Sign-off Sheet and Signatures of Environmental Professionals

This document entitled Phase I Environmental Site Assessment for 1321, 1329, and 1345 North Vermont Avenue, and 1328 North New Hampshire Avenue, Los Angeles, was prepared by Stantec Consulting Services Inc. (Stantec) for the account of Kaiser Foundation Health Plan Inc. The material in it reflects Stantec's best judgment in light of the information available to it at the time of preparation. Any use which a third party makes of this report, or any reliance on or decisions made based on it, are the responsibilities of such third parties. Stantec accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

All information, conclusions, and recommendations provided by Stantec in this document regarding the Phase I ESA have been prepared under the supervision of and reviewed by the professionals whose signatures appear below.

Thomas R. Szocinski, CEP
Senior Environmental Scientist

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

1.0 SUMMARY

Stantec has completed a Phase I Environmental Site Assessment (ESA) report of the property located at 1321, 1329, 1345 North Vermont Avenue and 1328 North New Hampshire Avenue, Los Angeles, California 90027 (the "Property"), on behalf of Kaiser Foundation Health Plan, Inc. (the "Client"). The work was performed according to Stantec's proposal and terms and conditions dated February 10, 2016 and accepted by Client on February 17, 2016. Kaiser Foundation Health Plan, Inc. (the "User") has been designated as the User of this report.

The Phase I ESA was conducted in conformance with the requirements of American Society for Testing and Materials (ASTM) Designation E 1527-13, except as may have been modified by the scope of work, and terms and conditions, requested by the Client. Any exceptions to, or deletions from, the ASTM practice are described in Section 2.3.

The Property consists of four addresses, 1321, 1329, 1345 North Vermont Avenue and 1328 North New Hampshire Avenue. The Property is identified as Assessor's Parcel Numbers (APNs) 5543-014-014, 5543-014-015, 5543-013-009, and 5543-014-003. A total of five building structures are located on the Property (three commercial, one residential with associated separate garage) the current status and use of each of the addresses is as follows:

- 1321 North Vermont Avenue (5543-014-014) consists of three lots (Lots 56, 57, and 58), is approximately 0.45 acres in size, and has two commercial buildings (building 1 is 7,349 square feet and building 2 is 1,730 square feet). The commercial buildings are currently being used as various dental practices.
- 1329 North Vermont Avenue (5543-014-015) consists of two lots (Lots 59 and 60), is approximately 0.30 acres in size and is zoned commercial. No building structure exists at this address and the entire area consists of an asphalt parking area.
- 1345 North Vermont Avenue (5543-013-009) consists of one lot (Lot 61), is approximately 0.15 acres in size, and has one 3,847 square foot commercial building. The commercial building is currently vacant; however, formerly was operated as a restaurant.
- 1328 North New Hampshire Avenue (5543-014-003) consists of one lot (Lot 47), is approximately 0.15 acres in size, and has two building structures (one 1,787 square foot residential dwelling and one 800 square foot detached garage).

Surrounding properties are a mix of commercial, medical, and residential properties. The Property buildings were reportedly built at various times. Further detail pertaining to the property history is included within the Phase I ESA report.

The following items of note were identified during this ESA:

- The Property is located along North Vermont Avenue. The metro transport subway runs directly beneath Vermont Avenue. Due to the close proximity of the metro transport to the Property, it

could pose a concern to the Property with regards to vibration and noise. This is considered as an item of note and not a REC.

- A portion of the Property (1321 North Vermont Avenue) was listed on the CA HAZNET database, Moncada's Dental Office, for inorganic solid waste disposal. No records were obtained for violations relating to the dental disposal practices. In addition, the disposal per the database review indicated that no waste disposal was on record. During site reconnaissance activities no evidence was observed for improper storage of inorganic solid waste; and therefore this is not considered a REC.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 of the Property. Any exceptions to, or deletions from, this practice are described in the Data Gaps section of this report. This assessment has revealed the following RECs in connection with the Property:

- Historical operations at the site included a gasoline/fueling station associated with 1331 North Vermont Avenue (former site address) the current addresses now are 1329 and 1345 North Vermont Avenue. The gasoline station was identified in Sanborn maps, aerial photographs, and city directories, and appears to have operated at the site from at least 1929 to approximately 1960. Client provided reports indicated environmental investigations were conducted at the site in 1993 by Smith-Emery Company (SEC) and in 1994 by AMI ADINI & Associates, Inc. (AMI). The environmental investigations were completed to evaluate the former gasoline/fueling station and associated former underground storage tank (UST) basin. Based on these reports four USTs were previously located at the facility (three 1,000-gallon USTs and one 10,000-gallon gasoline UST). The USTs were used until approximately 1959-1960. As part of these investigations a limited magnetometer survey was conducted, the survey did not identify any metallic anomaly indicative of a UST. Petroleum hydrocarbon contaminated soil was observed in each of the investigations with the predominate area located closer to the right-of-way of Vermont Avenue. Groundwater was not encountered during any of the subsurface investigations. Based on the historical gasoline/fueling operations at the site, including residual impacts from gasoline, this finding is considered a REC. Stantec recommends conducting a subsurface investigation to evaluate the current subsurface conditions.

- As part of the site reconnaissance and research, several historical dry cleaning operations were identified to have operated adjacent and/or less than 100 feet south of the Property. Based on the nature of these historical operations and the proximity to the Property, the former dry cleaning operations are considered a REC.

The preceding summary is intended for informational purposes only. Reading of the full body of this report is recommended.

2.0 INTRODUCTION

The objective of this Phase I ESA was to perform appropriate inquiry into the past ownership and uses of the Property consistent with good commercial or customary practice as outlined by the ASTM in "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", Designation E1527-13. The purpose of this Phase I ESA was to identify, to the extent feasible, adverse environmental conditions including recognized environmental conditions ("RECs") of the Property.

The ASTM E1527-13 standard indicates that the purpose of the Phase I ESA is to identify RECs, including historical recognized environmental conditions ("HRECs"), and controlled recognized environmental conditions ("CRECs") that may exist at a property. The term "recognized environmental conditions" means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property:

(1) Due to any release to the environment;

(2) Under conditions indicative of a release to the environment; or

(3) Under conditions that pose a material threat of a future release to the environment.

ASTM defines a "HREC" as a REC that has occurred in connection with the property, but has been addressed to the satisfaction of the applicable regulatory authority and meets unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a HREC, the environmental professional must determine whether the past release is a REC when the current Phase I ESA is conducted (for example, if there has been a change in the regulations). If the EP considers the past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a REC.

ASTM defines a "CREC" as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), but with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

De minimis conditions are not RECs. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. As indicated, the term REC does not include de minimis conditions, which generally do not present a material risk to human health and would not likely be subject to enforcement action if brought to the attention of governmental agencies.

This ESA was conducted in accordance with our proposal to Kaiser Foundation Health Plan, Inc. (Kaiser) dated October 23, 2015 and Client's authorization on December 17, 2015. The scope of work conducted during this Phase I ESA consisted of a visual reconnaissance of the Property, interviews with key

individuals, and review of reasonably ascertainable documents. The scope of work did not include an assessment for environmental regulatory compliance of any facility ever operated at the Property (past or present), or sampling and analyzing of environmental media. Stantec was not contracted to perform any independent evaluation of the purchase or lease price of the Property and its relationship to current fair market value. The conclusions presented in this ESA report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 2.3.

ASTM E1527-13 notes that the availability of record information varies from source to source. The User or Environmental Professional is not obligated to identify, obtain, or review every possible source that might exist with respect to a property. Instead, ASTM identifies record information that is reasonably ascertainable from standard sources. "Reasonably ascertainable" means:

(1) Information that is publicly available;

(2) Information that is obtainable from its source within reasonable time and cost constraints; and

(3) Information that is practicably reviewable.

2.1 PROPERTY DESCRIPTION

The Property consists of four parcels identified as Assessor's Parcel Number (APN) 5543-014-014, 5543-014-015, 5543-013-009, and 5543-013-003 with addresses of 1321, 1329, 1345 North Vermont Avenue and 1328 North New Hampshire Avenue, respectively. The portions of the Property along North Vermont are commercial with current occupancy located on 1321 North Vermont of various dental practices. 1328 North New Hampshire is a residential dwelling, divided into two sub-units, one of which was occupied during the time of this Phase I ESA. Surrounding properties are a mix of commercial and residential properties. The Property buildings were constructed at various times and details pertaining to the history are included in Section 4.4 of this report. A Property location map is illustrated on Figure 1. A Property map illustrating the main features of the Property is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A.

Stantec understands that Kaiser has requested this Phase I ESA in support of acquisition of the Property.

2.2 SPECIAL TERMS, CONDITIONS, AND SIGNIFICANT ASSUMPTIONS

It is assumed that the purpose of this Phase I ESA is to qualify the User, in part, for landowner protection to Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) liability and to facilitate the purchase of the Property. The possible contaminants of concern considered in this assessment include those hazardous compounds listed under CERCLA and petroleum products. Other than adherence to Client specific scope of work requirements, there were no other special terms, conditions, or significant assumptions associated with the Phase I ESA.

2.3 EXCEPTIONS AND LIMITING CONDITIONS

This report documents work that was performed in accordance with generally accepted professional standards at the time and location in which the services were provided and given the schedule and budget constraints established by the client. No other representations, warranties or guarantees are made concerning the accuracy or completeness of the data or conclusions contained within this report, including no assurance that this work has uncovered all potential and actual liabilities and conditions associated with the identified property.

This report provides an evaluation of selected environmental conditions associated with the identified portion of the property that was assessed at the time the work was conducted and is based on information obtained by and/or provided to Stantec at that time. There are no assurances regarding the accuracy and completeness of this information. All information received from the client or third parties in the preparation of this report has been assumed by Stantec to be correct. Stantec assumes no responsibility for any deficiency or inaccuracy in information received from others.

If a service is not expressly indicated, do not assume it has been provided. If a matter is not addressed, do not assume that any determination has been made by Stantec in regards to it.

Conclusions made within this report consist of Stantec's professional opinion as of the time of the writing of this report, and are based solely on the scope of work described in the report, the limited data available and the results of the work. They are not a certification of the property's environmental condition.

The client did not provide or contract Stantec to provide recorded title records or search results for environmental liens or activity and use limitations encumbering the property or in connection with the Property. These data failures represent data gaps; however, these data gaps are not considered significant. Based on the information obtained during the course of this ESA and general knowledge of development at and near the Property, the absence of this information did not affect the ability of the Environmental Professionals to identify RECs, HRECs, CRECs, or de minimis conditions.

This report relates solely to the specific project for which Stantec was retained and the stated purpose for which this report was prepared and shall not be used or relied upon by the client identified herein for any variation or extension of this project, any other project or any other purpose.

This report has been prepared for the exclusive use of the client identified herein and any use of or reliance on this report by any third party is prohibited, except as may be consented to in writing by Stantec or as required by law. The provision of any such consent is at Stantec's sole and unfettered discretion and will only be authorized pursuant to the conditions of Stantec's standard form reliance letter. Stantec assumes no responsibility for losses, damages, liabilities or claims, howsoever arising, from third party use of this report.

Project Specific limiting conditions are provided in Section 2.2.

The locations of any utilities, buildings and structures, and property boundaries illustrated in or described within this report, if any, including pole lines, conduits, water mains, sewers and other surface or sub-surface utilities and structures are not guaranteed. Before starting work, the exact location of all such utilities and structures must be confirmed by the client and Stantec assumes no liability resulting from damage to such utilities and structures.

The conclusions are based on the site conditions encountered by Stantec at the time the work. Accordingly, additional studies and actions may be required. As the purpose of this report is to identify selected site conditions which may pose an environmental risk; the identification of non-environmental risks to structures or people on the site is beyond the scope of this assessment. The findings, observations, and conclusions expressed by Stantec in this report are not an opinion concerning the compliance of any past or present owner or operator of the site which is the subject of this report with any Federal, state, provincial or local law or regulation.

This report presents professional opinions and findings of a scientific and technical nature. It does not and shall not be construed to offer a legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations or policies of Federal, state, provincial or local governmental agencies. Issues raised by the report should be reviewed by client legal counsel.

Stantec specifically disclaims any responsibility to update the conclusions in this report if new or different information later becomes available or if the conditions or activities on the property subsequently change.

2.4 PERSONNEL QUALIFICATIONS

This Phase I ESA was conducted by, or under the supervision of, an individual that meets the ASTM definition of an Environmental Professional (EP). The credentials of the EP and other key Stantec personnel involved in conducting this Phase I ESA are provided in Appendix B.

3.0 USER-PROVIDED INFORMATION

ASTM E1527-13 describes responsibilities of the User to complete certain tasks in connection with the performance of "All Appropriate Inquiries" into the Property. The ASTM standard requires that the Environmental Professional request information from the User on the results of those tasks because that information can assist in the identification of RECs, CRECs, HRECs, or de minimis conditions in connection with the Property. Towards that end, Stantec requested that the User provide the following documents and information:

Description of Information	Provided (Yes / No)	Description and/or Key Findings
User Questionnaire/Interview	Yes	User provided site contact information, and prior reports that had been provided by the Owner
Environmental Liens or Activity Use Limitations	No	Not Provided
Previous Environmental Permits or Reports Provided by User	Yes	Subsurface Investigation reports related to the former gasoline/fueling station located on the property. See below for additional information and key findings of these reports.
Purpose of the Phase I ESA	Yes	In support of purchase of the Property.

3.1 USER PROVIDED REPORTS

The User provided prior environmental reports obtained from the Own of the Property. These provided reports indicated environmental investigations were conducted at the site in 1993 by Smith-Emery Company (SEC) and in 1994 by AMI ADINI & Associates, Inc. (AMI). The environmental investigations were conducted to evaluate the former gasoline/fueling station and associated former UST basin. Further information relating to these reports is detailed below.

<u>SEC – Environmental Sampling Report – March/April 1993</u>

In March 1993, SEC conducted an environmental investigation at 1345 North Vermont Avenue (former address 1331 North Vermont Avenue) to assess the area of the former gasoline/fueling station. As part of this investigation SEC (1) advanced five soil borings, (2) analyzed twelve soil samples for total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, and xylenes (BTEX), and lead, and (3) conducted a limited magnetometer survey within the former UST basin area.

Visual, olfactory, and photoionization detector (PID) evidence of petroleum hydrocarbon impact was reported by SEC during field activities in four of the five soil borings advanced within the approximate location of the historical gas station operations. Analytical results indicated the presence of TPHg and BTEX in multiple soil samples above applicable regulatory screening criteria. SEC indicated that the

contamination appears to have migrated vertically to approximately 22 feet below ground surface (bgs), in which a confining layer was observed. No groundwater was encountered during their investigation.

The magnetometer survey indicated anomalies indicative of a potential UST; SEC then hand augered within the area of the anomalies and did not encountered any USTs during the hand augering activities.

SEC recommended the site to be further characterized and a remedial feasibility plan to be prepared.

SEC – Site Characterization Report – November 29, 1993

In October/November 1993, SEC conducted a site characterization investigation at 1345 North Vermont Avenue to attempt to delineate the contamination identified during their previous investigation of the former gasoline/fueling station. As part of this investigation SEC (1) advanced nine soil borings (three via hollow stem auger, six via hand auger) and (2) analyzed 24 soil samples for TPHg and BTEX.

Visual, olfactory, and PID evidence of petroleum hydrocarbon impact was reported by SEC during field activities in five of the nine soil borings advanced. Analytical results indicated the presence of TPHg and BTEX in multiple soil samples above applicable regulatory screening criteria. SEC indicated the highest level of contaminated soil was observed just above the confining layer identified at approximately 22 feet bgs.

SEC recommended a remedial feasibility plan be prepared and indicated that the petroleum hydrocarbon impacts appear to be migrating off-site, possibly into the right-of-way of Vermont Avenue, and further investigation/activities may be necessary associated with the impacted area off-site.

AMI – Limited Subsurface Investigation Report – September 23, 1994

In August/September 1994, AMI conducted a limited subsurface investigation at 1345 North Vermont Avenue to obtain a second opinion on the SEC investigations conducted in 1993 of the former gasoline/fueling station. As part of this investigation AMI (1) advanced three soil borings and (2) analyzed 18 soil samples for TPHg and BTEX.

Visual, olfactory, and PID evidence of petroleum hydrocarbon impact was reported by AMI during field activities in each of the three soil borings advanced. Analytical results indicated the presence of TPHg and BTEX in multiple soil samples above applicable regulatory screening criteria. Contamination was reported to have migrated vertically to the confining layer at approximately 22 feet bgs and appears to be migrating off-site into the right-of-way of Vermont Avenue.

AMI concluded the presence of gasoline contamination in the soil and AMI confirmed their findings to correlate with SEC's previous findings. No recommendations were made within the limited subsurface investigation report.

Refer to Appendix C for a copy of the previous environmental investigation reports.

4.0 RECORDS REVIEW

The objective of consulting historical sources of information is to develop the history of the Property and surrounding area, in order to evaluate if past uses may have resulted in RECs. Physical setting records are evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Property. During the review of historical records, Stantec attempted to identify uses of the Property from the present to the first developed use of the Property. Stantec's research included the reasonably ascertainable and useful records described in this section.

4.1 PHYSICAL SETTING

A summary of the physical setting of the Property is provided in the table below with additional details in the following subsections

Topography:	Section 12, Township 1S, and Range 14W, Hollywood 7.5 Minute topographic quadrangle. General topographic gradient is south.
Soil/Bedrock Data:	Boring logs obtained from previous investigation on the Property stated that soils consist predominantly of alluvium deposits consisting of clay and silts until approximately 20 feet bgs. A stiff clay and/or silt stone (bedrock) is underlain the alluvium clay/silts at approximately 20 feet bgs.
Estimated Depth to Groundwater/ Estimated Direction of Gradient:	Groundwater within the immediate region is approximately 70 bgs (see Section 4.1.3). Groundwater flow direction for a nearby site was reported to be south.
Note: Site-specific groundwater direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.	

4.1.1 Property Topography and Surface Water Flow

The Property is located at an elevation of approximately 376 feet above mean sea level (ft msl). Based on the topography and existing surface conditions, general surface water flow is to the south.

4.1.2 Regional and Property Geology

The Property is located in the Hollywood subbasin, a northeastern Coastal Plain alluvial deposit exists within this subbasin, overlain basement rocks from the Santa Monica Mountains (DWR 1961).

Boring logs obtained from previous investigation on the Property stated that soils consist predominantly of alluvium deposits consisting of clay and silts until approximately 20 feet below ground surface. A stiff

clay and/or silt stone (bedrock) confining layer is underlain the alluvium clay/silts at approximately 20-22 feet below ground surface.

4.1.3 Regional and Property Hydrogeology

According the Department of Water Resources' (DWR) Bulletin 118, the Property lies within the Hollywood Subbasin which occupies a 16 square mile area of the northeastern Coastal Plain. The Hollywood Subbasin is bounded on the north by Santa Monica Mountains and the Hollywood fault, on the east by the Elysian Hills, on the west by the Inglewood fault zone, and on the south by La Brea High, formed by an anticline that brings impermeable rocks close to the surface. Surface drainage from the site flows in a southerly direction towards Ballona Creek, where it then flows to the west and to the Pacific Ocean.

Groundwater in the Hollywood Subbasin is mainly produced from Pleistocene age alluvial sands and gravels. Unconfined groundwater conditions exist in the shallow aquifers in the northern and eastern portion of the subbasin. In the deeper aquifers and in the remainder of the subbasin, groundwater is confined, and clay members separate the aquifers over much of this subbasin. (DWR 1961).

Prior investigation conducted on the Property did not encounter groundwater at the site; however, review of data and from the Regional Water Quality Control Board's (RWQCB's) Geotracker Database; according to the most recent groundwater monitoring report for the site located at 1630 North Vermont Avenue (Shell/Tesoro Former Arco#5025), approximately ¼ of a mile north of the property, water was initially encountered as shallow as 13 feet bgs, with an average static depth to water across the site from 15-40 feet bgs. Groundwater elevation appears to vary significantly, as other regional reports indicate groundwater to be much deeper, and encountered at an approximate depth of 70 feet bgs.

4.2 FEDERAL, STATE AND TRIBAL ENVIRONMENTAL RECORDS

A regulatory agency database search report was obtained from Environmental Data Resources Inc. (EDR), a third-party environmental database search firm. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in Appendix D.

Stantec evaluated the information listed within the database relative to potential impact to the Property, assessing the potential for impacts based in part on the physical setting. As part of this process, inferences have been made regarding the likely groundwater flow direction at or near the Property. As described in 4.1.3, the inferred groundwater flow is to the south. Observations about the Property and surrounding properties made during the Property reconnaissance are provided in more detail in section 5.

4.2.1 Listings for Property

The Property was identified, as well as, the former addresses of the Property were identified in the following environmental databases:

- CA HAZNET: Moncada's Dental Office, 1321 North Vermont Avenue (inorganic solid waste disposal)
- No records were obtained for violations relating to the dental disposal practices. In addition, the disposal per the database review indicated that no waste disposal was on record. EDR Historical Auto Stations: The former address associated with the Property (1331 North Vermont Avenue) was listed in EDR's historical Auto Stations – Miayes Elias

Historical operations at the site included a gasoline/fueling station associated with 1331 North Vermont Avenue (former site address) the current addresses now are 1329 and 1345 North Vermont Avenue. The gasoline station was identified in Sanborn maps, aerial photographs, and city directories, and appears to have operated at the site from at least 1929 to approximately 1960. No environmental records were obtained through database research associated with Geotracker, DTSC's Envirostor, or LAFD. Historic use of the Property for automotive fueling is considered a REC.

Listings for Nearby Sites with Potential to Impact Property
Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions to pose a REC, CREC, or HREC for the Property.

Based on this evaluation, the following individual facilities were identified as the most likely potential sources of impact to the Property. The basis for why each of the following listed databases creates a REC for the Property is also provided.

Listed Facility Name/Address	Database Listing	Distance/Direction from Property	REC? (YES / NO)
Children's Hospital of Los Angeles (CHLA); 4650 Sunset Boulevard	RCRA-LQG CA ENVIRONSTOR CA HIST UST CA FID UST FINDS CA EMI NY MANIFEST WI MANIFEST LA Co. Site Mitigation ECHO CA UST CA SWEEPS UST	0.086 miles/ 454 feet Northwest Equal/Higher elevation	No
This facility was reportedly a large quantity generator of hazardous wastes including non-listed ignitable and corrosive wastes, solvents, and other petroleum related wastes. No violations were reported. The facility reportedly maintained USTs (year unknown). Per CA FID UST database, the UST status was active. No further information was provided within the environmental database research. Due to lack of reported release or violation, this is not considered a REC.			
Fook Mar 1309 North Vermont Avenue	EDR Historical Cleaners	0.008 miles/ 44 feet (adjacent)	Yes

Listed Facility Name/Address	Database Listing	Distance/Direction from Property	REC? (YES / NO)
		South Lower elevation	
The facility formerly operated as a dry cleaning facility from at least 1933 to at least 1942 (based on city directories). No further information was provided within the environmental data base research. Based on the historical operations and adjacent location to the Property this listing is considered a REC for the Property.			
Proulx J H 1307 North Vermont Avenue	EDR Historical Cleaners	0.011 miles/ 57 feet South Lower elevation	Yes
The facility formerly operated as a dry cleaning facility from at least 1942 (based on city directories). No further information was provided within the environmental data base research. Based on the historical operations and proximity to the Property this listing is considered a REC for the Property.			

The remaining listings in the database search report provided in Appendix D do not constitute a potential REC for the Property.

4.3 LOCAL/REGIONAL ENVIRONMENTAL RECORDS

Stantec checked the following sources to obtain information pertaining to Property use and/or indications of RECs in connection with the Property: California Department of Toxic Substances Control (DTSC) - Chatsworth

Agency Name Contact Information	Finding
Glenn Castillo DTSC Chatsworth 818-717-6521 Response Date: February 23, 2016	DTSC Chatsworth reported that they did not find any records for the Property or immediate adjacent properties listed.

4.3.1 California DTSC - Cypress

Agency Name Contact Information	Finding
Jone Barrio DTSC Cypress 818-717-6521 Response Date: February 22, 2016	DTSC Chatsworth reported that they did not find any records for the Property or immediate adjacent properties listed.

4.3.2 County of Los Angeles – Department of Public Works (LADPW)

Agency Name, Contact Information	Findings
LADPW www.ladpw.org/epd/cleanla/OpenFileReview.aspx	The online research stated that LADPW does not have any records (related to industrial waste/underground storage tanks/stormwater) for the Property.

4.3.3 Local Building and/or Planning Department Records

Agency Name, Contact Information	Findings
Los Angeles Building and Planning Department Van Nuys, CA	Stantec's review of the permits for the Property indicated no issues of environmental concern.

4.3.4 LAFD UST Division

Agency Name, Contact Information	Findings
LAFD UST Division Lafd.usttestnotify@lacity.org Response date: March 1, 2016	LAFD UST Division reported that they did not find records for the Property's current address or adjacent properties listed.

4.3.5 LAFD Hazardous Material Records

Agency Name, Contact Information	Findings
LAFD Hazardous Materials Records Lafd.rfi@lacity.org Response date: N/A	As of the time of this report, LAFD had not responded to Stantec's FOIA request.

4.3.6 Regional Water Quality Control Board – Los Angeles (RWQCB-LA)

Agency Name, Contact Information	Findings
Lucinda Flores/ Laura Gallardo RWQCB - LA Rb4-publicrecords@waterboards.ca.gov Response Date: March 1, 2016	RWQCB-LA reported that they did not maintain any records associated with the Property or former addresses associated with the Property. The RWQCB's GeoTracker database was also accessed and the Property current and former addresses did not indicate concerns. In addition, no other "open" sites were identified on Geotracker associated with adjacent properties.

4.3.7 Public Health Investigation (PHI)

Agency Name, Contact Information	Findings
PHI phicor@ph.lacounty.gov Response Date: March 4, 2016	PHI reported that they did not find any records for the Property.

4.4 HISTORICAL RECORDS REVIEW

4.4.1 Land Title Records/Deeds

Land title records and deeds were not provided by the User, and public records were not searched by Stantec.

4.4.2 Aerial Photographs

Stantec reviewed historical aerial photographs provided by EDR. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the

photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The following table summarizes Stantec's observations of the reviewed historical aerial photographs.

Year	Scale	Observations, Property and Adjoining Properties
1923	1"=500'	The Property has two residential buildings on the property. Smaller building possible commercial and residential are developed on adjacent properties surrounding the Property.
1928	1"=500'	A small building structure appears in the central portion of the Property. Based on other historical research this building structure is associated with the onsite automotive fueling at the Property's former address (1331 North Vermont Avenue). The property to the east is developed as a Hospital. (Hollywood Presbyterian Hospital)
1938	1"=500'	No significant changes in the Property since the 1928 aerial.
1948	1"=500'	Commercial building appears along the northern portion of the Property.
1952	1"=500'	Commercial building appears along the southern portion of the Property where one of the former residential buildings was observed during previous aerials. 5 total buildings are observed within this aerial of the Property.
1954	1"=500'	Commercial building addition appears along the southern central portion of the Property. 5 total buildings are observed within this aerial on the Property.
1964	1"=500'	Small gasoline fueling station is not present within this aerial. A larger parking area is observed within the area of the former fueling station. Newer commercial building appears in the central portion of the Property. 5 total buildings are observed within this aerial on the Property.
1970	1"=500'	No significant changes in the Property or the vicinity of the Property since the 1964 aerial photograph.
1977	1"=500'	No significant changes in the Property or the vicinity of the Property since the 1970 aerial photograph.
1983	1"=500'	No significant changes in the Property or the vicinity of the Property since the 1977 aerial photograph.
1994	1"=500'	No significant changes in the Property or the vicinity of the Property since the 1983 aerial photograph.
2002	1"=500'	No significant changes in the Property or the vicinity of the Property since the 1994 aerial photograph.
2005	1"=500'	No significant changes in the Property or the vicinity of the Property since the 2002 aerial photograph.
2009	1"=500'	No significant changes in the Property or the vicinity of the Property since the 2005 aerial photograph.
2010	1"=500'	No significant changes in the Property or the vicinity of the Property since the 2009 aerial photograph.

Year	Scale	Observations, Property and Adjoining Properties
2012	1"=500'	No significant changes in the Property or the vicinity of the Property since the 2010 aerial photograph.

Name of aerial photograph source: The EDR Aerial Photo Decade Package – Appendix E

4.4.3 City Directories

Stantec retained a third party to research available reverse city directories for the Property, in approximately five year intervals. The following is a general summary of Stantec's review of the city directory listings:

Subject/Adjoining Property	Year	Listed Occupants
Property – 1321 North Vermont Avenue	1924-2013	Various medical and dental practices
Property – 1329 North Vermont Avenue	1924-1976	Various commercial/office listings
Property – 1345 North Vermont Avenue	1924-2006	Various commercial/office listings
Property – 1328 North New Hampshire	1924-2006	Various residential listings
Property (Former address) – 1331 North Vermont Avenue	1942	Hooper Raymond M Gas Station
	1937	Mc Call Clarence H Laura Gas Station
	1933	Westphal Corinne Gas Station
	1929	Miays Elias Nabiha Gas Station
Property (former address) – 1317 North Vermont Avenue	NA	No listing in the directories, LADBS listed 1317 North Vermont as a former address, later to become 1321 North Vermont in 1952.
Adjoining Properties	1951 - 2013	Various commercial and medical listings. Some commercial included former dry cleaning operations. (see Section 4.2.2 for RECs identified with these former dry cleaners)

Name of city directories and source: The EDR City Directory Abstract – Appendix E

4.4.4 Historical Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide information on the history of prior land use are useful in assessing whether there may be potential environmental contamination on or near the Property. These maps, which have been periodically updated since the late 19th century, often provide valuable insight into historical Property uses.

Stantec contracted with a third party to search for copies of historical fire insurance maps covering the subject and immediately adjacent properties. The Sanborn® Map Search Report is presented in Appendix E.

Stantec contracted with a third party to search for copies of historical fire insurance maps covering the Property and immediately adjacent properties. No maps were available for the Property or adjacent properties. The Sanborn® Map Search Report is presented in Appendix E.

Year	Observations, Property and Adjoining Properties
1919	The Property is included on the map and one residential building structure is present on the Property. The surrounding areas appear to be developed with single family residential structures, along with a hospital (Children's Hospital) to the northeast.
1950	The Property is included on the map and is with two residential building structures, a gas station along the central portion of the Property and a doctor's office along the northern portion. The surrounding areas appear to be developed with a mix of commercial/medical and residential structures.
1955	The Property is include on the map and identifies two new commercial building structures along the southern portion of the Property. The gas station and doctor's office are still present on the Property, along with the residential building off of New Hampshire. The surrounding areas appear to be similar to the 1950 Sanborn map.
1957	No significant changes from the 1955 map are visible.
1960	The Property is included on the map and identifies one new commercial building structure along the central portion of the Property. No other significant changes from the 1957 map are visible.
1961	No significant changes from the 1960 map are visible.
1962	The gas station and associated structures appear to have been removed and a parking lot is in place of this along the central portion of the Property. No other significant changes from the 1961 map are visible.
1966	No significant changes from the 1962 map are visible.
1968	No significant changes from the 1966 map are visible.
1969	No significant changes from the 1968 map are visible.
1970	No significant changes from the 1969 map are visible.

4.4.5 Historical Topographic Maps

Stantec reviewed historical topographic maps to help identify past Property usage and areas of potential environmental concern.

The United States Geological Survey (USGS) 7.5-Minute Topographic Map of Hollywood Quadrangle (1:24,000) was reviewed to identify local and regional physiographic features in the vicinity of the Property (see Figure 1). Based on our review of this data, the Property is located at an elevation of approximately 376 ft msl and the general topographic gradient is to the north.

No RECs were noted during our review of the topographic maps. Copies of the historical maps are provided in Appendix E. The following table summarizes the maps reviewed and our observations.

Year	Scale	Observations, Property and Adjoining Properties
1894	1:62,500	No details regarding specific development of the Property were observed. No structures or indicators of potential RECs for the Property were depicted on the maps.
1896	1:62,500	
1898	1:62,500	
1900	1:62,500	
1902	1:62,500	
1921	1:62,500	
1928	1:24,000	
1953	1:24,000	
1966	1:24,000	
1972	1:24,000	
1981	1:24,000	
1991	1:24,000	
2012	1:24,000	

Name of maps and source: The EDR Historical Topographic Map Report – Appendix E

4.4.6 Other Historical Sources

No other historical sources were researched.

5.0 SITE RECONNAISSANCE

A visit to the Property and its vicinity was conducted by Mr. Thomas Szocinski on February 26, 2016. Stantec was provided access to Property by Mr. Todd Pratt, of Chandler Pratt & Partners. Stantec was accompanied by Mr. Pratt during the Property visit. Figure 2 provides information about the Property and adjoining properties and includes the location of potential areas of environmental concern identified by Stantec. Photographs collected during the Property visit are included in Appendix A.

5.1 SITE RECONNAISSANCE METHODOLOGY

The Site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions that may indicate the presence of a REC. The Property reconnaissance was conducted on foot and Stantec utilized the following methodology to observe the Property:

- Traverse the outer Property boundary.
- Traverse transects across the Property.
- Traverse the periphery of all structures on the Property.
- Visually observe accessible interior areas expected to be used by occupants or the public, maintenance and repair areas, utility areas, and a representative sample of occupied spaces.

Weather conditions during the visit to the Property were clear and sunny. There were no weather related Property access restrictions encountered during the reconnaissance visit.

5.2 GENERAL DESCRIPTION

Property and Area Description:	The Property is located in a dense urban development. Surrounding properties include combination of commercial/medical and residential properties.
Property Operations:	Dental practices, vacant restaurant, parking area, and residential.
Structures, Roads, Other Improvements:	The Property consists of a five building structures (two commercial buildings used for dental practices, one vacant restaurant, one residential building and an associated garage.) The Property also has two large asphalt parking areas, a garage associated with the residential, and a storage building associated with the former restaurant. • **1321 North Vermont Avenue** – two building structures. -Building 1 a commercial building, approximately 7,349 square feet and was built in 1933 with renovations through 1955. -Building 2 a commercial building, approximately 1,730 square feet and was built in 1960. • **1345 North Vermont Avenue** – one commercial building,

	approximately 3,847 square feet and was built in 1948 with renovations through 1975. • **1329 North Vermont Avenue** – No building structures are present at this address. • **1328 North New Hampshire Avenue** – one residential building, approximately 1,787 square feet and was built in 1925. In addition, a small detached garage, approximately 800 square feet is located at this address.
Property Size (acres):	1.35 acres (4 parcels total)
Estimated % of Property Covered by Buildings and/or Pavement:	90%
Observed Current Property Use/Operations:	• **1321 North Vermont Avenue** – Multiple dental practices • **1345 North Vermont Avenue** – Former restaurant, vacant upon site visit. • **1329 North Vermont Avenue** – No building structures are present at this address. Parking lot. • **1328 North New Hampshire Avenue** – Residential building, divided into two units. Front unit was occupied and back unit was vacant upon site visit.
Observed Evidence of Past Property Use(s):	None.
Sewage Disposal Method (and age):	Los Angeles Department of Public Works - Sanitation
Potable Water Source:	Los Angeles Department of Water and Power
Electric Utility:	Los Angeles Department of Water and Power

5.3 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

The following table summarizes Stantec's observations during the Property reconnaissance.

Observations	**Description/Location**
Hazardous Substances and Petroleum Products as Defined by CERCLA 42 U.S.C. § 9601(14):	None observed.
Drums (≥ 5 gallons):	None observed.
Strong, Pungent, or Noxious Odors:	None detected.
Pools of Liquid:	None observed.

Observations	Description/Location
Unidentified Substance Containers:	None observed.
PCB-Containing Equipment:	None observed.
Other Observed Evidence of Hazardous Substances or Petroleum Products:	None observed.

5.4 INTERIOR OBSERVATIONS

Stantec made the following observations during the Property reconnaissance of the building interiors at the Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
Heating/Cooling Method:	Heating and cooling methods appeared to be provided by Heating, ventilation, and air condition units. No previous methods were reported or identified.
Surface Stains or Corrosion:	No major surface stains or corrosion observed.
Floor Drains and Sumps:	None observed.
Other Interior Observations:	None observed.

5.5 EXTERIOR OBSERVATIONS

Stantec made the following observations during the site reconnaissance of exterior areas of the Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
On-site Pits, Ponds, or Lagoons:	None observed.
Stained Soil or Pavement:	No major staining observed.
Stressed Vegetation:	None observed.
Waste Streams and Waste Collection Areas:	None observed.
Solid Waste Disposal:	No areas indicative of solid waste disposal were observed.
Potential Areas of Fill Placement:	No mounds, piles or depressions suggesting the placement of fill material were observed on the Property.
Wastewater:	No exterior wastewater discharge was observed.
Stormwater:	None observed.
Wells:	No wells were observed.

