Subject: **Phase I Environmental Site Assessment**
670 Mesquit Street, Los Angeles, California

Dear Ms. Fatemi:

This report presents the findings of a Phase I Environmental Site Assessment (ESA) completed by Rincon Consultants, Inc. for 4 the approximately 4-acre site located at 670 Mesquit Street (APN: 5164-017-002, -003, -006, and -008) in Los Angeles, California. The Phase I ESA was performed in accordance with our proposal and professional services agreement dated June 2, 2016.

The accompanying report presents our findings and provides an opinion regarding the presence of recognized environmental conditions. Our work program for this project is intended to meet the guidelines outlined in the American Society for Testing and Materials (ASTM), Standard Practice for Environmental Site Assessments: *Phase I Environmental Site Assessment Process* (ASTM Standard E-1527-13). Our scope of services, pursuant to ASTM practice, did not include any inquiries with respect to asbestos containing building materials, biological agents, cultural and historic resources, ecological resources, endangered species, health and safety, indoor air quality unrelated to releases of hazardous substances or petroleum products into the environment, industrial hygiene, lead-based paint, lead in drinking water, mold, radon, regulatory compliance, wetlands, or high voltage power lines.

Thank you for selecting Rincon for this project. If you have any questions, or if we can be of any future assistance, please contact us.

Sincerely,
RINCON CONSULTANTS, INC.

Sarah A. Larese
Senior Environmental Scientist

Walt Hamann, PG, CEG, CHG
Vice President, Environmental Services

EXECUTIVE SUMMARY

This report presents the findings of a Phase I Environmental Site Assessment (ESA) for the 4.4-acre property identified as 670 Mesquit Street located south of E 6th Street, north of E 7th Street and west of the Los Angeles River in Los Angeles, California (Figure 1, Vicinity Map). The subject property includes the following addresses 658, 685-689, 670 and 690 Mesquit Street. The Phase I ESA was performed for Plus Development Group by Rincon Consultants, Inc. (Rincon). Plus Development Group has requested this assessment and will use the assessment to provide information for the purposes of entitlement of a new mixed-use building. The subject property is currently occupied by Rancho Cold Storage, Hidden Villa Ranch, Integrated Food Service and Harvey's Produce and is utilized for storage of refrigerated and dry food. Railroad tracks are present adjacent to the northeastern portion of the subject property.

Rincon performed a reconnaissance of the subject property on August 1, 2016. The purpose of the reconnaissance was to observe existing subject property conditions and to obtain information indicating the presence of recognized environmental conditions in connection with the subject property. The subject property is occupied by food warehouses, and includes refrigerated storage and dry storage. Two clarifiers were observed at the subject property. One clarifier is located on the east side of the 670 Mesquit Street building in the vicinity of several cooling towers. The purpose of the clarifier is to collect water from the cooling towers and oil from the engine room. The second clarifier is located in the 658 Mesquit Street building and is used to collect any food present when the production room is washed down. The clarifiers have four -stages, are concrete-lined and are connected to the municipal sewer system. The clarifiers are cleaned out on an as-needed basis. A 110-gallon aboveground storage tank (AST) containing waste oil was observed on the east side of the 670 Mesquit Street building in the vicinity of the cooling towers. Oil appeared to have been spilled around the top of the AST, and minor staining was observed on the concrete around the tank. The AST was situated in close proximity to a drain. However, the drain is reportedly connected to the onsite clarifier. Two empty 55-gallon drums were observed near the waste oil AST and were reportedly previously used for waste oil collection. Minor staining was observed in the vicinity of the drums. Railroad tracks are present adjacent to the the northeastern portion of the subject property.

The subject property is located in an area that is primarily comprised of industrial, residential, and commercial land uses. Properties in the vicinity of the subject property include a railroad yard, mixed-use lofts, warehouses, and restaurants.

Environmental Data Resources, Inc. (EDR) was contracted to provide a database search of public lists of sites that generate, store, treat or dispose of hazardous materials or sites for which a release or incident has occurred. The EDR search was conducted for the subject property and included data from surrounding sites within a specified radius of the property. The subject property was listed on the CA EMI database indicating that air emissions were regulated at the subject property. Several adjacent properties were also listed in one or more databases searched by EDR. However, based on the research conducted as part of this Phase I ESA, the surrounding specified properties are not expected to be adversely impacting soil or groundwater beneath the subject property.

Historical sources reviewed as part of the Phase I ESA include aerial photographs, Sanborn maps, topographic maps, city directories and building permits. The historical sources reviewed indicate the majority of the subject property has been used as a cold storage facility since at least 1890. Portions of the property have been used as dwellings, a barn, a wagon shed, a juice factory, a quilt factory, cold storage, and an automotive painting facility. Underground storage tanks (USTs) containing petroleum are depicted on the southeastern portion of the site in 1890 through 1950. Gas and oil storage is depicted on the Sanborn maps in 1959 through 1970. A transformer room, fuel oil use and a railroad spur are also identified on the subject property in the historical sources reviewed. City directories indicate that the subject property was occupied by a sheet metal manufacturing company from 1951 to 1958, and by food production warehouses and distribution facilities, and cold food storage warehouses from the early 1950s to present day.

Based on the findings of this Phase I ESA, it is our opinion that there are Recognized Environmental Conditions (RECs) and potential RECs in connection with the property as follows:

Recognized Environmental Conditions

1. Two former 150-gallon petroleum USTs and associated piping identified on the subject property on the Sanborn maps.
2. Former Gas and Oil facility identified on Sanborn maps.

Potential Recognized Environmental Condition

1. Transformer room identified on the subject property on Sanborn maps.
2. Use of fuel oil identified on the subject property on Sanborn maps.
3. Existing adjacent railroad tracks and former railroad spur on the northern portion of the subject property.
4. Former spray painting facility on the subject property at 685-689 Mesquit Street.
5. Former sheet metal shop on the subject property at 670 Mesquit Street.
6. Stained concrete near the waste oil AST and drums and the presence of an oil/water separator (clarifier) on the subject property.
7. The former use of the subject property for manufacturing.

To evaluate the potential subject property impact associated with the identified RECs and potential RECs, we recommend a Phase II Environmental Site Assessment consisting of soil matrix and soil vapor sampling be conducted at the subject property.

Based on our review of historical sources, the existing structures on the subject property were constructed prior to 1960. Although not considered a recognized environmental condition (REC), pursuant to ASTM E 1527-13, structures constructed prior to 1978 may contain lead based paint (LBP) and structures constructed prior to 1981 may contain asbestos containing building materials (ACBM). Based on the age of the onsite structures, there is the potential that LBP and ACBM were used during the construction of the onsite structures. To determine if LBP and ACBM are present in the onsite structures, LBP and ACBM surveys should be conducted.

INTRODUCTION

This report presents the findings of a Phase I ESA conducted for the 4.4-acre property identified as 670 Mesquit Street located south of E 6th Street, north of E 7th Street and west of the Los Angeles River in Los Angeles, California (Figure 1, Vicinity Map). The subject property includes the following addresses 658, 685-689, 670 and 690 Mesquit Street. The Phase I ESA was performed by Rincon Consultants, Inc. (Rincon) for Plus Development Group and RCSVE LLC in general conformance with ASTM E 1527-13, our contract and proposal dated June 2, 2016. The following sections present our findings and provide our opinion as to the presence of recognized environmental conditions.

PURPOSE

Plus Development Group and RCSVE LLC have requested this assessment and will use the assessment to provide information for the purposes of purchasing the subject property. The purpose of this Phase I ESA was to assess the environmental conditions of a property, taking into account commonly and reasonably ascertainable information and to qualify for Landowner Liability Protections under the Brownfields Amendments to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

A recognized environmental condition (REC) is defined pursuant to ASTM E 1527-13 as,

> *"the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; 3) under conditions that pose a material threat of a future release to the environment".*

A Controlled REC is defined pursuant to ASTM E 1527-13 as,

> *"a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report".*

A Historical REC is defined pursuant to ASTM E 1527-13 as,

> *"a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by regulatory authority, without subjecting the property to any required controls (for example, use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the*

regulatory criteria). If the EP [Environmental Professional] considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition".

A de minimis condition is defined pursuant to ASTM E 1527-13 as,

"*a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions*".

SCOPE OF SERVICES

The scope of services conducted for this study is outlined below:

- Perform a reconnaissance of the site to identify obvious indicators of the existence of hazardous materials.
- Observe adjacent or nearby properties from public thoroughfares in an attempt to see if such properties are likely to use, store, generate, or dispose of hazardous materials.
- Obtain and review an environmental records database search from Environmental Data Resources, Inc. (EDR) to obtain information about the potential for hazardous materials to exist at the subject property or at properties located in the vicinity of the subject property.
- Review files for the subject property and immediately adjacent properties as identified in the EDR report, as applicable.
- Review the current U.S. Geological Survey (USGS) topographic map to obtain information about the subject property's topography and uses of the subject property and properties in the vicinity of the subject property.
- Review additional pertinent record sources (e.g., California Division of Oil and Gas records, online databases of hazardous substance release sites), as necessary, to identify the presence of RECs at the subject property.
- Review reasonably ascertainable historical resources (e.g., aerial photographs, topographic maps, fire insurance maps, city directories) to assess the historical land use of the subject property and adjacent properties.
- Provide a property owner interview questionnaire to the property owner or a designated subject property representative identified to Rincon by the client.
- Provide a user interview questionnaire to a representative of the client, the user of the Phase I ESA.
- Conduct interviews with other property representatives (e.g., key site manager, occupants), as applicable.
- Review client-provided information (e.g., previous environmental reports, title documentation), as applicable.

SIGNIFICANT ASSUMPTIONS, LIMITATIONS, DEVIATIONS, EXCEPTIONS, SPECIAL TERMS, AND CONDITIONS

This work is intended to adhere to good commercial, customary, and generally accepted environmental investigation practices for similar investigations conducted at this time and in this geographic area. No guarantee or warranties, expressed or implied are provided. The findings and opinions conveyed in this report are based on findings derived from a site reconnaissance, review of an environmental database report, specified regulatory records and historical sources, and comments made by interviewees. This report is not intended as a comprehensive site characterization and should not be construed as such. Standard data sources relied upon during the completion of Phase I ESAs may vary with regard to accuracy and completeness. Although Rincon believes the data sources are reasonably reliable, Rincon cannot and does not guarantee the authenticity or reliability of the data sources it has used. Additionally, pursuant to our contract, the data sources reviewed included only those that are practically reviewable without the need for extraordinary research.

Rincon has not found evidence that hazardous materials or petroleum products exist at the subject property at levels likely to warrant mitigation. Rincon does not under any circumstances warrant or guarantee that not finding evidence of hazardous materials or petroleum products means that hazardous materials or petroleum products do not exist on the subject property. Additional research, including surface or subsurface sampling and analysis, can reduce Plus Development Group's risks, but no techniques commonly employed can eliminate these risks altogether.

In addition, pursuant to ASTM E 1527-13 practice, our scope of services did not include any inquiries with respect to asbestos containing building materials, biological agents, cultural and historic resources, ecological resources, endangered species, health and safety, indoor air quality unrelated to release of hazardous substances or petroleum products into the environment, industrial hygiene, lead-based paint, lead in drinking water, mold, radon, regulatory compliance, wetlands, or high voltage power lines.

USER RELIANCE

Plus Development Group and RCSVE LLC have requested this assessment and will use the assessment to provide information for the purposes of entitlement of a new mixed-use building. This Phase I ESA was prepared for use solely and exclusively by Plus Development Group and RCSVE LLC. No other use or disclosure is intended or authorized by Rincon. Also, this report is issued with the understanding that it is to be used only in its entirety. It is intended for use only by the client, and no other person or entity may rely upon the report without the express written consent of Rincon.

SITE DESCRIPTION

Location

The subject property is a 4.4-acre property located on the east side of Mesquit Street between E 6th Street and E 7th Street, and on the west side of Mesquit Street between Jesse Street and E 7th Street in Los Angeles, California (Figure 2, Site Map). The property is identified as Assessor Parcel Numbers (APNs) 5146-016-009 and -010, 5164-017-002, -003, -006, and -008, 5164-018-009, and a portion of 5164-016-803. The subject property also includes the following addresses 658, 685-689, 670 and 690 Mesquit Street.

Subject Property and Vicinity General Characteristics

The subject property is currently developed with warehouses used for refrigerated and dry food storage.

The subject property is located in an area that is primarily comprised of industrial, residential, and commercial land uses. Properties in the vicinity of the subject property include a railroad yard, mixed-use lofts, warehouses, and restaurants. The current adjacent land uses are described in Table 1 and depicted on Figure 3, Adjacent Land Use Map.

Table 1 - Current Uses of Adjacent Properties

Area	Use
Northern Properties	E 6th Street followed by a vacant lot and Los Angeles Department of Water and Power easement with power lines.
Eastern Properties	Railroad yard
Southern Properties	E 7th Street, followed by Bread Lounge and multi-family residences
Western Properties	Mixed-use lofts and Mesquit Street, followed by food warehouses and Los Angeles Department of Water and Power River Switching Station

Descriptions of Structures, Roads, Other Improvements on the Site

The subject property is occupied by warehouses utilized for cold and dry food storage. According to the site manager for Rancho Cold Storage, Rancho Cold Storage occupies 670 and 690 Mesquit Street. Hidden Villa Ranch and Integrated Food Service occupy 658 Mesquit Street, and Integrated Food Service and Harvey's Produce occupy 685-689 Mesquit Street. A large, multi-room warehouse is located on the east side of Mesquit Street. Up to four stories are present throughout the building, as well as a basement. The warehouses were constructed in stages. Based on available Sanborn Maps researched as part of this Phase I ESA, portions of the building were constructed by 1890. A smaller, one-story food storage warehouse is located on the west side of Mesquit Street, adjacent to E 7th Street. The warehouse on the west side of Mesquit Street was constructed in 1911. A storage area is present on the north side of the subject property, east of Mesquit Street and south of E 6th Street. The area appeared to be used as staging for ongoing demolition of the E. 6th Street Bridge. Additional improvements include paved and concrete parking areas and concrete walkways.

A metal fence is present along the eastern property boundary. A chain-link fence surrounds part of the northern portion of the subject property. Access to the subject property is available from driveways on Mesquit Street.

The Los Angeles Department of Water and Power provides water and electrical service to the subject property. The City of Los Angeles provides sewer service. The Southern California Gas Company provides natural gas service. Private vendors provide solid waste collection and disposal services.

USER PROVIDED INFORMATION

As described in ASTM E 1527-13 Section 6, Plus Development Group was interviewed for actual knowledge pertaining to the subject property to help identify recognized environmental conditions in connection with the subject property. Derek Sanders, Project Manager with Plus Development Group, completed the User Questionnaire as provided by ASTM Appendix X3 prior to completion of the site reconnaissance. A copy of the completed questionnaire is included as Appendix A.

Based on our review of the completed questionnaire, Mr. Sanders did not review the following sources of information and is unaware of information regarding the following:

- recorded land title records (or judicial records, where appropriate) that identify any environmental liens filed or recorded against the subject property
- recorded land title records (or judicial records, where appropriate) that identify any activity and land use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the subject property under federal, tribal, state or local law

Based on our review of the completed questionnaire, Mr. Sanders is unaware of information regarding the following:

- specialized knowledge or experience related to the subject property or nearby properties
- reduction in value for the subject property relative to any known environmental issues
- obvious indicators that point to the presence or likely presence of releases at the subject property
- pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the subject property
- pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the subject property
- notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products

Additionally, Mr. Sanders indicated that the purchase price being paid for the subject property reasonably reflects the fair market value of the property, and he is not aware of a reduction in value for the subject property relative to any known environmental issues.

Based on our review of the completed questionnaire, Mr. Sanders reviewed the Title Report for the subject property and he indicated he is unaware of information pertaining to environmental cleanup liens or AULs for the subject property.

RECORDS REVIEW

PHYSICAL SETTING SOURCES

Topography

The current USGS topographic map (Los Angeles, California Quadrangle, 1994, photorevised 1981) indicates that the subject property is situated at an elevation of about 245 feet above mean sea level with topography sloping down to the south-southeast. The adjacent topography consists of relatively flat land.

Geology and Hydrogeology

Site Geology

According to the California Geological Survey, Preliminary *Geologic Map of the Los Angeles 30x60 Quadrangle, California, 2005*, the subject property is underlain by Quaternary-aged alluvial fan deposits, which are described as unconsolidated boulder, cobbley, gravelly, sandy, or silty alluvial deposits on active and recently active alluvial fans and in some connected headward channel segments.

According to the City of Los Angeles Zoning Information and Map Access System (ZIMAS)[1], the site is not located within a methane zone.

Regional Groundwater Occurrence and Quality

The site is located within the Coastal Plain of Los Angeles Groundwater Basin - Central Basin. The basin covers an area of 277 square miles in the southeastern part of the Coastal Plain of the Los Angeles groundwater basin. The Central Basin is bounded to the north by a surface divide known as the La Brea high, on the northeast and east by emergent less permeable Tertiary rocks of the Elysian, Repetto, Merced, and Puente Hills. The boundary between the Central Basin and Orange County Groundwater Basin roughly follows Coyote Creek, along the southeast side of the Basin. The southwest boundary is formed by the Newport Inglewood fault system. Groundwater occurs in Holocene and Pleistocene age sediments at relatively shallow depths. The main productive freshwater-bearing sediments are contained within Holocene alluvium and Pleistocene Lakewood and San Pedro Formations. Groundwater flows southwestward from recharge areas in the northeast towards the Pacific Ocean, although groundwater

[1] http://zimas.lacity.org/

pumping has decreased subsurface outflow to the West Coast Subbasin. Folding, faulting, and uplift throughout the Central Basin create restrictive structures.

According to the *Removal Action Work Plan, Butterfield Property, 590 South Santa Fe Avenue, Los Angeles, California* prepared by Arcadis U.S., Inc. and dated August 28, 2015, depth to groundwater in the vicinity of the subject property is approximately 65 feet below ground surface with a flow direction towards the west-southwest. This property is located adjacent to the subject property to the north, across E 6th Street.

STANDARD ENVIRONMENTAL RECORD SOURCES

Environmental Data Resources, Inc. (EDR) was contracted to provide a database search of public lists of sites that generate, store, treat or dispose of hazardous materials or sites for which a release or incident has occurred. The EDR search was conducted for the subject property and included data from surrounding sites within specified radii of the property. A copy of the EDR report, which specifies the ASTM search distance for each public list, is included as Appendix B. As shown on the attached EDR report, federal, state and county lists were reviewed as part of the research effort. Please refer to Appendix B for a complete listing of sites reported by EDR and a description of the databases reviewed.

The Map Findings Summary, included in the EDR report, provides a summary of the databases searched, the number of reported facilities within the search radii, and whether the facility is located onsite or adjacent to the subject property. The following information is based on our review of the Map Findings Summary and the information contained in the EDR report.

Subject Property

The subject property was listed on the following database:

- CA EMI database as American Fiber Ind. at 689 Mesquit Street

Regulatory agency files reviewed for the subject property are discussed in the Additional Environmental Record Sources section of this report.

In addition, a review of the National Pipeline Mapping System (NMPS) online Public Map Viewer[2] indicates that no gas transmission pipelines or hazardous liquid pipelines are located on the subject property. However, a hazardous liquid pipeline is present within the railroad right-of-way adjacent to the east of the subject property, and a natural gas pipeline is present within E 7th Street, adjacent to the south of the subject property.

Offsite Properties

Offsite properties listed by EDR fall under two general categories of databases: those reporting unauthorized releases of hazardous substances (e.g., LUST, National Priority List [a.k.a. Superfund sites], and corrective action facilities), and databases of businesses permitted to use

[2] https://www.npms.phmsa.dot.gov/PublicViewer/

hazardous materials or generate hazardous wastes, for which an unauthorized release has not been reported to a regulatory agency.

Rincon reviewed the EDR Radius Map and select detailed listings to evaluate their potential to impact the subject property, based on the following factors:

- Reported distance of the facility from the subject property
- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes
- Reported case type (e.g., soil only, failed UST test only)
- Reported substance released (e.g., chlorinated solvents, gasoline, metals)
- Reported regulatory agency status (e.g., case closed, "no further action")
- Location of the facility with respect to the reported groundwater flow direction (discussed in the Geology and Hydrogeology section of this report)

Facilities/properties that were interpreted by Rincon to be of potential environmental concern to the subject property, based on one or more of the factors listed above, are summarized in Table 2. In accordance with ASTM, contamination migration pathways in soil, groundwater, and soil vapor were considered in our analysis of offsite properties of potential environmental concern.

Table 2 - EDR Listing Summary of Select Sites Within One-Eighth Mile of the Subject Site

Site Name	EDR Site ID	Site Address	Distance from Subject Property (miles)	Database Reference
Subject Property				
American Fiber Industries	A1	689 Mesquit Street	Subject Property	CA EMI
Adjacent Properties				
Apex Wholesale Produce Inc.	A2	1580 Jesse Street	Adjacent Property ï West	CA SWEEPS UST, CA HIST UST, CA FID UST, CA WDS
Alfred A Grant Company, Inc.	3	2138 E. 7th Street	Adjacent Property - South	CA SWEEPS, CA FID UST
Bailey and Schmitz Co.	B4, B5	2101 E. 7th Street	Adjacent Property ï West	SEMS-Archive, CA Envirostor, CA Hist Cortese
Riggs, E W	B6	2100 E. 7th Street	Adjacent Property ï South	EDR Historical Auto Stations

Santa Fe/W.A. Grant	I31	2144 East 7th St	Adjacent Property - Southeast	CA EnviroStor, CA VCP

Regulatory agency information reviewed for the listings in the table above are summarized in the Additional Environmental Record Sources section of this report.

Orphan Listings

EDR reported 394 orphan or unmapped site listings, which EDR is unable to plot due to insufficient address information. Based on Rincon's review of the limited address information or site descriptions for the orphan listings, none of the listings are expected to impact the subject property.

ADDITIONAL ENVIRONMENTAL RECORD SOURCES

Review of Agency Files

As a follow-up to the database search, Rincon reviewed regulatory information for facilities within the specified search radii that were interpreted to have the potential to impact the subject property, based on one or more factors previously discussed (e.g., distance, open case status, upgradient location, soil vapor migration).

The following is a summary of our review of regulatory information obtained from review of online sources (e.g., SWRCB GeoTracker database, DTSC EnviroStor database) and/or files requested from the applicable regulatory agency, as described below.

