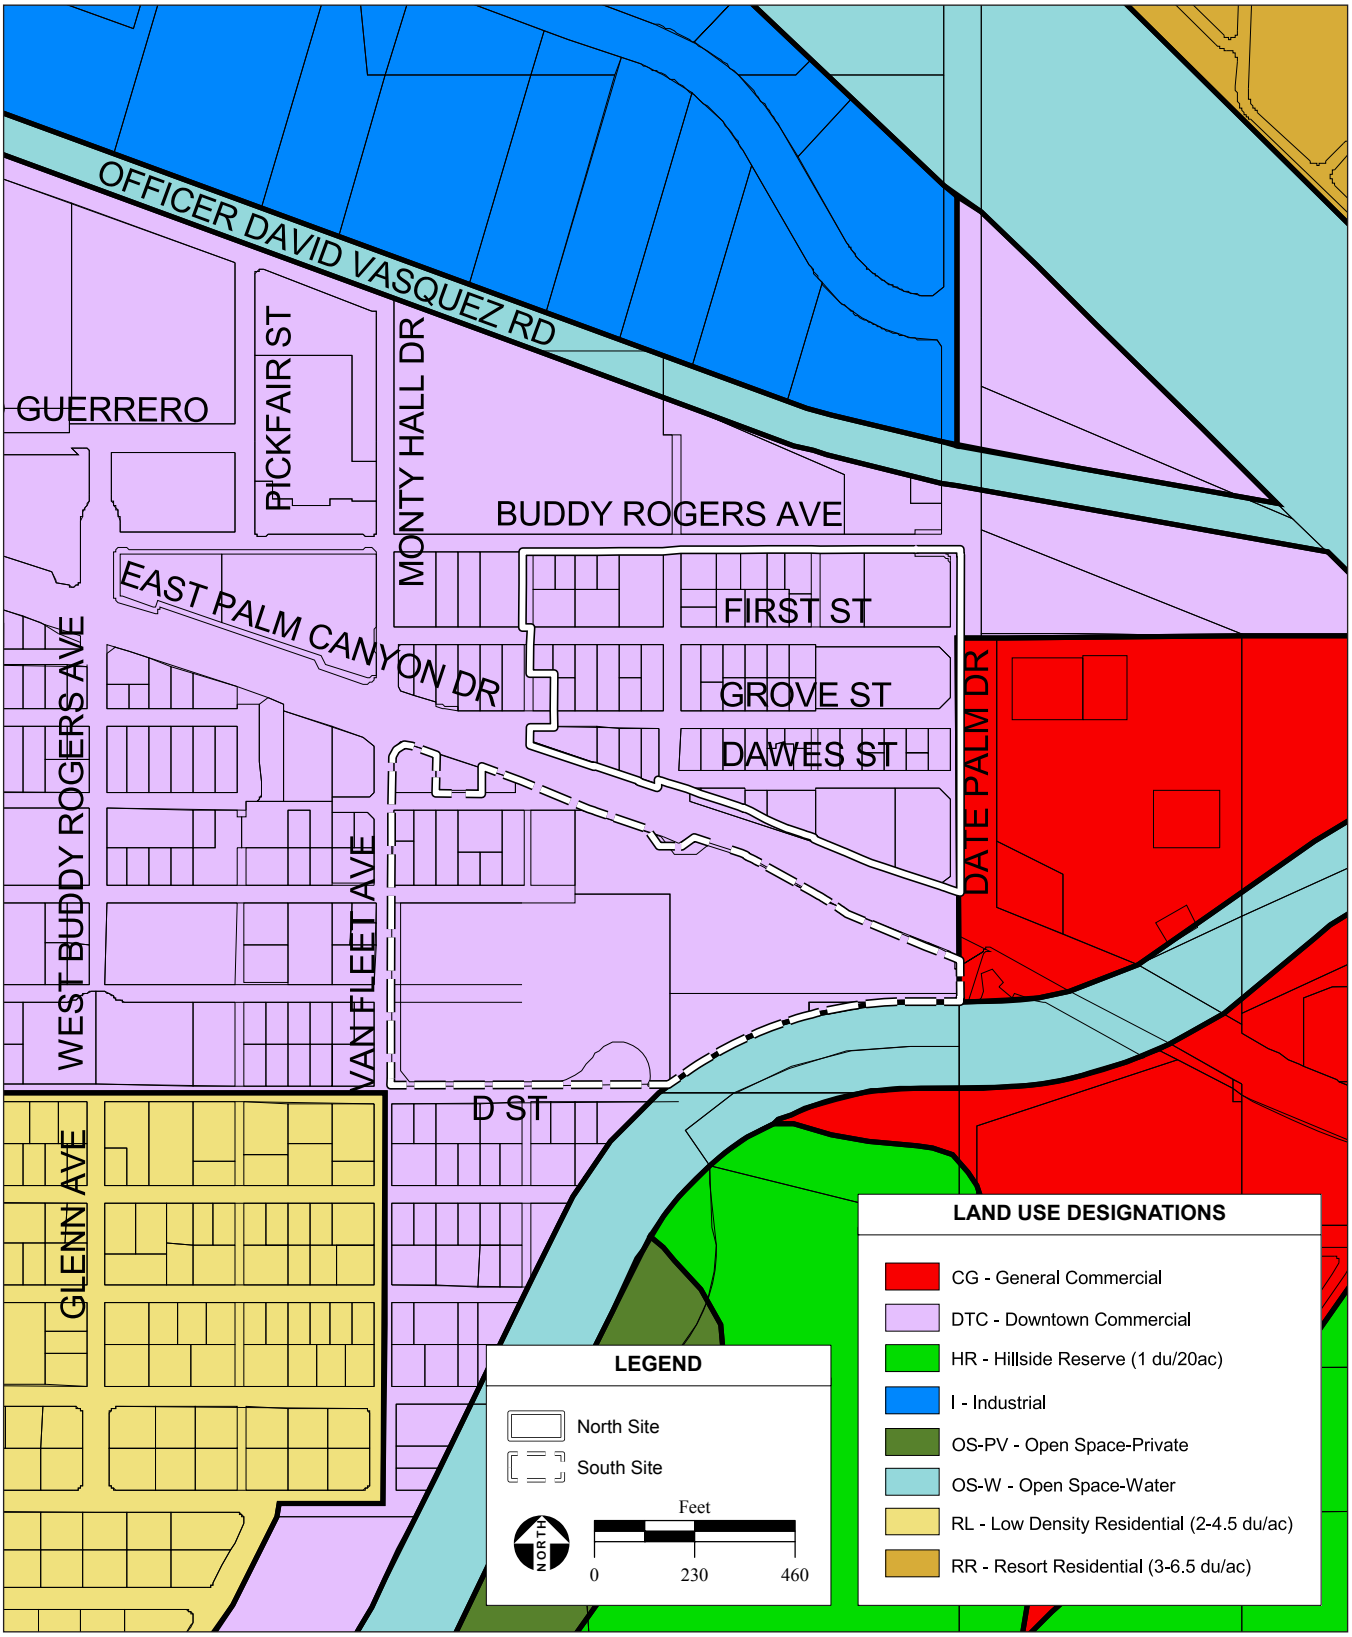

TABLE 3-17
SELECTED CITY GENERAL PLAN LAND USE POLICIES

Policy	Description
General: 2	All land use planning shall be directed toward the creation of internally integrated neighborhoods and development districts, which also enhance and optimize their connections to surrounding neighborhoods and districts.
General: 4	In-fill development and lot consolidation shall be encouraged as means of enhancing existing development and as a means of optimizing the use of existing roadways and utility infrastructure.
General: 9	The consideration of major development proposals shall include an assessment of their economic viability, and fiscal costs and benefits associated with such proposals.
Commercial: 2	Major community and regional commercial development shall be located where it can take advantage of major roadways and highways, such as Interstate-10 and East Palm Canyon Drive, maximizing the drive-by market along such arterials and minimizing impacts on residential neighborhoods.
Commercial: 3	Through implementation of the General Plan and by other means, the City shall enhance opportunities for the development of additional tourist/visitor-oriented commercial development, including business and resort hotels, theaters, golf courses and other recreational facilities.
Open Space: 2	All development proposals shall be reviewed for the degree or extent to which they encroach upon sensitive resource areas or may subject people and/or improvements to damage from environmental hazards. Mitigation measures shall be promulgated, to the extent practical, to avoid significant impacts and determine the feasibility of development proposals.

Source: City of Cathedral City, 2009.

Other City Plans

The Date Palm Drive Corridor Connector Plan reinforces the zoning designation, land use designation, and planned development identified in the City General Plan as it pertains to the North Site (City of Cathedral City, 2010b). Further, the Date Palm Drive Specific Plan Area fulfills an implementing action outlined in the Date Palm Drive Corridor Connector Plan (City of Cathedral City, 2012). Both the Date Palm Drive Corridor Connector Plan and the Date Palm Drive Specific Plan designate all or portions of the North Site as an area for Downtown/Art and Design Village developments, which allows for mixed uses within the art and design theme, including small businesses, residential uses, and landscaping with a major retail anchor at the northeast corner of Date Palm Drive and East Palm Canyon Drive. The downtown area, as presented at the 2018 "State of the City" meeting, include four anchors of development: (1) the renovation of the Mary Pickford Theatre, (2) construction of an amphitheater next to the City's parking structure, (3) renovation of the former Desert Cinemas into a live performing arts

SOURCE: City of Cathedral City, 5/12/2014; AES, 7/20/2018

Figure 3.8-1
Land Use Designations

theater, and (4) conversion of the North Site into a casino development and relocation of the fire station (City of Cathedral City, 2018).

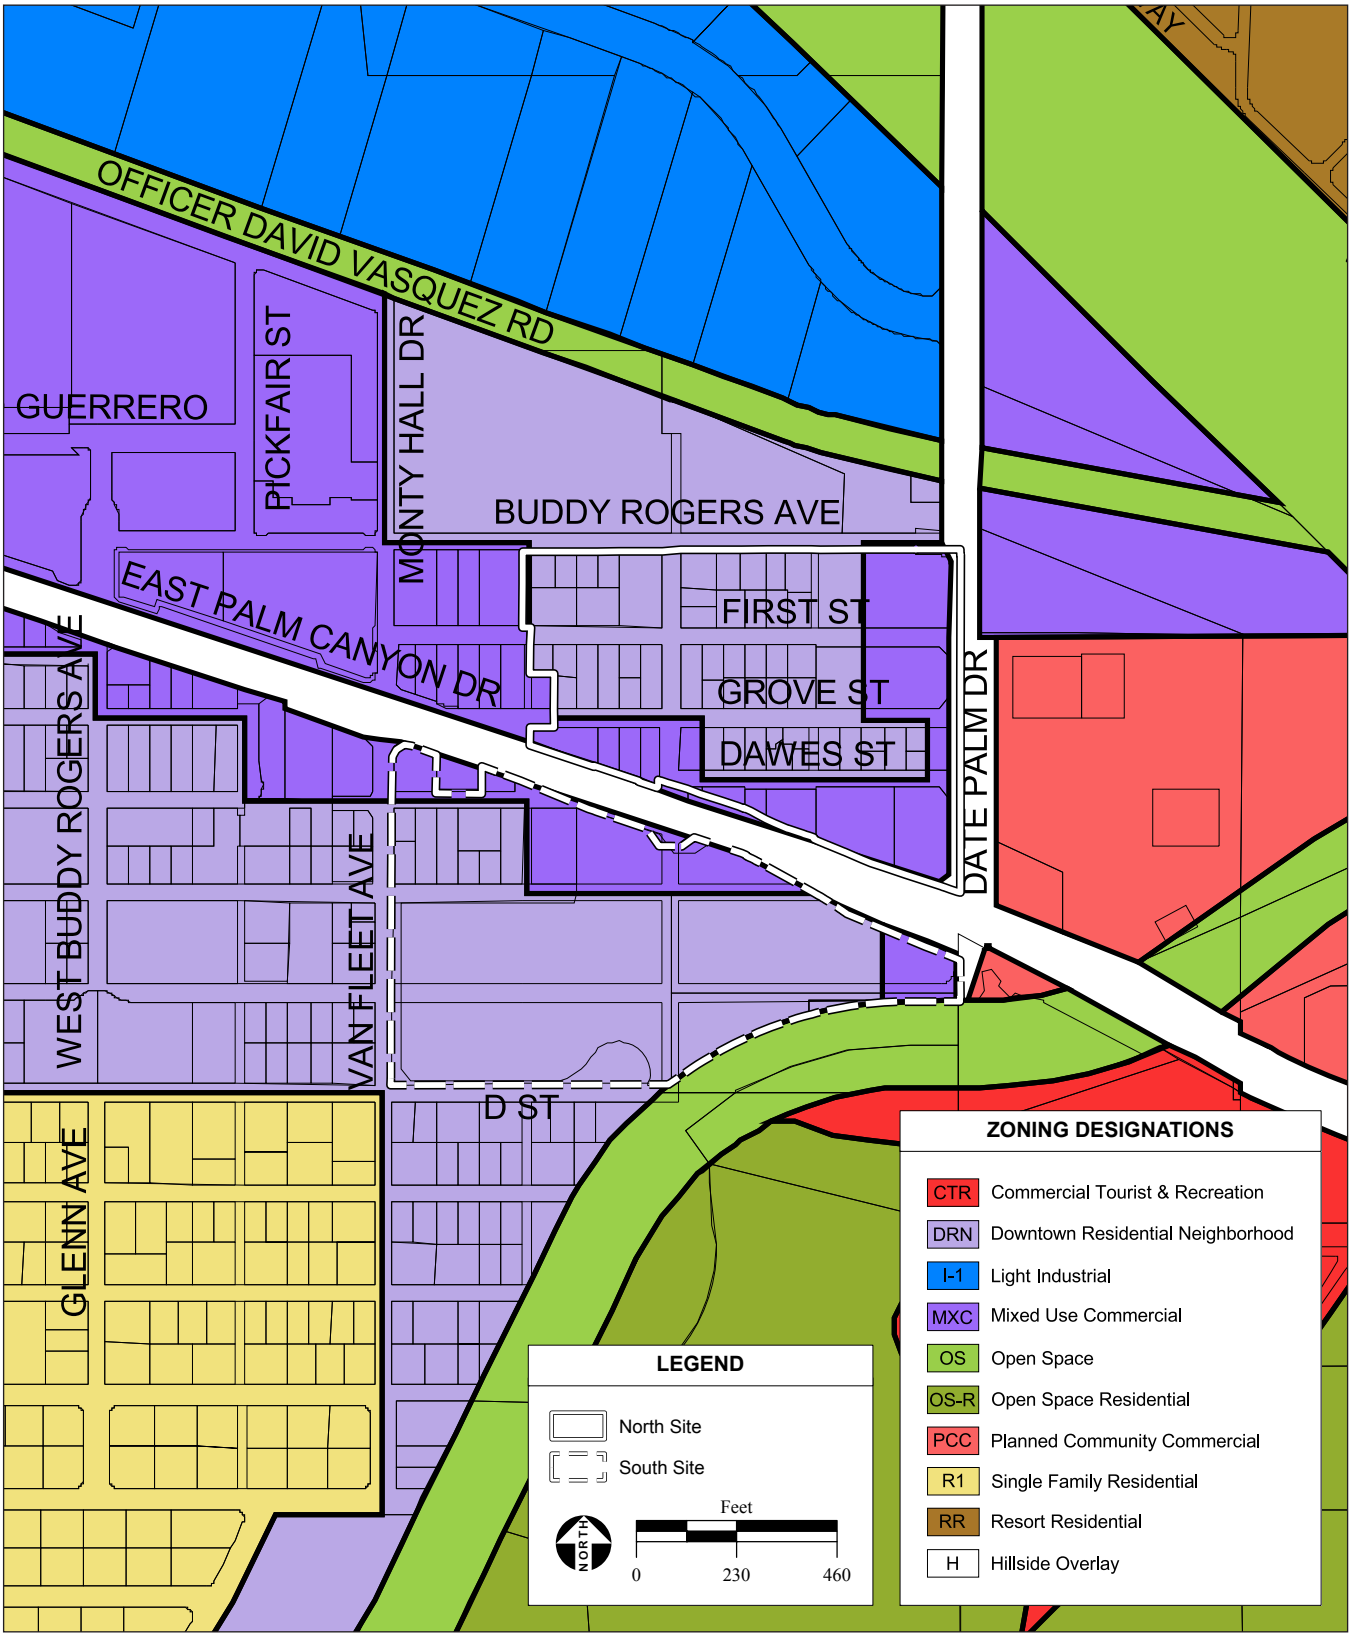
City of Cathedral City Zoning Ordinance

The City's Zoning Ordinance provides the framework for the development process, and is the primary instrument for implementing City General Plan policies. The ordinance provides information on the permitted uses in each zone, as well as development standards for the use of property. The alternative sites are both zoned Mixed Use Commercial (MXC) and Downtown Residential Neighborhood (DRN), as shown on **Figure 3.8-2** (City of Cathedral City, 2010a). Land to the west of the sites are also zoned MXC and DRN; lands south of South Site are zoned DRN and Open Space (OS); lands to the east of the sizes are zoned OS, MXC, Planned Community Commercial (PCC), and Commercial Tourist and Recreation (CTR); and lands to the north of the North Site are zoned DRN (City of Cathedral City, 2010a).

The MXC zoning designation permits the following uses: retail, dining, spas, hotels (and resort hotels), performing arts facilities (100 seats or less), professional services (including government), and other similar uses (refer to the City's Zoning Code, Section 9.31.020 for a complete list of permitted uses). The DRN zoning designation permits home occupations, single and multiple family dwellings, and other housing uses (refer to the City's Zoning Code, Section 9.25.020 for a complete list of permitted uses).

Tribal-Cathedral City Land Use Contract

Exhibit N of the Fee-to-Trust Application is the Tribal-Cathedral City Land Use Contract, which states that land use controls applicable to allotted trust lands within City limits include general plans and specific plans; zoning laws and regulations; subdivision laws and regulations; building, grading, and other laws and regulations; design review laws and regulations; and environmental laws and regulations. This contract further states that it does not apply tribal trust land. Additionally, Cathedral City Council Resolution 2017-14, which is included as Exhibit H to the Fee-to-Trust Application, supports the Tribe's use of the North Site for gaming purposes.



3.8.2 ENVIRONMENTAL SETTING

Regional Setting

The alternative sites are located within the incorporated boundaries of the City, in the County of Riverside, California. The City is located in the central-western portion of the Coachella Valley, which is a developed area with residential and commercial uses, including numerous golf courses and spa resorts. It is located approximately 50 miles east of the County seat, the City of Riverside, and adjacent to East Palm Canyon Drive (Highway 111). Locally, the City is served by East Palm Canyon Drive and Interstate 10 (I-10).

Local Land Use Setting

The approximately 13.6-acre North Site is comprised of 66 County tax parcels and is bound by Buddy Rogers Avenue to the north, Date Palm Drive to the east, East Palm Canyon Drive to the south, and adjacent parcels to the west between Monty Hall Drive and Allen Avenue. The approximately 13.9-acre

SOURCE: City of Cathedral City, 12/1/2010; AES, 7/20/2018

Figure 3.8-2
Zoning Designations

South Site is comprised of 15 County tax parcels and is bound by East Palm Canyon Road to the north, Van Fleet Street to the west, and D Street to the south.

The North Site was originally divided into 66 separate County parcels due to the previous commercial and residential development on the site which has since been demolished. The only remaining structures on the North Site include the fire station at the northeast corner of the site and a fast-food restaurant (Carl's Jr.) at the southeast corner of the site. The remainder of the North Site includes paved roadways, utilities infrastructure (aboveground and belowground), and gravel lots. Adjacent land uses include commercial buildings to the east, a public park and undeveloped land to the north, and undeveloped land with a few commercial buildings to the east.

The South Site was originally divided into 15 separate parcels due to the previous commercial and residential development on the site which has since been demolished. There are no remaining structures on the South Site. The South Site includes a paved parking lot, utilities infrastructure (aboveground and belowground), and a gravel ground surface. Adjacent land uses include undeveloped land and a dry canal to the south, and residential and commercial uses to the southwest and west.

3.9 PUBLIC SERVICES AND UTILITIES

3.9.1 REGULATORY SETTING

Desert Water Agency 2015 Urban Water Management Plan

The 2015 Final Urban Water Management Plan prepared for DWA (DWA, 2016) includes DWA's estimates of annual combined potable and recycled water supply and demand through the year 2040. These projections, which are based on existing data and historical consumption trends, include scenarios in which precipitation is normal over the entire 25-year period, in which a dry year occurs once every five years over the 25-year period, and multiple scenarios in which five consecutive dry years occur.

3.9.2 WATER SUPPLY

The alternative sites are within the service area of the DWA, a not-for-profit government agency that provides water supply services to customers within the City of Palm Springs and Cathedral City. A description of DWA's water supply system is provided within the Water and Wastewater Study included as Appendix F of the EA and is summarized below.

Water Supply Infrastructure

DWA's potable water supply system currently includes 29 active groundwater wells located throughout its service area in the western Coachella Valley (DWA, 2018a), approximately 392 miles of pipelines (DWA, 2018b), and two groundwater recharging stations, where surface water diverted from the Colorado River Aqueduct is discharged and allowed to percolate as a means of replenishing the regional groundwater aquifer (refer to **Section 3.2.2**).

As described in Section 2.2.2 of the EA, there is existing DWA water supply infrastructure on and adjacent to both alternative sites. There are currently 12-inch water mains running along the north and east boundaries of the North Site beneath Buddy Rogers Avenue and Date Palm Drive, the east, south,

and west boundaries of the South Site beneath D Street and Van Fleet Street, and the East Cathedral Channel levee near the southeastern boundary of the South Site. There are also 6-inch and 8-inch water mains in Hillery Road, Grove Street, Dawes Street, and Allen Avenue on the North Site, and in A Street on the South Site (Appendix F of the EA).

