REVISED NOTICE OF PREPARATION

PROJECT NAME: Inglewood Transit Connector Project

STATE CLEARINGHOUSE NO.: 2018071034

DUE DATE FOR PUBLIC COMMENTS: October 12, 2020 by close of business.

SUMMARY: The Inglewood Transit Connector Project (proposed Project) is a proposed Automated People Mover (APM) mass-transit line connecting the City of Inglewood (City) to the greater southern California region. The proposed Project will include a revised 1.6-mile transit guideway, three stations, APM trains, and support facilities including a maintenance storage facility (MSF) and two traction power substations (TPSSs). The City, as the Lead Agency, prepared an Initial Study (Original IS), which was published in July 2018 (SCH 2018071034).

The Original IS determined that an Environmental Impact Report (EIR) would be prepared in compliance with CEQA to assess for potentially significant impacts that may result from the proposed Project. A Notice of Preparation (Original NOP) was circulated, and comments were received from the public and agencies following a 30-day comment period that ended on August 15, 2018.

As a result of the comments received, in addition to refinements and modifications to the proposed Project identified in the Original NOP and Original IS, this Revised NOP and IS are being re-circulated. Subsequent to the circulation of the Original IS, the State of California Office of Planning and Research (OPR) updated and revised the thresholds contained in the State CEQA Guidelines Appendix G. The Revised IS has been updated to address the updated Appendix G checklist that became effective on December 28, 2018.

The proposed Project includes transit improvements that would be constructed in the City along the same route and alignment as noted in the Original NOP and Original IS. The elevated guideway would be located primarily within the public right-of-way from the intersection of Market Street and Florence Avenue intersection, along Market Street to Manchester Boulevard, then to Prairie Avenue. The portions of the elevated guideway not within the public right-of-way occur at the location of Market Street/Florence Avenue Station where the elevated guideway leaves the right-of-way and enters into an existing commercial center northeast of the intersection of Market Street and Regent Street. The existing uses would be demolished.

The proposed Project begins with a pedestrian walkway that connects to the Metro Crenshaw/LAX Line across Florence Avenue in downtown Inglewood to the Market Street/Florence Avenue Station, which will be located at an existing commercial plaza. The proposed Project's elevated guideway begins at the Market Street/Florence Station, then proceeds southwest to Market Street, where it turns south onto the existing right-of-way along Market Street. The elevated guideway alignment continues on Market Street until the intersection with Manchester Boulevard, where it turns east onto Manchester Boulevard until the intersection with Prairie Avenue. At this point, the elevated guideway alignment turns south onto Prairie Avenue and continues south on Prairie Avenue until the intersection of Prairie Avenue and Hardy Street, where it terminates with the Prairie Avenue/Hardy Street Station.

The proposed Project would also include a maintenance and storage facility (MSF) that would store and maintain the trains and two traction power substations (TPSSs). The proposed MSF would be constructed adjacent to the right-of-way at the proposed MSF site, south of the corner of Hillcrest Boulevard and Manchester Boulevard, which is currently occupied by a commercial center and gas station; this site would also include one of the proposed TPSS sites. The second TPSS site would be located at the City's proposed Intermodal Transportation Facility (ITF) located on Prairie Avenue south of Arbor Vitae Street; this TPSS site would be to the east of Prairie Avenue, outside of the right-of-way within the ITF site. The existing uses would be demolished. Anticipated construction duration for the proposed Project is 4 to 5 years.

The Revised NOP and Revised IS reflect the following refinements and modifications that have been made to the proposed Project:

- Changes to proposed Project's from an approximately 1.8-mile long alignment with 5 stations to an approximately 1.6-mile long alignment with 3 stations. The revised alignment follows the same route as the original alignment from Market Street and Florence Avenue to Manchester Boulevard to Prairie Avenue terminating at the intersection of Prairie Avenue and Hardy Street.
- Refinements and modifications to the proposed stations as follows:
  - Modify the proposed Project to reduce the total number of stations from the five stations previously considered to the three stations.
  - The new locations for the three stations are located at:
    - Market Street/Florence Avenue Station: at an existing commercial plaza on the southeast corner of the intersection of Market Street and Florence Avenue between Market Street and Locust Street;
    - Prairie Avenue/Arbor Vitae Street Station: at the intersection of Prairie Avenue and Pincay Drive; and
    - Prairie Avenue/Hardy Street Station: at the intersection of Prairie Avenue and Hardy Street.
  - A pedestrian bridge linkage has been added to connect the Market Street/Florence Avenue Station with the Metro Crenshaw line on the northside of Florence Avenue.
- Removal of the Intermodal Transportation Facilities as part of the proposed Project. The City is proceeding with that project separately.
- Reduce the potential number of traction power substations from three to two. One will be co-located with the MSF facility and one will be located on the City's ITF site on Prairie Avenue.

This Revised NOP and Revised IS are being recirculated as a result of these Project refinements.

PROJECT LOCATION:

The proposed Project is located entirely in the central portion of the City, east of the San Diego Freeway (I-405) and north of the Glen Anderson Freeway (I-105) in Los Angeles County, California (see **Figure 1: Regional Location Map**).

The proposed Project is generally bounded by Florence Avenue to the north; Hardy Street to the south; the Los Angeles Sports and Entertainment District (LASED) to the east; and La Brea Avenue to the west (see **Figure 2: Project Vicinity Map**).

The proposed Project begins with a pedestrian walkway that connects to the Metro Crenshaw/LAX Line across Florence Avenue in downtown Inglewood to the Market Street/Florence Avenue Station, which will be located at an existing commercial plaza. The proposed Project's elevated guideway begins at the Market Street/Florence Station, then proceeds from the intersection of Market Street and Florence Avenue adjacent to the Metro Crenshaw/LAX Line in Downtown Inglewood, south through Market Street, then east onto Manchester Boulevard, turning south on Prairie Avenue until its intersection with Hardy Street.

The elevated guideway will be located within the public rights-of-way along Market Street, Manchester Boulevard, and Prairie Avenue; with the exception of the Market Street/Florence Avenue Station, which will be located on a site that currently includes existing commercial use northeast of the intersection of Market Street and Regent Street, and the proposed MSF that will be located on a site that currently has commercial uses south of the intersection of Manchester Boulevard and Hillcrest Boulevard outside of the right-of-way (see **Figure 3: Typical Automated People Mover**). Construction staging is anticipated to be contained within the footprint and easements of the proposed Project, at sites that will be demolished (for other uses including the commercial Plaza at Regent Avenue and Market Streets, the commercial office building at 150 S. Market Street, and the commercial plaza at 500 E. Manchester Boulevard).

DUE DATE FOR PUBLIC COMMENTS: October 12, 2020 by close of business.

Notice is hereby given that the City will prepare an EIR for the proposed Project as revised and described in this Revised NOP and the Revised IS. The EIR to be prepared by the City will evaluate the potential significant environmental effects of the proposed Project. The City is requesting comments related to the proposed Project as revised.

Due to refinements and modifications to the proposed Project following the release of the Original NOP and Original IS, this Revised NOP and Revised IS have been prepared to inform the public of the changes to the proposed Project. The City is providing this Revised NOP and accompanying Revised IS to the Governor's Office of Planning and Research (OPR), any trustee or responsible agencies identified for the Project, to adjacent cities and counties, all entities who submitted comments on the Original NOP and Original IS, and to those entities requesting such notice regarding the proposed Project.

The Draft EIR will analyze the potential adverse impacts that are anticipated to result from the proposed Project as discussed herein; identify potential mitigation measures that may be considered as reasonable and feasible; and analyze a reasonable range of alternatives to the proposed Project that could reduce or

avoid potential significant impacts that could result from the construction or operation of the proposed Project while still feasibly achieving the Project's objectives.

The City encourages all parties to provide information regarding potentially significant environmental issues, mitigation measures, and reasonable alternatives to be included in the EIR. Any agency submitting comments on this Revised NOP and Revised IS shall also indicate if that agency would be a responsible agency, or a trustee agency for the proposed Project in accordance with CEQA Guidelines Section 15082(b).

A copy of the Revised Initial Study prepared for the proposed Project is available for review at the City of Inglewood website at: https://www.cityofinglewood.org/1016/Environmental-Documents; and at the locations listed below:

- Inglewood City Hall, First Floor Lobby, One W. Manchester Blvd., Inglewood, CA 90301

PROJECT DESCRIPTION

The proposed Project would include an automated people mover (APM) to transport riders to and from the regional Metro Rail system (Crenshaw Line) to Downtown Inglewood, the Forum, the LASED, which includes the new NFL stadium scheduled to open in the Fall of 2020, and the future Inglewood Basketball and Entertainment Center (IBEC). The proposed Project would consist of elevated dual guideways to allow for continuous APM trains to travel in each direction. The proposed Project is planned to have a ridership capacity of 11,500 passengers per hour. Additionally, the transit system presents an opportunity for integration with local economic activity, transit-oriented development, and other initiatives in the area.

The proposed Project will include support facilities to provide for maintenance, storage and system power requirements that would be located adjacent to the elevated guideway but outside the street rights-of-way. These facilities include an approximately 78,000 square feet (SF) maintenance and storage facility (MSF) to provide for maintenance activities and train storage, and two traction power substations (TPSS) facilities to provide electrical power for system operation. The location of the proposed Project's guideway, stations, and the support facilities are shown on **Figure 2**.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED: As described more fully in the Revised Initial Study, the Draft Environmental Impact Report will consider: Aesthetics, Air Quality, Biological Resources, Cultural Resources, Energy, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Land Use and Planning, Noise and Vibration, Population, Employment and Housing, Transportation and Circulation, Tribal Cultural Resources, and Utilities and Service Systems impacts.

Agricultural and Forestry Resources, Hydrology and Water Quality, Mineral Resources, Public Services, Recreation, and Wildfire impacts have been determined to have less than significant impacts on the environment through the analysis in the Revised Initial Study and are not proposed for further analysis in the EIR.

REQUESTED PERMITS/APPROVALS: The City of Inglewood has principal responsibility for approving and carrying out the proposed Project. Approvals required for implementation of the proposed Project may include, but are not limited to, the following:

State and Regional Agency Approval and Actions:

- South Coast Air Quality Management District (SCAQMD)—permit to operate a generator and Dust Control Plan;
- Regional Water Quality Control Board (RWQCB)—administer regulations regarding water quality. Permits or approvals required from the WQCB may include but are not limited to: (1) General Construction Stormwater Permit; (2) Standard Urban Stormwater Mitigation Plan; and (3) Submittal of a Recycled Water Report for the use of recycled water as a dust control measure for construction; and
- California State Transportation Agency (CalSTA)—oversight and consistency with grants funding from the Transit and Intercity Rail Capital Program (TIRCP).

City of Inglewood Approvals and Actions:

- Certification of the Final EIR for the Inglewood Transit Connector Project;
- Updates/amendments to the City of Inglewood General Plan and municipal code. These changes relate to conforming the plans, as necessary, to reflect the physical improvements within the Inglewood Transit Connector Project and technical amendments necessary for the construction, operation and maintenance of the Inglewood Transit Connector;
- Preparation of a Project-specific Stormwater Management Plan or Standard Urban Stormwater Mitigation Plan for approval;
- County of Los Angeles (as the City's contractor) Fire Department approval;
- Grading permits, building permits, haul route approval, and other permits issued by the Department of Building and Safety for the Project and any associated Department of Public Works permits for infrastructure improvements;
- Tree removal permits;
- Noise permit for Construction and Building Hours extension;
- Tract/parcel map and zone change approvals;
- Eminent Domain approvals for acquisition of parcels outside of the City's right-of-way;
- Approvals for federal, State, or local financing plans or grants;
- Approving contracts for the design and construction of the Project; and,
- Other federal, State, or local approvals, permits, or actions that may be deemed necessary for the Project.

Other agencies, such as the County of Los Angeles and the Los Angeles County Metropolitan Transportation Authority (Metro), may have approval authority or involvement depending on the financing used to construct the proposed Project.

COMMENTS ON THE REVISED NOTICE OF PREPATION AND INITIAL STUDY: The City welcomes all comments regarding the scope and content of environmental issues to be addressed in the EIR.

All comments will be considered in the preparation of the EIR. Written comments must be submitted to this office by 5 p.m. on October 12, 2020.

Responses should be submitted sent to Ms. Mindy Wilcox, AICP, Planning Manager, at the following email and address:

City of Inglewood
Planning Division
One W. Manchester Boulevard, 4th Floor
Inglewood, CA 90301

July 16, 2018

NOTICE OF PREPARATION
AND NOTICE OF PUBLIC SCOPING MEETING
FOR AN ENVIRONMENTAL IMPACT REPORT

PROJECT NAME: Inglewood Transit Connector

PROJECT LOCATION/ADDRESS: The proposed Inglewood Transit Connector (ITC) Project would include transit improvements that would be constructed in an area of the City of Inglewood within the public right-of-way from Market Street at the Metro Crenshaw/LAX Line; south to the intersection of Market Street and Manchester Boulevard; east to the intersection of Manchester Boulevard and Prairie Avenue; then south to the intersection of Prairie Avenue and Century Boulevard. The proposed Project would also include a Maintenance and Storage Facility and Intermodal Transportation Facilities; these facilities would be constructed adjacent to the right-of-way in the potential locations described below.

DUE DATE FOR PUBLIC COMMENTS: August 15, 2018

Notice is hereby given that the City of Inglewood ("City" or "Inglewood") will be the Lead Agency and will prepare an Environmental Impact Report (EIR) for the Inglewood Transit Connector Project ("proposed Project"). The EIR to be prepared by the City will evaluate the potential significant environmental effects of the proposed Project. The City is requesting comments related to the scope and content of the EIR. A description of the proposed Project, its location, and a summary of the probable environmental effects that the City proposes to address in the EIR are provided below.

The EIR for the proposed Project is being prepared in compliance with the California Environmental Quality Act (CEQA) (California Public Resources Code Section 21000 et. seq.) and the State CEQA Guidelines ("Guidelines") (California Code of Regulations, Title 14, Division 6, Chapter 3, Section 15000 et. seq.). Pursuant to Guidelines Section 15082(a), upon deciding to prepare an EIR, the City as Lead Agency is required to send a Notice of Preparation (NOP) stating that an EIR will be prepared. In accordance with the Guidelines, the City is providing this NOP to the Governor's Office of Planning and Research ("OPR"), any trustee or responsible agencies identified for the Project, to adjacent cities and counties, and to those requesting such notice. The purpose of the NOP is to provide information describing the Project and its potential environmental effects to those who may wish to comment regarding the scope and content of the information to be included in the EIR. Guidelines Section 15082(b) states: "Each responsible and trustee agency and the Office of Planning and Research shall provide the lead agency with specific detail about the scope and content of the environmental information related to the responsible or trustee

agency's area of statutory responsibility that must be included in the draft EIR. (1) The response at a minimum shall identify: (A) The significant environmental issues and reasonable alternatives and mitigation measures that the responsible or trustee agency, or the Office of Planning and Research, will need to have explored in the draft EIR; and (B) Whether the agency will be a responsible agency or trustee agency for the Project." The City encourages OPR, responsible and trustee agencies, adjacent cities and counties, and interested members of the public to provide this information to the City so that the City can ensure that the Draft EIR meets the needs of those agencies.

The Draft EIR will analyze the potential adverse impacts that are anticipated to result from the proposed Project; identify potential mitigation measures where reasonable and feasible; and analyze reasonable and feasible alternatives to the proposed Project that could reduce or avoid identified significant impacts while still feasibly achieving most of the basic Project objectives.

A copy of the Initial Study prepared for the proposed Project is available for review at the City of Inglewood website at: https://www.cityofinglewood.org/and at the locations listed below:

- Inglewood City Hall, One W. Manchester Blvd., Inglewood, CA 90301
- Inglewood Public Library, 101 W. Manchester Blvd., Inglewood, CA 90301

PROJECT DESCRIPTION

Location and Setting

The proposed Project is located in the northern portion of the City of Inglewood east of the San Diego Freeway (I-405) and north of the Glen Anderson Freeway (I-105) in Los Angeles County, California (see **Figure 1: Project Regional Location Map**).

The proposed Project is generally bounded by the Metro Crenshaw/LAX Line to the north; Century Boulevard to the south; the Los Angeles Sports and Entertainment District (LASED) to the east; and La Brea Avenue to the west (see **Figure 2: Project Vicinity Map**). The proposed Project extends from the Market Street and Florence Avenue intersection adjacent to the Metro Crenshaw/LAX Line in Downtown Inglewood, south through Market Street, then east on Manchester Boulevard, turning south on Prairie Avenue until its intersection with Century Boulevard. The APM system will be located within the public rights-of-way for the streets and sidewalk areas along Market Street, Manchester Boulevard, and Prairie Avenue (see **Figure 3: Typical Automated People Mover**). The entire Project Site is situated within the City of Inglewood, an incorporated city within Los Angeles County.

Background

The primary goal is to provide convenient, reliable, direct transit accessibility and connectivity to the City's major activity centers from the Metro Rail system. The City seeks to accommodate individuals traveling to and from Downtown Inglewood, the LASED, the Forum, and the proposed Inglewood Basketball and Entertainment Center (IBEC), during major events via public transportation, both for ease of access and to minimize traffic in the area. The proposed alignment is planned to have a ridership capacity of 13,500 passengers per hour. Additionally, the transit system presents an opportunity for integration with local economic activity, transit-oriented development, and other initiatives in the area.

Description

The proposed Project would include an automated people mover (APM) system to transport riders to and from the regional Metro Rail system to Downtown Inglewood, the Forum, the Los Angeles Sports and Entertainment District (LASED) which includes the new NFL stadium (currently under construction and scheduled to open in 2020), and the proposed Inglewood Basketball and Entertainment Center (IBEC). The proposed Project would consist of an elevated, automated people mover (APM) system with dual guideways to allow for continuous trains to travel in each direction.

In addition to the APM system, the proposed Project will include support facilities to provide for maintenance and additional access areas that could be either co-located or individually located at several potential sites adjacent to the APM alignment. These support facilities would include a Maintenance and Storage Facility (MSF), one or more Intermodal Transportation Facilities (ITF) and other components such as a power traction system. The MSF would consist of a single four- to six-acre facility to service the APM cars and other system components. The ITFs would provide multimodal access to the APM as well as provide for parking areas and drop-off and pick-up locations.

Potential sites for support facilities are shown on **Figure 2** and include locations east of North Market Street, south of Manchester Boulevard between Spruce Avenue and Hillcrest Boulevard, across Prairie Avenue from the Forum, and at either the northwest or southwest corner of Prairie Avenue and Century Boulevard.

The design and construction of the APM system elevated guideway structures, stations, and support facilities will be designed to avoid existing utility and other infrastructure to the degree possible. In addition to surface improvements, some utility infrastructure that cannot be avoided may need to be relocated to accommodate the guideway columns and foundations.

The proposed Project would be implemented through the development of an Enhanced Infrastructure Financing District (EIFD) in accordance with Senate Bill 628 (Beal), which provides for the creation of such districts to accommodate the construction or rehabilitation of public infrastructure facilities. The City of Inglewood will be the Public Financing Authority (PFA) for the EIFD; as such, it will determine the boundaries of the EIFD. The EIFD, governed by the PFA, implements an Infrastructure Financing Plan adopted by the City that describes the type of public facilities and development that will be financed by the EIFD. The City will also explore other potential sources of financing for the proposed Project.

REQUESTED PERMITS/APPROVALS: The City of Inglewood has principal responsibility for approving and carrying out the proposed Project. Approvals required for implementation of the proposed Project may include, but are not limited to, the following:

State and Regional Agency Approval and Actions:

- South Coast Air Quality Management District (SCAQMD);
- Southern California Association of Governments (SCAG);
- Regional Water Quality Control Boards (RWQCB) administer regulations regarding water quality. Permits or approvals required from the WQCB may include but are not limited to: (1) General

Construction Stormwater Permit; (2) Standard Urban Stormwater Mitigation Plan; and (3) Submittal of a Recycled Water Report for the use of recycled water as a dust control measure for construction;
- California Public Utilities Commission (CPUC) review and approval of a System Safety Program Plan and Security Plan for the proposed APM; and,
- Approvals for state financing plans or districts.

City of Inglewood Approvals and Actions:

- Certification of the Final EIR for the Inglewood Transit Connector Project;
- Updates/amendments to the City of Inglewood General Plan Land Use Element and Transportation Element. These changes relate to conforming the plans, as necessary, to reflect the physical Projects within the Inglewood Transit Connector Project and technical amendments necessary for the construction and operation of the Inglewood Transit Connector;
- Preparation of a Project-specific Stormwater Management Plan or Standard Urban Stormwater Mitigation Plan for approval;
- Los Angeles County (as the City's contractor) Fire Department approval;
- Grading permits, building permits, and other permits issued by the Department of Building and Safety for the Project and any associated Department of Public Works permits for infrastructure improvements;
- Tract/parcel map and zone change approvals;
- Approvals for federal, state, or local financing plans or districts;
- Approving contracts for the design and construction of the Project; and,
- Other federal, state, or local approvals, permits, or actions that may be deemed necessary for the Project.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED: Aesthetics, Air Quality, Biological Resources, Cultural Resources, Energy Resources, Geology and Soils, Greenhouse Gas Emissions, Land Use and Planning, Noise and Vibration, Transportation and Circulation, and Utilities/Service Systems.

Agricultural and Forestry Resources, Hazards and Hazardous Materials, Hydrology and Water Quality, Mineral Resources, Population and Housing, Public Services, Recreation, and Tribal Cultural Resources have been found to be less than significant through the analysis in the Initial Study and are not proposed for further analysis in the EIR.

PUBLIC SCOPING MEETING DATE AND LOCATION: A public scoping meeting in an open house format will be held to receive public comment regarding the scope and content of the environmental information to be included in the EIR. The City of Inglewood encourages all interested individuals and organizations to attend the meeting.

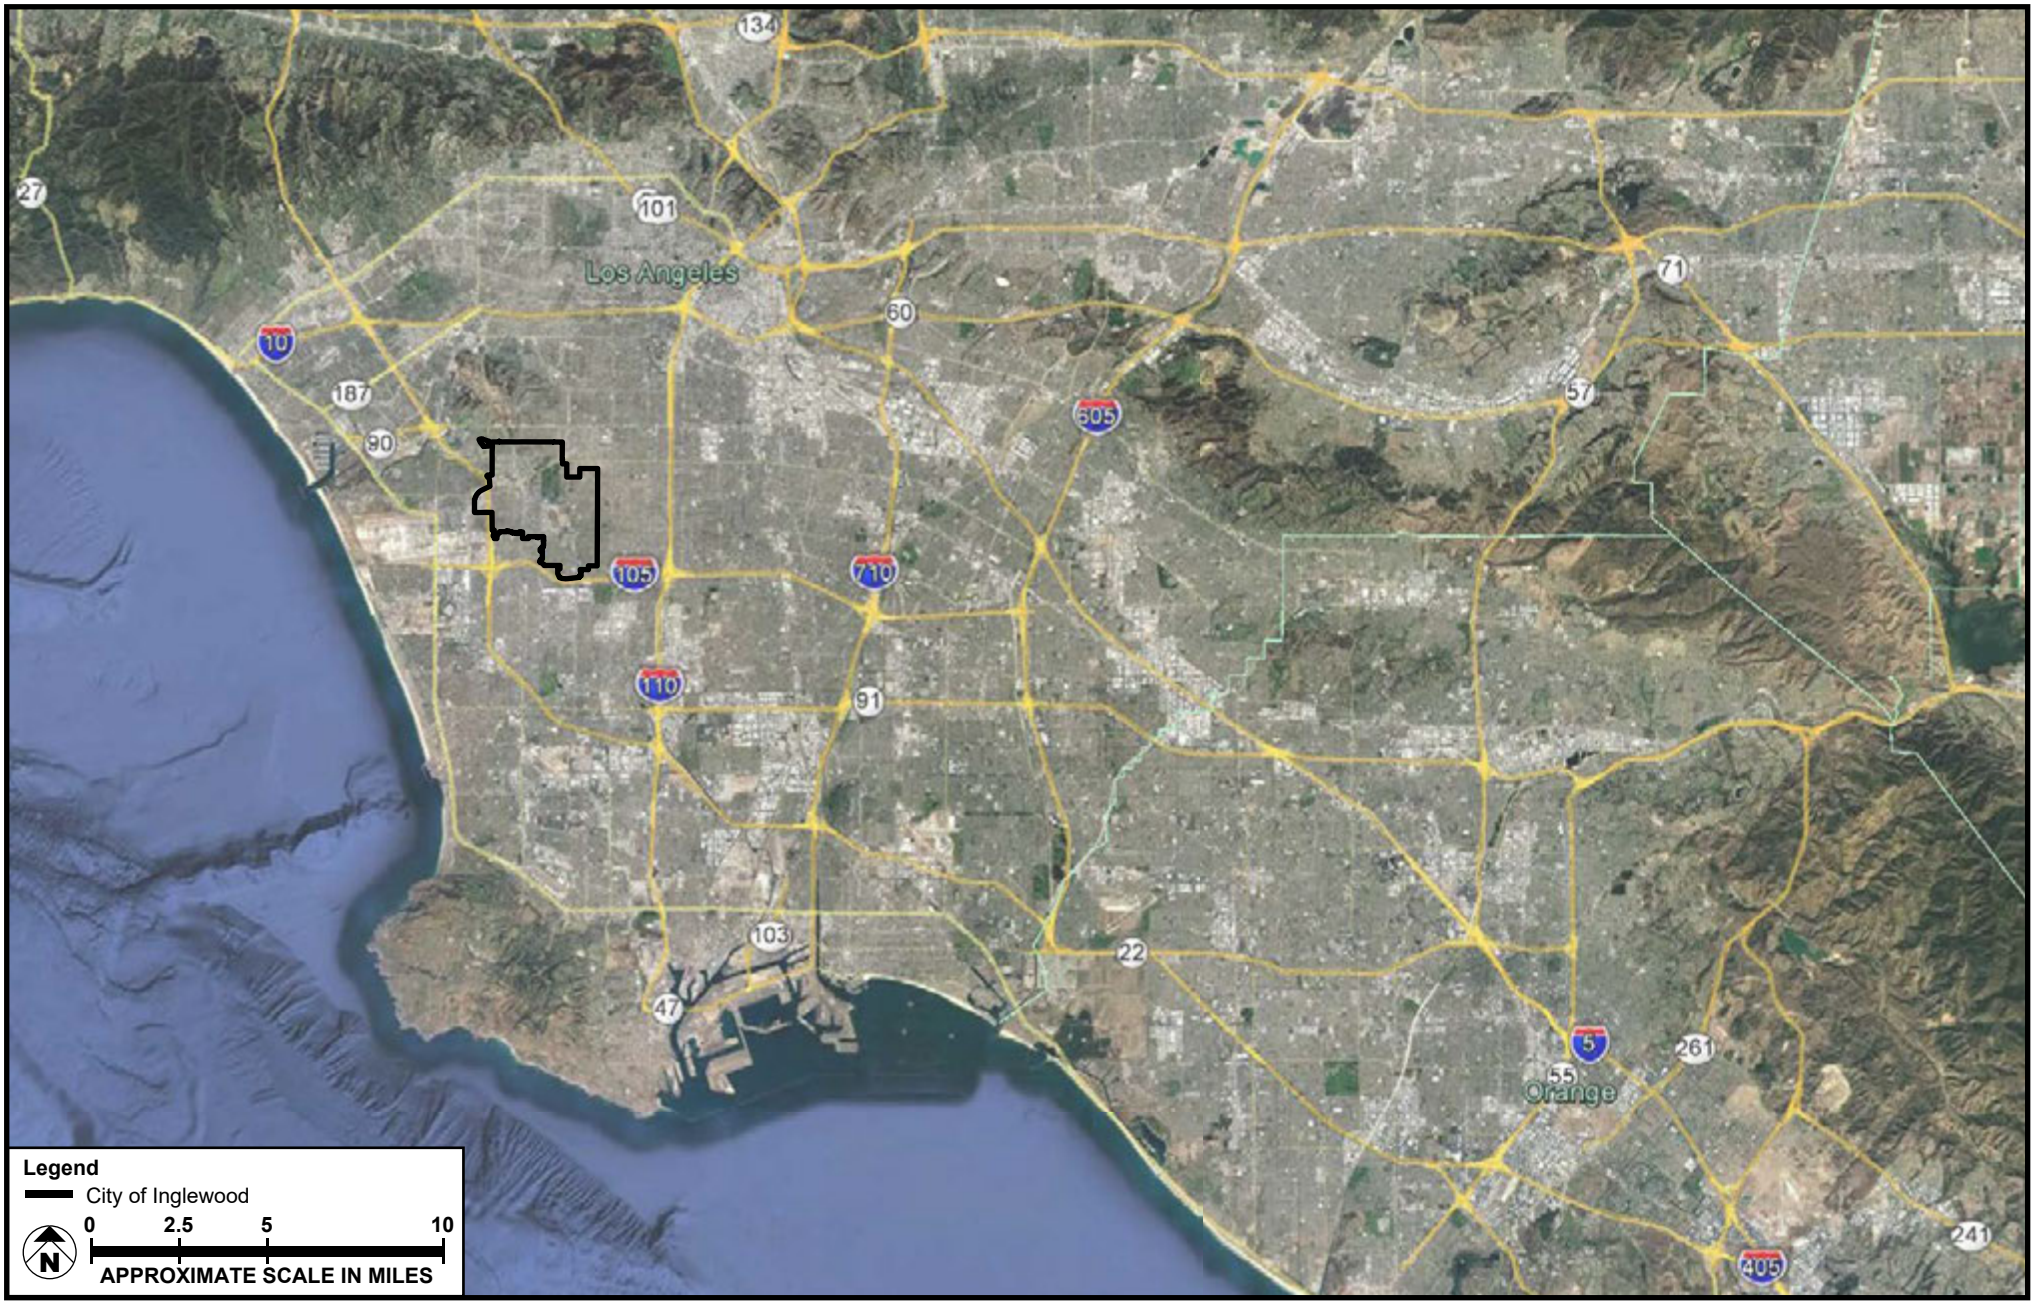
The location (see **Figure 4: Map of Scoping Meeting Location**), date, and time of the scoping meeting for this proposed Project is as follows:

Date and Time: Thursday, July 26, 2018, 6:00 p.m. to 8:00 p.m.
Location: Inglewood Senior Citizens Center
111 N. Locust Street
Inglewood, CA 90301

Sign Language Interpreters, Communication Access Real-Time Transcription, Assistive Listening Devices, or other auxiliary aids and/or services may be provided upon request. To ensure availability, you are advised to make your request at least 72 hours prior to the meeting. Due to difficulties in securing Sign Language Interpreters, five or more business days' notice is strongly recommended.

COMMENTS ON THE NOTICE OF PREPATION AND INITIAL STUDY: The City welcomes all comments regarding the scope and content of environmental issues to be addressed in the EIR. **All comments will be considered in the preparation of the EIR. Written comments must be submitted to this office by 5 p.m. on August 15, 2018.** Written comments will also be accepted at the scoping meeting described above.

Responses should be submitted on the City of Inglewood website (http://www.cityofinglewood.org) or sent to Ms. Mindy Wilcox, AICP, Planning Manager, at the following address:



City of Inglewood
Planning Division
One W. Manchester Boulevard, 4th Floor
Inglewood, CA 90301

The City welcomes your participation in the environmental review process.

ENVIRONMENTAL CHECKLIST FORM

INITIAL STUDY CHECKLIST

1. **Project title:** Inglewood Transit Connector Project
2. **State Clearinghouse Number:** 2018071034
3. **Lead agency name and address:** City of Inglewood, One W. Manchester Boulevard, Inglewood, CA 90301
4. **Contact person and email:** Mindy Wilcox, AICP, Planning Manager, mwilcox@cityofinglewood.org
5. **Revised Project:**

   The Inglewood Transit Connector Project (proposed Project) is a proposed Automated People Mover (APM) mass-transit line connecting the City of Inglewood to the greater southern California region. The proposed Project will include a revised 1.6-mile transit guideway, three stations, APM trains, and support facilities including a maintenance storage facility (MSF) and two traction power substations (TPSSs). The City of Inglewood (City or Inglewood) as the Lead Agency prepared an Initial Study (Original IS) which was published in July 2018 (SCH 2018071034).

   The Original IS determined that an Environmental Impact Report (EIR) would be prepared in compliance with CEQA to assess for potentially significant impacts that may result from the Project. A Notice of Preparation (Original NOP) was circulated and comments were received from the public and agencies following a 30-day comment period that ended on August 15, 2018.

   As a result of the comments received and refinements and modifications to the proposed Project identified in the Original NOP and Original IS, this Revised NOP and IS are being re-circulated. Subsequent to the circulation of the Original IS, the State of California Office of Planning and Research (OPR) updated and revised the thresholds contained in the State CEQA Guidelines Appendix G. The Revised IS has been updated to address the updated Appendix G checklist that became effective on December 28, 2018.

   The Revised NOP and Revised IS reflect the following refinements and modifications that have been made to the proposed Project:

   The City revised and recirculated the NOP and IS to reflect the following refinements:

   - Changes to proposed Project's alignment from an approximately 1.8-mile long alignment with 5 stations to an approximately 1.6-mile long alignment with 3 stations. The revised alignment

follows the same route as the original alignment from Market Street and Florence Avenue to Manchester Boulevard to Prairie Avenue terminating at the intersection of Prairie Avenue and Hardy Street.

- Refinements and modifications to the proposed stations as follows:
  - Modify the proposed Project to reduce the total number of stations from the five stations previously considered to the three stations. The original five station locations were at the following:
    - Market Street Station: at the intersection of Market Street and Regent Street on Market Street;
    - Manchester Boulevard Station: between Hillcrest Boulevard and Spruce Avenue on Manchester Avenue adjacent to the Proposed Projects maintenance and storage facility (MSF);
    - Forum Station: north of the intersection of Prairie Avenue and Pincay Drive on Prairie Avenue;
    - Hollywood Park Station: between Arbor Vitae Street and Hardy Street on Prairie Avenue adjacent to the City's proposed intermodal transit facility (ITF) located on the southeast corner of Prairie Avenue and E. Arbor Vitae Street; and
    - Century Boulevard Station: at the intersection of Prairie Avenue and Century Boulevard on Prairie Avenue.
  - The new locations for the three stations are located at:
    - Market Street/Florence Avenue Station: at an existing commercial plaza on the southeast corner of the intersection of Market Street and Florence Avenue between Market Street and Locust Street;
    - Prairie Avenue/Arbor Vitae Street Station: at the intersection of Prairie Avenue and Pincay Drive; and
    - Prairie Avenue/Hardy Street Station: at the intersection of Prairie Avenue and Hardy Street.
  - A pedestrian bridge linkage has been added to connect the Market Street/Florence Avenue Station with the Metro Crenshaw line on the northside of Florence Avenue.
- Removal of the ITF as part of the proposed Project; the City is proceeding with the ITF project separately.
- Reduce the potential number of traction power substations from three to two. One will be co-located with the proposed Project's Maintenance and Storage Facility (MSF) facility and the other will be located on the City's ITF site on Prairie Avenue.

This Revised NOP and accompanying Revised IS are being recirculated as a result of these Project refinements.

6. **Project location:**

The proposed Project is located in the central portion of the City of Inglewood east of the San Diego Freeway (I-405) and north of the Glen Anderson Freeway (I-105) in Los Angeles County, California (see **Figure 1: Project Regional Location Map**).

The proposed Project is generally bounded by Florence Avenue to the north; Hardy Street to the south; the Los Angeles Sports and Entertainment District (LASED) to the east; and La Brea Avenue to the west (see **Figure 2: Project Vicinity Map**). The proposed Project extends from the intersection of Market Street and Florence Avenue adjacent to the Metro Crenshaw/LAX Line in Downtown Inglewood, south through Market Street, then east onto Manchester Boulevard, turning south on Prairie Avenue until its intersection with Hardy Street. The guideway will be located within the public rights-of-way along Market Street, Manchester Boulevard, and Prairie Avenue, with the exception of the Market Street/Florence Avenue Station which will be located on a site that currently includes existing commercial use northeast of the intersection of Market Street and Regent Street, and the proposed MSF that will be located on a site that currently has commercial uses south of the intersection of Manchester Boulevard and Hillcrest Boulevard outside of the right-of-way (see **Figure 3: Typical Automated People Mover**). Construction staging is anticipated to be contained within the footprint and easements of the proposed Project, at sites that will be demolished (for other uses, including the commercial Plaza at Regent Avenue and Market Streets, the commercial office building at 150 S. Market Street, and the commercial plaza at 500 E. Manchester Boulevard).

The elevated guideway will be located mostly within the public rights-of-way along the streets and sidewalk areas on Market Street, Manchester Boulevard, and Prairie Avenue (see **Figures 4a–4d: Project Location Maps**). The entire Project is situated within the City of Inglewood, an incorporated city within Los Angeles County.

7. **Project sponsor's name and address:** City of Inglewood, One W. Manchester Boulevard, Inglewood, CA 90301

8. **General Plan designation:**

Elevated Guideway alignment*:* public rights-of-way down the centerline of existing City streets.

Stations*:* Downtown TOD, public rights-of-way down the centerline of existing City streets.

Maintenance and Storage Facility and Traction Power Substation locations*:* Commercial and Recreation.

9. **Zoning:**

The proposed Project is located in the City of Inglewood's Downtown area and extends along Market Street, Manchester Boulevard and Prairie Avenue within the rights-of-way of these streets. The proposed Project has components, which include the Market Street/Florence Avenue Station, the MSF, and a TPSS, that are located outside of the public rights-of-way on separate parcels or portions thereof.

The proposed Project footprint runs across multiple underlying zones. While the right-of-way portions are not currently subject to any underlying zoning designations, the Project components that are located outside of the public right-of-way are zoned MU-1 (TOD Mixed Use 1), H-C (Historic Core), C-2 (General Commercial), C-R (Commercial Recreation) or HPSP (Hollywood Park Specific Plan). The areas zoned as MU-1 and H-C are additionally subject to the City's Downtown Transit Oriented Development Plan and Design Guidelines. The areas zoned as HPSP are additionally subject to the Hollywood Park Specific Plan.

In order to provide for the comprehensive planning and development of the Project and its many unique elements, it is proposed that a new overlay zone be established and then applied within the Project boundaries.

This overlay zone would be additive in nature, in that it would create the appropriate zoning framework for realization of the Project across the entirety of the Project footprint (which intersects with multiple underlying zones and public rights-of-way) without modifying the development rights and requirements established through the underlying zoning. The overlay zone would include the Project improvements, infrastructure, establish necessary elements as permitted uses, and set forth the development standards (e.g., height, setbacks, parking requirements, etc.) and review process applicable to development and operation of the Project. The overlay zone boundaries would be coterminous with the Project footprint and would extend on each side of the public right-of-way along the entire alignment of the APM guideway.

Amendments to the City's Municipal Code and General Plan would be required to implement the above.

10. **Description of Project:**

The proposed Project would include an automated people mover (APM) system to transport riders from the regional Metro Rail system (Crenshaw Line) to Downtown Inglewood, the Forum, and the Los Angeles Sports and Entertainment District (LASED) which includes the new SoFi stadium (currently under construction and scheduled to open in the Fall of 2020), the proposed Inglewood Basketball and Entertainment Center (IBEC) and new retail, housing, and employment centers. The proposed Project will consist of elevated dual guideways to allow for continuous APM trains to travel in each direction. There will likely be several trains operating at any time, depending upon ridership needs.

As currently envisioned, the proposed Project will have up to three stations, as follows:

1. Market Street/Florence Avenue Station,
2. Prairie Avenue/Pincay Drive Station, and
3. Prairie Avenue/Hardy Street Station.

Station design will be established by passenger demand volumes under typical peak conditions, in addition to increased demands during special events. Station design will also take into account the potential for service disruptions and emergency evacuation requirements. Stations would provide for pedestrian access to the elevated guideway from street level via existing sidewalk and pedestrian travel areas adjacent to the station locations. Final station locations and configurations will be determined during the design process.

The proposed Project will include support facilities to provide for a maintenance and storage facility (MSF), and traction power substations (TPSSs) that would be located adjacent to the elevated guideway alignment but outside the street rights-of-way. The MSF would be an approximately 78,000 square feet structure to provide for maintenance activities and train storage, and two TPSS facilities would provide electrical power for system operation. The MSF location south of the intersection of Hillcrest Boulevard and Manchester Boulevard would include a TPSS. A second TPSS would be located on the Civic Center site located east of Prairie Avenue and south of Arbor Vitae Street.

The MSF location is shown on **Figure 3, Figure 4a,** and **Figure 4b**. Detailed guideway alignment and project components are presented in **Figures 4a** to **4d** and brief descriptions of each is provided below:

- **Figure 4a**: The guideway begins at the Market Street/Florence Avenue Station at the commercial plaza at 300 E Florence Avenue. The guideway continues south on Market Street at the intersection of Market Street and Regent Street and turns east on Manchester Boulevard. Part of the MSF is included south of Manchester Boulevard and Hillcrest Boulevard.

- **Figure 4b**: The guideway can be seen turning east on Manchester Boulevard from Market Street. The guideway continues east on Manchester Boulevard until it turns south on Prairie Avenue. The MSF is located south of Manchester Boulevard and sits between Hillcrest Boulevard and Spruce Avenue.

  Figure 4c: The guideway turns south on Prairie Avenue and the Prairie Avenue/Pincay Drive Station is located at the intersection of Prairie Avenue and Pincay Drive. The guideway alignment continues past Arbor Vitae Street on Prairie Avenue.

- **Figure 4d**: The guideway continue south on Prairie Avenue until it terminates at the intersection of Prairie Avenue and Hardy Street, where the Prairie Avenue/Hardy Street Station is located.

The design and construction of the elevated guideway structures, stations and support facilities will avoid existing utility and other infrastructure to the degree possible. Some existing infrastructure along the transit alignment may need to be reconfigured or removed to accommodate new elevated transit guideway structures and stations. In addition to surface improvements, some existing utility infrastructure may need to be relocated to accommodate the guideway columns and foundations.

11. **Surrounding land uses and setting:**

The proposed Project is located entirely within the City of Inglewood. Except for Market Street/Florence Avenue Station, the elevated guideway is located in the public rights-of-way. The proposed Project is surrounded by commercial, commercial recreation, single- and multifamily residential, and entertainment uses.

The proposed Project's elevated guideway travels through downtown Inglewood (along Market Street), where it is surrounded by commercial retail, office, restaurant, parking, residential, and mixed uses. Along East Manchester Boulevard, commercial and residential uses are located north and south of the proposed Project alignment. Along South Prairie Avenue, uses to the west of the proposed Project alignment are primarily commercial (heavy, general, and airport commercial) and multifamily residential, while uses to the east include major entertainment venues within the Hollywood Park Specific Plan.

The proposed Project will have supporting facilities (MSF and TPSSs) that would be located adjacent to the alignment.

The proposed Project is not expected to be complete and operational until 2026. At this time, the City has approved construction plans or issued building permits for, and construction has commenced on, significant portions of the LASED and the HPSP located immediately east of the Project alignment and stations on Prairie Avenue. Additionally, Metro's Crenshaw/LAX Line's Downtown Inglewood Station near Market Street and Florence Avenue is expected to be completed and operational in 2021 . These developments (referred to as "ITC Adjusted Baseline projects") are expected to be in place before the proposed Project begins operations, and are therefore included as part of the baseline for analysis of environmental impacts.

Construction and operation of the ITC Adjusted Baseline projects will change the physical conditions that currently exist in the vicinity of the proposed Project for most of the environmental topics addressed in the upcoming EIR. Due to the reasonable certainty that the ITC Adjusted Baseline projects will be constructed and in operation prior to construction and operation of the proposed Project, the City has determined that assuming the ITC Adjusted Baseline projects in the baseline provides the most accurate picture of the proposed Project's impacts and that it would be misleading to disregard the ITC Adjusted Baseline projects in the environmental setting

12. **Public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):**

The following agencies may have approval of actions involving the proposed Project:

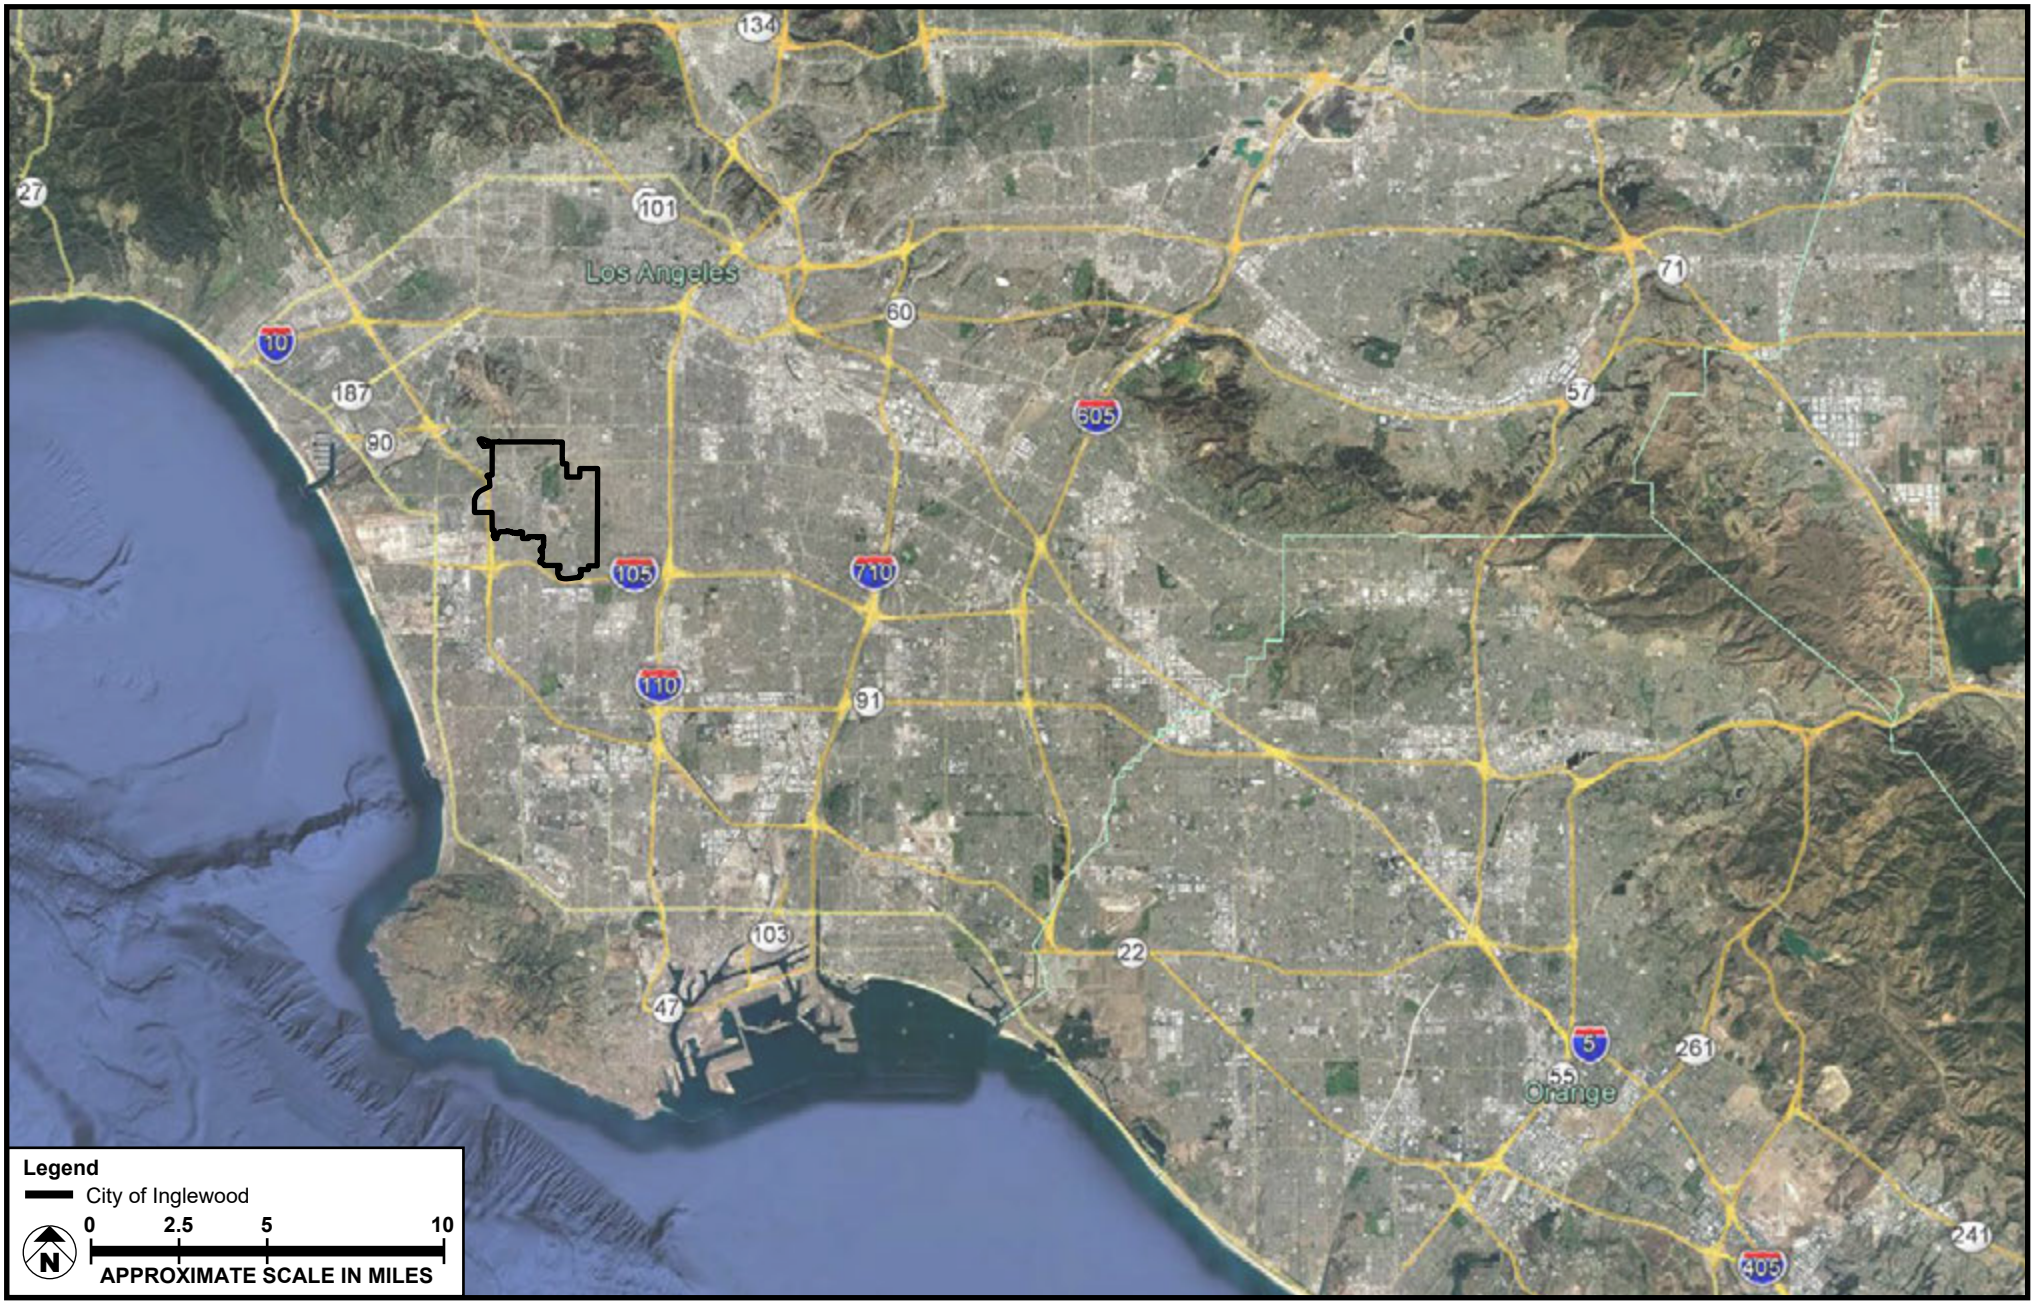
State and Regional Agency Approval and Actions:

- South Coast Air Quality Management District (SCAQMD) - permit to operate a generator and Dust Control Plan;
- Regional Water Quality Control Boards (RWQCB) administer regulations regarding water quality. Permits or approvals required from the WQCB may include but are not limited to: (1) General Construction Stormwater Permit; (2) Standard Urban Stormwater Mitigation Plan; and (3) Submittal of a Recycled Water Report for the use of recycled water as a dust control measure for construction; and
- California State Transportation Agency (CalSTA) for oversight and consistency with grants funding from the Transit and Intercity Rail Capital Program (TIRCP).

City of Inglewood Approvals and Actions:

- Certification of the Final EIR for the Inglewood Transit Connector Project;
- Updates/amendments to the City of Inglewood General Plan and municipal code. These changes relate to conforming the plans, as necessary, to reflect the physical improvements within the Inglewood Transit Connector Project and technical amendments necessary for the construction, operation and maintenance of the Inglewood Transit Connector;
- Preparation of a Project-specific Stormwater Management Plan or Standard Urban Stormwater Mitigation Plan for approval;
- County of Los Angeles (as the City's contractor) Fire Department approval;
- Grading permits, building permits, haul route approval, and other permits issued by the Department of Building and Safety for the Project and any associated Department of Public Works permits for infrastructure improvements;
- Tree removal permits;

- Noise permit for Construction and Building Hours extension;
- Tract/parcel map and zone change approvals;
- Eminent Domain approvals for acquisition of parcels outside of the City's right-of-way;
- Approvals for federal, State, or local financing plans or grants;
- Approving contracts for the design and construction of the Project; and,
- Other federal, State, or local approvals, permits, or actions that may be deemed necessary for the Project.



Other agencies, such as the County of Los Angeles and the Los Angeles County Metropolitan Transportation Authority (Metro), may have approval authority or involvement depending on the financing used to construct the proposed Project.

13. **Have California Native American tribes traditionally and culturally affiliated with the Project area requested consultation pursuant to Public Resources Code (PRC) Section 21080.3.1?**

    Yes.

    If so, has consultation begun?

    Yes.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this Project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☒	Aesthetics	☐	Agriculture and Forestry	☒	Air Quality
☐	Biological Resources	☒	Cultural Resources	☒	Energy
☒	Geology/Soils	☒	Greenhouse Gas Emissions	☒	Hazards & Hazardous Materials
☐	Hydrology/Water Quality	☒	Land Use Planning	☐	Mineral Resources
☒	Noise	☒	Population/Employment/Housing	☐	Public Services
☐	Recreation	☒	Transportation and Circulation	☒	Tribal Cultural Resources
☒	Utilities/Service Systems	☐	Wildfire	☒	Mandatory Findings of Significance

DETERMINATION:

On the basis of this initial evaluation:

☐	I find that the proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
☐	I find that although the proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the Project have been made by or agreed to by the Project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
☒	I find that the proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
☐	I find that the proposed Project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
☐	I find that although the proposed Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed Project, nothing further is required.

Date

POTENTIAL ENVIRONMENTAL IMPACTS

2.1 Aesthetics

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Except as provided in PRC Section 21099, would the Project				
a. Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway?	☐	☐	☒	☐
c. In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point.) If the Project is in an urbanized area, would the Project conflict with applicable zoning and other regulations governing scenic quality?	☒	☐	☐	☐
d. Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?	☒	☐	☐	☐

2.2 Agriculture and Forestry Resources

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the State's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the Project:				
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?	☐	☐	☐	☒
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c. Conflict with existing zoning for, or cause rezoning of, forestland (as defined in PRC section 12220(g)), timberland (as defined by PRC section 4526), or	☐	☐	☐	☒

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
timberland zoned Timberland Production (as defined by Government Code section 51104(g))?				
d. Result in the loss of forestland or conversion of forestland to nonforest use?	☐	☐	☐	☒
e. Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland to nonagricultural use, or conversion of forestland to nonforest use?	☐	☐	☐	☒

2.3 Air Quality

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the Project:				
a. Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable federal or State ambient air quality standard?	☒	☐	☐	☐
c. Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	☒	☐

2.4 Biological Resources

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?	☐	☐	☒	☐
b. Have a substantial adverse effect on any riparian	☐	☐	☐	☒

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?				
c. Have a substantial adverse effect on State or federally protected wetlands (including but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☒	☐	☐
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☒	☐	☐
f. Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or State habitat conservation plan?	☐	☐	☐	☒

2.5 Cultural Resources

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?	☒	☐	☐	☐
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	☐	☒	☐	☐
c. Disturb any human remains, including those interred outside of formal cemeteries	☐	☒	☐	☐

2.6. Energy

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☒	☐	☐	☐
b. Conflict with or obstruct a State or local plan for renewable energy or energy efficiency?	☒	☐	☐	☐

2.7 Geology and Soils

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☒	☐	☐	☐
ii. Strong seismic ground shaking?	☒	☐	☐	☐
iii. Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv. Landslides?	☐	☐	☐	☒
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☐	☒	☐
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	☐	☒	☐
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater	☐	☐	☐	☒

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
disposal systems where sewers are not available for the disposal of wastewater?				
f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☒	☐	☐	☐

2.8 Greenhouse Gas Emissions

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐

2.9 Hazards and Hazardous Materials

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☒	☐	☐	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☒	☐	☐	☐
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
e. For a project located within an airport land use plan or, where such plan has not been adopted, within 2 miles of a public airport or public use airport, Would the Project result in a safety hazard for people residing or working in the Project area?	☐	☐	☒	☐
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☒	☐	☐	☐
g. Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	☐	☐	☐	☒

2.10 Hydrology and Water Quality

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?	☐	☐	☒	☐
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin?	☐	☐	☒	☐
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i. result in substantial erosion or siltation on or off site;	☐	☐	☒	☐
ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;	☐	☐	☒	☐
iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	☐	☒	☐
iv. impede or redirect flood flows?	☐	☐	☒	☐

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	☒
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	☒	☐

2.11 Land Use and Planning

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Physically divide an established community?	☒	☐	☐	☐
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☒	☐	☐	☐

2.12 Mineral Resources

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Result in the loss of availability of a known mineral resource that would be of future value to the region and the residents of the State?	☐	☐	☐	☒
b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

2.13 Noise and Vibration

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project result in:				
a. Generation of a substantial temporary or permanent increase in ambient noise levels the vicinity of the Project in excess of standards established in the local	☒	☐	☐	☐

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
general plan or noise ordinance, or applicable standards of other agencies?				
b. Generation of excessive ground-borne vibration or ground-borne noise levels?	☒	☐	☐	☐
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?	☐	☐	☒	☐

2.14 Population, Employment and Housing

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☒	☐	☐	☐
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

2.15 Public Services

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
a. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
i. Fire protection?	☐	☐	☒	☐
ii. Police protection?	☐	☐	☒	☐
iii. Schools?	☐	☐	☐	☒

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
iv. Parks?	☐	☐	☐	☒
v. Other public services?	☐	☐	☐	☒

2.16 Recreation

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b. Include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	☐	☐	☐	☒

2.17 Transportation and Circulation

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☒	☐	☐	☐
b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	☒	☐
c. Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☒	☐	☐	☐
e. Result in inadequate emergency access?	☒	☐	☐	☐

2.18 Tribal Cultural Resources

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with the cultural value to a California Native American tribe, and that is:				
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in PRC Section 5020.1(k)?	☒	☐	☐	☐
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1? In applying the criteria set forth in subdivision (d) of PRC Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☒	☐	☐	☐

2.19 Utilities and Service Systems

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Require or result in the relocation or construction of new or expanded water, or wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☒	☐	☐	☐
b. Have sufficient water supplies available to serve the Project from existing entitlements and resources, or are new and expanded entitlements needed?	☐	☐	☒	☐
c. Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals	☐	☐	☒	☐

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
e. Comply with federal, State, and local management and reduction statutes and regulations related to solid waste?	☐	☐	☒	☐

2.20 Wildfire

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose Project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	☒	☐
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	☒	☐
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	☒	☐

2.21 Mandatory Findings of Significance

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
a. Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
b. Does the Project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☒	☐	☐	☐
c. Does the Project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

1.0 PROJECT DESCRIPTION

1.1 Introduction

The City of Inglewood (City) is currently undergoing a historic transformation into a world-class sports destination, entertainment destination, and major employment center within the greater Los Angeles region. First, in 2012, over $100 million was invested in the Forum, making it one of the largest indoor concert venues that hosts some of the largest entertainment acts in the country. Next, the redevelopment of approximately 298 acres at Hollywood Park includes thousands of new residential units, millions of square feet of commercial and recreational uses as part of the Los Angeles Stadium and Entertainment District (LASED) project. At the centerpiece of Hollywood Park is the new $5 billion-dollar, 70,240 seat National Football League (NFL) SoFi Stadium to be shared by both the Los Angeles Rams and Los Angeles Chargers. The SoFi Stadium will host Super Bowl LVI in Winter 2022, the 2026 FIFA World Cup, and the 2028 Summer Olympic Games. In August 2020, the City approved the Inglewood Basketball and Entertainment Center, which includes a new arena that will be home to the Angeles Clippers of the National Basketball Association (NBA) and will include the team's headquarters, training facilities, retail and restaurants. Finally, among other developments including hotels, retail commercial and hotel projects in the application pipeline, a new Los Angeles Philharmonic music and cultural campus for the Youth Orchestra Los Angeles (YOLA), designed by architect Frank Gehry, will also be headquartered in Inglewood and set to open by

Pivotal to the City's transformation is the new 8.5 mile Metro Crenshaw/LAX Line. Slated to begin service in 2021, the Metro Crenshaw/LAX Line will enhance transit access to the City and include stations at Aviation/Century, Westchester/Veterans, Downtown Inglewood, Fairview Heights, Hyde Park, Leimert Park, MLK Jr., and Expo/Crenshaw. It will extend light-rail transit from the existing Metro Expo Line station at Crenshaw/Exposition Boulevards to the Metro Green Line station at Aviation/Century Boulevards, and provide a transit connection to Los Angeles International Airport (LAX) via the City of Los Angeles's automated people mover (APM) system at the Airport Metro Connector 96th Street Transit Station, set to begin passenger service in 2023. Yet, even upon completion of the Metro Crenshaw/LAX Line, patrons who wish to use the Metro rail system to travel to events at the Forum, the SoFi stadium, the IBEC, or other activity sites would face a "last-mile" gap of approximately 1.5 to 2 miles between the Metro Crenshaw/LAX Line and the City's new activity centers. This gap is longer than a convenient walking distance for patrons traveling to the City's activity centers.

As Inglewood transforms into a major regional activity center, the number of vehicular trips associated with new jobs, retail, entertainment, and residential opportunities is anticipated to increase. Based on historic traffic counts, traffic volumes have been increasing at the rate of 1.5 percent per year, and many

key intersections and highway corridors already experience congestion. According to the Southern California Association of Government's (SCAG) *Connect SoCal - 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy's "*Demographics And Growth Forecast," substantial socioeconomic and demographic growth is projected in the region. The City is projected to be one of the highest growing housing and employment centers in Los Angeles County with growth rates of 20 percent in population, 27 percent in number of households, and 36 percent in employment from 2016 to 2045.[1] As the City is anticipating increases in traffic associated with the sports and entertainment venues and preparing for the opening of the SoFi Stadium, it is updating its Mobility Plan, developing a Stadium Events Transportation Management and Operations Plan (TMOP), working with transit agencies to improve transit operations to the City, creating an on-site satellite parking program with event shuttle service, and installing a comprehensive intelligent transportation system. Yet, the physical capacity of the existing local and regional roadway network may challenge the ability of residents and visitors to access the City's amenities easily in the future. Bus transit, shuttles and other alternative modes will still compete with existing roadway traffic and may not provide convenient, time-certain connectivity when compared to an elevated rail connection.

Now, the City proposes the Inglewood Transit Connector Project (proposed Project), as a 1.6-mile, three station, fully elevated, electrically powered APM system that will seamlessly connect passengers directly from the Metro Crenshaw/LAX Line's Downtown Inglewood station to new housing and employment centers, and regionally serving sports and entertainment venues. Most importantly, over 80 percent of the Project corridor (defined as the area within ½ mile of the proposed Project stations) is located within the top 25 percent of CalEnviroScreen[2] 3.0 census tracts, three disadvantaged communities and three low-income communities. The proposed Project will offer these Priority Populations an essential but otherwise lacking transit connection to the countywide Metro Rail system and regional employment opportunities including Los Angeles International Airport (LAX). Ensuring that long-time residents, employees and business are provided direct connection to the regional Metro Rail system while also providing visitors with a seamless connection to event venues is essential to Inglewood's transformation into a world-class city.

The City proposes the proposed Project to address projected future congestion, improve overall mobility and levels of service, and advance its sustainability goals. Providing transit access to the City's new activity centers will advance local and regional goals to increase transportation choice, significantly reduce GHG

1 SCAG. 2020-2045 RTP/SCS- ConnectSocal. Demographics And Growth Forecast. https://www.connectsocal.org/Documents/Adopted/fConnectSoCal_Demographics-And-Growth-Forecast.pdf. September 1, 2020.

2 California Office of Environmental Health and Hazard Assessment (OEHHA), CalEnviroScreen. https://oehha.ca.gov/calenviroscreen

emissions, improve air quality and human health, reduce per-capita vehicle miles travelled (VMT), reduce the growth of congestion on local and regional roads, and encourage sustainable development patterns. The City recognizes that an efficient and effective transportation network is essential to achieving the full benefits of ongoing and widespread investment.

1.2 Project Background

As early as 2017, in effort to address the City's critical mobility issues, the City of Inglewood partnered with Metro to analyze viable transit connection options from the Metro Crenshaw/LAX Line to the LASED. With the City's input, Metro conducted a study to explore how best to connect Inglewood's future LASED to Metro's rail system via a high-capacity transit connection. The Metro study analyzed (1) an interlined operability connection from the Metro Crenshaw/LAX Line in a subway under Prairie Avenue, which also would jointly operate on a portion of the Metro Crenshaw/LAX Line; and (2) operability options for independent services that could provide connections from the Metro rail system at nearby Metro stations along the Metro Crenshaw/LAX Line to the NFL stadium. At the conclusion of the study, the City and Metro agreed that the interlined operability scenario is infeasible due to the cost and complexity that would be created on the Metro rail system.

Consistent with Metro's recommendations, the City continued to analyze several independent operability transit connections to the City's activity centers. In July 2018, pursuant to the requirements of the California Environmental Quality Act (CEQA), the City as the Lead Agency prepared a Notice of Preparation (Original NOP) and an Initial Study (Original IS) (SCH 2018071034). The Original IS determined that an Environmental Impact Report (EIR) would be prepared in compliance with CEQA to assess for potentially significant impacts that may result from the Project. The Original NOP and IS were circulated and comments were received from the public and agencies following a 30-day comment period that ended on August 15, 2018.

Since 2018, the City has collaborated with a myriad key stakeholders, including the City's residential, commercial and nonprofit leaders and along with the other jurisdictions, including but not limited to the South Bay Cities Council of Governments, Caltrans, Metro, other transit agencies, the City of Los Angeles, the County of Los Angeles, and leadership representatives from the LASED event venues, and has now refined the proposed Project.

1.3 Environmental Setting

The proposed Project is located in the northern portion of the City of Inglewood east of the San Diego Freeway (I-405) and north of the Glen Anderson Freeway (I-105) in Los Angeles County, California (see **Figure 1**).

The proposed Project will be constructed in an area generally bounded by the Metro Crenshaw/LAX Line in the north; Hardy Street in the south; the LASED to the east; and La Brea Avenue to the west (see **Figure 2**). The proposed Project extends from the Market Street and Florence Avenue intersection adjacent to the Metro Crenshaw/LAX Line in Downtown Inglewood, south through Market Street, then east on Manchester Boulevard, turning south on Prairie Avenue until its intersection with Hardy Street. The proposed Project's guideway will be located mostly within the public rights-of-way for the streets and sidewalk areas along Market Street, Manchester Boulevard, and Prairie Avenue (see **Figures 4a–4d**). The entire Project is situated within the City of Inglewood, an incorporated city within Los Angeles County.

The City is located in the west-central portion of the Los Angeles Basin and is nine square miles and wholly surrounded by other jurisdictions. It is well-served by regional roadways, including both Interstate 405 and Interstate 105. Four major interstate highways serve the Inglewood area, including the Santa Monica Freeway (I-10) and Glenn Anderson Freeway (I-105), running east/west, the San Diego Freeway (I-405) which runs north/south, and the Harbor Freeway (I-110) running north/south east of the Study Area. The I-10, I-105, I-110 and the I-405 experience high levels of congestion, particularly during peak commute periods. I-105 and I-405 experience heavy traffic throughout the day as they provide regional access to West Los Angeles and Los Angeles International Airport.

The roadway system in the City is primarily a grid that includes arterials, collectors, and local roads. A major arterial thoroughfare is a high-capacity urban road with the primary function of delivering traffic from collector roads to freeways or expressways, and between urban centers, at the highest level of service possible. According to the City of Inglewood 1992 Circulation Element, the following streets within in the City are classified as major arterials:

- Arbor Vitae Street,
- Centinela Avenue,
- Century Boulevard,
- Florence Avenue,
- Hawthorne Boulevard,
- Manchester Boulevard, and
- Prairie Avenue.

Minor or secondary arterials are similar to major arterials except that they may be discontinuous with the City, they may carry less traffic volume, and/or may serve as extensions of other major arterials. Several roadway improvements within the City of Inglewood are either programmed or under construction. They

include Citywide Intelligent Transportation System improvements and physical roadway and intersection improvements along Century Boulevard and Prairie and Florence Avenues.

Transit service in Inglewood is provided by Metro and the City of Inglewood. A combination of Metro Local and Rapid buses provide service to the City of Inglewood, with limited service during weekends and evenings. Inglewood is currently served by City-operated I-Line and Metro. These lines connect the City of Inglewood to the rest of the greater Los Angeles region. Metro's new Crenshaw/LAX Line is currently under construction and will provide service to Inglewood at the Downtown Inglewood Metro Station at the Market Street and Florence Avenue intersection, the Westchester/Veterans Metro Station at the southwest border of the City, and the Fairview Heights Metro Station located just west of the Florence Avenue and West Boulevard intersection. As part of the City's Mobility Plan and Event Transportation Management and Operations Plan, the City is working with Metro and other municipal bus operators to increase and enhance transit service to City of Inglewood destinations.

The proposed Project is designed as an aerial guideway that runs approximately 1.6 miles in total length including approximately one-quarter of a mile along Market Street between Florence Avenue and Manchester Boulevard, where it transitions east along Manchester Boulevard for approximately half a mile to Prairie Avenue. The alignment is proposed to continue for approximately one mile south of Manchester Boulevard along Prairie Avenue to Hardy Street.

The proposed Project would be designed to serve the Forum, LASED, and the proposed IBEC. It would also be designed to be integrated with Downtown Inglewood and to take advantage of the existing Downtown assets, including, such as but not limited to:

- The Metro Crenshaw/LAX Line's Downtown Inglewood Station near Market Street and Florence Avenue. This station provides Inglewood with a new gateway to the region and provides the region with a new way to connect with Inglewood. The Downtown Inglewood Metro Rail Station is located adjacent to the proposed Project at the northern end of Market Street.
- The Civic Center, which has approximately 2,000 workers at City Hall, the Library, and Courthouse. These workers may benefit from increased high-capacity transit connectivity with the Metro Rail system and are potential customers for downtown businesses.
- Downtown Inglewood has thousands of existing parking spaces in public structures that are currently underutilized and present a major resource for off-site event parking and for supporting the area's revitalization.
- The approved development of the City-owned D3 Site—bounded by Florence Avenue, Market Street, Regent Street, and La Brea Avenue—is redeveloping into a mixed-use project with 5 stories of residential use over ground-floor retail.

- Market Street has a number of older structures and an ambiance resulting from past City investments in streetscape improvements. The City is encouraging the design and development of new mixed-use and retail along Inglewood's Market Street, along with signage, marketing, landscaping, and traffic-calming improvements. Situated in the heart of Inglewood's Historic Core, the Miracle Theater was once connected to greater Los Angeles by the Red Car system. In the late 1940s through the early 1960s, Inglewood's Market Street hosted Hollywood film premieres at several movie houses, including the Fox Theater, the United Artist's Theater, and the Ritz Theater. Built in 1937, the Ritz—now revived as the Miracle—is once again home to local and international entertainment. Featuring music, movies, comedy, and community events, the Miracle Theater provides a venue for arts and culture on Market Street.