Subject Property

The subject property was listed in one database searched by EDR: CA EMI. The listing indicates that air emissions were regulated at the subject property. In 1987 approximately four tons of particulate matter (ten micrometers and smaller) were released, and in 1990 approximately one ton was released. According to the South Coast Air Quality Management District (SCAQMD) Facility Information Detail (FIND) website, a textile goods facility was present which is currently out of business. The facility was permitted for baghouses (i.e. dust collectors). No violations were identified on the SCAQMD website. Based on the nature of the operation, the CA EMI listing for the subject property does not represent an environmental concern for the subject property.

Rincon submitted a request for public records via email on July 29, 2016 to the Los Angeles Regional Water Quality Control Board (LARWQCB) for information pertaining to unauthorized releases of hazardous substances or petroleum products pertaining to the subject property. The LARWQCB responded stating that no records are on file for the subject property.

Rincon submitted a request for public records via email on July 29, 2016 to the Los Angeles Department of Public Health (LADPH) for information pertaining to the storage, use, or unauthorized release of hazardous substances or petroleum products at the subject property. In several letters dated August 11 and 12, 2016, the LADPH indicated they do not have any records on file for the subject property.

Rincon submitted a request for public records via email on July 29, 2016 to the Los Angeles Fire Department (LAFD) UST and Hazmat divisions. The LAFD UST division responded and indicated that they do not have any records for the subject property.

The LAFD Hazmat division provided hazardous materials inventories for the subject property. Hazardous materials currently or previously stored at the subject property include cleaners, propane, acetylene compressed gas, anhydrous ammonia (4,200 pounds per year), machine oil (365 gallons/year), compressed oxygen, and water-based paint. In addition, the LAFD provided a redacted copy of the hazardous materials management plan for Rancho Cold Storage.

On July 29, 2016, Rincon reviewed the State Water Resources Control Board (SWRCB) GeoTracker website and the Department of Toxic Substances Control (DTSC) EnviroStor website for information pertaining to unauthorized releases of hazardous substances or petroleum products at the subject property. The subject property is not listed in the GeoTracker or EnviroStor databases.

Adjacent Properties
Eight adjacent properties were listed in databases searched by EDR:

- ***Apex Wholesale Produce, Inc.* – 1580 Jess Street, Los Angeles:** This property is located adjacent to the west of the subject property. The facility is listed in the CA SWEEPS UST, CA Hist UST, CA FID UST, and CA WDS database. These listings are not indicative of a release, however, they do indicate that petroleum products have been stored at the Apex property. However, the facility does not appear on any databases indicating an unauthorized release has occurred. Furthermore, the facility is located hydrologically cross-gradient from the subject property (with respect to the groundwater flow direction to the west-southwest). Therefore, the Apex facility is not expected to represent a significant environmental concern for the subject property.

- ***Alfred A Grant Company, Inc.* – 2138 E. 7th Street, Los Angeles:** This property was formerly located adjacent to the south of the subject property across E. 7th Street. The facility is listed in the CA SWEEPS UST and CA FID UST databases. These listings are not indicative of a release, however, they do indicate that petroleum products have been stored at the Grant property. However, the facility does not appear on any databases indicating an unauthorized release has occurred. Furthermore, the facility is located across 7th Street

from the subject property and hydrologically downgradient (with respect to the groundwater flow direction to the west-southwest). Therefore, the Grant facility is not expected to represent a significant environmental concern for the subject property.

- ***Bailey and Schmitz Co.* – 2101 E. 7th Street, Los Angeles:** This property is located adjacent to the west of the subject property. The facility is listed in the SEMS-Archive and CA Hist Cortese databases. According to the EDR report, the facility was evaluated in 1989 for placement on the National Priority List (NPL) and did not qualify. The facility was also evaluated by DTSC due to the disposal of oil into drums and the ground and disposal of auto parts. Potential contaminants of concern (COC) were waste oil, mixed oil, and pesticide containers, with potential contamination of soil only. No COCs were confirmed, and the facility was granted no further action in 1988. Furthermore, the Bailey and Schmitz facility is located hydrologically downgradient (with respect to the groundwater flow direction to the west-southwest). Based on the downgradient location, no further action status, and nature of potential contamination, the Bailey and Schmitz facility is not expected to represent a significant environmental concern for the subject property.

- ***Riggs, E W* – 2100 E. 7th Street, Los Angeles:** This property was formerly located adjacent to the south of the subject property across E. 7th Street. The facility is listed in the EDR Historical Auto Stations database as a gasoline and oil service station in 1929. The listing is not indicative of a release, however, it indicates that hazardous substances and/or petroleum products may have been used at the facility. However, the facility does not appear on any databases indicating the use, storage or disposal of hazardous substances or that an unauthorized release has occurred. Furthermore, the facility is located across 7th Street from the subject property and hydrologically downgradient (with respect to the groundwater flow direction to the west-southwest). Therefore, the facility is not expected to represent a significant environmental concern for the subject property.

- ***Dean and Associates* – 700 South Santa Fe Avenue, Los Angeles:** This property is located adjacent to the south of the subject property across E. 7th Street. The facility is listed in the CA Response, CA Hist Cal-Sites, and CA Bond Exp. Plan databases. According to the EDR report, the Dean property formerly operated as a recycling – scrap metal facility. Contaminants of concern were listed as PCBs affecting soil only. Approximately 5,000 gallons of liquid were treated and discharged and 570 cubic yards of hazardous solids were removed. The facility was certified as having been remedied satisfactorily under DTSC oversight in 1987. Furthermore, the facility is located across 7th Street from the subject property and hydrologically downgradient (with respect to the groundwater flow direction to the west-southwest). Based on the downgradient location, case status, and nature of contaminant, the Dean facility is not expected to represent a significant environmental concern for the subject property.

- ***Lumary's Tire Service Inc.* – 600 South Santa Fe Avenue, Los Angeles:** This property is located adjacent to the west of the subject property. The facility is listed in the CA SWEEPS UST and CA FID UST databases. These listings are not indicative of a release, however, they do indicate that petroleum products have been used and stored at the Lumary property. However, the facility does not appear on any databases indicating an unauthorized release has occurred. Furthermore, the facility is located hydrologically

cross-gradient from the subject property (with respect to the groundwater flow direction to the west-southwest). Therefore, the Lumary facility is not expected to represent a significant environmental concern for the subject property.

- ***Sun Chemical Corporation/MTA/Butterfield/Basf Inmont* – 590 South Santa Fe Avenue, Los Angeles:** The property is located adjacent to the north of the subject property across E. 6th Street. The facility is listed in the CA Hist UST, CA Haznet, CA Hist Cal-Sites, EnviroStor, VCP, NPDES, Hist Cortese, LUST, SLIC, RCRA NonGen/NLR, Finds, and Echo databases. According to information provided in the EDR report, the property was historically used for paint and chemical manufacturing. Soil and groundwater contamination have been identified, including petroleum hydrocarbons, BTEX, and chlorinated hydrocarbons. The facility is located hydrologically cross-gradient from the subject property (with respect to the groundwater flow direction to the west-southwest). Documents identified for this adjacent site on the EnviroStor database were reviewed.

  According to information reported in the *Groundwater Monitoring Report, Fourth Quarters 2012 and 2013, 590 South Santa Fe Avenue, Los Angeles, California,* dated February 6, 2014 and prepared by Avocet Environmental, Inc., the facility was previously used for the production of lacquer, printing ink, and paint. Multiple USTs were previously present at the facility. The primary contaminants of concern were toluene and xylenes, however, TPHg, benzene, ethyl benzene, and low concentrations of chlorinated solvents have been detected. Depth to groundwater has been documented at approximately 65 feet below ground surface with a flow direction towards the west-southwest.

  Based on groundwater data reviewed, it appears that one of the sources of contamination was located approximately 300 feet to the northwest of the subject property. During the most recent groundwater monitoring event, BTEX was not detected above laboratory reporting limits in MW-11, the closest groundwater monitoring well to the subject property, and only low concentrations of 1,1-dichloroethane and 1,1-dichloroethene were detected. The well is located approximately 150 feet northwest of and hydrologically cross-gradient from the northwest corner of the subject property.

  According to the *Removal Action Work Plan, Butterfield Property, 590 South Santa Fe Avenue, Los Angeles, California,* dated August 28, 2015, prepared by Arcadis, assessment and remediation is ongoing at the facility. Additional investigation is proposed for a southern UST area located about 250 feet northwest of the subject property. According to Arcadis, the lateral extent of deep VOC and TPH-impacted soil, and TPH impacted groundwater in the southern UST area is about 250 feet northwest of the subject property. Furthermore, relatively low concentrations of VOCs were detected in soil vapor collected from the soil vapor probe closest to the subject property (located about 225 feet north-northwest of the subject property). Based on data reviewed, this adjacent property to the north is not expected to significantly impact the soil or groundwater beneath the subject property.

- ***Santa Fe/W.A. Grant* – 2144 E. 7th Street, Los Angeles:** This property is located adjacent to the southeast of the subject property across 7th Street. The facility is listed in the EnviroStor and VCP databases. According to the EDR database report, the property was formerly used for foundry operations. The Santa Fe facility was contaminated with elevated levels

of heavy metals, including lead, copper, and zinc. In addition, a UST was removed without regulatory oversight, and evidence of a release was identified. In 1996 a Preliminary Endangerment Assessment was submitted to the DTSC. Based on the information presented, DTSC determined that hazardous constituents remaining at the site did not constitute a threat to human health or the environment and granted No Further Action. Furthermore, the facility is located across 7th Street from the subject property and hydrologically cross-gradient from the subject property (with respect to the groundwater flow direction to the west-southwest). Based on the cross-gradient location and No Further Action status, the Santa Fe facility is not expected to represent a significant environmental concern for the subject property.

Upgradient Release Sites
None of the upgradient listed sites are release sites.

KNOWN OR SUSPECT CONTAMINATED RELEASE SITES WITH POTENTIAL VAPOR MIGRATION

The EDR report was reviewed to identify nearby known or suspect contaminated sites that have the potential for contaminated vapor originating from the nearby site to be migrating beneath the subject property. Based on the ASTM E 2600-10, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, the following minimum search distances were initially used to determine if contaminated soil vapors from a nearby known or suspect contaminated site have the potential to be migrating beneath the subject property:

- 1/10 mile (528 feet) for petroleum hydrocarbons
- 1/3 mile (1,760 feet) for other contaminants of concern (COCs)

If upgradient known or suspect contaminated sites are located within the above referenced distances from the subject property, online resources are reviewed to determine the extent of the contaminated plume at those sites. The following describes search distances for contaminated plumes of petroleum hydrocarbons and other COCs.

Petroleum Hydrocarbons

Based on our review of the EDR report information, as well as review of additional agency records as indicated above, there are no adjacent or upgradient known or suspect petroleum hydrocarbon impacted soil or groundwater plumes located within 30 feet of the subject property.

Other COCs

Based on our review of the EDR report information, as well as review of additional agency records as indicated above, there are no adjacent or upgradient known or suspect other COC impacted soil or groundwater plumes located within 100 feet of the subject property.

REVIEW OF STATE OF CALIFORNIA DIVISION OF OIL AND GAS RECORDS

A review of the Department of Conservation, Division of Oil, Gas & Geothermal Resources Online Mapping System indicates that no oil wells are located on the subject property or adjacent properties. Two wells are located within ¼ mile of the subject property. One well identified as API No. 037-05160, is located approximately 535 feet east of the subject property, across the railroad property and the Los Angeles River. The well was plugged in accordance with DOGGR requirements in 2001. A second well identified as API No. 03720600, is located approximately 1,200 feet west of the subject property. The well was plugged immediately after it was drilled as it was found to contain no oil or gas. Based on distance and well status, the oil wells do not represent an REC for the subject property.

HISTORICAL USE INFORMATION ON THE PROPERTY AND THE ADJOINING PROPERTIES

The historical records review completed for this Phase I ESA includes aerial photographs, topographic maps, fire insurance maps, city directories and building permits as detailed in the following sections. Copies of the historical resources reviewed are included in Appendix C. Table 3 provides a summary of the historical use information available for the subject property.

Review of Historical Aerial Photographs

Aerial photographs from EDR's aerial photograph collection were obtained and reviewed.

Review of Historical Topographic Maps

Historical topographic maps from EDR's map collection were obtained and reviewed.

Review of City Directory Listings

EDR was contracted to provide copies of city directory listings for the subject property and adjacent properties.

Review of Fire Insurance Maps

EDR was contracted to provide copies of fire insurance maps (i.e. Sanborns) for the subject property.

Review of City of Los Angeles Building Permit Records

Building permit records for the subject property were reviewed via the City of Los Angeles Department of Building and Safety website on August 3, 2016. The files contained building permits for new structures and modifications to existing structures.

Other Historical Sources

Based on the quality of information provided within readily available historical records, no additional historical sources were reviewed.

Summary of Historical Uses

Subject Property

Based on our review of the documents listed above and summarized in Table 3 below, it appears that the majority of the subject property has been used as a cold storage facility since at least 1890. Portions of the property have been used as dwellings, a barn, a wagon shed, a juice factory, a quilt factory, cold storage, and an automotive painting facility. Underground petroleum storage tanks are depicted on the southeastern portion of the site in 1890 through 1950. Gas and oil storage is depicted on the sanborn maps in 1959 through 1970. City directories indicate that the subject property was occupied by a sheet metal manufacturing company from 1951 to 1958, and by food production warehouses and distribution facilities, and cold food storage warehouses from the early 1950s to present day.

Table 3 - Historical Use of the Subject Property

Year	Use	Source
Subject Property *(658, 670, 682, 684, and 690 Mesquit Street)*		
1890	The subject property is occupied by the Los Angeles Ice and Cold Storage Company. The Sanborn Map notes that crude petroleum is used for fuel, and wood is used for smoke houses. One water well is present on the east side of the property and is 84 feet deep. Two 150-gallon underground petroleum tanks are present in the southeast corner of the property. One oil pipe connects the tanks to the refrigeration equipment on the east side of the property. One dwelling is present near the north side of the subject property, and one dwelling and a corral are present near the south side. Mesquit Street borders the property to the west, railroad tracks border the property to the east, and E 7th Street borders the property to the south. Maps depicting the northern portion of the subject property were not provided by EDR, nor were they available in the Los Angeles Public Library Sanborn Map Collection.	Sanborn Map (SM)
1894	Features depicted on the 1894 Sanborn Map appear similar to the 1890 map, however, the property is identified as Ice Factory and Cold Storage ï Thomas Ford Property. In addition, two water wells are identified. The additional well is 90 feet in depth.	SM
1894	The 1894 topographic map depicts a long, rectangular building and two small, square buildings on the subject property. A railroad spur is present to the east of the buildings.	Topographic map (TM)
1896	The subject property appears similar to the 1894 topographic map.	TM
1900	The subject property appears similar to the 1896 topographic map.	TM
1906	The subject property is identified as Los Angeles Ice and Cold Storage. The building appears larger than the structure shown on the 1894 map. The 1906 map indicates that fuel oil is in use; however, oil tanks are not depicted. The southern end of the structure is occupied by a soda bottling operation. An additional building is present at the southern end of the subject property, and the corral appears to be larger. The water wells are no longer shown. A smokehouse is no longer present. One dwelling has been removed near the north side of the building, and a shed has been constructed.	SM

Year	Use	Source
1907	Barn with wood flooring ï 600-602 Mesquit Street	Building Permit (BP)
1908	Ice Storage ï 662-666 Mesquit Street Ice Storage ï 674-678 Mesquit Street	BP

1918	Transformer building with concrete floors ï 690 Mesquit Street	BP
1922	Fruit Juice Concentrate factory ï 658 Mesquit Street	BP
1923	The subject property is occupied by a large rectangular structure, a small structure to the north of the large structures, and several small structures on the south side of the property. A railroad spur appears to cross the northern portion of the property.	Aerial Photographs (AP)
1926	Bottling Works ï 658 Mesquit Street	BP
1927	Los Angeles Cold Storage ï 674 Mesquit Street Los Angeles Cold Storage ï 680 Mesquit Street	BP
1928	Factory ï 658 Mesquit Street	BP
1928	A larger structure appears to be present at the subject property. Two small, rectangular structures are present near the southeast corner. One small, rectangular structure is present north of the larger structure. The railroad spur is no longer present to the east of the building; however, it now appears to cross the northern portion of the subject property.	TM
1928	The subject property appears similar to the 1923 aerial photograph.	AP
1931	Boiler Room ï 658 Mesquit Street	BP
1935	Conveyor House ï 658 Mesquit Street Manufacturing Building ï 658 Mesquit Street	BP
1936	Addition of Boiler Room and boiler stack, new cooling tower for orange juice plant, and enclose laboratory ï 658 Mesquit Street	BP
1938	The subject property appears similar to the 1928 aerial photograph; however, the small, northern-most structure appears to have been replaced with a larger building.	AP
1941	New water cooling tower ï 658 Mesquit Street	BP
1942	Ice storage ï replace wood deck with concrete	BP
1947	Manufacturing fruit juice ï add offices ï 658 Mesquit Street	BP
1948	The subject property appears similar to the 1938 aerial photograph; however, an additional building is present on the north side.	AP

Year	Use	Source
1950	The subject property building is designated as Ice and Cold Storage. The original structure appears to have been extended to the north and south. The building was occupied by a boiler room at the north end, a fruit bin, multiple ice and cold storage warehouses, an ice manufacturing room, several stock storage rooms, and a transformer room at the south end of the building. An additional building is present at the south side of the subject property which included a warehouse, sheet metal shop, storage, and condensers. Two additional wells were present to the south and east of the new building, and the original wells were no longer depicted. The southeast corner of the property was occupied by an auto washing area. The northern portion of the property contained an automotive garage with storage. No dwellings were present.	SM
1950	Storage, offices, and citrus fruit processing ï new clarifier ï 658 Mesquit Street	BP
1951	Demo storage shed ï 680 Mesquit Street	BP
1951	The subject property (658 Mesquit Street) is occupied by Mesquit Tru Ade Inc. and Mesquit Hyland Stanford Corp. 670 Mesquit Street is occupied by Mesquit LA Cold Storage Co. Seventh St. Plant. 682 Mesquit Street is occupied by Mesquit Janssen J Sheet Metal Works.	City Directory (CD)
1952	Demo warehouse ï 678 Mesquit Street Demo water cooling shed ï 680 Mesquit Street Warehouse ï Repairs ï 612 Mesquit Street	BP
1952	The subject property appears similar to the 1948 aerial photograph; however, most structures at the south end have been removed. One small structure remains south of the large building.	AP
1953	Outdoor furniture assembly ï install cyclone and dust collecting system on roof ï 612 Mesquit Street	BP
1953	The subject property appears similar to the 1950 map; however, a juice concentrate manufacturing operation is present near the north end of the main building, south of the boiler room and north of the fruit bin. The stock storage area is noted as being mostly vacant. The building at the south end of the property has been removed, however, a small portion housing the condensers and a storage room remain.	SM
1953	The subject property is shaded red, indicating development. No structures are depicted.	TM
1954	The subject property appears similar to the 1953 map.	SM
1958	The subject property (658 Mesquit Street) is occupied by Hyland Stanford Corp.	CD
1959	The subject property appears similar to the 1954 map; however, an area in the southern portion is labeled ñGas and Oilò The fruit juice concentrate manufacturing area is no longer in operation. The subject property is identified as California Consumers Corp.	SM
1960	The subject property appears similar to the 1959 map.	SM
1963	Produce storage ï new cooler, storage building	BP
1964	The subject property appears similar to the 1952 photograph.	TM
1966	The subject property appears similar to the 1953 map.	TM
1967	The subject property is identified as Rancho Cold Storage. The automotive and storage building is no longer present at the north end of the property. The northern portion of the building is occupied by cold storage and a produce warehouse. The remainder of the property appears similar to the 1960 map.	SM
1967	The subject property (670 Mesquit Street) is occupied by Mr. K Transportation, Jack Levine Enterprises, Randyôs Frozen Meals, Rancho Egg Farms, Rancho Cold Storage, and Harry Y. Nakamura.	CD

2013	The subject property (689 Mesquit Street) is occupied by Luberski Inc.	CD

Northern Adjacent Property (E. 6th St. followed by 590 S. Santa Fe Ave.)

Based on our review of the documents listed above, it appears that the northern adjacent property across E. 6th Street was occupied by a railroad and small structures from at least 1928 through 1938. The structures were removed by 1948 and it appeared that the property was used for storage through 1989. The property appears to have been vacant or used as a parking lot since 1994. Fire insurance maps were not available for the northern adjacent properties. City directories were not provided by EDR for the northern adjacent properties.

Eastern Adjacent Property (Railroad Tracks and Los Angeles River)

Based on our review of the documents listed above, it appears that the eastern adjacent property has been occupied by a railroad yard consisting of multiple railroad tracks since at least 1890. Beyond the railroad yard is the Los Angeles River. City directories were not provided by EDR for the eastern adjacent properties.

Southern Adjacent Properties (E. 7th Street followed by 700 S Santa Fe Ave. and 2107-2144 E. 7th St.)

Based on our review of the documents listed above, it appears that the southern adjacent properties (across E. 7th Street) were vacant from 1894 through at least 1900. By 1906 the properties were occupied by a store, dwelling, small outbuildings, and a coal yard. Multiple structures were present by 1923. By 1950 the properties consisted of a parking lot, a welding and assembling shop with a metal paint dipping booth, storage buildings, a machine shop, an oil house, an office, a gas and oil facility, Grant & Co foundry supply company, and a warehouse. By 1959 the machine shop was replaced with a paper storage building. A metal salvage facility was present to the southwest by 1970. The warehouse to the southeast was removed by 1964. The foundry building was removed by 1994. City directories provided for the southern adjacent properties indicate that 2107, 2114, 2115, and 2116 East 7th Street were occupied by residents in 1924 and 1933. In addition, 2118 East 7th Street was occupied by Federal Drilling Company in 1924, 2126 East 7th Street was occupied by residents in 1950 and 1954, and 2144 East 7th Street was occupied by Grant Foundry Supply Co. in 1958 and 1967.

Western Adjacent Properties (Mesquit Street followed by 600 S Santa Fe Ave., 625-683 [odd] Mesquit St., 1580 Jesse St., and 688 S. Santa Fe Ave.)

