Bulk Sample Log and Lab Analysis

BULK SAMPLE LOG AND LAB ANALYSIS
Medical Office Building
1505 N. Edgemont St., Los Angeles, California
Sample Dates: November 4, 2015 to January 28, 2016

SAMPLE NUMBER	HOMOGENEOUS MATERIAL	ASBESTOS CONTENT (%)	FRIABLE	CONDITION	LOCATION
165A	Caulk (white)	ND	N/A	N/A	Exterior, South side at ground floor stucco soffit
166A	Caulk (green painted)	ND	N/A	N/A	Exterior, South side at ground floor window
166B	Caulk (green painted)	ND	N/A	N/A	Exterior, East side at ground floor window
167A	Caulk (gray)	ND	N/A	N/A	Exterior, South side at wall base
167B	Caulk (gray)	ND	N/A	N/A	Exterior, East side at wall base
168A	Caulk (gray)	ND	N/A	N/A	Exterior, East side at sliding door casing
045A	12" Vinyl floor tile (white with blue and red dots), with mastic	ND	N/A	N/A	Basement, Records/File Storage area (0048)
045B	12" Vinyl floor tile (white with blue and red dots), with mastic	ND	N/A	N/A	Basement, Records/File Storage area (0048)
046A	12" Vinyl floor tile (tan with red, white, blue specks), with mastic	ND	N/A	N/A	Basement, Locker Area (0082), South of EVS Closet
046B	12" Vinyl floor tile (tan with red, white, blue specks), with mastic	ND	N/A	N/A	EVS Closet North of Locker Area (0082)
047A	4” Baseboard (Tan) with mastic	ND	N/A	N/A	EVS Closet North of Locker Area (0082)
047B	4” Baseboard (Tan) with mastic	ND	N/A	N/A	Basement, Locker Area (0082), South of EVS Closet
048A	**4” Baseboard (gray) with mastic**	**Trace (mastic)**	**Non-Friable**	**Good**	**Basement, Records/File Storage area (0048)**

NA = Not applicable; ND = None Detected; Trace = less than one percent by visual area estimation
FRIABLE ASBESTOS-CONTAINING MATERIAL is material containing more than one percent (1%) asbestos that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure.

NOTE: This summary table must not be used alone. Important explanations and limitations are contained in the accompanying survey report text.
Percent asbestos content is based upon visual area estimation unless noted otherwise (point count analysis was not performed).

BULK SAMPLE LOG AND LAB ANALYSIS
Medical Office Building
1505 N. Edgemont St., Los Angeles, California
Sample Dates: November 4, 2015 to January 28, 2016

SAMPLE NUMBER	HOMOGENEOUS MATERIAL	ASBESTOS CONTENT (%)	FRIABLE	CONDITION	LOCATION
048B	4” Baseboard (gray) with mastic	ND	N/A	N/A	Basement, Records/File Storage area (0048)
049A	12" Vinyl floor tile (purple with red and blue dots), with mastic	ND	N/A	N/A	Basement, Lounge (0048E)
049B	12" Vinyl floor tile (purple with red and blue dots), with mastic	ND	N/A	N/A	Basement, Lounge (0048E)
050A	White paint on concrete	ND	N/A	N/A	Basement, West of File/Storage Area, adjacent to Stairwell (ST04)
051A	12" Vinyl floor tile (off-white with red and blue spots), with mastic	ND	N/A	N/A	Basement, Records/File Storage area (0048)
051B	12" Vinyl floor tile (off-white with red and blue spots), with mastic	ND	N/A	N/A	Basement, Records/File Storage area (0048)
052A	4” Baseboard (dark gray) with mastic	ND	N/A	N/A	Basement, Corridor East of Conference Room (B49)
052B	4” Baseboard (dark gray) with mastic	ND	N/A	N/A	Basement, Corridor South of Lounge (0048E)
053A	1’x1’ Acoustic ceiling tile, directly applied, white, fissured, with mastic	ND	N/A	N/A	Basement, Cubicle Area (0048F)
053B	1’x1’ Acoustic ceiling tile, directly applied, white, fissured, with mastic	ND	N/A	N/A	Basement, Cubicle Area (0048F)
054A	Carpet Glue	ND	N/A	N/A	Basement, Cubicle Area (0048F)
054B	Carpet Glue	ND	N/A	N/A	Basement, Waiting Room (F0019)
055A	Vinyl Sheet Flooring (wood veneer glossy planks) with mastic	ND	N/A	N/A	Basement, Copy Area (F0047), adjacent to South corridor

NA = Not applicable; ND = None Detected; Trace = less than one percent by visual area estimation
FRIABLE ASBESTOS-CONTAINING MATERIAL is material containing more than one percent (1%) asbestos that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure.

NOTE: This summary table must not be used alone. Important explanations and limitations are contained in the accompanying survey report text.

Appendix D
Inventory of Asbestos-Containing Materials

Inventory of Asbestos-Containing Materials
Medical Office Building
1505 N. Edgemont Street, Los Angeles, CA

Asbestos Materials (asbestos detected):			
Homogeneous Area	**Approximate Quantity**	**Description**	**Location**
Drywall Joint Compound	1,000 SF	White Joint Compound	Basement, Room F0050a
Floor Tile Mastic	1,000 SF	Black Floor Tile Mastic Beneath 12" Vinyl Floor Tile (white w/ brown spots)	Ground Floor, Mammo and Sonogram Rooms
	50 SF	Black Floor Tile Mastic Beneath 12" Vinyl Floor Tile (off-white w/ blue and gray streaks)	4th Floor, Rooms F4152A and F4115
Sheet Flooring Mastic	380 SF	Black Mastic Beneath Vinyl Sheet Flooring (gray w/ white and brown specks)	Basement, Rooms F0051 and F0050a
	8,000 SF	Black Mastic Beneath Vinyl Sheet Flooring (wood veneer glossy planks)	Ground Floor, Corridors, Waiting rooms, and various locations throughout; 4th Floor, Corridors, Waiting Rooms, Nurse Stations, Sleep Observation Rooms and Various locations throughout (see drawings)
	800 SF	Black Mastic Beneath Vinyl Sheet Flooring (brown w/ white and brown specks	Ground Floor, Rooms F1113 and F1113a
Black Mastic Remnants	150 SF	Black Mastic Remnants on floor	Basement, Rooms F0076, F0020A; 4th Floor, Room F4120 (under cabinets)

Asbestos Materials (asbestos detected):			
Homogeneous Area	**Approximate Quantity**	**Description**	**Location**
Sink Undercoating	1 Each	Silver Undercoating Material of Stainless Steel Sink	Basement, Room F0050a
Interior Wall and Ceiling Plaster and overspray	Not determined	Interior Wall Plaster	Levels B through 5 perimeter walls associated with elevator lobbies, stairwells, shafts, and various perimeter walls throughout (see drawings)
Interior Wall Stucco	650 SF	Interior Wall Stucco	Basement, Rooms F0048b & F0048c
Baseboard Mastic	2,050 LF	Mastic Beneath Gray Baseboard	Basement Room F0048 (File Storage Area)
Sheet Flooring Mastic	650 SF	Tan and Black Mastic Beneath Vinyl Sheet Flooring (wood veneer light brown glossy planks)	5th Floor, Room F5149
Floor Tile Mastic	100 SF	Tan and Black Floor Tile Mastic Beneath 12" Vinyl Floor Tile (gray w/ multicolor specks)	Basement, Room F0113c
Vinyl Flooring and/or Mastic beneath carpet	19,000 SF	Tan and Black Mastic Beneath Carpet	Basement through 5th Floor, Various Rooms and Corridors Throughout (see drawings)

Various materials assumed to contain asbestos due to the destructive nature of sampling: sub-grade materials, roofing, exterior stucco, fire-rated doors and hatches, elevator doors, mirror mastics, ceramic tile grouts and mortars, etc.

Tiffani Ludd, Laboratory Supervisor, Rancho Dominguez Laboratory

Note: Limit of Quantification ('LOQ') = 1%. 'Trace' denotes the presence of asbestos below the LOQ. 'ND' = 'None Detected'.

Analytical results and reports are generated by Forensic Analytical Laboratories Inc. (FALI) at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by FALI to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by FALI. The client is solely responsible for the use and interpretation of test results and reports requested from FALI. Forensic Analytical Laboratories Inc. is not able to assess the degree of hazard resulting from materials analyzed. FALI reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples were received in acceptable condition unless otherwise noted.

Tiffani Ludd, Laboratory Supervisor, Rancho Dominguez Laboratory

Note: Limit of Quantification ('LOQ') = 1%. 'Trace' denotes the presence of asbestos below the LOQ. 'ND' = 'None Detected'.

Analytical results and reports are generated by Forensic Analytical Laboratories Inc. (FALI) at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by FALI to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by FALI. The client is solely responsible for the use and interpretation of test results and reports requested from FALI. Forensic Analytical Laboratories Inc. is not able to assess the degree of hazard resulting from materials analyzed. FALI reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples were received in acceptable condition unless otherwise noted.

Tiffani Ludd, Laboratory Supervisor, Rancho Dominguez Laboratory

Note: Limit of Quantification ('LOQ') = 1%. 'Trace' denotes the presence of asbestos below the LOQ. 'ND' = 'None Detected'.

Analytical results and reports are generated by Forensic Analytical Laboratories Inc. (FALI) at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by FALI to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by FALI. The client is solely responsible for the use and interpretation of test results and reports requested from FALI. Forensic Analytical Laboratories Inc. is not able to assess the degree of hazard resulting from materials analyzed. FALI reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples were received in acceptable condition unless otherwise noted.

Appendix D: Inventory of Asbestos-Containing Materials
Appendix E: Laboratory Reports with Field Data Sheets/Chain of Custody

Executive Summary

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Foundation Health Plan, Inc. to perform a pre-demolition asbestos survey of the medical office building at 1526 N. Edgemont Street, Los Angeles, CA. This survey encompassed accessible suspect asbestos-containing building materials that could be sampled non-destructively. The building, though scheduled ultimately for demolition, remained occupied and operating during the asbestos survey. The results of the supplemental survey are presented on drawings in Appendix A. Sample locations are presented on drawings in Appendix B. The survey was performed between December 7, 2015 and April 7, 2016.

Asbestos

The following materials were identified as asbestos-containing materials:

- Plaster walls and ceilings
- Plaster overspray
- Joint compound associated with drywall
- Spray applied fireproofing
- Various vinyl floor tile mastics
- Various vinyl sheet flooring mastics
- Black flooring mastic remnants
- Carpet mastics
- Waterproofing paper membrane with tar
- HVAC Duct Sealant (Roof Mechanical Room)
- Exterior asbestos-cement panels

FACS recommends that the results of this report be incorporated into any renovation/demolition plans for this building.

Introduction

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Foundation Health Plan, Inc. to perform a pre-demolition asbestos survey of the medical office building located at 1526 N. Edgemont Street in Los Angeles, California. This survey encompassed accessible suspect asbestos-containing building materials that could be sampled non-destructively. The building, though scheduled ultimately for demolition, remained occupied and operating during the asbestos survey. The results of the supplemental asbestos survey are presented on drawings in Appendix A. Sample locations are presented on drawings in Appendix B. The survey was performed between December 7, 2015 and April 7, 2016.

Scope of Work

The purpose of this survey was to identify all asbestos-containing materials that may be disturbed during the future demolition project. The visual inspection, bulk sampling, and survey documentation were performed by Russell Ragsdale (CAC# 10-4690), Oscar Jimenez (CSST# 06-3921), Marc Waz (CSST# 00-2711), Larry Richardson (CSST# 97-2313), and Dan Mai Ha (CSST# 09-2693), all of whom are EPA accredited Building Inspectors, as required by law. In addition, the scope of the survey and the services provided by FACS included:

- Review of building floor drawings to develop the project sampling plan

- Performing a visual inspection of the project areas to identify accessible suspect asbestos-containing building materials (ACBMs)
- Collection of bulk samples for analysis by polarized light microscopy (PLM)
- Ensuring the technical quality of all work by using Asbestos Hazard Emergency Response Act (AHERA) accredited Inspectors and Management Planners
- Consolidating data and findings into a report format

Site Characterization

In general, the building interior was characterized by gypsum drywall with joint compound walls and/or plaster walls. The ceilings were typically drywall and/or lay-in ceiling tiles. The floors were typically resilient sheet flooring, vinyl floor tile, ceramic floor tile and carpet. Sample locations were selected to be representative of the suspect materials in the building.

Survey Methods

Document Review

FACS reviewed building floor drawings to identify the project scope and impacted areas.

Asbestos Inspection

Accessible building materials were visually inspected using the methods presented in the federal AHERA regulations (40 CFR, Part 763) as a guideline. While AHERA is only directly applicable to public schools, the principles presented under the Final Rule are generally accepted as the industry standard for ACBM inspections. Suspect ACBMs were also physically assessed for friability, condition and possible disturbance factors.

Asbestos Bulk Sample Collection

Bulk samples of identified homogeneous areas were collected in building areas that may be impacted by the planned renovation/demolition activities. Samples were collected of each separate homogeneous area. A homogeneous area is defined as a surfacing material, thermal system insulation, or miscellaneous material that is uniform in use, color and texture. Examples of homogeneous areas could include:

Floor tile
Ceiling tile
Gypsum wallboard and joint tape compound
Linoleum

The specific number of samples collected was primarily determined by using the methods presented in the federal AHERA regulations (40 CFR, Part 763.86):

1) For Surfacing Material:
   1,000 ft^2 or less - collect 3 samples
   1,001 to 5,000 ft^2 - collect 5 samples
   5,001 ft^2 or greater - collect 7 samples

2) For Thermal System Insulation:
   "In a randomly distributed manner" - collect 3 samples
   6 linear feet of patching or less - collect 1 sample
   cementitious pipe fittings - "In a manner sufficient to determine"

3) For all Miscellaneous Material:
   Collect samples "In a manner sufficient to determine whether material is ACM (asbestos-containing material) or not ACM..."

The suspect ACBMs were sampled using a knife or other similar coring device suitable to the type of material sampled to cut through its entire thickness and to ensure that a cross-section of the material was obtained. The material was then placed in an appropriately labeled container that was sealed and submitted to Forensic Analytical Laboratories, Inc. for analysis. A unique sample number (e.g. 051A) was assigned to each sample.

Bulk samples will be retained by the laboratory for one month unless otherwise instructed. After this period, the samples will be disposed of appropriately.

Asbestos Bulk Sample Analysis

A total of 476 bulk samples were collected. Bulk samples were analyzed by Forensic Analytical Laboratories, Inc. in Rancho Dominguez, CA. Forensic Analytical Laboratories, Inc. is accredited by the California Department of Public Health (CDPH) and the National Institute of Science and Technology's (NIST) National Voluntary Laboratory Accreditation Program (NVLAP). Forensic Analytical Laboratories, Inc. participates in the National Institute for Occupational Safety and Health (NIOSH) Proficiency Analytical Testing Program, and has substantial experience in the analysis of asbestos.

All of the samples were analyzed using Polarized Light Microscopy with Dispersion Staining (PLM/DS) techniques in accordance with the methodology approved by the U.S. Environmental Protection Agency (EPA). The percentage of asbestos present in the samples was determined on the basis of a visual area estimation. As set forth in the Code of Federal Regulations, 40 CFR Part 763, the lower limit of reliable quantification for asbestos using the PLM method is approximately one percent (1%) by volume, but regulations in California (CAL/OSHA Title 8 CCR 1529) define asbestos-containing construction materials as those materials having an asbestos content of greater than one tenth of one percent (> 0.1%). Therefore, for the purpose of this survey, any amount of asbestos detected will be considered positive. In addition to the percentages, the types of asbestos minerals are also reported. The PLM method is the standard method used to analyze asbestos bulk samples.

When "None Detected" (ND) appears in the laboratory results, it should be interpreted as meaning no asbestos was observed in the sample material.

Findings and Recommendations

FACS conducted an inspection of the medical office building at 1526 N. Edgemont Street, Los Angeles, CA for the presence of asbestos-containing building materials. Survey findings are presented below.

Asbestos

The following materials were identified as asbestos-containing materials:

- Plaster walls and ceilings
- Plaster overspray
- Joint compound associated with drywall
- Spray applied fireproofing
- Various vinyl floor tile mastics
- Various vinyl sheet flooring mastics
- Black flooring mastic remnants
- Carpet mastics
- Waterproofing paper membrane with tar
- HVAC Duct Sealant (Roof Mechanical Room)
- Exterior asbestos-cement panels

Various materials are assumed to contain asbestos due to the destructive nature of sampling including but not limited to: sub-grade materials, roofing, exterior stucco, fire-rated doors and hatches, elevator doors, mirror mastics, ceramic tile grouts and mortars, etc.

Federal EPA and SCAQMD (South Coast Air Quality Management District) require any material with an analytical result less than 10% (including Trace results) be confirmed by the point count method of PLM, or that the material is assumed to be ACM. For samples resulting in Trace by PLM analysis, the point count method of PLM would be required to determine if the materials could be classified as non-ACM under the EPA and SCAQMD definition. The point count method of PLM analysis was not performed for this asbestos survey. Such analysis was beyond the scope of this investigation. Consequently, materials with an analytical result of Trace asbestos are classified as ACM.

Asbestos material locations are depicted in the drawings contained in Appendix A. Asbestos sample locations are shown in the drawings contained in Appendix B. For a detailed description of the materials sampled and analyzed see the asbestos sample results table in Appendix C.

Renovations and/or demolition of the structures involved in this inspection must be permitted and conducted in compliance with Federal NESHAP and local air quality management district requirements.

Any suspect materials not included in this inspection must be presumed to be asbestos-containing materials until such time as they are tested and proven not to contain asbestos.

FACS recommends that the results of this report be incorporated into any renovation/demolition plans for this building.

Limitations

As noted above, certain materials were not tested due to the destructive means required to test these materials, and these will need to be tested prior to any disturbance by the planned demolition project. If any untested suspect materials are encountered during demolition, they should be treated as asbestos-containing materials and not disturbed, unless sampling and analysis of the materials proves otherwise.

This investigation is limited to the conditions and practices observed and information made available to FACS. The methods, conclusions and recommendations provided are based on FACS' judgment,

expertise and the standard of practice for professional service. They are subject to the limitations and variability inherent in the methodology employed. As with all environmental investigations, this investigation is limited to the defined scope and does not purport to set forth all hazards, nor indicate that other hazards do not exist.