Observations	Description
Septic Systems:	No visible evidence of the existence of a septic system was observed.
Other Exterior Observations:	None observed.

5.6 UNDERGROUND STORAGE TANKS/STRUCTURES

Existing USTs:	No visible evidence (fill pipes, vent pipes, dispensers, surface patches), which would indicate the presence of USTs, was discovered during the site reconnaissance.
Former USTs:	Three 1,000-gallon and one 10,000-gallon gasoline USTs were formerly located on the property.
Other Underground Structures:	None observed.

5.7 ABOVEGROUND STORAGE TANKS

Existing ASTs:	Ne existing ASTs were observed at the Property during this Phase I ESA.
Former ASTs:	No visible evidence of the former presence of ASTs was discovered during this Phase I ESA.

5.8 ADJOINING PROPERTIES

5.8.1 Current Uses of Adjoining Properties

As viewed from the Property and/or from public rights-of-way, Stantec made the following observations about use and activities on adjoining properties:

NORTH	1401 North Vermont Avenue, Travelodge Hollywood Hotel
SOUTH	1307 North Vermont Avenue, commercial multi-tenant building, and 1324 North New Hampshire, residential apartment building
EAST	1300 North Vermont Ave, Hollywood Presbyterian Medical Center
WEST	1329 North New Hampshire, residential

5.8.2 Observed Evidence of Past Uses of Adjoining Properties

Observations of adjoining properties providing indications of past use and activities, if any, are described below.

NORTH	None observed.
SOUTH	None observed.
EAST	None observed.
WEST	None observed.

5.8.3 Pits, Ponds or Lagoons on Adjoining Properties

As viewed from the Property and/or from public rights-of-way, Stantec made the following observations about the presence of pits, ponds and lagoons on adjoining properties:

NORTH	None observed.
SOUTH	None observed.
EAST	None observed.
WEST	None observed.

5.9 OBSERVED PHYSICAL SETTING

Topography of the Property and Surrounding Area:	The Property and surrounding areas have a general topographic gradient to the south.

6.0 INTERVIEWS

Stantec conducted interviews with the following individuals:

Name and contact information	Relationship to Property	Key findings:
Not available	Not available	Not available

7.0 EVALUATION

This section provides a summary overview of or Findings, Opinions, and Conclusions.

7.1 FINDINGS AND OPINIONS

Information gathered from interviews, reviews of existing data review, and a property inspection was evaluated to determine if RECs are present in connection with the Property. Based on this information, Stantec made the following findings and developed the following opinions.

Finding 1: A portion of the Property (1321 North Vermont Avenue) was listed on the CA HAZNET database, Moncada's Dental Office, for inorganic solid waste disposal.

Opinion 1: No records were obtained for violations relating to the dental disposal practices. In addition, the disposal per the database review indicated that no waste disposal was on record. During site reconnaissance activities no evidence was observed for improper storage of inorganic solid waste; and therefore this is not considered a REC.

It should be noted, bio-hazard waste containers were observed stored incorrectly outside of one of the dental suites (refer to photolog). This improper storage does not necessitate a REC but should be appropriately disposed;

Finding 2: Historical operations at the site included a gasoline/fueling station associated with 1331 North Vermont Avenue (former site address) the current addresses now are 1329 and 1345 North Vermont Avenue. The gasoline station was identified in Sanborn maps, aerial photographs, and city directories, and appears to have operated at the site from at least 1929 to approximately 1960. Environmental investigations were conducted at the site in 1993 by SEC and in 1994 by AMI to evaluate the former gasoline/fueling station and the associated former UST basin. Based on these reports four USTs were located at the facility (three 1,000-gallon USTs and one 10,000-gallon gasoline UST). The USTs were used until approximately 1959-1960. As part of these investigations a limited magnetometer survey was conducted to evaluate the presence of the former USTs. The survey did not identify any metallic anomaly indicative of a UST. Petroleum hydrocarbon contaminated soil was observed in each of the investigations with the predominate area

located closer to the right-of-way of Vermont Avenue. Groundwater was not encountered during any of the subsurface investigations.

Opinion 2: Based on the historical gasoline/fueling operations at the site including reported impacts that may extend beyond site boundaries, this finding is considered a REC. Stantec recommends conducting an investigation to evaluate the current subsurface conditions.

Finding 3: As part of the site reconnaissance and research, several historical dry cleaning operations were identified to have operated less than 100 feet south of the Property.

Opinion 3: Based on the nature of these historical operations and the proximity (adjacent) to the Property, the several former dry cleaning operations are considered a REC.

7.2 DATA GAPS

The federal AAI rule [40 CFR 312.10(a)] and ASTM E1527-13 identify a "data gap" as the lack or inability to obtain information required by the standards and practices of the rule despite good faith efforts by the Environmental Professional or the User.

Any data gaps resulting from the Phase I ESA described in this report are listed and discussed below.

Gap	Discussion
Deletions or Exceptions From Scope of Work Referenced in Section 1.4:	None
Weather-Related Restrictions To Site Reconnaissance:	None
Facility Access Restrictions to Site Reconnaissance:	During the site walk, Stantec was not granted access to the following buildings or portions of the buildings. Multiple dental suites located at 1321 North Vermont Avenue Residential garage located at 1328 North New Hampshire Avenue Crawl space beneath residential building located at 1328 North New Hampshire Avenue
Other Site Reconnaissance Restrictions:	None
Data Gaps From Environmental Records Review:	As of the time of completion of this report, Stantec was unable to review records from the LARWQCB.
Data Gaps From Historical Records Review:	None.
Data Gaps From Interviews:	As of the time of completion of this report, Stantec was unable to interview the owner or owner representative.
Other Data Gaps:	None

7.3 CONCLUSIONS

Stantec has completed a Phase I ESA report of the property located at 1331, 1329, 1345 North Vermont, and 1328 North New Hampshire Avenues (the "Property"), on behalf of Kaiser Foundation Health Plan, Inc. (the "Client"). The work was performed according to Stantec's proposal and terms and conditions dated February 10, 2016 and accepted by Client on February 17, 2016. Kaiser Foundation Health Plan, Inc. (the "User") has been designated as the User of this report. Stantec understands that Kaiser intends to purchase the Property.

The Phase I ESA was conducted in conformance with the requirements of ASTM Designation E 1527-13, except as may have been modified by the scope of work, and terms and conditions, requested by the Client. Any exceptions to, or deletions from, the ASTM practice are described in Section 2.3.

The Property consists of four parcels identified as Assessor's Parcel Number (APN) 5543-014-014, 5543-014-015, 5543-013-009, and 5543-013-003 with addresses of 1321, 1329, 1345 North Vermont Avenue and 1328 North New Hampshire Avenue, respectively. The portions of the Property along North Vermont are commercial with current occupancy located on 1321 North Vermont of various dental practices. 1328 North New Hampshire is a residential dwelling, divided into two sub-units, one of which was occupied during the time of this Phase I ESA. Surrounding properties are a mix of commercial and residential properties.

The following items of note were identified during this ESA:

- The Property is located along North Vermont Avenue. The metro transport subway runs directly beneath Vermont Avenue. Due to the close proximity of the metro transport to the Property, it could pose a concern to the Property with regards to vibration and noise. This is considered as an item of note and not a REC.

- A portion of the Property (1321 North Vermont Avenue) was listed on the CA HAZNET database, Moncada's Dental Office, for inorganic solid waste disposal. No records were obtained for violations relating to the dental disposal practices. In addition, the disposal per the database review indicated that no waste disposal was on record. During site reconnaissance activities no evidence was observed for improper storage of inorganic solid waste; and therefore this is not considered a REC.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 of the Property. Any exceptions to, or deletions from, this practice are described in the Data Gaps section of this report. This assessment has revealed the following RECs in connection with the Property:

- Historical operations at the site included a gasoline/fueling station associated with 1331 North Vermont Avenue (former site address) the current addresses now are 1329 and 1345 North Vermont Avenue. The gasoline station was identified in Sanborn maps, aerial photographs, and city directories, and appears to have operated at the site from at least 1929 to approximately 1960. Client provided reports indicated environmental investigations were conducted at the site in 1993

by Smith-Emery Company (SEC) and in 1994 by AMI ADINI & Associates, Inc. (AMI). The environmental investigations were completed to evaluate the former gasoline/fueling station and associated former underground storage tank (UST) basin. Based on these reports four USTs were previously located at the facility (three 1,000-gallon USTs and one 10,000-gallon gasoline UST). The USTs were used until approximately 1959-1960. As part of these investigations a limited magnetometer survey was conducted, the survey did not identify any metallic anomaly indicative of a UST. Petroleum hydrocarbon contaminated soil was observed in each of the investigations with the predominate area located closer to the right-of-way of Vermont Avenue. Groundwater was not encountered during any of the subsurface investigations. Based on the historical gasoline/fueling operations at the site, including residual impacts from gasoline, this finding is considered a REC. Stantec recommends conducting a subsurface investigation to evaluate the current subsurface conditions.

- As part of the site reconnaissance and research, several historical dry cleaning operations were identified to have operated adjacent and/or less than 100 feet south of the Property. Based on the nature of these historical operations and the proximity to the Property, the former dry cleaning operations are considered a REC.

8.0 NON-SCOPE CONSIDERATIONS

No ASTM E1527-13 non-scope services were performed as part of this Phase I ESA with the following exceptions:

8.1 LEAD-BASED PAINT

Concern for lead-based paint (LBP) is primarily related to residential structures. The EPA's Final Rule on Disclosure of Lead-Based Paint in Housing (40 CFR Part 745) defines LBP as paint or other surface coatings that contain lead equal to or in excess of 1.0 milligram per square centimeter or 0.5 percent by weight.

The risk of lead toxicity in LBP varies based upon the condition of the paint and the year of its application. The U.S. Department of Housing and Urban Development (HUD) has identified the following risk factors:

The age of the dwelling as follows: maximum risk is from paint applied before 1950.

There is severe risk from paint applied before 1960.

There is moderate risk from deteriorated paint applied before 1970.

There is slight risk from the paint that is intact but applied before 1977.

The condition of the painted surfaces.

The presence of children and certain types of households in the building.

Previously reported cases of lead poisoning in the building or area.

Construction Date	Residential (Yes/No)	Observed Condition of Painted Surfaces
Variable	Yes (1328 North New Hampshire) No (1321, 1329, and 1345 North Vermont)	Due to the age of the building, further assessment of LBP issues does appear to be warranted in support of redevelopment.

8.2 ASBESTOS

Asbestos can be found in many applications, including sprayed-on or blanket-type insulation, pipe wraps, mastics, floor and ceiling tiles, wallboard, mortar, roofing materials, and a variety of other materials commonly used in construction. The greatest asbestos-related human health risks are associated with friable asbestos, which is ACM that can be reduced to powder by hand pressure. Friable asbestos can become airborne and be inhaled, and has been associated with specific types of respiratory disease. The manufacturing and use of asbestos in most building products was curtailed during the late 1970s.

Stantec makes no warranty as to the possible existence or absence of inaccessible materials or to their evaluation with respect to asbestos content. Samples of suspect ACM should be collected for laboratory analysis of asbestos prior to any renovation or building demolition, in order to determine the need for compliance with EPA National Emission Standard for Hazardous Air Pollutants (NESHAP) regulations.

8.3 INDOOR AIR QUALITY

No issues regarding air quality were noted.

8.4 RADON

Radon is a colorless, tasteless radioactive gas with an EPA-specified action level of 4.0 PicoCuries per liter of air (pCi/L) for residential properties. Radon gas has a very short half-life of 3.8 days. The health risk potential of radon is primarily associated with its rate of accumulation within confined areas near or in the ground, such as basements, where vapors can readily transfer to indoor air from the ground through foundation cracks or other pathways. Large, adequately ventilated rooms generally present limited risk for radon exposure. The radon concentrations in buildings and homes depend on many factors, including soil types, temperature, barometric pressure, and building construction (EPA, 1993).

Stantec reviewed regional data published by the EPA (http://www.epa.gov/radon/zonemap.html) on average indoor radon concentrations in the vicinity of the Property.

EPA Radon Zones (w/Average Measured Indoor Radon concentrations)		
Zone 1 – High (>4.0 pCi/L)	Zone 2 – Moderate (2 to 4 pCi/L)	Zone 3 – Low (<2 pCi/L)
Normally-occupied sub grade areas (i.e. basement apartments, offices, stores, etc.)?		
No subgrade areas occupied by personnel were observed during the site visit.		

The property is located Los Angeles County, which is entirely in Zone 2 and is considered to have moderate potential for radon. To determine Property-specific radon levels a radon survey would have to be conducted. However, because the Property does not have any occupied subgrade areas; further investigation of indoor radon issues does not appear to be warranted.

8.5 FLOOD ZONES

According to the Physical Setting summary portion of the EDR report, the Property is not located within a 500-year or 100-year flood plain.

8.6 WETLANDS

Wetlands cannot be definitively identified through visual observation alone. Defensible wetland delineations require taxonomic classification of property vegetation, an investigation into the surface and subsurface hydrology of the property, and identification of hydric soils. This level of delineation is outside of the scope or work for this assessment. However, Stantec reviewed US Fish and Wildlife Service National Wetland Inventory maps and readily available USDA Soil Survey reports.

Potential Wetlands Observed on Property: None Observed

New Development Planned for Property: Yes

Wetland Inventory Maps

Map Quadrangle Name	Hollywood
Wetlands Depicted on Property:	None depicted
Wetlands Depicted on Adjoining Properties	None depicted

Soil Survey Data

Soil Survey Report Name and Date:	STATSGO: State Soil Geographic Database
Hydric Soils Depicted in Property	None Depicted

Vicinity:	

Based on the above documents and the field observations, a wetland do not appear to be present at the Property.

8.7 ENDANGERED SPECIES

Stantec personnel researched threatened and endangered species using the online searchable California Natural Diversity Database at http://www.dfg.ca.gov/bdb/html/cnddb.html. The California Natural Diversity Database (CNDDB) is a program that inventories the status and locations of rare plants and animals in California. According to the information listed for the Hollywood 7.5 Minute topographic quadrangle, the following rare plants and animals and their status were identified:

CNDDB Listing

SCINAME	COMNAME	FEDSTATUS	CALSTATUS	DEGSTATUS	RAREPLANT RANK
Anaxyrus californicus	arroyo toad	Endangered	None	SSC	-
Ardea Herodias	Great Blue Heron	None	None	-	-

SCINAME	COMNAME	FEDSTATUS	CALSTATUS	DEGSTATUS	RAREPLANT RANK
	lily				
Calochortus plummerae	Plummer's mariposa-lily	None	None	-	4.2

Inasmuch as the Project and Project area are developed, endangered species are not anticipated to be an issue for use of the Project.

SCINAME = *Scientific Name*
COMNAME = *Common Name*
FEDSTATUS = Federal Listing Status: United States legal status under the Federal Endangered Species Act, Birds of Conservation Concern (BCC)
DFGSTATUS = Indicates whether the species is a California Department of Fish and Game Species of Concern (SC), Watch List (WL). This applies to animals only. For the plant equivalent, see CNPSLIST. FP = Fully Protected, SSC = Species of Special Concern.
CALSTATUS = *California State listing status:* State of California legal status
RAREPLANTRANK = Generally, 1B = Plants rare, threatened, or endangered in California and elsewhere.

8.8 PESTICIDES

No documentation of commercial on-site use of agricultural chemicals (e.g., pesticides, insecticides, fertilizers or herbicides) was discovered during this ESA. Stantec did not identify any apparent agricultural chemical processing areas, such as crop dusting airfields, bulk mixing areas; or repacking, transfer, or agricultural chemical storage areas in the aerial photographs that were reviewed during this ESA.

8.9 DRY-CLEANING OPERATIONS

No existing dry-cleaning operations were observed at the Property. However, historical dry cleaning operations were identified on adjacent properties. This listing was identified as an REC. Additional information is provided in Section 7.1, Findings and Opinions.

8.10 KAISER TRACKED MATERIALS

The following table is a summary of observations regarding Kaiser tracked materials:

Currently Tracked Materials	On-Site Risk	Comment
Asbestos	Potential	The presence or absence of asbestos can only be confirmed with the implementation of a sampling and analytical testing program. No asbestos sampling was conducted as part of this assessment.
Chromium	Unknown	None reported or observed.
Freon	Unknown	None reported or observed.
Lead Paint	Potential	The presence or absence of lead paint can only be confirmed with the implementation of a sampling and analytical testing program. No sampling for lead paint was conducted by as part of this assessment. However, based on the age of the building structures there is a potential for lead based paint.
Lead Shielding	Potential	Based on the use of 1321 North Vermont as dental practices there is a potential for lead shielding associated with x-ray equipment.
Mercury	Potential	Thermostats and fluorescent lighting features were observed on the Property.
PCB Lighting Ballasts	Potential	Several fluorescent lighting ballasts are present on the Property.
PCB Caulking	Potential	Based on the age of the buildings and having been constructed or renovated between 1950-1980, there is a potential for PCBs within the caulk.
Soil Remediation (i.e., lead and other non-tank related materials)	Potential	Previous investigation conducted at the former gasoline/fueling station portion of the Property indicated the presence of petroleum hydrocarbon impacted soil.
Underground Storage Tanks	Potential	Former USTs (three 1,000-gallon USTs and one 10,000-gallon gasoline UST) were located at 1331 (former address) North Vermont Avenue. No records of the UST removals were found and only a limited magnetometer survey was conducted. Further assessment is necessary to confirm if the USTs were removed.
Above-Ground Storage Tanks	No	No above-ground storage tanks were observed on the property at the time of the site walk.

Appendix B
STANTEC RESUMES

Thomas R. Szocinski CEP

Senior Environmental Scientist

Mr. Szocinski has over 13 years of professional environmental consulting experience focusing on vapor intrusion, remediation, underground storage tank management, Brownfield Site management, and various subsurface environmental investigations throughout the United States, including RCRA, NEPA, and CERCLA/SARA regulated sites. He is a certified environmental professional (CEP) and a certified vapor mitigation inspector and specialist, having designed and implemented numerous vapor mitigation systems throughout the United States. In 2014, Mr. Szocinski was appointed by the Michigan Department of Environmental Quality (MDEQ) to the Vapor Intrusion Technical Advisory Group (TAG) to assist in the review of MDEQ's current vapor intrusion criteria.

Mr. Szocinski has also worked on complex remediation projects, including NPL sites, and has implemented various insitu technologies including: soil vapor extraction (SVE), air sparging (AS), active ventilation/mitigation, injection, and enhanced fluid recovery/aggressive fluid vapor recovery (EFR/AFVR).

EDUCATION

AA, Natural Science, Lake Superior State University, Sault Ste. Marie, MI, 2000

BS, Environmental/Criminal Law, Lake Superior State University, Sault Ste. Marie, MI, 2001

MEMBERSHIPS

Member, ASTM International
Member, Academy of Board Certified Environmental Professionals (ABCEP)

AWARDS

2011 Phoenix Award – Brownfield Redevelopment – Piquette Square – Detroit, Michigan

2015 Grand Prize Phoenix Award – Brownfield Redevelopment – Medical Supply Warehouse – Detroit, Michigan

PROJECT EXPERIENCE

Landfill Gas Collection and Control
Municipal Landfill*, Mount Clemens, Michigan
(Project Manager), 2010-2015
Client: Municipal
Extensive remedial investigations were conducted to evaluate the extent of the landfill. Designed and implemented a pilot study to collect the necessary data to design an active mitigation system. In 2011 and 2012, worked in collaboration with the United States Environmental Protection Agency (USEPA) to design and implement the active methane ventilation system within the landfill located near existing residential complexes to collect subsurface gases. The system extracts subsurface gases, including methane, by actively drawing from these designated locations. The subsurface gases are then directed to a self-igniting flare to burn off the methane and exhaust innocuously to the atmosphere. Throughout this process Thomas Szocinski was the lead technical negotiator for the municipality with USEPA, MDEQ, the Agency for Toxic Substances and Disease Registry (ASTDR), the Michigan State Housing Development Authority (MSHDA), the County Health Department, and the US Department of Housing and Urban Development (HUD).

Thomas R. Szocinski CEP

Senior Environmental Scientist

Environmental Mitigation and Monitoring

Northville Garage Restaurant*, Northville, Michigan (Project Manager/Vapor Intrusion Specialist), 2012-2013

Client: Northville Garage

A former auto service and dry cleaning facility was redeveloped into a restaurant in Northville, Michigan. Environmental investigations identified petroleum and chlorinated volatile organic compounds (VOCs) at concentrations which posed a threat to indoor air quality. Thomas Szocinski worked with MDEQ and local municipalities on designing and implementing a vapor mitigation system for the development. The site has since gone on to obtain national recognition and references by both the MDEQ and USEPA as a successful Brownfield redevelopment and vapor mitigation site.

Piquette Square Brownfield*, Detroit, Michigan (Vapor Intrusion Specialist), 2009-2010

Client: Non-Profit Organization

A former vehicle manufacturing facility (Studebaker factory 1910) site was redeveloped by a non-profit organization into a Veteran's Memorial Service center in Detroit, Michigan. Environmental investigations identified VOCs at concentrations which posed a threat to indoor air quality. Thomas Szocinski worked with MDEQ and MSHDA on designing and implementing a vapor mitigation system for the development. In 2011 the Piquette Square project earned the Phoenix Award.

Medical Supply Warehouse Vapor Mitigation System*, Detroit, Michigan (Vapor Intrusion Specialist), 2014-2015

Client: Cardinal Health

A newly constructed 275,000 square foot medical supply distribution facility opened in May 2015 where once a blighted Detroit neighborhood stood. The redevelopment incorporates many state-of-the-art design elements including one of the largest passive vapor mitigation systems in the country. The site had several historical operations which included fuel storage operations, a rail yard, paint shops and commercial structures. Subsurface investigations within the area identified VOCs, including chlorinated solvents within the soil and soil gas, which posed a potential risk to the indoor air quality of the proposed medical supply warehouse facility. As part of the development a passive vapor mitigation system was designed by Thomas Szocinski, which included a redundant ventilation and barrier system. Post-installation smoke and pressure testing were completed to ensure optimum sub-surface ventilation and barrier performance. The Medical Supply Warehouse earned multiple National Awards, including: Phoenix Award, Redevelopment & Renewal Environmental Impact Award, People's Choice Award, and the overall Grand Prize Award at EPA's 2015 National Brownfield Conference.

Thomas Szocinski worked directly with the MDEQ for design approval and installation oversight.

Site Management & Remediation

Manufacturing Facility Insitu Remediation*, Hastings, Michigan (Project Manager), 2010-2014

Client: Hastings Manufacturing

Manufacturing facility had a release from their current underground storage tank (UST). A nearby down-gradient stream posed an immediate concern to the facility and immediate actions were taken to monitoring and remediate the release. The petroleum release was adjacent to the existing manufacturing building; however it extended beneath the building foundation as well. Through successful coordination and management with the client, MDEQ, and the environmental insurance agents, Thomas Szocinski was able to prepare a plausible response action to address the release and meet the objectives for all parties involved.

Extensive environmental assessments were conducted on the project property and remediation activities which included the closure of the UST, hydro-excavation of the accessible soils, groundwater monitoring, and insitu remediation using Regenesis' PetroCleanze®.

In 2014, as a result of the significant reductions in both soil and groundwater contamination, MDEQ approved restricted UST closure for the petroleum release with no further action required.

REGISTRATIONS

Certified Environmental Site Assessor #7866, State of California

Professional Geologist #7976, State of California

PROJECT EXPERIENCE

Automotive

Automotive Plants Due Diligence & Compliance Audits/Phase II Investigations, Central and Southern Poland (Project Manager)

Lewis performed due diligence, compliance audits, and Phase II Investigations of automotive plants in Central & Southern Poland for Ford Environmental Quality Offices in the USA. Work comprised several site visits, interviews with site staff, and development of proposals for Phase II investigations. Coordination between Polish-speaking nationals and stringent US client requirements was integral in negotiating a successful purchase.

Automotive Manufacturing Company EMS (Project Manager)

Lewis enabled a multi-national automotive parts manufacturing company to implement an Environmental Management System (EMS) under ISO 14001 Environmental Management Guidelines. Work comprised the completion of an Initial Environmental Review (IER) and gap analysis designed to provide client management with a detailed assessment and understanding of the organizations current environmental performance and the establishment of baseline information and data used to develop an Environmental Policy, as well as identify and prioritize significant environmental aspects and set detailed objectives and targets. The move towards becoming ISO 14001 certified was integral to the company's relationship with clients, securing contracts, and providing a competitive edge with its competitors.

Lewis Simons PG

Senior Geologist

Automotive Service Company Environmental Assessment for Distributor Transfer (Project Manager)

Lewis performed Environmental Assessment for Distributor Transfer (EADTs) audits for a multi-national automotive service company in Southern California. As part of the EADT process, facility operations and compliance with appropriate local, state, and Federal regulations were reviewed. Potential areas of concern for operations and regulatory compliance were identified during field surveys, engineering reviews, and through discussions with facility personnel and local regulatory agencies. The purpose of the field surveys was to review environmental issues related to waste management, facility operations, and regulatory compliance that were identified during the completion of the ESAs. The feasibility of implementing the client's standard management systems and procedures was reviewed and emphasized in development of recommended facility improvements designed to ensure environmental compliance.

Mercedes Dealership Site Assessment, Los Angeles County, California (Project Manager)

Lewis managed, scoped, and completed a site assessment designed to evaluate the vertical and lateral extent of multi-source impacts (USTs, conveyance piping, hydraulic lifts and clarifier) at a Mercedes Dealership in Los Angeles County. He successfully presented the results of the assessment work and obtained a case closure letter from the Los Angeles County Department of Public Works—the lead oversight agency for the site.

Penske Motor Group Environmental Site Assessment, West Covina, California (Project Manager)

Lewis managed, scoped, and completed an expedited environmental site assessment for the Penske Motor Group specifically designed to evaluate the vertical and lateral extent of multiple-source impacts (USTs, conveyance piping, hydraulic lifts, and clarifier) at a Mercedes Dealership in Los Angeles County. The work included multiple soil borings using hollow stem auger and geoprobe drilling techniques, use of a mobile and fixed laboratory, as well as supervising the excavation, screening, segregation, and disposal of impacted soils. He presented the results of the assessment work and successfully negotiated and obtained a case closure/no further action (NFA) letter from the Los Angeles County Department of Public Works. Obtaining the case closure and NFA letter in an expedited time frame was critical in enabling the client to successfully divest the site and manage and control potential liabilities associated with the impacts identified and addressed via site characterization.

Due Diligence Assessments

Southern California Construction and Property Development Due Diligence and Compliance (Project Manager)

Lewis performed due diligence and compliance work for several local construction and property development companies within Southern California to ensure environmental compliance with local, state, and Federal guidelines and legislative aspects associated with stormwater pollution prevention. Work comprised liaison with local and state agencies to determine regulatory requirements, standards and sampling criteria, as well as research into providing cost-effective solutions for stormwater pollution prevention and dewatering activities conducted by clients.

** denotes projects completed with other firms*

Lewis Simons PG

Senior Geologist

Environmental Site Assessments Phase I, II, III

National and Multi-National Phase I and II ESAs and Due Diligence Compliance Audits (Project Manager)

Lewis performed and managed Phase I and Phase II Environmental Site Assessments (ESAs) and Due Diligence Compliance Audits for various national and multinational corporations in accordance with the methodology and protocol of the American Society of Testing Materials (ASTM) Standard Practice for Environmental Site Assessments ("Standard" E 1527-00 and E 1528-00). Work included a review of available government agency files; an environmental record search of interviews with property owners and regulatory agencies; submittal of report to the client, including recommendations for Phase II assessment and sampling, when appropriate.

Environmental Site Remediation

1936 UST Removal, Ventura, California (Project Manager)

Lewis managed and provided direct oversight for the successful removal of a UST dated 1936 that was inadvertently identified during a construction grading project in Ventura, California. The successful ;removal of the tank; impacted soil, and the placement of ORC in the excavation pit, to assist with the enhanced biodegradation of any residual petroleum hydrocarbons left in soil and shallow groundwater, resulted in a successfully negotiated case closure status to be issued by the Ventura County Environmental Health Division (VCEHD). Timing and obtaining case closure were critical in preventing costly delays that were being incurred by the client and stalling the redevelopment of the site.

Hazardous Waste

Yorkshire Electricity, Bradford, Yorkshire, England (Project Manager)

As project manager, Lewis provided 24-hour incident response services to a British-based energy supply company (Yorkshire Electricity is now known as npower®). He acted as a liaison with regulators and the specialist contractors to provide both safe and cost-effective solutions under emergency response conditions. An example of work completed includes a response to a release of potentially PCB containing transformer fluid at a large electricity transformer facility that was located in close proximity to a sensitive watercourse in Southern Yorkshire, England. Response measures included agency liaison and notifications, the completion of an initial risk assessment associated with conducting work at an electricity transformer facility, containment of the release, an assessment of the lateral and vertical extent of impacted soils (including an assessment of risks to groundwater and potentially sensitive receptors), as well as the implementation of cost-effective remedial measures. This comprised the field screening, excavation, and disposal of visually impacted soils to an appropriate facility licensed to accept potential PCB-containing and mineral oil impacted soils (i.e., segregation of soils as hazardous and/or nonhazardous waste).

Healthcare

Confidential - Former NASA Industrial Facility, Hospital and MOB Redevelopment, Downey, California

Mr. Simons participated on the team that conducted a combined environmental and geotechnical evaluation of a former NASA industrial plant that was to be demolished and redeveloped as a hospital and medical office building complex. The NASA facility was utilized for Gemini, Apollo, and Space Shuttle testing, and included an airfield, hazardous material storage, and cryogenic and physical testing areas. The project involved historical research to locate former hazardous material usage and storage areas; drilling and sampling of soil, soil vapor, and groundwater to evaluate impacts; combining the geotechnical and environmental sampling for efficiency and cost savings; assessment and health risk (PEA) reports for evaluation of worker and site user health risk and for submission to the California DTSC; asbestos and hazardous material abatement reports for demolition purposes; geotechnical reports for site grading, foundation, pile, and liner design, and backfill requirements; construction oversight; and participation with client legal counsel in negotiations with state regulatory agencies. Remedial oversight was also conducted, and we coordinated with the client, contractor, adjacent landowners, the City, and regulatory agencies.

** denotes projects completed with other firms*

Lewis Simons PG

Senior Geologist

Mining

Mining Colliery Hydrogeological Assessment, South Yorkshire, England (Project Manager)

Lewis performed a hydrogeological assessment of a former mining colliery that was selected for a potential solid waste landfill facility. Work comprised an assessment of background surface water and groundwater conditions in the vicinity of the former colliery site prior to landfill operations, which included the installation of multiple groundwater monitoring wells and surface water monitoring locations, as well as the completion of a geophysical survey designed to locate the presence of faulted stratigraphic units known to exist in the area. The faults presented a potential human health risk to active collieries actively operating in the area due to the potential migration of leachate waters from the landfill into surrounding areas via groundwater and preferential pathways that may exist as a result of fault movement.

Multi-Unit / Family Residential

Multi-media Site Assessment, Calabasas, California (Project Manager)

Lewis managed and coordinated a multi-media site assessment of a 161 acre Site in Calabasas, California. The site was located directly down gradient from an active landfill that had resulted in VOCs leaching to groundwater and migrating onto the property. Given the sensitive proposed redevelopment of the currently vacant ranch land into 23 luxury homes, assessment and site characterization were required to evaluate the risk to human health that might exist. Work was performed with oversight from the State of California Environmental Protection Agency (Cal-EPA) Department of Toxic Substances Control (DTSC). A detailed work plan, sampling and analysis plan, (SAP) and quality assurance plan (QAP) were prepared and submitted to the DTSC for approval prior to the completion of the proposed scope of work for the assessment activities.

Ozone Sparge System Installation and O&M, La Habra, California (Principal-in-Charge)

Lewis provided oversight for the installation, operation, and maintenance of an ozone sparge system at a former logistics/refrigeration facility in La Habra, California. The site was owned by an international redevelopment company that specializes in large-scale residential developments. Work comprised soil, soil vapor, and groundwater sampling for halogenated volatile organic compounds (HVOCs) that were migrating onto the site from an upgradient source. Work included the installation of 40 independent ozone sparge points and their connection (via above ground pipework) to two independent skid-mounted ozone sparge units capable of generating up to 1.5 and 2.5 pounds of ozone per day, respectively. Liaison and regulatory oversight from the Orange County Health Care Agency (OCHCA) and the Santa Ana Regional Water Quality Control Board (SARWQCB) were an integral part of the project. The agencies ensured that the source and potential responsible party for the release of the HVOCs into shallow soil and groundwater could be identified and the source removed to prevent further continued migration of HVOCs in groundwater and soil vapor onto the site.

Oil & Gas

Oil Exploration Well Research, Multiple Sites, California

Lewis has conducted research on behalf of clients into the presence of former oil well locations associated with acquisition of commercial and residential properties and redevelopment projects. Sources of historical information used include use of Munger Map Book, California and Alaska, Oil and Gas Fields, State of California Division of Oil and Gas records and online database as well as use of historical aerial photographs to observe the location and presence of wells when operational relative to topographic features in the area that may provide information on the likely location of an oil well. Upon a review of records, Lewis completed geophysical surveys using a Geometrics G858 Cesium Vapor Magnetometer, gradiometer and Schonstedt handheld magnetometer with an audible pitch to identify a ferromagnetic object (i.e., oil well casing) in the survey area. The last step in measures typically taken to locate the former oil well included physical excavation of the area using a backhoe excavator in order to expose the well casing and perform a leak check to evaluate whether the oil well meets current well standards or requires re-abandonment.

** denotes projects completed with other firms*

Lewis Simons PG

Senior Geologist

Pilot Trials, Various Locations

Lewis conducted pilot trials and implemented the design and installation of in-situ remediation systems on petroleum retail filling stations and contaminated land projects. Remedial technologies used to reduce or contain the migration of soil and groundwater contamination included LNAPL source recovery and plume containment by pump and treat, vapor extraction, vacuum enhanced recovery, and air sparging. Lewis planned, coordinated, and oversaw the safe decommissioning/removal of USTs, ASTs, site buildings, and pumps under CDM regulations for various industrial and petroleum retail outlets.

Fuel Distribution Depots/Terminals Phase I and II EASs (Project Manager)

Lewis managed (Phase I & II) environmental audits of petrol filling station sites and fuel distribution depots/terminals in the UK and overseas for several major oil companies. Sites were associated with divestiture, purchase, redevelopment, or 24-hour emergency response. Duties required liaison with the client and ensuring project deliverables were timely, on budget, and met quality assurance/quality control requirements.

Gas Station Environmental Consulting, Yorba Linda, California

Lewis worked closely with the City of Yorba Linda Engineering and Public Works Department and Orange County Health Care Agency to provide environmental consulting and engineering services at a former gas station. Work included the development and implementation of a Quarterly Groundwater Monitoring Program and following the identification of product during the initial groundwater monitoring exercise.

Shell Petroleum, Due Diligence and Compliance Audits, Various Counties, Southern California (Souther California Project Team Leader)

Lewis was the Southern California project team leader for conducting due diligence and compliance audits for Shell petroleum retail facilities located throughout Riverside County. The work included the development of a compliance checklist and resolving all notice of violations (NOVs) issued by the Riverside County Environmental Health Care Agency. Each Shell-owned facility was audited for evidence that NOVs were resolved; current SB 989 testing and compliance; and permits and hazardous materials business plans were current, accurate, and a copy was filed at the lead agency. Waste disposal and training records, as well as designated operator inspection reports, were reviewed; emergency equipment and procedures were checked to make sure they were available and on site. Strict deadlines set forth by the district attorney were met to ensure Shell's facilities were in compliance with all Federal, state, and local regulatory requirements. The compliance work was extended to include all counties within Southern California. The cost was $1,500,000.

Retail

New Target Store Construction Project, Simi Valley, California (Senior Geologist, Project Manager)

Lewis provided environmental assessment and remediation services for a new Target store built in Simi Valley, California. Key services provided to Target were: Phase I and II Environmental Site Assessments, UST and hydraulic lift removal work, groundwater monitoring well abandonment, grading and archaeological oversight, dewatering associated with stormwater and artesian site conditions and the installation of underground utilities. Stantec worked closely with Target and its construction team to mitigate environmental concerns present at the Site and minimize construction downtime, thus ensuring Target's date for store opening would be met.