Based on our review of the documents listed above, it appears that the western adjacent properties consisted of dwellings and small structures from at least 1890 through 1906. By 1923

additional larger, commercial buildings were interspersed with smaller structures. By 1950, the western adjacent properties were occupied by a furniture seat cover manufacturer, a paint dipping and spraying operation, a woodworking shop, a freight depot, a refrigerated set stage, a carding and upholstering facility with storage rooms, and a mattress manufacturer identified as Bailey & Schmitz Company. By 1970, the mattress factory had been replaced by a foam rubber warehouse. City directories provided for the western adjacent properties indicate the following:

- 635 Mesquit Street was occupied by residents from 1924 to 1933, Gary Dean Enterprises and California Lighting Products in 1981, and Woo & Locke Inc. in 1986.
- 643 Mesquit Street was occupied by De Corse Machine & Manufacturing Co. (oil well tools and supplies) from 1924 to 1942.
- 653 Mesquit Street was occupied by residents in 1924.
- 1580 Jesse Street was occupied by Jesse Superior Truck Co. and Jesse Planters Nut & Chocolate Co. in 1951 and 1958, by Apex Wholesale Produce Co. in 1976, and by Select Produce from 2000 to 2013.

Gaps in Historical Sources

Data gaps greater than five years were not encountered for the portion of the subject property located on the east side of Mesquit Street.

Several gaps of greater than five years were identified in the historical records reviewed for the portion of the subject property located on the west side of Mesquit Street, from 1900 to 1906, 1913 to 1921, 1928 to 1938, 1938 to 1948, 1970 to 1977, and 1983 to 1989. These gaps are considered insignificant because the subject property was vacant in 1900 and developed with an office, dwellings, and outbuildings by 1906. Subsequent gaps in historical records were considered insignificant, as the subject property use appears to be similar prior to and following the gaps.

INTERVIEWS

Rincon Consultants performed interviews regarding the subject property and surrounding areas. The purpose of the interview was to discuss current and historical subject property conditions and to obtain information indicating the presence of recognized environmental conditions in connection with the property.

INTERVIEW WITH OWNER

An interview questionnaire was completed by the property owner, Mr. Frank Gallo, prior to the site reconnaissance. A copy of the completed questionnaire is included in Appendix A. The following information is based on information obtained during our review of the completed questionnaire.

Mr. Gallo indicated that the current owners are Rancho Cold Storage Inc. (670 and 690 Mesquit Street) and Vince, Frank and Becky Gallo (658, 685 and 689 Mesquit Street). He did not provide

information pertaining to length of ownership, dates of construction, or previous owners. Mr. Gallo presented the following information regarding hazardous material and petroleum hydrocarbon storage and waste generation at the subject property:

- 110 gallons of waste oil are generated per year. The waste oil is transported offsite by Safety Kleen, a licensed hazardous waste hauler
- Ammonia is stored in above-ground tanks for use in refrigeration

Mr. Gallo noted that two clarifiers are present at the subject property. One clarifier is located within the engine room for the refrigeration equipment at 670 Mesquit Street. The purpose of the clarifier is to collect oil during floor cleaning. The second clarifier is located at 658 Mesquit Street and is used to collect food particles within a processing room.

Mr. Gallo identified the presence of drums containing water treatment chemicals in connection with the refrigeration equipment.

Mr. Gallo indicated that adjacent properties to the north and south have previously been used for industrial purposes. Details of previous uses were not provided by the property owner. Historical site uses are discussed further in the Historical Use section above.

Mr. Gallo indicated he is unaware of the presence of below-ground storage tanks, fill dirt, pits, ponds, lagoons, sumps, solvent degreasers, or stained soil on the site.

Mr. Gallo indicated that he is not aware of any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property. In addition, he is not aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

INTERVIEW WITH SITE MANAGER/OCCUPANT

The Site Manager, Mr. Jeremy Corselli with Rancho Cold Storage, was interviewed during the site reconnaissance conducted on August 1, 2016. Mr. Corselli has managed the Rancho Cold Storage facility since 1989. Mr. Corselli provided information regarding onsite operations and hazardous materials and hazardous waste storage.

According to Mr. Corselli, the subject property structures are owned by Rancho Cold Storage. Rancho Cold Storage occupies 670 and 690 Mesquit Street. Hidden Villa Ranch and Integrated Food Service occupy 658 Mesquit Street, and Integrated Food Service and Harvey's Produce occupy 685-689 Mesquit Street. The subject property has been used as a cold storage facility since 1895. The current owners have owned the property since 1985. The entire property is used for dry, cold, and frozen food storage. Mr. Corselli indicated that portions of the property have been rebuilt. Mr. Corselli noted that the subject property includes buildings on the east side of Mesquit Street between E 6th Street and E 7th Street, a truck parking lot immediately north of the eastern building, and a building on the west side of Mesquit, north of E 7th Street. Mr. Corselli further noted that the property line is present at the edge of the east side of the easternmost buildings.

Mr. Corselli indicated that a portion of the easternmost building was destroyed by fire and reconstructed. The building located at the southeast corner of the subject property, addressed as 690 Mesquit Street, was constructed on what had been a vacant lot in 2001. The building on the west side of Mesquit Street was previously used as a cold storage facility and dry warehouse.

A transformer room was observed during the site reconnaissance. Mr. Corselli noted that three transformers were previously present on the property. The old transformers were removed and replaced with one. The former transformers reportedly serviced other businesses in the area, according to Mr. Corselli.

Mr. Corselli was unaware of the previous presence of petroleum USTs, water wells, or a gas and oil facility which we identified on Sanborn maps. Mr. Corselli indicated that a geotechnical investigation was conducted and grading had occurred prior to the construction of the building at the southeast corner of the property, where the USTs and gas and oil features were identified on the historic Sanborn Maps. Mr. Corselli noted that these features were not observed during development of the southeastern portion of the property.

Mr. Corselli also presented the following information regarding hazardous material and petroleum hydrocarbon storage and waste generation at the subject property.

- Less than 100 gallons per year of waste oil are generated in connection with the engine room operations. Waste is disposed of once per year.
- Refrigeration equipment includes one 300-gallon and one 500-gallon ammonia tank.
- Two 55-gallon plastic drums observed near the cooling towers contain cooling water treatment.

Mr. Corselli indicated that he is unaware of the presence of underground storage tanks, fill dirt, pits, ponds, lagoons, sumps, solvent degreasers, and stained soil on the subject property.

Mr. Corselli indicated that he is not aware of any pending, threatened, or past litigation or administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property. In addition, he is not aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

INTERVIEWS WITH LOCAL GOVERNMENT OFFICIALS

In the City of Los Angeles and Los Angeles County, requests for information are required to be submitted in writing via the Freedom of Information Act (FOIA) process in place for each agency. Therefore, no local government officials were available for interview. Written requests for information were submitted to various city and county agencies, as identified in the Review of Agency Files section above. Information provided by Ms. Angenee Regado of the City of Los Angeles Fire Department Hazardous Materials Division is provided in the Review of Agency Files section above.

INTERVIEWS WITH OTHERS

Rincon did not attempt to interview neighboring property owners or others as part of this Phase I ESA.

SITE RECONNAISSANCE

Rincon Consultants performed a reconnaissance of the subject property on August 2, 2016 accompanied by Mr. Jeremy Corselli, Manager. The purpose of the reconnaissance was to observe existing subject property conditions and to obtain information indicating the presence of recognized environmental conditions in connection with the property.

METHODOLOGY AND LIMITING CONDITIONS

The site reconnaissance was conducted by:

1. Observing the subject property from public thoroughfares,
2. Observing the adjacent properties from public thoroughfares,
3. Observing the interior of the onsite structures,
4. Observing the exterior of the structures,
5. Backtracking to correlate exterior features with interior features, as necessary, and
6. Observing the subject property from driveways, roads, and walking paths.

Because of the large size of the subject property, a representative number of storage units were observed within the 658-690 Mesquit Street portion of the subject property. In addition, the main storage area at 685-689 Mesquit Street was observed; however, individual cold storage rooms were locked.

CURRENT USE OF THE PROPERTY AND ADJACENT PROPERTIES

The subject property is currently in use as food storage facility. Products are stored within multiple dry, refrigerated, and frozen food warehouses. Adjacent properties include produce warehouses, vacant lots, residential properties, a Los Angeles Department of Water and Power (LADWP) switching station and associated electrical towers, a former auto repair shop, and a vacant lot undergoing remedial excavation.

PAST USE OF THE PROPERTY AND ADJACENT PROPERTIES

Based on our site reconnaissance, past uses at the subject property and adjacent properties are not readily apparent.

CURRENT OR PAST USES IN THE SURROUNDING AREAS

The subject property is surrounded by residential, commercial, and warehouse land uses as detailed in the Site Description section of this report. Based on observations of surrounding buildings, the area appears to have historically been industrial in nature.

GEOLOGIC, HYDROGEOLOGIC, HYDROLOGIC AND TOPOGRAPHIC CONDITIONS

Geologic, hydrogeologic, hydrologic, and topographic information are as previously stated in the Physical Settings Section of this report.

GENERAL DESCRIPTION OF STRUCTURES

Onsite structures are as described previously in the Site Description section of this report.

INTERIOR AND EXTERIOR OBSERVATIONS

Storage Tanks

During the site reconnaissance, we observed two above-ground storage tanks (ASTs) containing ammonia within the engine room. The tanks were 300 and 500 gallons in volume, according to the manager. A smaller ammonia tank was observed on the east side of 670 Mesquit, near the cooling towers located at the south end of the building. Rincon did not observe any evidence of releases in connection with the ammonia ASTs.

A 110-gallon waste oil tank was observed on the east side of the building. Oil appeared to have been spilled around the top of the AST, and minor staining was observed on the concrete around the tank. The AST was situated in close proximity to a drain. However, the drain is reportedly connected to the onsite clarifier.

No other above-ground or below-ground tanks were reported by the subject property representative or observed during the site reconnaissance.

No evidence of underground storage tanks was observed during the site reconnaissance.

Drums

During the site reconnaissance, three 55-gallon drums containing cooling water treatment were observed. Rincon did not observe evidence of releases from the water treatment drums. Two empty 55-gallon drums were observed near the waste oil AST and were reportedly previously used for waste oil collection. Minor staining was observed in the vicinity of the drums. No other drums were reported by the site representative or observed during the site reconnaissance.

Hazardous Substances and Petroleum Products

Small quantities of various hazardous substances and petroleum products observed during the site reconnaissance are as follows:

- Ten small propane tanks for use in powering forklifts were observed in the 670 Mesquit building.
- A maintenance area contains a five-gallon container of kerosene, a five-gallon container of hydraulic oil, two five-gallon containers of compressor oil, small, retail-sized containers of maintenance supplies, and 12 old batteries.

Rincon did not observe indications of releases from these containers.

Unidentified Substance Containers

No unidentified substance containers or unidentified containers that might contain hazardous substances were observed during the site reconnaissance.

Odors

During the site reconnaissance, Rincon did not identify any strong, pungent, or noxious odors.

Pools of Liquid

During the site reconnaissance, Rincon did not identify any pools of liquid including standing surface water. In addition, no sumps containing liquids likely to be hazardous substances or petroleum products were observed.

Indications of Polychlorinated Biphenyls (PCBs)

During the site reconnaissance, Rincon observed a transformer room located on the south side of the 670 Mesquit building. The transformer room was equipped with large doors and is presumed to be related to a transformer building identified on Sanborn maps, as discussed previously. The doors to the transformer room were labeled with high voltage warning signs; therefore the transformer room was not entered.

In addition, three pole-mounted transformers were observed at the south end of Mesquit Street, between the 685-689 and 690 Mesquit Street buildings.

There was no indication of a release in the vicinity of the transformers.

Two elevators are present at the subject property. One is a traction lift, and one is hydraulic. The hydraulic equipment for the piston operated elevator was identified during the site reconnaissance. The hydraulic equipment and reservoir is located in a closet on the first floor in the 670 Mesquit building. There was no indication of a release in the vicinity of the reservoir. The elevator was reportedly installed in 1997; therefore, it is unlikely that hydraulic fluid within the elevator equipment contains PCBs.

Other Conditions of Concern

During the site reconnaissance Rincon did not note any of the following:

- corrosion
- degreasers/parts washers
- pits, ponds, and lagoons
- stained soil
- stressed vegetation
- solid waste/debris
- septic systems/effluent disposal system

Heating/Cooling – The refrigeration machinery is powered by electricity supplied by LADWP.

Clarifiers– As noted previously, two clarifiers are present at the subject property. One clarifier is located on the east side of the 670 Mesquit Street building in the vicinity of the cooling towers. The purpose of the clarifier is to collect water from the cooling towers and any oil from the engine room. The second clarifier is located in the 658 Mesquit Street building and is present to collect any food present when the production room is washed down. The clarifiers have four stages, are concrete-lined and are connected to the municipal sewer system. The clarifiers are cleaned out on an as-needed basis.

Stained Pavement – As noted previously, minor staining was observed on concrete near the waste oil AST and drums.

Waste Water – Waste water from the cooling towers enters the clarifier at 670 Mesquit prior to entering the municipal sewer system.

Wells – Although not located on the subject property, what appeared to be a groundwater monitoring well was located at the north end of Mesquit Street, immediately west of the north side of the subject property. The purpose of the groundwater monitoring well was not identified during the preparation of this report.

No other wells were observed on or near the subject property.

EVALUATION

FINDINGS

Known or suspect environmental conditions associated with the subject property include the following:

1. Two former 150-gallon petroleum USTs and associated piping identified on the subject property on the Sanborn maps.
2. Transformer room identified on the subject property on Sanborn maps.
3. Use of fuel oil identified on the subject property on Sanborn maps.
4. Gas and Oil facility identified on the subject property on Sanborn maps.
5. Two groundwater wells identified on the subject property on Sanborn maps.
6. Existing adjacent railroad tracks and former railroad spur on the northern portion of the subject property.
7. Former spray painting facility on the subject property at 685-689 Mesquit Street.
8. Former sheet metal shop on the subject property at 670 Mesquit Street.
9. Stained concrete near the waste oil AST and drums and the presence of an oil/water separator (clarifier) on the subject property.
10. The former use of the subject property for manufacturing.
11. Possible groundwater monitoring well in Mesquit Street adjacent to the northern portion of the subject property.

OPINIONS

1. ***Two former 150-gallon petroleum USTs and associated piping on the subject property*** – The 1890 and 1894 Sanborn maps depict two 150-gallon underground petroleum tanks and one pipe connecting the tanks to refrigeration equipment. The tanks were located on the south side of the subject property, east of Mesquit Street, in the current location of the 690 Mesquit Street building. In 1894 an additional pipe is connected between the tanks and equipment. No documentation has been identified pertaining to the removal of the USTs and associated piping. Therefore, the USTs and piping identified on the Sanborn maps are considered an REC.
2. ***Transformer room on the subject property*** – A transformer room was identified in a 1918 building permit. The transformer room was depicted on Sanborn maps from 1950 through 1970 at the south end of the Ice and Cold Storage building. Furthermore, the current facility manager indicated that three transformers previously existed and serviced several businesses in the area. Based on the age of the transformers, PCBs may have been present in cooling oil used in the transformer. If an undocumented release occurred at the subject property, there is the potential for the presence of PCBs in soil beneath the subject property in the vicinity of the former transformer room. The transformer room is therefore considered a potential REC.
3. ***Use of fuel oil on the subject property*** – The use of fuel oil was identified on Sanborn maps from 1906 through 1970. Therefore, it is possible that additional USTs may be present at the subject property. The potential presence of additional fuel USTs is considered a potential REC.

4. ***Former Gas and Oil facility on the subject property on Sanborn Maps –*** A Gas and Oil facility was identified on the subject property on Sanborn maps from 1959 through 1970. Due to the potential for undocumented releases, the former Gas and Oil facility on the subject property is considered an REC.
5. ***Two groundwater wells identified on the subject property on Sanborn maps –*** An 84-foot deep water well was identified on the 1890 Sanborn map, and a 90-foot deep well was identified on the 1894 Sanborn map. The use of well water is identified on Sanborn maps through 1970. No documentation has been identified pertaining to the destruction of the wells. If the water wells were not properly abandoned, then this could pose an environmental concern. The location of the water wells should be identified and properly abandoned under permit from the County of Los Angeles and in accordance with County and State regulations.
6. ***Existing adjacent railroad tracks and former railroad spur on the northern portion of the subject property –*** A railyard has been present adjacent to the east of the subject property since at least 1890. A railroad spur previously crossed the northern portion of the subject property from at least 1923 through 1983. Railroad ties were historically treated with creosote, and the track beds were historically treated with herbicides for weed management. Therefore, hydrocarbons, metals, herbicides, and semi volatile organic compounds (creosote, naphthalene) from the railroad activities are potentially present in the soils surrounding the railroad tracks. The presence of the adjacent railroad yard and former railroad spur on the northern portion of the subject property is a potential REC.
7. ***Former spray paint facility on the subject property –*** A spray paint facility was depicted on the subject property on Sanborn maps from 1950 through 1960. The former spray paint facility represents a potential REC due to the potential presence of VOCs in connection with the former spray paint operations.
8. ***Former sheet metal shops on the subject property –*** A sheet metal shop was depicted on the southeast portion of the subject property on the 1950 Sanborn map, and a sheet metal shop was present on the southwest portion of the subject property in 1959 and 1960. The former sheet metal shops are potential RECs due to the potential use of VOCs for degreasing operations and the potential presence of metals.
9. ***Stained concrete near the waste oil AST and drums and the presence of an oil/water separator (clarifier) on the subject property–*** Stained concrete was observed near the waste oil AST and drums on the subject property. In addition, one clarifier is located on the east side of the 670 Mesquit building in the vicinity of the cooling towers. The purpose of the clarifier is to collect water from the cooling towers and any oil from the engine room. The clarifier has four-stages, is concrete-lined and is connected to the municipal sewer system. There is the potential for undocumented releases to have occurred in the vicinity of the clarifier. The presence of stained concrete near the waste oil AST and drums and the presence of an oil/water separator (clarifier) on the subject property is a potential REC.
10. ***The former use of the subject property for manufacturing***. Based on the historic research conducted as part of this Phase I ESA, a portion of the subject property was historically used for manufacturing. Based on the nature of the use, there is the potential for soil beneath the subject property to be adversely impacted. Therefore the former use of the subject property for manufacturing is considered a potential REC.

11. ***Possible groundwater monitoring well in Mesquit Street adjacent to the northern portion of the subject property*** – What appeared to be a groundwater monitoring well was observed in Mesquit Street adjacent to the northeast of the subject property. The purpose of the groundwater monitoring well was not identified during the preparation of this report.

CONCLUSIONS

Rincon has performed a Phase I ESA in general conformance with the scope and limitations of ASTM E 1527-13 for the property identified as 670 Mesquit Street in Los Angeles, California. The property addresses include 658, 670, 685, 689, and 690 Mesquit Street.

This assessment has revealed evidence of RECs and Potential RECs in connection with the property as follows:

Recognized Environmental Conditions

1. Two former 150-gallon petroleum USTs and associated piping identified on the subject property on the Sanborn maps.
2. Former Gas and Oil facility identified on Sanborn maps.

Potential Recognized Environmental Condition

1. Transformer room identified on the subject property on Sanborn maps.
2. Use of fuel oil identified on the subject property on Sanborn maps.
3. Existing adjacent railroad tracks and former railroad spur on the northern portion of the subject property.
4. Former spray painting facility on the subject property at 685-689 Mesquit Street.
5. Former sheet metal shop on the subject property at 670 Mesquit Street.
6. Stained concrete near the waste oil AST and drums and the presence of an oil/water separator (clarifier) on the subject property.
7. The former use of the subject property for manufacturing.

RECOMMENDATIONS

To evaluate the potential subject property impact associated with the identified RECs and potential RECs, we recommend a Phase II Environmental Site Assessment consisting of soil matrix and soil vapor sampling be conducted at the subject property.

In addition, the location of the former water wells on the subject property should be identified and properly abandoned under permit from the County of Los Angeles and in accordance with County and State regulations.

Based on our review of historical sources, numerous existing structures on the subject property were constructed prior to 1950. Although not considered a recognized environmental condition (REC), pursuant to ASTM E 1527-13, structures constructed prior to 1978 may contain lead based paint (LBP) and structures constructed prior to 1981 may contain asbestos containing building materials (ACBM). Based on the age of the onsite structures, there is the potential that

LBP and ACBM were used during the construction of the onsite structures. To determine if LBP and ACBM are present in the onsite structures, LBP and ACBM surveys should be conducted.

DEVIATIONS

Deviations from ASTM practice were not encountered during the completion of this Phase I ESA. In addition, a lien search and chain of title review were not completed as part of this assessment.

SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

The qualified environmental professionals that are responsible for preparing the report include Walt Hamann and Sarah Larese. Their qualifications are summarized in the following section.

"We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 312.10 of 40 CFR 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Signature	September 6, 2016 Date
Walt Hamann, PG, CEG, CHG Name	Vice President Title
Signature	September 6, 2016 Date
Sarah A. Larese Name	Senior Environmental Scientist Title

QUALIFICATIONS OF ENVIRONMENTAL CONSULTANTS

The environmental consultants responsible for conducting this Phase I ESA and preparing the report include Walt Hamann, Sarah Larese and Jennifer Bauer Morten Their qualifications are summarized below.

Environmental Professional Qualifications	X2.1.1 (2) (i) - Professional Engineer or Professional Geologist License or Registration, and 3 years of full-time relevant experience	X2.1.1 (2) (ii) - Licensed or certified by the Federal Government, State, Tribe, or U.S. Territory to perform environmental inquiries	X2.1.1 (2) (iii) – Baccalaureate or Higher Degree from and accredited institution of higher education in a discipline of engineering or science and the equivalent of 5 years of full-time relevant experience	X2.1.1 (2) (iii) – Equivalent of 10 years of full-time relevant experience
Walt Hamann	PG, CHG, CEG		MS Geology	30 years
Sarah Larese			BA Environmental Studies	16 years
Jennifer Bauer Morton	PG		BS Earth Sciences	10 years

Walt Hamann, PG, CEG, CHG, is a Principal and Senior Geologist with Rincon Consultants. He holds a Bachelor of Arts degree in geology from the University of California, Santa Barbara and a Master of Science degree in geology from the University of California, Los Angeles. He has over 30 years of experience conducting assessment and remediation projects and has prepared or overseen the preparation of hundreds of Phase I and Phase II Environmental Site Assessments throughout California. Mr. Hamann is a Professional Geologist (#4742), Certified Engineering Geologist (#1635), and Certified Hydrogeologist (#208) with the State of California.

Sarah A. Larese is a Senior Environmental Scientist with Rincon Consultants. She holds a Bachelor of Science degree in environmental studies from the University of California, Santa Barbara, California. Ms. Larese has experience in development, implementation and project management of environmental assessment and remediation projects, especially relating to underground storage tanks. Ms. Larese's responsibilities at Rincon include implementation of Phase I and II Environmental Site Assessments as well as conducting site remediation field activities and preparation of environmental reports. She has 16 years of experience conducting research, assessment and remediation projects.