Please do not hesitate to contact our offices at 310-660-5600 with any questions or concerns. Thank you for the opportunity to assist Kaiser Foundation Health Plan, Inc. promoting a more healthful environment.

Respectfully,

FORENSIC ANALYTICAL

Bulk Sample Log and Lab Analysis

BULK SAMPLE LOG AND LAB ANALYSIS
Medical Office Building
1526 N. Edgemont St., Los Angeles, California
Sample Dates: December 7, 2015 to January 28, 2016

SAMPLE NUMBER	HOMOGENEOUS MATERIAL	ASBESTOS CONTENT (%)	FRIABLE	CONDITION	LOCATION
177A	Caulk (gray)	ND	N/A	N/A	Exterior, north side
178A	Caulk (gray)	ND	N/A	N/A	Exterior, north side
179A	Caulk (gray)	ND	N/A	N/A	Exterior, west side
207A	Carpet glue	ND	N/A	N/A	Basement, Conference Room
208A	4" Baseboard (black), with mastic	ND	N/A	N/A	Basement, Conference Room
209A	Sink undercoat (black)	ND	N/A	N/A	Basement, Conference Room
209B	Sink undercoat (black)	ND	N/A	N/A	Basement, Holding Area
210A	Vinyl sheet flooring (off-white and gray pebble)	ND	N/A	N/A	Basement, Holding Area
212A	12" Vinyl floor tile (off-white with gray streaks), with mastic	ND	N/A	N/A	Basement, South Corridor
213A	12" Vinyl floor tile (blue with blue and red streaks), with mastic	ND	N/A	N/A	Basement, South Corridor
210B	Vinyl sheet flooring (off-white and gray pebble) with mastic	ND	N/A	N/A	Basement, CT2 (B021)
211A	Vinyl sheet flooring (blue and light blue pebble) with mastic	ND	N/A	N/A	Basement, CT2 (B021)
214A	Wall trim and glue	ND	N/A	N/A	Basement, CT2 (B021)

NA = Not applicable; ND = None Detected; Trace = less than one percent by visual area estimation
FRIABLE ASBESTOS-CONTAINING MATERIAL is material containing more than one percent (1%) asbestos that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure.

NOTE: This summary table must not be used alone. Important explanations and limitations are contained in the accompanying survey report text.
Percent asbestos content is based upon visual area estimation unless noted otherwise (point count analysis was not performed).

305A	Vinyl sheet flooring (green with green and gray specks), with mastic	ND	N/A	N/A	6th Flr, Room 6063
306A	Vinyl sheet flooring, textured (brown with black and white specks), with mastic	ND	N/A	N/A	6th Flr, Corridor 6026
306B	Vinyl sheet flooring, textured (brown with black and white specks), with mastic	ND	N/A	N/A	6th Flr, Corridor 6026
307A	Vinyl sheet flooring (wood veneer, type 2), with mastic	ND	N/A	N/A	6th Flr, Pulmonary Function Lab 6034
307B	Vinyl sheet flooring (wood veneer, type 2), with mastic	ND	N/A	N/A	6th Flr, Pulmonary Function Lab 6034
308A	4" Baseboard (dark gray), with mastic	ND	N/A	N/A	6th Flr, Pulmonary Function Lab 6034
303B	Vinyl sheet flooring (off-white with gray and tan specks), with mastic	ND	N/A	N/A	6th Flr, Room 6089
309A	Vinyl sheet flooring (wood veneer glossy planks), with mastic	ND	N/A	N/A	6th Flr, Corridor south of Elevator Lobby
310A	**Vinyl sheet flooring (wood veneer dark plank, type 3), with mastic**	**2% (in brown mastic)**	**Non-friable**	**Good**	**6th Flr, Reception Area 6012**
310B	**Vinyl sheet flooring (wood veneer dark plank, type 3), with mastic**	**2% (in brown mastic)**	**Non-friable**	**Good**	**6th Flr, Reception Area 6012**
311A	Vinyl sheet flooring (wood veneer plank, type 4), with mastic	ND	N/A	N/A	6th Flr, Waiting Area 6002

NA = Not applicable; ND = None Detected; Trace = less than one percent by visual area estimation
FRIABLE ASBESTOS-CONTAINING MATERIAL is material containing more than one percent (1%) asbestos that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure.

NOTE: This summary table must not be used alone. Important explanations and limitations are contained in the accompanying survey report text.
Percent asbestos content is based upon visual area estimation unless noted otherwise (point count analysis was not performed).

Appendix D
Inventory of Asbestos-Containing Materials

Inventory of Asbestos-Containing Materials
Medical Office Building
1526 Edgemont Street, Los Angeles, CA

Asbestos Containing Materials (asbestos detected):			
Homogeneous Area	**Approximate Quantity**	**Description**	**Location**
Waterproofing paper membrane with tar	250 SF	White Joint Compound	Basement, Room B012
Interior Wall Plaster and Overspray	Not determined	Interior Wall Plaster	Levels B through 7 walls associated with elevator lobbies, stairwells, shafts, and various perimeter walls throughout (see drawings); Roof Mechanical Room
Floor Tile Mastic	300 SF	Black Floor Tile Mastic Beneath 12" Vinyl Floor Tile (beige w/ multicolor specks)	5th Floor, Staff Lounge 551
Sheet Flooring Mastic	12,500 SF	Black Mastic Beneath Vinyl Sheet Flooring (off-white with pink and blue specks)	2nd Floor, South Corridor; 5th Floor, Various Exam Rooms, Corridors throughout; 6th Floor Various rooms throughout (see drawings)
	50 SF	Black Mastic Beneath Vinyl Sheet Flooring (off-white with gray, tan, blue specks)	2nd Floor, South Corridor
	110 SF	Black Mastic Beneath Vinyl Sheet Flooring (wood veneer plank)	5th Floor, Reception Area 568

Asbestos Containing Materials (asbestos detected):			
Homogeneous Area	**Approximate Quantity**	**Description**	**Location**
Sheet Flooring Mastic (continued)	350 SF	Black Mastic Beneath Vinyl Sheet Flooring (blue w/ blue and gray specks)	6th Floor, Various rooms throughout (see drawings)
	300 SF	Black Mastic Beneath Vinyl Sheet Flooring (wood veneer dark plank, type 3)	6th Floor, Reception Area 6012
	400 SF	Black Mastic Beneath Vinyl Sheet Flooring (green)	6th Floor, Various rooms throughout (see drawings)
Black Mastic Remnants	10 SF	Black Mastic Remnants Beneath Vinyl Floor Tile Remnants (Tan)	Basement, Northeast Stairwell
	20 SF	Black Mastic Remnants	Basement, Telecom Room (B052a)
	20 SF	Black Mastic Remnants	1st Floor, Room 1012
Vinyl Flooring and/or Mastic beneath carpet	30,000 SF	Tan and Black Mastic Beneath Carpet	Various Rooms and Corridors Throughout Building (see drawings)
Spray Applied Fireproofing	20,000 SF	Spray Applied Fireproofing (off-white)	Roof Penthouse Mechanical Room, Throughout
Spray applied fireproofing	300 SF	Spray applied fireproofing (off-white)	6th Floor, Southeast Stairwell Vestibule above ceiling
Spray Applied Fireproofing	1,500 SF	Spray Applied Fireproofing (white)	Basement, South Corridor Throughout
HVAC duct mastic	1,000 SF	Duct mastic (dark brown)	Roof Penthouse Mechanical Room, Throughout

Asbestos Containing Materials (asbestos detected):			
Homogeneous Area	**Approximate Quantity**	**Description**	**Location**
Interior Wall Stucco	800 SF	Interior Wall Stucco	Basement through 2nd Floor, Northeast Stairwell
Floor Tile Mastic	1,200 SF	Tan Floor Tile Mastic Beneath 12" Vinyl Floor Tile (white w/ gray streaks)	5th Floor, Various Electrical Rooms (see drawings), Supply Rooms, Southeast Vestibule
	50 SF	Black Floor Tile Mastic Beneath 12" Vinyl Floor Tile (off-white w/ blue and gray streaks)	6th Floor, Storage Rooms throughout (see drawings)
	200 SF	Black Floor Tile Mastic Beneath 12" Vinyl Floor Tile (green w/ blue-green specks)	7th Floor, Room 7183
Sheet Flooring Mastic	1,200 SF	Black Mastic Beneath Vinyl Sheet Flooring (blue w/ pink and blue specks)	2nd Floor, Various Exam Rooms, Lounge, Storage Areas Throughout (see drawings)
	250 SF	Black Mastic Beneath Vinyl Sheet Flooring (brown)	5th Floor, Entry to Corridor 550
	200 SF	Black Mastic Beneath Vinyl Sheet Flooring (gray with multicolor specks)	5th Floor, Corridor 539a
	50 SF	Black Mastic Beneath Vinyl Sheet Flooring (green)	5th Floor, Staff Lounge Rest Room 552
Exterior asbestos-cement wall panels	10,000 SF	Grey asbestos-cement panels	Exterior walls – Floors 1 through 7

Various materials assumed to contain asbestos due to the destructive nature of sampling: sub-grade materials, roofing, exterior stucco, fire-rated doors and hatches, elevator doors, mirror mastics, ceramic tile grouts and mortars, etc.

Tiffani Ludd, Laboratory Supervisor, Rancho Dominguez Laboratory

Note: Limit of Quantification ('LOQ') = 1%. 'Trace' denotes the presence of asbestos below the LOQ. 'ND' = 'None Detected'.

Analytical results and reports are generated by Forensic Analytical Laboratories Inc. (FALI) at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by FALI to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by FALI. The client is solely responsible for the use and interpretation of test results and reports requested from FALI. Forensic Analytical Laboratories Inc. is not able to assess the degree of hazard resulting from materials analyzed. FALI reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples were received in acceptable condition unless otherwise noted.

Tiffani Ludd, Laboratory Supervisor, Rancho Dominguez Laboratory

Note: Limit of Quantification ('LOQ') = 1%. 'Trace' denotes the presence of asbestos below the LOQ. 'ND' = 'None Detected'.

Analytical results and reports are generated by Forensic Analytical Laboratories Inc. (FALI) at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by FALI to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by FALI. The client is solely responsible for the use and interpretation of test results and reports requested from FALI. Forensic Analytical Laboratories Inc. is not able to assess the degree of hazard resulting from materials analyzed. FALI reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples were received in acceptable condition unless otherwise noted.

Tiffani Ludd, Laboratory Supervisor, Rancho Dominguez Laboratory

Note: Limit of Quantification ('LOQ') = 1%. 'Trace' denotes the presence of asbestos below the LOQ. 'ND' = 'None Detected'.

Analytical results and reports are generated by Forensic Analytical Laboratories Inc. (FALI) at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by FALI to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by FALI. The client is solely responsible for the use and interpretation of test results and reports requested from FALI. Forensic Analytical Laboratories Inc. is not able to assess the degree of hazard resulting from materials analyzed. FALI reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples were received in acceptable condition unless otherwise noted.

Tiffani Ludd, Laboratory Supervisor, Rancho Dominguez Laboratory

Note: Limit of Quantification ('LOQ') = 1%. 'Trace' denotes the presence of asbestos below the LOQ. 'ND' = 'None Detected'.

Analytical results and reports are generated by Forensic Analytical Laboratories Inc. (FALI) at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by FALI to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by FALI. The client is solely responsible for the use and interpretation of test results and reports requested from FALI. Forensic Analytical Laboratories Inc. is not able to assess the degree of hazard resulting from materials analyzed. FALI reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples were received in acceptable condition unless otherwise noted.

Tiffani Ludd, Laboratory Supervisor, Rancho Dominguez Laboratory

Note: Limit of Quantification ('LOQ') = 1%. 'Trace' denotes the presence of asbestos below the LOQ. 'ND' = 'None Detected'.

Analytical results and reports are generated by Forensic Analytical Laboratories Inc. (FALI) at the request of and for the exclusive use of the person or entity (client) named on such report. Results, reports or copies of same will not be released by FALI to any third party without prior written request from client. This report applies only to the sample(s) tested. Supporting laboratory documentation is available upon request. This report must not be reproduced except in full, unless approved by FALI. The client is solely responsible for the use and interpretation of test results and reports requested from FALI. Forensic Analytical Laboratories Inc. is not able to assess the degree of hazard resulting from materials analyzed. FALI reserves the right to dispose of all samples after a period of thirty (30) days, according to all state and federal guidelines, unless otherwise specified. All samples were received in acceptable condition unless otherwise noted.

Appendix C: Bulk Sample Log and Laboratory Analysis
Appendix D: Inventory of Asbestos-Containing Materials
Appendix E: Laboratory Reports with Field Data Sheets/Chain of Custody

Executive Summary

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Foundation Health Plan, Inc. to perform a full-building asbestos survey of the parking garage building at 1517 N. Vermont Avenue, Los Angeles, California. This survey encompassed accessible suspect asbestos-containing building materials that could be sampled non-destructively. The building, though scheduled ultimately for demolition, remained occupied and operating during the asbestos survey. The results of the asbestos survey are presented on drawings in Appendix A. Sample locations are presented on drawings in Appendix B. The survey was performed between November 2, 2015 and January 28, 2016.

Asbestos

The following materials were identified as asbestos-containing materials:

- Exterior Caulk Material
- Vinyl Sheet Flooring Mastic
- Baseboard mastic
- Wall paint/skim coat

Introduction

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Foundation Health Plan, Inc. to perform a full-building asbestos survey of the parking garage building located at 1517 N. Vermont Avenue in Los Angeles, California. This survey encompassed accessible suspect asbestos-containing building materials that could be sampled non-destructively. The building, though scheduled ultimately for demolition, remained occupied and operating during the asbestos survey. The results of the asbestos survey are presented on drawings in Appendix A. Sample locations are presented on drawings in Appendix B. A log of each sample collected during the survey, and the associated analytical result, is contained in Appendix C. An inventory of asbestos-containing materials identified in the building is contained in Appendix D. The laboratory analysis reports from the survey are presented in Appendix E. The survey was performed between November 2, 2015 and April 7, 2016.

Scope of Work

The purpose of this survey was to identify and test accessible suspect asbestos-containing building materials that could be sampled non-destructively. The visual inspection, bulk sampling, and survey documentation were performed by Russell Ragsdale (CAC# 10-4690), Oscar Jimenez (CSST# 06-3921), Barry Smith (CAC# 13-5029), Larry Richardson (CSST# 97-2313) and Dan Mai Ha (CSST# 09-2693), all of whom are EPA accredited Building Inspectors, as required by law. In addition, the scope of the survey and the services provided by FACS included:

- Review of building floor drawings to develop the project sampling plan
- Performing a visual inspection of the project areas to identify accessible suspect asbestos-containing building materials (ACBMs)
- Collection of bulk samples for analysis by polarized light microscopy (PLM)

- Ensuring the technical quality of all work by using Asbestos Hazard Emergency Response Act (AHERA) accredited Inspectors and Management Planners

- Consolidating data and findings into a report format

Site Characterization

In general, the building interior was characterized by concrete walls, floors and ceilings. The 1st floor conference rooms area interior was characterized by plaster walls or gypsum drywall with joint compound walls. The ceilings were typically drywall and/or lay-in ceiling tiles. The floors were typically resilient sheet flooring, vinyl floor tile, ceramic floor tile and carpet. Sample locations were selected to be representative of the suspect materials in the building.

Survey Methods

Document Review

FACS reviewed building floor plan drawings to help develop the sampling strategy.

Asbestos Inspection

Accessible building materials were visually inspected using the methods presented in the federal AHERA regulations (40 CFR, Part 763) as a guideline. While AHERA is only directly applicable to public schools, the principles presented under the Final Rule are generally accepted as the industry standard for ACBM inspections. Since the building remained occupied, and the planned demolition is years in the future, certain materials were not tested to prevent potential leakage (e.g., roofing, exterior stucco), breakage (e.g., mirror mastic, ceramic tile mortar) or other damage (e.g., fire door cores) due to the destructive means required to test these materials. Untested materials should not be disturbed until sampled prior to the pre-construction demolition phase of the project and should be assumed to contain asbestos until tested. Suspect ACBMs were also physically assessed for friability, condition and possible disturbance factors.

<u>Asbestos Bulk Sample Collection</u>

Bulk samples of identified homogeneous areas were collected in building areas that may be impacted by the planned renovation/demolition activities. Samples were collected of each separate homogeneous area. A homogeneous area is defined as a surfacing material, thermal system insulation, or miscellaneous material that is uniform in use, color and texture. Examples of homogeneous areas could include:

Floor tile
Ceiling tile
Gypsum wallboard and joint tape compound
Linoleum

The specific number of samples collected was primarily determined by using the methods presented in the federal AHERA regulations (40 CFR, Part 763.86):

1) For Surfacing Material:
   1,000 ft^2 or less - collect 3 samples
   1,001 to 5,000 ft^2 - collect 5 samples
   5,001 ft^2 or greater - collect 7 samples

2) For Thermal System Insulation:
   "In a randomly distributed manner" - collect 3 samples
   6 linear feet of patching or less - collect 1 sample
   cementitious pipe fittings - "In a manner sufficient to determine"

3) For all Miscellaneous Material:
   Collect samples "In a manner sufficient to determine whether material is ACM (asbestos-containing material) or not ACM..."

The suspect ACBMs were sampled using a knife or other similar coring device suitable to the type of material sampled to cut through its entire thickness and to ensure that a cross-section of the material was obtained. The material was then placed in an appropriately labeled container that was sealed and submitted to Forensic Analytical Laboratories, Inc. for analysis. A unique sample number (e.g. 051A) was assigned to each sample.

Bulk samples will be retained by the laboratory for one month unless otherwise instructed. After this period, the samples will be disposed of appropriately.

Asbestos Bulk Sample Analysis

A total of 68 bulk samples were collected. Bulk samples were analyzed by Forensic Analytical Laboratories, Inc. in Rancho Dominguez, California. Forensic Analytical Laboratories, Inc. is accredited by the California Department of Public Health (CDPH) and the National Institute of Science and Technology's (NIST) National Voluntary Laboratory Accreditation Program (NVLAP). Forensic Analytical Laboratories, Inc. participates in the National Institute for Occupational Safety and Health (NIOSH) Proficiency Analytical Testing Program, and has substantial experience in the analysis of asbestos.