** denotes projects completed with other firms*

Lewis Simons PG

Senior Geologist

Retail / Commercial

Risk Based Corrective Action (RBCA) and Remediation/Decommissioning Projects (Project Manager)

Lewis served as a project manager responsible for 15 staff members and in excess of 100 petroleum retail outlets, industrial, and commercial sites. Work included Risk Based Corrective Action (RBCA) and remediation/decommissioning for the asset management department of various hydrocarbon-based clients.

Norwalk Shopping Plaza Phase I ESA, Norwalk, California

Lewis performed a Phase I ESA of seven independent business units within a shopping Plaza in Norwalk, Southern California. As well as the completion of an ESA under ASTM E 1527-00 guidelines, the work included organization and oversight of an assessment of potential asbestos bearing materials completed by a state qualified asbestos contractor prior to demolition of the buildings and redevelopment of the site into a supermarket.

Dry Cleaning Facility Subsurface Soil and Groundwater Site Assessment, Simi Valley, California (Project Manager)

Lewis performed a subsurface soil and groundwater site assessment of a Dry Cleaning facility in Simi Valley. A previous site investigation identified chlorinated solvent (PCE and TCE) impacts to soil and groundwater. The facility was entered into the Voluntary Cleanup Program facilitated by the Ventura Environmental Health Division (VCEHD) to obtain formal closure for the facility. The work included the development of a work plan for an additional Phase II site investigation that was submitted to the VCEHD and client for approval. Soil and groundwater samples were submitted for laboratory analysis to evaluate the vertical and lateral extent of potential chlorinated solvents associated with dry cleaning facilities. Multiple continuous-cored geoprobe borings were drilled and soil and groundwater samples collected for laboratory analysis. A No Further Action letter was issued by the VCEHD based upon the results of the chemical analyses, comparison with regulatory criteria, and evaluation of potential nearby sensitive receptors.

Inactive Railroad Spur Evaluation, San Pedro, California (Project Manager)

Lewis served as the project manager for the evaluation of an inactive railroad spur in San Pedro, California. The site was part of a former bakery property that had formally operated USTs, hydraulic lifts, and a clarifier that had since been removed; yet included a railroad spur that had been reportedly treated routinely with herbicides/pesticides and rodenticides. The purpose of the evaluation was to determine the extent of arsenic and lead, as well as other constituents of concern that had been detected, that might be present at levels considered hazardous prior to the redevelopment of the site into a nationally known retail store. Additional investigations, and as part of the conditions of the permit application submitted by the client to the Los Angeles Building and Safety Department, included the installation of shallow soil vapor probe points and methane soil gas testing in accordance with the guidelines and methane code set forth by the LADBS.

Di Carlo Bakery Site Case Closure, San Pedro, California

Lewis obtained case closure for former USTs located at a Former Di Carlo Bakery Site from the Los Angeles Regional Water Quality Control Board (LARWQCB). Tasks included the completion of a Case Review Form that required a summary of all previous work conducted at the Site to date, as well as an evaluation of historic and current detected constituents of concern in soil and shallow groundwater at the Site and the identification of potential sensitive receptors. The case closure letter prepared for the Site was issued by the LARWQCB and confirmed in a letter dated September 13, 2007.

Target Store Assessment and Remediation, Anaheim, California (Project Manager)

Lewis managed the assessment and remediation of a former Target Store located in Anaheim, California. Sources of impacts
identified in soil, soil vapor, and groundwater that were associated with a former dry cleaners and automotive service station that formerly operated at the property. Work included the evaluation of all historical soil, soil vapor, and groundwater
data associated with the site to date; the completion of an updated site assessment to evaluate current environmental conditions; and remediation of these source areas. Lewis worked closely with the City of Anaheim Public Utilities Department and the Santa Ana Regional Water Quality Control
Board to obtain no further action status for the Site. Liaison and
regular meetings due to the aggressive schedule required for

** denotes projects completed with other firms*

Lewis Simons PG

Senior Geologist

cleanup to residential levels and redevelopment of the property
into residential condominiums was an integral part of the projects success. Case closure and no further action status were
granted by the regulatory agencies in February 2012.

Former Bakery/New Target Store Site, San Pedro, California (Project Geologist)
Soils were inadvertently identified at a former bakery site in San Pedro, California during grading and were initially deemed to be RCRA Hazardous or Non-RCRA hazardous waste. Based on a cost-effective site-specific sampling and analysis plan developed in accordance with current regulatory and health and safety guidelines, Lewis was able to profile and dispose of the soils as non hazardous waste, thus enabling the Target Corporation to avoid liability as a hazardous waste generator and the resultant associated tax implications. By working effectively with the subcontractors and Target's designated construction group, Lewis was able to minimize down time, while providing significant cost savings and adherence to regulatory guidelines for the correct characterization and disposal of soils from the site. Cost savings were provided to Target in the form of reduced transport, handling, and significantly lower disposal costs, as well as avoiding long-term liability as a generator of hazardous waste and the associated tax implications. He expedited management of the characterization, excavation, and disposal of soils—critical given the construction schedule for the redevelopment of the former bakery site into a Target Store. Environmental consulting work also performed at this location that included obtaining an NFA/Case Closure status from the Los Angeles Regional Water Quality Control Board for the former underground storage tanks; evaluation of a former railroad spur for potential heavy metals, pesticides, and herbicide impacts or waste characterization purposes.

Roadways

Interstate 210/215 Soil Sampling, San Bernardino, California (Project Manager/Field Coordinator)
Lewis served as project manager/field coordinator for the completion of soil sampling for aerially deposited lead (ADL) analysis along the Interstate 210/215 Freeways in California. The proposed scope of work was intended to evaluate whether excavated soil generated during the proposed improvements to the freeways would result in the need for special handling or disposal (as defined by Title 22 of the California Code of Regulations) with respect to ADL. To evaluate appropriate handling procedures for excavated soil as a result of proposed Caltrans improvements, the collected samples were analyzed in a California certified laboratory for total lead. In addition, select samples were also analyzed for pH and soluble lead following the California Waste Extraction Test (where total lead exceeds 50 mg/kg) and the Toxicity Characteristic Leaching Procedure (TCLP) (where Cal WET results exceed 5 mg/L). Tasks included coordinating several soil sampling teams and the processing, collection, and logging of multiple soil samples.

Solid Waste

Waste Management Audit, Lakenheath, England
Lewis performed a waste management audit for the British Government Ministry of Defence and United States Air Force Base in Lakenheath, England. The work comprised an assessment of waste streams, as well as an assessment of current transport, transfer, and disposal protocols. A waste management strategy was devised to control and segregate the volume and types of waste produced, as well as reduce disposal costs thorough the education and promotion of waste recycling and reduction initiatives.

Warehouse / Light Industrial

Former Industrial Facility Methane Survey, San Pedro, California (Project Manager)
Lewis managed and coordinated a methane survey at a former commercial industrial facility in San Pedro in accordance with the Los Angeles Department of Building and Safety Guidelines (LADBS). Work comprised the installation of 15 soil vapor probe points and sampling on two consecutive days for methane via a company licensed by the LADBS. He presented conclusions and recommendations for methane mitigation measures based on a comparison of detected concentrations of methane and site specific parameters measured in the field (i.e., pressure readings), as well as requirements specified by the LADBS.

** denotes projects completed with other firms*

Lewis Simons PG

Senior Geologist

Water

Water Quality Sampling Services, Simi Valley, California

Lewis provided water quality sampling services for a construction company that was replacing a section of a flood channel. Scope of work involved ensuring that the construction work would not impair the flood channel, storm drain, or the sanitary sewer system operated by the City of Simi Valley. Adherence and compliance to the permit requirements (NPDES) issued by the City of Simi Valley was the prime objective for this project.

An Initial Environmental Review (EIR) Report. *EIA, Auditing & Environmental Management Systems*, 2002.

Steven Brady PG, CEG, CHG

Managing Principal Hydrogeologist Technical Intro

With more than 30 years experience in environmental consulting, engineering, and construction fields, Steve has been involved with all aspects of regional and site-specific environmental investigations throughout the southwestern US, including CERCLA/SARA, RCRA, NEPA, and CEQA regulated projects. His experience includes remedial investigations/feasibility studies; risk assessments; soil, soil vapor, and groundwater assessments; contaminant fate and transport determinations; and contaminant delineation and treatment or removal. Other activities include watershed and wetlands investigations; siting investigations; forensic chemical investigations; and investigations using various investigative techniques.

Steve has worked with a range of commercial and industrial client sectors, with focus on construction related projects. His experience includes military/aerospace; semiconductor manufacturers; transportation (rail & vehicle); healthcare; petroleum (upstream, midstream, and downstream); property management, investment, development; and legal clients.

Steve conducts independent and peer review of documents for Quality Assurance/Quality Review requirements. QA/QC review is performed for a variety of client projects, including due diligence; soil, soil vapor, and groundwater assessments; compliance; O&M and remedial projects; and CEQA/NEPA projects. His experience with contaminants includes petroleum hydrocarbons; volatile organic compounds; semi-volatiles organics (including pesticides and PCBs); metals; radionuclides; and others.

Steve has participated as an expert for the California Board of Geology for determination of pass point criteria for multiple certifications.

PROJECT EXPERIENCE

Aboveground and Underground Storage Tank Management

Underground Storage Tank Program Management for Major Oil Company Portfolios, Various Locations, California, Arizona, Nevada (Portfolio Manager)

Steve managed regional portfolios of site assessment and remediation projects at gasoline-dispensing facilities across the southwestern US. He was responsible for planning and implementing projects involving UST system closure, site assessment, remediation system design, construction management, operation-and-maintenance, and risk-based corrective action analysis. Tasks included collection of soil, soil vapor, and groundwater samples during assessments, UST removal activities, and after releases have been discovered, corrective action plan preparation, agency liaison, negotiations, and reporting, and remediation oversight.

** denotes projects completed with other firms*

The sites were located in a variety of geologic terrains ranging from fractured bedrock to alluvium, and the depth to groundwater ranged from a few feet to several hundred feet. Contaminants typically included separate-phase hydrocarbons (SPH) and dissolved-phase motor fuel constituents. Remediation technologies used to clean up the various leaking UST sites included excavation, ozone sparging, air sparging, biosparging, soil vapor extraction, bioventing, groundwater pump-and-treat, dual phase extraction, high vacuum dual phase extraction, and aboveground bioreactors (to treat higher concentration liquid effluent).

Agriculture

Agriculture Site Assessment, Monitoring, and Remedial Activities*, Santa Barbara, California (Project Manager)

Steve served as the project manager for the soil and groundwater site assessment, quarterly groundwater monitoring, and oversight of remedial activities at an agricultural site. The site encompasses more than 60 acres, with approximately 20 acres within the coastal zone of Santa Barbara. In addition to releases from pesticide and chemical storage areas, diesel boilers, and fuel tanks, large portions of the site consisted of undocumented landfills. An assessment of soil and groundwater was performed for the site, and the extent of both soil and groundwater contamination due to releases of fuels and chemicals was determined. Calculations of groundwater gradient and rates of contaminant flow in the subsurface were performed. Remedial action plans were developed and implemented to remove landfills from the site.

Agricultural Packing Plant SWPPP Development and Compliance Project* (Project Manager)

As project manager, Steve was responsible for site facility audits to evaluate potential discharge locations, development of best management practices recommendations, and development of a Storm Water Pollution Prevention Plan for submission to the lead regulatory agency.

Airports & Aviation

John Wayne Airport Soils and Groundwater Investigation* (Project Geologist)

Steve conducted characterization, delineation, and remediation of hydrocarbon and volatile organic contaminated soils and groundwater at Orange County's John Wayne Airport. Duties included development of site-specific work plans and health and safety plans; permitting, drilling and sampling soil borings; installation of groundwater monitoring wells; installation, maintenance, and monitoring of a groundwater treatment system; compilation and analysis of analytical results; and preparation of monthly and quarterly reports.

Norton Air Force Base Remedial Investigation*

Steve served as project manager for a fast-track remedial investigation supporting RCRA closure of Norton Air Force Base NPL site in San Bernardino, California. Initial tasks consisted of assessment and demolition of two hazardous material storage facility areas at the Base. Part of the DRMO, these two storage facilities received all hazardous materials generated at the Base. A site-specific Work Plan, Chemical Data Quality Management Plan, and Health and Safety Plan were developed and approved by the U.S. Army Corps of Engineers, U.S. Air Force, and the California EPA. Field activities consisted of wipe sampling of facility surfaces prior to demolition, demolition and salvage of building materials, drilling 33 subsurface borings, and collecting concrete core, asphalt, and subsurface materials to assess conditions at the site. Demolition of the buildings was completed in one day and salvage operations were performed concurrent with the site assessment. A report was developed detailing activities and recommendations, and Certification of Closure was performed as a final task.

March Air Force Base Site 17 Engineering Evaluation/Cost Analysis* (Deputy Project Manager)

Steve served as deputy project manager for an Engineering Evaluation/Cost Analysis (EE/CA) for remedial actions at March Air Force Base Site 17, an abandoned pool which was backfilled with hazardous waste. Duties consisted of research, analysis, and generation of a report which includes development of scope and schedule for removal action objectives adhering to statutory limits for removal actions; identification and analysis of removal action alternatives, including effectiveness, implementability, and cost; comparative analysis of remedial alternatives; and recommendations for removal actions.

** denotes projects completed with other firms*

Steven Brady PG, CEG, CHG

Managing Principal Hydrogeologist Technical Intro

Edwards Air Force Base and Phillips Laboratory Closure* (Project Manager)

Steve managed an expedited remedial investigation under the Installation Restoration Program for closure of Edwards Air Force Base, Phillips Laboratory OU4, Sites 7 and 167, the 48 acre beryllium storage and test firing range for the Phillips Laboratory. Site 7 was used to stockpile beryllium-contaminated soils after explosions destroyed buildings on the Site. Site 167 received beryllium fallout from test firings of rocket engines. Duties included development of the work, sampling and analysis, and Health and Safety Plans, which were reviewed and approved by the U.S. Army, the U.S. Air Force, and the U.S. EPA.

March Air Force Base, Hawes Site Closure*, San Bernardino County, California (Project Manager)

Steve managed a remedial investigation under the Installation Restoration Program for closure and property transfer of March Air Force Base, Hawes Site in San Bernardino County, California. The Hawes Site consists of a former auxiliary airport and radio tower, and encompasses approximately 305 acres of federally endangered species habitat. Initial duties included an endangered species survey of the Site, development of an endangered species Conservation Plan, and a geophysical survey of the Site. The Conservation Plan was reviewed and approved by the U.S. Fish and Wildlife Service. Site specific Work Plans, Sampling and Analysis Plans, and Health and Safety Plans were then developed for the Site and approved by the U.S. Army Corps of Engineers, the U.S. Air Force, the U.S. EPA, the California EPA, and the Regional Water Quality Control Board. The planning documents detailed protection of endangered species and assessment of potential contamination and closure of fuel and waste oil USTs, removal of septic tanks and leach fields, removal of underground tanks, geophysical logging and closure of the onsite water supply well, removal of numerous utility vaults, demolition and removal of a storage building, removal of scrap and debris from the Site, and asbestos abatement of the bunker and bunker area.

Brownfield Investment Property Fast-Track Investigation*, Santa Monica, California (Project Manager)

Steve served as project manager for a fast-track investigation on a Brownfield investment property that was formerly a portion of the original McDonnell Douglas Aircraft manufacturing facility in Santa Monica. Work plans were developed and approved by the client, property owner, and lender. Soil gas surveys and soil sampling assessments were performed to characterize the nature, levels, and potential sources of contamination at the site. The entire project was completed within three weeks and recommendations were provided to the client aimed at limiting future liability. Negotiation support was provided to assist in obtaining funding.

Former Military/Aerospace Manufacturer Remedial Oversight* (Project Manager)

Steve performed remedial oversight at a former military/aerospace manufacturer in Santa Ana, California. Extensive quantities of chlorinated solvents, metals, and fuels were released into subsurface soils and groundwater by a past military/aerospace tenant. Numerous remedial actions have been performed at the site. A summary report was developed detailing the nature and levels of contamination in the soil and groundwater aquifers, a summary of the prior assessments and remedial activities performed at the site, an opinion regarding the extent of contamination in the subsurface and different water-bearing zones, and an opinion regarding the adequacy of the former tenants proposed assessment and remedial activities. Assistance with negotiations with the tenant and the RWQCB regarding site remediation was provided.

Municipal Airports Fast-Track Compliance Audits and Evaluations, Various Locations (Project Manager)

Steve served as project manager for the fast-track compliance audits and historical evaluations of seven municipal airports in Southern California, Washington, and Pennsylvania. The project involved agency file and database research, historical document research, and site facility audits to determine compliance status with appropriate regulations, as well as generation of summary reports aimed at limiting future liability for the new operators at the airports.

** denotes projects completed with other firms*

Steven Brady PG, CEG, CHG

Managing Principal Hydrogeologist Technical Intro

Condition Assessments

Cave Creek Groundwater Mapping and Siting* (Project Manager)

Steve conducted mapping and siting of multiple groundwater production wells in Arizona for an assured water supply for the City of Cave Creek and in support of a proposed golf course and country club development. Well locations were selected and logging and evaluation of test boring conducted to more than 1,000-foot bgs. Screen depths were selected for the wells and oversight of well construction was completed.

Seismograph Station Siting* (Project Manager)

Steve conducted siting of multiple Seismograph Station arrays to locate significant, active fault segments in Central and Southern California meeting specific lithological criteria. The seismograph arrays were designed to obtain near-field seismic effects. The project involved review of numerous geologic and geotechnical reports, evaluation of data from existing seismograph arrays, field mapping and site reconnaissance, contact with property owners to obtain lease permits, and generation of a report detailing conclusions and recommendations.

Pacific Palisades Landslide and Contamination Investigation*, Los Angeles, California (Project Manager)

Steve served as the project manager for the geohydrologic and environmental portions of an investigation to evaluate landslide potential and potential soil and groundwater contamination for a proposed force main line in the Pacific Palisades for the City of Los Angeles, Geotechnical Services Division. Numerous ancient and historic landslides occur in the Pacific Palisades, many of which have activated due to the presence of high groundwater. The study required review and compilation of prior geotechnical and environmental data; geologic field mapping and surveying; geotechnical and environmental drilling, sampling, and chemical and physical analysis of soil and groundwater; review of historical and site-specific oblique, vertical, and infrared aerial photographs; data compilation and analysis; determination of groundwater sources; and map and report preparation with evaluation of alternatives and recommendations.

Methane and Leachate Collection Systems Investigation* (Project Manager)

An investigation of the methane and leachate collection systems operational at a golf and country club, on the site of a former landfill in the Santa Monica Mountains, was performed. An extensive review of available landfill and facility construction and monitoring data was conducted, as well as research on documentation available from the RWQCB, the Department of Fish & Game, and the US Army Corps of Engineers. Site and facility audits were performed to evaluate the present condition of the methane, gas condensate, and leachate collection systems. Conclusions and opinions were provided to the client concerning the operation, maintenance, and adequacy of the collection systems. Mitigative measures were recommended to the client aimed at limiting offsite migration of methane and improving water quality downgradient from the landfill.

UK and US Golf Course UST Compliance* (Project Manager)

Steve served as project manager for a compliance status summary of the underground storage tanks at 250 client-owned golf courses throughout the UK and US. The project involved review of tank data from the various courses and management/oversight of the development of a database that contained pertinent details including quantity of USTs and aboveground storage tanks, installation dates, and other tank/tank appurtenance information. The database allowed for searches and sorting to determine compliance with the US-EPA UST compliance deadline.

Steven Brady PG, CEG, CHG

Managing Principal Hydrogeologist Technical Intro

Environmental Site Assessments Phase I, II, III

Phase I ESAs and Liability Evaluation, Confidential Client, Multiple Foundries, Southern California

Steve was part of the Stantec team that completed concurrent Phase I ESAs and an overall evaluation of potential pollution liability for multiple foundries. The projects were completed during a business purchase transaction whereby the properties and their associated environmental liability would become the responsibility of the new land owner. At the time of evaluation, the foundry sites were each in various stages of environmental assessment and remediation, and under regulatory oversight by the Los Angeles Regional Water Quality Control Board (LARWQCB). The liability evaluations consisted of assessing the potential remaining environmental assessment and remediation that may be required by the LARWQCB, and development of potential costs associated with obtaining regulatory closure. Potential future environmental liabilities associated with purchasing the impacting properties and the foundry business operations were also included as they might pertain to the purchase of the business and its assets/liabilities. Because the projects were completed during the pre-transaction due diligence period, the projects were coordinated and completed within an expedited timeframe by a team of Stantec professionals across multiple offices.

Healthcare and/or Environmental Site Assessment Phase I, II, III, Various Locations, California, Oregon, and Washington (Project Manager)

Steve managed numerous Phase 1, Phase II, and remedial projects associated with property transfer and development for a major health care provider throughout California and the Pacific Northwest. Numerous specialized assessments have been conducted for various existing or planned hospitals, medical office buildings, and support facilities. These investigations have involved drilling and sampling of soil, soil vapor, and groundwater utilizing various techniques; installation and sampling of monitoring wells and calculated rates and direction of groundwater flow; location of contaminant sources; evaluation of facility usage, and Risk Assessments to document protection of human health for facility users and construction workers. Remediation of soil, soil vapor and groundwater have been performed, including underground storage tank removal, contaminated soil removal and treatment, and evaluation of best available technologies for remedial actions. Project support has involved negotiations with regulatory agencies, legal counsel, and property owners.

Retail Tire Facility and/or Environmental Site Assessment Phase I, II, III (Project Manager)

Steve served as Project Manager for numerous combined Phase I and Phase II environmental site assessments, groundwater monitoring, remedial actions, and reporting projects for a major retail tire facility. Projects generally included assessing the extent of contamination associated with hydraulic lifts, USTs, and other activities associated with operating a tire replacement facility, as well as remediating the extent of assessed contamination and negotiating cleanup levels with the local enforcement agencies.

Multiple Combined Phase I and II ESAs (Project Manager)

Steve served as Project Manager for numerous combined Phase I and Phase II environmental site assessments, groundwater monitoring, remedial actions, and reporting projects for a major retail tire facility. Projects generally included assessing the extent of contamination associated with hydraulic lifts, USTs, and other activities associated with operating a tire replacement facility, as well as remediating the extent of assessed contamination and negotiating cleanup levels with the local enforcement agencies.

Seven Oaks Dam Mitigation Property Environmental Assessment*, Redlands, California (Project Manager)

Steve served as the project manager for an environmental assessment of the 64-acre Seven Oaks Dam Mitigation property in the Santa Ana River Flood Channel, Redlands. The project consisted of a Phase I level site assessment and soil gas survey. The project involved research, historic air photo analysis, site reconnaissance and mapping, installation of soil gas monitoring wells, soil-gas sampling for volatile organics, data compilation and analysis, and preparation of a report detailing activities and conclusions.

** denotes projects completed with other firms*

Steven Brady PG, CEG, CHG

Managing Principal Hydrogeologist Technical Intro

Nike Site Environmental Assessment and Closure*, Puente Hills, California (Project Manager)

Steve served as the project manager for an environmental assessment aimed at gaining site closure for a 55-acre Nike missile battery located in the Puente Hills of Los Angeles County. The site consisted of three areas on two separated ridge tops; the administration area and launch area (also known as the Lower Site) were on one of the ridge tops, and the control area (also known as the Upper Site) was located on an adjacent ridge top. The Nike Site contained aboveground and underground storage tanks, a vehicle maintenance shop, underground missile storage and launch facilities, aboveground missile assembly, fueling, and testing facilities, surveillance facilities, barracks, and an underground network of tunnels. Duties consisted of research, negotiations with the Cal-EPA, development of Work Plans and Health and Safety Plans, geophysical and radiation surveys, drilling and sampling soil and bedrock, and sampling for asbestos containing building materials. Reports were developed detailing options and recommendations for property transfer of a complex military site.

Los Angeles and Ventura Counties Property Investigations and Transfers (Project Manager)

Steve served as project manager for commercial and industrial property transfers and litigation support in Los Angeles and Ventura Counties. Numerous specialized assessments have been conducted for various financial institutions. These investigations have involved drilling and sampling of soil and groundwater utilizing geoprobe, hydropunch, hollowstem auger, and other techniques; installation and sampling of monitoring wells and calculated rates and direction of groundwater flow; location of contaminant sources; and evaluation of facility usage, and Risk Assessments. Remediation of soils and groundwater have been performed, including underground storage tank removal, contaminated soil removal and treatment, and evaluation of best available technologies for remedial actions. Project support has involved negotiations with regulatory agencies, legal counsel, and property owners.

Telecommunication Property Site Assessment*, Santa Barbara, California (Project Manager)

Steve performed a subsurface soil and groundwater site assessment of a telecommunication property in Santa Barbara. Adjacent properties had released PCE and TCE into the subsurface soils and groundwater, but contamination at the site appeared disconnected from the larger plume originating offsite. A work plan and health and safety plan were developed and approved by the client and their corporate counsel. Multiple continuous-cored geoprobe borings were drilled and soil, soil vapor, and groundwater samples collected. Through analysis of the lithology, it was shown that the subsurface consisted of an ancient nearshore, lagoonal environment transected by stream channels. Two separated plumes were shown to occur at the site, with the larger plume derived from an offsite source and the smaller plume originating from onsite operations. A health-based risk assessment was performed for the property to determining appropriate cleanup levels.

Metal Stamping and Forming Facilities Property Transfer (Project Manager)

Steve served as project manager in support of property transfer of three metal stamping and forming facilities. Two of the sites were listed as potential contributors to the contamination in the San Gabriel Valley groundwater, with the third listed by the U.S. EPA as within the top 16 contributors to the groundwater contamination in the Baldwin Park Operable Unit (OU). Research was performed on the individual sites and their contribution to the San Gabriel Groundwater Basin contamination; on the nature and extent of contamination in the San Gabriel Valley Groundwater Basin; on the locations and calculated contributions to the contamination in the Baldwin Park OU from other known PRPs; and on the water delivery and remediation plans for the different San Gabriel Valley OUs, and in particular, in the Baldwin Park OU. Opinions were generated regarding potential future liability for ownership of each facility, and an evaluation of the sources of contamination found in the Baldwin Park OU was developed. Determinations of legal implications and calculations of environmental liability were performed, and a range of anticipated costs associated with ownership of the properties were presented. Results were used in negotiations for the properties. Facility audits were performed at each site, with recommendations provided for equipment and process upgrades, which were aimed at limiting future releases and overall liability.

** denotes projects completed with other firms*

Ventura County Phase I and II Site Assessments (Project Manager)

Steve managed multiple Phase 1 and 2 site assessments for coastal properties in Ventura County consisting of a power generating facility tank farm, hazardous materials storage area, agricultural, and degraded wetland areas to be acquired and restored to wetland conditions. The projects included research; soil, surface water, and groundwater sampling; assistance in property acquisition negotiations; and providing engineering geologic, hydrogeologic, and environmental and risk-based opinions ,and recommendations aimed at facilitating the property acquisition while limiting liability to the State of California. Participation on the project included oversight during tank farm and hazardous material storage area decommissioning and property restoration.

Environmental Site Remediation

South Gate Tank farm Closure Reports (Project Manager)

Steve developed remedial closure reports for a multiple-owner tank farm in the City of South Gate. To facilitate development of the property, the tank farm was split into four separate parcels. Remediation of the soils was performed, with impacted soils exceeding cleanup levels excavated and transported offsite, impacted soils within cleanup levels inhumed into a constructed soil repository, and clean soils reused during regrading activities. The project was estimated by prior consultants to cost more than $9 million to complete; however, the project was finished on an expedited basis and received RWQCB closure for approximately $1 million, a considerable savings to the client. Additionally, development of the property was performed on a parcel-by-parcel basis, allowing the City's contractor to begin development in a timely manner.

Healthcare

Confidential - Former NASA Industrial Facility, Hospital and MOB Redevelopment, Downey, California (Project Manager)

Steve was the project manager for a combined environmental and geotechnical evaluation of a former NASA industrial plant demolition and redevelopment as a hospital and medical office building complex. The NASA facility was utilized for Gemini, Apollo, and Space Shuttle testing, and included an airfield, hazardous material storage, and cryogenic and physical testing areas. The project involved historical research to locate former hazardous material usage and storage areas; drilling and sampling of soil, soil vapor, and groundwater to evaluate impacts; combining the geotechnical and environmental sampling for efficiency and cost savings; development of assessment and health risk (PEA) reports for submission to the DTSC; asbestos and hazardous material abatement reports for use for demolition purposes; geotechnical reports for site grading, foundation, pile, liner design, and backfill requirements; construction oversight; and participation with client legal counsel in negotiations with state regulatory agencies.

Justice

INS Border Patrol Stations Remedial Investigations* (Project Manager)

Steve served as the project manager for remedial investigations at the INS Border Patrol Stations in Campo and Calexico, California. Leaking underground fuel tanks had released significant quantities of gasoline into the subsurface and groundwater at each site. Unique, complex geohydrologic conditions occur in the subsurface, with groundwater contamination at the Campo site largely following an ancient buried river channel, but overflowing the subsurface "paleo-banks" during winter high water conditions. Groundwater contamination at the Calexico site occurred within interspersed sand lenses of a thick clayey (nearshore lacustrine) formation 10 feet below ground surface, and extends under a residential area. A geoprobe sampling device and onsite mobile laboratory was used to define the aerial extent of the groundwater plumes, and groundwater monitoring wells were installed for confirmation sampling and to determine groundwater gradient. Site specific Work Plans, Sampling and Analysis Plans, Health and Safety Plans, and reports detailing conclusions and recommendations were developed and approved by the U.S. Army Corps of Engineers for each major phase of the project. Negotiations with the lead regulatory agencies were performed on behalf of the INS.

** denotes projects completed with other firms*

Steven Brady PG, CEG, CHG

Managing Principal Hydrogeologist Technical Intro

Marine & Port Facilities

Port of Los Angeles As-Needed Environmental Services* (Project Manager)

Steve served as project manager for as-needed environmental services for the Port of Los Angeles. Duties included review and compilation of data from numerous prior reports into summary reports; and environmental drilling, sampling, and monitoring well installations at the proposed Terminal Island Container Transfer Facility (TICTF) to determine if contaminated soil occurred at hazardous levels, and the levels of volatile organic and metals contamination in the groundwater. A report detailing conclusions and recommendations was generated for the TICTF site. An additional study was performed at the Proposed Dry Bulk Handling facility to assess hydrocarbon and volatile organic contamination.

Los Angeles Harbor Department's Henry Ford Bridge Replacement Project* (Project Manager)

Steve served as project manager for a geologic, hydrologic, and contamination report for input to an EIR/EIS for the proposed Los Angeles Harbor Department's Henry Ford Bridge replacement project at the Port of Los Angeles. Duties included review of existing geologic, hydrologic, environmental data, and historical aerial photos; data compilation; seismic analysis; identification of impacts to the environment, workers, and the project; evaluation of mitigative measures; and report preparation.

Todd Pacific Shipyard Groundwater Investigation, Los Angeles, California (Field Manager and Technical Reviewer)

Steve served as field manager and technical reviewer for a soil and groundwater investigation at the Todd Pacific Shipyard at the Port of Los Angeles. The Shipyard was a 109-acre ship-building and repair facility at the Port. Responsibilities included management of the field sampling program at potential contamination sources such as machine pit, sumps, clarifiers, and dry wells in the maintenance/manufacturing buildings; drilling of shallow borings with limited access rigs at the targeted source areas; and collection of numerous groundwater samples at locations where suspected groundwater contamination might exist. In addition, quality control review of the reports developed for fire department and RWQCB compliance was also conducted.

Mixed-Use

Port of San Diego Rohr Facility, Chula Vista, California

Steve was responsible for a detailed subsurface assessment of the Rohr facility. The intent of the assessment was to evaluate the 40-acre former aircraft part manufacturing facility for acquisition by the Port of San Diego for redevelopment into a business park and entertainment complex. The assessment identified the presence of soil, soil vapor, and groundwater impacts by petroleum hydrocarbons, VOCs, heavy metals, PCBs, and semi-volatile organic compounds. He utilized many sampling techniques to assess the limits and concentrations of contaminants in the subsurface. Ultimately, the team was able to develop a cost estimate for potential remedial action cost associated to corrective action to allow redevelopment.

Oil & Gas

Retail Petroleum Stations Assessment and Remediation (Project Manager)

Steve managed numerous projects that involved assessment and remediation of petroleum releases at retail petroleum stations. Tasks included collection of soil, soil vapor, and groundwater samples during assessments, UST removal activities, and after releases have been discovered, corrective action plan preparation, periodic agency reporting, and remediation oversight. Remedial actions have included SVE with enhancement variations such as AS and biogac, total fluids extraction, oxygen releasing compounds, and excavation.

Ventura County Oil Fields* (Project Manager)

Steve prepared permit applications, FESOP reporting forms, Storm Water Pollution Prevention Plans, Storm Water Monitoring Plans, and Notices of Intent for two oil fields in Ventura County. The plans involved documenting past releases, mitigative measures to control future releases, details of sampling methodology and timing of sampling events, and development of summary tables and forms for field personnel to use as documentation for sampling during storm events.

Steven Brady PG, CEG, CHG

Managing Principal Hydrogeologist Technical Intro

Power Transmission & Distribution

PG&E Former G Street Substation, Fresno, California, Fresno, California

Steve was part of a team in conjunction with the DTSC to oversee investigation and cleanup, with the ultimate goal of certifying the site for unrestricted use. He completed a Preliminary Endangerment Assessment (PEA) that included a human health risk assessment (HHRA) and development of site-specific cleanup goals for constituents of concern. Following review of the PEA and feedback from DTSC, cleanup goals for lead, arsenic, PCBs, benzo(a)pyrene, and petroleum hydrocarbons in soil were approved by DTSC. We prepared a Removal Action Work (RAW) plan that recommended site-wide excavation of soils to approximately 1.5 feet to meet the cleanup goals. The DTSC approved the RAW and the excavation was completed in June 2009. During the remediation phase, he worked closely with DTSC staff to respond to changing field conditions. The remedial action was approved by DTSC in January 2010, and the site was certified for unrestricted use.

Retail / Commercial

Dry Cleaning Facility Assessment and Audit* (Project Manager)

Steve served as project manager for the soil and groundwater assessment, facility audit, and oversight of remedial activities at an active dry cleaning facility. Releases of PCE from older dry cleaning equipment and drum storage locations were investigated and the extent of both soil and groundwater contamination due to the releases was determined. Groundwater samples were also collected from perched zones and from below the groundwater table using a hydropunch sampling tool. Calculations of attenuation factors and PCE cleanup levels were performed using the LA RWQCB's Interim Guidance for VOC Impacted Sites.

Roadways

Cajalco Transportation Corridor EIR Investigation* (Project Geologist)

Steve developed the geologic portion of an EIR investigation for the proposed Cajalco Transportation Corridor. Duties included review of existing geologic and geotechnical information; review of historical and project specific vertical stereographic photographs; geologic field reconnaissance; slope stability and seismic considerations; identification of impacts and evaluation of mitigative measures; and preparation and submittal of a report and maps presenting geologic units, existing landslides, and potential constraints. In addition, preliminary environmental data was compiled and provided to the design team for evaluation of the different corridor segments.

California SR125 Corridor Site Investigation and Assessment* (Project Manager)

Steve served as project manager for a geologic/geotechnical investigation and hazardous materials assessment for the California SR 125 Corridor. The purpose of the study was to provide geologic, geotechnical, and environmental input for an EIR/EIS document consistent with Caltrans requirements to the engineering team evaluating the various alignment alternatives. The project included an environmental assessment, geologic reconnaissance, and seismic analysis of the alignment and alternatives. A contingency plan was developed for managing hazardous materials during road construction.

Foothill Transportation Corridor Geotechnical Investigation*, Orange County, California (Project Geologist)

Steve performed geologic portions of a geotechnical investigation for the proposed Foothill Transportation Corridor through in Orange County. The investigation provided geotechnical design criteria for proposed bridges, highway embankments, and appurtenant structures. Duties included coordination of services, supervision of geologic field and trench mapping, down-hole logging of borings to 175 feet below ground surface, determination of groundwater depth and gradient, compilation of data and maps, and report preparation.

** denotes projects completed with other firms*

Steven Brady PG, CEG, CHG

Managing Principal Hydrogeologist Technical Intro

Transit

San Diego Mission Valley Commuter Rail Alignments and Alternatives Site Assessments* (Project Manager)

Steve served as project manager for Site Assessments on the San Diego Mission Valley East and Mission Valley West commuter rail alignments and alternatives. Duties included development of Phase I alignment reports for the projects, including detailed environmental evaluation of alternatives with recommendations, and liaison with MTDB real estate and geotechnical design staff and local regulatory agencies. Each report involved research and government/regulatory database searches, historic air photo analysis, site reconnaissance, property owner interviews, generation of alignment maps indicating problematic areas, and detailed conclusions and recommendations. Additional assignments for the MTDB included peer review of other consultant's work and management of construction monitoring services for the MTDB's Cuyamaca Street Improvements project.

