TRAFFIC IMPACT STUDY
FOR THE
CONTINENTAL GRAND CAMPUS SPECIFIC PLAN PROJECT
IN THE CITY OF EL SEGUNDO

INTRODUCTION

The purpose of this traffic impact study is to evaluate the traffic-related impacts associated with the proposed Continental Grand Campus Specific Plan Project in the City of El Segundo. The scope of the analysis in this report is in accordance with direction provided by the City of El Segundo Planning Department staff.

PROJECT DESCRIPTION

Existing Site

The project applicant, Mattel Inc., proposes to expand its current headquarters in the City of El Segundo. The project site is a 12.5-acre office campus located in the northwest quadrant of the intersection of Grand Avenue and Continental Boulevard in the City of El Segundo, approximately 1.5 miles south of the Los Angeles International Airport (LAX) and 1.5 miles west of the San Diego Freeway (I-405). A regional vicinity map is provided on Figure 1.

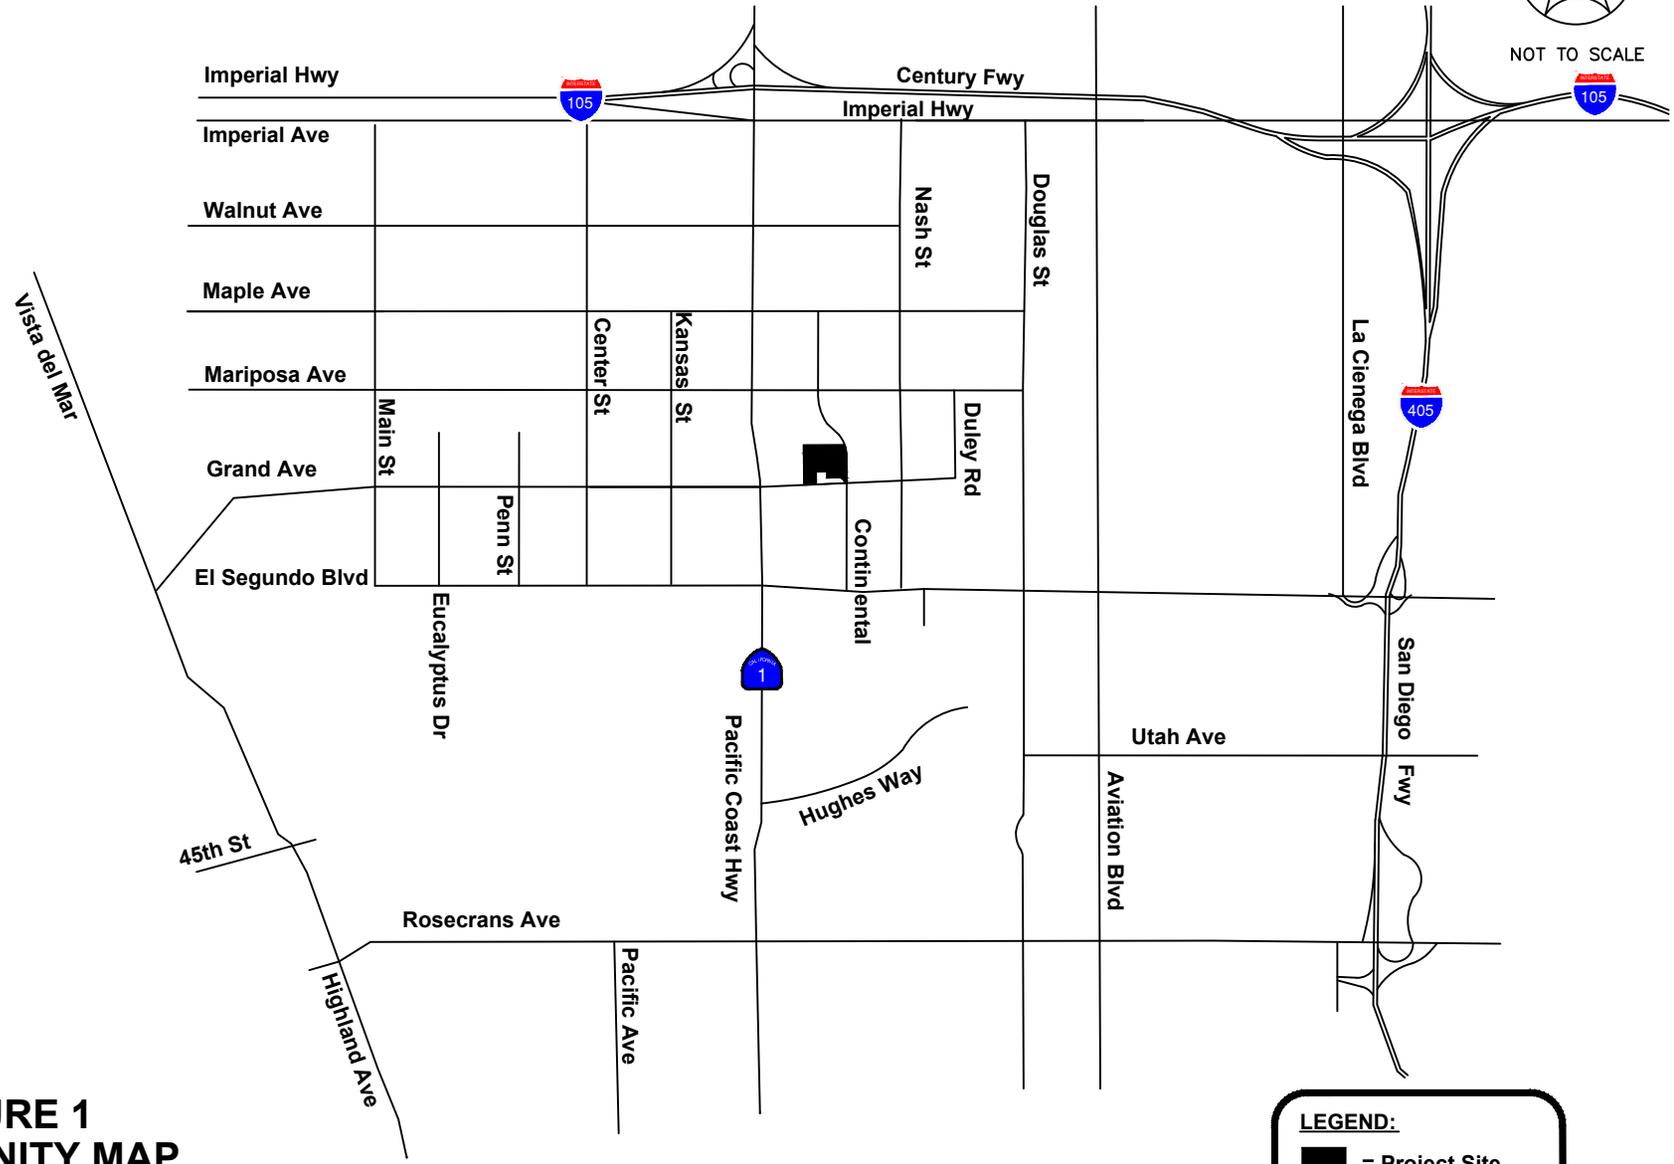

The project site consists of three contiguous parcels at 333 Continental Boulevard, 455 Continental Boulevard, and 1955 East Grand Avenue.

The 333 Continental Boulevard parcel is located on the south side of the project site and is currently occupied by a 14-story, 328,612-square-foot office building which houses the Mattel corporate headquarters offices. Additionally, a two-story Pavilion Building occupies the southeastern portion of the parcel. The Pavilion Building is approximately 29,710 square feet, and is occupied by a cafeteria and child care center for Mattel employees. The 333 Continental Boulevard parcel also includes an eight-level above-grade parking structure with 1,132 parking spaces. Access to the parking structure is provided via a single un-gated entrance on the south side of the structure.

A Doubletree Hotel is located directly south of and adjacent to the 333 Continental Boulevard parcel, between the existing buildings and Grand Avenue. The Doubletree Hotel and the 333 Continental Boulevard parcel share driveway access on Continental Boulevard and on Grand Avenue.

NOT TO SCALE

**FIGURE 1
VICINITY MAP**

LEGEND:
■ = Project Site

The 455 Continental Boulevard Parcel is the northernmost parcel, located directly north of and adjacent to the 333 Continental Boulevard parcel. It is improved with interim temporary uses that include outdoor recreational facilities for Mattel employees (basketball and sand volleyball courts), a landscaped area featuring the Mattel logo, and surface parking.

The 1955 East Grand Avenue parcel is directly west of the 333 Continental Boulevard parcel and the Doubletree Hotel. It is developed with a two-story, approximately 57,082-square-foot office building, fronting on Grand Avenue. The building serves as the location for a Toy Fair which occurs twice a year, for three weeks in June and in October. The rest of the year, the 1955 Grand Avenue building is occupied by a small staff and is used for training and internal meetings. Primary parking for the 1955 East Grand Avenue building is provided in a surface parking lot to the north of the building. The parking lot provides 365 parking spaces. A small visitor parking lot with eight spaces (4 standard, and 4 ADA spaces) is located at the front of the 1955 East Grand Avenue building.

Access to the 333 and 455 Continental Boulevard parcels consists of three driveways on Continental Boulevard, and one driveway on Grand Avenue:

- The main driveway on Continental Boulevard is the southernmost driveway, which is a full-movement, joint access driveway that also serves the adjacent Doubletree Hotel. This driveway leads to the parking structure behind the 333 Continental Boulevard building, and also provides a connection to a small traffic circle and surface parking to the north.
- The middle driveway on Continental Boulevard is a right-in/right-out only driveway that leads directly to the traffic circle in front of the 333 Continental Boulevard building, and to surface parking.
- The northernmost driveway on Continental Boulevard is located at the north end of the 455 Continental Boulevard parcel. All turning movements are allowed at this driveway, however, under current conditions, the driveway is closed off with a swinging gate.
- The driveway on Grand Avenue is located at the west edge of the 333 Continental Boulevard parcel, and is a full-movement, joint access driveway that also serves the Doubletree Hotel. Left turns are allowed due to a break in the median on Grand Avenue, although the median does not currently provide a left-turn pocket for eastbound left-turning traffic. This is discussed in more detail later in this report.

Access to the parking for the 1955 East Grand Avenue building is provided via two driveways on Grand Avenue:

- The main driveway is located at the west edge of the project site, and leads directly to the surface parking lot behind the building. It is a right-in/right-out only driveway, due to the raised median on Grand Avenue.