1.4 Relationship to Existing Plans and Documents

1.4.1 Southern California Association of Governments 2020-2045 RTP/SCS

SCAG adopted the 2020-2045 RTP/SCS, also known as Connect SoCal, on May 7, 2020 for federal transportation conformity purposes and will consider approval of the study in its entirety for all other purposes within 120 days of May 7, 2020. Connect SoCal is a long-range visioning plan that builds upon and expands land use and transportation strategies established over several planning cycles to increase mobility options and achieve a more sustainable growth pattern. The 2020—2045 RTP/SCS places focus on establishing a more mobile, sustainable, and prosperous region through implementing planning strategies that focus on transportation networks. The 2020—2045 RTP/SCS core vision centers on maintaining and better managing the transportation network for moving people and goods, while expanding mobility choices by locating housing, jobs and transit closer together and increasing investment in transit and complete streets.

1.4.2 The City of Inglewood General Plan and the Inglewood Mobility Plan

The City of Inglewood General Plan includes several goals and policies that are relevant to the proposed Project. The Land Use Element of the General Plan envisions the City becomes a model for sustainable development, promotes sound economic development and increase employment opportunities for the City's residents by responding to changing economic conditions, and promotes Inglewood's image and identity as an independent community within the Los Angeles metropolitan area. The City's Circulation Element of the General Plan will be updated once the Mobility Plan is finalized to reflect the City's long-range infrastructure needs and transportation goals, objectives, plans reflecting future projects.

The Mobility Plan includes performance measures that address short-term and long-term transportation improvements and policy recommendations designed to improve and enhance the City's local and regional

transportation networks. If approved, the proposed Project will serve as an integral component of the Inglewood Mobility Plan.

1.4.3 Hollywood Park Specific Plan

The Inglewood City Council approved the Hollywood Park Specific Plan, LASED project with the SoFi stadium , and voter initiative in 2015. The Hollywood Park Specific Plan is a section in the Inglewood Municipal Zoning Code that regulates and permits the incorporation of custom design guidelines and more extensive landscape than required by the zoning code and provides the land use framework for the redevelopment of the 238-acre Hollywood Park site.

The LASED project, which complies with the Specific Plan, includes a new mixed-use, master planned community on the site of the former Hollywood Park racetrack and equestrian training facility, started construction in 2014 and is slated for completion by 2023. The Specific Plan will transform underutilized asphalt lots and the former racetrack into a vibrant mixed-use community. The proposed Project includes a number of new uses including 2,500 residential units, 890,000 square feet of retail, 780,000 square feet of office and a 300-room hotel, as well as 25 acres of new recreational and park amenities for the City. The signature component of the LASED project is the 75,000-seat SoFi NFL stadium, which includes a 6,000-seat performance venue, and that will be home to both the NFL Los Angeles Rams and Los Angeles Chargers teams. The stadium is set to open in 2020.

The proposed Project will complement and further the Hollywood Park Specific Plan's goals of making high-quality, place making improvements, creating inviting, pedestrian oriented amenities, and promoting sustainable, transit access to the stadium.

1.4.4 City of Inglewood Downtown TOD Plans

The City of Inglewood adopted the New Downtown and Fairfield Heights Transit Oriented Development Plan, which included a General Plan Amendment, Transit Oriented Development zoning, Concept Plans and Design Guidelines for approximately 913 acres in downtown Inglewood. The Plan defines and implements the City's vision to transform the quality and vitality of its downtown area and protect and enhance the environment of the Fairview Heights area. The Plan encompasses two planning areas: Downtown Inglewood (Downtown TOD) and Fairview Heights.

The Downtown TOD planning area consists of approximately 585 acres located in the center of Inglewood along the new Metro Crenshaw/LAX Line just east of the Florence Avenue and La Brea Avenue intersection. The Downtown TOD planning area generally encompasses the area within approximately half-mile from the Downtown Inglewood Metro Station.

The Fairview Heights planning area consists of approximately 328 acres located near the intersection of Florence Avenue and West Boulevard. This planning area encompasses the westerly portion of the half-mile radius area extending from the Fairview Heights Metro Station that is within the City of Inglewood.

The easterly portion of the half-mile radius surrounding the Fairview Heights Station lies within the City of Los Angeles, and the easterly portion is not part of the City's TOD project. The primary impetus for the Downtown TOD Plan was the Metro Crenshaw/LAX Line, which will greatly increase regional accessibility to Inglewood and provide the City with convenient transit connections to Los Angeles International Airport, Downtown Los Angeles, Santa Monica, and the entire Los Angeles County area.

The proposed Project will complement the Downtown TOD goals for enhanced pedestrian and bicycle mobility and the enhancement of existing public spaces that encourage transit and multimodal activities.

1.5 Project Characteristics

The proposed Project includes an automated people mover (APM) with up to three stations connecting passengers from the Metro Crenshaw/LAX Line to Downtown Inglewood, the Forum, the LASED, and the proposed Inglewood Basketball and Entertainment Center (IBEC), and accompanying support facilities. Each of the proposed Project components is described further in the following sections.

1.5.1 Automated People Mover

The proposed Project would be a fully automated, grade-separated, mass transit system, consisting of an APM that would travel along an elevated dual-lane guideway with a total of up to three stations for passenger loading and unloading. The APM would be a driverless, self-propelled electric train built entirely above grade and thereby avoid traffic and alleviate congestion on the roadway network. The APM would provide reliable, time-certain access for passengers and users traveling to and from the Metro Crenshaw/LAX Line to the City's major activity centers. The guideway would be approximately 1.6 miles in length and would be up to approximately 22 to 45 feet in height above existing grade.

The design and construction of the proposed Project elevated guideway structures, stations and support facilities will avoid existing utility and other infrastructure to the degree possible. In addition to surface improvements, some utility infrastructure that cannot be avoided may need to be relocated to accommodate the guideway columns and foundations.

The APM would transport passengers between up to three stations and would accommodate up to six 4-car trains operating approximately every 6 to 6½ minutes during normal day and weekends, and every 2 to 2 ½ minutes during special events. Each station would have platforms sized to accommodate an APM

train length of up to four train cars. Each train car would be up to 45 feet long; in total, the train length could reach approximately 175 feet.

Based on preliminary analysis, event annual ridership is anticipated to reach over 1 million passengers, and total nonevent annual ridership is expected to reach over 1.5 million passengers. Preliminary ridership projections also indicate that the peak ridership is expected to occur on NFL Rams game days and could potentially reach nearly 9,000 riders occurring in the 1-hour period after a game. The peak ridership would be able to accommodate up to 9,600 passengers per hour after the events combined.

Figures 3 and **4a–4d**, show the proposed Project's alignment, which would include up to three stations to serve Downtown Inglewood/Market Street, The Forum, LASED, and IBEC.

The proposed Project's stations would be designed to include, among others, features such as mezzanine areas, escalators and elevators, signage, and walkways connecting the stations to the street. Stations would accommodate passengers waiting to board APM vehicles and the boarding/deboarding of passengers to and from the vehicles. Station platforms would also provide the required space for passengers to circulate between the station platform and the adjacent facilities. Station platform minimum widths would be based on queuing and circulation analysis results.

Queuing and circulation requirements will be determined from the peak-hour number of passengers boarding and deboarding the APM for the long-range planning horizon. Stations will be required to be fully accessible to passengers with disabilities. The station locations and configuration will be refined to reflect necessary coordination with the activity generator facility designs, passenger access/egress concepts and to address utility and right of way constraints.

While many different platform configurations are possible, center platforms which generally require less infrastructure are being considered. These platforms would be located between relatively widely spaced guideways and serve as both boarding and deboarding platforms for passengers traveling in either direction on the guideway. Vertical circulation would be provided at one or both ends of station platforms, or within the length of the platform for any of these platform configurations. A "mezzanine" level is anticipated under the station platform; mezzanines will provide the connectivity to the adjacent street level through pedestrian walkways.

Maintenance and/or emergency walkways are required along the guideways to provide for passengers to evacuate from trains in case of an emergency. Passenger access from the emergency walkway to the stations is provided to bring them to a point of evacuation from the guideway.

In addition, the proposed Project would include equipment to guide the movement of trains between stations, emergency walkways and lighting, communications systems, a command and control system, a public information system, and security systems to monitor activity at station platforms, along the guideway, and at the Maintenance and Storage Facility (MSF).

Traction power substations would be constructed to provide continuous power supply for system operation. Depending on load requirements, two traction power substations may be required. The traction power substations would be connected to existing power trunk lines and would be up to 3,000 square feet in size. Locations for the traction substations would be adjacent to other proposed components of the proposed Project and existing electrical trunk lines.

1.5.2 Maintenance and Storage Facility & TPSSs

The proposed Project would include an elevated guideway with stations and other support components to provide for maintenance and addition access areas that could be either co-located or individually located at two identified sites adjacent to the proposed Project's alignment. These support facilities would include a Maintenance and Storage Facility (MSF) and two traction power substations.

An MSF is included as part of the proposed Project to provide for regular and preventative maintenance of the APM cars and equipment, as well as provide space for storage of the vehicle fleet. The MSF would consist of a single 78,000 square feet (SF) facility with three floors and sufficient space for maintenance facilities, administration facilities, an automatic car wash for exterior vehicle cleaning, equipment and materials storage area, shipping/receiving areas, and sufficient parking for staff.

Additionally, the MSF would house the operations control center where automated train operations are monitored and controlled. The MSF will also include service bays (including under vehicle bays), equipment and materials storage areas, offices, lunch/break area(s), restrooms, locker area(s), personnel wash facilities, and loading platforms, paint booth, and other work areas. Additional components include access driveways, landscaping, exterior lighting, parking, signage, and secured fencing controlling access into and out of the MSF.

The MSF location is shown on **Figure 2,** south of Manchester Boulevard between Spruce Avenue and Hillcrest Boulevard. The MSF location will also include a TPSS; a second TPSS would be located at the Civic Center site. Backup generators would be located at each TPSS site to provide emergency backup power in the event of total loss of electrical feed from Southern California Edison (SCE)

1.5.3 Utilities

The proposed Project will require utility systems improvements, upgrades and possible relocations to accommodate and serve the various Project components. The design and construction of the elevated guideway structures, stations and support facilities will strive to avoid existing utility and other infrastructure to the degree possible. In addition to surface improvements, some utility infrastructure that cannot be avoided may need to be relocated to accommodate the guideway columns and foundations.

Potential utility constraints include an existing 36-inch (West Basin Water District) recycled water line identified at the Market/Manchester Alignment street centerline and several utilities within 15 feet of the alignment along Prairie Avenue. In addition, a 60-inch City of Los Angeles Department of Water and Power (LADWP) main pipe and 33-inch storm drain are located on the east side of Prairie Avenue, approximately 20 to 40 feet from centerline.

Underground electrical lines, including vaults, are present along or adjacent to sidewalks. Nongravity flow utilities, including water service lines, may be lowered in lieu of horizontal relocation. Utility crossings including electrical and storm drain lines are found at street intersections.

Existing utilities along the northern portion of the alignment pose minimal obstacles for placement of guideway columns. However, due to the span of utilities tie-ins and crossings along Manchester Boulevard at Hillcrest Boulevard, Spruce Avenue, Manchester Drive, and Manchester Terrace, placement of guideway columns on this alignment will be engineered to avoid relocation of gravity flow utilities including sewer and storm drains. As noted, the proposed Project along the Market/Manchester alignment will be designed so that utilities are avoided as feasible, and therefore do not pose a major impediment.

Potential land acquisitions, if necessary, for the proposed Project's implementation would be determined during final design.

1.6 Required Approvals/Consultations

The City of Inglewood has principal responsibility for approving and carrying out the proposed Project. Approvals required for implementation of the proposed Project may include, but are not limited to, the following:

State and Regional Agency Approval and Actions:

- South Coast Air Quality Management District (SCAQMD) – permit to operate a generator and Dust Control Plan;
- Regional Water Quality Control Boards (RWQCB) administer regulations regarding water quality. Permits or approvals required from the WQCB may include but are not limited to: (1) General

Construction Stormwater Permit; (2) Standard Urban Stormwater Mitigation Plan; and (3) Submittal of a Recycled Water Report for the use of recycled water as a dust control measure for construction; and

- California State Transportation Agency (CalSTA) for oversight and consistency with grants funding from the Transit and Intercity Rail Capital Program (TIRCP).

City of Inglewood Approvals and Actions:

- Certification of the Final EIR for the Inglewood Transit Connector Project;
- Updates/amendments to the City of Inglewood General Plan and municipal code. These changes relate to conforming the plans, as necessary, to reflect the physical improvements within the Inglewood Transit Connector Project and technical amendments necessary for the construction, operation and maintenance of the Inglewood Transit Connector;
- Preparation of a Project-specific Stormwater Management Plan or Standard Urban Stormwater Mitigation Plan for approval;
- County of Los Angeles (as the City's contractor) Fire Department approval;
- Grading permits, building permits, haul route approval, and other permits issued by the Department of Building and Safety for the Project and any associated Department of Public Works permits for infrastructure improvements;
- Tree removal permits;
- Noise permit for Construction and Building Hours extension;
- Tract/parcel map and zone change approvals;
- Eminent Domain approvals for acquisition of parcels outside of the City's right-of-way;
- Approvals for federal, State, or local financing plans or grants;
- Approving contracts for the design and construction of the Project; and,
- Other federal, State, or local approvals, permits, or actions that may be deemed necessary for the Project.

- Other federal, State, or local approvals, permits, or actions that may be deemed necessary for the Project.

2.0 EXPLANATION OF INITIAL STUDY CHECKLIST DETERMINATIONS

The following analysis provides supporting documentation for the determinations presented in the Initial Study Checklist. Each response provided below evaluates how the proposed Project, as defined in the Project Description, may affect Adjusted Baseline environmental conditions at the proposed Project's location and the surrounding area.

As previously mentioned, the proposed Project is not expected to be completed and operational until 2026. Active construction is ongoing adjacent to the Project alignment and the City has approved additional construction plans which would begin construction prior to the completion of the proposed Project. An Adjusted Baseline will be used to assess the potential project impacts more accurately as the proposed Project surrounding continues to develop.

The EIR will further evaluate topics where the potential for a significant impact has been identified. The Initial Study Checklist questions that are carried forward for additional analysis may be further refined as thresholds in the EIR or combined when they address overlapping environmental issues. The EIR will analyze the identified potentially significant impacts and, where appropriate, identify mitigation measures and explain how such measures would reduce significant impacts.

2.1 Aesthetics

Would the proposed Project:

a. Have a substantial adverse effect on a scenic vista?

Less than Significant Impact.

A significant impact regarding a scenic vista could occur if the Project were to introduce incompatible visual elements within a field of view containing a scenic vista or substantially blocked views of a scenic vista. Scenic vistas are generally described in two ways: panoramic views (visual access to a large geographic area, for which the field of view can be wide and extend into the distance) and focal views (visual access to a particular object, scene, or feature of interest). Scenic resources typically include natural open spaces, topographic formations, and landscapes that contribute to a high level of visual quality. They also can include ridgelines, parks, trails, nature preserves, sculpture gardens, and similar features.

The proposed Project consists of an elevated guideway that would be located in the center of the public rights-of-way. The proposed Project's alignment would extend from a point near the under-construction Metro Crenshaw/LAX Line, which will run south along North and South Market Street, east along East Manchester Avenue, and south along South Prairie Avenue before terminating near the intersection of South Prairie Avenue and Hardy Street.

The proposed Project is located entirely within the City of Inglewood in a highly developed urban area characterized by commercial, residential, and industrial uses. The existing level of development on the site and in the surrounding area limits views across and beyond the site from surrounding roadways. The City's General Plan states that no forest resources, wildlife, fisheries, shorelines, or agricultural land are present in the City,[3] nor does the General Plan designate any scenic vistas within the City or its vicinity. Additionally, the Project is not near any designated wild or scenic rivers pursuant to the National Wild and Scenic Rivers System.[4] The nearest surrounding mountains, the Santa Monica Mountains, are more than 10 miles to the north.[5] No views of these mountains or of any other focal points or broad panoramic view corridors are available from public rights-of-way along the proposed alignment.

Based on the above, the proposed Project would not have a substantial adverse effect on a scenic vista. Impacts would be less than significant, and no further evaluation of this topic area is required in an EIR.

b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway?

Less than Significant Impact.

A significant impact would occur if the proposed Project were to substantially damage identified scenic resources bordered by or within the viewshed of a State-designated scenic highway.

There are no designated scenic highways near the Project. In addition, although the City of Inglewood Municipal Code (IMC) has a tree protection ordinance that requires any street trees affected by Project implementation be replaced at a 1:1 ratio, the appended tree inventory does not identify any federally or State-listed trees that would be affected by proposed Project's implementation. None of the trees inventoried is located within a State scenic highway. Historic buildings located in the vicinity of the proposed Project also do not fall within a State scenic highway, and no rock outcroppings are present on or near the proposed Project. As such, impacts would be less than significant, and no further study is required.

3 City of Inglewood, *General Plan*, "Conservation Element" (1997), 1.
4 *National Wild and Scenic Rivers System*, accessed July 2020, https://www.rivers.gov.
5 *Google Maps* accessed July 2020, https://www.google.com/maps.

c. In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point.) If the Project is in an urbanized area, would the Project conflict with applicable zoning and other regulations governing scenic quality?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to introduce incompatible visual elements on the Project location or visual elements that would be incompatible with the character of the area surrounding the proposed Project.

Implementation of the proposed Project would involve the construction of an aerial guideway and stations along North and South Market Street, East Manchester Boulevard, and South Prairie Avenue connecting the Metro Crenshaw/LAX Line to the NFL Stadium/Hollywood Park. The proposed Project's alignment may include up to three stations that would be fully located within the public rights-of-way. Preliminary stations locations include: North Market Street, the intersection of Prairie Avenue and Pincay Drive, and the intersection of Prairie Avenue and Hardy Street.

The proposed Project would also include support facilities consisting of an MSF, as well as TPSSs. The TPSSs would be co-located with the MSF and on a separate location at the City's proposed Intermodal Transit Center on S. Prairie Avenue. The MSF would consist of an elevated structure to provide space for maintenance and storage of the vehicle fleet, as well as to house the operations control center. The TPSS would be connected to existing SCE power trunk lines, housing necessary equipment in each TPSS including transformers/rectifiers and switches or breakers.

Height and Massing

Land uses within the vicinity of the proposed Project vary in use and height. Within downtown Inglewood (North and South Market Street), buildings to the east and west of the proposed Project are characterized by commercial retail, office, restaurant, parking, residential, and mixed uses; these building are generally low rise (less than 40 feet). Along East Manchester Boulevard, buildings to the north and south of the proposed Project largely consist of commercial uses, with some limited residential uses also present.

Along South Prairie Avenue, buildings to the west of the proposed Project are primarily commercial (heavy, general, and airport commercial) and multifamily residential uses, while uses to the east include major entertainment venues, such as the Forum and the under-construction NFL stadium. These entertainment venues include wide setbacks from the rights-of-way (approximately 300 feet or greater) and are characterized by heights in excess of 100 feet. Although the appended historic resource assessment identifies structures in the vicinity of the proposed Project that are or could be considered historic

resources, the proposed Project would not be significantly taller than existing structures in the area. Therefore, impacts would be less than significant, and this topic does not require further evaluation in an EIR.

Views

Private views are not protected by viewshed protection ordinances or by policies in the City's General Plan. Accordingly, the alteration of private views would not constitute a significant impact. The visual impact of one structure blocking another structure is not considered a significant impact because the general characteristics of the urban setting would not be altered. However, the construction of an elevated guideway as proposed by the proposed Project could obstruct views from the public rights-of-way. As such, impacts are potentially significant and will be further evaluated in an EIR.

Streetscape and Landscaping

The proposed Project would require support structures (columns and aerial cross beams) to support the guideway and stations that would be located within the street right-of-way or in some area extend bet=yond the right-of-way on sidewalks and other properties. Sidewalks and pedestrian access ways would be maintained upon implementation of the proposed Project. The façades of the proposed stations and proposed Project support infrastructure would be articulated with geometric forms and variations in color that would reduce any conflict with the visual effect of the existing building masses.

The streets bounding the proposed Project contain street trees, ornamental landscaping and landscaping throughout the rights-of-way along the proposed Project alignment. Implementation of the proposed Project could require the removal of street trees and landscaping; the prosed project would be required to replace any street trees that are removed at a 1:1 ratio as required by the IMC.[6] Streetscape and landscaping will be further evaluated in an EIR.

d. Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?

Potentially Significant Impact.

A significant impact could occur if the proposed Project were to introduce new sources of light or glare on or from the Project that would be incompatible with the areas surrounding the Project or would pose a safety hazard to motorists utilizing adjacent streets or freeways. The determination of whether the proposed Project results in a significant nighttime illumination impact will be made considering the change

6 Inglewood Municipal Code (IMC), ch. 12, Planning and Zoning, art. 32, Tree Preservation, sec. 12-112, Definitions, accessed July 9, 2020, http://www.qcode.us/codes/inglewood/view.php?topic=12-32-12_112&frames=off

in ambient illumination levels as a result of the proposed Project's sources and the extent to which the proposed Project's lighting would emanate in to the local surroundings and affect adjacent light-sensitive areas.

Light

Due to the urban setting of the proposed Project's location, ambient nighttime light already exists. Existing nighttime lighting sources near the proposed Project include street lights, vehicle headlights, and interior and exterior building illumination. Night lighting for the Project would be provided for exterior illumination of stations and along the elevated guideway, in addition to interior lighting of the APM's vehicle fleet, largely to provide adequate night visibility for users and to provide a measure of security. The Project would utilize outdoor lighting designed and installed to meet City code requirements for shielding. However, exterior and interior lighting associated with the proposed Project could impact adjacent properties. As such, impacts will be further evaluated in an EIR.

Glare

Glare is largely a daytime occurrence caused by the reflection of sunlight or artificial light from highly polished or reflective surfaces. Daytime glare is typical in highly developed urban areas due to the highly reflective nature of exterior building materials and automobiles, among other sources.

The proposed Project will be located within the public rights-of-way along North and South Market Street, East Manchester Boulevard, and South Prairie Avenue; the potential locations for the support facilities may include public and/or private properties. The rights-of-way are developed with paved surfaces and include pedestrian sidewalks with assorted street furniture, vegetative planters and medians, parking lanes, and turning and travel lanes. The area currently contributes limited sources of glare in the proposed Project's vicinity. Reflective surfaces in the vicinity include automobiles traveling and parked on streets, as well as exterior building windows and façades. Excessive glare not only restricts visibility, but also increases the ambient heat reflectivity in a given area. The exterior lighting located on the façade of the stations and along the alignment would be shielded for glare.

The proposed Project's architectural materials may include highly polished and reflective materials, including metal and glass; as a result, the proposed Project could have the effect of increasing reflected light, thereby creating glare. Therefore, this topic will be further evaluated in an EIR.

Shade and Shadow

As the proposed Project will include elevated guideways and stations, it is anticipated that as a result of their height and mass, these structure would cast shade and shadow on adjacent properties.

The proposed Project will be constructed mostly within the public right-of-way, with shade and shadow patterns cast over the roadway including travel lanes and sidewalks. Existing land uses adjacent to the proposed Project include commercial, commercial recreation, single- and multifamily residential, and entertainment uses. Shade and shadow impacts on these adjacent uses may be potentially significant and will be further evaluated in an EIR.

2.2 Agriculture and Forestry Resources

Would the proposed Project:

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?

No Impact.

Significant impacts would occur if the proposed Project were to adversely impact Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. The location of the proposed Project is surrounded by commercial, commercial recreation, single- and multifamily residential, and entertainment uses (within the Hollywood Park Specific Plan).

According to the California Department of Conservation's Farmland Mapping and Monitoring Program, the location of the proposed Project has not been previously mapped.[7] However, the City is highly developed and entirely urbanized; no portion of the City, including the proposed Project location and surrounding development, is currently in agricultural use. As such, no portion of the proposed Project's location would qualify for designation as Prime Farmland, Farmland of Statewide Importance, Unique Farmland, or Farmland of Local Importance. No impacts would occur, and no further evaluation of this topic area is required in an EIR.

7 California Department of Conservation (CDC), Farmland Mapping and Monitoring Program, *California Important Farmland Finder,* accessed July 9, 2020, https://maps.conservation.ca.gov/DLRP/CIFF/.

b. Conflict with existing zoning for agricultural use, or Williamson Act contract?

No Impact.

Significant impacts would occur if the proposed Project were to conflict with existing agricultural zoning or a Williamson Act contract.

As previously noted, the proposed Project's location and surrounding development are not used for agricultural, nor can they support agricultural use. The area is not subject to a Williamson Act contract. No impacts would occur, and no further evaluation of this topic area is required in an EIR.

c. Conflict with existing zoning for, or cause rezoning of, forestland (as defined in PRC section 12220(g)), timberland (as defined by PRC section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

No Impact.

The proposed Project's location is not designated or zoned for forest or timberland. No timber operations exist in the area. Additionally, the area is highly urbanized area and is not within any forestland area. No impacts would occur, and no further evaluation of this topic area is required in an EIR.

d. Would the Project result in the loss of forest land or conversion of forest land to nonforest use?

No Impact.

As previously noted, the proposed Project's location does not contain any farmland or forestland. Development of the proposed Project would occur in an existing highly urbanized and developed area. No impacts would occur, and no further evaluation of this topic area is required in an EIR.

e. Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland to nonagricultural use, or conversion of forestland to nonforest use?

No Impact.

The proposed Project's location is not designated or zoned for forest or timberland. No timber operations exist in the area. Additionally, the area is highly urbanized area and is not within any forestland area. No impacts would occur, and no further evaluation of this topic area is required in an EIR

2.3 Air Quality

Would the proposed Project:

a. Conflict with or obstruct implementation of the applicable air quality plan?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to result in the obstruction or implementation of an adopted, applicable air quality plan.

The Project is in the South Coast Air Basin (Basin). Within the Basin, the SCAQMD is required, pursuant to the federal Clean Air Act (CAA), to reduce emissions of criteria pollutants for which the Basin is in nonattainment. The SCAQMD's *2016 Air Quality Management Plan* (AQMP) contains a comprehensive list of pollution control strategies directed at reducing emissions and achieving AAQS.[8]

According to the SCAQMD, there are two key indicators of consistency with the applicable air quality plan: whether the proposed Project would (1) result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the air quality plan; and (2) would cause the area to exceed the forecasted growth incorporated into the applicable air quality plan. Construction and operation of the proposed Project are evaluated in the context of both of these indicators.[9]

Construction emissions during the construction of the proposed Project itself, as well as associated stations, MSF, and TPSS facilities, have the potential to conflict with the implementation of the AQMP. Ongoing operations (particularly at the MSF facility because the APM will be powered by electrical guideways) also have the potential for adverse effects on AQMP implementation. Thus, additional analysis, including quantification of construction and operational emissions, is required to determine whether the proposed Project would have the potential to conflict with the SCAQMD's current AQMP, SCAG's 2020-2045 RTP/SCS and the City's Energy and Climate Action Plan (ECAP) and will be further addressed in an EIR.

8 South Coast Air Quality Management District (SCAQMD), *Final 2016 Air Quality Management Plan* (March 2017), http://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2016-air-quality-management-plan/final-2016-aqmp/final2016aqmp.pdf?sfvrsn=15.

9 SCAQMD, *CEQA Air Quality Handbook* (November 1993).

b. Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable federal or State ambient air quality standard?

Potentially Significant Impact.

A project could result in significant air quality impact under this criterion if project-related emissions were to exceed federal, State, or regional standards or thresholds, or substantially contribute to an existing or projected air quality violation.

The SCAQMD has developed specific CEQA air quality significance thresholds to assess potential impacts that may result from construction and operation of projects.[10] The proposed Project is located within the South Coast Air Basin (SCAB) where these thresholds apply. Daily emissions of volatile organic compounds (VOC), nitrogen oxides (NOX), carbon monoxide (CO), sulfur oxides (SOX), and respirable particulate matter less than 10 microns in diameter (PM10) and fine particulate matter less than 2.5 microns in diameter (PM2.5) should be quantified and assessed on both regional and localized scales, in accordance with SCAQMD methodology.

As stated above, the proposed Project's construction and operational activities would potentially generate pollutant emissions that could contribute to an existing or projected air quality violation. Specifically, construction of the elevated guideway and associated stations, MSF, and TPSS facilities would lead to emissions from construction equipment that could contribute to a violation of air quality standards adopted for the SCAB. Ongoing operations that would occur upon the proposed Project's implementation could also lead to emissions that could contribute to air quality violations, particularly as a result of activities at the MSF and TPSS facilities. Further analysis of the proposed Project's emissions, including quantification of construction and operational emissions and comparison to SCAQMD-recommended thresholds, is required to determine whether the proposed Project has the potential to violate air quality standards. This topic will be further analyzed in an EIR.

Significant impacts would occur if the proposed Project were to result in a cumulatively considerable net increase of any criteria pollutant for which the region is nonattainment under applicable federal or State air quality standards.

The United States Environmental Protection Agency (USEPA) is responsible for the implementation of portions of the 1970 CAA,[11] which regulates certain stationary and mobile sources of air emissions and other requirements. USEPA sets national vehicle and stationary source emission standards; oversees the

10 SCAQMD, *CEQA Air Quality Handbook*.

11 US Environmental Protection Agency, "Clean Air Act Text," https://www.epa.gov/clean-air-act-overview/clean-air-act-text.

approval of all State Implementation Plans;[12] provides research and guidance for air pollution programs; and sets National Ambient Air Quality Standards (NAAQS).[13] NAAQS for the seven common air pollutants, Ozone (O3), carbon monoxide (CO), nitrogen dioxide (NO2), sulfur dioxide (SO2), particulate matter (PM10), fine particulate matter (PM2.5), and lead (Pb), are identified in the CAA. **Table 1-1: Common Sources of Health Effects for Criteria Air Pollutants** details these pollutants.

Table 1-1
Common Sources of Health Effects for Criteria Air Pollutants

Pollutants	Sources	Primary Effects
Ozone (O3)	Formed when volatile organic compounds (VOC) and oxides of nitrogen (NOx) react in the presence of sunlight; VOC sources include any source that burns fuels (e.g., gasoline, natural gas, wood, oil), solvents, petroleum processing, and storage and pesticides	Breathing difficulties, lung tissue damage, damage to rubber and some plastics
Respirable particulate matter (PM10)	Road dust, windblown dust (agriculture), construction and fireplaces; also formed from other pollutants (e.g., acid rain, NOx, oxides of sulfur [SOx], organics) and from incomplete combustion of any fuel	Increased respiratory disease, lung damage, cancer, premature death, reduced visibility, surface soiling
Fine particulate matter (PM2.5)	Fuel combustion in motor vehicles, equipment and industrial sources, residential and agricultural burning; also formed from reaction of other pollutants (e.g., acid rain, NOx, SOx, organics)	Increases respiratory disease, lung damage, cancer, premature death, reduced visibility, surface soiling
Carbon monoxide (CO)	Any source that burns fuel, such as automobiles, trucks, heavy construction equipment, farming equipment, and residential heating	Chest pain in heart patients, headaches, reduced mental alertness
Nitrogen dioxide (NO2)	See *carbon monoxide*	Lung irritation and damage
Lead (Pb)	Metal smelters, resource recovery, leaded gasoline, deterioration of lead paint	Learning disabilities, brain and kidney damage
Sulfur dioxide (SO2)	Coal- or oil-burning power plants and industries, refineries, diesel engines	Increases lung disease and breathing problems for asthmatics; reacts in the atmosphere to form acid rain

Source: California Air Resources Board, "ARB Fact Sheet: Air Pollution and Health" (last reviewed December 2, 2009), http://www.arb.ca.gov/research/health/fs/fs1/fs1.htm, accessed June 2018.

12 A State Implementation Plan is a document prepared by each state describing existing air quality conditions and measures that will be followed to attain and maintain National Ambient Air Quality Standards (NAAQS).

13 The NAAQS were set to protect public health, including that of sensitive individuals; for this reason, the standards continue to change as more medical research becomes available regarding the health effects of the criteria pollutants. The primary NAAQS define the air quality considered necessary, with an adequate margin of safety, to protect the public health.

The California Air Resources Board (CARB) is the State agency responsible for setting the California Ambient Air Quality Standards (CAAQS).[14] USEPA and CARB designate air basins as nonattainment areas where air pollution levels exceed federal or State ambient air quality standards, respectively. If standards are met, the area is designated as an attainment area. If there is inadequate or inconclusive data to make a definitive attainment designation, an area is considered unclassified. Federal nonattainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from standards. The current federal and State attainment designations for the Basin are shown in **Table 1-2: South Coast Air Basin Attainment Status**.

As discussed above, construction and operation of the proposed Project could potentially result in the emission of air pollutants in the Basin, which is currently in nonattainment of federal air quality standards for O3, PM2.5 and Pb, and in nonattainment of State air quality standards for O3, PM10, and PM2.5.

Table 1-2
South Coast Air Basin Attainment Status

Pollutant	State Status	National Status
Ozone (O3)	Nonattainment	Nonattainment
Carbon monoxide (CO)	Attainment	Unclassified/Attainment
Nitrogen dioxide (NO2)	Attainment	Unclassified/Attainment
Sulfur dioxide (SO2)	Attainment	Attainment
Lead (Pb)	Attainment	Nonattainment
Suspended particulate matter (PM10)	Nonattainment	Attainment
Fine particulate matter (PM2.5)	Nonattainment	Nonattainment

Sources: CARB, "Area Designations Maps/State and National," http://www.arb.ca.gov/desig/adm/adm.htm (last reviewed October 18, 2017).

Trenching, paving, and other activities associated with the construction of the proposed Project's elevated guideway, as well as the associated stations, MSF, and TPSSs, have the potential to emit diesel particulates typical of construction activity. Ongoing operations at the MSF and TPSS sites also have the potential to increase the emission of the specific pollutants mentioned above, including those for which the Basin is already in nonattainment of federal and State air quality standards. Therefore, implementation of the

14 CARB, "California Ambient Air Quality Standards (CAAQS)" (August 10, 2017), https://www.arb.ca.gov/research/aaqs/caaqs/caaqs.htm.

proposed Project could potentially contribute to air quality impacts that may also be cumulatively considerable with other related projects. As such, this issue will be further addressed in an EIR.

c. Expose sensitive receptors to substantial pollutant concentrations?

Potentially Significant Impact.

A significant impact would occur if construction or operation of the proposed Project were to result in exposure of sensitive receptors to concentrations of air pollutants above the AAQS. The proposed Project's construction activities and operations, as described above under other thresholds, may increase air emissions above current levels.

Sensitive receptors are defined as schools, residential uses, hospitals, resident care facilities, daycare centers, or other facilities that may house individuals with health conditions that would be adversely impacted by changes in air quality. The nearest sensitive receptors to the Project are residences along East Manchester Boulevard, and residences, churches, and an elementary school along South Prairie Avenue.

Although the proposed Project will be an electrical powered system, the potential exists for impacts to sensitive receptors during the proposed Project's construction, as well as during certain g operations, particularly at the MSF and TPSS facilities. This would be as a result of typical construction practices such as grading and excavation, and construction activities associated with building the guideway, stations and support facilities; operation of the MSF and TPSS sites could also involve activities that generate emissions from the use of aerosols for cleaning, operation of generators and other activities.

Impacts are potentially significant, and this topic will be further addressed in an EIR. The analysis will include a Health Risk Assessment (HRA) to consider impacts associated with exposure to toxic air contaminants on nearby receptors during both construction and operation.

d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Less than Significant Impact.

Impacts would be considered potentially significant if the proposed Project were to result in the creation of objectionable odors with the potential to affect substantial numbers of people, or if construction or operation of the proposed Project would result in the creation of nuisance odors that would be noxious

to a substantial number of people as codified in SCAQMD Rule 402 (Nuisance).[15]

Odors are typically associated with industrial projects involving the use of chemicals, solvents, petroleum products, and other strong-smelling elements used in manufacturing processes, as well as sewage treatment facilities and landfills.

During construction, activities associated with the operation of equipment, the application of asphalt, and the application of architectural coatings and other interior and exterior finishes may produce discernible odors typical of most construction sites. As construction-related emissions dissipate from the area, odors associated with these emissions would also decrease, dilute, and become unnoticeable.

According to the SCAQMD *CEQA Air Quality Handbook,* land uses that are associated with odor complaints include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting refineries, landfills, dairies, and fiberglass molding.[16] The proposed Project would not include any of these odor-producing uses. Odors associated with the proposed Project's operation would be limited to on-site waste generation and disposal, as well as cleaning operations at the MSF. All trash receptacles would be covered and properly maintained in a manner as to minimize odors, as required by City and Los Angeles County Health Department regulations and be emptied on a regular basis.[17]

Implementation of the Project would not generate objectionable odors affecting a substantial number of people. Impacts related to odors would be less than significant, and no further analysis is required in an EIR.

2.4 Biological Resources

Would the proposed Project:

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?

Less than Significant Impact.

15 SCAQMD, "Rule 402: Nuisance" (adopted May 7, 1976), http://www.aqmd.gov/docs/default-source/rule-book/rule-iv/rule-402.pdf.

16 SCAQMD, *Air Quality Handbook*, accessed July 2020, http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook.

17 County of Los Angeles Department of Public Health, "Solid Waste Management Program," accessed July 2020, http://publichealth.lacounty.gov/eh/EP/solid_waste/solid_waste_main.htm.

A significant impact would occur if the proposed Project were to lead to adverse effects on any species identified as a candidate, sensitive, or special status species according to any adopted plan, policy, or regulation. This includes effects caused by habitat modification.

The proposed Project is located entirely within a highly developed urban area characterized by commercial and residential uses. The proposed Project's location consists of paved and active streets with various landscaping, as well as developed or previously developed parcels where the MSF and TPSS facilities may be located. The existing level of development in the area and in the surrounding area is not compatible with supporting wildlife and natural plant communities.

A biological assessment for the proposed Project's location was completed to determine the presence or absence of any sensitive biological resources. As part of the biological assessment, the California Department of Fish and Wildlife (CDFW) California Natural Diversity Database (CNDDB)[18] was used to conduct a 9-quadrant survey**.** In the Inglewood quadrant, 29 species were previously identified as seen in **Table 2-1: CNDDB Inglewood Quadrant Species List**.

There were no species listed on the CNNDB that have been observed within the area of proposed Project. Fourteen of the species listed in **Table 2-1** were no closer than 1.89 miles from the proposed Project. The only plant species on site were landscaping as well as weeds and ruderal vegetation. Of these species, none listed is a candidate, sensitive, or special-status species. None of the species listed in the CNDDB was found to be present within or surrounding the proposed Project during the field survey on May 23, 2018.

The sensitive species listed in quadrants are not within the proposed Project's footprint. The species listed tend to only occur in specific habitats that do not present within the City of Inglewood; suitable habitats for these species tend to occur in area beyond the City, such as the Santa Monica Mountains to the northwest and the coastal regions to the west. The proposed Project area is completely urbanized and has no natural open space natural plant communities.

The proposed Project is not located in a significant ecological area defined in the County of Los Angeles (the County) General Plan.[19] Moreover, the City's General Plan states that no forest resources, wildlife, fisheries, shorelines, or agricultural land are present in the City.[20]

Impacts would be less than significant, and no further evaluation of this topic area is required in an EIR.

20 City of Inglewood, *General Plan*, "Conservation Element" (1997).

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?

No Impact.

Significant impacts would occur if the proposed Project were to cause adverse effects on any riparian habitat or other sensitive natural community identified in an adopted plans, policies or regulations.

The proposed Project is located in an area that consists of paved rights-of-way, as well as developed or previously developed urban parcels adjacent to the proposed alignment. As such, no riparian habitat or sensitive natural community is located in the area.[21] In addition, the Project is not located in a significant ecological area defined in the County's General Plan[22] or the City's General Plan.[23]

No impacts would occur, and no further evaluation of this topic area is required in an EIR.

c. Have a substantial adverse effect on State or federally protected wetlands (including but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact.

A significant impact would occur if the proposed Project were to adversely affect federally protected wetlands under Section 404 of the Clean Water Act.

The proposed Project is not in proximity to, nor does it contain, wetland habitat or a blue-line stream that is subject to the jurisdiction of the US Army Corps of Engineers or the CDFW. The National Wetlands Mapper does not show any federally protected streams, wetlands, or other water bodies, or any riparian habitat on site or adjacent to the proposed Project.[24]

Because the proposed Project would not have any effect on federally protected wetlands, and would not result in any removal, filling, hydrological interruption, or other means of disruption to a watercourse, no impact would occur, and no further study is required.

Notes: NE = Northeast; S = South; SE = Southeast; SW = Southwest; Unprocessed = Data for species has not been uploaded to CNDDB for mapping—cannot determine distance.

d. Interfere substantially with the movement of any native resident or migratory fish, nesting birds, or other wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less Than Significant Impact with Mitigation.

The proposed Project would have significant impacts if it interfered with the movement of any wildlife species or if it adversely impacted wildlife corridors or nursery sites.

The proposed Project is located entirely within the City in a highly developed urban area characterized by commercial and residential uses. The proposed Project's location consists of paved and active streets with various landscaping including street trees, as well as developed or previously developed parcels adjacent to the alignment. Therefore, current development on the site and in the surrounding area is not compatible with supporting natural plant communities.

The City of Inglewood has an adopted tree preservation ordinance.[25] The intent of these regulations is to protect and preserve significant trees and control the reshaping, removal or relocation of those trees that provide benefits for the neighborhood or the entire community.[26] A total of 354 trees located within and surrounding the proposed Project have the potential to be impacted by construction or removed altogether. Of those, 230 meet IMC requirements to be considered a protected tree. For all of the protected trees that would be impacted or removed, permits would be filed with the City and the regulations set forth in the IMC would be followed, reducing impacts to less than significant.[27]

No wildlife mitigation corridors are found near the Project.[28] Implementation of the proposed Project would not interfere with the movement of native resident or migratory fish species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites.

The street trees within the footprint of the proposed Project have the potential to be utilized by migrating bird species. Nesting birds are protected under the federal Migratory Bird Treaty Act (MBTA)[29] and the California Fish and Game Code. The street trees within the roadway prism would not be ideal nesting habitats for most protected species given the highly urbanized setting surrounding the Project Site and

25 IMC, ch. 12, Planning and Zoning, art. 32, Tree Preservation, sec. 12-116, Permits Required, accessed July 2020, http://www.qcode.us/codes/inglewood/?view=desktop&topic=12-32-12_116/.

26 IMC, ch. 12, Planning and Zoning, art. 32, Tree Preservation, sec. 12-110, Purpose and Intent, accessed July 2020, http://www.qcode.us/codes/inglewood/?view=desktop&topic=12-32-12_110.

27 IMC, ch. 12, Planning and Zoning, art. 32, Tree Protection, sec. 12-112, Definitions.

28 County of Los Angeles*, General Plan 2035,* Fig. 9.2: Regional Habitat Linkages, available at http://planning.lacounty.gov/assets/upl/project/gp_2035_2014-FIG_9-2_Regional_Wildlife_Linkages.pdf.

29 USFWS, Congressional and Legislative Affairs, "Migratory Bird Treaty Act of 1918," accessed June 2020, https://www.fws.gov/laws/lawsdigest/migtrea.html.

the existing high traffic volume. However, there is a potential for migratory birds to nest in existing street trees that would be removed. Therefore, this topic area will be further evaluated in an EIR.

e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Less Than Significant Impact with Mitigation.

Significant impacts would occur if the proposed Project were to conflict with any adopted local policies or ordinances that protect biological resources.

As described above, the City has an adopted tree preservation ordinance.[30] The intent of this regulation is to protect and preserve significant trees and control the reshaping, removal or relocation of those trees that provide benefits for the neighborhood or the entire community.[31] Street trees located within and surrounding the footprint of the proposed Project have the potential to be impacted from construction or removed. Approximately 230 trees meet IMC requirements to be considered a protected tree that potentially would be impacted or removed' for any impacted trees.

The proposed Project would meet the ordinance requirements to reduce anticipated impacts to protected trees. During construction, preservation of protected trees would take priority over the relocation or removal of a protected tree. If the removal of a protected tree is required by the proposed Project, a replacement tree will be planted meeting the requirements of the City's Master Plan or the Parks, Recreation and Library Services Department. However, as there would be loss of street trees, impacts would be potentially significant and will be discussed in the EIR.

f. Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or State habitat conservation plan?

No Impact.

Significant impacts would occur if the proposed Project were to conflict with a Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or another approved plan designed to conserve habitat.

30 IMC, ch. 12, Planning and Zoning, art. 32, Tree Preservation, sec. 12-116, Permits Required.
31 IMC, ch. 12, Planning and Zoning, art. 32, Tree Preservation, sec. 12-110, Purpose and Intent

No adopted HCP, NCCP, or similar plan applies to the proposed Project's area.[32] Consequently, implementation of the proposed Project would not conflict with the provisions of any adopted conservation plan and therefore no impacts would occur.

2.5 Cultural Resources

Would the proposed Project:

a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?

Potentially Significant Impact.

A significant impact could occur if the proposed Project were to disturb historic resources that presently exist within the proposed Project location.

Section 15064.5 of the CEQA Guidelines generally defines a historic resource as a resource that is (1) listed in, or determined to be eligible for listing in the California Register of Historical Resources (California Register); (2) included in a local register of historical resources (pursuant to Section 5020.1(k) of the PRC [PRC]); or (3) identified as significant in an historical resources survey (meeting the criteria in Section 5024.1(g) of the PRC) in addition to maintaining a sufficient level of physical integrity. Further, any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record.

Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register. The California Register automatically includes all properties listed in the National Register of Historic Places (National Register) and those formally determined to be eligible for listing in the National Register.

The City does not currently have a historic preservation ordinance or program in effect; however, the City published a historic resources study in 2000[33] that identified potentially eligible historic properties in downtown Inglewood, an area bounded by La Brea Avenue to the west, Locust Street to the east, Florence

32 CDFW, "NCCP Plan Summaries," accessed July 2020, https://www.wildlife.ca.gov/conservation/planning/nccp/plans.

33 City of Inglewood, *Main Street Inglewood: Historic Resources Survey* (2000), accessed July 9, 2020, https://www.laconservancy.org/sites/default/files/community_documents/Main%20Street%20Inglewood%20Historic%20Resources%20Survey%2C%202000.pdf.

Avenue to the north, and Hillcrest Boulevard to the south. Because potentially eligible historic properties are located adjacent to the proposed alignment along North Market Street and East and West Manchester Boulevard, impacts are potentially significant and will be analyzed in detail in an EIR.

A number of designated historic resources and resources identified as historic through previous investigation are extant in locations adjacent to the proposed alignment of the proposed Project. Further preliminary study has identified properties eligible for historic designation within or in the immediate vicinity of the proposed Project.[34]

Six previously recorded built-environment cultural resources were identified within a half-mile radius of the proposed Project.[35] One of these resources, 19-189809, is a multistory commercial building that is located immediately adjacent to the proposed Project area and may be directly or indirectly impacted by the proposed Project. In addition, five buildings/structures, located immediately adjacent to the proposed Project area, are listed on the Directory of Historic Properties Data File.

Two properties located adjacent to the elevated guideway have been listed in the National Register of Historic Places. These are the Forum at 3900 W. Manchester Boulevard and the former Fox Theater at 115 N. Market Street in Downtown Inglewood. Seven additional properties were also previously identified.

All six of these properties are situated along the proposed alignment. No previously identified historic resources were discovered on any of the proposed MSF or TPSS sites. Additional potential historic resources may be identified as a result of the environmental review process for the proposed Project, either along the alignment or on the proposed MSF or TPSS sites. Conversely, some previously identified properties may have since been altered such that they are found to be no longer eligible for historic listing.

As currently described, the guideway, support structure, and stations for the proposed Project will be contained within the public rights-of-way, and construction of the various structures is not anticipated to require the demolition or alteration any existing buildings or structures immediately adjacent or in the immediate vicinity of the proposed Project. Because these elements will be contained within the public rights-of-way, it is not anticipated that their construction will result in any direct impacts to historic resources. Construction of the guideway, support structure, and stations does, however, have the potential for indirect impacts to identified historic resources located immediately adjacent to the proposed alignment. These structures could affect the setting in which the identified resources are located, which could in turn affect those attributes that contribute to the historic character of these resources.

---

34 *Historic Resources Impact Memo*, Paul Travis, AICP, and Kari Fowler, Historic Resources Group (HRG), January 17, 2019.
35 *Historic Resources Impact Memo*, Paul Travis, AICP, and Kari Fowler, Historic Resources Group (HRG), January 17, 2019

As mentioned above, the proposed Project includes an MSF and TPSS locations along the proposed alignment that are under consideration. Depending on the final location, construction of the MSF and TPSSs may require demolition of existing improvements at those locations. Historic resources do not appear to be present at these sites. Pending further analysis to determine if any historic resources are located on the proposed locations, construction of the MSF and TPSSs has the potential to result in direct or indirect impacts to previously unidentified historic resources.

The proposed Project has the potential to result in indirect impacts to previously identified historic resources. Pending further analysis to determine if historic resources not previously identified are present, the proposed Project also has limited potential to result in direct impacts to historic resources.

This topic will be further evaluated in an EIR.

b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Less Than Significant Impact with Mitigation.

A significant impact would occur if grading or excavation activities associated with the proposed Project were to disturb archaeological resources that presently exist within the proposed Project's location.

Archaeological resources include material evidence of past human life and culture of previous ages. Section 15064.5 of the CEQA Guidelines generally defines a historic or archeological resource as a resource that is (1) listed in, or determined to be eligible for listing in the California Register of Historical Resources (California Register); (2) included in a local register of historical resources (pursuant to Section 5020.1(k) of the PRC); or (3) identified as significant in an historical resources survey (meeting the criteria in Section 5024.1(g) of the PRC) in addition to maintaining a sufficient level of physical integrity.

A literature review and records search was conducted at the South Central Coastal Information Center housed at California State University, Fullerton.[36] The records search included the proposed Project's area (half-mile radius). The records search indicated that no prehistoric or historical archaeological resources have been recorded within the area or within a half-mile radius of the area. The records search indicated that at least 21 previous studies have been conducted within a half-mile of the proposed Project's area since 1984; none of these studies appears to include the proposed Project's area.

36 *Cultural Resource Investigation*, Roberta Thomas, M.A., RPA, and Gena Granger, M.A., RPA, PaleoWest Archaeology (PaleoWest), December 12, 2018.

The proposed Project will require excavation, grading, drilling, and other related construction activities that involve extensive ground disturbance that could expose undiscovered archaeological artifacts. However, as much of the area has experienced prior development, the potential for such discoveries is considered low. Further, deeper ground disturbing activities, such as drilling for columns, would involve technique that would not provide for successful recovery of any artifacts as they would be destroyed during drilling. Therefore, there is a potential for unearthing or destroying previously unknown archaeological resources. This topic will be further analyzed in the EIR.

c. Disturb any human remains, including those interred outside of formal cemeteries?

Less Than Significant Impact with Mitigation.

A significant adverse effect would occur if grading or excavation activities associated with the proposed Project were to disturb previously interred human remains.

Construction of the proposed Project would require extensive construction of foundations and columns, as well as other ground-disturbing activities. Thus, the potential to disturb human remains exists. Any potential impacts would be minimized as the proposed Project would comply with California Health and Safety Code Section 7050.5 and PRC Section 5097.98 in the event any human remains are discovered during project construction. California Health and Safety Code Section 7050.5 requires the construction to halt and no further excavation or disturbance of the site or any nearby area if human remain is discovered on the Project Site. A coroner of the county will be notified to examine the human remain. The coroner shall make his or her determination within two working days from the time the person responsible for the excavation, or his or her authorized representative, notifies the coroner of the discovery or recognition of the human remains. Until the coroner has examined the human remains construction activities may not continue.

PRC Section 5097.98 governs the discovery of Native American human remains which will be further discussed in **Section 2.18 Tribal Cultural Resources**.

Impacts would be potentially significant however, they would be mitigated with compliance of California Health and Safety Code Section 7050.5 and PRC Section 5097.98 This topic will be further discussed in the EIR.

2.6 Energy Resources

Would the proposed Project:

a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Potentially Significant Impact.

Construction

Project construction activities would consume energy in the form of petroleum-based fuels associated with the use of off-road construction vehicles and equipment on the proposed Project; construction worker travel to and from the proposed Project; and delivery and haul truck trips (e.g., hauling of demolition material to off-site reuse and disposal facilities). The amount of energy that would be consumed by these uses would not be considered excessive and would be similar to that consumed for other large construction projects. Electricity consumption that would be required during construction would be limited and temporary, and would cease upon the completion of construction.

Construction activities, including the expansion of existing buildings, typically do not involve the consumption of natural gas. Accordingly, natural gas would not be supplied to support proposed Project construction activities; thus, there would be no demand generated by construction. Construction of the proposed Project would not result in an increase in demand for natural gas that exceeds available supply or distribution infrastructure capabilities that could result in the construction of new natural gas facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.

The proposed Project would be required to coordinate infrastructure removals or relocations with local utility providers and comply with site-specific requirements set forth by the utility providers, which would ensure that service disruptions and potential impacts associated with construction, as well as development within utility easements, are minimized. In addition, prior to ground disturbance, construction contractors for the proposed Project would notify and coordinate with utility providers to identify the locations and depth of existing utility lines to avoid disruption of service to other properties.

Construction vehicles traveling to and from the proposed Project would result in on-road gasoline-related energy consumption. Construction of the proposed Project would require the export of debris from the proposed Project and staging areas. Construction worker travel to and from the proposed Project would result in the additional consumption of vehicular unleaded gasoline fuel during the construction period. Given that the construction period is expected to be limited to a short time frame and would be temporary, fuel consumption impacts would not be considered excessive or substantial with respect to regional fuel

supplies. The energy demands during construction would be typical for projects of this size and would not necessitate additional energy facilities or distribution infrastructure.

Compliance with State and regional air quality regulations and established construction standards that limit vehicle idling and promote the use of alternative fuels would minimize the unnecessary consumption of energy during construction. Construction energy consumption is short term and relatively minor compared to long-term regional energy use.

Because the amount and type of energy consumption required by construction-related activities are dependent upon Project design features that are not yet known, construction-related energy resource topics will be further evaluated in an EIR.

Operation

During operation of the proposed Project, energy would be consumed for multiple purposes, including but not limited to, heating, ventilating and air conditioning; lighting; and the use of electronics, equipment and machinery. Energy would also be consumed during Project operations related to water usage, solid waste disposal, and vehicle trips. The proposed Project's operating components would utilize electrical energy for the operation of the APM trains, as well as aspects of related Project support features, such as the stations, MSF, and TPSSs. Electricity is provided to the Project area by Southern California Edison (SCE). SCE provides roughly 90 billion kilowatts of electricity to more than 15 million people in Southern California.[37]

In addition, the proposed Project would include equipment to guide the movement of trains between stations; emergency walkways and lighting; communications systems; a command and control system; a public information system; and security systems to monitor activity at station platforms, along the guideway, and at the MSF. Traction power substations would be constructed to provide continuous power supply for system operation. Depending on load requirements, two to three traction power substations may be required. The traction power substations would be connected to existing power trunk lines and would be up to 3,000 square feet in size. Locations for the traction substations would be adjacent to other proposed components of the ITC system and existing electrical trunk lines.

With modern, energy-efficient construction materials and operating equipment, the proposed Project would comply with applicable Title 24 regulations and applicable City regulations and policies. The California Green Building Code imposes energy conservation measures for all new projects to further

37 Southern California Edison, "About Us: Who We Are," accessed July 2020, https://www.sce.com/wps/portal/home/about-us/who-we-are.

reduce energy demands with new buildings. Implementation of the California Green Building Code measures would meet or exceed the Title 24 energy efficiency regulations and further reduce demand for electricity.

During operation, Project-related traffic would result in the consumption of petroleum-based fuels related to vehicular travel to and from the proposed Project. Transportation fuels, primarily gasoline and diesel, would be provided by local or regional suppliers. The proposed Project is close to numerous bus routes and the Metro Crenshaw/LAX Line light rail stations.

According to CARB's EMFAC Web Database, the Los Angeles region on-road transportation sources consumed 4.19 billion gallons of gasoline and 0.62 billion gallons of diesel fuel in 2018.[38] The net increase of the proposed Project's operational gasoline consumption would be minimal in terms of Countywide gasoline and diesel consumption.

However, because the energy consumption associated with Project operations would be dependent on design features that are not yet known, this topic will be further evaluated in an EIR.

b. Conflict with or obstruct a State or local plan for renewable energy or energy efficiency?

Potentially Significant Impact.

As discussed above, the proposed Project area's electricity needs are provided by SCE. Natural gas service is provided by Southern California Gas Company. In addition, the City has prepared an Energy and Climate Change Plan (ECAP) that establishes goal for future energy use and reliance on sustainable energy sources. The proposed Project would comply with the requirements of the ECAP and the 2020-2045 RTP/SCS in implementing energy compliance. However, because specific Project design features are not yet fully defined in terms of their energy requirements, this topic will be further evaluated in an EIR.

38 California Air Resources Board, EMFAC2017 Web Database, www.arb.ca.gov/emfac/2017/

2.7 Geology and Soils

Would the proposed Project:

a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Potentially Significant Impact.

Significant impacts would occur if the proposed Project were to expose people or structures to risks associated with known earthquake faults.

Fault rupture is the surface displacement that occurs along the surface of a fault during an earthquake. The California Geological Survey (CGS) designates faults as active, potentially active, or inactive. The Alquist-Priolo Earthquake Fault Zoning Act establishes standards regulating development adjacent to active faults and areas designated as Earthquake Fault Zones. No active or potentially active faults delineated as Alquist-Priolo Earthquake Fault Zones are known to be present beneath the proposed Project.

As mentioned above, the proposed Project is not located within an Alquist-Priolo Earthquake Fault Zone.[39] Although no site-specific investigation has been performed, there have been investigations in the area, and none of them has identified a fault with the potential for surface rupture. The potential for surface rupture at the site due to faulting at the ground surface during the design life of the proposed Project is considered low. However, the potential exists for nearby faults to result in a seismic event that could result in adverse substantial impacts to people or structures constructed and operated by the proposed Project.

All components of the proposed Project would be designed and constructed in accordance with the requirements of the California Building Code regarding seismic standards as approved by the Inglewood Building Safety Division, and a geotechnical investigation will be undertaken to ensure that no Project components are astride previously unidentified faults.

39 CDC, CGS, "Earthquake Fault Zones," revised 2018, accessed June 26, 2020, https://www.conservation.ca.gov/cgs/Documents/SP_042.pdf.

To address potential significant impacts that may result from seismic shaking from both known and unknown faults that could affect the proposed Project, a geotechnical investigation will be performed to address geological conditions within the alignment the for the locations of the support facilities of the proposed Project. The geotechnical study will identify and confirm the presence of known active faults with the potential for surface rupture to ensure that Project components are designed to comply with seismic safety standards set forth in the California Building Code, as adopted by the City of Inglewood Building Safety Division.

The EIR will evaluate the potential for the project to directly or indirectly cause potential substantial adverse effects involving rupture of a known earthquake fault.

ii. Strong seismic ground shaking?

Potentially Significant Impact.

Significant impacts would occur if the proposed Project were to expose people or structures to strong seismic ground shaking.

The intensity of ground shaking depends primarily on an earthquake's magnitude, the distance from the source, and the site response characteristics. Although the proposed Project could be subjected to strong ground shaking in the event of an earthquake, this hazard is common throughout Southern California. The effects of ground shaking would be addressed by proper site-specific engineering design and construction in conformance with State and local building codes and engineering practices.

Prior to the issuance of building permits, a site-specific geotechnical study would be prepared by a licensed engineer that would specifically address seismic risk to the proposed Project. This study would ensure that the structural integrity of the elevated guideway, stations, support facilities and associated infrastructure would be maintained during a peak seismic event. Further, the design and construction of the proposed Project would conform to California Building Code seismic standards as reviewed and approved by the City of Inglewood Building Safety Division.

To address potential significant impacts that may result from strong seismic shaking that could affect the proposed Project, a geotechnical investigation will be performed to address geological conditions within the alignment the for the locations of the support facilities of the proposed Project. The geotechnical study will identify the extent of ground shaking that may occur so that Project components are designed to comply with seismic safety standards set forth in the California Building Code, as adopted by the City of Inglewood Building Safety Division.

As the proposed Project has the potential to expose people and structure to significant impacts associated with known or unknown faults, the EIR will further evaluate this topic and mitigation, if necessary, will be identified.

iii. Seismic-related ground failure, including liquefaction?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were to expose people or structure to the effects of liquefaction.

Liquefaction is a seismic phenomenon in which loose, saturated, granular soils behave similarly to a fluid when subjected to high-intensity ground shaking. Liquefaction occurs when three general conditions exist: shallow groundwater; low-density, fine, clean sandy soils; and strong ground motion. The effects of liquefaction can include sand boils, settlement, and bearing-capacity failures below structural foundations.

According to the CGS, the location of the proposed Project is not within an area susceptible to liquefaction.[40] Based on previous investigations and available geologic data, liquefaction zones are not mapped or known to exist beneath the proposed Project.

The following materials were consulted regarding potential liquefaction for the proposed Project:[41]

- Mapped liquefaction areas on the Inglewood Quadrangle,
- The City of Los Angeles Safety Element, and
- The County of Los Angeles Seismic Safety Element.

Based on are review of the above, it was determined that the proposed Project is not located within areas identified as having a potential for liquefaction according to these source materials. Furthermore, the regional geologic map and subsurface conditions reported in previous geotechnical investigations, and the absence of shallow groundwater, the Pleistocene age sediments underlying the proposed Project (generally dense silty sand and firm silty clay silts) are not considered prone to liquefaction. Therefore, the potential for liquefaction and its secondary effects are considered low and a Project Site-specific study in accordance with the Seismic Hazards Mapping Act[42] will not be required. The design and construction

40 CDC, CGS, *Earthquake Zones of Required Investigation,* interactive map, accessed July 2020, https://maps.conservation.ca.gov/cgs/EQZApp/app/.

41 *Inglewood Transit Connector, Technical Memorandum (DRAFT), Geology and Soils,* Geosyntec Consultants, June 25, 2018.

42 2018 California Code, Public Resources Code – PRC, Division 2 – Geology, Mines and Mining, Chapter 7.8, Seismic Hazards Mapping, Section 2690, Seismic Hazards Mapping Act.

of the proposed Project would conform to California Building Code requirements related to seismic standards, as approved by the City of Inglewood Building Safety Division.

Impacts related to seismic related liquefaction would be less than significant, and no further analysis is required.

iv. Landslides

No Impact.

Significant impacts would occur if the proposed Project were to expose people or structures to adverse impacts associated with landslides.

The proposed Project is located on level terrain. Based on the topographic setting and a review of previous geotechnical evaluations in the proposed Project's vicinity, no historical landslides are known to have occurred that could potentially impact the proposed Project.
According to the CGS,[43] the proposed Project is not located within an Earthquake-Induced Landslide Zone as shown on the Earthquake Zones of Required Investigation, Inglewood Quadrangle map. The probability of seismically induced landslides occurring within the area of the proposed Project is not significant due to the general lack of elevation difference in slope geometry across or adjacent to the site. In addition, development of the Project would not substantially alter the existing topography of the area.

As such, no impacts related to slope instability or landslides would occur, and no further analysis is required.

b. Result in substantial soil erosion or the loss of topsoil?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were to result in substantial soil erosion or the loss of topsoil.

The location of the proposed Project has been substantially developed with impermeable surfaces with only small areas of vegetative planters, and no areas of the site are susceptible to erosion under existing conditions. The area is highly urbanized and developed; the land is relatively flat and contains minimal rises or changes in elevation. No major slopes or bluffs are on or adjacent to the site. Although development of the proposed Project has the potential to result in the erosion of soils during construction

43 California Department of Conservation, California Geological Survey, DC, CGS, *Earthquake Zones of Required Investigation.*

activities, erosion would be reduced through implementation of SCAQMD Rule 403—Fugitive Dust to minimize wind- and waterborne erosion.

The proposed Project's construction would temporarily expose on-site soils to surface water runoff. Compliance with construction-related best management practices (BMPs), as detailed in a Storm Water Pollution Prevention Plan (SWPPP), would control and minimize erosion and siltation. Appropriate erosion-control BMPs may include but are not limited to silt fencing, fiber rolls, sand bag barriers, gravel bag berms, stabilized construction site entrances/exits, and any other practices laid out in the City's *Low-Impact Development (LID) Standards Manual*.[44] Following construction activities, treated runoff would be directed into existing storm drains that receive surface water runoff under existing conditions, and runoff would not encounter unprotected soils.

Because the proposed Project is greater than 1 acre in size, the proposed Project will implement a SWPPP in accordance with the National Pollutant Discharge Elimination System (NPDES) General Permit for Discharges of Storm Water Associated with Construction Activity and Land Disturbance Activities. The site-specific SWPPP would be prepared prior to earthwork activities and would be implemented during the proposed Project's construction. The SWPPP would include BMPs and erosion control measures to prevent pollution in stormwater discharge. Typical BMPs that could be used during construction include good housekeeping practices (e.g., street sweeping; proper waste disposal; vehicle and equipment maintenance; concrete washout area; materials storage; minimization of hazardous materials; proper handling and storage of hazardous materials; etc.) and erosion- and sediment-control measures (e.g., silt fences, fiber rolls, gravel bags, stormwater inlet protection, soil stabilization measures, etc.). The SWPPP would be subject to review and approval by the City.

The proposed Project's construction activities would comply with the City's grading permit regulations, which require the implementation of grading and dust control measures, including a wet-weather erosion control plan if construction occurs during the rainy season. Through compliance with these existing regulations, the proposed Project would not result in any significant impacts related to soil erosion during the construction phase.

During the proposed Project's operational phase, the proposed Project's surface areas would be developed with impervious surfaces, and all stormwater flows would be directed to storm drainage features and would not come into contact with bare soil surfaces. In addition, no native topsoil is present on the site because it has been previously disturbed and developed. Therefore, soil erosion impacts

44 IMC, ch. 10, Public Works, art. 16, LID Standards Manual, incorporated by reference.

associated with construction and operation of the proposed Project would not occur, and soil erosion impacts would be less than significant. No further evaluation is required.

c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were based on unstable soils that could result in landslides, lateral spreading, subsidence, liquefaction, or soil collapse.

Subsidence and ground collapse generally occur in areas with active groundwater withdrawal or petroleum production. The extraction of groundwater or petroleum from sedimentary source rocks can cause the permanent collapse of the pore space previously occupied by the removed fluid. The proposed Project does not involve the creation of new groundwater wells, nor are there active groundwater activities in the vicinity of the proposed Project.[45]

According to the California Division of Gas and Geothermal Resources (DOGGR), the area of the proposed Project is not located within the limits of any existing or former oil fields.[46] The area does not contain existing oil production wells, and no plugged or abandoned oil exploration wells are known to be located within the proposed Project area. The closest known oil production well is located approximately 1,00 feet east of Prairie Avenue and is categorized as "idle."[47] Therefore, while there is some history of oil extraction in the area, no oil extraction occurs or is known to have historically occurred within the area of the proposed Project.

Subsidence and ground collapse can also occur during dewatering activities. However, dewatering is not necessary for the proposed Project. US Geological Survey groundwater measurements indicate that nearby groundwater is at least 85 feet below grade. Given that the proposed Project does not include substantial excavation or subterranean structures, groundwater would not be encountered during construction. The proposed Project's design features and construction would comply with all applicable building codes and standards.

45 Los Angeles County Public Works. Groundwater Wells. https://dpw.lacounty.gov/general/wells/. September 1, 2020.
46 California Division of Gas and Geothermal Resources (DOGGR), Well Finder, https://maps.conservation.ca.gov/doggr/wellfinder/#openModal/-118.32073/33.94064/15. Accessed August 31, 2020.
47 California Division of Gas and Geothermal Resources (DOGGR), Well Finder, https://maps.conservation.ca.gov/doggr/wellfinder/#openModal/-118.32073/33.94064/15. Accessed August 31, 2020.

A site-specific geotechnical study would be performed by a licensed engineer that would outline structural design elements to ensure structural integrity is maintained and account for site specific soil conditions. In addition, the design and construction of the proposed Project would conform to California Building Code requirements related to site specific soil conditions, as approved by the City of Inglewood Building Safety Division.

With adherence to existing regulations, impacts related to geological failure—including lateral spreading, off-site landslides, liquefaction, or collapse—would be less than significant. No further evaluation is required.

d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Less than Significant Impact.

Significant impacts could occur if the proposed Project were located on expansive soil that could create substantial risks to life or property.

Expansive soils include clay minerals characterized by their ability to undergo significant volume change (shrink or swell) due to variation in moisture content. Sandy soils are generally not expansive, while clayey soils generally are expansive. Changes in soil moisture content can result from rainfall, irrigation, pipeline leakage, perched groundwater, drought, or other factors. Volumetric change of expansive soil may cause excessive cracking and heaving of structures with shallow foundations, concrete slabs-on-grade, or pavements supported on these materials.

Soil materials in the area tend to include: (1) artificial fill, consisting primarily of silty sand and sand with silt and gravel; (2) alluvial deposits consisting of sand, gravel, and cobles; and (3) alluvial deposits consisting of silty sand, sand, silty clay and sandy clay. Typically, sandy soils have a low expansion potential while clayey soils can have a high expansion potential. The predominance of granular content in the soils in the area including gravels, sands, and cobbles indicate a generally low potential for expansive soils.

A site-specific geotechnical study would be performed by a licensed engineer that would outline structural design elements to ensure structural integrity is maintained and account for site specific soil conditions. In addition, the design and construction of the proposed Project would conform to California Building Code requirements related to site specific soil conditions, as approved by the City of Inglewood Building Safety Division.

The proposed Project would incorporate standard construction practices to maintain the integrity of the Project's proposed structures. Additionally, the proposed Project's design features and construction would

comply with all applicable building codes and standards. With adherence to existing regulations, impacts related to expansive soils would be less than significant. No further study is required.

e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact.

The proposed Project would result in significant impacts if it were located on soils incapable of supporting septic tanks or other alternative systems in the event that the proposed Project were not connected to existing sewer systems.

The proposed Project is located in a highly urbanized area where wastewater infrastructure is currently in place. The proposed Project would connect to the City's existing sewer system and would not require the use of septic tanks or alternative wastewater disposal systems. Thus, the proposed Project would not result in any impacts related to soils that are incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems.

No impacts would occur, and no further evaluation of this topic area is required.

f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Potentially Significant Impact.

A significant impact would occur if grading or excavation activities associated with the proposed Project were to disturb paleontological resources or geologic features that presently exist within the proposed Project's location.

The area under consideration for the proposed Project has been previously graded and is not known to contain unique paleontological resource or site or any unique geologic feature. Construction of the proposed Project would require extensive excavation and the construction of foundations and columns, as well as other ground-disturbing activities which may disturb previously undisturbed soil. There is potential for the discovery of unique paleontological resources which were previously undiscovered as previously undisturbed soil may be impacted.

Due to the extensive ground disturbing activities and the potential for unearthing unique paleontological resources, this topic will be further evaluated in the EIR.

2.8 Greenhouse Gas Emissions

Would the proposed Project:

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Potentially Significant Impact.

A significant impact would occur if construction or operation of the proposed Project were to generate quantities of greenhouse gas (GHG) emissions that would interfere with State, regional, and local efforts to meet emissions reductions targets in accordance with State regulations. The term "GHG emissions" refers to a group of emissions that are believed to affect global climate conditions.

As a transportation-related project pertaining to travel to and from downtown Inglewood, the Forum, the LASED (including the NFL stadium), and the IBEC, the proposed Project could result in short-term emissions of GHGs during construction. These emissions would generally be associated with the operation of construction equipment that would be utilized to build the elevated guideway, its associated stations, and the MSF and TPSS facilities, as well as with the disposal of construction waste and demolition debris.

The potential exists for GHG emissions to occur as a result of ongoing operations at both the MSF and TPSSs upon the proposed Project's implementation. However, the fact that the proposed Project is an APM that would likely serve to reduce vehicle trips in the Project area could result in a net decrease in GHG emissions. Nonetheless, the proposed Project's construction and operational emissions will be quantified and evaluated in an EIR.

b. Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Potentially Significant Impact.