All of the samples were analyzed using Polarized Light Microscopy with Dispersion Staining (PLM/DS) techniques in accordance with the methodology approved by the U.S. Environmental Protection Agency (EPA). The percentage of asbestos present in the samples was determined on the basis of a visual area estimation. As set forth in the Code of Federal Regulations, 40 CFR Part 763, the lower limit of reliable quantification for asbestos using the PLM method is approximately one percent (1%) by volume, but regulations in California (CAL/OSHA Title 8 CCR 1529) define asbestos-containing materials as those materials having an asbestos content of greater than one tenth of one percent (> 0.1%). Therefore, for the purposes of this survey, any amount of asbestos detected is considered positive. In addition to the percentages, the types of asbestos minerals are also reported. The PLM method is the standard method used to analyze asbestos bulk samples.

When "None Detected" (ND) appears in the laboratory results, it should be interpreted as meaning no asbestos was observed in the sample material.

Findings and Recommendations

FACS conducted an inspection of the parking garage building at 1517 N. Vermont Avenue, Los Angeles, California for the presence of asbestos-containing building materials. Survey findings are presented below.

Asbestos

The following materials were identified as asbestos-containing materials:

- Exterior Caulk Material
- Vinyl Sheet Flooring Mastic
- Baseboard mastic
- White wall paint/skim coat

Federal EPA and SCAQMD (South Coast Air Quality Management District) require any material with an analytical result less than 10% (including Trace results) be confirmed by the point count method of PLM, or that the material is assumed to be ACM. For samples resulting in Trace by PLM analysis, the point count method of PLM would be required to determine if the materials could be classified as non-ACM under the EPA and SCAQMD definition. The point count method of PLM analysis was not performed for this asbestos survey. Such analysis was beyond the scope of this investigation. Consequently, materials with an analytical result of Trace asbestos are classified as ACM.

Asbestos material locations are depicted in the drawings contained in Appendix A. Asbestos sample locations are shown in the drawings contained in Appendix B. For a detailed description of the materials sampled and analyzed see the asbestos sample results table in Appendix C.

Renovations and/or demolition of the structures involved in this inspection must be permitted and conducted in compliance with Federal NESHAP and local air quality management district requirements.

Any suspect materials not included in this inspection must be presumed to be asbestos-containing materials until such time as they are tested and proven not to contain asbestos.

FACS recommends that the results of this report be incorporated into any renovation/demolition plans for this building.

Limitations

As noted above, certain materials were not tested due to the destructive means required to test these materials, and these will need to be tested prior to any disturbance by the planned demolition project. If any untested suspect materials are encountered during demolition, they should be treated as asbestos-containing materials and not disturbed, unless sampling and analysis of the materials proves otherwise.

This investigation is limited to the conditions and practices observed and information made available to FACS. The methods, conclusions and recommendations provided are based on FACS' judgment, expertise and the standard of practice for professional service. They are subject to the limitations and variability inherent in the methodology employed. As with all environmental investigations, this investigation is limited to the defined scope and does not purport to set forth all hazards, nor indicate that other hazards do not exist.

Please do not hesitate to contact our offices at 310-660-5600 with any questions or concerns. Thank you for the opportunity to assist Kaiser Foundation Health Plan, Inc. promoting a more healthful environment.

NA = Not applicable; ND = None Detected; Trace = less than one percent by visual area estimation
FRIABLE ASBESTOS-CONTAINING MATERIAL is material containing more than one percent (1%) asbestos that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure.

NOTE: This summary table must not be used alone. Important explanations and limitations are contained in the accompanying survey report text.
Percent asbestos content is based upon visual area estimation unless noted otherwise (point count analysis was not performed).

Appendix D
Inventory of Asbestos-Containing Materials

Inventory of Asbestos-Containing Materials
Parking Garage Building
1517 N. Vermont Ave., Los Angeles, CA

Asbestos Containing Materials :			
Homogeneous Area	**Approximate Quantity**	**Description**	**Location**
Sheet Flooring Mastic	1,800 SF	Black mastic beneath vinyl sheet flooring (wood veneer glossy planks)	Elevator lobbies - Basement and 2nd through 7th Floors
Baseboard Mastic	500 LF (170 SF)	Beige and Black Mastic Beneath 4" (Gray) Baseboard	Elevator lobbies - Basement and 2nd through 7th Floors
Exterior Caulk	40 LF (10 SF)	Exterior caulk material	Garage, Perimeter wall caulk at vertical joints
Coating underlying white wall paint	Not determined *	Areas of white paint with underlying thin coating	Throughout on various concrete walls

* The exact distribution (extent) of this material could not be determined without widespread sampling (destructive), due to the extensive white paint covering other surfaces in the parking garage and also covering this material. Additional sampling of this material will be required prior to demolition to determine the exact quantity and locations.

Appendix A: FACS Data Collection Methods
Appendix B: Sampling Results Summary & Laboratory Reports
Appendix C: Sample Location Drawing

Executive Summary

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Permanente to provide a pre-demolition survey for suspected PCB-containing materials on the exterior of the Kaiser Los Angeles Medical Office Building located at 1505 North Edgemont Street.

Some of the tested material (caulks) identified at this location were found to contain polychlorinated biphenyls (PCBs) greater than the important disposal threshold of 50 mg/kg.

Introduction

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Permanente to provide a pre-demolition survey for suspected PCB-containing materials on the exterior of the Kaiser Los Angeles Medical Office Building located at 1505 North Edgemont Street.

The purpose of the following document is to provide Kaiser Permanente with a summary of materials and locations that will require specific removal and disposal of PCB-containing materials per the U.S. Environmental Protection Agency (USEPA), Region 9, for compliance with 40 CFR 761.

Site Characterization

The Kaiser facility at 1505 North Edgemont Street in Los Angeles is a five-story Medical Office Building (plus basement), including ground level and basement level parking on the north side. Exterior construction consists of a mix of primarily concrete with stucco and granite panels. The building was constructed prior to 1978.

Scope of Work

In the course of this project, FACS conducted the following scope of work:

1. Identification and sampling of suspect caulk on the exterior of the building.

2. Identification and characterization of porous and non-porous substrates in contact with tested caulk.

3. Designation of waste categories for caulk and substrates as necessary.

Data collection methodologies are described in Appendix A. A Sampling Result Table (including laboratory reports and chain of custody forms) is provided in Appendix B. A drawing showing sample locations is contained in Appendix C.

While at least one sample of each caulk type was collected and analyzed, portions of some types of caulks were inaccessible and therefore did not allow for collection of additional samples to fully representative characterization of PCB content. For example, in some cases caulks were located high on the exterior of the building requiring a crane or suspended scaffold for access. For these caulks, additional samples will need to be collected and analyzed for PCBs prior to building demolition. Additional material types, such as subgrade waterproofing, may also need to be tested prior to demolition in order to determine EPA removal and disposal requirements.

Findings and Discussion

Caulk

Various types of caulk were identified at the building's exterior and were sampled and analyzed for PCBs. Sample results indicated that four out of the five types of caulk sampled contained PCB concentrations greater than 50 mg/kg (50 ppm) and therefore, under 40 CFR 761.3, are classified as PCB bulk product waste, requiring special disposal and additional assessment of adjacent building materials. See the greater than (>) 50 mg/kg caulk results summary Table 1 below:

Table 1: Types of Caulk Identified as greater than 50 mg/kg of PCBs

Caulk >50 mg/kg PCBs	Homogeneous Area*/ Location	Caulk Color	Adjacent Substrates	Caulk PCB Result (mg/kg)
Type I	East side of building, at northwest corner panel (inside perimeter)	Gray	Metal/Metal	1,400
Type II	East side of building, at northwest corner panel (inside perimeter)	Gray	Metal/Metal	1,200
Type III	North side of building, at window panel (inside perimeter)	Gray	Metal/Metal	1,100
Type IV	North side of building, at window panel (outside perimeter)	Gray	Metal/Metal	13,000

Note:
*Homogenous Areas/Locations defined as areas in which similar caulk materials were observed and determined to be of the same material

One other caulk sampled contained concentrations less than 50 mg/kg PCBs but greater than 1 mg/kg, and therefore, according to 40 CFR 761.3, is not classified as PCB bulk product waste. This caulk will be removed and disposed as a PCB Remediation waste; however, no additional assessment of adjacent materials is necessary.

All other caulks sampled demonstrated PCB concentrations less than 1 mg/kg, and therefore are not regulated for disposal. Caulking with concentrations below 1 mg/kg does not need to be removed prior to demolition.

See results table in Appendix B for specifics.

Substrates Touching Caulk

Substrates located directly adjacent to and touching PCB-containing caulk (> 50 mg/kg) were also identified and characterized. Only non-porous substrates were identified adjacent to the Type I – Type IV caulk materials and characterized as a metal window framing material. No porous substrates were identified adjacent to PCB-containing caulk.

Non-porous Substrates Touching Caulk

Non-porous substrates were not sampled for PCBs based on project considerations. These substrates are located directly adjacent to and touching PCB-containing caulk (> 50 mg/kg) and also caulk containing less than 50 mg/kg but greater than 1 mg/kg PCBs. These substrates can be cleaned to below EPA limits for unrestricted disposal or recycling, or they can be disposed with the adjacent caulk attached as PCB Bulk Product Waste.

Next Steps

The next step in the path to building demolition is preparation of a PCB Waste Characterization, Segregation, Disposal and Reuse Plan by FACS for submission to EPA Region 9. The plan will serve as notification and certification as required for the self-implementing cleanup and disposal as defined in 40 CFR 761.61(a). Prior to the plan being developed, meetings with the client and select contractors will be necessary to determine scope or work, removal plans, pilot studies, etc.

Upon EPA's review, removal and disposal of the regulated PCB materials, using a qualified remediation contractor, can proceed prior to building demolition. The PCB Waste Characterization, Segregation, Disposal and Reuse Plan will include air and soil testing by FACS and may also include pilot studies for verification that the proposed remediation strategies are effective.

Note: Based on site specifics an additional report outlining the characterization and cleanup of PCBs in soils and storm drains may be necessary. If so, a separate document will be generated and sent to EPA for **approval** for risk based disposal as defined in 40 CFR 761.61(c).

Limitations

As noted above, additional supplemental sampling will be required prior to building demolition.

This investigation is limited to the conditions and practices observed and information made available to FACS. The methods, conclusions, and recommendations provided are based on FACS' judgment, experience and the standard of practice for professional service. They are subject to the limitations and variability inherent in the methodology employed. As with all environmental investigations, this investigation is limited to the defined scope and does not purport to set forth all hazards, nor indicate that other hazards do not exist.

Please do not hesitate to contact our offices at 310-660-5600 with any questions or concerns. Thank you for the opportunity to assist Kaiser Foundation Health Plan, Inc. promoting a more healthful environment.

Respectfully,
FORENSIC ANALYTICAL

Appendix A
FACS Data Collection Methods

Polychlorinated Biphenyls (PCBs) – Caulk. Samples were collected using disposable chisels, files and box cutters and placed in small glass sampling containers. Samples were labeled using a unique identification number and shipped under Chain of Custody to an AIHA accredited analytical laboratory (Calscience, Garden Grove, California, facility). In the laboratory the samples were prepared in accordance with EPA Method 3540C (Soxhlet extraction) and analyzed in accordance with EPA Method 8082 (gas chromatography). Results of PCB concentrations are provided as Aroclors in µg/kg (ppb). All samples were stored and shipped at room temperature.

Appendix B
Sampling Results Summary & Laboratory Reports

Sampling results are provided in the table below. Supporting laboratory reports and chain of custody forms are attached in the pages that follow in order of laboratory report number. Please note that the laboratory calculated sample results in ug/kg, and these results have been converted by FACS to mg/kg for use in the summary tables contained in this report, in order to facilitate comparison with the EPA regulatory limits (which are typically expressed in mg/kg).

Caulk Sample Results (PCBs)						
Material	**Homogenous Area**	**Color**	**Adjacent Substrates**	**Sample #**	**Location**	**Sample Results (mg/kg*)**
Caulk	South side of building	White	Stucco/metal	1505-01	Stucco soffit	less than 0.400
Caulk	South side of building	Green	Stucco/metal	1505-02	Window (outside perimeter)	less than 0.990
Caulk	South side of building	Gray	Concrete/stucco	1505-03	Wall base	less than 0.400
Caulk	East side of building	Green	Metal/stucco	1505-04	Window (outside perimeter)	less than 0.400
Caulk	East side of building	Gray	Concrete/stucco	1505-05	Wall base	less than 0.400
Caulk	East side of building	Gray	Stucco/metal	1505-06	Entry sliding door (outside perimeter)	less than 0.200
Caulk	North side of building	Gray	Metal/stucco	1505-07	Electric panel	1.05
Caulk	East side of building	Gray	Metal/metal	1505-08	Northwest corner panel (outside perimeter)	**1,400**
Caulk	East side of building	Gray	Metal/metal	1505-09	Northwest corner panel (inside perimeter)	**1,200**
Caulk	North side of building	Gray	Metal/metal	1505-10	Window panel (inside perimeter)	**1,100**
Caulk	North side of building	Gray	Metal/metal	1505-11	Window panel (outside perimeter)	**13,000**

Note:
Results in bold are those that exceed the 50 ppm criteria.
* mg/kg = ppm

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-11-1337 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 11/18/15. They were assigned to Work Order 15-11-1337.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-11-1337 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Executive Summary

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Permanente to provide a pre-demolition survey for suspected PCB-containing materials on the exterior of the Kaiser Los Angeles Medical Office Building located at 1526 North Edgemont Street.

Some of the tested material (caulks) identified at this location were found to contain polychlorinated biphenyls (PCBs) greater than the important disposal threshold of 50 mg/kg.

Introduction

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Permanente to provide a pre-demolition survey for suspected PCB-containing materials on the exterior of the Kaiser Los Angeles Medical Office Building located at 1526 North Edgemont Street.

The purpose of the following document is to provide Kaiser Permanente with a summary of materials and locations that will require specific removal and disposal of PCB-containing materials per the U.S. Environmental Protection Agency (USEPA), Region 9, for compliance with 40 CFR 761.

Site Characterization

The Kaiser facility at 1526 North Edgemont Street in Los Angeles is a seven-story Medical Office Building (plus basement). Exterior construction consists of a mix of primarily windows with asbestos-cement panels, concrete and stucco. The building was constructed prior to 1978.

Scope of Work

In the course of this project, FACS conducted the following scope of work:

1. Identification and sampling of suspect caulk on the exterior of the building.

2. Identification and characterization of porous and non-porous substrates in contact with tested caulk.

3. Designation of waste categories for caulk and substrates as necessary.

Data collection methodologies are described in Appendix A. A Sampling Result Table (including laboratory reports and chain of custody forms) is provided in Appendix B. A drawing depicting sample locations is contained in Appendix C.

While at least one sample of each caulk type was collected and analyzed, portions of some types of caulks were inaccessible and therefore did not allow for collection of additional samples to fully representative characterization of PCB content. For example, in some cases caulks were located high on the exterior of the building requiring a crane or suspended scaffold for access. For these caulks, additional samples will need to be collected and analyzed for PCBs prior to building demolition. Additional material types, such as sub-grade waterproofing, may also need to be tested prior to demolition in order to determine EPA removal and disposal requirements.

Findings and Discussion

Caulk

Five types of caulk were identified at the building's exterior and were sampled and analyzed for PCBs. Sample results indicated that two types of caulk sampled contained PCB concentrations greater than 50 mg/kg (50 ppm) and therefore, under 40 CFR 761.3, are classified as PCB bulk product waste, requiring special disposal and additional assessment of adjacent building materials. See the greater than (>) 50 mg/kg caulk results summary Table 1 below:

Table 1: Types of Caulk Identified as greater than 50 mg/kg of PCBs

Caulk >50 mg/kg PCBs	Homogeneous Area*/ Location	Caulk Color	Adjacent Substrates	Caulk PCB Result (mg/kg)
Type I	West side, south of Urgent Care, transite window panel (interior)	Gray	Metal/metal	1,000
Type II	West side, south of Urgent Care, north of mechanical equipment, transite window panel (interior)	Gray	Metal/metal	3,200

Note:
*Homogenous Areas/Locations defined as areas in which similar caulk materials were observed and determined to be of the same material

In addition to the caulks referenced above, two other caulks sampled contained concentrations less than 50 mg/kg PCBs but with a laboratory reporting limit greater than 1 mg/kg, and therefore, according to 40 CFR 761.3, are not classified as PCB bulk product waste. PCBs were not detected by the laboratory in these caulks, however the laboratory detection limit was greater than 1 mg/kg; and therefore, it is uncertain if the concentration is actually greater than the 1 mg/kg threshold level (not regulated for disposal). If assumed that concentrations are greater than 1 mg/kg, the caulks should be removed and disposed of as a PCB containing material and sent to a facility permitted, licensed, or registered by a State to accept wastes containing PCBs at levels <50 mg/kg; however, no additional assessment of adjacent materials is necessary. Alternatively, since this classification is due to a high lab reporting limit for the sample of these caulks, retesting of the caulks prior to building demolition may be conducted to determine whether actual PCB concentration may be less than 1 mg/kg.

All other caulks sampled demonstrated PCB concentrations less than 1 mg/kg, and therefore are not regulated for disposal. Caulking with concentrations below 1 mg/kg does not need to be removed prior to demolition.

Substrates Touching Caulk

Substrates located directly adjacent to and touching PCB-containing caulk (> 50 mg/kg) were also identified and characterized. Only non-porous substrates were identified adjacent to the Type I and Type II caulk materials and characterized as a metal window framing material. No porous substrates were identified adjacent to PCB-containing caulk (> 50 mg/kg).

Non-porous Substrates Touching Caulk

Non-porous substrates were not sampled for PCBs based on project considerations. These substrates that are located directly adjacent to and touching PCB-containing caulk (> 50 mg/kg) can be cleaned to below EPA limits for unrestricted disposal or recycling, or they can be disposed with the adjacent caulk (> 50 mg/kg) attached as PCB Bulk Product Waste. If unrestricted disposal or recycling of the metal framing material is decided, a pilot study will be required to determine an appropriate removal/cleaning protocol to reduce PCB levels to <1 µg/100cm^2 as required.

Porous Substrates Touching Caulk

Porous substrates were not sampled for PCBs (which would check for potential leaching of PCBs into/onto the substrate) because all caulks in contact with porous substrates had demonstrated PCB concentrations below 50 mg/kg and are therefore designated as an excluded product (not required by EPA for caulk with PCB concentrations below 50 mg/kg).