- A minor entry drive located near the east edge of the project site provides one-way, inbound-only access to the small visitor parking area along the front of the 1955 Grand Avenue building, with a connection to the main driveway at the west edge of the site.

There are no vehicular connections between the 1955 East Grand Avenue parcel and the 333 and 455 Continental Boulevard parcels.

Proposed Project

A copy of the project site plan is provided on Figure 2. The proposed development would consist of two main components:

- Development on the 455 Continental Boulevard parcel would consist of a new 14-story building on the landscaped area with the Mattel logo. The new building would provide 328,612 square feet of office, research, and development space. This new building will house the Mattel Corporate Headquarters offices, and research and development functions. In addition, a new eight-story parking structure will be constructed on the site of the outdoor recreational area. The parking structure will provide 1,087 parking spaces, and will connect with the existing parking structure.
- On the 1955 East Grand Avenue parcel, the existing two-story building will be demolished and a new six-story office building with 174,236 square feet will be constructed. The surface parking to the north of the building will remain. There are currently 365 parking spaces in the surface parking lot. The project will increase the parking supply to a total of 465 parking spaces.

ANALYSIS METHODOLOGY

This traffic study includes documentation of existing conditions, analysis of cumulative traffic conditions, and identification of project-related impacts for the following analysis scenarios:

- Existing Conditions
- Existing Plus Project
- Opening Year 2022 Without Project
- Opening Year 2022 With Phase 1
- Opening Year 2023 Without Project
- Opening Year 2023 With Phase 1 and Phase 2

Analysis scenarios and study intersections were selected based on discussions with City of El Segundo staff and the project team.

Weekday morning and evening peak hours will be evaluated at the following study intersections:

1. Pacific Coast Highway at Imperial Highway *
2. Pacific Coast Highway at Walnut Avenue *
3. Pacific Coast Highway at Maple Avenue *
4. Pacific Coast Highway at Mariposa Avenue *
5. Pacific Coast Highway at Grand Avenue *
6. Pacific Coast Highway at El Segundo Boulevard *
7. Pacific Coast Highway at Rosecrans Boulevard *
8. Continental Boulevard at Mariposa Avenue
9. Continental Boulevard at Grand Avenue
10. Continental Boulevard at El Segundo Boulevard
11. Nash Street at Imperial Highway
12. Nash Street at Mariposa Avenue
13. Nash Street at Grand Avenue
14. Nash Street at El Segundo Boulevard
15. Douglas Street at El Segundo Boulevard
16. Aviation Boulevard at El Segundo Boulevard
17. El Segundo Boulevard at Isis Avenue**
18. El Segundo Boulevard at I-405 Southbound Ramps *
19. El Segundo Boulevard at La Cienega**
20. El Segundo Boulevard at I-405 Northbound Ramps *

* Caltrans intersection

**City of Hawthorne intersection

Intersection Capacity Utilization (ICU) Methodology

All of the study intersections for this analysis are signalized. Peak hour operating conditions at signalized intersections are evaluated using the Intersection Capacity Utilization (ICU) methodology, in accordance with the City of El Segundo and LA County Congestion Management Program (CMP) requirements. The ICU methodology provides a comparison of the number of vehicles passing through an intersection to the theoretical hourly vehicular capacity of that intersection during a given hour.

The ICU calculation assumes a per-lane capacity of 1,600 vehicles per hour (vph) for each travel lane (through or turning lane) through the intersection. A separate, "unofficial" de facto right-turn lane is assumed where there is no separately striped right-turn lane, if the width of the outside through lane is 19 feet or more, and parking is prohibited during the peak period. A clearance factor of 0.05 (5%) of the total intersection capacity is included in the ICU calculation to account for the effect of the yellow and all-red phases of the signal cycle.

The ICU calculation returns a volume-to-capacity (V/C) ratio that translates into a corresponding Level of Service (LOS) measure, ranging from LOS A, representing uncongested, free-flowing conditions; to

LOS F, representing over-capacity conditions. A summary description of each Level of Service and the corresponding V/C ratio is provided on the chart on the following page.

LEVEL OF SERVICE DESCRIPTIONS: ICU METHODOLOGY		
Level of Service	ICU Value	Description
A	0.00 - 0.60	EXCELLENT – No vehicle waits longer than one red light and no approach phase is fully used.
B	0.61 - 0.70	VERY GOOD – An occasional approach phase is fully utilized; many drivers begin to feel somewhat restricted within groups of vehicles.
C	0.71 - 0.80	GOOD – Occasionally drivers may have to wait through more than one red light; back-ups may develop behind turning vehicles.
D	0.81 - 0.90	FAIR – Delays may be substantial during portions of the rush hours, but enough lower volume periods occur to permit clearing of developing lines, preventing excessive back-ups.
E	0.91 - 1.00	POOR – Represents the most vehicles that the intersection approaches can accommodate; may be long lines of waiting vehicles through several signal cycles.
F	> 1.00	FAILURE – Back-ups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. Long delays with continuously increasing queue lengths.

Highway Capacity Manual (HCM) Methodology

Peak hour operating conditions at the unsignalized project driveway intersections and at intersections that are under Caltrans' jurisdiction are analyzed using the Highway Capacity Manual (HCM) delay methodology in accordance with the Caltrans *Guide for the Preparation of Traffic Impact Studies*. Pacific Coast Highway is a Caltrans facility; therefore, all intersections along Pacific Coast Highway, and all freeway ramp intersections will also be analyzed using the HCM methodology.

For signalized intersections, the HCM methodology estimates the average delay (in average seconds per vehicle) for each of the movements through the intersection, taking into account a number of factors, including number of lanes, volume of traffic, and signal timing and phasing.

For unsignalized intersections, the HCM methodology analysis determines the average delay for each vehicle making any movement from the stop-controlled minor street, as well as left turns from the major street. Delay values are calculated based on the relationship between the traffic on the major street and the availability of acceptable gaps in the traffic stream through which conflicting traffic movements can be made.

The HCM delay values correspond to Level of Service designations, also ranging from LOS A to LOS F. A summary of the delay ranges for each Level of Service is provided in the following chart.

HCM-BASED LEVEL OF SERVICE AND DELAY RANGES FOR SIGNALIZED AND UNSIGNALIZED INTERSECTIONS		
Level of Service	Signalized Intersection (Average delay per vehicle, in seconds) ¹	Unsignalized Intersections (Average delay per vehicle, in seconds) ²
A	≤ 10	0 – 10
B	> 10 – 20	> 10 – 15
C	> 20 – 35	> 15 – 25
D	> 35 – 55	> 25 – 35
E	> 55 – 80	> 35 – 50
F	> 80	> 50

¹ Source: Highway Capacity Manual (HCM 2010), Exhibit 18-4.

² Source: Highway Capacity Manual (HCM 2010), Exhibits 19-1 and 20-2.

Traffic Impact Criteria

The minimum acceptable level of service for signalized intersections in the City of El Segundo, per the City's Circulation Element, is LOS D. The project impact at an intersection would be considered to be significant if the project's traffic results in a change in Level of Service from LOS D or better to LOS E or F, or if there is an increase in intersection capacity utilization (ICU) value of 0.020 or more, when the "Without Project" intersection level of service is already at LOS E or F (ICU = 0.901 or more).

For Caltrans intersections, Level of Service standards and impact criteria specified by Caltrans will apply. The *Caltrans Guide for the Preparation of Traffic Impact Studies* states that "Caltrans endeavors to maintain a target Level of Service at the transition between LOS C and LOS D on State highway facilities. If an existing State highway facility is operating at less than the target LOS, the existing Level of Service is to be maintained."

EXISTING TRANSPORTATION SYSTEM

Roadway System

Regional access to the project site is provided by the Century Freeway (I-105), which is oriented in an east-west direction approximately ¾-mile north of the project site. Regional access is also provided via the San Diego Freeway (I-405) which is a north-south major travel corridor approximately 1.5 miles east of the project site, with a full interchange at Imperial Highway and at El Segundo Boulevard. Local access to the project site is provided by several arterial and commuter roadways.

Pacific Coast Highway (State Highway 1) is a north-south arterial located approximately 1,200 feet west of the project site. This roadway provides four travel lanes in each direction with a raised landscaped median in the project vicinity. Sidewalks are provided, and parking is prohibited along both sides of the street. The posted speed limit in the project vicinity is 40 miles per hour (mph). Pacific Coast Highway is classified as a Major Arterial and is a designated truck route on the City of El Segundo

Circulation Element of the General Plan. *Note:* The portion of Pacific Coast Highway through the study area was previously named Sepulveda Boulevard. It was renamed Pacific Coast Highway in 2017.

Continental Boulevard is a north-south street that forms the eastern boundary of the existing Mattel property and the project site. It has three lanes in each direction with a landscaped median from Mariposa Avenue on the north to El Segundo Boulevard on the south. Sidewalks are provided and parking is prohibited along both sides of the street, and the posted speed limit is 30 mph. Continental Boulevard is classified as a Secondary Arterial.

Nash Street is a north-south street located approximately 1,200 feet east of the project site. It has two lanes in each direction and connects Imperial Highway on the north to El Segundo Boulevard on the south. Sidewalks are provided along both sides of the street. Nash Street terminates at the westbound I-105 (Glenn Anderson Freeway) off-ramp at Imperial Highway. Parking is prohibited along both sides of Nash Street and the posted speed limit is 35 mph. Nash Street is classified as a Secondary Arterial.

Douglas Street is a six-lane north-south arterial located approximately one-half mile east of the project site. Douglas Street provides a connection between Imperial Highway and Rosecrans Avenue through the industrial/ manufacturing/aerospace area of El Segundo. Sidewalks are provided along both sides of the street. The posted speed limit on Douglas Street is 40 mph. South of El Segundo Boulevard, Douglas Street narrows to four lanes and the speed limit is reduced to 25 mph north of Rosecrans Avenue. Douglas Street is classified as a Secondary Arterial.

Aviation Boulevard is a north-south arterial located approximately 3/4 of a mile east of the project site. A sidewalk is provided along the east side of Aviation Boulevard. Parking is prohibited along both sides of the street. The posted speed limit is 40 mph. Aviation Boulevard is classified as a Major Arterial and is a designated truck route.