A significant impact would occur if GHG emissions generated by construction or operation of the proposed Project were to be of disproportionate magnitude relative to the growth induced by the proposed Project and consequently conflict with applicable State, regional, and local efforts to meet GHG emissions reduction targets.

Given that the proposed Project would have the potential to emit GHG emissions from both construction and ongoing operations at both the MSF and TPSSs, the proposed Project has the potential to conflict with applicable plans, policies, and regulations adopted for the purpose of reducing GHG emissions. These

plans, policies, and regulations and the proposed Project's consistency with them will be evaluated in an EIR.

2.9 Hazards and Hazardous Materials

Would the Project:

a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less than Significant Impact.

A significant impact could occur if a project were to create a significant hazard through the routine transfer, use, or disposal of hazardous materials.

Construction

During construction activities, excavation of soil impacted with petroleum hydrocarbons or dry-cleaning solvents or other contaminants may be encountered. In addition, common construction materials, such as fuels, paints, oils, transmission fluids, solvents, and other acidic and alkaline solutions, would be utilized. The potential encounter and usage of contaminants and hazardous materials would require special handling, transport, and disposal. Hazardous materials used during construction would typically be packaged in consumer quantities with handling instructions from the manufacturers. Manufacturer instructions will be followed during required usage of hazardous materials to minimize the risk of exposure to workers and the environment.

In addition, the construction of the MSF and TPSSs will necessitate the demolition of existing structures. Demolition activities have the potential to release hazardous materials, such as asbestos containing materials (ACM), lead-based paint (LBP), and other potentially hazardous building materials in some form such as polychlorinated biphenyl, mercury, or chlorofluorocarbons found in fluorescent lighting and electrical switches. Potential exposure to hazardous materials during demolition will be limited only to the duration of demolition activities. Prior to demolition, existing buildings are required to be inspected for the presence of hazardous materials, including asbestos containing materials , lead based paint , polychlorinated biphenyl (PCB) materials and mercury.

The identification, removal, and disposal of ACM is regulated under 8 CCR 1529 and 5208. The identification, removal, and disposal of LBP is regulated under 8 CCR 1532.1. A State-certified professional would be required to conduct all work related to the identification, removal, and disposal of both ACM and LBP. If either ACM or LBP are found, a site-specific hazard control plan must be prepared and

submitted to the appropriate agency detailing removal methods and specific instructions for protective clothing and equipment for abatement personnel. A State-certified LBP and an asbestos removal contractor would be retained to conduct the appropriate abatement measures and be retained for the removal of the hazardous material in compliance with all federal, state, and local laws and regulations. Once all abatement measures have been implemented and the hazardous material has been removed, a written documentation will be submitted to the City.

The identification, removal, and disposal of PCBs is regulated by the EPA under the Toxic Substances Control Act[48] and 22 CCR 66263.44. Electrical transformers and older fluorescent light ballasts, along with other suspect material will need to be tested and verified for PCB content prior to demolition. If PCBs are detected above action levels, a material must be disposed of at a licensed facility permitted to accept the materials. The identification, removal, and disposal of PCBs must follow all federal, state, and local laws and regulations. Upon completion of abatement measures, the contractor will submit written documentation to the City.

All hazardous material identification, removal, and disposal activities will be carried out in accordance with all federal, state, and local laws and regulations in combination with enforcement mechanisms by agencies including SCAQMD and Cal/OSHA. Compliance with applicable laws and regulations will minimize the potential for exposure of individuals and the environment to hazards during the construction, demolition, and disposal process.

The transport of hazardous material is regulated by US Department of Transportation, Caltrans and the California Highway Patrol. The enforcement agencies have established driver-training requirements, load labeling requirements, and container specifications designed to minimize the exposure of hazardous materials. Manchester Boulevard and Prairie Avenue are major roadways along the elevated guideway alignment that are designated truck routes.[49] These routes are permitted for use by any vehicle exceeding a maximum gross weight of 3 tons and includes the routine transport of hazardous materials by such trucks. While hazardous materials, with some exceptions, can be transported on all City roadways, Section 31303 of the California Vehicle Code and US Department of Transportation regulations require that hazardous materials be transported by routes with the least overall travel time, ensuring that freeways and major boulevards are primarily used for the transport of hazardous materials. Prior to the commencement of construction, haul routes will be reviewed and approved of by the City.

48 Title 40, Chapter 1, Subchapter R, Part 761

49 IMC, ch. 3, Motor Vehicles and Traffic, art. 3, Truck Route Regulations, sec. 3-85, Truck Routes Established (1985).

Additionally, the NPDES General Construction Permit described above in **Section 2.6: Geology and Soils,** would include the submittal of a SWPPP, identifying various BMPs and other measures, including proper material storage, prevention, and containment of accidental spills of hazardous materials and wastes, to ensure hazardous materials are contained. All materials will also be stored, handled, transported, and disposed of in accordance with all applicable local, State, and federal regulations. Therefore, the proposed Project would not create a significant impact related to routine transport, use, or disposal of hazardous materials during construction. Impacts would be less than significant.

Operation

The types and amounts of hazardous materials that would be used in connection with operation of the proposed Project, including along the elevated guideway alignment and at the stations, but particularly at the MSF, would be typical of those used in an industrial setting (e.g., cleaning solutions, solvents, pesticides for landscaping, painting supplies, and petroleum products used in normal vehicle fleet operations, coolants, absorbents, oil and fuel products, and machining wastes). All potentially hazardous materials would be used and stored in accordance with applicable federal, State, and local regulations, and the proposed Project would comply with planning and emergency response regulations pertaining to the presence of such materials. The potential for a significant hazardous impact to occur during operation of the proposed Project is considered low. Impacts would be less than significant, and no further evaluation is required.

b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Potentially Significant Impact.

A significant impact would occur if a project were to have a reasonably foreseeable chance to result in a substantial release of hazardous materials into the environment through accident or upset conditions.

Construction activities would involve the use of materials—including fuels, paints, oils, transmission fluids, solvents, and other acidic and alkaline solutions—that would require special handling, transport, and disposal. These materials would be transported to and from the Project area for use during construction activities. The improper handling and transport of hazardous materials could result in accidental release of hazardous materials, thereby exposing the public or the environment to hazardous materials. In addition, demolition may expose nearby environment public or the environment to hazardous debris and materials.

Contaminated sites have been known to exist within the area, some immediately adjacent to the proposed Project. This includes prior contamination at the City's Civic Center site: arsenic-contaminated soil that has recently been remediated. In addition, there are known locations of underground storage tanks at the existing 510 E. Manchester Boulevard that could have subsurface contamination associated with them, and thus, will be removed. As such, there may be the need for further investigation and remediation during demolition of this site prior to start of construction.

This topic will be further evaluated in the EIR.

c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Potentially Significant Impact.

A project would have a significant impact to hazards and hazardous materials if (a) the Project were to involve a risk of accidental explosion or release of hazardous substances (including but not limited to oil pesticides, chemicals, or radiation); or (b) the Project were to involve the creation of any health hazard or potential health hazard. The determination of significance shall be made on a case-by-case basis considering the following factors: (a) the regulatory framework for the health hazard; (b) the probable frequency and severity of consequences to people or property as a result of a potential accidental release or explosion of a hazardous substance; (c) the degree to which project design will reduce the frequency or severity of a potential accidental release or explosion of a hazardous substance; (d) the probable frequency and severity of consequences to people from exposure to the health hazard; and (e) the degree to which project design would reduce the frequency of exposure or severity of consequences to exposure to the health hazard.

The proposed Project is located within 0.25 miles of several existing schools: Kelso Elementary School (809 East Kelso Street), ICEF Inglewood Middle Charter Academy (304 E. Spruce Avenue), ICEF Inglewood Elementary Charter Academy (434 S. Grevillea Avenue), Dolores Huerta Elementary School (4125 W. 105th Street), Crozier Middle School (120 W. Regent Street), and Inglewood High School (231 W. Grevillea Avenue).

Construction

As discussed in **Threshold 2.8-a** above, construction of the proposed Project could involve the use of hazardous materials that are typically necessary for construction of mechanical infrastructure and industrial warehouses (e.g., paints, building materials, cleaners, fuel for construction equipment, etc.). Therefore, construction of the proposed Project would involve routine transport, use, and disposal of

these types of hazardous materials throughout the duration of construction activities. Construction activities are temporary in nature, and the transport, use, and disposal of construction-related hazardous materials would occur in conformance with all applicable local, State, and federal regulations governing such activities. However, transportation of hazardous materials will be within a quarter mile of the schools mentioned above and this topic will be further analyzed in the EIR.

Operation

Operation of the proposed Project would require a modest amount of hazardous materials typical of mechanical infrastructure and an industrial warehouse, including the necessary chemicals and devices associated with mechanical activities. Such products would only be considered hazardous if used inappropriately or if exposed to unfavorable conditions. All potentially hazardous materials transported and/or stored on site for daily upkeep would be contained, stored, and used in accordance with manufacturers' instructions, and handled in compliance with applicable standards and regulations. Compliance with manufacturers' instructions and all applicable standards and regulations will minimize the potential for hazardous material emissions during operation of the proposed Project. However, the elevated guideway and stations will be located in close proximity to school sites and this topic will be further analyzed in the EIR.

d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were located on a site that is included on a list of hazardous materials sites.

California Government Code Section 65962.5 requires various State agencies, including but not limited to the Department of Toxic Substances Control (DTSC) and the State Water Resources Control Board (SWRCB), to compile lists of hazardous waste disposal facilities, unauthorized releases from underground storage tanks, contaminated drinking water wells and solid waste facilities where there is known migration of hazardous waste and submit such information to the Secretary for Environmental Protection on at least an annual basis.[50] The State of California maintains the Hazardous Waste and Substances Site List, also

50 These lists include but are not limited to the EnviroStor (http://www.envirostor.dtsc.ca.gov/public/) and GeoTracker (http://geotracker.waterboards.ca.gov/) lists maintained by the Department of Toxic Substances Control and State Water Resources Control Board, respectively.

known as the Cortese List, as a planning document that assists Lead Agencies with CEQA compliance as it relates to hazardous materials and sites.

Section 65962.5(a)(1)requires that DTSC "shall compile and update as appropriate, but at least annually, and shall submit to the Secretary for Environmental Protection, a list of all the following: (1) [a]ll hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code (HSC)."The hazardous waste facilities, identified in HSC Section 25187.5, are those where DTSC has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC Section 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

No portions of the of the proposed Project are currently on the active Cortese list of sites compiled pursuant to Government Code Section 65962.5. Any site that was within the area of the proposed Project sites that were previously on the Cortese list has been sufficiently remediated to meet DTSC, SWRCB, and other agency requirements, and no longer pose a significant hazard to the public and the environment. Therefore, impacts would be less than significant, and no further evaluation is required.

e. For a project located within an airport land use plan or, where such plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard for people residing or working in the Project area?

Less Than Significant Impact.

A significant impact would occur if the proposed Project were located in an airport land use plan or within 2 miles of a public airport and would result in a safety hazard as a result of that location.

The proposed Project is not subject to the Los Angeles County Airport Land Use Plan, which was adopted in December 1991 and revised in December 2004. Los Angeles International Airport (LAX) is located more than 2 miles southwest of the proposed Project, and the Hawthorne Municipal Airport is located approximately 2.75 miles southeast of the proposed Project. The proposed Project is not located near a private airstrip.

Airport operation hazards include incompatible land uses or features such as power transmission lines, wildlife hazards, and tall structures that can interfere with aircraft operations. The proposed Project would not construct any buildings or structures to a height that would interfere with or obstruct any local airport operations. Therefore, impacts would be less than significant.

f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Potentially Significant Impact.

Significant impacts would occur if the proposed Project were to impair the implementation of an adopted emergency response or emergency evacuation plan.

The proposed Project is located largely within public rights-of-way. For this reason, construction activities associated with the proposed Project would likely cause the closure of travel lanes in streets along the elevated guideway. The City of Inglewood has planned evacuation routes that assume worst-case displacement and surface rupture from a seismic event in the region along the Newport-Inglewood Fault or Potrero Fault, as described in the Safety Element of the City's General Plan.[51]

The closure of lanes would be temporary and be confined only to the construction phase of the proposed Project. However, the construction duration of the proposed Project will be approximately five years which can pose a significant strain on existing emergency access routes and services provided. If the proposed Project is approved, a traffic management plan will be prepared with inputs from all applicable local agencies including fire services, police services and the City. A final traffic management plan will be submitted to the City for approval with incorporations of nearby detours and alternative routes for emergency services during each phase of construction to ensure that interference with area traffic and emergency access is minimized. The plan will require that emergency access be maintained throughout the proposed Project's construction. Due to the length of construction duration, the size of the project footprint, and the potential impact on existing emergency services, this topic will be further evaluated in the EIR.

g. Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

No Impact.

Significant impacts would occur if the proposed Project were to expose people or structures to significant risks associated with wildland fires.

The City is highly developed and entirely urbanized and is without an urban/wildland interface. The proposed Project is not within a Moderate, High, or Very High Fire Hazard Severity Zone as designated by

51 City of Inglewood, *General Plan* (adopted July 1995).

CAL FIRE. As such, the proposed Project would not increase or create the potential for wildland fires to occur near the proposed Project. No impacts would occur, and no further evaluation is required in an EIR.

2.10 Hydrology and Water Quality

Would the proposed Project:

a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?

Less than Significant Impact.

A significant impact would occur if Project discharges (either urban or stormwater runoff) to surface water or groundwater were to violate the conditions of any of the guiding federal, State, regional, or local requirements.

Construction

During construction, the proposed Project could disturb areas that require development outside of the transportation rights-of-way, including excavation, site preparation, and infrastructure improvements. Removing existing pavement, importing/exporting soil, grading, and stockpiling could potentially result in soils being exposed, loosened, and transported by stormwater to downstream receiving waters. Additional pollutants, including oil and grease, metals, and pH-altering materials, may also be introduced to the receiving water(s) during the construction phase. However, to reduce the potential for the above impacts during the construction phase, the proposed Project will comply with the SWRCB Construction General Permit (CGP). Under the CGP, the proposed Project will prepare an approved SWPPP and implement construction BMPs. The CGP will be enforced through the City's construction, grading, and excavation permitting process.

Therefore, impacts related to water quality standards and waste discharge requirements during the construction phase would be less than significant, and no further analysis is required.

Operation

The proposed Project's elevated guideway is located within existing transportation rights-of-way. The proposed Project component would be constructed on impervious surfaces. The proposed Project's structures would also be constructed in compliance with the applicable City's and County's Municipal Separate Storm Sewer System (MS4) Permits and LID Ordinance requirements to address any potential pollutant or pollutant loading impacts.

The proposed MSF site has nearly fully impervious surfaces with the exception of a few landscape areas. The MSF site would be constructed in full compliance with the City's and County's MS4 Permits and LID Ordinance requirements to address any potential pollutant or pollutant loading impacts.

The proposed Project in located over the West Coast Basin, which is a confined aquifer, and is located approximately 220 ft below the ground surface. Urban and stormwater runoff infiltrated on site is unlikely to reach this groundwater aquifer. As a result, even if infiltration BMPs are incorporated into the proposed Project as required LID measures, such BMPs would extend to such a depth as to enter the basin. Therefore, infiltrated runoff would be unlikely to cause adverse impact to the local groundwater quality. Any potential impacts would be reduced to acceptable levels with implementation of infiltration BMPs.

Therefore, impacts related to surface water and groundwater quality standards and waste discharge requirements during both the construction and operations phases would be less than significant, and no further analysis is required.

b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the basin?

Less than Significant Impact.

A significant impact would occur if the proposed Project were to substantially deplete groundwater or interfere with groundwater recharge.

Construction

The proposed Project's water supply needs during the construction phase will be provided by the City of Inglewood's municipal system (MS4). There would be no impact on groundwater supplies during the construction phase of the proposed Project. Because the underlying water basin is a confined aquifer, and the water table is located approximately 50 to 200 feet below ground surface, dewatering is not anticipated during the construction phase.

Therefore, impacts related to groundwater supply depletion during the construction phase would be less than significant, and no further analysis is required.

Operation

The proposed Project could result in increased demand of potable and nonpotable water from proposed Project operation and addition of commercial sites. The proposed Project's water supply during the operation phase will be provided by the City of Inglewood, which depends on a combination of extracted groundwater from City-owned wells and potable and nonpotable water purchased from WBMWD.

However, according to the City of Inglewood's 2015 Urban Water Management Plan Update (UWMP), the City cannot meet increased water demand through an increase in groundwater extraction due to limitations in water rights. Therefore, projected demands are anticipated to be met through a combination of conservation of local surface water, imported water, graywater, stormwater capture, ocean desalination, and/or other nongroundwater sources.

Impacts related to groundwater supply depletion during the operation phase would be less than significant, and no further analysis is required.

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i. Result in substantial erosion or siltation on or off site;

ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;

iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or

iv. Impede or redirect flood flows?

Less than Significant Impact.

A significant impact could occur if the proposed Project were to substantially alter the drainage pattern of an existing stream or river such that substantial erosion or siltation would result.

Construction

No existing surface streams or rivers pass within the proposed Project's extent. The nearest open channel is Centinela Creek, approximately 1.3 miles downstream of the proposed Project. In the existing condition, stormwater runoff is collected in curbs, gutters, and inlets, and conveyed through the storm drain network. No topographic changes are proposed as part of the proposed Project. If the construction phase of the proposed Project results in increased runoff or any modifications to existing drainage patterns, the existing stormwater facilities will be analyzed in the context of the proposed additional flow and upgraded if needed.

Activities during construction may expose and/or loosen soils, potentially resulting in erosion and topsoil loss. The average slopes of the proposed Project extents within the Ballona Creek and Dominguez Channel

Watersheds were 0.5 and 0.9 percent, respectively. Because the slopes in the proposed Project extents are relatively flat, the majority of soil disturbance is expected to be related to importing and exporting of soil, grading, and stockpiling. All potential impacts related to these activities are expected to be reduced to acceptable levels under the CGP-required SWPPP. The SWPPP will identify any potential sources of sedimentation during construction and detail required BMPs to reduce or eliminate erosion and/or any potential alterations to drainage patterns. BMPs may include silt fencing, fiber rolls, sand bag barriers, gravel bag berms, and/or stabilized construction site entrances/exits. A Qualified SWPPP Practitioner will ensure compliance with the SWPPP by conducting regular monitoring and inspections of construction activities.

Any storm drain upgrades required to address increases in peak flow or runoff volumes would be made as part of the proposed Project's drainage design. BMPs as required by the SWPPP and the MS4 Permit would preclude any additional sources of polluted runoff during both construction and operations.

Therefore, impacts related to the creation or contribution of runoff water exceeding the capacity of existing or planned stormwater drainage systems, or providing substantial additional sources of polluted runoff, during both the construction and operation phases would be less than significant, and no further evaluation is required.

No streams or rivers run within the proposed Project's location. The proposed Project does not propose any changes to existing drainage patterns. During construction, BMPs (required and monitored under the SWPPP) would be used to reduce the volume and velocity of stormwater runoff, thereby mitigating the potential for flooding due to construction. Any accumulated sediment observed during inspection of temporary BMPs or permanent stormwater network devices would be removed to prevent flooding. The proposed Project is located outside the 100-year Federal Emergency Management Agency (FEMA) flood hazard area.[52]

Impacts related to altering the existing drainage pattern of the proposed Project's alignment structure and support facilities that would result in erosion or siltation during the construction phase would be less than significant, and no further analysis is required.

Operation

No topographic changes or altered drainage patterns are currently proposed as part of the proposed Project, and any increases in runoff would be handled through compliance with MS4 Permit requirements.

52 County of Los Angeles, Department of Public Works, *Flood Zone Determination Website,* http://dpw.lacounty.gov/floodzone/.

Surface drainage will continue to be collected via the storm drain network to be ultimately conveyed to Ballona Creek and Dominguez Channel. Should the proposed Project result in increased runoff or peak flows, the existing stormwater facilities will be analyzed in the context of the proposed additional flow and upgraded if needed. In the proposed condition, stormwater runoff would not encounter unprotected soils within landscaped areas.

The proposed Project will not modify the existing drainage patterns and would address any increases in runoff through compliance with the MS4 Permits and upgrades to existing stormwater infrastructure, if needed.

Impacts related to altering the existing drainage pattern of the area of the proposed Project that would result in erosion or siltation during the operation phase would be less than significant, and no further analysis is required.

d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

No Impact.

A significant impact would occur if the proposed Project were located within an area susceptible to flooding because of the failure of a levee or dam. A significant impact could occur if the proposed Project were located in an area subject to inundation by seiche, tsunami, or mudflow. A seiche is an oscillation of a body of water in an enclosed or semi-enclosed basin, such as a reservoir, harbor, or lake. A tsunami is a sea wave produced by a significant undersea disturbance. Mudflows result from the down-slope movement of soil and/or rock under the influence of gravity.

Construction and Operation

The proposed Project is located within FEMA unshaded Zone X, which is defined as an area outside the 0.2 percent annual chance floodplain. Further, the proposed Project is outside of the floodplain of any nearby flood control channel (Centinela Creek and Dominguez Channel). Any increase in peak flow or runoff volumes in the proposed condition would be addressed through compliance with the MS4 Permit and drainage system upgrade as part of the proposed Project.

The proposed Project is not located in any established tsunami inundation area, liquefaction zone, or landslide zone. The proposed Project is at least 1.3 miles away from any open water feature and, therefore, would not be subjected to seiche events. As stated above, the proposed Project proposed is relatively flat within both the Ballona Creek and Dominguez Channel Watersheds, and it is not adjacent to any exposed or steep grades.

Therefore, the proposed Project would have no impact related to exposing people or structures to loss,

injury, or death involving flooding during either the construction or operational phases. No further evaluation of this topic area is required.

e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Less than Significant Impact.

Construction

Regular construction activities have the ability to result in the degradation of water quality, most noticeably from erosion and sedimentation. Loose sediment itself may degrade water quality and has the capacity to carry such pollutants as heavy metals, nutrients, pathogens oil and grease, and fuels. Additionally, construction may expose the proposed Project's location and stormwater to trash, solvents, paint, etc. The CGP requires the implementation of BMPs to eliminate or reduce the discharge of pollutants in stormwater discharges and prohibits the discharge of nonstormwater from construction sites because these nonstormwater discharges are likely to carry pollutants to receiving waters. The BMPs detailed in the SWPPP will minimize potential for impacts from erosion and sedimentation during construction. The SWPPP will also detail use of BMPs to minimize the potential for spills of toxic or hazardous chemicals or substances into surface or ground waters.

Impacts related to otherwise substantially degrading water quality during the construction phase would be less than significant, and no further analysis is required.

Operation

The Project will address proposed changes in land use, which often results in changes in pollutant contributions, through an analysis of the anticipated pollutant concentrations and loads under both the existing and proposed condition. Any projected increase in pollutant concentrations or loads will be addressed through compliance with the MS4 Permit, as well as site-specific BMPs to address any increases in pollutant concentrations or loads.

Impacts related to substantially degrading water quality during the operation phase would be less than significant, and no further evaluation is required.

2.11 Land Use and Planning

Would the proposed Project:

a. Physically divide an established community?

Potentially Significant Impact.

The proposed Project would have a significant impact if it served to physically divide an established community.

The proposed Project is located entirely within a highly developed urban area characterized by commercial and residential uses. The Market Street portion of the alignment is typical of a small city's downtown. Market Street is characterized by storefronts, on-street parking, wide sidewalks, and street trees. North Market Street also includes multifamily land uses. Along Manchester Boulevard, between Market Street and Prairie Avenue, are various commercial uses with storefronts, a large supermarket, with limited residential areas on the eastern end of this road segment. Prairie Avenue between Manchester and Hardy Street is dominated on the east side by the constituent components of LASED, the Forum, and the under-construction NFL stadium. The west side is primarily multifamily residential and commercial.

Because the proposed Project is an elevated, linear guideway that will run along existing City streets, it has the potential to physically divide existing communities. Therefore, impacts are potentially significant and will be further evaluated in an EIR.

b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Potentially Significant Impact.

Potentially significant impacts would occur if the proposed Project were to conflict with applicable land use plans, policies, or regulations of any agency with jurisdiction over the proposed Project, where those plans, policies or regulations are adopted for the purpose of avoiding or mitigating an environmental effect.

The City of Inglewood, along with the rest of the Greater Los Angeles Area, is covered by SCAG's 2016 RTP/SCS and upcoming 2020—2045 RTP/SCS. This document provides a framework for member agencies to fund and implement regional transportation infrastructure improvements that benefit the region as a whole, including transit projects such as the one described herein.

The northern portion of the proposed Project is within the City's 2016 Transit Oriented Development (TOD) Plan area of The New Downtown Inglewood, which supports the community's vision by creating a pedestrian-friendly, mixed-used Historic Downtown.[53] The purpose of the TOD Plan and Design Guidelines is to explain and implement the City's vision for transforming the quality of the environment within Downtown. It includes zoning districts and the purpose of each, as well as the use restrictions in each zoning district and other legal issues.

Along Market Street, from Florence Boulevard to Regent Street, both sides of the street are zoned for TOD Mixed-Use 1 (MU-1). The MU-1 zone provides larger-scale transit-oriented development at a higher density. Along Market Street, from Regent Street to Manchester Boulevard, both sides of the street are zoned for Historic Core (HC). The HC zone provides for a mix of uses, including ground-floor retail and restaurants, services, offices, and residential uses in the Historic Downtown in a pattern and size consistent with the existing historic urban fabric. Along Manchester Boulevard, from Market Street to Hillcrest Boulevard, both sides of the street are zoned HC. Along Manchester Boulevard, from Hillcrest Boulevard to Spruce Avenue, the south side of the street is zoned for HC and the north side is zoned for General Commercial.

The entirety of the proposed Project's location is within the City's Zoning Code and Zoning Map.[54] Along Manchester Boulevard, from Spruce Avenue to South Prairie Avenue, both sides of the street are zoned for General Commercial (C-2). Along South Prairie Avenue, from Manchester Boulevard to Hardy Street, the west side of the street is zoned for C-2. Also, on South Prairie Avenue, from Manchester Boulevard to Pincay Drive, the east side of the street is zoned for Commercial Recreation. Along South Prairie Avenue, from Pincay Drive to Hardy Street, the east side of the street is zoned for the Hollywood Park Specific Plan (HPSP). The HPSP was developed to ensure there was a complete, comprehensive code to regulate the unique development of the area, as permitted by Sections 65450-65457 of the California Government Code.[55]

Because the Project proposes land uses that differ from those currently designated and zoned for existing parcels, impacts would be potentially significant. This topic area will be further analyzed in an EIR.

55 City of Inglewood, *Hollywood Park Specific Plan*, accessed July 2020, https://www.cityofinglewood.org/DocumentCenter/View/1347/Hollywood-Park-Specific-Plan.

2.12 Mineral Resources

Would the Project:

a. Result in the loss of availability of a known mineral resource that would be of future value to the region and the residents of the State?

No Impact.

Significant impacts would occur if the proposed Project's implementation would result in the loss of availability of a known mineral resource.

The proposed Project is located within a Mineral Resources Zone 3 (MRZ-3), which is an area where significant mineral deposits cannot be evaluated based on current and available data.[56] The State of California has not classified or designated mineral resource zones within the area, and the Bureau of Land Management mineral potential maps also indicate no prospective valuable deposits.[57]

In addition, the proposed Project is located entirely within a highly developed urban area characterized by commercial, industrial, and residential land uses. No records exist with respect to the presence of valuable mineral resources within the proposed Project's area or the immediate surrounding area, and no mining is currently taking place in the City.[58]

No impacts would occur, and no further evaluation of this topic area is required.

b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

No Impact.

Significant impacts would occur if the proposed Project were to result in the loss of availability of a locally important mineral resource recovery site.

The proposed Project is located within MRZ-3 and, as such, information is not available to determine whether valuable mineral resources are deposited on site.

---

56 CDC, Division of Mines and Geology, *Update of Mineral Land Classification of Portland Cement Concrete Aggregate in Ventura, Los Angeles, and Orange Counties, California: Part II—Los Angeles County* (1994), Plate 1B, available at ftp://ftp.consrv.ca.gov/pub/dmg/pubs/ofr/OFR_94-14/OFR_94-14_Text.pdf.

57 CDC, CGS, *Mineral Lands Classification,* data portal, accessed July 2020, https://maps.conservation.ca.gov/cgs/informationwarehouse/index.html?map=mlc.

58 CDC, Division of Mines and Geology, *Update of Mineral Land Classification of Portland Cement Concrete Aggregate,* Plate 1B.

As mentioned above, the proposed Project is located entirely within a highly developed urban area characterized by commercial and residential uses and no mining operations are currently being conducted in the City. There are no records of valuable mineral resources within the proposed Project's footprint or the immediate surrounding area.[59]

No impacts would occur, and no further evaluation of this topic area is required.

2.13 Noise and Vibration

Would the proposed Project:

a. Generation of a substantial temporary or permanent increase in ambient noise levels the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to result in exposure of persons to or generation of noise levels in excess of standards established in the general plan, noise ordinance, of applicable standards of other agencies.

Section 5, Article 2 (Noise Regulations) of the IMC governs noise measurement and acceptable levels in the City.[60] For construction of the type that would be associated with the proposed Project, construction activities would not be permitted between 8 PM and 7 AM.

Construction of the proposed Project would require the use of heavy equipment for demolition and site clearing; grading, excavation, and foundation preparation; the installation of utilities; paving; and building. During each construction phase, a range of equipment would be operated on site. Noise levels would vary based on the amount and type of equipment being used, and the location of each activity. While only temporary, noise associated with the proposed Project's construction activities may have potential impacts on nearby residences, churches, and an elementary school immediately to the proposed Project.

Operation of the proposed Project would have the potential to increase noise levels near the proposed Project due to noise emitted by the APM trains as well as on-site operational activities at the MSF and TPSS sites. However, overall noise levels in the City could decrease as a result of a decrease in vehicle trips owing to the presence of the proposed Project.

59 LA County DRP, *General Plan 2035,* "General Plan Update Program—Interactive Map (GP-NET)."
60 City of Inglewood, Municipal Code, Section 5, Article 2 (Noise Regulations).

Impacts are potentially significant. Further analyses of the proposed Project's construction and operational noise sources will be addressed in an EIR.

b. Generation of excessive ground-borne vibration or ground-borne noise levels?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to result in exposure of people to or generation of excessive ground-borne vibration.

Ground-borne vibration and ground-borne noise could occur during construction of the proposed Project, especially during paving, demolition, earth movement activities, pile driving, and other activities associated with the construction of an elevated guideway. Demolition, grading, pile driving, paving, and other activities typical of construction activities would occur upon proposed Project implementation. As discussed above, the proposed Project's construction would be expected to generate an increase in ambient noise levels in the proposed Project's vicinity on a temporary basis. Operation of the proposed Project could involve vibration, especially near the MSF and TPSS facilities. Therefore, analysis of potential impacts of ground-borne noise and vibration impacts will be further addressed in an EIR.

c. For a project within an airport land use plan or, where such a plan has not been adopted within 2 miles of a public airport or public use airport, would the Project expose people residing or working the Project area to excessive noise levels?

Less than Significant Impact.

A significant impact would occur if the proposed Project were to expose people residing or working in the proposed Project area to excessive noise levels from a public airport or public use airport.

The Federal Aviation Administration (FAA) requires airports to prepare noise contour maps to assess the effects of aircraft noise to surrounding land uses. These maps can be used as an indicator of potential impacts. The closest airports to the proposed Project are the Hawthorne Municipal Airport (HHR), approximately 1.5 miles to the south, and Los Angeles International Airport (LAX), approximately 2 miles to the west of the proposed Project. Noise contours for the Hawthorne Municipal Airport remain confined within the runway of the airports and not within the proposed Project immediate area.[61]

61 LA County DRP, Hawthorne Airport: Airport Influence Area (May 13, 2003), http://planning.lacounty.gov/assets/upl/project/aluc_airport-hawthorne.pdf.

The proposed Project is partially located within the Planning Boundary/Airport Influence Area for the LAX Airport, as designated within the Los Angeles County ALUP.[62] The proposed Project falls within the Airport Influence Area and Airport Compatibility Zone for LAX for the southern LAX runway. Portions of the proposed Project are within the 65 dBA CNEL noise contour. This includes a portion of the proposed Project located within street rights-of-way on E. Manchester Boulevard and Prairie Avenue. The proposed Project is not considered a noise sensitive use in and of itself; therefore, noise associated with LAX would not create any impacts. Further, according to the Los Angeles World Airports' Noise Contour Map for the first quarter of 2018, the proposed Project is not located within noise contours associated with LAX as determined by studies by Los Angeles World Airports.[63]

Therefore, the proposed Project would not expose people to excessive noise levels associated with airport uses. As such, impacts would be less than significant, and no further study is required.

2.14 Population, Employment and Housing

Would the Project:

a. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Potentially Significant Impact.

A significant impact would occur if any aspect of the proposed Project were to lead to population growth in the Project area, either directly or indirectly.

The proposed Project will include the development and construction of a 1.6 mile long elevated guideway, connecting the future Metro Crenshaw/LAX Line with the Forum, the LASED (including the NFL stadium), and the proposed IBEC. The proposed Project would create additional employment opportunities for the local community and may lead to an increase in long-term population. The proposed Project would also provide additional connections to new entertainment centers listed above and the rest of the Greater Los Angeles Area. Because of this, the proposed Project may contribute to population growth either directly or indirectly.

This topic will be further evaluated in an EIR.

62 Los Angeles County Airport Land Use Commission, Los Angeles County Airport Land Use Plan, adopted December 1991, http://planning.lacounty.gov/view/alup/

63 Los Angeles World Airports, "Quarterly Noise Reports and Contour Maps," https://www.lawa.org/en/lawa-environment/noise-management/lawa-noise-management-lax/quarterly-noise-reports-and-contour-maps.

b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact.

A significant impact would occur if the proposed Project were to displace substantial numbers of existing housing.

The proposed Project would be constructed entirely within the existing public rights-of-way along City streets except for the MSF and the TPSSs. These features would be built on sites that are either currently vacant or being used for commercial or industrial purposes. As such, no housing would be displaced because of the proposed Project's implementation, and no impacts would occur. As noted above, portions of the proposed Project would be constructed and operated in areas that are proximate to residential uses. The proposed Project's elevated guideway and stations would be constructed almost entirely within existing public rights-of-way along existing City streets. The potential sites for the MSF and TPSS facilities are either vacant or are currently occupied by nonresidential uses. The EIR will address whether the proposed Project may have an indirect effect on these uses as a result of noise or vibration.

2.15 Public Services

Would the proposed Project:

a. Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:

i. Fire protection?

Less than Significant Impact.

The proposed Project would have a significant impact on fire protection if it were to require the addition of a new fire station or the expansion, consolidation, or relocation of an existing facility to maintain service. Services include fire suppression; hazardous materials protection; emergency medical treatment, including basic and advanced life support transportation; earthquake and fire safety planning; fire inspections; and building plan reviews.

The City is served by Battalion 20 within Division 6 of LACFD. Battalion 20 operates six stations in total; four of these serve the City (Fire Stations 170, 171, 172, and 173). Fire Station 171 is located approximately 0.25 miles west of the proposed Project at 141 W. Regent Street; Station 172 is approximately 0.7 miles

north at 810 Centinela Avenue; Station 173 is approximately 1 mile east at 9001 S. Crenshaw Boulevard; and Station 170 is approximately 1.1 miles southeast at 10701 S. Crenshaw Boulevard. The stations are staffed in three rotating shifts (A, B, and C). A three-platoon schedule is based on 24-hour shifts that start at 8 AM. Standard company staffing is generally a minimum of 25 personnel per shift. An assistant deputy chief oversees each of the three divisions.

Although the proposed Project would help accommodate large numbers of persons attending events at adjacent sports and entertainment venues, these people would likely be in the proposed Project's vicinity due to events at LASED or proposed IBEC. The reduction in vehicle traffic that would directly result from the proposed Project's implementation could potentially reduce the amount of fire services required in the area. Therefore, implementation of the proposed Project would not represent an increase in the need for these services.

Impacts would be less than significant, and no further analysis is required.

ii. Police protection?

Less than Significant Impact.

The proposed Project would have a significant impact on police protection services if it were to require expanded police services in the area as a result of the proposed Project's implementation.

Law enforcement services in the City are provided by the Inglewood Police Department (IPD). IPD operates one police station that houses most of the department's offices, located adjacent to Inglewood City Hall at One Manchester Boulevard. The Office of the Chief of Police, the Patrol Bureau, the Detective Bureau, the Records Division, the Custody Division, and the pistol range are all located at the police station. The Communications Division is located in the basement of the station, known as the Emergency Operations Center. The offices for the Traffic Division, the Training Section, and the Personnel Section are located on the second floor of the City Hall Building. IPD has 186 sworn officers and approximately 92 civilian personnel. The department comprises three major offices: Administrative Services, Criminal Investigative Services, and Patrol Services.

Although the proposed Project would help accommodate large numbers of persons attending events at adjacent sports and entertainment venues associated with LASED and proposed IBEC, these people would likely be in the proposed Project's vicinity regardless of the proposed Project's implementation. The proposed Project would provide an alternative mode of transit for persons attending such events but would not result in greater attendance than would otherwise be expected to occur. Because the proposed Project would divert some attendees who would otherwise travel by private vehicle, the proposed Project

will reduce vehicle traffic. The reduction in surface vehicle traffic could potentially reduce the amount of police services required in the area. Therefore, the implementation of the proposed Project would not increase the need for police services.

Impacts would be less than significant, and no further study is required.

iii. Schools?

No Impact.

Significant impacts would occur if the Project were to necessitate the construction or expansion of schools in the proposed Project's area.

The proposed Project would not result in an increase in the number of residents; thus, there would be no increase in demand for school facilities. Because the proposed Project will primarily serve to accommodate persons attending one-day events at adjacent sports and entertainment venues, the construction or expansion of schools would not be required because of the proposed Project's implementation.

No impacts would occur, and no further evaluation is required.

iv. Parks?

No Impact.

Significant impacts would occur if the proposed Project were to result in a need for new or expanded parks facilities.

The proposed Project would not result in an increase in the number of residents; thus, there would be no increase in demand for parks and recreational facilities. Because the proposed Project will primarily serve to accommodate persons attending one-day events at adjacent sports and entertainment venues, the construction or expansion of parks or recreational facilities would not be required because of the proposed Project's implementation.

No impacts would occur, and no further evaluation is required.

v. Other public services?

No Impact.

Significant impacts would occur if the proposed Project were to result in an increased need in public services other than those described above.

The proposed Project would not result in an increase in the number of residents; thus, there would be no increase in demand for other public services such as libraries. Because the Project will primarily serve to accommodate persons attending one-day events at adjacent sports and entertainment venues, the construction or expansion of library facilities would not be required because of the proposed Project's implementation.

No impacts would occur, and no further evaluation is required.

2.16 Recreation

Would the proposed Project:

a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

No Impact.

Significant impacts would occur if the proposed Project were to result in an increased use of existing recreational facilities such that these facilities would need to be expanded or new ones constructed.

The proposed Project would primarily serve special events at the existing, under-construction, and proposed sports and entertainment venues associated with LASED. As such, most of ridership would use the proposed Project for events at those facilities and would not visit existing neighborhood or regional parks. In addition, weekday commuter ridership on nonevent days would not increase the use of neighborhood and regional parks.

No impacts would occur, and no further evaluation of this topic area is required.

b. Include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

No Impact.

Significant impacts would occur if the proposed Project were to include recreational facilities or required the expansion or construction of existing residential facilities.

The proposed Project does not include recreational facilities. Because it will primarily serve to accommodate persons attending one-day events at adjacent sports and entertainment venues, the construction or expansion of recreational facilities would not be required because of the proposed Project's implementation.

No impacts would occur, and no further evaluation of this topic area is required.

2.17 Transportation and Circulation

Would the proposed Project:

a. Conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to result in conflicts with an adopted plan, ordinance, or policy that establishes measures of effectiveness for the performance of the circulation system.

The proposed Project would not result in a significant net increase in development that could result in an increase in daily and peak-hour traffic within and near the proposed Project. Along the elevated guideway, South Prairie Avenue and East Manchester Boulevard are designated as north–south and east–west Major Arterial routes, respectively, and Market Street (North and South) is designated as a north–south Minor Arterial.[64] In addition, construction of the proposed Project has the potential to affect the transportation system through the hauling of excavated materials and debris; the transport of construction equipment; the delivery of construction materials; and travel by construction workers to and from the proposed Project.

As part of the regional transit network, the proposed Project would divert passengers that might otherwise travel by car. The proposed Project would reduce vehicle trips in the area because it would be utilized not only for events at LASED, but also for regular workdays, its impacts with regard to existing transportation plans will be further evaluated in an EIR.

b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Less Than Significant Impact.

A significant impact could occur if the proposed Project were to inconsistent CEQA Guidelines section 15064.3, subdivision (b).

CEQA Guidelines 15064.4 describe specific considerations for evaluating a project's transportation impacts. Generally, vehicle miles traveled is the most appropriate measure of transportation impacts. For

64 City of Inglewood, *General Plan*, "Circulation Element" (1992), 17.

the purposes of this section, "vehicle miles traveled" refers to the amount and distance of automobile travel attributable to a project. Other relevant considerations may include the effects of the Project on transit and nonmotorized travel. Except as provided in subdivision (b)(2) below (regarding roadway capacity), a project's effect on automobile delay shall not constitute a significant environmental impact.

For transportation projects, the Guidelines state that such projects that reduce, or have no impact on, vehicle miles traveled should be presumed to cause a less than significant transportation impact. For roadway capacity projects, agencies have discretion to determine the appropriate measure of transportation impact consistent with CEQA and other applicable requirements. To the extent that such impacts have already been adequately addressed at a programmatic level, such as in a regional transportation plan EIR, a lead agency may tier from that analysis as provided in Section 15152.

Implementation of the proposed Project would serve to reduce vehicle trips in the area because the proposed system would be an alternative to private vehicles both for workday commuters as well as those attending events at LASED.

Although the proposed Project will have a less than significant impact, this topic will be discussed in the EIR to illustrate the reductions in VMT and compliance with CEQA Guidelines section 15064.3, subdivision (b).

c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to substantially increase hazards due to certain design features or incompatible uses.

The roadways adjacent to the proposed Project are part of the urban roadway network and contain no sharp curves or dangerous intersections. In addition, the proposed Project would serve to decrease vehicle trips in the area because it represents an alternative transportation option both for workday trips and special events at LASED and the proposed IBEC.

Given that the proposed Project will be implemented within the rights-of-way of existing City streets, its use as a mode of transportation is compatible with current uses in the proposed Project area. However, supporting infrastructure associated with the proposed Project, such as columns supporting the elevated guideway and stations, have the potential to interfere with line of sight on existing roads. Therefore, impacts are potentially significant and will be further evaluated in an EIR.

d. Result in inadequate emergency access?

Potentially Significant Impact.

Significant impacts could occur if the proposed Project's implementation were to result in inadequate emergency access in the proposed Project area.

Due to the proposed Project being a linear feature located largely within public rights-of-way, construction activities associated with the proposed Project would likely cause the closure of travel lanes in streets along the guideway alignment. Construction within these roadways has the potential to impede access to adjoining uses, as well as reduce the rate of traffic flow of the affected roadway. The proposed Project would also generate construction traffic, particularly by haul trucks, that may affect the capacity of adjacent streets and highways. These changes could impact emergency access. Therefore, impacts related to emergency access are potentially significant, and this topic will be further evaluated in an EIR.

2.18 Tribal Cultural Resources

Would the proposed Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC section 21074 as either a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in PRC Section 5020.1(k)?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to disturb historic resources that presently exist within the area of the proposed Project.

As discussed above under **Section 2.5: Cultural Resources,** Section 15064.5 of the CEQA Guidelines generally defines a historic resource as a resource that is (1) listed in, or determined to be eligible for listing in the California Register of Historical Resources (California Register); (2) included in a local register of historical resources (pursuant to Section 5020.1(k) of the PRC); or (3) identified as significant in an historical resources survey (meeting the criteria in Section 5024.1(g) of the PRC) in addition to maintaining a sufficient level of physical integrity.

The construction associated with the proposed Project has the potential to affect previously undiscovered historic resources. In accordance with AB 52, the City sent notification letters on July 31, 2018, notifying

the four following tribes: Gabrielino-Tongva Tribe, Gabrielino Tongva Indians of California Tribal Council, Gabrielino/Tongva Nation, and the Gabrieleno/Tongva San Gabriel Band of Mission Indians. Additionally, the Gabrieleno Band of Mission Indians–Kizh Nation was identified as a relevant party. The Gabrieleno Band of Mission Indians- Kizh Nation (Tribe) was the only Tribe that requested consultation for the proposed Project. Members of the Tribe provided an overview of the Tribe experience with other projects in the Los Angeles basin including work where artifacts had been unearthed as part of ground disturbing activities. The Tribe also noted that many of these discoveries were the result of many of the transit routes following historic roads and routes in the LA Basin.

As a result of the consultation with the Tribe, it is determined the proposed Project may have a potentially significant impact on tribal sites and places. The topic will be further studied in the EIR.

b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1? In applying the criteria set forth in subdivision (d) of PRC Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Potentially Significant Impact.

PaleoWest Archaeology contacted the NAHC for a review of the Sacred Lands File on June 15, 2018, to determine if the NAHC had any knowledge of Native American cultural resources (e.g., traditional use or gathering area, place of religious or sacred activity, etc.) within the immediate vicinity of the proposed Project area. The NAHC indicated that the SLF did not yield any results on potential tribes that may be affected. However, the NAHC did state that the absence of specific site information in the SLF does not indicate the absence of Native American cultural resources. As such, the NAHC recommended that five Native American individuals and/or tribal groups be contacted to elicit information regarding cultural resource issues related to the proposed Project.

As mentioned previously, tribal outreach and consultation were completed on July 31, 2018, when the City sent out notification letters notifying the four tribes and one relevant party. The Gabrieleno Band of Mission Indians- Kizh Nation (Tribe) was the only Tribe that requested consultation for the proposed Project. As a result of the consultation, it was determined the proposed Project may unearth tribal artifacts and resources. The topic would be further assessed in the EIR and mitigation measures will be incorporated, as necessary.

2.19 Utilities and Service Systems

Would the proposed Project:

a. Require or result in the relocation or construction of new or expanded water, or wastewater treatment or stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Potentially Significant Impact.

The proposed Project will require utility systems improvements, upgrades and possible relocations to accommodate and serve the various Project components. The design and construction of the Proposed Project's elevated guideway structures, stations and support facilities will avoid existing utility and other infrastructure to the degree possible. In addition to surface improvements, some utility infrastructure that cannot be avoided may need to be relocated to accommodate the guideway columns and foundations.

Potential utility constraints include an existing 36-inch (West Basin Water District) recycled water line identified at the Market/Manchester Alignment street centerline and several utilities within 15 feet of the alignment along Prairie Avenue. In addition, a 60-inch City of Los Angeles Department of Water and Power (LADWP) main pipe and 33-inch storm drain are located on the east side of Prairie Avenue, approximately 20 to 40 feet from centerline.

Underground electrical lines, including vaults, are present along or adjacent to sidewalks. Nongravity flow utilities, including water service lines, may be lowered in lieu of horizontal relocation. Utility crossings including electrical and storm drain lines are found at street intersections.

Existing utilities along the northern portion of the alignment pose minimal obstacles for placement of guideway columns. Utilities tie-ins and crossings are present along Manchester Boulevard at Hillcrest Boulevard, Spruce Avenue, Manchester Drive, and Manchester Terrace; in these areas, guideway columns on this alignment will be sited and engineered to avoid relocation of gravity flow utilities including sewer and storm drains. The Proposed Project along the Market/Manchester alignment will be designed so that utilities are avoided wherever possible, including significant utilities beneath Prairie Avenue. Although some minor utility relocation may be necessary, there appears to be sufficient room for such relocation, such that the presence of existing utilities does not appear pose a major impediment.

Impact on existing utilities will be addressed in the EIR.

b. Have sufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years?

Less than Significant Impact.

A significant impact could occur if a project were to increase water consumption to such a degree that new water sources would need to be identified.

Water supply to the City of Inglewood is provided through WBMWD and the West Coast Groundwater Basin via City wells.[65] The City's UWMP concludes that Inglewood has sufficient existing water supplies so that a nonwater-intensive project, such as the one proposed, would not result in a strain on existing water supplies. Because water supplies in the proposed Project area are more than sufficient, impacts would be less than significant, and no further study is required.

c. Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments?

Less than Significant Impact.

A significant impact would occur if a project were to increase water consumption or wastewater generation to such a degree that the capacity of the existing facilities would be exceeded.

Water is provided to the proposed Project via WBMWD as well as City-owned wells. Wastewater generated by the proposed Project would be treated at the JWPCP.

Development of the proposed Project would not significantly increase the demand for water and wastewater treatment services within the City. The APM trains are electrified systems; the operation of the trains would not require significant water resources because none of its constituent components is water dependent. In addition, activities at the MSF and TPSS sites would not require additional water demands such that existing facilities would need expansion or new facilities constructed. The routine maintenance and storage of parts of the APM trains at the MSF would not require significant amounts of water except for train washing. Activities that would take place at the MSF includes service activities to the APM train cars, vehicle storage, loading platforms, and a paint booth. Although water and wastewater

65 City of Inglewood, *Final Draft 2015 Urban Water Management Plan*, https://www.cityofinglewood.org/DocumentCenter/View/1061/2015-Urban-Water-Mangement-Plan-PDF?bidId=.

lines may need to be relocated, no aspect of the construction or operation of the proposed Project would require new or expanded water or wastewater treatment facilities.

Impacts would be less than significant, and no further study is required.

Because construction of the proposed Project may necessitate excavation in areas with existing stormwater drainage infrastructure, potential significant impacts that may result from the need to relocate stormwater drainage and other utilities will be further evaluated in an EIR.

d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals

Less than Significant Impact.

A significant impact would occur if a project were to increase solid waste generation to a degree such that the existing and projected landfill capacity would be insufficient to accommodate the additional solid waste.

Solid waste services in the City are provided by Consolidated Disposal Service (CDS); trash collected in the City is taken to CDS's American Waste Transfer Station in the City of Gardena, where it is sorted; residual garbage is taken to the Consolidated Volume Transport Disposal and Recycling Center (CVT) in the City of Anaheim, and recycling and green waste is taken to CDS's Compton Transfer Station in the City of Compton.[66] Solid waste generated in the City is ultimately disposed of at various landfill facilities located throughout Los Angeles County.

The proposed Project would generate additional solid waste from construction debris, activities, and site preparation, as well as during operation of the proposed Project. Solid waste generated during construction and operation of the proposed Project would have to be separated and recycled. As described in Los Angeles County's most recent landfill disposal capacity report, a shortfall in permitted solid waste disposal capacity within the County is not anticipated to occur under forecasted growth and ongoing municipal efforts at waste reduction and diversion.[67] The proposed Project would not drastically change the amount of solid waste disposal projected by the County due to the fact that the operations phase would generate minimal waste. Impacts would be less than significant, and no further study is required.

66 City of Inglewood, "Waste Collection FAQs," accessed July 2020, https://www.cityofinglewood.org/FAQ.aspx?TID=30.

67 County of Los Angeles, *Remaining Disposal Capacity Report,* https://dpw.lacounty.gov/epd/swims/reports/pages/swims-rpt39.aspx

e. Comply with federal, State, and local management and reduction statutes and regulations related to solid waste?

Less than Significant Impact.

A significant impact would occur if a project were to generate solid waste that was not disposed of in accordance with applicable regulations.

Assembly Bill (AB) 939 requires every city and county to divert 50 percent of its waste from landfills by the year 2000 through such means as recycling, source reduction, and composting.[68] In addition, AB 939 requires each county to prepare a countywide siting element for a 15-year period, specifying areas for transformation or disposal sites to provide capacity for solid waste generated in the county that cannot be reduced or recycled. Further, AB 1327, the California Solid Waste Reuse and Recycling Access Act of 1991, requires local agencies to adopt ordinances mandating the use of recyclable materials in development projects.[69]

The proposed Project would generate solid waste during both construction and operation that is typical of the development of a mechanical transportation system and industrial uses. This includes typical construction waste such as wood, concrete, and asphalt, as well as operational waste such as that collected from passengers and employees.

The proposed Project would fully comply with all federal, State, and local statutes and regulations regarding proper disposal. Impacts would therefore be less than significant, and no further evaluation is required.

2.20 Wildfires

If located in or near State responsibility areas or lands classified as very high fire hazard severity zones, would the Project:

a. Substantially impair an adopted emergency response plan or emergency evacuation plan?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were to impair the implementation of an adopted emergency response or emergency evacuation plan.

68 CalRecycle, "Assembly Bill 939," accessed July 2020, http://www.calrecycle.ca.gov/laws/legislation/calhist/1985to1989.htm.

69 CalRecycle, "Ordinances, Resolutions, and Policies," accessed July 2020, http://www.calrecycle.ca.gov/LGCentral/Library/LocalDocs/Policy.htm.

The City of Inglewood is located in a fully developed urban area that is not associated with wildland fires. According to the Fire Hazard Severity Zone mapping done by the California Department of Forestry and Fire Protection, the proposed Project is located in an incorporated city that is considered to be in the Non-Very High Fire Hazard Safety Zone (non-VHFHSZ).[70] The City is responsible for fire protection in the area, which is implemented in part by enforcement of the Fire Code requirements contained within the Building Code, as well as fire protection services provided by the City of Inglewood Fire Department.

As described above in **Section 2.8: Hazards and Hazardous Materials**, the proposed Project is located largely within public rights-of-way. For this reason, construction activities associated with the proposed Project would likely cause the closure of travel lanes in streets along the elevated guideway alignment. The City of Inglewood has planned evacuation routes that assume worst-case displacement and surface rupture from a seismic event in the region along the Newport-Inglewood Fault or Potrero Fault, as described in the Safety Element of the City's General Plan.[71]

However, the closure of lanes would be temporary and such closures would only be associated with the construction phase of the proposed Project. A Traffic Management Plan will be prepared to ensure that interference with area traffic is minimized. This would include ensuring that routes to the emergency room at the adjacent Centinela Hospital Medical Center would be maintained. The plan will require that emergency access be maintained throughout the proposed Project's construction. Therefore, the proposed Project's impacts on emergency response or evacuation plans would be less than significant.

b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose Project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were to exacerbate wildfire risks, and thereby expose Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire due to slope, prevailing winds, and other factors.

The City of Inglewood is a fully developed urban area that is not associated with wildland fires. As mentioned previously, the proposed Project is located in an area considered to be non-VHFHSZ.[72] The City

70 California Department of Forestry and Fire Protection, 2011. *Fire and Resource Assessment Program. Very High Fire Hazard Severity Zones in LRA as Recommended by CAL FIRE*. Los Angeles County.

71 City of Inglewood, *General Plan* (adopted July 1995).

72 California Department of Forestry and Fire Protection, 2011. Fire and Resource Assessment Program. Very High Fire Hazard Severity Zones in LRA as Recommended by CAL FIRE. Los Angeles County.

is responsible for fire protection in the area, which is implemented in part by enforcement of Fire Code requirements contained within the Building Code, as well as fire protection services provided by the City of Inglewood Fire Department.

As described in **Section 2.7: Geology and Soils**, the proposed Project is located on level terrain. Based on the topographic setting and a review of previous geotechnical evaluations in the proposed Project's vicinity, no historical landslides are known to have occurred that could potentially impact the proposed Project. The nearest surrounding mountains, the Santa Monica Mountains, are more than 10 miles to the north.[73]

According to the CGS,[74] the proposed Project is not located within an Earthquake-Induced Landslide Zone as shown on the Earthquake Zones of Required Investigation, Inglewood Quadrangle map. The probability of seismically induced landslides occurring within the area of the proposed Project is not significant due to the general lack of elevation difference in slope geometry across or adjacent to the site. In addition, development of the Project would not substantially alter the existing topography of the area.

Therefore, the Project's impacts on exacerbation of wildfire risks, and thereby exposure of Project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire would be less than significant due to slope, prevailing winds, and other factors.

c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were to require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment.

As discussed above in **Section 2.19: Utilities and Service Systems**, the proposed Project will require utility systems improvements, upgrades and possible relocations to accommodate and serve the various Project components. The design and construction of the proposed Project's elevated guideway structures, stations and support facilities will avoid existing utility and other infrastructure to the degree possible. In addition to surface improvements, some utility infrastructure that cannot be avoided may need to be relocated to

73 *Google Maps* accessed July 2020, https://www.google.com/maps.
74 CDC, CGS, *Earthquake Zones of Required Investigation.*

accommodate the guideway columns and foundations. As mentioned above, the City of Inglewood is a fully developed urban area that is not associated with wildland fires. According to the Fire Hazard Severity Zone mapping done by the California Department of Forestry and Fire Protection, the proposed Project is located in an incorporated city that is considered to be non-VHFHSZ.[75] The City is responsible for fire protection in the area, which is implemented in part by enforcement of Fire Code requirements contained within the Building Code, as well as fire protection services provided by the City of Inglewood Fire Department. With adherence to Fire Code requirements contained within the Building Code and implementation of fire protection services provided by the City of Inglewood Fire Department, any potential infrastructure-induced fire risk or ongoing environmental impacts would be less than significant.

d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were to expose people or structures to impacts associated with downstream flooding or landslides as a result of runoff, post-fire slope instability, or drainage changes.

The City of Inglewood is a fully developed urban area that is not associated with wildland fires. According to the Fire Hazard Severity Zone mapping done by the California Department of Forestry and Fire Protection, the proposed Project is located in an incorporated city that is considered to be non-VHFHSZ.[76] The City is responsible for fire protection in the area, which is implemented in part by enforcement of Fire Code requirements contained within the Building Code, as well as fire protection services provided by the City of Inglewood Fire Department.

As discussed above in **Section 2.7: Geology and Soils**, the proposed Project is located on level terrain. Based on the topographic setting and a review of previous geotechnical evaluations in the proposed Project's vicinity, no historical landslides are known to have occurred that could potentially impact the proposed Project.

According to the CGS,[77] the proposed Project is not located within an Earthquake-Induced Landslide Zone as shown on the Earthquake Zones of Required Investigation, Inglewood Quadrangle map. The probability of seismically induced landslides occurring within the area of the proposed Project is not significant due

77 California Department of Forestry and Fire Protection, 2011. *Fire and Resource Assessment Program.* Very High Fire Hazard Severity Zones in LRA as Recommended by CAL FIRE. Los Angeles County.

to the general lack of elevation difference in slope geometry across or adjacent to the site. In addition, development of the Project would not substantially alter the existing topography of the area.

No streams or rivers run within the proposed Project's location. The proposed Project does not propose any changes to existing drainage patterns. During construction, BMPs (required and monitored under the SWPPP) would be used to reduce the volume and velocity of stormwater runoff, thereby mitigating the potential for flooding due to construction. Any accumulated sediment observed during inspection of temporary BMPs or permanent stormwater network devices would be removed to prevent flooding. The proposed Project is located outside the 100-year Federal Emergency Management Agency (FEMA) flood hazard area.[78] No topographic changes or altered drainage patterns are currently proposed as part of the proposed Project, and any increases in runoff would be handled through compliance with MS4 Permit requirements during operation.

As such, no impacts associated with downstream flooding or landslides as a result of runoff, post-fire slope instability, or drainage changes would occur, and no further analysis is required.

2.21 Mandatory Findings of Significance

Would the Project:

a. Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

Potentially Significant Impact.

Significant impacts would occur if the proposed Project were to result in degradation of the environment; serve to substantially reduce the habitat of fish or wildlife species; cause a fish or wildlife population to drop below self-sustaining levels; threaten to eliminate a plant or animal community; reduce the number or restrict the range of rare or endangered plants or animals; or eliminate important examples of the major periods of California history or prehistory.

The proposed Project is located entirely within the City in a highly developed urban area characterized by commercial and residential uses. It is made up of paved and active streets with various landscaping. The existing level of development on the site and in the surrounding area is not compatible with supporting

78 County of Los Angeles, Department of Public Works, Flood Zone Determination Website, http://dpw.lacounty.gov/floodzone/.

wildlife and natural plant communities. No native vegetation exists on the site, although street trees are present along the alignment. However, any street trees removed as a result of Project implementation will be replaced per the requirements of the IMC and described above under **Section 2.4: Biological Resources.**

No Habitat Conservation Plan, Natural Community Conservation Plan, or other approved habitat conservation plans apply to the proposed Project's location.[79] The proposed Project would not have the potential to substantially reduce the habitat of fish or wildlife species, cause a fish or wildlife population, threaten to eliminate a plant or animal community, or reduce the number or restrict the range of a rare or endangered plant or animal. However, as discussed above under **Section 2.5: Cultural Resources,** the proposed Project does have the potential to affect historic resources in portions of the proposed Project's location of vicinity. As a result, impacts under this topic area are potentially significant and will be further evaluated in an EIR.

b. Does the Project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

Potentially Significant Impact.

Significant impacts would occur if the proposed Project were to result in individually limited but cumulatively considerable impacts. Independent, isolated impacts of the proposed Project may be considered cumulatively significant if they are greater when considered with impacts of related projects in the Project vicinity.

The proposed Project would largely serve to reduce transportation-related impacts in the area. However, as detailed in the sections above, several topic areas have potentially significant impacts. Because of this, the proposed Project's related impacts have the potential to be cumulatively considerable. Therefore, this topic will be further evaluated in an EIR.

c. Does the Project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less than Significant Impact.

79 CDFW, "NCCP Plan Summaries."

Significant impacts would occur if the proposed Project were to cause environmental effects that would cause substantial adverse effects on human beings, either directly or indirectly.

Although the proposed Project could result in potentially significant impacts regarding several topic areas to be addressed in an EIR, the fact that the proposed Project would serve to reduce vehicle congestion and emissions and would be built almost exclusively on existing paved surfaces in a highly urbanized area would indicate that substantial adverse effects on human beings would not occur. However, construction activities could create impacts to sensitive populations due to air quality issues, including dust, as well as noise issues. Therefore, impacts are considered to be potentially significant, and this topic will be further addressed in an EIR.

Appendix 2.0.2b

Original Initial Study

ENVIRONMENTAL CHECKLIST FORM

INITIAL STUDY CHECKLIST

1. **Project title:** Inglewood Transit Connector (ITC)
2. **Lead agency name and address:** City of Inglewood, One W. Manchester Boulevard, Inglewood, CA 90301
3. **Contact person and telephone number:** Mindy Wilcox, AICP, Planning Manager, (310) 412-5230
4. **Project location:**

   The proposed Project is located in the northern portion of the City of Inglewood east of the San Diego Freeway (I-405) and north of the Glen Anderson Freeway (I-105) in Los Angeles County, California (see **Figure 1: Regional Location Map**).

   The ITC will be constructed in an area generally bounded by the Metro Crenshaw/LAX Line in the north; Century Boulevard in the south; the Los Angeles Sports and Entertainment District (LASED) to the east; and La Brea Avenue to the west (see **Figure 2: City of Inglewood**). The proposed Project alignment extends from the intersection with the Metro Crenshaw/LAX Line north of downtown Inglewood, south through Market Street, then east on Manchester Boulevard, turning south on Prairie Avenue until its intersection with Century Boulevard (see **Figure 3: Project Vicinity Map**).

   The automatic people mover (APM) will be located within the public rights-of-way for the streets and sidewalk areas along Market Street, Manchester Boulevard, and Prairie Avenue (see **Figures 4a–4d: Project Location Maps**). The entire Project is situated within the City of Inglewood, an incorporated city within Los Angeles County.

5. **Project sponsor's name and address:** City of Inglewood, One W. Manchester Boulevard, Inglewood, CA 90301

6. **General Plan designation:**

APM alignment: public rights-of-way down the centerline of existing City streets.

Support facilities (Maintenance and Storage Facility/Intermodal Transportation Facility) potential locations: Commercial-Recreation.

7. **Zoning:**

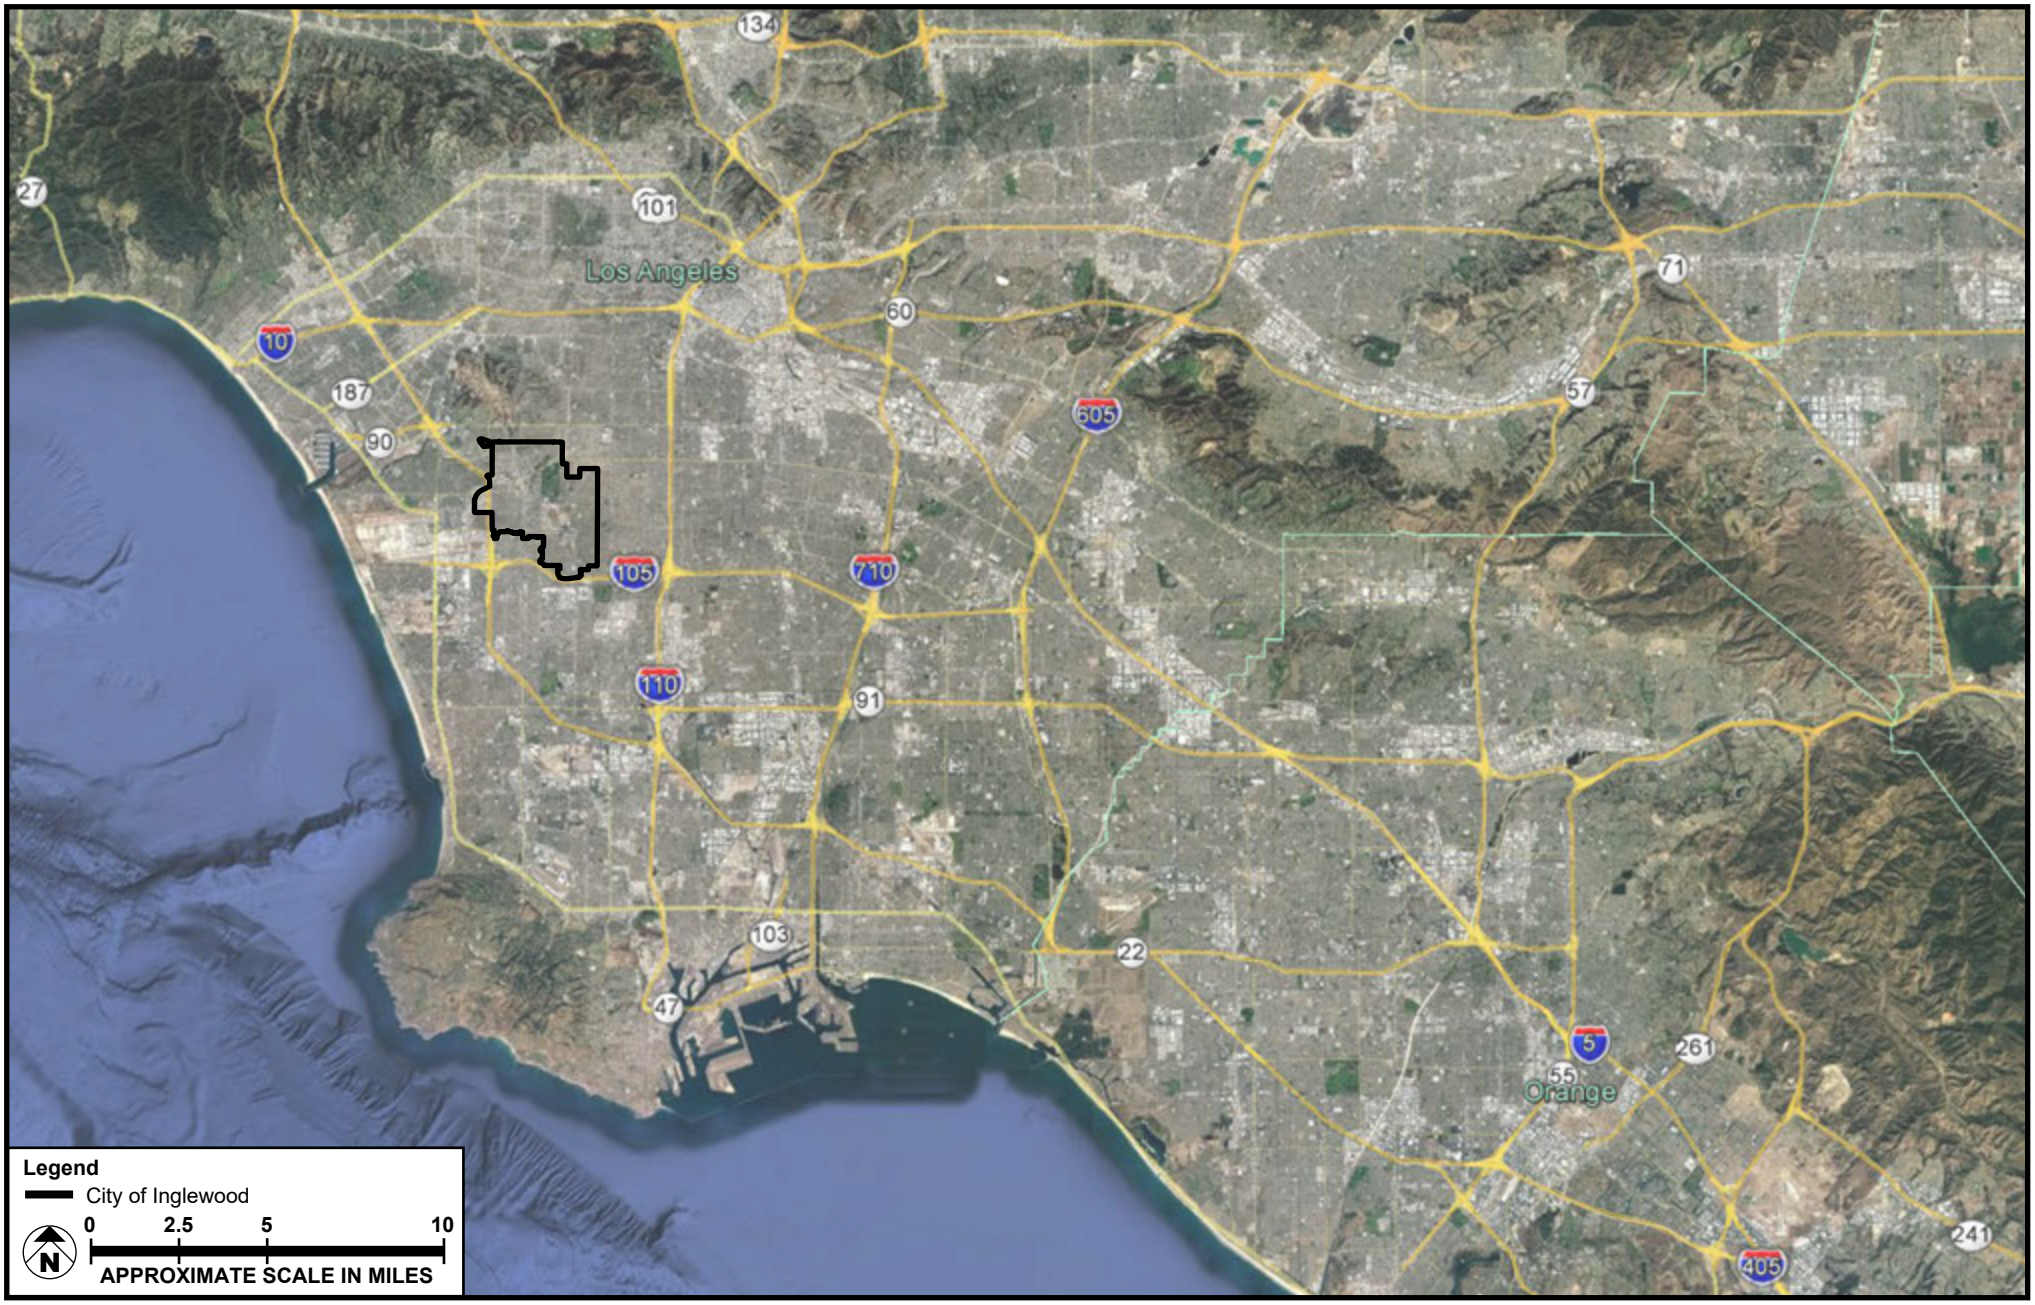
APM alignment: public rights-of-way in the centerline of existing City streets.