Water Supply Sources and Demand

Approximately 95 percent of DWA's potable water supply is pumped from deep groundwater wells in the Indio Subbasin in the western portion of the Coachella Valley. The remaining approximately 5 percent is surface water extracted from streams in the surrounding mountains, including Chino Creek, Snow Creek, and Falls Creek (DWA, 2018a). DWA also has annual rights to 55,750 acre-feet of surface water from the State Water Project, but because no aqueducts exist to convey water from the State Water Project to DWA's service area, DWA exchanges its State Water Project water with the Metropolitan Water District for water from the Colorado River via the Coachella Canal (DWA, 2018c). DWA uses this imported surface water to recharge the underlying groundwater basin (refer to **Section 3.2.2**), and it therefore does not constitute a direct source of potable water. DWA also operates a recycled water treatment facility, which treats secondary effluent discharged from the City of Palm Springs' wastewater treatment facility to tertiary standards. While this tertiary recycled water is not potable, it is of suitable quality to irrigate several locations in the cities of Palm Springs and Cathedral City (DWA, 2016).

As described in DWA's 2015 Final Urban Water Management Plan (refer to Appendix F of the EA), DWA projects that it will have a sufficient water supply to accommodate estimated demand through at least the year 2040, provided that natural and artificial recharge of the groundwater aquifer continues (DWA, 2016).

3.9.3 WASTEWATER SERVICE

While CVWD is the agency primarily responsible for wastewater collection and treatment in the region, wastewater flows generated on and in the vicinity of the alternative sites are currently collected by DWA sewer mains. These include a 12-inch main that runs along Date Palm Drive from its intersection with Buddy Rogers Drive at the eastern boundary of the North Site, the north side of the East Cathedral Channel levee (near the southeastern boundary of the South Site) to D Street, and D Street beyond Van Fleet Street. Additional 8-inch branch lines run south from the 12-inch main at F Street and Van Fleet Street, south of the South Site; west from Date Palm Drive along Grove Street through the North Site; north along Van Fleet Street from C Street; north along Monty Hall Drive (at the western boundary of the North Site) to the North Cathedral Channel; and east to a lift station near the intersection of Date Palm Drive and Buddy Rogers Avenue (Appendix F of the EA). Portions of a sanitary sewer network were also developed in the 1990s in East Palm Canyon Drive to provide future connectivity from the northern and southern segments of Allen Avenue and from A Street in the vicinity of the alternative sites; however, the best available evidence indicates that this network was never connected to any of the active systems in the area, and it remains an unused vestige (Appendix F of the EA).

The existing DWA sewer mains within the North Site conveys wastewater to a lift station at the northwest corner of the intersection of Buddy Rogers Avenue and Date Palm Drive, adjacent to the northeast corner of the North Site. From the lift station, the wastewater is pumped through a force main north on Date Palm Drive to a junction structure, from which it is discharged into a gravity sewer line owned and

operated by CVWD. The wastewater flows are ultimately conveyed to Water Reclamation Plant 10 (WRP-10), a wastewater treatment facility operated by CVWD located in Palm Desert approximately 6.7 miles east of the alternative sites. WRP-10 is the largest of five wastewater treatment facilities operated by CVWD and is capable of treating 18.0 million gallons per day (MGD) of wastewater and generating 15.0 MGD of tertiary treated wastewater (CVWD, 2017). WRP-10 collected and treated a total of 10,627 acre-feet (AF; or, on average, 9.5 MGD) of wastewater in 2015, the most recent year for which data are available (CVWD, 2016). The tertiary treated wastewater generated at WRP-10 is blended with Colorado River water and distributed to golf courses in Palm Desert for use in irrigation. During the winter months when the amount of treated wastewater generated exceeds the recycled water demand, excess secondary treated effluent is discharged to on-site percolation/evaporation ponds (CVWD, 2016). CVWD anticipates phasing out the use of percolation/evaporation ponds in the future as the regional demand for tertiary recycled water increases (CVWD, 2016).

3.9.4 SOLID WASTE SERVICE

The alternative sites are within the service area of Burrtec, a private waste management firm that provides residential and commercial solid waste services on behalf of the City. Burrtec operates one landfill, the Salton City Landfill in Salton City, California, approximately 18.5 miles east of the alternative sites. Burrtec also operates four transfer stations, including the Edom Hill Transfer Station, which is located within the City approximately 7.5 miles north of the alternative sites (Burrtec, 2018). Solid waste collected from the area in which the alternative sites are located is conveyed to the Edom Hill Transfer Station before being trucked to the Salton City Landfill for final disposal. Burrtec assumed ownership of the Salton City Landfill from Imperial County in 2008, and in 2014 began the first stage of construction in expanding the facility from 8 acres to approximately 287 acres (Desert Sun, 2014). Salton City Landfill is permitted to receive up to 6,000 tons per day of solid waste, and at the time of the issuance of its current permit in November 2013 had an estimated maximum capacity of 65,100,000 cubic yards. Salton City Landfill is designated as a Class III landfill by the State, and is permitted to receive construction and demolition waste, green materials, and mixed municipal waste (CalRecycle, 2018).

3.9.5 RECREATION

The alternative sites are not currently used for sanctioned recreational purposes. Of the 10 parks managed by the City, 5 are within one mile of the alternative sites. The nearest are Second Street Park and the Cathedral City Dog Park, which are located 25 feet from the northern boundary of the North Site and approximately 625 feet north of the South Site. Town Square Park is located immediately south of Cathedral City City Hall, less than 0.1 miles west of the alternative sites. Cathedral City Festival Lawn is located approximately 0.2 miles west of the alternative sites, and Memorial Park is located approximately 0.3 miles northwest of the alternative sites. There are also five private golf courses within an approximate one-mile radius of the alternative sites.

3.9.6 ELECTRICITY AND NATURAL GAS

SCE provides electrical services to the alternative sites and vicinity. Underground electrical utility lines run beneath the alternative sites, and electrical poles line Allen Avenue, Buddy Rogers Avenue, Grove Street, and Dawes Street within and adjacent to the North Site. Southern California Gas Company (SoCalGas) provides natural gas services to the alternative sites and vicinity.

Southern California Edison

SCE generates, transmits, and distributes electric power to a 50,000-square-mile territory that includes the County and all or portions of 13 other California counties. As of 2014, SCE was the third largest publicly-owned utility in the country in terms of customers served. SCE obtains electricity from a variety of sources, including hydrological dams, cogeneration plants, advanced renewable sources such as wind, solar, and biomass/landfill gas power, and obtains additional energy on the wholesale market (SCE, 2017a). In 2013, SCE operated 33 hydroelectric plants, five gas-fired peaking units, one combined-cycle gas plant, one diesel-driven electric generating plant, 24 solar photovoltaic (SPV) plants, and one ground-based SPV plant (SCE, 2013).

The region in which the alternative sites are located is served by SCE's Sumac 12kV Circuit and the Tamarisk 115/12 kV Substation, the latter of which is located approximately 1.1 miles northeast of the alternative sites and has a total generation capacity of approximately 112.0 MW (SCE, 2017b). The Tamarisk Substation is part of SCE's Mirage 220/115 kV System. There is existing SCE distribution infrastructure on and adjacent to the alternative sites, including overhead electrical lines throughout the North Site and underground electrical lines adjacent to the South Site.

Southern California Gas Company

SoCalGas provides natural gas service to approximately 21.6 million consumers in over 500 communities within a 20,000-square-mile service area in Central and Southern California. SoCalGas, the nation's largest natural gas distribution utility, provides natural gas service to customers throughout the County, including the City. SoCalGas maintains approximately 101,000 miles of natural gas distribution pipelines and delivers approximately 2.8 million cubic feet of natural gas per day via nearly 5.8 million metered connections (SoCalGas, 2013).

SoCalGas infrastructure in the vicinity of the alternative sites includes one high pressure distribution line running beneath East Palm Canyon Drive adjacent to the southern boundary of the North Site and the northern boundary of the South Site, as well as a second high pressure distribution line running beneath Date Palm Drive adjacent to the eastern boundary of the North Site (SoCalGas, 2018).

3.9.7 LAW ENFORCEMENT

The alternative sites are within the service boundary of the Cathedral City Police Department (CCPD), the headquarters of which are located at 68-700 Avenida Lalo Guerrero in Cathedral City California, less than 0.2 miles from both sites. CCPD's service area currently covers approximately 21.5 square miles and a population of approximately 52,000 residents. CCPD's patrol division consists of one lieutenant, four sergeants, and 25 patrol officers. The patrol division responds to an average of 42,500 calls for service per year, and has an average response time of approximately 4.8 minutes for priority-type calls (CCPD, 2018a). In addition to providing basic patrol, surveillance, investigative, and emergency response services, CCPD also maintains a special weapons and tactics team (SWAT), a detective bureau, a gang unit, and a school resource officer position (CCPD, 2018b).

3.9.8 FIRE PROTECTION AND EMERGENCY MEDICAL SERVICES

The alternative sites are within the service boundary of the Cathedral City Fire Department (CCFD) operating out of Station 411, which is currently located in the northeast corner of the North Site, less than 0.2 miles from the South Site. The City is currently planning to move Station 411 to a location immediately north of Buddy Rogers Avenue and immediately east of Second Street Park. Once relocated, Station 411 will be located immediately north of the North Site and will remain approximately 0.2 miles north of the South Site.

CCFD provides a range of services, including but not limited to fire suppression, emergency medical response, technical rescue, wild-land firefighting, and fire prevention. It employs a total of 40 individuals, 36 of whom work in fire suppression or paramedic service units (Appendix E of the EA). CCFD has two ambulances staffed with two firefighters/paramedics each, and its emergency medical services (EMS) team is the primary first response agency within the City's jurisdiction (Appendix E of the EA). In 2016, CCFD responded to a total of 5,660 incidents, including 159 incidents of fire and 4,378 incidents requiring EMS. Station 411 responded to 1,941 of the total incidents in 2016, including 47 of the fire incidents and 1,431 of the EMS incidents (CCFD, 2017). CCFD maintains automatic aid agreements for fire and EMS and mutual aid agreements with both the Riverside County Fire Department (RCFD) and the Palm Springs Fire Department (PSFD; City of Cathedral City, 2017). If the CCFD EMS team is unavailable to respond to a call, American Medical Response (AMR) or Riverside County EMS, both based in the City of Riverside, may also be contacted (Appendix E of the EA).

The closest medical facility to the alternative sites with a full-service emergency department is the Eisenhower Medical Center (EMC) located at 39000 Bob Hope Drive in Rancho Mirage, California, approximately 3.0 miles east of the alternative sites. The emergency department is open 24 hours a day and is staffed by physicians, registered nurses, pharmacists, X-ray technicians, and additional support staff. In 2009, EMC more than doubled the size of its emergency department, and now has 42 treatment areas. Additional expansions that would further increase the number of treatment areas are currently in the planning process (EMC, 2018).

3.10 VISUAL RESOURCES

3.10.1 REGULATORY SETTING

Development of the alternative sites is currently guided by the Cathedral City General Plan and Municipal Code. The visual resources regulatory setting is summarized in **Table 3-18**, and described in detail below.

City of Cathedral City General Plan

Development of the North and South Sites is currently guided by the City General Plan. Components of the General Plan relevant to the topic of aesthetics are included below:

Community Image and Urban Design Element

This element includes the following policies and programs related to visual resources:

TABLE 3-18
REGULATORY POLICIES AND PLANS RELATED TO VISUAL RESOURCES

Regulation	Description
City of Cathedral City General Plan	Policies and programs related to visual resources include: ▪ Development is subject to citywide design guidelines to protect scenic viewsheds. ▪ Commercial development requires adequate lighting, signage, and landscaping. ▪ Ensure outdoor lighting is shielded and downcast. ▪ Match building heights to existing development and include setbacks to protect scenic resources. ▪ Scenic corridors include East Palm Canyon Drive and Date Palm Drive and the intersection of the two streets. Design signage along these roadways to minimize visual impacts. ▪ Intersperse parking lots with landscaping and pedestrian paths. ▪ Implement Hillside Preservation Regulations, which protect natural scenic hillsides. ▪ Underground utility lines as much as possible.
City Municipal Code	▪ Ensure exterior light fixtures are fully or partially shielded and include filtering. ▪ Provide perimeter lighting during construction, as well as fencing and a uniformed security guard during nighttime hours.

Policy 1: Public and private sector development shall be subject to citywide design guidelines that include the Ahwahnee Principles and are intended to protect the community's scenic viewsheds, provide community cohesion, and enhance the image of Cathedral City as a residential and smart-growth community.

Policy 5: Areas of special interest, including entry points, landmarks, and scenic highway viewsheds, shall receive appropriate treatment whether part of public or private development proposals.

Program 7.A: The City shall review all commercial development to assure pedestrian-oriented circulation, safe and convenient ingress and egress, screening of outdoor storage/loading and other unsightly areas, lighting, signage, and the planting of mature landscaping to provide an immediate effect of permanency.

Policy 12: In an effort to preserve the value of the community's night sky, outdoor lighting shall be shielded downward and limited to the minimum height, number, and intensity of fixtures needed to provide sufficient security and identification on residential, commercial, and other development.

This element also includes a discussion of scenic resources and elements important to the City. The following text from the City General Plan describes scenic resources, viewsheds, and related guidance:

> *Building Proportions, Height and Setbacks*
> New structures should be similar in height to, and compatible with, other buildings in the vicinity, with the goals of preserving and enhancing design qualities of the built environment and preserving viewsheds. Setbacks should be compatible with those of surrounding structures and scenic resources, providing building presence without allowing the structure or development to dominate other buildings, the streetscape or the natural scenic viewshed….

Gateways, Crossroads, Corridors and Scenic Places
…The scenic resources of Cathedral City are most apparent to the traveling public. The natural vistas visible from City streets cannot be properly viewed or appreciated if screened by buildings, walls and landscaping, or the indiscriminate placement of signage.

…Other corridors [in addition to East Palm Canyon Drive] that exist in the city are Ramon Road, Date Palm Drive, Landau Boulevard, Cathedral Canyon Drive, Varner Road, Palm Drive and Perez Road. Crossroads, or major intersections, in Cathedral City are at Vista Chino Road/I-10/Date Palm Drive, Ramon Road/Date Palm Drive, Dinah Shore/Date Palm Drive, Date Palm Drive/East Palm Canyon Drive, Palm Drive/I-10, Palm Drive/Varner Road, Varner Road/Mountain View Road and Gerald Ford/Date Palm Drive….

Signage and Viewsheds of Public Rights-of-Way
The East Palm Canyon Drive commercial corridor, Date Palm Drive and Ramon Road are the most frequently traveled, and are most impacted by signage of businesses attempting to make their existence and location known. Enhancing commercial signage should be conducted in a manner that minimizes the adverse economic impact on business, while restoring the viewshed along existing and planned commercial corridors. Businesses located within Redevelopment project areas may be able to participate in and benefit from RDA sponsored sign renovation programs….

Transportation and Community Design
…Developers of new commercial projects should be encouraged to "break up" large expanses of parking with landscaping and pedestrian paths, locating buildings at the street and parking at the sides or rear of the buildings. This design approach also serves to provide the streets with a sense of vitality and community.

Scenic Highways
Especially striking are the mountain vista to the west and south as one descends into Cathedral City from the I-10 overpass and the hill and mountain vista. It is an essential and critical component of community design in Cathedral City, while effectively linking the City with other Coachella Valley communities. Many functional community design goals can be achieved through the detailed design and planning for the city's major gateways and corridors. The safe, functionally efficient and aesthetically pleasing design and buildout of these sites is a key element in the City's overall economic health and prosperity.

Water, Sewer, and Utilities Element
This element includes the following policy related to visual resources:

Policy 7: Utility lines shall be undergrounded, to the greatest extent practical. Those on major streets and scenic roadways shall have primary consideration for undergrounding.

City Municipal Code

The City's Municipal Code provides the following requirements regarding lighting:

9.89.050 General Requirements

A. *Shielding*. All exterior illuminating devices, except those exempt from this chapter and those regulated by Section 9.89.060, shall be fully or partially shielded as required in **Table 3-19** of this section.

1. "Fully shielded" means the fixture shall be shielded in such a manner that light rays emitted by the fixture, either directly from the lamp or indirectly from the fixture, are projected below a horizontal plane running through the lowest point on the fixture where light is emitted, thus preventing the emission of light above the horizontal.
2. "Partially shielded" means the fixture shall be shielded in such a manner that the bottom edge of the shield is below the plane centerline of the light source (lamp), minimizing the emission of light rays above the horizontal.

B. *Filtration*. Those outdoor light fixtures requiring a filter per **Table 3-19**, shall be equipped with a filter consisting of, but not including Quartz glass, a glass, acrylic or translucent enclosure.

C. *Requirements for Shielding and Filtering*. The requirements for shielding and filtering light emission from outdoor light fixtures shall be as set forth in **Table 3-19**.

TABLE 3-19
REQUIREMENTS FOR SHIELDING AND FILTERING OF OUTDOOR LIGHTING

Fixture Lamp Type	Shielding Requirement	Filtering Requirement
Low pressure sodium[1]	Partially	None
High pressure sodium	Fully	None
Metal halide[2]	Fully	Yes
Fluorescent	Fully[3]	Yes[4]
Quartz[5]	Fully	None
Incandescent, greater than 160 watts	Fully	None
Incandescent, 160 watts or less	None	None
Mercury vapor	Fully[6]	Yes
Fossil fuel	None	None
Glass tubes filled with neon, argon, or krypton	None	None
Other sources	As required by the city planner	As required by the city planner

Notes:
1 - This is the preferred light source to minimize undesirable light into the night sky affecting astronomical observations.
2 - Metal halide display lighting shall not be used for security lighting after eleven p.m. (or after closing hours if before eleven p.m.) unless fully shielded. Metal halide lamps shall be in enclosed luminaries.
3 - Outdoor advertising signs of the type constructed of translucent materials and wholly illuminated from within do not require shielding.
4 - Warm white and natural lamps are preferred to minimize detrimental effects.
5 - For the purposes of this section, quartz lamps shall not be considered an incandescent light source.
6 - Recommended for existing mercury vapor fixtures. The installation of new mercury fixtures is prohibited.

8.34.110 Construction site security provisions.

All new construction, on sites exceeding one acre in area, shall comply with the following security measures until the utilities have been released by the city:

A. Perimeter lighting shall be installed at a minimum of one hundred fifty foot intervals and at a height not less than fifteen feet from the ground. The light source used shall have a minimum

light output of two thousand lumens, and be lighted during the hours of darkness. Additional lighting shall be required if the construction site exceeds four acres in area.

B. In addition to perimeter lighting described in subsection A of this section, one of the following shall be used:

1. Fencing, not less than six feet in height, which is designed to preclude human intrusion, shall be installed along the perimeter boundaries of the construction site; or
2. A uniformed security guard, licensed according to Business and Professions Code, Chapter 11, shall be utilized to continually patrol the construction site during the hours when construction work has ceased.

3.10.2 ENVIRONMENTAL SETTING

Aesthetics

A viewshed is the geographical area that is visible from at least one location, referred to as a viewpoint. Each viewpoint provides a line of sight of the viewshed. The visual experience of an object within a viewshed is comprised of the overall visibility of the object within the viewshed, the amount of time the object is exposed to viewers within the viewshed, the distance of the viewer from the object, and the number of viewers anticipated to experience the viewshed.

There is no comprehensive list of specific features that automatically qualify as scenic resources; however, certain characteristics can be identified that contribute to the determination of a scenic resource. The following is a partial list of visual qualities and conditions that if present, may indicate the presence of a scenic resource:

- A tree that displays outstanding features of form or age;
- A landmark tree or a group of distinctive trees accented in a setting as a focus of attention;
- An unusual planting that has historical value;
- A unique, massive rock formation;
- A historic building that is a rare example of its period, style, or design, or that has special architectural features and details of importance;
- A feature specifically identified in applicable planning documents as having a special scenic value;
- A unique focus or a feature integrated with its surroundings or overlapping other scenic elements to form a panorama; or
- A vegetative or structural feature that has local, regional, or statewide importance.

North Site and South Site

The alternative sites lie within the downtown area of the City. The topography surrounding the sites is generally flat within the City and Coachella Valley, with mountainous terrain surrounding the valley. Both sites consist of empty gravel lots (the North Site has two remaining buildings in the northeast and southeast corners). The nearest residences to the North Site include an apartment building located approximately 440 feet to the northwest and single family homes located approximately 500 feet to the southwest, across East Palm Canyon Drive and Monty Hall Drive. The nearest residences to the South Site include a single family residential neighborhood located 40 feet directly to the south and west. The

residences have a clear view of both sites, as the intervening land is currently undeveloped. The sites can also be viewed by vehicles traveling along arterial roadways, including Date Palm Drive and East Palm Canyon Drive, and other surface streets including Buddy Rogers Avenue, Monty Hall Drive/Van Fleet Street, and D Street. There are no scenic resources immediately adjacent to the alternative sites.

Description of Viewsheds

Selected viewshed locations are shown on **Figure 3.10-1** and photographs of the alternative sites are shown in **Figure 3.10-2**. The locations of these individual viewpoints were selected based on their coverage of the sites and overall representation of typical viewsheds in the vicinity of the sites. The following are brief descriptions of the depicted viewpoints.

Viewpoint 1 – North Site

This northwest-facing photograph was taken from the intersection of Date Palm Drive and Palm Canyon Drive. It depicts a view of the existing fast-food restaurant and parking lot present on the southeast corner of the North Site from the perspective of a motorist traveling west on East Palm Canyon Drive.

Viewpoint 2 – North Site

This southeast-facing photograph was taken on Buddy Rogers Avenue along the northern border of the North Site. It depicts a view of an undeveloped gravel lot and utility lines from the perspective of a motorist travelling east along the Site's northern boundary.

Viewpoint 3 – South Site

This South-facing photograph was taken from the intersection of East Palm Canyon Drive and Allen Avenue of the South Site. It depicts an undeveloped gravel lot, a typical view of the South Site from the perspective of vehicles traveling on Allen Avenue as well as East Palm Canyon Drive. Views of the San Jacinto Mountains can be seen in the background.

Viewpoint 4 – South Site

This north-facing photograph was taken on D Street along the southern border of the South Site. It depicts a typical view of the undeveloped gravel lot from the perspective of existing residences on D Street. Long range views of the downtown Cathedral City and the Pickford Theatre can be seen in the background.

Scenic Highways

There are no state designated scenic highways or roads adjacent to or near the vicinity of the City; however, East Palm Canyon Drive (Highway 111), which is adjacent to both sites, is considered as an eligible State Scenic Highway (Caltrans, 2018b).

Figure 3.10-2
Viewshed Photographs

Lighting and Shadows

No significant sources of lighting, shadow, or glare are currently present on the alternative sites. The only source of light within the North Site is from the existing structures on the eastern half of the site (the fire station and Carl's Jr). Sources of nighttime lighting and glare in the vicinity of the sites include street lights and adjacent commercial development.