Imperial Highway is an east-west arterial extending from the City of El Segundo eastward into Orange County. Imperial Highway forms the southern boundary of the Los Angeles International Airport, and runs under and parallel to the Century Freeway (I-105). In the project vicinity, Imperial Highway provides three travel lanes in each direction, separated by a raised median. The roadway narrows to two lanes in each direction approximately 1/2-mile west of Pacific Coast Highway. Sidewalks are provided along both sides of the street. The speed limit on Imperial Highway in the project vicinity is posted at 40 (mph). Imperial Highway is classified as a Secondary Arterial and is a designated truck route on the Circulation Element of the General Plan.

Walnut Avenue is an east-west street located approximately one-half mile north of the project site. Walnut Avenue provides one travel lane in each direction. Sidewalks are provided along both sides of the street. Parking is allowed on both sides of Walnut Avenue. To the east of Pacific Coast Highway, Walnut Avenue terminates at Selby Street. Walnut Avenue is classified as a Secondary Arterial.

Maple Avenue is an east-west street located approximately 2,000 feet north of the project site. Maple Avenue provides one lane in each direction to the west of Pacific Coast Highway, and two lanes in each direction to the east of Pacific Coast Highway. Sidewalks are provided and on-street parking is allowed

on both sides of the street. Maple Avenue is classified as a Collector to the east of Pacific Coast Highway and a Local Street to the west of Pacific Coast Highway.

Mariposa Avenue is a four-lane east-west arterial located approximately 1,100 feet north of the project site. Mariposa Avenue connects Douglas Street on the east to the residential area of El Segundo on the west side of the city. Sidewalks are provided along both sides of the street. The posted speed limit is 40 mph. Mariposa Avenue is classified as a Secondary Arterial east of Pacific Coast Highway and a two-lane Collector west of Pacific Coast Highway.

Grand Avenue is an east-west arterial that forms the southern border of the project site. Grand Avenue begins at Duley Road on the east and extends westerly through the City of El Segundo downtown area to Vista del Mar, near the Pacific Ocean. In the project vicinity, Grand Avenue has two lanes east of Nash Street and six lanes west of Nash Street. Sidewalks are provided along both sides of the street. The posted speed limit on Grand Avenue is 35 mph. Grand Avenue is classified as a Secondary Arterial and is a designated truck route west of Pacific Coast Highway.

El Segundo Boulevard is an east-west arterial located approximately one-quarter mile south of the project site. El Segundo Boulevard extends from near the Pacific Ocean through the City of El Segundo to the San Diego Freeway and beyond. The posted speed limit in the project vicinity is 40 mph. Sidewalks are provided along both sides of the street. El Segundo Boulevard is classified as a Secondary Arterial west of Pacific Coast Highway and a Major Arterial east of Pacific Coast Highway; and is a designated truck route.

Isis Avenue is a north-south local street located in the City of Hawthorne and County of Los Angeles. Isis Avenue extends from El Segundo Boulevard to 16th Street and has one lane in each direction. The posted speed limit is 25 mph. Parking is allowed on both sides of the street.

La Cienega Boulevard is a north-south arterial located in the City of Hawthorne and County of Los Angeles. La Cienega Boulevard runs from the City boundary to the north to El Segundo Boulevard to the south. The posted speed limit is 40 mph, and parking is restricted on both sides of the street.

Existing Transit Service

Public transportation services for the project area are provided by the Los Angeles County Metropolitan Transportation Authority (LACMTA), the Los Angeles Department of Transportation (LADOT), and other local transit services, as described below.

Los Angeles County Metropolitan Transportation Authority (Metro)

Metro Bus Line 232 travels mainly north-south along Pacific Coast Highway (PCH) in the project vicinity, with a one-way loop via Mariposa Avenue, Nash Street, and Grand Avenue. Line 232 originates at LAX and travels south on PCH through the cities of Manhattan Beach, Hermosa Beach, and Redondo Beach, then turns eastward on PCH, terminating at the Transit Mall in the City of Long Beach. Line 232 operates with headways (the interval between arrivals) of 10-15 minutes during the weekday peak

commuting hours, and 20-60 minutes during other hours. Line 232 operates on the weekends with headways of 30 minutes during the day and 40-60 minutes in the evenings. The bus stop closest to the project site is located on Grand Avenue west of Continental Boulevard, adjacent to the project site.

The Metro Green Line is a light rail system that travels between Redondo Beach and Norwalk every day of the week with headways of 6-8 minutes during weekday peak hours and 15-20 minutes during non-peak hours and weekends. The Green Line stations in the vicinity of the project are the El Segundo Station, located near the intersection of El Segundo Boulevard at Nash Street (approximately 1/2 mile from the project site); the Mariposa Station, located at the intersection of Mariposa Avenue at Nash Street (approximately 1/2 mile from the project site); and the Aviation/LAX Station, located at the intersection of Aviation Boulevard at Imperial Highway (approximately 1-1/2 mile from the project).

Los Angeles Department of Transportation (LADOT)

The Los Angeles Department of Transportation (LADOT) operates Commuter Express (CE) lines to facilitate commuter travel to downtown Los Angeles and other employment destinations during the morning and afternoon commute hours.

Commuter Express 574 (CE 574) serves the communities of El Segundo, Manhattan Beach, Redondo Beach, and Hermosa Beach via Pacific Coast Highway, El Segundo Boulevard, and Aviation Boulevard. CE 574 operates southbound only during weekday mornings and northbound during the evenings, and travels non-stop via the I-405 Freeway between Space Park Drive at Aviation Boulevard in El Segundo, and the Sylmar / Encino area. CE 574 operates on 30- to 60-minute headways during the morning and afternoon commute periods (5:20 to 8:56 AM and 3:35 to 7:42 PM) on weekdays only. CE 574 stops at the bus stop located at the corner of Grand Avenue and Continental Boulevard.

Torrance Transit

Torrance Transit Line 8 (T8) originates at the LAX Transit Center and travels south via Pacific Coast Highway, Nash Street, and Aviation Boulevard to the City of Torrance. Line 8 has headways of approximately 30 minutes on weekdays and provides limited service on weekends with 30- to 60-minute headways. The nearest bus stop is located near the corner of Grand Avenue at Nash Street.

City of Redondo Beach – Beach Cities Transit

Beach Cities Transit Line 109 (BCT 109) operates between the cities of El Segundo and Redondo Beach, and provides service to Downtown Manhattan Beach, Downtown El Segundo, Plaza El Segundo, the Douglas and Aviation Green Line Stations, the LAX City Bus Center, and other areas. BCT 109 travels along Imperial Avenue, Main Street, Grand Avenue, and Pacific Coast Highway in the vicinity of the project site. This bus line operates with headways of 30 to 45 minutes on weekdays and one hour on weekends.

City of El Segundo

Lunchtime Shuttle: The City of El Segundo operates a Lunchtime Shuttle to connect the corporate business area on the east side of the city with the downtown area on the west side of the city. The shuttle operates free of charge, Monday through Friday from 11:30 AM to 2:15 PM, with 10-minute headways. The shuttle does not run on weekends or holidays. The Lunchtime Shuttle stops closest to the project site are located on Continental Boulevard between Mariposa Avenue and Grand Avenue; and on Grand Avenue, between Continental Boulevard and Nash Street.

EXISTING TRAFFIC CONDITIONS

Existing Traffic Volumes

Morning and evening peak hour turning movement counts were collected for the study intersections in October, 2015 and May, 2016. These counts were collected on a typical weekday, while local schools were in session. Counts collected in 2015 were grown 0.26%, per the Los Angeles County Congestion Management Program (CMP), to be consistent with 2016 counts. Additionally, morning and evening peak hour turning movement counts for intersections within the City of Hawthorne were collected in April, 2018. Existing lane configurations and traffic control at the study intersections are shown on Figure 3. The existing morning and evening peak hour traffic volumes are shown on Figure 4. Copies of the traffic count data worksheets are provided in *Appendix A*.

Existing Intersection Operating Conditions

Existing intersection operations were evaluated using the ICU and HCM methodologies described earlier. The results of the analysis are summarized on Table 1. ICU intersection analysis worksheets are provided in *Appendix B* and HCM intersection analysis worksheets are provided in *Appendix C*. Review of Table 1 indicates that all study intersections currently operate at an acceptable Level of Service D or better during both peak hours, with the exception of the following:

- #1 – Pacific Coast Highway at Imperial Highway (ICU) – PM LOS E
- #16 – Aviation Boulevard at El Segundo Boulevard (ICU) – PM LOS E

PROJECT TRAFFIC

Project Trip Generation

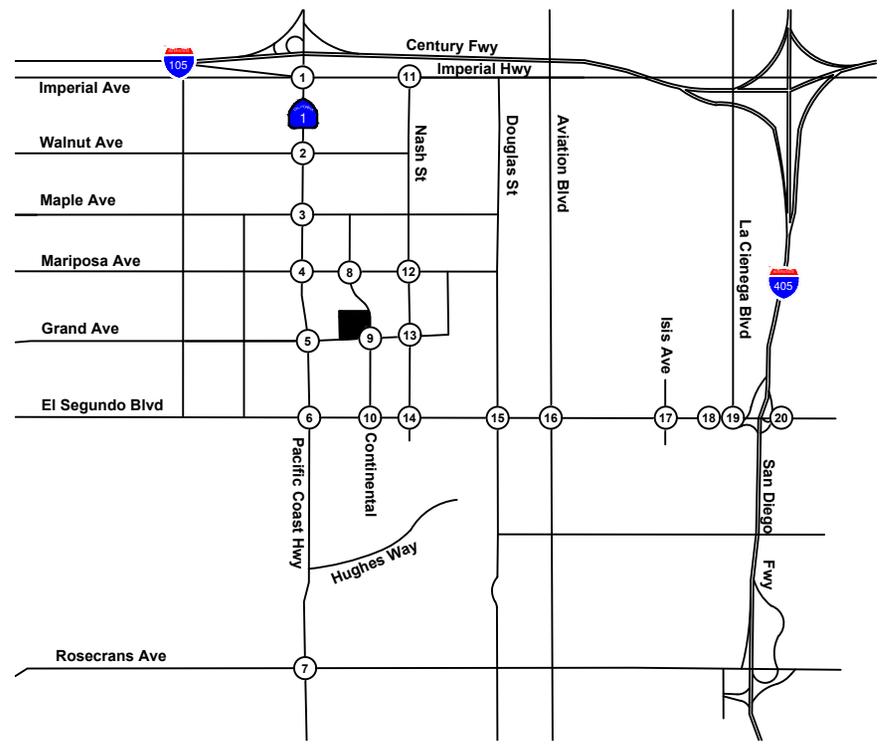

Trip generation estimates for the proposed Continental Grand Campus Specific Plan project are based on the Institute of Transportation Engineers (ITE) Trip Generation Manual. The following ITE land use categories were used:

- General Office Building (Land Use 710)
- Corporate Headquarters Building (Land Use 714)
- Research and Development Center (Land Use 760)

LOS shown in **Bold** and shaded indicates unacceptable Level of Service.
 ICU = Intersection Capacity Utilization
 HCM = Highway Capacity Manual
 LOS = Level of Service
 Intersection operation is expressed in volume-to-capacity (v/c) ratio for the ICU methodology.
 Intersection operation is expressed in average seconds of delay (sec/veh) for the HCM methodology.