Support facilities (Maintenance and Storage Facility/Intermodal Transit Facility potential locations): MU-1, TOD Mixed-Use 1; HC Historic Core; C-2 General Commercial and R-3 Residential, Multiple Family; C-2A, Airport Commercial.

8. **Description of Project:**

The proposed Project would include an automated people mover (APM) system to transport riders from the regional Metro Rail system to Downtown Inglewood, the Forum, the Los Angeles Sports and Entertainment District (LASED) which includes the new NFL stadium (currently under construction and scheduled to open in 2020), and the proposed Inglewood Basketball and Entertainment Center (IBEC). The proposed Project will consist of an elevated APM system with dual guideways to allow for continuous trains to travel in each direction. There will likely be several trains operating at any time, depending upon ridership needs.

As currently envisioned, the APM system will have up to five stations. The following preliminary locations have been identified: Market Street North, central Manchester Boulevard, the Forum, Hollywood Park, and Century Boulevard. Station design capacity will be established by passenger demand volumes under typical peak conditions, in addition to increased demands during special events. Station design will also take into account the potential for service disruptions and emergency evacuation requirements. Stations would provide for pedestrian access to the elevated APM from existing sidewalk and pedestrian travel areas adjacent to the station locations. Final station locations and configurations will be determined during the design process.



In addition to the APM system, the proposed Project will include support facilities to provide for maintenance and additional access areas that could be either co-located or individually located at several potential sites adjacent to the APM alignment. These support facilities would include a Maintenance and Storage Facility (MSF), one or more Intermodal Transportation Facilities (ITF) and other components such as a power traction system. The MSF would consist of a single 4- to 6-acre facility to service the APM cars and other system components. The ITFs would provide multimodal

access to the APM for passengers to conveniently transfer to and from the APM to other modes of travel including but not limited to Metro and other municipal bus lines, shared-ride vehicles, transportation network companies (TNCs), and taxis. The ITFs may also provide for parking areas and pick-up and drop-off locations.

Potential locations for support facilities are shown on **Figures 3** and **4**, and include locations east of North Market Street, south of Manchester Boulevard between Spruce Avenue and Hillcrest Boulevard, across Prairie Avenue from the Forum, and at either the northwest or southwest corner of Prairie Avenue and Century Boulevard.

The design and construction of the APM system elevated guideway structures, stations and support facilities will be designed to avoid existing utility and other infrastructure to the degree possible. In addition to surface improvements, some utility infrastructure that cannot be avoided may need to be relocated to accommodate the guideway columns and foundations.

The proposed Project would be implemented through the development of an Enhanced Infrastructure Financing District (EIFD) in accordance with Senate Bill 628 (Beal). SB 628 provides for the creation of such districts to accommodate the construction or rehabilitation of public infrastructure facilities. The City of Inglewood will be the Public Financing Authority (PFA) for the EIFD; as such, the City will determine the boundaries of the EIFD. The EIFD, governed by the PFA, implements an Infrastructure Financing Plan adopted the City that describes the type of public facilities and development that will be financed by the EIFD. The City will also explore other potential sources of financing for the proposed Project.

9. **Surrounding land uses and setting:**

   The proposed Project is located entirely within the City of Inglewood. The APM alignment is largely within the public rights-of-way and surrounded by commercial, commercial recreation, single- and multifamily residential, and entertainment uses (within the Hollywood Park Specific Plan). The proposed Project's APM alignment travels through downtown Inglewood (North and South Market Street), where it is surrounded by commercial retail, office, restaurant, parking, residential, and mixed uses. Along East Manchester Boulevard, commercial and residential uses are located north and south of the proposed Project alignment. Along South Prairie Avenue, uses to the west of the proposed Project alignment are primarily commercial (heavy, general, and airport commercial) and multifamily residential, while uses to the east include major entertainment venues within the Hollywood Park Specific Plan.

   The APM system will have supporting uses (MSF and ITFs) that would be located adjacent to the alignment; the surrounding land uses are similar to that of the APM.

10. **Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement):**

    The following agencies may have approval of actions involving the proposed Project:

- South Coast Air Quality Management District (SCAQMD);
- Southern California Association of Governments (SCAG);
- Regional Water Quality Control Boards (RWQCB) administer regulations regarding water quality. Permits or approvals required from the RWQCB may include but are not limited to: (1) General Construction Stormwater Permit; (2) Standard Urban Stormwater Mitigation Plan; and (3) Submittal of a Recycled Water Report for the use of recycled water as a dust control measure for construction;
- California Public Utilities Commission (CPUC) review and approval of a System Safety Program Plan and Security Plan for the proposed APM; and,
- Approvals for state financing plans or districts.

  Other agencies, such as the County of Los Angeles and the Los Angeles County Metropolitan Transportation Authority (Metro), may have approval authority or involvement depending on the financing used to construct the proposed Project.

11. **Have California Native American tribes traditionally and culturally affiliated with the Project area requested consultation pursuant to Public Resources Code (PRC) Section 21080.3.1?**

    Yes.

    If so, has consultation begun?

    No.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this Project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☒	Aesthetics	☐	Agriculture and Forestry	☒	Air Quality
☒	Biological Resources	☒	Cultural Resources	☒	Geology and Soils
☒	Greenhouse Gas Emissions	☐	Hazards & Hazardous Materials	☐	Hydrology/Water Quality
☒	Land Use and Planning	☐	Mineral Resources	☒	Noise and Vibration
☐	Population and Housing	☐	Public Services	☐	Recreation
☒	Transportation and Circulation	☐	Tribal Cultural Resources	☒	Utilities/Service Systems
☐	Energy	☒	Mandatory Findings of Significance		

DETERMINATION:

On the basis of this initial evaluation:

☐	I find that the proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
☐	I find that although the proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the Project have been made by or agreed to by the Project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
☒	I find that the proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
☐	I find that the proposed Project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
☐	I find that although the proposed Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed Project, nothing further is required.

Date

POTENTIAL ENVIRONMENTAL IMPACTS

2.1 Aesthetics

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
c. Substantially degrade the existing visual character or quality of the site and its surroundings?	☒	☐	☐	☐
d. Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?	☒	☐	☐	☐

2.2 Agriculture and Forestry Resources

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?	☐	☐	☐	☒
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c. Conflict with existing zoning for, or cause rezoning of, forestland (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	☒
d. Result in the loss of forestland or conversion of forestland to non-forest use?	☐	☐	☐	☒
e. Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland to nonagricultural use, or conversion of forestland to non-forest use?	☐	☐	☐	☒

2.3 Air Quality

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the Project:				
a. Conflict with or obstruct implementation of the applicable air quality plan?	☒	☐	☐	☐
b. Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	☒	☐	☐	☐
c. Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	☒	☐	☐	☐
d. Expose sensitive receptors to substantial pollutant concentrations?	☒	☐	☐	☐
e. Create objectionable odors affecting a substantial number of people?	☐	☐	☒	☐

2.4 Biological Resources

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?	☐	☐	☒	☐
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?	☐	☐	☐	☒
c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☐	☒

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	☐	☐	☒	☐
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☒	☐	☐	☐
f. Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	☒

2.5 Cultural Resources

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?	☒	☐	☐	☐
b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?	☐	☐	☒	☐
c. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☐	☒	☐
d. Disturb any human remains, including those interred outside of formal cemeteries	☐	☐	☒	☐

2.6 Geology and Soils

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☒	☐	☐	☐
ii. Strong seismic ground shaking?	☒	☐	☐	☐
iii. Seismic-related ground failure, including liquefaction?	☐	☐	☒	☐
iv. Landslides?	☐	☐	☐	☒
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?	☐	☐	☒	☐
d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	☐	☐	☒	☐
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	☒

2.7 Greenhouse Gas Emissions

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☒	☐	☐	☐
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	☒	☐	☐	☐

2.8 Hazards and Hazardous Materials

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
e. For a project located within an airport land use plan or, where such plan has not been adopted, within 2 miles of a public airport or public use airport, Would the Project result in a safety hazard for people residing or working in the Project area?	☐	☐	☐	☒
f. For a project within the vicinity of a private airstrip, Would the Project result in a safety hazard for people residing or working in the Project area?	☐	☐	☐	☒
g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
h. Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	☐	☐	☐	☒

2.9 Hydrology and Water Quality

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Violate any water quality standards or waste discharge requirements?	☐	☐	☒	☐
b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	☐	☐	☒	☐
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on or off site?	☐	☐	☒	☐
d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off site?	☐	☐	☒	☐
e. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	☐	☐	☒	☐
f. Otherwise substantially degrade water quality?	☐	☐	☒	☐
g. Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	☐	☐	☐	☒

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
h. Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	☐	☐	☐	☒
i. Expose people or structures to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam?	☐	☐	☐	☒
j. Inundation by seiche, tsunami, or mudflow?	☐	☐	☐	☒

2.10 Land Use and Planning

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Physically divide an established community?	☒	☐	☐	☐
b. Conflict with applicable land use plan, policy, or regulation of an agency with jurisdiction over the Project (including but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	☒	☐	☐	☐
c. Conflict with any applicable habitat conservation plan or natural community conservation plan?	☐	☐	☐	☒

2.11 Mineral Resources

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Result in the loss of availability of a known mineral resource that would be of future value to the region and the residents of the state?	☐	☐	☐	☒
b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?	☐	☐	☐	☒

2.12 Noise and Vibration

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project result in:				
a. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☒	☐	☐	☐
b. Exposure of persons to or generation of excessive ground-borne vibration or ground-borne noise levels?	☒	☐	☐	☐
c. A substantial permanent increase in ambient noise levels in the Project vicinity above levels existing without the Project?	☒	☐	☐	☐
d. A substantial temporary or periodic increase in ambient noise levels in the Project vicinity above levels existing without the Project?	☒	☐	☐	☐
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, Would the Project expose people residing or working in the Project area to excessive noise levels?	☐	☐	☒	☐
f. For a project within the vicinity of a private airstrip, Would the Project expose people residing or working in the Project area to excessive noise levels?	☐	☐	☐	☒

2.13 Population and Housing

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☐	☒
b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
c. Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

2.14 Public Services

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
a. Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:				
i. Fire protection?	☐	☐	☒	☐
ii. Police protection?	☐	☐	☒	☐
iii. Schools?	☐	☐	☐	☒
iv. Parks?	☐	☐	☐	☒
v. Other public services?	☐	☐	☐	☒

2.15 Recreation

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☐	☒
b. Include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?	☐	☐	☐	☒

2.16 Transportation and Circulation

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation, including mass transit and nonmotorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	☒	☐	☐	☐
b. Conflict with an applicable congestion management program, including but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	☒	☐	☐	☐
c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	☐	☐	☐	☒
d. Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☒	☐	☐	☐
e. Result in inadequate emergency access?	☒	☐	☐	☐
f. Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian	☒	☐	☐	☐

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
facilities, or otherwise decrease the performance or safety of such facilities?				

2.17 Tribal Cultural Resources

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with the cultural value to a California Native American tribe, and that is:				
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?	☐	☐	☒	☐
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (d) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	☐	☒	☐

2.18 Utilities and Service Systems

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	☐	☐	☒	☐
b. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☒	☐
c. Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☒	☐	☐	☐

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
d. Have sufficient water supplies available to serve the Project from existing entitlements and resources, or are new and expanded entitlements needed?	☐	☐	☒	☐
e. Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
f. Be served by a landfill with sufficient permitted capacity to accommodate the Project's solid waste disposal needs?	☐	☐	☒	☐
g. Comply with federal, state, and local statutes and regulations related to solid waste?	☐	☐	☒	☐

2.19 Energy Resources

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
Would the Project:				
a. Cause wasteful, inefficient, and unnecessary use of energy?	☐	☐	☒	☐
b. Result in an increase in demand for electricity or natural gas that exceeds available supply or distribution infrastructure capabilities that could result in the construction of new energy facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☒	☐

2.20 Mandatory Findings of Significance

	Potentially Significant Impact	Less than Significant with Project Mitigation	Less than Significant Impact	No Impact
a. Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
b. Does the Project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☒	☐	☐	☐
c. Does the Project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☐	☒	☐

1.0 PROJECT DESCRIPTION

1.1 Introduction

The City of Inglewood is actively transforming into a world-class sports and entertainment capital in the Southern California region. The City is home to the revitalized Forum, which is one of the leading concert and event venues in the country. The Los Angeles Stadium and Entertainment District at Hollywood Park is under construction. When completed, this district will include a new world-class 75,000 seat stadium for both the National Football League (NFL) Los Angeles Rams and Los Angeles Chargers, as well as millions of square feet of office space, retail, and a hotel. The stadium is scheduled to open in 2020. The Los Angeles Clippers of the National Basketball Association (NBA) recently announced a proposal to relocate their headquarters, training facilities and new arena to the City. The Girl Scouts of America, the NFL west coast headquarters and NFL network studio, and a new Los Angeles Philharmonic state-of-the-art music and cultural campus for the Youth Orchestra Los Angeles (YOLA) designed by renowned architect Frank Gehry, will also be headquartered in Inglewood. These new venues are transforming the City into a focal point for business centers, sports, arts, and entertainment in the region.

As these facilities are completed, the number of vehicle trips in and around the City is expected to increase. Based on historic traffic counts, traffic volumes have been increasing at the rate of 1.5 percent per year. Many key intersections and highway corridors are already experiencing congestion. Approximately 80–85 percent of event patrons are expected to use privately occupied vehicles to the City's major venues. At present, these patrons would use existing traffic corridors that may be physically constrained or congested. The Los Angeles County Metropolitan Transportation Authority (Metro) has made great progress developing the County's regional rail network and creating more transportation options such as with the construction of the Metro Crenshaw/LAX Line. Those who wish to use the Metro Crenshaw/LAX Line to travel to events at the Forum, the NFL stadium, the proposed Clippers' arena, or other activity sites, however, face a last-mile gap of approximately 1.5 to 2 miles between this rail line and the City's new activity centers; this gap is longer than a convenient distance for patrons traveling to the City's activity centers. The City has been studying the existing transportation infrastructure and circulation system in order to explore ways in which to provide convenient connections between regional transit and the City's emerging activity centers. The City is working to identify opportunities to implement transportation improvements, such as Intelligent Transportation Systems (ITS) strategies to improve levels of service and increase capacity of the existing roadway network. The City is also working to enhance Metro and municipal bus operations and service to the City, and create connections from the Metro Rail system to the City's major activity centers with an independent APM system.

The City proposes a "last-mile" fixed-guideway transit (APM) connector, referred to as the "Inglewood Transit Connector (ITC) Project" (proposed Project). The proposed Project will provide a transit connection from the Metro Crenshaw/LAX Line in Downtown Inglewood to the Los Angeles Stadium and Entertainment District (LASED) area and would be designed to integrate with local economic activity, transit-oriented development, and other initiatives in the area. Up to five stations are proposed at the following locations: (1) Market Street at or near Florence Avenue adjacent to the Metro Crenshaw/LAX Line Downtown Inglewood Station; (2) Manchester Boulevard at or near Market Street; (3) the Forum; (4) the LASED at Hollywood Park; and (5) Proposed Inglewood Basketball and Entertainment Center (IBEC).

The proposed Project would consist of an elevated, automated people mover (APM) system with dual guideways to allow for continuous trains to travel in each direction. The proposed Project is designed as an aerial APM system that runs approximately 1.8 miles along Market Street between Florence Avenue and Manchester Boulevard, where it transitions east along Manchester Boulevard for approximately half a mile to Prairie Avenue for approximately one mile.

The proposed Project may include ITFs that provide areas for accessible pickup and drop-off to other transit systems, charter buses, TNCs, taxis, and private vehicles or other transportation modes. These potential ITFs provide an opportunity to limit the amount and type of road-based traffic into the area especially during special events. Such limits may be voluntary, based on convenience, and/or controlled through regulatory policies such as possible congestion pricing for access.

Providing transit access to the City's new activity centers would advance local and regional goals to increase transportation choice, reduce greenhouse gas emissions, improve air quality and human health, reduce per-capita vehicle miles traveled (VMT), reduce the growth of congestion on City roads, and encourage sustainable development patterns. The City recognizes that an efficient and effective transportation network is essential to achieving the full benefits of ongoing and widespread investment. The City of Inglewood is working to ensure that its residents, businesses, employees, and visitors have a high level of reliable, convenient and efficient access to both its downtown area and to its new destinations. Specifically, the City's goals and objectives for the proposed Project are to:

- Provide direct connections between regional transit provided by Metro and other transit providers and the City's major activity centers;
- Reduce the City's traffic congestion and alleviate growing demand on the existing roadway network on both major arterials and residential streets for both event and non-event days;
- Encourage intermodal transportation systems by providing convenient, reliable time-certain transit;
- Increase transit mode split, reduce vehicle trips, and reduce per-capita vehicle miles traveled (VMT) to the City's major activity centers, with corresponding improvement in air quality, public health, and

reductions in greenhouse gas emissions from transportation sources in accordance with the City's goals under Senate Bill (SB) 375 and State policy with respect to climate change.

- Encourage redevelopment and investment within the City in areas served by the ITC;
- Connect City residents to jobs, education, services, destinations within the City and within the region, and support regional efforts to become more efficient, economically strong, equitable, and sustainable; and
- Provide convenient access to businesses in the City so that they are accessible to their workforce and customers.

1.2 Project Background

In 2017, the City of Inglewood partnered with Metro to prepare a focused analysis of viable transit connection options from the Metro Crenshaw/LAX Line to the Inglewood NFL Stadium/Hollywood Park mixed-use development. With the City's input, Metro explored how best to connect the LASED in Inglewood with the Metro Rail system via a high-capacity transit connection. The Metro study analyzed (1) an Interlined Operability connection from the Metro Crenshaw/LAX Line in a subway under Prairie Avenue, which also would jointly operate on a portion of the Metro Crenshaw/LAX Line, and (2) Independent Operability options for independent services that could provide a connection from the Metro Rail system at nearby Metro stations along the Crenshaw/LAX Line to the NFL stadium. The Metro study found that the Interlined Operability Scenario would disrupt Metro regional network operations due to the introduction of an additional route to NFL Stadium/Hollywood Park to address special-event/game-day ridership demands. The Interlined Operability alternative was deemed not feasible due to the costs and operational impacts on the regional system. Consistent with Metro's recommendations, Inglewood has continued to analyze several Independent Operability transit connections to the City's activity centers.

Building upon the work initiated by Metro, the City refined the Inglewood Transit Connector Options designed to achieve the City's goals and objectives. The City has evaluated several independent "last-mile" fixed-guideway APM connector options, comparing these options against key screening criteria and evaluating each option against the City's stated goals and objectives. The City evaluated four conceptual APM alternatives:

- Alternative A: Market/Manchester Alignment
- Alternative B: Fairview Heights Alignment
- Alternative C: Arbor Vitae Alignment
- Alternative D: Century Blvd Alignment

The City compared ridership, constructability, potential conflicts with utilities, impacts to rights of way, overall Project costs, cost effectiveness, and parity with City goals. The City also evaluated a range of APM

technologies to determine the viable classes of technologies that can potentially meet the anticipated requirements for the proposed Project. Driverless technologies are expected to be used because these technologies are in wide use for such systems; they are similar to manually operated technologies except that with an automated train control system, the driverless technologies can be operated at shorter (more frequent) headways. The specific technology is expected to be selected through a competitive procurement process and is not dependent on the selection of the preferred alignment for the proposed Project.

The City recommended that Alternative A: Market/Manchester Alignment be advanced for further environmental analysis as the preferred Inglewood Transit Connector Project proposal. This alternative performed well on a number of key measures including projected high annual ridership for peak hours during events at including the LASED (in excess of 2,500,000 riders annually), minimal conflicts related to utility and construction impacts, and cost effectiveness. The Market/Manchester Alignment also provides for increased economic opportunities for downtown Inglewood.

1.3 Environmental Setting

The proposed Project is located in the northern portion of the City of Inglewood east of the San Diego Freeway (I-405) and north of the Glen Anderson Freeway (I-105) in Los Angeles County, California (see **Figure 1: Regional Location Map**).

The proposed Project will be constructed in an area generally bounded by the Metro Crenshaw/LAX Line in the north; Century Boulevard in the south; the LASED to the east; and La Brea Avenue to the west (see **Figure 2: City of Inglewood**). The proposed Project extends from the Market Street and Florence Avenue intersection adjacent to the Metro Crenshaw/LAX Line in Downtown Inglewood, south through Market Street, then east on Manchester Boulevard, turning south on Prairie Avenue until its intersection with Century Boulevard. The APM system will be located within the public rights-of-way for the streets and sidewalk areas along Market Street, Manchester Boulevard, and Prairie Avenue (see **Figures 4a–4d, Project Location Maps**). The entire Project is situated within the City of Inglewood, an incorporated city within Los Angeles County.

The City is located in the west-central portion of the Los Angeles Basin and is nine square miles and wholly surrounded by other jurisdictions. It is well-served by regional roadways, including both Interstate 405 and Interstate 105. Four major interstate highways serve the Inglewood area, including the Santa Monica Freeway (I-10) and Glenn Anderson Freeway (I-105), running east/west, the San Diego Freeway (I-405) which runs north/south, and the Harbor Freeway (I-110) running north/south east of the Study Area. The I-10, I-105, I-110 and the I-405 experience high levels of congestion, particularly during peak commute

periods. I-105 and I-405 experience heavy traffic throughout the day as they provide regional access to West Los Angeles and Los Angeles International Airport.

The roadway system in the City is primarily a grid that includes arterials, collectors, and local roads. A major arterial thoroughfare is a high-capacity urban road with the primary function of delivering traffic from collector roads to freeways or expressways, and between urban centers, at the highest level of service possible. According to the City of Inglewood 1992 Circulation Element, the following streets within in the City are classified as major arterials:

- Arbor Vitae Street,
- Centinela Avenue,
- Century Boulevard,
- Florence Avenue,
- Hawthorne Boulevard,
- Manchester Boulevard, and
- Prairie Avenue.

Minor or secondary arterials are similar to major arterials except that they may be discontinuous with the City, they may carry less traffic volume, and/or may serve as extensions of other major arterials. Several roadway improvements within the City of Inglewood are either programmed or under construction. They include Citywide Intelligent Transportation System improvements and physical roadway and intersection improvements along Century Boulevard and Prairie and Florence Avenues.

Transit service in Inglewood is provided by Metro and the City of Inglewood. A combination of Metro Local and Rapid buses provide service to the City of Inglewood, with limited service during weekends and evenings. Inglewood is currently served by City-operated I-Line and Metro. These lines connect the City of Inglewood to the rest of the greater Los Angeles region. Metro's new Crenshaw/LAX Line is currently under construction and will provide service to Inglewood at the Downtown Inglewood Metro Station at the Market Street and Florence Avenue intersection, the Westchester/Veterans Metro Station at the southwest border of the City, and the Fairview Heights Metro Station located just west of the Florence Avenue and West Boulevard intersection. As part of the City's Mobility Plan and Event Transportation Management and Operations Plan, the City is working with Metro and other municipal bus operators to increase and enhance transit service to City of Inglewood destinations.

The proposed Project is designed as an aerial APM system that runs approximately 1.8 miles in total length including approximately one-quarter of a mile along Market Street between Florence Avenue and

Manchester Boulevard, where it transitions east along Manchester Boulevard for approximately half a mile to Prairie Avenue. The alignment is proposed to continue for approximately one mile south of Manchester Boulevard along Prairie Avenue to Century Boulevard.

The proposed Project would be designed to serve the Forum, LASED, and the proposed IBEC. It would also be designed to be integrated with Downtown Inglewood and to take advantage of the existing Downtown assets, including, such as but not limited to:

- The Metro Crenshaw/LAX Line's Downtown Inglewood Station near Market Street and Florence Avenue. This station provides Inglewood with a new gateway to the region and provides the region with a new way to connect with Inglewood. The Downtown Inglewood Metro Rail Station is located adjacent to the proposed APM at the northern end of Market Street.
- The Civic Center, which has approximately 2,000 workers at City Hall, the Library, and Courthouse. These workers may benefit from increased high-capacity transit connectivity with the Metro Rail system and are potential customers for downtown businesses.
- Downtown Inglewood has thousands of existing parking spaces in public structures that are currently underutilized and present a major resource for off-site event parking and for supporting the area's revitalization.
- The approved development of the City-owned D3 Site—bounded by Florence Avenue, Market Street, Regent Street, and La Brea Avenue—is redeveloping into a mixed-use project with 5 stories of residential use over ground-floor retail.
- Market Street has a number of older structures and an ambiance resulting from past City investments in streetscape improvements. The City is encouraging the design and development of new mixed-use and retail along Inglewood's Market Street, along with signage, marketing, landscaping, and traffic-calming improvements. Situated in the heart of Inglewood's Historic Core, the Miracle Theater was once connected to greater Los Angeles by the Red Car system. In the late 1940s through the early 1960s, Inglewood's Market Street hosted Hollywood film premieres at several movie houses, including the Fox Theater, the United Artist's Theater, and the Ritz Theater. Built in 1937, the Ritz—now revived as the Miracle—is once again home to local and international entertainment. Featuring music, movies, comedy, and community events, the Miracle Theater provides a venue for arts and culture on Market Street.

1.4 Relationship to Existing Plans and Documents

1.4.1 Southern California Association of Governments 2016 RTP/SCS

The Southern California Association of Governments (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) is the primary planning document for regional transportation infrastructure in the Greater Los Angeles Area. With a horizon year of 2040, this long-range plan, required

by the State of California and the federal government, is updated by SCAG every four years as demographic, economic, and policy circumstances change.

Although demographic growth in the six-county SCAG region is slowing, the overall regional population is expected to exceed 22 million by 2040—an increase of nearly 4 million people from the 2016 baseline. According to SCAG, population, housing, and employment growth are expected to be particularly strong in the Cities of Los Angeles, Inglewood, and Culver City; unincorporated areas of Los Angeles County; and portions of the South Bay Cities, consisting of El Segundo, Hawthorne, and others.

The City of Inglewood is coordinating with SCAG as it is updating the RTP/SCS to include the Inglewood Mobility Plan and the proposed Project in the future.

1.4.2 The City of Inglewood General Plan and the Inglewood Mobility Plan

The City of Inglewood General Plan includes several goals and policies that are relevant to the proposed Project. The Land Use Element of the General Plan envisions the City becomes a model for sustainable development, promotes sound economic development and increase employment opportunities for the City's residents by responding to changing economic conditions, and promotes Inglewood's image and identity as an independent community within the Los Angeles metropolitan area. The City's Circulation Element of the General Plan will be updated once the Mobility Plan is finalized to reflect the City's long-range infrastructure needs and transportation goals, objectives, plans reflecting future projects.

The Mobility Plan will include performance measures that address short-term and long-term transportation improvements and policy recommendations designed to improve and enhance the City's local and regional transportation networks. If approved, the proposed Project will serve as an integral component of the Inglewood Mobility Plan.

1.4.3 Hollywood Park Specific Plan

The Inglewood City Council approved the Hollywood Park Specific Plan, LASED stadium plan, and voter initiative in 2015. The Hollywood Park Specific Plan is a section in the Inglewood Municipal Zoning Code that regulates and permits the incorporation of custom design guidelines and more extensive landscape than required by the zoning code and provides the land use framework for the redevelopment of the 238-acre Hollywood Park site.

The LASED project, which complies with the Specific Plan, includes a new mixed-use, master planned community on the site of the former Hollywood Park racetrack and equestrian training facility, started construction in 2014 and is slated for completion by 2023. The proposed Project will transform

underutilized asphalt lots and the former racetrack into a vibrant mixed-use community. The proposed Project includes a number of new uses including 2,500 residential units, 890,000 square feet of retail, 780,000 square feet of office and a 300-room hotel, as well as 25 acres of new recreational and park amenities for the City. The signature component of the LASED project is the 75,000-seat NFL stadium, which includes a 6,000-seat performance venue, and that will be home to both the NFL Los Angeles Rams and Los Angeles Chargers teams. The stadium is set to open in 2020.

The proposed Project will complement and further the Hollywood Park Specific Plan's goals of making high-quality, place making improvements, creating inviting, pedestrian oriented amenities, and promoting sustainable, transit access to the stadium.

1.4.4 City of Inglewood TOD Plans

The City of Inglewood adopted a Transit Oriented Development (TOD) Plan, which included a General Plan Amendment, Transit Oriented Development zoning, Concept Plans and Design Guidelines for approximately 913 acres in downtown Inglewood. The TOD Plan defines and implements the City's vision to transform the quality and vitality of its downtown area and protect and enhance the environment of the Fairview Heights area. The TOD Plan encompasses two planning areas: Downtown Inglewood and Fairview Heights.

The Downtown Inglewood planning area consists of approximately 585 acres located in the center of Inglewood along the new Metro Crenshaw/LAX Line just east of the Florence Avenue and La Brea Avenue intersection. The Downtown planning area generally encompasses the area within approximately half-mile from the Downtown Inglewood Metro Station.

The Fairview Heights planning area consists of approximately 328 acres located near the intersection of Florence Avenue and West Boulevard. This planning area encompasses the westerly portion of the half-mile radius area extending from the Fairview Heights Metro Station that is within the City of Inglewood.

The easterly portion of the half-mile radius surrounding the Fairview Heights Station lies within the City of Los Angeles, and the easterly portion is not part of the City's TOD project. The primary impetus for the TOD Plan was the Metro Crenshaw/LAX Line, which will greatly increase regional accessibility to Inglewood and provide the City with convenient transit connections to Los Angeles International Airport, Downtown Los Angeles, Santa Monica, and the entire Los Angeles County area.

The proposed Project will complement the TOD goals for enhanced pedestrian and bicycle mobility and the enhancement of existing public spaces that encourage transit and multimodal activities.

1.5 Project Characteristics

The proposed Project includes an APM system with up to five APM stations connecting passengers from the Metro Crenshaw/LAX Line to Downtown Inglewood, the Forum, the LASED, and the proposed Inglewood Basketball and Entertainment Center (IBEC). Each of the proposed Project components is described further in the following sections.

1.5.1 Automated People Mover

The proposed APM system would be a fully automated, grade-separated, mass transit system, along an elevated dual-lane guideway with a total of up to five stations for passenger loading and unloading. The APM would be a driverless, self-propelled electric train built entirely above grade and thereby avoid traffic and alleviate congestion on the roadway network. The APM would provide reliable, time-certain access for passengers and users traveling to and from the Metro Crenshaw/LAX Line to the City's major activity centers. The APM guideway would be approximately 1.8 miles in length and would be up to approximately 60 feet in height above existing grade.

The design and construction of the APM system elevated guideway structures, stations and support facilities will avoid existing utility and other infrastructure to the degree possible. In addition to surface improvements, some utility infrastructure that cannot be avoided may need to be relocated to accommodate the guideway columns and foundations.

The APM would transport passengers between up to five stations and would accommodate up to nine 4-car trains operating approximately every 6 to 6½ minutes during normal day and weekends, and every 1½ to 3½ minutes during special events. Each APM station would have platforms sized to accommodate an APM train length of up to four train cars and would be up to approximately 60 feet in height above existing grade. Each train car would be up to 45 feet long; in total, the train length could reach approximately 175 feet.

Based on preliminary analysis, event annual ridership is anticipated to reach over 1 million passengers, and total non-event annual ridership is expected to reach over 1.5 million passengers. Preliminary ridership projections also indicate that the peak ridership is expected to occur on NFL Rams game days and could potentially reach nearly 9,000 riders occurring in the 1-hour period after a game.

Figures 3 and **4a–4d**, show the proposed alignment for the APM, which would include up to five stations to serve Downtown Inglewood/Market Street, The Forum, the LASED, and the proposed IBEC.

The APM stations would be designed to include, among others, features such as mezzanine areas, escalators and elevators, signage, and walkways connecting the stations to the street or intermodal

transportation facilities. APM stations would accommodate passengers waiting to board APM vehicles and the boarding/deboarding of passengers to and from the vehicles. Station platforms would also provide the required space for passengers to circulate between the station platform and the adjacent facilities. Station platform minimum widths would be based on queuing and circulation analysis results.

Queuing and circulation requirements will be determined from the peak-hour number of passengers boarding and deboarding the APM for the long-range planning horizon. Stations will be required to be fully accessible to passengers with disabilities. The station locations and configuration will be refined to reflect necessary coordination with the activity generator facility designs, passenger access/egress concepts and to address utility and right of way constraints.

While many different platform configurations are possible, center platforms which generally require less infrastructure are being considered. These platforms would be located between relatively widely spaced guideways and serve as both boarding and deboarding platforms for passengers traveling in either direction on the APM system. Vertical circulation would be provided at one or both ends of station platforms, or within the length of the platform for any of these platform configurations. A “mezzanine” level is anticipated under the station platform; mezzanines will provide the connectivity to the adjacent street level through pedestrian walkways.

Maintenance and/or emergency walkways are required along the guideways to provide for passengers to evacuate from trains in case of an emergency. Passenger access from the emergency walkway to the stations is provided to bring them to a point of evacuation from the guideway.

In addition, the APM system would include equipment to guide the movement of trains between stations, emergency walkways and lighting, communications systems, a command and control system, a public information system, and security systems to monitor activity at station platforms, along the guideway, and at the APM Maintenance and Storage Facility (MSF).

Traction power substations would be constructed to provide continuous power supply for system operation. Depending on load requirements, two to three traction power substations may be required. The traction power substations would be connected to existing power trunk lines and would be up to 3,000 square feet in size. Locations for the traction substations would be adjacent to other proposed components of the ITC system. and existing electrical trunk lines.

1.5.2 APM System Support Facilities

The proposed Project APM system would include an elevated APM system with stations and other support components to provide for maintenance and addition access areas that could be either co-located or

individually located at several potential sites adjacent to the APM alignment. These support facilities would include a Maintenance and Storage Facility (MSF), one or more ITFs and other components such as a power traction system. The MSF would consist of a single 4- to 6-acre facility to service the APM cars and other system components. The ITFs that would multimodal access to the APM for passengers to conveniently transfer to/from the APM to other modes of travel, including but not limited to Metro and municipal bus lines, shared-ride vehicles, TNCs, and taxis as well as provide for parking areas and drop-off and pickup locations.

Potential locations for support facilities are shown on **Figure 2** and include locations east of North Market Street, south of Manchester Boulevard between Spruce Avenue and Hillcrest Boulevard, across Prairie Avenue from the Forum, and at either the northwest or southwest corner of Prairie Avenue and Century Boulevard.

Maintenance and Storage Facility

A Maintenance and Storage Facility (MSF) is included as part of the proposed Project to provide for regular and preventative maintenance of the APM system cars and equipment, as well as provide space for storage of the vehicle fleet.

The MSF would consist of a multi-level building on an approximately 4- to 6-acre site with sufficient space for maintenance facilities, administration facilities, an automatic car wash for exterior vehicle cleaning, equipment and materials storage area, shipping/receiving areas, and sufficient parking for staff.

The MSF would and house the operations control center where automated train operations are monitored and controlled. The MSF also include but are not limited to and service bays (including under vehicle bays), equipment and materials storage areas, offices, lunch/break area(s), restrooms, locker area(s), personnel wash facilities, and loading platforms, paint booth, and other work areas.

Design of the MSF would also include access driveways, landscaping, exterior lighting, parking, signage, and secured fencing controlling access into and out of the MSF.

Intermodal Transportation Facilities

Intermodal Transportation Facilities (ITFs) are proposed to provide convenient and accessible pickup and drop-off areas for passengers to conveniently transfer to the APM system from other modes of travel including but not limited to from Metro transit, other municipal bus lines, shared-ride vehicles, TNCs, taxis, and privately occupied vehicles.

The ITFs would be designed to provide a location for the City to intercept passengers traveling to the City's major activity centers and reduce traffic congestion by capturing them before they enter the roadway network adjacent to the venues. Preliminary locations for the ITFs could be co-located with potential MSF facilities and other support facilities.

The ITFs will be sized to accommodate traffic projections that will vary based on special events and will include limited passenger amenities such as information kiosks, wayfinding, waiting areas, and other amenities.

1.5.3 Utilities

The proposed Project will require utility systems improvements, upgrades and possible relocations to accommodate and serve the various Project components. The design and construction of the APM system elevated guideway structures, stations and support facilities will strive to avoid existing utility and other infrastructure to the degree possible. In addition to surface improvements, some utility infrastructure that cannot be avoided may need to be relocated to accommodate the guideway columns and foundations.

Potential utility constraints include an existing 36-inch (West Basin Water District) recycled water line identified at the Market/Manchester Alignment street centerline and several utilities within 15 feet of the alignment along Prairie Avenue. In addition, a 60-inch City of Los Angeles Department of Water and Power (LADWP) main pipe and 33-inch storm drain are located on the east side of Prairie Avenue, approximately 20 to 40 feet from centerline.

Underground electrical lines, including vaults, are present along or adjacent to sidewalks. Non-gravity flow utilities, including water service lines, may be lowered in lieu of horizontal relocation. Utility crossings including electrical and storm drain lines are found at street intersections.

Existing utilities along the northern portion of the alignment pose minimal obstacles for placement of guideway columns. However, due to the span of utilities tie-ins and crossings along Manchester Boulevard at Hillcrest Boulevard, Spruce Avenue, Manchester Drive, and Manchester Terrace, placement of guideway columns on this alignment will be engineered to avoid relocation of gravity flow utilities including sewer and storm drains. As noted, the APM system along the Market/Manchester alignment will be designed so that utilities are avoided as feasible, and therefore do not pose a major impediment.

Potential land acquisitions, if necessary, for the proposed Project's implementation would be determined during final design.

1.5.4 Enhanced Infrastructure Financing District

The proposed Project is anticipated to be implemented in part through the development of an Enhanced Infrastructure Financing District (EIFD) in accordance with Senate Bill 628 (Beal), which provides for the creation of such districts to accommodate the construction or rehabilitation of public infrastructure facilities. The City of Inglewood will be the Public Financing Authority (PFA) for the EIFD; as such it, will determine boundaries of the EIFD. The EIFD, governed by the PFA, implements an Infrastructure Financing Plan adopted the City that describes the type of public facilities and development that will be financed by the EIFD. In addition to the EIFD, the City anticipates securing funding from other local, state, or federal sources, including the potential for public-private partnerships and/or joint funding and development tools.

1.6 Required Approvals/Consultations

1.6.1 City of Inglewood

The City of Inglewood will consider approval of the following discretionary actions for the proposed Project:

- Certification of the Final EIR for the Inglewood Transit Connector Project;
- Updates/amendments to the City of Inglewood General Plan Land Use Element and Transportation Element. These changes relate to conforming the plans, as necessary, to reflect the physical Projects within the Inglewood Transit Connector Project and technical amendments necessary for the construction and operation of the Inglewood Transit Connector;
- Preparation of a Project-specific Stormwater Management Plan or Standard Urban Stormwater Mitigation Plan for approval;
- Los Angeles County (as the City's contractor) Fire Department approval;
- Grading permits, building permits, and other permits issued by the Department of Building and Safety for the Project and any associated Department of Public Works permits for infrastructure improvements;
- Tract/parcel map and zone change approvals;
- Approvals for federal, state, or local financing plans or districts;
- Approving contracts for the design and construction of the Project; and
- Other federal, state, or local approvals, permits, or actions that may be deemed necessary for the Project.

1.6.2 Other Approvals

Other approvals may be needed from the following regional agencies for Project approval and implementation:

- South Coast Air Quality Management District (SCAQMD);
- Southern California Association of Governments (SCAG);
- Regional Water Quality Control Boards (RWQCB) administer regulations regarding water quality. Permits or approvals required from the RWQCB may include but are not limited to: (1) General Construction Stormwater Permit; (2) Standard Urban Stormwater Mitigation Plan; and (3) Submittal of a Recycled Water Report for the use of recycled water as a dust control measure for construction;
- California Public Utilities Commission (CPUC) review and approval of a System Safety Program Plan and Security Plan for the proposed APM; and
- Approvals for state financing plans or districts.

1.6.3 Potential Funding Approvals

The following regional agencies may provide access to programs and sources that could be utilized:

- County of Los Angeles;
- Los Angeles County Metropolitan Transportation Authority (Metro); and
- Southern California Association of Governments (SCAG).

2.0 EXPLANATION OF INITIAL STUDY CHECKLIST DETERMINATIONS

The following analysis provides supporting documentation for the determinations presented in the Initial Study Checklist. Each response provided below evaluates how the proposed Project, as defined in the Project Description, may affect existing environmental conditions at the proposed Project's location and the surrounding area. The EIR will further evaluate topics where the potential for a significant impact has been identified. The Initial Study Checklist questions that are carried forward for additional analysis may be further refined as thresholds in the EIR or combined when they address overlapping environmental issues. The EIR will analyze the identified potentially significant impacts and, where appropriate, identify mitigation measures and explain how such measures would reduce significant impacts.

2.1 Aesthetics

Would the proposed Project:

a. Have a substantial adverse effect on a scenic vista?

Less than Significant Impact.

A significant impact regarding a scenic vista could occur if the Project were to introduce incompatible visual elements within a field of view containing a scenic vista or substantially blocked views of a scenic vista. Scenic vistas are generally described in two ways: panoramic views (visual access to a large geographic area, for which the field of view can be wide and extend into the distance) and focal views (visual access to a particular object, scene, or feature of interest). Scenic resources typically include natural open spaces, topographic formations, and landscapes that contribute to a high level of visual quality. They also can include ridgelines, parks, trails, nature preserves, sculpture gardens, and similar features.

The proposed Project consists of an elevated APM system that would be located in the center of the public rights-of-way. The APM system alignment would extend from a point near the under-construction Metro Crenshaw/LAX Line, which will run south along North and South Market Street, east along East Manchester Avenue, and south along South Prairie Avenue before terminating near the intersection of South Prairie Avenue and West Century Boulevard.

The proposed Project is located entirely within the City of Inglewood in a highly developed urban area characterized by commercial, residential, and industrial uses. The existing level of development on the site and in the surrounding area limits views across and beyond the site from surrounding roadways. The City's General Plan states that no forest resources, wildlife, fisheries, shorelines, or agricultural land are

present in the City,[1] nor does the General Plan designate any scenic vistas within the City or its vicinity. Additionally, the Project is not near any designated wild or scenic rivers pursuant to the National Wild and Scenic Rivers System.[2] The nearest surrounding mountains, the Santa Monica Mountains, are more than 10 miles to the north.[3] No views of these mountains or of any other focal points or broad panoramic view corridors are available from public rights-of-way along the proposed alignment.

Based on the above, the proposed Project would not have a substantial adverse effect on a scenic vista. Impacts would be less than significant, and no further evaluation of this topic area is required in an EIR.

b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Less than Significant Impact.

A significant impact would occur if the proposed Project were to substantially damage identified scenic resources bordered by or within the viewshed of a State-designated scenic highway.

There are no designated scenic highways near the Project. In addition, although the City of Inglewood Municipal Code (IMC) has a tree protection ordinance that requires any street trees affected by Project implementation be replaced at a 1:1 ratio, the appended tree inventory (**Appendix A: Tree Inventory Memorandum**) does not identify any federally or state-listed trees that would be affected by proposed Project's implementation. None of the trees inventoried is located within a State scenic highway. Historic buildings located in the vicinity of the proposed Project as identified in the appended historic resources assessment also do not fall within a State scenic highway (see **Appendix B: Preliminary Historic Resources Investigation Memorandum**), and no rock outcroppings are present on or near the Project Site. As such, impacts would be less than significant, and no further study is required.

c. Substantially degrade the existing visual character or quality of the site and its surroundings

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to introduce incompatible visual elements on the Project location or visual elements that would be incompatible with the character of the area surrounding the Project Site.

1 City of Inglewood, *General Plan*, "Conservation Element" (1997), 1.
2 *National Wild and Scenic Rivers System*, accessed June 2018, https://www.rivers.gov.
3 *Google Maps*, accessed June 2018, https://www.google.com/maps.

Implementation of the proposed Project would involve the construction of an aerial APM system along North and South Market Street, East Manchester Boulevard, and South Prairie Avenue connecting the Metro Crenshaw/LAX Line to the NFL Stadium/Hollywood Park. The APM system alignment may include up to five stations that would be fully located within the public rights-of-way. Preliminary stations locations include: North Market Street, Manchester Boulevard, the Forum, NFL Stadium/Hollywood Park and the intersection of Prairie Avenue and Century Boulevard.

The proposed Project would also include support facilities consisting of an MSF, which would occupy a 4- to 6-acre site, as well as ITFs located on additional 3- to 5-acre sites that may be co-located with the MSF or on separate locations. The MSF would consist of an elevated structure to provide space for maintenance and storage of the vehicle fleet, as well as to house the operations control center. The ITFs would multimodal access to the APM for passengers to conveniently transfer to/from the APM to other modes of travel, including but not limited to Metro and municipal bus lines, shared-ride vehicles, TNCs, and taxis, as well as provide for parking areas and drop-off and pickup locations.

Height and Massing

Land uses within the vicinity of the proposed Project vary in use and height. Within downtown Inglewood (North and South Market Street), buildings to the east and west of the proposed Project are characterized by commercial retail, office, restaurant, parking, residential, and mixed uses; these building are generally low rise (less than 40 feet). Along East Manchester Boulevard, buildings to the north and south of the proposed Project largely consist of commercial uses, with some limited residential uses also present.

Along South Prairie Avenue, buildings to the west of the proposed Project are primarily commercial (heavy, general, and airport commercial) and multifamily residential uses, while uses to the east include major entertainment venues, such as the Forum and the under-construction NFL stadium. These entertainment venues include wide setbacks from the rights-of-way (approximately 300 feet or greater) and are characterized by heights in excess of 100 feet. Although the appended historic resource assessment (see **Appendix B**) identifies structures in the vicinity of the proposed Project that are or could be considered historic resources, the proposed Project would not be significantly taller than existing structures in the area. Therefore, impacts would be less than significant, and this topic does not require further evaluation in an EIR.

Views

Private views are not protected by viewshed protection ordinances or by policies in the City's General Plan. Accordingly, the alteration of private views would not constitute a significant impact. The visual impact of one structure blocking another structure is not considered a significant impact because the

general characteristics of the urban setting would not be altered. However, the construction of an elevated APM as proposed by the proposed Project could obstruct views from the public rights-of-way. As such, impacts are potentially significant and will be further evaluated in an EIR.

Streetscape and Landscaping

The streets bounding the proposed Project contain sidewalks and street trees. Sidewalks and pedestrian access ways would be maintained upon implementation of the proposed Project. The façades of the proposed APM stations and APM system support infrastructure would be articulated with geometric forms and variations in color that would reduce any conflict with the visual effect of the existing building masses.

Landscaping is present in limited areas throughout the rights-of-way along the APM system alignment and consists primarily of street trees and other ornamental landscaping. A complete list of the tree species that exist on site can be found in **Appendix A**. Implementation of the proposed Project could require the removal of street trees, although these would be replaced at a 1:1 ratio as required by the IMC.[4]

d. Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?

Potentially Significant Impact.

A significant impact could occur if the proposed Project were to introduce new sources of light or glare on or from the Project that would be incompatible with the areas surrounding the Project or would pose a safety hazard to motorists utilizing adjacent streets or freeways. The determination of whether the proposed Project results in a significant nighttime illumination impact will be made considering the change in ambient illumination levels as a result of the proposed Project's sources and the extent to which the proposed Project's lighting would emanate in to the local surroundings and affect adjacent light-sensitive areas.

Light

Due to the urban setting of the proposed Project's location, ambient nighttime light already exists. Existing nighttime lighting sources near the proposed Project include street lights, vehicle headlights, and interior and exterior building illumination. Night lighting for the Project would be provided for exterior illumination of APM stations and along the APM alignment, in addition to interior lighting of the APM's vehicle fleet, largely to provide adequate night visibility for users and to provide a measure of security.

4 Inglewood Municipal Code (IMC), ch. 12, Planning and Zoning, art. 32, Tree Preservation, sec. 12-112, Definitions, accessed July 11, 2018, http://www.qcode.us/codes/inglewood/?view=desktop&topic=12-32-12_112.

The Project would utilize outdoor lighting designed and installed to meet City code requirements for shielding. However, exterior and interior lighting associated with the proposed Project could impact adjacent properties. As such, impacts will be further evaluated in an EIR.

Glare

Glare is largely a daytime occurrence caused by the reflection of sunlight or artificial light from highly polished or reflective surfaces. Daytime glare is typical in highly developed urban areas due to the highly reflective nature of exterior building materials and automobiles, among other sources.

The proposed Project will be located within the public rights-of-way along North and South Market Street, East Manchester Boulevard, and South Prairie Avenue; the potential locations for the support facilities may include public and/or private properties. The rights-of-way are developed with paved surfaces and include pedestrian sidewalks with assorted street furniture, vegetative planters and medians, parking lanes, and turning and travel lanes. The area currently contributes limited sources of glare in the proposed Project's vicinity. Reflective surfaces in the vicinity include automobiles traveling and parked on streets, as well as exterior building windows and façades. Excessive glare not only restricts visibility, but also increases the ambient heat reflectivity in a given area. The exterior lighting located on the façade of the APM stations and along the alignment would be shielded for glare.

The proposed Project's architectural materials may include highly polished and reflective materials, including metal and glass; as a result, the proposed Project could have the effect of increasing reflected light, thereby creating glare. Therefore, this topic will be further evaluated in an EIR.

2.2 Agriculture and Forestry Resources

Would the proposed Project:

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to nonagricultural use?

No Impact.

Significant impacts would occur if the proposed Project were to adversely impact Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. The location of the proposed Project is surrounded by commercial, commercial recreation, single- and multifamily residential, and entertainment uses (within the Hollywood Park Specific Plan).

According to the California Department of Conservation's Farmland Mapping and Monitoring Program, the location of the proposed Project has not been previously mapped.[5] However, the City is highly developed and entirely urbanized; no portion of the City, including the proposed Project location and surrounding development, is currently in agricultural use. As such, no portion of the proposed Project's location would qualify for designation as Prime Farmland, Farmland of Statewide Importance, Unique Farmland, or Farmland of Local Importance. No impacts would occur, and no further evaluation of this topic area is required in an EIR.

b. Conflict with existing zoning for agricultural use, or Williamson Act contract?

No Impact.

Significant impacts would occur if the proposed Project were to conflict with existing agricultural zoning or a Williamson Act contract.

As previously noted, the proposed Project's location and surrounding development are not used for agricultural, nor can they support agricultural use. The area is not subject to a Williamson Act contract. No impacts would occur, and no further evaluation of this topic area is required in an EIR.

c. Involve other changes in the existing environment, which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?

No Impact.

Significant impacts would occur if the proposed Project were to result in the conversion of existing Farmland to nonagricultural use.

The proposed Project's locations are not designated, zoned, or in agricultural use. No impacts would occur, and no further evaluation of this topic area is required in an EIR.

5 California Department of Conservation (CDC), Farmland Mapping and Monitoring Program, *California Important Farmland Finder,* accessed June 12, 2018, https://maps.conservation.ca.gov/DLRP/CIFF/.

d. Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

No Impact.

Significant impacts would occur if the proposed Project were to result in adverse impacts to forest or timberland.

The proposed Project's location is not designated or zoned for forest or timberland. No timber operations exist in the area. Additionally, the area is highly urbanized area and is not within any forestland area. No impacts would occur, and no further evaluation of this topic area is required in an EIR.

e. Would the project result in the loss of forest land or conversion of forest land to non-forest use?

No Impact.

As previously noted, the proposed Project's location does not contain any farmland or forestland. Development of the proposed Project would occur in an existing highly urbanized and developed area. No impacts would occur, and no further evaluation of this topic area is required in an EIR.

2.3 Air Quality

Would the proposed Project:

a. Conflict with or obstruct implementation of the applicable air quality plan?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to result in the obstruction or implementation of an adopted, applicable air quality plan.

The Project is in the South Coast Air Basin (Basin). Within the Basin, the SCAQMD is required, pursuant to the federal Clean Air Act (CAA), to reduce emissions of criteria pollutants for which the Basin is in nonattainment. The SCAQMD's *2016 Air Quality Management Plan* (AQMP) contains a comprehensive list of pollution control strategies directed at reducing emissions and achieving AAQS.[6]

6 South Coast Air Quality Management District (SCAQMD), *Final 2016 Air Quality Management Plan* (March 2017), http://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2016-air-quality-management-plan/final-2016-aqmp/final2016aqmp.pdf?sfvrsn=15.

According to the SCAQMD, there are two key indicators of consistency with the applicable air quality plan: whether the proposed Project would (1) result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new violations, or delay timely attainment of air quality standards or the interim emission reductions specified in the air quality plan; and (2) would cause the area to exceed the forecasted growth incorporated into the applicable air quality plan. Construction and operation of the proposed Project are evaluated in the context of both of these indicators.[7]

Construction emissions during the construction of the APM system itself, as well as associated stations, MSF, and ITF facilities, have the potential to adversely affect the implementation of the AQMP. Ongoing operations (particularly at the MSF facility because the APM will be powered by electrical guideways) also have the potential for adverse effects on AQMP implementation. Thus, additional analysis, including quantification of construction and operational emissions, is required to determine whether the proposed Project would have the potential to conflict with the SCAQMD's current AQMP and will be further addressed in an EIR.

b. Violate any air quality standard or contribute substantially to an existing or projected air quality violation?

Potentially Significant Impact.

A project could result in significant air quality impact under this criterion if project-related emissions were to exceed federal, state, or regional standards or thresholds, or substantially contribute to an existing or projected air quality violation.

The SCAQMD has developed specific CEQA air quality significance thresholds to assess potential impacts that may result from construction and operation of projects.[8] The proposed Project is located within the South Coast Air Basin (SCAB) where these thresholds apply. Daily emissions of volatile organic compounds (VOC), nitrogen oxides (NOX), carbon monoxide (CO), sulfur oxides (SOX), and respirable particulate matter less than 10 microns in diameter (PM10) and fine particulate matter less than 2.5 microns in diameter (PM2.5) should be quantified and assessed on both regional and localized scales, in accordance with SCAQMD methodology.

As stated above, the proposed Project's construction and operational activities would potentially generate pollutant emissions that could contribute to an existing or projected air quality violation. Specifically, construction of the APM system and associated stations, MSF, and ITF facilities would lead to emissions from construction equipment that could contribute to a violation of air quality standards adopted for the

7 SCAQMD, *CEQA Air Quality Handbook* (November 1993).
8 SCAQMD, *CEQA Air Quality Handbook*.

SCAB. Ongoing operations that would occur upon the proposed Project's implementation could also lead to emissions that could contribute to air quality violations, particularly as a result of activities at the MSF and ITF facilities. Further analysis of the proposed Project's emissions, including quantification of construction and operational emissions and comparison to SCAQMD-recommended thresholds, is required to determine whether the proposed Project has the potential to violate air quality standards. This topic will be further analyzed in an EIR.

c. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions, which exceed quantitative thresholds for ozone precursors)?

Potentially Significant Impact.

Significant impacts would occur if the proposed Project were to result in a cumulatively considerable net increase of any criteria pollutant for which the region is nonattainment under applicable federal or State air quality standards.

The United States Environmental Protection Agency (USEPA) is responsible for the implementation of portions of the 1970 CAA,[9] which regulates certain stationary and mobile sources of air emissions and other requirements. USEPA sets national vehicle and stationary source emission standards; oversees the approval of all State Implementation Plans;[10] provides research and guidance for air pollution programs; and sets National Ambient Air Quality Standards (NAAQS).[11] NAAQS for the seven common air pollutants, Ozone (O3), carbon monoxide (CO), nitrogen dioxide (NO2), sulfur dioxide (SO2), particulate matter (PM10), fine particulate matter (PM2.5), and lead (Pb), are identified in the CAA. **Table 1-1: Common Sources of Health Effects for Criteria Air Pollutants** details these pollutants.

The California Air Resources Board (CARB) is the state agency responsible for setting the California Ambient Air Quality Standards (CAAQS).[12] USEPA and CARB designate air basins as nonattainment areas where air pollution levels exceed federal or state ambient air quality standards, respectively. If standards are met, the area is designated as an attainment area. If there is inadequate or inconclusive data to make a definitive attainment designation, an area is considered unclassified. Federal nonattainment areas are further designated as marginal, moderate, serious, severe, or extreme as a function of deviation from

9 US Environmental Protection Agency, "Clean Air Act Text," https://www.epa.gov/clean-air-act-overview/clean-air-act-text.

10 A State Implementation Plan is a document prepared by each state describing existing air quality conditions and measures that will be followed to attain and maintain National Ambient Air Quality Standards (NAAQS).

11 The NAAQS were set to protect public health, including that of sensitive individuals; for this reason, the standards continue to change as more medical research becomes available regarding the health effects of the criteria pollutants. The primary NAAQS define the air quality considered necessary, with an adequate margin of safety, to protect the public health.

12 CARB, "California Ambient Air Quality Standards (CAAQS)" (August 10, 2017), https://www.arb.ca.gov/research/aaqs/caaqs/caaqs.htm.

standards. The current federal and State attainment designations for the Basin are shown in **Table 1-2: South Coast Air Basin Attainment Status**.

As discussed above, construction and operation of the proposed Project could potentially result in the emission of air pollutants in the Basin, which is currently in nonattainment of federal air quality standards for O3, PM2.5 and Pb, and in nonattainment of state air quality standards for O3, PM10, and PM2.5. Trenching,

Table 1-1
Common Sources of Health Effects for Criteria Air Pollutants

Pollutants	Sources	Primary Effects
Ozone (O3)	Formed when volatile organic compounds (VOC) and oxides of nitrogen (NOx) react in the presence ofS sunlight; VOC sources include any source that burns fuels (e.g., gasoline, natural gas, wood, oil), solvents, petroleum processing, and storage and pesticides	Breathing difficulties, lung tissue damage, damage to rubber and some plastics
Respirable particulate matter (PM10)	Road dust, windblown dust (agriculture), construction and fireplaces; also formed from other pollutants (e.g., acid rain, NOx, oxides of sulfur [SOx], organics) and from incomplete combustion of any fuel	Increased respiratory disease, lung damage, cancer, premature death, reduced visibility, surface soiling
Fine particulate matter (PM2.5)	Fuel combustion in motor vehicles, equipment and industrial sources, residential and agricultural burning; also formed from reaction of other pollutants (e.g., acid rain, NOx, SOx, organics)	Increases respiratory disease, lung damage, cancer, premature death, reduced visibility, surface soiling
Carbon monoxide (CO)	Any source that burns fuel, such as automobiles, trucks, heavy construction equipment, farming equipment, and residential heating	Chest pain in heart patients, headaches, reduced mental alertness
Nitrogen dioxide (NO2)	See *carbon monoxide*	Lung irritation and damage
Lead (Pb)	Metal smelters, resource recovery, leaded gasoline, deterioration of lead paint	Learning disabilities, brain and kidney damage
Sulfur dioxide (SO2)	Coal- or oil-burning power plants and industries, refineries, diesel engines	Increases lung disease and breathing problems for asthmatics; reacts in the atmosphere to form acid rain

Table 1-2
South Coast Air Basin Attainment Status

Pollutant	State Status	National Status
Ozone (O3)	Nonattainment	Nonattainment
Carbon monoxide (CO)	Attainment	Unclassified/Attainment
Nitrogen dioxide (NO2)	Attainment	Unclassified/Attainment
Sulfur dioxide (SO2)	Attainment	Attainment
Lead (Pb)	Attainment	Nonattainment
Suspended particulate matter (PM10)	Nonattainment	Attainment
Fine particulate matter (PM2.5)	Nonattainment	Nonattainment

Sources: CARB, "Area Designations Maps/State and National," http://www.arb.ca.gov/desig/adm/adm.htm (last reviewed October 18, 2017).

paving, and other activities associated with the construction of the APM apparatus itself, as well as the APM's associated stations, MSF, and ITF, have the potential to emit diesel particulates typical of construction activity. Ongoing operations at the MSF and ITF sites also have the potential to increase the emission of the specific pollutants mentioned above, including those for which the Basin is already in nonattainment of federal and state air quality standards. Therefore, implementation of the proposed Project could potentially contribute to air quality impacts that may also be cumulatively considerable with other related projects. As such, this issue will be further addressed in an EIR.

d. Expose sensitive receptors to substantial pollutant concentrations?

Potentially Significant Impact.

A significant impact would occur if construction or operation of the proposed Project were to result in exposure of sensitive receptors to concentrations of air pollutants above the AAQS. The proposed Project's construction activities and operations, as described above under other thresholds, may increase air emissions above current levels.

Sensitive receptors are defined as schools, residential uses, hospitals, resident care facilities, daycare centers, or other facilities that may house individuals with health conditions that would be adversely impacted by changes in air quality. The nearest sensitive receptors to the Project are residences along East Manchester Boulevard, and residences, churches, and an elementary school along South Prairie Avenue.

Although the APM will be powered by overhead electricity, the potential exists for impacts to sensitive receptors during the proposed Project's construction, as well as during ongoing operations, particularly at the MSF and ITF facilities. This would be as a result of typical construction practices such as grading and excavation, as well as ongoing operations at the MSF and ITF sites.

Impacts are potentially significant, and this topic will be further addressed in an EIR. The analysis will include a Health Risk Assessment (HRA) to consider impacts associated with exposures to toxic air contaminants during both construction and operation.

e. Create objectionable odors affecting a substantial number of people?

Less than Significant Impact.

Impacts would be considered potentially significant if the proposed Project were to result in the creation of objectionable odors with the potential to affect substantial numbers of people, or if construction or operation of the proposed Project would result in the creation of nuisance odors that would be noxious to a substantial number of people as codified in SCAQMD Rule 402 (Nuisance).[13]

Odors are typically associated with industrial projects involving the use of chemicals, solvents, petroleum products, and other strong-smelling elements used in manufacturing processes, as well as sewage treatment facilities and landfills.

During construction, activities associated with the operation of equipment, the application of asphalt, and the application of architectural coatings and other interior and exterior finishes may produce discernible odors typical of most construction sites. As construction-related emissions dissipate from the area, odors associated with these emissions would also decrease, dilute, and become unnoticeable.

According to the SCAQMD *CEQA Air Quality Handbook,* land uses that are associated with odor complaints include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting refineries, landfills, dairies, and fiberglass molding.[14] The proposed Project would not include any of these odor-producing uses. Odors associated with the proposed Project's operation would be limited to on-site waste generation and disposal, as well as cleaning operations at the MSF. All trash

13 SCAQMD, "Rule 402: Nuisance" (adopted May 7, 1976), http://www.aqmd.gov/docs/default-source/rule-book/rule-iv/rule-402.pdf.

14 SCAQMD, *Air Quality Handbook*, accessed June 2018, http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook.

receptacles would be covered and properly maintained in a manner as to minimize odors, as required by City and Los Angeles County Health Department regulations and be emptied on a regular basis.[15]

Implementation of the Project would not generate objectionable odors affecting a substantial number of people. Impacts related to odors would be less than significant, and no further analysis is required in an EIR.

2.4 Biological Resources

The discussion provided in this section is based on information provided by Meridian Consultants (see **Appendix A: Tree Inventory Memorandum** and **Appendix C: Biological Survey Memorandum**).

Would the proposed Project:

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?

Less than Significant Impact.

A significant impact would occur if the proposed Project were to lead to adverse effects on any species identified as a candidate, sensitive, or special status species according to any adopted plan, policy, or regulation. This includes effects caused by habitat modification.

The proposed Project is located entirely within a highly developed urban area characterized by commercial and residential uses. The proposed Project's location consists of paved and active streets with various landscaping, as well as developed or previously developed parcels where the MSF and ITF facilities may be located. The existing level of development in the area and in the surrounding area is not compatible with supporting wildlife and natural plant communities.

A biological assessment for the proposed Project's location was completed to determine the presence or absence of any sensitive biological resources (see **Appendix C**). As part of the biological assessment, the California Department of Fish and Wildlife (CDFW) California Natural Diversity Database (CNDDB)[16] was used to conduct a 9-quadrant survey**.** In the Inglewood quadrant, 29 species were previously identified as seen in **Table 2-1: CNDDB Inglewood Quadrant Species List**.

15 County of Los Angeles Department of Public Health, "Solid Waste Management Program," accessed June 2018, http://publichealth.lacounty.gov/eh/EP/solid_waste/solid_waste_main.htm.

16 California Department of Fish and Wildlife (CDFW), California Natural Diversity Database (CNDDB), "Maps and Data," accessed April 2018, https://www.wildlife.ca.gov/Data/CNDDB.

There were five species listed on the CNNDB that have been observed within the proposed Project location and surrounding area: crotch bumble bee, pocketed free-tailed bat, southern tarplant, spreading navarretia, and prostrate vernal pool navarretia. Fourteen of the species listed in **Table 2-1** are found no closer than 2 miles from the proposed Project.

The sensitive species listed in quadrants adjacent to the proposed Project, but not with the proposed Project's footprint as noted above, only occur in specific habitats that do not occur within the Inglewood quadrant; examples are the Santa Monica Mountains to the northwest and the coastal regions to the west. The area is also completely developed and paved with no natural plant communities, excluding street trees along portions of the alignment that could potentially provide habitat for nesting birds (see **Appendix C**).

None of the species listed in the CNDDB was found to be present within or surrounding the proposed Project (see **Appendix C**) during the field survey on May 23, 2018.

The only plant species on site were landscaping as well as weeds and ruderal vegetation. A complete list of the tree species that exist along the APM alignment can be seen in **Appendix A**. Of these species, none listed is a candidate, sensitive, or special-status species.

The proposed Project is not located in a significant ecological area defined in the County of Los Angeles (the "County") General Plan.[17] Moreover, the City's General Plan states that no forest resources, wildlife, fisheries, shorelines, or agricultural land are present in the City.[18]

Impacts would be less than significant, and no further evaluation of this topic area is required in an EIR.

17 Los Angeles County, Department of Regional Planning (LA County DRP), *General Plan 2035,* "General Plan Update Program—Interactive Map (GP-NET)," accessed June 2018, http://planning.lacounty.gov/gpnet.

Notes: NE = Northeast; S = South; SE = Southeast; SW = Southwest; Unprocessed = Data for species has not been uploaded to CNDDB for mapping—cannot determine distance.

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?

No Impact.

Significant impacts would occur if the proposed Project were to cause adverse effects on any riparian habitat or other sensitive natural community identified in an adopted plans, policies or regulations.

The proposed Project is located in an area that consists of paved rights-of-way, as well as developed or previously developed urban parcels adjacent to the proposed alignment. As such, no riparian habitat or sensitive natural community is located in the area.[19] In addition, the Project is not located in a significant ecological area defined in the County's General Plan[20] or the City's General Plan.[21]

No impacts would occur, and no further evaluation of this topic area is required in an EIR.

c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including but not limited to marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

No Impact.

A significant impact would occur if the proposed Project were to adversely affect federally protected wetlands under Section 404 of the Clean Water Act.

The proposed Project is not in proximity to, nor does it contain, wetland habitat or a blue-line stream that is subject to the jurisdiction of the US Army Corps of Engineers or the CDFW. The National Wetlands Mapper does not show any federally protected streams, wetlands, or other water bodies, or any riparian habitat on site or adjacent to the proposed Project.[22]

Because the proposed Project would not have any effect on federally protected wetlands, and would not result in any removal, filling, hydrological interruption, or other means of disruption to a watercourse, no impact would occur, and no further study is required.

19 CDFW, CNDDB, "Maps and Data."

21 City of Inglewood, *General Plan*, "Conservation Element."
22 US Fish and Wildlife Service (USFWS), *National Wetlands Inventory,* "National Wetlands Mapper," accessed June 2018, https://www.fws.gov/wetlands/data/mapper.html.

d. Interfere substantially with the movement of any native resident or migratory fish, nesting birds, or other wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less than Significant Impact.

The proposed Project would have significant impacts if it interfered with the movement of any wildlife species or if it adversely impacted wildlife corridors or nursery sites.

The proposed Project is located entirely within the City in a highly developed urban area characterized by commercial and residential uses. The proposed Project's location consists of paved and active streets with various landscaping including street trees, as well as developed or previously developed parcels adjacent to the alignment. Therefore, current development on the site and in the surrounding area is not compatible with supporting natural plant communities.

The City of Inglewood has an adopted tree preservation ordinance.[23] The intent of these regulations is to protect and preserve significant trees and control the reshaping, removal or relocation of those trees that provide benefits for the neighborhood or the entire community.[24] A total of 354 trees located within and surrounding the proposed Project have the potential to be impacted by construction or removed altogether (see **Appendix A**). Of those, 230 meet IMC requirements to be considered a protected tree. For all of the protected trees that would be impacted or removed, permits would be filed with the City and the regulations set forth in the IMC would be followed, reducing impacts to less than significant.[25]

The street trees within the footprint of the proposed Project (see **Appendix A**) have the potential to be utilized by migrating bird species. Nesting birds are protected under the federal Migratory Bird Treaty Act (MBTA)[26] and the California Fish and Game Code. Fully protected birds and migratory nongame birds as designated by the MBTA, including raptors, or nests or eggs of any bird, except as otherwise provided by the Fish and Game Code, may not be taken, possessed, or destroyed at any time. As such, the trees that would be removed could have potentially significant, albeit temporary, impacts on nesting birds. Therefore, this topic area will be further evaluated in an EIR.

23 IMC, ch. 12, Planning and Zoning, art. 32, Tree Preservation, sec. 12-116, Permits Required, accessed June 2018, http://www.qcode.us/codes/inglewood/?view=desktop&topic=12-32-12_116/.

24 IMC, ch. 12, Planning and Zoning, art. 32, Tree Preservation, sec. 12-110, Purpose and Intent, accessed June 2018, http://www.qcode.us/codes/inglewood/?view=desktop&topic=12-32-12_110.

25 IMC, ch. 12, Planning and Zoning, art. 32, Tree Protection, sec. 12-112, Definitions.

26 USFWS, Congressional and Legislative Affairs, "Migratory Bird Treaty Act of 1918," accessed June 2018, https://www.fws.gov/laws/lawsdigest/migtrea.html.

No wildlife mitigation corridors are found near the Project.[27] Implementation of the proposed Project would not interfere with the movement of native resident or migratory fish species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites.

e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Potentially Significant Impact.

Significant impacts would occur if the proposed Project were to conflict with any adopted local policies or ordinances that protect biological resources.

As described above, the City has an adopted tree preservation ordinance.[28] The intent of this regulation is to protect and preserve significant trees and control the reshaping, removal or relocation of those trees that provide benefits for the neighborhood or the entire community.[29] Street trees located within and surrounding the footprint of the proposed Project have the potential to be impacted from construction or removed. Approximately 230 trees meet IMC requirements to be considered a protected tree that potentially would be impacted or removed' for any impacted trees, the City would abide by its ordinance and the specified regulatory requirements would be followed, reducing impacts to less than significant.

f. Conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan?

No Impact.

Significant impacts would occur if the proposed Project were to conflict with a Habitat Conservation Plan (HCP), Natural Community Conservation Plan (NCCP), or another approved plan designed to conserve habitat.

No adopted HCP, NCCP, or similar plan applies to the proposed Project's area.[30] Consequently, implementation of the proposed Project would not conflict with the provisions of any adopted conservation plan and therefore no impacts would occur.

2.5 Cultural Resources

The discussion provided in this section is based on information provided by Historic Resources Group (HRG) (see **Appendix B: Preliminary Historic Resources Investigation Memorandum)** and PaleoWest Archaeology (see **Appendix D: Cultural Resource Investigation Memorandum**).

Would the proposed Project:

a. Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?

Potentially Significant Impact.

A significant impact could occur if the proposed Project were to disturb historic resources that presently exist within the proposed Project location.

Section 15064.5 of the CEQA Guidelines generally defines a historic resource as a resource that is (1) listed in, or determined to be eligible for listing in the California Register of Historical Resources (California Register); (2) included in a local register of historical resources (pursuant to Section 5020.1(k) of the Public Resources Code [PRC]); or (3) identified as significant in an historical resources survey (meeting the criteria in Section 5024.1(g) of the PRC) in addition to maintaining a sufficient level of physical integrity. Further, any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record.

Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register. The California Register automatically includes all properties listed in the National Register of Historic Places (National Register) and those formally determined to be eligible for listing in the National Register.