Jennifer Bauer Morton, PG, is an Environmental Geologist. She holds a Bachelor of Science degree in Earth Sciences from the University of California, San Diego. She has experience conducting Phase I and Phase II Environmental Site Assessments for a variety of properties throughout southern California. Ms. Morton's responsibilities at Rincon include conducting environmental site assessments and preparing reports.

Appendix A

Interview Documentation

To qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the user must provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

We respectfully request that you fill out this form and e-mail it to Sarah Larese at **SLarese@RinconConsultants.com** within one week from the date of this transmittal.

1. Why is the Phase I ESA required or being performed?	For entitlement of a new mixed-use building.
2. What type of property transaction is planned? (i.e. sale, purchase, exchange, etc.)	Possible transfer into a separate LLC once property gets entitled with all required approvals.
3. What is the entire site address?	670 Mesquit St.
4. What is the Assessor's Parcel Number (s)?	5164-016-010 Portion of 5164-016-803[1] 5164-016-009 5164-017-006 5164-017-002 5164-107-003 5164-017-008 5164-018-009
5. Are any considerations beyond the requirements of Practice E1527 to be considered? (i.e. lien search, asbestos & lead based paint, radon, etc.)	Not at the moment. Depends on how initial study comes back. Might need to be in Phase 2.

[1] Based on the preliminary title reports from Chicago Title, part of this APN is owned by the Gallos and part of the APN is owned by Amtrak. The map on the following page indicates the area owned by the Gallos.

6. Identify all parties who will rely on the Phase I report.	City of LA, EIR Consultant, Geotech, Development Team, Land Use Attorney,
7. Identify the Site Manager/Contact and how the contact can be reached.	Frank Gallow: fhgrcs@aol.com
8. Identify the Site Owner and how the owner can be reached.	Frank Gallow: fhgrcs@aol.com
9. Do you have copies of any available prior environmental site assessment reports, documents, correspondence, etc., concerning the any other knowledge or experience with the property that may be pertinent to the environmental professional (i.e. title report, previous Ph I and II ESAs, Environmental Impact Studies, etc.).	No

1. **Did a search of *recorded land title records* (or judicial records, where appropriate) identify any environmental liens filed or recorded against the *property?***

Please checkmark the most appropriate response:

X I *have not* reviewed the records and ***do not know*** if there are any filed or recorded environmental liens.

☐ I *have* reviewed the records, and ***No, there aren't any*** filed or recorded environmental liens.

☐ I *have* reviewed the records, and ***Yes, there are*** environmental liens. Explain:

2. **Did a search of recorded land title records (or judicial records, where appropriate) identify any activity and land use limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?**

Please checkmark the most appropriate response:

X I *have not* reviewed the records and ***do not know*** if there are any filed/recorded AULs or any AULs in place at the site.

☐ I *have* reviewed the records, and ***No, there aren't any*** filed/recorded AULs or any AULs in place at the site.

☐ I *have* reviewed the records, and ***Yes, there are*** AULs filed, recorded, and/or in place at the site. Explain:

3. **Does the Title Report provide any information pertaining to environmental cleanup liens or activity and use limitations (AULs) for the subject property?**

Please checkmark the most appropriate response:

☐ I *have not* reviewed the Title Report and ***do not know*** if it provides environmental cleanup liens or AULs information.

X I *have* reviewed the Title Report, and ***No, it does not*** provide environmental cleanup liens or AULs information.

☐ I *have* reviewed the Title Report, and ***Yes, it does provide*** environmental cleanup liens or AULs information. Explain:

4. **Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?**

Please checkmark the most appropriate response:

X No, I *do not* have any specialized knowledge and/or experience related to the property or nearby properties.

☐ ***Yes***, I *do* have specialized knowledge and/or experience related to the property or nearby properties. Explain:

5. **As the user of this ESA, based on your knowledge and experience related to the property, are you aware of any information pertaining to a reduction in value for the subject property relative to any known environmental issues?**

Please checkmark the most appropriate response:

X ***No***, I *do not* have any information about a reduction in property value relative to environmental issues.

☐ ***Yes***, I *do* have information about a reduction in property value relative to environmental issues. Explain:

6. **Does the purchase price being paid for this property reasonably reflect the fair market value of the property?**

Please checkmark the most appropriate response:

X ***Yes***, I *do* believe the purchase price being paid for this property reasonably reflects the fair market value of the property. Skip to question #7.

☐ ***No***, I *do not* believe the purchase price being paid for this property reasonably reflects the fair market value of the property. Proceed to question #6a.

a. If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? (40 CFR 312.29)

Please checkmark the most appropriate response:

☐ ***No***, I *have not* considered the idea that known or believed contamination at the site has caused the lower purchase price.

☐ ***Yes***, I *have* considered the idea that known or believed contamination at the site has caused the lower purchase price. Explain.

7. **Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,**

a. **Do you know the past uses of the property**?

☐ I *do not* know.

X I *do* know. Explain: food distribution and storage.

b. Do you know of specific chemicals are present or once were present at the property?

X I *do not* know.

☐ I *do* know. Explain:

c. Do you know of any spills or other chemical releases that have taken place at the property?

X I *do not* know.

☐ I *do* know. Explain:

d. Do you know of any environmental cleanups have taken place at the property?

X I *do not* know.

☐ I *do* know. Explain:

8. **Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?**

Please checkmark the most appropriate response:

X No, I do not know and/or do not have any experience with any obvious indicators that point to the presence or likely presence of contamination at the property.

☐ Yes, I do know of and/*or do have experience with* obvious indicators that point to the presence or likely presence of contamination at the property. Explain:

9. **Are you aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the site?**

X No, I *am not aware of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the site.*

☐ ***Yes***, I *am aware of pending, threatened, or past litigation relevant to hazardous substances or petroleum products, in, on, or from the site*. Explain:

10. **Are you aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site?**

X No, I *am not aware of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site.*

☐ ***Yes***, I *am aware of pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the site.* Explain:

11. **Are you aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?**

X ***No***, I *am not aware of any notice from any government entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.*

☐ ***Yes***, I *am aware of a notice, or notices, from a government entity (or multiple government entities) regarding a possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.* Explain:

Property Owner Interview Questionnaire

670 Mesquit Street, Los Angeles, California, 90021

This questionnaire should be completed by the current property owner or a designated representative of the current property owner. We respectfully request that you fill out and return this form (via email **Sarah Larese** at SLarese@RinconConsultants.com) to us within one week from the date of this transmittal.

1)	**Was the subject property or any adjoining property ever used as:**	
	☐ a gasoline or other fueling station ☐ a motor vehicle repair facility ☐ a commercial printing facility ☐ a dry cleaners ☐ a photo developing laboratory ☐ a metal plating facility ☐ a farm	☐ a junkyard or landfill ☐ a waste treatment, storage, disposal, processing or recycling facility ☐ a machine shop ☐ a manufacturing facility ☐ an oil production facility (including oil wells) ☒ any other industrial use
	(please check all that apply and describe) WAREHOUSE	

2)	**Please describe the current land uses of the subject property and those surrounding your property. Please indicate all businesses/companies located on property.**	
2a	**Current use of Subject Property** (please check all that apply) ☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☒ Industrial (manufacturing, warehousing, processing) ☐ Other-Please Describe	(please include a brief description of current operation)
2b	**Current use of Northern Adjoining Properties** (please check all that apply) ☒ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ☐ Other-Please Describe	(please include a brief description of current operation) THE 6TH STREET BRIDGE SEPERATES THE PARCELS
2c	**Current use of Southern Adjoining Properties** (please check all that apply) ☐ Commercial (retail, offices, etc.) ☒ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ☐ Other-Please Describe	(please include a brief description of current operation) THE 7TH STREET BRIDGE SEPERATES THE PARCELS
2d	**Current use of Western Adjoining Properties** (please check all that apply) ☐ Commercial (retail, offices, etc.) ☒ Residential (single family or apartments) ☒ Industrial (manufacturing, warehousing, processing) ☐ Other-Please Describe	(please include a brief description of current operation)
2e	**Current use of Eastern Adjoining Properties** (please check all that apply) ☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ☒ Other-Please Describe	(please include a brief description of current operation) AMTRAK RAILROAD

3)	**Please describe the previous land uses of your property and those surrounding your property. Include property ownership and dates of operation if known.**	
3a	**Previous use of Subject Property** (please check all that apply) ☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☒ Industrial (manufacturing, warehousing, processing) ☐ Other-Please Describe	(please include a brief description of previous operations, former property owners, and dates of operation)
3b	**Previous use of Northern Adjoining Properties** (please check all that apply) ☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☒ Industrial (manufacturing, warehousing, processing) ☐ Other-Please Describe	(please include a brief description of previous operations)
3c	**Previous use of Southern Adjoining Properties** (please check all that apply) ☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☒ Industrial (manufacturing, warehousing, processing) ☐ Other-Please Describe	(please include a brief description of previous operations)
3d	**Previous use of Western Adjoining Properties** (please check all that apply) ☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☒ Industrial (manufacturing, warehousing, processing) ☒ Other-Please Describe	(please include a brief description of previous operations)
3e	**Previous use of Eastern Adjoining Properties** (please check all that apply) ☐ Commercial (retail, offices, etc.) ☐ Residential (single family or apartments) ☐ Industrial (manufacturing, warehousing, processing) ☒ Other-Please Describe	(please include a brief description of previous operations)

4)	**Who is the current owner of the property?**	RANCH COLD STORAGE INC 670, 690 VINE, FRANK & BETTY/ GALLO 658-689
5)	**When did current ownership begin?**	
6)	**What is the age of the on-site facility?**	
7)	**Who is the previous owner of the property?**	

8)	**Please indicate the property's current**	
	electrical service provider -	DWP
	water service provider -	DWP
	natural gas service provider -	SO. CAL GAS.
	sewer service provider -	N/A. (DWP)
	solid waste hauler -	N/A

9)	**To the best of your knowledge, has your facility previously or does your facility currently store or use any of the following in individual containers larger than 5 gallons in volume or 50 gallons in the aggregate?** (if yes or unknown, include how many, type, and size)	
	☐ ***Damaged or discarded automotive or industrial batteries***	
	☐ ***Pesticides***	
	☐ ***Paints***	
	☑ ***Oils or solvents***	110 GALLON WASTE OIL (WF65)
	☐ ***Motor vehicle fuel***	
	☐ ***Pesticides or Herbicides***	
	☐ ***Other Chemicals or hazardous substances***	

10)	**Please indicate any wastes generated at the facility.**		
	Hazardous waste:	**Quantity:**	**Disposal Method:**
	COMP OIL	110 GAL. PER YEAR	WASTE SERVICE / SAFETY CLEAN

11)	**Are there currently or to the best of your knowledge have there been previously, any industrial drums (typically 55 gallon) or sacks of chemicals located on the property or at the facility?**	
	☒ Yes ☐ No ☐ Unknown	if Yes or Unknown, please describe WATER TREATMENT DRUMS FOR REFRIGERATION

12)	**Are there currently or to the best of your knowledge have there been previously, any evidence of fill dirt having been brought onto the property that originated from a contaminated site or that is of an unknown origin?**	
	☐ Yes	if Yes or Unknown, please describe
	☒ No	
	☐ Unknown	

13)	**Are there currently or to the best of your knowledge have there been previously, any pits, ponds or lagoons located on the property in connection with waste treatment or waste disposal?**	
	☐ Yes	if Yes or Unknown, please describe
	☒ No	
	☐ Unknown	

14)	**Are there currently or to the best of your knowledge have there been previously, any sumps, clarifiers, or solvent degreasers on the property?**	
	☒ Yes	if Yes or Unknown, please describe CLARIFIER IN ENGINE ROOM FOR FLOOR CLEANING AND OIL COLLECTION. CLARIFIER AT 658 FOR PROCESSING ROOM.
	☐ No	
	☐ Unknown	

15)	**Are there currently or to the best of your knowledge have there been previously, any stained soil on the property?**	
	☐ Yes	if Yes or Unknown, please describe
	☒ No	
	☐ Unknown	

16)	**Are there currently or to the best of your knowledge have there been previously, any storage tanks (above or below ground) located on the property?**	
	☒ Yes	if Yes or Unknown, please describe AMMONIA IS USED WITH SEVERAL ABOVE GROUND TANKS @ 658-690-670 MESQUIT
	☐ No	
	☐ Unknown	

17)	**Are there currently or to the best of your knowledge have there been previously, any vent pipes, fill pipes, or access ways (etc.) indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property?**	
	☐ Yes	if Yes or Unknown, please describe
	☒ No	
	☐ Unknown	

18)	**If the property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system or has the well been designated as contaminated by any government agency?**	
	☐ Yes ☒ No ☐ Unknown	if Yes or Unknown, please describe

19)	**Are there currently or to the best of your knowledge have there been previously, any flooring, drains, or walls located within the facility that are stained by substances other than water, or are emitting foul odors?**	
	☐ Yes ☒ No ☐ Unknown	if Yes or Unknown, please describe

20)	**To the best of your knowledge has your facility previously or does your facility currently, discharge wastewater on or adjacent to the property other than storm water into a sanitary sewer system?**	
	☐ Yes ☒ No ☐ Unknown	if Yes or Unknown, please describe

21)	**Have any of the following ever been dumped above grade, buried and/or burned on the property?** (please check all that apply and describe if possible)	
	☐ hazardous substances	
	☐ petroleum products	
	☐ unidentified waste materials	
	☐ tires	
	☐ automotive or industrial batteries	
	☐ other waste materials (please describe)	

22)	**Are there currently or to the best of your knowledge have there been previously, a transformer, capacitor or any hydraulic equipment on the property?**	
	☒ Yes ☐ No ☐ Unknown	if Yes or Unknown, please describe (1552) DWP TRANSFORMERS 2-QTY ELEVATORS

23)	**Are there currently or to the best of your knowledge have there been previously any records indicating the presence of PCBs?**	
	☐ Yes	if Yes or Unknown, please describe
	☒ No	
	☐ Unknown	

24)	**Are there currently or to the best of your knowledge have there been previously any records indicating the presence of pesticides or herbicides?**	
	☐ Yes	if Yes or Unknown, please describe
	☒ No	
	☐ Unknown	

25)	**Do you have any knowledge of environmental liens that may have been recorded against the property or governmental notification relating to past or recurrent violations of environmental laws with respect to the property or any facility located on the property?**	
	☐ Yes	if Yes or Unknown, please describe
	☒ No	
	☐ Unknown	

26)	**Do you have any knowledge of activity and use limitations (AULs) such as engineering controls, deed restrictions, land use restrictions, or institutional controls that may have been recorded against the property?**	
	☐ Yes	if Yes or Unknown, please describe
	☒ No	
	☐ Unknown	

27)	**Have you been informed of the past or current existence of hazardous substances, petroleum products, or environmental violations with respect to the property or any facility located on the property?**	
	☐ Yes	if Yes or Unknown, please describe
	☒ No	
	☐ Unknown	

28)	**Do you have any knowledge of any environmental site assessments of the property or facility?**	
	☐ Yes	if Yes or Unknown, please describe
	☒ No	
	☐ Unknown	

29)	**Do you know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release of any hazardous substances or petroleum products involving the property by any owner or occupant of the property?**	
	☐ Yes	if Yes or Unknown, please describe
	☒ No	
	☐ Unknown	

30)	**Are there any site-specific geotechnical or geologic reports available for the subject property?**	
	☐ Yes	if Yes or Unknown, please describe
	☒ No	
	☐ Unknown	

31)	**Is there a "Title" Report available for the subject property?**	
	☒ Yes	if Yes or Unknown, please describe
	☐ No	
	☐ Unknown

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/07/2016 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/09/2015 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

7TH STREET CONSOLIDA	***2222 EAST 7TH STREET***	***ESE 1/8 - 1/4 (0.222 mi.)***	***X81***	***133***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 16 RCRA-SQG sites within approximately 0.25 miles of the target property.

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, and dated 05/02/2016 has revealed that there

are 3 CA RESPONSE sites within approximately 1 mile of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 05/02/2016 has revealed that there are 32 CA ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2015 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EXECUTIVE SUMMARY

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 3 EDR MGP sites within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CA BOND EXP. PLAN:

Reponsible Party:	COST RECOVERY/OPERATION AND MAINTENANCE SITE
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	DHS has utilized Bond funds to complete the remedial action. DHS is currently undertaking appropriate cost recovery actions.
Site Description:	This site was previously used to scrap electrical transformers.
Hazardous Waste Desc:	Polychlorinated biphenyls (PCBs) were detected in the soil.
Threat To Public Health & Env:	The remedial action has been completed. Soil contaminated with PCBs was excavated and redisposed of in a licensed landfill. There is no threat to public health and the environment.
Site Activity Status:	In August, 1985, the RP, Mr. Rodney Dean, pled no contest to three felony counts of illegal storage, transportation and disposal of hazardous wastes. Mr. Dean's probation required that the cleanup of the site be completed and reported to the court. The RP retained a contractor for the cleanup and began the remedial actions. The contractors removed much of the contaminated soil. DHS completed the cleanup after the RP exhausted his financial resources. DHS is currently in the cost recovery stage.

Alternate Address: 590 SOUTH SANTA FE AVENUE
Alternate City,St,Zip: LOS ANGELES, CA 90013
Background Info: The site is located at 590 South Santa Fe Avenue, Los Angeles, California. The site consists of two land parcels totaling approximately 2.68 actes of land and is located witin an indus-industrial portion of the City of Los Angeles. Historically the site has been used for chemeical or paint manufacturing.
Not reported
The site was formerly under the oversight of the California Regional Water Quality Control Board (CRWQCB). (CRWQCB) has

BUTTERFIELD (SUN CHEMICAL CORPORATION) (Continued) **S105481902**

overseen the site investiation and remediation since approximately 1986.
Not reported
Previous sampling activities have confirmed both soil and groundwater contamination. Contaminants of concern identified in the groundwater and soil include benzene, ethyl benzene, 1,1-dichlorethane, 1,1-dichloroethene, 4-methyl-2-pentanone (MIBK), toluene, and total xylene. The toluene, and xylene appear to be primarily located within the groundwater beneath the northern portion of the site whereas MIBK has been identified in the groundwater along the southwest corner of the site and may extend beyond the site boundary.

Registry ID: 110002138749

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 05/31/1996
Comments: DTSC signed a Voluntary Cleanup Agreement with Santa Fe for the completion and review of a Preliminary Endangerment Assessment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/04/1996
Comments: DTSC reviewed a Preliminary Endangerment Assessment for the site under a Voluntary Cleanup Agreement. Based on the information and data presented, DTSC determined that the hazardous constituents remaining at the site do not constitute a threat to human health or the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 09/13/1995
Comments: The Department received a Non-Emergency Hazardous Substance Release Report dated January 31, 1995. Review of the document indicates that the site is contaminated with elevated levels of heavy metals such as lead, copper and zinc. Foundry operations existed at the site from at least 1906 until 1990, operated by W.G. Grant & Co. Santa Fe Railway is the current owner of the site. RP removed USTs from the site without any regulatory agency oversight. Due to evidence of a release, DTSC is recommending that a PEA be conducted to evaluate the site. On September 13, 1995, DTSC notified the RP thereof.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Voluntary Cleanup Agreement
Completed Date:	05/31/1996
Comments:	DTSC signed a Voluntary Cleanup Agreement with Santa Fe for the completion and review of a Preliminary Endangerment Assessment.

SANTA FE/W.A. GRANT (Continued) **S102860873**

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	09/04/1996
Comments:	DTSC reviewed a Preliminary Endangerment Assessment for the site under a Voluntary Cleanup Agreement. Based on the information and data presented, DTSC determined that the hazardous constituents remaining at the site do not constitute a threat to human health or the environment.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	09/13/1995
Comments:	The Department received a Non-Emergency Hazardous Substance Release Report dated January 31, 1995. Review of the document indicates that the site is contaminated with elevated levels of heavy metals such as lead, copper and zinc. Foundry operations existed at the site from at least 1906 until 1990, operated by W.G. Grant & Co. Santa Fe Railway is the current owner of the site. RP removed USTs from the site without any regulatory agency oversight. Due to evidence of a release, DTSC is recommending that a PEA be conducted to evaluate the site. On September 13, 1995, DTSC notified the RP thereof.

Registry ID: 110059795574

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also

LA 7TH ST CONSOLIDATED FAC (Continued) **1000141475**

has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Registry ID: 110002756606

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002658963

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Manufactured Gas Plants:

Site located at 725 Chemming Street, Los Angeles, California, approximately 2.5 acres. From 1887 util 1906 an oil gas plant was operated at site. MGP may have been converted to a natural gas storage site in approximately 1906. Records indicate that MMGP equipment may have been removed by 1930. Site is currently used as a Greyhound Bus parking lot.

Completed Document Type: CEQA - Initial Study/ Neg. Declaration
Completed Date: 03/18/2003
Comments: Special Initial Study, Negative Declaration, and De Minimis Impact Finding were prepared and made available for public review. No verbal or written comments were received. DTSC approved the CEQA documents on 3/18/2003. DTSC approved RAW on 3/18/03. Proposed removal activities consists of removing approximately 615 cubic yards of contaminated soil. Chemicals of potential concern previously identified in the soil include the following: Lampslack, PAH's, and BTEX. Removal Activities are anticipated to last approximately 30 days.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	05/20/1993
Comments:	The Department completed review of the PEA. A Manufactured Gas Plant (MGP) was operated at the site in the late 1800s and early 1900s. Gas was produced from crude oil for distribution in the site area. Several companies operated at the site. In 1909, the site was owned by the Los Angeles Gas and Electric Corp., which merged with the Southern Calfornia Gas Company in 1937. SoCalGas owned the property until 1976, and sold to the current owners. The MGP was dismantled sometime before 1906. The byproducts from the manufactured gas operation were tars, oils, sludges, and lampblack. Elevated levels of polycyclic aromatic hydro- carbons (PAH), heavy metals such as lead and arsenic and cyanides were found at the site. The PEA concluded that there was contamination at the site above screening values. Therefore, the Department recommended that further investigation or assessment at the site was necessary.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Initial Study/ Neg. Declaration
Completed Date: 03/18/2003
Comments: Special Initial Study, Negative Declaration, and De Minimis Impact Finding were prepared and made available for public review. No verbal or written comments were received. DTSC approved the CEQA documents on 3/18/2003. DTSC approved RAW on 3/18/03. Proposed removal activities consists of removing approximately 615 cubic yards of contaminated soil. Chemicals of potential concern previously identified in the soil include the following: Lampslack, PAH's, and BTEX. Removal Activities are anticipated to last approximately 30 days.