Los Angeles County Metropolitan Transportation Authority (MTA) Environmental Services* (In-House Project Manager)

Steve served as the in-house project manager for MTA environmental services. He provided coordination and management of due diligence activities for the Phase I, II, and III site assessments on SPTCo, AT&SF, UPRR, and adjacent properties, as well as individual and multiple parcel acquisitions. Duties consisted of generation of RFP scope-of-work and engineer's estimates for environmental and hydrogeologic investigations; evaluation of consultants reports and raw data; recommendations concerning liability and effects of soil and groundwater contamination on the proposed and ongoing rail line, station, and tunneling projects; recommendations for remedial actions/mitigative measures for each project; liaison with MTA Staff and legal council; and negotiations with property owners and regulatory agencies to set project cleanup criteria for contaminated sites. A commendation was received from the MTA for the work performed on this contract. Steve also managed site assessments on more than 300 miles of MTA corridor right-of-way, as well as performed specialized assessments for individual parcels. Conclusions and recommendations provided were used for property negotiations. In addition, Steve was the response team manager for MTA Real Estate and METROLINK division of the MTA.

Monitoring Well Abandonment and Closure Activities – Moorpark Maintenance Facility, Ventura County, California (Project Manager and Director)

Steve managed and directed monitoring well abandonment and closure activities for the Caltrans Moorpark Maintenance Facility located in Ventura County. Seven onsite groundwater monitoring wells were abandoned in accordance with State of California Water Well Standards (Bulletins 74-81 and 74-90), by over-drilling with a hollow-stem auger to approximately 50 feet below ground surface and backfilling the boreholes with a cement/bentonite grout mixture. Following the completion of abandonment activities, he coordinated waste removal activities. All waste was properly disposed/recycled in accordance with all applicable Federal, State, and local regulations. Upon completion of all field activities, Steve prepared and submitted a Well Destruction Report to the Ventura County Department of Public Works Water Resources Division and the Los Angeles Regional Water Quality Control Board. Agency closure from the Ventura County Environmental Health Division was received for the Moorpark Maintenance Facility.

Groundwater Monitoring, Abandonment, and Closure Activities - Big Sycamore Maintenance Facility, Ventura County, California (Project Manager and Director)

Steve managed and directed semiannual groundwater sampling and reporting for the Caltrans Big Sycamore Maintenance Facility located in Ventura County. Groundwater sampling and reporting were required to maintain compliance with Ventura County Environmental Health Division (VCEHD) mandates. Prior to the commencement of field activities, he reviewed the County-approved Work Plan, prepared a Site-Specific Health and Safety Plan for groundwater monitoring activities, retained a Caltrans-approved and CDOHS-accredited analytical laboratory, and provided notification to the VCEHD inspector at least 48 hours in advance of each sampling event. Upon completion of each groundwater monitoring event, Steve prepared and submitted a Groundwater Monitoring Report to the VCEHD. Based on favorable results from groundwater monitoring activities, VCEHD recommended site closure to the Los Angeles Regional Water Quality Control Board.

** denotes projects completed with other firms*

Additionally, Steve conducted monitoring well abandonment and closure activities for the Caltrans Big Sycamore Maintenance Facility. Eight onsite groundwater monitoring wells were abandoned in accordance with State of California Water Well Standards by over-drilling with a hollow-stem auger to approximately 35 feet below ground surface and backfilling the boreholes with a cement/bentonite grout mixture. Following the completion of abandonment activities, he coordinated waste removal activities. All waste was properly disposed/recycled in accordance with all applicable Federal, State, and local regulations.

Groundwater Monitoring – Ojai Maintenance Facility, Ventura County, California (Project Manager and Director)
Steve managed and directed semiannual groundwater sampling and reporting for the Caltrans Ojai Maintenance Facility located in Ventura County. Groundwater sampling and reporting were required to maintain compliance with Ventura County Environmental Health Division (VCEHD) mandates. The groundwater monitoring activities were completed in accordance with the requirements of the Ventura County Leaking Underground Fuel Tank (LUFT) Guidance Manual (Fourth Edition, April 2001). Following the completion of sampling activities Steve coordinated waste removal activities. All waste was properly disposed/recycled in accordance with all applicable Federal, State, and local regulations. Upon completion of each groundwater monitoring event, he prepared and submitted a Groundwater Monitoring Report to the VCEHD.

Groundwater Monitoring and Assessment Activities – Ventura Maintenance Facility, Ventura, California (Project Manager and Director)
Steve managed and directed semiannual groundwater sampling and reporting for the Caltrans Ventura Maintenance Facility located in Ventura County. Groundwater sampling and reporting were required to maintain compliance with Ventura County Environmental Health Division (VCEHD) mandates. Prior to the commencement of field activities, he reviewed the County-approved work plan, prepared a Site-Specific Health and Safety Plan for groundwater monitoring activities, retained a Caltrans-approved and CDOHS-accredited analytical laboratory, and provided notification to the inspector 48 hours in advance of each sampling event. Upon completion of each groundwater monitoring event, Steve prepared and submitted a Groundwater Monitoring Report to the VCEHD.

Additional assessment required by the VCEHD included evaluation of soil and groundwater to evaluate whether released had also occurred from the waste oil tank. The scope of work was developed for the advancement of eight soil borings around the waste oil tank. Upon completion of all field activities, prepared and submitted a Waste Oil Tank Area Assessment Report to the VCEHD

Limited Site Investigation and Reporting – Altadena and Newhall Maintenance Facilities, Los Angeles County, California (Project Manager)
Steve managed implementation of a limited site investigation and reporting project for the Caltrans Altadena and Newhall Maintenance Facilities for the evaluation of potential impacts near the former USTs. These investigations were conducted in order to maintain compliance with County of Los Angeles Department of Public Works mandates. Steve was liaison with the lead regulatory agency, oversaw field activities and prepared Subsurface Investigation reports documenting field procedures, evaluating analytical results, and recommending no further action (NFA) status from the Los Angeles County Department of Public Works.

Transit-Oriented Development

Limited Site Investigation and Reporting - Altadena and Newhall Maintenance Facilities, Los Angeles County, California (Project Manager)
Steve managed implementation of a limited site investigation and reporting project for the Caltrans Altadena and Newhall Maintenance Facilities for the evaluation of potential impacts near the former USTs. These investigations were conducted in order to maintain compliance with County of Los Angeles Department of Public Works mandates. Steve was liaison with the lead regulatory agency, oversaw field activities and prepared Subsurface Investigation reports documenting field procedures, evaluating analytical results, and recommending no further action (NFA) status from the Los Angeles County Department of Public Works.

Steven Brady PG, CEG, CHG

Managing Principal Hydrogeologist Technical Intro

Water

Santa Clara River Watershed Hydrogeologic and Hydrologic Evaluation*

Steve served as a member of the project team evaluating the hydrogeologic and hydrologic conditions within portions of the Santa Clara River watershed. An extensive water budget analysis was performed on individual watersheds and contributory streams to the eastern groundwater basin, as well as for the entire groundwater basin, of the Santa Clara River, to estimate volumes of available water at any portion of the Basin.

Calleguas Creek Watershed Management Planning Habitat and Recreation and Water Quality Subcommittees (Geologic and Hydrogeologic Engineer)

Steve participated as a member of the Calleguas Creek Watershed Management Planning Habitat and Recreation and Water Quality Subcommittees.He provided engineering geologic and hydrogeologic opinions and recommendations to the committees aimed at consensus for management and obtainment of numerous conflicting goals of the various stakeholders. Additionally, he served on the Calleguas Creek wetlands restoration team for the California Coastal Conservancy identifying wetlands restoration candidates in the watershed.

Calleguas Creek/Ormond Beach Wetlands, Oxnard, California (Project Manager)

Steve managed multiple site assessments and risk evaluations for the acquisition of coastal and proposed wetland restoration properties in Ventura County. Properties included tank farms, hazmat storage areas, degraded wetlands, and agricultural land. Projects included oversight of tank farm decommissioning, remedial cost estimates and recommendations.

Healthcare Campus Planning and Design

Various Environmental Services, Multiple Locations (Project Manager)

Steve has served as project manager for a variety of environmental projects for Kaiser. He has successfully managed project scope, schedule, and budget, overseen and directed technical and professional teams, and attended project related meetings and conference calls with Kaiser Project Managers, Legal Counsel, and Environmental staff. Steve oversaw project field and office personnel, evaluated data, and developed conclusions and recommendations aimed at limiting Kaiser risk and liability. Specific projects have included research and opinion letters, Phase 1 and Phase 2 ESA's (including soil, soil vapor, groundwater studies; ambient air and indoor air quality studies), building HAZMAT studies (including asbestos, lead-based paint, hazardous materials inventory, and PCB's in sealants), mold and moisture intrusion studies, geotechnical studies, surveying and title research. Steve has also been responsible for remedial implementation and oversight, construction monitoring, facility equipment evaluations, regulatory consulting and liaison, and development of various opinion letters and reports supporting Kaiser projects.

National Coordinator for Environmental Services, Multiple Locations (Project Manager)

As primary liaison to Kaiser for environmental services, Steve has been responsible for managing responses to Kaiser's requests for environmental assistance on various projects nationwide. He has ensured that the appropriately skilled technical and professional personnel are allocated to delivering technical quality in a timely manner for the particular project need. With an always available policy, he has facilitated ease of communication for Kaiser as the primary point of contact with Stantec. Steve has worked with Kaiser Real Estate, Kaiser Health & Safety/Environmental, Kaiser Legal Counsel (internal and external), Kaiser Contracts and Procurement, and numerous Kaiser project managers and project teams responsible for their projects and programs with construction, development, and redevelopment, and other projects. Steve has assisted with scoping and proposal efforts, bringing in the appropriate experts for Kaiser's needs. His work has included development of client-specific policies and procedures, and has provided training for personnel that work on Kaiser projects. He has conveyed to the team the understanding that our work is generally a part of a much larger project, and supports the need that delivering technical quality in a responsive manner is what helps Kaiser achieve their larger goals for their projects.

I. INTRODUCTION

This investigation was conducted with the objective to obtain a second opinion on the validity of earlier findings by Smith-Emery Company (SECO). This objective was met by advancing several borings on the subject site, analyzing samples, and comparing the analytical results to the results obtained earlier by SECO. The results of this investigation are described herein.

Reference 1 *Smith-Emery Company; Environmental Sampling Report; Report Number G-93-5242*

Reference 2 *Smith-Emery company; Site Characterization Report; Report Number G-93-5977*

II. SITE LOCATION

The site is located at 1345 North Vermont Avenue, Los Angeles. The site is a parking lot, formerly used for the El Puerto Restaraunt.

Exhibit 1 *Site Location Map*

III. SCOPE OF WORK

Per the instructions of the Client, this investigation was limited to three (3) 40 foot test borings next to the existing SECO borings B-2, B-4, and B-6. Ami Adini & Associates, Inc.'s (AA&A) designations for and depths of the verification test borings are:

B2-C next to SECO's B-2; 40 feet
B4-C next to SECO's B-4; 40 feet
B6-C next to SECO's B-6; 40 feet.

SECO's test results at the above test holes were:

Sample ID	Gasoline (mg/kg)	Benzene (ug/kg)	Toluene (ug/kg)	Ethyl Benzene (ug/kg)	Xylene (ug/kg)	Lead
B2-S1-10'	--	--	--	--	--	--
B2-S2-20'	3500	4800	17000	35000	190000	--
B2-S3-25'	--	ND	ND	3100	9700	--
B2-S4-30	--	--	--	--	--	--
B2-S5-35'	ND	--	--	--	--	--
B2-S6-40'	--	--	--	--	--	--
B2-S7-45'	0.21	ND	ND	ND	ND	--
B4-S2-5'	--	--	--	--	--	--
B4-S3-10'	--	--	--	--	--	--
B4-S4-15'	--	--	--	--	--	--
B4-S5-20'	120	ND	ND	150	640	ND
B4-S6-25'	--	--	--	--	--	--
B4-S7-30'	ND	--	--	--	--	--
B4-S8-35'	--	--	--	--	--	--
B4-S9-40'	410	ND	ND	ND	ND	--

Table 1 of Reference 1

Sample ID	Gasoline EPA 8015M ppm	Benzene EPA 8020 ppb	Toluene EPA 8020 ppb	Ethyl Benzene EPA 8020 ppb	Xylene EPA 8020 ppb
B6-S2-10'	ND	ND	ND	ND	ND
B6-S5-17.5'	220	ND	ND	1,700	9,200
B6-S6-20'	*C5-C10 92 *C10-C20 ND *C20-C30 ND	--	--	--	--
B6-S7-22.5'	0.72	82	ND	22	ND
B6-S9-30'	0.24	ND	ND	ND	ND

Table 1 of Reference 2

-- = Not tested for this analyte
ND = Not detected above method detection limits
mg/kg = Parts per million -ppm
ug/kg = Parts per billion -ppb
* = Hydrocarbon range by EPA method 8015M
-- = Not tested for this analyte
ppm = parts per million
ppb = parts per billion

These borings were advanced on September 24, 1994.

Exhibit 2 — *Plate 2 of Reference 2 showing SECO's boring locations and lateral view of the estimated plume of contamination*

Exhibit 3 — *Site Plan, showing SECO's boring locations and AA&A's confirmation borings, as measured by AA&A*

Note: There are marks of other borings on site which were not identified in SECO's reports and are not marked on the Exhibits.

IV. DRILLING AND SAMPLING PROTOCOL

Drilling was performed using a truck mounted open flight rotary auger. Samples were obtained through the use of a modified California Split Spoon Sampler, using 2 1/2 inch diameter brass cylinders. Upon collection, the middle of the three soil sample cylinders were sealed with aluminum foil and plastic caps. Care was taken to insure that no headspace was allowed in the sample cylinders. Each sample was labeled, placed in ziplock plastic bags and immediately refrigerated for transport to the analytical laboratory. Samples were taken at five foot intervals. All samples were transported to a State of California certified laboratory using chain of custody procedures.

Between each sampling episode, sampling equipment was washed in a solution of non-phosphate detergent, then rinsed once with tap water and once with deionized water.

The borings were logged in accordance with the Unified Soil Classification System to describe soil lithology.

Samples were analyzed by the following methods:

BTEX	EPA Method 8260
TPH Gasoline	MS Detector

IV-A. ANALYSIS RESULTS

Results of the laboratory analysis of this investigation are tabulated are as follows:

SAMPLE ID	BENZENE	TOLUENE	ETHYL-BENZENE	XYLENE	TPH GASOLINE
B4-C-10	ND	ND	ND	ND	ND
B4-C-15	ND	ND	ND	ND	ND
B4-C-20	0.07	0.07	0.7	0.06	1.7
B4-C-25	0.08	ND	0.07	0.04	2.9
B4-C-30	ND	ND	ND	ND	ND
B4-C-40	ND	ND	ND	ND	ND
B6-C-10	ND	ND	ND	ND	ND
B6-C-15	0.003	ND	0.06	0.05	1.8
B6-C-20	1.0	0.5	3.2	8.4	117
B6-C-25	ND	ND	ND	ND	ND
B6-C-30	ND	ND	ND	ND	ND
B6C-35	ND	ND	ND	ND	ND
B2-C-10	ND	ND	ND	ND	ND
B2-C-15	ND	ND	4.2	8.2	170
B2-C-20	5.3	ND	39	140	1900
B2-C-25	0.13	0.007	0.12	0.18	5.0
B2-C-30	ND	ND	ND	ND	ND
B2-C-40	ND	ND	ND	ND	ND

All units in mg/Kg (ppm).

IV-B COMPARATIVE ANALYSIS

Test results, for TPH(G) from the three test holes in this investigation as plotted against the respective results fror earlier SECO's investigations are:

SAMPLE DEPTH	SECO B-2	AA&A B-2C	AA&A ODOR
10	--	ND	NO
15	NA	170	SO
20	3500	1900	SO
25	--	5.0	NO
30	--	ND	NO
40	--	ND	NO

SAMPLE DEPTH	SECO B-4	AA&A B-4C	AA&A ODOR
10	--	ND	NO
15	--	ND	SI O
20	120	1.7	SO
25	--	2.9	NO
30	ND	ND	NO
40	410	ND	NO

SAMPLE DEPTH	SECO B-6	AA&A B-6C	AA&A ODOR
10	ND	ND	NO
15	--	1.8	SO
20	92	117	SO
25	--	ND	NO
30	0.24	ND	NO
35	NA	ND	NO

All depths in feet.
All units in mg/kg (ppm)

ND = Not Detected
-- = Not tested for this analyte
NA = No sample taken
NO = No Odor
SO = Strong Odor
SI O = Slight Odor

4657 HOLLYWOOD BLVD. · LOS ANGELES, CALIFORNIA 90027 · TELEPHONE 213/913-4073 FAX 213/667-2336

V. FINDINGS

1. Test results from boring B2-C validate SECO's test results from boring B-2.

2. Test results from boring B4-C validate SECO's results from boring B-4 at 20 feet, but refute SECO's results at 40 feet.

3. Test results from boring B6-C validate SECO's results in boring B-6.

4. AA&A's field observations of petroleum odor match the lab analytical results of the respective samples.

5. Overall, AA&A's test results validate SECO's results in depths lesser than 25 feet, but refute SECO's results at 40 feet in boring B-4.

6. Soil changed from sand to clay in all borings at approximately 20 feet and stayed clay to the bottom of all borings.

VI. CONCLUSIONS

1. The presence of gasoline contamination in the soil has been validated.

2. The pattern of contamination corresponds to earlier findings of SECO in the respective test holes with the exception that AA&A did not find any contamination beyond 20 feet in depth.

3. The soil matrix changes from essentially sand to essentially stiff clay at approximately 20 feet. This geology supports the assumption that all significant contamination at the subject site terminates at approximately 20 feet of depth.

PLATES 7 TO 11 - BORING LOGS

APPENDIX A - ANALYTICAL LABORATORY REPORT AND CHAIN OF CUSTODY

some areas. Bedrock consists predominantly of siltstone and was encountered at a depths ranging from 22 to 27 feet below ground surface.

MAGNETOMETER SCREENING

A magnetometer screening was completed by Goldak/UDSEC to check for underground tanks which had no closure documentation on file. In the areas identified as potential concerns, borings were hand augered to a depth of 10 feet below ground surface.

No tanks were encountered in our borings in the areas of concern, as identified by the magnetometer screening.

OBSERVATIONS

Continuous air monitoring was performed during the drilling with an organic vapor analyzer (OVA). The monitoring indicated no organic vapors were present at a level of concern in the work area at any time. OVA readings were obtained at each five foot drilling interval as noted on the boring logs.

HYDROLOGIC INFORMATION

The subject property is located approximately 350 feet above sea level near the northern edge of the Los Angeles Basin, just south of the Santa Monica Mountains. Geologic units beneath the site consist

- To facilitate any future property transactions or financing, the site characterization should be conducted in accordance with the specifications of the regulatory agency that would have jurisdiction over this site (the Lead Agency). As the contamination appears to be due to leakage from underground fuel tanks the Lead Agency would be the Los Angeles City Fire Department.

- Following completion of the site characterization, a remedial feasibility plan should be prepared. The plan should evaluate the various remedial techniques that would be effective for the conditions encountered and choose the most appropriate method based on the needs of the client and the Lead Agency. After the remedial method has been chosen, a complete remedial action plan should be developed and implemented.

LIMITS OF LIABILITY

The findings and conclusions contained in this report are based on site conditions as they existed at the time of our investigation, and we further assume the explorations to be representative of the subsurface conditions throughout the site.

The factual data and interpretations pertain to the specific project described in this report and are solely for the use of Carlos Go and are not applicable to any other project or site. Any reliance on

this document by any other person or entity shall be at that party's sole risk.

Our investigation was performed using the standard of care and level of skill ordinarily exercised under similar circumstances by reputable Environmental Assessors and Geologists currently practicing in these or similar localities. No other warranty, expressed or implied, is made as to the conclusions and professional advice included in this report.

Respectfully submitted,

SMITH-EMERY COMPANY

NOTE ON SAMPLER

Unless otherwise noted on the boring logs, a "California" sampler with an I.D. of 2.5 inches was driven 18 inches into the soil with a 140 - pound hammer falling 30 inches. The blow count for the last 12 inches is recorded on the boring log.

NOTES:

The descriptions on the boring logs apply only at the specific boring location and at the time the borings were made. They are not warranted to be representative of subsurface conditions. Soil and rock descriptions are based on commonly accepted geotechnical methods of identification and classification and are based on our professional judgement and experience. Field descriptions have been modified where appropriate to reflect laboratory test results. The stratification of soil layers is represented with approximate boundaries and the transition between soil types may be gradual.

INTRODUCTION

This document constitutes Smith-Emery Company's report of site characterization activities conducted at 1345 North Vermont Avenue, in the City of Los Angeles, California (formerly noted as 1331 N. Vermont Ave. on the city parcel maps). The Site Vicinity Map (Plate 1) and the Plot Plan (Plate 2) show the location of the site with respect to the surrounding area and the arrangement of the exploratory soil borings in relation to the existing conditions at the site. Cross sections are shown as Plates 3 and 4 which show the approximate limits of the gasoline soil contamination.

Historical documentation on file with the City of Los Angeles indicates that four underground gasoline storage tanks were formerly located on Lot Nos. 59 and 60 of the subject site. These included three 1,000-gallon tanks and one 10,000-gallon tank as described in our previous reports (see references - Appendix B). The locations of the former underground storage tanks (contamination source) was determined to be near the street by the use of aerial photographs, Sanborn Maps, and soil borings. The underground storage tanks were used until approximately 1959.

SUMMARY OF PREVIOUS WORK

Previous work completed on the site by Smith-Emery Company included our Phase I Environmental Assessment report (SECo Report No. G-93-5176) dated March 25, 1993, and our Report of Environmental Sampling (SECo. Report No. G-93-5242) dated April 8, 1993. The previous environmental investigation and sampling revealed that the underground fuel storage tanks previously located at the site had leaked and impacted the surrounding soil. The contamination plume had migrated down to bedrock and had traveled on top of the bedrock to the east. Further assessment was

necessary to define the boundaries of the contaminated area. This site characterization was performed and is described in this report.

PURPOSE AND SCOPE OF SERVICE

The purpose of our work has been to estimate the degree to which the underground fuel storage tanks have adversely impacted the subsurface soils at the site, and to determine the approximate limits of the gasoline contamination.

The scope of our environmental services was based on the conclusions and recommendations of our Phase I Environmental Assessment report (SECo Report No. G-93-5176), and our Report of Environmental Sampling (SECo. Report No. G-93-5242).

FIELD WORK

SOIL SAMPLING

A truck-mounted, hollow-stem auger drill rig was utilized to drill a total of three exploratory soil borings to depths up to 30 feet below ground surface to obtain soil samples for chemical analysis. In addition, six borings were hand augered to depths up to 25 feet below ground surface for sampling and chemical analyses. The hand augered borings were done because Metro Rail construction activities in the street did not allow for lane closures and drill rig access. Soil samples were obtained at selected depths appropriate for the subsurface conditions and contaminants encountered on site.

A Smith-Emery Company geologist observed the drilling operations and visually logged the borings in accordance with the Unified Soil Classification System. Samples from the drilled borings were obtained by driving a split barrel sampler provided with 2.5 inch diameter brass sample liners, sealed at

each end with Teflon sheeting and a tight fitting plastic end caps. Samples from the hand augered borings were placed in tightly packed and filled, four ounce glass jars with Teflon lined lids. Each sample was marked with sample point identification, date and time sampled, placed in an iced cooler and delivered to Smith-Emery Company's laboratory in Los Angeles. Chain-of-custody documentation was completed for all samples and is included with the results of chemical analyses presented in Appendix A. Appropriate environmental sampling protocol and decontamination procedures were employed during all field investigations. All work was performed under the direction of a professional registered in the State of California.

SUBSURFACE CONDITIONS

The site is entirely underlain by a surface layer of alluvium (22 to 27 feet thick) overlying sedimentary bedrock. The alluvium encountered in the borings consists of interbedded silty clays and clayey silts with isolated horizons of silty sand to the bedrock surface. In addition, there is a nearly continuous layer of relatively permeable silty sand just above the bedrock surface beneath most of the site. The underlying bedrock consists predominantly of siltstones of the Miocene Age Puente Formation. Bedrock which were encountered at depths ranging from 22 to 27 feet below ground surface. Geologic Cross Section A-A' and B-B' depict our current understanding of the subsurface geologic conditions along with the results of chemical analyses of discrete soil samples.

Gasoline range hydrocarbons were detected in the borings. The highest concentrations were detected near the base of the alluvial soils just above the bedrock contact (at depths ranging from 15 to 22 feet below the surface). The relatively fine grained and less permeable weathered siltstone bedrock which underlies the site has retarded vertical migration of gasoline hydrocarbons and is only slightly impacted.

OBSERVATIONS

Continuous air monitoring was performed during the drilling operations with an organic vapor analyzer (OVA) for health and safety and field sample screening purposes. The monitoring indicated organic vapors were not present at a level of concern in the work area at any time during the field work.

Confined headspace OVA readings were obtained at each five foot drilling interval as noted on the boring logs, and were used as a screening method to determine if the samples were contaminated with gasoline hydrocarbons. Samples from borings B-8, HA-4 and HA-6 showed high OVA readings just above the bedrock surface. However, laboratory analyses of these samples indicated that gasoline hydrocarbons were not present in detectable concentrations in the soil. Further analyses were completed (for a hydrocarbon range by EPA method 8015M) to confirm that the OVA readings had not been caused by another possible hydrocarbon outside the gasoline range which may have remained in the soil. As a result, it is our opinion that these OVA readings represent the presence of vapor phase hydrocarbons which may have migrated from the former tank location through the relatively permeable layers of silty sands. These soils (in the area of borings B-8, HA-4 and HA-5) are not considered to be impacted to an extent which would require remedial action, however health and safety issues would need to be addressed if the soil were to be excavated.

HYDROLOGIC INFORMATION

The subject property is located at approximately 375 feet above sea level near the northern edge of the Los Angeles Basin, just south of the Santa Monica Mountains. Geologic units beneath the site include of a surface layer of Quaternary alluvial and terrace deposit materials over Tertiary sedimentary

bedrock. The alluvial and terrace deposits consist of interstratified silts and clays with isolated sand horizons derived from the Santa Monica Mountains to the north.

The site is located within the Hollywood Groundwater Basin and the regional groundwater flow direction is reportedly towards the south to southwest subparallel to the regional topographic gradient. Los Angeles County records indicate the depth to groundwater in the vicinity of the site maybe generally shallow. However, no groundwater was encountered in any of the previous exploratory soil borings to the maximum depth explored (45 feet).

ANALYTICAL TESTING

Selected soil samples obtained from the soil borings were analyzed at Smith-Emery Company's state certified laboratory for gasoline constituents by EPA method 8015M, for a hydrocarbon range by EPA method 8015M, and for benzene, toluene, ethylbenzene and xylenes (BTEX) by EPA method 8020. Copies of the analytical laboratory reports and accompanying chain of custody documentation are included in Appendix A and the results are summarized in Table 1. Analytical results from our previous report is summarized in Table 2.

CONCLUSIONS

GENERAL

Smith-Emery Company was retained to investigate the area surrounding the underground gasoline storage tanks historically located on this property. These tanks had been used for storing gasoline until approximately 1959. During the course of this site characterization investigation, nine borings were drilled on and adjacent the subject property to obtain representative samples of the subsurface soils. Selected samples were analyzed for gasoline hydrocarbons by EPA Method 8015M, for a

hydrocarbon range by EPA method 8015M, and for benzene, toluene, ethylbenzene, and xylenes (BTEX) by EPA Method 8020.

Samples from three of the borings drilled during the course of this investigation (B6, HA1, and HA2) contained gasoline hydrocarbon concentrations exceeding 100 parts per million. The highest concentration (3,900 ppm gasoline) was found at the location of Boring HA-1 at a depth of 20 feet below ground surface. The gasoline was found along the east property boundary and has migrated out into the sidewalk and street area.

CONTAMINANT MIGRATION

The distribution of gasoline hydrocarbon contamination encountered indicates that the point of release of gasoline to be near the location of Boring B-2 and HA-1. The resulting contamination plume is located around this point and extends offsite onto the public right of way to the east. Please see plume limits on Plot Plan, Plate 2.

The vertical migration of the gasoline hydrocarbons has been effectively restricted by the presence of the siltstone bedrock which underlies the entire site. This barrier has limited vertical migration of actionable concentrations of contamination to depths generally less than 25 feet below the ground surface. However , the presence of relatively permeable silty sand horizons within overlying alluvium has allowed for limited horizontal contaminant migration, see Cross Sections A-A' and B-B' found on Plates 3 and 4. This is interpreted from screening of the sampled zones with an organic vapor analyzer followed by subsequent analytical tests indicating levels of nondetect or below action levels.

REGULATORY REQUIREMENTS

The amount of gasoline and BTEX compounds that may be left in place in soil can be determined by applying criteria contained in the State Water Quality Control Board's LUFT Manual. Depth to groundwater at the site must be established to determine acceptable clean-up levels. It is the opinion of Smith-Emery Company, based on reasonable assumptions concerning site geology, that if groundwater is not at risk, any concentrations of gasoline hydrocarbons exceeding the following limits would be considered unacceptable by the appropriate regulatory agencies:

Gasoline:	100 ppm
Benzene:	0.3 ppm
Toluene:	0.3 ppm
Ethylbenzene:	1.0 ppm
Xylenes:	1.0 ppm

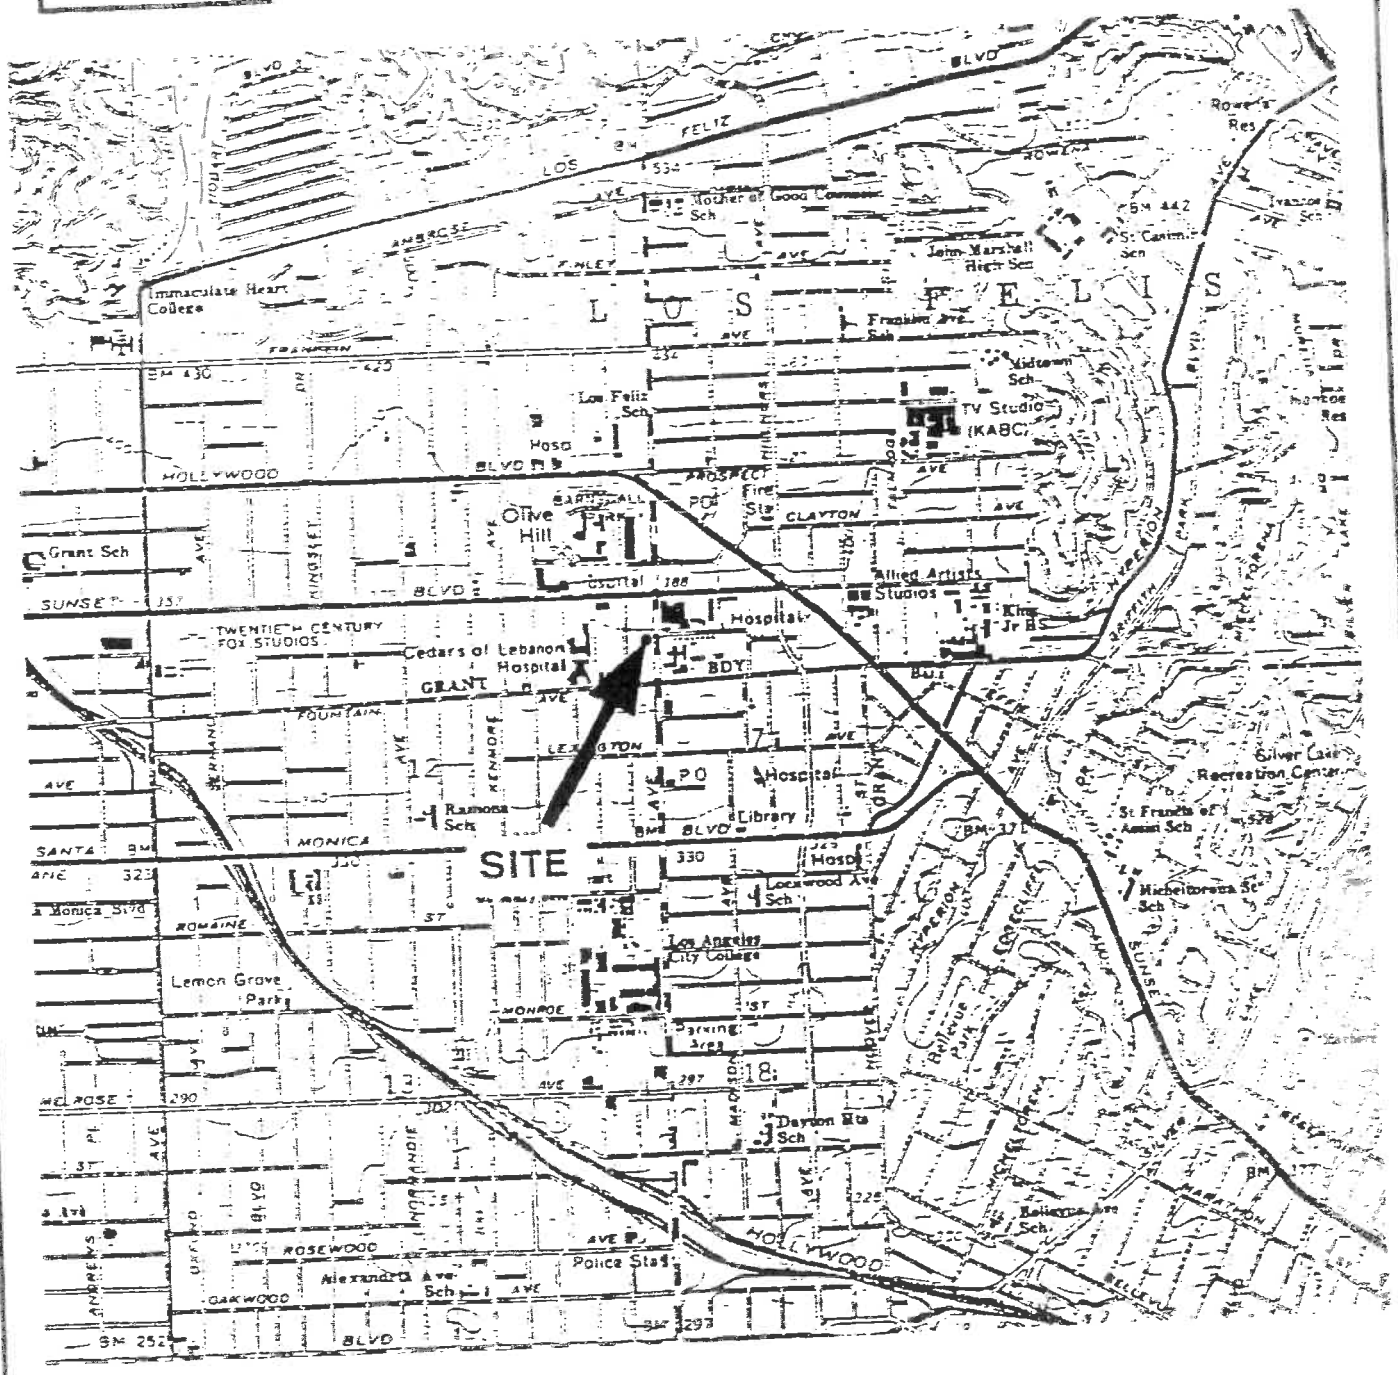
In this investigation, samples from boring B2 at 20 and 25 feet, B4 at 20 and 40 feet, B5 at 20 feet, B6 at 17.5 feet, HA1 at 15 and 20 feet, and HA2 at 20 feet meet or exceeded these criteria. These levels may be increased per the LUFT Manual if depth to groundwater can be clearly defined at the site.

It is therefore the conclusion of Smith-Emery Company that the soils beneath the property are contaminated with gasoline hydrocarbons in amounts exceeding the generally acceptable limits. These hydrocarbons are most likely due to leakage from the documented underground storage tanks and associated equipment historically located on this property. No underground tanks have been found to still exist at the site per records obtained and a geophysical survey of the site. The vertical limits of the plume extend down to bedrock which is approximately 22 to 27 feet below ground surface level. The horizontal limits are mainly contained to the eastern portion of the property, but also extend offsite under the sidewalk and street. High Organic Vapor Analyzer readings were also encountered in borings B-8, HA-4, and HA-6. This area of the contaminant plume has been degrading for approximately 35 years and although actionable levels of contaminants are not present in the soil, this

area still contains enough contamination in vapor phase to present a health and safety risk if excavated in a confined space condition (i.e. Metro Rail tunneling).