The City does not currently have a historic preservation ordinance or program in effect; however, the City published a historic resources study in 2000[31] that identified potentially eligible historic properties in downtown Inglewood, an area bounded by La Brea Avenue to the west, Locust Street to the east, Florence Avenue to the north, and Hillcrest Boulevard to the south. Because potentially eligible historic properties

31 City of Inglewood, *Main Street Inglewood: Historic Resources Survey* (2000), accessed June 11, 2018, https://www.laconservancy.org/sites/default/files/community_documents/Main%20Street%20Inglewood%20Historic%20Resources%20Survey%2C%202000.pdf.

are located adjacent to the proposed alignment along North Market Street and East and West Manchester Boulevard, impacts are potentially significant and will be analyzed in detail in an EIR.

A small number of designated historic resources and resources identified as historic through previous investigation are extant in locations adjacent to the proposed alignment of the proposed Project. Further study may yield additional properties eligible for historic designation within or in the immediate vicinity of the proposed Project.

Six previously recorded built-environment cultural resources were identified within a half-mile radius of the proposed Project. One of these resources, 19-189809, is a multistory commercial building that is located immediately adjacent to the proposed Project area and may be directly or indirectly impacted by the proposed Project. In addition, five buildings/structures, located immediately adjacent to the proposed Project area, are listed on the Directory of Historic Properties Data File (see **Appendix D**).

Two properties located adjacent to the APM alignment have been listed in the National Register of Historic Places. These are the Forum at 3900 W. Manchester Boulevard and the former Fox Theater at 115 N. Market Street in Downtown Inglewood. Seven additional properties were also previously identified.

All of these properties are situated along the proposed alignment. No previously identified historic resources were discovered on any of the proposed MSF or ITF sites. Additional potential historic resources may be identified as a result of the environmental review process for the proposed Project, either along the alignment or on the proposed MSF or ITF sites. Conversely, some previously identified properties may have since been altered such that they are found to be no longer eligible for historic listing.

As currently described, the guideway, support structure, and stations for the APM will be contained within the public rights-of-way, and construction of the various structures is not anticipated to require the demolition or alteration any existing buildings or structures immediately adjacent or in the immediate vicinity of the proposed Project. Because these elements will be contained within the public rights-of-way, it is not anticipated that their construction will result in any direct impacts to historic resources. Construction of the APM guideway, support structure, and stations does, however, have the potential for indirect impacts to identified historic resources located immediately adjacent to the proposed alignment. These structures could affect the setting in which the identified resources are located, which could in turn affect those attributes that contribute to the historic character of these resources.

As mentioned above, the proposed Project includes an MSF and ITF locations along the proposed alignment that are under consideration. Depending on the final location, construction of the MSF and ITFs may require demolition of existing improvements at those locations. Historic resources do not appear to be present at these sites. Pending further analysis to determine if any historic resources are located on

the proposed locations, construction of the MSF and ITFs has the potential to result in direct or indirect impacts to previously unidentified historic resources.

The proposed Project has the potential to result in indirect impacts to previously identified historic resources. Pending further analysis to determine if historic resources not previously identified are present, the proposed Project also has limited potential to result in direct impacts to historic resources.

This topic will be further evaluated in an EIR.

b. Cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

Less than Significant Impact.

A significant impact would occur if grading or excavation activities associated with the proposed Project were to disturb archaeological resources that presently exist within the proposed Project's location.

Archaeological resources include material evidence of past human life and culture of previous ages. Section 15064.5 of the CEQA Guidelines generally defines a historic or archeological resource as a resource that is (1) listed in, or determined to be eligible for listing in the California Register of Historical Resources (California Register); (2) included in a local register of historical resources (pursuant to Section 5020.1(k) of the PRC); or (3) identified as significant in an historical resources survey (meeting the criteria in Section 5024.1(g) of the PRC) in addition to maintaining a sufficient level of physical integrity.

A literature review and records search was conducted (see **Appendix D**) at the South Central Coastal Information Center housed at California State University, Fullerton. The records search included the proposed Project's area (half-mile radius). The records search indicated that no prehistoric or historical archaeological resources have been recorded within the area or within a half-mile radius of the area.

The records search indicated that at least 21 previous studies have been conducted within a half-mile of the proposed Project's area since 1984; none of these studies appears to include the proposed Project's area. As such, no significant archeological resources have been documented in the area.

The City would be required to comply with existing regulations, including PRC Section 21083.2, which specifies the protocol if archaeological resources are discovered during any excavation, grading, or construction activities.

Potential archeological impacts would be less than significant, and no further evaluation of this topic area is required.

c. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less than Significant Impact.

A significant impact would occur if grading or excavation activities associated with the proposed Project were to disturb paleontological resources or geologic features that presently exist within the proposed Project's location.

The area under consideration for the proposed Project has been previously graded and is not known to contain any unique paleontological resource or site or any unique geologic feature. Construction of the proposed Project would require extensive construction of foundations and columns, as well as other ground-disturbing activities. However, due to the elevated nature of the APM alignment, impacts on a unique paleontological resource or site or unique geologic feature would be minimized. Further, if artifacts are unearthed during construction activities, they will be documented and preserved in the same manner as archaeological resources as required by PRC Section 21083.2.

Impacts would be less than significant, and no further evaluation of this topic is required.

d. Disturb any human remains, including those interred outside of formal cemeteries?

Less than Significant Impact.

A significant adverse effect would occur if grading or excavation activities associated with the proposed Project were to disturb previously interred human remains.

Construction of the proposed Project would require extensive construction of foundations and columns, as well as other ground-disturbing activities. Thus, the potential to disturb human remains exists. However, potential impacts would be minimized because any remains that would be discovered during excavation would be subject to California Health and Safety Code Section 7050.5 and PRC Section 5097.98.

Impacts would therefore be less than significant, and no further evaluation of this topic is required.

2.6 Geology and Soils

The discussion provided in this section is based on information provided by Geosyntec Consultants (Geosyntec) in **Appendix E: Geology and Soils Technical Memorandum**.

Would the proposed Project:

a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault?

Potentially Significant Impact.

Significant impacts would occur if the proposed Project were to expose people or structures to risks associated with known earthquake faults.

Fault rupture is the surface displacement that occurs along the surface of a fault during an earthquake. The California Geological Survey (CGS) designates faults as active, potentially active, or inactive. The Alquist-Priolo Earthquake Fault Zoning Act establishes standards regulating development adjacent to active faults and areas designated as Earthquake Fault Zones. No active or potentially active faults delineated as Alquist-Priolo Earthquake Fault Zones are known to be present beneath the proposed Project.

As mentioned above, the proposed Project is not located within an Alquist-Priolo Earthquake Fault Zone.[32] Although no site-specific investigation has been performed, there have been investigations in the area, and none of them has identified a fault with the potential for surface rupture. The potential for surface rupture at the site due to faulting at the ground surface during the design life of the proposed Project is considered low. However, the potential exists for nearby faults to result in a seismic event that could result in adverse substantial impacts to people or structures constructed and operated by the proposed Project.

All components of the proposed Project would be designed and constructed in accordance with the requirements of the California Building Code regarding seismic standards as approved by the Inglewood Building Safety Division, and a geotechnical investigation will be undertaken to ensure that no Project components are astride previously unidentified faults.

To address potential significant impacts that may result from seismic shaking from both known and unknown faults that could affect the proposed Project, a geotechnical investigation will be performed to address geological conditions within the alignment the for the locations of the support facilities of the

32 CDC, California Geological Survey (CGS), "Release of Official Maps of Revised Earthquake Fault Zones" (June 15, 20170, http://www.conservation.ca.gov/cgs/rghm/ap/Pages/official_release.aspx.

proposed Project. The geotechnical study will identify and confirm the presence of known active faults with the potential for surface rupture to ensure that Project components are designed to comply with seismic safety standards set forth in the California Building Code, as adopted by the City of Inglewood Building Safety Division.

As the proposed Project has the potential to expose people and structure to significant impacts associated with known or unknown faults, the EIR will further evaluate this topic and mitigation, if necessary, will be identified.

ii. Strong seismic ground shaking?

Potentially Significant Impact.

Significant impacts would occur if the proposed Project were to expose people or structures to strong seismic ground shaking.

The intensity of ground shaking depends primarily on an earthquake's magnitude, the distance from the source, and the site response characteristics. Although the proposed Project could be subjected to strong ground shaking in the event of an earthquake, this hazard is common throughout Southern California. The effects of ground shaking would be addressed by proper site-specific engineering design and construction in conformance with State and local building codes and engineering practices.

Prior to the issuance of building permits, a site-specific geotechnical study would be prepared by a licensed engineer that would specifically address seismic risk to the proposed Project. This study would ensure that the structural integrity of the APM and associated infrastructure would be maintained during a peak seismic event. Further, the design and construction of the proposed Project would conform to California Building Code seismic standards as reviewed and approved by the City of Inglewood Building Safety Division.

To address potential significant impacts that may result from strong seismic shaking that could affect the proposed Project, a geotechnical investigation will be performed to address geological conditions within the alignment the for the locations of the support facilities of the proposed Project. The geotechnical study will identify the extent of ground shaking that may occur so that Project components are designed to comply with seismic safety standards set forth in the California Building Code, as adopted by the City of Inglewood Building Safety Division.

As the proposed Project has the potential to expose people and structure to significant impacts associated with known or unknown faults, the EIR will further evaluate this topic and mitigation, if necessary, will be identified.

iii. Seismic-related ground failure, including liquefaction?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were to expose people or structure to the effects of liquefaction.

Liquefaction is a seismic phenomenon in which loose, saturated, granular soils behave similarly to a fluid when subjected to high-intensity ground shaking. Liquefaction occurs when three general conditions exist: shallow groundwater; low-density, fine, clean sandy soils; and strong ground motion. The effects of liquefaction can include sand boils, settlement, and bearing-capacity failures below structural foundations.

According to the CGS, the location of the proposed Project is not within an area susceptible to liquefaction.[33] Based on previous investigations and available geologic data, liquefaction zones are not mapped or known to exist beneath the proposed Project.

A site-specific geotechnical study would be performed by a licensed engineer that would outline structural design elements to ensure structural integrity is maintained during seismic events. In addition, the design and construction of the proposed Project would conform to California Building Code requirements related to seismic standards, as approved by the City of Inglewood Building Safety Division.

Impacts related to seismic related liquefaction would be less than significant, and no further analysis is required.

iv. Landslides

No Impact.

Significant impacts would occur if the proposed Project were to expose people or structures to adverse impacts associated with landslides.

The proposed Project is located on level terrain. Based on the topographic setting and a review of previous geotechnical evaluations in the proposed Project's vicinity, no historical landslides are known to have occurred that could potentially impact the proposed Project.

33 CDC, CGS, *Earthquake Zones of Required Investigation,* interactive map, accessed June 2018, https://maps.conservation.ca.gov/cgs/EQZApp/app/.

According to the CGS,[34] the proposed Project is not located within an Earthquake-Induced Landslide Zone as shown on the Earthquake Zones of Required Investigation, Inglewood Quadrangle map. The probability of seismically induced landslides occurring within the area of the proposed Project is not significant due to the general lack of elevation difference in slope geometry across or adjacent to the site. In addition, development of the Project would not substantially alter the existing topography of the area.

As such, no impacts related to slope instability or landslides would occur, and no further analysis is required.

b. Result in substantial soil erosion or the loss of topsoil?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were to result in substantial soil erosion or the loss of topsoil.

The location of the proposed Project has been substantially developed with impermeable surfaces with only small areas of vegetative planters, and no areas of the site are susceptible to erosion under existing conditions. The area is highly urbanized and developed; the land is relatively flat and contains minimal rises or changes in elevation. No major slopes or bluffs are on or adjacent to the site. Although development of the proposed Project has the potential to result in the erosion of soils during construction activities, erosion would be reduced through implementation of SCAQMD Rule 403—Fugitive Dust to minimize wind- and waterborne erosion.

The proposed Project's construction would temporarily expose on-site soils to surface water runoff. Compliance with construction-related best management practices (BMPs), as detailed in a Storm Water Pollution Prevention Plan (SWPPP), would control and minimize erosion and siltation. Appropriate erosion-control BMPs may include but are not limited to silt fencing, fiber rolls, sand bag barriers, gravel bag berms, stabilized construction site entrances/exits, and any other practices laid out in the City's *Low-Impact Development (LID) Standards Manual*.[35] Following construction activities, treated runoff would be directed into existing storm drains that receive surface water runoff under existing conditions, and runoff would not encounter unprotected soils.

Because the proposed Project is greater than 1 acre in size, the proposed Project will implement a SWPPP in accordance with the National Pollutant Discharge Elimination System (NPDES) General Permit for Discharges of Storm Water Associated with Construction Activity and Land Disturbance Activities. The site-

34 CDC, CGS, *Earthquake Zones of Required Investigation.*

35 IMC, ch. 10, Public Works, art. 16, LID Standards Manual, incorporated by reference.

specific SWPPP would be prepared prior to earthwork activities and would be implemented during the proposed Project's construction. The SWPPP would include BMPs and erosion control measures to prevent pollution in stormwater discharge. Typical BMPs that could be used during construction include good housekeeping practices (e.g., street sweeping; proper waste disposal; vehicle and equipment maintenance; concrete washout area; materials storage; minimization of hazardous materials; proper handling and storage of hazardous materials; etc.) and erosion- and sediment-control measures (e.g., silt fences, fiber rolls, gravel bags, stormwater inlet protection, soil stabilization measures, etc.). The SWPPP would be subject to review and approval by the City.

The proposed Project's construction activities would comply with the City's grading permit regulations, which require the implementation of grading and dust control measures, including a wet-weather erosion control plan if construction occurs during the rainy season. Through compliance with these existing regulations, the proposed Project would not result in any significant impacts related to soil erosion during the construction phase.

During the proposed Project's operational phase, the proposed Project's surface areas would be developed with impervious surfaces, and all stormwater flows would be directed to storm drainage features and would not come into contact with bare soil surfaces. In addition, no native topsoil is present on the site because it has been previously disturbed and developed. Therefore, soil erosion impacts associated with construction and operation of the proposed Project would not occur, and soil erosion impacts would be less than significant. No further evaluation is required.

c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the Project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were based on unstable soils that could result in landslides, lateral spreading, subsidence, liquefaction, or soil collapse.

Subsidence and ground collapse generally occur in areas with active groundwater withdrawal or petroleum production. The extraction of groundwater or petroleum from sedimentary source rocks can cause the permanent collapse of the pore space previously occupied by the removed fluid. The proposed Project does not involve the creation of new groundwater wells.

Subsidence and ground collapse can also occur during dewatering activities. However, dewatering is not necessary for the proposed Project. US Geological Survey groundwater measurements indicate that nearby groundwater is at least 85 feet below grade. Given that the proposed Project does not include

substantial excavation or subterranean structures, groundwater would not be encountered during construction. The proposed Project's design features and construction would comply with all applicable building codes and standards.

With adherence to existing regulations, impacts related to geological failure—including lateral spreading, off-site landslides, liquefaction, or collapse—would be less than significant. No further evaluation is required.

d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Less than Significant Impact.

Significant impacts could occur if the proposed Project were located on expansive soil that could create substantial risks to life or property.

Expansive soils have relatively high clay mineral content and are usually found in areas where underlying formations contain an abundance of clay minerals. Due to high clay content, expansive soils expand with the addition of water and shrink when dried, which can cause damage to overlying structures. Soils on the within the proposed Project's location may have the potential to shrink and swell due to changes in the moisture content. However, the proposed Project would incorporate standard construction practices to maintain the integrity of the Project's proposed structures. Additionally, the proposed Project's design features and construction would comply with all applicable building codes and standards. With adherence to existing regulations, impacts related to expansive soils would be less than significant. No further study is required.

e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact.

The proposed Project would result in significant impacts if it were located on soils incapable of supporting septic tanks or other alternative systems in the event that the proposed Project were not connected to existing sewer systems.

The proposed Project is located in a highly urbanized area where wastewater infrastructure is currently in place. The proposed Project would connect to the City's existing sewer system and would not require the use of septic tanks or alternative wastewater disposal systems. Thus, the proposed Project would not

result in any impacts related to soils that are incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems.

No impacts would occur, and no further evaluation of this topic area is required.

2.7 Greenhouse Gas Emissions

Would the proposed Project:

a. Would the project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Potentially Significant Impact.

A significant impact would occur if construction or operation of the proposed Project were to generate quantities of greenhouse gas (GHG) emissions that would interfere with state, regional, and local efforts to meet emissions reductions targets in accordance with state regulations. The term "GHG emissions" refers to a group of emissions that are believed to affect global climate conditions.

As a transportation-related project pertaining to travel to and from downtown Inglewood, the Forum, the LASED (including the NFL stadium), and the IBEC, the proposed Project could result in short-term emissions of GHGs during construction. These emissions would generally be associated with the operation of construction equipment that would be utilized to build the APM system, its associated stations, and the MSF and ITF facilities, as well as with the disposal of construction waste and demolition debris.

The potential exists for GHG emissions to occur as a result of ongoing operations at both the MSF and ITFs upon the proposed Project's implementation. However, the fact that the proposed Project is an APM system that would likely serve to reduce vehicle trips in the Project area could result in a net decrease in GHG emissions. Nonetheless, the proposed Project's construction and operational emissions will be quantified and evaluated in an EIR.

b. Would the project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Potentially Significant Impact.

A significant impact would occur if GHG emissions generated by construction or operation of the proposed Project were to be of disproportionate magnitude relative to the growth induced by the proposed Project and consequently conflict with applicable state, regional, and local efforts to meet GHG emissions reduction targets.

Given that the proposed Project would have the potential to emit GHG emissions from both construction and ongoing operations at both the MSF and ITFs, the proposed Project has the potential to conflict with applicable plans, policies, and regulations adopted for the purpose of reducing GHG emissions. These plans, policies, and regulations and the proposed Project's consistency with them will be evaluated in an EIR.

2.8 Hazards and Hazardous Materials

The discussion provided herein is based on information provided by Geosyntec in their evaluation of potential hazards and hazardous materials impacts (see **Appendix F: Hazardous Material Assessment Technical Memorandum** and **Appendix G: Hazard and Hazardous Materials Technical Memorandum**).

Would the Project:

a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less than Significant Impact.

A significant impact could occur if a project were to create a significant hazard through the routine transfer, use, or disposal of hazardous materials.

The transport of hazardous material along these routes is regulated by Caltrans and the California Highway Patrol. Although the proposed Project will primarily be built in existing, paved rights-of-way on City streets, the construction of the MSF and ITFs could necessitate the demolition of existing structures depending on the sites chosen for these activities. Demolition activities have the potential release hazardous materials, such as asbestos containing material, lead-based paint, and other potentially hazardous building materials in some form as part of the building materials, such as polychlorinated biphenyl, mercury, or chlorofluorocarbons found in fluorescent lighting and electrical switches.

During construction activities, excavation of soil impacted with petroleum hydrocarbons or dry-cleaning solvents or other contaminants may be encountered. In addition, common construction materials, such as fuels, paints, cleaners, solvents, and welding materials, would be utilized. However, because the materials listed above will be stored and handled in accordance will all applicable local, State, and federal regulation,—such as implementation of a Risk Management Plan, Hazardous Material Business Plan, and Emergency Response Plan—impacts would be less than significant.

Manchester Boulevard and Prairie Avenue are major roadways along the APM alignment that are designated truck routes.[36] These routes are permitted for use by any vehicle exceeding a maximum gross weight of 3 tons and includes the routine transport of hazardous materials by such trucks. While hazardous materials, with some exceptions, can be transported on all City roadways, Section 31303 of the California Vehicle Code and US Department of Transportation regulations require that hazardous materials be transported by routes with the least overall travel time, ensuring that freeways and major boulevards are primarily used for the transport of hazardous materials. Because hazardous materials are permitted to be transported on existing roads that would be utilized for the proposed Project's construction, impacts would be less than significant.

Construction

Construction activities would involve the use of materials—including fuels, paints, oils, transmission fluids, solvents, and other acidic and alkaline solutions—that would require special handling, transport, and disposal. The NPDES General Construction Permit described above in **Section 2.6: Geology and Soils,** which would include the submittal of a SWPPP, identifies various BMPs and other measures, including proper material storage, prevention, and containment of accidental spills of hazardous materials and wastes, to ensure hazardous materials are contained.

The transport, use, and/or disposal of construction-related hazardous materials would occur in conformance with all applicable local, state, and federal regulations governing activities. Therefore, the proposed Project would not create a significant impact related to routine transport, use, or disposal of hazardous materials during construction. Impacts would be less than significant.

Operation

The types and amounts of hazardous materials that would be used in connection with operation of the proposed Project, including along the APM alignment and at the APM stations, but particularly at the MSF, would be typical of those used in an industrial setting (e.g., cleaning solutions, solvents, pesticides for landscaping, painting supplies, and petroleum products used in normal vehicle fleet operations, coolants, absorbents, oil and fuel products, and machining wastes). All potentially hazardous materials would be used and stored in accordance with applicable federal, state, and local regulations, and the proposed Project would comply with planning and emergency response regulations pertaining to the presence of such materials. The potential for a significant hazardous impact to occur during operation of the proposed Project is considered low. Impacts would be less than significant, and no further evaluation is required.

36 IMC, ch. 3, Motor Vehicles and Traffic, art. 3, Truck Route Regulations, sec. 3-85, Truck Routes Established (1985).

b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less than Significant Impact.

A significant impact would occur if a project were to have a reasonably foreseeable chance to result in a substantial release of hazardous materials into the environment through accident or upset conditions.

As discussed in **Threshold 2.8-a** above, compliance with federal, State, and local laws and regulations relating to transport, storage, disposal, and sale of hazardous materials would minimize any potential for accidental release or upset of hazardous materials.

The proposed Project would involve the construction of an elevated APM within the public rights-of-way along the APM alignment, in addition to both MSF and ITF uses on adjacent parcels. The MSF is expected to use and store bulk quantities of hazardous materials—such as fuel, solvents, oil, transmission fluid, paints and other chemicals—that would have the potential to be released into the environment if not properly handled and stored. However, because the proposed Project would comply with existing regulations governing the storage and handling of such chemicals, and applicable to responding to accidental release of such chemicals, impacts would be less than significant.

c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less than Significant Impact.

A project would have a significant impact to hazards and hazardous materials if (a) the project were to involve a risk of accidental explosion or release of hazardous substances (including but not limited to oil pesticides, chemicals, or radiation); or (b) the project were to involve the creation of any health hazard or potential health hazard. The determination of significance shall be made on a case-by-case basis considering the following factors: (a) the regulatory framework for the health hazard; (b) the probable frequency and severity of consequences to people or property as a result of a potential accidental release or explosion of a hazardous substance; (c) the degree to which project design will reduce the frequency or severity of a potential accidental release or explosion of a hazardous substance; (d) the probable frequency and severity of consequences to people from exposure to the health hazard; and (e) the degree to which project design would reduce the frequency of exposure or severity of consequences to exposure to the health hazard.

The proposed Project is located within 0.25 miles of several existing schools: Kelso Elementary School (809 East Kelso Street), ICEF Inglewood Middle Charter Academy (304 E. Spruce Avenue), ICEF Inglewood

Elementary Charter Academy (434 S. Grevillea Avenue), Dolores Huerta Elementary School (4125 W. 105th Street), Crozier Middle School (120 W. Regent Street), and Inglewood High School (231 W. Grevillea Avenue).

Although hazardous materials have the potential to be transported near these locations, the routes used will be the same designated truck routes described above. In addition, all activities associated with the proposed Project would comply with existing regulations governing the storage and handling of such chemicals as they relate to hazardous materials. Therefore, implementation of the proposed Project would not lead to a greater risk of significant impacts with respect to this threshold.

Construction

As discussed in **Threshold 2.8-a** above, construction of the proposed Project could involve the use of hazardous materials that are typically necessary for construction of mechanical infrastructure and industrial warehouses (e.g., paints, building materials, cleaners, fuel for construction equipment, etc.). Therefore, construction of the proposed Project would involve routine transport, use, and disposal of these types of hazardous materials throughout the duration of construction activities. However, construction activities are temporary by nature, and the transport, use, and disposal of construction-related hazardous materials would occur in conformance with all applicable local, State, and federal regulations governing such activities.

Operation

Operation of the proposed Project would require a modest amount of hazardous materials typical of mechanical infrastructure and an industrial warehouse, including the necessary chemicals and devices associated with mechanical activities. Such products would only be considered hazardous if used inappropriately or if exposed to unfavorable conditions. All potentially hazardous materials transported and/or stored on site for daily upkeep would be contained, stored, and used in accordance with manufacturers' instructions, and handled in compliance with applicable standards and regulations. Impacts would therefore be less than significant.

d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were located on a site that is included on a list of hazardous materials sites.

California Government Code Section 65962.5 requires various state agencies, including but not limited to the Department of Toxic Substances Control and the SWRCB, to compile lists of hazardous waste disposal facilities, unauthorized releases from underground storage tanks, contaminated drinking water wells and solid waste facilities where there is known migration of hazardous waste and submit such information to the Secretary for Environmental Protection on at least an annual basis.[37]

The State of California maintains the Hazardous Waste and Substances Site List, also known as the Cortese List, as a planning document that assists Lead Agencies with CEQA compliance as it relates to hazardous materials and sites. Although portions of the proposed Project's location are known to be on the historical Cortese list, no portions of the site are on the active Cortese list of sites compiled pursuant to Government Code Section 65962.5. Therefore, impacts would be less than significant, and no further evaluation is required.

e. For a project located within an airport land use plan or, where such plan has not been adopted, within two miles of a public airport or public use airport, would the Project result in a safety hazard for people residing or working in the Project area?

No Impact.

A significant impact would occur if the proposed Project were located in an airport land use plan or within 2 miles of a public airport and would result in a safety hazard as a result of that location.

The proposed Project is not subject to the Los Angeles County Airport Land Use Plan, which was adopted in December 1991 and revised in December 2004. Los Angeles International Airport (LAX) is located more than 2 miles southwest of the proposed Project, and the Hawthorne Municipal Airport is located approximately 2.75 miles southeast of the proposed Project.

Airport operation hazards include incompatible land uses or features such as power transmission lines, wildlife hazards, and tall structures that can interfere with aircraft operations. The proposed Project would not construct any buildings or structures to a height that would interfere with or obstruct any local airport operations. Therefore, no impacts would occur to people residing or working in the area of the proposed Project.

37 These lists include but are not limited to the EnviroStor (http://www.envirostor.dtsc.ca.gov/public/) and GeoTracker (http://geotracker.waterboards.ca.gov/) lists maintained by the Department of Toxic Substances Control and State Water Resources Control Board, respectively.

f. For a project within the vicinity of a private airstrip, would the Project result in a safety hazard for people residing or working in the Project area?

No Impact.

Significant impacts would occur if the proposed Project were located near a private airstrip and would pose safety hazards as a result of such a location.

The proposed Project is not located near a private airstrip. As discussed previously, the proposed Project is not subject to the Los Angeles County Airport Land Use Plan, and no private airstrips are located near the proposed Project.

Airport operation hazards include incompatible land uses or features, such as power transmission lines, wildlife hazards, and tall structures, that can interfere with aircraft operations. The Project would not construct any buildings or structures to a height that would interfere with or obstruct any local airport operations, nor is the proposed Project in a height-restricted area. Therefore, no safety hazard impacts would occur to people residing or working in the area of the proposed Project.

g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were to impair the implementation of an adopted emergency response or emergency evacuation plan.

The proposed Project is located largely within public rights-of-way. For this reason, construction activities associated with the proposed Project would likely cause the closure of travel lanes in streets along the APM alignment. The City of Inglewood has planned evacuation routes that assume worst-case displacement and surface rupture from a seismic event in the region along the Newport-Inglewood Fault or Potrero Fault, as described in the Safety Element of the City's General Plan.[38]

However, the closure of lanes would be temporary because such closures would be only associated with the construction phase of the proposed Project. If the proposed Project is approved, a traffic management plan will be prepared to ensure that interference with area traffic is minimized. This would include ensuring that routes to the emergency room at the adjacent Centinela Hospital Medical Center would be maintained. The plan will require that emergency access is maintained throughout the proposed Project's

38 City of Inglewood, *General Plan* (adopted July 1995).

construction. Therefore, the Project's impacts on emergency response or evacuation plans would be less than significant.

h. Expose people or structures to a significant risk of loss, injury, or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

No Impact.

Significant impacts would occur if the proposed Project were to expose people or structures to significant risks associated with wildland fires.

The City is highly developed and entirely urbanized and is without an urban/wildland interface. The proposed Project is not within a Moderate, High, or Very High Fire Hazard Severity Zone as designated by CAL FIRE. As such, the proposed Project would not increase or create the potential for wildland fires to occur near the proposed Project. No impacts would occur, and no further evaluation is required in an EIR.

2.9 Hydrology and Water Quality

The discussion provided herein is based on information provided by Geosyntec in their evaluation of potential hydrology and water quality impacts (see **Appendix H: Hydrology and Water Quality Technical Memorandum**).

Would the proposed Project:

a. Violate any water quality standards or waste discharge requirements?

Less than Significant Impact.

A significant impact would occur if Project discharges (either urban or stormwater runoff) to surface water or groundwater were to violate the conditions of any of the guiding federal, state, regional, or local requirements.

Construction

During construction, the proposed Project could disturb areas that require development outside of the transportation rights-of-way, including excavation, site preparation, and infrastructure improvements. Removing existing pavement, importing/exporting soil, grading, and stockpiling could potentially result in soils being exposed, loosened, and transported by stormwater to downstream receiving waters. Additional pollutants, including oil and grease, metals, and pH-altering materials, may also be introduced to the receiving water(s) during the construction phase. However, to reduce the potential for the above impacts during the construction phase, the proposed Project will comply with the SWRCB Construction

General Permit (CGP). Under the CGP, the proposed Project will prepare an approved SWPPP and implement construction BMPs. The CGP will be enforced through the City's construction, grading, and excavation permitting process.

Therefore, impacts related to water quality standards and waste discharge requirements during the construction phase would be less than significant, and no further analysis is required.

Operation

The proposed APM alignment is located within existing transportation rights-of-way. The APM component would be constructed on impervious surfaces. The APM 's structures would also be constructed in compliance with the applicable City's and County's Municipal Separate Storm Sewer System (MS4) Permits and LID Ordinance requirements to address any potential pollutant or pollutant loading impacts.

The proposed ITF and MSF sites would be converted to fully impervious surfaces. If all five existing sites were to be fully impervious in the proposed condition, impervious surface area could be increased. However, the MSF and ITF sites would be constructed in full compliance with the City's and County's MS4 Permits and LID Ordinance requirements to address any potential pollutant or pollutant loading impacts.

The proposed Project in located over the West Coast Basin, which is a confined aquifer, and is located approximately 220 ft below the ground surface. Urban and stormwater runoff infiltrated on site is unlikely to reach this groundwater aquifer. As a result, even if infiltration BMPs are incorporated into the proposed Project as required LID measures, such BMPs would extend to such a depth as to enter the basin. Therefore, infiltrated runoff would be unlikely to cause adverse impact to the local groundwater quality. Any potential impacts would be reduced to acceptable levels with implementation of infiltration BMPs.

Therefore, impacts related to surface water and groundwater quality standards and waste discharge requirements during both the construction and operations phases would be less than significant, and no further analysis is required.

b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?

Less than Significant Impact.

A significant impact would occur if the proposed Project were to substantially deplete groundwater or interfere with groundwater recharge.

Construction

The proposed Project's water supply needs during the construction phase will be provided by the City of Inglewood's municipal system (MS4). There would be no impact on groundwater supplies during the construction phase of the proposed Project. Because the underlying water basin is a confined aquifer, and the water table is located approximately 50 to 200 feet below ground surface, dewatering is not anticipated during the construction phase.

Therefore, impacts related to groundwater supply depletion during the construction phase would be less than significant, and no further analysis is required.

Operation

The proposed Project could result in increased demand of potable and non-potable water from APM system operation and addition of commercial sites. The proposed Project's water supply during the operation phase will be provided by the City of Inglewood, which depends on a combination of extracted groundwater from City-owned wells and potable and non-potable water purchased from WBMWD. However, according to the City of Inglewood's 2015 Urban Water Management Plan Update (UWMP), the City cannot meet increased water demand through an increase in groundwater extraction due to limitations in water rights. Therefore, projected demands are anticipated to be met through a combination of conservation of local surface water, imported water, graywater, stormwater capture, ocean desalination, and/or other non-groundwater sources.

Impacts related to groundwater supply depletion during the operation phase would be less than significant, and no further analysis is required.

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on or off site?

Less than Significant Impact.

A significant impact could occur if the proposed Project were to substantially alter the drainage pattern of an existing stream or river such that substantial erosion or siltation would result.

Construction

No existing surface streams or rivers pass within the proposed Project's extent. The nearest open channel is Centinela Creek, approximately 1.3 miles downstream of the proposed Project. In the existing condition, stormwater runoff is collected in curbs, gutters, and inlets, and conveyed through the storm drain network. No topographic changes are proposed as part of the proposed Project. If the construction phase of the proposed Project results in increased runoff or any modifications to existing drainage patterns, the existing stormwater facilities will be analyzed in the context of the proposed additional flow and upgraded if needed.

Activities during construction may expose and/or loosen soils, potentially resulting in erosion and topsoil loss. The average slopes of the proposed Project extents within the Ballona Creek and Dominguez Channel Watersheds were 0.5 and 0.9 percent, respectively. Because the slopes in the proposed Project extents are relatively flat, the majority of soil disturbance is expected to be related to importing and exporting of soil, grading, and stockpiling. All potential impacts related to these activities are expected to be reduced to acceptable levels under the CGP-required SWPPP. The SWPPP will identify any potential sources of sedimentation during construction and detail required BMPs to reduce or eliminate erosion and/or any potential alterations to drainage patterns. BMPs may include silt fencing, fiber rolls, sand bag barriers, gravel bag berms, and/or stabilized construction site entrances/exits. A Qualified SWPPP Practitioner will ensure compliance with the SWPPP by conducting regular monitoring and inspections of construction activities.

Impacts related to altering the existing drainage pattern of the proposed Project's alignment structure and support facilities that would result in erosion or siltation during the construction phase would be less than significant, and no further analysis is required.

Operation

No topographic changes or altered drainage patterns are currently proposed as part of the proposed Project, and any increases in runoff would be handled through compliance with MS4 Permit requirements.

Surface drainage will continue to be collected via the storm drain network to be ultimately conveyed to Ballona Creek and Dominguez Channel. Should the proposed Project result in increased runoff or peak flows, the existing stormwater facilities will be analyzed in the context of the proposed additional flow and upgraded if needed. In the proposed condition, stormwater runoff would not encounter unprotected soils within landscaped areas.

Impacts related to altering the existing drainage pattern of the area of the proposed Project that would result in erosion or siltation during the operation phase would be less than significant, and no further analysis is required.

d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on or off site?

Less than Significant Impact.

A significant impact would occur if the proposed Project were to substantially alter the drainage pattern of an existing stream or river such that flooding would result.

Construction

No streams or rivers run within the proposed Project's location. The proposed Project does not propose any changes to existing drainage patterns. During construction, BMPs (required and monitored under the SWPPP) would be used to reduce the volume and velocity of stormwater runoff, thereby mitigating the potential for flooding due to construction. Any accumulated sediment observed during inspection of temporary BMPs or permanent stormwater network devices would be removed to prevent flooding.

Impacts related to altering the existing drainage pattern of the proposed Project's location that would result in flooding on or off site during the construction phase would be less than significant, and no further analysis is required.

Operation

The proposed Project will not modify the existing drainage patterns and would address any increases in runoff through compliance with the MS4 Permits and upgrades to existing stormwater infrastructure, if needed. Adequate conveyance of runoff will mitigate potential flooding impacts.

Impacts related to altering the existing drainage pattern of the proposed Project's location that would result in flooding on or off site during the operation phase would be less than significant, and no further analysis is required.

e. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less than Significant Impact.

A significant impact would occur if surface water runoff were to exceed the capacity of existing or planned storm drain systems serving the proposed Project, or if the proposed Project were to substantially increase the sources of polluted runoff.

Construction and Operation

Any storm drain upgrades required to address increases in peak flow or runoff volumes would be made as part of the proposed Project's drainage design. BMPs as required by the SWPPP and the MS4 Permit would preclude any additional sources of polluted runoff during both construction and operations.

Therefore, impacts related to the creation or contribution of runoff water exceeding the capacity of existing or planned stormwater drainage systems, or providing substantial additional sources of polluted runoff, during both the construction and operation phases would be less than significant, and no further evaluation is required.

f. Otherwise substantially degrade water quality?

Less than Significant Impact.

A significant impact would occur if the proposed Project were to otherwise substantially degrade water quality.

Construction

Regular construction activities have the ability to result in the degradation of water quality, most noticeably from erosion and sedimentation. Loose sediment itself may degrade water quality and has the capacity to carry such pollutants as heavy metals, nutrients, pathogens oil and grease, and fuels. Additionally, construction may expose the proposed Project's location and stormwater to trash, solvents, paint, etc. The CGP requires the implementation of BMPs to eliminate or reduce the discharge of pollutants in stormwater discharges and prohibits the discharge of non-stormwater from construction sites because these non-stormwater discharges are likely to carry pollutants to receiving waters. The

BMPs detailed in the SWPPP will minimize potential for impacts from erosion and sedimentation during construction. The SWPPP will also detail use of BMPs to minimize the potential for spills of toxic or hazardous chemicals or substances into surface or ground waters.

Impacts related to otherwise substantially degrading water quality during the construction phase would be less than significant, and no further analysis is required.

Operation

The Project will address proposed changes in land use, which often results in changes in pollutant contributions, through an analysis of the anticipated pollutant concentrations and loads under both the existing and proposed condition. Any projected increase in pollutant concentrations or loads will be addressed through compliance with the MS4 Permit, as well as site-specific BMPs to address any increases in pollutant concentrations or loads.

Impacts related to substantially degrading water quality during the operation phase would be less than significant, and no further evaluation is required.

g. Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

No Impact.

A significant impact would occur if the proposed Project were located within a 100-year floodplain and included housing construction.

Construction and Operation

The proposed Project is located outside the 100-year Federal Emergency Management Agency (FEMA) flood hazard area.[39] The proposed Project does not propose housing. Hence, both the construction and operation phases of the proposed Project would not place housing within 100-year flood hazard areas.

The proposed Project would have no impact related to placing housing within a 100-year flood hazard area for either the construction or the operational phase, and no further evaluation of this topic area is required.

39 County of Los Angeles, Department of Public Works, *Flood Zone Determination Website,* http://dpw.lacounty.gov/floodzone/.

h. Place within a 100-year flood hazard area structures which would impede or redirect flood flows?

No Impact.

A significant impact would occur if the proposed Project Site were located within a 100-year floodplain and included structures that would impede or redirect flood flows.

Construction and Operation

The proposed Project proposed is located outside the 100-year FEMA flood hazard area. Hence, both the construction and operation phases of the Project will not place any structure within the 100-year flood hazard area.

The proposed Project would have no impact related to impeding or redirecting flood flows for either the construction or the operational phase, and no further evaluation is required.

i. Expose people or structures to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam?

No Impact.

A significant impact would occur if the proposed Project were located within an area susceptible to flooding because of the failure of a levee or dam.

Construction and Operation

The proposed Project is located within FEMA unshaded Zone X, which is defined as an area outside the 0.2 percent annual chance floodplain. Further, the proposed Project is outside of the floodplain of any nearby flood control channel (Centinela Creek and Dominguez Channel). Any increase in peak flow or runoff volumes in the proposed condition would be addressed through compliance with the MS4 Permit and drainage system upgrade as part of the proposed Project.

Therefore, the proposed Project would have no impact related to exposing people or structures to loss, injury, or death involving flooding during either the construction or operational phases. No further evaluation of this topic area is required.

j. Inundation by seiche, tsunami, or mudflow?

No Impact.

A significant impact could occur if the proposed Project were located in an area subject to inundation by seiche, tsunami, or mudflow.

A seiche is an oscillation of a body of water in an enclosed or semi-enclosed basin, such as a reservoir, harbor, or lake. A tsunami is a sea wave produced by a significant undersea disturbance. Mudflows result from the down-slope movement of soil and/or rock under the influence of gravity.

Construction and Operation

The proposed Project is not located in any established tsunami inundation area, liquefaction zone, or landslide zone. The proposed Project is at least 1.3 miles away from any open water feature and, therefore, would not be subjected to seiche events. As stated above, the proposed Project proposed is relatively flat within both the Ballona Creek and Dominguez Channel Watersheds, and it is not adjacent to any exposed or steep grades.

Therefore, neither the construction nor operational phase of the proposed Project would have any impacts related to inundation by seiche, tsunami, or mudflow that could result in loss, injury, or death. No impacts would occur, and no further evaluation of this topic area is required.

2.10 Land Use and Planning

Would the proposed Project:

a. Physically divide an established community?

Potentially Significant Impact.

The proposed Project would have a significant impact if it served to physically divide an established community.

The proposed Project is located entirely within a highly developed urban area characterized by commercial and residential uses. The Market Street portion of the alignment is typical of a small city's downtown. Market Street is characterized by storefronts, on-street parking, wide sidewalks, and street trees. North Market Street also includes multi-family land uses. Along Manchester Boulevard, between Market Street and Prairie Avenue, are various commercial uses with storefronts, a large supermarket, with limited residential areas on the eastern end of this road segment. Prairie Avenue between Manchester and Century Boulevard is dominated on the east side by the constituent components of LASED, the Forum, and the under-construction NFL stadium. The west side is primarily multi-family residential and commercial.

Because the proposed Project is an elevated, linear APM that will run along existing City streets, it has the potential to physically divide existing communities. Therefore, impacts are potentially significant and will be further evaluated in an EIR.

b. Conflict with applicable land use plan, policy, or regulation of an agency with jurisdiction over the Project (including but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

Potentially Significant Impact.

Potentially significant impacts would occur if the proposed Project were to conflict with applicable land use plans, policies, or regulations of any agency with jurisdiction over the proposed Project, where those plans, policies or regulations are adopted for the purpose of avoiding or mitigating an environmental effect.

The City of Inglewood, along with the rest of the Greater Los Angeles Area, is covered by SCAG's 2016 RTP/SCS. This document provides a framework for member agencies to fund and implement regional transportation infrastructure improvements that benefit the region as a whole, including transit projects such as the one described herein.

The northern portion of the proposed Project is within the City's 2016 Transit Oriented Development (TOD) Plan area of The New Downtown Inglewood, which supports the community's vision by creating a pedestrian-friendly, mixed-used Historic Downtown.[40] The purpose of the TOD Plan and Design Guidelines is to explain and implement the City's vision for transforming the quality of the environment within Downtown. It includes zoning districts and the purpose of each, as well as the use restrictions in each zoning district and other legal issues.

Along Market Street, from Florence Boulevard to Regent Street, both sides of the street are zoned for TOD Mixed-Use 1 (MU-1). The MU-1 zone provides larger-scale transit-oriented development at a higher density. Along Market Street, from Regent Street to Manchester Boulevard, both sides of the street are zoned for Historic Core (HC). The HC zone provides for a mix of uses, including ground-floor retail and restaurants, services, offices, and residential uses in the Historic Downtown in a pattern and size consistent with the existing historic urban fabric. Along Manchester Boulevard, from Market Street to Hillcrest Boulevard, both sides of the street are zoned HC. Along Manchester Boulevard, from Hillcrest Boulevard to Spruce Avenue, the south side of the street is zoned for HC and the north side is zoned for General Commercial.

The entirety of the proposed Project's location is within the City's Zoning Code and Zoning Map.[41] Along Manchester Boulevard, from Spruce Avenue to South Prairie Avenue, both sides of the street are zoned

40 City of Inglewood, *Transit Oriented Development Plan 2016*, "Part II: The New Downtown Inglewood," Chapter 3: Downtown Zoning, accessed June 2018, http://inglewood.arroyogroup.com/reports-and-documents/.

41 City of Inglewood, *Zoning Code and Map*, accessed June 2018, https://www.cityofinglewood.org/192/Zoning-Code.

for General Commercial (C-2). Along South Prairie Avenue, from Manchester Boulevard to West Century Boulevard, the west side of the street is zoned for C-2. Also, on South Prairie Avenue, from Manchester Boulevard to Pincay Drive, the east side of the street is zoned for Commercial Recreation. Along South Prairie Avenue, from Pincay Drive to West Century Boulevard, the east side of the street is zoned for the Hollywood Park Specific Plan (HPSP). The HPSP was developed to ensure there was a complete, comprehensive code to regulate the unique development of the area, as permitted by Sections 65450-65457 of the California Government Code.[42]

Because the Project proposes land uses that differ from those currently designated and zoned for existing parcels, impacts would be potentially significant. This topic area will be further analyzed in an EIR.

c. Conflict with any applicable habitat conservation plan or natural community conservation plan?

No Impact.

Significant impacts would occur if the proposed Project were to conflict with any adopted HCP or NCCP.

No adopted HCP, NCCP, or similar plan applies to any part of the City or the surrounding area.[43] Consequently, implementation of the proposed Project would not conflict with the provisions of any adopted conservation plan.

No impacts would occur, and no further evaluation of this topic area is required.

2.11 Mineral Resources

Would the Project:

a. Result in the loss of availability of a known mineral resource that would be of future value to the region and the residents of the state?

No Impact.

Significant impacts would occur if the proposed Project's implementation would result in the loss of availability of a known mineral resource.

42 City of Inglewood, *Hollywood Park Specific Plan 2014*, accessed June 2018, https://www.cityofinglewood.org/203/Hollywood-Park-Specific-Plan.

43 CDFW, "NCCP Plan Summaries."

The proposed Project is located within a Mineral Resources Zone 3 (MRZ-3), which is an area where significant mineral deposits cannot be evaluated based on current and available data.[44] The state of California has not classified or designated mineral resource zones within the area, and the Bureau of Land Management mineral potential maps also indicate no prospective valuable deposits.[45]

In addition, the proposed Project is located entirely within a highly developed urban area characterized by commercial, industrial, and residential land uses. No records exist with respect to the presence of valuable mineral resources within the proposed Project's area or the immediate surrounding area, and no mining is currently taking place in the City.[46]

No impacts would occur, and no further evaluation of this topic area is required.

b. Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

No Impact.

Significant impacts would occur if the proposed Project were to result in the loss of availability of a locally important mineral resource recovery site.

The proposed Project is located within MRZ-3 and, as such, information is not available to determine whether valuable mineral resources are deposited on site.

As mentioned above, the proposed Project is located entirely within a highly developed urban area characterized by commercial and residential uses and no mining operations are currently being conducted in the City. There are no records of valuable mineral resources within the proposed Project's footprint or the immediate surrounding area.[47]

No impacts would occur, and no further evaluation of this topic area is required.

47 LA County DRP, *General Plan 2035,* "General Plan Update Program—Interactive Map (GP-NET)."

2.12 Noise and Vibration

Would the proposed Project:

a. Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to result in exposure of persons to or generation of noise levels in excess of standards established in the general plan, noise ordinance, of applicable standards of other agencies.

Section 5, Article 2 (Noise Regulations) of the IMC governs noise measurement and acceptable levels in the City.[48] For construction of the type that would be associated with the proposed Project, construction activities would not be permitted between 8 PM and 7 AM.

Construction of the proposed Project would require the use of heavy equipment for demolition and site clearing; grading, excavation, and foundation preparation; the installation of utilities; paving; and building. During each construction phase, a range of equipment would be operated on site. Noise levels would vary based on the amount and type of equipment being used, and the location of each activity. While only temporary, noise associated with the proposed Project's construction activities may have potential impacts on nearby residences, churches, and an elementary school immediately to the proposed Project.

Operation of the proposed Project would have the potential to increase noise levels near the proposed Project due to noise emitted by the APM as well as on-site operational activities at the MSF and ITF sites. However, overall noise levels in the City could decrease as a result of a decrease in vehicle trips owing to the presence of the proposed Project.

Impacts are potentially significant. Further analyses of the proposed Project's construction and operational noise sources will be addressed in an EIR.

b. Exposure of people to or generation of excessive groundborne vibration or groundborne noise levels?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to result in exposure of people to or generation of excessive ground-borne vibration.

48 IMC.

Ground-borne vibration and ground-borne noise could occur during construction of the proposed Project, especially during paving, demolition, earth movement activities, pile driving, and other activities associated with the construction of an elevated APM line. Operation of the proposed Project could involve vibration, especially near the MSF and ITF facilities. Therefore, analysis of potential impacts of ground-borne noise and vibration impacts will be further addressed in an EIR.

c. A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to cause a substantial permanent increase in noise levels above existing ambient levels.

The proposed Project's construction would be expected to generate a temporary increase in ambient noise levels in the proposed Project's vicinity. Ongoing, permanent operational noise impacts could be generated near both the MSF and ITF facilities as these would see maintenance activity on APM components and the potential for increased vehicular traffic respectively. Therefore, this topic is potentially significant and will be further evaluated in an EIR.

d. A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to result in substantial temporary or periodic increase in ambient noise levels.

Demolition, grading, pile driving, paving, and other activities typical of construction activities would occur upon proposed Project implementation. As discussed above, the proposed Project's construction would be expected to generate an increase in ambient noise levels in the proposed Project's vicinity on a temporary basis. This topic will be further evaluated in an EIR.

e. For a project within an airport land use plan or, where such a plan has not been adopted within 2 miles of a public airport or public use airport, would the project expose people residing or working the project area to excessive noise levels?

Less than Significant Impact.

A significant impact would occur if the proposed Project were to expose people residing or working in the proposed Project area to excessive noise levels from a public airport or public use airport.

The Federal Aviation Administration (FAA) requires airports to prepare noise contour maps to assess the effects of aircraft noise to surrounding land uses. These maps can be used as an indicator of potential impacts. The closest airports to the proposed Project are the Hawthorne Municipal Airport (HHR), approximately 1.5 miles to the south, and Los Angeles International Airport (LAX), approximately 2 miles to the west of the proposed Project. HHR noise contours remain confined within the runway of the airports and not within the proposed Project immediate area.[49] In addition, according to the Los Angeles World Airports' Noise Contour Map for the first quarter of 2018, the proposed Project does not fall within any of these noise contours.[50]

Therefore, the proposed Project would not expose people to excessive noise levels associated with airport uses. As such, impacts would be less than significant, and no further study is required.

f. For a project within the vicinity of a private airstrip, would the Project expose people residing or working in the Project area to excessive noise levels?

No Impact.

A significant impact would occur if the proposed Project were to expose people residing or working in the Project area to excessive noise levels from a private airstrip.

The proposed Project is not near a private airstrip. Accordingly, the proposed Project would not expose people working or residing in the Project area to excessive noise levels from a private airstrip. Therefore, no impacts would occur.

2.13 Population and Housing

Would the Project:

a. Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

No impact.

A significant impact would occur if any aspect of the proposed Project were to lead to population growth in the Project area, either directly or indirectly.

---

49 LA County DRP, Hawthorne Airport: Airport Influence Area (May 13, 2003), http://planning.lacounty.gov/assets/upl/project/aluc_airport-hawthorne.pdf.

50 Los Angeles World Airports, "Quarterly Noise Reports and Contour Maps," https://www.lawa.org/en/lawa-environment/noise-management/lawa-noise-management-lax/quarterly-noise-reports-and-contour-maps.

The proposed Project does not include the development of any new residential or commercial land uses and would therefore not directly introduce population growth from the construction of new homes or businesses. The proposed Project proposes to construct an elevated APM system connecting the future Metro Crenshaw/LAX Line with the Forum, the LASED (including the NFL stadium), and the proposed IBEC. The APM system would lessen automobile trips and mobilize large numbers of persons in a short amount of time. The proposed Project represents an alternative to automobile traffic for access to the venues at the LASED and therefore has no aspects that would contribute to population growth either directly or indirectly.

No impacts would occur, and no further study is required.

b. Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?

No Impact.

A significant impact would occur if the proposed Project were to displace substantial numbers of existing housing.

The proposed Project would be constructed entirely within the existing public rights-of-way along City streets except for the MSF and the ITF. These features would be built on sites that are either currently vacant or being used for commercial or industrial purposes. As such, no housing would be displaced because of the proposed Project's implementation, and no impacts would occur. As noted above, portions of the proposed Project would be constructed and operated in areas that are proximate to residential uses. The EIR will address whether the proposed Project may have an indirect effect on these uses as a result of noise or vibration.

c. Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?

No Impact.

A significant impact would occur if implementation of the proposed Project were to result in the displacement of substantial numbers of people.

The proposed Project is an APM system that would be constructed almost entirely within existing public rights-of-way along existing City streets. The potential sites for the MSF and ITF facilities are either vacant or are currently occupied by nonresidential uses. As such, no population displacement would occur due to the proposed Project's implementation and no impacts would occur.

2.14 Public Services

Would the proposed Project:

a. Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:

i. Fire protection?

Less than Significant Impact.

The proposed Project would have a significant impact on fire protection if it were to require the addition of a new fire station or the expansion, consolidation, or relocation of an existing facility to maintain service. Services include fire suppression; hazardous materials protection; emergency medical treatment, including basic and advanced life support transportation; earthquake and fire safety planning; fire inspections; and building plan reviews.

The City is served by Battalion 20 within Division 6 of LACFD. Battalion 20 operates six stations in total; four of these serve the City (Fire Stations 170, 171, 172, and 173). Fire Station 171 is located approximately 0.25 miles west of the proposed Project at 141 W. Regent Street; Station 172 is approximately 0.7 miles north at 810 Centinela Avenue; Station 173 is approximately 1 mile east at 9001 S. Crenshaw Boulevard; and Station 170 is approximately 1.1 miles southeast at 10701 S. Crenshaw Boulevard. The stations are staffed in three rotating shifts (A, B, and C). A three-platoon schedule is based on 24-hour shifts that start at 8 AM. Standard company staffing is generally a minimum of 25 personnel per shift. An assistant deputy chief oversees each of the three divisions.

Although the proposed Project would help accommodate large numbers of persons attending events at adjacent sports and entertainment venues, these people would likely be in the proposed Project's vicinity due to events at LASED or proposed IBEC. The reduction in vehicle traffic that would directly result from the proposed Project's implementation could potentially reduce the amount of fire services required in the area. Therefore, implementation of the proposed Project would not represent an increase in the need for these services.

Impacts would be less than significant, and no further analysis is required.

ii. Police protection?

Less than Significant Impact.

The proposed Project would have a significant impact on police protection services if it were to require expanded police services in the area as a result of the proposed Project's implementation.

Law enforcement services in the City are provided by the Inglewood Police Department (IPD). IPD operates one police station that houses most of the department's offices, located adjacent to Inglewood City Hall at One Manchester Boulevard. The Office of the Chief of Police, the Patrol Bureau, the Detective Bureau, the Records Division, the Custody Division, and the pistol range are all located at the police station. The Communications Division is located in the basement of the station, known as the Emergency Operations Center. The offices for the Traffic Division, the Training Section, and the Personnel Section are located on the second floor of the City Hall Building. IPD has 186 sworn officers and approximately 92 civilian personnel. The department comprises three major offices: Administrative Services, Criminal Investigative Services, and Patrol Services.

Although the proposed Project would help accommodate large numbers of persons attending events at adjacent sports and entertainment venues associated with LASED and proposed IBEC, these people would likely be in the proposed Project's vicinity regardless of the proposed Project's implementation. The proposed Project would provide an alternative mode of transit for persons attending such events but would not result in greater attendance than would otherwise be expected to occur. Because the proposed Project would divert some attendees who would otherwise travel by private vehicle, the proposed Project will reduce vehicle traffic. The reduction in surface vehicle traffic could potentially reduce the amount of police services required in the area. Therefore, the implementation of the proposed Project would not increase the need for police services.

Impacts would be less than significant, and no further study is required.

iii. Schools?

No Impact.

Significant impacts would occur if the Project were to necessitate the construction or expansion of schools in the proposed Project's area.

The proposed Project would not result in an increase in the number of residents; thus, there would be no increase in demand for school facilities. Because the proposed Project will primarily serve to accommodate persons attending one-day events at adjacent sports and entertainment venues, the

construction or expansion of schools would not be required because of the proposed Project's implementation.

No impacts would occur, and no further evaluation is required.

iv. Parks?

No Impact.

Significant impacts would occur if the proposed Project were to result in a need for new or expanded parks facilities.

The proposed Project would not result in an increase in the number of residents; thus, there would be no increase in demand for parks and recreational facilities. Because the proposed Project will primarily serve to accommodate persons attending one-day events at adjacent sports and entertainment venues, the construction or expansion of parks or recreational facilities would not be required because of the proposed Project's implementation.

No impacts would occur, and no further evaluation is required.

v. Other public services?

No Impact.

Significant impacts would occur if the proposed Project were to result in an increased need in public services other than those described above.

The proposed Project would not result in an increase in the number of residents; thus, there would be no increase in demand for other public services such as libraries. Because the Project will primarily serve to accommodate persons attending one-day events at adjacent sports and entertainment venues, the construction or expansion of library facilities would not be required because of the proposed Project's implementation.

No impacts would occur, and no further evaluation is required.

2.15 Recreation

Would the proposed Project:

a. Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

No Impact.

Significant impacts would occur if the proposed Project were to result in an increased use of existing recreational facilities such that these facilities would need to be expanded or new ones constructed.

The proposed Project would primarily serve special events at the existing, under-construction, and proposed sports and entertainment venues associated with LASED. As such, most of ridership would use the proposed Project for events at those facilities and would not visit existing neighborhood or regional parks. In addition, weekday commuter ridership on nonevent days would not increase the use of neighborhood and regional parks.

No impacts would occur, and no further evaluation of this topic area is required.

b. Include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?

No Impact.

Significant impacts would occur if the proposed Project were to include recreational facilities or required the expansion or construction of existing residential facilities.

The proposed Project does not include recreational facilities. Because it will primarily serve to accommodate persons attending one-day events at adjacent sports and entertainment venues, the construction or expansion of recreational facilities would not be required because of the proposed Project's implementation.

No impacts would occur, and no further evaluation of this topic area is required.

2.16 Transportation and Circulation

Would the proposed Project:

a. Conflict with an applicable plan, ordinance, or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation, including mass transit and nonmotorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to result in conflicts with an adopted plan, ordinance, or policy that establishes measures of effectiveness for the performance of the circulation system.

The proposed Project would not result in a significant net increase in development that could result in an increase in daily and peak-hour traffic within and near the proposed Project. Along the APM alignment, South Prairie Avenue and East Manchester Boulevard are designated as north–south and east–west Major Arterial routes, respectively, and Market Street (North and South) is designated as a north–south Minor Arterial.[51] In addition, construction of the proposed Project has the potential to affect the transportation system through the hauling of excavated materials and debris; the transport of construction equipment; the delivery of construction materials; and travel by construction workers to and from the proposed Project.

As part of the regional transit network, the proposed Project would divert passengers that might otherwise travel by car. Although the proposed Project could reduce vehicle trips in the area because it is an APM project that would be utilized not only for events at LASED and the proposed IBEC, but also for regular workdays, its impacts with regard to existing transportation plans will be further evaluated in an EIR.

51 City of Inglewood, *General Plan*, "Circulation Element" (1992), 17.

b. Conflict with an applicable congestion management program, including but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

Potentially Significant Impact.

A significant impact could occur if the proposed Project were to conflict with an applicable congestion management program.

Within Los Angeles County, Metro administers the Congestion Management Program (CMP), a state-mandated program designed to address local and regional impacts of urban congestion. The CMP provides an analytical basis for the transportation decisions contained in the State Transportation Improvement Project.

The CMP for Los Angeles County, including the City of Inglewood, requires an analysis of any project that could add 50 or more trips to any CMP intersection or more than 150 trips to a CMP mainline freeway location in either direction during either the AM or PM weekday peak hours.

Implementation of the proposed Project would serve to reduce vehicle trips in the area because the proposed system would be an alternative to private vehicles both for workday commuters as well as those attending events at LASED. However, due to a potential increase at CMP-covered intersections, potentially associated with the ITF specifically, impacts are potentially significant and will be further evaluated in an EIR.

c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?

No Impact.

A significant impact could occur if the proposed Project were to result in the need for a change in existing air traffic patterns.

The proposed Project is not subject to the Los Angeles County Airport Land Use Plan, which was adopted in December 1991 and revised in December 2004. LAX is located more than 2 miles southwest of the proposed Project, and Hawthorne Municipal Airport is located approximately 2.75 miles southeast of the proposed Project.

Because the proposed Project does not have components that would potentially affect air traffic patterns, no impacts would occur, and no further study is required.

d. Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Potentially Significant Impact.

A significant impact would occur if the proposed Project were to substantially increase hazards due to certain design features or incompatible uses.

The roadways adjacent to the proposed Project are part of the urban roadway network and contain no sharp curves or dangerous intersections. In addition, the proposed Project would serve to decrease vehicle trips in the area because it represents an alternative transportation option both for workday trips and special events at LASED and the proposed IBEC.

Given that the proposed Project will be implemented within the rights-of-way of existing City streets, its use as a mode of transportation is compatible with current uses in the proposed Project area. However, supporting infrastructure associated with the proposed Project, such as columns supporting the APM, have the potential to interfere with line of sight on existing roads within the APM alignment. Therefore, impacts are potentially significant and will be further evaluated in an EIR.

e. Result in inadequate emergency access?

Potentially Significant Impact.

Significant impacts could occur if the proposed Project's implementation were to result in inadequate emergency access in the proposed Project area.

Due to the proposed Project being a linear feature located largely within public rights-of-way, construction activities associated with the proposed Project would likely cause the closure of travel lanes in streets along the APM alignment. Construction within these roadways has the potential to impede access to adjoining uses, as well as reduce the rate of traffic flow of the affected roadway. The proposed Project would also generate construction traffic, particularly by haul trucks, that may affect the capacity of adjacent streets and highways. These changes could impact emergency access. Therefore, impacts related to emergency access are potentially significant, and this topic will be further evaluated in an EIR.

f. Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?

Potentially Significant Impact.

A significant impact would occur if a project were to conflict with adopted polices or involve modification of existing alternative transportation facilities located on or off site.

Relevant policies that apply to the City of Inglewood include an Active Transportation Plan that is part of the Imagine Inglewood[52] effort and the SCAG 2016 RTP/SCS.

Construction of the proposed Project would likely involve temporary closure of portions of public rights-of-way, including both automobile travel lanes shared by bicycles and pedestrian sidewalks. Additionally, the proposed Project is served by a variety of public transit options and alternative transportation facilities that are located adjacent to or near the proposed Project, including several Metro Local and Rapid bus lines.

As such, public transportation may be affected as a result of construction associated with the proposed Project, including with the plans identified above. Although the transit nature of the proposed Project represents an expansion of public transportation infrastructure, a consistency analysis with existing policies will be conducted. Therefore, impacts related to alternative transportation facilities would be potentially significant, and this topic will be evaluated further in an EIR.

2.17 Tribal Cultural Resources

Would the proposed Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC section 21074 as either a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k)?

Less than Significant Impact.

A significant impact would occur if the proposed Project were to disturb historic resources that presently exist within the area of the proposed Project.

As discussed above under **Section 2.5: Cultural Resources,** Section 15064.5 of the CEQA Guidelines generally defines a historic resource as a resource that is (1) listed in, or determined to be eligible for listing in the California Register of Historical Resources (California Register); (2) included in a local register of historical resources (pursuant to Section 5020.1(k) of the PRC); or (3) identified as significant in an historical resources survey (meeting the criteria in Section 5024.1(g) of the PRC) in addition to maintaining a sufficient level of physical integrity.

52 City of Inglewood, *Imagine Inglewood*, http://www.imagineinglewood.com/.

The construction associated with the proposed Project has the potential to affect previously undiscovered historic resources. Because the entirety of the proposed Project is largely disturbed and previously developed, the risk that historic resources of tribal significance as described above would be encountered is considered very low. In addition, the California Native American Heritage Commission (NAHC) was contacted to ascertain if any known historic sites of Native American significance were known to exist in the proposed Project's area; no sites of significance are known to the NAHC (see response below). Therefore, impacts would be less than significant, and no further study is required.

b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (d) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.

Less than Significant Impact.

PaleoWest Archaeology (see **Appendix B**) contacted the NAHC for a review of the Sacred Lands File on June 15, 2018, to determine if the NAHC had any knowledge of Native American cultural resources (e.g., traditional use or gathering area, place of religious or sacred activity, etc.) within the immediate vicinity of the proposed Project area. The NAHC indicated that the SLF did not yield any results on potential tribes that may be affected. However, the NAHC did state that the absence of specific site information in the SLF does not indicate the absence of Native American cultural resources. As such, the NAHC recommended that five Native American individuals and/or tribal groups be contacted to elicit information regarding cultural resource issues related to the proposed Project.

In accordance with AB 52, tribal outreach and consultation will be completed as part of the environmental review process. Should any Tribes request consultation, the City will contact these Tribes to determine if they have any tribal cultural resources (TCRs) that may be impacted.

No known TCRs are present on or surrounding the site. However, should the proposed Project uncover any undiscovered TCRs during construction, construction activities would immediately cease, and the NAHC and the appropriate Tribe would be contacted. Therefore, potential impacts would be less than significant, and no further evaluation is required.

2.18 Utilities and Service Systems

The discussion provided herein is based on information provided by Pacifica Services, Inc in their evaluation of potential utility impacts (see **Appendix I: Utility Technical Memorandum**).

Would the proposed Project:

a. Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

Less than Significant Impact.

A significant impact would occur if a project were to exceed wastewater treatment requirements of the applicable RWQCB.

Currently, wastewater from the proposed Project's location is conveyed via municipal sewage infrastructure maintained by the City and the Los Angeles Bureau of Sanitation to the Joint Water Pollution Control Plant (JWPCP) (advanced primary with partial secondary treatment), a public facility subject to the RWQCB requirements. Though the Project would generate more wastewater than is currently generated on the proposed Project, pollutant loads would be typical of urban wastewater already processed by the JWPCP. As such, impacts would be less than significant, and no further evaluation is required.

b. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Less than Significant Impact.

A significant impact would occur if a project were to increase water consumption or wastewater generation to such a degree that the capacity of the existing facilities would be exceeded.

Water is provided to the proposed Project via WBMWD as well as City-owned wells. Wastewater generated by the proposed Project would be treated at the JWPCP.

Development of the proposed Project would not significantly increase the demand for water and wastewater treatment services within the City because it is an APM project. The APM is an electrified system; the operation of the train itself would not require significant water resources because none of its constituent components is water dependent. In addition, activities at the MSF and ITF sites would not require additional water demands such that existing facilities would need expansion or new facilities constructed. The routine maintenance and storage of parts of the APM apparatus at the MSF would not require significant amounts of water. Activities that would take place at the MSF includes service activities to the APM cars, vehicle storage, loading platforms, and a paint booth. Although water and wastewater lines may need to be relocated, no aspect of the construction or operation of the proposed Project would require new or expanded water or wastewater treatment facilities.

Impacts would be less than significant, and no further study is required.

c. Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Potentially Significant Impact.

A significant impact would occur if surface water runoff were to exceed the capacity of existing or planned storm drain systems serving the proposed Project, or if the proposed Project were to substantially increase the sources of polluted runoff.

The proposed Project will require utility systems improvements, upgrades and possible relocations to accommodate and serve the various Project components. The design and construction of the APM system elevated guideway structures, stations and support facilities will avoid existing utility and other infrastructure to the degree possible. In addition to surface improvements, some utility infrastructure that cannot be avoided may need to be relocated to accommodate the guideway columns and foundations.

Potential utility constraints include an existing 36-inch (West Basin Water District) recycled water line identified at the Market/Manchester Alignment street centerline and several utilities within 15 feet of the alignment along Prairie Avenue. In addition, a 60-inch City of Los Angeles Department of Water and Power (LADWP) main pipe and 33-inch storm drain are located on the east side of Prairie Avenue, approximately 20 to 40 feet from centerline.

Underground electrical lines, including vaults, are present along or adjacent to sidewalks. Non-gravity flow utilities, including water service lines, may be lowered in lieu of horizontal relocation. Utility crossings including electrical and storm drain lines are found at street intersections.

Existing utilities along the northern portion of the alignment pose minimal obstacles for placement of guideway columns. Utilities tie-ins and crossings are present along Manchester Boulevard at Hillcrest Boulevard, Spruce Avenue, Manchester Drive, and Manchester Terrace; in these areas, guideway columns on this alignment will be sited and engineered to avoid relocation of gravity flow utilities including sewer and storm drains. The APM system along the Market/Manchester alignment will be designed so that utilities are avoided wherever possible, including significant utilities beneath Prairie Avenue. Although some minor utility relocation may be necessary, there appears to be sufficient room for such relocation, such that the presence of existing utilities does not appear pose a major impediment. However, further evaluation may be required.

The proposed Project does not have features that would result in the creation of structures or systems that would significantly increase stormwater discharges in the proposed Project area. The APM, associated stations, and MSF and ITF facilities are all proposed for previously developed land on impervious surfaces. In addition, as detailed previously under **Section 2.9 Hydrology and Water Quality,** if storm drain upgrades are required to address increases in peak-flow or runoff volumes, these will be made as part of the proposed Project's drainage design. The Construction General Permit SWPPP for the proposed Project would require BMPs that would preclude any additional sources of polluted runoff during both construction and operations.

Because construction of the proposed Project may necessitate excavation in areas with existing stormwater drainage infrastructure, potential significant impacts that may result from the need to relocate stormwater drainage and other utilities will be further evaluated in an EIR.

d. Have sufficient water supplies available to serve the Project from existing entitlements and resources, or are new and expanded entitlements needed?

Less than Significant Impact.

A significant impact could occur if a project were to increase water consumption to such a degree that new water sources would need to be identified.

Water supply to the City of Inglewood is provided through WBMWD and the West Coast Groundwater Basin via City wells.[53] The City's UWMP concludes that Inglewood has sufficient existing water supplies so that a non-water-intensive project, such as the one proposed, would not result in a strain on existing water supplies. Because water supplies in the proposed Project area are more than sufficient, impacts would be less than significant, and no further study is required.

e. Result in a determination by the wastewater treatment provider which serves or may serve the Project that it has adequate capacity to serve the Project's projected demand in addition to the provider's existing commitments?

Less than Significant Impact.

The Project would have a significant wastewater impact if (a) the proposed Project were to cause a measurable increase in wastewater flows to a point where and a time when a sewer's capacity is already constrained or that would cause a sewer's capacity to become constrained; or (b) the proposed Project's additional wastewater flows were to substantially or incrementally exceed the future scheduled capacity

53 City of Inglewood, *Final Draft 2015 Urban Water Management Plan*, https://www.cityofinglewood.org/DocumentCenter/View/1061/2015-Urban-Water-Mangement-Plan-PDF?bidId=.

of any one treatment plant by generating flows greater than those anticipated in the Wastewater Facilities Plan or General Plan and its elements.

As detailed above, the proposed Project is an APM system consisting of an APM that would not require a significant amount of water for either its construction or operation. Maintenance activities would be limited to repairs typical of vehicle repair, and no water-intensive activities would take place at the MSF site. Therefore, impacts would be less than significant, and no further study is required.

f. Be served by a landfill with sufficient permitted capacity to accommodate the Project's solid waste disposal needs?

Less than Significant Impact.

A significant impact would occur if a project were to increase solid waste generation to a degree such that the existing and projected landfill capacity would be insufficient to accommodate the additional solid waste.

Solid waste services in the City are provided by Consolidated Disposal Service (CDS); trash collected in the City is taken to CDS's American Waste Transfer Station in the City of Gardena, where it is sorted; residual garbage is taken to the Consolidated Volume Transport Disposal and Recycling Center (CVT) in the City of Anaheim, and recycling and green waste is taken to CDS's Compton Transfer Station in the City of Compton.[54] Solid waste generated in the City is ultimately disposed of at various landfill facilities located throughout Los Angeles County.

The proposed Project would generate additional solid waste from construction debris, activities, and site preparation, as well as during operation of the proposed Project. Solid waste generated during construction and operation of the proposed Project would have to be separated and recycled. As described in Los Angeles County's most recent landfill disposal capacity report, a shortfall in permitted solid waste disposal capacity within the County is not anticipated to occur under forecasted growth and ongoing municipal efforts at waste reduction and diversion.[55] The proposed Project would not drastically change the amount of solid waste disposal projected by the County due to the fact that the operations phase would generate minimal waste. Impacts would be less than significant, and no further study is required.

54 City of Inglewood, "Waste Collection FAQs," accessed June 2018, https://www.cityofinglewood.org/FAQ.aspx?TID=30.

55 County of Los Angeles, *Remaining Disposal Capacity Report,* https://dpw.lacounty.gov/epd/swims/reports/pages/swims-rpt39.aspx

g. Comply with federal, state, and local statutes and regulations related to solid waste?