Next Steps

The next step in the path to building demolition is preparation of a PCB Waste Characterization, Segregation, Disposal and Reuse Plan by FACS for submission to EPA Region 9. The plan will serve as notification and certification as required for the self-implementing cleanup and disposal as defined in 40 CFR 761.61(a). Prior to the plan being developed, meetings with the client and select contractors will be necessary to determine scope or work, removal plans, pilot studies, etc.

Upon EPA's review, removal and disposal of the regulated PCB materials, using a qualified remediation contractor, can proceed prior to building demolition. The PCB Waste Characterization, Segregation, Disposal and Reuse Plan will include air and soil testing by FACS and may also include pilot studies for verification that the proposed remediation strategies are effective.

Note: Based on site specifics an additional report outlining the characterization and cleanup of PCBs in soils and storm drains may be necessary. If so, a separate document will be generated and sent to EPA for **approval** for risk based disposal as defined in 40 CFR 761.61(c).

Limitations

As noted above, additional supplemental sampling will be required prior to building demolition.

This investigation is limited to the conditions and practices observed and information made available to FACS. The methods, conclusions, and recommendations provided are based on FACS' judgment, experience and the standard of practice for professional service. They are subject to the limitations and variability inherent in the methodology employed. As with all environmental investigations, this investigation is limited to the defined scope and does not purport to set forth all hazards, nor indicate that other hazards do not exist.

Please do not hesitate to contact our offices at 310-660-5600 with any questions or concerns. Thank you for the opportunity to assist Kaiser Foundation Health Plan, Inc. promoting a more healthful environment.

Respectfully,
FORENSIC ANALYTICAL

Appendix A
FACS Data Collection Methods

Polychlorinated Biphenyls (PCBs) – Caulk. Samples were collected using disposable chisels, files and box cutters and placed in small glass sampling containers. Samples were labeled using a unique identification number and shipped under Chain of Custody to an AIHA accredited analytical laboratory (Calscience, Garden Grove, California, facility). In the laboratory the samples were prepared in accordance with EPA Method 3540C (Soxhlet extraction) and analyzed in accordance with EPA Method 8082 (gas chromatography). Results of PCB concentrations are provided as Aroclors in µg/kg (ppb). All samples were stored and shipped at room temperature.

Appendix B
Sampling Results Summary & Laboratory Reports

Sampling results are provided in the table below. Supporting laboratory reports and chain of custody forms are attached in the pages that follow in order of laboratory report number. Please note that the laboratory calculated sample results in ug/kg, and these results have been converted by FACS to mg/kg for use in the summary tables contained in this report, in order to facilitate comparison with the EPA regulatory limits (which are typically expressed in mg/kg).

Caulk Sample Results (PCBs)						
Material	**Homogenous Area**	**Color**	**Adjacent Substrates**	**Sample #**	**Location**	**Sample Results (mg/kg*)**
Caulk	North side of building	Gray	Concrete/metal	1526-01	Window (outside perimeter)	less than 20.0
Caulk	North side of building	Gray	Concrete/metal	1526-01B	East end, window (outside perimeter)	less than 0.200
Caulk	North side of building	Gray	Concrete/concrete	1526-02	Walkway base	0.28
Caulk	West side of building	Gray	Metal/stucco	1526-03	Entry window casing (outside perimeter)	less than 6.7
Caulk	West side of building	Gray	Metal/stucco	1526-03B	Entry window casing (outside perimeter)	less than 0.200
Caulk	West side of building	Gray	Metal/metal	1526-04	South of Urgent Care, transite window panel (inside perimeter)	**1,000**
Caulk	West side of building	Gray	Metal/metal	1526-05	South of Urgent Care, north of mechanical equipment, transite window pane (inside perimeter)	**3,200**

Note:
Results in bold are those that exceed the 50 ppm criteria.

Work Order Narrative

Work Order: 15-11-1337 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 11/18/15. They were assigned to Work Order 15-11-1337.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Work Order: 15-11-1337 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-12-1141 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 12/15/15. They were assigned to Work Order 15-12-1141.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 15-12-1141 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Appendix C: Sample Location Drawing

Executive Summary

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Permanente to provide a pre-demolition survey for suspected PCB-containing materials on the exterior of the Kaiser Los Angeles Medical Center Parking Garage located at 1517 North Vermont Avenue.

None of the tested material (caulks) identified at this location were found to contain polychlorinated biphenyls (PCBs) greater than or near the important disposal threshold of 50 mg/kg.

Introduction

Forensic Analytical Consulting Services, Inc. (FACS) was retained by Kaiser Permanente to provide a pre-demolition survey for suspected PCB-containing materials on the exterior of the Kaiser Los Angeles Medical Center Parking Garage located at 1517 North Vermont Avenue.

The purpose of the following document is to provide Kaiser Permanente with a summary of materials and locations that will require specific removal and disposal of PCB-containing materials per the U.S. Environmental Protection Agency (USEPA), Region 9, for compliance with 40 CFR 761.

Site Characterization

The Kaiser facility at 1517 North Vermont Avenue in Los Angeles is a three-story parking structure (plus basement), which also contains a limited number of interior meeting rooms. Exterior construction consists of a mix of primarily concrete with decorative stone and metal panels. The building was constructed prior to 1978.

Scope of Work

In the course of this project, FACS conducted the following scope of work:

1. Identification and sampling of suspect caulk on the exterior of the building.

2. Identification and characterization of porous and non-porous substrates in contact with tested caulk.

3. Designation of waste categories for caulk and substrates as necessary.

Data collection methodologies are described in Appendix A. A Sampling Result Table (including laboratory reports and chain of custody forms) is provided in Appendix B. A drawing showing sample locations is contained in Appendix C.

Findings and Discussion

Various types of caulk were identified on the building's exterior and were sampled and analyzed for PCBs. Findings of the sample analysis are as follows:

- All nine caulk samples collected and analyzed had PCB concentrations less than the important regulatory threshold of 50 mg/kg (50 ppm). Therefore, these caulks are designated as an excluded product under 40 CFR 761.3.

- Eight of the nine samples demonstrated PCB concentrations less than 1 mg/kg, and therefore are not regulated for disposal. Caulking with concentrations below 1 mg/kg does not need to be removed prior to demolition.

- No measurable levels of PCB were identified in the remaining caulk sample (Garage Top Level 3 and north exterior elevation to ground level, Northwest stairwell, east side). However, the detection limit was greater than 4 mg/kg; and therefore, it is uncertain if the concentration is greater than the 1 mg/kg threshold level as noted above. If assumed that concentrations are greater than 1 mg/kg, the caulk should be removed and disposed of as a PCB containing material and sent to a facility permitted, licensed, or registered by a State to accept wastes containing PCBs at levels <50 mg/kg. Alternatively, since this classification is due to a high lab reporting limit for the sample of this caulk, retesting of the caulk prior to building demolition may be conducted to determine whether actual PCB concentration may be less than 1 mg/kg.

Substrates Touching Caulk

Substrates located adjacent to sampled caulks were identified and characterized as either porous or non-porous. Non-porous substrates identified were metal. Porous substrates identified were concrete, stucco and stone. Substrates were not sampled for PCBs (which would check for potential leaching of PCBs into/onto the substrate) because all caulk samples had PCB concentrations below 50 mg/kg and therefore designated as an excluded product (not required by EPA for caulk with PCB concentrations below 50 mg/kg).

Refer to Appendix B for the sample result table.

Limitations

This investigation is limited to the conditions and practices observed and information made available to FACS. The methods, conclusions, and recommendations provided are based on FACS' judgment, experience and the standard of practice for professional service. They are subject to the limitations and variability inherent in the methodology employed. As with all environmental investigations, this investigation is limited to the defined scope and does not purport to set forth all hazards, nor indicate that other hazards do not exist.

Please do not hesitate to contact our offices at 310-660-5600 with any questions or concerns. Thank you for the opportunity to assist Kaiser Foundation Health Plan, Inc. promoting a more healthful environment.

Respectfully,
FORENSIC ANALYTICAL

Appendix A
FACS Data Collection Methods

Polychlorinated Biphenyls (PCBs) – Caulk. Samples were collected using disposable chisels, files and box cutters and placed in small glass sampling containers. Samples were labeled using a unique identification number and shipped under Chain of Custody to an AIHA accredited analytical laboratory (Calscience, Garden Grove, California, facility). In the laboratory the samples were prepared in accordance with EPA Method 3540C (Soxhlet extraction) and analyzed in accordance with EPA Method 8082 (gas chromatography). Results of PCB concentrations are provided as Aroclors in µg/kg (ppb). All samples were stored and shipped at room temperature.

Appendix B
Sampling Results Summary & Laboratory Reports

Sampling results are provided in the table below. Supporting laboratory reports and chain of custody forms are attached in the pages that follow in order of laboratory report number. Please note that the laboratory calculated sample results in ug/kg, and these results have been converted by FACS to mg/kg for use in the summary tables contained in this report, in order to facilitate comparison with the EPA regulatory limits (which are typically expressed in mg/kg).

Caulk Sample Results (PCBs)						
Material	**Homogenous Area**	**Color**	**Adjacent Substrates**	**Sample #**	**Location**	**Sample Results (mg/kg*)**
Caulk	East side of Garage exterior	Gray	Concrete/stone	001A	Wall base, south end	0.320
Caulk	East side of Garage exterior	Gray	Stone/stucco	002A	South end (vertical)	less than 0.200
Caulk	East side of Garage exterior	White	Stone/stucco	003A	At light fixtures	less than 0.200
Caulk	East side of Garage exterior	Gray	Concrete/stone	001B	Wall base, north end	less than 0.200
Caulk	Garage Top Level 3	Gray	Concrete/metal	004A	West exit, south side	less than 0.280
Caulk	Garage Top Level 3	Gray	Concrete/metal	004B	West exit, north side	less than 0.200
Caulk	Garage Top Level 3 and north exterior elevation to ground level	Gray	Concrete/concrete	005A	Northwest stairwell, east side	less than 4.000
Caulk	Garage Top Level 3 and north exterior elevation to ground level	Gray	Concrete/concrete	005B	Northwest stairwell, east side	0.320
Caulk	East side of Garage exterior	Gray	Stone/stucco	006A	Building entry, north wall	less than 1.000

Note:
Any results in bold are those that exceed the 50 ppm criteria.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-11-0164 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 11/03/15. They were assigned to Work Order 15-11-0164.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

eurofins | Calscience

Glossary of Terms and Qualifiers

Work Order: 15-11-0164 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 15-12-1141 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 12/15/15. They were assigned to Work Order 15-12-1141.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

eurofins | Calscience

Glossary of Terms and Qualifiers

Work Order: 15-12-1141 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

DESKTOP ENVIRONMENTAL RECORDS REVIEW

4760 Sunset Boulevard
Los Angeles, California
January 31, 2019

Executive Summary

On behalf of Kaiser Permanente (Kaiser), Stantec Consulting Services Inc. (Stantec) has completed a desktop environmental records review for the property located at 4760 Sunset Boulevard, Los Angeles, California (the "Property"). The environmental review was completed to evaluate the possible presence of environmental conditions or impacts that may have sourced from current and historical site activities, and/or operations associated with surrounding properties and facilities. Stantec understands that the intended use of the Property is continued medical facilities and infrastructure.

Stantec obtained historical sources of information to ascertain the past use of the Property and surrounding area and evaluate if past uses may have had the potential to impact environmental media beneath the Property. Governmental, regulatory, and other public records were evaluated to identify potential contributors to possible adverse environmental conditions in connection with the Property. During the review of historical records, Stantec attempted to identify uses of the Property from first developed use of the Property and that of surrounding properties, to the present. The following are key findings from the desktop records review:

- Prior to the current development as a medical office building, the Property remained undeveloped until approximately 1948 when a Transfer & Storage business occupied several buildings and sheds on the Property. A small building labeled as Auto Repairing in 1950 was located on the southeastern portion of the property. By 1960, a single commercial building identified as Sunset Boulevard Hospital was constructed on the Property. The Property was redeveloped by 1994 with additional commercial/medical buildings. By 2005, the Property appears to have been developed into the current configuration of improvements.

- Past land uses on nearby properties that could pose an environmental threat to the Property include gas stations and/or auto repair shops at 4700, 4720, and 4747 Sunset Boulevard. The former auto repair shops and gas station at 4700 Sunset Boulevard is the location of the current Kaiser parking structure that serves the Property.

- The Property is on record as containing a permitted UST. However, the lead Kaiser engineer for the LAMC confirmed that there is no UST at the Property. The Property is also identified as a past generator of hazardous waste. No records of environmental non-compliance or violations were found pertaining to the Property.

- The Property is located within the City of Los Angeles with multiple nearby listings of hazardous waste generators and sites with current or historic releases of hydrocarbons to soil and/or groundwater. Nearly all the nearby Leaking Underground Storage Tank sites have received regulatory case closure. Numerous active USTs are present at facilities in

the vicinity of the Property. Properly maintained and permitted USTs are not considered an imminent environmental threat to the Property.

Conclusions and Recommendations

Historical maps and directory listings identified a small building labeled as Auto Repairing in 1950 on the southeastern portion of the Property. Nearby gas stations and/or auto repair shops located at 4700, 4720, and 4747 Sunset Boulevard were depicted as early as 1919-1924. These historical operations likely included handling of hazardous materials and petroleum products and generation of hazardous wastes, as well as possible underground leaks from UST systems. Currently, the locations of these former gas stations and/or auto repair shops are fully developed commercial properties.

During redevelopment of the Property, soil and soil vapor containing petroleum hydrocarbons, solvents, and other organic and inorganic contaminants could be encountered during grading, excavation of footings, underground utility installation, and other ground disturbing activities. Accordingly, Stantec recommends that a Soil Management Plan approach be implemented to address these environmental contingencies during ground disturbance and construction activities. The Soil Management Plan (SMP) would specify the roles, responsibilities, protocols, and procedures to be employed in the event that subsurface chemical impacts are indicated or encountered during redevelopment of the Property. Key functions of the SMP in the event of a discovery of subsurface impacts are to specify procedures to stop work at the location of concern, provide immediate notification to local oversight agencies, implement health and safety protocols to protect workers, site occupants, and the public, and to isolate and contain suspected impacted materials while chemical analysis of preliminary samples is conducted.

For new facilities that include occupied space, a vapor barrier is recommended if potential vapor encroachment conditions (VEC) are indicated or suspected during construction, for protection of future occupants. Such conditions could include soil impacted with volatile organic compounds (VOC) being left in place beneath the depth of ground disturbance for new construction, the presence of shallow groundwater containing VOC beneath the Property, or soil vapor migration from adjacent or nearby sites impacted with VOC.

1.0 Introduction

At the request of Kaiser Permanente (Kaiser), Stantec Consulting Services Inc. (Stantec) is pleased to submit this report documenting the results of a desktop environmental records review conducted for the property located at 4760 Sunset Boulevard in Los Angeles, California (the "Property", **Figure 1**). This assessment was completed to evaluate the possible presence of environmental conditions or impacts that may have sourced from historical or current activities on the Properties, as well as the potential for environmental conditions that may have impacted the Properties from off-site third-party sources. Stantec understands that the intended use of the Property is continued medical facilities and infrastructure associated with the Kaiser Permanente Los Angeles Medical Center. All work was completed in accordance with the Work Authorization from Kaiser Permanente dated January 8, 2019.

1.1 PROPERTY LOCATION & FACILITY DESCRIPTION

The Property, identified by Los Angeles County Assessor Identification Numbers 5543-015-019 and 021, is situated on the south side of Sunset Boulevard between New Hampshire Avenue and L. Ron Hubbard Way in the City of Los Angeles. The Property encompasses roughly one acre and is developed with an approximately 62,800 square foot medical office building operated by Kaiser. An asphalt parking lot covers the remainder of the site.

The Property comprises a portion of the approximately 15.34-acre Kaiser Permanente Los Angeles Medical Center campus which is located along Sunset Boulevard between North Alexandria Avenue and North Vermont Avenue in the Hollywood Community Plan Area of the City of Los Angeles. The City of Los Angeles Planning Department considers the Unified Hospital Development Area to encompass the Kaiser Medical Center campus. The Property is part of the Kaiser Permanente Los Angeles Medical Center redevelopment project which proposes to expand the existing medical center campus by replacing facilities and adding new buildings. At the Property, an existing parking area will be redeveloped with a 50,000-square foot Procedure Center addition to the existing medical office building.

Land uses generally surrounding the Medical Center campus include open space, specifically Barnsdall Art Park to the north; commercial uses to the northeast along North Vermont Avenue; residential and commercial uses to the east and southeast, including the Children's Hospital of Los Angeles and the Hollywood Presbyterian Medical Center along Sunset Boulevard and North Vermont Avenue; residential and commercial uses to the south, including the Church of Scientology of Los Angeles; and residential and commercial uses to the west. A Property location map is provided as **Figure 1** and a Property site map is provided as **Figure 2**.

2.0 DESKTOP RECORDS REVIEW

The objective of consulting historical sources of information was to develop the history of the Property and surrounding area, in order to evaluate if past uses could have impacted subsurface conditions at the Property. Physical setting records were evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Property. During the review of historical records, Stantec attempted to identify uses of the Property from the present to the first developed use of the Property and surrounding properties. Stantec's research included the reasonably ascertainable and useful records described in this section.

2.1 PHYSICAL SETTING

A summary of the physical setting of the Property is provided in the table below with additional details in the following subsections

Topography:	The topographic gradient in the vicinity of the Property is generally to the south, away from Olive Hill, and the Property is located at approximately 389 feet above mean sea level (ft. amsl).
Soil/Bedrock Data:	The Property and surrounding area soils are classified as urban land. Unconsolidated alluvium consists of silt, clay, and silty sand. Bedrock consists of marine and non-marine sedimentary rocks of the Santa Monica Mountains.
Estimated Depth to Groundwater/ Estimated Direction of Gradient:	The depth to groundwater may vary from approximately 30 to 70 feet below ground surface (bgs), with gradient direction to the south.
Note: Site-specific groundwater direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.	

2.1.1 Property Topography and Surface Water Flow

The Property is situated at an elevation approximately 389 ft. amsl. Olive Hill rises to 495 feet amsl to the north of Sunset Boulevard and the Medical Center campus. Based on the topography and existing surface conditions, general surface water flow direction is to the south.