3.11 NOISE

3.11.1 ACOUSTICAL BACKGROUND AND TERMINOLOGY

Sound is defined as any pressure variation in air that the human ear can detect, and is technically described in terms of loudness (amplitude) and frequency (pitch). The standard unit of sound measurement is the decibel (dB).

Community noise is commonly described in terms of the "ambient" noise level, which is defined as the all-encompassing noise level associated with a given noise environment. A common statistical tool to measure the ambient noise level is the average, or equivalent sound level (Leq) over a given time period (usually one hour). The Leq is the foundation of the Day-Night Average Level (Ldn) noise descriptor, and shows a very good correlation with community response to noise. The Ldn, similar to the CNEL, is based upon the average noise level over a 24-hour day, with a +10 dB weighing applied to noise occurring during nighttime (10:00 p.m. to 7:00 a.m.) hours.

Effects of Noise on People

There is no completely satisfactory way to measure the subjective effects of noise, or the corresponding reactions of annoyance and dissatisfaction. A wide variation in individual thresholds of annoyance exists, and different tolerances to noise tend to develop based on an individual's past experiences with noise. Human reaction to a new noise can be estimated through comparison of the new noise to the existing ambient noise level within a given environment. With regard to increases in A-weighted decibel (dBA) noise levels, the following relationships occur:

- Except in carefully controlled laboratory experiments, a 1-dBA change cannot be perceived.
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference.
- A 5-dBA change is required before any noticeable change in human response is expected.
- A 10-dBA change is subjectively heard as approximately a doubling in loudness and can cause adverse response.

Generally, most noise is generated by transportation systems, principally motor vehicle noise, but also including aircraft noise and rail noise. The level of traffic noise depends on: l) the volume of the traffic, 2) the speed of the traffic, and 3) the number of trucks in the flow of the traffic. Because noise is measured on a logarithmic scale, 70 dBA plus 70 dBA does not equal 140 dBA. Instead, two sources of equal noise added together have been found to result in an increase of 3 dBA. That is, if a certain volume of traffic results in a noise level of 70 dBA, the addition of the same volume of traffic, or doubling, would result in a noise level of 73 dBA (Caltrans, 2013). As stated above, 3 dBA is just audible; therefore, if a project doubles the traffic volume there would be an audible increase in the ambient noise level.

Stationary point sources of noise attenuate (lessen) at a rate of 6 to 9 dBA per doubling of distance from the source, depending on environmental conditions (i.e., atmospheric conditions and noise barriers, vegetative or manufactured, etc.). Widely distributed noises, such as a large industrial facility or a street with moving vehicles would typically attenuate at a lower rate, of 4 to 6 dBA per doubling of distance.

3.11.2 REGULATORY SETTING

The noise regulatory setting is summarized in **Table 3-20**, and described in detail below.

TABLE 3-20
REGULATORY POLICIES AND PLANS RELATED TO NOISE

Regulation	Description
Federal Highway Administration (FHWA) Construction Noise Thresholds[1]	▪ Noise sensitive locations: (Daytime – 7 am to 6 pm) 78 dBA Leq or Baseline+5 (whichever is louder) ▪ Commercial areas: (Daytime) 83 dBA Leq or Baseline+5 (whichever is louder)
Federal Noise Abatement Criteria (NAC)[2]	▪ Applicable to traffic and other project-related noise sources ▪ Park and residential areas threshold: 67 dBA Leq ▪ Developed areas threshold: 72 dBA Leq
Federal Vibration Standards[3]	▪ Peak particle velocity (PPV) is the maximum instantaneous peak (inches per second) of the vibration signal, which is used to estimate Lv or VdB levels (vibration decibels with a reference velocity of one micro-inch per second). ▪ The Federal Transportation Administration's (FTA's) guideline vibration damage criteria for buildings is 90 VdB. ▪ The FTA's guideline for maximum vibration at sensitive receptors is 70 VdB. ▪ Background vibration velocity in residential areas is usually 50 VdB or lower.
Federal Interagency Committee on Noise (FICON)	▪ Provides guidance for setting thresholds for increases in noise levels ▪ Ambient noise less than 60 dB, + 5 dB is a significant increase; ambient 60-65 dB, +3 dB is significant; and ambient greater than 65 dB, +1.5 dB is significant
Source: 1 – FHWA, 2006; 2 – FHWA, 2011; 3 – FTA, 2006.; 4 – FICON, 1992	

Federal Highway Administration Construction Noise Thresholds

The FHWA provides construction noise level thresholds in its Construction Noise Handbook, 2006, which are presented as **Table 3-21**.

TABLE 3-21
FEDERAL CONSTRUCTION NOISE THRESHOLDS

Noise Receptor Locations and Land Uses	Daytime (7 am - 6 pm)	Evening (6 pm - 10 pm)	Nighttime (10 pm - 7 am)
	dBA, Leq[1]		
Noise-Sensitive Locations (residences, institutions, hotels, etc.)	78 or Baseline + 5 (whichever is louder)	Baseline + 5	Baseline + 5 (if Baseline < 70) or Baseline + 3 (if Baseline > 70)
Commercial Areas (businesses, offices, stores, etc.)	83 or Baseline + 5	None	None
Notes: [1] Leq thresholds were empirically determined (FHWA, 2006). Source: FHWA, 2006.			

Federal Noise Abatement Criteria

Operational noise standards used in this study are FHWA NAC for the assessment of noise consequences related to surface traffic and other project-related noise sources. These standards are discussed below.

The FHWA establishes NAC for various land uses that have been categorized based upon activity. Land uses are categorized on the basis of their sensitivity to noise as indicated in **Table 3-22**. Sensitive receptors with the potential to be impacted by the project alternatives include park land uses adjacent to the North Site; thus, the Category C noise standard (67 dBA Leq) would apply.

TABLE 3-22
FEDERAL NOISE ABATEMENT CRITERIA HOURLY A-WEIGHTED SOUND LEVEL DECIBELS[1]

Activity Category	Activity Criteria Leq (h), dBA	Evaluation Location	Activity Category Description
A	57	Exterior	Lands on which serenity and quiet are of extraordinary significance and serve an important public need and where the preservation of those qualities is essential if the area is to continue to serve its intended purpose.
B[1]	67	Exterior	Residential.
C[1]	67	Exterior	Active sport areas, amphitheaters, auditoriums, campgrounds, cemeteries, day care centers, hospitals, libraries, medical facilities, parks, picnic areas, places of worship, playgrounds, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, recreation areas, Section 4(f) sites, schools, television studios, trails and trail crossings.
D	52	Interior	Auditoriums, day care centers, hospitals, libraries, medical facilities, places of worship, public meeting rooms, public or nonprofit institutional structures, radio studios, recording studios, schools, and television studios.
E[1]	72	Exterior	Hotels, motels, offices, restaurants/bars, and other developed lands, properties or activities not included in A-D or F.
F	--	--	Agriculture, airports, bus yards, emergency services, industrial, logging, maintenance facilities, shipyards, utilities (water resources, water treatment, electricity), and warehousing.
G	--	--	Undeveloped lands that are not permitted.

Notes: [1]Includes undeveloped lands permitted for this activity category.
Source: FHWA, 2011.

Federal Vibration Standards

The effects of groundborne vibrations typically cause only a nuisance to people, but at extreme vibration levels, damage to buildings may occur. Although groundborne vibration can be felt outdoors, it is typically an annoyance only indoors, where the associated effects of the building shaking can be notable. Groundborne noise is an effect of groundborne vibration and only exists indoors, since it is produced from noise radiated from the motion of the walls and floors of a room and may consist of the rattling of windows or dishes on shelves.

PPV is often used to measure vibration. PPV is the maximum instantaneous peak (inches per second) of the vibration signal. The PPV levels are used to estimate Lv or VdB levels (vibration decibels with a reference velocity of one micro-inch per second). Scientific studies have shown that human responses to vibration vary by the source of vibration, which is either continuous or transient. Continuous sources of

vibration include construction, while transient sources include truck movements. Generally, the thresholds of perception and annoyance are higher for transient sources than for continuous sources. **Table 3-23** summarizes the FTA's guideline vibration damage criteria for various structural categories. As shown therein, buildings extremely susceptible to vibration damage could be damaged if vibration levels exceed 90 VdB. Additionally, although sensitive receptors have a perceptibility threshold of 65 VdB, they begin to exhibit a significant response at 70 VdB for ground-borne vibration (FTA, 2006). Background vibration velocity in residential areas is usually 50 VdB or lower.

TABLE 3-23
CONSTRUCTION VIBRATION DAMAGE CRITERIA

Building Category	Approximate Lv (VdB)
Reinforced-concrete, steel, or timber (no plaster)	102
Engineered concrete and masonry (no plaster)	98
Non-engineered timber and masonry buildings	94
Buildings extremely susceptible to vibration damage	90
Source: FTA, 2006.	

Federal Interagency Committee on Noise

FICON was formed to review Federal policies that govern the assessment of airport noise impacts, focusing on technical, legal, and policy issues. FICON provided guiding policy recommendations, including the significance thresholds summarized in **Table 3-24**, below.

TABLE 3-24
EXTERIOR NOISE STANDARDS FOR NEW TRANSPORTATION NOISE SOURCES

Existing Traffic Noise Level (Ldn)	Increase in Noise Level Considered Significant (Ldn)
< 60 dB	+ 5 dB
60 dB – 65 dB	+ 3 dB
> 65 dB	+ 1.5 dB
Source: FICON, 1992.	

City General Plan Noise Element

The Noise Element in the City General Plan aims to avoid community exposure to excessive noise levels. The Noise Element provides land use compatibility criteria (shown in **Table 3-25**), which are divided by the type of land use affected by a project's generated noise (refer to Appendix L of the EA). The applicable standards to nearby receptors of the alternative sites include a limit to 55 dBA CNEL[1] at residential receptors, 62.5 dBA CNEL at neighborhood parks, and 62.5 dBA CNEL at commercial developments (City of Cathedral City, 2009). Further, the City limits one-hour average for outdoor noise levels in residential areas to 55 dBA (ordinance 11.96.030). **Table 3-26** provides policies and programs that may be applicable to the project.

[1] CNEL is the average of the intensity of a sound over a 24-hour period with corrections for time of day.

TABLE 3-25

CITY GENERAL PLAN LAND USE COMPATIBILITY FOR COMMUNITY NOISE ENVIRONMENTS

Land Use	CNEL (dBA)						
	50	55	60	65	70	75	80
Residential – Single Family Dwellings, Duplex, Mobile Homes							
Residential – Multiple Family							
Transient Lodging: Hotels and Motels							
School Classrooms, Libraries, Churches, Hospitals, Nursing Homes, Convalescent Hospitals							
Auditoriums, Concert Halls, Amphitheaters							
Sports Arenas, Outdoor Spectator Sports							
Playgrounds, Neighborhood Parks							
Golf Courses, Riding Stables, Water Recreation, Cemeteries							
Office Buildings, Business, Commercial and Professional							
Industrial, Manufacturing, Utilities, Agriculture							

Notes:

NORMALLY ACCEPTABLE: With no special noise reduction requirements assuming standard construction.

CONDITIONALLY ACCEPTABLE: New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design.

NORMALLY UNACCEPTABLE: New construction is discouraged. If new construction does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

CLEARLY UNACCEPTABLE: New construction or development clearly should not be undertaken.

Source: City of Cathedral City, 2009.

TABLE 3-26
APPLICABLE CITY GENERAL PLAN NOISE POLICIES

Policy/Program	Description
Noise: 1	Protect noise sensitive land uses, including residential neighborhoods, schools, hospitals, libraries, churches, resorts and community open space, as well as land uses proposed in the vicinity of the railway, Interstate 10, the Mid-Valley Parkway, and Da Vall Drive from high noise levels generated by existing and future noise sources.
Noise: 1.B	Require building setbacks, the installation of wall and window insulation, soundwalls, earthen berms, and/or other mitigation measures in areas exceeding the City's noise limit standards for private development projects as they occur.

3.11.3 ENVIRONMENTAL SETTING

Existing Noise Levels

Existing noise levels in the vicinity of the alternative sites were measured at locations adjacent to sensitive noise receptors and where project-related noise has the potential to raise the ambient noise level. Measurement equipment consisted of Quest Sound Pro SE/DL sound level meters. An acoustical calibrator was used to calibrate the sound level meter before and after use. All instrumentation satisfies the Type II (precision) requirements.

The source of existing ambient noise in the vicinity of the alternative sites is primarily from traffic along Date Palm Drive and East Palm Canyon Road, in addition to noise generated by nearby commercial businesses. Noise measurements were taken at the locations shown in **Figure 3.11-1**. As shown in **Table 3-27**, readings at noise measurement sites 1, 2, and 3 were collected over a 24-hour period at locations near sensitive receptors and measurements at sites A, B, and C show a 15-minute noise level readings. These measurements provide the baseline noise levels at the alternative sites and along roadways that would experience an increase in traffic as a result of the project. Noise measurement output files are provided as Appendix L of the EA.

TABLE 3-27
SUMMARY OF 15-MINUTE AND 24-HOUR NOISE LEVEL MEASUREMENTS

Site	Date (2017)	Start Time	End Time	Noise Source	Receptor	Measure Noise Level (dBA Leq)[1]
1	12/26-12/27	14:29	11:33	Traffic at the intersection of Buddy Rogers Avenue and Monty Hall Drive	Commercial, Apartment complex	55.0
2	12/26-12/27	14:49	11:48	Traffic along Buddy Rogers Avenue and Date Palm Drive	Public Park	63.4
3	12/26-12/27	13:52	10:50	Traffic at the intersection of Van Fleet Street and D Street	Residences	58.9
A	12/27	11:39	11:54	Traffic on Date Palm Drive	Commercial	62.8
B	12/27	11:55	12:10	Traffic on East Palm Canyon Drive	Commercial	67.2
C	12/27	10:51	11:08	Traffic on D Street	Residences	66.0
Source: Appendix L of the EA.						

The Palm Springs International Airport is located approximately 3.0 miles northwest of the North Site. Neither of the alternative sites is within the noise level contours of the airport (Riverside County, 2004; City of Palm Springs, 2015).

Figure 3.11-1
Noise Monitoring Locations

Vibration Level

There are no existing vibration sources on or in the vicinity of the alternative sites with the potential to create audible vibration noise levels or cause noticeable ground-borne vibrations.

Noise Sensitive Receptors

Noise sensitive land uses are generally defined as land uses with the potential to be adversely affected by the presence of noise. Examples of noise sensitive land uses include residential housing, schools, and health care facilities. The nearest residences to the North Site include an apartment building located approximately 440 feet to the northwest and single family homes located approximately 500 feet to the southwest, across East Palm Canyon Drive and Monty Hall Drive. The nearest residences to the South Site include a single family residential neighborhood located 40 feet directly to the south and west. A public park is located 25 feet north of the North Site. Several commercial facilities are located adjacent to the western boundary of the North Site, approximately 100 feet east of the North Site, and adjacent to the northern boundary of the South Site. The nearest school to the alternative sites is the Cathedral City Elementary School located approximately 4,000 feet north. The nearest hospital to the alternative sites is EMC, located approximately 3.0 miles east.

3.12 HAZARDOUS MATERIALS

3.12.1 REGULATORY SETTING

The hazardous materials regulatory setting is summarized in **Table 3-28**, and described in detail below.

TABLE 3-28
REGULATORY POLICIES RELATED TO HAZARDOUS MATERIALS

Regulation	Description
Federal	
Clean Air Act (CAA)	▪ Regulates hazardous air pollutants.
Resource Conservation and Recovery Act (RCRA)	▪ Defines hazardous materials as substances that display one or more of the following characteristics: corrosivity, flammability, reactivity, or toxicity. ▪ Regulates land disposal of hazardous materials.
Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)	▪ Provides a Federal Superfund to clean up uncontrolled or abandoned hazardous-waste sites.
OSHA regulations	▪ Requires facilities to document the potential risk associated with the storage, use, and handling of toxic and flammable substances.
Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)	▪ Addresses the sale, distribution, and labeling of pesticides. ▪ Addresses certification and training of pesticide applicators. ▪ Provides pesticide labeling requirements, specific conditions, and when crops may be harvested after pesticide applications. ▪ Establishes pesticide recordkeeping and reporting requirements, imposes storage, disposal, and transportation requirements.
State	
22 CCR §66260.10	▪ Defines hazardous materials based on its characteristics as posing a significant hazard to human health and safety or to the environment if released.

Hazardous materials are those materials that may pose a material risk to human health or the environment. These materials are subject to numerous laws and regulations at several levels of government.

Federal

At the federal level, human exposure to chemical agents, and in some cases environmental and wildlife exposure to such agents, is regulated primarily by four agencies: the USEPA, the Food and Drug Administration (FDA), the Occupational Safety and Health Administration (OSHA), and the Consumer Product Safety Commission (CPSC). The USEPA administers several Congressional statutes pertaining to human health and the environment, including the CAA, which regulates hazardous air pollutants and the Resource Conservation and Recovery Act (RCRA; codified in 42 USC section 6901 *et seq*), which regulates land disposal of hazardous materials, which are defined as substances that display one or more of the following characteristics: corrosivity, flammability, reactivity, or toxicity (40 CFR section 261). The CPSC plays a limited role in regulating hazardous substances; it deals primarily with the labeling of consumer products. The FDA also plays a limited role in regulating hazardous substances; it primarily regulates food additives and contaminants, human drugs, medical devices, and cosmetics. OSHA regulations (codified in 29 CFR Parts 70-71, 2200-2205, 2400, and 1910) include provisions that require facilities to document the potential risk associated with the storage, use, and handling of toxic and flammable substances. In addition to these regulatory agencies, the United States Department of Transportation (DOT) regulates the interstate transport of hazardous materials. CERCLA provides a Federal Superfund to clean up uncontrolled or abandoned hazardous-waste sites, as well as accidental releases of pollutants and contaminants into the environment. The USEPA has the power to seek out responsible parties and gain their cooperation in the cleanup. The USEPA takes responsibility for hazardous sites when the responsible party cannot be identified or fails to act (USEPA, 2017).

The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) addresses the sale, distribution, and labeling of pesticides, as well as the certification and training of pesticide applicators. The FIFRA also establishes recordkeeping and reporting requirements on certified applicators of restricted use pesticides, as well as imposing storage, disposal, and transportation requirements on registrants, and applicants for registration, of pesticides. Pesticide use is regulated through requirements to apply pesticides in a manner consistent with the label. The labeling requirement includes directions for use, warnings, and cautions, along with the uses for which the pesticide is registered (i.e., pests and appropriate applications). Labeling requirements also include specific conditions for the application, mixture, storage, and time period for re-entry to fields following pesticide application, and when crops may be harvested after applications. If a pesticide is used in a manner contrary to its labeling, the use constitutes a violation of the FIFRA.

State

"Hazardous material" is defined in CCR, Title 22, Division 4.5, Chapter 10, Article 2, § 66260.10, as "[Any] material that, because of its quantity, concentration, or physical or chemical characteristics, poses a significant present or potential hazard to human health and safety or to the environment if released into the workplace or the environment. "Hazardous materials" include, but are not limited to, hazardous substances, hazardous waste, and any material that a handler or the administering agency has a reasonable basis for believing that it would be injurious to the health and safety of persons or harmful to the environment if released into the workplace or the environment."

3.12.2 HAZARDOUS MATERIALS INVESTIGATIONS

North Site

A site visit of the North Site was conducted on December 26, 2017. No visible signs of gross contamination nor any odors indicative of hazardous materials releases were observed within the North Site.

Current Hazardous Materials Involvement

Current hazardous materials involvement on the North Site include small quantities of chemicals typically used for maintenance in commercial businesses, such as motor oil, hydraulic fluid, solvents, cleaners, lubricants, paint, and paint thinner. The amount and types of hazardous materials that are currently generated are common to commercial sites and do not pose unusual storage, handling, or disposal issues.

No potential asbestos-containing material were observed on site (Appendix M of the EA); however, based solely upon the age of the former residential development that previously existed on site, there is a potential for concrete water lines to contain asbestos. A majority of the septic tanks associated with the former on-site residential development were pumped, crushed, and filled per City code. Since asbestos was used to strengthen concrete, and considering the potential age of the septic systems, there is a small potential for the crushed in-place concrete tanks to contain asbestos.

2017 Phase I Environmental Site Assessment (ESA)

A Phase I Environmental Site Assessment (ESA) of the North Site was prepared in accordance with the American Society for Testing and Materials (ASTM) Practice E 1527-13 ESAs and is included in Appendix M of the EA. The purpose of this assessment was to identify recognized environmental conditions (RECs) and hazardous materials involvement that may pose a material risk to human health or to the environment, or in any way affect the proposed use of the sites. In addition to the site reconnaissance, a historical review was conducted to identify RECs associated with previous land uses, and database searches were conducted for records of known hazardous material generation, storage, or disposal sites in the vicinity of the North Site. A full listing of databases consulted is provided in the Phase I ESA, included in this document as Appendix M of the EA. The Phase I ESA revealed one Historical REC (HREC) and five potential RECs, described below.

Palm Springs Oil #9, formerly located on site on Assessor's Parcel Number (APN) 687-205-005, which is approximately 400 feet west of the North Site, is considered an HREC. It was identified as a former leaking underground storage tank (LUST) case where soil vapor extraction remediation reportedly removed most of the subsurface contamination. The case was closed in 2006 by the County of Riverside with hydrocarbon soil vapors left in-place at a depth of approximately 48 feet. No further assessment was recommended (Appendix M of the EA).

The five potential RECs include:

- Three historic auto stations:
    - Pyles Robert (service station), 68904 Palm Canyon Drive (APN 687-205-024, -025 and -026);

    - Bob's Choice Cars, 68920 E. Palm Canyon Drive (APN 687-205-023); and
    - Auto Truck Repair, 68930 E. Palm Canyon Drive (APN 687-208-022).
- A gasoline service station that existed at 68980 E. Palm Canyon Drive (APN 687-208-015) from at least 1966 to sometime after 1972 and before 1978.
- The existing Cathedral City Fire Station at 36913 Date Palm Drive (APN 687-202-015) was reported to contain a 1,000 gallon diesel underground storage tank (UST) from 1975 to at least 1988. The UST was possibly removed in 1998.

No regulatory oversight agency database records were found for these four former and one active on-site facilities indicating removal of USTs or cleanup of soil residues. The Phase I ESA recommended evaluation of potential petroleum hydrocarbon contamination due to these five sites (Appendix M of the EA).