Completed Date: 12/04/2002
Comments: Removal Action Workplan Approved

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/31/2002
Comments: DTSC approved site characterization activities in December 2002. Contaminants of concern included PAH's & BTEX. A RAW involving excavation will be implemented for the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/20/1993
Comments: The Department completed review of the PEA. A Manufactured Gas Plant (MGP) was operated at the site in the late 1800s and early 1900s. Gas was produced from crude oil for distribution in the site area. Several companies operated at the site. In 1909, the site was owned by the Los Angeles Gas and Electric Corp., which merged with the Southern California Gas Company in 1937. SoCalGas owned the property until 1976, and sold to the current owners. The MGP was dismantled sometime before 1906. The byproducts from the manufactured gas operation were tars, oils, sludges, and lampblack. Elevated levels of

FARMERS PRODUCE PROJECT INC (Continued) **S101584054**

polycyclic aromatic hydro- carbons (PAH), heavy metals such as lead and arsenic and cyanides were found at the site. The PEA concluded that there was contamination at the site above screening values. Therefore, the Department recommended that further investigation or assessment at the site was necessary.

Manufactured Gas Plants:

The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were weere discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domesttic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a stanndby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility

CA BOND EXP. PLAN:

Reponsible Party:	RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	Southern California Gas has entered into a consent order with DHS for oversight/monitoring of its cleanup efforts. DHS has budgeted $50,000 for direct costs related to the project. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with site cleanup.
Site Description:	The Olympic Base facility, currently owned by Southern California Gas Company, is the site of a former oil gasification "towne gas" plant.
Hazardous Waste Desc:	The wastes are generally characterized as polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs). Other constituents of concern are cyanide, lead, and semivolatile organics. Soil contamination is present at the site from the surface to a depth of 10 to 15 feet in both the northern and southern portions of the site.
Threat To Public Health & Env:	The primary concern is potential contamination of ground water. Usable ground water lies approximately 200 feet below the ground surface and the water table may rise to only 100 feet below the site. Ground water contamination has not been verified. Surface soil contamination may migrate offsite due to airborne particulates.
Site Activity Status:	The Southern California Gas Company has completed a remedial investigation/feasibility study.

Completed Sub Area Name: Not reported
Completed Document Type: * Final Remedial Action
Completed Date: 12/16/1991
Comments: The Final Remedial Action consisted of placing an asphalt cap on the unpaved portions of the Olympic Base Site which would be maintained according to the requirements set forth in the RAP. A deed restriction was recorded on the property. The design of the cap was prepared and included in the RAP workplan.

Background Info:

The Southern California Gas (SCG), Olympic Base Site was once a gas manufacturing plant where oil was converted into gas for lighting, heating, and cooking. Residues from the gasification process, mainly consisting of a material "lamp black", were were discovered at the site. "Lamp Black" contains varying amounts of a family of compounds called polynuclear or polycyclic aromatic hydrocarbons (PNAs or PAHs).
The plant was built in the period 1907-1908 by the City Gas Company. In 1908, the Domestic Gas Company purchased and took over the operations of City Gas. In 1910, SCG was incorporated and became the successor of Domestic Gas. SCG operated the plant until 1927, when the service for 100% natural gas started. The plant operated on a standby basis until 1952, when all gas manufacturing operations ceased and the plant was dismantled. SCG has administrative facilities on other portions of the facility.
A Consent Order was signed in December 1986, which addressed the work needed to complete the Remedial Investigation/-Feasibility Study (RI/FS) process. The RI report was approved by the Department on September 17, 1987. The RI found that soil from about 2 to 12 feet below ground surface is contaminated. The contaminants are not readily vaporized, nor do they enter

OLYMPIC BASE (Continued) **S105689611**

aqueous phase solution. Groundwater aquifers beneath the site are unsaturated to a depth of 90 feet. Air monitoring at the site does not indicate that the contaminants are emitting vapors to the air. SCG then submitted a FS report in May 1988. DHS has reviewed the FS report and requested a full Health Risk Assessment (HRA) based on appropriate biological receptors and exposure pathways on October 20, 1988. The HRA was approved by the Department on June 4, 1990. The FS was revised by SCG and the report approved on July 19, 1990.
The RP submitted a draft RAP on August 20, 1990, as requested by the Department. The Department has published a fact sheet on the findings of the RI/FS. The RAP meeting with the community was held on November 17, 1990 and the RAP was subsequently approved in January of 1991.
The RAP proposed an asphalt cap on the site, groundwater monitoring, and a deed restriction. Groundwater monitoring is necessary as the region the site is located in is currently experiencing a drought; however, if this should change the groundwater table will rise, possibly impacting the conclusions of the RI. The deed restriction, protected the integrity of the cap by limiting land use and excavation of the waste.
The Department directed the RP to prepare a Remedial Design and Implementation (RD&I) plan. The plan included engineering specifications for the asphalt cap, permits, and a schedule for completion of the cap. The cap will be repaired as necessary; necessary; it is expected to require replacement every ten years. This operation and maintenance program will last for 20 years.

Corrective Action Summary:

Event date: 06/30/1995
Event: RFA Completed

Event date: 06/30/1997
Event: CA Prioritization, Facility or area was assigned a low corrective action priority.

Event date: 06/30/1997
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 07/09/2010
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 07/09/2010
Event: CA550RC

Event date: 07/09/2010
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 09/30/2011
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Certification
Completed Date:	10/05/2006
Comments:	The Site removal activities included placing an asphalt cover on the property and removal of soil containing metals.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	CEQA - Notice of Exemption
Completed Date:	10/21/2004
Comments:	NOE completed for Removal Action Workplan which describes installation of asphalt cap and soil removal.

WESTERN LEAD AND METAL CO (INTERNATIONAL LEAD CO.) (Continued) **1001115052**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/10/2006
Comments: Removal Action included placement of an asphalt cover in the property area and removal of 97 tons of soil contaminated with lead and arsenic.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 10/21/2004
Comments: The RAW proposes to address the lead & arsenic contaminated soil by placing a four-inch asphalt cap on the property area (15,000 sq.ft.) and removing soil from nine impacted areas at the Site boundary. Implementation is scheduled for end of January 2005.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/15/2003
Comments: The Remedial Investigation is approved. The RI involved sampling of lead and other metals, and volatile organic compounds, particularly tetrachlorethene and 1,1,1-trichloroethane.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Assessment Report
Completed Date: 06/30/1998
Comments: Completed a Preliminary Assessment (PA) with sampling of the site under contract with U.S. EPA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/18/1997
Comments: Soil removal (excavation) of lead-contaminated soils. The Implementation Report for completion of the Emergency Removal Action by Quemetco at Area 3 (Coast Produce Warehouse) and Area 4 (Residential property at 2151 E. 14th Street) was approved. An estimated 120 tons of contaminated lead was excavated and disposed of off-site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 07/18/1997
Comments: UPRR: A removal action workplan (RAW-UPRR) was approved for Union Pacific Railroad track areas along Lemon Street (between 10th & 14th Streets). These areas are designated as Areas 1 & 2. A Notice of Exemption was also filed with the OPR as required by the CEQA laws and guidelines. The RAW-UPRR included excavation, treatment and disposal of contaminated soils in the neighboring railroad right-of-way (track) areas of the International Lead Company site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

WESTERN LEAD AND METAL CO (INTERNATIONAL LEAD CO.) (Continued) **1001115052**

Completed Document Type:	Removal Action Completion Report
Completed Date:	06/25/1998
Comments:	Excavation, treatment and disposal of 2,500 tons of metal contaminated soil from the UPRR rail track areas. The Implementation Report of Emergency Removal Action by Dames & Moore for Areas 1 and 2 was approved.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Workplan
Completed Date:	07/18/1997
Comments:	A removal action workplan (RAW-QUEMETCO) which proposed excavation and disposal of contaminated soils, was approved for Areas 3 and 4 (perimeter of Property and residential property). A Notice of exemption was also filed with the OPR as required by the CEQA laws and guidelines.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	11/07/1994
Comments:	DTSC received an information letter for 3 possible hazardous substance release sites allegedly associated with Quemetco/ RSR Corporation, a lead smelting company.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Technical Workplan
Completed Date:	02/10/2006
Comments:	Workplan for additional removal of soil is approved.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Remedial Investigation Workplan
Completed Date:	05/26/1998
Comments:	Workplan to delineate soil contamination approved
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Supplemental Site Investigation Workplan
Completed Date:	10/31/2000
Comments:	WP approved for further Soil and Soil gas investigation.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	01/30/2005
Comments:	Placed asphalt cover and excavated 9 locations.

Alternate Address:	2182 EAST 11TH STREET
Alternate City,St,Zip:	LOS ANGELES, CA 90021
Background Info:	The Site is also known as the Western Lead and Metal Company Site. The Site is located in an industrial area near downtown Los Angeles and is surrounded by warehouses, food distributors, light manufacturing, and scrap metal recyclers. The Site is roughly bounded by 11th Street (Property), to the north, the Union Pacific Railroad right-of-way to the east, 14th Street, to the south, and Wilson Street to the west. The Site includes the property at 2182 East 11th Street, which was occupied by several different companies as a lead smelter from 1946 to 1965. The Western Lead Products Company operated a lead smelter on the Property from 1954 to 1960 under the name of Western Lead and

WESTERN LEAD AND METAL CO (INTERNATIONAL LEAD CO.) (Continued) **1001115052**

Metal Company. After 1965, the Property was used for die-cast manufacturing operations. The Property is approximately 110 feet by 140 feet and is currently devoid of any buildings, and is secured by fencing. The other areas of the Site include: portions of the Union Pacific Railroad right-of-way, between 14th and 10th Streets; a narrow strip of the property occupied by Coast Produce; and a residencial property at the corner of Wilson and 14th Streets. Since 1991, several site assessments have been conducted. These assessments involved mostly surface soil sampling and analyses for metals including lead, antimony, and arsenic. In 1996, the Property was paved with three inches of asphalt to prevent exposure of the public to contaminated soil. In addition, DTSC collected several surface soil samples in the areas surrounding the Property. Extremely high levels of lead (up to 574,000 ppm), antimony (up to 14,000 ppm), and arsenic (up to 920 ppm) were detected in the narrow strip along the southern and western boundaries of the Property; high levels of lead, copper, and zinc were detected along the railroad right-of-way; and elevated levels of lead (up to 1,450 ppm) were detected on the residential property. A Consent Order (Imminent and Substantial Endangerment) was entered into with Quemetco Inc., (an RSR Subsidiary) and Union Pacific Railroad Company. As required by the Order, in 1977, Quemetco completed an Emergency Removal Action at Areas 3 and 4 which are located at the perimeter of the Property and the residential property. Union Pacific has also conducted an Emergency Removal Action at Areas 1 and 2 (railroad right-of-wau). The Remedial Investigation found the extent of metal contamination. Currently, the Draft RAW, which proposes to place a 4-inch asphalt cover on the Property area and excavate soil, from the Site boundary, has been approved. The 30 day Public Comment Period starts on August 23 and ends September 22, 2004.

Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/13/2003
Comments: DTSC approves PEA Report. The PEA investigative activities conducted at the former smelting site identified arsenic (3410 mg/kg), and lead (25,700 mg/kg). DTSC concluded that the current conditions (building and pavement intact, no exposed soil) at the Site does not pose a potential threat to industrial workers. Due to elevated levels of the above-mentioned metals in the soil, if there is any demolition of the buidling or parking lot, or development at the Site, the responsible party(s) will be required to submit a Removal Action Workplan or Remedial Action Plan to DTSC for approval.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	05/12/2003
Comments:	Potential release as a result of Preliminary Assessment (PA). Further Action recommended.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Preliminary Endangerment Assessment Report
Completed Date:	06/06/2000
Comments:	06/06/2000: Based on review of the PEA, DTSC determines that "Further Action is necessary. In addition, DTSC provides comments to be incorporated in subsequent investigation.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	04/04/1997
Comments:	The site has been occupied by metal plating companies since 1943. Site soil and possibly groundwater is contaminated with heavy metals and cyanides. Also, there are four under- ground abandoned storage tanks at the site. The tanks were closed without proper regulatory involvement. site, staff recommends a PEA.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	07/26/2006
Comments:	Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Fieldwork
Completed Date:	02/08/2008
Comments:	Completed field investigation consisting of borehole drilling for soil gas probe installation and continuous coring for soil stratigraphy logging and sampling and soil gas probe installation.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	12/18/2007
Comments:	RP's consultant will schedule equipment for field work after the holidays.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Voluntary Cleanup Agreement Termination Notification
Completed Date:	10/07/2013
Comments:	VCA terminated effective 10/07/2013. The Site is listed as Inactive - Action Required.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Voluntary Cleanup Agreement

ALCO CAD-NICKEL PLATING CORPORATION (Continued) **U001560836**

Completed Date: 04/16/2004
Comments: VCA agreement for additional work is signed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 04/03/2000
Comments: DTSC enters into a Voluntary Cleanup Agreement with Alco Cad-Nickel Plating Corporation to review and comment on a Preliminary Endangerment Assessment (PEA) Report. The PEA was conducted without DTSC oversight.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate

Primary Waste Type:	Not reported
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Manufactured Gas Plants:

The former Aliso Street manufactured Gas Plant covered approximately 52 acres in downtown Los Angeles. The site is being investigated as 5 sectors and an overall groundwater unit. The "C" sector consists of 16.4 acres south of the Hollywood (101) Freeeway, bisected by Center Street and bounded by Commercial, Ducommun and Jackson Streets. Sector C is further subdivided into Blocks G, K, L, N, O, Q, and R. Contaminants suspected include petroleum hydrocarbons, volatile organic compounds, cyanide,polycyclic aromatic hydrocarbons and heavy metals

Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE), Chromium, Chromium

ACE PLATING CO., INC. (Continued) **S105632824**

VI

Site History: Plating operations started in the mid-1910s in the southwestern portion of the Site until 2005. Ace Plating owned and conducted plating related operations on the 11 contiguous parcels, specifically electrochemical coating of metal parts. Numerous assessments conducted at the site indicate that the soil is impacted with VOCs and metals. The soil vapor has been sampled throughout the Site with tetrachloroethene (PCE) concentrations at 5 feet below ground surface (bgs) ranging from 7.9 micrograms per liter (a%g/L) to 87 a%g/L. The soil vapor data is limited at depths greater than 30 feet bgs. No soil vapor data exists below 15 feet bgs in Plating Room 2. At 60 feet bgs and below, PCE concentrations range from 39 a%g/L below the Assembly Room to 127 a%g/L offsite on Crocker Street. The lateral extent of shallow PCE greater than 12 a%g/L is only defined on the east side. The source of the PCE is unknown but slightly higher concentrations exist in the central portions of the Plating Rooms. Chromium concentrations ranged from 1.5 mg/kg to 4,300 mg/kg for total chromium and from 0.92 to 840 mg/kg for hexavalent chromium. The maximum concentrations were both collected from SSVW-2 at 1 foot bgs located in the alley between the Crocker Street and Towne Avenue buildings and is adjacent to the location of the former chromium tanks. The impacted soil at the former chromium tanks have not been delineated either vertically or laterally to the southeast. Outside of the area impacted by the former chromium tanks, the maximum chromium concentration is 4200 mg/kg for total chromium and 94 mg/kg for hexavalent chromium at MW-1. The chromium impacted soil to the southwest of monitoring well MW-1 has not been delineated laterally. Degreasers that contained PCE were utilized in Plating Rooms 1 and 2 from 1993 to 2001. The maximum PCE concentration is 0.150 mg/kg and was sampled 4 feet deep in the vicinity of the former nickel dip tank in Plating Room 2. PCE was only detected in five sampling locations at depths greater than five feet bgs with a maximum concentration of 36 mg/kg. Two groundwater monitoring wells have been installed. Hexavalent chromium was not detected above the laboratory detection limits in any of the groundwater samples collected. Tetrachloroethylene (PCE) was the only VOC detected in groundwater, with the maximum concentration detected in MW-3 at a concentration of 11 ug/L.

Completed Date: 12/03/2004
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 07/26/2004
Comments: Block L - Polycyclic aromatic hydrocarbon (PAH) and volatile organic hydrocarbon (VOC) contaminated soil was excavated and thermally treated offsite. Site has been backfilled with clean soil. Subsurface contamination did not extend laterally to offsite areas. Contamination was found, as expected, at the ground water table, and will be addressed in a later, regional effort. As the soil was remediated to industrial cleanup goals, a deed restriction will limit use of the site, preventing residential or other sensitive uses on this parcel.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 09/10/2003
Comments: Block L - The Special initial Study described the proposed polycyclic aromatic hydrocarbon (PAH) and volatile organic hydrocarbon (VOC) contaminated soil remediation activity and its insignificant impact upon the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 02/27/2003
Comments: Block L - PEA-E investigated the former manufactured gas plant and petroleum transfer site. VOCs, SVOCs, PAHs and hydrocarbons were found to impact the site. A Renivak Action Work Plan will address clean up of this contamination. PEA-E completion was delayed due to further Site Characterization activities and delays in receiving the Human Human Health Risk Assessment reports associated with the PEA-E.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 03/07/2016
Date Data Arrived at EDR: 04/05/2016

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/07/2016

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/07/2016

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/13/2015

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

West Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

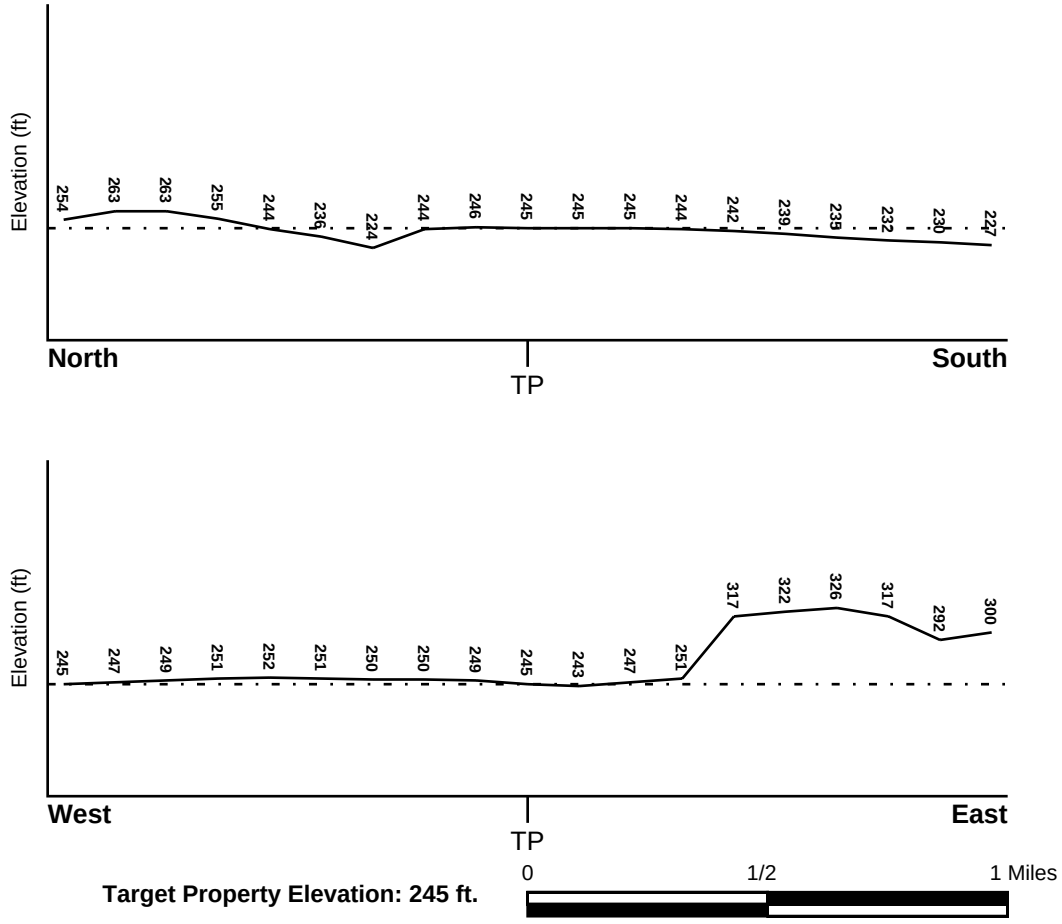
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06037C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LOS ANGELES	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/2 - 1 Mile ENE	SW
2	1/2 - 1 Mile South	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand

clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

WELL SEARCH DISTANCE INFORMATION

DATABASE	SEARCH DISTANCE (miles)
Federal USGS	1.000
Federal FRDS PWS	Nearest PWS within 0.001 miles
State Database	1.000

FEDERAL USGS WELL INFORMATION

MAP ID	WELL ID	LOCATION FROM TP
No Wells Found		

FEDERAL FRDS PUBLIC WATER SUPPLY SYSTEM INFORMATION

MAP ID	WELL ID	LOCATION FROM TP
No PWS System Found		

Note: PWS System location is not always the same as well location.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

EDR PUR-IQ® Report

"the intelligent way to conduct historical research"

for
670 Mesquit Street, Los Angeles, California, 90021
670 Mesquit Street
Los Angeles, CA 90021
Lat./Long. 34.0362 / 118.228871
EDR Inquiry # 04683930.1r

The EDR PUR-IQ report facilitates historical research planning required to complete the Phase I ESA process. The report identifies the *likelihood* of prior use coverage by searching proprietary EDR-Prior Use Reports® comprising nationwide information on: city directories, fire insurance maps, aerial photographs, historical topographic maps, flood maps and National Wetland Inventory maps.

Potential for EDR Historical (Prior Use) Coverage - Coverage in the following historical information sources may be used as a guide to develop your historical research strategy:

1. City Directory: Coverage may exist for portions of Los Angeles County, CA.

2. Fire Insurance Map: When you order online any EDR Package or the EDR Radius Map with EDR Sanborn Map Search/Print, you receive site specific Sanborn Map coverage information at no charge.

3. Aerial Photograph: Coverage exists for portions of Los Angeles County for the following decades: 1960s, 1920s, 1940s, 1980s, 1970s, 1950s, 1990s Shipping time 3-5 business days.