2.1.2 Regional and Property Geology

The Property is situated near the southern edge of the Transverse Ranges Geomorphic Province of California, within the Los Angeles Basin. The Los Angeles Basin is a lowland coastal plain approximately 50 miles long by 20 miles wide that slopes gradually southward and westward toward the Pacific Ocean. The coastal plain overlies a structural trough filled with a thick

sequence of early Cenozoic through Holocene age marine and nonmarine sediments that were deposited as the basin subsided.

The Property is further located within the Hollywood subbasin of the Coastal Plain of Los Angeles. Unconsolidated alluvial deposits within this subbasin are underlain by basement rocks of the Santa Monica Mountains (DWR 1961). Based on a previous subsurface investigations at a nearby site, the shallow soils/alluvium beneath the site area is dominated by layers of silt, clay, and silty poorly-graded sand.

2.1.3 Regional and Property Hydrogeology

According the Department of Water Resources (DWR) Bulletin 118, the Property lies within the Hollywood Subbasin which occupies a 16-square mile area of the northeastern Coastal Plain. The Hollywood Subbasin is bounded on the north by Santa Monica Mountains and the Hollywood fault, on the east by the Elysian Hills, on the west by the Inglewood fault zone, and on the south by La Brea High, formed by an anticline that brings impermeable rocks close to the surface. Surface drainage from the site flows in a southerly direction towards Ballona Creek, where it then flows to the west and to the Pacific Ocean.

Groundwater in the Hollywood Subbasin is mainly produced from Pleistocene age alluvial sands and gravels. Unconfined groundwater conditions exist in the shallow aquifers in the northern and eastern portion of the subbasin. In the deeper aquifers and in the remainder of the subbasin, groundwater is confined, and clay members separate the aquifers over much of this subbasin. (DWR 1961).

Local depth to groundwater was evaluated through a review of the Regional Water Quality Control Board's (RWQCB's) Geotracker database. According to the most recent groundwater monitoring report for the site located at 1630 North Vermont Avenue (Shell/Tesoro Former Arco#5025), approximately 1,000 feet northeast of the Property, groundwater was gauged at depths ranging from 25 to 44 feet below ground surface (bgs) in May 2018 with a flow direction to the east/southeast. However, based on local topography, the average groundwater flow direction in the site area is inferred to be southerly.

2.2 FEDERAL, STATE AND TRIBAL ENVIRONMENTAL RECORDS

A regulatory agency database search report was obtained from Environmental Data Resources Inc. (EDR), a third-party environmental database search firm. Stantec evaluated the information listed within the database relative to potential impact to the Property, assessing the potential for impacts based in part on the physical setting. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in **Attachment A**.

2.2.1 Listings for Property

The Property was identified in the following databases searched by EDR:

- CAL FID UST: The Property is listed as Active status. No other pertinent information is included under this listing.
- CA HAZNET: The Property is listed as having generated and disposed of off-specification, aged, or surplus organic wastes between 2012 and 2017 with quantities ranging from 0.004 to 0.035 tons per year.
- CA EMI: The Property is listed in 1990 as having reported air emissions of 22 tons per year of total organic hydrocarbon gases to the South Coast AQMD.
- CA UST, SWEEPS UST: The Property is listed as containing an active underground storage tank (UST) permitted by the City of Los Angeles Fire Department. No other pertinent information is included under this listing.
- CA FINDS: The Property was listed with an ID number but no other pertinent information is included under this listing.

2.2.2 Listings for Nearby Sites with Potential to Impact Property

Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions associated with neighboring properties to impact the Property. Based on this evaluation, the following individual facilities were identified as the most likely potential sources of releases that could possibly impact the Property.

Listed Facility Name/Address	Database Listing	Distance/Direction from Property
Kovall CC 4720 Sunset Boulevard Los Angeles, CA	EDR Hist Auto	82 feet / 0.016 miles east/northeast (cross-gradient to the Property)
The site was reportedly a gasoline service station and automotive repair facility between 1929 and 1942. No further information was provided.		
Texaco Inc 4747 Sunset Boulevard Los Angeles, CA	Sweeps UST, CA FID UST	96 feet / 0.018 miles north/northeast (up-gradient to the Property)
This site was listed in the UST databases but no pertinent information is included under this listing.		
McCall Payne Inc 4700 Sunset Boulevard Los Angeles, CA	EDR Hist Auto	257 feet / 0.049 miles east (cross-gradient to the Property)

Listed Facility Name/Address	Database Listing	Distance/Direction from Property
The site was reportedly an automotive repair facility in 1924. No further information was provided.		
Kaiser Foundation Hospital 4867 Sunset Boulevard Los Angeles, CA	CA HIST UST, CA LUST	451 feet / 0.085 miles west/northwest (cross-gradient to the Property)
The site was reportedly as having two diesel USTs installed in 1976 and 1983, respectively. A leak was reported in February 1989 and the LUST case was closed in April 1997. No further information was provided within the EDR report or Geotracker database.		
Miayes Elias 1331 N. Vermont Ave. Los Angeles, CA	EDR Hist Auto	454 feet / 0.086 miles southeast (cross-gradient to the Property)
The site was reportedly a gasoline service station between 1929 and 1942. No further information was provided.		
Schmitt Gustav 4874 Sunset Boulevard Los Angeles, CA	EDR Hist Auto	512 feet / 0.097 miles west (cross-gradient to the Property)
The site was reportedly a gasoline service station and automotive repair facility between 1924 and 1942. No further information was provided.		
Abramson Morris 1528 N. Vermont Ave. Los Angeles, CA	EDR Hist Auto	578 feet / 0.109 miles east/northeast (cross-gradient to the Property)
The site was reportedly a gasoline service station and automotive repair facility between 1924 and 1942. No further information was provided.		

2.3 LOCAL/REGIONAL ENVIRONMENTAL RECORDS

Stantec checked the following sources to obtain information pertaining to Property use and/or indications of releases that might impact the Property:

2.3.1 Local Environmental Agency Records

Agency Name, Contact Information	Findings
Custodian of Records, Los Angeles County Public Health Investigation (PHI) Via Facsimile: (323) 728-0217 January 9, 2019	A written request subject to the FOIA was submitted to the Los Angeles County Public Health Investigation to review their files regarding the Property. The information requested included file information regarding any records that indicate environmental concern at the Property. A response had not been received at the time of this report. Pertinent information, if received, will be summarized in an addendum to the report.
City of Los Angeles Fire Department 200 N. Mail St., 17th Fl. Los Angeles, CA 90012 January 9, 2019	A written request subject to the FOIA was submitted to the Los Angeles City Fire Department to review their files regarding the Property. The information requested included active and inactive hazardous materials file information, active/inactive UST files, and any records that indicate environmental concern at the Property. A response was received and included the following records: Inspector Referral Form, 1-8-2014 Note: No USTs on site Hazardous Materials System BP-8: Computer Listing of Inventory 3-31-2014 Total Chemicals: 12 Renalin Carbon Dioxide Compressed Air Nitrogen Petroleum Distillate Fuel Diesel Fuel Carbon Dioxide Nitrogen Nitrous Oxide Oxygen Oxygen, liquid Petroleum Distillate Fuel Hazardous Materials Business Plan (HMBP) 12/21/2016

Agency Name, Contact Information	Findings
City of Los Angeles Department of Building and Safety 201 N Figueroa St, Los Angeles, CA 90012	Stantec conducted a database search for building permits issued for the Property address. The records reviewed included approximately 31 building permits issued between May 2001 and August 2018 to Kaiser Foundations Hospitals for the Property. The project description on the permit applications ranged from minor repairs, upgrades, remodeling, and renovations. Numerous permits for electrical work, mechanical work, and plumbing upgrades were included. No activities related to hazardous materials or potential environmental conditions were noted in the permit applications.

2.3.2 Regional Environmental Agency Records

Agency Name, Contact Information	Findings
Custodian of Records, Department of Toxic Substances Control Chatsworth Regional Office Via Facsimile: (818) 717-6526 January 9, 2019	A written request subject to the FOIA was submitted to the Department of Toxic Substances Control, Chatsworth Regional Office to review their files regarding the Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concern at the Property. A response was received on January 10, 2019 indicating that after a thorough search, no records pursuant to the requests were identified.
Custodian of Records, Department of Toxic Substances Control Cypress Regional Office Via Facsimile: (714) 484-5318 January 9, 2019	A written request subject to the FOIA was submitted to the Department of Toxic Substances Control, Cypress Regional Office to review their files regarding the Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concern at the Property.

Agency Name, Contact Information	Findings
	A response was received on January 10, 2019 indicating that after a thorough search, no records pursuant to the requests were identified.
Custodian of Records, Los Angeles Regional Water Quality Control Board Via e-mail: rb4-publicrecords @waterboards.ca.gov January 9, 2019	A written request subject to the FOIA was submitted to the Los Angeles Regional Water Quality Control Board to review their files regarding the Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concern at the Property. A response was received on January 18, 2019 indicating that files were available for review. However, upon reviewing files at the Los Angeles RWQCB office on January 29, 2018, no records were found pertaining to the Property.

2.4 HISTORICAL RECORDS REVIEW

2.4.1 Aerial Photographs

Stantec reviewed historical aerial photographs of the Property. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The following table summarizes Stantec's observations of the reviewed historical aerial photographs. The aerial photographs are provided in **Attachment B**.

Year	Scale	Observations, Property and Adjoining Properties
1923	1" = 500'	The Property appears to be undeveloped and vacant. Adjacent and nearby properties are undeveloped or contain residences. Barnsdall Park occupies the north side of Sunset Blvd., with orchards visible directly north of the Property.
1928	1" = 500'	The Property appears to be undeveloped and vacant. The adjacent property to the east on Sunset Blvd. has been developed with a building. Adjacent and nearby properties to the south contain residences.
1938	1" = 500'	The Property appears to be undeveloped and partially vegetated. Immediately surrounding properties are primarily unchanged from the previous photograph.

Year	Scale	Observations, Property and Adjoining Properties
1948	1" = 500'	By 1948 the Property has been developed with two small buildings on the southern portion of the parcel. Equipment or vehicles appear to be parked to the north of the buildings. Across Sunset Blvd., the southern portion of Barnsdall Park remains undeveloped and vegetated.
1954	1" = 500'	The Property has been further developed with several long, narrow structures, possible storage sheds, located north of the buildings. Across Sunset Blvd., the southwestern portion of Barnsdall Park has been developed with a commercial building, possibly a hospital or medical center.
1964	1" = 500'	The Property has been redeveloped with a single commercial building situated on the northwestern portion of the parcel. The remainder of the Property appears to consist of parking areas. Adjoining properties now appear to be fully developed, including the north side of Sunset Blvd. across from the Property.
1972	1" = 500'	No significant changes to the Property are visible since the previous aerial photograph. The adjacent properties to the east and west are now primarily used as parking lots. Commercial development has continued on the north side of Sunset Blvd., across from the Property.
1985	1" = 500'	The Property and immediately surrounding land uses appear mostly unchanged since the previous photograph.
1994	1" = 500'	The Property has been redeveloped with an additional structure to the south of the original commercial building. Another commercial building has been constructed on the eastern side of the Property, fronting along New Hampshire Ave.
2005	1" = 500'	By 2005, the layout of the Property reflects the current development, with a large commercial (medical) building on the eastern portion of the parcel and primarily parking areas on the western portion.
2016	1" = 500'	The Property appears as it does currently with the Kaiser medical building at 4760 Sunset Blvd., parking on the west side of the building, and a utility building in the western portion of the parking area.

Aerial photograph source: The EDR Aerial Photo Decade Package

2.4.2 Historical City Address Directories

Stantec retained EDR to research available reverse city directories for the Property, in approximately five-year intervals, if available. EDR searched directories published by several sources between the years 1920 and 2014 for the subject Property addresses, and

adjacent/adjoining addresses along Sunset Boulevard and the major cross streets. The following is a summary of Stantec's review of the address directory listings:

Street Address	Year	Property Listings
4760 Sunset (the Property)		Address not listed, nearest addresses on south side of Sunset are 4650 Sunset (east) and 4810 Sunset (west)
4650 Sunset	1971 to 1986	Medical office building
4705 Sunset	1962 1976 1981	California Federal Savings and Loan
4725 Sunset	1981	Kaiser Permanente Medical Care Program
4733 Sunset	1981 1986	Kaiser Permanente Medical Care Program
4810 Sunset	1981 1986	Scientology Church of Dianetics Church of Scientology
4860 Sunset	1958 to 1990	Self-Realization Church of All Religions Self-Realization Fellowship Church
4867 Sunset	1958 to 1986	The Property is variously listed as Kaiser Permanente Medical Center, Southern California Permanente Medical Group, and Kaiser Foundation Hospital during this period.
4900 Sunset	1962 to 1986	Kaiser Permanente Medical Care Program
4904 Sunset	1962 1981 1986	Kaiser Permanente Medical Care Program
4918 Sunset	1924 1929 1942 1962 1981 1986	Gustav Verrier Aldo Freppoli Ralph Koehler Ivy Motel Kaiser Permanente Medical Care Program Kaiser Permanente Medical Care Program
4950 Sunset	1986	Kaiser Permanente Medical Care Program
1505 Edgemont	1967 to 1990	Variously listed as Southern California Permanente Medical Group, Kaiser Permanente Medical Care, and individual doctor's names.
1517 Edgemont	1951	Kenneth Geis
1519 Edgemont	1951	W G Black
1525 Edgemont	1929-1958	Various residents

Street Address	Year	Property Listings
1526 Edgemont	1962- 2014	Southern California Permanente Medical Group Kaiser Permanente Medical Care Program Individual Doctor's names
1515 Vermont (the Property)	1933 1962 1964-66 1967 1970 1971 to 1990	Lisetta Fleming Pedro Petroleum Corporation, attorney offices Attorney offices Federal Savings & Loan; medical/dental offices Kaiser Foundation Health Plan Property is variously listed as Kaiser Permanente Medical Care Program and Southern California Permanente Medical Group during this period.
1514 Vermont	1929 1958 1971 1986-90	Agnes Croner A One sewing machine & Appliance Service A-1 Appliance Company Sun Refrigeration Services
1512 Vermont	1958-71 1986-90	Barber Shop A-1 Appliance Company
1510 Vermont	1924 1929 1937 1990	Window Shades & Draperies Scherer Architects Chiropractors Uptown Cafe
1508 Vermont	1962 to1986	FeZ Night Club, Fez Supper Club, Fez Restaurant & Night Club
1517 Vermont (the Property)	1967-76 1981-90 1991	United California Bank First Interstate Bank of California Sunset-Vermont Office Building
1528 Vermont	1924 1933 1942 1962-71 1986-90	Auto Repairs Abramson Morris Gas Station Auto Repairs and Gas Station Catering Crocker National Bank, Wells Fargo Bank

2.4.3 Historical Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide information on the history of prior land use and are useful in assessing whether there may be potential environmental contamination on or near the Property. These maps, which have been periodically updated since the late 19th century, often provide valuable insight into historical Property uses. However, specific facility details on the maps can be difficult to interpret and labels and notes often contain abbreviations.

The following table summarizes Stantec's observations of the reviewed historical Sanborn maps. The historical maps are provided in **Attachment C.**

Year	Scale	Observations, Property and Adjoining Properties
1919	1" = 500'	The Property appears to be undeveloped. Adjacent properties along and across Sunset Blvd. are also undeveloped. Scattered residences are shown in the area south of the Property. An Auto Repairing shop is located at 4850 Sunset Blvd., over a block west of the Property. An Oil & Gasoline Station is shown at 4700 Sunset Blvd., one block east of the Property.
1950	1" = 500'	The Property is developed with a commercial building on the southern portion of the parcel identified as Transfer & Storage. A smaller detached building immediately east on the Property is labeled Auto Rep. The property to the east, across New Hampshire Ave., has several labels including Car Washing, Polishing & Greasing, Repairing, Battery, Auto Painting, and Gasoline & Oil Station
1957	1" = 150'	The Property is developed with a commercial building on the southern portion of the parcel identified as Transfer & Storage. Adjoining properties to the south appear to be residential. The property to the east, across New Hampshire Ave., is labeled Car Washing, Polishing & Greasing, Painting and Repairing. A rectangular area labeled Gasoline & Oil Sta. is situated near Sunset Blvd. on this property.
1960-1970	1" = 150'	The Property is developed as the Sunset Boulevard Hospital with a medical building situated on the northwest corner of the Property. A note indicates that the building was constructed in 1959. The details of the building are difficult to determine from the map. Adjoining properties to the south appear to be residential.

Map source: The EDR Certified Sanborn Map Report

2.4.4 Historical Topographic Maps

Stantec reviewed historical USGS 7.5-Minute Topographic Maps (scale 1:24,000 and 1:62,500) of the Hollywood, Quadrangle to help identify past Property usage and areas of potential environmental concern. Copies of the historical maps are provided in **Appendix C**. The following table summarizes the maps reviewed and observations.

Year	Scale	Observations, Property and Adjoining Properties
1894 1896 1898 1900 1902	1:62,500 1:62,500 1:62,500 1:62,500 1:62,500	The Property is situated within the Prospect Park area and Sunset Boulevard does not extend to the Property location. The Hollywood and Cahuenga Valley Railroad is visible to the west of the Property. No individual structures are visible on the Property. No features of environmental concern are noted on or near the Property location.
1921	1:24,000	Near the Property, Sunset Boulevard and other major streets have been developed. The Property still appears to be undeveloped, south of Olive Hill, with no structures shown. No features of environmental concern are noted on or near the Property location.
1928	1:24,000	The 1928 map shows increased development in the site area, including the historic Hollyhock House on Olive Hill to the north. However, the Property still appears to be undeveloped, with no structures shown. No features of environmental concern are noted on or near the Property location.
1953	1:24,000	The property is within the Los Angeles corporate boundaries and individual structures, other than landmark buildings, are not shown. A hospital is shown on the north side of Sunset Blvd. and the Children's Hospital is present on the east side of Vermont Ave.
1966 1972 1981	1:24,000 1:24,000 1:24,000	A single rectangular building is shown on the Property. The hospital on the north side of Sunset Blvd. (current Kaiser Hospital location) has expanded.
1991	1:24,000	The single rectangular building remains on the Property. map depicts four structures within the property boundary. No features of environmental concern are noted on or near the Property location.
2012	1:24,000	No details regarding specific structures are provided on this map version. Nearby hospitals are marked with a symbol. No features of environmental concern are noted on or near the Property location.