2017 Limited Phase II Environmental Evaluation

An in-depth records review as well as a geophysical survey of seven parcels was conducted on October 11 and 12, 2017, to identify the existence of USTs and/or remnants of UST excavation (Appendix M of the EA). The findings of this investigation are summarized below:

- No agency records were found pertaining to the three sites identified in the Phase I ESA located on APNs 687-208-022 through -026. Based upon the absence of permits and/or documents verifying the use of the properties and/or the existence of former underground/aboveground fuel storage tanks, a geophysical survey was undertaken on the parcels. Results of the survey found no anomalies suggesting a backfilled, former UST excavation within the parcels; however, buried concrete structures and/or debris were encountered within these five parcels, particularly APNs 687-208-024 through -026. No further assessment was recommended for this site, and it was determined not to be a REC.
- Aerial photographs and historic agency database records indicate a gasoline service station likely existed at 68980 E. Palm Canyon Drive (APN 687-208-015) from at least 1966 to sometime after 1972 and before 1978. No agency records, however, were found pertaining to this site (located at the northwest corner of Date Palm Drive and E. Palm Canyon Drive), which has apparently been occupied by a Carl's Jr. Restaurant from at least 2004 to the present. Based upon the absence of permits and/or documents verifying the service station location and status of the underground fuel storage tanks, a geophysical survey was undertaken. Results of the survey suggested that a backfilled, former UST excavation was likely situated in the southeastern portion of the Carl's Jr. parking lot. Subsurface assessment of the possible former tank excavation was recommended to evaluate the potential for detectable levels of petroleum hydrocarbon soil residues to exist at elevated concentrations requiring remediation.
- One 1,000-gallon diesel UST was installed at the existing fire station (APN 687-202-015) in 1975. The UST was removed in June 1998, and analytical testing reported no detectable levels of petroleum hydrocarbons in the gasoline to heavy hydrocarbon range, nor were odors, staining, or holes in the UST noted. A No Further Action letter was issued in July 1998. No further assessment was recommended for this site, and it was determined not to be a REC.

2018 Second Phase of Limited Phase II Environmental Site Evaluation

The second phase of the Limited Phase II Environmental Site Evaluation focused on the parcel located at 68980 E. Palm Canyon Drive (APN 687-208-015), currently occupied by a Carl's Jr (Appendix M of the EA). Soil boring samples were taken on January 22, 2018 and tested for total petroleum hydrocarbons (TPH), lead, and pH. TPH was not detected in 11 of 12 samples, and sample 12 was below the applicable environmental screening level (ESL). Lead was not detected in any of the samples. The pH of the soil samples was moderately to strongly alkaline. No further evaluation or testing was recommended (Appendix M of the EA).

South Site

The South Site was originally divided into 15 separate parcels due to the previous residential development on the site which has since been demolished. There are no remaining structures on the South Site. The South Site includes a paved parking lot, utilities infrastructure (aboveground and belowground), and a gravel ground surface. Adjacent land uses include open space and a dry canal to the south, and residential and commercial uses to the southwest and west. A site visit of the South Site was conducted on December 26, 2017. No visible signs of gross contamination nor any odors indicative of hazardous materials releases were observed within the South Site.

Database Search

AES reviewed a database report for the South Site, prepared by Environmental Data Resources, Inc. (EDR), in March 2018. The environmental database report has been included in this document as Appendix M of the EA.

The South Site is listed in the on several databases for potential hazardous material involvement. HAZNET is a database of records received by the Department of Toxic Substances Control (DTSC) for the transportation and disposal of potentially hazardous materials. The HAZNET database identified former residences and commercial businesses that disposed of waste (including asbestos-containing, organic, and household waste) from 1993 to 2016. According to the EDR Historic Auto database, two historic auto stations were located on site. In addition, World Oil Co., an on-site LUST case that has been closed since 1996 is listed on several databases. The former on-site facilities Cathedral Tire/Automotive and Elite Tire are both noted on the Facility Index System (FINDS) registry as being part of the UST program. There are no open sites within a 1.0-mile radius of the South Site (Appendix M of the EA).

January 23, 2018

Subject: List of threatened and endangered species that may occur in your proposed project location, and/or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, and proposed species, designated critical habitat, and candidate species that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Attachment(s):

- Official Species List

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

Consultation Code: 08ECAR00-2018-SLI-0454

Event Code: 08ECAR00-2018-E-01019

Project Name: Agua Caliente

Project Type: LAND - ACQUISITION

Project Description: Fee-to-trust

Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/place/33.778648021638276N116.46026478901481W

Counties: Riverside, CA

Endangered Species Act Species

There is a total of 7 threatened, endangered, or candidate species on this species list. Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species. See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

Mammals

NAME	STATUS
Peninsular Bighorn Sheep *Ovis canadensis nelsoni* Population: Peninsular CA pop. There is **final** critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/4970	Endangered

Birds

NAME	STATUS
Least Bell's Vireo *Vireo bellii pusillus* There is **final** critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/5945	Endangered
Southwestern Willow Flycatcher *Empidonax traillii extimus* There is **final** critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/6749	Endangered

Reptiles

NAME	STATUS
Coachella Valley Fringe-toed Lizard *Uma inornata* There is **final** critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/2069	Threatened
Desert Tortoise *Gopherus agassizii* Population: Wherever found, except AZ south and east of Colorado R., and Mexico There is **final** critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/4481	Threatened

Insects

NAME	STATUS
Casey's June Beetle *Dinacoma caseyi* There is **final** critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/4897	Endangered

Flowering Plants

NAME	STATUS
Coachella Valley Milk-vetch *Astragalus lentiginosus var. coachellae* There is **final** critical habitat for this species. Your location is outside the critical habitat. Species profile: https://ecos.fws.gov/ecp/species/7426	Endangered

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

REGIONALLY OCCURRING SPECIES TABLE

TABLE 1
REGIONALLY OCCURRING SPECIAL-STATUS SPECIES

Scientific Name **Common name**	**Federal/ State/CNPS**	**Distribution**	**Habitat Requirements**	**Period of Identification**	**Potential to Occur on Site**
PLANTS					
Abronia villosa var. aurita chaparral sand-verbena	--/--/1B.1	Known to occur in Imperial, Orange, San Bernardino, Sierra, Los Angeles, Riverside, San Diego, and Ventura counties.	Found in sandy soils, in chaparral, coastal scrub, and desert dunes at elevations of 75 to 1600 meters.	January-September	**None.** The North and South sites do not contain suitable habitat for this species.
Almutaster pauciflorus alkali marsh aster	--/--/2B.2	Known to occur in Inyo, Kern, Riverside, and San Bernardino counties.	Found in alkaline soils in meadows and seeps at elevations of 240 to 800 meters.	June-October	**None.** The North and South sites are outside the suitable elevation range for this species.
Astragalus lentiginosus var. coachellae Coachella Valley milk-vetch	FE/--/1B.2	Known to occur in Riverside county.	Found in sandy soils in desert dunes and Sonoran desert scrub at elevations of 40 to 655 meters.	February-May	**None.** The North and South sites do not contain suitable habitat for this species.
Euphorbia arizonica Arizona spurge	--/--/2B.3	Known to occur in Imperial, Riverside, and San Diego counties.	Found in sandy soils in Sonoran desert scrub at elevations of 50 to 300 meters.	March-April	**None.** The North and South sites do not contain suitable habitat for this species.
Euphorbia platysperma flat-seeded spurge	--/--/1B.2	Known to occur in Imperial, Riverside, San Bernardino, and San Diego counties.	Found in sandy soils in desert dunes and Sonoran desert scrub at elevations of 65 to 100 meters.	February-September	**None.** The North and South sites do not contain suitable habitat for this species.
Nemacaulis denudata var. gracilis slender cottonheads	--/--/2B.2	Known to occur in Imperial, Riverside, San Bernardino, and San Diego counties.	Found in coastal dunes, desert dunes, and Sonoran desert scrub at elevations of -50 to 400 meters.	March-May	**None.** The North and South sites do not contain suitable habitat for this species.
Selaginella eremophila desert spike-moss	--/--/2B.2	Known to occur in Imperial, Riverside, and San Diego counties.	Found in gravelly or rocky soils in chaparral and Sonoran desert scrub at elevations of 200 to 1295 meters.	May-July	**None.** The North and South sites are outside the suitable elevation range for this species.
Stemodia durantifolia purple stemodia	--/--/2B.1	Known to occur in Riverside and San Diego counties.	Found in often mesic and sandy soils in Sonoran desert scrub at elevations of 180 to 300 meters.	January-December	**None.** The North and South sites are outside the suitable elevation range for this species.
Xylorhiza cognata mecca-aster	--/--/1B.2	Known to occur in Imperial and Riverside counties.	Found in Sonoran desert scrub at elevations of 20 to 400 meters.	January-June	**None.** The North and South sites do not contain suitable habitat for this species.

Scientific Name **Common name**	**Federal/ State/CNPS**	**Distribution**	**Habitat Requirements**	**Period of Identification**	**Potential to Occur on Site**
ANIMALS					
Invertebrates					
Dinacoma caseyi Casey's june beetle	FE/--/--	Known to occur in the Coachella Valley region of Riverside County, California.	Less than an inch long and dusty brown or whitish color, with brown and cream longitudinal stripes on its wing covers and back. This species inhabits areas associated with Sonoran desert scrub vegetation located on alluvial fans at the base of the Santa Rosa Mountains.	All Year	**None.** The North and South sites do not contain suitable habitat for this species.
Birds					
Athene cunicularia burrowing owl	--/CSC/--	Broadly distributed throughout western North America; also occurs in Florida, Central and South America, Hispaniola, Cuba, the northern Lesser Antilles, and the Bahamas.	Yearlong resident of open, dry grassland and desert habitats, as well as grass, forb and open shrub stages of pinyon-juniper and ponderosa pine habitats. Burrowing owls are between 7.5 to 10 inches tall with a wingspan of 21 to 24 inches. Owls can dig their own burrows for shelter and nesting, but often rely on burrows created by small mammals such as prairie dogs and desert tortoises. An active burrow will contain debris such as twigs or feathers at the entrance. Burrowing owls feed primarily on insects and small mammals but will also eat reptiles and amphibians.	All Year	**None.** The North and South sites do not contain suitable habitat for this species.
Vireo bellii pusillus least Bell's Vireo	FE/--/--	Known to occur in Butte, Fresno, Imperial, Inyo, Kern, Los Angeles, Mariposa, Merced, Monterey, Orange, Riverside, Sacramento, San Benito, San Bernardino, San Diego, San Joaquin, San Luis Obispo, Santa Barbara, Stanislaus, Sutter, Tehama, Ventura, Yolo, and Yuba counties. However some counties only have one occurrence.	Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 600 meters. Nests placed along margins of bushes or on twigs projecting into pathways, usually willow, Baccharis, mesquite. Found in riparian forest, riparian scrub, and riparian woodland.	All Year	**None.** The North and South sites do not contain suitable habitat for this species.
Empidonax traillii extimus southwestern willow flycatcher	FE/--/--	Kern, Los Angeles, Orange, Riverside, San Bernardino, San Diego, and Santa Barbara counties. Breeding range occurs in California south of the Santa Ynez River.	Breeds in dense riparian habitats along rivers, streams, or other wetlands. Vegetation is often dominated by dense willows or other shrubs and medium-sized trees, with an overstory of cottonwood, tamarisk, or other large trees. Almost all breeding habitats are within close proximity (less than 60 feet) of water or saturated soil.	April-September	**None.** The North and South sites do not contain suitable habitat for this species.

Scientific Name **Common name**	**Federal/ State/CNPS**	**Distribution**	**Habitat Requirements**	**Period of Identification**	**Potential to Occur on Site**
Polioptila californica californica coastal California gnatcatcher	FT/CSC/--	Occurs in coastal southern California south of Los Angeles. Also known to occur in Mexico.	Prefers coastal sage scrub, but is occasionally found in chaparral, riparian and grassland habitats adjacent to coastal sage scrub.	March - August	**None.** The North and South sites do not contain suitable habitat for this species.
Toxostoma lecontei Le Conte's thrasher	--/CSC/--	Known to occur in the desert of southeastern California, northeastern Baja California, and northwestern Sonora.	Nesting areas require large, dense shrubs, and nests are generally placed in dense shrubs or portions of shrubs overhanging arroyos, rarely in direct sunlight.	All Year	**None.** The North and South sites do not contain suitable habitat for this species.
Mammals					
Lasiurus xanthinus western yellow bat	--/CSC/--	Known to occur in southern California.	Associated with dry, thorny vegetation in desert habitats. Commonly occurs in palm oases up to elevations of approximately 2,000 meters. Roosts in palm tree skirts and is limited by the availability of palm habitat.	All Year	**Low.** The North and South sites contain potential habitat for this species. This species was not observed during surveys.
Ovis canadensis nelson peninsular bighorn sheep	FE/--/--	Known to occur in San Diego, Riverside, and Imperial counties.	Inhabits rocky slopes and cliffs, canyons, washes, and alluvial fans. This species prefers rugged and open habitat, and eats a wide variety of desert plants, including cacti. In summer, distributions are often associated with scarce water sources.	All Year	**None.** The North and South sites do not contain suitable habitat for this species.
Xerospermophilus tereticaudus chlorus Palm Springs round-tailed ground squirrel	--/CSC/--	Known to occur in San Diego, Riverside, San Bernardino, and Imperial counties.	Inhabits sandy arid regions of lower sonoran life zone. Scrub and wash habitats include mesquite and creosote dominated sand dunes, creosote bush scrub, and saltbush/alkali scrub. Substrates include wind-blown sand, coarse sand, and packed silt. Burrows are dug at the base of shrubs, often creosote bushes.	All Year	**None.** The North and South sites do not contain suitable habitat for this species.
Perognathus longimembris bangsi Palm Springs pocket mouse	--/--/--	Known to occur throughout the Coachella Valley.	Found in sandy habitats on the Coachella Valley floor. Inhabits sandy arid regions in scrub and wash habitats with sparse to moderately dense vegetative cover, including mesquite sand dunes, creosote sand dunes, creosote bush scrub, creosote palo verde and saltbush and alkali scrub. Occupied habitat is restricted to areas with fine sandy soils necessary for burrow construction (Barrows, 2009). Burrows are dug at the base of shrubs, often creosote bushes, or burrows of other rodents may be utilized. Plant species associated with Palm Springs pocket mice include *Larrea tridentata*, *Encelia farinosa*, *Ambrosia dumosa*, and *Ephedra californica* (Barrows, 2009; Dodd, 1996 and 1998).	All Year	**None.** The North and South sites do not contain suitable habitat for this species.

Scientific Name Common name	Federal/ State/CNPS	Distribution	Habitat Requirements	Period of Identification	Potential to Occur on Site
Reptiles					
Gopherus agassizii desert tortoise	FT/CT/--	Occurs in the Mojave and Sonoran deserts north and west of the Colorado River in southwestern Utah, southern Nevada, southeastern California, and northwestern Arizona.	Found in sandy flats to rocky foothills, including alluvial fans, washes, and canyons where suitable soils for den construction might be found. Tortoises depend on bushes for shade and protection from predators, and live in dens that vary from 18 inches to eight feet long. This species often shares burrows. Occurs from near sea level to around 3,500 feet in elevation.	All Year	**None.** The North and South sites do not contain suitable habitat for this species.
Uma inornata Coachella Valley fringe-toed lizard	FT/CE/--	Known to occur in the Coachella Valley region of Riverside County, California.	Inhabits sparsely vegetated windblown sand dunes and sandy flats. Requires fine, loose sand for burrowing; scarce vegetation consisting of creosote bush or other scrubby growth, and perennial plants for shelter. This species seeks shelter underground, often in abandoned rodent burrows or by burying themselves in sand. The fringe-toed lizard is an insectivorous predator, with a diet comprised of insects, terrestrial invertebrates, and occasionally desert plant matter.	All Year	**None.** The North and South sites do not contain suitable habitat for this species.
Phrynosoma mcallii flat-tailed horned lizard	--/CSC/--	Known to occur in southern California.	Inhabits sandy desert flatlands with sparse vegetation. Occasionally occurs on low hills, mud hills, and alkali flats. This species is most abundant where surface soils contain loose or windblown sand. Vegetation in preferred habitat includes creosote bush, bur-sage, indigo bush, saltbush, and ocotillo. Abundance is positively correlated with density of perennial plants. The species does not normally occur in habitats characterized as rocky mountainous, new alluvial areas with sloping terrain, major dune systems, marshes and tamarisk-arrow weed thickets, and agricultural and developed areas (Turner et al. 1980).	All Year	**None.** The North and South sites do not contain suitable habitat for this species.

1.0 EXECUTIVE SUMMARY

1.1 Introduction

The Agua Caliente Band of Cahuilla Indians Cathedral City Fee-to-Trust Casino Project proposes to construct a casino, restaurants, and retail stores (Project) at the northwest corner of the intersection of Date Palm Drive and East Palm Canyon Drive (North Site) in the City of Cathedral City (City). There are four Project Alternatives that include a full project (Alternative A), a reduced project (Alternative B), a non-gaming alternative (Alternative C) , and an alternative (Alternative D) that moves the proposed Project to the southwest corner of the intersection (South Site).

1.2 Purpose of Report and Study Objectives

The purpose of this study is to evaluate the effects on traffic circulation produced from the proposed Project.

The objectives of this study include the following:

- Document Existing (2018) traffic conditions in the vicinity of the proposed Project;
- Determine the traffic generated from the proposed Project;
- Evaluate Project Opening Year (2020) traffic conditions;
- Evaluate Project Opening Year (2020) traffic conditions with each Project Alternative;
- Evaluate Cumulative Year (2040) traffic conditions for each Project Alternative;
- Determine if the level of service (LOS) required by the City of Cathedral City, City of Palm Springs, and City of Rancho Mirage will be maintained within the study area, and if not, determine the mitigation measures that will be necessary in order to maintain the required LOS;
- Determine if peak hour traffic signal warrants are met for any of the unsignalized study area intersections;
- Evaluate the adequacy of on-site circulation for the proposed Project; and
- Determine if safety and/or operational improvements are necessary due to the proposed Project.

1.3 Traffic and Transportation Project Design Features and Mitigation Measures

This traffic impact analysis demonstrates that the direct traffic impacts generated by Project Alternatives A, B, C, or D can be mitigated to meet the required level of service if the following recommended project design features and mitigation measures are adopted. Project design features are improvements that the Project had anticipated and is 100 percent responsible for since the improvements are proposed to provide Project access and safety for the proposed Project. Mitigation measures are proposed as a result of intersection and/or roadway segment impact due to the addition of project traffic. A fair share percentage responsibility or a project responsibility is determined based on the impacts.

1.3.1 Roadway & Safety Improvements for Alternatives A, B, and C

Project Design Features

- Construct full width improvements on all internal roadways.

- Construct roadway improvements to the northerly side of East Palm Canyon Drive to provide three lanes in the westbound direction of travel, which would be considered its ultimate cross-section as an arterial highway adjacent to the North Site south boundary line.
- Construct roadway improvements to the westerly side of Date Palm Drive to provide three lanes in the southbound direction, which would be considered at its ultimate cross-section as an arterial highway adjacent to the North Site east boundary line.
- Construct roadway improvements to the southerly side of Buddy Rogers Avenue to provide one lane in the eastbound direction of travel, which would be considered its ultimate cross-section as a local roadway adjacent to the North Site north boundary line.
- Construct modifications at existing traffic signals adjacent to the North Site as needed.
- Signing/striping modifications on adjacent roadways should be implemented in conjunction with detailed construction plans for the North Site.
- Sight distance at project driveways will be reviewed with respect to County of Riverside sight distance standards at the time of preparation of final grading, landscape, site development, and street improvement plans.
- Implement on-site traffic calming measures in parking lots and internal roadways as needed.

1.3.2 Roadway & Safety Improvements for Alternative D

Project Design Features

- Construct full width improvements on all internal roadways.
- Construct roadway improvements to the southerly side of East Palm Canyon Drive to provide three lanes in the eastbound direction of travel, which would be considered its ultimate cross-section, as an arterial highway adjacent to the South Site north boundary line.
- Construct roadway improvements to the easterly side of Van Fleet Street to provide one lane in the westbound direction of travel, which would be considered its ultimate cross-section as a collector roadway adjacent to the South Site west boundary line.
- Construct roadway improvements to the northerly side of D Street to provide one lane in the westbound direction of travel, which would be considered its ultimate cross-section as a collector roadway adjacent to the South Site south boundary line.
- Construct modifications at existing traffic signals adjacent to the South Site as needed.
- Signing/striping modifications on adjacent roadways should be implemented in conjunction with detailed construction plans for the South Site.
- Sight distance at project driveways will be reviewed with respect to County of Riverside sight distance standards at the time of preparation of final grading, landscape, site development, and street improvement plans.
- Implement on-site traffic calming measures in parking lots and internal roadways as needed.

1.3.3 Roadway Segment Mitigations and General Plan Consistency for Alternatives A, B, C or D

Opening Year 2020 Conditions

Unacceptable level of service along East Palm Canyon Drive is anticipated in the Opening Year (2020) scenario with and without the Project for the following segment:

4. East Palm Canyon Drive: Cathedral Canyon Drive to Date Palm Drive

The failing roadway segment is part of the TUMF program which has funding allocated to improve East Palm Canyon Drive's widening from four lanes to 6 lanes total in accordance with the approved *Cathedral City Downtown Circulation and Alignment Study* prepared by W2 Design, Inc. The study which was approved by Cathedral City in November 2009 analyzed the widening of East Palm Canyon to expand the roadway from four to six lanes to its City limits. The project would be responsible for its TUMF fees which would be used to contribute to the East Palm Canyon Drive expansion.

Build-Out Year 2040 Conditions

Impacts to roadway segments described below are considered significant and unavoidable in accordance to Cathedral City General Plan. The roadway would exceed capacity under ultimate build-out conditions. The General Plan does not propose any additional lanes to improve conditions.