Less than Significant Impact.

A significant impact would occur if a project were to generate solid waste that was not disposed of in accordance with applicable regulations.

Assembly Bill (AB) 939 requires every city and county to divert 50 percent of its waste from landfills by the year 2000 through such means as recycling, source reduction, and composting.[56] In addition, AB 939 requires each county to prepare a countywide siting element for a 15-year period, specifying areas for transformation or disposal sites to provide capacity for solid waste generated in the county that cannot be reduced or recycled. Further, AB 1327, the California Solid Waste Reuse and Recycling Access Act of 1991, requires local agencies to adopt ordinances mandating the use of recyclable materials in development projects.[57]

The proposed Project would generate solid waste during both construction and operation that is typical of the development of a mechanical transportation system and industrial uses. This includes typical construction waste such as wood, concrete, and asphalt, as well as operational waste such as that collected from passengers and employees.

The proposed Project would fully comply with all federal, State, and local statutes and regulations regarding proper disposal. Impacts would therefore be less than significant, and no further evaluation is required.

2.19 Energy Resources

Would the proposed Project:

a. Cause wasteful, inefficient, and unnecessary use of energy?

Less than Significant Impact.

Construction

Construction of the proposed Project would consume energy in the form of electricity, and transportation-related fuels through use of construction equipment, transport of construction materials, temporary lighting, and energy-consuming processes.

56 CalRecycle, "Assembly Bill 939," accessed June 2018, http://www.calrecycle.ca.gov/laws/legislation/calhist/1985to1989.htm.

57 CalRecycle, "Ordinances, Resolutions, and Policies," accessed June 2018, http://www.calrecycle.ca.gov/LGCentral/Library/LocalDocs/Policy.htm.

Project construction activities would consume energy in the form of petroleum-based fuels associated with the use of off-road construction vehicles and equipment on the Project site; construction worker travel to and from the Project site; and delivery and haul truck trips (e.g., hauling of demolition material to off-site reuse and disposal facilities). The amount of energy that would be consumed by these uses would not be considered excessive and would be similar to that consumed for other large construction projects.

Electricity consumption that would be required during construction would be limited and temporary, and would cease upon the completion of construction. Construction of the Project would not result in an increase in demand for electricity that exceeds available supply or distribution infrastructure capabilities that could result in the construction of the proposed Project. Therefore, construction-related impacts to electricity supply and infrastructure would be less than significant and no further study is required.

Construction activities, including the expansion of existing buildings, typically do not involve the consumption of natural gas. Accordingly, natural gas would not be supplied to support proposed Project construction activities; thus, there would be no demand generated by construction. Construction of the proposed Project would not result in an increase in demand for natural gas that exceeds available supply or distribution infrastructure capabilities that could result in the construction of new natural gas facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. Therefore, construction-related impacts to natural gas supply and infrastructure would be less than significant and no further study is required.

The proposed Project would be required to coordinate infrastructure removals or relocations with local utility providers and comply with site-specific requirements set forth by the utility providers, which would ensure that service disruptions and potential impacts associated with construction, as well as development within utility easements, are minimized. In addition, prior to ground disturbance, construction contractors for the proposed Project would notify and coordinate with utility providers to identify the locations and depth of existing utility lines to avoid disruption of service to other properties.

Construction vehicles traveling to and from the proposed Project would result in on-road gasoline-related energy consumption. Construction of the proposed Project would require the export of debris from the proposed Project site and staging areas. Construction worker travel to and from the Project site would result in the additional consumption of vehicular unleaded gasoline fuel during the construction period. Given that the construction period is expected to be limited to a short time frame and would be temporary, fuel consumption impacts would not be considered excessive or substantial with respect to regional fuel supplies. The energy demands during construction would be typical for projects of this size and would not necessitate additional energy facilities or distribution infrastructure.

Compliance with State and regional air quality regulations and established construction standards that limit vehicle idling and promote the use of alternative fuels would minimize the unnecessary consumption of energy during construction. Construction energy consumption is short term and relatively minor compared to long-term regional energy use.

Construction of the proposed Project would not result in an increase in demand for petroleum that exceeds available supply or distribution infrastructure capabilities that could result in the construction of new petroleum facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. Therefore, construction-related impacts to petroleum supply and infrastructure would be less than significant and no further study is required.

Operation

During operation of the proposed Project, energy would be consumed for multiple purposes, including but not limited to, heating, ventilating and air conditioning; lighting; and the use of electronics, equipment and machinery. Energy would also be consumed during Project operations related to water usage, solid waste disposal, and vehicle trips. The proposed Project's operating components would utilize electrical energy for the operation of the APM, as well as aspects of related Project support features, such as the MSF, ITFs, and the stations. Electricity is provided to the Project area by Southern California Edison (SCE). SCE provides roughly 90 billion kilowatts of electricity to more than 15 million people in Southern California.[58] Given the relative minor energy consumption of the electrically powered APM system, impacts would be less than significant, and no further study is required.

In addition, the APM system would include equipment to guide the movement of trains between stations; emergency walkways and lighting; communications systems; a command and control system; a public information system; and security systems to monitor activity at station platforms, along the guideway, and at the APM MSF. Traction power substations would be constructed to provide continuous power supply for system operation. Depending on load requirements, two to three traction power substations may be required. The traction power substations would be connected to existing power trunk lines and would be up to 3,000 square feet in size. Locations for the traction substations would be adjacent to other

58 Southern California Edison, "About Us: Who We Are," accessed July 2018, https://www.sce.com/wps/portal/home/about-us/who-we-are/!ut/p/b1/lVPLbsIwEPyVXnI0XrCdR29BRRCqtkKAILkgO3FCWohDMND262sQUotUEvDBsq2d0czsGkd4jqOC7_OM61wVfHW8R_ai7fb9QTCGoD-hDIJuxyH9bkAmPWYKQlMAV5YPJ7zXh95g-HbEjwgEZASvY98nADae4QhHcaFLvcThNpaLWBVaFnohCwvOZwu4UDv9sNtacFgqdJCIV_IILOM8waGTJhQoEJTaQiLqOm3EWeyZLWHclq5IUvcstEZJjdEnSs_4moKGoE5GG6JqCmuIo2ylxKkvoV8I4mY4qmQqK1m1dpV5Xmpdbh8tMEEdDq1MqWwlW7FaW_AfZKm2Gs8vK3FojDpXjT4zPP5NnseEeTEXqONIG1GRAOKmCciTrkdlwiiHtImwczfh8IZe5e-bTeSb0TqO0Kdx2Thb9TonbfpX500jV084JXcTDm_4jfcbv_hU5Xq6dslXjj7SF80EK_ffk3Q9Q1y4QNgq-wHf5g_Q/dl4/d5/L2dBISEvZ0FBIS9nQSEh/.

proposed components of the ITC system and existing electrical trunk lines. Because the proposed Project would provide these traction power substations, there would be no impact on existing electrical substations and their ability to provide power to surrounding areas.

With modern, energy-efficient construction materials and operating equipment, the proposed Project would comply with applicable Title 24 regulations and applicable City regulations and policies. While impacts to regional energy resources are expected to be less than significant, the California Green Building Code imposes energy conservation measures for all new projects to further reduce energy demands with new buildings. Implementation of the California Green Building Code measures would meet or exceed the Title 24 energy efficiency regulations and further reduce demand for electricity.

Accordingly, operation of the proposed Project would not result in significant impacts with regard to electricity use and consumption, including the wasteful, inefficient, and unnecessary consumption of electricity. Further, the proposed Project would not result in an increase in demand for electricity that exceeds available supply or distribution infrastructure capabilities that could result in the construction of new energy facilities or expansion of existing facilities, the construction of which could cause significant environmental effects. Based on the above, operational impacts to electricity supply and infrastructure would be less than significant, and no further study is required.

During operation, Project-related traffic would result in the consumption of petroleum-based fuels related to vehicular travel to and from the Project site. Transportation fuels, primarily gasoline and diesel, would be provided by local or regional suppliers. The Project site is close to numerous bus routes and the Metro Crenshaw/LAX Line light rail stations.

On-road vehicular transportation sources from the subarea of Los Angeles County within the SCAQMD consumed 3.89 billion gallons of gasoline and 0.66 billion gallons of diesel fuel in 2016. The net increase of the proposed Project's operational gasoline consumption would be minimal in terms of Countywide gasoline and diesel consumption.

Based on the above, operation of the proposed Project would not result in significant impacts with regard to petroleum use and consumption, including the wasteful, inefficient, and unnecessary consumption of petroleum. Further, the proposed Project would not result in an increase in demand for petroleum that exceeds available supply or distribution infrastructure capabilities that could result in construction of new energy facilities or expansion of existing facilities, the construction of which could cause significant effects. As such, operational impacts associated with petroleum supply and infrastructure would be less than significant, and no further study is required.

b. Result in an increase in demand for electricity or natural gas that exceeds available supply or distribution infrastructure capabilities that could result in the construction of new energy facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Less than Significant Impact.

As discussed above, the proposed Project area's electricity needs are provided by SCE. Natural gas service is provided by Southern California Gas Company. Because the proposed Project and its associated components would not require substantial increases in electrical or natural gas energy resources, impacts would be less than significant. No further study is required.

2.20 Mandatory Findings of Significance

Would the Project:

a. Does the Project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

Potentially Significant Impact.

Significant impacts would occur if the proposed Project were to result in degradation of the environment; serve to substantially reduce the habitat of fish or wildlife species; cause a fish or wildlife population to drop below self-sustaining levels; threaten to eliminate a plant or animal community; reduce the number or restrict the range of rare or endangered plants or animals; or eliminate important examples of the major periods of California history or prehistory.

The proposed Project is located entirely within the City in a highly developed urban area characterized by commercial and residential uses. It is made up of paved and active streets with various landscaping. The existing level of development on the site and in the surrounding area is not compatible with supporting wildlife and natural plant communities. No native vegetation exists on the site, although street trees are present along the alignment (see **Appendix A**). However, any street trees removed as a result of Project implementation will be replaced per the requirements of the IMC and described above under **Section 2.4: Biological Resources.**

No Habitat Conservation Plan, Natural Community Conservation Plan, or other approved habitat conservation plans apply to the proposed Project's location.[59] The proposed Project would not have the potential to substantially reduce the habitat of fish or wildlife species, cause a fish or wildlife population, threaten to eliminate a plant or animal community, or reduce the number or restrict the range of a rare or endangered plant or animal. However, as discussed above under **Section 2.5: Cultural Resources,** the proposed Project does have the potential to affect historic resources in portions of the proposed Project's location of vicinity. As a result, impacts under this topic area are potentially significant and will be further evaluated in an EIR.

b. Does the Project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

Potentially Significant Impact.

Significant impacts would occur if the proposed Project were to result in individually limited but cumulatively considerable impacts. Independent, isolated impacts of the proposed Project may be considered cumulatively significant if they are greater when considered with impacts of related projects in the Project vicinity.

The proposed Project is an APM system that would largely serve to reduce transportation-related impacts in the area. However, as detailed in the sections above, several topic areas have potentially significant impacts. Because of this, the proposed Project's related impacts have the potential to be cumulatively considerable. Therefore, this topic will be further evaluated in an EIR.

c. Does the Project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less than Significant Impact.

Significant impacts would occur if the proposed Project were to cause environmental effects that would cause substantial adverse effects on human beings, either directly or indirectly.

Although the proposed Project could result in potentially significant impacts regarding several topic areas to be addressed in an EIR, the fact that the proposed Project is an APM system that would serve to reduce vehicle congestion and emissions and would be built almost exclusively on existing paved surfaces in a highly urbanized area would indicate that substantial adverse effects on human beings would not occur.

59 CDFW, "NCCP Plan Summaries."

However, construction activities could create impacts to sensitive populations due to air quality issues, including dust, as well as noise issues. Therefore, impacts are considered to be potentially significant, and this topic will be further addressed in an EIR.

MEMORANDUM

Date: June 11, 2018

To: Project File — Meridian Project No. 208-001-18

From: Marina Barton, Staff Planner/Biologist

Subject: Inglewood Transit Connector Project Tree Inventory

On June 5, 2018, at 7:30 AM, Meridian Consultants staff planner/biologist Marina Barton and staff planner Dillan Murray performed a tree survey of the Project Site. The Project Site consists of paved and active streets throughout the City of Inglewood surrounded by urban development and various landscaping. The Project Site starts at the cross section of West Florence Avenue and North Market Street, follows North Market Street south, goes onto East Manchester Blvd east, and then follows South Prairie Avenue south, ending at the cross section of South Prairie Avenue and Century Boulevard, as shown on **Figure 1: Project Location Map**. The Project Site is a paved active street with various landscaping.

This tree report was prepared in conjunction with Chapter 12: Planning and Zoning, Article 32: Tree Preservation of the City of Inglewood Municipal Code, which is applicable to all types of existing industrial, commercial, residential-medical, and multifamily development, as well as to new development, underdeveloped properties, or undeveloped properties.[1] Maintenance and removal of street trees is managed by the City's Parks, Recreation and Library Services. Section 12-113: Protected Trees defines the following trees as being protected trees when located on properties to which this article applies:[2]

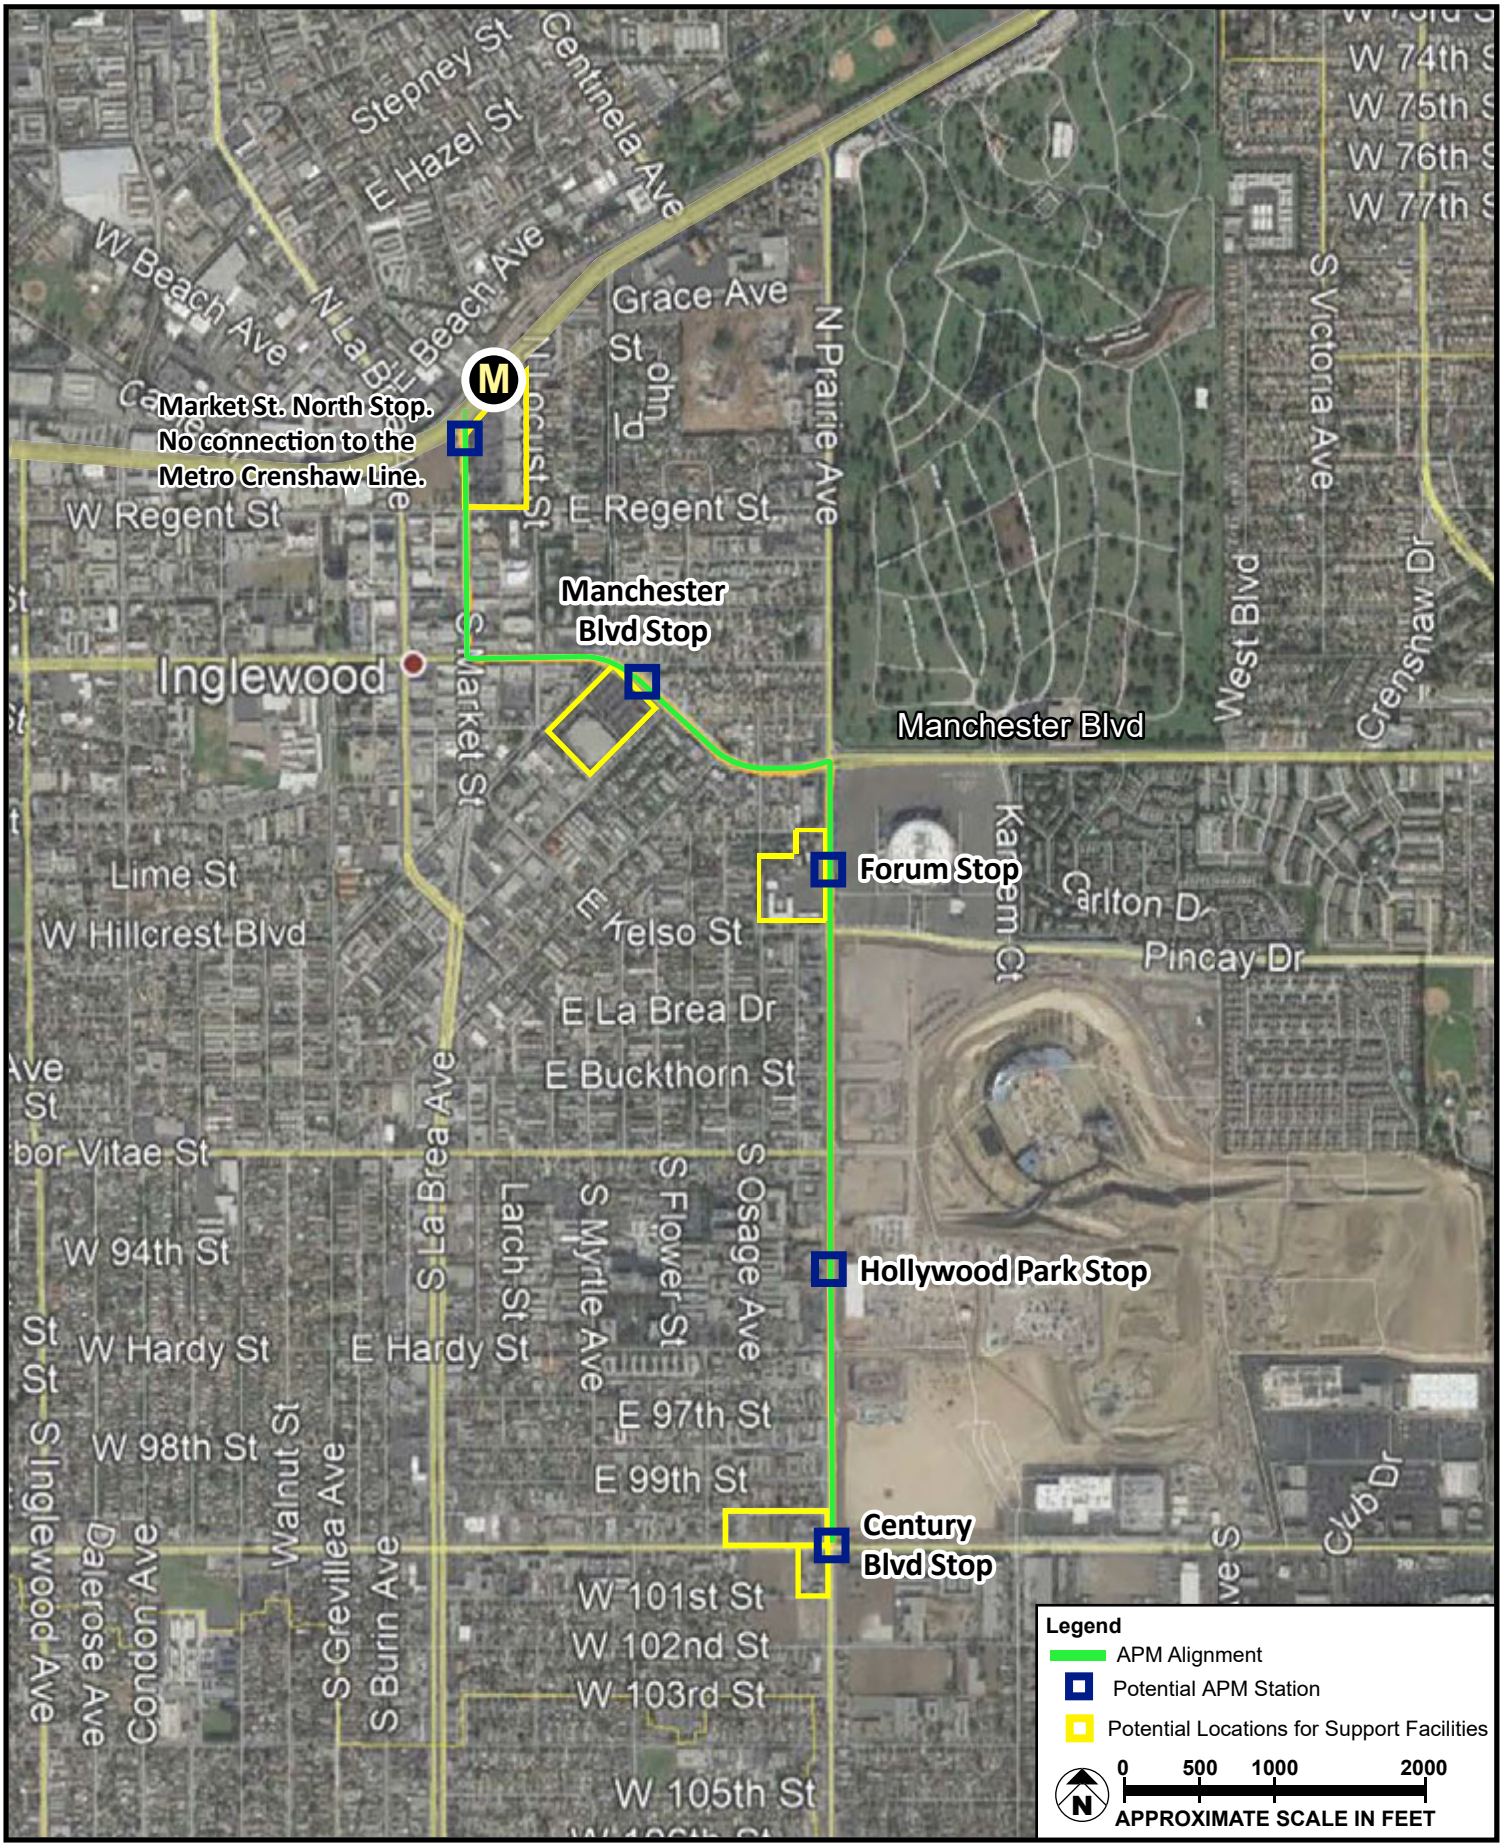
A. Trees having a minimum trunk diameter of 8 inches measured 54 inches aboveground. When measuring a multitrunk tree, the diameters of the largest three trunks shall be added together.
B. Street trees or other required trees, such as those required as a condition of approval, Use Permit, or other zoning requirement, regardless of size.
C. All memorial trees dedicated by an entity recognized by the City, and all specimen trees that define a neighborhood or community.
D. Trees of the following species that have reached a minimum of 4 inches diameter trunk size:

1 Inglewood Municipal Code, *Chapter 12 Planning and Zoning*, "Article 32 Tree Preservation, Section 12-116 Permits Required," accessed June 2018, https://www.qcode.us/codes/inglewood/.
2 Inglewood Municipal Code, *Chapter 12 Planning and Zoning*, "Article 32 Tree Preservation, Section 12-111 Application of Article."

1. Big leaf maple, *Acer macrophyllum*
2. California buckeye, *Aesculus californica*
3. Madrone, *Arbutus menziesii*
4. Western dogwood, *Cornus nuttallii*
5. California sycamore, *Platanus racemosa*
6. Coast live oak, *Quercus agrifolia*
7. Canyon live oak, *Quercus chrysolepis*
8. Blue oak, *Quercus douglassii*
9. Oregon white oak, *Quercus garryana*
10. California black oak, *Quercus kelloggii*
11. Valley oak, *Quercus lobate*
12. Interior live oak, *Quercus wislizenii*
13. California bay, *Umbellularia californica*

E. A tree or trees of any size planted as a replacement for a protected tree.

Section 12-118: Criteria for Evaluating Applications also contains criteria that will be used when evaluating protected tree removal requests. Section 12-116: Permits Required states that all protected trees that are removed or disfigured shall require replacement with like-size, like-kind trees or equal-value trees, as determined by the City's Master Plan or the Parks, Recreation and Library Services Department.



A total of 354 trees were inventoried along the streets that make up the Project Site. A list of the trees identified within the Project Site is available in **Attachment 1: Tree Inventory**. Captioned photographs of each tree are available in **Attachment 2: Tree Photographs.** Of the 354 trees, 230 are considered protected trees under Section 12-113, as shown in **Table 1: Tree Inventory Summary**. Only 55 of the trees identified are native to California; of those, 38 qualify as protected. Due to the objectives of the Project, trees located within the public right-of-way have a greater potential to be affected by construction or removed. Of the trees identified, 255 are located within the public right-of-way.

Table 1
Tree Inventory Summary

Category	Total
Trees inventoried	354
Trees that qualify as protected	230
Native trees	55
Right-of-way trees	255

Source: ***Attachment 1.***

When the plans for the Project are finalized, this report and its attachments can be used to determine the number of protected trees within the Project Site that would require permits from the City of Inglewood to be removed.

APPENDIX B

Preliminary Historic Resources Investigation Memorandum

To: Meridian Consultants, LLC

From: Paul Travis, AICP; Kari Fowler

Date: June 21, 2018

Summary of Findings

Historic Resources Group (HRG) has completed a preliminary investigation of the proposed project site for the Inglewood Transit Connector Project (the Project) area to understand the potential for impacts to historic resources resulting from the Project.

A small number of designated historic resources and resources identified as historic through previous investigation are extant in locations adjacent to the proposed alignment of the Project. Further study may yield additional properties eligible for historic designation within or in the immediate vicinity of the Project site.

As discussed below, the proposed Project does have the potential to result in *indirect* impacts to previously identified historic resources. Pending further analysis to determine if historic resources not previously identified are present, the Project also has limited potential to result in *direct* impacts to historic resources.

Proposed Project

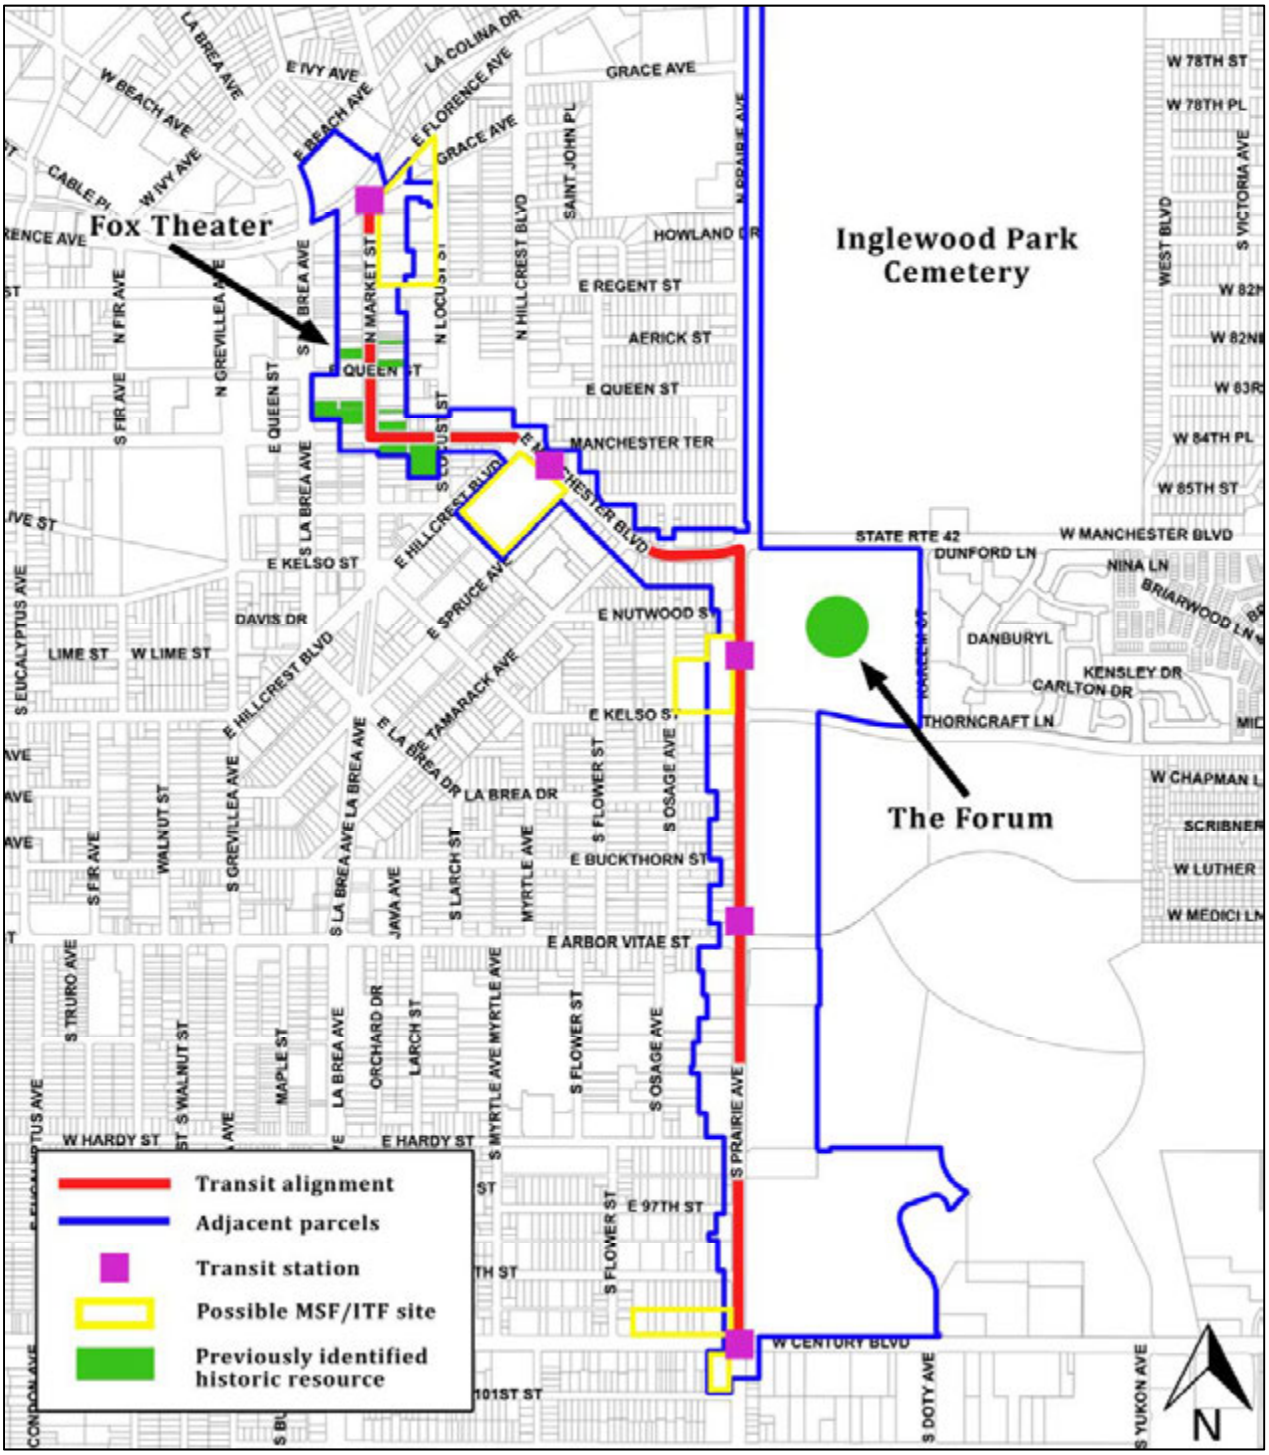
The proposed Project will construct an elevated Automated People Mover (APM) along an aerial alignment that runs approximately one quarter of a mile along Market Street between Florence Avenue and Manchester Boulevard, where it transitions east along Manchester Boulevard for approximately half a mile to Prairie Avenue. The alignment continues for approximately one mile south of Manchester Boulevard along Prairie to Century Boulevard, providing service to Downtown Inglewood, the Forum, the Hollywood Park Development/NFL Stadium, and the Basketball and Entertainment Center. The Project will also include a Maintenance and Storage Facility (MSF) and two Intermodal Transit Facilities (ITFs) adjacent to the APM alignment.

Identified Historic Resources

Appendix A contains a list of properties that have been previously identified as historic resources or potential historic resources through historic designation, past historic resources surveys, environmental review, or other efforts. Two properties located adjacent to the APM alignment have been listed in the National Register of Historic Places. These are the Forum at 3900 W. Manchester Boulevard, and the former Fox Theater at 115 N. Market Street in Downtown Inglewood. Seven additional properties were also previously identified.

All of these properties are situated along the proposed Market/Manchester alignment. No previously identified historic resources were discovered on any of the proposed MSF/ITF sites. Additional potential historic resources may be identified as a result of the environmental review process for the proposed Project, either along the alignment or on the proposed MSF/ITF sites. Conversely, some previously identified properties may have since been altered such that they are found to be no longer eligible for historic listing.

Discussion of Potential Impacts



As currently described, the guideway, support structure and stations for the APM will be contained within the public right-of-way and their construction is not anticipated to require the demolition or alteration any existing buildings or structures immediately adjacent or in the near vicinity of the project. Because these elements will be contained within the public right-of-way, it is not anticipated that their construction will result in any direct impacts to historic resources. Construction of the APM guideway, support structure and stations does, however, have the potential for indirect impacts to identified historic resources located immediately adjacent to the proposed alignment.

The Project will also include a MSF and two ITFs; five locations along the proposed alignment are being considered as locations for these facilities. Construction of the MSF and ITFs may require demolition of existing improvements at those locations. Pending further analysis to determine if any historic resources are located on the considered locations, construction of the MSF and ITFs has the potential to result in direct impacts to previously unidentified historic resources.

ADDRESS	APN	DATE	PROPERTY NAME	PREVIOUS EVALUATION	EVALUTION SOURCE
302 E Manchester Bl/ 200-204 S Market St	4021013019	1941	Cox Menswear	Appears eligible for National Register listing under Criterion C "because it embodies the distinctive characteristics of the Streamline Moderne style." Status code 3S.	*Inglewood Downtown District Main Street Project Area, Historic Design Guidelines* (Bricker, et al, 2000).
330 E Manchester Bl	4021013018	1948	Bank of America (former)	Appears eligible for National Register listing under Criterion C as a "very good example of the PWA Moderne within the city of Inglewood." HISTORIC RESOURCES GROUP

APPENDIX C

Biological Survey Memorandum

Meridian Consultants
920 Hampshire Road, Suite A-5
Westlake Village, California 91631
(805) 367-5720

MEMORANDUM

Date: May 24, 2018

To: Project File — Meridian Project No. 208-001-18

From: Marina Barton, Staff Planner/Biologist

Subject: Inglewood Transit Connector Project Biological Survey

---

On May 23, 2018, at 9:30 AM, Meridian Consultants staff planner/biologist Marina Barton performed a biological survey of the Project Site to determine if any sensitive species were present. Field notes of the visit are attached to this memorandum (see **Attachment 1: Field Notes**).

The Project Site consists of paved and active streets throughout the City of Inglewood surrounded by urban development and various landscaping. The Project Site starts at the cross section of West Florence Avenue and North Market Street; follows North Market Street south; goes onto East Manchester Blvd in an easterly direction, and then follows South Prairie Avenue southward, ending at the cross section of South Prairie Avenue and East Arbor Vitae Street, as shown on **Figure 1: Project Location Map**.

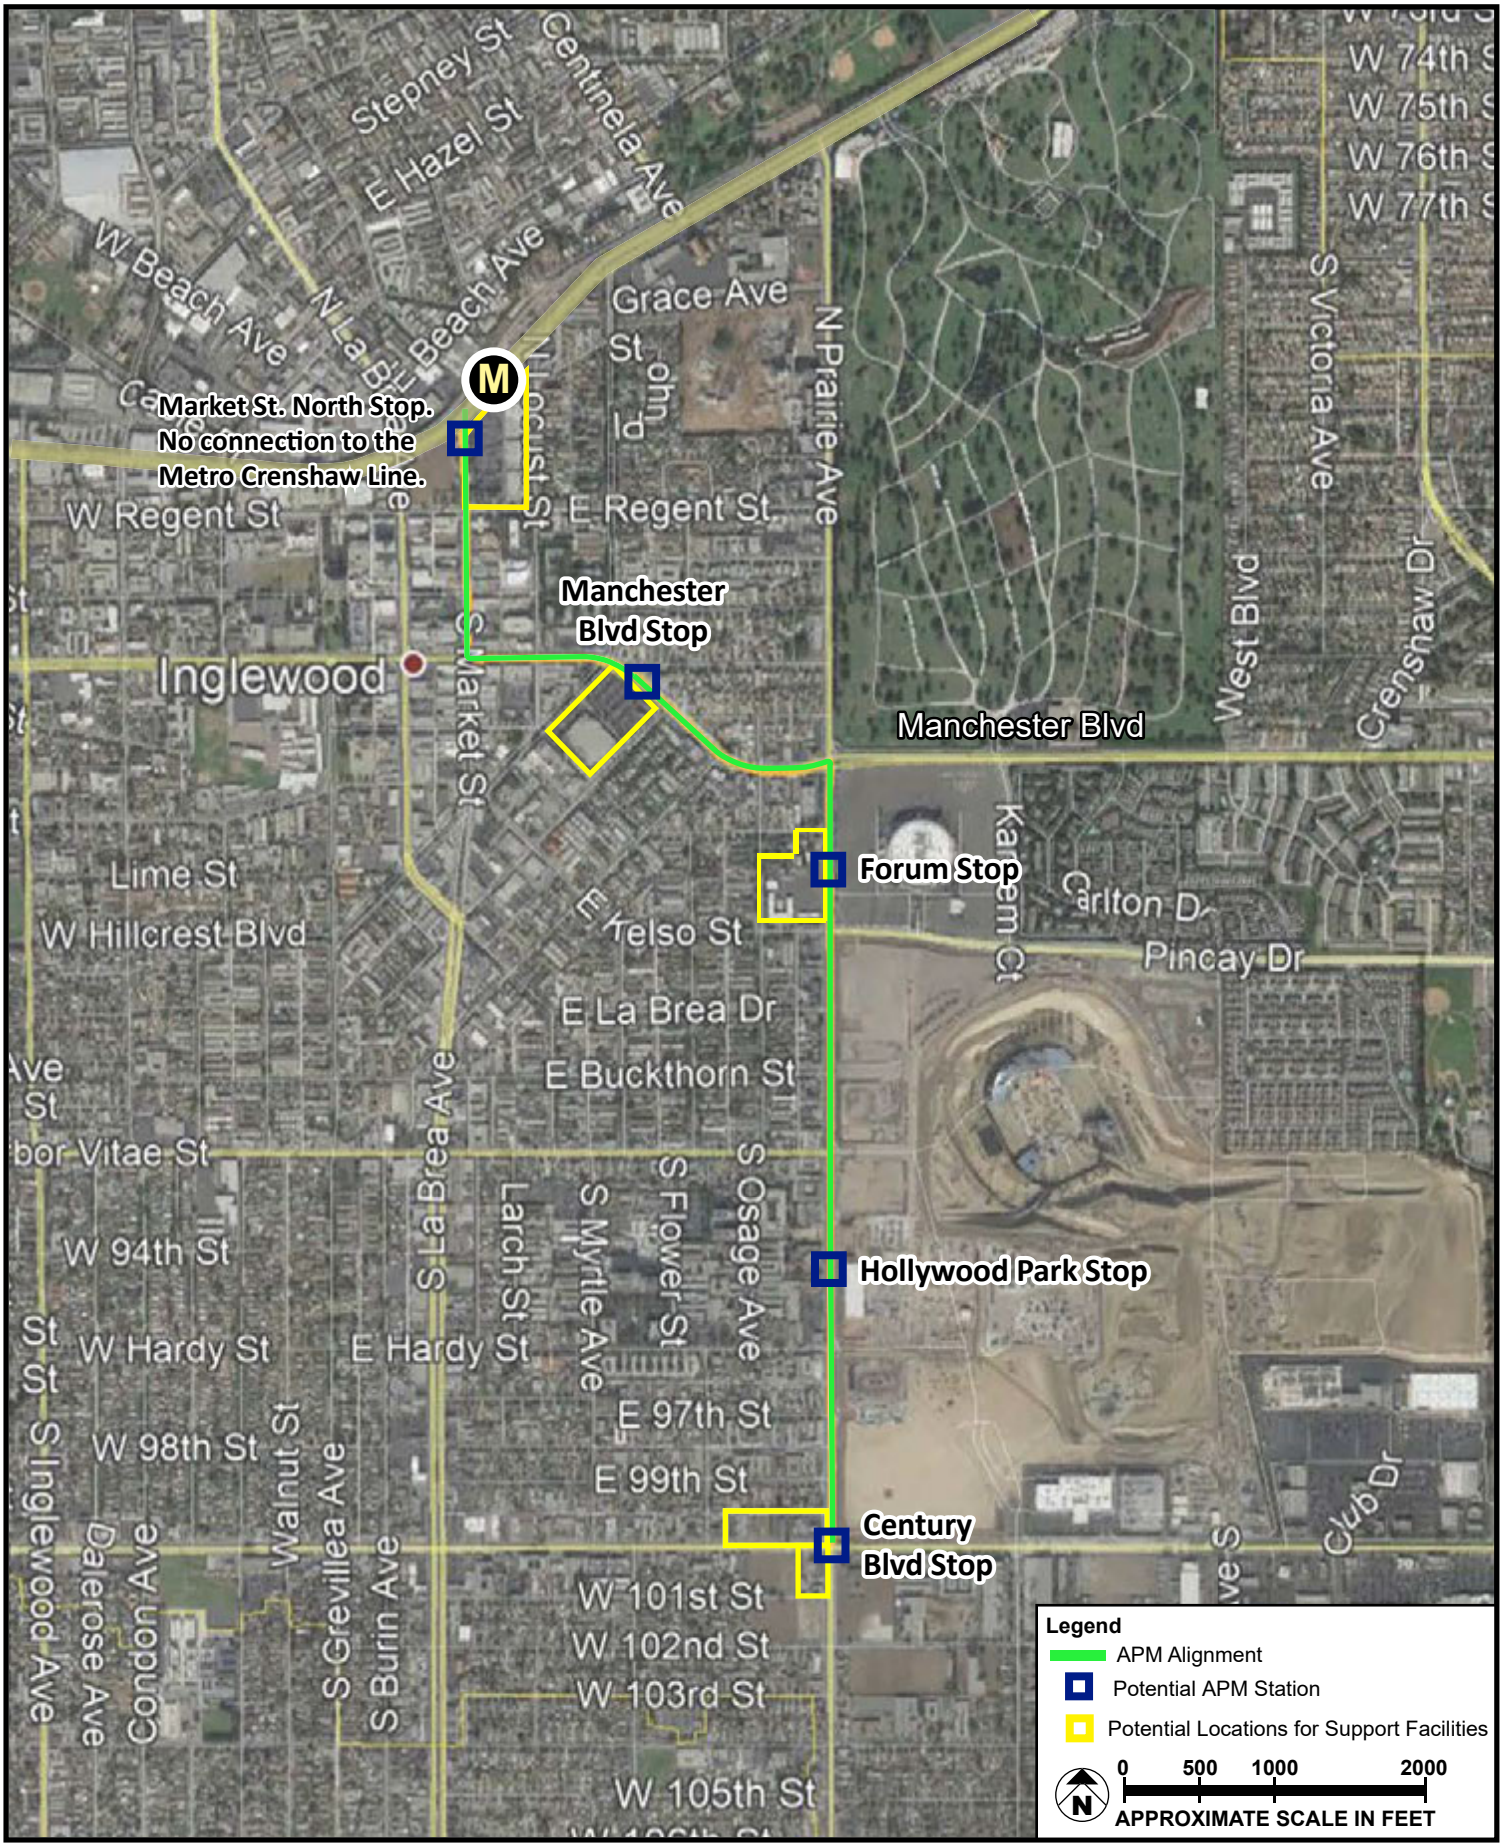
Prior to the field survey, a search of the California Natural Diversity Database (CNDDB)[1] was conducted to identify any recorded species observations and/or sightings in the greater Project Area, as shown in **Figure 2: CNDDB Quadrant Map**. As shown on **Figure 2**, the Project Site is located within the northwestern corner of the Inglewood quadrant and is surrounded by eight other quadrants (South Gate, Los Angeles, Hollywood, Beverly Hills, Venice, Redondo Beach, Torrance, and Long Beach).

A total of 440 species were identified on the CNNDB output list (see **Attachment 2: CNDDB Nine-Quadrant Species List**). Most of the sensitive species listed in quadrants adjacent to the Project Site only occur in specific habitats that do not occur within the Inglewood quadrant, such as the Santa Monica Mountains to the northwest and the coastal regions to the west. The Project Site is also completely developed and paved, with no natural plant communities. None of the species listed in the CNDDB nine-quadrant survey were found within or surrounding the Project Site.

1 California Department of Fish and Wildlife, *California Natural Diversity Database,* "Maps and Data," accessed April 2018, https://www.wildlife.ca.gov/Data/CNDDB/Maps-and-Data.

The Project Site is located within the northwestern corner of the Inglewood quadrant and has a total of 29 species as listed in **Table 1: CNDDB Inglewood Quadrant Species List**. Five species listed on the CNNDB have been observed within the Project Site: crotch bumble bee (*Bombus crotchii*), pocketed free-tailed bat (*Nyctinomops femorosaccus*), southern tarplant (*Centromadia parryi ssp. australis*), spreading navarretia (*Navarretia fossalis*), and prostrate vernal pool navarretia (*Navarretia prostrata*). The only species with a recorded sighting is the spreading navarretia; that sighting occurred in 1906. Most of the species listed in **Table 1** were recorded in the southern half of the quadrant, approximately 2 to 5 miles away from the Project Site. The most recent of these observations were recorded in 1980, with the earliest as long ago as 1895.

Table 1
CNDDB Inglewood Quadrant Species List



Scientific Name	Common Name	Distance to Project Site (miles)
Spea hammondii	Western spadefoot	Unprocessed
Nycticorax	Black-crowned night heron	Unprocessed
Ammodramus savannarum	Grasshopper sparrow	Unprocessed
Spizella breweri	Brewer's sparrow	Unprocessed
Agelaius tricolor	Tricolored blackbird	3.06 SE
Setophaga petechia	Yellow warbler	Unprocessed
Athene cunicularia	Burrowing owl	4.19 NE
Polioptila californica	Coastal California gnatcatcher	2.01 NW
Empidonax traillii extimus	Southwestern willow flycatcher	4.19 NE
Vireo bellii pusillus	Least Bell's vireo	4.59 NE
Bombus crotchii	Crotch bumble bee	On site
Eumops perotis californicus	Western mastiff bat	1.89 SE
Nyctinomops femorosaccus	Pocketed free-tailed bat	On site
Microtus californicus stephensi	South coast marsh vole	2.01 NW
Taxidea taxus	American badger	4.19 NE
Lasionycteris noctivagans	Silver-haired bat	Unprocessed
Anniella stebbinsi	Southern California legless lizard	Unprocessed
Phrynosoma blainvillii	Coast horned lizard	5.70 S
Eryngium aristulatum var. parishii	San Diego button-celery	2.12 SW
Centromadia parryi ssp. australis	Southern tarplant	On site
Lasthenia glabrata ssp. coulteri	Coulter's goldfields	0.77 NE

Scientific Name	Common Name	Distance to Project Site (miles)
Atriplex coulteri	Coulter's saltbush	4.44 SE
Astragalus tener var. titi	Coastal dunes milk-vetch	0.77 NE
Sidalcea neomexicana	Salt spring checkerbloom	3.07 NW
Camissoniopsis lewisii	Lewis's evening-primrose	Unprocessed
Hordeum intercedens	Vernal barley	Unprocessed
Orcuttia californica	California Orcutt grass	3.69 SW
Navarretia fossalis	Spreading navarretia	On site
Navarretia prostrata	Prostrate vernal pool navarretia	On site

*Source: California Natural Diversity Database (CNDDB); see **Attachment 2** to this memorandum.*
Notes: NE = Northeast; S = South; SE = Southeast; SW = Southwest; Unprocessed = Data for species has not been uploaded to CNDDB for mapping—cannot determine distance.

The survey of the Project Site was done by walking through the areas with landscaping to observe the plant species. Ms. Barton also visually searched on and adjacent to the Project Site for nesting birds, reptiles, plants, and other sensitive species (see **Attachment 1**).

During the field survey conducted on May 23, 2018, no active bird nests or listed species were observed on or within a half-mile of the Project Site.

Field Notes

INGLEWOOD TRANSIT CONNECTOR PROJECT
DAILY FIELD RECORD

Project and Task Number: 208-001-18	Date: 05/01/18
Project Name: Inglewood Transit Connector Project	Field Activity: bio monitoring
Location: Inglewood, CA	Weather: overcast, low 60s

PERSONNEL: Name	Company	Time In	Time Out
Marina Barton	Meridian Consultants	09:30	10:15

PERSONAL SAFETY CHECKLIST

	Steel-toed Boots		Hard Hat		Safety Vest
	Rubber Gloves		Safety Goggles		

TIME	DESCRIPTION OF WORK PERFORMED
09:30	Arrive in Inglewood
	Drove through and walked sections of Market St, Manchester Blvd, and Prairie Ave
	- Market St, in the downtown area, has landscaping on both sides and in the
	median, no protected species
	- Manchester has small trees planted along both sides of the street, palm trees
	and an unknown species, most likely less than 8 in. diameter
	- Tall old trees planted at the cross roads of Manchester and Hillcrest Blvd, around
	the Vons shopping center, including palm trees, eucalyptus, and pine
	- Where Tamarack Ave meets Manchester there is a lot of vegetation on the far
	far side of the street, almost a hedge, no protected species
	- At cross roads of Manchester and Prairie there are tall grey pines.
	- Few trees planted along Prairie on the edge of the Forums parking lot, no
	protected species, palm trees and ornamental species
	- No trees along Prairie where the stadium construction is
	No native or protected species listed in the municipal code were identified.
10:15	Leave Inglewood

Los Angeles, California 90014

RE: Records Search Summary for the Inglewood Transit Interconnect Project in Inglewood, Los Angeles County, California

Dear Mr. Thomason:

At the request of Meridian Consultants, LLC, PaleoWest Archaeology (PaleoWest) is conducting a cultural resource investigation for the Inglewood Transit Interconnect Project in Inglewood, Los Angeles County, California. This memorandum summarizes the results of the preliminary cultural resource inventory efforts conducted for the Project. These preliminary efforts include a cultural resource literature review and records search of the California Historic Resource Information System (CHRIS) and a review of the Sacred Lands File (SLF) by the Native American Heritage Commission (NAHC).

The literature review and records search was conducted by Roberta Thomas, Senior Archaeologist, on June 20, 2018 at the South Central Coastal Information Center (SCCIC) housed at California State University, Fullerton. The records search included the Project area as well as a half-mile radius. The purpose of the records search was to identify any known cultural resources within the immediate vicinity of the Project area. The records search also included a review of the Office of Historic Preservation Archaeological Determination of Eligibility and the Office of Historic Preservation Directory of Historic Properties Data File.

The records search indicated that no less than 21 previous studies have been conducted within a half-mile of the Project area since 1984 (Table 1). None of these studies appear to include the Project area. The records search also indicated that no prehistoric or historical archaeological resources have been recorded within the Project area or within one half mile of the Project area. However, six previously recorded built-environment cultural resources were identified within a half-mile radius of the Project. One of these resources, 19-189809, is a multi-story commercial building that is located immediately adjacent to the Project area and may be directly or indirectly impacted by the Project. In addition, five buildings/structures, located immediately adjacent to the Project area, are listed on the Directory of Historic Properties Data File. These resources may be directly or indirectly impacted by the Project as well. PaleoWest understands that a separate built-environment resource study is being prepared for this Project. As such, these resources will not be considered further during the cultural resource study conducted by PaleoWest.

PaleoWest contacted the NAHC for a review of the SLF on June 15, 2018. The objective of the SLF search was to determine if the NAHC had any knowledge of Native American cultural resources (e.g., traditional use or gathering area, place of religious or sacred activity, etc.) within the immediate vicinity of the Project area. The NAHC responded on June 19, 2018, stating that the SLF was completed with negative results. However, the NAHC did state that the absence of specific site information in the SLF does not indicate the absence of Native American cultural resources. As such, the NAHC recommended that five Native American individuals and/or tribal groups be contacted to elicit information regarding cultural resource issues related to the proposed Project. PaleoWest will send outreach letters to the recommends tribal groups after conducting the pedestrian survey of the Project area. These letters will be followed up by phone calls if no response is received within a two week period.

If you have any questions regarding these preliminary cultural resource inventory efforts, please do not hesitate to contact me at rthomas@paleowest.com.

Sincerely,

Roberta Thomas, MA, RPA
Senior Archaeologist
PaleoWest Archaeology

Subject: **Inglewood Transit Connector**
Geology and Soils Technical Memorandum

Dear Mr. Thomason:

Geosyntec Consultants (Geosyntec) has prepared *Geology and Soils* Technical Memorandum at your request for the above referenced project and is being delivered as attachment to this letter.

Should you have any questions or need additional information please do not hesitate to contact Jared Warner (jwarner@geosyntec.com) at (858)716-2885.

Sincerely,

Jared J. Warner, P.G.
Project Geologist

Alexander J. Greene, C.E.G.
Senior Principal Engineering Geologist

Inglewood Transit Connector
Technical Memorandum
Geology and Soils

1. INTRODUCTION

Geosyntec Consultants, Inc. (Geosyntec) understands that the City of Inglewood (City) is planning the development of an automated people mover (APM) system (approximately 1.8-mile-long) connecting the Los Angeles Metro Crenshaw/LAX light-rail line to the mixed-use development at Los Angeles Stadium and Entertainment District at Hollywood Park (LASED) via the Market Street and Manchester Blvd in the City of Inglewood (referred as Project). The Project includes rail alignment and associated five Interconnector Stations (ICS), and five Intermodal Transit Facilities (ITF)/Maintenance and Storage Facilities (MSF). Geosyntec has examined potential impacts to the proposed Project related to geology, soils, and seismicity and provides a summary of our findings in this Geology and Soils Technical Memorandum (Report). Impacts examined in this Report include risks related to geologic hazards such as earthquakes, landslides liquefaction, and expansive soils. This Report also includes a description of the regulatory framework, significance criteria, and impact analysis related to the Project.

2. PROJECT DESCRIPTION

The proposed rail alignment and the ICS will be located within the public right-of-way (ROW) along the South Market Street (starting at Market Street North Connection with the Metro Crenshaw Line), West Manchester Boulevard, and North Prairie Avenue (terminates at West Century Boulevard at the LASED as shown in Figure 1). The entire rail alignment and the ICS are expected to be elevated. In addition, five sites (Site 1 through Site 5) along the alignment are currently proposed for the use as ITF and MSF as also shown in Figure 1. The area encompassing the rail alignment (including ICS) and the five sites proposed for the use of ITF and MSF are collectively referred as Project Site.

3. ENVIRONMENTAL SETTING

Our knowledge of the Project Site conditions has been developed from a review of the area geology, historical information, and the referenced reports prepared by others within the Project Site vicinity. The following summarizes the regional geology, Project Site conditions, seismic setting, and the regulatory framework pertinent to geotechnical issues that may impact the Project.

3.1 Topography

The Project alignment is situated within the central portion of the City, located approximately 1.75-miles northeast of the I-105 and I-405 intersection. The proposed alignment extends along existing paved roads and adjacent to residential neighborhoods, schools, commercial and retail businesses, paved parking lots, and undeveloped lots. The Project area is relatively flat-lying, sloping gently

to the south from an elevation of approximately +150 feet Mean Sea Level (ft MSL), near the Market Street North/Metro Crenshaw Line connection, to approximately +90 ft MSL at the southern extension of the Project [Dibblee and Minch, 2007].

3.2 Regional Geology

The Project Site is located within the central portion of the Los Angeles Basin, south of the Santa Monica Mountains, near the intersection of the Peninsular Ranges and Transverse Ranges geomorphic provinces of southern California. The Peninsular Ranges province is characterized by a series of northwest trending mountains and valleys separated by faults associated with, and subparallel to, the San Andreas Fault system. These rocks were intruded by Cretaceous-age (65 million years ago [mya]) granitic basement rocks, also known as the Peninsular Ranges Batholith. The Transverse Ranges are characterized by east-west trending structural features such as the Santa Monica Mountains and the Santa Monica and Hollywood faults. The Santa Monica and Hollywood faults are considered the boundary between these two physiographic provinces.

The Los Angeles Basin is a northwest-trending alluviated lowland plane filled with thick deposits of relatively unconsolidated marine and non-marine sediments bounded by the Santa Monica Mountains to the north, the Elysian, Repetto and Puente Hills to the east, the Santa Ana Mountains and San Joaquin Hills to the south and southeast, and the Pacific Ocean to the west. The relatively flat surface of the Los Angeles Basin slopes gently south, and is interrupted by locally trending northwest alignment of low hills and mesas to the south and west that extend from Newport Beach northwest to Beverly Hills, and the Palos Verdes peninsula at the southwest extremity.

The Los Angeles Basin began forming during the Late Miocene (approximately 7.2 mya) as a result of subsidence following compressional stresses between the right-oblique Whittier and Palos Verdes fault zones, and the left-oblique Santa Monica fault system [Wright, 1991]. Sedimentary deposits within the Los Angeles Basin are estimated to range in thickness from approximately 32,000 feet to 35,000 feet within the general vicinity of the Project Site [Yerkes et al., 1965].

3.2.1 Subsurface Conditions

The Project Site subsurface conditions were observed and documented during previous geotechnical investigations performed by others within the vicinity of the Project [Geocon, 2015 and SALEM, 2016]. These explorations along with published geologic maps [Dibblee and Minch, 2007 and Saucedo et al., 2016] indicate that recent Pleistocene-age alluvium forms the surficial cover within the Project Site vicinity, often with thin localized layers of artificial fill associated with previous development activities. The anticipated geologic materials below the Project corridor are described in the following sections.

Artificial Fill

Artificial fill (af) was encountered during previous investigations within the Project Site vicinity extending up to 2 feet below ground surface (ft bgs) [Geocon, 2015] and generally consisted of brown to dark brown sandy silt and characterized as slightly moist and soft to medium stiff.

Potential fill underlying the Project alignment is likely the result of grading or construction activities associated with previous development and may vary in composition and thickness.

Alluvial Fan Deposits

As described above, geologic maps of the area (Figure 2) describe relatively small portions of the Project Site area as underlain by late Pleistocene-age alluvial fan sediments of granitic sand [Dibblee and Minch, 2007]. These alluvial fan deposits (Qae) typically consist of unconsolidated to weakly consolidated sands, silts, clays, and/or mixtures thereof (sandy silts, silty sands, etc.). These materials are generally derived from material shed off the nearby Santa Monica Mountains. The thickness of the alluvial fan deposits is likely variable along the Project alignment.

Older Alluvium

Most of the Project Site is underlain by relatively older late Pleistocene-age alluvium (Qoa). The older alluvial deposits consist of sediments that were mainly shed from the Santa Monica Mountains to the north. Composition of the older alluvial deposits primarily consists of slightly consolidated deposits of silts, clays, sands, and sandy gravel, and/or mixtures thereof (e.g., sandy silts and silty sands). Similar to the alluvial fan deposits, thickness of the older alluvium materials is likely to vary along the Project alignment, but extend to depths below anticipated development associated with the proposed Project.

3.3 Seismic Setting

The tectonic setting of the Los Angeles Basin area is dominated by right-lateral strike-slip faults with a general northwest by southeast trend as a result of the interaction between the Pacific and North American lithospheric plates. Numerous faults in southern California include “active”, “potentially active”, and “inactive” faults. Division of these major groups are based on criteria by the California Geologic Survey (CGS, formerly known as California Division of Mines and Geology, CDMG) for the Alquist-Priolo Earthquake Fault Zoning Program [Bryant and Hart, 2007]. By definition, an “active” fault is one that has had displacement within Holocene time (last 11,000 years). A “potentially active” fault has demonstrated displacement of Quaternary-age deposits (last 1.6 million years). “Inactive” faults have not exhibited displacement in the last 1.6 million years.

Faults of tectonic significance mapped in the Los Angeles region and the historical earthquake epicenters in the region are presented in Figure 3. These regional faults include the Santa Monica fault zone (SMFZ) to the north and northwest, the Newport-Inglewood fault zone (NIFZ) to the east and west, and the Cabrillo, Redondo Canyon, and Palos Verdes faults offshore to the west and southwest. Faults considered active [Bryant and Hart, 2007] and their respective distances from the Project and maximum moment magnitudes are presented in Table 1.

TABLE 1 - SIGNIFICANT SEISMIC SOURCES WITHIN 100 KM OF PROJECT

Fault or Fault Segment	Fault Type [1]	Approximate. Slip Rate (mm/yr) [2]	Dip Direction [3]	Approximate Fault Length (km) [4]	Approximate Closest Distance to Project (km) [5]	Approximate Maximum Magnitude (Mw) [6]
Newport-Inglewood (onshore)	RL	1.0	-	65	0.20	7.2
Santa Monica	O/LL, R	1.0	N	28	13	6.6
Hollywood	O/LL, R	1.0	N	17	14	6.4

San Diego Trough	R	-	V	-	57	-

Notes:
"-" Unspecified
1 - RL = Right Lateral Strike-Slip Fault; LL = Left Lateral Strike-Slip Fault; O/LL = Oblique Left-Lateral Fault; R = Reverse Fault
2 - Approximate Slip Rate millimeters per year (mm/yr) obtained from CGS (2003) and USGS (2008)
3 – N = North; S = South, V = Vertical, NE = Northeast, E = East
4 - Fault Length obtained from CGS (2003) and USGS (2008)
5 - Distances from Project noted are the closest distances to the surface trace or inferred projection of the fault as measured from the CDMG (1998), CGS (2003), or USGS (2008)
6 - Maximum Earthquake values reported at maximum moment magnitude by the CGS (2003) and USGS (2008)

3.3.1 Active Faults

Faults closest to the Project area that are considered "active" [Bryant and Hart, 2007] include the following:

- The Los Angeles Basin section of the NIFZ is the closest major active fault zone to the Project, with the Inglewood and Potrero fault segments located respectively at their nearest points, approximately 0.45-miles (0.75 km) east and 0.15-miles (0.25 km) west of the Project alignment (Figure 2). The NIFZ is composed of a series of discontinuous northwest trending en echelon faults extending from Ballona Gap southeast to the area offshore of Newport Beach. This zone is reflected at the surface by a line of geomorphically young anticlinal hills and mesas formed by the folding and faulting of a thick sequence of Pleistocene-age sediments and Tertiary-age sedimentary rocks [Barrows, 1974]. Historical seismic activity (between 1977 and 1985) shows mostly strike-slip faulting with some reverse faulting along the northern segment (north of Dominguez Hills), and normal faulting along the southern segment (south of Dominguez Hills to Newport Beach) [Hauksson, 1987].
- The SMFZ is considered a continuous zone comprised of five fault segments including the Malibu Coast, Santa Monica, Hollywood, and Raymond faults, with a total length of approximately 150-miles [Dolan and Rockwell, 2000]. The SMFZ exhibits both reverse and left-lateral components of slip and is located approximately 7-miles (12 km) northwest of the Project Site (Figure 3). The SMFZ extends 25-miles from the western edge of Beverly Hills across West Los Angeles and Santa Monica to Pacific Palisades, where it trends offshore and parallels the Malibu coast near Point Dume. The SMFZ extends eastward as the Hollywood fault along the base of the Santa Monica Mountains from the West Beverly Hills Lineament in the West Hollywood-Beverly Hills area, to the Los Feliz area of Los Angeles. Although the Santa Monica and Hollywood faults are considered active, these segments have not yet been included in a State of California Special Studies Alquist-Priolo Earthquake Fault Zone (A-P Zone). The active Hollywood fault trends east-west along the southern boundary of the Santa Monica Mountains, located approximately 8.5-miles (13.5 km) north of the Project Site (Figure 3).

Other significant regional faults considered "active" which have a potential for producing large magnitude (stronger shaking) events, but lie farther away from the Project area include:

- The San Andreas strike-slip fault is located approximately 40-miles (65 km) to the northeast, along the northern edge of the San Gabriel Mountains at their contact with the Mojave Desert (Figure 3). The approximately 700-mile-long San Andreas Fault is a network of faults that collectively accommodates the majority of relative north-south motion between the North American and Pacific tectonic plates [Bryant and Matthew, 2002]. The most recent movement on the fault is estimated to be Latest Quaternary (less than 15,000 ybp) with a slip rate of 30 millimeters per year (mm/yr) [CGS, 2003] and a 100-135 year recurrence rate.

- The Whittier section of the right-lateral Elsinore fault zone is approximately 17-miles (27 km) to the east of the Project (Figure 3). The most recent movement in the fault zone is estimated to be within late Quaternary (less than 15,000 ybp) with a slip rate of 2.5 mm/yr [CGS, 2003].

3.3.2 Blind Thrust Faults

Blind thrust fault zones are considered active features that do not rupture at the ground surface. Although these features present risk by generating intense seismic shaking, their respective distances to the Project are not included in Table 1 due to the uncertainty in their vertical surface projection. Known blind thrust faults within the Project Site vicinity along with their respective slip rates and maximum moment magnitudes are described below.

3.3.2.1 Elysian Park Thrust

The Elysian Park Thrust, previously defined as the Elysian Park Fold and Thrust Belt [Hauksson, 1990], is a blind thrust fault that overlies the Los Angeles and Santa Fe Springs segments of the Puente Hills Thrust [Oskin et al., 2000 and Shaw et al., 2002]. The eastern edge of the Elysian Park Thrust is defined by the northwest-trending Whittier fault zone. The closest edge of the vertical surface projection of the Elysian Park Thrust is approximately 6-miles (10 km) northeast of the Project Site. Like other blind thrust faults in the Los Angeles area, the Elysian Park Thrust is not exposed at the surface and does not present a potential surface rupture hazard; however, should be considered an active feature capable of generating future earthquakes. An average slip rate of 1.3 mm/yr and a maximum moment magnitude (**M**, defined as a measurement of the size of an earthquake in terms of energy released) **M** 6.4 were estimated for the Elysian Park Thrust [CGS, 2003].

3.3.2.2 Compton-Los Alamitos Thrust

The Compton-Los Alamitos Thrust is an inferred blind thrust fault located within the south-central portion of the Los Angeles Basin. The closest edge of the vertical surface projection of the buried thrust fault is located approximately 8-miles (13 km) southwest of the Project Site. Like other blind thrust faults in the Los Angeles Area, the Compton-Los Alamitos Thrust is not exposed at the surface and does not present a potential surface rupture hazard; however, should be considered an active feature capable of generating future earthquakes. An average slip rate of 1.5 mm/yr and a maximum moment magnitude **M** 6.8 were estimated for the Compton-Los Alamitos Thrust [CGS, 2003].

3.3.2.3 Puente Hills Blind Thrust

The Puente Hills Blind Thrust fault (PHBT) system extends eastward from downtown Los Angeles to Brea in northern Orange County. The PHBT is comprised of three north-dipping segments overlain by folds expressed at the surface as the Coyote Hills, Santa Fe Springs Anticline, and the Montebello Hills. The PHBT exhibits an estimated average slip rate of 0.7 mm/year [CGS, 2003]. Postulated earthquake scenarios for the PHBT include a single segment rupture of a magnitude M 6.6, and a multiple segment rupture producing an earthquake of **M** 7.1. The PHBT is not exposed

at the ground surface and does not present a potential for surface fault rupture. However, based on deformation of late Quaternary age sediments above this fault system and the occurrence of the Whittier Narrows earthquake, the PHBT is considered an active fault capable of generating future earthquakes beneath the Los Angeles Basin.

3.3.3 Potentially Active Faults

Faults considered "potentially active" that are closest to the Project alignment include the following:

3.3.3.1 Overland Fault

The Overland fault located approximately 1.3-miles (2 km) southwest of the Project Site is considered potentially active. The Overland fault trends northwest between the Charnock fault and the Newport-Inglewood fault zone, extending from the northwest flank of the Baldwin Hills to Santa Monica Boulevard in the vicinity of Overland Avenue. However, there is no evidence that the fault has offset late Pleistocene or Holocene age alluvial deposits [County of Los Angeles, 1990] and is considered potentially active by the State Geologist [Jennings, 1994].

3.3.3.2 Charnock Fault

The potentially active Charnock fault is located approximately 3.8-miles (6 km) southwest of the Project Site. The Charnock fault trends northwest-southeast subparallel to the Newport-Inglewood fault zone and the Overland fault. No recent evidence suggests the fault has offset late Pleistocene or Holocene age alluvial deposits [County of Los Angeles, 1990] and is considered potentially active by the State Geologist [Jennings, 1994].

3.4 Surface Fault Rupture

Fault rupture hazard was evaluated to assess the exposure to people or structures to substantial adverse effects, including the risk of loss, injury, or death. The potential for fault surface rupture is generally considered to be significant along "active" faults and to a lesser degree along "potentially active" faults [CDMG, 1998]. Mapped active faults do not cross the Project Site and, therefore, fault rupture hazard is considered less than significant. No mitigation measures are required.

The Project does not lie within the boundaries of an "Earthquake Fault Zone" as defined by the State of California in the Alquist-Priolo Earthquake Zoning Act [CGS, 1999]. The closest A-P Zone to the Project Site has been established for two portions of the Newport-Inglewood fault zone located approximately 280-feet west of the alignment along North Market Street (Inglewood fault), and approximately 2,750-feet east of the alignment from the intersection of West Manchester Boulevard and Prairie Avenue (Protrero fault). Therefore, performance of a Project Site-specific fault-hazard evaluation in accordance with the Alquist-Priolo Earthquake Fault Zoning Act (Public Resources Code Sections 2621-2630) is not required.

3.5 Ground Shaking

The Project Site is situated within a seismically active region and will likely experience moderate to severe ground shaking in response to a large-magnitude earthquake occurring on a local or more distant active fault during the expected lifespan of the Project. The potential for significant seismically induced ground shaking in response to an earthquake occurring along a nearby active fault, such as the Newport-Inglewood fault zone, or a regional fault, such as the San Andreas fault zone, is relatively high within the Project Site area [CDMG, 1998].

The potential for strong seismic shaking is considered high; however, a geotechnical investigation will be undertaken by a qualified geologist as part of the site design. Therefore, impacts related to ground shaking would be less than significant.

3.6 Liquefaction

Seismically induced liquefaction is a phenomenon in which saturated soils lose a significant portion of their strength and acquire some mobility from seismic shaking or other large cyclic loading. The material types considered most susceptible to liquefaction are granular and low-plasticity fine grained soils which are saturated and loose to medium dense. A rapid increase in groundwater pressures (excess pore water pressures) causes the loss of soil strength.

Manifestations of soil liquefaction can include sand boils, surface settlements and tilting in level ground, lateral spreading, and global instability (flow slides) in areas of sloping ground. The impact of liquefaction on structures can include loss of bearing capacity, drag loads on deep foundations, liquefaction-induced total and differential settlement, and increased lateral and uplift pressures on buried structures. Other factors such as soil mineralogy, void ratio, overconsolidation ratio, and age are contributing factors to liquefaction susceptibility. In general, the older or denser a deposit, the less susceptible it is to liquefaction.

According to mapped liquefaction areas on the Inglewood Quadrangle [CGS, 1999], the City of Los Angeles Safety Element [1996], and the County of Los Angeles Seismic Safety Element [1990], the Project is not located within areas identified as having a potential for liquefaction. Additionally, based on a review of the regional geologic map and subsurface conditions reported in previous geotechnical investigations, and the absence of shallow groundwater, the Pleistocene-age sediments underlying the Project Site (generally dense silty sand and firm silty clay silts) are not considered prone to liquefaction. Therefore, the potential for liquefaction and its secondary effects are considered low and a Project Site-specific study in accordance with the Seismic Hazards Mapping Act (Public Resources Code Sections 2690-2699.6) is not required.

3.7 Slope Stability

Given the topographic setting and a review of previous geotechnical evaluations in the project vicinity, no historical landslides are known to exist at the Project Site or in an area that could potentially impact the Project. The Project Site is not located within an “Earthquake-Induced Landslide Zone” [CGS, 1999] and not identified as an area that has potential for permanent ground displacements. Therefore, the potential for landslides are concerned very low and seismic slope

instability mitigation in accordance with the Seismic Hazards Mapping Act (Public Resources Code Sections 2690-2699.6) is not required.

3.8 Flooding

The Federal Emergency Management Agency (FEMA) presents the flood hazard potential in the vicinity of the Project areas as part of their Flood Insurance Rate Maps. FEMA Map No. 06037C1780F, dated 26 September 2008 [FEMA, 2008], indicates that the Project Site is located in an un-shaded Zone X which is defined as "areas determined to be outside the 0.2% annual chance flood plain". Due to a lack of any reservoirs up gradient from the Project Site, flooding as a result of dam failure is not considered to be a viable hazard. Based on our review of the FEMA mapping, the geologic setting, and the Project Site elevations, the potential for flooding at the site is very low.