RECOMMENDATIONS

Based on the results of our Phase I Environmental Assessment report, our Environmental Sampling report, and this site characterization report, it is the opinion of Smith-Emery Company that in order to return the property to a condition acceptable for closure of the hydrocarbon contamination the following work should be conducted:



- A site remediation feasibility study should be performed. The study should evaluate the various remedial techniques that would be effective for the conditions encountered and determine the most appropriate method on the basis on the needs of the client and the requirements of the lead regulatory agency. After the remediation method has been chosen, a complete remedial action plan should be developed, cost estimates obtained, approved by the regulators, and implemented.

- The area of gasoline hydrocarbon migration which has been shown to extend into the street east of the site may create a health and safety problem during construction of the proposed Metro Rail line to be located in the Vermont Avenue right of way. These hydrocarbons are not considered to be actionable from a regulatory standpoint, based on limited sampling to date. However they may effect underground construction associated with Metro Rail improvements. The effects of this contamination which impact the Metro Rail construction may result in back-charges to the property owner responsible for the contamination. See the attached Plates 2 through 4 for a depiction of the limits of contamination in plan and cross section view.

NOTE ON SAMPLER

Unless otherwise noted on the boring logs, a "California" sampler with an I.D. of 2.5 inches was driven 18 inches into the soil with a 140 - pound hammer falling 30 inches. The blow count for the last 12 inches is recorded on the boring log.

NOTES:

The descriptions on the boring logs apply only at the specific boring location and at the time the borings were made. They are not warranted to be representative of subsurface conditions. Soil and rock descriptions are based on commonly accepted geotechnical methods of identification and classification and are based on our professional judgement and experience. Field descriptions have been modified where appropriate to reflect laboratory test results. The stratification of soil layers is represented with approximate boundaries and the transition between soil types may be gradual.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 11/07/2015 has revealed that there are 13 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

CA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the CA LUST list, as provided by EDR, and dated 12/14/2015 has revealed that there are 25

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, and dated 12/14/2015 has revealed that there are 9 CA UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/09/2015 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 11 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 8 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 7779

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS

KAISER PERMANENTE LOS ANGELES (Continued) **1007199251**

USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants.

DELUXE LABORATORIES (Continued) **1000428979**

AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/30/2015
Date Data Arrived at EDR: 11/07/2015
Date Made Active in Reports: 01/04/2016
Number of Days to Update: 58

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/30/2015
Date Data Arrived at EDR: 11/07/2015
Date Made Active in Reports: 01/04/2016
Number of Days to Update: 58

Telephone: N/A
Last EDR Contact: 01/26/2016
Next Scheduled EDR Contact: 04/18/2016
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/30/2015
Date Data Arrived at EDR: 11/07/2015
Date Made Active in Reports: 01/04/2016
Number of Days to Update: 58

Telephone: N/A
Last EDR Contact: 01/26/2016
Next Scheduled EDR Contact: 04/18/2016
Data Release Frequency: Quarterly

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2015
Date Data Arrived at EDR: 04/08/2015
Date Made Active in Reports: 06/11/2015
Number of Days to Update: 64

Source: Environmental Protection Agency
Telephone: 703-603-8704
Last EDR Contact: 01/06/2016
Next Scheduled EDR Contact: 04/18/2016
Data Release Frequency: Varies

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013
Date Data Arrived at EDR: 11/11/2013
Date Made Active in Reports: 02/13/2014

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

1321 NORTH VERMONT
1321 NORTH VERMONT
LOS ANGELES, CA 90027

TARGET PROPERTY COORDINATES

Latitude (North):	34.096451 - 34° 5' 47.22''
Longitude (West):	118.292132 - 118° 17' 31.68''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	380803.0
UTM Y (Meters):	3773409.2
Elevation:	376 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

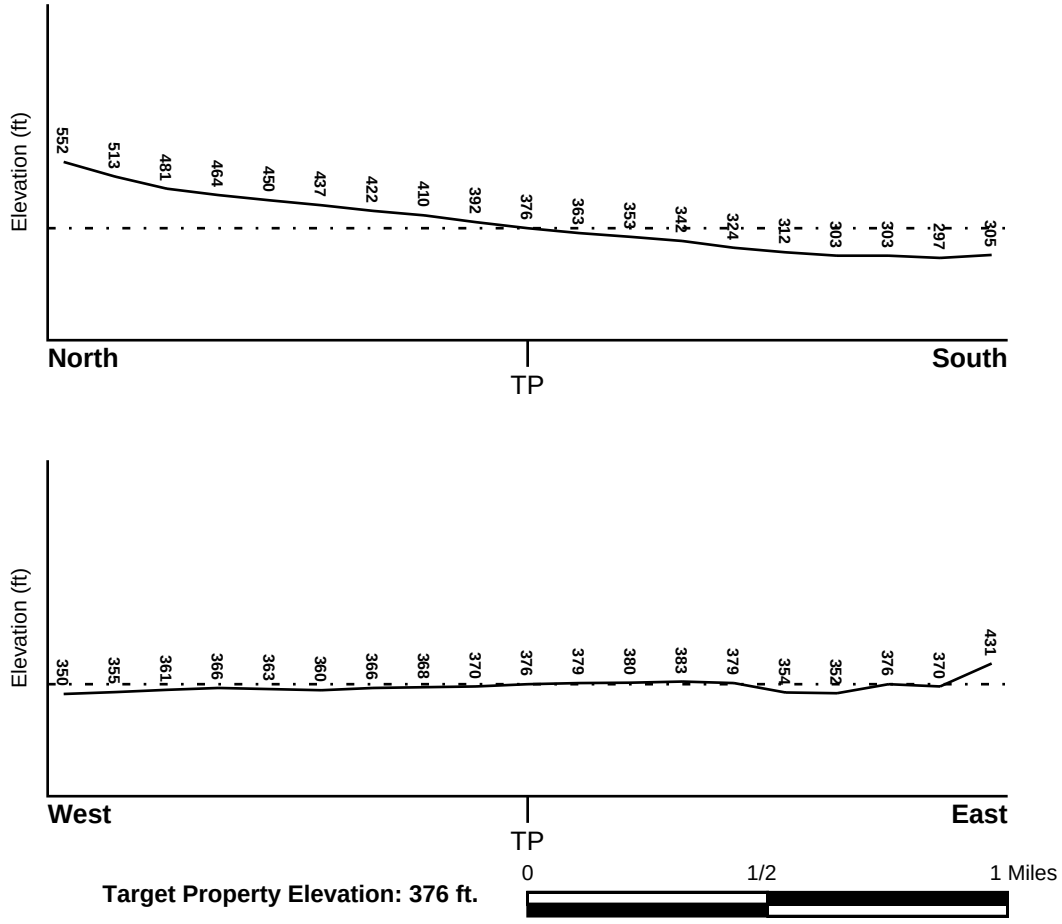
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06037C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
2	1/4 - 1/2 Mile WNW	S
3	1/2 - 1 Mile ESE	SW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Miocene
Code:	Tm *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Stantec were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

CITY OF LOS ANGELES

DEPARTMENT OF BUILDING AND SAFETY

BUILDING DIVISION

Application to Alter, Repair, Move or Demolish

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

PHASE II ENVIRONMENTAL SITE ASSESSMENT REPORT

N. Vermont and N. New Hampshire, Los Angeles, California
April 19, 2016

EXECUTIVE SUMMARY

On behalf of Kaiser Foundation Health Plan Inc. (Kaiser), Stantec Consulting Services Inc. (Stantec) is pleased to submit this report documenting the results of the expedited Phase II Environmental Site Assessment (ESA) activities conducted on the property, consisting of 1321, 1329, 1345 North Vermont Avenue, and 1328 North New Hampshire Avenue, Los Angeles, California (the "Property", Figure 1). Stantec recommended this investigation of subsurface conditions at the Property in response to Stantec's Phase I ESA, dated March 11, 2016. The referenced Phase I ESA revealed Recognized Environmental Conditions (RECs) in connection with the Property, including historical gasoline/fueling operations on the Property and historical dry cleaning operations on adjoining properties.

To investigate subsurface conditions for the presence of contaminants that may have resulted from historical activities on the Property 1) a geophysical survey was conducted to identify the presence of underground storage tanks (USTs), 2) 10 soil borings were advanced, 3) four soil vapor monitoring wells were installed, and 4) soil and soil vapor samples were collected and submitted to a fixed based laboratory for chemical analysis. Further detail associated with the assessment is detailed below.

Geophysical Survey

A geophysical survey was conducted for the purpose of utility clearance at all proposed boring locations, as well as to verify the presence of one or more USTs and former gas station-related underground structures at the street address 1329 North Vermont. A reinforced concrete underground structure, measuring approximately 6 feet by 25 feet, was identified in the drive way of 1329 North Vermont Avenue (Figure 2). Shallow underground piping was detected which was likely related to former gas station activities at the referenced Property. No USTs were identified during this investigation.

Soil Assessment

A total of 10 soil borings were advances to a maximum depth of 40 feet below ground surface (bgs); three borings were located at 1321 North Vermont Avenue; five borings were located at the street address 1329 North Vermont Avenue (former gas station); and two borings were located on the northern-most address of 1345 North Vermont Avenue.

14 soil samples were collected at depths ranging from 17 to 40 feet bgs, and analyzed for volatile organic compounds (VOCs), gasoline range organics (GRO), diesel range organics (DRO), and for metals.

GRO was detected in four samples at concentrations up to 350 milligrams per kilogram (mg/kg), which exceeds the USEPA's Regional Screening Levels (RSLs) for residential use properties of 82 mg/kg.

DRO concentrations ranging from 5.9 mg/kg to 83 mg/kg were detected in six of the fourteen samples; which were all below the USEPA's RSLs of 110 mg/kg for residential use and 600 mg/kg for commercial use.

Low concentrations of benzene, 4-Isopropyltoluene, ethylbenzene, Isopropylbenzene, xylenes, n-Butylbenzene, n-Propylbenzene, and sec-Butylbenzene are indicative of operations pertaining to the former or current presence of gasoline and diesel or related substances.

Arsenic was detected in all soil samples at concentrations exceeding the USEPA RSLs for residential use properties of 0.67 mg/kg, four arsenic soil concentrations exceeded the

commercial use RSLs of 3.0 mg/kg. Chromium was detected in all samples above USEPA commercial RSLs of 6.3 mg/kg (maximum of 26 mg/kg). A comparison of the arsenic and chromium concentrations detected at the Property with California background metal concentrations (Table4), indicates that concentrations are within the typically occurring background range.

All other detected metals are considered to be within the typical range for Southern California soil and are not present at concentrations exceeding the USEPA RSLs established for either residential or industrial use.

Groundwater was not encountered during this phase of investigation.

Soil Vapor Assessment

A total of four soil vapor probes were installed at three locations; one dual-nested vapor probe (SV-2) was installed on the property of the former gas station (1329 North Vermont Avenue); the remaining two soil vapor probes (SV-1 and SV-3) were installed on the northern and southern properties, respectively.

Soil vapor samples were analyzed for VOCs. Benzene was detected in soil vapor samples at concentrations up to 2.1 µg/l, which is above the Office of Environmental Health Hazard Assessment (OEHHA) residential screening level of 0.036 microgram per liter (µg/l); and OEHHA's commercial screening level for benzene (0.12 µg/l).

Recommendations

GRO was identified in soil at concentrations exceeding USEPA RSLs. Benzene was identified in soil vapor above the OEHHA Vapor Intrusion Screening Level. Based on the GRO and benzene levels identified, proper soil management will need to be conducted during redevelopment activities and the potential for vapor intrusion exists.

Arsenic and chromium were also identified in soils above their respective screening levels, both for residential and commercial uses; however, a comparison of the arsenic and chromium concentrations detected at the Property with California background metal concentrations (Table4), indicates that concentrations are within the typically occurring background range.

The geophysical survey did not identify the presence of any USTs at the Property; however, this was a limited assessment and based on the historical use of the Property, any future redevelopment of the Property should include the possibility of encountering/assessing USTs, piping, dispensers, and/or any other UST system component.

Therefore, based on the results of this investigation, Stantec recommends the following:

1) Contamination and risk of exposure (volatilization to indoor air) was identified at the Property, as well as, potential risk of offsite impacts. The Phase II ESA was limited; therefore, additional assessment is recommended to further evaluate the impacts and the overall vapor intrusion risk at the Property. This further investigation will provide additional data to determine if remediation or mitigation is necessary.
2) Preparation of a Soil Management Plan (SMP) for the Property prior to excavation and redevelopment activities, the purpose of the SMP is to provide guidance to project management, site management, and field personnel on the identification and management of soil (both impacted and clean), and construction debris during excavation, grading, and construction activities to be completed at the Property. This SMP should include information associated with the possibility of

encountering/assessment USTs, piping, dispensers, and/or any other UST system component; and

3) A noise and vibration study is recommended to identify potential noise and vibration mitigation measures (if necessary), dependent on the end use of the Property and equipment to be used at the Property.

1.0 INTRODUCTION

On behalf of Kaiser Foundation Health Plan Inc. (Kaiser), Stantec Consulting Services Inc. (Stantec) is pleased to submit this report documenting the results of the expedited Phase II Environmental Site Assessment (ESA) activities conducted on the property, consisting of 1321, 1329, 1345 North Vermont Avenue, and 1328 North New Hampshire Avenue, Los Angeles, California (the "Property", Figure 1). Stantec recommended this investigation of subsurface conditions at the Property in response to Stantec's Phase I ESA, dated March 11, 2016. This assessment revealed Recognized Environmental Conditions (RECs) in connection with the Property, including historical gasoline/fueling operations on the Property and historical dry cleaning operations on adjoining properties.

To investigate subsurface conditions for the presence of contaminants that may have resulted from historical activities on the Property the following activities were conducted: 1) a limited geophysical survey to identify the presence of USTs, 2) advancement of 10 soil borings, 3) installation of four soil vapor monitoring wells, 4) collection and submittal of soil and soil vapor samples to a fixed based laboratory for chemical analysis, and 5) review and interpretation of the assessment findings with documentation and recommendations within this report.

2.0 SITE BACKGROUND

2.1 SITE LOCATION & FACILITY DESCRIPTION

The Property consists of four parcels identified as Assessor's Parcel Number (APN) 5543-014-014, 5543-014-015, 5543-013-009, and 5543-013-003 with addresses of 1321, 1329, 1345 North Vermont Avenue and 1328 North New Hampshire Avenue, respectively. The portions of the Property along North Vermont are commercial with various dental practices located on 1321 North Vermont. 1328 North New Hampshire is a residential dwelling, divided into two sub-units. Surrounding properties are a mix of commercial and residential properties. A Property location map is illustrated on Figure 1.

2.2 PRIOR ENVIRONMENTAL STUDIES

The completion of a Phase I Environmental Site Assessment by Stantec for the Property and documented in a report dated March 11, 2016, identified the following Recognized Environmental Conditions (RECs) in connection with the Property:

1) Historical operations at the Property included a gasoline/fueling station associated with 1331 North Vermont Avenue (former Property address) the current addresses now are 1329 and 1345 North Vermont Avenue. The gasoline station was identified in Sanborn maps, aerial photographs, and city directories, and appears to have operated at the Property from at least 1929 to approximately 1960; and

2) As part of the site reconnaissance and research, several historical dry cleaning operations were identified to have operated adjacent and/or less than 100 feet south of the Property.

Based on these findings, Stantec recommended the completion of a Phase II ESA to evaluate the potential presence of impacts in subsurface soils related to the former gasoline/fueling operations at the Property and the adjacent dry cleaning operations.

This report presents the findings of the site investigation completed on the Property.

3.0 GEOLOGY/HYDROGEOLOGY

The Property is located in the Los Angeles Basin, a coastal plain at the northern end of the Peninsular Ranges Geomorphic Province. The sediment in the basin consists of upper Miocene through Lower Pleistocene sediments. Local lithology encountered at the Property from subgrade to approximately 20 feet bgs consisted primarily of interbedded silty sand, sandy silt, and sand. The coarser sands and silts overlie a confining clay layer, the top of which was encountered at depths ranging from 19.75 feet bgs (in SV-1) to 24 feet bgs (in SB-2). The depth of the clay layer was not defined, but exceeds 40 feet bgs which was the greatest explored depth during this investigation. Soil boring logs are presented as Attachment A.

According the Department of Water Resources' (DWR) Bulletin 118, the Property lies within the Hollywood Subbasin which occupies a 16 square mile area of the northeastern Coastal Plain. The Hollywood Subbasin is bounded on the north by Santa Monica Mountains and the Hollywood fault, on the east by the Elysian Hills, on the west by the Inglewood fault zone, and on the south by La Brea High, formed by an anticline that brings impermeable rocks close to the surface. Surface drainage from the Property flows in a southerly direction towards Ballona Creek, where it then flows to the west and to the Pacific Ocean.

Groundwater in the Hollywood Subbasin is mainly produced from Pleistocene age alluvial sands and gravels. Unconfined groundwater conditions exist in the shallow aquifers in the northern and eastern portion of the subbasin. In the deeper aquifers and in the remainder of the subbasin, groundwater is confined, and clay members separate the aquifers over much of this subbasin. (DWR 1961).

Groundwater was not encountered in any of the soil boring advanced on the Property as part of this assessment.

4.0 SCOPE OF WORK

On March 26, 29, and 30th, 2016, Stantec conducted the oversight of the geophysical survey, soil boring and soil vapor well installation, and collected and submitted soil and soil vapor samples at the Property to a fixed based laboratory for chemical analysis.

4.1 PRE-FIELD ACTIVITIES

4.1.1 Health & Safety Plan

A *Health and Safety Plan* was prepared as required by the Occupational Health and Safety Administration (OSHA) Standard "Hazardous Waste Operations and Emergency Response" guidelines (29 CFR 1910.120). The document was reviewed and signed by all on-site consulting personnel and subcontractors prior to performing work at the Property.

4.1.2 Permitting & Utility Clearance

Prior to conducting subsurface work, permits were obtained from the Los Angeles Department of Environmental Health (LACEH) for the advancement of soil borings reaching maximum depths of 40 feet bgs. Underground Service Alert (USA) was contacted ((USA; Ticket #A60840214) to delineate subsurface utilities with surface markings. In addition, Stantec contracted a private utility locating company, Southwest Geophysics (SW Geophysics) of San Diego, California, to clear the areas surrounding boring locations.

Copies of the LACEH permits are presented as Attachment B.

4.2 GEOPHYSICAL SURVEY

On March 26, 2016, Stantec contracted SW Geophysics to conduct a geophysical survey to verify the presence of one or more USTs and former gas station-related underground structures at the street address 1329 North Vermont. This area is currently a paved parking lot; however, no records for the removal of these USTs were found during the Phase I ESA. No USTs were identified during the geophysical survey. A rebar-enforced concrete anomaly measuring approximately 6 feet by 25 feet, was identified towards the center of the parking lot of 1329 North Vermont Avenue; further, shallow piping (approximately two feet deep) which was likely related to former gas station activities was identified on the southeastern portion of 1329 North Vermont Avenue. Refer to Figure 2 for a map depicting the location of the concrete anomaly.

4.3 SOIL BORING ADVANCEMENT AND SOIL VAPOR PROBE INSTALLATION

On March 29, 2016, Stantec oversaw Coreprobe advance soil borings SV-1, SV-3, and SB-7. These borings were advanced using a 2.5-inch diameter hand auger to a depth of 5' bgs; subsequently, a Geoprobe LAR 540M, equipped with 2.25-inch diameter rods was utilized to advanced borings to their total depths (maximum depth explored during this phase of work was 25 feet bgs). These borings were advanced with a LAR due to access restrictions; all three locations were located beyond narrow (less than three feet wide) gates.

Additionally, soil borings SB-2, SB-3, and SB-7 were completed on March 29, 2016; these borings were manually cleared to a depth of five feet bgs via hand auger technology. SB-2, SB-3, and SV-2 were advanced utilizing a Geoprobe 6610DT rig, equipped with 2.25-inch diameter rods to their total depths of 25, 40, and 25 feet bgs, respectively. Soil boring locations are shown on Figure 2.

On March 30, 2016, Stantec provided oversight for Coreprobe to advance borings SB-1, SB-4, SB-5, and SB-6; as there were no access restrictions for these borings, the Geoprobe 6610DT rig was utilized. Soil borings SB-1 and SB-6 were advanced to a depth of 25 feet bgs, borings SB-4 and SB-5 were advanced to 40 feet bgs.

The soil borings were logged by Stantec field staff using the Unified Soil Classification System, working under the supervision of a California registered Professional Geologist. Copies of Stantec boring logs are presented as Attachment A. Sampling equipment was cleaned between each sampling interval. Soil samples were screened for hydrocarbon vapors using a portable photo-ionization detector (PID).

4.3.1 Soil Sampling

Continuous core soil sampling was conducted using dedicated acetate liners placed within the direct push rods at five- and three-foot intervals. Soil sampling was performed in accordance with the ASTM Method 1586-84. Soil samples were collected for subsequent laboratory analyses using an USEPA Method 5035 approved sampling device and laboratory supplies containers as applicable.

4.3.2 Soil Sample Analyses

Soil samples were submitted to American Analytics of Chatsworth, California for chemical analysis under chain-of-custody procedures. Soil samples were analyzed for DRO by USEPA Method 8015M, for VOCs and GRO by USEPA Method 8260B, and for CAM Metals by USEPA Methods 6010B/7000 and 7470/7471A. Certified laboratory reports are included as Attachment C; Tables 1 and 2 present laboratory results of soil analytical data.

4.3.3 Soil Sample Results

A total of fourteen soil samples were collected during the expedited site assessment; samples were collected based on field findings and PID readings from each soil boring (Figure 2). VOCs were analyzed via USEPA method 8260B/5035:

All detected VOCs within the soil samples were measured at concentrations below the USEPA's residential and commercial screening levels.

DRO concentrations (via USEPA method 8015M) ranging from 5.9 mg/kg to 83 mg/kg were detected in six of the fourteen samples; which were all below the USEPA's RSLs of 110 mg/kg for residential use and 600 mg/kg for commercial use.

GRO was detected in four samples at concentrations up to 350 mg/kg, exceeding the USEPA's RSLs for residential use properties of 82 mg/kg.

Metals were analyzed via USEPA methods 6010B/7000, 7471A, 7199; various metals were detected in all samples; maximum concentrations were measured as follows:

- Arsenic: 5.3 mg/kg
- Barium: 250 mg/kg
- Cadmium: 4.2 mg/kg
- Chromium: 26 mg/kg
- Cobalt: 17 mg/kg
- Copper: 26 mg/kg
- Lead: 6.4 mg/kg
- Mercury: 0.057 mg/kg

- Molybdenum: 8.9 mg/kg
- Nickel: 42 mg/kg
- Vanadium: 53 mg/kg
- Zinc: 66 mg/kg

Arsenic was detected in all soil samples at concentrations exceeding the USEPA RSLs for residential use properties of 0.67 mg/kg, four arsenic soil concentrations exceeded the commercial use RSLs of 3.0 mg/kg. Chromium was detected in all samples above USEPA commercial RSLs of 6.3 mg/kg (maximum of 26 mg/kg). A comparison of the arsenic and chromium concentrations detected at the Property with California background metal concentrations (Table4), indicates that concentrations are within the typically occurring background range.

All other detected metals are considered to be within the typical range for Southern California soils and are not present at concentrations exceeding the USEPA RSLs established for either residential or industrial use.

4.3.4 Soil Vapor Probe Installation

On March 29, 2016, soil vapor probes SV-1 through SV-3 were installed at the Property. Two borings (SV-1 and SV-3) were completed as single probe wells (set at 19 and 20 feet bgs, respectively); boring SV-2 was completed with dual-nested soil vapor wells (set at 5 and 19 feet bgs). Each implant, consisted of a 6" Probe tip attached to ¼" Nylaflow™ tubing, was surrounded with approximately 1.5-foot of clean #2/12 sand filter pack, topped with one foot of dry granulated bentonite, and subsequently overlain by a minimum of three feet of hydrated bentonite. All probes were lowered to their designated depth via a PVC tremmie pipe, to ensure the probes were centered and upright in the borehole. Upon completion of probe construction, all probes were properly labeled and three-way plastic valves were fit onto each probe. All vapor probes are currently in place, pending further sampling activities if needed.

4.3.5 Soil Vapor Sampling

On March 30, 2016, Stantec collected four soil gas samples from vapor probes SV-1-20, SV-2-5, SV-2-19, and SV-3-19. All samples were collected into certified clean 1.6-liter Summa canisters with regulators slowing the vapor intake to below 200 milliliters per minute.

4.3.6 Soil Vapor Sample Analyses

The four summa canisters were subsequently transported to the fixed laboratory (American Analytics of Chatsworth, California) and analyzed for VOCs via USEPA Method TO-15. Certified laboratory reports are included as Attachment D; Table 3 presents laboratory results of soil gas analytical data.

4.3.7 Soil Vapor Sample Results

A total of four soil gas samples were collected during the expedited site assessment; samples were collected in certified clean summa canisters from three locations at varying depths (Figure 2). VOCs were analyzed via USEPA method TO15.

Benzene was identified in two soil vapor samples above the OEHHA risk assessment soil gas screening levels (measured at 0.058 µg/l in SV-3-19 and 2.1 µg/l in SV-2-19).

4.4 WASTE HANDLING & STORAGE

During operations, hand augers, sampling tools, and down-hole equipment were cleaned prior to and in between each sampling interval. Rinsate water, construction debris, and soil cuttings generated during operations were placed in a California DOT-approved, 55-gallon drum on Site pending characterization and disposal. Following waste profiling (based on above referenced soil sampling results) and coordination, the drum containing the investigation-derived waste will be removed and transported off-site to an appropriate waste disposal facility. Documentation will be provided by Stantec along with manifests.

5.0 CONCLUSIONS & RECOMMENDATIONS

Stantec completed this Phase II ESA to investigate subsurface conditions for the presence of contaminants that may have resulted from historical activities, as identified in the Phase I ESA on the Property. The following activities were conducted as part of this Phase II ESA 1) a geophysical survey was conducted to identify the presence of USTs, 2) 10 soil borings were advanced, 3) four soil vapor monitoring wells were installed, and 4) soil and soil vapor samples were collected and submitted to a fixed based laboratory for chemical analysis.

Geophysical Survey

A geophysical survey was conducted for the purpose of utility clearance at all proposed boring locations, as well as to verify the presence of one or more USTs and former gas station-related underground structures at the street address 1329 North Vermont. A reinforced concrete underground structure, measuring approximately 6 feet by 25 feet, was identified in the drive way of 1329 North Vermont Avenue (Figure 2). Shallow underground piping was detected which was likely related to former gas station activities at the referenced Property. No USTs were identified during this investigation.

Assessment

A total of 10 soil borings were advances to a maximum depth of 40 feet bgs and four soil vapor wells were installed at the Property. 14 soil samples were collected at depths ranging from 17 to 40 feet bgs, and analyzed for VOCs, GRO, DRO, and metals.

GRO was identified in soil at concentrations exceeding USEPA RSLs. Benzene was identified in soil vapor above the OEHHA Vapor Intrusion Screening Levels. Based on the GRO and benzene levels identified, proper soil management will need to be conducted during redevelopment activities and the potential for vapor intrusion exists.

Arsenic and chromium were also identified in soils above their respective screening levels, both for residential and commercial uses; however, a comparison of the arsenic and chromium concentrations detected at the Property with California background metal concentrations (Table4), indicates that concentrations are within the typically occurring background range.

The geophysical survey did not identify the presence of any USTs at the Property; however, this was a limited assessment and, based on the history of a portion of the Property, any future redevelopment of the Property should include the possibility of encountering/assessing USTs, piping, dispensers, and/or any other UST system component.

Therefore, based on the results of this investigation, Stantec recommends the following:

1) Contamination and risk of exposure (volatilization to indoor air) was identified at the Property, as well as, potential risk of offsite impacts. The Phase II ESA was limited; therefore, additional assessment is recommended to further evaluate the impacts and the overall vapor intrusion risk at the Property. This further investigation will provide additional data to determine if remediation or mitigation is necessary.
2) Preparation of a Soil Management Plan (SMP) for the Property prior to excavation and redevelopment activities, the purpose of the SMP is to provide guidance to project management, site management, and field personnel on the identification and management of soil (both impacted and clean), and construction debris during excavation, grading, and construction activities to be completed at the Property. This SMP should include information associated with the possibility of encountering/assessment USTs, piping, dispensers, and/or any other UST system component; and
3) A noise and vibration study is recommended to identify potential noise and vibration mitigation measures (if necessary), dependent on the end use of the Property and equipment to be used at the Property.

6.0 Limitations & Certification

This report was prepared in accordance with the scope of work outlined in Stantec's contract and with generally accepted professional environmental consulting practices existing at the time this report was prepared and applicable to the location of the Property. It was prepared for the exclusive use of Kaiser, for the express purpose stated above. Any re-use of this report for a different purpose or by others not identified above shall be at the user's sole risk without liability to Stantec. To the extent that this report is based on information provided to Stantec by third parties, Stantec may have made efforts to verify this third party information, but Stantec cannot guarantee the completeness or accuracy of this information. The opinions expressed and data collected are based on the conditions of the Property existing at the time of the field investigation. No other warranties, expressed or implied are made by Stantec.

Well Permit Approval

TO BE COMPLETED BY APPLICANT:

WORK SITE ADDRESS	CITY	ZIP	EMAIL ADDRESS FOR WELL PERMIT APPROVAL
1321, 1329, 1345 North Vermont, and 1328 North New Hampshire Avenue	Los Angeles	90027	tom.szocinski@stantec.com

NOTICE:

- WORK PLAN APPROVALS ARE VALID FOR 180 DAYS. 30 DAY EXTENSIONS OF WORK PLAN APPROVALS ARE CONSIDERED ON AN INDIVIDUAL (CASE-BY-CASE) BASIS AND MAY BE SUBJECT TO ADDITIONAL PLAN REVIEW FEES (HOURLY RATE AS APPLICABLE).
- WORK PLAN MODIFICATIONS MAY BE REQUIRED IF WELL AND GEOLOGIC CONDITIONS ENCOUNTERED AT THE SITE INSPECTION ARE FOUND TO DIFFER FROM THE SCOPE OF WORK PRESENTED TO THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.
- THIS WELL PERMIT APPROVAL IS LIMITED TO COMPLIANCE WITH THE CALIFORNIA WELL STANDARDS AND THE LOS ANGELES COUNTY CODE AND DOES NOT GRANT ANY RIGHTS TO CONSTRUCT, RENOVATE, OR DECOMMISSION ANY WELL. THE APPLICANT IS RESPONSIBLE FOR SECURING ALL OTHER NECESSARY PERMITS SUCH AS WATER RIGHTS, PROPERTY RIGHTS, COASTAL COMMISSION APPROVALS, USE COVENANTS, ENCROACHMENT PERMISSIONS, UTILITY LINE SETBACKS, CITY/COUNTY PUBLIC WORKS RIGHTS OF WAY, ETC.
- ALL FIELD WORK MUST BE CONDUCTED UNDER THE DIRECT SUPERVISION OF A PROFESSIONAL GEOLOGIST LICENSED IN THE STATE OF CALIFORNIA.
- THIS PERMIT IS NOT COMPLETE UNTIL ALL OF THE FOLLOWING REQUIREMENTS ARE SIGNED BY THE DEPUTY HEALTH OFFICER. WORK SHALL NOT BE INITIATED WITHOUT A WORK PLAN APPROVAL STAMPED BY THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.
- **NOTIFY THE DRINKING WATER PROGRAM BY EMAIL 3 BUSINESS DAYS BEFORE WORK IS SCHEDULED TO BEGIN.**

Juan Rodriguez 626-430-5386 or JuRodriguez@ph.lacounty.gov

TO BE COMPLETED BY DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM:

☐ WORK PLAN INCOMPLETE; SUBMIT THE FOLLOWING:

☑ WORK PLAN APPROVED

DATE: 3/18/16

Los Angeles County Drinking Water stamp

REGISTERED ENVIRONMENTAL HEALTH SPECIALIST — COUNTY OF LOS ANGELES — CALIFORNIA

R.E.H.S. NO: 6330

Juan Rodriguez

ADDITIONAL APPROVAL CONDITIONS:

On 3/17/16 $1,300.00 was paid for Permit #SR0063991 to advance 10 soil borings/hydropunch at above-mentioned site.

☐ ANNULAR SEAL FINAL INSPECTION REQUIRED

Re : Kaiser - Vermont Ave. / 185803633

A732163 / 6C30008

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 03/30/16 09:43 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile

Operations Manager

Re : Kaiser - Vermont Ave. / 185803633

A732164 / 6C30016

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 03/30/16 14:15 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile

Operations Manager

Re : Kaiser - Vermont Ave. / 185803633

A732165 / 6C30017

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 03/30/16 14:15 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile

Operations Manager

ADDITIONAL SUBSURFACE ASSESSMENT REPORT

N. Vermont and N. New Hampshire, Los Angeles, California
May 31, 2016

EXECUTIVE SUMMARY

On behalf of Kaiser Foundation Health Plan, Inc. (Kaiser), Stantec Consulting Services Inc. (Stantec) is pleased to submit this report documenting the results of an additional subsurface assessment conducted on the property consisting of 1321, 1329, and 1345 North Vermont Avenue and 1328 North New Hampshire Avenue, Los Angeles, California (the "Property"; Figure 1). Stantec prepared a Phase I Environmental Site Assessment (ESA) on the Property in March 2016. This Phase I ESA identified historical site operations and use as a former gasoline/fueling station. Consequently, in April 2016 Stantec conducted a Phase II ESA to evaluate the subsurface conditions at the Property. Volatile organic compounds (VOCs) were identified during this Phase II ESA which appeared to be associated with the historical gasoline/fueling operations on the Property. Therefore, Stantec recommended this additional assessment to further evaluate VOCs identified in soil and soil vapor at the Property during Stantec's April 2016 Phase II ESA.

To further investigate the VOC contamination previously identified at the Property 1) eight soil borings were advanced; 2) 13 soil vapor monitoring wells were installed (five dual nested and three shallow); and 3) soil and soil vapor samples were collected and submitted to a fixed based laboratory for chemical analysis.

Soil Boring Advancement and Soil Sampling

A total of eight soil borings were advanced throughout the Property during the additional subsurface assessment. Three borings (SV-1b, SV-3b, and SV-9) were advanced to a depth of 5.5 feet below grade surface (bgs) and five borings (SV-4 through SV-8) were advanced to depths ranging from 20 and 25 feet bgs (depths varied according to geologic conditions encountered).

Soil samples were analyzed for the presence of VOCs and gasoline range organics (GRO). Groundwater was not encountered during the assessment.

Soil Analytical Data Summary

GRO was detected in the sample collected from boring SV-6 at a concentration of 8,300 milligrams per kilogram (mg/kg), which exceeds the United States Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) for commercial and residential use properties of 420 mg/kg and 82 mg/kg, respectively.

Benzene and 1,2,4-trimethylbenzene were detected in the sample collected from boring SV-6 at a concentration of 4.8 mg/kg and 63 mg/kg, respectively, which exceeds the RSL for residential properties of 1.2 mg/kg and 58 mg/kg, respectively.

Ethylbenzene was detected in the sample collected from boring SV-6 at a concentration of 36 mg/kg, which exceeds the RSL for residential properties of 25 mg/kg.

No other soil samples collected during this additional investigation were above their respective RSLs.

Soil Vapor Probe Installation

A total of 13 soil vapor probes were installed within the eight soil borings; five dual-nested vapor probes (SV-4 through SV-8) and three shallow vapor probes (SV-1b, SV-3b, and SV-9).

Soil Vapor Analytical Data Summary

Soil vapor samples were collected from previously installed soil vapor probes SV-1 through SV-3 as well as newly installed soil vapor probes SV-1b, SV-3b, and SV-4 through SV-9. Soil vapor samples were analyzed for the presence of VOCs.

The following constituents were identified in soil vapor above California Environmental Protection Agency, Office of Environmental Health Hazard Assessment (OEHHA) residential screening level:

- Benzene was detected above OEHHA screening levels for residential and/or commercial properties (0.036 micrograms per liter (µg/L) and 0.12 µg/L, respectively) in four of the 13 soil vapor samples collected. Detected concentrations ranged from 0.039 µg/L to 390 µg/L.
- Ethylbenzene was detected in the vapor sample collected from SV-6-19 at a concentration of 310 µg/L which exceeds the OEHHA screening level for commercial properties of 1.4 µg/L.
- Xylenes were detected in the vapor sample collected from SV-6-19 at a concentration of 846 µg/L which exceeds the OEHHA screening level for residential properties of 320 µg/L.