Level of service for the following four segments along East Palm Canyon Drive are expected continue to operate at unacceptable levels of service under build-out conditions with and without the Project as shown below:

1. East Palm Canyon Drive: Golf Club Drive to Canyon Plaza Drive
2. East Palm Canyon Drive: Canyon Plaza Drive to Perez Road
5. East Palm Canyon Drive: Date Palm Drive to Frank Sinatra Drive
6. East Palm Canyon Drive: Frank Sinatra Drive to Country Club Drive

In accordance with the Cathedral City General Plan all four roadway segments were forecasted to exceed build-out capacity and anticipated to operate at unacceptable level of service of E or F. However, the proposed Mid-Valley Parkway has been proposed as *"an alternate route to Highway 111/East Palm Canyon Drive… The Transportation Uniform Mitigation Fee (TUMF) program has helped to pay for this facility and a wide range of other arterial roadways in the Coachella Valley."*

1.3.4 Alternative A Project Design Features and Mitigation Measures

Intersection Project Design Features

- Restripe the intersection of Buddy Rogers Avenue and Project Driveway (North) to include the following geometrics with one-way stop control:
  Northbound: One left turn lane. One shared through-right lane.
  Southbound: One shared left-through-right lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

- Restripe the intersection of East Palm Canyon Drive and Project Driveway (South) to include the following geometrics with signalized control:
  Northbound: Not Applicable.
  Southbound: One left turn lane. One right turn lane.
  Eastbound: One left turn lane. Two through lanes. One right turn lane.
  Westbound: One left turn lane. Three through lanes. One right turn lane.

Intersection Mitigation Measures

- Restripe the intersection of Buddy Rogers Avenue and Date Palm Drive to include the following geometrics with signalized control:
  Northbound: One left turn lane. Three through lanes.
  Southbound: Two through lanes. One shared through-right turn lane.
  Eastbound: One left turn lane. One right turn lane.
  Westbound: Not Applicable.

- Contribute fair share for installation of a traffic signal at the intersection of Cathedral Canyon Drive and Paseo Real and provide the following geometrics:
  Northbound: One left turn lane. One through lane. One shared through-right turn lane.
  Southbound: One left turn lane. One through lane. One shared through-right turn lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

1.3.5 Alternative B Project Design Features and Mitigation Measures

Intersection Project Design Features

- Restripe the intersection of Buddy Rogers Avenue and Project Driveway (Northwest) to include the following geometrics with one-way stop control:
  Northbound: One left turn lane. One shared through-right lane.
  Southbound: One shared left-through-right lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

- Restripe the intersection of Buddy Rogers Avenue and Project Driveway (Northeast) to include the following geometrics with one-way stop control:
  Northbound: One shared left-right turn lane.
  Southbound: Not Applicable.
  Eastbound: One shared through-right lane.
  Westbound: One shared left-through lane.

- Restripe the intersection of East Palm Canyon Drive and Project Driveway (South) to include the following geometrics with signalized control:
  Northbound: Not Applicable.
  Southbound: One left turn lane. One right turn lane.
  Eastbound: One left turn lane. Two through lanes. One right turn lane.
  Westbound: One left turn lane. Three through lanes. One right turn lane.

Intersection Mitigation Measures

- Install a traffic signal at the intersection of Buddy Rogers Avenue and Date Palm Drive and provide the following geometrics:
  Northbound: One left turn lane. Three through lanes.
  Southbound: Two through lanes. One shared through-right turn lane.

Eastbound: One left turn lane. One right turn lane.
Westbound: Not Applicable.

- Contribute fair share for installation of a traffic signal at the intersection of Cathedral Canyon Drive and Paseo Real and provide the following geometrics:
  Northbound: One left turn lane. One through lane. One shared through-right turn lane.
  Southbound: One left turn lane. One through lane. One shared through-right turn lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

1.3.6 Alternative C Project Design Features and Mitigation Measures

Intersection Project Design Features

- Restripe the intersection of Buddy Rogers Avenue and Project Driveway (Northwest) to include the following geometrics with one-way stop control:
  Northbound: One left turn lane. One shared through-right lane.
  Southbound: One shared left-through-right lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

- Restripe the intersection of Buddy Rogers Avenue and Project Driveway (Northeast) to include the following geometrics with one-way stop control:
  Northbound: One shared left-right turn lane.
  Southbound: Not Applicable.
  Eastbound: One shared through-right lane.
  Westbound: One shared left-through lane.

- Restripe the intersection of Date Palm Drive and Project Driveway (East) to include the following geometrics with one-way stop control:
  Northbound: Three through lanes.
  Southbound: Two through lane. One shared through-right lane.
  Eastbound: One right turn lane.
  Westbound: Not Applicable.

- Restripe the intersection of East Palm Canyon Drive and Project Driveway (South) to include the following geometrics with signalized control:
  Northbound: Not Applicable.
  Southbound: One left turn lane. One right turn lane.
  Eastbound: One left turn lane. Two through lanes. One right turn lane.
  Westbound: One left turn lane. Three through lanes. One right turn lane.

Intersection Mitigation Measures

- Install a traffic signal at the intersection of Buddy Rogers Avenue and Date Palm Drive and provide the following geometrics:

Northbound: One left turn lane. Three through lanes.
Southbound: Two through lanes. One shared through-right turn lane.
Eastbound: One left turn lane. One right turn lane.
Westbound: Not Applicable.

- Contribute fair share for installation of a traffic signal at the intersection of Cathedral Canyon Drive and Paseo Real and provide the following geometrics:
  Northbound: One left turn lane. One through lane. One shared through-right turn lane.
  Southbound: One left turn lane. One through lane. One shared through-right turn lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

1.3.7 Alternative D Project Design Features and Mitigation Measures

Intersection Project Design Features

- Restripe the intersection of Van Fleet Street and B Street to include the following geometrics with two-way stop control:
  Northbound: One left turn lane. One shared through-right lane.
  Southbound: One left turn lane. One shared through-right lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

- Restripe the intersection of D Street and Project Driveway (South) to include the following geometrics with one-way stop control:
  Northbound: Not Applicable.
  Southbound: One shared left-through-right lane.
  Eastbound: One shared left-through lane.
  Westbound: One shared through-right lane.

- Restripe the intersection of East Palm Canyon Drive and Project Driveway (North) to include the following geometrics with signalized control:
  Northbound: One left turn lane. One shared through-right lane.
  Southbound: One shared left-through-right lane.
  Eastbound: One left turn lane. Three through lanes. One right turn lane.
  Westbound: One left turn lane. Two through lanes. One right turn lane.

Intersection Mitigation Measures

- Contribute fair share for installation of a traffic signal at the intersection of Cathedral Canyon Drive and Paseo Real and provide the following geometrics:
  Northbound: One left turn lane. One through lane. One shared through-right turn lane.
  Southbound: One left turn lane. One through lane. One shared through-right turn lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

1.4 Intersections and Project Fair Share Mitigation Summary

The Project will participate in the cost of off-site improvements through the payment of "fair share" mitigation fees, including the following:

- Transportation Uniform Mitigation Fee (TUMF), current at time of construction.
- Transit Development Fee, current at time of construction.
- City Facilities Impact Fees, current at time of construction.

These fees will be collected and utilized as needed by the City of Cathedral City to construct the improvements necessary to assist in maintaining the required level of service in the transportation network.

Table 1-1, **Table 1-2, Table 1-3** and **Table 1-4** summarize the proposed mitigation measure and associated funding mechanism for the study intersections for Alternative A, Alternative B, Alternative C and Alternative D, respectively. The intersections of Date Palm Drive / Buddy Rogers Avenue and Cathedral Canyon Drive / Paseo Real require the installation of a traffic signal to improve the LOS to acceptable LOS of D or better.

Table 1-1 – Project Fair Share Mitigation Summary – Alternative A Intersections

Intersection	LOS Standard	Mitigation Measure	LOS with Mitigation		Existing Volume	Project Volume	2040 Alt A Volume	Net New Volume	Fair Share
			PM	SAT MD					
Date Palm Drive / Buddy Rogers Avenue	D	Install traffic signal	A	A	--				100%
Cathedral Canyon Drive / Paseo Real	D	Install traffic signal	A	A	1417	91	1976	559	16%

Table 1-2 – Project Fair Share Mitigation Summary – Alternative B Intersections

Intersection	LOS Standard	Mitigation Measure	LOS with Mitigation		Existing Volume	Project Volume	2040 Alt B Volume	Net New Volume	Fair Share
			PM	SAT MD					
Date Palm Drive / Buddy Rogers Avenue	D	Install traffic signal	A	A	--				100%
Cathedral Canyon Drive / Paseo Real	D	Install traffic signal	A	A	1417	81	1966	549	15%

Table 1-3 – Project Fair Share Mitigation Summary – Alternative C Intersections

Intersection	LOS Standard	Mitigation Measure	LOS with Mitigation		Existing Volume	Project Volume	2040 Alt C Volume	Net New Volume	Fair Share
			PM	SAT MD					
Date Palm Drive / Buddy Rogers Avenue	D	Install traffic signal	A	A	--				100%
Cathedral Canyon Drive / Paseo Real	D	Install traffic signal	A	A	1417	126	2011	594	21%

Table 1-4 – Project Fair Share Mitigation Summary – Alternative D Intersections

Intersection	LOS Standard	Mitigation Measure	LOS with Mitigation		Existing Volume	Project Volume	2040 Alt D Volume	Net New Volume	Fair Share
			PM	SAT MD					
Date Palm Drive / Buddy Rogers Avenue	D	Install traffic signal	A	A	1264	135	1611	347	39%
Cathedral Canyon Drive / Paseo Real	D	Install traffic signal	A	A	1417	91	1976	559	16%

Table 1-5 summarizes the proposed mitigation measure and associated funding mechanism for the Project as a result of the traffic study for the study area roadway segments. The anticipated LOS for buildout general plan conditions is also reported in the table below. All four roadway segments present unacceptable levels of service under all alternatives (Alternative A, Alternative B, Alternative C and Alternative D) as shown below. Roadway segments on East Palm Canyon Drive between Date Palm Drive and County Club Drive experience level of service F with and without Project traffic, but the increase in vehicle-to-capacity ratio is less than 0.05 with the Project traffic which is less than significant.

Table 1-5 – Project Fair Share Mitigation Summary - Roadways

East Palm Canyon Drive Roadway Segment	Jurisdiction	LOS Standard	General Plan Buildout LOS	LOS w/o Project	LOS w/ Project	Funding Mechanism
Golf Club Drive to Canyon Plaza Drive	Cathedral City	D	**E**	**E**	**E**	TUMF
Canyon Plaza Drive to Perez Road	Cathedral City	D	**E**	**E**	**E**	TUMF
Date Palm Drive to Frank Sinatra Drive	Cathedral City	D	**F**	**F**	**F**	TUMF
Frank Sinatra Drive to Country Club Drive	Cathedral City	D	**F**	**F**	**F**	TUMF

LOS = Unacceptable LOS, No significant impact

2.0 INTRODUCTION

2.1 Purpose of Report and Study Objectives

The purpose of this study is to evaluate the effects on traffic circulation produced from the proposed development of the Project.

The objectives of this study include the following:

- Document Existing (2018) traffic conditions in the vicinity of the proposed Project;
- Determine the traffic generated from the proposed Project;
- Evaluate Project Opening Year (2020) traffic conditions;
- Evaluate Project Opening Year (2020) traffic conditions with each Project Alternative;
- Evaluate Cumulative Year (2040) traffic conditions for each Project Alternative;
- Determine if the level of service (LOS) required by the City of Cathedral City, City of Palm Springs, and City of Rancho Mirage will be maintained within the study area, and if not, determine the mitigation measures that will be necessary in order to maintain the required LOS;
- Determine if peak hour traffic signal warrants are met for any of the unsignalized study area intersections;
- Evaluate the adequacy of on-site circulation for the proposed Project; and
- Determine if safety and/or operational improvements are necessary due to the proposed Project.

2.2 Site Location and Study Area

The proposed Project is located in the City of Cathedral City. Depending on the Project Alternative chosen, the Project would be located on the northwest (North Site) or southwest (South Site) corner of Date Palm Drive and East Palm Canyon Drive. The study area is located within the Downtown Commercial area in the Cathedral City General Plan.

2.3 Development Project Description

2.3.1 Project Size and Description

The North and South Sites both encompass approximately 14 acres, and are currently proposed for development of a casino, restaurant, and/or retail uses as shown below for trip generation rate purposes for each Project Alternative.

Alternative A – Casino with 40,000 square feet of gaming floor
24,000 square feet Shopping Center
14,000 square feet High-Turnover Sit-Down Restaurant
14,000 square feet Quality Restaurant
6,000 square feet Fast Casual Restaurant
2,000 square feet Coffee/Donut Shop Without Drive-Through Window

Alternative B – Casino with 40,000 square feet of gaming floor
15,200 square feet Shopping Center
8,500 square feet High-Turnover Sit-Down Restaurant

8,500 square feet Quality Restaurant
3,800 square feet Fast Casual Restaurant
2,000 square feet Coffee/Donut Shop Without Drive-Through Window

Alternative C – 36,000 square feet Shopping Center
22,000 square feet High-Turnover Sit-Down Restaurant
22,000 square feet Quality Restaurant
8,000 square feet Fast Casual Restaurant
2,000 square feet Coffee/Donut Shop Without Drive-Through Window

Alternative D – Casino with 40,000 square feet of gaming floor
24,000 square feet Shopping Center
14,000 square feet High-Turnover Sit-Down Restaurant
14,000 square feet Quality Restaurant
6,000 square feet Fast Casual Restaurant
2,000 square feet Coffee/Donut Shop Without Drive-Through Window

2.3.2 Existing Land Use and Zoning

Existing land use and zoning designations are as follows:

- Existing Zoning: Mixed Use Commercial, Downtown Residential Neighborhood
- Existing Land Use: Vacant and Commercial

2.3.3 Proposed Land Use and Zoning

Proposed land use and zoning designations are as follows:

- Proposed Zoning: Mixed Use Commercial
- Proposed Land Use: Commercial

2.3.4 Site Plan of Proposed Project

The proposed Project Alternative layouts are shown on **Figure 2-A, Figure 2-B, Figure 2-C,** and **Figure 2-D.** Project Alternatives A, B, and C will have access to Buddy Rogers Avenue north of the Project, Monty Hall Drive west of the Project, East Palm Canyon Drive south of the Project, and Date Palm Drive east of the Project. Alternative D will have access to East Palm Canyon Drive north of the Project, Van Fleet Street west of the Project, and D Street south of the Project.

The Alternative A site plan includes the following:

1. N/S driveway at Buddy Rogers Avenue with two-way stop control
2. N/S driveway at East Palm Canyon Drive with signalized control

The Alternative B site plan includes the following:

1. N/S driveway (western) at Buddy Rogers Avenue with two-way stop control
2. N/S driveway (eastern) at Buddy Rogers Avenue with one-way stop control
3. N/S driveway at East Palm Canyon Drive with signalized control

The Alternative C site plan includes the following:

1. N/S driveway (western) at Buddy Rogers Avenue with two-way stop control
2. N/S driveway (eastern) at Buddy Rogers Avenue with one-way stop control
3. E/W driveway at Date Palm Drive with one-way stop control
4. N/S driveway at East Palm Canyon Drive with signalized control

The Alternative D site plan includes the following:

1. N/S driveway at East Palm Canyon Drive with signalized control
2. N/S driveway at D Street with one-way stop control
3. E/W driveway at Van Fleet Street with two-way stop control

Figure 2-A – Alternative A Project Site Plan

Figure 2-B – Alternative B Project Site Plan

Figure 2-C – Alternative C Project Site Plan

Figure 2-D – Alternative D Project Site Plan

2.3.5 Proposed Project Opening Year and Proposed Project Phasing

For analysis purposes, it is assumed that the Project will be developed in a single phase and full development is anticipated by 2020.

2.3.6 Sphere of Influence

The Project is within one mile of the border of the City of Palm Springs and the City of Rancho Mirage.

3.0 AREA CONDITIONS

3.1 Existing Roadway Descriptions

3.1.1 Collector

- D Street is an undivided 2-lane east-west collector in the Project vicinity. It is classified as a collector in the Cathedral City General Plan Circulation Element and provides connectivity to Van Fleet Street and Cathedral Canyon Drive. Street parking is allowed. There are existing sidewalks on one side of the street, but designated bike lanes do not exist within the study area.

- Van Fleet Street is an undivided 2-lane north-south collector in the Project vicinity. It is classified as a collector in the Cathedral City General Plan Circulation Element and provides connectivity to D Street and East Palm Canyon Drive. Street parking is allowed. There are existing sidewalks on both sides of the street where development is complete, but designated bike lanes do not exist within the study area.

- Country Club Drive is a divided 4-lane east-west collector in the Project vicinity. It is classified as a collector in the Rancho Mirage General Plan Circulation Element and provides connectivity to East Palm Canyon Drive. Street parking is not allowed. There are existing sidewalks on both sides of the street where development is complete, but designated bike lanes do not exist within the study area.

- Morningside Drive is a divided 4-lane north-south collector roadway in the Project vicinity. It is classified as a major collector in the Rancho Mirage General Plan Circulation Element and provides connectivity to the major streets like Country Club Drive and Frank Sinatra Drive. There are no existing sidewalks, designated bike lanes exist within the study area.

3.1.2 Secondary Highway

- Cathedral Canyon Drive is a divided 4-lane north-south secondary highway in the Project vicinity with a two-way left-turn lane. It is classified as a secondary highway in the Cathedral City General Plan Circulation Element and provides connectivity from East Palm Canyon Drive to Ramon Road. Street parking is not allowed. There are existing sidewalks on both sides of the street, and designated bike lanes exist within the study area.

- Golf Club Drive is an undivided 4-lane secondary thoroughfare in the Project vicinity. It is classified as secondary thoroughfare in Palm Springs General Plan Circulation Element and provides connectivity to East Palm Canyon Drive. Street parking is not allowed. There are existing sidewalks on the both sides of the street, and designated bike lanes exist within the study area.

3.1.3 Major Highway

- Da Vall Drive is a divided 4-lane north-south major highway in the Project vicinity with a raised median. It is classified as a major highway in the Cathedral City General Plan Circulation Element and provides connectivity to Frank Sinatra Drive and 30th Avenue. Street parking is not allowed. There are existing

sidewalks on both sides of the street, but designated bike lanes do not exist within the study area.

- Frank Sinatra Drive is a divided 4-lane east-west major highway in the Project vicinity with a raised median. It is classified as a major highway in the Cathedral City General Plan Circulation Element and provides connectivity to East Palm Canyon Drive and the City of Rancho Mirage. Street parking is not allowed. There are existing sidewalks on both sides of the street, and designated bike lanes exist within the study area.

- Gerald Ford Drive is a divided 4-lane east-west major highway in the Project vicinity with a two-way left-turn lane. It is classified as a major highway in the Cathedral City General Plan Circulation Element and provides connectivity to Date Palm Drive and the City of Rancho Mirage. Street parking is not allowed. There are existing sidewalks on both sides of the street in most places, but designated bike lanes do not exist within the study area.

- Perez Road is a divided 4-lane east-west major highway in the Project vicinity. It is classified as a major highway in the Cathedral City General Plan Circulation Element and provides connectivity to East Palm Canyon Drive and Date Palm Drive. Street parking is allowed. There are existing sidewalks in most areas, but designated bike lanes do not exist within the study area.

3.1.4 Arterial Highway

- Date Palm Drive is a divided 4 to 6-lane north-south arterial highway in the Project vicinity. It is classified as an arterial highway in the Cathedral City General Plan Circulation Element and provides connectivity to East Palm Canyon and Interstate 10. Street parking is not allowed. There are existing sidewalks on both sides of the street where development is complete, but designated bike lanes do not exist within the study area.

- East Palm Canyon Drive is a divided 4 to 6-lane east-west arterial highway in the Project vicinity. It is classified as an arterial highway in the Cathedral City General Plan Circulation Element and provides connectivity to the City of Palm Springs and the City of Rancho Mirage. East Palm Canyon Drive is formerly known as State Route 111 under Caltrans jurisdiction, but control of the roadway has been relinquished to local agency control within the Project vicinity. Street parking is allowed in small areas. There are existing sidewalks on both sides of the street, but designated bike lanes do not exist within the study area.

- Dinah Shore Drive is a divided 4 to 6-lane east-west arterial highway in the Project vicinity. It is classified as an arterial highway in the City of Cathedral City General Plan Circulation Element and provides connectivity to the City of Palm Springs and the City of Rancho Mirage. Street parking is not allowed. There are existing sidewalks on both sides of the street where development is complete, but designated bike lanes do not exist within the study area.

- Ramon Road is a divided 6-lane east-west arterial highway in the Project vicinity. It is classified as an arterial in the Cathedral City General Plan Circulation Element and provides connectivity to the City of Palm Springs and the City of Rancho Mirage. Street parking is not allowed. There are existing sidewalks on both sides of the street, but designated bike lanes do not exist within the study area.

3.1.5 Local Streets

- Buddy Rogers Avenue is an undivided 2-lane east-west roadway in the Project vicinity. It provides connectivity to Date Palm Drive and East Palm Canyon Drive. There are existing sidewalks in some areas, but designated bike lanes do not exist.

- Allen Avenue is an undivided 2-lane north-south roadway in the Project vicinity. It provides connectivity to East Palm Canyon Drive and Buddy Rogers Avenue. There are no existing sidewalks and bike lanes do not exist.

- Paseo Real is a divided 2-lane east-west roadway in the Project vicinity. It provides connectivity to Date Palm Drive and Cathedral Canyon Drive. There are existing sidewalks on the both sides of the street, but designated bike lanes do not exist.

- Mirage Cove Drive is a 2-lane east-west roadway in the Project vicinity. It provides connectivity to East Palm Canyon Drive. There are existing sidewalks on the both sides of the street, but designated bike lanes do not exist.

- B Street is an undivided 2-lane east-west roadway in the Project vicinity. It provides connectivity to Cathedral Canyon Drive and Van Fleet Street. There is existing sidewalk in most areas, but designated bike lanes do not exist.

- Officer David Vasquez Road is an undivided 2-lane east-west roadway in the Project vicinity. It provides connectivity to Monty Hall Drive and Cathedral Canyon Drive. There are sidewalks in a few developed areas, but designated bike lanes do not exist.

- Monty Hall Drive is an undivided 2-lane north-south roadway in the Project vicinity. It provides connectivity to the East Palm Canyon Drive and Officer David Vasquez Road. There are existing sidewalks where development is complete, but designated bike lanes do not exist.

- Canyon Plaza Drive is an undivided 2-lane north-south roadway in the Project vicinity. It provides connectivity to East Palm Canyon Drive. There are few existing sidewalks, and designated bike lanes do not exist.