3.9 Other Geologic Hazards

The presence of potentially expansive clayey soil was not observed in the previous explorations performed within the proximity of the Project Site [SALEM, 2016]. Given the underlying geologic conditions within the area, typically silty to sandy soils, we do not anticipate expansive soils to be encountered within the limits of the Project Site. However, if expansive soils are encountered during the proposed grading, we recommend that these materials should be removed, mixed with non-expansive soils, or segregated and stockpiled for potential use as low permeable materials during grading. It is unlikely that expansive soil will be encountered; therefore, expansive soil does not constitute a significant hazard at the Project Site if appropriate grading practices are maintained.

Other potential geologic hazards evaluated which could possibly affect the Project Site include slope instability, floods, seiches, and tsunamis. Tsunamis are seismically induced waves generated by sudden movements of the ocean bottom during submarine earthquakes, landslides or volcanic activity. Seiches are similarly generated but are oscillating waves within bodies of water such as reservoirs, lakes or bays. The Project Site is not located within the County of Los Angeles mapped tsunami run-up zone [CGS, 2009]. Similarly, potential seiche inundation would not likely exceed the extent of tsunami run up and no significant reservoirs were identified up gradient within 10-miles from the Project Site area. Based on the physiographic setting of the Project Site, the distance to the ocean or other large water bodies, and the elevation of the Project Site, it is our opinion that the potential for flooding from seismically induced seiches and tsunamis is very low.

3.10 Groundwater

Based on a review of the Seismic Hazard Zone Report for the Inglewood Quadrangle [CDMG, 1998], the highest historical groundwater level in the area is greater than 50 ft bgs. Groundwater data provided in this document were collected between the early 1900's to the late 1990's.

According to previous investigations in the project vicinity, groundwater was not encountered within exploratory borings drilled to depths ranging from 20 to 50 ft bgs [Geocon, 2015 and SALEM, 2016]. Based on the historically high groundwater levels in the Project Site vicinity and

absence of groundwater observed during previous investigations, groundwater is neither expected to be encountered during Project construction, nor have a detrimental effect on the Project.

4. REGULATORY FRAMEWORK

The City's General Plan Safety Element policy and current City development review practices address seismic hazards under laws such as Alquist-Priolo Earthquake Fault Zoning Act, Seismic Hazard Mapping Act, Real Estate Disclosure Requirements, CEQA, Uniform Building Code and California Building Code and Unreinforced Masonry Law. Compliance with these laws and the City's seismic design standards will be required to mitigate the structural effects of seismic shaking. The City Planning & Community Development Department will enforce the seismic design provisions for Seismic Zone 4 of the California Building Code, including near-source seismic conditions.

California Public Resources Code Sections 2621-2630, the Alquist-Priolo Earthquake Fault Zoning Act, is intended to provide policies and criteria to assist cities, counties, and state agencies in the exercise of their responsibility to prohibit the location of developments and structures for human occupancy across the trace of active faults. It is applicable to any project, as defined in Section 2621.6, which is located within a delineated earthquake fault zone. As indicated in Section 3.4, the Project Site is not situated within an Alquist-Priolo Earthquake Fault Zone, and the nearest Alquist-Priolo Earthquake Fault Zones are located along portions of the Newport-Inglewood-Rose Canyon fault zone located approximately 280-feet west of the alignment along North Market Street (Inglewood fault), and approximately 2,750-feet east of the alignment from the intersection of West Manchester Boulevard and Prairie Avenue (Protrero fault).

5. SIGNIFICANCE CRITERIA

Criteria outlined in the California Environmental Quality Act (CEQA) Guidelines were used to determine the level of significance of geology, soils, and seismicity impacts. Appendix G of state CEQA Guidelines indicates that a project would have a significant effect from these impacts if it were to:

- Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:
    a. Rupture of a known earthquake fault, as delineated in the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known potentially active fault (Refer to CDMG Special Publication 42 [Bryant and Hart, 2007]);
    b. Strong seismic ground shaking;
    c. Seismic-related ground failure, including liquefaction; and
    d. Landslides;
- Result in substantial soil erosion or the loss of topsoil;

- Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse;
- Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (UBC, 1994), creating substantial risks to life or property; or
- Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater.

6. POTENTIAL IMPACTS

6.1 Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:

i) Known Fault Rupture Zone

The Project Site is not located within an Alquist-Priolo "Earthquake Fault Zone". The potential for surface rupture at the site due to faulting at the ground surface during the design life of the proposed Project is considered low. Therefore, impacts related to fault surface rupture would be less than significant.

ii) Strong Seismic Ground Shaking

Although the Project Site could be subjected to strong ground shaking in the event of an earthquake, this hazard is common in southern California and the effects of ground shaking will be limited by proper engineering design and construction in conformance with current building codes and engineering practices. Therefore, impacts related to strong seismic ground shaking would be less than significant.

iii) Seismic-Related Ground Failure, Including Liquefaction

The Project Site is not located within a "Liquefaction Zone" as shown on the Earthquake Zones of Required Investigation, Inglewood Quadrangle map [CDMG, 1998]. Therefore, impacts related to seismic related liquefaction would be less than significant.

iv) Landslides

The Project Site is not located within an "Earthquake-Induced Landslide Zone" as shown on the Earthquake Zones of Required Investigation, Inglewood Quadrangle map [CDMG, 1998]. Based on the topographic setting and a review of previous geotechnical evaluations in the Project vicinity, no historical landslides are known to exist that could potentially impact the Project and would not expose people or structures to potential hazards associated with slope-instability or landslides. Therefore, no impacts related to slope instability or landslides would occur.

6.2 Result in substantial soil erosion or the loss of topsoil

The Project Site is currently developed with exiting paved roads, residential neighborhoods, office buildings and parking lots. Project construction would temporarily expose on-site soils to surface water runoff. Compliance with construction-related best management practices (BMPs) would control and minimize erosion and siltation. Appropriate erosion control BMPs may include, but are not limited to silt fencing, fiber rolls, sand bag barriers, gravel bag berms and stabilized construction site entrance/exit and any other practices laid out in the City's Low-Impact Development (LID) Standards Manual. Following construction activities, runoff would be directed into existing storm drains that receive surface water runoff under existing conditions, and runoff would not encounter unprotected soils. Because Project implementation would include standard construction BMPs outlined in a SWPPP, impacts related to soil erosion or loss of topsoil would be less than significant.

6.3 Be located on geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse

Subsidence and ground collapse generally occur in areas with active groundwater withdrawal or petroleum production. The extraction of groundwater or petroleum from sedimentary source rocks can cause the permanent collapse of the pore space previously occupied by the removed fluid. The Project does not involve the creation of new groundwater wells. Subsidence and ground collapse can also occur during dewatering activities. However, dewatering is not necessary for the Project. U.S. Geological Survey (USGS) groundwater measurements indicate that groundwater in the vicinity is at least 85 feet below grade. Since the Project does not include substantial excavation or subterranean structures, groundwater would not be encountered during construction. Project design features and construction would comply with all applicable building codes and standards. With adherence to existing regulations, impacts related to geological failure, including lateral spreading, off-site landslides, liquefaction, or collapse would be less than significant.

6.4 Be located on expansive soil as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property

Expansive soils have relatively high clay mineral content and are usually found in areas where underlying formations contain an abundance of clay minerals. Due to high clay content, expansive soils expand with the addition of water and shrink when dried, which can cause damage to overlying structures.

The Project would incorporate standard construction practices to maintain the integrity of the Project site and proposed structures. Additionally, Project design features and construction would comply with all applicable building codes and standards. With adherence to existing regulations, impacts related to expansive soils would be less than significant.

6.5 Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

The Project Site is located in a highly urbanized area, where wastewater infrastructure is currently in place. The Project would connect to existing sewer lines that serve the Project Site and would not use septic tanks or alternative wastewater disposal systems. Therefore, no impact would occur.

7. LIMITATIONS

The professional opinions and recommendations expressed in this Report are made in accordance with generally accepted standards of practice and were based largely on source information provided by others. No other warranty is either expressed or implied. Geosyntec is responsible for the findings contained in this Report based on the data available and information relating only to the specific Project and location discussed herein. Geosyntec is not responsible for use of the information contained in this Report for purposes other than those expressly stated in this Report, namely supporting the completion of the initial study checklist. Geosyntec is not responsible for any conclusions or recommendations made by others based upon the data or conclusions contained herein unless given the opportunity to review them and concur with them in writing.

Hazardous Material Assessment and Hazard and Hazardous Materials Technical Memorandum

Dear Mr. Thomason:

Geosyntec Consultants (Geosyntec) has prepared *Hazardous Material Assessment* and *Hazard and Hazardous Materials* technical memorandums at your request for the above referenced project and are being delivered as attachment to this letter.

Should you have any questions or need additional information please do not hesitate to contact Mital Desai (mdesai@geosyntec.com) at (626)788-4634.

Sincerely,

Mital Desai
Senior Professional

Jane Besch
Principal

Inglewood Transit Connector
Technical Memorandum
Hazardous Material Assessment

1. INTRODUCTION

Geosyntec Consultants (Geosyntec) has prepared this Hazardous Materials Assessment (HMA) Technical Memorandum for the City of Inglewood (City) in support of planning for an automated people mover (APM) system (approximately 1.8-mile in length) connecting the Los Angeles Metro Crenshaw/LAX light-rail line to the mixed-use development at Los Angeles Stadium and Entertainment District at Hollywood Park (LASED) via Market Street and Manchester Boulevard in the City of Inglewood (referred to as the Project). The Project includes rail alignment and associated five Interconnector Stations (ICS), and five potential Intermodal Transit Facility (ITF) and Maintenance and Storage Facilities (MSF) locations. The results of this HMA will be used in the preparation of the Hazard and Hazardous Materials study, the results of which will be included in the Project Initial Study.

2. PROJECT DESCRIPTION

The proposed rail alignment and the five ICS will be located within the public right-of-way (ROW) along the South Market Street (starting at the Market Street North Connection with the Los Angeles Metro Crenshaw/LAX Line), West Manchester Boulevard, and North Prairie Avenue. The proposed project terminates at West Century Boulevard at the LASED mixed-use development as shown in Figure 1. The entire rail alignment and the ICS are currently planned to be elevated. In addition, five[1] sites (Site 1 through Site 5) along the alignment are currently proposed for the use as ITF and MSF as shown in Figure 1. The area encompassing the rail alignment (including ICS) and the five sites proposed for the use of ITF and MSF are collectively referred as the Project Site.

3. SCOPE OF HMA

The scope of the HMA was limited to a desk-top review of electronic and readily- available government and regulatory agency database files for the Project Site and present the findings in this HMA Technical Memorandum. An environmental database report prepared by Environmental Database Resources, Inc. [EDR[2]] was obtained and reviewed for local, state and federal listing of the Project Site. The goal of the HMA was to perform a screening-level evaluation to identify potential subsurface (in soil and/or groundwater) environmental impacts occurring from a past, current, or potential future release of hazardous substances and/or petroleum products at the Project Site (referred to as Environmental Impact).

---

[1] It is our understanding that the actual ITF/MSF facilities will be shortlisted from these five sites.
[2] Provided as Appendix A.

4. SUMMARY OF PERTINENT FINDINGS

Oil Field Related

Portions of the Project Site are located within the boundary of the Potrero Oil and Gas Field which included historic oil and gas exploration and production activities (Figure 2). Development within former oil and gas fields, such as considered for the Project Site, is a common undertaking in Los Angeles County with prescribed regulations and assessment and cleanup methods, as needed. The following describes potential oilfield-related Environmental Impacts identified for the Project Site:

- The State of California, Division of Oil, Gas, and Geothermal Resources (DOGGR) database indicates the presence of plugged oil and gas wells in the vicinity[3] of the proposed ITF/MSF Sites 2 and 3 (Figure 2). Based on the preliminary review, these wells are not located on the Project Site. If Site 2 and 3 are identified to be a location for ITF/MSF, then these wells should be evaluated in accordance with the current DOGGR regulations.
- Contaminants frequently associated with oil and gas activities include crude oil, refined petroleum products, drilling mud, metals, polychlorinated biphenyls (PCBs), pesticides and volatile organic compound (VOCs) impacts in soil and soil vapor. Potential sources for these contaminants include oil wells, well cellars, pumps, pipes, sumps, storage tanks, separators, transformers and application of petroleum products/crude oil (likely containing PCBs and pesticides) for dust/weed control. Since the Project Site areas are already developed, such on-site issues may have been addressed during its development. However, if such issues are encountered, then they will be addressed in accordance with applicable regulations.
- The subsurface conditions in the vicinity of the Project Site may also include naturally-occurring methane and hydrogen sulfide gas associated with underlying and nearby oil and gas fields. After shortlisting the locations for ITF/MSF, methane investigation/mitigation should be evaluated according to the applicable regulations.

EDR Database

The following describes specific findings for each portion of the Project Site:

- Rail alignment: The area of the alignment (Figure 1) was not found in the EDR database understandably because it is within the public ROW, therefore, Environmental Impact was not identified within this area resulting from its[4] operation.

[3] The DOGGR database acknowledges oil and gas well locations are approximate, thus an accurate determination of the well locations is needed to assess whether an abandoned oil well is located within the Project Site.
[4] However, there is a potential for Environmental Impacts from off-site sources.

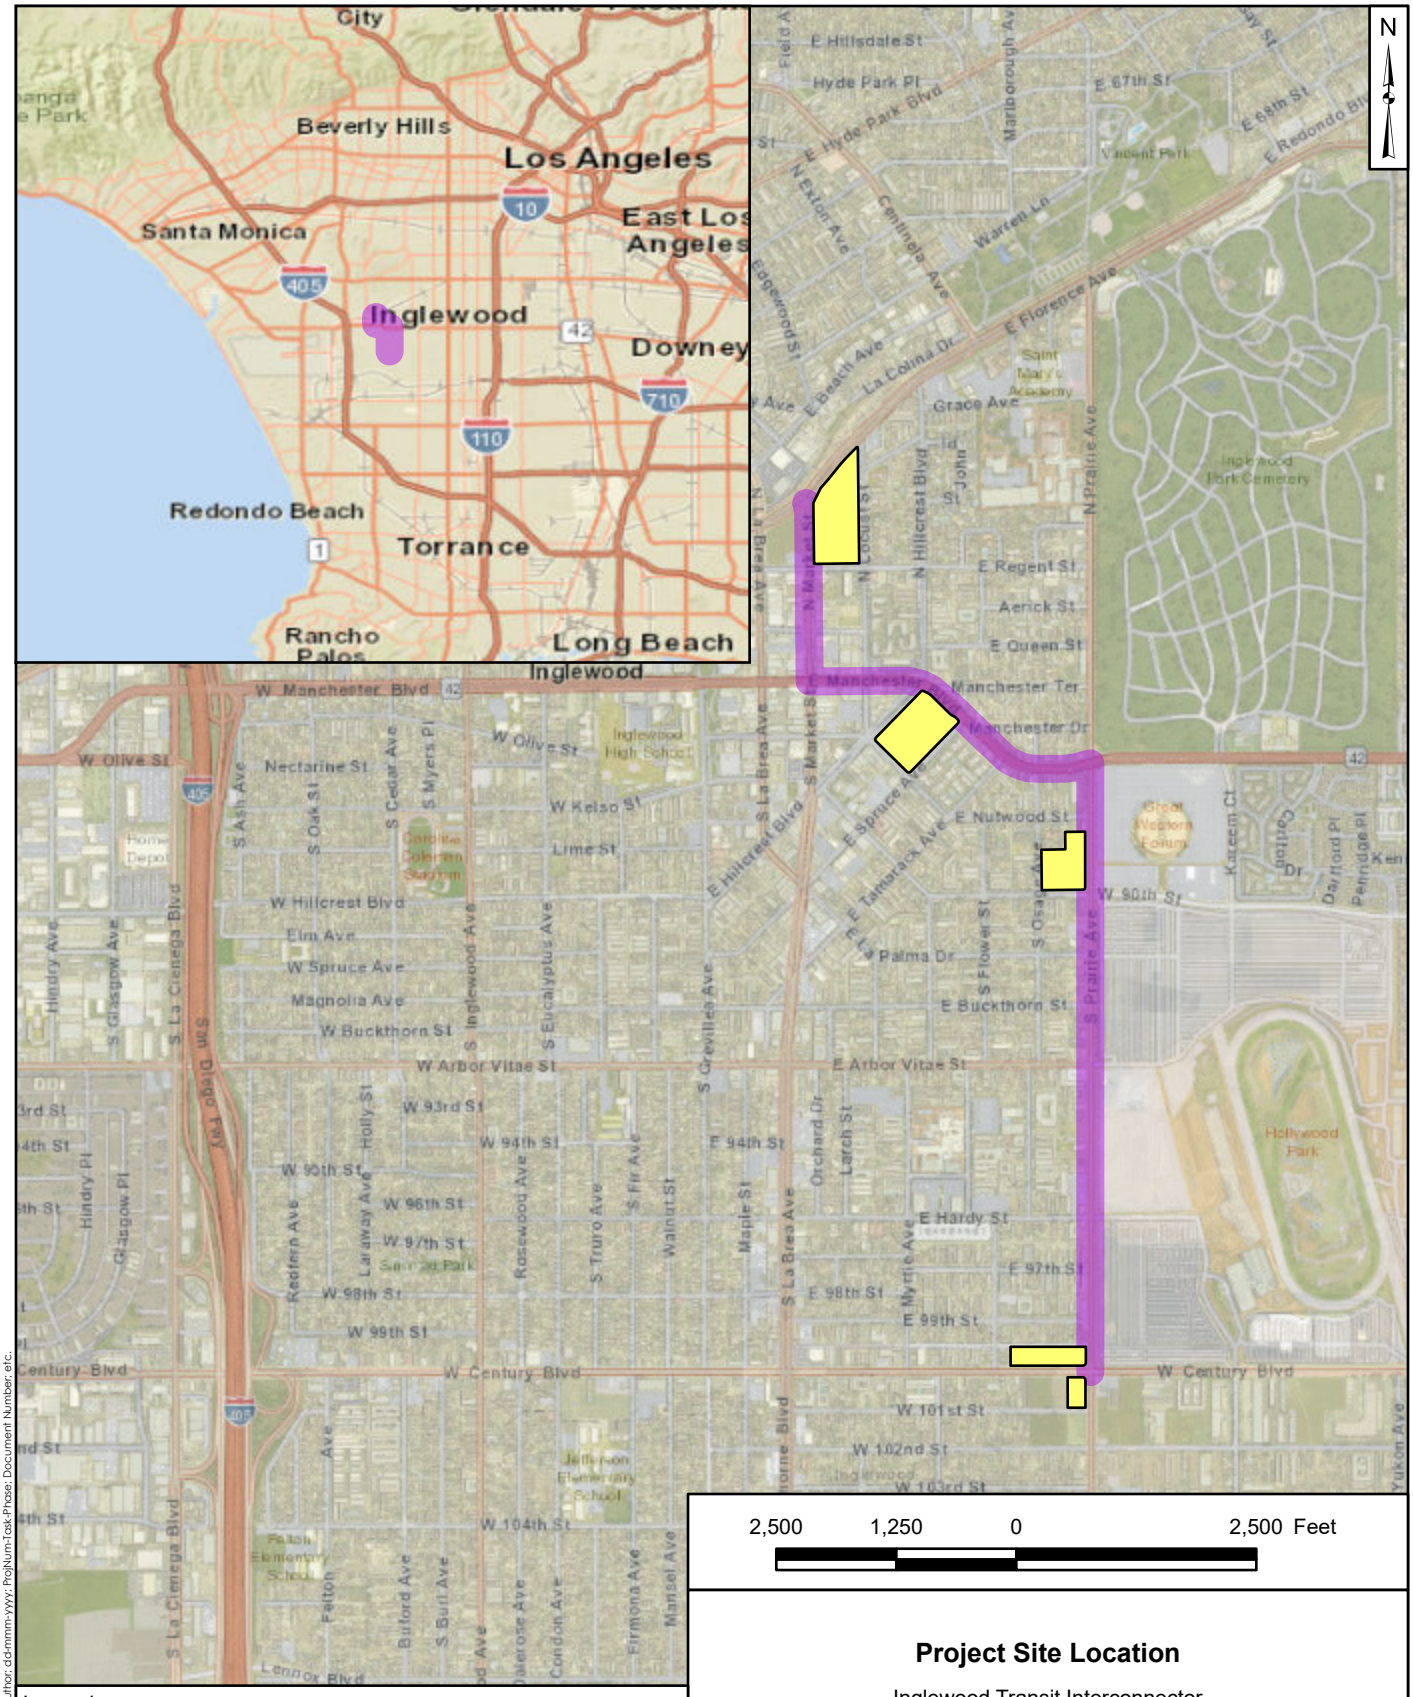
- Site 1 (200 to 270[5] North Market Street, 330 East Florence Avenue): This facility (under various business names) was found in multiple databases that indicate its former use as gas station/automobile repair and dry cleaner operations. Site 1 was identified in the EDR Exclusive Historical Auto Stations (EDR Hist Auto) and EDR Exclusive Historical Dry Cleaners (EDR Hist Cleaner) lists. It was further found in databases such as Resource Conservation and Recovery Act (RCRA) Small Quantity Generator[6] (SQG), Facility Index System/Facility Registry System (FINDS[7]), and Enforcement and Compliance History information (ECHO) indicating generation and disposal of hazardous material. A CVS store is currently located at this location and is listed as a RCRA Large Quantity Generator[8] (LQG) that generates alkaline and acidic solutions, other inorganic solid waste, unspecific solvent mixture, pharmaceutical waste, ignitable waste, chromium, mercury, selenium, m-cresol, nicotine, 2-propanone, acetone, cyclohexane, lindane, selenium sulfide and various other organic chemicals. The site previous uses as a dry cleaner and a gas station may have caused Environmental Impact. Further the hazardous waste storage area(s) of the current CVS may also have caused an Environmental Impact.
- Site 2 (500 and 510 East Manchester Boulevard): This facility currently operates as Vons supermarket that also includes Vons Fuel Station # 2502 in addition to other amenities. This facility was listed in the Underground Storage Tank (UST) database. This facility is also a former Sears Auto Center and was found on the Leaking Underground Storage Tank (LUST) and Hazardous Waste & Substances Site List (HIST CORTESE[9]) database and has been reported to have a gasoline release in soil that was discovered during tank closure activities in 1987. The case was reportedly closed by the Los Angeles Region, Regional Water Quality Control Board (LARWQCB) in 1996. Other documentation describing the release, investigation and remediation was not available. This facility is also listed in FINDS, LOS ANGELES CO. HMS[10], Facility and Manifest Data (HAZNET, for disposal of organic and inorganic solid waste), California Hazardous Material Incident Report System (CHMIRS, for an accidental customer release of gasoline), RCRA SQG, Statewide

[5] Even numbers only.
[6] generates more than 100 and less than 1000 kg of hazardous waste during any calendar month; or generates less than 1 kg of acutely hazardous waste during any calendar month.
[7] This database supports the RCRA program through the tracking of events and activities related to facilities that generate, transport and treat, store, or dispose of hazardous waste.
[8] generates 1,000 kg or more of hazardous waste during calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month.
[9] The sites in this list are designated by the State Water Resource Control board [i.e. LUST sites], the Integrated Waste Board [i.e. active, closed and inactive landfills, SWF/LF], and the Department of Toxic Substances Control [i.e. sites contain potential or confirmed hazardous substance release, CALSITES]. This listing is no longer updated by the state agencies.
[10] A listing from Los Angeles County, Department of Public Works for sites that generate industrial waste and UST sites.

Environmental Evaluation and Planning System UST (SWEEPS UST[11]), Historical Substance Storage Container (HIST UST[12], for storing waste oil), FINDS and ECHO. Its current operation as a gas station may have caused an Environmental Impact.

- Site 3 (501 South Prairie Avenue): This facility was not found in EDR databases therefore; Environmental Impact was not identified within Site 3 resulting from its[13] operation.
- Site 4 (4015 West Century Boulevard, 4055 West Century Boulevard): A portion of the facility is currently operated as an auto shop and a Chevron gas station and was found in databases such as UST, RCRA LQG (for disposal of ignitable waste, benzene), FINDS, and ECHO. The facility is also found in the EDR Hist Auto database for presence of a gas station/automotive repair shop in the past. The site operation (both historical and current) as a gas station/automotive repair shop may have caused an Environmental Impact.
- Site 5 (10023 S. Prairie Ave., 4000 W. Century Blvd): This facility was found on HIST CORTESE, SWEEP UST, LOS ANGELES Co. HMS., Facility Inventory Database (CA FID UST) as well as LUST (under the business of former UNOCAL # 5050 station) where gasoline had potentially contaminated the groundwater. The case was closed by the LARWQCB in 1996. This site was also found in EDR Hist Cleaners, EDR Hist Auto, and HIST UST databases. The site operation as a dry cleaner and gas station (the exact location of the operation is unknown) may also have caused an Environmental Impact.

5. SUMMARY



Geosyntec has performed the HMA in accordance with the approved scope discussed in Section 3 and found a number of issues that has the potential to cause an Environmental Impact to the Project Site. These issues are limited to MSF/ITF potential locations; no issues exist within the rail alignment itself. These issues would be further evaluated/addressed in accordance with industry standard and applicable local, state and federal regulations once the MSF/ITF locations are determined.

Figure 1: Project Site Location
Figure 2: Project Site Layout

Appendix A: EDR Report

[11] This listing is no longer maintained.
[12] This database contains a list of historical UST sites.
[13] However, there is a potential for Environmental Impacts from off-site sources.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/09/2018 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 7 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 25 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 17 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 3 SWF/LF sites within

approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 6 CPS-SLIC sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 19 UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

SCH: This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category. depending on the level of threat to public health and safety or the. environment they pose.

A review of the SCH list, as provided by EDR, and dated 01/30/2018 has revealed that there are 2 SCH sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 18 SWEEPS UST sites within approximately 0.25 miles of the target property.

OES Incident Number: 908535				
Date Completed: 11-OCT-89				
Not reported	1050 S. PRAIRIE AVEN	0 - 1/8 (0.000 mi.)	H43	65
OES Incident Number: 099408				
Date Completed: 07-AUG-90				

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

ICIS: The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

A review of the ICIS list, as provided by EDR, and dated 11/18/2016 has revealed that there is 1 ICIS site within approximately 0.001 miles of the target property.

HOLLYWOOD PARK	1050 PRAIRIE AVE	0 - 1/8 (0.000 mi.)	G24	28

FTTS: FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, has revealed that there are 2 FTTS sites within approximately 0.001 miles of the target property.

Database: FTTS, Date of Government Version: 04/09/2009				

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, has revealed that there are 2 HIST FTTS sites within approximately 0.001 miles of the target property.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, has revealed that there is 1 US AIRS site within

approximately 0.001 miles of the target property.

Database: US AIRS MINOR, Date of Government Version: 10/12/2016

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/21/2018 has revealed that there are 8 FINDS sites within approximately 0.001 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there are 24 DRYCLEANERS sites within approximately 0.25 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2016 has revealed that there are 12

HAZNET sites within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used

whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 48 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 32 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002818933

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major

HOLLYWOOD PARK (Continued) **1007649232**

redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Longitude: -118.338117599487
Case Type: Cleanup Program Site
Case Worker: GAC
Local Agency: Not reported
RB Case Number: 1207
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Arsenic
Site History: SITE SUMMARY: Horse racing track since 1938. Scheduled to be demolished in 2009 and redeveloped into mixed residential/commercial use. 238 acres total with paved parking area, grandstand building with former dry cleaners, casino, former race track maintenance area, vehicle maintenance area, racing track and infield, practice track and infield, former oil field impoundments, storm water sediment area, horse stables, and treated wastewater impoundments. Adjacent to Texaco Cypress Fee former oil field site (since redeveloped residential), responsible for PHC-contaminated GW in eastern area of property. GW exceeds MCL for PCE at the former dry cleaner area (5.8 ug/L in grab sample), TPH in groundwater in the western parking area

HOLLYWOOD PARK RACE TRACK (Continued) **U001563804**

(980 ug/L max), and nitrate in groundwater in the western half of the property (17,000 ug/L). Strong evidence for off-site sources of nitrate and TPH GW contamination. SVE installed in 2007 in former dry cleaners beneath the grandstand and operated until December 2008 to mitigate PCE soil vapors to a depth of 50 ft BGS. Approx 30 lbs VOCs removed to-date. PCE soil and GW plumes need to be fully defined after demolition. Depth to GW approximately 100 ft bgs in the western half and 150 feet bgs in the eastern half. A large fault separates the east and west portions of the property. GW flow direction is uncertain, but 4 to 6 monitoring wells are planned. Formerly agricultural until 1938 when developed as a racetrack. Never used for industrial purposes, minor soil and GW contamination detected in the former dry cleaners, vehicle and track maintenance areas, and former oil field impoundment areas. Approved soil management plan to investigate and remediate contaminated soil during redevelopment. NEEDED: Further investigation of the former dry cleaner area.

FINDS:

Registry ID: 110002863704

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002759051

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110055782906

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 244

CVS PHARMACY #9578 (Continued) **1016140120**

Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002630261

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
STATE MASTER

Registry ID: 110012212890

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No

Leak Detection: None

FINDS:

Registry ID: 110055843128

Environmental Interest/Information System
STATE MASTER

Registry ID: 110002948197

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DELGADOS AUTOMOTIVE (Continued) **1000596490**

Registry ID: 110002859979

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002859835

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

1/2-1 **INGLEWOOD, CA 90302**
0.518 mi.
2737 ft. **Site 1 of 2 in cluster AU**

Relative: Manufactured Gas Plants:
Lower

Actual: A 1.4 acre former, early 1900's, manufactured gas plant site that was
135 ft. dismantled in 1913. The site is currently part of an 18 acre city-owned park. A PEA identified some contamination (lampblack PAH's) in the subsurface soils. A removal action was coompleted in February of 1995 and this section of the public park returned to use.

SO CAL GAS/INGLEWOOD MGP (Continued) **S101480993**

Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 07/08/1992
Comments: The Department completed review of the PEA on July 8, 1992. The Department concurred with the recommendation that Further Action was needed at the site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 04/07/1992
Comments: The 1.4 acre of total 58 acre park was used by the Gas Co. for the production of "manufactured gas" in the early 1900s. Currently the site is used as a city owned rec- reational park. The manufactured gas was made at the site from coal and oil. The byproducts from this operation were tars, oils, sludges, lampblack etc, which were sold to various industrial uses. Some of these byproduct residues have been found in soils at former towne gas plant sites. Out of these polycyclic aromatic hydrocarbons (PAH) are hazardous. Also, elevated levels of heavy metals such as lead and arsenic were found at a few sites. A PEA is required at the site to determine, if any emergency removal action is required to reduce the potential threat to public health and the environment. The Dept received a Notice of Intent dated March 20, 1992 to initiate PEA.

FINDS:

Registry ID: 110002793898

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Comments:	In a letter, dated October 9, 2007, DTSC approved the Phase I

JEFFERSON ELEMENTARY SCHOOL EXPANSION (Continued) **S105087248**

Environmental Site Assessment report, dated May 4, 2007, with additional information provided on October 2, 2007. The Phase I concludes that the only recognized environmental conditions at the site are asbestos containing material, lead from lead-based paint, and organochlorine pesticides from termiticides. DTSC concurred with the conclusion that further environmental investigation of the site is required.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 4.14 Request
Completed Date: 10/11/2007
Comments: On October 11, 2007, DTSC signed the completed SFPD 4.14 form and transmitted the form to Lennox School District via a letter, dated October 11, 2007. The form documents commitment of the District to complete the required further investigation and related response action with DTSC's oversight. Further investigation of lead from lead-based paint and organochlorine pesticides from termiticides, including asbestos containing material, is required per DTSC's letter, dated October 9, 2007.

OAK STREET ELEMENTARY SCHOOL, CITY OF INGLEWOOD (Continued) **S109933637**

Longitude: -118.3660
APN: 4022-002-900
Past Use: UNKNOWN
Potential COC: Under Investigation
Confirmed COC: Under Investigation
Potential Description: UE
Alias Name: 4022-002-900
Alias Type: APN
Alias Name: 301498
Alias Type: Project Code (Site Code)
Alias Name: 60001399
Alias Type: Envirostor ID Number

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 03/10/2011
Comments: A Phase I ESA was prepared to determine potenital historical operations that may have led to soil impacts at the Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Workplan
Completed Date: 03/23/2011
Comments: A PEA Workplan was prepared to outline the scope of work needed to assess potential environmental impacts resulting from historical operations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/26/2011
Comments: The PEA Report recommends No Further Action. DTSC concurs with this recommendation and accepts the PEA Report as Final.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 03/30/2011
Comments: Soil and Soil Gas sampling conducted on March 29 and 30, 2011. Samples were analyzed for metals, organochlorine pesticides, total petroleum hydrocarbons, polychlorinated biphenyls, and volatile organic compounds.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: State/Federal Funded Site Work Order
Completed Date: 01/27/2010
Comments: Work Order Approval executed and Start Work was issued.

Future Area Name: Not reported
Future Sub Area Name: Not reported
Future Document Type: Not reported
Future Due Date: Not reported
Schedule Area Name: Not reported
Schedule Sub Area Name: Not reported
Schedule Document Type: Not reported

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/11/2017

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 01/09/2018

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region’s active disposal pits are operating without permission.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

West Map:	5640438 VENICE, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

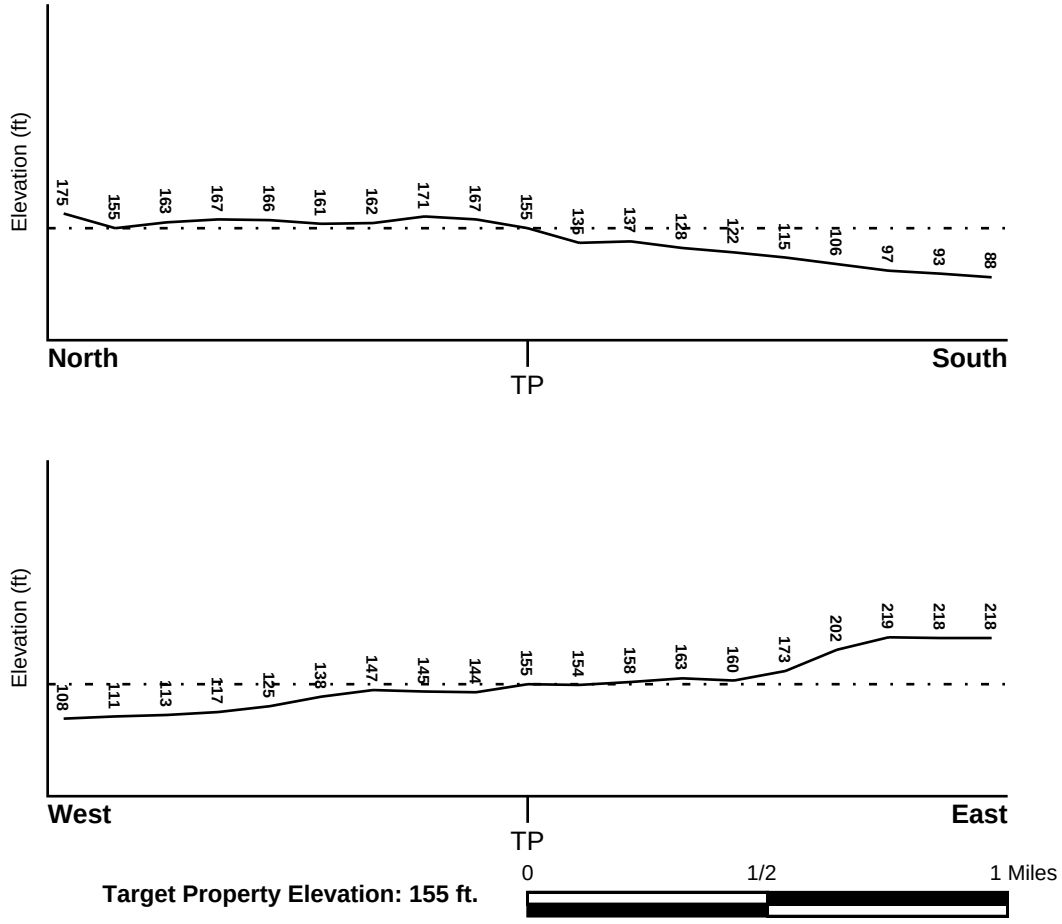
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1780F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
INGLEWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Hazardous Material Assessment and Hazard and Hazardous Materials Technical Memorandum

Dear Mr. Thomason:

Geosyntec Consultants (Geosyntec) has prepared *Hazardous Material Assessment* and *Hazard and Hazardous Materials* technical memorandums at your request for the above referenced project and are being delivered as attachment to this letter.

Should you have any questions or need additional information please do not hesitate to contact Mital Desai (mdesai@geosyntec.com) at (626)788-4634.

Sincerely,

Mital Desai

Inglewood Transit Connector
Technical Memorandum
Hazards and Hazardous Materials

1. INTRODUCTION

Geosyntec Consultants, Inc. (Geosyntec) understands that the City of Inglewood (City) is planning the development of an automated people mover (APM) system (approximately 1.8-mile-long) connecting the Los Angeles Metro Crenshaw/LAX light-rail line to the mixed-use development at Los Angeles Stadium and Entertainment District at Hollywood Park (LASED) via the Market Street and Manchester Blvd in the City of Inglewood (referred as Project). The Project includes rail alignment and associated five Interconnector Stations (ICS), and five potential Intermodal Transit Facilities (ITF)/Maintenance and Storage Facilities (MSF) locations. Geosyntec has prepared this Hazard and Hazardous Materials Technical Memorandum (Report) which includes a description of the Project-related environmental setting, regulatory framework, significance criteria, and potential environmental impacts associated with Hazards and Hazardous Materials to be included in the Initial Study.

2. PROJECT DESCRIPTION

The proposed rail alignment and the ICS will be located within the public right-of-way (ROW) along the South Market Street (starting at Market Street North Connection with the Metro Crenshaw Line), West Manchester Boulevard, and North Prairie Avenue (terminates at West Century Boulevard at the LASED as shown in Figure 1). The entire rail alignment and the ICS are expected to be elevated. In addition, five sites (Site 1 through Site 5) along the alignment are currently proposed for the use as ITF and MSF as also shown in Figure 1. The area encompassing the rail alignment (including ICS) and the five sites proposed for the use of ITF and MSF are collectively referred as Project Site.

3. ENVIRONMENTAL SETTING

A Hazardous Material Assessment (HMA) was prepared by Geosyntec for the Project Site [Geosyntec, 2018]. The goal of the HMA was limited to a desk-top review of electronic and readily- available government and regulatory agency database to identify potential subsurface (in soil and/or groundwater) environmental impacts occurring from a past, current, or potential future release of hazardous substances and/or petroleum products at the Project Site (referred as “Environmental Impact”). The pertinent findings (described in detail in HMA and not repeated herein) were:

- The rail road alignment is proposed within the public ROW and was not found in any databases.
- The ITF/MSF sites are proposed on commercial properties that were found in databases that indicates their use (historical or current) as gas stations, dry cleaners, parking lots etc. and for use/storage/management of hazardous materials in various quantities. Due to the nature of the activities that occur at these facilities/businesses, there is a potential for Environmental Impact at these sites which should be evaluated/addressed in accordance with industry standards and applicable regulations upon final determination of ITF/MSF locations.
- In addition, a portion of the Project Site also falls within the Potrero Oil and Gas Field which could have potential issues related to oil and gas field such as methane, hydrogen sulfide, leaking wells, wells not abandoned to current standards, other contaminants etc. Such issues should be evaluated/addressed in accordance with industry standards and applicable regulations.

4. REGULATORY FRAMEWORK

The section identifies the local, state and federal statutes that govern the production, storage and transport of hazardous materials.

4.1 Federal

The Resource Conservation and Recovery Act (RCRA)[1] RCRA is the principal law that regulates the generation, transportation, treatment, storage and disposal of hazardous waste. RCRA regulation framework provides management of hazardous substances from the time of generation to the point of disposal.

The Emergency Planning and Community Right-to-Know Act (EPCRA) improved community access to information regarding chemical hazards and facilitated the development of business chemical inventories and emergency response plans. EPCRA also established reporting obligations for facilities that store or manage specified chemicals.

According to the Department of Transport (DOT) Hazardous Materials Transportation Act[2], DOT, in conjunction with U.S. EPA, is responsible for enforcement and implementation of federal laws pertaining to safe storage and transportation of hazardous material.

The Occupational Safety and Health Administration (OSHA) provision as set forth in 29 Code of Federal Regulations (CFR) § 1910 contains provisions for safety of the general industry

[1] 42 United States Code (USC) § 6901-6992(k).
[2] 49 USC 5101

workers with respect to hazardous material handling. The OHSA provisions set forth in 29 CFR §1926 contains provisions for safety for construction with respect to hazardous material handling.

4.2 State

In California, the California Code of Regulations (CCR) Title 22 defines, categorizes and lists hazardous materials and wastes, and Title 23 addresses public health and safety issues related to hazardous materials and wastes and specifies disposal options. The Hazardous Waste Control Law of 1972[3] established the California Hazardous Waste Control Program in California.

The Division of Occupational Safety and Health (DOSH), better known as Cal/OSHA protects and improves the health and safety of workers as set forth in CCR, Title 8.

Cal-EPA adopted regulations implementing a "Unified Hazardous Waste and Hazardous Materials Management Regulatory Program" (Unified Program). The program addresses the following six programs:

- Hazardous Materials Release Response Plans and Inventories (Business Plan);
- California Accidental Release Prevention (CalARP) Program;
- Underground Storage Tank (UST) Program;
- Aboveground Petroleum Storage Act Requirements for Spill Prevention, Control and Countermeasures (SPCC) Plans;
- Hazardous Waste Generators and On-Site Hazardous Waste Treatment (tiered permitting) Programs; and
- California Uniform Fire Code (UFC): Hazardous Materials Management Plans and Hazardous Materials Inventory Statements.

The Unified Program is implemented at the local level by a local agency: the Certified Unified Program Agency (CUPA). The CUPA is responsible for consolidating the administration of the above six program elements within its jurisdiction. Los Angeles County, Fire Department (LACFD) is the CUPA for the Project Site.

California regulates USTs pursuant to California Health and Safety Code, Division 20, Chapter 6.7 and CCR Title 23, Division 3, Chapter 16 and 18. Oversight of the statewide UST program is assigned to the State Water Resources Control Board and typically on the local level, to the fire department. The LACFD administers and enforces federal and state laws and local ordinances for USTs at the Project Site.

[3] California Health and Safety Code § 25100.

In the State of California, hazardous materials sites are consolidated in "CORTESE" list by various state agencies pursuant to the Government Code Section 65962.5 which includes the following lists:

- List of Hazardous Waste and Substances sites from Department of Toxic Substances Control (DTSC) EnviroStor database;
- List of Leaking Underground Storage Tank Sites by County and Fiscal Year from Water Board GeoTracker database;
- List of solid waste disposal sites identified by Water Board with waste constituents above hazardous waste levels outside the waste management unit;
- List of "active" Cease and Desist Orders (CDO) and Cleanup and Abatement Order (CAO) from Water Board; and
- List of hazardous waste facilities subject to corrective action pursuant to Section 25187.5 of the Health and Safety Code, identified by DTSC.

The databases referenced above identify facilities with suspected and confirmed releases of hazardous materials to soil and/or groundwater.

4.3 Regional and Local

Various regional agencies enforce federal and state regulations in the Project area, including South Coast Air Quality Management District (SCAQMD) and Los Angeles Regional Water Quality Control Board (LARWQCB). The SCAQMD regulates air quality and sets control for the emission of VOCs in Rule 1166, toxic air contaminants in Rule 1466, nuisance in Rule 403 and fugitive dust in Rule 403. The LARWQCB regulates unauthorized release that may result in pollution of regional water bodies. LACFD oversees tank monitoring, installation, removal and site mitigation. The federal government and the State require all businesses that handle more than a specified amount of hazardous materials or extremely hazardous materials to submit a business plan to their local CUPA. The LACFD requires preparation, submittal and implementation of a business plan on a yearly basis if a business uses, stores, or manufactures a hazardous material in any amount. The business plan should require an inventory of the hazardous materials and set forth emergency response plans and procedures to be used in an event of significant or threatened significant release of a hazardous substance.

5. SIGNIFICANCE CRITERIA

Potential impacts of hazards and hazardous material on the public and environment were evaluated based on the known existing potentially hazardous materials used/stored at the Site or are expected to be used/stored at the Site during construction and operation. Criteria for determining the significance of impacts related to the hazards and hazardous materials are based

upon criteria contained in the California Environmental Quality Act (CEQA) Guidelines Appendix G Checklist and are as follows:

- Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials;

- Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment;

- Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;

- Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment;

- For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area;

- For a project within the vicinity of a private airstrip, would the project result in a safety hazard for the people residing or working in the area;

- Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; or

- Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands.

These criteria are discussed in the following sections.

6. POTENTIAL ENVIRONMENTAL IMPACTS

6.1 Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials

The Project may involve the following activities and/or use of hazardous substances during construction that may adversely impact the environment, and/or construction workers and off-Site receptors:

- The existing buildings will be demolished for the construction of MSF. This has potential to contain hazardous materials such as asbestos containing material (ACM), lead-based paint and other potentially hazardous building materials in some form as part of the building materials, such as PCBs, mercury, or chlorofluorocarbons (CFCs) in fluorescent lighting and electrical switches. The demolition of the structures, and subsequent removal and disposal of potential hazardous materials, has the potential to release these hazardous materials into the environment and may expose members of the public in the vicinity of the demolition activities. However, by complying with applicable regulations, impacts would be less than significant.

- Excavation of soil impacted with petroleum hydrocarbons or dry-cleaning solvents or other contaminants may be encountered during construction activities at the Site. The on-Site construction workers and off-Site receptors may be exposed to such impacted soil via direct contact and/or indirect exposures during excavation/grading, loading and transportation. However, by complying with applicable regulations, impacts would be less than significant.

- Use of common construction materials such as fuels, paints, cleaners, solvents, and welding materials are also expected during construction. An accidental spill of such materials may impact the environment, on-Site construction workers and possibly off-Site receptors. The construction contractor shall develop a Spill Prevention and Control Plan (SPCC) in accordance with all applicable local, state and federal regulations to minimize the potential for and effects from spills of hazardous, toxic or petroleum substances during construction activities and therefore, such impacts would be less than significant.

The proposed Project will include MSF that is expected to use/store bulk quantities of hazardous materials such as fuel (potentially in underground storage tanks [USTs]), solvents, oil, transmission fluid, paints and other chemicals needed for maintenance and service during Project operation. Such materials should be stored and handled in accordance with all applicable local, state and federal regulation including but not limited to the requirement of the Unified Program such as implementation of Risk Management Plan (RMP), Hazardous Material Business Plan (HMBP) and Emergency Response Plan (ERP). Consequently, the Project operations would result in a less than significant hazardous material impact due to transport, use or disposal of hazardous material.

6.2 Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment

An accidental spill of common construction materials such as fuels, paints, cleaners, solvents, and welding materials may impact the environment. However, by complying with existing regulations governing the storage and handling of such chemicals, impacts would be less than significant.

In addition, the MSF is expected to use/store bulk quantities of hazardous materials such as fuel, solvents, oil, transmission fluid, paints and other chemicals that would have the potential to be released into the environment if not properly handled and stored. However, by complying with existing regulations governing the storage and handling of such chemicals, impacts would be less than significant.

6.3 Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school

Preschools, schools and daycare centers are considered sensitive receptors for hazardous material issues because children are more susceptible than adults to the effect of many hazardous materials. There are multiple schools, child development centers located within approximately 0.25 miles of the Project Site. However, by complying with existing regulations governing the storage and handling of such chemicals, impacts would be less than significant.

6.4 Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment

Portions of the Project Site is known to be on the "HIST CORTESE" list but not on active "CORTESE" list of sites compiled pursuant to Government Code Section 65962.5. Therefore, impacts related to hazardous materials sites is less than significant.

6.5 For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area

The closest airport is Los Angeles International Airport (LAX) and the Project Site is not located within LAX airport influence area. Therefore, the proposed Project would not place structures or additional persons within an airport land use plan, runway clear zone, or other airport-related hazard area. Therefore, impacts related to safety hazard associated with public airports would be less than significant.

6.6 For a project within the vicinity of a private airstrip, would the project result in a safety hazard for the people residing or working in the area

The Project is not located within the vicinity of a private airstrip. Therefore, no impact related to safety hazards associated with private airstrips would occur.

6.7 Impair implementation of or physically interfere with an adopted emergency response plan or emergency

An emergency response plan was not available for the City of Inglewood (City). However, the City has planned evacuation routes assuming "worst case" displacement and surface rupture from a seismic event in the region along the Newport-Inglewood Fault or Potrero Fault as described in its General Plan, Safety Element (adopted July 1995). Prairie Avenue is one of the major arteries to be used for evacuation to the south and Manchester Boulevard to be used for evacuation to the east or west depending on rupture of Inglewood or Potrero fault.

A City department that responses to such a disaster was not known until the date of this report. During the permitting process with the City, access to the Project Site will be designed to provide access for emergency response vehicles to the satisfaction of the City. Consequently, the proposed Project will not impair implementation of or physically interfere with the City's emergency evacuation plan and will result in a less than significant impact.

6.8 Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands

Project Site is located in an urbanized developed area and is not within a Moderate, High, or Very High Fire Hazard Severity Zone (FHSZ) as designated by CAL FIRE. Therefore, no impact related to the exposure of people or structures to a risk of loss, injury, or death involving wildland fires would occur.

LIMITATIONS

The professional opinions and recommendations expressed in this Report are made in accordance with generally accepted standards of practice and were based largely on source information provided by others. No other warranty is either expressed or implied. Geosyntec is responsible for the findings contained in this Report based on the data available and information relating only to the specific Project and location discussed herein. Geosyntec is not responsible for use of the information contained in this Report for purposes other than those expressly stated in this Report, namely supporting the completion of the initial study checklist. Geosyntec is not responsible for any conclusions or recommendations made by others based upon the data or conclusions contained herein unless given the opportunity to review them and concur with them in writing.

Hydrology and Water Quality Technical Memorandum

Dear Mr. Thomason:

Geosyntec Consultants (Geosyntec) has prepared *Hydrology and Water Quality* Technical Memorandum at your request for the above referenced project and is being delivered as attachment to this letter.

Should you have any questions or need additional information please do not hesitate to contact Megan Otto (mmotto@geosyntec.com) at (619)810-4043.

Sincerely,

Megan Otto

Inglewood Transit Connector
Technical Memorandum
Hydrology and Water Quality

1 INTRODUCTION

Geosyntec Consultants, Inc. (Geosyntec) understands that the City of Inglewood (City) is planning the development of an automated people mover (APM) system (approximately 1.8-mile-long) connecting the Los Angeles Metro Crenshaw/LAX light-rail line to the mixed-use development at Los Angeles Stadium and Entertainment District at Hollywood Park (LASED) via the Market Street and Manchester Blvd in the City of Inglewood (referred as Project). The Project includes rail alignment and associated five Interconnector Stations (ICS), and five Intermodal Transit Facilities (ITF)/Maintenance and Storage Facilities (MSF). Geosyntec has examined potential impacts to the proposed Project related to Hydrology and Water Quality and have documented the findings in this Hydrology and Water Quality Technical Memorandum (Report).

2 PROJECT DESCRIPTION

The proposed rail alignment and the ICS will be located within the public right-of-way (ROW) along the South Market Street (starting at Market Street North Connection with the Metro Crenshaw Line), West Manchester Boulevard, and North Prairie Avenue (terminates at West Century Boulevard at the LASED as shown in Figure 1). The entire rail alignment and the ICS are expected to be elevated. In addition, five sites (Site 1 through Site 5) along the alignment are currently proposed for the use as ITF and MSF as also shown in Figure 1. The area encompassing the rail alignment (including ICS) and the five sites proposed for the use of ITF and MSF are collectively referred as Project Site.

The proposed Project alignment spans approximately 1.8 miles along a 100-ft wide public right-of-way, covering a total area of approximately 22 acres. The proposed ITF/MSF sites cover another 20 acres.

3 ENVIRONMENTAL SETTING

This section describes the existing environmental conditions of the Project Site, as relevant to hydrology and water quality.

3.1 Climate

The Project Site is approximately 5.5 miles from the Santa Monica Bay shoreline and has a typical warm summer Mediterranean climate, which is characterized by rainy, moderately cold winters and dry, warm summers. Utilizing the monthly average climate data from the closest two National Oceanic and Atmospheric Administration (NOAA) weather gauges (Hawthorne Municipal Airport[1] and Los Angeles International Airport[2]) (NOAA, 2018), the annual cumulative precipitation depth from year 1999 to 2017[3] is shown in Figure 2. The annual cumulative precipitation varies widely, ranging from about 3.5 inches measured in the driest year (2013) to just over 20 inches in the wettest year (2010). The monthly average precipitation depth during the examined periods is shown in in Figure 3. As shown in the figure, the average monthly precipitation varies from less than 0.01 inch in August to 2.6 inches in February.

The monthly average ambient temperature range is shown in Figure 4. As shown in the figure, the ambient temperature at Project site varies moderately throughout the year. The monthly average minimum temperature varies from 49°F in December to 64°F in September; the monthly average maximum temperature varies from 66˚F in December to 79˚F in September.

3.2 Geology

The proposed Project Site is located within the central portion of the Los Angeles Basin, south of the Santa Monica Mountains, near the intersection of the Peninsular Ranges and Transverse Ranges geomorphic provinces of southern California.

Potential geologic hazards evaluated which could possibly affect the Project Site include slope instability, floods, seiches, and tsunamis. Tsunamis are seismically induced waves generated by sudden movements of the ocean bottom during submarine earthquakes, landslides or volcanic activity. Seiches are similarly generated but are oscillating waves within bodies of water such as reservoirs, lakes or bays. As shown in Figure 5, the Project Site is not located within any landslide, liquefaction and tsunami inundation zones as mapped by California Geological Survey (CGS) (CGS, 2015).

[1] Approximately 2.0 miles from southern boundary of the Project Site.
[2] Approximately 3.5 miles from southern boundary of the Project Site.
[3] These is the time period when complete year round data is available from both stations.

3.3 Soils

The surface soil types of the Project Site and vicinity are illustrated in Figure 6. Approximately 70% of the Project Site is above Soil Type 013 (Ramona Loam[4]), and 30% of the Project Site is above Soil Type 016 (Yolo Loam). Both soil types are classified as hydrologic soil group (HSG) C. HSG is an indicator of unsaturated hydraulic conductivity, which impacts if and how infiltration type stormwater management best management practices (BMPs) would be designed, if required. Saturated hydraulic conductivity is typically somewhat restricted through HSG C, and hence the project site may or may not be conductive to infiltration type BMPs, depending on further site-specific soil property determination (NRCS, 2007).

3.4 Land Uses

The existing land uses of the Project Site and vicinity are illustrated in Figure 7 (SCAG, 2005[5]) and summarized in Table 1. These values are approximate and do not reflect detailed ground conditions; it is expected that these number will be refined as the Project design phase progresses.

More than 90% of the Project Site is located in highly impervious commercial and transportation right-of-way area[6]. The area-weighted imperviousness of the existing land use condition of the Project Site is calculated as 92%.

Table 1. Existing Land Use Summary for Project Footprint

Project Site Component	Land Use	Area (ft^2)	Imperviousness (%)[7]
ITF and MTF	Commercial	713,900	96%
	Education	139,800	82%
	Multi-Family Residential	17,200	59%
Rail Transit	Transportation Right-of-Way	950,400	91%
Total		**1,821,300**	**92%**

[4] Soil name was found in Appendix C of the Los Angeles County Hydrology Manual (LACDPW, 2006)
[5] SCAG data were post-processed to group similar land use types
[6] The total proposed "rail transit" area is classified as transportation right-of-way, assuming the impacted area is the right-of-way width along the length of the project, per Figures 2.2-1 through 2.2-5 of *Envision Inglewood* (City of Inglewood, 2018).
[7] Imperviousness is land use specific and is obtained from Appendix D of the Los Angeles County Hydrology Manual (LACDPW, 2006)

3.5 Watershed Description

As shown in Figure 8, the Project Site is located within two watersheds in the southern California Coastal Subregion. The uppermost section of the Project (24% of the Project footprint) is located approximately 1.3 miles (as the crow flies) from the headwaters of Centinela Creek, in the Ballona Creek Watershed. Centinela Creek flows to Ballona Creek Reach 2[8], which eventually flows to the Santa Monica Bay. The southern section of the Project (76% of the Project footprint) is located approximately 1.3 miles (as the crow flies) upstream of the headwaters of the upper Dominguez Channel watershed. The Dominguez Channel eventually drains south toward Alamitos and ultimately the Los Angeles Harbor.

There are existing storm drain inlets and storm drains along both segments of the Project alignment. The drains would convey stormwater runoff downstream, and ultimately, to the respective water bodies. Figure 9 reflects the Los Angeles County Flood Control District (LACFCD) facilities as well as the catch basin inlets observed in the field.

3.5.1 Beneficial Uses

The phrase "beneficial uses" refers to the various ways water can be used. Los Angeles Regional Water Quality Control Board (LARWQCB) designates beneficial uses for surface and groundwater. Together with water quality objectives for specific beneficial uses, these beneficial uses form the basis of developing water quality standards.

Taken directly from the Basin Plan for the Coastal Watershed of Los Angeles and Ventura Counties (LARWQCB, 2018; herein referred as the "Basin Plan"), the beneficial uses (potential, existing, and intermittent) for Ballona Creek Reach 2[9] include:

- Municipal and Domestic Supply (MUN): Uses of water for community, military, or individual water supply systems including, but not limited to, drinking water supply.
- Navigation (NAV): Uses of water for shipping, travel, or other transportation by private, military, or commercial vessels.
- Commercial and Sport Fishing (COMM): Uses of water for commercial or recreational collection of fish, shellfish, or other organisms including, but not limited to, uses involving organisms intended for human consumption or bait purposes.
- Warm Freshwater Habitat (WARM): Uses of water that support warm water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.

[8] Defined as Ballona Creek south of National Boulevard (LARWQCB, 2018).
[9] The Basin Plan does not define beneficial uses for Centinela Creek.

- Estuarine Habitat (EST): Uses of water that support estuarine ecosystems including, but not limited to, preservation or enhancement of estuarine habitats, vegetation, fish, shellfish, or wildlife (e.g., estuarine mammals, waterfowl, shorebirds).
- Marine Habitat (MAR): Uses of water that support marine ecosystems including, but not limited to, preservation or enhancement of marine habitats, vegetation such as kelp, fish, shellfish, or wildlife (e.g., marine mammals, shorebirds).
- Wildlife Habitat (WILD): Uses of water that support terrestrial ecosystems including, but not limited to, preservation and enhancement of terrestrial habitats, vegetation, wildlife (e.g., mammals, birds, reptiles, amphibians, invertebrates), or wildlife water and food sources.
- Rare, Threatened, or Endangered Species (RARE): Uses of water that support habitats necessary, at least in part, for the survival and successful maintenance of one or more plant or animal species established under state or federal law as rare, threatened, or endangered.
- Migration of Aquatic Organisms (MIGR): Uses of water that support habitats necessary for migration, acclimatization between fresh and salt water, or other temporary activities by aquatic organisms, such as anadromous fish.
- Spawning, Reproduction, and/or Early Development (SPWN): Uses of water that support high quality aquatic habitats suitable for reproduction and early development of fish.
- Shellfish Harvesting (SHELL): Uses of water that support habitats suitable for the collection of filter-feeding shellfish (e.g., clams, oysters, and mussels) for human consumption, commercial, or sports purposes.

Taken directly from the Los Angeles Basin Plan, the beneficial uses (potential, existing, and intermittent) for Dominguez Channel include:

- Municipal and Domestic Supply (MUN): Uses of water for community, military, or individual water supply systems including, but not limited to, drinking water supply.
- Navigation (NAV): uses of water for shipping, travel, or other transportation by private, military, or commercial vessels.
- Commercial and Sport Fishing (COMM): Uses of water for commercial or recreational collection of fish, shellfish, or other organisms including, but not limited to, uses involving organisms intended for human consumption or bait purposes.
- Warm Freshwater Habitat (WARM): Uses of water that support warm water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.

- Estuarine Habitat (EST): Uses of water that support estuarine ecosystems including, but not limited to, preservation or enhancement of estuarine habitats, vegetation, fish, shellfish, or wildlife (e.g., estuarine mammals, waterfowl, shorebirds).
- Marine Habitat (MAR): Uses of water that support marine ecosystems including, but not limited to, preservation or enhancement of marine habitats, vegetation such as kelp, fish, shellfish, or wildlife (e.g., marine mammals, shorebirds)
- Wildlife Habitat (WILD): Uses of water that support terrestrial ecosystems including, but not limited to, preservation and enhancement of terrestrial habitats, vegetation, wildlife (e.g., mammals, birds, reptiles, amphibians, invertebrates), or wildlife water and food sources
- Rare, Threatened, or Endangered Species (RARE): Uses of water that support habitats necessary, at least in part, for the survival and successful maintenance of one or more plant or animal species established under state or federal law as rare, threatened, or endangered
- Migration of Aquatic Organisms (MIGR): Uses of water that support habitats necessary for migration, acclimatization between fresh and salt water, or other temporary activities by aquatic organisms, such as anadromous fish
- Spawning, Reproduction, and/or Early Development (SPWN): Uses of water that support high quality aquatic habitats suitable for reproduction and early development of fish.

3.5.2 Surface Water Quality

Existing conditions at the Project Site are generally impervious commercial and transportation land uses. No site-specific water quality data are currently available. However, stormwater runoff in the existing, and potentially the proposed, condition could contain pollutants commonly found in runoff from commercial, industrial, and transportation sites including:

- Sediments (Total Suspended Solids [TSS] and Turbidity): Excessive erosion, transport, and deposition of sediment in surface waters are a significant form of pollution resulting in major water quality problems, such as filling interstitial spaces of spawning gravels, impairing fish food sources, filling rearing pools, and reducing beneficial habitat structure in stream channels. In addition, excessive sediment can cause taste and odor problems in drinking water supplies and block water intake structures. Sources of sediment from commercial properties include wind-blown dust and particles, and sediment tracked on site from vehicles.
- Nutrients (Phosphorus and Nitrogen [Nitrate+Nitrite-N, Ammonia-N, and Total Nitrogen]): Nutrients of concern include the inorganic forms of nitrogen (nitrate, nitrite and ammonia) and phosphorus. Organic forms of nitrogen are associated with

vegetative matter such as particulates from sticks and leaves. Inorganic forms of nitrogen include nitrate, nitrite and ammonia. Total nitrogen (TN) is a measure of all nitrogen present, including inorganic and particulate forms. Phosphorus can be measured as total phosphorus (TP) or as dissolved phosphorus. Dissolved phosphorus is the more bioavailable form of phosphorus. TP is often composed mostly of soil-related particulate phosphorus. There are several sources of nutrients in urban areas and the likely sources associated with an office building complex are: fertilizers in runoff from landscaped areas, pet wastes, atmospheric deposition from industry and automobile emissions, and soil erosion. Eutrophication due to excessive nutrient input can lead to changes in algae, benthic, and fish communities; extreme eutrophication can cause hypoxia or anoxia, resulting in fish death. Surface algal scum, water discoloration, and the release of toxins from sediment can also occur.

- Trace Metals (Aluminum, Copper, Iron, Lead, and Zinc): The primary sources of trace metals in stormwater are typically commercially available metals used in transportation (e.g. automobiles), vehicle maintenance, buildings, and infrastructure. Metals are also found in fuels, adhesives, paints, and other coatings. Metals are a source of concern because of the potential for toxic effects on aquatic life and the potential for groundwater contamination. High metal concentrations can lead to bioaccumulation in fish and shellfish and affect the beneficial uses of receiving waters.
- Pathogens (Bacteria, Viruses, and Protozoa): Runoff that flows over land can mobilize pathogens, including bacteria and viruses. The presence of pathogens in runoff can impair receiving waters and contaminate drinking water sources. Sources of pathogens in urban areas may leaky sanitary sewer pipes, pet, wildlife and human fecal wastes.
- Petroleum Hydrocarbons (Oil and Grease and polycyclic aromatic hydrocarbons [PAHs]): The sources of oil, grease, and other petroleum hydrocarbons include spillage fuels and lubricants, discharge of domestic and industrial wastes, atmospheric deposition, and runoff. Runoff can be contaminated by leachate from asphalt roads, wearing of tires, and deposition from automobile exhaust. Petroleum hydrocarbons, such as PAHs, can bioaccumulate in aquatic organisms from contaminated water, sediments, and food; they are toxic to aquatic life at low concentrations. Hydrocarbons can persist in sediments for long periods of time and result in adverse impacts on the diversity and abundance of benthic communities. Hydrocarbons can be measured as total petroleum hydrocarbons (TPH), oil and grease, or as individual groups of hydrocarbons, such as PAHs.
- Pesticides (herbicides, insecticides and fungicides): Pesticides are chemical compounds commonly used to control insects, rodents, plant diseases, and weeds. Excessive application of a pesticide in connection with landscaping may result in runoff containing toxic levels of its active component. Pesticides may be classified as organochlorine pesticides or organophosphorus pesticides, the former being associated with persistent

bioaccumulative pesticides (e.g. DDT and other legacy pesticides) that have been banned. Organophosphorus pesticides include diazinon and chlorpyrifos whose uses also are being restricted by United States Environmental Protection Agency (USEPA).

- Trash & Debris: Trash (such as paper, plastic, polystyrene packing foam, and aluminum materials) and biodegradable organic debris (such as leaves, grass cuttings, and food waste) are general waste products on the landscape that can be entrained in urban runoff. The presence of trash and debris may have a significant impact on the recreational value of a water body and aquatic habitat. Excess organic matter can create a high biochemical oxygen demand in a water body and thereby lower its water quality. Also, in areas where stagnant water exists, the presence of excess organic matter can promote conditions resulting in the growth of undesirable organisms and the release of odorous and hazardous compounds such as hydrogen sulfide.
- pH: pH is an indicator of acidity in water and other aqueous solution. Natural stormwater runoff typically has pH value ranging between 6 to 9. Untreated discharge of acidic or basic solvents used in industrial and commercial activities may result in higher or lower pH in the stormwater runoff, which will cause significant impact to aquatic life and recreational uses of downstream receiving waters.

3.6 Groundwater

As shown in Figure 8, the Project Site overlies the West Coast groundwater basin, which is a confined aquifer in the southwestern part of the Los Angeles Coastal Plain. As one of the most heavily utilized urban basins in California, the West Coast basin has since been adjudicated by Water Replenishment District of Southern California (WRD) to remediate saltwater intrusion (West Basin Municipal Water District, 2018). Approximately 18 percent of the City's water supply is groundwater from the West Coast basin using five extraction wells located throughout the City (City of Inglewood, 2016).

Average annual depth to groundwater at the Project Site is estimated at approximately 220 feet below ground surface. Based on a review of the Seismic Hazard Zone Report for the Inglewood Quadrangle (CDMG, 1998), the highest historical groundwater level in the area is greater than 50 ft bgs. According to previous investigations in the project vicinity, groundwater was not encountered within exploratory borings drilled to depths ranging from 20 to 50 ft bgs (Geocon, 2015 and SALEM, 2016).

Based on the historically high groundwater levels in the Project Site vicinity and absence of groundwater observed during previous investigations, groundwater is neither expected to be encountered during Project construction, nor have a detrimental effect on the Project. However, it is not uncommon for groundwater levels to vary seasonally or for groundwater seepage

conditions to develop where none previously existed, especially in impermeable fine-grained soils which are heavily irrigated or after seasonal rainfall.

3.6.1 Beneficial Uses

Taken directly from the Los Angeles Basin Plan, the beneficial uses (potential, existing, and intermittent) for the West Coast basin include:

- Industrial Service Supply (IND): Uses of water for industrial activities that do not depend primarily on water quality including, but not limited to, mining, cooling water supply, hydraulic conveyance, gravel washing, fire protection, or oil well re-pressurization.
- Industrial Process Supply (PROC): Uses of water for industrial activities that depend primarily on water quality.
- Municipal and Domestic Supply (MUN): Uses of water for community, military, or individual water supply systems including, but not limited to, drinking water supply.
- Agricultural Supply (AGR): Uses of water for farming, horticulture, or ranching including, but not limited to, irrigation, stock watering, or support of vegetation for range grazing.

3.6.2 Groundwater Quality

City-owned groundwater extraction wells both historically and currently produce groundwater that generally meets Federal and State water quality standards. The water quality constituents of concern (COC) for groundwater produced by City wells are iron (Fe), manganese (Mn), and total dissolved solids (TDS). TDS concentrations have ranged from 277 milligrams per liter (mg/L) to 640 mg/L, which exceed the lower long term recommended maximum contaminant level (MCL) of 500mg/L but do not exceed the upper long term or short term MCL. Iron (Fe) was present at concentrations ranging from Not Detectable (ND) to as high as 13,000 µg/L; where the secondary MCL for iron is 300 µg/L. The unusually high concentrations of Fe could be related to laboratory testing of a turbid water sample and not reflective of actual field water quality. Manganese (Mn) was listed in the SWRCB database at concentrations ranging from ND to 670 µg/L, with all City wells reporting concentrations above the current SWRCB secondary MCL of 50 µg/L for Mn on one or more occasions. For this reason, groundwater from City wells is treated for iron and manganese at the City's Sanford M. Anderson Water Treatment Plant to meet the secondary MCLs for these two Trace Elements.

3.7 Topography

The proposed Project area is relatively flat-lying. According to the publicly available Los Angeles County wide digital elevation model data (LAR-IAC, 2006), the existing elevation grade along the proposed Project alignment within the Ballona Creek watershed changes from approximately 150 feet[10] to 140 feet downgradient, over a 2,500 feet length, with an average slope of 0.5%. The existing elevation grade of the Project segment within the Dominguez Channel watershed changes from approximately 150 feet to 90 feet downgradient, over a 7,000 feet length, with an average slope of 0.9%.

3.8 Flood Zones

Based on the applicable Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (Figure 10), the entire Project Site is located outside a 100-year flood hazard area. The Project Site is located within FEMA unshaded Zone X (FEMA, 2008), which is defined as an area outside the 0.2% annual chance floodplain (i.e., 500-year floodplain).

4 REGULATORY SETTING

The following section presents an overview of the federal, state, regional, and local setting as they relate to potential water quality and hydromodification impacts.

4.1 Federal

Applicable Federal regulations described below include the Clean Water Act (CWA) and the California Toxics Rule (CTR).

4.1.1 Clean Water Act

In 1972, the Federal Water Pollution Control Act (later referred to as the Clean Water Act) was amended to require National Pollutant Discharge Elimination System (NPDES) permits for the discharge of pollutants to waters of the United States from any point source. In 1987, the CWA was amended to require that the United States Environmental Protection Agency (USEPA) establish regulations for permitting of municipal and industrial stormwater discharges under the NPDES permit program. The USEPA published final regulations regarding stormwater discharges on November 16, 1990. The regulations require that Municipal Separate Storm Sewer Systems (MS4s) discharging to surface waters is regulated by a NPDES permit.

[10] All elevations were measured in reference to the mean seal level.

The CWA also requires States to adopt water quality standards for receiving water bodies and to have those standards approved by the USEPA. Water quality standards consist of designated beneficial uses for a particular receiving water body (e.g. wildlife habitat, agricultural supply, fishing etc.), along with water quality criteria necessary to support those uses. Water quality criteria are prescribed concentrations or levels of constituents – such as lead, suspended sediment, and fecal coliform bacteria – or narrative statements which represent the quality of water that support a particular use. Because California had not established a complete list of acceptable water quality criteria, USEPA established numeric water quality criteria for certain toxic constituents in receiving waters with human health or aquatic life designated uses in the form of the California Toxics Rule ("CTR") (40 CFR 131.38).

4.1.2 California Toxics Rule

The CTR is a Federal regulation issued by the USEPA providing water quality criteria for potentially toxic constituents in receiving waters with human health or aquatic life designated uses in the State of California. CTR criteria are applicable to the receiving water body and therefore must be calculated based upon the probable hardness values of the receiving waters for evaluation of acute (and chronic) toxicity criteria. At higher hardness values for the receiving water, copper, lead, and zinc are more likely to be bound with components in the water column. This in turn reduces the bioavailability and resulting potential toxicity of these metals.