Conclusions

GRO, benzene, ethylbenzene, and 1,2,4-trimethylbenzene were identified in soil at concentrations exceeding USEPA RSLs. These constituents appear to be from gasoline and based on this historical use at the Property, likely associated with this historical usage. Similar petroleum hydrocarbon VOCs were identified within soil during Stantec's April 2016 Phase II ESA as well as historical reports provided by the Property owner. Based on 1) the location of the historical gasoline operations and 2) the detection of petroleum hydrocarbon impacts at the Property boundary along Vermont Avenue; indicate contaminants may have migrated from the Property into the right-of-way of Vermont Avenue. However, the extent and levels of the off-site migration is unknown.

Benzene, ethylbenzene, and xylenes were identified in soil vapor above regulatory screening levels. Based on the VOC impacts observed in soil and soil vapor during this additional subsurface assessment, the potential for vapor intrusion exists.

Recommendations

Based on the results of this assessment, Stantec recommends the following:

1) It is recommended that the Property owner be provided the results of this investigation, and provide the results to the Los Angeles Regional Water Quality Control Board (LARWQCB) to determine what additional actions, if any, may be required. The Property is not listed as an open regulatory case; however, it should be noted that the Property could become an open case following communication to the LARWQCB. Kaiser should participate in any agency discussions if possible in order to understand the level of remediation that will be needed for redevelopment to occur.
2) Preparation of a Soil Management Plan (SMP) for the Property prior to excavation and redevelopment activities. The purpose of the SMP is to provide guidance to project management, site management, and field personnel on the identification and management of soil (both impacted and clean), and construction debris during excavation, grading, and construction activities to be completed at the Property. This SMP should include information associated with the possibility of

encountering/assessment USTs, piping, dispensers, and/or any other UST system component;

It should be anticipated that redevelopment will require:

1) Remediation via over-excavation; and/or
2) Installation of a vapor barrier/mitigation system beneath the proposed building(s).

Stantec continues to recommend:

1) Due to proximity to Metro tunnels, a noise and vibration study is recommended to identify potential noise and vibration mitigation measures (if necessary), dependent on the end use of the Property and equipment to be used at the Property.

1.0 INTRODUCTION

On behalf of Kaiser Foundation Health Plan, Inc. (Kaiser), Stantec Consulting Services Inc. (Stantec) is pleased to submit this report documenting the results of an additional subsurface assessment conducted on the property consisting of 1321, 1329, and 1345 North Vermont Avenue and 1328 North New Hampshire Avenue, Los Angeles, California (the "Property"; Figure 1). Stantec recommended the additional assessment to further evaluate VOCs identified in soil and soil vapor at the Property during Stantec's April 2016 Phase II ESA.

To further investigate the VOC contamination previously identified at the Property 1) eight soil borings were advanced; 2) 13 soil vapor monitoring wells were installed (five dual nested and three shallow); and 3) soil and soil vapor samples were collected and submitted to a fixed based laboratory for chemical analysis. A detailed description of assessment activities, results, and recommendations are provided in the following sections.

2.0 SITE BACKGROUND

2.1 SITE LOCATION & FACILITY DESCRIPTION

The Property consists of four parcels identified by Assessor's Parcel Numbers 5543-014-014, 5543-014-015, 5543-013-009, and 5543-013-003 with addresses of 1321, 1329, 1345 North Vermont Avenue and 1328 North New Hampshire Avenue, respectively. The portions of the Property along North Vermont Avenue are commercial with various dental practices located on 1321 North Vermont Avenue. 1328 North New Hampshire Avenue is a residential dwelling, divided into two sub-units. Surrounding properties are a mix of commercial and residential properties. A Property location map is illustrated on Figure 1.

2.2 PRIOR ENVIRONMENTAL STUDIES

Results of a Phase I ESA conducted by Stantec for the Property and documented in a report dated March 11, 2016, identified the following Recognized Environmental Conditions in connection with the Property:

1) Historical operations at the Property included a gasoline/fueling station associated with 1331 North Vermont Avenue (former Property address); the current addresses now are 1329 and 1345 North Vermont Avenue. The gasoline station was identified in Sanborn maps, aerial photographs, and city directories, and appears to have operated at the Property from at least 1929 to approximately 1960; and

2) As part of the site reconnaissance and research, several historical dry cleaning operations were identified to have operated adjacent and/or less than 100 feet south of the Property.

Based on these findings, Stantec recommended the completion of a Phase II ESA to evaluate the potential presence of impacts in subsurface soils related to the former gasoline/fueling operations at the Property and the adjacent dry cleaning operations.

A limited Phase II ESA was completed by Stantec and documented in a report dated April 19, 2016. Contamination by petroleum hydrocarbons and risk of exposure (volatilization to indoor air) was identified at the Property. Based on the results of the Phase II ESA, Stantec recommended the following:

1) Preparation of a SMP for the Property prior to excavation and redevelopment activities;
2) A noise and vibration study to identify potential noise and vibration mitigation measures (if necessary), dependent on the end use of the Property and equipment to be used at the Property; and
3) An additional subsurface assessment to further investigate impacts to soil and soil vapor and determine if remediation or mitigation is warranted.

This report presents the findings of the additional subsurface assessment completed at the Property.

3.0 SCOPE OF WORK

The following sections detail the activities completed during the additional subsurface assessment.

3.1 PRE-FIELD ACTIVITIES

3.1.1 Health & Safety Plan

An updated *Health and Safety Plan* was prepared as required by the Occupational Health and Safety Administration (OSHA) Standard "Hazardous Waste Operations and Emergency Response" guidelines (29 CFR 1910.120). The document was reviewed and signed by all on-site consulting personnel and subcontractors prior to performing work at the Property.

3.1.2 Permitting & Utility Clearance

Prior to conducting subsurface work, permits were obtained from the Los Angeles Department of Environmental Health (LACEH) for the advancement of soil borings reaching maximum depths of 25 feet bgs. Underground Service Alert (USA) was contacted (#A61160562-00A) to identify underground utilities with surface markings. In addition, Stantec contracted a private utility locating company, Southwest Geophysics of San Diego, California, to clear the areas surrounding the proposed boring/vapor well locations.

Copies of the LACEH permits are presented as Attachment B.

3.2 SOIL BORING ADVANCEMENT AND SOIL VAPOR PROBE INSTALLATION

On May 10 and 11, 2016, Stantec oversaw CoreProbe International, Inc. (CoreProbe) of San Gabriel, CA advance soil borings SV-1b, SV-3b, and SV-4 through SV-9 at the Property (Figure 2). Each boring was advanced using a 2.5-inch diameter hand auger to a depth of 5.5 feet bgs; subsequently, a Geoprobe 6610DT rig, equipped with 2.25-inch diameter rods, was utilized to additionally advance borings SV-5 and SV-8 to 20 feet bgs and borings SV-4, SV-6 and SV-7 to 25 feet bgs.

The borings were subsequently converted into soil vapor monitoring wells. A soil vapor probe was installed at five feet bgs in borings SV-1b, SV-3b and SV-4 through SV-9. An additional soil vapor probe was installed in boring SV-4 at a depth of 21 feet bgs, in boring SV-5 at a depth of 12.5 feet bgs, in boring SV-6 at a depth of 19 feet bgs, in boring SV-7 at a depth of 23.5 feet bgs, and in boring SV-8 at a depth of 18 feet bgs. The depth of each deep vapor probe was selected based on field screening with a photo-ionization detector (PID) and the lithology encountered.

All soil borings were logged by Stantec field staff using the Unified Soil Classification System, working under the supervision of a California registered Professional Geologist. Copies of Stantec boring logs are presented as Attachment A.

3.2.1 Soil Sampling

Soil samples were selected based on field screening with a PID. A soil sample was collected from boring SV-6 at a depth of 19 feet bgs and boring SV-7 at a depth of 24 feet bgs, and an additional soil sample was collected from boring SV-8 at a depth of 17 feet bgs for soil sample analysis. Samples were obtained from a continuous core using dedicated acetate liners placed within the direct push rods at five foot intervals and was performed in accordance with the

American Society for Testing and Materials Method 1586-84. Soil samples were collected for laboratory analyses using USEPA Method 5035 approved sampling equipment and laboratory supplied containers. Sampling equipment was cleaned between each sampling interval.

3.2.2 Soil Sample Analyses

Soil samples were transported under chain-of-custody documentation to American Analytics of Chatsworth California (American Analytics) and analyzed for the presences of VOCs and GRO by USEPA Method 8260B/5035. Soil analytical data is provided as Table 1. Certified laboratory reports are included as Attachment C.

3.2.3 Soil Sample Results

GRO was detected in the sample collected from SV-6-19 at a concentration of 8,300 mg/kg, which exceeds the USEPA RSL for commercial and residential use properties of 420 mg/kg and 82 mg/kg, respectively.

Benzene and 1,2,4-trimethylbenzene were detected in the sample collected from SV-6-19 at a concentration of 4.8 mg/kg and 63 mg/kg, respectively, which exceeds the RSL for residential properties of 1.2 mg/kg and 58 mg/kg, respectively.

Ethylbenzene was detected in the sample collected from SV-6-19 at a concentration of 36 mg/kg, which exceeds the RSL for commercial and residential properties of 25 mg/kg and 5.8 mg/kg, respectively.

All other constituents for each soil sample were either detected below RSLs for residential properties or were not detected at a concentration greater than the laboratory reporting limit.

3.2.4 Soil Vapor Sampling

On May 11, 2016 soil vapor samples were collected from vapor probes SV-2-5, SV-2-19, SV-3b-5, SV-3-19, SV-4-5, SV-4-21, SV-5-5, SV-5-12.5, SV-6-5, SV-6-19, SV-7-5, and SV-7-23.5. On May 12, 2016 soil vapor samples were collected from vapor probes SV-1b-5, SV-1-20, SV-8-5, and SV-8-18. Samples from recently installed vapor wells were obtained approximately 24 hours after well installation to allow for equilibration with the subsurface. All samples were collected using laboratory provided 1.6-liter Summa canisters with regulators slowing the vapor intake to below 200 milliliters per minute.

3.2.5 Soil Vapor Sample Analyses

The summa canisters were transported under chain-of-custody documentation to American Analytics and analyzed for the presence of VOCs by USEPA Method TO-15. Soil vapor analytical data is provided as Table 2. Certified laboratory reports are included as Attachment D.

3.2.6 Soil Vapor Sample Results

Benzene was detected in vapor samples collected from probes SV-4-5 and SV-8-5 at concentrations of 0.046 µg/L and 0.039 µg/L, respectively, which exceeds the OEHHA residential screening level of 0.036 µg/L. Benzene was also detected in vapor samples collected from probes SV-6-5 and SV-6-19 at concentrations of 0.2 µg/L and 390 µg/L, respectively, which exceeds the OEHHA commercial screening level of 0.12 µg/L.

Ethylbenzene was detected in the vapor sample collected from SV-6-19 at a concentration of 310 µg/L which exceeds the OEHHA commercial screening level of 1.4 µg/L.

Xylenes were detected in the vapor sample collected from SV-6-19 at a concentration of 846 µg/L which is above the OEHHA commercial screening level of 320 µg/L.

All other constituents for each soil vapor sample were either detected below RSLs for residential properties or were not detected at a concentration greater than the laboratory reporting limit.

3.2.7 Soil Vapor Monitoring Well Abandonment

Each soil vapor monitoring well was abandoned immediately following collection of soil vapor samples. Wells were abandoned by removing the vapor probe tubing and backfilling the borehole with cement (dyed black where appropriate). The surface was then completed to match the existing grade.

3.3 WASTE HANDLING & STORAGE

Hand augers, sampling tools, and down-hole equipment were cleaned prior to and in between each sampling interval. Decontamination water and soil cuttings generated during assessment activities were placed in a California Department of Transportation approved, 35-gallon drum and stored on the Property prior to transportation to an appropriate waste disposal facility on May 24, 2016. Waste disposal documentation, including manifests, will be provided by Stantec when available.

4.0 CONCLUSIONS & RECOMMENDATIONS

To further investigate VOC contamination previously identified at the Property, Stantec conducted an additional subsurface assessment between May 10 and 12, 2016. The assessment consisted of 1) advancement of eight soil borings; 2) installation of 13 soil vapor monitoring probes (five dual nested and three shallow); 3) collection of soil and soil vapor samples for fixed based laboratory analysis; and 4) soil vapor well abandonment and waste disposal.

Additional Assessment Conclusions

GRO, benzene, ethylbenzene, and 1,2,4-trimethylbenzene were identified in soil at concentrations exceeding USEPA RSLs. Similar petroleum hydrocarbon VOCs were identified within soil during Stantec's April 2016 Phase II ESA as well as historical reports provided by the Property owner. Detection of soil impacts at the Property boundary and Vermont Avenue indicate contaminants may have migrated from the Property into the right-of-way of Vermont Avenue.

Benzene, ethylbenzene, and xylenes were identified in soil vapor above OEHHA screening levels. Based on the VOC impacts observed in soil and soil vapor during this additional subsurface assessment, the potential for vapor intrusion exists.

Additional Assessment Recommendations

Based on the results of this assessment, Stantec recommends the following:

3) It is recommended that the Property owner be provided the results of this investigation, and provide the results to the Los Angeles Regional Water Quality Control Board (LARWQCB) to determine what additional actions, if any, may be required. The Property is not listed as an open regulatory case; however, it should be noted that the Property could become an open case following communication to the LARWQCB. Kaiser should participate in any agency discussions if possible in order to understand the level of remediation that will be needed for redevelopment to occur.
4) Preparation of a Soil Management Plan (SMP) for the Property prior to excavation and redevelopment activities. The purpose of the SMP is to provide guidance to project management, site management, and field personnel on the identification and management of soil (both impacted and clean), and construction debris during excavation, grading, and construction activities to be completed at the Property. This SMP should include information associated with the possibility of encountering/assessment USTs, piping, dispensers, and/or any other UST system component;

It should be anticipated that redevelopment will require:

3) Remediation via over-excavation; and/or
4) Installation of a vapor barrier/mitigation system beneath the proposed building(s).

Stantec continues to recommend:

1) Due to proximity to Metro tunnels, a noise and vibration study is recommended to identify potential noise and vibration mitigation measures (if necessary), dependent on the end use of the Property and equipment to be used at the Property.

5.0 Limitations & Certification

This report was prepared in accordance with the scope of work outlined in Stantec's contract and with generally accepted professional environmental consulting practices existing at the time this report was prepared and applicable to the location of the Property. It was prepared for the exclusive use of Kaiser, for the express purpose stated above. Any re-use of this report for a different purpose or by others not identified above shall be at the user's sole risk without liability to Stantec. To the extent that this report is based on information provided to Stantec by third parties, Stantec may have made efforts to verify this third party information, but Stantec cannot guarantee the completeness or accuracy of this information. The opinions expressed and data collected are based on the conditions of the Property existing at the time of the field investigation. No other warranties, expressed or implied are made by Stantec.

Notes:

< = Analyte was not detected at a concentration greater than the laboratory reporting limit.

µg/kg = Micrograms per kilogram

US EPA RSLs= US Environmental Protection Agency Regional Screening Levels (November 2015)

-- = not available

63* = Concentration above the US EPA RSL for residential use.

8,300** = Concentration above the US EPA RSL for commercial use.

1321 N Vermont Los Angeles 90027 Work Plan Approval

TO BE COMPLETED BY APPLICANT:

WORK SITE ADDRESS	CITY	ZIP	EMAIL ADDRESS FOR WELL PERMIT APPROVAL
1321 N. Vermont / New Hampshire	Los Angeles	90027	Tom.szocinski@stantec.com

NOTICE:

- WORK PLAN APPROVALS ARE VALID FOR 180 DAYS. 30 DAY EXTENSIONS OF WORK PLAN APPROVALS ARE CONSIDERED ON AN INDIVIDUAL (CASE-BY-CASE) BASIS AND MAY BE SUBJECT TO ADDITIONAL PLAN REVIEW FEES (HOURLY RATE AS APPLICABLE).
- WORK PLAN MODIFICATIONS MAY BE REQUIRED IF WELL AND GEOLOGIC CONDITIONS ENCOUNTERED AT THE SITE INSPECTION ARE FOUND TO DIFFER FROM THE SCOPE OF WORK PRESENTED TO THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.
- WORK PLAN APPROVALS ARE LIMITED TO COMPLIANCE WITH THE CALIFORNIA WELL STANDARDS AND THE LOS ANGELES COUNTY CODE AND DOES NOT GRANT ANY RIGHTS TO CONSTRUCT, RENOVATE, OR DECOMMISSION ANY WELL. THE APPLICANT IS RESPONSIBLE FOR SECURING ALL OTHER NECESSARY PERMITS SUCH AS WATER RIGHTS, PROPERTY RIGHTS, COASTAL COMMISSION APPROVALS, USE COVENANTS, ENCROACHMENT PERMISSIONS, UTILITY LINE SETBACKS, CITY/COUNTY PUBLIC WORKS RIGHTS OF WAY, ETC.
- ALL FIELD WORK MUST BE CONDUCTED UNDER THE DIRECT SUPERVISION OF A PROFESSIONAL GEOLOGIST LICENSED IN THE STATE OF CALIFORNIA.
- THIS PERMIT IS NOT COMPLETE UNTIL ALL OF THE FOLLOWING REQUIREMENTS ARE SIGNED BY THE DEPUTY HEALTH OFFICER. WORK SHALL NOT BE INITIATED WITHOUT A WORK PLAN APPROVAL STAMPED BY THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.
- ***ONCE APPROVED NOTIFY VINCENT GALLEGOS AT vgallegos@ph.lacounty.gov PREFERABLY 4 BUSINESS DAYS BEFORE WORK IS SCHEDULED TO BEGIN.***

TO BE COMPLETED BY DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM:

X WORK PLAN APPROVED: 7 borings DATE: May 4, 2016

ADDITIONAL APPROVAL CONDITIONS:

- Please provide/ verify project dates and time via my email listed above this comment box
- Backfill: use approved materials such as Portland cement, sand cement grout, neat cement, bentonite… native material may not be utilized.
- Borings: drilled, sampled and backfilled within 72 hours

Re : Kaiser - Vermont Ave. / 185803633

A732181 / 6E11017

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 05/11/16 13:59 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile

Operations Manager

Re : Kaiser - Vermont Ave. / 185803633

A732180 / 6E11016

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 05/11/16 13:59 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile

Operations Manager

Re : Kaiser - Vermont Ave. / 185803633

A732182 / 6E12012

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received on 05/12/16 14:53 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Assurance Program Manual, applicable standard operating procedures, and other related documentation. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report or require additional information please call me at American Analytics.

Sincerely,

Viorel Vasile

Operations Manager

DRAFT

1.0 SUMMARY

At the request of Kaiser Foundation Health Plan, Inc. (Kaiser), Stantec Consulting Services Inc. (Stantec) performed an asbestos, lead-based paint, polychlorinated biphenyls in caulk (PCBs), and hazardous materials survey of buildings located on four adjacent parcels (5543-014-003, 5543-014-014, 5543-014-015, and 5543-013-009) located on the west side of N. Vermont Avenue and east side of N. New Hampshire Avenue. The buildings are a one-story residence and associated detached garage at 1326/1328 N. New Hampshire Avenue, a one-story former restaurant with a roof-level office area at 1345 N. Vermont Avenue, and three multi-tenant dental/medical practice buildings at 1321 N Vermont Avenue, Los Angeles, California (the Property) on February 25 and 26, 2016. At the time of the survey, the Property owner denied Stantec access to the interior of the 1328 N. New Hampshire Avenue residence as well as various tenant spaces and roofs of 1321 N. Vermont Avenue buildings. Additionally, Stantec was unable to fully survey walls and ceilings of the 1326 N. New Hampshire Avenue residence and the tenant spaces at 1321 N Vermont Avenue, due to the occupied nature of the Property by residents and dental/medical facility patients and staff.

Stantec recommends the results of this report be incorporated into any renovation/demolition plan for the Property.

Figures of the Property with sample locations are included in Appendix A. Copies of the sample logs, chains-of-custody, and laboratory analytical results are included in Appendix B. A photographic log is included in Appendix C. Employee certifications are included in Appendix D. Laboratory accreditations are included in Appendix E. A completed California Department of Public Health Form (8552) is included in Appendix F.

<u>Asbestos-Containing Materials</u>
A variety of ACMs were identified at the Property. The ACMs consisted of vinyl floor tiles, sealants, asphalt roofing, pipe wrap, paper tape, and window putty. Please refer to specific sections of this report for more details regarding the types and locations of the ACMs at the Property.

<u>Asbestos-Containing Construction Materials</u>
Stucco identified on exterior walls associated 1321 (A-C) N. Vermont Avenue is considered Asbestos-Containing Construction Material (ACCM) (>0.1% - <1% asbestos). Please refer to specific sections of this report for more details regarding the types and location of the ACCM at the Property.

DRAFT

Non-Asbestos Containing Materials

Many of the suspect materials sampled and analyzed as a part of this assessment did not contain asbestos. These materials included the following:

- Acoustic Ceiling Tile
- Gypsum Board
- Joint Compound
- Plaster
- Sealants and Adhesives
- Vinyl Floor Tiles
- Window Putty
- Sink Undercoating
- Fire Stop
- Cove Base
- Vapor Barrier
- Asphalt Roofing
- Stucco/Plaster

Please refer to specific sections of this report for more details regarding the types and locations of the non-ACMs at the Property. It should be noted, however, that the asbestos survey was limited to accessible materials only and did not include underground utilities. In conducting the survey, Stantec attempted to access concealed materials such as internal wall insulations where possible in areas that were unoccupied and authorized by the Property owner. Historically, certain concealed materials may be present within wall cavities (e.g., electrical wire wrapping, insulation materials, vapor barrier paper, etc.) that contain asbestos. Additionally, some underground utility piping has been known to contain asbestos (e.g., Transite pipe). It is a widely accepted practice, and Stantec's recommendation, to collect additional bulk samples during actual abatement activities when concealed suspect ACMs are discovered that are not consistent with those identified in this report.

Lead-Based Paint

Stantec made observations to assess the condition of painted surfaces of the Property, and was to collect paint chip samples of painted surfaces observed to be in fair and/or poor condition. Based on the findings of this survey, various paints meet the definition of LBP. Other paints identified at the Property were determined to be lead-containing.

Other Hazardous Materials

Stantec performed a visual inspection of existing building equipment for the presence of other hazardous materials and Universal Wastes [pursuant to 40 CFR 273.9, 40 CFR 260.10, and 22 CCR §66261.9]. The survey was limited to above grade only, and did not include a soil or subsurface investigation. Materials evaluated as part of this inspection included: PCB-containing units such as lighting ballasts and other electrical units (i.e., electrical transformers); lead-containing units such as car batteries or emergency exit sign batteries; fluorescent lighting tubes; mercury containing units such as light switches and thermostats; refrigerants, halon, and other Chlorofluorocarbons (CFCs) such as fire extinguishing systems and Freon® used in association with building drinking fountains; heavy metals as may be found in cooling tower water treatment systems; solvents, paints, fuel (storage tanks), lubricants, and other associated maintenance and cleaning products; radioactive materials that may be contained in units such as smoke detectors or medical equipment; office materials, supplies, and equipment such as computer monitors and printing supplies, and miscellaneous materials such as unlabeled materials or substances of concern. Stantec's visual inspection was limited to fixtures and equipment in the

DRAFT

Property that were readily accessible. Assessment of these hazardous materials was based solely on the identification placards on the equipment or general knowledge of historical use. If the presence and/or absence of a particular material was not clearly marked, then the piece of equipment was assumed to contain a concentration of the material in question. No sample collection, other than for bulk PCB in caulking analysis, was performed in the process of identifying other hazardous materials or Universal Wastes. The following were observed or noted at the Property:

- Fluorescent Light Fixtures
- Fluorescent Light Bulbs
- Refrigerant
- Fire Extinguishers
- X-ray Machines
- Paints
- Mercury-Containing Thermostat and Light Switch

PCBs in Caulk

Stantec collected caulk samples for the presence of PCBs. All caulk samples analyzed were determined to be non PCB-containing.

RECOMMENDATIONS

Asbestos-Containing Materials

Based on the planned demolition of the Property, Stantec recommends that Corrective Action Option IV be implemented for the ACMs identified throughout the Property. Additionally, the ACCM's should be removed by certified personnel properly trained in accordance with DOSH asbestos construction standards. It is Stantec's understanding that these materials are scheduled for demolition by Kaiser. If these materials are not scheduled for demolition, Stantec recommends Corrective Action Option I be implemented. If the Property is not going to be demolished, which would include the removal of these ACMs, then written notification to employees, tenants, contractors, or purchasers of the Property in regards to the presence and location of ACMs and ACCMs is required pursuant to the California Health and Safety Code 25915 (formerly known as The Connelly Bill). If identified ACMs will be removed, Stantec additionally recommends that the removal of the ACMs be completed by an appropriately licensed contractor in accordance with all applicable federal, state, and local regulations. If future plans for this project change, additional and/or different corrective actions may be recommended.

Lead-Based Paint

Based on the findings of this survey, various paints meet the definition of LBP. These LBPs and other paints identified at the Property with detectable concentrations of lead would require compliance with applicable portions of the Federal OSHA 29 CFR 1926.62 and the DOSH Section 1532.1 (Lead in Construction Standards).

DRAFT

Other Hazardous Materials

There are a variety of items within the Property that may contain mercury or are identified to be a Universal Waste. It is recommended that these materials be handled and disposed of in accordance with applicable Environmental Protection Agency (EPA) regulations (40 CFR 273.9 and 40 CFR 260.10) and the Department of Toxic Substances Control (DTSC), "Universal Waste Rule" (DTSC Control Number R-97-08). Additionally, EPA regulations require Freon related work be performed by EPA certified personnel.

PCB's in Caulk

Stantec collected caulk samples for the presence of PCBs. All caulk samples analyzed were determined to be non PCB-containing. No additional assessment appears warranted at this time.

DRAFT

2.0 INTRODUCTION

At the request of Kaiser Foundation Health Plan, Inc. (Kaiser), Stantec Consulting Services Inc. (Stantec) performed an asbestos, lead-based paint, polychlorinated biphenyls in caulk (PCBs), and hazardous materials survey of buildings located on four adjacent parcels (5543-014-003, 5543-014-014, 5543-014-015, and 5543-013-009) located on the west side of N. Vermont Avenue and east side of N. New Hampshire Avenue. The buildings are a one-story residence and associated detached garage at 1326/1328 N. New Hampshire Avenue, a one-story former restaurant with a roof-level office area at 1345 N. Vermont Avenue, and three multi-tenant dental/medical practice buildings at 1321 N Vermont Avenue, Los Angeles, California (the Property) on February 25 and 26, 2016. As communicated to Ms. Teresa Wolfe at the time of the survey, the Property owner denied Stantec access to the interior of the 1328 N. New Hampshire Avenue residence as well as various tenant spaces and roofs of 1321 N. Vermont Avenue buildings. Additionally, Stantec was unable to fully survey walls and ceilings of the 1326 N. New Hampshire Avenue residence and the tenant spaces at 1321 N Vermont Avenue, due to the occupied nature of the Property by residents and dental/medical facility patients and staff. Due to the lack of full access to the Property, the survey was limited and may not satisfy the regulatory requirements for renovation or demolition.

Figures of the Property and sample locations are included in Appendix A. Copies of the sample logs, chain-of-custody, and laboratory analytical results are included in Appendix B. Photographs of the Property are provided in Appendix C. Employee certifications are included in Appendix D. Laboratory accreditations are included in Appendix E. A completed California Department of Public Health Form (8552) is included in Appendix F.

The asbestos, lead-based paint and hazardous materials survey was performed by Ms. Melissa Baernstein, Project Scientist with Stantec and State of California Division of Occupational Safety and Health (DOSH) Certified Site Surveillance Technician (CSST # 15-5377) and State of California, Department of Public Health (CDPH) Lead Related Construction Sampling Technician (LRCST # 26903) and Mr. Anthony Aguilar, Senior Environmental Technician with Stantec and Asbestos Hazard Emergency Response Act (AHERA) accredited Building Inspector and Management Planner. Work was performed under the guidance of Mr. Jason Stagno, Senior Scientist with Stantec DOSH Certified Asbestos Consultant (CAC #12-4949) and CDP) Lead Related Construction Inspector/Assessor (LRCIA #19068).

2.1 PROJECT INFORMATION

The purpose of this survey was to determine the asbestos content of suspect asbestos-containing materials (ACMs) and suspect asbestos-containing construction materials (ACCMs) in accordance with the National Emission Standards for Hazardous Air Pollutants [NESHAP (40 CFR, Part 61)]. The Federal Asbestos NESHAP is promulgated through the South Coast Air Quality Management District (SCAQMD) under Rule 1403. Additionally, the ACM survey satisfies certain

DRAFT

requirements of DOSH, Construction Industry Standards (Title 8, CCR, Section 1529). Stantec documented potential lead-based paint (LBP) observed to be in fair and/or poor condition, and other hazardous materials that would require special handling and/or disposal in accordance with applicable federal, state, and local regulations.

The scope of the survey and the services provided by Stantec included:

- Performing a visual inspection of the survey areas to identify accessible suspect ACM.
- Collecting and analyzing bulk samples of select suspect materials for determination of asbestos content.
- Ensuring the technical quality of all work by using a CSST and/or CAC.
- Performing a visual inspection and collecting paint chip samples of painted surfaces observed to be in a deteriorated condition for lead content following criteria outlined in applicable sections of Chapter 7 and Appendix 13.2 of the HUD Guidelines.
- Submitting samples to an accredited laboratory for analysis.
- Performing a visual inspection of the survey areas to identify any other hazardous materials.
- Collecting bulk samples of caulk for polychlorinated biphenyl (PCB) content as outlined in EPA's October 24, 2012, PCB Bulk Product Waste Reinterpretation memorandum.
- Consolidating data and findings into a report format.

Additionally, no sample collection was performed in the process of identifying Universal Wastes.

DRAFT

3.0 BUILDING DESCRIPTION

For the purpose of this assessment, the Property consists of a one-story duplex residence and associated detached garage at 1326/1328 N. New Hampshire Avenue, a one-story vacant former restaurant with roof-level office at 1345 N. Vermont Avenue, and three single-story buildings occupied by dental/medical practices at 1321 N. Vermont Avenue, comprising a total of approximately 14,700 square feet (SF).

1326/1328 N. New Hampshire Avenue

The duplex house was occupied by residents. The residence spaces consist of bedrooms, kitchens, living rooms, laundry rooms, and bathrooms. The interior finishes generally consist of painted plaster and gypsum board walls and ceilings, hardwood floors, and vinyl floor sheeting. The exterior is finished with asphalt roofing and wood siding.

1345 N. Vermont Avenue

The former restaurant building is primarily a vacant shell and consists of roof-level office and building addition. The interiors consist of plaster, sealants, adhesives, leveling compound, and vapor barrier. The exterior is finished with asphalt roofing, terra cotta tile, and stucco/plaster walls.

1321 N. Vermont Avenue

Three commercial buildings are associated with this address. The building tenant spaces are primarily occupied by dental/medical practices. The buildings consist primarily of offices, patient rooms, X-ray rooms, operatory rooms, storage rooms, and restrooms. The interior finishes generally consist of acoustic ceiling tiles, gypsum board walls, plaster walls, and vinyl floor tile. The exterior is finished with asphalt roofing, terra cotta tile, and stucco/plaster walls.

The following suspect asbestos-containing building materials sampled as a part of this survey included:

- Acoustic Ceiling Tile
- Gypsum Board
- Joint Compound
- Plaster
- Sealants and Adhesives
- Vinyl Floor Tiles
- Window Putty
- Sink Undercoating
- Fire Stop
- Cove Base
- Vapor Barrier
- Asphalt Roofing
- Stucco/Plaster

Figures of the Property with sample locations are included in Appendix A.

DRAFT

4.0 SURVEY METHODS

4.1 VISUAL INSPECTION

4.1.1 Visual Inspection for Asbestos

Building materials were visually inspected for asbestos using the methods presented in applicable sections of the Federal Asbestos Hazard Emergency Response Act (AHERA) regulations (40 CFR, Part 763). The principles presented under AHERA are generally accepted as the industry standard for ACM inspections. Suspect ACMs were also physically assessed for friability, condition, and disturbance factors.

In conducting the survey, Stantec did not attempt to access concealed materials such as internal wall insulations or pipe chases, or behind mirrors. Stantec makes no warranty as to the possible existence or absence of such materials or to their evaluation in respect to asbestos content. It is a widely accepted practice, and Stantec's recommendation, to collect additional bulk samples during actual abatement activities when concealed suspect ACMs are discovered that are not consistent with those identified in this report.

4.1.2 Visual Inspection for Lead-Based Paint

Painted surfaces throughout the Property were visually inspected to identify paint in fair and/or poor condition as defined within Chapter 5 of the United States, Housing and Urban Development (HUD) guidelines. The definitions of paint condition are dependent on the location of the paint and component involved. The table below illustrates how HUD categorizes paint condition under various circumstances.

HUD Categories of Paint Film Quality

	Total Area of Deteriorated Paint		
Type of Building Component	**Intact**	**Fair**	**Poor**
Exterior components with large surface areas.	Entire Surface is Intact	Less than or equal to 10 square feet.	More than 10 square feet
Interior components with large surface areas (walls, ceilings, floors, doors).	Entire Surface is Intact	Less than or equal to 2 square feet.	More than 2 square feet.
Interior and exterior components with small surface areas (window sills, baseboards, soffits, trim)	Entire Surface is Intact	Less than or equal to 10 percent of the total surface area of the component.	More than 10 percent of the total surface area of the component.

DRAFT

4.1.3 Visual Inspection for Other Hazardous Materials and Universal Wastes

Stantec performed a visual inspection of existing building equipment for the presence of other hazardous materials and Universal Wastes. The visual inspection was limited to fixtures and equipment in the Property that were readily accessible. Other than sampling of caulking for the presence of PCBs, assessment of these hazardous materials was based solely on the identification placards on the equipment or general knowledge of historical use. If the presence and/or absence of a particular material was not clearly marked, then the piece of equipment was assumed to contain a concentration of the material in question. No sample collection was performed in the process of identifying Universal Wastes.

4.2 SAMPLE COLLECTION AND ANALYSIS

4.2.1 Bulk Sample Collection and Analysis for Asbestos

Bulk samples of identified homogeneous areas were collected which may be impacted by renovation/demolition activities. The EPA defines a homogeneous area as a surfacing material, thermal system insulation, or miscellaneous material that is uniform in color and texture. The use or application of the homogeneous area is also used to identify suspect ACMs. Examples of homogeneous materials include:

- Ceiling tiles of same color and size in contiguous areas
- Flooring of same color and size in contiguous areas

Bulk samples were collected to determine if there is any asbestos in a material. The sample result will identify the percentage of each type of asbestos detected.

At least one sample was collected of each suspect ACM. The sample was collected by removing the material using a hand tool to extract a representative piece. A plastic bag was used to contain the sample of suspect material and sealed to prevent the introduction of contamination from outside sources. A unique sample number was assigned to each sample.

A total of 362 bulk samples were collected from 112 homogeneous areas at the Property during the survey.

The samples were analyzed by Polarized Light Microscopy (PLM) in accordance with the EPA "Method for the Determination of Asbestos in Bulk Building Materials" (EPA/600/R93/116, July 1993). Analysis was performed by EMSL Analytical, Inc. (EMSL) located in Cinnaminson, New Jersey. EMSL is a participant in the National Institute of Standards and Testing (NIST) and National Voluntary Laboratory Accreditation Program (NVLAP). The laboratory is also accredited by the American Industrial Hygiene Association (AIHA). Laboratory accreditations are included in Appendix D.

DRAFT

Both the U.S. EPA, under their asbestos National Emission Standards for Hazardous Air Pollutants (NESHAP) regulations, and the South Coast Air Quality Management District (SCAQMD) define and regulate ACMs, which are materials containing more than one percent (>1%) asbestos. Please note, in California, asbestos exposure in construction is regulated when construction, alteration, repair, maintenance, or renovation of structures, substrates, or portions thereof contain asbestos [§1529 (a)(1)(C)]. Additionally, materials containing greater than one-tenth of one percent (> 0.1%) are regulated as ACCMs. For the purpose of this report, materials with any detectable concentration of asbestos are considered positive.

4.2.2 Bulk Sample Collection and Analysis for Lead-Based Paint

Stantec made observations to assess the condition of painted surfaces of the Property, and was to collect paint chip samples of painted surfaces observed to be in fair and/or poor condition as defined within Chapter 5 of the United States, Housing and Urban Development (HUD) guidelines. In the absence of paint observed to be in fair or poor condition, bulk samples were collected of the predominant paint at the Property. Paint chips were collected by removing the material using hand tools to extract representative pieces. Hard-sided containers were used to contain the samples of suspect material. A unique sample number was assigned to each sample.