3.2 Study Area Intersections and Roadways

Key study intersections and roadway segments are typically selected based on their location in relation to the vicinity of the project and whether potential significant project-related traffic will pass through them. The key intersections and roadways were identified in coordination with the City of Cathedral City staff and are shown on **Figure 3-A**. The study area includes the following intersections:

1. North Project Driveway (Western)-Allen Avenue (NS) / Buddy Rogers Avenue (NS)
2. Date Palm Drive (NS) / Buddy Rogers Avenue (EW)
3. Date Palm Drive (NS) / East Palm Canyon Drive (EW)
4. South Project Driveway-Allen Avenue (NS) / East Palm Canyon Drive (EW)
5. Monty Hall Drive-Van Fleet Street (NS) / East Palm Canyon Drive (EW)

6. Date Palm Drive (NS) / East Project Driveway-Hillery Road (EW)
7. North Project Driveway (Eastern)-Allen Avenue (NS) / Buddy Rogers Avenue (NS)
8. Monty Hall Drive (NS) / Buddy Rogers Avenue (EW)
9. Buddy Rogers Avenue (NS) / East Palm Canyon Drive (EW)
10. Cathedral Canyon Drive (NS) / East Palm Canyon Drive (EW)
11. Perez Road (NS) / East Palm Canyon Drive (EW)
12. Canyon Plaza Drive (NS) / East Palm Canyon Drive (EW)
13. Golf Club Drive (NS) / East Palm Canyon Drive (EW)
14. Cathedral Canyon Drive (NS) / Officer David Vasquez Road (EW)
15. Cathedral Canyon Drive (NS) / Perez Road (EW)
16. Cathedral Canyon Drive (NS) / Paseo Real (EW)
17. Cathedral Canyon Drive (NS) / Dinah Shore Drive (EW)
18. Date Palm Drive (NS) / Gerald Ford Drive (EW)
19. Date Palm Drive (NS) / Dinah Shore Drive (EW)
20. Date Palm Drive (NS) / Ramon Road (EW)
21. Da Vall Drive (NS) / Dinah Shore Drive (EW)
22. Da Vall Drive (NS) / Gerald Ford Drive (EW)
23. East Palm Canyon Drive (NS) / Frank Sinatra Drive (EW)
24. East Palm Canyon Drive (NS) / Mirage Cove Drive (EW)
25. East Palm Canyon Drive (NS) / Country Club Drive (EW)
26. Thompson Road-Morningside Drive (NS) / Frank Sinatra Drive (EW)
27. Van Fleet Street (NS) / B Street-We (EW)
28. Van Fleet Street (NS) / D Street (EW)
29. South Project Driveway (NS) / D Street (EW)

The study area also includes the following roadway segments:

1. East Palm Canyon Drive between Golf Club Drive and Canyon Plaza Drive
2. East Palm Canyon Drive between Canyon Plaza Drive and Perez Road
3. East Palm Canyon Drive between Perez Road and Cathedral Canyon Drive
4. East Palm Canyon Drive between Cathedral Canyon Drive and Date Palm Drive
5. East Palm Canyon Drive between Date Palm Drive and Frank Sinatra Drive
6. East Palm Canyon Drive between Frank Sinatra Drive and Country Club Drive
7. Cathedral Canyon Drive between East Palm Canyon Drive and Perez Road
8. Cathedral Canyon Drive between Perez Road and Dinah Shore Drive
9. Date Palm Drive between East Palm Canyon Drive and Gerald Ford Drive
10. Date Palm Drive between Gerald Ford Drive and Dinah Shore Drive

Intersection numbering and roadway segment numbering is unique and consistent throughout each project alternative.

3.3 Existing Traffic Controls and Intersection Geometrics

The existing roadway system is shown on **Figure 3-B**. It identifies the existing intersection traffic controls (i.e. signals and signage), intersection geometrics, and the number of traffic lanes within the study area.

3.4 Existing Traffic Volumes

The casino land use is not a standard ITE land use and is not included in the ITE Trip Generation Manual. In addition, the proposed Project's peak traffic hours had to be determined since the hours of operation of a development with a casino land use would not fall under a typical weekday (a.m. peak and p.m. peak analysis). Therefore, Webb's sub-consultant, *Counts Unlimited, Inc.*, performed counts at two existing similar casinos in southern California and conducted trip generation counts at each location on Thursday, March 1 and Saturday, March 3. Vehicles entering and exiting each driveway were counted in 15 minute periods for 12 hours on each day (7AM to 7PM). The results from the two casinos were processed, and Webb determined that the highest two peak hours occurred between the hours of 4:00 PM to 5:00 PM (PM peak hour) on weekdays and 1:00 PM to 2:00 PM (Saturday mid-day (MD) peak hour) on weekends.

The existing PM peak hour and Saturday MD (mid-day) peak hour intersection turning movement counts at the 25 key study intersections were conducted by *Counts Unlimited, Inc*. on April 10 and 14, 2018. The daily roadway segment counts were conducted on April 7 and 10, 2018. The traffic count worksheets are provided in Appendix C. The PM and Saturday MD peak hour intersection turning movement volumes are presented on **Figure 3-C** and **Figure 3-D**, respectively. The daily roadway segment ADT volumes at the 10 key study roadways are presented on **Figure 3-E**.

3.5 Level of Service Methodology

The City of Cathedral City requires that the Transportation Research Board Highway Capacity Manual 2010 (HCM2010) or the most recent release of the HCM be used to analyze Level of Service (LOS).

Quality of service describes how well a transportation facility or service operates from the traveler's perspective. Level of service (LOS) is a quantitative stratification of a performance measure or measures that represent quality of service. LOS is measured on a familiar A to F scale where LOS A represents the best conditions from a traveler's perspective and LOS F the worst. A simple LOS letter system is used to hide much of the complexity of transportation facility performance in order to simplify decision making on whether facility performance is generally acceptable and whether a future change in performance is likely to be perceived as significant by the general public. One reason for the widespread adoption of the LOS concept by agencies is the concept's ability to communicate roadway performance to nontechnical decision makers.

The HCM2010 evaluates the LOS of intersections based upon the control delay per vehicle. Control delay is defined as the delay associated with vehicles slowing in advance of an intersection, the time spent stopped on an intersection approach, the time spent as vehicles move up in the queue, and the time needed for vehicles to accelerate to their desired speed. The methodology used to evaluate the intersection level of service differs on whether the intersection is signalized or unsignalized. Levels of service at signalized and unsignalized intersections have been evaluated using PTV Vistro 5.00 software, which is based upon HCM2010 methodologies.

3.5.1 Signalized Intersections

Signalized intersections have been evaluated using the Operational Method as described in Chapter 18 of the HCM2010. According to this methodology, the level of service for signalized intersections is based upon the weighted average control delay, in seconds per vehicle, of all vehicles passing through the intersection. **Table 3-1** shows the criteria used to determine the level of service for signalized intersections.

Table 3-1 – Level of Service for Signalized Intersections

Level of Service	Control Delay (sec/vehicle)	Description
A	≤ 10	Minimal delay and primarily free-flow operation. Most vehicles do not stop because they arrive during the green indication or only stop for a brief amount of time as the signal changes.
B	> 10 – 20	Short delay and reasonably unimpeded operation. Many vehicles do not stop because they arrive during the green indication or only stop for a short amount of time as the signal changes. More vehicles stop than with LOS A.
C	> 20 – 35	Moderate delay and stable operation. Individual cycle failures (i.e. when queued vehicles do not clear the signal during the next green indication) may begin to appear. The number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.
D	> 35 – 55	Less stable operation in which small increases in vehicles may cause substantial increases in delay. Many vehicles stop and individual cycle failures are noticeable.
E	> 55 – 80	Significant delay and unstable operation. Most vehicles stop and individual cycle failures are frequent.
F	> 80	Considerable delay and extensive queuing. Almost all vehicles stop and most cycles fail to clear the queue.

Source: Transportation Research Board Highway Capacity Manual 2010 (HCM2010)

3.5.2 Unsignalized Intersections

Unsignalized intersections were evaluated using Chapter 19-20 of the HCM2010. According to this methodology, the level of service for all-way stop intersections is based upon the weighted average control delay, in seconds per vehicle, of all vehicles passing through the intersection. For two-way stop controlled intersections, the level of service is based on the highest control delay of all controlled movements for the intersection. **Table 3-2** shows the criteria used to determine the level of service for unsignalized intersections.

Table 3-2 – Level of Service for Unsignalized Intersections

Level of Service	Control Delay (sec/vehicle)	Description
A	≤ 10	Minimal delay. Usually no conflicting traffic.
B	> 10 – 15	Short delay. Occasionally some conflicting traffic.
C	> 15 – 25	Noticeable delay, but not inconveniencing. Usually some conflicting traffic.
D	> 25 – 35	Noticeable delay and irritating. A significant amount of conflicting traffic. Increased likelihood of risk taking.
E	> 35 – 50	Significant delay approaching tolerance level. Lots of conflicting traffic, but with some gaps of suitable size. Risk taking behavior likely.
F	> 50	Considerable delay exceeding tolerance level. Lots of conflicting traffic, with not enough gaps of suitable size. High likelihood of risk taking.

Source: Transportation Research Board Highway Capacity Manual 2010 (HCM2010)

3.6 Acceptable Level of Service

3.6.1 City of Cathedral City

The acceptable Level of Service (LOS) for the City of Cathedral City is based on the Cathedral City General Plan Circulation Element:

> *For General Plan purposes, the upper level of LOS D is assumed to be the "acceptable" level-of-service for a given roadway in the City. While the vast majority of roadways in the planning area are expected to operate at acceptable levels-of-service at General Plan buildout, several segments may operate at LOS E or F unless special design and/or control measures are implemented to mitigate traffic impacts in these areas.*

3.6.2 City of Palm Springs

The acceptable LOS for the City of Palm Springs is based on the City of Palm Springs General Plan Circulation Element:

> *The City has established that roadways and intersections shall operate at LOS D or better to maintain a successful circulation system and to be consistent with the Riverside County Congestion Management Program (CMP).*

3.6.3 City of Rancho Mirage

The acceptable LOS for the City of Rancho Mirage is based on the City of Rancho Mirage General Plan Circulation Element:

> *For peak operating periods, LOS D or a maximum volume to capacity ratio of 0.90 is now considered the generally acceptable service level.*

3.7 Determination of Significant Impact

Cathedral City, which follows Riverside County traffic impact analysis guidelines, states that an intersection should be analyzed if it assigns 50 or more peak hour trips to an intersection. Intersections should also be analyzed if they are currently experiencing failing levels of service and the project is expected to add traffic to it. If an intersection or roadway is currently operating acceptably and is found to operate at LOS E or F with the addition of project traffic, the project is considered to have a significant impact at that intersection or roadway if the impacts cannot be mitigated to an acceptable LOS through conditions of approval.

If an intersection is currently operating unacceptably and the project adds 50 or more trips to the intersection, this would constitute a significant impact at that intersection. If a roadway segment is currently operating unacceptably with a vehicle-to-capacity ratio less than 1.0 and the project increases the overall vehicle-to-capacity ratio to greater than 1.0, this would constitute a significant impact on the roadway segment. If a roadway segment is currently operating unacceptably with an overall vehicle-to-capacity ratio greater than 1.0, an increase of the vehicle-to-capacity ratio by 0.05 or greater with the addition of project traffic would constitute a significant impact on the roadway segment. These criteria are consistent with surrounding agencies' policies and other recent similar traffic impact studies.

3.8 Roadway Segments

Roadway segments are evaluated based on a roadway daily volume and its capacity. Roadway segment analysis compares the daily volume with the roadway capacity to arrive at a volume to capacity ratio (v/c). This study follows the "v/c" ratio stipulated by the Cathedral City General Plan Circulation Element, shown in **Table 3-3**. The target LOS for roadway segments will be considered as LOS D. Per the Cathedral City General Plan, it is projected that several roadway segments in the General Plan Buildout scenario (2035) are expected to operate at LOS E or LOS F. Roadways forecasted to operate at LOS E may be mitigated by the addition of turning lanes at key intersections. Roadways forecasted to operate at LOS F may require the construction of additional through lanes.

Table 3-3 – Roadway Segment Capacity

Roadway Classification	Number of Lanes	Maximum Two-Way Traffic Volume (ADT)*				
		LOS A	LOS B	LOS C	LOS D	LOS E
Collector	2-U	6,000	9,000	12,000	15,000	18,000
Secondary	4-U	10,000	15,000	20,000	25,000	30,000
Major	4-D	10,000	17,000	24,000	31,000	38,000
Arterial	6-D	17,000	27,500	38,000	48,500	59,000
Freeway	8-D	74,000	103,000	132,000	161,000	190,000

All capacity figures are based on optimum conditions and are intended as guidelines for planning purposes.
*Maximum two-way ADT values are based on the Cathedral City General Plan Circulation Element, 2009.
U - Undivided Roadway
D - Divided Roadway

3.9 Levels of Service – Existing (2018) Conditions

The intersection levels of service for existing (2018) conditions shown on **Table 3-4** are based upon the existing roadway system shown on **Figure 3-B** and the existing PM and Saturday MD peak hour intersection volumes shown on **Figure 3-C** and **Figure 3-D**, respectively. The roadway segment levels of service for existing (2018) conditions are shown on **Table 3-5** and are based upon existing roadway segment geometry. The level of service calculation worksheets are provided in Appendix E.

The following intersection is operating at an unacceptable level of service under existing (2018) conditions:

16. Cathedral Canyon Drive / Paseo Real – LOS E in the PM peak hour

The following roadway segments are operating at unacceptable levels of service under existing (2018) conditions:

1. East Palm Canyon Drive: From Golf Club Drive to Canyon Plaza Drive
2. East Palm Canyon Drive: From Canyon Plaza Drive to Perez Road
4. East Palm Canyon Drive: From Cathedral Canyon Drive to Date Palm Drive

Table 3-4 – Intersection Levels of Service – Existing (2018) Conditions

Intersection		LOS Standard	Peak Hour	Traffic Control	Delay (sec)	LOS
1	North Project Driveway (Western)-Allen Avenue / Buddy Rogers Avenue	D	PM	OWSC	9	A
			Sat-MD		9	A
2	Date Palm Drive / Buddy Rogers Avenue	D	PM	OWSC	19.8	C

3.10 General Plan Circulation

The current Cathedral City General Plan Circulation Element Roadways Figure is shown on **Figure 3-F.**

3.11 Transit Service

The North and South Sites are currently served by Sunline Transit Agency Routes 30 and 111. The nearest bus stops are located on East Palm Canyon at Allen Avenue and Date Palm Drive at Grove Street. Both bus stops are directly adjacent to Project Alternatives A, B, and C (North Site) while the bus stops are across the street from Project Alternative D (South Site).

4.0 PROJECTED FUTURE TRAFFIC

4.1 Method of Projection

In order to estimate the traffic impact characteristics of the Project, a multi-step process has been utilized. The first step is traffic generation which estimates the total arriving and departing traffic during a peak hour and on a daily basis. The traffic generation potential is forecast by applying the appropriate vehicle trip generation rates to the project development tabulation. The second step of the forecasting process is traffic distribution, which identifies the origins and destinations of inbound and outbound project traffic based on existing/expected future travel patterns in the study area. The third step is traffic assignment, which involves the allocation of Project traffic to study area street segments and intersections. Traffic distribution patterns are indicated by general percentage orientation, while traffic assignment allocates specific volume forecasts to individual roadway segments and intersection turning movements throughout the study area. The impact of the Project is isolated by comparing operation level of service conditions at selected key study intersections using expected future traffic volumes with and without forecasted Project traffic.

The method of traffic projection is based on the following criteria:

- Existing traffic conditions (2018);
- Ambient growth projections;
- Project generated traffic; and
- Planned development Project generated traffic.

This report uses a project opening year of 2020 for analysis purposes.

4.2 Ambient Growth

In order to evaluate traffic conditions for the opening year, area wide growth on existing roadways must be projected. The majority of the anticipated growth within the study area is accounted for with other cumulative project traffic. The ambient traffic growth factor is intended to include unknown and future cumulative projects in the study area, as well as account for regular growth in traffic volumes due to the development of projects outside the study area. Per discussion with Cathedral City staff, this study will utilize a 2 percent per year growth rate for a total of 4 percent growth to opening year 2020.

4.3 Project Generated Traffic

4.3.1 Project Trip Generation

Trip Generation Rates

Trip generation represents the amount of traffic traveling to and from the proposed Project, which are defined as inbound and outbound trips. An inbound and outbound trip by the same vehicle is considered two separate trips. The traffic generation rates used in this study are based upon the development of the various land uses in each Project Alternative as shown below:

Alternative A – Casino with 40,000 square feet of gaming floor
24,000 square feet Shopping Center
14,000 square feet High-Turnover Sit-Down Restaurant
14,000 square feet Quality Restaurant
6,000 square feet Fast Casual Restaurant
2,000 square feet Coffee/Donut Shop Without Drive-Through Window

Alternative B – Casino with 40,000 square feet of gaming floor
15,200 square feet Shopping Center
8,500 square feet High-Turnover Sit-Down Restaurant
8,500 square feet Quality Restaurant
3,800 square feet Fast Casual Restaurant
2,000 square feet Coffee/Donut Shop Without Drive-Through Window

Alternative C – 36,000 square feet Shopping Center
22,000 square feet High-Turnover Sit-Down Restaurant
22,000 square feet Quality Restaurant
8,000 square feet Fast Casual Restaurant
2,000 square feet Coffee/Donut Shop Without Drive-Through Window

Alternative D – Casino with 40,000 square feet of gaming floor
24,000 square feet Shopping Center
14,000 square feet High-Turnover Sit-Down Restaurant
14,000 square feet Quality Restaurant
6,000 square feet Fast Casual Restaurant
2,000 square feet Coffee/Donut Shop Without Drive-Through Window

The trip generation rates for shopping center are based on the fitted curve equation for trip generation provided in the *Trip Generation Manual (10th Edition)* by the Institute of Transportation Engineers (ITE), 2017. The trip generation rates for the various restaurant types are based on the weighted average trip generation rates provided in the *ITE Trip Generation Manual*. The inbound and outbound peak hour trip generation rates are calculated by multiplying the total peak hour generation rate by the directional distribution provided in the *Trip Generation Manual*.

The fitted curve equation was used for the shopping center land use as it more accurately reflects the trip generation trends in shopping centers under 300,000 square feet than the weighted average trip generation rate. Furthermore, using the fitted curve equation for this Project resulted in a higher and more conservative trip generation estimate.

The casino land use is not a standard ITE land use and is not included in the ITE Trip Generation Manual. A similar land use included in the ITE Trip Generation Manual is Casino/Video Lottery Establishment, but this land use specifically states that it does not include casinos with restaurants or retail areas. In order to develop trip generation rates for the Project's casino land use, the analysis conducted trip generation counts at two existing similar casinos in southern California and counted traffic at each location on Thursday, March 1 and Saturday, March 3, 2018. Vehicles entering and exiting each driveway were counted in 15 minute periods for

12 hours on each day (7AM to 7PM). The results were then processed to determine peak hour volumes and rates for each casino. The existing casinos that were studied are as follows:

1. Soboba Casino – San Jacinto, CA – 74,000 Sqft. Gaming Area
2. Augustine Casino – Coachella, CA – 42,000 Sqft. Gaming Area

Both existing casinos are full-service casinos with gaming floors and interior restaurants and retail. The two existing casinos are relatively isolated and do not share their parking lots or driveways with other businesses. These two casinos also do not have hotels and their gaming floor square footages are similar to the proposed Project's gaming floor area. Gaming floor square footage was chosen as the independent variable that was used to determine the proposed Project's trip generation rate. This is similar to other ITE land uses that utilize gross floor area as the independent variable in the calculations. The calculated trip generation rates for the studied casinos are shown in **Table 4-1**. Counts from the two casinos are provided in Appendix C.

Table 4-1 – Casino Trip Generation Rates

Casino Trip Generation Rates									
Casino Name	Gaming Area	Unit	PM Peak Hour			Saturday MD Peak Hour			Daily
			Total	In	Out	Total	In	Out	
Soboba Casino	74	TSF	6.35	2.24	4.11	7	4.37	2.63	118.7

Internal Trips

Internal trips were also included in the total Project trip generation calculation. Internal trips are trips that occur between land uses on site and do not require users to drive a vehicle offsite. Internal trips between restaurants and retail land uses were calculated using the National Cooperative Highway Research Program (NCHRP) Report 684 which provides internal trip calculations between compatible land uses. These trips are then discounted from the total trip generation. Internal trip rates between the casino land use and other Project land uses were taken from previous studies on similar casino projects. The rates from previous studies ranged from 20% to 97.5%. This analysis will use 60% as a reasonable and conservative internal capture rate from the casino to the adjacent Project land uses. The casino is assumed to be the primary destination on the site with a majority of visitors using the restaurant and retail areas as part of their original trip to the casino.

4.3.2 Project Trip Distribution

Trip distribution represents the directional orientation of traffic to and from the North and South Sites. Trip distribution is influenced by the geographical location of the site, type of land use in the study area, such as residential areas and recreational sites, and proximity to the regional roadway system.

The trip directional orientation of traffic for the proposed Project was determined based upon the existing roadway system, existing traffic patterns, and existing and future land uses. The directional distribution for the Project Alternative traffic assumed in this study are shown on **Figure 4-A, Figure 4-B, Figure 4-C,** and **Figure 4-D**. They show the direction that vehicles will travel from the North and South Sites to their next destination.

4.3.3 Project Modal Split

The traffic-reducing potential of public transit has not been considered in this study. Therefore, the traffic projections provided in this report are considered conservative since public transit could reduce traffic volumes in the Project vicinity.

4.3.4 Project Trip Assignment

Trip assignment is the result of assigning the previously-discussed trip generation numbers to the City's circulation system using the aforementioned trip distribution. Project weekday PM peak hour and Saturday mid-day peak hour volumes are shown in **Figure 4-E, Figure 4-F, Figure 4-G, Figure 4-H, Figure 4-I, Figure 4-J, Figure 4-K,** and **Figure 4-L**.