4. Topographic Map: The USGS 7.5 min. quad topo sheet(s) associated with this site:

Historical: Coverage exists for LOS ANGELES County

Current: Target Property: TP | 2012 | 5630795 Los Angeles, CA

Additional required for 1 Mile radius: W | 2012 | 5630741 Hollywood, CA

5. Flood Insurance Rate Maps (FEMA) : Coverage is available for LOS ANGELES county.

EDR's network of professional researchers, located throughout the United States, accesses the most extensive national collections of city directory, fire insurance maps, aerial photographs, flood maps and historical topographic map resources available for Los Angeles, CA. These collections may be located in multiple libraries throughout the country. To ensure maximum coverage, EDR will often assign researchers at these multiple locations on your behalf. Please call or fax your EDR representative to authorize a search.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Rincon were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

16. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date 3-2-88 Lic. Class B Lic. Number 404469 Contractor James F. Green (Signature)

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

Date _____ Owner's Signature _____

WORKERS' COMPENSATION DECLARATION

18. I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Worker's Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. 1-06328-10 00 Q Insurance Company FAIRMONT INS. CO.

☐ Certified copy is hereby furnished.

☐ Certified copy is filed with the Los Angeles City Dept. of Bldg. & Safety.

Date 3-2-88 Applicant's Signature James F. Green

Applicant's Mailing Address _____

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

19. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

Date _____ Applicant's Signature _____

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

20. I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____ Lender's Address _____

21. I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

I realize that this permit is an application for inspection, that it does not approve or authorize the work specified herein, that it does not authorize or permit any violation or failure to comply with any applicable law, that neither the city of Los Angeles nor any board, department, officer or employee thereof make any warranty or shall be responsible for the performance or results of any work described herein or the condition of the property or soil upon which such work is performed. (See Sec. 91.0202 LAMC)

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

16. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date _____ Lic. Class _____ Lic. No. _____ Contractor _____ (Signature)

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

[ ] I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

[ ] I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

[ ] I am exempt under Sec. _____, B. & P. C. for this reason

CITY OF LOS ANGELES
DEPARTMENT OF BUILDING AND SAFETY
BUILDING DIVISION
Application to Alter, Repair, Move or Demolish

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

Application for the Erection of a Building

OF

CLASS "D"

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

3 DEPARTMENT OF BUILDING AND SAFETY

Application to Alter, Repair or Demolish

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

Board of Public Works

July 6, 1921.

J. J. Backus, Esq.,
Chief Inspector of Buildings.

Dear Sir:

At a meeting of the Board of Public Works of the City of Los Angeles, California, held July 6, 1921, enclosed communication No. 22,063 from the Los Angeles Ice and Cold Storage Company, submitting plans of a proposed Class "D" building, which they are constructing on Mesquit Street, showing an extension of the height thereof, four feet beyond that provided for in the City Ordinance, and asking the Board to permit them to construct the said building in accordance with the said plans, was referred to you, with instructions to grant the request, set forth in the said communication, if the said plans meet with your approval as to the safety features involved in connection with the aforesaid matter.

Respectfully yours,

(Signed) Horace B. Ferris
Secretary

Subject: **Phase II Environmental Site Assessment**
670 Mesquit Street, Los Angeles, California

Dear Ms. Robertson:

This report presents the findings of a Phase II Environmental Site Assessment (ESA) consisting of soil matrix sampling conducted by Rincon Consultants, Inc. for the 4.6-acre property identified as 670 Mesquit Street in Los Angeles, California. The subject property is occupied by Rancho Cold Storage, Hidden Villa Ranch, Integrated Food Service and Harvey's Produce and is utilized for storage of refrigerated and dry food. Railroad tracks are present adjacent to the eastern portion of the subject property. The Phase II ESA was performed for RCS VE LLC based on the findings of our previous Phase I ESA Report dated September 6, 2016.

Thank you for selecting Rincon for this project. If you have any questions, or if we can be of any future assistance, please contact us.

Sincerely,
Rincon Consultants, Inc.

Executive Summary

This report presents the results of a Phase II Environmental Site Assessment (ESA) conducted for the 4.6-acre property identified as 670 Mesquit Street located south of E 6th Street, north of E 7th Street and west of the Los Angeles River in Los Angeles, California (Figure 1, Vicinity Map). The subject property includes the following addresses 606, 610, 612, 638, 640, 642, 646, 650, 654, 658-684, 679-685, 689, 690, and 694 S. Mesquit Street; 1494-1498 E. 6th Street; and 2119-2123, 2135, 2139, and 2143 E. 7th Street. The subject property is occupied by Rancho Cold Storage, Hidden Villa Ranch, Integrated Food Service and Harvey's Produce and is utilized for storage of refrigerated and dry food. Railroad tracks are present adjacent to the eastern portion of the subject property.

The Phase II ESA was performed for RCS VE LLC by Rincon Consultants, Inc. (Rincon). The work was conducted based on the findings of our Phase I ESA, dated September 6, 2016, which identified the following recognized environmental conditions (RECs) and potential RECs in connection with the subject property:

Recognized Environmental Conditions

1. Two former petroleum underground storage tanks (USTs) and associated piping at the subject property identified on Sanborn maps
2. Former Gas and Oil facility at the subject property identified on Sanborn maps

Potential Recognized Environmental Conditions

1. Transformer room identified at the subject property on Sanborn maps
2. Use of fuel oil identified at the subject property on Sanborn maps
3. Existing adjacent railroad tracks and former railroad spur on the northern portion of the subject property
4. Former spray painting facility on the subject property at 685-689 Mesquit Street
5. Stained concrete near the waste oil above-ground storage tank (AST) and drums and the presence of an oil/water separator (clarifier) on the subject property
6. The former use of the subject property for manufacturing. This includes the former presence of a sheet metal shop onsite.

To evaluate the subject property impact associated with the identified RECs and potential RECs, Rincon recommended conducting a soil sampling assessment at the subject property. The following summarizes the soil sampling that was conducted as part of this Phase II ESA.

On March 1, 2018, Choice Drilling, under the oversight of Rincon, mobilized to the subject property and advanced a total of 14 soil borings. Soil samples were collected at various depths and analyzed for one or more of the following: total petroleum hydrocarbons (TPH) by EPA method 8015M, volatile organic compounds (VOCs) by EPA method 8260B, semi-volatile organic compounds (SVOCs) by EPA method 8270C, polychlorinated biphenyls (PCBs) by EPA method 8082 and total metals by EPA method 6010B and 7471A.

The depths of the soil borings were determined based on the use of the area, or former use (i.e. former UST area, former piping, transformer room).

The soil analytical results were compared to San Francisco Bay Regional Water Quality Control Board (RWQCB) Environmental Screening Levels (ESLs) established for residential and commercial/ industrial soil (February 2016). The ESLs were established by the RWQCB for chemicals commonly found in soil and groundwater at sites where releases of hazardous chemicals have occurred[1]. Based on the *Interim Site Assessment and Cleanup Guidebook, May 1996 California Regional Water Quality Control Board (LARWQCB), Los Angeles and Ventura Counties, Region 4*[2], analytical results for TPH and VOCs were also compared to the LARWQCB Maximum Soil Screening Levels (SSL). In addition, the soil sampling results for metals were compared to the California Background Concentrations published by the Kearney Foundation (March 1996).

Based on the results of the current assessment, PCBs and SVOCs were not detected.

Based on the results of the current assessment, VOCs were not detected except for benzene in one sample and acetone in two samples. The detected concentrations were below their respective ESLs. In addition, the detected concentration of benzene was below the SSL. No further assessment for VOCs appears warranted.

Metals were detected at varying concentrations, all within background ranges that are naturally occurring in California soils.

Based on the results of the current assessment, TPH as diesel was detected in soil beneath the subject property (in the vicinity of the former onsite USTs on the southeastern portion of the subject property) at concentrations that exceed the residential ESLs and SSLs to which they were compared. Following removal of the onsite structures as part of the planned redevelopment, we recommend further assessment of soil beneath the subject property to delineate the lateral and vertical extent of the TPH as diesel in soil. However, it should be noted that the area recommended for further assessment is within a freezer building with a "freezer floor" through which soil borings were not allowed to be drilled during the current assessment because drilling through the floor would compromise the integrity of the freezer building. Further assessment of the site should be conducted following removal of the onsite structures and prior to redevelopment.

In addition, based on the proposed redevelopment of the subject property, we recommend that a soil management plan (SMP) be prepared that addresses issues associated with any contaminated soils that may be encountered during future site excavation/ grading activities. Contaminated soils should be removed in accordance with applicable regulations and requirements.

Introduction

This report presents the results of a Phase II Environmental Site Assessment (ESA) conducted at 670 Mesquit Ave, Los Angeles, California (Figure 1, Vicinity Map). The Phase II ESA was performed for RCS VE LLC by Rincon Consultants, Inc. The work was conducted based on the findings of our Phase I ESA, dated September 6, 2016.

Project History

Phase I ESA, September 6, 2016

Rincon completed a Phase I ESA for the subject property in 2016 (report dated September 6, 2016). The subject property includes the following addresses 606, 610, 612, 638, 640, 642, 646, 650, 654, 658-684, 679-685, 689, 690, and 694 S. Mesquit Street; 1494-1498 E. 6th Street; and 2119-2123, 2135, 2139, and 2143 E. 7th Street. The subject property is occupied by Rancho Cold Storage, Hidden Villa Ranch, Integrated Food Service and Harvey's Produce and is utilized for storage of refrigerated and dry food. Railroad tracks are present adjacent to the eastern portion of the subject property.

As part of the Phase I ESA, Rincon performed a reconnaissance of the subject property on August 1, 2016. The purpose of the reconnaissance was to observe existing subject property conditions and to obtain information indicating the presence of recognized environmental conditions (RECs) and potential RECs in connection with the subject property. The subject property was occupied by food warehouses, and included refrigerated storage and dry storage. Two wastewater clarifiers were observed at the subject property. One clarifier was located on the east side of the 670 Mesquit Street building in the vicinity of a cooling tower. According to the owner questionnaire, the purpose of the clarifier is to collect water from the cooling tower and oil from the engine room. The second clarifier was located in the 658 Mesquit Street building and was used to collect any food present when the production room is washed down. The clarifiers have four -stages, are concrete-lined and are connected to the municipal sewer system. According to the site representative, the clarifiers are cleaned out on an as-needed basis. A 110-gallon aboveground storage tank (AST) containing waste oil was observed on the east side of the 670 Mesquit Street building in the vicinity of the cooling towers. Oil appeared to have been spilled around the top of the AST, and minor staining was observed on the concrete around the tank. The AST was situated in close proximity to a drain. However, the drain is reportedly connected to the onsite clarifier located on the east side of 670 Mesquit Street. Two empty 55-gallon drums were observed near the waste oil AST and were reported by the site manager to have been previously used for waste oil collection. Minor staining was observed on the concrete floor in the vicinity of the drums.

The subject property is located in an area that is primarily comprised of industrial, residential, and commercial land uses. Properties in the vicinity of the subject property include a railroad yard, mixed-use lofts, warehouses, and restaurants.

Environmental Data Resources, Inc. (EDR) was contracted to provide a database search of public lists of sites that generate, store, treat or dispose of hazardous materials or sites for which a release or incident has occurred. The EDR search was conducted for the subject property and included data from surrounding sites within a specified radius of the property. The subject property was listed on the CA EMI database indicating that air emissions were regulated at the subject property. Based on

our review of the South Coast Air Quality Management District (SCAQMD) Facility Information Detail (FIND) website, there are no active air emission permits for the subject property. Several adjacent properties were also listed in one or more databases searched by EDR. However, based on the research conducted as part of the Phase I ESA, the surrounding specified properties were not expected to be adversely impacting soil or groundwater beneath the subject property.

Historical sources reviewed as part of the Phase I ESA included aerial photographs, Sanborn maps, topographic maps, city directories and building permits. The historical sources reviewed indicated that the majority of the subject property has been used as a cold storage facility since at least 1890. Portions of the property have been used as dwellings, a barn, a wagon shed, a juice factory, a quilt factory, cold storage, and an automotive painting facility. Underground storage tanks (USTs) containing petroleum were depicted on the southeastern portion of the subject property in 1890 through 1895. Gas and oil storage is depicted on the Sanborn maps in 1959 through 1970. A transformer room, fuel oil use and a railroad spur were also identified on the subject property in the historical sources reviewed. City directories indicate that the subject property was occupied by a sheet metal manufacturing company from 1951 to 1958, and by food production warehouses and distribution facilities, and cold food storage warehouses from the early 1950s to present day.

The following Recognized Environmental Conditions (RECs) and potential RECs in connection with the property were identified as follows:

Recognized Environmental Conditions

1. Two former 150-gallon petroleum USTs and associated piping identified on the subject property on the Sanborn maps.
2. Former Gas and Oil facility identified on Sanborn maps.

Potential Recognized Environmental Condition

1. Transformer room identified on the subject property on Sanborn maps.
2. Use of fuel oil identified on the subject property on Sanborn maps.
3. Existing adjacent railroad tracks and former railroad spur on the northern portion of the subject property.
4. Former spray painting facility on the subject property at 685-689 Mesquit Street.
5. Former sheet metal shop on the subject property at 670 Mesquit Street.
6. Stained concrete near the waste oil AST and drums and the presence of an oil/water separator (clarifier) on the subject property.
7. The former use of the subject property for manufacturing.

To evaluate the potential subject property impact associated with the identified RECs and potential RECs, a Phase II Environmental Site Assessment at the subject property was recommended.

The scope of work described below is based on the recommendations for additional assessment stated in the Phase I ESA.

Scope of Work

The following tasks were performed as part of this Phase II ESA:

- **Soil Boring Permit.** A soil boring permit was obtained from the County of Los Angeles Public Health Department Environmental Health Division.

- **Health and Safety Plan**. A Health and Safety Plan was developed for the Phase II ESA sampling personnel. Rincon's Health and Safety Plan outlined the measures to be followed to minimize exposure to onsite workers and the public. This document was prepared prior to the commencement of field work.

- **Utility Notification.** Prior to the commencement of drilling activities, the subject property was pre-marked and Underground Services Alert (USA) utility marking service was contacted to mark areas where underground public utilities might be located in the drilling area. California law requires this notification.

- **Soil Sampling.** Soil sampling was conducted at the subject property according to the table below:

RECs and Potential RECs	Number of Borings	Sample Depths (feet bgs)	Analysis
Former USTs	1 Boring (SB1A)	5, 10, 15 & 20	4 soil samples - TPH 4 soil samples - VOCs
Former USTs Associated Piping, Clarifier and Stained Concrete Near Waste Oil AST and Drums	2 Borings (SB1/7A, SB1/7B)	5 & 10	4 soil samples - TPH 4 soil samples - VOCs, 4 soil samples – metals 4 soil samples – PCBs
Former Gas and Oil Facility	2 Borings (SB2A, SB2B)	5, 10, 15 & 20	4 soil samples - TPH 4 soil samples – herbicides 4 soil samples – metals
Transformer Room	2 Borings (SB3A, SB3B)	1 & 5	4 soil samples - PCBs

RECs and Potential RECs	Number of Borings	Sample Depths (feet bgs)	Analysis
Existing Adjacent Railroad Tracks and Former Onsite Railroad Spur	6 Borings (SB1A, SB5A, SB5B, SB5C, SB5D, SB5E)	SB1A – 5 SB5A – 1 SB5B through SB5E – 0.5	6 soil samples - TPH 6 soil samples - SVOCs 6 soil samples – metals
Former Spray Painting Facility / Former Manufacturing/ Sheet Metal Shop	2 Borings (SB6A, SB6B)	1 & 5	4 soil samples - VOCs 4 soil samples - SVOCs 4 soil samples – metals

- **Reporting.** Preparation of this report documenting our findings.

Geologic and Hydrogeologic Setting

Physical Setting Sources

Topography

The current USGS topographic map (Los Angeles, California Quadrangle, 1994, photorevised 1981) indicates that the subject property is situated at an elevation of about 245 feet above mean sea level with topography sloping down to the south-southeast. The adjacent topography consists of relatively flat land.

Geology and Hydrogeology

Site Geology

According to the California Geological Survey, Preliminary Geologic Map of the Los Angeles 30x60 Quadrangle, California, 2005, the subject property is underlain by Quaternary-aged alluvial fan deposits, which are described as unconsolidated boulder, cobbley, gravelly, sandy, or silty alluvial deposits on active and recently active alluvial fans and in some connected headward channel segments.

During the current assessment, soil beneath the site consisted of silty sand and sandy silt mixtures up to 20 feet below grade.

Regional Groundwater Occurrence and Quality

According to the Department of Water Resources Bulletin 118 (DWR, 2003), the subject property is located within the Coastal Plain of Los Angeles Groundwater Basin - Central Basin. The basin covers an area of 277 square miles in the southeastern part of the Coastal Plain of Los Angeles

groundwater basin. The Central Basin is bounded to the north by a surface divide known as the La Brea high, on the northeast and east by emergent less permeable Tertiary rocks of the Elysian, Repetto, Merced, and Puente Hills. The boundary between the Central Basin and Orange County Groundwater Basin roughly follows Coyote Creek, along the southeast side of the Basin. The southwest boundary is formed by the Newport Inglewood fault system. Groundwater occurs in Holocene and Pleistocene age sediments. The main productive freshwater-bearing sediments are contained within Holocene alluvium and Pleistocene Lakewood and San Pedro Formations. Groundwater flows southwestward from recharge areas in the northeast towards the Pacific Ocean, although groundwater pumping has decreased subsurface outflow to the West Coast Subbasin. Folding, faulting, and uplift throughout the Central Basin create restrictive structures (Department of Water Resources Bulletin 118 – February 2004). [3]

During preparation of the Phase I ESA, we reviewed the California State Water Resources Control Board's (SWRCB) online GeoTracker database to determine groundwater flow direction in the vicinity of the subject property. According to the Removal Action Work Plan, Butterfield Property, 590 South Santa Fe Avenue, Los Angeles, California prepared by Arcadis U.S., Inc. and dated August 28, 2015, depth to groundwater in the vicinity of the subject property is approximately 65 feet below ground surface with a flow direction towards the west-southwest. This property is located adjacent to the subject property to the north, across E 6th Street, and is included in Figure 3.

Sampling Methodology

Soil Sampling

Under the direction of Rincon, on March 1, 2018, Choice Drilling advanced 14 borings at the subject property using a limited access track-mounted Geoprobe rig and a full sized track-mounted rig as follows:

The Geoprobe hydraulically drives a rod into the ground. When the target soil sampling depth is reached, a soil sampler is attached to the end of the rod. The soil sampler consists of a 1 inch diameter tube equipped with an acetate liner. By advancing this sampler into the soil, soil is forced into the opening of the sampling tube and a sample is obtained. Once the sampler is filled, it is retrieved and the sample liner is removed. The liner is then covered at each end with Teflon and tight-fitting plastic caps, labeled, and stored in a cooler with ice and transferred under chain of custody documentation to the analytical laboratory. Soil boring Logs are in Appendix A.

The samples were transported under chain-of-custody documentation by courier to American Scientific Laboratories, a State-certified analytical laboratory in Los Angeles, California. All sampling equipment was decontaminated between uses by washing with Alconox detergent and water. All soil sampling was performed under the oversight of a California Professional Geologist.

[3] https://www.water.ca.gov/-/media/DWR-Website/Web-Pages/Programs/Groundwater-Management/Bulletin-118/Files/2003-B118-Basin-Descriptions/B118_2003_BasinDescription_4_011_04.pdf

Laboratory Analysis

Soil samples collected from the subject property were analyzed for one or more of the following:

- Total petroleum hydrocarbons (TPH) by EPA method 8015M
- Volatile organic compounds (VOCs) by EPA method 8260B
- Semi-Volatile Organic compounds (SVOCs) by EPA method 8270C
- Polychlorinated biphenyls (PCBs) by EPA method 8082
- Total metals by EPA method 6010B and 7471A

Based on the purpose of the soil boring (i.e. to investigate the area of a former UST, former piping, transformer room, etc.), soil samples were selectively analyzed at varying depths for specific constituents of concern.

Soil Sampling Results

On March 1, 2018 Choice Drilling, under the supervision of Rincon, advanced 14 soil borings at the subject property at the locations depicted on Figure 2. Soil samples were collected at various depths and were analyzed for a variety of constituents as shown in the table above. Results of the soil analysis are shown in Tables 1 through 5. A copy of the soil analytical laboratory report is included in Appendix B.

The soil analytical results were compared to San Francisco Bay Regional Water Quality Control Board (RWQCB) Environmental Screening Levels (ESLs) established for residential and commercial/industrial soil (February 2016). The ESLs were established by the RWQCB for chemicals commonly found in soil and groundwater at sites where releases of hazardous chemicals have occurred. Analytical results for TPH and VOCs were also compared to the Los Angeles Regional Water Quality Control Board (LARWQCB) Maximum Soil Screening Levels (SSL). In addition, the soil sampling results for metals were compared to the California Background Concentrations published by the Kearney Foundation (March 1996).

Former USTs and Associated Piping, Clarifier and Stained Concrete Near Waste Oil AST and Drums

Two USTs and associated piping were identified on 1890 and 1895 Sanborn Maps. Sanborn Maps further confirmed that fuel oil was used at the subject property during this time. In addition, during the site reconnaissance a clarifier was observed on the east side of the subject property (near the area of the former UST piping). Furthermore, during the site reconnaissance stained concrete was observed in the vicinity of the waste oil AST and waste oil drums on the east side of the subject property (near the former UST piping and clarifier). To evaluate potential impact to the subject property resulting from former USTs, piping, clarifier, waste oil ASTs and drums, soil borings were advanced as follows:

- One soil boring (SB1A) was advanced to a depth of approximately 20 feet below ground surface (bgs) in the approximate location of the former USTs.

- Two soil borings (SB1/7A and SB1/7B) were advanced to 10 feet bgs in the approximate locations of the former piping, adjacent to the clarifier and near the waste oil AST and drums.

Soil samples were collected every five feet. Soil samples were analyzed for total petroleum hydrocarbons as gasoline, diesel, and oil (TPHg, TPHd, and TPHo, respectively) and for volatile organic compounds (VOCs), polychlorinated biphenyls (PCBs) and total metals.

TPH: TPHg was not detected in any of the soil samples collected and analyzed for TPHg.

TPHd was detected at concentrations ranging from 963 to 5,540 milligrams per kilogram (mg/kg) in five of the eight soil samples collected from SB1A, SB1/7A and SB1/7B. All of the concentrations exceed the residential ESL of 230 mg/kg. Three of the detected concentrations exceed the commercial industrial ESL of 1,100 mg/kg and the LA RWQCB SSL of 1,000 mg/kg.

TPHo was detected at concentrations ranging from 1,730 to 11,400 mg/kg in five of the eight soil samples collected from SB1A, SB1/7A and SB1/7B. Only one of the samples (SB1A-15 feet bgs) had a concentration of TPHo (11,400 mg/kg) that exceeds the residential ESL of 11,000 mg/kg and the LA RWQCB SSL of 10,000 mg/kg. None of the detected concentrations exceed the commercial industrial ESL of 140,000 mg/kg.