Due to the intermittent nature of stormwater runoff, the acute criteria are considered to be more applicable to stormwater conditions than chronic criteria and therefore are used in assessing project impacts. Acute criteria represent the highest concentration of a pollutant to which aquatic life can be exposed for a short period of time (one hour) without deleterious effects; chronic criteria equal the highest concentration to which aquatic life can be exposed for an extended period of time (four days) without deleterious effects.

To assess potential impacts, CTR criteria can be used as one type of benchmark to evaluate the potential ecological impacts of project runoff on the receiving waters.

4.2 State

Applicable State regulations discussed below include the California Porter-Cologne Act, CWA Section 303(d) and Total Maximum Daily Loads (TMDLs), the Statewide Construction General Permit, and the Statewide Industrial General Permit.

4.2.1 California Porter-Cologne Act

The Federal CWA places the primary responsibility for the control of surface water pollution and for planning the development and use of water resources with the States, although it does establish certain guidelines for the States to follow in developing their programs and allows USEPA to take control from States with inadequate implementation mechanisms.

California's primary statute governing water quality and water pollution issues with respect to both surface waters and groundwater is the Porter-Cologne Water Quality Control Act of 1970 (Porter-Cologne Act). The Porter-Cologne Act grants the State Water Resources Control Board (SWRCB) and RWQCBs power to protect water quality; it is the primary vehicle for implementing California's responsibilities under the federal Clean Water Act. The Porter-Cologne Act grants the SWRCB and RWQCBs authority and responsibility to adopt plans and policies to regulate discharges of waste to surface and groundwater, to regulate waste disposal sites, and to require cleanup of discharges of hazardous materials and other pollutants. The Porter-Cologne Act also establishes reporting requirements for unintended discharges of any hazardous substance, sewage, or oil or petroleum product.

Each RWQCB must formulate and adopt a water quality control plan (Basin Plan) for its region. The Basin Plan must conform to the policies set forth in the Porter-Cologne Act and state water policy established by the SWRCB. To implement state and federal law, the Basin Plan establishes beneficial uses for surface and groundwaters in the region and sets forth narrative and numeric water quality objectives to protect those beneficial uses. The Porter-Cologne Act also allows a RWQCB to include water discharge prohibitions within its regional plan applicable to conditions, areas, or types of waste. The relevant publication for the Project is the Los Angeles Basin Plan.

4.2.2 CWA Section 303(d) - TMDLs

In 1972, the Federal Water Pollution Control Act (later referred to as the Clean Water Act [CWA]) was amended to require NPDES permits for the discharge of pollutants to waters of the United States from any point source. In 1987, the CWA was amended to require the USEPA establish regulations for permitting municipal and industrial stormwater discharges under the NPDES permit program. The USEPA published final regulations regarding stormwater discharges on November 16, 1990. The regulations require that municipal separate storm sewer system (MS4) discharges to surface waters be regulated by a NPDES permit.

In addition, the CWA requires each state to adopt water quality standards approved by the USEPA for receiving water bodies. Water quality standards consist of designated beneficial uses for a particular receiving water body (e.g. wildlife habitat, agricultural supply, fishing etc.)

along with water quality criteria necessary to support those uses. Water quality criteria are prescribed concentrations, or levels, of constituents – such as lead, suspended sediment, and fecal coliform bacteria – or narrative statements which represent the quality of water that support a particular use.

When designated beneficial uses of a particular receiving water body are being compromised by water quality, Section 303(d) of the CWA requires identifying and listing that water body as "impaired". Once a water body has been deemed impaired, a TMDL must be developed for the impairing pollutant(s). A TMDL is an estimate of the total load of pollutants from point, non-point, and natural sources that a water body may receive without exceeding applicable water quality standards (with a "factor of safety" included). Once established, the TMDL allocates the loads among current and future pollutant sources to the water body.

The USEPA has delegated implementation and enforcement of the CWA in California to the State of California.

Ballona Creek is 303(d) listed for lead, copper, trash, zinc, cyanide, enteric viruses, indicator bacteria and toxicity. Dominguez Channel is 303(d) listed for lead, indicator bacteria, zinc, copper and toxicity.

Total Maximum Daily Loads (TMDLs) are developed for contaminants in 303(d)-listed water bodies. The Los Angeles Regional Water Quality Control Board (LARWQCB) and the United States Environmental Protection Agency (USEPA) have established the following TMDLs for Centinela Creek subwatershed within the City's jurisdiction:

- Ballona Creek Trash TMDL
- Ballona Creek, Estuary and Sepulveda Channel Bacteria TMDL
- Ballona Creek Metals TMDL

According to the Dominguez Channel EWMP, LARWQCB and USEPA have established the following TMDL for Dominguez Channel watershed within the City's jurisdiction:

- Dominguez Channel and Los Angeles Harbor Water Toxic Pollutants TMDL

Compliance with TMDLs can be achieved through an array of BMPs required by the National Pollutant Discharge Elimination System (NPDES) permit.

4.2.3 Construction General Permit

Pursuant to the CWA Section 402(p), requiring regulations for permitting certain stormwater discharges, the SWRCB issued a statewide general NPDES Permit for stormwater discharges

from construction sites ([NPDES No. CAR000002] Water Quality Order 2009-0009-DWQ, SWRCB NPDES General Permit for Stormwater Discharges Associated with Construction Activity [adopted by the SWRCB on September 2, 2009]). Discharges of stormwater from construction sites with a disturbed area of one or more acres are required to either obtain individual NPDES permits for stormwater discharges or to be covered by the Construction General Permit (CGP). Due to the complexity of obtaining an individual permit, virtually all construction projects utilize the Construction General Permit. Coverage under the Construction General Permit is accomplished by completing a construction site risk assessment to determine appropriate coverage level as well as preparing a Stormwater Pollution Prevention Plan (SWPPP), including site maps, a Construction Site Monitoring Program (CSMP), and sediment basin design calculation. All of these documents must be electronically submitted to the SWRCB for General Permit coverage. The primary objective of the SWPPP is to identify and apply proper construction, implementation, and maintenance of BMPs to reduce or eliminate pollutants in stormwater discharges and authorized non-stormwater discharges from the construction site during construction. The SWPPP also outlines the monitoring and sampling program required for the construction site to verify compliance with discharge Numeric Action Levels (NALs) set by the Construction General Permit.

The CGP recognizes four phases of construction (1) Grading and land development, (2) Streets and utilities, (3) Vertical construction, and (4) Final landscaping and site stabilization. Each phase has activities that can potentially result in different water quality impacts and pollutants. Erosion and sediment control BMPs for the site are to be implemented and maintained throughout the year on an as-needed basis. BMPs should be implemented in a proactive manner, as appropriate, to protect water quality Table 2 below lists common erosion and sediment control BMPs that can reduce or eliminate sediment related pollutants in stormwater discharges and authorized non-stormwater discharges. Site-specific BMP selection and implementation plan will be developed as part of the SWPPP.

Table 2. Typical Sediment and Erosion Control BMPs

Erosion Controls
Scheduling (EC-1) • All BMPs shall be in place year-round. Construction activities shall be planned and performed to minimize the area and duration of exposure of soil to erosion by wind, rain, runoff and vehicle tracking. • The area that can be cleared or graded and left exposed at one time will be limited to the amount of acreage that the Contractor can adequately protect prior to a predicted rainstorm. A predicted storm event is defined as a forecasted 50% chance of rain. • Timing of construction will be considered when scheduling work to minimize soil disturbing activities and major grading operations during the rainy season. • Grading of the site will be phased to minimize the total area of exposed soil and the duration of exposure.
Preserve Existing Vegetation (EC-2) • Existing vegetation will be retained (EC-2) in undisturbed areas to the extent possible. If possible, vegetative buffer strips will be left adjacent to watercourses and along the site perimeter.
Temporary Soil Stabilization (EC-3), (EC-4), (EC-7) • Erosion Control Blankets (EC-7), hydraulic mulches (EC-3) with seed (EC-4), and/or temporary vegetation will be used on disturbed soil areas as a temporary surface cover until soils can be prepared for re-vegetation and permanent vegetation is established. At a minimum, disturbed areas that will remain bare and un-worked for over two weeks. Any hydraulic soil stabilizers applied will include mulch, so that any potential pollutant transport to the storm drain system is visually detectable.
Soil Roughening (EC-15) • Soil will be roughened with the vehicle tracks perpendicular to the direction of flow.
Dust Control (WE-1) • Wind Erosion Controls (WE-1) shall be provided to prevent or alleviate dust generated by construction activities. Care will be taken to prevent over-watering, which may result in runoff or erosion.
Sediment Controls
Stabilize Perimeter (SE-1, SE-5, SE-6) • To prevent transport of sediment off site, the site perimeter will be stabilized using controls such as silt fence (SE-1), fiber rolls (SE-5), or gravel bag berms (SE-6).

Fiber Rolls (SE-5) • Fiber rolls will be used to reduce flow velocity (as slope interrupters or temporary check dams) and provide some removal of sediment, predominantly along the face or toe of erodible slopes and for perimeter sediment control. Fiber rolls are not appropriate as the only BMP at a site and should be used in conjunction with other erosion and sediment control measures to reduce pollutant discharges and shall be maintained by the Contractor for effective sediment control.
Gravel bag berms (SE-6) • Gravel bag berms will be used to reduce flow velocity (as slope interrupters or temporary check dams) and provide some removal of sediment. • Gravel bag barriers will be used for perimeter site control or along streams or channels or around stockpiles to intercept sediment laden sheet flow or moderately concentrated flows**.**
Street Sweeping and Vacuuming (SE-7) • Street sweeping and vacuuming will be used anywhere dry sediment is tracked from the project site onto paved streets and roads, typically at points of egress.
Tracking Controls (TC-1, TC-2) • A stabilized construction entrance will be used to reduce offsite tracking (TC-1). • Construction roads will be stabilized to prevent tracking of sediments. (TC-2).
Storm Drain Inlet Protection (SE-10) • All storm drains in the project area and offsite where inlets can receive flow downstream of sediment tracked from the site will be protected with appropriate storm drain inlet protection such as filter fabrics, block and gravel filters, gravel and wire mesh filters, or gravel bag barriers.
Drainage Controls
Earth Dikes, Drainage Swales and Ditches (EC-9) • Diversion ditches to prevent run-on from offsite areas will be constructed and maintained. • Level spreaders, outlets for dikes and flow channels consisting of an excavated depression constructed at zero grade across a slope, will be used to convert concentrated runoff into diffuse flow to be released onto areas stabilized by existing vegetation.
Outlet Protection (EC-10) • Runoff velocities, both on slopes and at discharge points, will be retarded to prevent erosion. • Rock outlet protection (i.e. rip rap) will be placed at pipe outlets to prevent scour and reduce the velocity and/or energy of exiting stormwater flows.

4.2.4 Industrial General Permit

Pursuant to the CWA Section 402(p) and as authorized under Water Code section 13377, the SWRCB issue a statewide general NPDES Permit for stormwater discharges from industrial facilities ([NPDES No. CAS000001] General Permit for Stormwater Discharges associated with Industrial Activities [adopted by the SWRCB on April 1, 2014] (SWRCB, 2014). Discharges of stormwater and non-stormwater from specific industrial facilities, determined by industry-specific standard industrial classification (SIC) codes, are required to either obtain individual NPDES permits for stormwater discharges or be covered by the Industrial General Permit (IGP). Coverage under the IGP is accomplished by submitting a notice of intent (NOI), no exposure certification (NEC), or notice of non-applicability (NONA), which may include the development of a site wide SWPPP and site map, implementation of BMPs, conducting employee training, and collecting stormwater samples.

4.3 Regional

Applicable State regulations discussed below include the Los Angeles Basin Plan and the Dewatering General Permit.

4.3.1 Basin Plan

The Project Site is located within the boundary of the LARWQCB jurisdiction. The Basin Plan designates beneficial uses for receiving waters and provides numeric and narrative criteria for a range of water quality constituents applicable to certain receiving water bodies and groundwater basins within the Los Angeles region. Specific criteria are provided for the larger, designated water bodies within the region as well as general criteria or guidelines for ocean waters, bays and estuaries, inland surface waters, and groundwaters. Waters not specifically listed (generally smaller tributaries) are assumed to have the same beneficial uses as the streams, lakes, or reservoirs to which they are tributary. In general, the narrative criteria require that degradation of water quality does not occur due to increases in pollutant loads that will adversely impact the designated beneficial uses of a water body. For example, the Los Angeles Basin Plan requires that "inland surface waters shall not contain suspended or settleable solids in amounts which cause a nuisance or adversely affect beneficial uses as a result of controllable water quality factors." The Basin Plan also contains water quality criteria for groundwater basins. For example, the Basin Plan requires that "groundwaters shall not contain taste or odor producing substances in concentrations that cause nuisance or adversely affect beneficial uses."

4.3.2 MS4 Permit

In 2012, the LARWQCB issued an NPDES Permit and Waste Discharge Requirements (Permit No. CAS004001, Order No. R4-2012-0175) (herein refereed as the "MS4 Permit") under the CWA and the Porter-Cologne Act for discharges of urban runoff in public storm drains in Los Angeles County. The Permittees are the Los Angeles County cities and the County (collectively "the Co-Permittees").

Part VI.D.7 of the Permit establishes criteria for new development and redevelopment projects, requiring qualifying projects to, among other objectives, "minimize pollutant loadings form impervious surfaces such as rooftops, parking lots, and roadways through the use of properly designed, technically appropriate BMPs…, LID Strategies, and Treatment Control BMPs."

Qualifying new development projects are generally defined as equal to one acre or greater of disturbed area and adding more than 10,000 square feet of impervious area, with some land-use specific guidelines, including for street and road construction as defined in Section 4.4.1.

Qualifying redevelopment projects are generally defined as projects that result in the creation or addition of 5,000 square feet or more of impervious surface area on an already developed site on development categories identified in Part VI.D.6.c (e.g., industrial and commercial land uses), with the following additional criteria:

- Where redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction storm water control requirements, the entire project must be mitigated; and
- Where redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction storm water control requirements, only the alteration must be mitigated, and not the entire development.

Qualifying projects are required to control pollutants, pollutant loads, and runoff volume emanating from the project site by: 1) minimizing the impervious surface area, and 2) controlling runoff from impervious surfaces through infiltration, bioretention, and/or rainfall harvest and use. Furthermore, with some exceptions noted in the Permit (e.g., technical infeasibility, ground water replenishment, local ordinance equivalence, or hydromodification), each Permittee shall also require the project to retain on-site the Stormwater Quality Design Volume defined as the runoff from either the 0.75-inch, 24-hour rain event, or the 85th percentile, 24-hour rain event, whichever is greater.

The MS4 Permit also requires each permittee to adopt a local LID ordinance and green streets policy to meet the Permit's requirement for new development and redevelopment projects. The City has adopted the local LID Ordinance in Municipal Code Section 10-200, cited as the Stormwater Management and Discharge Control Ordinance. Section 4.4.1 provides a comprehensive overview of the City's local LID Ordinance. The City has also drafted a local Green Streets Policy, which has yet to be adopted.

4.3.3 County of Los Angeles Department of Public Works LID Standards Manual

The County of Los Angeles LID Standards Manual (LACDPW, 2014) was developed to comply with the MS4 Permit requirements for stormwater and non-storm discharges from the MS4. It provides guidance on how new development and redevelopment projects can meet the requirements of retaining the Stormwater Quality Design Volume from a design storm event. The Los Angeles County LID Standards Manual provides guidance on the selection of stormwater control measures feasible for the Project Site condition, and subsequently addresses design specifications such as sizing and geometry, inlet and outlet structures, landscaping, geotechnical considerations, safety, and maintenance access.

4.4 Local

4.4.1 LID Ordinance

The City adopted the MS4 Permit requirements stated in Section 4.2. through its local LID Ordinance (Section 10-208 of the Inglewood Municipal Code). The Ordinance requires that new development and redevelopment projects comply with the MS4 Permit requirements. Section 10-208-D references "…the City's LID Standards Manual, which includes urban and stormwater runoff quantity and quality control development principles and technologies for achieving compliance with the provisions of this section." At the time this study was drafted, the City's LID Standards Manual has not yet been adopted. Therefore, the County of Los Angeles Department of Public Works LID Standards Manual (LACDPW, 2014) is assumed most applicable for LID incorporated into the Project (see Section 4.3.3).

The proposed Project, either in part or in whole, may be classified as a street and road construction project. If so, the following excerpts from the Ordinance are applicable:

- Part 10-208.C.1.g states, "street and road construction of 10,000 square feet or more of impervious surface area shall follow the City's Green Streets Manual to the maximum extent practicable. Street and road construction applies to standalone streets, roads, highways, and freeway projects, and also applies to streets within larger projects." The City does not currently have an adopted Green Streets Manual.

- Part 10-208.E.2 also states, "street and road construction of 10,000 square feet or more of impervious surface are exempt from the New Development/Redevelopment Project Performance Criteria of Part VI.D.7.c of the MS4 Permit, but shall follow the City's Green Streets Manual to the maximum extent practicable, consistent with the City's Green Streets Policy."

Since neither the City's Green Streets Manual nor the Green Streets Policy have yet to be adopted, if required, the Project will generally follow the USEPA Green Street Guidance (referenced in the MS4 Permit) and the Los Angeles County LID Manual to comply with stormwater management requirements stated above.

5 SIGNIFICANCE CRITERIA

The impacts evaluation will be based on the significance criteria covered by the Hydrology and Water Quality significance categories in the CEQA Appendix G, Environmental Checklist. A project would have a significant effect on hydrology and/or water quality if it were to:

a) Violate any water quality standards or waste discharge requirements.
b) Substantially deplete groundwater supplies or interfere with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g. the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned land uses for which permits have been granted).
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site.
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off site.
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff.
f) Otherwise substantially degrade water quality.
g) Place housing within a 100-year flood hazard area as mapped on federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map.
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows.
i) Expose people or structures to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam.
j) Inundation by seiche, tsunami, or mudflow.

6 HYDROLOGIC AND WATER QUALITY IMPACTS

This Section seeks to identify any factors associated with the Project's construction and/or post-construction ("operation") condition that may cause or contribute to hydrologic and/or water quality impacts as defined by the significance criteria. Each potential impact (a-j) is discussed in detail below.

a) Would the Project violate any water quality standards or waste discharge requirements?

A significant impact would occur if Project discharges (either urban or stormwater runoff) to surface water or groundwater were to violate the conditions of any of the guiding Federal, State, Regional, or Local requirements.

Construction

During construction, the Project will disturb approximately 42 acres, and include excavation, site preparation, and infrastructure improvements. Removing existing pavement, importing/exporting soil, grading, and stockpiling could potentially result in soils being exposed, loosened, and transported by stormwater to downstream receiving waters. Additional pollutants may also be introduced to the receiving water(s) during the construction phase, including oil and grease, metals, and pH-altering materials. However, to reduce the potential for the above impacts during the construction phase, the Project will comply with the SWRCB Construction General Permit (CGP). Under the CGP, the Project will prepare an approved Stormwater Pollution Prevention Plan (SWPPP) and implement construction BMPs as described in Section 4.3. The CGP will be enforced through the City of Inglewood's construction, grading, and excavation permitting process.

Therefore, impacts related to water quality standards and waste discharge requirements during the construction phase would be less than significant.

Operation

As shown in Table 1, the proposed ITF and MTF component covers approximately 810,000 ft^2 of commercial, education, and multi-family residential land uses. The proposed detail design for the ITF and MTF are not currently available, so in lieu of such data, it has been conservatively assumed that the sites would be converted to fully impervious surfaces. If all five existing sites were to be fully impervious in the proposed condition, this would add approximately 61,000 ft^2 of impervious surface. The ITF and MTF sites would be constructed in full compliance with the MS4 Permit and LID Ordinance requirements to address any potential pollutant or pollutant loading impacts.

The proposed rail transit component covers 950,400 ft^2 of transportation right-of-way. The proposed detail design for the rail transit component is not currently available, so in lieu of such data, it has been conservatively assumed that the full component would be converted to fully impervious surfaces. If the Project results in the complete modification of this area to fully impervious surfaces, there would be an increase in impervious area of 85,000 ft^2. The rail transit project component would also be constructed in full compliance with the MS4 Permit and LID Ordinance requirements to address any potential pollutant or pollutant loading impacts.

Furthermore, depending on the final facility uses, the proposed Project, in part or in whole, may be required to comply with the IGP. The Project would be designed and operated in full compliance with Permit requirements, including discharge monitoring.

The Project Site overlays the West Coast basin, which is a confined aquifer, and is located approximately 220 ft below the ground surface. Urban and stormwater runoff infiltrated onsite will unlikely reach the groundwater aquifer. As a result, even if infiltration BMPs are incorporated into the proposed Project as required LID measures, such BMPs would extend to such a depth as to enter the basin. Therefore, infiltrated runoff would be unlikely to cause adverse impact to the local groundwater quality. Furthermore, the quality of runoff under the proposed condition would be assessed prior to designing such infiltration BMPs.

Therefore, impacts related to surface water and groundwater quality standards and waste discharge requirements during the operation phase would be less than significant.

b) Substantially deplete groundwater supplies or interfere with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g. the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned land uses for which permits have been granted).

A significant impact would occur if the Project would substantially deplete groundwater or interfere with groundwater recharge.

Construction

Project water supply needs during the construction phase will be provided by the City of Inglewood's municipal system. There would be no impact on groundwater supplies during the construction phase of the Project. Since West Coast basin is a confined aquifer, and the water table is located approximately 50-ft to 200-ft below ground surface, dewatering is not anticipated during the construction phase.

Therefore, impacts related to groundwater supply depletion during the operation phase would be less than significant.

Operation

The Project may result in increased demand of potable and non-potable water from transit line operation and addition of commercial sites. Project water supply during the operation phase will be provided by the City of Inglewood, which depends on a combination of extracted groundwater from City-owned wells and potable and non-potable water purchased from West Basin Municipal Water District. However, according to the City of Inglewood Urban Water Management Plan (City of Inglewood, 2016), the City cannot meet increased water demand through an increase in groundwater extraction due to limitations in water rights. Therefore, projected demands are anticipated to be met through a combination of conservation of local surface water, imported water, graywater, stormwater capture, ocean desalination, and/or other non-groundwater sources (City of Inglewood, 2016).

Therefore, impacts related to groundwater supply depletion during the operation phase would be less than significant.

c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site.

A significant impact would occur if the Project would substantially alter the drainage pattern of an existing stream or river such that substantial erosion or siltation would result.

Construction

There are no existing surface streams or rivers that pass within the Project's extent. The nearest open channel is Centinela Creek, approximately 1.3 miles downstream of the Project. In the existing condition, stormwater runoff is collected in curbs, gutters, and inlets, and conveyed through the storm drain network. There are no topographic changes proposed as part of the Project. If the construction phase of the Project results in increased runoff or any modifications to existing drainage patterns, the existing stormwater facilities will be analyzed in the context of the proposed additional flow and upgraded if needed.

Activities during construction may expose and/or loosen soils, potentially resulting in erosion and topsoil loss. As stated in Section 3.7, the average slopes of the Project extents within the Ballona Creek and Dominguez Channel watersheds were 0.5% and 0.9% respectively. Because the slopes in the Project extents are relatively flat, the majority of soil disturbance is expected to be related to importing/exporting soil, grading, and stockpiling. All potential impacts related

to these activities are expected to be mitigated under the CGP-required SWPPP. The SWPPP will identify any potential sources of sedimentation during construction, and detail required BMPs to reduce or eliminate erosion and/or any potential alterations to drainage patterns. BMPs may include silt fencing, fiber rolls, sand bag barriers, gravel bag berms, and/or stabilized construction site entrances/exits. A Qualified SWPPP Practitioner will ensure compliance with the SWPPP by conducting regular monitoring and inspections of construction activities.

Therefore, impacts related to altering the existing drainage pattern of the Project Site that would result in erosion or siltation during the construction phase would be less than significant.

Operation

No topographic changes or altered drainage patterns are currently proposed as part of the Project and any increases in runoff would be handled through compliance with the MS4 Permit requirements.

Surface drainage will continue to be collected via the storm drain network to be ultimately conveyed to Ballona Creek and Dominguez Channel. If the Project results in increased runoff or peak flows, the existing stormwater facilities will be analyzed in the context of the proposed additional flow and upgraded if needed. In the proposed condition, stormwater runoff will not encounter unprotected soils within landscaped areas.

Therefore, impacts related to altering the existing drainage pattern of the Project Site that would result in erosion or siltation during the operation phase would be less than significant.

d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off site.

A significant impact would occur if the Project would substantially alter the drainage pattern of an existing stream or river such that flooding would result.

Construction

As aforementioned, there are no streams or rivers within the Project's extents, and the improvements do not propose any changes to existing drainage patterns. During construction, BMPs (required and monitored under the SWPPP) will be used to reduce the volume and velocity of stormwater runoff, thereby mitigating the potential for flooding due to construction. If any accumulated sediment is observed during inspection of temporary BMPs or permanent stormwater network devices, it will be removed to prevent flooding.

Therefore, impacts related to altering the existing drainage pattern of the Project Site that would result in flooding on- or off-site during the construction phase would be less than significant.

Operation

As stated in Section 6b, the proposed Project will not modify the existing drainage patterns and would address any increases in runoff by compliance with the MS4 Permit and upgrades to existing stormwater infrastructure, if needed. Adequate conveyance of runoff will mitigate potential flooding impacts.

Therefore, impacts related to altering the existing drainage pattern of the Project Site that would result in flooding on- or off-site during the operation phase would be less than significant.

e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff.

A significant impact would occur if surface water runoff would exceed the capacity of existing or planned storm drain systems serving the Project Site, or if the Project would substantially increase the sources of polluted runoff.

Construction and Operation

If storm drain upgrades are required to address increases in peak flow or runoff volumes, these will be made as part of the Project's drainage design. BMPs as required by the SWPPP, the MS4 Permit, and potentially the IGP, will preclude any additional sources of polluted runoff during both construction and operations.

Therefore, impacts related to the creation or contribution of runoff water exceeding the capacity of existing or planned stormwater drainage systems or providing substantial additional sources of polluted runoff during the construction and operation phases would be less than significant.

f) Would the Project otherwise substantially degrade water quality?

A significant impact would occur if the Project would otherwise substantially degrade water quality.

Construction

Regular construction activities have the ability to result in the degradation of water quality, most noticeably from erosion and sedimentation. Loose sediment itself may degrade water quality and has the capacity to carry pollutants such as heavy metals, nutrients, pathogens oil and grease, and fuels. Additionally, construction may expose the Project Site and stormwater to trash, solvents, paint, etc. The CGP requires the implementation of BMPs to eliminate or reduce the discharge of pollutants in stormwater discharges and prohibits the discharge of non-stormwater from construction sites as these non-stormwater discharges are likely to carry pollutants to receiving waters. The BMPs detailed in the SWPPP will minimize potential for impacts from erosion and sedimentation during construction. The SWPPP will also detail use of BMPs to minimize the potential for spills of toxic or hazardous chemicals or substances into surface or ground waters.

Therefore, impacts related to otherwise substantially degrading water quality during the construction phase would be less than significant.

Operation

The Project will address proposed changes in land use, which often results in changes in pollutant contributions, through an analysis of the anticipated pollutant concentrations and loads under both the existing and proposed condition. Any projected increase in pollutant concentrations or loads will be addressed through compliance with the MS4 Permit and/or the IGP, as well as site-specific BMPs to address any increases in pollutant concentrations or loads.

Therefore, impacts related to substantially degrading water quality during the operation phase would be less than significant.

g) Would the Project place housing within a 100-year flood hazard area as mapped on federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

A significant impact would occur if the Project Site were located within a 100- year flood plain and included housing construction.

Construction and Operation

As stated in Section 3.8, the entire Project Site is located outside the 100-year FEMA flood hazard area. Hence, both the construction and operation phases of the Project will not place housing within 100-year flood hazard areas.

Therefore, the Project would have no impact related to placing housing within a 100-year flood hazard are for either the construction or the operational phase.

h) Would the Project place within a 100-year flood hazard area structures which would impede or redirect flood flows?

A significant impact would occur if the Project Site were located within a 100- year flood plain and include structure that would impede or redirect flood flows.

Construction and Operation

As stated in Section 3.8, the entire Project Site is located outside the 100-year FEMA flood hazard area. Hence, both the construction and operation phases of the Project will not place any structure within the 100-year flood hazard area.

Therefore, the Project would have no impact related to impeding or redirecting flood flows for either the construction or the operational phase.

i) Would the Project expose people or structures to a significant risk or loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam.

A significant impact would occur if the Project were located within an area susceptible to flooding because of the failure of a levee or dam.

Construction and Operation

As stated in Section 3.8, the Project Site is located within FEMA unshaded Zone X, which is defined as an area outside the 0.2% annual chance floodplain. Further, the Project Site is outside of the floodplain of any nearby flood control channel (Centinela Creek and Dominguez Channel). Any increase in peak flow or runoff volumes in the proposed condition would be addressed through compliance with the MS4 Permit and drainage system upgrade as part of the Project.

Therefore, the Project would have no impact related to exposing people or structure to a significant ross or loss, injury, or death involving flooding for either the construction or the operational phase.

j) Would the Project cause or contribute to inundation by seiche, tsunami, or mudflow?

A significant impact could occur if the Project were located in an area subject to inundation by seiche, tsunami, or mudflow.

A seiche is an oscillation of a body of water in an enclosed or semi-enclosed basin, such as a reservoir, harbor, or lake. A tsunami is a sea wave produced by a significant undersea

disturbance. Mudflows result from the down-slope movement of soil and/or rock under the influence of gravity.

Construction and Operation

As stated in Section 3.2, the Project Site is not located in any established tsunami inundation area, liquefaction zone, or landslide zone, and the Project Site is at least 1.3 miles away from any open water feature (so it will not be subject to seiche). As stated in Section 3.7, the Project Site is relatively flat in both Ballona Creek and Dominguez Channel watersheds, and is not adjacent to any exposed or steep grades.

Therefore, the Project would have no impacts related to inundation by seiche, tsunami, or mudflow for either the construction or the operational phase.

7 LIMITATIONS

The professional opinions and recommendations expressed in this Report are made in accordance with generally accepted standards of practice and were based largely on source information provided by others. No other warranty is either expressed or implied. Geosyntec is responsible for the findings contained in this Report based on the data available and information relating only to the specific Project and location discussed herein. Geosyntec is not responsible for use of the information contained in this Report for purposes other than those expressly stated in this Report, namely supporting the completion of the initial study checklist. Geosyntec is not responsible for any conclusions or recommendations made by others based upon the data or conclusions contained herein unless given the opportunity to review them and concur with them in writing.

ATTACHMENT A: UTILITY EXHIBITS

1.0 INTRODUCTION

As the City of Inglewood is transforming into a world-class, major regional activity center, the number of trips or vehicle mile traveled (VMT) in and around the City are anticipated to increase. Since 2010, traffic has increased by 128,066 (11%) vehicles per day within the City of Inglewood based on the latest Annual Daily Traffic studies. That is approximately an increase of 18,295 (1.57%) daily vehicles per year. The existing transportation infrastructure and circulation system is outdated, capacity should be increased as major arterials street and highways are highly congested, and there remains no direct connection from the Countywide Metro Rail System to the newly completed, under construction, and future activity centers. To address these critical issues, the City of Inglewood is now studying the development of a major mass transit project connecting the Metro Rail System to the proposed activity centers. The City is also preparing a comprehensive mobility plan to identify policy recommendations, infrastructure improvements and the program requirements necessary to move people across a multimodal transportation environment, and best prepare for the future development in the City.

This Study evaluates the following four conceptual transit alternatives:

- Option A: Market Street Alignment
- Option B: Fairview Heights Alignment
- Option C: Arbor Vitae Alignment
- Option D: Century Blvd Alignment

The key objectives of this report are to identify, and present potential utility-related impacts associated with four conceptual alignment alternatives that have been further reviewed as part of the Inglewood Transit Connector Study.

1.1 Methodology

This study represents a preliminary identification of existing utilities based on acquired record drawings and existing City of Inglewood database (Table 1). Available data did not provide for exact utility locations in terms of plan and profile; rather, exact utility locations will be determined for the selected locally preferred alternative by utilizing ground penetrating radar and/or other methods. Such information will be critical to project design as part of the project implementation process. The City of Inglewood will select a locally preferred alternative project and will further define and review as part of environmental clearance process pursuant to the California Environmental Quality Act (CEQA).

For the purpose of this initial technical evaluation, the available utility information was examined by overlaying the transit alignment alternatives to determine whether there were any “fatal flaws.” A “fatal flaw” is deemed to be utility conflict that could not be resolved through design to avoid the conflict or by providing for a technically viable utility relocation. For the purpose of this study, a conflict resolution that required the relocation of a major utility (i.e. a utility that serves a regional base) was considered technically non-viable.

The utility identification and assessment process consisted of requests for information from various agencies and utility purveyors. Obtained data included existing and planned major utilities within the project limits. Data and utility maps were prepared for major identified utilities. These maps have been incorporated into preliminary project concept plans for each alternative concept (see Attachment A).

Using the preliminary utility identification maps, limits and extent of critical areas were identified. Critical areas are referenced as the areas within the project limits where the presence of utilities could significantly impact the project's environmental footprint, construction cost, or overall project schedule.

Utility information was provided from the following agencies and utility purveyors:

1. City of Inglewood
2. Southern California Gas Company, Transmission Department
3. Southern California Gas Company, Northwest Distribution Region
4. Los Angeles Department of Water and Power
5. Los Angeles Department of Public Works
6. West Basin Municipal Water District

Utility data was collected from October 2018 to December 2018. For a more detailed breakdown of data collected and format, please see Table 1.

This study identifies the major impacts for the conceptual alignments. During the environmental review of the locally preferred alternative, the City will perform a more comprehensive utility analysis, including depths, width of utilities, material makeup, condition of utility, and clearance requirements to address potential significant impacts and mitigation measures.

Table 1: Utility Inventory

Type of Utility	Agency	Date Received	Summary of Data	Data Missing
Water/ Sewer	City of Inglewood Public Works Department (GIS Department)	10/26/2017	City owned water and sewer utilities including geo-reference as-built plans for water utilities. City also provided information for sewers.	None
	Los Angeles Department of Water and Power (LADWP)	11/21/2017	As-built plans for water utilities within the proposed project area.	None
	Los Angeles County Waterworks District	10/26/2017	GIS files of storm drain facilities.	Dimensions: Diameter of water pipes
	West Basin Municipal Water District	11/20/2017	West Basin facility sites and recycled water lines.	None
Electrical	SoCal Edison	11/29/2017	Electrical utilities along Century Blvd.	Electrical utilities along Arbor Vitae, Market Street, Manchester Blvd.
Gas	SoCal Gas, Transmission Department	11/14/2017	Received a letter signed by Luis Ramos, Planning Pipeline Assistant stating that there are no major transmission gas lines or facilities in the vicinity of the proposed project area.	None
	SoCal Gas, Northwest Distribution Region	11/21/2017	SoCal Gas Facilities within the project area.	None

1.2 Summary of Findings

An overall summary of the preliminary analysis and findings include:

1. Utilities identified in this preliminary analysis do not present fatal flaws, but will require design strategies for future consideration to avoid relocation of major systems, i.e. 60-inch water main line, LADWP vaults and the high voltage transmission lines. Identified utility conflicts appear resolvable through design strategies to avoid potential conflict or through a technically viable relocation of minor utilities. Major utility conflicts can be resolved through design of the Inglewood Transit Connector to avoid such conflicts.
2. The most noteworthy utility impacts are attributed to major utilities along the centerline of streets and/or within proximity of the projected transit alignments which may pose obstacles in the placement of the guideway columns. Such conflicts appear to be resolvable through column placement to avoid the utilities during design.
3. Numerous but minor utility lines and lateral connections are in close proximity to the transit alignment alternatives. These utilities may be sleeved through foundations in lieu of relocations; through column/foundation placements to avoid the conflicts; or through relocations.

A detailed description of findings per alignment alternative is included in this report

2.0 UTILITY ANALYSIS PER OPTION

2.1 Option A: Market-Manchester Street Alignment

The Market-Manchester Street Alignment (Option A) is an aerial alignment that runs approximately one quarter of a mile along Market Street between Florence Avenue and Manchester Blvd where it transitions east along Manchester Blvd for approximately half a mile to Prairie Ave. The alignment continues for approximately one mile south of Manchester Blvd along Prairie to Century Blvd providing service to Downtown Inglewood, the Forum, the Hollywood Park Development (NFL Stadium), and the Basketball and Entertainment Center.

Option A (see Figure 1) was developed to connect major development sites to the Metro's LAX Crenshaw LRT line station at Downtown Inglewood. Option A presents an opportunity for integration with local economic activity, current and future transit-oriented development, and other initiatives in the area.

Figure 1: Option A: Market-Manchester Street Alignment

Legend

- Option A Market-Manchester
- Metro Crenshaw Line
- Metro Green Line
- Possible Intermodal Facility

2.1.1 Option A Utility Analysis

There are various types of utilities throughout the northern portion of Market Street, Manchester Boulevard, and Prairie Avenue. As shown in Figure 2, several utility companies maintain the operation of water, sewer, power, cable and phone services in the corridor.

The potable water in the City of Inglewood is supplied by the City, Golden State Water Company, and Cal - America Water Company. Water pipes are located along Market Street, Manchester Boulevard, and Prairie Avenue. The Department of Water and Power (DWP) and the West Basin Municipal Water District also have major pipe lines, 60-inch and 36-inch along Prairie Avenue.

The main lines of the storm drain system in the City of Inglewood are jointly maintained by the Los Angeles County Flood Control District (LACFCD) and the City of Inglewood. The storm drains lines along Prairie Avenue consist of Reinforced Concrete Pipe (RCP) and Reinforced Concrete Box (RCB).

The existing sewer system in the City of Inglewood is owned by both the City and the County and information was provided by the City of Inglewood. Electrical power is supplied by the Southern California Edison Company and the City's Natural gas is provided by the Southern California Gas Company (Transmission Department and Northwest Distribution Region). Market Street, Manchester Boulevard, and Prairie Avenue are well covered with a natural gas facility network and the existing gas lines range in sizes from 1 to 8 inches.

Preliminary Analysis

Potential obstacles along the Option A alignment include a 36-inch (West Basin Water District) recycled water line at street centerline and several utilities within 15 feet along Prairie Avenue. A large 60-inch Department of Water and Power (DWP) main pipe and a 33-inch storm drain line are located on the east side of Prairie, approximately 20 to 40 feet from centerline. Underground electrical lines, including vaults, are primarily concentrated along or adjacent to easterly and westerly sidewalks do not pose a major impediment to the Option A alignment. Non-gravity flow utilities, including water service lines, may be relocated vertically (lowered) in lieu of horizontal relocation. Utility crossings including electrical and storm drain lines, are primarily found at street intersections and between Kelso Street/Pincay Drive, and Arbor Vitae Street along Prairie Avenue.

Existing utilities along the northern portion of the alignment pose minimal obstacles for placement of guideway columns. However, due to the span of utilities tie-ins and crossings along Manchester Boulevard at Hillcrest, Spruce Avenue, Manchester Drive and Manchester Terrace, placement of guideway columns this alignment should avoid relocation of gravity flow utilities including sewer and storm drains.

In short, utilities along Option A pose minimal conflicts that can be resolved as there is sufficient roadway width (see Figure 3) along Market Street, Manchester, and Prairie. As part of the detailed design of preferred alternative, the City will conduct site investigations to determine exact utility locations and coordinate column placements to avoid/resolve conflicts or relocate based on cost/benefits.

2.2 Option B: Fairview Heights Alignment

The Fairview Heights Alignment (Option B) is an aerial alignment that runs approximately one-half mile along Florence Avenue between Prairie Avenue and West Boulevard. The alignment then transitions south along Prairie Avenue for approximately one and three-quarter miles between Florence Avenue to Century Boulevard providing service to Downtown Inglewood, the Forum, the Hollywood Park Development (including NFL Stadium), and the Clippers Arena.

Option B (see Figure 4) was initially conceptualized as part of the June 2016 Metro study to connect the Metro Rail network with Metro owned and operated light rail service directly to the Development. However, the Metro study concluded that the Fairview Heights alignment was infeasible because of its high cost and complexity. Nevertheless, the City of Inglewood is further studying the alignment as part of their Initial Study for the Inglewood Transit Connector as independently owned system that is not interlined with the Metro's LAX Crenshaw LRT line. The Fairview Heights Alignment provides a connection between the LAX Crenshaw LRT Line at Fairview Heights / West Station and the Entertainment District.

Figure 4: Option B: Fairview Heights Alignment

2.2.1 Option B Utility Analysis

There are various types of utilities throughout the northern portion of Market Street, Manchester Boulevard, and Prairie Avenue. As shown in Figure 3, several utility companies maintain the operation of water, sewer, power, cable and phone services in the corridor.

The potable water in the City of Inglewood is supplied by the City, Golden State Water Company, and Cal-America Water Company. Water pipes are located along Market Street, Manchester Boulevard, and Prairie Avenue. The Department of Water and Power (DWP) and the West Basin Municipal Water District also have major pipe lines, 60-inch and 36-inch along Prairie Avenue.

The main lines of the storm drain system in the City of Inglewood are jointly maintained by the Los Angeles County Flood Control District (LACFCD) and the City of Inglewood. The storm drains lines along Prairie Avenue consist of Reinforced Concrete Pipe (RCP) and Reinforced Concrete Box (RCB).

The existing sewer system in the City of Inglewood is owned by both the City and the County and information was provided by the City of Inglewood. Electrical power is supplied by the Southern California Edison Company and the City's Natural gas is provided by the Southern California Gas Company (Transmission Department and Northwest Distribution Region. Florence Avenue and Market Street are well covered with a natural gas facility network and the existing gas lines range in sizes from 1 to 8 inches. Figure 5 illustrates utilities located along Option B at a high level. For a more detailed description of the utilizes please see Attachment A and B.

Preliminary Analysis

Based on preliminary research, minor utility pipes as well as lateral connections to these pipes from adjacent properties have been identified along Florence Avenue. Existing utilities, including sewer, gas and water mains, along these streets pose minimal obstacles for placement of guideway columns; however, various utility crossings at the curve alignment transition at Florence Avenue and Prairie Avenue should be avoided.

Several utilities along Prairie Avenue have been identified within close proximity, approximately 15 feet, to this preliminary project alignment alternative. A 36-inch recycled water line travels along the easterly side of Prairie Avenue and transitions to the centerline of the street at Grace Avenue. A large 60-inch DWP water main and a 33-inch storm drain line are located toward the southerly end of the alignment on the east side of Prairie, approximately 20 to 40 feet from centerline. These utilities may pose significant obstacles but would not be considered infeasible at this stage.

Underground electrical lines, including vaults, are primarily concentrated along or adjacent to easterly and westerly sidewalks and do not pose a concern. Non-gravity flow utilities, including water service lines, may be relocated vertically (lowered) in lieu of horizontal relocation. Utility crossings including electrical and relatively large sized storm drain lines, are primarily found at street intersections. Extensive utility crossings have been identified south of Manchester Boulevard, at Kelso Street/Pincay Drive, and north of Arbor Vitae Street. Guideway column placements should be avoided near these utility crossings and street intersections.

In short, utilities along Option B pose a significant obstacle but relocations are not considered infeasible at this stage. However, although Option B is located with the street right-of-way, there is limited roadway width between Florence Avenue and Manchester Boulevard (Figure 6), and potential property impacts to Inglewood Cemetery are anticipated. As part of the detailed design and environmental review analysis of the preferred alternative, the City will conduct site investigations for exact utility locations and coordinate column placements to avoid/resolve conflicts or relocate utilities based on cost/benefit to the project.

2.3 Option C: Arbor Vitae Avenue Alignment

The Arbor Vitae Alignment (Option C) is also an aerial alignment that runs approximately 2 miles along Arbor Vitae St from Aviation Boulevard to Prairie Avenue where it transitions south (and potentially north) along Prairie Avenue for approximately half a mile to Century Boulevard providing service to the Forum, the Hollywood Park Development (NFL Stadium), and the Clippers Arena. Option C is the most direct connection between these venues and development to the Metro Airport Connector 96th Street Transit Station and presents opportunity for future connection to a planned regional multi-modal hub served by both Metro's Crenshaw/LAX and Green Line, various Metro and municipal bus lines, and LAWA's APM system.

2.3.1 Option C Utility Analysis

There are various types of utilities throughout the northern portion of Market Street, Manchester Boulevard, and Prairie Avenue. As shown in Figure 3, several utility companies maintain the operation of water, sewer, power, cable and phone services in the corridor.

The potable water in the City of Inglewood is supplied by the City, Golden State Water Company, and Cal - America Water Company. Water pipes are located along Market Street, Manchester Boulevard, and Prairie Avenue. The Department of Water and Power (DWP) and the West Basin Municipal Water District also have major pipe lines, 60-inch and 36-inch along Prairie Avenue.

The main lines of the storm drain system in the City of Inglewood are jointly maintained by the Los Angeles County Flood Control District (LACFCD) and the City of Inglewood. The storm drains lines along Prairie Avenue consist of Reinforced Concrete Pipe (RCP) and Reinforced Concrete Box (RCB).

The existing sewer system in the City of Inglewood is owned by both the City and the County and information was provided by the City of Inglewood. Electrical power is supplied by the Southern California Edison Company and the City's Natural gas is provided by the Southern California Gas Company (Transmission Department and Northwest Distribution Region). Arbor Vitae, and Prairie Avenue are well covered with a natural gas facility network and the existing gas lines range in sizes from 1 to 8 inches. Figure 8 illustrates utilities located along Option C at a high level. For a more detailed description of the utilities please see Attachment A and B.

Preliminary Analysis

The most significant utilities identified as part of preliminary research for this alignment alternative include an 8 to 10-inch sewer pipe along the centerline of Arbor Vitae Street between Eucalyptus Ave and La Brea Ave, 36-inch recycled water line along Prairie Ave street centerline that has been identified within 15 ft to the preliminary alignment, large 60-inch DWP water main and a 33-inch storm drain line are located at the east side of Prairie, approximately 20 to 40 feet from centerline (see Figure 8). Together, these utilities may pose significant obstacles but would not be considered infeasible at this stage.

Underground electrical lines, including vaults, are primarily concentrated along or adjacent to sidewalks do not pose a major impediment. Non-gravity flow utilities, including water service lines, may be relocated vertically (lowered) in lieu of horizontal relocation.

In short, due to narrowing of the right-of-way east of Eucalyptus Ave (shown in Figure 9), there are potential major impacts to existing small businesses and possible neighborhood displacement. During detailed design of the preferred alternative, the City will conduct site investigations for exact utility locations and coordinate column placements to avoid/resolve conflicts or relocate utilities based on cost/benefit to the project.

2.4 Option D: Century Boulevard Alignment

The Century Boulevard Alignment (Option D) is an aerial alignment that runs approximately 2 miles along Century Boulevard from Aviation Boulevard to Prairie Avenue where it transitions north along Prairie for approximately one mile to south of Manchester Boulevard providing service to the Forum, the Hollywood Park Development (NFL Stadium), and Inglewood's Basketball and Entertainment Center.

Figure 10: Option D: Century Blvd Alignment

Legend

- Option D Century Boulevard
- Metro Crenshaw Line
- Metro Green Line
- Possible Intermodal Facility

2.4.1 Option D Utility Analysis

There are various types of utilities throughout Century Boulevard and Prairie Avenue. As shown in Figure 11, several utility companies maintain the operation of water, sewer, storm drain, power, cable, and phone services in the corridor.

The potable water in the City of Inglewood is supplied by the City, Golden State Water Company, and Cal - America Water Company and have water pipes located along Prairie Blvd and Century Blvd. The Department of Water and Power (DWP) and the West Basin Municipal Water District also have major pipe lines, 60 inches and 36-inch waterline along Prairie Ave and Century Blvd.

The main lines of the storm drain system in the City of Inglewood are jointly maintained by the Los Angeles County Flood Control District (LACFCD) and the City of Inglewood. Numerous storm drain lines and catch basin connections are located at intersections.

The existing sewer system in the City of Inglewood is owned by the City and the County and information was provided by the City of Inglewood. Electrical power is supplied by the Southern California Edison Company and the City's Natural gas is provided by the Southern California Gas Company. Utility information was gathered by Transmission Department and Northwest Distribution Region. Century Boulevard and Prairie Avenue are well covered with natural gas facility network and the existing gas lines range in sizes from 1 to 8 inches.

Overhead power lines are located along and crossing Century Boulevard from east of Felton Avenue to Condon Avenue. Clearance requirements for these power lines should be considered when evaluating this alignment. Additional underground electrical lines are located along Option D including crossings between Grevillea and Burn Ave and at the intersection of Prairie Avenue and Century Blvd. Figure 11 illustrates utilities located along Option D at a high level. For a more detailed description of the utilities please see Attachment A.

Preliminary Analysis

In short, although Century Boulevard has a wide ROW of at least 100 feet (illustrated in Figure 12) and continuous center median, major utilities are located along Century Blvd and pose significant conflicts. Major property acquisitions or a major utility relocation effort are required if Option D is the selected alternative. The Interstate 405 freeway crosses Century Boulevard with a single 100-foot bridge span cross Interstate 405 over or under.

As part of the detailed design of preferred alternative, the City will conduct site investigations to determine exact utility locations and coordinate column placements to avoid/resolve conflicts or relocate based on cost/benefits.

2.5 CONCLUSIONS

Based on a preliminary review and inventory of existing utilities and information currently available located within the vicinity of the proposed alignments, various utility relocations obstacles, right-of-way impacts, and design considerations have been identified.

In addition to typical surface improvements, it is anticipated that existing utility infrastructure elements at various locations will need to be reconfigured or protected in place to accommodate the transit project components, including guideway slabs, columns, footings, and supporting infrastructure.

As noted above, the most significant utility impacts are attributed to major utilities along the centerline of streets and/or within close proximity of the projected transit alignments as they may pose obstacles in the placement of the guideway columns. Conflicts with existing utility infrastructure identified in this preliminary analysis can be avoided through design, avoided, or through technically viable relocation. This analysis identifies design requirements for future consideration to avoid relocation of major systems, i.e. 60-inch water main line, LADWP vaults and the high voltage transmission lines. Numerous but minor utility lines and lateral connections are located in close proximity to the transit alignments. These utilities, if cannot be avoided, may be sleeved through foundations in lieu of relocations.

Appendix 2.0.3

Summary of Comments Received on the Recirculated and Original NOP and IS Memorandum

Meridian Consultants
920 Hampshire Road, Suite A5
Westlake Village, California 91631
(805) 367-5720

MEMORANDUM

Date: December 16, 2020

To: Lisa Trifiletti, Principal, Trifiletti Consulting Inc.

From: Christine Lan, Senior Project Manager, Meridian Consultants LLC

Subject: Summary of Comments Received on the Original Notice of Preparation (Original NOP)/ Original Initial Study (Original IS) and the Revised Notice of Preparation (Revised NOP)/ Revised Initial Study (Revised IS) for the Inglewood Transit Connector Project

The City of Inglewood (City or Inglewood), the Lead Agency for the Inglewood Transit Connector (ITC) Project (proposed Project), issued an Original NOP and a Revised NOP stating that the City has determined that an environmental impact report (EIR) should be prepared to evaluate the potential significant environmental effects of the proposed Project.

The purpose of the NOP and Revised NOP was to provide the most up-to-date information describing the Project and its potential environmental effects to those who may wish to comment regarding the scope and content of the information to be included in the EIR. The City encouraged the Governor's Office of Planning and Research (OPR), responsible and trustee agencies, adjacent cities and counties, and interested members of the public to provide comments on the Original NOP/IS and Original Revised NOP/Revised IS to the City. Thus, the City can ensure the Draft EIR addresses the appropriate topics and considers all potential environmental impacts that may result from the construction and operation of the proposed Project.

Pursuant to State California Environmental Quality Act (CEQA) Guidelines Section 15082(a), upon deciding to prepare an EIR, the City, as Lead Agency, prepared and released an NOP and IS on July 16, 2018. In accordance with the CEQA Guidelines, the City provided the NOP to OPR, applicable trustee or responsible agencies identified for the Project, adjacent cities, the County of Los Angeles, and all interested parties requesting such notice.

As a result of the comments received, in addition to refinements and modifications to the proposed Project identified in the Original NOP and Original IS, a Revised NOP and IS were re-circulated on September 10, 2020. Subsequent to the circulation of the Original IS, OPR updated and revised the thresholds contained in the State CEQA Guidelines Appendix G. The Revised IS was updated accordingly to address the updated Appendix G checklist that became effective on December 28, 2018.

The Original NOP and Revised NOP were mailed to OPR, trustee or responsible agencies identified for the Project, adjacent cities and counties, relevant Native American tribes, and those requesting such notice. A full list of agencies, departments, tribes, and parties that were mailed certified copies of the NOP and the Revised NOP of the distribution list is provided as **Attachment 1: Original NOP Distribution List** and **Attachment 2: Revised NOP Distribution List** to the memorandum.

Original NOP Public Review and Outreach

In addition to the distribution of the NOPs, notices for the Original NOP were published in newspapers with circulation in the local area and surrounding region. These included the *Los Angeles Times* on July 18, 2018, and the *Inglewood News* on July 19, 2018, as well as a Spanish-language notice in *La Opinión* on July 18, 2018. Proofs of publication are included in **Attachment 3: Original NOP Proof of Publication**.

Further, pursuant to the requirements of Public Resources Code Section 21080.3.1 (Assembly Bill 52), the City mailed letters on July 31, 2018, notifying the following Native American tribes of the proposed Project: Gabrielino-Tongva Tribe, Gabrielino Tongva Indians of California Tribal Council, Gabrielino/ Tongva Nation, and Gabrieleno/Tongva San Gabriel Band of Mission Indians. To date, only the Gabrieleño Band of Mission Indians–Kizh Nation has expressed interest in consulting on the proposed Project.

A public scoping meeting for the proposed Project was held on Thursday, July 26, 2018, from 6:00 to 8:00 PM at the Inglewood Senior Citizens Center (111 N. Locust Street, Inglewood, CA 90301) in an open-house format; both Spanish translators and sign language interpreters were present. Although a formal count of attendees was not conducted, it is estimated that approximately 150 people attended the scoping meeting throughout the evening. A copy of the sign-in sheets for the scoping meeting is provided as **Attachment 4: Scoping Meeting Sign-in Sheets**.

The City provided a 30-day period from the release of the Original NOP to allow State and local agencies, as well as the public, to submit written comments regarding the Original NOP and Original IS to the City; the comment period was completed at 5:00 PM on August 15, 2018. In addition, the City accepted written comment cards at the scoping meeting. A list of written comment letters and cards received by the City is shown in **Table 1: Comment Letters Received on the Original Notice of Preparation and Original Initial Study for the Inglewood Transit Connector Project**.

A total of three State agencies, five regional agencies, and one local agency submitted comments. At the scoping meeting, 17 individuals submitted comments.

Copies of the original comment letters and cards are included as **Attachment 5: Comments Received on the ITC Original NOP and Original Initial Study**. All comment cards and letters received have been reviewed to identify the nature of the comments and assess whether they are a comment on the proposed Project or on the potential environmental affects, by topic (e.g., air quality, noise, traffic, etc.); each comment within each letter has been bracketed to allow for future reference. A copy of the matrix listing each

comment letter and the nature of the comment(s) made (whether on the proposed Project or environmental topic) is provided as **Attachment 6: Summary Matrix of Comments and Topics for Original NOP and Original Initial Study.**

Revised NOP Public Review and Outreach

In addition to the distribution of the Original NOP, notices for the Revised NOP were published in newspapers with circulation in the local area and surrounding region. These included the *Los Angeles Times* on September 16, 2020, *Inglewood Today* on September 24, 2020, and the Spanish-language newspaper *La Opinión* on September 15, 2020. Proofs of publication are included in **Attachment 7: Revised NOP Proof of Publication.**

Further, mailing notices of the Revised NOP were distributed on September 10, 2020, notifying the four Native American tribes consulted under AB 52 of the changes to the original project scope. The four tribes are as follows: The Gabrielino-Tongva Tribe, Gabrielino Tongva Indians of California Tribal Council, Gabrielino/ Tongva Nation, and Gabrieleno/Tongva San Gabriel Band of Mission Indians. To date, only the Gabrieleño Band of Mission Indians–Kizh Nation has expressed interest in consulting on the proposed Project. No additional requests on the original or revised project scope were received.

The City provided a 30-day period from the release of the Revised NOP to allow State and local agencies, as well as the public, to submit written comments regarding the Revised NOP and Revised IS to the City; the comment period was completed at 5:00 PM on October 12, 2020. A list of written comment letters received by the City is shown in **Table 2: Comment Letters Received on the Revised Notice of Preparation and Revised Initial Study for the Inglewood Transit Connector Project**.

A total of two State agencies, four regional agencies, three local agency submitted comments, and three interested parties/individuals submitted comments.

Copies of the original comment letters and cards are included as **Attachment 8: Comments Received on the ITC Revised NOP and Revised Initial Study**. All comment letters received have been reviewed to identify the nature of the comments and assess whether they are a comment on the proposed Project or on the

potential environmental affects, by topic (e.g., air quality, noise, traffic, etc.); each comment within each letter has been bracketed to allow for future reference. A copy of the matrix listing each comment letter and the nature of the comment(s) made (whether on the proposed Project or environmental topic) is provided as **Attachment 9: Summary Matrix of Comments and Topics for Revised NOP and Revised Initial Study.**

PROOF OF PUBLICATION
(2015.5 C.C.P.)

STATE OF ILLINOIS
County of Cook

I am a citizen of the United States and a resident of the County aforesaid; I am over the age of eighteen years, and not a party to or interested in the action for which the attached notice was published.

I am a principal clerk of the Los Angeles Times, which was adjudged a newspaper of general circulation on May 21, 1952, Cases 598599 for the City of Los Angeles, County of Los Angeles, and State of California. Attached to this Affidavit is a true and complete copy as was printed and published on the following date(s):

Jul 18, 2018

I certify (or declare) under penalty of perjury
under the laws of the State of California that the foregoing is true and correct.

Dated at Chicago, Illinois
on this 19 day of 7, 2018.

July 16, 2018 NOTICE OF PREPARATION AND NOTICE OF PUBLIC SCOPING MEETING FOR AN ENVIRONMENTAL IMPACT REPORT

PROJECT NAME: Inglewood Transit Connector

PROJECT LOCATION: The Inglewood Transit Connector (ITC) would include improvements that would be constructed in an area of the City of Inglewood within the public right-of-way from the intersection of Market Street and Florence Avenue adjacent to the Crenshaw/LAX Metro Line in Downtown Inglewood, south through Market Street, then east on Manchester Boulevard, turning south on Prairie Avenue until its intersection with Century Boulevard. The proposed Project would be located within the public right-of-way and would include supporting infrastructure on adjacent parcels.

DUE DATE FOR PUBLIC COMMENTS: August 15, 2018

Notice is hereby given that the City of Inglewood ("City") will be the Lead Agency and will prepare an Environmental Impact Report (EIR) for the Inglewood Transit Connector project. The EIR to be prepared by the City will evaluate the potential significant environmental effects of the proposed project. The City is requesting comments related to the scope and content of the EIR.

A copy of the Initial Study prepared for the proposed Project is available for review at the City of Inglewood website at: www.cityofinglewood.org and at the locations listed below:

- Inglewood City Hall, One W. Manchester Blvd., Inglewood, CA 90301
- Inglewood Public Library, 101 W. Manchester Blvd., Inglewood, CA 90301

PROJECT DESCRIPTION

The City proposes to construct a 1.8-mile Automatic People Mover (APM) and supporting infrastructure that would run from the Market Street and Florence Ave-

Los Angeles Times
MEDIA GROUP

nue intersection adjacent to the Metro Crenshaw/ LAX Line in Downtown Inglewood, south through Market Street, then east on Manchester Boulevard, turning south on Prairie Avenue until its intersection with Century Boulevard. The APM system would provide service from Downtown Inglewood to the Forum, the Los Angeles Sports and Entertainment District (LASED), and the proposed Inglewood Basketball and Entertainment Center (IBEC). The proposed Project would be located within the public right away and would include supporting infrastructure on adjacent parcels.

PUBLIC SCOPING MEETING DATE AND LOCATION The City of Inglewood encourages all interested individuals and organizations to attend the meeting. The location, date, and time of the scoping meeting for the proposed Project is as follows:

Date and Time: Thursday, July 26, 2018, 6:00 p.m. to 8:00 p.m.

Location: Inglewood Senior Citizens Center
111 N. Locust Street
Inglewood, CA 90301

NOTICE OF PREPARATION AND NOTICE OF PUBLIC SCOPING MEETING FOR AN ENVIRONMENTAL IMPACT REPORT

PROJECT NAME:
Inglewood Transit Connector

PROJECT LOCATION: The Inglewood Transit Connector (ITC) would include improvements that would be constructed in an area of the City of Inglewood within the public right-of-way from the intersection of Market Street and Florence Avenue adjacent to the Crenshaw/LAX Metro Line in Downtown Inglewood, south through Market Street, then east on Manchester Boulevard, turning south on Prairie Avenue until its intersection with Century Boulevard. The proposed Project would be located within the public right-of-way and would include supporting infrastructure on adjacent parcels.

DUE DATE FOR PUBLIC COMMENTS:
August 15, 2018

Notice is hereby given that the City of Inglewood ("City") will be the Lead Agency and will prepare an Environmental Impact Report (EIR) for the Inglewood Transit Connector project. The EIR to be prepared by the City will evaluate the potential significant environmental effects of the proposed project. The City is requesting comments related to the scope and content of the EIR.

A copy of the Initial Study prepared for the proposed Project is available for review at the City of Inglewood website at: www.cityofinglewood.org and at the locations listed below:
Inglewood City Hall, One W. Manchester Blvd., Inglewood, CA 90301
Inglewood Public Library, 101 W. Manchester Blvd., Inglewood, CA 90301

PROJECT DESCRIPTION
The City proposes to construct a 1.8-mile Automated People Mover (APM) and supporting infrastructure that would run from the Market Street and Florence Avenue intersection adjacent to the Metro Crenshaw/LAX Line in Downtown Inglewood, south through Market Street, then east on Manchester Boulevard, turning south on Prairie Avenue until its intersection with Century Boulevard. The APM system would provide service from Downtown Inglewood to the Forum, the Los Angeles Sports and Entertainment District (LASED), and the proposed Inglewood Basketball and Entertainment Center (IBEC). The proposed Project would be located within the public right-of-way and would include supporting infrastructure on adjacent parcels.

PUBLIC SCOPING MEETING DATE AND LOCATION
The City of Inglewood encourages all interested individuals and organizations to attend the meeting. The location, date, and time of the scoping meeting for the proposed Project is as follows:

Date and Time:
Thursday, July 26, 2018, 6:00 p.m. to 8:00 p.m.

Location: Inglewood Senior Citizens Center
111 N. Locust Street
Inglewood, CA 90301

All comments will be considered in the preparation of the EIR. Written comments must be submitted by August 15, 2018.

AVISO DE PREPARACIÓN
Y AVISO DE REUNIÓN DE ALCANCE PÚBLICO PARA UN INFORME DE IMPACTO AMBIENTAL

NOMBRE DEL PROYECTO: Conector de Tránsito Inglewood

UBICACIÓN DEL PROYECTO: El Conector de Tránsito Inglewood (ITC, por sus siglas en inglés) incluiría mejoras que serían construidas en un área de la Ciudad de Inglewood dentro del derecho de paso público desde la intersección de Market Street y Florence Avenue adyacente a la Línea de Metro Crenshaw/LAX en el Centro de la ciudad de Inglewood, al sur hasta Market Street, luego al este en Manchester Boulevard, girando al sur en Prairie Avenue hasta su intersección con Century Boulevard. El Proyecto Propuesto sería ubicado dentro del derecho de paso público e incluiría la infraestructura de apoyo en parcelas adyacentes.

PLAZO PARA COMENTARIOS PÚBLICOS: 15 de agosto de 2018
Por medio de la presente se da aviso que la Ciudad de Inglewood ("Ciudad") será la Agencia Principal y preparará un Informe de Impacto Ambiental (EIR, por sus siglas en inglés) para el proyecto de Conector de Tránsito Inglewood. El EIR que se prepara por la Ciudad evaluará los posibles efectos ambientales significativos del proyecto propuesto. La Ciudad está solicitando comentarios relacionados al alcance y contenido del EIR. Una copia del Estudio Inicial preparado para el Proyecto propuesto está disponible para revisión en el sitio web de la Ciudad de Inglewood en: www.cityofinglewood.org y en las ubicaciones que se muestran a continuación:
- Ayuntamiento de Inglewood, One W. Manchester Blvd., Inglewood, CA 90301
- Biblioteca Pública de Inglewood, 101 W. Manchester Blvd., Inglewood, CA 90301

DESCRIPCIÓN DEL PROYECTO
La Ciudad propone construir un sistema Automático para el Transporte de Personas (APM) de 1.8 millas e infraestructura de apoyo que se correría desde la intersección de Market Street y Florence Avenue adyacente a la Línea Metro Crenshaw/LAX en el Centro de Inglewood, al sur a través de Market Street, luego a este en Manchester Boulevard, girando al sur en Prairie Avenue hasta su intersección con Century Boulevard. El sistema APM proporcionaría servicios desde el Centro de la Ciudad de Inglewood al Forum, Los Angeles Sports y el Distrito de Entretenimiento (LASED), y el Centro de Entretenimiento y Basquetbol de Inglewood (IBEC). El Proyecto propuesto estaría ubicado dentro del derecho de paso público e incluiría infraestructura de apoyo en parcelas adyacentes.

FECHA Y UBICACIÓN DE LA REUNIÓN DE ALCANCE PÚBLICO
La Ciudad de Inglewood anima a todas las personas interesadas y organizaciones a asistir a la reunión. La ubicación, fecha, y hora de la reunión de alcance para el Proyecto propuesto es la siguiente:

Fecha y Hora: Jueves 26 de julio de 2018, 6:00 p.m. a 8:00 p.m.

Ubicación: Centro para Ciudadanos Mayores de Inglewood
111 N. Locust Street
Inglewood, CA 90301

Todos los comentarios serán considerados en la preparación del EIR. Los comentarios escritos deben enviarse antes del 15 de agosto de 2018.

RE: SCH# 2018071034, Inglewood Transit Connector Project, City of Inglewood; Los Angeles County, California

Dear Ms. Wilcox:

The Native American Heritage Commission has received the Notice of Preparation (NOP) for Draft Environmental Impact Report for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code § 21000 et seq.), specifically Public Resources Code section 21084.1, states that a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, § 15064.5 (b) (CEQA Guidelines Section 15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an environmental impact report (EIR) shall be prepared. (Pub. Resources Code § 21080 (d); Cal. Code Regs., tit. 14, § 15064 subd. (a)(1) (CEQA Guidelines § 15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources with the area of project effect (APE). 1-1

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a **separate category of cultural resources**, "tribal cultural resources" (Pub. Resources Code § 21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment (Pub. Resources Code § 21084.2). Please reference California Natural Resources Agency (2016) "Final Text for tribal cultural resources update to Appendix G: Environmental Checklist Form," http://resources.ca.gov/ceqa/docs/ab52/Clean-final-AB-52-App-G-text-Submitted.pdf. Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code § 21084.3 (a)). **AB 52 applies to any project for which a notice of preparation or a notice of negative declaration or mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements**. If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. § 800 et seq.) may also apply. 1-2

The NAHC recommends **lead agencies consult with all California Native American tribes** that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments. **Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws**.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a **lead agency** shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
    a. A brief description of the project.
    b. The lead agency contact information.
    c. Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code § 21080.3.1 (d)).
    d. A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code § 21073).

1-3

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A **lead agency** shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code § 21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or environmental impact report. (Pub. Resources Code § 21080.3.1(b)).
    a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code § 65352.4 (SB 18). (Pub. Resources Code § 21080.3.1 (b)).

1-4

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
    a. Alternatives to the project.
    b. Recommended mitigation measures.
    c. Significant effects. (Pub. Resources Code § 21080.3.2 (a)).

1-5

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
    a. Type of environmental review necessary.
    b. Significance of the tribal cultural resources.
    c. Significance of the project's impacts on tribal cultural resources.
    d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code § 21080.3.2 (a)).

1-6

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code sections 6254 (r) and 6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code § 21082.3 (c)(1)).

1-7

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
    a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
    b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code section 21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code § 21082.3 (b)).

1-8

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:
    a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
    b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code § 21080.3.2 (b)).

1-9

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code section 21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code section 21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code § 21082.3 (a)).

1-10

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code section 21084.3 (b). (Pub. Resources Code § 21082.3 (e)).

1-11

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:
    a. Avoidance and preservation of the resources in place, including, but not limited to:
        i. Planning and construction to avoid the resources and protect the cultural and natural context.
        ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
    b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
        i. Protecting the cultural character and integrity of the resource.
        ii. Protecting the traditional use of the resource.
        iii. Protecting the confidentiality of the resource.
    c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
    d. Protecting the resource. (Pub. Resource Code § 21084.3 (b)).
    e. Please note that a federally recognized California Native American tribe or a nonfederally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code § 815.3 (c)).
    f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code § 5097.991).

1-12

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An environmental impact report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
    a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code sections 21080.3.1 and 21080.3.2 and concluded pursuant to Public Resources Code section 21080.3.2.
    b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
    c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code section 21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code § 21082.3 (d)).

    This process should be documented in the Cultural Resources section of your environmental document.

1-13

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires **local governments** to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code § 65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf 1-14

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code § 65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code section 65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code sections 5097.9 and 5097.993 that are within the city's or county's jurisdiction. (Gov. Code § 65352.3 (b)). 1-15
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/ 1-16

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine: 1-17
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have been already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.

b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE. 1-17
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, section 15064.5(f) (CEQA Guidelines section 15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code section 7050.5, Public Resources Code section 5097.98, and Cal. Code Regs., tit. 14, section 15064.5, subdivisions (d) and (e) (CEQA Guidelines section 15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

Please contact me if you need any additional information at gayle.totton@nahc.ca.gov. 1-18

Inglewood, California 90301

SUBJECT: SCH# 2018071034; City of Inglewood, Inglewood Transit Connector draft Environmental Impact Report, Notice of Preparation

Dear Ms. Wilcox,

The California Public Utilities Commission (Commission) has jurisdiction over the safety of highway-rail crossings (crossings) and rail transit projects in California. All rail fixed guideway systems are subject to the Commission's Safety Oversight Program requirements. Safety Certification Plan approval is required for rail transit projects to be placed in revenue service. The California Public Utilities Code requires Commission approval for construction or alteration of crossings and grants the Commission exclusive power on design, alteration, and/or closure of crossings in California. The Commission's Rail Transit Safety Branch (RTSB) will review rail transit project matters and the Rail Crossings and Engineering Branch (RCEB) will review crossing matters. The Commission has received a copy of the *Notice of Preparation (NOP)* from City of Inglewood, who is the lead agency for the proposed Inglewood Transit Connector Project. 2-1

According to the NOP, the project is an elevated dual guideway automatic people mover/transit connector that would be built entirely within the public Right-of-Way in the City of Inglewood. The project would include an APM system to transport riders from the new Metro Crenshaw/LAX Line to Downtown Inglewood, the Forum, the L.A. Sports and Entertainment District, which includes the new NFL stadium, and the proposed Inglewood Basketball and Entertainment Center. In addition, the automatic people mover/transit connector system would include up to five passenger stations. 2-2

The automatic people mover/transit connector system described in the NOP will be subject to a number of rules and regulations involving the Commission. These may include, but not limited to:

- California Public Utilities Code, Sections 1201 et al, which requires Commission authority to construct rail crossings
- California Public Utilities Code, Sections 2111, 2112, 99152; rail transit safety
- Commission's Rules of Practice and Procedure, which details the Formal Application process for construction or modification of a public crossing

2-3

The design criteria of the proposed project must comply with Commission General Orders (GOs), such as:

- GO 26-D, Clearances on railroads and street railroads as to side and overhead structures, parallel tracks and crossings,
- GO 72-B, Construction and maintenance of crossings – standard types of pavement construction at railroad grade crossings (if any),