4.4 Cumulative Year (2040) Traffic

Cumulative Year (2040) traffic is used to forecast traffic conditions at the projected year of the City's General Plan buildout. Cumulative Year (2040) traffic volumes are obtained from the City's General Plan Circulation Element which utilized a refined version of the Coachella Valley Area Transportation Study (CVATS) forecasting model which was developed by the Southern California Association of Governments (SCAG), the Coachella Valley Association of Governments (CVAG), and the Riverside County Transportation Commission (RCTC). The CVATS model was refined to include more accurate land uses and travel characteristics of the City. The model outputs daily traffic volumes on General Plan roadways for the Year 2035. Those volume outputs were then extrapolated to Year 2040 volumes by multiplying the volumes by 1.5 percent per year for 5 years. The growth rate between the existing roadway segment volumes and the projected Year 2040 roadway segment volumes was then calculated and applied to the existing intersection turning movement counts for the Year 2040 intersection analysis.

4.5 Planned Development Project Generated Traffic

Planned development projects are those projects identified by the cities within the study area that are anticipated to be completed and contribute vehicle trips to the roadway network by the Project's opening year of 2020. The City of Cathedral City, City of Palm Springs, and City of Rancho Mirage provided a list of projects that are in development within the study area of this Project. Traffic from these planned development projects is expected to have an impact on levels of service. The planned development projects within the study area and each project's trip generation values are listed in **Table 4-6**. The location of these projects are shown on **Figure 4-M**. The PM and Saturday MD peak hour intersection turning movement volumes for cumulative projects are shown on **Figure 4-N** and **Figure 4-O**, respectively.

5.0 TRAFFIC ANALYSIS

5.1 Capacity and Level of Service and Improvement Analysis

5.1.1 Levels of Service – Project Opening Year with Project (2020) Conditions

The Project Opening Year (2020) scenario includes existing traffic, planned development traffic, ambient growth traffic (2 percent per year), and Project traffic. **Table 5-1, Table 5-2, Table 5-3,** and **Table 5-4** provide the projected delay and levels of service at the study intersections under Project Opening Year conditions without off-site improvements. These levels of service vary from LOS A to F. The Project Opening Year PM peak hour intersection turning movement volumes for each Project Alternative are shown on **Figure 5-A, Figure 5-B, Figure 5-C,** and **Figure 5-D**. The Project Opening Year Saturday MD peak hour intersection turning movement volumes for each Project Alternative are shown on **Figure 5-E, Figure 5-F, Figure 5-G,** and **Figure 5-H**. The Project Opening Year daily roadway segment volumes and levels of service for each Project Alternative are shown on **Table 5-5, Table 5-6, Table 5-7,** and **Table 5-8**. The levels of service are based upon the existing geometrics for the study area intersections and roadways. The level of service calculation worksheets for the intersections are provided in Appendix E. The following study intersections are expected to operate at an unacceptable level of service:

1. Date Palm Drive (NS) / Buddy Rogers Avenue (EW)
2. Cathedral Canyon Drive (NS) / Paseo Real (EW)

One study roadway segment is expected to operate at an unacceptable level of service:

1. East Palm Canyon Drive between Cathedral Canyon Drive and Date Palm Drive

5.1.2 Levels of Service – Project Opening Year with Project (2020) with Improvements

Table 5-9, Table 5-10, Table 5-11and **Table 5-12** provide the projected delay and levels of service at the study intersections under Project Opening Year (2020) conditions alternatives A through D with off-site improvements for each alternative respectably. With the recommended off-site improvements, the study area intersections would operate at an acceptable LOS D or better. The level of service calculation worksheets are provided in Appendix E.

Table 5-9 – Intersection LOS – Alternative A Project Opening Year (2020) with Improvements

Intersection		LOS Standard	Peak Hour	Traffic Control	Opening Year Plus Project without Improvements		Opening Year Plus Project with Improvements	
					Delay (sec)	LOS	Delay (sec)	LOS
2	Date Palm Drive / Buddy Rogers Avenue	D	PM	Signalized	**55.6**	**F**	7.3	A
			Sat-MD		**58.2**	**F**	8.7	A

5.1.3 Levels of Service – Cumulative Year with Project (2040) Conditions

The Cumulative Year with Project (2040) scenario includes forecasted traffic from the Cathedral City General Plan traffic model and project traffic. **Table 5-13, Table 5-14, Table 5-15,** and provide the projected delay and levels of service at the study intersections under Cumulative Year with Project (2040) conditions without off-site improvements. These levels of service vary from LOS A to F. The Cumulative Year with Project PM peak hour intersection turning movement volumes are shown on **Figure 5-I, Figure 5-J, Figure 5-K,** and **Figure 5-L**. The Cumulative Year with Project Saturday MD peak hour intersection turning movement volumes are shown on **Figure 5-M, Figure 5-N, Figure 5-O,** and **Figure 5-P**. The Cumulative Year with Project (2040) daily roadway segment volumes and levels of service for each Project Alternative are shown on **Table 5-16, Table 5-17, Table 5-18, Table 5-19,** and **Table 5-20**. The levels of service are based upon the existing geometrics for the study intersections and roadway segments. The level of service calculation worksheets are provided in Appendix E. The following study intersections are expected to operate at an unacceptable level of service:

2. Date Palm Drive (NS) / Buddy Rogers Avenue (EW)
16. Cathedral Canyon Drive (NS) / Paseo Real (EW)

The following study roadway segments are expected to operate at an unacceptable level of service:

1. East Palm Canyon Drive between Golf Club Drive and Perez Road
2. East Palm Canyon Drive between Perez Road and Cathedral Canyon Drive
5. East Palm Canyon Drive between Date Palm Drive and Frank Sinatra Drive
6. East Palm Canyon Drive between Frank Sinatra Drive and Country Club Drive

5.1.4 Levels of Service – Cumulative Year with Project (2040) with Improvements

Table 5-21, Table 5-22, Table 5-23, and **Table 5-24** provide the projected delay and levels of service at the study intersections under Cumulative Year with Project (2040) conditions for alternatives A through D with off-site improvements. With the recommended off-site improvements, the study area intersections would operate at an acceptable LOS D or better. The level of service calculation worksheets are provided in Appendix E.

Table 5-21 – Intersection LOS – Alternative A Cumulative Year with Project (2040) with Improvements

Intersection		LOS Standard	Peak Hour	Traffic Control	Year 2040 Plus Project without Improvements		Year 2040 Plus Project with Improvements	
					Delay (sec)	LOS	Delay (sec)	LOS
2	Date Palm Drive / Buddy Rogers Avenue	D	PM	Signalized	**1418.5**	**F**	10.2	B
			Sat-MD		**1360.5**	**F**	11.4	B

6.0 FINDINGS AND RECOMMENDATIONS

6.1 Traffic Impacts and Level of Service Analysis

6.1.1 Proposed Mitigation Measures – Opening Year with Project (2020) Conditions

Figure 6-A presents the proposed mitigation measures in order to achieve a satisfactory level of service at the study intersections in the Opening Year with Project (2020) conditions. The Project proposed mitigation measures are as follows:

2. Date Palm Drive (NS) / Buddy Rogers Avenue (EW): This intersection operates at unacceptable LOS with Alternative A, B, C, and D due to the high volumes entering and exiting Buddy Rogers Avenue. It is recommended to signalize the intersection to provide acceptable LOS.

16. Cathedral Canyon Drive (NS) / Paseo Real (EW): This intersection operates at unacceptable LOS under all scenarios including existing conditions without the Project. While it does not meet traffic signal warrants, it is recommended to pay fair share for signalization of the intersection to provide acceptable LOS.

6.1.2 Proposed Mitigation Measures – Cumulative Year with Project (2040) Conditions

Figure 6-B presents the proposed mitigation measures in order to achieve a satisfactory level of service at the study intersections in Cumulative Year with Project (2040) conditions. The Project proposed mitigation measures are as follows:

2. Date Palm Drive (NS) / Buddy Rogers Avenue (EW): This intersection operates at unacceptable LOS with Alternative A, B, C and D due to the high volumes entering and exiting Buddy Rogers Avenue. It is recommended to signalize the intersection to provide acceptable LOS.

16. Cathedral Canyon Drive (NS) / Paseo Real (EW): This intersection operates at unacceptable LOS under all scenarios including existing conditions without the Project. While it does not meet traffic signal warrants, it is recommended to pay fair share for signalization of the intersection to provide acceptable LOS.

6.2 Traffic Signal Warrants

"Traffic Signal Warrants" are a method of determining whether or not an unsignalized intersection needs to install a traffic signal. Traffic conditions that satisfy a traffic signal warrant are more likely to require the installation of a traffic signal. However, the Manual on Uniform Traffic Control Devices (MUTCD) states that the satisfaction of a traffic signal warrant or warrants shall not in itself require the installation of a traffic control signal. Peak hour traffic signal warrant analysis should only be considered as an "indicator" of the likelihood of an unsignalized intersection warranting a traffic signal. Intersections that exceed the peak hour warrant are more likely to meet one or more of the other volume based signal warrants. The MUTCD also advises that a traffic control signal should not be installed unless:

- One or more of the traffic signal warrants is satisfied;
- An engineering study indicates that installing a traffic control signal will improve the overall safety and/or operation of the intersection; and
- It will not seriously disrupt progressive traffic flow.

For Existing (2018) traffic conditions, the peak hour traffic control signal warrant is not satisfied for any of the study area unsignalized intersections (see Appendix D for technical calculations).

For Opening Year without Project (2020) traffic conditions, the peak hour traffic control signal warrant is not satisfied for any of the study area unsignalized intersections (see Appendix D for technical calculations).

For Opening Year with Project (2020) traffic conditions, the peak hour traffic control signal warrant is expected to be satisfied for the following study area unsignalized intersection for Alternatives A, B, and C (see Appendix D for technical calculations):

2. Date Palm Drive (NS) / Buddy Rogers Avenue (EW)

For Cumulative Year without Project (2040) traffic conditions, the peak hour traffic control signal warrant is expected to be satisfied for the following study area unsignalized intersection for Alternatives A, B, and C (see Appendix D for technical calculations):

2. Date Palm Drive (NS) / Buddy Rogers Avenue (EW)

For Cumulative Year with Project (2040) traffic conditions, the peak hour traffic control signal warrant is expected to be satisfied for the following study area unsignalized intersection for Alternatives A, B, and C (see Appendix D for technical calculations):

2. Date Palm Drive (NS) / Buddy Rogers Avenue (EW)

6.3 Traffic and Transportation Project Design Features and Mitigation Measures

This traffic impact analysis demonstrates that the direct traffic impacts generated by Project Alternatives A, B, C, or D can be mitigated to meet the required level of service if the following recommended improvements are adopted. Project design features are those improvements that the Project had anticipated and is 100 percent responsible for since the improvements are not proposed as a result of an impact, but rather to improve project access and safety for the proposed Project. Mitigation measures shown in **Figure 6-A** and **Figure 6-B** are proposed as a result of intersection and/or roadway segment impact and either a fair share percentage is determined or the project responsibility is described.

6.3.1 Roadway and Safety Improvements for Alternatives A, B, and C

Project Design Features

- Construct full width improvements on all internal roadways.
- Construct roadway improvements to the northerly side of East Palm Canyon Drive to provide three lanes in the westbound direction of travel, which would be considered its ultimate cross-section as an arterial highway adjacent to North Site south line.
- Construct roadway improvements to the westerly side of Date Palm Drive to provide three lanes in the southbound direction, which would be considered at its ultimate cross-section as an arterial highway adjacent to North Site east boundary line.
- Construct roadway improvements to the southerly side of Buddy Rogers Avenue to provide one lane in the eastbound direction of travel, which would be considered its ultimate cross-section as a local roadway adjacent to North Site north boundary line.
- Construct modifications at existing traffic signals adjacent to the North Site as needed.
- Signing/striping modifications on adjacent roadways should be implemented in conjunction with detailed construction plans for the North Site.
- Sight distance at project driveways will be reviewed with respect to County of Riverside sight distance standards at the time of preparation of final grading, landscape, site development, and street improvement plans.
- Implement on-site traffic calming measures in parking lots and internal roadways as needed.

6.3.2 Roadway and Safety Improvements for Alternative D

Project Design Features

- Construct full width improvements on all internal roadways.
- Construct roadway improvements to the southerly side of East Palm Canyon Drive to provide three lanes in the eastbound direction of travel, which would be considered its ultimate cross-section, as an arterial highway adjacent to South Site north boundary line.
- Construct roadway improvements to the easterly side of Van Fleet Street to provide one lane in the westbound direction of travel, which would be considered its ultimate cross-section as a collector roadway adjacent to South Site west boundary line.
- Construct roadway improvements to the northerly side of D Street to provide one lane in the westbound direction of travel, which would be considered its ultimate cross-section as a collector roadway adjacent to South Site south boundary line.

- Construct modifications at existing traffic signals adjacent to the South Site as needed.
- Signing/striping modifications on adjacent roadways should be implemented in conjunction with detailed construction plans for the South Site.
- Sight distance at project driveways will be reviewed with respect to County of Riverside sight distance standards at the time of preparation of final grading, landscape, site development, and street improvement plans.
- Implement on-site traffic calming measures in parking lots and internal roadways as needed.

6.3.3 Roadways Segments Mitigations and General Plan Consistency for Alternatives A, B, C or D

Opening Year 2020 Conditions

Unacceptable level of service along East Palm Canyon Drive is anticipated in the Opening Year (2020) scenario with and without the Project for the following segment:

4. East Palm Canyon Drive: Cathedral Canyon Drive to Date Palm Drive

The failing roadway segment is part of the TUMF program which has funding allocated to improve East Palm Canyon Drive's widening from four lanes to 6 lanes total in accordance with the approved *Cathedral City Downtown Circulation and Alignment Study* prepared by W2 Design, Inc. and the Cathedral City General Plan. The study which was approved by Cathedral City in November 2009 analyzed the widening of East Palm Canyon to expand the roadway from four to six lanes to its City limits. The project would be responsible for its TUMF fees which would be used to contribute to the East Palm Canyon Drive expansion.

Build-Out Year 2040 Conditions

Impacts to roadway segments described below are considered significant and unavoidable in accordance to Cathedral City General Plan. The roadway would exceed capacity under ultimate build-out conditions. The general plan does not propose additional lanes to improve conditions.

Level of service for the following four segments along East Palm Canyon Drive are expected continue to operate at unacceptable levels of service under build-out conditions with and without the Project as shown below:

1. East Palm Canyon Drive: Golf Club Drive to Canyon Plaza Drive
2. East Palm Canyon Drive: Canyon Plaza Drive to Perez Road
5. East Palm Canyon Drive: Date Palm Drive to Frank Sinatra Drive
6. East Palm Canyon Drive: Frank Sinatra Drive to Country Club Drive

According to the Cathedral City General Plan all four roadway segments were forecasted to exceed build-out capacity and anticipated to operate at unacceptable level of service of E or F; however the proposed Mid-Valley Parkway has been proposed as *"an alternate route to Highway 111/East Palm Canyon Drive… The Transportation Uniform Mitigation Fee (TUMF) program has helped to pay for this facility and a wide range of other arterial roadways in the Coachella Valley."*

6.3.4 Alternative A Project Design Features and Mitigation Measures

Intersection Project Design Features

- Restripe the intersection of Buddy Rogers Avenue and Project Driveway (North) to include the following geometrics with two-way stop control:
  Northbound: One left turn lane. One shared through-right lane.
  Southbound: One shared left-through-right lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

- Restripe the intersection of East Palm Canyon Drive and Project Driveway (South) to include the following geometrics with signalized control:
  Northbound: Not Applicable.
  Southbound: One left turn lane. One right turn lane.
  Eastbound: One left turn lane. Two through lanes. One right turn lane.
  Westbound: One left turn lane. Three through lanes. One right turn lane.

Intersection Mitigation Measure

- Install a traffic signal at the intersection of Buddy Rogers Avenue and Date Palm Drive and provide the following geometrics:
  Northbound: One left turn lane. Three through lanes.
  Southbound: Two through lanes. One shared through-right turn lane.
  Eastbound: One left turn lane. One right turn lane.
  Westbound: Not Applicable.

- Contribute fair share towards installation of a traffic signal at the intersection of Cathedral Canyon Drive and Paseo Real and provide the following geometrics:
  Northbound: One left turn lane. One through lane. One shared through-right turn lane.
  Southbound: One left turn lane. One through lane. One shared through-right turn lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

6.3.5 Alternative B Project Design Features and Mitigation Measures

Intersection Project Design Features

- Restripe the intersection of Buddy Rogers Avenue and Project Driveway (Northwest) to include the following geometrics with two-way stop control:
  Northbound: One left turn lane. One shared through-right lane.
  Southbound: One shared left-through-right lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

- Restripe the intersection of Buddy Rogers Avenue and Project Driveway (Northeast) to include the following geometrics with one-way stop control:
  Northbound: One shared left-right turn lane.
  Southbound: Not Applicable.
  Eastbound: One shared through-right lane.
  Westbound: One shared left-through lane.

- Restripe the intersection of East Palm Canyon Drive and Project Driveway (South) to include the following geometrics with signalized control:
  Northbound: Not Applicable.
  Southbound: One left turn lane. One right turn lane.
  Eastbound: One left turn lane. Two through lanes. One right turn lane.
  Westbound: One left turn lane. Three through lanes. One right turn lane.

Intersection Mitigation Measure

- Install a traffic signal at the intersection of Buddy Rogers Avenue and Date Palm Drive and provide the following geometrics:
  Northbound: One left turn lane. Three through lanes.
  Southbound: Two through lanes. One shared through-right turn lane.
  Eastbound: One left turn lane. One right turn lane.
  Westbound: Not Applicable.

- Contribute fair share towards installation of a traffic signal at the intersection of Cathedral Canyon Drive and Paseo Real and provide the following geometrics:
  Northbound: One left turn lane. One through lane. One shared through-right turn lane.
  Southbound: One left turn lane. One through lane. One shared through-right turn lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

6.3.6 Alternative C Project Design Features and Mitigation Measures

Intersection Project Design Features

- Restripe the intersection of Buddy Rogers Avenue and Project Driveway (Northwest) to include the following geometrics with two-way stop control:
  Northbound: One left turn lane. One shared through-right lane.
  Southbound: One shared left-through-right lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

- Restripe the intersection of Buddy Rogers Avenue and Project Driveway (Northeast) to include the following geometrics with one-way stop control:
  Northbound: One shared left-right turn lane.
  Southbound: Not Applicable.

Eastbound: One shared through-right lane.
Westbound: One shared left-through lane.

- Restripe the intersection of Date Palm Drive and Project Driveway (East) to include the following geometrics with one-way stop control:
  Northbound: Three through lanes.
  Southbound: Two through lanes. One shared through-right lane.
  Eastbound: One right turn lane.
  Westbound: Not Applicable.

- Restripe the intersection of East Palm Canyon Drive and Project Driveway (South) to include the following geometrics with signalized control:
  Northbound: Not Applicable.
  Southbound: One left turn lane. One right turn lane.
  Eastbound: One left turn lane. Two through lanes. One right turn lane.
  Westbound: One left turn lane. Three through lanes. One right turn lane.

Intersection Mitigation Measure

- Install a traffic signal at the intersection of Buddy Rogers Avenue and Date Palm Drive and provide the following geometrics:
  Northbound: One left turn lane. Three through lanes.
  Southbound: Two through lanes. One shared through-right turn lane.
  Eastbound: One left turn lane. One right turn lane.
  Westbound: Not Applicable.

- Contribute fair share towards installation of a traffic signal at the intersection of Cathedral Canyon Drive and Paseo Real and provide the following geometrics:
  Northbound: One left turn lane. One through lane. One shared through-right turn lane.
  Southbound: One left turn lane. One through lane. One shared through-right turn lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

6.3.7 Alternative D Project Design Features and Mitigation Measures

Intersection Project Design Features

- Restripe the intersection of Van Fleet Street and B Street to include the following geometrics with two-way stop control:
  Northbound: One left turn lane. One shared through-right lane.
  Southbound: One left turn lane. One shared through-right lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

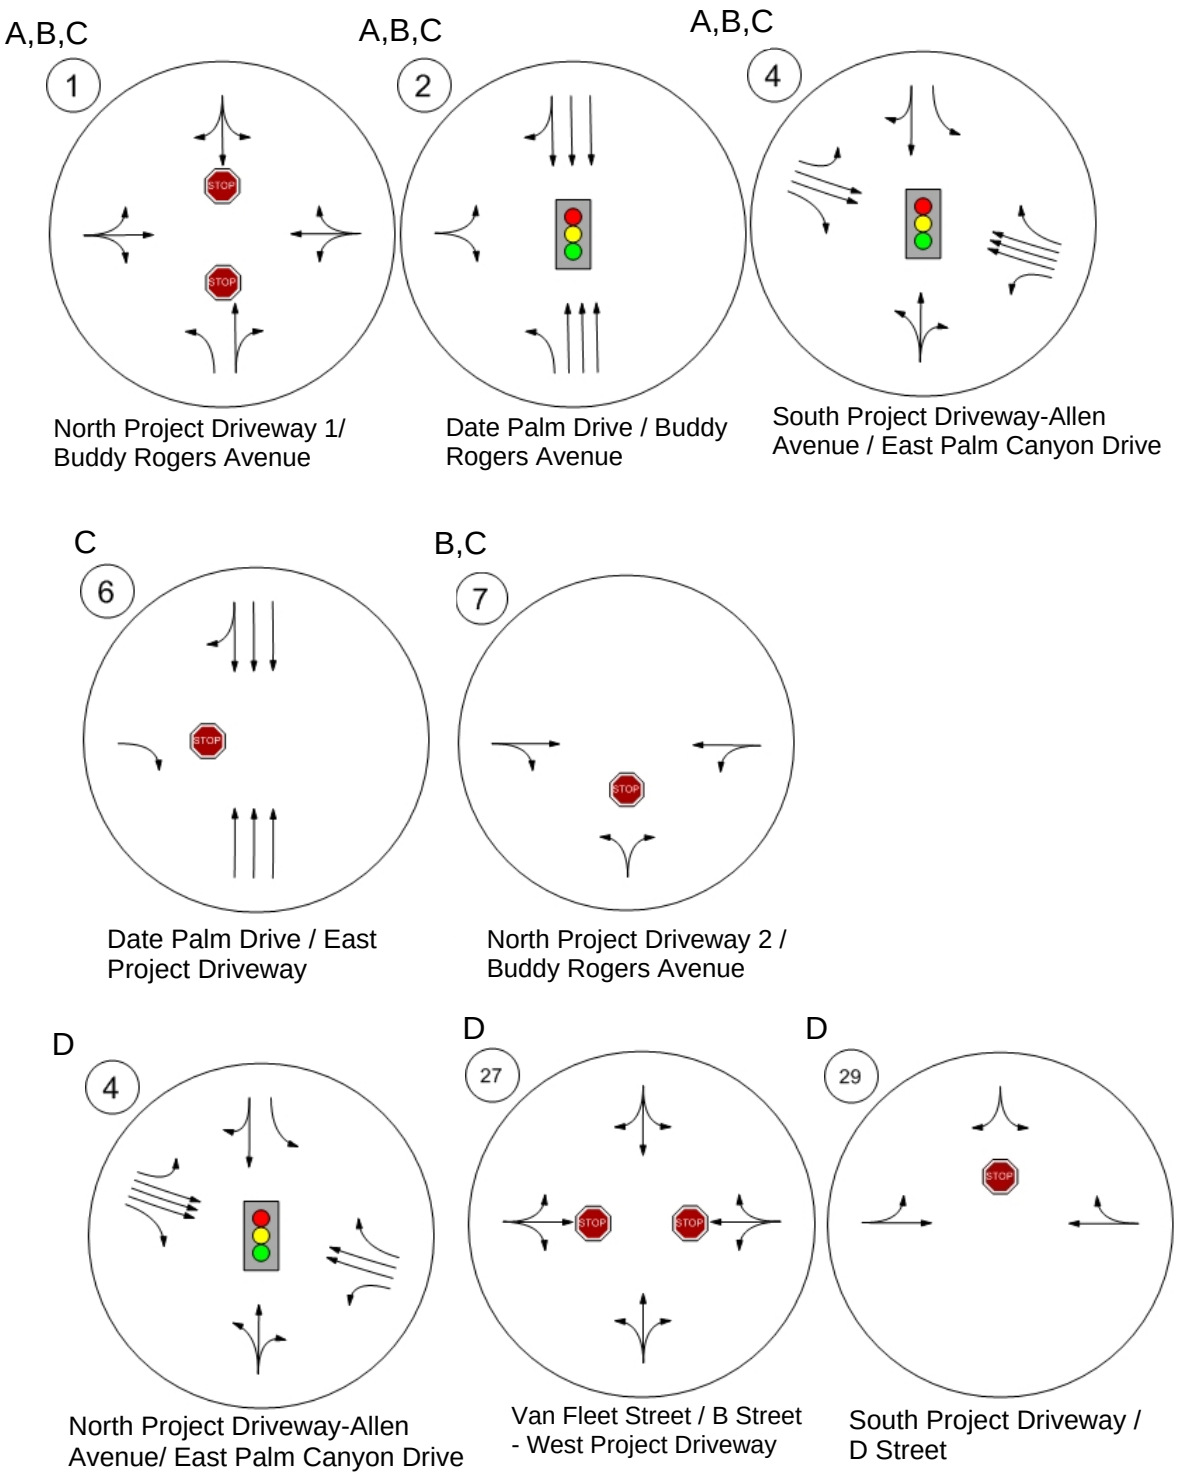
- Restripe the intersection of D Street and Project Driveway (South) to include the following geometrics with one-way stop control:
  Northbound: Not Applicable.
  Southbound: One shared left-through-right lane.
  Eastbound: One shared left-through lane.
  Westbound: One shared through-right lane.