Name of maps and source: EDR Historical Topo Map Report

2.5 ELECTRONIC DATABASES

Publicly accessible electronic databases were searched by Stantec to better understand subsurface conditions in the vicinity of the Property and identify potential sources of impacts to soil and groundwater.

2.5.1 State Water Resources Control Board - GeoTracker Database

GeoTracker is a publicly accessible database operated by the California Environmental Protection Agency State Water Resources Control Board (SWRCB). The searchable database is utilized by State and local oversight agencies to track and archive data related to releases of hazardous substances. Using GeoTracker, Stantec identified sites within approximately 1,750-foot radius (1/3 mile) of the Property having at least one reported release of a hazardous material. A summary of results is presented below.

Subject Property Permitted UST Site
A flag is shown on the Property for a UST permitted by the City of Los Angeles Fire Department.

Open Leaking Underground Storage Tank (LUST) / Cleanup Program Sites
The following provides a summary of open LUST/Cleanup Program sites identified within a 1/3-mile radius of the Site. Only one open case was located within the search area:

- An open LUST Cleanup Site identified as Shell/Tesoro (former ARCO #5025) is located at 1630 N. Vermont Avenue, approximately 1,000 feet north/northeast of the Property. The RWQCB approved a revised Remedial Action Plan in October 2018 to address fuel hydrocarbons in soil and groundwater at the site. Groundwater flow direction at the site is towards the east/southeast, placing the site hydraulically cross-gradient from the Property. The dissolved hydrocarbon plumes, including benzene and MTBE, extend eastward from the site, beneath Hollywood Blvd.

Closed LUST/Cleanup Program Sites
The following provides a summary of closed LUST/Cleanup Program sites identified within a 1/3-mile radius of the Site:

- A closed LUST case identified as Kaiser Permanente is located at 4867 Sunset Boulevard, approximately 600 feet northwest of the Property. This case was granted closure on April 7, 1997. The contaminants of concern were reported as diesel.

- A closed LUST case identified as Thrifty #183 is located at 5025 Sunset Boulevard, approximately 1,000 feet west of the Property. This case was granted closure on January 7, 2013. The contaminants of concern were listed as gasoline.

- A closed LUST case identified as Presbyterian Medical Center at 1300 N. Vermont Avenue is located approximately 650 feet southeast of the Property. This case was granted closure on May 7, 2013. The contaminants of concern were listed as diesel.

- A closed LUST case identified as Pacific Bell (G1-125) at 1255 N. Vermont Avenue is located approximately 1,050 feet south/southeast of the Property. This case was granted closure on July 27, 1998. The contaminants of concern were listed as "other solvent or non-petroleum hydrocarbons".

- A closed LUST case identified as 76 Products Station #3647 at 1270 N. Vermont Avenue is located approximately 1,000 feet south/southeast of the Property. This case was granted closure on April 20, 1998. The contaminants of concern were listed as gasoline.

- A closed LUST case identified as Hollywood Car Wash at 4810 Hollywood Blvd. is located approximately 1,350 feet north of the Property. This case was granted closure on January 22, 1997. The contaminants of concern were listed as gasoline.

- A closed LUST case identified as Edgemont Hospital at 4841 Hollywood Blvd. is located approximately 1,400 feet north of the Property. This case was granted closure on July 7, 1996. The contaminants of concern were listed as gasoline.

Permitted Underground Storage Tank
The following provides a summary of USTs permitted through the Los Angeles County Fire Department that have been identified within a 1/3-mile radius of the Site:

- Including the listing for the Property, eleven active USTs are located within the search radius. The nearest offsite permitted USTs are located at the Church of Scientology at 1404 N. Catalina Street, the Children's Hospital at 4661 Sunset Boulevard, and the Kaiser Permanente hospital located at 4867 Sunset Boulevard. These nearby UST sites are located just over 500 feet from the Property.

2.5.2 EnviroStor

EnviroStor is a publicly accessible database operated by the State of California Department of Toxic Substances Control (DTSC). The searchable database contains information related to sites with contamination and/or sites where the DTSC's environmental oversight has been requested or required. Stantec utilized EnviroStor to obtain information relating to two identified DTSC sites located within 1,750-foot radius of the Property.

- The only site listed in EnviroStor within the search radius distance was the Children's Hospital at 4650 Sunset Boulevard. The site was listed for a tiered permit not related to contamination or site cleanup.

3.0 SITE RECONNAISSANCE

A visit to the Property and its vicinity was conducted by Laura Butler of Stantec on January 23, 2019. Stantec was accompanied by a Kaiser representative during the Property visit. Figure 2 provides information about the Property and adjoining properties and the location of potential areas of environmental concern.

3.1 SITE RECONNAISSANCE METHODOLOGY

The site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions of the Property that may indicate the presence of environmental concerns. The reconnaissance of the Property was conducted by entering the building on the property, viewing representative interior areas, and by viewing exterior portions of the property including parking areas and storage/maintenance areas or structures. In general, Stantec utilized the following methodology to observe the Property:

- View the outer Property boundary as accessible by public thoroughfares.
- Visually observe accessible interior areas expected to be used by occupants or the public, maintenance and repair areas, utility areas, and a representative sample of occupied spaces, as applicable to the Property.
- View storage areas for bulk chemicals, hazardous materials, and compressed gases.

Weather conditions during the visit to the Property were clear and mostly sunny. There were no weather-related Property access restrictions encountered during the reconnaissance visit.

3.2 GENERAL DESCRIPTION AND OBSERVATIONS

The 3-story commercial building on the Property primarily contains medical offices, patient examination rooms, and a diagnostic imaging center. The main entrance is on the western portion of the building. Parking areas are located on the west and north sides of the building. A secured and partially covered utility/storage area is located in the parking lot west of the building. The utility area contains an industrial trash compactor for handling general and biological wastes, a compressed oxygen storage tank, electrical transformer, and other equipment and controls. Toured first floor and associated surface parking lot. This building is offices, and. There is as well. The parking lot houses a trash compactor in an outdoor sheltered area as well as a large behind fencing. No surface patches or above ground storage tanks were observed.

Adjoining and adjacent properties are characterized by the following uses:

North: Kaiser hospital and medical center at 4867 Sunset Boulevard.

South: Residential properties along New Hampshire Avenue.

DESKTOP ENVIRONMENTAL RECORDS REVIEW

East: Kaiser parking structure at 4700 Sunset Boulevard.

West: Church of Scientology campus across L. Ron Hubbard Way.

4.0 INTERVIEWS

Stantec conducted interviews with the following individuals:

Name and Contact Information	**Relationship to Property**	**Key findings:**
Peter E. Zaragoza 323-783-7709	Kaiser Permanente General Superintendent - LAMC Capital Project Facilities Construction	During the site visit, Mr. Zaragoza stated that he was not aware of any past or current environmental conditions such as releases of hazardous materials or known contamination at the Property.
Daniel P. Weaver (323) 783-7734	Lead Engineer Kaiser Permanente LAMC	Mr. Weaver confirmed that there is no UST at the Property.

4.1 FINDINGS FROM INTERVIEW WITH PROPERTY REPRESENTATIVE

No indications of known environmental impairments or releases of hazardous materials or petroleum products at the Property were identified based on the information obtained.

5.0 SUMMARY, CONCLUSIONS, AND RECOMENDATIONS

On behalf of Kaiser Permanente (Kaiser), Stantec Consulting Services Inc. (Stantec) has completed a desktop environmental records review for the property located at 4760 Sunset Boulevard, Los Angeles, California (the "Property"). The environmental review was completed to evaluate the possible presence of environmental impacts that may have sourced from current and historical site activities, and/or operations associated with surrounding properties and facilities. Stantec understands that the intended use of the Property is continued medical facilities and infrastructure.

Stantec obtained historical sources of information to ascertain the past use of the Property and surrounding area and evaluate if past uses may have had the potential to impact environmental media beneath the Property. Governmental, regulatory, and other public records were evaluated to identify potential contributors to possible adverse environmental conditions in connection with the Property. During the review of historical records, Stantec attempted to identify uses of the Property from first developed use of the Property and that of surrounding properties, to the present. The following are conclusions from the records review.

- Prior to the current development as a medical office building, the Property remained undeveloped until approximately 1948 when a Transfer & Storage business occupied several buildings and sheds on the Property. A small building labeled as Auto Repairing in 1950 was located on the southeastern portion of the Property. By 1960, a single commercial building identified as Sunset Boulevard Hospital was constructed on the Property. The Property was redeveloped by 1994 with additional commercial/medical buildings. By 2005, the Property appears to have been developed into the current configuration of improvements.

- Past land uses on nearby properties that could pose an environmental threat to the Property include gas stations and/or auto repair shops at 4700, 4720, and 4747 Sunset Boulevard. The former auto repair shops and gas station at 4700 Sunset Boulevard is the location of the current Kaiser parking structure that serves the Property.

- The Property is on record as containing a permitted UST. However, the lead Kaiser engineer for the LAMC confirmed that there is no UST at the Property. The Property is also identified as a past generator of hazardous waste. No records of environmental non-compliance or violations were found pertaining to the Property.

- The Property is located within the City of Los Angeles with multiple nearby listings of hazardous waste generators and sites with current or historic releases of hydrocarbons to soil and/or groundwater. Nearly all the nearby Leaking Underground Storage Tank sites have received regulatory case closure. Numerous active USTs are present at facilities in

the vicinity of the Property. Properly maintained and permitted USTs are not considered an imminent environmental threat to the Property.

5.1 RECOMMENDATIONS

Historical maps and directory listings identified a small building labeled as Auto Repairing in 1950 on the southeastern portion of the Property. Nearby gas stations and/or auto repair shops located at 4700, 4720, and 4747 Sunset Boulevard were depicted as early as 1919-1924. These historical operations likely included handling of hazardous materials and petroleum products and generation of hazardous wastes, as well as possible underground leaks from UST systems. Currently, the locations of these former gas stations and/or auto repair shops are fully developed commercial properties.

During redevelopment of the Property, soil and soil vapor containing petroleum hydrocarbons, solvents, and other organic and inorganic contaminants could be encountered during grading, excavation of footings, underground utility installation, and other ground disturbing activities. Accordingly, Stantec recommends that a Soil Management Plan approach be implemented to address these environmental contingencies during ground disturbance and construction activities. The Soil Management Plan (SMP) would specify the roles, responsibilities, protocols, and procedures to be employed in the event that subsurface chemical impacts are indicated or encountered during redevelopment of the Property. Key functions of the SMP in the event of a discovery of subsurface impacts are to specify procedures for immediate notification to local oversight agencies, provide health and safety protocols to protect workers, site occupants, and the public, and to isolate and contain suspected impacted materials while chemical analysis of preliminary samples is conducted.

For new facilities that include occupied space, a vapor barrier is recommended if potential vapor encroachment conditions (VEC) are indicated or suspected during construction, for protection of future occupants. Such conditions could include soil impacted with volatile organic compounds (VOC) being left in place beneath the depth of ground disturbance for new construction, the presence of shallow groundwater containing VOC beneath the Property, or soil vapor migration from adjacent or nearby sites impacted with VOC.

6.0 LIMITATIONS & CERTIFICATION

This report was prepared in accordance with the scope of work outlined in Stantec's contract and with generally accepted professional environmental consulting practices existing at the time this report was prepared and applicable to the location of the Property. It was prepared for the exclusive use of Kaiser, for the express purpose stated above. Any re-use of this report for a different purpose or by others not identified above shall be at the user's sole risk without liability to Stantec. To the extent that this report is based on information provided to Stantec by third parties, Stantec may have made efforts to verify this third party information, but Stantec cannot guarantee the completeness or accuracy of this information. No other warranties, expressed or implied, are made by Stantec.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/29/2018 has revealed that there are 15 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 20 CA LUST sites within approximately 0.5 miles of the target property.

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there is 1 CA CPS-SLIC site within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 11 CA UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 7 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 4 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003

KAISER PERMANENTE LOS ANGELES (Continued) **1007199251**

. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

. Waste code: 551
. Waste name: Laboratory waste chemicals

. Waste code: 725
. Waste name: Liquids with mercury > 20 mg/l

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D005

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource

CHILDREN'S HOSPITAL OF LOS ANGELES (Continued) **1000278867**

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

QUEEN OF ANGELS HOLLYWOOD PRES (Continued) **1000597740**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: 151
. Waste name: Asbestos-containing waste

. Waste code: 221
. Waste name: Waste oil and mixed oil

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D010
. Waste name: SELENIUM

. Waste code: D011
. Waste name: SILVER

Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Violation Status: No violations found

FINDS:

Registry ID: 110002714091

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 131
. Waste name: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 223
. Waste name: Unspecified oil-containing waste

. Waste code: 261
. Waste name: Polychlorinated biphenyls and material containing PCB’s

. Waste code: 291
. Waste name: Latex waste

RITE AID NO 5435 (Continued) **1016955199**

. Waste name: Pharmaceutical waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 541
. Waste name: Photochemicals / photo processing waste

. Waste code: 561
. Waste name: Detergent and soap

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

FINDS:

Registry ID: 110012238578

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF

BARNSDALL PARK (Continued) **1000243399**

DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: D004
. Waste name: ARSENIC

. Waste code: D008
. Waste name: LEAD

Violation Status: No violations found

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART)

LA FIRE STATION 35 (Continued) **1000229428**

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D011
. Waste name: SILVER

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

. Waste code: F002

DELUXE LABORATORIES INC (Continued) **1000428979**

. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Date form received by agency: 02/27/2002
Site name: DELUXE LABORATORIES, INC.
Classification: Large Quantity Generator

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 211
. Waste name: Halogenated solvents (chloroform, methyl chloride, perchloroethylene, etc.)

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 541
. Waste name: Photochemicals / photo processing waste

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Next Scheduled EDR Contact: 02/11/2019
Data Release Frequency: Varies

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/12/2018
Date Data Arrived at EDR: 11/14/2018
Date Made Active in Reports: 12/04/2018
Number of Days to Update: 20

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

UTM Y (Meters):	3773557.2
Elevation:	389 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

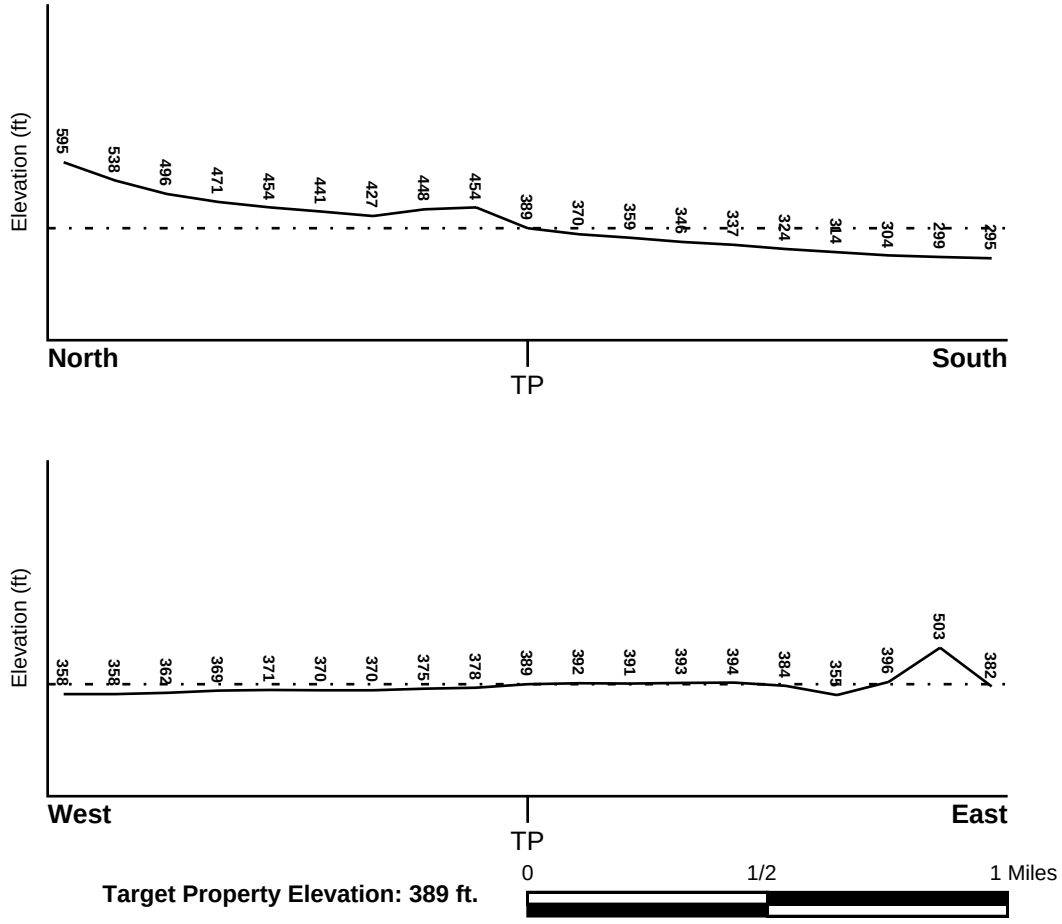
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1610F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
2	1/4 - 1/2 Mile West	S
3	1/2 - 1 Mile ESE	SW
1G	1/4 - 1/2 Mile West	S
2G	1/2 - 1 Mile ESE	SW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Miocene
Code:	Tm *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Stantec were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

DESKTOP ENVIRONMENTAL RECORDS REVIEW

1505 North Edgemont Street
Los Angeles, California
February 4, 2019

Executive Summary

On behalf of Kaiser Permanente (Kaiser), Stantec Consulting Services Inc. (Stantec) has completed a desktop environmental records review for the property located at 1505 N. Edgemont Street, Los Angeles, California (the "Property"). The environmental review was completed to evaluate the possible presence of environmental impacts that may have sourced from current and historical site activities, and/or operations associated with surrounding properties and facilities. Stantec understands that the intended use of the Property is continued medical facilities and infrastructure.

Stantec obtained historical sources of information to ascertain the past use of the Property and surrounding area and evaluate if past uses may have had the potential to impact environmental media beneath the Property. Governmental, regulatory, and other public records were evaluated to identify potential contributors to possible adverse environmental conditions in connection with the Property. During the review of historical records, Stantec attempted to identify uses of the Property from first developed use of the Property and that of surrounding properties, to the present. The following are conclusions from the records review.