The project will be constructed in two phases:

- Phase 1 will consist of the construction of a 14-story, 328,612-square-foot building on the 455 Continental Boulevard parcel. The building will include 246,459 gross square feet of Corporate Headquarters use and 82,153 gross square feet of Research and Development use. Phase 1 Opening Year is anticipated to be 2022.
- Phase 2 will include the demolition of the existing 1955 East Grand Avenue building and the construction of a six-story, 174,236-square-foot General Office Building. As discussed earlier, the existing 1955 East Grand Avenue building is not regularly used, therefore, no trip credits were taken for the existing use. Phase 2 Opening Year is anticipated to be 2023.

Trip generation rates and the resulting trip generation estimates for Phase 1 and Phase 2 of the Continental Grand Campus Specific Plan are summarized on Table 2. The project is estimated to generate a total of 4,555 trips on a daily basis, with 746 trips in the morning peak hour, and 696 trips in the evening peak hour.

Project Trip Distribution and Assignment

Trip distribution assumptions for the project were developed, taking into account the project access, the surrounding land uses and the area roadway system. Trip distribution assumptions for the project are shown on Figure 5. The resulting peak hour project trips at the study intersections are shown on Figure 6 for Phase 1, Figure 7 for Phase 2, and Figure 8 for the total project.

EXISTING PLUS PROJECT CONDITIONS

The Existing Plus Project analysis scenario is a hypothetical scenario that assumes completion of the project and full absorption of the project traffic on the surrounding street network at the current time, with no other changes in traffic conditions. The Existing Plus Project scenario is required by the California Environmental Quality Act (CEQA).

The project-related peak hour trips were added to the existing peak hour volumes to evaluate Existing Plus Project conditions. The resulting traffic volumes are shown on Figure 9. Existing Plus Project intersection results are shown on Table 3. As this table indicates, with the addition of project traffic, all study intersections would continue to operate at an acceptable Level of Service D or better, with the following exceptions:

The two intersections currently operating at a deficient Level of Service would continue to do so with the addition of project traffic:

- #1 – Pacific Coast Highway at Imperial Highway (ICU) – PM LOS F
- #16 – Aviation Boulevard at El Segundo Boulevard (ICU) – PM LOS E

<p>LOS shown in Bold and shaded indicates unacceptable Level of Service. ICU = Intersection Capacity Utilization HCM = Highway Capacity Manual LOS = Level of Service Intersection operation is expressed in volume-to-capacity (v/c) ratio for the ICU methodology. Intersection operation is expressed in average seconds of delay (sec/veh) ratio for the HCM methodology.</p>													

Both intersections would experience a significant impact per the City's significance thresholds. The intersection of Pacific Coast Highway at Imperial Highway would deteriorate from LOS E to LOS F in the evening peak hour.

In addition, two intersections would worsen from acceptable to unacceptable with the addition of project traffic, which would be considered a significant impact per the City's significance thresholds:

- #15 – Douglas Street at El Segundo Boulevard (ICU) – PM LOS E
- #18 – El Segundo Boulevard at I-405 SB Ramps (ICU) – PM LOS E

FUTURE TRAFFIC CONDITIONS

Near-term future traffic forecasts have been developed to evaluate Cumulative Conditions for the anticipated project opening year. Phase 1 Opening Year is estimated to be Year 2022, and Phase 2 Opening Year is anticipated to be Year 2023. The surrounding transportation network, intersection lane configurations, and traffic control are assumed to be the same as existing. Near-Term traffic forecast volumes were developed using the "build-up" process, starting with existing traffic volumes, and adding a background growth factor and traffic from cumulative projects.

Ambient Growth

Based on the Los Angeles County Congestion Management Program (CMP), the traffic growth factor for the South Bay / LAX area is estimated to be 0.26% per year between years 2016 and 2020, and 0.18% between years 2020 and 2025. The proposed project is expected to be completed in two phases, with Phase 1 completion in 2022 and Phase 2 completion in 2023, therefore, a growth factor of 1.014 is applied for Phase 1 and a factor of 1.0158 is applied for Phase 2.

Cumulative Projects Traffic

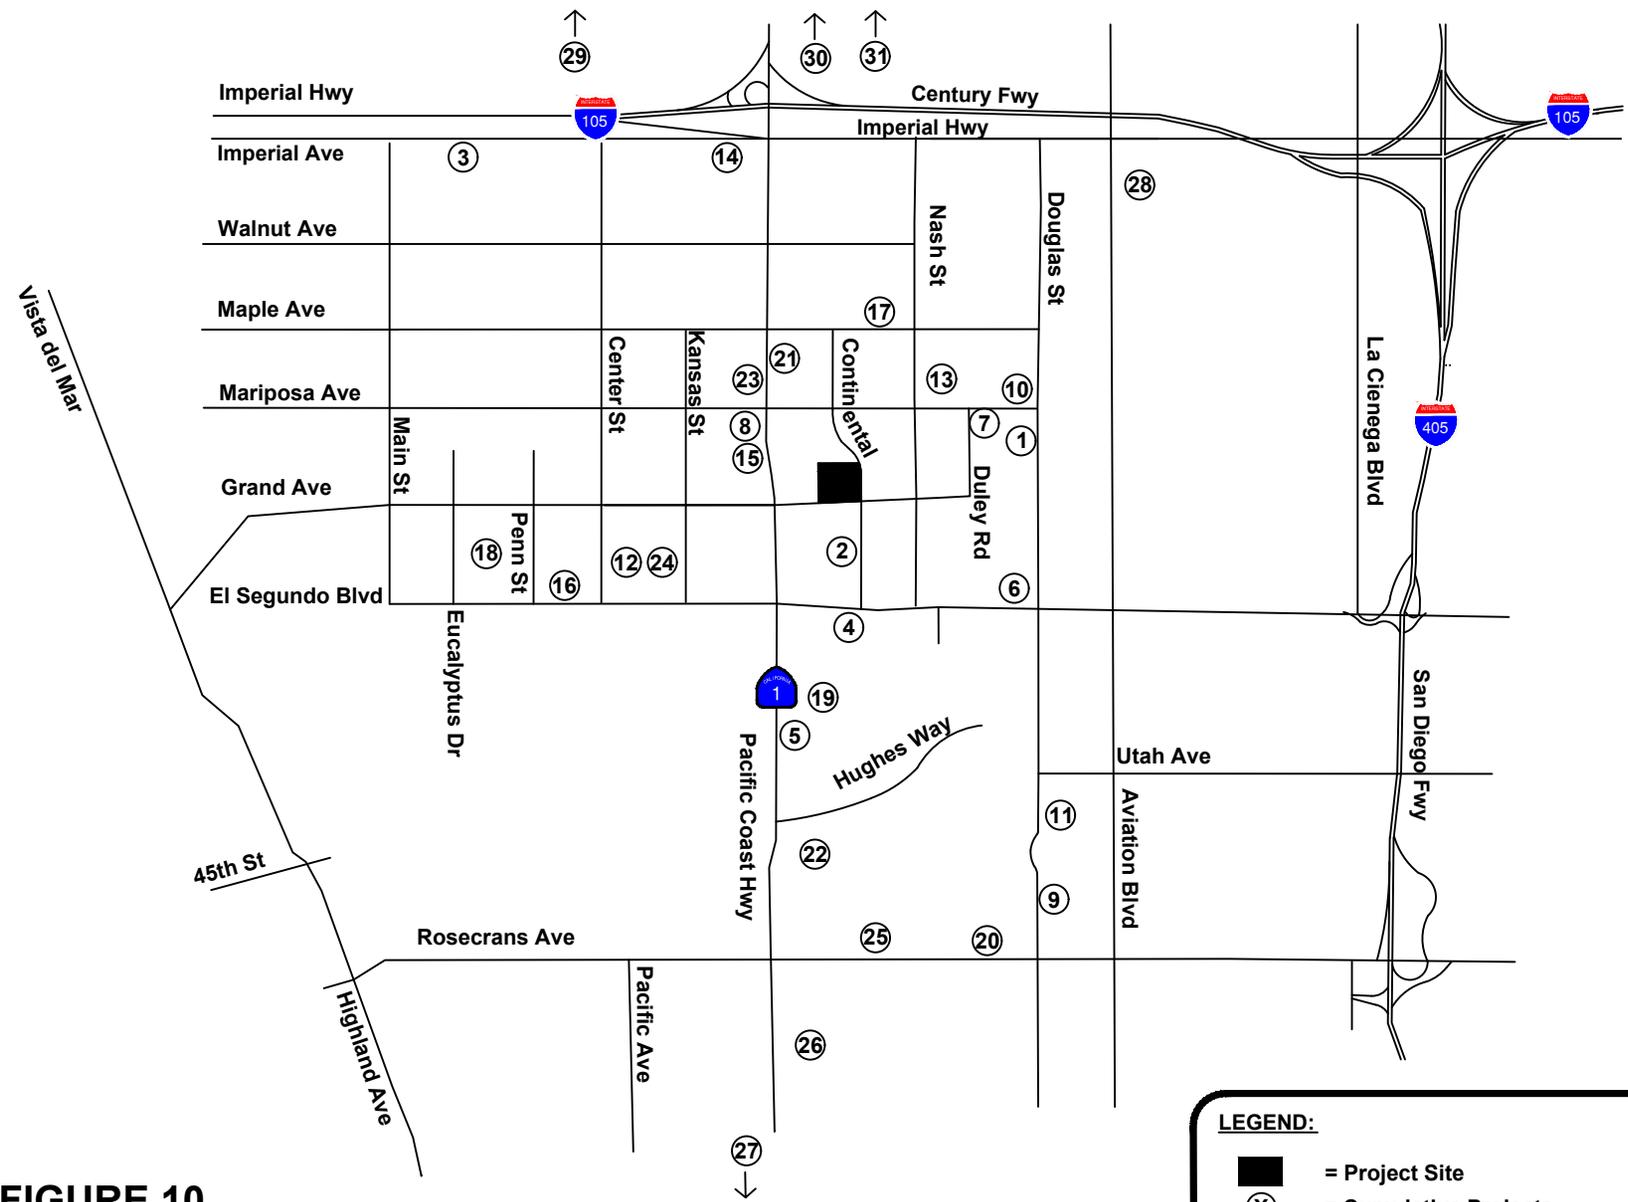

Information about cumulative projects (approved and pending projects) was obtained from the City of El Segundo Planning Department and the Cities of Manhattan Beach and Los Angeles. The cumulative projects are listed on Table 4, along with approved/proposed land uses, and estimated peak hour trips. The cumulative projects locations are shown on Figure 10. Trip generation estimates and trip distribution assumptions for the Cumulative Projects were derived from approved traffic studies, where available; and developed by Kimley-Horn if approved traffic studies were not available. Cumulative project turning movement volumes at the study intersections are shown on Figure 11.