A total of 11 paint chip samples were collected from surfaces observed to be in fair or poor condition at the Property during the survey.

Bulk paint-chip samples were collected and analyzed by Flame Atomic Absorption Spectrometry following the EPA SW 846-7000B/7420 analytical protocol. The samples were submitted to EMSL in Cinnaminson, New Jersey. This laboratory is accredited by the American Industrial Hygiene Association (AIHA Lab ID 100194) under the Environmental Lead Laboratory Accreditation Program (ELLAP) as well as the CDPH Environmental Lab Accreditation Program (ELAP No. 1877) for bulk paint chip analysis.

4.2.3 Bulk Sample Collection and Analysis for PCB's or Other Hazardous Materials

Bulk sampling of caulking for the presence of PCBs was conducted. Assessment of other hazardous materials was based solely on the identification placards on the equipment or general knowledge of historical use. If the presence and/or absence of a particular material was not clearly marked, then it was assumed that the material in question was present in the piece of equipment being assessed. No sample collection and analysis, other than for caulking, was performed in the process of identifying other hazardous materials.

DRAFT

5.0 REGULATIONS

5.1 ASBESTOS

Asbestos is the name of a class of magnesium-silicate minerals that occur in fibrous form. Minerals that are included in this group are chrysotile, crocidolite, amosite, anthophyllite asbestos, tremolite asbestos, and actinolite asbestos. Although the chrysotile minerals are the most common type of asbestos found in the construction industry, all types of asbestos are regulated in the same manner. Asbestos has been used in thousands of different building materials. Asbestos was added to building materials to: increase fire-resistance, insulate against heat, cold and sound, resist corrosion, and increase tensile strength. Common building materials that may contain asbestos include, but are not limited to the following: floor tile, floor sheeting, ceiling tile, mastics, roofing materials, fireproofing, acoustical treatments, gypsum board, pipe and boiler insulations. Adverse health effects have been associated with the inhalation of airborne asbestos. However, asbestos fibers that are tightly bound in building materials, may not pose an exposure hazard, unless disturbed in such a way that releases airborne fibers (i.e., cutting, drilling, sanding, and other abrasive methods).

5.1.1 Asbestos Building Surveys

The following is a partial summary of current federal and state regulations that contain requirements related to the performance of building surveys for asbestos. These summaries are not intended to be all-inclusive and do not contain every aspect of the regulations discussed.

5.1.1.1 US EPA National Emission Standard for Hazardous Air Pollutants (NESHAPs), 40 CFR Part 61

Under the NESHAPs regulation, no visible emissions are allowed during facility demolition or renovation activities, which involve regulated asbestos-containing materials. For this reason, all facilities must be surveyed for asbestos-containing materials prior to demolition or renovation. The EPA, and/or the local AQMD which has delegated authority from the EPA NESHAP, must be notified prior to any building demolition, even if no asbestos-containing materials are present. Assessments are made by the inspector as to the condition of each material and whether or not the materials are "friable." The US EPA NESHAP regulation defines “friable" materials as:

Materials that, when dry, ***can*** *be crumbled, pulverized or reduced to a powder using hand pressure.*

Conversely, a non-friable material **cannot**, when dry, be crumbled, pulverized or reduced to a powder.

DRAFT

Generally, undamaged vinyl asbestos floor tiles/adhesives, carpet mastic, plaster, roofing materials, wallboard, concrete, electrical insulation, base cove adhesives, fire doors, and exterior facing materials and similar materials are considered to be "non-friable." These materials present a low risk of asbestos fiber release unless impacted by maintenance, construction, demolition, or another activity that disturbs the material.

Materials such as acoustical ceiling texture and many thermal system insulations (TSIs), ceiling tile and similar materials are considered to be "friable" materials that may become damaged more readily through less intrusive contact. Many of these materials result in a much higher airborne concentration of asbestos than do non-friable materials. Therefore, extra care should be taken not to disturb this type of material.

The EPA Asbestos NESHAP regulation specifies that Category I non-friable materials (packings, gaskets, asphalt roofing products and resilient floor coverings) that are not in poor condition and not friable prior to demolition usually do not have to be removed, except where demolition will be by intentional burning or by a means that will sand, cut, grind or abrade the material. However, regulated asbestos-containing materials (RACM) and Category II materials (all other non-friable materials) that have a high probability of being crumbled, pulverized, or reduced to powder as part of demolition or renovation must be removed before demolition or renovation begins.

EPA uses the term RACM to describe the types of asbestos-containing materials they regulate on demolition and renovation (including maintenance) projects. RACM is defined as follows:

- Friable asbestos-containing material;
- Category I non-friable ACM that has become friable;
- Category I non-friable ACM that will be or has been subjected to sanding, grinding, cutting, or abrading; or
- Category II non-friable ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the (mechanical) forces expected to act on the material in the course of demolition or renovation operations.

According to EPA's Asbestos NESHAP "Clarification Regarding Analysis of Multi-Layered Systems" (40 CFR Part 61 FRL-4821-7), "composite sampling" which may potentially reduce the reported asbestos content of a material, may only be used for NESHAP-related purposes when sampling joint compound, tape, and gypsum wallboard where the joint compound is applied to joints and nail holes only.

The South Coast Air Quality Management District (SCAQMD) is the delegated NESHAP authority for asbestos in Los Angeles County as well as portions of Orange, Riverside, and San Bernardino Counties. The SCAQMD promulgates the Federal NESHAP through district Rule 1403.

DRAFT

5.1.1.2 Asbestos Hazard Emergency Response Act (AHERA), 40 CFR Part 763, Subpart E

The AHERA requires performance of asbestos surveys and the development of Asbestos Management Plans for all public and non-profit private schools, K-12, in the United States and its territories. Although this regulation applies to such schools only, the procedures mandated under AHERA are considered the industry standard and are applied to all surveys performed by Stantec in accordance with Federal OSHA mandates in 29 CFR 1926.1101, Subsections (k) (1), (2), and (5).

5.1.2 Worker Protection

The following is a partial summary of current state regulations that contain requirements related to worker protection. These summaries are not intended to be all-inclusive and do not contain every aspect of the regulations discussed.

5.1.2.1 California Assembly Bill AB3713, Health and Safety Code Div. 20, Ch. 10.4, Sec. 25915-25924

The state of California has enacted legislation that requires building owners, employers, lessees, etc. to notify tenants, employees and contractors of the presence of asbestos in both friable and non-friable forms. In addition, preventive maintenance activities must be developed and communicated to these parties. Notification is required 15 days after the identification of ACM in the building, and annually thereafter.

5.1.2.2 California Division of Occupational Safety and Health (DOSH a.k.a. Cal-OSHA)

Pursuant to DOSH standard 1529, an asbestos-containing material is any material containing greater than one percent (>1%) asbestos. However, for worker classifications, DOSH follows the California Health and Safety Code definition of ACCMs which are defined as any materials with an asbestos content greater than one-tenth of one percent (>0.1%). The DOSH set forth licensing and work requirements for disturbance of ACMs and ACCMs. The requirements have been divided into four classes of work: Class I, Class II, Class III, and Class IV work. The materials are distinguished by their potential to release fibers when damaged. The DOSH prescribes specific engineering controls and work practices for each Class of work.

- Class I – This Class refers to removal of ACMs identified as Thermal System Insulation (TSI) or surfacing (sprayed-on or troweled-on) materials. These materials are generally considered friable.
- Class II – This Class refers to removal of ACMs identified that are not TSI or surfacing materials. These materials are generally considered non-friable.
- Class III – This Class refers to repair and maintenance operations of all identified ACMs.
- Class IV – This Class refers to incidental contact with identified ACMs such as custodial staff.

DRAFT

5.1.3 Hazardous Waste

The California Department of Toxic Substances Control (DTSC), a department of Cal EPA, has the regulatory and enforcement authority for hazardous wastes deposited or transported in California. DTSC regulates as "hazardous wastes" generated wastes containing more than one percent (>1%) asbestos that have been determined to be "friable." DTSC uses the same methods for determining percentage of asbestos and friability, as does the U.S. EPA. However, local agencies and Cal/OSHA may regulate waste handling and packaging even if the material contains one percent or less or is determined to be non-friable.

5.2 LEAD-BASED PAINT

5.2.1 Lead-Based Paint Surveys

The following is a partial summary of current federal and state regulations that contain requirements related to the performance of lead-based paint surveys. These summaries are not intended to be all-inclusive and do not contain every aspect of the regulations discussed.

5.2.1.1 Accreditation, Certification, and Work Practices for Lead-Based Paint and Lead Hazards (Title 17 California Code of Regulations, Division 1, Chapter 8)

Title 17 pertains to all public and residential buildings in California and is enforced by the California Department of Public Health (CDPH). Pursuant to Title 17, lead-based paint is defined as paint or other surface coatings containing an amount of lead equal to or greater than one milligram per square centimeter (1 mg/cm^2), more than half of one percent (>0.5%) by weight, or 5,000 parts per million (5,000 ppm). Title 17 also defines a lead hazard as deteriorated lead-based paint, disturbing lead-based paint or presumed lead-based paint without containment, or any other nuisances which may result in persistent or quantifiable lead exposure.

5.2.2 Worker Protection

The following is a partial summary of current state regulations that contain requirements related to worker protection. These summaries are not intended to be all-inclusive and do not contain every aspect of the regulations discussed.

5.2.2.1 California Division of Occupational Safety and Health (DOSH a.k.a. Cal-OSHA)

Pursuant to Section 1532.1 in Title 8 of California Code of Regulations, construction employers are responsible for recognizing lead hazards and submitting samples of suspect materials to a US EPA lead accredited laboratory for analysis.

When lead is present on construction jobs the following is required:

DRAFT

- Housekeeping methods (including HEPA vacuuming, wet clean-up, or other effective methods) must be implemented to remove lead dust on surfaces;
- Hand and face washing facilities with soap and water must be provided for workers;
- Workers must receive training on lead hazards and how to protect themselves;
- Employee breathing-zone air sampling must be conducted to assess the amount of lead breathed by workers to determine protective measures and the type of respirator required for employee protection.

Special protective measures are required for highly hazardous tasks, commonly referred to as trigger tasks until employee airborne exposures to lead are determined to be below levels specified in Section 1532.1. Pre-job notification is required for all jobs involving trigger tasks. Written notification must be made to the local CAL/OSHA district office at least 24 hours before the job starts.

- Level 1 – Any of the following with lead-containing coating or materials: spray painting, manual demolition, manual scraping or sanding, use of a heat gun, power tool cleaning with dust collection system. Minimum required protection is a half-face respirator with N-100, R-100, or P-100 filters.

- Level 2 - Any of the following with lead-containing coating or materials: using lead-containing mortar, lead burning, rivet busting, power tool cleaning without dust collection system, clean-up activities using dry expendable abrasives, abrasive blasting enclosure movement or removal. Minimum required protection is an air-supplied hood or helmet or loose fitting hood or helmet powered air-purifying respirator with N-100, R-100, or P-100 filters.

- Level 3 – Abrasive blasting, welding, cutting, or torch burning on structures where lead-containing coatings or materials are present. Minimum required protection is a half-mask supplied air respirator in a positive pressure mode.

All trigger tasks require: respirators, protective equipment, and clothing; clothing change areas; initial blood testing for lead and zinc protoporphyrin; basic lead hazard, respirator, and safety training; and warning signs.

If air sampling shows exposures to workers are above the permissible exposure limit (PEL), the following additional controls are required:

- Respirators appropriate to the levels of exposures measured;
- Clean areas for eating and clothing change;
- Showers;
- Full worker training;
- Medical monitoring with routine blood testing for lead and zinc protoporphyrin; and

DRAFT

- Certification by the California Department of Public Health for workers and supervisors working on jobs at residential and publicly accessible buildings.

5.3 OTHER HAZARDOUS MATERIALS

The following is a partial summary of current federal and state regulations that contain requirements related to hazardous materials. These summaries are not intended to be all-inclusive and do not contain every aspect of the regulations discussed.

5.3.1 EPA Regulations (40 CFR 273.9 and 40 CFR 260.10)

The EPA regulations (40 CFR 273.9 and 40 CFR 260.10) provide standards for universal waste management and hazardous waste management systems. The EPA regulations specify requirements for managing the following hazardous materials: batteries; pesticides; mercury-containing equipment; lamps; and household and conditionally exempt small quantity generator waste. In addition to the EPA universal waste regulations, the following federal regulations may also include, but not be limited to the following:

- Applicable federal Occupational Safety and Health regulations,
- Title 40, Code of Federal Regulations, Part 261 - Identification and Listing of Hazardous Waste,
- Title 40, Code of Federal Regulations, Part 262 - Standards Applicable to Generators of Hazardous Waste,
- Title 40, Code of Federal Regulations, Part 264 - Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities,
- Title 40, Code of Federal Regulations, Part 265 - Interim Status Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities,
- Title 49, Code of Federal Regulations, Parts 100-199 - Transportation of Hazardous Materials,
- Title 40, Code of Federal Regulations, Part 268 - Land Disposal Restrictions,
- Title 40, Code of Federal Regulations, Part 761 - Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions,
- National Emissions Standards for Hazardous Air Pollutants (NESHAPS).

5.3.2 Department of Toxic Substance Control (DTSC), "Universal Waste Rule" (DTSC Control Number R-97-08)

The Department of Toxic Substances Control (DTSC), "Universal Waste Rule" (DTSC Control Number R-97-08) provides requirements and standards for universal waste management for small quantity and large quantity handlers and universal waste transporters. Additionally, the Universal Waste Rule provides standards for destination facilities.

DRAFT

6.0 FINDINGS

6.1 ASBESTOS

Stantec conducted an inspection of the accessible portions of the Property to determine whether suspect ACMs were present. All samples were analyzed using PLM techniques in accordance with methodology approved by the EPA. A summary of the analytical results are provided in the following sections. The complete analytical report is included in Appendix B.

6.1.1 Asbestos-Containing Materials

The following materials observed and sampled were identified as asbestos-containing materials.

Address	Sample No.	Homogeneous Material	Location of Material	Asbestos Content	Condition	Quantity	DOSH Definition	EPA Category
1326 N. New Hampshire	08A 08B 08C	Sealant, Gray, Associated with Roof Penetrations	Roof	5% Chrysotile	Good	20 SF	ACM	CAT I
1345 N. Vermont (Former Restaurant)	12A 12B 12C	Sealant, Gray/White and Black, Associated with Ducting	Roof	8% Chrysotile	Good	<50 SF	ACM	CAT I
1345 N. Vermont (Addition)	03A 03B 03C	Sealant, Gray/Black, Associated with HVAC Base	Roof – HVAC	8% Chrysotile	Damaged	50 SF	ACM	CAT I
1345 N. Vermont (Addition)	04A 04B 04C	Sealant, Gray/Black, Associated with HVAC Ducting	Roof - HVAC	5% Chrysotile	Damaged	50 SF	ACM	CAT I
1345 N. Vermont (Addition)	05A 05B 05C	Sealant, Gray/Black, Associated with Seams	Roof	8% Chrysotile	Good	20 LF	ACM	CAT I
1345 N. Vermont (Office)	02A 02B 02C	Roofing, Gray/Black, Rolled Asphalt, Concealed Beneath HA #01	Roof	2% Chrysotile	Damaged	120 SF	ACM	CAT I
1321 (#1) N. Vermont Avenue	13A 13B 13C	Vinyl Floor Tile, Green, 9"x9"	Boiler Room, Room 2, Telephone Closet	5% Chrysotile	Damaged	86 SF	ACM	CAT I
1321 (#1) N. Vermont Avenue	16A 16B 16C	Pipe Wrap, Brown, Paper Tape	Boiler Room	45% Chrysotile	Good	<50 LF	ACM	CAT I

ACCM = Asbestos-Containing Construction Material

6.1.3 Non-Asbestos Containing Materials

The following materials were identified as suspect ACMs and sampled as a part of this survey, and are considered non-asbestos containing materials.

Address	Sample No.	Homogeneous Material	Location of Material	Asbestos Content	Condition	Quantity	DOSH Definition	EPA Category
1326 N. New Hampshire	01A 01B 01C	Vinyl Floor Sheeting, Gray/White, Squares Pattern, *Unable to Sample Associated Adhesives; No Inconspicuous Sample Locations Available*	Kitchen	ND	Good	120 SF	NA	NA
1326 N. New Hampshire	02A 02B 02C	Plaster, Gray, Associated with Interior Walls – West Side	Bedroom #1, Living Room, Kitchen, Bathroom	ND	Good	1,950 SF	NA	NA
1326 N. New Hampshire	03A	Gypsum Board, Associated with Walls	Bedroom #2	ND	Good	400 SF	NA	NA
1326 N. New Hampshire	04A	Joint Compound, White, Associated with HA #03	Bedroom #2	Insufficient Material*	Good	400 SF	NA	NA
1326 N. New Hampshire	05A 05B 05C	Sink Undercoat, Black	Kitchen	ND	Good	10 SF	NA	NA
1326 N. New Hampshire	06A 06B 06C	Roofing, Rolled Asphalt	Roof	ND	Good	900 SF	NA	NA
1328 N. New Hampshire	07A 07B 07C 07D 07E	Roofing, Asphalt Shingle	Roof	ND	Good	900 SF	NA	NA
1328 N. New Hampshire	08A 08B 08C	Sealant, Gray, Associated with Roof Penetrations	Various Across Roof	ND	Good	20 SF	NA	NA
1326 N. New Hampshire	09A 09B 09C	Sealant, Gray, Associated with Duct Seams	Roof - HVAC	ND	Damaged	100 LF	NA	NA
1345 N. Vermont (Former Restaurant)	01A 01B 01C 01D 01E	Leveling Compound, White, Associated with Floors	Throughout Floors	ND	Damaged	3,500 SF	NA	NA

LF = Linear Feet
SF = Square Feet
NA = Not Applicable
* = Additional samples of material were unable to be collected without damaging walls of residence

6.2 LEAD-BASED PAINT

Stantec made observations to assess the condition of painted surfaces of the Property, and was to collect paint chip samples of painted surfaces observed to be in fair and/or poor condition.

6.2.1 Lead-Based Paint

The following provides a summary of the deteriorated paint identified and sampled during this survey that meets the definition of lead-based paint (greater than or equal to 0.5% by weight [5,000 ppm]).

Address	Sample No.	Sample Location	Paint Color	Substrate Material	Paint Condition	Estimated Quantity	Lead Content (by weight)
1326 N. New Hampshire	P1	Exterior – South Wall	White/Light Green	Wood	Fair	3,000 SF	9.8% (98,000 ppm)
1321 (#1-3) N. Vermont	P2	Exterior – Trim at West Window	Blue/Green	Wood	Poor	500 LF	12% (120,000 ppm)
1321 (#1-3) N. Vermont	P3	Exterior – Trim at NW Wall	Dark Green	Wood	Poor	500 LF	23% (230,000 ppm)

Notes and Abbreviations:
SF = Square Feet
ppm = Parts per million

DRAFT

6.2.2 Lead-Containing Paint

The following provides a summary of the deteriorated paint identified and sampled during this survey that does contain lead, but does not meet the definition of lead-based paint.

Address	Sample No.	Sample Location	Paint Color	Substrate Material	Paint Condition	Estimated Quantity	Lead Content (by weight)
1345 N. Vermont (Office)	P1	Exterior – Wall	Beige	Stucco	Intact	500 SF	0.048% (480 ppm)
1321 (#1) N. Vermont	P1	Hall - Wall	Cream	Gypsum Board	Intact	2,000 SF	0.036% (360 ppm)
1321 (#1) N. Vermont	P2	Room 2 - Wall	Light Blue	Plaster	Intact	3,000 SF	0.16% (1,600 ppm)
1321 (#1-3) N. Vermont	P1	Exterior – Wall at South Window	Beige	Stucco	Fair	3,000 SF	0.020% (200 ppm)
1321 (#4-8) N. Vermont	P1	Exterior – North Wall	Brown/Beige	Stucco	Fair	3,000 SF	0.57% (5,700 ppm)
1321 (#4-8) N. Vermont Exteriors	P2	Exterior – Trim at SE Drain Pipe	Blue/Green	Metal	Poor	700 SF	0.33% (3,300 ppm)
1321 (#A-C) N. Vermont	P1	Exterior – North Wall	Beige	Stucco	Fair	2,500 SF	0.012% (120 ppm)

Notes and Abbreviations:
SF = Square Feet
ppm = Parts per million

Although the paint listed above does not meet the definition of lead-based paint, the paint collected from the hand railing on the roof does contain detectable concentrations of lead that would require compliance with applicable portions of the Federal OSHA 29 CFR 1926.62 and the DOSH Section 1532.1 (Lead in Construction Standards).

6.2.3 Non Lead-Based Paint

The following provides a summary of the paint identified and sampled during this survey.

Address	Sample No.	Sample Location	Paint Color	Substrate Material	Paint Condition	Estimated Quantity	Lead Content (by weight)
1345 N. Vermont (Former Restaurant)	P1	Exterior – Stair Railing	Blue/Green	Metal	Poor	50 SF	<0.049% (<490 ppm)

Notes and Abbreviations:
SF = Square Feet
ppm = Parts per million

6.3 OTHER HAZARDOUS MATERIALS

Stantec performed a visual inspection of existing building equipment for the presence of other hazardous materials and Universal Wastes [pursuant to 40 Code Federal Regulations (CFR) 273.9,

DRAFT

40 CFR 260.10, and 22 California Code of Regulations (CCR) §66261.9], and bulk sampling for analysis of PCBs in caulking (Section 6.3.1). The survey was limited to above grade only, and did not include a soil or subsurface investigation. Materials evaluated as part of this inspection included: PCB-containing units such as lighting ballasts and PCB containing electrical units (i.e., electrical transformers); lead-containing units such as car batteries or emergency exit sign batteries; fluorescent lighting tubes; mercury containing units such as light switches and thermostats; refrigerants, halon, and other Chlorofluorocarbons (CFCs) such as fire extinguishing systems and Freon® used in association with building drinking fountains; heavy metals as may be found in cooling tower water treatment systems; solvents, paints, fuel (storage tanks), lubricants, and other associated maintenance and cleaning products; radioactive materials that may be contained in units such as smoke detectors, or medical equipment; office materials, supplies, and equipment such as computer monitors and printing supplies, and miscellaneous materials such as unlabeled materials or substances of concern. Stantec's visual inspection was limited to fixtures and equipment in the Property that were readily accessible. Assessment of these hazardous materials was based solely on the identification placards on the equipment or general knowledge of historical use. If the presence and/or absence of a particular material was not clearly marked, then the piece of equipment was assumed to contain a concentration of the material in question. No sample collection was performed in the process of identifying other hazardous materials or Universal Wastes.

6.3.1 PCBS

Approximately 40 fluorescent light fixtures were observed throughout the Property. At least one style of each type of light fixture was disassembled to make observations of the light ballast. Various light ballasts observed are labeled as "No PCBs" while others did not indicate presence or absence of PCBs.

Stantec collected caulk samples for the presence of PCBs. The EPA defines waste derived from caulk PCBs at greater than or equal to 50 parts per million (ppm) *PCB bulk product* in *40 CFR 761.3*. The following materials were identified as suspect PCB-containing caulking/sealants and sampled as a part of this survey, and are considered non PCB-containing.

Sample No.	Sample Location	Caulk Color	PCB Content (mg/kg)
1345-C1	1345 N. Vermont (Former Restaurant): Roof –Sealant	Black	<0.56
1345-C2	1345 N. Vermont (Former Restaurant): Roof –Sealant	Gray	<0.97
1321-C1	1321 N. Vermont (A-C): Roof –Sealant	Black/Silver	<0.67

Notes and Abbreviations:
mg/kg = milligrams per kilogram (parts per million)

DRAFT

6.3.2 Mercury

Many of the interior light fixtures are equipped with fluorescent light tubes. According to the EPA, fluorescent light bulbs contain varying amounts of mercury and can be hazardous to the environment if they are disposed of improperly. Because of this, the EPA encourages the recycling of mercury-containing light bulbs, regardless of the mercury content. A total of approximately 60 fluorescent light fixtures of varying size, shape, and wattage, were observed throughout the accessible areas of the Property. Each of the fixtures observed are equipped with between one and three fluorescent lights tubes for an approximate total of 30 light tubes that may contain mercury (Hg) present at the Property.

Older style, "silent" light switches and analog thermostat boxes are also known to contain varying amounts of mercury contained in ampules that act as an electronic switch. During our field work, one mercury- containing light switch and one mercury-containing thermostat were observed within the 1326 N New Hampshire Avenue portion of the Property. However, potential mercury-containing thermostats were observed within the residences during the survey. Care should be taken when removing potential mercury-containing equipment to ensure no mercury ampules are present.

6.3.3 Ozone Depleting Substances

Refrigeration equipment consisting of roof mounted HVAC units and wall mounted air conditioning units were observed at the Property. Labels indicating the type of refrigerant used in these units were not observed. Therefore, the units are assumed to contain ozone depleting refrigerant (i.e. Freon®).

6.3.4 Radioactive Materials

The California Health and Safety Code's Radiation Law (Sections 11495-115225) provides for the regulation of ionizing radiation for the protection of the health and safety of workers and the public. Decommissioning of radiologic equipment must be approved through the CDPH. Three X-ray machines were observed accessible areas of the Property.

Smoke detectors typically utilize a small radioactive source as a key component in detecting smoke particles. EPA regulations require smoke detectors to be disposed of at a nuclear waste facility or returned directly to the manufacturer. A total of approximately two smoke detectors were observed within accessible areas of the Property, with no labeling was observed on the units.

DRAFT

6.3.5 Batteries

Batteries are required to be recycled and/or disposed of in accordance with applicable hazardous waste regulations. Multiple automobile batteries were observed at the Property in connection with the auto parts store and auto repair garage.

6.3.6 Miscellaneous

Approximately five A/B/C fire extinguishers were observed within the Property.

Various types of electronics and paint containers were observed throughout accessible areas of the Property and should be properly disposed of or recycled as "e-waste" if they are not intended to be used at another facility.

X-ray machines were observed at 1321 N. Vermont Avenue. Walls surrounding the X-ray machines are potentially lined with lead.

DRAFT

7.0 RECOMMENDATIONS

7.1 ASBESTOS CORRECTIVE ACTIONS

Corrective actions are designed to ensure the safety of all individuals who either work in the vicinity of the ACMs or perform duties, which have the potential for disturbing ACMs. Selection of an appropriate corrective action is based upon the physical nature of the material, the potential for disturbance of the material, the configuration and functional use of the structure, local environmental conditions, and regulations. Final recommendations for corrective actions are based on the professional expertise and judgment of the Stantec Building Inspector/Management Planner, using the EPA AHERA Final Rule as a guideline.

Corrective Action Option I: Asbestos Management Plan and Operations and Maintenance Program (O & M Program)

Once ACMs are found in a building, an Asbestos Management Plan should be implemented. The Asbestos Management Plan should include an Operations and Maintenance (O&M) Program, which identifies required work practices and procedures designed to minimize or eliminate the exposure of building occupants to asbestos fibers. The O&M Program should be designed to achieve this goal by delineating proper maintenance, repair, and protection measures to be used in the building. This will reduce the likelihood of an airborne fiber release by minimizing asbestos disturbance or damage, and monitoring the conditions of the asbestos material. An O&M Program is recommended for each type of ACM, including surfacing materials, thermal systems insulation, and miscellaneous materials. One of the keys to an O&M Program is to be aware of the location and condition of all identified and suspect ACMs, observe the ACMs for deterioration in condition, avoid any activity that may induce the release of fibers, and notify all employees and any contractors that may work in the building of the presence of the ACMs.

Corrective Action Option II: Encapsulation

Encapsulation refers to the spraying of the ACM with a sealant. Encapsulants are typically of the bridging (surface coating) or penetrative variety. The primary function of an encapsulant is to penetrate the ACM, adhere to the substrate and form a tough skin over the material. Additionally, the encapsulant can withstand minimal impact, is flexible, flame retardant, resists deterioration over time, and is generally not considered toxic. Care must be taken to ensure that the added weight of the encapsulant does not cause the base material to delaminate from its substrate surface due to the force of gravity. Stantec does not normally recommend this option because of potentially inherent problems arising from inappropriate applications and the fact that there are no reliable means of determining potential for failure of an individual application.

Corrective Action Option III: Enclosure

Enclosure involves the construction of airtight walls, ceilings or conduits around the ACM. The enclosure should be designed to greatly reduce air movement across the enclosure boundary. Design of the enclosure must address the potential release of fibers during construction,

DRAFT

structural integrity to withstand the added weight of the enclosures, accessibility of utilities, and local fire and building codes.

Corrective Action Option IV: Removal

Removal involves, to the greatest extent practical, the complete removal, disposal, and replacement, if necessary, of the ACM. Removal usually also requires encapsulation of the structure to lock down residual fibers which may exist. Removal is generally required prior to renovation and/or demolition activities. This usually will be the most expensive option, but will also be the most permanent option.

The NESHAP requires removal of all friable materials from buildings prior to demolition or renovation activities. In addition, all materials, which are likely to become friable while normal demolition/renovation activities are being performed, must also be removed prior to the commencement of those activities. The abatement must only be accomplished be a licensed asbestos abatement contractor.

Corrective Action Option V: Repair

Repair involves returning the damaged ACM to an undamaged condition or to an intact state such that the material does not release fibers. Repairs can be accomplished with a variety of materials and procedures, but since they typically disturb the ACM, the repair must be conducted with the same engineering controls as a removal project. Although repairs may have a lower initial cost when compared to removal, the continued cost of implementing an O&M program should be considered.

Based on the planned demolition of the Property, Stantec recommends that Corrective Action Option IV be implemented for the ACMs identified throughout the Property. Additionally, the ACCM's should be removed by certified personnel properly trained in accordance with DOSH asbestos construction standards. It is Stantec's understanding that these materials are scheduled for demolition by Kaiser. If these materials are not scheduled for demolition, Stantec recommends Corrective Action Option I be implemented. If the Property is not going to be demolished, which would include the removal of these ACMs, then written notification to employees, tenants, contractors, or purchasers of the Property in regards to the presence and location of ACMs and ACCMs is required pursuant to the California Health and Safety Code 25915 (formerly known as The Connelly Bill). If identified ACMs will be removed, Stantec additionally recommends that the removal of the ACMs be completed by an appropriately licensed contractor in accordance with all applicable federal, state, and local regulations. If future plans for this project change, additional and/or different corrective actions may be recommended.

7.2 LEAD-BASED PAINT RECOMMENDATIONS

Based on the findings of this survey, various paints meet the definition of LBP. These LBPs and other paints identified at the Property with detectable concentrations of lead would require

DRAFT

compliance with applicable portions of the Federal OSHA 29 CFR 1926.62 and the DOSH Section 1532.1 (Lead in Construction Standards).

7.3 PCBS IN CAULK RECOMMENDATIONS

Stantec collected caulk samples for the presence of PCBs. All caulk samples analyzed were determined to be non PCB-containing. No additional assessment appears warranted at this time.

7.4 OTHER HAZARDOUS MATERIALS RECOMMENDATIONS

There are a variety of items within the Property that may contain mercury or are identified to be a Universal Waste. It is recommended that these materials be handled and disposed of in accordance with applicable Environmental Protection Agency (EPA) regulations (40 CFR 273.9 and 40 CFR 260.10) and the Department of Toxic Substances Control (DTSC), "Universal Waste Rule" (DTSC Control Number R-97-08). Additionally, EPA regulations require Freon related work be performed by EPA certified personnel.

DRAFT

8.0 LIMITATIONS

Reasonable efforts have been made by Stantec personnel to locate, sample, and/or identify suspect ACMs, LBPs, PCBs in caulk, and other hazardous materials associated with the Property. Underground utilities were not accessed for assessment. Stantec was denied access to the 1328 New Hampshire Avenue residence and various tenant spaces and roofs of the 1321 N. Vermont Avenue buildings. Additionally, destructive testing of wall cavities was not conducted per the Property owner Stantec was unable to fully survey walls and ceilings of the 1326 N. New Hampshire Avenue residence and the remaining tenant spaces at 1321 N Vermont Avenue, due to the occupied nature of the Property by families, and dental/medical practices. Due to the lack of full access to the Property, the survey was limited and may not satisfy the regulatory requirements for renovation or demolition.

For any facility the existence of unique or concealed materials and debris is a possibility. In addition, sampling and laboratory analysis constraints typically hinder the investigation. Stantec does not warrant, guarantee or profess to have the ability to locate or identify all hazardous materials in a facility. Stantec cannot warrant the effectiveness or damage thereof, at any of the patches or temporary repairs performed at sampling locations (carpet, gypsum board, roof, etc.). This report is intended for use in planning based on the agreed upon scope of work. This report is not intended to be a bidding document. Quantities of materials identified are estimates only and would need to be verified. If during the course of a renovation/demolition project suspect ACMs, LBPs, or other hazardous materials are discovered that are not included within this report, those materials should be treated accordingly until additional sampling, analysis and/or assessment can be performed.

Additionally, the passage of time may result in a change in the environmental characteristics at the Property. This report does not warrant against future operations or conditions that could affect the recommendations made. The results, findings, conclusions and recommendations expressed in this report are based only on conditions that were observed during Stantec's survey of the Property and test results provided by EMSL Analytical, Inc. These observations are time dependent, are subject to changing site conditions, and revisions to federal, state, and local regulations. This report is not intended to act as a negative exposure assessment for any contractor or future site tenant. Reliance on this letter report by Third Parties (i.e., other than Kaiser) shall be at the Third Party's sole risk.

Appendix B: CDPH 8552 Form

Executive Summary

A pre-construction lead inspection was conducted by Forensic Analytical Consulting Services, Inc. for the 4760 Sunset Boulevard Medical Office Building located at the Kaiser Permanente Los Angeles Medical Center campus. A future addition is planned that will attach to the west side of the building. The inspection encompassed testing of ceramic tiles, ceramic fixtures, and paints that might be impacted by the future construction, for the presence of lead. Only very low levels of lead were expected due to the post-1978 construction of this building, but testing was performed primarily because it is still possible for newer ceramic tiles or ceramic fixtures to contain high levels of lead. No paints or ceramics with high levels of lead were identified.

Introduction

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Foundation Health Plan, Inc. to perform a pre-construction lead survey of the occupied medical office building located at 4760 Sunset Blvd. in Los Angeles, California. This survey was limited to potential lead-containing building materials that may be disturbed during the future construction project that is planned to expand the building to the west. The survey was performed by FACS representative Barry Smith (California Lead Certification No. 17048) under the supervision of CDPH certified Inspector/Assessor Steve Long (California Lead Certification No. 2202) on March 18, 2016.

Scope of Work

The purpose of the inspection was to identify the presence of lead-based paint or ceramic tiles/fixtures with high lead content that may be disturbed during the future construction. X-Ray Fluorescence (XRF) testing of ceramic tile and walls suspected of containing lead paint was performed for this survey. In addition, the scope of the survey and the services provided by FACS included:

- Review of project drawings (building floor drawings) to develop the project sampling plan
- Performing a visual inspection of the project areas to identify accessible suspect lead-containing coatings or ceramics
- Consolidating data and findings into a report format

Site Characterization

The survey was limited to areas of the building on the west side that may be disturbed during the future construction project. In general, in these areas the building interior was characterized walls constructed of gypsum drywall. The ceilings were typically drywall and/or lay-in ceiling tiles. The floors were typically resilient sheet flooring, vinyl floor tile, ceramic floor tile or carpet. Sample locations were selected to be representative of materials throughout the project area.

Survey Methods

The lead survey was not a comprehensive lead-based paint or building material survey as detailed in the *"Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing"* by The National Center for Lead-Safe Housing for HUD.

Lead-based paint is defined in Los Angeles County as coatings that contain lead at levels greater than 0.7 milligrams of lead per square centimeter of surface area (mg/cm^2) as measured by an X-Ray Fluorescence (XRF) instrument. However, construction work impacting materials with detectable levels of lead is subject to Cal/OSHA requirements.

Construction activities, sometimes referred to as trigger tasks, impacting materials containing any amount of lead require an initial exposure assessment per Cal/OSHA. Trigger tasks are defined in Cal/OSHA 1532.1, section (d) (2) and include but are not limited to such tasks as: manual demolition, manual scraping, manual sanding, lead burning, abrasive blasting, welding, cutting and torch burning.

XRF readings were collected from representative components, not every individual component. Lead results are assumed to be the same on like components in the same general area of the representative component that was sampled. The types, number, and locations of XRF readings were determined based on available information about the renovation provided to FACS, visual observations, regulatory requirements, and other project management considerations.