- Prior to the current development as a medical office building, the Property was shown as developed with a small residential structure as early as 1919. By 1950, the eastern portion of the Property was a gas station and automotive repair business. The remainder of the Property contained cottages. By 1966, the Property had been redeveloped with a building labeled as a clinic with parking areas adjacent to the building. By 1970, the development layout of the Property resembled the current medical office building development. Building permits issued between 1962 and 2016 to Kaiser Foundations Hospitals were found for the Property.

- Past land uses on nearby properties that could pose an environmental threat to the Property include gas stations and/or auto repair shops at 4901, 5000, 5001, 5007, and 5025 Sunset Boulevard. The former auto repair shop and gas station listed as 4901 Sunset Boulevard corresponds to the Property.

- The Property is not listed in database sources as containing a permitted UST and the lead Kaiser engineer for the LAMC confirmed that there is no UST at the Property. The Property was identified as a past generator of hazardous waste. No records of environmental non-compliance or violations were found pertaining to the Property.

- The Property is located within the City of Los Angeles with multiple nearby listings of hazardous waste generators and sites with current or historic releases of hydrocarbons to soil and/or groundwater. Nearly all the nearby Leaking Underground Storage Tank sites have received regulatory case closure. Numerous active USTs are present at facilities in

the vicinity of the Property. Properly maintained and permitted USTs are not considered an imminent environmental threat to the Property.

Conclusions and Recommendations

Historical maps and directory listings identified nearby gas stations and/or auto repair shops located at 4901, 5000, 5001, 5007, and 5025 Sunset Boulevard were depicted as early as 1919-1923. These historical operations likely included handling of hazardous materials and petroleum products and generation of hazardous wastes, as well as possible underground leaks from UST systems. Currently, two of these locations, 5007 and 5025 Sunset Boulevard, are active gas stations. The USA Gasoline station at 5025 Sunset is also a closed LUST case.

During redevelopment of the Property, soil and soil vapor containing petroleum hydrocarbons, solvents, and other organic and inorganic contaminants could be encountered during grading, excavation of footings, underground utility installation, and other ground disturbing activities. Accordingly, Stantec recommends that a Soil Management Plan approach be implemented to address these environmental contingencies during ground disturbance and construction activities. The Soil Management Plan (SMP) would specify the roles, responsibilities, protocols, and procedures to be employed in the event that subsurface chemical impacts are indicated or encountered during redevelopment of the Property. Key functions of the SMP in the event of a discovery of subsurface impacts are to specify procedures for immediate notification to local oversight agencies, provide health and safety protocols to protect workers, site occupants, and the public, and to isolate and contain suspected impacted materials while chemical analysis of preliminary samples is conducted.

For new facilities that include occupied space, a vapor barrier is recommended if potential vapor encroachment conditions (VEC) are indicated or suspected during construction, for protection of future occupants. Such conditions could include soil impacted with volatile organic compounds (VOC) being left in place beneath the depth of ground disturbance for new construction, the presence of shallow groundwater containing VOC beneath the Property, or soil vapor migration from adjacent or nearby sites impacted with VOC. Given the proposed construction of a new medical office building at the Property, incorporation of a vapor barrier into the new building plans may be appropriate.

1.0 Introduction

At the request of Kaiser Permanente (Kaiser), Stantec Consulting Services Inc. (Stantec) is pleased to submit this report documenting the results of a desktop environmental records review conducted for the property located at 1505 North Edgemont Street in Los Angeles, California (the "Property", Figure 1). This assessment was completed to evaluate the possible presence of environmental conditions or impacts that may have sourced from historical or current activities on the Property, as well as the potential for environmental conditions that may have impacted the Property from off-site third-party sources. Stantec understands that the intended use of the Property is continued medical facilities and infrastructure associated with the Kaiser Permanente Los Angeles Medical Center. All work was completed in accordance with the Work Authorization from Kaiser Permanente dated January 8, 2019.

1.1 PROPERTY LOCATION & FACILITY DESCRIPTION

The Property, identified by Los Angeles County Assessor Identification Number 5543-007-025, is situated on the north side of Sunset Boulevard and west side of North Edgemont Street in the City of Los Angeles. The Property encompasses approximately 0.56 acres and is developed with a commercial medical building that comprises a portion of the Kaiser Permanente Los Angeles Medical Center. The medical building, reportedly constructed in 1962, is approximately six stories high and is situated on the southeast corner of the parcel, directly fronting on Sunset Boulevard and North Edgemont Street. A small parking structure is situated on the northern portion of the Property and a utility building is located to the west of the office building.

The Property comprises a portion of the approximately 15.34-acre Kaiser Permanente Los Angeles Medical Center campus which is located along Sunset Boulevard between North Alexandria Avenue and North Vermont Avenue in the Hollywood Community Plan Area of the City of Los Angeles. The City of Los Angeles Planning Department considers the Unified Hospital Development Area to encompass the Kaiser Medical Center campus. The Property is part of the Kaiser Permanente Los Angeles Medical Center redevelopment project which proposes to expand the existing medical center campus by replacing facilities and adding new buildings. The current plan for the Property is to demolish the existing medical office building, to be replaced with a new medical office building during the third phase of the redevelopment project.

Land uses generally surrounding the Medical Center campus include open space, specifically Barnsdall Art Park to the northeast; and commercial uses to the north along Edgemont Street and to the east and west along Sunset; and residential farther to the north, south, and west. A Property location map is provided as **Figure 1** and a Property site map is provided as **Figure 2**.

2.0 DESKTOP RECORDS REVIEW

The objective of consulting historical sources of information was to develop the history of the Property and surrounding area, in order to evaluate if past uses could have impacted subsurface conditions at the Property. Physical setting records were evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Property. During the review of historical records, Stantec attempted to identify uses of the Property from the present to the first developed use of the Property and surrounding properties. Stantec's research included the reasonably ascertainable and useful records described in this section.

2.1 PHYSICAL SETTING

A summary of the physical setting of the Property is provided in the table below with additional details in the following subsections

Topography:	The topographic gradient in the vicinity of the Property is to the general south, away from nearby Olive Hill, and the Property is located at approximately 385 feet above mean sea level (ft. amsl).
Soil/Bedrock Data:	The Property and surrounding area soils are classified as urban land. Unconsolidated alluvium consists of silt, clay, and silty sand. Bedrock consists of marine and non-marine sedimentary rocks of the Santa Monica Mountains.
Estimated Depth to Groundwater/ Estimated Direction of Gradient:	The depth to groundwater may vary from approximately 30 to 70 feet below ground surface (bgs), with gradient direction to the south.
Note: Site-specific groundwater direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.	

2.1.1 Property Topography and Surface Water Flow

The Property is situated at an elevation approximately 385 ft. amsl. Olive Hill rises to 495 feet amsl to the north of Sunset Boulevard and the Medical Center campus. Based on the topography and existing surface conditions, general surface water flow direction is to the south.

2.1.2 Regional and Property Geology

The Property is situated near the southern edge of the Transverse Ranges Geomorphic Province of California, within the Los Angeles Basin. The Los Angeles Basin is a lowland coastal plain 50 miles long by 20 miles wide that slopes gradually southward and westward toward the Pacific Ocean.

The coastal plain overlies a structural trough filled with a thick sequence of early Cenozoic through Holocene age marine and nonmarine sediments that were deposited as the basin subsided.

The Property is further located on the Hollywood Piedmont slope of the Coastal Plain of Los Angeles. The site area is underlain by Pleistocene alluvium of the Lakewood Formation which is underlain by the upper Miocene age Puente Formation. Alluvial deposits within this area are underlain by basement rocks of the nearby Santa Monica Mountains (DWR 1961). Based on a previous subsurface investigations at a nearby site, the shallow soils/alluvium beneath the site area is dominated by layers of silt, clay, and silty poorly-graded sand.

2.1.3 Regional and Property Hydrogeology

According the Department of Water Resources (DWR) Bulletin 118, the Property lies within the Hollywood Subbasin which occupies a 16 square mile area of the northeastern Coastal Plain. The Hollywood Subbasin is bounded on the north by Santa Monica Mountains and the Hollywood fault, on the east by the Elysian Hills, on the west by the Inglewood fault zone, and on the south by La Brea High, formed by an anticline that brings impermeable rocks close to the surface. Surface drainage from the site flows in a southerly direction towards Ballona Creek, where it then flows to the west and to the Pacific Ocean.

Groundwater in the Hollywood Subbasin is mainly produced from Pleistocene age alluvial sands and gravels. Unconfined groundwater conditions exist in the shallow aquifers in the northern and eastern portion of the subbasin. In the deeper aquifers and in the remainder of the subbasin, groundwater is confined, and clay members separate the aquifers over much of this subbasin. (DWR 1961).

Local depth to groundwater was evaluated through a review of the Regional Water Quality Control Board's (RWQCB's) Geotracker database. According to the most recent groundwater monitoring report for the site located at 1630 North Vermont Avenue (Shell/Tesoro Former Arco#5025), approximately 1,500 feet northeast of the Property, groundwater was gauged at depths ranging from 25 to 44 feet below ground surface (bgs) in May 2018 with a flow direction to the east/southeast. However, based on local topography, the average groundwater flow direction in the site area is inferred to be southerly.

2.2 FEDERAL, STATE AND TRIBAL ENVIRONMENTAL RECORDS

A regulatory agency database search report was obtained from Environmental Data Resources Inc. (EDR), a third-party environmental database search firm. Stantec evaluated the information listed within the database relative to potential impact to the Property, assessing the potential for impacts based in part on the physical setting. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in **Attachment A**.

2.2.1 Listings for Property

The Property was identified in the following databases searched by EDR:

- FINDS: The Property was identified with an ID number in the FINDS database. No other pertinent information is included under this listing.

- CA HAZNET: The Property is listed as having generated and disposed of unspecified organic liquids and pharmaceutical waste in 2012 through 2014, and 2017.

2.2.2 Listings for Nearby Sites with Potential to Impact Property

Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions associated with neighboring properties to impact the Property. Based on this evaluation, the following individual facilities were identified as the most likely potential sources of releases that could possibly impact the Property.

Listed Facility Name/Address	Database Listing	Distance/Direction from Property
COVEV J A 4901 Sunset Boulevard Los Angeles, CA	EDR Hist Auto	32 feet / 0.006 miles southeast
This site was listed as a gasoline and oil service station in 1937 but no pertinent information is included under this listing.		
Schmitt Gustav 4874 Sunset Boulevard Los Angeles, CA	EDR Hist Auto	221 feet / 0.042 miles east/southeast (cross-gradient to the Property)
The site was reportedly a gasoline service station and automotive repair facility between 1924 and 1942. No further information was provided.		
Hester J G 5001 Sunset Boulevard Los Angeles, CA	EDR Hist Auto	472 feet / 0.089 miles west (cross-gradient to the Property)
The site was reportedly a gasoline service station and automotive repair facility between 1933 and 1942. No further information was provided.		
Swift Richard 5000 Sunset Boulevard Los Angeles, CA	EDR Hist Auto	564 feet / 0.107 miles west/southwest (cross-gradient to the Property)
The site was reportedly a gasoline service station and automotive repair facility in 1942. No further information was provided.		
Advanced Auto Clinic Inc ARA Shell Service Ara Kessedjian	CA Hist UST UST EDR Hist Auto	566 feet / 0.107 miles west (cross-gradient to the Property)

Listed Facility Name/Address	Database Listing	Distance/Direction from Property
Sunboa Inc. 5007 Sunset Boulevard Los Angeles, CA		
Currently an active ARCO gas station with four permitted USTs. The site was also listed as having a historical 8,000-gallon UST storing unleaded gasoline. The site was reportedly a gasoline service station and automotive repair facility from 1971 to the Present.		
ARCO Station #183 L&C ARCO USA Gasoline Thrifty #183 5025 Sunset Boulevard Los Angeles, CA	CA Hist UST EDR Hist Auto CA LUST	306 feet / 0.058 miles northwest (cross-gradient to the Property)
Currently, an active USA Gasoline station. The site was listed as having a historical 8,000-gallon UST storing regular gasoline, a 12,000-gallon UST storing unleaded and installed in 1978, a 10,000-gallon UST storing unleaded, a 6,000-gallon UST storing regular, and a 550-gallon waste oil UST. The site was reportedly a gasoline service station and automotive repair facility between 1969 and 2011. The LUST case at the site was closed in Jan. 2013 with the release listed as gasoline.		

2.3 LOCAL/REGIONAL ENVIRONMENTAL RECORDS

Stantec checked the following sources to obtain information pertaining to Property use and/or indications of releases that might impact the Property:

2.3.1 Local Health and Fire Department Records

Agency Name Contact Information	Finding
Custodian of Records, Los Angeles County Public Health Investigation (PHI) Via Facsimile: (323) 728-0217 January 11, 2019	A written request subject to the FOIA was submitted to the Los Angeles County Public Health Investigation to review their files regarding the Property. The information requested included file information regarding any records that indicate environmental concern at the Property. No agency records had been received at the time of this report. Pertinent information, if received, will be summarized in an addendum to the report.
City of Los Angeles Fire Department 200 N. Mail St., 17th Fl. Los Angeles, CA 90012 January 9, 2019	A written request subject to the FOIA was submitted to the Los Angeles City Fire Department of Downey, office of the City Clerk to review their files regarding the Property. The information requested included active and inactive hazardous materials file information, active/inactive UST files, and any records that indicate environmental concern at the Property. A response was received on January 14, 2019, indicating that after a thorough search, no records pursuant to the requests were identified.
City of Los Angeles Department of Building and Safety 201 N Figueroa St, Los Angeles, CA 90012	Stantec conducted a database search for building permits issued for the Property address. The records reviewed included over 150 building department records and permits issued between 1962 and 2016 to Kaiser Foundations Hospitals for the Property. The project descriptions on the permit applications ranged from minor repairs, upgrades, and modifications to major tenant improvements, remodeling and renovations. No activities related to hazardous materials or potential environmental conditions were noted in the permit applications.

2.3.2 State Environmental Department Records

Agency Name, Contact Information	Findings
Custodian of Records, Department of Toxic Substances Control Chatsworth Regional Office Via Facsimile: (818) 717-6526 January 9, 2019	A written request subject to the FOIA was submitted to the Department of Toxic Substances Control, Chatsworth Regional Office to review their files regarding the Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concern at the Property. A response was received on January 10, 2019 indicating that after a thorough search, no records pursuant to the requests were identified.
Custodian of Records, Department of Toxic Substances Control Cypress Regional Office Via Facsimile: (714) 484-5318 January 9, 2019	A written request subject to the FOIA was submitted to the Department of Toxic Substances Control, Cypress Regional Office to review their files regarding the Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concern at the Property. A response was received on January 10, 2019 indicating that after a thorough search, no records pursuant to the requests were identified.
Custodian of Records, Los Angeles Regional Water Quality Control Board Via e-mail: rb4-publicrecords @waterboards.ca.gov January 9, 2019	A written request subject to the FOIA was submitted to the Los Angeles Regional Water Quality Control Board to review their files regarding the Property. The information requested included file information regarding permits, hazardous materials, waste, complaints, violations, underground or aboveground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concern at the Property. A response was received on January 18, 2019 indicating that files were available for review. However, upon reviewing files at the Los Angeles RWQCB office on January 29, 2018, no records were found pertaining to the Property.

2.4 HISTORICAL RECORDS REVIEW

2.4.1 Aerial Photographs

Stantec reviewed historical aerial photographs of the Property. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The following table summarizes Stantec's observations of the reviewed historical aerial photographs. The aerial photographs are provided in **Attachment B**.

Year	Scale	Observations, Property and Adjoining Properties
1923	1" = 500'	The Property appears to be developed with a square shaped building and two small outbuildings. A driveway appears to extend onto the Property from Sunset Blvd. Adjacent and nearby properties appear to be undeveloped or dominantly contain residences. Barnsdall Park is present across Edgemont from the Property.
1928	1" = 500'	Specific structures on the Property are difficult to discern in the 1928 photograph. The adjacent property to the west appears to be undeveloped. Nearby properties appear to remain dominantly residential.
1938	1" = 500'	The Property appears to be developed, however the details are difficult to distinguish. The adjacent property to the west is undeveloped. Undeveloped portions of Barnsdall Park are present across Edgemont from the Property.
1948	1" = 500'	The Property appears to be developed with several structures including a square shaped building, a narrow rectangular structure, and three smaller buildings. The adjacent property to the west now appears to be developed. Undeveloped portions of Barnsdall Park remain across Edgemont from the Property.
1954	1" = 500'	The Property layout appears similar to the previous photograph, with five structures visible and a driveway leading onto the property from Sunset Blvd. The Kaiser Hospital has been developed across Edgemont from the Property
1964	1" = 500'	A large multi-story commercial building has been constructed at the Property. Parking areas are situated on the western and northern sides of the building. Further development has occurred at the Kaiser Los Angeles Medical Center across Edgemont to the east of the Property. Nearby properties along Sunset are now fully developed, primarily for commercial use.

Year	Scale	Observations, Property and Adjoining Properties
1972	1" = 500'	The Property is developed with the existing commercial medical building. Parking areas are visible to the north and west of the building. Kaiser developments associated with the Los Angeles Medical Center are present across Sunset to the south and across Edgemont to the east.
1985	1" = 500'	The Property and immediately surrounding land uses appear similar to the previous photograph, with the exception of a large commercial building constructed to the north of the Property.
1994	1" = 500'	The Property is fully developed with a medical building and the nearby properties along Sunset and Edgemont are developed with large commercial buildings, including Kaiser buildings of the Los Angeles Medical Center to the north, south, and east.
2005	1" = 500'	The layout of the buildings and improvements on the Property appears similar to the previous photograph.
2016	1" = 500'	The Property appears as it does currently with the two level parking lot on the north side of the medical building and the utility building to the west.