- Restripe the intersection of East Palm Canyon Drive and Project Driveway (North) to include the following geometrics with signalized control:
  Northbound: One left turn lane. One shared through-right lane.
  Southbound: One shared left-through-right lane.
  Eastbound: One left turn lane. Three through lanes. One right turn lane.
  Westbound: One left turn lane. Two through lanes. One right turn lane.

Intersection Mitigation Measure

- Contribute fair share towards installation Install a traffic signal at the intersection of Cathedral Canyon Drive and Paseo Real and provide the following geometrics:
  Northbound: One left turn lane. One through lane. One shared through-right turn lane.
  Southbound: One left turn lane. One through lane. One shared through-right turn lane.
  Eastbound: One shared left-through-right lane.
  Westbound: One shared left-through-right lane.

Figure 6-A –Intersection Improvements for Opening Year with Project (2020) Conditions



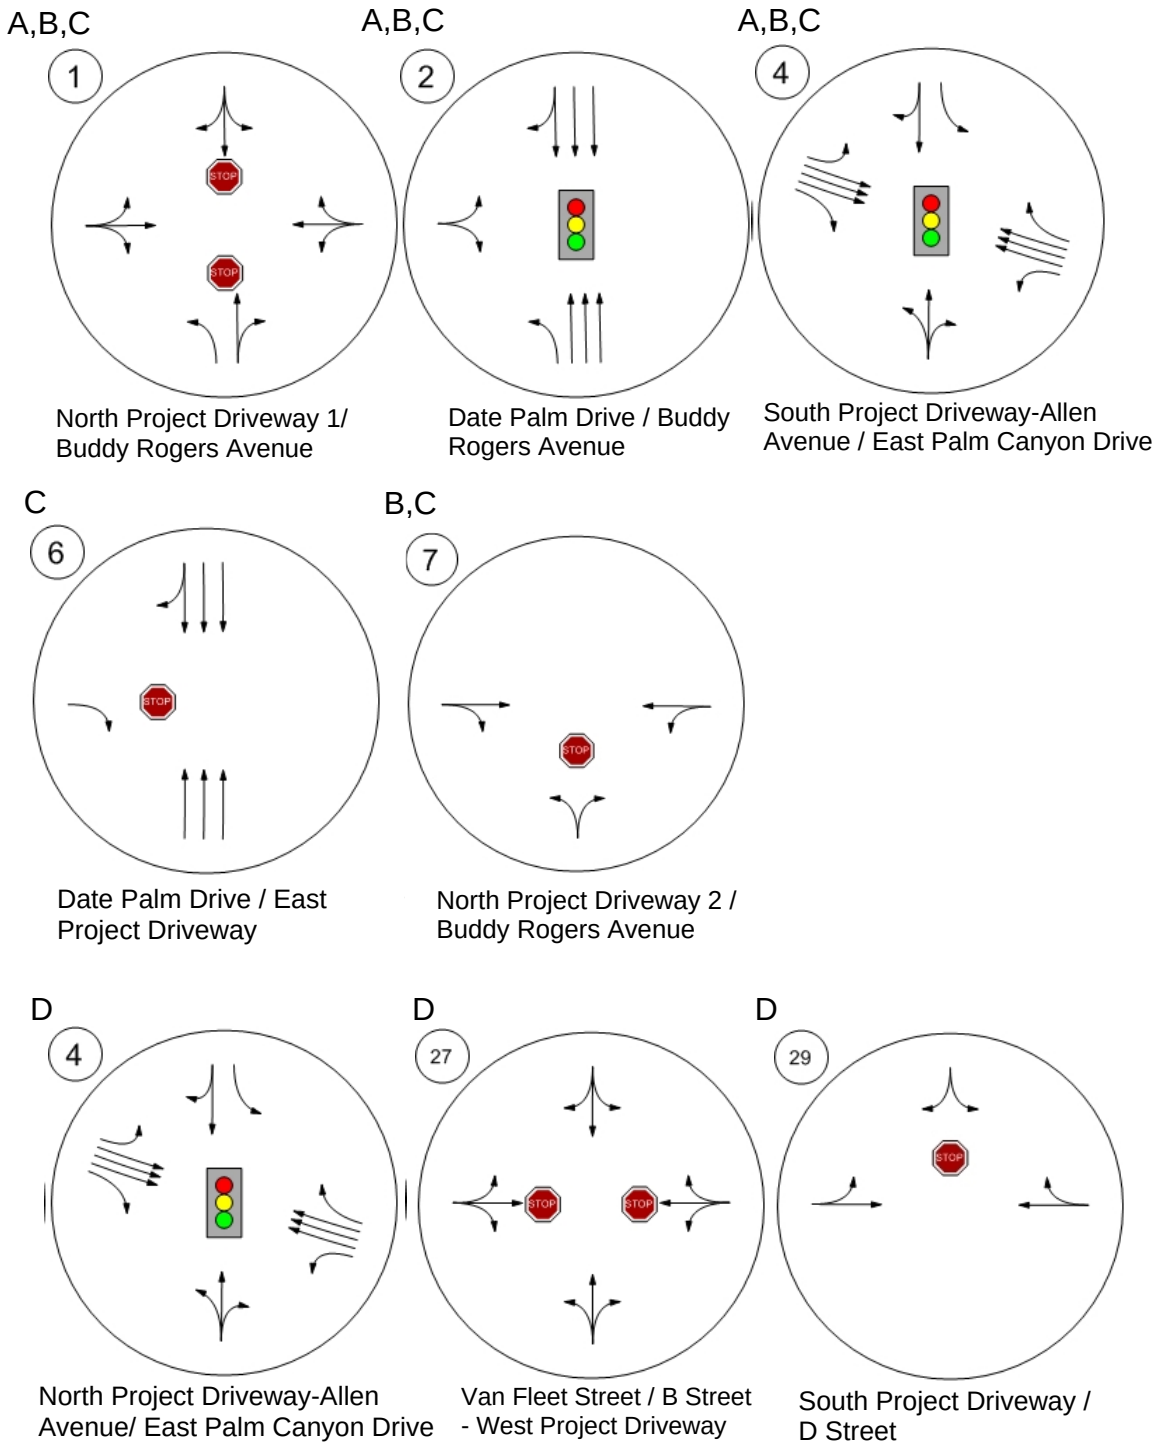


Figure 6-B – Intersection Improvements for Cumulative Year with Project (2040) Conditions

6.4 Intersections and Project Fair Share Mitigation Summary

The Project will participate in the cost of off-site improvements through the payment of "fair share" mitigation fees, including the following:

- Transportation Uniform Mitigation Fee (TUMF), current at time of construction.
- Transit Development Fee, current at time of construction.
- City Facilities Impact Fees

These fees will be collected and utilized as needed by the City of Cathedral City to construct the improvements necessary to assist in maintaining the required level of service in the transportation network.

Table 6-1, Table 6-2, Table 6-3 and **Table 6-4** summarize the proposed mitigation measure and associated funding mechanism for the study intersections for Alternative A, Alternative B, Alternative C, and Alternative D, respectively. The intersections of Date Palm Drive / Buddy Rogers Avenue and Cathedral Canyon Drive / Paseo Real require the installation of a traffic signal to improve the intersections to acceptable LOS of D or better.

Table 6-1 – Project Fair Share Mitigation Summary – Alternative A Intersections

Intersection	LOS Standard	Mitigation Measure	LOS with Mitigation		Existing Volume	Project Volume	2040 Alt A Volume	Net New Volume	Fair Share
			PM	SAT MD					
Date Palm Drive / Buddy Rogers Avenue	D	Install traffic signal	A	A	--				100%

			PM	SAT MD					
Date Palm Drive / Buddy Rogers Avenue	D	Install traffic signal	A	A	1264	135	1611	347	39%
Cathedral Canyon Drive / Paseo Real	D	Install traffic signal	A	A	1417	91	1976	559	16%

Table 6-5 summarizes the proposed mitigation measure and associated funding mechanism for the Project as a result of the traffic study for the study area roadway segments. The anticipated LOS for general plan buildout conditions is also reported in the table below. All four roadway segments present unacceptable levels of service under all alternatives (Alternative A, Alternative B, Alternative C, and Alternative D) as shown below. Roadway segments on East Palm Canyon Drive between Date Palm Drive and County Club Drive experience level of service F with and without Project traffic, but the increase in vehicle-to-capacity ratio is less than 0.05 with the Project traffic which is less than significant.

Table 6-5 – Project Fair Share Mitigation Summary - Roadways

East Palm Canyon Drive Roadway Segment	Jurisdiction	LOS Standard	General Plan Buildout LOS	LOS w/o Project	LOS w/ Project	Funding Mechanism
Golf Club Drive to Canyon Plaza Drive	Cathedral City	D	**E**	**E**	**E**	TUMF
Canyon Plaza Drive to Perez Road	Cathedral City	D	**E**	**E**	**E**	TUMF
Date Palm Drive to Frank Sinatra Drive	Cathedral City	D	**F**	**F**	**F**	TUMF
Frank Sinatra Drive to Country Club Drive	Cathedral City	D	**F**	**F**	**F**	TUMF

Scoping Agreement

APPENDIX A

ALBERT A. WEBB ASSOCIATES

Memorandum

To: Ryan Lee Sawyer, Analytical Environmental Services

From: Nicholas Lowe, P.E., Albert A. Webb Associates

Date: April 26, 2018

Re: Scoping Memo for the Agua Caliente Casino Development in Cathedral City

Dear Ryan:

Albert A. Webb Associates (Webb) has been contracted to conduct a traffic impact analysis (TIA) report for a project within Cathedral City. The project includes casino, retail, and restaurant land uses. There are four alternative site plans which differ in building sizes and site location which are shown in the Appendix. The project is planned to be constructed in a single phase by 2020. The goal of the this TIA scoping memo is to outline the methodologies, forecast scenarios, trip generation, trip distribution, and study area of the TIA.

Analysis Parameters

The TIA will analyze certain nearby intersections and roadways based on the number of trips that he project is forecasted to generate. This trip generation value is based on the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition as well as traffic counts at similar existing projects that are not standard land uses in the ITE Trip Generation Manual. The TIA will analyze weekday PM (4-6PM), and Saturday mid-day (11AM-2PM) peak periods to determine peak hour of traffic and any operational impacts to existing transportation facilities. Intersections that are expected to serve a minimum of 50 project trips during a peak hour are included in the study area. Roadway segments between these intersections are also included in the study area.

Ambient traffic growth will be incorporated into the analysis. Ambient growth is a growth rate applied to the existing (2018) traffic volumes to forecast roadway traffic volumes in short timeframes into the future. Ambient growth generally accounts for population growth and the construction of projects that are outside of the study area. In general, the annual ambient growth rate used in TIAs throughout Riverside County and Cathedral City is 2% unless the project is located in a known fast or slow-growing area. A 2% annual ambient growth rate will be used for this analysis. The project's buildout year is expected to be 2020 which would translate to a 4% total ambient growth over the two years.

Planned developments are nearby projects, generally within one to five miles of the project site, which are in the approval or construction process at the time of the project's TIA. These planned developments would not generate trips at the time of the project's TIA completion, but are expected to contribute trips to the roadway network by the project's buildout year, 2020.

Cumulative year (2040) is to be analyzed using RivTAM model outputs. RivTAM currently forecasts traffic to year 2035. Additional annual growth rates of 1.5% are to be added onto 2035 volumes during post-processing.

Analysis Scenarios

The TIA will analyze the four project alternatives in several different forecast scenarios individually. These scenarios include traffic conditions during existing, project opening year (2020), and cumulative (2040) timeframes. The study scenarios are as follows:

1. Existing (2018) conditions.
2. Project Opening Year (2020).
3. Project Opening Year (2020) Plus Alternative A.
4. Project Opening Year (2020) Plus Alternative B.
5. Project Opening Year (2020) Plus Alternative C.
6. Project Opening Year (2020) Plus Alternative D.
7. Project Opening Year (2020) Plus Alternative A with Mitigation.
8. Project Opening Year (2020) Plus Alternative B with Mitigation.
9. Project Opening Year (2020) Plus Alternative C with Mitigation.
10. Project Opening Year (2020) Plus Alternative D with Mitigation.
11. Cumulative Year (2040).
12. Cumulative Year (2040) Plus Alternative A.
13. Cumulative Year (2040) Plus Alternative B.
14. Cumulative Year (2040) Plus Alternative C.
15. Cumulative Year (2040) Plus Alternative D.
16. Cumulative Year (2040) Plus Alternative A with Mitigation.
17. Cumulative Year (2040) Plus Alternative B with Mitigation.
18. Cumulative Year (2040) Plus Alternative C with Mitigation.
19. Cumulative Year (2040) Plus Alternative D with Mitigation.

The Opening Year (2020) scenarios include ambient traffic (4% growth) and planned development traffic. The Cumulative Year (2040) scenarios include projected traffic volume forecasts per the RivTAM model outputs.

Scenario number 11 above includes general plan land use at the project site. Any mitigation scenarios are to be analyzed as needed. Project driveway additions that do not impact other intersection approaches or roadways are not classified as mitigations. Planned or funded roadway improvements and projects will be included in the analysis for opening year and cumulative year as reasonable.

Trip Generation Methodology

Trip generation values were based on the site plans' land use tables provided to Webb by AES. The land uses on the site plans are casino and mixed use. After discussions with AES, it was decided that the mixed use areas are to be analyzed as 60% restaurant and 40% shopping center. The restaurant areas were then further divided into specific land uses that are included in the ITE Trip Generation Manual. The project land uses consist of casino, shopping center, high-turnover sit down restaurant, coffee/donut shop without drive-through window, quality restaurant, and fast casual restaurant.

The casino land use is not a standard ITE land use and is not included in the ITE Trip Generation Manual. A similar land use included in the ITE Trip Generation Manual is Casino/Video Lottery Establishment, but this land use specifically states that it does not include casinos with restaurants or retail areas. In order to develop trip generation rates for the project's casino land use, Webb found two existing similar casinos in southern California and conducted trip generation counts at each location on Thursday, March 1 and Saturday, March

3. Vehicles entering and exiting each driveway were counted in 15 minute periods for 12 hours on each day (7AM to 7PM). The results were then processed to determine peak hour volumes and rates for each casino.

1. Soboba Casino – San Jacinto, CA – 74,000 Sqft. Gaming Area
2. Augustine Casino – Coachella, CA – 42,000 Sqft. Gaming Area

Both existing casinos are full-service casinos with gaming floors and interior restaurants and retail. The two existing casinos are relatively isolated and do not share their parking lots or driveways with other businesses. These two casinos also do not have hotels and their gaming floor square footages are similar to the proposed project's gaming floor. Gaming floor square footage is the independent variable that was used to determine the proposed project's trip generation rate. This is similar to other ITE land uses that utilize gross floor area as the independent variable in the calculations. The calculated trip generation rates for the studied casinos are as follows:

Casino Trip Generation Rates								
Casino Name	Gaming Area	Unit	AM Peak Hour			PM Peak Hour		
			Total	In	Out	Total	In	Out
Soboba Casino	74	TSF	3.51	1.96	1.55	6.35	2.24	4.11
Augustine Casino	42	TSF	4.07	3.17	0.90	8.71	4.64	4.07
AVERAGE			3.72	2.40	1.32	7.21	3.11	4.10

Casino Trip Generation Rates					
Casino Name	Gaming Area	Unit	Saturday MD Peak Hour		
			Total	In	Out
Soboba Casino	74	TSF	7	4.37	2.63
Augustine Casino	42	TSF	8.81	4.07	4.74
AVERAGE			7.66	4.26	3.40

Internal trips were also included in the total project trip generation calculation. Internal trips are trips that occur between land uses on site and do not require users to drive a vehicle offsite. Internal trips between restaurants and retail land uses were calculated using the National Cooperative Highway Research Program (NCHRP) Report 684 which provides internal trip calculations between compatible land uses. These trips are then discounted from the total trip generation. Internal trip rates between the casino land use and other project land uses were taken from previous studies on similar casino projects. The rates from previous studies ranged from 20% to 97.5%. This analysis will use 60% as a reasonable and conservative internal capture rate from the casino to the adjacent project land uses. The casino is assumed to be the primary destination on the site with a majority of visitors using the restaurant and retail areas as part of their original trip to the casino.

Trip Distribution Methodology

Project trips were distributed throughout the nearby roadway network based on the proposed project's land use, the surrounding area's land uses, and the locations and directions of collector, arterial, and freeway-type roadways. Project trips are distributed by percentage up to 100%. Project trips are then applied to the distribution to obtain the project trip assignment which is the volume that will be analyzed.

Intersection Analysis Methodology

Intersections will be analyzed using PTV Vistro 5.0 intersection simulation software. This software package is based off of the Transportation Research Board's Highway Capacity Manual 2010 (HCM2010) methodologies, calculations, and assumptions. Intersection geometry, traffic volumes, and intersection operations are input into the software packages for analysis. The analysis results in intersection delay and level of service (LOS) values. Intersection level of service (LOS) is based on average vehicle delay at the intersection and is the primary factor in TIA analysis and project impact determination.

Roadway Analysis Methodology

Roadway segments will be analyzed by calculating volume-to-capacity (v/c) ratios. Each type of roadway has a calculated theoretical maximum daily capacity which is standard and will be sourced from the County of Riverside General Plan. Roadway capacity is primarily influenced by number of lanes, roadway classification, presence of a raised median, and terrain. Daily traffic volumes will be divided by the theoretical roadway capacity to obtain a ratio. Similar to intersections, a LOS is derived from this ratio to determine impacts.

Significance Criteria

Cathedral City, which follows Riverside County traffic impact analysis guidelines, states that an intersection should be analyzed if it assigns 50 or more peak hour trips to an intersection. Intersections should also be analyzed if they are currently experiencing failing levels of service and the project is expected to add traffic to it.

Riverside County, Cathedral City, Caltrans, and most agencies have a minimum LOS threshold of LOS D. If an intersection or roadway is currently operating acceptably and is found to operate at LOS E or F with the addition of project traffic, the project is considered to have a significant impact at that intersection or roadway.

If an intersection is currently operating unacceptably and the project adds 50 or more trips to the intersection, this would constitute a significant impact at that intersection. If a roadway segment is currently operating unacceptably and the project increases the vehicle-to-capacity ratio to greater than 1.0, this would constitute a significant impact on the roadway segment.

Warrant 3 Condition A

Orientation	W
Total Stopped Delay Per Vehicle on Minor Approach (s)	3703.7
Number of Lanes on Minor Street Approach	1
VehicleHours of Stopped Delay on Minor Approach ([h]h:mm)	132:43
Delay Condition Met	Yes
Volume on Minor Street Approach During Same Hour	129
High Minor Volume Condition Met	Yes
Total Entering Volume on All Approaches During Same Hour	3879
Number of Approaches on Intersection	3
Total Volume Condition Met	Yes
Warrant Met for Approach	Yes
Warrant Met for Intersection	**Yes**

Signal Warrants Report For Intersection 7: North Project Driveway 2 / Buddy Rogers Avenue

Warrants Summary

Warrant	Name	Met?
#1	Eight Hour Vehicular Volume	No
#2	Four Hour Vehicular Volume	No
#3	Peak Hour	No

Intersection Warrants Parameters

Major Approaches	E, W
Minor Approaches	S
Speed > 40mph	No
Population < 10,000	No
Warrant Factor	100%