PEAK HOUR TRAFFIC VOLUMES**

Opening Year 2022 Without Project Conditions

The ambient traffic growth and cumulative project traffic volumes were added to existing traffic volumes to develop the Opening Year 2022 Without Project peak hour forecasts. Forecasted peak hour volumes are shown on Figure 12. Each intersection was re-analyzed with these traffic volumes, and the results are shown on Table 5. ICU intersection analysis worksheets are provided in *Appendix B* and HCM intersection worksheets are provided in *Appendix C*.

The results show that the addition of ambient traffic growth and cumulative project traffic would cause the Level of Service at the following intersections to deteriorate to an unacceptable Level of Service in one or both peak hours under Opening Year 2022 Without Project Conditions:

- #1 – Pacific Coast Highway at Imperial Highway (ICU) – PM LOS F
- #6 – Pacific Coast Highway at El Segundo Boulevard
 - (ICU) – AM and PM LOS F
 - (HCM) – AM and PM LOS E
- #7 – Pacific Coast Highway at Rosecrans Boulevard (ICU) – AM LOS E, PM LOS F
- #14 – Nash Street at El Segundo Boulevard (ICU) – PM LOS F
- #15 – Douglas Street at El Segundo Boulevard (ICU) – AM LOS E, PM LOS F
- #16 – Aviation Boulevard at El Segundo Boulevard (ICU) – AM and PM LOS F
- #18 – El Segundo Boulevard at I-405 SB Ramps
 - (ICU) – PM LOS F
 - (HCM) – PM LOS E

Opening Year 2022 With Phase 1 Conditions

Phase 1 project traffic was added to the Opening Year 2022 Without Project traffic volumes to develop Opening Year 2022 With Phase 1 forecasts, which are shown on Figure 13. The results of the analysis are summarized on Table 6. The ICU intersection analysis worksheets are provided in *Appendix B* and HCM intersection worksheets are provided in *Appendix C*.

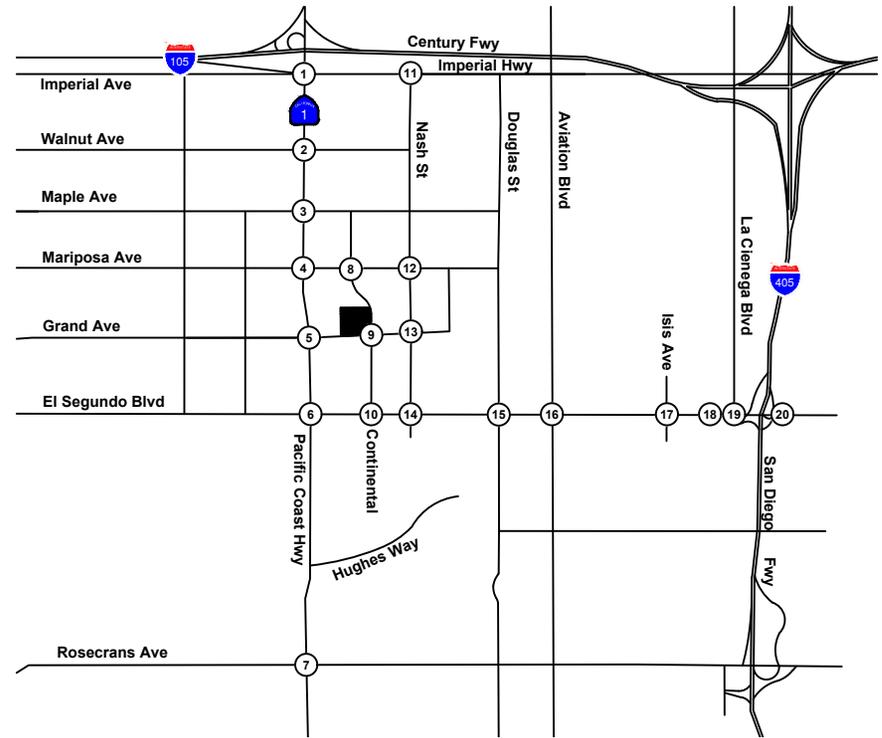

In the Opening Year 2022 With Phase 1 scenario, the same intersections that were forecasted to operate at an unacceptable Level of Service in the Opening Year 2022 Without Project scenario will continue to do so with the addition of project traffic.

This table also shows the project impact at each study intersection, calculated as the change in V/C ratio or in the seconds of delay as a result of the project traffic. The addition of project traffic would cause one additional intersection to worsen to an unacceptable Level of Service:

- #20 – El Segundo Boulevard at I-405 NB Ramps (ICU) – AM LOS E.

LOS shown in **Bold** and shaded indicates unacceptable Level of Service.
 ICU = Intersection Capacity Utilization
 HCM = Highway Capacity Manual
 LOS = Level of Service
 Intersection operation is expressed in volume-to-capacity (v/c) ratio for the ICU methodology.
 Intersection operation is expressed in average seconds of delay (sec/veh) ratio for the HCM methodology.

The Phase 1 project would cause the ICU value at an already-deficient intersection to worsen by 0.02 V/C or more at the following intersections:

- #14 – Nash Street at El Segundo Boulevard (ICU) – PM LOS F, Impact +0.024
- #15 – Douglas Street at El Segundo Boulevard (ICU) – AM LOS F, Impact +0.027; PM LOS F, Impact +0.024
- #16 – Aviation Boulevard at El Segundo Boulevard (ICU) – AM LOS F, Impact +0.027
- #18 – El Segundo Boulevard at I-405 SB Ramps
 - (ICU) PM LOS F, Impact +0.049
 - (HCM) PM LOS E to LOS F, Impact + 9.4 seconds
- #20 – El Segundo Boulevard at I-405 NB Ramps
 - (ICU) AM LOS E, Impact +0.036

Based on the significance criteria presented earlier, the project impact at these study intersections would be considered to be a significant impact.

Opening Year 2023 Without Project Conditions

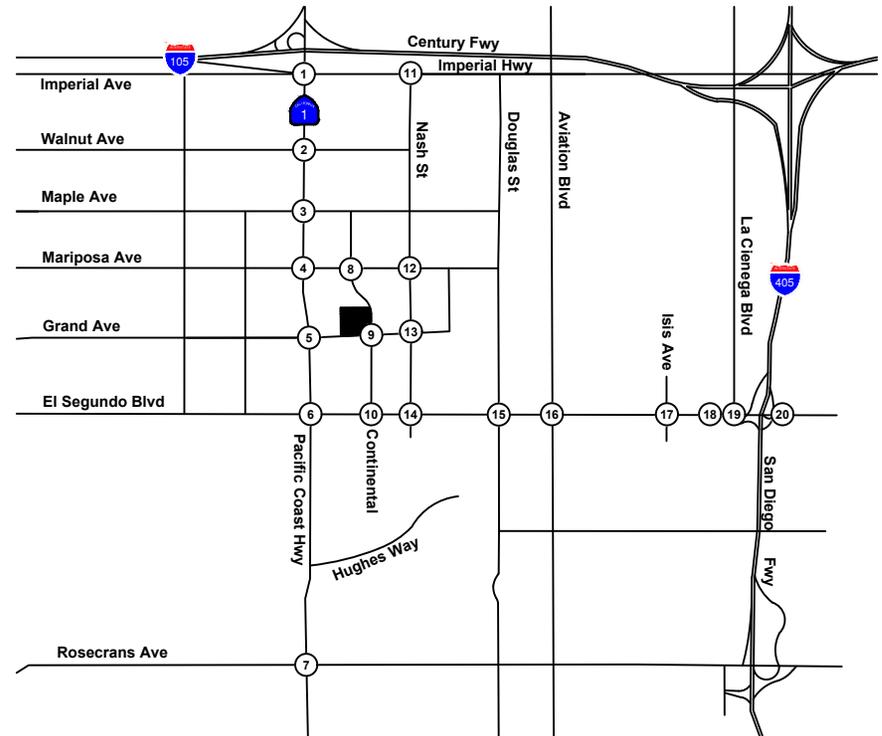

The ambient growth rate and cumulative project traffic volumes were added to existing traffic volumes to develop Opening Year 2023 Without Project peak hour forecasts. Forecasted peak hour volumes are shown on Figure 14. Each intersection was re-analyzed with these traffic volumes, and the results are shown on Table 7. ICU intersection analysis worksheets are provided in *Appendix B* and HCM intersection worksheets are provided in *Appendix C*.

The results show that the same intersections that were forecasted to operate at an unacceptable Level of Service in the Opening Year 2022 without Project scenario will continue to do so in the Opening Year 2023 without Project scenario:

- #1 – Pacific Coast Highway at Imperial Highway (ICU) – PM LOS F
- #6 – Pacific Coast Highway at El Segundo Boulevard
 - (ICU) – AM and PM LOS F
 - (HCM) – AM and PM LOS E
- #7 – Pacific Coast Highway at Rosecrans Boulevard (ICU) – AM LOS E, PM LOS F
- #14 – Nash Street at El Segundo Boulevard (ICU) – PM LOS F
- #15 – Douglas Street at El Segundo Boulevard (ICU) – AM LOS E, PM LOS F
- #16 – Aviation Boulevard at El Segundo Boulevard (ICU) – AM and PM LOS F
- #18 – El Segundo Boulevard at I-405 SB Ramps
 - (ICU) – PM LOS F
 - (HCM) – PM LOS E

Opening Year 2023 With Phase 1 and Phase 2 Conditions

Phase 1 and Phase 2 project traffic was added to Opening Year 2023 Without Project traffic volumes to develop Opening Year 2023 With Phase 1 and Phase 2 forecasts, as shown on Figure 15. The results are summarized on Table 8. ICU intersection analysis worksheets are provided in *Appendix B* and HCM intersection worksheets are provided in *Appendix C*.