Aerial photograph source: The EDR Aerial Photo Decade Package

2.4.2 Historical City Address Directories

Stantec retained EDR to research available reverse city directories for the Property, in approximately five-year intervals, if available. EDR searched directories published by several sources between the years 1920 and 2014 for the subject Property addresses, and adjacent/adjoining addresses along Sunset Boulevard and the major cross streets. The following is a summary of Stantec's review of the address directory listings:

Street Address	Year	Property Listings
1505 Edgemont (the Property)	1967 to 1990	Variously listed as Southern California Permanente Medical Group, Kaiser Permanente Medical Care, and individual doctor's names.
1517 Edgemont	1951	Kenneth Geis
1519 Edgemont	1951	W G Black
1525 Edgemont	1929-1958	Various residents
1526 Edgemont	1962-2014	Southern California Permanente Medical Group Kaiser Permanente Medical Care Program Individual Doctor's names
1529 Edgemont	1951	Chas Hampton
1533 Edgemont	1951	Various residents
1539 Edgemont	1951	Norman Wright
1543 Edgemont	1951	Alva Leasure

Street Address	Year	Property Listings
4650 Sunset	1971 to 1986	Medical office building
4705 Sunset	1962 1976 1981	California Federal Savings and Loan
4725 Sunset	1981	Kaiser Permanente Medical Care Program
4733 Sunset	1981 1986	Kaiser Permanente Medical Care Program
4810 Sunset	1981 1986	Scientology Church of Dianetics Church of Scientology
4860 Sunset	1958 to 1990	Self Realization Church of All Religions Self Realization Fellowship Church
4867 Sunset	1958 to 1986	The Property is variously listed as Kaiser Permanente Medical Center, Southern California Permanente Medical Group, and Kaiser Foundation Hospital during this period.
4900 Sunset	1962 to 1986	Kaiser Permanente Medical Care Program
4904 Sunset	1962 1981 1986	Kaiser Permanente Medical Care Program
4918 Sunset	1924 1929 1942 1962 1981 1986	Gustav Verrier Aldo Freppoli Ralph Koehler Ivy Motel Kaiser Permanente Medical Care Program Kaiser Permanente Medical Care Program
4950 Sunset	1986	Kaiser Permanente Medical Care Program

The historical directory listings are provided in Attachment A

2.4.3 Historical Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide information on the history of prior land use and are useful in assessing whether there may be potential environmental contamination on or near the Property. These maps, which have been periodically updated since the late 19th century, often provide valuable insight into historical Property uses. However, specific facility details on the maps can be difficult to interpret and labels and notes often contain abbreviations.

The following table summarizes Stantec's observations of the reviewed historical Sanborn maps. The historical maps are provided in **Attachment C**.

Year	Scale	Observations, Property and Adjoining Properties
1919	1" = 500'	The Property is shown to be developed with a single small dwelling at the northeast corner of the parcel. Nearby properties across Sunset Blvd. and Edgemont St. are mostly undeveloped or contain residences. An Auto Repairing shop is located at 4850 Sunset Blvd., southeast across Sunset from the Property.
1950	1" = 500'	The eastern portion of the Property adjacent to Edgemont is labeled as Auto Repairing and Gas & Oil (4901 Sunset). The middle portion of the Property (4911 Sunset) contains a building labeled as "3 Flats" and a car garage. The western portion of the property (4915 Sunset) is developed with three small buildings and a car garage. The Auto Repairing shop located at 4850 Sunset Blvd. in 1919 is no longer shown. A gasoline and oil station is shown at the intersection of Sunset and Edgemont, southeast (across Sunset) from the Property.
1957	1" = 150'	The Property appears unchanged from the 1950 map with the eastern portion still labeled as Auto Repairing and Gas & Oil. Across Edgemont, the Kaiser Foundation Hospital has been developed. The gasoline and oil station at the intersection of Sunset and Edgemont, southeast (across Sunset) from the Property is also still shown.
1966	1" = 150'	The Property has been redeveloped with a building labeled as "Clinic" in the location of the former gas station on the southeast portion of the Property. A parking garage surrounds the medical building on the northern and western sides. To the east across Edgemont, the Kaiser Foundation Hospital on the Property has expanded. To the west along the north side of Sunset, two gas stations are located at 5009 and 5025 Sunset, two blocks west of the Property.
1970	1" = 150'	The layout of the Kaiser Foundation Hospital on the Property appears similar to the 1966 map.

Map source: The EDR Certified Sanborn Map Report

2.4.4 Historical Topographic Maps

Stantec reviewed historical USGS 7.5-Minute Topographic Maps (scale 1:24,000 and 1:62,500) of the Hollywood, Quadrangle to help identify past Property usage and areas of potential environmental concern. Copies of the historical maps are provided in **Attachment C**. The following table summarizes the maps reviewed and observations.

Year	Scale	Observations, Property and Adjoining Properties
1894 1896 1898 1900 1902	1:62,500 1:62,500 1:62,500 1:62,500 1:62,500	The Property is situated within the Prospect Park area and Sunset Boulevard does not extend to the Property location. The Hollywood and Cahuenga Valley Railroad is visible to the west of the Property. No individual structures are visible on the Property. No features of environmental concern are noted on or near the Property location.
1921	1:24,000	Near the Property, Sunset Boulevard and other major streets have been developed. The map appears to show a single structure on the southeastern portion of the Property. No features of environmental concern are noted on or near the Property location.
1928	1:24,000	The 1928 map shows increased development in the site area, including the historic Hollyhock House on Olive Hill to the northeast. The Property now appears to contain a structure on the western portion of the parcel, along Sunset. A second structure is shown on the northeastern portion of the parcel, along Edgemont.
1953	1:24,000	The property is within the Los Angeles corporate boundaries and individual structures, other than landmark buildings, are not shown. A rectangular building noted as a Hospital is shown across Edgemont from the Property and the larger Lebanon Hospital is shown to the south of the Property.
1966	1:24,000	No structures are shown on the Property. The Kaiser hospital across Edgemont has expanded and consist of an L-shaped building or complex. The Barnsdall House is shown to the northeast of the Property.
1981	1:24,000	No structures are shown on the Property. No features of environmental concern are noted on or near the Property location.
2012	1:24,000	No details regarding specific structures are provided on this map version. No features of environmental concern are noted on or near the Property location.

Name of maps and source: EDR Historical Topo Map Report

2.5 ELECTRONIC DATABASES

Publicly accessible electronic databases were searched by Stantec to better understand subsurface conditions in the vicinity of the Property and identify potential sources of impacts to soil and groundwater.

2.5.1 State Water Resources Control Board - GeoTracker Database

GeoTracker is a publicly accessible database operated by the California Environmental Protection Agency State Water Resources Control Board (SWRCB). The searchable database is utilized by State and local oversight agencies to track and archive data related to releases of hazardous substances. Using GeoTracker, Stantec identified sites within approximately 1,750-foot radius (1/3 mile) of the Property having at least one reported release of a hazardous material. A summary of results is presented below.

Open Leaking Underground Storage Tank (LUST) / Cleanup Program Sites
The following provides a summary of open LUST/Cleanup Program sites identified within a 1/3-mile radius of the Site. Only one open case was located within the search area:

- An open LUST Cleanup Site identified as Shell/Tesoro (former ARCO #5025) is located at 1630 N. Vermont Avenue, approximately 1,600 feet northeast of the Property. The RWQCB approved a revised Remedial Action Plan in October 2018 to address fuel hydrocarbons in soil and groundwater at the site. Groundwater flow direction at the site is towards the east/southeast, placing the site hydraulically cross-gradient from the Property. The dissolved hydrocarbon plumes, including benzene and MTBE, extend eastward from the site, beneath Hollywood Blvd.

Closed LUST/Cleanup Program Sites
The following provides a summary of closed LUST/Cleanup Program sites identified within a 1/3-mile radius of the Site:

- A closed LUST site at the Kaiser Permanente medical center at 8467 Sunset, across Edgemont St. from the Property. This case was granted closure on April 7, 1997. The contaminants of concern were reported as diesel.

- A closed LUST case identified as Thrifty #183 is located at 5025 Sunset Boulevard, approximately 700 feet west of the Property. This case was granted closure on January 7, 2013. The contaminants of concern were listed as gasoline.

- A closed LUST case identified as Hollywood Car Wash at 4810 Hollywood Blvd. is located approximately 1,300 feet northeast of the Property. This case was granted closure on January 22, 1997. The contaminants of concern were listed as gasoline.

- A closed LUST case identified as Edgemont Hospital at 4841 Hollywood Blvd. is located approximately 1,300 feet north of the Property. This case was granted closure on July 7, 1996. The contaminants of concern were listed as gasoline.

- A closed LUST case identified as Unocal #3837 at 4905 Hollywood Blvd. is located approximately 1,250 feet north of the Property. This case was granted closure on September 8, 1997. The contaminants of concern were listed as gasoline.

- A closed LUST case identified as Hollywood Gas at 4977 Hollywood Blvd. is located approximately 1,350 feet north/northwest of the Property. This case was granted closure on January 9, 1997. The contaminants of concern were listed as gasoline.

- A closed LUST case identified as Leslie's Service Station at 5101 Fountain Ave., approximately 1,600 feet southwest of the Property. This case was granted closure on July 15, 2016. The contaminants of concern were listed as gasoline.

Permitted Underground Storage Tank
The following provides a summary of USTs permitted through the Los Angeles County Fire Department that have been identified within a 1/3-mile radius of the Site:

- Eight active USTs are located within the search radius. The nearest offsite permitted USTs are at the Kaiser Permanente Medical Center at 4867 Sunset Blvd., approximately 300 feet northeast of the Property. The next closest USTs are at two active gas stations located at 5007 and 5025 Sunset, approximately 650 feet west of the Property.

2.5.2 EnviroStor

EnviroStor is a publicly accessible database operated by the State of California Department of Toxic Substances Control (DTSC). The searchable database contains information related to sites with contamination and/or sites where the DTSC's environmental oversight has been requested or required. Stantec utilized EnviroStor to obtain information relating to identified DTSC sites located within 1,750-foot radius of the Property.

- The only site listed in EnviroStor within the search radius distance was the Children's Hospital at 4650 Sunset Boulevard. The site was listed for a tiered permit not related to contamination or site cleanup.

3.0 SITE RECONNAISSANCE

A visit to the Property and its vicinity was conducted by Laura Butler of Stantec on January 23, 2019. Stantec was accompanied by a Kaiser representative during the Property visit. Figure 2 provides information about the Property and adjoining properties and the location of potential areas of environmental concern.

3.1 SITE RECONNAISSANCE METHODOLOGY

The site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions of the Property that may indicate the presence of environmental concerns. The reconnaissance of the Property was conducted by entering the building on the property, viewing representative interior areas, and by viewing exterior portions of the property including parking areas and storage/maintenance areas or structures. In general, Stantec utilized the following methodology to observe the Property:

- View the outer Property boundary as accessible by public thoroughfares.
- Visually observe accessible interior areas expected to be used by occupants or the public, maintenance and repair areas, utility areas, and a representative sample of occupied spaces, as applicable to the Property.
- View storage areas for bulk chemicals, hazardous materials, and compressed gases.

Weather conditions during the visit to the Property were clear and mostly sunny. There were no weather-related Property access restrictions encountered during the reconnaissance visit.

3.2 GENERAL DESCRIPTION AND OBSERVATIONS

The 1505 N. Edgemont medical office building has a total of seven levels with various medical departments/functions on each level. The ground level contains lobbies, registration, offices, Member Services, and the Diagnostic Breast Center. Diagnostic Imaging and X-Ray is located on the basement level. Level 1 includes the Pre-Admission Center, Social Medicine, Surgery Scheduling, and Pharmacy. Levels 2 through 5 includes departments such as Infectious Disease, Addiction Medicine, EEG Laboratory, Neurology, and Neurosurgery.

Limited parking is situated to the north of the building and is accessed from N. Edgemont Street. Electrical infrastructure, utilities, and a lower level parking area are located on the west side of the building.

Adjoining and adjacent properties are characterized by the following uses:

North: Kaiser Permanente parking structure.

DESKTOP ENVIRONMENTAL RECORDS REVIEW

4.0 INTERVIEWS

Stantec conducted interviews with the following individuals.

Name and Contact Information	**Relationship to Property**	**Key findings:**
Peter E. Zaragoza 323-783-7709	Kaiser Permanente General Superintendent - LAMC Capital Project Facilities Construction	During the site visit, Mr. Zaragoza stated that he was not aware of any past or current environmental conditions such as releases of hazardous materials or known contamination at the Property.
Daniel P. Weaver (323) 783-7734	Lead Engineer Kaiser Permanente LAMC	Mr. Weaver confirmed that there is no UST at the Property.

4.1 FINDINGS FROM INTERVIEW WITH PROPERTY REPRESENTATIVE

No indications of known environmental impairments or releases of hazardous materials or petroleum products at the Property were identified based on the information obtained.

5.0 SUMMARY, CONCLUSIONS, AND RECOMENDATIONS

On behalf of Kaiser Permanente (Kaiser), Stantec Consulting Services Inc. (Stantec) has completed a desktop environmental records review for the property located at 1505 N. Edgemont Street, Los Angeles, California (the "Property"). The environmental review was completed to evaluate the possible presence of environmental impacts that may have sourced from current and historical site activities, and/or operations associated with surrounding properties and facilities. Stantec understands that the intended use of the Property is continued medical facilities and infrastructure.

Stantec obtained historical sources of information to ascertain the past use of the Property and surrounding area and evaluate if past uses may have had the potential to impact environmental media beneath the Property. Governmental, regulatory, and other public records were evaluated to identify potential contributors to possible adverse environmental conditions in connection with the Property. During the review of historical records, Stantec attempted to identify uses of the Property from first developed use of the Property and that of surrounding properties, to the present. The following are conclusions from the records review.

- Prior to the current development as a medical office building, the Property was shown as developed with a small residential structure as early as 1919. By 1950, the eastern portion of the Property was a gas station and automotive repair business. The remainder of the Property contained cottages. By 1966, the Property had been redeveloped with a building labeled as a clinic with parking areas adjacent to the building. By 1970, the development layout of the Property resembled the current medical office building development. Building permits issued between 1962 and 2016 to Kaiser Foundations Hospitals were found for the Property.

- Past land uses on nearby properties that could pose an environmental threat to the Property include gas stations and/or auto repair shops at 4901, 5000, 5001, 5007, and 5025 Sunset Boulevard. The former auto repair shop and gas station listed as 4901 Sunset Boulevard corresponds to the Property.

- The Property is not listed in database sources as containing a permitted UST and the lead Kaiser engineer for the LAMC confirmed that there is no UST at the Property. The Property was identified as a past generator of hazardous waste. No records of environmental non-compliance or violations were found pertaining to the Property.

- The Property is located within the City of Los Angeles with multiple nearby listings of hazardous waste generators and sites with current or historic releases of hydrocarbons to soil and/or groundwater. Nearly all the nearby Leaking Underground Storage Tank sites have received regulatory case closure. Numerous active USTs are present at facilities in

the vicinity of the Property. Properly maintained and permitted USTs are not considered an imminent environmental threat to the Property.

5.1 RECOMMENDATIONS

Historical maps and directory listings identified nearby gas stations and/or auto repair shops located at 4901, 5000, 5001, 5007, and 5025 Sunset Boulevard were depicted as early as 1919-1923. These historical operations likely included handling of hazardous materials and petroleum products and generation of hazardous wastes, as well as possible underground leaks from UST systems. Currently, two of these locations, 5007 and 5025 Sunset Boulevard, are active gas stations. The USA Gasoline station at 5025 Sunset is also a closed LUST case.

During redevelopment of the Property, soil and soil vapor containing petroleum hydrocarbons, solvents, and other organic and inorganic contaminants could be encountered during grading, excavation of footings, underground utility installation, and other ground disturbing activities. Accordingly, Stantec recommends that a Soil Management Plan approach be implemented to address these environmental contingencies during ground disturbance and construction activities. The Soil Management Plan (SMP) would specify the roles, responsibilities, protocols, and procedures to be employed in the event that subsurface chemical impacts are indicated or encountered during redevelopment of the Property. Key functions of the SMP in the event of a discovery of subsurface impacts are to specify procedures for immediate notification to local oversight agencies, provide health and safety protocols to protect workers, site occupants, and the public, and to isolate and contain suspected impacted materials while chemical analysis of preliminary samples is conducted.

For new facilities that include occupied space, a vapor barrier is recommended if potential vapor encroachment conditions (VEC) are indicated or suspected during construction, for protection of future occupants. Such conditions could include soil impacted with volatile organic compounds (VOC) being left in place beneath the depth of ground disturbance for new construction, the presence of shallow groundwater containing VOC beneath the Property, or soil vapor migration from adjacent or nearby sites impacted with VOC. Given the proposed construction of a new medical office building at the Property, incorporation of a vapor barrier into the new building plans may be appropriate.

6.0 LIMITATIONS & CERTIFICATION

This report was prepared in accordance with the scope of work outlined in Stantec's contract and with generally accepted professional environmental consulting practices existing at the time this report was prepared and applicable to the location of the Property. It was prepared for the exclusive use of Kaiser, for the express purpose stated above. Any re-use of this report for a different purpose or by others not identified above shall be at the user's sole risk without liability to Stantec. To the extent that this report is based on information provided to Stantec by third parties, Stantec may have made efforts to verify this third party information, but Stantec cannot guarantee the completeness or accuracy of this information. No other warranties, expressed or implied are made by Stantec.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
KAISER PERMANENTE LO EPA ID:: CAD981396591	4867 W. SUNSET BLVD.	E 0 - 1/8 (0.055 mi.)	B12	23
KAISER PERMANENTE EPA ID:: CAD981396658	1515 N. VERMONT AVEN	E 1/8 - 1/4 (0.227 mi.)	L49	82

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/29/2018 has revealed that there are 17 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 17 CA LUST sites within approximately 0.5 miles of the target property.

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there is 1 CA CPS-SLIC site within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 9 CA UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 5 EDR Hist Auto

sites within approximately 0.125 miles of the target property.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

4900 SUNSET (Continued) **1000380325**

. Waste code: 151
. Waste name: Asbestos-containing waste

. Waste code: 221
. Waste name: Waste oil and mixed oil

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D010
. Waste name: SELENIUM

. Waste code: D011
. Waste name: SILVER

. Waste code: U188
. Waste name: PHENOL

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: D004
. Waste name: ARSENIC

SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D010
. Waste name: SELENIUM

KAISER PERMANENTE LOS ANGELES (Continued) **1007199251**

Site name: KAISER PERMANENTE LOS ANGELES MED CENTER
Classification: Large Quantity Generator

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D018
. Waste name: BENZENE

Violation Status: No violations found

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: D004
. Waste name: ARSENIC

. Waste code: D008
. Waste name: LEAD

Violation Status: No violations found