The Protec LPA-1 XRF Analyzer utilized for the testing is a direct-reading instrument that determines the concentration of lead in paints by subjecting the paint to energy from a small radioactive source when the instrument is held against the paint and analyzing the absorption of x-rays by the paint. The instrument was calibrated to the manufacturer's specifications and was also verified, at least every four hours and at the beginning and completion of each set of readings, against known lead sample standards produced by the National Institute of Standards and Testing (NIST). The XRF instrument measures lead in units of milligrams of lead per square centimeter of tested surface (mg/cm^2). Readings of 0.0 mg/cm2 or negative readings (e.g., -0.4) do not necessarily indicate there is no lead present, as the XRF instrument does not have sufficient sensitivity to determine a zero result.

Due to the presence of the small radioactive source in the instrument, FACS inspectors are trained in proper use of the instrument to avoid exposure to themselves or others from operation of the instrument.

Findings and Recommendations

No paints or ceramics with high levels of lead were identified. Survey results of XRF testing are summarized in the table presented in Appendix A. The completed 8552 Form required by the California Department of Public Health is contained in Appendix B.

During construction, all affected paints and ceramic tile should be assumed to contain some small amount of lead (since the XRF instrument cannot determine a zero result), and the Cal/OSHA Lead in Construction Standard (8 CCR 1532.1) should be followed (especially requirements related to exposure assessments and trigger tasks), since the standard applies to paints containing any amount of lead, even those with very low levels below 0.06%.

Limitations

This investigation is limited to the conditions and practices observed and information made available to FACS. The methods, conclusions and recommendations provided are based on FACS' judgment, expertise and the standard of practice for professional service. They are subject to the limitations and variability inherent in the methodology employed. As with all environmental investigations, this investigation is limited to the defined scope and does not purport to set forth all hazards, nor indicate that other hazards do not exist.

Please do not hesitate to contact our office at 310-660-5600 with any questions or concerns. Thank you for the opportunity to assist Kaiser Foundation Health Plan, Inc. promoting a more healthful environment.

Respectfully,
FORENSIC ANALYTICAL

Introduction 1

Scope of Work 1

Site Characterization 1

Survey Methods 1

Findings and Recommendations 2

Limitations 3

Appendix A: XRF Lead Testing Results Table
Appendix B: CDPH 8552 Form

Executive Summary

A pre-demolition lead inspection was conducted by Forensic Analytical Consulting Services, Inc. for the above referenced structure. The inspection encompassed inspection for lead X-Ray shielding and testing of ceramic tiles, restroom fixtures, and paints for the presence of lead. The following were identified as lead shielding or lead-based paint/ceramic:

- Basement: Rooms 0071, 0072, 0073, 0075, 0076 & 0078 - lead X-ray shielding at walls, glass, etc.
- 1st Floor: Restrooms 1066 & 1067 - sinks
- 1st Floor: Restroom at SW stairs - sink
- 5th Floor: Restroom 5155 – old style urinal

Introduction

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Foundation Health Plan, Inc. to perform a pre-demolition lead survey of the Medical Office Building located at 1505 N. Edgemont Street in Los Angeles, California. The survey was performed by FACS representatives Barry Smith (California Lead Technician Certification No. 17048) and Stephen Long (California Lead Inspector Certification No. 2202) on January 22 and March 18, 2016.

Scope of Work

The purpose of the inspection was to identify the presence of lead X-Ray shielding and paint and ceramic tiles with high lead content that would be disturbed during the future demolition project. X-Ray Fluorescence (XRF) testing of ceramic tile and paint was performed for this survey. In addition, the scope of the survey and the services provided by FACS included:

- Review of building floor drawings to develop the project sampling plan
- Performing a visual inspection of the project areas to identify accessible suspect lead shielding and lead-containing coatings or ceramics
- Consolidating data and findings into a report format

The third floor was inaccessible due to renovation throughout that floor, and is excluded from this report.

Site Characterization

In general, the building interior was characterized by plaster walls and/or gypsum drywall with joint compound walls. The ceilings were typically drywall and/or lay-in ceiling tiles. The floors were typically resilient sheet flooring, vinyl floor tile, ceramic floor tile and carpet. Sample locations were selected to be representative of the materials identified.

Survey Methods

Document Review

FACS reviewed building floor plan drawings to help develop the sampling strategy.

Lead Inspection

The lead survey was not a comprehensive lead-based paint or building material survey as detailed in the *"Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing"* by The National Center for Lead-Safe Housing for HUD.

Cal/OSHA, in Title 8 California Code of Regulations (CCR) Section 1532.1, Lead in Construction Standard which implements California labor code 8716-6717, regulates all construction work were an employee may be occupationally exposed to lead. Paint or materials with any detectable level of lead is considered lead-containing by Cal/OSHA.

Lead-based paint is defined as shall be defined as coatings that contain lead at levels greater than 0.7 milligrams of lead per square centimeter of surface area (mg/cm^2) as measured by an X-Ray Fluorescence (XRF) instrument. However, construction work impacting materials with detectable levels of lead is subject to Cal/OSHA requirements.

Construction activities, sometimes referred to as trigger tasks, impacting materials containing any amount of lead require an initial exposure assessment. Trigger tasks are defined in Cal/OSHA 1532.1, section (d) (2) and include but are not limited to such tasks as: manual demolition, manual scraping, manual sanding, lead burning, abrasive blasting, welding, cutting and torch burning.

XRF readings were collected from representative components, not every individual component. Lead results are assumed to be the same on like components in the same general area of the representative component that was sampled.

The types, number, and locations of XRF readings were determined based on available information about the renovation provided to FACS, visual observations, regulatory requirements, and other project management considerations.

The Protec LPA-1 XRF Analyzer utilized for the testing is a direct-reading instrument that determines the concentration of lead in paints by subjecting the paint to energy from a small radioactive source when the instrument is held against the paint and analyzing the absorption of x-rays by the paint. The instrument was calibrated to the manufacturer's specifications and was also verified, at least every four hours and at the beginning and completion of each set of readings, against known lead sample standards produced by the National Institute of Standards and Testing (NIST). The XRF instrument measures lead in units of milligrams of lead per square centimeter of tested surface (mg/cm^2). In Los Angeles County, paint is considered classified as LBP if it contains 0.7 mg/cm^2 or more of lead.

Due to the presence of the small radioactive source in the instrument, FACS inspectors are trained in proper use of the instrument to avoid exposure to themselves or others from operation of the instrument.

Readings of 0.0 mg/cm2 or negative readings (e.g., -0.4) do not necessarily indicate there is no lead present, as the XRF instrument does not have sufficient sensitivity to determine a zero result.

Findings and Recommendations

FACS conducted an inspection of the Medical Office Building at 1505 N. Edgemont Street, Los Angeles, CA for the presence of lead-containing building components that will be impacted by the future demolition project. Survey findings are presented below.

The following were identified as lead shielding or lead-based paint/ceramic:

- Basement: Rooms 0071, 0072, 0073, 0075, 0076 & 0078 - lead X-ray shielding at walls, glass, etc.
- 1st Floor: Restrooms 1066 & 1067 - sinks
- 1st Floor: Restroom at SW stairs - sink
- 5th Floor: Restroom 5155 – old style urinal

Survey results of XRF testing are summarized in the tables in Appendix A.

Lead-safe work practices must be used when disturbing lead shielding or lead-based paint/ceramic.

During demolition, all affected paints and ceramic tile should be assumed to contain some amount of lead (since the XRF instrument cannot determine a zero result), and the Cal/OSHA Lead in Construction Standard (8 CCR 1532.1) should be followed (especially requirements related to exposure assessments and trigger tasks), since the standard applies to paints containing any amount of lead, even those with very low levels below 0.06%.

Limitations

As noted above, the entire third floor of the building was excluded from this report due to inaccessibility.

This investigation is limited to the conditions and practices observed and information made available to FACS. The methods, conclusions and recommendations provided are based on FACS' judgment, expertise and the standard of practice for professional service. They are subject to the limitations and variability inherent in the methodology employed. As with all environmental investigations, this investigation is limited to the defined scope and does not purport to set forth all hazards, nor indicate that other hazards do not exist.

Please do not hesitate to contact our offices at 310-660-5600 with any questions or concerns. Thank you for the opportunity to assist Kaiser Foundation Health Plan, Inc. promoting a more healthful environment.

Respectfully,
FORENSIC ANALYTICAL

Appendix A: XRF Lead Testing Results Table
Appendix B: CDPH 8552 Form

Executive Summary

A pre-demolition lead inspection was conducted by Forensic Analytical Consulting Services, Inc. for the above referenced structure. The inspection encompassed inspection for lead X-Ray shielding and testing of ceramic tiles, restroom fixtures, and paints for the presence of lead. The following were identified as lead shielding or lead-based paint/ceramic:

- Basement: Rooms B013, B017 & B021 - lead X-ray shielding at walls, glass, etc.
- 3rd Floor, 4th Floor & 7th Floor: Elevator Lobby and hallway – ceramic floor and baseboard tile
- 1st Floor: NE Women's Restroom – 2-inch green accent ceramic wall tile
- 1st Floor: N Utility Room - Sink
- 3rd Floor: Room G3122A – Sink (squared shape)
- 4th Floor: Rooms G4021, G4052, G4055, and Restrooms G4002, G4007 & G4043 – Sinks (squared shape)
- 5th Floor: Rooms G503, G512 & G539 - 2-inch red accent ceramic wall tile
- 6th Floor: Rooms G6010, G6016, G6036 &G6086 - 2-inch red accent ceramic wall tile
- Exterior – White and gray paint on stucco

Introduction

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Foundation Health Plan, Inc. to perform a pre-demolition lead survey of the Medical Office Building located at 1526 N. Edgemont Street in Los Angeles, California. The survey was performed by FACS representatives Barry Smith (California Lead Technician Certification No. 17048) and Stephen Long (California Lead Inspector Certification No. 2202) on January 14 & 19 and March 18, 2016.

Scope of Work

The purpose of the inspection was to identify the presence of lead X-Ray shielding and paint and ceramic tiles with high lead content that would be disturbed during the future demolition project. X-Ray Fluorescence (XRF) testing of ceramic tile and paint was performed for this survey. In addition, the scope of the survey and the services provided by FACS included:

- Review of building floor drawings to develop the project sampling plan
- Performing a visual inspection of the project areas to identify accessible suspect lead shielding and lead-containing coatings or ceramics
- Consolidating data and findings into a report format

Site Characterization

In general, the building interior was characterized by gypsum drywall with joint compound walls and/or plaster walls. The ceilings were typically drywall and/or lay-in ceiling tiles. The floors were typically resilient sheet flooring, vinyl floor tile, ceramic floor tile and carpet. Sample locations were selected to be representative of the materials identified.

Survey Methods

Document Review

FACS reviewed building floor plan drawings to help develop the sampling strategy.

Lead Inspection

The lead survey was not a comprehensive lead-based paint or building material survey as detailed in the *"Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing"* by The National Center for Lead-Safe Housing for HUD.

Cal/OSHA, in Title 8 California Code of Regulations (CCR) Section 1532.1, Lead in Construction Standard which implements California labor code 8716-6717, regulates all construction work were an employee may be occupationally exposed to lead. Paint or materials with any detectable level of lead is considered lead-containing by Cal/OSHA.

Lead-based paint is defined as coatings that contain lead at levels greater than 0.7 milligrams of lead per square centimeter of surface area (mg/cm^2) as measured by an X-Ray Fluorescence (XRF) instrument. However, construction work impacting materials with detectable levels of lead is subject to Cal/OSHA requirements.

Construction activities, sometimes referred to as trigger tasks, impacting materials containing any amount of lead require an initial exposure assessment. Trigger tasks are defined in Cal/OSHA 1532.1, section (d) (2) and include but are not limited to such tasks as: manual demolition, manual scraping, manual sanding, lead burning, abrasive blasting, welding, cutting and torch burning.

XRF readings were collected from representative components, not every individual component. Lead results are assumed to be the same on like components in the same general area of the representative component that was sampled.

The types, number, and locations of XRF readings were determined based on available information about the renovation provided to FACS, visual observations, regulatory requirements, and other project management considerations.

The Protec LPA-1 XRF Analyzer utilized for the testing is a direct-reading instrument that determines the concentration of lead in paints by subjecting the paint to energy from a small radioactive source when the instrument is held against the paint and analyzing the absorption of x-rays by the paint. The instrument was calibrated to the manufacturer's specifications and was also verified, at least every four hours and at the beginning and completion of each set of readings, against known lead sample standards produced by the National Institute of Standards and Testing (NIST). The XRF instrument measures lead in units of milligrams of lead per square centimeter of tested surface (mg/cm^2). In Los Angeles County, paint is considered classified as LBP if it contains 0.7 mg/cm^2 or more of lead.

Due to the presence of the small radioactive source in the instrument, FACS inspectors are trained in proper use of the instrument to avoid exposure to themselves or others from operation of the instrument.

Readings of 0.0 mg/cm^2 or negative readings (e.g., -0.4) do not necessarily indicate there is no lead present, as the XRF instrument does not have sufficient sensitivity to determine a zero result.

Findings and Recommendations

FACS conducted an inspection of the Medical Office Building at 1526 N. Edgemont Street, Los Angeles, CA for the presence of lead-containing building components that will be impacted by the future demolition project. Survey findings are presented below.

The following were identified as lead shielding or lead-based paint/ceramic:

- Basement: Rooms B013, B017 & B021 - lead X-ray shielding at walls, glass, etc.
- 3rd Floor, 4th Floor & 7th Floor: Elevator Lobby and hallway – ceramic floor and baseboard tile
- 1st Floor: NE Women's Restroom – 2-inch green accent ceramic wall tile
- 1st Floor: N Utility Room - Sink
- 3rd Floor: Room G3122A – Sink (squared shape)
- 4th Floor: Rooms G4021, G4052, G4055, and Restrooms G4002, G4007 & G4043 – Sinks (squared shape)
- 5th Floor: Rooms G503, G512 & G539 - 2-inch red accent ceramic wall tile
- 6th Floor: Rooms G6010, G6016, G6036 &G6086 - 2-inch red accent ceramic wall tile
- Exterior – White and gray paint on stucco

Survey results of XRF testing are summarized in the table in Appendix A.

Lead-safe work practices must be used when disturbing lead shielding or lead-based paint/ceramic.

During demolition, all affected paints and ceramic tile should be assumed to contain some amount of lead (since the XRF instrument cannot determine a zero result), and the Cal/OSHA Lead in Construction Standard (8 CCR 1532.1) should be followed (especially requirements related to exposure assessments and trigger tasks), since the standard applies to paints containing any amount of lead, even those with very low levels below 0.06%.

Limitations

This investigation is limited to the conditions and practices observed and information made available to FACS. The methods, conclusions and recommendations provided are based on FACS' judgment, expertise and the standard of practice for professional service. They are subject to the limitations and variability inherent in the methodology employed. As with all environmental investigations, this investigation is limited to the defined scope and does not purport to set forth all hazards, nor indicate that other hazards do not exist.

Please do not hesitate to contact our offices at 310-660-5600 with any questions or concerns. Thank you for the opportunity to assist Kaiser Foundation Health Plan, Inc. promoting a more healthful environment.

Respectfully,
FORENSIC ANALYTICAL

Stephen Long

Appendix A: XRF Lead Testing Results Table
Appendix B: CDPH 8552 Form

Executive Summary

A pre-demolition lead inspection was conducted by Forensic Analytical Consulting Services, Inc. for the above referenced structure. The inspection encompassed testing of ceramic tiles, restroom fixtures, and paints for the presence of lead.

- Turquoise wall paint
- White, yellow and red floor stripe and curb marking paints
- Stairwells grey metal door frame paint

Introduction

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Foundation Health Plan, Inc. to perform a pre-demolition lead survey of the parking garage located at 1517 N. Vermont Street in Los Angeles, California. The survey was performed by FACS Stephen Long (California Lead Certification No. 2202) on March 18, 2016.

Scope of Work

The purpose of the inspection was to identify the presence of lead-containing paint and ceramic tiles with high lead content that would be disturbed during the future demolition project. X-Ray Fluorescence (XRF) testing of ceramic tile and paint was performed for this survey. In addition, the scope of the survey and the services provided by FACS included:

- Review of building floor drawings to develop the project sampling plan
- Performing a visual inspection of the project areas to identify accessible suspect lead-containing coatings or ceramics
- Consolidating data and findings into a report format

Site Characterization

In general, the building interior walls, ceilings and floors were characterized by concrete. The 1st floor conference areas are characterized by plaster and/or drywall with joint compound walls. Ceilings were typically drywall and/or lay-in ceiling tiles. The floors were typically resilient sheet flooring, vinyl floor tile, ceramic floor tile and carpet. Sample locations were selected to be representative of the materials identified.

Survey Methods

Document Review

FACS reviewed building floor plan drawings to help develop the sampling strategy.

Lead Inspection

The lead survey was not a comprehensive lead-based paint or building material survey as detailed in the *"Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing"* by The National Center for Lead-Safe Housing for HUD.

Cal/OSHA, in Title 8 California Code of Regulations (CCR) Section 1532.1, Lead in Construction Standard which implements California labor code 8716-6717, regulates all construction work were an employee may be occupationally exposed to lead. Paint or materials with any detectable level of lead is considered lead-containing by Cal/OSHA.

Lead-based paint is defined as shall be defined as coatings that contain lead at levels greater than 0.7 milligrams of lead per square centimeter of surface area (mg/cm^2) as measured by an X-Ray Fluorescence (XRF) instrument. However, construction work impacting materials with detectable levels of lead is subject to Cal/OSHA requirements.

Construction activities, sometimes referred to as trigger tasks, impacting materials containing any amount of lead require an initial exposure assessment. Trigger tasks are defined in Cal/OSHA 1532.1, section (d) (2) and include but are not limited to such tasks as: manual demolition, manual scraping, manual sanding, lead burning, abrasive blasting, welding, cutting and torch burning.

XRF readings were collected from representative components, not every individual component. Lead results are assumed to be the same on like components in the same general area of the representative component that was sampled.

The types, number, and locations of XRF readings were determined based on available information about the renovation provided to FACS, visual observations, regulatory requirements, and other project management considerations.

The Protec LPA-1 XRF Analyzer utilized for the testing is a direct-reading instrument that determines the concentration of lead in paints by subjecting the paint to energy from a small radioactive source when the instrument is held against the paint and analyzing the absorption of x-rays by the paint. The instrument was calibrated to the manufacturer's specifications and was also verified, at least every four hours and at the beginning and completion of each set of readings, against known lead sample standards produced by the National Institute of Standards and Testing (NIST). The XRF instrument measures lead in units of milligrams of lead per square centimeter of tested surface (mg/cm^2). In Los Angeles County, paint is considered classified as LBP if it contains 0.7 mg/cm2 or more of lead.

Due to the presence of the small radioactive source in the instrument, FACS inspectors are trained in proper use of the instrument to avoid exposure to themselves or others from operation of the instrument.

Readings of 0.0 mg/cm2 or negative readings (e.g., -0.4) do not necessarily indicate there is no lead present, as the XRF instrument does not have sufficient sensitivity to determine a zero result.

Findings and Recommendations

FACS conducted an inspection of the parking garage at 1517 N. Vermont Street, Los Angeles, CA for the presence of lead-containing building components that will be impacted by the future demolition project. Survey findings are presented below.

The following materials were identified as lead-based paint:

- Turquoise wall paint
- White, yellow and red floor stripe and curb marking paints
- Stairwells grey metal door frame paint

Survey results of XRF testing are summarized in the tables in Appendix A.

Lead-safe work practices must be used when disturbing lead-based paint.

During demolition, all affected paints and ceramic tile should be assumed to contain some amount of lead (since the XRF instrument cannot determine a zero result), and the Cal/OSHA Lead in Construction Standard (8 CCR 1532.1) should be followed (especially requirements related to exposure assessments and trigger tasks), since the standard applies to paints containing any amount of lead, even those with very low levels below 0.06%.

Limitations

This investigation is limited to the conditions and practices observed and information made available to FACS. The methods, conclusions and recommendations provided are based on FACS' judgment, expertise and the standard of practice for professional service. They are subject to the limitations and variability inherent in the methodology employed. As with all environmental investigations, this investigation is limited to the defined scope and does not purport to set forth all hazards, nor indicate that other hazards do not exist.

Please do not hesitate to contact our offices at 310-660-5600 with any questions or concerns. Thank you for the opportunity to assist Kaiser Foundation Health Plan, Inc. promoting a more healthful environment.

Respectfully,
FORENSIC ANALYTICAL

Stephen Long

Executive Summary

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Foundation Health Plan, Inc. to perform a limited pre-construction asbestos survey for the 4760 Sunset Boulevard Medical Office Building located at the Kaiser Permanente Los Angeles Medical Center campus. A future addition is planned that will attach to the west side of the building. The inspection encompassed testing of building materials that might contain asbestos and that might be impacted by the future construction. Few, if any, asbestos-containing materials were expected given the recent construction of this building, but testing was performed in order to satisfy regulatory requirements and because it is still possible for certain types of newer building materials to contain asbestos. The survey was performed on January 20 and 21, 2016 and was limited to suspect asbestos-containing building materials that might be disturbed by the construction project.

No asbestos-containing materials were identified in areas affected by the planned construction.

Introduction

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Foundation Health Plan, Inc. to perform a limited pre-construction lead survey of the occupied medical office building located at 4760 Sunset Blvd. in Los Angeles, California. This survey was limited to potential asbestos-containing building materials that may be disturbed during the future construction project that is planned to expand the building to the west. The survey was performed by the following FACS representatives: Certified Site Surveillance Technician Dan Mai Ha (CSST No. 09-2693), Certified Asbestos Consultant Barry Smith (CAC No. 13-5029) and Certified Asbestos Consultant Russell Ragsdale (CAC# 10-4690). The survey was performed on January 20 and 21, 2016.

Scope of Work

The purpose of this survey was to identify asbestos-containing materials that may be disturbed during the future construction project. In addition, the scope of the survey and the services provided by FACS included:

- Review of project drawings (building floor drawings) to develop the project sampling plan
- Performing a visual inspection of the project areas to identify accessible suspect asbestos-containing building materials (ACBMs)
- Collection of bulk samples for analysis by polarized light microscopy (PLM)
- Ensuring the technical quality of all work by using Asbestos Hazard Emergency Response Act (AHERA) accredited Inspectors and Management Planners
- Consolidating data and findings into a report format
-

Site Characterization

The survey was limited to areas of the building on the west side that may be disturbed during the future construction project. In general, in these areas the building interior was characterized walls constructed of gypsum drywall. The ceilings were typically drywall and/or lay-in ceiling tiles. The floors were typically resilient sheet flooring, vinyl floor tile, ceramic floor tile or carpet. Sample locations were selected to be representative of materials throughout the project area.

Survey Methods

Accessible building materials were visually inspected using the methods presented in the federal AHERA regulations (40 CFR, Part 763) as a guideline. While AHERA is only directly applicable to public schools, the principles presented under the Final Rule are generally accepted as the industry standard for ACBM inspections. Since the building remained occupied, and the planned construction is years in the future, certain materials were not tested to prevent potential leakage (e.g., roofing, exterior stucco), breakage (e.g., mirror mastic, ceramic tile mortar) or other damage (e.g., fire door cores) due to the destructive means required to test these materials. Untested materials should not be disturbed until sampled prior to the pre-construction demolition phase of the project and should be assumed to contain asbestos until tested.

Asbestos Bulk Sample Collection

Bulk samples of identified homogeneous areas were collected in building areas that may be impacted by the planned renovation/demolition activities. Samples were collected of each separate homogeneous area. A homogeneous area is defined as a surfacing material, thermal system insulation, or miscellaneous material that is uniform in use, color and texture. Examples of homogeneous areas could include:

Floor tile
Ceiling tile
Gypsum wallboard and joint tape compound
Linoleum

The specific number of samples collected was primarily determined by using the methods presented in the federal AHERA regulations (40 CFR, Part 763.86):

1) For Surfacing Material:
   1,000 ft2 or less - collect 3 samples
   1,001 to 5,000 ft2 - collect 5 samples
   5,001 ft2 or greater - collect 7 samples

2) For Thermal System Insulation:
   “In a randomly distributed manner” - collect 3 samples
   6 linear feet of patching or less - collect 1 sample
   cementitious pipe fittings - “In a manner sufficient to determine”

3) For all Miscellaneous Material:
   Collect samples "In a manner sufficient to determine whether material is ACM (asbestos-containing material) or not ACM..."

The suspect ACBMs were sampled using a knife or other similar coring device suitable to the type of material sampled to cut through its entire thickness and to ensure that a cross-section of the material was obtained. The material was then placed in an appropriately labeled container that was sealed and submitted to Forensic Analytical Laboratories, Inc. for analysis. A unique sample number (e.g. 051A) was assigned to each sample.

Bulk samples will be retained by the laboratory for one month unless otherwise instructed. After this period, the samples will be disposed of appropriately.

Asbestos Bulk Sample Analysis

A total of 64 bulk samples were collected. Bulk samples were analyzed by Forensic Analytical Laboratories, Inc. in Rancho Dominguez, CA. Forensic Analytical Laboratories, Inc. is accredited by the California Department of Public Health (CDPH) and the National Institute of Science and Technology's (NIST) National Voluntary Laboratory Accreditation Program (NVLAP). Forensic Analytical Laboratories, Inc. also participates in the National Institute for Occupational Safety and Health (NIOSH) Proficiency Analytical Testing Program, and has substantial experience in the analysis of asbestos.

All of the samples were analyzed using Polarized Light Microscopy with Dispersion Staining (PLM/DS) techniques in accordance with the methodology approved by the U.S. Environmental Protection Agency (EPA). The percentage of asbestos present in the samples was determined on the basis of a visual area estimation. As set forth in the Code of Federal Regulations, 40 CFR Part 763, the lower limit of reliable quantification for asbestos using the PLM method is approximately one percent (1%) by volume, but regulations in California (CAL/OSHA Title 8 CCR 1529) define asbestos-containing construction materials as those materials having an asbestos content of greater than one tenth of one percent (> 0.1%). Therefore, for the purpose of this survey, any amount of asbestos detected will be considered positive. In addition to the percentages, the types of asbestos minerals are also reported. The PLM method is the standard method used to analyze asbestos bulk samples.

When "None Detected" (ND) appears in the laboratory results, it should be interpreted as meaning no asbestos was observed in the sample material.

Findings and Recommendations

No asbestos-containing materials were identified in areas affected by the planned construction.

Any suspect materials not included in this inspection must be presumed to be asbestos-containing materials until such time as they are tested and proven not to contain asbestos.

Limitations

As noted above, certain materials were not tested due to the destructive means required to test these materials, and these will need to be tested prior to any disturbance by the construction project. If any untested suspect materials are encountered during construction, they should be treated as asbestos-containing materials and not disturbed, unless sampling and analysis of the materials proves otherwise.

This investigation is limited to the conditions and practices observed and information made available to FACS. The methods, conclusions and recommendations provided are based on FACS' judgment, expertise and the standard of practice for professional service. They are subject to the limitations and variability inherent in the methodology employed. As with all environmental investigations, this investigation is limited to the defined scope and does not purport to set forth all hazards, nor indicate that other hazards do not exist.

Please do not hesitate to contact our offices at 310-660-5600 with any questions or concerns. Thank you for the opportunity to assist Kaiser Foundation Health Plan, Inc. in promoting a more healthful environment.

Respectfully,
FORENSIC ANALYTICAL

Note: Limit of Quantification ('LOQ') = 1%. 'Trace' denotes the presence of asbestos below the LOQ. 'ND' = 'None Detected'.

Analytical results and reports are generated by Forensic Analytical Laboratories Inc. (FALI) at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by FALI to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by FALI. The client is solely responsible for the use and interpretation of test results and reports requested from FALI. Forensic Analytical Laboratories Inc. is not able to assess the degree of hazard resulting from materials analyzed. FALI reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples were received in acceptable condition unless otherwise noted.

Executive Summary

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Foundation Health Plan, Inc. to perform a pre-demolition asbestos survey of the medical office building at 1505 N. Edgemont Street, Los Angeles, CA. This survey encompassed accessible suspect asbestos-containing building materials that could be sampled non-destructively. The building, though scheduled ultimately for demolition, remained occupied and operating during the asbestos survey. The results of the asbestos survey are presented on drawings in Appendix A. Sample locations are presented on drawings in Appendix B. The survey was performed between November 4, 2015 and April 7, 2016.

Asbestos

The following materials were identified as asbestos-containing materials:

- Joint compound associated with drywall
- Various vinyl floor tile mastics
- Various vinyl sheet flooring mastics
- Black flooring mastic remnants
- Sink undercoating
- Plaster walls and ceilings
- Plaster overspray
- Baseboard mastic
- Carpet mastic

FACS recommends that the results of this report be incorporated into any renovation/demolition plans for this building.

Introduction

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Foundation Health Plan, Inc. to perform a pre-demolition asbestos survey of the medical office building located at 1505 N. Edgemont Street in Los Angeles, California. This survey encompassed accessible suspect asbestos-containing building materials that could be sampled non-destructively. The building, though scheduled ultimately for demolition, remained occupied and operating during the asbestos survey. The third floor was inaccessible following the start of renovation throughout that floor, and is excluded from this report. The results of the asbestos survey are presented on drawings in Appendix A. Sample locations are presented on drawings in Appendix B. A log of each sample collected during the survey, and the associated analytical result, is contained in Appendix C. An inventory of asbestos-containing materials identified in the building is contained in Appendix D. The laboratory analysis reports from the survey are presented in Appendix E. The survey was performed between November 4, 2015 and April 7, 2016.

Scope of Work

The purpose of this survey was to identify all asbestos-containing materials that may be disturbed during the future demolition project. The visual inspection, bulk sampling, and survey documentation were performed by Russell Ragsdale (CAC# 10-4690) and Dan Mai Ha (CSST# 09-2693), both of whom are EPA accredited Building Inspectors, as required by law. In addition, the scope of the survey and the services provided by FACS included:

- Review of building floor drawings to develop the project sampling plan

- Performing a visual inspection to identify accessible suspect asbestos-containing building materials (ACBMs)
- Collection of bulk samples for analysis by polarized light microscopy (PLM)
- Ensuring the technical quality of all work by using Asbestos Hazard Emergency Response Act (AHERA) accredited Inspectors and Management Planners
- Consolidating data and findings into a report format

Site Characterization

In general, the building interior was characterized by plaster walls and/or gypsum drywall with joint compound walls. The ceilings were typically drywall and/or lay-in ceiling tiles. The floors were typically resilient sheet flooring, vinyl floor tile, ceramic floor tile and carpet. Sample locations were selected to be representative of the suspect materials in the building.

Survey Methods

Document Review

FACS reviewed building floor drawings to identify the project scope and impacted areas.

Asbestos Inspection

Accessible building materials were visually inspected using the methods presented in the federal AHERA regulations (40 CFR, Part 763) as a guideline. While AHERA is only directly applicable to public schools, the principles presented under the Final Rule are generally accepted as the industry standard for ACBM inspections. Suspect ACBMs were also physically assessed for friability, condition and possible disturbance factors.

Asbestos Bulk Sample Collection

Bulk samples of identified homogeneous areas were collected in building areas that may be impacted by the planned renovation/demolition activities. Samples were collected of each separate homogeneous area. A homogeneous area is defined as a surfacing material, thermal system insulation, or miscellaneous material that is uniform in use, color and texture. Examples of homogeneous areas could include:

Floor tile
Ceiling tile
Gypsum wallboard and joint tape compound
Linoleum

The specific number of samples collected was primarily determined by using the methods presented in the federal AHERA regulations (40 CFR, Part 763.86):

1) For Surfacing Material:
   1,000 ft^2 or less - collect 3 samples
   1,001 to 5,000 ft^2 - collect 5 samples
   5,001 ft^2 or greater - collect 7 samples

2) For Thermal System Insulation:

"In a randomly distributed manner" - collect 3 samples
6 linear feet of patching or less - collect 1 sample
cementitious pipe fittings - "In a manner sufficient to determine"

3) For all Miscellaneous Material:
Collect samples "In a manner sufficient to determine whether material is ACM (asbestos-containing material) or not ACM..."

The suspect ACBMs were sampled using a knife or other similar coring device suitable to the type of material sampled to cut through its entire thickness and to ensure that a cross-section of the material was obtained. The material was then placed in an appropriately labeled container that was sealed and submitted to Forensic Analytical Laboratories, Inc. for analysis. A unique sample number (e.g. 051A) was assigned to each sample.

Bulk samples will be retained by the laboratory for one month unless otherwise instructed. After this period, the samples will be disposed of appropriately.

Asbestos Bulk Sample Analysis

A total of 378 bulk samples were collected. Bulk samples were analyzed by Forensic Analytical Laboratories, Inc. in Rancho Dominguez, CA. Forensic Analytical Laboratories, Inc. is accredited by the California Department of Public Health (CDPH) and the National Institute of Science and Technology's (NIST) National Voluntary Laboratory Accreditation Program (NVLAP). Forensic Analytical Laboratories, Inc. participates in the National Institute for Occupational Safety and Health (NIOSH) Proficiency Analytical Testing Program, and has substantial experience in the analysis of asbestos.

All of the samples were analyzed using Polarized Light Microscopy with Dispersion Staining (PLM/DS) techniques in accordance with the methodology approved by the U.S. Environmental Protection Agency (EPA). The percentage of asbestos present in the samples was determined on the basis of a visual area estimation. As set forth in the Code of Federal Regulations, 40 CFR Part 763, the lower limit of reliable quantification for asbestos using the PLM method is approximately one percent (1%) by volume, but regulations in California (CAL/OSHA Title 8 CCR 1529) define asbestos-containing construction materials as those materials having an asbestos content of greater than one tenth of one percent (> 0.1%). Therefore, for the purpose of this survey, any amount of asbestos detected will be considered positive. In addition to the percentages, the types of asbestos minerals are also reported. The PLM method is the standard method used to analyze asbestos bulk samples.

When "None Detected" (ND) appears in the laboratory results, it should be interpreted as meaning no asbestos was observed in the sample material.

Findings and Recommendations

FACS conducted an inspection of the medical office building at 1505 N. Edgemont Street, Los Angeles, CA for the presence of asbestos-containing building materials. Survey findings are presented below.

Asbestos

The following materials were identified as asbestos-containing materials:

- Joint compound associated with drywall
- Various vinyl floor tile mastics
- Various vinyl sheet flooring mastics
- Black flooring mastic remnants

- Sink undercoating
- Plaster walls and ceilings
- Plaster overspray
- Baseboard mastic
- Carpet mastic

Various materials are assumed to contain asbestos due to the destructive nature of sampling including but not limited to: sub-grade materials, roofing, exterior stucco, fire-rated doors and hatches, elevator doors, mirror mastics, ceramic tile grouts and mortars, etc.

Federal EPA and SCAQMD (South Coast Air Quality Management District) require any material with an analytical result less than 10% (including Trace results) be confirmed by the point count method of PLM, or that the material is assumed to be ACM. For samples resulting in Trace by PLM analysis, the point count method of PLM would be required to determine if the materials could be classified as non-ACM under the EPA and SCAQMD definition. The point count method of PLM analysis was not performed for this asbestos survey. Such analysis was beyond the scope of this investigation. Consequently, materials with an analytical result of Trace asbestos are classified as ACM.

Asbestos material locations are depicted in the drawings contained in Appendix A. Asbestos sample locations are shown in the drawings contained in Appendix B. For a detailed description of the materials sampled and analyzed see the asbestos sample results table in Appendix C.

Renovation and/or demolition of the structure involved in this inspection must be permitted and conducted in compliance with Federal NESHAP and local air quality management district requirements.

Any suspect materials not included in this inspection must be presumed to be asbestos-containing materials until such time as they are tested and proven not to contain asbestos.

FACS recommends that the results of this report be incorporated into any renovation/demolition plans for this building.

Limitations

As noted above, certain materials were not tested due to the destructive means required to test these materials, and these will need to be tested prior to any disturbance by the planned demolition project. Similarly, the entire third floor of the building was excluded from this report due to inaccessibility. If any untested suspect materials are encountered during demolition, they should be treated as asbestos-containing materials and not disturbed, unless sampling and analysis of the materials proves otherwise.

This investigation is limited to the conditions and practices observed and information made available to FACS. The methods, conclusions and recommendations provided are based on FACS' judgment, expertise and the standard of practice for professional service. They are subject to the limitations and variability inherent in the methodology employed. As with all environmental investigations, this investigation is limited to the defined scope and does not purport to set forth all hazards, nor indicate that other hazards do not exist.

Please do not hesitate to contact our offices at 310-660-5600 with any questions or concerns. Thank you for the opportunity to assist Kaiser Foundation Health Plan, Inc. promoting a more healthful environment.

Respectfully,

FORENSIC ANALYTICAL

Russell Ragsdale