In the Opening Year 2023 With Phase 1 and Phase 2 scenario, the same intersections that were forecasted to operate at an unacceptable Level of Service in the Opening Year 2023 Without Project scenario will continue to do so with the addition of project traffic.

The addition of project traffic would cause two additional intersections to worsen to an unacceptable Level of Service:

- #5 – Pacific Coast Highway at Grand Avenue (ICU) – PM LOS E
- #20 – El Segundo Boulevard at I-405 NB Ramps (ICU) – AM LOS E.

This table also shows the project impact at each study intersection. The project would cause one intersection to operate at an unacceptable Level of Service, and would cause the ICU value at an already-deficient intersection to worsen by 0.02 V/C or more at the following intersections:

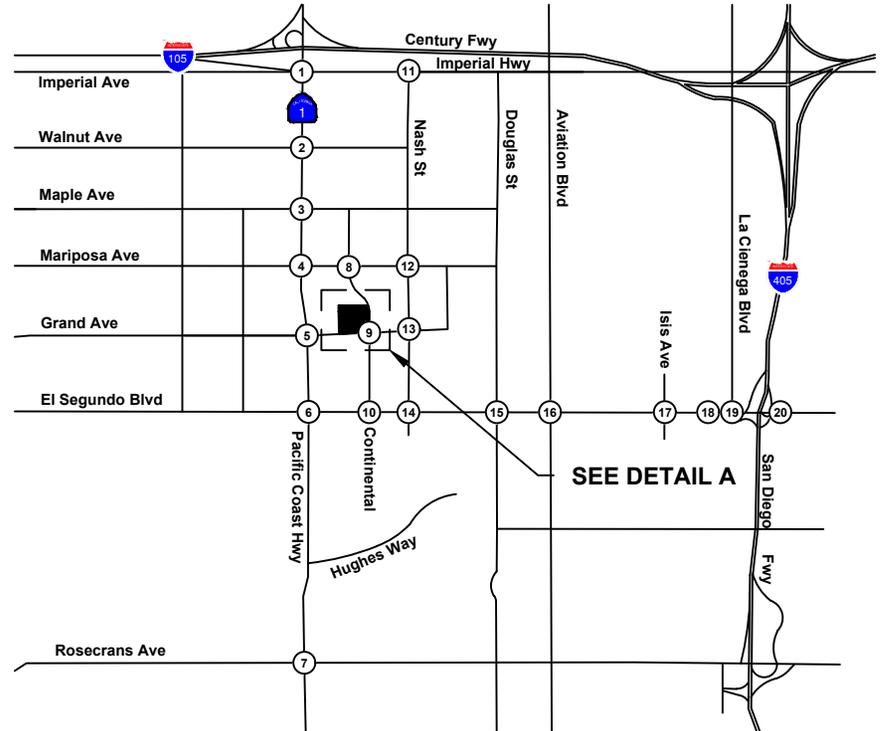

- #1 – Pacific Coast Highway at Imperial Highway – (ICU) – PM LOS F, Impact +0.047
- #5 – Pacific Coast Highway at Grand Avenue (ICU) – Project causes PM LOS E
- #14 – Nash Street at El Segundo Boulevard (ICU) – PM LOS F, Impact +0.037
- #15 – Douglas Street at El Segundo Boulevard (ICU) – AM LOS F, Impact +0.042; PM LOS F, Impact +0.037
- #16 – Aviation Boulevard at El Segundo Boulevard (ICU) – AM LOS F, Impact +0.042; PM LOS F, Impact +0.028
- #18 – El Segundo Boulevard at I-405 SB Ramps (ICU) – PM LOS F, Impact +0.075
- #20 – El Segundo Boulevard at I-405 NB Ramps (ICU) – Project causes AM LOS E

In addition, based on the HCM delay methodology, the project would cause two intersections already operating at a deficient Level of Service to worsen from LOS E to LOS F:

- #6 – Pacific Coast Highway at El Segundo Boulevard (HCM) – PM LOS E worsens to LOS F.
- #18 – El Segundo Boulevard at I-405 SB Ramps (HCM) – PM LOS E worsens to LOS F.

1. Pacific Coast Hwy at Imperial Hwy 14/19, 3172/2272, 594/501, 523/447, 305/289, 236/171, 213/194, 378/447, 262/176, 94/253, 1705/2447, 488/1112, 106/69, 2217/3359, 70/42	2. LOS shown in **Bold** and shaded indicates unacceptable Level of Service.
 ICU = Intersection Capacity Utilization
 HCM = Highway Capacity Manual
 LOS = Level of Service
 Intersection operation is expressed in volume-to-capacity (v/c) ratio for the ICU methodology.
 Intersection operation is expressed in average seconds of delay (sec/veh) ratio for the HCM methodology.

MITIGATION MEASURES

Based on the impact criteria outlined above, the project-related impact would be considered significant at these intersections, and project mitigation would be required.

#1 – Pacific Coast Highway at Imperial Highway: Re-stripe the northbound approach to provide a second northbound right-turn lane. This improvement would provide additional capacity for the heavy northbound right-turn movement, and would improve the Level of Service from LOS F to LOS D in the evening peak hour, which would mitigate the project impact.

#5 – Pacific Coast Highway at Grand Avenue: Re-stripe the westbound approach to convert the number 1 through lane to a shared through/right-turn lane. This improvement would provide additional capacity for the heavy westbound right-turn movement, and would improve the Level of Service from LOS E to LOS D in the evening peak hour, which would mitigate the project impact.

#6 – Pacific Coast Highway at El Segundo Boulevard: Re-stripe the westbound approach to convert the number 1 through lane to a shared through/right-turn lane. This improvement would provide additional capacity for the heavy westbound right-turn movement, and would improve the Level of Service from LOS F to LOS D in the evening peak hour, which would mitigate the project impact.

#14 – Nash Street at El Segundo Boulevard: The south leg of this intersection is one of the primary driveways for the Raytheon development. The Raytheon South Campus Specific Plan TIA (RBF, May 27, 2014) identified the following improvement for this intersection: Widen the northbound approach from two left-turn lanes, one shared through/right-turn lane, and one right-turn lane with right-turn overlap signal phasing to consist of two left-turn lanes, one through lane, and two right-turn lanes with right-turn overlap signal phasing. This improvement would provide additional capacity for the heavy northbound right-turn movement, and would improve the Level of Service from LOS F to LOS E in the evening peak hour, which would mitigate the project impact.

#15 – Douglas Street at El Segundo Boulevard: Mitigation measures at this intersection are considered to be infeasible, due to right-of-way constraints, and the impact that intersection widening would have on existing infrastructure and adjacent developed private property. Therefore, the project impact at this intersection would remain significant and unavoidable.

#16 – Aviation Boulevard at El Segundo Boulevard: Mitigation measures at this intersection are considered to be infeasible, due to right-of-way constraints and the impact that intersection widening would have on existing infrastructure and adjacent developed private property. Therefore, the project impact at this intersection would remain significant and unavoidable.

#18 – El Segundo Boulevard at I-405 SB Ramps: Add right-turn overlap phasing to the eastbound approach of the intersection. This improvement would provide additional signal green time for the heavy eastbound right-turn movement, and would improve the Level of Service from LOS F to LOS E in the evening peak hour, which would mitigate the project impact.

#20 – El Segundo Boulevard at I-405 NB Ramps: Re-stripe the northbound right-turn lane to a shared left/right-turn lane. This improvement would provide additional capacity for the northbound left-turn

movement, and would improve the Level of Service from LOS E to LOS C in the morning peak hour, which would mitigate the project impact.

While implementation of the mitigation measures at Intersection Nos. 1, 5, 6, 18, and 20 would reduce impacts to a less-than-significant level, the intersections are under Caltrans jurisdiction. Since the implementation of these improvements are outside the City's jurisdiction and there is uncertainty regarding the ability to implement these improvements, the City determines that there is a potential for a significant and unavoidable impact to occur at Intersection Nos. 1, 5, 6, 18, and 20 as a result of buildout of the Project.

A summary of the intersection operation before and after implementation of these mitigation measures is provided on Table 9.

FREEWAY MAINLINE ANALYSIS

Analysis of freeway mainline segments in the vicinity of the project was conducted in accordance with the *Caltrans Guide for the Preparation of Traffic Impact Studies*, which specifies application of the HCM methodology for freeway analysis. Freeway analysis results are expressed in terms of density, which measures the number of passenger cars per lane mile (pc/mi/ln) on the freeway mainline. The target Level of Service (LOS) for freeway mainline segments is LOS D, which is a density between 26 and 35 pc/mi/ln. If the existing density exceeds the target LOS, the existing Level of Service is to be maintained.

Freeway mainline analysis was conducted on the I-405 Freeway between Century Boulevard and Rosecrans Avenue, and on the I-105 Freeway between Pacific Coast Highway and Hawthorne Boulevard. Peak hour freeway volumes were obtained from the Caltrans website. The most recent data available was 2015. A conservative growth factor of 1.0% per year was applied to the traffic volumes to derive Existing and Future Year volumes. A summary of the results of the freeway mainline analysis for each study scenario are presented below.

Existing Conditions

Existing peak hour freeway volumes and analysis results for the morning and evening peak hours, by segment, and by direction are summarized on Table 10 for the I-405 segments, and Table 11 for the I-105 segments. Review of these tables indicates that each freeway segment currently operates at LOS D or better in each direction, and in both peak hours, with the exception of the I-405 southbound segment between El Segundo Boulevard and Rosecrans Avenue, which is currently operating at LOS E in the evening peak hour.

Existing Plus Project

Existing Plus Project results are summarized on Table 12 for the I-405 segments, and on Table 13 for the I-105 segments. Review of these tables indicates that each freeway segment will continue operating at LOS D or better in each direction, and in both peak hours, with the exception of the I-405 southbound segment between El Segundo Boulevard and Rosecrans Avenue, which would continue to operate at LOS E in the evening peak hour with the addition of project traffic.