VOCs: VOCs were not detected in the eight samples collected from SB1A, SB1/7A and SB1/7B except for benzene in one sample and acetone in two samples as follows:

- *Benzene*: A concentration of 2.24 micrograms per kilogram (μg/kg) benzene was detected in SB 1/7B at 10 feet below grade. The detected concentration is below the commercial/ industrial and residential ESLs (230 and 1,000 μg/kg, respectively). The detected concentration of benzene was also below the SSL of 18 μg/kg, which was determined based on the *Interim Site Assessment and Cleanup Guidebook, May 1996 California Regional Water Quality Control Board (LARWQCB), Los Angeles and Ventura Counties, Region 4*[4],.
- *Acetone*: Acetone was detected in SB1/7B at 5 and 10 feet (112 and 98.5 μg/kg, respectively). Both concentrations are below their respective residential and commercial/industrial ESLs (59,000,000 and 220,000,000 μg /kg, respectively).

PCBs: PCBs were not detected in any of the four samples collected and analyzed from SB1/7A and SB1/7B.

Metals: Metals were detected at varying concentrations in the soil samples collected and analyzed from SB1/7A and SB1/7B collected in the vicinity of former USTs and associated piping, clarifier and stained concrete near the waste oil AST and drums. The detected concentrations were within the range of background concentrations found in California soils. None of the detected concentrations of metals exceeded the ESLs except for arsenic:

- *Arsenic*: Concentrations of arsenic were detected in 3 of the 4 soil samples collected and analyzed from SB1/7A and SB1/7B, and ranged from 0.57 mg/kg to 1.9 mg/kg. All of the detected concentrations of arsenic were above the established ESL of 0.067 mg/kg for residential soil and 0.31 for commercial/industrial soil. However, all of the detected concentrations of arsenic were within the accepted California background concentration range published by the Kearney Foundation (0.6 mg/kg to 11 mg/kg). In California it is common for background concentrations of arsenic to be above the ESL screening level.

[4] https://www.waterboards.ca.gov/losangeles/water_issues/programs/remediation/may1996_voc_guidance.html

Therefore, regulators have generally accepted the background levels of arsenic found in the environment as an appropriate screening criteria, because property owners are not considered liable for arsenic concentrations that are representative of background. Cal EPA does not generally require cleanup of naturally- occurring chemicals to less than background (ITRC, 2005; San Francisco Bay RWQCB, 2008).

- *Lead:* Although it did not exceed the ESL, because one of the detected concentrations of lead exceeded 50 mg/kg (SB1A at 5 feet bgs had a concentration of 58.1 mg/kg), the soil sample was further analyzed for soluble lead. A Soluble Threshold Limit Concentration (STLC) extraction (using the Waste Extraction Test (WET) method) was completed by the laboratory. The STLC represents the soluble concentration of a constituent that may be present before a waste is classified as a California hazardous waste under California Code of Regulations (CCR) Title 22, Section 66261.24. Lead was not detected above the laboratory reporting limit in the sample; therefore, detected lead concentrations are not considered a hazardous waste. In addition, the deeper sample collected from SB1A at 10 feet bgs was also analyzed for total lead. The detected concentration of lead (1.42 mg/kg) is below background concentration and below the screening levels.

  The final lab report for lead STLC is included in Appendix B.

Former Gas & Oil Facility

A Gas & Oil facility was identified on Sanborn maps from 1959 through 1970. Gas & Oil facilities on the Sanborn maps are fueling stations commonly associated with dispensers, USTs and underground piping. However, the specific locations of the dispensers, USTs, and piping were not identified on the map. To evaluate the potential impact to the subject property from the former Gas & Oil facility, the following were advanced as follows:

- Two soil borings (SB2A and SB2B) were advanced to 20 feet bgs in the area of the former Gas & Oil facility.

Soil samples were collected every five feet. The 10 and 15 feet bgs samples were analyzed from each boring for TPHg, TPHd, TPHo, and VOCs.

TPH: TPHg, TPHd and TPHo were not detected in any of the soil samples collected and analyzed from SB2A and SB2B.

VOCs: VOCs were not detected in any of the soil samples collected and analyzed from SB2A and SB2B.

Transformer Room

A transformer room was identified in a building permit from 1918 and on Sanborn maps from 1950 through 1970. During the site reconnaissance conducted as part of the Phase I ESA, Mr. Corseli, the facility manager indicated that three transformers were previously located at the subject property and serviced several businesses in the area. Based on the age of the transformers, polychlorinated biphenyls (PCBs) may have been present in cooling oil used in the transformers. To evaluate the potential presence of PCBs in soil beneath the subject property soil borings were advanced as follows:

- Two soil borings (SB3A and SB3B) were advanced to a depth of 5 feet bgs adjacent to the transformer room.

Soil samples collected at 1 foot and 5 feet bgs were analyzed for PCBs.

PCBs: PCBs were not detected in any of the soil samples collected and analyzed from SB3A and SB3B.

Existing Adjacent Railroad Tracks and Former Railroad Spur

A railyard has been present adjacent to the east of the subject property since at least 1890. A railroad spur previously crossed the northern portion of the subject property from at least 1923 through 1983. According to the USEPA website, railroad ties were historically treated with creosote, and track beds were historically treated with herbicides, such as oil and arsenic, for weed management[5]. Additionally, metals may be present in soil along railroads at elevated concentrations. To evaluate the potential impact to the subject property from onsite and nearby railways, soil borings were advanced as follows:

- Four soil borings (SB5A, SB5B, SB5C, and SB5D) were advanced along the northeastern property boundary.
- One soil boring (SB5E) was advanced in the approximate location of the former railroad spur on the northern portion of the subject property.

Soil borings were advanced to a depth of 5 feet bgs and soil samples were collected at 0.5, 2, and 5 feet bgs. Soil samples collected from 0.5 feet bgs were analyzed for TPHg, TPHd, TPHo, semi-volatile organic compounds (SVOCs), and total metals.

TPH: TPHg and TPHd were not detected in any of the soil samples collected and analyzed from SB5A through SB5E.

TPHo was detected at concentrations ranging from 253 to 631 mg/kg in three of the five soil samples collected from SB5A through SB5E. None of the detected concentrations exceed the LA RWQCB SSL of 10,000 mg/kg, the residential ESL of 11,000 mg/kg, or the commercial/ industrial ESL of 140,000 mg/kg.

SVOCs: SVOCs were not detected in any of the soil samples collected and analyzed from SB5A through SB5E.

Metals: Metals were detected at varying concentrations in the soil samples collected and analyzed from SB5A through SB5E. The detected concentrations were within the range of background

[5] https://www.epa.gov/ingredients-used-pesticide-products/creosote

concentrations found in California soils. None of the detected concentrations of metals exceeded the ESLs except for the following:

- *Arsenic*: Concentrations of arsenic were detected in all 5 of the soil samples collected and analyzed from SB5A through SB5E, and ranged from 0.327 mg/kg to 4.64 mg/kg. All of the detected concentrations of arsenic were above the established ESL of 0.067 mg/kg for residential soil and 0.31 for commercial/industrial soil. However, all of the detected concentrations of arsenic were within the accepted California background concentration range published by the Kearney Foundation (0.6 mg/kg to 11 mg/kg). In our experience, in California, it is common for background concentrations of arsenic to be above the ESL screening level, and regulatory agencies typically do not require cleanup of arsenic at concentrations that are at or below the background concentrations. The California Department of Toxic Substances Control (DTSC) indicates that the screening level for arsenic at school sites is 12 mg/kg[6]. In our experience, the DTSC also allows the use of 12 mg/kg as a screening level for other non-school sites.
- *Cobalt*: A concentration of cobalt (24.9 mg/kg) was detected in SB5B at 0.5 feet bgs which slightly exceeds the residential ESL of 23 mg/kg. The detected concentration was within the accepted California background concentration range published by the Kearney Foundation (2.7 mg/kg to 46.9 mg/kg). This sample also had elevated copper and nickel concentrations, although the copper and nickel concentrations did not exceed the ESLs.

Former Spray Painting Facility

A spray painting facility was depicted on Sanborn maps from 1950 through 1960. VOCs, SVOCs, and metals may be present in soil as the result of paint spraying operations. To evaluate the potential impact to the subject property from spray painting activities, soil borings were advanced as follows:

- Two soil borings (SB6A and SB6B) were advanced to 5 feet bgs in the location of the former spray paint facility.

The soil samples collected from 1 foot and 5 feet bgs were analyzed for VOCs, SVOCs and metals.

VOCs: VOCs were not detected in any of the soil samples collected and analyzed from SB6A and SB6B.

SVOCs: SVOCs were not detected in any of the soil samples collected and analyzed from SB6A and SB6B.

Metals: Metals were detected at varying concentrations in the soil samples collected and analyzed from SB6A and SB6B. The detected concentrations were within the range of background concentrations found in California soils. None of the detected concentrations of metals exceeded the ESLs except for arsenic:

- *Arsenic*: Concentrations of arsenic were detected in 3 of the 4 soil samples collected and analyzed from SB6A and SB6B, and ranged from 0.881 mg/kg to 1.09 mg/kg. All of the detected concentrations of arsenic were above the established ESL of 0.067 mg/kg for residential soil and 0.31 for commercial/industrial soil. However, all of the detected concentrations of arsenic were within the accepted California background concentration

[6] DTSC, Interim Guidance for Sampling Agricultural Properties (Third Revision), August 7, 2008.

range published by the Kearney Foundation (0.6 mg/kg to 11 mg/kg). In California it is common for background concentrations of arsenic to be above the ESL screening level. In addition, regulatory agencies typically do not require cleanup of arsenic at concentrations that are at or below the background concentrations.

Former Sheet Metal Shop/Manufacturing

A sheet metal shop was depicted in the southeastern portion of the subject property on the 1950 Sanborn map, and a sheet metal shop was depicted in the southwestern portion of the subject property on the 1959 and 1960 Sanborn maps, and a sheet metal manufacturing operation was identified in City Directories from 1951 through 1958. VOCs may have been used for degreasing in the former sheet metal shops. To evaluate the potential impact to the subject property due to the former sheet metal shops, the following was conducted:

- The five-foot soil samples collected to evaluate the former UST piping (SB1/7A and SB1/7B) were also used to evaluate the former sheet metal shop/manufacturing.
- The five-foot samples collected to evaluate the former spray paint facility (SB6A and SB6B) were also used to evaluate the former sheet metal shop/manufacturing.
- Samples collected from 5, 10, 15 and 20 feet from SB1A were also used to evaluate the former sheet metal shop/manufacturing.

VOCs: VOCs were not detected in the eight samples collected from SB1A, SB1/7A and SB1/7B except for benzene in one sample and acetone in two samples. The detected concentrations were below their respective ESLs. The detected concentration of benzene was also below the SSL of 18 µg/kg, which was based on the *Interim Site Assessment and Cleanup Guidebook, May 1996 California Regional Water Quality Control Board (LARWQCB), Los Angeles and Ventura Counties, Region 4.* [7],. In addition, as stated above, VOCs were not detected in any of the soil samples collected and analyzed from SB6A and SB6B.

Metals: Metals were detected at varying concentrations in the soil samples collected and analyzed from SB1/7A, SB1/7B, SB6A and SB6B. The detected concentrations were within the range of background concentrations found in California soils. None of the detected concentrations of metals exceeded the ESLs except for arsenic which had concentrations that were within naturally occurring background ranges.

[7] https://www.waterboards.ca.gov/losangeles/water_issues/programs/remediation/may1996_voc_guidance.html

Conclusions & Recommendations

Based on the results of the current assessment, TPH as diesel was detected in soil beneath the subject property (in the vicinity of the former onsite USTs on the southeastern portion of the subject property) at concentrations that exceed the ESLs and SSLs to which they were compared. We recommend further assessment in soil beneath the subject property to delineate the lateral and vertical extent of the TPH -diesel in soil. However, it should be noted that the area recommended for further assessment is within a freezer building with a "freezer floor" through which soil borings were not drilled during the current assessment because drilling through the floor would compromise the integrity of the freezer building. Further assessment of the site should be conducted following removal of the onsite structures and prior to redevelopment.

Based on the results of the current assessment, PCBs and SVOCs were not detected.

Based on the results of the current assessment, VOCs were not detected except for benzene in one sample and acetone in two samples. The detected concentrations were below their respective ESLs. In addition, the detected concentration of benzene was below the SSL. No further assessment for VOCs appears warranted.

Metals were detected at varying concentrations, all within background ranges that are naturally occurring in California soils.

To address the area of elevated TPH in soil, based on the proposed redevelopment of the site, we recommend that a soil management plan (SMP) be prepared that addresses issues associated with impacted soils that could potentially be encountered during future site excavation/ grading activities. The purpose of the SMP is to mitigate the potential for health, safety, and environmental risks resulting from the excavation and removal of potentially impacted soil that may be encountered during grading and excavation activities completed on the site. The SMP should include methodology and protocols to properly handle, store, transport, and dispose of impacted soil that is encountered during ground-disturbing work performed at the site. The SMP should also address encountering unknown subsurface features or contamination.

The SMP should include the following:

- Site description, including geologic and hydrogeologic setting
- Site assessment history
- Agency correspondence, if required
- Current extent of known contamination
- Excavation, segregation, storage and assessment of impacted soil
- Identification of Previously Unknown Impacted Soil (and steps to take)
- Verification sampling
- Cleanup goals
- Disposal of and waste characterization of impacted soil
- Preparation of a soils disposal report

Limitations

This report has been prepared for and is intended for the exclusive use of RCS VE LLC. The contents of this report should not be relied upon by any other party without the written consent of Rincon Consultants, Inc.

This scope was not intended to completely establish the quantities and distribution of contaminants present at the subject property or to determine the cost to remediate the subject property. The concentrations of contaminants measured at any given location may not be representative of conditions at other locations. Further, conditions may change at any particular location as a function of time in response to natural conditions, chemical reactions and other events. Conclusions regarding the condition of the subject property do not represent a warranty that all areas within the subject property are similar to those sampled.

Work Order #: 1803012

Project Name: 670 Mesquit St.

Project ID: 17-05318

Site Address: 670 Mesquit St.

Enclosed are the results of analyses for samples received by the laboratory on March 01, 2018. If you have any questions concerning this report, please feel free to contact us.

Wendy Lu

Laboratory Supervisor

Rojert G. Araghi

Laboratory Director

American Scientific Laboratories, LLC (ASL) accepts sample materials from clients for analysis with the assumption that all of the information provided to ASL verbally or in writing by our clients (and/or their agents), regarding samples being submitted to ASL, is complete and accurate. ASL accepts all samples subject to the following conditions:

1) ASL is not responsible for verifying any client-provided information regarding any samples submitted to the laboratory.
2) ASL is not responsible for any consequences resulting from any inaccuracies , omissions, or misrepresentations contained in client-provided information regarding samples submitted to the laboratory.

Notes and Definitions

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
R-01	The Reporting Limit for this analyte has been raised to account for matrix interference.
J	Detected but below the Reporting Limit; therefore, result is an estimated concentration (CLP J-Flag).
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the practical quantitation limit (PQL)
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Laboratory Director

American Scientific Laboratories, LLC (ASL) accepts sample materials from clients for analysis with the assumption that all of the information provided to ASL verbally or in writing by our clients (and/or their agents), regarding samples being submitted to ASL, is complete and accurate. ASL accepts all samples subject to the following conditions:

1) ASL is not responsible for verifying any client-provided information regarding any samples submitted to the laboratory.
2) ASL is not responsible for any consequences resulting from any inaccuracies , omissions, or misrepresentations contained in client-provided information regarding samples submitted to the laboratory.

Subject: **Subsurface Methane Investigation Report**
Proposed 670 Mesquit Mixed-Use Development Project
658 and 670 Mesquit Street
Los Angeles, California 90021

Dear Mr. LoGrande:

Wood Environment & Infrastructure Solutions, Inc. (Wood), formerly Amec Foster Wheeler Environment & Infrastructure, Inc, is pleased to submit this report presenting the results of our subsurface methane investigation that was conducted on April 30 through June 14, 2018 at the proposed 670 Mesquit Mixed-Use Development Project located at 658 and 670 Mesquit Street in Los Angeles, California (site). This investigation was conducted in accordance with Wood Proposal 4953-18-9033 rev2 dated April 18, 2018.

Project Information

The site consists of an irregular-shaped, 5.45-acre property located on both the east and west sides of Mesquit Street and bounded by 6th Street on the north and 7th Street on the south (Figure 1). The site is currently developed with existing one- and two-story cold storage facilities consisting of warehouse and wholesale commercial buildings and associated office space, loading docks, and seven surface parking areas. The existing buildings comprise a total of approximately 205,393 square feet of floor space. The site owners, the Gallo family, have worked at the site since the 1960s and have owned the primary business operating on the site, Rancho Cold Storage, for over 30 years. Other existing on-site businesses include Hidden Villa Ranch, Integrated Food Service, and Harvey's Produce. The northern portion of the site is located within a City of Los Angeles designated methane buffer zone.

We understand the proposed project will consist of demolishing the existing on-site cold storage facilities for subsequent redevelopment as a mixed-use project that would include creative office space, multi-family residential units, hotel rooms, retail stores, restaurants, studio/event/gallery space, and a gym. The proposed project would also include an above-grade landscaped open space and four levels of below grade parking. Based on information provided to Wood at the time the investigation was conducted, the lowest parking level floor slab was to be situated at approximately 50 feet below ground surface (bgs). Upon completing the investigation, the lowest parking level floor slab elevations were modified to a range of 61 to 68 feet bgs (average of approximately 65 feet bgs).

City of Los Angeles Methane Testing Requirements

Based on the City of Los Angeles, Bureau of Engineering, Department of Public Works web-based mapping application "NavigateLA" (http://navigatela.lacity.org/), the site is located within the mapped boundaries of a City of Los Angeles methane buffer zone. Therefore, a methane investigation is required as a condition of the building permit application process. As summarized below, methane testing at the site generally followed the protocols published by the Los Angeles Department of Building and Safety (LADBS) "Site Testing Standards for Methane" (LADBS Public Bulletin Code, Document No. P/BC 2014-101). P/BC 2014-101 prescribes a three-step methane evaluation process:

'Wood' is a trading name for John Wood Group PLC and its subsidiaries

1) Schedule site testing either before, or 30 days after, any site grading;

2) Conduct a shallow soil gas test not less than 4 feet bgs; and

3) Conduct a deep gas probe test using multiple-depth gas probes where the highest concentrations of soil gases are expected to be found.

Wood utilized LADBS Document No. P/BC 2014-101 to determine the number and depths of soil gas samples to be collected at the site. According to the P/BC 2014-101 guidelines, one shallow soil gas probe at approximately 5 feet bgs should be installed for every 10,000 square feet of site area, with a minimum of two shallow gas probes per new project site, or portion thereof. However, a majority of the site is currently occupied by cold storage buildings and access to the buildings using a standard drill rig required to reach the desired boring depth is extremely limited, and Wood was informed that drilling inside the site buildings was not feasible. Additionally, the northern portions of the site are currently being used for the 6th Street Viaduct Replacement Project and were not accessible to a standard drill rig. Therefore, the truck loading docks and parking lots were the only site areas on which the methane investigation field work could be conducted.

As part of the proposal scoping process in April 2018, Wood contacted Mr. Chiharu Suzuki with the LADBS Permit & Engineering Plan Check Department to discuss the site drilling limitations and LADBS's guidelines based on the site area. Mr. Suzuki stated that, in cases such as those related to the site, LADBS allows the consultant to use their best engineering judgment with respect to the number and locations of both shallow and deep multiple-depth methane probes. Based on site access limitations and restrictions, Wood proposed 10 shallow soil gas sampling locations (SV1 through SV10). A supplemental methane investigation was conducted that consisted of installing soil gas probes at two additional site locations (SV11 and SV12).

According to the P/BC 2014-101 guidelines, at least one deep multiple-depth gas probe should be set for every 20,000 square feet, or portion thereof, of site area. According to P/BC 2014-101, each gas probe location should consist of three probes, installed at approximate sampling depths of 5, 10 and 20 feet below the lowest building slab elevation. In following P/BC 2014-101 guidelines (a ratio of one deep multi-depth gas probe set for every two shallow gas probes) and considering 10 shallow soil gas sampling locations were identified, five deep multiple-depth gas probe locations were identified.

Field Investigation

Before conducting the field activities, a Job Hazard Analysis (JHA) was prepared to address the site-specific job hazards associated with all field activities conducted at the site. Wood notified Underground Service Alert of Southern California (a.k.a "Dig Alert), as required by law, at least 48 hours prior to drilling, to mark the underground utilities entering the site near the proposed boring locations. All boring locations were screened for the presence of underground utilities on April 30, 2018 by Wood's subcontractor, Spectrum Geophysics.

Shallow Soil Gas Sampling and Testing

On May 1, 2018, H&P Mobile Geochemistry, Inc. (H&P), an LADBS-approved methane field testing driller and a California State Water Resources Control Board (SWRCB) certified laboratory located in Carlsbad, California, drilled 10 shallow borings, installed soil gas probes, and collected soil gas samples. H&P used a hand-held roto-hammer and a direct push Geoprobe drilling rig to advance the gas probe borings. The 10 shallow soil gas sampling locations (SV1 through SV10) are presented on Figure 2. Shallow soil gas probes were installed at depths of approximately 5 feet bgs at each boring location. A shallow soil gas sample was then collected from each gas probe after waiting a minimum of two hours subsequent to probe installation to allow for subsurface environment equilibration. Eleven soil gas samples (including a replicate sample from SV6) were collected.

The eleven shallow soil gas samples were collected by an H&P field technician into a 50-cubic centimeter (cc) glass syringe. H&P analyzed each sample for methane gas using EPA Method 8015M by gas chromatography with flame ionization detection (GC/FID) in their on-site mobile laboratory. Additionally, during the shallow soil gas collection activities, probe

pressure readings were recorded using a portable field instrument (digital manometer) at each sample location. The barometric pressure was documented during the soil gas sample collection process. After completion of the shallow soil gas sampling, the 5-foot gas probes were abandoned by removing the probe tubing and backfilling with hydrated bentonite granules and cement.

Deep Multi-Depth Soil Gas Sampling and Testing

Five separate deep, multi-depth gas probes were installed by Gregg Drilling & Testing, Inc. (Gregg) using a hollow-stem auger rig. In accordance with P/C 2014-101, the deep multi-depth boring locations are to be installed adjacent to the shallow soil gas sample locations with the highest methane readings. However, since methane was not detected in the ten shallow soil gas probes (see soil gas test results below), the five deep multi-depth gas probe boring locations (SV2, SV3, SV6, SV7 and SV8), were chosen to provide representative coverage of the entire site footprint.