TABLE 9
SUMMARY OF INTERSECTION OPERATION
WITH PROPOSED MITIGATION MEASURES

Intersection and Mitigation	Methodology	Impacted Condition Peak Hour	Without Mitigation		With Mitigation	
			ICU/Delay	LOS	ICU/Delay	LOS
<i>1. Pacific Coast Highway at Imperial Highway:</i> Stripe an additional northbound right-turn lane to provide dual northbound right-turn lanes	ICU	PM	1.085	F	0.899	D
<i>5. Pacific Coast Highway at Grand Avenue:</i> Restripe westbound through lane to be a shared through-right lane to provide dual right-turn capacity	ICU	PM	0.967	E	0.826	D
<i>6. Pacific Coast Highway at El Segundo Boulevard:</i> Restripe westbound through lane to be a shared through-right lane to provide dual right-turn capacity	HCM	PM	88.1	F	55.3	E
<i>14. Nash Street at El Segundo Boulevard:</i> Widen the northbound approach to consist of two left-turn lanes, one through lane, and two right-turn lanes with right-turn overlap signal phasing	ICU	PM	1.076	F	0.917	E
<i>15. Douglas Street at El Segundo Boulevard:</i> No Feasible Mitigation	ICU	AM	1.031	F	No Feasible Mitigation

Opening Year 2022

Freeway analysis results for the Opening Year 2022 Without Project scenario are summarized on Table 14 for the I-405 segments, and on Table 15 for the I-105 segments. Results for the Opening Year 2022 With Project (Phase 1) scenario are summarized on Table 16 for the I-405 segments, and on Table 17 for the I-105 segments.

Review of these tables indicates that the freeway segments would continue operating at LOS D or better in each direction, and in both peak hours, with the exception of:

- I-405 southbound, between El Segundo Boulevard and Rosecrans Avenue, PM LOS E
- I-405 northbound, between Rosecrans Avenue and El Segundo Boulevard, AM LOS E

Opening Year 2023

Freeway analysis results for the Opening Year 2023 Without Project Conditions are summarized on Table 18 for the I-405 segments, and on Table 19 for the I-105 segments. Results for the With Project (Phase 1 and Phase 2) scenario are summarized on Table 20 for the I-405 segments, and on Table 21 for the I-105 segments. Review of these tables indicates that the freeway segments would continue operating at LOS D or better in each direction, and in both peak hours, with the exception of:

- I-405 southbound, between El Segundo Boulevard and Rosecrans Avenue, PM LOS E
- I-405 northbound, between Rosecrans Avenue and El Segundo Boulevard, AM LOS E

The addition of project traffic to the freeway mainline system would not cause a freeway segment to worsen from acceptable to unacceptable, and would not cause a freeway segment that is already operating at a deficient Level of Service to deteriorate to a worse Level of Service.

CONSTRUCTION TRAFFIC

Construction of the Continental Grand Campus Specific Plan Project would occur over two phases and would add construction-related trips to and from the site. These trips are associated with construction activities, including construction workers, grading, and construction of structures and site features. Large construction equipment such as bulldozers, loaders, scrapers, and pavers would be required during various construction phases. Large equipment is generally brought to the site at the start of the construction phase, and kept on site until its term of use ends. A staging area would be designated on-site to store construction equipment and supplies during construction.

Throughout construction, the size of the work crew reporting to the site each day would vary, depending on the construction phase and the different construction activities taking place at the time. Parking for workers would be provided on-site during all phases of construction. Construction workers would not be allowed to park on local streets. If needed during the peak construction periods, off-site parking will be provided, and workers will carpool or be shuttled to the worksite.

Phase 1 will include the construction of the 455 Continental Boulevard building. Phase 1 would consist of three stages of construction activity: demolition, excavation, and construction. Demolition and excavation activities would require the removal of approximately 4,000 cubic yards of dirt over the course of three to five months. Assuming a capacity of 9 cubic yards per truckload, grading activities will require approximately 445 truckloads of material. In a conservative scenario in which excavation is completed in three months (65 working days), an average of 7 truckloads of material will need to be moved per day. This would equate to 7 inbound trucks and 7 outbound trucks per day.

Phase 2 would include the construction of the 1955 Grand Avenue building. Phase 2 would also consist of three stages of activity: demolition, excavation, and construction. Demolition and excavation activities would require the removal of approximately 23,200 cubic yards of dirt over the course of three to five months. Assuming a capacity of 9 cubic yards per truckload, grading activities will require approximately 2,578 truckloads of cut material. In a conservative scenario in which demolition and excavation is completed in five months (109 working days), an average of 24 truckloads of material will need to be moved per day. This would equate to 24 inbound trucks and 24 outbound trucks per day.

Heavy vehicles associated with construction would use the existing regional and local truck route network to approach the site, getting as close to the destination site as possible before turning off the designated truck route. The applicant will be required to identify planned travel patterns for haul vehicles, and obtain a haul route permit from the City. Designated truck routes serving the project area include Pacific Coast Highway and El Segundo Boulevard. Approach and departure routes for construction vehicles, therefore, would most likely be via Pacific Coast Highway or El Segundo Boulevard. Depending on the origin/destination (the nearest landfill, or the deposit site identified for cut material), trucks will either arrive and depart on Pacific Coast Highway via the I-105 Freeway, to the north of the site; or El Segundo Boulevard via the I-405 Freeway, to the east of the site.

Temporary delays in traffic may occasionally occur due to oversized vehicles traveling at lower speeds on local streets. Such delays would be occasional, and of short duration. These temporary delays would be considered less than significant. The project will be required to prepare a construction traffic management plan, which could include such things as requiring an encroachment permit for work in the public right-of-way, limiting heavy truck activity during peak hours, using flag men to manage short-term traffic control, requiring a formal traffic control plan for extended street and lane closures, limiting time and duration of closures, or requiring a minimum number of lanes be open for travel during peak hours.

SITE ACCESS

Access to the parcels making up the Continental Grand Specific Plan is currently provided by three driveways on Continental Boulevard, and three driveways on Grand Avenue. A detailed description of the existing site access for the three project parcels was provided in the Project Description section of this report.

The site driveways will remain in place, and will generally continue to serve the same functions they serve currently. The northernmost driveway on Continental Boulevard, which is a full-movement driveway, is currently gated under typical operating conditions. This driveway would be opened upon completion of the 455 Continental Boulevard portion of the project. The driveway would be extended to the west to connect to the entrance to the new parking structure, on the north end of the structure.

The analysis indicates that, upon completion of the project, each driveway would operate at Level of Service C or better in both peak hours as unsignalized intersections. Therefore, all project driveways will continue to be unsignalized driveways.

Pedestrian access to the site is facilitated by existing sidewalks on both sides of Grand Avenue and Continental Boulevard, and crosswalks on all four legs of the intersection. There are no bicycle routes in the project area. The project would not make any changes to reduce or inhibit pedestrian access to the site, and will not add bicycle routes.

Grand Avenue Median

As mentioned previously, the existing Grand Avenue driveway for 333 Continental Boulevard is located at the west edge of the parcel, and is a full-movement, joint access driveway that also serves the Doubletree Hotel. Left turns are allowed due to a break in the median on Grand Avenue, although the median does not currently provide a left-turn pocket for eastbound left-turning traffic. As a result, left-turning vehicles must turn from the Number 1 through lane (the left-most lane closest to the median). A left-turn pocket at this location would allow left-turning vehicles to wait for a gap in oncoming traffic from the refuge of the pocket, and would allow through vehicles in the lane closest to the median to proceed straight, without being delayed by turning vehicles.

The lack of a left-turn pocket at the median break on Grand Avenue and the Mattel driveway does not cause a deficient condition from a peak hour Level of Service standpoint. Currently, approximately 100 vehicles enter the driveway via a left turn from the Number 1 through lane on eastbound Grand Avenue during the AM peak hour. The intersection currently operates at LOS B. The addition of project traffic would increase the left-turn volume to approximately 200 AM peak hour vehicles. The intersection is forecasted to operate at LOS C in the future With Project condition, without an eastbound left-turn pocket.

Although the driveway intersection with Grand Avenue would not operate at a deficient Level of Service, the presence of a median break on a 6-lane roadway without a left-turn pocket is an unusual and potentially unsafe condition. This condition was further evaluated based on the industry standards and criteria for left-turn lanes at unsignalized intersections.

Two of the primary industry resources for roadway design policies are the American Association of State Highway and Transportation Officials (AASHTO): *A Policy on Geometric Design of Highways and Streets*; and the National Cooperative Highway Research Program (NCHRP) Report 279 – *Intersection Channelization Design Guide*. These resources provide “sliding scale” thresholds, based on the through and left-turn volumes at the intersection, to determine whether or not an unsignalized intersection warrants installation of a left-turn lane. Based on the policies and thresholds published in these two reference documents, the existing left-turn and through volumes on Grand Avenue at the Mattel driveway currently meet the warrant for a left-turn pocket. The existing volumes are well over the minimum thresholds, and with the addition of project traffic, future traffic volumes at this location would exceed the thresholds by an even greater margin.

Based on the industry standards for geometric design of streets and intersections, it is recommended that the City consider requiring an improvement to the median to provide a left-turn pocket as a condition of the project approval.

A prior traffic study for the project site (*Traffic Study for Mattel, Incorporated; Phase II of the Grand Way Project & 1955 East Grand Avenue*, Crain & Associates, August 15, 2003) identified the following median features that would require relocation, reconstruction, or replacement as a result of construction of a left-turn pocket:

“Currently the island has streetlights, electrical boxes, electrical and sewer access manholes and landscaping with trees and grass. . . . improvements will be conducted so as to disturb the existing landscaping as little as possible. However, one to two trees may need to be removed. The two manholes in the island will need to be dropped to street grade level within the new pocket. In addition, street lights may need to be moved.”

LOS ANGELES COUNTY CONGESTION MANAGEMENT PROGRAM

The Los Angeles County CMP was established to reduce traffic congestion and to provide a mechanism for coordinating land use and development decisions. Compliance with CMP requirements ensures a city's eligibility to compete for State gas tax funds for local transportation projects. The following intersections in the vicinity of the project site are listed as a CMP Arterial Monitoring Station:

- Pacific Coast Highway at El Segundo Boulevard
- Pacific Coast Highway at Rosecrans Avenue

Los Angeles County CMP determines the geographic area for study with the following criteria:

“ . . . all CMP arterial monitoring intersections, including monitored freeway on- or off-ramp intersections, where the proposed project will add 50 or more trips during either the AM or PM weekday peak hours”.