The multi-depth gas probes were to be installed at depths of approximately 5, 10, and 20 feet below the elevation of lowest building floor slab (corresponding to depths of approximately 55, 60, and 70 feet bgs. However, groundwater was encountered a depth of approximately 65 feet bgs while drilling the first two multi-depth gas probe borings. Therefore, in accordance with P/BC 2014-101 which requires the gas probes to be set a minimum of 1 foot above groundwater, the actual probe depths were modified to adjust for this condition. The planned gas probe depths were subsequently adjusted in the field by installing the probes at 48, 53 and 63 feet bgs.

Gregg drilled and installed the multi-depth gas probes from May 3 through May 7, 2018. Inert 1-inch polyethylene vapor implants (probes) connected to ¼-inch inert polyethylene tubing were inserted into each borehole. During each probe installation, approximately one foot of #2/12 sand was placed in the borehole around the probe. Hydrated bentonite chips were then placed into the borehole above the sand to form a seal. Another foot of sand followed by bentonite was then added at the next probe depth. The top of each sampling line was outfitted with an on-off valve that was left in the closed position between sampling events.

Forty-eight hours after placement of the gas probes, two sequential sets of multi-depth gas samples, separated by a minimum 24-hour interval, were collected at each combination of location and depth. Soil gas samples could not be collected from the 63-foot deep probes in two boring locations (SV7-63 and SV8-63) during the two sampling events because of "no flow" conditions. The first set of samples (16, including one replicate and two confirmation samples) were collected on May 10, 2018. The two additional confirmation samples (SV6-63A and SV6-63B) were collected and analyzed during the first day of sampling to confirm results obtained in the initial sample that was collected at this depth earlier in the day. The second set of samples (14, including one replicate) were collected on May 11, 2018.

Soil gas samples were collected by an H&P field technician using a 50-cc syringe connected via an on-off valve. The samples were collected and delivered for analysis to H&P's on-site mobile laboratory. Each soil gas sample was analyzed for methane using EPA Method 8015M with a reporting limit (RL) of 10 parts per million by volume (ppmv), or 0.001% by volume. H&P also analyzed each sample for fixed gases (oxygen, carbon dioxide, and nitrogen) by gas chromatography using ASTM Method 1945-96 with a RL of 0.2%. A total of 30 soil gas samples (two sampling events, including two replicates and two confirmation samples) were analyzed for methane and fixed gases during this portion of the investigation. After completion of the multi-depth gas probe field sampling, the gas probes were abandoned by pulling out as much of the polyethylene tubing as possible and filling the boreholes with bentonite/cement.

On both May 10 and May 11, 2018 during the soil gas sampling activities at SV6 at the 63-foot depth probe, a noticeable "rotten egg" odor was detected. A soil gas sample was subsequently collected in a 1.0-liter Tedlar® bag and delivered to American Scientific Laboratories, LLC (ASL) for analysis.

Following the initial methane investigation (SV1 through SV10), Wood drilled two additional borings (SV11 and SV12) on June 9, 2018. Soil gas probes were installed at depths of 5, 48, 53 and 63 feet bgs in each boring. Two sets of soil gas samples were collected from each multi-depth soil gas probe location on June 12 and 14, 2018 following the same field procedures described above. Twenty soil gas samples (including four replicate samples) were collected and analyzed for methane and fixed gases as part of the supplemental investigation.

Investigation Derived Waste

Soil cuttings, or investigation derived waste (IDW), generated during drilling operations for the deep soil gas probe borings were placed in 55-gallong drums and stored on the site. Soil samples were collected from the drums and submitted to ASL, a SWRCB certified laboratory located in Los Angeles, for characterization and profiling purposes. The drums were collected by Clean Harbors Environmental Services, Inc. and transported to their facility located at 1737 East Denni Street in Wilmington, California for appropriate disposal. Copies of the soil sample analytical laboratory report and the waste manifest are attached to this report.

Soil Gas Analytical Results

Shallow (5-Foot) Soil Gas Samples

Methane was not detected above the laboratory RL in the 11 shallow soil gas samples collected from SV1 through SV10 nor was it detected above the laboratory RL in the four shallow soil gas samples collected from SV11 and SV12.

Multiple-Depth Soil Gas Samples

Thirty deep soil gas samples (including replicates and confirmation samples) were collected during the initial subsurface investigation. Methane gas was detected above the laboratory RL in 12 of the 30 samples submitted for analysis. Soil gas samples containing detectable methane were collected from two borings: SV2 (two samples) and SV6 (10 samples). The methane concentrations in the 53- and 63-foot samples from SV2 were reported as 22 and 31 ppmv, respectively. The methane concentrations in the SV6 samples ranged from 530 to 18,000 ppmv. The highest methane concentrations were detected in the 63-foot sample from SV6 which ranged from 14,000 to 18,000 ppmv. The highest methane concentration reported in the samples collected on May 10, 2018 was from SV6-63 (17,000 ppmv) while the highest methane concentration reported in the samples collected on May 11, 2018 was also from SV6-63 (two samples with 18,000 ppmv).

Sixteen deep soil gas samples (including replicates) were collected from SV11 and SV12. Methane gas was detected above the laboratory RL in 14 of the 16 samples submitted for analysis. The highest methane concentrations were detected in the 48-foot sample from SV12 which ranged from 120,000 to 140,000 ppmv.

The highest probe pressure reading was 0.14 inches of water at SV6-63 on both May 10 and 11, 2018. All other probe pressure readings were zero inches of water. Carbon dioxide (CO_2) concentrations ranged from not detected (ND) to 1.6 percent while oxygen (O_2) concentrations ranged from 2.6 to 21 percent.

The field and laboratory results are summarized in the attached Table 1. H&P's analytical laboratory reports and the completed Form 1 –Certificate of Compliance for Methane Test Data are also attached.

Hydrogen Sulfide Soil Gas Sample

The soil gas sample collected from SV6-63 was delivered to ASL for analysis. ASL forwarded the sample to ALS Environmental (ALS), a soil gas laboratory located in Simi Valley, for analysis. The sample was analyzed for hydrogen sulfide using Method ASTM D 5504-12. The ALS report showed that hydrogen sulfide was detected with a concentration of 1,500,000 parts per billion by volume (equivalent to 1,500 ppmv). ALS's analytical laboratory report is included as an attachment.

Conclusions

LADBS, Ordinance No. 175790, Division 71 Methane Seepage Regulations, Section 91.7102 (Definitions) defines design methane concentration as "…the highest concentration of methane gas found during site testing…" and defines design methane pressure as "…the highest pressure of methane gas found during site testing."

Pursuant to Ordinance No. 175790, Division 71 Methane Seepage Regulations, Section 91.7104.2 (Methane Mitigation Systems), all buildings located in a methane buffer zone shall install a methane mitigation system as required by Table 71 and Table 1B, based on the applicable site design level. Table 1B - "Mitigation Requirements for Methane Buffer Zones"

(attached), provides details on the minimum methane mitigation systems (i.e., passive, active or miscellaneous) that are required based on the highest methane concentration and pressure detected during the subsurface investigation. Each component of the passive, active and miscellaneous systems shall be constructed of an approved material and shall be installed in accordance with the Methane Mitigation Standards.

Based on the site investigation results and according to Table 1B, LADBS requires a "Level V" site design methane mitigation system as part of the building permit application process when the design methane concentration results are greater than 12,500 ppmv. The design methane pressure result is irrelevant when the design methane concentration exceeds 12,500 ppmv.

The following mitigation measures are typically required for a Level V site design:

Passive System:

- Sub-slab vent lines (perforated horizontal pipes) connected to vent risers routed through the roof of the structure;
- An impervious gas membrane;
- Gravel blanket surrounding perforated horizontal pipes and the under the impervious membrane;

Active System:

- Pressure sensors below the impervious gas membrane;
- A mechanical extraction system;
- A dewatering system if the proposed sub-slab vent lines are to be located within 1 foot of the historical high groundwater table;
- A gas detection system located in the lowest occupied space; and
- Mechanical ventilation, an alarm system and a control panel.

Section 91.7104.2.1 of the Ordinance defines the passive system as a methane mitigation system installed beneath or near the building. The components of the passive system may consist of a de-watering system, the sub-slab vent system, and impervious membrane. The sub-slab vent system shall consist of perforated horizontal pipes, vent risers, and gravel blankets for collecting and conveying methane from the soil underneath the building to the atmosphere. Section 91.7104.2.1.1 of the Ordinance states the dewatering system is required to lower the ground water table to a level greater than 12 inches below the bottom of the perforated horizontal pipes. The dewatering system shall direct ground water to an approved discharge location. Section 91.7104.2.2. of the Ordinance states the components of the active system shall consist of one or more of the following: sub-slab system; gas detection system; mechanical ventilation; alarm system; and control panel.

Hydrogen sulfide, at certain concentrations, is an explosive and toxic gas often found in conjunction with methane gas. Unlike for methane gas, the LADBS does not have specific hydrogen sulfide testing and mitigation standards. However, a properly designed methane mitigation system will also serve as a mitigation measure for potential hydrogen sulfide gas intrusion into buildings and structures. Additionally, a project health and safety plan that is commonly prepared for construction/soil excavation activities should address the potential presence of methane and hydrogen sulfide gases that could be encountered during site excavation activities. The document should discuss monitoring for such gases with appropriate field instrumentation.

Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. This warranty is in lieu of all other warranties, expressed or implied. This report has not been prepared for use by other parties and may not contain sufficient information for purposes of other parties or other uses.

We appreciate the opportunity to work with you and your design consultants on this project. Please contact us if there are any questions regarding the investigation.

Sincerely,

Wood Environment & Infrastructure Solutions, Inc.

	Additional Vent Risers (See note 4)										X

NOTES FOR TABLES 1A AND 1B:

1. Components required for this project are identified by an "X" in the column circled.
2. Table 1A - Mitigation Requirements for Methane Zone and Table 1B - Mitigation Requirements for Methane Buffer Zone are based on Table 71 and Chapter 71 of the Los Angeles Building Code.
3. De-watering not required when the maximum Historical High Ground Water Table Elevation, or projected post-construction ground water level, is more than 12 inches below the bottom of the Perforated Horizontal Pipes.
4. The total quantity of installed Vent Risers shall be increased to double the calculated rate for the Passive System.

LADBS Forms

FORM 1 - CERTIFICATE OF COMPLIANCE FOR METHANE TEST DATA

Part 1: Certification Sheet

Site Address: 658-670 Mesquit Street, Los Angeles, CA

Legal Description: Tract: WINGERTER TRACK Lot: 267 Block:

Building Use: Mixed use development

Name of Architect, Engineer, or Geologist:
Matt Fraychineaud

Mailing Address:
6001 Rickenbacker Rd,
Los Angeles, CA 90040

Telephone: 323 889 5300

Name of Testing Laboratory:
H&P Mobile Geochemistry, Inc.

City Test Lab License #: 10231

Telephone: 760 804 9678

Architect's, Engineer's or Geologist's Stamp:

I hereby certify that I have tested the above site for the purpose of methane mitigation and that all procedures were conducted by a City of Los Angeles licensed testing agency in conformity with the requirements of the LADBS Information Bulletin P/BC 2014-101. Where the inspection and testing of all or part of the work above is delegated, full responsibility shall be assumed by the architect, engineer or geologist whose signature is affixed thereon.

Signed: Matt Fraychineaud date 9/18/18

Required Data:

- Project is in the (Methane Zone) or (~~Methane Buffer Zone~~).
- Depth of ground water observed during testing: 0 feet below the Impervious Membrane.
- Depth of Historical High Ground Water Table Elevation*: 0 feet below the Impervious Membrane.
- Design Methane Concentration**: 140,000 parts per million in volume (ppmv).
- Design Methane Pressure***: 0.14 inches of water column.
- Site Design Level: (Level I, Level II, Level III, Level IV, ~~Level V~~) with 0.14 inches of water column.

De-watering:

- De-watering (is) **(is not)** required per Section 7104.3.7.
- Pump discharge rate _____ cubic feet per minute per reference geology or soil report: _____ dated _____.

Additional Investigation:

- Additional investigation (was) (was not) conducted.

Latest Grading on Site:

- Date of last grading on site (was) (was not) more than 30 days before Site Testing.
- See Attached explanation of the effect on soil gas survey results by grading operations.

Notes:

* Historical High Ground Water Table Elevation shall mean the highest recorded elevation of ground water table based on historical records and field investigations as determined by the engineer for the methane mitigation system. *(Source: Historical groundwater determined using California Geological survey, Seismic Hazard Report 98-20)*

** Design Methane Concentration shall mean the highest recorded measured methane concentration from either Shallow Soil Gas Test or any Gas Probe Set on the site.

*** Design Methane Pressure shall mean the highest total pressure measured from any Gas Probe Set on the site.

Analytical Laboratory Reports

H&P Mobile Geochemistry Inc.

09 May 2018

Mr. Matt Fraychineaud
Wood Env. & Infra. Solutions, Inc. - LA
6001 Rickenbacker Road
Los Angeles, CA 90040

H&P Project: WD050118-12
Client Project: 4953-18-0381 / 670 Mesquit St

Dear Mr. Matt Fraychineaud:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 01-May-18 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis La Roux
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP and the National Environmental Laboratory Accreditation Conference (NELAC). H&P is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs through PJLA, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

H&P is approved by the State of Arizona as an Environmental Testing Laboratory and Mobile Laboratory, certification numbers AZM758 and AZ0779.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743, 2744, 2745, 2754 & 2930.

H&P is approved by the State of Florida Department of Health under the National Environmental Laboratory Accreditation Conference (NELAC) certification number E871100.

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at www.handpmg.com/about/certifications.

Los Angeles, CA 90040

H&P Project: WD051018-L6
Client Project: 4953-18-0381 / 670 Mesquit St

Dear Mr. Matt Fraychineaud:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 5/10/2018 -5/11/2018 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis La Roux
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP and the National Environmental Laboratory Accreditation Conference (NELAC). H&P is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

ANALYTICAL REPORT FOR SAMPLES

Sample ID	Laboratory ID	Matrix	Date Sampled	Date Received
SV-8-53	E805045-13	Vapor	11-May-18	11-May-18
SV-8-48	E805045-14	Vapor	11-May-18	11-May-18

A continuing calibration verification (CCV) standard was not analyzed for Hexane following the analysis of all samples on May 10, 2018. However, the CCV analyzed for Hexane prior to running any samples on May 11, 2018, met all method criteria, indicating that the instrument was operating acceptably.

Notes and Definitions

LCC	Leak Check Compound
ND	Analyte NOT DETECTED at or above the reporting limit
MDL	Method Detection Limit
%REC	Percent Recovery
RPD	Relative Percent Difference

All soil results are reported in wet weight.

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs through PJLA, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

H&P is approved by the State of Arizona as an Environmental Testing Laboratory and Mobile Laboratory, certification numbers AZM758 and AZ0779.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743, 2744, 2745, 2754 & 2930.

H&P is approved by the State of Florida Department of Health under the National Environmental Laboratory Accreditation Conference (NELAC) certification number E871100.

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at www.handpmg.com/about/certifications.

Site Notes such as weather, visitors, scope deviations, health & safety issues, etc. (When making sample specific notes, reference the line number above):

*A: No flow, purged for 5 seconds & then shut up to 100"+ H_2O

*Tubing terminated w/ duct tape. Replaced w/ 1-way valve

*B

*B: Client requested resample & client consented to 1TV purge

*C: Client requested tirtiary sample & consented to no purge, just collection of sample

H&P Mobile Geochemistry Inc.

20 June 2018

Mr. Matt Fraychineaud
Wood Env. & Infra. Solutions, Inc. - LA
6001 Rickenbacker Road
Los Angeles, CA 90040

H&P Project: WD061218-L4
Client Project: 4953-18-0381 / 670 Mesquit St

Dear Mr. Matt Fraychineaud:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 12-Jun-18 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis La Roux
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP and the National Environmental Laboratory Accreditation Conference (NELAC). H&P is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs through PJLA, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

H&P is approved by the State of Arizona as an Environmental Testing Laboratory and Mobile Laboratory, certification numbers AZM758 and AZ0779.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743, 2744, 2745, 2754 & 2930.

H&P is approved by the State of Florida Department of Health under the National Environmental Laboratory Accreditation Conference (NELAC) certification number E871100.

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at www.handpmg.com/about/certifications.

Purge Volume Information
PV Amount: 3 PV
PV Includes: ☑ Tubing ☑ Sand 40% ☑ Dry Bent 50%

Leak Check Compound
A cloth saturated with LCC is placed around tubing connections and probe seal. This is done for all samples unless otherwise noted.

Site Notes such as weather, visitors, scope deviations, health & safety issues, etc. (When making sample specific notes, reference the line number above):

(1) SV11-5 initially pulled H_2O into pump. Evacuated as much H_2O from tubing as possible w/ syringe. Seems to be clear of H_2O. 2nd attempt to purge successful @ 1000 mL/min. Pump time: 19 min 23 sec.

* Purged 1 PV of tubing before collecting ~~Rep~~ + Resample. ~~Original PV = 20218 + 50 (Sample) + 315 (Tubing PV) = 20583 mL.~~

(11) Sample not taken - Lab down 11:30am / Lab back up @ 12:30. SV12-48 Rep resampled.

H&P Project: WD061418-L4
Client Project: 4953-18-0381 / 670 Mesquit St

Dear Mr. Matt Fraychineaud:

Enclosed is the analytical report for the above referenced project. The data herein applies to samples as received by H&P Mobile Geochemistry, Inc. on 14-Jun-18 which were analyzed in accordance with the attached Chain of Custody record(s).

The results for all sample analyses and required QA/QC analyses are presented in the following sections and summarized in the documents:

- Sample Summary
- Case Narrative (if applicable)
- Sample Results
- Quality Control Summary
- Notes and Definitions / Appendix
- Chain of Custody
- Sampling Logs (if applicable)

Unless otherwise noted, I certify that all analyses were performed and reviewed in compliance with our Quality Systems Manual and Standard Operating Procedures. This report shall not be reproduced, except in full, without the written approval of H&P Mobile Geochemistry, Inc.

We at H&P Mobile Geochemistry, Inc. sincerely appreciate the opportunity to provide analytical services to you on this project. If you have any questions or concerns regarding this analytical report, please contact me at your convenience at 760-804-9678.

Sincerely,

Janis La Roux
Laboratory Director

H&P Mobile Geochemistry, Inc. is certified under the California ELAP and the National Environmental Laboratory Accreditation Conference (NELAC). H&P is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

Appendix

H&P Mobile Geochemistry, Inc. is approved as an Environmental Testing Laboratory and Mobile Laboratory in accordance with the DoD-ELAP Program and ISO/IEC 17025:2005 programs through PJLA, accreditation number 69070 for EPA Method TO-15, H&P Method TO-15, EPA Method 8260B and H&P 8260SV.

H&P is approved by the State of Arizona as an Environmental Testing Laboratory and Mobile Laboratory, certification numbers AZM758 and AZ0779.

H&P is approved by the State of California as an Environmental Laboratory and Mobile Laboratory in conformance with the Environmental Laboratory Accreditation Program (ELAP) for the category of Volatile and Semi-Volatile Organic Chemistry of Hazardous Waste, certification numbers 2740, 2741, 2743, 2744, 2745, 2754 & 2930.

H&P is approved by the State of Florida Department of Health under the National Environmental Laboratory Accreditation Conference (NELAC) certification number E871100.

The complete list of stationary and mobile laboratory certifications along with the fields of testing (FOTs) and analyte lists are available at www.handpmg.com/about/certifications.

Purge Volume Information
PV Amount: 3PV
PV Includes: ☑ Tubing ☑ Sand 40% ☒ Dry Bent 50%

Leak Check Compound
A cloth saturated with LCC is placed around tubing connections and probe seal. This is done for all samples unless otherwise noted.

LABORATORY REPORT

May 18, 2018

Alen Hosepians
American Scientific Laboratories
2520 North San Fernando Road
Los Angeles, CA 90065

RE: 1805079

Dear Alen:

Enclosed are the results of the sample submitted to our laboratory on May 11, 2018. For your reference, this analysis has been assigned our service request number P1802396.

All analyses were performed according to our laboratory's NELAP and DoD-ELAP-approved quality assurance program. The test results meet requirements of the current NELAP and DoD-ELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP and DoD-ELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. Results are intended to be considered in their entirety and apply only to the samples analyzed and reported herein.

If you have any questions, please call me at (805) 526-7161.

Respectfully submitted,

ALS | Environmental

T: +1 805 526 7161
F: +1 805 526 7270
www.alsglobal.com

Client: American Scientific Laboratories
Project: 1805079

Service Request No: P1802396

CASE NARRATIVE

The sample was received intact under chain of custody on May 11, 2018 and was stored in accordance with the analytical method requirements. Please refer to the sample acceptance check form for additional information. The results reported herein are applicable only to the condition of the sample at the time of sample receipt.

Hydrogen Sulfide Analysis

The sample was analyzed for hydrogen sulfide per modified SCAQMD Method 307-91 and ASTM D 5504-12 using a gas chromatograph equipped with a sulfur chemiluminescence detector (SCD). Method ASTM D 5504-12 is included on the laboratory's NELAP scope of accreditation, however it is not part of the DoD-ELAP accreditation. Method SCAQMD 307-91 is not included on the laboratory's NELAP or DoD-ELAP accreditation.

The results of analyses are given in the attached laboratory report. All results are intended to be considered in their entirety, and ALS Environmental (ALS) is not responsible for utilization of less than the complete report.

Use of ALS Environmental (ALS)'s Name. Client shall not use ALS's name or trademark in any marketing or reporting materials, press releases or in any other manner ("Materials") whatsoever and shall not attribute to ALS any test result, tolerance or specification derived from ALS's data ("Attribution") without ALS's prior written consent, which may be withheld by ALS for any reason in its sole discretion. To request ALS's consent, Client shall provide copies of the proposed Materials or Attribution and describe in writing Client's proposed use of such Materials or Attribution. If ALS has not provided written approval of the Materials or Attribution within ten (10) days of receipt from Client, Client's request to use ALS's name or trademark in any Materials or Attribution shall be deemed denied. ALS may, in its discretion, reasonably charge Client for its time in reviewing Materials or Attribution requests. Client acknowledges and agrees that the unauthorized use of ALS's name or trademark may cause ALS to incur irreparable harm for which the recovery of money damages will be inadequate. Accordingly, Client acknowledges and agrees that a violation shall justify preliminary injunctive relief. For questions contact the laboratory.