The project is forecasted to contribute 50 or more project trips to the two CMP intersections. Both intersections were included as study intersections. CMP significance thresholds are the same as the thresholds used by the City. The project's impacts were identified at these intersections, and where necessary, mitigation measures were identified, in compliance with Los Angeles County CMP requirements.

SUMMARY OF FINDINGS AND CONCLUSIONS

- The project site consists of three contiguous parcels at 333 Continental Boulevard, 455 Continental Boulevard, and 1955 East Grand Avenue.
- The 333 Continental Boulevard parcel is located on the south side of the project site and is currently occupied by a 14-story, 328,612-square-foot office building which houses the Mattel corporate headquarters offices.
- Development on the 455 Continental Boulevard parcel would consist of a new 14-story building on the landscaped area with the Mattel logo. The new building would provide 328,612 square feet of office, research, and development space.
- On the 1955 East Grand Avenue parcel, the existing two-story building will be demolished and a new six-story office building with 174,236 square feet will be constructed. The surface parking to the north of the building will remain.
- This traffic study includes documentation of existing conditions, analysis of cumulative traffic conditions, and identification of project-related impacts for the following analysis scenarios:
 - Existing Conditions
 - Existing Plus Project
 - Opening Year 2022 Without Project
 - Opening Year 2022 With Phase 1
 - Opening Year 2023 Without Project
 - Opening Year 2023 With Phase 1 and Phase 2

- The project will be constructed in two phases:
 - Phase 1 will include the construction of a 14-story, 328,612-square-foot building on the 455 Continental Boulevard parcel. The building will include 246,459 gross square feet of Corporate Headquarters use and 82,153 gross square feet of Research and Development use. Phase 1 Opening Year is anticipated to be 2022.
 - Phase 2 will include the demolition of the existing 1955 East Grand Avenue building and the construction of a six-story, 174,236-square-foot General Office Building. As discussed earlier, the existing 1955 East Grand Avenue building is not regularly used, therefore, no trip credits were taken for the existing use. Phase 2 Opening Year is anticipated to be 2023.
- The project is estimated to generate a total of 4,555 trips on a daily basis, with 746 trips in the morning peak hour, and 696 trips in the evening peak hour.
- Twenty study intersections in the project vicinity were evaluated for project traffic impacts.
- All study intersections currently operate at an acceptable Level of Service D during both peak hours, with the exception of the following:
 - #1 – Pacific Coast Highway at Imperial Highway (PM LOS E)
 - #16 – Aviation Boulevard at El Segundo Boulevard (PM LOS E)
- Project-related peak hour trips were added to the existing peak hour volumes to evaluate Existing Plus Project Conditions. With the addition of project traffic, all study intersections would continue to operate at an acceptable Level of Service D or better, with the following exceptions:
 - #1 – Pacific Coast Highway at Imperial Highway (ICU) – PM LOS F
 - #16 – Aviation Boulevard at El Segundo Boulevard (ICU) – PM LOS E
- Both intersections would experience a significant impact per the City's significance thresholds. The intersection of Pacific Coast Highway at Imperial Highway would deteriorate from LOS E to LOS F in the evening peak hour.
- In addition, two intersections would worsen from acceptable to unacceptable with the addition of project traffic, which would be considered a significant impact per the City's significance thresholds:
 - #15 – Douglas Street at El Segundo Boulevard (ICU) – PM LOS E
 - #18 – El Segundo Boulevard at I-405 SB Ramps (ICU) – PM LOS E

- Near-term future traffic forecasts have been developed to evaluate Cumulative Conditions for the anticipated project opening year. Phase 1 Opening Year is estimated to be Year 2022, and Phase 2 Opening Year is anticipated to be Year 2023. The future traffic forecasts include ambient growth as well as traffic from cumulative projects in the area.
- With the addition of ambient growth and cumulative project traffic, the Level of Service at the following intersections would deteriorate to an unacceptable Level of Service in one or both peak hours under Opening Year 2022 Without Project Conditions:
 - #1 – Pacific Coast Highway at Imperial Highway (ICU) – PM LOS F
 - #6 – Pacific Coast Highway at El Segundo Boulevard
 - (ICU) – AM LOS F, PM LOS F
 - (HCM) – AM and PM LOS E
 - #7 – Pacific Coast Highway at Rosecrans Boulevard (ICU) – AM LOS E, PM LOS F
 - #14 – Nash Street at El Segundo Boulevard (ICU) – PM LOS F
 - #15 – Douglas Street at El Segundo Boulevard (ICU) – AM LOS E, PM LOS F
 - #16 – Aviation Boulevard at El Segundo Boulevard (ICU) – AM LOS F, PM LOS F
 - #18 – El Segundo Boulevard at I-405 SB Ramps
 - (ICU) – PM LOS F
 - (HCM) – PM LOS E
- Phase 1 project traffic was added to the Opening Year 2022 Without Project traffic volumes to develop Opening Year 2022 With Phase 1 forecasts.
- In the Opening Year 2022 With Phase 1 scenario, the same intersections that were forecasted to operate at an unacceptable Level of Service in the Opening Year 2022 Without Project scenario will continue to do so with the addition of project traffic:
- The Phase 1 project would cause the ICU value at an already-deficient intersection to worsen by 0.02 V/C or more at the following intersections:
 - #14 – Nash Street at El Segundo Boulevard (ICU) – PM LOS F, Impact +0.024
 - #15 – Douglas Street at El Segundo Boulevard (ICU) – AM LOS F, Impact +0.027; PM LOS F, Impact +0.024
 - #16 – Aviation Boulevard at El Segundo Boulevard (ICU) – AM LOS F, Impact +0.027
 - #18 – El Segundo Boulevard at I-405 SB Ramps
 - (ICU) PM LOS F, Impact +0.049
 - (HCM) PM LOS E to LOS F, Impact + 9.4 seconds
 - #20 – El Segundo Boulevard at I-405 NB Ramps
 - (ICU) AM LOS E, Impact +0.036

- Phase 1 and Phase 2 project traffic was added to the Opening Year 2023 Without Project traffic volumes to develop Opening Year 2023 With Phase 1 and Phase 2 forecasts.
- In the Opening Year 2023 With Phase 1 and Phase 2 scenario, the same intersections that were forecasted to operate at an unacceptable Level of Service in the Opening Year 2023 Without Project scenario will continue to do so with the addition of project traffic.
- Based on the ICU Methodology, the following intersections would experience significant impacts per the City of El Segundo's significance criteria:
 - #1 – Pacific Coast Highway at Imperial Highway – (ICU) – PM LOS F, Impact +0.047
 - #5 – Pacific Coast Highway at Grand Avenue (ICU) – Project causes PM LOS E
 - #14 – Nash Street at El Segundo Boulevard (ICU) – PM LOS F, Impact +0.037
 - #15 – Douglas Street at El Segundo Boulevard (ICU) – AM LOS F, Impact +0.042; PM LOS F, Impact +0.037
 - #16 – Aviation Boulevard at El Segundo Boulevard (ICU) – AM LOS F, Impact +0.042; PM LOS F, Impact +0.028
 - #18 – El Segundo Boulevard at I-405 SB Ramps (ICU) – PM LOS F, Impact +0.075
 - #20 – El Segundo Boulevard at I-405 NB Ramps (ICU) – AM LOS E, Impact +0.056
- In addition, based on the HCM delay methodology, the project would cause two intersections already operating at a deficient Level of Service to worsen from LOS E to LOS F:
 - #6 – Pacific Coast Hwy at El Segundo Boulevard (HCM) – PM LOS E worsens to LOS F.
 - #18 – El Segundo Boulevard at I-405 SB Ramps (HCM) – PM LOS E worsens to LOS F.
- Mitigation measures were identified to mitigate the project impacts. Mitigation measures at Intersections #15 and #16 are considered to be infeasible, due to right-of-way constraints and the impact that intersection widening would have on existing infrastructure and densely developed private property. Therefore, the project impact at these intersections would remain significant and unavoidable.
- While implementation of the remaining mitigation measures at Intersection #1, 5, 6, 18, and 20 would reduce impacts to a less-than-significant level, the intersections are under Caltrans jurisdiction. Since the implementation of these improvements are outside the City's jurisdiction and there is uncertainty regarding the ability to implement these improvements, the City determines that there is a potential for a significant and unavoidable impact to occur at Intersection #1, 5, 6, 18, and 20 as a result of buildout of the Project.
- Heavy vehicles associated with construction would use the existing regional and local truck route network to approach the site. Designated truck routes serving the project area include Pacific Coast Highway and El Segundo Boulevard.
- Temporary delays in traffic may occasionally occur during construction due to oversized

vehicles traveling at lower speeds on local streets. Such delays would be occasional, and of short duration. These temporary delays would be considered less than significant. The project will be required to prepare a construction traffic management plan, to be reviewed and approved by the City.

- Upon completion of the project, each site driveway would operate at Level of Service C or better in both peak hours as unsignalized intersections. Therefore, all project driveways will continue to be unsignalized driveways.
- The existing Grand Avenue driveway for 333 Continental Boulevard is a full-movement, joint access driveway that also serves the Doubletree Hotel. Left turns are allowed due to a break in the median on Grand Avenue, although the median does not currently provide a left-turn pocket for eastbound left-turning traffic.
- The lack of a left-turn pocket at the median break on Grand Avenue at the Mattel driveway does not cause a deficient condition from a peak hour Level of Service standpoint.
- Although the driveway intersection with Grand Avenue would not operate at a deficient Level of Service, the presence of a median break on a 6-lane roadway without a left-turn pocket is an unusual and potentially unsafe condition.
- Based on the policies and thresholds published by the American Association of State Highway and Transportation Officials (AASHTO): *A Policy on Geometric Design of Highways and Streets*; and the National Cooperative Highway Research Program (NCHRP) Report 279 – *Intersection Channelization Design Guide*, the existing left-turn and through volumes on Grand Avenue at the Mattel driveway currently meet the warrant for a left-turn pocket. The existing volumes are well over the minimum thresholds, and with the addition of project traffic, future traffic volumes at this location would exceed the thresholds by an even greater margin.
- Based on the industry standards for geometric design of streets and intersections, it is recommended that the City consider requiring an improvement to the median to provide a left-turn pocket as a condition of the project approval.
- The project is forecasted to contribute 50 or more project trips to two CMP intersections: Pacific Coast Highway at Rosecrans Avenue and Pacific Coast Highway at El Segundo Boulevard. Both intersections were included as study intersections. The project's impacts were identified at these intersections, and where necessary, mitigation measures were identified, in compliance with Los Angeles County CMP requirements.
